State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 04/19/2021 has revealed that there are 5 CERS HAZ WASTE sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that

there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
K A MANGEMENT	23805 CLINTON KEITH	SSW 0 - 1/8 (0.101 mi.)	C17	115

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

TESORO USA 68238 (Continued) **S113177276**

Violation Description:	Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.
Violation Notes:	Returned to compliance on 10/13/2015.
Violation Division:	Riverside County Department of Env Health
Violation Program:	UST
Violation Source:	CERS
Site ID:	74628
Site Name:	TESORO (SPEEDWAY) 68238
Violation Date:	09-04-2019
Citation:	23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description:	Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 pounds per square inch and restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes:	Returned to compliance on 10/28/2019. OBSERVATION: Observed 87 & 91 leak detectors fail to detect a 3.0 gallon per hour leak and restrict or shut off flow of product when tested. CORRECTIVE ACTION: Owner/operator shall repair/replace failed leak detector and certify that leak detector is capable of detecting a 3.0 gallon per hour leak and slowing/stopping the flow of product. 48 hour notification required to be submitted to this Department prior to re-testing failed leak detector.

Site ID:	74628
Site Name:	TESORO (SPEEDWAY) 68238
Violation Date:	09-04-2019
Citation:	HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description:	"Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes:	Returned to compliance on 09/04/2019. OBSERVATION: Observed 87 fill drain valve to be leaking and would not hold liquid. CORRECTIVE ACTION: Owner/operator shall repair/replace the leaking 87 fill drain valve so that bucket is able to hold liquid and contain release until detected.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

KA MANAGEMENT INC DBA CLINTON KEITH CHEVRON (Continued) **S113123680**

	16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 07/16/2019. OBSERVATION: Observed that Designated Operator inspections are being improperly performed. DO report for December was conducted by Jesse Kirk III whose ICC cert expired 3 days before the inspection was conducted (12/18/2018). Also veeder root print outs were not attached to DO reports for the month of July-October. CORRECTIVE ACTION: Owner/operator shall ensure that the Designated Operator is properly conducting inspections, noting observations, reviewing paperwork and alarm history reports, attaching required documentation and any other DO required functions.

Violation Description: Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes: Returned to compliance on 08/02/2016.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS

Site ID: 20450
Site Name: Shell Oil Products US
Violation Date: 12-20-2016
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 04/28/2017.
Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS

Site ID: 20450
Site Name: Shell Oil Products US
Violation Date: 06-07-2016
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure of the overfill prevention system to meet one of the following requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes: Returned to compliance on 08/02/2016.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS

Site ID: 20450
Site Name: Shell Oil Products US
Violation Date: 07-10-2019
Citation: HSC 6.7 25290.1(d) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(d)
Violation Description: Failure of a UST system installed on or after July 1, 2004 to be designed and constructed with a monitoring system capable of detecting the entry of the liquid or vapor-phase of the hazardous substance stored in the primary containment into the secondary containment and capable of detecting water intrusion into the secondary containment.
Violation Notes: Returned to compliance on 07/16/2019.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS

Site ID: 20450

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 02/22/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 03/15/2021

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 10/05/2020
Date Data Arrived at EDR: 02/17/2021
Date Made Active in Reports: 05/10/2021
Number of Days to Update: 82

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

USGS TOPOGRAPHIC MAP

Target Property Map:	5641304 MURRIETA, CA
Version Date:	2012
Southwest Map:	5636487 WILDOMAR, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

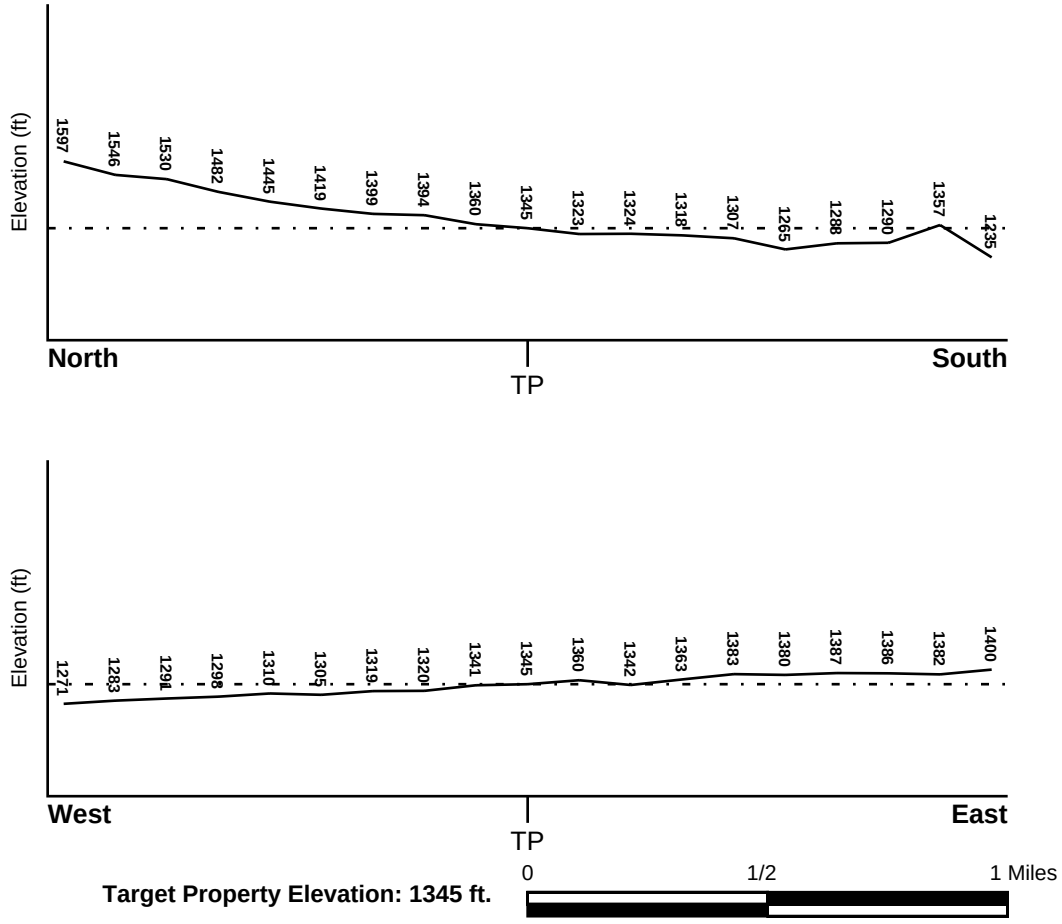
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C2705G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06065C2684G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MURRIETA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PLACENTIA

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
2	18 inches	38 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
3	38 inches	57 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
4	57 inches	59 inches	gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: HANFORD

Soil Surface Texture: coarse sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6
2	7 inches	40 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6
3	40 inches	59 inches	stratified loamy sand to coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6

Soil Map ID: 3

Soil Component Name: MONSERATE

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
2	9 inches	18 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
3	18 inches	44 inches	indurated	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
4	44 inches	57 inches	cemented	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
5	57 inches	70 inches	loamy coarse sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

Soil Map ID: 4

Soil Component Name: Terrace escarpments

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 5

Soil Component Name: MONSERATE

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Dear Requestor:

On July 9th, 2021, the Department of Toxic Substances Control (DTSC) received your email of July 9th, 2021 requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You will find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at 714.484.5336 or via email at CypressFileRoom@dtsc.ca.gov .

Sincerely,
Jone Barrio

Certified Sanborn® Map Report

07/12/21

Site Name:

Sage Wildomar Phase I ESA
NW Corner of Clinton Keith Rd
WILDOMAR, CA 92595
EDR Inquiry # 6571762.3

Client Name:

Leighton and Associates, Inc.
17781 Cowan
Irvine, CA 92614
Contact: Tracy Roberts

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Leighton and Associates, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 3403-4BC9-885B

PO # NA

Project 13158.002

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 3403-4BC9-885B

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Leighton and Associates, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Appendix H
GBA Geoenvironmental Report

Important Information about This

Geoenvironmental Report

Geoenvironmental studies are commissioned to gain information about environmental conditions on and beneath the surface of a site. The more comprehensive the study, the more reliable the assessment is likely to be. But remember: Any such assessment is to a greater or lesser extent based on professional opinions about conditions that cannot be seen or tested. Accordingly, no matter how many data are developed, risks created by unanticipated conditions will always remain. *Have realistic expectations.* Work with your geoenvironmental consultant to manage known and unknown risks. Part of that process should already have been accomplished, through the risk allocation provisions you and your geoenvironmental professional discussed and included in your contract's general terms and conditions. This document is intended to explain some of the concepts that may be included in your agreement, and to pass along information and suggestions to help you manage your risk.

Beware of Change; Keep Your Geoenvironmental Professional Advised

The design of a geoenvironmental study considers a variety of factors that are subject to change. Changes can undermine the applicability of a report's findings, conclusions, and recommendations. *Advise your geoenvironmental professional about any changes you become aware of.* Geoenvironmental professionals cannot accept responsibility or liability for problems that occur because a report fails to consider conditions that did not exist when the study was designed. Ask your geoenvironmental professional about the types of changes you should be particularly alert to. Some of the most common include:

- modification of the proposed development or ownership group,
- sale or other property transfer,
- replacement of or additions to the financing entity,
- amendment of existing regulations or introduction of new ones, or
- changes in the use or condition of adjacent property.

Should you become aware of any change, *do not rely on a geoenvironmental report.* Advise your geoenvironmental professional immediately; follow the professional's advice.

Recognize the Impact of Time

A geoenvironmental professional's findings, recommendations, and conclusions cannot remain valid indefinitely. The more time that passes, the more likely it is that important latent changes will occur. *Do not rely on a geoenvironmental report if too much time has elapsed since it was completed.* Ask your environmental professional to define "too much time." In the case of Phase I Environmental Site Assessments (ESAs), for example, more than 180 days after submission is generally considered "too much."

Prepare To Deal with Unanticipated Conditions

The findings, recommendations, and conclusions of a Phase I ESA report typically are based on a review of historical information, interviews, a site "walkover," and other forms of noninvasive research. When site subsurface conditions are not sampled in any way, the risk of unanticipated conditions is higher than it would otherwise be.

While borings, installation of monitoring wells, and similar invasive test methods can help reduce the risk of unanticipated conditions, *do not overvalue the effectiveness of testing.* Testing provides information about actual conditions only at the precise locations where samples are taken, and only when they are taken. Your geoenvironmental

professional has applied that specific information to develop a general opinion about environmental conditions. *Actual conditions in areas not sampled may differ (sometimes sharply) from those predicted in a report.* For example, a site may contain an unregistered underground storage tank that shows no surface trace of its existence. *Even conditions in areas that were tested can change*, sometimes suddenly, due to any number of events, not the least of which include occurrences at adjacent sites. Recognize, too, that *even some conditions in tested areas may go undiscovered,* because the tests or analytical methods used were designed to detect only those conditions assumed to exist.

Manage your risks by retaining your geoenvironmental professional to work with you as the project proceeds. Establish a contingency fund or other means to enable your geoenvironmental professional to respond rapidly, in order to limit the impact of unforeseen conditions. And to help prevent any misunderstanding, identify those empowered to authorize changes and the administrative procedures that should be followed.

Do Not Permit Any Other Party To Rely on the Report

Geoenvironmental professionals design their studies and prepare their reports to meet the specific needs of the clients who retain them, in light of the risk management methods that the client and geoenvironmental professional agree to, and the statutory, regulatory, or other requirements that apply. The study designed for a developer may differ sharply from one designed for a lender, insurer, public agency...or even another developer. *Unless the report specifically states otherwise, it was developed for you and only you.* Do not unilaterally permit any other party to rely on it. The report and the study underlying it may not be adequate for another party's needs, and you could be held liable for shortcomings your geoenvironmental professional was powerless to prevent or anticipate. Inform your geoenvironmental professional when you know or expect that someone else—a third-party—will want to use or rely on the report. *Do not permit third-party use or reliance until you first confer with the geoenvironmental professional who prepared the report.* Additional testing, analysis, or study may be required and, in any event, appropriate terms and conditions should be agreed to so both you and your geoenvironmental professional are protected from third-party risks. *Any party who relies on a geoenvironmental report without the express written permission of the professional who prepared it and the client for whom it was prepared may be solely liable for any problems that arise.*

Avoid Misinterpretation of the Report

Design professionals and other parties may want to rely on the report in developing plans and specifications. They need to be advised, in writing, that their needs may not have been considered when the study's scope was developed, and, even if their needs were considered, they might misinterpret geoenvironmental findings, conclusions, and recommendations. *Commission your geoenvironmental professional to explain pertinent elements of the report to others who are permitted to rely on it, and to review any plans, specifications or other instruments of professional service that incorporate any of the report's findings, conclusions, or recommendations.* Your geoenvironmental professional has the best understanding of the issues involved, including the fundamental assumptions that underpinned the study's scope.

Give Contractors Access to the Report

Reduce the risk of delays, claims, and disputes by giving contractors access to the full report, *providing that it is accompanied by a letter of transmittal that can protect you* by making it unquestionably clear that: 1) the study was not conducted and the report was not prepared for purposes of bid development, and 2) the findings, conclusions, and recommendations included in the report are based on a variety of opinions, inferences, and assumptions and are subject to interpretation. Use the letter to also advise contractors to consult with your geoenvironmental professional to obtain clarifications, interpretations, and guidance (a fee may be required for this service), and that—in any event—they should conduct additional studies to obtain the specific type and extent of information each prefers for preparing a bid or cost estimate. Providing access to the full report, with the appropriate caveats, helps prevent formation of adversarial attitudes and claims of concealed or differing conditions. If a contractor elects to ignore the warnings and advice in the letter of transmittal, it would do so at its own risk. Your geoenvironmental professional should be able to help you prepare an effective letter.

Do Not Separate Documentation from the Report

Geoenvironmental reports often include supplemental documentation, such as maps and copies of regulatory files, permits, registrations, citations, and correspondence with regulatory agencies. If subsurface explorations were performed, the report may contain final boring logs and copies of laboratory data. If remediation activities occurred on site, the report may include: copies of daily field reports; waste manifests; and information about the disturbance of subsurface materials, the type and thickness of any fill placed on site, and fill placement practices, among other types of documentation. *Do not separate supplemental documentation from the report. Do not, and do not permit any other party to redraw or modify any of the supplemental documentation for incorporation into other professionals' instruments of service.*

Understand the Role of Standards

Unless they are incorporated into statutes or regulations, standard practices and standard guides developed by the American Society for Testing and Materials (ASTM) and other recognized standards-developing organizations (SDOs) are little more than aspirational methods agreed to by a consensus of a committee. The committees that develop standards may not comprise those best-qualified to establish methods and, no matter what, no standard method can possibly consider the infinite client- and project-specific variables that fly in the face of the theoretical "standard conditions" to which standard practices and standard guides apply. In fact, these variables can be so pronounced that geoenvironmental professionals who comply with every directive of an ASTM or other standard procedure could run afoul of local custom and practice, thus violating the standard of care. Accordingly, when geoenvironmental professionals indicate in their reports that they have performed a service "in general compliance" with one standard or another, it means they have applied professional judgement in creating and implementing a scope of service designed for the specific client and project involved, and which follows some of the general precepts laid out in the referenced standard. To the extent that a report indicates "general compliance" with a standard, you may wish to speak with your geoenvironmental professional to learn more about what was and was not done. *Do not assume a given standard was followed to the letter.* Research indicates that that seldom is the case.

Realize That Recommendations May Not Be Final

The technical recommendations included in a geoenvironmental report are based on assumptions about actual conditions, and so are preliminary or tentative. Final recommendations can be prepared only by observing actual conditions as they are exposed. For that reason, you should retain the geoenvironmental professional of record to observe construction and/or remediation activities on site, to permit rapid response to unanticipated conditions. *The geoenvironmental professional who prepared the report cannot assume responsibility or liability for the report's recommendations if that professional is not retained to observe relevant site operations.*

Understand That Geotechnical Issues Have Not Been Addressed

Unless geotechnical engineering was specifically included in the scope of professional service, a report is not likely to relate any findings, conclusions, or recommendations about the suitability of subsurface materials for construction purposes, especially when site remediation has been accomplished through the removal, replacement, encapsulation, or chemical treatment of on-site soils. The equipment, techniques, and testing used by geotechnical engineers differ markedly from those used by geoenvironmental professionals; their education, training, and experience are also significantly different. If you plan to build on the subject site, but have not yet had a geotechnical engineering study conducted, your geoenvironmental professional should be able to provide guidance about the next steps you should take. The same firm may provide the services you need.

Read Responsibility Provisions Closely

Geoenvironmental studies cannot be exact; they are based on professional judgement and opinion. Nonetheless, some clients, contractors, and others assume geoenvironmental reports are or certainly should be unerringly precise. Such assumptions have created unrealistic expectations that have led to wholly unwarranted claims and disputes. To help prevent such problems, geoenvironmental professionals have developed a number of report provisions and contract terms that explain who is responsible for what, and how risks are to be allocated. Some people mistake these for "exculpatory clauses," that is, provisions whose purpose is to transfer one party's rightful responsibilities and liabilities to someone else. Read the responsibility provisions included in a report and in the contract you and your geoenvironmental professional agreed to. *Responsibility provisions are not "boilerplate."* They are important.

Rely on Your Geoenvironmental Professional for Additional Assistance

Membership in the Geoprofessional Business Association exposes geoenvironmental professionals to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a geoenvironmental project. Confer with your GBA-member geoenvironmental professional for more information.

A Brief Introduction

The Regional Municipal Separate Stormwater Sewer System (MS4) Permit[1] requires that a Project-Specific WQMP be prepared for all development projects within the Santa Margarita Region (SMR) that meet the 'Priority Development Project' categories and thresholds listed in the SMR Water Quality Management Plan (WQMP). This Project-Specific WQMP Template for Development Projects in the **Santa Margarita Region** has been prepared to help document compliance and prepare a WQMP submittal. Below is a flowchart for the layout of this Template that will provide the steps required to document compliance.

[1] Order No. R9-2013-0001 as amended by Order Nos. R9-2015-0001 and R9-2015-0100, NPDES No. CAS0109266, National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the MS4s Draining the Watersheds within the San Diego Region, California Regional Water Quality Control Board, May 8, 2013.

OWNER'S CERTIFICATION

This Project-Specific WQMP has been prepared for Sage Investco LLC by DRC Engineering, Inc. for the WILDOMAR CROSSINGS MIXED-USE project.

This WQMP is intended to comply with the requirements of Riverside County for County Ordinance No. 754 which includes the requirement for the preparation and implementation of a Project-Specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation and funding of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. In addition, the property owner accepts responsibility for interim operation and maintenance of Stormwater Best Management Practices until such time as this responsibility is formally transferred to a subsequent owner. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity. The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under Riverside County Water Quality Ordinance (No. 754).

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

Section A: Project and Site Information

Use the table below to compile and summarize basic site information that will be important for completing subsequent steps. Subsections A.1 through A.4 provide additional detail on documentation of additional project and site information. The Regional MS4 Permit has effectively removed the ability for a project to be grandfathered from WQMP requirements. Even if a project were able to meet all the requirements stated in Section 1.2 of the WQMP, the 2014 WQMP requirements would apply.

PROJECT INFORMATION	
Type of PDP:	New Development
Type of Project:	Mixed-Use
Planning Case Number:	21-0012
Rough Grade Permit No.:	TBD
Development Name:	Wildomar Crossings Mixed-Use Project
PROJECT LOCATION	
Latitude & Longitude (DMS):	33° 35' 53"N, 117° 14' 30"W
Project Watershed and Sub-Watershed:	Santa Margarita River, Murrieta Creek, Santa Margarita River (Lower), Santa Margarita River (Upper)
24-Hour 85th Percentile Storm Depth (inches):	0.69
Is project subject to Hydromodification requirements?	☒ Y ☐ N (Select based on Section A.3)
APN(s):	376-410-021, 376-410-015, 376-410-016, and 376-410-017
Map Book and Page No.:	Book 36, Page 69

PROJECT CHARACTERISTICS	
Proposed or Potential Land Use(s)	Mixed-Use
Proposed or Potential SIC Code(s)	5311, 5812, 6513
Existing Impervious Area of Project Footprint (SF)	30,000
Total area of proposed Impervious Surfaces within the Project Limits (SF)/or Replacement	342,250
Total Project Area (ac)	8.94
Does the project consist of offsite road improvements?	☒ Y ☐ N
Does the project propose to construct unpaved roads?	☐ Y ☒ N
Is the project part of a larger common plan of development (phased project)?	☐ Y ☒ N
Has preparation of Project-Specific WQMP included coordination with other site plans?	☐ Y ☒ N
EXISTING SITE CHARACTERISTICS	
Is the project located within any Multi-Species Habitat Conservation Plan area (MSHCP Criteria Cell?)	☐ Y ☒ N If "Y" insert Cell Number
Is a Geotechnical Report attached?	☒ Y ☐ N
If no Geotech. Report, list the Natural Resources Conservation Service (NRCS) soils type(s) present on the site (A, B, C and/or D)	N/A

Provide a brief description of the project: The project site encompasses 4 parcels, which total approximately 9.1 acres. The western most lot is developed on the southern end with a single-family home and an unoccupied out-structure. The three remaining lots are undeveloped although there is a cement foundation near the single-family home. All existing site improvements will be removed prior to grading operations.

The proposed project would consist of demolishing the existing structures and other site improvements and constructing a new mixed-use development. The **residential** portion of the project is proposed for 4.5 acres

of the site and includes 150 apartment units. The **commercial** portion of the project is proposed for the eastern 4.53 acres of the site and includes a market, shops, and restaurants. The 23,104 SF Sprouts Farmers Market and 4,000 SF attached building for shops are located on the north end of the commercial site.

The storm water will be treated by four modular wetland biofiltration BMP flow-rate based units and hydrodynamic separators before entering the underground detention chambers (refer to **Basin A** and **Basin B**). Outflow from each underground detention basin will be metered by an outlet control manhole with weir plate and will then discharge in County's Line 'GG', across Clinton Keith Road via a double 60-inch RCP storm drain into the RCFC&WCD regional drainage facility.

Paver and dirt roads are considered pervious for determining WQMP applicability.

A.1 Maps and Site Plans

When completing your Project-Specific WQMP, include a map of the Project vicinity and existing site. In addition, include all grading, drainage, landscape/plant palette and other pertinent construction plans in Appendix 2. At a **minimum**, your WQMP Site Plan should include the following:

- Vicinity and location maps
- Parcel Boundary and Project Footprint
- Existing and Proposed Topography
- Drainage Management Areas (DMAs)
- Proposed Structural Best Management Practices (BMPs)
- Drainage Paths
- Drainage infrastructure, inlets, overflows
- Source Control BMPs
- Site Design BMPs
- Buildings, Roof Lines, Downspouts
- Impervious Surfaces
- Pervious Surfaces (i.e., Landscaping)
- Standard Labeling
- Cross Section and Outlet details

Use your discretion on whether or not you may need to create multiple sheets or can appropriately accommodate these features on one or two sheets. Keep in mind that the co-permittee plan reviewer must be able to easily analyze your Project utilizing this template and its associated site plans and maps. Complete the checklists in Appendix 1 to verify that all exhibits and components are included.

A.2 Identify Receiving Waters

Using Table, A-1 below, list in order of upstream to downstream, the Receiving Waters that the Project site is tributary to. Continue to fill each row with the Receiving Water's 303(d) listed impairments (if any), designated Beneficial Uses, and proximity, if any, to a RARE Beneficial Use. Include a map of the Receiving Waters in Appendix 1. This map should identify the path of the stormwater discharged from the site all the way to the outlet of the Santa Margarita River to the Pacific Ocean. Use the most recent 303(d) list available from the State Water Resources Control Board Website.
(http://www.waterboards.ca.gov/sandiego/water_issues/programs/basin_plan/)

Table A-1 Identification of Receiving Waters

Receiving Waters	USEPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Murrieta Creek	Metals, Nutrients, Pesticides, Toxicity	MUN, AGR, IND, PROC, GWR, RCC-2, WARM, WILD	NA
Santa Margarita River (upper)	Pathogens, Nutrients, Toxicity	REC 1, REC 2, WILD, RARE, MUN, AGR, IND, WARD, COLD	10.5
Santa Margarita River (Lower)	Nutrients, Toxicity	REC 1, REC 2, WILD, RARE, MUN, AGR, IND, WARD, COLD	22
Pacific Ocean	None	IND, NAV, REC 1, REC 2, COMM, WILD, RARE, SPWN, MAR, SHELL, BIOL, AQUA, MIGR	30.5

A.3 Drainage System Susceptibility to Hydromodification

Using Table, A-2 below, list in order of the point of discharge at the project site down to the Santa Margarita River[2], each drainage system or receiving water that the project site is tributary to. Continue to fill each row with the material of the drainage system, and any exemption (if applicable). Based on the results, summarize the applicable hydromodification performance standards that will be documented in Section E. Exempted categories of receiving waters include:

- Existing storm drains that discharge directly to water storage reservoirs, lakes, or enclosed embayments, or
- Conveyance channels whose bed and bank are concrete lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.
- Other water bodies identified in an approved WMAA (See Exhibit G to the WQMP)

Include a map exhibiting each drainage system and the associated susceptibility in Appendix 1.

Table A-2 Identification of Susceptibility to Hydromodification

Drainage System	Drainage System Material	Hydromodification Exemption	Hydromodification Exempt
Murrieta Creek	Natural Channel, Young alluvial valley deposits (Qyv)	Very Susceptible	☐ Y ☒ N
Santa Margarita River (Upper)	Natural Channel, Young alluvial valley deposits (Qyv)	Very Susceptible	☐ Y ☒ N
Santa Margarita River (Lower)	Natural Channel, Young alluvial valley deposits (Qyv)	Very Susceptible	☐ Y ☒ N
Summary of Performance Standards			

[2] Refer to Exhibit G of the WQMP for a map of exempt and potentially exempt areas. These maps are from the Draft SMR WMAA as of January 5, 2018 and will be replaced upon acceptance of the SMR WMAA.

Drainage System	Drainage System Material	Hydromodification Exemption	Hydromodification Exempt

☐ **Hydromodification Exempt** – Select if "Y" is selected in the Hydromodification Exempt column above, project is exempt from hydromodification requirements.

☒ **Not Exempt**-Select if "N" is selected in any row of the Hydromodification Exempt column above. Project is subject to hydrologic control requirements and may be subject to sediment supply requirements.

A.4 Additional Permits/Approvals required for the Project:

Table A-3 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	☐ Y	☒ N
State Water Resources Control Board, Clean Water Act Section 401 Water Quality Certification	☐ Y	☒ N
US Army Corps of Engineers, Clean Water Act Section 404 Permit	☐ Y	☒ N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	☐ Y	☒ N
Statewide Construction General Permit Coverage	☒ Y	☐ N
Statewide Industrial General Permit Coverage	☐ Y	☒ N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	☐ Y	☒ N
Other *(please list in the space below as required)*	☐ Y	☒ N

If yes is answered to any of the questions above, the co-permittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Section B: Optimize Site Utilization (LID Principles)

Review of the information collected in Section 'A' will aid in identifying the principal constraints on site design and selection of LID BMPs as well as opportunities to reduce imperviousness and incorporate LID Principles into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, utility locations or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for LID Bioretention BMPs), and differences in elevation (which can provide hydraulic head). Prepare a brief narrative for each of the site optimization strategies described below. This narrative will help you as you proceed with your Low Impact Development (LID) design and explain your design decisions to others.

Apply the following LID Principles to the layout of the PDP to the extent they are applicable and feasible. Putting thought upfront about how best to organize the various elements of a site can help to significantly reduce the PDP's potential impact on the environment and reduce the number and size of Structural LID BMPs that must be implemented. Integrate opportunities to accommodate the following LID Principles within the preliminary PDP site layout to maximize implementation of LID Principles.

Site Optimization

Complete checklist below to determine applicable Site Design BMPs for your site.

Project- Specific WQMP Site Design BMP Checklist

The following questions below are based upon Section 3.2 of the SMR WQMP will help you determine how to best optimize your site and subsequently identify opportunities and/or constraints, and document compliance.

SITE DESIGN REQUIREMENTS

Answer the following questions below by indicating "Yes," "No," or "N/A" (Not Applicable). Justify all "No" and "N/A" answers by inserting a narrative at the end of the section. The narrative should include identification and justification of any constraints that would prevent the use of those categories of LID BMPs. Upon identifying Site Design BMP opportunities, include these on your WQMP Site plan in Appendix 1.

☒ Yes ☐ No ☐ N/A

Did you identify and preserve existing drainage patterns?

Integrating existing drainage patterns into the site plan helps to maintain the time of concentration and infiltration rates of runoff, decreasing peak flows, and may also help preserve the contribution of Critical Coarse Sediment (i.e., Bed Sediment Supply) from the PDP to the Receiving Water. Preserve existing drainage patterns by:

- Minimizing unnecessary site grading that would eliminate small depressions, where appropriate add additional "micro" storage throughout the site landscaping.
- Where possible conform the PDP site layout along natural landforms, avoid excessive grading and disturbance of vegetation and soils, preserve or replicate the sites natural drainage features and patterns.
- Set back PDP improvements from creeks, wetlands, riparian habitats and any other natural water bodies.
- Use existing and proposed site drainage patterns as a natural design element, rather than using expensive impervious conveyance systems. Use depressed landscaped areas, vegetated buffers, and bioretention areas as amenities and focal points within the site and landscape design.

Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer.

☐ Yes ☒ No ☐ N/A

Did you identify and protect existing vegetation?

Identify any areas containing dense native vegetation or well-established trees, and try to avoid disturbing these areas. Soils with thick, undisturbed vegetation have a much higher capacity to store and infiltrate runoff than do disturbed soils. Reestablishment of a mature vegetative community may take decades. Sensitive areas, such as streams and floodplains should also be avoided.

- Define the development envelope and protected areas, identifying areas that are most suitable for development and areas that should be left undisturbed.
- Establish setbacks and buffer zones surrounding sensitive areas.
- Preserve significant trees and other natural vegetation where possible.

Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *The proposed cuts and fills are too large to preserve any existing vegetation over the site. The existing topography includes the need to remove and recompact undocumented fills and alluvium to prepare the site for development.*

Project- Specific WQMP Site Design BMP Checklist	
☐ Yes ☒ No ☐ N/A	**Did you identify and preserve natural infiltration capacity?** A key component of LID is taking advantage of a site's natural infiltration and storage capacity. A site survey and geotechnical investigation can help define areas with high potential for infiltration and surface storage. • Identify opportunities to locate LID Principles and Structural BMPs in highly pervious areas. Doing so will maximize infiltration and limit the amount of runoff generated. • Concentrate development on portions of the site with less permeable soils, and preserve areas that can promote infiltration.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *The site is within hydrologic soil group 'D' with low infiltration rate. Also, based from the soil's report, the site has minimal infiltration due to shallow sandstone bedrock layer.*	
☒ Yes ☐ No ☐ N/A	**Did you minimize impervious area?** Look for opportunities to limit impervious cover through identification of the smallest possible land area that can be practically impacted or disturbed during site development. • Limit overall coverage of paving and roofs. This can be accomplished by designing compact, taller structures, narrower and shorter streets and sidewalks, clustering buildings and sharing driveways, smaller parking lots (fewer stalls, smaller stalls, and more efficient lanes), and indoor or underground parking. • Inventory planned impervious areas on your preliminary site plan. Identify where permeable pavements, or other permeable materials, such as crushed aggregate, turf block, permeable modular blocks, pervious concrete or pervious asphalt could be substituted for impervious concrete or asphalt paving. This will help reduce the amount of Runoff that may need to be addressed through Structural BMPs. • Examine site layout and circulation patterns and identify areas where landscaping can be substituted for pavement, such as for overflow parking. • Consider green roofs. Green roofs are roofing systems that provide a layer of soil/vegetative cover over a waterproofing membrane. A green roof mimics pre-development conditions by filtering, absorbing, and evapotranspiring precipitation to help manage the effects of an otherwise impervious rooftop.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *The proposed development is proposed using pervious pavement at locations available. Also, drive aisles are at the minimum width which meets the City's requirement. Refer to WQMP Site Exhibit for more details.*	

Project- Specific WQMP Site Design BMP Checklist	
☒ Yes ☐ No ☐ N/A	**Did you identify and disperse runoff to adjacent pervious areas or small collection areas?** Look for opportunities to direct runoff from impervious areas to adjacent landscaping, other pervious areas, or small collection areas where such runoff may be retained. This is sometimes referred to as reducing Directly Connected Impervious Areas. • Direct roof runoff into landscaped areas such as medians, parking islands, planter boxes, etc., and/or areas of pervious paving. Instead of having landscaped areas raised above the surrounding impervious areas, design them as depressed areas that can receive Runoff from adjacent impervious pavement. For example, a lawn or garden depressed 3"-4" below surrounding walkways or driveways provides a simple but quite functional landscape design element. • Detain and retain runoff throughout the site. On flatter sites, smaller Structural BMPs may be interspersed in landscaped areas among the buildings and paving. • On hillside sites, drainage from upper areas may be collected in conventional catch basins and piped to landscaped areas and LID BMPs and/or Hydrologic Control BMPs in lower areas. Low retaining walls may also be used to create terraces that can accommodate LID BMPs. Wherever possible, direct drainage from landscaped slopes offsite and not to impervious surfaces like parking lots. • Reduce curb maintenance and provide for allowances for curb cuts. • Design landscaped areas or other pervious areas to receive and infiltrate runoff from nearby impervious areas. • Use Tree Wells to intercept, infiltrate, and evapotranspire precipitation and runoff before it reaches structural BMPs. Tree wells can be used to limit the size of Drainage Management Areas that must be treated by structural BMPs. Guidelines for Tree Wells are included in the Tree Well Fact Sheet in the LID BMP Design Handbook.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *Stormwater will be directed to landscaping area or pervious pavement area when feasible prior to enter the storm drain system.*	
☒ Yes ☐ No ☐ N/A	**Did you utilize native or drought tolerant species in site landscaping?** Wherever possible, use native or drought tolerant species within site landscaping instead of alternatives. These plants are uniquely suited to local soils and climate and can reduce the overall demands for potable water use associated with irrigation.
Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *The project is proposed to use native or drough tolerant speccities in site landscaping per City's requirement.*	

Project- Specific WQMP Site Design BMP Checklist

Did implement harvest and use of runoff?

Under the Regional MS4 Permit, Harvest and Use BMPs must be employed to reduce runoff on any site where they are applicable and feasible. However, Harvest and Use BMPs are effective for retention of stormwater runoff only when there is adequate demand for non-potable water during the wet season. If demand for non-potable water is not sufficiently large, the actual retention of stormwater runoff will be diminished during larger storms or during back-to-back storms.

For the purposes of planning level Harvest and Use BMP feasibility screening, Harvest and Use is only considered to be a feasible if the total average wet season demand for non-potable water is sufficiently large to use the entire DCV within 72 hours. If the average wet season demand for non-potable water is not sufficiently large to use the entire DCV within 72 hours, then Harvest and Use is not considered to be feasible and need not be considered further.

☐ Yes ☒ No ☐ N/A

The general feasibility and applicability of Harvest and Use BMPs should consider:

- Any downstream impacts related to water rights that could arise from capturing stormwater (not common).
- Conflicts with recycled water used – where the project is conditioned to use recycled water for irrigation, this should be given priority over stormwater capture as it is a year-round supply of water.
- Code Compliance - If a particular use of captured stormwater, and/or available methods for storage of captured stormwater would be contrary to building codes in effect at the time of approval of the preliminary Project-Specific WQMP, then an evaluation of harvesting and use for that use would not be required.
- Wet season demand – the applicant shall demonstrate, to the acceptance of the County of Riverside, that there is adequate demand for harvested water during the wet season to drain the system in a reasonable amount of time.

Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *There is minimal landscaping areas for the use of captured stormwater and is not practical.*

Did you keep the runoff from sediment producing pervious area hydrologically separate from developed areas that require treatment?

☐ Yes ☐ No ☒ N/A

Pervious area that qualifies as self-treating areas or off-site open space should be kept separate from drainage to structural BMPs whenever possible. This helps limit the required size of structural BMPs, helps avoid impacts to sediment supply, and helps reduce clogging risk to BMPs.

Discuss how this was included or provide a discussion/justification for "No" or "N/A" answer. *Pervious areas will be landscaped and not a producer of sediment. Finished grades in planters will be set 1" to 2" below the top of curb to impound water and prevent sediment transport.*

Section C: Delineate Drainage Management Areas (DMAs) & Green Streets

This section provides streamlined guidance and documentation of the DMA delineation and categorization process, for additional information refer to the procedure in Section 3.3 of the SMR WQMP which discusses the methods of delineating and mapping your project site into individual DMAs. Complete Steps 1 to 4 to successfully delineate and categorize DMAs.

Step 1: Identify Surface Types and Drainage Pathways

Carefully delineate pervious areas and impervious areas (including roofs) throughout site and identify overland flow paths and above ground and below ground conveyances. Also identify common points (such as BMPs) that these areas drain to.

Step 2: DMA Delineation

Use the information in Step 1 to divide the entire PDP site into individual, discrete DMAs. Typically, lines delineating DMAs follow grade breaks and roof ridge lines. Where possible, establish separate DMAs for each surface type (e.g., landscaping, pervious paving, or roofs). Assign each DMA a unique code and determine its size in square feet. The total area of your site should total the sum of all of your DMAs (unless water from outside the project limits comingles with water from inside the project limits, i.e. run-on). Complete Table C-1

Table C-1 DMA Identification

DMA Name or Identification	Surface Type(s)[1]	Area (Sq. Ft.)	DMA Type
DMA-A1	Mixed	117,615	To be Determined in Step 3
DMA-A2	Mixed	74,050	
DMA-B1	Mixed	141,130	
DMA-B2	Mixed	51,830	

Add Columns as Needed. Consider a separate DMA for Tree Wells or other LID principals like Self-Retaining areas are used for mitigation.

Step 3: DMA Classification

Determine how drainage from each DMA will be handled by using information from Steps 1 and 2 and by completing Steps 3.A to 3.C. Each DMA will be classified as one of the following four types:

- Type 'A': Self-Treating Areas:
- Type 'B': Self-Retaining Areas
- Type 'C': Areas Draining to Self-Retaining Areas
- Type 'D': Areas Draining to BMPs

Tree wells are considered Type 'B' areas, and their tributary areas limited to a 10:1 ratio are considered Type 'C' areas. If Tree wells are proposed, consider grading or other features to minimize the pervious runoff to the tree wells, to avoid overwhelming the trees. Type 'A', 'B', and 'C' are considered LID Principals that can be used to minimize or potentially eliminate structural LID BMPs.

If Tree wells are proposed, a landscape architect shall be consulted on the tree selection, since compliance will be determined based on the survival of the tree. The tree type should be noted on the WQMP site map.

Step 3.A – Identify Type 'A' Self-Treating Area

Indicate if the DMAs meet the following criteria by answering "Yes" or "No".

☐ Yes ☒ No	Area is undisturbed from their natural condition OR restored with Native and/or California Friendly vegetative covers.
☐ Yes ☒ No	Area is irrigated, if at all, with appropriate low water use irrigation systems to prevent irrigation runoff.
☐ Yes ☒ No	Runoff from the area will not comingle with runoff from the developed portion of the site, or across other landscaped areas that do not meet the above criteria.

If all answers indicate "Yes," complete Table C-2 to document the DMAs that are classified as Self-Treating Areas.

Table C-2 Type 'A', Self-Treating Areas

DMA Name or Identification	Area (Sq. Ft.)	Stabilization Type	Irrigation Type (if any)

Step 3.B – Identify Type 'B' Self-Retaining Area and Type 'C' Areas Draining to Self-Retaining Areas

Type 'B' Self-Retaining Area: A Self-Retaining Area is shallowly depressed 'micro infiltration' areas designed to retain the Design Storm rainfall that reaches the area, without producing any Runoff.

Indicate if the DMAs meet the following criteria by answering "Yes," "No," or "N/A".

☐ Yes ☐ No ☒ N/A	Inlet elevations of area/overflow drains, if any, should be clearly specified to be three inches or more above the low point to promote ponding.
☐ Yes ☐ No ☒ N/A	Soils will be freely draining to not create vector or nuisance conditions.
☐ Yes ☐ No ☒ N/A	Pervious pavements (e.g., crushed stone, porous asphalt, pervious concrete, or permeable pavers) can be self-retaining when constructed with a gravel base course four or more inches deep below any underdrain discharge elevation.

If all answers indicate "Yes," DMAs may be categorized as Type 'B', proceed to identify Type 'C' Areas Draining to Self-Retaining Areas.

Type 'C' Areas Draining to Self-Retaining Areas: Runoff from impervious or partially pervious areas can be managed by routing it to Self-Retaining Areas consistent with the LID Principle discussed in SMR WQMP Section 3.2.5 for 'Dispersing Runoff to Adjacent Pervious Areas'.
Indicate if the DMAs meet the following criteria by answering "Yes" or "No".

☐ Yes ☒ No The drainage from the tributary area must be directed to and dispersed within the Self-Retaining Area.

☐ Yes ☒ No The maximum ratio of Tributary Area to Self-Retaining area is (2 ÷ Impervious Fraction): 1

If all answers indicate "Yes," DMAs may be categorized as Type 'C'.

Complete Table C-3 and Table C-4 to identify Type 'B' Self-Retaining Areas and Type 'C' Areas Draining to Self-Retaining Areas.

Table C-3 Type 'B', Self-Retaining Areas

Self-Retaining Area				Type 'C' DMAs that are draining to the Self-Retaining Area		
DMA Name/ ID	Post-project surface type	Area (square feet) [A]	Storm Depth (inches) [B]	DMA Name / ID	[C] from Table C-4= [C]	Required Retention Depth (inches) [D] = $[B] + \frac{[B]\cdot[C]}{[A]}$

Note: Tree well areas can extend well beyond the drip line. The Tree Well area for open top types would include the shallow depressed area at the soil surface. The Tree Well area for Structural Soil Tree Wells or Suspended Pavement Tree Wells includes the area with open-graded gravel or void space over the structural soil or structural cells. Please specify type in this table and WQMP site map. See LID handbook Tree Well factsheet for additional details.

$$\left(\frac{2}{\boldsymbol{Impervious\ Fraction}}\right) : 1$$

(Tributary Area: Self-Retaining Area)

Table C-4 Type 'C', Areas that Drain to Self-Retaining Areas

DMA					Receiving Self-Retaining DMA		
DMA Name/ ID	Area (square feet) [A]	Post-project surface type	Runoff factor [B]	Product [C] = [A] x [B]	DMA name /ID	Area (square feet) [D]	Ratio [C]/[D]

Note: (See Section 3.3 of SMR WQMP) Ensure that partially pervious areas draining to a Self-Retaining area do not exceed the following ratio:

Step 3.B.1 – Document the use of Green Street Exemption (see Section 3.11 of the WQMP Guidance)

The Regional MS4 Permit specifies that projects that consist of **retrofitting or redevelopment of existing paved alleys, streets, or roads** may be exempted from classification as PDPs if they are designed and constructed in accordance with USEPA Green Streets Guidance. This does not apply for interior roads for PDP projects. For projects with road frontage improvements, Green Street standards can be used in the frontage road right-of-way. The remainder of the project is subject to full WQMP and Hydromodification requirements. See excerpt from Section 3.11 of the WQMP Guidance below:

3.11.4 BMP Sizing Targets for Applicable Green Streets Projects

Applicable green street projects are not required to meet the same sizing requirements for BMPs as other projects, but should attempt to meet a sizing target to the MEP. The following steps are used to size BMPs for applicable Green Streets projects:

1. Delineate drainage areas tributary to BMP locations and compute imperviousness.
2. Determine sizing goal by referring to sizing criteria presented in Section 2.3.2 (V_{BMP}).
3. Attempt to provide the target BMP sizing according to Step 2.
4. If the target criteria cannot be achieved, document the constraints that override the application of BMPs, and provide the largest portion of the sizing criteria that can be reasonably provided given constraints.

Even if BMPs cannot be sized to meet the target sizing criteria, it is still important to design the BMP inlet, energy dissipation, and overflow capacity for the full tributary area to ensure that flooding and scour is avoided. It is strongly recommended that BMPs which are designed to less than their target design volume be designed to bypass peak flows.

Table C-4.1 – Green Streets

DMA Name or ID	Street Name	BMP Sizing Targets Calculations and documenting constraints included in Appendix 6*
		☐ Yes ☐ No
		☐ Yes ☐ No
		☐ Yes ☐ No
		☐ Yes ☐ No
		☐ Yes ☐ No
*WQMP shall not be approved without calculations or documenting constraints for Green Street Exemption.		

Step 3.C – Identify Type 'D' Areas Draining to BMPs

Areas draining to BMPs are those that could not be fully managed through LID Principles (DMA Types A through C) and will instead drain to an LID BMP and/or a Conventional Treatment BMP designed to manage water quality impacts from that area, and Hydromodification where necessary.

Complete Table C-5 to document which DMAs are classified as Areas Draining to BMPs

Table C-5 Type 'D', Areas Draining to BMPs

DMA Name or ID	BMP Name or ID Receiving Runoff from DMA
DMA-A1	BMP 1 – Modular Wetland (8'x16')
DMA-A2	BMP 2 – Modular Wetland (8'x8')
DMA-B1	BMP 3 – Modular Wetland (8'x16')
DMA-B2	BMP 4 – Modular Wetland (8'x8')

Note: More than one DMA may drain to a single LID BMP; however, one DMA may not drain to more than one BMP.

Section D: Implement LID BMPs

The Regional MS4 Permit requires the use of LID BMPs to provide retention or treatment of the DCV and includes a BMP hierarchy which requires Full Retention BMPs (Priority 1) to be considered before Biofiltration BMPs (Priority 2) and Flow-Through Treatment BMPs and Alternative Compliance BMPs (Priority 3). LID BMP selection must be based on technical feasibility and should be considered early in the site planning and design process. Use this section to document the selection of LID BMPs for each DMA. Note that feasibility is based on the DMA scale and may vary between DMAs based on site conditions.

D.1 Full Infiltration Applicability

An assessment of the feasibility of utilizing full infiltration BMPs is required for all projects, *except where it can be shown that site design LID principles fully retain the DCV (i.e., all DMAs are Type A, B, or C), or where Harvest and Use BMPs fully retain the DCV. Check the following box if applicable:*

☐ Site design LID principles or Tree Wells fully retain the DCV (i.e., all DMAs are Type A, B, or C), (Proceed to Section E).

If the above box remains unchecked, perform a site-specific evaluation of the feasibility of Infiltration BMPs using each of the applicable criteria identified in Chapter 2.3.3 of the SMR WQMP and complete the remainder of Section D.1.

Geotechnical Report

A Geotechnical Report or Phase I Environmental Site Assessment may be required by the co-permittee to confirm present and past site characteristics that may affect the use of Infiltration BMPs. In addition, the co-permittee, at their discretion, may not require a geotechnical report for small projects as described in Chapter 2 of the SMR WQMP. If a geotechnical report has been prepared, include it in Appendix 3. In addition, if a Phase I Environmental Site Assessment has been prepared, include it in Appendix 4.

Infiltration Feasibility

Table D-1 below is meant to provide a simple means of assessing which DMAs on your site support Infiltration BMPs and is discussed in the SMR WQMP in Chapter 2.3.3. Check the appropriate box for each question and then list affected DMAs as applicable. If additional space is needed, add a row below the corresponding answer.

Table D-1 Infiltration Feasibility

Downstream Impacts (SMR WQMP Section 2.3.3.a)		
Does the project site…	**YES**	**NO**
…have any DMAs where infiltration would negatively impact downstream water rights or other Beneficial Uses[3]?		X
If Yes, list affected DMAs:		
Groundwater Protection (SMR WQMP Section 2.3.3.b)		
Does the project site…	**YES**	**NO**
…have any DMAs with industrial, and other land uses that pose a high threat to water quality, which cannot be treated by Bioretention BMPs? Or have DMAs with active industrial process areas?		X
If Yes, list affected DMAs:		
…have any DMAs with a seasonal high groundwater mark shallower than 10 feet?		X
If Yes, list affected DMAs:		
…have any DMAs located within 100 feet horizontally of a water supply well?		X
If Yes, list affected DMAs:		
…have any DMAs that would restrict BMP locations to within a 2:1 (horizontal: vertical) influence line extending from any septic leach line?		X
If Yes, list affected DMAs:		
…have any DMAs been evaluated by a licensed Geotechnical Engineer, or Environmental Engineer, who has concluded that the soils do not have adequate physical and chemical characteristics for the protection of groundwater, and has treatment provided by amended media layers in Bioretention BMPs been considered in evaluating this factor?		X
If Yes, list affected DMAs:		
Public Safety and Offsite Improvements (SMR WQMP Section 2.3.3.c)		
Does the project site…	**YES**	**NO**
…have any areas identified by the geotechnical report as posing a public safety risk where infiltration of stormwater could have a negative impact, such as potential seepage through fill conditions?		X
If Yes, list affected DMAs:		
Infiltration Characteristics For LID BMPs (SMR WQMP Section 2.3.3.d)		
Does the project site…	**YES**	**NO**
…have measured infiltration rates of less than 2.4 inches / hour? Riverside County may allow measure rates as low as 0.8in/hr to support infiltration BMPs, if the Engineer believes infiltration is appropriate and sustainable. Mark no, if this is the case.	X	
If Yes, list affected DMAs: All DMAs. Granite / bedrock encounter 4'-5' below finished surface per soil's report.		
Cut/Fill Conditions (SMR WQMP Section 2.3.3.e)		
Does the project site…	**YES**	**NO**
…have significant cut and/or fill conditions that would preclude in-situ testing of infiltration rates at the final infiltration surface?	X	
If Yes, list affected DMAs: All DMAs. Cuts get into bedrock layers.		
Other Site-Specific Factors (SMR WQMP Section 2.3.3.f)		
Does the project site…	**YES**	**NO**
…have DMAs where the geotechnical investigation discovered other site-specific factors that would preclude effective and/or safe infiltration?	X	
Describe here: Sandstone bedrock encountered 4' to 5' below finished surface per soil's report.		

If you answered "Yes" to any of the questions above for any DMA, Infiltration BMPs that rely solely on infiltration should not be used for those DMAs and you should proceed to the assessment for Biofiltration BMPs below. Biofiltration BMPs that provide partial infiltration may still be feasible and should be assessed in Section D.2. Summarize concerns identified in the Geotechnical Report, if any, that resulted in a "YES" response above in the table below.

[3] Such a condition must be substantiated by sufficient modeling to demonstrate an impact and would be subject to County of Riverside discretion. There is not a standardized method for assessing this criterion. Water rights evaluations should be site-specific.

Table D-2 Geotechnical Concerns for Onsite Infiltration

Type of Geotechnical Concern	DMAs Feasible (By Name or ID)	DMAs Infeasible (DMA-1A, DMA-1B, DMA-2)
Collapsible Soil		
Expansive Soil		
Slopes		
Liquefaction		
Low Infiltration Rate		DMA 1A, 1B, 2A, and 2B
Other		DMA 1A, 1B, 2A, and 2B

D.2 Biofiltration Applicability

This section should document the applicability of biofiltration BMPs for Type D DMAs that are not feasible for full infiltration BMPs. The key decisions to be documented in this section include:

1. Are biofiltration BMPs with partial infiltration feasible?
    a. Biofiltration BMPs must be designed to maximize incidental infiltration via a partial infiltration design unless it is demonstrated that this design is not feasible.
    b. These designs can be used at sites with low infiltration rates where other feasibility factors do not preclude incidental infiltration.

    Document summary in Table D-3.
2. If not, what are the factors that require the use of biofiltration with no infiltration? This may include:
    a. Geotechnical hazards
    b. Water rights issues
    c. Water balance issues
    d. Soil contamination or groundwater quality issues
    e. Very low infiltration rates (factored rates < 0.1 in/hr)
    f. Other factors, demonstrated to the acceptance of the local jurisdiction

    If this applies to any DMAs, then rationale must be documented in Table D-3.
3. Are biofiltration BMPs infeasible?
    a. If yes, then provide a site-specific analysis demonstrating the technical infeasibility of all LID BMPs has been performed and is included in Appendix 5. If you plan to submit an analysis demonstrating the technical infeasibility of LID BMPs, request a pre-submittal meeting with the co-permittee with jurisdiction over the Project site to discuss this option. Proceed below.

Table D-3 Evaluation of Biofiltration BMP Feasibility

DMA ID	Is Partial/ Incidental Infiltration Allowable? (Y/N)	Basis for Infeasibility of Partial Infiltration (provide summary and include supporting basis if partial infiltration not feasible)
DMA-A1, DMA-A2, DMA-B1, DMA-B2	Y	

Proprietary Biofiltration BMP Approval Criteria

Does the co-permittee allow Proprietary BMPs as an equivalent to Biofiltration, if specific criteria is met?

☒ Yes or ☐ No, if no skip to Section F to document your alternative compliance measures.

If the project will use proprietary BMPs as biofiltration BMPs, then this section and Appendix 5 shall be completed to document that the proprietary BMPs are selected in accordance with Section 2.3.6 of the SMR WQMP and County requirements. Proprietary Biofiltration BMPs must meet both of the following approval criteria:

1. Demonstrate equivalency to Biofiltration by completing the BMP Design worksheet and Proprietary Biofiltration Criteria, which is found in Appendix 5, including all supporting documentation, and
2. Obtain Co-Permittee concurrence for the long-term Operation and Maintenance Plan for the proprietary BMP. The Co-Permittee has the sole discretion to allow or reject Proprietary BMPs, especially if they will be maintained publicly through a CFD, CSA, or L&LMD.

Add additional rows to Table D-4 to document approval criteria are met for each type of BMP proposed.

Table D-4 Proprietary BMP Approval Requirement Summary

Proposed Proprietary Biofiltration BMP	Approval Criteria	Notes/Comments
Modular Wetland System by BioClean (BMP 1, BMP 2, BMP 3, and BMP 4)	BMP Design worksheets and Proprietary Biofiltration Criteria are completed in Appendix 5	☒ Yes or ☐ No
	Proposed BMP has an active TAPE GULD Certification for the project pollutants of concern[4] or equivalent 3rd party demonstrated performance.	☒ Yes or ☐ No
	Is there any media or cartridge required to maintain the function of the BMP sole-sourced or proprietary in any way? If yes, obtain explicit approval by the Agency. Potentially full replacement costs to a non-proprietary BMP needs to be considered.	☒ Yes or ☐ No If yes, provide the date of concurrence from the Co-Permittee. California State Water Resources Control Board
	☒ The BMP includes biological features including vegetation supported by engineered or other growing media.	Vegetation on top of the BMP system.

[4] Use Table F-1, F-2, and F-3 to identify and document the pollutants of concern and include these tables in Appendix 5.

D.3 Feasibility Assessment Summaries

From the Infiltration, Biofiltration with Partial Infiltration and Biofiltration with No Infiltration Sections above, complete Table D-5 below to summarize which LID BMPs are technically feasible, and which are not, based upon the established hierarchy.

Table D-5 LID Prioritization Summary Matrix

DMA Name/ID	LID Principles or Tree Wells	LID BMP Hierarchy			No LID (Alternative Compliance)
		1. Infiltration	2. Biofiltration with Partial Infiltration*	3. Biofiltration with No Infiltration*	
DMA - A1	☐	☐	☒	☐	☐
DMA- A2	☐	☐	☒	☐	☐
DMA - B1	☐	☐	☒	☐	☐
DMA - B2	☐	☐	☒	☐	☐
	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐

*Includes Proprietary Biofiltration, if accepted by the Co-Permittee.

For those DMAs where LID BMPs are not feasible, provide a narrative in Table D-6 below summarizing why they are not feasible, include your technical infeasibility criteria in Appendix 5, and proceed to Section F below to document Alternative Compliance measures for those DMAs. Recall that each proposed DMA must pass through the LID BMP hierarchy before alternative compliance measures may be considered.

This is based on the clarification letter titled "San Diego Water Board's Expectations of Documentation to Support a Determination of Priority Development Project Infiltration Infeasibility" (April 28, 2017, Via email from San Diego Regional Water Quality Control Board to San Diego County Municipal Storm Water Copermittees[5]).

Table D-6 Summary of Infeasibility Documentation

Question	Narrative Summary (include reference to applicable appendix/attachment/report, as applicable)
a) When in the entitlement process did a geotechnical engineer analyze the site for infiltration feasibility?	No. But the soil's report indicates the site has shallow sandstone bedrock which prohibits good infiltration.
b) When in the entitlement process were other investigations conducted (e.g., groundwater quality, water rights) to evaluate infiltration feasibility?	Yes, groundwater was not encountered on site borings.
c) What was the scope and results of testing, if conducted, or rationale for why testing was not needed to reach findings?	Soil's report indicates the site have shallow sandstone bedrock which prohibits infiltration.

[5] http://www.projectcleanwater.org/download/pdp-infiltration-infeasibility/

d) What public health and safety requirements affected infiltration locations?	N/A
e) What were the conclusions and recommendations of the geotechnical engineer and/or other professional responsible for other investigations?	N/A
f) What was the history of design discussions between the permittee and applicant for the proposed project, resulting in the final design determination related locations feasible for infiltration?	N/A
g) What site design alternatives were considered to achieve infiltration or partial infiltration on site?	N/A
h) What physical impairments (i.e., fire road egress, public safety considerations, utilities) and public safety concerns influenced site layout and infiltration feasibility?	N/A
i) What LID Principles (site design BMPs) were included in the project site design?	LID principles such as disperse to landscape areas, minimized impervious areas were implemented in the project site design.

D.4 LID BMP Sizing

Each LID BMP must be designed to ensure that the DCV will be captured by the selected BMPs with no discharge to the storm drain or surface waters during the DCV size storm. Infiltration BMPs must at minimum be sized to capture the DCV to achieve pollutant control requirements.

Biofiltration BMPs must at a minimum be sized to:

- Treat 1.5 times the DCV not reliably retained on site using a volume-base or flow-based sizing method, or
- Include static storage volume, including pore spaces and pre-filter detention volume, at least 0.75 times the portion of the DCV not reliably retained on site.

First**,** calculate the DCV for each LID BMP using the V_{BMP} worksheet in Appendix F of the LID BMP Design Handbook. Second**,** design the LID BMP to meet the required V_{BMP} using the methods included in Section 3 of the LID BMP Design Handbook. Utilize the worksheets found in the LID BMP Design Handbook or consult with the co-permittee to assist you in correctly sizing your LID BMPs. Use Table D-7 below to document the DCV each LID BMP. Provide the completed design procedure sheets for each LID BMP in Appendix 6. You may add additional rows to the table below as needed.

Table D-7 DCV Calculations for LID BMPs

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	BMP Name/ Identifier	*Design Rainfall Intensity (in/hr)*	*Design Flow Rate, Q_{BMP} (cfs)* *Q=[D]X[E] Divided by 43,560*	*Proposed Flow on Plans (cfs)*
	[A]		[B]	[C]	[A] x [C]				
DMA-A1	*117,615*	*Mixed*	*0.91*	*0.74*	*87,035*	*BMP-1*	*0.2* [E]	*0.399*	*0.462*

[E] is obtained from Exhibit A in the SMR WQMP
[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6.

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	BMP Name/ Identifier	*Design Rainfall Intensity (in/hr)*	*Design Flow Rate, Q_{BMP} (cfs)* *Q=[D]X[E] Divided by 43,560*	*Proposed Flow on Plans (cfs)*
	[A]		[B]	[C]	[A] x [C]				
DMA-A2	*74,050*	*Mixed*	*0.88*	*0.70*	*51,835*	*BMP-2*	*0.2* [E]	*0.238*	*0.240*

[E] is obtained from Exhibit A in the SMR WQMP
[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6.

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	BMP Name/ Identifier	*Design Rainfall Intensity (in/hr)*	*Design Flow Rate, Q_{BMP} (cfs)* *Q=[D]X[E] Divided by 43,560*	*Proposed Flow on Plans (cfs)*
	[A]		[B]	[C]	[A] x [C]				
DMA-B1	*141,130*	*Mixed*	*0.88*	*0.70*	*98,791*	*BMP-3*	*0.2* [E]	*0.454*	*0.462*

[E] is obtained from Exhibit A in the SMR WQMP

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	BMP Name/ Identifier		*Design Flow Rate,* Q_{BMP} *(cfs)*	
	[A]		[B]	[C]	[A] x [C]		*Design Rainfall Intensity (in/hr)*	*Q=*[D]X[E] Divided by 43,560	*Proposed Flow on Plans (cfs)*
DMA-B2	*51,830*	*Mixed*	*0.88*	*0.70*	*36,281*	*BMP-4*	*0.2* [E]	*0.167*	*0.240*

[E] is obtained from Exhibit A in the SMR WQMP
[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6.

Complete Table D-8 below to document the Design Capture Volume and the Proposed Volume for each LID BMP. You can add rows to the table as needed. Alternatively, the Santa Margarita Hydrology Model (SMRHM) can be used to size LID BMPs to address the DCV and, if applicable, to size Hydrologic Control BMPs to meet the Hydrologic Performance Standard described in the SMR WQMP, as identified in Section E.

Table D-8 LID BMP Sizing

BMP Name / ID	DMA No.	BMP Type / Description	Design Capture Flowrate (ft^3 / S)	Proposed Flowrate (ft^3 / S)
BMP 1	DMA-A1	Modular Wetland System (8'x16')	0.399	0.462
BMP 2	DMA-A2	Modular Wetland System (8'x8')	0.238	0.240
BMP 3	DMA-B1	Modular Wetland System (8'x16')	0.454	0.462
BMP 4	DMA-B2	Modular Wetland System (8'x8')	0.167	0.240

If bioretention will include a capped underdrain, then include sizing calculations demonstrating that the BMP will meet infiltration sizing requirements with the underdrain capped and also meet biofiltration sizing requirements if the underdrain is uncapped.

Section E: Implement Hydrologic Control BMPs and Sediment Supply BMPs

See Appendix 7 for additional required information.

If a completed Table 1.2 demonstrates that the project is exempt from Hydromodification Performance Standards, specify N/A and proceed to Section G.

☐ N/A Project is Exempt from Hydromodification Performance Standards.

If a PDP is not exempt from hydromodification requirements than the PDP must satisfy the requirements of the performance standards for hydrologic control BMPs and Sediment Supply BMPs. The PDP may choose to satisfy hydrologic control requirements using onsite or offsite BMPs (i.e. Alternative Compliance). Sediment supply requirements cannot be met via alternative compliance. If N/A is not selected above, select one of the two options below and complete the applicable sections.

☐ Project is Not Hydromodification Exempt and chooses to implement Hydrologic Control and Sediment Supply BMPs Onsite (complete Section E).

☐ Project is Not Hydromodification Exempt and chooses to implement Hydrologic Control Requirements using Alternative Compliance (complete Section F). Selection of this option must be approved by the co-permittee.

E.1 Hydrologic Control BMP Selection

Capture of the DCV and achievement of the Hydrologic Performance Standard may be met by combined and/or separate structural BMPs. The user should consider the full suite of Hydrologic Control BMPs to manage runoff from the post-development condition and meet the Hydrologic Performance Standard identified in this section.

For the Preliminary WQMP, in lieu of preparing detailed routing calculations, the basin size may be estimated as the difference in volume between the pre-development and post-development hydrograph for the 10-year 24-hour storm event plus the Vbmp. This does not relieve the engineer of the responsibility for meeting the full Hydrologic Control requirements during final design.

The Hydrologic Performance Standard consists of matching or reducing the flow duration curve of post-development conditions to that of pre-existing, naturally occurring conditions, for the range of geomorphically significant flows (the low flow threshold runoff event up to the 10-year runoff event). 10% of the 2-year runoff event can be used for the low flow threshold without any justification. Higher low flow thresholds can be used with site-specific analysis, see Section 2.6.2.b of the WQMP guidance document. Select each of the hydrologic control BMP types that are applied to meet the above performance standard on the site.

☐ LID principles as defined in Section 3.2 of the SMR WQMP, including Tree Wells.

☐ Structural LID BMPs that may be modified or enlarged, if necessary, beyond the DCV.

☐ Structural Hydrologic Control BMPs that are distinct from the LID BMPs above. The LID BMP Design Handbook provides information not only on Hydrologic Control BMP design, but also on BMP design to meet the combined LID requirement and Hydrologic Performance Standard. The Handbook specifies the type of BMPs that can be used to meet the Hydrologic Performance Standard.

E.2 Hydrologic Control BMP Sizing

Hydrologic Control BMPs must be designed to ensure that the flow duration curve of the post-development DMA will not exceed that of the pre-existing, naturally occurring, DMA for the range of geomorphically significant flows. Using SMRHM, (or another acceptable continuous simulation model if approved by the Copermittee) the applicant shall demonstrate that the performance of the Hydrologic Control BMPs complies with the Hydrologic Performance Standard. Complete Table E-1 below and identify, for each DMA, the type of Hydrologic Control BMP, if the SMRHM model confirmed the management (Identified as "passed" in SMRHM), the total volume capacity of the Hydrologic Control BMP, the Hydrologic Control BMP footprint at top floor elevation, and the drawdown time of the Hydrologic Control BMP. SMRHM summary reports should be documented in Appendix 7. Refer to the SMRHM Guidance Document for additional information on SMRHM. You can add rows to the table as needed.

Table E-1 Hydrologic Control BMP Sizing

BMP Name / ID	DMA No.	BMP Type / Description	SMRHM* Passed	BMP Volume (ac-ft)	BMP Footprint (ac)	Drawdown time (hr)
Basin A	DMA-A1 and DMA-A2	Underground Modular Eco-Rain System	☒	0.456	0.080	24
Basin B	DMA-B1 and DMA-B2	Underground Modular Eco-Rain System	☒	0.472	0.083	24
			☐			
			☐			

**Or other continuous simulation model, compliant with the WQMP and Permit. If Tree Wells are proposed for some or all of the project, check the box for Tree Wells in Section E.1 and enter each Tree Well DMA in Table E-1 above for the BMP Name/ID, DMA No. and BMP Type/Description. For Tree Wells, leave SMRHM* Passed Column and the columns to the left blank.*

If a bioretention BMP with capped underdrain is used and hydromodification requirements apply, then sizing calculations must demonstrate that the BMP meets flow duration control criteria with the underdrain capped and uncapped. Both calculations must be included.

E.3 Implement Sediment Supply BMPs

The sediment supply performance standard applies to PDPs for which hydromodification applied that have the potential to impact Potential Critical Coarse Sediment Yield Areas. Refer to Exhibit G-1 of the WQMP Guidance Document to determine if there are onsite Potential Critical Coarse Sediment Yield Areas (based on on-going WMAA analysis) or Potential Sediment Source Areas (sites added through the Regional

Board review process). Select one of the two options below and include the Potential Critical Coarse Sediment Yield Area Exhibit showing your project location in Appendix 7.

☒ There are no mapped Potential Critical Coarse Sediment Yield Areas or Potential Sediment Source Areas on the site. Include a copy of Exhibit G - CCSY & PSS Areas in Appendix 7, with the project location marked. If the project is outside of the "Potential Critical Coarse Sediment Yield Areas and Potential Sediment Source Areas" then check this box. The Sediment Supply Performance Standard is met with no further action is needed.

☐ There are mapped Potential Critical Coarse Sediment Yield Areas or Potential Sediment Source Areas on the site, the Sediment Supply Performance Standard will be met through Option 1 (E.3.1) or Option 2 (E.3.2) below.

☐ **E.3.1 Option 1: Avoid Potential Critical Coarse Sediment Yield Areas and Potential Sediment Source Areas**

The simplest approach for complying with the Sediment Supply Performance Standard is to avoid impacts to areas identified as Potential Critical Coarse Sediment Yield Areas or Potential Sediment Supply Areas. If a portion of PDP is identified as a Potential Critical Coarse Sediment Yield Area or a Potential Sediment Source Area, that PDP may still achieve compliance with the Sediment Supply Performance Standards if Potential Critical Coarse Sediment Yield Areas and Potential Sediment Supply Areas are avoided, i.e. areas are not developed and thereby delivery of Critical Coarse Sediment to the receiving waters is not impeded by site developments.

Provide a narrative describing how the PDP has avoided impacts to Potential Critical Coarse Sediment Yield Areas and/or Potential Sediment Source Areas below.

If it is not feasible to avoid these areas, proceed to Option 2 to complete a Site-Specific Critical Coarse Sediment Analysis.

☐ **E.3.2 Option 2: Site-Specific Critical Coarse Sediment Analysis**

Perform a stepwise assessment to ensure the pre-project source(s) of Critical Coarse Sediment (i.e., Bed Sediment Supply) is maintained:

Step 1: Identify if the site is an actual verified Critical Coarse Sediment Yield Area supplying Bed Sediment Supply to the receiving channel

☐ **Step 1.A** – Is the Bed Sediment of onsite streams similar to that of receiving streams?

Rate the similarity:
☐ High
☐ Medium
☐ Low

Results from the geotechnical and sieve analysis to be performed both onsite and in the receiving channel should be documented in Appendix 7. Of particular interest, the results of the sieve analysis, the soil erodibility factor, a description of the topographic relief of the project area, and the lithology of onsite soils should be reported in Appendix 7.

☐ **Step 1.B** – Are onsite streams capable of delivering Bed Sediment Supply from the site, if any, to the receiving channel?

Rate the potential:
☐ High
☐ Medium
☐ Low

Results from the analyses of the sediment delivery potential to the receiving channel should be documented in Appendix 7 and identify, at a minimum, the Sediment Source, the distance to the receiving channel, the onsite channel density, the project watershed area, the slope, length, land use, and rainfall intensity.

☐ **Step 1.C** – Will the receiving channel adversely respond to a change in Bed Sediment Load?

Rate the need for bed sediment supply:
☐ High
☐ Medium
☐ Low

Results from the in-stream analysis to be performed both onsite should be documented in Appendix 7. The analysis should, at a minimum, quantify the bank stability and the degree of incision, provide a gradation of the Bed Sediment within the receiving channel, and identify if the channel is sediment supply-limited.

☐ **Step 1.D** – Summary of Step 1

Summarize in Table E.3 the findings of Step 1 and associate a score (in parenthesis) to each step. The sum of the three individual scores determines if a stream is a significant contributor to the receiving stream.

- Sum is equal to or greater than eight - Site is a significant source of sediment bed material – all on-site streams must be preserved or by-passed within the site plan. The applicant shall proceed to Step 2 for all onsite streams.
- Sum is greater than five but lower than eight. Site is a source of sediment bed material – some of the on-site streams must be preserved (with identified streams noted). The applicant shall proceed to Step 2 for the identified streams only.
- Sum is equal to or lower than five. Site is not a significant source of sediment bed material. The applicant may advance to Section F.

Table E-2 Triad Assessment Summary

Step	Rating			Total Score
1.A	☐ High (3)	☐ Medium (2)	☐ Low (1)	
1.B	☐ High (3)	☐ Medium (2)	☐ Low (1)	
1.C	☐ High (3)	☐ Medium (2)	☐ Low (1)	
Significant Source Rating of Bed Sediment to the receiving channel(s)				

Step 2: Avoid Development of Critical Coarse Sediment Yield Areas, Potential Sediment Sources Areas, and Preserve Pathways for Transport of Bed Sediment Supply to Receiving Waters

Onsite streams identified as a actual verified Critical Coarse Sediment Yield Areas should be avoided in the site design and transport pathways for Critical Coarse Sediment should be preserved

Check those that apply:

☐ The site design does avoid all onsite channels identified as actual verified Critical Coarse Sediment Yield Areas ***AND***

☐ The drainage design bypasses flow and sediment from onsite upstream drainages identified as actual verified Critical Coarse Sediment Yield Areas to maintain Critical Coarse Sediment supply to receiving waters

(If both are yes, the applicant may disregard subsequent steps of Section E.3 and directly advance directly to Section G)

Or -

Provide in Appendix 7 a site map that identifies all onsite channels and highlights those onsite channels that were identified as a Significant Source of Bed Sediment. The site map shall demonstrate, if feasible, that the site design avoids those onsite channels identified as a Significant Source of Bed Sediment. In addition, the applicant shall describe the characteristics of each onsite channel identified as a Significant Source of Bed Sediment. If the design plan cannot avoid the onsite channels, please provide a rationale for each channel individually.

The site map shall demonstrate that the drainage design bypasses those onsite channels that supply Critical Coarse Sediment to the receiving channel(s). In addition, the applicant shall describe the characteristics of each onsite channel identified as an actual verified Critical Coarse Sediment Yield Area.

Identified Channel #1 - Insert narrative description here

Identified Channel #2 - Insert narrative description here

☐ The site design **does NOT avoid** all onsite channels identified as actual verified Critical Coarse Sediment Yield Areas

OR

☐ The project blocks the potential for Critical Coarse Sediment from migrating to receiving waters.

(If either of these are the case, the applicant shall continue completing this section).

E.3.3 Sediment Supply BMPs to Result in No Net Impact to Downstream Receiving Waters

If impacts to Critical Coarse Sediment Yield Areas cannot be avoided, sediment supply BMPs must be implemented such there is no net impact to receiving waters. Sediment supply BMPs may consist of approaches that permit flux of bed sediment supply from Critical Coarse Sediment Yield Areas within the project boundary. This approach is subject to acceptance by the County of Riverside. It may require extensive documentation and analysis by qualified professionals to support this demonstration.

Appendix H of the San Diego Model BMP Design Manual provides additional information on site-specific investigation of Critical Coarse Sediment Supply areas.

http://www.projectcleanwater.org/download/2018-model-bmp-design-manual/

If applicable, insert narrative description here

Documentation of sediment supply BMPs should be detailed in Appendix 7.

Section F: Alternative Compliance

Alternative Compliance may be used to achieve compliance with pollutant control and/or hydromodification requirements for a given PDP. Alternative Compliance may be used under two scenarios, check the applicable box if the PDP is proposing to use Alternative Compliance to satisfy all or a portion of the Pollutant Control and/or Hydrologic Control requirements (but not sediment supply requirements)

☐ If it is not feasible to fully implement Infiltration or Biofiltration BMPs at a PDP site, Flow-Through Treatment Control BMPs may be used to treat pollutants contained in the portion of DCV not reliably retained on site and Alternative Compliance measures must also be implemented to mitigate for those pollutants in the DCV that are not retained or removed on site prior to discharging to a receiving water.

☐ Alternative Compliance is selected to comply with either pollutant control or hydromodification flow control requirements even if complying with these requirements is potentially feasible on-site. If such voluntary Alternative Compliance is implemented, Flow-Through Treatment Control BMPs must still be used to treat those pollutants in the portion of the DCV not reliably retained on site prior to discharging to a receiving water.

Refer to Section 2.7 of the SMR WQMP and consult the Local Jurisdiction for currently available Alternative Compliance pathways. Coordinate with the co-permittee if electing to participate in Alternative Compliance and complete the sections below to document implementation of the Flow-Through BMP component of the program.

F.1 Identify Pollutants of Concern

The purpose of this section is to help you appropriately plan for mitigating your Pollutants of Concern in lieu of implementing LID BMPs and to document compliance and.

Utilize Table A-1 from Section A, which noted your project's Receiving Waters, to identify impairments for Receiving Waters (including downstream receiving waters) by completing Table F-1. Table F-1 includes the watersheds identified as impaired in the Approved 2010 303(d) list; check box corresponding with the PDP's receiving water. The most recent 303(d) lists are available from the State Water Resources Control Board website:
https://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml).https://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml.

Table F-1 Summary of Approved 2010 303(d) listed waterbodies and associated pollutants of concern for the Riverside County SMR Region and downstream waterbodies.

	Water Body	Nutrients[1]	Metals[2]	Toxicity	Bacteria and Pathogens	Pesticides and Herbicides	Sulfate	Total Dissolved Solids
☐	De Luz Creek	X	X				X	
☐	Long Canyon Creek		X		X	X		
☒	Murrieta Creek	X	X	X		X		
☐	Redhawk Channel	X	X		X	X		X
☐	Santa Gertudis Creek	X	X		X	X		
☐	Santa Margarita Estuary	X						
☒	Santa Margarita River (Lower)	X			X			
☒	Santa Margarita River (Upper)	X		X				
☐	Temecula Creek	X	X	X		X		X
☐	Warm Springs Creek	X	X		X	X		

[1] Nutrients include nitrogen, phosphorus and eutrophic conditions caused by excess nutrients.

[2] Metals includes copper, iron, and manganese.

Use Table F-2 to identify the pollutants identified with the project site. Indicate the applicable PDP Categories and/or Project Features by checking the boxes that apply. If the identified General Pollutant Categories are the same as those listed for your Receiving Waters, then these will be your Pollutants of Concern; check the appropriate box or boxes in the last row.

Table F-2 Potential Pollutants by Land Use Type

Priority Development Project Categories and/or Project Features (check those that apply)		General Pollutant Categories									
		Bacterial Indicators	Metals	Nutrients	Pesticides	Toxic Organic Compounds	Sediments	Trash & Debris	Oil & Grease	Total Dissolved Solids	Sulfate
☐	Detached Residential Development	P	N	P	P	N	P	P	P	N	N
☒	Attached Residential Development	P	N	P	P	N	P	P	P[(2)]	N	N
☒	Commercial/Industrial Development	P[(3)]	P[(7)]	P[(1)]	P[(1)]	P	P[(1)]	P	P	N	N
☐	Automotive Repair Shops	N	P	N	N	P[(4, 5)]	N	P	P	N	N
☐	Restaurants (>5,000 ft^2)	P	N	N	P[(1)]	N	N	P	P	N	N
☐	Hillside Development (>5,000 ft^2)	P	N	P	P	N	P	P	P	N	N
☐	Parking Lots (>5,000 ft^2)	P[(6)]	P[(7)]	P[(1)]	P[(1)]	P[(4)]	P	P	P	N	N
☐	Streets, Highways, and Freeways	P[(6)]	P[(7)]	P[(1)]	P[(1)]	P[(4)]	P	P	P	N	N
☐	Retail Gasoline Outlets	N	P[(7)]	N	N	P[(4)]	N	P	P	N	N
Project Priority Pollutant(s) of Concern		☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

P = Potential

N = Not Potential

(1) A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected

(2) A potential Pollutant if the project includes uncovered parking areas; otherwise not expected

(3) A potential Pollutant is land use involving animal waste products; otherwise not expected

(4) Including petroleum hydrocarbons

(5) Including solvents

(6) Bacterial indicators are routinely detected in pavement runoff

(7) A potential source of metals, primarily copper and zinc. Iron, magnesium, and aluminum are commonly found in the environment and are commonly associated with soils, but are not primarily of anthropogenic stormwater origin in the municipal environment.

F.2 Treatment Control BMP Selection

Treatment Control BMPs typically provide proprietary treatment mechanisms to treat potential Pollutants in runoff, but do not sustain significant biological processes. Treatment Control BMPs must be selected to address the Project Priority Pollutants of Concern (identified above) and meet the acceptance criteria described in Section 2.3.7 of the SMR WQMP. Documentation of acceptance criteria must be included in Appendix 6. In addition, ensure that proposed Treatment Control BMPs are properly identified on the WQMP Site Plan in Appendix 1.

Table F-3 Treatment Control BMP Selection

Selected Treatment Control BMP Name or ID[1]	Priority Pollutant(s) of Concern to Mitigate[2]	Removal Efficiency Percentage[3]

[1] Treatment Control BMPs must not be constructed within Receiving Waters. In addition, a proposed Treatment Control BMP may be listed more than once if they possess more than one qualifying pollutant removal efficiency.
[2] Cross Reference Table E.1 above to populate this column.
[3] As documented in a Copermittee Approved Study and provided in Appendix 6.

F.3 Sizing Criteria

Utilize Table F-4 below to appropriately size flow-through BMPs to the DCV, or Design Flow Rate, as applicable. Please reference Chapter 3.5.1 of the SMR WQMP for further information.

Table F-4 Treatment Control BMP Sizing

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	***BMP A1***	
	[A]		[B]	[C]	[A] x [C]		
						Design Storm (in)	*Design Flow Rate (cfs)*
	$A_T = \Sigma[A]$				$\Sigma = [D]$	[E] 0.2	$[F] = \frac{[D]x[E]}{[G]}$

[B], [C] is obtained as described in Section 2.6.1.b from the SMR WQMP
[E] either 0.2 inches or 2 times the 85th percentile hourly rainfall intensity
[G] = 43,560,.

F.4 Hydrologic Performance Standard – Alternative Compliance Approach

Alternative compliance options are only available if the governing co-permittee has acknowledged the infeasibility of onsite Hydrologic Control BMPs and approved an alternative compliance approach. See Section 3.5 and 3.6 of the SMR WQMP.

Select the pursued alternative and describe the specifics of the alternative:

☐ Offsite Hydrologic Control Management within the same channel system

☐ In-Stream Restoration Project

For Offsite Hydrologic Control BMP Option

Each Hydrologic Control BMP must be designed to ensure that the flow duration curve of the post-development DMA will not exceed that of the pre-existing, naturally occurring, DMA by more than ten percent over a one-year period. Using SMRHM, the applicant shall demonstrate that the performance of each designed Hydrologic Control BMP is equivalent with the Hydrologic Performance Standard for onsite conditions. Complete Table F-5 below and identify, for each Hydrologic Control BMP, the equivalent DMA the Hydrologic Control BMP mitigates, that the SMRHM model passed, the total volume capacity of the BMP, the BMP footprint at top floor elevation, and the drawdown time of the BMP. SMRHM summary reports for the alternative approach should be documented in Appendix 7. Refer to the SMRHM Guidance Document for additional information on SMRHM. You can add rows to the table as needed.

Table F-5 Offsite Hydrologic Control BMP Sizing

BMP Name / Type	Equivalent DMA (ac)	SMRHM Passed	BMP Volume (ac-ft)	BMP Footprint (ac)	Drawdown time (hr)
		☐			
		☐			
		☐			
		☐			

For Instream Restoration Option

Attach to Appendix 7 the technical report detailing the condition of the receiving channel subject to the proposed hydrologic and sediment regimes. Provide the full design plans for the in-stream restoration project that have been approved by the Copermittee. Utilize the San Diego Regional Water Quality Equivalency Guidance Document.

Section G: Implement Trash Capture BMPs

The Santa Margarita Regional Board has required Full Trash Capture compliance thru Order No. R9-2017-007. For the Santa Margarita Watershed, the County is requiring Track 1 full trash capture compliance for projects proposing the following uses as part of their development after **December 3, 2018**.

- High-density residential: all land uses with at least ten (10) developed dwelling units/acre.
- Industrial: land uses where the primary activities on the developed parcels involve product manufacture, storage, or distribution (e.g., manufacturing businesses, warehouses, equipment storage lots, junkyards, wholesale businesses, distribution centers, or building material sales yards).
- Commercial: land uses where the primary activities on the developed parcels involve the sale or transfer of goods or services to consumers (e.g., business or professional buildings, shops, restaurants, theaters, vehicle repair shops, etc.).
- Mixed urban: land uses where high-density residential, industrial, and/or commercial land uses predominate collectively (i.e., are intermixed).
- Public transportation stations: facilities or sites where public transit agencies' vehicles load or unload passengers or goods (e.g., bus stations and stops).

Riverside County Maintenance is generally supportive of United Storm Water – Connector Pipe Screens or equivalent. Equivalent systems or alternative designs shall be on the State of California Approved Trash Capture Device List and requires approval by the Transportation Department for maintenance. Riverside County is developing Trash Capture Device Standards, which are expected to be added to the Transportation Plan Check Policies and Guidelines when available. Design calculations are not expected to be required if the project uses standard sizes per the County's Trash Capture Device Standards. Until the Trash Capture Device Standards are available and the project uses standard sizes, the project shall complete the following tables and furnish hydraulic analysis calculating the flowrate in the catch basin does not exceed the flowrate capacity of the trash capture device in a fully clogged condition.

Trash Capture BMPs may be applicable to Type 'D' DMAs, as defined in Section 2.3.4 of the SMR WQMP. Trash Capture BMPs are designed to treat Q_{TRASH}, the runoff flow rate generated during the 1-year 1-hour precipitation depth. Utilize Table G-1 to size Trash Capture BMP. Refer to Table G-3 to determine the Trash Capture Design Storm Intensity (E).

Table G-1 Sizing Trash Capture BMPs

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Hydrodynamic Separator (BMP A)*	
	[A]		[B]	[C]	[A] x [C]		
DMA-A1	117,615	Mixed	0.91	0.74	87,035	*Trash Capture Design Storm Intensity (in)*	*Trash Capture Design Flow Rate (cubic feet or cfs)*
DMA-A2	69,700	Mixed	0.91	0.74	51,578		
	$A_T = \Sigma[A]$ 187,315				$\Sigma=$ [D] 138,613	[E] 0.37	$[F] = \frac{[D]x[E]}{[G]}$ ***1.177***

[B], [C] is obtained as described in Section 2.6.1.b from the SMR WQMP
[G] = 43,560

Table G-2 Sizing Trash Capture BMPs

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Hydrodynamic Separator (BMP B)*	
	[A]		[B]	[C]	[A] x [C]		
DMA-B1	*141,130*	*Mixed*	*0.88*	*0.70*	*98,791*	*Trash Capture Design Storm Intensity (in)*	*Trash Capture Design Flow Rate (cubic feet or cfs)*
DMA-B2	*51,830*	*Mixed*	*0.88*	*0.70*	*36,281*		
	$A_T = \Sigma[A]$ 192,960				$\Sigma=$ [D] 135,072	[E] 0.37	$[F] = \frac{[D]x[E]}{[G]}$ ***1.147***

[B], [C] is obtained as described in Section 2.6.1.b from the SMR WQMP
[G] = 43,560

Table G-3 Approximate precipitation depth/intensity values for calculation of the Trash Capture Design Storm

City	1-year 1-hour Precipitation Depth/Intensity (inches/hr)
Murrieta	0.47
Temecula	0.50
Wildomar	0.37

Use Table G-4 to summarize and document the selection and sizing of Trash Capture BMPs.

Table G-4 Trash Capture BMPs

BMP Name / ID	DMA No(s)	BMP Type / Description	Required Trash Capture Flowrate (cfs)	Provided Trash Capture Flowrate (cfs)[1]
BMP A	DMA-A1 and A2	Aqua-Swirl Model AS-3S	1.177	2.10
BMP B	DMA-B1 and B2	Aqua-Swirl Model AS-3S	1.147	2.10

[1] For connector pipe screens, the Trash Capture Flowrate shall be based on a fully clogged condition for the screen, where the water level is at the top of the screen. Then determined the Flowrate based on weir equation (Qweir = C x L x H^(2/3), where C = 3.4). The height used to calculate the weir flow rate shall maintain a 6" freeboard to the invert of the catch basin opening at the road. This analysis is meant to replicate the hydraulic analysis used in the County's Full Trash Capture Device Standards.

Section H: Source Control BMPs

Section H need only be completed at the Preliminary WQMP phase if source control is critical to the project successfully handling the anticipated pollutants.

Source Control BMPs include permanent, structural features that may be required in your Project plans, such as roofs over and berms around trash and recycling areas, and Operational BMPs, such as regular sweeping and "housekeeping," that must be implemented by the site's occupant or user. The Maximum Extent Practicable (MEP) standard typically requires both types of BMPs. In general, Operational Source Control BMPs cannot be substituted for a feasible and effective Structural Source Control BMP. Complete checklist below to determine applicable Source Control BMPs for your site.

Project-Specific WQMP Source Control BMP Checklist

All development projects must implement Source Control BMPs. Source Control BMPs are used to minimize pollutants that may discharge to the MS4. Refer to Chapter 3 (Section 3.8) of the SMR WQMP for additional information. Complete Steps 1 and 2 below to identify Source Control BMPs for the project site.

Step 1: Identify Pollutant Sources

Review project site plans and identify the applicable pollutant sources. "Yes" indicates that the pollutant source is applicable to project site. "No" indicates that the pollutant source is not applicable to project site.

☒ Yes ☐ No	Storm Drain Inlets		☐ Yes ☒ No	Outdoor storage areas	
☐ Yes ☒ No	Floor Drains		☐ Yes ☒ No	Material storage areas	
☐ Yes ☒ No	Sump Pumps		☐ Yes ☒ No	Fueling areas	
☐ Yes ☒ No	Pets Control/Herbicide Application		☒ Yes ☐ No	Loading Docks	
☒ Yes ☐ No	Food Service Areas		☐ Yes ☒ No	Fire Sprinkler Test/Maintenance water	
☒ Yes ☐ No	Trash Storage Areas		☒ Yes ☐ No	Plazas, Sidewalks and Parking Lots	
☐ Yes ☒ No	Industrial Processes		☒ Yes ☐ No	Pools, Spas, Fountains and other water features	
☐ Yes ☒ No	Vehicle and Equipment Cleaning and Maintenance/Repair Areas				

Step 2: Required Source Control BMPs

List each Pollutant source identified above in column 1 and fill in the corresponding Structural Source Control BMPs and Operational Control BMPs by referring to the Stormwater Pollutant Sources/Source Control Checklist included in Appendix 8. The resulting list of structural and operational source control BMPs must be implemented as long as the associated sources are present on the project site. Add additional rows as needed.

Pollutant Source	Structural Source Control BMP	Operational Source Control BMP
On-site storm drain inlets	Mark all inlets with the words "Only Rain Down the Storm Drain" or similar.	Maintain and periodically repaint or replace markings. Provide stormwater pollution prevention information to new site owners, lessees, or operators. Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."

Trash Storage Area		Trash container areas shall be screened or walled to prevent off-site transport of trash. See Fact Sheet SD-32, "Trash Storage Areas," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
Loading Docks		Move loaded and unloaded items indoors as soon as possible. See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
Plazas, sidewalks, and parking lots		Sweep plazas, sidewalks, and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect wash water containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.
Pools, Spas (Resid)		Perform regular maintenance. Filter backflush to be determined.

Section I: Coordinate Submittal with Other Site Plans

For Final WQMPs, populate Table I-1 below to assist the plan checker in an expeditious review of your project. During construction and at completion, County of Riverside inspectors will verify the installation of BMPs against the approved plans. The first two columns will contain information that was prepared in previous steps, while the last column will be populated with the corresponding plan sheets. This table is to be completed with the submittal of your final Project-Specific WQMP.

Table I-1 Construction Plan Cross-reference

BMP No. or ID	BMP Identifier and Description	Corresponding Plan Sheet(s)

Note that the updated table — or Construction Plan WQMP Checklist — is **only a reference tool** to facilitate an easy comparison of the construction plans to your Project-Specific WQMP. The co-permittee with jurisdiction over the Project site can advise you regarding the process required to propose changes to the approved Project-Specific WQMP.

Use Table I-2 to identify other applicable permits that may impact design of the site. If yes is answered to any of the items below, the co-permittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Table I-2 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	☐ Y	☒ N
State Water Resources Control Board, Clean Water Act Section 401 Water Quality Certification	☐ Y	☒ N
US Army Corps of Engineers, Clean Water Act Section 404 Permit	☐ Y	☒ N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	☐ Y	☒ N
Statewide Construction General Permit Coverage	☒ Y	☐ N
Statewide Industrial General Permit Coverage	☐ Y	☒ N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	☐ Y	☒ N
Other *(please list in the space below as required)*	☐ Y	☐ N

Section J: Operation, Maintenance and Funding

Applicant is required to state the intended responsible party for BMP Operation, Maintenance and Funding at the Preliminary WQMP phase. The remaining requirements as outlined above are required for Final WQMP only.

The co-permittee with jurisdiction over the Project site will periodically verify that BMPs on your Project are maintained and continue to operate as designed. To make this possible, the co-permittee will require that you include in Appendix 9 of this Project-Specific WQMP:

1. A means to finance and implement maintenance of BMPs in perpetuity, including replacement cost.
2. Acceptance of responsibility for maintenance from the time the BMPs are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the Stormwater BMPs you have selected.
4. Figures delineating and designating pervious and impervious areas, location, and type of Stormwater BMP, and tables of pervious and impervious areas served by each facility. Geo-locating the BMPs using a coordinate system of latitude and longitude is recommended to help facilitate a future statewide database system.
5. A separate list and location of self-retaining areas or areas addressed by LID Principles that do not require specialized Operations and Maintenance or inspections but will require typical landscape maintenance as noted in Chapter 5, in the SMR WQMP. Include a brief description of typical landscape maintenance for these areas.

The co-permittee with jurisdiction over the Project site will also require that you prepare and submit a detailed BMP Operation and Maintenance Plan that sets forth a maintenance schedule for each of the BMPs built on your site. An agreement assigning responsibility for maintenance and providing for inspections and certification may also be required.

Details of these requirements and instructions for preparing a BMP Operation and Maintenance Plan are in Chapter 5 of the SMR WQMP.

Maintenance Mechanism: TBD

Will the proposed BMPs be maintained by a Homeowners' Association (HOA) or Property Owners Association (POA)?

☒ Y ☐ N

HOA for residential portion of the development. CC&Rs for the commercial site.

Include your Operation and Maintenance Plan and Maintenance Mechanism in Appendix 9, **see Appendix 9 for additional instructions.** Additionally, include all pertinent forms of educational materials for those personnel that will be maintaining the proposed BMPs within this Project-Specific WQMP in Appendix 10.

Section K: Acronyms, Abbreviations and Definitions

Regional MS4 Permit	Order No. R9-2013-0001 as amended by Order No. R9-2015-0001 and Order No. R9-2015-0100 an NPDES Permit issued by the San Diego Regional Water Quality Control Board.
Applicant	Public or private entity seeking the discretionary approval of new or replaced improvements from the Copermittee with jurisdiction over the project site. The Applicant has overall responsibility for the implementation and the approval of a Priority Development Project. The WQMP uses consistently the term "user" to refer to the applicant such as developer or project proponent. The WQMP employs also the designation "user" to identify the Registered Professional Civil Engineer responsible for submitting the Project-Specific WQMP, and designing the required BMPs.
Best Management Practice (BMP)	Defined in 40 CFR 122.2 as schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States. BMPs also include treatment requirements, operating procedures and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. In the case of municipal storm water permits, BMPs are typically used in place of numeric effluent limits.
BMP Fact Sheets	BMP Fact Sheets are available in the LID BMP Design Handbook. Individual BMP Fact Sheets include sitting considerations, and design and sizing guidelines for seven types of structural BMPs (infiltration basin, infiltration trench, permeable pavement, harvest-and-use, bioretention, extended detention basin, and sand filter).
California Stormwater Quality Association (CASQA)	Publisher of the California Stormwater Best Management Practices Handbooks, available at www.cabmphandbooks.com.
Conventional Treatment Control BMP	A type of BMP that provides treatment of stormwater runoff. Conventional treatment control BMPs, while designed to treat particular Pollutants, typically do not provide the same level of volume reduction as LID BMPs, and commonly require more specialized maintenance than LID BMPs. As such, the Regional MS4 Permit and this WQMP require the use of LID BMPs wherever feasible, before Conventional Treatment BMPs can be considered or implemented.
Copermittees	The Regional MS4 Permit identifies the Cities of Murrieta, Temecula, and Wildomar, the County, and the District, as Copermittees for the SMR.

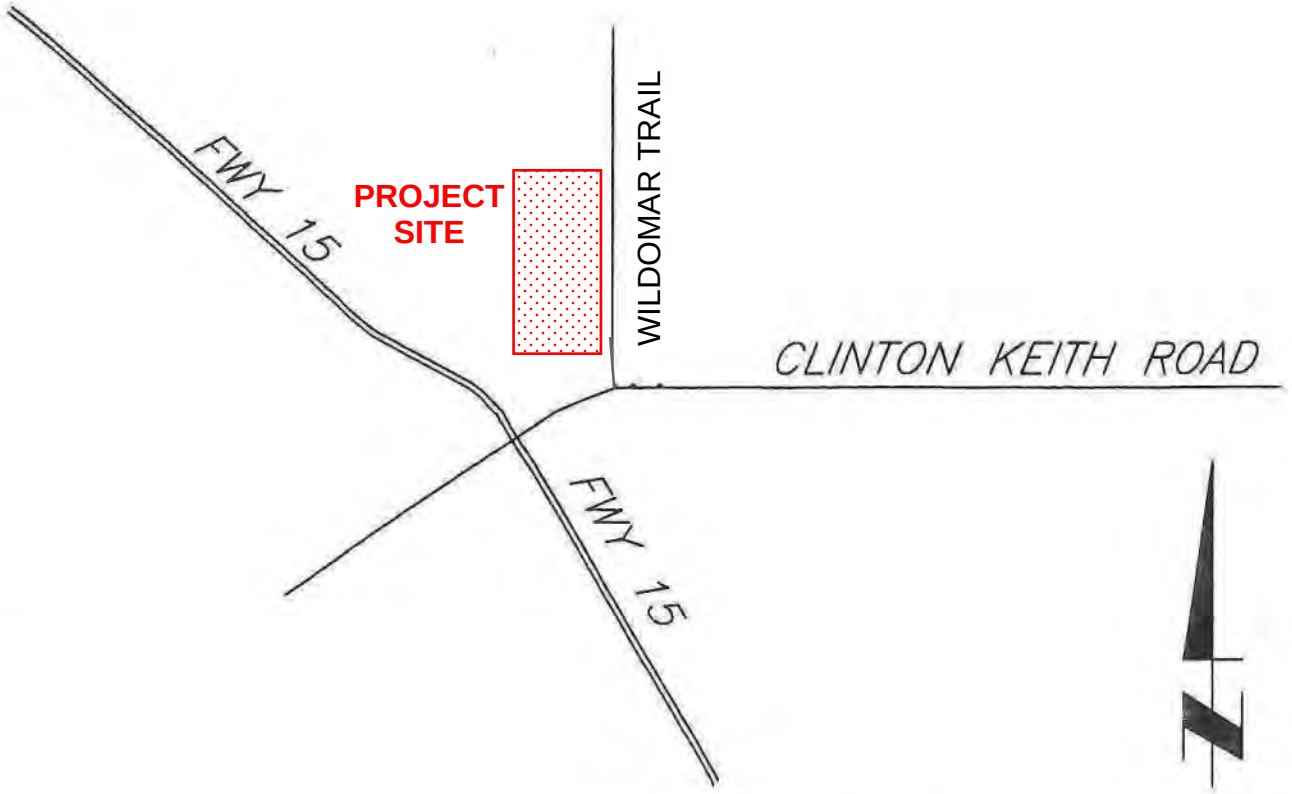
County	The abbreviation refers to the County of Riverside in this document.
CEQA	California Environmental Quality Act - a statute that requires state and local agencies to identify the significant environmental impacts of their actions and to avoid or mitigate those impacts, if feasible.
CIMIS	California Irrigation Management Information System - an integrated network of 118 automated active weather stations all over California managed by the California Department of Water Resources.
CWA	Clean Water Act - is the primary federal law governing water pollution. Passed in 1972, the CWA established the goals of eliminating releases of high amounts of toxic substances into water, eliminating additional water pollution by 1985, and ensuring that surface waters would meet standards necessary for human sports and recreation by 1983. CWA Section 402(p) is the federal statute requiring NPDES permits for discharges from MS4s.
CWA Section 303(d) Waterbody	Impaired water in which water quality does not meet applicable water quality standards and/or is not expected to meet water quality standards, even after the application of technology based pollution controls required by the CWA. The discharge of urban runoff to these water bodies by the Copermittees is significant because these discharges can cause or contribute to violations of applicable water quality standards.
Design Storm	The Regional MS4 Permit has established the 85th percentile, 24-hour storm event as the "Design Storm". The applicant may refer to Exhibit A to identify the applicable Design Storm Depth (D85) to the project.
DCV	Design Capture Volume (DCV) is the volume of runoff produced from the Design Storm to be mitigated through LID Retention BMPs, Other LID BMPs and Volume Based Conventional Treatment BMPs, as appropriate.
Design Flow Rate	The design flow rate represents the minimum flow rate capacity that flow-based conventional treatment control BMPs should treat to the MEP, when considered.
DCIA	Directly Connected Impervious Areas - those impervious areas that are hydraulically connected to the MS4 (i.e. street curbs, catch basins, storm drains, etc.) and thence to the structural BMP without flowing over pervious areas.
Discretionary Approval	A decision in which a Copermittee uses its judgment in deciding whether and how to carry out or approve a project.
District	Riverside County Flood Control and Water Conservation District.

DMA	A Drainage Management Area - a delineated portion of a project site that is hydraulically connected to a common structural BMP or conveyance point. The Applicant may refer to Section 3.3 for further guidelines on how to delineate DMAs.
Drawdown Time	Refers to the amount of time the design volume takes to pass through the BMP. The specified or incorporated drawdown times are to ensure that adequate contact or detention time has occurred for treatment, while not creating vector or other nuisance issues. It is important to abide by the drawdown time requirements stated in the fact sheet for each specific BMP.
Effective Area	Area which 1) is suitable for a BMP (for example, if infiltration is potentially feasible for the site based on infeasibility criteria, infiltration must be allowed over this area) and 2) receives runoff from impervious areas.
ESA	An Environmental Sensitive Area (ESA) designates an area "in which plants or animals life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would be easily disturbed or degraded by human activities and developments". (Reference: California Public Resources Code § 30107.5).
ET	Evapotranspiration (ET) is the loss of water to the atmosphere by the combined processes of evaporation (from soil and plant surfaces) and transpiration (from plant tissues). It is also an indicator of how much water crops, lawn, garden, and trees need for healthy growth and productivity
FAR	The Floor Area Ratio (FAR) is the total square feet of a building divided by the total square feet of the lot the building is located on.
Flow-Based BMP	Flow-based BMPs are conventional treatment control BMPs that are sized to treat the design flow rate.
FPPP	Facility Pollution Prevention Plan
HCOC	Hydrologic Condition of Concern - Exists when the alteration of a site's hydrologic regime caused by development would cause significant impacts on downstream channels and aquatic habitats, alone or in conjunction with impacts of other projects.
HMP	Hydromodification Management Plan – Plan defining Performance Standards for PDPs to manage increases in runoff discharge rates and durations.
Hydrologic Control BMP	BMP to mitigate the increases in runoff discharge rates and durations and meet the Performance Standards set forth in the HMP.
HSG	Hydrologic Soil Groups – soil classification to indicate the minimum rate of infiltration obtained for bare soil after prolonged wetting. The HSGs are A (very low runoff potential/high infiltration rate), B, C, and D (high runoff potential/very low infiltration rate)

Hydromodification	The Regional MS4 Permit identifies that increased volume, velocity, frequency and discharge duration of storm water runoff from developed areas has the potential to greatly accelerate downstream erosion, impair stream habitat in natural drainages, and negatively impact beneficial uses.
JRMP	A separate Jurisdictional Runoff Management Plan (JRMP) has been developed by each Copermittee and identifies the local programs and activities that the Copermittee is implementing to meet the Regional MS4 Permit requirements.
LID	Low Impact Development (LID) is a site design strategy with a goal of maintaining or replicating the pre-development hydrologic regime through the use of design techniques. LID site design BMPs help preserve and restore the natural hydrologic cycle of the site, allowing for filtration and infiltration which can greatly reduce the volume, peak flow rate, velocity, and pollutant loads of storm water runoff.
LID BMP	A type of stormwater BMP that is based upon Low Impact Development concepts. LID BMPs not only provide highly effective treatment of stormwater runoff, but also yield potentially significant reductions in runoff volume – helping to mimic the pre-project hydrologic regime, and also require less ongoing maintenance than Treatment Control BMPs. The applicant may refer to Chapter 2.
LID BMP Design Handbook	The LID BMP Design Handbook was developed by the Copermittees to provide guidance for the planning, design and maintenance of LID BMPs which may be used to mitigate the water quality impacts of PDPs within the County.
LID Bioretention BMP	LID Bioretention BMPs are bioretention areas are vegetated (i.e., landscaped) shallow depressions that provide storage, infiltration, and evapotranspiration, and provide for pollutant removal (e.g., filtration, adsorption, nutrient uptake) by filtering stormwater through the vegetation and soils. In bioretention areas, pore spaces and organic material in the soils help to retain water in the form of soil moisture and to promote the adsorption of pollutants (e.g., dissolved metals and petroleum hydrocarbons) into the soil matrix. Plants use soil moisture and promote the drying of the soil through transpiration. The Regional MS4 Permit defines "retain" as to keep or hold in a particular place, condition, or position without discharge to surface waters.
LID Biofiltration BMP	BMPs that reduce stormwater pollutant discharges by intercepting rainfall on vegetative canopy, and through incidental infiltration and/or evapotranspiration, and filtration, and other biological and chemical processes. As stormwater passes down through the planting soil, pollutants are filtered, adsorbed, biodegraded, and sequestered by the soil and plants, and collected through an underdrain.

LID Harvest and Reuse BMP	BMPs used to facilitate capturing Stormwater Runoff for later use without negatively impacting downstream water rights or other Beneficial Uses.
LID Infiltration BMP	BMPs to reduce stormwater runoff by capturing and infiltrating the runoff into in-situ soils or amended onsite soils. Typical LID Infiltration BMPs include infiltration basins, infiltration trenches and pervious pavements.
LID Retention BMP	BMPs to ensure full onsite retention without runoff of the DCV such as infiltration basins, bioretention, chambers, trenches, permeable pavement and pavers, harvest and reuse.
LID Principles	Site design concepts that prevent or minimize the causes (or drivers) of post-construction impacts, and help mimic the pre-development hydrologic regime.
MEP	Maximum Extent Practicable - standard established by the 1987 amendments to the CWA for the reduction of Pollutant discharges from MS4s. Refer to Attachment C of the Regional MS4 Permit for a complete definition of MEP.
MF	Multi-family – zoning classification for parcels having 2 or more living residential units.
MS4	Municipal Separate Storm Sewer System (MS4) is a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or designated and approved management agency under section 208 of the CWA that discharges to waters of the United States; (ii) Designated or used for collecting or conveying storm water; (iii) Which is not a combined sewer; (iv) Which is not part of the Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.26.
New Development Project	Defined by the Regional MS4 Permit as 'Priority Development Projects' if the project, or a component of the project meets the categories and thresholds described in Section 1.1.1.
NPDES	National Pollution Discharge Elimination System - Federal program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under Sections 307, 318, 402, and 405 of the CWA.
NRCS	Natural Resources Conservation Service

PDP	Priority Development Project - Includes New Development and Redevelopment project categories listed in Provision E.3.b of the Regional MS4 Permit.
Priority Pollutants of Concern	Pollutants expected to be present on the project site and for which a downstream water body is also listed as Impaired under the CWA Section 303(d) list or by a TMDL.
Project-Specific WQMP	A plan specifying and documenting permanent LID Principles and Stormwater BMPs to control post-construction Pollutants and stormwater runoff for the life of the PDP, and the plans for operation and maintenance of those BMPs for the life of the project.
Receiving Waters	Waters of the United States.
Redevelopment Project	The creation, addition, and or replacement of impervious surface on an already developed site. Examples include the expansion of a building footprint, road widening, the addition to or replacement of a structure, and creation or addition of impervious surfaces. Replacement of impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed, exposing underlying soil during construction. Redevelopment does not include trenching and resurfacing associated with utility work; resurfacing existing roadways; new sidewalk construction, pedestrian ramps, or bike lane on existing roads; and routine replacement of damaged pavement, such as pothole repair. Project that meets the criteria described in Section 1.
Runoff Fund	Runoff Funds have not been established by the Copermittees and are not available to the Applicant. If established, a Runoff Fund will develop regional mitigation projects where PDPs will be able to buy mitigation credits if it is determined that implementing onsite controls is infeasible.
San Diego Regional Board	San Diego Regional Water Quality Control Board - The term "Regional Board", as defined in Water Code section 13050(b), is intended to refer to the California Regional Water Quality Control Board for the San Diego Region as specified in Water Code Section 13200. State agency responsible for managing and regulating water quality in the SMR.
SCCWRP	Southern California Coastal Water Research Project
Site Design BMP	Site design BMPs prevent or minimize the causes (or drivers) of post-construction impacts, and help mimic the pre-development hydrologic regime.
SF	Parcels with a zoning classification for a single residential unit.
SMC	Southern California Stormwater Monitoring Coalition
SMR	The Santa Margarita Region (SMR) represents the portion of the Santa Margarita Watershed that is included within the County of Riverside.

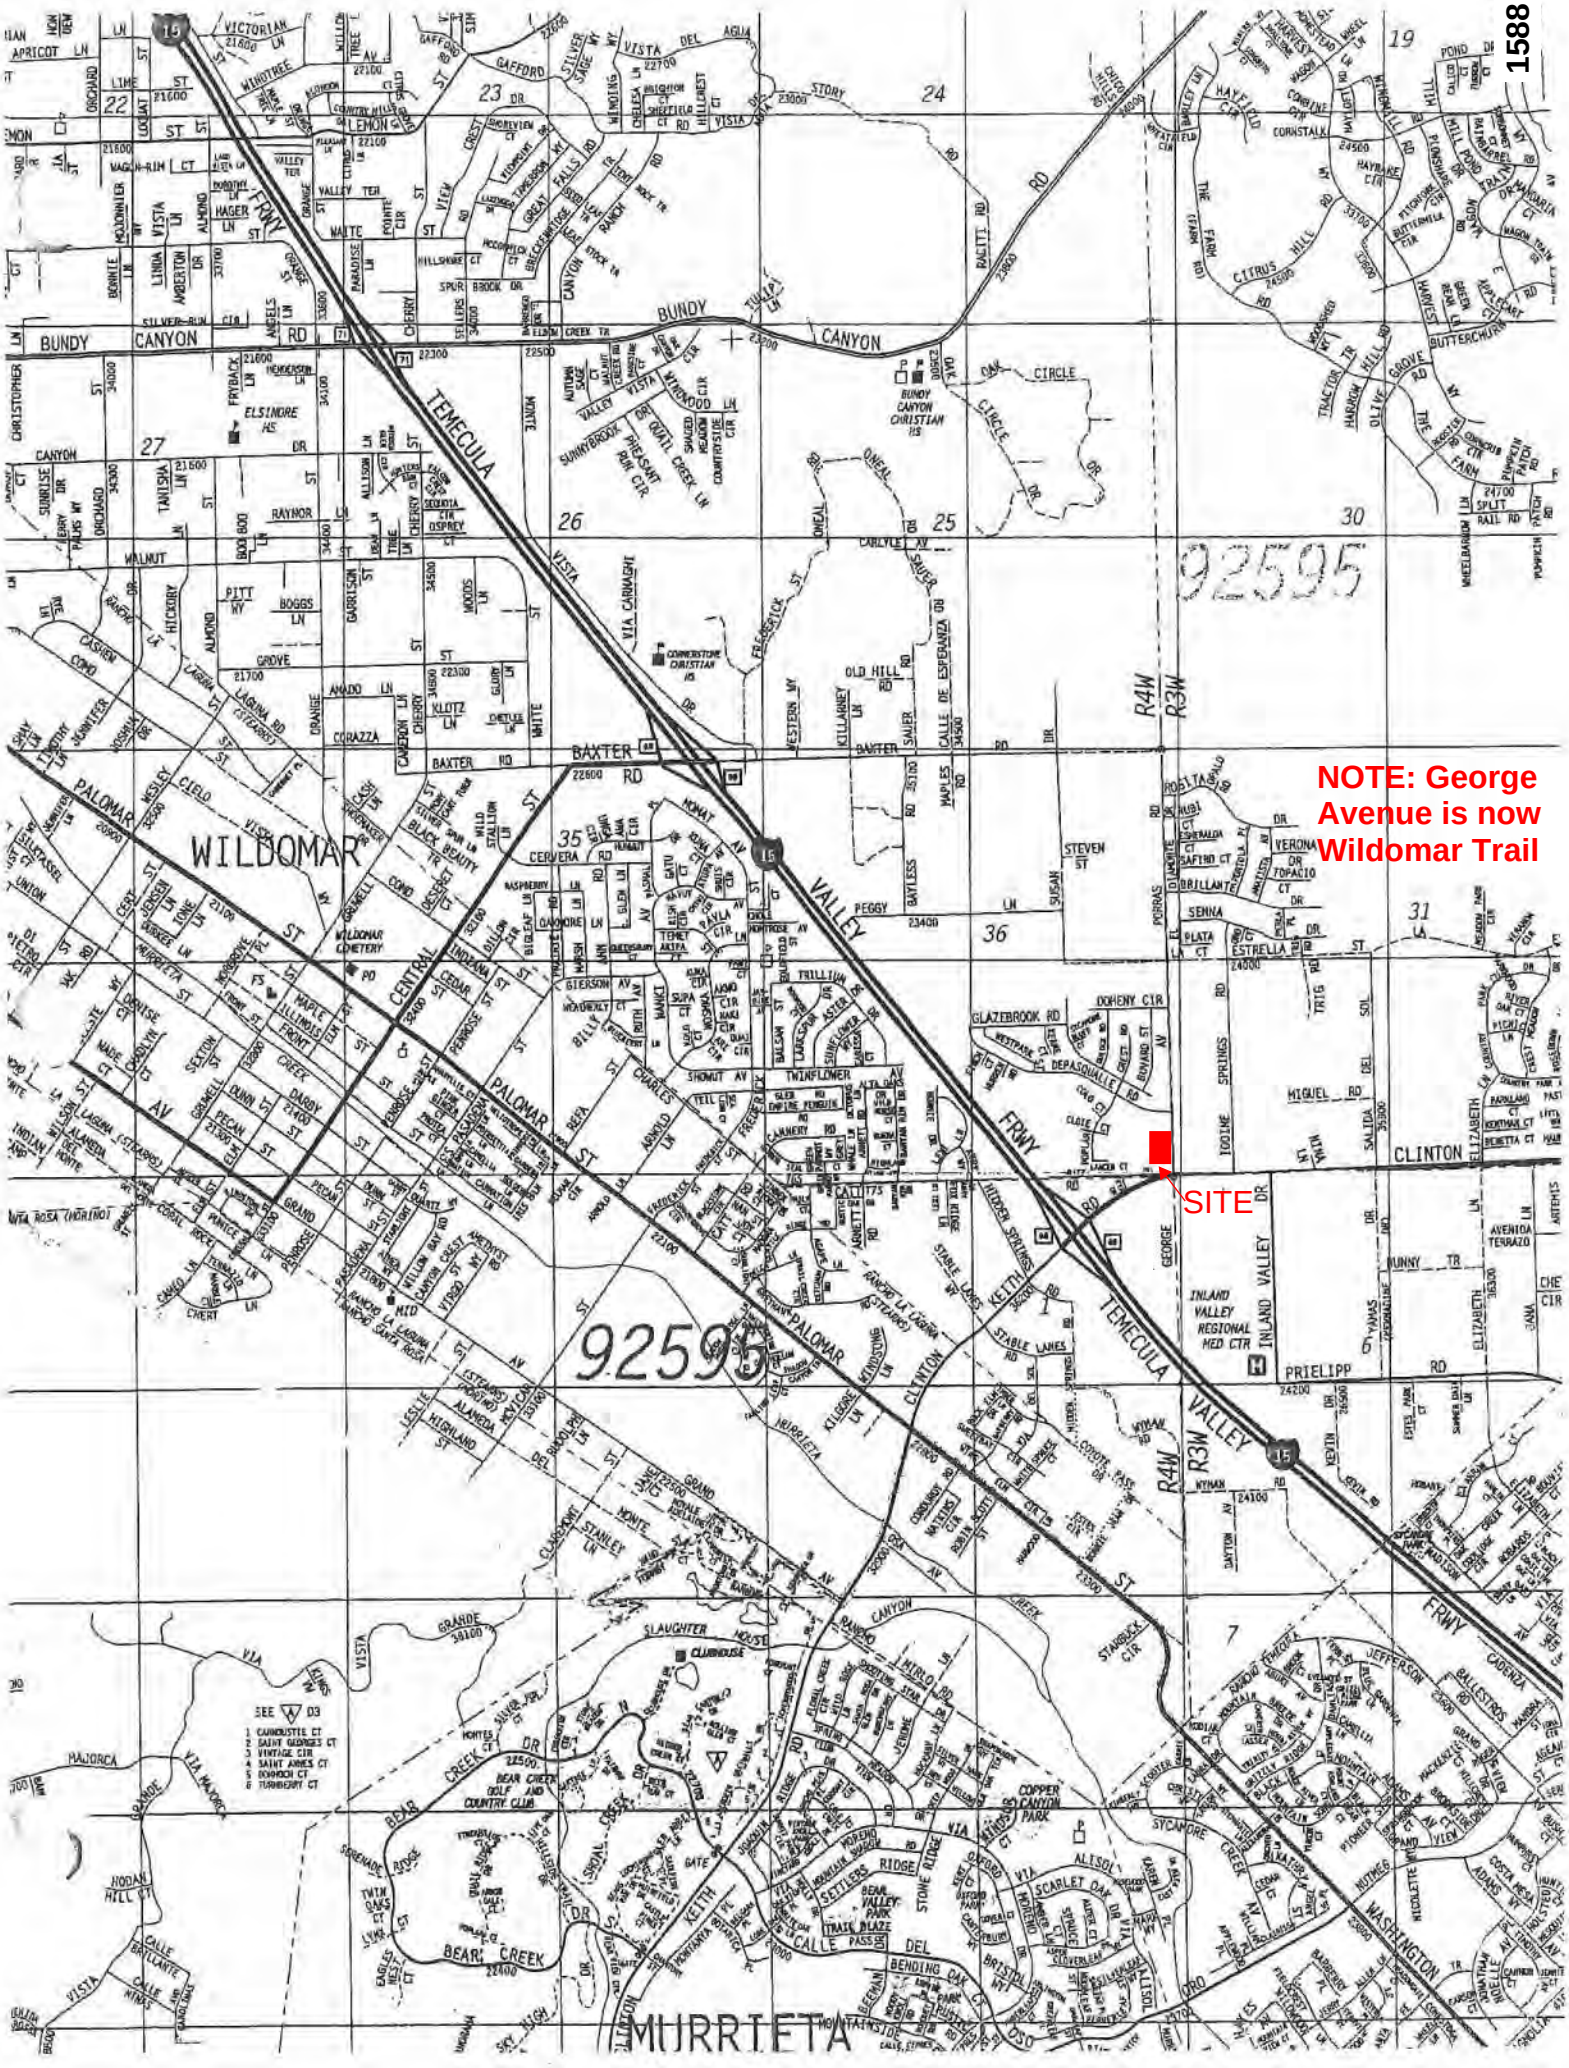


Source Control BMP	Source Control BMPs land use or site planning practices, or structural or nonstructural measures that aim to prevent runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between Pollutants and runoff.
Structural BMP	Structures designed to remove pollutants from stormwater runoff and mitigate hydromodification impacts.
SWPPP	Storm Water Pollution Prevention Plan
Tentative Tract Map	Tentative Tract Maps are required for all subdivision creating five (5) or more parcels, five (5) or more condominiums as defined in Section 783 of the California Civil Code, a community apartment project containing five (5) or more parcels, or for the conversion of a dwelling to a stock cooperative containing five (5) or more dwelling units.
TMDL	Total Maximum Daily Load - the maximum amount of a Pollutant that can be discharged into a waterbody from all sources (point and non-point) and still maintain Water Quality Standards. Under CWA Section 303(d), TMDLs must be developed for all waterbodies that do not meet Water Quality Standards after application of technology-based controls.
USEPA	United States Environmental Protection Agency
Volume-Based BMP	Volume-Based BMPs applies to BMPs where the primary mode of pollutant removal depends upon the volumetric capacity such as detention, retention, and infiltration systems.
WQMP	Water Quality Management Plan
Wet Season	The Regional MS4 Permit defines the wet season from October 1 through April 30.

Appendix 1: Maps and Site Plans

Location Map, WQMP Site Plan and Receiving Waters Map

Complete the checklist below to verify all exhibits and components are included in the Project-Specific WQMP. Refer Section 4 of the SMR WQMP and Section D of this Template.



Map and Site Plan Checklist
Indicate all Maps and Site Plans are included in your Project-Specific WQMP by checking the boxes below.
☒ Vicinity and Location Map
☒ Existing Site Map (unless exiting conditions are included in WQMP Site Plan)
☒ WQMP Site Plan
☒ Parcel Boundary and Project Footprint
☒ Existing and Proposed Topography & Drainage Management Areas (DMAs)
☒ Proposed Structural Best Management Practices (BMPs), with cross sections
☒ Drainage Paths
☒ Drainage infrastructure, inlets, overflows
☒ Source Control & Site Design BMPs (notes can be used for BMPs that can't be depicted)
☒ Buildings, Roof Lines, Downspouts
☒ Impervious Surfaces
☒ Pervious Surfaces (i.e. Landscaping)
☒ Standardized Labeling

NWC Clinton Keith Road and Wildomar Trail
Wildomar, California

In accordance with your request, we have performed a geotechnical exploration for the subject site located northwest of the intersection of Clinton Keith Road and Wildomar Trail in the City of Wildomar, California (see Figure 1). This report summarizes our geotechnical findings and provides preliminary recommendations for the design and construction of the proposed improvements. Based on the results of our exploration, it is our opinion that the site is suitable for the intended use provided the recommendations included in this report are implemented during the design and construction phases of development.

If you have any questions regarding this report, please do not hesitate to contact the undersigned. We appreciate this opportunity to be of service on this project.

Respectfully submitted,

1.0 INTRODUCTION

1.1 Purpose and Scope

This geotechnical exploration is for the proposed residential development located in the City of Wildomar, California (***see Figure 1, Site Location Map)***. Our scope of services for this exploration included the following:

- Review of available site-specific geologic information and conceptual site plans by AO Architects (residential) and GK Pierce (commercial).
- A site reconnaissance and excavation of 6 exploratory borings and 7 exploratory test pits. Approximate locations of these borings and test pits are depicted on Figure 2. The logs of borings are presented in Appendix A.
- Geotechnical laboratory testing of selected soil samples collected during this exploration. Test results are presented in Appendix B***.***
- Geotechnical engineering analyses performed as directed by a California registered Geotechnical Engineer (GE) and reviewed by a California Certified Engineering Geologist (CEG).
- Preparation of this report which presents our geotechnical conclusions and recommendations regarding the grading and design of the proposed structures.

This report is not intended to be used as an environmental assessment (Phase I or other), or foundation/grading plan review. A Phase 1 ESA for this project was prepared by Leighton under separate cover.

1.2 Site Description

As depicted on Figure 1, the 8.96-acre site is located north of Clinton Keith Road and west of Wildomar Trail in the City of Wildomar, California. The site is designated by Riverside County APNs 376-410-021 and 376-410-015, 016 and -017. A large portion of the site is undeveloped and vacant, with the western portion of the site occupied by a single family residence and ancillary out buildings. Review of historic aerial photographs indicate that the residence was built sometime between 1938 and 1967, and that there were previous additional barn-type structures to the north of the residence on the property. Review of these aerial photos (and field reconnaissance) also indicates that one large and multiple smaller end-dumped stockpiles were placed on the central and southern portions of the site circa 2009. The general area of the project site is underlain by sedimentary bedrock formation (Pauba Formation), locally mantled by younger alluvium and topsoil. Site vegetation is generally sparse and

consists of seasonal weeds and grasses with several mature trees in the northeastern portion of the site.

1.3 Project Description

We understand that proposed site improvements involve mixed-use development with multifamily residential construction on the western portion of the site and commercial retail within the eastern portion (see Figure 2). The residential development includes five (5), two to three-story apartment buildings, a community club house, and associated driveways, parking and drainage structures. The commercial development includes a Major store with attached shop (~27,160 sq.ft) in the northeastern part of the site and two drive-thru restaurants (~3,000 to 3,600 sq. ft.) located in the southeastern portion of the site along Clinton Keith. Grading plans were not available at the time of this evaluation. However, based on the provided conceptual site plan and existing topography, future grading is expected to be moderate with maximum cuts and fills in the order of 10 to 15 feet plus remedial grading, where applicable. Cut or fill slopes, if proposed, are expected to be constructed at 2:1 (horizontal to vertical) inclinations or flatter.

2.0 FIELD EXPLORATION AND LABORATORY TESTING

2.1 Field Exploration

Our field exploration consisted of the excavation of six (6) borings within the site and seven (7) backhoe trenches. During the drilling exploration, in-situ undisturbed (Cal Ring), standard penetration test (SPT) and disturbed/bulk samples were collected from the borings for further laboratory testing and evaluation. Approximate locations of these exploratory borings and trenches are depicted on the ***Geotechnical Map*** (Figure 2). Sampling was conducted by a senior staff engineer and engineering geologist from our firm. After logging and sampling, the excavations were backfilled with spoils generated during excavation. The exploration logs from this exploration investigation are included in Appendix A.

2.2 Laboratory Testing

Laboratory tests were performed on representative samples to provide a basis for development of remedial earthwork and geotechnical design parameters. The laboratory testing program included expansion index, in-situ moisture and density, R-value, collapse potential, and corrosion characteristics. The results of our laboratory testing from this exploration are presented in Appendix B.

3.0 GEOTECHNICAL AND GEOLOGIC FINDINGS

3.1 Regional Geology

The site is located within a prominent natural geomorphic province in southwestern California known as the Peninsular Ranges. This region is characterized by steep, elongated ranges and valleys that trend generally northwestward. More specifically, the site is located within the southwestern portion of the relatively stable Perris Block, adjacent to the Elsinore Trough (Kennedy, 1977).

The Perris Block, approximately 20 miles by 50 miles in extent, is bounded by the San Jacinto Fault Zone to the northwest, the Elsinore Fault Zone to the southwest, the Cucamonga Fault Zone to the northwest, and the Temecula Basin to the southeast. The Perris Block has had a complex tectonic history, apparently undergoing relative vertical land-movements of several thousand feet in response to movement on the Elsinore and San Jacinto Fault Zones. Sedimentary and volcanic materials locally mantle crystalline bedrock. With alluvial deposits filling the lower valley areas.

3.2 Site Specific Geology

The earth materials encountered on site during this investigation consisted of undocumented artificial fill, alluvium, and the sandstone member of the Pleistocene-age Pauba Formation (Figure 3). These units are discussed in the following sections in order of increasing depth and relative age.

- **Undocumented Artificial Fill (Afu):** Undocumented fill soils were observed at several locations within the subject site. The majority of the undocumented fill forms a large central stock pile and multiple smaller end dump piles within the central and southern portions of the site (see Figure 2). While the undocumented fill soil appears to be composed of materials derived from surrounding development, the presence of imported materials or rock/debris within these fills cannot be ruled out at this time. Additional localized fill soil is likely present in the areas surrounding previous residences and out-buildings/structures. Surface accumulations of artificial fill less than approximately 3 feet may not be depicted on Figure 2. These undocumented fills are considered unsuitable for support of additional fill and/or structural improvements in their current setting and should be completely removed during rough-grading operations. Clean undocumented fill soils, free of deleterious material may be reused as compacted fill provided they are placed in general accordance with the recommendations provided in Appendix C. Vegetation, trash and debris, where encountered, should also be removed from the site.

- **Topsoil/Colluvium (not a mapped unit):** Thin deposits of weathered topsoil and slope wash mantle the elevated portions of the site. Where present, these deposits generally consist of silty/clayey sand (SM/SC) to sandy clay (CL) and expected to extend to a maximum depth of 3 feet. The topsoil and colluvium are considered unsuitable in their present state and should be removed to competent underlying deposits per the recommendations of section 4.2.1 in this report. Free of deleterious materials these deposits can be reused as fill soils during grading. Based on the results of our laboratory testing, these materials are expected to possess low expansion potential (EI<51).

- **Quaternary Alluvium (Qal):** Alluvium was observed infilling the bottom of the drainage present within the eastern parts of the site. The alluvium appears to be composed of clayey sand (SC) to silty sand (SM) occasional sandy clay layers (CL). Based on the results of our laboratory testing, these materials are expected to possess low expansion potential (EI<51) in the upper 5 to 10 feet. Due to the potentially compressible nature of the near-surface alluvium (upper ~5 to 7 feet), these deposits are considered unsuitable for support of settlement-sensitive structures and/or structural fill in their present condition.

- **Pauba Formation (Qps):** The bedrock material (Pauba Formation) is expected to underlie the site and will be exposed at the surface in future cut (western) portions of site. This unit generally consists of medium-dense to very dense, well graded sands (SW) and clayey silty sands (SM) with interbedded sandy silt/clay (CL/ML). Based on the results of our laboratory testing, this unit appears to generally possess very low to low expansion potential (EI<51) and low collapse potential (collapse<1%)

3.3 Groundwater and Surface Water

Groundwater was encountered within one of our borings at a depth of 42.6 feet below surface grade (BGS). Surface water is not anticipated to be encountered during grading. However, it should be noted that locally perched water conditions may occur in the future, and may fluctuate seasonally, depending on rainfall conditions. Surface water was not observed during this study; however, surface water should be expected during inclement weather within the onsite natural drainage channel.

3.4 Regional Faulting and Fault Activity

The subject site, like the rest of Southern California, is located within a seismically active region as a result of being located near the active margin between the North American and Pacific tectonic plates. The principal source of seismic activity is movement along the northwest-trending regional fault systems such as the San Andreas, San Jacinto, and Elsinore Fault Zones. Based on published geologic

hazard maps, this subject site is not located within a currently designated Alquist-Priolo (AP) Earthquake Fault Zone. The project site is located approximately 0.63 miles northeast of the closest Alquist-Priolo Earthquake Fault Zone. However, the subject site is located within a mapped Riverside County Fault Hazard zone. Previous mapping on adjacent properties has identified an earthquake fault in the northeastern portion of this site (Leighton, 2005, 2006, 2021). As presented on the conceptual site plan (Figure 2), habitable buildings are located (set back) in excess of 50 feet from the mapped trace of the identified fault per the approved fault hazard report (Leighton, 2021).

3.5 Ground Shaking and Seismic Coefficients per 2019 CBC

Strong ground shaking can be expected at the site during moderate to severe earthquakes in this general region. This is common to virtually all of Southern California. Intensity of ground shaking at a given location depends primarily upon earthquake magnitude, site distance from the source, and site response (soil type) characteristics.

Based on our explorations and review, the site is underlain by shallow dense fill and alluvial materials underlain by dense Pauba formation. As such, the site is classified as a Class C site, and in accordance with ASCE 7-16 as the Design Code Reference Document, the 2019 CBC seismic coefficients are listed in table below. These seismic coefficients are generated based on interactive tools/programs currently available on USGS website and/or OSHPD seismic maps.

Table 1. 2019 CBC Seismic Coefficients per USGS General Procedure

CBC Categorization/Coefficient	Design Value
Site Latitude	**33.5985**
Site Longitude	**-117.2416**
Site Class Definition	**C**
Mapped Spectral Response Acceleration at 0.2s Period, S_s	**1.65 g**
Mapped Spectral Response Acceleration at 1s Period, S_1	**0.62 g**
Short Period Site Coefficient at 0.2s Period, F_a	**1.2**
Long Period Site Coefficient at 1s Period, F_v	**1.4**
Adjusted Spectral Response Acceleration at 0.2s Period, S_{MS}	**1.97 g**
Adjusted Spectral Response Acceleration at 1s Period, S_{M1}	**0.86 g**
Design Spectral Response Acceleration at 0.2s Period, S_{DS}	**1.32 g**
Design Spectral Response Acceleration at 1s Period, S_{D1}	**0.57 g**

g = Gravity acceleration

The results of the analysis also indicate that the adjusted Peak Ground Acceleration (PGA_M) for this site is 0.87 g.

3.6 Secondary Seismic Hazards

Ground shaking can induce "secondary" seismic hazards such as liquefaction, dynamic densification, and ground rupture, as discussed in the following subsections:

3.6.1 Dynamic Settlement (Liquefaction and/or Dry Settlement)

The site is mapped as located within a Low to Moderate Riverside County Liquefaction Hazard zone. Based on the results of our subsurface borings, observations and the geotechnical recommendations presented herein, the loose near surface soils (susceptible to liquefaction) on the site will be completely removed and recompacted during remedial grading. Thus, potential for liquefaction or dynamic settlement to occur on this site is considered very low.

Compacted fill soils above the ground water elevation that are primarily granular in nature (sand), may be susceptible to dynamic settlement or densification if shaken by the design level earthquake. This hazard is considered very low at this site. As such, the differential settlement is expected to be less than 0.5-inch in a 40-foot horizontal distance within this site.

3.6.2 Ground Rupture

Previous mapping on adjacent properties has identified an earthquake fault projecting across the northeastern portion of this site (Leighton, 2005, 2006, 2021). Habitable building locations, as presented on the conceptual site plan in place at the time of this evaluation are located (set back) in excess of 50 feet from the mapped trace of the identified fault. Given the aforementioned setbacks, surface rupture hazard to buildings are considered very low in the event of movement on the mapped fault.

3.6.3 Rock Falls

The potential for rock fall due to either erosion or seismic ground shaking is considered non-existent in this area.

3.6.4 Seiches, Tsunamis, Inundation Due to Large Water Storage Facilities

Due to the great distance to large bodies of water, the possibility of seiches and tsunamis impacting the site is considered remote.

3.6.5 Slope Stability and Landslides

The existing slopes are considered grossly stable. Due to the relatively moderate relief across the site and anticipated graded slope heights, the risk of deep-seated slope failure on this site or adjacent sites is considered low. The site is not considered susceptible to seismically induced landslides.

3.6.6 Subsidence

In accordance with County of Riverside Geologic Hazard Maps, the site is located within an active subsidence area. However, due to the previous grading (Leighton 2004), we consider the potential for differential subsidence and ground fissuring on this site to be very low.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 General

The proposed site development appears feasible from a geotechnical viewpoint provided that the following recommendations are incorporated into the design and construction phases of development. The main geotechnical concern is the potential for differential settlement along portions of the proposed buildings where subgrade transitions from dense Pauba subgrade into fill subgrade. As such, special remedial grading recommendations are provided below so differential settlement is kept to tolerable limits.

4.2 Earthwork

Earthwork should be performed in accordance with the following recommendations and the ***Earthwork and Grading Specifications*** included in Appendix C of this report. In case of conflict, the following recommendations supersede those in Appendix C. The contract between the Owner and the earthwork contractor should be worded such that it is the responsibility of the contractor to place fill properly and in accordance with recommendations presented in this report, including the guide specifications in Appendix C, and the testing and observation of the geotechnical consultant.

4.2.1 Remedial Grading

Prior to grading, the proposed structural improvement areas (i.e. all structural fill areas, pavement areas, buildings, etc.) of the site should be cleared of surface and subsurface obstructions, heavy vegetation, roots and debris. These deleterious materials should be disposed of offsite. Septic tanks, cesspool, and water wells, if encountered, should be removed or abandoned in accordance with the Riverside County Department of Health Services guidelines.

An actual grading plan was not available at the time of preparing this report. However, we anticipate that there will be conventional cut and fill grading at the site to create building pads. Removal of unsuitable compressible materials should be anticipated in the proposed cut and fill areas. Unsuitable materials will consist of topsoil/ colluvium, all undocumented fill, and the upper 3 to 7 feet of alluvium. For preliminary planning purposes, the removal depth as indicated on figure 2 will be on the order of 3 to 5 feet below existing grades for most of the residential site and western portion of the commercial site. The removal depth is expected to be 5 to 7 feet below existing grade for settlement-sensitive

structures within the eastern portion of the commercial site. Removal depth or over-excavation need not to exceed 3 feet in parking areas.

Localized deeper "pockets" of unsuitable material may be encountered such as the central eastern portion of the site where undocumented fills may reside on top of compressible alluvium. The over excavation bottoms should be reviewed by a representative of the geotechnical consultant. The excavation bottoms exposing moderately dense Pauba Formation or Alluvium should be processed and moisture conditioned prior to placement of fill soils.

If design grades create cut/fill transitions, over-excavation of the cut portion of the transition pads to a minimum of 3 feet below pad grade may be desired during rough grading. This over-excavation does not include scarification or pre-processing prior to addition of fill placements. Over-excavation limits should extend to approximately 10 feet outside of proposed building “footprints”. Actual limits can be determined during rough grading operations. We recommend that transition pads be overexcavated during rough-grading operations.

After completion of the recommended removal of unsuitable soils, and over-excavation of transition pads, the approved surface should be scarified a minimum of 8-inches, moisture conditioned as necessary to near optimum and compacted.

4.2.2 Structural Fills

The onsite soil is generally suitable for reuse as compacted fill, provided it is substantially free of organic materials, expansive soil, debris, and oversize material (greater than 6 inches in greatest dimension). Topsoil and vegetation layers, root zones, and similar surface materials should be striped and stockpiled or removed from the site. The optimum lift thickness to produce a uniformly compacted fill will depend on the soil and the type and size of compaction equipment used. In general, fill should be placed in uniform lifts not exceeding 8 inches in thickness. Fill soil should be placed and compacted to a minimum 90 percent relative compaction (as determined by ASTM Test Method D1557) and at or above the optimum moisture content.

Placement and compaction of fill should be performed in accordance with the City Grading Ordinances and the recommendations in Appendix C, under the full-time observation and testing of the geotechnical engineer. Import fill soil with an expansion index greater than 21 should not be used in the upper 3 feet of subgrade soil below building pads. If cobbles and boulders larger than 6-inches in largest diameter are encountered or produced during grading, these oversized cobbles and boulders should be reduced to less than 6 inches or placed in structural fill as outlined in Appendix C.

4.2.3 Slope Construction

If applicable, fill slope keyways will be necessary at the toe of all fill slopes placed beyond the areas of existing fill and at fill-over-cut contacts. Keyway schematics, including dimensions and subdrain recommendations, are provided in Appendix C. All keyways should be excavated into dense existing fill or Pauba formation as determined by the geotechnical engineer. The cut portions of all slope and keyway excavations should be geologically mapped and approved by a geologist prior to fill placement.

Compacted fill or cut slopes up to 20 feet in height at 2:1 (horizontal:vertical) or flatter are considered grossly stable for static and pseudostatic conditions. Higher or steeper slopes should be subject to further review and evaluation.

The outer portion of fill slopes should be either overbuilt by 2 feet (minimum) and trimmed back to the finished slope configuration or compacted in vertical increments of 5 feet (maximum) by a weighted sheepsfoot roller as the fill is placed. The slope face should then be track-walked by dozers of appropriate weight to achieve the final slope configuration and compaction of the slope face.

Slope faces are inherently subject to erosion, particularly if exposed to rainfall and irrigation. Landscaping and slope maintenance should be conducted as soon as possible in order to increase long-term surficial stability. Berms and or v-ditch drainage devices should be provided at the top of all slopes. Drainage should be directed such that surface runoff on the slope face is minimized.

4.2.4 Import Soils

Import soil and/or borrow sites, if needed, should be evaluated by us prior to import. Import soil should be uncontaminated, granular in nature, free of organic material (loss on ignition less-than 2 percent), have very low expansion potential (E<21) and have a low corrosion impact to the proposed improvements.

4.2.5 Utility Trenches

Utility trenches should be backfilled with compacted fill in accordance with Sections 306-6 and 306-12 of the ***Standard Specifications for Public Works Construction,*** ("Greenbook"), 2021 Edition. Fill material above the pipe zone should be placed in lifts not exceeding 8 inches in uncompacted thickness and should be compacted to at least 90 percent relative compaction (ASTM D 1557) by mechanical means only. Site soil may generally be suitable as trench backfill provided the soil is screened of rocks over 1½ inch in diameter and organic matter. If imported sand is used as backfill, the upper 3 feet in building and pavement areas should be compacted to 95 percent. The upper 6 inches

of backfill in all pavement areas should be compacted to at least 95 percent relative compaction.

Where granular backfill is used in utility trenches adjacent moisture sensitive subgrades and foundation soil, we recommend that a cut-off "plug" of impermeable material be placed in these trenches at the perimeter of buildings, and at pavement edges adjacent to irrigated landscaped areas. A "plug" can consist of a 5-foot long section of clayey soil with more than 35-percent passing the No. 200 sieve, or a Controlled Low Strength Material (CLSM) consisting of one sack of Portland-cement plus one sack of bentonite per cubic-yard of sand. CLSM should generally conform to requirements of the "Greenbook". This is intended to reduce the likelihood of water permeating trenches from landscaped areas, then seeping along permeable trench backfill into the building and pavement subgrades, resulting in wetting of moisture sensitive subgrade soil under buildings and pavements.

Excavation of utility trenches should be performed in accordance with the project plans, specifications and the ***California Construction Safety Orders*** (latest Edition). The contractor should be responsible for providing a "competent person" as defined in Article 6 of the ***California Construction Safety Orders***. Contractors should be advised that sandy soil could make excavations particularly unsafe if all safety precautions are not properly implemented. In addition, excavations at or near the toe of slopes or parallel to slopes may be highly unstable due to the increased driving force and load on the trench wall. Spoil piles from the excavation(s) and construction equipment should be kept away from the sides of the trenches. Leighton and Associates, Inc. (Leighton) does not consult in the area of safety engineering.

4.2.6 Temporary Slope Stability

Existing site soil and/or fill derived from onsite soil should be considered as OSHA soil Type C. Therefore, unshored temporary cut slopes should be no steeper than 1½:1 (horizontal:vertical), for a height no-greater-than 20 feet (California Construction Safety Orders, Subchapter 4, Section 1541.1, Table B-1). During construction, exposed soil conditions should be regularly evaluated to verify that conditions are as anticipated. The contractor should be responsible for providing the "competent person" required by OSHA standards to evaluate soil conditions. Close coordination between the competent person and geotechnical consultant should be maintained to facilitate construction while providing safe excavations.

4.2.7 Shrinkage

The volume change of excavated on-site soils upon recompaction is expected to vary with material type, density, in situ moisture content, location, and compaction effort. The in-place and compacted densities of soil vary and

accurate overall determination of shrinkage and bulking cannot be made. Therefore, we recommend site grading include, if possible, a balance area or ability to adjust grades slightly to accommodate some variation. Based on our geotechnical laboratory test results, we expect recompaction shrinkage (when recompacted to an average 92 percent of ASTM D 1557) of 5- to 15-percent by volume for the alluvium or Pauba formation.

4.2.8 Drainage

All drainage should be directed away from structures, slopes and pavements by means of approved permanent or temporary drainage devices. Adequate storm drainage of any proposed pad should be provided to avoid wetting of the foundation soil. Irrigation adjacent to buildings should be avoided when possible. As an option, sealed-bottom planter boxes or drought resistant vegetation should be used within 5-feet of buildings.

4.3 Foundation Design

Shallow spread or continuous wall footings bearing on a newly placed properly compacted fill are anticipated for the proposed structures.

4.3.1 Design Parameters – Spread/Continuous Shallow Footings

Footings should be embedded at least 12-inches below lowest adjacent grade for the proposed structures. Footing embedment should be measured from lowest adjacent finished grade, considered as the top of interior slabs-on-grade or the finished exterior grade, excluding landscape topsoil, whichever is lower. Footings located adjacent to utility trenches or vaults should be embedded below an imaginary 1:1 (horizontal:vertical) plane projected upward and outward from the bottom edge of the trench or vault, up towards the footing.

- **Bearing Capacity**: For footings founded on properly compacted fill soil, an allowable vertical bearing capacity of 2,000 pounds-per-square-foot (psf) should be used. The bearing pressure value may be increased by 250 psf for each additional foot of embedment or each additional foot of width to a maximum vertical bearing value of 3,000 psf. These bearing values may be increased by one-third when considering short-term seismic or wind loads. All continuous perimeter or interior footings should be reinforced with at least one No. 5 bar placed both top and bottom.

- **Lateral loads**: Lateral loads may be resisted by friction between the footings and the supporting subgrade. A maximum allowable frictional resistance of 0.35 may be used for design. In addition, lateral resistance may be provided by passive pressures acting against foundations poured neat against properly compacted granular fill. We recommend that an allowable passive pressure based on an equivalent fluid pressure of

350 pounds-per-cubic-foot (pcf) be used in design. These friction and passive values have already been reduced by a factor-of-safety of 1.5.

Slab-on-grade floors utilized with conventional foundations should be designed with a minimum thickness as indicated by the project structural engineer consistent with a modulus of subgrade reaction of 200 pounds-per-square-inch per inch (pci) and reinforced in accordance with the structural engineer's recommendations.

4.3.2 Post-Tension Slab-on-Grade Design

Per Section 1808.6.2 of the 2019 California Building Code, slab-on-grade design for expansive soils (EI>21) should be designed in accordance with WRI/CRSI Design of Slab-On-Ground Foundations or PTI DC 10.5 or any other approved method taking into consideration the anticipated differential movement (ym) and/or differential settlement provided in Section 4.3.4 of this soils report.

PTI Design Category 1 may be applied to lots with an Expansion Index (EI) less than 51 (or PI<20). The following PTI design parameters were derived using VOLFLO 1.5 computer program developed by Geostructural Tool Kit, Inc. and the laboratory test results summarized above:

Table 2. PTI Design Parameters

	Category I (EI<51 & PI<20)
Edge Moisture Variation, e_m	
Center Lift	9.0 feet
Edge Lift	5.1 feet
Differential Swell, y_m	
Center Lift - Shrink	0.46 inches
Edge Lift - Swell	0.88 inches

4.3.3 Vapor Retarder

A moisture retarder should be installed underneath all slabs where moisture condensation is undesirable. The vapor retarder should be sealed at all penetrations and laps and properly installed in accordance with the recommendations of the architect, concrete subcontractor, and the manufacturer's recommendations. Moisture vapor retarders may retard but not eliminate moisture vapor movement from the underlying soils up through the slabs. Moisture vapor transmission may be additionally reduced by use of concrete additives. A slipsheet or equivalent should be utilized above the concrete slab if crack-sensitive floor coverings (such as ceramic tiles, etc.) are to be placed directly on the concrete slab

It has been a standard of care to place a 10-mil Visqueen moisture retarder (or equivalent) underneath all moisture sensitive slabs. This moisture retarder is typically covered by a 2-inch layer of sand (SE of 30 or greater) to reduce curling. Visqueen sheets should overlap at least 6-inches. If storage of moisture sensitive records (files) or floor coverings (e.g. vinyl tile, etc.) are to be used, additional moisture mitigation measures may be employed within or beneath concrete slab-on-grade floors. Moisture retarders do not completely eliminate moisture vapor movement from the underlying soils up through the slabs or from the unbonded water in the concrete. To further reduce moisture vapor emissions that may result in delamination and other tile damage, we recommend that a moisture retarder specialist be consulted.

4.3.4 Settlement Estimates

For settlement estimates, we assumed that column loads will be no larger than 90 kips, with bearing wall loads not exceeding 10 kips per foot of wall. If greater column or wall loads are required, we should re-evaluate our foundation recommendation, and re-calculate settlement estimates.

Buildings located on properly compacted fill soils as required per Section 4.2 should be designed in anticipation of 1 inch of total settlement and 1/2-inch of differential settlement within a 40-foot horizontal run.

4.4 Footing Setback

We recommend a minimum horizontal setback distance from the face of slopes for all structural footings (retaining and decorative walls, building footings, etc.). This distance is measured from the outside bottom edge of the footing horizontally to the slope face (or to the face of a retaining wall) and should be a minimum of H/2, where H is the slope height (in feet). The setback should not be less than 7 feet and need not be greater than 20 feet for this project.

Note that the soils within the structural setback area possess poor lateral stability and improvements (such as retaining walls, sidewalks, fences, pavements, etc.) constructed within this setback area may be subject to lateral movement and/or differential settlement. Potential distress to such improvements may be mitigated by providing a deepened footing or a pier and grade-beam foundation system to support the improvement. The deepened footing should meet the setback as described above.

4.5 Retaining Walls

Retaining wall earth pressures are a function of the amount of wall yielding horizontally under load. If the wall can yield enough to mobilize full shear strength

of the backfill soil, then the wall can be designed for "active" pressure. If the wall cannot yield under the applied load, the shear strength of the soil cannot be mobilized and the earth pressure will be higher. Such walls should be designed for "at rest" conditions. If a structure moves toward the soils, the resulting resistance developed by the soil is the "passive" resistance. Retaining walls backfilled with non-expansive soils can be designed using the following equivalent fluid pressures:

Table 3. Retaining Wall Design Earth Pressures (Static, Drained)

Loading Conditions	Equivalent Fluid Density (pcf)	
	Level Backfill	2:1 Sloped Backfill
Active	35	55
At-Rest	55	75
Passive*	300	150 (2:1, sloping down)

* This assumes level condition in front of the wall will remain for the duration of the project, not to exceed 3,500 psf at depth.

Unrestrained (yielding) cantilever walls should be designed for the active equivalent-fluid weight value provided above for very low to low expansive soils that are free draining (see Appendix C for typical drainage). In the design of walls restrained from movement at the top (non-yielding) such as basement or elevator pit/utility vaults, the at-rest equivalent fluid weight value should be used. Total depth of retained earth for design of cantilever walls should be measured as the vertical distance below the ground surface measured at the wall face for stem design, or measured at the heel of the footing for overturning and sliding calculations. Should a sloping backfill other than a 2:1 (horizontal:vertical) be constructed above the wall (or a backfill is loaded by an adjacent surcharge load), the equivalent fluid weight values provided above should be re-evaluated on an individual case basis by us. Non-standard wall designs should also be reviewed by us prior to construction to check that the proper soil parameters have been incorporated into the wall design.

All retaining walls should be provided with appropriate drainage. The outlet pipe should be sloped to drain to a suitable outlet. Wall backfill should be non-expansive (EI $\leq$ 21) sands compacted by mechanical methods to a minimum of 90 percent relative compaction (ASTM D 1557). Walls should not be backfilled until wall concrete attains the 28-day compressive strength and/or as determined by the Structural Engineer that the wall is structurally capable of supporting backfill. Lightweight compaction equipment should be used, unless otherwise approved by the Structural Engineer.

4.6 Sulfate Attack

The result of our laboratory testing on a soil sample taken from the site showing a low exposure to sulfate attack is included in Appendix B. Further testing should be performed at the completion of site grading to confirm soluble-sulfate content in on-site subgrade soil.

4.7 Preliminary Pavement Design

The preliminary pavement design provided below is based on the design procedures included in Caltrans Highway Design Manual and an R-value of 5. For planning and estimating purposes, the pavement sections are calculated based on assumed Traffic Indexes (TI) and design criteria of 20-year life span.

Table 4. Preliminary Asphalt Pavement Sections

General Traffic Condition	Traffic Index (TI)	Hot Mix Asphalt HMA (ft.)	Aggregate Base* AB (ft.)
Interior Auto Parking	4.5	0.25	0.81
Interior Access Roadways	5.0	0.25	0.86
Truck Access & Driveways	6.0	0.33	1.16
Truck Access & Driveways	7.0	0.33	1.56

The applicable Traffic Index (TI) should be designated by the project civil engineer and actual R-values of the subgrade soils should be verified after completion of site grading to finalize the pavement design.

The upper 6 inches of pavement area subgrade soils should be moisture-conditioned to near optimum moisture content, compacted to at least 95 percent relative compaction (ASTM D 1557) and kept in this condition until the pavement section is constructed. Minimum relative compaction requirements for aggregate base should be 95 percent of the maximum laboratory density as determined by ASTM D 1557. Aggregate base should conform to Greenbook or Caltrans Class 2 aggregate base.

If pavement areas are adjacent to heavily watered landscape areas, some deterioration of the subgrade load bearing capacity may result. Moisture control measures such as deepened curbs or other moisture barrier materials may be used to prevent the subgrade soil from becoming saturated. The use of concrete cutoff or edge barriers should be considered when pavement is planned adjacent to either open (unfinished) or irrigated landscaped areas.

5.0 GEOTECHNICAL CONSTRUCTION SERVICES

Geotechnical review is of paramount importance in engineering practice. Poor performance of many foundation and earthwork projects has been attributed to inadequate construction review. We recommend that Leighton be provided the opportunity to review the grading and foundation plans prior to bid.

Reasonably-continuous construction observation and review during site grading and foundation installation allows for evaluation of the actual soil conditions and the ability to provide appropriate revisions where required during construction. Geotechnical conclusions and preliminary recommendations should be reviewed and verified by Leighton during construction, and revised accordingly if geotechnical conditions encountered vary from our findings and interpretations. Geotechnical observation and testing should be provided:

- After completion of site demolition and clearing,
- During over-excavation of compressible soil,
- During compaction of all fill soil,
- After excavation of all footings and prior to placement of concrete,
- During utility trench backfilling and compaction, and
- When any unusual conditions are encountered.

Additional geotechnical exploration and analysis may be required based on final development plans, for reasons such as significant changes in proposed structures, locations, or footprints. We should review grading (civil) and foundation (structural) plans, and comment further on geotechnical aspects of this project.

6.0 LIMITATIONS

This report was based in part on data obtained from a limited number of observations, site visits, soil excavations, samples and tests. Such information is, by necessity, incomplete. The nature of many sites is such that differing soil or geologic conditions can be present within small distances and under varying climatic conditions. Changes in subsurface conditions can and do occur over time. Therefore, our findings, conclusions and recommendations presented in this report are based on the assumption that we (Leighton and Associates, Inc.) will provide geotechnical observation and testing during construction as the Geotechnical Engineer of Record for this project. Please refer to Appendix D, GBA's ***Important Information About Your Geotechnical Report***, prepared by the Geoprofessional Business Association (GBA) presenting additional information and limitations regarding geotechnical engineering studies and reports.

This report was prepared for the sole use of Client and their design team, for application to design of the proposed maintenance building, in accordance with generally accepted geotechnical engineering practices at this time in California. Any unauthorized use of or reliance on this report constitutes an agreement to defend and indemnify Leighton and Associates, Inc. from and against any liability, which may arise as a result of such use or reliance, regardless of any fault, negligence, or strict liability of Leighton and Associates, Inc.

APPENDIX A

LOGS OF EXPLORATORY BORINGS / FIELD EXPLORATION

Encountered earth materials were logged and sampled in the field by our representative and described in accordance with the Unified Soil Classification System (ASTM D 2488). During drilling, bulk and relatively undisturbed ring-lined split-barrel driven earth material samples were obtained from our borings for geotechnical laboratory testing and classification. Drive-samples were driven with a 140-pound auto-hammer falling 30-inches. Samples were transported to our in-house Temecula laboratory for geotechnical testing. After logging and sampling, our borings were backfilled with spoils generated during drilling.

The attached subsurface exploration logs and related information depict subsurface conditions only at the locations indicated and at the particular date designated on these logs. Subsurface conditions at other locations may differ from conditions occurring at these logged locations. Passage of time may result in altered subsurface conditions due to environmental changes. In addition, any stratification lines on these logs represent an approximate boundary between sampling intervals and soil types; and transitions may be gradual.

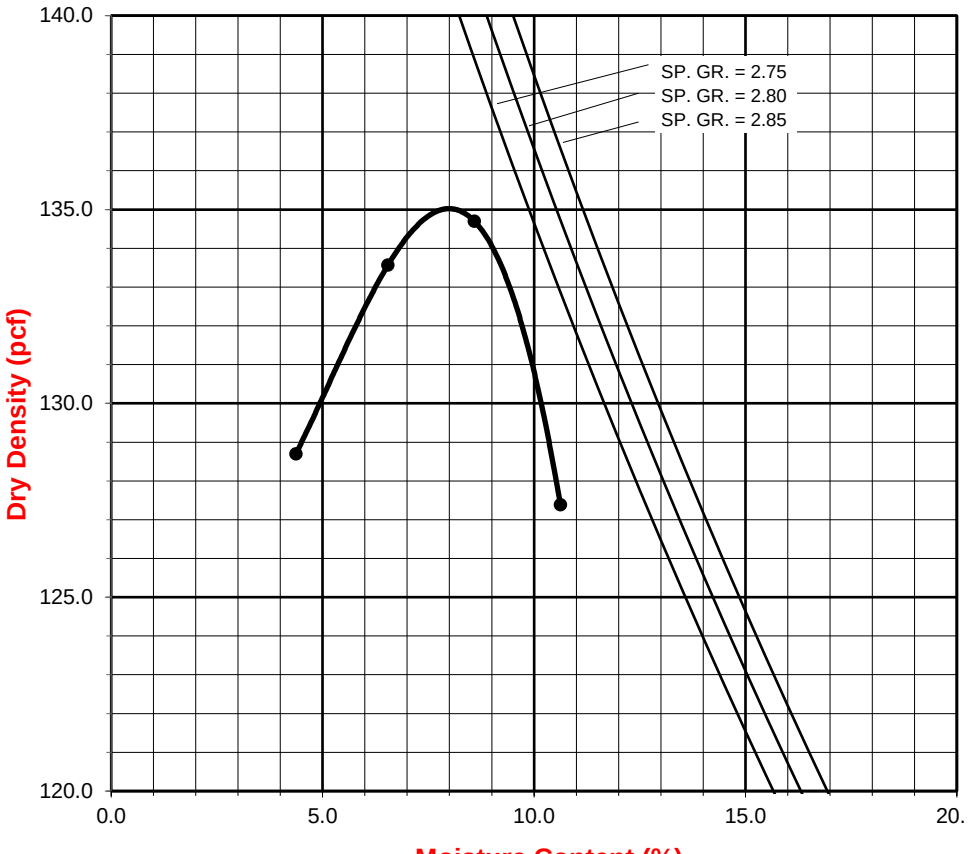
PROCEDURE USED



[X] **Procedure A**
Soil Passing No. 4 (4.75 mm) Sieve
Mold : 4 in. (101.6 mm) diameter
Layers : 5 (Five)
Blows per layer : 25 (twenty-five)
May be used if +#4 is 20% or less

[ ] **Procedure B**
Soil Passing 3/8 in. (9.5 mm) Sieve
Mold : 4 in. (101.6 mm) diameter
Layers : 5 (Five)
Blows per layer : 25 (twenty-five)
Use if +#4 is >20% and +3/8 in. is 20% or less

[ ] **Procedure C**
Soil Passing 3/4 in. (19.0 mm) Sieve
Mold : 6 in. (152.4 mm) diameter
Layers : 5 (Five)
Blows per layer : 56 (fifty-six)
Use if +3/8 in. is >20% and +¾ in. is <30%

Particle-Size Distribution:
GR:SA:FI

Atterberg Limits:
LL,PL,PI

1.0 General

1.1 Intent

These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 The Geotechnical Consultant of Record

Prior to commencement of work, the owner shall employ the Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultants shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required. Subsurface areas to be geotechnically observed, mapped, elevations recorded, and/or tested include natural ground after it has been cleared for receiving fill but before fill is placed, bottoms of all "remedial removal" areas, all key bottoms, and benches made on sloping ground to receive fill.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to determine the attained level of compaction. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.

1.3 The Earthwork Contractor

The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with the plans and specifications.

The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of "spreads" of work and the estimated quantities of daily earthwork contemplated for the site prior to commencement of grading. The Contractor shall inform the owner and the Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate observations and tests can be planned and accomplished. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified.

2.0 Preparation of Areas to be Filled

2.1 Clearing and Grubbing

Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). No fill lift shall contain more than 5 percent of organic matter. Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed.

2.2 Processing

Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be overexcavated as specified in the following section. Scarification shall continue until soils are broken down and free of large clay lumps or clods and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.

2.3 Overexcavation

In addition to removals and overexcavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be overexcavated to competent ground as evaluated by the Geotechnical Consultant during grading.

2.4 Benching

Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise overexcavated to provide a flat subgrade for the fill.

2.5 Evaluation/Acceptance of Fill Areas

All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant

prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

3.0 Fill Material

3.1 General

Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 Oversize

Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.

3.3 Import

If importing of fill material is required for grading, proposed import material shall meet the requirements of Section 3.1. The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

4.0 Fill Placement and Compaction

4.1 Fill Layers

Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 Fill Moisture Conditioning

Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557).

4.3 Compaction of Fill

After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.

4.4 Compaction of Fill Slopes

In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557.

4.5 Compaction Testing

Field-tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.6 Frequency of Compaction Testing

Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soils embankment. In addition, as a guideline, at least one test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.7 Compaction Test Locations

The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than 5 feet apart from potential test locations shall be provided.

5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

6.0 Excavation

Excavations, as well as over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical plans are estimates only. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 Trench Backfills

7.1 Safety

The Contractor shall follow all OSHA and Cal/OSHA requirements for safety of trench excavations.

7.2 Bedding and Backfill

All bedding and backfill of utility trenches shall be performed in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum of 90 percent of relative compaction from 1 foot above the top of the conduit to the surface.

The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill.

7.3 Lift Thickness

Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

7.4 Observation and Testing

The jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.

APPENDIX D

GBA - IMPORTANT INFORMATION ABOUT THIS GEOTECHNICAL REPORT

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, you can benefit from a lowered exposure to problems associated with subsurface conditions at project sites and development of them that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed herein, contact your GBA-member geotechnical engineer. Active engagement in GBA exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Understand the Geotechnical-Engineering Services Provided for this Report

Geotechnical-engineering services typically include the planning, collection, interpretation, and analysis of exploratory data from widely spaced borings and/or test pits. Field data are combined with results from laboratory tests of soil and rock samples obtained from field exploration (if applicable), observations made during site reconnaissance, and historical information to form one or more models of the expected subsurface conditions beneath the site. Local geology and alterations of the site surface and subsurface by previous and proposed construction are also important considerations. Geotechnical engineers apply their engineering training, experience, and judgment to adapt the requirements of the prospective project to the subsurface model(s). Estimates are made of the subsurface conditions that will likely be exposed during construction as well as the expected performance of foundations and other structures being planned and/or affected by construction activities.

The culmination of these geotechnical-engineering services is typically a geotechnical-engineering report providing the data obtained, a discussion of the subsurface model(s), the engineering and geologic engineering assessments and analyses made, and the recommendations developed to satisfy the given requirements of the project. These reports may be titled investigations, explorations, studies, assessments, or evaluations. Regardless of the title used, the geotechnical-engineering report is an engineering interpretation of the subsurface conditions within the context of the project and does not represent a close examination, systematic inquiry, or thorough investigation of all site and subsurface conditions.

Geotechnical-Engineering Services are Performed for Specific Purposes, Persons, and Projects, and At Specific Times

Geotechnical engineers structure their services to meet the specific needs, goals, and risk management preferences of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client.

Likewise, geotechnical-engineering services are performed for a specific project and purpose. For example, it is unlikely that a geotechnical-engineering study for a refrigerated warehouse will be the same as one prepared for a parking garage; and a few borings drilled during a preliminary study to evaluate site feasibility will not be adequate to develop geotechnical design recommendations for the project.

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project or purpose;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, the reliability of a geotechnical-engineering report can be affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying the recommendations in it. A minor amount of additional testing or analysis after the passage of time – if any is required at all – could prevent major problems.

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read the report in its entirety. Do not rely on an executive summary. Do not read selective elements only. *Read and refer to the report in full.*

You Need to Inform Your Geotechnical Engineer About Change

Your geotechnical engineer considered unique, project-specific factors when developing the scope of study behind this report and developing the confirmation-dependent recommendations the report conveys. Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the elevation, configuration, location, orientation, function or weight of the proposed structure and the desired performance criteria;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project or site changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept*

responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface using various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing is performed.* The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgement to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team through project completion to obtain informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, they are not final, because the geotechnical engineer who developed them relied heavily on judgement and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* exposed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a continuing member of the design team, to:

- confer with other design-team members;
- help develop specifications;
- review pertinent elements of other design professionals' plans and specifications; and
- be available whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction-phase observations.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for information purposes only.* To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. This happens in part because soil and rock on project sites are typically heterogeneous and not manufactured materials with well-defined engineering properties like steel and concrete. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely.* Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually provide environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures.* If you have not obtained your own environmental information about the project site, ask your geotechnical consultant for a recommendation on how to find environmental risk-management guidance.

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, the engineer's services were not designed, conducted, or intended to prevent migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration. Confront the risk of moisture infiltration*** by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

Company Project Number/Name	21-994 Wildomar Trail Mix-Use Project		
Drainage Area Number/Name	DMA-A1		

Enter the Area Tributary to this Feature A_T = 2.7 acres

Determine the Effective Impervious Fraction

Type of post-development surface cover (use pull down menu): Mixed Surface Types

Effective Impervious Fraction I_f = 0.91

Calculate the composite Runoff Coefficient, C for the BMP Tributary Area

Use the following equation based on the WEF/ASCE Method

$C = 0.858I_f^3 - 0.78I_f^2 + 0.774I_f + 0.04$

C = 0.74

BMP Design Flow Rate

$Q_{BMP} = C \times I \times A_T$

Q_{BMP} = 0.399 t^3/s

Notes:

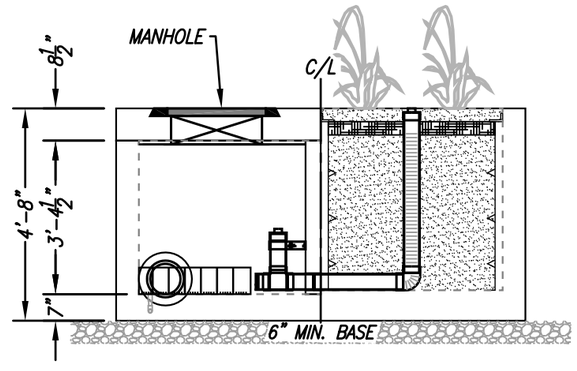
INSTALLATION NOTES



1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURERS CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE TO VERIFY PROJECT ENGINEERS RECOMMENDED BASE SPECIFICATIONS.
4. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE. (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL PIPES SHALL BE SEALED WATER TIGHT PER MANUFACTURERS STANDARD CONNECTION DETAIL.
5. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO GROUT ALL MANHOLES AND HATCHES TO MATCH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.
6. VEGETATION SUPPLIED AND INSTALLED BY OTHERS. ALL UNITS WITH VEGETATION MUST HAVE DRIP OR SPRAY IRRIGATION SUPPLIED AND INSTALLED BY OTHERS.
7. CONTRACTOR RESPONSIBLE FOR CONTACTING BIO CLEAN FOR ACTIVATION OF UNIT. MANUFACTURERS WARRANTY IS VOID WITH OUT PROPER ACTIVATION BY A BIO CLEAN REPRESENTATIVE.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT BIO CLEAN.

FULL TRASH CAPTURE BMPS

AquaShield™

INNOVATING GOOD CLEAN WATER

AQUA-SWIRL® TRASH CAPTURE

HYDRODYNAMIC SEPARATOR

FEATURES

1. The Aqua-Swirl® Trash Capture is constructed of durable, lightweight, high performance materials to withstand up to HS-25 loads.
2. Floatable trash, debris and coarse sediments enter tangentially into the unit.
3. Vortex separation removes coarse particles of TSS, floatable debris, and free oil.
4. Stainless steel screen removes trash larger than 5 mm.
5. Independent testing & validation for 100% trash removal larger than 5 mm before discharging into sensitive receiving waters.

Water Boards

Aqua-Swirl® TRASH CAPTURE System

AQUA-SWIRL® TRASH CAPTURE

- Provides customized solutions for project specific requirements.
- Systems designed for specific water quality treatment flow rates.
- Modular sizes from 2.5 – 13 ft diameters with attached riser(s) to finish grade.
- Online project and system design tool at http://pda.aquashieldinc.com.

Vortex Separation Technology

- Utilizes hydrodynamic and gravitational forces incorporating a stainless steel screen to remove trash/debris greater than 5mm, coarse sediment (TSS), and free oil.
- Extensive full-scale laboratory testing with independent 3rd parties.
- Certified Full Trash Capture device by CA State Water Resources Control Board.

Bypass Designs

- Systems are designed to treat water quality flow rates and bypass peak storm events.
- Internal and external bypass configurations are available and tailored to site-specific needs.

Pipe Connections

- Systems are designed with custom inlet/outlet diameters at various configuration angles.
- Inlet/outlet stub outs are provided for easy coupling to storm drain lines.
- Easily plumbed to RCP, CMP, PVC, and HDPE piping with dissimilar pipe diameters.

Installation Benefits

- Quick and simple installation, resulting in measurable project cost savings.
- Designed to withstand HS-25 loadings with capabilities of heavier loads available.
- Small footprint design reduces excavation costs.
- Lightweight and durable construction eliminating the need of a crane.
- Lifting lugs attached for easy maneuverability on site.

Storage Capacities

- Large storage capacities for sediment, debris and free oil to extend maintenance frequency.
- Screened trash capture storage capacities up to 122 ft3.
- Sediment storage capacities up to 310 ft3.

Inspection & Maintenance

- AquaShield™ offers an extensive network of local service providers across the country to ensure system performance efficiency.
- I&M manuals are available to download at www.aquashieldinc.com.

APPROVED: Aqua-Swirl® Full Trash Capture Device receives approval

from CA State Water Resources Control Board

AquaShield™ and Prinsco are proud to announce the approval of the Aqua-Swirl® by the CA SWRCB for projects requiring full trash capture. Aqua-Swirl® is a hydrodynamic separation device and is part of a full line of stormwater treatment products engineered to meet the growing need for filtration and pollutant removal from stormwater runoff.

Aqua-Swirl® captures and retains floatable materials.

BASIN B
(DMA-B1 & B2)

SMRHM
PROJECT REPORT

Project Name: 21994 SMRHM_2
Site Name: Wildomar Trail Mixed-Use Project
Site Address: Clinton Keith Road and Wildomar Trail
City : Wildomar
Report Date: 11/24/2021
Gage : Wildomar / North Murrieta
Data Start : 1949/10/01 00:00
Data End : 2011/09/30 00:00
Precip Scale: 1.00
Version Date: 2019/12/01

Low Flow Threshold for POC 1 : 10 Percent of the 2 Year

High Flow Threshold for POC 1: 10 year

PREDEVELOPED LAND USE

Name : DMA 1
Bypass: No

GroundWater: No

Pervious Land Use	acre
A,Shrub,Flat(0-5%)	2.5
A,Shrub,Mod(5-10%)	.5
A,Shrub,Stee(10-20%)	.33
A,Shrub,Very S(>20%)	.2
Pervious Total	3.53

Impervious Land Use	acre
Roof Area	0.3
Driveways,Flat(0-5%)	0.3
Driveways,Mod(5-10%)	0.3
Impervious Total	0.9
Basin Total	4.43

Element Flows To:
Surface **Interflow** **Groundwater**

MITIGATED LAND USE

Name : DMA 1
Bypass: No

GroundWater: No

Pervious Land Use	acre
A,Urban,Stee(10-20%)	.1
A,Urban,Mod(5-10%)	.1
A,Urban,Flat(0-5%)	.33
Pervious Total	**0.53**

Impervious Land Use	acre
Roof Area	1.2
Driveways,Flat(0-5%)	0.5
Sidewalks,Flat(0-5%)	0.3
Parking,Flat(0-5%)	1.9
Impervious Total	**3.9**
Basin Total	**4.43**

Element Flows To:

Surface	Interflow	Groundwater
Vault 1	Vault 1	Vault 1

Name : Vault 1
Width : 20 ft.
Length : 180 ft.
Depth: 5.71 ft.

Volume = 20,556 cf

Discharge Structure
Riser Height: 4.5 ft.
Riser Diameter: 18 in.
Orifice 1 Diameter: 2 in. **Elevation:** 4.33333333333333 ft.

Element Flows To:

Outlet 1	Outlet 2

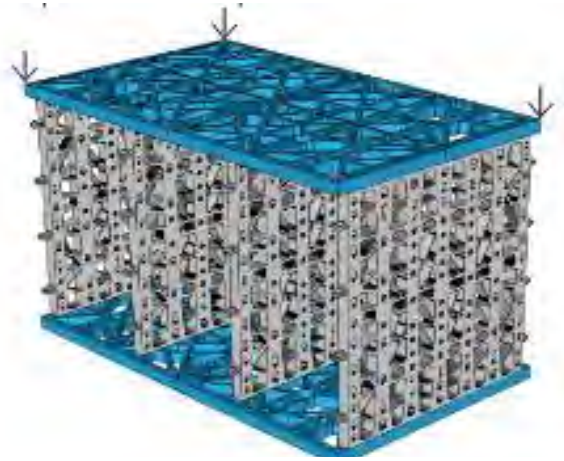
BASIN SIZING CALCULATIONS

BMP Sizing Calculation

PROJECT: 21-994 Wildomar Trail
BMP Location: BMP-A



Basin Sizing Calculations :

Calculated DCV: 19871 cf

U.G. Product	Dimension	97% Water	Number of	FootPrint	Total Vol. Provided
Eco-Tank		**Storage Volume (cf) ***	**Units**	**(sf)**	**(cf)**
ET - 1504 QUAD	1.34' W x 2.25' L x 5.71' depth	16.7	1150	3,500	**19,205**
12" Gravel Section Below Eco-Tank (n=0.40)	N/A (V = FootPrint x n x Gravel Thickness)				**700**
				Total:	**19,905**

* Based on manufacturer's cutsheet
Footprint = Gravel Infiltration Area Below Tank Bottom. See LID Plan for size.
Total Volume Provided = 97% Water Storage Volume x # of Units

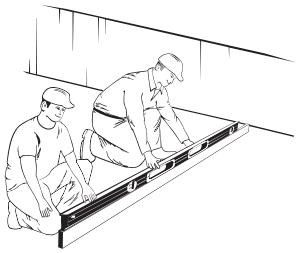
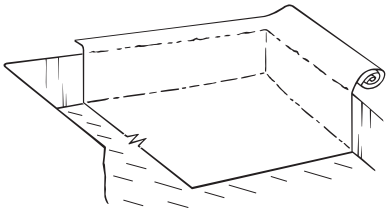
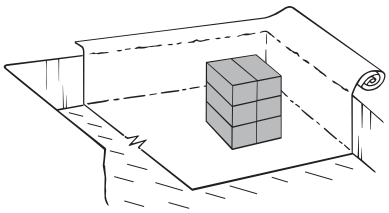
ECO-RAIN DETENTION & EXFILTRATION TANK INSTALLATION GUIDE*



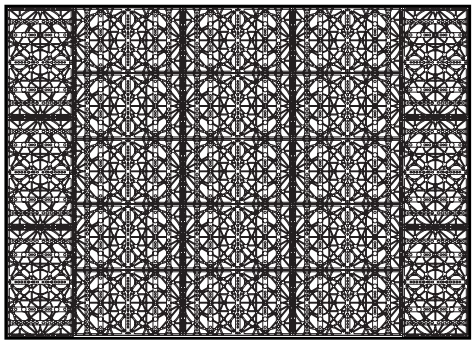
Step 1
Excavate Trench Larger than Specified Tank Size, per Engineered Detail



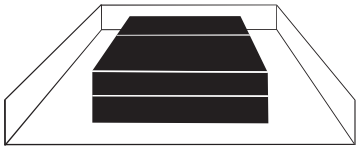
Step 2
Compact Base to 35 psi



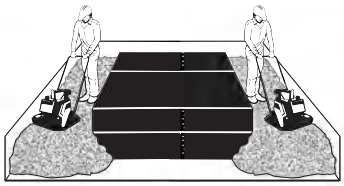
Step 3
Add **Sand** or Free Drainage Material* to Base, Compact and Level with a Straight Edge



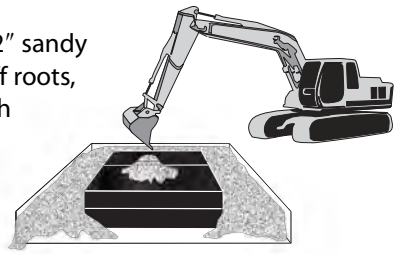
Step 4
Lay Geotextile Material in Bottom and on Sides of Trench, Enough to Fully Wrap Tank, with 12″ Seam Overlaps



Step 5
Install Tanks upright for Maximum Strength and per the Warranty:
Half Tank - .79′ High
Single Tank - 1.48′ High

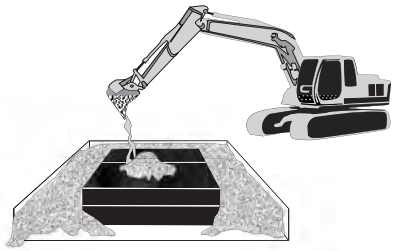


Step 6
Orient Tanks Lengthwise along Perimeter



Step 7
Cover Eco-Rain Tanks with Geotextile Material - Wrap Tight, Cut Away Excess Folds, Overlap and/or Seal Joints with Tape

Step 8
Backfill Sides with Sandy Fill in maximum 12″ Layers - Compacting Each Layer at least 95%



Step 9
Backfill over Top with 12″ sandy backfill free of rocks, stiff roots, or debris - Compact with Lightweight Equipment

Correct

Do Not Drop Fill from High Up

Incorrect

Step 10
Finish Backfill per Engineered Detail

Minimum 12″ Top Cover for Pedestrian Use

Minimum 24″ Top Cover for Vehicle Use – Layer Biaxial Geogrid 12″ Above Eco-Rain Tanks & Extending 3′ beyond Edges of Eco-Rain Tank or as per Engineer Detail.

*Email contact@ecoraintank.com to request full specifications and submittal installation instructions

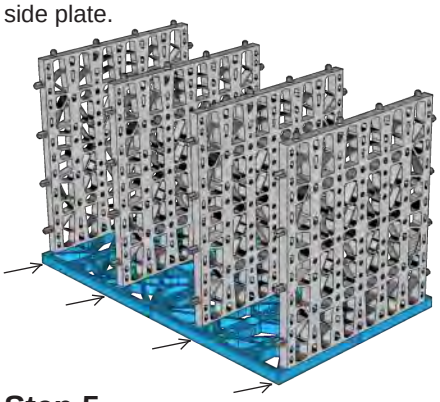
Eco-Rain Tank Systems

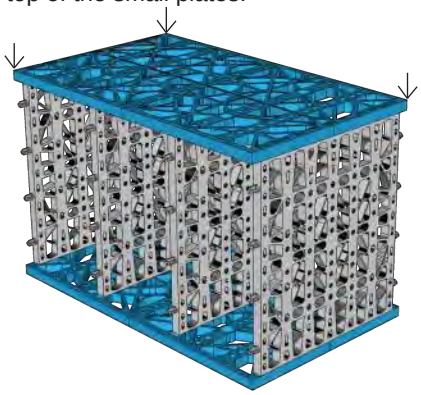
Assembly of Single and Multiple Eco-Rain Tanks

Single Tank Assembly



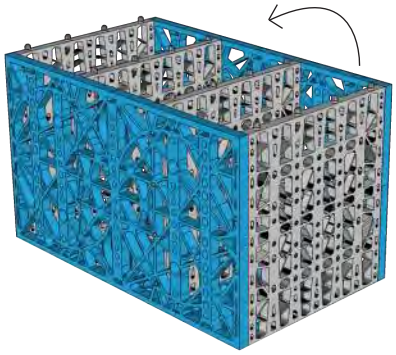
Step 1

Install large pegs of one small plate into holes of one side plate.



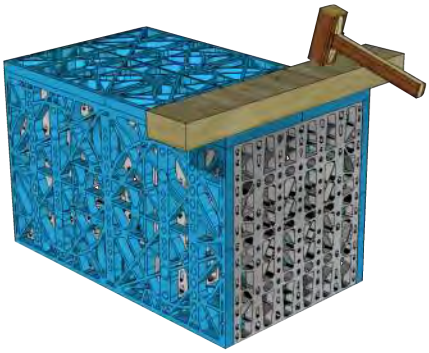
Step 2

Install large pegs of the second, third, and end small plates into holes of the side plate.



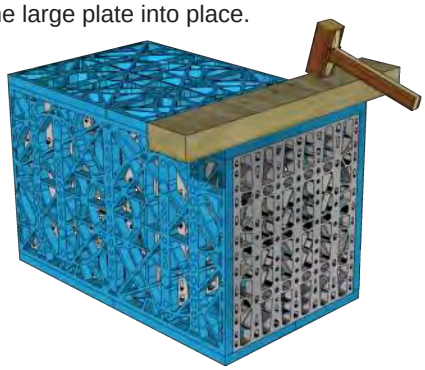
Step 3

Place and align the second side plate on top of the small plates.



Step 4

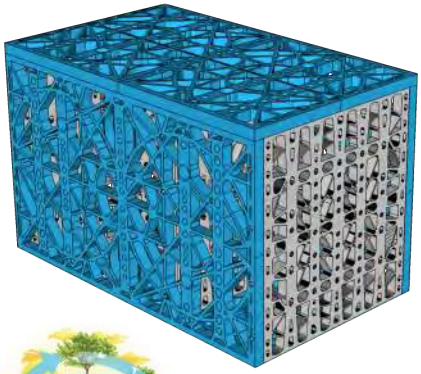
Rotate the tank such that the side plates are now on the sides and the top and bottom are open.



Step 5

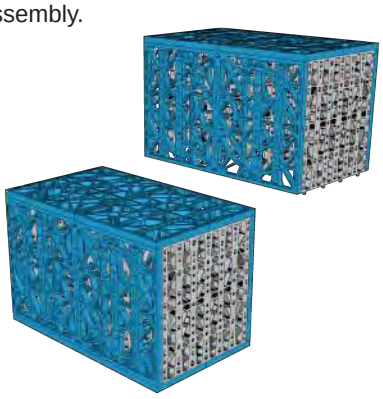
Place and align a large plate with the pegs of the vertical small plates. Use a 2x4 and a dead weight hammer to tap the large plate into place.

Step 6



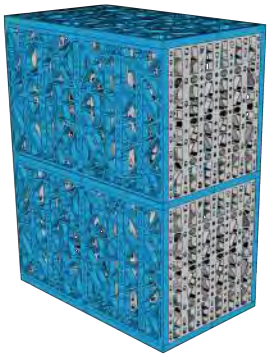
Turn the tank upside down. Place and align the second large plate with the pegs of the vertical small plates. Use a 2x4 and a dead weight hammer to tap the large plate into place.

Multiple Tank Assembly



Step 1

Repeat Steps 1 through 5 for Multiple Tank Assembly.



Step 2

Turn the tank upside down. Align the tank (with one open end) over a complete tank for Double Tank Assembly.

Step 3

Use Multiple Tank Assembly Steps 1 and 2 for Triple, Quad and Pent Tank Assemblies. Check for full pin insertion and re-tap if necessary.

Appendix 8: Source Control

Pollutant Sources/Source Control Checklist

1 Potential Sources of Runoff Pollutants	2 Permanent Controls— **Shown on** WQMP Drawings	3 Permanent Controls– **Listed in WQMP** Table and Narrative	4 Operational BMPs— **Included in WQMP** Table and Narrative
☑ A. **On-site storm drain inlets**	☑ **Locations of inlets.**	☑ **Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.**	☑ **Maintain and periodically repaint or replace inlet markings.** ☑ **Provide stormwater pollution prevention information to new site owners, lessees, or operators.** ☑ **See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** ☑ **Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."**
☑ B. **Interior floor drains and elevator shaft sump pumps**		☑ **State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.**	☑ **Inspect and maintain drains to prevent blockages and overflow.**
☐ C. **Interior parking garages**		☐ **State that parking garage floor drains will be plumbed to the sanitary sewer.**	☐ **Inspect and maintain drains to prevent blockages and overflow.**

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

1 **Potential Sources of Runoff Pollutants**	2 **Permanent Controls**— Shown on **WQMP Drawings**	3 **Permanent Controls**– Listed in WQMP **Table and Narrative**	4 **Operational BMPs**— Included in WQMP **Table and Narrative**
☐ **D1.** Need for future indoor & structural pest control		☐ Note building design features that discourage entry of pests.	☐ Provide Integrated Pest Management information to owners, lessees, and operators.
✓ **D2.** Landscape/ Outdoor Pesticide Use	✓ Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained. ✓ Show self-retaining landscape areas, if any. ✓ Show stormwater treatment and hydrograph modification management BMPs. (See instructions in Chapter 3, Step 5 and guidance in Chapter 5.)	State that final landscape plans will accomplish all of the following. ✓ Preserve existing native trees, shrubs, and ground cover to the maximum extent possible. ✓ Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. ✓ Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions. ✓ Consider using pest-resistant plants, especially adjacent to hardscape. ✓ To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	✓ Maintain landscaping using minimum or no pesticides. ✓ See applicable operational BMPs in "What you should know for…..Landscape and Gardening" at http://rcflood.org/stormwater/downloads/landscapegardenbrochure.pdf ✓ Provide IPM information to new owners, lessees and operators.

1 Potential Sources of Runoff Pollutants	2 Permanent Controls— **Shown on** WQMP Drawings	3 Permanent Controls– **Listed in WQMP** Table and Narrative	4 Operational BMPs— **Included in WQMP** Table and Narrative
❑ E. **Pools, spas, ponds, decorative fountains, and other water features.**	❑ **Show location of water feature and a sanitary sewer cleanout in an accessible area within 10 feet. (Exception: Public pools must be plumbed according to County Department of Environmental Health Guidelines.)**	**If the Co-Permittee requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements.**	❑ **See applicable operational BMPs in** "Guidelines for Maintaining Your Swimming Pool, Jacuzzi and Garden Fountain" at http://rcflood.org/stormwater/
❑ F. **Food service**	❑ **For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment.** ❑ **On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.**	❑ **Describe the location and features of the designated cleaning area.** ❑ **Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.**	❑ **See the brochure, "**The Food Service Industry Best Management Practices for: Restaurants, Grocery Stores, Delicatessens and Bakeries" at http://rcflood.org/stormwater/ **Provide this brochure to new site owners, lessees, and operators.**
 G. **Refuse areas**	 **Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas.** ❑ **If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area.** ❑ **Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.**	❑ **State how site refuse will be handled and provide supporting detail to what is shown on plans.** ❑ **State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.**	 **State how the following will be implemented:** **Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

1 Potential Sources of Runoff Pollutants	2 Permanent Controls— **Shown on** WQMP Drawings	3 Permanent Controls– **Listed in WQMP** Table and Narrative	4 Operational BMPs— **Included in WQMP** Table and Narrative
❑ H. **Industrial processes.**	❑ **Show process area.** All processing areas are indoor.	❑ **If industrial processes are to be located on site, state: "All process activities to be performed indoors. No processes to drain to exterior or to storm drain system."**	❑ **See Fact Sheet SC-10, "Non-Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** See the brochure "Industrial & Commercial Facilities Best Management Practices for: Industrial, Commercial Facilities" at http://rcflood.org/stormwater/

1 Potential Sources of Runoff Pollutants	2 Permanent Controls— **Shown on** WQMP Drawings	3 Permanent Controls– **Listed in WQMP** Table and Narrative	4 Operational BMPs— **Included in WQMP** Table and Narrative
❑ I. **Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.)**	❑ **Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent run-on or run-off from area.** ❑ **Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults.** ❑ **Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site.**	**Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains.** **Where appropriate, reference documentation of compliance with the requirements of Hazardous Materials Programs for:** ▪ **Hazardous Waste Generation** ▪ **Hazardous Materials Release Response and Inventory** ▪ **California Accidental Release (CalARP)** ▪ **Aboveground Storage Tank** ▪ **Uniform Fire Code Article 80 Section 103(b) & (c) 1991** ▪ **Underground Storage Tank** www.cchealth.org/groups.hazmat/	❑ **See the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC-33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

1 Potential Sources of Runoff Pollutants	2 Permanent Controls— **Shown on** WQMP Drawings	3 Permanent Controls– **Listed in WQMP** Table and Narrative	4 Operational BMPs— **Included in WQMP** Table and Narrative
❑ J. **Vehicle and Equipment Cleaning**	❑ **Show on drawings as appropriate:** **(1) Commercial/industrial facilities having vehicle/equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses.** **(2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shut-off to discourage such use).** **(3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer.** **(4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed.**	❑ **If a car wash area is not provided, describe any measures taken to discourage on-site car washing and explain how these will be enforced.**	**Describe operational measures to implement the following (if applicable):** ❑ **Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system.** Refer to "Outdoor Cleaning Activities and Professional Mobile Service Providers" for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/ ❑**Car dealerships and similar may rinse cars with water only.**

1 Potential Sources of Runoff Pollutants	2 Permanent Controls— **Shown on** WQMP Drawings	3 Permanent Controls– **Listed in WQMP** Table and Narrative	4 Operational BMPs— **Included in WQMP** Table and Narrative
❑ K. **Vehicle/Equipment Repair and Maintenance**	❑ **Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater.** ❑ **Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas.** ❑ **Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.**	❑ **State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area.** ❑ **State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.** ❑ **State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.**	**In the Stormwater Control Plan, note that all of the following restrictions apply to use the site:** ❑ **No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains.** ❑ **No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately.** ❑ **No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment.** Refer to "Automotive Maintenance & Car Care Best Management Practices for Auto Body Shops, Auto Repair Shops, Car Dealerships, Gas Stations and Fleet Service Operations". Brochure can be found at http://rcflood.org/stormwater/ Refer to Outdoor Cleaning Activities and Professional Mobile Service Providers for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/

1 Potential Sources of Runoff Pollutants	2 Permanent Controls— **Shown on** WQMP Drawings	3 Permanent Controls– **Listed in WQMP** Table and Narrative	4 Operational BMPs— **Included in WQMP** Table and Narrative
❑ L. **Fuel Dispensing Areas**	❑ **Fueling areas[6] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and b) separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable.** ❑ **Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area[1].] The canopy [or cover] shall not drain onto the fueling area.**		❑ **The property owner shall dry sweep the fueling area routinely.** ❑ **See the Fact Sheet SD-30 , "Fueling Areas" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

[6] **The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.**

1 Potential Sources of Runoff Pollutants	2 Permanent Controls— **Shown on** WQMP Drawings	3 Permanent Controls– **Listed in WQMP** Table and Narrative	4 Operational BMPs— **Included in WQMP** Table and Narrative
❑ M. **Loading Docks**	❑ **Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks shall be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts shall be positioned to direct stormwater away from the loading area. Water from loading dock areas shall be drained to the sanitary sewer, or diverted and collected for ultimate discharge to the sanitary sewer.** ❑ **Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation.** ❑ **Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer.**		❑ **Move loaded and unloaded items indoors as soon as possible.** ❑ **See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

1 **Potential Sources of Runoff Pollutants**	2 **Permanent Controls**— Shown on **WQMP Drawings**	3 **Permanent Controls**– Listed in WQMP **Table and Narrative**	4 **Operational BMPs**– Included in WQMP **Table and Narrative**
☑ **N.** Fire Sprinkler Test Water		☑ Provide a means to drain fire sprinkler test water to the sanitary sewer.	☑ See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
O. Miscellaneous Drain or Wash Water or Other Sources ☐ Boiler drain lines ☑ Condensate drain lines ☑ Rooftop equipment ☐ Drainage sumps ☑ Roofing, gutters, and trim. ☐ Other sources		☐ Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system. ☑ Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system. ☑ Rooftop equipment with potential to produce pollutants shall be roofed and/or have secondary containment. ☐ Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water. ☑ Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff. ☐ Include controls for other sources as specified by local reviewer.	

1 Potential Sources of Runoff Pollutants	2 Permanent Controls— **Shown on** WQMP Drawings	3 Permanent Controls– **Listed in WQMP** Table and Narrative	4 Operational BMPs— **Included in WQMP** Table and Narrative
 P. **Plazas, sidewalks, and parking lots.**			 **Sweep plazas, sidewalks, and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.**

Appendix 9: O&M

Operation and Maintenance Plan and Documentation of Finance, Maintenance and Recording Mechanism

TO BE PROVIDED IN FINAL ENGINEERING

Appendix 10: Educational Materials

BMP Fact Sheets, Maintenance Guidelines and Other End-User BMP Information

LANDSCAPE MAINTENANCE

DISCHARGE TO THE STORM DRAIN, ACCIDENTAL OR NOT, COULD LEAD TO ENFORCEMENT ACTIONS, WHICH COULD INCLUDE FINES.

Follow the best practices below to **prevent water pollution from landscaping activities.**

RECYCLE YARD WASTE

- Recycle leaves, grass clippings and other yard waste.
- Do not blow, sweep, rake or hose yard waste into the street or catch basin.
- **Try grasscycling:** the natural recycling of grass by leaving clippings on the lawn when mowing.

  For more information, please visit: **www.calrecycle.ca.gov/organics/grasscycling**

USE FERTILIZERS, HERBICIDES AND PESTICIDES SAFELY

- Fertilizers, herbicides and pesticides are often carried into the storm drain system by sprinkler runoff. Use natural and non-toxic alternatives as often as possible.
- If you must use chemical fertilizers, herbicides or pesticides:
  - Spot apply, rather than blanketing entire areas.
  - Avoid applying near curbs and driveways, and **never** before a rain.
  - Apply fertilizers as needed: when plants could best use it and when the potential runoff would be low.
  - Follow the manufacturer's instructions carefully—this will not only give the best results, but will save money.

USE WATER WISELY

- Control the amount of water and direction of sprinklers. Sprinklers should only be on long enough to allow water to soak into the ground, but not so long as to cause runoff.
- Periodically inspect, fix leaks and realign sprinkler heads.
- Plant native vegetation to reduce the need of water, fertilizers, herbicides and pesticides.

HOMEOWNERS

KEEP THESE TIPS IN MIND WHEN HIRING PROFESSIONAL LANDSCAPERS AND REMIND AS NECESSARY.

Leftover pesticides, fertilizers, and herbicides contaminate landfills and should be disposed of through a Hazardous Waste Facility.

For more information on proper disposal call,

(909) 382-5401 or 1-800-OILY CAT.

*FREE for San Bernardino County residents only. Businesses can call for cost inquiries and to schedule an appointment.

To report illegal dumping, call (877) WASTE18 or visit sbcountystormwater.org
To report toxic spills, call 1(800) 33 TOXIC
To dispose of hazardous waste, call 1(800) OILY CAT

sbcountystormwater.org

WASH YOUR CAR THE ECO-FRIENDLY WAY!

When possible, wash in a professional car wash.

1. **Locate** the nearest storm drain and ensure that wash water does not flow into it.

2. **Wash** in a contained area or on grass*, gravel or other permeable surface. Dispose of excess soapy water into the sanitary sewer *(ie. sink or toilet)* or onto grass.

3. **Use** eco-friendly cleaning products (*non-toxic, phosphate free or biodegradable*). Use as little soap as possible and wipe brake dust off tires with a rag before washing.

4. **Conserve** water by using a high pressure hose and turn off the water when not in use.

**Some local ordinances may not allow a car to be parked on the front lawn. Check with your City's Building and Code department if you are unsure.*

How Does Eco Car Washing Help Local Waterways?

When excess wash water travels through the street it has the potential to pick up oil, grease and other chemicals along the way before it ends up in the curb, gutter and the storm drain system. **This contaminated water then travels to our creeks and the Santa Ana River making it unsafe for people and wildlife.**

To report illegal dumping, call **(877) WASTE18** or visit **sbcountystormwater.org**
To find a Hazardous Waste Facility, call **(800) OILY CAT**

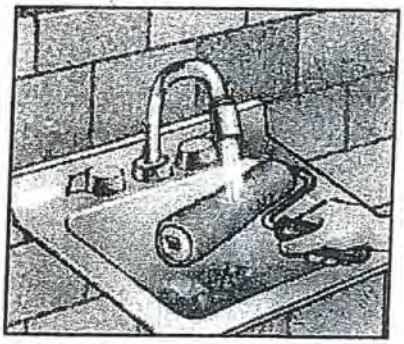
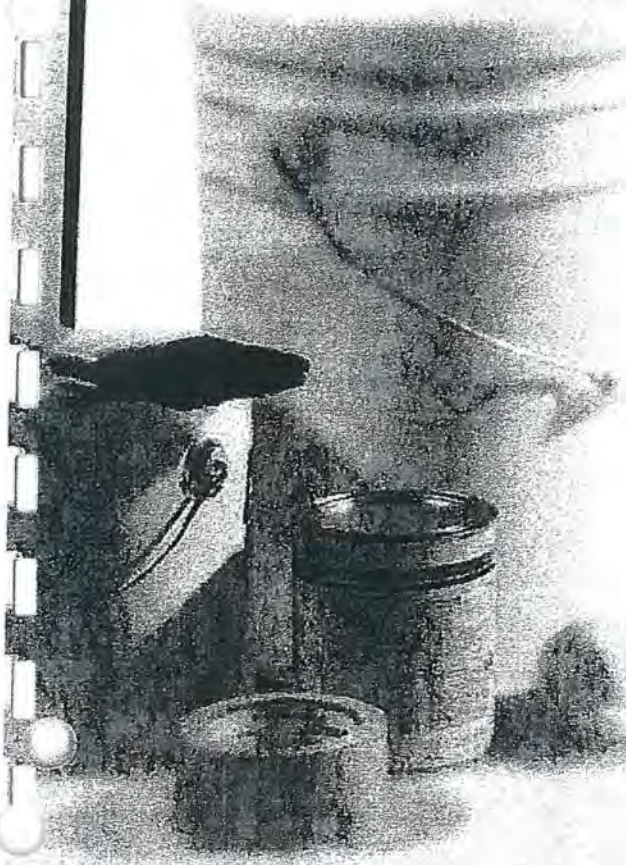
STORMWATER Pollution Prevention

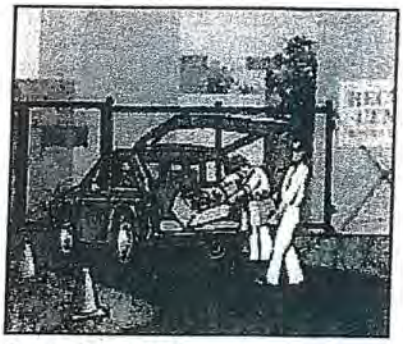
PAINTING



Paints, solvents, adhesives and other toxic chemicals used in painting often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these simple tips to prevent pollution and protect our health.



Water-Based Paints
Use water-based paints whenever possible. They are less toxic than oil-based paints and easier to clean up. Look for products labeled "latex" or "cleans with water."



Paint Removal
Sweep up paint stripping residue, chips and dust instead of hosing into the street and dispose of them safely at a household hazardous waste collection facility. Call (800) CLEANUP for the facility in your area.

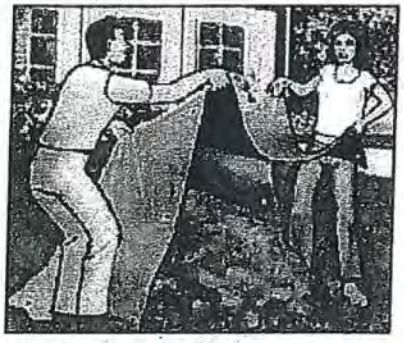
Painting Cleanup
Never clean brushes or rinse paint containers in the street, gutter or near a storm drain. Clean water-based paints in the sink. Clean oil-based paints with thinner, which can be reused by putting it in a jar to settle out the paint particles and then pouring off the clear liquid for future use. Wrap dried paint residue in newspaper and dispose of it in the trash.

Exterior Paint Removal
When stripping or cleaning building exteriors with high-pressure water, block nearby storm drains and divert washwater onto a designated dirt area. Ask your local wastewater treatment authority if you can collect building cleaning water and discharge it to the sewer.

Recycling Paint
Recycle leftover paint at a household hazardous waste collection facility, save it for touch ups or give it to someone who can use it, like a theatre group, school, city or community organization.

To report illegal dumping or for more information on stormwater pollution prevention, call:

1 (800) CLEANUP



www.1800cleanup.org

San Bernardino County STORMWATER PROGRAM

STORMWATER Pollution Prevention

HOME REPAIR & REMODELING

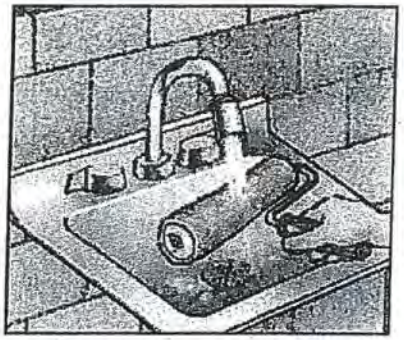
Paints, solvents, adhesives and other toxic substances used in home repair and remodeling often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these simple tips to prevent pollution and protect your health.

Construction Projects

Keep construction debris away from the street, gutter and storm drains. Schedule grading and excavation projects for dry weather. Cover excavated material and stockpiles of soil, sand or gravel, protected from rain, wind and runoff. Prevent erosion by planting fast-growing annual and perennial grass, which can shield and bind soil.

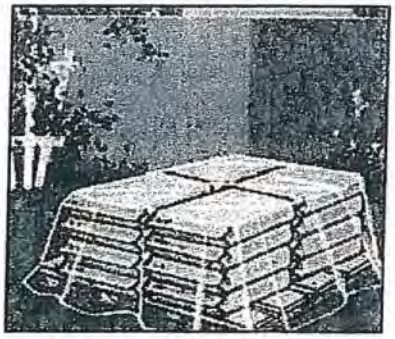
Recycle Household Hazardous Waste

Household cleaners, paint and other home improvement products like wallpaper and tile adhesives are too toxic to trash. Recycle them instead, at a convenient household hazardous waste collection facility. Call (800) CLEANUP for the facility in your area.



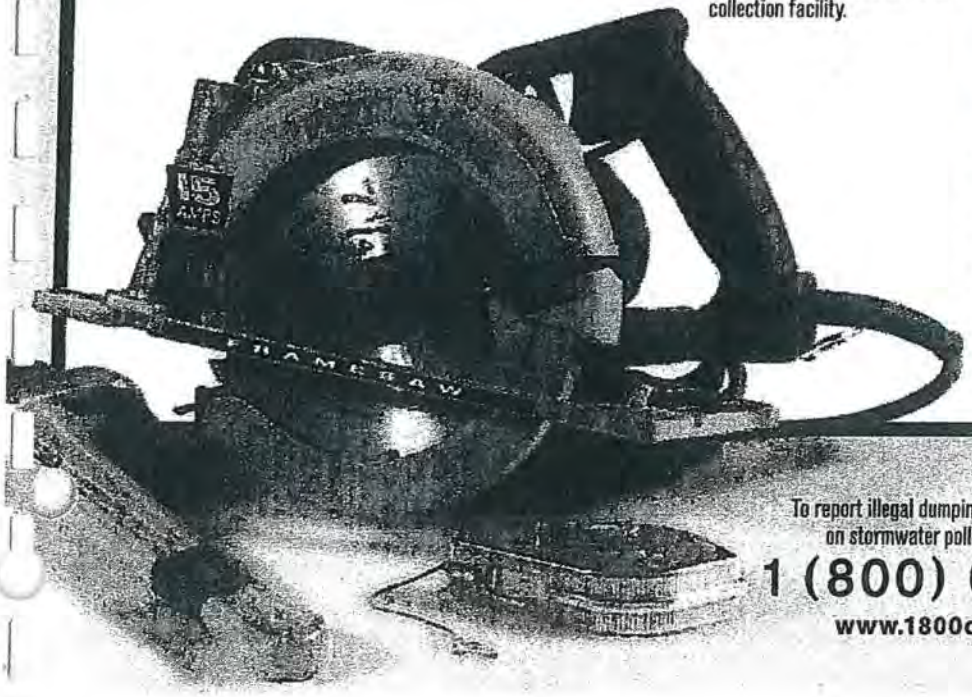
Landscaping & Gardening

Avoid applying fertilizers or pesticide near curbs and driveways, and store covered, protected from rain, wind and runoff. Try using organic or non-toxic alternatives. Reduce runoff and lower your water bill by using drip irrigation, soaker hoses or micro-spray systems. Recycle leaves instead of blowing, sweeping or raking them into the street, gutter or storm drain.



Paint Removal

Paint stripping residue, chips and dust from marine paints and paints containing lead or tributyl tin are hazardous wastes. Sweep them up instead of hosing into the street and dispose of them safely at a household hazardous waste collection facility.



Painting Cleanup

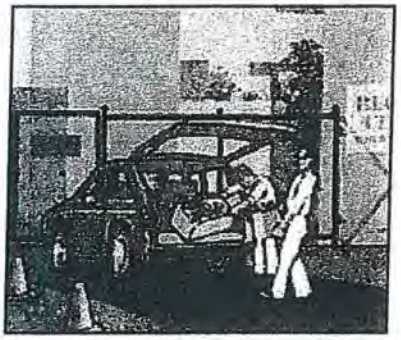
Avoid cleaning brushes or rinsing paint containers in the street, gutter or near a storm drain. Clean water-based paints in the sink. Clean oil-based paints with thinner, which you can filter and reuse. Recycle leftover paint at a household hazardous waste collection facility, save it for touch ups or give it to someone who can use it, like a theatre group, school, city or community organization.

Concrete and Masonry

Store bags of cement and plaster away from gutters and storm drains, and cover them to protect against rain, wind and runoff. Sweep or scoop up cement washout or concrete dust instead of hosing into driveways, streets, gutters or storm drains.

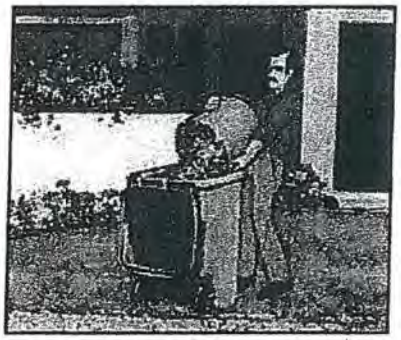
To report illegal dumping or for more information on stormwater pollution prevention, call:

1 (800) CLEANUP



www.1800cleanup.org

San Bernardino County STORMWATER PROGRAM

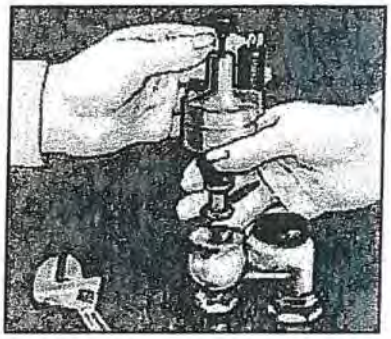


STORMWATER Pollution Prevention

HOME & GARDEN

Yard waste and household toxics like paints and pesticides often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these simple tips to prevent pollution and protect your health.

Recycle Household Hazardous Waste
Household products like paint, pesticides, solvents and cleaners are too dangerous to dump and too toxic to trash. Take them to be recycled at a convenient household hazardous waste collection facility. Call (800) CLEANUP for the facility in your area.



Disposing of Yard Waste
Recycle leaves, grass clippings and other yard waste, instead of blowing, sweeping or hosing into the street. Try grasscycling, leaving grass clippings on your lawn instead of using a grass catcher. The clippings act as a natural fertilizer, and because grass is mostly water, it also irrigates your lawn, conserving water.

Use Fertilizers & Pesticides Safely
Fertilizers and pesticides are often carried into the storm drain system by sprinkler runoff. Try using organic or non-toxic alternatives. If you use chemical fertilizers or pesticides, avoid applying near curbs and driveways and never apply before a rain.

Planting in the Yard
Produce less yard waste and save water by planting low maintenance, drought-tolerant trees and shrubs. Using drip irrigation, soaker hoses or micro-spray systems for flower beds and vegetation can also help reduce your water bill and prevent runoff.

Use Water Wisely
Cut your water costs and prevent runoff by controlling the amount of water and direction of sprinklers. The average lawn needs about an inch of water a week, including rainfall, or 10 to 20 minutes of watering. A half-inch per week is enough for fall and spring. Sprinklers should be on long enough to allow water to soak into the ground but not so long as to cause runoff.

To report illegal dumping or for more information on stormwater pollution prevention, call:

1 (800) CLEANUP

www.1800cleanup.org

San Bernardino County STORMWATER PROGRAM

Drainage System Maintenance SC-44

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize

Description

As a consequence of its function, the stormwater conveyance system collects and transports urban runoff and stormwater that may contain certain pollutants. The protocols in this fact sheet are intended to reduce pollutants reaching receiving waters through proper conveyance system operation and maintenance.

Targeted Constituents

Sediment	✓
Nutrients	
Trash	✓
Metals	
Bacteria	✓
Oil and Grease	
Organics	

Approach

Pollution Prevention

Maintain catch basins, stormwater inlets, and other stormwater conveyance structures on a regular basis to remove pollutants, reduce high pollutant concentrations during the first flush of storms, prevent clogging of the downstream conveyance system, restore catch basins' sediment trapping capacity, and ensure the system functions properly hydraulically to avoid flooding.

Suggested Protocols

Catch Basins/Inlet Structures

- Staff should regularly inspect facilities to ensure compliance with the following:
  - Immediate repair of any deterioration threatening structural integrity.
  - Cleaning before the sump is 40% full. Catch basins should be cleaned as frequently as needed to meet this standard.
  - Stenciling of catch basins and inlets (see SC34 Waste Handling and Disposal).

CASQA California Stormwater Quality Association

Waste Handling & Disposal SC-34

Description

Improper storage and handling of solid wastes can allow toxic compounds, oils and greases, heavy metals, nutrients, suspended solids, and other pollutants to enter stormwater runoff. The discharge of pollutants to stormwater from waste handling and disposal can be prevented and reduced by tracking waste generation, storage, and disposal; reducing waste generation and disposal through source reduction, reuse, and recycling; and preventing run-on and runoff.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- ☐ Accomplish reduction in the amount of waste generated using the following source controls:
  - ✓ Production planning and sequencing;
  - ✓ Process or equipment modification;
  - ✓ Raw material substitution or elimination;
  - ✓ Loss prevention and housekeeping;
  - ✓ Waste segregation and separation; and
  - ✓ Close loop recycling.
- ☐ Establish a material tracking system to increase awareness about material usage. This may reduce spills and minimize contamination, thus reducing the amount of waste produced.
- ☐ Recycle materials whenever possible.

Objectives
■ *Cover*
■ *Contain*
■ *Educate*
■ *Reduce/Minimize*
■ *Product Substitution*

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Use the entire product before disposing of the container.
- To the extent possible, store wastes under cover or indoors after ensuring all safety concerns such as fire hazard and ventilation are addressed.
- Provide containers for each waste stream at each work station. Allow time after shift to clean area.

Good Housekeeping

- Cover storage containers with leak proof lids or some other means. If waste is not in containers, cover all waste piles (plastic tarps are acceptable coverage) and prevent stormwater run-on and runoff with a berm. The waste containers or piles must be covered except when in use.
- Use drip pans or absorbent materials whenever grease containers are emptied by vacuum trucks or other means. Grease cannot be left on the ground. Collected grease must be properly disposed of as garbage.
- Dispose of rinse and wash water from cleaning waste containers into a sanitary sewer if allowed by the local sewer authority. Do not discharge wash water to the street or storm drain. Clean in a designated wash area that drains to a clarifier.
- Transfer waste from damaged containers into safe containers.
- Take special care when loading or unloading wastes to minimize losses. Loading systems can be used to minimize spills and fugitive emission losses such as dust or mist. Vacuum transfer systems can minimize waste loss.
- Keep the waste management area clean at all times by sweeping and cleaning up spills immediately.
- Use dry methods when possible (e.g., sweeping, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Stencil or demarcate storm drains on the facility's property with prohibitive message regarding waste disposal.
- Cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropylene or hypalon.
- If possible, move the activity indoor after ensuring all safety concerns such as fire hazard and ventilation are addressed.

Preventative Maintenance

- Prevent stormwater run-on from entering the waste management area by enclosing the area or building a berm around the area.
- Prevent waste materials from directly contacting rain.

- Cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropylene or hypalon.
- Cover the area with a permanent roof if feasible.
- Cover dumpsters to prevent rain from washing waste out of holes or cracks in the bottom of the dumpster.
- Check waste containers weekly for leaks and to ensure that lids are on tightly. Replace any that are leaking, corroded, or otherwise deteriorating.
- Sweep and clean the waste management area regularly. Use dry methods when possible (e.g., sweeping, vacuuming, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Inspect and replace faulty pumps or hoses regularly to minimize the potential of releases and spills.
- Repair leaking equipment including valves, lines, seals, or pumps promptly.

Spill Response and Prevention Procedures

- Keep your spill prevention and plan up-to-date.
- Have an emergency plan, equipment and trained personnel ready at all times to deal immediately with major spills.
- Collect all spilled liquids and properly dispose of them.
- Store and maintain appropriate spill cleanup materials in a location known to all near the designated wash area.
- Ensure that vehicles transporting waste have spill prevention equipment that can prevent spills during transport. Spill prevention equipment includes:
  - ✓ Vehicles equipped with baffles for liquid waste; and
  - ✓ Trucks with sealed gates and spill guards for solid waste.

Material Handling and Waste Management

Litter Control

- Post "No Littering" signs and enforce anti-litter laws.
- Provide a sufficient number of litter receptacles for the facility.
- Clean out and cover litter receptacles frequently to prevent spillage.

Waste Collection

- Keep waste collection areas clean.

- Inspect solid waste containers for structural damage regularly. Repair or replace damaged containers as necessary.
- Secure solid waste containers; containers must be closed tightly when not in use.
- Do not fill waste containers with washout water or any other liquid.
- Ensure that only appropriate solid wastes are added to the solid waste container. Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc., may not be disposed of in solid waste containers (see chemical/ hazardous waste collection section below).
- Do not mix wastes; this can cause chemical reactions, make recycling impossible, and complicate disposal. Affix labels to all waste containers.

Chemical/Hazardous Wastes

- Select designated hazardous waste collection areas on-site.
- Store hazardous materials and wastes in covered containers and protect them from vandalism.
- Place hazardous waste containers in secondary containment.
- Make sure that hazardous waste is collected, removed, and disposed of only at authorized disposal areas.
- Hazardous waste cannot be reused or recycled; it must be disposed of by a licensed hazardous waste hauler.

Employee Training Program

- Educate employees about pollution prevention measures and goals.
- Train employees how to properly handle and dispose of waste using the source control BMPs described above.
- Train employees and subcontractors in proper hazardous waste management.
- Use a training log or similar method to document training.
- Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.

Quality Assurance and Record Keeping

- Keep accurate maintenance logs that document minimum BMP activities performed for waste handling and disposal, types and quantities of waste disposed of, and any improvement actions.
- Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.

- Establish procedures to complete logs and file them in the central office.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Capital costs will vary substantially depending on the size of the facility and the types of waste handled. Significant capital costs may be associated with reducing wastes by modifying processes or implementing closed-loop recycling.
- Many facilities will already have indoor covered areas where waste materials will be stored and will require no additional capital expenditures for providing cover.
- If outdoor storage of wastes is required, construction of berms or other means to prevent stormwater run-on and runoff may require appropriate constructed systems for containment.
- Capital investments will likely be required at some sites if adequate cover and containment facilities do not exist and can vary significantly depending upon site conditions.

Maintenance

- Check waste containers weekly for leaks and to ensure that lids are on tightly. Replace any that are leaking, corroded, or otherwise deteriorating.
- Sweep and clean the waste management area regularly. Use dry methods when possible (e.g., sweeping, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Inspect and replace faulty pumps or hoses regularly to minimize the potential of releases and spills.
- Repair leaking equipment including valves, lines, seals, or pumps promptly.

- Clean catch basins, storm drain inlets, and other conveyance structures before the wet season to remove sediments and debris accumulated during the summer.
- Conduct inspections more frequently during the wet season for problem areas where sediment or trash accumulates more often. Clean and repair as needed.
- Keep accurate logs of the number of catch basins cleaned.
- Store wastes collected from cleaning activities of the drainage system in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain.
- Dewater the wastes if necessary with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not allowed, water should be pumped or vacuumed to a tank and properly disposed. Do not dewater near a storm drain or stream.

Storm Drain Conveyance System

- Locate reaches of storm drain with deposit problems and develop a flushing schedule that keeps the pipe clear of excessive buildup.
- Collect and pump flushed effluent to the sanitary sewer for treatment whenever possible.

Pump Stations

- Clean all storm drain pump stations prior to the wet season to remove silt and trash.
- Do not allow discharge to reach the storm drain system when cleaning a storm drain pump station or other facility.
- Conduct routine maintenance at each pump station.
- Inspect, clean, and repair as necessary all outlet structures prior to the wet season.

Open Channel

- Modify storm channel characteristics to improve channel hydraulics, increase pollutant removals, and enhance channel/creek aesthetic and habitat value.
- Conduct channel modification/improvement in accordance with existing laws. Any person, government agency, or public utility proposing an activity that will change the natural (emphasis added) state of any river, stream, or lake in California, must enter into a Steam or Lake Alteration Agreement with the Department of Fish and Game. The developer-applicant should also contact local governments (city, county, special districts), other state agencies (SWRCB, RWQCB, Department of Forestry, Department of Water Resources), and Federal Corps of Engineers and USFWS.

Illicit Connections and Discharges

- Look for evidence of illegal discharges or illicit connections during routine maintenance of conveyance system and drainage structures:
  - Is there evidence of spills such as paints, discoloring, etc?

- Are there any odors associated with the drainage system?
- Record locations of apparent illegal discharges/illicit connections?
- Track flows back to potential dischargers and conduct aboveground inspections. This can be done through visual inspection of upgradient manholes or alternate techniques including zinc chloride smoke testing, fluorometric dye testing, physical inspection testing, or television camera inspection.
- Eliminate the discharge once the origin of flow is established.

- Stencil or demarcate storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as "Dump No Waste Drains to Stream" stenciled next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

Illegal Dumping

- Inspect and clean up hot spots and other storm drainage areas regularly where illegal dumping and disposal occurs.
- Establish a system for tracking incidents. The system should be designed to identify the following:
  - Illegal dumping hot spots
  - Types and quantities (in some cases) of wastes
  - Patterns in time of occurrence (time of day/night, month, or year)
  - Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills)
  - Responsible parties
- Post "No Dumping" signs in problem areas with a phone number for reporting dumping and disposal. Signs should also indicate fines and penalties for illegal dumping.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

Training

- Train crews in proper maintenance activities, including record keeping and disposal.
- Allow only properly trained individuals to handle hazardous materials/wastes.
- Have staff involved in detection and removal of illicit connections trained in the following:
  - OSHA-required Health and Safety Training (29 CFR 1910.120) plus annual refresher training (as needed).

- OSHA Confined Space Entry training (Cal-OSHA Confined Space, Title 8 and Federal OSHA 29 CFR 1910.146).

- Procedural training (field screening, sampling, smoke/dye testing, TV inspection).

Spill Response and Prevention

- Investigate all reports of spills, leaks, and/or illegal dumping promptly.
- Clean up all spills and leaks using "dry" methods (with absorbent materials and/or rags) or dig up, remove, and properly dispose of contaminated soil.
- Refer to fact sheet SC-11 Spill Prevention, Control, and Cleanup.

Other Considerations (Limitations and Regulations)

- Clean-up activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.
- Storm drain flushing is most effective in small diameter pipes (36-inch diameter pipe or less, depending on water supply and sediment collection capacity). Other considerations associated with storm drain flushing may include the availability of a water source, finding a downstream area to collect sediments, liquid/sediment disposal, and prohibition against disposal of flushed effluent to sanitary sewer in some areas.
- Regulations may include adoption of substantial penalties for illegal dumping and disposal.
- Local municipal codes may include sections prohibiting discharge of soil, debris, refuse, hazardous wastes, and other pollutants into the storm drain system.

Requirements

Costs

- An aggressive catch basin cleaning program could require a significant capital and O&M budget.
- The elimination of illegal dumping is dependent on the availability, convenience, and cost of alternative means of disposal. The primary cost is for staff time. Cost depends on how aggressively a program is implemented. Other cost considerations for an illegal dumping program include:

  - Purchase and installation of signs.

  - Rental of vehicle(s) to haul illegally-disposed items and material to landfills.

  - Rental of heavy equipment to remove larger items (e.g., car bodies) from channels.

  - Purchase of landfill space to dispose of illegally-dumped items and material.

- Methods used for illicit connection detection (smoke testing, dye testing, visual inspection, and flow monitoring) can be costly and time-consuming. Site-specific factors, such as the level of impervious area, the density and ages of buildings, and type of land use will determine the level of investigation necessary.

Maintenance

- Two-person teams may be required to clean catch basins with vactor trucks.
- Teams of at least two people plus administrative personnel are required to identify illicit discharges, depending on the complexity of the storm sewer system.
- Arrangements must be made for proper disposal of collected wastes.
- Technical staff are required to detect and investigate illegal dumping violations.

Supplemental Information

Further Detail of the BMP

Storm Drain Flushing

Flushing is a common maintenance activity used to improve pipe hydraulics and to remove pollutants in storm drainage systems. Flushing may be designed to hydraulically convey accumulated material to strategic locations, such as an open channel, another point where flushing will be initiated, or the sanitary sewer and the treatment facilities, thus preventing resuspension and overflow of a portion of the solids during storm events. Flushing prevents "plug flow" discharges of concentrated pollutant loadings and sediments. Deposits can hinder the designed conveyance capacity of the storm drain system and potentially cause backwater conditions in severe cases of clogging.

Storm drain flushing usually takes place along segments of pipe with grades that are too flat to maintain adequate velocity to keep particles in suspension. An upstream manhole is selected to place an inflatable device that temporarily plugs the pipe. Further upstream, water is pumped into the line to create a flushing wave. When the upstream reach of pipe is sufficiently full to cause a flushing wave, the inflated device is rapidly deflated with the assistance of a vacuum pump, thereby releasing the backed up water and resulting in the cleaning of the storm drain segment.

To further reduce impacts of stormwater pollution, a second inflatable device placed well downstream may be used to recollect the water after the force of the flushing wave has dissipated. A pump may then be used to transfer the water and accumulated material to the sanitary sewer for treatment. In some cases, an interceptor structure may be more practical or required to recollect the flushed waters.

It has been found that cleansing efficiency of periodic flush waves is dependent upon flush volume, flush discharge rate, sewer slope, sewer length, sewer flow rate, sewer diameter, and population density. As a rule of thumb, the length of line to be flushed should not exceed 700 feet. At this maximum recommended length, the percent removal efficiency ranges between 65-75% for organics and 55-65% for dry weather grit/inorganic material. The percent removal efficiency drops rapidly beyond that. Water is commonly supplied by a water truck, but fire hydrants can also supply water. To make the best use of water, it is recommended that reclaimed water be used or that fire hydrant line flushing coincide with storm sewer flushing.

Landscaping and garden maintenance activities can be major contributors to water pollution. Soils, yard wastes, over-watering and garden chemicals become part of the urban runoff mix that winds its way through streets, gutters and storm drains before entering lakes, rivers, streams, etc. Urban runoff pollution contaminates water and harms aquatic life!

...Only Rain Down ...the Storm Drain

What you should know for... Landscape and Gardening

Best Management tips for:

- Professionals
- Novices
- Landscapers
- Gardeners
- Cultivators

Tips for Landscape & Gardening

This brochure will help you to get the most of your lawn and gardening efforts and keep our waterways clean. Clean waterways provide recreation, establish thriving fish habitats, secure safe sanctuaries for wildlife, and add beauty to our communities. NEVER allow gardening products or waste water to enter the street, gutter or storm drain.

General Landscaping Tips

- Protect stockpiles and materials from wind and rain by storing them under tarps or secured plastic sheeting.
- Prevent erosion of slopes by planting fast-growing, dense ground covering plants. These will shield and bind the soil.

- Plant native vegetation to reduce the amount of water, fertilizers and pesticides applied to the landscape.
- Never apply pesticides or fertilizers when rain is predicted within the next 48 hours.

Garden & Lawn Maintenance

- Do not overwater. Use irrigation practices such as drip irrigation, soaker hoses or micro-spray systems. Periodically inspect and fix leaks and misdirected sprinklers.
- Do not rake or blow leaves, clippings or pruning waste into the street, gutter or storm drain. Instead, dispose of green waste by composting, hauling it to a permitted landfill, or recycling it through your city's program.

- Consider recycling your green waste and adding "nature's own fertilizer" to your lawn or garden.
- Read labels and use only as directed. Do not over-apply pesticides or fertilizers. Apply to spots as needed, rather than blanketing an entire area.
- Store pesticides, fertilizers and other chemicals in a dry covered area to prevent exposure that may result in the deterioration of containers and packaging.
- Rinse empty pesticide containers and re-use rinse water as you would use the product. Do not dump rinse water down storm drains or sewers. Dispose of empty containers in the trash.
- When available, use non-toxic alternatives to traditional pesticides, and use pesticides specifically designed to control the pest you are targeting.
- Try natural long-term common sense solutions first. Integrated Pest Management (IPM) can provide landscaping guidance and solutions, such as:
  - **Physical Controls** - Try hand picking, barriers, traps or caulking holes to control weeds and pests.
  - **Biological Controls** - Use predatory insects to control harmful pests.
  - **Chemical Controls** - Check out www.ipm.ucdavis.edu before using chemicals. Remember, all chemicals should be used cautiously and in moderation.
- If fertilizer is spilled, sweep up the spill before irrigating. If the spill is liquid, apply an absorbent material such as cat litter, and then sweep it up and dispose of it in the trash.
- Take unwanted pesticides to a Household Waste Collection Center to be recycled.
- *Dumping toxics into the street, gutter or storm drain is illegal!*

Additional information can also be found on the back of this brochure.

We ♥ our Watershed!

A clean and healthy watershed is important to all of us.

Trash, debris, chemicals and other contaminants from business activities often make their way into the Riverside County storm drain system. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife.

Did you know?

There is a difference between storm drains and sewers.

Storm drains capture rainwater and flow directly to our rivers, lakes and streams – untreated.

Sewers capture and collect water from sinks, toilets and floor drains, and then it is processed and treated before it is released into the environment.

For more information about how you can protect our watershed, please visit:
www.rcwatershed.org

Questions?

If you have questions about Best Management Practices, or if you have questions about illicit dumping and stormwater pollution visit the Pollution Prevention website: rcwatershed.org.

For more information on requirements for all retail food facilities go to Riverside County Environmental Health's website: rivcoeh.org

RIVERSIDE COUNTY
WATERSHED PROTECTION

Riverside County Watershed Protection Program is managed by Riverside County Flood Control & Water Conservation District in partnership with 27 Cities, the County of Riverside and the Coachella Valley Water District.

OUR MISSION

"To protect, preserve and enhance the quality of Riverside County watersheds by fostering a community-wide commitment to clean water."

Watershed Protection

Food Service Industry Best Practices

Restaurants
Mobile Food Trucks
Grocery Stores
Bakeries
Delicatessens

Best Kitchen Practices

Recycle Oil & Grease

- Never put oil or grease down the drain. Contain grease and oil by using covered grease storage containers or installing a grease interceptor.
- Never overfill your grease storage container or transport it without a cover.
- Grease control devices must be emptied and cleaned by permitted companies and according to manufacturer's specifications.
- Keep maintenance records on site.
- For a list of oil/grease recycling companies, contact CalRecycle www.calrecycle.ca.gov or contact your local sanitation district.

Managing Spills

- Clean food spills in loading and trash areas by using absorbent materials and sweeping then mopping.
- Discharge mop water into the sewer through a grease interceptor.
- Have spill containment and cleanup kits available.
- To report serious toxic spills, call 911.

Handling Toxic Chemicals

- Dispose of all unwanted toxics materials like cleaners, solvents and detergents through a hazardous waste hauler. These items are not trash!
- Use non-toxic cleaning products whenever possible.
- For information on hazardous waste transporters, call (888) 722-4234.

Dumpster Areas

- Keep dumpster lids closed and the areas around them clean.
- Do not fill with liquid waste or hose them out.
- Call your trash hauler to replace any dumpsters that are damaged or leaking.

Cleaning & Maintenance

- Clean equipment, floor mats, filters and garbage cans in a mop sink, wash rack or floor drain connected to a sanitary sewer.
- Sweep outside areas and put the debris in trash containers DO NOT hose down or sweep into the parking lot or street.
- Outside eating areas and sidewalks may not be hosed down or pressure washed UNLESS the following standards are met:
  - ✓ Use dry cleanup methods prior to any pressure washing – absorbing with kitty litter, sweeping, vacuuming, scraping off dried debris.
  - ✓ Wash waters must be captured for proper disposal: collected waters should be discharged to a sanitary drain.
  - ✓ DO NOT use any chemicals or detergents.
  - ✓ DO NOT wash or pour water in a parking lot, alley, sidewalk or street.

Mobile Food Trucks

- The potential for generating stormwater pollution as part of a mobile food business requires special attention. Cleaning activities are required to be conducted at an approved fixed location with a connection to a sanitary sewer. For more information contact Riverside County Environmental Health at (888) 722-4234.
- Do not discharge wash water into storm drains.
- Clean on a properly equipped wash pad and drain wastewater to a sanitary sewer system.

Food Waste Disposal

- Scrape food waste off of plates, pots and food prep areas and dispose of in the trash.
- Food scraps often contain grease, which can clog sewer pipes and result in costly sewer backups and overflows.
- Never put food waste down the drain.

RECYCLE
USED OIL

Waste Handling & Disposal SC-34

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Description

Improper storage and handling of solid wastes can allow toxic compounds, oils and greases, heavy metals, nutrients, suspended solids, and other pollutants to enter stormwater runoff. The discharge of pollutants to stormwater from waste handling and disposal can be prevented and reduced by tracking waste generation, storage, and disposal; reducing waste generation and disposal through source reduction, re-use, and recycling; and preventing runon and runoff.

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	☑
Metals	☑
Bacteria	☑
Oil and Grease	☑
Organics	☑
Oxygen Demanding	☑

Approach

Pollution Prevention

- Reduction in the amount of waste generated can be accomplished using the following source controls such as:
  - Production planning and sequencing
  - Process or equipment modification
  - Raw material substitution or elimination
  - Loss prevention and housekeeping
  - Waste segregation and separation
  - Close loop recycling
- Establish a material tracking system to increase awareness about material usage. This may reduce spills and minimize contamination, thus reducing the amount of waste produced.
- Recycle materials whenever possible.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Suggested Protocols

General

- Cover storage containers with leak proof lids or some other means. If waste is not in containers, cover all waste piles (plastic tarps are acceptable coverage) and prevent stormwater runon and runoff with a berm. The waste containers or piles must be covered except when in use.
- Use drip pans or absorbent materials whenever grease containers are emptied by vacuum trucks or other means. Grease cannot be left on the ground. Collected grease must be properly disposed of as garbage.
- Check storage containers weekly for leaks and to ensure that lids are on tightly. Replace any that are leaking, corroded, or otherwise deteriorating.
- Sweep and clean the storage area regularly. If it is paved, do not hose down the area to a storm drain.
- Dispose of rinse and wash water from cleaning waste containers into a sanitary sewer if allowed by the local sewer authority. Do not discharge wash water to the street or storm drain.
- Transfer waste from damaged containers into safe containers.
- Take special care when loading or unloading wastes to minimize losses. Loading systems can be used to minimize spills and fugitive emission losses such as dust or mist. Vacuum transfer systems can minimize waste loss.

Controlling Litter

- Post "No Littering" signs and enforce anti-litter laws.
- Provide a sufficient number of litter receptacles for the facility.
- Clean out and cover litter receptacles frequently to prevent spillage.

Waste Collection

- Keep waste collection areas clean.
- Inspect solid waste containers for structural damage or leaks regularly. Repair or replace damaged containers as necessary.
- Secure solid waste containers; containers must be closed tightly when not in use.
- Place waste containers under cover if possible.
- Do not fill waste containers with washout water or any other liquid.
- Ensure that only appropriate solid wastes are added to the solid waste container. Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc. may not be

disposed of in solid waste containers (see chemical/ hazardous waste collection section below).

- Do not mix wastes; this can cause chemical reactions, make recycling impossible, and complicate disposal.

Good Housekeeping

- Use all of the product before disposing of the container.
- Keep the waste management area clean at all times by sweeping and cleaning up spills immediately.
- Use dry methods when possible (e.g. sweeping, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Stencil storm drains on the facility's property with prohibitive message regarding waste disposal.

Chemical/Hazardous Wastes

- Select designated hazardous waste collection areas on-site.
- Store hazardous materials and wastes in covered containers protected from vandalism, and in compliance with fire and hazardous waste codes.
- Place hazardous waste containers in secondary containment.
- Make sure that hazardous waste is collected, removed, and disposed of only at authorized disposal areas.

Runon/Runoff Prevention

- Prevent stormwater runon from entering the waste management area by enclosing the area or building a berm around the area.
- Prevent the waste materials from directly contacting rain.
- Cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropyleneor hypalon.
- Cover the area with a permanent roof if feasible.
- Cover dumpsters to prevent rain from washing waste out of holes or cracks in the bottom of the dumpster.
- Move the activity indoor after ensuring all safety concerns such as fire hazard and ventilation are addressed.

Inspection

- Inspect and replace faulty pumps or hoses regularly to minimize the potential of releases and spills.
- Check waste management areas for leaking containers or spills.
- Repair leaking equipment including valves, lines, seals, or pumps promptly.

Training

- Train staff pollution prevention measures and proper disposal methods.
- Train employees and contractors proper spill containment and cleanup. The employee should have the tools and knowledge to immediately begin cleaning up a spill if one should occur.
- Train employees and subcontractors in proper hazardous waste management.

Spill Response and Prevention

- Refer to SC-11, Spill Prevention, Control & Cleanup.
- Keep your Spill Prevention Control and countermeasure (SPCC) plan up-to-date, and implement accordingly.
- Have spill cleanup materials readily available and in a known location.
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.
- Vehicles transporting waste should have spill prevention equipment that can prevent spills during transport. The spill prevention equipment includes:
  - Vehicles equipped with baffles for liquid waste
  - Trucks with sealed gates and spill guards for solid waste

Other Considerations

- Hazardous waste cannot be re-used or recycled; it must be disposed of by a licensed hazardous waste hauler.

Requirements

Costs

- Capital and operation and maintenance costs will vary substantially depending on the size of the facility and the types of waste handled. Costs should be low if there is an inventory program in place.

Maintenance

- None except for maintaining equipment for material tracking program.

Supplemental Information

Further Detail of the BMP

Land Treatment System

- Minimize the runoff of polluted stormwater from land application of municipal waste on-site by:
  - Choosing a site where slopes are under 6%, the soil is permeable, there is a low water table, it is located away from wetlands or marshes, there is a closed drainage system.
  - Avoiding application of waste to the site when it is raining or when the ground is saturated with water.
  - Growing vegetation on land disposal areas to stabilize soils and reduce the volume of surface water runoff from the site.
  - Maintaining adequate barriers between the land application site and the receiving waters. Planted strips are particularly good.
  - Using erosion control techniques such as mulching and matting, filter fences, straw bales, diversion terracing, and sediment basins.
  - Performing routine maintenance to ensure the erosion control or site stabilization measures are working.

Stormwater Pollution

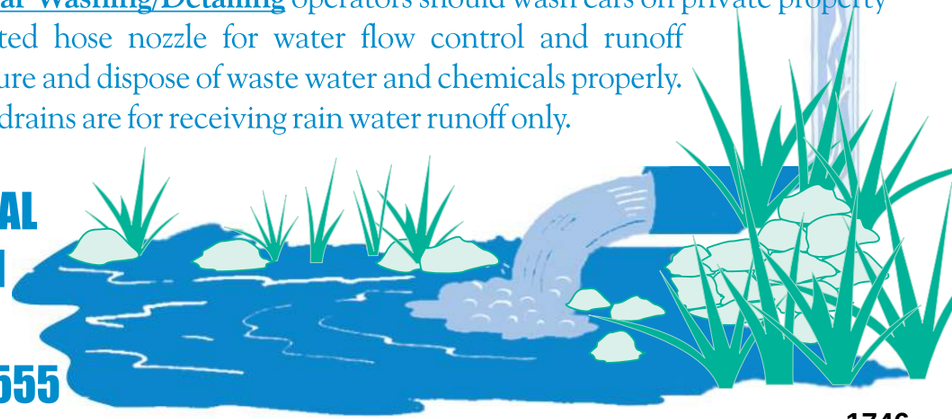
What you should know for...

Outdoor Cleaning Activities and Professional Mobile Service Providers

Storm drain pollution prevention information for:

- Car Washing / Mobile Detailers
- Window and Carpet Cleaners
- Power Washers
- Waterproofers / Street Sweepers
- Equipment cleaners or degreasers and all mobile service providers

Do you know where street flows actually go?



Storm drains are NOT connected to sanitary sewer systems and treatment plants!

The primary purpose of storm drains is to carry *rain* water away from developed areas to prevent flooding. Pollutants discharged to storm drains are transported directly into rivers, lakes and streams. Soaps, degreasers, automotive fluids, litter and a host of materials are washed off buildings, sidewalks, plazas and parking areas. Vehicles and equipment must be properly managed to prevent the pollution of local waterways.

Unintentional spills by mobile service operators can flow into storm drains and pollute our waterways. **Avoid mishaps.** *Always* have a **Spill Response Kit** on hand to clean up unintentional spills. Only emergency **Mechanical** repairs should be done in City streets, using drip pans for spills. **Plumbing** should be done on private property. Always store chemicals in a leak-proof container and keep covered when not in use. **Window/Power Washing** waste water shouldn't be released into the streets, but should be disposed of in a sanitary sewer, landscaped area or in the soil. Soiled **Carpet Cleaning** wash water should be filtered before being discharged into the sanitary sewer. Dispose of all filter debris properly. **Car Washing/Detailing** operators should wash cars on private property and use a regulated hose nozzle for water flow control and runoff prevention. Capture and dispose of waste water and chemicals properly. Remember, storm drains are for receiving rain water runoff only.

REPORT ILLEGAL STORM DRAIN DISPOSAL 1-800-506-2555

Help Protect Our Waterways!

Use these guidelines for Outdoor Cleaning Activities and Wash Water Disposal

Did you know that disposing of pollutants into the street, gutter, storm drain or body of water is *PROHIBITED* by law and can result in stiff penalties?

Best Management Practices

Waste wash water from Mechanics, Plumbers, Window/Power Washers, Carpet Cleaners, Car Washing and Mobile Detailing activities may contain significant quantities of motor oil, grease, chemicals, dirt, detergents, brake pad dust, litter and other materials.

Best Management Practices, or BMPs as they are known, are guides to prevent pollutants from entering the storm drains. ***Each of us*** can do our part to keep stormwater clean by using the suggested BMPs below:

Simple solutions for both light and heavy duty jobs:

Do...consider dry cleaning methods first such as a mop, broom, rag or wire brush. Always keep a spill response kit on site.

Do...prepare the work area before power cleaning by using sand bags, rubber mats, vacuum booms, containment pads or temporary berms to keep wash water away from the gutters and storm drains.

Do...use vacuums or other machines to remove and collect loose debris or litter before applying water.

Do...obtain the property owner's permission to dispose of ***small amounts*** of power washing waste water on to landscaped, gravel or unpaved surfaces.

Do...check your local sanitary sewer agency's policies on wash water disposal regulations before disposing of wash water into the sewer. (See list on reverse side)

Do...be aware that if discharging to landscape areas, soapy wash water may damage landscaping. Residual wash water may remain on paved surfaces to evaporate. Sweep up solid residuals and dispose of properly. Vacuum booms are another option for capturing and collecting wash water.

Do...check to see if local ordinances prevent certain activities.

Do not let...wash or waste water from sidewalk, plaza or building cleaning go into a street or storm drain.

Report illegal storm drain disposal
Call Toll Free
1-800-506-2555

Using Cleaning Agents

Try using biodegradable/phosphate-free products. They are easier on the environment, but don't confuse them with being toxic free. Soapy water entering the storm drain system can impact the delicate aquatic environment.

When cleaning surfaces with a ***high-pressure washer*** or ***steam cleaner***, additional precautions should be taken to prevent the discharge of pollutants into the storm drain system. These two methods of surface cleaning can loosen additional material that can contaminate local waterways.

Think Water Conservation

Minimize water use by using high pressure, low volume nozzles. Be sure to check all hoses for leaks. Water is a precious resource, don't let it flow freely and be sure to shut it off in between uses.

Screening Wash Water

Conduct thorough dry cleanup before washing exterior surfaces, such as buildings and decks ***with loose paint***, sidewalks or plaza areas. Keep debris from entering the storm drain after cleaning by first passing the wash water through a "20 mesh" or finer screen to catch the solid materials, then dispose of the mesh in a refuse container. Do not let the remaining wash water enter a street, gutter or storm drain.

Drain Inlet Protection & Collection of Wash Water

- Prior to any washing, block all storm drains with an impervious barrier such as sandbags or berms, or seal the storm drain with plugs or other appropriate materials.
- Create a containment area with berms and traps or take advantage of a low spot to keep wash water contained.
- Wash vehicles and equipment on grassy or gravel areas so that the wash water can seep into the ground.
- Pump or vacuum up all wash water in the contained area.

Concrete/Coring/Saw Cutting and Drilling Projects

Protect any down-gradient inlets by using dry activity techniques whenever possible. If water is used, minimize the amount of water used during the coring/drilling or saw cutting process. Place a barrier of sandbags and/or absorbent berms to protect the storm drain inlet or watercourse. Use a shovel or wet vacuum to remove the residue from the pavement. Do not wash residue or particulate matter into a storm drain inlet or watercourse.

Building & Grounds Maintenance SC-41

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	☑
Metals	☑
Bacteria	☑
Oil and Grease	☑
Organics	☑
Oxygen Demanding	☑

Description

Stormwater runoff from building and grounds maintenance activities can be contaminated with toxic hydrocarbons in solvents, fertilizers and pesticides, suspended solids, heavy metals, and abnormal pH. Utilizing the following protocols will prevent or reduce the discharge of pollutants to stormwater from building and grounds maintenance activities by washing and cleaning up with as little water as possible, following good landscape management practices, preventing and cleaning up spills immediately, keeping debris from entering the storm drains, and maintaining the stormwater collection system.

Approach

Pollution Prevention

- Switch to non-toxic chemicals for maintenance when possible.
- Choose cleaning agents that can be recycled.
- Encourage proper lawn management and landscaping, including use of native vegetation.
- Encourage use of Integrated Pest Management techniques for pest control.
- Encourage proper onsite recycling of yard trimmings.
- Recycle residual paints, solvents, lumber, and other material as much as possible.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Suggested Protocols

Pressure Washing of Buildings, Rooftops, and Other Large Objects

- In situations where soaps or detergents are used and the surrounding area is paved, pressure washers must use a waste water collection device that enables collection of wash water and associated solids. A sump pump, wet vacuum or similarly effective device must be used to collect the runoff and loose materials. The collected runoff and solids must be disposed of properly.
- If soaps or detergents are not used, and the surrounding area is paved, wash water runoff does not have to be collected but must be screened. Pressure washers must use filter fabric or some other type of screen on the ground and/or in he catch basin to trap the particles in wash water runoff.
- If you are pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement. Ensure that this practice does not kill grass.

Landscaping Activities

- Do not apply any chemicals (insecticide, herbicide, or fertilizer) directly to surface waters, unless the application is approved and permitted by the state.
- Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage, or by composting. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures on exposed soils.
- Check irrigation schedules so pesticides will not be washed away and to minimize non-stormwater discharge.

Building Repair, Remodeling, and Construction

- Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.
- Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.
- Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.
- Clean paint brushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.

- Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a catch basin. The containment device(s) must be in place at the beginning of the work day, and accumulated dirty runoff and solids must be collected and disposed of before removing the containment device(s) at the end of the work day.
- If you need to de-water an excavation site, you may need to filter the water before discharging to a catch basin or off-site. In which case you should direct the water through hay bales and filter fabric or use other sediment filters or traps.
- Store toxic material under cover with secondary containment during precipitation events and when not in use. A cover would include tarps or other temporary cover material.

Mowing, Trimming, and Planting

- Dispose of leaves, sticks, or other collected vegetation as garbage, by composting or at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures when soils are exposed.
- Place temporarily stockpiled material away from watercourses and drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- Consider an alternative approach when bailing out muddy water; do not put it in the storm drain, pour over landscaped areas.
- Use hand or mechanical weeding where practical.

Fertilizer and Pesticide Management

- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.
- Follow manufacturers' recommendations and label directions. Pesticides must never be applied if precipitation is occuring or predicted. Do not apply insecticides within 100 feet of surface waters such as lakes, ponds, wetlands, and streams.
- Use less toxic pesticides that will do the job, whenever possible. Avoid use of copper-based pesticides if possible.
- Do not use pesticides if rain is expected.
- Do not mix or prepare pesticides for application near storm drains.
- Use the minimum amount needed for the job.
- Calibrate fertilizer distributors to avoid excessive application.
- Employ techniques to minimize off-target application (e.g. spray drift) of pesticides, including consideration of alternative application techniques.

- Apply pesticides only when wind speeds are low.
- Work fertilizers into the soil rather than dumping or broadcasting them onto the surface.
- Irrigate slowly to prevent runoff and then only as much as is needed.
- Clean pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
- Dispose of empty pesticide containers according to the instructions on the container label.
- Use up the pesticides. Rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- Implement storage requirements for pesticide products with guidance from the local fire department and County Agricultural Commissioner. Provide secondary containment for pesticides.

Inspection

- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering, and repair leaks in the irrigation system as soon as they are observed.

Training

- Educate and train employees on use of pesticides and in pesticide application techniques to prevent pollution.
- Train employees and contractors in proper techniques for spill containment and cleanup.
- Be sure the frequency of training takes into account the complexity of the operations and the nature of the staff.

Spill Response and Prevention

- Refer to SC-11, Spill Prevention, Control & Cleanup
- Keep your Spill Prevention Control and countermeasure (SPCC) plan up-to-date, and implement accordingly.
- Have spill cleanup materials readily available and in a known location.
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- Alternative pest/weed controls may not be available, suitable, or effective in many cases.

Requirements

Costs

- Overall costs should be low in comparison to other BMPs.

Maintenance

- Sweep paved areas regularly to collect loose particles, and wipe up spills with rags and other absorbent material immediately, do not hose down the area to a storm drain.

Supplemental Information

Further Detail of the BMP

Fire Sprinkler Line Flushing

Building fire sprinkler line flushing may be a source of non-stormwater runoff pollution. The water entering the system is usually potable water though in some areas it may be non-potable reclaimed wastewater. There are subsequent factors that may drastically reduce the quality of the water in such systems. Black iron pipe is usually used since it is cheaper than potable piping but it is subject to rusting and results in lower quality water. Initially the black iron pipe has an oil coating to protect it from rusting between manufacture and installation; this will contaminate the water from the first flush but not from subsequent flushes. Nitrates, poly-phosphates and other corrosion inhibitors, as well as fire suppressants and antifreeze may be added to the sprinkler water system. Water generally remains in the sprinkler system a long time, typically a year, between flushes and may accumulate iron, manganese, lead, copper, nickel and zinc. The water generally becomes anoxic and contains living and dead bacteria and breakdown products from chlorination. This may result in a significant BOD problem and the water often smells. Consequently dispose fire sprinkler line flush water into the sanitary sewer. Do not allow discharge to storm drain or infiltration due to potential high levels of pollutants in fire sprinkler line water.

SECTION I Introduction

This preliminary hydrology report has been prepared for the Wildomar Crossings mixed-use project. The project site is located at the northwest intersection of Clinton Keith Road and Wildomar Trail in the City of Wildomar, County of Riverside, State of California. Refer to the vicinity map in **Technical Appendix A** for location of the project.

SECTION II Methodology

For both the existing and proposed conditions, the peak storm discharges for the drainage areas were calculated using the Riverside County Hydrology Manual. The Rational Method Equation (1978 April), using CivilD computer software package, utilizing rational method was used to calculate the 10-year and 100-year storm events and utilizing the Unit Hydro graph Methodology, was used to determine the on-site existing and proposed runoff values for the site (1,3-,6- and 24-hour duration, 100-year storm event).

The site is situated within hydrologic soils type "D" as identified in the Hydrology Manual. "Apartment" and "commercial" land use types have been used for the proposed disturbed development areas.

SECTION III Project Discussion

The proposed project would consist of demolishing the existing structures and other site improvements and constructing a new mixed-use development. The residential portion of the project is proposed for 4.5 acres of the site and includes 150 apartment units. The commercial portion of the project is proposed for the eastern 4.53 acres of the site and includes a market, shops, and restaurants. The 23,104 SF Sprouts Farmers Market and 4,000 SF attached shops building are located on the north end of the site.

Existing Conditions: The project site encompasses 4 existing parcels, that total approximately 9.1 acres. The western most lot is developed on the southern end with a single-family home and an unoccupied out-structure. The three remaining lots are undeveloped and contain undocumented fill soils. A remnant cement foundation is located near the single-family home. Refer to the "Existing Hydrology Map" in **back sleeve** for an illustration of the existing drainage patterns. Presently, drainage areas A1 and A2 flow southeasterly towards Wildomar Trail. The storm water runoff is picked up by two inlets headwalls with 24" RCP that discharge into the existing 72" RCP RCFC&WCD line 'GG'. The flow will ultimately travel across Clinton Keith Road to a RCFC&WCD regional drainage facility via a double 60-inch RCP storm drain. Drainage area B flows southerly to a sump located just north from Clinton Keith Road. The flow continues across Clinton Keith Road to the RCFC&WCD regional drainage facility in a 24" CMP pipe. Refer to **Appendix E** for the reference as-built plan that define existing drainage facilities and patterns.

EXISTING DRAINAGE SUMMARY			
SUBAREA	**AREA (Ac)**	**Q_{10} (cfs)**	**Q_{100} (cfs)**
A1	1.34	1.99	3.20
A2	0.53	0.93	1.49
A3	7.07	9.96	16.07
TOTAL ON-SITE	**8.94**	**12.88**	**20.76**

The above table summarizes the data and results for the 10-year and 100-year storm event in the existing condition. All calculations can be found in **Appendix B** of this report.

Proposed Conditions: The proposed development will be approximately 90% impervious. The proposed drainage pattern will be consistent with existing condition. Refer to the "Proposed Hydrology Map" in **back sleeve** for an illustration of the proposed drainage patterns. The proposed development can be divided into two drainage areas. Drainage area A comprised of the **Commercial** portion of the project and drainage area B comprised of the **Residential** portion of the project. Both drainage areas will be picked up by a separate backbone storm drain system. The storm water will be treated by four modular wetland biofiltration BMP flow-rate based units and hydrodynamic separators before entering the underground detention chambers (refer to **Basin A** and **Basin B**). Outflow from each underground detention basin will be metered by an outlet control manhole with weir plate and will then discharge in County's Line 'GG', across Clinton Keith Road via a double 60-inch RCP storm drain into the RCFC&WCD regional drainage facility.

The following table summarizes the data and results for the 10-year and 100-year storm event in the proposed condition. All calculations are in **Appendix B** of this report.

PROPOSED DRAINAGE SUMMARY			
SUBAREA	**AREA (Ac)**	**Q_{10} (cfs)**	**Q_{100} (cfs)**
A1	1.47	3.37	5.12
A2	2.93	6.38	9.73
B1	0.45	1.10	1.67
B2	1.22	2.65	4.09
B3	2.76	3.58	8.69
TOTAL ON-SITE**	**8.83 ***	**16.82**	**26.15**

* Areas (negligible compare overall study area) from high point to the right-of-way within proposed driveways are not included in the calculations.

** Total On-site stormwater runoff is based confluence of the Residential and Commercial sites at node 40.

As a result of the Rational Method calculations, the proposed developed condition for the project site produces 16.82 cfs of runoff for the 10-year storm event and 26.15 cfs for the 100-year storm event. This translates to a decrease of 3.94 cfs for the 10-year storm event and 5.39 cfs for the 100-year storm event in comparison to the existing condition.

Hydromodification Mitigation

The project will have two underground detention basins for the purpose of low impact development and hydrologic control. These systems are designed to ensure that the flow duration curve of the post-development drainage management area (DMA) meets the 100-year stormwater increased runoff mitigation for the project site.

Existing Conditions: The existing project site peak runoff rates were determined using the Riverside County Unit Hydrograph Method. Refer to **Appendix F**, the Existing Condition Hydrograph Calculations, section of this report for data used in the calculations. The following table illustrates the runoff rate calculation results for the Existing Conditions analysis. These values are used as the maximum the post-developed discharge rate for the on-site areas.

EXISTING ON-SITE CONDITIONS SUMMARY TABLE

Storm Year	1-Hour	3-Hour	6-Hour	24-Hour
100	25.17 cfs	19.14 cfs	18.00 cfs	8.20 cfs

Proposed Conditions: The proposed site is separated into two (2) distinct drainage areas. Refer to the "Proposed Hydrology Map" in **back sleeve** for an illustration of the proposed drainage patterns. The table below summarizes the on-site outflow for the two drainage areas.

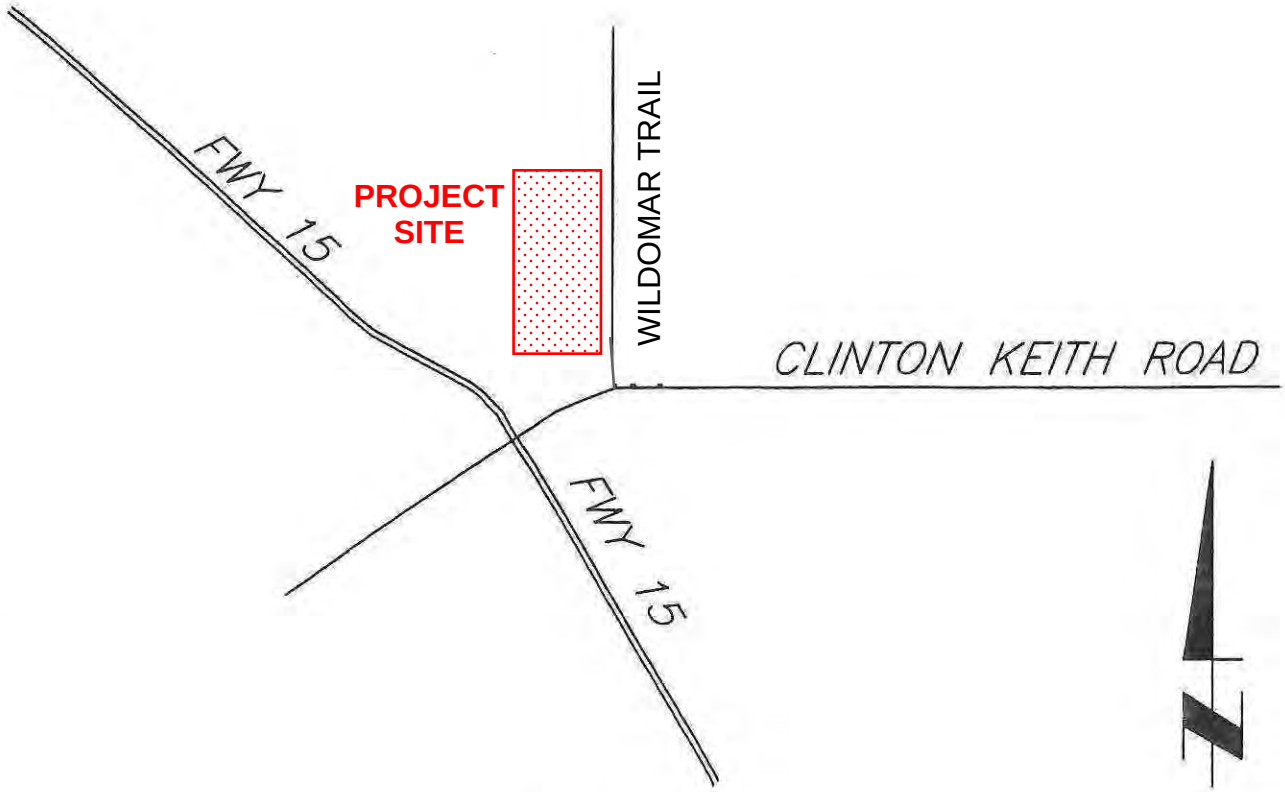
PROPOSED CONDITION ON-SITE OUTFLOW SUMMARY TABLE (100 Year Storm)

Drainage Area	1-Hour	3-Hour	6-Hour	24-Hour
A	15.04 cfs	10.30 cfs	9.67 cfs	4.31 cfs
B	14.48 cfs	10.10 cfs	9.50 cfs	4.23 cfs
Total	29.52 cfs	20.40 cfs	19.17 cfs	8.54 cfs

The following table summarizes the results of the routing of the combined hydrograph (drainage zones A and B) through the individual underground detention system and outlet structure and the algebraic summation with Zone C and off-site street flow rates to achieve a **total post-developed site runoff rate**. Comparing the summed flows, the post-developed total on-site runoff rates have been mitigated to below existing condition rates. Refer to Section 5.0 for detention chamber calculations.

MITIGATED CONDITION ON-SITE OUTFLOW SUMMARY TABLE (100 Year Storm)

	1-Hour	3-Hour	6-Hour	24-Hour
Detention System A	5.79 cfs	5.70 cfs	5.61 cfs	3.90 cfs
Detention System B	5.61 cfs	5.52 cfs	5.42 cfs	3.63 cfs
Total	11.40 cfs	11.22 cfs	11.03 cfs	7.53 cfs



Hydromodification Summary: The proposed project is required to maintain post-developed flows to levels equal to or below existing flow rates. Comparing the tables above, it illustrates that for the 1-hour, 3-hour, 6-hour and 24 hour 100-year storm event, the proposed site total outflow is lower than the existing condition values.

Conclusion

In conclusion, the proposed development will not adversely affect the existing drainage patterns in the area and will provide adequate protection for the proposed on-site improvements and structures for up to the 100-year storm event. The required detention basin volumes will be sized to maintain the post-development discharge rates to the pre-development discharge rates up to the 100-year storm events.

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S M.O.U. STANDARD SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.
2. AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL. CONTACT ED LOTZ AT 909/955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT 909/955-1288. THE DISTRICT MUST BE NOTIFIED TWENTY DAYS (20) PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE INTERSECTION STATIONS.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-422-4133.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHEWISE NOTED.
10. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO.4 (JS 229) UNLESS OTHERWISE NOTED.
12. PIPE BENDING SHALL CONFORM TO RCFC&WCD STD. DWG. NO. M815 EXCEPT FOR COVER <2 FEET. FOR COVER <2 FEET, CONCRETE SLURRY (2000 PSI – 2 SACK) SHALL BE USED. THE ENTIRE TRENCH SHALL BE EXTENDING 4 INCHES MINIMUM AND 12 INCHES MAXIMUM ABOVE THE TOP OF THE PIPE.
13. BH-1 INDICATES SOIL BORING LOCATIONS BASED ON THE SOILS REPORT DATED _____ LOCATIONS SHOWN ARE APPROXIMATE.
14. "V" IS THE DEPTH OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
15. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
16. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
17. STANDARD DRAWINGS CALLED FOR ON THE PLAN AND PROFILE SHALL CONFORM TO DISTRICT STANDARD DRAWINGS UNLESS NOTED OTHERWISE.
18. THE CONTRACTOR IS REQUIRED TO CALL ALL UTILITY AGENCIES REGARDING TEMPORARY SHORING AND SUPPORT REQUIREMENTS FOR THE VARIOUS UTILITY LINES SHOWN ON THESE PLANS.
19. DURING ROUGH GRADING OPERATIONS AND PRIOR TO CONSTRUCTION OF PERMANENT DRAINAGE STRUCTURES, TEMPORARY DRAINAGE CONTROL SHOULD BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES.
20. APPROVAL OF THESE PLANS BY THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERAVTION DISTRICT DOES NOT RELIEVE THE DEVELOPER'S ENGINEER OF RESPONSIBILITY FOR THE ENGINEERING DESIGN. IF FIELD CHANGES ARE REQUIRED, IT WILL BE THE RESPONSIBILITY OF THE DESIGN ENGINEER TO MAKE THE NECESSARY CORRECTIONS.
21. THE CONTRACTOR OR DEVELOPER SHALL SECURE ALL REQUIRED ENCROACHMENT AND/OR STATE AND FEDERAL REGULATORY PERMITS PRIOR TO THE COMMENCEMENT OF ANY WORK.

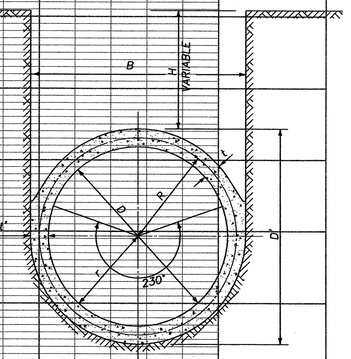
TITLE SHEET

PROJECT NO. 7-0-00234,7-0-00235 7-0-00236
DRAWING NO. 7-404
SHEET NO. 1 OF 16

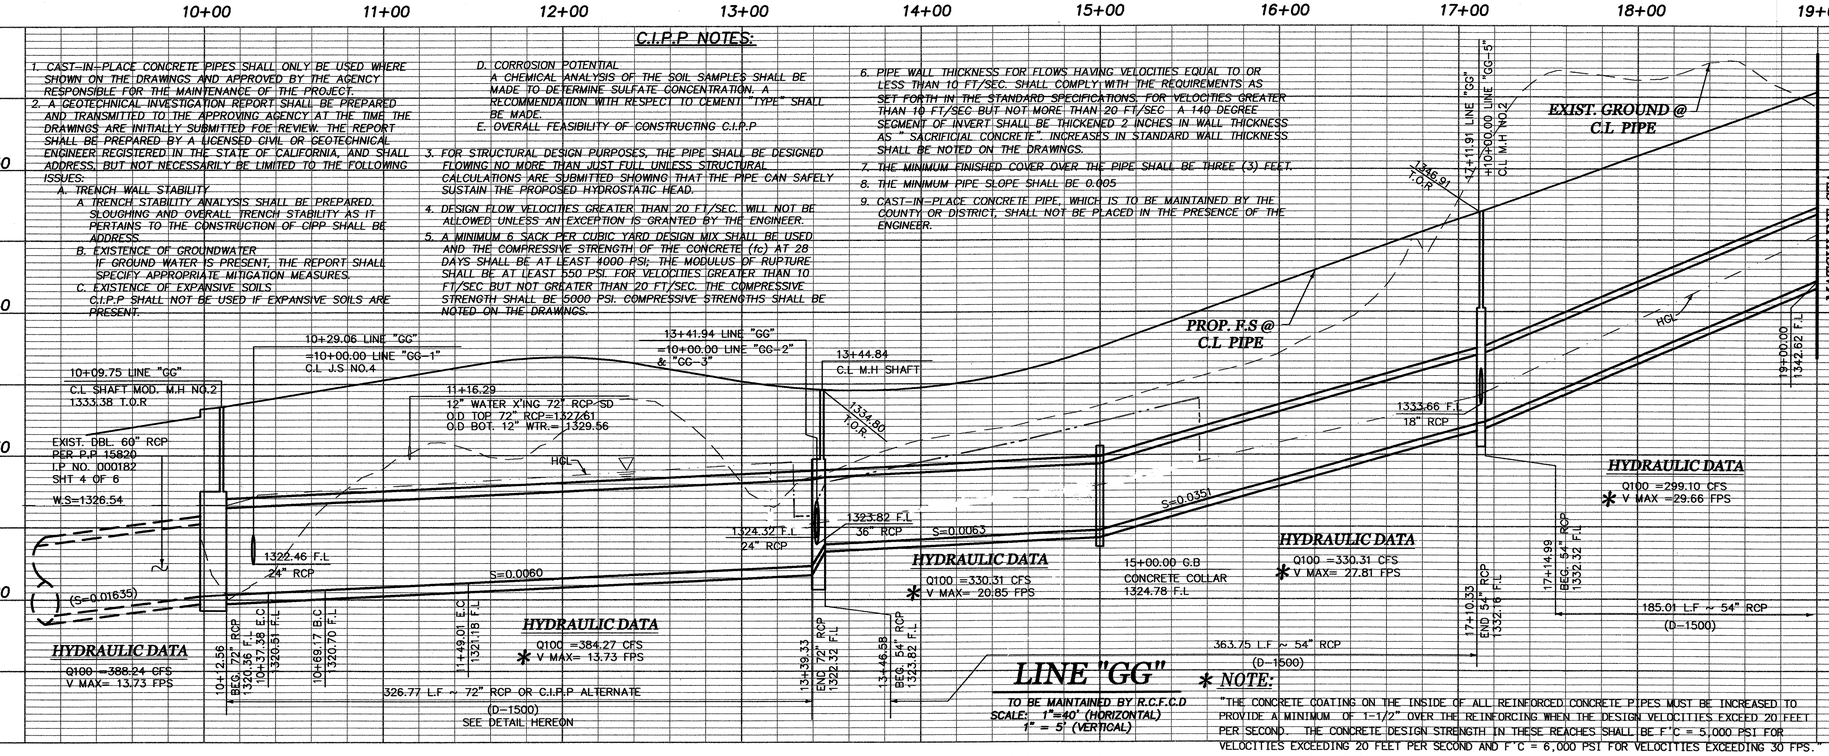
C.I.P.P NOTES:



1. CAST-IN-PLACE CONCRETE PIPES SHALL ONLY BE USED WHERE SHOWN ON THE DRAWINGS AND APPROVED BY THE AGENCY RESPONSIBLE FOR THE MAINTENANCE OF THE PROJECT.
2. A GEOTECHNICAL INVESTIGATION REPORT SHALL BE PREPARED AND TRANSMITTED TO THE APPROVING AGENCY AT THE TIME THE DRAWINGS ARE INITIALLY SUBMITTED FOE REVIEW. THE REPORT SHALL BE PREPARED BY A LICENSED CIVIL OR GEOTECHNICAL ENGINEER REGISTERED IN THE STATE OF CALIFORNIA, AND SHALL ADDRESS, BUT NOT NECESSARILY BE LIMITED TO THE FOLLOWING ISSUES:
   - A. TRENCH WALL STABILITY
     - A TRENCH STABILITY ANALYSIS SHALL BE PREPARED. SLOUGHING AND OVERALL TRENCH STABILITY AS IT PERTAINS TO THE CONSTRUCTION OF CIPP SHALL BE ADDRESS.
   - B. EXISTENCE OF GROUNDWATER
     - IF GROUND WATER IS PRESENT, THE REPORT SHALL SPECIFY APPROPRIATE MITIGATION MEASURES.
   - C. EXISTENCE OF EXPANSIVE SOILS
     - C.I.P.P SHALL NOT BE USED IF EXPANSIVE SOILS ARE PRESENT.
   - D. CORROSION POTENTIAL
     - A CHEMICAL ANALYSIS OF THE SOIL SAMPLES SHALL BE MADE TO DETERMINE SULFATE CONCENTRATION. A RECOMMENDATION WITH RESPECT TO CEMENT "TYPE" SHALL BE MADE.
   - E. OVERALL FEASIBILITY OF CONSTRUCTING C.I.P.P
3. FOR STRUCTURAL DESIGN PURPOSES, THE PIPE SHALL BE DESIGNED FLOWING NO MORE THAN JUST FULL UNLESS STRUCTURAL CALCULATIONS ARE SUBMITTED SHOWING THAT THE PIPE CAN SAFELY SUSTAIN THE PROPOSED HYDROSTATIC HEAD.
4. DESIGN FLOW VELOCITIES GREATER THAN 20 FT/SEC. WILL NOT BE ALLOWED UNLESS AN EXCEPTION IS GRANTED BY THE ENGINEER.
5. A MINIMUM 6 SACK PER CUBIC YARD DESIGN MIX SHALL BE USED AND THE COMPRESSIVE STRENGTH OF THE CONCRETE (fc) AT 28 DAYS SHALL BE AT LEAST 4000 PSI; THE MODULUS OF RUPTURE SHALL BE AT LEAST 550 PSI. FOR VELOCITIES GREATER THAN 10 FT/SEC BUT NOT GREATER THAN 20 FT/SEC. THE COMPRESSIVE STRENGTH SHALL BE 5000 PSI. COMPRESSIVE STRENGTHS SHALL BE NOTED ON THE DRAWINGS.
6. PIPE WALL THICKNESS FOR FLOWS HAVING VELOCITIES EQUAL TO OR LESS THAN 10 FT/SEC. SHALL COMPLY WITH THE REQUIREMENTS AS SET FORTH IN THE STANDARD SPECIFICATIONS. FOR VELOCITIES GREATER THAN 10 FT/SEC BUT NOT MORE THAN 20 FT/SEC A 140 DEGREE SEGMENT OF INVERT SHALL BE THICKENED 2 INCHES IN WALL THICKNESS AS " SACRIFICIAL CONCRETE". INCREASES IN STANDARD WALL THICKNESS SHALL BE NOTED ON THE DRAWINGS.
7. THE MINIMUM FINISHED COVER OVER THE PIPE SHALL BE THREE (3) FEET.
8. THE MINIMUM PIPE SLOPE SHALL BE 0.005
9. CAST-IN-PLACE CONCRETE PIPE, WHICH IS TO BE MAINTAINED BY THE COUNTY OR DISTRICT, SHALL NOT BE PLACED IN THE PRESENCE OF THE ENGINEER.

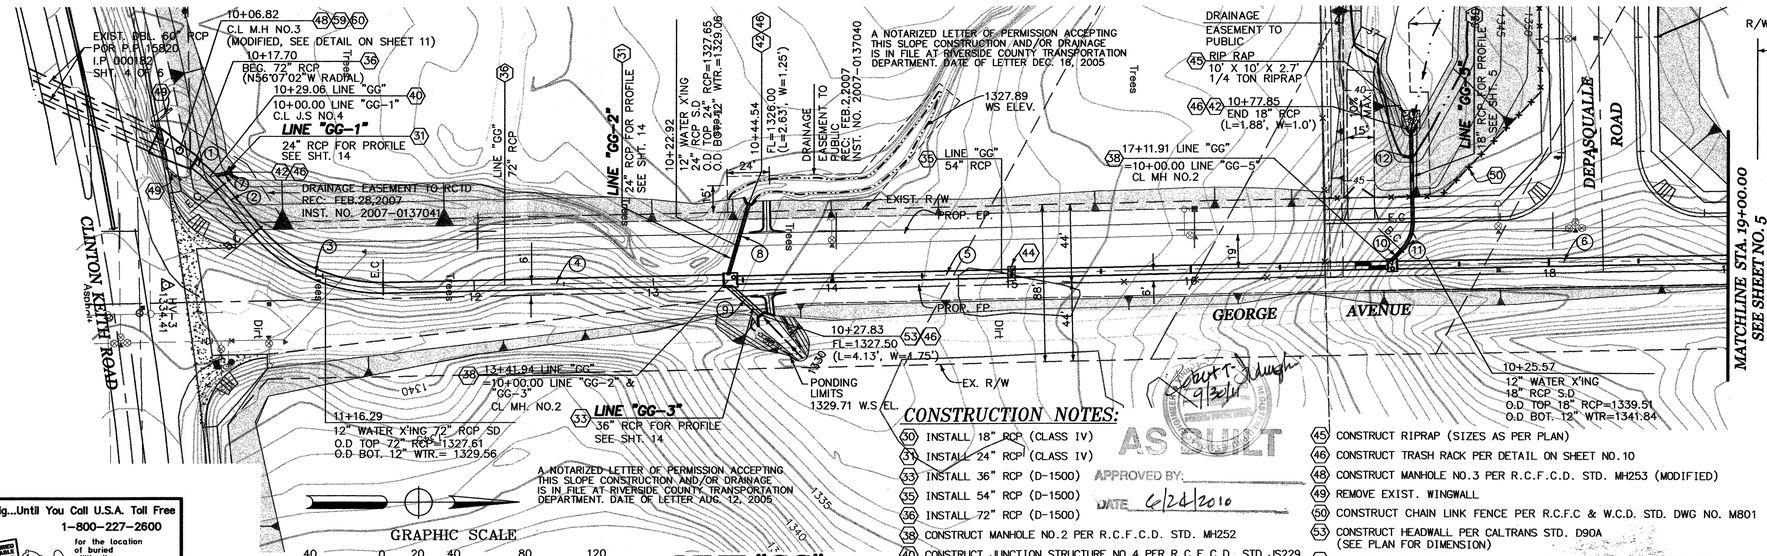
C.I.P.P NOTES (CONT.)

10. WHEN C.I.P.P IS SPECIFIED AS AN ALTERNATIVE TO RCP, A NOTE TO THE CONSTRUCTION DRAWINGS STATING THAT TRANSITION STRUCTURE NO.3 SHALL REPLACED, JUNCTION STRUCTURE NO.2 WHEN C.I.P.P IS USED. NO CHANGES NEED BE MADE FOR JUNCTION STRUCTURE NO.4.
11. CAST-IN-PLACE PIPE SHALL NOT HAVE CURVE RADII LESS THAN SHOWN HERE.



PIPE SIZE	RADIUS *
48"	60 FT.
72"	60 FT.

* THESE VALUES MAY BE REDUCED BY 25% FOR CURVES WITH INCLUDED ANGLES OF LESS THAN 25 DEGREES.



TYPICAL LYNCH C.I.P PIPE CROSS SECTION (72")

NOMINAL DIAMETER D	OUTER DIAMETER D'	WITH OF PIPE/TRENCH B	THICKNESS (MIN.) I	THICKNESS (MIN.) I'
72"	86"	87"	7"	7"

* NOTE:
"THE CONCRETE COATING ON THE INSIDE OF ALL REINFORCED CONCRETE PIPES MUST BE INCREASED TO PROVIDE A MINIMUM OF 1-1/2" OVER THE REINFORCING WHEN THE DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE F'C = 5,000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND AND F'C = 6,000 PSI FOR VELOCITIES EXCEEDING 30 FPS."

21-994 WILDOMAR TRAIL
100-YEAR
EXISTING CONDITION

Drainage Area = 8.94(Ac.) = 0.014 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 8.94(Ac.) = 0.014 Sq. Mi.
Length along longest watercourse = 750.00(Ft.)
Length along longest watercourse measured to centroid = 450.00(Ft.)
Length along longest watercourse = 0.142 Mi.
Length along longest watercourse measured to centroid = 0.085 Mi.
Difference in elevation = 26.30(Ft.)
Slope along watercourse = 185.1520 Ft./Mi.
Average Manning's 'N' = 0.030
Lag time = 0.050 Hr.
Lag time = 2.99 Min.
25% of lag time = 0.75 Min.
40% of lag time = 1.20 Min.
Unit time = 5.00 Min.
Duration of storm = 6 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
8.94	1.50	13.41

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
8.94	3.60	32.18

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 1.500(In)
Area Averaged 100-Year Rainfall = 3.600(In)

Point rain (area averaged) = 3.600(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 3.600(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
8.940	89.00	0.100

Total Area Entered = 8.94(Ac.)

RI AMC2	RI AMC-2	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
89.0	89.0	0.141	0.100	0.129	1.000	0.129
					Sum (F) =	0.129

Area averaged mean soil loss (F) (In/Hr) = 0.129
Minimum soil loss rate ((In/Hr)) = 0.064

(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.820

21-994 WILDOMAR TRAIL
DRAINAGE AREA A - COMMERICAL
100-YEAR STORM EVENT

6-Year Storm Event

Drainage Area = 4.40(Ac.) = 0.007 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 4.40(Ac.) = 0.007 Sq. Mi.
Length along longest watercourse = 795.00(Ft.)
Length along longest watercourse measured to centroid = 450.00(Ft.)
Length along longest watercourse = 0.151 Mi.
Length along longest watercourse measured to centroid = 0.085 Mi.
Difference in elevation = 17.50(Ft.)
Slope along watercourse = 116.2264 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.028 Hr.
Lag time = 1.67 Min.
25% of lag time = 0.42 Min.
40% of lag time = 0.67 Min.
Unit time = 5.00 Min.
Duration of storm = 6 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
4.40	1.50	6.60

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
4.40	3.60	15.84

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 1.500(In)
Area Averaged 100-Year Rainfall = 3.600(In)

Point rain (area averaged) = 3.600(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 3.600(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
4.400	75.00	0.900

Total Area Entered = 4.40(Ac.)

RI AMC2	RI AMC-2	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
75.0	75.0	0.303	0.900	0.058	1.000	0.058
					Sum (F) =	0.058

Area averaged mean soil loss (F) (In/Hr) = 0.058
Minimum soil loss rate ((In/Hr)) = 0.029

(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

English Rainfall Data (Inches) Input Values Used

English Units used in output format

21-994 WILDOMAR TRAIL
DRAINAGE AREA A - COMMERICAL
100-YEAR STORM EVENT

24-Year Storm Event

Drainage Area = 4.40(Ac.) = 0.007 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 4.40(Ac.) = 0.007 Sq. Mi.
Length along longest watercourse = 795.00(Ft.)
Length along longest watercourse measured to centroid = 450.00(Ft.)
Length along longest watercourse = 0.151 Mi.
Length along longest watercourse measured to centroid = 0.085 Mi.
Difference in elevation = 17.50(Ft.)
Slope along watercourse = 116.2264 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.028 Hr.
Lag time = 1.67 Min.
25% of lag time = 0.42 Min.
40% of lag time = 0.67 Min.
Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
4.40	2.70	11.88

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
4.40	7.50	33.00

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 2.700(In)
Area Averaged 100-Year Rainfall = 7.500(In)

Point rain (area averaged) = 7.500(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 7.500(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
4.400	75.00	0.900

Total Area Entered = 4.40(Ac.)

RI AMC2	RI AMC-2	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
75.0	75.0	0.303	0.900	0.058	1.000	0.058
					Sum (F) =	0.058

Area averaged mean soil loss (F) (In/Hr) = 0.058
Minimum soil loss rate ((In/Hr)) = 0.029

(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

21-994 WILDOMAR TRAIL
DRAINAGE AREA B - RESIDENTIAL
100-YEAR STORM EVENT

1-Year Storm Event

Drainage Area = 4.43(Ac.) = 0.007 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 4.43(Ac.) = 0.007 Sq. Mi.
Length along longest watercourse = 955.00(Ft.)
Length along longest watercourse measured to centroid = 575.00(Ft.)
Length along longest watercourse = 0.181 Mi.
Length along longest watercourse measured to centroid = 0.109 Mi.
Difference in elevation = 23.00(Ft.)
Slope along watercourse = 127.1623 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.032 Hr.
Lag time = 1.93 Min.
25% of lag time = 0.48 Min.
40% of lag time = 0.77 Min.
Unit time = 5.00 Min.
Duration of storm = 1 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
4.43	0.60	2.66

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
4.43	1.45	6.42

Notes:

1. Inflow per unit hydrograph calulations.

PROJECT NAME: WILDOMAR TRAIL PROJECT

PROJECT LOCATION: CLINTON KEITH RAOD AND WILDOMAR TRAIL

BASIN ROUTING CALCULATION

Storm Period, Years:	100
Storm Period, Hrs:	24
Peak Inflow Rate (cfs):	0.50
Peak Outflow (cfs):	3.63
Peak Storage (cubic ft):	0

BASIN B

Unit Time Period (5 min.)	Inflow (cfs)	Volume (cubic ft)	Elevation (ft)	Outflow (cfs)	Storage (cubic ft)

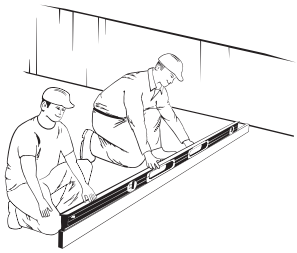
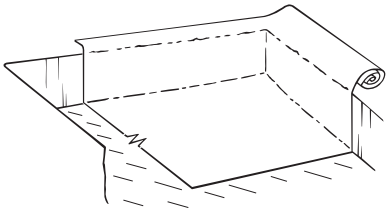
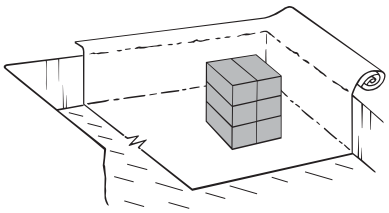
ECO-RAIN DETENTION & EXFILTRATION TANK INSTALLATION GUIDE*



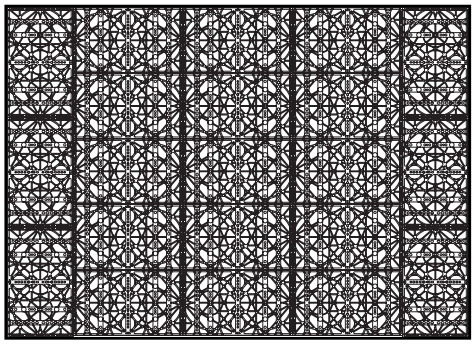
Step 1
Excavate Trench Larger than Specified Tank Size, per Engineered Detail



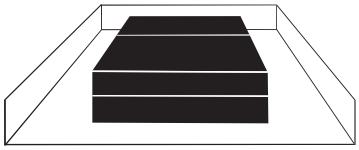
Step 2
Compact Base to 35 psi



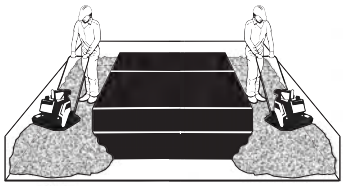
Step 3
Add **Sand** or Free Drainage Material* to Base, Compact and Level with a Straight Edge



Step 4
Lay Geotextile Material in Bottom and on Sides of Trench, Enough to Fully Wrap Tank, with 12″ Seam Overlaps

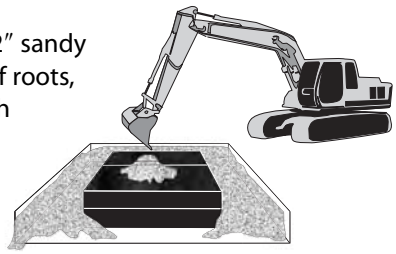


Step 5
Install Tanks upright for Maximum Strength and per the Warranty:
Half Tank - .79′ High
Single Tank - 1.48′ High

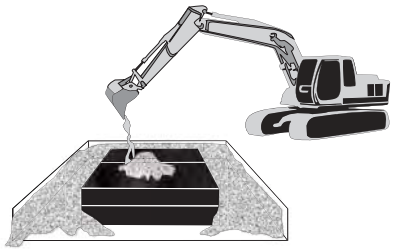


Step 6
Orient Tanks Lengthwise along Perimeter

Step 7
Cover Eco-Rain Tanks with Geotextile Material - Wrap Tight, Cut Away Excess Folds, Overlap and/or Seal Joints with Tape



Step 8
Backfill Sides with Sandy Fill in maximum 12″ Layers - Compacting Each Layer at least 95%



Step 9
Backfill over Top with 12″ sandy backfill free of rocks, stiff roots, or debris - Compact with Lightweight Equipment

Correct

Do Not Drop Fill from High Up

Incorrect

Step 10
Finish Backfill per Engineered Detail

Minimum 12″ Top Cover for Pedestrian Use

Minimum 24″ Top Cover for Vehicle Use – Layer Biaxial Geogrid 12″ Above Eco-Rain Tanks & Extending 3′ beyond Edges of Eco-Rain Tank or as per Engineer Detail.

*Email contact@ecoraintank.com to request full specifications and submittal installation instructions

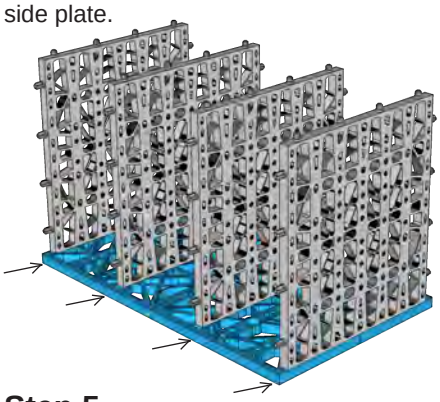
Eco-Rain Tank Systems

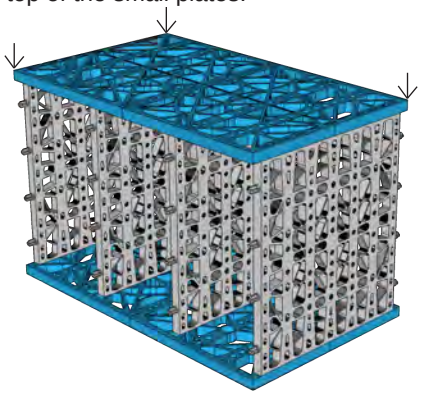
Assembly of Single and Multiple Eco-Rain Tanks

Single Tank Assembly



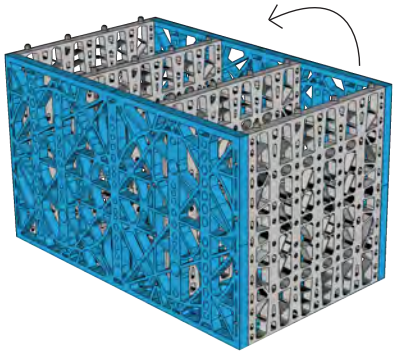
Step 1

Install large pegs of one small plate into holes of one side plate.



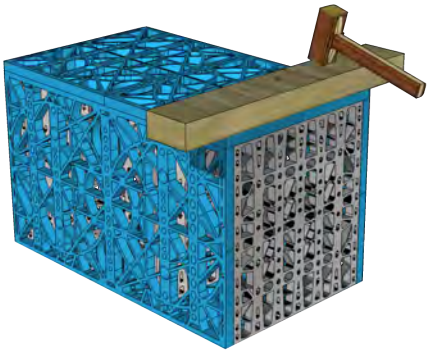
Step 2

Install large pegs of the second, third, and end small plates into holes of the side plate.



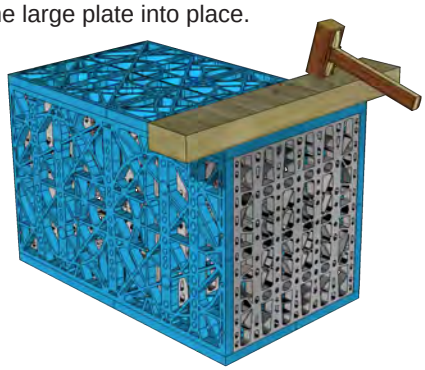
Step 3

Place and align the second side plate on top of the small plates.



Step 4

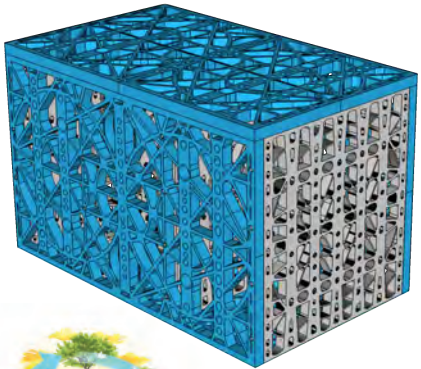
Rotate the tank such that the side plates are now on the sides and the top and bottom are open.



Step 5

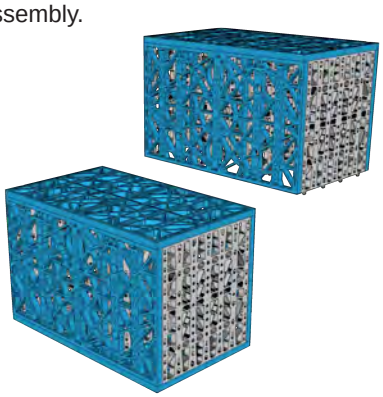
Place and align a large plate with the pegs of the vertical small plates. Use a 2x4 and a dead weight hammer to tap the large plate into place.

Step 6



Turn the tank upside down. Place and align the second large plate with the pegs of the vertical small plates. Use a 2x4 and a dead weight hammer to tap the large plate into place.

Multiple Tank Assembly



Step 1

Repeat Steps 1 through 5 for Multiple Tank Assembly.

Step 2

Turn the tank upside down. Align the tank (with one open end) over a complete tank for Double Tank Assembly.

Step 3

Use Multiple Tank Assembly Steps 1 and 2 for Triple, Quad and Pent Tank Assemblies. Check for full pin insertion and re-tap if necessary.

Parking Demand Analysis

ENVIRONMENT | PLANNING | DEVELOPMENT SOLUTIONS, INC.

To:	City of Wildomar
From:	Meghan Macias, TE
Date:	4/8/2022
Re:	Parking Demand Analysis for the proposed Shopping Center project at Northwest Corner of Clinton Keith Rd & Wildomar Tr, Wildomar

This technical memorandum provides an evaluation of the parking demand for the proposed shopping center project located at 24850-23980 Catt Rd, northwest corner of Clinton Keith Rd & Wildomar Tr in the City of Wildomar. The purpose of this analysis is to determine the number of parking spaces that would be required by the project site which is currently vacant. The project proposes to construct a 34,540 SF shopping center on a 4.61-acre site at northwest corner of Clinton Keith Rd & Wildomar Tr in the City of Wildomar. It is anticipated that the project site will be used for retail and restaurant uses. The project site plan is shown in Figure 1.

Project Parking Supply and City Requirement

The project would provide a total of 195 parking spaces. According to City of Wildomar Municipal Code - *Section 17.188 (Off-Street Vehicle Parking Standards),* general retail uses which include shopping centers with restaurants, shall provide 6 spaces per 1,000 square feet, resulting in a requirement of 208 parking spaces for the proposed project. The project would be under parked by 13 spaces, according to the City of Wildomar requirements.

Parking Rates of Adjacent Cities

The City of Wildomar is adjacent to the Cities of Murrieta, Menifee, and Lake Elsinore. EPD prepared a summary of the parking requirements for shopping center projects in the three adjacent Cities. The comparison is shown in Table 1. As shown in the table, the parking requirements for shopping center land use in adjacent cities is significantly lower than in the City of Wildomar. The highest number of parking spaces that would be required in an adjacent city is in the Cities of Murrieta and Lake Elsinore, where 139 parking spaces would be required for the project, 69 fewer spaces than required in the City of Wildomar.

Review of Table 1 shows that the required parking would range from 104 spaces in the City of Menifee to 139 spaces in the Cities of Murrieta and Lake Elsinore. Because of the wide range of rates utilized in Wildomar and adjacent cities, and the fact that the parking demand of the project would be unlikely to change if it was in an adjacent City, parking rates from the Institute of Transportation Engineers were used to validate the city parking requirements.

Table 1. Parking Calculation using City Rates

Land Use	Parking Ratio	Area	Spaces Required
City of Wildomar[1]			
General Retail	6/ 1,000 SF	34,540	208
City of Murrieta[2]			
Shopping Center	1/ 250 SF	34,540	139
City of Menifee[3]			
General Retail	3/ 1,000 SF	34,540	104
City of Lake Elsinore[4]			
Commercial	1/ 250 SF	34,540	139

[1] City of Wildomar Municipal Code, Section *17.188 - Off-Street Vehicle Parking Standards.*

[2] City of Murrieta Municipal Code, Section *16.34.040 - Number of Parking Spaces Required.*

[3] City of Menifee Municipal Code, Section *9.215.040 - Development Standards.*

[4] City of Lake Elsinore Municipal Code, Section *17.148.030 - Number of Parking Spaces Required.*

Parking Rates from the Institute of Transportation Engineers (ITE)

The Institute of Transportation Engineers (ITE) Parking Generation (2019) includes parking demand rates for various uses derived from surveys taken throughout the United States. The parking rates for Shopping Center (land use 820) are based on 93 studies. The average parking rate for Shopping Center use were used. To provide a conservative analysis of parking demand, the parking rates for a Saturday in December were utilized. per ITE, Shopping Center parking demand on a Saturday in December is 4.58 spaces per 1,000 square feet. Application of the ITE rate of 4.58 spaces per 1,000 square feet would result in a parking demand of 159 spaces. Table 2 shows the parking demand that would result using the ITE parking rate.

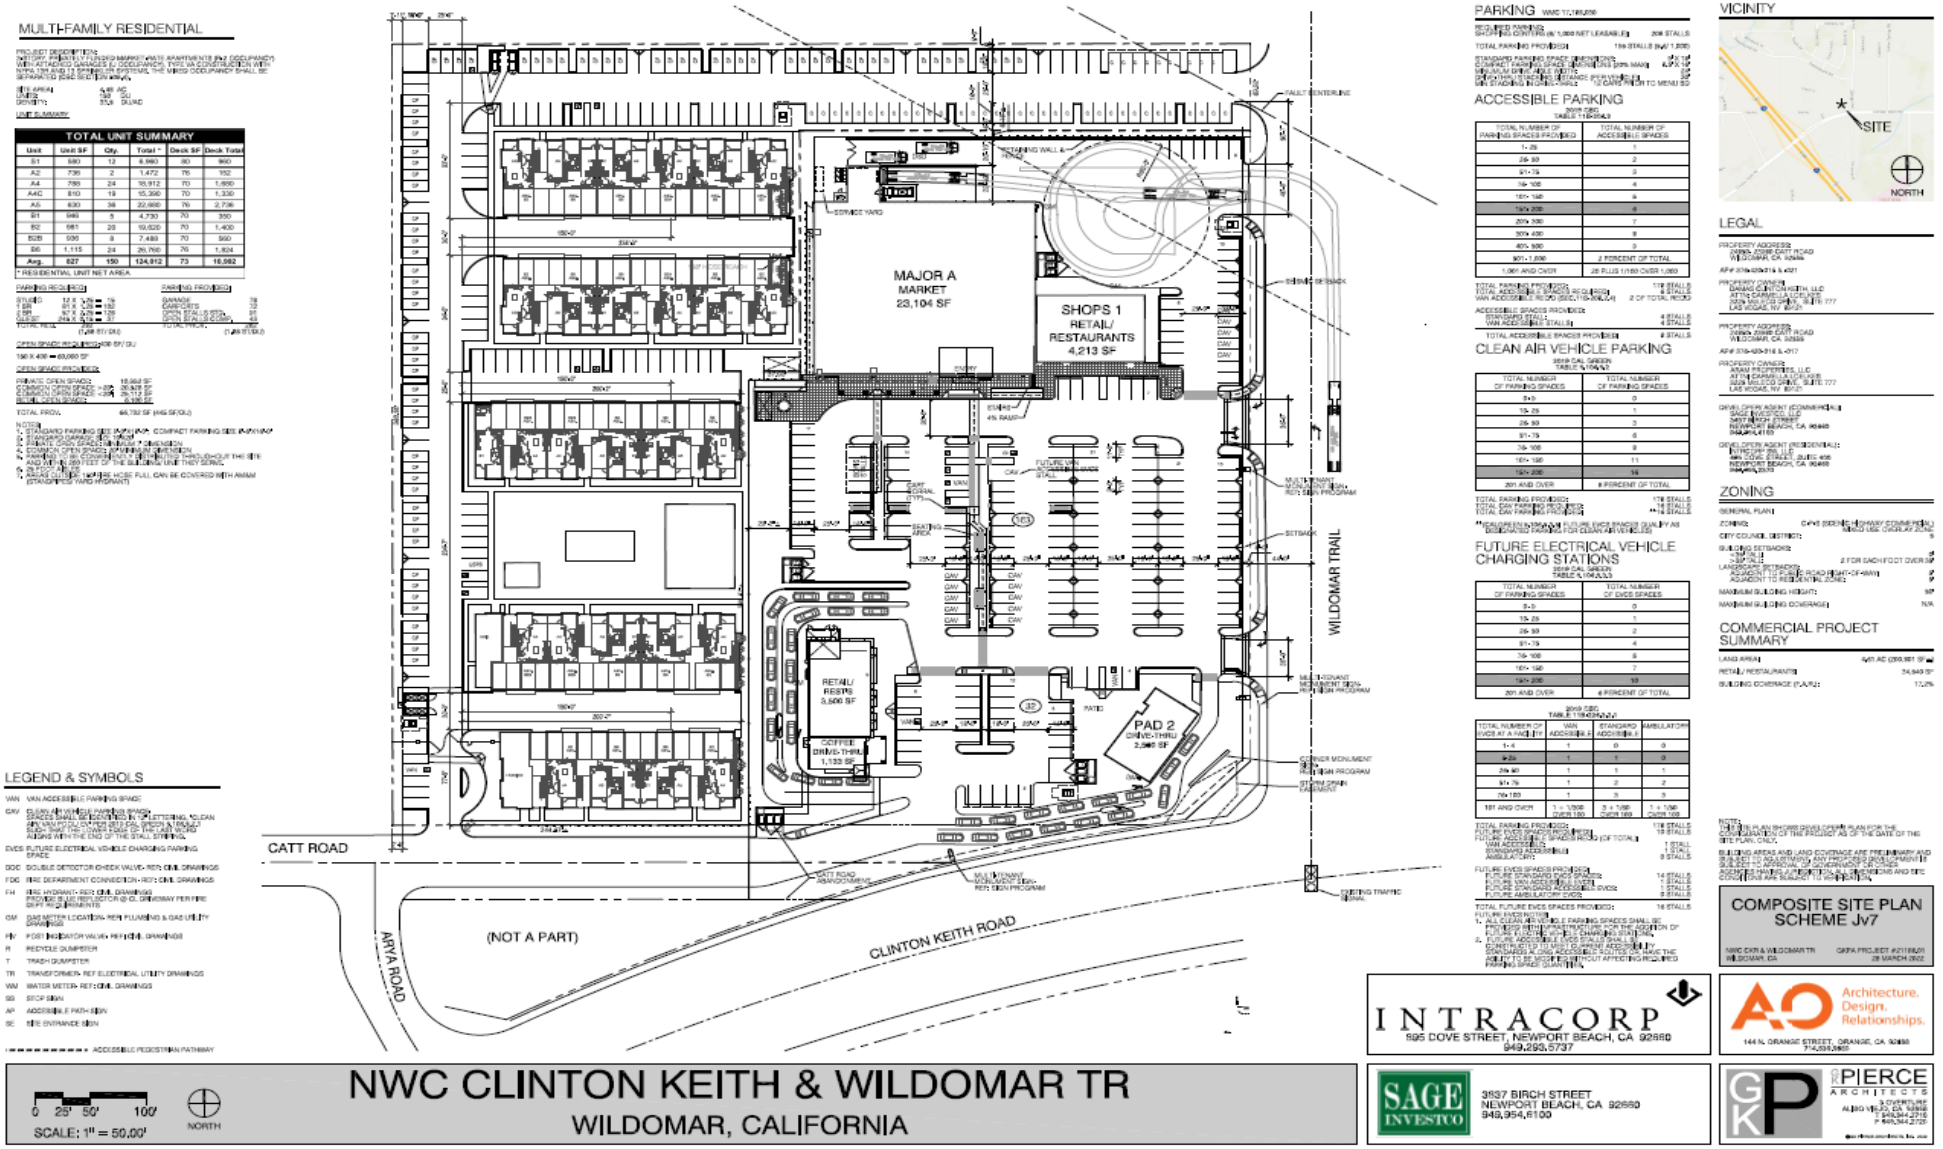
Table 2. Parking Calculation using ITE Rates

Land Use	Parking Ratio	Area	Spaces Required
ITE Rates[1]			
Shopping Center	4.58/ 1,000 SF	34,540	159

[1] Parking rates from the Institute of Transportation Engineers, *Parking Generation*, 5th Edition, 2019 - Land Use Code 820 - Shopping Center.

Internal Capture

Internal Capture quantifies customers of specific uses that may visit other uses on-site without leaving the site, thereby reducing project trips to and from the site as well as the overall parking demand. The percent of Internal Capture can be applied to trip generation estimates and parking requirements for individual land uses to account for internal trips made within the site. For this parking demand analysis, residents in the residential portion of the project are expected to make internal trips (i.e. trips to the shopping center) by walking instead of using their vehicles. The Internal Capture of residents to the shopping center was calculated using the National Cooperative Highway Research Program's (NCHRP Report 684) internal trip capture estimation tool. EPD Solutions calculated the percent of trips that would originate at the residential units and be destined to the shopping center during the AM and PM peak hours. The percentage was calculated as 8% for the AM peak hour and 36% for the PM peak hour. As a conservative approach, the 8% AM rate was utilized to estimate the number of walking trips from the residential project that ultimately would not require a parking space. Out of the 208 (according to City Code) or the 159 (according to ITE) parking space requirements, 8% would correspond to a reduction in 16 (City Code) or 12 (ITE) parking spaces. Accounting for the Internal Capture, the net number of required parking spaces would be 192 (Calculated using City Code) or 147 (Calculated using ITE rates).



Project Parking Requirements

The parking requirement based on City Zoning Code rates would range from 104 spaces in the City of Menifee to 208 spaces in the City of Wildomar. Although the parking requirements vary widely, it is unlikely that the parking demand of the project would be significantly changed if it was in an adjacent City. As discussed in the previous section, the ITE Parking Rates are based on data collected at similar project sites throughout the country and therefore provide a real-world estimate of the project parking demand. Application of the most conservative ITE rate would yield a parking demand of 159 spaces, which is fewer spaces than the proposed parking supply of 195 spaces. The proposed 195 spaces would also meet the code requirement of the three adjacent Cities of Murrieta, Menifee, and Lake Elsinore. Furthermore, accounting for the Internal Capture as discussed above, the net number of required parking spaces would be 192 (using City Code requirement) or 147 (according to ITE trip rates). Therefore, the proposed 195 spaces would provide adequate parking supply for this shopping center project and would satisfy both ITE and City Code parking space requirements upon accounting for Internal Capture.

If you have any questions about this analysis, please contact me at (949) 794-1186 or meghan@epdsolutions.com.

Re Wildomar Crossroads PA21-0145—Justification for a reduction in the current code for parking on the commercial property

Dear Matt:

Should the city not approve the parking demand analysis we had done as justification for a reduction in parking requirements it will result in the project having about 2200sf less retail space which would result in a potential reduction in value by as much as $750,000 which the project projections currently include and are needed to support the economic viability of the project

Refer to Ceneral Land Use & Zoning Comments The proposed design is considered as a Farm Chic Design and the concerns are itemize below itemized below:

C-P-S (Scenic Highway Commercial) / Mixed Use Overlay Zone Standard	Chapter and Section Number	Requirement and City Comment	Applies?	Compliance Notes and Comment Response
STYLE DESCRIPTION	B.1	HIGH PITCHED ROOF	Y	
	B.1	ACCENTUATED VERTICAL ORIENTATION	Y	
	B.1	HORIZONTAL AND VERTICAL WOOD BOARD AND BATTEN SIDING	Y	
	B.1	MULTIPLE ROOF PLANES	Y	
	B.1	DORMERS	N	We believe dormers are part of traditional detail which we prefer to eliminate in favour of a clean and modern interpretation of Farm Chic design.
	B.1	FIXED AWNING WITHOUT SIDES	Y	
		CASEMENT WINDOWS WITH MUNTINS	Y	
FORM & MASSING			Y	
	B.2.1	Multi-story with medium- to high pitched roof forms accentuating vertical orientation	Y	
	B.2.2	Incorporate farm and ranch forms inspired by barns, silos, sheds, tank houses and granary towers	Y	
	B.2.3	Multiple gable roof planes	Y	
	B.2.4	Covered porches and awnings break up volumes between lower and upper floors	Y	
ROOF DESIGNS	B.3.1	Medium to high-pitched (minimum 6:12 slope)	Y	8:12
	B.3.2	Front and/or side facing gables	Y	
	B.3.3	Variation in heights and/or planes	Y	
	B.3.4	Asphalt shingle and metal roofs	Y	

WALLS & WINDOW DESIGNS	B.4.1	Utilize board and batten siding, corrugated panels to give texture and variation to exterior walls	Y	
	B.4.2	Minimal molding around window and door openings	Y	
	B.4.3	Double hung or casement windows with muntins	Y	
	B.4.4	Contrast color of window sash with color of the body of the building	N	The color scheme has been updated to give the color and the distinctive look of black and white composition, with a primarily white mass with crisp black lines of the window, fascia and black roof shingles.
MATERIALS & COLORS	B.5.1	Unadorned materials: metal, wood, masonry	Y	
	B.5.2	Neutral or muted colors should be predominant	Y	
	B.5.3	Monochrome accents of doors, windows or architectural features encouraged	Y	
	B.5.4	Stucco prohibited	N	Stucco has been added as a creative contrast to distinguish the forms applied to siding and board and batten.
DECORATIVE ACCENTS & DETAILS	B.6.1	Wall-mounted gooseneck lights	Y	
	B.6.2	Fixed wood or metal awning without sides	Y	
	B.6.3	Porches with ceiling fans	N	We believe we applied stronger details than ceiling fans to reinforce Farm Chic design. We added a silo to the club house to reinforce the farmhouse chic look additionally the unexpected contrast of white mass with black trims will add a very unique look to the project.
	B.6.4	Exposed rafter tails and brackets	N	We pursued a more modern and refined architectural detail with cleaner and tighter lines.
	B.6.5	Dormers	N	We do not believe dormers would add to the architecture that we are proposing here. The overall concept is one of very elegant and minimal farmhouse forms and meniscal details.

Please include the design guideline chapter and section number in front of all standards in your next submittal, eg E.2.2

A column referring to the chapter and section number has been added to this Multifamily Design Standards Checklist

GENERAL BUILDING DESIGN STANDARDS	E.2.1	Duplexes, triplexes, and fourplexes abutting single-family neighborhoods shall include individual front doors and interior stairs (when stairs are needed).	Y	
	E.2.4	Trim surrounds shall be provided at all exterior window and door openings. In lieu of exterior window trim, windows can be recessed from wall plane by a minimum of three inches.	Y	
	E.2.6	Front doors shall orient towards and be visible from the street.	Y	
	E.2.7	Building front elevations shall emphasize entries, porches and other living areas. No garages shall be forward of architecture and no more than 50% of front facing garages shall be located within 20' of the property line.	Y	
	E.3.2	Buildings shall have minor massing breaks at least every 50 feet along the street frontage, through the use of varying setbacks, building entries and recesses, or structural bays. Minor breaks shall be a minimum of 12 inches deep and four feet wide and extend the full height of the building	Y	
	E.3.3	Rooflines shall be vertically articulated at least every 50 feet along the street frontage, through the use of architectural elements such as parapets, varying cornices, reveals, clerestory windows, and varying roof height and/or form.	Y	
	F.2.1	Building entries shall face the primary public street with pedestrian access provided from sidewalks to all building entries, parking areas, and publicly accessible open spaces. For larger sites with multiple buildings, building entries may also be oriented to face internal open spaces, paseos, and recreation amenities	Y	

	F.2.2	A minimum of 60% of the street frontage shall be devoted to buildings located between the minimum and maximum front setback lines. The remaining 40% may be devoted to parking.	Y	Provided 62% Building Frontage. This Building Frontage measurement is provided in the Site Plan on sheet 3.
	F.2.3	Parking areas, covered and uncovered, shall be screened from public street frontages. Screening may be accomplished through building placement, landscaping, fencing, or some combination thereof. Landscaping for screening purposes shall be no less than four feet tall. Fencing shall comply with the WMC.	Y	
	F.2.4	For multifamily projects located across the street from a single-family residential zone, parking lot areas and carports shall not be located along the single-family neighborhood street frontages.	Y	
	F.2.5	A minimum of one window from each residential unit shall be located to overlook a landscaped private or common open space area.	Y	
	F.2.6	If adjacent to a single-family residential zone, windows, balconies or similar openings shall be oriented so as not to have a direct line-of sight into adjacent units or onto private patios or backyards adjoining the property line. This can be accomplished through: stepbacks of upper stories; window placement; use of clerestory windows, glass block or opaque glass; or mature landscaping within the rear or side setback areas.	Y	
	F.2.7	Controlled entrances to parking facilities (gates, doors, etc.) shall be located a minimum of 18 feet from the back of sidewalk, in order to accommodate a minimum of one vehicle entering the facility.	Y	

	F.2.8	Ground floor residential fronting or siding onto an arterial roadway shall be elevated at least 21 inches above the finished grade of the sidewalk	N/A	
	F.4.1	Minimum Requirements for Recreational-Leisure Areas (RLA):		Per the letter submitted to the City of Wildomar Planning Director dated 3/16/2022, and the confirmation email from the City of Wildomar Planning Director dated 4/11/2022, it is agreed upon that residential open space is no longer deficient and will be accepted by the City.
	F.4.1.1	400 square feet per dwelling unit	Y	
	F.4.1.2	Private areas:7 feet	Y	
	F.4.1.2	Common areas: 20 feet	N	
	F.4.1.2	Pedestrian walkway width: 6 feet	N	Per the letter submitted to the City of Wildomar Planning Director dated 3/16/2022, and the confirmation email from the City of Wildomar Planning Director dated 4/11/2022, it is agreed upon that residential open space is no longer deficient and will be accepted by the City.
	F.4.1.2	Courtyard internal to a project, or enclosed on at least three sides: 40 feet	Y	
	F.4.1.4	One hundred one (101) or more dwelling units: minimum of two (2) spaces, forty (40) feet minimum dimension (three thousand two hundred square feet total).	N	one in 42' X 36' (N) second one in 110 X 188' (Y)

EXECUTIVE SUMMARY

Urban Crossroads, Inc. has prepared this noise study to determine the noise exposure and the necessary noise mitigation measures for the proposed Wildomar Crossroads development ("Project"). The Project site is located on the northwest corner of Clinton Keith Road and Wildomar Trail in the City of Wildomar. The Project as proposed consists of a neighborhood commercial retail development with 150 multi-family residential units. This noise study has been prepared to satisfy applicable City of Wildomar noise standards and significance criteria based on Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1)

The results of this Noise and Vibration Impact Analysis are summarized below based on the significance criteria in Section 4 of this report consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1) Table ES-1 shows the findings of significance for each potential noise and/or vibration impact under CEQA before and after any required mitigation measures.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Off-Site Traffic Noise	7	*Less Than Significant*	-
On-Site Traffic Noise	8	*Less Than Significant*	-
Stationary source Noise	10	*Less Than Significant*	-
Construction Noise	11	*Less Than Significant*	-

1 INTRODUCTION

This noise analysis has been completed to determine the noise impacts associated with the development of the proposed Wildomar Crossroads ("Project"). This noise study briefly describes the proposed Project, provides information regarding noise fundamentals, sets out the regulatory setting, presents the study methods and procedures for transportation related CNEL traffic noise analysis, and evaluates the future exterior noise environment. In addition, this study includes an analysis of the potential Project-related long-term stationary-source stationary source noise and short-term construction noise and vibration impacts.

1.1 SITE LOCATION

The proposed Project is located on the northwest corner of Clinton Keith Road and Wildomar Trail, as shown on Exhibit 1-A. The project site has a General Plan Land Use designation of Mixed-Use Planning Area (MUPA) and a zoning designation of Scenic Highway Commercial (C-P-S) with a Mixed-Use Overlay Zone. The area surrounding the Project Site consists of existing single-family residential homes to the north and west, commercial land use and the Oak Springs Ranch Apartment community located to the south, and commercial land uses east of the Project site.

1.2 PROJECT DESCRIPTION

The proposed Project is planned to consist of the following land uses as shown on Exhibit 1-B

- 23,104 square feet (sf) of supermarket land use
- 5,087 sf shops
- 2,750 sf of fast-food restaurant with drive-through window
- 1,133 sf of coffee/donut shop with drive-through window
- 3,348 sf of high-turnover (sit-down) restaurant
- 150 multi-family residential units in 3-story apartment buildings

2 FUNDAMENTALS

Noise is simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Exhibit 2-A presents a summary of the typical noise levels and their subjective loudness and effects that are described in more detail below.

EXHIBIT 2-A: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	COMMON INDOOR ACTIVITIES	A - WEIGHTED SOUND LEVEL dBA	SUBJECTIVE LOUDNESS	EFFECTS OF NOISE
THRESHOLD OF PAIN		140	INTOLERABLE OR DEAFENING	HEARING LOSS
NEAR JET ENGINE		130		
		120		
JET FLY-OVER AT 300m (1000 ft)	ROCK BAND	110		
LOUD AUTO HORN		100	VERY NOISY	
GAS LAWN MOWER AT 1m (3 ft)		90		
DIESEL TRUCK AT 15m (50 ft), at 80 km/hr (50 mph)	FOOD BLENDER AT 1m (3 ft)	80		SPEECH INTERFERENCE
NOISY URBAN AREA, DAYTIME	VACUUM CLEANER AT 3m (10 ft)	70	LOUD	
HEAVY TRAFFIC AT 90m (300 ft)	NORMAL SPEECH AT 1m (3 ft)	60		
QUIET URBAN DAYTIME	LARGE BUSINESS OFFICE	50	MODERATE	SLEEP DISTURBANCE
QUIET URBAN NIGHTTIME	THEATER, LARGE CONFERENCE ROOM (BACKGROUND)	40		
QUIET SUBURBAN NIGHTTIME	LIBRARY	30	FAINT	NO EFFECT
QUIET RURAL NIGHTTIME	BEDROOM AT NIGHT, CONCERT HALL (BACKGROUND)	20		
	BROADCAST/RECORDING STUDIO	10	VERY FAINT	
LOWEST THRESHOLD OF HUMAN HEARING	LOWEST THRESHOLD OF HUMAN HEARING	0

2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. (2) The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA

at approximately 1,000 feet, which can cause serious discomfort. (3) Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages, rather than instantaneous, noise levels. The most used metric is the equivalent level (L_{eq}). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period and is commonly used to describe the "average" noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA L_{eq} sound levels in the evening from 7:00 p.m. to 10:00 p.m., and the addition of 10 decibels to dBA L_{eq} sound levels at night between 10:00 p.m. and 7:00 a.m. These additions are made to account for the noise sensitive time periods during the evening and night hours when noise can become more intrusive. CNEL does not represent the actual sound level heard at any time, but rather represents the total sound exposure. The City of Wildomar relies on the 24-hour CNEL level to assess land use compatibility with transportation related noise sources.

2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The way noise reduces with distance depends on the following factors.

2.3.1 GEOMETRIC SPREADING

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source. (2)

2.3.2 GROUND ABSORPTION

The propagation path of noise from a highway to a receiver is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually

sufficiently accurate for distances of less than 200 ft. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receiver, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receiver such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source. (4)

2.3.3 ATMOSPHERIC EFFECTS

Receivers located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects. (2)

2.3.4 SHIELDING

A large object or barrier in the path between a noise source and a receiver can substantially attenuate noise levels at the receiver. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an "out of sight, out of mind" effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearby residents. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide and dense enough to completely obstruct the line-of-sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The Federal Highway Administration (FHWA) does not consider the planting of vegetation to be a noise abatement measure. (5)

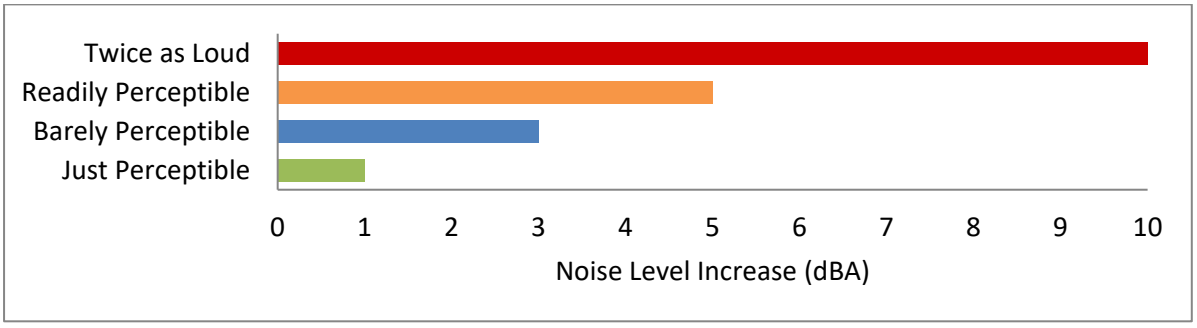
2.4 NOISE CONTROL

Noise control is the process of obtaining an acceptable noise environment for an observation point or receiver by controlling the noise source, transmission path, receiver, or all three. This concept is known as the source-path-receiver concept. In general, noise control measures can be applied to these three elements.

2.5 NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receiver. Noise barriers, however, do have limitations. For a noise barrier to work, it must block the line-of-sight path of sound from the noise source.

2.6 LAND USE COMPATIBILITY WITH NOISE



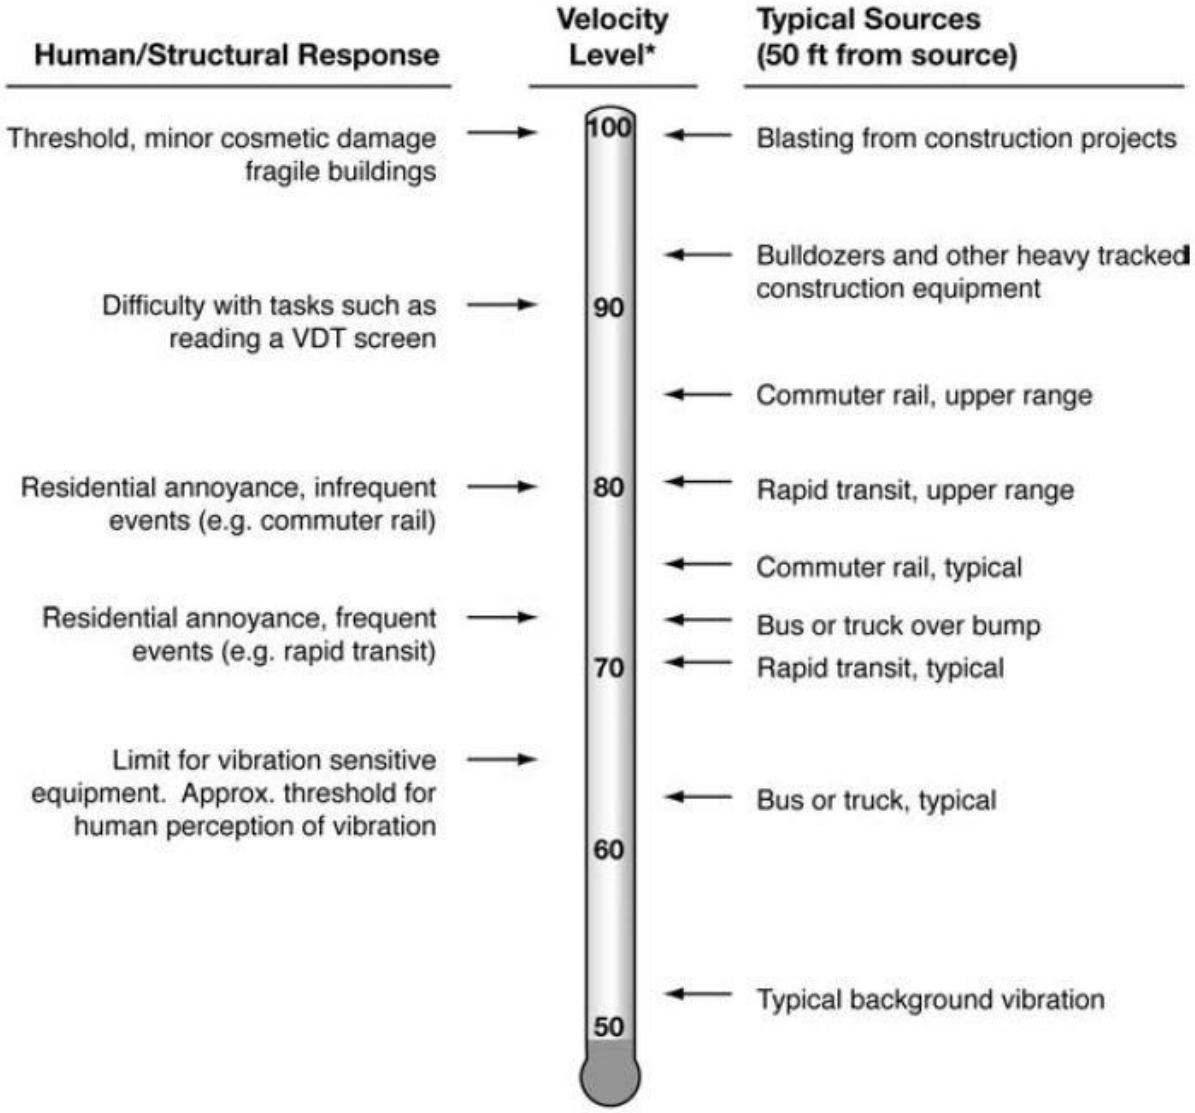
Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized. (6)

2.7 COMMUNITY RESPONSE TO NOISE

Approximately sixteen percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints may occur. Twenty to thirty percent of the population will not complain even in very severe noise environments. (7 pp. 8-6) Thus, a variety of reactions can be expected from people exposed to any given noise environment.

Surveys have shown that community response to noise varies from no reaction to vigorous action for newly introduced noises averaging from 10 dB below existing to 25 dB above existing. (8) According to research originally published in the Noise Effects Handbook (7), the percentage of high annoyance ranges from approximately 0 percent at 45 dB or less, 10 percent are highly annoyed around 60 dB, and increases rapidly to approximately 70 percent being highly annoyed at approximately 85 dB or greater. Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels as shown on Exhibit 2-B. A change of 3 dBA is considered barely perceptible, and changes of 5 dBA are considered readily perceptible. (4)

EXHIBIT 2-B: NOISE LEVEL INCREASE PERCEPTION



2.8 VIBRATION

Per the Federal Transit Administration (FTA) *Transit Noise Impact and Vibration Impact Assessment Manual* (8) , vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. Decibel notation (VdB) is commonly used to measure RMS. Decibel notation (VdB) serves to reduce the range of numbers used to describe human response to vibration. Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receivers for vibration include structures (especially older masonry structures), people (especially residents, the elderly, and sick), and vibration-sensitive equipment and/or activities.

The background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

EXHIBIT 2-C: TYPICAL LEVELS OF GROUND-BORNE VIBRATION

Source: Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual.

3 REGULATORY SETTING

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research (OPR). (9) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels*. In addition, the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

3.1.1 RESIDENTIAL CONSTRUCTION

The State of California's noise insulation standards for all residential units are codified in the California Code of Regulations (CCR), Title 24, Building Standards Administrative Code, Section 1206 to 1207.11.2. These noise standards are applied to new construction that contains dwelling units or sleeping units, such as residential and hotel or motel uses, in California for controlling interior noise levels resulting from exterior noise sources. For new buildings, the acceptable interior noise limit is 45 dBA CNEL in habitable rooms (10).

3.1.2 NON-RESIDENTIAL CONSTRUCTION

The State of California's Green Building Standards Code contains mandatory measures for non-residential building construction in Section 5.507 on Environmental Comfort. (11) These noise standards are applied to new construction in California for controlling interior noise levels resulting from exterior noise sources. The regulations specify that acoustical studies must be prepared when non-residential structures are developed in areas where the exterior noise levels exceed 65 dBA CNEL, such as within a noise contour of an airport, freeway, railroad, and other noise source. If the development falls within an airport or freeway 65 dBA CNEL noise contour, buildings shall be construction to provide an interior noise level environment attributable to exterior sources that does not exceed an hourly equivalent level of 50 dBA L_{eq} in occupied areas during any hour of operation.

3.2 CITY OF WILDOMAR GENERAL PLAN NOISE ELEMENT

The City of Wildomar was incorporated as a City in October of 2008. Through the incorporation process, the City adopted the Riverside County General Plan Noise Element to control and abate environmental noise, and to protect the citizens of the City of Wildomar from excessive exposure to noise. (12) The Noise Element specifies the maximum allowable exterior noise levels for new developments impacted by transportation noise sources such as arterial roads, freeways, airports and railroads. In addition, the Noise Element identifies several polices to minimize the impacts of excessive noise levels throughout the community and establishes noise level requirements for all land uses. To protect City of Wildomar residents from excessive noise, the Noise Element contains the following policies related to the Project:

N 1.1 Protect noise-sensitive land uses from high levels of noise by restricting noise-producing land uses from these areas. If the noise-producing land use cannot be relocated, then noise buffers such as setbacks, landscaping, or block walls shall be used.

N 1.3 Consider the following uses noise-sensitive and discourage these uses in areas in excess of 65 CNEL:

- *Schools*
- *Hospitals*
- *Rest Homes*
- *Long Term Care Facilities*
- *Mental Care Facilities*
- *Residential Uses*
- *Libraries*
- *Passive Recreation Uses*
- *Places of Worship*

N 1.5 Prevent and mitigate the adverse impacts of excessive noise exposure on the residents, employees, visitors, and noise-sensitive uses of Riverside County.

N 4.1 Prohibit facility-related noise, received by any sensitive use, from exceeding the following worst-case noise levels:

a. 45 dBA 10-minute L_{eq} between 10:00 p.m. and 7:00 a.m.;

b. 65 dBA 10-minute L_{eq} between 7:00 a.m. and 10:00 p.m.

N 12.1 Minimize the impacts of construction noise on adjacent uses within acceptable standards.

N 12.2 Ensure that construction activities are regulated to establish hours of operation in order to prevent and/or mitigate the generation of excessive or adverse impacts on surrounding areas.

N 12.3 Condition subdivision approval adjacent to developed/occupied noise-sensitive land uses (see policy N 1.3) by requiring the developer to submit a construction-related noise mitigation plan to the [County] for review and approval prior to issuance of a grading permit. The plan must depict the location of construction equipment and how the noise from this equipment will be mitigated during construction of this project, through the use of such methods as:

i. Temporary noise attenuation fences;

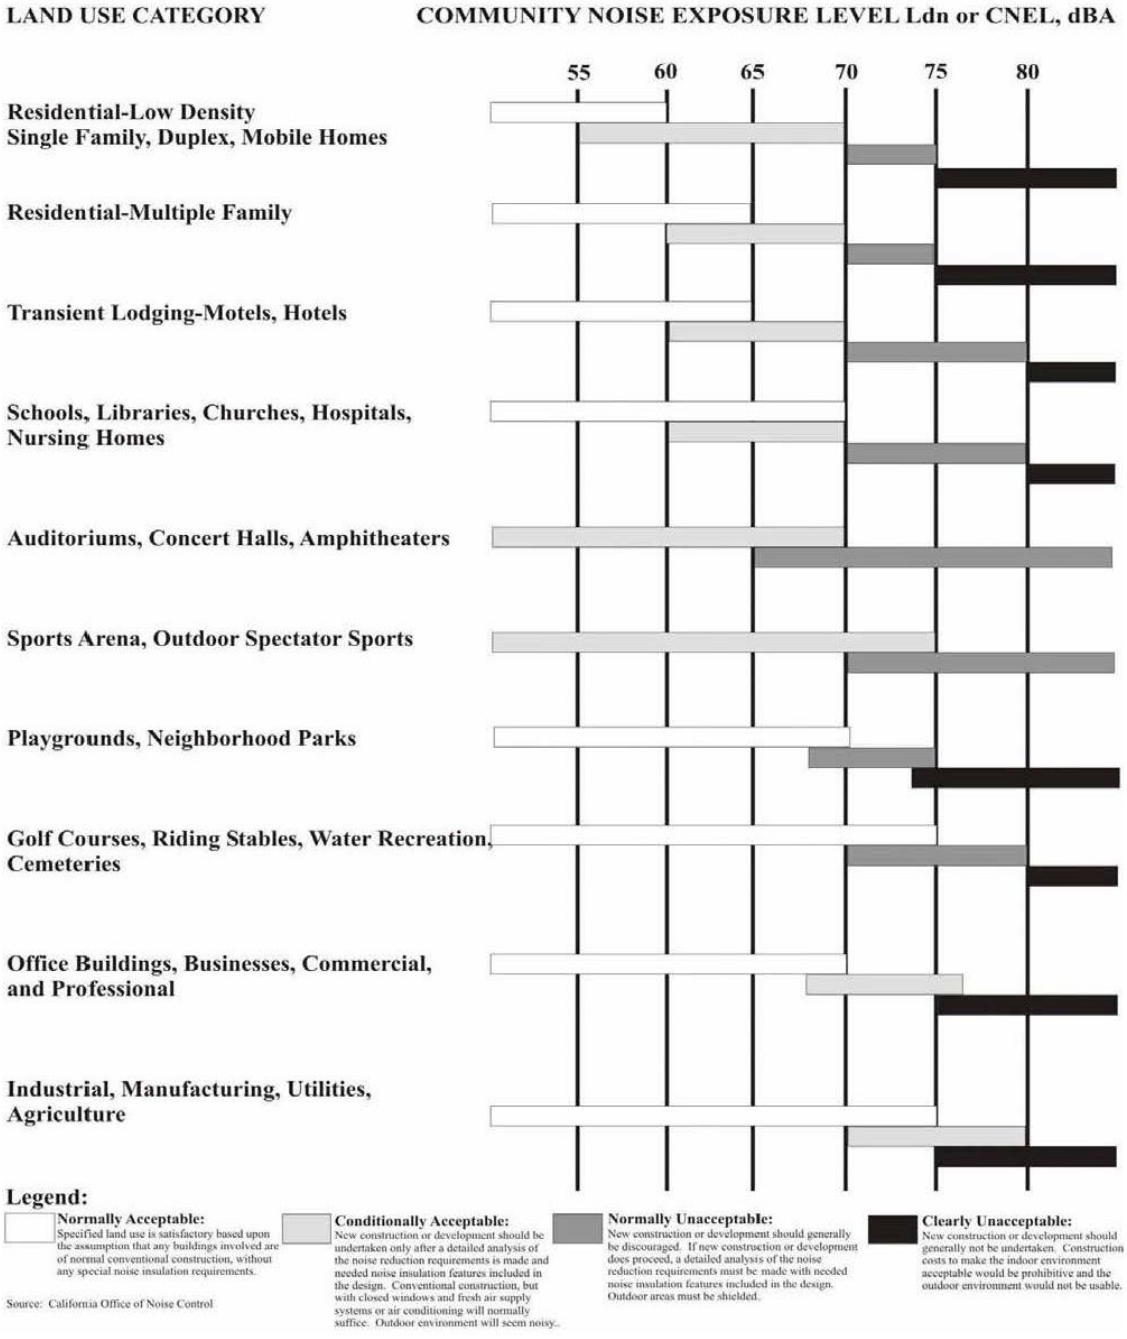
ii. Preferential location and equipment; and

iii. Use of current noise suppression technology and equipment.

N 13.1 Enforce the California Building Standards that sets standards for building construction to mitigate interior noise levels to the tolerable 45 CNEL limit. These standards are utilized

in conjunction with the Uniform Building Code by the County's Building Department to ensure that noise protection is provided to the public. Some design features may include extra-dense insulation, double-paned windows, and dense construction materials.

N 15.3 Prohibit exposure of residential dwellings to perceptible ground vibration from passing trains as perceived at the ground or second floor. Perceptible motion shall be presumed to be a motion velocity of 0.01 inches/second over a range of 1 to 100 Hz.



To ensure noise-sensitive land uses are protected from high levels of noise (N 1.1), Table N-1 of the Noise Element identifies guidelines to evaluate proposed developments based on exterior and interior noise level limits for land uses and requires a noise analysis to determine needed mitigation measures if necessary. The Noise Element identifies residential use as a noise-sensitive land use (N 1.3) and discourages new development in areas with transportation related levels of 65 dBA CNEL or greater existing ambient noise levels. In addition, the City of Wildomar had adopted an interior noise level limit of 45 dBA CNEL (N 13.1).

Policy N 4.1 of the Noise Element sets a stationary-source exterior noise limit to not to be exceeded for a cumulative period of more than ten minutes in any hour of 65 dBA L_{eq} for daytime hours of 7:00 a.m. to 10:00 p.m., and 45 dBA L_{eq} during the noise-sensitive nighttime hours of 10:00 p.m. to 7:00 a.m. To prevent high levels of construction noise from impacting noise-sensitive land uses, policies N 12.1 through 12.3 identify construction noise mitigation requirements for new development located near existing noise-sensitive land uses. Policy 15.3 establishes the vibration perception threshold for rail-related vibration levels, used in this analysis as a threshold for determining potential vibration impacts due to Project construction. (12)

3.2.1 LAND USE COMPATIBILITY GUIDELINES

The noise criteria identified in the City of Wildomar Noise Element (Table N-1) are guidelines to evaluate the land use compatibility of transportation related noise. The compatibility criteria, shown on Exhibit 3-A, provides the County with a planning tool to gauge the compatibility of land uses relative to existing and future exterior noise levels. The *Land Use Compatibility for Community Noise Exposure* matrix describes categories of compatibility and not specific noise standards. The Project's multi-family residential land use is considered *normally acceptable* with exterior noise levels below 65 dBA CNEL, *conditionally acceptable* with exterior noise levels of up to 70 dBA CNEL, and *normally unacceptable* with exterior noise levels of up to 75 dBA CNEL. The Project's commercial retail land use is considered *normally acceptable* with exterior noise levels below 70 dBA CNEL, *conditionally acceptable* with exterior noise levels up to 77 dBA CNEL and *clearly unacceptable* with exterior noise levels above up to 75 dBA CNEL.

EXHIBIT 3-A: LAND USE COMPATIBILITY FOR COMMUNITY NOISE EXPOSURE

Source: City of Wildomar General Plan Noise Element, Table N-1.

3.3 STATIONARY SOURCE NOISE STANDARDS

To analyze noise impacts originating from a designated fixed location or private property such as Wildomar Crossroads Project, stationary-source (stationary source) noise such as the expected loading dock activity, pool/spa activity, outdoor seating activity, trash enclosure activity, roof-top air conditioning units, parking lot activity, shopping cart corrals and drive-thru speakerphones are typically evaluated against standards established under a jurisdiction's Municipal Code.

However, the City of Wildomar Noise Ordinance included in the Municipal Code (Chapter 9.48) indicates that *this chapter is not intended to establish thresholds of significance for the purpose of any analysis required by CEQA and no such thresholds are established*. (13) The City of Wildomar Municipal Code is included in Appendix 3.1. Therefore, potential Project related stationary-source (stationary source) noise impacts are limited to the absolute noise levels outlined in the General Plan and the generation of a substantial temporary or permanent relative increase in the ambient noise levels. Policy N 4.1 of the City of Wildomar General Plan Noise Element sets a stationary-source average L_{eq} exterior noise limit not to be exceeded for a cumulative period of more than ten minutes in any hour of 65 dBA L_{eq} for daytime hours of 7:00 a.m. to 10:00 p.m., and 45 dBA L_{eq} during the noise-sensitive nighttime hours of 10:00 p.m. to 7:00 a.m. (12)

3.4 CONSTRUCTION NOISE STANDARDS

To control noise impacts associated with the construction of the proposed Project, the City of Wildomar has established limits to the hours of operation. Section 9.48.020 (I) of the Noise Regulation ordinance indicates that *noise associated with any private construction activity located within one-quarter of a mile from an inhabited dwelling is considered exempt between the hours of 6:00 a.m. and 6:00 p.m., during the months of June through September, and 7:00 a.m. and 6:00 p.m., during the months of October through May*. (13) However, neither the City of Wildomar General Plan nor Municipal Code establish numeric maximum acceptable construction source noise levels at potentially affected receivers. Therefore, a numerical construction threshold based on Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* is used for analysis of daytime construction impacts, as discussed below.

According to the FTA, local noise ordinances are typically not very useful in evaluating construction noise. They usually relate to nuisance and hours of allowed activity, and sometimes specify limits in terms of maximum levels, but are generally not practical for assessing the impact of a construction project. Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land use. Due to the lack of standardized construction noise thresholds, the FTA provides guidelines that can be considered reasonable criteria for construction noise assessment. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise sensitive residential land use. (8 p. 179)

3.5 CONSTRUCTION VIBRATION STANDARDS

Construction activity can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment such as air compressors, light trucks, hydraulic loaders, etc., generates little or no ground vibration. (8)

To analyze vibration impacts originating from the operation and construction of Wildomar Crossroads, vibration-generating activities are appropriately evaluated against standards established under a City's Municipal Code, if such standards exist. However, the City of Wildomar does not identify specific vibration level limits. Therefore, for analysis purposes, the Caltrans *Transportation and Construction Vibration Guidance Manual*, (15 p. 38) Table 19, vibration damage are used in this noise study to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise sensitive buildings adjacent to the Project site can best be described as "older residential structures" with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

4 SIGNIFICANCE CRITERIA

The following significance criteria are based on currently adopted guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1) For the purposes of this report, impacts would be potentially significant if the Project results in or causes:

A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

B. Generation of excessive ground-borne vibration or ground-borne noise levels?

C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

4.1 NOISE LEVEL INCREASES (THRESHOLD A)

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines described above at the closest sensitive receiver locations. Under CEQA, consideration must be given to the magnitude of the increase, the existing ambient noise levels, and the location of noise-sensitive receivers to determine if a noise increase represents a significant adverse environmental impact. This approach *recognizes that there is no single noise increase that renders the noise impact significant.* (16) This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called *ambient* environment.

In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will typically be judged. The Federal Interagency Committee on Noise (FICON) (17) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) and equivalent continuous noise level (L_{eq}). The FICON guidance provides an established source of criteria to assess the impacts of substantial temporary or permanent increase in ambient noise levels. Based on the FICON criteria, the amount to which a given noise level increase is considered acceptable is reduced when the without Project noise levels are already shown to exceed certain land-use specific exterior noise level criteria. The specific levels are based on typical responses to noise level increases of 5 dBA or *readily perceptible*, 3 dBA or *barely perceptible*, and 1.5 dBA depending on the underlying without Project noise levels for noise-sensitive uses. These levels of increases and their perceived acceptance are consistent with guidance provided by both the Federal Highway Administration (4 p. 9) and Caltrans (18 p. 2_48).

Policy N 4.1 of the City of Wildomar General Plan Noise Element sets a stationary-source average L_{eq} exterior noise limit not to be exceeded for a cumulative period of more than ten minutes in any hour of 65 dBA L_{eq} for daytime hours of 7:00 a.m. to 10:00 p.m., and 45 dBA L_{eq} during the noise-sensitive nighttime hours of 10:00 p.m. to 7:00 a.m. (12)

In addition, since neither the City of Wildomar General Plan or County Code establish numeric maximum acceptable construction source noise levels at potentially affected receivers for CEQA analysis purposes, a numerical construction threshold based on Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for analysis of daytime construction impacts. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise sensitive residential land use. (8 p. 179)

4.2 VIBRATION (THRESHOLD B)

As described in Section 3.6, the vibration impacts originating from the construction of the Wildomar Crossroads, vibration-generating activities are appropriately evaluated using the Caltrans vibration damage thresholds to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise sensitive buildings adjacent to the Project site can best be described as "older residential structures" with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

4.3 CEQA GUIDELINES NOT FURTHER ANALYZED (THRESHOLD C)

CEQA Noise Threshold C applies when there are nearby public and private airports and/or air strips and focuses on land use compatibility of the Project to nearby airports and airstrips. The Project site is not located within two miles of an airport or airstrip. The closest airport is the French Valley Airport located over 6 miles east of the Project site. As such, the Project site would not be exposed to excessive noise levels from airport operations, and therefore, impacts are considered *less than significant,* and no further noise analysis is conducted in relation to Appendix G to the CEQA Guidelines, Noise Threshold C.

4.4 SIGNIFICANCE CRITERIA SUMMARY

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. Table 4-1 shows the significance criteria summary matrix that includes the allowable criteria used to identify potentially significant incremental noise level increases.

TABLE 4-1: SIGNIFICANCE CRITERIA SUMMARY

Analysis	Condition(s)	Significance Criteria	
		Daytime	**Nighttime**
Off-Site Traffic[1]	If ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
	If ambient is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase	
	If ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
On-Site Traffic	Exterior Noise Compatibility Criteria[2]	See Exhibit 3-A	
	Interior Noise Level Standard[3]	45 dBA CNEL	
Stationary-Source	Exterior Noise Level Standards[4]	65 dBA L_{eq}	45 dBA L_{eq}
	If ambient is < 60 dBA Leq[1]	≥ 5 dBA L_{eq} Project increase	
	If ambient is 60 - 65 dBA Leq[1]	≥ 3 dBA L_{eq} Project increase	
	If ambient is > 65 dBA Leq[1]	≥ 1.5 dBA L_{eq} Project increase	
Construction	Noise Level Threshold[5]	80 dBA L_{eq}	
	Vibration Level Threshold[6]	0.3 PPV (in/sec)

5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, 24-hour noise level measurements were taken at four locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-A provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, noise level measurements were collected by Urban Crossroads, Inc. on Thursday, December 16, 2021. Appendix 5.1 includes study area photos.

5.1 MEASUREMENT PROCEDURE AND CRITERIA

To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the equivalent daytime and nighttime hourly noise levels. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (19)

5.2 NOISE MEASUREMENT LOCATIONS

The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing ambient hourly noise levels surrounding the Project site. Both Caltrans and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent every part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the Caltrans general site location guidelines which indicate that, *sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources*. (2) Further, FTA guidance states, t*hat it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community*. (8)

Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence, because each receiver measurement represents a group of buildings that share acoustical equivalence. (8) In other words, the area represented by the receiver shares similar shielding, terrain, and geometric relationship to the reference noise source. Receivers represent a location of noise sensitive areas and are used to estimate the future noise level impacts. Collecting reference ambient noise level measurements at the nearby sensitive receiver locations allows for a comparison of the before and after Project noise levels

and is necessary to assess potential noise impacts due to the Project's contribution to the ambient noise levels.

5.3 NOISE MEASUREMENT RESULTS

The noise measurements presented below focus on the equivalent or the hourly energy average sound levels (L_{eq}). The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. Table 5-1 identifies the hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise levels at each noise level measurement location.

TABLE 5-1: AMBIENT NOISE LEVEL MEASUREMENTS

Location[1]	Description	Energy Average Noise Level (dBA L_{eq})[2]	
		Daytime	Nighttime
L1	Located northwest of the Project site near walled off sensitive habitat east of Poplar Crest Road.	54.4	53.3
L2	Located northeast of the Project site near single-family residence at 35925 Susan Drive.	60.4	55.4
L3	Located southeast of the Project site near Oak Springs Ranch at 24055 Clinton Keith Road.	61.7	55.8
L4	Located in the western portion of the Project site near single-family residence at 24900 Catt Road.	50.9	51.7

[1] See Exhibit 5-A for the noise level measurement locations.
[2] Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2. "Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

Table 5-1 provides the equivalent noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. Appendix 5.2 provides summary worksheets of the noise levels for each of the daytime and nighttime hours.

6 TRAFFIC NOISE METHODS AND PROCEDURES

The following section outlines the methods and procedures used to estimate and analyze the future traffic noise environment. Consistent with the City of Wildomar *Land Use Compatibility* guidelines, all transportation related noise levels are presented in terms of the 24-hour CNEL's.

6.1 FHWA TRAFFIC NOISE PREDICTION MODEL

The expected roadway noise level increases from vehicular traffic were calculated by Urban Crossroads, Inc. using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. (20) The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. (21) Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period. Research conducted by Caltrans has shown that the use of soft site conditions is appropriate for the application of the FHWA traffic noise prediction model used in this analysis. (22)

This methodology is consistent with the County of Riverside Office of Industrial Hygiene *Requirements for Determining and Mitigating Traffic Noise Impacts to Residential Structures*, which specifically requires the FHWA RD-77-108 model to be used in analysis within the County's jurisdiction. (23)

6.1.1 OFF-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

Table 6-1 presents the roadway parameters used to assess the Project's off-site transportation noise impacts. Table 6-1 identifies the 5 off-site study area roadway segments, the distance from the centerline to adjacent receiving land use based on the functional roadway classifications per the City of Wildomar General Plan Circulation Element, and the vehicle speeds. The ADT volumes used in this study are presented on Table 6-2 are based on the *Wildomar Crossroads Traffic Impact Analysis* prepared by EPD Solutions, Inc. for the following traffic conditions:

1. Existing Without Project
2. Existing With Project
3. Cumulative (2024) Without Project
4. Cumulative (2024) With Project

TABLE 6-1: OFF-SITE ROADWAY PARAMETERS

ID	Roadway	Segment	Classification[1]	Centerline Distance to Receiving Land Use[2]	Vehicle Speed (mph)
1	Wildomar Tr.	n/o Clinton Keith Rd.	Secondary	50'	45
2	Clinton Keith Rd.	e/o Palomar St.	Urban Arterial	76'	45

TABLE 6-2: AVERAGE DAILY TRAFFIC VOLUMES

ID	Roadway	Segment	Existing Average Daily Traffic Volumes (ADT)[1]		Cumulative Average Daily Traffic Volumes (ADT)[1]	
			Without Project	With Project	Without Project	With Project
1	Wildomar Tr.	n/o Clinton Keith Rd.	5,160	7,880	15,710	18,430
2	Clinton Keith Rd.	e/o Palomar St.	5,100	5,100	5,140	5,140
3	Clinton Keith Rd.	w/o Arya Rd.	29,200	30,930	48,890	50,620
4	Clinton Keith Rd.	w/o Wildomar Tr.	24,880	25,730	44,210	45,060
5	Clinton Keith Rd.	e/o Wildomar Tr.	24,100	26,270	44,550	46,720

[1] Wildomar Crossroads Traffic Impact Analysis, EPD Solutions, Inc.

The ADT volumes vary for each roadway segment based on the existing traffic volumes and the combination of project traffic distributions. In addition, the off-site traffic noise analysis is based on a PM peak hour to average daily traffic (peak-to-daily) relationship of 10%. Table 6-3 provides the time of day (daytime, evening, and nighttime) vehicle splits and Table 6-4 presents the traffic flow distributions (vehicle mix) used for this analysis. The vehicle mix provides the hourly distribution percentages of automobile, medium trucks, and heavy trucks for input into the FHWA noise prediction model.

TABLE 6-3: TIME OF DAY VEHICLE SPLITS

Vehicle Type	Time of Day Splits[1]			Total of Time of Day Splits
	Daytime	Evening	Nighttime	
Autos	75.55%	13.96%	10.49%	100.00%
Medium Trucks	48.92%	2.17%	48.91%	100.00%
Heavy Trucks	47.30%	5.40%	47.30%	100.00%

6.1.2 ON-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

The maximum two-way traffic volumes at a level of service C shown on Table 6-5, were obtained from Table 3.7 of the City of Wildomar Mobility Plan Existing Conditions Report (23) and reflect future long-range traffic conditions needed to assess the on-site traffic noise environment and to identify potential mitigation measures (if any) that address the worst-case future conditions.

To predict the future noise environment at Planning Areas within the Project site, coordinate information was collected to identify the noise transmission path between the noise source and receiver. The coordinate information is based on the Project site plan (Exhibit 1-B) showing the proposed Project land uses adjacent City of Wildomar General Plan roadways. The first-floor exterior noise level receivers were placed five feet above the pad elevation. All second-floor receivers were located 14 feet above the proposed finished floor elevation. Table 6-5 presents the on-site roadway parameters including the ADT volumes used for this study. The on-site roadway parameters are based on the City of Wildomar Mobility Plan Table 3.7.

TABLE 6-5: ON-SITE ROADWAY PARAMETERS

Roadway	Classification[1]	Lanes	Average Daily Traffic Volume[2]	Speed Limit (mph)
Wildomar Tr.	Secondary	4	20,700	45
Clinton Keith Rd.	Urban Arterial	6	43,100	45

7 OFF-SITE TRAFFIC NOISE ANALYSIS

As described in Section 4.1, the off-site traffic noise impacts are evaluated based on noise level increases resulting from the Project. Under CEQA, consideration must be given to the magnitude of the increase, the existing ambient noise levels, and the location of noise-sensitive receivers to determine if a noise increase represents a significant adverse environmental impact. To assess the off-site transportation CNEL noise level impacts associated with development of the proposed Project, noise contours were developed based on *Wildomar Crossroads Traffic Impact Analysis* prepared by EPD Solutions, Inc . Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway.

7.1 NOISE CONTOURS

Noise contours were used to assess the Project's incremental 24-hour dBA CNEL traffic-related noise impacts at receiving land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA CNEL noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the Project study area.

Appendix 7.1 includes a summary of the dBA CNEL traffic noise level contours for each of the traffic scenarios. Tables 7-1 through 7-4 present a summary of the exterior dBA CNEL traffic noise levels without barrier attenuation. Roadway segments are analyzed in each of the following timeframes:

- Existing Conditions
- Existing plus Project Conditions
- Cumulative (2024) Conditions
- Cumulative (2024) plus Project Conditions

TABLE 7-1: EXISTING PROJECT CONTOURS

ID	Road	Segment	CNEL at Nearest Receiving Land Use (dBA)[1]	Distance to Contour from Centerline (Feet)		
				70 dBA CNEL	65 dBA CNEL	60 dBA CNEL
1	Inland Valley Dr.	s/o Clinton Keith Rd.	68.0	RW	79	171
2	Clinton Keith Rd.	w/o Arya Rd.	71.4	94	202	436
3	Clinton Keith Rd.	w/o Wildomar Tr.	70.7	84	182	392

5	Clinton Keith Rd.	e/o Inland Valley Dr.	72.5	112	241	520

[1] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the nearest receiving land use.
"RW" = Location of the respective noise contour falls within the right-of-way of the road.

7.2 EXISTING PROJECT TRAFFIC NOISE LEVEL INCREASES

An analysis of existing traffic noise levels plus traffic noise generated by the proposed Project has been included in this report. Table 7-1 shows the Existing Project conditions CNEL noise levels. The Existing Project exterior noise levels range from 68.0 to 71.4 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-2 shows the Existing plus Project conditions ranging from 68.4 to 71.6 dBA CNEL. Table 7-5 shows that the Project off-site traffic noise level increases range from 0.1 to 0.4 dBA CNEL on the study area roadway segments. Based on the significance criteria for off-site traffic noise presented in Table 4-1, land uses adjacent to the study area roadway segments would experience *less than significant* noise level increases on receiving land uses due to the Existing Project-related traffic.

TABLE 7-5: EXISTING PROJECT TRAFFIC NOISE LEVEL INCREASES

ID	Road	Segment	CNEL at Receiving Land Use (dBA)[1]			Incremental Noise Level Increase Threshold[2]	
			No Project	With Project	Project Addition	Limit	Exceeded?
1	Inland Valley Dr.	s/o Clinton Keith Rd.	68.0	68.4	0.4	1.5	No
2	Clinton Keith Rd.	w/o Arya Rd.	71.4	71.6	0.2	1.5	No
3	Clinton Keith Rd.	w/o Wildomar Tr.	70.7	70.8	0.1	1.5	No
4	Clinton Keith Rd.	e/o Wildomar Tr.	70.5	70.9	0.4	1.5	No
5	Clinton Keith Rd.	e/o Inland Valley Dr.	69.4	69.7	0.3	1.5	No

[1] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.
[2] Does the Project create an incremental noise level increase exceeding the significance criteria (Table 4-1)?

7.2 CUMULATIVE PROJECT TRAFFIC NOISE LEVEL INCREASES

An analysis of existing traffic noise levels plus traffic noise generated by the proposed Project has been included in this report. Table 7-3 shows the Cumulative conditions CNEL noise levels. The Cumulative exterior noise levels range from 70.8 to 73.6 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-4 shows the Cumulative plus Project conditions ranging from 71.0 to 73.8 dBA CNEL. Table 7-3 shows that the Project off-site traffic noise level increases range from 0.1 to 0.2 dBA CNEL on the study area roadway segments. Based on the significance criteria for off-site traffic noise presented in Table 4-1, land uses adjacent to the study area roadway segments would experience *less than significant* noise level increases on receiving land uses due to the Cumulative Project-related traffic.

TABLE 7-6: CUMULATIVE PROJECT TRAFFIC NOISE LEVEL INCREASES

ID	Road	Segment	CNEL at Receiving Land Use (dBA)[1]			Incremental Noise Level Increase Threshold[2]	
			No Project	With Project	Project Addition	Limit	Exceeded?

[1] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.
[2] Does the Project create an incremental noise level increase exceeding the significance criteria (Table 4-1)?

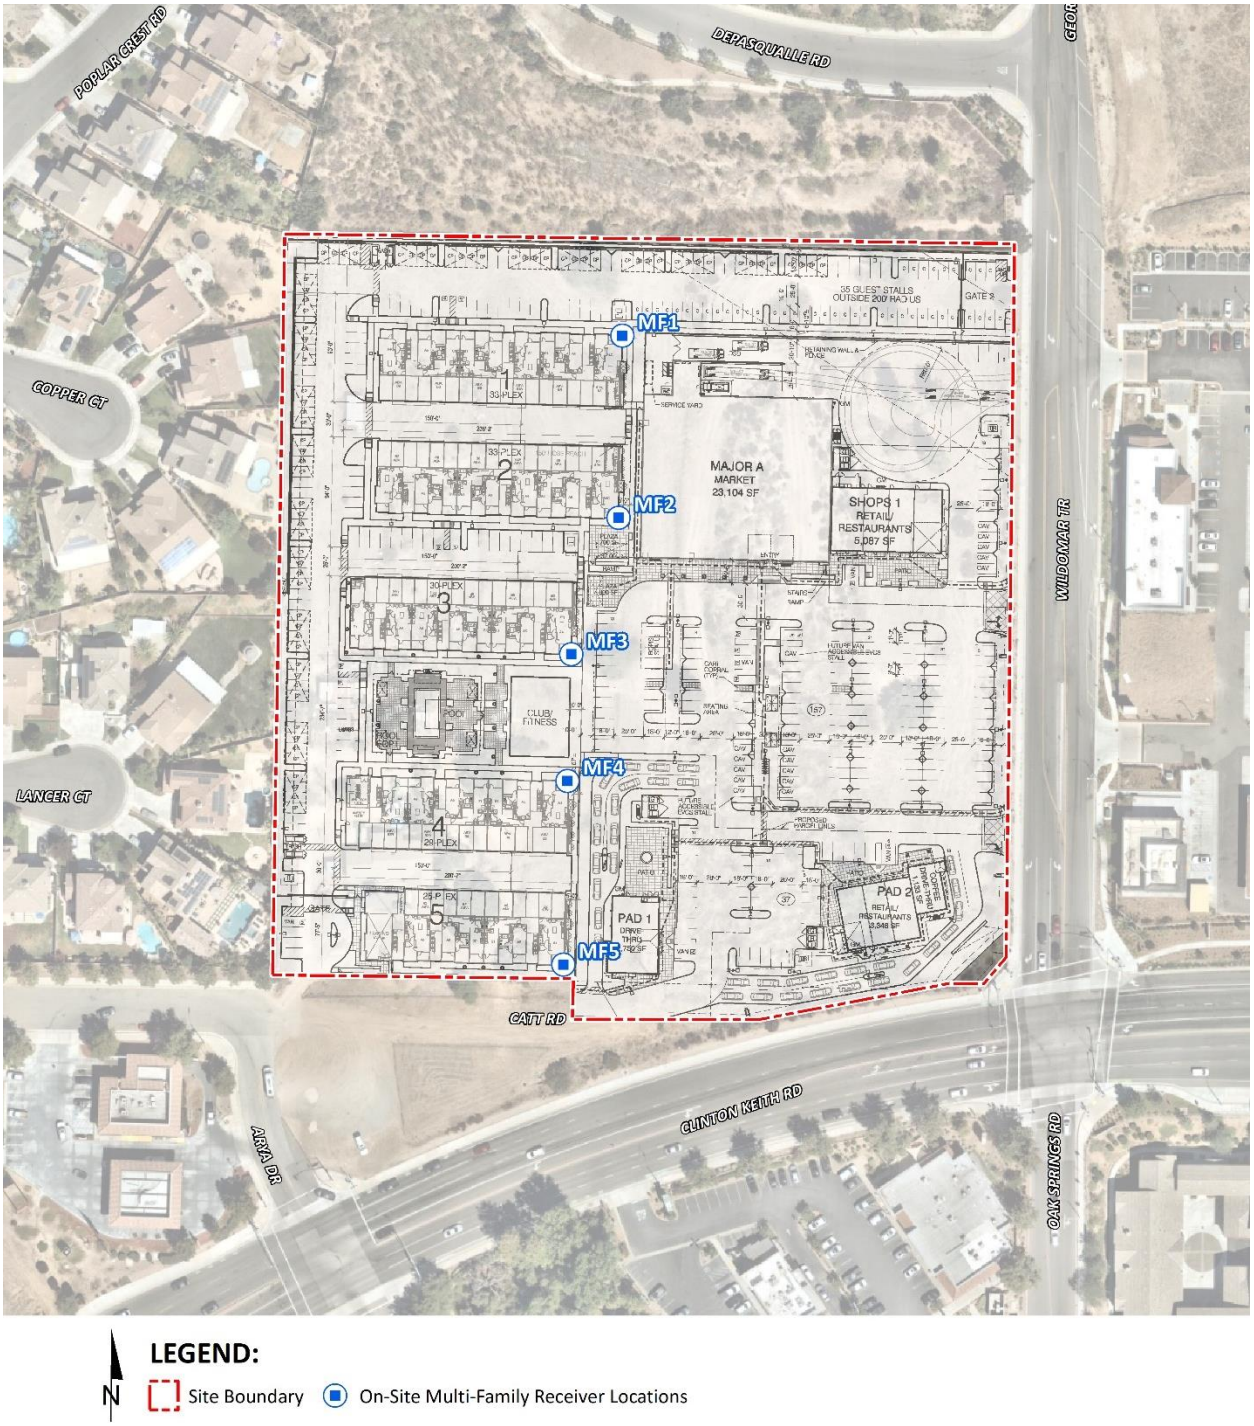
8 ON-SITE TRAFFIC NOISE ANALYSIS

An on-site exterior noise impact analysis has been completed to determine the noise exposure levels that would result from adjacent transportation noise sources in the Project study area, and to identify potential noise abatement measures that would achieve acceptable Project exterior and interior noise levels. The primary source of transportation noise affecting the Project site is anticipated to be from Wildomar Trail and Clinton Keith Road. The Project would also be exposed to nominal traffic noise from the Project's internal roads. However, due to the distance, topography and low traffic volume/speed, traffic noise from these roads will not make a substantive contribution to ambient noise conditions. This section analyzes on-site exterior and interior noise levels at the Project buildings.

8.1 EXTERIOR NOISE ANALYSIS

Using the FHWA traffic noise prediction model and the parameters outlined in Tables 6-3 to 6-5, the expected future exterior noise levels for the on-site Project land uses were estimated at on-site receiver locations. To describe the on-site traffic noise impacts, five on-site receiver locations were identified at the multi-family residential locations facing Wildomar Trail and Clinton Keith Road as shown on Exhibit 8-A. Table 8-1 presents a summary of future on-site exterior traffic noise levels. The on-site traffic noise analysis calculations are provided in Appendix 8.1.

TABLE 8-1: EXTERIOR NOISE LEVELS



Receiver Location[1]	Roadway	Land Use	Exterior Noise Level (dBA CNEL)[2]	Land Use Compatibility[3]
MF1	Wildomar Trail	Multi-Family Residential	56.6	*Normally Acceptable*
MF2	Wildomar Trail	Multi-Family Residential	56.6	*Normally Acceptable*
MF3	Clinton Keith Rd.	Multi-Family Residential	59.2	*Normally Acceptable*
MF4	Clinton Keith Rd.	Multi-Family Residential	61.1	*Normally Acceptable*
MF5	Clinton Keith Rd.	Multi-Family Residential	65.3	*Conditionally Acceptable*

[1] On-site multi-family receiver locations shown on Exhibit 8-A.
[2] Exterior on-site traffic noise level calculations are included in Appendix 8.1.
[3] Based on the General Plan land use compatibility guidelines as shown on Exhibit 3-A.

As shown on Table 8-1, the proposed multi-family residential land use will experience transportation related exterior noise levels of ranging from 56.6 to 65.3 dBA CNEL. Based on Exhibit 3-A, multi-family residential land use is considered *normally acceptable* as noise approaches 65 dBA CNEL and *conditionally acceptable* up to 70 dBA CNEL. For *normally acceptable* exterior noise levels, the *Land Use Compatibility Standards* indicate that the *land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insultation requirements.* For *conditionally acceptable* exterior noise levels, the *land use compatibility guidelines* indicates that *new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional*

construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice. Tables 8-2 presents the detailed analysis of the interior noise reduction requirements. Therefore, no exterior noise abatement is required to satisfy the land use compatibility guidelines.

EXHIBIT 8-A: ON-SITE RECEIVER LOCATIONS

8.2 INTERIOR NOISE ANALYSIS

To ensure that the Project provides an acceptable interior noise environment, this analysis relies on the acceptable 45 dBA CNEL interior noise limit for new construction.

8.2.1 NOISE REDUCTION METHODOLOGY

The interior noise level is the difference between the predicted exterior noise level at the building façade and the noise reduction of the structure. Typical building construction will provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." (4) (24) However, sound leaks, cracks and openings within the window assembly can greatly diminish its effectiveness in reducing noise. Several methods are used to improve interior noise reduction, including: [1] weather-stripped solid core exterior doors; [2] upgraded dual glazed windows; [3] mechanical ventilation/air conditioning; and [4] exterior wall/roof assembles free of cut outs or openings.

8.2.2 INTERIOR NOISE LEVEL ASSESSMENT

Table 8-2 shows that the buildings within the Project will require a windows-closed condition and a means of mechanical ventilation (e.g., air conditioning). Table 8-2 shows that the future interior noise levels are expected to range from 31.6 to 40.3 dBA CNEL. The interior noise level analysis shows that the 45 dBA CNEL interior noise level standard can be satisfied using standard building construction providing windows and sliding glass doors with minimum STC ratings of 27.

TABLE 8-2: INTERIOR NOISE LEVELS (CNEL)

Receiver Location	Roadway	Noise Level at Façade[1]	Required Interior Noise Reduction[2]	Estimated Interior Noise Reduction[3]	Upgraded Windows[4]	Interior Noise Level[5]
MF1	Wildomar Trail	56.6	11.6	25.0	No	31.6
MF2	Wildomar Trail	56.6	11.6	25.0	No	31.6
MF3	Clinton Keith Rd.	59.2	14.2	25.0	No	34.2
MF4	Clinton Keith Rd.	61.1	16.1	25.0	No	36.1
MF5	Clinton Keith Rd.	65.3	20.3	25.0	No	40.3

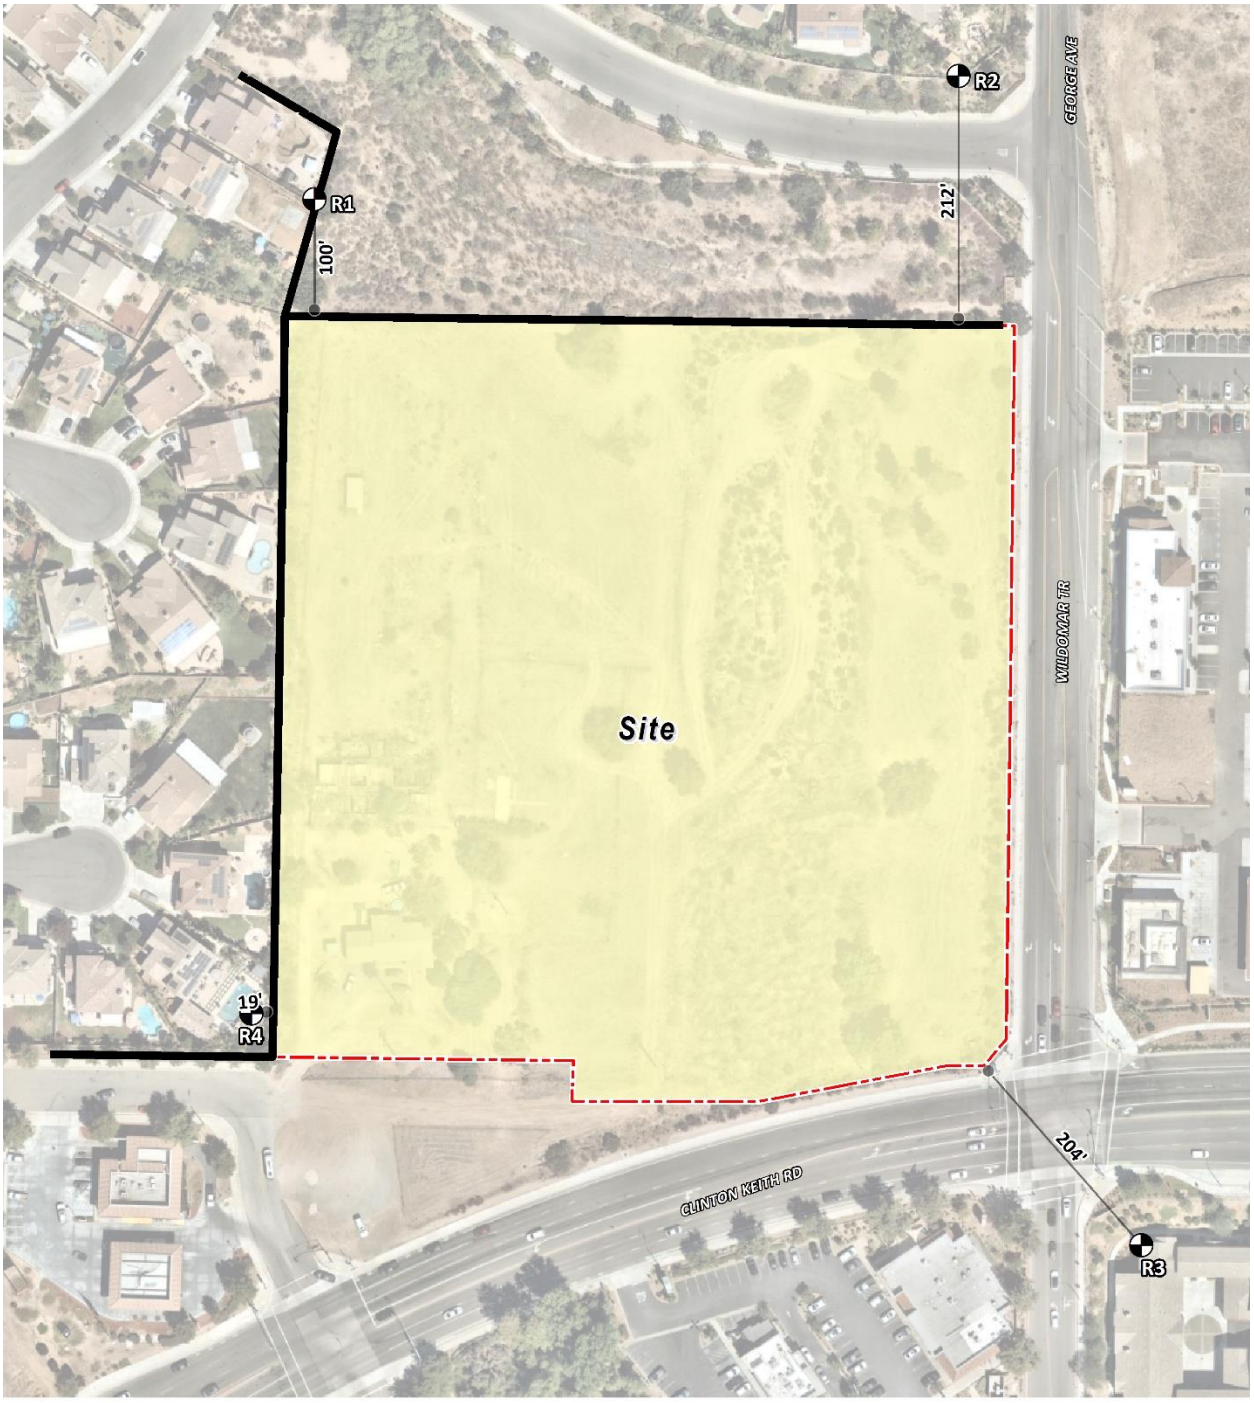
[1] Exterior noise level at the facade with a windows closed condition requiring a means of mechanical ventilation (e.g. air conditioning).
[2] Noise reduction required to satisfy the 45 dBA CNEL interior noise limits.
[3] A minimum of 25 dBA noise reduction is assumed with standard building construction.
[4] Does the required interior noise reduction trigger upgraded windows with a minimum STC rating of greater than 27?
[5] Estimated interior noise level with minimum STC rating for all windows.

This page intentionally left blank

9 OFF-SITE RECEIVER LOCATIONS

To assess the potential for long-term stationary source and short-term construction noise impacts, the following off-site receiver locations, as shown on Exhibit 9-A, were identified as representative locations for analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, out-patient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

To describe the potential off-site Project noise levels, four receiver locations in the vicinity of the Project site were identified. All distances are measured from the Project site boundary to the outdoor living areas (e.g., private backyards) or at the building façade, whichever is closer to the Project site. The selection of receiver locations is based on FHWA guidelines and is consistent with additional guidance provided by Caltrans and the FTA, as previously described in Section 5.2. Other sensitive land uses in the Project study area that are located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures. Distance is measured in a straight line from the project boundary to each receiver location.



R1: Location R1 represents existing noise sensitive residence at 35816 Poplar Crest Road, approximately 100 feet northwest of the Project site. Receiver R1 is placed in the private outdoor living areas (backyards) facing the Project site. A 24-hour noise measurement was taken near this location, L1, to describe the existing ambient noise environment.

R2: Location R2 represents existing noise sensitive residence at 35925 Susan Drive, approximately 212 feet northeast of the Project site. Receiver R2 is placed in the private outdoor living areas (backyards) facing the Project site. A 24-hour noise measurement was taken near this location, L2, to describe the existing ambient noise environment.

R3: Location R3 represents existing noise sensitive Oak Springs Ranch at 24055 Clinton Keith Road, approximately 204 feet southeast of the Project site. Since there is no private outdoor living areas (backyards) facing the Project site, receiver R3 is placed at the building façade facing the Project site. A 24-hour noise measurement was taken near this location, L3, to describe the existing ambient noise environment.

R4: Location R4 represents existing noise sensitive residence at 23849 Lancer Court, approximately 19 feet west of the Project site. Receiver R4 is placed in the private outdoor living areas (backyards) facing the Project site. A 24-hour noise measurement was taken near this location, L4, to describe the existing ambient noise environment.

EXHIBIT 9-A: OFF-SITE RECEIVER LOCATIONS

10 STATIONARY SOURCE NOISE IMPACTS

This section analyzes the potential stationary-source stationary source noise impacts at the nearest receiver locations, identified in Section 9, resulting from the operation of the Wildomar Crossroads Project. Exhibit 10-A identifies the representative noise source activities used to assess the stationary source noise levels.

10.1 STATIONARY SOURCE NOISE SOURCES

This stationary source noise analysis is intended to describe noise level impacts associated with the expected typical daytime and nighttime activities at the Project site. The on-site Project-related noise sources are expected to include: loading dock activity, pool/spa activity, outdoor seating activity, trash enclosure activity, roof-top air conditioning units, parking lot activity, shopping cart corrals and drive-thru speakerphones.

10.2 REFERENCE NOISE LEVELS

To estimate the Project stationary source noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels expected with the development of the proposed Project. This section provides a detailed description of the reference noise level measurements shown on Table 10-1 used to estimate the Project stationary source noise impacts. It is important to note that the following projected noise levels assume the worst-case noise environment with the loading dock activity, pool/spa activity, outdoor seating activity, trash enclosure activity, roof-top air conditioning units, parking lot activity, shopping cart corrals and drive-thru speakerphones all operating at the same time. These sources of noise activity will likely vary throughout the day.

10.2.1 MEASUREMENT PROCEDURES

The reference noise level measurements presented in this section were collected using a Larson Davis LxT Type 1 precisions sound level meter (serial number 01146). The LxT sound level meter was calibrated using a Larson-Davis calibrator, Model CAL 200, was programmed in "slow" mode to record noise levels in "A" weighted form and was located at approximately five feet above the ground elevation for each measurement. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (19)

EXHIBIT 10-A: STATIONARY SOURCE NOISE LOCATIONS

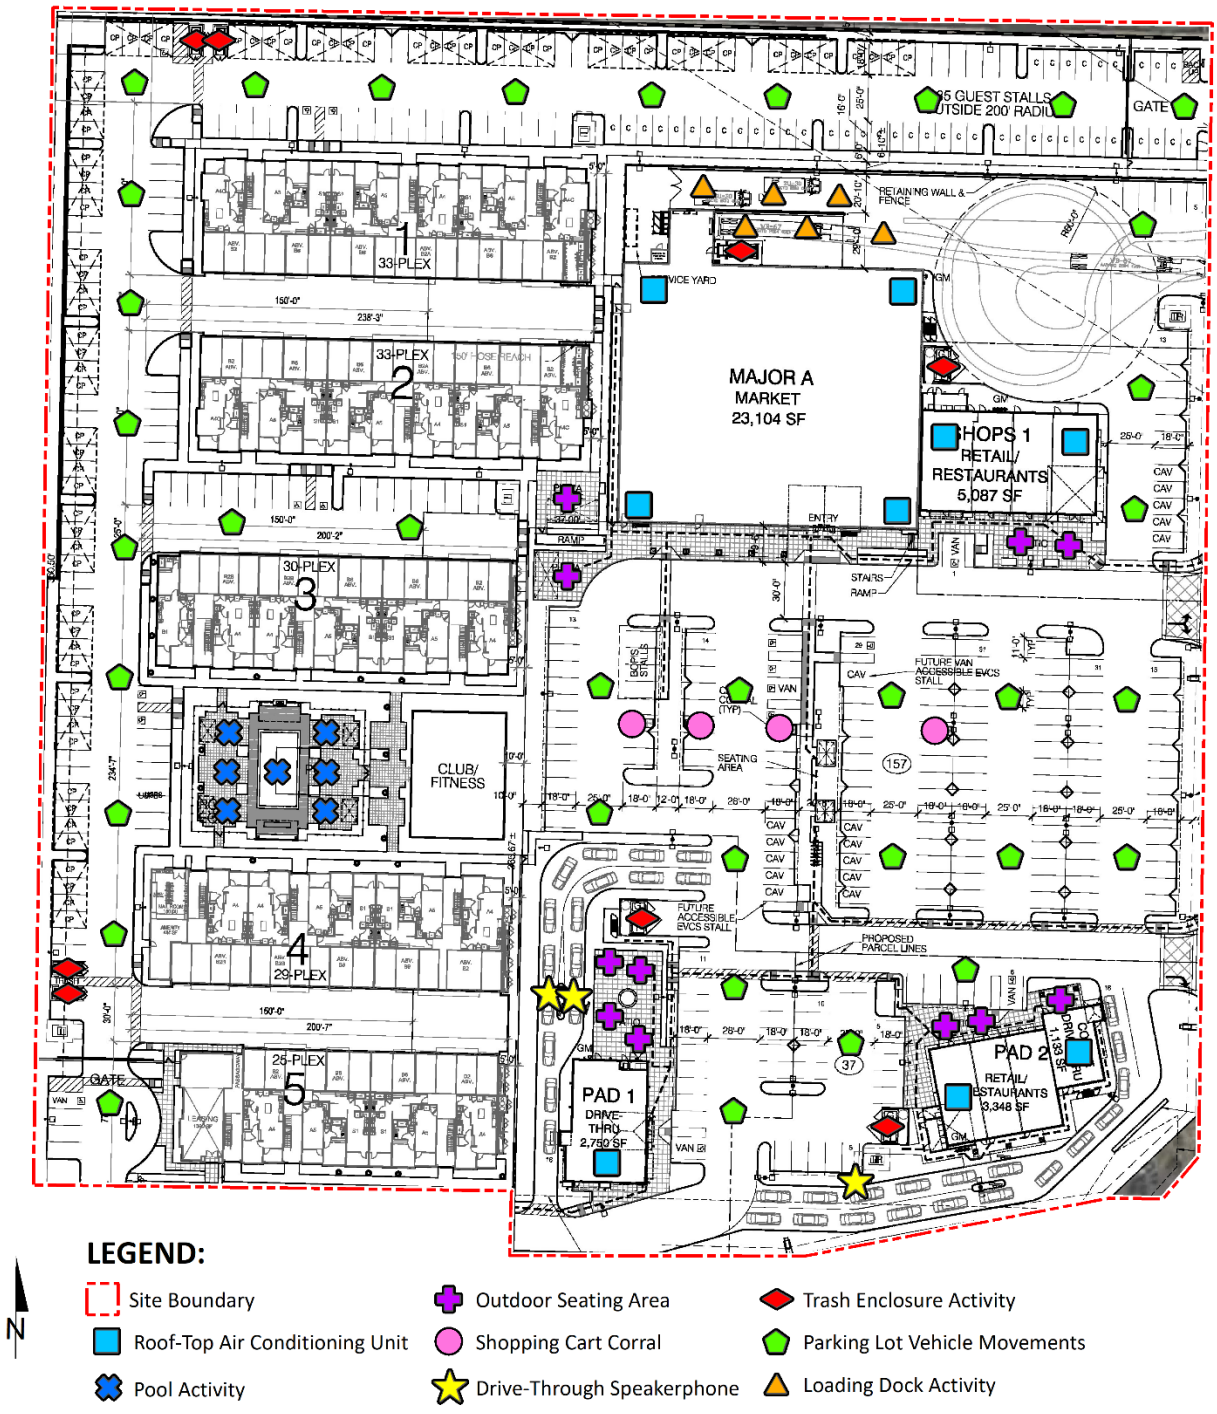


TABLE 10-1: REFERENCE NOISE LEVEL MEASUREMENTS

Noise Source[1]	Noise Source Height (Feet)	Min./Hour[2]		Reference Noise Level @50 feet (dBA L_{eq})	Sound Power Level (dBA)[3]
		Day	Night		
Loading Dock Activity	5'	60	0	62.8	103.4
Pool/Spa Activity	4'	60'	60'	54.7	94.6
Outdoor Seating Activity	5'	60	0	59.8	91.5
Trash Enclosure Activity	5'	10	10	56.8	89.0
Roof-Top Air Conditioning Units	5'	39	28	57.2	88.9
Parking Lot Activity	5'	60	60	56.1	87.8
Shopping Cart Corral	3'	20	20	52.9	87.5
Drive-Thru Speakerphone	3'	60	60	51.5	83.2

[1] As measured by Urban Crossroads, Inc.
[2] Anticipated duration (minutes within the hour) of noise activity during typical hourly conditions expected at the Project site. "Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.
[3] Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings. Sound power levels calculated using the CadnaA noise model at the reference distance to the noise source.

10.2.2 LOADING DOCK ACTIVITY

The reference loading dock activities are intended to describe the typical stationary source noise levels associated with the Project. This includes truck idling, deliveries, backup alarms, unloading/loading, docking including a combination of tractor trailer semi-trucks, two-axle delivery trucks, and background forklift operations. At a uniform reference distance of 50 feet, Urban Crossroads collected a reference noise level of 62.8 dBA L_{eq}.

The loading dock activity noise level measurement was taken over a fifteen-minute period and represents multiple noise sources taken from the center of activity. The reference noise level measurement includes employees unloading a docked truck container included the squeaking of the truck's shocks when weight was removed from the truck, employees playing music over a radio, as well as a forklift horn and backup alarm. In addition, during the noise level measurement a truck entered the loading dock area and proceeded to reverse and dock in a nearby loading bay, adding truck engine, idling, air brakes noise, in addition to on-going idling of an already docked truck.

10.2.3 POOL/SPA ACTIVITY

To represent the noise levels associated with pool activities, Urban Crossroads collected a reference noise level measurement that include kids playing, running, screaming, splashing, playing with a ball, and parents talking. The reference noise level at 50 feet is 54.7 dBA L_{eq} for pool activity. Pool/Spa activities are expected to be limited to daytime hours with no activities at night.

10.2.4 OUTDOOR SEATING ACTIVITY

To describe the outdoor common area courtyards activity areas, a reference noise level measurement was taken. At 50 feet, the reference noise level is 59.8 dBA L_{eq} at a noise source height of 5 feet. The reference noise level measurement includes outdoor eating, drinking, with laughing and talking. Outdoor common area activities are limited to the daytime hours only.

10.2.5 TRASH ENCLOSURE ACTIVITY

To describe the noise levels associated with a trash enclosure activity, Urban Crossroads collected a reference noise level measurement at an existing trash enclosure containing two dumpster bins. The trash enclosure noise levels describe metal gates opening and closing, metal scraping against concrete floor sounds, dumpster movement on metal wheels, and trash dropping into the metal dumpster. The reference noise levels describe trash enclosure noise activities when trash is dropped into an empty metal dumpster, as would occur at the Project site. The measured reference noise level at the uniform 50-foot reference distance is 56.8 dBA L_{eq} for the trash enclosure activity. The reference noise level describes the expected noise source activities associated with the trash enclosures for the Project's proposed building. Typical trash enclosure activities are estimated to occur for 10 minutes per hour.

10.2.6 ROOF-TOP AIR CONDITIONING UNITS

To assess the noise levels created by the roof-top air conditioning units, reference noise level measurements were collected from a Lennox SCA120 series 10-ton model packaged air conditioning unit. At the uniform reference distance of 50 feet, the reference noise levels are 57.2 dBA L_{eq}. Based on the typical operating conditions observed over a four-day measurement period, the roof-top air conditioning units are estimated to operate for an average of 39 minutes per hour during the daytime hours, and 28 minutes per hour during the nighttime hours. For this noise analysis, the air conditioning units are expected to be located on the roof of the proposed building. This reference noise level describes the expected roof-top air conditioning units located 5 feet above the roof for the planned air conditioning units at the Project site.

10.2.7 PARKING LOT ACTIVITY

To describe the on-site parking lot activity a reference noise level of 56.1 dBA L_{eq} at 50 feet is used. Parking lot activity are expected to take place during the full hour (60 minutes) throughout the daytime and evening hours. The parking lot noise levels are mainly due cars pulling in and out of parking spaces.

10.2.8 SHOPPING CART CORRAL (METAL CARTS)

To evaluate the noise level impacts from shopping carts placed by customers into assigned shopping cart corral areas, Urban Crossroads collected reference noise level measurements of 52.9 dBA L_{eq} at 50 feet. The noise impacts are mainly due to the metal shopping carts crashing into other carts already placed in the corral as well as striking the side rails. Shopping cart corral activities are estimated to occur for 20 minutes per hour.

10.2.9 DRIVE-THRU SPEAKERPHONE ACTIVITY

To describe the potential noise level impacts associated with potential drive-thru speakerphones and vehicle activities, a reference noise level measurement was collected. The reference noise levels collected are expected to reflect potential drive-thru speakerphone noise level activities at the Project site, since the reference measurement includes both drive-thru speakerphone and vehicle activity noise. The noise sources included in the reference noise level measurement consist of voices of the employees over the speakerphone, customers' voices ordering food, car engines idling, car radios playing music, and cars queuing in the drive-thru lane. At 50 feet from the speakerphone, a reference noise level of 51.5 dBA L_{eq} was measured.

10.3 CADNAA NOISE PREDICTION MODEL

To fully describe the exterior stationary sourcestationary source noise levels from the Project, Urban Crossroads, Inc. developed a noise prediction model using the CadnaA (Computer Aided Noise Abatement) computer program. CadnaA can analyze multiple types of noise sources using the spatially accurate Project site plan, georeferenced Nearmap aerial imagery, topography, buildings, and barriers in its calculations to predict outdoor noise levels.

Using the ISO 9613-2 protocol, CadnaA will calculate the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of noise level at each receiver and the partial noise level contributions by noise source. Consistent with the ISO 9613-2 protocol, the CadnaA noise prediction model relies on the reference sound power level (L_w) to describe individual noise sources. While sound pressure levels (e.g., L_{eq}) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (L_w) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles and barriers, air absorption, wind, and other factors. Sound power is the acoustical energy emitted by the sound source and is an absolute value that is not affected by the environment.

The stationary sourcestationary source noise level calculations provided in this noise study account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. A default ground attenuation factor of 0.5 was used in the noise analysis to account for mixed ground representing a combination of hard and soft surfaces.

10.4 PROJECT STATIONARY SOURCESTATIONARY SOURCE NOISE LEVELS

Using the reference noise levels to represent the proposed Project operations that include loading dock activity, pool/spa activity, outdoor seating activity, trash enclosure activity, roof-top air conditioning units, parking lot activity, shopping cart corrals and drive-thru speakerphones, Urban Crossroads, Inc. calculated the stationary sourcestationary source source noise levels that are expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of the sensitive receiver locations. Table 10-2 shows the Project stationary sourcestationary source noise levels during the daytime hours of 7:00 a.m. to 10:00

p.m. The daytime hourly noise levels at the off-site receiver locations are expected to range from 42.9 to 47.7 dBA L_{eq}. Table 10-3 shows the Project stationary sourcestationary source noise levels during the nighttime hours of 10:00 p.m. to 7:00 a.m. The nighttime hourly noise levels at the off-site receiver locations are expected to range from 39.1 to 44.5 dBA L_{eq}. The differences between the daytime and nighttime noise levels are largely related to the duration of noise activity (Table 10-1). Appendix 10.1 includes the detailed noise model inputs including the existing perimeter walls used to estimate the Project stationary sourcestationary source noise levels presented in this section.

TABLE 10-2: DAYTIME PROJECT STATIONARY SOURCE NOISE LEVELS

Noise Source[1]	Stationary source Noise Levels by Receiver Location (dBA Leq)			
	R1	R2	R3	R4
Loading Dock Activity	32.2	36.5	16.4	15.1

Shopping Cart Corral	6.1	9.4	19.2	8.7
Drive-Thru Speakerphone	14.4	10.4	23.1	35.7
Total (All Noise Sources)	**40.5**	**40.8**	**39.1**	**44.5**

[1] See Exhibit 10-A for the noise source locations. CadnaA noise model calculations are included in Appendix 10.1.

10.5 PROJECT STATIONARY SOURCE NOISE LEVEL COMPLIANCE

To demonstrate compliance with local noise regulations, the Project-only stationary source noise levels are evaluated against exterior noise level thresholds based on the City of Wildomar exterior

noise level standards at nearby noise-sensitive receiver locations. Table 10-4 shows the stationary source noise levels associated with Wildomar Crossroads Project will satisfy the City of Wildomar 65 dBA L_{eq} daytime and 45 dBA L_{eq} nighttime exterior noise level standards at all nearby receiver locations. Therefore, the stationary source noise impacts are considered *less than significant* at the nearby noise-sensitive receiver locations.

TABLE 10-4: STATIONARY SOURCE NOISE LEVEL COMPLIANCE

Receiver Location[1]	Project Stationary source Noise Levels (dBA Leq)[2]		Noise Level Standards (dBA Leq)[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	43.4	40.5	65	45	No	No
R2	44.1	40.8	65	45	No	No
R3	42.9	39.1	65	45	No	No
R4	47.7	44.5	65	45	No	No

[1] See Exhibit 9-A for the off-site receiver locations.
[2] Proposed Project stationary source noise levels as shown on Tables 10-2 and 10-3.
[3] City of Wildomar General Plan Policy N 4.1.
[4] Do the estimated Project stationary source noise source activities exceed the noise level standards? "Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.

10.6 PROJECT STATIONARY SOURCE NOISE LEVEL INCREASES

To describe the Project stationary source noise level increases, the Project stationary source noise levels are combined with the existing ambient noise levels measurements for the nearby off-site receiver locations potentially impacted by Project stationary source noise sources. The stationary source noise level increases are limited to the off-site receiver locations R1 to R5 that may perceive a noise level increase over time. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-stationary source and existing ambient noise levels cannot be combined using standard arithmetic equations. (2) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10\log_{10}[10^{SPL1/10} + 10^{SPL2/10} + \ldots 10^{SPLn/10}]$$

Where "SPL1," "SPL2," etc. are equal to the sound pressure levels being combined, or in this case, the Project-stationary source and existing ambient noise levels. The difference between the combined Project and ambient noise levels describes the Project noise level increases to the existing ambient noise environment. Noise levels that would be experienced at receiver locations when Project-source noise is added to the daytime and nighttime ambient conditions are presented on Tables 10-5 and 10-6, respectively. As indicated on Tables 10-5, the Project will generate a daytime stationary source noise level increases ranging from 0.1 to 1.7 dBA L_{eq} at the nearest receiver locations. Table 10-6 shows that the Project will generate a nighttime stationary source noise level increases ranging from 0.1 to 0.3 dBA L_{eq} at the nearest receiver locations. Project-related stationary source noise level increases will satisfy the stationary source noise level increase significance criteria presented in Table 4-1. Therefore, the incremental Project stationary source noise level increase is considered *less than significant* at all receiver locations.

TABLE 10-5: DAYTIME PROJECT STATIONARY SOURCE NOISE LEVEL INCREASES

Receiver Location[1]	Total Project Stationary source Noise Level[2]	Measurement Location[3]	Reference Ambient Noise Levels[4]	Combined Project and Ambient[5]	Project Increase[6]	Increase Criteria[7]	Increase Criteria Exceeded?

11 CONSTRUCTION IMPACTS

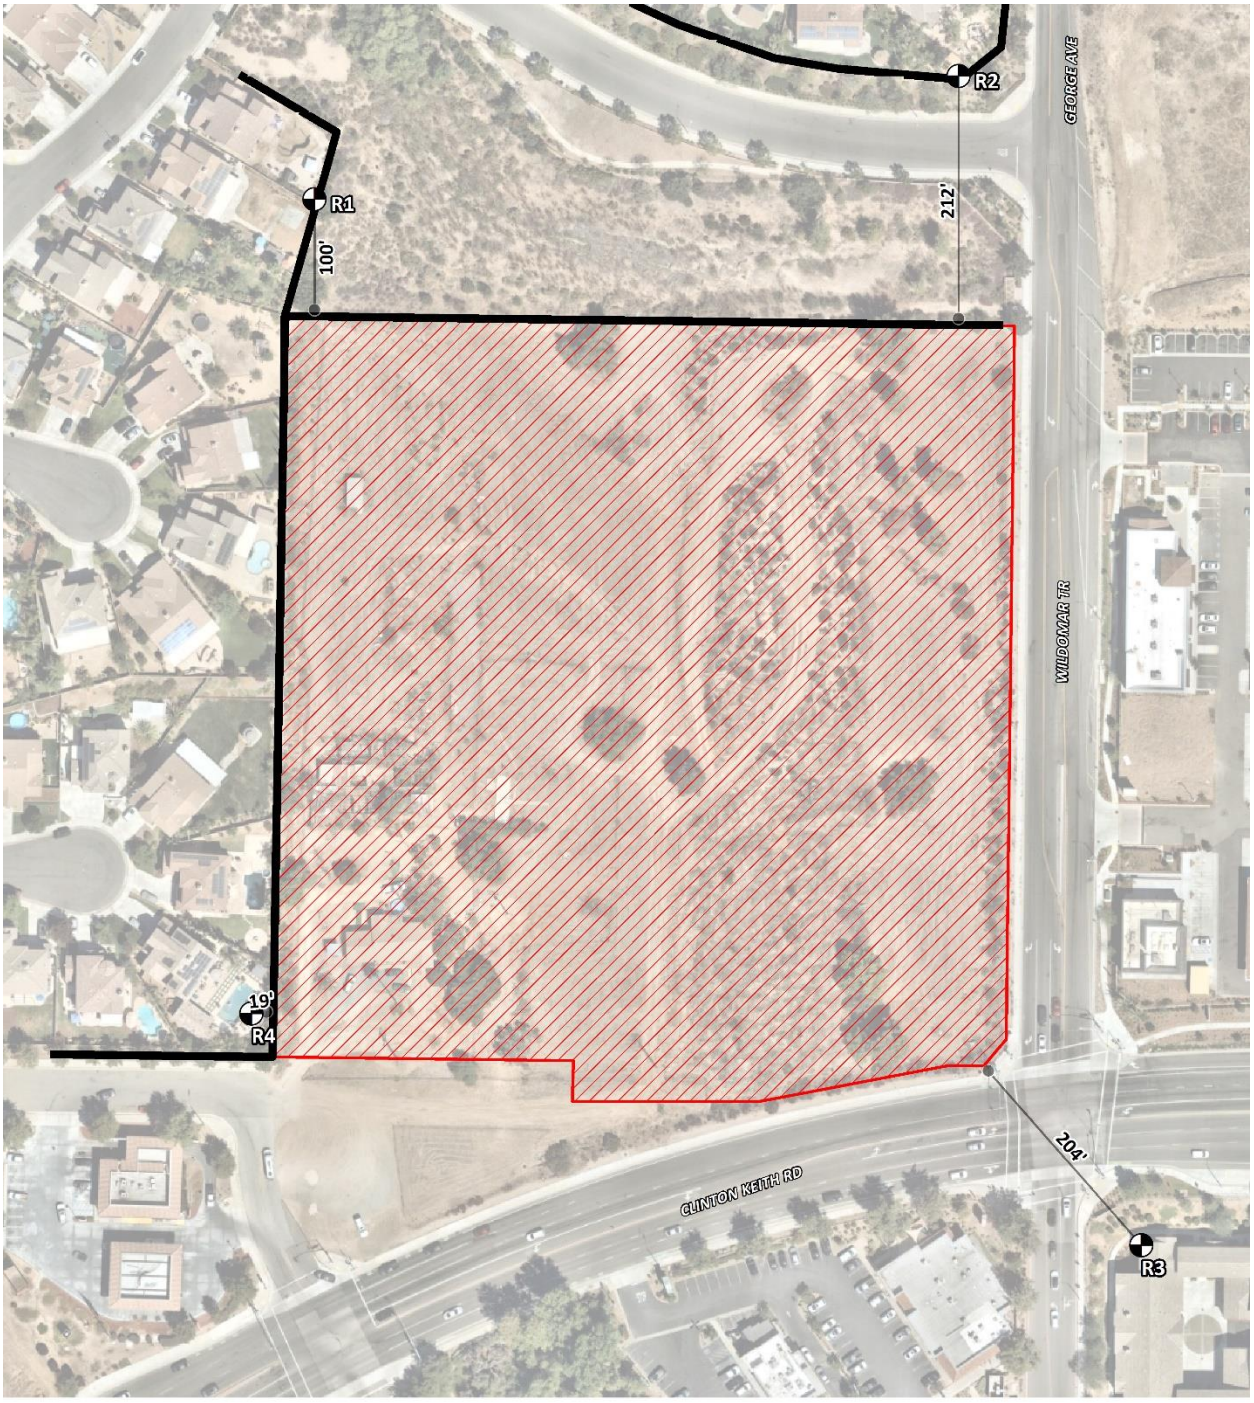
This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project. Construction is anticipated to begin in December 2022 and will last through February 2024. Exhibit 11-A shows the construction noise source locations in relation to the nearby sensitive receiver locations previously described in Section 9. Section 9.48.020 (I) of the Noise Regulation ordinance indicates that *noise associated with any private construction activity located within one-quarter of a mile from an inhabited dwelling is considered exempt between the hours of 6:00 a.m. and 6:00 p.m., during the months of June through September, and 7:00 a.m. and 6:00 p.m., during the months of October through May*. (13)

In addition, since neither the City of Wildomar General Plan or County Code establish numeric maximum acceptable construction source noise levels at potentially affected receivers for CEQA analysis purposes, a numerical construction threshold based on Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for analysis of daytime construction impacts. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise sensitive residential land use. (8 p. 179)

Construction trips would occur throughout the construction period and would be associated with the delivery of building materials, supplies, and concrete to the Project Site. The construction trips will consist mostly of individual worker vehicles. However, it is expected that the individual worker vehicle construction noise source activities will be overshadowed by the construction noise source activities outlined below.

11.1 CONSTRUCTION NOISE LEVELS

The FTA *Transit Noise and Vibration Impact Assessment Manual* recognizes that construction projects are accomplished in several different stages and outlines the procedures for assessing noise impacts during construction. Each stage has a specific equipment mix, depending on the work to be completed during that stage. As a result of the equipment mix, each stage has its own noise characteristics; some stages have higher continuous noise levels than others, and some have higher impact noise levels than others. The Project construction activities are expected to occur in the following stages:



- Demolition
- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

11.2 CONSTRUCTION REFERENCE NOISE LEVELS

To describe construction noise activities, this construction noise analysis was prepared using reference construction equipment noise levels from the Federal Highway Administration (FHWA)

published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. (25) The RCNM equipment database, provides a comprehensive list of the noise generating characteristics for specific types of construction equipment. In addition, the database provides an acoustical usage factor to estimate the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation.

EXHIBIT 11-A: TYPICAL CONSTRUCTION NOISE SOURCE LOCATIONS

11.3 CONSTRUCTION NOISE ANALYSIS

Using the reference construction equipment noise levels and the CadnaA noise prediction model, calculations of the Project construction noise level impacts at the nearby sensitive receiver locations were completed. Consistent with FTA guidance for general construction noise assessment, Table 11-1 presents the combined noise levels for the loudest construction equipment, assuming they operate at the same time. As shown on Table 11-2, the construction noise levels are expected to range from 46.6 to 61.3 dBA L_{eq} at the nearby receiver locations. Appendix 11.1 includes the detailed CadnaA construction noise model inputs.

TABLE 11-1: CONSTRUCTION REFERENCE NOISE LEVELS

Construction Stage	Reference Construction Activity	Reference Noise Level @ 50 Feet (dBA L_{eq})[1]	Combined Noise Level (dBA L_{eq})[2]	Combined Sound Power Level (PWL)[3]
Demolition	Demolition Equipment	82	83	115
	Backhoes	74		
	Hauling Trucks	72		
Site Preparation	Crawler Tractors	78	80	112
	Hauling Trucks	72		
	Rubber Tired Dozers	75		
Grading	Graders	81	83	115
	Excavators	77		
	Compactors	76		
Building Construction	Cranes	73	81	113
	Tractors	80		
	Welders	70		
Paving	Pavers	74	83	115
	Paving Equipment	82		
	Rollers	73		
Architectural Coating	Cranes	73	77	109
	Air Compressors	74		
	Generator Sets	70		

[1] FHWA Roadway Construction Noise Model (RCNM).
[2] Represents the combined noise level for all equipment assuming they operate at the same time consistent with FTA Transit Noise and Vibration Impact Assessment guidance.
[3] Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings. Sound power levels calibrated using the CadnaA noise model at the reference distance to the noise source.

TABLE 11-2: CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})						
	Demolition	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels[2]
R1	54.0	51.0	54.0	52.0	54.0	48.0	54.0
R2	53.4	50.4	53.4	51.4	53.4	47.4	53.4
R3	52.6	49.6	52.6	50.6	52.6	46.6	52.6
R4	61.3	58.3	61.3	59.3	61.3	55.3	61.3

[1] Noise receiver locations are shown on Exhibit 11-A.
[2] Construction noise level calculations based on distance from the construction activity, which is measured from the Project site boundary to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix 11.1.

11.4 CONSTRUCTION NOISE LEVEL COMPLIANCE

To evaluate whether the Project will generate potentially significant short-term noise levels at nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts. The construction noise analysis shows that the nearest receiver locations will satisfy the reasonable daytime 80 dBA L_{eq} significance threshold during Project construction activities as shown on Table 11-3. Therefore, the noise impacts due to Project construction noise are considered *less than significant* at all receiver locations.

TABLE 11-3: CONSTRUCTION NOISE LEVEL COMPLIANCE

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	54.0	80	No
R2	53.4	80	No
R3	52.6	80	No
R4	61.3	80	No

[1] Noise receiver locations are shown on Exhibit 11-A.
[2] Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations as shown on Table 11-2.
[3] Construction noise level thresholds as shown on Table 4-1.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?

11.5 CONSTRUCTION VIBRATION ANALYSIS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods employed. Operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Ground vibration levels associated with various types of construction equipment are summarized on Table 11-4. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential for human response (annoyance) and

building damage using the following vibration assessment methods defined by the FTA. To describe the vibration impacts the FTA provides the following equation: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$

TABLE 11-4: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV (in/sec) at 25 feet
Small bulldozer	0.003
Jackhammer	0.035
Loaded Trucks	0.076
Large bulldozer	0.089
Vibratory Roller	0.210

Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual

Table 11-5 presents the expected Project related vibration levels at the nearby receiver building façade locations. At distances ranging from 49 to 252 feet from the building façade to the Project construction activities, construction vibration velocity levels are estimated to range from 0.007 to 0.0.77 in/sec PPV. Based on maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec), the typical Project construction vibration levels will fall below the building damage thresholds at all the noise sensitive receiver locations. Therefore, the Project-related vibration impacts are considered *less than significant* during typical construction activities at the Project site. Moreover, the vibration levels reported at the sensitive receiver locations are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter.

TABLE 11-5: PROJECT CONSTRUCTION VIBRATION LEVELS

Location[1]	Distance to Const. Activity (Feet)[2]	Typical Construction Vibration Levels PPV (in/sec)[3]						Thresholds PPV (in/sec)[4]	Thresholds Exceeded?[5]
		Small bulldozer	Jackhammer	Loaded Trucks	Large bulldozer	Vibratory Roller	Highest Vibration Level		
R1	137'	0.000	0.003	0.006	0.007	0.016	0.016	0.3	No
R2	252'	0.000	0.001	0.002	0.003	0.007	0.007	0.3	No
R3	204'	0.000	0.002	0.003	0.004	0.009	0.009	0.3	No
R4	49'	0.001	0.013	0.028	0.032	0.077	0.077	0.3	No

[1] Receiver locations are shown on Exhibit 11-A.
[2] Distance from receiver building facade to Project construction boundary (Project site boundary).
[3] Based on the Vibration Source Levels of Construction Equipment (Table 11-4).
[4] Caltrans Transportation and Construction Vibration Guidance Manual, April 2020, Table 19, p. 38.
[5] Does the peak vibration exceed the acceptable vibration thresholds?
"PPV" = Peak Particle Velocity

Moreover, the impacts at the site of the nearest sensitive receiver locations are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter.

APPENDIX 3.1:

CITY OF WILDOMAR MUNICIPAL CODE

This page intentionally left blank

Chapter 9.48 NOISE REGULATION

9.48.010 Intent.

At certain levels, sound becomes noise and may jeopardize the health, safety or general welfare of the City of Wildomar residents and degrade their quality of life. Pursuant to its police power, the City Council declares that noise shall be regulated in the manner described in this chapter. This chapter is intended to establish City-wide standards regulating noise. This chapter is not intended to establish thresholds of significance for the purpose of any analysis required by the California Environmental Quality Act and no such thresholds are established. (Ord. 18 § 2, 2008, RCC § 9.52.010)

9.48.020 Exemptions.

Sound emanating from the following sources is exempt from the provisions of this chapter:

A. Facilities owned or operated by or for a governmental agency;

B. Capital improvement projects of a governmental agency;

C. The maintenance or repair of public properties;

D. Public safety personnel in the course of executing their official duties, including, but not limited to, sworn peace officers, emergency personnel and public utility personnel. This exemption includes, without limitation, sound emanating from all equipment used by such personnel, whether stationary or mobile;

E. Public or private schools and school-sponsored activities;

F. Agricultural operations on land designated “agriculture” in the City General Plan, or land zoned A-l (light agriculture), A-P (light agriculture with poultry), A-2 (heavy agriculture), A-D (agriculture-dairy) or C/V (citrus/vineyard), provided such operations are carried out in a manner consistent with accepted industry standards. This exemption includes, without limitation, sound emanating from all equipment used during such operations, whether stationary or mobile;

G. Wind energy conversion systems (WECS), provided such systems comply with the WECS noise provisions of Title 17;

H. Private construction projects located one-quarter of a mile or more from an inhabited dwelling;

I. Private construction projects located within one-quarter of a mile from an inhabited dwelling, provided that:

1. Construction does not occur between the hours of 6:00 p.m. and 6:00 a.m. during the months of June through September, and

2. Construction does not occur between the hours of 6:00 p.m. and 7:00 a.m. during the months of October through May;

J. Property maintenance, including, but not limited to, the operation of lawnmowers, leaf blowers, etc., provided such maintenance occurs between the hours of 7:00 a.m. and 8:00 p.m.;

K. Motor vehicles, other than off-highway vehicles. This exemption does not include sound emanating from motor vehicle sound systems;

L. Heating and air conditioning equipment;

M. Safety, warning and alarm devices, including, but not limited to, house and car alarms, and other warning devices that are designed to protect the public health, safety, and welfare;

N. The discharge of firearms consistent with all state laws. (Ord. 18 § 2, 2008, RCC § 9.52.020)

9.48.030 Definitions.

As used in this chapter, the following terms shall have the following meanings:

"Audio equipment" means a television, stereo, radio, tape player, compact disc player, mp3 player, iPod or other similar device.

"Decibel (dB)" means a unit for measuring the relative amplitude of a sound equal approximately to the smallest difference normally detectable by the human ear, the range of which includes approximately 130 decibels on a scale beginning with zero decibels for the faintest detectable sound. Decibels are measured with a sound level meter using different methodologies as defined below:

1. "A-weighting (dBA)" means the standard A-weighted frequency response of a sound level meter, which de-emphasizes low and high frequencies of sound in a manner similar to the human ear for moderate sounds.
2. "Maximum sound level (L_{max})" means the maximum sound level measured on a sound level meter.

"Governmental agency" means the United States, the State of California, Riverside County, any city within Riverside County, any special district within Riverside County, the City of Wildomar or any combination of these agencies.

"Land use permit" means a discretionary permit issued by the City pursuant to Title 17.

"Motor vehicle" means a vehicle that is self-propelled.

"Motor vehicle sound system" means a stereo, radio, tape player, compact disc player, mp3 player, iPod or other similar device.

"Noise" means any loud, discordant or disagreeable sound.

"Occupied property" means property upon which is located a residence, business or industrial or manufacturing use.

"Off-highway vehicle" means a motor vehicle designed to travel over any terrain.

"Public or private school" means an institution conducting academic instruction at the preschool, elementary school, junior high school, high school, or college level.

"Public property" means property owned by a governmental agency or held open to the public, including, but not limited to, parks, streets, sidewalks, and alleys.

"Sensitive receptor" means a land use that is identified as sensitive to noise in the noise element of the City General Plan, including, but not limited to, residences, schools, hospitals, churches, rest homes, cemeteries or public libraries.

"Sound-amplifying equipment" means a loudspeaker, microphone, megaphone or other similar device.

"Sound level meter" means an instrument meeting the standards of the American National Standards Institute for Type 1 or Type 2 sound level meters or an instrument that provides equivalent data. (Ord. 18 § 2, 2008, RCC § 9.52.030)

9.48.040 General sound level standards.

No person shall create any sound, or allow the creation of any sound, on any property that causes the exterior sound level on any other occupied property to exceed the sound level standards set forth in Table 1.

TABLE 1

(Ord. 18 § 2, 2008, RCC § 9.52.040)

9.48.050 Sound level measurement methodology.

Sound level measurements may be made anywhere within the boundaries of an occupied property. The actual location of a sound level measurement shall be at the discretion of the enforcement officials identified in Section 9.48.080 of this chapter. Sound level measurements shall be made with a sound level meter. Immediately before a measurement is made, the sound level meter shall be calibrated utilizing an acoustical calibrator meeting the standards of the American National Standards Institute. Following a sound level measurement, the calibration of the sound level meter shall be re-verified. Sound level meters and calibration equipment shall be certified annually. (Ord. 18 § 2, 2008, RCC § 9.52.050)

9.48.060 Special sound sources standards.

The general sound level standards set forth in Section 9.48.040 of this chapter apply to sound emanating from all sources, including the following special sound sources, and the person creating, or allowing the creation of, the sound is subject to the requirements of that section. The following special sound sources are also subject to the following additional standards, the failure to comply with which constitutes separate violations of this chapter:

A. Motor Vehicles.

1. Off-Highway Vehicles.

a. No person shall operate an off-highway vehicle unless it is equipped with a USDA-qualified spark arrester and a constantly operating and properly maintained muffler. A muffler is not considered constantly operating and properly maintained if it is equipped with a cutout, bypass or similar device.

b. No person shall operate an off-highway vehicle unless the noise emitted by the vehicle is not more than 96 dBA if the vehicle was manufactured on or after January 1, 1986 or is not more than 101 dBA if the vehicle was manufactured before January 1, 1986. For purposes of this subsection, emitted noise shall be measured a distance of 20 inches from the vehicle tailpipe using test procedures established by the Society of Automotive Engineers under Standard J-1287.

2. Sound Systems. No person shall operate a motor vehicle sound system, whether affixed to the vehicle or not, between the hours of 10:00 p.m. and 8:00 a.m., such that the sound system is audible to the human ear inside any inhabited dwelling. No person shall operate a motor vehicle sound system, whether affixed to the vehicle or not, at any other time such that the sound system is audible to the human ear at a distance greater than 100 feet from the vehicle.

B. Power Tools and Equipment. No person shall operate any power tools or equipment between the hours of 10:00 p.m. and 8:00 a.m. such that the power tools or equipment are audible to the human ear inside an inhabited dwelling other than a dwelling in which the power tools or equipment may be located. No person shall operate any power tools or equipment at any other time such that the power tools or equipment are audible to the human ear at a distance greater than 100 feet from the power tools or equipment.

C. Audio Equipment. No person shall operate any audio equipment, whether portable or not, between the hours of 10:00 p.m. and 8:00 a.m. such that the equipment is audible to the human ear inside an inhabited dwelling other than a dwelling in which the equipment may be located. No person shall operate any audio equipment, whether portable or not, at any other time such that the equipment is audible to the human ear at a distance greater than 100 feet from the equipment.

D. Sound-Amplifying Equipment and Live Music. No person shall install, use or operate sound-amplifying equipment, or perform, or allow to be performed, live music unless such activities comply with the following requirements. To the extent that these requirements conflict with any conditions of approval attached to an underlying land use permit, these requirements shall control:

1. Sound-amplifying equipment or live music is prohibited between the hours of 10:00 p.m. and 8:00 a.m.

2. Sound emanating from sound-amplifying equipment or live music at any other time shall not be audible to the human ear at a distance greater than 200 feet from the equipment or music. (Ord. 18 § 2, 2008, RCC § 9.52.060)

9.48.070 Exceptions.

Exceptions may be requested from the standards set forth in Section 9.48.040 or 9.48.060 of this chapter and may be characterized as construction-related, single-event or continuous-events exceptions.

A. Application and Processing.

1. Construction-Related Exceptions. An application for a construction-related exception shall be made to and considered by the Director of Building and Safety on forms provided by the Building and Safety Department and shall be accompanied by the appropriate filing fee. No public hearing is required.

2. Single-Event Exceptions. An application for a single-event exception shall be made to and considered by the Planning Director on forms provided by the Planning Department and shall be accompanied by the appropriate filing fee. No public hearing is required.

3. Continuous-Events Exceptions. An application for a continuous-events exception shall be made to the Planning Director on forms provided by the Planning Department and shall be accompanied by the appropriate

filing fee. Upon receipt of an application for a continuous-events exception, the Planning Director shall set the matter for public hearing before the Planning Commission, notice of which shall be given as provided in Title 17. Notwithstanding the above, an application for a continuous-events exception that is associated with an application for a land use permit shall be processed concurrently with the land use permit in the same manner that the land use permit is required to be processed.

B. Requirements for Approval. The appropriate decision-making body or officer shall not approve an exception application unless the applicant demonstrates that the activities described in the application would not be detrimental to the health, safety or general welfare of the community. In determining whether activities are detrimental to the health, safety or general welfare of the community, the appropriate decision-making body or officer shall consider such factors as the proposed duration of the activities and their location in relation to sensitive receptors. If an exception application is approved, reasonable conditions may be imposed to minimize the public detriment, including, but not limited to, restrictions on sound level, sound duration and operating hours.

C. Appeals. The Director of Building and Safety's decision on an application for a construction-related exception is considered final. The Planning Director's decision on an application for a single-event exception is considered final. After making a decision on an application for a continuous-events exception, the appropriate decision-making body or officer shall mail notice of the decision to the applicant. Within 10 calendar days after the mailing of such notice, the applicant or an interested person may appeal the decision to the City Council. Upon receipt of an appeal and payment of the appropriate appeal fee, the City Clerk shall set the matter for hearing not less than five days nor more than 30 days thereafter and shall give written notice of the hearing in the same manner as notice of the hearing was given by the appropriate hearing officer or body. The City Council shall render its decision within 30 days after the appeal hearing is closed.

D. Effect of a Pending Continuous-Events Exception Application. For a period of 180 days from the effective date of the ordinance codified in this chapter, no person creating any sound prohibited by this chapter shall be considered in violation of this chapter if the sound is related to a use that is operating pursuant to an approved land use permit, if an application for a continuous-events exception has been filed to sanction the sound and if a decision on the application is pending. (Ord. 18 § 2, 2008, RCC § 9.52.070)

9.48.080 Enforcement.

The Chief of Police and Code Enforcement Department shall have the primary responsibility for enforcing this chapter; provided, however, the Chief of Police and Code Enforcement Department may be assisted by the Public Health Department. Violations shall be prosecuted as described in Section 9.48.100 of this chapter, but nothing in this chapter shall prevent the Chief of Police, Code Enforcement or the Department of

Public Health from engaging in efforts to obtain voluntary compliance by means of warnings, notices, or educational programs. (Ord. 18 § 2, 2008, RCC § 9.52.080)

9.48.090 Duty to cooperate.

No person shall refuse to cooperate with, or obstruct, the enforcement officials identified in Section 9.48.080 of this chapter when they are engaged in the process of enforcing the provisions of this chapter. This duty to cooperate may require a person to extinguish a sound source so that it can be determined whether sound emanating from the source violates the provisions of this chapter. (Ord. 18 § 2, 2008, RCC § 9.52.090)

9.48.100 Violations and penalties.

Any person who violates any provision of this chapter once or twice within a 180-day period shall be guilty of an infraction. Any person who violates any provision of this chapter more than twice within a 180-day period shall be guilty of a misdemeanor. Each day a violation is committed or permitted to continue shall constitute a separate offense and shall be punishable as such. Penalties shall not exceed the following amounts:

A. For the first violation within a 180-day period, the minimum mandatory fine shall be $500.00.

B. For the second violation within a 180-day period, the minimum mandatory fine shall be $750.00.

C. For any further violations within a 180-day period, the minimum mandatory fine shall be $1,000.00 or imprisonment for a period not exceeding six months, or both. (Ord. 18 § 2, 2008, RCC § 9.52.100)

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL

Scenario: Existing
Road Name: Inland Valley Dr.
Road Segment: s/o Clinton Keith Rd.
Project Name: Wildomar Crossroads
Job Number: 14362

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt):	8,150 vehicles
Peak Hour Percentage:	10.00%
Peak Hour Volume:	815 vehicles
Vehicle Speed:	45 mph
Near/Far Lane Distance:	36 feet

Site Data

Barrier Height:	**0.0 feet**
Barrier Type (0-Wall, 1-Berm):	0.0
Centerline Dist. to Barrier:	50.0 feet
Centerline Dist. to Observer:	50.0 feet
Barrier Distance to Observer:	0.0 feet
Observer Height (Above Pad):	5.0 feet
Pad Elevation:	0.0 feet
Road Elevation:	0.0 feet
Road Grade:	0.0%
Left View:	-90.0 degrees
Right View:	90.0 degrees

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos:	15
Medium Trucks (2 Axles):	15
Heavy Trucks (3+ Axles):	15

Vehicle Mix

VehicleType	Day	Evening	Night	Daily
Autos:	75.5%	14.0%	10.5%	97.42%
Medium Trucks:	48.9%	2.2%	48.9%	1.84%
Heavy Trucks:	47.3%	5.4%	47.3%	0.74%

Noise Source Elevations (in feet)

Autos:	0.000		
Medium Trucks:	2.297		
Heavy Trucks:	8.006	Grade Adjustment:	0.0

Lane Equivalent Distance (in feet)

Autos:	46.915
Medium Trucks:	46.726
Heavy Trucks:	46.744

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL

Scenario: Cumulative
Road Name: Clinton Keith Rd.
Road Segment: e/o Wildomar Tr.

Project Name: Wildomar Crossroads
Job Number: 14362

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt):	44,550 vehicles
Peak Hour Percentage:	10.00%
Peak Hour Volume:	4,455 vehicles
Vehicle Speed:	45 mph
Near/Far Lane Distance:	78 feet

Site Data

Barrier Height:	**0.0 feet**
Barrier Type (0-Wall, 1-Berm):	0.0
Centerline Dist. to Barrier:	76.0 feet
Centerline Dist. to Observer:	76.0 feet
Barrier Distance to Observer:	0.0 feet
Observer Height (Above Pad):	5.0 feet
Pad Elevation:	0.0 feet
Road Elevation:	0.0 feet
Road Grade:	0.0%
Left View:	-90.0 degrees
Right View:	90.0 degrees

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos:	15
Medium Trucks (2 Axles):	15
Heavy Trucks (3+ Axles):	15

Vehicle Mix

VehicleType	Day	Evening	Night	Daily
Autos:	75.5%	14.0%	10.5%	97.42%
Medium Trucks:	48.9%	2.2%	48.9%	1.84%
Heavy Trucks:	47.3%	5.4%	47.3%	0.74%

Noise Source Elevations (in feet)

Autos:	0.000		
Medium Trucks:	2.297		
Heavy Trucks:	8.006	Grade Adjustment:	0.0

Lane Equivalent Distance (in feet)

Autos:	65.422
Medium Trucks:	65.286
Heavy Trucks:	65.300

1 EXECUTIVE SUMMARY

This Traffic Impact Analysis (TIA) has been prepared by EPD Solutions, Inc. (EPD) to analyze the potential transportation-related impacts of the proposed Wildomar Crossroads mixed-use development located the northwest corner of the intersection of Clinton Keith Rd and Wildomar Trl in the City of Wildomar. The project site is identified by four adjacent parcels (APNs – 376-410-015, -016, -017, and -021) totaling an area of approximately 10.06 acres. The development proposes the construction of 150 units multifamily housing, 23,104 SF of supermarket, 5,087 SF of shops, 3,348 SF of retail/restaurant area, 2,750 SF of drive-through restaurant, and 1,333 SF of drive-through coffee shop.

The trip generation for the proposed development was analyzed as per the *ITE Trip Generation Manual, 11th Edition, 2021*. The proposed mixed-use development is estimated to generate approximately 4551 daily trips, 282 AM peak hour trips, and 404 PM peak hour trips. The following study area intersections were evaluated during the AM and PM peak hours, which are defined as the hours with the highest traffic volumes during the 7 AM to 9 AM and 4 PM to 6 PM peak commute periods.

1. Wildomar Trl/ Clinton Keith Rd
2. Inland Valley Dr/Clinton Keith Rd
3. Nutmeg St/Clinton Keith Rd
4. California Oaks Rd/Clinton Keith Rd
5. Nutmeg St/Jackson Ave
6. Palomar Rd/Clinton Keith Rd
7. I-15 SB Ramps/Clinton Keith Rd
8. I-15 NB Ramps/Clinton Keith Rd
9. Arya Rd/ Clinton Keith Rd
10. Arya Rd/Catt Rd
11. Wildomar Trl/Project Dwy 3
12. Wildomar Trl/Proj Dwy 4

AM and PM peak hour traffic operations were evaluated for the following scenarios:

- Existing Year Traffic Conditions
- Project Completion (Existing plus Ambient Growth plus Project) Conditions
- Project Completion (Existing plus Ambient Growth plus Project) Conditions with Improvements
- Cumulative (Existing plus Ambient Growth plus Project plus Cumulative Projects) Conditions
- Cumulative (Existing plus Ambient Growth plus Project plus Cumulative Projects) Conditions with Improvements

Existing Conditions Intersection Analysis Results

All intersections operate at acceptable LOS condition in this scenario.

Project Completion (2024) Intersection Analysis Results

All intersections operate at acceptable LOS condition in this scenario except the intersection of Wildomar Trl/Proj Dwy 4 which operates at LOS F during the PM peak hour.

Cumulative Conditions (2024) Intersection Analysis Results

The project would result in unsatisfactory LOS at the following five intersections in this scenario:

- #1- Wildomar Trl/Clinton Keith Rd
- #2- Inland Valley Dr/Clinton Keith Rd
- #6- Palomar Rd/Clinton Keith Rd
- #9- Arya Rd/Clinton Keith Rd
- #12- Wildomar Trl/Proj Dwy 4

The project would result in deficient queueing at the following intersections:

- #1- Wildomar Trl/Clinton Keith Rd
- #2- Inland Valley Dr/Clinton Keith Rd
- #3- Nutmeg St/Clinton Keith Rd
- #4- California Oaks Rd/Clinton Keith Rd
- #6- Palomar Rd/Clinton Keith Rd
- #9- Arya Rd/Clinton Keith Rd

Recommended Improvements

The following improvements are recommended for satisfactory LOS operations:

- #1- Wildomar Trl/Clinton Keith Rd: Construct improvements as per approved CIP at this intersection. Improvements include the addition of WBT receiving lane at project frontage and the modification of WBR to WBTR. Signal modifications include changing SBL and NBL signal permissive phasing to protected permissive and overlapping SBR. In the event the CIP improvements are constructed before the project is constructed, the project would contribute fair-share to improvements at this intersection, as discussed further in Section 7.2.
- #2- Inland Valley Dr/Clinton Keith Rd: Project would contribute fair-share to the CIP at this intersection which improves the intersection to a 4-lane intersection. Improvements include addition of WBT lane and EBT receiving lane.
- #6- Palomar Rd/Clinton Keith Rd: Project would contribute fair-share to intersection improvements as per approved CIP at this intersection. Improvements as per CIP include

addition of 2nd EBL, modification of EBR to EBTR. Modification of WBT to WBTR. Modification on NBTR to NBT, addition of NBR and addition of 2nd SBL. The project's fair-share contributions would be limited to the 2nd SBL improvement on Clinton Keith Rd which would include widening the road to shift the SBR further northwest.

- #9- Arya Rd/Clinton Keith Rd: Construct improvements or provide fair-share as per approved Westpark Promenade Conditions of Approval. Improvements include northbound striping to provide dedicated NBL and NBTR, dedicated SBL and SBTR. Recommended signal modifications include changing NB-SB permissive phasing to protective permissive phasing. Project would construct improvements in the event that its construction commences before the construction of the adjacent Westpark Promenade project; otherwise, project would contribute fair-share for all improvements to this intersection as stated in Section 7.2. Improvements would include widening of Arya Rd to 4 lanes.
- #12- Wildomar Trl/Proj Dwy 4: Construct improvements as project design feature to add Two Stage Gap Acceptance for EBL approach from Project Dwy.

The following improvements are recommended to address deficient queueing:

- Within the City of Wildomar, as a Condition of Approval, the project is required to contribute to the ITS program which is used by the City to resolve queueing operations at impacted intersections as traffic conditions evolve. ITS uses various methods, such as intersection cameras, loop detection, and timing modifications to optimize intersection operations in real time.
- For intersections within the City of Murrieta (Nutmeg St/Clinton Keith Rd and California Oaks Rd/Clinton Keith Rd) the project will contribute payment to City of Murrieta CIP #13039 (Traffic Signal Adaptive Timing Program – Citywide). The applicant would work with the City of Murrieta to address queuing at the two intersections with contribution to the adaptive signal timing program.

Project Fair Share

The fair share percentage for recommended intersection improvements is listed below:

- #1- Wildomar Trl/Clinton Keith Rd: 9.62%
- #2- Inland Valley Dr/Clinton Keith Rd: 7.54%

2 INTRODUCTION

This Traffic Impact Analysis (TIA) has been prepared by EPD Solutions, Inc. (EPD) to analyze the potential transportation-related impacts of the proposed Wildomar Crossroads mixed-use development located the northwest corner of the intersection of Clinton Keith Rd and Wildomar Trl in the City of Wildomar. The scope of work for this TIA was reviewed and approved by the City of Wildomar and is provided in *Appendix A*. The TIA was prepared according to the approved scope of work using methodologies and significance criteria consistent as per the Riverside County Transportation Analysis Guidelines and the City of Wildomar General Plan.

2.1 Project Description

The project site is identified by four adjacent parcels (APNs – 376-410-015, -016, -017, and -021) totaling an area of approximately 10.06 acres. The existing site is currently vacant. The development proposes the construction of 150 multifamily housing dwelling units, 23,104 SF of supermarket, 5,087 SF of shops, 3,348 SF of retail/restaurant area, 2,750 SF of drive-through restaurant, and 1,333 SF of drive-through coffee shop. Please note that the project description had been updated post approval of the TIA scope of work such that the area of the total area of the shops increased by 1,087 SF and the area of the drive-through restaurant increased by 150 SF. This TIA utilizes the most updated project description for the purpose of analysis. The location of the project is shown in *Figure 1* and the project site plan is shown in *Figure 2A*.

The proposed development has a total of six driveways. The multifamily development part of the project has driveways separate from the shopping center development, with one entrance on Catt Rd and the other entrance on Wildomar Trl. Both multifamily development project driveways are gated. The shopping center has four separate driveway with one driveway on Catt Rd and the other three on Wildomar Trl. The northern most driveways on Wildomar Trl providing access to the grocery store is primary for truck access. Trucks would not be utilizing any other driveway to access the project site. The other three project driveways are accessible to passenger vehicles. The multifamily development has direct pedestrian access to the shopping center through a gated central access that opens onto the plaza in front of the grocery store.

2.2 Project Frontage Improvements

Please note as per the grading plans provided to EPD, Clinton Keith Rd will be expanded to six-lanes immediately adjacent to the project site as shown in Fi*gure 2B*. A NBL turn lane and a two-stage gap acceptance or two-way-left-turn lane (TWLTL) for EBL turns out of the project driveway will also be included at the intersection of Wildomar Trl/Project Dwy 4 as shown in the figure. The street improvement plan for Clinton Keith Rd and grading plan which includes typical street cross-sections in the immediate vicinity of the project site are attached in *Appendix E for* reference.

Figure 1: Project Location

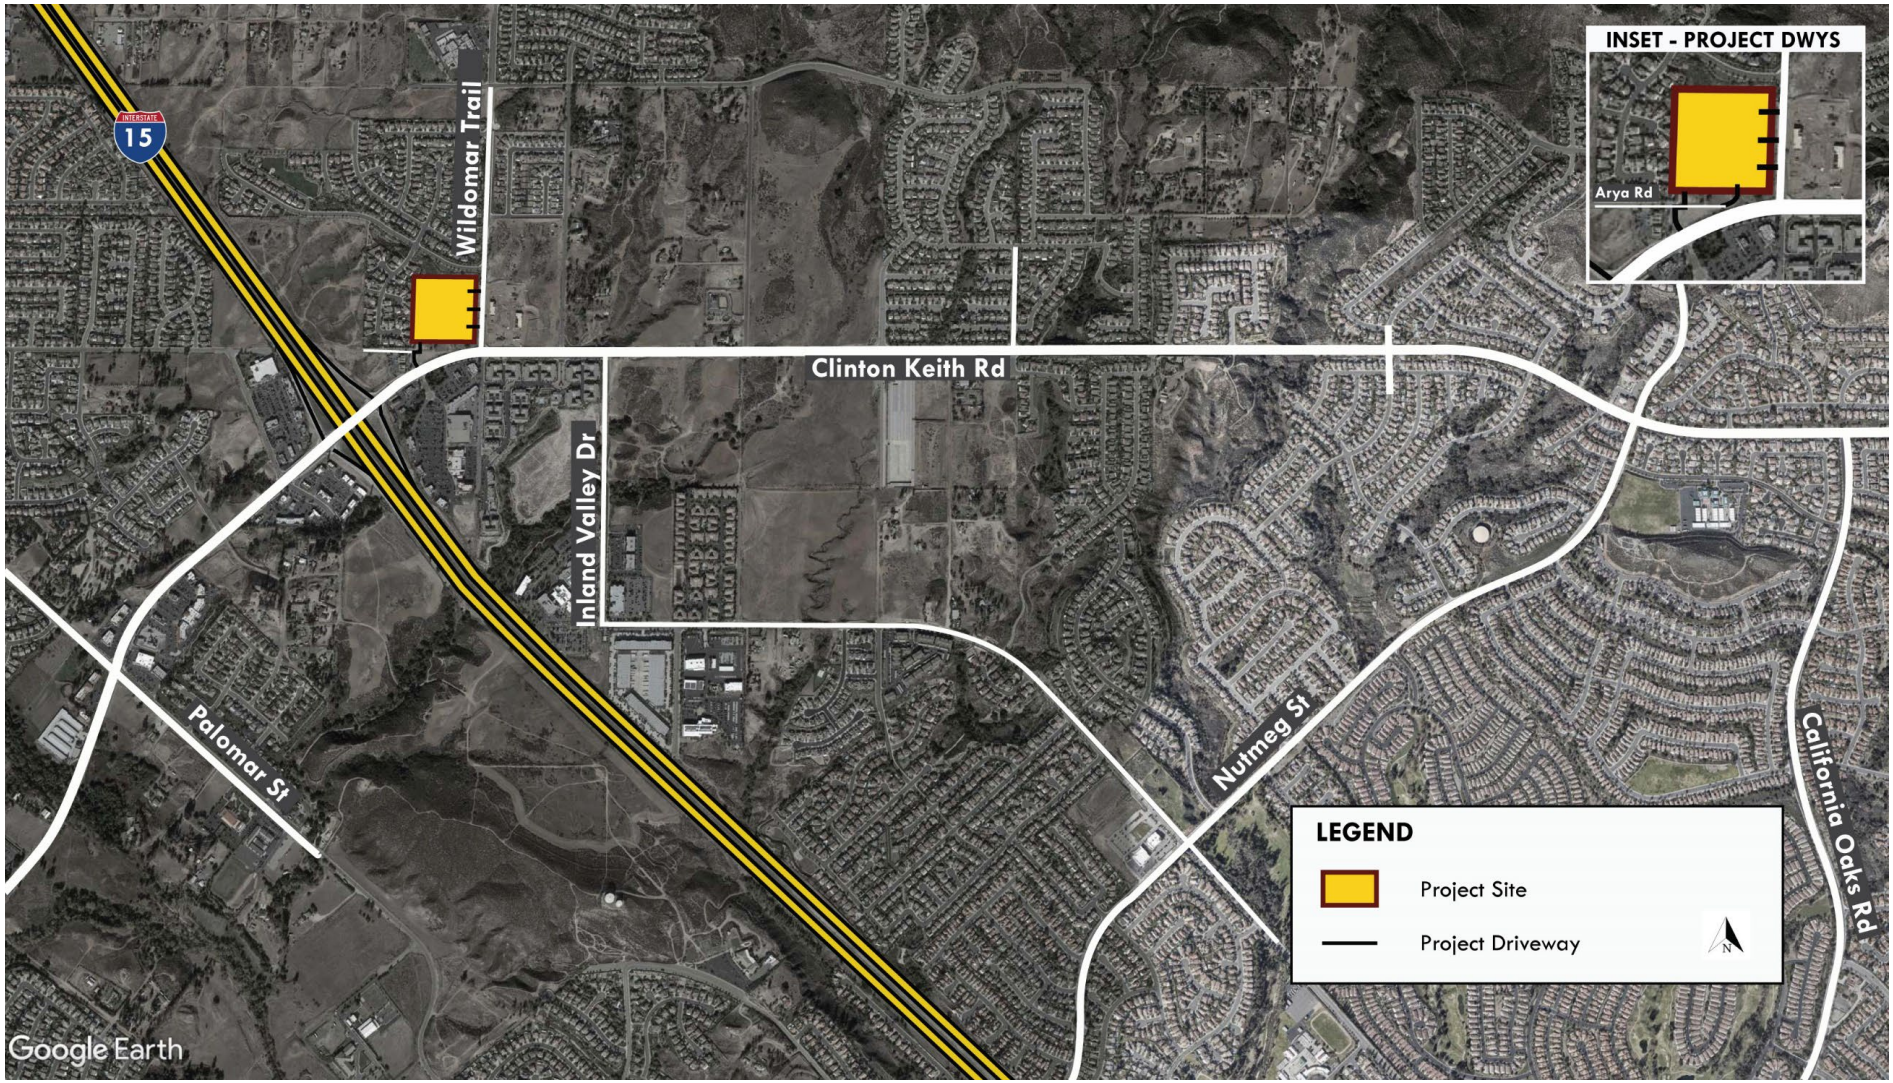

Figure 2A: Project Site Plan

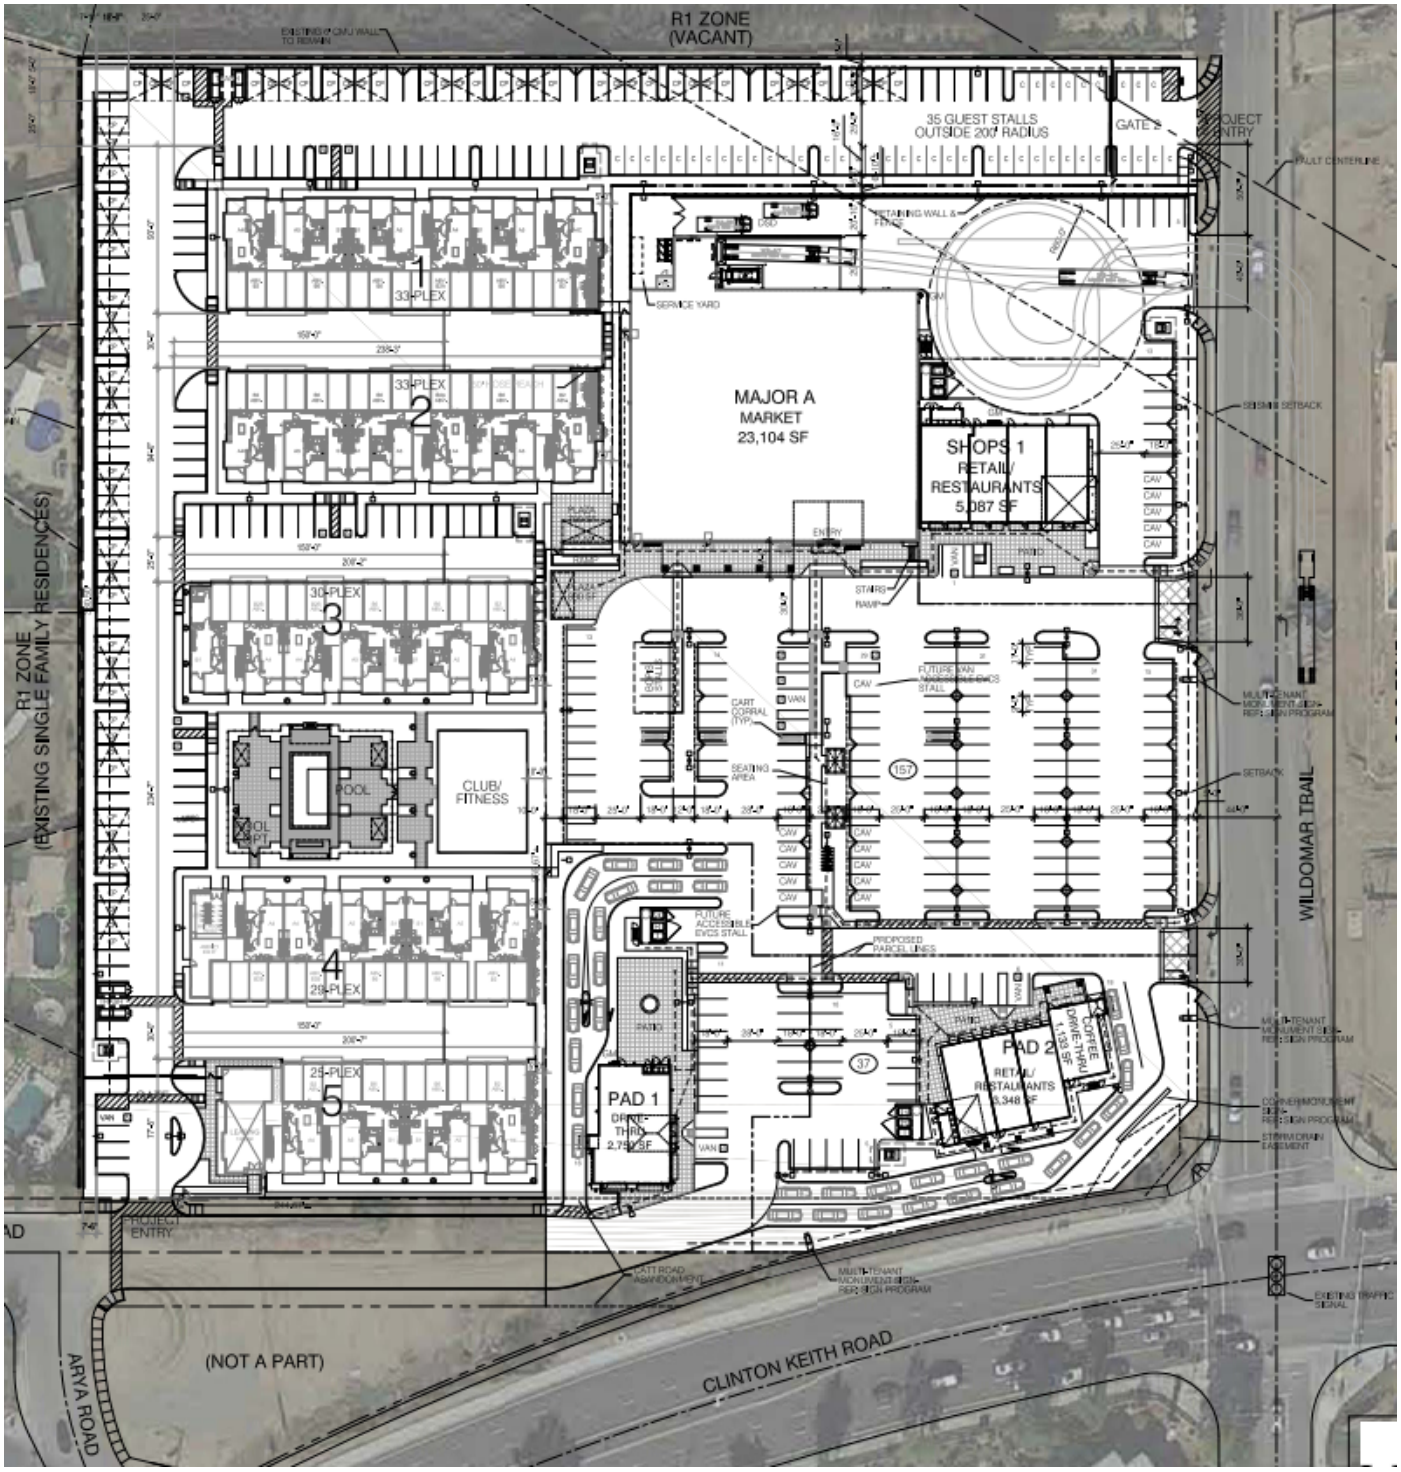

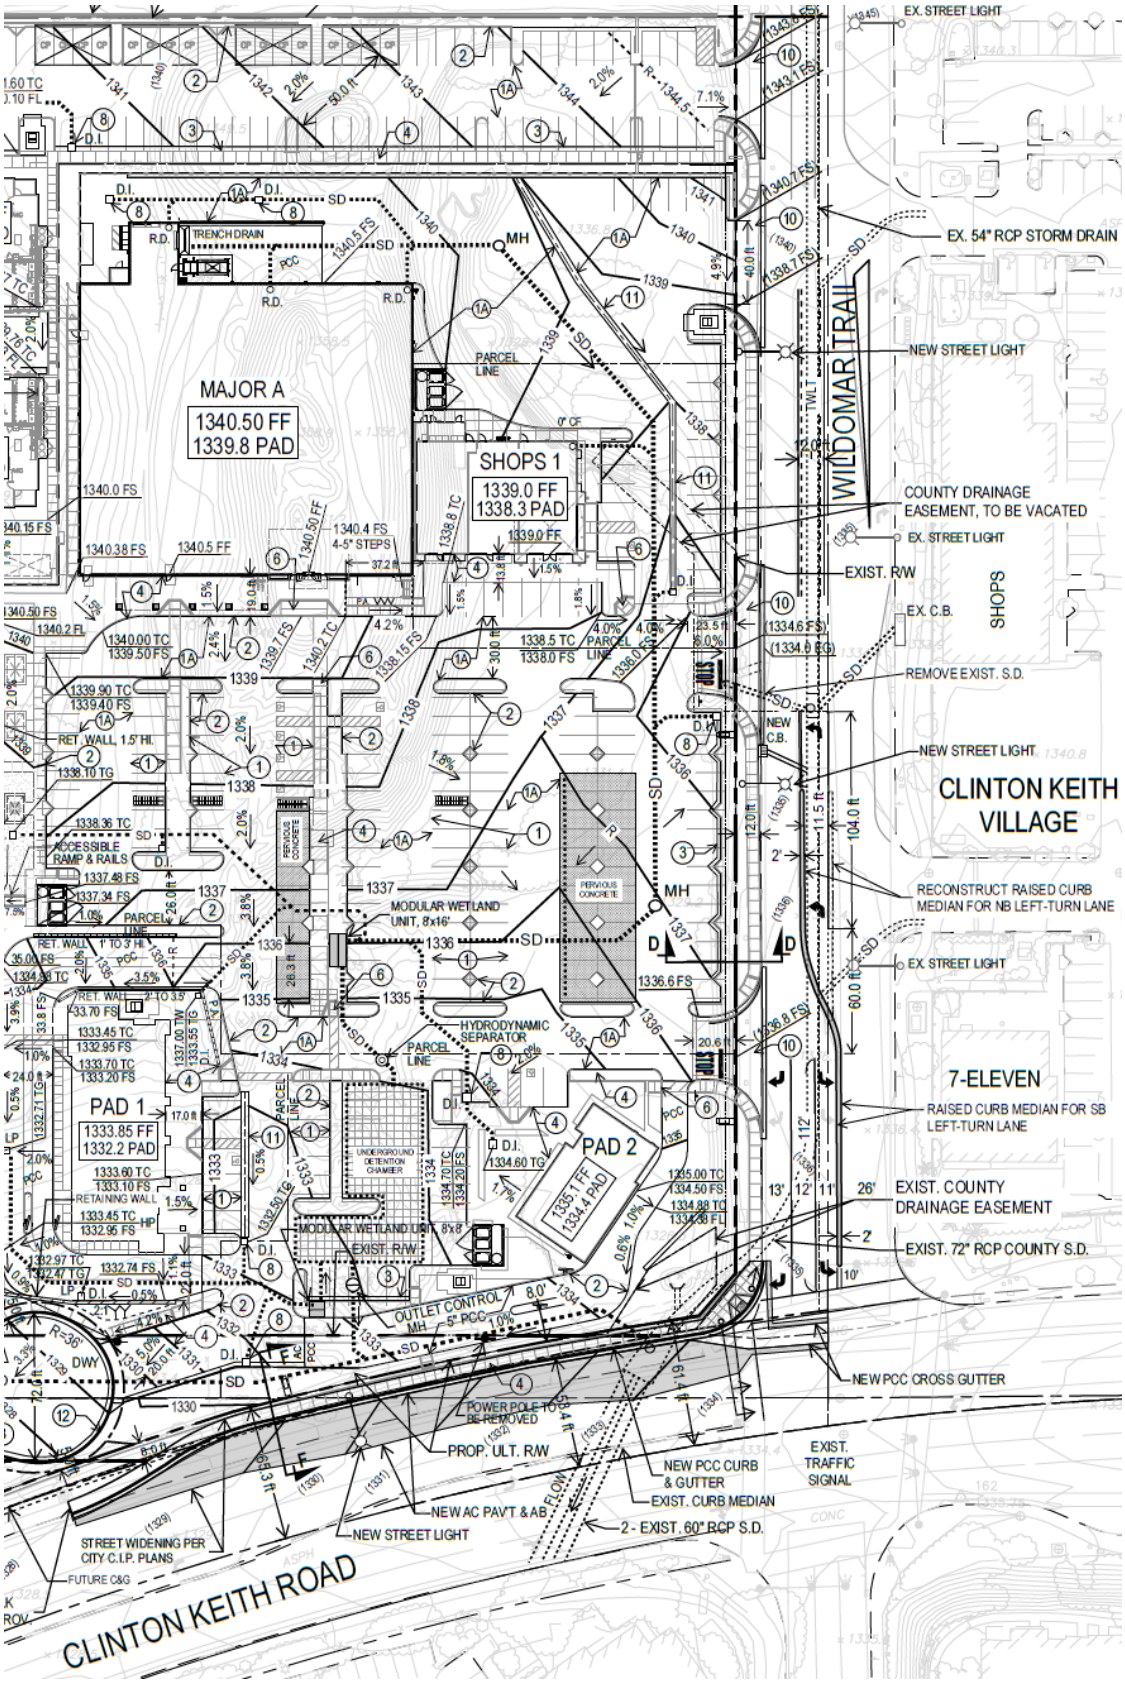

Figure 2B: Proposed Project Frontage Improvements

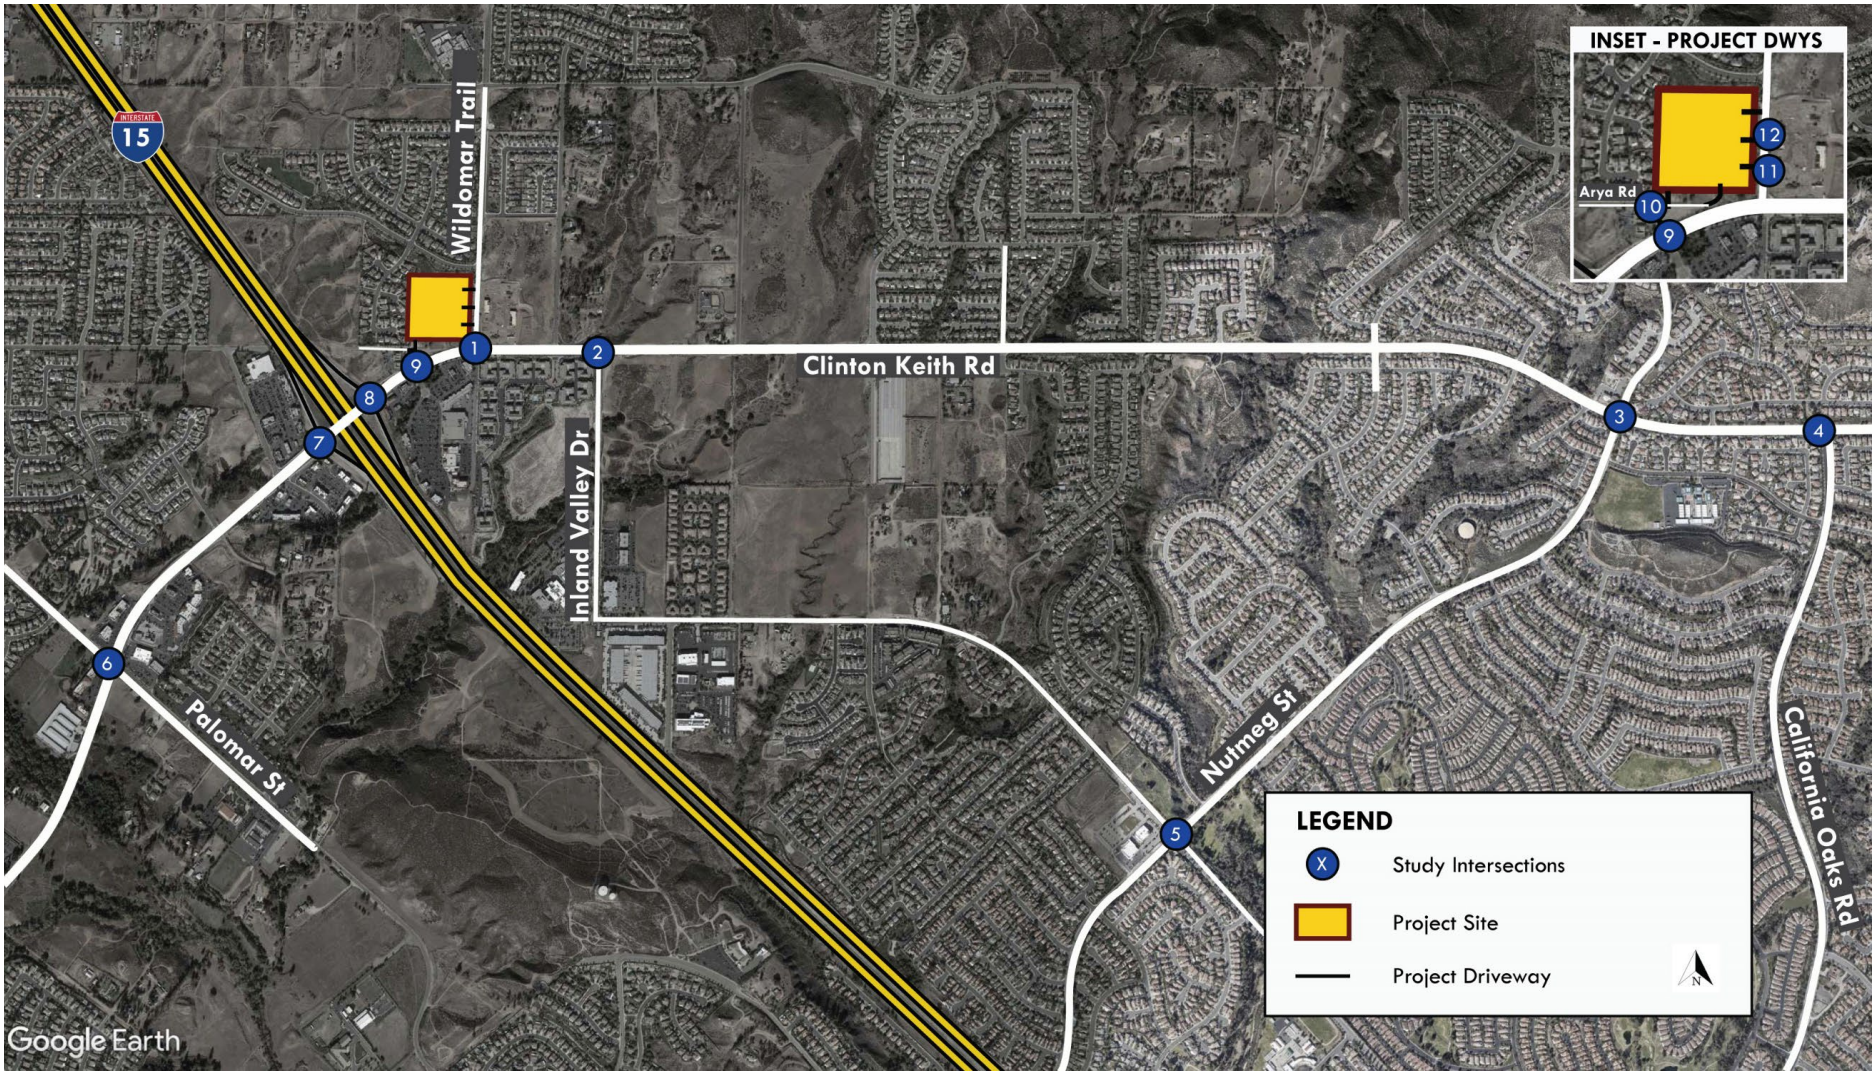
2.3 Study Area and Analysis Scenarios

The City of Wildomar requires that the traffic and circulation impacts of proposed development projects be analyzed. The study area was selected to include those intersections to which the project would add 50 or more peak hour trips. This TIA includes the analysis of signalized intersections, all-way stop controlled (AWSC) and two-way stop controlled (TWSC) intersections. The following intersections were included in the analysis:



1. Wildomar Trl/Clinton Keith Rd (Signal)
2. Inland Valley Dr/Clinton Keith Rd (Signal)
3. Nutmeg St/Clinton Keith Rd (Signal)
4. California Oaks Rd/Clinton Keith Rd (Signal)
5. Nutmeg St/Jackson Ave (Signal)
6. Palomar Rd/Clinton Keith Rd (Signal)
7. I-15 SB Ramps/Clinton Keith Rd (Signal)
8. I-15 NB Ramps/Clinton Keith Rd (Signal)
9. Arya Rd/Clinton Keith Rd (Signal)
10. Arya Rd/Catt Rd (AWSC)
11. Wildomar Trl/Project Dwy 3 (TWSC)
12. Wildomar Trl/Proj Dwy 4 (TWSC)

The locations of the study area intersections are shown on *Figure* 3. Study area intersections were evaluated during the AM and PM peak hours, which are defined as the hour with the highest traffic volumes during the 7 AM to 9 AM and 4 PM to 6 PM peak commute periods. AM and PM peak hour traffic operations were evaluated for the following scenarios:

- Existing Year Traffic Conditions
- Project Completion (Existing plus Ambient Growth plus Project) Conditions
- Project Completion (Existing plus Ambient Growth plus Project) Conditions with Improvements
- Cumulative (Existing plus Ambient Growth plus Project plus Cumulative Projects) Conditions
- Cumulative (Existing plus Ambient Growth plus Project plus Cumulative Projects) Conditions with Improvements

EPD collected counts for the study intersections on Tuesday, December 15th, 2021. As per the County of Riverside Transportation Analysis Guidelines, forecast traffic volumes for the Project Completion (2024) baseline conditions were developed by adding the project trips to Existing conditions and adding an ambient growth rate of 2 percent per year to existing traffic volumes. Cumulative (2024) traffic volumes were developed by adding the project trips to Existing conditions, adding an ambient growth rate of 2 percent per year to existing traffic volumes and adding traffic generated by other approved and pending development projects. All traffic count data are provided in *Appendix B*.

Figure 3: Project Study Area

2.4 Methodology

Intersection operations are evaluated using Level of Service (LOS), which is a measure of the delay experienced by drivers on a roadway facility. LOS A indicates free-flow traffic conditions and is generally the best operating conditions. LOS F is an extremely congested condition and is the worst operating condition from the driver's perspective. In this report, LOS at signalized and unsignalized intersections is calculated using the Highway Capacity Manual (HCM), 6th Edition methodology.

LOS at signalized intersections is defined in terms of the weighted average control delay for the intersection as a whole. Control delay is a measure of the increase in travel time that is experienced due to traffic signal control and is expressed in terms of average control delay per vehicle (in seconds). Control delay is determined based on the intersection geometry and volume, signal cycle length, phasing and coordination along the arterial corridor. *Table 2* shows the relationship between control delay and LOS.

Table 1: Relationship between Control Delay and LOS at a Signalized Intersection

LOS	Delay (Seconds per Vehicle)
A	≤ 10
B	>10 – 20
C	>20 – 35
D	>35 – 55
E	>55 – 80
F	>80

Unsignalized intersections are categorized as either all-way stop control (AWSC) or two-way stop control (TWSC). LOS at AWSC intersections is determined by the weighted average control delay of the overall intersection. The HCM TWSC intersection methodology calculates LOS based on the delay experienced by drivers on the minor (stop-controlled) approaches to the intersection. For TWSC intersections, LOS is determined for each minor-street movement, as well as the major-street left-turns. The relationship between delay and LOS at Unsignalized intersections is shown in *Table 3*.

Table 2: Relationship between Delay and LOS an Unsignalized Intersection

LOS	Delay (seconds)
A	0-10
B	>10 – 15
C	>15 – 25
D	>25 – 35
E	>35 – 50
F	>50

2.5 Significance Criteria

City of Wildomar

The *City of Wildomar General Plan Mobility Element* identifies LOS D as the threshold for all Mobility Element roadways and intersections, with the exception of Clinton Keith Road, between Hidden Springs Road and I-15 Northbound Ramps, where LOS E would be acceptable due to right-of-way constraints, unless otherwise approved by the City Engineer.

City of Murrieta

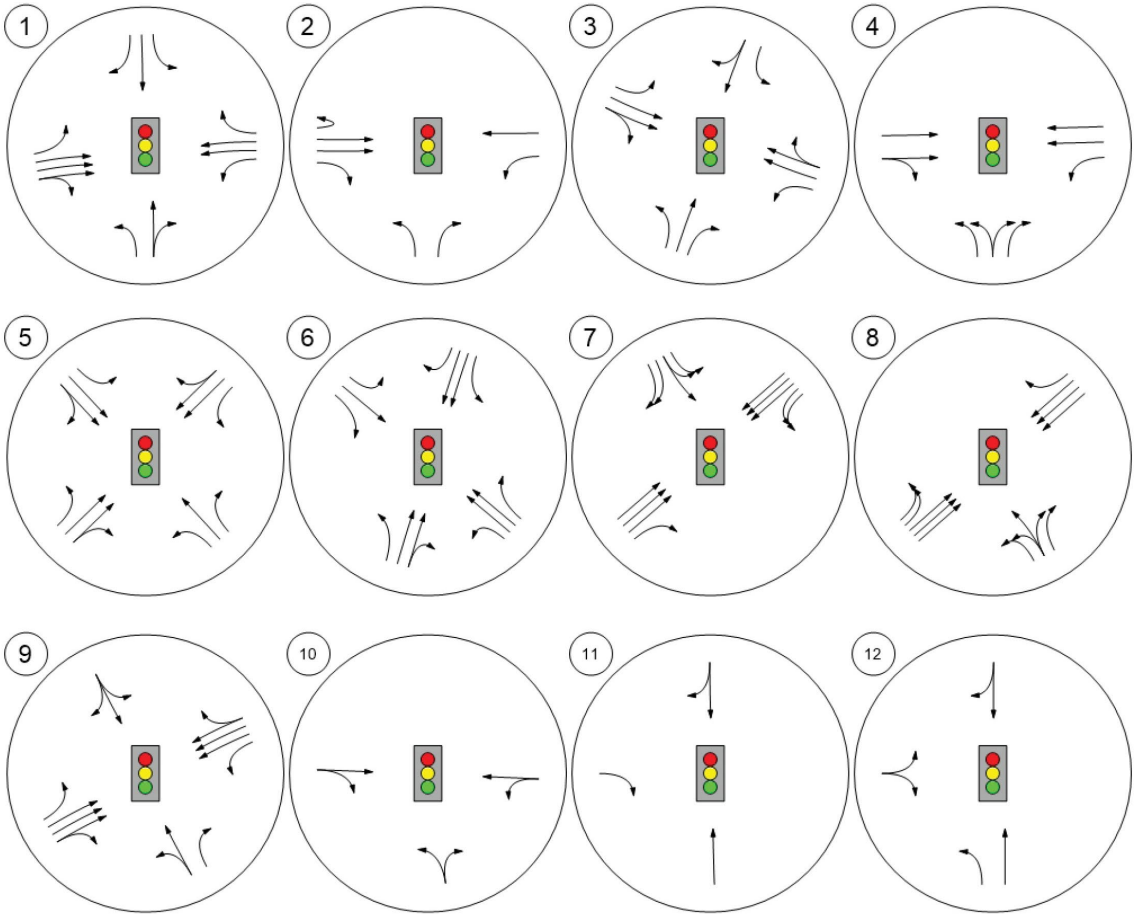
The *City of Murrieta General Plan Circulation Element* identifies LOS D as the threshold for all intersections during peak hours, and LOS E or better at freeway interchanges during peak hours.

California Department of Transportation (Caltrans)

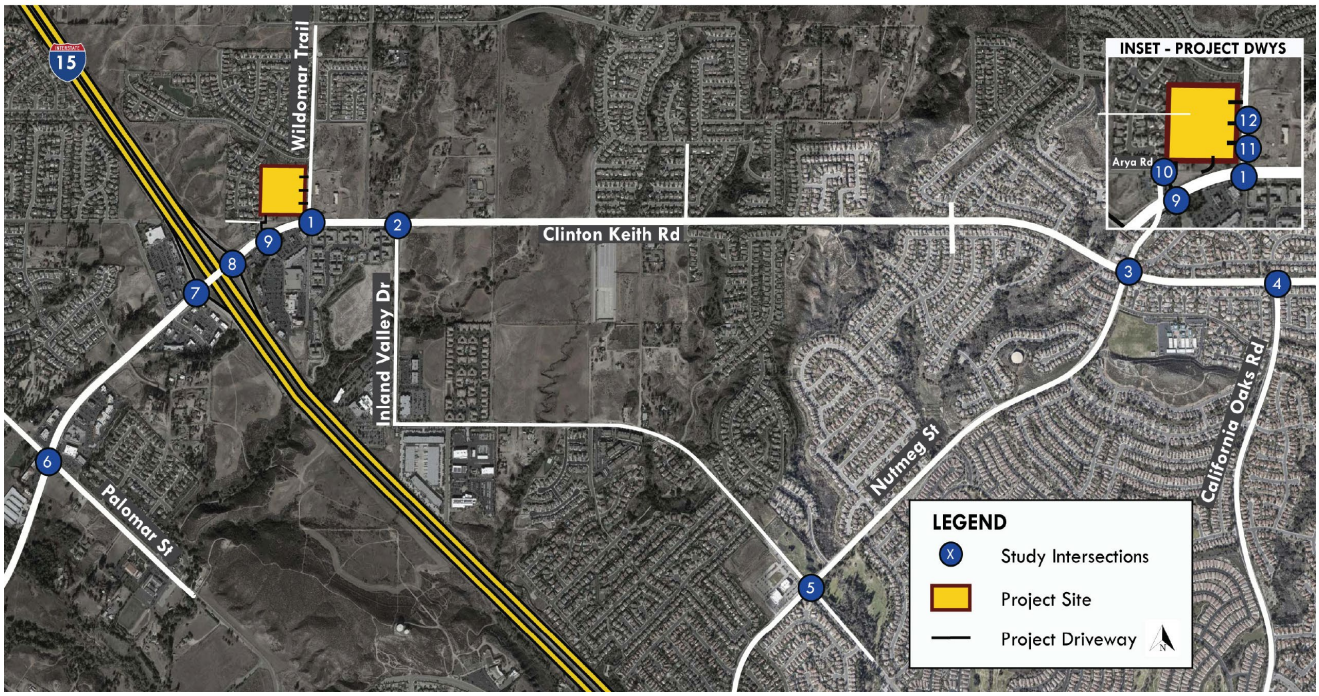
The Caltrans *Guide for the Preparation of Traffic Impact Studies* (December 2002) required that State Highway facilities be analyzed when project traffic was added to the facility. As per the guidelines, LOS D is the required standard at intersections under the jurisdiction of Caltrans. In response to implementation of SB743, Caltrans released the *Vehicle Miles Traveled-Focused Transportation Impact Study Guide*, May 20, 2020. According to the latest guide, "With this guidance, the Department will transition away from requesting LOS or other vehicle operations analyses of land use projects."

3 BASELINE CONDITIONS

This section discusses the baseline (without project) conditions. Baseline conditions are those conditions that exist within the study area in the existing condition.



3.1 Existing Transportation System and Access



The proposed mixed-use development is located at the northwest corner of the intersection of Wildomar Trl/Clinton Keith Rd in the City of Wildomar. Roadways providing access to the project site include I-15, Clinton Keith Rd, Wildomar Trl, Inland Valley Dr, Palomar St, Nutmeg St and California Oaks Rd. Nutmeg St and California Oaks Rd fall within the jurisdiction of the City of Murrieta. The characteristics of each roadway are discussed below:

- Regional access is provided to the project via interstate highway I-15 which provides connections to San Bernardino County, Los Angeles County and San Diego County.
- Clinton Keith Rd is designated as a six-lane primary arterial with raised median as per the City of Wildomar General Plan. This road is a five-lane undivided arterial in the immediate vicinity of the project. Bike lanes are provided on both sides of the road beginning at approximately 335 feet east of the intersection of Wildomar Trl/Clinton Keith Rd and extend west of the intersection till the southwest boundary of the City of Wildomar. The posted speed limit on this road is 35 miles per hour.
- Wildomar Trl is classified as a two-lane collector as per the City of Wildomar General Plan. Wildomar Trl is a two-lane undivided road in the vicinity of the project. No bike-lanes are provided on this road. The posted speed limit is 40 mph in the vicinity of the project site.
- Inland Valley Dr is classified as a four-lane minor arterial as per the City of Wildomar General Plan. Inland Valley Dr is a two-lane undivided arterial in the vicinity of the project. The posted speed limit on this road is 45 miles per hour. No bike lanes or on-street parking is provided on this road in the vicinity of the project.
- Palomar St is classified as a four-lane major arterial with raised/striped/center left-turn lane median as per the City of Wildomar General Plan. Palomar is a three-lane undivided arterial north of the intersection of Palomar St/Clinton Keith Rd, and a two-lane undivided arterial south of the intersection. Posted speed limit on this road is 45 miles per hour.
- Nutmeg St is classified as a secondary as per the City of Murrieta General Plan. Nutmeg St is a four-lane undivided street with a posted speed limit of 30 miles per hour. Bike lanes are provided on both sides of this street.
- California Oaks Rd is classified as a major as per the City of Murrieta General Plan. California Oaks Rd is a four-lane undivided street with a posted speed limit of 45 miles per hour. Bike lanes are provided on both sides of this street.

Catt Rd will be extended east of Arya Rd to function as project driveway for gated entry/exit into the residential part of the development and extend east to provide entry/exit from the commercial part of the development located south of the project site. Other project driveways providing access to the commercial development from the east open onto Wildomar Trl. The project also provides gated access to the residential development via project driveway located on Wildomar Trl. The existing traffic control and intersection geometrics at study area intersections are shown in *Figure 4*.

Figure 4: Existing Lane Geometries and Traffic Control

3.2 Existing Traffic Volumes and Intersection Operations

Existing AM and PM peak hour traffic volumes at the study area intersections are shown in *Figure 5* and *Figure 6* respectively. The existing Levels of Service at the study area are show in *Table 3*. All LOS calculations are provided in *Appendix C*. As shown in *Table 3*, all intersections operate at a satisfactory LOS during the existing peak hours except for the intersection of Arya Rd/Clinton Keith Rd which operates at LOS E in the PM peak hour.

Table 3: Existing AM and PM Peak Hour Level of Service

Intersection	Jurisdiction	Control Type	Existing			
			AM Peak		PM Peak	
			Delay[1]	LOS[2]	Delay[1]	LOS[2]

4 PROPOSED PROJECT

4.1 Project Trip Generation

Vehicle trips were generated for the proposed mixed-use development using trip rates from the Institute of Transportation Engineers (ITE) Trip Generation (11th Edition, 2021). The project trip generation is shown in *Table 4*. The proposed mixed-use development is estimated to generate approximately 4551 daily trips, 282 AM peak hour trips, and 404 PM peak hour trips. As mentioned in *Section 2.1*, the project description for the proposed development had been updated post approval of the TIA scope of work such that the total area of the shops increased by 1,087 SF and the area of the drive-through restaurant increased by 150 SF. The trip generation in this TIA utilizes the most updated project description for the purpose of analysis.

4.2 Project Trips

Project trips were distributed to the study area intersections based on the location of the project and logical routes of travel to and from the site. Project trips were assigned to the study area intersections by multiplying the project trip generation by the trip distribution percent at each location. The retail trip distribution for the proposed mixed-use development is shown in *Figure 7*. The residential trip distribution for the proposed mixed-use development is shown in *Figure 8*. The project retail trip assignment for AM and PM peak hours is shown in *Figure 9* and *Figure 10* respectively. The project residential trip assignment in for AM and PM peak hours is shown in *Figure 11* and *Figure 12* respectively.

5 PROJECT IMPACTS

5.1 Project Completion (2024) Conditions

5.1.1 Project Completion Traffic Volumes and Intersection Operations

Project Completion (2024) conditions volumes were developed by adding the project trips to Existing conditions and adding an ambient growth rate of 2 percent per year to existing traffic volumes. The AM peak hour and PM peak hour traffic volumes for this scenario are shown in *Figure 13* and *Figure 14* respectively. *Table 5* shows the Project Completion AM and PM peak hour levels of service at study intersections. All LOS calculations are provided in *Appendix* C. As shown in *Table 5*, all intersections would operate at a satisfactory LOS during both AM and PM peak hours with the exception of Arya Rd/Clinton Keith Rd which would operate at LOS F during the PM peak hour.

5.2 Cumulative (2024) Conditions

5.2.1 Cumulative Projects

The approved and pending development projects utilized in this scenario were referred from the *Cumulative Development Project Spreadsheet document* provided to EPD by the City of Wildomar. The location of the approved and pending cumulative projects is shown in *Figure 15*. The map shows the location of residential and commercial projects. Mixed-use developments are illustrated as separate commercial and residential projects with the same project number. The trip generation for the cumulative projects is shown in *Table 6*. The figures were numbered in the location map and in the trip generation table as per the project numbers assigned in the *Cumulative Development Project Spreadsheet* attached in *Appendix D*. In addition to the cumulative projects obtained from the document provided by the City, EPD added Mt. San Jacinto Community College District campus obtained from the Inland Valley Medical Center Project TIA prepared by Linscott, Law and Greenspan, Engineers (LLG). The trips from each cumulative project were distributed to the study area intersections based on the location of the cumulative project and logical routes of travel to and from their respective sites. The AM and PM peak hour traffic volumes generated by the cumulative projects is shown in *Figure 16* and *Figure 17*.

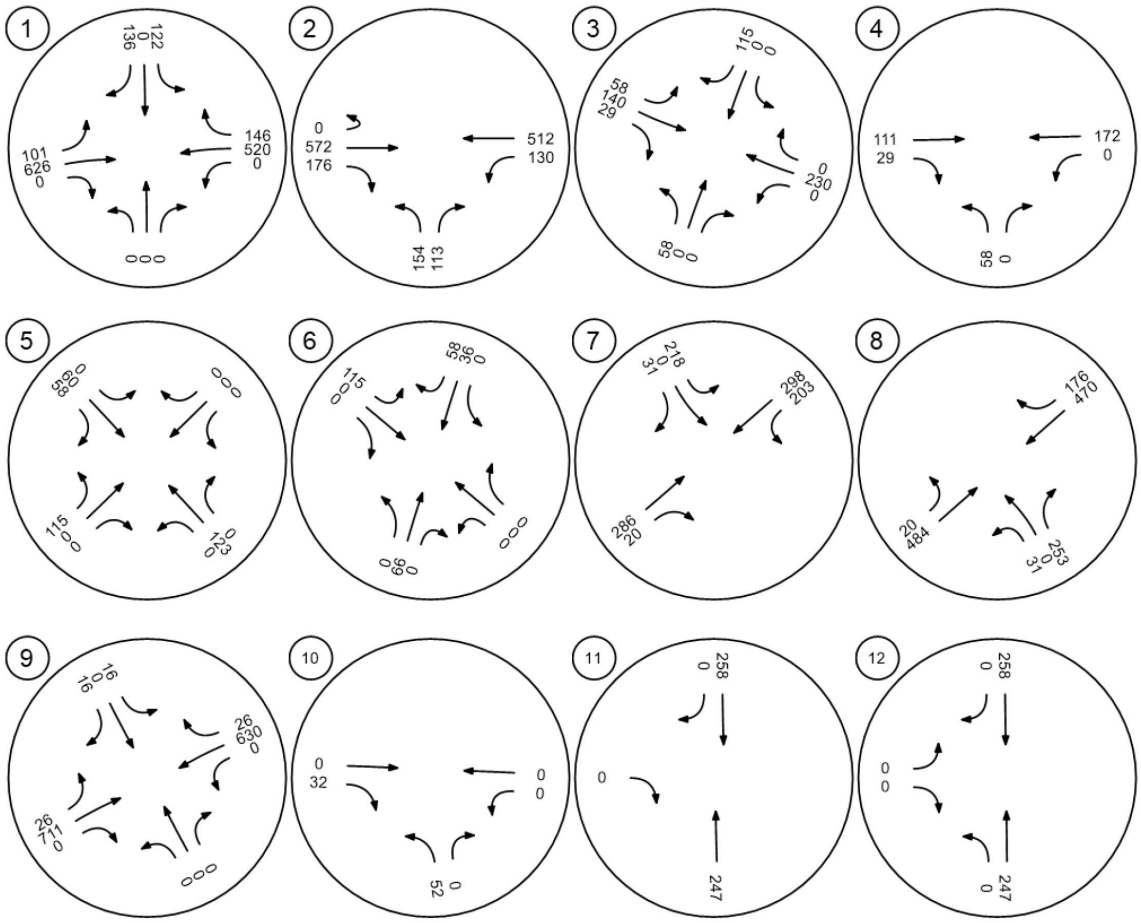
Figure 16: Cumulative Projects AM Peak Hour Traffic Volumes



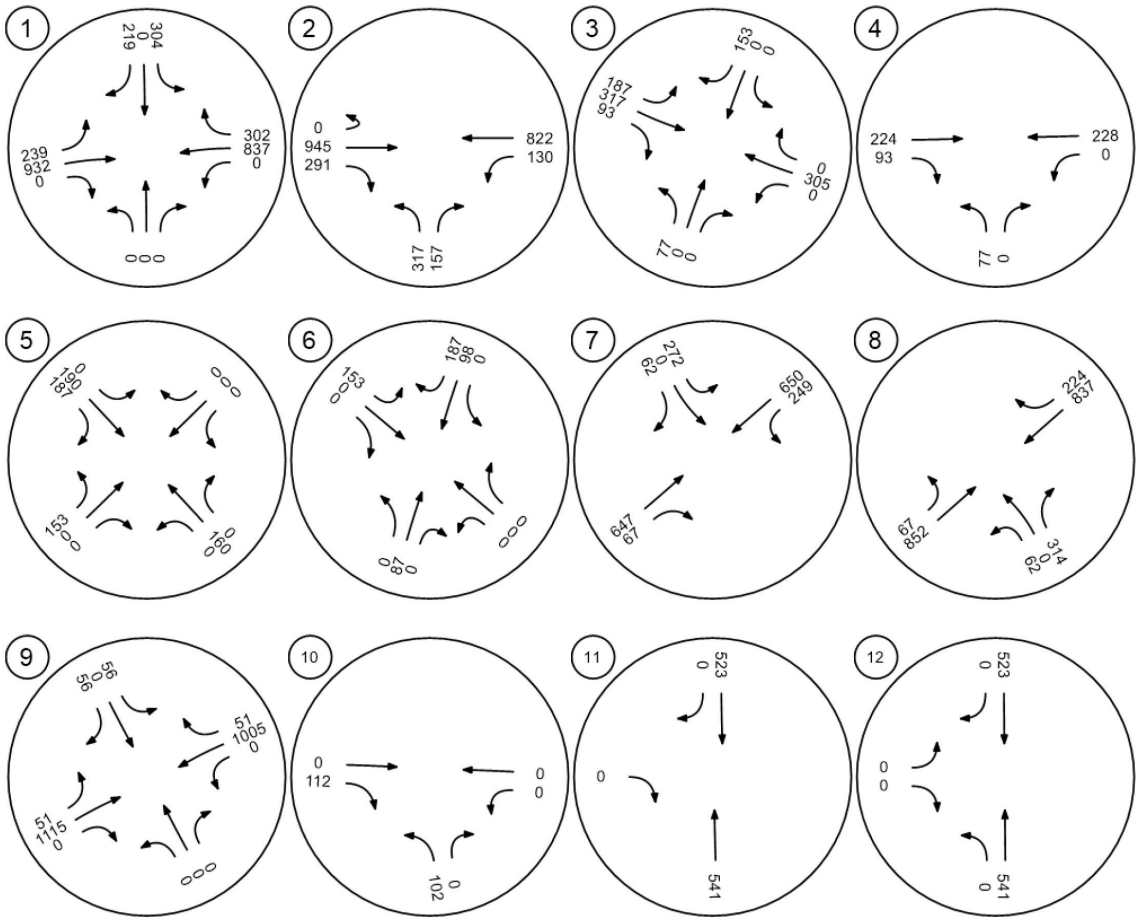


Figure 17: Cumulative Projects PM Peak Hour Traffic Volumes

5.2.2 Cumulative Conditions Traffic Volumes and Intersection Operations

Cumulative (2024) conditions volumes were developed by adding the project trips to Existing conditions, adding an ambient growth rate of 2 percent per year to existing traffic volumes and adding traffic generated by other approved and pending development projects. The AM peak hour and PM peak hour traffic volumes for this scenario are shown in *Figure 18* and *Figure 19* respectively. Levels of Service at the study area intersections were determined using the HCM methodology, described previously in section 2.3. *Table 7* shows the Cumulative Conditions AM and PM peak hour levels of service at study intersections. All LOS calculations are provided in *Appendix C*. As shown in *Table 7*, all intersections would operate at a satisfactory LOS during both AM and PM peak hours except for the following intersections:

- #1- Wildomar Trl/Clinton Keith Rd
- #2- Inland Valley Dr/Clinton Keith Rd
- #3- Palomar Rd/Clinton Keith Rd
- #9- Arya Rd/Clinton Keith Rd
- #12- Wildomar Trl/Proj Dwy 4.

Improvements for each deficient intersection are recommended in *Section 7.1*.

Table 7: Cumulative AM and PM Peak Hour Level of Service

Intersection	Jurisdiction	Control Type	Cumulative			
			AM Peak		PM Peak	
			Delay[1]	LOS[2]	Delay[1]	LOS[2]

6 PROJECT QUEUEING AND TRUCK TURNING

6.1 Project Queueing

A queuing analysis for conducted for intersections that would result in LOS D or worse in the Cumulative conditions. The queueing analysis is provided in the *Table 8* below. The following intersections were analyzed for queueing:

- #1- Wildomar Trl/Clinton Keith Rd
- #2- Inland Valley Dr/Clinton Keith Rd
- #3- Nutmeg St/Clinton Keith Rd
- #4- California Oaks Rd/ Clinton Keith Rd
- #6- Palomar Rd/Clinton Keith Rd
- #9- Arya Rd/Clinton Keith Rd
- #10- Arya Rd/Catt Rd
- #11- Wildomar Trl/Project Dwy 3
- #12- Wildomar Trl/Project Dwy 4

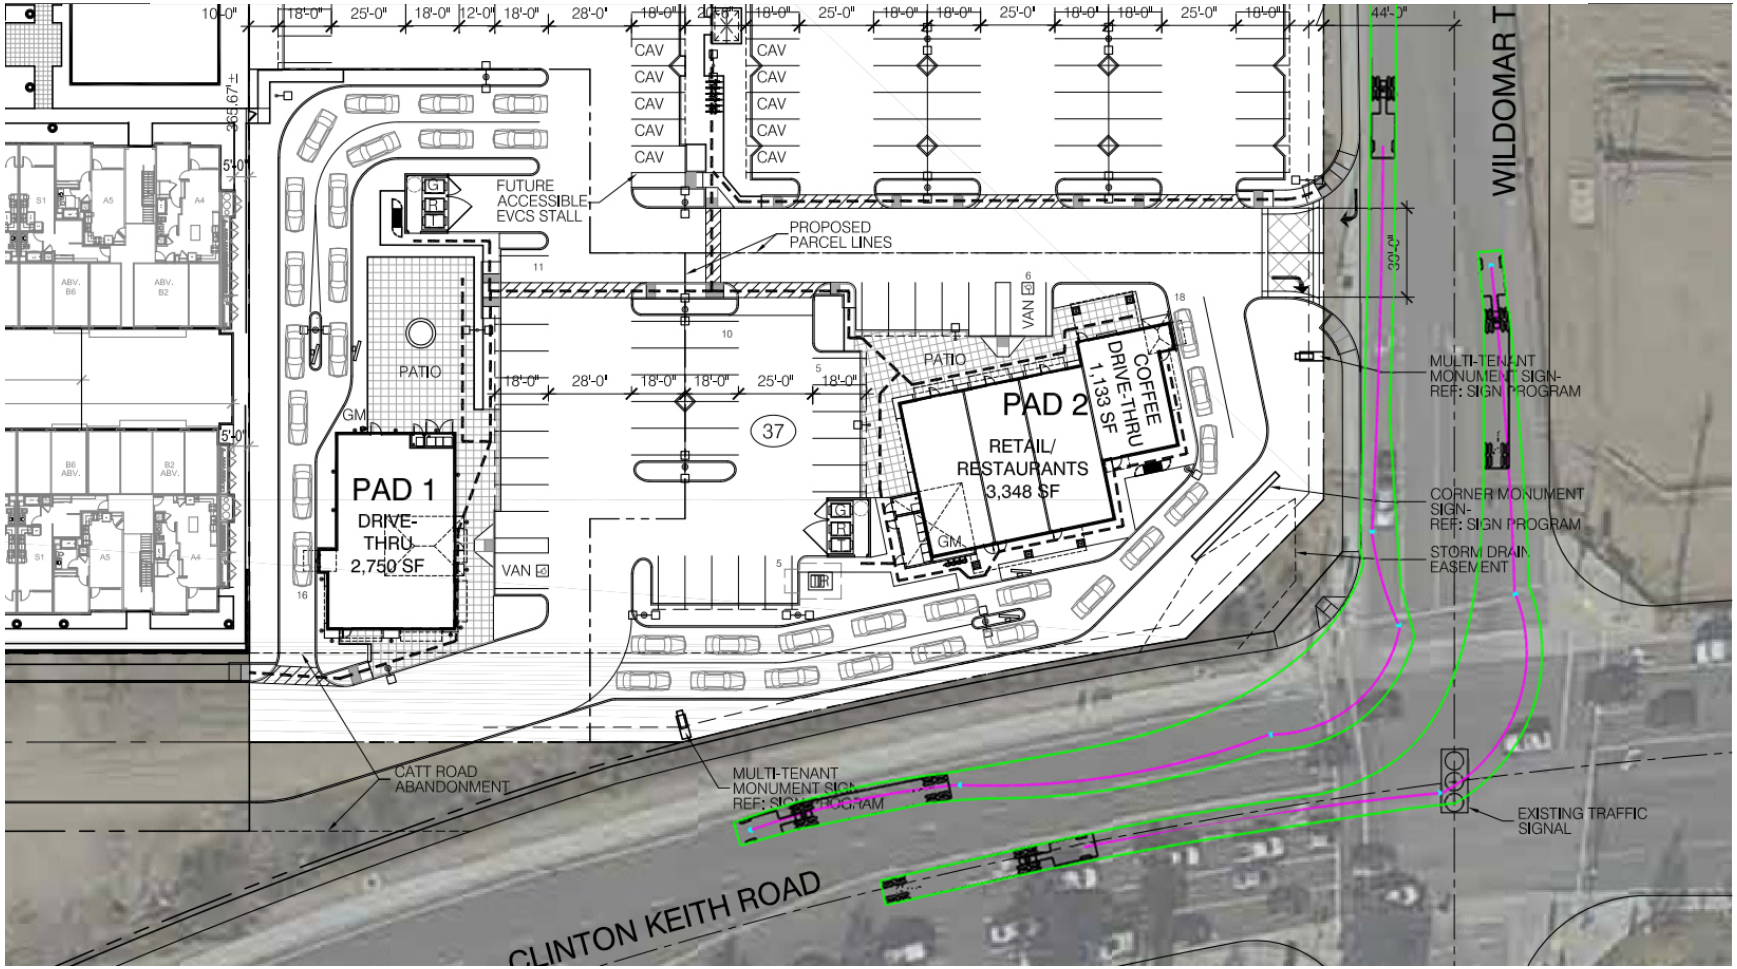
6.2 Truck Turning

The truck turning for WB-67 truck at the intersection of Wildomar Trl/Clinton Keith Rd is shown in *Figure 20*. The truck turning for WB-67 truck at the intersection of Wildomar Trl/Project Dwy 5 is shown in *Figure 21*.

Figure 20: Truck Turning at Wildomar Trl/Clinton Keith Rd



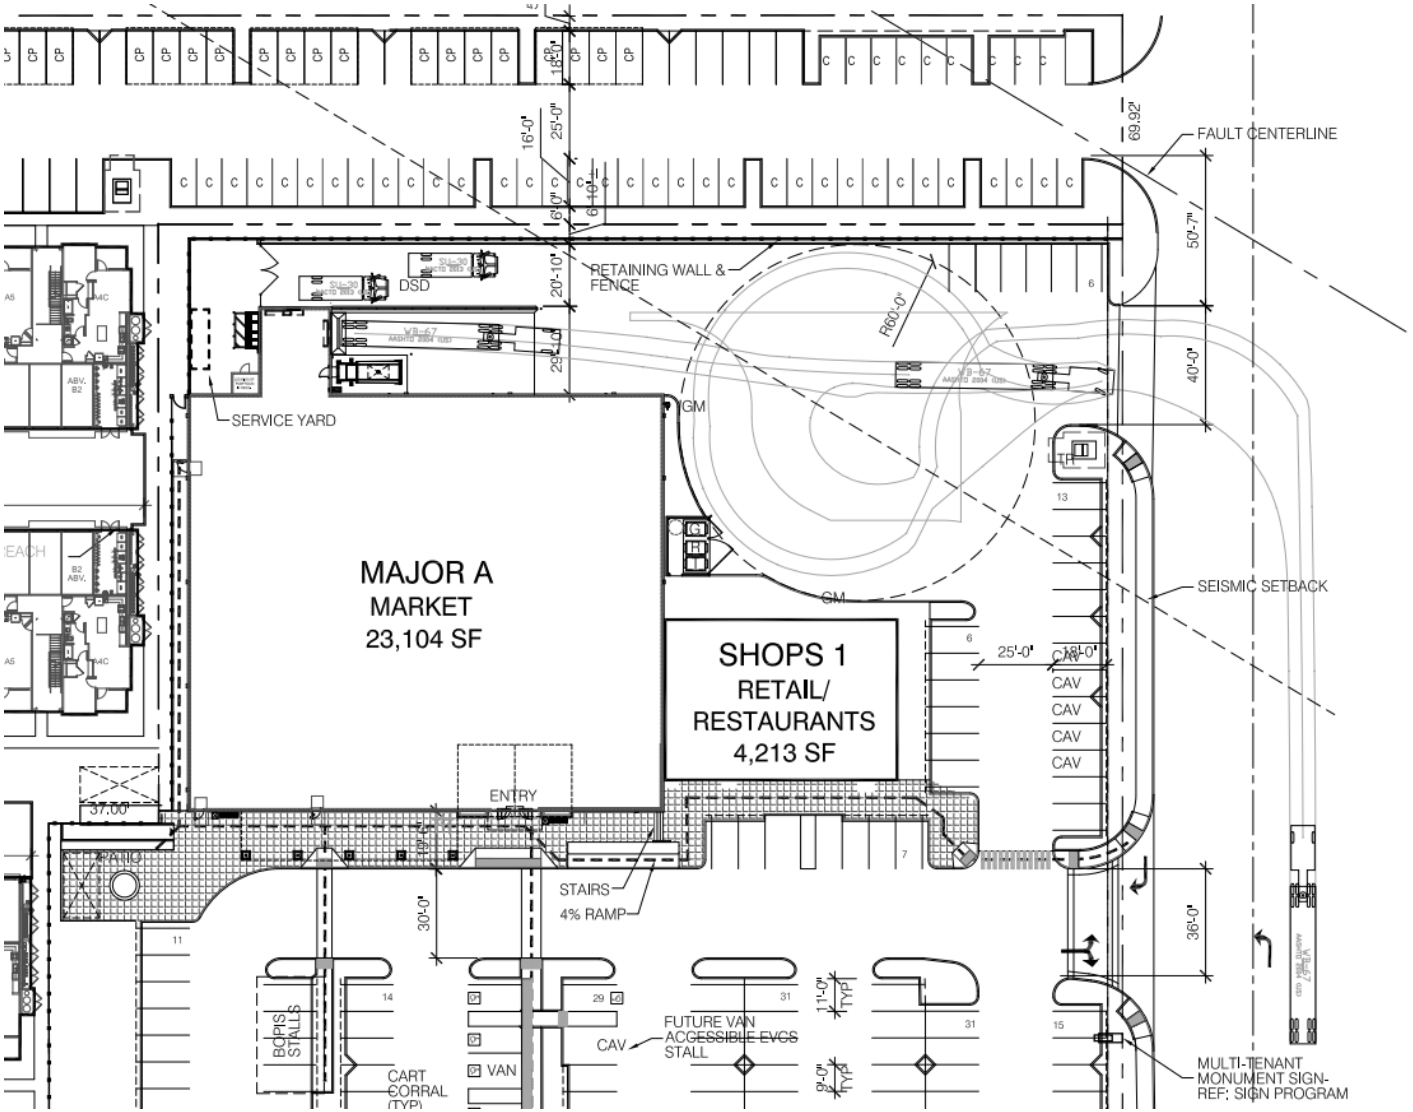


Figure 21: Truck Turning at Wildomar Trl/Project Dwy 5

7 RECOMMENDED PROJECT IMPROVEMENTS AND FAIR SHARE

7.1 Recommended Project Improvements

Development of the proposed mixed-use project would result in unsatisfactory LOS operations at one intersection in the Project Completion condition, and unsatisfactory LOS operations at five intersections in the Cumulative condition. The following improvements would result in the intersections operating with satisfactory LOS as shown in *Table 9* and *Table 10*.

- #1- Wildomar Trl/Clinton Keith Rd: Construct improvements as per approved CIP at this intersection. Improvements include the addition of WBT receiving lane at project frontage and the modification of WBR to WBTR. Signal modifications include changing SBL and NBL signal permissive phasing to protected permissive and overlapping SBR. In the event the CIP improvements are constructed before the project is constructed, the project would contribute fair-share to improvements at this intersection, as discussed further in Section 7.2.
- #2- Inland Valley Dr/Clinton Keith Rd: Project would contribute fair-share to the CIP at this intersection which improves the intersection to a 4-lane intersection. Improvements include addition of WBT lane and EBT receiving lane.[1]
- #6- Palomar Rd/Clinton Keith Rd: Project would contribute fair-share to intersection improvements as per approved CIP at this intersection. Improvements as per CIP include addition of 2nd EBL, modification of EBR to EBTR. Modification of WBT to WBTR. Modification on NBTR to NBT, addition of NBR and addition of 2nd SBL. The project's fair-share contributions would be limited to the 2nd SBL improvement on Clinton Keith Rd which would include widening the road to shift the SBR further northwest.
- #9- Arya Rd/Clinton Keith Rd: Construct improvements or provide fair-share as per approved Westpark Promenade Conditions of Approval. Improvements include northbound striping to provide dedicated NBL and NBTR, dedicated SBL and SBTR. Recommended signal modifications include changing NB-SB permissive phasing to protective permissive phasing. Project would construct improvements in the event that its construction commences before the construction of the adjacent Westpark Promenade project; otherwise, project would contribute fair-share for all improvements to this intersection as stated in Section 7.2. Improvements would include widening of Arya Rd to 4 lanes.
- #12- Wildomar Trl/Proj Dwy 4: Construct improvements as project design feature to add Two Stage Gap Acceptance for EBL approach from Project Dwy.

With the above stated improvements, all intersections are improved to satisfactory operations of LOS D or better, except for the intersections of Wildomar Trl/Clinton Keith Rd and Inland Valley Dr/Clinton Keith Rd which would improve the intersections to better-than-existing LOS F and LOS E operations, respectively, in the Cumulative PM peak hour conditions with the CIP improvements.

[1] It is to be noted that apart from City of Wildomar CIPs at the above intersections, improvements on Clinton Keith Rd from I-15 to Copper Craft Dr are covered by TUMF for improvement from 2-lanes to 4-lanes.

=Unsatisfactory Intersection Operation AWSC = All-Way Stop Controlled TWSC = Two-Way Stop Controlled

[1] Delay in Seconds

[2] Level of Service

7.2 Project Fair Share for LOS and Queueing Improvements

The percentage of project fair-share at affected intersections was calculated using the total trips generated by the project divided by the total "new" traffic, which is the net increase in traffic volume in the Cumulative conditions as a result of all other proposed projects.

The project's fair-share percentage for each recommended LOS improvement, as identified in Section 7.1, is listed in *Table 11* below. Additionally, the project has the potential to create or contribute to existing queuing capacity deficiencies as indicated previously in Table 8. Table 11 includes fair-share for intersections which would require improvements for identified queueing deficiencies. Deficient queueing can be improved either with striping modifications at intersections or through Intelligent Transportation Systems (ITS). The City of Wildomar has adopted ITS program which would improves deficient queueing operations to satisfactory operations.

Within the City of Wildomar, as a Condition of Approval, the project is required to contribute to the ITS program which is used by the City to resolve queueing operations at impacted intersections as traffic conditions evolve. ITS uses various methods, such as intersection cameras, loop detection, and timing modifications to optimize intersection operations in real time. Similarly, for intersections within the City of Murrieta (Nutmeg St/Clinton Keith Rd and California Oaks Rd/Clinton Keith Rd), the project will contribute payment to City of Murrieta CIP #13039 (Traffic Signal Adaptive Timing Program – Citywide). The applicant would work with the City of Murrieta to address queuing at the two intersections with contribution to the adaptive signal timing program.

Table 11 identifies fair-share to contribute towards ITS program along with fair-share for LOS improvements. Therefore, within the City of Wildomar and the City of Murrieta, these improvements would resolve LOS and/or queueing deficiencies. The project would not substantially increase hazards at a dangerous intersection and impacts would be less than significant.

Table 11: Cumulative Conditions Project Fair Share

Intersection	Existing	Project	2024	2024 with Project	Total New Traffic	Project % of New Traffic
AM Peak Hour						
1. Wildomar Trl/Clinton Keith Rd	2437	186	4185	4371	1934	9.62%
2. Inland Valley Dr/Clinton Keith Rd	2139	142	3880	4022	1883	7.54%
3. Nutmeg St/Clinton Keith Rd	2460	76	3187	3263	803	9.46%
4. California Oaks Rd/Clinton Keith Rd	3124	43	3618	3661	537	8.01%
6. Palomar Rd/Clinton Keith Rd	2726	34	3109	3143	417	8.15%
9. Arya Rd/Clinton Keith Rd	2611	137	4141	4278	1667	8.22%
PM Peak Hour						
1. Wildomar Trl/Clinton Keith Rd	2878	287	5825	6112	3234	8.87%
2. Inland Valley Dr/Clinton Keith Rd	2536	217	5300	5517	2981	7.28%
3. Nutmeg St/Clinton Keith Rd	2632	112	3868	3980	1348	8.31%
4. California Oaks Rd/Clinton Keith Rd	3369	59	4146	4205	836	7.06%
6. Palomar Rd/Clinton Keith Rd	2842	54	3480	3534	692	7.80%
9. Arya Rd/Clinton Keith Rd	3151	188	5610	5798	2647	7.10%

Shading indicates higher fair-share percent of either AM or PM peak hours for each intersection.

APPENDIX A – SCOPE OF WORK

PROJECT SCOPING FORM FOR TRAFFIC ANALYSIS

This letter acknowledges the Riverside County Transportation Department requirements for traffic impact analysis of the following project. The analysis must follow the Riverside County Transportation Department Transportation Analysis Guidelines dated August 2020.

E. Other Jurisdictional Impacts

Is this project within a City's Sphere of Influence or one-mile radius of City boundaries? ☐ Yes ☑ No

If so, name of City Jurisdiction:

F. Site Plan Please see attached

G. Specific issues to be addressed in the Study (in addition to the standard analysis described in the Guideline) (To be filled out by Transportation Department)
(NOTE: If the traffic study states that "a traffic signal is warranted" (or "a traffic signal appears to be warranted," or similar statement) at an existing unsignalized intersection under existing conditions, 8-hour approach traffic volume information must be submitted in addition to the peak hourly turning movement counts for that intersection.)

Review of internal circulation will be provided in TIA, queueing on turn-lanes at intersections which have LOS "D" or worse".

H. Existing Conditions

Traffic count data must be new or recent. Provide traffic count dates if using other than new counts. Date of counts.

EPD will will collect new counts at study intersections.

*** NOTE* Traffic Study Submittal Form and appropriate fee must be submitted with, or prior to submittal of this form. Transportation Department staff will not process the Scoping Agreement prior to receipt of the fee.**

Analysis Scenarios

1. Existing Conditions. Existing conditions will be analyzed using new traffic counts.

2. Project Completion (Existing plus Ambient Growth plus Project). Project Completion traffic volumes will be determined by adding the project trips to Existing conditions and adding an ambient growth rate of 2 percent per year to existing traffic volumes.

3. Cumulative (Existing plus Ambient Growth plus Project plus Cumulative Projects). Cumulative (2024) traffic volumes will be developed by adding the project trips to Existing conditions, adding an ambient growth rate of 2 percent per year to existing traffic volumes and adding traffic generated by other approved and pending development projects.

Trip Distribution

The project trips were distributed to the surrounding roadways based on the location of the project in relation to local and regional land uses and transportation facilities. As shown in Figure 2, approximately 38% of the *residential trips* would travel north on I-15, 45% would travel south on I-15, 15% would travel east of I-15 and 2% would travel west of I-15. As shown in Figure 3, approximately 10% of the retail trips would travel north on I-15, 10% would travel south on I-15, 65% would travel east of I-15 and 15% would travel west of I-15.

VMT Screening

As per Exhibit 1 of the City of Wildomar Vehicle Miles Travelled (VMT) CEQA Threhold Policy Guidelines, any mixed use project with at least 30 percent residential will screen from requiring a VMT analysis. The proposed mixed use development encompasses 4.47 acres of residential space and 4.63 acres of commerical space providing approximately 49 percent residential. Hence the proposed development would screen from requiring a VMT analysis.

Parking

The residential gated portion of the project site will be accessible via Clinton Keith Road and Arya Road to the southwest corner of the site and Wildomar Trail to the northeast corner. Both access points will include a rolling gate. The development will include 283 spaces consisting of 130 open stalls, 76 carport stalls, and 77 garage stalls. Circulation will be provided via 25 FT and 27 FT drive aisles. The distribution of electric vehicle stalls is not mandated by regulation and will be determined in final construction designs.

The commercial will be accessible via three points along Wildomar Trail and via Clinton Keith Road. The commercial portion of the project contains 19 fewer stalls than required by the zoning ordinance requirement of 213 stalls (6/1000) overall. The reduced parking is justified by the adjacent residential component as residents would walk to the commercial portion from the integrated residential development to shop and dine. This proximity of mixed uses would reduce the number of required vehicle parking spaces on the commercial side of the project. It should be noted that the project does not propose shared parking, as the residential portion of the project would be gated and not accessible for retail parking.

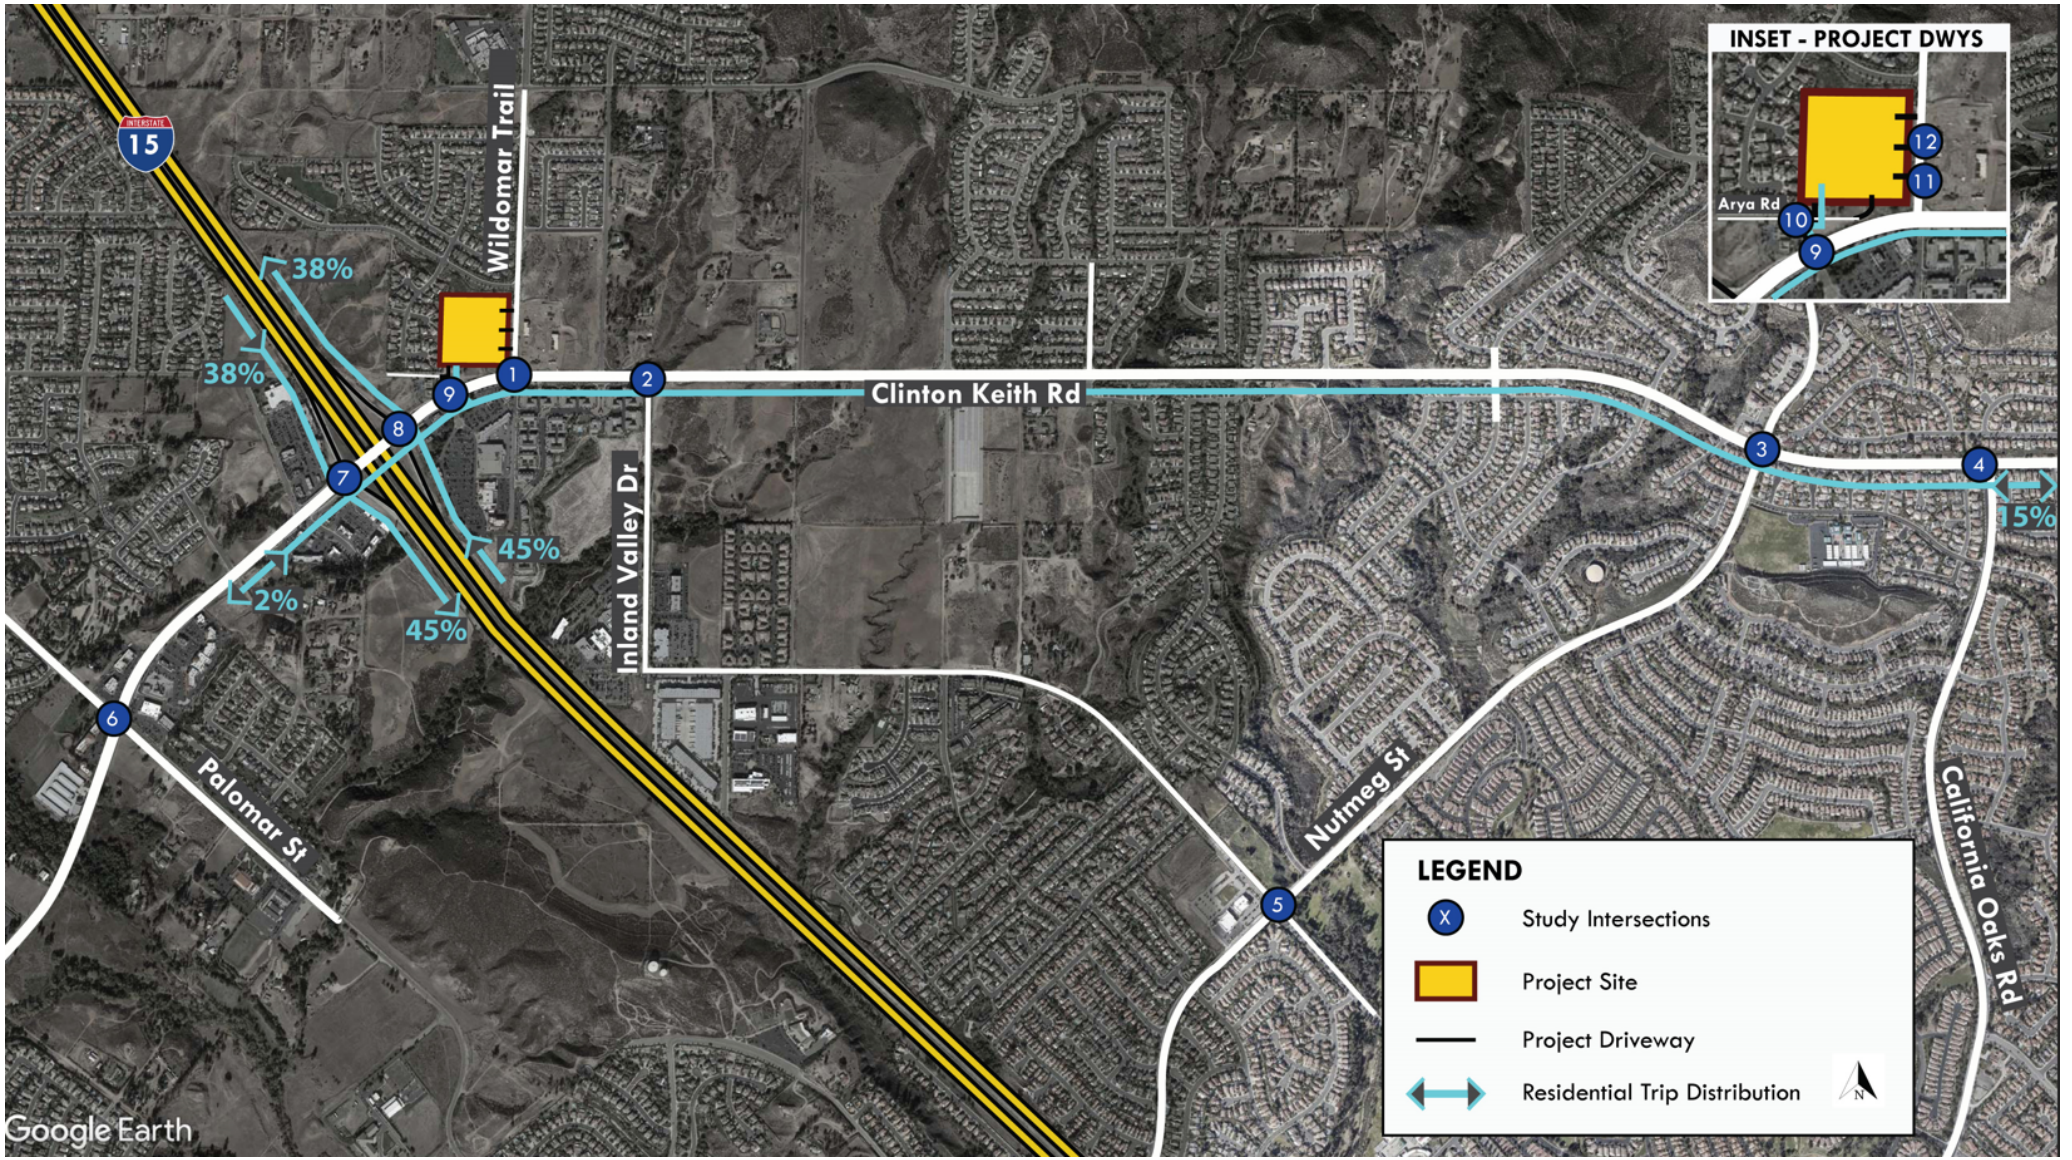
[6] Trip rates from the Institute of Transportation Engineers, *Trip Generation,11th Edition, 2017*. Land Use Code 221 - Multifamily Housing (Mid-Rise).

[7] Pass-By Trip Percentage from the Institute of Transportation Engineers, Web-based App: Pass-By Data and Rate Tables/2021 Pass-By Tables for ITE Trip Gen Appenidces.
The same Pass-By Trip Percentage was applied to Land use code 937 - Coffee/Donut Shop with Drive-Through Window as no pass-by trip percentage is provided for this land use by ITE. The daily pass-by reduction of 52.5% was assumed as an average of the AM and PM rates.

Figure 1: Site Plan

Please note that the higlighted area provides pedestrian access from the residential section to the shopping center.

Figure 2: Proposed Residential Trip Distribution



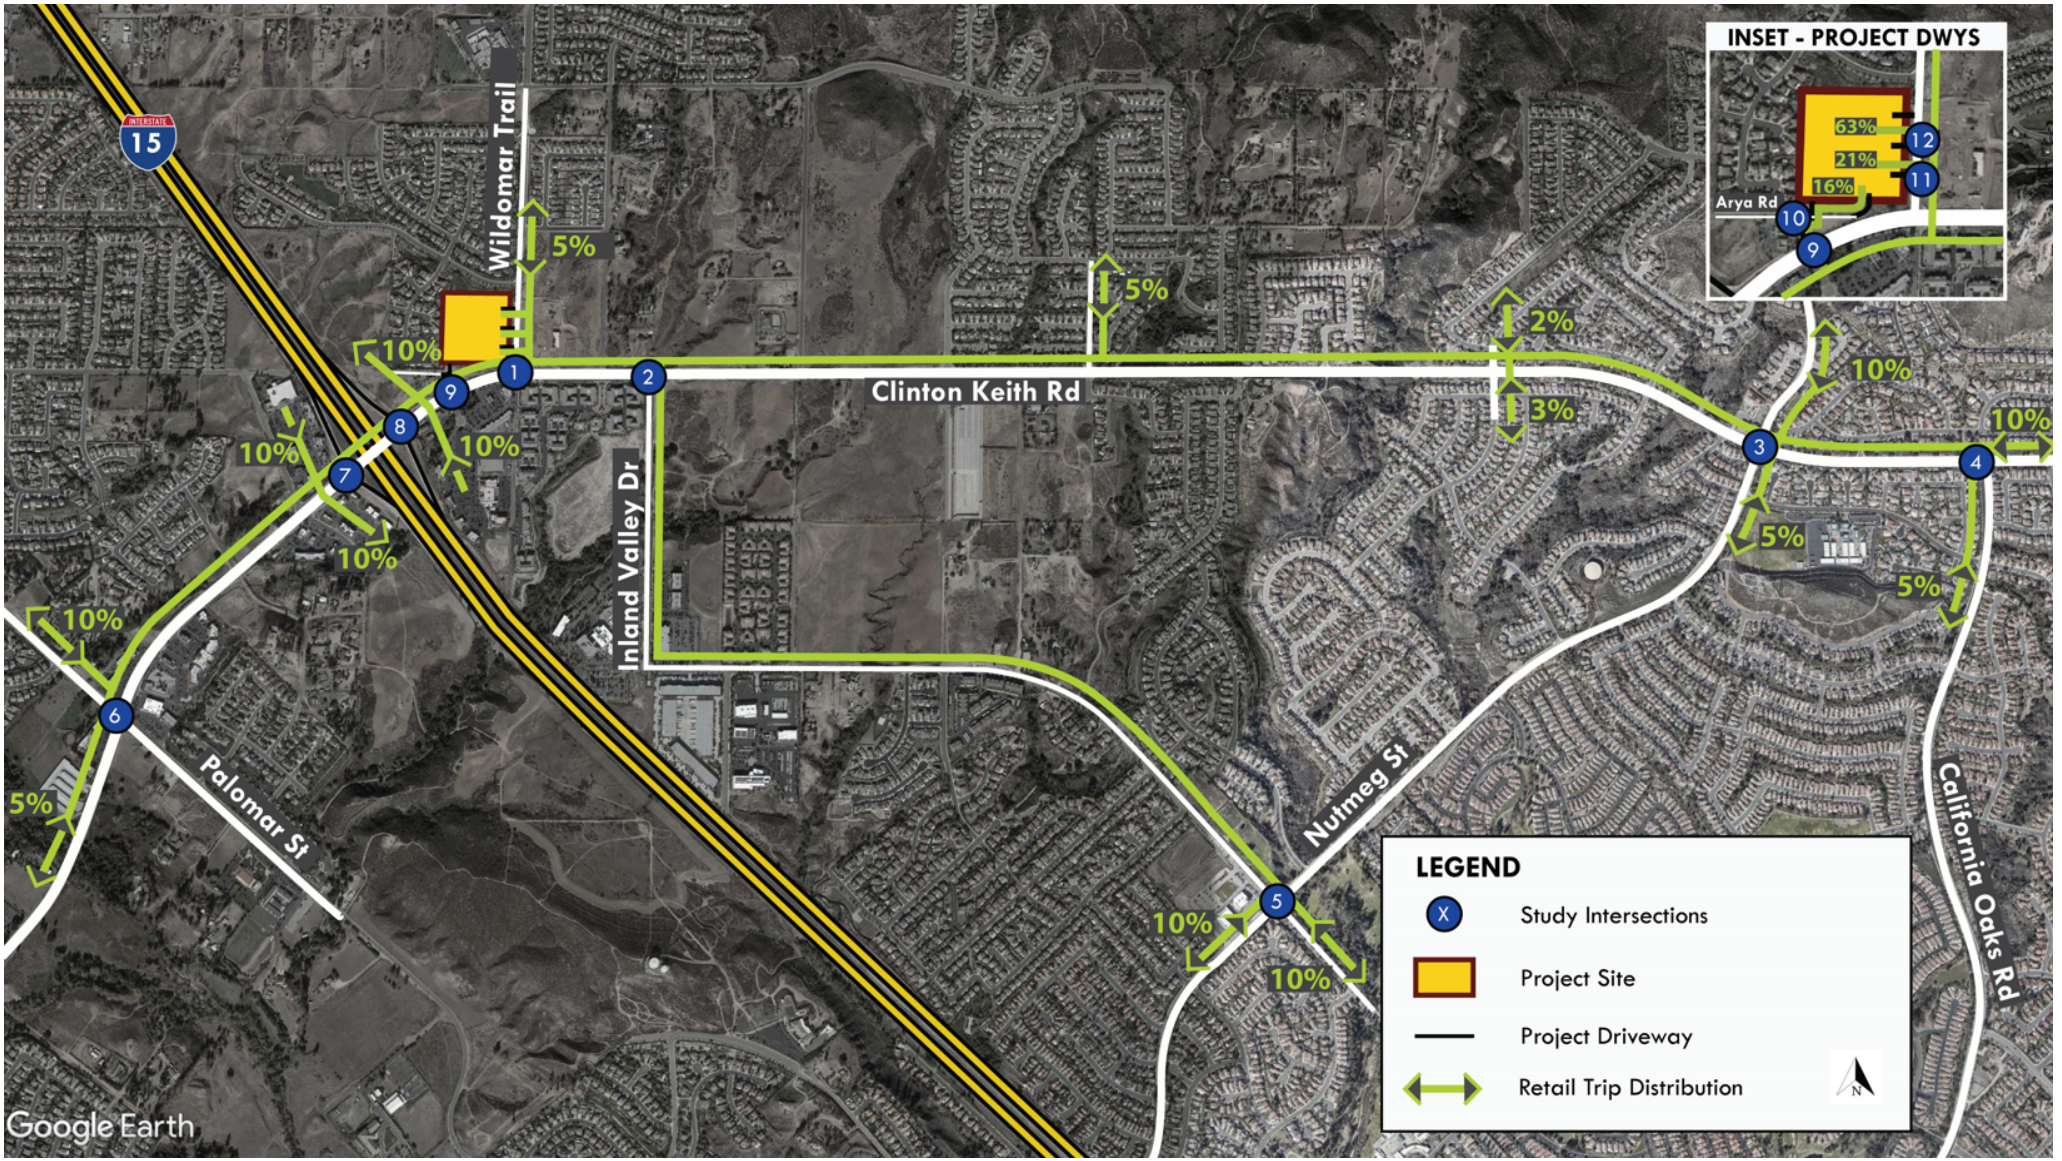


Figure 3: Proposed Retail Trip Distribution

Please note that project driveway on intersection 11 is RIRO.

Scenario 11 Existing AM
5/9/2022

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Clinton Keith Rd/Wildomar Trl	Signalized	HCM 6th Edition	WB Left	0.522	23.6	C
2	Inland Valley Dr/Clinton Keith Rd	Signalized	HCM 6th Edition	WB Left	0.661	25.5	C
3	Nutmeg St/Clinton Keith Rd	Signalized	HCM 6th Edition	EB Left	0.595	23.2	C
4	California Oaks Rd/Clinton Keith Rd	Signalized	HCM 6th Edition	WB Left	0.768	30.1	C
5	Nutmeg St/Jackson Ave	Signalized	HCM 6th Edition	SB Left	0.442	31.2	C
6	Palomar Rd/Clinton Keith Rd	Signalized	HCM 6th Edition	SB Left	0.746	46.2	D
7	I-15 SB Ramps/Clinton Keith Rd	Signalized	HCM 6th Edition	WB Left	0.543	18.8	B
8	I-15 NB Ramps/Clinton Keith Rd	Signalized	HCM 6th Edition	EB Left	0.537	16.1	B
9	Clinton Keith Rd/Arya Rd	Signalized	HCM 6th Edition	EB Left	0.503	37.7	D
10	Arya Rd/Catt Rd	All-way stop	HCM 6th Edition	NB Left	0.139	7.6	A
11	Wildomar Trl/Proj Dwy 3	Two-way stop	HCM 6th Edition	SB Thru	0.004	0.0	A
12	Wildomar Trl/Proj Dwy 4	Two-way stop	HCM 6th Edition	SB Thru	0.004	0.0	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Clinton Keith Rd/Wildomar Trl

Control Type:	Signalized	Delay (sec / veh):	23.6
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.522

10	Arya Rd/Catt Rd	All-way stop	HCM 6th Edition	NB Left	0.161	7.7	A
11	Wildomar Trl/Proj Dwy 3	Two-way stop	HCM 6th Edition	EB Right	0.070	10.6	B
12	Wildomar Trl/Proj Dwy 4	Two-way stop	HCM 6th Edition	EB Left	0.032	18.5	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Clinton Keith Rd/Wildomar Trl

Control Type:	Signalized	Delay (sec / veh):	30.5
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.629

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Clinton Keith Rd/Wildomar Trl	Signalized	HCM 6th Edition	SB Left	1.283	140.3	F
2	Inland Valley Dr/Clinton Keith Rd	Signalized	HCM 6th Edition	NB Left	1.526	210.1	F
3	Nutmeg St/Clinton Keith Rd	Signalized	HCM 6th Edition	WB Left	0.735	41.0	D
4	California Oaks Rd/Clinton Keith Rd	Signalized	HCM 6th Edition	EB Right	0.904	50.7	D
5	Nutmeg St/Jackson Ave	Signalized	HCM 6th Edition	SB Left	0.530	27.4	C
6	Palomar Rd/Clinton Keith Rd	Signalized	HCM 6th Edition	SB Left	0.767	46.5	D
7	I-15 SB Ramps/Clinton Keith Rd	Signalized	HCM 6th Edition	SB Left	0.747	24.7	C
8	I-15 NB Ramps/Clinton Keith Rd	Signalized	HCM 6th Edition	WB Right	0.853	30.8	C
9	Clinton Keith Rd/Arya Rd	Signalized	HCM 6th Edition	SB Right	1.621	206.8	F
10	Arya Rd/Catt Rd	All-way stop	HCM 6th Edition	NB Left	0.305	8.8	A
11	Wildomar Trl/Proj Dwy 3	Two-way stop	HCM 6th Edition	EB Right	0.138	17.0	C
12	Wildomar Trl/Proj Dwy 4	Two-way stop	HCM 6th Edition	EB Left	0.181	86.5	F

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Clinton Keith Rd/Wildomar Trl

Control Type:	Signalized	Delay (sec / veh):	140.3
Analysis Method:	HCM 6th Edition	Level Of Service:	F
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.283

Intersection Level Of Service Report
Intersection 4: California Oaks Rd/Clinton Keith Rd

Control Type:	Signalized	Delay (sec / veh):	50.7
Analysis Method:	HCM 6th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.904

Intersection Setup

Name						
Approach	Northbound		Eastbound		Westbound	
Lane Configuration						
Turning Movement	Left	Right	Thru	Right	Left	Thru
Lane Width [ft]	12.00	12.00	12.00	12.00	12.00	12.00
No. of Lanes in Entry Pocket	1	0	0	0	1	0
Entry Pocket Length [ft]	275.00	100.00	100.00	100.00	255.00	100.00
No. of Lanes in Exit Pocket	0	0	0	0	0	0
Exit Pocket Length [ft]	0.00	0.00	0.00	0.00	0.00	0.00
Speed [mph]	30.00		30.00		30.00	
Grade [%]	0.00		0.00		0.00	
Curb Present	No		No		No	
Crosswalk	Yes		Yes		Yes	

Volumes

NOTICE TO CONTRACTOR:

1. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. THE LOCATIONS SHOWN HEREIN ARE APPROXIMATE AND SHALL BE CONFIRMED IN THE FIELD BY THE CONTRACTOR SO THAT ANY NECESSARY ADJUSTMENTS CAN BE MADE IN ALIGNMENT AND/OR GRADE OF THE PROPOSED IMPROVEMENTS. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PREVENT DAMAGE TO ANY UTILITY LINES SHOWN AND ANY OTHER LINES NOT OF RECORD OR NOT SHOWN.
2. ACTUAL THICKNESS OF BASE MATERIAL IS TO BE DETERMINED BY A SOILS TEST AND RECOMMENDED BY THE SOILS ENGINEER. R-VALUES , SAND EQUIVALENTS AND STRUCTURAL SECTION OF STREETS SHALL BE SUBMITTED TO THE CITY OF WILDOMAR FOR APPROVAL UPON COMPLETION OF ROUGH GRADING.
3. CARE SHOULD BE TAKEN TO PREVENT GRADED DITCHES AND SWALES FROM UNDERMINING STREET IMPROVEMENTS. UPON INSPECTION OF THE SITE, THE CITY ENGINEER MAY REQUIRE TEMPORARY GUNITE SWALES, ENTERING OR EXITING IMPROVEMENTS.
4. THE CONSTRUCTION CONTRACTOR AGREES TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING THE SAFETY OF ALL PERSONS AND PROPERTY. THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS. THE CONSTRUCTION CONTRACTOR FURTHER AGREES TO DEFEND, INDEMNIFY AND HOLD DESIGN PROFESSIONAL HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT EXCEPTING LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE DESIGN PROFESSIONAL.

GENERAL NOTES:

1. WORK SHALL CONFORM TO THE CALTRANS 2010 STANDARD PLANS, STANDARD SPECIFICATIONS, SPECIAL PROVISIONS, THE RIVERSIDE COUNTY ORDINANCE 461 AND SUBSEQUENT AMENDMENTS AS ADOPTED BY THE CITY OF WILDOMAR.
2. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO APPLY TO THE CITY OF WILDOMAR PERMIT SECTION FOR AN ENCROACHMENT PERMIT FOR ALL WORK PERFORMED WITHIN THE PUBLIC RIGHT-OF-WAY AND TO BE RESPONSIBLE FOR SATISFACTORY COMPLIANCE FOR ALL CURRENT ENVIRONMENTAL REGULATIONS DURING THE LIFE OF CONSTRUCTION ACTIVITIES FOR THIS PROJECT. ADDITIONAL STUDIES AND/OR PERMITS MAY BE REQUIRED.
3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE CLEARING OF THE PROPOSED WORK AREA AND RELOCATION COSTS OF ALL EXISTING UTILITIES. PERMITEE MUST INFORM THE CITY OF WILDOMAR OF THE CONSTRUCTION SCHEDULE AT LEAST 48 HOURS PRIOR TO BEGINNING OF CONSTRUCTION. [(951) 677-7751]
4. THE CONTRACTOR SHALL INSTALL STREET NAME SIGNS CONFORMING TO COUNTY STD NO. 816.
5. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO NOTIFY THE ENGINEER TO INSTALL STREET CENTERLINE MONUMENTS AS REQUIRED BY RIVERSIDE COUNTY ORDINANCE 461.
6. ALL UNDERGROUND FACILITIES WITH LATERALS SHALL BE IN PLACE PRIOR TO PAVING THE STREET SECTION INCLUDING, BUT NOT LIMITED TO, THE FOLLOWING: SEWER, WATER, ELECTRIC, GAS AND STORM DRAINS.
7. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO INSTALL AND MAINTAIN ALL CONSTRUCTION, REGULATORY, GUIDE AND WARNING SIGNS WITHIN THE PROJECT LIMITS AND ITS SURROUNDINGS TO PROVIDE SAFE PASSAGE FOR THE TRAVELING PUBLIC AND WORKERS UNTIL THE FINAL COMPLETION AND ACCEPTANCE OF THE PROJECT BY THE CITY, FROM 8:00 AM TO 5:00 PM.
8. A TRAFFIC CONTROL PLAN MUST BE SUBMITTED FOR REVIEW TO THE PERMITS SECTION OR INSPECTION SECTION PRIOR TO OBTAINING AN ENCROACHMENT PERMIT.
9. ALL STREET SECTIONS ARE TENTATIVE. ADDITIONAL SOIL TESTS SHALL BE TAKEN AFTER ROUGH GRADING TO DETERMINE THE EXACT STREET SECTION REQUIREMENTS. USE RIVERSIDE COUNTY STANDARD NO. 401 IF EXPANSIVE SOILS ARE ENCOUNTERED.
10. STREET LIGHTS SHALL BE INSTALLED IN ACCORDANCE WITH THE APPROVED STREET LIGHTING IMPROVEMENT PLANS.
11. ONLY LANDSCAPING CONSISTING OF GRASS AND PARKWAY TREES MAY BE INSTALLED WITHIN PARKWAYS ON LOCAL RESIDENTIAL STREETS WITHOUT SEPARATE LANDSCAPE PLANS. ALL OTHER TYPES OF LANDSCAPING IN THESE AREAS AND ALL LANDSCAPING ON ALL OTHER STREETS SHALL REQUIRE SEPARATE LANDSCAPE PLANS. ALL LANDSCAPING ENCROACHMENTS SHALL CONFORM TO RIVERSIDE COUNTY COMPREHENSIVE LANDSCAPING GUIDELINES DATED OCTOBER 2009.
12. ANY PRIVATE DRAINAGE FACILITIES SHOWN ON THESE PLANS ARE FOR INFORMATIONAL PURPOSES ONLY. BY APPROVING THESE IMPROVEMENT PLANS, NO REVIEW OR APPROVAL OF SAID PRIVATE DRAINAGE FACILITIES ARE IMPLIED OR INTENDED BY THE CITY OF WILDOMAR.
13. CONSTRUCTION PROJECTS DISTURBING MORE THAN ONE ACRE MUST OBTAIN A NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMIT. THE OWNER/CONTRACTOR IS REQUIRED TO FILE A NOTICE OF INTENT (NOI) WITH THE STATE WATER RESOURCES CONTROL BOARD (SWRCB), PREPARE A STORM WATER POLLUTION PREVENTION PLAN (SWPPP) AND MONITORING PLAN FOR THE SITE.
14. PRIOR TO ANY CONSTRUCTION, THE OWNER/CONTRACTOR SHALL PROVIDE THE CITY OF WILDOMAR WITH A COPY OF THE NOI WITH A VALID WDID NUMBER.
15. THE OWNER/CONTRACTOR SHALL BE RESPONSIBLE FOR THE INSTALLATION OF ADDITIONAL SIGNS AND MARKINGS NOT INCLUDED IN THE SIGNAGE AND STRIPING PLANS BUT WITHIN THE PROJECT AREAS OR ON ROADWAYS ADJACENT TO THE PROJECT BOUNDARIES UPON THE REQUEST OF THE CITY ENGINEER OR HIS DESIGNEE SO AS TO IMPROVE THE SAFETY ON THE ROADS UNDER THE JURISDICTION OF THE DEVELOPER.
16. EXISTING STORM DRAIN PIPES/CULVERTS (WHETHER TO BE CONNECTED TO, EXTENDED, ADJUSTED, DRAINAGED TO, OR JUST IN THE PROJECT VICINITY) MUST BE REPAIRED, AND/OR CLEANED TO MAKE THEM FUNCTIONAL AND ACCEPTABLE AS DIRECTED BY THE CITY OF WILDOMAR.
17. FOR ALL DRIVEWAY CONSTRUCTION BEYOND RIGHT-OF-WAY, PROOF OF DRIVEWAY OWNER NOTIFICATION IS REQUIRED PRIOR TO CONSTRUCTION.
18. VERIFY ELEVATION PRIOR TO CONSTRUCTION.

Appendix A Mitigation Monitoring and Reporting Program

Table of Contents

This page intentionally left blank.

1. Introduction

1.1 BACKGROUND

This document includes a compilation of the public comments received on the Wildomar Crossroads Mixed Use Project Initial Study and Mitigated Negative Declaration (collectively, MND; State Clearinghouse No. 2022080339) and the City of Wildomar's (City's) responses to those comments.

Under the California Environmental Quality Act (CEQA), a lead agency is not required to prepare formal responses to comments on an MND. However, CEQA requires the City to have adequate information on the record explaining why the comments do not affect the conclusion of the MND that there are no potentially significant environmental effects. In the spirit of public disclosure and engagement, the City, as the lead agency, has responded to all written comments submitted on the MND during the 30-day public review period, which began August 17, 2022, and ended September 15, 2022.

1.2 DOCUMENT FORMAT

Section 1, ***Introduction.*** This section describes CEQA requirements and the content of this document.

Section 2, ***Response to Comments.*** This section provides a list of agencies and persons commenting on the MND, copies of comment letters received during the public review period, and individual responses to written comments. To facilitate review of the responses, each comment letter has been reproduced and assigned a letter. Individual comments within each letter have been numbered, and the letter is followed by responses with references to the corresponding comment number.

Appendix A, ***Mitigation Monitoring and Reporting Program.*** The Mitigation Monitoring and Reporting Program (MMRP) document lists all the mitigation measures required for implementation of the project, the phase in which the measures would be implemented, and the enforcement agency responsible for compliance. The monitoring program provides (1) a mechanism for giving the lead agency staff and decision makers feedback on the effectiveness of their actions; (2) a learning opportunity for improved mitigation measures on future projects; and (3) a means of identifying corrective actions, if necessary, before irreversible environmental damage occurs.

1.3 CEQA REQUIREMENTS REGARDING COMMENTS AND RESPONSES

CEQA Guidelines, Section 15204(b), outlines parameters for submitting comments on negative declarations, and reminds persons and public agencies that the focus of review and comment of MNDs should be on the proposed findings that the project will not have a significant effect on the environment. If the commenter believes that the project may have a significant effect, they should: (1) Identify the specific effect, (2) Explain why they believe the effect would occur, and (3) Explain why they believe the effect would be significant.

1. Introduction

CEQA Guidelines, Section 15204(c), further advises, "Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to Section 15064, an effect shall not be considered significant in the absence of substantial evidence."

Section 15204(d) also states, "Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility." Section 15204 (e) states, "This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section."

Finally, CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commenters. When responding to comments, lead agencies need only respond to potentially significant environmental issues and do not need to provide all information requested by reviewers, as long as a good-faith effort at full disclosure is made in the environmental document.

2. Response to Comments

This section provides all written comments received on the circulated MND and the City's response to each comment.

Comment letters and specific comments within those letters are assigned an alphanumeric designation for reference purposes. The following is a list of all comment letters received on the circulated MND during the 30-day public review period, which began August 17, 2022, and ended September 15, 2022.

Letter Reference	Commenting Person/Agency	Date of Comment	Page No.
A	Riverside County Flood Control and Water Conservation District, Amy NcNeill	August 18, 2022	4
B	Kenny Mayes	September 15, 2022	8

2. Response to Comments

LETTER A – Riverside County Flood Control and Water Conservation District, Amy NcNeill, Engineering Project Manager (2 pages)

52336

August 18, 2022

City of Murrieta
Planning Department
One Town Square
Murrieta, CA 92562-7922

Attention: Mathew Bassi

Re: PA 21-0145, Wildomar Crossroads
APNs: 376-410-015, 016, 017, and 021

The Riverside County Flood Control and Water Conservation District (District) does not usually review land divisions/land use cases or provide State Division of Real Estate letters/flood hazard reports for projects that are located within incorporated cities. Exceptions are made for cases with items of specific interest to the District including District Master Drainage Plan facilities, other regional flood control and drainage facilities which could be considered a logical component or extension of a master plan system, and District Area Drainage Plan fees (development mitigation fees).

The District's review is based on the above-referenced project transmittal, received August 18, 2022. The District has not reviewed the proposed project in detail, and the following comments do not in any way constitute or imply District approval or endorsement of the proposed project with respect to flood hazard, public health and safety, or any other such issue:

☐ This project would not be impacted by District Master Drainage Plan facilities, nor are other facilities of regional interest proposed.

☐ This project involves District proposed Master Drainage Plan facilities, namely, _____. The District will accept ownership of such facilities on written request by the City. The Project Applicant shall enter into a cooperative agreement establishing the terms and conditions of inspection, operation, and maintenance with the District and any other maintenance partners. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection, and administrative fees will be required. All regulatory permits (and all documents pertaining thereto, e.g., Habitat Mitigation and Monitoring Plans, Conservation Plans/Easements) that are to be secured by the Applicant for both facility construction and maintenance shall be submitted to the District for review. The regulatory permits' terms and conditions shall be approved by the District prior to improvement plan approval, map recordation, or finalization of the regulatory permits. There shall be no unreasonable constraint upon the District's ability to operate and maintain the flood control facility(ies) to protect public health and safety.

A-1

☐ This project proposes channels, storm drains 36 inches or larger in diameter, or other facilities that could be considered regional in nature and/or a logical extension a District's facility. The District would consider accepting ownership of such facilities on written request by the City. The Project Applicant shall enter into a cooperative agreement establishing the terms and conditions of inspection, operation, and maintenance with the District and any other maintenance partners. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection, and administrative fees will be required. The regulatory permits' terms and conditions shall be approved by the District prior to improvement plan approval, map recordation, or finalization of the regulatory permits. There shall be no unreasonable constraint upon the District's ability to operate and maintain the flood control facility(ies) to protect public health and safety.

☒ This project is located within the limits of the District's Murrieta Creek (☒Murrieta Valley ☐Temecula Valley ☐Santa Gertrudis Valley ☐Warm Springs Valley) Area Drainage Plan for which drainage fees

have been adopted. If the project is proposing to create additional impervious surface area, applicable fees should be paid (in accordance with the Rules and Regulations for Administration of Area Drainage Plans) to the Flood Control District or City prior to issuance of grading or building permits. Fees to be paid should be at the rate in effect at the time of issuance of the actual permit. A-1 cont'd

☒ An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, Murrieta Valley – George Avenue Storm Drain. If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266. A-2

☐ The District's previous comments are still valid.

GENERAL INFORMATION

This project may need to obtain an applicable National Pollutant Discharge Elimination System (NPDES) permit coverage from the State Water Resources Control Board or the California Regional Water Quality Control Board. Clearance for grading, recordation, or other final approval should not be given until the City has determined that the project has been granted a permit or is shown to be exempt.

If this project involves a Federal Emergency Management Agency (FEMA) mapped floodplain, then the City should require the applicant to provide all studies, calculations, plans, and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation, or other final approval of the project and a Letter of Map Revision (LOMR) prior to occupancy. A-3

The project proponent shall bear the responsibility for complying with all applicable mitigation measures defined in the California Environmental Quality Act (CEQA) document (i.e., Negative Declaration, Mitigated Negative Declaration, Environmental Impact Report) and/or Mitigation Monitoring and Reporting Program, if a CEQA document was prepared for the project. The project proponent shall also bear the responsibility for complying with all other federal, state, and local environmental rules and regulations that may apply. A-4

If a natural watercourse or mapped floodplain is impacted by this project, the City should require the applicant to obtain a Section 1602 Agreement from the California Department of Fish and Wildlife and a Clean Water Act Section 404 Permit from the U.S. Army Corps of Engineers, or written correspondence from these agencies indicating the project is exempt from these requirements. A Clean Water Act Section 401 Water Quality Certification may be required from the local California Regional Water Quality Control Board prior to issuance of the Corps 404 permit. A-5

Very truly yours,

AMY MCNEILL
Engineering Project Manager

ec: Riverside County Planning Department
Attn: Phayvanh Nanthavongdouangsy

2. Response to Comments

A. Response to Comments from Riverside County Flood Control and Water Conservation District, Amy McNeill, Engineering Project Manager, dated August 18, 2022.

A-1 The commenter states that the Riverside County Flood Control and Water Conservation District does not normally review land use cases for projects in incorporated cities. The commenter states that the project is located within the limits of the District's Murrieta Creek (Murrieta Valley) Area Drainage Plan where drainage fees have been adopted. The commenter states that if the project is proposing to create additional impervious surface area, applicable fees should be paid.

The project applicant would pay the appropriate fees to the Flood Control District prior to issuance of a grading permit (City of Wildomar Municipal Code Section 16.32.040).

A-2 The commenter states that an encroachment permit shall be obtained for any construction related activities occurring within the District's right of way or facilities, namely, Murrieta Valley – George Avenue Storm Drain. The commenter also states that if a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required.

The project applicant would submit an application to the District for an encroachment permit for work performed within the public right of way, pursuant to City of Wildomar Municipal Code Section 12.08.060.

As stated in Section V.10, *Hydrology and Water Quality,* of the MND, the proposed development would not adversely affect the existing drainage patterns in the area and would provide adequate protection for the proposed on-site improvements and structures for up to the 100-year storm event. The required detention basin volumes would be sized to maintain the post-development discharge rates to the pre-development discharge rates up to the 100-year storm events, and as such, there would be no exceedances in the hydraulic performance. No mitigation is necessary.

A-3 The commenter states the project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. The commenter states that if the site is within a Federal Emergency Management Agency (FEMA)-mapped floodplain or if the project would impact a natural watercourse, the City should enforce state and federal requirements.

As stated in Section V.10, *Hydrology and Water Quality,* of the MND, the project would comply with the NPDES regulations. Additionally, the site is not within a FEMA floodplain and would not impact a natural watercourse.

A-4 The commenter states that the project applicant shall bear the responsibility for complying with all applicable mitigation measures are indicated in the MND and MMRP. The commenter states that if a natural watercourse or mapped floodplain is impacted, the City

should require the applicant to obtain a Section 1602 Agreement and Section 401 Certification.

The project applicant would implement all mitigation measures as listed in the MMRP (see Appendix A to document).

A-5 The commenter states that if a natural watercourse or mapped floodplain is impacted, the City should require the applicant to obtain a Section 1602 Agreement and Section 401 Certification.

The proposed project would not impact a natural water course or floodplain.

2. Response to Comments

LETTER B – Kenny Mayes (1 page)

From: Wildomar Connected
To: Matthew Bassi
Subject: Wildomar Crossroads Mixed-Use Project (Planning Application No. 21-0145)
Date: Thursday, September 15, 2022 5:51:59 AM

Some of my concerns about this project

How many two drive-through restaurants pads are currently approved, yet unbuilt, in the numerous projects throughout Wildomar. B-1

How much in DIF Fees will be collected for parks and how much will be collected in annual Measure Z tax. B-2

Catt Rd entrance to the project will split through one drive thru exit (used by coffee restaurant and drive thru restaurant), and one drive through entrance. How is that going to work? B-3

Of the three exits on Wildomar Trail, how many or right-turn only? B-4

How much electrical power will this project consume when complete and operating. Can Edison provide it? Is Edison required to provide a "will serve letter"?, like the water district. B-5

Will the vacant lot at Arya/Catt/Clinton Keith be fenced off to prevent unauthorized parking B-6

Tree selection should eliminate trees with falling fruit.
Ulmus Parvifolia (Chinese Elm) prolific windblown seeds develop into aggressive seedlings and invade without contributing as a food source B-7

Kenny Mayes
Wildomar

B. Response to Comments from Kenny Mayes, dated September 15, 2022.

B-1 The commenter asks how many drive-thru restaurants have been approved by the City.

This comment does not raise an issue with the analysis or conclusions of the MND. No further response is necessary.

B-2 The commenter inquires about the amount of Development Impact Fees (DIFs) that will be collected for parks in addition to amount collected in annual Measure Z Tax.

According to the City of Wildomar Development Impact Fee Schedule adopted on July 1, 2022, the development would be required to pay $678 per unit in parkland acquisition fees and $6,780 per unit in park improvement fees. There are 150 multi-family residential units in the project so the applicant would be required to pay $1,118,70.00 in park related DIFs to the City. Pursuant to Chapter 3.18 of the Wildomar Municipal Code, residents of Wildomar Crossroads would pay the Measure Z tax that helps fund repair and maintenance of parks of $28 each year.

B-3 The commenter inquires about the internal access to Pad 1 and Pad 2 of the commercial potion of the proposed project.

As stated in Section V.17, *Transportation*, the project would be reviewed by the City and the CAL FIRE/Riverside County Fire Department to ensure there is sufficient emergency access provided at the site as required by the City of Wildomar Municipal Code 8.28, Fire Code, for compliance with the California Fire Code. This would ensure that all portions of the project are provided adequate access for emergency vehicles.

B-4 The commenter asks which entrances/exits to the proposed project on Wildomar Trail will be right-turn only.

As shown in Figure 2A of Appendix 16 of the MND, at least one of the entrances/exits would be right-turn only. However, ingress/egress plans will be reviewed and finalized by CAL FIRE/Riverside County Fire Department and the City of Wildomar Public Works Department.

B-5 The commenter asks how much electrical power the proposed project will consume during operation. The commenter also asks whether the electrical utility provider for the project, Southern California Edison (SCE), can provide this power. Finally, the commenter inquires as to whether the project would be required to receive a "will serve" letter from SCE.

As stated in Section V.6, *Energy*, the project is expected to use approximately 1.85 million kilowatt-hours per year (kWh/year) to serve operational demands. SCE provided over 103,597 gigawatt-hours (GWh) of electricity to its customers in 2020. Total electricity demand in SCE's service area is forecast to increase by approximately 12,000 GWh

2. Response to Comments

between 2015 and 2026. The increase in electricity demand from the project would represent an insignificant percent increase compared to overall demand in SCE's service area. Prior to final building plan submittal, the project applicant would provide project plans to SCE to prepare a Method-of-Service Study to determine exact location of electrical connections at the site and establish estimated electricity demand.

B-6 The commenter asks whether the vacant lot adjacent to the southwest border of the proposed project on Arya Road and Catt Road would be fenced off to prevent unauthorized parking.

As shown in Figure 4, *Site Plan,* of the MND, the vacant lot would be landscaped, thereby discouraging unauthorized parking.

B-7 The commenter suggests that the project's tree selection should eliminate trees with falling fruit, such as Ulmus Parvifolia (Chinese Elm).

The landscape palette would include native vegetation and would be reviewed by the City of Wildomar Planning Department.

1. Introduction

1.1 PURPOSE OF MITIGATION MONITORING AND REPORTING PROGRAM

The City of Wildomar (City) is the lead agency for the proposed Wildomar Crossroads Mixed Use Project and has developed this Mitigation Monitoring and Reporting Program (MMRP) as a vehicle for monitoring mitigation measures outlined in the Wildomar Crossroads Mixed Use Project Mitigated Negative Declaration (MND), State Clearinghouse No. 2022080339. As the lead agency, the City is responsible for implementing the MMRP, which has been prepared in conformance with Section 21081.6 of the California Public Resources Code, as follows:

> (a) When making findings required by paragraph (1) of subdivision (a) of Section 21081 or when adopting a mitigated negative declaration pursuant to paragraph (2) of subdivision (c) of Section 21080, the following requirements shall apply:
>
> (1) The public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation. For those changes which have been required or incorporated into the project at the request of a responsible agency or a public agency having jurisdiction by law over natural resources affected by the project, that agency shall, if so requested by the lead or responsible agency, prepare and submit a proposed reporting or monitoring program.
>
> (2) The lead agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which its decision is based.

The MMRP consists of mitigation measures that avoid, reduce, and/or fully mitigate potential environmental impacts. The mitigation measures have been identified and recommended through preparation of the MND and drafted to meet the requirements of Public Resources Code, Section 21081.6.

1.2 PROJECT CHARACTERISTICS

1.2.1 Project Location

The project site is in the southeast portion of the City of Wildomar, California at 24850-23980 Catt Road, at the northwest intersection of Clinton Keith Road and Wildomar Trail. It covers approximately 9 acres and is comprised of Assessor's Parcel Numbers (APNs) 376-410-015, -016, -017, and -021. Regional access is provided by Interstate 15 (I-15) located approximately 0.2-mile southwest of the project site.

1.2.2 Proposed Improvements

This project proposes the construction of a 150-unit "gated" multi-family apartment community and 35,422 square-foot commercial retail center. Access to the residential portion of the site would be provided via two gated entrances/exits. Catt Road would be extended from Arya Road to function as a project driveway and one access point would be provided at the southwest corner of the site via this driveway. The other residential access point would be provided on the northeast corner of the project via Wildomar Trail and include an internal driving aisle that extends around the north and west perimeter of the project linking the two access points. The commercial portion would be accessible from three points along Wildomar Trail. The Catt Road driveway would extend into the commercial portion of the project. The project also includes 0.85 acres of off-site improvements and dedications. These include a 0.38-acre Catt Road improvement, a 0.20-acre Wildomar Trail improvement, and a 0.26-acre Clinton Keith Road improvement. An additional 0.10-acre is proposed as a Catt Road vacation for the commercial portion of the project with an easement retained for public utilities. An additional 0.007-acre will be dedicated for Clinton Keith Road and 0.016-acre dedicated for Catt Road. The project, including the residential, commercial and roadway improvements, totals 10.02 acres.

The project would require the following entitlement approvals by the City of Wildomar:

- **Tentative Parcel Map (TPM 38333):** The project will require approval of a Tentative Parcel Map to subdivide the 9-acre site into five (5) parcels to accommodate the 150-unit residential apartment community and 35,422 square-foot commercial retail center.

- **Conditional Use Permit (CUP) No. 21-0145:** The proposed Sprouts Grocery store will require approval of a CUP to allow for alcohol sales in accordance with Section 17.248 of the WMC.

- **Plot Plan No. 21-0145 :** The project will require approval of a commercial Plot Plan to develop the 4.53-acre commercial retail site with 35,422 square feet of retail and restaurant uses, including site planning, architecture, landscaping, parking, etc. and on-site and off-site improvements consistent with the city's commercial objective design standards and guidelines.

- **Plot Plan/Final Site Plan of Development:** The project will require approval of a plot plan/final site plan of development to develop the 150-unit apartment community (33.5 units/acre density) on the 4.48-acre site to, including site planning, architecture, landscaping, parking, etc. consistent with the city's multi-family objective residential design standards and guidelines.

1.3 ENVIRONMENTAL IMPACTS

1.3.1 Impacts Considered Less Than Significant

The MND identified various thresholds from the California Environmental; Quality Act (CEQA) Guidelines in a number of environmental categories that would not be significantly impacted by the proposed project and therefore did not require mitigation. Impacts to the were found to be less than significant:

- Aesthetics
- Agriculture and Forestry Resources
- Energy
- Greenhouse Gas Emissions
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems

1.3.2 Potentially Significant Adverse Impacts That Can Be Mitigated, Avoided, or Substantially Lessened

Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Noise, Transportation, Tribal Cultural Resources, and Wildfire were identified as having potentially significant impacts that could be reduced, avoided, or substantially lessened through implementation of mitigation measures. No significant and unavoidable impacts were identified.

1. Introduction

This page intentionally left blank.

2. Mitigation Monitoring Process

2.1 MITIGATION MONITORING PROGRAM ORGANIZATION

Overall MMRP management is the responsibility of the City of Wildomar. The City's technical consultants (CEQA consultant, etc.) may perform related monitoring tasks under the direction of the environmental monitor if they are contracted by the City.

2.2 CITY OF WILDOMAR

As the lead agency, the City is responsible for the review of all monitoring reports, enforcement actions and document disposition. The City will rely on information provided by individual monitors (e.g., CEQA consultant, etc.) as accurate and up to date, and will field check mitigation measure status, as required.

2.3 MITIGATION MONITORING TEAM

The mitigation monitoring team, consisting of the designated Project Manager (City Planning Director) and Technical Consultants (CEQA consultant, etc.) are responsible for monitoring implementation and compliance with all adopted mitigation measures and conditions of approval. A major portion of the team's work is in-field monitoring and compliance report preparation. Implementation disputes are brought to the Project Manager, and any appeals would go to the City Manager and ultimately the Planning Commission and City Council.

2.3.1 Monitoring Team

The following summarizes key positions in the MMRP and their respective functions:

- **Project Manager:** Responsible for coordination of mitigation monitoring team, technical consultants, report preparation, and overall program administration and document/report clearinghouse.
- **Construction Contractor:** Responsible for coordination of mitigation monitoring team; technical consultants; report preparation; and implementation the monitoring program, including overall program administration, document/report clearinghouse, and first phase of dispute resolution.
- **Technical Consultants:** Responsible for monitoring in respective areas of expertise (CEQA consultant, project engineer, noise analyst/specialist). Report directly to the Project Manager.

2.3.2 Recognized Experts

The use of recognized experts on the monitoring team is required to ensure compliance with scientific and engineering mitigation measures. The mitigation monitoring team's recognized experts assess compliance with required mitigation measures, and recognized experts from responsible agencies consult with the Project Manager regarding disputes.

2.4 DISPUTE RESOLUTION

If the mitigation monitor determines that a mitigation measure, in the opinion of the monitor, has not been implemented or has not been implemented correctly, the problem will be brought before the Project Manager for resolution. The decision of the Project Manager is final unless appealed to the City Manager. The Project Manager will have the authority to issue stop-work order until the dispute is resolved.

2.5 ENFORCEMENT

Public agencies may enforce conditions of approval through their existing police power, using stop-work orders, fines, infraction citations, or in some cases, notice of violation for tax purposes.

3. Mitigation Monitoring Requirements

3.1 PREMONITORING MEETING

A pre-monitoring meeting will be scheduled to review mitigation measures, implementation requirements, schedule conformance, and mitigation monitoring committee responsibilities. Committee rules are established, the entire mitigation monitoring program is presented, and any misunderstandings are resolved.

3.2 CATEGORIZED MITIGATION MEASURES/MATRIX

Project-specific mitigation measures have been categorized in matrix format, as shown in Table 3-1, *Mitigation Monitoring Requirements for Wildomar Crossroads Mixed Use Project*. The matrix identifies the environmental factor, specific mitigation measures, schedule, and responsible monitor. The mitigation matrix will serve as the basis for scheduling the implementation of, and compliance with, all mitigation measures. These mitigation measures are also contained in the Conditions of Approval matrix for the Project.

3.3 IN-FIELD MONITORING

Project monitors and technical subconsultants shall exercise caution and professional practices at all times when monitoring implementation of mitigation measures. Protective wear (e.g. hard hat, glasses) shall be worn at all times in construction areas. Injuries shall be immediately reported to the mitigation monitoring committee.

3.4 DATABASE MANAGEMENT

All mitigation monitoring reports, letters, and memos shall be prepared utilizing Microsoft Word software on IBM-compatible PCs.

3.5 COORDINATION WITH CONTRACTORS

The construction manager is responsible for coordination of contractors and for contractor completion of required mitigation measures.

3.6 LONG-TERM MONITORING

Long-term monitoring related to several mitigation measures will be required, including fire safety inspections. Post-construction fire inspections are conducted on a routine basis by the City of Wildomar Fire Department.

3. Mitigation Monitoring Requirements

Table 3-1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
AIR QUALITY					
AQ-1	During the site preparation phase, construction equipment greater than 150 horsepower (hp), the Construction Contractor shall ensure that off-road diesel construction equipment that complies with Environmental Protection Agency (EPA)/California Air Resources Board (CARB) Tier 3 emissions standards and shall ensure that all construction equipment is tuned and maintained in accordance with the manufacturer's specifications.	Construction Contractor	During site preparation	City of Wildomar Engineering Department and Planning Department	
AQ-2	All actively graded (disturbed) areas within the project site during site preparation activities shall be watered at 2.1-hour watering intervals (e.g., 4 times per day) or a movable sprinkler system shall be in place to ensure minimum soil moisture of 12 percent in maintained for actively graded areas. Moisture content can be verified with use of a moisture probe by the grading contractor.	Construction Contractor	During site preparation	City of Wildomar Engineering Department and Planning Department	
BIOLOGICAL RESOURCES					
BIO-1	The Project applicant/developer shall retain a qualified biologist to conduct a 30-day pre-construction survey for burrowing owls (BUOW). The results of the survey shall be submitted to the City of Wildomar prior to obtaining a grading permit. If BUOW are not detected during the pre-construction survey, no further mitigation is required. If BUOW are detected during the pre-construction survey, the project applicant shall relocate burrowing owls out of harm's way, in consultation with the CDFW. Notification to the CDFW shall occur if burrowing owls are found to be present onsite and the development of a conservation strategy in cooperation with the U/S/ Fish and Service, the CDFW, and the Western Riverside County Regional Conservation Authority (RCA) shall be conducted. The project applicant/developer and a qualified consulting biologist will be required to prepare and submit for approval a BUOW relocation program. The report shall be submitted to the applicant and the City of Wildomar concurrently.	Project Applicant and Qualified Biologist	Within 30 days prior to construction, prior to issuance of grading permits	City of Wildomar Planning Department	
BIO-2	Prior to vegetation clearance, the Project applicant/developer shall retain a qualified biologist to conduct a pre-disturbance nesting bird survey in accordance with the following: • The survey shall be conducted no more than three (3) days prior to the initiation of clearance/construction work; • If pre-disturbance surveys indicate that bird nests are not present or are inactive, or if potential habitat is unoccupied, no further mitigation is required; • If active nests of birds are found during the surveys, a species-specific no-disturbance buffer zone shall be established by a qualified biologist around active	Project Applicant and Biologist	Within three (3) days prior to the initiation of clearance/ construction work, prior to vegetation clearance	City of Wildomar Planning Department	

Table 3-1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
	nests until a qualified biologist determines that all young have fledged (i.e., no longer reliant upon the nest).				
CULTURAL RESOURCES					
CUL-1	**Human Remains.** If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the Riverside County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant." The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98.	Professional archaeologist	During any ground-disturbing construction activities	City of Wildomar Engineering Department and Planning Department	
GEOLOGY AND SOILS					
GEO-1	The project applicant/developer shall incorporate the recommendations of the Geotechnical Report prepared Leighton and Associates, Inc. (**Appendix 8)** into project plans related to the proposed project. The project's building plans shall demonstrate that they incorporate all applicable recommendations of the Geotechnical Report and comply with all applicable requirements of the latest adopted version of the California Building Code.	Project Applicant and licensed professional engineer	During building plan check, prior to any ground-disturbing construction activities	City of Wildomar Planning Department and Building and Safety Department	
GEO-2	A paleontological grading observation schedule by a Certified Paleontologist shall be maintained when grading in bedrock units to further evaluate the fossil resources of the site. Salvage operations shall be initiated by the Certified Paleontologist and coordinated with the developer if other significant concentrations of fossils, as determined by the Certified Paleontologist, are encountered. Any paleontological resources shall be provided for curation at a local curation facility, or any other local museum or repository willing and able to accept and house the resource to preserve for future scientific study.	Project Applicant and professional paleontologist	During ground-disturbing construction activities	City of Wildomar Planning Department and Building and Safety Department	
HAZARDS AND HAZARDOUS MATERIALS					
HAZ-1	Prior to the development of the site, representative sampling of the soil stockpiles shall be conducted. Soil samples shall be analyzed by a laboratory licensed with the Environmental Laboratory Accreditation Program [ELAP] for total petroleum	Project Applicant and qualified	Prior to site development	City of Wildomar Building Department, Local Health	

3. Mitigation Monitoring Requirements

Table 3-1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
	hydrocarbon chains by EPA Method 8015M, Title 22 Metals by EPA Method 6010B/7471A, organochlorine pesticides by EPA Method 8081A, volatile organic compounds by EPA Method 8260B/5035 and polychlorinated biphenyls by EPA Method 8082. During stockpile testing, a soil sample shall be collected from the area where an orchard may have been located and tested for organochlorine pesticides to assess for residual pesticides. If the results of the soil testing show chemical levels are below EPA Region 9 or DTSC screening levels for residential land use, grading or excavation may proceed accordingly. Remediation and/or removal of contaminated soils shall be made prior to development, if chemical levels are above screening levels. Remediation shall be made in coordination with the local health department, SCAQMD, the California Department of Toxic Substances Control, the U. S. Environmental Protection Agency or other regulatory agencies and in compliance with established residential screening levels.	hazardous materials specialist		Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency	
HAZ-2	After grading is completed, but before construction begins, the project Applicant/developer shall install soil gas probes with a 100-foot grid spacing in the footprints of the proposed structures, at depths of 5 feet below ground surface and 15 feet below ground surface at each location. Methane shall be tested from the probes with a properly calibrated hand-held device with a detection limit of no greater than 500 ppmv, or via a laboratory licensed with ELAP by ASTM Method 1946D, or a combination of the two. In addition, calibrated pressure gauges such as Magnehelic gauges or equivalent with a range of 0-10 inches of water pressure to a range of 0-100 inches of water pressure shall be used on each probe. If methane levels in probes are below 10 percent of the Lower Explosive Limit (10 percent LEL or 5,000 ppmv), the project could proceed without further action. For areas of the site that have methane concentrations at or exceeding 10 percent LEL or have pressures exceeding 3 inches of water, further testing shall be implemented to determine if a methane mitigation system is necessary. If additional weekly testing shows that methane concentrations consistently exceed 10 percent LEL or have pressures exceeding 3 inches of water over a period of 30 days and a plot of the resulting data does not show a downward trend in concentrations or pressures, then a methane mitigation system shall be incorporated into the building plans for the structures where the elevated concentrations and/or pressures were observed. If there is a downward trend but the concentrations are still above 10 percent LEL or have pressures above 3 inches of water, then additional testing past 30 days may be requested to determine if concentrations and pressures subside below the action levels.	Project Applicant and qualified hazardous materials specialist	After grading but prior to construction	City of Wildomar Building Department, Local Health Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency	

Table 3-1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
HAZ-3	Prior to the issuance of building permits, the project applicant shall demonstrate, to the satisfaction of the City Building Official and the Riverside County Fire Chief, compliance with the 2019 California Building Code (or the most recent edition) (Part 2 of Title 24 of the California Code of Regulations) and the 2019 California Fire Code (or the most recent edition) (Part 9 of Title 24 of the California Code of Regulations), including those regulations pertaining to materials and construction methods intended to mitigate wildfire exposure as described in the 2019 California Building Code and California Residential Code (or most recent edition); specifically California Building Code Chapter 7A; California Residential Code Section R327; California Residential Code Section R337; California Referenced Standards Code Chapter 12-7A; and California Fire Code Chapter 49.	Riverside County Fire Department	Prior to issuance of a Certificate of Occupancy	City of Wildomar and Riverside County Fire Department	
HAZ-4	Prior to the issuance of a certificate of occupancy, the applicant shall demonstrate, to the satisfaction of the City Building Official and the County Fire Chief, compliance with the vegetation management requirements prescribed in California Fire Code Section 4906 and California Government Code Section 51182.	Riverside County Fire Department	Prior to issuance of a Certificate of Occupancy	City of Wildomar and Riverside County Fire Department	
NOISE					
NOI-1	The following mitigation measure from the Clinton Keith Road Widening Project IS/MND (SCH# 200910103) would also be applicable to the proposed project (numbering is from 2009 IS/MND): All noise producing project equipment and vehicles using internal combustion engines shall be equipped with mufflers and air-inlet silencers, where appropriate, in good operating condition that meet or exceed original factory specifications. Mobile or fixed "package" equipment (e.g., arc welders, air compressors) shall be equipped with shrouds and noise control features that are readily available for that type of equipment.	Construction Contractor	Prior to construction	City of Wildomar Building Department	
TRANSPORTATION					
TRF-1	The following mitigation measure from the Clinton Keith Road Widening Project IS/MND (SCH# 200910103) would also be applicable to the proposed project (numbering is from 2009 IS/MND): During final design, stage construction and detour plans will be prepared to minimize disruption to the traveling public. Such plans shall be prepared in consultation with affected local jurisdictions prior to construction. Adequate access shall be provided at all times to and from side streets serving adjacent land uses. To further ensure public safety, proper detours and warning signs shall be established. The stage construction and detour plans shall be designed to not interfere with any emergency response or	Construction Contractor	During final design	City of Wildomar Building Department	

3. Mitigation Monitoring Requirements

Table 3-1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
	evacuation plans, and construction routes shall utilize non-residential streets to the extent practicable. Finally, such plans shall identify construction worker parking areas and equipment staging areas to minimize impacts to roadway operations.				
TRIBAL CULTURAL RESOURCES					
TRI-1	**Inadvertent Archeological Find.** If during ground disturbance activities, cultural resources are discovered that were not assessed by the archaeological report(s) and/or environmental assessment conducted prior to project approval, the following procedures shall be followed. Cultural resources are defined, as being multiple artifacts in close association with each other, but also include fewer artifacts if the area of the find is determined to be of significance due to its sacred or cultural importance as determined in consultation with the lead agency and Native American Tribe(s) that elected to consult under AB 52 ("Consulting Tribe(s)"). a. All ground disturbance activities within 100 feet of the discovered cultural resources shall be halted until a meeting is convened between the developer, the archaeologist, the tribal representative(s) and the Planning Director to discuss the significance of the find. b. At the meeting, the significance of the discoveries shall be discussed and after consultation with the tribal representative(s), developer, and the archaeologist, a decision shall be made, with the concurrence of the Planning Director, as to the appropriate mitigation (documentation, recovery, avoidance, etc.) for the cultural resources. c. Grading or further ground disturbance shall not resume within the area of the discovery until an agreement has been reached by all parties as to the appropriate mitigation. Work shall be allowed to continue outside of the buffer area and will be monitored by additional Tribal monitors if needed. d. Treatment and avoidance of the newly discovered resources shall be consistent with the Treatment and Monitoring Agreements entered into with the Consulting Tribe(s) and the applicant. This may include avoidance of the cultural resources through project design, in-place preservation of cultural resources located in native soils and/or re-burial	Professional archaeologist	During any ground-disturbing construction activities	City of Wildomar Planning Department and Building and Safety Department	

Table 3-1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
	on the Project property so they are not subject to further disturbance in perpetuity as identified in Mitigation Measures TRI-2 and TRI-7. e. If the find is determined to be significant and avoidance of the site has not been achieved, a Phase III data recovery plan (see Mitigation Measure TRI-6) shall be prepared by the project archeologist, in consultation with the Consulting Tribe(s), and shall be submitted to the City for their review and approval prior to implementation of the said plan. Pursuant to Calif. Pub. Res. Code § 21083.2(b) avoidance is the preferred method of preservation for archaeological resources and tribal cultural resources. If the landowner and the Consulting Tribe(s) cannot agree on the significance or the mitigation for the archaeological or tribal cultural resources, these issues will be presented to the Planning Director for decision. The City's Planning Director shall make the determination based on the provisions of the California Environmental Quality Act with respect to archaeological and tribal cultural resources, recommendations of the project archeologist, and shall take into account the cultural and religious principles and practices of the Consulting Tribe(s). Notwithstanding any other rights available under the law, the decision of the City Planning Director shall be appealable to the City Planning Commission and/or City Council.				
TRI-2	**Cultural Resources Disposition.** In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries: a. One or more of the following treatments, in order of preference, shall be employed with the Consulting Tribe(s). Evidence of such shall be provided to the City of Wildomar Planning Department: i. Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place where they were found with no development affecting the integrity of the resources.	Professional archaeologist	During grading activities	City of Wildomar Engineering Department and Planning Department	

3. Mitigation Monitoring Requirements

Table 3-1 Mitigation Monitoring Requirements

Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
ii. Reburial of the resources on the Project property. The measures for reburial shall include, at least, the following: Measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed, with an exception that sacred items, burial goods and Native American human remains are excluded. Any reburial process shall be culturally appropriate. Listing of contents and location of the reburial shall be included in the confidential Phase IV report (see Mitigation Measure TRI-6). The Phase IV Report shall be filed with the City under a confidential cover and not subject to Public Records Request.				
iii. If preservation in place or reburial is not feasible then the resources shall be curated in a culturally appropriate manner at a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees by the Applicant necessary for permanent curation. Evidence of curation in the form of a letter from the curation facility stating that subject archaeological materials have been received and that all fees have been paid, shall be provided by the landowner to the City. There shall be no destructive or invasive testing on sacred items, burial goods, and Native American

	human remains, as defined by the cultural and religious practices of the Most Likely Descendant. Results concerning finds of any inadvertent discoveries shall be included in the Phase IV monitoring report.				
TRI-3	**Archaeologist Retained.** Prior to issuance of a grading permit the project applicant shall retain a Riverside County qualified Registered Professional Archaeologist (RPA), to monitor all ground disturbing activities in an effort to identify any unknown archaeological resources. The Registered Professional Archaeologist and the Tribal monitor(s) required by Mitigation Measures TRI-4 and TRI-5 shall manage and oversee monitoring for all initial ground disturbing activities and excavation of each portion of the project site including clearing, grubbing, tree removals, mass or rough grading, trenching, stockpiling of materials, rock crushing, structure demolition and etc. The Registered Professional Archaeologist and the Tribal monitor(s), shall independently have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources in coordination with any required special interest or tribal monitors. The developer/permit holder shall submit a fully executed copy of the contract to the Planning Department to ensure compliance with this condition of approval. Upon verification, the Planning Department shall clear this condition. In addition, the Registered Professional Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB 52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB 52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include: a. Project grading and development scheduling; b. The Project archaeologist and the Consulting Tribes(s) shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a	Qualified archaeologist, tribal cultural monitor(s), and developer/permit holder	Prior to issuance of grading permit	City of Wildomar Engineering Department and Planning Department	

3. Mitigation Monitoring Requirements

Table 3-1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
	brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis; c. The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.				
TRI-4	**Native American Monitoring (Pechanga).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Pechanga Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist.	Tribal cultural monitor(s)	During ground-disturbing activities	City of Wildomar Engineering Department and Planning Department	

Table 3-1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
TRI-5	**Native American Monitoring (Soboba).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Soboba Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist.	Tribal cultural monitor(s)	During ground-disturbing activities	City of Wildomar Engineering Department and Planning Department	
TRI-6	**Archeology Report - Phase III and IV.** Prior to final inspection, the developer/permit holder shall prompt the Project Archeologist to submit two (2) copies of the Phase III Data Recovery report (if required for the Project) and the Phase IV Cultural Resources Monitoring Report. The Phase IV report shall include evidence of the required cultural/historical sensitivity training for the construction staff held during the pre-grade meeting. The Planning Department shall review the reports to determine adequate mitigation compliance. Provided the reports are adequate, the Community Development Department shall clear this condition. Once the report(s) are determined to be adequate, two (2) copies shall be submitted to the Eastern Information Center (EIC) at the University of California Riverside (UCR) and one (1) copy shall be submitted to the Consulting Tribe(s) Cultural Resources Department(s).	Developer/permit holder and qualified archaeologist	Prior to final inspection	City of Wildomar Engineering Department and Planning Department	
TRI-7	**Non-Disclosure of Reburial Locations**. It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, pursuant to the specific exemption set forth in California Government Code 6254 (r)., parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).	Professional archaeologist	During any ground-disturbing construction activities	City of Wildomar Engineering Department and Planning Department

4. Mitigation Monitoring Reports

Mitigation monitoring reports are required to document compliance with the Mitigation Monitoring Program and to resolve disputes. Specific reports include:

- Field Check Report
- Implementation Compliance Report
- Dispute/Enforcement Report

4.1 FIELD CHECK REPORT

Field check reports are required to record in-field compliance and conditions.

4.2 IMPLEMENTATION COMPLIANCE REPORT

The Implementation Compliance Report (ICR) is prepared to document the implementation of mitigation measures on a phased basis, based on the information in Table 3-1. The report summarizes implementation compliance, including mitigation measures, date completed, and monitor's signature.

4.3 DISPUTE/ENFORCEMENT REPORT

The Dispute/Enforcement Report (DER) is prepared to document the outcome of the Project Manager or City Manager and becomes a portion of the ICR.

4. Mitigation Monitoring Reports

This page intentionally left blank.

5. Community Involvement

Monitoring reports are public documents and are available for review by the general public. Discrepancies in monitoring reports can be taken to the Project Manager or Planning Director by the general public.

5. Community Involvement

PC Resolution No. 2022-27

TPM No. 38333

PC RESOLUTION NO. 2022-27

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, APPROVING TENTATIVE PARCEL MAP NO. 38333 TO SUBDIVIDE A 9.05-ACRE SITE INTO FIVE (5) PARCELS TO ACCOMMODATE THE DEVELOPMENT OF THE WILDOMAR CROSSROADS MIXED-USE PROJECT LOCATED AT THE NORTHWEST CORNER OF WILDOMAR TRAIL AND CLINTON KEITH ROAD (APN: 376-410-015, -016, -017, & -021)

WHEREAS, the Planning Department has received an application for Tentative Parcel Map No. 38333 (PA No. 21-0145) to subdivide a 9.05-acre site into five (5) parcels to develop the Wildomar Crossroads mixed-use project from:

Project Applicant:	Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc.
Project Location:	Northwest corner of Wildomar Trail and Clinton Keith Road
APN:	APN: 376-410-015, -016, -017, & -021
Project Area:	9.05+/- acres

WHEREAS, in accordance with the California Government Code Section 66452 – 66452.22 (Subdivision Map Act), the Wildomar Subdivision Ordinance (Title 16), and the Wildomar Zoning Ordinance (Title 17), the Planning Commission has the authority to review Tentative Parcel Map No. 38333 for the Wildomar Crossroads Mixed-Use project; and

WHEREAS, in accordance with Government Code Section 66452.3, the City has provided the applicant with a copy of the Planning Department staff report and resolutions for Tentative Parcel Map No. 38333 containing staff's recommendation to the Planning Commission at least three (3) days prior to the October 19, 2022 Planning Commission meeting; and

WHEREAS, the proposed Wildomar Crossroads mixed-use project is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code §21000 et seq. ("CEQA"); and

WHEREAS, the Planning Director determined that there was substantial evidence that the proposed Wildomar Crossroads project may have one or more significant effects on the environment and that preparation of a Mitigated Negative Declaration was therefore warranted under Section 15070 of the CEQA Guidelines; and

WHEREAS, in accordance with Section 16.12.140 of the Wildomar Municipal Code, the Planning Department on October 4, 2022 gave public notice to all property owners within a 600-foot radius of the project boundary notifying said property owners of the October 19, 2022 Planning Commission meeting at which time the Planning

Commission would consider Tentative Parcel Map No. 38333 for the Wildomar Crossroads Mixed-Use project; and

WHEREAS, In accordance with Ordinance No. 135, the Planning Department on October 7, 2022 posted two (2) public hearing notice "sign boards" on Wildomar Trail and Clinton Keith Road notifying the general public of the October 19, 2022 Planning Commission meeting at which time the Planning Commission would consider Tentative Parcel Map No. 38333 for the Wildomar Crossroads Mixed-Use project; and

WHEREAS, in accordance with Section 16.12.140 of the Wildomar Municipal Code, the Planning Department on October 7, 2022 published a legal notice in the "Press Enterprise", a local newspaper of general circulation, notifying the general public of the of the October 19, 2022 Planning Commission meeting at which time the Planning Commission would consider Tentative Parcel Map No. 38333 for the Wildomar Crossroads Mixed-Use project; and

WHEREAS, in accordance with Section 16.12.140 of the Wildomar Municipal Code, the Planning Commission conducted the duly noticed public hearing on October 19, 2022, at which time interested persons had an opportunity to testify in support of, or opposition to, the proposed Tentative Parcel Map No. 38333 (PA No. 21-0145) for the Wildomar Crossroads project, and at which time the Planning Commission received public testimony concerning the proposed Tentative Parcel Map No. 38333.

NOW, THEREFORE, the Planning Commission of the City of Wildomar does hereby resolve, determine and order as follows:

SECTION 1. CEQA FINDINGS:

The approval of Tentative Parcel Map No. 38333 (PA 21-0145) is in compliance with requirements of the California Environmental Quality Act ("CEQA"), in that on October 19, 2022, at a duly noticed public hearing, the Planning Commission adopted a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program reflecting its independent judgment and analysis and documenting the environmental impacts and mitigation measures related to the proposed Tentative Parcel Map No. 38333 (PA No. 21-0145) for the Wildomar Crossroads Mixed-Use project. The documents comprising the City's environmental review for the project are on file and available for public review at Wildomar City Hall, 23873 Clinton Keith Road, Suite 201, Wildomar, CA 92595.

SECTION 2. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP).

The Planning Commission finds that the Wildomar Crossroads Mixed-Use project is consistent with the MSHCP, and the project is not located in any MSHCP criteria cell area, and required mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 3. TENTATIVE PARCEL MAP FINDINGS.

In accordance with Wildomar Municipal Code Title 16 and Title 17, and Government Code § 66473.1, § 66473.5 and § 66474, the Planning Commission, in light of the whole record before it, including but not limited to the Planning Department's staff report and all

documents incorporated by reference therein, the City's General Plan, Subdivision Ordinance, Zoning Ordinance, standards for public streets and facilities, and any other evidence within the record or provided at the public hearing of this matter, hereby finds and determines as follows:

A. The proposed parcel map is consistent with the City's General Plan and any applicable specific plan as specified in Government Code Section 65451.

Evidence: The proposed Tentative Parcel Map No. 38333 is consistent with the City's General Plan in that the proposed subdivision of 9.05 acres into five (5) parcels to accommodate the Wildomar Crossroads mixed-use project is consistent with the existing land use designation of Mixed Use Planning Area (MUPA). The MUPA land use designation is intended to provide for mixed-use projects with a variety of residential, commercial and retail development. The Wildomar Crossroads project consists of 34,450 square feet of commercial retail uses and a 150-unit apartment community (for-sale).

Further, the project site has the "Mixed-Use Overlay" (MU) zone that requires multi-family development in a mixed-use format with densities at least 30 units/acre. Given the 150-unit multi-family complex on the 4.5 +/- acre site, the projects' density is 33.3 units/acre and consistent with the "Mixed-Use Overlay" requirements. The particular mix of land uses consisting of residential, a Sprouts grocery store, multi-tenant retail building with restaurants will provide a variety of jobs, shopping opportunities, sales tax and property tax revenue and living opportunities.

With the efforts of Staff and Applicant regarding the design and layout of the proposed site plan, the project results in a walkable environment for residents and customers as both site areas will have very similar grades and easy pedestrian access between the properties. Lastly, there is no specific plan governing this subdivision, but the proposed lot sizes are consistent with the C-P-S zone development standards. Therefore, the proposed tentative parcel map meets this finding.

Lastly, the proposed mixed-use project also promotes the following land use and housing policies of the General Plan:

LU 2.1 The proposed project will accommodate a land use development that is in accordance with patterns and distribution of land uses that are depicted on the General Plan Land Use map proposed for the subject site.

LU 4.1 The proposed project will accommodate a land use development proposal that is located and designed to visually enhance and not degrade the character of the surrounding area.

LU 6.1 The proposed project will be developed in accordance with the proposed General Plan land use designation that ensures compatibility and minimizes impacts.

LU 22.1 The proposed project will accommodate the development of single family detached dwellings in an area that is appropriately designated by the General Plan.

LU 22.4 The proposed project will provide a specific housing type, style and density that is accessible to and, meets the needs, of a range of lifestyles, physical abilities and income levels.

LU 23.6 The proposed project will have proper mitigation measures to protect the neighboring residential areas from noise, light, fumes, odors, vehicular traffic, parking and operational hazards.

LU 22.10 The proposed project is designed to consider the surrounding areas to visually enhance, and not degrade, the appearance of adjacent residential structures.

LU 23.7 The proposed project will be served by water and sewer along provided by EVMWD to meet the project demands.

LU 24.1 The proposed project will accommodate the development of a new commercial retail, residential, restaurant and grocery store uses that will provide jobs and sales tax revenues.

H-1.1 The proposed multi-family apartment site will help ensure a sufficient supply of housing needs for people who can't afford to buy a home, as well as, help meet the City's Regional Housing Needs Allocation (RHNA) numbers required in the Housing Element.

H-6.1 The proposed single project will utilize energy conservation measures in that each enclosed garage space is conditioned to have an EV charging outlet for electric vehicles and will be designed to meet Cal-Green Building code standards.

B. The design or improvement of the proposed subdivision is consistent with the City's General Plan and any applicable specific plan.

Evidence: The proposed five (5) lot subdivision to accommodate the Wildomar Crossroads mixed-use project has been designed to meet City design and improvement standards applicable to residential, commercial, retail and restaurant development. Wildomar Trail will be dedicated and improved per the Circulation Element and Public Works road standards, including full public improvements such as curb, gutter, sidewalks, etc. These improvements will ensure safe and efficient pedestrian and vehicular circulation, including emergency vehicle access on-site and off-site. Further, all streets, utilities, and drainage facilities have been designed and are required to be constructed in conformance with City standards. There is no specific plan governing this project. Therefore, the proposed tentative parcel map meets this finding.

C. The site is physically suitable for the type and proposed density of development.

Evidence: The project site encompasses approximately 9.05 acres that will be subdivided into five (5) lots to accommodate the mixed use project and is suitable for the type and proposed density of development per the General Plan and Zoning requirements. Further, the site is adequate in size to accommodate the sizes of the commercial, retail, restaurant and residential uses including all required parking and circulation facilities. As the MUPA land use designation allows for mixed-use projects, the overall site design is physically capable of accommodating the total number of buildings, lots and uses. Since the proposed tentative parcel map meets and exceeds the C-P-S zone development standards in terms of lot sizes and lot widths, the project is consistent with the Subdivision and Zoning Ordinances. Given these facts, the proposed Tentative Parcel Map No. 38333 meets this finding.

D. The design of the subdivision or proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

Evidence: The City has prepared a Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program (MMRP) for the proposed mixed-use project. The MND was circulated for the required 30-day public review period that commenced on August 17, 2022 and concluded on September 15, 2022 in accordance with CEQA law. The MND analyzed in detail the environmental issues required under CEQA, including but not limited to, fish and wildlife and their respective habitats. The Applicant prepared and submitted a number of specific technical studies to support the analysis of environmental impacts, including but not limited to, Biological Resources Assessment Report, Cultural Resources Report and MSHCP Compliance Report. These studies concluded that the design of the proposed subdivision and improvements conditioned will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. Proper mitigation measures have been proposed as outlined in the MMRP and the conditions of approval matrix. Given these facts, the proposed Tentative Parcel Map No. 38333 meets this finding.

E. The design of the subdivision or type of improvements is not likely to cause serious public health problems.

Evidence: The design of the subdivision is in conformance with the City's General Plan, Zoning Code and Subdivision Ordinance. The design and construction of all improvements to accommodate the mixed use project have been conditioned in accordance with all applicable City of Wildomar ordinances, codes, and standards including, but not limited to, the California Uniform Building Code, the City's Subdivision and Zoning Ordinances relating to stormwater runoff management and water quality. City ordinances, codes, and standards are intended to protect the health, safety and welfare of the general public, including residents and visitors to

the project. Given these facts, the proposed Tentative Parcel Map No. 38333 meets this finding.

F. The design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision.

Evidence: No easements of record or easements established by judgment of a court of competent jurisdiction for public access across the site have been disclosed in a search of the title records for the site and the City does not otherwise have any constructive or actual knowledge of any such easements.

SECTION 4. PLANNING COMMISSION ACTION

The Planning Commission hereby adopts PC Resolution No. 2022-27 approving Tentative Parcel Map No. 38333 (PA No. 21-0145), subject to conditions, as provided herein and attached hereto to this Resolution as Exhibit 1.

PASSED, APPROVED AND ADOPTED this 19th day of October, 2022 by the following vote:

The results of the survey shall be submitted to the City of Wildomar prior to obtaining a grading permit. If BUOW are not detected during the pre-construction survey, no further mitigation is required. If BUOW are detected during the pre-construction survey, the project applicant shall relocate burrowing owls out of harm's way, in consultation with the CDFW. Notification to the CDFW shall occur if burrowing owls are found to be present onsite and the development of a conservation strategy in cooperation with the U/S/ Fish and Service, the CDFW, and the Western Riverside County Regional Conservation Authority (RCA) shall be conducted. The project applicant/developer and a qualified consulting biologist will be required to prepare and submit for approval a BUOW relocation program. The report shall be submitted to the applicant and the City of Wildomar concurrently.	Within 30 days prior to construction, Prior to issuance of grading permits	Planning Department & Public Works Department	
12. **BIO-2** Prior to vegetation clearance, the Project applicant/developer shall retain a qualified biologist to conduct a pre-disturbance nesting bird survey in accordance with the following: • The survey shall be conducted no more than three (3) days prior to the initiation of clearance/construction work; • If pre-disturbance surveys indicate that bird nests are not present or are inactive, or if potential habitat is unoccupied, no further mitigation is required; • If active nests of birds are found during the surveys, a species-specific no-disturbance buffer zone shall be established by a qualified biologist	Within three (3) days prior to the initiation of clearance/construction work	Planning Department & Public Works Department	

	around active nests until a qualified biologist determines that all young have fledged (i.e., no longer reliant upon the nest).			
Cultural Resources				
13.	**CUL-1** Human Remains. If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the Riverside County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant." The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98	During any ground-disturbing construction activities	Planning Department & Public Works Department	
Geology and Soils				
14.	**GEO-1** The project applicant/developer shall incorporate the recommendations of the Geotechnical Report prepared Leighton and Associates, Inc. (**Appendix 8)** into project plans related to the proposed project. The project's building plans shall demonstrate that they incorporate all applicable recommendations of the Geotechnical Report and comply with all applicable requirements of the latest adopted version of the California Building Code.	During building plan check, prior to any ground-disturbing construction activities	Planning Department and Building and Safety Department	

15.	**GEO-2** A paleontological grading observation schedule by a Certified Paleontologist shall be maintained when grading in bedrock units to further evaluate the fossil resources of the site. Salvage operations shall be initiated by the Certified Paleontologist and coordinated with the developer if other significant concentrations of fossils, as determined by the Certified Paleontologist, are encountered. Any paleontological resources shall be provided for curation at a local curation facility, or any other local museum or repository willing and able to accept and house the resource to preserve for future scientific study.	During ground-disturbing construction activities	Planning Department & Public Works Department	
Hazards and Hazardous Materials				
16.	**HAZ-1** Prior to the development of the site, representative sampling of the soil stockpiles shall be conducted. Soil samples shall be analyzed by a laboratory licensed with the Environmental Laboratory Accreditation Program [ELAP] for total petroleum hydrocarbon chains by EPA Method 8015M, Title 22 Metals by EPA Method 6010B/7471A, organochlorine pesticides by EPA Method 8081A, volatile organic compounds by EPA Method 8260B/5035 and polychlorinated biphenyls by EPA Method 8082. During stockpile testing, a soil sample shall be collected from the area where an orchard may have been located and tested for organochlorine pesticides to assess for residual pesticides. If the results of the soil testing show chemical levels are below EPA Region 9 or DTSC screening levels for residential land use, grading or excavation may proceed accordingly. Remediation and/or removal of contaminated soils shall be made prior to development, if chemical levels are above screening levels. Remediation shall be made in	Prior to site development	Wildomar Building Department, Riverside County Health Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency	

	coordination with the local health department, SCAQMD, the California Department of Toxic Substances Control, the U. S. Environmental Protection Agency or other regulatory agencies and in compliance with established residential screening levels.			
17.	**HAZ-2** After grading is completed, but before construction begins, the project Applicant/developer shall install soil gas probes with a 100-foot grid spacing in the footprints of the proposed structures, at depths of 5 feet below ground surface and 15 feet below ground surface at each location. Methane shall be tested from the probes with a properly calibrated hand-held device with a detection limit of no greater than 500 ppmv, or via a laboratory licensed with ELAP by ASTM Method 1946D, or a combination of the two. In addition, calibrated pressure gauges such as Magnehelic gauges or equivalent with a range of 0-10 inches of water pressure to a range of 0-100 inches of water pressure shall be used on each probe. If methane levels in probes are below 10 percent of the Lower Explosive Limit (10 percent LEL or 5,000 ppmv), the project could proceed without further action. For areas of the site that have methane concentrations at or exceeding 10 percent LEL or have pressures exceeding 3 inches of water, further testing shall be implemented to determine if a methane mitigation system is necessary. If additional weekly testing shows that methane concentrations consistently exceed 10 percent LEL or have pressures exceeding 3 inches of water over a period of 30 days and a plot of the resulting data does not show a downward trend in concentrations or pressures, then a methane mitigation system shall be incorporated into the building plans for the structures where the elevated concentrations and/or	Prior to site development	Wildomar Building Department, Riverside County Health Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency	

	pressures were observed. If there is a downward trend but the concentrations are still above 10 percent LEL or have pressures above 3 inches of water, then additional testing past 30 days may be requested to determine if concentrations and pressures subside below the action levels.			
18.	**HAZ-3** Prior to the issuance of building permits, the project applicant/developer shall demonstrate, to the satisfaction of the City Building Official and the Riverside County Fire Chief, compliance with the 2019 California Building Code (or the most recent edition) (Part 2 of Title 24 of the California Code of Regulations) and the 2019 California Fire Code (or the most recent edition) (Part 9 of Title 24 of the California Code of Regulations), including those regulations pertaining to materials and construction methods intended to mitigate wildfire exposure as described in the 2019 California Building Code and California Residential Code (or most recent edition); specifically California Building Code Chapter 7A; California Residential Code Section R327; California Residential Code Section R337; California Referenced Standards Code Chapter 12-7A; and California Fire Code Chapter 49.	Prior to issuance of building permits	Building and Safety Department and Riverside County Fire Department	
19.	**HAZ-4** Prior to the issuance of a certificate of occupancy, the applicant shall demonstrate, to the satisfaction of the City Building Official and the County Fire Chief, compliance with the vegetation management requirements prescribed in California Fire Code Section 4906 and California Government Code Section 51182.	Prior to issuance of certificate of occupancy	Building and Safety Department and Riverside County Fire Department	

ATTACHMENT B - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: TENTATIVE PARCEL MAP No. 38333			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**Parcel Map 38333 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
Noise Measures			
20. **NOI-1** All noise producing project equipment and vehicles using internal combustion engines shall be equipped with mufflers and air-inlet silencers, where appropriate, in good operating condition that meet or exceed original factory specifications. Mobile or fixed "package" equipment (e.g., arc welders, air compressors) shall be equipped with shrouds and noise control features that are readily available for that type of equipment.	Prior to construction	Planning Department and Building and Safety Department	
Transportation			
21. **TRA-1** During final design, stage construction and detour plans will be prepared to minimize disruption to the traveling public. Such plans shall be prepared in consultation with affected local jurisdictions prior to construction. Adequate access shall be provided at all times to and from side streets serving adjacent land uses. To further ensure public safety, proper detours and warning signs shall be established. The stage construction and detour plans shall be designed to not interfere with any emergency response or evacuation plans, and construction routes shall utilize non-residential streets to the extent practicable. Finally, such plans shall identify construction worker parking areas and equipment staging areas to minimize impacts to roadway operations.	During final design	Planning Department & Public Works Department	
Tribal and Cultural Resources			
22. **TRI-1** Inadvertent Archeological Find. If during ground disturbance activities, cultural resources are discovered that were not assessed by the archaeological report(s) and/or environmental assessment conducted prior to project approval, the following procedures shall be	During any ground-disturbing or construction activities	Planning Department & Public Works Department	

	followed. Cultural resources are defined, as being multiple artifacts in close association with each other, but also include fewer artifacts if the area of the find is determined to be of significance due to its sacred or cultural importance as determined in consultation with the lead agency and Native American Tribe(s) that elected to consult under AB 52 ("Consulting Tribe(s)"). a. All ground disturbance activities within 100 feet of the discovered cultural resources shall be halted until a meeting is convened between the developer, the archaeologist, the tribal representative(s) and the Planning Director to discuss the significance of the find. b. At the meeting, the significance of the discoveries shall be discussed and after consultation with the tribal representative(s), developer, and the archaeologist, a decision shall be made, with the concurrence of the Planning Director, as to the appropriate mitigation (documentation, recovery, avoidance, etc.) for the cultural resources. c. Grading or further ground disturbance shall not resume within the area of the discovery until an agreement has been reached by all parties as to the appropriate mitigation. Work shall be allowed to continue outside of the buffer area and will be monitored by additional Tribal monitors if needed. d. Treatment and avoidance of the newly discovered resources shall be consistent with the Treatment and Monitoring Agreements entered into with the Consulting Tribe(s) and the applicant. This may include avoidance of the cultural resources through project design, in-place preservation of cultural resources located in native soils and/or re-burial on the Project property so they are not subject to further disturbance in perpetuity as identified in Mitigation Measures TRI-2 and TRI-7.			

Planning Commission Date: October 19, 2022	Parcel Map 38333 Expiration Date: October 19, 2025		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
	e. If the find is determined to be significant and avoidance of the site has not been achieved, a Phase III data recovery plan (see Mitigation Measure TRI-6) shall be prepared by the project archeologist, in consultation with the Consulting Tribe(s), and shall be submitted to the City for their review and approval prior to implementation of the said plan. f. Pursuant to Calif. Pub. Res. Code § 21083.2(b) avoidance is the preferred method of preservation for archaeological resources and tribal cultural resources. If the landowner and the Consulting Tribe(s) cannot agree on the significance or the mitigation for the archaeological or tribal cultural resources, these issues will be presented to the Planning Director for decision. The City's Planning Director shall make the determination based on the provisions of the California Environmental Quality Act with respect to archaeological and tribal cultural resources, recommendations of the project archeologist, and shall take into account the cultural and religious principles and practices of the Consulting Tribe(s). Notwithstanding any other rights available under the law, the decision of the City Planning Director shall be appealable to the City Planning Commission and/or City Council.			
23.	**TRI-2** Cultural Resources Disposition. In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries: a. One or more of the following treatments, in order of preference, shall be employed with the Consulting Tribe(s). Evidence of such shall be provided to the City of Wildomar Planning Department:	During grading activities	Planning Department & Public Works Department	

	i. Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place where they were found with no development affecting the integrity of the resources. ii. Reburial of the resources on the Project property. The measures for reburial shall include, at least, the following: Measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed, with an exception that sacred items, burial goods and Native American human remains are excluded. Any reburial process shall be culturally appropriate. Listing of contents and location of the reburial shall be included in the confidential Phase IV report (see Mitigation Measure TRI- 6). The Phase IV Report shall be filed with the City under a confidential cover and not subject to Public Records Request. iii. If preservation in place or reburial is not feasible then the resources shall be curated in a culturally appropriate manner at a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees by the Applicant necessary for permanent curation. Evidence of curation in the form of a letter from the curation facility stating that subject archaeological materials have been received and that all fees have been paid, shall be provided by the landowner to the City. There shall be no destructive or			

	invasive testing on sacred items, burial goods, and Native American human remains, as defined by the cultural and religious practices of the Most Likely Descendant. Results concerning finds of any inadvertent discoveries shall be included in the Phase IV monitoring report.			
24.	**TRI-3** Archaeologist Retained. Prior to issuance of a grading permit the project applicant shall retain a Riverside County qualified Registered Professional Archaeologist (RPA), to monitor all ground disturbing activities in an effort to identify any unknown archaeological resources. The Registered Professional Archaeologist and the Tribal monitor(s) required by Mitigation Measures TRI-4 and TRI-5 shall manage and oversee monitoring for all initial ground disturbing activities and excavation of each portion of the project site including clearing, grubbing, tree removals, mass or rough grading, trenching, stockpiling of materials, rock crushing, structure demolition and etc. The Registered Professional Archaeologist and the Tribal monitor(s), shall independently have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources in coordination with any required special interest or tribal monitors. The developer/permit holder shall submit a fully executed copy of the contract to the Planning Department to ensure compliance with this condition of approval. Upon verification, the Planning Department shall clear this condition. In addition, the Registered Professional Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation	Prior to issuance of grading permit	Planning Department & Public Works Department	

	pursuant to the definition in AB 52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB 52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include: a. Project grading and development scheduling; b. The Project archaeologist and the Consulting Tribes(s) shall attend the pre- grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis; c. The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of			

	inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.			
25.	**TRI-4 Native American Monitoring (Pechanga).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Pechanga Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist.	During ground-disturbing activities	Planning Department & Public Works Department	
26.	**TRI-5 Native American Monitoring (Soboba).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Soboba Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist.	During ground-disturbing activities	Planning Department & Public Works Department	

27.	**TRI-6 Archeology Report** – Phase III and IV. Prior to final inspection, the developer/permit holder shall prompt the Project Archeologist to submit two (2) copies of the Phase III Data Recovery report (if required for the Project) and the Phase IV Cultural Resources Monitoring Report. The Phase IV report shall include evidence of the required cultural/historical sensitivity training for the construction staff held during the pre-grade meeting. The Planning Department shall review the reports to determine adequate mitigation compliance. Provided the reports are adequate, the Community Development Department shall clear this condition. Once the report(s) are determined to be adequate, two (2) copies shall be submitted to the Eastern Information Center (EIC) at the University of California Riverside (UCR) and one (1) copy shall be submitted to the Consulting Tribe(s) Cultural Resources Department(s).	Prior to final inspection	Planning Department & Public Works Department	
28.	**TRI-7 Non-Disclosure of Reburial Locations**. It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, pursuant to the specific exemption set forth in California Government Code 6254 l., parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).	During discovery of Native American human remains	Planning Department & Public Works Department	

ATTACHMENT B - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: TENTATIVE PARCEL MAP No. 38333			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**Parcel Map 38333 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
Prior to the Recordation of the Final Map			
29. Prior to recordation of the final map, the Applicant shall submit two (2) copies of the revised/updated Covenants, Conditions, and Restrictions (CC&R's) for the for review and approval by the Planning Director, Public Works Director and City Attorney. The CC&R's shall include liability insurance and methods of maintaining landscaping, parking areas, private roads, exterior of all buildings (if applicable), and all landscaped and open areas including parkways, as well as a provision indicating that the homeowners association may not be terminated or dissolved without the permission of the City. The revised CC&R's shall be in the form and content approved by the Planning Director and City Attorney and shall include such provisions as are required by this approval and as said officials deem necessary to protect the interests of the City and its residents. Said CC&R's shall be recorded concurrently with the final map and a copy of the recorded CC&R's shall be submitted to the Planning and Engineering Departments within 2 weeks of recordation.	Prior to Final Map Recordation	Planning and Engineering Departments	
PUBLIC WORKS/ENGINEERING/BUILDING DEPARTMENT CONDITIONS			
General Requirements / Standard Conditions			
1. The developer shall obtain City approval for any modifications or revisions to the approval of this project in accordance with State law (Gov. Code 65913.4). Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.	On-going	Engineering	

ATTACHMENT B - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: TENTATIVE PARCEL MAP No. 38333			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**Parcel Map 38333 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
2. The developer shall comply with the State of California Subdivision Map Act and all applicable City ordinances and resolutions.	On-going	Engineering	
3. Prior to recordation or issuance of grading permit, the applicant shall demonstrate to the satisfaction of the City Engineer that the proposed subdivision will not unreasonably interfere with the use of any easement holder of the property.	On-going	Engineering	
4. Written permission shall be obtained from the affected property owners allowing the proposed grading and/or facilities to be installed outside of the project boundaries.	On-going	Engineering	
5. The submitted parcel map shall correctly show all existing easements, traveled ways, and drainage courses. Any omission or misrepresentation of these documents may require said parcel map to be resubmitted for further consideration.	On-going	Engineering	
6. Prior to recordation or issuance of grading permit, the applicant shall demonstrate to the satisfaction of the City Engineer that the proposed subdivision will not unreasonably interfere with the use of any easement holder of the property.	On-going	Engineering	
7. The developer/owner or contractor shall apply for an Encroachment Permit for work performed within the public right of way. Compliance with current environmental regulations applies and additional studies and/or permits may be required to the extent applicable under State law (Gov. Code 65913.4).	On-Going	Public Works	
8. The developer's contractor is required to submit for a haul route permit for the hauling of material to and from the project site. Said permit will include limitations of haul hours, number of loads per day and the	On-Going	Public Works	

	posting of traffic control personnel at all approved entrances/exits onto public roads. Hauled material shall be to/from an environmentally approved site.			
9.	Street design criteria and cross sections shall be per City of Wildomar standards, approved Master Plan/Specific Plan design guidelines and the State of California Department of Transportation Highway Design Manual unless otherwise approved by the City Engineer.	On-going	Engineering	
10.	Prior to the issuance of a grading permit, a Final WQMP, prepared in substantial conformance with the approved Preliminary WQMP, shall be submitted to the Public Works Land Development Section for approval.	On-going	Engineering	
11.	Prior to issuance of the first Certificate of Occupancy, the applicant shall provide proof of notification to the future homeowners and/or occupants of all non-structural BMPs and educational and training requirements for said BMPs as directed in the approved WQMP.	On-going	Engineering	
12.	Prior to issuance of Certificate of Occupancy, the applicant shall ensure all structural post construction BMPs identified in the approved project specific Final WQMP are constructed and operational.	On-going	Engineering	
13.	Prior to approval of improvement plans, the improvement plans shall show all the streets to be improved to half width plus twelve (12) additional feet, unless otherwise approved by the City Engineer. At the discretion of the applicant, the existing pavement maybe cored to confirm adequate section and R values during the design process and any findings shall be incorporated into the project design. Therefore, improvements may include full pavement reconstruction, grind and overlay, or slurry seal. All striping shall be replaced in kind.	On-going	Engineering	

14.	The Developer shall dedicate, design and construct all improvements in accordance with the City of Wildomar Road Improvement Standards & Specification, Improvement Plan Check Policies and Guidelines, as further conditioned herein and to the satisfaction of the City Engineer. In the absence of a subdivision map, rights-of-way and easements shall be dedicated by separate instrument.	On-going	Engineering	
15.	Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred or covered under the City's Community Facility District (CFD Services).	On-Going	Engineering	
16.	The developer shall prepare and submit a comprehensive drainage study and plan that includes, but is not limited to: definition with mapping of the existing watersheds; a detailed pre- and post-project hydrologic and hydraulic analysis of the project and project impacts; definition of the local controlling 100-year frequency water levels existing and with project; the proposed method of flow conveyance to mitigate the potential project impacts with adequate supporting calculations; any proposed improvements to mitigate the impacts of increased runoff from the project and any change in runoff; including quality, quantity, volume, and duration in accordance with City of Wildomar's Hydrology Manual, Improvement Standards, and to the satisfaction of the City Engineer. Specifically, the study will: a. Analyze the detention basin drainage area for a project using the Rational Method 100-year storm event for the pre-project and post-project.	Prior to Issuance of a Grading Permit	Engineering	

	b. Analyze 4 hydrographs for the detention basin drainage area for a project using the Unit Hydrograph 100-year storm event for the 1-hour, 3-hour, 6-hour, and 24-hour storm durations for post-project condition. c. Using the Unit Hydrographs determine which duration provides the highest flow rate. Adjust parameters such as lag time, flow line roughness coefficient or other parameters to calibrate Unit Hydrograph model to provide results similar to the Rational Method. Using the calibrated Unit Hydrograph for the detention basin drainage area perform basin routing analysis to demonstrate that the outflow is less than the pre-project Rational Method flow rate.			
17.	Prior to issuance of any grading permit, any environmental Phase I and Phase II applicable findings and recommended actions to remove contamination resulting from previous use of the subject site shall be implemented.	Prior to Issuance of a Grading Permit	Engineering	
18.	The Construction Runoff Management Plan (or Erosion/Sediment Control Plan) shall include enhanced BMPs, for installation of landscaping to minimize the potential runoff of nutrients which is the Priority Water Quality Condition of Concern in the Santa Margarita River Watershed, to the satisfaction of the City Engineer.	Prior to Issuance of a Grading Permit	Engineering	
19.	The developer shall annex into the City's Community Facility District (CFD Services) and pay associated costs for annexation. Should this project lie within any assessment/benefit district that duplicates the services to be covered under CFD Services then the developer shall de-annex from said assessment/benefit district.	Prior to First Building permit issuance	Engineering	

Planning Commission Date: October 19, 2022	**Parcel Map 38333 Expiration Date:** October 19, 2025		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
20. The developer shall annex into CFD Service District 2022-2, or current equivalent Community Facilities District, to offset development related costs for maintenance and services for the applicable development.	Prior to Issuance of a Building Permit	Engineering	
21. Prior to issuance of Building Permit, the developer shall post security guaranteeing the construction of all required public improvements consistent with the approved TIA. Said improvements shall include, but are not limited to the following: 1. All street facilities: 2. Any missing or substandard public improvements on Wildomar Trail and Catt Road, to half street plus 12' along the project frontage. 3. Traffic Mitigation measures as outlined in approved Traffic Impact Analysis dated, August 10, 2022. 4. All ingress and egress shall meet minimum commercial driveway standards. 5. Southernmost site access on Wildomar Trail indicated on the site plan and "DWY 3" indicated on the TIA shall be limited to right in, right out, access only. Site access on Catt Road shall be coordinated with adjacent developments, City of Wildomar Traffic Engineering, and the City Engineer. b) All drainage facilities to serve the proposed, and as outlined in the approved Hydrology Study. c) All required grading, including erosion control. Additional erosion control may be required per the City Engineer	Prior to Issuance of a Building Permit	Engineering	

	d) All required sewer, water and reclaimed water facilities per Elsinore Valley Municipal Water District (EVMWD) standards and specifications, per approved plans. e) All required landscaping and/or park facilities on-site, as well as parkway landscaping per approved streetscape plans and design guidelines. f) All under grounding of overhead utilities, except for cables greater than 32k volts, per Wildomar Municipal Code			
22.	Prior to building permit issuance, the applicant shall commence construction or guarantee the construction of all new or upgraded required public improvements including but not limited to, the potable water line, sewer line, , potable water services, sewer laterals, , double detector check assemblies and reduced pressure principal assemblies within the public right of way and/or easements.	Prior to Issuance of a Building Permit	Engineering	
23.	Clinton Keith Road is currently paved to its ultimate as a Primary Arterial 6-lane (128' ROW), however, the project may submit an in-lieu fee for the portion lying along its project frontage, in coordination with the percentage identified in the approved Traffic Impact Analysis and associated MND. Catt Road plans shall be submitted and approved for construction to its ultimate classification as a Local Road. The plans shall include construction of applicable curb, gutter and sidewalk improvements along its frontage. The ultimate modified design shall be coordinated with the City Engineering Division and subject to the satisfaction of the City Engineer.	Prior to Improvement Plan Approval	Engineering	

Planning Commission Date: October 19, 2022	Parcel Map 38333 Expiration Date: October 19, 2025		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
	Arya Road plans shall be submitted and approved for construction to its ultimate classification as a Local Road, and as identified to support the proposed project per the approved TIA and subject to the satisfaction of the City Engineer. The project shall submit plans to construct Wildomar Trail along its project frontage, at its ultimate half-section width classification as a Collector (74-foot right-of-way) in compliance with applicable City of Wildomar and Caltrans standards. Plans shall be approved subject to the satisfaction of the City Engineer. Wildomar Trail/Clinton Keith Rd: Plans shall be submitted and approved for Construction of improvements as per approved CIP at this intersection. Improvements include the addition of WBT receiving lane at project frontage and the modification of WBR to WBTR. Signal modifications include changing SBL and NBL signal permissive phasing to protected permissive and overlapping SBR. In the event the CIP improvements are constructed before the project is constructed, the project would contribute fair-share to improvements at this intersection, as identified in the approved TIA. Plans shall be coordinated with the CIP and shall be subject to the satisfaction of the City Engineer. Inland Valley Dr/Clinton Keith Rd: Project would calculate and contribute fair-share to the CIP at this intersection which improves the intersection to a 4-lane intersection. Improvements include addition of WBT lane and EBT receiving lane. The fair-share shall be calculated to the satisfaction of the City Engineer.			

	Palomar Rd/Clinton Keith Rd: Project would calculate and contribute a fair-share to intersection improvements as per approved CIP at this intersection. Improvements as per CIP include addition of 2nd EBL, modification of EBR to EBTR. Modification of WBT to WBTR. Modification on NBTR to NBT, addition of NBR and addition of 2nd SBL. The project's fair-share contributions would be limited to the 2nd SBL improvement on Clinton Keith Rd which would include widening the road to shift the SBR further northwest along with any associated improvements or costs necessary to accomplish such improvement consistent with the approved TIA and subject to the satisfaction of the City Engineer. Arya Rd/Clinton Keith Rd: Plans shall be submitted and approved for construction of improvements or provide fair-share contribution as identified in the approved TIA and subject to the satisfaction of the City Engineer. Improvements include northbound striping to provide dedicated NBL and NBTR, dedicated SBL and SBTR. Signal modifications include changing NB-SB permissive phasing to protective permissive phasing along with associated improvements necessary to accomplish the lane configuration, road widening, and signal operation discussed above. These improvements would include widening of Arya Rd to 4 lanes. Wildomar Trail/Project Driveway 4: Plans shall be submitted and approved for construction of improvements as a project design feature to add Two Stage Gap Acceptance for EBL approach from Project Dwy			

	consistent with the striping concept included in the approved TIA and subject to the satisfaction of the City Engineer. Sight distance at each project access point shall be reviewed with respect to standard Caltrans and City of Wildomar sight distance standards at the time of preparation of final grading, landscape, and street improvement plans. On-site traffic signing and striping plan shall be submitted and approved in conjunction with detailed construction plans for the project site subject to the satisfaction of the City Engineer. All public improvement plans shall include adequate transitions beyond the project boundary to 300', at the discretion of the City Engineer. Project applicant shall pay all fair-share contributions and provide plans for approval necessary to implement all improvements as discussed in the approved TIA subject to the satisfaction of the City Engineer.			
24.	Prior to issuance of building permits, the developer shall cause the civil engineer of record and soils engineer of record for the approved grading plans to submit pad certifications and compaction test reports for the subject lots where building permits are requested.	Prior to Issuance of Building Permits	Engineering	

ATTACHMENT B - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: TENTATIVE PARCEL MAP No. 38333			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**Parcel Map 38333 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
Prior to Recordation of the Final Map			
25. All the drainage design criteria shall be per City of Wildomar standards and the Riverside County Flood Control and Water Conservation District standards unless otherwise approved by the Public Works Director.	Prior to Map	Engineering	
26. Prior to map recordation or approval of any improvement plans, the applicant shall submit a detailed hydrology study. Said study shall include the existing, interim, and ultimate proposed hydrologic conditions including key elevations, drainage patterns and proposed locations and sizes of all existing and proposed drainage devices. The hydrology study shall present a full breakdown of all the runoff generated on- and off-site.	Prior to Map	Engineering	
27. Prior to recordation or approval of improvement plans, the improvement plans submitted by the applicant shall include the following: a) All local and/or major arterial highways' vertical and horizontal alignments shall be approved by the Director of the Public Works Department. b) All driveways shall conform to the applicable City of Wildomar standards and shall be shown on the street improvement plans. c) All street intersections shall be at ninety (90) degrees or as approved by the City Engineer. e) Under grounding of existing and proposed utility lines. f) Streetlights. g) All other public improvements shall conform to City of Wildomar standards.	Prior to Map	Engineering	

28.	Prior to recordation or approval of improvement plans, the improvement plans submitted by the applicant shall address the following: a) The project drainage design shall be designed to accept and properly convey all on- and off-site drainage flowing on or through the site. b) The project drainage system design shall protect downstream properties from any damage caused by alteration of drainage patterns such as concentration or diversion of flow. c) All residential lots shall drain toward the street. Lot drainage to the street shall be by side yard swales independent of adjacent lots or by an underground piping system. Concentrated drainage on commercial lots shall be diverted through parkway drains under sidewalks. All non-residential lots shall drain toward an approved water quality or drainage facility. Once onsite drainage has been treated it may continue into an approved public drainage facility or diverted through under-sidewalk parkway drains.	Prior to Map	Engineering	
29.	Prior to recordation, the applicant shall submit for approval all proposed parkway, slope maintenance, and/or landscaping easements to be granted to the Community Facilities District, as specified on the tentative map or Conditions of Approval. Said information shall be submitted to the Public Works Department Land Development Section for approval.	Prior to Map	Engineering	
30.	Prior to final map recordation the applicant shall prepare a disclosure statement indicating that the property is within an Assessment District, Community Facilities District and/or Landscape Maintenance District and will be subject to an annual levy. The disclosure statement is subject to the review and approval of the Public Works Department and shall be recorded concurrently with the final map.	Prior to Map	Engineering	

ATTACHMENT B - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: TENTATIVE PARCEL MAP No. 38333			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**Parcel Map 38333 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
31. Prior to map recordation, issuance of a building permit and/or issuance of a Certificate of Occupancy, the applicant shall pay all development fees, including but not limited to: Development Impact Fees (DIF) per City Municipal Code 3.44, and Transportation Uniform Mitigation Fees (TUMF) per City Municipal Code 3.40. Said fees shall be collected at the rate in effect at the time of fee collection as specified by the current City Council fee resolutions and ordinances.	Prior to Map	Engineering	
32. Prior to map recordation, the applicant shall offer for dedication all required street rights-of-required to support the development. Said dedications shall continue in force until the City accepts or abandons such offers. All dedications shall be free of all encumbrances and approved by the City Engineer.	Prior to Map	Engineering	
33. Prior to issuance of a Certificate of Occupancy, all proposed parkway, slope maintenance, and/or median landscaping specified in the tentative map or in these Conditions of Approval shall be constructed.	Prior to Map	Engineering	
34. The developer shall install any missing streetlight facilities along the project frontage, in accordance with the applicable City of Wildomar Road Improvement Standards & Specification, Improvement Plan Check Policies and Guidelines, City Ordinances and to the satisfaction of the City Engineer.	Prior to Certificate of Occupancy	Building/ Public Works	
35. The developer/applicant shall demonstrate that all applicable development related fees, impact fees, and mitigation fees have been satisfactorily paid.	Prior to Issuance of a Building Permit or Certificate of Occupancy	Building	

ATTACHMENT B - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: TENTATIVE PARCEL MAP No. 38333			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**Parcel Map 38333 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
36. The developer shall comply with the recommendations in Approved TIA. Prior to issuance of building permit, the developer shall guarantee construction of the following public improvements: Catt Road shall be constructed to its ultimate classification as a Local Road. This shall include construction of applicable curb, gutter and sidewalk improvements along its frontage as well as applicable cul-de-sac. The ultimate modified design shall be coordinated with the City Engineering Division and subject to the satisfaction of the City Engineer. Arya Road shall be constructed to its ultimate classification as a Local Road, and as identified to support the proposed project per the approved TIA and subject to the satisfaction of the City Engineer. The project shall construct Wildomar Trail along its project frontage, at its ultimate half-section width classification as a Collector (74-foot right-of-way) in compliance with applicable City of Wildomar and Caltrans standards subject to the satisfaction of the City Engineer. Wildomar Trl/Clinton Keith Rd: The project shall construct improvements as per approved CIP at this intersection. Improvements include the addition of WBT receiving lane at project frontage and the modification of WBR to WBTR. Signal modifications include changing SBL and NBL signal permissive phasing to protected permissive and overlapping SBR. In the event the CIP improvements are constructed before the project is constructed, the project would contribute fair-share to improvements at this intersection, as identified in the approved TIA.	Prior to Issuance of Certificate of Occupancy	Engineering	

Planning Commission Date: October 19, 2022	**Parcel Map 38333 Expiration Date:** October 19, 2025		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
	Plans shall be coordinated with the CIP and shall be subject to the satisfaction of the City Engineer. Arya Rd/Clinton Keith Rd: The project shall construct improvements or provide fair-share contribution as identified in the approved TIA and subject to the satisfaction of the City Engineer. Improvements include northbound striping to provide dedicated NBL and NBTR, dedicated SBL and SBTR. Signal modifications include changing NB-SB permissive phasing to protective permissive phasing along with associated improvements necessary to accomplish the lane configuration, road widening, and signal operation discussed above. These improvements would include widening of Arya Rd to 4 lanes. Wildomar Trail/Proj Driveway 4: The project shall construct improvements as a project design feature to add Two Stage Gap Acceptance for EBL approach from Project Driveway consistent with the striping concept included in the approved TIA and subject to the satisfaction of the City Engineer. Sight distance at each project access point shall be reviewed with respect to standard Caltrans and City of Wildomar sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

PC Resolution No. 2022-28
CUP & Plot Plan No. 21-0145

PC RESOLUTION NO. 2022-28

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, APPROVING CONDITIONAL USE PERMIT NO. 21-0145 (TO ALLOW GROCERY STORE SALE OF ALCOHOL) AND PLOT PLAN NO. 21-0145 TO DEVELOP A 34,540 SQUARE-FOOT MULTI-TENANT RETAIL CENTER AND A 150-UNIT GATED APARTMENT PROJECT ON A 9.05-ACRE SITE IN THE C-P-S ZONE, SUBJECT TO CONDITIONS, TO ACCOMMODATE THE DEVELOPMENT OF THE WILDOMAR CROSSROADS MIXED-USE PROJECT LOCATED AT THE NORTHWEST CORNER OF WILDOMAR TRAIL AND CLINTON KEITH ROAD (APN: 376-410-015, -016, -017, & -021)

WHEREAS, the Planning Department has received an application for a Conditional Use Permit to establish alcohol sales for off-site consumption as part of the Sprouts Farmers Market store, and to develop the 9.05-acre site with the 34,540 square-foot multi-tenant retail center (Parcels 1 - 4) and the 150-unit gated multi-family apartment project (Parcel 5) consistent with the City's commercial and multi-family design standards and guidelines, including full on-site and off-site improvements per the WMC from:

Project Applicant:	Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc.
Project Location:	Northwest corner of Wildomar Trail and Clinton Keith Road
APN:	APN: 376-410-015, -016, -017, & -021
Project Area:	9.05+/- acres

WHEREAS, in accordance with Section 17.200, 17.216 and 17.248 of the Wildomar Municipal Code, the Planning Commission has the authority to review the proposed Wildomar Crossroads mixed-use project as described above; and

WHEREAS, the proposed Wildomar Crossroads mixed-use project is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code §21000 et seq. ("CEQA"); and

WHEREAS, the Planning Director determined that there was substantial evidence that the proposed Wildomar Crossroads project may have one or more significant effects on the environment and that preparation of a Mitigated Negative Declaration was therefore warranted under Section 15070 of the CEQA Guidelines; and

WHEREAS, in accordance with Section 17.192.040 of the Wildomar Municipal Code, the Planning Department on October 4, 2022 gave public notice to all property owners within a 600-foot radius of the project boundary notifying said property owners of the October 19, 2022 Planning Commission meeting at which time the Planning Commission would consider CUP/Plot Plan No. 21-0145 for the Wildomar Crossroads Mixed-Use project; and

WHEREAS, In accordance with Ordinance No. 135, the Planning Department on October 7, 2022 posted two (2) public hearing notice "sign boards" on Wildomar Trail and Clinton Keith Road notifying the general public of the October 19, 2022 Planning Commission meeting at which time the Planning Commission would consider CUP/Plot Plan No. 21-0145 for the Wildomar Crossroads Mixed-Use project; and

WHEREAS, in accordance with Section 17.192.040 of the Wildomar Municipal Code, the Planning Department on October 7, 2022 published a legal notice in the "Press Enterprise", a local newspaper of general circulation, notifying the general public of the of the October 19, 2022 Planning Commission meeting where the Commission would review CUP/Plot Plan No. 21-0145 for the Wildomar Crossroads Mixed-Use project; and

WHEREAS, in accordance with Section 17.192.040 of the Wildomar Municipal Code, the Planning Commission conducted the duly noticed public hearing on October 19, 2022, at which time interested persons had an opportunity to testify in support of, or opposition to, the proposed CUP/Plot Plan No. 21-0145; and at which time the Planning Commission received public testimony concerning the proposed CUP/Plot Plan No. 21-0145.

NOW, THEREFORE, the Planning Commission of the City of Wildomar does hereby resolve, determine and order as follows:

SECTION 1. CEQA.

The approval of CUP/Plot Plan No. 21-0145 is in compliance with requirements of the California Environmental Quality Act ("CEQA"), in that on October 19, 2022, at a duly noticed public hearing, the Planning Commission adopted a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program reflecting its independent judgment and analysis and documenting the environmental impacts and mitigation measures related to the proposed CUP/Plot Plan No. 21-0145 for the Wildomar Crossroads mixed-use project. The documents comprising the City's environmental review for the project are on file and available for public review at Wildomar City Hall, 23873 Clinton Keith Road, Suite 201, Wildomar, CA 92595.

SECTION 2. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP).

The Planning Commission finds that the Wildomar Crossroads Mixed-Use project is consistent with the MSHCP, and the project is not located in any MSHCP criteria cell area, and required mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 3. CONDITIONAL USE PERMIT FINDINGS.

Pursuant to Chapter 17.200 (Conditional Use Permits) and Chapter 17.248 (Alcoholic Beverage Sales) of the Wildomar Municipal Code, the Planning Commission, in light of the whole record before it, including but not limited to the Planning Department's staff report and all documents incorporated by reference herein, the City's General Plan and any other evidence within the record or provided at the public hearing of this matter, hereby finds and determines as follows:

A. That the proposed conditional use permit is consistent with the General Plan and in accord with the purposes of the zone in which the site is located.

Evidence: The proposal to have alcohol sales for off-site consumption as part of the Sprouts Farmers Market store is consistent with the General Plan land use designation of MUPA and C-P-S zoning in that it is a conditionally permitted use in the C-P-S (Scenic Highway Commercial) zone in accordance with Chapter 17.248.020.A of the Zoning Ordinance. The project is consistent with General Plan Policy LU 23.1 because the project accommodates the development of a commercial use in an area appropriately designated by the General Plan land use map for a mixed use project which includes grocery stores. The sale of alcohol is typically associated with grocery stores in the C-P-S zone and other similar commercial zones in the City. Further, the sale of alcohol will be restricted to "off-premise" consumption only (i.e., no on-site consumption) in accordance with the requirements of a Type 20 ABC license. Therefore, the proposed CUP for alcohol sales meets this finding.

B. The proposed use will not be detrimental to the health, safety, or general welfare of the community.

Evidence: The proposal to have alcohol sales for off-site consumption as part of the Sprouts Farmers Market store will not be detrimental to the health, safety, or general welfare of the community since it will be highly regulated by the State Alcohol Beverage Control. (ABC). The sale of alcohol is typically associated with commercial uses, and grocery stores in particular, in the C-P-S zone and other similar commercial zones in the City and will be restricted to "off-premise" consumption only (i.e., no on-site consumption) in accordance with the requirements of a Type 20 ABC license. Further, the store owner will be required to obtain a Type 20 license prior to the sale of any alcohol from the premises, which will be regulated by the State Alcohol Beverage Control (ABC). As no alcohol will be consumed on-site or within the building, the sale of alcohol for this grocery store will not be detrimental to the health, safety, or general welfare of the community. Therefore, the proposed CUP for alcohol sales meets this finding.

C. The proposed conditional use permit is consistent with the development standards of Section 17.248 (Alcoholic Beverage Sales).

Evidence: The proposed conditional use permit is consistent with the following:

- Section 17.248.020 sets forth the requirement that off-premise sale can only occur in the R-R, C-1/C-P, C-P-S and C-R zones. As the project has an existing C-P-S zone designation, the project meets this requirement.

- Section 17.248.030.C requires that off-premise sales are permitted provided the vehicular traffic from the facility does not reasonably create a potential hazard to schools, churches, public parks or playgrounds. The Ronald Reagan elementary

school is the nearest school to the Sprouts Farmers market and is over 2,000 feet away. ABC requirements allow for alcohol sales provided it is more than 600 feet away from schools. The nearest "park" is the Hartford Park HOA private park (and playground) and is approximately 1,500 feet away from the proposed Sprouts Farmers market. Further, based on the site design, street improvements and distance, it is staff's opinion that the off-premise sale of alcohol at the Sprouts Farmers market will not create traffic hazards.

- Section 17.248.030.D requires that the notice of public hearing be sent to all property owners within a 600-foot radius of the project site and to the school district. On October 4, 2022, the Planning Department mailed out a public hearing notice to all property owners and Lake Elsinore Unified School District in compliance with code section.

SECTION 4. PLOT PLAN FINDINGS FOR COMMERCIAL RETAIL SITE.

In accordance with Chapter 17.216 of the Wildomar Municipal Code (Title 17), the Planning Commission, in light of the whole record before it, including but not limited to the Planning Department's staff report and all documents incorporated by reference herein, the City's General Plan and any other evidence within the record or provided at the public hearing of this matter, finds and determines as follows:

A. The proposed use is consistent with the Wildomar General Plan and Zoning Ordinance.

Evidence: The proposed Wildomar Crossroads mixed-use project which consists of 34,450 square feet of retail uses (Sprouts Grocery store, restaurants and shops) and a 150-unit multi-family apartment community is consistent with the intent of the General Plan land use designation of Mixed-Use Planning Area (MUPA) as this land use designation encourages the development of mixed-use projects that have a neighborhood and regional influence, and that provide housing opportunities. The proposed land uses will provide result in a variety of jobs, shopping opportunities, sales tax, property tax revenue and housing opportunities. Given the layout of the proposed site plan, the project will be walkable for residents of the apartment community and employees/visitors of the business on site, including providing nearby neighborhood residents with a variety of retail and shopping needs in very close proximity.

Further, the commercial retail center and its uses are permitted in the C-P-S (Scenic Highway Commercial) zone subject to the approval of a plot plan provided all development standards of Chapter 17.76.030 are complied with. The proposed site plan has been evaluated by each City department and Riverside County Fire Department as part of the city's development review process. Based on this review each department has determined that the proposed Wildomar Crossroads mixed-use project meets and/or exceeds City and County development standards as discussed within the staff report. In addition, the proposed Wildomar Crossroads mixed-use project also is consistent with the following General Plan policies:

LU 4.1 The proposed retail development will accommodate a land use development proposal that is located and designed to visually enhance and not degrade the character of the surrounding area as the project is consistent with the City's Commercial Design Standards and Guidelines.

LU 6.1 The proposed retail development will be developed in accordance with the proposed General Plan land use designations that ensures compatibility and minimizes impacts.

LU 22.1 The proposed retail development will accommodate the development of commercial retail in an area that is appropriately designated by the General Plan for mixed-use projects

LU 22.10 The proposed retail development is designed to consider the surrounding areas to visually enhance, and not degrade, the appearance of adjacent structures as the project is consistent with the City's Commercial Design Standards and Guidelines

LU 23.1 The proposed project resulting in the commercial retail and professional office area is properly located and designated in accordance with the General Plan.

LU 23.7 The proposed project will be served by water and sewer along provided by EVMWD to meet the project demands.

LU 23.8 The proposed project results in commercial retail opportunities in a commercially designated area that will provide much needed services and jobs for Wildomar residents, including sales tax revenue for the City in accordance with the General Plan.

LU 24.1 The proposed project will accommodate the development of a new commercial retail, residential, restaurant and grocery store uses that will provide jobs and sales tax revenues.

B. The overall development of the land shall be designed to conform to the logical development of the land and to be compatible with the present and future logical development of the surrounding property.

Evidence: The proposed Wildomar Crossroads mixed-use project has been designed to conform to the logical development of the land and to be compatible with the present and future logical development of the surrounding property. The project site has had the MUPA land use designation since incorporation and the proposed mixed-use project meets the intent of this land use designation. Further, due to its proximity to the Hartford Park residential community, the project creates opportunities for shopping and services to these residents in close proximity to their neighborhood. Based on this, the proposed Wildomar Crossroads mixed-use project meets this finding.

C. The Plot Plan considers the location and need for dedication and improvement of necessary streets and sidewalks, including the avoidance of traffic congestion.

Evidence: The proposed commercial retail center development were considered in preparation of the plot plan. The site has been planned appropriately and the location and need for dedication and improvement of necessary streets and sidewalks, including the avoidance of traffic congestion has been addressed. Wildomar Trial will be improved in accordance with Public Works street standards (including curb, gutter and sidewalks) to facilitate the safe off-site and on-site traffic flow generated by the project. Further, a detailed traffic impact analysis was prepared as part of the MND which was extensively analyzed. The project must comply with all improvement measures identified in the approved Traffic Impact Analysis (TIA) and must include Transportation Demand Management mitigation as identified within the TIA to reduce Vehicle Miles Traveled (VMT) consistent with the intent of SB 743 and to the satisfaction of the City Engineer. Based on this, the proposed Wildomar Crossroads mixed-use project meets this finding.

D. The Plot Plan takes into consideration topographical and drainage conditions, including the need for dedication and improvements of necessary structures.

Evidence: The construction of the project has been designed and conditioned to comply with all applicable City ordinances, codes, and standards including, but not limited to, requirements relating to storm water runoff management and other drainage control regulations. The project drainage has been designed to accommodate a series of filtration and detention areas (within and around the drive aisles and parking areas) to capture storm runoff. Further the project was required to prepare a Hydrology/Hydraulic study and Preliminary Water Quality Management Plan as part of the MND which analyzed and addressed in detail all drainage impacts that could have resulted from this project. Based on this, the proposed Wildomar Crossroads mixed-use project meets this finding.

E. All plot plans which permit the construction of more than one structure on a single legally divided parcel shall, in addition to all other requirements, be subject to a condition which prohibits the sale of any existing or subsequently constructed structures on the parcel until the parcel is divided and a final map recorded in accordance with Title 16 (Subdivisions) in such a manner that each building is located on a separate legally divided parcel.

Evidence: The project does include a tentative parcel map (TPM No. 38333) to subdivide the 9.05-acre site into five (5) lots to accommodate the proposed Wildomar Crossroads mixed-use project. The tentative parcel map has been conditioned to be recorded prior to any occupancy of the project. Based on this, the proposed Wildomar Crossroads mixed-use project meets this finding.

SECTION 5. PLOT PLAN FINDINGS FOR RESIDENTIAL SITE:

In accordance with Chapter 17.216 of the Wildomar Municipal Code (Title 17), the Planning Commission, in light of the whole record before it, including but not limited to the Planning Department's staff report and all documents incorporated by reference herein, the City's General Plan and any other evidence within the record or provided at the public hearing of this matter, finds and determines as follows:

A. The proposed use is consistent with the Wildomar General Plan and Zoning Ordinance.

Evidence: The proposed plot plan to develop the 150-unit multi-family apartment community with related on-site open space and recreational components as part of the Wildomar Crossroads mixed-use project is consistent with the intent of the General Plan land use designation of MUPA as this land use is intended to accommodate a variety of mixed-uses including attached and detached multi-family dwelling units. The residential site area does not require any special zoning since the MUPA land use designation allows multi-family uses. The proposed multi-family apartment community is also consistent with the Zoning Ordinance as the site plan meets and exceeds all development standards.

Further, the density of the apartment community at 33 units/acre is consistent with the Mixed-Use Overlay (MU) zoning that requires multi-family development of at least 30 units/acre. The overlay was applied to this site when the City Council adopted the 2013 Housing Element (in December 2013). The proposed plot plan has been evaluated in accordance with the multi-family development standards as outlined in Section 17.44 of the Wildomar Municipal Code. Based on this review, it has been determined that each standard has been met and/or exceeded as discussed within the staff report. Based on this, the proposed residential plot plan meets this finding. Lastly, the proposed residential project also promotes the following land use and housing policies:

LU 2.1 The proposed project will accommodate a land use development that is in accordance with patterns and distribution of land uses that are depicted on the General Plan Land Use map proposed for the subject site.

LU 4.1 The proposed project will accommodate a land use development proposal that is located and designed to visually enhance and not degrade the character of the surrounding area given its compliance with the City's Multi-family objective design standards.

LU 6.1 The proposed project will be developed in accordance with the proposed General Plan land use designation that ensures compatibility and minimizes impacts.

LU 22.1 The proposed project will accommodate the development of multi-family attached dwellings in an area that is appropriately designated by the General Plan.

LU 22.4 The proposed project will provide a specific housing type, style and density that is accessible to and, meets the needs, of a range of lifestyles, physical abilities and income levels.

LU 22.10 The proposed project is designed to consider the surrounding areas to visually enhance, and not degrade, the appearance of adjacent residential structures given its compliance with the City's Multi-family objective design standards.

LU23.6 The proposed project will have proper mitigation measures to protect the neighboring residential areas from noise, light, fumes, odors, vehicular traffic, parking and operational hazards.

LU23.7 The proposed project will be served by water and sewer provided by EVMWD to meet the project demands.

LU24.8 The proposed project will accommodate a land use development proposal that is located and designed to visually enhance and not degrade the character of the surrounding area given its compliance with the City's Multi-family objective design standards.

H-1.1 The proposed apartment community is a rental development that will help ensure a sufficient supply of properly planned land to meet the various housing needs identified in the City's Regional Housing Needs Allocation (RHNA) outlined in the Housing Element.

H-6.1 The proposed project will utilize energy conservation measures in that each enclosed garage space is conditioned to have an EV charging outlet for electric vehicles and will be designed to meet Cal-Green Building code standards.

B. The overall development of the land shall be designed to conform to the logical development of the land and to be compatible with the present and future logical development of the surrounding property.

Evidence: The proposed 150-unit apartment community site plan has been designed to conform to the logical development of the land and to be compatible with the present and future logical development of the surrounding property. The project site has had the MUPA land use designation since incorporation and the MU Overlay zoning since the 2013 Housing Element adoption. The proposed mixed-use project meets the intent of these two designations. Further, the project will also provide additional housing opportunities for employees of the retail center and surrounding area. Based on this, the proposed final site plan of development meets this finding.

C. The Plot Plan considers the location and need for dedication and improvement of necessary streets and sidewalks, including the avoidance of traffic congestion.

Evidence: The site design of the proposed residential apartment community considered the location and need for dedication and improvement of necessary streets and sidewalks, including the avoidance of traffic congestion in preparation of the plot plan. The site has been planned appropriately and the location and need for dedication and improvement of necessary streets and sidewalks, including the avoidance of traffic congestion has been addressed through conditions of approval requiring full street dedication and improvements. Wildomar Trial and Clinton Keith Road will be improved along the project boundary in accordance with Public Works street standards (including curb, gutter and sidewalks) to facilitate the safe off-site and on-site traffic flow generated by the project. Further, a detailed traffic impact analysis was prepared as part of the MND which was extensively analyzed by the City's traffic engineering team. The project will comply with all improvement measures identified in the approved Traffic Impact Analysis (TIA) and will include appropriate TDM mitigation as identified within the TIA to reduce Vehicle Miles Traveled (VMT) consistent with the intent of SB 743. Based on this, the proposed Plot Plan to develop the residential apartment community meets this finding.

D. The Plot Plan takes into consideration topographical and drainage conditions, including the need for dedication and improvements of necessary structures.

Evidence: The construction of the project has been designed and conditioned to comply with all applicable City ordinances, codes, and standards including, but not limited to, requirements relating to storm water runoff management and other drainage control regulations. The project drainage has been designed to accommodate a series of filtration and detention areas (within and around the drive aisles and parking areas) to capture storm runoff. Further the project was required to prepare a Hydrology/Hydraulic study and Preliminary Water Quality Management Plan as part of the MND which analyzed and addressed in detail all drainage impacts that could have resulted from this project. Based on this, the proposed final site plan of development meets this finding.

E. All plot plans which permit the construction of more than one structure on a single legally divided parcel shall, in addition to all other requirements, be subject to a condition which prohibits the sale of any existing or subsequently constructed structures on the parcel until the parcel is divided and a final map recorded in accordance with Title 16 (Subdivisions) in such a manner that each building is located on a separate legally divided parcel.

Evidence: The project does include a tentative parcel map (TPM No. 38333) to subdivide the 9.05-acre site into five (5) lots to accommodate the proposed Wildomar Crossroads mixed-use project. The tentative parcel map has been conditioned to be recorded prior to any occupancy of the project. Based on this, the proposed Wildomar Crossroads mixed-use project meets this finding.

SECTION 6. PLANNING COMMISSION ACTION:

Based on the foregoing findings, and on substantial evidence in the whole of the record, the Planning Commission hereby adopts PC Resolution No. 2022-28 approving Conditional Use Permit and Plot Plan No. 21-0145, subject to conditions of approval, as provided herein and attached hereto to this Resolution as Exhibit 1.

PASSED, APPROVED AND ADOPTED this 19th day of October, 2022 by the following vote:

AYES.

NOES:

Stephanie Gutierrez
Assistant City Attorney

ATTACHMENT C - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: CUP/Plot Plan/FSPOD No. 21-0145			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**

PLANNING DEPARTMENT CONDITIONS				
General / Standard Conditions (Applies to both the Commercial & Residential Portions of the Project)				
1.	In compliance with Section 15094 of the CEQA Guidelines, the Planning Department shall file a Notice of Determination (NOD) with the Riverside County Clerk within five (5) working days after CUP/Plot Plan No. 21-0145 is approved by the Planning Commission. The NOD notice shall include payment of the required California Department of Fish and Wildlife (Fish and Game Code Section 711.4.d.3) fee, and Riverside County Clerk administrative fee. Total fee amount shall be **$2,498.00** and shall be made payable to the "City of Wildomar" and submitted to the Planning Department at least 7 days prior to the October 19, 2022 Planning Commission (10/12/22). Failure to pay the required fee will result in the project being deemed null and void (California Fish and Game Code Section 711.4(c)).	October 26, 2022	Planning Department	
2.	The Applicant shall review, and sign below verifying the "Acceptance of the Conditions of Approval" for Tentative Parcel Map No. 38333 and submit the signed page to the Wildomar Planning Department within one (1) week of Planning Commission approval. Applicant Signature Date Applicant Signature Date	October 26, 2022	Planning Department	

3.	The Applicant shall indemnify, protect, defend, and hold harmless, the City of Wildomar, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, from any and all claims, demands, law suits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative or adjudicatory in nature), and alternative dispute resolutions procedures (including, but not limited to arbitrations, mediations, and other such procedures), (collectively "Actions"), brought against the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul, the any action of, or any permit or approval issued by, the City and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the City), for or concerning the Project, whether such Actions are brought under the California Environmental Quality Act, the Planning and Zoning Law, the Subdivision Map Act, Code of Civil Procedure Chapter 1085 or 1094.5, the California Public Records Act, or any other state, federal, or local statute, law, ordinance, rule, regulation, or any decision of a court of competent jurisdiction. City shall promptly notify the Applicant of any Action brought and request that Applicant defend the City. It is expressly agreed that Applicant may select legal counsel providing the Applicant's defense and the City shall have the right to approve separate legal counsel providing the City's defense. The Applicant shall reimburse City for any attorneys' fees, costs and expenses directly and necessarily incurred by the City in the course of the defense. Applicant agrees that City will forward monthly invoices to Applicant for attorneys' fees, costs and expenses it has incurred related to its defense of any Action and Applicant agrees to timely payment	Ongoing	Planning Department	

	within thirty (30) days of receipt of the invoice. Within fourteen (14) days of an Action being filed, Applicant agrees to post adequate security or a cash deposit with City in an amount to cover the City's estimated attorneys' fees, costs and expenses incurred by City in the course of the defense in order to ensure timely payment of the City's invoices. The amount of the security or cash deposit shall be determined by the City. City shall cooperate with Applicant in the defense of any Action.			
4.	Approval of *CUP/Plot Plan/FSPOD No. 21-0145* shall expire on October 19, 2025 (3 years after approval by the Planning Commission) if grading and/or building permits have not been issued and substantial construction work has commenced on the project site. The Applicant may apply in writing for an Extension of Time (EOT) for review and approval of the Planning Director in accordance with Section 17.216.070 of the Wildomar Municipal Code. Said extension of time application and required fee must be submitted to the Planning Department prior to the expiration date.	October 19, 2025	Planning Department	
5.	In accordance with Section 66020.d.1 of the Government Code, the Applicant has 90 days from project approval to file a protest of the imposition of fees, dedications, reservations, or other exactions being imposed on this project. Notice is hereby given to the Applicant that the 90-day appeal hereby begins with approval of this project.	January 19, 2023	Planning Department	
6.	Within 60 days of approval of *CUP/Plot Plan/FSPOD No. 21-0145* the Applicant shall pay any outstanding deposit account balances. Failure to pay the outstanding balance by the due date may result in delays in the submittal of final map, grading plans, improvement plans and/or building/construction plans.	December 19, 2022	Planning Department	

ATTACHMENT C - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: CUP/Plot Plan/FSPOD No. 21-0145			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
7. Applicant hereby understands and agrees that failure to comply with all Conditions of Approval may result in the City Council taking action resulting in a modification to the Conditions of Approval and/or suspension or revocation of the plot plan and/or conditional use permit.	On-Going	Planning Department	
8. The project shall be developed in accordance with the approved plot plan approved by the Planning Commission on October 19, 2022. The Applicant may request a modification/revision to the approved project, if needed, in accordance with Sections 17.228 of the Wildomar Municipal Code.	Ongoing	Planning Department	
9. The proposed Project shall comply with existing SCAQMD rules for the reduction of fugitive dust emissions in accordance with SCAQMD Rule 403.	On-Going	Planning Dept.	
10. All grading shall conform to the California Building Code and all other relevant laws, rules, and regulations governing grading in the City of Wildomar. Prior to commencing any grading which includes 50 or more cubic yards, the developer shall obtain a grading permit from the Building Dept.	On-Going	Planning & Engineering Depts.	
11. Erosion control-landscape plans, required for manufactured slopes greater than 3 feet in vertical height, are to be signed by a registered landscape architect and bonded (refer to dept. form 284-47). Planting shall occur within 30 days of meeting final grades to minimize erosion and to ensure slope coverage prior to the rainy season. The developer shall plant and irrigate all manufactured slopes steeper than a 4:1 (horizontal to vertical) ratio and 3 feet or greater in vertical height with grass or ground cover; slopes 15 feet or greater in vertical height shall be planted with additional shrubs or trees or as approved by the City Engineer.	On-Going	Planning & Engineering Depts.	

ATTACHMENT C - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: CUP/Plot Plan/FSPOD No. 21-0145			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
12. The Applicant is prohibited from using any sort of blasting device or activity during all grading and/or construction operations.	On-Going	Planning Department	
13. The proposed development approved by the Planning Commission shall comply with the standards and requirements of the City's Light Pollution Ordinance in accordance with Section 8.64 of the WMC.	On-Going	Planning Department	
14. As required by Chapter 8.56 of the WMC, subsequent development on the site will need to comply with the County of Riverside, Department of Environmental Health, Local Enforcement Agency (LEA) for all activities related to potential hazardous materials.	On-Going	Planning Department	
15. The Applicant shall provide EV charging stations throughout the parking lot at designated locations consistent with the plot plan and the requirements of the State Cal Green Building Code.	On-Going	Planning & Building Departments	
16. The Applicant shall be subject to, and comply with, the following four (4) state mandated codes/ordinances including all other applicable state & local codes/ordinances already in effect: • California Building Code, Chapter 7A; • California Residential Code, Chapter R327; • California Referenced Standards Code, Chapter 12-7A; and • California Fire Code, Chapter 49.	On-Going	Building & Fire Departments	
17. The proposed Project shall comply with the requirements of Chapter 9.48 of the WMC relating to noise.	On-Going	Planning Department	
18. As required by City of Wildomar Municipal Code Section 13.12.050, Regulatory Consistency, and the MS4 Permit from the San Diego Regional Water Quality Control Board, stormwater drainage improvements must be consistent and in accordance with these provisions.	On-Going	Public Works Department	

19.	As required by City of Wildomar Municipal Code Section 16.40.10, Installation Requirements, the project would comply with all applicable requirements for undergrounding utilities per this code section.	On-Going	Public Works Department	
20.	As required by City of Wildomar Municipal Code Section 8.104, Solid Waste Collection and Disposal, the generation, accumulation, handling, collection, transportation, conversion, and disposal of solid waste must be controlled and regulated through the provisions of this chapter.	On-Going	Public Works Department	
Initial Study/Mitigated Negative Declaration (IS/MND) Mitigation Measures (Applicable to Both Project Sites):				
Air Quality Resources				
21.	**AQ-1** During the site preparation phase, construction equipment greater than 150 horsepower (hp), the Construction Contractor shall ensure that off-road diesel construction equipment that complies with Environmental Protection Agency (EPA)/California Air Resources Board (CARB) Tier 3 emissions standards and shall ensure that all construction equipment is tuned and maintained in accordance with the manufacturer's specifications.	During site preparation	Planning Department & Public Works Department	
22.	**AQ-2** All actively graded (disturbed) areas within the project site during site preparation activities shall be watered at 2.1-hour watering intervals (e.g., 4 times per day) or a movable sprinkler system shall be in place to ensure minimum soil moisture of 12 percent in maintained for actively graded areas. Moisture content can be verified with use of a moisture probe by the grading contractor.	During site preparation	Planning Department & Public Works Department	

ATTACHMENT C - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: CUP/Plot Plan/FSPOD No. 21-0145			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
Biological Resources			
23. **BIO-1** The Project applicant/developer shall retain a qualified biologist to conduct a 30-day pre- construction survey for burrowing owls (BUOW). The results of the survey shall be submitted to the City of Wildomar prior to obtaining a grading permit. If BUOW are not detected during the pre-construction survey, no further mitigation is required. If BUOW are detected during the pre-construction survey, the project applicant shall relocate burrowing owls out of harm's way, in consultation with the CDFW. Notification to the CDFW shall occur if burrowing owls are found to be present onsite and the development of a conservation strategy in cooperation with the U/S/ Fish and Service, the CDFW, and the Western Riverside County Regional Conservation Authority (RCA) shall be conducted. The project applicant/developer and a qualified consulting biologist will be required to prepare and submit for approval a BUOW relocation program. The report shall be submitted to the applicant and the City of Wildomar concurrently.	Within 30 days prior to construction, Prior to issuance of grading permits	Planning Department & Public Works Department	
24. **BIO-2** Prior to vegetation clearance, the Project applicant/developer shall retain a qualified biologist to conduct a pre-disturbance nesting bird survey in accordance with the following: • The survey shall be conducted no more than three (3) days prior to the initiation of clearance/construction work; • If pre-disturbance surveys indicate that bird nests are not present or are inactive, or if potential habitat is unoccupied, no further mitigation is required; • If active nests of birds are found during the surveys, a species-specific no-disturbance buffer zone shall be established by a qualified biologist	Within three (3) days prior to the initiation of clearance/construction work	Planning Department & Public Works Department	

	around active nests until a qualified biologist determines that all young have fledged (i.e., no longer reliant upon the nest).			
Cultural Resources				
25.	**CUL-1** Human Remains. If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the Riverside County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant." The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98	During any ground-disturbing construction activities	Planning Department & Public Works Department	
Geology and Soils				
26.	**GEO-1** The project applicant/developer shall incorporate the recommendations of the Geotechnical Report prepared Leighton and Associates, Inc. (**Appendix 8)** into project plans related to the proposed project. The project's building plans shall demonstrate that they incorporate all applicable recommendations of the Geotechnical Report and comply with all applicable requirements of the latest adopted version of the California Building Code.	During building plan check, prior to any ground-disturbing construction activities	Planning Department and Building and Safety Department	

27.	**GEO-2** A paleontological grading observation schedule by a Certified Paleontologist shall be maintained when grading in bedrock units to further evaluate the fossil resources of the site. Salvage operations shall be initiated by the Certified Paleontologist and coordinated with the developer if other significant concentrations of fossils, as determined by the Certified Paleontologist, are encountered. Any paleontological resources shall be provided for curation at a local curation facility, or any other local museum or repository willing and able to accept and house the resource to preserve for future scientific study.	During ground-disturbing construction activities	Planning Department & Public Works Department	
Hazards and Hazardous Materials				
28.	**HAZ-1** Prior to the development of the site, representative sampling of the soil stockpiles shall be conducted. Soil samples shall be analyzed by a laboratory licensed with the Environmental Laboratory Accreditation Program [ELAP] for total petroleum hydrocarbon chains by EPA Method 8015M, Title 22 Metals by EPA Method 6010B/7471A, organochlorine pesticides by EPA Method 8081A, volatile organic compounds by EPA Method 8260B/5035 and polychlorinated biphenyls by EPA Method 8082. During stockpile testing, a soil sample shall be collected from the area where an orchard may have been located and tested for organochlorine pesticides to assess for residual pesticides. If the results of the soil testing show chemical levels are below EPA Region 9 or DTSC screening levels for residential land use, grading or excavation may proceed accordingly. Remediation and/or removal of contaminated soils shall be made prior to development, if chemical levels are above screening levels. Remediation shall be made in coordination with the local health department, SCAQMD, the California Department of Toxic Substances Control, the U. S. Environmental Protection Agency or other	Prior to site development	Wildomar Building Department, Riverside County Health Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency	

	regulatory agencies and in compliance with established residential screening levels.			
29.	**HAZ-2** After grading is completed, but before construction begins, the project Applicant/developer shall install soil gas probes with a 100-foot grid spacing in the footprints of the proposed structures, at depths of 5 feet below ground surface and 15 feet below ground surface at each location. Methane shall be tested from the probes with a properly calibrated hand-held device with a detection limit of no greater than 500 ppmv, or via a laboratory licensed with ELAP by ASTM Method 1946D, or a combination of the two. In addition, calibrated pressure gauges such as Magnehelic gauges or equivalent with a range of 0-10 inches of water pressure to a range of 0-100 inches of water pressure shall be used on each probe. If methane levels in probes are below 10 percent of the Lower Explosive Limit (10 percent LEL or 5,000 ppmv), the project could proceed without further action. For areas of the site that have methane concentrations at or exceeding 10 percent LEL or have pressures exceeding 3 inches of water, further testing shall be implemented to determine if a methane mitigation system is necessary. If additional weekly testing shows that methane concentrations consistently exceed 10 percent LEL or have pressures exceeding 3 inches of water over a period of 30 days and a plot of the resulting data does not show a downward trend in concentrations or pressures, then a methane mitigation system shall be incorporated into the building plans for the structures where the elevated concentrations and/or pressures were observed. If there is a downward trend but the concentrations are still above 10 percent LEL or have pressures above 3 inches of water, then additional testing past 30 days may be requested to determine if concentrations and pressures subside below the action levels.	Prior to site development	Wildomar Building Department, Riverside County Health Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency	

Planning Commission Date: October 19, 2022	CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date: October 19, 2025		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
30. **HAZ-3** Prior to the issuance of building permits, the project applicant/developer shall demonstrate, to the satisfaction of the City Building Official and the Riverside County Fire Chief, compliance with the 2019 California Building Code (or the most recent edition) (Part 2 of Title 24 of the California Code of Regulations) and the 2019 California Fire Code (or the most recent edition) (Part 9 of Title 24 of the California Code of Regulations), including those regulations pertaining to materials and construction methods intended to mitigate wildfire exposure as described in the 2019 California Building Code and California Residential Code (or most recent edition); specifically California Building Code Chapter 7A; California Residential Code Section R327; California Residential Code Section R337; California Referenced Standards Code Chapter 12-7A; and California Fire Code Chapter 49.	Prior to issuance of building permits	Building and Safety Department and Riverside County Fire Department	
31. **HAZ-4** Prior to the issuance of a certificate of occupancy, the applicant shall demonstrate, to the satisfaction of the City Building Official and the County Fire Chief, compliance with the vegetation management requirements prescribed in California Fire Code Section 4906 and California Government Code Section 51182.	Prior to issuance of certificate of occupancy	Building and Safety Department and Riverside County Fire Department	
Noise Measures			
32. **NOI-1** All noise producing project equipment and vehicles using internal combustion engines shall be equipped with mufflers and air-inlet silencers, where appropriate, in good operating condition that meet or exceed original factory specifications. Mobile or fixed "package" equipment (e.g., arc welders, air compressors) shall be equipped with shrouds and noise control features that are readily available for that type of equipment.	Prior to construction	Planning Department and Building and Safety Department	

ATTACHMENT C - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: CUP/Plot Plan/FSPOD No. 21-0145			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
Transportation			
33. **TRA-1** During final design, stage construction and detour plans will be prepared to minimize disruption to the traveling public. Such plans shall be prepared in consultation with affected local jurisdictions prior to construction. Adequate access shall be provided at all times to and from side streets serving adjacent land uses. To further ensure public safety, proper detours and warning signs shall be established. The stage construction and detour plans shall be designed to not interfere with any emergency response or evacuation plans, and construction routes shall utilize non-residential streets to the extent practicable. Finally, such plans shall identify construction worker parking areas and equipment staging areas to minimize impacts to roadway operations.	During final design	Planning Department & Public Works Department	
Tribal and Cultural Resources			
34. **TRI-1** Inadvertent Archeological Find. If during ground disturbance activities, cultural resources are discovered that were not assessed by the archaeological report(s) and/or environmental assessment conducted prior to project approval, the following procedures shall be followed. Cultural resources are defined, as being multiple artifacts in close association with each other, but also include fewer artifacts if the area of the find is determined to be of significance due to its sacred or cultural importance as determined in consultation with the lead agency and Native American Tribe(s) that elected to consult under AB 52 ("Consulting Tribe(s")). a. All ground disturbance activities within 100 feet of the discovered cultural resources shall be halted until a meeting is convened between the developer, the archaeologist, the tribal representative(s) and the Planning Director to discuss the significance of the find.	During any ground-disturbing or construction activities	Planning Department & Public Works Department	

	b. At the meeting, the significance of the discoveries shall be discussed and after consultation with the tribal representative(s), developer, and the archaeologist, a decision shall be made, with the concurrence of the Planning Director, as to the appropriate mitigation (documentation, recovery, avoidance, etc.) for the cultural resources. c. Grading or further ground disturbance shall not resume within the area of the discovery until an agreement has been reached by all parties as to the appropriate mitigation. Work shall be allowed to continue outside of the buffer area and will be monitored by additional Tribal monitors if needed. d. Treatment and avoidance of the newly discovered resources shall be consistent with the Treatment and Monitoring Agreements entered into with the Consulting Tribe(s) and the applicant. This may include avoidance of the cultural resources through project design, in-place preservation of cultural resources located in native soils and/or re-burial on the Project property so they are not subject to further disturbance in perpetuity as identified in Mitigation Measures TRI-2 and TRI-7. e. If the find is determined to be significant and avoidance of the site has not been achieved, a Phase III data recovery plan (see Mitigation Measure TRI-6) shall be prepared by the project archeologist, in consultation with the Consulting Tribe(s), and shall be submitted to the City for their review and approval prior to implementation of the said plan. f. Pursuant to Calif. Pub. Res. Code § 21083.2(b) avoidance is the preferred method of preservation for archaeological resources and tribal cultural resources. If the landowner and the Consulting Tribe(s) cannot agree on the significance or the mitigation for the archaeological or tribal cultural resources, these issues will be presented to the Planning Director for decision. The City's Planning Director shall make the			

	determination based on the provisions of the California Environmental Quality Act with respect to archaeological and tribal cultural resources, recommendations of the project archeologist, and shall take into account the cultural and religious principles and practices of the Consulting Tribe(s). Notwithstanding any other rights available under the law, the decision of the City Planning Director shall be appealable to the City Planning Commission and/or City Council.			
35.	**TRI-2** Cultural Resources Disposition. In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries: a. One or more of the following treatments, in order of preference, shall be employed with the Consulting Tribe(s). Evidence of such shall be provided to the City of Wildomar Planning Department: i. Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place where they were found with no development affecting the integrity of the resources. ii. Reburial of the resources on the Project property. The measures for reburial shall include, at least, the following: Measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed, with an exception that sacred items, burial goods and Native American human remains are excluded. Any reburial process shall be culturally appropriate. Listing of contents and location of the reburial shall be included in the confidential Phase IV report (see Mitigation Measure	During grading activities	Planning Department & Public Works Department	

	TRI- 6). The Phase IV Report shall be filed with the City under a confidential cover and not subject to Public Records Request. iii. If preservation in place or reburial is not feasible then the resources shall be curated in a culturally appropriate manner at a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees by the Applicant necessary for permanent curation. Evidence of curation in the form of a letter from the curation facility stating that subject archaeological materials have been received and that all fees have been paid, shall be provided by the landowner to the City. There shall be no destructive or invasive testing on sacred items, burial goods, and Native American human remains, as defined by the cultural and religious practices of the Most Likely Descendant. Results concerning finds of any inadvertent discoveries shall be included in the Phase IV monitoring report.			
36.	**TRI-3** Archaeologist Retained. Prior to issuance of a grading permit the project applicant shall retain a Riverside County qualified Registered Professional Archaeologist (RPA), to monitor all ground disturbing activities in an effort to identify any unknown archaeological resources. The Registered Professional Archaeologist and the Tribal monitor(s) required by Mitigation Measures TRI-4 and TRI-5 shall manage and oversee monitoring for all initial ground disturbing activities and excavation of each portion of the project site including clearing, grubbing, tree removals, mass or rough grading, trenching, stockpiling of materials, rock crushing, structure demolition and etc.	Prior to issuance of grading permit	Planning Department & Public Works Department	

	The Registered Professional Archaeologist and the Tribal monitor(s), shall independently have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources in coordination with any required special interest or tribal monitors. The developer/permit holder shall submit a fully executed copy of the contract to the Planning Department to ensure compliance with this condition of approval. Upon verification, the Planning Department shall clear this condition. In addition, the Registered Professional Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB 52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB 52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include: Project grading and development scheduling; The Project archaeologist and the Consulting Tribes(s) shall attend the pre- grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent			

	discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis; The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.			
37.	**TRI-4 Native American Monitoring (Pechanga).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Pechanga Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist.	During ground-disturbing activities	Planning Department & Public Works Department	

38.	**TRI-5 Native American Monitoring (Soboba).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Soboba Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist.	During ground-disturbing activities	Planning Department & Public Works Department	
39.	**TRI-6 Archeology Report** – Phase III and IV. Prior to final inspection, the developer/permit holder shall prompt the Project Archeologist to submit two (2) copies of the Phase III Data Recovery report (if required for the Project) and the Phase IV Cultural Resources Monitoring Report. The Phase IV report shall include evidence of the required cultural/historical sensitivity training for the construction staff held during the pre-grade meeting. The Planning Department shall review the reports to determine adequate mitigation compliance. Provided the reports are adequate, the Community Development Department shall clear this condition. Once the report(s) are determined to be adequate, two (2) copies shall be submitted to the Eastern Information Center (EIC) at the University of California Riverside (UCR) and one (1) copy shall be submitted to the Consulting Tribe(s) Cultural Resources Department(s).	Prior to final inspection	Planning Department & Public Works Department	

40.	**TRI-7 Non-Disclosure of Reburial Locations**. It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, pursuant to the specific exemption set forth in California Government Code 6254 l., parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).	During discovery of Native American human remains	Planning Department & Public Works Department	
Project Specific CUP/Plot Plan No. 21-0145 Conditions (Appliable to the Commercial/Retail Site)				
Prior to the Issuance of Grading Permits				
41.	Prior to the issuance of any grading permit, the Project applicant shall comply with all of the provisions of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), including payment of the MSHCP Local Development Mitigation Fee and Best Management Practices (specifically Appendix C, Standard Best Management Practices, of the MSHCP).	Prior to Issuance of Grading Permits	Planning Department	
42.	Prior to the issuance of the 1st grading permit on the property, the applicant shall submit a haul permit for any import of material to the site or export of material off-site for review and approval by the City Engineer and Planning Director. The request for a haul permit shall include a haul route plan addressing the limitations of haul hours, number of loads per day and the posting of traffic control personnel at all approved entrances/exits onto public roads. This haul permit shall be in place prior to the issuance of the grading permit and the mobilization of equipment on the project site. If the proposed material source or disposal site does not have an approved environmental	Prior to Issuance of a Grading Permit	Planning & Engineering Depts.	

	assessment, a grading environmental assessment shall be submitted for review and approval by the Planning Director prior to the issuance of the haul permit.			
43.	The grading plan shall include the following information in the Notes Section of the Grading Plan: "No grubbing/clearing of the site shall occur prior to scheduling the pre-grading meeting with Engineering. All project sites containing suitable habitat for burrowing owls, whether owls were found or not, require a 30-day preconstruction survey that shall be conducted within 30 days prior to ground disturbance to avoid direct take of burrowing owls. If the results of the survey indicate that no burrowing owls are present on-site, then the project may move forward with grading, upon Planning Department approval. If burrowing owls are found to be present or nesting on-site during the preconstruction survey, then the following recommendations must be adhered to: Exclusion and relocation activities may not occur during the breeding season, which is defined as March 1 through August 31, with the following exception: From March 1 through March 15 and from August 1 through August 31 exclusion and relocation activities may take place if it is proven to the City and appropriate regulatory agencies (if any) that egg laying or chick rearing is not taking place. This determination must be made by a qualified biologist."	Prior to Issuance of a Grading Permit	Planning & Engineering Depts.	
44.	The grading plan shall include the following information in the Notes Section of the Grading Plan: "If at any time during excavation/construction of the site, archaeological/cultural resources, or any artifacts or other objects which reasonably appears to be evidence of cultural or archaeological resource are discovered, the property owner shall immediately advise the City of such and the City	Prior to Issuance of a Grading Permit	Planning & Engineering Depts.	

	shall cause all further excavation or other disturbance of the affected area to immediately cease. The Planning Director at his/her sole discretion may require the property owner to deposit a sum of money it deems reasonably necessary to allow the City to consult and/or authorize an independent, fully qualified specialist to inspect the site at no cost to the City, in order to assess the significance of the find. Upon determining that the discovery is not an archaeological/cultural resource, the Planning Director shall notify the property owner of such determination and shall authorize the resumption of work. Upon determining that the discovery is an archaeological/cultural resource, the Planning Director shall notify the property owner that no further excavation or development may take place until a mitigation plan or other corrective measures have been approved by the Planning Director.			
45.	Concurrent with the submittal of grading plans, the applicant shall submit one (1) set of detailed/complete landscape and irrigation construction drawings to the Planning Department prepared by a licensed Landscape Architect including on-site and public right-of-way and a fence/wall plan for review and approval by the Planning Department. Said landscape and irrigation plans shall be prepared by a licensed Landscape Architect and shall comply with all requirements of the City's Landscape Design Standards and Guidelines. The landscape plans shall include the following: a) Landscape plans shall be drawn at a scale of 20 feet equal to 1 foot or larger. b) No light fixture shall be designed for any location in a planting area, which would make it necessary to eliminate a tree. All overhead	Concurrent with the submittal of grading plans	Planning and Landscape Depts.	

	light fixtures and utilities shall be identified on the grading and site plan prior to approval of the grading and site plans. c) All above ground utilities shall be shown on the precise grading plans in their exact locations. Building and landscape backflow prevention units and transformers shall be located in shrub areas. Double detector checks shall be fully screened from view. The detector check/backflow device shall be painted a neutral/earth tone color and any pipes extending above ground shall be finished and painted to match the device. The detector check and post indicator shall be set back at least 10 feet away from the driveway or sidewalk in a shrub area. Transformers shall be screened with 5 feet of landscaping outside the required setback (18 inches on sides and 8 feet at the front doors). d) All ground covers shall be installed from living plant materials. Spacing shall be such that 100% coverage is achieved within 1 year of the installation. e) All parking lot planter areas shall be a minimum of 5 feet wide excluding curbs, walkways and required concrete strip adjacent to parking spaces (6" curb with a 12" wide by 4" deep reinforced concrete strip adjacent). A detail shall be drawn on the civil engineer's plan to illustrate this application in all relevant locations. f) All plants within the detention basin shall be California native. The trees shall include *Quercus agrifolia* (coast live oak) and *Platanus racemosa* (sycamore). The shrubs shall include *Heteromeles arbutifolia* (toyon) or as approved by the City Landscape Architect per the project landscape plans. g) All planting areas damaged during construction shall be replaced at the direction of the City Landscape Architect.			

	h) The irrigation controller shall be a weather-based controller that measures evapo-transpiration. A rain shut-off device is required. Drip irrigation is required in all planting areas. i) All soil amendments and fertilizers shall be organic as a storm-water best management practice. Soil analysis and agronomic soil report shall be submitted to the City with the landscape plans, including the following: soil texture, percentage of organic matter, soil infiltration rate (measured or derived from soil texture/infiltration rate tables), pH and total soluble salts, macro-nutrients, micro-nutrients, recommendations for organic fertilizers and amendments. j) No plant materials that could freeze, damage paving, or have thorns are allowed. k) Prior to construction, the job site superintendent and the landscape contractor shall meet with the City's Landscape Architect and Planning Department representative shall meet for a pre-job meeting. No landscaping shall occur prior to the meeting. l) Erosion control-landscape plans, required for manufactured slopes greater than 3 feet in vertical height, are to be signed by a registered landscape architect and bonded per the requirements of Ordinance 457. m) Planting shall occur within 30 days of meeting final grades to minimize erosion and to ensure slope coverage prior to the rainy season. n) The developer shall plant and irrigate all manufactured slopes steeper than a 4:1 (horizontal to vertical) ratio and 3 feet or greater in vertical height with grass or ground cover; slopes 15 feet or			

	greater in vertical height shall be planted with additional shrubs or trees or as approved by the City Engineer. o) Several buildings have undersized landscape planters. The plant material for these areas will be further evaluated during the review of construction drawings. Carefully select plant material that will naturally grow within the restricted planter widths. Do not propose shrubs that will require continuous trimming to control width or height. p) Water quality basin bottom is typically planted with material from containers, 4" pots, or plugs. Hydroseed is not preferred. This allowance shall be further evaluated with landscape construction drawings.			
46.	The landscape plans shall further include the following items: • Slope planting shall achieve full coverage and consist of permanent ground cover adequately planted with shrubs and/or trees to the satisfaction of the Planning Director. Plant material and mulch shall be suitable for slope conditions and prevention of surface erosion. • Stormwater basin slopes shall be planted with spreading, stabilizing ground covers and shrub groupings from containers. • Stormwater basin bottom shall be planted with species suitable for both wet and dry conditions. Basin bottom shall be planted with the plant material from containers, 4" pots, or plugs. Hydroseed is not preferred, and the allowance shall be further evaluated with landscape construction drawings. • Provide a fuel modification plan in compliance with the Fire Department's requirements. All planting shall be designed using	Prior to Issuance of Grading Permits	Planning and Landscape Depts.	

	approved fire resistive plants, review and modify preliminary plant list to comply. • Fire apparatus access roads shall be illustrated and noted on landscape plan. Trees are to be located so that mature canopies do not encroach into the access road. Remove any tree in conflict with this restriction. • Shift tree canopies out of fire lane - typical review entirety of fire lane in both residential and commercial and adjust tree spacing as needed to be clear of fire lane. • Trees are to be located so that the mature canopies do not encroach into the fire access road clear zone of 28 feet wide and 13.5 feet high. Remove any tree in conflict with this restriction. Preliminary landscape plan to be modified to comply. • If required by the Fire Department, provide a fuel modification plan in compliance with the Fire Department's requirements. • Mature specimen trees in thirty-six inch or forty-eight inch boxes shall be provided for large projects in sufficient quantity to provide variety and emphasis at main focal areas. Quantity and locations are subject to the review and approval of the director. • Perimeter landscape design shall coordinate with surrounding properties. Select street trees to match adjacent existing or approved species. Shrub and ground cover selections are to match or compliment adjacent developments. • Provide enhanced corner planting using specimen trees and accent shrubs that do not conflict with vehicular line of sight. Limit shrubs to a maximum of 30" natural height.			

	• Avoid plants that require cutting back to keep them within a specific area or at a trimmed height. Carefully select and locate plants where they will be allowed to grow to maturity and keep their natural shape. • Plant materials within vehicular line of sight impact areas are to be limited to a maximum of 30" natural height. Impact areas include but are not limited to project entries, drive aisles, and parking lot island planters. • Planting design and materials utilized within any biofiltration, or detention basin areas shall be suitable for both dry and wet conditions and provide slope stabilization where necessary. Planting design and materials are subject to the review and approval of the City's Landscape Architect. Hydroseed is not preferred. • All areas of the project site shall be landscaped. Provide temporary landscape for vacant pad areas, an ornamental low growing native hydroseed mix may be acceptable. • Linear root barriers shall be installed for all trees located within 5 feet of paving and within 10 feet of city sidewalks. • Above ground utilities shall be located in shrub areas and screened as required from public view. • Utilities and light standard locations shall be coordinated with Owner's engineering team to avoid conflicts with required tree locations and utility screening.			

ATTACHMENT C - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: CUP/Plot Plan/FSPOD No. 21-0145			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**

Prior to Issuance of Building Permits				
47.	Prior to the issuance of the 1st building permit, the Applicant shall submit a comprehensive sign program for Planning Department approval. The sign program shall be consistent with all applicable provisions of Section 17.252 (Sign Regulations) of the Wildomar Municipal Code.	Prior to Issuance of Building Permits	Planning Department	
48.	Prior to the issuance of a building permit, the applicant shall comply with Building Department requirements in obtaining all necessary permits to construct said structures, including submittal of plans for all signs to be constructed as part of this project.	Prior to Issuance of a Building Permit	Planning Department	
49.	Prior to issuance of building permits, the Applicant shall submit a detailed/final photometric analysis for review and approval by the Planning and Building departments. The proposed development approved by the Planning Commission shall comply with the standards and requirements of the City's Light Pollution Ordinance in accordance with Chapter 8.64 of the Wildomar Municipal Code.	Prior to Issuance of Building Permits	Planning Department	
50.	Prior to the issuance of the building permits, the applicant shall pay all applicable and current Development Impact Fees and City Mitigation Fees as determined by the Building and Engineering departments, including but not limited to, regional fees such TUMF, MSHCP, K-Rat fees, School Fees, etc. in accordance with the timing outlined in Title 3 of the WMC.	Prior to Issuance of Building Permits	Planning & Building Departments	
51.	Prior to the issuance of the building permits, the applicant shall submit for review and approval by the Planning Department a final exterior lighting/security lighting plan/photometric survey. Said lighting plan	Prior to Issuance of Building Permits	Planning & Building Departments	

	shall comply with all applicable provisions of Section 8.64 (Light Pollution Ordinance) of the WMC.			
Prior to Issuance of a Certificate of Occupancy				
52.	Prior to the issuance of occupancy permits, the following conditions shall be satisfied: • Prior to occupancy permits for each planning area, the landscape improvements outlined above shall be completed. • Performance securities, in the amount determined by the City Landscape Architect and Planning Director, shall be provided to guarantee the adequate maintenance of the landscaping materials and irrigation system in accordance with the approved plans for a period of one (1) year from the date of final clearance of the installed landscaping by the City. Acceptable forms of security shall be limited to cash deposit, cash bonds, or irrevocable letters of credit. The performance securities shall be released one (1) year after final clearance of the installed landscaping by the City, upon written request by the owner, if the landscaping has been adequately maintained in accordance with the approved landscape plans. A deposit to cover re-inspection of the landscape, at the current City rate shall be posted with the Planning Department prior to re-inspection for maintenance bond release. • The project landscape contractor shall provide the City with the Landscape Installation Certification of Completion stating that the landscaping was installed per the approved plans. The City will review the Certificate and conduct inspections to ensure that the landscape installation is in compliance with the approved landscape plans.	Prior to the Issuance of Occupancy Permits	Planning Dept.	

53.	Prior to the issuance of the final Certificate of Occupancy permit, all required onsite landscape planting and irrigation improvements for the planning area shall have been installed and fully operational consistent with the approved construction plans. The plants shall be healthy and free of weeds, disease, or pests. The irrigation system shall be properly constructed and in good working order. The Applicant shall contact the Planning Department to schedule the final inspection(s).	Prior to the Issuance of Occupancy Permits	Planning Dept.	
54.	Prior to the Issuance of the final Certificate of Occupancy permit, all Planning Department conditions listed herein shall be completed to the satisfaction of the Planning Department.	Prior to final Certificate of Occupancy	Planning Dept.	
55.	Prior to the Issuance of the final Certificate of Occupancy permit, all Riverside County Fire Department conditions shall be complied with and cleared by the Fire Department. The Applicant shall provide written verification from County Fire that all applicable conditions have been met.	Prior to final Certificate of Occupancy	Planning Dept.	
Project Specific CUP Conditions for Alcohol Sales at the Grocery Store				
56.	Prior to an employee selling alcohol from the grocery store, the store owner shall ensure that employees have received Licensee Education on Alcohol and Drugs (L.E.AD.) training from the California Department of Alcoholic Beverage Control.	On-Going	Planning Department	
57.	Prior to the issuance of occupancy permits for the grocery store, the store owner shall obtain a Type 20 License from the State Department of Alcohol Beverage Control (ABC). A copy of said license shall be submitted to the Planning Department prior to occupancy of the building.	Prior to the issuance of occupancy permits	Planning Department

	Planting design and materials are subject to the review and approval of the City's Landscape Architect. Hydroseed is not preferred. • All areas of the project site shall be landscaped. Provide temporary landscape for vacant pad areas, an ornamental low growing native hydroseed mix may be acceptable. • Linear root barriers shall be installed for all trees located within 5 feet of paving and within 10 feet of city sidewalks. • Above ground utilities shall be located in shrub areas and screened as required from public view. • Utilities and light standard locations shall be coordinated with Owner's engineering team to avoid conflicts with required tree locations and utility screening.			
Prior to Issuance of Building Permits				
64.	Prior to the issuance of the 1st building permit, the Applicant shall submit a comprehensive sign program for Planning Department approval. The sign program shall be consistent with all applicable provisions of Section 17.252 (Sign Regulations) of the Wildomar Municipal Code.	Prior to Issuance of Building Permits	Planning Department	
65.	Prior to the issuance of a building permit, the applicant shall comply with Building Department requirements in obtaining all necessary permits to construct said structures, including submittal of plans for all signs to be constructed as part of this project.	Prior to Issuance of a Building Permit	Planning Department	
66.	Prior to issuance of building permits, the Applicant shall submit a detailed/final photometric analysis for review and approval by the Planning and Building departments. The proposed development approved by the Planning Commission shall comply with the standards	Prior to Issuance of Building Permits	Planning Department	

	and requirements of the City's Light Pollution Ordinance in accordance with Chapter 8.64 of the Wildomar Municipal Code.			
67.	Prior to the issuance of the building permits, the applicant shall pay all applicable and current Development Impact Fees and City Mitigation Fees as determined by the Building and Engineering departments, including but not limited to, regional fees such TUMF, MSHCP, K-Rat fees, School Fees, etc. in accordance with the timing outlined in Title 3 of the WMC.	Prior to Issuance of Building Permits	Planning & Building Departments	
68.	Prior to the issuance of the building permits, the applicant shall submit for review and approval by the Planning Department a final exterior lighting/security lighting plan/photometric survey. Said lighting plan shall comply with all applicable provisions of Section 8.64 (Light Pollution Ordinance) of the WMC.	Prior to Issuance of Building Permits	Planning & Building Departments	
Prior to Issuance of a Certificate of Occupancy				
69.	Prior to the issuance of occupancy permits, the following conditions shall be satisfied: • Performance securities, in the amount determined by the City Landscape Architect and Planning Director, shall be provided to guarantee the adequate maintenance of the landscaping materials and irrigation system in accordance with the approved plans for a period of one (1) year from the date of final clearance of the installed landscaping by the City. Acceptable forms of security shall be limited to cash deposit, cash bonds, or irrevocable letters of credit. The performance securities shall be released one (1) year after final clearance of the installed landscaping by the City, upon written request by the owner, if the landscaping has been adequately maintained in accordance with the approved landscape plans. A	Prior to the Issuance of Occupancy Permits	Planning Dept.	

	deposit to cover re-inspection of the landscape, at the current City rate shall be posted with the Planning Department prior to re-inspection for maintenance bond release. The project landscape contractor shall provide the City with the Landscape Installation Certification of Completion stating that the landscaping was installed per the approved plans. The City will review the Certificate and conduct inspections to ensure that the landscape installation is in compliance with the approved landscape plans.			
70.	Prior to the issuance of the final Certificate of Occupancy permit, all required onsite landscape planting and irrigation improvements for the planning area shall have been installed and fully operational consistent with the approved construction plans. The plants shall be healthy and free of weeds, disease, or pests. The irrigation system shall be properly constructed and in good working order. The Applicant shall contact the Planning Department to schedule the final inspection(s).	Prior to the Issuance of Occupancy Permits	Planning Dept.	
71.	Prior to the Issuance of the final Certificate of Occupancy permit, all Planning Department conditions listed herein shall be completed to the satisfaction of the Planning Department.	Prior to final Certificate of Occupancy	Planning Dept.	
72.	Prior to the Issuance of the final Certificate of Occupancy permit, all Riverside County Fire Department conditions shall be complied with and cleared by the Fire Department. The Applicant shall provide written verification from County Fire that all applicable conditions have been met.	Prior to final Certificate of Occupancy	Planning Dept.

Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
1. The developer shall obtain City approval for any modifications or revisions to the approval of this project in accordance with State law (Gov. Code 65913.4). Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.	On-Going	Engineering	
2. The developer shall comply with the State of California Subdivision Map Act and all City ordinances and resolutions.	On-Going	Engineering	
3. No grading shall be performed without the prior issuance of a grading permit by the City.	On-Going	Engineering	
4. Written permission shall be obtained from the affected property owners allowing the proposed grading and/or facilities to be installed outside of the project boundaries.	On-Going	Engineering	
5. All grading shall conform to the California Building Code, including Appendix J, and all other relevant and applicable laws, rules, and regulations governing grading in the City of Wildomar. Prior to commencing any grading which includes 50 or more cubic yards, the developer shall obtain a grading permit from PW/Engineering.	On-Going	Engineering	
6. All necessary measures to control dust shall be implemented by the developer during grading to the satisfaction of the City Engineer. A PM10 plan may be required at the time a grading permit is issued.	On-Going	Engineering	
7. Graded slopes shall be limited to a maximum steepness ratio of 2:1 (horizontal to vertical) unless otherwise approved by the City Engineer.	On-Going	Engineering	
8. Grading in excess of 199 cubic yards will require performance security to be posted with the City.	On-Going	Engineering	

9.	All retaining walls shall require a separate permit from the Building Department. The retaining wall calculations shall address earth and hydrostatic loads associated with the water basins. The footings along the westerly property line must be designed in a manner that additional loads are not placed on the existing structure to the west.	On-Going	Engineering	
10.	The developer/owner or contractor shall apply for an Encroachment Permit for work performed within the public right of way. Compliance with current environmental regulations applies and additional studies and/or permits may be required to the extent applicable under State law (Gov. Code 65913.4).	On-Going	Public Works	
11.	The developer's contractor is required to submit for a haul route permit for the hauling of material to and from the project site. Said permit will include limitations of haul hours, number of loads per day and the posting of traffic control personnel at all approved entrances/exits onto public roads. Hauled material shall be to/from an environmentally approved site.	On-Going	Public Works	
12.	Storm water and non-storm water discharges from the project site shall be mitigated in conformance with the Regional Water Quality Control Board permit(s) and/or site specific SWPPP prior to entering into the MS4s including, but not limited to, storm drains, streets, channels, etc.	On-Going	Engineering	
13.	For commercial/industrial projects, the developer/applicant shall submit a Business Registration application to the City for approval. The business shall be required to pay a fee to the City with the Business Registration for Stormwater Compliance Inspections that are required by the City's NPDES Permit. The requirement for stormwater compliance inspections is recurring for the duration of the development, unless otherwise approved. The developer/applicant shall also submit	On-Going	Engineering	

	to the City, prior to Certificate of Occupancy, a document that includes the Business' Statement of Operations and a summary of the business' best management practices for stormwater pollution prevention.			
14.	The developer/applicant shall provide all tenants/employees/homeowners with educational materials regarding Best Management Practices for Stormwater Pollution Prevention. Educational materials are available on the Riverside County Flood Control and Water Conservation District's website.	On-Going	Engineering	
15.	The developer/owner/tenant shall comply with all applicable laws and regulations regarding the proper disposal of waste materials generated from the business.	On-Going	Engineering	
16.	The Developer shall dedicate, design and construct all improvements in accordance with the City of Wildomar Road Improvement Standards & Specification, Improvement Plan Check Policies and Guidelines, as further conditioned herein and to the satisfaction of the City Engineer. In the absence of a subdivision map, rights-of-way and easements shall be dedicated by separate instrument.	On-Going	Engineering	
17.	Erosion control – landscape plans, required for manufactured slopes greater than 3 feet in vertical height, are to be signed by a registered landscape architect and bonded. The soils engineer shall review the erosion control plans for conformance with the Geotechnical Report's Findings and Recommendations. Erosion control shall be placed within 30 days of meeting final grades to minimize erosion and to ensure slope coverage prior to the rainy season. The Developer shall plant & irrigate all manufactured slopes steeper than a 4:1 (horizontal to vertical) ratio and 3 feet or greater in vertical height with soil stabilizers and ground cover; slopes 15 feet or greater in vertical height shall be planted with	On-Going	Engineering	

	additional shrubs or trees or as approved by the City Engineer and City Planner. Protection of Rough graded slopes will be based on the approved BMP's as depicted in the approved Storm Water Pollution Prevention Plan.			
18.	The landscape plans of all parkway and Landscape Maintenance/ Community Facilities District (CFD) lots shall be prepared by a licensed Landscape Architect and shall be submitted to the City for review and approval.	On-Going	Engineering	
19.	Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred or covered under the City's Community Facility District (CFD Services).	On-Going	Engineering	
20.	The developer shall annex into the City's Community Facility District (CFD Services) and pay associated costs for annexation. Should this project lie within any assessment/benefit district that duplicates the services to be covered under CFD Services then the developer shall de-annex from said assessment/benefit district.	Prior to First Building permit issuance	Engineering	
21.	The developer shall design and construct all driveways in accordance with the applicable City of Wildomar Improvement Standards.	On-Going	Engineering	
22.	The improvement plans for the required public improvements must be prepared and shall be based upon a design profile extending a minimum of 300 feet beyond the project boundaries at a grade and alignment as approved by the City Engineer.	On-Going	Engineering	
23.	Above-ground utilities shall be undergrounded by the developer in accordance with City of Wildomar Municipal Code 16.04.010. The	On-Going	Engineering	

	undergrounding of utilities shall be reflected on the project improvement plans. A non-interference letter from Southern California Edison (SCE), shall be submitted for the proposed development.			
24.	Improvement Plans for underground utilities (eg. Water, sewer, electrical, telecommunications, etc.) to be placed in public right of way or easement that will be owned and maintained by other entities shall be reviewed by the City. The City shall have a place on the Title Sheet to accept the plans with a statement "The city's acceptance is limited to the placement of utilities relative to public infrastructure clearances, uses and future plans within the right of way." The plans shall be attached to a city Encroachment Permit.	On-Going	Engineering	
25.	All flood control plans to be reviewed by the City or the Riverside County Flood Control District (RCFCD) shall be submitted through the City of Wildomar, unless otherwise directed by the City Engineer. For projects requiring RCFCD review the developer shall pay the appropriate fees to RCFCD.	On-Going	Engineering	
26.	Prior to approval of improvement plans, the improvement plans shall show all the streets to be improved consistent with Condition 61. At the discretion of the applicant, the existing pavement may be cored to confirm adequate section and R values during the design process and any findings shall be incorporated into the project design. Therefore, improvements may include full pavement reconstruction, grind and overlay, or slurry seal. All striping shall be replaced in kind.	Prior to Improvement Plan Approval	Engineering	
27.	Prior to improvement plans approval, the applicant shall ensure that all water meters, fire hydrants or other water appurtenances shall not be located within a drive aisle or path of travel.	Prior to Improvement Plan Approval	Engineering	

28.	Clinton Keith Road is currently paved to its ultimate as a Primary Arterial 6-lane (128' ROW), however, the project may submit an in-lieu fee for the portion lying along its project frontage, in coordination with the percentage identified in the approved Traffic Impact Analysis and associated MND. Catt Road plans shall be submitted and approved for construction to its ultimate classification as a Local Road. The plans shall include construction of applicable curb, gutter and sidewalk improvements along its frontage. The ultimate modified design shall be coordinated with the City Engineering Division and subject to the satisfaction of the City Engineer. Arya Road plans shall be submitted and approved for construction to its ultimate classification as a Local Road, and as identified to support the proposed project per the approved TIA and subject to the satisfaction of the City Engineer. The project shall submit plans to construct Wildomar Trail along its project frontage, at its ultimate half-section width classification as a Collector (74-foot right-of-way) in compliance with applicable City of Wildomar and Caltrans standards. Plans shall be approved subject to the satisfaction of the City Engineer. Wildomar Trl/Clinton Keith Rd: Plans shall be submitted and approved for Construction of improvements as per approved CIP at this intersection. Improvements include the addition of WBT receiving lane at project frontage and the modification of WBR to WBTR. Signal modifications include changing SBL and NBL signal permissive phasing to protected permissive and overlapping SBR. In the event the	Prior to Improvement Plan Approval	Engineering	

	CIP improvements are constructed before the project is constructed, the project would contribute fair-share to improvements at this intersection, as identified in the approved TIA. Plans shall be coordinated with the CIP and shall be subject to the satisfaction of the City Engineer. Inland Valley Dr/Clinton Keith Rd: Project would calculate and contribute fair-share to the CIP at this intersection which improves the intersection to a 4-lane intersection. Improvements include addition of WBT lane and EBT receiving lane. The fair-share shall be calculated to the satisfaction of the City Engineer. Palomar Rd/Clinton Keith Rd: Project would calculate and contribute a fair-share to intersection improvements as per approved CIP at this intersection. Improvements as per CIP include addition of 2nd EBL, modification of EBR to EBTR. Modification of WBT to WBTR. Modification on NBTR to NBT, addition of NBR and addition of 2nd SBL. The project's fair-share contributions would be limited to the 2nd SBL improvement on Clinton Keith Rd which would include widening the road to shift the SBR further northwest along with any associated improvements or costs necessary to accomplish such improvement consistent with the approved TIA and subject to the satisfaction of the City Engineer. Arya Rd/Clinton Keith Rd: Plans shall be submitted and approved for construction of improvements or provide fair-share contribution as identified in the approved TIA and subject to the satisfaction of the City Engineer. Improvements include northbound striping to provide dedicated NBL and NBTR, dedicated SBL and SBTR. Signal			

	modifications include changing NB-SB permissive phasing to protective permissive phasing along with associated improvements necessary to accomplish the lane configuration, road widening and signal operation discussed above. These improvements would include widening of Arya Rd to 4 lanes. Wildomar Trl/Proj Dwy 4: Plans shall be submitted and approved for construction of improvements as a project design feature to add Two Stage Gap Acceptance for EBL approach from Project Dwy consistent with the striping concept included in the approved TIA and subject to the satisfaction of the City Engineer. Sight distance at each project access point shall be reviewed with respect to standard Caltrans and City of Wildomar sight distance standards at the time of preparation of final grading, landscape, and street improvement plans. On-site traffic signing and striping plan shall be submitted and approvedin conjunction with detailed construction plans for the project site subject to the satisfaction of the City Engineer. All public improvement plans shall include adequate transitions beyond the project boundary to 300', at the discretion of the City Engineer. Project applicant shall pay all fair-share contributions and provide plans for approval necessary to implement all improvements as discussed in the approved TIA subject to the satisfaction of the City Engineer.			
Prior to the Issuance of Grading Permits				

29.	The developer shall submit a geotechnical/soils reports to the City Engineer for review and approval prior to issuance of grading permit. The findings and recommendations shall reflect current conditions and the report shall be no older than one (1) year. All grading shall be in conformance with the recommendations of the geotechnical/soils reports as approved by City of Wildomar.	Prior to Issuance of a Grading Permit	Engineering	
30.	The developer shall obtain any and all easements and/or permissions necessary to perform the grading required for the project. A notarized letter of permission from all affected property owners or easement holders, or encroachment permit, is required for all off-site grading.	Prior to Issuance of a Grading Permit	Engineering	
31.	Prior to the issuance of a grading permit the developer shall submit recorded slope easements or written letters of permission from adjacent landowners in all areas where grading is proposed to take place outside of the project boundaries.	Prior to Issuance of a Grading Permit	Engineering	
32.	The project specific SWPPP and an Erosion/Sediment Control plan shall be provided to the Public Works Dept. and always provided on the project site.	Prior to Issuance of a Grading Permit	Engineering	
33.	The Developer shall provide the Engineering Department evidence of compliance with the National Pollutant Discharge Elimination System (NPDES); obtain a construction permit from the State Water Resource Control Board (SWRRCB); and, reference the WDID number on the improvement/grading.	Prior to Issuance of a Grading Permit	Engineering	
34.	The developer shall have obtained approval for the import/export location from the City of Wildomar. Additionally, if either location was not previously approved by an Environmental Assessment, prior to issuing a grading permit, a Grading Environmental Assessment shall	Prior to Issuance of a Grading Permit	Engineering	

	be submitted to the Planning Director for review and comment and to the City Engineer for approval.			
35.	A Final Water Quality Management Plan (WQMP), in conformance with the requirements of the City of Wildomar (City) shall be prepared, submitted, and approved. All stormwater quality treatment devices shall be located outside of the ultimate public right of way, unless otherwise approved. The developer shall prepare the Final WQMP in conformance with the City of Wildomar WQMP (which is based on the SMR Model WQMP) to the satisfaction of the City Engineer. The WQMP shall also address the effects of hydromodification caused by the project, per the City of Wildomar WQMP Model Document. Due to the high-density residential land-use of this project, the WQMP shall include the installation of Trash Capture Devices for both private and public storm drain facilities, as required by the State Water Board's Trash Amendments and the subsequent order issued by the San Diego Regional Water Quality Control Board to the City. Trash Capture Devices shall be on the State Water Board's "Certified Trash Full Capture Systems List of Trash Treatment Control Devices". Trash Control Devices selected for use in City storm drains shall be approved by the City Engineer. Trash Control Devices installed in City storm drains shall be included in the Community Facilities District (CFD) for maintenance.	Prior to Issuance of a Grading Permit	Engineering	
36.	A Grading Agreement and a Storm Water Management Facilities Agreement shall be approved by the City Engineer and/or City Council.	Prior to Issuance of a Grading Permit	Engineering	
37.	The developer shall prepare and submit a comprehensive drainage study and plan that includes, but is not limited to: definition with mapping of the existing watersheds; a detailed pre- and post-project	Prior to Issuance of a Grading Permit	Engineering	

	hydrologic and hydraulic analysis of the project and project impacts; definition of the local controlling 100-year frequency water levels existing and with project; the proposed method of flow conveyance to mitigate the potential project impacts with adequate supporting calculations; any proposed improvements to mitigate the impacts of increased runoff from the project and any change in runoff; including quality, quantity, volume, and duration in accordance with City of Wildomar's Hydrology Manual, Improvement Standards, and to the satisfaction of the City Engineer. Specifically, the study will: a. Analyze the detention basin drainage area for a project using the Rational Method 100-year storm event for the pre-project and post-project. b. Analyze 4 hydrographs for the detention basin drainage area for a project using the Unit Hydrograph 100-year storm event for the 1-hour, 3-hour, 6-hour, and 24-hour storm durations for post-project condition. c. Using the Unit Hydrographs determine which duration provides the highest flow rate. Adjust parameters such as lag time, flow line roughness coefficient or other parameters to calibrate Unit Hydrograph model to provide results similar to the Rational Method. d. Using the calibrated Unit Hydrograph for the detention basin drainage area perform basin routing analysis to demonstrate that the outflow is less than the pre-project Rational Method flow rate.			

ATTACHMENT C - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: CUP/Plot Plan/FSPOD No. 21-0145			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
38. Prior to approval of improvement plans, the improvement plans submitted by the applicant shall address the following: a) The project drainage design shall be designed to accept and properly convey all on- and off-site drainage flowing on or through the site. b) The project drainage system design shall protect downstream properties from any damage caused by alteration of drainage patterns such as concentration or diversion of flow. c) Concentrated drainage on commercial lots shall be diverted through parkway drains under sidewalks. All non-residential lots shall drain toward an approved water quality or drainage facility. Once onsite drainage has been treated it may continue into an approved public drainage facility or diverted through under-sidewalk parkway drains.	Prior to Issuance of a Grading Permit	Engineering	

39.	Prior to issuance of any grading permit, any environmental Phase I and Phase II applicable findings and recommended actions to remove contamination resulting from previous use of the subject site shall be implemented.	Prior to Issuance of a Grading Permit	Engineering	
40.	The Construction Runoff Management Plan (or Erosion/Sediment Control Plan) shall include enhanced BMPs, for installation of landscaping to minimize the potential runoff of nutrients which is the Priority Water Quality Condition of Concern in the Santa Margarita River Watershed, to the satisfaction of the City Engineer.	Prior to Issuance of a Grading Permit	Engineering	
41.	City storm drain outfalls that will discharge to a Receiving Water, as defined by the City's MS4 Permit, shall be separate from and shall not receive flows from any private storm drain system.	Prior to Issuance of a Grading Permit	Engineering	
42.	The developer shall show all easements per the Title Report to the satisfaction of Public Works. Any conflict with existing easements resulting in the site being redesigned potentially requires a minor change or amendment approval by Planning Commission.	Prior to Issuance of a Grading Permit	Engineering	
43.	Prior to issuance of grading permit, the applicant shall demonstrate to the satisfaction of the City Engineer that the proposed project will not unreasonably interfere with the use of any easement holder of the property.	Prior to Issuance of a Grading Permit	Engineering	
Prior to Issuance of Building Permits				
44.	The developer/owner shall obtain a grading permit prior to building permit issuance, and/or approval to construct from the City Engineer.	Prior to Issuance of a Building Permit	Building/ Engineering	

45.	Any public improvements shall be approved by the City Engineer and all improvements to be constructed and shall be secured by the Developer.	Prior to Issuance of a Building Permit	Building/ Engineering	
46.	The developer shall provide will serve letters from the appropriate utility agencies.	Prior to Issuance of a Building Permit	Building	
47.	The developer shall provide approval letter from Fire Department for fire water service.	Prior to Issuance of a Building Permit	Building/ Fire	
48.	The developer shall install any missing streetlight facilities along the project frontage, in accordance with the applicable City of Wildomar Road Improvement Standards & Specification, Improvement Plan Check Policies and Guidelines, City Ordinances and to the satisfaction of the City Engineer.	Prior to Certificate of Occupancy	Building/ Public Works	
49.	The developer shall annex into CFD Service District 2022-2, or current equivalent Community Facilities District, to offset development related costs for maintenance and services for the applicable development.	Prior to Issuance of a Building Permit	Engineering	
50.	The developer/applicant shall demonstrate that all applicable development related fees, impact fees, and mitigation fees have been satisfactorily paid.	Prior to Issuance of a Building Permit or Certificate of Occupancy	Building	
51.	The developer shall pay the appropriate impact mitigation fee to the Riverside County Flood Control and Water Conservation District and provide the City receipt of payment.	Prior to Issuance of a Building Permit	Building	
52.	The developer shall pay all necessary impact and mitigation fees required to the extent applicable. These fees include, but are not limited to, fees associated with),Quimby (parkland in-lieu) Fee, and City	Prior to Issuance of a Building Permit or	Building	

	Development Impact Fees. Pursuant to Exhibit E, Section G of the Administrative Plan, low-income residential housing is exempt from the payment of TUMF.	Certificate of Occupancy		
53.	The developer shall construct the stormwater quality treatment devices to accommodate all project runoff in accordance with City of Wildomar's Hydrology Manual, Stormwater Quality Best Management Practice Design Handbook, Improvement Standards, and to the satisfaction of the City Engineer. All stormwater quality treatment devices shall be constructed outside of the ultimate public right of way.	Prior to Issuance of a Building Permit	Public Works	
54.	Prior to issuance of Building Permit, the developer shall post security guaranteeing the construction of all required public improvements consistent with the approved TIA. Said improvements shall include, but are not limited to the following: 1. All street facilities: 2. Any missing or substandard public improvements on Wildomar Trail and Catt Road, to half street plus 12' along the project frontage. 3. Traffic Mitigation measures as outlined in approved Traffic Impact Analysis dated, August 10, 2022. 4. All ingress and egress shall meet minimum commercial driveway standards. 5. Southernmost site access on Wildomar Trail indicated on the site plan and "DWY 3" indicated on the TIA shall be limited to right in, right out, access only. Site access on Catt Road shall be coordinated with adjacent developments, City of Wildomar Traffic Engineering, and the City Engineer.	Prior to Issuance of a Building Permit	Engineering	

	b) All drainage facilities to serve the proposed, and as outlined in the approved Hydrology Study. c) All required grading, including erosion control. Additional erosion control may be required per the City Engineer d) All required sewer, water and reclaimed water facilities per Elsinore Valley Municipal Water District (EVMWD) standards and specifications, per approved plans. e) All required landscaping and/or park facilities on-site, as well as parkway landscaping per approved streetscape plans and design guidelines. f) All under grounding of overhead utilities, except for cables greater than 32k volts, per Wildomar Municipal Code			
55.	Prior to building permit issuance, the applicant shall commence construction or guarantee the construction of all new or upgraded required public improvements including but not limited to, the potable water line, sewer line, reclaimed water line, potable water services, sewer laterals, reclaimed water services, double detector check assemblies and reduced pressure principal assemblies within the public right of way and/or easements.	Prior to Issuance of a Building Permit	Engineering	
56.	Prior to issuance of building permits, the developer shall cause the civil engineer of record and soils engineer of record for the approved grading plans to submit pad certifications and compaction test reports for the subject lots where building permits are requested.	Prior to Issuance of Building Permits	Engineering	

ATTACHMENT C - EXHIBIT 1 WILDOMAR CROSSROADS MIXED-USE PROJECT - CONDITIONS OF APPROVAL			
Project No.: CUP/Plot Plan/FSPOD No. 21-0145			
Applicant: Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc. (APN: 376-410-015; -016, -017, & -021)			
Planning Commission Date: **October 19, 2022**	**CUP/Plot Plan/FSPOD No. 21-0145 Expiration Date:** **October 19, 2025**		
Conditions of Approval	**Timing/ Implementation**	**Enforcement/ Monitoring**	**Verification (Date and Signature)**
Prior to Certificate of Occupancy, Final Inspection or Surety Release			
57. Prior to issuance of the first Certificate of Occupancy, the applicant shall provide proof of notification to the future occupants of all non-structural BMPs and educational and training requirements for said BMPs as directed in the approved WQMP.	Prior to Issuance of first Certificate of Occupancy	Engineering	
58. Prior to issuance of Certificate of Occupancy, the applicant shall ensure all structural post construction BMPs identified in the approved project specific Final WQMP are constructed and operational.	Prior to Issuance of first Certificate of Occupancy	Engineering	
59. Prior to issuance of a Certificate of Occupancy, all proposed parkway, slope maintenance, and/or median landscaping specified in these Conditions of Approval shall be constructed.	Prior to Issuance of first Certificate of Occupancy	Engineering	
60. Prior to release of public improvement security, the developer shall cause the civil engineer of record for the approved improvement plans to submit a set of as-built plans for review and approval by the Public Works Department.	Prior to release of public improvement security	Engineering	
61. The developer shall comply with the recommendations in Approved TIA. Prior to issuance of building permit, the developer shall guarantee construction of the following public improvements: Catt Road shall be constructed to its ultimate classification as a Local Road. This shall include construction of applicable curb, gutter and sidewalk improvements along its frontage as well as applicable cul-de-sac. The ultimate modified design shall be coordinated with the City Engineering Division and subject to the satisfaction of the City Engineer.	Prior to first certificate of occupancy	Engineering	

	Arya Road shall be constructed to its ultimate classification as a Local Road, and as identified to support the proposed project per the approved TIA and subject to the satisfaction of the City Engineer The project shall construct Wildomar Trail along its project frontage, at its ultimate half-section width classification as a Collector (74-foot right-of-way) in compliance with applicable City of Wildomar and Caltrans standards subject to the satisfaction of the City Engineer. Wildomar Trail/Clinton Keith Rd: The project shall construct improvements as per approved CIP at this intersection. Improvements include the addition of WBT receiving lane at project frontage and the modification of WBR to WBTR. Signal modifications include changing SBL and NBL signal permissive phasing to protected permissive and overlapping SBR. In the event the CIP improvements are constructed before the project is constructed, the project would contribute fair-share to improvements at this intersection, as identified in the approved TIA. Plans shall be coordinated with the CIP and shall be subject to the satisfaction of the City Engineer. Arya Rd/Clinton Keith Rd: The project shall construct improvements or provide fair-share contribution as identified in the approved TIA and subject to the satisfaction of the City Engineer. Improvements include northbound striping to provide dedicated NBL and NBTR, dedicated SBL and SBTR. Signal modifications include changing NB-SB permissive phasing to protective permissive phasing along with associated improvements necessary to accomplish the lane			

	configuration, road widening, and signal operation discussed above. These improvements would include widening of Arya Rd to 4 lanes. Wildomar Trail/Proj Driveway 4: The project shall construct improvements as a project design feature to add Two Stage Gap Acceptance for EBL approach from Project Driveway consistent with the striping concept included in the approved TIA and subject to the satisfaction of the City Engineer. Sight distance at each project access point shall be reviewed with respect to standard Caltrans and City of Wildomar sight distance standards at the time of preparation of final grading, landscape, and street improvement plans. On-site traffic signing and striping plan shall be constructed as demonstrated in detailed construction plans for the project site subject to the satisfaction of the City Engineer. All public improvement plans shall include adequate transitions beyond the project boundary to 300', at the discretion of the City Engineer. Completion of said improvements shall occur prior to first Certificate of Occupancy for the project site. Design of all public improvements shall be coordinated and approved at the discretion of the City Engineer.			

62.	Walls and fences around the perimeter of the project, or along the public right-of-way, shall be treated with an anti-graffiti coating, consistent with current standards and guidelines, to aid in ongoing maintenance.	Prior to final Certificate of Occupancy	Engineering	
63.	Prior to acceptance of improvements, the City Engineer may determine that aggregate slurry, as defined in the Standard Specifications for Public Works Construction, may be required one year after acceptance of street(s) by the City if the condition of the street(s) warrant its application. All striping shall be replaced in kind. The applicant is the sole responsible party for the maintenance of all the improvements until said acceptance takes place. The final Thermal Plastic striping shall be installed only after the aggregate slurry.	Prior to acceptance of improvements	Engineering	
64.	Any deviations/revisions from the approved WQMP plans and specifications shall be submitted by the Engineer of Record and shall be approved by the City, prior to construction. Approved revisions shall be documented in the Final WQMP on-file with the City. The Developer shall also ensure that the Final WQMP on-file with the owner is also updated. Prior to final approval of the constructed WQMP, the Developer shall submit a certification letter, signed by the Engineer of Record, certifying that the WQMP has been constructed and installed per the approved plans and specifications, and that the WQMP is currently operating in conformance with the original design.	On-going	Engineering

BUILDING DEPARTMENT CONDITIONS				
General Conditions				
1.	The design of the construction drawings submittal post entitlement must be reviewed and stamped by an architect or engineer licensed in the State of California – (Business and Professions code Sections 5537, 5538 and 6737.1).	On-Going	Building Department	
2.	A building permit shall be obtained for the proposed construction and site development. The design of the building shall comply with the 2019 California Building Codes.	On-Going	Building Department	
3.	All grading shall conform to the 2022 California Building Code, and all other relevant laws, ordinances and resolutions governing grading as adopted by the City of Wildomar. The applicant shall obtain a grading permit from the Building & Safety Division prior to commencing any grading or site excavation.	On-Going	Building Department	
4.	A Final geotechnical and/or soils reports shall be submitted to the Building Official for review and approval prior to issuance of a grading permit. All grading shall be in conformance with the recommendations of the geotechnical/soils reports as approved by the City of Wildomar.	On-Going	Building Department	
5.	All proposed work shall comply with the 2022 California Energy Code and all other relevant laws, ordinances and resolutions governing Energy conservation as adopted by the City of Wildomar.	On-Going	Building Department	
6.	Proposed project shall comply with the 2022 California Green Building Standards Code and all other relevant laws, ordinances and resolutions governing sustainable design as adopted by the City of Wildomar.	On-Going	Building Department	

7.	Proposed project shall be sprinklered and comply with all other relevant laws, ordinances and resolutions governing residential sprinklers as adopted by the City of Wildomar.	On-Going	Building Department	
8.	Building Department comments and conditions are subject to plan check. Comments are based on information provided.	On-Going	Building Department	
9.	A Fence and wall plan required will be required prior to the issuance of any building permits for construction of any fences/walls.	On-Going	Building Department	
RIVERSIDE COUNTY FIRE DEPARTMENT CONDITIONS				
General Conditions				
1.	If the project is built phases, each phase of development must comply with all fire department requirements	On-Going	Fire Department	
2.	This project is in a Very High Fire Hazard Severity Zone of Riverside County as shown on a map on file with the Clerk of the Board of Supervisors. Any building constructed within this project shall comply with the special construction provisions contained in City of Wildomar Municipal Code and the California Building Code.	On-Going	Fire Department	
3.	The developer shall provide fire hydrants in accordance with the following. a. Prior to placing any combustibles on site, provide an approved water source for firefighting purposes. b. Prior to building permit issuance, submit plans to the water district for a water system capable of delivering fire flow as required by the California Fire Code and Fire Department standards. Fire hydrants shall be spaced in accordance with the California Fire Code.	On-Going	Fire Department	

4.	Gates must meet Fire Department standards at the time of building permit application. Current standards require that gates have a Knox rapid entry system, an infrared gate opener, and be set back up to 35 feet allow emergency vehicles to safely stop away from traffic flow.	On-Going	Fire Department	
5.	Buildings 3,600 square feet and larger, regardless of occupancy classification, require a fire sprinkler system in accordance with City of Wildomar Municipal Code.	On-Going	Fire Department	
6.	The applicant or developer must provide a fire hydrant system capable of delivering fire flow as required by the California Fire Code and Fire Department standards. Fire hydrants shall be spaced in accordance with the California Fire Code. Based on current standards, the required fire flow is estimated to be 2,500 GPM at 20 PSI for a 2 hour duration. Estimated fire flow is based on a 36,000 square foot building area with Type V-B construction and an approved fire sprinkler system per 2019 California Fire Code.	On-Going	Fire Department	
7.	Prior to building permit issuance, install the approved water system, approved access roads, and contact the Fire Department for a verification inspection.	On-Going	Fire Department	
8.	Emergency vehicle access roads must meet fire department standards at the time of building permit application. Current standards require minimum 24-foot wide roads. Roads must be capable of supporting at least 80,000 pounds. Gates must have a Knox Rapid Entry System.	On-Going	Fire Department

MONUMENT AND ESTABLISHMENT NOTES

- ● INDICATES FOUND MONUMENT AS NOTED BELOW.
- (1) INDICATES FOUND 1" IRON PIPE WITH ILLEGIBLE PLASTIC PLUG, NO REFERENCE, DOWN 0.6'. ACCEPTED AS POINT ON THE CENTERLINE OF CATT ROAD.
- (2) INDICATES FOUND LEAD, TACK AND TAG STAMPED "LS 7910" PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., FLUSH.
- (3) INDICATES FOUND 1" IRON PIPE (WITH PLASTIC PLUG) TAGGED "LS 7910" PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., FLUSH.
- (4) INDICATES FOUND 1" IRON PIPE WITH ILLEGIBLE PLASTIC PLUG, NO REFERENCE, FLUSH. ACCEPTED AS THE CENTERLINE INTERSECTION OF CATT ROAD AND ARYA DRIVE.
- (5) INDICATES FOUND 1" IRON PIPE (WITH PLASTIC PLUG) TAGGED "LS 7910" PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., DOWN 0.5'.
- (6) INDICATES FOUND 1" IRON PIPE TAGGED "L.S. 3365", PER R1, DOWN 0.4'. SAID MONUMENT IS LOCATED SOUTH 01°18'34" EAST, 0.11 FEET FROM THE SOUTH COMMON CORNER BETWEEN PARCELS 1 AND 2 OF R1.
- (7) INDICATES FOUND 1" IRON PIPE TAGGED "L.S. 3365", PER R1, DOWN 0.4'. SAID MONUMENT IS LOCATED SOUTH 01°17'00" WEST, 0.25 FEET FROM THE SOUTH COMMON CORNER BETWEEN PARCELS 2 AND 3 OF R1.
- (8) INDICATES SEARCHED, NOTHING FOUND. ESTABLISHED THE SOUTH COMMON CORNER BETWEEN PARCELS 3 AND 4 OF R1 BY PRORATION USING R1 DATA.
- (9) INDICATES SEARCHED, NOTHING FOUND. ESTABLISHED BY INTERSECTION.
- (10) INDICATES FOUND 1" IRON PIPE WITH ILLEGIBLE PLASTIC PLUG, NO REFERENCE, FLUSH. ACCEPTED AS THE CENTERLINE INTERSECTION OF CATT ROAD AND GEORGE AVENUE.
- (11) INDICATES FOUND 1" IRON PIPE WITH ILLEGIBLE PLASTIC PLUG, NO REFERENCE, FLUSH. ACCEPTED AS THE CENTERLINE INTERSECTION OF CLINTON KEITH ROAD AND GEORGE AVENUE.
- (12) INDICATES FOUND LEAD, TACK AND TAG STAMPED "LS 7910" ON TOP OF WALL, PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., FLUSH WITH TOP OF WALL.
- (13) INDICATES FOUND GIN SPINDLE WITH WASHER STAMPED "LS 7910", PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., FLUSH.
- (14) INDICATES SEARCHED, NOTHING FOUND. ESTABLISHED BY HOLDING RECORD DATA PER R1.

LANDSCAPE NOTES

A. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, MATURE SPECIMEN TREES IN THIRTY-SIX INCH (36") AND FORTY-EIGHT INCH (48") BOX TREES SHALL BE PROVIDED FOR LARGE PROJECT IN SUFFICIENT QUANTITY TO PROVIDE VARIETY AND EMPHASIS ON MAIN FOCAL AREAS. SUBJECT TO REVIEW AND APPROVAL OF THE DIRECTOR AND LANDSCAPE CONSULTANT.

B. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE ARCHITECT SHALL INCLUDE 3 TO 4 FOOT HIGH LANDSCAPE SCREENING ELEMENTS ALONG ENTIRE PARKING FRONTAGE AT STREETS AND DRIVE AISLES. A COMBINATION OF LANDSCAPE BERMS, GROUPS OF SCREENING SHRUBS, OR ENHANCED WALLS SHALL BE UTILIZED.

C. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE WILL AVOID PLANTS THAT REQUIRE CUTTING BACK TO KEEP THEM WITHIN A SPECIFIC AREA OR AT A TRIMMED HEIGHT. PROVIDED SPACE FOR PLANTS TO GROW TO MATURITY AND KEEP THEIR NATURAL SHAPE.

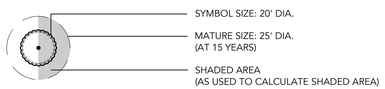
D. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE WILL SELECT PLANT MATERIALS WITHIN VEHICULAR LINE OF SIGHT IMPACT AREAS LIMITED TO A MAXIMUM OF 30" NATURAL HEIGHT.

E. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE ARCHITECT WILL AVOID MONOCULTURE PLANTING, PROVIDE ADDITIONAL PLANT MATERIAL WITH VARYING CHARACTERISTICS. FINAL SHRUB LAYOUT WILL NOT APPEAR AS MASSES, NO SPOTTY PLACEMENT OF SINGULAR SHRUBS.

F. LANDSCAPE ARCHITECT RECOGNIZES THAT THIS PROJECT IS LOCATED WITHIN THE 'VERY HIGH FIRE SEVERITY ZONE' AND WILL BE SUBJECT TO REVIEW BY RIVERSIDE COUNTY OFFICE OF THE FIRE MARSHAL FOR FUEL MODIFICATION REQUIREMENTS.

G. NO COMBUSTIBLE MULCH WILL BE ALLOWED TO BE LOCATED WITHIN 5' OF ANY BUILDING STRUCTURE.

WATER USE CALCULATIONS



TOTAL LANDSCAPE AREA 29,086 SF

MAXIMUM APPLIED WATER ALLOWANCE (MAWA)
MAWA = (ETO) X (0.7) X (LA) X (0.62) = GALLONS PER YEAR
MAWA = 61.65 X 0.7 X 29,086 X 0.62 = 778,228 GALLONS PER YEAR

I HAVE COMPLIED WITH THE CRITERIA OF THE ORDINANCE AND APPLIED THEM ACCORDINGLY FOR THE EFFICIENT USE OF WATER IN THE IRRIGATION DESIGN PLAN

SHADED PARKING CALCULATIONS

OPEN PARKING	130 SPACES
COVERED PARKING	76 SPACES
TOTAL AREA OF OPEN PARKING SPACES	19,862 SF
REQUIRED PERCENTAGE OF PARKING AREA TO BE SHADED	50% (50+ SPACES)
TOTAL SHADE PROVIDED	10,603 SF
PERCENT OF OPEN PARKING SHADED	53 %

UTILITY COORDINATION

PLEASE NOTE THAT THE LOCATION OF ALL UTILITY STRUCTURES IS CONCEPTUAL ONLY AND WILL BE COORDINATED FURTHER DURING THE DESIGN DEVELOPMENT AND CONSTRUCTION DOCUMENTATION PHASE. CONCEPTUAL LIGHTING PLAN IS PROVIDED WITHIN THE DRAWING SET, REFER TO LIGHTING PLANS.

GENERAL NOTES

ALL LANDSCAPING, IRRIGATION AND RELATED IMPROVEMENTS SHALL BE DESIGNED, INSTALLED AND MAINTAINED IN ACCORDANCE WITH THE REQUIREMENTS OF THE CITY OF WILDOMAR, THE COUNTY OF RIVERSIDE (AS REQUIRED), RIVERSIDE COUNTY FIRE DEPARTMENT AND THE ELSINORE VALLEY MUNICIPAL WATER DISTRICT. REFERENCE THE CITY OF WILDOMAR MUNICIPAL CODE CHAPTERS 17.188 (OFF-STREET VEHICULAR PARKING STANDARDS) AND 17.276 (WATER-EFFICIENT LANDSCAPES) AND APPLICABLE SECTIONS OF THE COUNTY OF RIVERSIDE MUNICIPAL CODE (ORDINANCES 348 - LAND USE, 457 - CALIFORNIA BUILDING CODE (EROSION CONTROL), 460 - SUBDIVISION, AND 461 - ROAD IMPROVEMENTS), THE COUNTYWIDE DESIGN STANDARDS & GUIDELINES (JANUARY 2004), GUIDE TO CALIFORNIA FRIENDLY LANDSCAPING (DECEMBER 2009), CALIFORNIA FRIENDLY PLANT LIST (MARCH 2013), FIRE DEPARTMENT REQUIREMENTS, OAK TREE MANAGEMENT GUIDELINES, AND THE REQUIREMENTS OF THE ELSINORE VALLEY MUNICIPAL WATER DISTRICT. IRRIGATION SYSTEM SHALL MINIMIZE THE USE OF OVERHEAD SPRAY TYPE SYSTEMS AND INCORPORATE DRIP OR BUBBLER TYPE IRRIGATION SYSTEMS.

ALL LANDSCAPE IMPROVEMENTS DEPICTED IN THIS DRAWING SET ARE TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).

MONUMENT AND ESTABLISHMENT NOTES

- INDICATES FOUND MONUMENT AS NOTED BELOW.
1. INDICATES FOUND 1" IRON PIPE WITH ILLEGIBLE PLASTIC PLUG, NO REFERENCE, DOWN 0.6'. ACCEPTED AS POINT ON THE CENTERLINE OF CATT ROAD.
2. INDICATES FOUND LEAD, TACK AND TAG STAMPED "LS 7910" PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., FLUSH.
3. INDICATES FOUND 1" IRON PIPE (WITH PLASTIC PLUG) TAGGED "LS 7910" PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., FLUSH.
4. INDICATES FOUND 1" IRON PIPE WITH ILLEGIBLE PLASTIC PLUG, NO REFERENCE, FLUSH. ACCEPTED AS THE CENTERLINE INTERSECTION OF CATT ROAD AND ARYA DRIVE.
5. INDICATES FOUND 1" IRON PIPE (WITH PLASTIC PLUG) TAGGED "LS 7910" PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., DOWN 0.5'.
6. INDICATES FOUND 1" IRON PIPE TAGGED "L.S. 3365", PER R1, DOWN 0.4'. SAID MONUMENT IS LOCATED SOUTH 01°18'34" EAST, 0.11 FEET FROM THE SOUTH COMMON CORNER BETWEEN PARCELS 1 AND 2 OF R1.
7. INDICATES FOUND 1" IRON PIPE TAGGED "L.S. 3365", PER R1, DOWN 0.4'. SAID MONUMENT IS LOCATED SOUTH 01°17'00" WEST, 0.25 FEET FROM THE SOUTH COMMON CORNER BETWEEN PARCELS 2 AND 3 OF R1.
8. INDICATES SEARCHED, NOTHING FOUND. ESTABLISHED THE SOUTH COMMON CORNER BETWEEN PARCELS 3 AND 4 OF R1 BY PRORATION USING R1 DATA.
9. INDICATES SEARCHED, NOTHING FOUND. ESTABLISHED BY INTERSECTION.
10. INDICATES FOUND 1" IRON PIPE WITH ILLEGIBLE PLASTIC PLUG, NO REFERENCE, FLUSH. ACCEPTED AS THE CENTERLINE INTERSECTION OF CATT ROAD AND GEORGE AVENUE.
11. INDICATES FOUND 1" IRON PIPE WITH ILLEGIBLE PLASTIC PLUG, NO REFERENCE, FLUSH. ACCEPTED AS THE CENTERLINE INTERSECTION OF CLINTON KEITH ROAD AND GEORGE AVENUE.
12. INDICATES FOUND LEAD, TACK AND TAG STAMPED "LS 7910" ON TOP OF WALL, PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., FLUSH WITH TOP OF WALL.
13. INDICATES FOUND GIN SPINDLE WITH WASHER STAMPED "LS 7910", PER CERTIFICATE OF CORRECTION RECORDED 9/20/2011 AS DOCUMENT NO. 2011-0415389, O.R., FLUSH.
14. INDICATES SEARCHED, NOTHING FOUND. ESTABLISHED BY HOLDING RECORD DATA PER R1.

SITE LIGHTING PROJECT SUMMARY

COMMERCIAL PARCEL

PROJECT SITE ACREAGE
= 4.63 ACRES

PROJECT SITE OCCUPANCY / ZONING
= C–P–S, SCENIC HIGHWAY COMMERCIAL

LUMINAIRE CUT–OFF TYPES USED:
= FULLY SHIELDED FIXTURES – GENERAL USE
= UNSHIELDED FIXTURES – DECORATIVE AND AMBIANCE USE

LUMEN ALLOWANCE PER ACRE
PER CITY OF WILDOMAR MUNICIPAL CODE CHAPTER 8, TABLE 8.64.090–1
COMMERCIAL PARCEL: (OPTION 3)
= 175000 LUMENS OF COMBINED SHIELDED AND UNSHIELDED
= 11000 LUMENS OF UNSHIELDED

PROJECT SITE TOTAL LUMEN ALLOWANCE
= 810250 LUMENS OF COMBINED (175000L X 4.63 ACRES)
= 49280 LUMENS OF UNSHIELDED (50930L X 4.63 ACRES)

TOTAL LUMENS IN PROJECT OF COMBINED FIXTURES
PER FACTOR CALCULATIONS SHOWN ON FIXTURE SCHEDULE
= 343897 LUMENS (336223L, SHIELDED + 7674L, UNSHIELDED)

TOTAL LUMENS IN PROJECT OF UNSHIELDED FIXTURES
PER FACTOR CALCLUATIONS SHOWN ON FIXTURE SCHEDULE
= 7674 LUMENS

RESIDENTIAL PARCEL

PROJECT SITE ACREAGE
= 4.48 ACRES

PROJECT SITE OCCUPANCY / ZONING
= R–2, RESIDENTIAL

LUMINAIRE CUT–OFF TYPES USED:
= FULLY SHIELDED FIXTURES – GENERAL USE
= UNSHIELDED FIXTURES – DECORATIVE AND AMBIANCE USE

LUMEN ALLOWANCE PER ACRE
PER CITY OF WILDOMAR MUNICIPAL CODE CHAPTER 8, TABLE 8.64.090–1
RESIDENTIAL PARCEL:
= 55000 LUMENS OF COMBINED SHIELDED AND UNSHIELDED
= 11000 LUMENS OF UNSHIELDED

PROJECT SITE TOTAL LUMEN ALLOWANCE
= 246400 LUMENS OF COMBINED (55000L X 4.48 ACRES)
= 49280 LUMENS OF UNSHIELDED (11000L X 4.48 ACRES)

TOTAL LUMENS IN PROJECT OF COMBINED FIXTURES
PER FACTOR CALCULATIONS SHOWN ON FIXTURE SCHEDULE
= 238471 LUMENS (228513L + 9958L, UNSHIELDED)

TOTAL LUMENS IN PROJECT OF UNSHIELDED FIXTURES
PER FACTOR CALCLUATIONS SHOWN ON FIXTURE SCHEDULE
= 9958 LUMENS

NOTE:
ALL EXTERIOR LIGHTING CONTROLS SHALL BE COMPLIANT PER
CITY OF WILDOMAR MUNICIPAL CODE: TITLE 8 / CHAPTER 8.64

TYPE S1A S1B S1C

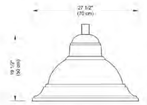
cyclone

Domia CY55P1B Approval – Specification

Project: Order:
Qty: Luminaire: Type:

Tenon Details: Round shape, made of one-piece cast A356 aluminum. An interior border makes it possible to fix the frame module. The certification, maintenance and coding labels of the luminaire are located inside the housing module.

Frame Module: Cast A356 aluminum ring mechanically fixed to the housing, with hinge and quarter-turn latch that accepts the lens module and provides access to the driver module.



Optical Module: The cast A384 aluminum heat sink is optimized to minimize the temperature of the LEDs, increasing their longevity and efficiency. The lens module is assembled mechanically for easy replacement. A flat lens in ▼ is fixed on the cast aluminum frame. The lens is fully IP67 thanks to the silicone gasket. The high efficiency ▼ LED circuit is mechanically assembled on the heat sink. The lifetime of the LEDs is 100,000 hours. It is based on the LM-80 test and extrapolated with TM-21. This data is calculated when 50% of the LEDs produce 70% of their initial luminous flux (L70). The minimum color rendering index (CRI) is 70. The lenses are made of acrylic and designed to illuminate only where needed while achieving excellent uniformity with maximum spacing. The type according to IES ▼.

Driver Module: The self-adjusting Class 1 (50W and over) or Class 2 (20 to 40W) driver is removable without tools.

Primary Voltage of ▼ **Volts.** 50 / 60Hz. THD max 20%. The high power factor is of 90%. The operating temperature is from -40° F (-40° C) to 130° F (50° C). Complies with ROHS. Assembled with quick-disconnect connectors. Complete with 10kA tripolar overvoltage protection for live, neutral and ground lines according to EEE / ANSI C62.41 2002 C. The driver offers 0-10 Volts output.

Wiring / Hardware: Type TEW 14-7, 12" (30cm) minimum exceeding luminaire. All electrical connections between the modules are provided with quick-disconnect connectors for easy maintenance. All outside accessible hardware is accessible is stainless steel. Silicone gaskets are used for sealing the luminaire.

Color: ▼ Textured or Smooth (SM) ▼ finish. The application of durable polyester powder coating meets AAMA 2604 requirements (5 years at all weather conditions). The finish meets ASTM-D7, B117, D1654 and D2247 standards for salt spray and moisture. Cyclone recommends a textured finish for this product.

EPA: 1.61 ft² **Weight:** 52 lbs / 24 kg

CLX

24", 36", 48" and 96" Lengths

FEATURES & SPECIFICATIONS

INTENDED USE — The CLX is a linear lighting solution that is available in multiple lengths, lumen packages and distributions. Designed for versatility, the CLX can address virtually any indoor lighting need. The CLX is also offered in standard and high efficacy configurations and capable of being continuous row mounted or installed as a stand-alone fixture. Ideal for upright and downlight in commercial, retail, manufacturing, warehouse, and display applications. **Certain airborne contaminants can diminish the integrity of acrylic and/or polycarbonate. Click here for Acrylic-Polycarbonate Compatibility table for suitable uses.**

CONSTRUCTION — Channel and cover are formed from code-gauge cold-rolled steel. Housing and lens ends are injection molded plastic to provide a more architectural look and feel. The end caps come standard with a 7/8" knock out for continuous row mounting but can be ordered without.

Finish: Paint options include high-gloss, Baked white polyester (WH), opalescent (GACF), matte black (MB) and smoke gray (MGY). Pre-cogs input phosphate per insulment ensures superior paint adhesion and rust resistance.

OPTICS — Offered with acrylic lens and lens trim configurations. Provides a choice of optical distributions including, wide, narrow, and wide.

ELECTRICAL — 3000mm high-output LEDs integrated on a two layer circuit board, ensuring cool-running operation. Optional internal pluggable wiring harness for reduced labor cost in row mounting applications. See P.R.R. ordering information on page 3-4. Electronic LED drivers is multi-volt input and 0-10V dimming standard (see Operational Data on page 4 for actual wattage consumption). The fixture is IP20 rated and has been tested to a minimum low range of 2.5kV at 0.5Hz combination wave for indoor locations. Regional locations requiring higher level of protection additional surge protection must be provided. L70 is 100,000 hours at 25˚C.

ULEs provide nominal 80 CRI at 90 CRI at 3000-K, 3500-K, 4000-K or 5000-K.

Lumen output up to 22,000 lumens per foot.

INSTALLATION — Fixture may be ceiling or wall mounted (with or without THICK bumper or angle mounted with CLAMKLIBT), pendant or stem mounted with appropriate mounting systems.

WARNING — Removing the lens and scoring the fixture during installation exposes the LEDs, putting them at risk for damage.

If you plan to surface-mount this fixture, we recommend using the THICK. This eliminates the need to score the fixture.

If you plan to continuous row mount, we recommend using the FLX scoring fixture option. Utu eliminates the need to open the fixture.

Damage to the LEDs caused during installation will not be covered under the warranty.

LISTINGS — CSA certified to US and Canadian safety standards. For use in damp locations between -4°F (-20°C) and 104°F (40°C). Optional High Ambient (hA) ranging to 122°F (50°C) available on certain lumen packages (see ambient temperature chart for additional information).

Designlights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

BUY AMERICAN — Product with the BAA option is assembled in the USA and meets the Buy American(a) government procurement requirements under 14D, DFARS and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks marked by a distinctive icon

To learn more about A+, visit www.acuitybrands.com/aplus.

Introduction

The WDGE LED family is designed to meet specifier's every wall-mounted lighting need in a widely accepted shape that blends with any architecture. The clean rectilinear design comes in four sizes with lumen packages ranging from 1,200 to 25,000 lumens, providing true site-wide solution.

WDGE1 delivers up to 2,000 lumens with a soft, non-pixelated light source, creating a visually comfortable environment. The compact size of WDGE1, with its integrated emergency battery backup option, makes it an ideal over-the-door wall-mounted lighting solution.

WDGE LED Family Overview

Introduction

The WDGE LED family is designed to meet specifier's every wall-mounted lighting need in a widely accepted shape that blends with any architecture. The clean rectilinear design comes in four sizes with lumen packages ranging from 1,200 to 25,000 lumens, providing a true site-wide solution. Embedded with xLight® AIR wireless controls, the WDGE family provides additional energy savings and code compliance.

WDGE2 delivers up to 6,000 lumens with a soft, non-pixelated light source, creating a visually comfortable environment. When combined with multiple integrated emergency battery backup options, including an 18W cold temperature option, the WDGE2 becomes the ideal wall-mounted lighting solution for pedestrian scale applications in any environment.

MODULE SPECIFICATION:
- Efficacy 65-125 Lumens per watt
- Life: L70 50,000 hours
- Color temp: 2700K, 3000K, 3500K and 4000K
- CRI: >90.

MODULE DRIVER SPECIFICATION:
- Input Voltage: 120-277 Volts; 50/60Hz
- Dimmable down to 1%
- 0-10V, TRIAC and ELV dimming protocols are standard. (12w is 120v and TRIAC dimming only)
- Output Current: Constant Current, 440mA to 940mA (model dependent)
- Driver Efficiency > 80%; Power Factor > 0.9
- Integral Surge Protection in conformance to ANSI C62.41 Category A.

MODULE LISTINGS
- Fully compliant with the RoHS Directive
- Certifications: CE/UL

WARRANTY

See www.ANPlighting.com for complete fixture warranty.

LED warranty information:
- 5 year limited warranty*

*Limited Warranty: A typical year is defined as 4380 hours of operation

SUSPENDED DECORATIVE STRINGLIGHT SYSTEMS

PROJECT:
TYPE:

SOCKET, WIRE & CABLE DETAILS

Decostrings are a perfect accent lighting solution to add a personal ambience to patios, courtyards, atriums, restaurants, amusement parks and any open area. The "festoon" lighting system is typically strung between two anchorage points with optional intermediary support and electrically fed from one end. The sockets can be either symmetrically spaced or randomly spaced to suit the application. Optional shades, guards and lenses complete the architectural design.

SPECIFICATIONS

LAMPHOLDER	Black phenolic, medium base UL weatherproof with hook for optional mounting.
WIRE	12/2 G. Black flexible wire rated for 25A max. uv rated for outdoor use and long lasting.
SUPPORT CABLE	1/16" aircraft catenary cable supports the system, 480# test. Heavier cable available. (*See Page 7*)
LAMPS	LED and incandescent medium base A, G or S style lamps. (*See Page 3 for Lamp Options*)
ACCESSORIES	Optional brass, aluminum and acrylic shades. (*See Page 4 & 5 for Shade Options*) Consult factory for custom shades not shown in catalog.
GUIDELINES	Many ways to install and create a design. (*See Page 6 & 7*)
PHOTOMETRY	Bare lamp and shielded "BUG" rated .IES files available. (*See Page 8*) (Consult Factory or Visit Website)
CERTIFICATION	ETL listed for dry or wet and permanent installation. E201431 MADE IN THE USA
VOLTAGE	120V system (1920 watts max load). No driver or transformer required. (Consult Factory for 12V/24V)
DIMMING	Dimmable down to 10% with leading or trailing edge type dimmers.

With **Linear One,** we set out to produce a series that works with your vision instead of crowding it. Acclaim Lighting continually strives for simple goals during the design process: be useful, stay out of the way, and function wonderfully. Creativity begins with great design and Linear One is streamlined to work for you. We meticulously craft linear lights that install with no visible cables and create the clutter-free space your work deserves. This means that subtlety enhances your aesthetic as Linear One remains hidden while serving as the powerhouse behind your visual creation. Refined to work with your creativity, Linear One provides end-to-end modular functionality that adapts to your needs and never works against them. Acclaim Lighting is motivated by the passion of its users and strives to produce the very best solutions in architectural lighting. We create beautiful products that work for creativity.

SPECIFICATIONS

Colors	2700K, 3000K, 3500K, 4000K (80 CRI or 90 CRI available), Red, Green, Blue, Amber
Beam Angles	10 x 10 , 30 x 30 , 60 x 60 , 100 x 100 , 10 x 25 , 10 x 40 , 10 x 70 , 30 x 60 , 40 x 70 Asymmetric (60 x 60 + 20 tilt), Batwing (split 10 x 40 or 40 x 70)
Housing Lengths	1' (304.8mm), 4' (1219.2mm)
Control	0-100% dimming via internal 0-10V driver, DMX via optional UDM, wireless via optional Aria
Max Fixtures in Series	80' (24m)
Power Consumption	**1':** 12W, **4':** 48W
Operating Voltage	100-277VAC, 50/60 Hz
Lumen Maintenance	L70 @ 150,000 hours (25 C)
Mounting	90 mounting bracket included, flat mounting bracket optional
Finish	Silver / finished aluminum, marine and natatorium environment capability standard.
Material	Aluminum body - Type III hard coat anodized, polycarbonate lens
Ambient Operating Temperature	-40 F to 131 F (-40 C to 55 C)
IP Rating	IP66, wet location - marine environment housing standard
IK Rating	IK10, protection against 5 joule impact (40cm distance)
Fixture Connectors	IP66 End to end multi-pin connection cables included
Warranty	5 Years, limited
Weight	**1':** 2.4 lbs, **4':** 9.7 lbs
Dimensions	**L:** 12" / 48" **W:** 2.12" **H:** 3.39" (L: 305 / 1220 W: 54 H: 86.2mm)

KEYNOTES:

1. CLASS 'A' SINGLE PLY T.P.O. ROOF WITH R-30 INSULATION ON METAL ROOF DECK. REF SPECS.
2. PROVIDE OPENING IN ROOF FOR REFRIGERATION LINES
3. TOWER STRUCTURE SHOWN DASHED BELOW.
4. ROOF CRICKET, WOOD FRAME OR RIGID INSULATION FOR 1/4" PER FOOT SLOPE MINIMUM.
5. 24 GAUGE METAL FLASHING AT PARAPET - PAINT.
6. LINE OF REFRIGERATION RACKS BELOW.
7. HOSE BIB 6" ABOVE FINISH ROOF.
8. PRIMARY SCUPPER (SEE PLAN FOR SIZE) & 24" ADJACENT OVERFLOW SCUPPER.
9. WEATHER STATION BY REFRIGERATION CONTRACTOR. VERIFY LOCATION WITH REFRIGERATION DRAWINGS.
10. FLUE / VENT THRU ROOF. MIN. 2'-0" FROM PARAPET, 10'-0" FROM AIR-INTAKE ON HVAC UNITS.
11. ROOF ACCESS HATCH AND LADDER.
12. RESTROOM EXHAUST FAN.
13. ONE HOUR FIRE RATED EXHAUST HOOD DUCT SHAFT ENCLOSURE.
14. HVAC UNIT. FOR CURB.
15. REFRIGERATION EQUIPMENT ON ROOF. FOR LEVEL STEEL PLATFORM.
16. COMBUSTION AIR INTAKE.
17. LOUVERED ACCESS PANEL AT BACK OF TOWER.
18. STANDING SEAM METAL ROOF ON (2) LAYER 30# FELT ON EXTERIOR SHEATHING OVER METAL FRAMING.
19. 4" x 4" BOX SHAPE, METAL GUTTER WITH 2" DIAMETER DOWNSPOUT. INCLUDE SPLASH GUARD AT ROOF, INSTALLED DIRECTLY UNDER DOWNSPOUT.
20. SNOW GUARD RAILS (IN ZONES 4 AND COLDER) ON STANDING SEAM ROOF WITH TABS EXTENDING DOWN BETWEEN RAISED SNAP-LOCK SEAMS.
21. 4" x 4" BOX SHAPE, METAL GUTTER. INSTALL LEVEL AND PROVIDE DRAINAGE HOLE AT THE BOTTOM OF EACH END.
22. COMMUNICATION ANTENNA; G.C. TO PROVIDE 2" CONDUIT, PULL STRING AND WEATHER PROOF ROOF JACK FOR COAT CABLE.
23. WALKWAY PADS TYPICAL.
24. CONDENSING UNIT. REF MECHANICAL.

GENERAL NOTES:

1. SEE MECHANICAL AND PLUMBING DRAWINGS FOR ADDITIONAL NOTES AND DETAILS.
2. VERIFY LOCATIONS OF ALL ROOF PENETRATIONS WITH STRUCTURAL, PLUMBING, MECHANICAL AND ARCHITECTURAL DRAWINGS.
3. ALL EQUIPMENT ON ROOF TO BE MOUNTED ON LEVEL CURBS.
4. ALL VENT LOCATIONS TO BE COORDINATED WITH PLUMBING AND MECHANICAL DRAWINGS.
5. EXHAUST FANS AND VENTS TO BE LOCATED A MINIMUM OF 10'-0" FROM HVAC INTAKE. VERIFY ALL LOCATIONS WITH PLUMBING AND MECHANICAL DRAWINGS.
6. ALL MECHANICAL DUCT DROP LOCATIONS DIMENSIONED TO CENTER OF HVAC OPENING. VERIFY EXACT LOCATION. INTENT OF LAYOUT IS TO ALIGN EDGE OF CURB ON STRUCTURAL PURLIN. SEE STRUCTURAL DRAWINGS FOR ADDITIONAL INFORMATION.
7. MECHANICAL SUBCONTRACTOR TO COORDINATE INSTALLATION AND ACCEPTANCE OF PREFABRICATED CURBS AND PENETRATIONS WITH ROOF MEMBRANE SUBCONTRACTOR. GENERAL CONTRACTOR TO PROVIDE ALL NECESSARY BLOCKING, NAILING, ETC. AS NECESSARY FOR A WATERTIGHT AND WATERPROOF BUILDING.
8. IT IS THE GENERAL CONTRACTORS RESPONSIBILITY TO VERIFY, COORDINATE AND / OR INSTALL ALL ADJACENT AND / OR RELATED FLASHING, BLOCKING, NAILERS, CRICKETS, ETC. NECESSARY FOR THE COMPLETE INSTALLATION OF THE ROOF MEMBRANE WHICH IS REQUIRED FOR A COMPLETE, WARRANTED, WATERTIGHT, WATERPROOF INSTALLATION.
9. IT IS THE GENERAL CONTRACTORS RESPONSIBILITY TO VERIFY HEIGHT ELEVATION OF ROOF DECK AND ENTRY GABLE WITH STRUCTURAL DRAWINGS.
10. ROOF PENETRATIONS TO BE MINIMUM 2'-0" FROM EDGE OF ROOF OR PARAPETS.
11. GENERAL CONTRACTOR TO PROVIDE ONE (1) 3/4" CONDUIT FOR MUZAK COAXIAL CABLE PENETRATION. VERIFY EXACT LOCATION WITH SPROUTS. (LOCATE, CLOSE AS POSSIBLE, TO MANAGER'S OFFICE).
12. WOOD BLOCKING UNDER MANUFACTURED CURBS IS TO BE FLUSH WITH TOP OF RIGID (ROOF) INSULATION (MINIMUM) AND IS TO BE FLAT AND LEVEL. PROVIDE 5 1/2" MINIMUM WIDTH FRAMING AS NECESSARY FULL PERIMETER OF OPENING.
13. GENERAL CONTRACTOR TO PROVIDE WALKWAY PADS AROUND ALL ROOFTOP EQUIPMENT WITH A CONNECTED PATH LEADING TO THE ROOF HATCH.

T	AUTOMATIC SLIDING DOORS. G.C. SHALL WRAP EXTERIOR SIDE OF ANY WOOD BLOCKING OR SHIMS WITH BRAKE METAL MATCHING STOREFRONT FINISH.
U	KNOX BOX - MOUNT AT +52" ABOVE FINISH FLOOR CONFIRM FINAL LOCATION WITH AHJ.
V	HOLLOW METAL DOOR AND FRAME. PAINT TO MATCH ADJACENT SURFACE..
W	OVERHEAD DOOR AND FRAME - AT SIM. CONDITION OVERHEAD DOOR AND FRAME AND DOCK SEALS. PROVIDE 16" OF SMOOTH FACE BLOCK AROUND ENTIRE OVERHEAD SIM DOOR.
X	COMPACTOR DOOR.
Y	FIRE DEPARTMENT CONNECTION
Z	GAS METER, PAINT TO MATCH ADJACENT WALL OR COLOR AS REQUIRED BY AHJ. ENSURE IT IS LABELED PER AHJ REQUIREMENTS.
AA	BOLLARD
AB	LINE OF ROOF BEYOND, HVAC, AND REFRIGERATION SHOWN DOTTED

COLOR SCHEDULE:

1	PPG - 1099-1 - ALWAYS ALMOND
2	PPG - 1142-6 - JERICHO JADE
3	PPG - 1028-6 - MOMENTUM
4	PPG - 1032-2 - HURRICANE HAZE
5	PPG - 1005-7 - DARK GRANITE
6	FLOOD WOOD STAIN - SEMI-TRANSPARENT - TOBACCO
7	BERRIDGE - AGED BRONZE
8	CORONADO - OLD WORLD LEDGE - MONARCH
9	CORONADO - 900 SERIES - GREY
10	PREFINISHED BY MFR. - WHITE
11	TRAFFIC YELLOW
12	DARK BRONZE

GENERAL NOTES:

1. GENERAL CONTRACTOR TO VERIFY MOUNTING HEIGHT WITH ARCHITECT PRIOR TO INSTALLATION OF ALL PERIMETER WALL PACK LIGHTING. (16'-0" ABOVE FINISH FLOOR TYPICAL U.N.O.).
2. HOLLOW METAL DOORS / OVERHEAD DOORS, DOWNSPOUTS, AND GUTTERS - PAINT TO MATCH ADJACENT WALL.
3. ALL SIGNAGE UNDER SEPARATE PERMIT. COORD. W/ SIGNAGE VENDOR
4. EXTENTS OF FIBER CEMENT TRIM SURROUND ARE SHOWN FOR BIDDING PURPOSES. PRIOR TO INSTALLATION OF FURRING CHANNELS AND FINISH MATERIALS GC SHALL COORDINATE WITH SIGNAGE VENDOR AND ARCHITECT TO CONFIRM REQUIRED DIMENSIONS. EXTENTS OF FIBER CEMENT TRIM SURROUND VARY WITH SIZE OF SIGN ALLOWED BY AHJ.
5. GRIND ALL METAL EDGES (INCLUDING TRIM AND FLASHING) FOR A SMOOTH FINISH.
6. PROVIDE JUNCTION BOXES FOR MAIN SIGN AND (4) ADDITIONAL JUNCTION BOXES FOR FUTURE SIGNS. REF. ELECTRICAL. VERIFY LOCATIONS AND NUMBER OF SIGNS WITH SPROUTS PRIOR TO INSTALLATION.
7. GENERAL CONTRACTOR TO POWER WASH EXTERIOR WALLS AND ENTRANCE WALK AT A MINIMUM PRIOR TO STORE OPENING.
8. GENERAL CONTRACTOR TO COORDINATE INSTALLATION OF "NOW HIRING" & "COMING SOON" BANNER 80-DAYS PRIOR TO OPENING.
9. GENERAL CONTRACTOR TO COORDINATE INSTALLATION OF "OPENING DATE" BANNER 30-DAYS PRIOR TO OPENING.
10. PROVIDE CONTROL JOINTS IN CMU WALLS AS LOCATED BY STRUCTURAL.

LANDSCAPE NOTES

A. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, MATURE SPECIMEN TREES IN THIRTY-SIX INCH (36") AND FORTY-EIGHT INCH (48") BOX TREES SHALL BE PROVIDED FOR LARGE PROJECT IN SUFFICIENT QUANTITY TO PROVIDE VARIETY AND EMPHASIS ON MAIN FOCAL AREAS. SUBJECT TO REVIEW AND APPROVAL OF THE DIRECTOR AND LANDSCAPE CONSULTANT.

B. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE ARCHITECT SHALL INCLUDE 3 TO 4 FOOT HIGH LANDSCAPE SCREENING ELEMENTS ALONG ENTIRE PARKING FRONTAGE AT STREETS AND DRIVE AISLES. A COMBINATION OF LANDSCAPE BERMS, GROUPS OF SCREENING SHRUBS, OR ENHANCED WALLS SHALL BE UTILIZED.

C. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE WILL AVOID PLANTS THAT REQUIRE CUTTING BACK TO KEEP THEM WITHIN A SPECIFIC AREA OR AT A TRIMMED HEIGHT. PROVIDED SPACE FOR PLANTS TO GROW TO MATURITY AND KEEP THEIR NATURAL SHAPE.

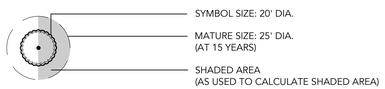
D. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE WILL SELECT PLANT MATERIALS WITHIN VEHICULAR LINE OF SIGHT IMPACT AREAS LIMITED TO A MAXIMUM OF 30" NATURAL HEIGHT.

E. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE ARCHITECT WILL AVOID MONOCULTURE PLANTING, PROVIDE ADDITIONAL PLANT MATERIAL WITH VARYING CHARACTERISTICS. FINAL SHRUB LAYOUT WILL NOT APPEAR AS MASSES, NO SPOTTY PLACEMENT OF SINGULAR SHRUBS.

F. LANDSCAPE ARCHITECT RECOGNIZES THAT THIS PROJECT IS LOCATED WITHIN THE 'VERY HIGH FIRE SEVERITY ZONE' AND WILL BE SUBJECT TO REVIEW BY RIVERSIDE COUNTY OFFICE OF THE FIRE MARSHAL FOR FUEL MODIFICATION REQUIREMENTS.

G. NO COMBUSTIBLE MULCH WILL BE ALLOWED TO BE LOCATED WITHIN 5' OF ANY BUILDING STRUCTURE.

WATER USE CALCULATIONS



TOTAL LANDSCAPE AREA 29,086 SF

MAXIMUM APPLIED WATER ALLOWANCE (MAWA)
MAWA = (ETO) X (0.7) X (LA) X (0.62) = GALLONS PER YEAR
MAWA = 61.65 X 0.7 X 29,086 X 0.62 = 778,228 GALLONS PER YEAR

I HAVE COMPLIED WITH THE CRITERIA OF THE ORDINANCE AND APPLIED THEM ACCORDINGLY FOR THE EFFICIENT USE OF WATER IN THE IRRIGATION DESIGN PLAN

SHADED PARKING CALCULATIONS

OPEN PARKING	130 SPACES
COVERED PARKING	76 SPACES
TOTAL AREA OF OPEN PARKING SPACES	19,862 SF
REQUIRED PERCENTAGE OF PARKING AREA TO BE SHADED	50% (50+ SPACES)
TOTAL SHADE PROVIDED	10,603 SF
PERCENT OF OPEN PARKING SHADED	53 %

UTILITY COORDINATION

PLEASE NOTE THAT THE LOCATION OF ALL UTILITY STRUCTURES IS CONCEPTUAL ONLY AND WILL BE COORDINATED FURTHER DURING THE DESIGN DEVELOPMENT AND CONSTRUCTION DOCUMENTATION PHASE. CONCEPTUAL LIGHTING PLAN IS PROVIDED WITHIN THE DRAWING SET, REFER TO LIGHTING PLANS.

GENERAL NOTES

ALL LANDSCAPING, IRRIGATION AND RELATED IMPROVEMENTS SHALL BE DESIGNED, INSTALLED AND MAINTAINED IN ACCORDANCE WITH THE REQUIREMENTS OF THE CITY OF WILDOMAR, THE COUNTY OF RIVERSIDE (AS REQUIRED), RIVERSIDE COUNTY FIRE DEPARTMENT AND THE ELSINORE VALLEY MUNICIPAL WATER DISTRICT. REFERENCE THE CITY OF WILDOMAR MUNICIPAL CODE CHAPTERS 17.188 (OFF-STREET VEHICULAR PARKING STANDARDS) AND 17.276 (WATER-EFFICIENT LANDSCAPES) AND APPLICABLE SECTIONS OF THE COUNTY OF RIVERSIDE MUNICIPAL CODE (ORDINANCES 348 - LAND USE, 457 - CALIFORNIA BUILDING CODE (EROSION CONTROL), 460 - SUBDIVISION, AND 461 - ROAD IMPROVEMENTS), THE COUNTYWIDE DESIGN STANDARDS & GUIDELINES (JANUARY 2004), GUIDE TO CALIFORNIA FRIENDLY LANDSCAPING (DECEMBER 2009), CALIFORNIA FRIENDLY PLANT LIST (MARCH 2013), FIRE DEPARTMENT REQUIREMENTS, OAK TREE MANAGEMENT GUIDELINES, AND THE REQUIREMENTS OF THE ELSINORE VALLEY MUNICIPAL WATER DISTRICT. IRRIGATION SYSTEM SHALL MINIMIZE THE USE OF OVERHEAD SPRAY TYPE SYSTEMS AND INCORPORATE DRIP OR BUBBLER TYPE IRRIGATION SYSTEMS.

ALL LANDSCAPE IMPROVEMENTS DEPICTED IN THIS DRAWING SET ARE TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).

SITE LIGHTING PROJECT SUMMARY

COMMERCIAL PARCEL

PROJECT SITE ACREAGE
= 4.63 ACRES

PROJECT SITE OCCUPANCY / ZONING
= C–P–S, SCENIC HIGHWAY COMMERCIAL

LUMINAIRE CUT–OFF TYPES USED:
= FULLY SHIELDED FIXTURES – GENERAL USE
= UNSHIELDED FIXTURES – DECORATIVE AND AMBIANCE USE

LUMEN ALLOWANCE PER ACRE
PER CITY OF WILDOMAR MUNICIPAL CODE CHAPTER 8, TABLE 8.64.090–1
COMMERCIAL PARCEL: (OPTION 3)
= 175000 LUMENS OF COMBINED SHIELDED AND UNSHIELDED
= 11000 LUMENS OF UNSHIELDED

PROJECT SITE TOTAL LUMEN ALLOWANCE
= 810250 LUMENS OF COMBINED (175000L X 4.63 ACRES)
= 49280 LUMENS OF UNSHIELDED (50930L X 4.63 ACRES)

TOTAL LUMENS IN PROJECT OF COMBINED FIXTURES
PER FACTOR CALCULATIONS SHOWN ON FIXTURE SCHEDULE
= 343897 LUMENS (336223L, SHIELDED + 7674L, UNSHIELDED)

TOTAL LUMENS IN PROJECT OF UNSHIELDED FIXTURES
PER FACTOR CALCLUATIONS SHOWN ON FIXTURE SCHEDULE
= 7674 LUMENS

RESIDENTIAL PARCEL

PROJECT SITE ACREAGE
= 4.48 ACRES

PROJECT SITE OCCUPANCY / ZONING
= R–2, RESIDENTIAL

LUMINAIRE CUT–OFF TYPES USED:
= FULLY SHIELDED FIXTURES – GENERAL USE
= UNSHIELDED FIXTURES – DECORATIVE AND AMBIANCE USE

LUMEN ALLOWANCE PER ACRE
PER CITY OF WILDOMAR MUNICIPAL CODE CHAPTER 8, TABLE 8.64.090–1
RESIDENTIAL PARCEL:
= 55000 LUMENS OF COMBINED SHIELDED AND UNSHIELDED
= 11000 LUMENS OF UNSHIELDED

PROJECT SITE TOTAL LUMEN ALLOWANCE
= 246400 LUMENS OF COMBINED (55000L X 4.48 ACRES)
= 49280 LUMENS OF UNSHIELDED (11000L X 4.48 ACRES)

TOTAL LUMENS IN PROJECT OF COMBINED FIXTURES
PER FACTOR CALCULATIONS SHOWN ON FIXTURE SCHEDULE
= 238471 LUMENS (228513L + 9958L, UNSHIELDED)

TOTAL LUMENS IN PROJECT OF UNSHIELDED FIXTURES
PER FACTOR CALCLUATIONS SHOWN ON FIXTURE SCHEDULE
= 9958 LUMENS

NOTE:
ALL EXTERIOR LIGHTING CONTROLS SHALL BE COMPLIANT PER
CITY OF WILDOMAR MUNICIPAL CODE: TITLE 8 / CHAPTER 8.64

TYPE S1A S1B S1C

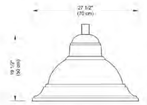
cyclone

Domia CY55P1B Approval – Specification

Project: Order:
Qty: Luminaire: Type:

Tenon Details: Round shape, made of one-piece cast A356 aluminum. An interior border makes it possible to fix the frame module. The certification, maintenance and coding labels of the luminaire are located inside the housing module.

Frame Module: Cast A356 aluminum ring mechanically fixed to the housing, with hinge and quarter-turn latch that accepts the lens module and provides access to the driver module.



Optical Module: The cast A384 aluminum heat sink is optimized to minimize the temperature of the LEDs, increasing their longevity and efficiency. The lens module is assembled mechanically for easy replacement. A flat lens in ▼ is fixed on the cast aluminum frame. The lens is fully IP67 thanks to the silicone gasket. The high efficiency ▼ LED circuit is mechanically assembled on the heat sink. The lifetime of the LEDs is 100,000 hours. It is based on the LM-80 test and extrapolated with TM-21. This data is calculated when 50% of the LEDs produce 70% of their initial luminous flux (L70). The minimum color rendering index (CRI) is 70. The lenses are made of acrylic and designed to illuminate only where needed while achieving excellent uniformity with maximum spacing. The type according to IES ▼.

Driver Module: The self-adjusting Class 1 (50W and over) or Class 2 (20 to 40W) driver is removable without tools.

Primary Voltage of ▼ **Volts.** 50 / 60Hz. THD max 20%. The high power factor is of 90%. The operating temperature is from -40° F (-40° C) to 130° F (50° C). Complies with ROHS. Assembled with quick-disconnect connectors. Complete with 10kA tripolar overvoltage protection for live, neutral and ground lines according to EEE / ANSI C62.41 2002 C. The driver offers 0-10 Volts output.

Wiring / Hardware: Type TEW 14-7, 12" (30cm) minimum exceeding luminaire. All electrical connections between the modules are provided with quick-disconnect connectors for easy maintenance. All outside accessible hardware is accessible is stainless steel. Silicone gaskets are used for sealing the luminaire.

Color: ▼ Textured or Smooth (SM) ▼ finish. The application of durable polyester powder coating meets AAMA 2604 requirements (5 years at all weather conditions). The finish meets ASTM-D7, B117, D1654 and D2247 standards for salt spray and moisture. Cyclone recommends a textured finish for this product.

EPA: 1.61 ft² **Weight:** 52 lbs / 24 kg

CLX

24", 36", 48" and 96" Lengths

FEATURES & SPECIFICATIONS

INTENDED USE — The CLX is a linear lighting solution that is available in multiple lengths, lumen packages and distributions. Designed for versatility, the CLX can address virtually any indoor lighting need. The CLX is also offered in standard and high efficacy configurations and capable of being continuous row mounted or installed as a stand-alone fixture. Ideal for skylight and downlight in commercial, retail, manufacturing, warehouse, and display applications. **Certain airborne contaminants can diminish the integrity of acrylic and/or polycarbonate. Click here for Acrylic-Polycarbonate Compatibility table for suitable uses.**

CONSTRUCTION — Channel and cover are formed from code-gauge cold-rolled steel. Housing and lens ends are injection molded plastic to provide a more architectural look and feel. The end caps come standard with a 5/8" knock out for continuous row mounting but can be ordered without.

Finish: Paint options include high-gloss, Baked white polyester (WH), opalescent (GACF), matte black (HB) and smoke gray (MGY). Pre-coat-type phosphate pre-treatment ensures superior paint adhesion and rust resistance.

OPTICS — Offered with acrylic lens and lens trim configurations. Provides a choice of optical distributions including, wide, narrow, and color.

ELECTRICAL — 3000mA high-output LEDs integrated on a two-layer circuit board, ensuring cool-running operation. Optional internal pluggable wiring harness for reduced labor cost in row mounting applications. See P.R.E. ordering information on page 5-6. Electronic LED drivers is multi-volt input and 0-10V dimming standard (see Operational Data on page 4 for actual wattage consumption). The fixture is IP20 rated and has been tested to a minimum low range of 2.5kV at 0.5Hz combination wave for indoor locations. Regional locations requiring higher level of protection additional surge protection must be provided. L70 is 100,000 hours at 25˚C.

ULEs provide nominal 80 CRI at 90 CRI at 3000-K, 3500-K, 4000-K or 5000-K.

Lumen output up to 22,000 lumens per foot.

INSTALLATION — Fixture may be ceiling or wall mounted (with or without THICK bumper or angle mounted with CLAMKLIBT), pendant or stem mounted with appropriate mounting systems.

WARNING — Removing the lens and scoring the fixture during installation exposes the LEDs, putting them at risk for damage.

If you plan to surface-mount this fixture, we recommend using the THICK. This eliminates the need to score the fixture.

If you plan to continuous row mount, we recommend using the FLX wiring harness option. Ultra eliminates the need to open the fixture.

Damage to the LEDs caused during installation will not be covered under the warranty.

LISTINGS — CSA certified to US and Canadian safety standards. For use in damp locations between -4°F (-20°C) and 104°F (40°C). Optional High Ambient (hA) ranging to 122°F (50°C) available on certain lumen packages (see ambient temperature chart for additional information).

Designlights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

BUY AMERICAN — Product with the BAA option is assembled in the USA and meets the Buy American(a) government procurement requirements under FAR, DFARS and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

Stock configurations are offered for shorter lead times:

Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks marked by a ✓ checkmark symbol

To learn more about A+, visit www.acuitybrands.com/aplus.

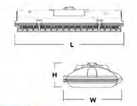
TYPE S4



D-Series
LED Surface Canopy

Buy American

Catalog Number	
Notes	
Type	

Specifications

Length: 17-3/4" (451 mm)
Width: 8-1/2" (215.9 mm)
Height: 3-7/16" (87.3 mm)
Weight (max): 16 lbs (7.3 kg)

Introduction

The D-Series LED Surface Canopy luminaire is ideal for covered walkways or drive-thrus, semi-covered outdoor aisles, and walk-in coolers and freezers. Its five optical choices provide the design flexibility to potentially reduce luminaire counts while still meeting IES criteria, lowering overall energy consumption.

Its expected service life of over 100,000 hours (20 years of nighttime operation) combined with the available motion/ambient sensor offers an extremely low maintenance solution that yields quick payback.

Accessories

Ordered and shipped separately.

DSXSCHEX Hex-wrench key (1 per light engine)
DSXSCSBOLTMNTKIT Bolt shroud for SRM use (allows a low-wide, wall-hugging profile) (1 per fixture)

NOTES
1. Available with 700mA or 1000mA option only.
2. Not available with 347 or 480V.
3. AMBPC only available with 530mA or 700mA.
4. Designlights Consortium qualified.
5. MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120, 208, 240 or 277 options only when ordering with Hazmg DS-ZP option).
6. Not with one light engine (10C). Only available with 700mA or 1000mA.
7. Also available as a separate accessory; see Accessories information at left.
8. Single fuse (SF) requires 120, 277 or 347 voltage option. Double fuse (DF) requires 208, 240 or 480 voltage option.
9. See the electrical section on page 3 for more details. 10C1ONLY not available with all PIR options.
10. Dimming driver standard. Available in layouts up to 30'. Not available in 10C, 20C, 30C, 10C1ONLY or 20C1ONLY.
11. PIR & PIRFC3V specifies the Acuity Controls ISENSOR 2.0 (360° motion/ambient sensor, the PIR1 & PIR1FC3V specifies the Acuity Controls ISENSOR 2.0 (180° motion/ambient sensor.

Introduction

The WDGE LED family is designed to meet specifier's every wall-mounted lighting need in a widely accepted shape that blends with any architecture. The clean rectilinear design comes in four sizes with lumen packages ranging from 1,200 to 25,000 lumens, providing true site-wide solution.

WDGE1 delivers up to 2,000 lumens with a soft, non-pixelated light source, creating a visually comfortable environment. The compact size of WDGE1, with its integrated emergency battery backup option, makes it an ideal over-the-door wall-mounted lighting solution.

Introduction

The WDGE LED family is designed to meet specifier's every wall-mounted lighting need in a widely accepted shape that blends with any architecture. The clean rectilinear design comes in four sizes with lumen packages ranging from 1,200 to 25,000 lumens, providing a true site-wide solution. Embedded with eLight® AIR wireless controls, the WDGE family provides additional energy savings and code compliance.

WDGE2 delivers up to 6,000 lumens with a soft, non-pixelated light source, creating a visually comfortable environment. When combined with multiple integrated emergency battery backup options, including an 18W cold temperature option, the WDGE2 becomes the ideal wall-mounted lighting solution for pedestrian scale applications in any environment.

MODULE SPECIFICATION:
- Efficacy 65-125 Lumens per watt
- Life: L70 50,000 hours
- Color temp: 2700K, 3000K, 3500K and 4000K
- CRI: >90.

MODULE DRIVER SPECIFICATION:
- Input Voltage: 120-277 Volts; 50/60Hz
- Dimmable down to 1%
- Color temp: 2700K, 3000K, 3500K and 4000K (12w is 120v and TRIAC dimming only)
- Output Current: Constant Current, 440mA to 940mA (model dependent)
- Driver Efficiency > 80%; Power Factor > 0.9
- Integral Surge Protection in conformance to ANSI C62.41 Category A.

MODULE LISTINGS
- Fully compliant with the RoHS Directive
- Certifications: CE/UL

WARRANTY
See www.ANPlighting.com for complete fixture warranty.
LED warranty information:
- 5 year limited warranty*
*Limited Warranty: A typical year is defined as 4,380 hours of operation

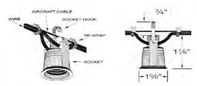
PRIMUS



DECOSTRING SERIES

LED / INCANDESCENT

SUSPENDED DECORATIVE STRINGLIGHT SYSTEMS

PROJECT:
TYPE:

SOCKET, WIRE & CABLE DETAILS

Decostrings are a perfect accent lighting solution to add a personal ambience to patios, courtyards, atriums, restaurants, amusement parks and any open area. The "festoon" lighting system is typically strung between two anchorage points with optional intermediary support and electrically fed from one end. The sockets can be either symmetrically spaced or randomly spaced to suit the application. Optional shades, guards and lenses complete the architectural design.

SPECIFICATIONS

LAMPHOLDER	Black phenolic, medium base UL weatherproof with hook for optional mounting.
WIRE	12/2 G. Black flexible wire rated for 25A max. uv rated for outdoor use and long lasting.
SUPPORT CABLE	1/16" aircraft catenary cable supports the system, 480# test. Heavier cable available. (*See Page 7*)
LAMPS	LED and incandescent medium base A, G or S style lamps. (*See Page 3 for Lamp Options*)
ACCESSORIES	Optional brass, aluminum and acrylic shades. (*See Page 4 & 5 for Shade Options*) Consult factory for custom shades not shown in catalog.
GUIDELINES	Many ways to install and create a design. (*See Page 6 & 7*)
PHOTOMETRY	Bare lamp and shielded "BUG" rated JIES files available. (*See Page 8*) (Consult Factory or Visit Website)
CERTIFICATION	ETL listed for dry or wet and permanent installation. E201431 MADE IN THE USA
VOLTAGE	120V system (1920 watts max load). No driver or transformer required. (Consult Factory for 12V/24V)
DIMMING	Dimmable down to 10% with leading or trailing edge type dimmers.

With **Linear One,** we set out to produce a series that works with your vision instead of crowding it. Acclaim Lighting continually strives for simple goals during the design process: be useful, stay out of the way, and function wonderfully. Creativity begins with great design and Linear One is streamlined to work for you. We meticulously craft linear lights that install with no visible cables and create the clutter-free space your work deserves. This means that subtlety enhances your aesthetic as Linear One remains hidden while serving as the powerhouse behind your visual creation. Refined to work with your creativity, Linear One provides end-to-end modular functionality that adapts to your needs and never works against them. Acclaim Lighting is motivated by the passion of its users and strives to produce the very best solutions in architectural lighting. We create beautiful products that work for creativity.

SPECIFICATIONS

Colors	2700K, 3000K, 3500K, 4000K (80 CRI or 90 CRI available), Red, Green, Blue, Amber
Beam Angles	10 x 10 , 30 x 30 , 60 x 60 , 100 x 100 , 10 x 25 , 10 x 40 , 10 x 70 , 30 x 60 , 40 x 70 Asymmetric (60 x 60 + 20 tilt), Batwing (split 10 x 40 or 40 x 70)
Housing Lengths	1' (304.8mm), 4' (1219.2mm)
Control	0-100% dimming via internal 0-10V driver, DMX via optional UDM, wireless via optional Aria
Max Fixtures in Series	80' (24m)
Power Consumption	**1':** 12W, **4':** 48W
Operating Voltage	100-277VAC, 50/60 Hz
Lumen Maintenance	L70 @ 150,000 hours (25 C)
Mounting	90 mounting bracket included, flat mounting bracket optional
Finish	Silver / finished aluminum, marine and natatorium environment capability standard.
Material	Aluminum body - Type III hard coat anodized, polycarbonate lens
Ambient Operating Temperature	-40 F to 131 F (-40 C to 55 C)
IP Rating	IP66, wet location - marine environment housing standard
IK Rating	IK10, protection against 5 joule impact (40cm distance)
Fixture Connectors	IP66 End to end multi-pin connection cables included
Warranty	5 Years, limited
Weight	**1':** 2.4 lbs, **4':** 9.7 lbs
Dimensions	**L:** 12" / 48" **W:** 2.12" **H:** 3.39" (L: 305 / 1220 W: 54 H: 86.2mm)
Certifications	ETL, CE

X	COMPACTOR DOOR.
Y	FIRE DEPARTMENT CONNECTION
Z	GAS METER, PAINT TO MATCH ADJACENT WALL OR COLOR AS REQUIRED BY AHJ. ENSURE IT IS LABELED PER AHJ REQUIREMENTS.
AA	BOLLARD
AB	LINE OF ROOF BEYOND, HVAC, AND REFRIGERATION SHOWN DOTTED

COLOR SCHEDULE:

1	PPG - 1099-1 - ALWAYS ALMOND
2	PPG - 1142-6 - JERICHO JADE
3	PPG - 1028-6 - MOMENTUM
4	PPG - 1032-2 - HURRICANE HAZE
5	PPG - 1005-7 - DARK GRANITE
6	FLOOD WOOD STAIN - SEMI-TRANSPARENT - TOBACCO
7	BERRIDGE - AGED BRONZE
8	CORONADO - OLD WORLD LEDGE - MONARCH
9	CORONADO - 900 SERIES - GREY
10	PREFINISHED BY MFR. - WHITE
11	TRAFFIC YELLOW
12	DARK BRONZE

GENERAL NOTES:

1. GENERAL CONTRACTOR TO VERIFY MOUNTING HEIGHT WITH ARCHITECT PRIOR TO INSTALLATION OF ALL PERIMETER WALL PACK LIGHTING. (16'-0" ABOVE FINISH FLOOR TYPICAL U.N.O.).
2. HOLLOW METAL DOORS / OVERHEAD DOORS, DOWNSPOUTS, AND GUTTERS - PAINT TO MATCH ADJACENT WALL.
3. ALL SIGNAGE UNDER SEPARATE PERMIT. COORD. W/ SIGNAGE VENDOR
4. EXTENTS OF FIBER CEMENT TRIM SURROUND ARE SHOWN FOR BIDDING PURPOSES. PRIOR TO INSTALLATION OF FURRING CHANNELS AND FINISH MATERIALS GC SHALL COORDINATE WITH SIGNAGE VENDOR AND ARCHITECT TO CONFIRM REQUIRED DIMENSIONS. EXTENTS OF FIBER CEMENT TRIM SURROUND VARY WITH SIZE OF SIGN ALLOWED BY AHJ.
5. GRIND ALL METAL EDGES (INCLUDING TRIM AND FLASHING) FOR A SMOOTH FINISH.
6. PROVIDE JUNCTION BOXES FOR MAIN SIGN AND (4) ADDITIONAL JUNCTION BOXES FOR FUTURE SIGNS. REF. ELECTRICAL. VERIFY LOCATIONS AND NUMBER OF SIGNS WITH SPROUTS PRIOR TO INSTALLATION.
7. GENERAL CONTRACTOR TO POWER WASH EXTERIOR WALLS AND ENTRANCE WALK AT A MINIMUM PRIOR TO STORE OPENING.
8. GENERAL CONTRACTOR TO COORDINATE INSTALLATION OF "NOW HIRING" & "COMING SOON" BANNER 80-DAYS PRIOR TO OPENING.
9. GENERAL CONTRACTOR TO COORDINATE INSTALLATION OF "OPENING DATE" BANNER 30-DAYS PRIOR TO OPENING.
10. PROVIDE CONTROL JOINTS IN CMU WALLS AS LOCATED BY STRUCTURAL.

KEYNOTES:

1. CLASS 'A' SINGLE PLY T.P.O. ROOF WITH R-30 INSULATION ON METAL ROOF DECK. REF SPECS.
2. PROVIDE OPENING IN ROOF FOR REFRIGERATION LINES
3. TOWER STRUCTURE SHOWN DASHED BELOW.
4. ROOF CRICKET, WOOD FRAME OR RIGID INSULATION FOR 1/4" PER FOOT SLOPE MINIMUM.
5. 24 GAUGE METAL FLASHING AT PARAPET - PAINT.
6. LINE OF REFRIGERATION RACKS BELOW.
7. HOSE BIB 6" ABOVE FINISH ROOF.
8. PRIMARY SCUPPER (SEE PLAN FOR SIZE) & 24" ADJACENT OVERFLOW SCUPPER.
9. WEATHER STATION BY REFRIGERATION CONTRACTOR. VERIFY LOCATION WITH REFRIGERATION DRAWINGS.
10. FLUE / VENT THRU ROOF. MIN. 2'-0" FROM PARAPET, 10'-0" FROM AIR-INTAKE ON HVAC UNITS.
11. ROOF ACCESS HATCH AND LADDER.
12. RESTROOM EXHAUST FAN.
13. ONE HOUR FIRE RATED EXHAUST HOOD DUCT SHAFT ENCLOSURE.
14. HVAC UNIT. FOR CURB.
15. REFRIGERATION EQUIPMENT ON ROOF. FOR LEVEL STEEL PLATFORM.
16. COMBUSTION AIR INTAKE.
17. LOUVERED ACCESS PANEL AT BACK OF TOWER.
18. STANDING SEAM METAL ROOF ON (2) LAYER 30# FELT ON EXTERIOR SHEATHING OVER METAL FRAMING.
19. 4" x 4" BOX SHAPE, METAL GUTTER WITH 2" DIAMETER DOWNSPOUT. INCLUDE SPLASH GUARD AT ROOF, INSTALLED DIRECTLY UNDER DOWNSPOUT.
20. SNOW GUARD RAILS (IN ZONES 4 AND COLDER) ON STANDING SEAM ROOF WITH TABS EXTENDING DOWN BETWEEN RAISED SNAP-LOCK SEAMS.
21. 4" x 4" BOX SHAPE, METAL GUTTER. INSTALL LEVEL AND PROVIDE DRAINAGE HOLE AT THE BOTTOM OF EACH END.
22. COMMUNICATION ANTENNA; G.C. TO PROVIDE 2" CONDUIT, PULL STRING AND WEATHER PROOF ROOF JACK FOR COAT CABLE.
23. WALKWAY PADS TYPICAL.
24. CONDENSING UNIT. REF MECHANICAL.

GENERAL NOTES:

1. SEE MECHANICAL AND PLUMBING DRAWINGS FOR ADDITIONAL NOTES AND DETAILS.
2. VERIFY LOCATIONS OF ALL ROOF PENETRATIONS WITH STRUCTURAL, PLUMBING, MECHANICAL AND ARCHITECTURAL DRAWINGS.
3. ALL EQUIPMENT ON ROOF TO BE MOUNTED ON LEVEL CURBS.
4. ALL VENT LOCATIONS TO BE COORDINATED WITH PLUMBING AND MECHANICAL DRAWINGS.
5. EXHAUST FANS AND VENTS TO BE LOCATED A MINIMUM OF 10'-0" FROM HVAC INTAKE. VERIFY ALL LOCATIONS WITH PLUMBING AND MECHANICAL DRAWINGS.
6. ALL MECHANICAL DUCT DROP LOCATIONS DIMENSIONED TO CENTER OF HVAC OPENING. VERIFY EXACT LOCATION. INTENT OF LAYOUT IS TO ALIGN EDGE OF CURB ON STRUCTURAL PURLIN. SEE STRUCTURAL DRAWINGS FOR ADDITIONAL INFORMATION.
7. MECHANICAL SUBCONTRACTOR TO COORDINATE INSTALLATION AND ACCEPTANCE OF PREFABRICATED CURBS AND PENETRATIONS WITH ROOF MEMBRANE SUBCONTRACTOR. GENERAL CONTRACTOR TO PROVIDE ALL NECESSARY BLOCKING, NAILING, ETC. AS NECESSARY FOR A WATERTIGHT AND WATERPROOF BUILDING.
8. IT IS THE GENERAL CONTRACTORS RESPONSIBILITY TO VERIFY, COORDINATE AND / OR INSTALL ALL ADJACENT AND / OR RELATED FLASHING, BLOCKING, NAILERS, CRICKETS, ETC. NECESSARY FOR THE COMPLETE INSTALLATION OF THE ROOF MEMBRANE WHICH IS REQUIRED FOR A COMPLETE, WARRANTED, WATERTIGHT, WATERPROOF INSTALLATION.
9. IT IS THE GENERAL CONTRACTORS RESPONSIBILITY TO VERIFY HEIGHT ELEVATION OF ROOF DECK AND ENTRY GABLE WITH STRUCTURAL DRAWINGS.
10. ROOF PENETRATIONS TO BE MINIMUM 2'-0" FROM EDGE OF ROOF OR PARAPETS.
11. GENERAL CONTRACTOR TO PROVIDE ONE (1) 3/4" CONDUIT FOR MUZAK COAXIAL CABLE PENETRATION. VERIFY EXACT LOCATION WITH SPROUTS. (LOCATE, CLOSE AS POSSIBLE, TO MANAGER'S OFFICE).
12. WOOD BLOCKING UNDER MANUFACTURED CURBS IS TO BE FLUSH WITH TOP OF RIGID (ROOF) INSULATION (MINIMUM) AND IS TO BE FLAT AND LEVEL. PROVIDE 5 1/2" MINIMUM WIDTH FRAMING AS NECESSARY FULL PERIMETER OF OPENING.
13. GENERAL CONTRACTOR TO PROVIDE WALKWAY PADS AROUND ALL ROOFTOP EQUIPMENT WITH A CONNECTED PATH LEADING TO THE ROOF HATCH.

C-P-S Zone (Chapter 17.76) Development Standards Table for Commercial Retail Center

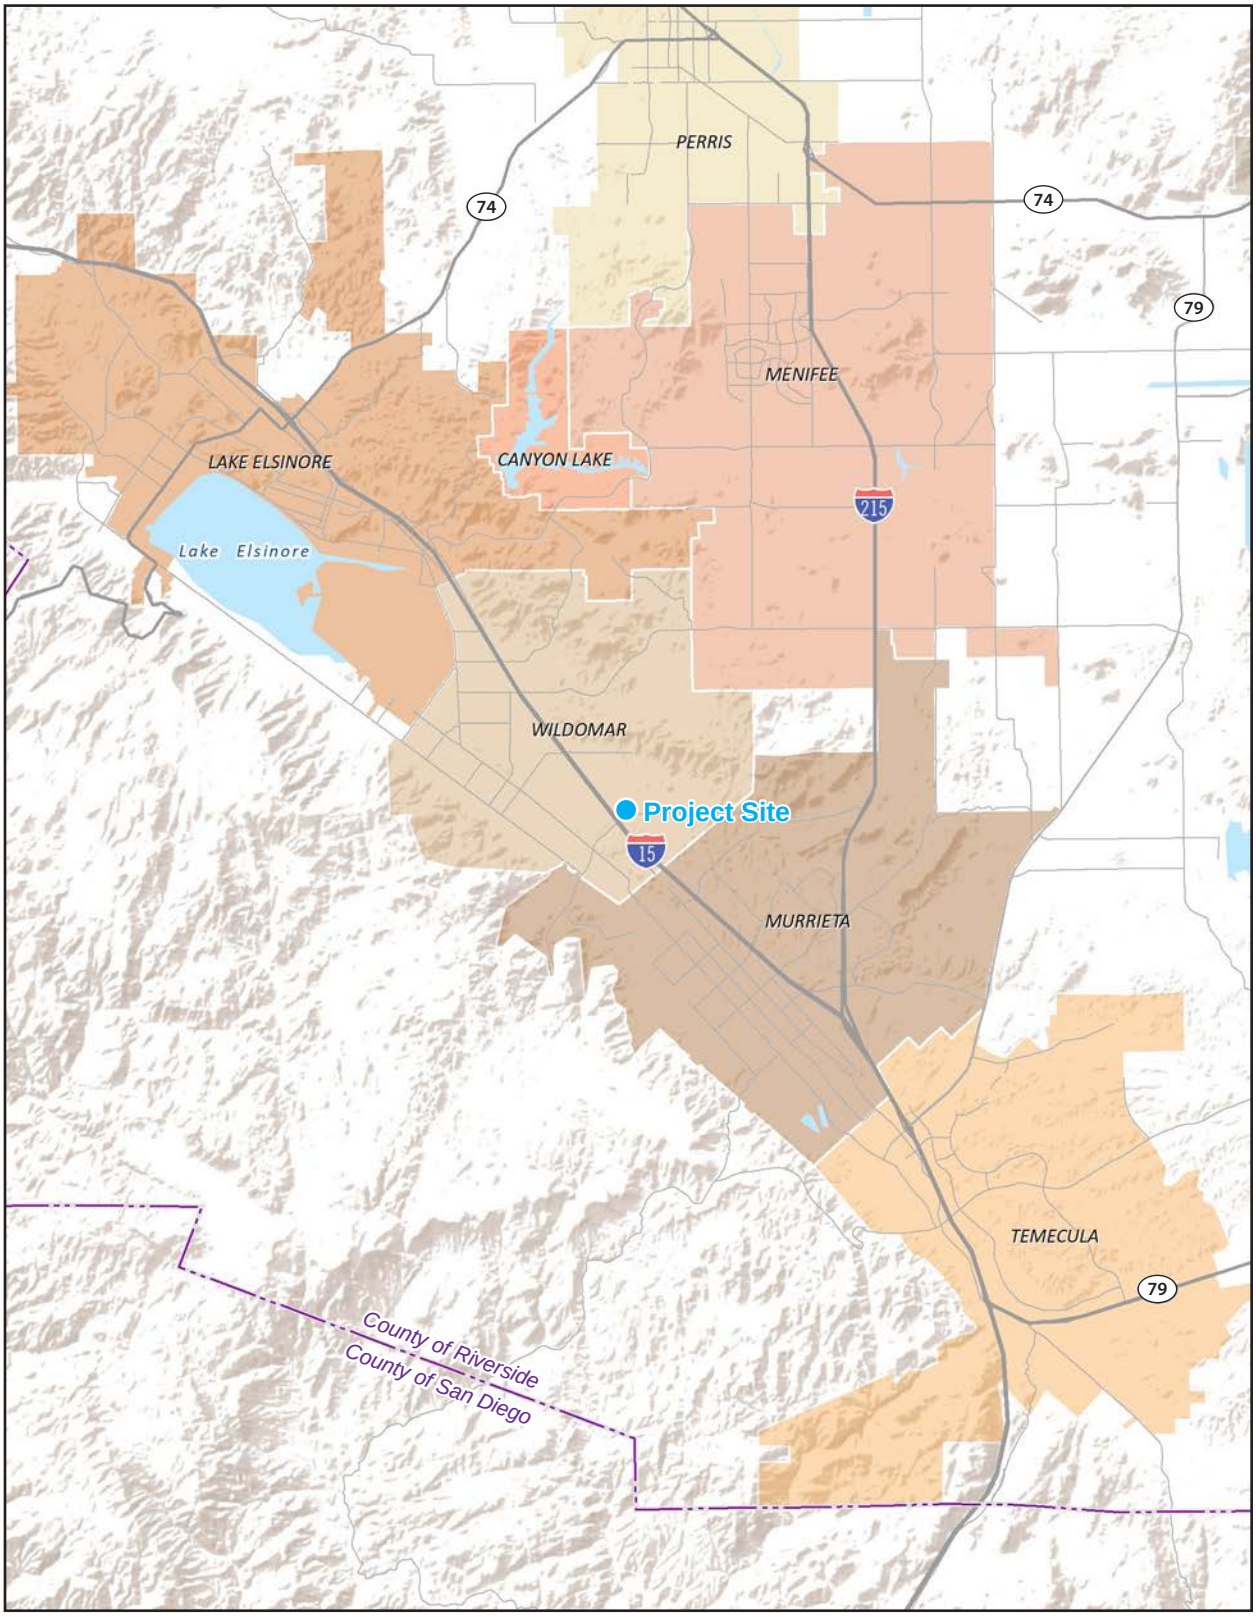
Development Standards	Minimum Development Standard	All Buildings	Meets/Exceeds Requirements
Lot Area	No minimum lot area	5.03 acres	Yes
Building Height	50 feet max.	29.0 to 38.5 feet	Yes
Required Setbacks			
Front Setback (south elev.)	6 feet min.	25 – 140 feet	Yes
Rear Setback (north elev.)	6 feet min.	88 feet	Yes
Side Setback (east elev.)	6 feet min.	40 - 62 feet	Yes
west elev.)	6 feet min.	10 – 29 feet	Yes

Parking Standards (Sec. 17.188) Table for Commercial Retail Project

Parking Standards	Minimum Parking Requirement Standard	Proposed Project	Meets/Exceeds Requirements
Commercial Retail Buildings (34,450 s.f.)	5.5 spaces / 1,000 s.f. = 190 spaces	195 spaces	Yes
Parking Stall Size (open)	9’ x 18’ 11’ x 18’ (end stalls)	9’ x 18’ 11’ x 18’ (end stalls)	Yes
On-site Drive Aisles	24 feet min.	25 feet minimum	Yes
Open Parking Area Shading	50%	61%	Yes
Cal Green Code	10%	15±%	Yes

Multi-Family Zone (17.44.020) Development Standards Table for Apartment Project site

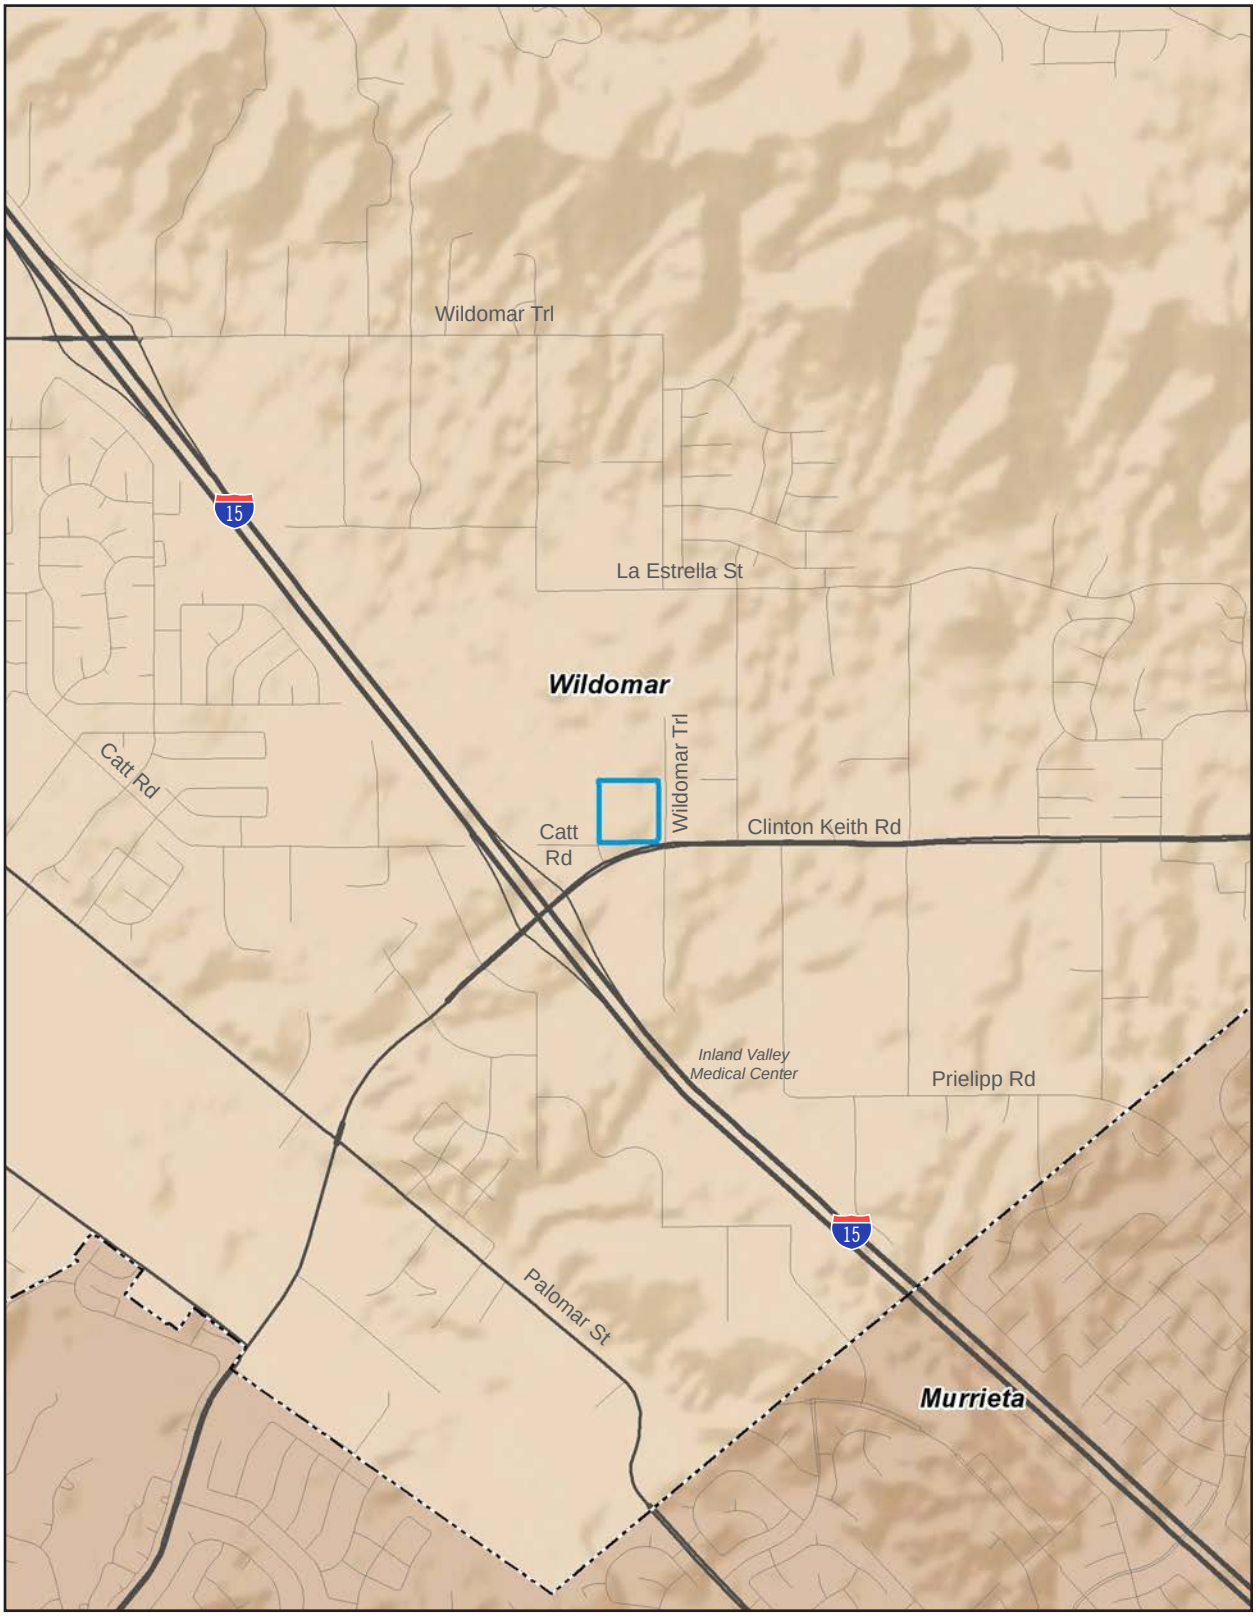
Development Standards	Development Standard	Proposed Project	Meets/Exceeds Requirements
Minimum Lot Area	7,200 square feet (60' x 100')	4.5 +/- acres	Yes
Required Setbacks			
Front Street Setbacks (along Catt Road)	20' min. since buildings are 39.9' in height	22' min. along Catt Road (all buildings are 39.9' in height)	Yes
Rear Setbacks (north property line)	20' min. since buildings are 39.9' in height	75' min. along entire rear property line.	Yes
Side Setback (adjacent to Retail Center & west property line)	10' min. since buildings are 39.9' in height	10' min. between Retail Center and 75' from west prop. line)	Yes
Building Height	50' maximum	39.9' maximum	Yes
Density Range (MU Overlay)	30+ units/acre	33.5 units/acre	Yes



Multi-Family Parking (Sec. 17.188) Standards Table for Apartment Project

Development Standards	Minimum Parking Requirement Standard	Provided by Project	Meets/Exceeds Requirements
Proposed Apartments			
Studio & 1 bedroom units (93 units @ 1.25 spaces/unit)	116.5 spaces	116.5 spaces	Yes
2 bedroom units (57 units @ 2.25 spaces/unit)	128.5 spaces	267.5 spaces	Yes
Visitor Parking (15% of 245 sp.)	37.0	37.0	Yes
Total Spaces	**282 spaces**	**282 spaces**	**Yes**
Parking Stall Size	9' x 18' 11' x 18' (end stalls)	9' x 18' 11' x 18'	Yes
Garage Stall Size: Single Car Garage Size 2 Car Garage Size)	 9' x 20' 18' x 20'	 10'-8" x 20'-9" 20'-6" x 20'-2"	 Yes Yes
On-site Drive Aisles	25 feet	25 feet	Yes
E.V. Parking Stalls (per Cal Green Code) – Garage will have EV outlets for EV cars	27 spaces	27 spaces	Yes

Unit Breakdown and Size Table for Apartment Project Site



Unit Type	Unit Quantity	Unit Size(s)	# of Bedrooms
Studio Units (8%)	12 units	580 square feet	Studio
1-Bedroom Units (54%)	81 units	630 to 810 square feet	1-Bedroom
2-Bedroom Units (38%)	57 units	936 to 1,115 square feet	2-Bedroom
Total Count	**109 Units**	826 square feet average

CITY OF WILDOMAR - PC - SPECIAL MEETING
GENERAL BUSINESS
Agenda Staff Report # 3.1
Meeting Date: October 19, 2022

SUBJECT: Proper Findings in Land Use Decisions

SUBMITTED BY: Janet Morales, City Attorney

PREPARED BY: Matthew Bassi, Planning Director

ACTION:
The Planning Department recommends the Planning Commission Receive and File this presentation.

PROJECT DESCRIPTION:
Land use decisions are frequently challenged in court. When judges review land use decisions, they need to examine the evidence and the reasons why local agencies either approved or denied the project. These reasons, along with the supporting evidence for a land use decision, are known as "findings." This means that the documentation supporting the approval or denial of a project must include an explanation of how a city agency, such as a planning commission or city council, processed the evidence presented when reaching its decision.

PROJECT ANALYSIS:
Findings are the legal "footprints" that an agency must leave to bridge the analytical gab between the raw data considered by the agency and its ultimate decision. They expose an agency's mode of analysis of facts, regulations, and policies. It is recommended that these findings be written and addressed in the material presented to the Planning Commission.

Certain items presented to the Planning Commission, including Conditional Use Permits, require the adoption of written findings to support their action. Findings are not required to follow a particular form. (Topanga Ass'n for a Scenic Community v. County of Los Angeles (1974) 11 Cal.3d 506). Courts focus on substance over form in challenges to the adequacy of findings. In practice, the organization and presentation of findings vary significantly between jurisdictions. Courts are generally deferential towards local land use decisions so long as they are adequate finding to support those decisions. Adequate findings are findings that clearly

show that the Planning Commission considered the required factors and that the local agency based its decision, in a reasoned way, on legally required or permissible considerations.

Dependent on the item before the Planning Commission, Commissioners should consider the answer to the following questions:

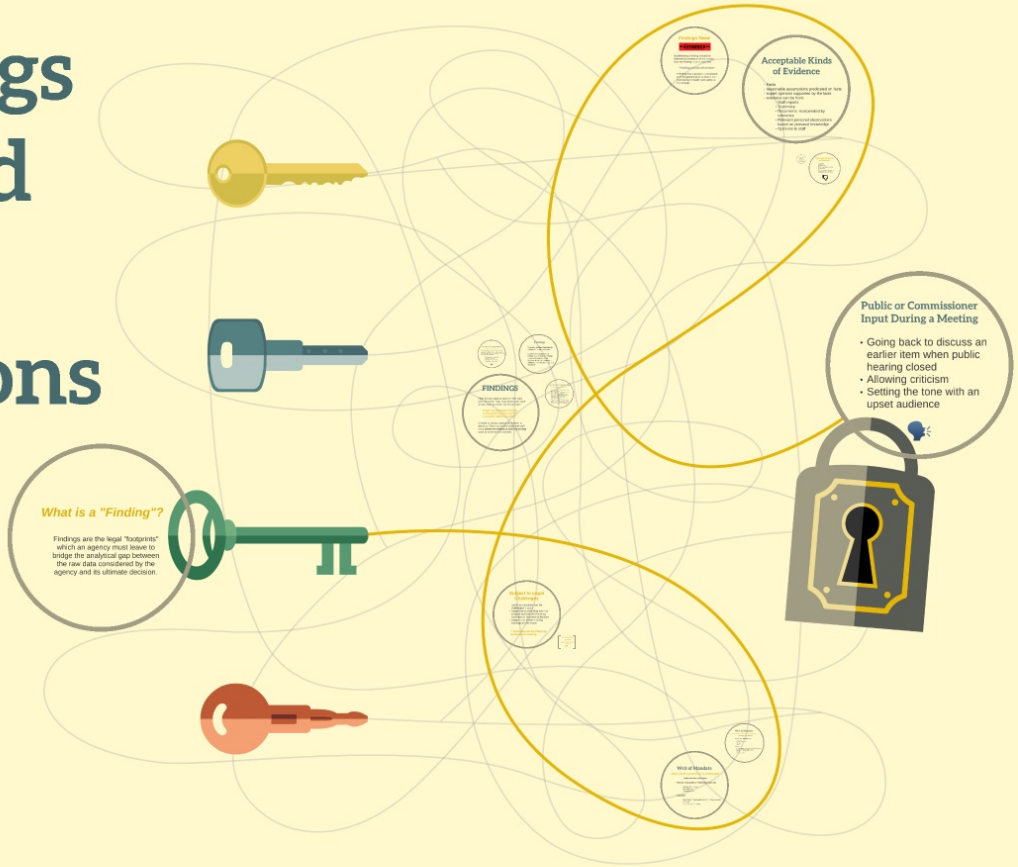
- Is the request consistent with the intent and purpose of the general plan and zoning ordinance?

- Is the request compatible with the surrounding zoning?

- Will the proposed development have density impacts that are similar to surrounding areas?

- Is there adequate ingress/egress?

- Is there enough buildable area?



- Will the request cause any unreasonable adverse effects on the adjacent properties?

- Is the location and character proposed development considered to be consistent with the desirable pattern of development?

In summary, adequate findings are necessary to show a judge that the public agency compiled enough evidence and explained its reasoning well enough to reach its decision. A judge will not presume that a public agency's rulings rest upon necessary findings and that those findings are supported by substantial evidence. Rather, agencies must expressly set forth their findings and set forth sufficient facts to support them. We can all recall a high school Algebra teacher who said over and over, "You must show your work, or you won't get credit for the answer." Preparing adequate findings is like showing your work on a complex Algebra problem. Instead of simply showing the answer or the decision, public agencies must show the evidence and the reasoning used to arrive at the decision.

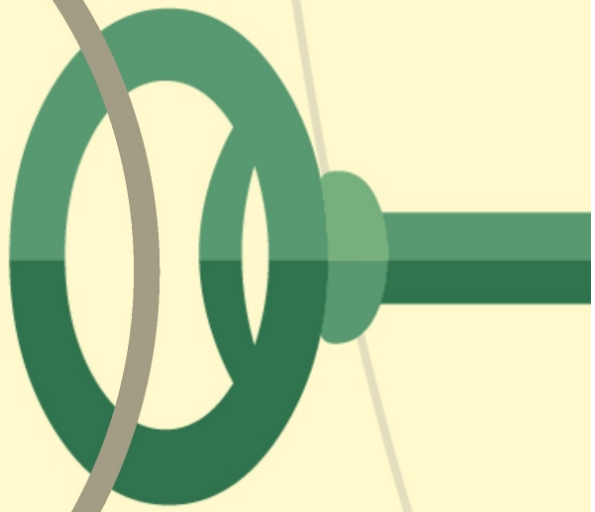
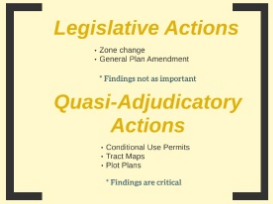
Proper Findings in Land Use Decisions



burke

BURKE, WILLIAMS & SORENSEN, LLP

What is a "Finding"?



Findings are the legal "footprints" which an agency must leave to bridge the analytical gap between the raw data considered by the agency and its ultimate decision.

Subject to Legal Challenges

- Land use decisions can be challenged in court
- Judge has to read what went on to figure out how the Planning Commission reached its decision
- Judge is not present during hearings on the matter

***** Think beyond the Planning Commission meeting***

Legislative Actions

- Zone change
- General Plan Amendment

* **Findings not as important**

Quasi-Adjudicatory Actions

- Conditional Use Permits
- Tract Maps
- Plot Plans

* **Findings are critical**

Findings must be supported by evidence
No bias
No conflict of interest

Writ of Mandate

How a land use decision is challenged

Traditional Writ of Mandate

- **Review of Legislative / Ministerial Decisions**

  Zoning Ordinance
  Specific Plan
  General Plan

- **Standard**

  Must have "reasonable basis" for the decision
  No bias
  No conflict of interest

Writ of Mandate

How a land use decision is challenged

Administrative Writ of Mandate

- **Review of Quasi-Judicial Decisions**

  Tract maps
  Conditional Use Permit
  Plot Plan
  Variance

- **Standard**

  No prejudicial abuse of discretion by Planning Commission
  Decision must be supported by findings
  Findings must be supported by evidence
  No bias
  No conflict of interest

FINDINGS

High School algebra teacher who said over and over, "you must show your work or you wont get credit for the answer."

Preparing adequate findings is like showing your work on a complex algebra problem.

Instead of simply stating the answer or decision, Planning Commission and staff must **show the evidence and reasoning** used to arrive at the decision.

Findings
Typically ***written statements*** contained in the resolution
Courts have expressed a willingness to look for findings in oral statements of the Agency at a public hearing in addition to written findings in a resolution.

Tentative Tract Map Findings

Government Code Section 66474:

A legislative body of a city or county shall deny approval of a tentative map, or a parcel map for which a tentative map was not required, if it makes any of the following findings:

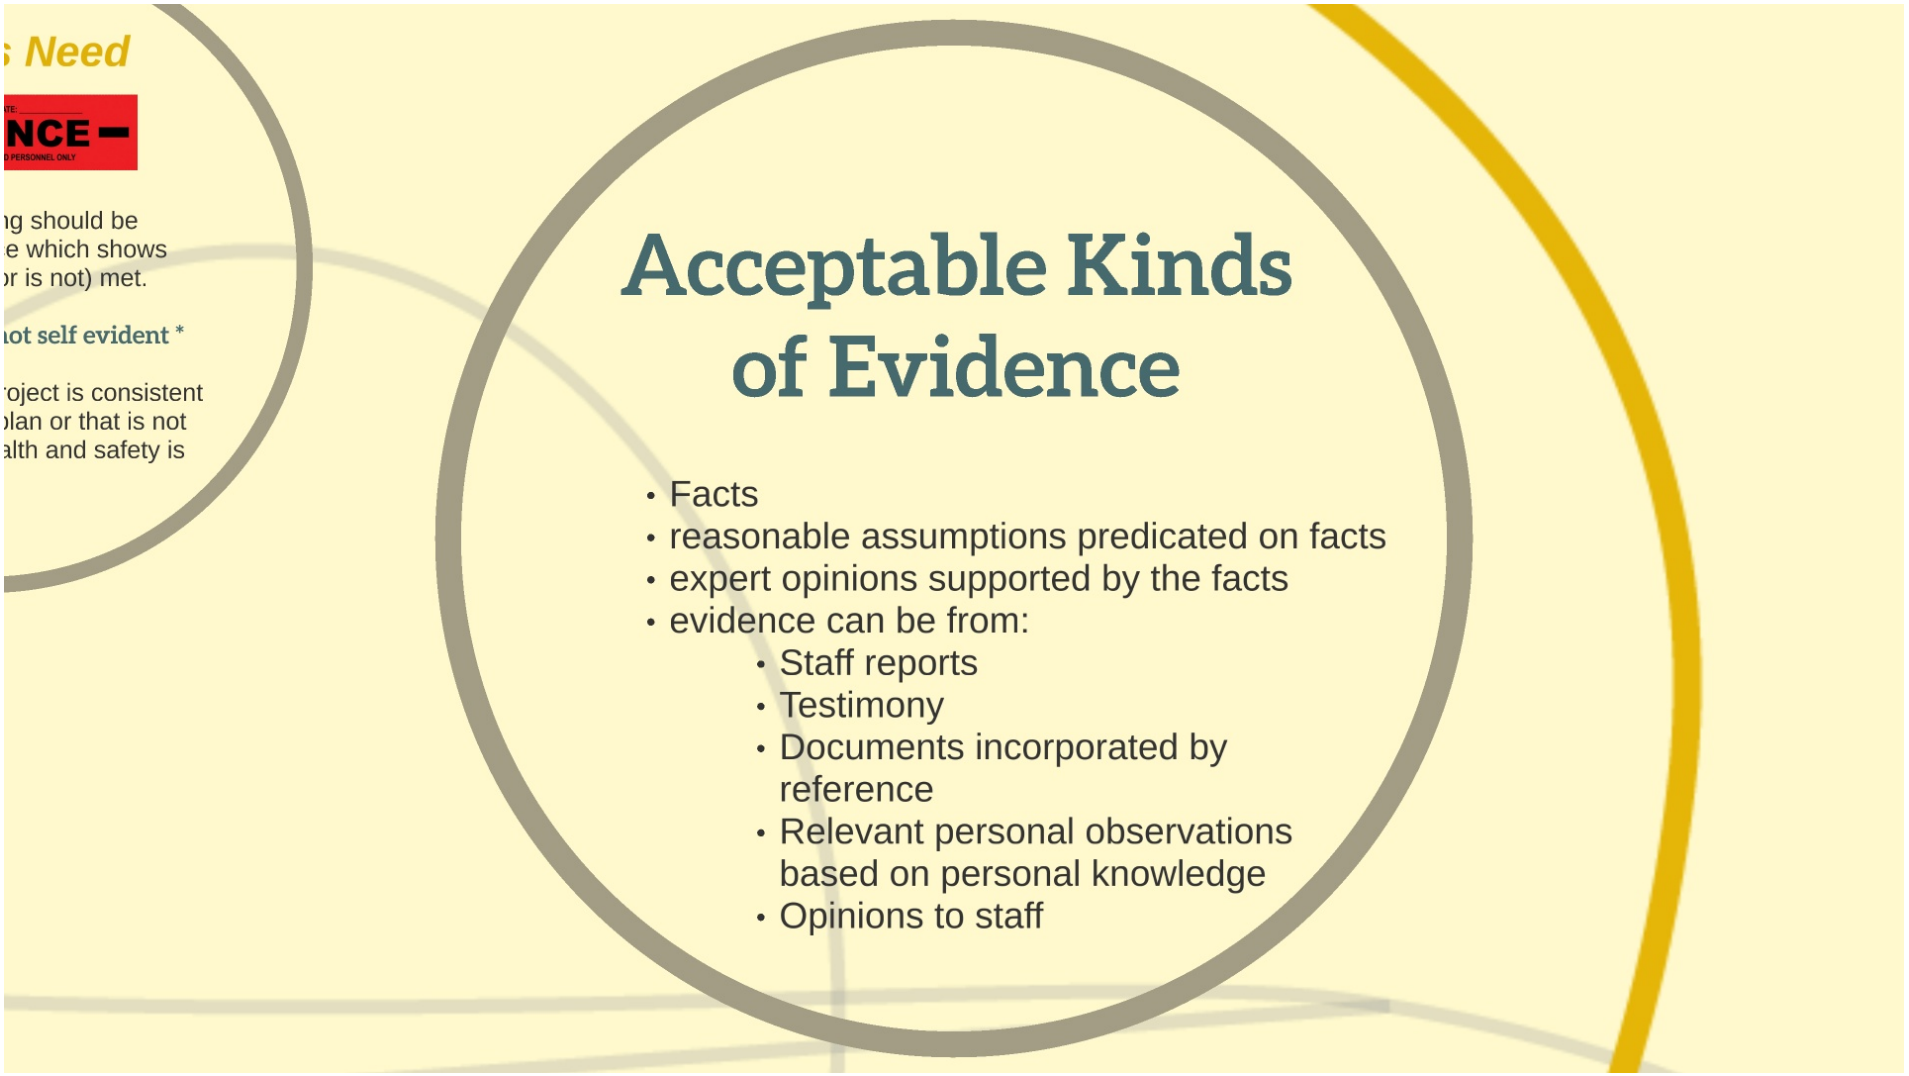
- That the proposed map is not consistent with applicable general and specific plans as specified in Section 65451
- That the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans

Tentative Tract Map Findings

Government Code Section 66474:

Continued...

- That the site is not physically suitable for the type of development
- That the site is not physically suitable for the proposed density of development
- That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat
- That the design or type of improvements is likely to cause serious public health problems
- that the design of the subdivision or the type of improvements will conflict with easements



Findings Need

Establishing a finding should be followed by evidence which shows how the finding is (or is not) met.

*** Findings are not self evident ***

A finding that a project is consistent with the general plan or that is not detrimental to health and safety is not enough.

s Need
NCE –
ng should be
e which shows
or is not) met.
not self evident *
oject is consistent
olan or that is not
alth and safety is
Acceptable Kinds of Evidence
• Facts
• reasonable assumptions predicated on facts
• expert opinions supported by the facts
• evidence can be from:
• Staff reports
• Testimony
• Documents incorporated by reference
• Relevant personal observations based on personal knowledge
• Opinions to staff

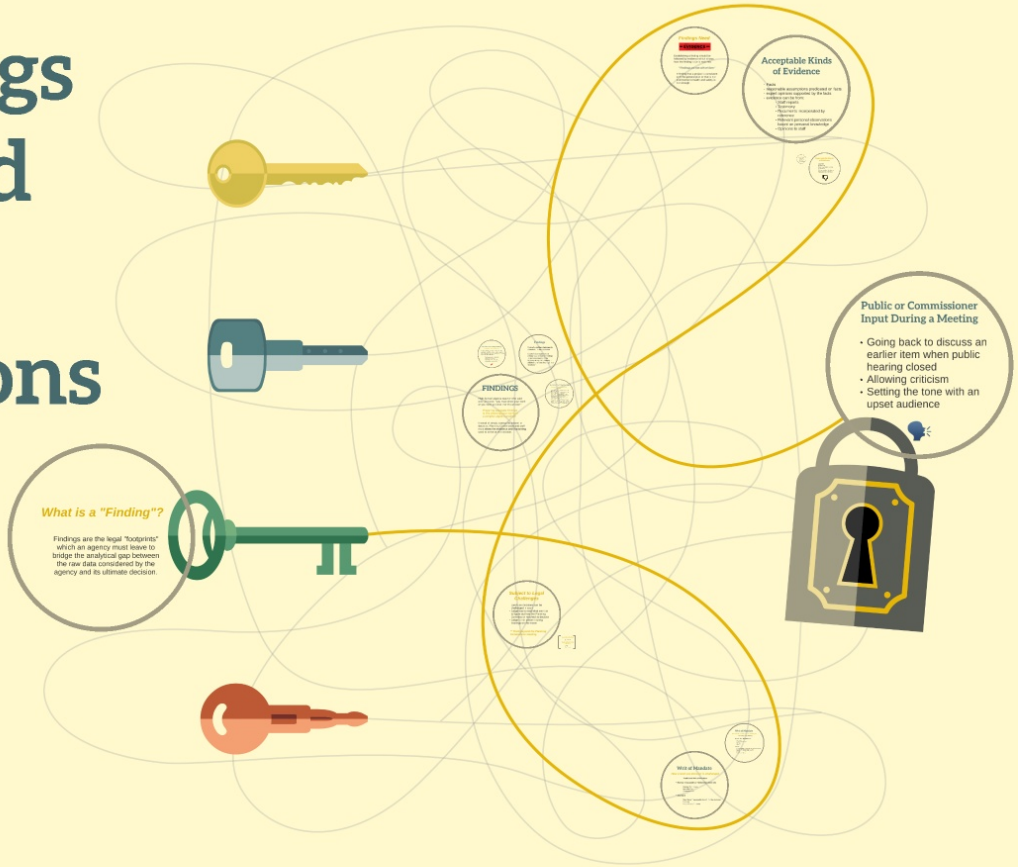
Courts have also found certain facts, opinions and information as irrelevant to quasi judicial decisions.

Examples of considerations that are irrelevant for most planning commission decisions include the:

- economic viability of the project;
- desirability of the project;
- sales or rental price of dwellings;
- applicant's personal financial condition;
- applicants economic hardship;
- taxes or income generated by the project; and
- aesthetics of the house during subdivision approval

Unacceptable Kinds of Evidence

- Argument
- Speculation
- Unsubstantiated opinion or narrative
- Evidence which is clearly inaccurate or erroneous



Courts have also found certain facts, opinions and information as irrelevant to quasi judicial decisions.

Examples of considerations that are irrelevant for most planning commission decisions include the:

- economic viability of the project;
- desirability of the project;
- sales or rental price of dwellings;
- applicant's personal financial condition;
