PLANNING COMMISSION - PC - SPECIAL MEETING

WEDNESDAY, OCTOBER 19, 2022

COUNCIL CHAMBERS 23873 CLINTON KEITH ROAD SUITE 106 WILDOMAR, CA 92595
SPECIAL SESSION 6:30 PM

Kim Strong - Chair
Eric Filar - Vice Chair
Arrin Banks - Commissioner
Brianna Bernard - Commissioner
John Lloyd - Commissioner

Matthew Bassi - Planning Director Erica Vega, Assistant City Attorney

The City of Wildomar will be a Safe and Active Community with Responsible Growth and Quality Infrastructure while keeping a Hometown Feel

NOTICE:
Planning Commission meetings may be live-streamed, photographed, and/or videotaped. Participation at the meeting constitutes consent by members of the public to the City's and any third party's use in any media, without compensation or further notice, of audio, video, and/or pictures of meeting attendees.

CALL TO ORDER – SPECIAL SESSION - 6:30 P.M.

ROLL CALL

FLAG SALUTE

PUBLIC COMMENTS
This is the time when the Commission receives general public comments regarding any items or matters within the jurisdiction that do not appear on the agenda.

APPROVAL OF THE AGENDA AS PRESENTED
The Planning Commission to approve the agenda as it is herein presented, or, if it is the desire of the Planning Commission, the agenda can be reordered, added to, or have items tabled at this time.

1. CONSENT CALENDAR
All matters listed under the Consent Calendar are considered routine and will be enacted by one roll call vote. There will be no separate discussion of these items unless members of the Commission, the Public, or Staff request to have specific items removed from the Consent Calendar for separate discussion and/or action.

1.1 Planning Commission Minutes, July 6, 2022 Regular Meeting:

RECOMMENDATION:
Staff recommends the Planning Commission approve the July 6, 2022, regular meeting minutes as submitted.

2. PUBLIC HEARINGS

2.1 Wildomar Crossroads Mixed-Use Project (PA 21-0145)

RECOMMENDATION:

The Planning Department recommends the Planning Commission take the following actions:

1. Adopt a Resolution entitled:

PC RESOLUTION NO. 2022-26

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, ADOPTING A MITIGATED NEGATIVE DECLARATION/MITIGATION MONITORING AND REPORTING PROGRAM (SCH# 2022080339) FOR TENTATIVE PARCEL MAP NO. 3833, CONDITIONAL USE PERMIT NO. 21-0145, AND PLOT PLAN NO. 21-0145 LOCATED AT THE NORTHWEST CORNER OF WILDOMAR TRAIL AND CLINTON KEITH ROAD (APN: 376-410-015, -016, -017, & -021)

2. Adopt a Resolution entitled:

PC RESOLUTION NO. 2022-27

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, APPROVING TENTATIVE PARCEL MAP NO. 38333 TO SUBDIVIDE A 9.05-ACRE SITE INTO FIVE (5) PARCELS TO ACCOMMODATE THE DEVELOPMENT OF THE WILDOMAR CROSSROADS MIXED-USE PROJECT LOCATED AT THE NORTHWEST CORNER OF WILDOMAR TRAIL AND CLINTON KEITH ROAD (APN: 376-410-015, -016, -017, & -021)

3. Adopt a Resolution entitled:

PC RESOLUTION NO. 2022-28

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, APPROVING CONDITIONAL USE PERMIT NO. 21-0145 (TO ALLOW GROCERY STORE SALE OF ALCOHOL) AND PLOT PLAN NO. 21-0145 TO DEVELOP A 34,540 SQUARE-FOOT MULTI-TENANT RETAIL CENTER AND A 150-UNIT GATED APARTMENT PROJECT ON A 9.05-ACRE SITE IN THE C-P-S ZONE, SUBJECT TO CONDITIONS, TO ACCOMMODATE THE DEVELOPMENT OF THE WILDOMAR CROSSROADS MIXED-USE PROJECT LOCATED AT THE NORTHWEST CORNER OF WILDOMAR TRAIL AND CLINTON KEITH ROAD (APN: 376-410-015, -016, -017, & -021)

3. GENERAL BUSINESS

3.1 Proper Findings in Land Use Decisions

RECOMMENDATION:

The Planning Department recommends the Planning Commission Receive and File this presentation.

FUTURE AGENDA ITEMS

ADJOURN THE MEETING

The City of Wildomar encourages your participation in the meeting. The following options are available for the public to participate:

1. You may view the Regular Session meeting live on the City of Wildomar's website at http://www.cityofwildomar.org or on cable TV through Frontier Channel 36 or AT&T channel 99. To view from the website, select the live stream link on the top of the front page.

2. You may participate in person.

PUBLIC COMMENT: During Public Comment not on the agenda and after each Agenda Item, the Chair will announce Public Comment. If you would like to speak on that item, please fill out a speaker slip and submit it in the inbox at the front of the room. When the City Clerk announces your name, please come up to the podium. Public Comments are limited to 3 minutes or such other time as the Commission may provide. Commissioners are not allowed to respond to public comments.

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, you should contact the City Clerk's Office at 951-677-7751 x210.

REPORTS: All agenda items and reports are available for review at City Hall, 23873 Clinton Keith Road and on the City's website at the following address: http://www.cityofwildomar.org/government/agendas___minutes. Any writings or documents provided to a majority of the Planning Commission regarding any item on this agenda (other than writings legally exempt from public disclosure) will be made available by appointment for public inspection at City Hall during regular business hours.

If requested, the agenda and backup materials will be made available in appropriate alternative formats to persons with a disability, as required by Section 202 of the Americans With Disabilities Act of 1990 (42 U.S.C. Sec. 12132), and the federal rules and regulations adopted in implementation thereof. Any person that requires a disability-related modification or accommodation, including auxiliary aids or services, in order to participate in the public meeting, may request such modification, accommodation, aid or service by contacting the City Clerk either in person or by phone at 951-677-7751, no later than 10:00 a.m. on the day preceding the scheduled meeting.

AFFIDAVIT OF POSTING

I, Jandi Aguilar, Wildomar Admin. Analyst, do certify that at least 72 hours prior to the meeting, a true and correct copy of this agenda was posted at Wildomar City Hall, 23873 Clinton Keith Road; U.S. Post Office, 21392 Palomar Street; Wildomar Library, 34303 Mission Trail Blvd; and on the City's website at www.cityofwildomar.org.

Agenda Staff Report # 1.1
Meeting Date: October 19, 2022

SUBJECT: Planning Commission Minutes, July 6, 2022 Regular Meeting:

SUBMITTED BY: Janet Morales, Planning

PREPARED BY: Matthew Bassi, Planning Director

ACTION:
Staff recommends the Planning Commission approve the July 6, 2022, regular meeting minutes as submitted.

ATTACHMENTS:
07-06-22-Regular PC Minutes-final.pdf

AGENDA ITEM No. 1.1

CITY OF WILDOMAR
OFFICIAL PLANNING COMMISSION MEETING MINUTES
FOR THE REGULAR MEETING ON JULY 6, 2022

CALL TO ORDER:
The Regular meeting of the Wildomar Planning Commission was called to order by Planning Commission Chair Strong at 6:30 P.M. at Wildomar City Hall, Council Chambers.

ROLL CALL:

Present:	Kim Strong, Chair
	Eric Filar, Vice-Chair
	Commissioner Arrin Banks
	Commissioner Brianna Bernard
	Commissioner John Lloyd
Staff Present	Matthew Bassi, Planning Director
	Stephanie Gutierrez, City Attorney
	Abdu Lachgar, AICP, Associate Planner
	Kimberley Davison, Economic Development Director
	Janet Morales, City Clerk
	Jason Farag, Senior Engineer
	Patrick Lopez, IT Specialist
Absent:	None

FLAG SALUTE:
Commissioner Banks led the flag salute.

PUBLIC COMMENTS:
None.

APPROVAL OF AGENDA AS PRESENTED
Chair Strong asked if there were changes to the agenda.

Director Bassi stated there were no changes.

1.0 CONSENT CALENDAR ITEMS

1.1 Planning Commission Minutes – April 6, 2022, Regular Meeting:

A **Motion** was made by Commissioner Lloyd seconded by Vice-Chair Filar to approve the regular meeting minutes.

The **Motion** Carried, 3-0-0-2, with the following vote resulted:

AYES: STRONG, FILAR, LLOYD

NOES:

ABSENT:

ABSTAIN: BANKS, BERNARD

1.2 Planning Commission Minutes – May 18, 2022 Special Meeting:

A **Motion** was made by Commissioner Lloyd seconded by Chair Strong to approve the regular meeting minutes.

The **Motion** Carried, 3-0-0-2, with the following vote resulted:

AYES: STRONG, BANKS, LLOYD

NOES:

ABSENT:

ABSTAIN: FILAR, BERNARD

2.0 PUBLIC HEARING ITEMS:

2.1 Zoning Ordinance Amendment No. 2022-05 (TUP Code Amendment):

Planning Commission consideration of a General Rule Exemption and a proposed Zoning Ordinance Amendment to adopt comprehensive regulations for temporary use permits.

Chair Strong read the title and opened the public hearing.

Associate Planner Lachgar presented the staff report.

With no public speakers, Chair Strong closed the public hearing and asked for a Commission discussion.

A **Motion** was made by Vice-chair Filar and seconded by Commissioner Bernard to adopt a Resolution entitled:

PC RESOLUTION NO. 2022-22

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, RECOMMENDING CITY COUNCIL ADOPTION A GENERAL RULE EXEMPTION IN ACCORDANCE WITH SECTION 15061(B)(3) OF CEQA, AND APPROVAL OF ZONING ORDINANCE AMENDMENT NO 2022-05 TO ADOPT COMPREHENSIVE REGULATIONS FOR TEMPORARY USE PERMITS

The **Motion** Carried, 4 – 0 - 1, with the following vote resulted:

AYES: STRONG, FILAR, BANKS, BERNARD

NOES:

ABSENT: LLOYD

ABSTAIN:

2.2 Zoning Ordinance Amendment No. 2022-06 (SB 9 Code Amendment):

Planning Commission consideration of a proposed zoning ordinance amendment to revise the Wildomar Municipal Code (Title 16 and Title 17) to address new, state regulations of SB 9 (Government Code Sections 66411.7 and 65852.21 pertaining to urban lot splits and two-unit (2) developments in the City of Wildomar.

Chair Strong read the title and opened the public hearing.

Associate Planner Lachgar presented the staff report.

With no public speakers, Chair Strong closed the public hearing and asked for a Commission discussion

A **Motion** was made by Commissioner Banks seconded by Chair Strong to adopt a Resolution entitled:

PC RESOLUTION NO. 2022-23

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, RECOMMENDING CITY COUNCIL APPROVAL OF AN AMENDMENT (ZOA 2022-06) TO THE WILDOMAR MUNICIPAL CODE TO ADD A NEW CHAPTER 16.72 TO TITLE 16 (SUBDIVISIONS), ADD A NEW SUBSECTION 17.204.110 TO CHAPTER 17.204 (ACCESSORY DWELLING UNITS), AND ADD A NEW CHAPTER 17.320 TO TITLE 17 (ZONING) FOR THE IMPLEMENTATION OF GOVERNMENT CODE SECTIONS 66411.7 AND 65852.21 (SB 9) RELATED TO URBAN LOT SPLITS AND TWO (2)-UNIT DEVELOPMENTS

The **Motion** Carried, 5 – 0 - 0, with the following vote resulted:

AYES: STRONG, FILAR, BANKS, BERNARD, LLOYD

NOES:

ABSENT:

ABSTAIN:

3.0 GENERAL BUSINESS ITEMS

3.1 Baxter Village Mixed-Use Project – EOT #2 (PA 14-0002):

Planning Commission review and consideration of a 2-year Extension of Time (EOT #2 of 3) for Tentative Tract Map No. 36674 and Plot Plan No. 14-0002 to develop the single-family and multi-family residential portions of the Baxter Village Mixed-Use project generally located at the northwest corner of Wildomar Trail and I-15 Freeway (APN: 367-180-063).

Chair Strong read the title and opened the item for public comments

Associate Planner Lachgar presented the staff report.

Dwyane McGee, resident, provided public comment stating that the White Road is plagued with heavy traffic and excessive trash dumping.

Michael Smith, resident, provided public comment.

With no further public comments, Chair Strong asked for Commission discussion

A **Motion** was made by Vice-Chair Filar and seconded by Commissioner Banks to adopt a Resolution entitled:

PC RESOLUTION NO. 2022-24

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, APPROVING A 2-YEAR EXTENSION OF TIME TO JULY 13, 2024 FOR TENTATIVE TRACT MAP NO. 36674 AND PLOT PLAN NO. 14-0002 TO DEVELOP THE SINGLE-FAMILY AND MULTI-FAMILY RESIDENTIAL PORTIONS OF THE BAXTER VILLAGE MIXED-USE PROJECT (APN: 380-250-003) AND A DETERMINATION THAT ADDITIONAL ENVIRONMENTAL REVIEW IS NOT REQUIRED PER CEQA GUIDELINES SECTION 15162

The **Motion** Carried, 5 – 0 - 0, with the following vote resulted:

AYES: STRONG, FILAR, BANKS, BERNARD, LLOYD

NOES:

ABSENT:

ABSTAIN:

3.2 General Plan Consistency For Capital Improvement Program (FY 22/23):

Planning Commission's Annual Review of the Public Works Departments' FY 2022/23 Capital Improvement Program making a finding of General Plan Consistency.

Chair Strong read the title and item for public comments.

Senior Engineer Farag presented the staff report.

With no further public comments, Chair Strong asked for Commission discussion

A **Motion** was made by Commissioner Lloyd and seconded by Chair Strong to adopt a Resolution entitled:

PC RESOLUTION NO. 2022-25

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, DETERMINING THAT FISCAL YEAR 2022/23 CIP PROJECTS OF THE FY 2022/23 – 2026/27) FIVE-YEAR CAPITAL IMPROVEMENT PROGRAM (CIP) IS IN CONFORMANCE WITH THE CITY OF WILDOMAR GENERAL PLAN

The **Motion** Carried, 5 – 0 - 0, with the following vote resulted:

AYES: STRONG, FILAR, BANKS, BERNARD, LLOYD

NOES:

ABSENT:

ABSTAIN:

PLANNING COMMISSION COMMUNICATIONS

None.

PLANNING DIRECTOR REPORT

1. Director Bassi confirmed there will be an August 3, 2022 planning Commission meeting
2. Director Bassi gave a briefing on the General Plan Update progress.
3. Director Bassi asked about revising eh Commission meeting starting time to 6:00 pm instead of 6:30.
4. City Clerk Morales provided an update on the new Agenda management system coming next month

CITY ATTORNEY REPORT

None.

FUTURE AGENDA ITEMS
None.

ADJOURNMENT
Chair Strong adjourned the July 6, 2022, Planning Commission meeting at 7:19 P.M.

Submitted By:

Matthew C. Bassi
Planning Director/Minutes Secretary

CITY OF WILDOMAR - PC - SPECIAL MEETING
PUBLIC HEARING
Agenda Staff Report # 2.1
Meeting Date: October 19, 2022

SUBJECT: Wildomar Crossroads Mixed-Use Project (PA 21-0145)

SUBMITTED BY: Janet Morales, Planning

PREPARED BY: Matthew Bassi, Planning Director

ACTION:
The Planning Department recommends the Planning Commission take the following actions:

1. Adopt a Resolution entitled:

PC RESOLUTION NO. 2022-26

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, ADOPTING A MITIGATED NEGATIVE DECLARATION/MITIGATION MONITORING AND REPORTING PROGRAM (SCH# 2022080339) FOR TENTATIVE PARCEL MAP NO. 3833, CONDITIONAL USE PERMIT NO. 21-0145, AND PLOT PLAN NO. 21-0145 LOCATED AT THE NORTHWEST CORNER OF WILDOMAR TRAIL AND CLINTON KEITH ROAD (APN: 376-410-015, -016, -017, & -021)

2. Adopt a Resolution entitled:

PC RESOLUTION NO. 2022-27

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, APPROVING TENTATIVE PARCEL MAP NO. 38333 TO SUBDIVIDE A 9.05-ACRE SITE INTO FIVE (5) PARCELS TO ACCOMMODATE THE DEVELOPMENT OF THE WILDOMAR CROSSROADS MIXED-USE PROJECT LOCATED AT THE NORTHWEST CORNER OF WILDOMAR TRAIL AND CLINTON KEITH ROAD (APN: 376-410-015, -016, -017, & -021)

3. Adopt a Resolution entitled:

PC RESOLUTION NO. 2022-28

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR,

CALIFORNIA, APPROVING CONDITIONAL USE PERMIT NO. 21-0145 (TO ALLOW GROCERY STORE SALE OF ALCOHOL) AND PLOT PLAN NO. 21-0145 TO DEVELOP A 34,540 SQUARE-FOOT MULTI-TENANT RETAIL CENTER AND A 150-UNIT GATED APARTMENT PROJECT ON A 9.05-ACRE SITE IN THE C-P-S ZONE, SUBJECT TO CONDITIONS, TO ACCOMMODATE THE DEVELOPMENT OF THE WILDOMAR CROSSROADS MIXED-USE PROJECT LOCATED AT THE NORTHWEST CORNER OF WILDOMAR TRAIL AND CLINTON KEITH ROAD (APN: 376-410-015, -016, -017, & -021)

FISCAL IMPACT:

The Wildomar Crossroads project will not have a fiscal impact on the city's general fund. In accordance with the Development Impact Fee (DIF) ordinance adopted by Council in December 2021. The City DIF fees (150 mfr units / 34,540 s.f. retail) will be approximately $2,823,000. Required regional impact fees (i.e., TUMF, MSHCP, LEUSD, SKR, etc.) are approximately $2,112,000. Total impact fees equal approximately $4,935,000. These fees are paid typically prior to the issuance of building permits or occupancy permits. In addition, the project is conditioned to be annexed into the city-wide CFD 2022-1 which will pay its fair share of park maintenance fees through the CFD services and the equivalent share of the Measure Z tax of $28/year/unit. The CFD revenue will be determined and finalized based on final engineering and building plans and the level of maintenance required.

PROJECT DESCRIPTION:

The Applicant's (Intracorp, Inc. & Sage Investco, Inc.) are proposing the Wildomar Crossroads Mixed-Use project (PA 21-0145) consisting of an Initial Study/Mitigated Negative Declaration (MND), Tentative Parcel Map Conditional Use Permit, and Plot Plan to develop a 34,540 square-foot multi-tenant retail center and 150-unit gated apartment project. The proposed project consists of the following applications for review and consideration by the Planning Commission.

Mitigated Negative Declaration & Mitigation Monitoring & Reporting Program:

In the course of the preliminary review of the proposed project, the Planning Director determined that there was substantial evidence that the Wildomar Crossroads project may have one or more significant effects on the environment. Therefore, in accordance with Section 15070 of the California Environmental Quality Act (CEQA) Guidelines, the proposed project requires the preparation, review, and adoption of an MND and MMRP (SCH# 2022080339). The Planning Commission has the sole authority to review and make a decision on the MND/MMRP. The discussion for the MND is provided in the Analysis section of this staff report and the Findings are provided in PC Resolution No. 2022-26 (Attachment A).

Tentative Parcel Map (TPM) No. 38333 (PA 21-0145):

In accordance with Title 16.12 (Subdivisions) of the Wildomar Municipal Code (WMC), the proposed project requires approval of Tentative Parcel Map, subject to conditions, to subdivide the 9.05-acre site into five (5) parcels to develop the mixed-use project as presented in Plot

Plan No. 21-0145. The Planning Commission has the sole authority to review and make a decision on the proposed parcel map. The discussion for the TPM is provided in the Analysis section of this staff report and the Findings are provided in PC Resolution No. 2022-27 (Attachment B). The proposed TPM No. 38333 exhibit is provided for Commission review (Attachment D).

Conditional Use Permit No. 21-0145:

In accordance with Section 17.248 of the WMC, the proposed project requires approval of a CUP to establish alcohol sales for off-site consumption for the proposed Sprouts Farmers Market grocery store building. The CUP discussion is provided in the Analysis section of this staff report and the Findings are provided in PC Resolution No. 2022-28 (Attachment C).

Plot Plan No. 21-0145:

Also, in accordance with Section 17.216 of the WMC, the project requires approval of a Plot Plan (combined for the commercial and residential portions of the project) to develop the 9.05-acre site with the 34,540 square-foot multi-tenant retail center (Parcels 1 - 4) and the 150-unit gated multi-family apartment project (Parcel 5) consistent with the City's commercial and multi-family design standards and guidelines, including full on-site and off-site improvements per the WMC. The proposed mixed-use project has been designed so that it achieves a horizontal mixed-use design between the commercial and residential parcels with full pedestrian access without having to walk along Clinton Keith Road and Wildomar Trial.

Commercial Retail Site Plan Layout:

The proposed commercial/retail site comprises 5.03 acres in size and will include a 34,450 square-foot retail center with a Sprouts Farmers Market, multi-tenant retail uses retail and a couple of restaurant uses. The building sizes are as follows:

- Major A (Sprouts Farmers Market) - This building is 23,104 square feet in size and is planned for grocery store use with alcohol sales and an associated parking area (reciprocal). The truck delivery/dock area is located on the north side of the building about 200 feet west of Wildomar Trail. The dock area will be screened by a 6-foot tall decorative block wall on the north side of the dock area. The wall will block and obscure the view from southbound traffic on Wildomar Trail. The sale of alcohol by Sprouts requires CUP approval and is discussed in the CUP section of the staff report. The architectural design proposed is "Farm Chic" which is consistent with the City's Commercial Design Standards and Guidelines.

- Shops 1 Building – This building is 4,213 square feet in size and is attached to the Sprouts store. It is intended as a multi-tenant building with up to 3 or 4 users depending on the need with an associated parking area (reciprocal). The building has been designed to include some outdoor seating on the sidewalk in front of the lease spaces if a food user leases the space. The architectural design proposed is "Farm Chic" which is

consistent with the City's Commercial Design Standards and Guidelines.

- Pad 1 Building – This building is 3,500 square feet in size and is designed to accommodate retail users and a restaurant use with associated parking. Attached to the building is a 1,133 square-foot drive-through coffee shop with associated drive-through lanes (the lanes/stacking meets city codes). The drive-through lanes near the "pick-up" window are designed with an "escape lane." If someone is already waiting at the drive-up window, a coffee shop attendant will walk an order to the client waiting on the outside lane which enables them to then bypass the person at the window. The Applicant explains that this design greatly increases the flow of cars through the drive-thru, thereby existing much quicker. The Applicant does not have an agreement with a coffee shop user at this time but is marketing the building as such. The architectural design proposed is also "Farm Chic" which is consistent with the City's Commercial Design Standards and Guidelines.

- Pad 2 Building - This building is 3,610 square feet in size and is solely intended as a fast food/drive-through restaurant with outdoor seating and a drive-through lane and associated parking. No lease has been secured at this time either. The architectural design proposed is also "Farm Chic" which is consistent with the City's Commercial Design Standards and Guidelines.

C-P-S Development Standards (Chapter 17.76.030):

The uses planned for the commercial retail center are permitted uses in the C-P-S zone as outlined in Chapter 17.76 of the WMC. The retail center has been designed to meet and exceed the development standards of the C-P-S zone as discussed below. The overall theme of the center (Farm Chic) is consistent with the City's Commercial Design Standards and Guidelines. A copy of the overall site plan and architectural elevations, landscaping, etc. is provided in Attachments E – H.

Physical development of the commercial retail center is subject to the development standards of Chapter 17.76.030 of the C-P-S zone. This code section establishes standards and requirements related to lot area, setbacks, building height, etc. The retail project is consistent with the C-P-S zone standards. Refer to Attachment I for the C-P-S Zone (Chapter 17.76) Development Standards Table.

Off-Street Parking (Chapter 17.188):

The proposed commercial retail development is subject to the parking requirements outlined in Chapter 17.188.030 of the WMC. Based on the square footage of the proposed project, the Applicant is required to provide 5.5 spaces/1,000 square feet of the net leasable floor area of all the buildings. The application package was submitted prior to the effective date of Ordinance No. 204 (12/10/21) which established the new parking requirement of 6.0 spaces/1,000 square feet. Given the size of the retail center at 34,450 square feet, the retail

project must provide a minimum of 190 parking spaces. The Applicant is providing a total of 195 parking spaces which exceeds the minimum standard. The Applicant has proposed and is conditioned to record a reciprocal access and parking agreement for the entire site that will allow flexibility in the location of the stalls. The design of the parking stalls and aisle widths meet and exceed code requirements, including Riverside County Fire standards. In addition, the project is providing six (6) accessible spaces, 16 clean air vehicle spaces, and 10 electric vehicle charging stations in compliance with the 2019 California Building Code and 2019 Cal Green Code. Lastly, the two drive-through restaurants include vehicle stacking for 12 cars (2 lanes) in accordance with parking code requirements.

Pedestrian Circulation/Connectivity:

Pedestrian circulation is an important element of a mixed-use project. The Applicant has designed the retail center to allow for easy pedestrian access between the grocery store and other commercial uses throughout the site. More importantly, the center has been designed with the goal of easy pedestrian access between the retail and apartment community as part of the mixed-use design. In fact, the whole project area is intended to be mass graded so that the elevation change between the apartment community and retail center is minimal. It is staff's opinion that this concept really facilitates and enhances the "horizontal" mixed-use design (i.e., easy walkability). The proposed landscape plan (Pdf page 8 of Attachment E) shows this connectivity relationship.

Vehicular Traffic/Access:

Primary vehicular access to and from the commercial retail site and apartment community will be provided via entrances on Catt Road (south end of the site) and Wildomar Trail (east end of the site). There will be no vehicular connection between the two sites to better encourage/emphasize pedestrian connectivity. The retail center has three drive approaches on Wildomar Trail leading to and from the site with the southerly most driveway being limited to a "right-in & right-out" design. The other two drive approaches have full turning movements as they are far enough away from the Clinton Keith/Wildomar Trail intersection to avoid northbound/southbound conflicts.

The apartment community has a second-drive approach on the northerly edge of the site along Wildomar Trail. This drive approach has full turning movements and will be adjacent to a linear parking area for the community. A second exit/entrance to the apartment community occurs from Catt Road via Arya Road. Both streets will be fully improved with the project to provide better vehicular access than currently exists. A detailed traffic study was prepared for the project as part of the MND process that evaluated access on all streets servicing the project. It was determined that the proposed site design would not create unsafe vehicular or pedestrian movements. Based on the traffic analysis, the Public Works Department is proposing several conditions requiring specific improvements to create safe vehicular access to and from the site. Further, the site has been planned appropriately and the location and need for dedication and improvement of necessary streets and sidewalks, including the

avoidance of traffic congestion have been addressed. All street improvements will be constructed along the project boundaries in accordance with Public Works standards (including curb, gutter and sidewalks) to facilitate the safe off-site and on-site traffic flow generated by the project.

Landscaping Plan:

The Applicant has provided a detailed conceptual landscape plan for staff review as part of the development review process. The landscape plan was designed to meet the requirements of the city's newly adopted Landscape Design Standards and Guidelines manual. The project achieves valuable water conservation through the use of water-efficient landscaping. The landscape plans provide for a variety of landscape species (including drought-tolerant turf) in varying sizes to accommodate the project. The landscape plans were reviewed by the City's Landscape Architect and based on this review; the conceptual landscape plans are consistent with City standards. During the construction plan check process, staff will perform a more detailed landscape and irrigation plan review to determine that the proposed water usage meets the Landscape Design Standards and Guidelines manual. The proposed landscape plan is shown on Pdf pages 8-12 of Attachment E.

Commercial Retail Architecture:

The architectural theme for the commercial retail center site is characterized as "Farm Chic" which is one of the four design themes allowed on the city's Commercial Design Standards and Guidelines. Farm Chic is a contemporary interpretation of traditional rural forms adapted to a commercial setting. This style reflects Wildomar's agricultural and ranching history and regional context. As indicated in the accompanying precedent images and illustrative diagram, the style utilizes elements of recognizable farm and ranch forms such as barns, sheds, silos, tank houses, and granary towers. Common materials such as metal, wood, and stone are utilized. Board and batten siding and corrugated metal panels are used to give texture and variation to exterior walls. Roofs are typically medium to high-pitched. Large openings are patterned after the functional design of typical agricultural buildings. The proposed architecture is a high-quality design.

The discussion for the Commercial Plot Plan is provided in the Analysis section of this staff report and the Findings are provided in PC Resolution No. 2022-28 (Attachment C). Staff has provided exhibits of the architectural elevations for Commission consideration (refer to Attachment G).

Multi-Family Residential Apartment Site Plan Layout:

In accordance with Section 17.216 of the Wildomar Municipal Code, the Wildomar Crossroads mixed-use project requires approval of a plot plan (i.e., final site plan of development plot plan). The Applicant has proposed to develop the 4.5-acre residential site with a 150-unit apartment community. Since the apartment site has the 2013 Housing Element "Mixed-Use overlay (MU)" zoning, the required density to meet our RHNA numbers for this site is at least 30 units/acre. The applicant has proposed a density of 33.5 units/acre consistent with the

overlay zoning. The site also includes a 3,700-square-foot recreation building and community pool and recreation area for the residents. Entries into the apartment community will occur from Wildomar Trail and Catt Road (refer to site plan).

The proposed apartment project is subject to the development standards of the R-3 multi-family zone (Chapter 17.44.020 of the WMC). This section establishes standards and requirements related to lot area, setbacks, building height, etc. The apartment project is consistent with the R-3 zone development standards. Refer to Attachment I for the R-3 Zone (17.44.020) Development Standards Table. A full set of the development plans and architectural elevations for the apartment community is provided for Commission consideration in Attachment E - H.

Off-Street Parking (Section 17.188):

The apartment community site is subject to the multi-family parking requirements outlined in Chapter 17.188.030 of the WMC. Based on the number of units at 150 and bedroom types (Studio, 1 and 2-bedrooms), the project is required to provide a minimum of 282 parking spaces. The site plan shows 282 parking spaces distributed between attached garage spaces and open/visitor spaces. Refer to Attachment I for the Multi-family Residential Parking Standards Table. A full set of the development plans for the apartment community is provided for Commission consideration in Attachment E - H.

Proposed Unit Type / Floor Plans:

The 150-unit apartment community will be comprised of five (5), 3-story buildings with 25 – 33 units per building with a combination studio, and one and two-bedroom units. The floor plan layout of each unit will be a “stacked-flat” design with some tucked under attached garages on the first floor. There are 12, Studio units, 81, 1-bedroom units, and 57, 2-bedroom units distributed throughout the site. The units range in size from 580 to 1,115 square feet in size with an overall average of 826 square feet. Refer to Attachment I for the Unit Breakdown and Size Table. A full set of the development plans for the apartment community is provided for Commission consideration in Attachment E - H.

Proposed Architecture:

The architectural design of the apartment community is consistent with the City’s multi-family objective design standards and guidelines. Of the four (4) design themes approved by the Commission and Council, the Applicant has chosen to use the “Farm Chic” style which is compatible with the design of the commercial retail development. Our design standards and guidelines provide general criteria for architecture and landscaping in order to ensure a high-quality development and strong community character. The overall goal is to create a unique, community within the context of the mixed-use project. Farm Chic is a contemporary interpretation of traditional rural forms. This contemporary interpretation of residential architectural styles was popular in the late 19th and early 20th centuries, and the Farm Chic style is often found in coastal communities. This style reflects Wildomar’s residential

character and Southern California context. As indicated on the following pages, recognizable elements include the use of wood siding, often painted white, with contrasting awnings and trim treatments. Flat or low-pitched roofs are typical. High interior visibility is achieved through the use of large windows and glass doors. Board and batten siding adds texture and depth to exterior facades. The architectural design and theme for the apartments are consistent with the City's multi-family design standards and guidelines design. A full set of the development plans for illustrating the design for the apartments for Commission consideration is in Attachment H.

Landscaping/Water Efficient Standards (Chapter 17.276):

The Applicant has provided a detailed conceptual landscape plan for staff's review. The purpose of Chapter 17.276 of the Zoning Ordinance is to establish water-efficient landscape regulations that are "at least as effective in conserving water as" the State Model Water Efficient Landscape Ordinance in the context of conditions in the City in order to ensure that landscapes are planned, designed, installed, maintained, and managed in a manner that uses water efficiently, encourages water conservation, and prevents water waste. The intent of this chapter is to also encourage cooperation between the City and local water purveyors to achieve irrigation efficiency and water conservation goals.

The landscape plans provide for a variety of landscape species (including drought-tolerant turf) in varying sizes to accommodate the project. The landscape plans were reviewed by the City's Landscape Architect in accordance with the provisions of this code section. Based on this review, the conceptual landscape plans are consistent with City standards. During the construction plan check process, staff will perform a detailed landscape and irrigation plan review to determine that the proposed water usage meets the requirements of Chapter 17.276. Based on the conceptual landscape plans, the project is consistent with city standards. The discussion of the Multi-Family Residential Plot Plan is provided in the Analysis section of this staff report and the Findings are provided in PC Resolution No. 2022-28 (Attachment C). Staff has provided exhibits of the landscape plans for Commission consideration (Attachment F).

PROJECT ANALYSIS:

CEQA/MND Analysis:

The proposed Wildomar Crossroads project is considered a "project" as defined by the California Environmental Quality Act, Public Resources Code § 21000 et seq. ("CEQA"). Thus, in accordance with Public Resources Code §§ 21000 – 21189.3, and the CEQA Guidelines, 14 CCR §§ 15000-15387, in the course of the preliminary review of the proposed project, the Planning Director determined that there was substantial evidence that the Wildomar Crossroads project may have one or more significant effects on the environment. Therefore, in accordance with Section 15070 of the California Environmental Quality Act (CEQA) Guidelines, the proposed project requires the preparation, review, and adoption of a Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program (MMRP) (SCH# 2022080339). The Planning Commission has the authority to adopt the MND/MMRP which staff is recommending they do. The required MND findings are discussed

and outlined in PC Resolution No. 2022-26. A copy of the MND package is provided for Commission consideration in Attachment A, Exhibits 1 -4 (under separate cover).

SB 18/AB 52 Tribal Consultation Compliance:

Enacted as of July 1, 2015, AB 52 established a new category of resources under CEQA called "tribal cultural resources" that considers the tribal cultural values in addition to the scientific and archaeological values when determining impacts and mitigations. The bill was built on the concept that California Native American tribes have the expertise "with regard to tribal history and practices" to identify significant cultural resources. To this end, AB 52 requires early consultation in the CEQA process to ensure that local and Tribal governments, public agencies, and project proponents have information available, early in the CEQA environmental review process, for the purpose of identifying and addressing potential adverse impacts on tribal cultural resources. Since the project includes a general plan amendment, early consultation under this bill is also required. Both can be accomplished simultaneously.

The planning department contacted (in writing) all culturally affiliated tribes that could be affected by a project within 14 days of deeming a development application complete. The notice commences a 30-day period for the tribe to request a consultation. The City has complied with notification requirements and has initiated consultation as required under AB 52 with both the Soboba and Pechanga Band of Luiseno Indians. Staff has met with both tribes, and a series of standard mitigation measures intended to protect tribal cultural resources were agreed to. These have been placed into the MND mitigation measures (MMRP) as well as the conditions of approval matrix. As a result, consultation has been completed.

MND Preparation:

Upon completion of the draft Initial Study/Mitigated Negative Declaration (IS/MND) and in accordance with CEQA Guidelines Section 15072, the Planning Department on August 17, 2022, provided a Notice of Intent (NOI) to the State Clearinghouse, Riverside County Clerk, Press Enterprise, a local newspaper of general circulation, and the City's local distribution list regarding the preparation and public review of the draft Initial Study/Mitigated Negative Declaration for the proposed project. Also, in accordance with CEQA Guidelines §15073 and §15105, and the City's Local CEQA Guidelines, the draft IS/MND was circulated and made available to the State Clearinghouse/OPR, the City's local distribution list, and other interested parties requesting a copy for a 30-day public review/comment period that commenced on August 17, 2022, and concluded on September 15, 2022. In addition, IS/MND was uploaded to the City's Environmental Documents Center webpage during the same 30-day public review period, and a hard copy was made available to the general public at the Planning Department.

During the 30-day public review period, the City received two (2) comment letters (Ken Mayes & RCFCD) on the MND. In accordance with CEQA guidelines, staff has prepared detailed responses to each comment letter which is provided in the final MND (Attachment A, Exhibit 3). In accordance with CEQA requirements, the final MND was mailed out to each commenter

10 days prior to the October 19, 2022, Planning Commission meeting. In accordance with CEQA Guidelines Section 15097, the Planning Department has also prepared a Mitigation Monitoring and Reporting Program (MMRP) for the Wildomar Crossroads project MND. The MMRP outlines the proposed mitigation measures for the project and the timing and department responsibility for implementing the mitigation measures. The mitigation measures have also been included with the project conditions of approval matrix.

Tentative Parcel Map 38333 Analysis:

The Applicant is requesting approval of a tentative Parcel map in accordance with Title 16.12 (Subdivisions) of the Wildomar Municipal Code. The proposed Tentative Parcel Map No. 38333 is a request to subdivide the 9.05-acre site into five (5) lots to accommodate the development of the mixed-use project. Based on the C-P-S zoning for the property, there is no minimum lot size; however, the apartment site must have a minimum lot size of 7,200 square feet. Based on staff's review of the Tentative Parcel No. 38333, all lots meet and exceed the minimum lot size requirements. Refer to the table below for details.

TPM No. 38333 Summary Table

Lot/Parcel Number	Minimum Lot Size Requirement	Proposed Parcel Size	Meets Code Standards
1	No Minimum Size	0.482 acres	Yes
2	No Minimum Size	2.346 acres	Yes
3	No Minimum Size	0.767 acres	Yes
4	No Minimum Size	0.977 acres	Yes
5	7,200 square feet	4.482 acres	Yes

The Planning Commission has the authority to approve Tentative Parcel Map No. 38333, subject to conditions, for the proposed Wildomar Crossroads project. The findings to support the approval of the parcel map are discussed and outlined in PC Resolution No. 2022-27 (Attachment B). The parcel map conditions matrix is provided in Exhibit 1 of Attachment B.

Conditional Use Permit 21-0145 Analysis:

The Applicant is proposing to establish alcohol sales for the proposed Sprouts Farmers Market grocery store. In accordance with Section 17.248 of the Wildomar Municipal Code, this requires approval of a Conditional Use Permit (CUP). Based on staff's review, the CUP can be supported based on the findings. The proposal to have alcohol sales for off-site consumption as part of the Sprouts Farmers Market store is consistent with the General Plan land use designation of MUPA and C-P-S zoning in that it is a conditionally permitted use in the C-P-S (Scenic Highway Commercial) zone in accordance with Chapter 17.248.020.A of the Zoning Ordinance. The sale of alcohol is typically associated with grocery stores in the C-

P-S zone and other similar commercial zones in the City. Further, the sale of alcohol will be restricted to "off-premise" consumption only (i.e., no on-site consumption) in accordance with the requirements of a Type 20 ABC license which will be regulated by the State Alcohol Beverage Control (ABC). The Planning Commission has the authority to approve CUP No. 21-0145, subject to conditions, for the proposed Sprouts Farmers Market grocery store. The findings to support approval of the CUP are provided in PC Resolution No. 2022-28 (Attachment C).

Plot Plan 21-0145 Analysis (Commercial Retail Center):

As noted, the proposed commercial/retail development requires approval of a plot plan to develop the 34,450 square-foot Wildomar Crossroads retail center. The Applicant intends to build the Sprouts grocery store first followed by the remainder of the buildings and restaurants. Based on staff's analysis of the project, the development of the commercial/retail center complies with all the development standards of the C-P-S zone related to setbacks, building height, landscaping, parking, etc. (refer to Project Description above and Attachment I). In addition, the development standards of Chapter 17.188 (Parking) were reviewed in detail and the project is in compliance with these provisions. In terms of architecture, the project is consistent with the "Farm Chic" design theme outlined in the City's commercial design standards and guidelines book (refer to Project Description above for details). A copy of the full development plans and the architectural plan is provided for Commission consideration in Attachment E - I.

The project as proposed and conditioned is also consistent with the General Plan. Further, all environmental impacts created by the project have been mitigated to a level of non-significance, and each mitigation measure has been incorporated into the project conditions and mitigation monitoring and reporting program. Based on these facts, staff supports the proposed plot plan. The Planning Commission has the authority to approve Plot Plan No. 21-0145, subject to conditions, for the proposed Wildomar Crossroads retail center project. The findings to support the approval of the Plot Plan are provided in PC Resolution No. 2022-28 (Attachment C). The plot plan conditions matrix is provided in Exhibit 1 of Attachment C.

Plot Plan No. 21-0145 Analysis (Multi-Family Apartments):

In accordance with Chapters 17.44 and 17.305, the proposed 150-unit apartment community requires approval of a Plot Plan by the Commission. The apartment community development plans and architecture is designed to be in compliance with the city's Multi-family Objective Residential Design Standards (refer to the project description discuss for specific details). The plot plan for the apartment site layout was reviewed and analyzed in detail as part of the city's development review process to ensure that the R-3 development standards related to setbacks, building height, landscaping, parking, circulation, open space, etc. were complied with. In addition, the development standards of Chapter 17.188 (Parking) were reviewed in

detail and the project is in compliance with these provisions (refer to the project description discuss for specific details).

In terms of the proposed density, the project is consistent with the MUPA land use designation and MU overlay zone provision as this land use is intended to accommodate a variety of mixed-uses including attached and detached multi-family dwelling units. The residential site area does not require any special zoning since the MUPA land use designation allows multi-family uses. Further, the density of the apartment community at 33 units/acre is consistent with the Mixed-Use Overlay (MU) zoning that requires multi-family development of at least 30 units/acre. The overlay was applied to this site when the City Council adopted the 2013 Housing Element (in December 2013). The proposed residential project also promotes a number of land use and housing policies, including consistency with the City's RHNA numbers described in the Plot Plan resolution.

Further, all environmental impacts created by the project have been mitigated to a level of non-significance, and each mitigation measure has been incorporated into the project conditions. The Planning Commission has the authority to approve Plot Plan No. 21-0145, subject to conditions, for the proposed multi-family residential project. The findings for the Plot Plan are provided in PC Resolution No. 2022-28 (Attachment C). The plot plan conditions matrix is provided in Exhibit 1 of Attachment C.

PC Resolution No. 2022-26
for
Initial Study/Mitigated Negative Declaration

PC RESOLUTION NO. 2022-26

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF WILDOMAR, CALIFORNIA, ADOPTING A MITIGATED NEGATIVE DECLARATION/MITIGATION MONITORING AND REPORTING PROGRAM (SCH# 2022080339) FOR TENTATIVE PARCEL MAP NO. 3833, CONDITIONAL USE PERMIT NO. 21-0145, AND PLOT PLAN NO. 21-0145 LOCATED AT THE NORTHWEST CORNER OF WILDOMAR TRAIL AND CLINTON KEITH ROAD (APN: 376-410-015, -016, -017, & -021)

WHEREAS, the Planning Department has received a development application for the Wildomar Crossroads Mixed-Use Project consisting of an Initial Study/Mitigated Negative Declaration (MND), Tentative Parcel Map No. 38333, Conditional Use Permit No. 21-0145, and Plot Plan No. 21-0145 to develop a 34,540 square-foot multi-tenant retail center and 150-unit gated apartment project on a 9.05-acre site from:

Project Applicant:	Sage CK 15 Wildomar, LLC / Intracorp Homes, Inc.
Project Location:	Northwest corner of Wildomar Trail and Clinton Keith Road
APN:	APN: 376-410-015, -016, -017, & -021
Project Area:	9.05+/- acres

WHEREAS, the proposed Wildomar Crossroads Mixed-Use project consists of the following applications for review and consideration by the Planning Commission and City Council:

1) Mitigated Negative Declaration (IS/MND) - The proposed project requires the preparation, review and adoption of a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program (SCH# 2022080339) in accordance with Section 15070 of the California Environmental Quality Act (CEQA) Guidelines.

2) Tentative Parcel Map No. 38333 - The project requires the subdivision of the 9.05-acre site into five (5) parcels in accordance with Title 16.12 (Subdivisions) of the Wildomar Municipal Code (WMC), to accommodate Wildomar Crossroads Mixed-Use Project consisting of a 34,540 square-foot multi-tenant retail center and a 150-unit gated apartment project; and

3) Conditional Use Permit (CUP) No. 21-0145 - The project requires approval of a CUP to establish alcohol sales for off-site consumption for the proposed Sprouts Farmers Market grocery store building in accordance with Section 17.248 of the WMC; and

4) Plot Plan No. 21-0145 - The project requires approval of a Plot Plan (for the commercial and residential portions of the project) to develop the 9.05-acre site with the 34,540 square-foot multi-tenant retail center (Parcels 1 - 4) and the 150-unit gated multi-family apartment project (Parcel 5) consistent with the city's commercial and multi-family design standards and guidelines, including full on-site and off-site improvements per the WMC.

WHEREAS, in accordance with the City's Local CEQA Guidelines, the Planning Commission has the authority to take action on the Initial Study/Mitigated Negative Declaration for the Wildomar Crossroads Mixed-Use project; and

WHEREAS, the proposed Wildomar Crossroads Mixed-Use project is considered a "project" as defined by the California Environmental Quality Act, Public Resources Code § 21000 et seq. ("CEQA"); and

WHEREAS, the Planning Director determined that there was substantial evidence that the Wildomar Crossroads Mixed-Use project may have one or more significant effects on the environment and that preparation of an Initial Study/Mitigated Negative Declaration ("MND") was therefore warranted under Public Resources Code § 21080(c); and,

WHEREAS, the Wildomar Crossroads Mixed-Use project IS/MND consists of the following documents as Exhibits to this Resolution:

- Exhibit 1 - Mitigated Negative Declaration Document (SCH# 2022080339 - under separate cover);
- Exhibit 2 - IS/MND Technical Appendices (under separate cover).
- Exhibit 3 – IS/MND City Response to Comments
- Exhibit 4 – IS/MND Mitigation Monitoring and Reporting Program (MMRP).

WHEREAS, in accordance with CEQA Guidelines Section 15072, the Planning Department on August 17, 2022 provided a Notice of Intent (NOI) to the State Clearinghouse, Riverside County Clerk, Press Enterprise, a local newspaper of general circulation, and the City's local distribution list regarding the release of the draft Initial Study/Mitigated Negative Declaration for the proposed Wildomar Crossroads Mixed-Use project; and

WHEREAS, in accordance with CEQA Guidelines §15073 and §15105, the draft Initial Study/Mitigated Negative Declaration was circulated and made available to the State Clearinghouse/OPR, the City's local distribution list, and other interested parties for a 30-day public review/comment period that commenced on August 17, 2022 and concluded on September 15, 2022; and

WHEREAS, in accordance with the City's Local CEQA Guidelines, the draft Initial Study/Mitigated Negative Declaration was posted at Wildomar Planning Department and online at the City's Environmental Documents Center website for a 30-day public review/comment period that commenced on August 17, 2022 and concluded on September 15, 2022; and

WHEREAS, during the 30-day public review period, the City received one (1) public comment (Riverside County Flood Control District) on the draft Initial Study/Mitigated Negative Declaration, thus, warranting preparation of a Response to Comments document for the proposed Wildomar Crossroads Mixed-Use project; and

WHEREAS, the Planning Department, on October 4, 2022 gave public notice to all property owners within a 600-foot radius of the project boundary notifying said property owners of the October 19, 2022 Planning Commission meeting at which time the Planning Commission would consider the Wildomar Crossroads Mixed-Use project IS/MND; and

WHEREAS, In accordance with Ordinance No. 135, the Planning Department on October 7, 2022 posted two (2) public hearing notice "sign boards" on Wildomar Trail and Clinton Keith Road notifying the general public of the October 19, 2022 Planning Commission meeting at which time the Planning Commission would consider the Wildomar Crossroads Mixed-Use project IS/MND; and

WHEREAS, the Planning Department, on October 7, 2022 published a legal notice in the "Press Enterprise," a local newspaper of general circulation, notifying the general public of the October 19, 2022 Planning Commission meeting at which time the Planning Commission would consider the Wildomar Crossroads Mixed-Use project IS/MND; and

WHEREAS, the Planning Commission conducted the duly noticed public hearing on October 19, 2022, at which time interested persons had an opportunity to testify in support of, or opposition to, the proposed Wildomar Crossroads Mixed-Use project IS/MND, and at which time the Planning Commission received public testimony concerning the IS/MND.

NOW THEREFORE, the Planning Commission of the City of Wildomar, does hereby resolve, determine and order as follows:

SECTION 1 CEQA FINDINGS.

The Planning Commission, in light of the whole record before it, including but not limited to, the draft IS/MND, Technical Appendices, Response to Comments and Mitigation Monitoring and Reporting Program (Exhibits 1 - 4) and all documents incorporated by reference therein, any comments received and responses provided, and other substantial evidence (within the meaning of Public Resources Code § 21080(e) and § 21082.2) within the record and/or provided at the public hearing, finds and determines as follows:

A. Review Period: That the City has provided a 30-day public review period which commenced on August 17, 2022 and concluded on September 15, 2022 for the draft Initial Study/Mitigated Negative Declaration as required by CEQA Guidelines §15073 and §15105.

B. Compliance with Law: That the draft Initial Study/Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program were prepared, processed, and noticed in accordance with the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) and the CEQA Guidelines (14 California Code of Regulations Section 15000 et seq.).

C. Independent Judgment: That the draft Initial Study/Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program reflect the independent judgment and analysis of the City.

D. Mitigation Monitoring and Reporting Program: That the Mitigation Monitoring and Reporting Program is designed to ensure compliance during project implementation in that changes to the project and/or mitigation measures have been incorporated into the project and are fully enforceable through permit conditions, agreements, or other measures as required by Public Resources Code Section 21081.6.

E. No Significant Effect: That revisions made to the project as agreed to by the applicant, and mitigation measures imposed as conditions of approval on the project, avoid or mitigate any potential significant effects on the environment identified in the Initial Study to a point below the threshold of significance. Furthermore, after taking into consideration the revisions to the project and the mitigation measures imposed, the Planning Commission finds that there is no substantial evidence, in light of the whole record, from which it could be fairly argued that the project may have a significant effect on the environment. Therefore, the Planning Commission concludes that the project will not have a significant effect on the environment with the proposed mitigation measures and Mitigation Monitoring and Reporting Program.

SECTION 2. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The Planning Commission finds that the Wildomar Crossroads Mixed-Use project is consistent with the MSHCP, and the project is not located in any MSHCP criteria cell area, and required mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 3. PLANNING COMMISSION ACTION.

Based on the foregoing findings, and on substantial evidence in the whole of the record, the Planning Commission hereby recommends that the City Council take the following actions:

1. Adoption of a Mitigated Negative Declaration/MMRP:
   The Planning Commission hereby recommends the City Council adopt the Initial Study/Mitigated Negative Declaration (with technical appendices) and Mitigation Monitoring and Reporting Program for the Wildomar Crossroads Mixed-Use project attached hereto this Resolution as Attachment A, Exhibits 1 - 4.

2. Filing a Notice of Determination:
   In compliance with Public Resources Code Section 21152 and CEQA Guidelines Section 15075, the Planning Commission hereby directs the Planning Director to file a Notice of Determination (NOD) with the Riverside County Clerk and State Clearinghouse for posting within five (5) working days of Planning Commission approval of the Wildomar Crossroads Mixed-Use project and adoption of the Mitigated Negative Declaration & Mitigation Monitoring and Reporting Program.

3. Location:
   The Planning Commission hereby recommends the City Council keep on file the Initial Study/Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Wildomar Crossroads Mixed-Use project, and all documents incorporated therein or forming the record of decision therefore, with the Wildomar Planning Department at City Hall, located 23873 Clinton Keith Road, Suite 201, Wildomar, CA 92595 and shall be made available for public review upon request in accordance with state law.

Santa Ana, CA 92707

August 2022

NOTICE OF AVAILABILITY FOR PUBLIC REVIEW OF AN INITIAL STUDY/MITIGATED NEGATIVE DECLARATION FOR THE WILDOMAR CROSSROADS MIXED USE PROJECT

An Initial Study/Mitigated Negative Declaration (MND) has been prepared by the City of Wildomar for the proposed Wildomar Crossroads Mixed Use Project (PA No. 21-0145). The IS/MND and technical appendices will be available for public review/comment beginning on **Wednesday, August 17, 2022**. All files can be downloaded from the City of Wildomar Environmental Documents Center webpage at the following web address: http://www.cityofwildomar.org/cms/One.aspx?portalId=9894827&pageId=10911316.

The project site is located at the northwest intersection of Clinton Keith Road and Wildomar Trail on 24850-23980 Catt Road, and encompasses Assessor's Parcel Numbers 376-410-015, -016, -017, and -021. The proposed project would construct a 150-unit "gated" multi-family apartment community and a 3,728 square-foot club/fitness center. The project also proposes the construction of a 35,422 square-foot commercial retail center anchored by a Sprouts Grocery store, one multi-tenant retail building, two drive-through restaurants, and one drive-through coffee restaurant. Access to the residential portion of the site would be provided via two gated entrances/exits. Catt Road would be extended from Arya Road to function as a project driveway and one access point would be provided at the southwest corner of the site via this driveway. The other residential access point would be provided on the northeast corner of the project via Wildomar Trail and include an internal driving aisle that extends around the north and west perimeter of the project linking the two access points. The commercial portion would be accessible from three points along Wildomar Trail. The Catt Road driveway would extend into the commercial portion of the project as well, providing an additional entrance/exit. The project includes the following applications for consideration by the Wildomar Planning Commission:

- **CEQA/Mitigated Negative Declaration:** The Planning Department will act as the Lead Agency and has determined that the project will require preparation and approval of an MND in accordance with Section 15070 of CEQA.
- **Conditional Use Permit (CUP):** The proposed Sprouts Grocery store will require approval of a CUP to allow for alcohol sales in accordance with Section 17.248 of the WMC.
- **Tentative Parcel Map (TPM 38333):** The project will require approval of a Tentative Parcel Map to subdivide the 9-acre site into five (5) parcels to accommodate the 150-unit residential apartment community and 35,422 square-foot commercial retail center.
- **Plot Plan (PP):** The project will require approval of a commercial Plot Plan to develop the 4.53-acre commercial retail site with 35,422 square feet of retail and restaurant uses, including site planning, architecture, landscaping, parking, etc. and on-site and off-site improvements consistent with the city's commercial objective design standards and guidelines.
- **Final Site Plan of Development (FSPOD):** The project will require approval of a final site plan of development for the 4.48-acre site to develop the 150-unit apartment community (33.5 units/acre density, including site planning, architecture, landscaping, parking, etc. consistent with the city's multi-family objective residential design standards and guidelines.

The IS/MND identifies impacts that require mitigation in the following topic areas: Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Noise, Transportation, Tribal Cultural Resources, and Wildfire. Significant and unavoidable impacts and cumulatively considerable impacts have not been identified in any of the environmental issue areas. The project is not located on any hazardous materials sites enumerated under Section 65962.5 of the California Government Code.

In accordance with Sections 15072(a) and (b) of the CEQA Guidelines, this public notice is posted to officially notify the public, public agencies, and responsible and trustee agencies that the required 30-day public review/comment period will commence on **Wednesday, August 17, 2022, and conclude on Thursday, September 15, 2022.** Any written comments (via email or letter) on the IS/MND must be submitted no later than 5 p.m. on September 15, 2022. Written comments may be mailed to Matthew C. Bassi, Planning Director, City of Wildomar Planning Department, 23873 Clinton Keith Road, Suite 201, Wildomar, CA 92595. Email comments can be sent to mbassi@cityofwildomar.org. The Planning Commission is tentatively scheduled to review the IS/MND and proposed development project at their regular meeting of October 19, 2022. **Published: August 17, 2022**

I. INTRODUCTION AND PROJECT DESCRIPTION

Project Summary

This project proposes the construction of a 150-unit gated multi-family apartment community and 35,422 square-foot commercial retail center on an approximately 9-acre site on the northwest intersection of Clinton Keith Road and Wildomar Trail at 24850-23980 Catt Road. The Assessor's Parcel Numbers (APN) for the project site are 376-410-015, -016, -017, and -021.

Purpose and Project Overview

This Initial Study evaluates the proposed project which is being processed through the following development applications:

- **Conditional Use Permit (CUP):** The proposed Sprouts Grocery store will require approval of a CUP to allow for alcohol sales in accordance with Section 17.248 of the WMC.
- **Tentative Parcel Map (TPM 38333)**: The project will require approval of a Tentative Parcel Map to subdivide the 9-acre site into five (5) parcels to accommodate the 150-unit residential apartment community and 35,422 square-foot commercial retail center.
- **Plot Plan (PP):** The project will require approval of a commercial Plot Plan to develop the 4.53-acre commercial retail site with 35,422 square feet of retail and restaurant uses, including site planning, architecture, landscaping, parking, etc. and on-site and off-site improvements consistent with the city's commercial objective design standards and guidelines.
- **Final Site Plan of Development (FSPOD):** The project will require approval of a final site plan of development for the 4.48-acre site to develop the 150-unit apartment community (33.5 units/acre density), including site planning, architecture, landscaping, parking, etc. consistent with the city's multi-family objective residential design standards and guidelines.

The purpose of this Initial Study is to evaluate the potential environmental effects associated with the construction and occupancy of the planned development project and to provide mitigation where necessary to avoid, minimize, or lessen environmental effects.

Proposed Conditions of Approval

In addition to the proposed project, the City is likely to require several conditions of approval that may also have physical environmental impacts.

Off-Site Mobility Improvements

The proposed project will have a condition of approval that would improve a portion of the north side of Clinton Keith Road between the intersection with Wildomar Trail and Arya Road. The improvement will move the existing curb and gutter north to allow buildout of a third lane. A portion of the third lane already exists and the movement of the curb is needed to ensure that the existing bike lane can remain. The improvement is part of the City's Capital Improvement Program CIP 025 Clinton Keith Widening and the impacts were addressed in an IS/MND adopted by Riverside County (SCH# 200910103). The proposed project would only be responsible for the improvements if it is constructed before the City on the project.

The City will also require the project to construct or pay for its fair-share to implement the following improvements at four intersections that would experience unsatisfactory Level of Service and/or queuing impacts:

- **Intersection of Wildomar Trail and Clinton Keith Road:** Construct improvements as per the approved Capital Improvement Project at this intersection. Improvements include the addition of westbound through receiving lane at project frontage and the modification of westbound right lane to westbound through right lane. Signal modifications include changing southbound left lane and northbound left lane signal permissive phasing to protected permissive and overlapping southbound right lane. In the event the CIP improvements are constructed before the project is constructed, the project would contribute fair-share to improvements at this intersection.
- **Intersection of Inland Valley Drive and Clinton Keith Road:** Project would contribute fair-share to the CIP at this intersection which improves the intersection to a 4-lane intersection. Improvements include addition of westbound through lane and eastbound through lane receiving lane.
- **Intersection of Palomar Road and Clinton Keith Road:** Project would contribute fair-share to intersection improvements as per approved CIP at this intersection. Improvements as per CIP include addition of 2nd eastbound left lane, modification of eastbound right lane to eastbound through right lane. Modification of westbound through lane to westbound through right lane. Modification on northbound through right lane to northbound through lane, addition of northbound right lane and addition of 2nd southbound left lane. The project's fair-share contributions would be limited to the 2nd southbound left lane improvement on Clinton Keith Road which would include widening the road to shift the southbound right lane further northwest.
- **Intersection of Arya Road and Clinton Keith Road:** Construct improvements or provide fair-share as per approved Westpark Promenade Conditions of Approval. Improvements include northbound striping to provide dedicated northbound left lane and northbound through right lane, dedicated southbound left lane and southbound through right lane. Recommended signal modifications include changing northbound-southbound permissive phasing to protective permissive phasing. Project would construct improvements in the event that its construction commences before the construction of the adjacent Westpark Promenade project; otherwise, project would contribute fair-share for all improvements to this intersection as stated in Section 7.2. Improvements in the Traffic Impact Analysis (Appendix 16) would include widening of Arya Road to 4 lanes.
- The project would be required to contribute to the City's ITS program to mitigate queuing impacts at the impacted intersections shown in **Table 17-4** in Section V.17, Transportation.
- For intersections within the City of Murrieta (Nutmeg St/Clinton Keith Rd and California Oaks Rd/Clinton Keith Rd) the project will contribute payment to City of Murrieta CIP #8283 (Traffic Striping Modifications – Citywide). CIP #8283 is an ongoing program for removal and restriping to modify traffic control in accordance with changing traffic demands citywide and the applicant would work with the City to address queuing in the City of Murrieta with striping improvements.

II. EXISTING CONDITIONS

Project Site

Project Location

The project site is in the southeast portion of the City of Wildomar, California at 24850-23980 Catt Road, at the northwest intersection of Clinton Keith Road and Wildomar Trail. It covers approximately 9 acres and is comprised of Assessor's Parcel Numbers (APNs) 376-410-015, -016, -017, and -021. Regional and local vicinity maps of the project are shown in **Figure 1**, Regional Location, and **Figure 2**, Local Vicinity. An aerial photograph of the site is shown in **Figure 3**, Aerial Photograph.

Surrounding Area

The project site is surrounded by commercial uses to the south and east, residential uses to the west, and a vacant, gated lot to the north. Surrounding roadways that provide access to the site include Clinton Keith Road, Catt Road, and Wildomar Trail.

To the east of the project site across Wildomar Trail sits the Clinton Keith Village commercial development and south of the site following W Freedom Ave is the Freedom Business Park. These sites are zoned C-P-S (Scenic Highway Commercial). North of the site is a gated, sunken area marked as the Hartford Park Sensitive Habitat Area followed by single family residential units across Depasquale Road and single-family homes also directly border the western portion of the site. Both subdivisions are zoned R-1 (One-Family Dwellings).

Access

Regional access to the project site is provided by Interstate 15 (I-15) located approximately 0.2-mile southwest. In addition, local access to the site is provided by Catt Road, via Clinton Keith Road and Arya Road south of the site as well as Wildomar Trail to the east.

Physical Setting

The western portion of the lot contains a single-family home with an attached garage, an unoccupied structure north of the residence, and a vacant metal shed north of the structure. The site also contains a concrete foundation east of the other structures and additional remnant building debris and concrete in various places across the site. The remainder of the site is vacant with ruderal vegetation and several pine trees. Additionally, the site contains two groundwater wells one of which appears to be currently operating and servicing the single-family home. The second well is in the east-central portion of the site and does not appear to be in use. The site generally slopes southwest and small former tributary of Murietta Creek cuts into the northeastern portion of the site. The project site's existing conditions are shown in **Figure 3** Aerial Photograph.

Conservation

The proposed project site is not within a Western Riverside County Multiple Species Habitat Conservation Plan Criteria Cell (Riverside County 2022).

Natural Hazards

The project site is located approximately 0.63- mile northeast of the closest Alquist-Priolo Earthquake Fault Zone (Leighton 2022). However, most of the site falls within a mapped Riverside County Fault Hazard Zone (Leighton 2022). The project site is also located within a Very High Fire Hazard Severity Zone (VHFHSZ) (CALFIRE 2009). (See Executive Summary, below).

Regulatory Setting

The City of Wildomar General Plan designates this site as a Mixed-Use Planning Area (MUPA) with a zoning designation of Scenic Highway Commercial and a Mixed Use Overlay zone. The intent of the Mixed-Use Overlay District is to implement the MUPA designation by allowing and encouraging commercial and professional office uses to be located with multifamily residential development. The proposed plan would require the approval of a Conditional Use Permit, Tentative Parcel Map No. 38333, Plot Plan, and Final Site Plan of Development.

III. PROJECT DESCRIPTION

The proposed project would consist of demolishing the existing single-family home, garage, and outbuildings, abandonment of the two wells, and constructing a new mixed-use development including an apartment complex and commercial shopping center, as shown in **Figure 4**, Site Plan. The proposed project would be constructed in a single phase with an opening year of 2024. The duration of construction activities associated with the project is estimated to be approximately 14 months.

The proposed residential portion will be a gated community consisting of 150 units that cover 4.48 acres on the western side of the site. As shown in **Figure 5**, Conceptual Residential Building Elevations, the exterior of the proposed residential buildings would be painted sand-finished stucco with board and batten siding, off-white vinyl windows, and dark gray asphalt roof tiles. The tallest portion of the proposed residential buildings is 39 feet and 9 inches tall.

The commercial shopping center portion of the proposed project would cover approximately 4.53 acres on the eastern portion of the site and contain a market, shops, and restaurants. This development would include a 23,104 square-foot Sprouts Farmers Market and a 5,087 square-foot attached building intended for shops and restaurants on the northern end of the site, shown as “Major A” and “Shops 1” in **Figure 4**. Two pads on the southern end of the commercial portion will include an additional 7,231 square feet of restaurant space. Pad 1 would be located in the southwest corner and is planned as a 2,750 square-foot drive-thru. Pad 2 is located on the southeast corner and includes 3,348 square feet of restaurant space as well as a 1,133 square foot coffee drive-thru. These buildings are labeled as “Pad 1” and “Pad 2” on **Figure 4**. Approximately 4,500 square feet of outdoor eating areas and multi-function gathering space will be placed across both the north and south portions of the site and would be open for breakfast, lunch, and dinner daily.

Both the residential and commercial sections of the project have an architectural design that has been modeled after the City of Wildomar’s “Farm Chic” design style. The Sprouts Farmers Market exterior would consist of primarily neutral tones including shades of gray, beige and brown with a teal accent on concrete, stone, and wood façades, as shown in **Figure 6**, Sprouts Farmers Market Exterior Elevations. The

other commercial buildings on site would contain a similar color scheme, and materials as shown in **Figure 7**, Shops1-South Elevation and East Elevation; **Figure 8**, Pad 1- South Elevation and East Elevation; and **Figure 9**, Pad 2- Northwest Elevation and Southwest Elevation. The maximum height of these buildings is 38 feet and 6 inches.

Access to the residential portion of the site would be provided via two gated entrances/exits. Catt Road would be extended from Arya Road to function as a project driveway and one access point would be provided at the southwest corner of the site via this driveway. The other residential access point would be provided on the northeast corner of the project via Wildomar Trail and include an internal driving aisle that extends around the north and west perimeter of the project linking the two access points. The residential development would provide 283 spaces consisting of 119 open stalls, 71 carport stalls, and 93 garage stalls. The commercial portion would be accessible from three points along Wildomar Trail. The Catt Road driveway would extend into the commercial portion of the project, providing an additional entrance/exit for Pad 1 and Pad 2. The commercial portion of the project would provide 195 parking spaces for the commercial uses as well as 16 stalls for clean-air vehicles.

The project also includes 0.85 acres of off-site improvements and dedications. These include a 0.38-acre Catt Road improvement, a 0.20-acre Wildomar Trail improvement, and a 0.26-acre Clinton Keith Road improvement. An additional 0.10-acre is proposed as a Catt Road vacation for the commercial portion of the project with an easement retained for public utilities. An additional 0.007-acre will be dedicated for Clinton Keith Road and 0.016-acre dedicated for Catt Road. The project, including the residential, commercial and roadway improvements, totals 10.02 acres.

Electric power service will be provided by Southern California Edison (SCE) and natural gas service by Southern California Gas Company. Additional electric, gas, telephone, and cable services to the proposed development will be provided through extension of existing facilities located in Catt Road and Wildomar Trail. Three existing power poles along Catt Road are proposed to be placed in an underground system in accordance with SCE Rule 20 criteria and appropriate design features.

Once occupied, the proposed project is expected to generate a total of 4,551 daily trips with 282 AM peak hour trips and 404 PM peak hour trips. The proposed development plans, including architectural renderings and elevations, are provided in **Appendix 1.**

IV. EXECUTIVE SUMMARY

Through analysis provided in this MND, it was determined that the proposed project has the potential to result in significant environmental impacts to Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Tribal Cultural Resources, and Wildfire. Mitigation measures are identified that would reduce all impacts to less than significant levels. **Table ES-1,** Project Impact and Mitigation Summary, presents an at-a-glance summary of the identified significant impact issue areas and required mitigation measures.

Table ES-1 Project Impact and Mitigation Summary			
3. Air Quality			
b) Expose sensitive receptors to substantial pollutant concentrations?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant

AQ-1 During the site preparation phase, construction equipment greater than 150 horsepower (hp), the Construction Contractor shall ensure that off-road diesel construction equipment that complies with Environmental Protection Agency (EPA)/California Air Resources Board (CARB) Tier 3 emissions standards and shall ensure that all construction equipment is tuned and maintained in accordance with the manufacturer's specifications.

Timing/Implementation: *During site preparation*

Enforcement/Monitoring: *City of Wildomar Engineering Department and Planning Department*

AQ-2 All actively graded (disturbed) areas within the project site during site preparation activities shall be watered at 2.1-hour watering intervals (e.g., 4 times per day) or a movable sprinkler system shall be in place to ensure minimum soil moisture of 12 percent in maintained for actively graded areas. Moisture content can be verified with use of a moisture probe by the grading contractor.

Timing/Implementation: *During site preparation*

Enforcement/Monitoring: *City of Wildomar Engineering Department and Planning Department*

4. Biological Resources			
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant

BIO-1 The Project applicant/developer shall retain a qualified biologist to conduct a 30-day pre-construction survey for burrowing owls (BUOW). The results of the survey shall be submitted to the City of Wildomar prior to obtaining a grading permit. If BUOW are not detected during the pre-construction survey, no further mitigation is required. If BUOW are detected during the pre-construction survey, the project applicant shall relocate burrowing owls out of harm's way, in consultation with the CDFW. Notification to the CDFW shall occur if burrowing owls are found to be present onsite and the development of a conservation strategy in cooperation with the U/S/ Fish and Service, the CDFW, and the Western Riverside County Regional Conservation Authority (RCA) shall be conducted. The project applicant/developer and a qualified consulting biologist will be required to prepare and submit for approval a

Table ES-1 Project Impact and Mitigation Summary			
BUOW relocation program. The report shall be submitted to the applicant and the City of Wildomar concurrently. *Timing/Implementation:* *Within 30 days prior to construction, Prior to issuance of grading permits* *Enforcement/Monitoring:* *City of Wildomar Planning Department*			
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant
BIO-2 Prior to vegetation clearance, the Project applicant/developer shall retain a qualified biologist to conduct a pre-disturbance nesting bird survey in accordance with the following: • The survey shall be conducted no more than three (3) days prior to the initiation of clearance/construction work; • If pre-disturbance surveys indicate that bird nests are not present or are inactive, or if potential habitat is unoccupied, no further mitigation is required; • If active nests of birds are found during the surveys, a species-specific no-disturbance buffer zone shall be established by a qualified biologist around active nests until a qualified biologist determines that all young have fledged (i.e., no longer reliant upon the nest). *Timing/Implementation:* *Within three (3) days prior to the initiation of clearance/construction work* *Enforcement/Monitoring:* *City of Wildomar Planning Department*			
3. Cultural Resources			
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant
Implement Mitigation Measures **TRI-1** through **TRI-7** (see Tribal Cultural Resources, below).			
c) Disturb any human remains, including those interred outside of dedicated cemeteries?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant

Table ES-1 Project Impact and Mitigation Summary			
CUL-1 **Human Remains.** If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the Riverside County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant." The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98. *Timing/Implementation:* *During any ground-disturbing construction activities* *Enforcement/Monitoring:* *City of Wildomar Engineering Department and Planning Department*			
7. Geology and Soils			
a) i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant
GEO-1 The project applicant/developer shall incorporate the recommendations of the Geotechnical Report prepared Leighton and Associates, Inc. (**Appendix 8)** into project plans related to the proposed project. The project's building plans shall demonstrate that they incorporate all applicable recommendations of the Geotechnical Report and comply with all applicable requirements of the latest adopted version of the California Building Code. *Timing/Implementation:* *During building plan check, prior to any ground-disturbing construction activities* *Enforcement/Monitoring:* *City of Wildomar Planning Department and Building and Safety Department*			

Table ES-1 Project Impact and Mitigation Summary			
a) ii) Strong seismic ground shaking?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant
Implement Mitigation Measure **GEO-1**			
a) iii) Seismic-related ground failure, including liquefaction?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant
Implement Mitigation Measure **GEO-1**			
b) Result in substantial soil erosion or the loss of topsoil?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant
Implement Mitigation Measure **GEO-1**			
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant
Implement Mitigation Measure **GEO-1**			
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant
GEO-2 A paleontological grading observation schedule by a Certified Paleontologist shall be maintained when grading in bedrock units to further evaluate the fossil resources of the site. Salvage operations shall be initiated by the Certified Paleontologist and coordinated with the developer if other significant concentrations of fossils, as determined by the Certified Paleontologist, are encountered. Any paleontological resources shall be provided for curation at a local curation facility, or any other local museum or repository willing and able to accept and house the resource to preserve for future scientific study. *Timing/Implementation:* *During ground-disturbing construction activities* *Enforcement/Monitoring:* *City of Wildomar Planning Department and Building and Safety Department*			

Table ES-1 Project Impact and Mitigation Summary			
9. Hazards and Hazardous Materials			
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant

HAZ-1 Prior to the development of the site, representative sampling of the soil stockpiles shall be conducted. Soil samples shall be analyzed by a laboratory licensed with the Environmental Laboratory Accreditation Program [ELAP] for total petroleum hydrocarbon chains by EPA Method 8015M, Title 22 Metals by EPA Method 6010B/7471A, organochlorine pesticides by EPA Method 8081A, volatile organic compounds by EPA Method 8260B/5035 and polychlorinated biphenyls by EPA Method 8082. During stockpile testing, a soil sample shall be collected from the area where an orchard may have been located and tested for organochlorine pesticides to assess for residual pesticides**.** If the results of the soil testing show chemical levels are below EPA Region 9 or DTSC screening levels for residential land use, grading or excavation may proceed accordingly. Remediation and/or removal of contaminated soils shall be made prior to development, if chemical levels are above screening levels. Remediation shall be made in coordination with the local health department, SCAQMD, the California Department of Toxic Substances Control, the U. S. Environmental Protection Agency or other regulatory agencies and in compliance with established residential screening levels.

Timing/Implementation: *Prior to site development*

Enforcement/Monitoring: *City of Wildomar Building Department, Local Health Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency*

HAZ-2 After grading is completed, but before construction begins, the project Applicant/developer shall install soil gas probes with a 100-foot grid spacing in the footprints of the proposed structures, at depths of 5 feet below ground surface and 15 feet below ground surface at each location. Methane shall be tested from the probes with a properly calibrated hand-held device with a detection limit of no greater than 500 ppmv, or via a laboratory licensed with ELAP by ASTM Method 1946D, or a combination of the two. In addition, calibrated pressure gauges such as Magnehelic gauges or equivalent with a range of 0-10 inches of water pressure to a range of 0-100 inches of water pressure shall be used on each probe. If methane levels in probes are below 10 percent of the Lower Explosive Limit (10 percent LEL or 5,000 ppmv), the project could proceed without further action. For areas of the site that have methane concentrations at or exceeding 10 percent LEL or have pressures exceeding 3 inches of water, further testing shall be implemented to determine if a methane mitigation system is necessary. If additional weekly testing shows that methane concentrations consistently exceed 10 percent LEL or have pressures exceeding 3 inches of water over a period of 30 days

Table ES-1 Project Impact and Mitigation Summary		
and a plot of the resulting data does not show a downward trend in concentrations or pressures, then a methane mitigation system shall be incorporated into the building plans for the structures where the elevated concentrations and/or pressures were observed. If there is a downward trend but the concentrations are still above 10 percent LEL or have pressures above 3 inches of water, then additional testing past 30 days may be requested to determine if concentrations and pressures subside below the action levels.		
	Timing/Implementation:	*Prior to site development*
	Enforcement/Monitoring:	*City of Wildomar Building Department, Local Health Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency*

Table ES-1 Project Impact and Mitigation Summary			
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant

HAZ-3 Prior to the issuance of building permits, the project applicant/developer shall demonstrate, to the satisfaction of the City Building Official and the Riverside County Fire Chief, compliance with the 2019 California Building Code (or the most recent edition) (Part 2 of Title 24 of the California Code of Regulations) and the 2019 California Fire Code (or the most recent edition) (Part 9 of Title 24 of the California Code of Regulations), including those regulations pertaining to materials and construction methods intended to mitigate wildfire exposure as described in the 2019 California Building Code and California Residential Code (or most recent edition); specifically California Building Code Chapter 7A; California Residential Code Section R327; California Residential Code Section R337; California Referenced Standards Code Chapter 12-7A; and California Fire Code Chapter 49.

Timing/Implementation: *Prior to issuance of building permits*

Enforcement/Monitoring: *City of Wildomar Building Department and Riverside County Fire Department*

HAZ-4 Prior to the issuance of a certificate of occupancy, the applicant shall demonstrate, to the satisfaction of the City Building Official and the County Fire Chief, compliance with the vegetation management requirements prescribed in California Fire Code Section 4906 and California Government Code Section 51182.

Timing/Implementation: *Prior to issuance of certificate of occupancy*

Enforcement/Monitoring: *City of Wildomar Building Department and Riverside County Fire Department*

Table ES-1 Project Impact and Mitigation Summary			
13. Noise			
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant
The following mitigation measure from the Clinton Keith Road Widening Project IS/MND (SCH# 200910103) would also be applicable to the proposed project (numbering is from 2009 IS/MND): **NOI-1** All noise producing project equipment and vehicles using internal combustion engines shall be equipped with mufflers and air-inlet silencers, where appropriate, in good operating condition that meet or exceed original factory specifications. Mobile or fixed "package" equipment (e.g., arc welders, air compressors) shall be equipped with shrouds and noise control features that are readily available for that type of equipment. *Timing/Implementation: Prior to construction* *Enforcement/Monitoring: City of Wildomar Building Department*			
17. Transportation			
d) Result in inadequate emergency access?			
Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant

Table ES-1 Project Impact and Mitigation Summary
The following mitigation measure from the Clinton Keith Road Widening Project IS/MND (SCH# 200910103) would also be applicable to the proposed project (numbering is from 2009 IS/MND): **TRF-1** During final design, stage construction and detour plans will be prepared to minimize disruption to the traveling public. Such plans shall be prepared in consultation with affected local jurisdictions prior to construction. Adequate access shall be provided at all times to and from side streets serving adjacent land uses. To further ensure public safety, proper detours and warning signs shall be established. The stage construction and detour plans shall be designed to not interfere with any emergency response or evacuation plans, and construction routes shall utilize non-residential streets to the extent practicable. Finally, such plans shall identify construction worker parking areas and equipment staging areas to minimize impacts to roadway operations. *Timing/Implementation: During final design* *Enforcement/Monitoring: City of Wildomar Building Department*
18. Tribal Cultural Resources
a) i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k).

Level of Significance without Mitigation	Potentially Significant	**Resulting Level of Significance**	Less Than Significant

TRI-1 Inadvertent Archeological Find. If during ground disturbance activities, cultural resources are discovered that were not assessed by the archaeological report(s) and/or environmental assessment conducted prior to project approval, the following procedures shall be followed. Cultural resources are defined, as being multiple artifacts in close association with each other, but also include fewer artifacts if the area of the find is determined to be of significance due to its sacred or cultural importance as determined in consultation with the lead agency and Native American Tribe(s) that elected to consult under AB 52 ("Consulting Tribe(s)").

a. All ground disturbance activities within 100 feet of the discovered cultural resources shall be halted until a meeting is convened between the developer, the archaeologist, the tribal representative(s) and the Planning Director to discuss the significance of the find.
b. At the meeting, the significance of the discoveries shall be discussed and after consultation with the tribal representative(s), developer, and the archaeologist, a decision shall be made, with the concurrence of the Planning Director, as to the

appropriate mitigation (documentation, recovery, avoidance, etc.) for the cultural resources.

c. Grading or further ground disturbance shall not resume within the area of the discovery until an agreement has been reached by all parties as to the appropriate mitigation. Work shall be allowed to continue outside of the buffer area and will be monitored by additional Tribal monitors if needed.

d. Treatment and avoidance of the newly discovered resources shall be consistent with the Treatment and Monitoring Agreements entered into with the Consulting Tribe(s) and the applicant. This may include avoidance of the cultural resources through project design, in-place preservation of cultural resources located in native soils and/or re-burial on the Project property so they are not subject to further disturbance in perpetuity as identified in Mitigation Measures TRI-2 and TRI-7.

e. If the find is determined to be significant and avoidance of the site has not been achieved, a Phase III data recovery plan (see Mitigation Measure TRI-6) shall be prepared by the project archeologist, in consultation with the Consulting Tribe(s), and shall be submitted to the City for their review and approval prior to implementation of the said plan.

f. Pursuant to Calif. Pub. Res. Code § 21083.2(b) avoidance is the preferred method of preservation for archaeological resources and tribal cultural resources. If the landowner and the Consulting Tribe(s) cannot agree on the significance or the mitigation for the archaeological or tribal cultural resources, these issues will be presented to the Planning Director for decision. The City's Planning Director shall make the determination based on the provisions of the California Environmental Quality Act with respect to archaeological and tribal cultural resources, recommendations of the project archeologist, and shall take into account the cultural and religious principles and practices of the Consulting Tribe(s). Notwithstanding any other rights available under the law, the decision of the City Planning Director shall be appealable to the City Planning Commission and/or City Council.

Timing/Implementation: *During any ground-disturbing or construction activities*

Enforcement/Monitoring: *City of Wildomar Engineering Department and Planning Department*

TRI-2 **Cultural Resources Disposition.** In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:

a. One or more of the following treatments, in order of preference, shall be employed with the Consulting Tribe(s). Evidence of such shall be provided to the City of Wildomar Planning Department:

i. Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place where they were found with no development affecting the integrity of the resources.

ii. Reburial of the resources on the Project property. The measures for reburial shall include, at least, the following: Measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed, with an exception that sacred items, burial goods and Native American human remains are excluded. Any reburial process shall be culturally appropriate. Listing of contents and location of the reburial shall be included in the confidential Phase IV report (see Mitigation Measure TRI-6). The Phase IV Report shall be filed with the City under a confidential cover and not subject to Public Records Request.

iii. If preservation in place or reburial is not feasible then the resources shall be curated in a culturally appropriate manner at a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees by the Applicant necessary for permanent curation. Evidence of curation in the form of a letter from the curation facility stating that subject archaeological materials have been received and that all fees have been paid, shall be provided by the landowner to the City. There shall be no destructive or invasive testing on sacred items, burial goods, and Native American human remains, as defined by the cultural and religious practices of the Most Likely Descendant. Results concerning finds of any inadvertent discoveries shall be included in the Phase IV monitoring report.

Timing/Implementation: *During grading activities*

Enforcement/Monitoring: *City of Wildomar Engineering Department and Planning Department*

TRI-3 **Archaeologist Retained.** Prior to issuance of a grading permit the project applicant shall retain a Riverside County qualified Registered Professional Archaeologist (RPA), to monitor all ground disturbing activities in an effort to identify any unknown archaeological resources.

The Registered Professional Archaeologist and the Tribal monitor(s) required by Mitigation Measures TRI-4 and TRI-5 shall manage and oversee monitoring for all initial ground disturbing activities and excavation of each portion of the project site including clearing, grubbing, tree removals, mass or rough grading, trenching, stockpiling of materials, rock

crushing, structure demolition and etc. The Registered Professional Archaeologist and the Tribal monitor(s), shall independently have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources in coordination with any required special interest or tribal monitors.

The developer/permit holder shall submit a fully executed copy of the contract to the Planning Department to ensure compliance with this condition of approval. Upon verification, the Planning Department shall clear this condition.

In addition, the Registered Professional Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB 52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB 52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include:

a. Project grading and development scheduling;

b. The Project archaeologist and the Consulting Tribes(s) shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;

c. The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

Timing/Implementation: Prior to issuance of grading permit

Table ES-1 Project Impact and Mitigation Summary	
	Enforcement/Monitoring: *City of Wildomar Engineering Department and Planning Department*
TRI-4	**Native American Monitoring (Pechanga).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Pechanga Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist. *Timing/Implementation:* *During ground-disturbing activities* *Enforcement/Monitoring:* *City of Wildomar Engineering Department and Planning Department*
TRI-5	**Native American Monitoring (Soboba).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Soboba Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist. *Timing/Implementation:* *During ground-disturbing activities* *Enforcement/Monitoring:* *City of Wildomar Engineering Department and Planning Department*
TRI-6	**Archeology Report – Phase III and IV.** Prior to final inspection, the developer/permit holder shall prompt the Project Archeologist to submit two (2) copies of the Phase III Data Recovery report (if required for the Project) and the Phase IV Cultural Resources Monitoring Report. The Phase IV report shall include evidence of the required cultural/historical sensitivity training for the construction staff held during the pre-grade meeting. The Planning Department shall review the reports to determine adequate mitigation compliance. Provided the reports are adequate, the Community Development Department shall clear this condition. Once the report(s) are determined to be adequate, two (2) copies shall be submitted to the Eastern Information Center (EIC) at the University of California Riverside

<table>

TRI-7 Non-Disclosure of Reburial Locations. It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, pursuant to the specific exemption set forth in California Government Code 6254 I., parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).

Timing/Implementation: During discovery of Native American human remains

Enforcement/Monitoring: City of Wildomar Engineering Department and Planning Department

V. ENVIRONMENTAL CHECKLIST FORM

A. BACKGROUND

1. Project Title:

Wildomar Crossroads Mixed-Use Project (Planning Application No. 21-0145)

2. Lead Agency Name and Address:

City of Wildomar, 23873 Clinton Keith Road, Suite 201, Wildomar, CA 92595

3. Contact Person and Phone Number:

Matthew Bassi, Planning Director; (951) 677-7751, ext. 213

4. Project Location:

The project is located on the northwest corner of Wildomar Trial and Clinton Keith Road and encompasses Assessor's Parcel Numbers (APN) 376-410-015, -016, -017, -021.

5. Project Sponsor's Name and Address:

Ralph Deppisch, Sage CK15 Wildomar, LLC., 4340 Von Karman Avenue, Suite 110, Newport Beach, CA 92660

6. General Plan Designation:

MUPA (Mixed Use Planning Area)

7. Zoning:

C-P-S (Scenic Highway Commercial)

8. Description of Project:

The proposed project is a mixed use development that would include a gated multi-family apartment community and 35,422 square-foot commercial retail center. The residential portion of the project would consist of 150 housing units with studios, 1-bedroom and 2-bedroom units on the western side of the site with parking along the western and northern edges and a 3,728 square-foot club/fitness center. The proposed retail center would be anchored by a Sprouts Grocery store, one multi-tenant retail building, two drive-through restaurants, and one drive-through coffee restaurant, including approximately 4,500 square feet of outdoor seating/eating areas.

The proposed development plans, including architectural renderings and elevations, are provided in **Appendix 1.**

9. Surrounding Land Uses and Setting:

ADJACENT LAND USE, LAND USE DESIGNATION, AND ZONING			
Location	**Current Land Use**	**General Plan Land Use Designation**	**Zoning**
North	Hartford Park Association Sensitive Habitat Area followed by Depasquale Road and single-family units	Medium Density Residential (MDR)	One-Family Dwellings (R-1)
South	W Freedom Ave followed by Freedom Business Park	Commercial Retail (CR)	Scenic Highway Commercial (C-P-S)
East	Wildomar Trail followed by the Clinton Keith Village commercial development inclusive of a gas station, 7-11 convenience store, Grocery Outlet, and additional commercial buildings.	Commercial Retail (CR)	Scenic Highway Commercial (C-P-S)
West	Single-family residential units	Medium Density Residential (MDR)	One-Family Dwellings (R-1)

10. Other Public Agencies Whose Approval May Be Required:

- San Diego Regional Water Quality Control Board
- Elsinore Valley Municipal Water District
- Riverside County Flood Control and Water Conservation District

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code Section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

The City of Wildomar sent notice to tribes on December 10, 2021, that have requested to be notified of projects pursuant to Assembly Bill (AB) 52 Native Americans: California Environmental Quality Act and Public Resources Code Section 21080.3.1. The City has completed consultations with Native American Tribes (please refer to section V.18 of the Initial Study, Tribal Cultural Resources).

B. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project involving at least one impact that is "Less Than Significant Impact with Mitigation Incorporated" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☒ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology/Soils	☐ Greenhouse Gas Emissions	☒ Hazardous and Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use/Planning	☐ Mineral Resources
☒ Noise	☐ Population/Housing	☐ Public Services
☐ Recreation	☒ Transportation	☒ Tribal Cultural Resources
☐ Utilities and Service Systems	☒ Wildfire	☒ Mandatory Findings of Significance

C. DETERMINATION

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because of the incorporated mitigation measures and revisions in the project have been made by or agreed to by the project proponent. **A MITIGATED NEGATIVE DECLARATION will be prepared**.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

City Representative

Matthew Bassi

Matthew C. Bassi, Planning Director — Date

Applicant

Pursuant to Section 15070(b)(1) of the California Environmental Quality Act, as the project applicant, I agree to revisions of the project plans or proposals as described in this Initial Study/Mitigated Negative Declaration to avoid or reduce environmental impacts of my project to a less than significant level.

Wildomar Crossroads Mixed-Use Project, LLC, Applicant — Date

D. ENVIRONMENTAL ANALYSIS

1. Aesthetics

Except as provided in Public Resources Code Section 21099, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?			✓	
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				✓
c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (*Public views are those that are experienced from publicly accessible vantage point*). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			✓	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			✓	

DISCUSSION

a) Less Than Significant Impact. The proposed project would result in the development of commercial retail up to 38 feet and 6 inches in height and apartment residential buildings with three stories up to 39 feet and 9 inches in height. The average elevation across the site is 1,345 feet above mean sea level (amsl). Scenic vistas in the project vicinity include mountain ridgelines in the north and southwest directions of the project site ranging from approximately 4,000 feet (amsl) to 10,000 feet amsl. Existing commercial and residential uses partially obstruct the ridgelines visible southwest of the site. Views of these hills may be altered by construction of the proposed structures for the residential uses bordering the north side of the project site. The site is vacant and surrounded by residential uses to the west and north and commercial uses to the east and south, and the proposed structures would not fully obstruct any scenic view or resource. Views of the surrounding ridgelines would not be obstructed from off-site viewpoints. Therefore, implementation of the proposed project would not have a substantial adverse effect on a scenic vista, and this impact is less than significant.

b) No Impact. The project site is located approximately 25 miles west of the nearest portion of a designated State Scenic Highway, State Route (SR) 74 in the San Jacinto Mountains. The site is also

approximately 1,000 feet away from the Interstate 15 which is eligible for listing as a State Scenic Highway, but not officially designated (CALTRANS 2018). Additionally, construction of the proposed project would not require the removal of any tree, rock outcropping, or historic building that has been recognized as a scenic resource. Therefore, there are no impacts to scenic resources within a State Scenic Highway.

c) Less Than Significant Impact. The project site is in an urbanized area that includes a residential neighborhood of single-family homes to the north and west directions of the site and commercial shopping centers to the south and east directions. The design of the existing homes in the area contains a mix of white, grey, beige and brown color palette. The existing commercial development consists of similarly neutral tones and majority stucco facades with brown stone accents. The proposed project would be compatible with the character of these existing developments; the commercial portion proposes similar tones of off-white, brown and grey stucco and a brown manufactured stone veneer for much of the buildings lower façade, as shown in **Figures 6**, **7**, **8** and **9**. The residential portion of the proposed project would contain primarily white and grey tones with building materials consisting of wood siding and stucco, as shown in **Figure 5**. This style would also be consistent with the existing character of the area, complementing the appearance of several other multi-family apartments nearby.

Furthermore, the proposed project is required to undergo review by the City Planning Commission to determine its consistency with other design styles in the area. The project is also reviewed under a design guidelines checklist which determines its consistency with the City's established design styles. Both the residential and commercial portions of the project have been designed under the "Farm Chic" design guidelines, one of the City of Wildomar's recommended design styles. While the Planning Commission will make the final decision on compatibility, from the evidence in the record, the proposed project would not substantially degrade the existing visual character or quality of the site and its surroundings. Additionally, the project would be consistent with the standards of the Scenic Highway Commercial Zone as shown in Chapter 17.76, C-P-S Scenic Highway Commercial Zone, of the Wildomar Municipal Code including the restriction of building height to 50 feet. The City does not have any additional regulations regarding scenic quality. This impact is less than significant.

d) Less Than Significant Impact. The proposed project would result in new and increased sources of nighttime lighting and illumination including new building display and store lighting, signs, lights associated with vehicular travel street lighting, parking lot lights, and security-related lighting, and exterior lighting for the multi-family buildings. Chapter 8.64, Light Pollution, of the Wildomar Municipal Code establishes limits on the types of fixtures and size of bulbs used in all aspects of development. The project is required to comply with this ordinance, which is verified as part of the building permit application process and again prior to occupancy during building and site inspections of the site to ensure that the project's lighting will not create significant impacts. Consistent with the City's lighting standards (Wildomar Municipal Code Section 8.64.090), all proposed exterior light fixtures must have full cutoff so that there is no light pollution created above the 90-degree plane of the light fixtures. Furthermore, all light fixtures installed along the perimeter would include aluminum housing to eliminate the spillover of light pollution onto streets and neighboring properties. The project would not adversely affect day or nighttime views in the area, and the project would not contribute to night sky pollution. Therefore, this impact is less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

1. The project is required to comply with the provisions of Wildomar Municipal Code Chapter 8.64, Light Pollution.

MITIGATION MEASURES

None required.

2. Agriculture and Forestry Resources

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				✓
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				✓
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?				✓
d) Result in the loss of forest land or conversion of forest land to non-forest use?				✓
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				✓

DISCUSSION

a) No Impact. This site is not designated under the State Farmland Mapping and Monitoring Program (FMMP) as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, nor is the site adjacent to such designations. The site is designated under the class Other Land, which describes a land use that is vacant and nonagricultural surrounded on all sides by urban development. The project site is surrounded by urbanized uses. The project would not result in the conversion of agricultural lands, and therefore no impact would occur.

b) No Impact. There is not land zoned for agricultural use and there are no Williamson Act contracts on the project site. Therefore, no impact would occur.

c) No Impact. The project site is not designated as forestland or timberland, and there is no forestland or timberland adjacent to these sites. Therefore, no impact would occur.

d) No Impact. The project site does not contain forestland, nor is the project site zoned as forestland. Implementation of the proposed project would not convert forestland to non-forest use or result in a loss of forestland. Therefore, no impact would occur.

e) No Impact. The project site does not contain forestland or unique farmland. The project site is in an urbanized area, as shown in **Figure 3**. Development on the site would not result in the conversion of farmland to nonagricultural uses or forestland to non-forest uses. As such, impacts would be less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

3. Air Quality

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?			✓	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?			✓	
c) Expose sensitive receptors to substantial pollutant concentrations?		✓		
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			✓	

An Air Quality Assessment was prepared by Urban Crossroads on January 18, 2022. It was peer reviewed by Placeworks on March 11, 2022 and revised on April 13, 2022 (2022a) (see **Appendix 2**). This report evaluates the project's potential impacts on air resources.

DISCUSSION

a) **Less Than Significant Impact.** The project site is in the South Coast Air Basin (SoCAB), which is under the jurisdiction of the South Coast Air Quality Management District (South Coast AQMD). The South Coast AQMD is required, pursuant to the federal Clean Air Act, to reduce emissions of criteria pollutants for which the basin is in nonattainment: ozone (O3), coarse particulate matter (PM10), and fine particulate matter (PM2.5). These are considered criteria pollutants because they are three of several prevalent air pollutants known to be hazardous to human health. An area designated as nonattainment for an air pollutant is an area that does not achieve national and/or state ambient air quality standards for that pollutant.

In order to reduce emissions of criteria pollutants for which the SoCAB is in nonattainment, the South Coast AQMD has adopted the 2016 Air Quality Management Plan (AQMP). The 2016 AQMP establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving state (California) and national air quality standards. The 2016 AQMP is a regional and multi-agency effort including the South Coast AQMD, the California Air Resources Board (CARB), the Southern California Association of Governments (SCAG), and the US Environmental Protection Agency (EPA). The 2016 AQMP pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's 2016–2040 Regional Transportation Plan/Sustainable Communities Strategy, updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts,

defined in consultation with local governments and with reference to local general plans. The project is subject to the South Coast AQMD's AQMP.

Criteria for determining consistency with the AQMP are defined by the following indicators:

- Consistency Criterion No. 1: The proposed project will not result in an increase in the frequency or severity of existing air quality violations, or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.
- Consistency Criterion No. 2: The proposed project will not exceed the assumptions in the AQMP based on the years of project buildout phase.

Consistency Criterion 1

Consistency Criterion No. 1 refers to violations of the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). CAAQS and NAAQS violations would occur if Localized Significance Thresholds (LSTs) or regional significance thresholds were exceeded. As evaluated in the Air Quality Assessment, the project's regional and localized construction-source emissions would not exceed applicable regional significance threshold and LST thresholds after implementation of mitigation measures **AQ-1** and **AQ-2**. Additionally, the project would not exceed the applicable regional and localized significance thresholds for operational activity. Therefore, the proposed project is determined to be consistent with the first criterion and impacts would be less than significant.

Consistency Criterion 2

The 2016 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Wildomar General Plan is considered to be consistent with the AQMP.

The City's General Plan designates the project site as a Mixed Use Planning Area (MUPA). The project site's current zoning designation is Scenic Highway Commercial (C-P-S) with a Mixed Used Overlay. The MUPA designation and the Mixed Use Overlay allow and encourage commercial and professional office uses to be located with multifamily residential development and do not identify a particular mix or intensity of uses for these zones. The project's proposed use of the site is to develop a "gated" multi-family apartment community and a commercial retail center. As such, the project uses are consistent with uses allowed under the MUPA designation and is thus consistent with both the City of Wildomar General Plan and the AQMP. Furthermore, the project would not exceed the regional or localized air quality significance thresholds. Therefore, impacts would be less than significant.

b) Less Than Significant Impact. The project site is in the SoCAB. State and federal air quality standards are often exceeded in many parts of the basin. A discussion of the project's potential short-term construction-period and long-term operational-period air quality impacts are provided below.

Construction Emissions

Construction activities associated with the project will result in emissions of VOC's, NO_x, SO_x, CO, PM_{10}, and $PM_{2.5}$. Emissions would result from demolition of a single-family residence, site preparation, grading which would include the export of 38,761 cubic yards of material, building construction, paving and architectural coating. Construction is anticipated to last 14 months from December 2022 to February 2024. As shown in **Table 3-1**, Project Construction Emissions Summary — Without Mitigation, emissions resulting from project construction would not exceed pollutant thresholds established by South Coast AQMD for emissions of any criteria pollutant. Therefore, criteria pollutant emissions generated during construction of the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard. Impacts would be less than significant.

Table 3-1 Project Construction Emissions Summary – Without Mitigation

Year	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2022	4.55	50.48	21.26	0.06	10.87	6.07
2023	3.89	53.02	25.89	0.18	10.46	5.70
2024	49.80	9.69	15.19	0.02	0.66	0.48
Winter						
2022	4.54	50.48	21.15	0.06	10.87	6.07
2023	3.89	54.47	54.40	0.18	10.46	5.70
2024	49.79	9.69	15.10	0.02	0.66	0.48
Maximum Daily Emissions	**49.80**	**54.47**	**25.89**	**0.18**	**10.87**	**6.07**
South Coast AQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Source: Urban Crossroads 2022a (Appendix 2)

Operational Emissions

Operational activities associated with the proposed project would result in emissions of VOcs, NOx, SOx, CO, PM10, and PM2.5. Operational emissions would be expected from area sources, energy sources, and mobile sources.

As shown in **Table 3-2**, Summary of Peak Operational Emissions — Without Mitigation, the proposed project's daily regional emissions from on-going operations would not exceed the South Coast AQMD's regional threshold. Therefore, criteria pollutant emissions generated during operation of the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard. Impacts would be less than significant.

Table 3-2 Summary of Peak Operational Emissions – Without Mitigation

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$

Summer						
Area Source	4.20	2.63	13.49	0.02	0.27	0.27
Energy Source	0.14	1.20	0.78	7.38E-03	0.09	0.09
Mobile Source	14.43	11.31	76.97	0.13	12.71	3.47
Total Maximum Daily Emissions	**18.76**	**15.14**	**91.24**	**0.16**	**13.07**	**3.83**
South Coast AQMD Regional Threshold	55	55	550	150	150	55
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**
Winter						
Area Source	4.20	2.63	13.49	0.02	0.27	0.27

Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Source: Urban Crossroads 2022a (Appendix 2)

c) Less Than Significant Impact with Mitigation. The proposed project would not expose sensitive receptors to substantial pollutants with mitigation measures incorporated.

LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable NAAQS and CAAQA at the nearest location where an individual can be expected to remain for 24 hours.

Localized Construction Impacts

Table 3-3, Project Localized Construction Emissions — Without Mitigation, identifies the localized impacts at the nearest receptor location in the vicinity of the project. Without mitigation, localized construction emissions would exceed the applicable South Coast AQMD LST's for emissions by emitting an excess of $PM_{2.5}$ and PM_{10} pollutants during the site preparation phase of construction.

Table 3-3 Project Localized Construction Emissions – Without Mitigation

Construction Activity	Year	Emissions (lbs/day)			
		NO_x	CO	PM_{10}	$PM_{2.5}$
Demolition	2022	25.72	20.59	1.27	1.16
	Maximum Daily Emissions	**25.72**	**20.59**	**1.27**	**1.16**
	SCAQMD Localized Threshold	162	750	4	3
	Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**
Site Preparation	2022	50.35	19.98	10.65	6.01
	2023	41.82	18.27	10.25	5.64
	Maximum Daily Emissions	**50.35**	**19.98**	**10.65**	**6.01**
	SCAQMD Localized Threshold	303	1,533	10	6
	Threshold Exceeded?	**NO**	**NO**	**YES**	**YES**
Grading	2023	28.66	14.77	4.62	2.47
	Maximum Daily Emissions	**28.66**	**14.77**	**4.62**	**2.47**
	SCAQMD Localized Threshold	257	1,244	8	5
	Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

Source: Urban Crossroads 2022a (Appendix 2)

As shown in **Table 3-4**, Project Localized Construction Emissions – With Mitigation, after implementation of mitigation measures **AQ-1** and **AQ-2**, construction emissions would not exceed the applicable South Coast AQMD LST's for any criteria pollutant. Therefore, less than significant impacts would occur. **Table 3-4** only shows the results of site preparation activities as this was the only construction activity found to produce emissions above the thresholds.

Table 3-4 Project Localized Construction Emissions – With Mitigation

Construction Activity	Year	Emissions (lbs/day)			
		NO_x	CO	PM_{10}	$PM_{2.5}$
Site Preparation	2022	38.04	25.64	7.23	4.17
	2023	34.03	24.81	7.04	3.99
	Maximum Daily Emissions	**38.04**	**25.64**	**7.23**	**4.17**
	SCAQMD Localized Threshold	303	1,533	10	6
	Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

Source: Urban Crossroads 2022a (Appendix 2)

Localized Operational Impacts

The proposed project would include residential and commercial uses. According to SCAQMD LST methodology, LST's would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend periods queuing and idling at the site. The proposed project does not include such uses, and therefore due to the lack of significant stationary source emissions, analysis of the project's long-term localized emissions is not needed. Impacts would be less than significant.

Carbon Monoxide Hotspots

An adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur. To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any violation of CO standards.

The ambient 1-hr and 8-hr CO concentration within the project study area is estimated to be 0.9 ppm and 0.7 ppm, respectively. Therefore, even if the traffic volumes for the proposed project were double or even triple of the traffic volumes generated at the Long Beach Boulevard and Imperial Highway intersection (3.1 ppm at 1-hour and 9.3 ppm at 8-hour CO concentration), coupled with the on-going improvements in ambient air quality, the project would not be capable of resulting in a CO "hot spot" at any study area intersections. Therefore, project impacts associated with CO "hot spots" are less than significant.

d) Less Than Significant Impact.

The potential for the proposed project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Food processing plants
- Wastewater treatment plants
- Chemicals plants

- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The proposed project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed project's long-term operational activity. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is therefore, considered less than significant. It is expected that project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The proposed project would also be required to comply with South Coast AQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed project construction and operational activities would be less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

1. Compliance with SCAQMD Rules including 402, 403, and 1113.

MITIGATION MEASURES

AQ-1 During the site preparation phase, construction equipment greater than 150 horsepower (hp), the Construction Contractor shall ensure that off-road diesel construction equipment that complies with Environmental Protection Agency (EPA)/California Air Resources Board (CARB) Tier 3 emissions standards and shall ensure that all construction equipment is tuned and maintained in accordance with the manufacturer's specifications.

Timing/Implementation: During site preparation

Enforcement/Monitoring: City of Wildomar Engineering Department and Planning Department

AQ-2 All actively graded (disturbed) areas within the project site during site preparation activities shall be watered at 2.1-hour watering intervals (e.g., 4 times per day) or a movable sprinkler system shall be in place to ensure minimum soil moisture of 12 percent in maintained for actively graded areas. Moisture content can be verified with use of a moisture probe by the grading contractor.

Timing/Implementation: During site preparation

Enforcement/Monitoring: City of Wildomar Engineering Department and Planning Department

4. Biological Resources

Issues: Would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?		✓		
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?			✓	
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			✓	
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?		✓		
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				✓
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?			✓	

TERACOR prepared a MSHCP Consistency Analysis on June 30, 2022 (2022a) for the project which is included as **Appendix 3**. As a companion report to the Consistency Analysis, TERACOR prepared a Habitat Assessment and Focused Burrowing Owl Survey Report on June 20, 2022 (2022b), included as **Appendix 4**.

DISCUSSION

a) Less Than Significant Impact with Mitigation Incorporated. The project site is not within a Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Criteria Cell, as shown in the Riverside County MSHCP Information Map, but is within a Stephens' Kangaroo Rat Plan Fee Area and the MSHCP Fee Area, both of which encompass the City of Wildomar (Riverside County 2022). The MSHCP Consistency Analysis Report by TERACOR evaluated the site's potential to contain habitat for 34 riparian, riverine, and vernal pool species that are covered under the MSHCP. The analysis concluded that none of these species are present on the site nor does the site contain suitable riparian/riverine/vernal pool habitat. The Report also concluded that there is no suitable habitat for vernal pool fairy shrimp (Branchinecta lynchi). Therefore, impacts would be less than significant.

The eastern portion of the project site, APN 376-410-021, is within the Western Riverside County MSHCP burrowing owl survey area (TERACOR 2022a). TERACOR completed an initial habitat assessment on March 16, 2022 and burrow survey on April 11, 2022, in addition to focused surveys on the 10.12-acre project site on April 11, April 27, May 9, and May 24, 2022. No burrowing owls were found during the surveys. However, due to the presence of suitable habitat on the site, burrowing owls could be present on the site at a later date. mitigation measure **BIO-1**, which requires a 30-day pre-construction survey for burrowing owls prior to initial ground-disturbing activities, would be implemented to minimize potential take of burrowing owls. mitigation measure **BIO-1** would reduce impacts to burrowing owls to less than significant.

b) Less than Significant Impact. The site does not contain any Riparian/Riverine resources as defined under Section 6.1.2 of the MSHCP (TERACOR 2022a). TERACOR's analysis evaluated four potential Riparian/Riverine areas on-site but determined that none of the areas contained suitable wildlife or aquatic habitat. Additionally, no features on-site met the criteria of Section 6.1.2 to be considered as a vernal pool (TERACOR 2022a). Therefore, impacts would be less than significant.

c) Less than Significant Impact. There are no areas on the project site that are considered wetlands according to the US Fish and Wildlife Service's National Wetlands Inventory. The analysis conducted by TERACOR determined that one feature on-site, a human created pit which sits atop a large stockpile of dirt, could be subject to ponding during a significant rain event. However, TERACOR determined that it is highly unlikely that this feature would be considered jurisdictional by any local, state or federal agency. Therefore, impacts would be less than significant.

d) Less Than Significant Impact with Mitigation Incorporated. Wildlife corridors refer to established migration routes commonly used by resident and migratory species for passage from one geographic location to another. Movement corridors may provide favorable locations for wildlife to travel between different habitat areas, such as foraging sites, breeding sites, cover areas, and preferred summer and winter range locations. They may also function as dispersal corridors allowing animals to move between various locations within their range. TERACOR's analysis notes that the proposed project site is highly disturbed and surrounded on four sides by urban development. A small natural area was found north of the site, but it is separated by a block wall and lies above the project site hydrologically (TERACOR 2022a). As previously noted, there is no functional riparian habitat on the site. The site is also not in a mapped

survey area for mammal species or amphibian species under the MSHCP (TERACOR 2022a). Furthermore, the project site is not within any MSHCP core areas, linkages, or wildlife corridors.

TERACOR notes that the project site contains trees and shrubs that can be utilized by nesting birds and raptors. Disturbing or destroying active nests is a violation of the Migratory Bird Treaty Act (MBTA). In addition, nests and eggs are protected under California Fish and Wildlife Code Section 3503. In order to avoid violation of the MBTA and California Fish and Wildlife Code, implementation of mitigation measure **BIO-2** will ensure raptors and other nesting bird species that may or may not be covered under the MSHCP will be protected and impacts will be less than significant.

e) No Impact. The City Wildomar Municipal Code Section 12.08.050, regulates trees within the public right of way. The project site contains no trees within a public right-of-way. There are no other city policies or ordinances protecting biological resources. Therefore, no impact would occur.

f) Less Than Significant Impact. The Western Riverside MSHCP is a habitat conservation plan and natural community conservation plan to which the City of Wildomar is a permittee (i.e., signatory). The project site is located in the Elsinore Area Plan of the MSHCP, but is not located in a Criteria Cell. Since the site is not located in a Criteria Cell, there are no conservation requirements on the property.

The proposed project would be consistent with Sections 6.1.2, Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools, 6.3.2, Additional Survey Needs and Procedures, and 6.1.4, Guidelines Pertaining to the Urban/Wildlands Interface, of the MSHCP. There are no riverine/riparian areas or vernal pools on the site and the site is not within a Criteria Cell. However, project implementation would result in loss of 10.12 acres of semi-natural habitat. These natural and naturalized upland habitat areas would be permanently removed. Impacts to all upland vegetation communities would be mitigated through MSHCP fee payment and SKR-fee payment. With Implementation of standard conditions and requirements, impacts would be less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

1. As required by Section 3.42.070 of the Wildomar Municipal Code, the project applicant/developer is required to submit fees to the City in accordance with the requirements of the Western Riverside County Multiple Species Habitat Conservation Plan Mitigation Fee.

1. As required by Section 3.43.070 of the Wildomar Municipal Code, the project applicant/developer is required to submit fees to the City in accordance with the requirements of the Stephens' Kangaroo Rat Habitat Conservation Plan Mitigation Fee Area.

MITIGATION MEASURES

BIO-1 The Project applicant/developer shall retain a qualified biologist to conduct a 30-day pre-construction survey for burrowing owls (BUOW). The results of the survey shall be submitted to the City of Wildomar prior to obtaining a grading permit. If BUOW are not detected during the pre-construction survey, no further mitigation is required. If BUOW are detected during the pre-construction survey, the project applicant shall relocate burrowing owls out of harm's way, in consultation with the CDFW. Notification to the CDFW shall occur if burrowing owls are found to be present onsite and the development of a conservation strategy in cooperation with the U/S/ Fish and Service, the CDFW, and the Western Riverside County Regional Conservation Authority

(RCA) shall be conducted. The project applicant/developer and a qualified consulting biologist will be required to prepare and submit for approval a BUOW relocation program. The report shall be submitted to the applicant and the City of Wildomar concurrently.

Timing/Implementation: *Within 30 days prior to construction, Prior to issuance of grading permits*

Enforcement/Monitoring: *City of Wildomar Planning Department*

BIO-2 Prior to vegetation clearance, the Project applicant/developer shall retain a qualified biologist to conduct a pre-disturbance nesting bird survey in accordance with the following:

- The survey shall be conducted no more than three (3) days prior to the initiation of clearance/construction work;
- If pre-disturbance surveys indicate that bird nests are not present or are inactive, or if potential habitat is unoccupied, no further mitigation is required;
- If active nests of birds are found during the surveys, a species-specific no-disturbance buffer zone shall be established by a qualified biologist around active nests until a qualified biologist determines that all young have fledged (i.e., no longer reliant upon the nest).

Timing/Implementation: *Within three (3) days prior to the initiation of clearance/construction work*

Enforcement/Monitoring: *City of Wildomar Planning Department*

5. Cultural Resources

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?				✓
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?		✓		
c) Disturb any human remains, including those interred outside of dedicated cemeteries?		✓		

A Cultural Resources Assessment was prepared for the 10-acre Wildomar Crossroads Project by Brian F. Smith and Associates, Inc. (BSA) on November 24, 2021 (see **Appendix 5**). An additional Focused Cultural Resources Survey – Historic Resources Assessment was prepared in on November 22, 2021 by JM Research and Consulting (JM) to supplement the findings made during the initial Cultural Resources Assessment. (See **Appendix 6**).

DISCUSSION

a) No Impact.

Section 15064.5 defines historic resources as resources listed or determined to be eligible for listing by the State Historical Resources Commission, a local register of historical resources, or lead agency. Generally, a resource is considered to be "historically significant" if it meets one of the following criteria:

i. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

ii. Is associated with the lives of persons important in our past;

iii. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

iv. Has yielded, or may be likely to yield, information important in prehistory or history.

The Historic Resources Assessment did not find the site to be eligible for listing in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR) or for local designation in the Wildomar Municipal Code (JM 2021). The Cultural Resources Assessment indicated that the foundation appeared to be historic, however, based on aerial photographs, the foundation does not meet the age threshold to qualify as historic (BSA 2021a). The Cultural Resources Survey conducted for this project identified a single-family house built in a simple ranch style as well as several ancillary structures, remnant fencing, and cement foundation on the westernmost portion of the proposed project site (BSA

2021a). Additional historic and building specific archival research under the Historic Resources Assessment found that these structures were constructed in the 1960s but not associated with individuals who have figured prominently in history (JM 2021). Therefore, the properties are not strongly associated with events that have made a significant contribution to the broad patterns of our national or state history or with significant persons in our past (JM 2021). Although unaltered, the residence and ancillary buildings are of common design and construction and do not embody the distinctive characteristics of a type, period, or represent the work of a master, or possess high artistic value (JM 2021). In addition, the results of the study have not yielded, or predicted the likelihood of the previously graded and disturbed property to yield information important in history or prehistory (JM 2021).

b) Less Than Significant Impact with Mitigation Incorporated. Archaeological resources are prehistoric or historic evidence of past human activities, including structural ruins and buried resources.

The Cultural Resources Assessment concluded that there are no known archaeological resources on the project site (BSA 2021a). However, eight cultural resources have been recorded within a one-mile radius of the site (BSA 2021a). Due to construction and ground-disturbing activities like clearing, excavation, and grading associated with building the proposed project, there is potential for archaeological resources to be discovered. Implementation of mitigation measures **TRI-1** through **TRI-7** (see V. 19, Tribal Cultural Resources) would ensure that any archaeological resources discovered on the project site would be properly managed by having a qualified archaeologist to monitor construction and grading activities, complying with provisions outlined in the Tribal Cultural Resources Treatment and Monitoring Agreement, and halting construction within 100 feet of discovered resources in the event that they are uncovered. These actions would ultimately reduce impacts to a less than significant level.

c) Less Than Significant Impact with Mitigation Incorporated. Construction activities associated with project implementation would require grading and excavation of the site below the surface. Pursuant to California Health and Safety Code Section 70520.5, in the event of an accidental discovery or recognition of any human remains on the site, no further excavation or disturbance of the site shall be permitted until the coroner of the county is contacted and has conducted an investigation into the circumstances, manner, and cause of any death, and recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes or has reason to believe the human remains to be those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission. The project would comply with existing law, and potential impacts to human remains is less than significant with the implementation of mitigation measures **CUL-1** and **TRI-7**.

STANDARD CONDITIONS AND REQUIREMENTS

None required.

MITIGATION MEASURES

CUL-1 Human Remains. If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to Public Resource Code Section 5097.98(b)

remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the Riverside County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant." The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98.

Timing/Implementation:	*During any ground-disturbing construction activities*
Enforcement/Monitoring:	*City of Wildomar Engineering Department and Planning Department*

6. Energy

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			✓	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			✓	

Urban Crossroads prepared calculations of the proposed project's energy usage in a memorandum dated January 18, 2022 (2022b) which are included as **Appendix 7.**

a) Less Than Significant Impact.

Construction

During construction, the project would consume energy in two general forms: (1) the fuel energy consumed by construction vehicles and equipment; and (2) bound energy in construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction of the proposed project would require the use of construction equipment for grading, hauling, and building activities. Electricity use during construction would vary during different phases of construction—construction equipment during grading would be gas powered or diesel powered, and the later construction phases would require electricity-powered equipment, such as interior construction and architectural coatings. Construction also includes the vehicles of construction workers traveling to and from the project site and haul trucks for the export of materials from site clearing. The construction phase of the project is expected to use 96,082 kilowatt-hours (kWh) of electricity.

The surrounding area is already served by electricity provided by Southern California Edison (SCE) and natural gas infrastructure provided by the Southern California Gas Company. The proposed project would connect to the existing gas lines to the project site.

The construction contractors would minimize idling of construction equipment during construction as required by state law. These required practices would limit wasteful and unnecessary electrical energy consumption. Furthermore, there are no unusual project characteristics that would necessitate the use of construction equipment that is less energy efficient than at comparable construction sites in other parts of the state. Therefore, the proposed short-term construction activities would not result in inefficient, wasteful, or unnecessary fuel consumption.

Transportation

Transportation energy use depends on the type and number of trips, vehicle miles traveled, fuel efficiency of vehicles, and travel mode. Transportation energy use during construction would come from the

transport and use of construction equipment, delivery vehicles and haul trucks, and construction employee vehicles that would use diesel fuel and/or gasoline. The use of energy resources by these vehicles would fluctuate according to the phase of construction and would be temporary. Construction equipment during grading would be gas-powered or diesel-powered, and the later construction phases would require electricity-powered equipment. The project is expected to use 49,302 gallons of fuel from the use of construction equipment as well as from construction worker commutes. Construction techniques, equipment and materials are consistent with other construction in the City. Impacts related to transportation energy use during construction would be temporary and would not require expanded energy supplies or the construction of new infrastructure. Impacts would not be significant.

Operation

Operational use of energy would include heating, cooling, and ventilation of buildings; water heating; operation of electrical systems, security, and control center functions; use of on-site equipment and appliances; and indoor, outdoor, and parking lot lighting. Additionally, the proposed project would result in residential and commercial uses and would not result in an excessive consumption of energy compared to other similar uses.

Electricity

The project is expected to use approximately 1.85 million kilowatt-hours per year (kWh/year) to serve operational demands (Urban Crossroads 2022b). The increased demand is expected to be adequately served by the existing SCE electrical facilities. SCE provided over 103,597 gigawatt-hours (GWh) of electricity to its customers in 2020 and total electricity demand in SCE's service area is forecast to increase by approximately 12,000 GWh between 2015 and 2026 (CEC 2020; CEC 2018). The increase in electricity demand from the project would represent an insignificant percent increase compared to overall demand in SCE's service area. Therefore, projected electrical demand would not significantly impact SCE's level of service. Prior to final building plan submittal, the project applicant would provide project plans to SCE to prepare a Method-of-Service Study to determine exact location of electrical connections at the site and establish estimated electricity demand. Additionally, because the proposed project would be subject to the more stringent 2019 Title 24 standards, the project's electricity demand would not result in significant impacts. Therefore, impacts are less than significant.

Natural Gas

The project is expected to use approximately 4.58 million kilo-British thermal units per year (KBTU/year) of natural gas during its operational phase (Urban Crossroads 2022b). The increased demand is expected to be adequately served by the existing Southern California Gas facilities. The project would construct new facilities at the project site that would result in an increase in gas demands. The use of natural gas would be limited to building heating. The proposed project would not result in a significant impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.

Renewable Energy

Project development would not interfere with achievement of the 60 percent Renewable Portfolio Standard set forth in SB 100 for 2030 or the 100 percent standard for 2045. These goals apply to SCE and

other electricity retailers. As electricity retailers reach these goals, emissions from end user electricity use will decrease from current emission estimates.

Vehicle Miles Traveled and Fuel Consumption

Transportation energy use depends on the type and number of trips, vehicle miles traveled (VMT), fuel efficiency of vehicles, and travel mode. Transportation energy used during operation of the site would come from delivery vehicles, maintenance vehicles, and residents that would primarily use diesel fuel and/or gasoline. The use of energy resources by these vehicles would be temporary and would fluctuate throughout the lifespan of the project. The Traffic Impact Analysis prepared for the proposed project (see **Appendix 16**), shows that the proposed project is expected to generate a net total of 4,551 two-way trips per day with 282 AM peak hour trips and 404 PM peak hour trips. Therefore, the impacts are considered less than significant.

b) Less Than Significant Impact. The City of Wildomar is within SCAG's 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals.

The RTP/SCS sets forth a development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, would reduce GHG emissions from transportation (excluding goods movement) by reducing fuel consumption. The RTP/SCS is meant to provide individual jurisdictions with growth strategies that, when taken together, achieve the regional GHG emissions reduction targets. Specifically, the SCS distributes growth forecast data to transportation analysis zones for the purpose of modeling performance. As described in Section V.14, Population and Housing, the proposed project does not exceed the growth projections described in SCAG's RTP/SCS. Additionally, as a mixed use project with transit access, the proposed project supports the guiding principles of the RTP/SCS, including the goal to encourage the development of diverse housing types in areas that are supported by multiple transportation options. The proposed project would not obstruct the implementation of the RTP/SCS.

The City of Wildomar does not have its own renewable energy plan or energy efficiency plan; however, the City does encourage the use of renewable energy via solar panels, recycling, etc. The proposed project would be subject to 2019 Title 24, Part 6, standards, which sets standards that improve energy efficiency of newly constructed buildings. Additionally, all contractors and waste haulers are required to comply with the Countywide Integrated Waste Management Plan, which requires a minimum diversion of 50 percent of waste project materials from disposal. Therefore, the project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

STANDARD CONDITIONS AND REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

7. Geology and Soils

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.		✓		
ii) Strong seismic ground shaking?		✓		
iii) Seismic-related ground failure, including liquefaction?		✓		
iv) Landslides?				✓
b) Result in substantial soil erosion or the loss of topsoil?		✓		
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?		✓		
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?			✓	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?				✓

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?		✓		

Leighton and Associates, Inc. (Leighton) prepared a Geotechnical Report on October 19, 2021 (revised March 30 2022), for the proposed project which is included as **Appendix 8** (Leighton 2022). Brian F. Smith and Associates, Inc. (BSA) prepared a Paleontological Survey in November 24, 2022 included as **Appendix 9**.

DISCUSSION

a)

i) **Less Than Significant Impact with Mitigation Incorporated**. According to the Geotechnical Report, the site is in a seismically active region. The site is not situated within a State of California designated "Alquist-Priolo" Earthquake Fault Zone. The project site is located approximately 0.63 miles northeast of the closest Alquist-Priolo Earthquake Fault Zone (Leighton 2022). However, the project site is located within a mapped Riverside County Fault Hazard zone. Previous mapping on adjacent properties has identified an earthquake fault in the northeastern portion of this site (Leighton 2022). As presented on the conceptual site plan (Figure 2 in **Appendix 8**), habitable buildings are set back in excess of 50 feet from the mapped trace of the identified fault per the approved fault hazard report (Leighton 2022). Compliance with seismic design criteria contained in the California Building Code (CBC) would minimize impacts to the extent feasible. Additionally, compliance with mitigation measure **GEO-1**, which states that the project applicant shall incorporate all recommendations made in the geotechnical report, or directed by the geotechnical engineer such as, temporary excavations, grading, utility trench backfill, foundation and concrete slab-on-grade, concrete flatwork, conventional retaining walls, lateral loading, preliminary pavement, will be implemented as part of the building permit and inspection requirements of the City which would reduce impacts to less than significant.

ii) **Less Than Significant Impact with Mitigation Incorporated.** The project site in a seismically active region. Strong ground shaking due moderate to severe earthquakes can be expected at the site within the lifetime of the project. Structures must also be designed and constructed to resist the effects of seismic ground motions as outlined in the 2019 California Building Code Section 1613. After implementation of mitigation measure **GEO-1,** which states that the project applicant shall incorporate all recommendations made in the geotechnical report, the impacts will be less than significant.

iii) **Less Than Significant Impact with Mitigation Incorporated.** The site is mapped within a low to moderate Riverside County Liquefaction Hazard zone (Leighton 2022). Based on the results of subsurface borings, observations and the geotechnical recommendations made during and within

the geotechnical report, the loose near surface soils typically most susceptible to liquefaction on the site will be completely removed and recompacted during remedial grading. Therefore, implementation of **GEO-1** would reduce risk of liquefaction on site and make impacts less than significant.

iv) **No Impact.** Due to the relatively moderate relief across the site and anticipated graded slope heights, the risk of deep-seated slope failure on this site or adjacent sites is considered low. Additionally, as seen in Figure S-6 of the General Plan, no landslides have been mapped to the site. Therefore, no impact would occur.

b) Less Than Significant Impact with Mitigation Incorporated. The anticipated earthwork associated with the proposed site improvements necessitate the removal or burial of the existing surface soils present on the site during grading activities. Surface soils may be subject to erosion where exposed during grading. The City routinely requires the submittal of detailed erosion control plans with any grading plans to comply with the state water quality regulations. Since this project involves clearing, grading, or excavation that causes soil disturbance of one or more acres, it is subject to the provisions of the National Pollutant Discharge Elimination System (NPDES) State General Permit (Order No. R8-2010-0033). Furthermore, the project is required to prepare and comply with an approved Stormwater Pollution Prevention Plan (SWPPP) that provides a schedule for the implementation and maintenance of erosion control measures and a description of the erosion control practices, including appropriate design details and a time schedule.

Construction activities related to the proposed project would be subject to compliance with the CBC and would include best management practices (BMPs). Additionally, the SWPPP would consider the full range of erosion control BMPs, including any additional site-specific and seasonal conditions. BMPs may include but are not limited to covering of the disturbed or stockpiled soil, use of a dust-inhibiting material, landscaping, use of straw and jute to slow and channelize stormwater runoff, hydroseeding, and grading in a pattern than slows stormwater flow and reduces the potential for erosion. Compliance with BMPs is required by the federal and state Clean Water acts.

The State General Permit also requires that those implementing SWPPPs meet prerequisite qualifications that would demonstrate the skills, knowledge, and experience necessary to implement such plans. NPDES requirements would significantly reduce the potential for substantial erosion or topsoil loss to occur in association with new development. Additionally, as part of the approval process, prior to grading plan approval, the project applicant will be required to comply with Wildomar Municipal Code Chapter 13.12, Stormwater Drainage System Protection, which establishes requirements for stormwater and non-stormwater quality discharge and control that require new development or redevelopment projects to control stormwater runoff by implementing appropriate BMPs to prevent the deterioration of water quality. Water quality features intended to reduce construction-related erosion impacts will be clearly denoted on the grading plans for implementation by the construction contractor. For a discussion of erosion and runoff impact post-construction, see Section V.10, Hydrology and Water Quality.

As indicated by the geotechnical report, after all undocumented fill is removed and native materials are uncovered, all topsoil, alluvium, colluvium, and highly weathered bedrock with the project site or any areas to receive engineered fill should be removed to expose competent native materials. Additionally,

proper vegetative cover is recommended for all completed slopes to reduce the potential for significant slope erosion. Compliance with the recommendations of the geotechnical report for cut and fill during construction (mitigation measure **GEO-1**) would reduce impacts to less than significant.

Compliance with the CBC and the NPDES would minimize effects from erosion. Additionally, compliance with Wildomar Municipal Code Chapter 13.12 and NPDES requirements would result in less than significant impacts related to soil erosion. Therefore, project impacts to erosion and topsoil would be mitigated to less than significant.

c) Less Than Significant Impact with Mitigation Incorporated. See issues a.iii) and aiv). The project site is not at risk for landslide, collapse, or rockfall due to the relatively level terrain of the site and surrounding developed properties. According to Figure S-7 in the General Plan, the site is located within a documented subsidence area. However due to previous grading activities on the site, the geotechnical report considers the potential for differential subsidence and ground fissuring on the site to be low. Implementation of CBC and other related construction standards apply seismic requirements and address certain grading activities. The CBC includes common engineering practices requiring special design and construction methods that reduce or eliminate potential impacts related to unstable soils. Compliance with CBC regulations and implementation of mitigation measure **GEO-1** would ensure adequate design and construction of building foundations to resist soil movement. Impacts are less than significant with mitigation incorporated**.**

d) Less Than Significant Impact with Mitigation Incorporated. The soils found on site are considered to possess a low expansion potential (Leighton 2022). Undocumented fill soils were also found onsite during the Phase Site Assessment, however these will be removed and replaced with suitable fill soils during grading operations, as per the recommendations made in the geotechnical report. Implementation of mitigation measure **GEO-1** will ensure compliance with all additional applicable recommendations in the geotechnical report and reduce impacts of expansive soils to less than significant.

e) No Impact. The proposed project will connect to the Elsinore Valley Municipal Water District (EVMWD) and does not propose the use or construction of septic tanks or an alternative wastewater disposal system. Therefore, no impact would occur.

f) Less Than Significant Impact with Mitigation Incorporated. Paleontological resources are fossilized remains of past life on earth such as bones, shells, leaves, tracks, burrows, and impressions. The paleontological review did not find any known fossil localities within the project boundaries during a paleontological literature review and collections and records search. However, the records search did confirm the existence of potentially fossiliferous Pleistocene Pauba Formation ("Qps") at the project site. The occurrence of terrestrial vertebrate fossils from the Pauba Formation is well-documented. The "High" paleontological sensitivity rating assigned to this formation for yielding paleontological resources supports the recommendation that paleontological monitoring be implemented during mass grading and excavation activities in these deposits to mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources. Full-time monitoring of undisturbed Pauba Formation at the project is warranted starting at the surface. Mitigation measure **GEO-2** will facilitate and monitor these actions, reducing impacts to less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

1. The project shall comply with the California Building Code and Wildomar Municipal Code Chapter 13.12, Stormwater Drainage System Protection.
2. The project shall comply with the geotechnical report's recommendation to set back all habitable buildings in excess of 50 feet from the mapped trace of the identified fault per the approved fault hazard report.

MITIGATION MEASURES

GEO-1 The project applicant/developer shall incorporate the recommendations of the Geotechnical Report prepared Leighton and Associates, Inc. (**Appendix 8**) into project plans related to the proposed project. The project's building plans shall demonstrate that they incorporate all applicable recommendations of the Geotechnical Report and comply with all applicable requirements of the latest adopted version of the California Building Code.

Timing/Implementation: *During building plan check, prior to any ground-disturbing construction activities*

Enforcement/Monitoring: *City of Wildomar Planning Department and Building and Safety Department*

GEO-2 A paleontological grading observation schedule by a Certified Paleontologist shall be maintained when grading in bedrock units to further evaluate the fossil resources of the site. Paleontological monitoring may be reduced upon observations and recommendations of the professional-level project paleontologist. Salvage operations shall be initiated by the Certified Paleontologist and coordinated with the developer if other significant concentrations of fossils, as determined by the Certified Paleontologist, are encountered. Any paleontological resources shall be provided for curation at a local curation facility, or any other local museum or repository willing and able to accept and house the resource to preserve for future scientific study.

Timing/Implementation: *During ground-disturbing construction activities*

Enforcement/Monitoring: *City of Wildomar Planning Department and Building and Safety Department*

8. Greenhouse Gas Emissions

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			✓	
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			✓	

A Greenhouse Gas Emissions Analysis was prepared by Urban Crossroads on January 18, 2022. It was peer reviewed by Placeworks on March 11, 2022 and revised on April 13, 2022 (2022c) (see **Appendix 10**). The analysis was prepared to evaluate the potential for the proposed project to contribute to greenhouse gas emissions.

DISCUSSION

a) Less Than Significant Impact. According to **Table 8-1**, Proposed Project GHG Emissions, the proposed project would result in a net total of approximately 2,833.80 metric tons of CO_2e per year. This would not exceed the South Coast AQMD and City's screening threshold of 3,000 $MTCO_se$/year. Therefore, the proposed project would not have the potential to result in a cumulatively impact with respect to GHG emissions. Therefore, impacts would be less than significant.

Table 8-1 Proposed Project GHG Emissions

Emission Source	Emissions (MT/yr)			
	CO_2	**CH_4**	**N_2O**	**Total CO_2e**
Annual construction-related emissions amortized over 30 years	20.07	3.81E-03	1.30E-03	28.55
Area Source	38.56	0.00315	0.00066	38.84
Energy Source	573.98	0.03	0.00785	577.13
Mobile Source	1,917.05	0.17	0.13	1,960.36
Waste	62.51	3.69	0.00	154.87
Water Usage	57.40	0.52	0.01	74.04
Total CO_2e (All sources)	**2,833.80**			

Source: Urban Crossroads 2022c (Appendix 10)

b) Less Than Significant Impact.

SB 32/2017 Scoping Plan Consistency

The 2017 Scoping Plan Update reflects the 2030 target of a 40 percent reduction below 1990 levels, set by Executive Order B-30-15 and codified by SB 32. Table 8-2, 2017 Scoping Plan Consistency Summary, summarizes the proposed project's consistency with the 2017 Scoping Plan. As summarized, the proposed

project would not conflict with any of the provisions of the Scoping Plan and in fact supports seven of the action categories.

Table 8-2 2017 Scoping Plan Consistency Summary		
Action	Responsible Parties	Consistency
Implement SB 350 by 2030		
Increase the Renewables Portfolio Standard to 50% of retail sales by 2030 and ensure grid reliability.	CPUC, CEC, CARB	**Consistent.** The proposed Project would use energy from Southern California Edison (SCE), which has committed to diversify its portfolio of energy sources by increasing energy from wind and solar sources. The proposed project would not interfere with or obstruct SCE energy source diversification efforts.
Establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030.		**Consistent**. The Project would be constructed in compliance with current California Building Code requirements. Specifically, new buildings must achieve compliance with 2019 Building and Energy Efficiency Standards and the 2019. California Green Building Standards requirements. The proposed Project includes energy efficient field lighting and fixtures that meet the current Title 24 Standards throughout the Project Site and would be a modern development with energy efficient boilers, heaters, and air conditioning systems.
Reduce GHG emissions in the electricity sector through the implementation of the above measures and other actions as modeled in Integrated Resource Planning (IRP) to meet GHG emissions reductions planning targets in the IRP process. Load-serving entities and publicly-owned utilities meet GHG emissions reductions planning targets through a combination of measures as described in IRPs.		**Consistent.** The proposed project would be constructed in compliance with current California Building Code requirements. Specifically, new buildings must achieve compliance with 2019 Building and Energy Efficiency Standards and the 2019 California Green Building Standards requirements. The proposed project includes energy efficient lighting and fixtures that meet the current Title 24 Standards throughout the project site and would be a modern development with energy efficient boilers, heaters, and air conditioning systems.
Implement Mobile Source Strategy (Cleaner Technology and Fuels)		
At least 1.5 million zero emissions and plug-in hybrid light-duty EV by 2025.	CARB, California State Transportation Agency (CalSTA), Strategic Growth Council (SGC), California Department of Transportation	**Not applicable.** This measure is not within the purview of this project.

Table 8-2 2017 Scoping Plan Consistency Summary		
Action	Responsible Parties	Consistency
At least 4.2 million zero emission and plug-in hybrid light-duty EV by 2030.	(Caltrans), CEC, OPR, Local Agencies	**Not applicable.** This measure is not within the purview of this project.
Further increase GHG stringency on all light-duty vehicles beyond existing Advanced Clean cars regulations.		**Not applicable.** This measure is not within the purview of this project.
Medium- and Heavy-Duty GHG Phase 2.		**Not applicable.** This measure is not within the purview of this project.
Innovative Clean Transit: Transition to a suite of to-be-determined innovative clean transit options. Assumed 20% of new urban buses purchased beginning in 2018 will be zero emission buses with the penetration of zero-emission technology ramped up to 100% of new sales in 2030. Also, new natural gas buses, starting in 2018, and diesel buses, starting in 2020, met the optional heavy-duty low-NO_x standard.		**Not applicable.** This measure is not within the purview of this project**.**

Table 8-2 2017 Scoping Plan Consistency Summary		
Action	Responsible Parties	Consistency
Last Mile Delivery: New regulation that would result in the use of low NO_x or cleaner engines and the deployment of increasing numbers of zero-emission trucks primarily for class 3-7 last mile delivery trucks in California. This measure assumes ZEVs comprise 2.5% of new Class 3-7 truck sales in local fleets starting in 2020, increasing to 10% in 2025 and remaining flat through 2030.		**Not applicable.** This project is not responsible for implementation of SB 375 and would therefore not conflict with this measure.

Table 8-2 2017 Scoping Plan Consistency Summary		
Action	Responsible Parties	Consistency
Further reduce VMT through continued implementation of SB 375 and regional Sustainable Communities Strategies; statewide implementation of SB 743; and potential additional VMT reduction strategies not specified in the Mobile Source Strategy but included in the document "Potential VMT Reduction Strategies for Discussion."		**Not applicable.** This project is not responsible for implementation of SB 375 and would therefore not conflict with this measure.
Increase stringency of SB 375 Sustainable Communities Strategy (2035 targets).	CARB	**Not applicable.** The project is not within the purview of SB 375 and would therefore not conflict with this measure.
By 2019, adjust performance measures used to select and design transportation facilities		
Harmonize project performance with emissions reductions and increase competitiveness of transit active transportation modes (e.g., via guideline documents, funding programs, project selection, etc.).	CalSTA, SGC, OPR, CARB, Governor's Office of Business and Economic Development (GO-Biz), California Infrastructure and Economic Development Bank (IBank), Department of Finance (DOF), California Transportation Commission (CTC), Caltrans	**Not applicable.** Although this is directed towards CARB and Caltrans, the proposed project would be designed to promote and support pedestrian activity on-site and in the project site area by providing pedestrian access from the residential section to the shopping center**.**

Table 8-2 2017 Scoping Plan Consistency Summary		
Action	Responsible Parties	Consistency
By 2019, develop pricing policies to support low-GHG transportation (e.g. low-emission vehicle zones for heavy duty, road user, parking pricing, transit discounts).	CalSTA, Caltrnas, CTC, OPR, SGC, CARB	**Not applicable.** This project is not responsible for developing pricing policies to support low-GHG transportation.
Implement California Sustainable Freight Action Plan		
Improve freight system efficiency.	CalSTA, CalEPA, CNRA, CARB, Caltrans, CEC, GO-Biz.	**Consistent**. When adopted, this measure would apply to all trucks accessing the project site, this may include existing trucks or new trucks that are part of the statewide goods movement sector.
Deploy over 100,000 freight vehicles and equipment capable of zero emission operation and maximize both zero and near-zero emission freight vehicles and equipment powered by renewable energy by 2030.		**Not applicable.** This measure is not within the purview of this project**.**
Adopt a Low Carbon Fuel Standard with a Carbon Intensity reduction of 18%.	CARB	**Consistent.** When adopted, this measure would apply to all fuel purchased and used by the project in the state.
Implement the Short-Lived Climate Pollutant Strategy (SLPS) by 2030		
40% reduction in CH_4 and hydrofluorocarbon emissions below 2013 levels.	CARB, CalRecycle, CDFA, SWRCB, Local Air Districts	**Consistent.** When adopted, the project would be required to comply with this measure and reduce SLPS accordingly.
50% reduction in black carbon emissions below 2013 levels.		**Not applicable.** This measure is not within the purview of this project.
By 2019, develop regulations and programs to support organic waste landfill reduction goals in the SLCP and SB 1383.	CARB, CalRecycle, CDFA, SWRCB, Local Air Districts	**Consistent.** The State of California and the City of Wildomar have implemented mandatory organic waste recycling applicable to commercial and multi-family residential uses pursuant to SB 1383. This project will be required to comply with these organic waste recycling requirements

Table 8-2 2017 Scoping Plan Consistency Summary		
Action	Responsible Parties	Consistency
Implement the post-2020 Cap-and-Trade Program with declining annual caps.	CARB	**Consistent.** When adopted, the project would be required to comply with the Cap-and-Trade Program if it generates emissions from sectors covered by Cap-and-Trade.
By 2018, develop Integrated Natural and Working Lands Implementation Plan to secure California's land base as a net carbon sink.		
Protect land from conversion through conversion easements and other incentives.	CNRA, Departments within CDFA, CalEPA, CARB	**Not applicable.** This measure is not within the purview of this project.
Increase the long-term resilience of carbon storage in the land base and enhance sequestration capacity.		**Not applicable.** This measure is not within the purview of this project.
Utilize wood and agricultural products to increase the amount of carbon stored in the natural and built environments.		**Not applicable.** This measure is not within the purview of this project.
Establish scenario projections to serve as the foundation for the Implementation Plan.		**Not applicable.** This measure is not within the purview of this project.

Table 8-2 2017 Scoping Plan Consistency Summary		
Action	Responsible Parties	Consistency
Establish a carbon accounting framework for natural and working lands as described in SB 859 by 2018.	CARB	**Not applicable.** This measure is not within the purview of this project.
Implement Forest Carbon Plan	CNRA, California Department of Forestry and Fire Protection (CALFIRE), CalEPA	**Not applicable.** This measure is not within the purview of this project.
Identify and expand funding and financing mechanisms to support GHG reductions across all sectors.	State and Local Agencies	**Not applicable.** This measure is not within the purview of this project.
Source: Urban Crossroads 2021c		

As shown above, the proposed project would not conflict with any of the 2017 Scoping Plan elements as any regulations adopted would apply directly or indirectly to the proposed project. Further, recent studies show that the State's existing and proposed regulatory framework will allow the State to reduce its GHG emissions level to 40 percent below 1990 levels by 2030.

Consistency with WRCOG Subregional Climate Action Plan (CAP)

The City of Wildomar has not adopted the WRCOG Subregional Climate Action Plan (CAP) but uses the provisions of the CAP to evaluate development projects. The specific goals and actions that are applicable to the proposed project include those pertaining to energy and water use reduction, promotion of green building measures, waste reduction, and reduction in vehicle miles traveled. Projects that demonstrate consistency with the strategies, actions, and emission reduction targets contained in the CAP would have a less than significant impact on climate change. The proposed project would be required to include all mandatory green building measures for new developments under the CALGreen Code, which would require that the new buildings reduce water consumption, employ building commissioning to increase building system materials. In addition, the City requires that all landscaping comply with water efficient landscaping requirements. The implementation of these stricter building and appliance standards would result in water, energy, and construction waste reductions for the proposed project. The proposed project would be compliant with the goal and objectives set forth in the WRCOG's Subregional CAP with implementation of applicable requirements of California building Code Title 24 and the CALGreen Code. Therefore, the proposed project would not conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs.

STANDARD CONDITIONS AND REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

9. Hazards and Hazardous Materials

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			✓	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?		✓		
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			✓	
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5 and, as a result, would it create a significant hazard to the public or the environment?			✓	
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?			✓	
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			✓	
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?		✓		

A Phase I Environmental Site Assessment Update (ESA) was prepared by Leighton and Associates, Inc. (Leighton) on July 22, 2021. which can be found in **Appendix 11**.

DISCUSSION

a) Less Than Significant Impact. Construction activities at the project site would involve the use of hazardous materials such as gasoline fuels, asphalt, lubricants, toxic solvents, pesticides, and herbicides which would be transported to and from the site and be present temporarily during construction. These potentially hazardous materials would not be used in sufficient enough quantities to pose a significant hazard to public health and safety or the environment, and their use during construction would be short-term. Operation of the project would involve the use of small amounts of hazardous materials for cleaning and maintenance purposes, such as cleaners, solvents, paints, degreasers, pesticides, fertilizers, and other custodial products. The materials used and stored on site would be clearly labeled and safely stored in compliance with state and federal requirements.

The transport, use, storage, and disposal of these materials would comply with existing regulations established by several agencies, including the Department of Toxic Substances Control, the US Environmental Protection Agency (EPA), the US Department of Transportation, and the Occupational Safety and Health Administration. Moreover, any businesses that transport, generate, use, and/or dispose of hazardous materials in Wildomar are subject to existing local hazardous materials regulations, such as those implemented by the Riverside County Department of Environmental Health which is the Certified Unified Program Agency (CUPA) for Riverside County. This program is responsible for consolidating, coordinating, and making consistent the administrative requirements, permits, inspections, and enforcement activities of state standards regarding the transportation, use, and disposal of hazardous materials in Riverside County, including Wildomar. Compliance with federal, state, and local laws and regulations would result in a less than significant impact.

b) Less Than Significant Impact with Mitigation Incorporated. The principal findings of the Phase I ESA specify four Recognized Environmental Conditions (RECs) or potential RECs present at the site.

1. An investigation of the site located dozens of stockpiles of soil of unknown origin. The Phase I ESA recommends that samples from these materials be analyzed for TPH, Title 22 Metals, OCPs, VOCs and PCBs. The implementation of mitigation measure **HAZ-1** would reduce impacts to less than significant.

2. As a result of former chicken ranch operations present at the site, methane may be present in the subsurface. The report notes that this is not a REC but that local regulations require post-grading sampling for methane in former livestock operation areas and that possible mitigation measures may be required depending on the sampling results. The implementation of mitigation measure **HAZ-2** would reduce impacts to less than significant.

3. The report found that the southeastern and northeastern portions of the site formerly hosted agricultural uses, indicating possible concern for the presence of pesticides. Although the project's current plans are to develop this portion of the site with commercial/retail uses instead of residential use, the implementation of mitigation measure **HAZ-1** would reduce impacts to less than significant.

4. Based on the age of the current and dilapidated structures on the western portion of the site, the report indicates that lead-based paint (LBP) and asbestos-containing materials (ACMs) are likely present. Project-related demolition that has the potential to expose workers and the public to LBP and ACMs would be conducted in accordance with applicable regulations, including, but not limited to:

    - South Coast Air Quality Management District's Rule 1403
    - California Health and Safety Code (Section 39650 et seq.)
    - California Code of Regulations (Title 8, Section 1529)
    - California Occupational Safety and Health Administration Regulations (California Code of Regulations, Title 8, Section 1529 [Asbestos] and Section 1532.1 [Lead])
    - Code of Federal Regulations (Title 40, Part 61 [asbestos], Title 40, Part 763 [asbestos], and Title 29, Part 1926 [asbestos and lead])

As described under criterion V.9.a, above, construction and operation of the proposed project would involve the transport, storage and use of hazardous materials on the site including common cleaning substances, building maintenance products, lubricants, paints, solvents, herbicides, pesticides, fertilizers and fuels. An impact could occur if construction and operation of the proposed project creates conditions where these hazardous materials could easily contaminate surrounding soil, water, or air. The most likely scenarios would be from rainwater runoff spreading contaminated waste. However, construction activities would be conducted in accordance with a Stormwater Water Pollution Prevention Plan (SWPPP) as part of the National Pollutant Discharge Elimination System (NPDES) permit, discussed further in Section 10, Hydrology and Water Quality, below. While the risk of exposure to hazardous materials cannot be eliminated, adherence to existing regulations would ensure compliance with safety standards related to the use and storage of hazardous materials and with the safety procedures mandated by applicable federal, state, and local laws and regulations. Compliance with these regulations, as well as the implementation of mitigation measure **HAZ-1** and **HAZ-2**, would ensure that risks resulting from the routine transportation, use, storage, or disposal of hazardous materials or hazardous wastes associated with the proposed project and the potential for accident or upset is reduced to a less-than-significant level.

c) Less Than Significant Impact. There are no schools within a quarter mile of the site. The nearest school to the project site is Ronald Reagan Elementary, approximately 0.4-mile north of the site. The proposed project would not involve the storage, handling, or disposal of hazardous materials in sufficient quantities that would pose a significant risk to the public. Therefore, impacts would be less than significant.

d) Less Than Significant Impact. The project site is not included on a list of hazardous materials databases compiled by the California Department of Toxic Substances Control (DTSC) or the State Water Resources Control Board (SWRCB) (DTSC 2022; SWRCB 2022). The database search performed during the Phase I ESA did not locate the site on any hazardous material site lists. The report notes, however, that the site is adjacent to two gas stations on the properties east and west of the site off of Clinton Keith Road

(Leighton 2021). The project site is approximately 0.46-mile northwest from the nearest Leaking Underground Storage Tank (LUST) Cleanup Site at 36485 Inland Valley Drive, the Inland Valley Regional Medical Center. However, as of October 10, 2006, this case has been closed and completed. Therefore, impacts are considered less than significant.

e) Less Than Significant Impact. The project site is not located within any airport land use plan. The closest public airport is French Valley Airport, which is located approximately 7 miles east of the project site. Given the distance and because the project is not in the airport land use plan area for French Valley Airport, there is no impact.

f) Less Than Significant Impact. Access to the project site will be available via three driveways extending from Catt Road on the southwest corner of the site. Additionally, the project will include four entrances/exits to site from Wildomar Trail. Construction will take place within the project site; no roadway closures are anticipated. If roadway closure(s) or reduction in access/capacity is necessary during construction (i.e., to connect to water, sewer, or utilities), the City requires that the applicant submit appropriate plans for review prior to the issuance of a building permit. Adherence to these requirements would ensure that the project would not have a significant impact on emergency response and evacuation plans.

g) Less Than Significant With Mitigation Incorporated. California Government Code Chapter 6.8 directs the California Department of Forestry and Fire Protection (CAL FIRE) to identify areas of very high fire hazard severity within Local Responsibility Areas (LRA). Mapping of the areas, referred to as Very High Fire Hazard Severity Zones (VHFHSZ), is based on data and models of potential fuels over a 30- to 50-year time horizon and their associated expected fire behavior and expected burn probabilities, which quantifies the likelihood and nature of vegetation fire exposure to buildings. LRA VHFHSZ maps were initially developed in the mid-1990s and are now being updated based on improved science, mapping techniques, and data. In 2008, the California Building Standards Commission adopted California Building Code Chapter 7A requiring new buildings in Very High Fire Hazard Severity Zones to use ignition-resistant construction methods and materials.

The eastern and western portions of the City of Wildomar have been designated Very High Fire Hazard Severity Zones. The project site is within a VHFHSZ within the LRA (CALFIRE 2009). Development on the project site would be subject to compliance with the 2019 California Building Code (or the most current version) and the 2019 edition of the California Fire Code (or the most current version). The 2019 California Fire Code (Part 9 of Title 24 of the California Code of Regulations) includes Section 4905.2, Construction Methods and Requirements within Established Limits. Fire Code Chapter 49 cites specific requirements for wildland-urban interface areas that include, but are not limited to, providing defensible space and hazardous vegetation and fuel management. Wildomar is covered under the Riverside County Operational Area Emergency Operations Plan (2006) and the Riverside County Operation Area Multi-Jurisdictional Local Hazard Mitigation Plan (2012). These plans provide guidance to effectively respond to any emergency, including wildfires. In addition, all proposed construction is required to meet minimum standards for fire safety, and mitigation measures **HAZ-3** and **HAZ-4,** which require conformance with the

California Building Code and Fire Code, would be implemented. Therefore, impacts are considered less than significant with mitigation incorporated.

STANDARD CONDITIONS AND REQUIREMENTS

1. City of Wildomar Municipal Code Chapter 8.28, *Fire Code*, requires compliance with the 2016 California Building Code (or most current version) and the 2016 edition of the California Fire Code (Part 9 of Title 24 of the California Code of Regulations).

2. City of Wildomar Municipal Code Chapter 8.28, *Fire Code*, requires adherence to California Fire Code Chapter 49, which cites specific requirements for wildland-urban interface areas.

MITIGATION MEASURES

HAZ-1 Prior to the development of the site, representative sampling of the soil stockpiles shall be conducted. Soil samples shall be analyzed by a laboratory licensed with the Environmental Laboratory Accreditation Program [ELAP] for total petroleum hydrocarbon chains by EPA Method 8015M, Title 22 Metals by EPA Method 6010B/7471A, organochlorine pesticides by EPA Method 8081A, volatile organic compounds by EPA Method 8260B/5035 and polychlorinated biphenyls by EPA Method 8082. During stockpile testing, a soil sample shall be collected from the area where an orchard may have been located and tested for organochlorine pesticides to assess for residual pesticides**.** If the results of the soil testing show chemical levels are below EPA Region 9 or DTSC screening levels for residential land use, grading or excavation may proceed accordingly. Remediation and/or removal of contaminated soils shall be made prior to development, if chemical levels are above screening levels. Remediation shall be made in coordination with the local health department, SCAQMD, the California Department of Toxic Substances Control, the U. S. Environmental Protection Agency or other regulatory agencies and in compliance with established residential screening levels.

Timing/Implementation:	*Prior to site development*
Enforcement/Monitoring:	*City of Wildomar Building Department, Local Health Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency*

HAZ-2 After grading is completed, but before construction begins, the proponent shall install soil gas probes with a 100-foot grid spacing in the footprints of the proposed structures, at depths of 5 feet below ground surface and 15 feet below ground surface at each location. Methane shall be tested from the probes with a properly calibrated hand-held device with a detection limit of no greater than 500 ppmv, or via a laboratory licensed with ELAP by ASTM Method 1946D, or a combination of the two. In addition, calibrated pressure gauges such as Magnehelic gauges or equivalent with a range of 0-10 inches of water pressure to a range of 0-100 inches of water pressure shall be used on each probe. If methane levels in probes are below 10 percent of the Lower Explosive Limit (10 percent LEL or 5,000 ppmv), the project could proceed without further action. For areas of the site that have methane concentrations at or exceeding 10 percent LEL or

have pressures exceeding 3 inches of water, further testing shall be implemented to determine if a methane mitigation system is necessary. If additional weekly testing shows that methane concentrations consistently exceed 10 percent LEL or have pressures exceeding 3 inches of water over a period of 30 days and a plot of the resulting data does not show a downward trend in concentrations or pressures, then a methane mitigation system shall be incorporated into the building plans for the structures where the elevated concentrations and/or pressures were observed. If there is a downward trend but the concentrations are still above 10 percent LEL or have pressures above 3 inches of water, then additional testing past 30 days may be requested to determine if concentrations and pressures subside below the action levels.

Timing/Implementation: *After site grading but prior to construction*

Enforcement/Monitoring: *City of Wildomar Building Department, Local Health Department, SCAQMD, California Department of Toxic Substances Control, U.S. Environmental Protection Agency*

HAZ-3 Prior to the issuance of building permits, the project applicant/developer shall demonstrate, to the satisfaction of the City Building Official and the Riverside County Fire Chief, compliance with the 2019 California Building Code (or the most recent edition) (Part 2 of Title 24 of the California Code of Regulations) and the 2019 California Fire Code (or the most recent edition) (Part 9 of Title 24 of the California Code of Regulations), including those regulations pertaining to materials and construction methods intended to mitigate wildfire exposure as described in the 2019 California Building Code and California Residential Code (or most recent edition); specifically California Building Code Chapter 7A; California Residential Code Section R327; California Residential Code Section R337; California Referenced Standards Code Chapter 12-7A; and California Fire Code Chapter 49.

Timing/Implementation: *Prior to issuance of building permits*

Enforcement/Monitoring: *City of Wildomar Building Department and Riverside County Fire Department*

HAZ-4 Prior to the issuance of a certificate of occupancy, the applicant shall demonstrate, to the satisfaction of the City Building Official and the County Fire Chief, compliance with the vegetation management requirements prescribed in California Fire Code Section 4906 and California Government Code Section 51182.

Timing/Implementation: *Prior to issuance of certificate of occupancy*

Enforcement/Monitoring: *City of Wildomar Building Department and Riverside County Fire Department*

10. Hydrology and Water Quality

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?			✓	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			✓	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in a substantial erosion or siltation on- or off-site;			✓	
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;			✓	
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or			✓	
iv) impede or redirect flood flows?			✓	
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?				✓
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?			✓	

The following analysis is based on the Project Specific Water Quality Management Plan (WQMP) prepared by DRC Engineering, Inc. on November 29, 2021 (revised April 2, 2022) and is included as **Appendix 12** (DRC 2022a), and the Preliminary Hydrology Report by DRC Engineering, Inc. dated April 2, 2022 and included as **Appendix 13** (DRC 2022b) in this Initial Study.

DISCUSSION

a) Less Than Significant Impact.

Construction

As part of Section 402 of the Clean Water Act, the US Environmental Protection Agency has established regulations under the National Pollution Discharge Elimination System (NPDES) program to control direct stormwater discharges. The NPDES program regulates industrial pollutant discharges, which include construction activities. In California, the State Water Resources Control Board (SWRCB) administers the NPDES permitting program and is responsible for developing NPDES permitting requirements.

Wildomar Municipal Code Section 13.12.050 requires development to comply with a Municipal Separate Storm Sewer System (MS4) Permit from the San Diego Regional Water Quality Control Board. Section F.1 of the MS4 permit specifies requirements for new developments, and Section F.1.D details the requirements for standard stormwater mitigation plans (also known as water quality management plans). The MS4 permit imposes pollution prevention requirements on planned developments, construction sites, commercial and industrial businesses, municipal facilities and activities, and residential activities. Even though Wildomar is split by two watersheds (Santa Ana and Santa Margarita) that affect some of the properties in the city, the entire city is governed by the MS4 permit for the Santa Margarita region.

Requirements for waste discharges potentially affecting stormwater from construction sites of one acre or more are set forth in the SWRCB's Construction General Permit, Order No. 2012-0006-DWQ, issued in 2012. The site is larger than one acre and would be subject to requirements of the Construction General Permit. Projects obtain coverage under the Construction General Permit by filing a Notice of Intent with the SWRCB prior to grading activities and preparing and implementing a Storm Water Pollution Prevention Plan (SWPPP) during construction. The primary objective of the SWPPP is to identify, construct, implement, and maintain BMPs to reduce or eliminate pollutants in stormwater discharges and authorized non-stormwater discharges from the project site, and to contain hazardous materials. BMPs categories include, but are not limited to, erosion control and wind erosion control, sediment control, and tracking control. Implementation and monitoring required under the SWPPP would control and reduce short-term intermittent impacts to water quality from construction activities to less than significant levels.

Operation

The primary constituents of concern during the project operational phase would be solids, oils, and greases from parking area and driveways that could be carried off-site. Structural BMPs as stated in the Water Quality Management Plan (WQMP), included as **Appendix 12** to this Initial Study, would include, but are not limited to, drainage stenciling and signage, roofs designed to runoff into adjoining landscaping, and efficient irrigation, and the use of pervious pavement where possible. Operational source control

BMPs include education for property owners, street and sidewalk sweeping, and landscape maintenance (DRC 2022a).

Additionally, onsite landscaping would assist in minimizing the amount of runoff from the site by providing permeable areas for water infiltration and decreasing runoff volume. Specifically, storm water will be treated by four modular wetland biofiltration systems and hydrodynamic separators before entering the underground detention chambers. The proposed project would also include BMPs to properly manage stormwater flow and prevent stormwater pollution by reducing the potential for contamination at the source, as listed above. The mix of BMPs have been determined as part of the WQMP.

In general, projects must control pollutants, pollutant loads, and runoff volume from the project site by minimizing the impervious surface area and controlling runoff through infiltration, bioretention, or rainfall harvest and use. Projects must incorporate BMPs in accordance with the requirements of the municipal NPDES permit. The project would comply with water quality standards, and impacts are less than significant.

b) Less Than Significant Impact. According to the Geotechnical Report, groundwater was encountered during one of the borings at a depth of 42.6 feet below surface grade. The proposed project is in the area subject to the Elsinore Basin Groundwater Management Plan (EBGMP) area. The EBGMP addresses the hydrogeologic understanding of the Elsinore Basin, evaluates baseline conditions, identifies management issues and strategies, and defines and evaluates alternatives. The primary sources of groundwater recharge in the basin are listed in the plan as:

- Recharge from precipitation – Rainfall directly to the basin.
- Surface water infiltration – Recharge from infiltration of surface waters such as streams. The San Jacinto River is the major surface water inflow. Inflow from Lake Elsinore is considered negligible.
- Infiltration from land use – Direct surface recharge from application of water for irrigation.
- Infiltration from septic tanks – Infiltration in areas serviced by septic systems in the basin.

As shown in the Department of Water Resources Bulletin 118, the Elsinore Basin, which is the major source of potable groundwater supply for Elsinore Valley Municipal Water District (EVMWD), has not been identified to be in a state of overdraft (DWR 2020). Furthermore, active groundwater management and conjunctive use programs have been implemented by EVMWD to ensure the balance of inflows and outflows of the Elsinore Basin (EVMWD 2021). Therefore, the project would not impede sustainable groundwater management of the basin, and impacts are less than significant.

c)

i, ii) **Less Than Significant Impact**. Please refer to issue b) in Section V.7, Geology and Soils, for further discussion of erosion. Surface water drainage would be controlled by building regulations, with the water directed toward existing streets, flood control channels, storm drains, and catch basins. The proposed drainage for the site would not channel runoff on exposed soils, would not direct flows over unvegetated soils, and would not otherwise increase the erosion or siltation potential

of the site or any downstream areas. As discussed above, the proposed project is subject to NPDES requirements and the countywide MS4 permit. Additionally, the project applicant is required to submit a SWPPP to reduce erosion and sedimentation of downstream watercourses during project construction. Furthermore, the applicant is required to prepare and submit a detailed erosion control plan for City approval prior to obtaining a grading permit. Implementation of this plan would address any erosion issues associated with proposed grading and site preparation. Although future development would create new impervious surfaces on the property, development associated with the proposed project would result in opportunities for landscaped areas to be used for on-site stormwater retention.

According to the Preliminary Hydrology Report, the proposed development will not adversely affect the existing drainage patterns in the area (DRC 2022b). The site currently consists of two drainage areas that flow southeasterly towards Wildomar Tail. The proposed drainage facilities will maintain these existing conditions with the commercial and residential portions of the project draining into separate storm drain systems. Four modular wetlands biofiltration BMP's are proposed which would treat the water before entering the underground detention chambers (DRC 2022b).

The project-specific WQMP provides BMPs for after construction, such as educational materials for property owners, street and sidewalk sweeping, and landscape maintenance, etc. Therefore, the proposed project would not result in substantial erosion or siltation on- or off-site, or flooding on- or off-site. Therefore, impacts would be less than significant.

iii) **Less Than Significant Impact.** The proposed project is required to comply with Wildomar Municipal Code Section 13.12.050, which requires development to comply with a MS4 Permit from the San Diego Regional Water Quality Control Board. The proposed project would include biofiltration systems to capture runoff; the proposed project's drainage would match the existing conditions, and therefore, the proposed project would not exceed the capacity of the existing stormwater system. Impacts would be less than significant.

iv). **Less Than Significant Impact.** The project site is designated by the Federal Emergency Management Agency (FEMA) as being within Zone X, indicating minimal risk of flooding (FEMA 2008). Moreover, the project site is not within a 100- or 500-year flood zone (Wildomar 2003). Although the proposed project would increase impervious surfaces, the project site is not located within an area of flood risk, and the proposed catch basins would reduce impacts from on- or off-site flooding. Therefore, impacts are less than significant.

d) No Impact. As provided in V.10.c.iv, the project site is not within a flood hazard zone. The project site is not in an area that is subject to seiches, mudflows, or tsunamis due to the absence of any nearby bodies of water and mud/debris channels. Additionally, the County of Riverside identifies dam inundation hazard areas throughout the county. A review of records maintained at the California Office of Emergency Services provided potential failure inundation maps for 23 dams affecting Riverside County; these maps were compiled into geographic information system (GIS) digital coverage of potential dam inundation zones. The County's dam inundation zones are identified in Figure S-10 of the Wildomar General Plan. As

shown in Figure S-10, the project site is not in any dam inundation hazard zones (Wildomar 2003). In addition, the project is not in the vicinity of any levees. Therefore, the project would not be exposed to seiches, mudflows, or tsunami hazards, and no impact would occur.

e) Less Than Significant Impact. As provided in Section V.10.b, above, the project site is within the Elsinore Basin Groundwater Management Plan area; the proposed improvements would not conflict or obstruct implementation of the EBGMP. Additionally, the project site is in the Water Quality Improvement Plan for the Santa Margarita River Watershed Management Area. The proposed project would comply with water quality requirements set forth in the Statewide General Construction Permit, the NPDES, and the City of Wildomar Municipal Code Section 13.12 (Stormwater/Urban Runoff Management and Discharge Controls Ordinance). Additionally, active groundwater management and conjunctive use programs have been implemented by EVMWD to ensure the balance of inflows and outflows of the Elsinore Basin (EVMWD 2021). Therefore, the project would not impede sustainable groundwater management of the basin, and impacts are less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

1. Wildomar Municipal Code Section 13.12.060 requires that new construction and renovation control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. The City shall identify the BMPs that may be implemented in addition to those provided in the WQMP to prevent such deterioration, as part of the building plan check review process prior to construction.

MITIGATION MEASURES

None required.

11. Land Use and Planning

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Physically divide an established community?			✓	
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?			✓	

DISCUSSION

A Parking Demand Analysis Memorandum was prepared by EPD Solutions to assess the commercial parking demands for the project on April 8, 2022 (2022a) and is included in as **Appendix 14**.

a) No Impact. The project site is in an urbanized area characterized by a mix of land uses. The surrounding area includes both residential (medium and high density) and commercial uses. The site itself is primarily vacant land zoned Scenic Highway Commercial (C-P-S) with a Mixed Use Overlay. Thus, implementation of the proposed project would be consistent with existing uses on surrounding properties and conform to the City's vision for development in this area. The project would not disrupt or divide the physical arrangement of an established community, therefore no impact would occur.

b) Less Than Significant Impact. The proposed project site is designated by the City of Wildomar General Plan as a Mixed Used Planning Area (MUPA) and zoned by the City's Zoning Ordinance as Scenic Highway Commercial (C-P-S) with a Mixed Use Overlay. The current project plans are consistent with the policies and development standards established under these designations and ordinances. The General Plan states that MUPA's are intended to allow a mixture of residential, commercial, office entertainment, educational and/or other uses. It is not intended to identify a particular mixture or intensity of land uses in these areas. The project proposes multiple uses for the site including a residential multi-family development and a commercial retail center. The site's Mixed Use Overlay is designed to implement the MUPA designation and requires a density of at least 30 dwelling units per acre for the residential component of a development. The project proposes a density of 33.5 dwelling units per acre which complies with the Mixed Use Overlay/MUPA requirements. The Mixed Use Overlay, as described in Section 17.305.030 (Permitted Uses in Mixed Use Overlay Districts) permits a variety of uses including multi-family apartments, food markets, and restaurants. Additionally, the development standards listed in Sections 17.76 (C-P-S (Scenic Highway Commercial) Zone) and Section 17.44 (R-3 General Residential Zone) of the Wildomar Municipal Code both restrict structures to a maximum height of 50 feet. The tallest structure across both the residential and commercial portions of the project is 39 feet and 9 inches. The project is also consistent with General Plan policies aimed at mitigating environmental effects. For

example, the project complies with policy LU-28.11 which requires mixed-use developments be located and designed to visually enhance, not degrade the character of the surrounding area.

The project will adhere to all additional development standards listed in Sections 17.76, 17.305, and 17.44 and other applicable standards of the Municipal Code with the exception of the City's commercial parking standard. According to Section 17.188 (Off-Street Vehicle Parking Standards), general retail uses which include shopping centers with restaurants, shall provide 6 spaces per 1,000 square feet, resulting in a requirement of 208 parking spaces for the proposed project (EDP 2022). The project would provide 195 spaces and therefore be under parked by 13 spaces, according to the City of Wildomar requirements (EDP 2022a). According to the parking demand analysis conducted by EPD Solutions, the commercial portion of the project is expected to receive a minimum of 8 percent of its peak hour trips from residents of the adjacent residential development. These trips are expected to be made with non-motorized modes of transportation including walking and biking. This corresponds to a reduction of 16 parking spaces and therefore the proposed 195 spaces would provide adequate parking supply for the project. Refer to issue b in Section V. 17 for further discussion of vehicle trip reduction. Furthermore, the City is signatory to the MSHCP and the project site is within the Stephens' Kangaroo Rat Plan Fee Area, as discussed in Issue d of Section 4, Biological Resources, of this Initial Study, and therefore, the project is required to pay fees. Compliance with the MSHCP, applicable General Plan policies and zoning ordinances would result in a less than significant impact.

STANDARD CONDITIONS AND REQUIREMENTS

1. Section 3.42.090 of the Wildomar Municipal Code requires the payment of MSHCP fees at the time of issuance of a building permit.
2. Section 3.44.060 requires that the applicant pay appropriate development impact fees prior to issuance of a certificate of occupancy for the development project.
3. As required by Section 3.43.070 of the Wildomar Municipal Code, the project applicant is required to submit fees to the City in accordance with the requirements of the Stephens' Kangaroo Rat Habitat Conservation Plan Mitigation Fee Area.

MITIGATION MEASURES

None required.

12. Mineral Resources

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				✓
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				✓

DISCUSSION

a) No Impact.

The Phase I Environmental Assessment did not locate the site in in any governmental databases monitoring mineral resources including the Active Mines & Mineral Plants Database and the Mineral Resources Data System. Additionally, the proposed project is located in an area designated as MRZ-3 by the Wildomar General Plan (Wildomar 2003.). The MRZ-3 zone includes areas where the available geologic information indicates that while mineral deposits are likely to exist, the significance of the deposit is undetermined. The General Plan Open Space-Mineral Resources (OS-MIN) land use designation allows mineral extraction and processing facilities, based on the applicable Surface Mining and Reclamation Act (SMARA) classification. Those land areas held in reserve for future mining activities are also designated OS-MIN. No areas within the City boundaries are designated as OS-MIN. In addition to local regulations, all projects are required to comply with applicable state and federal regulations. As a result, no impacts would occur.

b) No Impact. There are no known locally important mineral resource recovery sites identified on the project site in the Wildomar General Plan or in a specific plan or other land use plan. As a result, no impacts would occur.

STANDARD CONDITIONS AND REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

13. Noise

Issues, would the project result in:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?		✓		
b) Generation of excessive groundborne vibration or groundborne noise levels?			✓	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			✓	

A noise impact analysis was prepared by Urban Crossroads on January 18, 2022 and peer reviewed by Placeworks on March 11, 2022. The revised report was prepared on April 18, 2022 (2022d) (see **Appendix 15**)

Noise Measurements

An on-site exterior noise impact analysis was completed to determine the noise exposure levels that would result from adjacent transportation noise sources in the project study area, and to identify potential noise abatement measures that would achieve acceptable project exterior and interior noise levels. The primary source of transportation noise affecting the project site is anticipated to be from Wildomar Trail and Clinton Keith Road. To describe the on-site traffic noise impacts, five on-site receiver locations were identified at the proposed multi-family residential locations facing Wildomar Trail and Clinton Keith Road as shown on Exhibit 8-A in **Appendix 15**. **Table 13-1** presents a summary of future on-site exterior traffic noise levels.

Table 13-1 Exterior Noise Levels (CNEL)				
Receiver Location	**Roadway**	**Land Use**	**Exterior Noise Level (dBA CNEL)**	**Land Use Compatibility[1]**
MF1	Wildomar Trail	Multi-Family Residential	56.6	*Normally Acceptable*
MF2	Wildomar Trail	Multi-Family Residential	56.6	*Normally Acceptable*
MF3	Clinton Keith Road	Multi-Family Residential	59.2	*Normally Acceptable*
MF4	Clinton Keith Road	Multi-Family Residential	61.1	*Normally Acceptable*
MF5	Clinton Keith Road	Multi-Family Residential	65.3	*Conditionally Acceptable*

Source: Urban Crossroads 2022d, (Appendix 15)

[1] Based on General Plan land use combability guidelines; refer to Exhibit 3-A in Appendix 15

As shown on **Table 13-1**, the proposed multi-family residential land use will experience transportation related exterior noise levels ranging from 56.6 to 65.3 dBA CNEL. According to the Land Use Compatibility Guidelines in the City's Noise Element, noise experienced by multi-family residential land uses is considered "normally acceptable" as it approaches 65 dBA CNEL and conditionally acceptable up to 70 dBA CNEL. "Normally acceptable" noise levels do not require any additional noise insulation requirements, based upon the assumption that any buildings involved are of normal conventional construction (Wildomar 2003). For "conditionally acceptable" exterior noise levels, the land use compatibility guidelines indicate that new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insultation features are included in the design.

Table 13-2 shows that the buildings within the project will require a windows-closed condition and a means of mechanical ventilation to maintain the interior noise limit. The future interior noise levels are expected to range from 31.6 to 40.3 dBA CNEL. This analysis shows that the 45 dBA CNEL interior noise level standard can be satisfied using standard building construction providing windows and sliding glass doors.

Table 13-2 Interior Noise Levels (CNEL)					
Receiver Location	**Roadway**	**Noise Level at Façade[1]**	**Required Interior Noise Reduction[2]**	**Estimated Interior Noise Reduction[3]**	**Interior Noise Level[4]**
MF1	Wildomar Trail	56.6	11.6	25.0	31.6
MF2	Wildomar Trail	56.6	11.6	25.0	31.6
MF3	Clinton Keith Road	59.2	14.2	25.0	34.2
MF4	Clinton Keith Road	61.1	16.1	25.0	36.1
MF5	Clinton Keith Road	65.3	20.3	25.0	40.3

[2] Noise reduction required to satisfy the 45 dBA CNEL interior noise limits.

[3] A minimum of 25 dBA noise reduction is assumed with standard building construction

[4] Estimated interior noise level with minimum STC rating for all windows.

Sensitive Receptors

Noise exposure standards and guidelines for various types of land uses reflect the varying noise sensitivities associated with each of these uses. Residences, hospitals, schools, guest lodging, libraries, and churches are treated as the most sensitive to noise intrusion and therefore have more stringent noise exposure targets than do other uses, such as manufacturing or agricultural uses that are not subject to impacts such as sleep disturbance. Sensitive receptors near the Project are listed in **Table 13-3**, Sensitive Receptors.

Table 13-3 Sensitive Receptors	
Receptor Type/Description	**Distance and Direction from the Project Site**
(R1) Residence at 35816 Poplar Crest Road	100 feet northwest
(R2) Residence at 35925 Susan Drive	212 feet northeast
(R3) Oak Spring Ranch at 24055 Clinton Keith Road	204 southeast
(R4) Residence at 23849 Lancer Court	19 feet west

Source: Urban Crossroads 2022d (Appendix 15)

DISCUSSION

a) Less Than Significant with Mitigation Incorporated.

Significance Criteria

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. **Table 13-4** Significance Criteria Summary shows the criteria used to identify potentially significant incremental noise level increases.

Table 13-4 Significance Criteria Summary			
Analysis	**Condition(s)**	**Significance Criteria**	
		Daytime	**Nighttime**
Off-Site Traffic[1]	If ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
	If amb–ent is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase	
	If ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
On-Site Traffic	Exterior Noise Compatibility Criteria[2]	See Exhibit 3-A in Appendix 15	
	Interior Noise Level Standard[3]	45 dBA CNEL	
Stationary-Source	Exterior Noise Level Standards[4]	65 dBA L_{eq}	45 dBA L_{eq}
	If ambient is < 60 dBA L_{eq} [1]	≥ 5 dBA L_{eq} Project increase	
	If amb–ent is 60 - 65 dBA L_{eq} [1]	≥ 3 dBA L_{eq} Project increase	
	If ambient is > 65 dBA L_{eq} [1]	≥ 1.5 dBA L_{eq} Project increase	
Construction	Noise Level Threshold[5]	80 dBA L_{eq}	
	Vibration Level Threshold[6]	0.3 PPV (in/sec)

Construction

Construction-related, short-term noise levels would be higher than existing ambient noise levels in the project area but would no longer occur once construction of the project is complete.

Construction Noise

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, noise levels are expected to range from 46.6 to 61.3dBA L_{eq}, and the highest construction levels are expected to range from 63.2 to 67.8 dBA L_{eq} at the nearest receiver locations from the property line. Construction activities would occur throughout the project site and would not be concentrated at the point closest to the sensitive receptors.

Construction activities would include site preparation, grading, building construction, paving, and architectural coating. Such activities would require graders, scrapers, and tractors during site preparation; graders, dozers, and tractors during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, tractors, and paving equipment during paving; and air compressors during architectural coating. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power

settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels.

In addition, the City's Noise Ordinance indicates that noise sources associated with private construction projects located within one-quarter of a mile from an inhabited dwelling are permitted between the hours of 6:00 a.m. and 6:00 p.m. during the months of June through September, and between the hours of 7:00 a.m. and 6:00 p.m. during the months of October through July. These permitted hours of construction are included in the code in recognition that construction activities undertaken during daytime hours are a typical part of living in an urban environment and do not cause a significant disruption. The potential for construction-related noise to affect nearby residential receptors would depend on the location and proximity of construction activities to these receptors.

To evaluate whether the proposed project would generate potentially significant short-term noise levels at the nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts. The construction noise analysis shows that the nearest receiver locations will satisfy the reasonable daytime 80 dBA L_{eq} significance threshold during project construction activities as shown on **Table 13-5.** Therefore, the noise impacts due to project construction noise are considered less than significant at all receiver locations.

Table 13-5 Construction Noise Level Compliance

Receiver Location	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[1]	Threshold[2]	Threshold Exceeded?[3]
R1	54.0	80	No
R2	53.4	80	No
R3	52.6	80	No
R4	61.3	80	No

Source: Urban Crossroads 2022d (Appendix 15)

[1] Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations

[1] Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual.

[3] Do the estimated project construction noise levels exceed the construction noise level threshold?

The project would also include a roadway improvement on Clinton Keith Road between the intersection with Wildomar Trail and Arya Road, which is discussed in Section V.17, Transportation. The improvement is part 'f the City's Capital Improvement Program CIP 025 Clinton Keith Widening and the impacts were addressed in an IS/MND adopted by Riverside County (SCH# 200910103). The proposed project would only be responsible for the improvements if it is constructed before the City on the project. The project would also be responsible for implementing mitigation measure **NOI-1**, as shown in the Clinton Keith Road Widening IS/MND.

Construction Truck Trips

Construction activities would also cause increased noise along access routes to and from the site due to movement of equipment and workers. Mobile source noise would increase along access routes to and from the project site during construction. However, this source of noise would be temporary and would cease upon completion of the proposed project. It is anticipated that hauling would occur along major City roadways, which are collector streets, such as Clinton Keith Road. While individual trucks will generate noise as they pass by a receptor, the intermittent noise would not exceed a noise threshold which is based on hourly or daily noise levels. Additionally, construction activities would only take place within the allowable hours specified by Municipal Code Section 9.48.020. Therefore, short-term construction-related impacts associated with worker commute and equipment transport to the project site would be less than significant.

Operations

Implementation of the proposed project would create new sources of noise in the project vicinity. The on-site project related noise sources are expected to include: loading dock activity, pool/spa activity, outdoor eating activity, trash enclosure activity, roof-top air conditioning units, parking lot activity, shopping cart corrals and drive-thru speakerphones. **Table 13-6** Daytime Project Stationary Source Noise Levels, shows the project stationary source noise levels during the daytime hours of 7:00 a.m. to 10:00 p.m. The daytime hourly noise levels at the off-site receiver locations are expected to range from 42.9 to 47.7 dBA L_{eq}. **Table 13-7** Nighttime Project Stationary Source Noise Levels, shows the project stationary source noise levels during the nighttime hours of 10:00 p.m. to 7:00 a.m. The nighttime hourly noise levels at the off-site receiver locations are expected to range from 39.1 to 44.5 dBA L_{eq}. The differences between the daytime and the nighttime noise levels are largely related to the duration of noise activity.

Table 13-6 Daytime Project Stationary Source Noise Levels

Noise Source	Stationary source Noise Levels by Receiver Location (dBA L_{eq})			
	R1	R2	R3	R4
Loading Dock Activity	32.2	36.5	16.4	15.1
Pool/Spa Activity	22.9	19.8	26.6	39.6

Noise levels that would be experienced at receiver locations when project-source noise is added to the daytime and nighttime ambient conditions area presented on **Table 13-8** Daytime Project Stationary Source Noise Level Increases and **Table 13-9** Nighttime Project Stationary Source Noise Level Increases, respectively. As indicated on **Table 13-8**, the project will generate a daytime stationary source noise level increase ranging from 0.1 to 1.7 dBA L_{eq} at the nearest receiver locations. **Table 13-9** shows that the project will generate a nighttime stationary source noise level increase ranging from 0.1 to 0.3 dBA L_{eq} at the nearest receiver locations. Project-related stationary source level increases will satisfy the stationary source noise increase significance criteria presented in **Table 13-4**. Therefore, the incremental project stationary source noise level increase is considered less than significant at all receiver locations.

[7] Significance increase criteria as shown on Table 13-4

Off-Site Traffic Noise

Future development generated by the project would result in additional traffic on adjacent roadways, increasing vehicular noise near existing and proposed land uses. The existing traffic noise levels range from 68.0 to 71.4 dBA CNEL and as shown in **Table 13-10** Existing Project Traffic Noise Level Increases, the traffic noise levels generated by the project range from 68.4 to 71.6 dBA CNEL which is an increase of 0.1 to 0.4 dBA CNEL. Based on the significance criteria for off-site traffic noise presented in **Table 13-4**, land uses adjacent to the study area roadway segments would experience less than significant impacts.

Table 13-10 Existing Project Traffic Noise Level Increases

Road	Road Segment	CNEL at Receiving Land Use (dBA)[1]			Incremental Noise Level Increase Threshold[2]	
		No Project	With Project	Project Addition	Limit	Exceeded
Inland Valley Drive	s/o Clinton Keith Road	68.0	68.4	0.4	1.5	No

Clinton Keith Road	w/o Arya Road	71.4	71.6	0.2	1.5	No
Clinton Keith Road	w/o Wildomar Trail	70.7	70.8	0.1	1.5	No
Clinton Keith Road	e/o Wildomar Trail	70.5	70.9	0.4	1.5	No
Clinton Keith Road	e/o Inland Valley Drive	69.4	69.7	0.3	1.5	No

Source: Urban Crossroads 2022d (Appendix 15)

[1] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.

[2] Does the project create an incremental noise level increase exceeding the significance criteria (Table 13-4)

An analysis of the existing traffic noise levels plus traffic noise generated by the proposed project is shown in **Table 13-11** Cumulative Project Traffic Noise Level Increases. The cumulative exterior noise levels range from 70.8 to 73.6 dBA CNEL without accounting for any noise attenuation features such as noise barriers or topography. The project conditions plus cumulative noise levels range from 71.0 to 73.8 dBA CNEL. Based on the significance criteria listed presented in **Table 13-4**, land uses adjacent to the study area roadway segments would experience less than significant noise level increases due to the cumulative and project-related traffic.

Table 13-11 Cumulative Project Traffic Noise Level Increases

Road	Road Segment	CNEL at Receiving Land Use (dBA)[1]			Incremental Noise Level Increase Threshold[2]	
		No Project	With Project	Project Addition	Limit	Exceeded
Inland Valley Drive	s/o Clinton Keith Road	70.8	71.0	0.2	1.5	No
Clinton Keith Road	w/o Arya Road	73.6	73.8	0.2	1.5	No
Clinton Keith Road	w/o Wildomar Trail	73.2	73.3	0.1	1.5	No
Clinton Keith Road	e/o Wildomar Trail	73.2	73.4	0.2	1.5	No
Clinton Keith Road	e/o Inland Valley Drive	72.4	72.5	0.1	1.5	No

Source: Urban Crossroads 2022d (Appendix 15)

[1] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.

[2] Does the project create an incremental noise level increase exceeding the significance criteria (Table 13-4)

b) Less Than Significant Impact. Once operational, the project would not be a source of groundborne vibration. Increases in groundborne vibration levels attributable to the proposed project would be primarily associated with short-term construction-related activities. Construction on the project site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved.

The California Department of Transportation (Caltrans) routinely published updates to transportation and construction guidance manual which contains standard vibration velocities for construction and equipment operations. Vibration generated by construction activity has the potential to damage structures, disrupt the operation of vibration-sensitive research and advanced technology equipment and

annoy humans (Caltrans 2020). Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage generally dependent on the building material and the building's age, the qualities of the soil underneath it and the distance at which is receiving vibrations. Caltrans suggests that an appropriate damage potential threshold for older residential structures is 0.3 inches per second when the source is continuous (Caltrans 2020). Additionally, the Federal Transit Administration (FTA) recommends the standard of 0.2 in/sec as a conservative vibration level safe for most building types (FTA 2018). Groundborne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. The nearest receiver locations range from 49 feet to 252 feet from the proposed project's construction activities. At these distances, construction vibration velocities are estimated to range from 0.007 to 0.077 in/sec PPV, which is below both Caltrans' 0.3 in/sec threshold, as seen in **Table 13-4,** and the FTA's standard of 0.2 in/sec. Therefore, vibration impacts associated with the project would be less than significant.

c) Less Than Significant Impact. The project is not located within an airport land use plan. There is no public airport or public use airport located within two miles of the project site; however, the nearest private airstrip is the Bear Creek Airport located approximately 3.6 miles southwest of the project site. The proposed project would not expose people residing or working in the area to excessive noise levels. Therefore, impacts are less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

1. As required by the City of Wildomar Municipal Code Sections 9.48.020 and 15.04.010, all construction and general maintenance activities shall be limited to the hours 7:00 AM and 6:00 PM from October through May (Monday–Saturday), and between 6:30 AM and 6:00 PM (Monday–Saturday) from June through September. No construction is permitted on Sundays or City-observed holidays unless approved by the City Building Official or City Engineer.

MITIGATION MEASURES

The following mitigation measure from the Clinton Keith Road Widening Project IS/MND (SCH# 200910103) would also be applicable to the proposed project (numbering is from 2009 IS/MND):

NOI-1 All noise producing project equipment and vehicles using internal combustion engines shall be equipped with mufflers and air-inlet silencers, where appropriate, in good operating condition that meet or exceed original factory specifications. Mobile or fixed "package" equipment (e.g., arc welders, air compressors) shall be equipped with shrouds and noise control features that are readily available for that type of equipment.

Timing/Implementation: *Prior to construction*

Enforcement/Monitoring: *City of Wildomar Building Department*

14. Population and Housing

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			✓	
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?			✓	

DISCUSSION

a) Less Than Significant Impact. According to estimates made by the California Department of Finance (DOF) regarding the average household size in the City of Wildomar, the project is expected to house approximately 486 new residents[1] (DOF 2022[2]). When compared to the to the 2022 estimated population of 36,632, the proposed project would result in an approximate 1.32 percent increase to the City's population (DOF 2022). As part of its Regional Transportation/Sustainable Community Strategies Plan (RTP/SCS), the Southern California Association of Governments makes projections about the population growth in its member cities which include Wildomar. These projections show an estimated population of 55,200 in 2045 for the City, which is an increase of 18,568 from the DOF 2022 estimates. The potential 486 new residents added by the project would comprise 2.6 percent of the projected 25-year population growth of the city. SCAG also projected that the City's population would be 38,700 in 2020, which is an additional 1,825 people when compared to the actual population recorded during the 2020 Census count of 36,875 (Census 2020). If the estimated project population is added to either the existing population of the City recorded in 2020 or the 2021 estimated population, the resulting estimated population remains below the 2020 SCAG projection. Because the projected increase in population due to the housing portion of the proposed project is less than the regionally anticipated population growth, the impact to population is considered less than significant.

[1] Note that all of the above figures assume residents new to the City.

[2] 150 apartments x 3.24 average persons per household (DOF 2022) = 486 persons

The project will also employ a workforce for both the construction and operational stages of the project. Due to the size of the project and the duration of labor needed to complete it, the City expects that those employed during the construction phase will likely be commuting to job sites rather than relocating their households to any significant degree. The project's commercial uses are expected to generate between 31[3] and 56[4] new jobs in the City (Natelson 2001). It is anticipated that this new on-site employment under the project would also not lead to a significant relocation of workers due to the size of the existing labor pool in the area. Additionally, when compared to SCAG's employment 2045 projection of 11,200 workers in the City the project's contribution to overall population increases due to employment is marginal. Therefore, jobs added by the project would not induce substantial growth to the City's population.

b) Less than Significant. The project site is primarily vacant with the exception of a single-family residence that the project's Historic Resources Assessment estimates was built in the 1960s. The proposed project would develop this site by demolishing all existing structures and constructing housing, retail, and restaurant uses. Since the project will not be displacing a significant amount of people, the impacts are considered less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

[3] The project's 35,422 square of commercial space was divided by 1,148 square feet/employee which represents the median square feet/employee in the "other retail" category for Riverside County and this calculation equals 30 employees.

[4] The project's commercial square footage was also divided by 629 square feet/employee which represents the average square feet/employee in the "other retail" category for Riverside County and this calculation equals 56 employees.

15. Public Services

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
a) Fire protection?			✓	
b) Police protection?			✓	
c) Schools?			✓	
d) Parks?			✓	
e) Other public facilities?			✓	

DISCUSSION

a) Less Than Significant Impact. The Riverside County Fire Department (RCFD) provides fire protection and safety services to the City of Wildomar. RCFD Fire Station 61 on 32637 Gruwell Street is approximately 2 miles to the west of the site and RCFD Fire Station 75 on 38900 Clinton Keith Road in the City of Murrieta is approximately 2.5 miles south of the site. These and several other Riverside County and Murrieta Fire Department stations in the surrounding area would be able to provide fire protection services to the project site, if needed.

A standard condition of approval for the proposed project includes compliance with the requirements of the Riverside County Fire Department and the payment of standard City development impact fees, which include a fee for fire service impacts. The proposed project is not expected to result in activities that create unusual fire protection needs, therefore any such impacts are considered less than significant.

b) Less Than Significant Impact. Police protection services are provided in Wildomar by the Riverside County Sheriff's Department (RCSD). The nearest sheriff's station is located at 333 Limited Street in Lake Elsinore, approximately 7 miles northwest of the project site. Traffic enforcement is provided in this area of Riverside County by the California Highway Patrol, with additional support from local Riverside County Sheriff's Department personnel.

The Sheriff's Department strives to maintain a recommended servicing of 1.2 sworn law enforcement personnel for every 1,000 residents (Wildomar 2018). The proposed project would introduce new land uses to the site but as discussed in Section V.14, Population and Housing, it is not anticipated to induce

substantial population growth in the area. The project uses would instead serve the projected growth, and therefore, would not be expected to substantially increase the demand for police protection services. Regardless, pursuant to Section 3.44 of the Municipal Code, the project applicant is required to pay standard development impact fees, which include a fee for police service to offset potential demand for new structures or expanded facilities associated with development. Consideration of adding more law enforcement personnel is Council decision and is not a CEQA issue. As the physical impacts of police force expansion are part of the impact fees that are required to be paid prior to building permit, this impact is less than significant.

c) Less Than Significant Impact. The project site is in the Lake Elsinore Unified School District (LEUSD). As discussed in issue a) in section V. 14, Population and Housing, the proposed project would not induce substantial growth to the city's population but instead accommodate this projected growth. The City provides a Notice of Impact Mitigation Requirement to applicants for a building permit, who then work with the school district to determine the precise amount of the fee. Once the fee has been paid in full, LEUSD prepares and provides a certificate to the City demonstrating payment of the fee. Payment of fees in compliance with Government Code Section 65996 fully mitigates all impacts to school facilities. Therefore, this impact is less than Significant.

d) Less Than Significant Impact. The City of Wildomar owns and manages four public parks with a combined acreage of 14.27 acres: Marna O'Brien Park, Regency Heritage Park, Windsong Park, and Malaga Park. Additionally, the City is proposing to develop two new park sites of 11 and 27 acres, respectively. The City requires 3 acres of neighborhood and community parkland per 1,000 residents as per the City of Wildomar Municipal Code Section 16.20.020 Park and recreation fees and dedications. The proposed project is projected to add at maximum 498 new residents to the City's population, which would necessitate a dedication of 1.49 acres of public parkland by the project. The project will provide 43,430 square feet (1 acre) of public open space, however this space is not considered parkland and does not count towards the public open space requirements. Payment of the City's development impact fees will reduce the impact to less than significant as the fees are used to expand and develop parkland.

e) Less Than Significant Impact. Development of the proposed project would not significantly increase demand for other public facilities. Since the growth expected by the project would not exceed the City's growth projections, the demand for additional services would be incremental. The project applicant would be required to pay any applicable impact fees which will contribute to offsetting this demand on local government services. Therefore, impacts would be less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

1. The project applicant is required to comply with the requirements of the Riverside County Fire Department and pay standard development impact fees for fire service impacts (Wildomar Municipal Code Section 3.44).
2. The project applicant is required to pay standard development impact fees for police service impacts (Wildomar Municipal Code Section 3.44).

3. The City will require that the project applicant work with the LEUSD to determine the precise amount for the Notice of School Impact Mitigation, and demonstrate payment of the fee prior to issuance of a building permit. (Wildomar Municipal Code Section 15.50.170)
4. The project applicant is required to pay standard development impact fees for impacts to parks (Wildomar Municipal Code Section 3.44).

MITIGATION MEASURES

None required.

16. Recreation

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			✓	
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			✓	

DISCUSSION

a) Less Than Significant Impact. See response to issue V.15.d., Public Services above. The project would require the dedication of 1.49 acres of parkland as described under Section 16.20.020 Park and Recreation Fees and Dedications of the City's municipal code. The project would provide a 3,388 square-foot private club/fitness center on site. It would also provide 1-acre of public space including retail and outdoor eating space in addition to open and landscaped space. The project applicant would be required to pay impact fees which would reduce the impacts to existing parks and recreational facilities. Therefore, impacts would be less than significant.

b) Less Than Significant Impact. The project will provide a recreational area available to residents of the development, inclusive of a clubhouse with a swimming pool, outdoor seating, and a fitness center. This amenity would occupy 3,388 square feet of space on the site and is included as part of the proposed development. The construction or expansion of this facility would not result in an adverse physical effect on the environment beyond those analyzed for the overall development of the project in this document. Therefore, impacts would be less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

17. Transportation

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			✓	
b) Conflict or be inconsistent with CEQA Guidelines §15064.3, subdivision (b)?			✓	
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			✓	
d) Result in inadequate emergency access?			✓	

The Traffic Impact Analysis (TIA) was prepared by EDP Solutions, Inc. (EPD) on January 19, 2022 (2022b) (revised August 10, 2022) and is included as **Appendix 16.** This document was peer reviewed by the City.

Trip Generation

Trip generation represents the amount of traffic that is attracted and produced by a development based on the specific land uses planned for a given project. Trip generation rates for the proposed project are shown in **Table 17-1**, Project Trip Generation Rates, illustrating daily and peak hour trip generation estimates based on the ITE Trip Generation Manual, 11th Edition (2021), for each of the planned uses in the project. The daily AM and PM peak hours are defined as the hour with the highest traffic volumes during the 7 AM to 9 AM and 4 PM to 6 PM peak commute periods.

Table 17-1 Project Trip Generation Rates

Land Use[1]	ITE LU Code	Units[2-3]	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
Multifamily Housing (Mid-Rise)	221	DU	0.09	0.28	0.37	0.15	0.24	0.39	4.54
Supermarket	850	TSF	1.69	1.17	2.86	4.48	4.48	8.95	93.84

[1] DU = Dwelling Units

[2] TSF = Thousand Square Feet

[3] Pass-By Trip Percentage from the Institute of Engineers, Web Based Apps: Pass-By- Data and Rate Tables/2021 Pass-By Tables for ITE Gen Appendices. The daily pass-by reduction of 52.5% was assumed as an average of the AM and PM rates.

a) Less Than Significant Impact. As shown on Table 17-2, the proposed project is anticipated to generate a net total of approximately 4,551 two-way trips per day with 282 AM peak hour trips and 404 PM peak hour trips.

Public Transit and Bicycle Plans

The project area is directly served by the Riverside Transit Agency (RTA) route 23 which provides service within the cities of Wildomar, Murrieta and Temecula (RTA 2022a). The route travels along Clinton Keith Road fronting the southern project site boundary, stopping at the corner of Clinton Keith Road and Wildomar Trail. This stop would provide direct access to transit services for residents and employees of the proposed project, and all the commercial component of the proposed project to be accessed by transit by residents of Wildomar and surrounding communities. As a result of these proposed uses and the proximity of the stop to the site, the use of transit services is expected to increase. Transit service is reviewed and updated by RTA periodically to address ridership, budget, and community demand needs in order to adequately serve all residents of member communities (RTA 2022b). The Riverside County Transportation Commission and the City of Wildomar recognize the benefits of placing transit services in proximity of mixed-use developments as a congestion management strategy and include goals and policies that encourage this coordination within their Long-Range Transportation Study and General Plan, respectively (RCTC 2019, Wildomar 2003).

The site is also in proximity of roadside trails La Estrella Street W-E-24b and Salinda Del Sol N-S-27 which are approximately 0.4-mile northwest of the project, as well as the multi-use Jon Rodarme Regional Trail which sits approximately 0.5-mile south of the site (Wildomar 2019).

The proposed project will include a condition of approval that would improve a portion of the north side of Clinton Keith Road between the intersection with Wildomar Trail and Arya Road. The improvement will move the existing curb and gutter north to allow buildout of a third lane. A portion of the third lane already exists and the movement of the curb is needed to ensure that the existing bike lane can remain. The improvement is part of the City's Capital Improvement Program CIP 025 Clinton Keith Widening and the impacts were addressed in an IS/MND adopted by Riverside County (SCH# 200910103). The proposed project would only be responsible for the improvements if it is constructed before the City on the project.

Consistent with the City's plans, the proposed project will construct a bike lane on Wildomar Trail. Any additional proposed changes to bicycle and pedestrian facilities will be consistent with City development standards and will be checked for compliance as part of the City's review process. Therefore, the proposed project would not conflict with any policies, plans, or programs related to public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities as improvements would occur within the project boundaries. Impacts would be less than significant.

Roadways and Intersections

Automobile delay, as described by Level of Service (LOS) or other measurements of vehicular capacity or traffic congestion, is no longer considered a significant impact under CEQA. However, the City uses LOS to determine the appropriate size of roadways and the need for intersection improvements. If the proposed project is projected to exceed the City's LOS standard, conditions of approval may be placed on the project

to address the traffic impact. As CEQA must evaluate the whole of the project, physical impacts to the environment such as changes to roadways and/or intersection from either a mitigation measure or condition of approval must also be evaluated.

The TIA evaluated 12 intersections that would experience an increase of 50 trips or more under implementation of the project. The analysis evaluated impacts to these intersections using the following scenarios:

- Project Completion Conditions- This scenario forecasted traffic volumes for the anticipated opening year of the project, 2024, by adding the project's expected trips to existing traffic conditions and adding an ambient growth rate of 2 percent per year to existing traffic volumes.
- Cumulative Conditions- This scenario forecasted traffic volumes for the anticipated opening year of the project, 2024, by adding the project's expected trips to existing traffic conditions, adding an ambient growth rate of 2 percent per year to existing traffic volumes and adding traffic generated by other approved and pending development projects.

The City's Circulation Element identifies LOS D as an acceptable level of traffic operations during peak hour at intersections (Wildomar 2003). Therefore, project-related traffic that would result in roadway segments operating at LOS E or F would exceed the City's standard for congestion impacts. All intersections currently operate at an acceptable LOS under existing conditions, with the exception of Arya Road and Clinton Keith Road which operates at LOS E. The TIA concluded that these intersections would continue to operate an acceptable LOS under the Project Completion scenario during both AM and PM peak hours with the exception of Arya Road/Clinton Keith Road which would operate at LOS F during the PM peak hour To address the project's impacts to this roadway, the TIA recommends that the project construct the following roadway improvement or provide fair-share as per the approved Westpark Promenade Conditions of Approval:

- Restripe northbound combined-through left (NBTL) to northbound left (NBL) and northbound right (NBR) to northbound through right (NBTR), southbound left/through/right lane (SBLTR) to southbound through left (SBTL), add southbound right (SBR).

The project would construct this improvement in the event that its construction commences before the construction of the adjacent Westpark Promenade project. Otherwise, the project would contribute its fair-share for all improvements to this intersection. The construction of this improvement would reduce the LOS delay on Arya Road and Clinton Keith Road from 84.1 seconds at PM peak (LOS F) to 33.9 second at PM peak (LOS C).

Under the Cumulative Conditions analysis, the TIA found that five of the studied intersections would operate at an LOS E or worse. In order to address the proposed project's traffic impacts, the City would impose conditions of approval that require the project to construct improvements or pay its fair share to implement the improvements shown in **Table 17-3**. Improvements to Wildomar Trail/Project Driveway 4, also included in **Table 17-3**, would be implemented as project design features. The TIA includes the following specifications regarding these improvements:

- **Intersection of Wildomar Trail and Clinton Keith Road:** Construct improvements as per the approved Capital Improvement Project at this intersection. Improvements include the addition of westbound through receiving lane at project frontage and the modification of westbound right lane to westbound through right lane. Signal modifications include changing southbound left lane and northbound left lane signal permissive phasing to protected permissive and overlapping southbound right lane. In the event the CIP improvements are constructed before the project is constructed, the project would contribute fair-share to improvements at this intersection.
- **Intersection of Inland Valley Drive and Clinton Keith Road**: Project would contribute fair-share to the CIP at this intersection which improves the intersection to a 4-lane intersection. Improvements include addition of westbound through lane and eastbound through lane receiving lane.
- **Intersection of Palomar Road and Clinton Keith Road:** Project would contribute fair-share to intersection improvements as per approved CIP at this intersection. Improvements as per CIP include addition of 2nd eastbound left lane, modification of eastbound right lane to eastbound through right lane. Modification of westbound through lane to westbound through right lane. Modification on northbound through right lane to northbound through lane, addition of northbound right lane and addition of 2nd southbound left lane. The project's fair-share contributions would be limited to the 2nd southbound left lane improvement on Clinton Keith Road which would include widening the road to shift the southbound right lane further northwest.
- **Intersection of Arya Road and Clinton Keith Road:** Construct improvements or provide fair-share as per approved Westpark Promenade Conditions of Approval. Improvements include northbound striping to provide dedicated northbound left lane and northbound through right lane, dedicated southbound left lane and southbound through right lane. Recommended signal modifications include changing northbound-southbound permissive phasing to protective permissive phasing. Project would construct improvements in the event that its construction commences before the construction of the adjacent Westpark Promenade project; otherwise, project would contribute fair-share for all improvements to this intersection as stated in Section 7.2. Improvements in the Traffic Impact Analysis (Appendix 16) would include widening of Arya Road to 4 lanes.
- **Wildomar Trail/Project Driveway 4:** Construct improvements as project design feature to add Two Stage Gap Acceptance for eastbound left lane approach from Project Driveway.

All the improvements in **Table 17-3** would occur in the existing public right of way adjacent to or on existing streets. Therefore, construction and operation of the proposed roadway widening, restriping, and signalization would occur in areas disturbed by previous roadways, and environmental impacts as a result of the implementation of these improvements would be less than significant.

The implementation of these improvements would ensure all intersections are improved to satisfactory operations of LOS D or better, except for the intersections of Wildomar Trail/Clinton Keith Road and Inland

Valley Drive/Clinton Keith Road which would be improved to better-than-existing LOS F and LOS E operations, respectively, in the Cumulative PM peak hour conditions with the CIP improvements.

The TIA analyzed queuing impacts for nine intersections that would perform at an LOS D or worse under the Cumulative Conditions scenario. **Table 17-4** summarizes the queuing impacts at these nine intersections during AM and PM peak hours within the Existing Conditions, Project Completion Conditions, and Cumulative Conditions scenarios. As shown in **Table 17-4**, the project has the potential to create or contribute to existing queuing capacity deficiencies at six of the studied intersections. Deficient queueing can be improved either with striping modifications at intersections or through Intelligent Transportation Systems (ITS). The City of Wildomar has adopted ITS program which would improve deficient queueing operations to satisfactory operations.

Within the City of Wildomar, as a Condition of Approval, the project would be required to contribute to the ITS program which is used by the City to resolve queueing operations at impacted intersections as traffic conditions evolve. ITS uses various methods, such as intersection cameras, loop detection, and timing modifications to optimize intersection operations in real time. For intersections within the City of Murrieta (Nutmeg St/Clinton Keith Rd and California Oaks Rd/Clinton Keith Rd) the project will contribute payment to City of Murrieta CIP #8283 (Traffic Striping Modifications – Citywide). CIP #8283 is an ongoing program for removal and restriping to modify traffic control in accordance with changing traffic demands citywide and the applicant would work with the City to address queuing in the City of Murrieta with striping improvements.

Table 11 in Appendix 16 identifies the project's fair-share to contribute towards ITS program along with its fair-share for LOS improvements. Within the City of Wildomar and the City of Murrieta, these improvements would resolve LOS and/or queueing deficiencies. Impacts would be less than significant.

b) Less Than Significant Impact. According to CEQA Guidelines Section 15064.3 subdivision (b), vehicle miles traveled (VMT) exceeding an applicable threshold of significance may indicate a significant impact. The City of Wildomar's Vehicle Miles Travelled (VMT) CEQA Threshold Policy Guidelines allows mixed use projects with at least 30 percent residential to screen from requiring a VMT analysis (EDP 2021b)). This guideline follows the Office of Planning and Research's Guidelines on Evaluating Transportation Impacts in CEQA, which notes that projects which incorporate density, a mix of uses, and transit accessibility will tend to exhibit lower VMT when compared to developments without these features (OPR 2018). The proposed mixed-use development encompasses 4.47 acres of residential space and 4.53 acres of commercial space which makes the project approximately 49 percent residential. Therefore, the proposed development would screen from requiring a VMT analysis and the project's contribution to VMT can be considered less than significant.

c) Less Than Significant Impact. The project proposes the construction of six new driveways to accommodate the project's uses. Catt Road would be extended east of Arya Road to function as a driveway for gated entry/exit into the residential portion of the site and extend further east along the south border to provide entry/exit to the commercial portion of the project. In addition, the project proposes four other entrances/exits along the eastern border of the site from Wildomar Trail. Three of these entrances/exits would serve the commercial portion and the fourth is a gated access point to serve

the multi-family apartment community. The northern most driveway on Wildomar Trail providing access to the grocery store would primarily be used for truck access. Trucks would not be utilizing any other driveway to access the project site. The other three commercial project driveways are accessible to passenger vehicles. The multifamily development has direct pedestrian access to the shopping center through a gated central access that opens onto the plaza in front of the grocery store.

As part of the project's frontage improvements, Clinton Keith Road will be expanded to six-lanes immediately adjacent to the project site. A northbound left turn lane and a two-way stage gap acceptance or two-way-left-turn lane for the eastbound left lane that turns out of the project driveway will also be included at the intersection of Wildomar Trail and Project Driveway 4 as shown on Figure 2B of Appendix 16.

The City of Wildomar implements development standards designed to ensure standard engineering practices are used for all improvements. These features of the proposed project would be reviewed for compliance with these standards as part of the City's review process. Additionally, the implementation of the recommended roadway improvements and adherence to all applicable standards will ensure that roadway hazards are reduced, and impacts are less than significant.

Table 17-3 Recommended Improvements for Traffic Impacts											
Intersection	**Jurisdiction**	**Control Type**	**Cumulative Impacts**				**Recommended Improvements**	**With Improvements**

d) Less Than Significant with Mitigation Incorporated. The proposed project would provide six driveways. Access to the project site would be reviewed by the City and the CAL FIRE / Riverside County Fire Department to ensure there is sufficient emergency access provided at the site as required by the City of Wildomar Municipal Code 8.28, Fire Code, for compliance with the California Fire Code. The project would also be responsible for implementing mitigation measure **TRF-1**, as shown in the Clinton Keith Widening IS/MND (SCH # 200910103). Impacts would be less than significant with mitigation incorporated.

STANDARD CONDITIONS AND REQUIREMENTS

1. Prior to issuance of any building permit on the project site, the project applicant/developer shall pay all development impact fees (Wildomar Municipal Code Section 3.44).
2. Prior to issuance of any building permit on the project site, the project applicant/developer shall demonstrate payment of the Western Riverside Transportation Uniform Mitigation Fee (Wildomar Municipal Code Section 3.40).
3. The proposed project will have a condition of approval that would improve a portion of the north side of Clinton Keith Road between the intersection with Wildomar Trail and Arya Road. The improvement will move the existing curb and gutter north to allow buildout of a third lane. A portion of the third lane already exists and the movement of the curb is needed to ensure that the existing bike lane can remain. The improvement is part of the City's Capital Improvement Program CIP 025 Clinton Keith Widening and the impacts were addressed in an IS/MND adopted by Riverside County (SCH# 200910103). The proposed project would only be responsible for the improvements if it is constructed before the City on the project.
4. The City will also require the project to construct or pay its fair-share to implement the following improvements at seven intersections that would experience unsatisfactory Level of Service and/or queuing impacts during the existing plus project and/or cumulative plus project scenarios:
    - **Intersection of Wildomar Trail and Clinton Keith Road:** Construct improvements as per the approved Capital Improvement Project at this intersection. Improvements include the addition of westbound through receiving lane at project frontage and the modification of westbound right lane to westbound through right lane. Signal modifications include changing southbound left lane and northbound left lane signal permissive phasing to protected permissive and overlapping southbound right lane. In the event the CIP improvements are constructed before the project is constructed, the project would contribute fair-share to improvements at this intersection.
    - **Intersection of Inland Valley Drive and Clinton Keith Road:** Project would contribute fair-share to the CIP at this intersection which improves the intersection to a 4-lane intersection. Improvements include addition of westbound through lane and eastbound through lane receiving lane.
    - **Intersection of Palomar Road and Clinton Keith Road:** Project would contribute fair-share to intersection improvements as per approved CIP at this intersection. Improvements as per CIP

include addition of 2nd eastbound left lane, modification of eastbound right lane to eastbound through right lane. Modification of westbound through lane to westbound through right lane. Modification on northbound through right lane to northbound through lane, addition of northbound right lane and addition of 2nd southbound left lane. The project's fair-share contributions would be limited to the 2nd southbound left lane improvement on Clinton Keith Road which would include widening the road to shift the southbound right lane further northwest.

- **Intersection of Arya Road and Clinton Keith Road:** Construct improvements or provide fair-share as per approved Westpark Promenade Conditions of Approval. Improvements include northbound striping to provide dedicated northbound left lane and northbound through right lane, dedicated southbound left lane and southbound through right lane. Recommended signal modifications include changing northbound-southbound permissive phasing to protective permissive phasing. Project would construct improvements in the event that its construction commences before the construction of the adjacent Westpark Promenade project; otherwise, project would contribute fair-share for all improvements to this intersection as stated in Section 7.2. Improvements in the Traffic Impact Analysis (Appendix 16) would include widening of Arya Road to 4 lanes.
- The project would be required to contribute to the City's ITS program to mitigate queuing impacts at the impacted intersections shown in **Table 17-4** in Section V.17, Transportation.
- For intersections within the City of Murrieta (Nutmeg St/Clinton Keith Rd and California Oaks Rd/Clinton Keith Rd) the project will contribute payment to City of Murrieta CIP #8283 (Traffic Striping Modifications – Citywide). CIP #8283 is an ongoing program for removal and restriping to modify traffic control in accordance with changing traffic demands citywide and the applicant would work with the City to address queuing in the City of Murrieta with striping improvements.

5. As required by Municipal Code section 8.28, Fire Code, review of the project design by the City and CAL FIRE / Riverside County Fire Department is required to ensure adequate emergency access.

MITIGATION MEASURES

The following mitigation measure from the Clinton Keith Road Widening Project IS/MND (SCH# 200910103) would also be applicable to the proposed project (numbering is from 2009 IS/MND):

TRF-1 During final design, stage construction and detour plans will be prepared to minimize disruption to the traveling public. Such plans shall be prepared in consultation with affected local jurisdictions prior to construction. Adequate access shall be provided at all times to and from side streets serving adjacent land uses. To further ensure public safety, proper detours and warning signs shall be established. The stage construction and detour plans shall be designed to not interfere with any emergency response or evacuation plans, and construction routes shall utilize

non-residential streets to the extent practicable. Finally, such plans shall identify construction worker parking areas and equipment staging areas to minimize impacts to roadway operations.

Timing/Implementation: *During final design*

Enforcement/Monitoring: *City of Wildomar Building Department*

18. Tribal Cultural Resources

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or		✓		
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.		✓		

DISCUSSION

a

i, ii) Less Than Significant Impact with Mitigation Incorporated. The project site does not contain any structures or resources that are listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in PRC Section 5020.1(k) (see section V.5, above).

In accordance with Senate Bill (SB) 18, the Native American Heritage Commission was contacted to obtain a list of tribes that may have cultural association with the project site and its local vicinity. Assembly Bill (AB) 52 established a formal consultation process for California tribes within the CEQA process. The Bill specifies that any project that may affect or cause a substantial adverse change in the significance of a tribal cultural resource would require a lead agency to "begin consultation with a California Native American tribe that is traditional and culturally affiliated with the geographic area of the proposed project." Section 21074 of AB 52 also defines

tribal cultural resources as sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe and that are either listed on, or eligible for, the California Register of Historical Resources or a local historic register, or the lead agency chooses to treat the resource as a significant resource.

The City notified tribes that requested to be alerted of new projects in 2021, which included the Morongo Band of Mission Indians, Pechanga Band of Mission Indians, Rincon Band of Luiseño Indians, and Soboba Band of Mission Indians, and pursuant to SB 18, the City notified tribes on the list obtained from the Native American Heritage Commission on December 10, 2021. The Rincon Band of Luiseño Indians and the Soboba Band of Luiseño Indians responded. The Rincon Band of Luiseno Indians notified the City on December 29, 2021 that the identified location of the project is within the Traditional Use Area of the Luiseño people and that the tribe agrees with the measures proposed in the Cultural Resources Assessment, which include archaeological and tribal monitoring for all ground disturbing activities, a monitoring report, and protocols for discovery of cultural material and human remains. The Rincon Band supports all efforts to completely avoid cultural resources as preferred mitigation and requests to be notified of any changes in the project plans.

The Soboba Band of Luiseño Indians stated in a letter to the City on January 10, 2022, that the project area is considered sensitive by the people of Soboba, as there are existing Tribal Traditional Use Areas in the surrounding areas. Their in-house database search identified multiple areas of potential impact. For these reasons, the tribe requested consultation with the City. The City of Wildomar consulted with the Pechanga Band of Mission Indians on January 20, 2022 and consulted with the Soboba Band of Luiseno Indians on January 13, 2022. The City reached out to the tribes again on March 8th, 2022 and March 18th, 2022 but the tribes did not respond.

The City works closely with the tribes and consults on all projects before the City. The Pechanga Band of Mission Indians provided cultural and tribal mitigation measure language which the Soboba Band of Mission Indians agreed upon. These mitigation measures have been incorporated into this IS/MND.

With the inclusion of mitigation measures **TRI-1** through **TRI-7** and **CUL-1**, impacts to tribal cultural resources would be mitigated to a less than significant impact with mitigation incorporated.

STANDARD CONDITIONS AND REQUIREMENTS

None required.

MITIGATION MEASURES

Refer to mitigation measure **CUL-1** in section V.5 of this document.

TRI-1 **Inadvertent Archeological Find.** If during ground disturbance activities, cultural resources are discovered that were not assessed by the archaeological report(s) and/or environmental assessment conducted prior to project approval, the following procedures

shall be followed. Cultural resources are defined, as being multiple artifacts in close association with each other, but also include fewer artifacts if the area of the find is determined to be of significance due to its sacred or cultural importance as determined in consultation with the lead agency and Native American Tribe(s) that elected to consult under AB 52 ("Consulting Tribe(s)").

a. All ground disturbance activities within 100 feet of the discovered cultural resources shall be halted until a meeting is convened between the developer, the archaeologist, the tribal representative(s) and the Planning Director to discuss the significance of the find.
b. At the meeting, the significance of the discoveries shall be discussed and after consultation with the tribal representative(s), developer, and the archaeologist, a decision shall be made, with the concurrence of the Planning Director, as to the appropriate mitigation (documentation, recovery, avoidance, etc.) for the cultural resources.
c. Grading or further ground disturbance shall not resume within the area of the discovery until an agreement has been reached by all parties as to the appropriate mitigation. Work shall be allowed to continue outside of the buffer area and will be monitored by additional Tribal monitors if needed.
d. Treatment and avoidance of the newly discovered resources shall be consistent with the Treatment and Monitoring Agreements entered into with the Consulting Tribe(s) and the applicant. This may include avoidance of the cultural resources through project design, in-place preservation of cultural resources located in native soils and/or re-burial on the Project property so they are not subject to further disturbance in perpetuity as identified in Mitigation Measures TRI-2 and TRI-7.
e. If the find is determined to be significant and avoidance of the site has not been achieved, a Phase III data recovery plan (see Mitigation Measure TRI-6) shall be prepared by the project archeologist, in consultation with the Consulting Tribe(s), and shall be submitted to the City for their review and approval prior to implementation of the said plan.
f. Pursuant to Calif. Pub. Res. Code § 21083.2(b) avoidance is the preferred method of preservation for archaeological resources and tribal cultural resources. If the landowner and the Consulting Tribe(s) cannot agree on the significance or the mitigation for the archaeological or tribal cultural resources, these issues will be presented to the Planning Director for decision. The City's Planning Director shall make the determination based on the provisions of the California Environmental Quality Act with respect to archaeological and tribal cultural resources, recommendations of the project archeologist, and shall take into account the cultural and religious principles and practices of the Consulting Tribe(s). Notwithstanding any other rights available under the law, the decision of the City Planning Director shall be appealable to the City Planning Commission and/or City Council.

Timing/Implementation: *During any ground-disturbing or construction activities*

Enforcement/Monitoring: *City of Wildomar Engineering Department and Planning Department*

TRI-2 **Cultural Resources Disposition.** In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:

a. One or more of the following treatments, in order of preference, shall be employed with the Consulting Tribe(s). Evidence of such shall be provided to the City of Wildomar Planning Department:

   i. Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place where they were found with no development affecting the integrity of the resources.

   ii. Reburial of the resources on the Project property. The measures for reburial shall include, at least, the following: Measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed, with an exception that sacred items, burial goods and Native American human remains are excluded. Any reburial process shall be culturally appropriate. Listing of contents and location of the reburial shall be included in the confidential Phase IV report (see Mitigation Measure TRI-6). The Phase IV Report shall be filed with the City under a confidential cover and not subject to Public Records Request.

   iii. If preservation in place or reburial is not feasible then the resources shall be curated in a culturally appropriate manner at a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees by the Applicant necessary for permanent curation. Evidence of curation in the form of a letter from the curation facility stating that subject archaeological materials have been received and that all fees have been paid, shall be provided by the landowner to the City. There shall be no destructive or invasive testing on sacred items, burial goods, and Native American human remains, as defined by the cultural and religious practices of the Most Likely Descendant. Results concerning finds of any inadvertent discoveries shall be included in the Phase IV monitoring report.

Timing/Implementation: *During grading activities*

Enforcement/Monitoring: *City of Wildomar Engineering Department and Planning Department*

TRI-3 **Archaeologist Retained.** Prior to issuance of a grading permit the project applicant shall retain a Riverside County qualified Registered Professional Archaeologist (RPA), to monitor all ground disturbing activities in an effort to identify any unknown archaeological resources.

The Registered Professional Archaeologist and the Tribal monitor(s) required by Mitigation Measures TRI-4 and TRI-5 shall manage and oversee monitoring for all initial ground disturbing activities and excavation of each portion of the project site including clearing, grubbing, tree removals, mass or rough grading, trenching, stockpiling of materials, rock crushing, structure demolition and etc. The Registered Professional Archaeologist and the Tribal monitor(s), shall independently have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources in coordination with any required special interest or tribal monitors.

The developer/permit holder shall submit a fully executed copy of the contract to the Planning Department to ensure compliance with this condition of approval. Upon verification, the Planning Department shall clear this condition.

In addition, the Registered Professional Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB 52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB 52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include:

a. Project grading and development scheduling;

b. The Project archaeologist and the Consulting Tribes(s) shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as-needed basis;

c. The protocols and stipulations that the contractor, City, Consulting Tribe(s) and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

Timing/Implementation: Prior to issuance of grading permit

Enforcement/Monitoring: City of Wildomar Engineering Department and Planning Department

TRI-4 **Native American Monitoring (Pechanga).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Pechanga Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist.

Timing/Implementation: During ground-disturbing activities

Enforcement/Monitoring: City of Wildomar Engineering Department and Planning Department

TRI-5 **Native American Monitoring (Soboba).** Tribal monitor(s) shall be required on-site during all ground-disturbing activities, including grading, stockpiling of materials, engineered fill, rock crushing, etc. The land divider/permit holder shall retain a qualified tribal monitor(s) from the Soboba Band of Luiseno Indians. Prior to issuance of a grading permit, the developer shall submit a copy of a signed contract between the above-mentioned Tribe and the land divider/permit holder for the monitoring of the project to the Planning Department and to the Engineering Department. The Tribal Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground-disturbance activities to allow recovery of cultural resources, in coordination with the Project Archaeologist.

Timing/Implementation: During ground-disturbing activities

Enforcement/Monitoring: City of Wildomar Engineering Department and Planning Department

TRI-6 **Archeology Report - Phase III and IV.** Prior to final inspection, the developer/permit holder shall prompt the Project Archeologist to submit two (2) copies of the Phase III Data Recovery report (if required for the Project) and the Phase IV Cultural Resources Monitoring Report. The Phase IV report shall include evidence of the required cultural/historical sensitivity training for the construction staff held during the pre-grade meeting. The Planning Department shall review the reports to determine adequate mitigation compliance. Provided the reports are adequate, the Community Development Department shall clear this condition. Once the report(s) are determined to be adequate,

two (2) copies shall be submitted to the Eastern Information Center (EIC) at the University of California Riverside (UCR) and one (1) copy shall be submitted to the Consulting Tribe(s) Cultural Resources Department(s).

Timing/Implementation: *Prior to final inspection*

Enforcement/Monitoring: City of Wildomar Engineering Department and Planning Department

TRI-7 **Non-Disclosure of Reburial Locations**. It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, pursuant to the specific exemption set forth in California Government Code 6254 (r)., parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).

Timing/Implementation: *During discovery of Native American human remains*

Enforcement/Monitoring: *City of Wildomar Engineering Department and Planning Department*

19. Utilities and Service Systems

Issues, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			✓	
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			✓	
c) Result in a determination by the waste water treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			✓	
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			✓	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			✓	

DISCUSSION

a,c) **Less Than Significant Impact.**

Wastewater Treatment

The EVMWD currently operates three wastewater treatment facilities: The Regional Water Reclamation Facility (WRF), the Horsethief Canyon Wastewater Treatment Plant (WWTP), and the Railroad Canyon WWTP (EVMWD 2021). In addition, flow in the southern part of the EVMWD's service area is treated at the Santa Rosa Water Reclamation Facility operated by the Rancho California Water District. The project site is within the Regional WRF wastewater collection area (EVMWD 2021).

To determine future demand for wastewater facilities, the EVMWD relies on recommended generation factors specified in the 2016 Sewer System Master Plan. The recommended generation rates are determined according to land use designation. The wastewater generation rate in Table 4-8, Calibrated Wastewater Duty and Generation Factors, of the 2016 Sewer System Master Plan is 1,094 gallons per day (gpd)/acre for High Density Residential (12-24 du/acre) and 806 gallons per day (gpd)/acre for General Commercial (EVMWD 2016). The residential portion of the site covers 4.48 acres and the commercial portion covers 4.53 acres, therefore, the proposed wastewater generation for the site would be 4,901 gpd and 3,651 gpd, respectively, totaling 8,552 gpd.

The proposed project would connect to a 16-inch gravity sewer line that is present in Catt Road and as well as an 8-inch sewer main in Wildomar Trail. The project site is located within the Regional Water Reclamation Facility (WRF) service area. The Regional WRF has an average daily intake of 5.46 million gallons per day (mgd) with a flow capacity of 8 mgd and a peak flow capacity of 17.6 mdg (EVMWD 2016). Therefore, the Regional WRF has an excess daily intake capacity of approximately 2.54 mgd. In addition, the RWRF also has a planned capacity expansion to 4 mgd (EVMWD 2021).

The proposed project would result in an increase of approximately 0.0034 percent[5] of the remaining wastewater flow capacity of the Regional WRF and would be even less with implementation of the future expansion of the WRF. Therefore, based on wastewater generated by the project, the current capacity of the Regional WRF would be able to accommodate the wastewater flows generated from the proposed project. The proposed project impacts to wastewater treatment are less than significant.

Water Treatment

Water treatment facilities filter and/or disinfect water before it is delivered to customers. The EVMWD supplies water to the surrounding area and would supply water to the project site. Water line improvements at the project site would be constructed in accordance with Title 13, Public Services, of the Wildomar Municipal Code.

EVMWD purchases water from the Western Municipal Water District (WMWD) via Western Municipal Water District (western). The imported water is a blend of Colorado River water, State Project Water, and local Western supplies (EVMWD 2021).

The water treatment facilities, their capacities, and remaining available treatment capacities are shown in **Table 19-1**, EVMWD Water Treatment Facilities.

[5] 8,552 gpd / 2,540,000 gpd = 0.003367 = 0.0034 percent.

Table 19-1 EVMWD Water Treatment Facilities			
Treatment Plant	**Capacity (mgd)**	**Maximum Flow (mgd)**	**Remaining Treatment Capacity (mgd)**
Canyon Lake Water Treatment Plant	7	7	0
Skinner Filtration Plant (via the Auld Valley Pipeline)	20.2	14.5	5.7
Mills Filtration Plant (via the Temescal Valley Pipeline)	12.7	8.9	3.8
Total:	39.9	30.4	**9.5**
Source: EVMWD 2021			

As shown in **Table 19-1**, the EVMWD water treatment facilities have a remaining water treatment capacity of approximately 9.5 mgd. Based on water generations rates in Table 4-8, Calibrated Wastewater Duty and Generation Factors, of the Sewer System Master Plan, the water duty factors for the site's uses would be 1,900 gpd/acre for High Density Residential (12-24 du/ac) and 1,500 gpd/acre for General Commercial (EVMWD 2016). The total proposed water demand for both uses covering 9.01 acres of the site would be 15,307 gpd (EVMWD 2016). This is approximately 0.17 percent[6] of the remaining treatment capacity of the EVMWD water treatment facilities. Therefore, based on water demands of the project, the current capacity of the EVMWD treatment facilities would be able to accommodate the water demands generated from the proposed project. The proposed project impacts to water treatment is less than significant.

Stormwater Drainage

Stormwater drainage impacts are addressed in section V.10.c.iii, above. The proposed development would be approximately 90 percent impervious (DRC 2022). The proposed development consists of two drainage areas both of which will be picked up by a separate backbone drainage system (DRC 2022). The storm water will be treated by four modular wetland biofiltration BMP flow-rate based units and hydrodynamic separators before entering the underground detention chambers (DRC 2022). Outflow from each underground detention basin will be metered by an outlet control manhole with a weir plate then discharge in the County's Line 'GG', across Clinton Keith Road via a double 60-inch RCP storm drain into the RCFC and WCD regional drainage facility (DRC 2022b). Additionally, the BMP facilities implemented by the proposed project would improve water quality and reduce runoff. Impacts are less than significant. Stormwater drainage improvements would not exceed the capacity of storm drain systems, in accordance with the City of Wildomar Municipal Code Section 13.12.050 and the MS4 Permit from the San Diego Regional Water Quality Control Board.

[6] 15,307 gpd / 8,800,000 gpd = 0.00173943 = 0.17 percent.

Electricity and Natural Gas

The project site would require connection to utilities such as natural gas lines in the vicinity of the site in accordance the installation requirements of City of Wildomar Municipal Code Section 16.40.010. The applicant would be responsible for payment of electricity and gas connections as well as use of the utility. As described in section V.6, Energy, the project would not result in energy use such that new or expanded facilities is required. Therefore, impacts are less than significant.

b) Less Than Significant Impact. The project site is within the service boundary for the EVMWD. The EVMWD utilizes both groundwater and imported water supplies to ensure adequate water is available for consumers. Imported water is utilized to ensure that significant overdraft of local groundwater supplies does not occur. Imported water is obtained from the Metropolitan Water District, local surface water from Canyon Lake, and local groundwater from the Elsinore Basin. Since the adoption of the 2005 Groundwater Management Plan, EVMWD has limited pumping to 5,500 acre-ft/year to be consistent with the safe yield of the Elsinore Groundwater Basin (EVMWD 2021). The EVMWD has the ability to obtain a capacity of 26,296 acre-feet per year (23.4 mgd) during average years and wet years (EVMWD 2021).

As shown in the 2020 Urban Water Management Plan, the projected 2025 water demand and supply would be 38,932 acre-feet per year and 47,218 acre-feet per year, respectively (EVMWD 2021). Therefore, the supply would exceed the demand by 8,286 acre-feet/year. Thus, this impact is less than significant because there would be sufficient water supply to service the proposed project.

The California State Model Water Efficient Landscape Ordinance (MWELO) requires local agencies to adopt, implement, and enforce the MWELO or a local Water Efficient Landscape Ordinance (WELO) that is at least as effective as the MWELO. Chapter 17.276 of the City of Wildomar Municipal Code implements the MWELO and requires that a landscape documentation package be submitted to the City for review and approval prior to the issuance of any permits to install or construct any landscape-related improvements. This ensures that landscapes are planned, designed, installed, maintained, and managed in a manner that uses water efficiently, encourages water conservation, and prevents water waste. Compliance with the City's ordinance would additionally help to reduce impacts on water supplies and ensure that water resources would be available for the foreseeable future of the project.

d) Less Than Significant Impact. The main solid waste disposal site that would serve the project site is the El Sobrante Landfill in Corona. The landfill is projected to reach its full capacity of 209,910,000 cy in 2051 (CalRecycle 2019a). The landfill covers approximately 1,322 acres and has a maximum permitted throughput of approximately 16,054 tons/day (CalRecycle 2019a). The El Sobrante Landfill has a remaining capacity of 143,977,170 tons (CalRecycle 2019a).

The California Department of Resources Recycling and Recovery's (CalRecycle) sample solid waste generation rates for residential uses is 12.23 pounds per household per day and 2.5 pounds per 1,000 square feet per day for the retail and restaurant uses (CalRecycle 2019b). Therefore, the proposed apartments would generate 1,834.5 lb/day of solid waste (12.23 lb x 150 apartments) and the commercial center would generate 885.55 lb/day of solid waste (0.0025 lb x 35,422 square feet) for a total of 1,923 lb/day.

This increase would be 0. 006 percent[7] of the landfill's daily maximum permitted throughput and could be accommodated. Therefore, the project impacts on landfill capacity are less than significant**.**

e) Less Than Significant Impact. Solid waste would be generated during construction and operation of the proposed project. The Solid Waste Reuse and Recycling Access Act of 1991 requires that adequate areas be provided for collecting and loading recyclable materials such as paper, products, glass, and other recyclables. City of Wildomar Municipal Code Section 8.104 regulates solid waste handling and mandates that sufficient receptacles be in place onsite to accommodate refuse and recycling. Compliance with state law and the City's Municipal Code would ensure the project would result in a less than significant impact.

STANDARD CONDITIONS AND REQUIREMENTS

1. As required by City of Wildomar Municipal Code Section 13.12.050, Regulatory Consistency, and the MS4 Permit from the San Diego Regional Water Quality Control Board, stormwater drainage improvements must be consistent and in accordance with these provisions.
2. As required by City of Wildomar Municipal Code Section 16.40.10, Installation Requirements, the project would comply with the installation requirements for undergrounding utilities.
3. As required by City of Wildomar Municipal Code Section 8.104, Solid Waste Collection and Disposal, the generation, accumulation, handling, collection, transportation, conversion, and disposal of solid waste must be controlled and regulated through the provisions of this chapter.
4. As required by City of Wildomar Municipal Code Section 17.276.060, a landscape documentation package shall be submitted and approved prior to installation of any landscaping.

MITIGATION MEASURES

None required.

[7] 1,923 lb/day = 0.96 ton/day

0.96 tons/day / 16,054 tons/day = 0.0000598 or 0.00598 percent.

20. Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?		✓		
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?		✓		
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			✓	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			✓	

a) Less Than Significant Impact With Mitigation Incorporated. California Government Code Chapter 6.8 directs the California Department of Forestry and Fire Protection (CALFIRE) to identify areas of very high fire hazard severity within Local Responsibility Areas (LRA). Mapping of the areas, referred to as Very High Fire Hazard Severity Zones (VHFHSZ), is based on data and models of potential fuels over a 30- to 50-year time horizon and their associated expected fire behavior and expected burn probabilities, which quantifies the likelihood and nature of vegetation fire exposure to buildings. LRA VHFHSZ maps were initially developed in the mid-1990s and are now being updated based on improved science, mapping techniques, and data. In 2008, the California Building Standards Commission adopted California Building Code Chapter 7A requiring new buildings in Very High Fire Hazard Severity Zones to use ignition-resistant construction methods and materials.

The eastern and western portions of the City of Wildomar have been designated Very High Fire Hazard Severity Zones (VHFHSZ). The project site is within a VHFHSZ within the LRA (CALFIRE 2009). Development on the project site would be subject to compliance with the 2019 CBC. Wildomar is covered under the Riverside County Operational Area Emergency Operations Plan (2019) and the Riverside County Operation Area Multi-Jurisdictional Local Hazard Mitigation Plan (2012). These plans provide guidance to effectively

respond to any emergency, including wildfires. In addition, all proposed construction is required to meet minimum standards for fire safety. Implementation of these plans and policies in conjunction with compliance with the Fire Code would minimize the risk of loss due to wildfires.

Development on the project site would be subject to compliance with the CBC. Moreover, the City of Wildomar is under the Riverside County Operational Area Multi-Jurisdictional Local Hazard Mitigation Plan, which provides guidance to effectively respond to and mitigate emergencies, including wildfires. Furthermore, the proposed project would not conflict with adopted emergency response or evacuation plans. The surrounding roadways would continue to provide emergency access to the project site and surroundings during construction and postconstruction. In addition, as with all projects in the City of Wildomar, mitigation measures **HAZ-3** and **HAZ-4**, which require conformance with the CBC and Fire Code, would be implemented. Therefore, impacts are considered less than significant with mitigation incorporated.

b) Less Than Significant with Mitigation Incorporated. The project site is primarily vacant with the exception of a single-family residential structure and additional remnant structures associated with the residence. The majority of the site contains ruderal/weedy vegetation as well as several trees. The topography of the site is gently to moderately sloped from the north to the south. The City does not have high-speed prevailing winds, and average wind speeds are approximately 6 miles per hour during the windier part of the year, from November to June (Weather Spark 2022).

Development of the site with the proposed improvements would reduce the amount of exposed vegetation that could be used as fuel on the site. Therefore, the project and site conditions would not contribute to an increase in exposure to wildfire risk. Additionally, development on the project site would be subject to compliance with the CBC. Moreover, the City of Wildomar is under the Riverside County Operational Area Multi-Jurisdictional Local Hazard Mitigation Plan, which provides guidance to effectively respond to and mitigate emergencies, including wildfires. The project site is within a VHFHSZ, and as with all projects in the City of Wildomar, mitigation measures **HAZ-3** and **HAZ-4,** which require conformance with the CBC and Fire Code, would be implemented. Therefore, impacts are considered less than significant with mitigation incorporated.

c) Less Than Significant Impact. The project site would require expansion of connection to utilities such as electricity, water, and sewer. The project applicant is required to pay for connections and maintenance of onsite utility infrastructure. The utilities would be installed to meet service requirements. The construction of infrastructure improvements for the project would not directly increase fire risk, and impacts are less than significant.

d) Less Than Significant Impact. As discussed in Section V.7 and V.10 respectively, above, the project site is not within a landslide hazard area or a flood plain. Historical geographic mapping does not show any flooding or safety concerns caused by the drainage. Construction activities related to the proposed project would be subject to compliance with the CBC and would include BMPs. BMPs may include but are not limited to covering of the soil, use of a dust-inhibiting material, landscaping, use of straw and jute, hydroseeding, and grading in a pattern than slows stormwater flow and reduces the potential for erosion,

landslides, and downstream flooding. Operationally, drainage at the project site would be match existing conditions. Therefore, with implementation of BMPs, impacts are less than significant.

STANDARD CONDITIONS AND REQUIREMENTS

None Required.

MITIGATION MEASURES

Implementation of mitigation measures **HAZ-3** and **HAZ-4** in Section V.9 of this document.

VI. MANDATORY FINDINGS OF SIGNIFICANCE

Issues, does the project:	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?		✓		
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)		✓		
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?		✓		

DISCUSSION

The following mandatory findings of significance are in accordance with CEQA Guidelines Section 15065.

a) Less Than Significant Impact with Mitigation Incorporated. Based on the evaluations and discussion in this IS/MND, the proposed project has a very limited potential to incrementally degrade the quality of the environment. As discussed in Section V.3, Air Quality, implementation of mitigation measures **AQ-1** and **AQ-2**, would reduce emissions from the construction phase of the project to less than significant. Additionally, as discussed in Section V.4, Biological Resources, implementation of mitigation measures **BIO-1** and **BIO-2** would require surveys for nesting birds and burrowing owls, reducing impacts to biological resources to less than significant. As discussed in Section V.5, Cultural Resources, with implementation of mitigation measures **CUL-1** and **TRI-1** through **TRI-7,** the proposed project would have

a less than significant impact on archaeological resources. Furthermore, as discussed in Section V.7, Geology and Soils, the proposed project would have a less than significant impact on geological and paleontological resources with implementation of mitigation measure **GEO-1**, which requires the project to incorporate recommendations of the geotechnical report, and **GEO-2**, which requires a paleontological grading observation schedule during grading. Moreover, with implementation of mitigation measures **CUL-1** and **TRI-1** through **TRI-7**, the proposed project would have a less than significant impact to tribal cultural resources. Implementation of **HAZ-1**, and **HAZ-2**, as discussed in section V.8, Hazards and Hazardous Materials, would ensure that the site is tested for hazardous materials and that if such materials are found, that they are removed safely. With implementation of **HAZ-3** and **HAZ-4**, as discussed in section V.8, Hazards and Hazardous Materials, and section V.20, Wildfire, the proposed project would result in a less than significant impact with respect to wildfire with conformance to building codes and City standards. The project may also include a roadway improvement on Clinton Keith Road between the intersection with Wildomar Trail and Arya Road, which is discussed in Section V.17, Transportation. The improvement is part of the City's Capital Improvement Program CIP 025 Clinton Keith Widening and the impacts were addressed in an IS/MND adopted by Riverside County (SCH# 200910103). The proposed project would only be responsible for the improvements if it is constructed before the City on the project. The project would also be responsible for implementing mitigation measure **NOI-1** and **TRF-1**, as shown in the Clinton Keith Widening IS/MND. These mitigation measures would reduce impacts with respect to construction noise and access. Therefore, the proposed project would not significantly affect the environment after implementation of the mitigation measures in this IS/MND. Therefore, any impacts would be considered less than significant with mitigation incorporated.

b) Less Than Significant Impact with Mitigation Incorporated.

Aesthetics

Implementation of the proposed project would not contribute to cumulative visual resource or aesthetic impacts. This project and other projects in Wildomar are required to comply with the City's light pollution ordinance. The project is proposed in a developing region of the City and is consistent with the proposed General Plan designation. While the proposed building may obscure views of surrounding ridgelines from the project site, the proposed project, in combination with other development in the vicinity would not significantly impact any scenic vistas. Therefore, the proposed project would have a less than cumulatively considerable impact to aesthetics.

Agriculture and Forestry Resources

Implementation of the proposed project would not result in any impacts to agriculture or forestry resources and would therefore not contribute to cumulative impacts to these resources.

Air Quality

The South Coast Air Quality Management District's approach for assessing cumulative impacts are based on the Air Quality Management Plan forecasts of attainment of ambient air quality standards in accordance with the requirements of the federal and California Clean Air acts. In other words, the South Coast AQMD considers projects that are consistent with the AQMP, which is intended to bring the basin

into attainment for all criteria pollutants, to also have less than significant cumulative impacts. The discussion under Issue a) in section V.3, Air Quality, describes the South Coast AQMD criteria for determining consistency with the AQMP and further demonstrates that the proposed project would be consistent with the plan.

Cumulative Short-Term Emissions

The SCAB is designated nonattainment for O_3, PM_{10}, and $PM_{2.5}$ for State standards and nonattainment for O_3 and $PM_{2.5}$ for Federal standards. The project construction-related emissions by themselves would not have the potential to exceed the South Coast AQMD significance thresholds for criteria pollutants. Since these thresholds indicate whether individual project emissions have the potential to affect cumulative regional air quality, project-related construction emissions would not be cumulatively considerable. The South Coast AQMD has developed strategies to reduce criteria pollutant emissions outlined in the AQMP pursuant to the federal Clean Air Act mandates. With the compliance of these strategies, the proposed project would not exceed thresholds by the South Coast AQMD.

South Coast AQMD rules, mandates, and compliance with adopted AQMP emissions control measures would also be imposed on construction projects throughout the air basin, which would include related projects. Compliance with South Coast AQMD rules and regulations would reduce the proposed Project construction-related impacts to a less than significant level. Therefore, project-related construction emissions, in combination with those from other projects in the area, would not substantially deteriorate the local air quality. Construction emissions associated with the proposed project would not result in a cumulatively considerable contribution to significant cumulative air quality impacts.

Cumulative Long-Term Impacts

The South Coast AQMD has not established separate significance thresholds for cumulative operational emissions. The nature of air emissions is largely a cumulative impact. As a result, no single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, individual project emissions contribute to existing cumulatively significant adverse air quality impacts. The South Coast AQMD developed the operational thresholds of significance based on the level above which individual project emissions would result in a cumulatively considerable contribution to the SCAB's existing air quality conditions. Therefore, a project that exceeds the South Coast AQMD operational thresholds would also be a cumulatively considerable contribution to a significant cumulative impact. With the implementation of applicable South Coast AQMD rules and regulations, the proposed project's operational emissions would not exceed South Coast AQMD thresholds as they would alleviate potential impacts related to cumulative conditions on a project-by-project basis. As a result, operational emissions associated with the proposed project would not result in a cumulatively considerable contribution to significant cumulative air quality impacts. Project operations would not contribute a cumulatively considerable net increase of any nonattainment criteria pollutant.

Biological Resources

The project site is primarily vacant and undeveloped, and is not located with a Criteria Cell, but is located within the Stephens' Kangaroo Rat Fee Plan Area and MSHCP Fee Area. No sensitive species were found

on-site, but the site could contain habitat for burrowing owls and nesting birds. Implementation of mitigation measures **BIO-1**, and **BIO-2** would minimize the potential take of these species and reduce impacts to less than significant. The proposed project also will pay the MSHCP and Stephens' Kangaroo Rat Plan Area fees as required to ensure that there would be a less than cumulatively considerable impact on biological resources.

Cultural Resources

Development of the project site would contribute to a cumulative increase in potential impacts to cultural and archaeological resources. Other projects in the region could demolish or otherwise alter cultural resources. However, mitigation measures **CUL-1** and **TRI-1** through **TRI-7** would reduce the potential impacts associated with development on the project site. Other projects in the region would be required to comply with CEQA Guidelines Section 15064.5, which requires the lead agency to determine if discovered resources are unique or historically significant, and if so, to avoid or mitigate impacts to such resources in accordance with the provisions of PRC Section 21083.2. Thus, the project would have a less than cumulatively considerable impact.

Energy

Construction and operation of the improvements would result in an increase in energy. Construction energy would be temporary and normal of development in the region. Section V.6, Energy, analyzed the project's cumulative contribution to energy in the region and determined the project would have a less than cumulatively considerable environmental impact to energy.

Geology and Soils

Project-related impacts on geology and soils associated with development on the project site are site specific, and project development would not contribute to seismic hazards or soil erosion. Implementation of mitigation measure **GEO-1** would result in decreased exposure to the risks associated with seismic activity, and implementation of mitigation measure **GEO-2** would ensure impacts to paleontological resources are reduced to a less than significant level. Therefore, impacts are expected to be less than cumulatively considerable**.**

Greenhouse Gas Emissions

The greenhouse gas analysis in section V.8, Greenhouse Gas Emissions, analyzed the proposed project's cumulative contribution to global climate change and determined that the project would have a less than cumulatively considerable environmental impact resulting from greenhouse gas emissions.

Regarding goals for 2050 under Executive Order S-3-05, at this time it is not possible to quantify the emissions savings from future regulatory measures, as they have not yet been developed. Nevertheless, it is anticipated that operation of the proposed project would comply with all applicable measures that state lawmakers decide would lead to an 80 percent reduction below 1990 levels by 2050.

Hazards and Hazardous Materials

The proposed project is not expected to utilize or contribute to hazards associated with the accidental release of hazardous materials. The project site was found to contain stockpiles of soils of unknown origin and remnants of a former livestock operation, but implementation of mitigation measures **HAZ-1** and **HAZ-2** would require testing and removal of potentially hazardous materials and reduce impacts to less than cumulatively considerable. The project site is within a Very High Fire Hazard Severity Zone. Implementation of mitigation measures **HAZ-3** and **HAZ-4** would ensure that the proposed project complies with California Building Code, Fire Code, and City standards in regard to fire hazards. Compliance with federal, state, and local regulations would ensure that cumulative hazard conditions are less than cumulatively considerable.

Hydrology and Water Quality

Water quality measures included in the proposed project and the WQMP and SWPPP prepared for the project would protect the quality of water discharged from the site during both construction and operational activities and are intended to ensure impacts are not cumulatively considerable. The site is not located within a flood hazard zone. Therefore, the proposed project would have a less than cumulatively considerable impact related to hydrology.

Land Use and Planning

Implementation of the proposed project in conjunction with other cumulative development in accordance with the City's General Plan could cause citywide land use and general planning impacts. The proposed project would be consistent with the General Plan thereby reducing physical environmental impacts. Cumulative development projects in accordance with the General Plan would be subject to compliance with regional and local plans. Other cumulative development would be reviewed by the City to ensure general consistency with local land use plans. Therefore, the proposed project combined with related projects would not result in cumulatively considerable impacts to land use and planning.

Mineral Resources

The proposed project would have no impact related to mineral resources and would therefore not contribute to any cumulative impacts to such resources.

Noise

As discussed in section V.13, Noise, the proposed project would comply with all applicable noise standards and would have less than significant direct impacts related to construction and operational noise. It is possible that other construction projects in the vicinity could overlap with activity on the proposed project site, but other such projects are required to mitigate their construction noise impacts. Any combined impacts would be temporary, constituting intermittent annoyance perhaps, but not a significant cumulative noise impact. The project may also include a roadway improvement on Clinton Keith Road between the intersection with Wildomar Trail and Arya Road, the impacts of which are addressed in an IS/MND adopted by Riverside County (SCH# 200910103). The project would also be responsible for implementing mitigation measure **NOI-1**, as shown in the Clinton Keith Widening IS/MND, which would

reduce any construction noise impacts to less than cumulatively considerable. Therefore, the proposed project would have a less than cumulatively considerable impact related to noise.

Population and Housing

As the project site is currently vacant, no housing units or people would be displaced, and the construction of replacement housing is not required. The proposed project would increase the housing supply in the City. Therefore, the project would have a less than cumulatively considerable impact related to population and housing.

Public Services

Implementation of the proposed project, in combination with other existing, planned, proposed, approved, and reasonably foreseeable development in the immediate area, may increase the demand for public services such as fire and police protection. However, as a standard condition of approval, project applicant is required to pay development impact fees to fund the expansion of such services. Development of any future public facilities would be subject to CEQA review prior to approval that would identify and address any resulting impacts. Therefore, the proposed project would have a less than cumulatively considerable impact on public services.

Recreation

Implementation of the proposed project, in combination with other existing, planned, proposed, approved, and reasonably foreseeable development in the immediate area, would not significantly increase the demand for recreational space. Additionally, as a standard condition of approval, the project applicant is required to pay development impact fees to fund the expansion of such services. Development of any future public facilities would be subject to CEQA review prior to approval that would identify and address any resulting impacts. Therefore, the proposed project would have a less than cumulatively considerable impact on public services.

Transportation

Cumulative traffic impacts are created because of a combination of the proposed project and other future developments contributing to the overall traffic impacts and requiring additional improvements to maintain acceptable level of service operations with or without the project. A project's contribution to a cumulatively significant impact can be reduced to less than significant if the project implements or funds its fair share of improvements designed to alleviate the potential cumulative impact. As enforced by City Municipal Code Chapter 3.40, the Western Riverside County Transportation Uniform Mitigation Fee, and the adopted City Traffic Signal Development Impact Fee (Article I, Development Impact Fees, of Municipal Code Chapter 3.44), the project applicant will be required to participate in the funding of off-site improvements, including traffic signals that are needed to serve cumulative traffic conditions. Specifically, this will be accomplished through the payment of the Western Riverside County Transportation Uniform Mitigation Fee, City of Wildomar development impact fees, fair-share payment to City of Murrieta CIP #8282, and a fair-share contribution as directed by the City. These fees are collected as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with projected

population increases. In addition to these fees, as a condition of approval for the proposed project, the City will likely require the project to contribute its fair share to the specific roadway improvements outlined in Table **17-3** in section V. 17, Transportation, to reduce traffic impacts attributed to the project and future development within the project vicinity. In addition, the project may include an improvement that is part of the City's Capital Improvement Program CIP 025 Clinton Keith Widening. The impacts of this project were addressed in an IS/MND adopted by Riverside County (SCH# 200910103) and the project would be required to implement **TRF-1**, as shown in the Clinton Keith Road Widening IS/MND. The City of Wildomar's Vehicle Miles Travelled (VMT) CEQA Threshold Policy Guidelines allows mixed use projects with at least 30 percent residential to screen from requiring a VMT analysis (EDP 2021b)). The proposed mixed-use development encompasses 4.47 acres of residential space and 4.53 acres of commercial space which makes the project approximately 49 percent residential. Therefore, the proposed development would screen from requiring a VMT analysis and the project's contribution to VMT can be considered less than significant. Implementation of these improvements and mitigation measure would reduce the project's impacts to cumulative traffic conditions to less than cumulatively considerable.

Tribal Cultural Resources

Development of the project site would contribute to a cumulative increase in potential impacts to cultural and archaeological resources. However, mitigation measures **CUL-1** and **TRI-1** through **TRI-7** would reduce the potential impacts to tribal cultural resources associated with development on the project site. As with the proposed project, each related cumulative project would be required to comply with AB 52 and PRC Section 21083.2(i), which addresses accidental discoveries of archaeological sites and resources, including tribal cultural resources; therefore, any discoveries of Tribal Cultural resources caused by the project or related projects would be mitigated to a less than significant level. Therefore, the project would have a less than cumulatively considerable impact.

Utilities and Service Systems

Implementation of the proposed project would increase demand for public utilities. However, project would not result in a significant increase in utility demand and would be accounted for in long-range plans for provision of such services, as provided in the General Plan. Therefore, the proposed project would have less than cumulatively considerable impacts on utilities and service systems.

Wildfire

The project site is located within a Very High Fire Hazard Severity Zone. Implementation of mitigation measures **HAZ-3** and **HAZ-4** and Compliance with California Building Code, Fire Code, and other applicable federal, state, and local regulations would ensure that cumulative hazard conditions are less than cumulatively considerable.

c) **Less Than Significant Impact with Mitigation Incorporated**. The proposed project does not have the potential to significantly adversely affect humans, either directly or indirectly. Although a number of impacts were identified as having potential to significantly impact humans, with implementation of the identified mitigation measures, and implementation of standard conditions and requirements, these impacts are less than significant. With implementation of the identified mitigation measures, the

proposed project is not expected to cause significant adverse impacts to humans. Mitigation measures **AQ-1** and **AQ-2** reduce impacts associated with air resources; mitigation measures **BIO-1** and **BIO-2** reduce impacts associated with biological resources; **CUL-1** and **TRI-1** through **TRI-7** reduce impacts associated with cultural, archaeological, and tribal cultural resources; mitigation measure **GEO-1** reduces impacts associated with earthquake faults and soils hazards. As conditioned the proposed project will pay into the fee program for several intersections to ensure that the CIP improvements occur as needed under the cumulative condition. Therefore, the project does not have any environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly. Furthermore, because this document analyzes long-term and short-term impacts and mitigates all potential impacts to a less than significant level, the proposed project would not achieve short-term environmental goals to the disadvantage of long-term environmental goals. Any impacts are considered less than significant with mitigation incorporated. W

FRONT (SOUTH) ELEVATION — SCALE: 3/32" = 1'-0" — 1

SIDE (WEST) ELEVATION — SCALE: 3/32" = 1'-0" — 2

REAR (NORTH) ELEVATION — SCALE: 3/32" = 1'-0" — 3

SIDE (EAST) ELEVATION — SCALE: 3/32" = 1'-0" — 4

MATERIAL KEYNOTES:

- A - SMOOTH FACE C.M.U. BLOCK - STACKED BOND
- B - SPLIT FACE C.M.U. BLOCK - RUNNING BOND
- C - HARDIE BOARD ARTISAN SQUARE CHANNEL SIDING - VERTICAL
- D - BERRIDGE STANDING SEAM ROOFING
- E - SOLID WOOD
- F - CORONADO STONE VENEER
- G - CORONADO STONE SILL
- H - PRECAST CONCRETE CAP - AT COLUMNS ONLY
- I - HARDIE BOARD FIBER CEMENT FASCIA TRIM
- J - HARDIE BOARD ARTISAN FIBER CEMENT TRIM
- K - METAL - PAINTED
- L - BLACK ORNAMENTAL METAL FENCE
- M - CONCRETE CURB
- N - NOT USED
- O - ROOF DRAIN, DOWN SPOUT, AND ROOF OVERFLOW SCUPPER. PAINT TO MATCH ADJACENT SURFACE. U.N.O.
- P - BUILDING ADDRESS, VERIFY NUMBERS, LOCATION AND HEIGHT WITH FIRE MARSHAL (12" HIGH MIN.) NUMBERS MUST CONTRAST WITH BACKGROUND
- Q - LOCATION OF FUTURE SIGN - GENERAL CONTRACTOR TO INSTALL J-BOX FOR EACH SIGN, SIGNAGE UNDER SEPARATE PERMIT
- R - LIGHT FIXTURE REF. ELECTRICAL.
- S - PARAPET WATERPROOFING MEMBRANE
- T - AUTOMATIC SLIDING DOORS. G.C. SHALL WRAP EXTERIOR SIDE OF ANY WOOD BLOCKING OR SHIMS WITH BRAKE METAL MATCHING STOREFRONT FINISH.
- U - KNOX BOX - MOUNT AT +52" ABOVE FINISH FLOOR CONFIRM FINAL LOCATION WITH AHJ.
- V - HOLLOW METAL DOOR AND FRAME. PAINT TO MATCH ADJACENT SURFACE..
- W - OVERHEAD DOOR AND FRAME - AT SIM. CONDITION OVERHEAD DOOR AND FRAME AND DOCK SEALS. PROVIDE 16" OF SMOOTH FACE BLOCK AROUND ENTIRE OVERHEAD SIM DOOR.
- X - COMPACTOR DOOR.
- Y - FIRE DEPARTMENT CONNECTION
- Z - GAS METER, PAINT TO MATCH ADJACENT WALL OR COLOR AS REQUIRED BY AHJ. ENSURE IT IS LABELED PER AHJ REQUIREMENTS.
- AA - BOLLARD
- AB - LINE OF ROOF BEYOND, HVAC, AND REFRIGERATION SHOWN DOTTED

COLOR SCHEDULE:

- 1 - PPG - 1099-1 - ALWAYS ALMOND
- 2 - PPG - 1142-6 - JERICHO JADE
- 3 - PPG - 1028-6 - MOMENTUM
- 4 - PPG - 1032-2 - HURRICANE HAZE
- 5 - PPG - 1005-7 - DARK GRANITE
- 6 - FLOOD WOOD STAIN - SEMI-TRANSPARENT - TOBACCO
- 7 - BERRIDGE - AGED BRONZE
- 8 - CORONADO - OLD WORLD LEDGE - MONARCH
- 9 - CORONADO - 900 SERIES - GREY
- 10 - PREFINISHED BY MFR. - WHITE
- 11 - TRAFFIC YELLOW
- 12 - DARK BRONZE

GENERAL NOTES:

1. GENERAL CONTRACTOR TO VERIFY MOUNTING HEIGHT WITH ARCHITECT PRIOR TO INSTALLATION OF ALL PERIMETER WALL PACK LIGHTING. (16'-0" ABOVE FINISH FLOOR TYPICAL U.N.O.).
2. HOLLOW METAL DOORS / OVERHEAD DOORS, DOWNSPOUTS, AND GUTTERS - PAINT TO MATCH ADJACENT WALL.
3. ALL SIGNAGE UNDER SEPARATE PERMIT. COORD. W/ SIGNAGE VENDOR
4. EXTENTS OF FIBER CEMENT TRIM SURROUND ARE SHOWN FOR BIDDING PURPOSES. PRIOR TO INSTALLATION OF FURRING CHANNELS AND FINISH MATERIALS GC SHALL COORDINATE WITH SIGNAGE VENDOR AND ARCHITECT TO CONFIRM REQUIRED DIMENSIONS. EXTENTS OF FIBER CEMENT TRIM SURROUND VARY WITH SIZE OF SIGN ALLOWED BY AHJ.
5. GRIND ALL METAL EDGES (INCLUDING TRIM AND FLASHING) FOR A SMOOTH FINISH.
6. PROVIDE JUNCTION BOXES FOR MAIN SIGN AND (4) ADDITIONAL JUNCTION BOXES FOR FUTURE SIGNS. REF. ELECTRICAL. VERIFY LOCATIONS AND NUMBER OF SIGNS WITH SPROUTS PRIOR TO INSTALLATION.
7. GENERAL CONTRACTOR TO POWER WASH EXTERIOR WALLS AND ENTRANCE WALK AT A MINIMUM PRIOR TO STORE OPENING.
8. GENERAL CONTRACTOR TO COORDINATE INSTALLATION OF "NOW HIRING" & "COMING SOON" BANNER 80-DAYS PRIOR TO OPENING.
9. GENERAL CONTRACTOR TO COORDINATE INSTALLATION OF "OPENING DATE" BANNER 30-DAYS PRIOR TO OPENING.
10. PROVIDE CONTROL JOINTS IN CMU WALLS AS LOCATED BY STRUCTURAL.

KEYNOTES:

1. CLASS 'A' SINGLE PLY T.P.O. ROOF WITH R-30 INSULATION ON METAL ROOF DECK. REF SPECS.
2. PROVIDE OPENING IN ROOF FOR REFRIGERATION LINES
3. TOWER STRUCTURE SHOWN DASHED BELOW.
4. ROOF CRICKET, WOOD FRAME OR RIGID INSULATION FOR 1/4" PER FOOT SLOPE MINIMUM.
5. 24 GAUGE METAL FLASHING AT PARAPET - PAINT.
6. LINE OF REFRIGERATION RACKS BELOW.
7. HOSE BIB 6" ABOVE FINISH ROOF.
8. PRIMARY SCUPPER (SEE PLAN FOR SIZE) & 24" ADJACENT OVERFLOW SCUPPER.
9. WEATHER STATION BY REFRIGERATION CONTRACTOR. VERIFY LOCATION WITH REFRIGERATION DRAWINGS.
10. FLUE / VENT THRU ROOF. MIN. 2'-0" FROM PARAPET, 10'-0" FROM AIR-INTAKE ON HVAC UNITS.
11. ROOF ACCESS HATCH AND LADDER.
12. RESTROOM EXHAUST FAN.
13. ONE HOUR FIRE RATED EXHAUST HOOD DUCT SHAFT ENCLOSURE.
14. HVAC UNIT. FOR CURB.
15. REFRIGERATION EQUIPMENT ON ROOF. FOR LEVEL STEEL PLATFORM.
16. COMBUSTION AIR INTAKE.
17. LOUVERED ACCESS PANEL AT BACK OF TOWER.
18. STANDING SEAM METAL ROOF ON (2) LAYER 30# FELT ON EXTERIOR SHEATHING OVER METAL FRAMING.
19. 4" x 4" BOX SHAPE, METAL GUTTER WITH 2" DIAMETER DOWNSPOUT. INCLUDE SPLASH GUARD AT ROOF, INSTALLED DIRECTLY UNDER DOWNSPOUT.
20. SNOW GUARD RAILS (IN ZONES 4 AND COLDER) ON STANDING SEAM ROOF WITH TABS EXTENDING DOWN BETWEEN RAISED SNAP-LOCK SEAMS.
21. 4" x 4" BOX SHAPE, METAL GUTTER. INSTALL LEVEL AND PROVIDE DRAINAGE HOLE AT THE BOTTOM OF EACH END.
22. COMMUNICATION ANTENNA; G.C. TO PROVIDE 2" CONDUIT, PULL STRING AND WEATHER PROOF ROOF JACK FOR COAT CABLE.
23. WALKWAY PADS TYPICAL.
24. CONDENSING UNIT. REF MECHANICAL.

GENERAL NOTES:

1. SEE MECHANICAL AND PLUMBING DRAWINGS FOR ADDITIONAL NOTES AND DETAILS.
2. VERIFY LOCATIONS OF ALL ROOF PENETRATIONS WITH STRUCTURAL, PLUMBING, MECHANICAL AND ARCHITECTURAL DRAWINGS.
3. ALL EQUIPMENT ON ROOF TO BE MOUNTED ON LEVEL CURBS.
4. ALL VENT LOCATIONS TO BE COORDINATED WITH PLUMBING AND MECHANICAL DRAWINGS.
5. EXHAUST FANS AND VENTS TO BE LOCATED A MINIMUM OF 10'-0" FROM HVAC INTAKE. VERIFY ALL LOCATIONS WITH PLUMBING AND MECHANICAL DRAWINGS.
6. ALL MECHANICAL DUCT DROP LOCATIONS DIMENSIONED TO CENTER OF HVAC OPENING. VERIFY EXACT LOCATION. INTENT OF LAYOUT IS TO ALIGN EDGE OF CURB ON STRUCTURAL PURLIN. SEE STRUCTURAL DRAWINGS FOR ADDITIONAL INFORMATION.
7. MECHANICAL SUBCONTRACTOR TO COORDINATE INSTALLATION AND ACCEPTANCE OF PREFABRICATED CURBS AND PENETRATIONS WITH ROOF MEMBRANE SUBCONTRACTOR. GENERAL CONTRACTOR TO PROVIDE ALL NECESSARY BLOCKING, NAILING, ETC. AS NECESSARY FOR A WATERTIGHT AND WATERPROOF BUILDING.
8. IT IS THE GENERAL CONTRACTORS RESPONSIBILITY TO VERIFY, COORDINATE AND / OR INSTALL ALL ADJACENT AND / OR RELATED FLASHING, BLOCKING, NAILERS, CRICKETS, ETC. NECESSARY FOR THE COMPLETE INSTALLATION OF THE ROOF MEMBRANE WHICH IS REQUIRED FOR A COMPLETE, WARRANTED, WATERTIGHT, WATERPROOF INSTALLATION.
9. IT IS THE GENERAL CONTRACTORS RESPONSIBILITY TO VERIFY HEIGHT ELEVATION OF ROOF DECK AND ENTRY GABLE WITH STRUCTURAL DRAWINGS.
10. ROOF PENETRATIONS TO BE MINIMUM 2'-0" FROM EDGE OF ROOF OR PARAPETS.
11. GENERAL CONTRACTOR TO PROVIDE ONE (1) 3/4" CONDUIT FOR MUZAK COAXIAL CABLE PENETRATION. VERIFY EXACT LOCATION WITH SPROUTS. (LOCATE, CLOSE AS POSSIBLE, TO MANAGER'S OFFICE).
12. WOOD BLOCKING UNDER MANUFACTURED CURBS IS TO BE FLUSH WITH TOP OF RIGID (ROOF) INSULATION (MINIMUM) AND IS TO BE FLAT AND LEVEL. PROVIDE 5 1/2" MINIMUM WIDTH FRAMING AS NECESSARY FULL PERIMETER OF OPENING.
13. GENERAL CONTRACTOR TO PROVIDE WALKWAY PADS AROUND ALL ROOFTOP EQUIPMENT WITH A CONNECTED PATH LEADING TO THE ROOF HATCH.

LANDSCAPE NOTES

A. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, MATURE SPECIMEN TREES IN THIRTY-SIX INCH (36") AND FORTY-EIGHT INCH (48") BOX TREES SHALL BE PROVIDED FOR LARGE PROJECT IN SUFFICIENT QUANTITY TO PROVIDE VARIETY AND EMPHASIS ON MAIN FOCAL AREAS. SUBJECT TO REVIEW AND APPROVAL OF THE DIRECTOR AND LANDSCAPE CONSULTANT.

B. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE ARCHITECT SHALL INCLUDE 3 TO 4 FOOT HIGH LANDSCAPE SCREENING ELEMENTS ALONG ENTIRE PARKING FRONTAGE AT STREETS AND DRIVE AISLES. A COMBINATION OF LANDSCAPE BERMS, GROUPS OF SCREENING SHRUBS, OR ENHANCED WALLS SHALL BE UTILIZED.

C. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE WILL AVOID PLANTS THAT REQUIRE CUTTING BACK TO KEEP THEM WITHIN A SPECIFIC AREA OR AT A TRIMMED HEIGHT. PROVIDED SPACE FOR PLANTS TO GROW TO MATURITY AND KEEP THEIR NATURAL SHAPE.

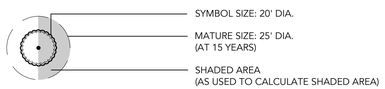
D. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE WILL SELECT PLANT MATERIALS WITHIN VEHICULAR LINE OF SIGHT IMPACT AREAS LIMITED TO A MAXIMUM OF 30" NATURAL HEIGHT.

E. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE ARCHITECT WILL AVOID MONOCULTURE PLANTING, PROVIDE ADDITIONAL PLANT MATERIAL WITH VARYING CHARACTERISTICS. FINAL SHRUB LAYOUT WILL NOT APPEAR AS MASSES, NO SPOTTY PLACEMENT OF SINGULAR SHRUBS.

F. LANDSCAPE ARCHITECT RECOGNIZES THAT THIS PROJECT IS LOCATED WITHIN THE 'VERY HIGH FIRE SEVERITY ZONE' AND WILL BE SUBJECT TO REVIEW BY RIVERSIDE COUNTY OFFICE OF THE FIRE MARSHAL FOR FUEL MODIFICATION REQUIREMENTS.

G. NO COMBUSTIBLE MULCH WILL BE ALLOWED TO BE LOCATED WITHIN 5' OF ANY BUILDING STRUCTURE.

WATER USE CALCULATIONS



TOTAL LANDSCAPE AREA 29,086 SF

MAXIMUM APPLIED WATER ALLOWANCE (MAWA)
MAWA = (ETO) X (0.7) X (LA) X (0.62) = GALLONS PER YEAR
MAWA = 61.65 X 0.7 X 29,086 X 0.62 = 778,228 GALLONS PER YEAR

I HAVE COMPLIED WITH THE CRITERIA OF THE ORDINANCE AND APPLIED THEM ACCORDINGLY FOR THE EFFICIENT USE OF WATER IN THE IRRIGATION DESIGN PLAN

SHADED PARKING CALCULATIONS

OPEN PARKING	130 SPACES
COVERED PARKING	76 SPACES
TOTAL AREA OF OPEN PARKING SPACES	19,862 SF
REQUIRED PERCENTAGE OF PARKING AREA TO BE SHADED	50% (50+ SPACES)
TOTAL SHADE PROVIDED	10,603 SF
PERCENT OF OPEN PARKING SHADED	53 %

UTILITY COORDINATION

PLEASE NOTE THAT THE LOCATION OF ALL UTILITY STRUCTURES IS CONCEPTUAL ONLY AND WILL BE COORDINATED FURTHER DURING THE DESIGN DEVELOPMENT AND CONSTRUCTION DOCUMENTATION PHASE. CONCEPTUAL LIGHTING PLAN IS PROVIDED WITHIN THE DRAWING SET, REFER TO LIGHTING PLANS.

GENERAL NOTES

ALL LANDSCAPING, IRRIGATION AND RELATED IMPROVEMENTS SHALL BE DESIGNED, INSTALLED AND MAINTAINED IN ACCORDANCE WITH THE REQUIREMENTS OF THE CITY OF WILDOMAR, THE COUNTY OF RIVERSIDE (AS REQUIRED), RIVERSIDE COUNTY FIRE DEPARTMENT AND THE ELSINORE VALLEY MUNICIPAL WATER DISTRICT. REFERENCE THE CITY OF WILDOMAR MUNICIPAL CODE CHAPTERS 17.188 (OFF-STREET VEHICULAR PARKING STANDARDS) AND 17.276 (WATER-EFFICIENT LANDSCAPES) AND APPLICABLE SECTIONS OF THE COUNTY OF RIVERSIDE MUNICIPAL CODE (ORDINANCES 348 - LAND USE, 457 - CALIFORNIA BUILDING CODE (EROSION CONTROL), 460 - SUBDIVISION, AND 461 - ROAD IMPROVEMENTS), THE COUNTYWIDE DESIGN STANDARDS & GUIDELINES (JANUARY 2004), GUIDE TO CALIFORNIA FRIENDLY LANDSCAPING (DECEMBER 2009), CALIFORNIA FRIENDLY PLANT LIST (MARCH 2013), FIRE DEPARTMENT REQUIREMENTS, OAK TREE MANAGEMENT GUIDELINES, AND THE REQUIREMENTS OF THE ELSINORE VALLEY MUNICIPAL WATER DISTRICT. IRRIGATION SYSTEM SHALL MINIMIZE THE USE OF OVERHEAD SPRAY TYPE SYSTEMS AND INCORPORATE DRIP OR BUBBLER TYPE IRRIGATION SYSTEMS.

ALL LANDSCAPE IMPROVEMENTS DEPICTED IN THIS DRAWING SET ARE TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).

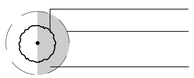
WATER USE CALCULATIONS

TOTAL LANDSCAPE AREA 23,991 SF

MAXIMUM APPLIED WATER ALLOWANCE (MAWA)
MAWA = (ETO) X (0.7) X (LA) X (0.62) = GALLONS PER YEAR
MAWA = 61.65 X 0.7 X 23,991 X 0.62 = 641,905 GALLONS PER YEAR

I HAVE COMPLIED WITH THE CRITERIA OF THE ORDINANCE AND APPLIED THEM ACCORDINGLY FOR THE EFFICIENT USE OF WATER IN THE IRRIGATION DESIGN PLAN



GENERAL NOTES

ALL LANDSCAPING, IRRIGATION AND RELATED IMPROVEMENTS SHALL BE DESIGNED, INSTALLED AND MAINTAINED IN ACCORDANCE WITH THE REQUIREMENTS OF THE CITY OF WILDOMAR, THE COUNTY OF RIVERSIDE (AS REQUIRED), RIVERSIDE COUNTY FIRE DEPARTMENT AND THE ELSINORE VALLEY MUNICIPAL WATER DISTRICT. REFERENCE THE CITY OF WILDOMAR MUNICIPAL CODE CHAPTERS 17.188 (OFF-STREET VEHICULAR PARKING STANDARDS) AND 17.276 (WATER-EFFICIENT LANDSCAPES) AND APPLICABLE SECTIONS OF THE COUNTY OF RIVERSIDE MUNICIPAL CODE (ORDINANCES 348 - LAND USE, 457 - CALIFORNIA BUILDING CODE (EROSION CONTROL), 460 - SUBDIVISION, AND 461 - ROAD IMPROVEMENTS), THE COUNTYWIDE DESIGN STANDARDS & GUIDELINES (JANUARY 2004), GUIDE TO CALIFORNIA FRIENDLY LANDSCAPING (DECEMBER 2009), CALIFORNIA FRIENDLY PLANT LIST (MARCH 2013), FIRE DEPARTMENT REQUIREMENTS, OAK TREE MANAGEMENT GUIDELINES, AND THE REQUIREMENTS OF THE ELSINORE VALLEY MUNICIPAL WATER DISTRICT. IRRIGATION SYSTEM SHALL MINIMIZE THE USE OF OVERHEAD SPRAY TYPE SYSTEMS AND INCORPORATE DRIP OR BUBBLER TYPE IRRIGATION SYSTEMS.

ALL LANDSCAPE IMPROVEMENTS DEPICTED IN THIS DRAWING SET ARE TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).

SHADED PARKING CALCULATIONS

PARKING PROVIDED	195 SPACES (OPEN)
TOTAL AREA OF PARKING SPACES	26,669 SF
REQUIRED PERCENTAGE OF PARKING AREA TO BE SHADED	50% (50+ SPACES)
TOTAL SHADE PROVIDED	16,054 SF
PERCENT OF OPEN PARKING SHADED	61 %

BICYCLE PARKING CALCULATIONS

CAR PARKING PROVIDED	195 SPACES
EMPLOYEE SPACES REQUIRED (1 BICYCLE SPACE PER 25 CAR SPACES)	8 BIKE PARKING SPACES (CLASS I LOCKERS OR CLASS II RACKS IN AN ENCLOSED LOCKABLE AREA)
EMPLOYEE SPACES PROVIDED	8 BIKE PARKING SPACES (4 CLASS I LOCKERS - 2 BIKES PER LOCKER)
PATRON & VISITOR SPACES REQUIRED (1 BICYCLE SPACE PER 33 CAR SPACES)	6 BIKE PARKING SPACES (CLASS II RACKS)
PATRON & VISITOR SPACES PROVIDED	6 BIKE PARKING SPACES (3 CLASS II BIKE RACKS - 2 BIKES PER RACK)

INTERIOR PARKING LANDSCAPE

PARKING PROVIDED	195 SPACES
TOTAL AREA OF PARKING SPACES	26,669 SF
REQUIRED PERCENTAGE TO BE LANDSCAPED	10% (50+ SPACES)
TOTAL INTERIOR PARKING LANDSCAPE	3,606 SF
PERCENT OF INTERIOR PARKING LANDSCAPE PROVIDED	13 %

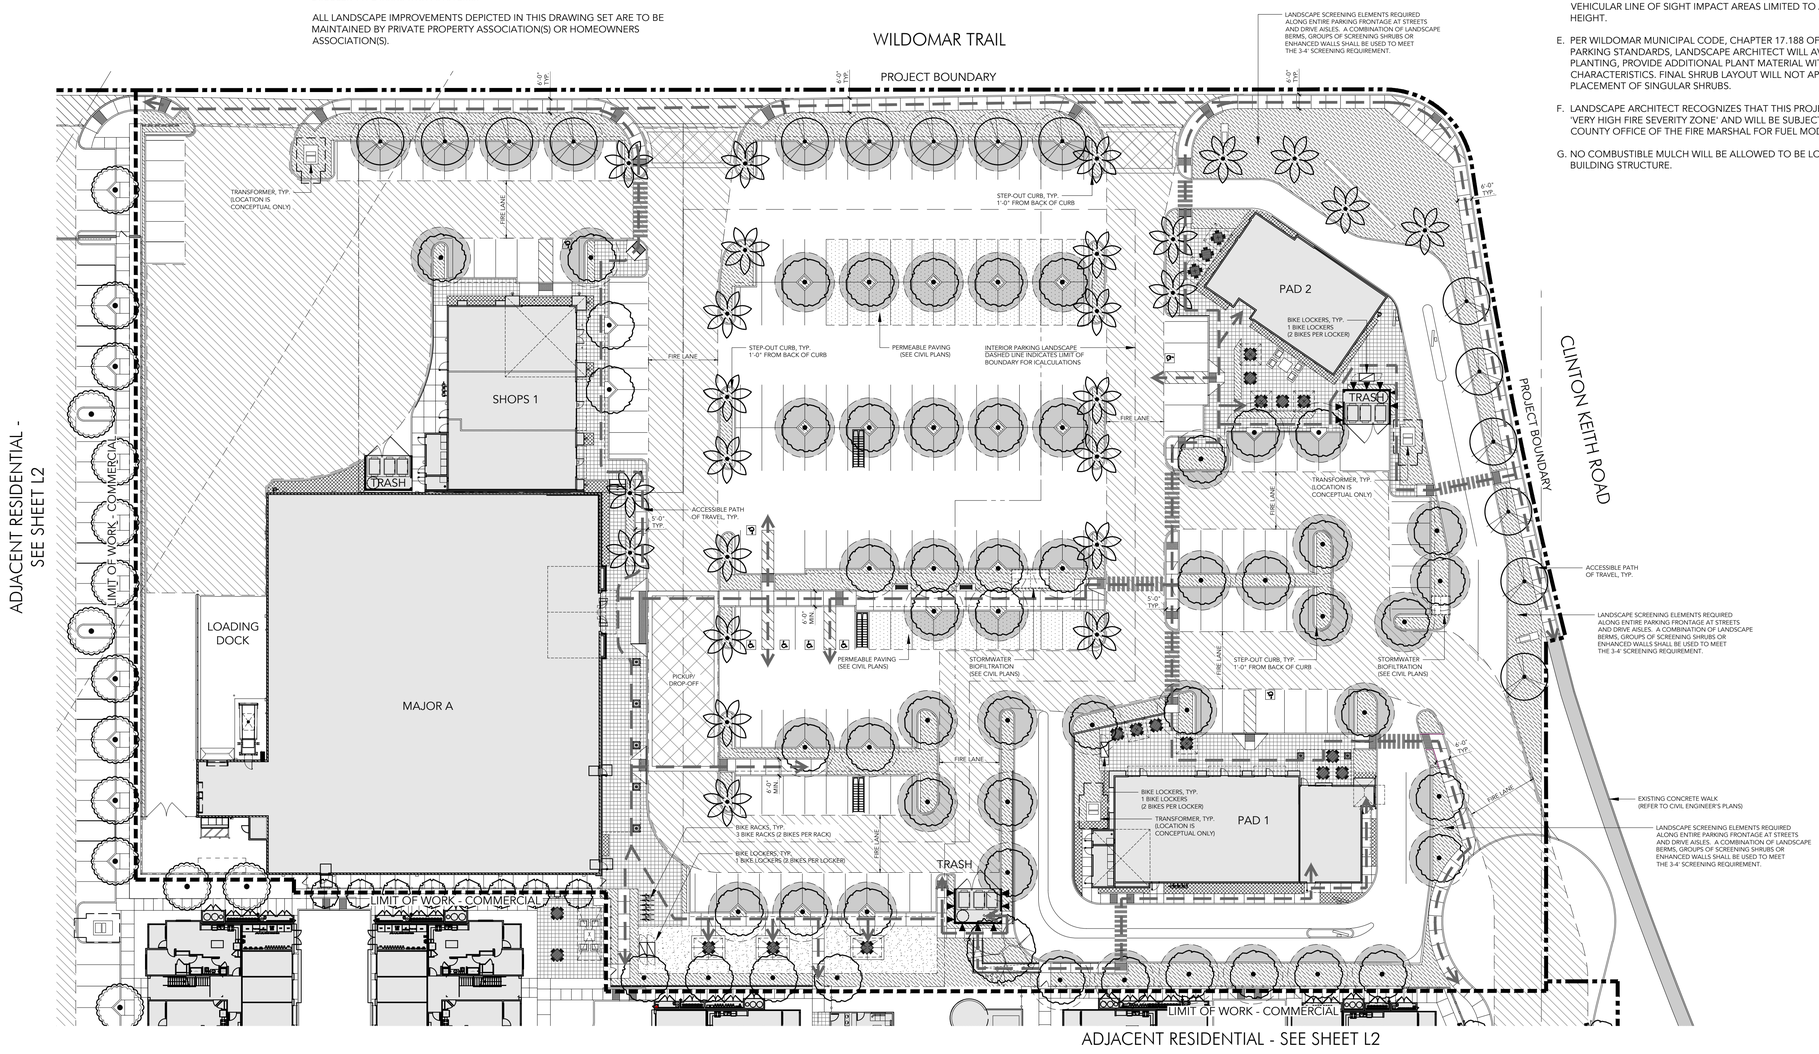
UTILITY COORDINATION

PLEASE NOTE THAT THE LOCATION OF ALL UTILITY STRUCTURES IS CONCEPTUAL ONLY AND WILL BE COORDINATED FURTHER DURING THE DESIGN DEVELOPMENT AND CONSTRUCTION DOCUMENTATION PHASE. CONCEPTUAL LIGHTING PLAN IS PROVIDED WITHIN THE DRAWING SET, REFER TO LIGHTING PLANS.

LANDSCAPE NOTES

A. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, MATURE SPECIMEN TREES IN THIRTY-SIX INCH (36") AND FORTY-EIGHT INCH (48") BOX TREES SHALL BE PROVIDED FOR LARGE PROJECT IN SUFFICIENT QUANTITY TO PROVIDE VARIETY AND EMPHASIS ON MAIN FOCAL AREAS. SUBJECT TO REVIEW AND APPROVAL OF THE DIRECTOR AND LANDSCAPE CONSULTANT.

B. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE ARCHITECT SHALL INCLUDE 3 TO 4 FOOT HIGH LANDSCAPE SCREENING ELEMENTS ALONG ENTIRE PARKING FRONTAGE AT STREETS AND DRIVE AISLES. A COMBINATION OF LANDSCAPE BERMS, GROUPS OF SCREENING SHRUBS OR ENHANCED WALLS SHALL BE UTILIZED.



C. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE WILL AVOID PLANTS THAT REQUIRE CUTTING BACK TO KEEP THEM WITHIN A SPECIFIC AREA OR AT A TRIMMED HEIGHT. PROVIDED SPACE FOR PLANTS TO GROW TO MATURITY AND KEEP THEIR NATURAL SHAPE.

D. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE WILL SELECT PLANT MATERIALS WITHIN VEHICULAR LINE OF SIGHT IMPACT AREAS LIMITED TO A MAXIMUM OF 30" NATURAL HEIGHT.

E. PER WILDOMAR MUNICIPAL CODE, CHAPTER 17.188 OFF-STREET VEHICULAR PARKING STANDARDS, LANDSCAPE ARCHITECT WILL AVOID MONOCULTURE PLANTING, PROVIDE ADDITIONAL PLANT MATERIAL WITH VARYING CHARACTERISTICS. FINAL SHRUB LAYOUT WILL NOT APPEAR AS MASSES, NO SPOTTY PLACEMENT OF SINGULAR SHRUBS.

F. LANDSCAPE ARCHITECT RECOGNIZES THAT THIS PROJECT IS LOCATED WITHIN THE 'VERY HIGH FIRE SEVERITY ZONE' AND WILL BE SUBJECT TO REVIEW BY RIVERSIDE COUNTY OFFICE OF THE FIRE MARSHAL FOR FUEL MODIFICATION REQUIREMENTS.

G. NO COMBUSTIBLE MULCH WILL BE ALLOWED TO BE LOCATED WITHIN 5' OF ANY BUILDING STRUCTURE.

TYPE S1A S1B S1C

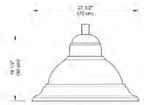
cyclone

Domia CY55P1B Approval – Specification

Project: Order:
Qty: Luminaire: Type:

Tenon Details: Round shape, made of one-piece cast A356 aluminum. An interior border makes it possible to fix the frame module. The certification, maintenance and coding labels of the luminaire are located inside the housing module.

Frame Module: Cast A356 aluminum ring mechanically fixed to the housing, with hinge and quarter-turn latch that accepts the lens module and provides access to the driver module.



Optical Module: The cast A384 aluminum heat sink is optimized to minimize the temperature of the LEDs, increasing their longevity and efficiency. The lens module is assembled mechanically for easy replacement. A flat lens in ▼ is fixed on the cast aluminum frame. The lens is fully IP67 thanks to the silicone gasket. The high efficiency ▼ LED circuit is mechanically assembled on the heat sink. The lifetime of the LEDs is 100,000 hours. It is based on the LM-80 test and extrapolated with TM-21. This data is calculated when 50% of the LEDs produce 70% of their initial luminous flux (L70). The minimum color rendering index (CRI) is 70. The lenses are made of acrylic and designed to illuminate only where needed while achieving excellent uniformity with maximum spacing. The type according to IES ▼.

Driver Module: The self-adjusting Class 1 (50W and over) or Class 2 (20 to 40W) driver is removable without tools.

Primary Voltage of ▼ **Volts.** 50 / 60Hz. THD max 20%. The high power factor is of 90%. The operating temperature is from -40° F (-40° C) to 130° F (50° C). Complies with ROHS. Assembled with quick-disconnect connectors. Complete with 10kA tripolar overvoltage protection for live, neutral and ground lines according to EEE / ANSI C62.41 2002 C. The driver offers 0-10 Volts output.

Wiring / Hardware: Type TEW 14-7, 12" (30cm) minimum exceeding luminaire. All electrical connections between the modules are provided with quick-disconnect connectors for easy maintenance. All outside accessible hardware is accessible is stainless steel. Silicone gaskets are used for sealing the luminaire.

Color: ▼ Textured or Smooth (SM) ▼ finish. The application of durable polyester powder coating meets AAMA 2604 requirements (5 years at all weather conditions). The finish meets ASTM-D7, B117, D1654 and D2247 standards for salt spray and moisture. Cyclone recommends a textured finish for this product.

EPA: 1.61 ft² **Weight:** 52 lbs / 24 kg

LED Linear

CLX

24", 36", 48" and 96" Lengths

FEATURES & SPECIFICATIONS

INTENDED USE — The CLX is a linear lighting solution that is available in multiple lengths, lumen packages and distributions. Designed for versatility, the CLX can address virtually any indoor lighting need. The CLX is also offered in standard and high efficacy configurations and capable of being continuous row mounted or installed as a stand-alone fixture. Ideal for skylight and downlight in commercial, retail, manufacturing, warehouse, and display applications. **Certain airborne contaminants can diminish the integrity of acrylic and/or polycarbonate. Click here for Acrylic-Polycarbonate Compatibility table for suitable uses.**

CONSTRUCTION — Channel and cover are formed from code-gauge cold-rolled steel. Housing and lens ends are injection molded plastic to provide a more architectural look and feel. The end caps come standard with a 5/8" knock out for continuous row mounting but can be ordered without.

Finish: Paint options include high-gloss, Baked white polyester (WH), opalescent (GACF), matte black (HB) and smoke gray (MGY). Pre-coat/post-phosphate pre-treatment ensures superior paint adhesion and rust resistance.

OPTICS — Offered with acrylic lens and lens trim configurations. Provides a choice of optical distributions including, wide, narrow, and side.

ELECTRICAL — 3000mA high-output LEDs integrated on a two-layer circuit board, ensuring cool-running operation. Optional internal pluggable wiring harness for reduced labor cost in row mounting applications. See P.R.E. ordering information on page 5-6. Electronic LED drivers is multi-volt input and 0-10V dimming standard (see Operational Data on page 4 for actual wattage consumption). The fixture is IC rated and has been certified to a maximum line range of 2.7kV at 0.5Hz combination wave for indoor locations. Regional locations requiring higher level of protection additional surge protection must be provided. L70 is 100,000 hours at 25˚C.

ELDs provide nominal 80 CRI at 90 CRI at 3000-K, 3500-K, 4000-K or 5000-K.

Lumen output up to 22,000 lumens per foot.

INSTALLATION — Fixture may be ceiling or wall mounted (with or without THCLX bumper or angle mounted with CLAMKLIBT), pendant or stem mounted with appropriate mounting systems.

WARNING — Removing the lens and exposing the fixture during installation exposes the LEDs, putting them at risk for damage.

If you plan to surface-mount this fixture, we recommend using the THCLX. This eliminates the need to open the fixture.

Damage to the LEDs caused during installation will not be covered under the warranty.

LISTINGS — CSA certified to US and Canadian safety standards. For use in damp locations between -4°F (-20°C) and 104°F (40°C). Optional High Ambient (HA) ranging to 122°F (50°C) available on certain lumen packages (see ambient temperature chart for additional information).

Design Lights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

BUY AMERICAN — Product with the BAA option is assembled in the USA and meets the Buy American(a) government procurement requirements under 14 CFR, 25 and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks marked by a distributor/supplier

To learn more about A+, visit www.acuitybrands.com/aplus.

Weight (max): 16 lbs (7.3 kg)

Introduction

The D-Series LED Surface Canopy luminaire is ideal for covered walkways or drive-thrus, semi-covered outdoor aisles, and walk-in coolers and freezers. Its five optical choices provide the design flexibility to potentially reduce luminaire counts while still meeting IES criteria, lowering overall energy consumption.

Its expected service life of over 100,000 hours (20 years of nighttime operation) combined with the available motion/ambient sensor offers an extremely low maintenance solution that yields quick payback.

Ordering Information

EXAMPLE: DSXSC LED 20C 700 40K TSM MVOLT SRM DWHXD

DSXSC LED										
Series	LEDs		Drive current		Color temperature		Distribution		Voltage	Mounting
DSXSC LED	10C	10 LEDs (one engine)	350	350 mA	30K	3000K	TSM	Type V, emitter	MVOLT	277	Shipped included
	20C	20 LEDs (two engines)	530	530 mA	40K	4000K	TSW	Type V, medium	120	347	SRM	Surface mount (13 inch height maximum)
	30C	30 LEDs (three engines)	700	700 mA	50K	5000K	TSH	Type V, wide	208	480		
			1000	1000 mA (1 A)	AMBPC	Amber phosphor converted	TSR	Type V, rectangular	240	
							ASY	Asymmetric		

Options				Finish
Shipped installed				Shipped separately
PIR	Motion/ambient sensor for 15-30' mounting height, and typical applications requiring daylight harvesting and 180-240 lux maintained light level	PIRBSSCFW	Motion/ambient sensor for 15-30' mounting height and typical applications requiring daylight harvesting and Title 24 compliance [11]	BDXD Bronze
PIRH	Motion/ambient sensor for 15-30' mounting height. [6]	PIRBSSCFWDCR	Motion/ambient sensor for emergency circuits for 15-30' mounting height. [11,12]	DNAXD Natural aluminum
PIRHCLW	Motion/ambient sensor for 8-15' mounting heights and for typical applications requiring daylight harvesting and Title 24 compliance [6]	PIRBSSCFWDCRDCR	Motion/ambient sensor for emergency circuits for 15-30' mounting height. [11,12]	DDBXD Dark bronze
DS	Dual switching [7]			DWHXD White
DF	Double fuse (208, 240, 480V) [7]			DNAXD Natural aluminum
SPD	Separate surge protector [8]			DDBXD Dark bronze
DMG	0-10V dimming wires pulled outside fixture (for use with an external control, ordered separately) [9,10]			
PIR	Motion/ambient sensor for 8-15' mounting heights. [6]			
PIRH	Motion/ambient sensor for 15-30' mounting heights. [6]			
PIRHCLW	Motion/ambient sensor for 8-15' mounting heights and for typical applications requiring daylight harvesting and Title 24 compliance [6]			

Accessories
Ordered and shipped separately.
DSXSCHEX Hex-wire shield (1 per light engine)
DSXSCSBEZ-DWHXD Skirt shroud for SRM on surface & low-wide surface (specify finish)

NOTES
1. Available with 700mA or 1000mA option only.
2. Not available with 347 or 480V.
3. AMBPC only available with 530mA or 700mA.
4. Designlights Consortium qualified.
5. MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120, 208, 240 or 277 options only when ordering with fusing (DF option).
6. Not with one light engine (10C). Only available with 530mA or 700mA.
7. Also available as a separate accessory; see Accessories information at left.
8. Single fuse (SF) requires 120, 277 or 347 voltage option. Double fuse (DF) requires 208, 240 or 480 voltage options.
9. See the electrical section on page 3 for more details. 10CDMG not available with all PIR options.
10. Dimming driver standard. Available in layouts up to 30'. Not available in 347V, 480V, or with PIR1FC3V.
11. Pair B, PIRBCFW specifies the Acuity Controls ISCM-ICSX motion/ambient sensor, the PIRH & PIRH3FCW specifies the Acuity Controls ISCM-ICSX motion/ambient sensor.

Introduction

The WDGE LED family is designed to meet specifier's every wall-mounted lighting need in a widely accepted shape that blends with any architecture. The clean rectilinear design comes in four sizes with lumen packages ranging from 1,200 to 25,000 lumens, providing true site-wide solution.

WDGE1 delivers up to 2,000 lumens with a soft, non-pixelated light source, creating a visually comfortable environment. The compact size of WDGE1, with its integrated emergency battery backup option, makes it an ideal over-the-door wall-mounted lighting solution.

Introduction

The WDGE LED family is designed to meet specifier's every wall-mounted lighting need in a widely accepted shape that blends with any architecture. The clean rectilinear design comes in four sizes with lumen packages ranging from 1,200 to 25,000 lumens, providing a true site-wide solution. Embedded with eLight® AIR wireless controls, the WDGE family provides additional energy savings and code compliance.

WDGE2 delivers up to 6,000 lumens with a soft, non-pixelated light source, creating a visually comfortable environment. When combined with multiple integrated emergency battery backup options, including an 18W cold temperature option, the WDGE2 becomes the ideal wall-mounted lighting solution for pedestrian scale applications in any environment.

	VW	1,701
E20WC	VF	2,840
	VW	2,911

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative Lumen output for average ambient temperatures from 0-40°C (32-104°F).

Ambient	Lumen Multiplier
0°C	1.03
10°C	1.02
20°C	1.01
25°C	1.00
30°C	0.99
40°C	0.98

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the platforms noted in a 25°C ambient, based on 10,000 hours of LED testing (testing per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate L87 use the Lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	0	25,000	50,000	100,000
Lumen Maintenance Factor	1.0	>0.96	>0.95	>0.91

MODULE SPECIFICATION:
- Efficacy 65-125 Lumens per watt
- Life: L70 50,000 hours
- Color temp: 2700K, 3000K, 3500K and 4000K
- CRI: >90.

MODULE DRIVER SPECIFICATION:
- Input Voltage: 120-277 Volts; 50/60Hz
- Dimmable down to 1%
- Color temp: 2700K, 3000K, 3500K and 4000K (12w is 120v and TRIAC dimming only)
- Output Current: Constant Current, 440mA to 940mA (model dependent)
- Driver Efficiency > 80%; Power Factor > 0.9
- Integral Surge Protection in conformances to ANSI C62.41 Category A.

MODULE LISTINGS
- Fully compliant with the RoHS Directive
- Certifications: CE/UL

WARRANTY

See www.ANPlighting.com for complete fixture warranty.

LED warranty information:
- 5 year limited warranty*

*Limited Warranty: A typical year is defined as 4380 hours of operation

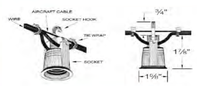
TYPE S7

PRIMUS



DECOSTRING SERIES

LED / INCANDESCENT

SUSPENDED DECORATIVE STRINGLIGHT SYSTEMS

PROJECT:
TYPE:

SOCKET, WIRE & CABLE DETAILS

Decostrings are a perfect accent lighting solution to add a personal ambience to patios, courtyards, atriums, restaurants, amusement parks and any open area. The "festoon" lighting system is typically strung between two anchorage points with optional intermediary support and electrically fed from one end. The sockets can be either symmetrically spaced or randomly spaced to suit the application. Optional shades, guards and lenses complete the architectural design.

SPECIFICATIONS

LAMPHOLDER	Black phenolic, medium base UL weatherproof with hook for optional mounting.
WIRE	12/2 G. Black flexible wire rated for 25A max. uv rated for outdoor use and long lasting.
SUPPORT CABLE	1/16" aircraft catenary cable supports the system, 480# test. Heavier cable available. (*See Page 7*)
LAMPS	LED and incandescent medium base A, G or S style lamps. (*See Page 3 for Lamp Options*)
ACCESSORIES	Optional brass, aluminum and acrylic shades. (*See Page 4 & 5 for Shade Options*) Consult factory for custom shades not shown in catalog.
GUIDELINES	Many ways to install and create a design. (*See Page 6 & 7*)
PHOTOMETRY	Bare lamp and shielded "BUG" rated JIES files available. (*See Page 8*) (Consult Factory or Visit Website)
CERTIFICATION	ETL listed for dry or wet and permanent installation. E201431 MADE IN THE USA
VOLTAGE	120V system (1920 watts max load). No driver or transformer required. (Consult Factory for 12V/24V)
DIMMING	Dimmable down to 10% with leading or trailing edge type dimmers.

With **Linear One,** we set out to produce a series that works with your vision instead of crowding it. Acclaim Lighting continually strives for simple goals during the design process: be useful, stay out of the way, and function wonderfully. Creativity begins with great design and Linear One is streamlined to work for you. We meticulously craft linear lights that install with no visible cables and create the clutter-free space your work deserves. This means that subtlety enhances your aesthetic as Linear One remains hidden while serving as the powerhouse behind your visual creation. Refined to work with your creativity, Linear One provides end-to-end modular functionality that adapts to your needs and never works against them. Acclaim Lighting is motivated by the passion of its users and strives to produce the very best solutions in architectural lighting. We create beautiful products that work for creativity.

SPECIFICATIONS

Colors	2700K, 3000K, 3500K, 4000K (80 CRI or 90 CRI available), Red, Green, Blue, Amber
Beam Angles	10 x 10 , 30 x 30 , 60 x 60 , 100 x 100 , 10 x 25 , 10 x 40 , 10 x 70 , 30 x 60 , 40 x 70 Asymmetric (60 x 60 + 20 tilt), Batwing (split 10 x 40 or 40 x 70)
Housing Lengths	1' (304.8mm), 4' (1219.2mm)
Control	0-100% dimming via internal 0-10V driver, DMX via optional UDM, wireless via optional Aria
Max Fixtures in Series	80' (24m)
Power Consumption	**1':** 12W, **4':** 48W
Operating Voltage	100-277VAC, 50/60 Hz
Lumen Maintenance	L70 @ 150,000 hours (25 C)
Mounting	90 mounting bracket included, flat mounting bracket optional
Finish	Silver / finished aluminum, marine and natatorium environment capability standard.
Material	Aluminum body - Type III hard coat anodized, polycarbonate lens
Ambient Operating Temperature	-40 F to 131 F (-40 C to 55 C)
IP Rating	IP66, wet location - marine environment housing standard
IK Rating	IK10, protection against 5 joule impact (40cm distance)
Fixture Connectors	IP66 End to end multi-pin connection cables included
Warranty	5 Years, limited
Weight	**1':** 2.4 lbs, **4':** 9.7 lbs

EXECUTIVE SUMMARY

ES.1 SUMMARY OF FINDINGS

The results of this *Wildomar Crossroads Air Quality Impact Analysis* (AQIA) are summarized below based on the significance criteria in Section 3 of this report consistent with Appendix G of the *California Environmental Quality Act (CEQA) Guidelines* (*CEQA Guidelines*) (1). Table ES-1 shows the findings of significance for each potential air quality impact under CEQA before and after any required mitigation measures (MM) described below.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Regional Construction Emissions	3.4	*Less Than Significant*	*n/a*
Localized Construction Emissions	3.7	*Potentially Significant*	*Less Than Significant*
Regional Operational Emissions	3.5	*Less Than Significant*	*n/a*
Localized Operational Emissions	3.8	*Less Than Significant*	*n/a*
CO "Hot Spot" Analysis	3.9	*Less Than Significant*	*n/a*
Air Quality Management Plan	3.10	*Potentially Significant*	*Less Than Significant*
Sensitive Receptors	3.11	*Less Than Significant*	*n/a*
Odors	3.12	*Less Than Significant*	*n/a*
Cumulative Impacts	3.13	*Potentially Significant*	*Less Than Significant*

ES.2 REGULATORY REQUIREMENTS

There are numerous requirements that development projects must comply with by law, and that were put in place by federal, State, and local regulatory agencies for the improvement of air quality.

Any operation or activity that might cause the emission of any smoke, fly ash, dust, fumes, vapors, gases, or other forms of air pollution, which can cause damage to human health, vegetation, or

other forms of property, or can cause excessive soiling on any other parcel shall conform to the requirements of the South Coast Air Quality Management District (SCAQMD).

SCAQMD RULES

SCAQMD Rules that are currently applicable during construction activity for this Project are described below.

SCAQMD RULE 401

A person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any 1 hour that is as dark or darker in shade as that designated No. 1 on the Ringelmann Chart, as published by the U.S. Bureau of Mines.

SCAQMD RULE 402

A person shall not discharge from any source whatsoever such quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or that endanger the comfort, repose, health, or safety of any such persons or the public, or that cause, or have a natural tendency to cause, injury or damage to business or property. The provisions of this rule do not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.

Odor Emissions. All uses shall be operated in a manner such that no offensive odor is perceptible at or beyond the property line of that use.

SCAQMD RULE 403

This rule is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (human-made) fugitive dust sources by requiring actions to prevent and reduce fugitive dust emissions. Rule 403 applies to any activity or human-made condition capable of generating fugitive dust and requires best available control measures to be applied to earth moving and grading activities.

Dust Control, Operations. Any operation or activity that might cause the emission of any smoke, fly ash, dust, fumes, vapors, gases, or other forms of air pollution, which can cause damage to human health, vegetation, or other forms of property, or can cause excessive soiling on any other parcel, shall conform to the requirements of the SCAQMD.

SCAQMD RULE 1113

This rule serves to limit the Volatile Organic Compound (VOC) content of architectural coatings used on projects in the SCAQMD. Any person who supplies, sells, offers for sale, or manufactures any architectural coating for use on projects.

SCAQMD RULE 1301

This rule is intended to provide that pre-construction review requirements to ensure that new or relocated facilities do not interfere with progress in attainment of the National Ambient Air Quality Standards (NAAQS), while future economic growth within the SCAQMD is not unnecessarily restricted. The specific air quality goal is to achieve no net increases from new or modified permitted sources of nonattainment air contaminants or their precursors. Rule 1301 also limits emission increases of ammonia, and Ozone Depleting Compounds (ODCs) from new, modified or relocated facilities by requiring the use of Best Available Control Technology (BACT).

SCAQMD RULE 2305

The SCAQMD adopted Rule 2305, the Warehouse Indirect Source Rule, on May 7, 2021. Owners and operators associated with warehouses 100,000 square feet (sf) or larger are required to directly reduce nitrogen oxides (NO_X) and particulate matter emissions, or to otherwise facilitate emission and exposure reductions of these pollutants in nearby communities.

Although the Project would comply with the above regulatory requirements, it should be noted that emission reductions associated with Rules 401, 402, 1301, and 2305 cannot be quantified in the California Emissions Estimator Model (CalEEMod) and are therefore not reflected in the emissions presented herein. Conversely, Rule 403 (Fugitive Dust) (2) and Rule 1113 (Architectural Coatings) (3) can be modeled in CalEEMod. As such, credit for Rule 403 and Rule 1113 have been taken in the analysis.

ES.3 CONSTRUCTION-SOURCE EMISSIONS MMS

MM AQ-1

During the site preparation phase, construction equipment greater than 150 horsepower (hp), the Construction Contractor shall ensure that off-road diesel construction equipment that complies with Environmental Protection Agency (EPA)/California Air Resources Board (CARB) Tier 3 emissions standards and shall ensure that all construction equipment is tuned and maintained in accordance with the manufacturer's specifications.

MM AQ-2

All actively graded (disturbed) areas within the Project site during site preparation activities shall be watered at 2.1-hour watering intervals (e.g., 4 times per day) or a movable sprinkler system shall be in place to ensure minimum soil moisture of 12 percent (%) in maintained for actively graded areas. Moisture content can be verified with use of a moisture probe by the grading contractor.

This page intentionally left blank

1 INTRODUCTION

This report presents the results of the AQIA prepared by Urban Crossroads, Inc., for the proposed Wildomar Crossroads (Project). The purpose of this AQIA is to evaluate the potential impacts to air quality associated with construction and operation of the Project and recommend measures to mitigate impacts considered potentially significant in comparison to thresholds established by the SCAQMD.

1.1 SITE LOCATION

The proposed Project is located on the northwest corner of Clinton Keith Road and Wildomar Trail, as shown on Exhibit 1-A. The project site has a General Plan Land Use designation of Mixed-Use Planning Area (MUPA) and a zoning designation of Scenic Highway Commercial (C-P-S) with a Mixed-Use Overlay Zone. The area surrounding the Project Site consists of existing single-family residential homes to the north and west, commercial land use and the Oak Springs Ranch Apartment community located to the south, and commercial land uses east of the Project site.

1.2 PROJECT DESCRIPTION

The proposed Project is planned to consist of the following land uses as shown on Exhibit 1-B

- 23,104 square feet (sf) of supermarket land use
- 5,087 sf shops
- 2,750 sf of fast-food restaurant with drive-through window
- 1,133 sf of coffee/donut shop with drive-through window
- 3,348 sf of high-turnover (sit-down) restaurant
- 150 multi-family residential units in 3-story apartment buildings

It is anticipated that the Project would be developed in a single phase with an anticipated Opening Year of 2024.

This page intentionally left blank

2 AIR QUALITY SETTING

This section provides an overview of the existing air quality conditions in the Project area and region.

2.1 SOUTH COAST AIR BASIN (SCAB)

The Project site is located in the SCAB within the jurisdiction of SCAQMD (4). The SCAQMD was created by the 1977 Lewis-Presley Air Quality Management Act, which merged four county air pollution control bodies into one regional district. Under the Act, the SCAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards. As previously stated, the Project site is located within the SCAB, a 6,745-square mile subregion of the SCAQMD, which includes portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County.

The SCAB is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Los Angeles County portion of the Mojave Desert Air Basin is bounded by the San Gabriel Mountains to the south and west, the Los Angeles / Kern County border to the north, and the Los Angeles / San Bernardino County border to the east. The Riverside County portion of the Salton Sea Air Basin is bounded by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley.

2.2 REGIONAL CLIMATE

The regional climate has a substantial influence on air quality in the SCAB. In addition, the temperature, wind, humidity, precipitation, and amount of sunshine influence the air quality.

The annual average temperatures throughout the SCAB vary from the low to middle 60s degrees Fahrenheit (°F). Due to a decreased marine influence, the eastern portion of the SCAB shows greater variability in average annual minimum and maximum temperatures. January is the coldest month throughout the SCAB, with average minimum temperatures of 47°F in downtown Los Angeles and 36°F in San Bernardino. All portions of the SCAB have recorded maximum temperatures above 100°F.

Although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB, and the conversion of sulfur dioxide (SO_2) to sulfates (SO_4) is heightened in air with high relative humidity. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is 71% along the coast and 59% inland. Since the ocean effect is dominant, periods of heavy early morning fog are frequent and low stratus clouds are a characteristic feature. These effects decrease with distance from the coast.

More than 90% of the SCAB's rainfall occurs from November through April. The annual average rainfall varies from approximately nine inches in Riverside to fourteen inches in downtown Los

Angeles. Monthly and yearly rainfall totals are extremely variable. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the SCAB with frequency being higher near the coast.

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year there are approximately 10 hours of possible sunshine, and on the longest day of the year there are approximately 14½ hours of possible sunshine.

The importance of wind to air pollution is considerable. The direction and speed of the wind determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the "Catalina Eddy," a low level cyclonic (counterclockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections.

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level.

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as NO_X and CO from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline.

2.3 WIND PATTERNS AND PROJECT LOCATION

The distinctive climate of the Project area and the SCAB is determined by its terrain and geographical location. The SCAB is located in a coastal plain with connecting broad valleys and

low hills, bounded by the Pacific Ocean in the southwest quadrant with high mountains forming the remainder of the perimeter.

Wind patterns across the south coastal region are characterized by westerly and southwesterly onshore winds during the day and easterly or northeasterly breezes at night. Winds are characteristically light although the speed is somewhat greater during the dry summer months than during the rainy winter season.

2.4 CRITERIA POLLUTANTS

Criteria pollutants are pollutants that are regulated through the development of human health based and/or environmentally based criteria for setting permissible levels. Criteria pollutants, their typical sources, and health effects are identified below (5):

TABLE 2-1: CRITERIA POLLUTANTS

Criteria Pollutant	Description	Sources	Health Effects
CO	CO is a colorless, odorless gas produced by the incomplete combustion of carbon-containing fuels, such as gasoline or wood. CO concentrations tend to be the highest during the winter morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion engines, unlike ozone (O_3), motor vehicles operating at slow speeds are the primary source of CO in the SCAB. The highest ambient CO concentrations are generally found near congested transportation corridors and intersections.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Individuals with a deficient blood supply to the heart are the most susceptible to the adverse effects of CO exposure. The effects observed include earlier onset of chest pain with exercise, and electrocardiograph changes indicative of decreased oxygen (O_2) supply to the heart. Inhaled CO has no direct toxic effect on the lungs but exerts its effect on tissues by interfering with O_2 transport and competing with O_2 to combine with hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, conditions with an increased demand for O_2 supply can be adversely affected by exposure to CO. Individuals most at risk include fetuses, patients with diseases involving heart and blood vessels, and patients with chronic hypoxemia (O_2 deficiency) as seen at high altitudes.

Criteria Pollutant	Description	Sources	Health Effects
SO_2	SO_2 is a colorless, extremely irritating gas or liquid. It enters the atmosphere as a pollutant mainly as a result of burning high sulfur-content fuel oils and coal and from chemical processes occurring at chemical plants and refineries. When SO_2 oxidizes in the atmosphere, it forms SO_4. Collectively, these pollutants are referred to as sulfur oxides (SO_X).	Coal or oil burning power plants and industries, refineries, diesel engines	A few minutes of exposure to low levels of SO_2 can result in airway constriction in some asthmatics, all of whom are sensitive to its effects. In asthmatics, increase in resistance to air flow, as well as reduction in breathing capacity leading to severe breathing difficulties, are observed after acute exposure to SO_2. In contrast, healthy individuals do not exhibit similar acute responses even after exposure to higher concentrations of SO_2. Animal studies suggest that despite SO_2 being a respiratory irritant, it does not cause substantial lung injury at ambient concentrations. However, very high levels of exposure can cause lung edema (fluid accumulation), lung tissue damage, and sloughing off of cells lining the respiratory tract. Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient SO_2 levels. In these studies, efforts to separate the effects of SO_2 from those of fine particles have not been successful. It is not clear whether the two pollutants act synergistically, or one pollutant alone is the predominant factor.

Criteria Pollutant	Description	Sources	Health Effects
NO_X	NO_X consist of nitric oxide (NO), nitrogen dioxide (NO_2) and nitrous oxide (N_2O) and are formed when nitrogen (N_2) combines with O_2. Their lifespan in the atmosphere ranges from one to seven days for nitric oxide and nitrogen dioxide, to 170 years for nitrous oxide. NO_X is typically created during combustion processes and are major contributors to smog formation and acid deposition. NO_2 is a criteria air pollutant and may result in numerous adverse health effects; it absorbs blue light, resulting in a brownish-red cast to the atmosphere and reduced visibility. Of the seven types of NO_X compounds, NO_2 is the most abundant in the atmosphere. As ambient concentrations of NO_2 are related to traffic density, commuters in heavy traffic may be exposed to higher concentrations of NO_2 than those indicated by regional monitoring station.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Population-based studies suggest that an increase in acute respiratory illness, including infections and respiratory symptoms in children (not infants), is associated with long-term exposure to NO_2 at levels found in homes with gas stoves, which are higher than ambient levels found in Southern California. Increase in resistance to air flow and airway contraction is observed after short-term exposure to NO_2 in healthy subjects. Larger decreases in lung functions are observed in individuals with asthma or chronic obstructive pulmonary disease (e.g., chronic bronchitis, emphysema) than in healthy individuals, indicating a greater susceptibility of these sub-groups. In animals, exposure to levels of NO_2 considerably higher than ambient concentrations result in increased susceptibility to infections, possibly due to the observed changes in cells involved in maintaining immune functions. The severity of lung tissue damage associated with high levels of O_3 exposure increases when animals are exposed to a combination of O_3 and NO_2.
O_3	O_3 is a highly reactive and unstable gas that is formed when VOCs and NO_X, both byproducts of internal combustion engine exhaust, undergo slow photochemical reactions in the presence of sunlight. O_3 concentrations are generally highest during the summer	Formed when reactive organic gases (ROG) and NO_X react in the presence of sunlight. ROG sources include any source	Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the most susceptible sub-groups for O_3 effects. Short-term exposure (lasting for a

Criteria Pollutant	Description	Sources	Health Effects
	months when direct sunlight, light wind, and warm temperature conditions are favorable to the formation of this pollutant.	that burns fuels, (e.g., gasoline, natural gas, wood, oil) solvents, petroleum processing and storage and pesticides.	few hours) to O_3 at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. Elevated O_3 levels are associated with increased school absences. In recent years, a correlation between elevated ambient O_3 levels and increases in daily hospital admission rates, as well as mortality, has also been reported. An increased risk for asthma has been found in children who participate in multiple outdoor sports and reside in communities with high O_3 levels. O_3 exposure under exercising conditions is known to increase the severity of the responses described above. Animal studies suggest that exposure to a combination of pollutants that includes O_3 may be more toxic than exposure to O_3 alone. Although lung volume and resistance changes observed after a single exposure diminish with repeated exposures, biochemical and cellular changes appear to persist, which can lead to subsequent lung structural changes.
Particulate Matter	PM_{10}: A major air pollutant consisting of tiny solid or liquid particles of soot, dust, smoke, fumes, and aerosols. Particulate matter pollution is a major cause of reduce visibility (haze) which is caused by the scattering of light	Sources of PM_{10} include road dust, windblown dust and construction. Also formed from other pollutants (acid rain, NO_X, SO_X,	A consistent correlation between elevated ambient fine particulate matter (PM_{10} and $PM_{2.5}$) levels and an increase in mortality rates, respiratory infections, number and severity of

Criteria Pollutant	Description	Sources	Health Effects
	and consequently the significant reduction air clarity. The size of the particles (10 microns or smaller, about 0.0004 inches or less) allows them to easily enter the lungs where they may be deposited, resulting in adverse health effects. Additionally, it should be noted that PM_{10} is considered a criteria air pollutant. $PM_{2.5}$: A similar air pollutant to PM_{10} consisting of tiny solid or liquid particles which are 2.5 microns or smaller (which is often referred to as fine particles). These particles are formed in the atmosphere from primary gaseous emissions that include SO_4 formed from SO_2 release from power plants and industrial facilities and nitrates that are formed from NO_X release from power plants, automobiles, and other types of combustion sources. The chemical composition of fine particles highly depends on location, time of year, and weather conditions. $PM_{2.5}$ is a criteria air pollutant.	organics). Incomplete combustion of any fuel. $PM_{2.5}$ comes from fuel combustion in motor vehicles, equipment, and industrial sources, residential and agricultural burning. Also formed from reaction of other pollutants (acid rain, NO_X, SO_X, organics).	asthma attacks and the number of hospital admissions has been observed in different parts of the United States and various areas around the world. In recent years, some studies have reported an association between long-term exposure to air pollution dominated by fine particles and increased mortality, reduction in lifespan, and an increased mortality from lung cancer. Daily fluctuations in $PM_{2.5}$ concentration levels have also been related to hospital admissions for acute respiratory conditions in children, to school and kindergarten absences, to a decrease in respiratory lung volumes in normal children, and to increased medication use in children and adults with asthma. Recent studies show lung function growth in children is reduced with long term exposure to particulate matter. The elderly, people with pre-existing respiratory or cardiovascular disease, and children appear to be more susceptible to the effects of high levels of PM_{10} and $PM_{2.5}$.
VOC	VOCs are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. VOCs contribute to the formation of smog through atmospheric photochemical reactions and/or may be toxic. Compounds of carbon (also known as organic compounds) have different levels of reactivity; that is, they do not react at the same speed or do not	Organic chemicals are widely used as ingredients in household products. Paints, varnishes, and wax all contain organic solvents, as do many cleaning, disinfecting, cosmetic, degreasing and hobby products.	Breathing VOCs can irritate the eyes, nose, and throat, can cause difficulty breathing and nausea, and can damage the central nervous system as well as other organs. Some VOCs can cause cancer. Not all VOCs have all these health effects, though many have several.

Criteria Pollutant	Description	Sources	Health Effects
	form O_3 to the same extent when exposed to photochemical processes. VOCs often have an odor, and some examples include gasoline, alcohol, and the solvents used in paints. Exceptions to the VOC designation include CO, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. VOCs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms VOC and ROG (see below) interchangeably.	Fuels are made up of organic chemicals. All of these products can release organic compounds while you are using them, and, to some degree, when they are stored.	
ROG	Similar to VOC, ROGs are also precursors in forming O_3 and consist of compounds containing methane, ethane, propane, butane, and longer chain hydrocarbons, which are typically the result of some type of combustion/decomposition process. Smog is formed when ROG and NO_X react in the presence of sunlight. ROGs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms ROG and VOC (see previous) interchangeably.	Sources similar to VOCs.	Health effects similar to VOCs.
Lead (Pb)	Pb is a heavy metal that is highly persistent in the environment and is considered a criteria pollutant. In the past, the primary source of Pb in the air was emissions from vehicles burning leaded gasoline. The major sources of Pb emissions are ore and metals processing, particularly Pb smelters, and piston-engine aircraft operating on leaded aviation gasoline. Other stationary sources include waste incinerators, utilities, and lead-acid battery manufacturers. It should be noted that the	Metal smelters, resource recovery, leaded gasoline, deterioration of Pb paint.	Fetuses, infants, and children are more sensitive than others to the adverse effects of Pb exposure. Exposure to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased Pb levels are associated with increased blood pressure.

Criteria Pollutant	Description	Sources	Health Effects
	Project does not include operational activities such as metal processing or Pb acid battery manufacturing. As such, the Project is not anticipated to generate a quantifiable amount of Pb emissions.		Pb poisoning can cause anemia, lethargy, seizures, and death; although it appears that there are no direct effects of Pb on the respiratory system. Pb can be stored in the bone from early age environmental exposure, and elevated blood Pb levels can occur due to breakdown of bone tissue during pregnancy, hyperthyroidism (increased secretion of hormones from the thyroid gland) and osteoporosis (breakdown of bony tissue). Fetuses and breast-fed babies can be exposed to higher levels of Pb because of previous environmental Pb exposure of their mothers.
Odor	Odor means the perception experienced by a person when one or more chemical substances in the air come into contact with the human olfactory nerves (6).	Odors can come from many sources including animals, human activities, industry, natures, and vehicles.	Offensive odors can potentially affect human health in several ways. First, odorant compounds can irritate the eye, nose, and throat, which can reduce respiratory volume. Second, studies have shown that the VOCs that cause odors can stimulate sensory nerves to cause neurochemical changes that might influence health, for instance, by compromising the immune system. Finally, unpleasant odors can trigger memories or attitudes linked to unpleasant odors, causing cognitive and emotional effects such as stress.

2.5 EXISTING AIR QUALITY

Existing air quality is measured at established SCAQMD air quality monitoring stations. Monitored air quality is evaluated in the context of ambient air quality standards. These standards are the levels of air quality that are considered safe, with an adequate margin of safety, to protect the public health and welfare. NAAQS and California Ambient Air Quality Standards (CAAQS) currently in effect are shown in Table 2-2 (7).

The determination of whether a region's air quality is healthful or unhealthful is determined by comparing contaminant levels in ambient air samples to the state and federal standards. At the time of this AQIA, the most recent state and federal standards were updated by CARB on May 4, 2016, as presented in Table 2-2. The air quality in a region is considered to be in attainment by the state if the measured ambient air pollutant levels for O_3, CO (except 8-hour Lake Tahoe), SO_2 (1 and 24 hour), NO_2, PM_{10}, and $PM_{2.5}$ do not exceed standards. All others are not to be equaled or exceeded. It should be noted that the three-year period is presented for informational purposes and is not the basis for how the State assigns attainment status. Attainment status for a pollutant means that the SCAQMD meets the standards set by the EPA or the California EPA (CalEPA). Conversely, nonattainment means that an area has monitored air quality that does not meet the NAAQS or CAAQS standards. In order to improve air quality in nonattainment areas, CARB has implemented a State Implementation Plan (SIP). The SIP outlines the measures that the state will take to improve air quality. Once nonattainment areas meet the standards and additional redesignation requirements, the EPA will designate the area as a maintenance area (8).

TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (1 OF 2)

Ambient Air Quality Standards						
Pollutant	**Averaging Time**	**California Standards** [1]		**National Standards** [2]		
		Concentration [3]	**Method** [4]	**Primary** [3,5]	**Secondary** [3,6]	**Method** [7]
Ozone (O_3)[8]	1 Hour	0.09 ppm (180 µg/m^3)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m^3)		0.070 ppm (137 µg/m^3)		
Respirable Particulate Matter (PM10)[9]	24 Hour	50 µg/m^3	Gravimetric or Beta Attenuation	150 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m^3		—		
Fine Particulate Matter (PM2.5)[9]	24 Hour	—	—	35 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m^3	Gravimetric or Beta Attenuation	12.0 µg/m^3	15 µg/m^3	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m^3)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m^3)		9 ppm (10 mg/m^3)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		—	—	
Nitrogen Dioxide (NO_2)[10]	1 Hour	0.18 ppm (339 µg/m^3)	Gas Phase Chemiluminescence	100 ppb (188 µg/m^3)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m^3)		0.053 ppm (100 µg/m^3)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1 Hour	0.25 ppm (655 µg/m^3)	Ultraviolet Fluorescence	75 ppb (196 µg/m^3)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m^3)	
	24 Hour	0.04 ppm (105 µg/m^3)		0.14 ppm (for certain areas)[11]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[11]	—	
Lead[12,13]	30 Day Average	1.5 µg/m^3	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m^3 (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m^3		
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	**No National Standards**		
Sulfates	24 Hour	25 µg/m^3	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24 Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

See footnotes on next page …

For more information please call ARB-PIO at (916) 322-2990 — California Air Resources Board (5/4/16)

TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (2 OF 2)

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.
8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.
9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.
12. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
14. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

For more information please call ARB-PIO at (916) 322-2990 **California Air Resources Board (5/4/16)**

2.6 REGIONAL AIR QUALITY

Air pollution contributes to a wide variety of adverse health effects. The EPA has established NAAQS for six of the most common air pollutants: CO, Pb, O_3, particulate matter (PM_{10} and $PM_{2.5}$), NO_2, and SO_2 which are known as criteria pollutants. The SCAQMD monitors levels of various criteria pollutants at 37 permanent monitoring stations and 5 single-pollutant source Pb air monitoring sites throughout the air district (9). On February 21, 2019, CARB posted the 2018 amendments to the state and national area designations. See Table 2-3 for attainment designations for the SCAB (10). Appendix 2.1 provides geographic representation of the state and federal attainment status for applicable criteria pollutants within the SCAB.

TABLE 2-3: ATTAINMENT STATUS OF CRITERIA POLLUTANTS IN THE SCAB

Criteria Pollutant	State Designation	Federal Designation
O_3 – 1-hour standard	Nonattainment	--
O_3 – 8-hour standard	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Attainment
$PM_{2.5}$	Nonattainment	Nonattainment
CO	Attainment	Unclassifiable/Attainment
NO_2	Attainment	Unclassifiable/Attainment
SO_2	Unclassifiable/Attainment	Unclassifiable/Attainment
Pb[1]	Attainment	Unclassifiable/Attainment

Note: See Appendix 2.1 for a detailed map of State/National Area Designations within the SCAB
"-" = The national 1-hour O_3 standard was revoked effective June 15, 2005.

2.7 LOCAL AIR QUALITY

The SCAQMD has designated general forecast areas and air monitoring areas (referred to as Source Receptor Areas [SRA]) throughout the district in order to provide Southern California residents about the air quality conditions. The Project site is located within the Elsinore Valley area (SRA 25). Within SRA 25, the Elsinore Valley monitoring station is located approximately 7.9 miles northwest of the Project site and reports air quality statistics for O_3, CO, NO_2, and PM_{10}. As the Elsinore Valley monitoring station does not provide data for $PM_{2.5}$, data from the Saddleback Valley monitoring station located 24.9 miles west of the Projects site will be utilized. It should be noted that data from Saddleback Valley monitoring station was reported in lieu of the Elsinore Valley monitoring station only in instances where data was not available.

The most recent three (3) years of data available is shown on Table 2-4 and identifies the number of days ambient air quality standards were exceeded for the study area, which is considered to be representative of the local air quality at the Development Site. Data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$ for 2018 through 2020 was obtained from the SCAQMD Air Quality Data Tables (11).

[1] The Federal nonattainment designation for lead is only applicable towards the Los Angeles County portion of the SCAB.

Additionally, data for SO_2 has been omitted as attainment is regularly met in the SCAB and few monitoring stations measure SO_2 concentrations.

TABLE 2-4: PROJECT AREA AIR QUALITY MONITORING SUMMARY 2018-2020

Pollutant	Standard	Year		
		2018	2019	2020
O_3				
Maximum Federal 1-Hour Concentration (ppm)		0.116	0.108	0.130
Maximum Federal 8-Hour Concentration (ppm)		0.095	0.089	0.100
Number of Days Exceeding State 1-Hour Standard	> 0.09 ppm	16	4	18
Number of Days Exceeding State/Federal 8-Hour Standard	> 0.070 ppm	30	28	52
CO				
Maximum Federal 1-Hour Concentration	> 35 ppm	1.1	1.6	0.9
Maximum Federal 8-Hour Concentration	> 20 ppm	0.8	0.7	0.7
NO_2				
Maximum Federal 1-Hour Concentration	> 0.100 ppm	0.041	0.038	0.044
Annual Federal Standard Design Value		0.009	0.007	0.007
PM_{10}				
Maximum Federal 24-Hour Concentration (µg/m^3)	> 150 µg/m^3	104	93	84
Annual Federal Arithmetic Mean (µg/m^3)		22.4	18.7	22.0
Number of Days Exceeding Federal 24-Hour Standard	> 150 µg/m^3	0	0	0
Number of Days Exceeding State 24-Hour Standard	> 50 µg/m^3	9	5	7
$PM_{2.5}$				
Maximum Federal 24-Hour Concentration (µg/m^3)	> 35 µg/m^3	20.80	20.80	35.00
Annual Federal Arithmetic Mean (µg/m^3)	> 12 µg/m^3	8.31	7.11	8.81
Number of Days Exceeding Federal 24-Hour Standard	> 35 µg/m^3	0	0	0

ppm = Parts Per Million
µg/m^3 = Microgram per Cubic Meter
Source: Data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$ was obtained from SCAQMD Air Quality Data Tables.

2.8 REGULATORY BACKGROUND

2.8.1 FEDERAL REGULATIONS

The EPA is responsible for setting and enforcing the NAAQS for O_3, CO, NO_X, SO_2, PM_{10}, and Pb (12). The EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (13). The CAA also mandates that states submit and implement SIPs for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards would be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions) (14) (15). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O_3, NO_2, SO_2, PM_{10}, CO, $PM_{2.5}$, and Pb. The NAAQS were amended in July 1997 to include an additional standard for O_3 and to adopt a NAAQS for $PM_{2.5}$. Table 2-3 (previously presented) provides the NAAQS within the SCAB.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and NO_X. NO_X is a collective term that includes all forms of NO_X which are emitted as byproducts of the combustion process.

2.8.2 CALIFORNIA REGULATIONS

CARB

CARB, which became part of the CalEPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. AB 2595 mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. CARB established the CAAQS for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for SO_4, visibility, hydrogen sulfide (H_2S), and vinyl chloride (C_2H_3Cl). However, at this time, H_2S and C_2H_3Cl are not measured at any monitoring stations in the SCAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (16) (12).

Local air quality management districts, such as the SCAQMD, regulate air emissions from stationary sources such as commercial and industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare Air Quality Management Plans (AQMP) that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;

- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g., motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a 5% or more annual reduction in emissions or 15% or more in a period of three years for ROGs, NO_X, CO and PM_{10}. However, air basins may use alternative emission reduction strategy that achieves a reduction of less than 5% per year under certain circumstances.

TITLE 24 ENERGY EFFICIENCY STANDARDS AND CALIFORNIA GREEN BUILDING STANDARDS

California Code of Regulations (CCR) Title 24 Part 6: The California Energy Code was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption.

The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. CCR, Title 24, Part 11: California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect on January 1, 2009, and is administered by the California Building Standards Commission.

CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2019 California Green Building Code Standards that became effective January 1, 2020.

Local jurisdictions are permitted to adopt more stringent requirements, as state law provides methods for local enhancements. CALGreen recognizes that many jurisdictions have developed existing construction waste and demolition ordinances and defers to them as the ruling guidance provided they establish a minimum 65% diversion requirement.

The code also provides exemptions for areas not served by construction waste and demolition recycling infrastructure. The State Building Code provides the minimum standard that buildings must meet in order to be certified for occupancy, which is generally enforced by the local building official.

Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases greenhouse gas (GHG) emissions. The 2019 version of Title 24 was adopted by the California Energy Commission [CEC]) and became effective on January 1, 2020.

The 2019 Title 24 standards would result in less energy use, thereby reducing air pollutant emissions associated with energy consumption in the SCAB and across the State of California. For example, the 2019 Title 24 standards require solar photovoltaic systems for new homes, establish requirements for newly constructed healthcare facilities, encourage demand responsive technologies for residential buildings, and update indoor and outdoor lighting requirements for nonresidential buildings.

The CEC anticipates that single-family homes built with the 2019 standards would use approximately 7% less energy compared to the residential homes built under the 2016 standards. Additionally, after implementation of solar photovoltaic systems, homes built under the 2019 standards would use about 53% less energy than homes built under the 2016 standards. Nonresidential buildings (such as the Project) would use approximately 30% less energy due to lighting upgrade requirements (18).

Because the Project would be constructed after January 1, 2019, the 2019 CALGreen standards are applicable to the Project and require, among other items (19):

RESIDENTIAL MANDATORY MEASURES

- Electric vehicle (EV) charging stations. New construction shall comply with Section 4.106.4.1, 4.106.4.2, 4.106.4.3, to facilitate future installation and use of EV chargers. Electric vehicle supply equipment (EVSE) shall be installed in accordance with the *California Electrical Code*, Article 625. (4.106.4).
    - New one- and two-family dwellings and town-houses with attached private garages. For each dwelling unit, install a listed raceway to accommodate a dedicated 208/240-volt branch circuit. The raceway shall not be less than trade size 1 (nominal 1-inch inside diameter). The raceway shall originate at the main service or subpanel and shall terminate into a listed cabinet, box or other enclosure in close proximity to the proposed location of an EV charger. Raceways are required to be continuous at enclosed, inaccessible or concealed areas and spaces. The service panel and/or subpanel shall provide capacity to install a 40-ampere 208/240-volt minimum dedicated branch circuit and space(s) reserved to permit installation of a branch circuit overcurrent protective device.
    - New hotels and motels. All newly constructed hotels and motels shall provide EV spaces capable of supporting future installation of EVSE. The construction documents shall identify the location of the EV spaces. The number of required EV spaces shall be based on the total number of parking spaces provided for all types of parking facilities in accordance with Table 4.106.4.3.1.
- Water conserving plumbing fixtures and fittings. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with Sections 4.303.1.1, 4.303.1.2, 4.303.1.3, and 4.303.1.4.
- Outdoor potable water use in landscape areas. Residential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resource ' Model Water Efficient Landscape Ordinance (MWELO), whichever is more stringent.
- Operation and maintenance manual. At the time of final inspection, a manual, compact disc, web-based reference or other media acceptable to the enforcing agency which includes all of the following shall be placed in the building:
    - Directions to the owner or occupant that the manual shall remain with the building throughout the life cycle of the structure.
    - Operations and maintenance instructions for the following:
        - Equipment and appliances, including water-saving devices and systems, HVAC systems, photovoltaic systems, EV chargers, water-heating systems and other major appliances and equipment.

  - Roof and yard drainage, including gutter and downspouts.
  - Space conditioning systems, including condensers and air filters.
  - Landscape irrigation systems.
  - Water reuse systems.
- Information from local utility, water and waste recovery providers on methods to future reduce resource consumption, including recycle programs and locations.
- Public transportation and/or carpool options available in the area.
- Educational material on the positive impacts of an interior relative humidity between 30-60% and what methods an occupants may use to maintain the relative humidity level in that range.
- Information about water-conserving landscape and irrigation design and controllers which conserve water.
- Instructions for maintaining gutters and downspouts and the importance of diverting water at least 5 feet away from the foundation.
- Information about state solar energy and incentive programs available.
- A copy of all special inspection verifications required by the enforcing agency of this code.
- Information from CALFIRE on maintenance of defensible space around residential structures.

- Any installed gas fireplace shall be direct-vent sealed-combustion type. Any installed woodstove or pellet stove shall comply with U.S. EPA New Source Performance Standards (NSPS) emission limits as applicable and shall have a permanent label indicating they are certified to meet the emission limits. Woodstoves, pellet stoves and fireplaces shall also comply with applicable local ordinances.
- Paints and coatings. Architectural paints and coatings shall comply with VOC limits in Table 1 of the CARB Architectural Suggested Control Measure, as shown in Table 4.504.3, unless more stringent local limits apply. The VOC content limit for coatings that do not meet the definitions for the specialty coatings categories listed in Table 4.504.3 shall be determined by classifying the coating as a Flat, Nonflat, or Nonflat-high Gloss coating, based on its glass, as defined in subsections 4.21, 4.36, and 4.37 of the 2007 CARB, Suggested Control Measure, and the corresponding Flat, Nonflat, Nonflat-high Gloss VOC limit in Table 4.504.3 shall apply.

NONRESIDENTIAL MANDATORY MEASURES

- Short-term bicycle parking. If the new project or an additional alteration is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors' entrance, readily visible to passers-by, for 5% of new visitor motorized vehicle parking spaces being added, with a minimum of one two-bike capacity rack (5.106.4.1.1).
- Long-term bicycle parking. For new buildings with tenant spaces that have 10 or more tenant-occupants, provide secure bicycle parking for 5% of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility (5.106.4.1.2).
- Designated parking for clean air vehicles. In new projects or additions to alterations that add 10 or more vehicular parking spaces, provide designated parking for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles as shown in Table 5.106.5.2 (5.106.5.2).

- EV charging stations. New construction shall facilitate the future installation of EV supply equipment. The compliance requires empty raceways for future conduit and documentation that the electrical system has adequate capacity for the future load. The number of spaces to be provided for is contained in Table 5.106. 5.3.3 (5.106.5.3).
- Outdoor light pollution reduction. Outdoor lighting systems shall be designed to meet the backlight, uplight and glare ratings per Table 5.106.8 (5.106.8)
- Construction waste management. Recycle and/or salvage for reuse a minimum of 65% of the nonhazardous construction and demolition waste in accordance with Section
- 5.408.1.1. 5.405.1.2, or 5.408.1.3; or meet a local construction and demolition waste management ordinance, whichever is more stringent (5.408.1).
- Excavated soil and land clearing debris. 100% of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reused or recycled. For a phased project, such material may be stockpiled on site until the storage site is developed (5.408.3).
- Recycling by Occupants. Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of non-hazardous materials for recycling, including (at a minimum) paper, corrugated cardboard, glass, plastics, organic waste, and metals or meet a lawfully enacted local recycling ordinance, if more restrictive (5.410.1).
- Water conserving plumbing fixtures and fittings. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with the following:
    - Water Closets. The effective flush volume of all water closets shall not exceed 1.28 gallons per flush (5.303.3.1)
    - Urinals. The effective flush volume of wall-mounted urinals shall not exceed 0.125 gallons per flush (5.303.3.2.1). The effective flush volume of floor- mounted or other urinals shall not exceed 0.5 gallons per flush (5.303.3.2.2).
    - Showerheads. Single showerheads shall have a minimum flow rate of not more than 1.8 gallons per minute and 80 psi (5.303.3.3.1). When a shower is served by more than one showerhead, the combine flow rate of all showerheads and/or other shower outlets controlled by a single valve shall not exceed 1.8 gallons per minute at 80 psi (5.303.3.3.2).
    - Faucets and fountains. Nonresidential lavatory faucets shall have a maximum flow rate of not more than 0.5 gallons per minute at 60 psi (5.303.3.4.1). Kitchen faucets shall have a maximum flow rate of not more than 1.8 gallons per minute of 60 psi (5.303.3.4.2). Wash fountains shall have a maximum flow rate of not more than 1.8 gallons per minute (5.303.3.4.3). Metering faucets shall not deliver more than 0.20 gallons per cycle (5.303.3.4.4). Metering faucets for wash fountains shall have a maximum flow rate not more than 0.20 gallons per cycle (5.303.3.4.5).
- Outdoor portable water use in landscaped areas. Nonresidential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient (MWELO), whichever is more stringent (5.304.1).
- Water meters. Separate submeters or metering devices shall be installed for new buildings or additions in excess of 50,000 sf or for excess consumption where any tenant within a new building or within an addition that is project to consume more than 1,000 gallons per day (5.303.1.1 and 5.303.1.2).

- Outdoor water use in rehabilitated landscape projects equal or greater than 2,500 sf. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 sf requiring a building or landscape permit (5.304.3).
- Commissioning. For new buildings 10,000 sf and over, building commissioning shall be included in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (5.410.2).

2.8.3 AQMP

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMP to meet the state and federal ambient air quality standards (17). AQMPs are updated regularly to ensure an effective reduction in emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. A detailed discussion on the AQMP and Project consistency with the AQMP is provided in Section 3.10.

3 PROJECT AIR QUALITY IMPACT

3.1 INTRODUCTION

This study quantifies air quality emissions generated by construction and operation of the Project and addresses whether the Project conflicts with implementation of the SCAQMD's AQMP and Lead Agency planning regulations. The analysis of Project-generated air emissions determines whether the Project would result in a cumulatively considerable net increase of any criteria pollutant for which the SCAB is in non-attainment under an applicable NAAQS and CAAQS. Additionally, the Project has been evaluated to determine whether the Project would expose sensitive receptors to substantial pollutant concentrations and the impacts of odors. The significance of these potential impacts is described in the following sections.

3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the *CEQA Guidelines* (14 CCR §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (1):

- Conflict with or obstruct implementation of the applicable air quality plan.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.
- Expose sensitive receptors to substantial pollutant concentrations.
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The SCAQMD has also developed regional significance thresholds for other regulated pollutants, as summarized at Table 3-1 (18). The SCAQMD's *CEQA Air Quality Significance Thresholds* (April 2019) indicate that any projects in the SCAB with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 3-1: MAXIMUM DAILY REGIONAL EMISSIONS THRESHOLDS

Pollutant	Regional Construction Threshold	Regional Operational Thresholds
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Pb	3 lbs/day	3 lbs/day

lbs/day = Pounds Per Day

3.3 MODELS EMPLOYED TO ANALYZE AIR QUALITY

3.3.1 CALEEMOD

Land uses such as the Project affect air quality through construction-source and operational-source emissions.

In May 2021, the SCAQMD, in conjunction with the California Air Pollution Control Officers Association (CAPCOA) and other California air districts, released the latest version of the CalEEMod Version 2020.4.0. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from MMs (19). Accordingly, the latest version of CalEEMod has been used for this Project to determine construction and operational air quality emissions. Output from the model runs for both construction and operational activity are provided in Appendices 3.1 through 3.4.

3.4 CONSTRUCTION EMISSIONS

Construction activities associated with the Project will result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Construction related emissions are expected from the following construction activities:

- Demolition
- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

DEMOLITION ACTIVITIES

The site is currently developed with an existing 1,434 sf building which will be demolished and hauled off-site.

GRADING ACTIVITIES

Dust is typically a major concern during grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called “fugitive emissions”. Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). CalEEMod was utilized to calculate fugitive dust emissions resulting from this phase of activity. The Project will need to export 38,761 cubic yards of material.

OFF-SITE UTILITY AND INFRASTRUCTURE IMPROVEMENTS

Off-site utility and infrastructure improvements would occur. However, at this time, a specific schedule is unknown. Impacts associated with these expected activities are not expected to

exceed the emissions identified for Project-related construction activities. As such, no impacts beyond what has already been identified in this report are expected to occur.

ON-ROAD TRIPS

Construction generates on-road vehicle emissions from vehicle usage for workers, hauling, and vendors commuting to and from the site. The number of workers, hauling, and vendor trips are presented below in Table 3-2.

TABLE 3-2: CONSTRUCTION TRIP ASSUMPTIONS

Construction Activity	Worker Trips Per Day	Vendor Trips Per Day	Total Hauling Trips
Demolition	15	4	7
Site Preparation	18	2	0
Grading	15	4	4,845
Building Construction	218	43	0
Paving	15	4	0
Architectural Coating	44	4	0

3.4.1 CONSTRUCTION DURATION

Construction is anticipated to begin in December 2022 and will last through February 2024. The construction schedule utilized in the analysis, shown in Table 3-3, represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent[2]. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per *CEQA Guidelines* (1).

TABLE 3-3: CONSTRUCTION DURATION

Construction Activity	Start Date	End Date	Days
Demolition	12/01/2022	12/28/2022	20
Site Preparation	12/29/2022	01/11/2023	10
Grading	01/12/2023	02/08/2023	20
Building Construction	02/09/2023	12/27/2023	230
Paving	12/28/2023	01/24/2024	20
Architectural Coating	01/25/2024	02/21/2024	20

Source: Construction schedule based on CalEEMod default parameters.

[2] As shown in the CalEEMod User's Guide Version 2020.4.0, Section 4.3 "Off-Road Equipment" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

3.4.2 CONSTRUCTION EQUIPMENT

Consistent with industry standards and typical construction practices, each piece of equipment listed in Table 3-4 will operate up to a total of eight (8) hours per day, or more than two-thirds of the period during which construction activities are allowed pursuant to the code.

TABLE 3-4: CONSTRUCTION EQUIPMENT ASSUMPTIONS

Construction Activity	Equipment[1]	Amount	Hours Per Day
Demolition	Concrete/Industrial Saws	1	8
	Excavators	3	8
	Rubber Tired Dozers	2	8
Site Preparation	Crawler Tractors	4	8
	Rubber Tired Dozers	3	8
Grading	Crawler Tractors	3	8
	Excavators	1	8
	Graders	1	8
	Rubber Tired Dozers	1	8
Building Construction	Cranes	1	8
	Forklifts	3	8
	Generator Sets	1	8
	Tractors/Loaders/Backhoes	3	8
	Welders	1	8
Paving	Pavers	2	8
	Paving Equipment	2	8
	Rollers	2	8
Architectural Coating	Air Compressors	1	8

Source: Construction equipment based on CalEEMod default parameters.

[1] In order to account for fugitive dust emissions, Crawler Tractors were used in lieu of Tractors/Loaders/Backhoes.

3.4.3 CONSTRUCTION EMISSIONS SUMMARY

IMPACTS WITHOUT MITIGATION

CalEEMod calculates maximum daily emissions for summer and winter periods. The estimated maximum daily construction emissions without mitigation are summarized on Table 3-5. Detailed construction model outputs are presented in Appendix 3.1. Under the assumed scenarios, emissions resulting from the Project construction will not exceed criteria pollutant thresholds established by the SCAQMD for emissions of any criteria pollutant.

TABLE 3-5: OVERALL CONSTRUCTION EMISSIONS SUMMARY – WITHOUT MITIGATION

Year	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2022	4.55	50.48	21.26	0.06	10.87	6.07
2023	3.89	53.02	25.89	0.18	10.46	5.70
2024	49.80	9.69	15.19	0.02	0.66	0.48
Winter						
2022	4.54	50.48	21.15	0.06	10.87	6.07
2023	3.89	54.47	24.40	0.18	10.46	5.70
2024	49.79	9.69	15.10	0.02	0.66	0.48
Maximum Daily Emissions	**49.80**	**54.47**	**25.89**	**0.18**	**10.87**	**6.07**

Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Source: CalEEMod unmitigated construction-source emissions are presented in Appendix 3.1

IMPACTS WITH MITIGATION

Mitigation is not needed to reduce estimated maximum daily construction regional emissions, MM AQ-1 and MM AQ-2 would be required to decrease localized emissions (please refer to the subsequent discussions in Section 3.7, Localized Significance – Construction Activity). Detailed construction model outputs are presented in Appendix 3.2. Implementation of this localized emissions MM would further reduce already less-than-significant regional emissions as indicated at Table 3.6.

TABLE 3-6: OVERALL CONSTRUCTION EMISSIONS SUMMARY – WITH MITIGATION

Year	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2022	2.93	38.17	26.39	0.06	7.45	4.23
2023	3.18	53.02	25.89	0.18	9.35	4.05

3.5 OPERATIONAL EMISSIONS

Operational activities associated with the Project will result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Operational emissions are expected from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions

3.5.1 AREA SOURCE EMISSIONS

ARCHITECTURAL COATINGS

Over a period of time the buildings that are part of this Project will require maintenance and will therefore produce emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings. The emissions associated with architectural coatings were calculated using CalEEMod.

CONSUMER PRODUCTS

Consumer products include, but are not limited to detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants. The emissions associated with use of consumer products were calculated based on defaults provided within CalEEMod.

LANDSCAPE MAINTENANCE EQUIPMENT

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. It should be noted that as October 9, 2021, Governor Gavin Newsom signed AB 1346. The bill aims to ban the sale of new gasoline-powered equipment under 25 gross hp (known as small off-road engines [SOREs]) by 2024. For purposes of analysis, the emissions associated with landscape maintenance equipment were calculated based on assumptions provided in CalEEMod.

3.5.2 ENERGY SOURCE EMISSIONS

COMBUSTION EMISSIONS ASSOCIATED WITH NATURAL GAS AND ELECTRICITY

Electricity and natural gas are used by almost every project. Criteria pollutant emissions are emitted through the generation of electricity and consumption of natural gas. However, because electrical generating facilities for the Project area are located either outside the region (state) or offset through the use of pollution credits (RECLAIM) for generation within the SCAB, criteria pollutant emissions from offsite generation of electricity are generally excluded from the evaluation of significance and only natural gas use is considered. The emissions associated with natural gas use were calculated using CalEEMod.

3.5.3 MOBILE SOURCE EMISSIONS

The Project related operational air quality emissions derive primarily from vehicle trips generated by the Project, including employee trips to and from the site and truck trips associated with the proposed uses. Trip characteristics available from the *Wildomar Crossroads Traffic Impact Analysis* were utilized in this analysis (20).

It should be noted that CalEEMod has different trip rates for different days of the week. In order to accurately determine mobile-source emission from vehicle activity generated by the proposed Project, the CalEEMod default trip rates were adjusted for weekday, Saturday, and Sunday utilizing the trip rates used in this analysis are based on the trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021).

TRIP LENGTH

Due to the predominately retail nature of the Project (supermarket, shops, fast-food restaurant with drive-thru, coffee/donut shop with drive-thru, and high-turnover (sit down) restaurant), the Project's location, a substantial amount of residential land uses within a 2-mile radius of the Project site, and other retail uses located in the Project vicinity, an average trip length for customers of 2 miles was used in the assessment as opposed to the 8.4-mile model default trip length value. As evaluated in the *Wildomar Crossroads Traffic Impact Analysis*, the Project consists of a mixed-use development which tend to shorten vehicle trips. As such, since the Project contains mixed-uses and is surrounded by residential land uses, the adjustments to the CalEEMod default trip length for retail land uses are substantiated. CalEEMod defaults for trip length were utilized for the Multifamily Housing (Mid-Rise) portion of the Project.

FUGITIVE DUST RELATED TO VEHICULAR TRAVEL

Vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of break and tire wear particulates. The emissions estimate for travel on paved roads were calculated using CalEEMod.

3.5.4 OPERATIONAL EMISSIONS SUMMARY

As previously stated, CalEEMod utilizes summer and winter EMFAC2017 emission factors in order to derive vehicle emissions associated with Project operational activities, which vary by season. The estimated operational-source emissions are summarized on Tables 3-7. Detailed operation model outputs for the Project are presented in Appendix 3.4. As shown on Table 3-7, the Project's daily regional emissions from on-going operations will not exceed any of the thresholds of significance.

TABLE 3-7: SUMMARY OF PEAK OPERATIONAL EMISSIONS

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
Area Source	4.20	2.63	13.49	0.02	0.27	0.27

3.6 LOCALIZED SIGNIFICANCE

BACKGROUND ON LST DEVELOPMENT

The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the

federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs).

The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4[3]. LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

LSTs were developed in response to environmental justice and health concerns raised by the public regarding exposure of individuals to criteria pollutants in local communities. To address the issue of localized significance, the SCAQMD adopted LSTs that show whether a project would cause or contribute to localized air quality impacts and thereby cause or contribute to potential localized adverse health effects. The analysis makes use of methodology included in the *LST Methodology* (21).

APPLICABILITY OF LSTS FOR THE PROJECT

For this Project, the appropriate SRA for the LST analysis is the SCAQMD Elsinore Valley (SRA 25). LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size.

In order to determine the appropriate methodology for determining localized impacts that could occur as a result of Project-related construction, the following process is undertaken:

- Identify the maximum daily on-site emissions that will occur during construction activity:
    - The maximum daily on-site emissions could be based on information provided by the Project Applicant; or
    - The SCAQMD's *Fact Sheet for Applying CalEEMod to Localized Significance Thresholds* and CalEEMod User's Guide *Appendix A: Calculation Details for CalEEMod* can be used to determine the maximum site acreage that is actively disturbed based on the construction equipment fleet and equipment hours as estimated in CalEEMod (22) (23).
- If the total acreage disturbed is less than or equal to 5 acres per day, then the SCAQMD's screening look-up tables are utilized to determine if a Project has the potential to result in a significant impact. The look-up tables establish a maximum daily emissions threshold in lbs/day that can be compared to CalEEMod outputs.
- If the total acreage disturbed is greater than 5 acres per day, then LST impacts may still be conservatively evaluated using the LST look-up tables for a 5-acre disturbance area. Use of the 5-acre disturbance area thresholds can be used to show that even if the daily emissions from all construction activity were emitted within a 5-acre area, and therefore concentrated over a smaller area which would result in greater site adjacent concentrations, the impacts would still be less than significant if the applicable 5-acre thresholds are utilized.

[3] The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

- The *LST Methodology* presents mass emission rates for each SRA, project sizes of 1, 2, and 5 acres, and nearest receptor distances of 25, 50, 100, 200, and 500 meters. For project sizes between the values given, or with receptors at distances between the given receptors, the methodology uses linear interpolation to determine the thresholds.

EMISSIONS CONSIDERED

Based on SCAQMD's *LST Methodology*, emissions for concern during construction activities are on-site NO_X, CO, $PM_{2.5}$, and PM_{10}. The *LST Methodology* clearly states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs (24)." As such, for purposes of the construction LST analysis, only emissions included in the CalEEMod "on-site" emissions outputs were considered.

MAXIMUM DAILY DISTURBED-ACREAGE

The "acres disturbed" for analytical purposes are based on specific equipment type for each subcategory of construction activity and the estimated maximum area a given piece of equipment can pass over in an 8-hour workday (as shown on Table 3-8). The equipment-specific grading rates are summarized in the SCAQMD's *Fact Sheet for Applying CalEEMod to Localized Significance Thresholds* and CalEEMod User's Guide *Appendix A: Calculation Details for CalEEMod* (22) (25). It The disturbed area per day is representative of a piece of equipment making multiple passes over the same land area. In other words, one Rubber Tired Dozer can make multiple passes over the same land area totaling 0.5 acres in a given 8-hour day. Based on Table 3-8, the Project's construction activities could actively disturb approximately 1.0 acre per day during demolition, 3.5 acres per day during site preparation, and 2.5 acres per day during grading activities.

It should be noted that in CalEEMod, the Total Acres Graded (TAG) field represents the cumulative distance traversed on the property by the grading equipment. In order to properly grade a piece of land, multiple passes with grading equipment may be required. So even though the lot size is a fixed number of acres, the TAG could be an order of magnitude higher than the footprint of the lot (25). Total Acres Graded (TAG) is a function of the maximum acreage disturbed per day times the number of days of the subphase of construction. As such, the TAG field in CalEEMod has been revised to 35 acres (3.5 acres per day x 10 days) for site preparation and 50 acres (2.5 acres per day x 20 days) for grading.[4]

[4] CalEEMod does not provide a "Total Acres Graded" field for Demolition, Building Construction, Paving, or Architectural Coating activities.

TABLE 3-8: MAXIMUM DAILY DISTURBED-ACREAGE

Construction Activity	Equipment Type	Equipment Quantity	Acres graded per 8-hour day	Operating Hours per Day	Acres graded per day
Demolition	Rubber Tired Dozers	2	0.5	8	1.0
Total acres disturbed per day during Demolition					1.0
Site Preparation	Crawler Tractors	4	0.5	8	2.0
	Rubber Tired Dozers	3	0.5	8	1.5
Total acres disturbed per day during Site Preparation					3.5
Grading	Crawler Tractors	3	0.5	8	1.5
	Graders	1	0.5	8	0.5
	Rubber Tired Dozers	1	0.5	8	0.5
Total acres disturbed per day during Grading					2.5

Source: Maximum daily disturbed acreage based on equipment list presented in Appendix 3.1.

RECEPTORS

As previously stated, LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable NAAQS and CAAQS at the nearest residence or sensitive receptor. Receptor locations are off-site locations where individuals may be exposed to emissions from Project activities.

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as "sensitive receptors". These structures typically include uses such as residences, hotels, and hospitals where an individual can remain for 24 hours. Consistent with the LST Methodology, the nearest land use where an individual could remain for 24 hours to the Project site (in this case the West Valley Detention Center) has been used to determine construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$, since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time.

LSTs apply, even for non-sensitive land uses, consistent with *LST Methodology* and SCAQMD guidance. Per the *LST Methodology*, commercial and industrial facilities are not included in the definition of sensitive receptor because employees and patrons do not typically remain onsite for a full 24 hours but are typically onsite for 8 hours or less. However, *LST Methodology* explicitly states that "*LSTs based on shorter averaging periods, such as the NO_2 and CO LSTs, could also be applied to receptors such as industrial or commercial facilities since it is reasonable to assume that a worker at these sites could be present for periods of one to eight hours* (24)." Therefore, any adjacent land use where an individual could remain for 1 or 8-hours, that is located at a closer distance to the Project site than the receptor used for PM_{10} and $PM_{2.5}$ analysis, must be considered to determine construction and operational LST air impacts for emissions of NO_2 and CO since these pollutants have an averaging time of 1 and 8-hours.

RECEPTORS

Receptors in the relative to Project area are described below and shown on Exhibit 3-A. Localized air quality impacts were evaluated at receptor land uses nearest the Project site. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site.

R1: Location R1 represents existing residence at 35816 Poplar Crest Road, approximately 100 feet northwest of the Project site. Receptor R1 is placed in the private outdoor living areas (backyards) facing the Project site.

R2: Location R2 represents existing residence at 35925 Susan Drive, approximately 212 feet northeast of the Project site. Receptor R2 is placed in the private outdoor living areas (backyards) facing the Project site.

R3: Location R3 represents the B&K Dreamy Nails & Spa salon located at 24088 Clinton Keith Road, approximately 200 feet east of the Project site. Receptor R3 is placed at the building façade.

R4: Location R4 represents existing Oak Springs Ranch at 24055 Clinton Keith Road, approximately 204 feet southeast of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R4 is placed at the building façade facing the Project site.

R5: Location R5 represents the Teakwoods Bar vs. Grill restaurant located at 23971 Clinton Keith Road, approximately 200 feet southwest of the Project site.

R6: Location R6 represents existing residence at 23849 Lancer Court, approximately 19 feet west of the Project site. Receptor R6 is placed in the private outdoor living areas (backyards) facing the Project site.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual a cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ is represented by location R6 which represents the existing residence at 23849 Lancer Court, approximately 19 feet (6 meters) west of the Project site.

As previously stated, and consistent with *LST Methodology*, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assumed that an individual could be present at these sites for periods of one to 8 hours. It should be noted that the existing residence (R6) is located at a closer distance than the nearest industrial/commercial use. As such, same receptor will be used for evaluation of localized NO_X and CO.

EXHIBIT 3-A: SENSITIVE RECEPTOR LOCATIONS

It should be noted that the *LST Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters* (26)." As such a 25-meter receptor distance will be used for evaluation of localized PM_{10}, $PM_{2.5}$, NO_2, and CO.

3.7 CONSTRUCTION-SOURCE EMISSIONS LST ANALYSIS

3.7.1 LOCALIZED THRESHOLDS FOR CONSTRUCTION ACTIVITY

Since the total acreage disturbed is less than five acres per day for site preparation and grading activities, the SCAQMD's screening look-up tables are utilized in determining impacts. Consistent with SCAQMD guidance, the thresholds presented in Table 3-9 were calculated by interpolating the threshold values for the Project's disturbed acreage.

TABLE 3-9: MAXIMUM DAILY LOCALIZED CONSTRUCTION EMISSIONS THRESHOLDS

Construction Activity	Construction Localized Thresholds			
	NO_X	CO	PM_{10}	PM_{10}
Demolition	162 lbs/day	750 lbs/day	4 lbs/day	3 lbs/day
Site Preparation	303 lbs/day	1,533 lbs/day	10 lbs/day	6 lbs/day
Grading	257 lbs/day	1,244 lbs/day	8 lbs/day	5 lbs/day

Source: Localized Thresholds presented in this table are based on the SCAQMD Final LST Methodology, July 2008

3.7.2 CONSTRUCTION-SOURCE LOCALIZED EMISSIONS

IMPACTS WITHOUT MITIGATION

Table 3-10 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. Without mitigation, localized construction emissions would not exceed the applicable SCAQMD LSTs for emissions of any criterial pollutant. Outputs from the model runs for unmitigated construction LSTs are provided in Appendix 3.1.

TABLE 3-10: LOCALIZED CONSTRUCTION-SOURCE EMISSIONS – WITHOUT MITIGATION (1 OF 2)

Construction Activity	Year	Emissions (lbs/day)			
		NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition	2022	25.72	20.59	1.27	1.16
	Maximum Daily Emissions	**25.72**	**20.59**	**1.27**	**1.16**
	SCAQMD Localized Threshold	162	750	4	3
	Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

TABLE 3-10: LOCALIZED CONSTRUCTION-SOURCE EMISSIONS – WITHOUT MITIGATION (2 OF 2)

Construction Activity	Year	Emissions (lbs/day)			
		NO_X	CO	PM_{10}	$PM_{2.5}$
Site Preparation	2022	50.35	19.98	10.65	6.01
	2023	41.82	18.27	10.25	5.64
	Maximum Daily Emissions	**50.35**	**19.98**	**10.65**	**6.01**
	SCAQMD Localized Threshold	303	1,533	10	6
	Threshold Exceeded?	**NO**	**NO**	**YES**	**YES**
Grading	2023	28.66	14.77	4.62	2.47
	Maximum Daily Emissions	**28.66**	**14.77**	**4.62**	**2.47**
	SCAQMD Localized Threshold	257	1,244	8	5
	Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

Source: CalEEMod unmitigated localized construction-source emissions are presented in Appendix 3.1.

IMPACTS WITH MITIGATION

The following MMs would be required to reduce project related construction emission below the LST for PM_{10} and $PM_{2.5}$ during site preparation.

MM AQ-1

During the site preparation phase, construction equipment greater than 150 hp, the Construction Contractor shall ensure that off-road diesel construction equipment that complies with EPA/CARB Tier 3 emissions standards and shall ensure that all construction equipment is tuned and maintained in accordance with the manufacturer's specifications.

MM AQ-2

All actively graded (disturbed) areas within the Project site during site preparation activities shall be watered at 2.1-hour watering intervals (e.g., 4 times per day) or a movable sprinkler system shall be in place to ensure minimum soil moisture of 12% in maintained for actively graded areas. Moisture content can be verified with use of a moisture probe by the grading contractor

As shown on Table 3-11, after implementation of MM AQ-1 and MM AQ-2, construction emissions would not exceed the applicable SCAQMD LSTs for any criteria pollutant. Therefore, a less than significant impact would occur. It should be noted that as this mitigation measure is not applicable to demolition or grading activities, emissions from demolition and grading activities have been omitted from the "Impacts with Mitigation" results.

TABLE 3-11: LOCALIZED CONSTRUCTION-SOURCE EMISSIONS – WITH MITIGATION

Construction Activity	Year	Emissions (lbs/day)			
		NO_X	CO	PM_{10}	$PM_{2.5}$
Site Preparation	2022	38.04	25.64	7.23	4.17
	2023	34.03	24.81	7.04	3.99
	Maximum Daily Emissions	**38.04**	**25.64**	**7.23**	**4.17**
	SCAQMD Localized Threshold	303	1,533	10	6

Source: CalEEMod mitigated localized construction-source emissions are presented in Appendix 3.4.

3.8 OPERATIONAL-SOURCE EMISSIONS LST ANALYSIS

As previously stated, the total development is proposed to consist of a 23,104-sf supermarket, a 2,750-sf fast-food restaurant with drive-through window, 5,087-sf of retail/restaurants, a 1,133-sf coffee/donut shop with drive-through window, a 3,348-sf of high-turnover (sit-down) restaurant, and 150 multi-family residential units in 3-story apartment buildings. According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The proposed project does not include such uses, and thus, due to the lack of significant stationary source emissions, no long-term localized significance threshold analysis is needed.

3.9 CO "HOT SPOT" ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific CO "hot spots" is not needed to reach this conclusion. An adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur.

It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment.

To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any violation of CO standards, as shown on Table 3-12.

TABLE 3-12: CO MODEL RESULTS

Intersection Location	CO Concentrations (ppm)		
	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire Boulevard/Veteran Avenue	4.6	3.5	3.7
Sunset Boulevard/Highland Avenue	4	4.5	3.5
La Cienega Boulevard/Century Boulevard	3.7	3.1	5.2
Long Beach Boulevard/Imperial Highway	3	3.1	8.4

Source: 2003 AQMP, Appendix V: Modeling and Attainment Demonstrations
Notes: Federal 1-hour standard is 35 ppm and the deferral 8-hour standard is 9.0 ppm.

Based on the SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (*1992 CO Plan*), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of traffic volumes and congestion at a particular intersection. As evidence of this, for example, 8.4 ppm 8-hr CO concentration measured at the Long Beach Blvd. and Imperial Hwy. intersection (highest CO generating intersection within the "hot spot" analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 7.7 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared (27). In contrast, an adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur.

The ambient 1-hr and 8-hr CO concentration within the Project study area is estimated to be 0.9 ppm and 0.7 ppm, respectively (data from Elsinore Valley station for 2020). Therefore, even if the traffic volumes for the proposed Project were double or even triple of the traffic volumes generated at the Long Beach Blvd. and Imperial Hwy. intersection, coupled with the on-going improvements in ambient air quality, the Project would not be capable of resulting in a CO "hot spot" at any study area intersections.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour (vph)—or 24,000 vph where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (28). Traffic volumes generating the CO concentrations for the "hot spot" analysis is shown on Table 3-13. The busiest intersection evaluated was that at Wilshire Boulevard and Veteran Avenue, which has a daily traffic volume of approximately 100,000 vph and AM/PM traffic volumes of 8,062 vph and 7,719 vph respectively (27). The *2003 AQMP* estimated that the 1-hour concentration for this intersection was 4.6 ppm; this indicates that, should the daily traffic volume increase four times to 400,000 vehicles per day, CO concentrations (4.6 ppm x 4= 18.4 ppm) would still not likely exceed the most stringent 1-hour CO standard (20.0 ppm)[5].

[5] Based on the ratio of the CO standard (20.0 ppm) and the modeled value (4.6 ppm)

TABLE 3-13: TRAFFIC VOLUMES

Intersection Location	Peak Traffic Volumes (vph)				
	Eastbound (AM/PM)	Westbound (AM/PM)	Southbound (AM/PM)	Northbound (AM/PM)	Total (AM/PM)
Wilshire Boulevard/Veteran Avenue	4,954/2,069	1,830/3,317	721/1,400	560/933	8,062/7,719
Sunset Boulevard/Highland Avenue	1,417/1,764	1,342/1,540	2,304/1,832	1,551/2,238	6,614/5,374
La Cienega Boulevard/Century Boulevard	2,540/2,243	1,890/2,728	1,384/2,029	821/1,674	6,634/8,674
Long Beach Boulevard/Imperial Highway	1,217/2,020	1,760/1,400	479/944	756/1,150	4,212/5,514

Source: 2003 AQMP

3.10 AQMP

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the SCAG, county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards. AQMPs are updated regularly to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In March 2017, the SCAQMD released the *Final 2016 AQMP* (*2016 AQMP*). The *2016 AQMP* continues to evaluate current integrated strategies and control measures to meet the NAAQS, as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (29). Similar to the 2012 AQMP, the *2016 AQMP* incorporates scientific and technological information and planning assumptions, including the *2016-2040 RTP/SCS*, a planning document that supports the integration of land use and transportation to help the region meet the federal CAA requirements (17). The Project's consistency with the AQMP will be determined using the *2016 AQMP* as discussed below.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the *1993 CEQA Handbook* (30). These indicators are discussed below:

3.10.1 CONSISTENCY CRITERION NO. 1

The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations that Consistency Criterion No. 1 refers to are the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded.

Construction Impacts – Consistency Criterion 1

Consistency Criterion No. 1 refers to violations of the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if LSTs or regional significance thresholds were exceeded. As evaluated, the Project's regional and localized construction-source emissions would not exceed applicable regional significance threshold and LST thresholds after implementation of MM AQ-1 and MM AQ-2. As such, a less than significant impact is expected.

Operational Impacts – Consistency Criterion 1

As evaluated, the Project would not exceed the applicable regional and localized significance thresholds for operational activity. Therefore, the Project would not conflict with the AQMP according to this criterion.

On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

3.10.2 CONSISTENCY CRITERION NO. 2

The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The *2016 AQMP* demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Wildomar General Plan is considered to be consistent with the AQMP***.***

Construction Impacts – Consistency Criterion 2

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no regional or localized emissions thresholds will be exceeded, a less than significant impact would result.

Operational Impacts – Consistency Criterion 2

Per the City of Wildomar's General Plan, the Project site is designated for MUPA uses. The MUPA land use designation is intended to reflect mixed use areas. The intent of the designation is not to identify a particular mixture or intensity of land uses, but to designate areas where a mixture of residential, commercial, office, entertainment, educational, and/or recreational uses, or other uses is planned. Many of the MUPAs are located in specific plans. In the future, these areas may be appropriate candidates for the Community Center designation. In order for the Community Center designation to be considered, the project proponent is required to file a specific plan or a specific plan amendment, wherein issues relating to density, traffic, provision of transit services, compatibility with other nearby land uses, fiscal impacts, and other issues relating to the viability of the Community Center proposal are addressed and resolved (31).

The proposed Project will consist of a 23,104-sf supermarket, a 2,750-sf fast-food restaurant with drive-through window, 5,087-sf of retail/restaurants, a 1,133-sf coffee/donut shop with drive-through window, a 3,348-sf of high-turnover (sit-down) restaurant, and 150 multi-family residential units in 3-story apartment buildings. As such, the Project uses are consistent with uses allowed under the MUPA designation. Furthermore, the Project, as evaluated herein would not exceed the regional or localized air quality significance thresholds.

On the basis of the preceding discussion, the Project is determined to be consistent with the second criterion.

AQMP CONSISTENCY CONCLUSION

The Project would not have the potential to result in or cause NAAQS or CAAQS violations. Additionally, the proposed Project is consistent with the land use designation reflected in the General Plan. Furthermore, the Project would not exceed any applicable regional or local thresholds. As such, the Project is therefore considered to be consistent with the AQMP.

3.11 POTENTIAL IMPACTS TO SENSITIVE RECEPTORS

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Results of the LST analysis indicate that the Project will not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction.

Additionally, the Project will not exceed the SCAQMD localized significance thresholds during operational activity. Further Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of Project operations.

3.11.1 FRIANT RANCH CASE

In December 2018, in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, the California Supreme Court held that an EIR air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided.

As discussed in briefs filed in the Friant Ranch case, correlating a project's criteria air pollutant emissions to specific health impacts is challenging. The SCAQMD, which has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes (32) noted that it may be "difficult to quantify health impacts for criteria pollutants." SCAQMD used O_3 as an example of why it is impracticable to determine specific health outcomes from criteria pollutants for all but very large, regional-scale projects. First, forming O_3 "takes time and the influence of meteorological conditions for these reactions to occur, so ozone may be formed at a distance downwind from the sources." (SCAQMD, 2015a, p. 11) Second, "it takes a large amount of additional precursor emissions (NO_X and VOCs) to cause a modeled increase in ambient ozone levels over an entire region," with a 2012 study showing that "reducing NO_X by 432 tons per day (157,680 tons/year) and reducing VOC by 187 tons per day (68,255 tons/year) would reduce ozone levels at the SCAQMD's monitor site with the highest levels by only 9 parts per billion." (SCAQMD, 2015a, pp. 12-14)

SCAQMD concluded that it "does not currently know of a way to accurately quantify ozone-related health impacts caused by NO_X or VOC emissions from relatively small projects." (SCAQMD, 2015a, pp. 12-14) The San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD) ties the difficulty of correlating the emission of criteria pollutants to health impacts to how ozone and particulate matter are formed, stating that "[b]ecause of the complexity of ozone formation, a specific tonnage amount of NO_X or VOCs emitted in a particular area does not equate to a particular concentration of ozone in that area." (SJVUAPCD, 2015, p. 4) Similarly, the tonnage of particulate matter "emitted does not always equate to the local particulate matter concentration because it can be transported long distances by wind," and "[s]econdary particulate matter, like ozone, is formed via complex chemical reactions in the atmosphere between precursor chemicals such as sulfur dioxides (SO_X) and NO_X," meaning that "the tonnage of particulate matter -forming precursor emissions in an area does not necessarily result in an equivalent concentration of secondary particulate matter in that area." (SJVUAPCD, 2015, p. 5) The disconnect between the amount of precursor pollutants and the concentration of ozone or particulate matter formed makes it difficult to determine potential health impacts, which are related to the concentration of ozone and particulate matter experienced by the receptor rather than levels of NO_X, SO_X, and VOCs produced by a source.

Most local agencies lack the data to do their own assessment of potential health impacts from criteria air pollutant emissions, as would be required to establish customized, locally specific thresholds of significance based on potential health impacts from an individual development project. The use of national or "generic" data to fill the gap of missing local data would not yield accurate results because such data does not capture local air patterns, local background conditions, or local population characteristics, all of which play a role in how a population experiences air pollution. Because it is impracticable to accurately isolate the exact cause of a human disease (for example, the role a particular air pollutant plays compared to the role of other allergens and genetics in cause asthma), existing scientific tools cannot accurately estimate health impacts of the Project's air emissions without undue speculation. Instead, readers are directed to the Project's air quality impact analysis above, which provides extensive information

concerning the quantifiable and non-quantifiable health risks related to the Project's construction and long-term operation.

The LST analysis above determined that the Project would not result in emissions exceeding SCAQMD's LSTs. Therefore, the proposed Project would not be expected to exceed the most stringent applicable federal or state ambient air quality standards for emissions of CO, NO_X, PM_{10}, and $PM_{2.5}$.

As the Project's emissions will comply with federal, state, and local air quality standards, the proposed Project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level and would not provide a reliable indicator of health effects if modeled.

3.12 ODORS

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required (33).

3.13 CUMULATIVE IMPACTS

As previously shown in Table 2-3, the CAAQS designate the Project site as nonattainment for O_3 PM_{10}, and $PM_{2.5}$ while the NAAQS designates the Project site as nonattainment for O_3 and $PM_{2.5}$.

The SCAQMD has published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (34). In this report the SCAQMD clearly states (Page D-3):

> *"…the SCAQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the HI[6] significance threshold for TAC[7] emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*
>
> *Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which SCAB is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable.

CONSTRUCTION IMPACTS

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project construction-source emissions would be considered less than significant on a project-specific and cumulative basis.

[6] HI = Hazard Index

[7] TAC = Toxic Air Contaminants

OPERATIONAL IMPACTS

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project operational-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project operational-source emissions would be considered less than significant on a project-specific and cumulative basis.

APPENDIX 2.1:

STATE/FEDERAL ATTAINMENT STATUS OF CRITERIA POLLUTANTS

APPENDIX C

MAPS AND TABLES OF AREA DESIGNATIONS FOR STATE AND NATIONAL AMBIENT AIR QUALITY STANDARDS

[This page intentionally left blank]

APPENDIX C

MAPS AND TABLES OF AREA DESIGNATIONS FOR STATE AND NATIONAL AMBIENT AIR QUALITY STANDARDS

This attachment fulfills the requirement of Health and Safety Code section 40718 for CARB to publish maps that identify areas where one or more violations of any State ambient air quality standard (State standard) or national ambient air quality standard (national standard) have been measured. The national standards are those promulgated under section 109 of the federal Clean Air Act (42 U.S.C. 7409).

This attachment is divided into three parts. The first part comprises a table showing the levels, averaging times, and measurement methods for each of the State and national standards. This is followed by a section containing maps and tables showing the area designations for each pollutant for which there is a State standard in the California Code of Regulations, title 17, section 70200. The last section contains maps and tables showing the most current area designations for the national standards.

Ambient Air Quality Standards

(Updated 5/4/16)

Pollutant	Averaging Time	California Standards [1]		National Standards [2]		
		Concentration [3]	Method [4]	Primary [3,5]	Secondary [3,6]	Method [7]
Ozone (O_3)[8]	1 Hour	0.09 ppm (180 µg/m³)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m³)		0.070 ppm (137 µg/m³)		
Respirable Particulate Matter (PM10)[9]	24 Hour	50 µg/m³	Gravimetric or Beta Attenuation	150 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m³		—		
Fine Particulate Matter (PM2.5)[9]	24 Hour	—	—	35 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	12.0 µg/m³	15 µg/m³	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m³)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m³)		9 ppm (10 mg/m³)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m³)		—	—	
Nitrogen Dioxide (NO_2)[10]	1 Hour	0.18 ppm (339 µg/m³)	Gas Phase Chemiluminescence	100 ppb (188 µg/m³)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m³)		0.053 ppm (100 µg/m³)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1 Hour	0.25 ppm (655 µg/m³)	Ultraviolet Fluorescence	75 ppb (196 µg/m³)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m³)	
	24 Hour	0.04 ppm (105 µg/m³)		0.14 ppm (for certain areas)[11]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[11]	—	
Lead[12,13]	30 Day Average	1.5 µg/m³	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m³ (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m³		
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	**No National Standards**		
Sulfates	24 Hour	25 µg/m³	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m³)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24 Hour	0.01 ppm (26 µg/m³)	Gas Chromatography			

See footnotes on next page ...

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1- and 24-hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.

3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.

5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

7. Reference method as described by the U.S. EPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the U.S. EPA.

8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

12. The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

14. In 1989, the CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

[This page intentionally left blank]

Area Designations for the State Ambient Air Quality Standards

The following maps and tables show the area designations for each pollutant with a State standard set forth in the California Code of Regulations, title 17, section 60200. Each area is identified as attainment, nonattainment, nonattainment-transitional, or unclassified for each pollutant, as shown below:

Attainment	A
Nonattainment	N
Nonattainment-Transitional	NA-T
Unclassified	U

In general, CARB designates areas by air basin for pollutants with a regional impact and by county for pollutants with a more local impact. However, when there are areas within an air basin or county with distinctly different air quality deriving from sources and conditions not affecting the entire air basin or county, CARB may designate a smaller area. Generally, when boundaries of the designated area differ from the air basin or county boundaries, the description of the specific area is referenced at the bottom of the summary table.

Area Designations for the National Ambient Air Quality Standards

The following maps and tables show the area designations for each pollutant with a national ambient air quality standard. Additional information about the federal area designations is available on the U.S. EPA website:

https://www.epa.gov/green-book

Over the last several years, U.S. EPA has been reviewing the levels of the various national standards. The agency has already promulgated new standard levels for some pollutants and is considering revising the levels for others. Information about the status of these reviews is available on the U.S. EPA website:

https://www.epa.gov/criteria-air-pollutants

Designation Categories

Suspended Particulate Matter (PM_{10}). The U.S. EPA uses three categories to designate areas with respect to PM_{10}:

- Attainment
- Nonattainment
- Unclassifiable

Ozone, Fine Suspended Particulate Matter ($PM_{2.5}$), Carbon Monoxide (CO), and Nitrogen Dioxide (NO_2). The U.S. EPA uses two categories to designate areas with respect to these standards:

- Nonattainment
- Unclassifiable/Attainment

The national 1-hour ozone standard was revoked effective June 15, 2005, and the area designations map reflects the 2015 national 8-hour ozone standard of 0.070 ppm. Original designations were finalized on August 3, 2018.

On December 14, 2012, the U.S. EPA established a new national annual primary $PM_{2.5}$ standard of 12.0 $\mu g/m^3$. New area designations reflecting this revised standard became final in December 2014. The current designation map reflects the most recently revised (2012) annual average standard of 12.0 $\mu g/m^3$ as well as the 24-hour standard of 35 $\mu g/m^3$, revised in 2006.

On January 22, 2010, the U.S. EPA established a new national 1-hour NO_2 standard of 100 parts per billion (ppb) and retained the annual average standard of 53 ppb. Designations for the primary NO_2 standard became effective on February 29, 2012. All areas of California meet this standard.

Sulfur Dioxide (SO_2). The U.S. EPA uses three categories to designate areas with respect to the 24-hour and annual average sulfur dioxide standards. These designation categories are:

- Nonattainment,
- Unclassifiable, and
- Attainment/Unclassifiable.

On June 2, 2010, the U.S. EPA established a new primary 1-hour SO_2 standard of 75 parts per billion (ppb). At the same time, U.S. EPA revoked the 24-hour and annual

average standards. Area designations for the 1-hour SO_2 standard were finalized on December 21, 2017 and are reflected in the area designations map.

Lead (particulate). The U.S. EPA promulgated a new rolling 3-month average lead standard in October 2008 of 0.15 µg/m^3. Designations were made for this standard in November 2010.

Designation Areas

From time to time, the boundaries of the California air basins have been changed to facilitate the planning process. CARB generally initiates these changes, and they are not always reflected in the U.S. EPA's area designations. For purposes of consistency, the maps in this attachment reflect area designation boundaries and nomenclature as promulgated by the U.S. EPA. In some cases, these may not be the same as those adopted by CARB. For example, the national area designations reflect the former Southeast Desert Air Basin. In accordance with Health and Safety Code section 39606.1, CARB redefined this area in 1996 to be the Mojave Desert Air Basin and Salton Sea Air Basin. The definitions and boundaries for all areas designated for the national standards can be found in Title 40, Code of Federal Regulations (CFR), Chapter I, Subchapter C, Part 81.305. They are available on the web at:

https://ecfr.io/Title-40/se40.20.81_1305

(1) Air quality in Sacramento County meets the national PM10 standards. The request for redesignation to attainment was approved by U.S. EPA in September 2013.
(2) U.S. EPA designation puts the Sacramento Valley Air Basin portion of Placer County in the Mountain Counties Air Basin.
(3) Air quality in Coachella Valley meets the national PM10 standards. A request for redesignation to attainment has been submitted to U.S. EPA.

* Definitions and references for all areas can be found in 40 CFR, Chapter I, Part 81.305. This map reflects the 2006 24-hour PM2.5 standard as well as the 1997 and 2012 PM2.5 annual standards.

(1) For this purpose, Sacramento Metro Area comprises all of Sacramento and portions of El Dorado, Placer, Solano, and Yolo Counties. Air quality in this area meets the national PM2.5 standards. A Determination of Attainment for the 2006 24-hour PM2.5 standard was made by U.S. EPA in June 2017.

(2) Air quality in this area meets the national PM2.5 standards. A Determination of Attainment for the 2006 24-hour PM2.5 standard was made by U.S. EPA in June 2017.

(3) Those lands of the Santa Rosa Band of Cahulla Mission Indians in Riverside County are designated Unclassifiable/Attainment.

(4) That portion of Imperial County encompassing the urban and surrounding areas of Brawley, Calexico, El Centro, Heber, Holtville, Imperial, Seeley, and Westmorland. Air quality in this area meets the national PM2.5 standards. A Determination of Attainment for the 2006 24-hour PM2.5 standard was made by U.S. EPA in June 2017.

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area is 9.01 acres

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Hours are based on an 8-hour workday

Wildomar Crossroads (Construction - Unmitigated) - Riverside-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Trips and VMT - CalEEMod only assumes Vendor Trips during Building Construction. The CalEEMod default trips were ratioed between each phase based on the number of days

Demolition -

Grading - For purposes of analysis, total acres graded per day is based on the equipment specific grading rates (CalEEMod Appendix A) and the equipment list

Architectural Coating - Rule 1113

Vehicle Trips - Construction run only

Woodstoves - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - Rule 403

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	30.00	1000sqft	0.69	29,996.00	0
Other Non-Asphalt Surfaces	66.55	1000sqft	1.53	66,549.00	0
Parking Lot	477.00	Space	1.81	79,056.00	0
City Park	1.32	Acre	1.32	57,591.00	0
Fast Food Restaurant with Drive Thru	3.88	1000sqft	0.09	3,883.00	0
High Turnover (Sit Down Restaurant)	3.35	1000sqft	0.08	3,348.00	0
Apartments Mid Rise	150.00	Dwelling Unit	2.84	123,862.00	429
Strip Mall	5.09	1000sqft	0.12	5,087.00	0
Supermarket	23.10	1000sqft	0.53	23,104.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area is 9.01 acres

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Hours are based on an 8-hour workday

Wildomar Crossroads (Construction - Unmitigated) - Riverside-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Trips and VMT - CalEEMod only assumes Vendor Trips during Building Construction. The CalEEMod default trips were ratioed between each phase based on the number of days

Demolition -

Grading - For purposes of analysis, total acres graded per day is based on the equipment specific grading rates (CalEEMod Appendix A) and the equipment list

Architectural Coating - Rule 1113

Vehicle Trips - Construction run only

Woodstoves - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - Rule 403

CALEEMOD CONSTRUCTION (MITIGATED) EMISSIONS MODEL OUTPUTS

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Wildomar Crossroads (Construction - Mitigated)

Riverside-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	30.00	1000sqft	0.69	29,996.00	0
Other Non-Asphalt Surfaces	66.55	1000sqft	1.53	66,549.00	0
Parking Lot	477.00	Space	1.81	79,056.00	0
City Park	1.32	Acre	1.32	57,591.00	0
Fast Food Restaurant with Drive Thru	3.88	1000sqft	0.09	3,883.00	0
High Turnover (Sit Down Restaurant)	3.35	1000sqft	0.08	3,348.00	0
Apartments Mid Rise	150.00	Dwelling Unit	2.84	123,862.00	429
Strip Mall	5.09	1000sqft	0.12	5,087.00	0
Supermarket	23.10	1000sqft	0.53	23,104.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area is 9.01 acres

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Hours are based on an 8-hour workday

Wildomar Crossroads (Construction - Mitigated) - Riverside-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Trips and VMT - CalEEMod only assumes Vendor Trips during Building Construction. The CalEEMod default trips were ratioed between each phase based on the number of days

Demolition -

Grading - For purposes of analysis, total acres graded per day is based on the equipment specific grading rates (CalEEMod Appendix A) and the equipment list

Architectural Coating - Rule 1113

Vehicle Trips - Construction run only

Woodstoves - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - MM AQ-1: Tier 3 for all equipment operating at >150 HP during Site Preparation activities; MM AQ-2: Increase watering to 4 times per day

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area is 9.01 acres

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Hours are based on an 8-hour workday

Wildomar Crossroads (Construction - Mitigated) - Riverside-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Trips and VMT - CalEEMod only assumes Vendor Trips during Building Construction. The CalEEMod default trips were ratioed between each phase based on the number of days

Demolition -

Grading - For purposes of analysis, total acres graded per day is based on the equipment specific grading rates (CalEEMod Appendix A) and the equipment list

Architectural Coating - Rule 1113

Vehicle Trips - Construction run only

Woodstoves - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - MM AQ-1: Tier 3 for all equipment operating at >150 HP during Site Preparation activities; MM AQ-2: Increase watering to 4 times per day

CALEEMOD OPERATIONAL EMISSIONS MODEL OUTPUTS

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Wildomar Crossroads (Operations)

Riverside-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	30.00	1000sqft	0.69	29,996.00	0
Other Non-Asphalt Surfaces	66.55	1000sqft	1.53	66,549.00	0
Parking Lot	477.00	Space	1.81	79,056.00	0
City Park	1.32	Acre	1.32	57,591.00	0
Fast Food Restaurant w/o Drive Thru	1.13	1000sqft	0.03	1,133.00	0
Fast Food Restaurant with Drive Thru	2.75	1000sqft	0.06	2,750.00	0
High Turnover (Sit Down Restaurant)	3.35	1000sqft	0.08	3,348.00	0
Apartments Mid Rise	150.00	Dwelling Unit	2.84	123,862.00	429
Strip Mall	5.09	1000sqft	0.12	5,087.00	0
Supermarket	23.10	1000sqft	0.53	23,104.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area is 9.01 acres. For purposes of analysis, the Coffee/Donut Shop will be modeled as Fast-Doof Restaurant without Drive-Thru

Construction Phase - Operations run only

Wildomar Crossroads (Operations) - Riverside-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics based on information provided in the Trip Generation

Woodstoves - Rule 445

Water And Wastewater - For purposes of analysis, the Coffee/Shop (modeled as Fast-Food Restaurant without Drive-Thru) is assumed to have the same Indoor/Outdoor water usage as a Fast-Food Restaurant with Drive-Thru

Solid Waste - For purposes of analysis, the Coffee/Shop (modeled as Fast-Food Restaurant without Drive-Thru) is assumed to have the same Solid Waste Generation Rate as a Fast-Food Restaurant with Drive-Thru

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area is 9.01 acres. For purposes of analysis, the Coffee/Donut Shop will be modeled as Fast-Doof Restaurant without Drive-Thru

Construction Phase - Operations run only

Wildomar Crossroads (Operations) - Riverside-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics based on information provided in the Trip Generation

Woodstoves - Rule 445

Water And Wastewater - For purposes of analysis, the Coffee/Shop (modeled as Fast-Food Restaurant without Drive-Thru) is assumed to have the same Indoor/Outdoor water usage as a Fast-Food Restaurant with Drive-Thru

Solid Waste - For purposes of analysis, the Coffee/Shop (modeled as Fast-Food Restaurant without Drive-Thru) is assumed to have the same Solid Waste Generation Rate as a Fast-Food Restaurant with Drive-Thru

BRIEF OF AMICUS CURIAE 1

SUMMARY OF ARGUMENT 1

ARGUMENT 2

I. RELEVANT FACTUAL AND LEGAL FRAMEWORK. 2

A. Air Quality Regulatory Background 2

B. The SCAQMD's Role Under CEQA 6

II. THIS COURT SHOULD NOT SET A HARD-AND-FAST RULE CONCERNING THE EXTENT TO WHICH AN EIR MUST CORRELATE A PROJECT'S EMISSION OF POLLUTANTS WITH RESULTING HEALTH IMPACTS..... 8

III. THE QUESTION OF WHETHER AN EIR CONTAINS SUFFICIENT ANALYSIS TO MEET CEQA'S REQUIREMENTS IS A MIXED QUESTION OF FACT AND LAW GOVERNED BY TWO DIFFERENT STANDARDS OF REVIEW. 16

A. Standard of Review for Feasibility Determination and Sufficiency as an Informative Document 16

B. Friant Ranch's Rationale for Rejecting the Independent Judgment Standard of Review is Unsupported by Case Law. 23

IV. COURTS MUST SCRUPULOUSLY ENFORCE THE REQUIREMENTS THAT LEAD AGENCIES CONSULT WITH AND OBTAIN COMMENTS FROM AIR DISTRICTS 26

CONCLUSION 29

TO THE HONORABLE CHIEF JUSTICE AND JUSTICES OF THE SUPREME COURT:

APPLICATION FOR LEAVE TO FILE *AMICUS CURIAE* BRIEF

Pursuant to Rule 8.520(f) of the California Rules of Court, the South Coast Air Quality Management District (SCAQMD) respectfully requests leave to file the attached *amicus curiae* brief. Because SCAQMD's position differs from that of either party, we request leave to submit this amicus brief in support of neither party.

HOW THIS BRIEF WILL ASSIST THE COURT

SCAQMD's proposed amicus brief takes a position on two of the issues in this case. In both instances, its position differs from that of either party. The issues are:

1) Does the California Environmental Quality Act (CEQA) require an environmental impact report (EIR) to correlate a project's air pollution emissions with specific levels of health impacts?
2) What is the proper standard of review for determining whether an EIR provides sufficient information on the health impacts caused by a project's emission of air pollutants?

This brief will assist the Court by discussing the practical realities of correlating identified air quality impacts with specific health outcomes. In short, CEQA requires agencies to provide detailed information about a project's air quality impacts that is sufficient for the public and decisionmakers to adequately evaluate the project and meaningfully understand its impacts. However, the level of analysis is governed by a rule of reason; CEQA only requires agencies to conduct analysis if it is reasonably feasible to do so.

With regard to health-related air quality impacts, an analysis that correlates a project's air pollution emissions with specific levels of health impacts will be feasible in some cases but not others. Whether it is feasible depends on a variety of factors, including the nature of the project and the nature of the analysis under consideration. The feasibility of analysis may also change over time as air districts and others develop new tools for measuring projects' air quality related health impacts. Because SCAQMD has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, it is uniquely situated to express an opinion on the extent to which the Court should hold that CEQA requires lead agencies to correlate air quality impacts with specific health outcomes.

SCAQMD can also offer a unique perspective on the question of the appropriate standard of review. SCAQMD submits that the proper standard of review for determining whether an EIR is sufficient as an informational document is more nuanced than argued by either party. In our view, this is a mixed question of fact and law. It includes determining whether additional analysis is feasible, which is primarily a factual question that should be reviewed under the substantial evidence standard. However, it also involves determining whether the omission of a particular analysis renders an EIR insufficient to serve CEQA's purpose as a meaningful, informational document. If a lead agency has not determined that a requested analysis is infeasible, it is the court's role to determine whether the EIR nevertheless meets CEQA's purposes, and courts should not defer to the lead agency's conclusions regarding the legal sufficiency of an EIR's analysis. The ultimate question of whether an EIR's analysis is "sufficient" to serve CEQA's informational purposes is predominately a question of law that courts should review de novo.

This brief will explain the rationale for these arguments and may assist the Court in reaching a conclusion that accords proper respect to a lead agency's factual conclusions while maintaining judicial authority over the ultimate question of what level of analysis CEQA requires.

STATEMENT OF INTEREST OF *AMICUS CURIAE*

The SCAQMD is the regional agency primarily responsible for air pollution control in the South Coast Air Basin, which consists of all of Orange County and the non-desert portions of the Los Angeles, Riverside, and San Bernardino Counties. (Health & Saf. Code § 40410; Cal. Code Regs., tit. 17, § 60104.) The SCAQMD participates in the CEQA process in several ways. Sometimes it acts as a lead agency that prepares CEQA documents for projects. Other times it acts as a responsible agency when it has permit authority over some part of a project that is undergoing CEQA review by a different lead agency. Finally, SCAQMD also acts as a commenting agency for CEQA documents that it receives because it is a public agency with jurisdiction by law over natural resources affected by the project.

In all of these capacities, SCAQMD will be affected by the decision in this case. SCAQMD sometimes submits comments requesting that a lead agency perform an additional type of air quality or health impacts analysis. On the other hand, SCAQMD sometimes determines that a particular type of health impact analysis is not feasible or would not produce reliable and informative results. Thus, SCAQMD will be affected by the Court's resolution of the extent to which CEQA requires EIRs to correlate emissions and health impacts, and its resolution of the proper standard of review.

CERTIFICATION REGARDING AUTHORSHIP AND FUNDING

No party or counsel in the pending case authored the proposed amicus curiae brief in whole or in part, or made any monetary contribution intended to fund the preparation or submission of the brief. No person or entity other than the proposed *Amicus Curiae* made any monetary contribution intended to fund the preparation or submission of the brief.

Respectfully submitted,

DATED: April 3, 2015

SOUTH COAST AIR QUALITY
MANAGEMENT DISTICT

BRIEF OF AMICUS CURIAE

SUMMARY OF ARGUMENT

The South Coast Air Quality Management District (SCAQMD) submits that this Court should not try to establish a hard-and-fast rule concerning whether lead agencies are required to correlate emissions of air pollutants with specific health consequences in their environmental impact reports (EIR). The level of detail required in EIRs is governed by a few, core CEQA (California Environmental Quality Act) principles. As this Court has stated, "[a]n EIR must include detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project." (*Laurel Heights Improvement Assn. v. Regents of the Univ of Cal.* (1988) 47 Cal.3d 376, 405 ["*Laurel Heights I*"]) Accordingly, "an agency must use its best efforts to find out and disclose all that it reasonably can." (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 428 (quoting CEQA Guidelines § 15144)[1].). However, "[a]nalysis of environmental effects need not be exhaustive, but will be judged in light of what is reasonably feasible." (*Association of Irritated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1390; CEQA Guidelines §§ 15151, 15204(a).)

With regard to analysis of air quality related health impacts, EIRs must generally quantify a project's pollutant emissions, but in some cases it is not feasible to correlate these emissions to specific, quantifiable health impacts (e.g., premature mortality; hospital admissions). In such cases, a general description of the adverse health impacts resulting from the pollutants at issue may be sufficient. In other cases, due to the magnitude

[1] The CEQA Guidelines are found at Cal. Code Regs., tit. 14 §§ 15000, *et seq.*

or nature of the pollution emissions, as well as the specificity of the project involved, it may be feasible to quantify health impacts. Or there may be a less exacting, but still meaningful analysis of health impacts that can feasibly be performed. In these instances, agencies should disclose those impacts.

SCAQMD also submits that whether or not an EIR complies with CEQA's informational mandates by providing sufficient, feasible analysis is a mixed question of fact and law. Pertinent here, the question of whether an EIR's discussion of health impacts from air pollution is sufficient to allow the public to understand and consider meaningfully the issues involves two inquiries: (1) Is it feasible to provide the information or analysis that a commenter is requesting or a petitioner is arguing should be required?; and (2) Even if it is feasible, is the agency relying on other policy or legal considerations to justify not preparing the requested analysis? The first question of whether an analysis is feasible is primarily a question of fact that should be judged by the substantial evidence standard. The second inquiry involves evaluating CEQA's information disclosure purposes against the asserted reasons to not perform the requested analysis. For example, an agency might believe that its EIR meets CEQA's informational disclosure standards even without a particular analysis, and therefore choose not to conduct that analysis. SCAQMD submits that this is more of a legal question, which should be reviewed de novo as a question of law.

ARGUMENT

I. RELEVANT FACTUAL AND LEGAL FRAMEWORK.

A. Air Quality Regulatory Background

The South Coast Air Quality Management District (SCAQMD) is one of the local and regional air pollution control districts and air quality

management districts in California. The SCAQMD is the regional air pollution agency for the South Coast Air Basin, which consists of all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. (Health & Saf. Code § 40410, 17 Cal. Code Reg. § 60104.) The SCAQMD also includes the Coachella Valley in Riverside County (Palm Springs area to the Salton Sea). (SCAQMD, *Final 2012 AQMP (Feb. 2013)*, http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan; then follow "chapter 7" hyperlink; pp 7-1, 7-3 (last visited Apr. 1, 2015).) The SCAQMD's jurisdiction includes over 16 million residents and has the worst or nearly the worst air pollution levels in the country for ozone and fine particulate matter. (SCAQMD, *Final 2012 AQMP (Feb. 2013)*, http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan; then follow "Executive Summary" hyperlink p. ES-1 (last visited Apr. 1, 2015).)

Under California law, the local and regional districts are primarily responsible for controlling air pollution from all sources except motor vehicles. (Health & Saf. Code § 40000.) The California Air Resources Board (CARB), part of the California Environmental Protection Agency, is primarily responsible for controlling pollution from motor vehicles. (*Id.*) The air districts must adopt rules to achieve and maintain the state and federal ambient air quality standards within their jurisdictions. (Health & Saf. Code § 40001.)

The federal Clean Air Act (CAA) requires the United States Environmental Protection Agency (EPA) to identify pollutants that are widely distributed and pose a threat to human health, developing a so-called "criteria" document. (42 U.S.C. § 7408; CAA § 108.) These pollutants are frequently called "criteria pollutants." EPA must then establish "national ambient air quality standards" at levels "requisite to protect public health",

allowing "an adequate margin of safety." (42 U.S.C. § 7409; CAA § 109.) EPA has set standards for six identified pollutants: ozone, nitrogen dioxide, sulfur dioxide, carbon monoxide, particulate matter (PM), and lead. (U.S. EPA, National Ambient Air Quality Standards (NAAQS), http://www.epa.gov/air/criteria.html (last updated Oct. 21, 2014).)[2]

Under the Clean Air Act, EPA sets emission standards for motor vehicles and "nonroad engines" (mobile farm and construction equipment, marine vessels, locomotives, aircraft, etc.). (42 U.S.C. §§ 7521, 7547; CAA §§ 202, 213.) California is the only state allowed to establish emission standards for motor vehicles and most nonroad sources; however, it may only do so with EPA's approval. (42 U.S.C. §§ 7543(b), 7543(e); CAA §§ 209(b), 209(c).) Sources such as manufacturing facilities, power plants and refineries that are not mobile are often referred to as "stationary sources." The Clean Air Act charges state and local agencies with the primary responsibility to attain the national ambient air quality standards. (42 U.S.C. § 7401(a)(3); CAA § 101(a)(3).) Each state must adopt and implement a plan including enforceable measures to achieve and maintain the national ambient air quality standards. (42 U.S.C. § 7410; CAA § 110.) The SCAQMD and CARB jointly prepare portion of the plan for the South Coast Air Basin and submit it for approval by EPA. (Health & Saf. Code §§ 40460, et seq.)

The Clean Air Act also requires state and local agencies to adopt a permit program requiring, among other things, that new or modified "major" stationary sources use technology to achieve the "lowest achievable emission rate," and to control minor stationary sources as

---

[2] Particulate matter (PM) is further divided into two categories: fine particulate or $PM_{2.5}$ (particles with a diameter of less than or equal to 2.5 microns) and coarse particulate (PM_{10}) (particles with a diameter of 10 microns or less). (U.S. EPA, Particulate Matter (PM), http://www.epa.gov/airquality/particlepollution/ (last visited Apr. 1, 2015).)

needed to help attain the standards. (42 U.S.C. §§ 7502(c)(5), 7503(a)(2), 7410(a)(2)(C); CAA §§ 172(c)(5), 173(a)(2), 110(a)(2)(C).) The air districts implement these permit programs in California. (Health & Saf. Code §§ 42300, et seq.)

The Clean Air Act also sets out a regulatory structure for over 100 so-called "hazardous air pollutants" calling for EPA to establish "maximum achievable control technology" (MACT) for sources of these pollutants. (42 U.S.C. § 7412(d)(2); CAA § 112(d)(2).) California refers to these pollutants as "toxic air contaminants" (TACs) which are subject to two state-required programs. The first program requires "air toxics control measures" for specific categories of sources. (Health & Saf. Code § 39666.) The other program requires larger stationary sources and sources identified by air districts to prepare "health risk assessments" for impacts of toxic air contaminants. (Health & Saf. Code §§ 44320(b), 44322, 44360.) If the health risk exceeds levels identified by the district as "significant," the facility must implement a "risk reduction plan" to bring its risk levels below "significant" levels. Air districts may adopt additional more stringent requirements than those required by state law, including requirements for toxic air contaminants. (Health & Saf. Code § 41508; *Western Oil & Gas Assn. v. Monterey Bay Unified APCD* (1989) 49 Cal.3d 408, 414.) For example, SCAQMD has adopted a rule requiring new or modified sources to keep their risks below specified levels and use best available control technology (BACT) for toxics. (SCAQMD, *Rule 1401-New Source Review of Toxic Air Contaminants*, http://www.aqmd.gov/home/regulations/rules/scaqmd-rule-book/regulation-xiv; then follow "Rule 1401" hyperlink (last visited Apr. 1, 2015).)

B. The SCAQMD's Role Under CEQA

The California Environmental Quality Act (CEQA) requires public agencies to perform an environmental review and appropriate analysis for projects that they implement or approve. (Pub. Resources Code § 21080(a).) The agency with primary approval authority for a particular project is generally the "lead agency" that prepares the appropriate CEQA document. (CEQA Guidelines §§ 15050, 15051.) Other agencies having a subsequent approval authority over all or part of a project are called "responsible" agencies that must determine whether the CEQA document is adequate for their use. (CEQA Guidelines §§ 15096(c), 15381.) Lead agencies must also consult with and circulate their environmental impact reports to "trustee agencies" and agencies "with jurisdiction by law" including "authority over resources which may be affected by the project." (Pub. Resources Code §§ 21104(a), 21153; CEQA Guidelines §§ 15086(a)(3), 15073(c).) The SCAQMD has a role in all these aspects of CEQA.

Fulfilling its responsibilities to implement its air quality plan and adopt rules to attain the national ambient air quality standards, SCAQMD adopts a dozen or more rules each year to require pollution reductions from a wide variety of sources. The SCAQMD staff evaluates each rule for any adverse environmental impact and prepares the appropriate CEQA document. Although most rules reduce air emissions, they may have secondary environmental impacts such as use of water or energy or disposal of waste—e.g., spent catalyst from control equipment.[3]

---

[3] The SCAQMD's CEQA program for its rules is a "Certified Regulatory Program" under which it prepares a "functionally equivalent" document in lieu of a negative declaration or EIR. (Pub. Resources Code § 21080.5, CEQA Guidelines § 15251(l).)

The SCAQMD also approves a large number of permits every year to construct new, modified, or replacement facilities that emit regulated air pollutants. The majority of these air pollutant sources have already been included in an earlier CEQA evaluation for a larger project, are currently being evaluated by a local government as lead agency, or qualify for an exemption. However, the SCAQMD sometimes acts as lead agency for major projects where the local government does not have a discretionary approval. In such cases, SCAQMD prepares and certifies a negative declaration or environmental impact report (EIR) as appropriate.[4] SCAQMD evaluates perhaps a dozen such permit projects under CEQA each year. SCAQMD is often also a "responsible agency" for many projects since it must issue a permit for part of the projects (e.g., a boiler used to provide heat in a commercial building). For permit projects evaluated by another lead agency under CEQA, SCAQMD has the right to determine that the CEQA document is inadequate for its purposes as a responsible agency, but it may not do so because its permit program already requires all permitted sources to use the best available air pollution control technology. (SCAQMD, *Rule 1303(a)(1) – Requirements*, http://www.aqmd.gov/home/regulations/rules/scaqmd-rule-book/regulation-xiii; then follow "Rule 1303" hyperlink (last visited Apr. 1, 2015).)

Finally, SCAQMD receives as many as 60 or more CEQA documents each month (around 500 per year) in its role as commenting agency or an agency with "jurisdiction by law" over air quality—a natural resource affected by the project. (Pub. Resources Code §§ 21104(a), 21153; CEQA Guidelines § 15366(a)(3).) The SCAQMD staff provides comments on as many as 25 or 30 such documents each month.

---

[4] The SCAQMD's permit projects are not included in its Certified Regulatory Program, and are evaluated under the traditional local government CEQA analysis. (Pub. Resources Code §§ 21150-21154.)

(SCAQMD Governing Board Agenda, Apr. 3, 2015, Agenda Item 16, Attachment A, http://www.aqmd.gov/home/library/meeting-agendas-minutes/agenda?title=governing-board-meeting-agenda-april-3-2015; then follow "16. Lead Agency Projects and Environmental Documents Received by SCAQMD" hyperlink (last visited Apr. 1, 2015).) Of course, SCAQMD focuses its commenting efforts on the more significant projects.

Typically, SCAQMD comments on the adequacy of air quality analysis, appropriateness of assumptions and methodology, and completeness of the recommended air quality mitigation measures. Staff may comment on the need to prepare a health risk assessment detailing the projected cancer and noncancer risks from toxic air contaminants resulting from the project, particularly the impacts of diesel particulate matter, which CARB has identified as a toxic air contaminant based on its carcinogenic effects. (California Air Resources Board, Resolution 98-35, Aug. 27, 1998, http://www.arb.ca.gov/regact/diesltac/diesltac.htm; then follow Resolution 98-35 hyperlink (last visited Apr. 1, 2015).) Because SCAQMD already requires new or modified stationary sources of toxic air contaminants to use the best available control technology for toxics and to keep their risks below specified levels, (SCAQMD Rule 1401, supra, note 15), the greatest opportunity to further mitigate toxic impacts through the CEQA process is by reducing emissions—particularly diesel emissions—from vehicles.

II. THIS COURT SHOULD NOT SET A HARD-AND-FAST RULE CONCERNING THE EXTENT TO WHICH AN EIR MUST CORRELATE A PROJECT'S EMISSION OF POLLUTANTS WITH RESULTING HEALTH IMPACTS.

Numerous cases hold that courts do not review the correctness of an EIR's conclusions but rather its sufficiency as an informative document. (*Laurel Heights 1, supra*, 47 Cal.3d at p. 392; *Citizens of Goleta Valley v.*

Bd. of Supervisors (1990) 52 Cal.3d 553, 569; *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1197.)

As stated by the Court of Appeal in this case, where an EIR has addressed a topic, but the petitioner claims that the information provided about that topic is insufficient, courts must "draw[] a line that divides *sufficient* discussions from those that are *insufficient*." (*Sierra Club v. County of Fresno* (2014) 226 Cal.App.4th 704 (superseded by grant of review) 172 Cal.Rptr.3d 271, 290.) The Court of Appeal readily admitted that "[t]he terms themselves – sufficient and insufficient – provide little, if any, guidance as to where the line should be drawn. They are simply labels applied once the court has completed its analysis." (*Id.*)

The CEQA Guidelines, however, provide guidance regarding what constitutes a sufficient discussion of impacts. Section 15151 states that "the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible." Case law reflects this: "Analysis of environmental effects need not be exhaustive, but will be judged in light of what was reasonably feasible." (*Association of Irritated Residents v. County of Madera, supra,* 107 Cal.App.4th at p. 1390; see also CEQA Guidelines § 15204(a).)

Applying this test, this Court cannot realistically establish a hard-and-fast rule that an analysis correlating air pollution impacts of a project to quantified resulting health impacts is always required, or indeed that it is never required. Simply put, in some cases such an analysis will be "feasible"; in some cases it will not.

For example, air pollution control districts often require a proposed new source of toxic air contaminants to prepare a "health risk assessment" before issuing a permit to construct. District rules often limit the allowable cancer risk the new source may cause to the "maximally exposed individual" (worker and residence exposures). (*See, e.g.*, SCAQMD Rule 1401(c)(8); 1401(d)(1), *supra* note 15.) In order to perform this analysis, it

is necessary to have data regarding the sources and types of air toxic contaminants, location of emission points, velocity of emissions, the meteorology and topography of the area, and the location of receptors (worker and residence). (SCAQMD, *Supplemental Guidelines for Preparing Risk Assessments for the Air Toxics "Hot Spots" Information and Assessment Act (AB2588), pp. 11-16*; (last visited Apr. 1, 2015) http://www.aqmd.gov/home/library/documents-support-material; "Guidelines" hyperlink; AB2588; then follow AB2588 Risk Assessment Guidelines hyperlink.)

Thus, it is feasible to determine the health risk posed by a new gas station locating at an intersection in a mixed use area, where receptor locations are known. On the other hand, it may not be feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on "speculation" (i.e., without knowing the future tenant(s)). Even where a health risk assessment can be prepared, however, the resulting maximum health risk value is only a calculation of risk—it does not necessarily mean anyone will contract cancer as a result of the project.

In order to find the "cancer burden" or expected additional cases of cancer resulting from the project, it is also necessary to know the numbers and location of individuals living within the "zone of impact" of the project: i.e., those living in areas where the projected cancer risk from the project exceeds one in a million. (SCAQMD, Health Risk Assessment Summary form, http://www.aqmd.gov/home/forms ; filter by "AB2588" category; then "Health Risk Assessment" hyperlink (last visited Apr. 1, 2015).) The affected population is divided into bands of those exposed to at least 1 in a million risk, those exposed to at least 10 in a million risk, etc. up to those exposed at the highest levels. (*Id.*) This data allows agencies to calculate an approximate number of additional cancer cases expected from

the project. However, it is not possible to predict which particular individuals will be affected.

For the so-called criteria pollutants[5], such as ozone, it may be more difficult to quantify health impacts. Ozone is formed in the atmosphere from the chemical reaction of the nitrogen oxides (NO_x) and volatile organic compounds (VOC) in the presence of sunlight. (U.S. EPA, Ground Level Ozone, http://www.epa.gov/airquality/ozonepollution/ (last updated Mar. 25, 2015).) It takes time and the influence of meteorological conditions for these reactions to occur, so ozone may be formed at a distance downwind from the sources. (U.S. EPA, *Guideline on Ozone Monitoring Site Selection* (Aug. 1998) EPA-454/R-98-002 § 5.1.2, http://www.epa.gov/ttnamti1/archive/cpreldoc.html (last visited Apr. 1, 2015).) NO_x and VOC are known as "precursors" of ozone.

Scientifically, health effects from ozone are correlated with increases in the ambient level of ozone in the air a person breathes. (U.S. EPA, *Health Effects of Ozone in the General Population,* Figure 9, http://www.epa.gov/apti/ozonehealth/population.html#levels (last visited Apr. 1, 2015).) However, it takes a large amount of additional precursor emissions to cause a modeled increase in ambient ozone levels over an entire region. For example, the SCAQMD's 2012 AQMP showed that reducing NO_x by 432 tons per day (157,680 tons/year) and reducing VOC by 187 tons per day (68,255 tons/year) would reduce ozone levels at the SCAQMD's monitor site with the highest levels by only 9 parts per billion. (South Coast Air Quality Management District, *Final 2012 AQMP (February 2013)*, http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan; then follow "Appendix V: Modeling & Attainment Demonstrations" hyperlink,

[5] See discussion of types of pollutants, supra, Part I.A.

pp. v-4-2, v-7-4, v-7-24.) SCAQMD staff does not currently know of a way to accurately quantify ozone-related health impacts caused by NO_x or VOC emissions from relatively small projects.

On the other hand, this type of analysis may be feasible for projects on a regional scale with very high emissions of NO_x and VOCs, where impacts are regional. For example, in 2011 the SCAQMD performed a health impact analysis in its CEQA document for proposed Rule 1315, which authorized various newly-permitted sources to use offsets from the districts "internal bank" of emission reductions. This CEQA analysis accounted for essentially *all* the increases in emissions due to new or modified sources in the District between 2010 and 2030.[6] The SCAQMD was able to correlate this very large emissions increase (e.g., 6,620 pounds per day NO_x (1,208 tons per year), 89,180 pounds per day VOC (16,275 tons per year)) to expected health outcomes from ozone and particulate matter (e.g., 20 premature deaths per year and 89,947 school absences in the year 2030 due to ozone).[7] (SCAQMD Governing Board Agenda, February 4, 2011, Agenda Item 26, *Assessment for: Re-adoption of Proposed Rule 1315 – Federal New Source Review Tracking System* (see hyperlink in fn 6*)* at p. 4.1-35, Table 4.1-29.)

---

[6] (SCAQMD Governing Board Agenda, February 4, 2011, Agenda Item 26, Attachment G, *Assessment for: Re-adoption of Proposed Rule 1315 – Federal New Source Review Tracking System, Vol. 1, p.4.0-6,* http://www.aqmd.gov/home/library/meeting-agendas-minutes/agenda?title=governing-board-meeting-agenda-february-4-2011; the follow "26. Adopt Proposed Rule 1315 – Federal New Source Review Tracking System" (last visited April 1, 2015).)

[7] The SCAQMD was able to establish the location of future NO_x and VOC emissions by assuming that new projects would be built in the same locations and proportions as existing stationary sources. This CEQA document was upheld by the Los Angeles County Superior Court in *Natural Res. Def. Council v SCAQMD*, Los Angeles Superior Court No. BS110792).

However, a project emitting only 10 tons per year of NO_x or VOC is small enough that its regional impact on ambient ozone levels may not be detected in the regional air quality models that are currently used to determine ozone levels. Thus, in this case it would not be feasible to directly correlate project emissions of VOC or NO_x with specific health impacts from ozone. This is in part because ozone formation is not linearly related to emissions. Ozone impacts vary depending on the location of the emissions, the location of other precursor emissions, meteorology and seasonal impacts, and because ozone is formed some time later and downwind from the actual emission. (EPA Guideline on Ozone Monitoring Site Selection (Aug. 1998) EPA-454/R-98-002, § 5.1.2; https://www.epa.gov/ttnamti1/archive/cpreldoc.html; then search "Guideline on Ozone Monitoring Site Selection" click on pdf) (last viewed Apr. 1, 2015).)

SCAQMD has set its CEQA "significance" threshold for NO_x and VOC at 10 tons per year (expressed as 55 lb/day). (SCAQMD, *Air Quality Analysis Handbook*, http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook; then follow "SCAQMD Air Quality Significance Thresholds" hyperlink (last visited Apr. 1, 2015).) This is because the federal Clean Air Act defines a "major" stationary source for "extreme" ozone nonattainment areas such as SCAQMD as one emitting 10 tons/year. (42 U.S.C. §§ 7511a(e), 7511a(f); CAA §§ 182(e), 182(f).) Under the Clean Air Act, such sources are subject to enhanced control requirements (42 U.S.C. §§ 7502(c)(5), 7503; CAA §§ 172(c)(5), 173), so SCAQMD decided this was an appropriate threshold for making a CEQA "significance" finding and requiring feasible mitigation. Essentially, SCAQMD takes the position that a source that emits 10 tons/year of NO_x or VOC would contribute cumulatively to ozone formation. Therefore, lead agencies that use SCAQMD's thresholds of significance may determine

that many projects have "significant" air quality impacts and must apply all feasible mitigation measures, yet will not be able to precisely correlate the project to quantifiable health impacts, unless the emissions are sufficiently high to use a regional modeling program.

In the case of particulate matter ($PM_{2.5}$)[8], another "criteria" pollutant, SCAQMD staff is aware of two possible methods of analysis. SCAQMD used regional modeling to predict expected health impacts from its proposed Rule 1315, as mentioned above. Also, the California Air Resources Board (CARB) has developed a methodology that can predict expected mortality (premature deaths) from large amounts of $PM_{2.5}$. (California Air Resources Board, *Health Impacts Analysis: PM Premature Death Relationship*, http://www.arb.ca.gov/research/health/pm-mort/pm-mort_arch.htm (last reviewed Jan. 19, 2012).) SCAQMD used the CARB methodology to predict impacts from three very large power plants (e.g., 731-1837 lbs/day). (Final Environmental Assessment for Rule 1315, *supra*, pp 4.0-12, 4.1-13, 4.1-37 (e.g., 125 premature deaths in the entire SCAQMD in 2030), 4.1-39 (0.05 to 1.77 annual premature deaths from power plants.) Again, this project involved large amounts of additional $PM_{2.5}$ in the District, up to 2.82 tons/day (5,650 lbs/day of $PM_{2.5}$, or, or 1029 tons/year. (*Id.* at table 4.1-4, p. 4.1-10.)

However, the primary author of the CARB methodology has reported that this $PM_{2.5}$ health impact methodology is not suited for small projects and may yield unreliable results due to various uncertainties. [9] (SCAQMD, *Final Subsequent Mitigated Negative Declaration for: Warren*

---

[8] SCAQMD has not attained the latest annual or 24-hour national ambient air quality standards for "$PM_{2.5}$" or particulate matter less than 2.5 microns in diameter.

[9] Among these uncertainties are the representativeness of the population used in the methodology, and the specific source of PM and the corresponding health impacts. (*Id.* at p. 2-24.)

E&P, Inc. WTU Central Facility, New Equipment Project (certified July 19, 2011), http://www.aqmd.gov/home/library/documents-support-material/lead-agency-permit-projects/permit-project-documents---year-2011; then follow "Final Subsequent Mitigated Negative Declaration for Warren E&P Inc. WTU Central Facility, New Equipment Project" hyperlink, pp. 2-22, 2-23 (last visited Apr. 1, 2015).) Therefore, when SCAQMD prepared a CEQA document for the expansion of an existing oil production facility, with very small $PM_{2.5}$ increases (3.8 lb/day) and a very small affected population, staff elected not to use the CARB methodology for using estimated $PM_{2.5}$ emissions to derive a projected premature mortality number and explained why it would be inappropriate to do so. (*Id.* at pp 2-22 to 2-24.) SCAQMD staff concluded that use of this methodology for such a small source could result in unreliable findings and would not provide meaningful information. (*Id.* at pp. 2-23, 2-25.) This CEQA document was not challenged in court.

In the above case, while it may have been technically possible to plug the data into the methodology, the results would not have been reliable or meaningful. SCAQMD believes that an agency should not be required to perform analyses that do not produce reliable or meaningful results. This Court has already held that an agency may decline to use even the "normal" "existing conditions" CEQA baseline where to do so would be misleading or without informational value. (*Neighbors for Smart Rail v. Exposition Metro Line* (2013) 57 Cal.4th 439, 448, 457.) The same should be true for a decision that a particular study or analysis would not provide reliable or meaningful results.[10]

---

[10] Whether a particular study would result in "informational value" is a part of deciding whether it is "feasible." CEQA defines "feasible" as "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and

Therefore, it is not possible to set a hard-and-fast rule on whether a correlation of air quality impacts with specific quantifiable health impacts is required in all cases. Instead, the result turns on whether such an analysis is reasonably feasible in the particular case.[11] Moreover, what is reasonably feasible may change over time as scientists and regulatory agencies continually seek to improve their ability to predict health impacts. For example, CARB staff has been directed by its Governing Board to reassess and improve the methodology for estimating premature deaths. (California Air Resources Board, *Health Impacts Analysis: PM Mortality Relationship*, http://www.arb.ca.gov/research/health/pm-mort/pm-mort.htm (last reviewed Dec. 29, 2010).) This factor also counsels against setting any hard-and-fast rule in this case.

III. THE QUESTION OF WHETHER AN EIR CONTAINS SUFFICIENT ANALYSIS TO MEET CEQA'S REQUIREMENTS IS A MIXED QUESTION OF FACT AND LAW GOVERNED BY TWO DIFFERENT STANDARDS OF REVIEW.

A. Standard of Review for Feasibility Determination and Sufficiency as an Informative Document

A second issue in this case is whether courts should review an EIR's informational sufficiency under the "substantial evidence" test as argued by Friant Ranch or the "independent judgment" test as argued by Sierra Club.

---

technological factors." (Pub. Resources Code § 21061.1.) A study cannot be "accomplished in a *successful* manner" if it produces unreliable or misleading results.

[11] In this case, the lead agency did not have an opportunity to determine whether the requested analysis was feasible because the comment was non-specific. Therefore, SCAQMD suggests that this Court, after resolving the legal issues in the case, direct the Court of Appeal to remand the case to the lead agency for a determination of whether the requested analysis is feasible. Because Fresno County, the lead agency, did not seek review in this Court, it seems likely that the County has concluded that at least some level of correlation of air pollution with health impacts is feasible.

As this Court has explained, "a reviewing court must adjust its scrutiny to the nature of the alleged defect, depending on whether the claim is predominantly one of improper procedure or a dispute over the facts." (*Vineyard Area Citizens v. City of Rancho Cordova, supra,* 40 Cal.4th at 435.) For questions regarding compliance with proper procedure or other legal questions, courts review an agency's action de novo under the "independent judgment" test. (*Id.*) On the other hand, courts review factual disputes only for substantial evidence, thereby "accord[ing] greater deference to the agency's substantive factual conclusions." (*Id.*)

Here, Friant Ranch and Sierra Club agree that the case involves the question of whether an EIR includes sufficient information regarding a project's impacts. However, they disagree on the proper standard of review for answering this question: Sierra Club contends that courts use the independent judgment standard to determine whether an EIR's analysis is sufficient to meet CEQA's informational purposes,[12] while Friant Ranch contends that the substantial evidence standard applies to this question.

---

[12] Sierra Club acknowledges that courts use the substantial evidence standard when reviewing predicate factual issues, but argues that courts ultimately decide as a matter of law what CEQA requires. (Answering Brief, pp. 14, 23.)

SCAQMD submits that the issue is more nuanced than either party contends. We submit that, whether a CEQA document includes sufficient analysis to satisfy CEQA's informational mandates is a mixed question of fact and law,[13] containing two levels of inquiry that should be judged by different standards.[14]

The state CEQA Guidelines set forth standards for the adequacy of environmental analysis. Guidelines Section 15151 states:

> An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection, but for adequacy, completeness, and a good-faith effort at full disclosure.

In this case, the basic question is whether the underlying analysis of air quality impacts made the EIR "sufficient" as an informative document. However, whether the EIR's analysis was sufficient is judged in light of what was reasonably feasible. This represents a mixed question of fact and law that is governed by two different standards of review.

---

[13] Friant Ranch actually states that the claim that an EIR lacks sufficient relevant information is, "most properly thought of as raising mixed questions of fact and law." (Opening Brief, p. 27.) However, the remainder of its argument claims that the court should apply the substantial evidence standard of review to all aspects of the issue.

[14] Mixed questions of fact and law issues may implicate predominantly factual subordinate questions that are reviewed under the substantial evidence test even though the ultimate question may be reviewed by the independent judgment test. *Crocker National Bank v. City and County of San Francisco* (1989) 49 Cal.3d 881, 888-889.

SCAQMD submits that an EIR's sufficiency as an informational document is ultimately a legal question that courts should determine using their independent judgment. This Court's language in *Laurel Heights I* supports this position. As this Court explained: "The court does not pass upon the correctness of the EIR's environmental conclusions, but only upon its *sufficiency as an informative document.*" (*Laurel Heights I, supra*, 47 Cal.3d at 392-393) (emphasis added.) As described above, the Court in *Vineyard Area Citizens v. City of Rancho Cordova, supra,* 40 Cal.4th at 431, also used its independent judgment to determine what level of analysis CEQA requires for water supply impacts. The Court did not defer to the lead agency's opinion regarding the law's requirements; rather, it determined for itself what level of analysis was necessary to meet "[t]he law's informational demands." (*Id.* at p. 432.) Further, existing case law also holds that where an agency fails to comply with CEQA's information disclosure requirements, the agency has "failed to proceed in the manner required by law." (*Save Our Peninsula Comm. v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 118.)

However, whether an EIR satisfies CEQA's requirements depends in part on whether it was reasonably feasible for an agency to conduct additional or more thorough analysis. EIRs must contain "a detailed statement" of a project's impacts (Pub. Res. Code § 21061), and an agency must "use its best efforts to find out and disclose all that it reasonably can." (CEQA Guidelines § 15144.) Nevertheless, "the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible." (CEQA Guidelines § 15151.)

SCAQMD submits that the question of whether additional analysis or a particular study suggested by a commenter is "feasible" is generally a question of fact. Courts have already held that whether a particular alternative is "feasible" is reviewed by the substantial evidence test.

(*Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 598-99; *Center for Biological Diversity v. County of San Bernardino* (2010) 185 Cal.App.4th 866, 883.) Thus, if a lead agency determines that a particular study or analysis is infeasible, that decision should generally be judged by the substantial evidence standard. However, SCAQMD urges this Court to hold that lead agencies must explain the basis of any determination that a particular analysis is infeasible in the EIR itself. An EIR must discuss information, including issues related to the feasibility of particular analyses "in sufficient detail to enable meaningful participation and criticism by the public. '[W]hatever is required to be considered in an EIR must be in that formal report; what any official might have known from other writings or oral presentations cannot supply what is lacking in the report.'" (*Laurel Heights I, supra*, 47 Cal.3d at p. 405 (quoting *Santiago County Water District v. County of Orange* (1981) 118 Cal.App.3d 818, 831) (discussing analysis of alternatives).) The evidence on which the determination is based should also be summarized in the EIR itself, with appropriate citations to reference materials if necessary. Otherwise commenting agencies such as SCAQMD would be forced to guess where the lead agency's evidence might be located, thus thwarting effective public participation.

Moreover, if a lead agency determines that a particular study or analysis would not result in reliable or useful information and for that reason is not feasible, that determination should be judged by the substantial evidence test. (See *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority, supra*, 57 Cal.4th 439, 448, 457:

whether "existing conditions" baseline would be misleading or uninformative judged by substantial evidence standard.[15])

If the lead agency's determination that a particular analysis or study is not feasible is supported by substantial evidence, then the agency has not violated CEQA's information disclosure provisions, since it would be infeasible to provide additional information. This Court's decisions provide precedent for such a result. For example, this Court determined that the issue of whether the EIR should have included a more detailed discussion of future herbicide use was resolved because substantial evidence supported the agency's finding that "the precise parameters of future herbicide use could not be predicted." *Ebbetts Pass Forest Watch v. California Dept. of Forestry & Fire Protection* (2008) 43 Cal.4th 936, 955.

Of course, SCAQMD expects that courts will continue to hold lead agencies to their obligations to consult with, and not to ignore or misrepresent, the views of sister agencies having special expertise in the area of air quality. (*Berkeley Keep Jets Over the Bay v. Board of Port Commissioners* (2007) 91 Cal.App.4th 1344, 1364 n.11.) In some cases, information provided by such expert agencies may establish that the purported evidence relied on by the lead agency is not in fact "substantial". (*Id.* at pp. 1369-1371.)

In sum, courts retain ultimate responsibility to determine what CEQA requires. However, the law does not require exhaustive analysis, but only what is reasonably feasible. Agencies deserve deference for their factual determinations regarding what type of analysis is reasonably feasible. On the other hand, if a commenter requests more information, and the lead agency declines to provide it but does *not* determine that the

---

[15] The substantial evidence standard recognizes that the courts "have neither the resources nor the scientific expertise" to weigh conflicting evidence on technical issues. (*Laurel Heights I, supra,* 47 Cal.3d 376, 393.)

requested study or analysis would be infeasible, misleading or uninformative, the question becomes whether the omission of that analysis renders the EIR inadequate to satisfy CEQA's informational purposes. (*Id.* at pp. 1370-71.) Again, this is predominantly a question of law and should be judged by the de novo or independent judgment standard of review. Of course, this Court has recognized that a "project opponent or reviewing court can always imagine some additional study or analysis that might provide helpful information. It is not for them to design the EIR. That further study...might be helpful does not make it necessary." (*Laurel Heights I, supra,* 47 Cal.3d 376, 415 – see also CEQA Guidelines § 15204(a) [CEQA "does not require a lead agency to conduct every test. . . recommended or demanded by commenters."].) Courts, then, must adjudicate whether an omission of particular information renders an EIR inadequate to serve CEQA's informational purposes.[16]

---

[16] We recognize that there is case law stating that the substantial evidence standard applies to "challenges to the scope of an EIR's analysis of a topic" as well as the methodology used and the accuracy of the data relied on in the document "because these types of challenges involve factual questions." (*Bakersfield Citizens for Local Control v. City of Bakersfield, supra,* 124 Cal.App.4th 1184, 1198, and cases relied on therein.) However, we interpret this language to refer to situations where the question of the scope of the analysis really is factual—that is, where it involves whether further analysis is feasible, as discussed above. This interpretation is supported by the fact that the *Bakersfield* court expressly rejected an argument that a claimed "omission of information from the EIR should be treated as inquiries whether there is substantial evidence supporting the decision approving the project. " *Bakersfield, supra,* 124 Cal.App.4th at p. 1208. And the *Bakersfield* court ultimately decided that the lead agency must analyze the connection between the identified air pollution impacts and resulting health impacts, even though the EIR already included some discussion of air-pollution-related respiratory illnesses. *Bakersfield, supra,* 124 Cal.App.4th at p. 1220. Therefore, the court must not have interpreted this question as one of the "scope of the analysis" to be judged by the substantial evidence standard.

B. Friant Ranch's Rationale for Rejecting the Independent Judgment Standard of Review is Unsupported by Case Law.

In its brief, Friant Ranch makes a distinction between cases where a required CEQA topic is not discussed at all (to be reviewed by independent judgment as a failure to proceed in the manner required by law) and cases where a topic is discussed, but the commenter claims the information provided is insufficient (to be judged by the substantial evidence test). (Opening Brief, pp. 13-17.) The Court of Appeal recognized these two types of cases, but concluded that both raised questions of law. (*Sierra Club v. County of Fresno* (2014) 226 Cal.App.4th 704 (superseded by grant of review) 172 Cal.Rptr.3d 271, 290.) We believe the distinction drawn by Friant Ranch is unduly narrow, and inconsistent with cases which have concluded that CEQA documents are insufficient. In many instances, CEQA's requirements are stated broadly, and the courts must interpret the law to determine what level of analysis satisfies CEQA's mandate for providing meaningful information, even though the EIR discusses the issue to some extent.

For example, the CEQA Guidelines require discussion of the existing environmental baseline. In *County of Amador v. El Dorado County Water Agency* (1999) 76 Cal.App.4th 931, 954-955, the lead agency had discussed the environmental baseline by describing historic month-end water levels in the affected lakes. However, the court held that this was not an adequate baseline discussion because it failed to discuss the timing and amounts of past actual water releases, to allow comparison with the proposed project. The court evidently applied the independent judgment test to its decision, even though the agency discussed the issue to some extent.

Likewise, in *Vineyard Area Citizens* (2007) 40 Cal.4th 412, this Court addressed the question of whether an EIR's analysis of water supply impacts complied with CEQA. The parties agreed that the EIR was required to analyze the effects of providing water to the development project, "and that in order to do so the EIR had, in some manner, to identify the planned sources of that water." (*Vineyard Area Citizens, supra,* at p. 428.) However, the parties disagreed as to the level of detail required for this analysis and "what level of uncertainty regarding the availability of water supplies can be tolerated in an EIR . . . ." (*Id.*) In other words, the EIR had analyzed water supply impacts for the project, but the petitioner claimed that the analysis was insufficient.

This Court noted that neither CEQA's statutory language or the CEQA Guidelines specifically addressed the question of how precisely an EIR must discuss water supply impacts. (*Id.*) However, it explained that CEQA "states that '[w]hile foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can.'" (*Id.*, [Guidelines § 15144].) The Court used this general principle, along with prior precedent, to elucidate four "principles for analytical adequacy" that are necessary in order to satisfy "CEQA's informational purposes." (*Vineyard Area Citizens, supra,* at p. 430.) The Court did not defer to the agency's determination that the EIR's analysis of water supply impacts was sufficient. Rather, this Court used its independent judgment to determine for itself the level of analysis required to satisfy CEQA's fundamental purposes. (*Vineyard Area Citizens, supra*, at p. 441: an EIR does not serve its purposes where it neglects to explain likely sources of water and "... leaves long term water supply considerations to later stages of the project.")

Similarly, the CEQA Guidelines require an analysis of noise impacts of the project. (Appendix G, "Environmental Checklist Form."[17]) In *Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1123, the court held that the lead agency's noise impact analysis was inadequate even though it had addressed the issue and concluded that the increase would not be noticeable. If the court had been using the substantial evidence standard, it likely would have upheld this discussion.

Therefore, we do not agree that the issue can be resolved on the basis suggested by Friant Ranch, which would apply the substantial evidence standard to *every* challenge to an analysis that addresses a required CEQA topic. This interpretation would subvert the courts' proper role in interpreting CEQA and determining what the law requires.

Nor do we agree that the Court of Appeal in this case violated CEQA's prohibition on courts interpreting its provisions "in a manner which imposes procedural or substantive requirements beyond those explicitly stated in this division or in the state guidelines." (Pub. Resources Code § 21083.1.) CEQA requires an EIR to describe *all* significant impacts of the project on the environment. (Pub. Resources Code § 21100(b)(2); *Vineyard Area Citizens, supra,* at p. 428.) Human beings are part of the environment, so CEQA requires EIRs to discuss a project's significant impacts on human health. However, except in certain particular circumstances,[18] neither the CEQA statute nor Guidelines specify the precise level of analysis that agencies must undertake to satisfy the law's requirements. (see, e.g., CEQA Guidelines § 15126.2(a) [EIRs must describe "health and safety problems caused by {a project's} physical changes"].) Accordingly, courts must interpret CEQA as a whole to

[17] Association of Environmental Professionals, 2015 CEQA Statute and Guidelines (2015) p.287.

[18] E.g., Pub. Resources Code § 21151.8(C)(3)(B)(iii) (requiring specific type of health risk analysis for siting schools).

determine whether a particular EIR is sufficient as an informational document. A court determining whether an EIR's discussion of human health impacts is legally sufficient does not constitute imposing a new substantive requirement.[19] Under Friant Ranch's theory, the above-referenced cases holding a CEQA analysis inadequate would have violated the law. This is not a reasonable interpretation.

IV. COURTS MUST SCRUPULOUSLY ENFORCE THE REQUIREMENTS THAT LEAD AGENCIES CONSULT WITH AND OBTAIN COMMENTS FROM AIR DISTRICTS

Courts must "scrupulously enforce" CEQA's legislatively mandated requirements. (*Vineyard Area Citizens, supra*, 40 Cal.4th 412, 435.) Case law has firmly established that lead agencies must consult with the relevant air pollution control district before conducting an initial study, and must provide the districts with notice of the intention to adopt a negative declaration (or EIR). (*Schenck v. County of Sonoma* (2011) 198 Cal.App.4th 949, 958.) As *Schenck* held, neither publishing the notice nor providing it to the State Clearinghouse was a sufficient substitute for sending notice directly to the air district. (*Id.*) Rather, courts "must be satisfied that [administrative] agencies have fully complied with the procedural requirements of CEQA, since only in this way can the important public purposes of CEQA be protected from subversion." *Schenck,* 198 Cal.App.4th at p. 959 (citations omitted).[20]

---

[19] We submit that Public Resources Code Section 21083.1 was intended to prevent courts from, for example, holding that an agency must analyze economic impacts of a project where there are no resulting environmental impacts (see CEQA Guidelines § 15131) , or imposing new procedural requirements, such as imposing additional public notice requirements not set forth in CEQA or the Guidelines.

[20] Lead agencies must consult air districts, as public agencies with jurisdiction by law over resources affected by the project, *before* releasing an EIR. (Pub. Resources Code §§ 21104(a); 21153.) Moreover, air

Lead agencies should be aware, therefore, that failure to properly seek and consider input from the relevant air district constitutes legal error which may jeopardize their project approvals. For example, the court in *Fall River Wild Trout Foundation v. County of Shasta,* (1999) 70 Cal.App.4th 482, 492 held that the failure to give notice to a trustee agency (Department of Fish and Game) was prejudicial error requiring reversal. The court explained that the lack of notice prevented the Department from providing any response to the CEQA document. (*Id.* at p. 492.) It therefore prevented relevant information from being presented to the lead agency, which was prejudicial error because it precluded informed decision-making. (*Id.*)[21]

---

districts should be considered "state agencies" for purposes of the requirement to consult with "trustee agencies" as set forth in Public Resources Code § 20180.3(a). This Court has long ago held that the districts are not mere "local agencies" whose regulations are superseded by those of a state agency regarding matters of statewide concern, but rather have concurrent jurisdiction over such issues. (*Orange County Air Pollution Control District v. Public Util. Com.* (1971) 4 Cal.3d 945, 951, 954.) Since air pollution is a matter of statewide concern, *Id* at 952, air districts should be entitled to trustee agency status in order to ensure that this vital concern is adequately protected during the CEQA process.

[21] In *Schenck,* the court concluded that failure to give notice to the air district was not prejudicial, but this was partly because the trial court had already corrected the error before the case arrived at the Court of Appeal. The trial court issued a writ of mandate requiring the lead agency to give notice to the air district. The air district responded by concurring with the lead agency that air impacts were not significant. (*Schenck,* 198 Cal.App.4th 949, 960.) We disagree with the *Schenck* court that the failure to give notice to the air district would not have been prejudicial (even in the absence of the trial court writ) merely because the lead agency purported to follow the air district's published CEQA guidelines for significance. (*Id.*, 198 Cal.App.4th at p. 960.) In the first place, absent notice to the air district, it is uncertain whether the lead agency properly followed those guidelines. Moreover, it is not realistic to expect that an air district's published guidelines would necessarily fully address all possible air-quality related issues that can arise with a CEQA project, or that those

Similarly, lead agencies must obtain additional information requested by expert agencies, including those with jurisdiction by law, if that information is necessary to determine a project's impacts. (*Sierra Club v. State Bd. Of Forestry* (1994) 7 Cal.4th 1215, 1236-37.) Approving a project without obtaining that information constitutes a failure to proceed in the manner prescribed by CEQA. (*Id.* at p. 1236.)

Moreover, a lead agency can save significant time and money by consulting with the air district early in the process. For example, the lead agency can learn what the air district recommends as an appropriate analysis on the facts of its case, including what kinds of health impacts analysis may be available, and what models are appropriate for use. This saves the lead agency from the need to do its analysis all over again and possibly needing to recirculate the document after errors are corrected, if new significant impacts are identified. (CEQA Guidelines § 15088.5(a).) At the same time, the air district's expert input can help the lead agency properly determine whether another commenter's request for additional analysis or studies is reasonable or feasible. Finally, the air district can provide input on what mitigation measures would be feasible and effective.

Therefore, we suggest that this Court provide guidance to lead agencies reminding them of the importance of consulting with the relevant air districts regarding these issues. Otherwise, their feasibility decisions may be vulnerable to air district evidence that establishes that there is no substantial evidence to support the lead agency decision not to provide specific analysis. (*See Berkeley Keep Jets Over the Bay, supra,* 91 Cal.App.4th 1344, 1369-1371.)

---

guidelines would necessarily be continually modified to reflect new developments. Therefore we believe that, had the trial court not already ordered the lead agency to obtain the air district's views, the failure to give notice would have been prejudicial, as in *Fall River, supra,* 70 Cal.App.4th 482, 492.

CONCLUSION

The SCAQMD respectfully requests this Court *not* to establish a hard-and-fast rule concerning whether CEQA requires a lead agency to correlate identified air quality impacts of a project with resulting health outcomes. Moreover, the question of whether an EIR is "sufficient as an informational document" is a mixed question of fact and law containing two levels of inquiry. Whether a particular proposed analysis is feasible is predominantly a question of fact to be judged by the substantial evidence standard of review. Where the requested analysis is feasible, but the lead agency relies on legal or policy reasons not to provide it, the question of whether the EIR is nevertheless sufficient as an informational document is predominantly a question of law to be judged by the independent judgment standard of review.

Respectfully submitted,

PROOF OF SERVICE

I am employed in the County of Los Angeles, California. I am over the age of 18 years and not a party to the within action. My business address is 21865 Copley Drive, Diamond Bar, California 91765.

On April 3, 2015 I served true copies of the following document(s) described as **APPLICATION OF THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT FOR LEAVE TO FILE BRIEF OF *AMICUS CURIAE* IN SUPPORT OF NEITHER PARTY AND *[PROPOSED]* BRIEF OF *AMICUS CURIAE*** by placing a true copy of the foregoing document(s) in a sealed envelope addressed as set forth on the attached service list as follows:

BY MAIL: I enclosed the document(s) in a sealed envelope or package addressed to the persons at the addresses listed in the Service List and placed the envelope for collection and mailing following our ordinary business practices. I am readily familiar with this District's practice for collection and processing of correspondence for mailing. Under that practice, the correspondence would be deposited with the United States Postal Service, with postage thereon fully prepaid at Diamond Bar, California, in the ordinary course of business. I am aware that on motion of the party served, service is presumed invalid if postal cancellation date or postage meter date is more than one day after date of deposit for mailing in affidavit.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed on April 3, 2015 at Diamond Bar, California.

Patricia Anderson

1.0 Executive Summary

The proposed project Wildomar Crossroads, a proposed mixed-use project, is located at 24850-23980 Catt Road, Wildomar, California 92595. It lies within the southeast portion of the City of Wildomar, at the northwest intersection of Clinton Keith Road and Wildomar Trail.

Reserve Assembly Analysis: The property lies outside of any designated conservation areas of the *Western Riverside Multi-Species Habitat Conservation Plan* (MSHCP). Hence, the property is not with a Criteria Cell, and so it does not require evaluation for conservation under the Plan. This is discussed in *Section 3.0 – Reserve Assembly Analysis* of this report.

Section 6.1.2 Riparian/Riverine Vernal Pool: Four (4) separate subareas on-site were evaluated for Riparian/Riverine resources, and these potential R/R/VP areas have been mapped on-site. The total area of these potential features combined was 0.072 acre (3,136 sq.ft). Our investigation and subsequent evaluation led TERACOR to conclude there are no Riparian/Riverine or Vernal Pools or similar structures on-site. This conclusion was based on several factors including the beheading and truncation of a blue-line ephemeral drainage, extensive dumping and stockpiling on-site, intensive animal husbandry, prior orchard development on the site and construction of area roadways and commercial centers which left the site isolated and lowered relative to adjacent properties. Because Riparian/Riverine/VP resources appear to be absent, we concluded the Project would not affect MSHCP R/R/VP resources.

Section 6.1.3 Narrow Endemic/Criteria Area Plant Species: The proposed Project site does not lie within a Narrow Endemic Plant Survey Area or Criteria Area Plant Species survey area; as such, no surveys were required. While conducting vegetation and burrowing owl surveys, vegetation detected on-site was identified, recorded, and included in this report as *Appendix B – Floral Compendium*. No narrow endemic or criteria area plants were incidentally detected during the initial Habitat Assessment on 16 March 2022 through the last site visit on 15 June 2022.

Section 6.1.4 Urban Wildlands Interface: The proposed Project site is surrounded on four (4) sides by urban development. Tract No. 30155 to the north contains a small natural area (perhaps a water quality basin), but it is separated by a block wall and lies above the Project site hydrologically. The subject site is not adjacent to other MSHCP-designated Conservation or Quasi-Public lands, and. Nonetheless, the Project was evaluated as to its potential to generate stormwater or nuisance drainage, toxics, lighting, noise and invasive plants that might potentially downstream washes or creeks (Murrieta Creek watershed) which could include Public or Quasi-public sites in Murrieta Creek, or the small conservation area to the immediate north.

A Water Quality Management Plan (WQMP) is required for this Project and must be reviewed and approved by the City of Wildomar which will implement specified Best Management Practices ("BMP's") and control and manage runoff. This would avoid potential impacts to downstream conserved lands.

Vegetation Mapping (MSHCP Section 6.3.1): Vegetation mapping has been provided in this Consistency Analysis in conformance with MSHCP Section 6.3.1 parameters. MSHCP Permittees (i.e., the City

of Wildomar) generally require vegetation mapping to be conducted. TERACOR worked in conjunction with 4M Engineering and Development to develop the mapping in a GIS/CADD format for presentation purposes. TERACOR undertook vegetation mapping of the Project site in a manner consistent with prevailing conventions and standard CDFW recommendations for *CEQA* compliance. We utilized Sawyer/Keeler-Wolf's *A Manual of California Vegetation*, 2nd edition, to classify vegetation communities (i.e., alliances, associations), supplemented with the California Department of Fish and Wildlife (CDFW) CaCode system (09 September 2020 version) to describe and refine our classifications of all on-site vegetative structures.

Additional Survey Needs and Procedures (MSHCP Section 6.3.2): Arroyos, washes and creeks are known to occur in the general vicinity not far from the Project site. Vernal pools, riparian vegetation, cienegas, tenajas, billabongs and similar areas appear absent on-site, although there is a remnant blue-line feature which was beheaded by implementation of Tract No. 30155 and truncated by rural activities prior to implementation of the Clean Water Act or California Fish and Game Code. Truncation was advanced even further with the full-width construction of both Wildomar Trail and Clinton Keith Road, as well as commercial development across from these two roadways. Small patches of mulefat are present in very small cells. These mulefat were mapped for close evaluation and consideration. Mulefat is generally considered stream-related, however, it can also occur on disturbed sites in upland conditions as it does on this site. No functional riparian scrub, woodland or forest alliances which are considered suitable as support habitat for MSHCP-protected riparian-dwelling organisms were mapped on the Project site. Furthermore, the site is not within Narrow Endemic/Criteria Area Plant Species Survey Areas. Lastly, the *RCA/MSHCP Information Map* indicated no predetermined need for focused surveys for any mammals, amphibians, invertebrates or plants. Lastly, there is no potential for those species for which adequate conservation has not yet been arranged to be present (*Table 3 - Covered Species Not Adequately Conserved* [MSHCP Table 9-3]).

Mammal Surveys: The proposed Project site does not require surveys for any mammal species. Ground squirrel is present in high numbers due to lowered vegetative density in disturbed areas. There were normal numbers of smaller fossorial mammal burrows on the site. There are no mammal survey requirements for the property, and none of the MSHCP-listed species have been detected. Therefore, there are no mammal conservation issues to discuss or analyze further in this report, as further supported by the analysis contained in *Table 3 - Covered Species Not Adequately Conserved* (MSHCP Table 9-3).

Riparian Birds: There are no functional riparian vegetative communities on the Project site that would justify focused surveys for least Bell's vireo, southwestern willow flycatcher, or western yellow-billed cuckoo. Mulefat shrubs (0.05 acre) and three elderberry shrubs (0.01 acre) were too small in extent (and upland in nature) to justify riparian-obligate focused surveys. These two plant alliances are very limited in distribution on-site and generally are not suitable for least Bell's vireo, southwestern willow flycatcher, or western yellow-billed cuckoo or other riparian-obligate species. Focused riparian bird surveys were not warranted and were not conducted.

Amphibians/Reptiles: The project site does not support suitable habitat for the Section 6.1.2 listed amphibians which included arroyo toad, red-legged frog, and mountain yellow-legged frog. We did not observe natural pools, stock ponds, cienegas or tenajas which could provide breeding habitat for

western pond turtle. No amphibian larvae were observed at any time on-site as ponding or sustained water flow on the property was never observed.

Burrowing Owl: The MSHCP required a habitat assessment and the habitat assessment indicated that focused surveys should be conducted for burrowing owl in areas considered potentially-suitable for occupation, although areas of dense growth were excluded. A burrowing owl survey was performed in Spring 2022 in compliance with MSHCP/RCA/EPD guidelines; surveys were negative. Survey methodology and results are presented in a companion report.

Recommendations are included at the end of this report to address potential impacts of the Project (e.g., water quality runoff, follow up surveys prior to development, etc.) although TERACOR did not identify any resources identified as warranting specific mitigation required by the MSHCP.

2.0 Introduction

2.1 Project Area

The subject property is located within the Western Riverside County Multiple Species Habitat Conservation Plan ("MSHCP" or "Plan") area). *Exhibit 1 – Regional Location*, attached, depicts the Project site's location relative to other geographic features in the area. The following is quoted from Section 1.0 of the MSHCP:

"*The MSHCP is a comprehensive, multi-jurisdictional Habitat Conservation Plan ("HCP") focusing on Conservation of species and their associated Habitats in Western Riverside County. This Plan is one of several large, multi-jurisdictional habitat-planning efforts in Southern California with the overall goal of maintaining biological and ecological diversity within a rapidly urbanizing region… The MSHCP will allow Riverside County …and its Cities to better control local land-use decisions and maintain a strong economic climate in the region while addressing the requirements of the state and federal Endangered Species Acts.*"

2.2 Project Description

The proposed project would consist of demolishing the existing structures and other site improvements. A new mixed-use development, including a multi-family complex and commercial shopping center would be constructed. The Wildomar Crossroads site plan is incorporated in the application package.

The residential portion of the project is proposed for 4.48 acres of the site and includes 150 units ranging from 580 SF to 1,115 SF and will offer studio (8%), one-bedroom (54%), and two-bedroom (38%) plans with an anticipated 9 plan types in total. This development is proposed on the western side of the site with parking along the western and northern edges. The approximate density is 33.5 du/ac.

The commercial portion of the project is proposed for the eastern 4.53 acres of the site and includes a market, shops, and restaurants. The 23,104 square foot Sprouts Farmers Market and 5,087 square foot

attached building for shops and quick serve restaurants are located on the northern end of the commercial site. The restaurants are located at the southern end of the commercial site. Pad 1 is located in the southwest corner and is planned as a 2,750 square foot drive-thru. Pad 2 is located on the southeast corner and includes 3,348 square feet of restaurant space as well as a 1,133 square feet coffee drive-thru. The restaurants, consist of a maximum of 12,318 square feet of indoor space and approximately 4,500 square feet of outdoor eating areas and multi-function gathering space which will be open for breakfast, lunch and dinner daily. The hours of operation are yet to be determined. Up to 50 employees would be expected onsite at any one time.

2.3 Covered Roads

There are no new MSHCP designated "covered roads" proposed for this Project site.

2.4 Covered Public Access Activities

The Project site does not warrant consideration of Covered Public Access Activities. It is currently privately-owned and the Project is intended for commercial and residential uses.

2.5 General Setting

The subject property is located in the City of Wildomar within a rapidly-developing suburban area. Collector and arterial roadways border the site, and a residential tract (Tract No. 30155) was constructed over ten years ago to the north and west of the site. At this point in the City's development, we would consider the site and urban infill area with only remnants of the natural environment still found on the site.

Property Location: The proposed project Wildomar Crossroads, a proposed mixed-use project, is located at 24850-23980 Catt Road, Wildomar, California 92595. It lies within the southeast portion of the City of Wildomar, at the northwest intersection of Clinton Keith Road and Wildomar Trail. Regional access to the project site is provided by Interstate 15 (I-15) located approximately 0.15 miles southwest and Interstate 215 (I-215) located 3.8 miles east.

The property is geographically located within Section 36 of Township 6 South, Range 4 West of the *Murrieta, California 7.5 Minute Series U.S.G.S. Topographic Quadrangle*, as depicted in the attached *Exhibit 2 – USGS Topo. Exhibit 3 – Site Photos* illustrates the current condition of the site.

The site is identified by Assessor's Parcel Numbers 376-410-015, 376-410-016, 376-410-017, and 376-410-021.

Topography: Elevations on-site are variable, based on dirt storage and stockpiling that occurred in the past. Elevations range from approximately 1932 feet above mean sea level (msl) along the southeasterly corner of the site down, and 1339 feet above msl at the existing residence pad in the southwesterly corner. Elevations are highest at the top of the large stockpile (1336 feet msl). The north property line is variable but has a block wall constructed on it. Ground elevations along the wall are run approximately from 1335 to 1354 feet msl.

The U.S.G.S. map depicts a much simpler broad alluvial structure ranging from 1440 to 1460 feet msl across the property down to Catt Road along the south property line. All the fill on the site has buried much of the native soil, and resulted in a very different drainage pattern than originally existed. The blueline drainage, which once stretched northward uphill over half a mile has been beheaded and truncated so that it now is a very small relict on-site with fill placed at the upstream and downstream end of it.

Soils: The property was historically comprised of three (3) soil types, according to the NRCS *Web Soil Survey: Western Riverside Area, California*. It should be noted that areas on which fill has been placed are now over-covered with unconsolidated fill. Other areas on-site have been modified to support historic uses. In these disturbed and over-covered areas native soils are not present at the surface. The soils historically present on the property were as follows:

Table 1 - Soil Types, below, describes the soils on-site (as they were naturally arrayed), as well as the basic known characteristics of those soils.

Table 1 - Soil Types

Code	Soil Type/Description	Location
HcC	Hanford Series The Hanford series consists of well-drained and some-what excessively drained soils on alluvial fans. Slopes are 0 to 15 percent. These soils developed in alluvium made up of granitic materials. Elevations• range from·700 to 2,500 feet. The average annual rainfall ranges from 9 to 14 inches, the average annual temperature from 59° to 64° F., and the average frost-free season from 210 to 280 days. Vegetation is chiefly annual grasses, forbs, and chamise. Typically, the upper 18 inches of the profile is grayish-brown coarse sandy loam. Underlying this is brown, strat-ified coarse sandy loam and loamy sand. Hanford soils are near the Tujunga, Greenfield, and Ramona soils. The Hanford soils are used for dry land pasture and grain and for irrigated alfalfa, potatoes, citrus, grapes, and grain. They are also used for homesites. Hanford coarse sandy loam, 2 to 8 percent slopes (HcC). - This gently to moderately sloping soil occurs on alluvial fans. Following is a typical profile on a northeast-facing slope of 5 percent (275 feet east and 650 feet south of the north quarter-corner of section 30, T. 3 S., R. 3 W.): Ap-0 to 8 inches, grayish-brown (10YR 5/2) coarse sandy loam, very dark grayish brown (10YR 3/2) when moist; massive; slightly hard, very friable, non-sticky and nonplastic; abundant very fine roots; few, very fine, irregular pores; slightly acid (pH 6.2); gradual, smooth boundary. Horizon is 3 to 12 inches thick. Cl-8 to 18 inches, very similar to the Ap horizon, except slightly darker in color. Horizon is 6 to 23 inches thick. C2-18 to 40 inches, brown (10YR 5/3) coarse sandy loam, dark brown (10YR 8/3) when moist; massive; slightly hard, very friable, nonsticky and non-plastic; plentiful very fine roots; common, very fine, irregular pores and few, very fine, tubular pores; slightly acid (pH 6.5); clear, smooth boundary. Horizon is 4 to 28 inches thick. C3-40 to 60 inches, brown (10YR 5/3) loamy sand, dark brown (10YR 3/3) when moist; single grain; loose when dry or moist, nonsticky and non-plastic; few very fine roots; slightly acid (pH 6.5). This Hanford soil is used for irrigated alfalfa, potatoes, and citrus, for dryland grain and	This soil type follows the orientation of the former blueline drainage on-site. The coarse sand likely reflects the depositional nature of the former streamcourse, which has been dramatically altered by other projects. The soil would be highly porous and not prone to extended detention or ponding. Course sandy loams are not as structurally cohesive or more dense or clayey soils, therefore, mammal burrows were found in this area but would generally be expected to be less stable due to loose soil structure.

Code	Soil Type/Description	Location
	pasture, and for homesites. This Hanford soil is used for irrigated alfalfa, potatoes, and citrus, for dryland grain and pasture, and for homesites. (Capability unit IIe-1 (19) irrigated, IVec-1 (20) dryland; Sandy range site)	
MnD2	Monserate Series The Monserate series consists of well-drained soils that developed in alluvium from predominantly granitic materials. Slopes range from 0 to 25 percent·. These soils are on terraces and on old alluvial fans. Elevations range from 700 to 2,500 feet. The average annual rainfall ranges from 9 to 14 inches, the average annual temperature from 61 ° to 64° F., and the average frost-free season from 220 to 280 days. Vegetation is chiefly annual grasses, forbs, and chamise. In a typical profile, the surface layer is brown and yellowish-red sandy loam about 10 inches thick. The sub-soil is reddish-brown sandy clay loam. At a depth of about 28 inches is a dark-brown layer that is cemented with iron and silica. The cementation decreases with depth, and the material contains seams that are slightly effervescent. The Monserate soils are near the Tujunga, Hanford, Greenfield, and Ramona soils. Monserate soils are used for dryland grain and pasture, for irrigated citrus and truck crops, and for nonfarm purposes. Monserate sandy loam, shallow, 5 to 15 percent slopes, eroded (MnD2) -The profile of this soil is similar to that described for the Monserate series, but it is 10 to 20 inches deep to the silica-cemented pan, has a reddish-brown surface layer, and a sandy clay subsoil. Included with this soil in mapping are small areas that have a gravelly sandy loam surface layer. Also included are small areas having slopes of less than 5 percent. The available water holding capacity of this soil is 2.0 to 3.0 inches. Runoff is rapid, and the hazard of erosion is high. Natural fertility is moderately low. This soil is used for dryland pasture and grain and for nonfarm purposes. (Capability unit Vle-8 (19) dryland; Shallow Loamy range site)	Found only in the northeast corner of the property, this soil may not persist on the site. Sandy loams are generally quite porous and easily excavated by ground-dwelling animals.
PID	Placentia Series The Placentia series consists of moderately well drained soils on alluvial fans and terraces. Slopes range from 0 to 25 percent. These soils developed in alluvium consisting mainly of granitic materials. Elevations range from 600 to 2,200 feet. The average annual rainfall ranges from 10 to 14 inches, the average annual temperature from 60° to 64° F., and the average frost-free season from 200 to 270 days. The vegetation is chiefly annual grasses, forbs, and chamise. In a typical profile, the surface layer is brown and pale-brown fine sandy loam and loam about 18 inches thick. The upper subsoil is brown heavy clay loam about 21 inches thick. The lower subsoil is brown sandy clay loam about 18 inches thick. The substratum is stratified sandy, gravelly, or cobbly alluvium of granitic origin. The Placentia soils are near the · Hanford, Greenfield, and Ramona soils. Placentia soils are used for dryland pasture and grain, for irrigated permanent pasture, and for nonfarm purposes. Placentia fine sandy loam, 5 to 15 percent slopes (PID) - A few small areas having slopes of 0 to 5 percent or of 15 to 25 percent are included in areas mapped as this soil. The available water holding capacity of this soil is 3.0 to 4.5 inches. Runoff is medium, and the hazard of erosion is moderate. Natural fertility is low.	This type of soil would be suitable for burrowing animals. It would be unlikely to pond or retard the percolation of water, based on the soils description provided by the USDA this soil is "moderately well-drained. Prior to numerous, historic disturbances on the site, this soil was present over most of site, including over two-thirds (approximately 75%-80%) of the property.

Code	Soil Type/Description	Location
	This soil is used for dryland grain and pasture and for nonfarm purposes. (Capability unit IVe-3 (19) irrigated; Claypan range site)	

Exhibit 4 – Soils, attached, depicts the soils types described above and their historical locations across the property. Though the date of the USDA aerial photo is not known to us; it certainly was at least 50 years ago and probably dated back to the 1940's. The soil suitability analysis would only be relevant for those areas which remain reasonably undisturbed, as stockpiling dirt and associated grading generally eliminates or overcovers native soil profiles. The remnant drainage course (designated Feature 1 herein) comprises only 0.058 acre and may be the only area where native soils remain at the surface.

Site Disturbance and Development History

Exhibit 5 – Historic Aerial 1938, depicts conditions on the property prior to development of the homesite and associated rural agricultural activities. The blueline drainage is fully intact, and drains into a large pond that would now be filled due to decades of heavy use of this area. Natural scrub appears to remain intact on the east side of the drainage, however, the west side of the drainage (most of the site) appears to have been dry farmed in 1938 (84 years ago).

There is one feature we were not able to conclusively identify in the upper northwest quadrant of the property, near the north property line based on just this photo. It appears to be either a pond of some sort or a tree. Trees probably occurred naturally on the lower flanks of the Sedco Hills. These alluvial fan structures (which is the geomorphic structure on which the Project site is located) often support local aquifers which can be depleted easily via extraction or drought. Additional historic analysis was necessary.

Exhibit 6 – Historic Aerial 1978 indicates that the blueline drainage has been substantially disturbed. Most, and perhaps all, of the scrub vegetation has been removed on the property (except the darkened bottom of the upper drainage). Only the upper one-third of the drainage can be recognized as still exhibiting a bed and bank, but the lower two-thirds has been filled or somehow physically obscured. It is likely the flowline of the feature remained active in 1978 (44 years ago), however there are intensive uses on the site in 1978 which look like poultry farming and other activities.

There are two features in the northwest quadrant of the property near the property line. One appears rectangular in shape and could be a trough or a structure, and the one just north of the mapped property line could be a small tree or a pond. Once again, additional historic analysis was necessary.

Exhibit 7 – Historic Aerial 1996 depicts intensification of the agricultural use of the property. Groves have been planted in the upper northeast corner of the property east of the drainage course, and another small grove is present at the southeast corner of the property west of the drainage course alignment. Although the drainage appears to be filled, stormflows could still have occurred and may have spread out into either grove from time to time in larger storm events. Remnant olive trees and one pecan tree remain on the property, suggesting these may have been the fruits which were being harvested in the late 20th Century. Clinton Keith Road has been constructed to the south of the site.

The feature at the north property line, previously discussed, now appears to be a small tree adjacent to a structure of some sort. That determination is likely, but not conclusive however.

Exhibit 8 – Historic Aerial 2002 is not clear enough to make out many details, but it appears that agricultural activities on-site were in decline. Some structures have been removed, and the non-native tree and shrub cover appears to be reduced as well suggesting that the irrigation of the site has ceased. The blueline drainage course alignment can still be detected in the north portion of the site, but it likely has been altered further based on the imagery of the photo.

The feature in the northwest quadrant of the site, near the north property line is larger, and now appears to be a tree.

Exhibit 9 – Historic Aerial 2006 shows clearly that the drainage course has largely re-established itself within its historic alignment. Use of the easterly half of the site has dwindled, but the west one-third of the site is still actively being used for animal husbandry based on the presence of barns, sheds, and multiple animal-holding pens. It is also possible that despite the former uses in the eastern half of the site, that either native or natural vegetation (i.e., scrub or non-native grasses and shrubs) are present in 2006. Tract No. 30155 had not yet been developed in 2006. The current Wildomar Trail alignment remained a dirt road in 2006.

The clarity of this aerial is helpful with regard to the "feature" in the northwest quadrant of the site, near the north property line. Clearly it is a tree next to a small rectangular structure.

Exhibit 10 – Historic Aerial 2009 clearly illustrates that development of the adjoining residential tract is underway. The photo also shows that the blueline drainage course has been beheaded and filled in a manner similar to its current condition. This photo demonstrates that the former stream is no longer functional in terms of 1) conveying stormflows from the north, 2) conveying stormflows from the site to the south in a concentrated manner (i.e., sheet-flow is the prevalent drainage pattern across almost the entire site), 3) Stormflow volumes have been essentially eliminated except for that derived from the northeast quadrant of the site (i.e., the watershed for the feature probably does not exceed one acre), 4) the former drainage no longer transports sediment to replenish downstream river and beach resources, 5) the native cover is no longer substantially present to support wildlife resources tied to intermittent stream functions, as well as other diminished or defunct functions explored in the 6.1.2 analysis contained later in this report.

Stockpiling appears to have been underway both in the southeast corner of the property, as well as in the north central area where the large stockpile is located. The basic outline of the stockpile looks similar to the current configuration. We cannot, however, discern if the stockpile had reached its current height by 2009. The Wildomar Trail alignment is partially constructed.

Exhibit 11 – Aerial Photo 2021 portrays the property as it currently exists; no changes have occurred over the last year. Wildomar Trail has been constructed to its full width, including a sidewalk along the east property line of the subject property. Some grading would have had to occur on the site in order to construct the sidewalk and full right-of-way (ROW) area because a 2:1 slope was constructed onto the subject site with fill

material in order to support these full width right-of-way improvements. Close examination of both Exhibit 10 and Exhibit 11 demonstrate that the terminus of the former blueline drainage was shortened due to the placement of additional fill material, a necessary outcome to achieve the full width ROW. This action further diminished the physical expression of the drainage, but functional values of the wash had already been eliminated or severely diminished prior to this fairly-recent action.

3.0 Reserve Assembly Analysis

3.1 Public Quasi-Public Lands

The property close to but outside of the southerly-most extent of Subunit 4 – Sedco Hills of the *Western Riverside Multi-Species Habitat Conservation Plan* (MSHCP) and requires evaluation for conservation under the Plan. *Exhibit 12 – RCA MSHCP Information Map Pubic Quasi-Public Conserved Lands* shows the subject property is approximately one-half mile west of Cell No. 5559 of the Sedco Hills Subunit. As such, there are no outright conservation requirements for the Project that would be required for Reserve Assembly, as the subject site is not within a Criteria Cell.

Nonetheless, certain MSHCP survey overlay zones are in place across the Plan Area that can require additional analysis and land avoidance or mitigation if certain resources as described in the MSHCP are present. These different parameters are discussed below for consideration by the City of Wildomar to consider.

3.1.1 Public Quasi-Public Lands in Reserve Assembly Analysis

Exhibit 12 – RCA MSHCP Information Map Pubic Quasi-Public Conserved Lands shows that the Project site is not in a Criteria Cell and is outside of Subunit 4 – Sedco Hills. As such, there are no provisions in which the Project could be required to conserve land that would contribute to Reserve Assembly.

3.1.2 Project Impacts to Public Quasi-Public Lands

There are no Public or Quasi-Public lands adjacent to or near the subject property as shown in Exhibit 12. However, the Project site is upstream of and within the Murrieta Creek watershed, and therefore the Project cannot degrade water quality or allow contaminants or invasive materials to be discharged from the site.

It should also be noted that there is a walled-in, small, linear basin area north of and directly adjacent to the Project site. The origin of this conserved area appears to be associated with the implementation of Tract 30155. The Homeowner Association (HOA) maintains the area (*perscom*, M. Bassi, 29 June 2022). There is a sign posted at the east gate of the facility which states "*This Area Is Restricted – Sensitive Habitat Area – Entry Prohibited – Your Assistance Is Needed To Protect The Biological Resources Found In This Area. Hartford Park Maintenance Association*". The site lies north of the Project site above the Project site's watershed, and is protected by a six (6) foot block wall. It is not shown in *Exhibit 12 - RCA MSHCP Information Map – Public Quasi Public Conserved Lands*. Despite the HOA signage, we are not aware of any specific resources being protected at this location, and the location does not appear in the *CNDDB* where sensitive organism detections

are reported and records of those detections made available to subscribers.

No impacts to Public Quasi-Public Lands would be expected to occur.

4.0 Vegetation Mapping

Literature Review: Baseline conditions for the property were initially evaluated through review of existing area biological information and pertinent scientific literature. Primary literature reviewed in determining vegetation community names, associations, and descriptions for the project area were derived from: *The Jepson Manual, Higher Plants of California*, Hickman,1993; California Natural Community List (2019); *A Manual of California Vegetation*, Sawyer and Keeler-Wolf, 2nd edition, 2009, *The Vascular Plants of Riverside County* (Boyd & Sanders, et al, 2004) and the California Native Plant Society's ("CNPS") *Inventory of Rare and Endangered Plants* were also utilized. A complete list of references has been provided as Appendix C.

Geographically, the property is located within the California Floristic Province Southwestern California region, specifically in the South Coast subregion. The South Coast subregion extends along the Pacific Coast from Point Conception to Mexico.

Despite disturbances on-site, there are natural vegetation alliances present on the property. Designations for these habitat elements and their respective California Natural Community Codes ("CaCodes") have been described in the following text. Vegetation is depicted in the attached *Exhibit 13 - Vegetation Alliances*, which includes acreage totals for each vegetation alliance identified.

Riparian Vegetation

There are no functional riparian communities on the site.

There are, nonetheless, several scattered elderberry shrubs (considered by some to be trees) but these elderberries are not within any stream channel or mapped floodplain. They appear to benefit from the shade of nearby pine trees, though that is a speculative conclusion. Elderberries may be artifacts of a time when portions of the site were irrigated for an orchard. Furthermore, according to the U.S. Army Corps of Engineers' *List of Plants Which Occur in Wetlands*, mulefat can be found in wet areas 50% of the time, and in upland areas 50% of the time (i.e., facultative species). In this case the elderberries do not comprise a riparian area on the site.

Mulefat thicket has also been mapped on the project site, but these small cells are located incoherently across the property. Several pods are found on or at the base of a recently-constructed 2:1 slope leading down from the Wildomar Trail ROW. Mulefat is a facultative species, meaning it can occur in uplands, as described below. Mulefat often does not occur in wetlands or riparian areas, and can be related to temporary irrigation, inhibited drainage via disturbance, and other anthropomorphic causes.

One elderberry bush is located in the eastern half of the property, where conditions are highly disturbed and very dry. Both the elderberry stand alliance and the mulefat thicket alliance are discussed in more detail below, as both cells occur in upland areas.

Upland Vegetation

Upland Mustards/Fiddleneck Fields (MUS/FID) (CaCode 42.011.05/42/011.03): This is the most common alliance mapped on-site. The total acreage is 7.94 acres. Mostly comprised of non-native grasses and weeds, there were also native herbaceous plants such as popcorn flower (*Amskinkia* sp.), vinegarweed (*Trichostema lanceolatum*), and stinknet (*Oncosiphon piluliferum*). This alliance comprised almost eight (8) acres on the property, and was considered generally suitable for BUOW.

California Buckwheat Scrub (CABU) (CaCode 32.040.02): CABU is scattered mostly in and around the former blueline drainage and in small cells along the east property line. This upland plant alliance can sometimes be present in BUOW habitat in low densities, but the vegetation cannot be dense because it would not allow BUOW to detect lurking predators. This alliance also contained a good deal of California-aster (*Corethrogyne filaginifolia*). CABU comprises 0.72 acre on-site.

Narrowleaf Goldenbush Scrub (GB) (CaCode 38.125.01): TERACOR mapped this alliance as a separate alliance, although it is represented in only 0.002 acre on-site. Formerly, before current mapping methods suggested by RCA Guidelines and the California Department of Fish and Wildlife, we would have grouped goldenbush with buckwheat and brittlebush into one mixed sage scrub community type. It can grow in dense patches and is not considered the type of habitat that BUOW can successfully utilize.

Coyote Brush Scrub (CBS) (CaCode 32.060.00): Coyote brush scrub is found in a number of small cells concentrated in areas where drainage is somewhat impeded and soils can retain moisture. As an upland plant that favors disturbed conditions, it generally will not grow in creeks and depressions and similar areas that are seasonally inundated, as it requires moist but not wet soil, therefore it is considered an upland plant community. The total area of coyote brush scrub on-site is 0.07 acre. One cell is found as the overstory vegetation above Feature 4, described in Section 5.0 Protection of Species – Riparian/Riverine/Vernal Pool Analysis

Mulefat Thickets (MT) (CaCode 63.510.00): Mulefat thicket comprises 0.05 acre of area on the property. It is mostly located in two locations on-site; 1) at the base of a human-constructed 2:1 along the Wildomar Trail right-of-way, and also at the base of another slope found on the west property line. Impeded drainage occurs at the block wall constructed behind homes along this westerly edge of the property, but there was no evidence of southward concentrated flow. We assumed therefore that unconsolidated fill substrates absorb the rain that falls on the slope, keeping the slope moist enough to support mulefat which is a facultative species known to occur in uplands approximately 50% of the time, and in wet areas 50% of the time.

Brittlebush Scrub (EN) (CaCode 33.030.01): Brittlebush scrub locally consists of *Encelia farinosa* and comprises only 0.013 acre on the Project site. It is common in the Wildomar area, and is always considered an upland plant community.

Blue Elderberry Stand (E) (CaCode 63.410.01): Usually elderberries grow on floodplains, or saddles between hilltops, or in ravines where soil moisture is slightly elevated but not saturated, such as on the margin of riparian woodlands and riparian scrub communities. It exists in a few small cells on-site, comprising just 0.012 acre.

Ornamental (O) (No corresponding CaCode): This area consisted of 0.58 acre. Species include pine trees (*Pinus* sp.), European olive (*Olea europaea*), domesticated pecan (*Carya illinoinensis*), and Peruvian pepper trees. These ornamental trees are found most densely around the residential structure, but are also scattered around the site.

Disturbed (D) (No corresponding CaCode): Though almost all the site exhibits some degree of disturbance, areas that cannot be considered habitat of any type include the residential structures, driveways, and dilapidated farm structures. This area comprised 0.73 acre.

Table 2 – Vegetation Alliances

Vegetation Alliances	CA – Code	Acres
GB - Narrowleaf Goldenbush Scrub	38.125.01	0.002
CABU - California Buckwheat Scrub	32.040.02	0.72
MUS / FID - Upland Mustards/Fiddleneck Field	42.011.05 / 42.110.03	7.94
CBS - Coyote Brush Scrub	32.060.00	0.07
MT - Mulefat Thickets	63.510.00	0.05
EN - Brittlebush Scrub	33.030.01	0.013
E - Blue Elderberry Stand	63.410.01	0.012
D - Disturbed	No CA-Code	0.73
O - Ornamental/Non-native Trees	No CA-Code	0.58
Total		10.12 Acres

5.0 Protection of Species - Riparian/Riverine/Vernal Pool Analysis (MSHCP Section 6.1.2)

Section 6.1.2 of the MSHCP describes the process through which protection of riparian/riverine areas and vernal pools (R/R/VP areas) would occur within the MSHCP Plan Area. Protection of riparian/riverine areas and vernal pools is important to conservation of the amphibian, bird, fish, invertebrate, and plant species which occur primarily or exclusively within these habitats. These species include: amphibians (for example arroyo toad); birds (such as least Bell's vireo), fish (e.g., Santa Ana sucker); invertebrates/crustaceans (e.g., Riverside fairy shrimp) and plants (including species such as California Orcutt grass, Orcutt's brodiaea, and spreading navarretia). The stated purpose contained in Section 6.1.2 states:

"*The purpose …is to ensure that the biological functions and values of these areas… are maintained*

such that Habitat values for species inside the MSHCP Conservation Area are maintained."

TERACOR first evaluated the site in the field on 16 March 2022. The last of several site evaluations occurred on 15 June 2022. A burrowing owl habitat and focused survey was conducted in this timeframe. Vegetation mapping for thorough consideration of alliances and disturbance history. All native and naturalized vegetation was recorded and organized into a compendium. Walkovers for identification of R/R/VP resources were conducted on each site visit, and potential R/R/VP resources were staked and flagged in the field and subsequently professionally surveyed for mapping purposes. The completion of all site investigations allowed consideration of the likelihood of occurrence of the riparian/riverine/vernal pool species which occur inside the MSHCP Conservation area. These species evaluations are presented below in *Table 2 - Riparian/Riverine and Vernal Pool Species*.

Table 3 - Riparian/Riverine and Vernal Pool Species (MSHCP Section 6.1.2)

Section 6.1.2 Species	Organismal Habitat Needs and Life History Parameters/Determination for the Project Site
Brand's star phacelia (*Phacelia stellaris*)	Not Present. Known only to occur along the Santa Ana River in Riverside County, this annual herb blooms from March through June. Elsewhere in CA it occurs in open areas within coastal dunes and coastal sage scrub below 400 meters. Habitat on-site is not suitable, and the subject property is outside of this species' known geographic range. Further, this species was not expected, due to habitat conditions, and it did not occur on-site.
California Orcutt grass (*Orcuttia californica*)	Not Present. This species is broadly distributed geographically, but confined to vernal pool complexes between fifteen (15) and 660 meters. It blooms from April through August. No vernal pools are present on-site. Habitat on the subject property, therefore, is unsuitable for this species, surveys are not required for the species in this area, and it was not detected on-site.
California black walnut (*Juglans californica*) Formerly *Juglans californica* var. *californica*	Not Present. This MSHCP-covered species occurs in western Riverside County. This deciduous tree occurs on slopes and in canyons between 50 and 900 meters along the south coast, south Transverse Ranges, and north Peninsular Ranges. It blooms from March through August. Walnut forest is a much fragmented, declining community. Individual trees themselves are not particularly relevant. Woodland stands would be considered sensitive and might warrant conservation or mitigation, not single trees. Walnut does not occur on the Project site.
Coulter's matilija poppy (*Romneya coulteri*)	Not Present. This MSHCP-covered species occurs in Riverside County. The matillja poppy is distinctive in that it has the largest flowers of any plant native to California. It typically blooms from March to July, and occasionally as late as August. It is often found in burned chaparral and coastal scrub in the Peninsular Ranges, Western Transverse Ranges, and the south coast area from 20 to 1200 meters in elevation. Surveys of the site revealed this species is not present.

Section 6.1.2 Species	Organismal Habitat Needs and Life History Parameters/Determination for the Project Site
Engelmann oak (*Quercus engelmannii*)	Not Present. This MSHCP-covered species occurs in western Riverside County; however, the subject property is not suitable for this tree species. This southern California oak occurs in chaparral, cismontane woodland, riparian woodland and valley and foothill grassland. Its elevation range is 50 to 1300 meters. This perennial deciduous tree flowers from March through June. It does not occur on-site.
Fish's milkwort (*Polygala cornuta* var. *fishiae*	Not Present. This perennial deciduous shrub blooms from May through August and occurs in chaparral, oak woodland and riparian woodland between 100 and 1000 meters in elevation. Vegetation surveys and mapping revealed this variety is not present on the subject property.
graceful tarplant (*Holocarpha virgata* ssp. *elongata*)	Not Present. This MSHCP-covered annual plant blooms from May through November and occurs in chaparral, cismontane woodland, coastal scrub, and valley and foothill grassland between 60 and 1100 meters in elevation. It was not detected on-site.
lemon lily (*Lilium parryi*)	Not Present. This MSHCP-covered bulbiferous plant blooms from July through August and occurs in mesic areas within lower and upper montane coniferous forest, meadows and seeps, and riparian forest between 1220 and 2745 meters in elevation. The subject property is located outside of this species' known geographic and elevational range, and suitable habitat is not present on-site
Mojave tarplant (*Deinandra mohavensis*)	Not Present. This MSHCP-covered species is primarily a species found in the San Jacinto Mtns., however, it is also known to occur along washes at the eastern fringes of western Riverside Co. This annual herb blooms from May through January and occurs in mesic areas in chaparral, coastal scrub and riparian scrub between 640 and 1,600 meters in elevation. The subject property is outside this species' known geographic distribution, and this tarplant does not occur on-site.
mud nama (*Nama stenocarpa*) Formerly known as *Nama stenocarpum*	Not Present. This MSHCP-covered species is very scarce in Riverside County, known only from the north shore of Mystic Lake (Boyd et al). This herb blooms from January through July and occurs on marshes, swamps, lake margins and streambanks between 5 and 500 meters. Habitat on-site is not suitable and it has a restricted distribution that does not include the Lakeview Mountains. It does not occur on-site.
ocellated Humboldt lily (*Lilium humboldtii* ssp. *ocellatum*)	Not Present. This perennial bulbiferous herb blooms from March through August and occurs often in shaded stream settings or in mesic openings within chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest and riparian woodland between 30 and 1800 meters in elevation. Suitable habitat is not present on-site for this tall, conspicuous and easily-detected lily.

Section 6.1.2 Species	Organismal Habitat Needs and Life History Parameters/Determination for the Project Site
Orcutt's brodiaea (*Brodiaea orcuttii*)	Not Present. Boyd et all note that this MSHCP-covered species occurs in the southern Santa Ana Mtns. and on the Santa Rosa Plateau. This perennial bulbiferous herb blooms from May through July and occurs on mesic and clay soils in closed-cone coniferous forest, chaparral, cismontane woodland, meadows and seeps, valley and foothill grassland and vernal pools between 30 and 1,692 meters in elevation. Suitable habitat is not present on-site, and the subject property is not located within the known geographic distribution of this species. Orcutt's brodiaea is not present on-site.
Parish's meadowfoam (*Limnanthes alba* ssp. *parishii*) Formerly known as *Limnanthes gracilis* var. *parishii*	Not Present. This annual herb blooms from April through June and occurs in vernally mesic areas and along edges of ephemeral streams in lower montane coniferous forest, meadows and seeps, and vernal pools between 600 and 2000 meters in elevation. Suitable habitat is not present on-site, and the subject property is outside this subspecies' known geographic distribution. This subspecies is not present on-site.
prostrate vernal pool navarretia (*Navarretia prostrata*)	Not Present. This MSHCP-covered species occurs in western Riverside County. This annual herb blooms from April through July and occurs in mesic areas in coastal scrub, meadows and seeps, alkaline valley and foothill grassland, and vernal pools between three (3) and 1210 meters in elevation. Suitable habitat is not present on-site. This species is not found on the subject property.
San Diego button-celery (*Eryngium aristulatum* var. *parishii*)	Not Present. This MSHCP-covered this herb blooms from April through June and occurs in mesic areas in coastal scrub, valley and foothill grassland, vernal pools and marshes between 20 and 620 meters in elevation. Suitable habitat is not present on-site and it is our understanding it only occurs in vernal pools on the Santa Rosa Plateau.
San Jacinto Valley crownscale (*Atriplex coronata* var. *notatior*)	Not Present. This annual herb occurs in alkaline playas, mesic valley, foothill grasslands and vernal pools from 139 to 500 meters in elevation and blooms April through August. Threats include flood control, agriculture, non-native plants, urbanization, vehicles, road maintenance, and pipeline construction. According to the MSHCP, this species is primarily restricted to the alkali floodplains of the San Jacinto River, Mystic Lake and Salt Creek in association with Willows, Domino and Traver soils. This variety is also known to occur north of Diamond Valley Lake and on Willows soils at Alberhill Creek near Lake Elsinore. Suitable habitat is not present on-site. It is not found on the property.
San Miguel savory (*Clinopodium chandleri*) Formerly known as *Satureja chandleri*	Not Present. This MSHCP-covered species is a perennial shrub that occurs in western Riverside County, in rocky, gabbroic or metavolcanic areas in chaparral, cismontane woodland. It blooms from March through July. Habitats on-site overlie granitic material lower in mafic minerals. Suitable habitat and parent material rock for this species is absent on the subject property.

Section 6.1.2 Species	Organismal Habitat Needs and Life History Parameters/Determination for the Project Site
Santa Ana River woollystar (*Eriastrum densifolium* ssp. *sanctorum*)	Not Present. This MSHCP-covered perennial herb occurs in sandy or gravelly washes, floodplains, and dry riverbeds in chaparral and alluvial fan sage scrub from 91 to 610 meters in elevation. It blooms from April through September. This subspecies primarily occurs along the Santa Ana River from San Bernardino to Riverside. Suitable habitat is not present on-site and it was not detected.
slender-horned spineflower (*Dodecahema leptoceras*)	Not Present. Occurs in Riverside County mostly on old alluvial benches along the San Jacinto River, Bautista Canyon, Temescal Valley, and lower Agua Tibia Mtns. Listed as federally endangered on 28 September 1987 and state endangered in January 1982, this annual herb requires flood deposited terraces and washes in chaparral/coastal scrub and cismontane woodland between 200 and 760 meters. It is also found at Vail Lake on sandstone. It blooms from April through June. This species was not expected due to lack of support habitat and did not occur on-site.
smooth tarplant (*Centromadia pungens* ssp. *laevis*)	Not Present. This MSHCP-covered species occurs in Riverside County and blooms from April through September and occurs below 640 meters in elevation. Smooth tarplant occurs in open, poorly drained flats, depressions, waterway banks and beds, grassland and disturbed sites. CNPS states that this subspecies occurs in alkaline areas in chenopod scrub, meadows and seeps, playas, riparian woodland and grassland. High porosity of sandy loam soils on-site suggest the site is not suitable, although there is a fairly recent detection of smooth tarplant on both sides of Clinton Keith Road at Murrieta Creek not far from the site.
spreading navarretia (*Navarretia fossalis*)	Not Present. This MSHCP-covered species occurs in southwest Riverside County. This annual blooms from April through June and occurs in vernal pools, ditches, chenopod scrub, marshes and swamps with assorted shallow freshwater, and playas. Habitat on-site is not suitable for this species, and it was not detected on-site. These is a 2004 detection for this species to the east of the Project site approximately 1.75 miles away, but the CNDDB notes it is considered extirpated.
thread-leaved brodiaea (*Brodiaea filifolia*)	Not Present. This MSHCP-covered species occurs in western Riverside County. It is a bulbiferous perennial herb that blooms from March through June and is known to occur in chaparral openings, cismontane woodland, coastal scrub, playas, valley and foothill grasslands, and most often in vernal pool complexes and clay soils. It can be locally common in vernal pools complexes on the Santa Rosa Plateau and on alkali flats along the San Jacinto River. Suitable habitat is not present. This species was not detected and does not occur on-site.
Vernal barley (*Hordeum intercedens*) Now known as bobtail barley	Not Present. This MSHCP-covered species occurs in vernal pools, alkali flats and ephemeral saline streams within coastal dunes, coastal scrub and grasslands below 1000 meters throughout southwestern California. An annual herb, it blooms from March through June. Suitable habitat is not present on-site, and this species was not detected on the subject property.

Section 6.1.2 Species	Organismal Habitat Needs and Life History Parameters/Determination for the Project Site
Riverside fairy shrimp (*Streptocephalus woottoni*)	Not Present. The property was determined to be unsuitable for this species due to the lack of ponds, natural vernal pools, clayey surface soils, and similar features. This species of fairy shrimp is endemic to western Riverside, Orange, and San Diego Counties in areas of tectonic swales/earth slump basins in grassland and coastal sage scrub. It inhabits seasonally astatic pools filled by Winter/Spring rains, and hatches in warm water later in the season. Suitable habitat is not present as vernal pools were not found on the site. There is a 2009 detection of this organism southeast of the Project site approximately 1 mile away, just east of Interstate 15. There is an e detection from 2010 approximately 2 miles east of the site, which the CNDDB indicates is extirpated. This species has occurred historically in the area and may persist.
vernal pool fairy shrimp (*Branchinecta lynchi*)	Not Present. TERACOR's on-site and off-site analysis found no evidence of vernal pools and thus the site was determined to be unsuitable for this species. Potential habitat includes short lived, cool temperature vernal pools. Vernal pools were not detected on-site; therefore, suitable habitat for this fairy shrimp is not believed present on the subject property.
arroyo toad (*Anaxyrus californicus*) Formerly known as (*Bufo californicus*)	Not Present. This species has no potential to occur on-site. The arroyo toad breeds in sandy river washes and inundated arroyos; hence the name arroyo toad. This species has a very specialized breeding habitat in that it requires shallow, slow moving water or overflow pools within a stream system comprised of silt-free sandy or gravelly substrates. This species also requires streamside terraces for burrowing. Suitable breeding habitat is not present on the subject property. Distance from the nearest natural suitably waterbody precludes its non-breeding presence outside of the breeding season as well.
California red-legged frog (*Rana draytonii*) Formerly known as *Rana aurora draytonii*	Not Present. Populations of this frog are in serious decline primarily due to the introduction of non-native predators such as the American bullfrog (*Lithobates catesbeianus*), habitat loss, on-going drought and pollutants. This species prefers pond habitats for breeding; however, it will also utilize slow, permanent streams. Necessary habitat is not present on-site.
southern mountain yellow-legged frog (*Rana muscosa*) Formerly known as the mountain yellow-legged frog	Not Present. This species has no potential to occur on-site. This frog species, once abundant, has lost approximately 99% of its former range. Chytrid fungus, introduction of bullfrogs and trout species, pollution, fires, drought and cattle grazing are just a few of the suspected causes of this, likely fatal, decline of the species. Suitable habitat is not present. This species is not present on-site.

Section 6.1.2 Species	Organismal Habitat Needs and Life History Parameters/Determination for the Project Site
Santa Ana sucker (*Catostomus santaanae*)	Not Present. The property contains no aquatic habitat and was determined to be unsuitable for this species. This species is not present on the subject property.
bald eagle (*Haliaeetus leucocephalus*)	Not Present. Bald eagles typically nest in forested areas adjacent to large bodies of water and avoid heavily developed areas when possible. This species tolerates human activity when feeding, and may congregate around fish processing plants, dumps, and below dams where fish concentrate. Bald eagles prefer tall, mature coniferous or deciduous trees for perching, and can be seen in open, dry uplands if there is access to open water for fishing in winter. Bald eagles are becoming increasingly widespread again following cessation of the pesticide DDT, recovery efforts and public education. They forage throughout the MSHCP Plan area now with increasing frequency. The nearest substantial bodies of water are Mystic Lake, the San Jacinto Wildlife Refuge, Lake Mathews and Lake Perris. Suitable foraging and nesting habitat is generally not present on-site. This eagle would not occur on-site except perhaps to opportunistically consume conspicuous carrion in accessible areas like on Juniper Flats Road.
least Bell's vireo (*Vireo bellii pusillus*)	Not Present. This riparian-obligate subspecies generally requires lesser-disturbed areas of dense willow-associated riparian habitat and prefers areas with standing water. The habitat on-site does not support standing water even seasonally or riparian woodland vegetation. This subspecies does not occur on-site.
Peregrine falcon (*Falco peregrinus anatum*) Formerly known as the peregrine falcon (*Falco peregrinus*)	Not Present. This MSHCP-covered species can occur in western Riverside County. This subspecies occurs along the coast year-round, breeding from Santa Barbara to northern California. This subspecies also breeds in the Sierra Nevada and the Salton Sea. The wintering range for this subspecies extends into the Central Valley and more inland in southern California. Most commonly occupied habitats contain cliffs for nesting, with open gulfs of air and generally open landscapes for foraging. In addition to natural habitats, many artificial habitats are now used by this subspecies (urban, human-built environments such as towers, buildings, etc.). Suitable nesting habitat is not present, and we did not observe this species foraging on or near the subject property.
southwestern willow flycatcher (*Empidonax traillii extimus)*	Not Present. The property was determined to be unsuitable for this species based on the absence of willow scrub on-site and because there is no seasonal standing water. The subspecies southwestern willow flycatcher occupies the southernmost breeding range of the willow flycatcher. Habitat loss and parasitism from brown-headed cowbirds have reduced the populations to the threshold of extinction in many ways. This species would not utilize the site.
western yellow-billed cuckoo (*Coccyzus americanus occidentalis*)	Not Present. The property is not suitable for this species. The western yellow-billed cuckoo prefers dense riverine woodlands. This subspecies is common in parts of its range, but has experienced serious declines due to habitat loss and fragmentation. This subspecies is not present on-site.

5.1 Riparian/Riverine

5.1.1 Methods

If there are stream resources (ephemeral, intermittent or perennial) which appear present, or areas exhibiting ponding or similar detention of water (seasonal or permanent "waters") on the site, then jurisdictional criteria are applied in conformance with current professional delineation standards for both agencies. These areas would be mapped, measured, delineated, and evaluated with respect to vegetative composition and presence of hydric soils, using the resources and methodologies mandated by the respective agencies.

In the case of the subject site, the entire property was investigated and potentially-jurisdictional areas were identified and mapped as Features 1, 2, 3 and 4. Only Feature 4 had retains stormwater. Based on both on-site field investigation and off-site analyses, it is does not appear necessary to prepare a Preliminary Jurisdictional Delineation (PJD) report for either the U.S. Army Corps of Engineers ("Corps") or the California Department of Fish and Wildlife (CDFW) because it appears that the site does not contain these jurisdictional resources. The areas TERACOR mapped as "potential" Riparian, Riverine or Vernal Pool resources were considered using MSHCP criteria for this analysis, as well as identifying field evidence for presence of surface "waters". We evaluated whether "waters" (state or federal) were present, and if so, whether those "waters" were ephemeral, intermittent or permanent (perennial). The four (4) potential features were identified and mapped using GPS/GIS cartographic methods by skilled delineation and survey personnel; only one (Feature 4) was a depression with no hydrologic outflow. Therefore, TERACOR evaluated whether Feature 4 was a vernal pool or likely to support vernal pool resources and aquatic life.

The MSHCP defines a riparian/riverine area as: *"...lands which contain Habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year..."* (MSHCP 6-21).

The MSHCP requires assessment of Riparian/Riverine resources, including but not limited to consideration of hydrology, species composition and utilization, topography, and soil analysis.

These areas, even when they are not located in targeted conservation lands, can sometimes require on-site preservation of Riparian/Riverine areas or additional off-site mitigation as negotiated. Vernal Pool assessment methodology, investigations and findings are discussed below in Section 5.2 Vernal Pools.

Functions and Values: The MSHCP requires assessment of riparian/riverine areas and vernal pools including consideration of species composition, topography/hydrology, and soil analysis, where appropriate. Section 6.1.2 states:

"Factors to be considered include hydrologic regime, flood storage and flood flow modification, nutrient retention and transformation, sediment trapping and transport, toxicant trapping, public use, wildlife Habitat, and aquatic Habitat. The functions and values assessment will focus on those areas that

should be considered for priority acquisition for the MSHCP Conservation Area, as well as those functions that may affect downstream values related to Conservation of Covered Species within the MSHCP Conservation Area" (MSHCP 6-22).

Artificial (Human-Created) Areas: Section 6.1.2 language clarifies that "…*areas demonstrating characteristics as described above which are artificially created are not included in these definitions*." Exceptions to this are as follows: "*…wetlands created for the purpose of providing wetlands Habitat or resulting from human actions to create open waters or from the alteration of natural stream courses…*"

Human-affected Areas: Through both on-site field analysis and utilizing off-site information (i.e., soils, historic aerial photos, and vegetation mapping-derived data) TERACOR identified the presence of one former blueline drainage relict, which we also mapped and evaluated (Feature 1). Additionally, TERACOR also identified three human-created areas in the mapping process (i.e., Features 2, 3 and 4).

Human-affected stream course areas, even when they are not located in targeted conservation lands, can also sometimes require on-site preservation of R/R/VP areas or specific off-site mitigation for impacts both temporal and permanent to those human-affected stream course areas. Several factors were included in our evaluation, including whether the isolation of the drainage (via beheading and truncation) and agricultural modifications in prior decades had likely been lawfully conducted or permitted by local agencies and state and federal authorities. Additionally, the remnant functional values Feature 1 maintains was taken into consideration.

MSHCP-Defined Riparian/Riverine and Vernal Pool Protected Habitat: MSHCP Section 6.1.2 describes the process by which protection of riparian/riverine areas and vernal pools occurs within the MSHCP Plan Area. Protection of riparian/riverine areas and vernal pools is important to conservation of specified amphibian, bird, fish, invertebrate, and plant species which occur within these habitats. These species include:

- Amphibians: arroyo toad, mountain yellow-legged frog, and California red-legged frog;
- Birds: bald eagle, peregrine falcon, least Bell's vireo, southwestern willow flycatcher, and western yellow-billed cuckoo;
- Fish: Santa Ana sucker;
- Invertebrates - Crustaceans: Riverside fairy shrimp and vernal pool fairy shrimp;
- Plants: Brand's phacelia, California Orcutt grass, California black walnut, Coulter's matilija poppy, Engelmann oak, Fish's milkwort, graceful tarplant, lemon lily, Mojave tarplant, mud nama, ocellated Humboldt lily, Orcutt's brodiaea, Parish's meadowfoam, prostrate navarretia, San Diego button-celery, San Jacinto Valley crownscale, San Miguel savory, Santa Ana River woolly-star, slender-horned spine flower, smooth tarplant, spreading navarretia, thread-leaved brodiaea, and vernal barley.

Of the 23 plant species listed above, none were detected or expected to occur. None of the eleven (11) animal species listed above was detected or believed present on the Project site due to site conditions. The *CNDDB* did note several historic and extirpated occurrences of several organisms in proximity to the Project site, such as smooth tarplant, spreading navarretia, and Riverside fairy shrimp within two (2)

miles of the site. These stream and pool-associated organisms are discussed in *Table 2 - Riparian/Riverine and Vernal Pool Species (MSHCP Section 6.1.2)*, previously presented.

5.1.2 Existing Conditions and Results

Existing conditions were evaluated in the field and remotely as previously described. The MSHCP protected species listed above in *Table 2*, above, were found unlikely to occur or absent, based on the methodologies recommended in the MSHCP, by the RCA, and in accordance with standard professional practice for consulting biologists in southern California.

Regarding Riparian/Riverine resources, TERACOR also utilized the MSHCP functional assessment parameters to guide the evaluation of the four (4) potential Riparian/Riverine/Vernal Pool areas on-site.

MSHCP Section 6.1.2 indicates that eight (8) functions and values (all listed below) should be described "… *with respect to the species listed above*…" (i.e., the Section 6.1.2 animals and plants). While all eight (8) functions and values need not be present to be considered Riparian or Riverine, it is the opinion of the Consulting Biologist that a prevalence of these functions should be present to legitimately assert the applicability of Section 6.1.2 to most drainage features.

Using the eight (8) criteria (functions and values) that are specifically described in Section 6.1.2, we applied those criteria to the four (4) Features on-site that could be either observed or reasonably inferred:

- *Hydrologic Regime*: Determined Present in All 4 Features, albeit in very small volumes and frequency. Evidence of water collection was detected in all the features, and all the 4 features were found to be "ephemeral". Field evidence and review of hydrological mapping provided by the Project Engineer, indicated that Feature 1, the former blueline drainage, receives no tributary runoff from upstream areas as it did historically. It does receive runoff from an approximate one-acre watershed surrounding it. The balance of the drainage across the 10.12 acre site (approximately 9 acres) is either absorbed into site substrates or sheet-flows to the south property line. Features 2 and 3 are human-constructed inlet structures which receive sheet-flow runoff in a 2-year event. Human-constructed facilities in historically upland areas are not riverine by definition. Feature 4 is a human-induced pit (11 ft. x 12 ft.) formed during placement of the large stockpile located in the northeast quadrant of the site. The temporary haul route apparently created a circular area which ponds in the middle and supports a dense but very small cell of coyote brush. The watershed for the pit was not recognized in the hydrology mapping because it is less than 400 square feet in extent. The topographic mapping indicates Feature 4 is a pit with no outlet.

- *Flood storage and Flood Flow Modification*: Determined Present (but insignificant) in Features 1 and 4 and Absent in Features 2 and 3. Much of the water entering or falling onto the site is absorbed into highly sandy substrate thereby naturally reducing downstream runoff. Two-year storm events, however, produce enough water volume to flow out of Feature 1 and transition

into sheetflow, and into the two concrete inlet basins on-site. Feature 4 however, is artificial within an earthen stockpile and its small size renders it insignificant with respect to flood storage. Because of the insignificant watershed size that "stores" floodwater, this function is not applicable.

- *Nutrient Retention and Transformation*: Determined Possibly Present in Feature 1 and Absent in Features 2, 3 and 4. While Nutrient Retention is hypothetically possible in Feature 1, the size of the Feature 1 watershed is approximately one acre, and therefore insignificant especially in light of the irregular and generally light rainfall in this area. Features 2 and 3 were constructed to convey water, not detain it. Feature 4 is 130 sq. ft. in size and therefore does not contribute in a measurably significant manner to nutrient retention or transformation.

- *Sediment Trapping and Transport*: Sediment Trapping is Present in Features 1 and 4 and Absent in Features 2 and 3. Sediment transport is Present in Features 1, 2 and 3 and Absent in Feature 4.

- *Toxicant Trapping*: Presumed Absent in all 4 Features due to the undeveloped condition of the watershed, the small size of the features, and presumed absence of urban toxic substances.

- *Public Use*: Determined Absent. There is no authorized public use of the site.

- *Wildlife Habitat*: Determined Absent for MSHCP species, except for common species like ground squirrel, Pacific rattlesnake and coyote. Not suitable habitat for any MSHCP Section 6.1.2 organisms or Table 9-3 organisms. Therefore, wildlife habitat for MSHCP species is not present in Features 1 - 4.

- *Aquatic Habitat*: Determined Absent as presence of water is only ephemeral in all 4 Features, and would not be expected to support aquatic life due to the very small size of the watershed for each feature, and the porous nature of the substrates as documented in the soils analysis, previously presented.

Summary of Functions and Values: Feature 1 exhibits 3 of the 8 possible functions and values, but it does not contribute in a significant way to warrant protection as a Riverine resource by virtue of prior agency decisions made to allow beheading and truncation of Feature 1 off-site. Much of Feature 1 was legitimately filled on-site to accommodate agricultural activities by the late 1970's. Features 2 and 3 collect and convey stormwater runoff, but are human-constructed in uplands and therefore not Riverine by definition. Feature 4 is a human-constructed pit in unconsolidated fill placed on the site during the grading of Tract No. 30155, so it is comprised of unconsolidated fill material and contains dense coyote brush making presence of fairy shrimp highly unlikely. There is no evidence to suggest it is a natural vernal pool perched well above the native substrates in fill material.

Conclusion Regarding Functions and Values: None of the 4 Feature meet a preponderance of the 8 functions and values criteria. The criteria they do meet is insignificant and miniscule. Therefore,

TERACOR's conclusion is that no features on-site are Riparian or Riverine.

Table 4 – Potential Riparian/Riverine/Vernal Pool Resources

Potential Features	Potential Acreage	Determined R/R/VP	Affected Acreage	Total Affected Acreage R/R/VP
Feature 1	0.058	No	0.0	0.0
Feature 2	0.007	No	0.0	0.0
Feature 3	0.004	No	0.0	0.0
Feature 4	0.003	No	0.0	0.0
Total	0.072	None	0.0	0.0

5.1.3 Impacts

TERACOR asserts there are no Riverine or Riparian areas on-site, therefore, no impacts to Riparian or Riverine resources are expected to occur.

5.1.4 Mitigation

There are no Riverine or Riparian areas on-site, therefore, no impacts to Riparian or Riverine resources are expected to occur, and specific mitigation for R/R resources is not required.

5.2 Vernal Pools

5.2.1 Methods

The MSHCP describes a vernal pool as *"... seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season. Obligate hydrophytes and facultative wetlands plant species are normally dominant during the wetter portion of the growing season, while upland species (annuals) may be dominant during the drier portion of the growing season. The determination that an area exhibits vernal pool characteristics, and the definition of the watershed supporting vernal pool hydrology, must be made on a case-by case basis. Such determinations should consider the length of the time the area exhibits upland and wetland characteristics and the manner in which the area fits into the overall ecological system as a wetland. Evidence concerning the persistence of an area's wetness can be obtained from its history, vegetation, soils, and drainage characteristics, uses to which it has been subjected, and weather and hydrologic records* (MSHCP 6-22).

The methodology for detecting vernal pools consists of both on-site and off-site analysis. We begin by compiling information and data about the history of site use and development via historic aerial photography, analysis of underlying soils information obtained from the USDA, analysis of topographic conditions on-site and off-site in the contributing watershed, and review of any site-specific hydrological information and mapping if available. We sometimes interview the site owner or long-time nearby residents if they are available to do so, as residents are often curious about our on-site investigations. They have questions for field staff which is a good opportunity to gather anecdotal historical information about a site.

If a state or federal preliminary jurisdictional delineation is being performed or has been performed, then criteria would be applied both in the field and in the preparation of the assessment off-site which would consider all the parameters listed by both the U.S. Army Corps of Engineers and the California Department of Fish and Wildlife (CDFW) to establish jurisdictional status. This information, particularly hydrological information, soils sampling, and compiling vegetative profiles in potential jurisdictional areas, would be very helpful. If any site is only upland in composition, then that information would not exist, and jurisdictional areas would be considered absent. In that event, TERACOR utilizes other information to establish vernal pool presence or absence. We purposely do not conduct soil sampling in areas under evaluation which might support endangered or threatened fairy shrimp species as a matter of avoiding any possibility of alleged "take" of a species. In that case we utilize information gathered from the surface such as evidence of ponding, surface soil color, presence of surface water, water-stained debris, and other non-invasive techniques for establishing the presence of a wetland, in conformance with Army Corps guidance and practice.

5.2.2 Existing Conditions and Result

TERACOR field personnel utilized the methodology discussed above, and explored the property thoroughly to determine if vernal pools were present based on the methodology described above and the MSHCP-Section 6.1.2 defined criteria. We conducted a review of aerial photography, both recent and historic dating back to 1938, and subsequently performed comprehensive evaluation of the property to assess if any features on-site met the criteria established in MSHCP Section 6.1.2 to be considered as a vernal pool.

There are no natural vernal pools on the property. The sandy loam soils and gradients on-site are not conducive to ponding.

There is, however, one small area on the property that any location on the site which contained mudcracks and we assumed would pond during significant rainfall events. We identified the feature as Feature 4, which is 130 sq. ft. in extent (11 ft. x 12 ft. in extent). The mudcracks at the bottom of the "pit" were overstoried with dense coyote brush and dead vegetation, indicative of the recent drought. As analyzed in Section 5.1.2 above, however, Feature 4 is a human created pit which sits atop a large stockpile of dirt presumably derived from grading operations on an adjoining residential development, and perhaps elsewhere as well (the source of the material is not known with certainty to TERACOR). The material in the pit, however, was examined in the field and found to be very sandy and with loam type content to it, along with other debris. Access was somewhat difficult due to the steepness of the pit and the density of the coyote brush, but the aside from mudcracks, other important characteristics were absent, such as detectable wetland vegetation (alive or remains from earlier seasons), rings of different coloration around the mudcracks, or a viable watershed (which was judged in the field to be more than 300-400 square feet). Aerial photography (recent and historic) failed to produce any information suggestive of a vernal pool at or near this location. The position of Feature 4, atop a stockpile, also lowered the likelihood that the pit could be considered functional in terms of vernal pool characteristics. We noted it was highly unlikely to be considered jurisdictional by any local, state or federal agency.

Nonetheless, TERACOR mapped Feature 4 and a "potential" R/R/VP resource and evaluated it in the context of this report.

5.2.3 Impacts

Based on the information gathered by TERACOR remotely and in the field, it appears to us that no impacts to vernal pools will occur on the proposed Project site.

5.2.4 Mitigation

Based on the absence of natural vernal pools, the overstory of dense coyote brush (an upland shrub). and the poor likelihood of extended ponding long enough to support MSHCP-listed fairy shrimp species, we concluded that vernal pool mitigation was not necessary to recommend.

5.3 Fairy Shrimp

Based on the information analyzed and reported above, it is asserted by TERACOR that fairy shrimp species listed in the MSHCP do not occur on the site.

5.3.1 Impacts

TERACOR asserts there is no functional support habitat on-site for fairy shrimp species, therefore, no impacts are expected to occur.

5.3.4 Mitigation

TERACOR asserts there is no functional support habitat on-site for fairy shrimp species, therefore, no impacts are expected to occur, and no specific fairly shrimp mitigation is necessary.

TERACOR recommends, however, that a pre-disturbance walkover by a Permitted Fairy Shrimp Biologist be conducted to confirm or disprove TERACOR's determination.

5.4 Riparian Birds

There is no riparian vegetation present on-site capable of supporting any riparian bird species, therefore, further analysis is not required.

No impacts to Least Bell's vireo, southwestern willow flycatcher and yellow-billed cuckoo will occur on the proposed Project site with Project implementation.

5.5 Other Section 6.1.2 Species

No "other species" are expected to occur on the Project site.

6.0 Protection of Narrow Endemic Plant Species (MSHCP Section 6.1.3)

The proposed Project site does not lie within a Narrow Endemic Plant Survey Area or Criteria Area Plant Species survey area. As such, no surveys were required. While conducting vegetation and burrowing owl surveys, all plants encountered on-site were identified and no narrow endemic or criteria area plants were detected in Spring and Summer surveys from 16 March through 15 June 2022.

No narrow endemics were identified on the project site during vegetation surveys. No impacts to narrow endemic plant species will occur as a result of Project implementation.

Nonetheless, TERACOR queried the California Natural Diversity Database (CNDDB) and has included *Exhibit 16 – CNDDB Occurrences* for reference.

No mitigation for narrow endemic plant species is required as no impacts will occur to these plant species.

7.0 Additional Survey Needs and Procedures (MSHCP Section 6.3.2)

The proposed project is not located within a Section 6.3.2 survey area.

Criteria Area and Narrow Endemic Plant Species: The Proposed project does not fall within a mapped survey area for Criteria Area or Narrow Endemic plant species. Vegetation surveys did not incidentally detect any of these species. No impacts would occur, and no mitigation is necessary.

Amphibians: The Proposed project site does not fall within a mapped survey area for amphibian species. Site resources do not appear adequate for providing habitat for MSHCP-listed amphibian species. No impacts would occur, and no mitigation is necessary.

Mammals: The proposed project does not fall within a mapped survey area for mammal species. The project site is within the Stephen's Kangaroo rat fee area.

Burrowing Owl (BUOW): TERACOR conducted a burrowing owl habitat assessment and focused survey. The Habitat Assessment and Field Survey Methodology is described in detail in the BUOW Report. As described in the report, we followed the *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area* (EPD 2006

Burrowing Owl (BUOW): The subject property was required to conduct a burrowing owl habitat assessment. TERACOR performed the habitat assessment and concluded that portions of the property had some possibility of supporting BUOW, therefore focused surveys were undertaken in 2022. The Habitat Assessment and Field Survey Methodology is described in detail in the BUOW Report. The report is entitled *Step I Habitat Assessment, Step II, Part a Focused Burrow Survey and Part B Focused Burrowing Owl Surveys*

for a 10.12-Acre Property Located in the City Of Wildomar, Riverside County, California, dated 20 June 2022, and is a companion report to this Consistency Analysis. No burrowing owls were detected on the property. As described in the report, we followed the *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area* (EPD 2006). No burrowing owls were detected on the property. No impacts are expected to occur.

A 30-day pre-construction survey for burrowing owls is required prior to initial ground-disturbing activities (including but not limited to vegetation clearing, clearing and grubbing, tree removal, site watering) to ensure that no owls have colonized the site in the days or weeks preceding the ground-disturbing activities. If burrowing owls have colonized the project site prior to the initiation of ground-disturbing activities, the project proponent will immediately inform the Regional Conservation Authority (RCA) and the Wildlife Agencies, and will need to coordinate further with RCA and the Wildlife Agencies, including the possibility of preparing a Burrowing Owl Protection and Relocation Plan, prior to initiating ground disturbance. If ground-disturbing activities occur but the site is left undisturbed for more than 30 days, a preconstruction survey will again be necessary to ensure burrowing owl has not colonized the site since it was last disturbed. If burrow owl is found, the same coordination described above will be necessary.

8.0 Information on Other Species (MSHCP Table 9 - 3 Species)

8.1 Delhi Sands Flower-loving Fly (DSF)

The subject property is a great distance from areas mapped as potentially-suitable for DSF. These DSF occupied lands are generally north of the Santa Ana River. The organism is endemic the Delhi sands and similar aeolian sand-deposited substrates. A site-specific habitat assessment and surveys, of course, were not necessary.

8.1.1 Methods

The proposed project does not fall within an area with Delhi soils mapped within the MSHCP baseline data.

8.1.2 Existing Conditions and Results

The proposed project does not fall within an area with Delhi soils mapped within the MSHCP baseline data.

8.1.3 Impacts

The proposed project does not fall within an area with Delhi soils mapped within the MSHCP baseline data.

8.1.4 Mitigation

The proposed project does not fall within an area with Delhi soils mapped within the MSHCP baseline data, therefore, no mitigation is required.

8.2 Species Not Adequately Covered

No Species considered "Not Adequately Conserved" were found on the proposed Project site.

Table 5 - Covered Species Not Adequately Conserved (MSHCP Table 9 – 3)

Species	Conservation Requirement Status	Suitability of Subject Property for Organism - Life History and/or Habitat Description
Plants		
beautiful hulsea (*Hulsea vestita* ssp. *callicarpha*)	Met	Not Present. This MSHCP-covered species is a perennial herb which blooms from May through October and occurs on open gravel, talus slopes, rocky and granitic areas in montane chaparral and coniferous forest between 915 and 3050 meters in elevation. Suitable habitat is not present on-site, and the subject property is outside this subspecies' known geographic and elevational range.
California bedstraw (*Galium californicum* ssp. *primum*) Now known as Alvin Meadow bedstraw	No	Not Present. This subspecies is found on granitic or sandy substrates in chaparral and lower montane coniferous forests. Its blooming period is May through July and elevation range is 1350 to 1700 meters above sea level. Suitable habitat is not present, and the subject property is below the subspecies' known elevational range.
California muhly (*Muhlenbergia californica*)	No	Not Present. This now uncommon perennial rhizomatous herb blooms from June through September and occurs in seeps and streambanks in chaparral, forests, scrub and meadows throughout the western Transverse Ranges and south coast regions. Its elevation range is between 100 and 2000 meters. Habitat on-site is considered unsuitable for this species to occur on the subject property as seeps and moist streambanks are absent.
chickweed oxytheca (*Sidotheca caryophylloides*) Formerly known as *Oxytheca caryophylloides*	No	Not Present. This annual herb occurs on sandy substrates in lower montane coniferous forest. It blooms from July to October and its elevation range is 1114 to 2600 meters. The subject property is outside of this species' known elevational and geographic ranges, and suitable habitat is not present on-site. It occasionally can be found in the San Jacinto River wash.

Species	Conservation Requirement Status	Suitability of Subject Property for Organism - Life History and/or Habitat Description
Cleveland's bush monkeyflower (*Diplacus clevelandii*) Formerly known as *Mimulus clevelandii*	No	Not Present. This MSHCP-covered plant occurs in upper elevation chaparral in the Santa Ana and Agua Tibia Mtns. As a perennial rhizomatous herb, it blooms from April through July and occurs in gabbroic, often in disturbed areas, openings and rocky areas in chaparral, cismontane woodland and lower montane coniferous forest between 450 and 2000 meters in elevation. Gabbroic parent material is absent, and the subject property is outside this species' known geographic range.
cliff cinquefoil (*Potentilla rimicola*)	No	Not Present. This perennial herb occurs in granitic and rocky crevices in subalpine coniferous forest and upper montane coniferous forest between 2400 and 2800 meters in elevation. This species blooms from July through September. According to the CNPS, cliff cinquefoil is known only to occur in the San Jacinto Mountains. Suitable habitat is not present on-site, and the subject property is outside of this species' known geographic and elevational ranges.
Coulter's matilija poppy (*Romneya coulteri*) This species is also a 6.1.2 species.	Met	Not Present. This MSHCP-covered species occurs in Riverside County. The matillja poppy is distinctive in that it has the largest flowers of any plant native to California. It typically blooms from March to July, and occasionally as late as August. It is often found in burned chaparral and coastal scrub in the Peninsular Ranges, Western Transverse Ranges, and the south coast area from 20 to 1200 meters in elevation. It was not detected on-site during vegetation identification and mapping surveys, and does not occur on-site.
Fish's milkwort (*Polygala cornuta* var. *fishiae* This species is also a 6.1.2 species.	Met	Not Present. This perennial deciduous shrub blooms from May through August and occurs in chaparral, oak woodland and riparian woodland between 100 and 1000 meters in elevation. This perennial shrub was not detected on the Project site during vegetation identification and mapping surveys.
graceful tarplant (*Holocarpha virgata* ssp. *elongata*) This species is also a 6.1.2 species.	Met	Not Present. This MSHCP-covered annual plant blooms from May through November and occurs in chaparral, cismontane woodland, coastal scrub, and valley and foothill grassland between 60 and 1100 meters in elevation. It was not detected on-site.
lemon lily (*Lilium parryi*) This species is also a 6.1.2 species.	No	Not Present. This MSHCP-covered bulbiferous plant blooms from July through August and occurs in mesic areas within lower and upper montane coniferous forest, meadows and seeps, and riparian forest between 1220 and 2745 meters in elevation. The subject property is located outside of this species' known geographic and elevational ranges, and suitable habitat is not present on-site.

Species	Conservation Requirement Status	Suitability of Subject Property for Organism - Life History and/or Habitat Description
Mojave tarplant (*Deinandra mohavensis*) This species is also a 6.1.2 species.	No	Not Present. This MSHCP-covered species is primarily found in the San Jacinto Mtns. It is also known to occur along washes at the eastern fringes of western Riverside Co. This herb occurs in mesic areas in chaparral, coastal scrub and riparian scrub between 640 and 1,600 meters in elevation. The subject property is outside this species' known geographic distribution and at the low end of its elevational range. It was not detected on-site.
ocellated Humboldt lily (*Lilium humboldtii* ssp. *ocellatum*) Also a 6.1.2 species.	No	Not Present. This perennial bulbiferous herb blooms from March through August and occurs along shaded streams and in openings within chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest and riparian woodland between 30 and 1800 meters in elevation. Suitable habitat is not present on-site for this tall, conspicuous and easily-detected lily.
Parry's spineflower (*Chorizanthe parryi* var. *parryi*)	Met	Not Detected. This annual herb occurs in sandy or rocky openings in chaparral, cismontane woodland, coastal scrub and grassland between 275 and 1220 meters in elevation. It blooms from April through June and is currently known from approximately 20 occurrences in Riverside County, but does not occur on-site.
peninsular spineflower (*Chorizanthe leptotheca*)	Met	Not Detected. This annual herb blooms from May through August and occurs on natural alluvial fans and granitic areas in chaparral, coastal scrub and lower montane coniferous forests from 300 to 1,900 meters in elevation. Suitable habitat is not present on-site. It occurs on alluvial benches at the base of both the Santa Ana and Agua Tibia Mtns (Vail Like).
Plummer's mariposa lily (*Calochortus plummerae*)	Met	Not Present. This distinctive and easily detected perennial bulbiferous herb is usually found on granitic, rocky slopes within chaparral, cismontane woodland, coastal scrub, and grassland from 100 to 1700 meters. Boyd et al cite the northeastern Santa Ana Mtns, Box Springs Mtn, and Skinner Lake as occurrences. This species was not detected.
Rainbow manzanita (*Arctostaphylos rainbowensis*)	Met	Not Present. This MSHCP-covered species occurs in western Riverside County in both the Aqua Tibia Mountains and the hills above Murrieta in chaparral on basalt flows. This perennial evergreen shrub blooms from December through March and occurs on granitic outcrops in chaparral between 205 and 670 meters in elevation. Suitable habitat for this shrub is not present, and this species is not known to occur within the area. Rainbow manzanita is not on the site.
shaggy-haired alumroot (*Heuchera hirsutissima*)	No	Not Present. This perennial rhizomatous herb blooms from May through July and occurs in rocky and granitic areas in subalpine coniferous forest and upper montane coniferous forest between 1520 and 3500 meters in elevation. The subject property is outside of this species' known geographic and elevational ranges, and suitable habitat is not present on-site.

Species	Conservation Requirement Status	Suitability of Subject Property for Organism - Life History and/or Habitat Description
small-flowered microseris (*Microseris douglasii* ssp. *platycarpha*)	Met	Not Present. This MSHCP-covered herb occurs in western Riverside County; in heavy clay soils associated with vernal pools, grasslands and similar habitats. It blooms from March through May and occurs below 1070 meters in the South Coast region, Peninsular Ranges and San Jacinto Mountains. Suitable habitat is not present on-site.
sticky dudleya (*Dudleya viscida*) Formerly known as sticky-leaved dudleya	No	Not Present. This MSHCP-covered species occurs in western Riverside County. This perennial herb blooms from May through June and occurs in steep, rocky scrub, chaparral, and cismontane woodland between ten (10) and 550 meters in elevation. This dudleya is not detected on-site.
Reptiles		
California mountain kingsnake (San Bernardino population) (*Lampropeltis zonata [parvirubra*]) California mountain kingsnake (San Diego population) (*Lampropeltis zonata [pulchra]*)	No	Not Present. These MSHCP-covered subspecies can occur in southwest Riverside County; however, focused surveys are not specified in the MSHCP and are not required for the subject property. The California mountain kingsnake inhabits mountainous regions across southern California. It prefers moist woods, coniferous forests, oak woodlands, and chaparral above 1000 meters. They are quite secretive, residing in rock crevices or beneath rock and debris piles. They may also utilize rotting logs and seek cover under dense shrubs. Habitat on-site is not particularly suitable, and the subject property is located below these snakes' known elevational range.
southern rubber boa (*Charina umbratica*) Formerly known as *Charina bottae umbratica*	No	Not Present. This MSHCP-covered species possibly occurs on-site though ATV and dirt bike trespassing may have impacted the species locally. The southern rubber boa frequents grassland, broken chaparral, woodland, and forest, in and beneath rotting logs, under rocks, and under bark of fallen and standing dead trees. Habitat on-site is not suitable due to disturbance factors and the lack of dead-wood on-site.
southern sagebrush lizard (*Sceloporus graciosus vandenburgianus*)	No	Not Present. This MSHCP-covered subspecies occurs in western Riverside County; however, this lizard is found within the San Jacinto and Santa Rosa Mountains above 1,524 meters in elevation. Suitable habitat includes montane chaparral, sagebrush (*Artemisia* sp.), hardwood and conifer forests and woodlands and juniper woodlands. Habitat on-site is not suitable, and the subject property is outside of this subspecies' known geographic range.
Birds		

Species	Conservation Requirement Status	Suitability of Subject Property for Organism - Life History and/or Habitat Description
California spotted owl (*Strix occidentalis occidentalis*)	No	Not Present. The California spotted owl has a sparse distribution within the Santa Ana Mountains, San Bernardino Mountains and the San Jacinto Mountains within the MSHCP Plan Area within montane coniferous forest and oak-deciduous woodlands and forests. Suitable habitat is not present on-site, and the subject property is outside this owl's known geographic range. This subspecies would not occur on the subject property.
grasshopper sparrow (*Ammodramus savannarum*)	Partially met	Not Detected. This MSHCP-covered species is not likely to utilize the subject property. The species prefers grasslands with sparse shrub cover. It occurs mainly on hillsides and mesas in coastal districts, but has bred up to 1500 meters in the San Jacinto Mountains. It was not detected on the subject property.
Lincoln's sparrow - breeding (*Melospiza lincolnii*)	No	Not Present. The Lincoln's sparrow has a sparse and widespread distribution throughout the MSHCP Plan Area within a wide variety of habitats. This species occurs within the lowland and foothills of the Plan Area as a transient in the Spring and Fall and may overwinter within the area. This sparrow prefers dense, low underbrush often in disturbed edges with grasses and weeds mixed with shrubs. It occurs in a variety of habitats including willow-sedge swamp, scrub-meadow, and flat land aspen. Breeding in southern California occurs in wet montane meadows of corn lily, sedges and low willows. At lower elevations, this organism prefers mesic willow shrubs and can be found in mixed deciduous groves such as aspen and cottonwoods, mixed shrub-willows, bogs as well as a variety of other riparian habitats. Suitable habitat is absent.
Williamson's sapsucker (*Sphyrapicus thyroideus*)	No	Not Present. This species has declined throughout its range presumably from loss of large snags for nesting. Habitat includes montane coniferous forest dominated by lodge pole pines and firs, and oak woodlands and forests in the San Bernardino and San Jacinto Mountains. Suitable habitat is not present on-site, and the subject property is outside this species' known range.
Mammals		
San Bernardino flying squirrel (*Glaucomys oregonensis californicus*) Formerly *Glaucomys sabrinus californicus*	No	Not Present. This MSHCP-covered species occurs in Riverside County; however, habitat for the San Bernardino flying squirrel in the Plan Area only occurs in the San Jacinto Mountains. Suitable habitat is not present on-site. This squirrel would, therefore, not occur on the subject property.

9.0 Urban/Wildlands Interface

The Project site lies outside of any Criteria Cells designated and described for conservation. The Project, therefore, has very limited negative affect adjacent and downstream conserved areas.

Drainage – Pre-Construction: No pre-construction measures are required to be implemented.

Drainage – Post-Construction: Urban runoff will be treated on-site prior to being discharged, as described in a Water Quality Management Plan (WQMP) that is required by the City of Wildomar. The approved WQMP will require on-site Best Management Practices (BMP's) to address runoff and low flow stormwater quality.

Best Management Practices (BMP's) Construction and Operational: During project grading, a number of BMPs will be implemented to protect off-site downstream areas. These measures include construction of detention basins, use of straw bales and fiber roles (straw wattles) to detain and filter sheet-flow, use of silt fencing where appropriate, utilization of sandbags, installation of mitigation devices to be installed to control dust and dirt in ingress/egress areas for vehicular traffic, dust control via watering, and similar measures. The Water Quality Management Plan (WQMP) is reviewed and approved by the County of Riverside and must include a detailed account of the BMPs that will be utilized. Permanent treatment facilities must also be constructed to protect downstream water quality as part of the proposed Project.

Toxics – Potential toxics in runoff and stormwater will be treated on-site in the post-construction phase. No toxic material would affect existing or future Reserve areas because drainage generated from the proposed Project will be controlled and treated prior to discharge.

Lighting – The proposed Project will be expected to generate night-time light, however, it would not affect any MSHCP-conserved areas. A lighting plan will be prepared as required by the City of Wildomar to reduce lighting effects to adjacent properties, including the water quality basin along the north property line.

Noise – The proposed Project will generate both construction and operational noise. However, the Project site is distant from MSHCP-conserved lands and this noise would not substantially negatively MSHCP Reserve areas.

Invasives – The Project will not be allowed to utilize plants included in *Table 6-2 Plants that Should be Avoided Adjacent to the MSHCP Conservation Area* within Section 6.1.4 of the MSHCP. All proposed landscaping must be included in a landscape plan which will be reviewed by the City of Wildomar to insure that landscape materials do not include the use of invasives and utilizes native and drought tolerant plant materials. The plan must avoid the use of invasive species due to transport by wind, water and biota.

Barriers – The only anticipated barrier around the proposed Project already exists along the west and north property lines. The other property lines face public roadways.

Grading/Land Development – Grading and development of the property has no significant potential to negatively affect MSHCP-conserved areas. The implementation of BMP's and specific conditions of approval which may be required by the City of Wildomar would reduce the impact of development via implementation of the measures described above.

Fuels Management - The MSHCP states: "*Fuels management focuses on hazard reduction for humans and their property… management …shall continue in a manner that is compatible with public safety and conservation of biological resources*.". MSHCP Section 6.4 outlines a framework for working to minimize effects of establishing and maintaining fuel modification zones within designated conservation areas. Because the Project site is located in an urban area surrounded entirely by existing single-family residences and commercial uses, no fuel management is necessary.

10.0 Best Management Practices

During project construction, a number of BMPs will be implemented and enforced by the City of Wildomar Building and Safety Department to protect downstream water resources and sensitive human receptors in the area. Sensitive human receptors include children (disproportionately outdoors and more subject to effects of contamination), the disabled, breathing-impaired or immune-compromised individuals, and the elderly. These groups are more susceptible to the negative effects of uncontrolled dust, pollution from poorly-maintained or older construction equipment, and noise. A Preliminary Water Quality Management Plan ("WQMP"), which includes a detailed account of the BMPs that will be utilized, will be submitted to the City of Wildomar. The following types of BMPs will be implemented for erosion, dust and sediment control, although all of them may not be required:

1. Dust control: Controlled by use of water trucks and cessation of work on windy days.

2. Fiber rolls (wattles): Fiber rolls are placed on the ground to intercept surface waters which contain dirt and sand.

3. Stabilized construction entrances – These facilities prevent mud and dirt from leaving the construction site if tires are very dirty or muddy.

4. Check dams: Check dams hold back surface flows on-site during storm events.

5. Silt fencing: Silt fencing detours and redirects contaminated flow into basins or similar containment features.

6. Straw bale dikes: Straw bales stabilize dirt surfaces and prevent run-off into streets.

7. Sandbags: Sand bags detain and help filter dirty stormwater.

8. Detention basins: temporary areas to detain and filter dirty water.

Post-Construction BMPs

Once the project is constructed, a single Best Management Practice (BMP) will be in operation and will need to be approved by the City of Wildomar. These permanent systems are designed to control erosion, collect sediment, and improve water quality from runoff generated by the site.

The Stormwater Filtration System usually consists of basins and/or bioswales which are designed to capture low flows generated on the Project site and detain those flows on-site while biological processes breakdown and absorb deleterious compounds and substances.

The design of the water treatment system will be approved in advance by the City and will be detailed in the above mentioned WQMP which will be on file with the City of Wildomar.

11.0 MSHCP Project Impacts and Recommended Mitigation Measures

MSHCP Project Impacts

Project-associated impacts within the MSHCP Plan Area are typically offset and mitigated via a number of processes. When projects are within Criteria Cells various combinations of avoidance, fee-payment, land dedication/purchase, and other mechanisms as applicable can be utilized to offset impacts to sensitive species and habitats of all types. Some project areas are required to survey for specific biological resources, such as burrowing owl or fairy shrimp. When those focused surveys are positive and target organisms or their habitats are identified on-site, then avoidance is usually required, and land dedication and other mitigation measures unique to that resource may be necessary. There are no burrowing owls present, therefore, at this time no specific BUOW-related mitigation is necessary. MSHCP fee payment is, however, required to offset the loss of biological resources described in this report that would occur with Project implementation.

Project implementation would result in loss of 10.12 acres of semi-natural habitat. These natural and naturalized upland habitat areas would be permanently removed. Impacts to all upland vegetation communities would be mitigated as described above, through MSHCP fee payment and SKR-fee payment.

With the implementation of the mitigation measures described below, none of these effects are considered to be significant.

Recommended Mitigation Measures

1. Prior to the commencement of grading activities, the developer of the site shall make the appropriate mitigation fee payment into the MSHCP Stephens' kangaroo rat fee payment program for conservation of Stephens' kangaroo rat-occupied habitats in order to offset the loss of potentially suitable Stephens' kangaroo rat habitat on-site through project implementation.

2. Prior to the issuance of certificate of occupancy permits the developer of the site shall make the appropriate MSHCP mitigation fee payment that will contribute to conservation and management of conservation land for all MSHCP-covered organisms.

3. Prior to vegetation clearance, the Project applicant shall retain a qualified biologist to conduct a pre-disturbance nesting bird survey in accordance with the following:

    a) The survey shall be conducted no more than three (3) days prior to the initiation of clearance/construction work;

    b) If pre-disturbance surveys indicate that bird nests are not present or are inactive, or if potential habitat is unoccupied, no further mitigation is required;

    c) If active nests of birds are found during the surveys, a species-specific no-disturbance buffer zone shall be established by a qualified biologist around active nests until a qualified biologist determines that all young have fledged (i.e., no longer reliant upon the nest).

    d) It is recommended that close coordination between the developer of the site, the City of Wildomar, the project engineer, and the consulting qualified biologist to consider vegetation clearance outside of the normal bird nesting season (usually February 15 – Sept 15) to avoid impacts to nesting birds which would potentially violate the federal Migratory Bird Treaty Act. It should be noted that bird nesting season is increasingly less-definitive for some year-round resident species such as hummingbirds and raptors. Further, ground-dwelling birds such burrowing owls, can be affected nearly any time of the year if present. It is therefore advisable to conduct a preconstruction bird survey no matter the time of year.

    e) Removal of vegetation necessitates installation of appropriate Storm Water Pollution Prevention Plan "SWPPP" measures, particularly if grading is not undertaken immediately, therefore careful timing of the project schedule and implementation measures is necessary to avoid water quality impacts.

4. The Project Developer shall retain a qualified biologist to conduct a 30-day pre-construction survey for BUOW. The results of the single one-day survey would be submitted to the City of Wildomar prior to obtaining a grading permit. If BUOW are not detected during the pre-construction survey, no further mitigation is required. If BUOW are detected during the pre-construction survey, the Project applicant and a qualified consulting biologist will be required to prepare and submit for approval a BUOW-relocation program. The report shall be submitted to the Applicant and the City of Wildomar concurrently.

5. In accordance with MSHCP provisions limiting the use of exotic/invasive plant species, the Project's landscape plan shall exclude invasive species such as crimson fountain grass (*Pennisetum setaceum*), pampas grass (*Cortaderia selloana*), giant reed (*Arundo donax*), tree of heaven (*Ailanthus altissima*),

Eucalyptus, and other ornamental landscape elements on the list of exotic invasive plants utilized by the Riverside Conservation Authority.

6. The Project Developer shall implement dust control and all other project-specific Storm Water Pollution Prevention Plan ("SWPPP") measures during grading and construction required by the County of Riverside.

7. TERACOR has determined that Riparian/Riverine and Vernal Pool resources are absent. Prior to the issuance of grading permits, the Project should also be reviewed by a Permitted Fairy Shrimp Biologist to confirm TERACOR's determination of absence or make recommendations for additional investigation if determined appropriate.

8. TERACOR determined that the subject site does not contain resources likely to fall under the jurisdiction of the U.S. Army Corps of Engineers or the California Department of Fish and Wildlife (CDFW) and the California Regional Water Quality Control Board – San Diego Region (Water Board). The City may accept this determination, or seek second party review of this assessment to establish concurrence with this determination.

Level of Significance After Mitigation

Implementation of the proposed mitigation measures described above would reduce all the impacts to the biological resources discussed in this biological assessment to a level considered not significant.

Appendix A
Faunal Species Observed

Birds

Birds were observed with 10x40 binoculars. Birds were identified following *The Sibley Field Guide to Birds 2nd Edition* (2014), and updated to conform to changes in nomenclature consistent with the most recent American Ornithological Society checklist. Non-native species have been noted below with an asterisk (*) following the scientific name.

Scientific Name	Common Name
Aegithalidae	Bushtits
Psaltriparus minimus	bushtit
Columbidae	Pigeons and Doves
Zenaida macroura	mourning dove
Corvidae	Crows, Jays and Magpies
Aphelocoma californica	California scrub-jay
Corvus brachyrhynchos	American crow
Corvus corax	common raven
Fringillidae	Finches
Haemorhous mexicanus	house finch
Spinus psaltria	lesser goldfinch
Mimidae	Mockingbirds, Thrashers
Mimus polyglottos	northern mockingbird
Passerellidae	New World Sparrows
Melozone crissalis	California towhee
Passeridae	Old World Sparrows
*Passer domesticus**	house sparrow
Sturnidae	Starlings
*Sturnus vulgaris**	European starling
Sylviidae	Gnatcatchers
Chamaea fasciata	wrentit
Trochilidae	Hummingbirds
Calypte anna	Anna's hummingbird

Scientific Name	Common Name
Tyrannidae	Flycatchers
Sayornis nigricans	black phoebe

Mammals

Species seen or detected via sign are listed. Nomenclature follows *Peterson Field Guides: Mammals of North America* (Reid 2006). Non-native species have been noted below with an asterisk (*) following the scientific name.

Scientific Name	Common Name
Leporidae	Rabbits and Hares
Sylvilagus audubonii	Audubon's cottontail
Muridae	Rats and Mice
Neotoma fuscipes	dusky-footed woodrat
Sciuridae	Squirrels, Chipmunks and Marmots
Ostospermophilus beecheyi	California ground squirrel

Amphibians and Reptiles

Identification of amphibians and reptile species were made visually, with nomenclature following R.C. Stebbins (2003) *A Field Guide to Western Reptiles and Amphibians,* third edition, updated to conform to the most recent changes in nomenclature utilizing The Center for North American Herpetology.

Scientific Name	Common Name
Reptiles	
Lizards	
Phrynosomatidae	Zebra-tailed, Fringe-toed, Spiny, Tree, Side-Blotched, and Horned Lizards
Sceloporus occidentalis	western fence lizard
Snakes	
Viperidae	Vipers
Crotalus oreganus helleri	southern Pacific rattlesnake

Appendix B
Floral Species Observed

Vegetation List

The species listed below were detected within the subject property during field surveys performed in 2022. Field identifications are a composite list prepared by S. Reed and M. Long. Scientific names follow *The Jepson Manual, Vascular Plants of California - Second Edition*, 2012, and have been updated following the Jepson Online Interchange for California Floristics database (2014). Non-native species have been noted below with an asterisk (*) following the scientific name. Exotic trees were not systematically included in the list, although some well-known species are.

Scientific Name	Common Name
Adoxaceae	Muskroot Family
Sambucus nigra ssp. *caerulea*	blue elderberry
Anacardiaceae	Sumac Family
*Schinus terebinthifolius**	Brazilian pepper tree
Apiaceae	Carrot Family
Daucus pusillus	rattlesnake weed
Apocynaceae	Dogbane Family
*Nerium oleander**	oleander
*Vinca major**	greater periwinkle
Arecaceae	Palm Family
*Washingtonia robusta**	Mexican fan palm
Asteraceae	Sunflower Family
Achillea millefolium	common yarrow
Artemisia californica	California sagebrush
Baccharis pilularis	coyote brush
Baccharis salicifolia	mulefat
*Centaurea solstitialis**	yellow star-thistle
Corethrogyne filaginifolia	California-aster
Deinandra fasciculata	fascicled tarplant
Encelia farinosa	brittlebush
Ericameria linearifolia	narrowleaf goldenbush
Erigeron canadensis	horseweed
Heterotheca grandiflora	telegraph weed
*Lactuca serriola**	prickly lettuce
Pseudognaphalium californicum	ladies' tobacco
*Oncosiphon piluliferum**	stinknet
*Taraxacum officinale**	common dandelion

Scientific Name	Common Name
Boraginaceae	Borage Family
Amsinckia intermedia	common fiddleneck
Amsinckia menziesii	Menzies' fiddleneck
Cryptantha intermedia	popcorn flower (common)
Heliotropium curassavicum	salt heliotrope
Pectocarya sp.	popcorn flower
Brassicaceae	Mustard Family
*Brassica nigra**	black mustard
*Hirschfeldia incana**	short pod mustard
*Sisymbrium orientale**	Oriental mustard
Chenopodiaceae	Goosefoot Family
*Atriplex semibaccata**	Australian saltbush
Fabaceae	Legume Family
Acmispon glaber	deerweed
*Melilotus officinalis**	sweetclover
Geraniaceae	Geranium Family
*Erodium cicutarium**	red-stem filaree
Juglandaceae	Walnut Family
*Carya illinoinensis**	pecan
Lamiaceae	Mint Family
*Marrubium vulgare**	white horehound
Trichostema lanceolatum	vinegarweed
Meliaceae	Mahogany Family
*Melia azedarach**	China berry
Myrtaceae	Myrtle Family
*Eucalyptus sideroxylon**	red iron bark
Oleaceae	Olive Family
*Fraxinus uhdei**	shamel ash
*Olea europaea**	European olive
Onagraceae	Evening Primrose Family
Camissoniopsis micrantha	small-flowered evening-primrose
Pinaceae	Pine Family
*Pinus eldarica**	Afghan pine

Scientific Name	Common Name
Poaceae	Grass Family
*Bromus diandrus**	ripgut grass
Bromus madritensis ssp. *rubens**	red brome
*Bromus tectorum**	cheat grass
*Hordeum murinum **	foxtail barley
Melica imperfecta	onion grass
Polygonaceae	Buckwheat Family
Eriogonum davidsonii	Davidson's buckwheat
Eriogonum fasciculatum	California buckwheat
*Rumex crispus**	curly dock
Salicaceae	Willow Family
Salix laevigata	red willow
Solanaceae	Nightshade Family
Datura wrightii	jimson weed
*Nicotiana glauca**	tree tobacco

1.0 Introduction

Purpose

Step I Habitat Assessment and Step II, Part A Focused Burrow Survey

TERACOR Resource Management, Inc. ("TERACOR") initially conducted a focused habitat suitability assessment on 16 March 2022 to evaluate the biological resources on-site to determine if: 1) suitable burrowing owl (*Athene cunicularia*) ("BUOW") habitat is present on the10.12-acre site, and 2) determine if any burrows on-site could potentially be utilized by BUOW.

Due to the presence of suitable open habitat on the project site, it's proximity to open habitat to the northeast, and the prevalence of California ground squirrel (*Otospermophilus beecheyi*) burrows and activity on the site, TERACOR conducted a Step II, Part A Focused Burrow Survey on the subject property on 11 April 2022 to locate and record California ground squirrel burrows on-site. Any habitat area within the Riverside County Multi-Species Habitat Conservation Plan area with sparsely-vegetated ground and supporting ground squirrel burrows is generally considered to be potentially suitable habitat for BUOW. BUOW has historically occurred in the Plan area and is known to opportunistically utilize ground squirrel burrows.

TERACOR examined the outer structure of each burrow encountered and mapped for evidence of BUOW occupation. We concluded there were a relatively high number of potentially-occupiable burrows present on-site, but that all potentially suitable burrows lacked any BUOW diagnostic sign. Nonetheless, due to the presence of potentially suitable BUOW burrows, the open nature of much of the subject property, and the relatively high mobility of the organism, TERACOR recommended focused surveys be conducted within the BUOW nesting season.

Step II, Part B Focused Burrowing Owl Survey

After conducting the initial habitat assessment on 16 March 2022 and burrow survey on 11 April 2022, TERACOR proceeded with focused surveys on the subject property on 11 April, 27 April, 09 May, and 24 May 2022. These surveys were performed to determine the following:

1. Confirm the geographic extent of any suitable BUOW habitat present on the site;
2. Assess whether burrows detected on-site showed any evidence of utilization by BUOW;
3. Detect and record all parameters of occupation of BUOW if detected; and
4. Establish the number of BUOW individuals if encountered on-site.

Information contained herein is based on known BUOW life history parameters as described in MSHCP documentation and information published by the California Department of Fish and Wildlife, our field reconnaissance within the above-stated survey dates, and other pertinent information. As required by the Survey Guidelines for the MSHCP Plan Area, we visually scanned perimeters of the subject property, but these lands have been developed and we made no intentional entry into adjoining properties as we did not have permission from property owners to do so. On-site, we conducted transect surveys across suitable areas. *Exhibit 3 – Transect Locations* illustrates survey routes.

Property Location

The proposed project Wildomar Crossroads, a proposed mixed-use project, is located at 24850-23980 Catt Road, Wildomar, California 92595. It lies within the southeast portion of the City of Wildomar, at the northwest intersection of Clinton Keith Road and Wildomar Trail. Regional access to the project site is provided by Interstate 15 (I-15) located approximately 0.15 miles southwest and Interstate 215 (I-215) located 3.8 miles east.

The property is geographically located within Section 36 of Township 6 South, Range 4 West of the *Murrieta, California 7.5 Minute Series U.S.G.S. Topographic Quadrangle*, as depicted in the attached *Exhibit 1 - USGS Topo – Pre-disturbance* and *Exhibit 2 – USGS Topo – Current.*

The site is identified by Assessor's Parcel Numbers 376-410-015, 376-410-016, 376-410-017, and 376-410-021.

Project Description

The proposed project would consist of demolishing the existing structures and other site improvements. A new mixed-use development, including a multi-family complex and commercial shopping center would be constructed. The Wildomar Crossroads site plan is incorporated in the application package.

The **residential** portion of the project is proposed for 4.48 acres of the site and includes 150 units ranging from 580 SF to 1,115 SF and will offer studio (8%), one-bedroom (54%), and two-bedroom (38%) plans with an anticipated 9 plan types in total. This development is proposed on the western side of the site with parking along the western and northern edges. The approximate density is 33.5 du/ac.

The **commercial** portion of the project is proposed for the eastern 4.53 acres of the site and includes a market, shops, and restaurants. The 23,104 square foot Sprouts Farmers Market and 5,087 square foot attached building for shops and quick serve restaurants are located on the northern end of the commercial site. The restaurants are located at the southern end of the commercial site. Pad 1 is located in the southwest corner and is planned as a 2,750 square foot drive-thru. Pad 2 is located on the southeast corner and includes 3,348 square feet of restaurant space as well as a 1,133 square feet coffee drive-thru. The restaurants, consist of a maximum of 12,318 square feet of indoor space and approximately 4,500 square feet of outdoor eating areas and multi-function gathering space which will be open for breakfast, lunch and dinner daily. The hours of operation are yet to be determined. Up to 50 employees would be expected onsite at any one time.

Site Conditions

This property has undergone substantial modifications over several decades. In addition to the rural residential development and animal husbandry structures located in the southwest and west side of the property, it appears various other agricultural projects were undertaken on-site, including development of outbuildings, irrigation systems, and an orchard. A USGS-designated blueline drainage formerly traversed the site, but this feature was beheaded by the construction of Tract No. 30155 (to the north and west of the

property). This action profoundly affected the functionality of the drainage, since it was cut-off from its' natural upper watershed. Further, the drainage was truncated by the full-width development of both Clinton Keith Road and Wildomar Trail and existing development to the south and west. These actions caused the relictual drainage feature to be isolated, and functional values either eliminated of significantly diminished. Any residual drainage derived from the site is shunted unground to the west and south through urban development.

There are also numerous historic disturbances on the site. These disturbances include building construction, agricultural modifications, and grading activity. Our analyses of historic aerial imagery suggest that most grading modifications occurred at the time Tract No. 30155 to the north and west was constructed. This fill appears to be comprised primarily of unconsolidated sandy soils. These dirt spoils piles likely absorb a good deal of rainfall due to their porosity. There remains some evidence of sheet-flow in lesser-disturbed areas. A large hillock lies centrally on the site. It also appears to be a stockpile of earthen material. Rural-residential farm-like development and associated ornamental trees such as pine, olive, and Peruvian pepper are present across the site. Though the home appears occupied, all associated sheds and barn-type structures are dilapidated. Despite all these disturbances, the high number of ground-squirrel (*Ostospermophilus beecheyi*) burrows on-site and the presence of open fields led TERACOR to conclude that BUOW focused surveys were necessary.

Background

BUOW is a **California Department of Fish and Wildlife** ("CDFW") "Species of Special Concern – Second Priority." Both the federal and state resource agencies have declined to list the species as endangered or threatened based on abundance of the species in some California locations and other western states. The Western Riverside County Multiple Species Habitat Conservation Plan ("MSHCP") affords special consideration to BUOW due largely to localized declines and requires evaluations as to their potential presence within specified survey areas across the Plan Area. BUOW can inhabit grasslands, deserts, and scrublands characterized by low-growing vegetation. Burrows are the essential component of BUOW habitat, which provide protection, shelter, and nests for BUOW (Henny and Blus 1981). BUOW typically utilize burrows made by fossorial mammals, such as California ground squirrels and/or even more secretive mammals such as American badger (*Taxidea taxus*). BUOW are also known to utilize man-made structures, such as cement culverts, pipes, asphalt or wood debris piles, and in openings beneath cement or asphalt pavement (*Burrowing Owl Survey Instructions*, Riverside County Environmental Planning Department ["EPD"], 29 March 2006).

BUOW may utilize a site for breeding, wintering, foraging, and/or migration stopovers. BUOW often exhibit high site fidelity, reusing burrows year after year (Rich 1984, Feeney 1992, Consortium Guidelines). The Guidelines also state a site may be assumed "occupied" if at least one (1) BUOW has been observed occupying a burrow within the last three (3) years, although more recent evidence would appear prudent to assert "active occupation" by a species not considered endangered or threatened. Occupation status of suitable BUOW habitat can be verified at a site by an observation of at least one (1) BUOW, or, alternatively, its molted feathers, cast pellets with characteristic prey remains, prey remains, eggshell fragments, or excrement at or near a burrow entrance (Burrowing Owl Consortium, *Occupied Burrowing Owl Habitat*). Other occupation indicators include Orthoptera (grasshoppers, katydids, and crickets) and Coleoptera (beetles) exoskeletal material in the immediate vicinity of the burrow.

2.0 Methods

Burrowing Owl Survey Methods

There are no applicable formal federal or state-adopted Survey Protocols for BUOW, however, the **County of Riverside** adopted the *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area* (Environmental Programs Department ["EPD"], 2006) ("Survey Instructions"). The Survey Instructions were published to replace the *Burrowing Owl Consortium Guidelines* to address consistency with:

1) Specific conservation requirements of the MSHCP for BUOW, and

2) Ensure direct mortality of BUOW is avoided through implementation of preconstruction surveys.

Step I: Habitat Assessment: is the first step in the survey process to assess the presence/absence of BUOW, specifically BUOW habitat, on the project site. TERACOR conducts physical walkovers of individual sites to determine if BUOW habitat, as described above, is present on-site. If suitable habitat is found on-site, then walkovers of an approximate 150 meter (500 feet) buffer zone surrounding the project is required. If permission to access surrounding private properties has not been granted, then TERACOR field personnel visually inspect surrounding properties utilizing 10x40 or 8x32 binoculars.

Further, if BUOW habitat is present on-site, TERACOR subsequently conducts a Step II: Locating Burrows and Burrowing Owls Survey. Step II surveys must be conducted during the breeding season (March 1 to August 31), and must be comprised of a minimum of one (1) site visit. Moreover, all Step II surveys are to be performed during weather that is conducive to observing owls outside of burrow complexes, and are not accepted if they are conducted during rain, high winds (>20 mph), dense fog, or temperatures over 90°F. BUOW sign may not be detectable if surveys are conducted within five days following rain.

Step II surveys are comprised of two (2) components; *Part A: Focused Burrow Surveys* and *Part B: Focused Burrowing Owl Surveys*.

Part A: Focused Burrow Surveys consist of a systematic survey for burrows by walking through suitable habitat areas. Suitable habitat areas are walked at maximum transect intervals spaced at approximately 30 meters (100 feet), with transect interval variations to accommodate terrain, vegetation density, and ground surface visibility. Project sites of 100 acres or more are generally transected by two (2) or more TERACOR field personnel. Burrow Surveys are physical inspections of burrows located within suitable habitat or potential foraging habitat on-site. If BUOW burrows or BUOW are recorded during surveys, BUOW and BUOW burrow locations are mapped using a hand-held G.P.S. unit and on aerial or topographic mapping. In contrast, if no potential burrows are observed during burrow surveys then no further surveys are required.

Part B: Focused Burrowing Owl Surveys are conducted if burrows which could potentially support BUOW are determined to be present during Part A: Focused Burrow Surveys. Part B surveys are conducted on four (4) separate survey dates, though the first may be conducted concurrently with the Focused Burrow

Survey. Initially, these surveys are performed by scanning all suitable habitat areas, mapped burrows, owl sign, and owls both on-site utilizing 10x40 or 8x32 binoculars. Off-site areas in all directions have been developed with urban infrastructure, housing and commercial development. Therefore, those adjacent developed properties were not visually scanned. Subsequently, TERACOR field personnel conduct walkovers at maximum transect intervals spaced at between 20 to 25 meters (approximately 60 - 75 feet), with transect interval variations to accommodate terrain, vegetation density, and ground surface visibility.

Step III: Reporting Requirements: states that once the appropriate surveys have been completed, a report shall be submitted to EPD, which outlines the survey methodologies, transect width, duration, conditions, and results of the survey. The property, however, is located within the City; therefore, the report will be submitted to the City. Further, appropriate maps showing BUOW burrow locations and/or individual BUOW sightings must be included in the report.

Preconstruction Surveys: must be conducted on all subject properties containing burrows or suitable habitat (based on Step I: Habitat Assessment) whether owls were detected or not within 30 days prior to ground disturbance to avoid direct take of BUOW (MSHCP Species – Specific Objective 6).

CNDDB Query

The State of California maintains the *Natural Diversity Data Base* ("CNDDB"), which is a computerized inventory of information on the location of California rare, threatened, endangered, and otherwise sensitive plants, animals, and natural communities. Updates to the CNDDB are issued monthly. Valuable information regarding the species occurrence, population numbers, observers, occurrence dates and potential threats to the organism(s) are included for each occurrence record. TERACOR queried the *Murrieta Quadrangle* and surrounding quadrangles specifically for BUOW location records. The results of that query are presented below in Section 3.0.

Soil Analysis

In accordance with the MSHCP, all biological surveys must include a description of soils present on-site. TERACOR, therefore, based our soil survey analysis on the **Natural Resources Conservation Service** ("NRCS") Web Soil Survey of the Western Riverside Area, California mapped soils on the property and the United States Department of Agriculture, Soil Survey - Western Riverside Area, California. Soil types present on the property are presented below in Section 3.0.

Vegetation Classifications

Literature reviewed from which plant names and identifications, vegetation communities and associations, and relevant descriptions were derived include: *The Jepson Manual, Vascular Plants of California - Second Edition* (Baldwin et. al. 2012), the CDFW's *California Natural Community List* (2021), and *A Manual of California Vegetation - Second Edition* (Sawyer, Keeler-Wolf and Evens 2009). A complete list of references has been included as Appendix D.

Field Visits

TERACOR Principal S. Reed, conducted a Step II, Part A Focused Burrow Survey on 11 April 2022 to obtain G.P.S. locations of all potentially suitable burrows. Mr. Reed conducted the Step II, Part B Focused Burrowing Owl Survey on 11 April, 27 April, 09 May, and 24 May 2022 due to the known presence of suitable habitat and potentially suitable burrows.

Weather conditions during the survey dates were favorable for detection of the species and are presented in *Table 1 - Meteorological Data*, presented below.

Table 1 - Meteorological Data

Date	Surveyors	Time of Survey		Temperature (°F)		Percent Cloud Cover		Wind Speed (mph)		Annual Precipitation to Date (inches)
		Start	End	Start	End	Start	End	Start	End	
Focused Surveys										
11 April 2022	S. Reed	0910	1130	59	66	80	80	3-7	5-9	8.89
27 April 2022	S. Reed	0800	0900	58	62	0	0	4-8	5-8	9.12
09 May 2022	S. Reed	0900	1000	60	64	partly cloudy	partly cloudy	4-8	3-9	9.12
24 May 2022	S. Reed	0700	0830	57	62	0	0	3-5	3-7	9.12

Source: TERACOR field investigators
*Annual precipitation data was obtained from http://weathercurrents.com/murrieta. The annual precipitation season extends from July 1 to June 30.

Fieldwork was conducted on foot through the entire site at transects spaced at approximately 10 meters apart (no more than 30 feet). *Exhibit 3 – Transect Locations*, attached, depicts TERACOR field personnel's 2022 recorded squirrel burrow and primary transect locations using a GPS device. Faunal and floral species present were identified in the field and recorded by S. Reed. All open areas of the property were considered suitable habitat for BUOW; the residential structure, dilapidated buildings and dense ornamental vegetation were not surveyed.

3.0 Results

Fauna

TERACOR field personnel detected avian, mammal, and reptilian species during focused surveys on-site.

Avian species detected included, but were not limited to, mourning dove (*Zenaida macroura*), house finch (*Haemorhous mexicanus*), bushtit (*Psaltriparus minimus)*, house sparrow (*Passer domesticus*), black phoebe (*Sayornis nigricans*), northern mockingbird (*Mimus polyglottos),* lesser goldfinch (*Spinus psaltria*), California scrub jay (*Aphelocoma californica*), American crow (*Corvus brachyrhynchos)*, wrentit (*Chamaea fasciata*), California towhee (*Melozone crissalis*), and Anna's hummingbird (*Calypte anna*).

Mammals detected included California ground squirrel (*Ostospermophilus beecheyi),* dusky-footed woodrat (*Neotoma fuscipes*) (nest), and Audubon's cottontail (*Sylvilagus audubonii).*

Southern Pacific rattlesnake (*Crotalus oreganus helleri*) was found to be present on-site. Western fence lizard (*Sceloporus occidentalis*) was also commonly detected.

A complete list of faunal species detected on-site is provided in Appendix A – Faunal Species Observed.

Vegetation

Geographically, the property is located within the California Floristic Province Southwestern California region, specifically in the South Coast subregion. The South Coast subregion extends along the Pacific Coast from Point Conception to Mexico.

Despite disturbances on-site, there are natural vegetation alliances present on the property. Designations for these habitat elements and their respective California Natural Community Codes ("CaCodes") have been described in the following text. Vegetation is depicted in the attached *Exhibit 4 - Vegetation Alliances*, which includes acreage totals for each vegetation alliance identified.

Riparian Vegetation

There are no functional riparian communities on the site. There are several scattered elderberry shrubs (considered by some to be trees) but these elderberries are not stream-associated on this property. Additionally, according to the U.S. Army Corps of Engineers' *List of Plants Which Occur in Wetlands*, mulefat can be found in wet areas 50% of the time, and in upland areas 50% of the time (i.e., facultative species). In this case there are no riparian areas on the site.

Upland Vegetation

Upland Mustards/Fiddleneck Fields (MUS/FID) (CaCode 42.011.05/42/011.03): This is the most common alliance mapped on-site. The total acreage is 7.94 acres. Mostly comprised of non-native grasses and weeds, there were also native herbaceous plants such as popcorn flower (*Amskinkia* sp.), vinegarweed (*Trichostema lanceolatum*), and stinknet (*Oncosiphon piluliferum*). This alliance comprised almost eight (8) acres on the property, and was considered generally suitable for BUOW.

California Buckwheat Scrub (CABU) (CaCode 32.040.02): CABU is scattered mostly in and around the former blueline drainage and in small cells along the east property line. This upland plant alliance can sometimes be present in BUOW habitat in low densities, but it cannot be dense which would not allow BUOW to detect lurking predators. This alliance also contained a good deal of California-aster (*Corethrogyne filaginifolia*). CABU comprises 0.72 acre on-site.

Narrowleaf Goldenbush Scrub (GB) (CaCode 38.125.01): TERACOR mapped this alliance as a separate alliance, although it is represented in only 0.002 acre on-site. Formerly, before current mapping methods suggested by RCA Guidelines and the California Department of Fish and Wildlife, we would have grouped goldenbush with buckwheat and brittlebush into one mixed sage scrub community type. It can grow in dense patches and is not considered the type of habitat that BUOW can successfully utilize.

Coyote Brush Scrub (CBS) (CaCode 32.060.00): Coyote brush scrub is found in a number of small cells concentrated in areas where drainage is somewhat impeded and soils can retain moisture. As an upland plant that favors disturbed conditions, it generally will not grow in creeks and depressions and similar areas that are seasonally inundated, as it requires moist but not wet soil, therefore it is considered an upland plant community. The total area of coyote brush scrub on-site is 0.07 acre.

Mulefat Thickets (MT) (CaCode 63.510.00): Mulefat thicket comprises 0.05 acre of area on the property. It is mostly located in two locations on-site; 1) at the base of a human-constructed 2:1 along the Wildomar Trail right-of-way, and also at the base of another slope found on the west property line. Impeded drainage along the base of the slope cannot move past the block wall constructed behind homes along this westerly edge of the property, and there was no evidence of southward flow. We assumed therefore that substrates absorb the rain that falls on the slope, keeping the slope moist enough to support mulefat which is a facultative species known to occur in uplands approximately 50% of the time, and in wet areas 50% of the time.

Brittlebush Scrub (EN) (CaCode 33.030.01): Brittlebush scrub locally consists of *Encelia farinosa* and comprises only 0.013 acre on the Project site. It is common in the Wildomar area, and is always considered an upland plant community.

Blue Elderberry Stand (E) (CaCode 63.410.01): Usually elderberries grow on floodplains, or saddles between hilltops, or in ravines where soil moisture is slightly elevated but not saturated, such as on the margin of riparian woodlands and riparian scrub communities. It exists in a few small cells on-site, comprising just 0.012 acre.

Ornamental (O) (No corresponding CaCode): This area consisted of 0.58 acre. Species include pine trees (*Pinus* sp.), European olive (*Olea europaea*), domesticated pecan (*Carya illinoinensis*), and Peruvian pepper trees. These ornamental trees are found most densely around the residential structure, but are also scattered around the site.

Disturbed (D) (No corresponding CaCode): Though almost all the site exhibits some degree of disturbance, areas that cannot be considered habitat of any type include the residential structures, driveways, and dilapidated farm structures. This area comprised 0.73 acre.

CNDDB Query Results

The CNDDB query of the *Wildomar, Romoland, Lake Elsinore and Murrieta* Quadrangles resulted in numerous recorded sightings of BUOW within the four (4) quadrangles. The nearest sighting to the subject site occurred 0.2 mile south of the intersection of Garden Street and Corydon Road. The sighting was

approximately 4.0 miles northwest of the project site; two (2) BUOW adults were observed utilizing a broken concrete pipe structure as a burrow on 18 June 2007. This recorded sighting nearest to the subject property is depicted in the attached *Exhibit 5 – Burrowing Owl CNDDB Locations*.

Soil Analysis Results

The property is historically comprised of three (3) soil types, according to the NRCS *Web Soil Survey: Western Riverside Area, California*. It should be noted that areas on which fill has been placed are now overcovered with unconsolidated fill. Other areas on-site have been modified to support historic uses. In these disturbed and over-covered areas native soils are not present at the surface. The soils historically present on the property are as follows:

Table 2 - Soil Types

Code	Soil Type	Location
HcC	Hanford coarse sandy loam, 2 to 8 percent slopes	This soil type follows the orientation of the former blueline stream on-site. The coarse sand likely reflects the depositional nature of the former streamcourse. It would be highly porous and not prone to ponding. Course sandy loams do not as structurally cohesive or more dense soils, therefore, burrows would be expected to be less stable.
MnD2	Monserate sandy loam, shallow, 5 to 15 percent slopes, eroded	Found only in the northeast corner of the property, this soil may not persist on the site. Sandy loams are generally quite porous and easily excavated by ground-dwelling animals.
PID	Placentia fine sandy loam, 5 to 15 percent slopes	This type of soil would be suitable for burrowing animals, and would be unlikely to pond or retard the percolation of water. It was naturally present over most of site.

All native soils within the property could be considered structurally suitable for occupation by BUOW and other burrowing organisms. The attached *Exhibit 6 – Soils* depicts the soils types described above and their historical locations across the property.

Survey Results

On-Site

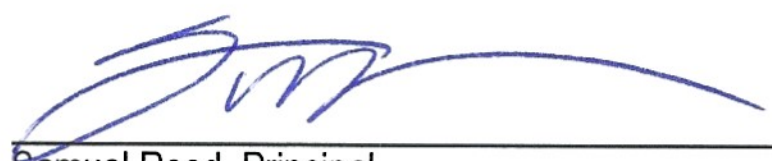
No BUOW were observed during the course of the four (4) focused surveys performed in 2022. TERACOR detected numerous California ground squirrel burrows and burrow complexes on the property as depicted in the attached *Exhibit 8 – Suitable Burrow Locations*. Burrows and burrow complexes were generally concentrated in the southern portion of the subject site. No BUOW utilization sign, however, was detected within or near any of these burrows. Photographs were taken during TERACOR's field surveys, and are depicted in the attached *Exhibit 7 – Site Photos.*

TERACOR also detected other small mammal burrows throughout the property; however, these burrows appeared to be utilized by deer mice (*Peromyscus* sp.), pocket mice (*Chaetodipus* sp.) or kangaroo rats (*Dipodomys* sp.) and were considered too small to be utilized by BUOW.

The G.P.S. locations of the potential owl burrows detected are presented in *Appendix C – G.P.S. Locations*.

Off-Site

TERACOR did not obtain permission to transect or visually survey adjacent properties for BUOW. The property to the east across Wildomar Trail is developed and could not support BUOW. The properties to the south and west of the subject site are comprised respectively of a commercial center and an existing residential tract, therefore, they were not considered suitable for BUOW and were not investigated.

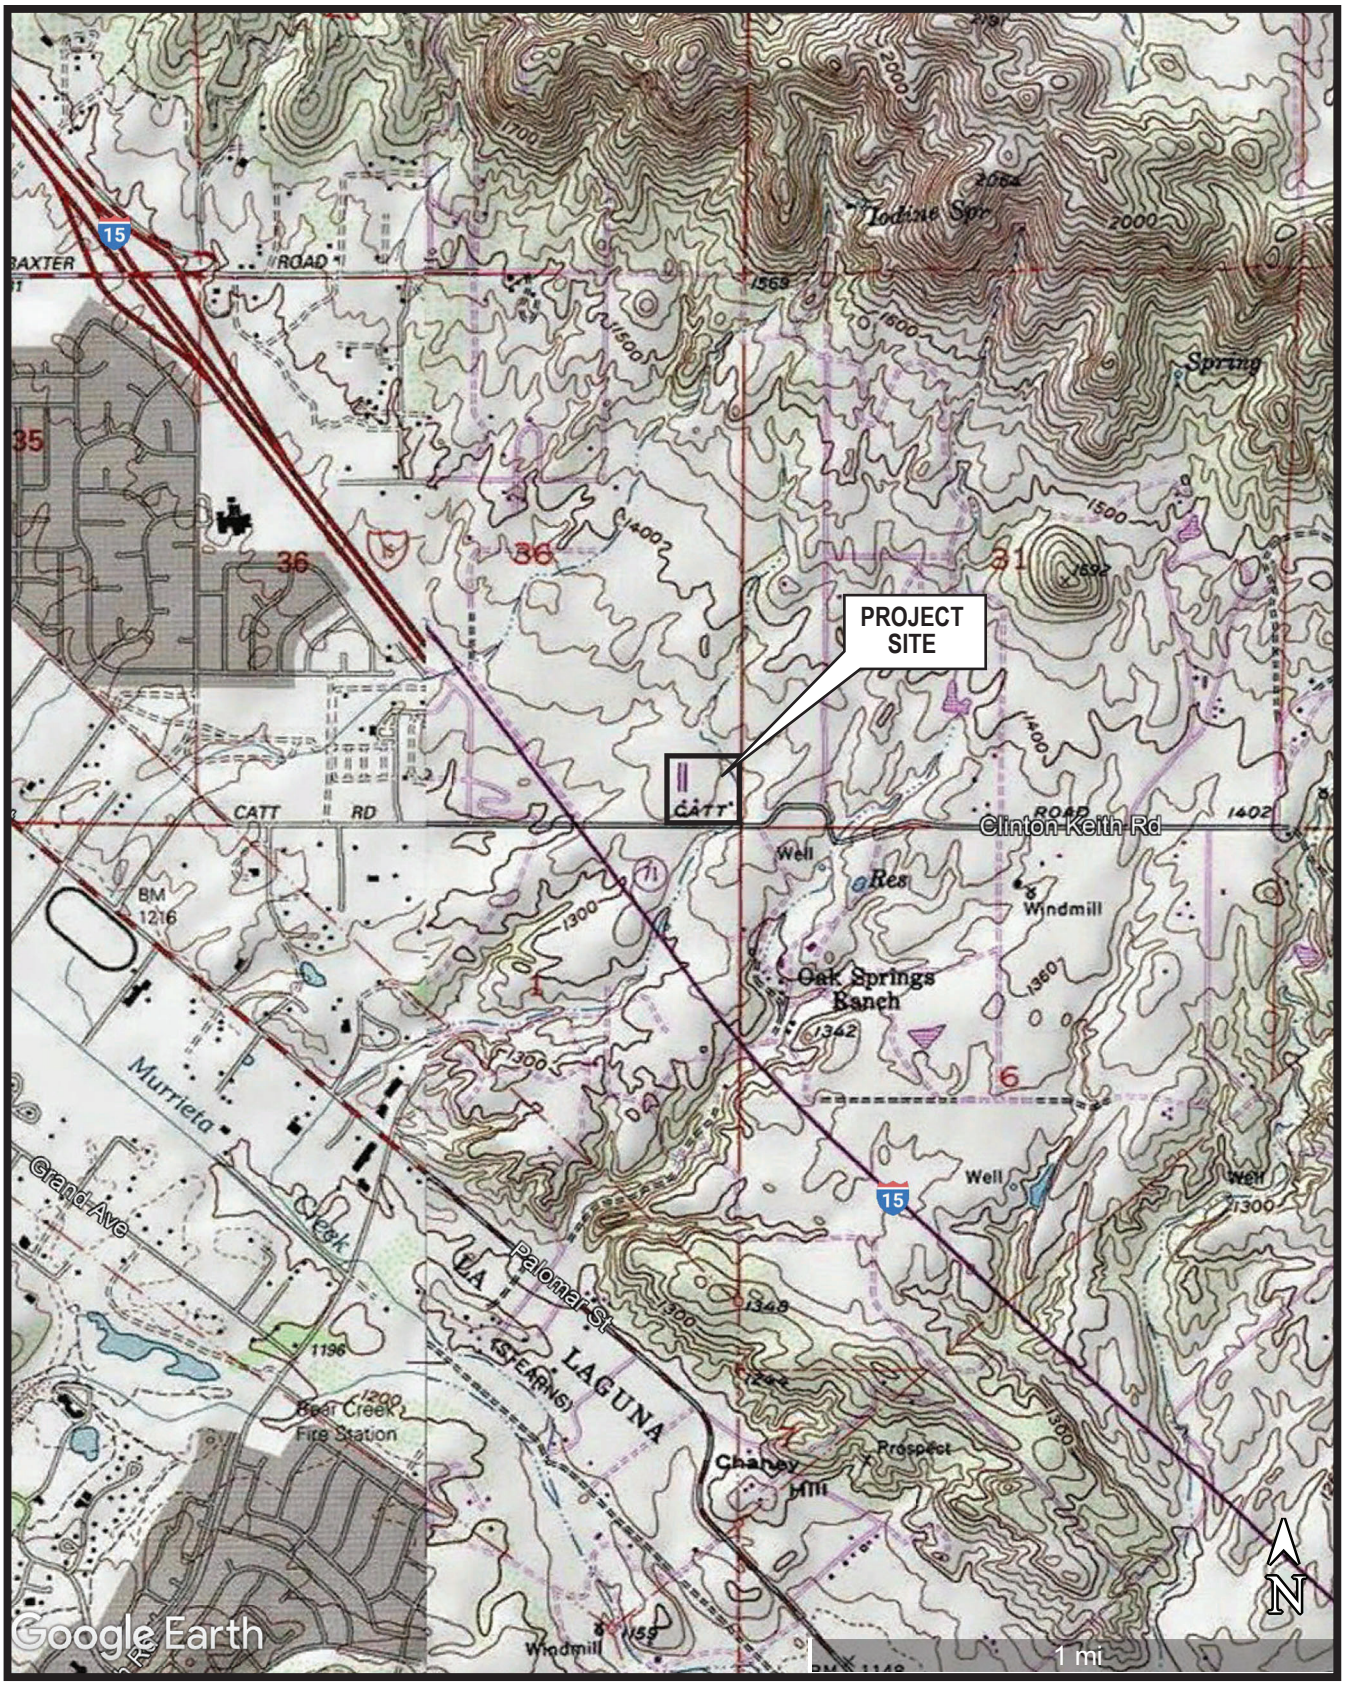


4.0 Conclusion and Recommendations

We detected no evidence that indicated BUOW inhabit the site or general area. No BUOW were observed during TERACOR's 2022 field surveys on 16 March, 11 April, 27 April, 09 May, and 24 May 2022. Evidence of active fossorial mammal utilization was common throughout the property. These burrows lacked any BUOW sign. No BUOW were detected in 2022.

In accordance with MSHCP requirements, however, TERACOR recommends conducting a pre-construction survey within 30 days prior to ground disturbance since suitable habitat is present on-site.

A list of references is presented in Appendix D – References.



CERTIFICATION: I hereby certify that the statements and exhibits contained in this report present data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge.

Suitable Burrow Locations

Photo 1 - View of property taken from the northwest corner of the site.

Photo 2 - Southwest corner of site, facing west.

Photo 3 - The site is heavily disturbed. A large berm comprised of earthen fill material was placed in the center of the site. Subsequent disturbances include these spoils piles dumped in the foreground, and disking where feasible for weed control.

Photo 4 - Northeast quadrant of property facing north. Emplaced fill which comprises the central hillock on-site (to the left of the photo) has been present long enough that a CA Buckwheat Scrub alliance has formed on much of it.

Appendix A
Faunal Species Observed

Birds

Birds were observed with 10x40 binoculars. Birds were identified following *The Sibley Field Guide to Birds 2nd Edition* (2014), and updated to conform to changes in nomenclature consistent with the most recent American Ornithological Society checklist. Non-native species have been noted below with an asterisk (*) following the scientific name.

Scientific Name	Common Name
Aegithalidae	**Bushtits**
Psaltriparus minimus	bushtit
Columbidae	**Pigeons and Doves**
Zenaida macroura	mourning dove
Corvidae	**Crows, Jays and Magpies**
Aphelocoma californica	California scrub-jay
Corvus brachyrhynchos	American crow
Corvus corax	common raven
Fringillidae	**Finches**
Haemorhous mexicanus	house finch
Spinus psaltria	lesser goldfinch
Mimidae	**Mockingbirds, Thrashers**
Mimus polyglottos	northern mockingbird
Passerellidae	**New World Sparrows**
Melozone crissalis	California towhee
Passeridae	**Old World Sparrows**
*Passer domesticus**	house sparrow
Sturnidae	**Starlings**
*Sturnus vulgaris**	European starling
Sylviidae	**Gnatcatchers**
Chamaea fasciata	wrentit

Scientific Name	Common Name
Trochilidae	**Hummingbirds**
Calypte anna	Anna's hummingbird
Tyrannidae	**Flycatchers**
Sayornis nigricans	black phoebe

Mammals

Species seen or detected via sign are listed. Nomenclature follows *Peterson Field Guides: Mammals of North America* (Reid 2006). Non-native species have been noted below with an asterisk (*) following the scientific name.

Scientific Name	Common Name
Leporidae	**Rabbits and Hares**
Sylvilagus audubonii	Audubon's cottontail
Muridae	**Rats and Mice**
Neotoma fuscipes	dusky-footed woodrat
Sciuridae	**Squirrels, Chipmunks and Marmots**
Ostospermophilus beecheyi	California ground squirrel

Amphibians and Reptiles

Identification of amphibians and reptile species were made visually, with nomenclature following R.C. Stebbins (2003) *A Field Guide to Western Reptiles and Amphibians,* third edition, updated to conform to the most recent changes in nomenclature utilizing The Center for North American Herpetology.

Scientific Name	Common Name
Reptiles	
Lizards	
Phrynosomatidae	**Zebra-tailed, Fringe-toed, Spiny, Tree, Side-Blotched, and Horned Lizards**
Sceloporus occidentalis	western fence lizard
Snakes	
Viperidae	**Vipers**
Crotalus oreganus helleri	southern Pacific rattlesnake

Appendix B
Floral Species Observed

Vegetation List

The species listed below were detected within the subject property during field surveys performed in 2022. Field identifications are a composite list prepared by S. Reed and M. Long. Scientific names follow *The Jepson Manual, Vascular Plants of California - Second Edition*, 2012, and have been updated following the Jepson Online Interchange for California Floristics database (2014). Non-native species have been noted below with an asterisk (*) following the scientific name. Exotic trees were not systematically included in the list, although some well-known species are.

Scientific Name	Common Name
Adoxaceae	**Muskroot Family**
Sambucus nigra	black elderberry
Anacardiaceae	**Sumac Family**
*Schinus molle**	Peruvian pepper tree
Apiaceae	**Carrot Family**
Daucus pusillus	rattlesnake weed
Apocynaceae	**Dogbane Family**
*Nerium oleander**	oleander
*Vinca major**	greater periwinkle
Arecaceae	**Palm Family**
*Washingtonia robusta**	Mexican fan palm
Asteraceae	**Sunflower Family**
Achillea millefolium	common yarrow
Artemisia californica	California sagebrush
Baccharis pilularis	coyote brush
Baccharis salicifolia	mulefat
*Centaurea solstitialis**	yellow star-thistle
Corethrogyne filaginifolia	California-aster
Deinandra fasciculata	fascicled tarplant
Encelia farinosa	brittlebush
Ericameria linearifolia	narrowleaf goldenbush
Erigeron canadensis	horseweed
Heterotheca grandiflora	telegraph weed
*Lactuca serriola**	prickly lettuce

Scientific Name	Common Name
Pseudognaphalium californicum	ladies' tobacco
*Oncosiphon piluliferum**	stinknet
*Taraxacum officinale**	common dandelion
Boraginaceae	**Borage Family**
Amsinckia intermedia	common fiddleneck
Amsinckia menziesii	Menzies' fiddleneck
Cryptantha intermedia	popcorn flower (common)
Heliotropium curassavicum	salt heliotrope
Pectocarya sp.	popcorn flower
Brassicaceae	**Mustard Family**
*Brassica nigra**	black mustard
*Hirschfeldia incana**	short pod mustard
*Sisymbrium orientale**	Oriental mustard
Chenopodiaceae	**Goosefoot Family**
*Atriplex semibaccata**	Australian saltbush
Fabaceae	**Legume Family**
Acmispon glaber	deerweed
*Melilotus officinalis**	sweetclover
Geraniaceae	**Geranium Family**
*Erodium cicutarium**	red-stem filaree
Juglandaceae	**Walnut Family**
*Carya illinoinensis**	pecan
Lamiaceae	**Mint Family**
*Marrubium vulgare**	white horehound
Trichostema lanceolatum	vinegarweed
Meliaceae	**Mahogany Family**
*Melia azedarach**	China berry
Myrtaceae	**Myrtle Family**
*Eucalyptus sideroxylon**	red iron bark
Oleaceae	**Olive Family**
*Fraxinus uhdei**	shamel ash
*Olea europaea**	European olive

Scientific Name	Common Name
Onagraceae	**Evening Primrose Family**
Camissoniopsis micrantha	small-flowered evening-primrose
Pinaceae	**Pine Family**
*Pinus eldarica**	Afghan pine
Poaceae	**Grass Family**
*Bromus diandrus**	ripgut grass
Bromus madritensis ssp. *rubens**	red brome
*Bromus tectorum**	cheat grass
*Hordeum murinum **	foxtail barley
Melica imperfecta	onion grass
Polygonaceae	**Buckwheat Family**
Eriogonum davidsonii	Davidson's buckwheat
Eriogonum fasciculatum	California buckwheat
*Rumex crispus**	curly dock
Salicaceae	**Willow Family**
Salix laevigata	red willow
Solanaceae	**Nightshade Family**
Datura wrightii	jimson weed
*Nicotiana glauca**	tree tobacco

1.0 MANAGEMENT SUMMARY/ABSTRACT

The following report describes the results of the cultural resources survey conducted by Brian F. Smith and Associates, Inc. (BFSA) for the Wildomar Trail Project. The 10.056-acre project is located northwest of the intersection of Clinton Keith Road and George Avenue within Assessor's Parcel Numbers (APNs) 376-410-015 to -017 and -021. The project is situated within Section 36, Township 6 South, Range 4 West, of the San Bernardino Baseline and Meridian in the U.S. Geological Survey 7.5-minute *Murrieta*, *California* topographic quadrangle map. The project proposes the construction of multifamily and commercial developments. BFSA conducted this study in compliance with the California Environmental Quality Act (CEQA) and the environmental guidelines of the City of Wildomar in order to locate and record any cultural resources present within the project.

The archaeological investigation of the subject property included a review of an archaeological records search performed in-house by BFSA compiled from data from the Eastern Information Center (EIC) at the University of California at Riverside (UCR) in order to assess previous archaeological studies and identify any previously recorded sites within the project boundaries, or in the immediate vicinity. An updated records search from the EIC has been requested, but due the limitations imposed by the evolving circumstances related to the COVID-19 pandemic, the results are delayed for the foreseeable future. As of the date of this report, the EIC results have not been received. Based upon the in-house records search compiled by EIC data, eight cultural resources are located within one mile of the project; however, no resources have been recorded within the Area of Potential Effect (APE). The in-house records search results also indicated that a total of 46 cultural resource studies have been conducted within a one-mile radius of the project, none of which include the APE. A Sacred Lands File (SLF) search was also requested from the Native American Heritage Commission (NAHC) to determine if any recorded Native American sacred sites or locations of religious or ceremonial importance are present within the project.

1.1 Purpose of Investigation

The purpose of this investigation was to complete a records search of previously recorded archaeological sites on or near the property, survey the project acreage, identify any archaeological resources within the project, and test and evaluate any cultural resources that may be impacted by the proposed development.

1.2 Major Findings

The in-house records search compiled by EIC data indicated that eight cultural resources are located within one mile of the project; however, no resources have been recorded within the APE. Most of the resources identified within one mile of the APE are historic buildings and prehistoric isolates and artifact scatters. The records search results also indicated that a total of

46 cultural resource studies have been conducted within a one-mile radius of the project, none of which include any portion of the APE.

BFSA also requested a records search of the SLF of the NAHC to determine the presence of any sacred sites or locations of religious or ceremonial importance within the search radius. The NAHC SLF results were negative for the presence of Native American sacred sites or locations of religious or ceremonial importance. All correspondence is provided in Appendix C.

The project was noted as generally flat with elevations ranging from 1,329 to 1,356 feet above mean sea level. A modern house and two sheds were located on the property. No prehistoric cultural resources were discovered as a result of the survey, but one foundation was observed that appeared potentially historic; however, historic aerial photographs document the foundation does not meet the age threshold to qualify as historic.

1.3 Recommendation Summary

Based upon the in-house records search data, the general area contains a minimal number of cultural resources mostly associated with the historic development of the region. The archaeological survey identified one potentially historic foundation, but no other historic features were noted. Based upon the historic aerial photographs researched, the foundation appears to be less than 50 years old and therefore does not meet the minimum age threshold to be historic. Based upon the absence of any significant cultural resources within the APE, site-specific mitigation measures will not be required for this project. However, monitoring of grading is recommended because past uses may have masked prehistoric sites or other historic features. No further archaeological study is recommended as a condition of permit approval based upon the records search and the results of the field survey, although monitoring of grading is recommended due to the potential to encounter historic or prehistoric features or artifacts.

2.0 INTRODUCTION

BFSA was retained by EPD Solutions, Inc. to conduct a cultural resources survey for the Wildomar Trail Project, located within the city of Wildomar, Riverside County, California. The archaeological survey was conducted in order to comply with CEQA and City of Wildomar environmental guidelines with regards to development-generated impacts to cultural resources. The project is located in an area of low to moderate cultural resource sensitivity, as is suggested by known site density and predictive modeling. Sensitivity for cultural resources in a given area is usually indicated by known settlement patterns, which in Riverside County are focused around environments with accessible food and water.

The project is located northwest of the intersection of Clinton Keith Road and George Avenue, just east of Interstate 15, within Assessor's Parcel Numbers (APNs) 376-410-015 to -017 and -021 (Figure 2.0–1). The project is situated within Section 36, Township 6 South, Range 4 West, of the San Bernardino Baseline and Meridian in the U.S. Geological Survey 7.5-minute *Murrieta*, *California* topographic quadrangle map (Figure 2.0–2). The project proposes the construction of multifamily and commercial developments (Figure 2.0–3).

Principal Investigator Brian F. Smith conducted the pedestrian survey of the project on October 13, 2021. Brian Smith and Summer J. Forsman prepared the technical report. Jillian L.H. Conroy created the report graphics and Summer Forsman conducted technical editing and report production. Qualifications of key personnel are provided in Appendix A.

2.1 Previous Work

The in-house records search for the project compiled by EIC data indicates that eight cultural resources are located within one mile of the project; however, no resources have been recorded within the APE. The in-house records search results also indicated that a total of 46 cultural resource studies have been conducted within a one-mile radius of the project, none of which include the APE.

2.2 Project Setting

Riverside County lies in the Peninsular Ranges Geologic Province of southern California. The mountain range, which lies in a northwest to southeast trend through the county, extends some 1,000 miles from the Raymond-Malibu Fault Zone in western Los Angeles County to the southern tip of Baja California.

The project is situated within the southern portion of Elsinore Valley, which occupies the Elsinore fault zone (Morton and Miller 2006). The project area is underlain entirely by the middle Pleistocene-aged sandstone member of the fossiliferous Pauba Formation. The sandstone member of the Pauba Formation consists of "brown, moderately well-indurated, cross-bedded sandstone containing sparse cobble- to boulder-conglomerate beds."

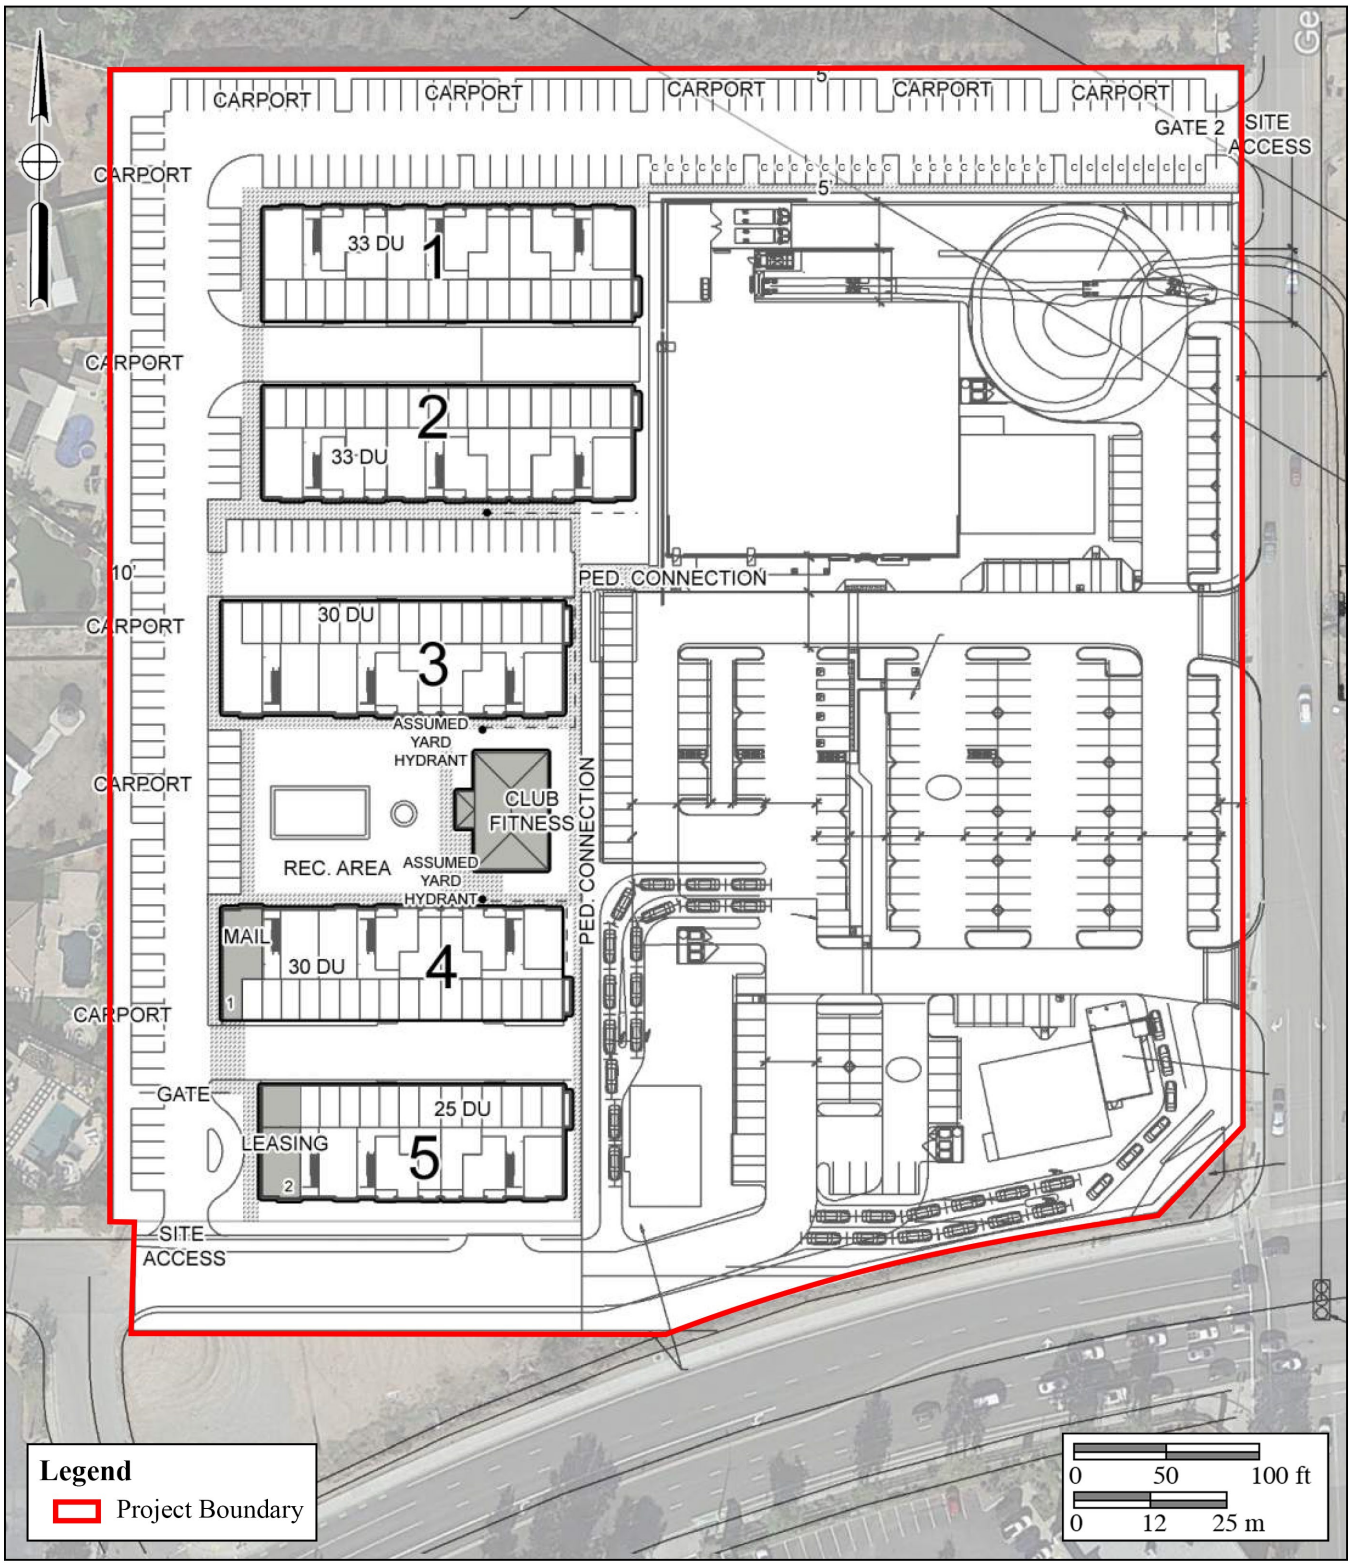

Figure 2.0–3
Site Plan
The Wildomar Trail Project

Nearby to the north is the Cretaceous-aged monzogranite to granodiorite of the Paloma Valley Ring Complex (plutonic rocks). Underlying the Pauba Formation, and exposed to the south of the project, is the fossiliferous sandstone member of the Pleistocene to Pliocene-aged "unnamed sandstone and conglomerate of the Wildomar area", described as friable, pale yellowish-green, medium-grained, caliche-rich sandstone (Morton and Miller 2006). In the greater Wildomar, Murrieta, and Temecula areas, this formation has produced abundant suites of fossil terrestrial mammals, including various reptiles and amphibians, shrew, various rodents, rabbit, giant ground sloth, saber-tooth cat, pronghorn antelope, tapir, horse, camel, mastodon, mammoth, deer, and llama.

The subject property has been disturbed by past uses that include grading and deposition of soil in the center of the property and rural residential uses on the east and west portions of the property. The entire property has been cleared and partially graded in the past.

2.3 Cultural Setting – Archaeological Perspectives

The archaeological perspective seeks to reconstruct past cultures based upon the material remains left behind. This is done using a range of scientific methodologies, almost all of which draw from evolutionary theory as the base framework. Archaeology allows one to look deeper into history or prehistory to see where the beginnings of ideas manifest themselves via analysis of material culture, allowing for the understanding of outside forces that shape social change. Thus, the archaeological perspective allows one to better understand the consequences of the history of a given culture upon modern cultures. Archaeologists seek to understand the effects of past contexts of a given culture on this moment in time, not culture in context *in* the moment.

Despite this, a distinction exists between "emic" and "etic" ways of understanding material culture, prehistoric lifeways, and cultural phenomena in general (Harris 1991). While "emic" perspectives serve the subjective ways in which things are perceived and interpreted by the participants within a culture, "etic" perspectives are those of an outsider looking in hopes of attaining a more scientific or "objective" understanding of the given phenomena. Archaeologists, by definition, will almost always serve an etic perspective as a result of the very nature of their work. As indicated by Laylander et al. (2014), it has sometimes been suggested that etic understanding, and therefore an archaeological understanding, is an imperfect and potentially ethnocentric attempt to arrive at emic understanding. In contract to this, however, an etic understanding of material culture, cultural phenomena, and prehistoric lifeways can address significant dimensions of culture that lie entirely beyond the understanding or interest of those solely utilizing an emic perspective. As Harris (1991:20) appropriately points out, "Etic studies often involve the measurement and juxtaposition of activities and events that native informants find inappropriate or meaningless." This is also likely true of archaeological comparisons and juxtapositions of material culture. However, culture as a whole does not occur in a vacuum and is the result of several millennia of choices and consequences influencing everything from technology, to religions, to institutions. Archaeology allows for the ability to not only see what

came before, but to see how those choices, changes, and consequences affect the present. Where possible, archaeology should seek to address both emic and etic understandings to the extent that they may be recoverable from the archaeological record as manifestations of patterned human behavior (Laylander et al. 2014).

To that point, the culture history offered herein is primarily based upon archaeological (etic) and ethnographic (partially emic and partially etic) information. It is understood that the ethnographic record and early archaeological records were incompletely and imperfectly collected. In addition, in most cases, more than a century of intensive cultural change and cultural evolution had elapsed since the terminus of the prehistoric period. Coupled with the centuries and millennia of prehistoric change separating the "ethnographic present" from the prehistoric past, this has affected the emic and etic understandings of prehistoric cultural settings. Regardless, there remains a need to present the changing cultural setting within the region under investigation. As a result, both archaeological and Native American perspectives are offered when possible.

2.3.1 Introduction

Paleo Indian, Archaic Period Milling Stone Horizon, and the Late Prehistoric Takic groups are the three general cultural periods represented in Riverside County. The following discussion of the cultural history of Riverside County references the San Dieguito Complex, Encinitas Tradition, Milling Stone Horizon, La Jolla Complex, Pauma Complex, and San Luis Rey Complex, since these culture sequences have been used to describe archaeological manifestations in the region. The Late Prehistoric component present in the Riverside County area was primarily represented by the Cahuilla, Gabrielino, and Luiseño Indians.

Absolute chronological information, where possible, will be incorporated into this archaeological discussion to examine the effectiveness of continuing to interchangeably use these terms. Reference will be made to the geological framework that divides the archaeologically-based culture chronology of the area into four segments: the late Pleistocene (20,000 to 10,000 years before the present [YBP]), the early Holocene (10,000 to 6,650 YBP), the middle Holocene (6,650 to 3,350 YBP), and the late Holocene (3,350 to 200 YBP).

2.3.2 Paleo Indian Period (Late Pleistocene: 11,500 to circa 9,000 YBP)

Archaeologically, the Paleo Indian Period is associated with the terminus of the late Pleistocene (12,000 to 10,000 YBP). The environment during the late Pleistocene was cool and moist, which allowed for glaciation in the mountains and the formation of deep, pluvial lakes in the deserts and basin lands (Moratto 1984). However, by the terminus of the late Pleistocene, the climate became warmer, which caused the glaciers to melt, sea levels to rise, greater coastal erosion, large lakes to recede and evaporate, extinction of Pleistocene megafauna, and major vegetation changes (Moratto 1984; Martin 1967, 1973; Fagan 1991). The coastal shoreline at 10,000 YBP, depending upon the particular area of the coast, was near the 30-meter isobath, or

two to six kilometers further west than its present location (Masters 1983).

Paleo Indians were likely attracted to multiple habitat types, including mountains, marshlands, estuaries, and lakeshores. These people likely subsisted using a more generalized hunting, gathering, and collecting adaptation utilizing a variety of resources including birds, mollusks, and both large and small mammals (Erlandson and Colten 1991; Moratto 1984; Moss and Erlandson 1995).

2.3.3 Archaic Period (Early and Middle Holocene: circa 9,000 to 1,300 YBP)

Archaeological data indicates that between 9,000 and 8,000 YBP, a widespread complex was established in the southern California region, primarily along the coast (Warren and True 1961). This complex is locally known as the La Jolla Complex (Rogers 1939; Moriarty 1966), which is regionally associated with the Encinitas Tradition (Warren 1968) and shares cultural components with the widespread Milling Stone Horizon (Wallace 1955). The coastal expression of this complex appeared in southern California coastal areas and focused upon coastal resources and the development of deeply stratified shell middens that were primarily located around bays and lagoons. The older sites associated with this expression are located at Topanga Canyon, Newport Bay, Agua Hedionda Lagoon, and some of the Channel Islands. Radiocarbon dates from sites attributed to this complex span a period of over 7,000 years in this region, beginning over 9,000 YBP.

The Encinitas Tradition is best recognized for its pattern of large coastal sites characterized by shell middens, grinding tools that are closely associated with the marine resources of the area, cobble-based tools, and flexed human burials (Shumway et al. 1961; Smith and Moriarty 1985). While ground stone tools and scrapers are the most recognized tool types, coastal Encinitas Tradition sites also contain numerous utilized flakes, which may have been used to pry open shellfish. Artifact assemblages at coastal sites indicate a subsistence pattern focused upon shellfish collection and nearshore fishing. This suggests an incipient maritime adaptation with regional similarities to more northern sites of the same period (Koerper et al. 1986). Other artifacts associated with Encinitas Tradition sites include stone bowls, doughnut stones, discoidals, stone balls, and stone, bone, and shell beads.

The coastal lagoons in southern California supported large Milling Stone Horizon populations circa 6,000 YBP, as is shown by numerous radiocarbon dates from the many sites adjacent to the lagoons. The ensuing millennia were not stable environmentally, and by 3,000 YBP, many of the coastal sites in central San Diego County had been abandoned (Gallegos 1987, 1992). The abandonment of the area is usually attributed to the sedimentation of coastal lagoons and the resulting deterioration of fish and mollusk habitat, which is a well-documented situation at Batiquitos Lagoon (Miller 1966; Gallegos 1987). Over a two-thousand-year period at Batiquitos Lagoon, dominant mollusk species occurring in archaeological middens shift from deep-water mollusks (*Argopecten* sp.) to species tolerant of tidal flat conditions (*Chione* sp.), indicating water depth and temperature changes (Miller 1966; Gallegos 1987).

This situation likely occurred for other small drainages (Buena Vista, Agua Hedionda, San Marcos, and Escondido creeks) along the central San Diego coast where low flow rates did not produce sufficient discharge to flush the lagoons they fed (Buena Vista, Agua Hedionda, Batiquitos, and San Elijo lagoons) (Byrd 1998). Drainages along the northern and southern San Diego coastline were larger and flushed the coastal hydrological features they fed, keeping them open to the ocean and allowing for continued human exploitation (Byrd 1998). Peñasquitos Lagoon exhibits dates as late as 2,355 YBP (Smith and Moriarty 1985) and San Diego Bay showed continuous occupation until the close of the Milling Stone Horizon (Gallegos and Kyle 1988). Additionally, data from several drainages in Camp Pendleton indicate a continued occupation of shell midden sites until the close of the period, indicating that coastal sites were not entirely abandoned during this time (Byrd 1998).

By 5,000 YBP, an inland expression of the La Jolla Complex is evident in the archaeological record, exhibiting influences from the Campbell Tradition from the north. These inland Milling Stone Horizon sites have been termed "Pauma Complex" (True 1958; Warren et al. 1961; Meighan 1954). By definition, Pauma Complex sites share a predominance of grinding implements (manos and metates), lack mollusk remains, have greater tool variety (including atlatl dart points, quarry-based tools, and crescentics), and seem to express a more sedentary lifestyle with a subsistence economy based upon the use of a broad variety of terrestrial resources. Although originally viewed as a separate culture from the coastal La Jolla Complex (True 1980), it appears that these inland sites may be part of a subsistence and settlement system utilized by the coastal peoples. Evidence from the 4S Project in inland San Diego County suggests that these inland sites may represent seasonal components within an annual subsistence round by La Jolla Complex populations (Raven-Jennings et al. 1996). Including both coastal and inland sites of this time period in discussions of the Encinitas Tradition, therefore, provides a more complete appraisal of the settlement and subsistence system exhibited by this cultural complex.

More recent work by Sutton has identified a more localized complex known as the Greven Knoll Complex. The Greven Knoll Complex is a redefined northern inland expression of the Encinitas Tradition first put forth by Mark Sutton and Jill Gardener (2010). Sutton and Gardener (2010:25) state that "[t]he early millingstone archaeological record in the northern portion of the interior southern California was not formally named but was often referred to as 'Inland Millingstone,' 'Encinitas,' or even 'Topanga.'" Therefore, they proposed that all expressions of the inland Milling Stone in southern California north of San Diego County be grouped together in the Greven Knoll Complex.

The Greven Knoll Complex, as postulated by Sutton and Gardener (2010), is broken into three phases and obtained its name from the type-site Greven Knoll located in Yucaipa, California. Presently, the Greven Knoll Site is part of the Yukaipa't Site (SBR-1000) and was combined with the adjacent Simpson Site. Excavations at Greven Knoll recovered manos, metates, projectile points, discoidal cogged stones, and a flexed inhumation with a possible

cremation (Kowta 1969:39). It is believed that the Greven Knoll Site was occupied between 5,000 and 3,500 YBP. The Simpson Site contained mortars, pestles, side-notched points, and stone and shell beads. Based upon the data recovered at these sites, Kowta (1969:39) suggested that "coastal Milling Stone Complexes extended to and interdigitated with the desert Pinto Basin Complex in the vicinity of the Cajon Pass."

Phase I of the Greven Knoll Complex is generally dominated by the presence of manos and metates, core tools, hammerstones, large dart points, flexed inhumations, and occasional cremations. Mortars and pestles are absent from this early phase, and the subsistence economy emphasized hunting. Sutton and Gardener (2010:26) propose that the similarity of the material culture of Greven Knoll Phase I and that found in the Mojave Desert at Pinto Period sites indicates that the Greven Knoll Complex was influenced by neighbors to the north at that time. Accordingly, Sutton and Gardener (2010) believe that Greven Knoll Phase I may have appeared as early as 9,400 YBP and lasted until about 4,000 YBP.

Greven Knoll Phase II is associated with a period between 4,000 and 3,000 YBP. Artifacts common to Greven Knoll Phase II include manos and metates, Elko points, core tools, and discoidals. Pestles and mortars are present; however, they are only represented in small numbers. Finally, there is an emphasis upon hunting and gathering for subsistence (Sutton and Gardener 2010:8).

Greven Knoll Phase III includes manos, metates, Elko points, scraper planes, choppers, hammerstones, and discoidals. Again, small numbers of mortars and pestles are present. Greven Knoll Phase III spans from approximately 3,000 to 1,000 YBP and shows a reliance upon seeds and yucca. Hunting is still important, but bones seem to have been processed to obtain bone grease more often in this later phase (Sutton and Gardener 2010:8).

The shifts in food processing technologies during each of these phases indicate a change in subsistence strategies; although people were still hunting for large game, plant-based foods eventually became the primary dietary resource (Sutton 2011a). Sutton's (2011b) argument posits that the development of mortars and pestles during the middle Holocene can be attributed to the year-round exploitation of acorns as a main dietary provision. Additionally, the warmer and drier climate may have been responsible for groups from the east moving toward coastal populations, which is archaeologically represented by the interchange of coastal and eastern cultural traits (Sutton 2011a).

2.3.4 Late Prehistoric Period (Late Holocene: 1,300 YBP to 1790)

Many Luiseño hold the world view that as a population they were created in southern California; however, archaeological and anthropological data proposes a scientific/archaeological perspective. Archaeological and anthropological evidence suggests that at approximately 1,350 YBP, Takic-speaking groups from the Great Basin region moved into Riverside County, marking the transition to the Late Prehistoric Period. An analysis of the Takic expansion by Sutton (2009) indicates that inland southern California was occupied by "proto-

Yuman" populations before 1,000 YBP. The comprehensive, multi-phase model offered by Sutton (2009) employs linguistic, ethnographic, archaeological, and biological data to solidify a reasonable argument for population replacement of Takic groups to the north by Penutians (Laylander 1985). As a result, it is believed that Takic expansion occurred starting around 3,500 YBP moving toward southern California, with the Gabrielino language diffusing south into neighboring Yuman (Hokan) groups around 1,500 to 1,000 YBP, possibly resulting in the Luiseño dialect.

Based upon Sutton's model, the final Takic expansion would not have occurred until about 1,000 YBP, resulting in Vanyume, Serrano, Cahuilla, and Cupeño dialects. The model suggests that the Luiseño did not simply replace Hokan speakers, but were rather a northern San Diego County/southern Riverside County Yuman population who adopted the Takic language. This period is characterized by higher population densities and elaborations in social, political, and technological systems. Economic systems diversified and intensified during this period with the continued elaboration of trade networks, the use of shell-bead currency, and the appearance of more labor-intensive, yet effective, technological innovations. Technological developments during this period included the introduction of the bow and arrow between A.D. 400 and 600 and the introduction of ceramics. Atlatl darts were replaced by smaller arrow darts, including Cottonwood series points. Other hallmarks of the Late Prehistoric Period include extensive trade networks as far-reaching as the Colorado River Basin and cremation of the dead.

2.3.5 Protohistoric Period (Late Holocene: 1790 to Present)

Ethnohistoric and ethnographic evidence indicates that three Takic-speaking groups occupied portions of Riverside County: the Cahuilla, the Gabrielino, and the Luiseño. The geographic boundaries between these groups in pre- and proto-historic times are difficult to place, but the project is located well within the borders of ethnographic Luiseño territory. This group was a seasonal hunting and gathering people with cultural elements that were very distinct from Archaic Period peoples. These distinctions include cremation of the dead, the use of the bow and arrow, and exploitation of the acorn as a main food staple (Moratto 1984). Along the coast, the Luiseño made use of available marine resources by fishing and collecting mollusks for food. Seasonally available terrestrial resources, including acorns and game, were also sources of nourishment for Luiseño groups. Elaborate kinship and clan systems between the Luiseño and other groups facilitated a wide-reaching trade network that included trade of Obsidian Butte obsidian and other resources from the eastern deserts, as well as steatite from the Channel Islands.

According to Charles Handley (1967), the primary settlements of Late Prehistoric Luiseño Indians in the San Jacinto Plain were represented by Ivah and Soboba near Soboba Springs, Jusipah near the town of San Jacinto, Ararah in Webster's Canyon en route to Idyllwild, Pahsitha near Big Springs Ranch southeast of Hemet, and Corova in Castillo Canyon. These locations share features such as the availability of food and water resources. Features of this

land use include petroglyphs and pictographs, as well as widespread milling, which is evident in bedrock and portable implements. Groups in the vicinity of the project, neighboring the Luiseño, include the Cahuilla and the Gabrielino. Ethnographic data for the three groups is presented below.

Luiseño: An Archaeological and Ethnographic Perspective

When contacted by the Spanish in the sixteenth century, the Luiseño occupied a territory bounded on the west by the Pacific Ocean, on the east by the Peninsular Ranges mountains at San Jacinto (including Palomar Mountain to the south and Santiago Peak to the north), on the south by Agua Hedionda Lagoon, and on the north by Aliso Creek in present-day San Juan Capistrano. The Luiseño were a Takic-speaking people more closely related linguistically and ethnographically to the Cahuilla, Gabrielino, and Cupeño to the north and east rather than the Kumeyaay who occupied territory to the south. The Luiseño differed from their neighboring Takic speakers in having an extensive proliferation of social statuses, a system of ruling families that provided ethnic cohesion within the territory, a distinct worldview that stemmed from the use of datura (a hallucinogen), and an elaborate religion that included the creation of sacred sand paintings depicting the deity Chingichngish (Bean and Shipek 1978; Kroeber 1976).

Subsistence and Settlement

The Luiseño occupied sedentary villages most often located in sheltered areas in valley bottoms, along streams, or along coastal strands near mountain ranges. Villages were located near water sources to facilitate acorn leaching and in areas that offered thermal and defensive protection. Villages were composed of areas that were publicly and privately (by family) owned. Publicly owned areas included trails, temporary campsites, hunting areas, and quarry sites. Inland groups had fishing and gathering sites along the coast that were intensively used from January to March when inland food resources were scarce. During October and November, most of the village would relocate to mountain oak groves to harvest acorns. The Luiseño remained at village sites for the remainder of the year, where food resources were within a day's travel (Bean and Shipek 1978; Kroeber 1976).

The most important food source for the Luiseño was the acorn, six different species of which were used (*Quercus californica, Quercus agrifolia, Quercus chrysolepis, Quercus dumosa, Quercus engelmannii,* and *Quercus wislizenii*). Seeds, particularly of grasses, flowering plants, and mints, were also heavily exploited. Seed-bearing species were encouraged through controlled burns, which were conducted at least every third year. A variety of other stems, leaves, shoots, bulbs, roots, and fruits were also collected. Hunting augmented this vegetal diet. Animal species taken included deer, rabbit, hare, woodrat, ground squirrel, antelope, quail, duck, freshwater fish from mountain streams, marine mammals, and other sea creatures such as fish, crustaceans, and mollusks (particularly abalone, or *Haliotis* sp.). In addition, a variety of snakes, small birds, and rodents were eaten (Bean and Shipek 1978; Kroeber 1976).

Social Organization

Social groups within the Luiseño nation consisted of patrilinear families or clans, which were politically and economically autonomous. Several clans comprised a religious party, or nota, which was headed by a chief who organized ceremonies and controlled economics and warfare. The chief had assistants who specialized in particular aspects of ceremonial or environmental knowledge and who, with the chief, were part of a religion-based social group with special access to supernatural power, particularly that of Chingichngish. The positions of chief and assistants were hereditary, and the complexity and multiplicity of these specialists' roles likely increased in coastal and larger inland villages (Bean and Shipek 1978; Kroeber 1976; Strong 1929).

Marriages were arranged by the parents, often made to forge alliances between lineages. Useful alliances included those between groups of differing ecological niches and those that resulted in territorial expansion. Residence was patrilocal (Bean and Shipek 1978; Kroeber 1976). Women were primarily responsible for plant gathering and men principally hunted, although, at times, particularly during acorn and marine mollusk harvests, there was no division of labor. Elderly women cared for children and elderly men participated in rituals, ceremonies, and political affairs. They were also responsible for manufacturing hunting and ritual implements. Children were taught subsistence skills at the earliest age possible (Bean and Shipek 1978; Kroeber 1976).

Material Culture

House structures were conical, partially subterranean, and thatched with reeds, brush, or bark. Ramadas were rectangular, protected workplaces for domestic chores such as cooking. Ceremonial sweathouses were important in purification rituals; these were round and partially subterranean thatched structures covered with a layer of mud. Another ceremonial structure was the wámkis (located in the center of the village, serving as the place of rituals), where sand paintings and other rituals associated with the Chingichngish religious group were performed (Bean and Shipek 1978; Kroeber 1976).

Clothing was minimal; women wore a cedar-bark and netted twine double apron and men wore a waist cord. In cold weather, cloaks or robes of rabbit fur, deerskin, or sea otter fur were worn by both sexes. Footwear included deerskin moccasins and sandals fashioned from yucca fibers. Adornments included bead necklaces and pendants made of bone, clay, stone, shell, bear claw, mica, deer hooves, and abalone shell. Men wore ear and nose piercings made from cane or bone, which were sometimes decorated with beads. Other adornments were commonly decorated with semiprecious stones including quartz, topaz, garnet, opal, opalite, agate, and jasper (Bean and Shipek 1978; Kroeber 1976).

Hunting implements included the bow and arrow. Arrows were tipped with either a carved, fire-hardened wood tip or a lithic point, usually fashioned from locally available metavolcanic material or quartz. Throwing sticks fashioned from wood were used in hunting

small game, while deer head decoys were used during deer hunts. Coastal groups fashioned dugout canoes for nearshore fishing and harvested fish with seines, nets, traps, and hooks made of bone or abalone shell (Bean and Shipek 1978; Kroeber 1976).

The Luiseño had a well-developed basket industry. Baskets were used in resource gathering, food preparation, storage, and food serving. Ceramic containers were shaped by paddle and anvil and fired in shallow, open pits to be used for food storage, cooking, and serving. Other utensils included wood implements, steatite bowls, and ground stone manos, metates, mortars, and pestles (Bean and Shipek 1978; Kroeber 1976). Additional tools such as knives, scrapers, choppers, awls, and drills were also used. Shamanistic items include soapstone or clay smoking pipes and crystals made of quartz or tourmaline (Bean and Shipek 1978; Kroeber 1976).

Cahuilla: An Archaeological and Ethnographic Perspective

At the time of Spanish contact in the sixteenth century, the Cahuilla occupied territory that included the San Bernardino Mountains, Orocopia Mountain, and the Chocolate Mountains to the west, Salton Sea and Borrego Springs to the south, Palomar Mountain and Lake Mathews to the west, and the Santa Ana River to the north. The Cahuilla are a Takic-speaking people closely related to their Gabrielino and Luiseño neighbors, although relations with the Gabrielino were more intense than with the Luiseño. They differ from the Luiseño and Gabrielino in that their religion is more similar to the Mohave tribes of the eastern deserts than the Chingichngish religious group of the Luiseño and Gabrielino. The following is a summary of ethnographic data regarding this group (Bean 1978; Kroeber 1976).

Subsistence and Settlement

Cahuilla villages were typically permanent and located on low terraces within canyons in proximity to water sources. These locations proved to be rich in food resources and also afforded protection from prevailing winds. Villages had areas that were publicly owned and areas that were privately owned by clans, families, or individuals. Each village was associated with a particular lineage and series of sacred sites that included unique petroglyphs and pictographs. Villages were occupied throughout the year; however, during a several-week period in the fall, most of the village members relocated to mountain oak groves to take part in acorn harvesting (Bean 1978; Kroeber 1976).

The Cahuilla's use of plant resources is well documented. Plant foods harvested by the Cahuilla included valley oak acorns and single-leaf pinyon pine nuts. Other important plant species included bean and screw mesquite, agave, Mohave yucca, cacti, palm, chia, quail brush, yellowray goldfield, goosefoot, manzanita, catsclaw, desert lily, mariposa lily, and a number of other species such as grass seed. A number of agricultural domesticates were acquired from the Colorado River tribes including corn, bean, squash, and melon grown in limited amounts. Animal species taken included deer, bighorn sheep, pronghorn antelope, rabbit, hare, rat, quail,

dove, duck, roadrunner, and a variety of rodents, reptiles, fish, and insects (Bean 1978; Kroeber 1976).

Social Organization

The Cahuilla was not a political nation, but rather a cultural nationality with a common language. Two non-political, non-territorial patrimoieties were recognized: the Wildcats (túktem) and the Coyotes (?ístam). Lineage and kinship were memorized at a young age among the Cahuilla, providing a backdrop for political relationships. Clans were composed of three to 10 lineages; each lineage owned a village site and specific resource areas. Lineages within a clan cooperated in subsistence activities, defense, and rituals (Bean 1978; Kroeber 1976).

A system of ceremonial hierarchy operated within each lineage. The hierarchy included the lineage leader, who was responsible for leading subsistence activities, guarding the sacred bundle, and negotiating with other lineage leaders in matters concerning land use, boundary disputes, marriage arrangements, trade, warfare, and ceremonies. The ceremonial assistant to the lineage leader was responsible for organizing ceremonies. A ceremonial singer possessed and performed songs at rituals and trained assistant singers. The shaman cured illnesses through supernatural powers, controlled natural phenomena, and was the guardian of ceremonies, keeping evil spirits away. The diviner was responsible for finding lost objects, telling future events, and locating game and other food resources. Doctors were usually older women who cured various ailments and illnesses with their knowledge of medicinal herbs. Finally, certain Cahuilla specialized as traders, who ranged as far west as Santa Catalina and as far east as the Gila River (Bean 1978; Kroeber 1976).

Marriages were arranged by parents from opposite moieties. When a child was born, an alliance formed between the families, which included frequent reciprocal exchanges. The Cahuilla kinship system extended to relatives within five generations. Important economic decisions, primarily the distribution of goods, operated within this kinship system (Bean 1978; Kroeber 1976).

Material Culture

Cahuilla houses were dome-shaped or rectangular, thatched structures. The home of the lineage leader was the largest, located near the ceremonial house with the best access to water. Other structures within the village included the men's sweathouse and granaries (Bean 1978; Kroeber 1976).

Cahuilla clothing, like other groups in the area, was minimal. Men typically wore a loincloth and sandals; women wore skirts made from mesquite bark, animal skin, or tules. Babies wore mesquite bark diapers. Rabbit skin cloaks were worn in cold weather (Bean 1978; Kroeber 1976).

Hunting implements included the bow and arrow, throwing sticks, and clubs. Grinding tools used in food processing included manos, metates, and wood mortars. The Cahuilla were

known to use long grinding implements made from wood to process mesquite beans; the mortar was typically a hollowed log buried in the ground. Other tools included steatite arrow shaft straighteners (Bean 1978; Kroeber 1976).

Baskets were made from rush, deer grass, and skunkbrush. Different species and leaves were chosen for different colors in the basket design. Coiled-ware baskets were either flat (for plates, trays, or winnowing), bowl-shaped (for food serving), deep, inverted, and cone-shaped (for transporting), or rounded and flat-bottomed for storing utensils and personal items (Bean 1978; Kroeber 1976).

Cahuilla pottery was made from a thin, red-colored ceramic ware that was often painted and incised. Four basic vessel types are known for the Cahuilla: small-mouthed jars, cooking pots, bowls, and dishes. Additionally, smoking pipes and flutes were fashioned from ceramic (Bean 1978; Kroeber 1976).

Gabrielino: An Archaeological and Ethnographic Perspective

The territory of the Gabrielino at the time of Spanish contact covers much of present-day Los Angeles and Orange counties. The southern extent of this culture area is bounded by Aliso Creek, the eastern extent is located east of present-day San Bernardino along the Santa Ana River, the northern extent includes the San Fernando Valley, and the western extent includes portions of the Santa Monica Mountains. The Gabrielino also occupied several Channel Islands including Santa Barbara Island, Santa Catalina Island, San Nicholas Island, and San Clemente Island. Because of their access to certain resources, including a steatite source from Santa Catalina Island, this group was among the wealthiest and most populous aboriginal groups in all of southern California. Trade of materials and resources controlled by the Gabrielino extended as far north as the San Joaquin Valley, as far east as the Colorado River, and as far south as Baja California (Bean and Smith 1978; Kroeber 1976).

Subsistence and Settlement

The Gabrielino lived in permanent villages and occupied smaller resource-gathering camps at various times of the year depending upon the seasonality of the resource. Larger villages were comprised of several families or clans, while smaller, seasonal camps typically housed smaller family units. The coastal area between San Pedro and Topanga Canyon was the location of primary subsistence villages, while secondary sites were located near inland sage stands, oak groves, and pine forests. Permanent villages were located along rivers and streams and in sheltered areas along the coast. As previously mentioned, the Channel Islands were also the locations of relatively large settlements (Bean and Smith 1978; Kroeber 1976).

Resources procured along the coast and on the islands were primarily marine in nature and included tuna, swordfish, ray and shark, California sea lion, Stellar sea lion, harbor seal, northern elephant seal, sea otter, dolphin and porpoise, various waterfowl species, numerous fish species, purple sea urchin, and mollusks, such as rock scallop, California mussel, and limpet.

Inland resources included oak acorn, pine nut, Mohave yucca, cacti, sage, grass nut, deer, rabbit, hare, rodent, quail, duck, and a variety of reptiles such as western pond turtle and numerous snake species (Bean and Smith 1978; Kroeber 1976).

Social Organization

The social structure of the Gabrielino is little known; however, there appears to have been at least three social classes: 1) the elite, which included the rich, chiefs, and their immediate family; 2) a middle class, which included people of relatively high economic status or long-established lineages; and 3) a class of people that included most other individuals in the society. Villages were politically autonomous units comprised of several lineages. During times of the year when certain seasonal resources were available, the village would divide into lineage groups and move out to exploit them, returning to the village between forays (Bean and Smith 1978; Kroeber 1976).

Each lineage had its own leader, with the village chief coming from the dominant lineage. Several villages might be allied under a paramount chief. Chiefly positions were of an ascribed status, most often passed to the eldest son. Chiefly duties included providing village cohesion, leading warfare, and peace negotiations with other groups, collecting tribute from the village(s) under his jurisdiction, and arbitrating disputes within the village(s). The status of the chief was legitimized by his safekeeping of the sacred bundle, a representation of the link between the material and spiritual realms and the embodiment of power (Bean and Smith 1978; Kroeber 1976).

Shamans were leaders in the spirit realm. The duties of the shaman included conducting healing and curing ceremonies, guarding the sacred bundle, locating lost items, identifying, and collecting poisons for arrows, and making rain (Bean and Smith 1978; Kroeber 1976).

Marriages were made between individuals of equal social status, and, in the case of powerful lineages, marriages were arranged to establish political ties between the lineages (Bean and Smith 1978; Kroeber 1976).

Men conducted the majority of the heavy labor, hunting, fishing, and trading with other groups. Women's duties included gathering and preparing plant and animal resources, and making baskets, pots, and clothing (Bean and Smith 1978; Kroeber 1976).

Material Culture

Gabrielino houses were domed, circular structures made of thatched vegetation. Houses varied in size and could house from one to several families. Sweathouses (semicircular, earth-covered buildings) were public structures used in male social ceremonies. Other structures included menstrual huts and a ceremonial structure called a yuvar, an open-air structure built near the chief's house (Bean and Smith 1978; Kroeber 1976).

Clothing was minimal; men and children most often went naked, while women wore deerskin or bark aprons. In cold weather, deerskin, rabbit fur, or bird skin (with feathers intact)

cloaks were worn. Island and coastal groups used sea otter fur for cloaks. In areas of rough terrain, yucca fiber sandals were worn. Women often used red ochre on their faces and skin for adornment or protection from the sun. Adornment items included feathers, fur, shells, and beads (Bean and Smith 1978; Kroeber 1976).

Hunting implements included wood clubs, sinew-backed bows, slings, and throwing clubs. Maritime implements included rafts, harpoons, spears, hook and line, and nets. A variety of other tools included deer scapulae saws, bone and shell needles, bone awls, scrapers, bone or shell flakers, wedges, stone knives and drills, metates, mullers, manos, shell spoons, bark platters, and wood paddles and bowls. Baskets were made from rush, deer grass, and skunkbush. Baskets were fashioned for hoppers, plates, trays, and winnowers for leaching, straining, and gathering. Baskets were also used for storing, preparing, and serving food, and for keeping personal and ceremonial items (Bean and Smith 1978; Kroeber 1976).

The Gabrielino had exclusive access to soapstone, or steatite, procured from Santa Catalina Island quarries. This highly prized material was used for making pipes, animal carvings, ritual objects, ornaments, and cooking utensils. The Gabrielino profited well from trading steatite since it was valued so much by groups throughout southern California (Bean and Smith 1978; Kroeber 1976).

2.3.6 Ethnohistoric Period (1769 to Present)

Traditionally, the history of the state of California has been divided into three general periods: the Spanish Period (1769 to 1821), the Mexican Period (1822 to 1846), and the American Period (1848 to present) (Caughey 1970). The American Period is often further subdivided into additional phases: the nineteenth century (1848 to 1900), the early twentieth century (1900 to 1950), and the Modern Period (1950 to present). From an archaeological standpoint, all of these phases can be referred to together as the Ethnohistoric Period. This provides a valuable tool for archaeologists, as ethnohistory is directly concerned with the study of indigenous or non-Western peoples from a combined historical/anthropological viewpoint, which employs written documents, oral narrative, material culture, and ethnographic data for analysis.

European exploration along the California coast began in 1542 with the landing of Juan Rodriguez Cabrillo and his men at San Diego Bay. Sixty years after the Cabrillo expeditions, an expedition under Sebastian Viscaíno made an extensive and thorough exploration of the Pacific coast. Although the voyage did not extend beyond the northern limits of the Cabrillo track, Viscaíno had the most lasting effect upon the nomenclature of the coast. Many of his place names have survived, whereas practically every one of the names created by Cabrillo have faded from use. For instance, Cabrillo named the first (now) United States port he stopped at “San Miguel”; 60 years later, Viscaíno changed it to “San Diego” (Rolle 1969). The early European voyages observed Native Americans living in villages along the coast but did not make any substantial, long-lasting impact. At the time of contact, the Luiseño population was estimated to

have ranged from 4,000 to as many as 10,000 individuals (Bean and Shipek 1978; Kroeber 1976).

The historic background of the project area began with the Spanish colonization of Alta California. The first Spanish colonizing expedition reached southern California in 1769 with the intention of converting and civilizing the indigenous populations, as well as expanding the knowledge of and access to new resources in the region (Brigandi 1998). As a result, by the late eighteenth century, a large portion of southern California was overseen by Mission San Luis Rey (San Diego County), Mission San Juan Capistrano (Orange County), and Mission San Gabriel (Los Angeles County), who began colonization the region and surrounding areas (Chapman 1921).

Up until this time, the only known way to feasibly travel from Sonora to Alta California was by sea. In 1774, Juan Bautista de Anza, an army captain at Tubac, requested and was given permission by the governor of the Mexican State of Sonora to establish an overland route from Sonora to Monterey (Chapman 1921). In doing so, Juan Bautista de Anza passed through Riverside County and described the area in writing for the first time (Caughey 1970; Chapman 1921). In 1797, Father Presidente Lausen (of Mission San Diego de Alcalá), Father Norberto de Santiago, and Corporal Pedro Lisalde (of Mission San Juan Capistrano) led an expedition through southwestern Riverside County in search of a new mission site to establish a presence between San Diego and San Juan Capistrano (Engelhardt 1921). Their efforts ultimately resulted in the establishment of Mission San Luis Rey in Oceanside, California.

Each mission gained power through the support of a large, subjugated Native American workforce. As the missions grew, livestock holdings increased and became increasingly vulnerable to theft. In order to protect their interests, the southern California missions began to expand inland to try and provide additional security (Beattie and Beattie 1939; Caughey 1970). In order to meet their needs, the Spaniards embarked on a formal expedition in 1806 to find potential locations within what is now the San Bernardino Valley. As a result, by 1810, Father Francisco Dumetz of Mission San Gabriel had succeeded in establishing a religious site, or capilla, at a Cahuilla rancheria called Guachama (Beattie and Beattie 1939). San Bernardino Valley received its name from this site, which was dedicated to San Bernardino de Siena by Father Dumetz. The Guachama rancheria was located in present-day Bryn Mawr in San Bernardino County.

These early colonization efforts were followed by the establishment of estancias at Puente (circa 1816) and San Bernardino (circa 1819) near Guachama (Beattie and Beattie 1939). These efforts were soon mirrored by the Spaniards from Mission San Luis Rey, who in turn established a presence in what is now Lake Elsinore, Temecula, and Murrieta (Chapman 1921). The indigenous groups who occupied these lands were recruited by missionaries, converted, and put to work in the missions (Pourade 1961). Throughout this period, the Native American populations were decimated by introduced diseases, a drastic shift in diet resulting in poor nutrition, and social conflicts due to the introduction of an entirely new social order (Cook

1976).

Mexico achieved independence from Spain in 1822 and became a federal republic in 1824. As a result, both Baja and Alta California became classified as territories (Rolle 1969). Shortly thereafter, the Mexican Republic sought to grant large tracts of private land to its citizens to begin to encourage immigration to California and to establish its presence in the region. Part of the establishment of power and control included the desecularization of the missions circa 1832. These same missions were also located on some of the most fertile land in California and, as a result, were considered highly valuable. The resulting land grants, known as "ranchos," covered expansive portions of California and by 1846, more than 600 land grants had been issued by the Mexican government. Rancho Jurupa was the first rancho to be established and was issued to Juan Bandini in 1838. Although Bandini primarily resided in San Diego, Rancho Jurupa was located in what is now Riverside County (Pourade 1963). A review of Riverside County place names quickly illustrates that many of the ranchos in Riverside County lent their names to present-day locations, including Jurupa, El Rincon, La Sierra, El Sobrante de San Jacinto, La Laguna (Lake Elsinore), Santa Rosa, Temecula, Pauba, San Jacinto Nuevo y Potrero, and San Jacinto Viejo (Gunther 1984). As was typical of many ranchos, these were all located in the valley environments within western Riverside County.

The treatment of Native Americans grew worse during the Rancho Period. Most of the Native Americans were forced off of their land or put to work on the now privately-owned ranchos, most often as slave labor. In light of the brutal ranchos, the degree to which Native Americans had become dependent upon the mission system is evident when, in 1838, a group of Native Americans from Mission San Luis Rey petitioned government officials in San Diego to relieve suffering at the hands of the rancheros:

> We have suffered incalculable losses, for some of which we are in part to be blamed for because many of us have abandoned the Mission … We plead and beseech you … to grant us a Rev. Father for this place. We have been accustomed to the Rev. Fathers and to their manner of managing the duties. We labored under their intelligent directions, and we were obedient to the Fathers according to the regulations, because we considered it as good for us. (Brigandi 1998:21)

Native American culture had been disrupted to the point where they could no longer rely upon prehistoric subsistence and social patterns. Not only does this illustrate how dependent the Native Americans had become upon the missionaries, but it also indicates a marked contrast in the way the Spanish treated the Native Americans compared to the Mexican and United States ranchers. Spanish colonialism (missions) is based upon utilizing human resources while integrating them into their society. The Mexican and American ranchers did not accept Native Americans into their social order and used them specifically for the extraction of labor,

resources, and profit. Rather than being incorporated, they were either subjugated or exterminated (Cook 1976).

By 1846, tensions between the United States and Mexico had escalated to the point of war (Rolle 1969). In order to reach a peaceful agreement, the Treaty of Guadalupe Hidalgo was put into effect in 1848, which resulted in the annexation of California to the United States. Once California opened to the United States, waves of settlers moved in searching for gold mines, business opportunities, political opportunities, religious freedom, and adventure (Rolle 1969; Caughey 1970). By 1850, California had become a state and was eventually divided into 27 separate counties. While a much larger population was now settling in California, this was primarily in the central valley, San Francisco, and the Gold Rush region of the Sierra Nevada mountain range (Rolle 1969; Caughey 1970). During this time, southern California grew at a much slower pace than northern California and was still dominated by the cattle industry established during the earlier rancho period. However, by 1859, the first United States Post Office in what would eventually become Riverside County was set up at John Magee's store on the Temecula Rancho (Gunther 1984).

During the same decade, circa 1852, the Native Americans of southern Riverside County, including the Luiseño and the Cahuilla, thought they had signed a treaty resulting in their ownership of all lands from Temecula to Aguanga east to the desert, including the San Jacinto Valley and the San Gorgonio Pass. The Temecula Treaty also included food and clothing provisions for the Native Americans. However, Congress never ratified these treaties, and the promise of one large reservation was rescinded (Brigandi 1998).

With the completion of the Southern Pacific Railroad in 1869, southern California saw its first major population expansion. The population boom continued circa 1874 with the completion of connections between the Southern Pacific Railroad in Sacramento to the transcontinental Central Pacific Railroad in Los Angeles (Rolle 1969; Caughey 1970). The population influx brought farmers, land speculators, and prospective developers to the region. As the Jurupa area became more and more populated, circa 1870, Judge John Wesley North and a group of associates founded the city of Riverside on part of the former rancho.

Although the first orange trees were planted in Riverside County circa 1871, it was not until a few years later when a small number of Brazilian navel orange trees were established that the citrus industry truly began in the region (Patterson 1971). The Brazilian naval orange was well suited to the climate of Riverside County and thrived with assistance from several extensive irrigation projects. At the close of 1882, an estimated half a million citrus trees were present in California. It is estimated that nearly half of that population was in Riverside County. Population growth and 1880s tax revenue from the booming citrus industry prompted the official formation of Riverside County in 1893 out of portions of what was once San Bernardino County (Patterson 1971).

Shortly thereafter, with the start of World War I, the United States began to develop a military presence in Riverside County with the construction of March Air Reserve Base. During

World War II Camp Haan and Camp Anza were constructed in what is now the current location (of the National Veteran's Cemetery. In the decades that followed, populations spread throughout the county into Lake Elsinore, Corona, Norco, Murrieta, and Wildomar. However, a significant portion of the county remained largely agricultural well into the 1970s. Following the 1970s, Riverside saw a period of dramatic population increase as the result of new development, more than doubling the population of the county with a population of over 1.3 million residents (Patterson 1971).

General History of the Wildomar Area

The Wildomar town site was recorded in December 1885. The name "Wildomar" was derived by combining the names of the new town's founders, "WIL" for William Collier, "DO" for Donald Graham, and "MAR" for Margaret Collier Graham, wife of Donald Graham and sister of William Collier (Gunther 1984). The proprietors of Wildomar were supporters of the temperance movement and incorporated into every deed of acreage property, as well as the town lots, a "no saloon" clause. As a result, the early population of Wildomar was made up mainly of prohibitionists. At the time, the town had a rather large Quaker population who mainly came from West Branch, Iowa (Gunther 1984).

In 1886, a new school, post office, and railroad depot were built and by 1887, Wildomar could boast a large hotel, livery stable, blacksmith shop, numerous stores, a lumberyard, and a park (Gunther 1984). In the same year, a map of the Santa Rosa addition to Wildomar was produced that included an addition of about 1,500 acres that were purchased from Parker Deer. This new map was recorded in 1892. Throughout the early twentieth century, the railroad that served as the foundation for the development of Wildomar was plagued by washouts, and within a few years, the rails that traveled south from Temecula to San Diego were abandoned. This eventually slowed the development of the town and rail service to Wildomar was abandoned by 1935. However, with the completion of Interstate 15 in the mid-1980s, the region began to prosper again. The City of Wildomar voted to incorporate in 2008, becoming the 25th city in Riverside County (City of Wildomar 2018).

2.4 Research Goals

The primary goal of the research design is to attempt to understand the way in which humans have used the land and resources within the project area through time, as well as to aid in the determination of resource significance. For the current project, the study area under investigation is the western portion of Riverside County. The scope of work for the archaeological program conducted for the Wildomar Trail Project included an intensive pedestrian survey of the 10.056-acre property. Given the area involved and the narrow focus of the cultural resources study, the research design for this project was necessarily limited and general in nature. Since the main objective of the investigation was to identify the presence of and potential impacts to cultural resources, the goal here is not necessarily to answer wide-

reaching theories regarding the development of early southern California, but to investigate the role and importance of the identified resources. Although survey-level investigations are limited in terms of the amount of information available, several specific research questions were developed that could be used to guide the initial investigations of any observed cultural resources. The following research questions take into account the size and location of the project.

Research Questions:

- Can located cultural resources be situated with a specific time period, population, or individual?
- Do the types of located cultural resources allow a site activity/function to be determined from a preliminary investigation? What are the site activities? What is the site function? What resources were exploited?
- How do the located sites compare to others reported from different surveys conducted in the area?
- How do the located sites fit existing models of settlement and subsistence for valley environments of the region?

Data Needs

At the survey level, the principal research objective is a generalized investigation of changing settlement patterns in both the prehistoric and historic periods within the study area. The overall goal is to understand settlement and resource procurement patterns of the project area occupants. Therefore, adequate information on site function, context, and chronology from an archaeological perspective is essential for the investigation. The fieldwork and archival research were undertaken with these primary research goals in mind:

1) To identify cultural resources occurring within the project;
2) To determine, if possible, site type and function, context of the deposit, and chronological placement of each cultural resource identified;
3) To place each cultural resource identified within a regional perspective; and
4) To provide recommendations for the treatment of each of the cultural resources identified.

3.0 METHODOLOGY

The archaeological program for the Wildomar Trail Project consisted of an institutional records search, a SLF search, an intensive pedestrian survey of the 10.056-acre project, and preparation of a technical study. This archaeological study conformed to the City of Wildomar environmental guidelines. Statutory requirements of CEQA and subsequent legislation (Section 15064.5) were followed in evaluating the significance of cultural resources. Specific definitions for archaeological resource type(s) used in this report are those established by the State Historic Preservation Office (SHPO 1995).

3.1 Archaeological Records Search

The in-house records search conducted by BFSA from data compiled from the EIC was reviewed for an area of one mile surrounding the project in order to determine the presence of any previously recorded archaeological sites. Results of the in-house records search are provided in Appendix B and discussed in Section 4.1. An updated records search was requested from the EIC, and the results are still pending. The EIC search also included a standard review of the National Register of Historic Places and the Office of Historic Preservation Historic Property Directory. Land patent records, held by the Bureau of Land Management (BLM) and accessible through the BLM General Land Office (GLO) website, were also reviewed for pertinent project information. In addition, the BFSA research library was consulted for any relevant historical information.

3.2 Field Methodology

In accordance with City of Wildomar and CEQA review requirements, an intensive pedestrian reconnaissance was conducted that employed a series of parallel survey transects spaced between five and 10-meter intervals to locate archaeological sites within the project. The archaeological survey of the project was conducted on October 13, 2021. The entire project was covered by the survey process and photographs were taken to document project conditions during the survey (see Section 4.2). The subject property has been disturbed by past uses that include grading and deposition of soil in the center of the property and rural residential uses on the east and west portions of the property. The entire property has been cleared and partially graded in the past.

3.3 Report Preparation and Recordation

This report contains information regarding previous studies, statutory requirements for the project, a brief description of the setting, research methods employed, and the overall results of the survey. The report includes all appropriate illustrations and tabular information needed to make a complete and comprehensive presentation of these activities, including the methodologies employed and the personnel involved. A copy of this report will be placed at the

EIC at UCR. Any newly recorded sites or sites requiring updated information will be recorded on the appropriate Department of Parks and Recreation site forms, which will be filed at the EIC.

3.4 Native American Consultation

A SLF search was also requested from the NAHC to determine if any recorded Native American sacred sites or locations of religious or ceremonial importance are present within the project. The NAHC SLF results were negative for the presence of Native American sacred sites or locations of religious or ceremonial importance. All correspondence is provided in Appendix C.

3.5 Applicable Regulations

Resource importance is assigned to districts, sites, buildings, structures, and objects that possess exceptional value or quality illustrating or interpreting the heritage of Riverside County in history, architecture, archaeology, engineering, and culture. A number of criteria are used in demonstrating resource importance. Specifically, criteria outlined in CEQA provide the guidance for making such a determination. The following sections detail the CEQA criteria that a resource must meet in order to be determined important.

3.5.1 California Environmental Quality Act

According to CEQA (§15064.5a), the term "historical resource" includes the following:

1) A resource listed in, or determined to be eligible by the State Historical Resources Commission for listing in, the California Register of Historical Resources (Public Resources Code SS5024.1, Title 14 CCR. Section 4850 et seq.).
2) A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3) Any object, building, structure, site, area, place, record, or manuscript, which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Public Resources Code SS5024.1, Title 14, Section 4852) including the following:

a) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
b) Is associated with the lives of persons important in our past;
c) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
d) Has yielded, or may be likely to yield, information important in prehistory or history.

4) The fact that a resource is not listed in, or determined eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to Section 5020.1[k] of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in Section 5024.1[g] of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code Section 5020.1(j) or 5024.1.

According to CEQA (§15064.5b), a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. CEQA defines a substantial adverse change as:

1) Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.

2) The significance of an historical resource is materially impaired when a project:

a) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or
b) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or,

c) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

Section 15064.5(c) of CEQA applies to effects on archaeological sites and contains the following additional provisions regarding archaeological sites:

1) When a project will impact an archaeological site, a lead agency shall first determine whether the site is an historical resource, as defined in subsection (a).
2) If a lead agency determines that the archaeological site is an historical resource, it shall refer to the provisions of Section 21084.1 of the Public Resources Code, Section 15126.4 of the guidelines, and the limits contained in Section 21083.2 of the Public Resources Code do not apply.
3) If an archaeological site does not meet the criteria defined in subsection (a), but does meet the definition of a unique archaeological resource in Section 21083.2 of the Public Resources Code, the site shall be treated in accordance with the provisions of Section 21083.2. The time and cost limitations described in Public Resources Code Section 21083.2 (c-f) do not apply to surveys and site evaluation activities intended to determine whether the project location contains unique archaeological resources.
4) If an archaeological resource is neither a unique archaeological nor historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment. It shall be sufficient that both the resource and the effect on it are noted in the Initial Study or EIR, if one is prepared to address impacts on other resources, but they need not be considered further in the CEQA process.

Section 15064.5 (d) and (e) contain additional provisions regarding human remains. Regarding Native American human remains, paragraph (d) provides:

(d) When an initial study identifies the existence of, or the probable likelihood, of Native American human remains within the project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code SS5097.98. The applicant may develop an agreement for treating or disposing of, with appropriate dignity, the human remains and any items associated with Native American burials with the appropriate Native Americans as identified by the NAHC. Action implementing such an agreement is exempt from:

1) The general prohibition on disinterring, disturbing, or removing human

remains from any location other than a dedicated cemetery (Health and Safety Code Section 7050.5).

2) The requirement of CEQA and the Coastal Act.

4.0 RESULTS

4.1 Records Search Results

An archaeological in-house records search for the project and the surrounding area within a one-mile radius was conducted by BFSA by compiling data from the EIC at UCR. The search results identified eight cultural resources within one-mile of the project (Table 4.1–1). The records search indicated that none of these sites are located within the APE. The cultural resources identified within one mile of the project consist of a historic artifact scatter, two prehistoric artifact lithic scatters, three prehistoric isolates, a historic residential complex, and the historic Oak Springs Ranch.

Table 4.1–1
Archaeological Sites Located Within One Mile
of the Wildomar Trail Project

Site	Description
P-33-008654	Historic artifact scatter
P-33-011434 and P-33-017366	Prehistoric artifact lithic scatters
P-33-011435; P-33-015304; and P-33-015305	Prehistoric isolates
P-33-016988	Historic residential complex
P-33-020991	Historic Oak Springs Ranch

The records search results also indicate that a total of 46 cultural resource studies have been conducted within a one-mile radius of the project. None of the previous studies include the current APE.

An updated EIC records search has been requested, and the results are pending. The in-house data from past projects within the project vicinity indicate that the subject property has not been previously studied, and no known cultural resources are recorded within it. Additional research was undertaken to assess the project's sensitivity for cultural resources. BFSA reviewed the following sources to help assess the potential for cultural resources within the property:

- The National Register of Historic Places index;
- The Built Environment Resources Directory;
- Historic USGS data;
- Bureau of Land Management/General Land Office land patents; and
- Historic aerial photographs (1967, 1978, 1982, 1996, 2002, 2005, 2009, 2010, 2012, 2014, 2016, and 2018).

The listed sources did not indicate the presence of archaeological resources within the project. The complete records search results are provided in Appendix B.

Historic aerial photographs dating between 1967 and 2018 were consulted. In 1967, it appears the property has been graded along the western parcel, but no structures are clearly visible. By 1978, a residence is present in the southwestern corner along with four associated structures; three of these structures line up directly north of the residence and one structure appears northeast of the residence on the central parcel. There also appears to be another structure in the eastern parcel in the southeast area of the property. The 1982 and 1996 aerials show no change, however, in the 2002 aerial, the structure in the southeast parcel is no longer present. The 2005 aerial depicts no change, but by 2009, one of the structures in the western parcel of the property (between where the two current sheds were identified during the survey) is no longer present. The 2010 to 2012 aerials depict no change, but in the 2014 aerial, the structure northeast of the residence on the central parcel is no longer present and in its place is the foundation that was identified during the survey. The 2018 and 2019 aerial photographs depict the foundation on the central parcel as well and reflect what was identified during the survey. No aerial photographs can confirm the exact date of construction of the old foundation noted on the property; however, the first confirmed date of construction is less than the 50-year age threshold date for a structure to be considered historic under CEQA.

The records search and literature review suggest that there is a low potential for prehistoric sites to be situated within the APE. The only prehistoric resources located within one mile of the project are isolated artifacts and lithic scatters. Prehistoric sites within the area generally are situated near permanent water sources and bedrock outcroppings, which do not occur within the APE. Although the potential for cultural resources does exist, the clearing and grading of the APE has likely impacted potential resources within the subject property.

A SLF search was also requested from the NAHC to determine if any recorded Native American sacred sites or locations of religious or ceremonial importance are present within the project. The NAHC SLF results were negative for the presence of Native American sacred sites or locations of religious or ceremonial importance. All correspondence is provided in Appendix C.

4.2 Results of the Field Survey

Principal Investigator Brian F. Smith conducted the pedestrian survey of the project on October 13, 2021. Aerial photographs, maps, and a compass permitted orientation and location of project boundaries. The entire property was surveyed in five to 10-meter interval transects. All exposed ground surfaces, including rodent burrows and disturbed areas, were carefully inspected. A survey form, field notes, and photographs documented the survey work undertaken. The topography of the project was noted as generally flat and previously graded and developed. The subject property has been disturbed by past uses that include grading and deposition of soil in the center of the property and rural residential uses on the east and west portions of the

property (Plate 4.2–1). The entire property has been cleared and partially graded in the past. No Native American sites, features, or artifacts were observed on the property.

The property appears to have consisted of three parcels in the past. The eastern parcel had a structure present in the past based upon the 1978 aerial photograph; however, the structure has been removed. The central parcel did include a foundation that appears to be historic in age (Plate 4.2–2). The structure has been removed and the foundation is all that remains. The central parcel has evidence of corralling of animals (horses) (Plate 4.2–3). Two sheds remain on the western parcel that were likely used for the keeping of animals. The north shed has a poured concrete entry with footprints and horseshoe prints (along with a date of 2004), suggesting the association with horse use. The western parcel also has a more modern residence that is currently occupied (Plate 4.2–4).

The archaeological survey identified one possible historic foundation, but no other historic features were noted. The foundation was determined to fall short of the historic threshold age of 50 years old or older. No significant historic features were noted, and mitigation measures are not required. Monitoring of grading is recommended because past uses may have masked prehistoric sites or other historic features. No prehistoric cultural resources were discovered as a result of the survey. The lack of prehistoric sites is likely due to the absence food, water, bedrock, or lithic resources on the property.

Plate 4.2–1: View of the northeastern corner of the property showing disturbed areas and a stockpile of graded soil.

Plate 4.2–2: View of the potentially historic foundation.

Plate 4.2–3: View of the north section of the property showing the disturbed areas that have been cleared and appear to have had animals, likely horses, corralled in the past.

Plate 4.2–4: View of the modern residence on the west side of the property.

5.0 RECOMMENDATIONS

The current project proposes the construction of multifamily and commercial developments (APNs 376-410-015 to -017 and -021). The archaeological survey identified one possible historic foundation within the APE, but no other historic features were noted. The foundation has been determined to not meet the age threshold to qualify as historic under CEQA. No significant historic features were noted, and mitigation measures are not required. Further, the in-house records search compiled from EIC data did not indicate that any resources have ever been recorded within the APE. Most of the resources identified within one mile of the APE are historic buildings and prehistoric isolates and lithic scatters. The records search also indicated that although the APE had not been previously surveyed, a total of 46 cultural resource studies have been conducted within one mile of the APE. Therefore, based upon the records search data, an adequate archaeological sample of the surrounding area indicates that the area contains a minimal number of cultural resources mostly associated with the historic development of the region.

The archaeological study was completed in accordance with the City of Wildomar environmental guidelines and CEQA significance evaluation criteria. Although there is little potential for cultural resources to be present/disturbed by the proposed project due to previous grading activities and the absence of recorded cultural resources within the APE, monitoring of grading is recommended because past uses may have masked prehistoric sites or other historic features. Monitoring of grading is recommended to a depth of no more than five feet from the current ground surface, unless the consulting archeologist determines that, during the grading process, the potential to encounter cultural resources is exhausted and formational soil horizons were encountered.

6.0 CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this archaeological report, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Brian F. Smith is the owner and principal historical and archaeological consultant for Brian F. Smith and Associates. Over the past 32 years, he has conducted over 2,500 cultural resource studies in California, Arizona, Nevada, Montana, and Texas. These studies include every possible aspect of archaeology from literature searches and large-scale surveys to intensive data recovery excavations. Reports prepared by Mr. Smith have been submitted to all facets of local, state, and federal review agencies, including the US Army Corps of Engineers, the Bureau of Land Management, the Bureau of Reclamation, the Department of Defense, and the Department of Homeland Security. In addition, Mr. Smith has conducted studies for utility companies (Sempra Energy) and state highway departments (CalTrans).

Professional Accomplishments

These selected major professional accomplishments represent research efforts that have added significantly to the body of knowledge concerning the prehistoric life ways of cultures once present in the Southern California area and historic settlement since the late 18th century. Mr. Smith has been principal investigator on the following select projects, except where noted.

Downtown San Diego Mitigation and Monitoring Reporting Programs: Large numbers of downtown San Diego mitigation and monitoring projects, some of which included Broadway Block (2019), 915 Grape Street (2019), 1919 Pacific Highway (2018), Moxy Hotel (2018), Makers Quarter Block D (2017), Ballpark Village (2017), 460 16th Street (2017), Kettner and Ash (2017), Bayside Fire Station (2017), Pinnacle on the Park (2017), IDEA1 (2016), Blue Sky San Diego (2016), Pacific Gate (2016), Pendry Hotel (2015), Cisterra Sempra Office Tower (2014), 15th and Island (2014), Park and G (2014), Comm 22 (2014), 7th and F Street Parking (2013), Ariel Suites (2013), 13th and Marker (2012), Strata (2008), Hotel Indigo (2008), Lofts at 707 10th Avenue Project (2007), Breeza (2007), Bayside at the Embarcadero (2007), Aria (2007), Icon (2007), Vantage Pointe (2007), Aperture (2007), Sapphire Tower (2007), Lofts at 655 Sixth Avenue (2007), Metrowork (2007), The Legend (2006), The Mark (2006), Smart Corner (2006), Lofts at 677 7th Avenue (2005), Aloft on Cortez Hill (2005), Front and Beech Apartments (2003), Bella Via Condominiums (2003), Acqua Vista Residential Tower (2003), Northblock Lofts (2003), Westin Park Place Hotel (2001), Parkloft

Apartment Complex (2001), Renaissance Park (2001), and Laurel Bay Apartments (2001).

1900 and 1912 Spindrift Drive: An extensive data recovery and mitigation monitoring program at the Spindrift Site, an important prehistoric archaeological habitation site stretching across the La Jolla area. The project resulted in the discovery of over 20,000 artifacts and nearly 100,000 grams of bulk faunal remains and marine shell, indicating a substantial occupation area (2013-2014).

San Diego Airport Development Project: An extensive historic assessment of multiple buildings at the San Diego International Airport and included the preparation of Historic American Buildings Survey documentation to preserve significant elements of the airport prior to demolition (2017-2018).

Citracado Parkway Extension: A still-ongoing project in the city of Escondido to mitigate impacts to an important archaeological occupation site. Various archaeological studies have been conducted by BFSA resulting in the identification of a significant cultural deposit within the project area.

Westin Hotel and Timeshare (Grand Pacific Resorts): Data recovery and mitigation monitoring program in the city of Carlsbad consisted of the excavation of 176 one-square-meter archaeological data recovery units which produced thousands of prehistoric artifacts and ecofacts, and resulted in the preservation of a significant prehistoric habitation site. The artifacts recovered from the site presented important new data about the prehistory of the region and Native American occupation in the area (2017).

The Everly Subdivision Project: Data recovery and mitigation monitoring program in the city of El Cajon resulted in the identification of a significant prehistoric occupation site from both the Late Prehistoric and Archaic Periods, as well as producing historic artifacts that correspond to the use of the property since 1886. The project produced an unprecedented quantity of artifacts in comparison to the area encompassed by the site, but lacked characteristics that typically reflect intense occupation, indicating that the site was used intensively for food processing (2014-2015).

Ballpark Village: A mitigation and monitoring program within three city blocks in the East Village area of San Diego resulting in the discovery of a significant historic deposit. Nearly 5,000 historic artifacts and over 500,000 grams of bulk historic building fragments, food waste, and other materials representing an occupation period between 1880 and 1917 were recovered (2015-2017).

Archaeology at the Padres Ballpark: Involved the analysis of historic resources within a seven-block area of the "East Village" area of San Diego, where occupation spanned a period from the 1870s to the 1940s. Over a period of two years, BFSA recovered over 200,000 artifacts and hundreds of pounds of metal, construction debris, unidentified broken glass, and wood. Collectively, the Ballpark Project and the other downtown mitigation and monitoring projects represent the largest historical archaeological program anywhere in the country in the past decade (2000-2007).

4S Ranch Archaeological and Historical Cultural Resources Study: Data recovery program consisted of the excavation of over 2,000 square meters of archaeological deposits that produced over one million artifacts, containing primarily prehistoric materials. The archaeological program at 4S Ranch is the largest archaeological study ever undertaken in the San Diego County area and has produced data that has exceeded expectations regarding the resolution of long-standing research questions and regional prehistoric settlement patterns.

Charles H. Brown Site: Attracted international attention to the discovery of evidence of the antiquity of man in North America. Site located in Mission Valley, in the city of San Diego.

Del Mar Man Site: Study of the now famous Early Man Site in Del Mar, California, for the San Diego Science Foundation and the San Diego Museum of Man, under the direction of Dr. Spencer Rogers and Dr. James R. Moriarty.

Old Town State Park Projects: Consulting Historical Archaeologist. Projects completed in the Old Town State Park involved development of individual lots for commercial enterprises. The projects completed in Old Town include Archaeological and Historical Site Assessment for the Great Wall Cafe (1992), Archaeological Study for the Old Town Commercial Project (1991), and Cultural Resources Site Survey at the Old San Diego Inn (1988).

Site W-20, Del Mar, California: A two-year-long investigation of a major prehistoric site in the Del Mar area of the city of San Diego. This research effort documented the earliest practice of religious/ceremonial activities in San Diego County (circa 6,000 years ago), facilitated the projection of major non-material aspects of the La Jolla Complex, and revealed the pattern of civilization at this site over a continuous period of 5,000 years. The report for the investigation included over 600 pages, with nearly 500,000 words of text, illustrations, maps, and photographs documenting this major study.

City of San Diego Reclaimed Water Distribution System: A cultural resource study of nearly 400 miles of pipeline in the city and county of San Diego.

Master Environmental Assessment Project, City of Poway: Conducted for the City of Poway to produce a complete inventory of all recorded historic and prehistoric properties within the city. The information was used in conjunction with the City's General Plan Update to produce a map matrix of the city showing areas of high, moderate, and low potential for the presence of cultural resources. The effort also included the development of the City's Cultural Resource Guidelines, which were adopted as City policy.

Draft of the City of Carlsbad Historical and Archaeological Guidelines: Contracted by the City of Carlsbad to produce the draft of the City's historical and archaeological guidelines for use by the Planning Department of the City.

The Mid-Bayfront Project for the City of Chula Vista: Involved a large expanse of undeveloped agricultural land situated between the railroad and San Diego Bay in the northwestern portion of the city. The study included the analysis of some potentially historic features and numerous prehistoric

Cultural Resources Survey and Test of Sites Within the Proposed Development of the Audie Murphy Ranch, Riverside County, California: Project manager/director of the investigation of 1,113.4 acres and 43 sites, both prehistoric and historic—included project coordination; direction of field crews; evaluation of sites for significance based on County of Riverside and CEQA guidelines; assessment of cupule, pictograph, and rock shelter sites, co-authoring of cultural resources project report. February- September 2002.

Cultural Resources Evaluation of Sites Within the Proposed Development of the Otay Ranch Village 13 Project, San Diego County, California: Project manager/director of the investigation of 1,947 acres and 76 sites, both prehistoric and historic—included project coordination and budgeting; direction of field crews; assessment of sites for significance based on County of San Diego and CEQA guidelines; co-authoring of cultural resources project report. May-November 2002.

Cultural Resources Survey for the Remote Video Surveillance Project, El Centro Sector, Imperial County: Project manager/director for a survey of 29 individual sites near the U.S./Mexico Border for proposed video surveillance camera locations associated with the San Diego Border barrier Project—project coordination and budgeting; direction of field crews; site identification and recordation; assessment of potential impacts to cultural resources; meeting and coordinating with U.S. Army Corps of Engineers, U.S. Border Patrol, and other government agencies involved; co-authoring of cultural resources project report. January, February, and July 2002.

Cultural Resources Survey and Test of Sites Within the Proposed Development of the Menifee West GPA, Riverside County, California: Project manager/director of the investigation of nine sites, both prehistoric and historic—included project coordination and budgeting; direction of field crews; assessment of sites

for significance based on County of Riverside and CEQA guidelines; historic research; co-authoring of cultural resources project report. January-March 2002.

Cultural Resources Survey and Test of Sites Within the Proposed French Valley Specific Plan/EIR, Riverside County, California: Project manager/director of the investigation of two prehistoric and three historic sites—included project coordination and budgeting; survey of project area; Native American consultation; direction of field crews; assessment of sites for significance based on CEQA guidelines; cultural resources project report in prep. July-August 2000.

Cultural Resources Survey and Test of Sites Within the Proposed Development of the Menifee Ranch, Riverside County, California: Project manager/director of the investigation of one prehistoric and five historic sites—included project coordination and budgeting; direction of field crews; feature recordation; historic structure assessments; assessment of sites for significance based on CEQA guidelines; historic research; co-authoring of cultural resources project report. February-June 2000.

Salvage Mitigation of a Portion of the San Diego Presidio Identified During Water Pipe Construction for the City of San Diego, California: Project archaeologist/director—included direction of field crews; development and completion of data recovery program; management of artifact collections cataloging and curation; data synthesis and authoring of cultural resources project report in prep. April 2000.

Enhanced Cultural Resource Survey and Evaluation for the Tyrian 3 Project, La Jolla, California: Project manager/director of the investigation of a single-dwelling parcel—included project coordination; assessment of parcel for potentially buried cultural deposits; authoring of cultural resources project report. April 2000.

Enhanced Cultural Resource Survey and Evaluation for the Lamont 5 Project, Pacific Beach, California: Project manager/director of the investigation of a single-dwelling parcel—included project coordination; assessment of parcel for potentially buried cultural deposits; authoring of cultural resources project report. April 2000.

Enhanced Cultural Resource Survey and Evaluation for the Reiss Residence Project, La Jolla, California: Project manager/director of the investigation of a single-dwelling parcel—included project coordination; assessment of parcel for potentially buried cultural deposits; authoring of cultural resources project report. March-April 2000.

Salvage Mitigation of a Portion of Site SDM-W-95 (CA-SDI-211) for the Poinsettia Shores Santalina Development Project and Caltrans, Carlsbad, California: Project archaeologist/ director—included direction of field crews; development and completion of data recovery program; management of artifact collections cataloging and curation; data synthesis and authoring of cultural resources project report in prep. December 1999-January 2000.

Survey and Testing of Two Prehistoric Cultural Resources for the Airway Truck Parking Project, Otay Mesa, California: Project archaeologist/director—included direction of field crews; development and completion of testing recovery program; assessment of site for significance based on CEQA guidelines; authoring of cultural resources project report, in prep. December 1999-January 2000.

Cultural Resources Phase I and II Investigations for the Tin Can Hill Segment of the Immigration and Naturalization Services Triple Fence Project Along the International Border, San Diego County, California: Project manager/director for a survey and testing of a prehistoric quarry site along the border—NRHP eligibility assessment; project coordination and budgeting; direction of field crews; feature recordation; meeting and coordinating with U.S. Army Corps of Engineers; co-authoring of cultural resources project report. December 1999-January 2000.

Mitigation of a Prehistoric Cultural Resource for the Westview High School Project for the City of San Diego, California: Project archaeologist/ director—included direction of field crews; development and completion of data recovery program including collection of material for specialized faunal and botanical analyses; assessment of sites for significance based on CEQA guidelines; management of artifact collections cataloging and curation; data synthesis; co-authoring of cultural resources project report, in prep. October 1999-January 2000.

Mitigation of a Prehistoric Cultural Resource for the Otay Ranch SPA-One West Project for the City of Chula Vista, California: Project archaeologist/director—included direction of field crews; development of data recovery program; management of artifact collections cataloging and curation; assessment of site for significance based on CEQA guidelines; data synthesis; authoring of cultural resources project report, in prep. September 1999-January 2000.

Monitoring of Grading for the Herschel Place Project, La Jolla, California: Project archaeologist/ monitor—included monitoring of grading activities associated with the development of a single- dwelling parcel. September 1999.

Survey and Testing of a Historic Resource for the Osterkamp Development Project, Valley Center, California: Project archaeologist/ director—included direction of field crews; development and completion of data recovery program; budget development; assessment of site for significance based on CEQA guidelines; management of artifact collections cataloging and curation; data synthesis; authoring of cultural resources project report. July-August 1999.

Survey and Testing of a Prehistoric Cultural Resource for the Proposed College Boulevard Alignment Project, Carlsbad, California: Project manager/director —included direction of field crews; development and completion of testing recovery program; assessment of site for significance based on CEQA guidelines; management of artifact collections cataloging and curation; data synthesis; authoring of cultural resources project report, in prep. July-August 1999.

Survey and Evaluation of Cultural Resources for the Palomar Christian Conference Center Project, Palomar Mountain, California: Project archaeologist—included direction of field crews; assessment of sites for significance based on CEQA guidelines; management of artifact collections cataloging and curation; data synthesis; authoring of cultural resources project report. July-August 1999.

Survey and Evaluation of Cultural Resources at the Village 2 High School Site, Otay Ranch, City of Chula Vista, California: Project manager/director —management of artifact collections cataloging and curation; assessment of site for significance based on CEQA guidelines; data synthesis; authoring of cultural resources project report. July 1999.

Cultural Resources Phase I, II, and III Investigations for the Immigration and Naturalization Services Triple Fence Project Along the International Border, San Diego County, California: Project manager/director for the survey, testing, and mitigation of sites along border—supervision of multiple field crews, NRHP eligibility assessments, Native American consultation, contribution to Environmental Assessment document, lithic and marine shell analysis, authoring of cultural resources project report. August 1997- January 2000.

Phase I, II, and II Investigations for the Scripps Poway Parkway East Project, Poway California: Project archaeologist/project director—included recordation and assessment of multicomponent prehistoric and historic sites; direction of Phase II and III investigations; direction of laboratory analyses including prehistoric and historic collections; curation of collections; data synthesis; coauthorship of final cultural resources report. February 1994; March-September 1994; September-December 1995.

MEMORANDUM

DATE: November 22, 2021

TO: Jeremy Krout
EPD Solutions, Inc.
2 Park Plaza, Suite 1120
Irvine, CA Orange, CA 92614

FROM: Jennifer Mermilliod, M.A., Principal Historian/Architectural Historian

SUBJECT: Focused Cultural Resources Survey – Historic Resources Assessment for the NWC Clinton Keith & Wildomar Trail Project, Wildomar, Riverside County, California

Dear Mr. Krout,

JM Research & Consulting (JMRC) completed a focused Cultural Resources Survey – Historic Resources Assessment (HRA) for the proposed NWC Clinton Keith & Wildomar Trail Project in Wildomar, Riverside County, which proposes the demolition of the existing site improvements and construction of a new mixed-use development. The project includes approximately 194,585 SF multi-family residential on the west portion and approximately 201,538 SF commercial, including retail and restaurant use, on the east portion of the approximately 9-acre consolidated site (APNs 376-410-015, -016, -017, -021).

The survey was requested by EPD Solutions based on the results of initial investigation for a Phase I-level Cultural Resources study, including archaeological investigation completed by others (Brian F. Smith and Associates [BFSA] 2021), which identified one property of historic age that would be demolished as part of the proposed project - 24850 Catt Road. This HRA acts as a companion study to complete the Cultural Resources investigation as part of the environmental review process in compliance with CEQA (PRC §21000, et seq.) to evaluate the property for significance and eligibility for historic designation and to analyze potential impacts of the proposed project.

Jennifer Mermilliod, M.A., Principal Historian/Architectural Historian, JMRC, who exceeds the Secretary of the Interior's Professional Qualifications Standards, acted as Principal Historic Consultant and both managed and completed the study, which included consultation, coordination, and compliance applicable and relevant to cultural resources planning (see resume, Attachment B). The intensive-level survey was conducted from October to November 2021 and included field survey and historic and building specific research in accordance with CEQA Guidelines. Research

and review of source material included previous cultural resources studies, Riverside County property records, historic and current newspapers, historic aerial photographs, and topographical maps, and local history, records, and maps accessible through the City of Wildomar and Wildomar Historical Society websites. Building permits were requested from the City of Wildomar but not received, and no permits for this property were on file with Riverside County. The survey area is outside the geographic boundaries covered by Sanborn Maps, and city directories are not available for Wildomar.

The project area is located within the south-central area of the City of Wildomar, which was founded on the La Laguna Rancho during the 1880s by Quaker brothers-in-law William Collier and Donald Graham, who were also involved in the founding of South Pasadena, after a split with Franklin Heald, who retained and developed Elsinore to the north. The local land boom that followed the coming of the railroad prompted the development of land and water throughout the region in the late-1880s. First dubbed 'Wildon,' a combination of the founders' first names, they were soon joined by William's sister and Donald's wife, Margaret, which led to the name of Wildomar. As many friends from Iowa soon emigrated upon invitation by Collier and Graham to the warmer climate, the new town soon became known as a Quaker colony. The early town was centered between Palomar Street and Grand Avenue, running northwest to southeast, and Gruwell and South Pasadena Streets, running southwest to northeast. The 120 acres was subdivided into 34 blocks of 50-foot-wide lots, and proximity to the railroad ensured brisk sales. At least one major addition by Townsend, Frame, and Starbuck added 50 lots to the southeast in 1887, and further improvements in 1887-88 contributed the Hotel Wildomar, a "Friends Church," a lumber business, and later, a brick yard, hardware store, and library. Like many towns born of the railroad, Wildomar suffered with the end of the boom in 1888 and remained a small agrarian town. Settlers in the 1920s introduced dryland farming, and the 1940s-1950s brought others seeking farm and rural alternatives to urban living. It was not until the 1970s that Wildomar experienced suburban residential development, and the postmodern housing tracts were carved among the many horse ranches. Modern revitalization efforts, which began in the 1980s, saw the incorporation of Wildomar as a city in 2008, and continue today with the transformation of its rural acreage.

Additional historic and building specific archival research under the current HRA revealed that, aside from a short-lived 1970s building on the east, all but the westernmost portion of the project area has remained undeveloped:

> 24850 Catt Road APN 376-410-015. In the latter 20th century, this westernmost 2.40-acre parcel (Parcel Map 36/69 PM No. 8705) was developed with a residence and multiple ancillary buildings and structures likely related to agriculture or ranching use. The property includes evidence of grading and clearing, and multiple ancillary structures and remnant fencing indicates the sheltering of animals, likely horses. Riverside County land and property records document that the existing single-family residence was constructed in 1962. Historic topographical maps and aerial images show the residence as well as a large, multi-divided structure to the rear (Ancillary 1; now partially demolished) by 1967. Two long structures aligned north-south, which were likely temporary canopies, appear for a short time in the 1970s on the rear balance of the parcel. By 1978, the extant building far to the rear (Ancillary 2) was constructed, though it's original L-shape configuration was modified to its current footprint by 2005, and another long rectangular rear building is shown that is no longer extant (demolished 2010-12). Additionally, a building, possibly another residence, was constructed on the footprint of the extant adjacent foundation (376-410-016; demolished 2012-14) that appears to be associated with 24850 Catt Road by common internal footpaths. The small shed (Ancillary 3) adjacent to the extant residence was added 1982-1996. Fieldwork confirmed that the commonly designed, simple Ranch style residence dates to the

1960s and is unaltered and in fair condition, although ancillary development associated with the use of the property was extensively modified or demolished from the 1970s-2000s.

The extant residence, ancillary structures, and ancillary remains were constructed in the 1960s at the end of the horse ranch and farming period and the brink of residential tract development in the modern period and were not found to be associated with individuals who have figured prominently in history. Therefore, the properties are not strongly associated with events that have made a significant contribution to the broad patterns of our national or state history or with significant persons in our past (NR/CR Criteria A,B/1,2). Although unaltered, the residence and ancillary buildings are of common design and construction and do not embody the distinctive characteristics of a type, period, or represent the work of a master, or possess high artistic value (NR/CR C/3). The results of research under this focused HRA study have not yielded, or predicted the likelihood of the previously graded and disturbed property to yield, information important in history or prehistory (NR/CR Criteria D/4; see also BFSA 2021). On the local level, the property is subject to the Chapter 15.88 of the City of Wildomar Municipal, specifically Section 15.88.030, which provides mandatory findings, like designation eligibility criteria, for the establishment of historic preservation districts; no provisions are provided for individual resources. The surrounding area is either vacant rural land or developed with modern residential or commercial construction as well as the I-15 freeway, and no potential exists for the property to contribute to a collective resource.

Based on the results of the HRA, 24850 Catt Road does not appear to be eligible for listing in the National Register of Historic Places (NR) or California Register of Historical Resources (CR) at any level, or for local designation under the Wildomar Municipal Code. The property has been assigned a California Historic Resources (CHR) code of ***6Z – Found ineligible for NR, CR, or Local designation through survey evaluation*** and fully documented on California Department of Parks and Recreation DPR forms (attached). The results of this focused study indicate that no further historic investigation is recommended.

The proposed NWC Clinton Keith & Wildomar Trail Project includes the demolition of all existing site improvements and redevelopment of the site for multi-family residential and commercial use. As 24850 Catt Road (376-410-015), including the related adjacent foundation slab (376-410-016), within the project area has been found ineligible for designation, the property is not considered a historic resource under CEQA, and no mitigation measures are recommended.

Please contact me should you need any clarification or further assistance.

Regards,

Jennifer Mermilliod, Principal, JMRC

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

This Ranch style single-family residence faces south from the north side of Catt Road. The wood-framed, one-story rectangular building rests on a slightly raised foundation with vented crawl space. The low-pitched, cross-gabled composition shingle roof ends in wide open eaves with fascia boards over walls sheathed in stucco. Fenestration consists of original aluminum-framed windows, and two tripartite windows with sliding-fixed-sliding sash are found on the façade. An original wood door is recessed under the side gable eave, and the two-step stoop is sheltered by the elongated eave of the front gable. An attached 2-car garage with modern metal roll up door fills the left façade, a brick chimney rises from the interior, and a rear entry door with stoop is found on the north elevation. Three ancillary builings are present – a partially demolished rear wood-framed structure with wire and plywood sheathing (by 1967; Ancillary 1), a wood-framed far rear outbuilding with wire-filled windows sheathed and roofed with corrugated metal (1967-1978; Ancillary 2), and a small wood-framed chicken wire shed covered with a corrugated metal roof to the left of the SFR (1982-1996; Ancillary 3). An adjacent foundation (1967-1978; 376-410-016) appears associated with the elevated property, which is covered with natural vegetation and mature trees. The unaltered residence is in fair condition, and ancillary/associated development was extensively modified/demolished from the 1970s-2000s.

B13. Remarks:

***B14. Evaluator:** Jennifer Mermilliod

***Date of Evaluation:** November 7, 2021

***B10. Significance:**

The project area is located within the south-central area of the City of Wildomar, which was founded on the La Laguna Rancho during the 1880s by Quaker brothers-in-law William Collier and Donald Graham, who were also involved in the founding of South Pasadena, after a split with Franklin Heald, who retained and developed Elsinore to the north. The local land boom that followed the coming of the railroad prompted the development of land and water throughout the region in the late-1880s. First dubbed 'Wildon,' a combination of the founders' first names, they were soon joined by William's sister and Donald's wife, Margaret, which led to the name of Wildomar. As many friends from Iowa soon emigrated upon invitation by Collier and Graham to the warmer climate, the new town soon became known as a Quaker colony. The early town was centered between Palomar Street and Grand Avenue, running northwest to southeast, and Gruwell and South Pasadena Streets, running southwest to northeast. The 120 acres was subdivided into 34 blocks of 50-foot-wide lots, and proximity to the railroad ensured brisk sales. At least one major addition by Townsend, Frame, and Starbuck added 50 lots to the southeast in 1887, and further improvements in 1887-88 contributed the Hotel Wildomar, a "Friends Church," a lumber business, and later, a brick yard, hardware store, and library. Like many towns born of the railroad, Wildomar suffered with the end of the boom in 1888 and remained a small agrarian town. Settlers in the 1920s introduced dryland farming, and the 1940s-1950s brought others seeking farm and rural alternatives to urban living. It was not until the 1970s that Wildomar experienced suburban residential development, and the postmodern housing tracts were carved among the many horse ranches. Modern revitalization efforts, which began in the 1980s, saw the incorporation of Wildomar as a city in 2008, and continue today with the transformation of its rural acreage.

This 2.4-acre parcel (376-410-015) remained undeveloped until the latter 20th century when a residence and multiple ancillary buildings and structures likely related to agriculture or ranching use were constructed. The property includes evidence of grading and clearing, and multiple ancillary structures and remnant fencing indicates the sheltering of animals, likely horses. Riverside County land and property records document that the existing single-family residence was constructed in 1962. Historic topographical maps and aerial images show the residence as well as a large, multi-divided structure to the rear (Ancillary 1; now partially demolished) by 1967. Two long structures aligned north-south, which were likely temporary canopies, appear for a short time in the 1970s on the rear balance of the parcel. By 1978, the extant building far to the rear (Ancillary 2) was constructed, though it's original L-shape configuration was modified to its current footprint by 2005, and another long rectangular rear building is shown that is no longer extant (demolished 2010-12). Additionally, a building, possibly another residence, was constructed on the footprint of the extant adjacent foundation (376-410-016; demolished 2012-14) that appears to be associated with 24850 Catt Road by common internal footpaths. The small shed (Ancillary 3) adjacent to the extant residence was added 1982-1996. Fieldwork confirmed that the commonly designed, simple Ranch style residence dates to the 1960s and is unaltered and in fair condition, although ancillary development associated with the use of the property was extensively modified or demolished from the 1970s-2000s.

The extant residence, ancillary structures, and ancillary remains were constructed in the 1960s at the end of the horse ranch and farming period and the brink of residential tract development in the modern period and were not found to be associated with individuals who have figured prominently in history. Therefore, the properties are not strongly associated with events that have made a significant contribution to the broad patterns of our national or state history or with significant persons in our past (NR/CR Criteria A,B/1,2). Although unaltered, the residence and ancillary buildings are of common design and construction and do not embody the distinctive characteristics of a type, period, or represent the work of a master, or possess high artistic value (NR/CR C/3). The results of research under this focused HRA study have not yielded, or predicted the likelihood of the previously graded and disturbed property to yield, information important in history or prehistory (NR/CR Criteria D/4; see also BFSA 2021). On the local level, the property is subject to the Chapter 15.88 of the City of Wildomar Municipal, specifically Section 15.88.030, which provides mandatory findings, like designation eligibility criteria, for the establishment of historic preservation districts; no provisions are provided for individual resources. The surrounding area is either vacant rural land or developed with modern residential or commercial construction as well as the I-15 freeway, and no potential exists for the property to contribute to a collective resource. As the property does not appear to be eligible for listing in the National Register of Historic Places (NR), or California Register of Historical Resources (CR), or for local designation under the Wildomar Municipal Code, it has been assigned a California Historic Resources (CHR) code of ***6Z – Found ineligible for NR, CR, or Local designation through survey evaluation.***

Wildomar Crossroads Energy Tables

January 18, 2022

Ms. Konnie Dobreva
EPD Solutions, Inc.
2 Park Plaza Suite 1120
Irvine, CA 92614

SUBJECT: WILDOMAR CROSSROADS ENERGY TABLES

The following Energy Tables were prepared for the proposed Wildomar Crossroads development (referred to as "Project") which is located in the City of Wildomar.

CONSTRUCTION POWER COSTS

Based on the *2022 National Construction Estimator* (1), the typical power cost per 1,000 square feet of building construction per month is estimated to be $2.41. The Project is proposed to consist of a 23,104-square foot (sf) supermarket, 5,087-sf of retail/restaurants, a 2,750-sf fast-food restaurant with drive-through window, a 1,133-sf coffee/donut shop with drive-through window, a 3,348-sf of high-turnover (sit-down) restaurant, and 150 multi-family residential units in 3-story apartment buildings. Table 1 estimates the total power cost of the on-site electricity usage during the construction of the proposed Project to be approximately $13,242.15.

TABLE 1: PROJECT CONSTRUCTION POWER COST

Land Use	Power Cost (per 1,000 SF)	Size (1,000 SF)	Construction Duration (months)	Project Construction Power Cost
Supermarket	$2.41	23.104	14	$779.53
Shops	$2.41	5.087	14	$171.64
Fast-Food Restaurant w/ Drive-Thru	$2.41	2.750	14	$92.79
Coffee/Donut Shop w/Drive-Thru	$2.41	1.133	14	$38.23
High-Turnover (Sit-Down) Restaurant	$2.41	3.348	14	$112.96
Multifamily Housing (Mid-Rise)	$2.41	123.862	14	$4,179.10
Parking	$2.41	79.056	14	$2,667.35
Landscape	$2.41	57.591	14	$1,943.12
Open Space	$2.41	66.549	14	$2,245.36
Other Asphalt Surfaces	$2.41	29.996	14	$1,012.08
			CONSTRUCTION POWER COST	***$13,242.15***

CONSTRUCTION ELECTRICITY USAGE

The SCE's general service rate schedule were used to determine the Project's electrical usage. As of January 1, 2022, SCE's general service rate is $0.13 per kilowatt hours (kWh) of electricity for commercial uses, $0.17 per kWh of electricity of residential uses, and $0.13 per kWh of electricity for street and area lighting (2), the total electricity usage from on-site Project construction related activities is estimated to be approximately 96,082 kWh.

TABLE 2: PROJECT CONSTRUCTION ELECTRICITY USAGE

Land Use	Cost per kWh	Project Construction Electricity Usage (kWh)
Supermarket	$0.13	5,918
Shops	$0.13	1,303
Fast-Food Restaurant w/ Drive-Thru	$0.13	704
Coffee/Donut Shop w/Drive-Thru	$0.13	290
High-Turnover (Sit-Down) Restaurant	$0.13	858
Multifamily Housing (Mid-Rise)	$0.17	24,797
Parking	$0.13	21,091
Landscape	$0.13	15,364
Open Space	$0.13	17,754
Other Asphalt Surfaces	$0.13	8,002
CONSTRUCTION ELECTRICITY USAGE		***96,082***

CONSTRUCTION EQUIPMENT FUEL CONSUMPTION

Fuel consumption estimates are presented in Table 3. The aggregate fuel consumption rate for all equipment is estimated at 18.5 hp-hr-gal., obtained from California Air Resources Board (CARB) 2018 Emissions Factors Tables and cited fuel consumption rate factors presented in Table D-24 of the Moyer guidelines (3). For the purposes of this analysis, the calculations are based on all construction equipment being diesel-powered which is standard practice consistent with industry standards. Diesel fuel would be supplied by existing commercial fuel providers serving the City and region. As presented in Table 3, Project construction activities would consume an estimated 44,579 gallons of diesel fuel.

TABLE 3: CONSTRUCTION EQUIPMENT FUEL CONSUMPTION ESTIMATES

Construction Activity	Duration (Days)	Equipment	HP Rating	Quantity	Usage Hours	Load Factor	HP-hrs/day	Total Fuel Consumption
Demolition	20	Concrete/Industrial Saws	81	1	8	0.73	473	511
		Excavators	158	3	8	0.38	1,441	1,558
		Rubber Tired Dozers	247	2	8	0.40	1,581	1,709
Site Preparation	10	Crawler Tractors	212	4	8	0.43	2,917	1,577
		Rubber Tired Dozers	247	3	8	0.40	2,371	1,282
Grading	20	Crawler Tractors	212	3	8	0.43	2,188	2,365
		Excavators	158	1	8	0.38	480	519
		Graders	187	1	8	0.41	613	663
		Rubber Tired Dozers	247	1	8	0.40	790	854
Building Construction	230	Cranes	231	1	8	0.29	536	6,663
		Forklifts	89	3	8	0.20	427	5,311
		Generator Sets	84	1	8	0.74	497	6,182
		Tractors/Loaders/Backhoes	97	3	8	0.37	861	10,709
		Welders	46	1	8	0.45	166	2,059

		Paving Equipment	132	2	8	0.36	760	822
		Rollers	80	2	8	0.38	486	526
Architectural Coating	20	Air Compressors	78	1	8	0.48	300	324
							CONSTRUCTION FUEL DEMAND (GALLONS DIESEL FUEL)	***44,579***

CONSTRUCTION WORKER FUEL ESTIMATES

For purposes of analysis, it is assumed that 50% of all worker trips are from light-duty-auto vehicles (LDA), 25% are from light-duty-trucks with a gross vehicle weight rating (GVWR) of less than 6,000 lbs. and equivalent test weight (ETW) of less than or equal to 3,750 lbs (LDT1), and 25% are from light-duty-trucks with a GVWR of less than 6,000 lbs. and ETW between 3,751 lbs. and 5,750 lbs (LDT2). Data regarding Project related construction worker trips were based on CalEEMod 2020.4.0 model defaults utilized within the AQIA. Vehicle fuel efficiencies for LDAs, LDT1s, and LDT2s were estimated using information generated within the 2017 version of the EMFAC developed by the CARB.

Table 4 provides an estimated annual fuel consumption resulting from the Project generated by LDAs, LDT1s, and LDT2s related to construction worker trips. Based on Table 4, it is estimated that 4,723 gallons of fuel will be consumed related to construction worker trips during full construction of the proposed Project.

TABLE 4: CONSTRUCTION WORKER FUEL CONSUMPTION ESTIMATES (1 OF 2)

Year	Construction Activity	Duration (Days)	Worker Trips/Day	Trip Length (miles)	VMT	Average Vehicle Fuel Economy (mpg)	Estimated Fuel Consumption (gallons)
2022	LDA

CONSTRUCTION VENDOR FUEL ESTIMATES

It is assumed that 50% of all vendor trips are from Medium-Heavy-Duty-Trucks (MHDT) and 50% are from Heavy-Heavy-Duty Trucks (HHDT). These assumptions are consistent with the CalEEMod 2020.4.0 defaults utilized within the within the AQIA. Vehicle fuel efficiencies for MHDTs and HHDTs were estimated using information generated within EMFAC2017.

Table 5 shows the estimated fuel economy of MHDTs and HHDTs accessing the Project site. Based on Table 5, fuel consumption from construction trips will total approximately 6,995 gallons.

TABLE 5: CONSTRUCTION VENDOR/HAULING FUEL CONSUMPTION ESTIMATES

TOTAL ANNUAL FUEL CONSUMPTION		***5,361,620***	***199,687***

MDV = Medium Duty Trucks; LHDT1 = Light-Duty Trucks (Vehicles under the LHDT1 category have a GVWR of 8,501 to 10,000 lbs.);
LHDT2 = Light-Duty Trucks (Vehicles under the LHDT2 category have a GVWR of 10,001 to 14,000 lbs.); OBUS = Other Buses; UBUS = Urban Buses
MCY = Motorcycle; SBUS = School Bus; MH = Motorhome

FACILITY ENERGY DEMANDS

Project building operations and Project site maintenance activities would result in the consumption of natural gas and electricity. Natural gas would be supplied to the Project by Southern California Gas (SoCalGas) and electricity would be supplied to the Project by SCE. Annual natural gas and electricity demands of the Project are summarized in Table 7.

TABLE 7: PROJECT ANNUAL OPERATIONAL NATURAL GAS AND ELECTRICITY DEMAND SUMMARY

Land Use	Natural Gas Demand (kBTU/year)	Electricity Demand (kWh/year)
Supermarket	441,980	840,524
Shops	11,191	61,756
Fast-Food Restaurant w/ Drive-Thru	749,815	126,940
Coffee/Donut Shop w/Drive-Thru	308,924	52,299
High-Turnover (Sit-Down) Restaurant	912,866	154,544
Multifamily Housing (Mid-Rise)	2,157,330	594,002
Parking	0	27,670
Landscape	0	0
Open Space	0	0
Other Asphalt Surfaces	0	0
TOTAL PROJECT ENERGY DEMAND	***4,582,106***	***1,857,735***

Preliminary Geotechnical Exploration

March 31, 2022

Project No. 13158.003

Sage Investco
3837 Birch Street
Newport Beach, CA 92660

Attention: Mr. Ralph Deppisch

Subject: Response to Third-Party Peer Review of the Wildomar Crossroads Geotechnical Report
City of Wildomar, Planning Department Case Number WILD-01, Task 112
Wildomar, California

References: Preliminary Geotechnical Exploration Proposed 8.9 Acre Mixed-Use Development, APNs 376-410-021 and 376-410-015, 016 & -017, NWC Clinton Keith Road and Wildomar Trail, Wildomar, California prepared by Leighton and Associates, Inc., Project 13158.003, dated October 19, 2021.

In accordance with the request of Joe Francis of Intracorp SW, this Addendum Letter is prepared in response to the third-party peer review comments provided by the City of Wildomar for our referenced geotechnical report (Leighton, 2021). For ease of reference, the review comments are summarized below and followed by our response.

Comments No. 1 through 4 *Are typographical/ editorial in nature and addressed collectively below.*

Response – The typographical errors are noted and have been corrected in our revised report dated October 19, 2021 (attached). Seeing as no geotechnical issues of concern are presented by these comments, the content and findings of our report remain unchanged and the recommendations are valid for the project as currently conceived.

Comment No. 5 – *While it may not have been part of the scope for this report, there is not much discussion on the potential for erosion and the loss of topsoil. For the purposes of CEQA this report has covered most of the topics but only briefly touches on erosion during the discussions on rockfalls, and slope construction. A general statement regarding the potential for erosion and the loss of topsoil on the site during construction and in the operational phase would be helpful.*

Response – To facilitate this request we have included the following statements within Section 3.6.6 of the revised report. “The anticipated earthwork associated with the proposed site improvements will necessitate the removal and/or burial of the existing surface soils present on the subject site during grading activities. Surface soils may be subject to erosion where

exposed during grading. These activities however, would be conducted in accordance with the regulations and procedures set forth in Chapter 33 of the California Building Code (CBC), which would avoid substantial erosion or unstable soil conditions. Substantial soil erosion should therefore not be anticipated as a result of the development of the site with incorporation of appropriate mitigation measures."

Based on proposed erosion control measures and surface drainage improvements upon completion of the project the loss of site materials due to erosion (water and wind) is considered low.

If you have any questions regarding this report, please contact this office at your convenience.

Respectfully submitted,

NWC Clinton Keith Road and Wildomar Trail
Wildomar, California

In accordance with your request, we have performed a geotechnical exploration for the subject site located northwest of the intersection of Clinton Keith Road and Wildomar Trail in the City of Wildomar, California (see Figure 1). This report summarizes our geotechnical findings and provides preliminary recommendations for the design and construction of the proposed improvements. Based on the results of our exploration, it is our opinion that the site is suitable for the intended use provided the recommendations included in this report are implemented during the design and construction phases of development.

If you have any questions regarding this report, please do not hesitate to contact the undersigned. We appreciate this opportunity to be of service on this project.

1.0 INTRODUCTION

1.1 Purpose and Scope

This geotechnical exploration is for the proposed residential development located in the City of Wildomar, California (*see Figure 1, Site Location Map)*. Our scope of services for this exploration included the following:

- Review of available site-specific geologic information and conceptual site plans by AO Architects (residential) and GK Pierce (commercial).
- A site reconnaissance and excavation of 6 exploratory borings and 7 exploratory test pits. Approximate locations of these borings and test pits are depicted on Figure 2. The logs of borings are presented in Appendix A.
- Geotechnical laboratory testing of selected soil samples collected during this exploration. Test results are presented in Appendix B.
- Geotechnical engineering analyses performed as directed by a California registered Geotechnical Engineer (GE) and reviewed by a California Certified Engineering Geologist (CEG).
- Preparation of this report which presents our geotechnical conclusions and recommendations regarding the grading and design of the proposed structures.

This report is not intended to be used as an environmental assessment (Phase I or other), or foundation/grading plan review. A Phase 1 ESA for this project was prepared by Leighton under separate cover.

1.2 Site Description

As depicted on Figure 1, the 8.96-acre site is located north of Clinton Keith Road and west of Wildomar Trail in the City of Wildomar, California. The site is designated by Riverside County APNs 376-410-021 and 376-410-015, 016 and -017. A large portion of the site is undeveloped and vacant, with the western portion of the site occupied by a single family residence and ancillary out buildings. Review of historic aerial photographs indicate that the residence was built sometime between 1938 and 1967, and that there were previous additional barn-type structures to the north of the residence on the property. Review of these aerial photos (and field reconnaissance) also indicates that one large and multiple smaller end-dumped stockpiles were placed on the central and southern portions of the site circa 2009. The general area of the project site is underlain by sedimentary bedrock formation (Pauba Formation), locally mantled by younger alluvium and topsoil. Site vegetation is generally sparse and

consists of seasonal weeds and grasses with several mature trees in the northeastern portion of the site.

1.3 Project Description

We understand that proposed site improvements involve mixed-use development with multifamily residential construction on the western portion of the site and commercial retail within the eastern portion (see Figure 2). The residential development includes five (5), two to three-story apartment buildings, a community club house, and associated driveways, parking and drainage structures. The commercial development includes a Major store with attached shop (~27,160 sq.ft) in the northeastern part of the site and two drive-thru restaurants (~3,000 to 3,600 sq. ft.) located in the southeastern portion of the site along Clinton Keith. Grading plans were not available at the time of this evaluation. However, based on the provided conceptual site plan and existing topography, future grading is expected to be moderate with maximum cuts and fills in the order of 10 to 15 feet plus remedial grading, where applicable. Cut or fill slopes, if proposed, are expected to be constructed at 2:1 (horizontal to vertical) inclinations or flatter.

2.0 FIELD EXPLORATION AND LABORATORY TESTING

2.1 Field Exploration

Our field exploration consisted of the excavation of six (6) borings within the site and seven (7) backhoe trenches. During the drilling exploration, in-situ undisturbed (Cal Ring), standard penetration test (SPT) and disturbed/bulk samples were collected from the borings for further laboratory testing and evaluation. Approximate locations of these exploratory borings and trenches are depicted on the *Geotechnical Map* (Figure 2). Sampling was conducted by a senior staff engineer and engineering geologist from our firm. After logging and sampling, the excavations were backfilled with spoils generated during excavation. The exploration logs from this exploration investigation are included in Appendix A.

2.2 Laboratory Testing

Laboratory tests were performed on representative samples to provide a basis for development of remedial earthwork and geotechnical design parameters. The laboratory testing program included expansion index, in-situ moisture and density, R-value, collapse potential, and corrosion characteristics. The results of our laboratory testing from this exploration are presented in Appendix B.

3.0 GEOTECHNICAL AND GEOLOGIC FINDINGS

3.1 Regional Geology

The site is located within a prominent natural geomorphic province in southwestern California known as the Peninsular Ranges. This region is characterized by steep, elongated ranges and valleys that trend generally northwestward. More specifically, the site is located within the southwestern portion of the relatively stable Perris Block, adjacent to the Elsinore Trough (Kennedy, 1977).

The Perris Block, approximately 20 miles by 50 miles in extent, is bounded by the San Jacinto Fault Zone to the northwest, the Elsinore Fault Zone to the southwest, the Cucamonga Fault Zone to the northwest, and the Temecula Basin to the southeast. The Perris Block has had a complex tectonic history, apparently undergoing relative vertical land-movements of several thousand feet in response to movement on the Elsinore and San Jacinto Fault Zones. Sedimentary and volcanic materials locally mantle the crystalline bedrock with alluvial deposits filling the lower valley areas.

3.2 Site Specific Geology

The earth materials encountered on site during this investigation consisted of undocumented artificial fill, alluvium, and the sandstone member of the Pleistocene-age Pauba Formation (Figure 3). These units are discussed in the following sections in order of increasing depth and relative age.

- **Undocumented Artificial Fill (Afu):** Undocumented fill soils were observed at several locations within the subject site. The majority of the undocumented fill forms a large central stock pile and multiple smaller end dump piles within the central and southern portions of the site (see Figure 2). While the undocumented fill soil appears to be composed of materials derived from surrounding development, the presence of imported materials or rock/debris within these fills cannot be ruled out at this time. Additional localized fill soil is likely present in the areas surrounding previous residences and out-buildings/structures. Surface accumulations of artificial fill less than approximately 3 feet may not be depicted on Figure 2. These undocumented fills are considered unsuitable for support of additional fill and/or structural improvements in their current setting and should be completely removed during rough-grading operations. Clean undocumented fill soils, free of deleterious material may be reused as compacted fill provided they are placed in general accordance with the recommendations provided in Appendix C. Vegetation, trash and debris, where encountered, should also be removed from the site.

- **Topsoil/Colluvium (not a mapped unit):** Thin deposits of weathered topsoil and slope wash mantle the elevated portions of the site. Where present, these deposits generally consist of silty/clayey sand (SM/SC) to sandy clay (CL) and expected to extend to a maximum depth of 3 feet. The topsoil and colluvium are considered unsuitable in their present state and should be removed to competent underlying deposits per the recommendations of section 4.2.1 in this report. Free of deleterious materials these deposits can be reused as fill soils during grading. Based on the results of our laboratory testing, these materials are expected to possess low expansion potential (EI<51).

- **Quaternary Alluvium (Qal):** Alluvium was observed infilling the bottom of the drainage present within the eastern parts of the site. The alluvium appears to be composed of clayey sand (SC) to silty sand (SM) occasional sandy clay layers (CL). Based on the results of our laboratory testing, these materials are expected to possess low expansion potential (EI<51) in the upper 5 to 10 feet. Due to the potentially compressible nature of the near-surface alluvium (upper ~5 to 7 feet), these deposits are considered unsuitable for support of settlement-sensitive structures and/or structural fill in their present condition.

- **Pauba Formation (Qps):** The bedrock material (Pauba Formation) is expected to underlie the site and will be exposed at the surface in future cut (western) portions of site. This unit generally consists of medium-dense to very dense, well graded sands (SW) and clayey silty sands (SM) with interbedded sandy silt/clay (CL/ML). Based on the results of our laboratory testing, this unit appears to generally possess very low to low expansion potential (EI<51) and low collapse potential (collapse<1%)

3.3 Groundwater and Surface Water

Groundwater was encountered within one of our borings at a depth of 42.6 feet below surface grade (BGS). Surface water is not anticipated to be encountered during grading. However, it should be noted that locally perched water conditions may occur in the future, and may fluctuate seasonally, depending on rainfall conditions. Surface water was not observed during this study; however, surface water should be expected during inclement weather within the onsite natural drainage channel.

3.4 Regional Faulting and Fault Activity

The subject site, like the rest of Southern California, is located within a seismically active region as a result of being located near the active margin between the North American and Pacific tectonic plates. The principal source of seismic activity is movement along the northwest-trending regional fault systems such as the San Andreas, San Jacinto, and Elsinore Fault Zones. Based on published geologic

hazard maps, this subject site is not located within a currently designated Alquist-Priolo (AP) Earthquake Fault Zone. The project site is located approximately 0.63 miles northeast of the closest Alquist-Priolo Earthquake Fault Zone. However, the subject site is located within a mapped Riverside County Fault Hazard zone. Previous mapping on adjacent properties has identified an earthquake fault in the northeastern portion of this site (Leighton, 2005, 2006, 2021). As presented on the conceptual site plan (Figure 2), habitable buildings are located (set back) in excess of 50 feet from the mapped trace of the identified fault per the approved fault hazard report (Leighton, 2021).

3.5 Ground Shaking and Seismic Coefficients per 2019 CBC

Strong ground shaking can be expected at the site during moderate to severe earthquakes in this general region. This is common to virtually all of Southern California. Intensity of ground shaking at a given location depends primarily upon earthquake magnitude, site distance from the source, and site response (soil type) characteristics.

Based on our explorations and review, the site is underlain by shallow dense fill and alluvial materials underlain by dense Pauba Formation. As such, the site is classified as a Class C site, and in accordance with ASCE 7-16 as the Design Code Reference Document, the 2019 CBC seismic coefficients are listed in table below. These seismic coefficients are generated based on interactive tools/programs currently available on USGS website and/or OSHPD seismic maps.

Table 1. 2019 CBC Seismic Coefficients per USGS General Procedure

CBC Categorization/Coefficient	Design Value
Site Latitude	**33.5985**
Site Longitude	**-117.2416**
Site Class Definition	**C**
Mapped Spectral Response Acceleration at 0.2s Period, S_s	**1.65 g**
Mapped Spectral Response Acceleration at 1s Period, S_1	**0.62 g**
Short Period Site Coefficient at 0.2s Period, F_a	**1.2**
Long Period Site Coefficient at 1s Period, F_v	**1.4**
Adjusted Spectral Response Acceleration at 0.2s Period, S_{MS}	**1.97 g**
Adjusted Spectral Response Acceleration at 1s Period, S_{M1}	**0.86 g**
Design Spectral Response Acceleration at 0.2s Period, S_{DS}	**1.32 g**
Design Spectral Response Acceleration at 1s Period, S_{D1}	**0.57 g**

g = Gravity acceleration

The results of the analysis also indicate that the adjusted Peak Ground Acceleration (PGA_M) for this site is 0.87 g.

3.6 Secondary Seismic Hazards

Ground shaking can induce "secondary" seismic hazards such as liquefaction, dynamic densification, and ground rupture, as discussed in the following subsections:

3.6.1 Dynamic Settlement (Liquefaction and/or Dry Settlement)

The site is mapped as located within a Low to Moderate Riverside County Liquefaction Hazard zone. Based on the results of our subsurface borings, observations and the geotechnical recommendations presented herein, the loose near surface soils (susceptible to liquefaction) on the site will be completely removed and recompacted during remedial grading. Thus, potential for liquefaction or dynamic settlement to occur on this site is considered very low.

Compacted fill soils above the ground water elevation that are primarily granular in nature (sand), may be susceptible to dynamic settlement or densification if shaken by the design level earthquake. This hazard is considered very low at this site. As such, the differential settlement is expected to be less than 0.5-inch in a 40-foot horizontal distance within this site.

3.6.2 Ground Rupture

Previous mapping on adjacent properties has identified an earthquake fault projecting across the northeastern portion of this site (Leighton, 2005, 2006, 2021). Habitable building locations, as presented on the conceptual site plan in place at the time of this evaluation are located (set back) in excess of 50 feet from the mapped trace of the identified fault. Given the aforementioned setbacks, surface rupture hazard to buildings are considered very low in the event of movement on the mapped fault.

3.6.3 Rock Falls

The potential for rock fall due to either erosion or seismic ground shaking is considered non-existent in this area.

3.6.4 Seiches, Tsunamis, Inundation Due to Large Water Storage Facilities

Due to the great distance to large bodies of water, the possibility of seiches and tsunamis impacting the site is considered remote.

3.6.5 Slope Stability and Landslides

The existing slopes are considered grossly stable. Due to the relatively moderate relief across the site and anticipated graded slope heights, the risk of deep-seated slope failure on this site or adjacent sites is considered low. The site is not considered susceptible to seismically induced landslides.

3.6.6 Erosion

The anticipated earthwork associated with the proposed site improvements will necessitate the removal and/or burial of the existing surface soils present on the subject site during grading activities. Surface soils may be subject to erosion where exposed during grading. These activities however, would be conducted in accordance with the regulations and procedures set forth in Chapter 33 of the CBC, which would avoid substantial erosion or unstable soil conditions. Substantial soil erosion should therefore not be anticipated as a result of the development of the site with incorporation of appropriate mitigation measures.

Based on proposed erosion control measures and surface drainage improvements upon completion of the project the loss of site materials due to erosion (water and wind) is considered low.

3.6.7 Subsidence

In accordance with County of Riverside Geologic Hazard Maps, the site is located within an active subsidence area. However, due to the previous grading (Leighton 2004), we consider the potential for differential subsidence and ground fissuring on this site to be very low.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 General

The proposed site development appears feasible from a geotechnical viewpoint provided that the following recommendations are incorporated into the design and construction phases of development. The main geotechnical concern is the potential for differential settlement along portions of the proposed buildings where subgrade transitions from dense Pauba subgrade into fill subgrade. As such, special remedial grading recommendations are provided below so differential settlement is kept to tolerable limits.

4.2 Earthwork

Earthwork should be performed in accordance with the following recommendations and the *Earthwork and Grading Specifications* included in Appendix C of this report. In case of conflict, the following recommendations supersede those in Appendix C. The contract between the Owner and the earthwork contractor should be worded such that it is the responsibility of the contractor to place fill properly and in accordance with recommendations presented in this report, including the guide specifications in Appendix C, and the testing and observation of the geotechnical consultant.

4.2.1 Remedial Grading

Prior to grading, the proposed structural improvement areas (i.e. all structural fill areas, pavement areas, buildings, etc.) of the site should be cleared of surface and subsurface obstructions, heavy vegetation, roots and debris. These deleterious materials should be disposed of offsite. Septic tanks, cesspool, and water wells, if encountered, should be removed or abandoned in accordance with the Riverside County Department of Health Services guidelines.

An actual grading plan was not available at the time of preparing this report. However, we anticipate that there will be conventional cut and fill grading at the site to create building pads. Removal of unsuitable compressible materials should be anticipated in the proposed cut and fill areas. Unsuitable materials will consist of topsoil/ colluvium, all undocumented fill, and the upper 3 to 7 feet of alluvium. For preliminary planning purposes, the removal depth as indicated on figure 2 will be on the order of 3 to 5 feet below existing grades for most of the residential site and western portion of the commercial site. The removal depth is expected to be 5 to 7 feet below existing grade for settlement-sensitive

structures within the eastern portion of the commercial site. Removal depth or over-excavation need not to exceed 3 feet in parking areas.

Localized deeper "pockets" of unsuitable material may be encountered such as the central eastern portion of the site where undocumented fills may reside on top of compressible alluvium. The over excavation bottoms should be reviewed by a representative of the geotechnical consultant. The excavation bottoms exposing moderately dense Pauba Formation or Alluvium should be processed and moisture conditioned prior to placement of fill soils.

If design grades create cut/fill transitions, over-excavation of the cut portion of the transition pads to a minimum of 3 feet below pad grade may be desired during rough grading. This over-excavation does not include scarification or pre-processing prior to addition of fill placements. Over-excavation limits should extend to approximately 10 feet outside of proposed building “footprints”. Actual limits can be determined during rough grading operations. We recommend that transition pads be overexcavated during rough-grading operations.

After completion of the recommended removal of unsuitable soils, and over-excavation of transition pads, the approved surface should be scarified a minimum of 8-inches, moisture conditioned as necessary to near optimum and compacted.

4.2.2 Structural Fills

The onsite soil is generally suitable for reuse as compacted fill, provided it is substantially free of organic materials, expansive soil, debris, and oversize material (greater than 6 inches in greatest dimension). Topsoil and vegetation layers, root zones, and similar surface materials should be stripped and stockpiled or removed from the site. The optimum lift thickness to produce a uniformly compacted fill will depend on the soil and the type and size of compaction equipment used. In general, fill should be placed in uniform lifts not exceeding 8 inches in thickness. Fill soil should be placed and compacted to a minimum 90 percent relative compaction (as determined by ASTM Test Method D1557) and at or above the optimum moisture content.

Placement and compaction of fill should be performed in accordance with the City Grading Ordinances and the recommendations in Appendix C, under the full-time observation and testing of the geotechnical engineer. Import fill soil with an expansion index greater than 21 should not be used in the upper 3 feet of subgrade soil below building pads. If cobbles and boulders larger than 6-inches in largest diameter are encountered or produced during grading, these oversized cobbles and boulders should be reduced to less than 6 inches or placed in structural fill as outlined in Appendix C.

4.2.3 Slope Construction

If applicable, fill slope keyways will be necessary at the toe of all fill slopes placed beyond the areas of existing fill and at fill-over-cut contacts. Keyway schematics, including dimensions and subdrain recommendations, are provided in Appendix C. All keyways should be excavated into dense existing fill or Pauba formation as determined by the geotechnical engineer. The cut portions of all slope and keyway excavations should be geologically mapped and approved by a geologist prior to fill placement.

Compacted fill or cut slopes up to 20 feet in height at 2:1 (horizontal:vertical) or flatter are considered grossly stable for static and pseudostatic conditions. Higher or steeper slopes should be subject to further review and evaluation.

The outer portion of fill slopes should be either overbuilt by 2 feet (minimum) and trimmed back to the finished slope configuration or compacted in vertical increments of 5 feet (maximum) by a weighted sheepsfoot roller as the fill is placed. The slope face should then be track-walked by dozers of appropriate weight to achieve the final slope configuration and compaction of the slope face.

Slope faces are inherently subject to erosion, particularly if exposed to rainfall and irrigation. Landscaping and slope maintenance should be conducted as soon as possible in order to increase long-term surficial stability. Berms and or v-ditch drainage devices should be provided at the top of all slopes. Drainage should be directed such that surface runoff on the slope face is minimized.

4.2.4 Import Soils

Import soil and/or borrow sites, if needed, should be evaluated by us prior to import. Import soil should be uncontaminated, granular in nature, free of organic material (loss on ignition less-than 2 percent), have very low expansion potential (E<21) and have a low corrosion impact to the proposed improvements.

4.2.5 Utility Trenches

Utility trenches should be backfilled with compacted fill in accordance with Sections 306-6 and 306-12 of the *Standard Specifications for Public Works Construction,* (“Greenbook”), 2021 Edition. Fill material above the pipe zone should be placed in lifts not exceeding 8 inches in uncompacted thickness and should be compacted to at least 90 percent relative compaction (ASTM D 1557) by mechanical means only. Site soil may generally be suitable as trench backfill provided the soil is screened of rocks over 1½ inch in diameter and organic matter. If imported sand is used as backfill, the upper 3 feet in building and pavement areas should be compacted to 95 percent. The upper 6 inches

of backfill in all pavement areas should be compacted to at least 95 percent relative compaction.

Where granular backfill is used in utility trenches adjacent moisture sensitive subgrades and foundation soil, we recommend that a cut-off "plug" of impermeable material be placed in these trenches at the perimeter of buildings, and at pavement edges adjacent to irrigated landscaped areas. A "plug" can consist of a 5-foot long section of clayey soil with more than 35-percent passing the No. 200 sieve, or a Controlled Low Strength Material (CLSM) consisting of one sack of Portland-cement plus one sack of bentonite per cubic-yard of sand. CLSM should generally conform to requirements of the "Greenbook". This is intended to reduce the likelihood of water permeating trenches from landscaped areas, then seeping along permeable trench backfill into the building and pavement subgrades, resulting in wetting of moisture sensitive subgrade soil under buildings and pavements.

Excavation of utility trenches should be performed in accordance with the project plans, specifications and the *California Construction Safety Orders* (latest Edition). The contractor should be responsible for providing a "competent person" as defined in Article 6 of the *California Construction Safety Orders*. Contractors should be advised that sandy soil could make excavations particularly unsafe if all safety precautions are not properly implemented. In addition, excavations at or near the toe of slopes or parallel to slopes may be highly unstable due to the increased driving force and load on the trench wall. Spoil piles from the excavation(s) and construction equipment should be kept away from the sides of the trenches. Leighton and Associates, Inc. (Leighton) does not consult in the area of safety engineering.

4.2.6 Temporary Slope Stability

Existing site soil and/or fill derived from onsite soil should be considered as OSHA soil Type C. Therefore, unshored temporary cut slopes should be no steeper than 1½:1 (horizontal:vertical), for a height no-greater-than 20 feet (California Construction Safety Orders, Subchapter 4, Section 1541.1, Table B-1). During construction, exposed soil conditions should be regularly evaluated to verify that conditions are as anticipated. The contractor should be responsible for providing the "competent person" required by OSHA standards to evaluate soil conditions. Close coordination between the competent person and geotechnical consultant should be maintained to facilitate construction while providing safe excavations.

4.2.7 Shrinkage

The volume change of excavated on-site soils upon recompaction is expected to vary with material type, density, in situ moisture content, location, and compaction effort. The in-place and compacted densities of soil vary and

accurate overall determination of shrinkage and bulking cannot be made. Therefore, we recommend site grading include, if possible, a balance area or ability to adjust grades slightly to accommodate some variation. Based on our geotechnical laboratory test results, we expect recompaction shrinkage (when recompacted to an average 92 percent of ASTM D 1557) of 5- to 15-percent by volume for the alluvium or Pauba formation.

4.2.8 Drainage

All drainage should be directed away from structures, slopes and pavements by means of approved permanent or temporary drainage devices. Adequate storm drainage of any proposed pad should be provided to avoid wetting of the foundation soil. Irrigation adjacent to buildings should be avoided when possible. As an option, sealed-bottom planter boxes or drought resistant vegetation should be used within 5-feet of buildings.

4.3 Foundation Design

Shallow spread or continuous wall footings bearing on a newly placed properly compacted fill are anticipated for the proposed structures.

4.3.1 Design Parameters – Spread/Continuous Shallow Footings

Footings should be embedded at least 12-inches below lowest adjacent grade for the proposed structures. Footing embedment should be measured from lowest adjacent finished grade, considered as the top of interior slabs-on-grade or the finished exterior grade, excluding landscape topsoil, whichever is lower. Footings located adjacent to utility trenches or vaults should be embedded below an imaginary 1:1 (horizontal:vertical) plane projected upward and outward from the bottom edge of the trench or vault, up towards the footing.

- **Bearing Capacity**: For footings founded on properly compacted fill soil, an allowable vertical bearing capacity of 2,000 pounds-per-square-foot (psf) should be used. The bearing pressure value may be increased by 250 psf for each additional foot of embedment or each additional foot of width to a maximum vertical bearing value of 3,000 psf. These bearing values may be increased by one-third when considering short-term seismic or wind loads. All continuous perimeter or interior footings should be reinforced with at least one No. 5 bar placed both top and bottom.

- **Lateral loads**: Lateral loads may be resisted by friction between the footings and the supporting subgrade. A maximum allowable frictional resistance of 0.35 may be used for design. In addition, lateral resistance may be provided by passive pressures acting against foundations poured neat against properly compacted granular fill. We recommend that an allowable passive pressure based on an equivalent fluid pressure of

350 pounds-per-cubic-foot (pcf) be used in design. These friction and passive values have already been reduced by a factor-of-safety of 1.5.

Slab-on-grade floors utilized with conventional foundations should be designed with a minimum thickness as indicated by the project structural engineer consistent with a modulus of subgrade reaction of 200 pounds-per-square-inch per inch (pci) and reinforced in accordance with the structural engineer's recommendations.

4.3.2 Post-Tension Slab-on-Grade Design

Per Section 1808.6.2 of the 2019 California Building Code, slab-on-grade design for expansive soils (EI>21) should be designed in accordance with WRI/CRSI Design of Slab-On-Ground Foundations or PTI DC 10.5 or any other approved method taking into consideration the anticipated differential movement (ym) and/or differential settlement provided in Section 4.3.4 of this soils report.

PTI Design Category 1 may be applied to lots with an Expansion Index (EI) less than 51 (or PI<20). The following PTI design parameters were derived using VOLFLO 1.5 computer program developed by Geostructural Tool Kit, Inc. and the laboratory test results summarized above:

Table 2. PTI Design Parameters

	Category I (EI<51 & PI<20)
Edge Moisture Variation, e_m	
Center Lift	9.0 feet
Edge Lift	5.1 feet
Differential Swell, y_m	
Center Lift - Shrink	0.46 inches
Edge Lift - Swell	0.88 inches

4.3.3 Vapor Retarder

A moisture retarder should be installed underneath all slabs where moisture condensation is undesirable. The vapor retarder should be sealed at all penetrations and laps and properly installed in accordance with the recommendations of the architect, concrete subcontractor, and the manufacturer's recommendations. Moisture vapor retarders may retard but not eliminate moisture vapor movement from the underlying soils up through the slabs. Moisture vapor transmission may be additionally reduced by use of concrete additives. A slipsheet or equivalent should be utilized above the concrete slab if crack-sensitive floor coverings (such as ceramic tiles, etc.) are to be placed directly on the concrete slab

It has been a standard of care to place a 10-mil Visqueen moisture retarder (or equivalent) underneath all moisture sensitive slabs. This moisture retarder is typically covered by a 2-inch layer of sand (SE of 30 or greater) to reduce curling. Visqueen sheets should overlap at least 6-inches. If storage of moisture sensitive records (files) or floor coverings (e.g. vinyl tile, etc.) are to be used, additional moisture mitigation measures may be employed within or beneath concrete slab-on-grade floors. Moisture retarders do not completely eliminate moisture vapor movement from the underlying soils up through the slabs or from the unbonded water in the concrete. To further reduce moisture vapor emissions that may result in delamination and other tile damage, we recommend that a moisture retarder specialist be consulted.

4.3.4 Settlement Estimates

For settlement estimates, we assumed that column loads will be no larger than 90 kips, with bearing wall loads not exceeding 10 kips per foot of wall. If greater column or wall loads are required, we should re-evaluate our foundation recommendation, and re-calculate settlement estimates.

Buildings located on properly compacted fill soils as required per Section 4.2 should be designed in anticipation of 1 inch of total settlement and 1/2-inch of differential settlement within a 40-foot horizontal run.

4.4 Footing Setback

We recommend a minimum horizontal setback distance from the face of slopes for all structural footings (retaining and decorative walls, building footings, etc.). This distance is measured from the outside bottom edge of the footing horizontally to the slope face (or to the face of a retaining wall) and should be a minimum of H/2, where H is the slope height (in feet). The setback should not be less than 7 feet and need not be greater than 20 feet for this project.

Note that the soils within the structural setback area possess poor lateral stability and improvements (such as retaining walls, sidewalks, fences, pavements, etc.) constructed within this setback area may be subject to lateral movement and/or differential settlement. Potential distress to such improvements may be mitigated by providing a deepened footing or a pier and grade-beam foundation system to support the improvement. The deepened footing should meet the setback as described above.

4.5 Retaining Walls

Retaining wall earth pressures are a function of the amount of wall yielding horizontally under load. If the wall can yield enough to mobilize full shear strength

of the backfill soil, then the wall can be designed for "active" pressure. If the wall cannot yield under the applied load, the shear strength of the soil cannot be mobilized and the earth pressure will be higher. Such walls should be designed for "at rest" conditions. If a structure moves toward the soils, the resulting resistance developed by the soil is the "passive" resistance. Retaining walls backfilled with non-expansive soils can be designed using the following equivalent fluid pressures:

Table 3. Retaining Wall Design Earth Pressures (Static, Drained)

Loading Conditions	Equivalent Fluid Density (pcf)	
	Level Backfill	2:1 Sloped Backfill
Active	35	55
At-Rest	55	75
Passive*	300	150 (2:1, sloping down)

* This assumes level condition in front of the wall will remain for the duration of the project, not to exceed 3,500 psf at depth.

Unrestrained (yielding) cantilever walls should be designed for the active equivalent-fluid weight value provided above for very low to low expansive soils that are free draining (see Appendix C for typical drainage). In the design of walls restrained from movement at the top (non-yielding) such as basement or elevator pit/utility vaults, the at-rest equivalent fluid weight value should be used. Total depth of retained earth for design of cantilever walls should be measured as the vertical distance below the ground surface measured at the wall face for stem design, or measured at the heel of the footing for overturning and sliding calculations. Should a sloping backfill other than a 2:1 (horizontal:vertical) be constructed above the wall (or a backfill is loaded by an adjacent surcharge load), the equivalent fluid weight values provided above should be re-evaluated on an individual case basis by us. Non-standard wall designs should also be reviewed by us prior to construction to check that the proper soil parameters have been incorporated into the wall design.

All retaining walls should be provided with appropriate drainage. The outlet pipe should be sloped to drain to a suitable outlet. Wall backfill should be non-expansive (EI $\leq$ 21) sands compacted by mechanical methods to a minimum of 90 percent relative compaction (ASTM D 1557). Walls should not be backfilled until wall concrete attains the 28-day compressive strength and/or as determined by the Structural Engineer that the wall is structurally capable of supporting backfill. Lightweight compaction equipment should be used, unless otherwise approved by the Structural Engineer.

4.6 Sulfate Attack

The result of our laboratory testing on a soil sample taken from the site showing a low exposure to sulfate attack is included in Appendix B. Further testing should be performed at the completion of site grading to confirm soluble-sulfate content in on-site subgrade soil.

4.7 Preliminary Pavement Design

The preliminary pavement design provided below is based on the design procedures included in Caltrans Highway Design Manual and an R-value of 5. For planning and estimating purposes, the pavement sections are calculated based on assumed Traffic Indexes (TI) and design criteria of 20-year life span.

Table 4. Preliminary Asphalt Pavement Sections

General Traffic Condition	Traffic Index (TI)	Hot Mix Asphalt HMA (ft.)	Aggregate Base* AB (ft.)
Interior Auto Parking	4.5	0.25	0.81
Interior Access Roadways	5.0	0.25	0.86
Truck Access & Driveways	6.0	0.33	1.16
Truck Access & Driveways	7.0	0.33	1.56

The applicable Traffic Index (TI) should be designated by the project civil engineer and actual R-values of the subgrade soils should be verified after completion of site grading to finalize the pavement design.

The upper 6 inches of pavement area subgrade soils should be moisture-conditioned to near optimum moisture content, compacted to at least 95 percent relative compaction (ASTM D 1557) and kept in this condition until the pavement section is constructed. Minimum relative compaction requirements for aggregate base should be 95 percent of the maximum laboratory density as determined by ASTM D 1557. Aggregate base should conform to Greenbook or Caltrans Class 2 aggregate base.

If pavement areas are adjacent to heavily watered landscape areas, some deterioration of the subgrade load bearing capacity may result. Moisture control measures such as deepened curbs or other moisture barrier materials may be used to prevent the subgrade soil from becoming saturated. The use of concrete cutoff or edge barriers should be considered when pavement is planned adjacent to either open (unfinished) or irrigated landscaped areas.

5.0 GEOTECHNICAL CONSTRUCTION SERVICES

Geotechnical review is of paramount importance in engineering practice. Poor performance of many foundation and earthwork projects has been attributed to inadequate construction review. We recommend that Leighton be provided the opportunity to review the grading and foundation plans prior to bid.

Reasonably-continuous construction observation and review during site grading and foundation installation allows for evaluation of the actual soil conditions and the ability to provide appropriate revisions where required during construction. Geotechnical conclusions and preliminary recommendations should be reviewed and verified by Leighton during construction, and revised accordingly if geotechnical conditions encountered vary from our findings and interpretations. Geotechnical observation and testing should be provided:

- After completion of site demolition and clearing,
- During over-excavation of compressible soil,
- During compaction of all fill soil,
- After excavation of all footings and prior to placement of concrete,
- During utility trench backfilling and compaction, and
- When any unusual conditions are encountered.

Additional geotechnical exploration and analysis may be required based on final development plans, for reasons such as significant changes in proposed structures, locations, or footprints. We should review grading (civil) and foundation (structural) plans, and comment further on geotechnical aspects of this project.

6.0 LIMITATIONS

This report was based in part on data obtained from a limited number of observations, site visits, soil excavations, samples and tests. Such information is, by necessity, incomplete. The nature of many sites is such that differing soil or geologic conditions can be present within small distances and under varying climatic conditions. Changes in subsurface conditions can and do occur over time. Therefore, our findings, conclusions and recommendations presented in this report are based on the assumption that we (Leighton and Associates, Inc.) will provide geotechnical observation and testing during construction as the Geotechnical Engineer of Record for this project. Please refer to Appendix D, GBA's *Important Information About Your Geotechnical Report*, prepared by the Geoprofessional Business Association (GBA) presenting additional information and limitations regarding geotechnical engineering studies and reports.

This report was prepared for the sole use of Client and their design team, for application to design of the proposed maintenance building, in accordance with generally accepted geotechnical engineering practices at this time in California. Any unauthorized use of or reliance on this report constitutes an agreement to defend and indemnify Leighton and Associates, Inc. from and against any liability, which may arise as a result of such use or reliance, regardless of any fault, negligence, or strict liability of Leighton and Associates, Inc.

APPENDIX A

LOGS OF EXPLORATORY BORINGS / FIELD EXPLORATION

Encountered earth materials were logged and sampled in the field by our representative and described in accordance with the Unified Soil Classification System (ASTM D 2488). During drilling, bulk and relatively undisturbed ring-lined split-barrel driven earth material samples were obtained from our borings for geotechnical laboratory testing and classification. Drive-samples were driven with a 140-pound auto-hammer falling 30-inches. Samples were transported to our in-house Temecula laboratory for geotechnical testing. After logging and sampling, our borings were backfilled with spoils generated during drilling.

The attached subsurface exploration logs and related information depict subsurface conditions only at the locations indicated and at the particular date designated on these logs. Subsurface conditions at other locations may differ from conditions occurring at these logged locations. Passage of time may result in altered subsurface conditions due to environmental changes. In addition, any stratification lines on these logs represent an approximate boundary between sampling intervals and soil types; and transitions may be gradual.

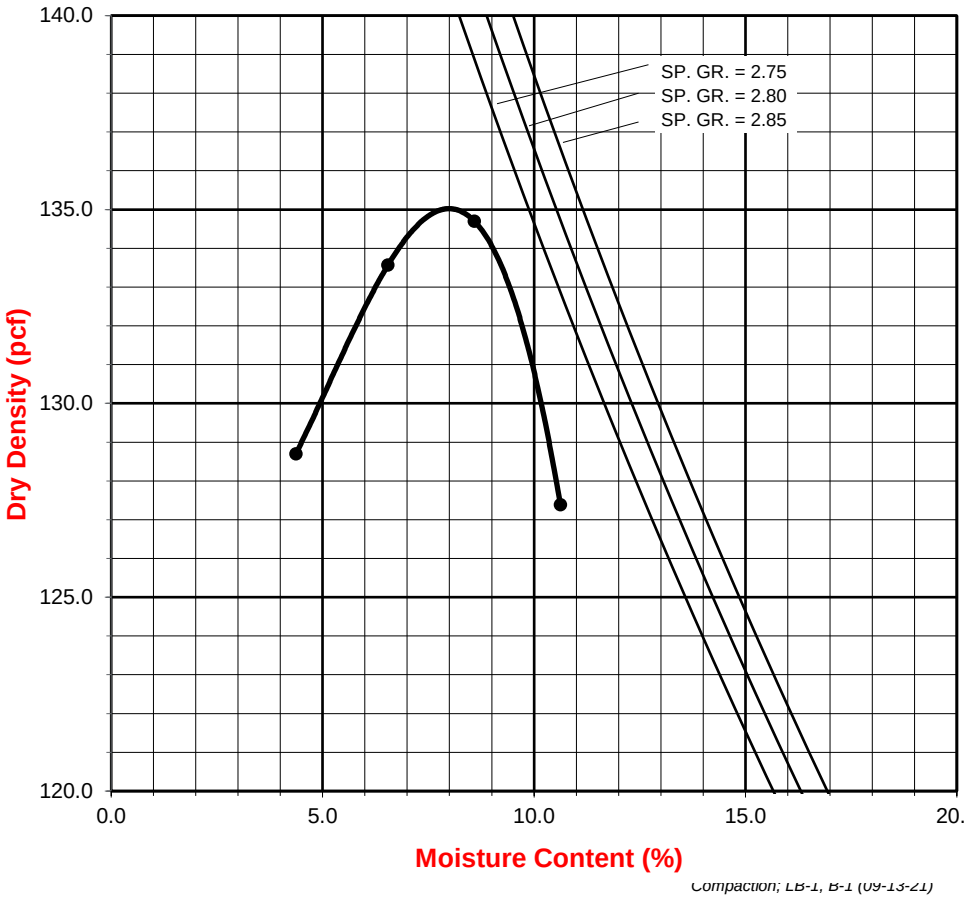
Maximum Dry Density (pcf) 135.0 **Optimum Moisture Content (%)** 8.0

PROCEDURE USED

[X] **Procedure A**
Soil Passing No. 4 (4.75 mm) Sieve
Mold : 4 in. (101.6 mm) diameter
Layers : 5 (Five)
Blows per layer : 25 (twenty-five)
May be used if +#4 is 20% or less

[ ] **Procedure B**
Soil Passing 3/8 in. (9.5 mm) Sieve
Mold : 4 in. (101.6 mm) diameter
Layers : 5 (Five)
Blows per layer : 25 (twenty-five)
Use if +#4 is >20% and +3/8 in. is 20% or less



[ ] **Procedure C**
Soil Passing 3/4 in. (19.0 mm) Sieve
Mold : 6 in. (152.4 mm) diameter
Layers : 5 (Five)
Blows per layer : 56 (fifty-six)
Use if +3/8 in. is >20% and +¾ in. is <30%

1.0 General

1.1 Intent

These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 The Geotechnical Consultant of Record

Prior to commencement of work, the owner shall employ the Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultants shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required. Subsurface areas to be geotechnically observed, mapped, elevations recorded, and/or tested include natural ground after it has been cleared for receiving fill but before fill is placed, bottoms of all "remedial removal" areas, all key bottoms, and benches made on sloping ground to receive fill.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to determine the attained level of compaction. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.

1.3 The Earthwork Contractor

The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with the plans and specifications.

The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of "spreads" of work and the estimated quantities of daily earthwork contemplated for the site prior to commencement of grading. The Contractor shall inform the owner and the Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate observations and tests can be planned and accomplished. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified.

2.0 Preparation of Areas to be Filled

2.1 Clearing and Grubbing

Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). No fill lift shall contain more than 5 percent of organic matter. Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed.

2.2 Processing

Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be overexcavated as specified in the following section. Scarification shall continue until soils are broken down and free of large clay lumps or clods and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.

2.3 Overexcavation

In addition to removals and overexcavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be overexcavated to competent ground as evaluated by the Geotechnical Consultant during grading.

2.4 Benching

Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise overexcavated to provide a flat subgrade for the fill.

2.5 Evaluation/Acceptance of Fill Areas

All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant

prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

3.0 Fill Material

3.1 General

Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 Oversize

Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.

3.3 Import

If importing of fill material is required for grading, proposed import material shall meet the requirements of Section 3.1. The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

4.0 Fill Placement and Compaction

4.1 Fill Layers

Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 Fill Moisture Conditioning

Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557).

4.3 Compaction of Fill

After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.

4.4 Compaction of Fill Slopes

In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557.

4.5 Compaction Testing

Field-tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.6 Frequency of Compaction Testing

Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soils embankment. In addition, as a guideline, at least one test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.7 Compaction Test Locations

The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than 5 feet apart from potential test locations shall be provided.

5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

6.0 Excavation

Excavations, as well as over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical plans are estimates only. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 Trench Backfills

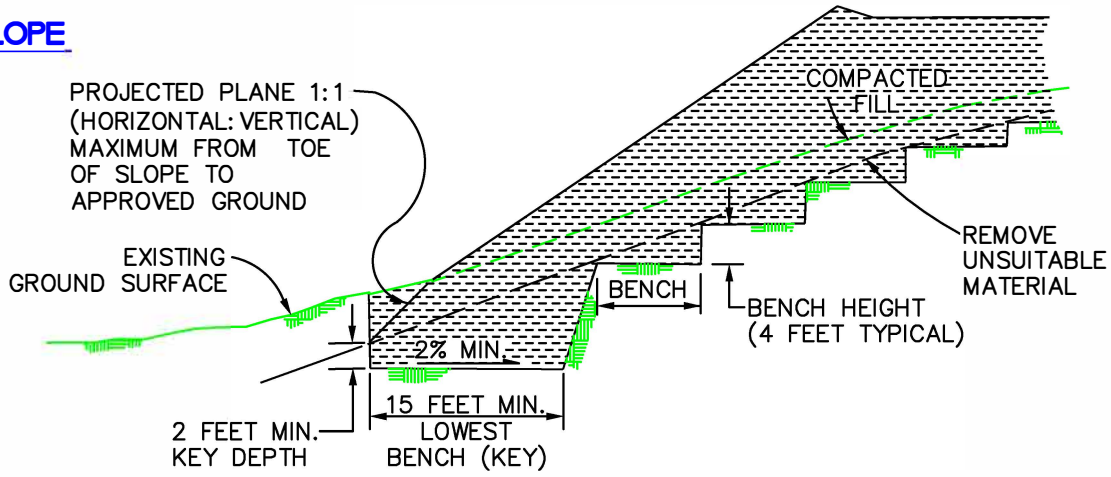
7.1 Safety

The Contractor shall follow all OSHA and Cal/OSHA requirements for safety of trench excavations.

7.2 Bedding and Backfill

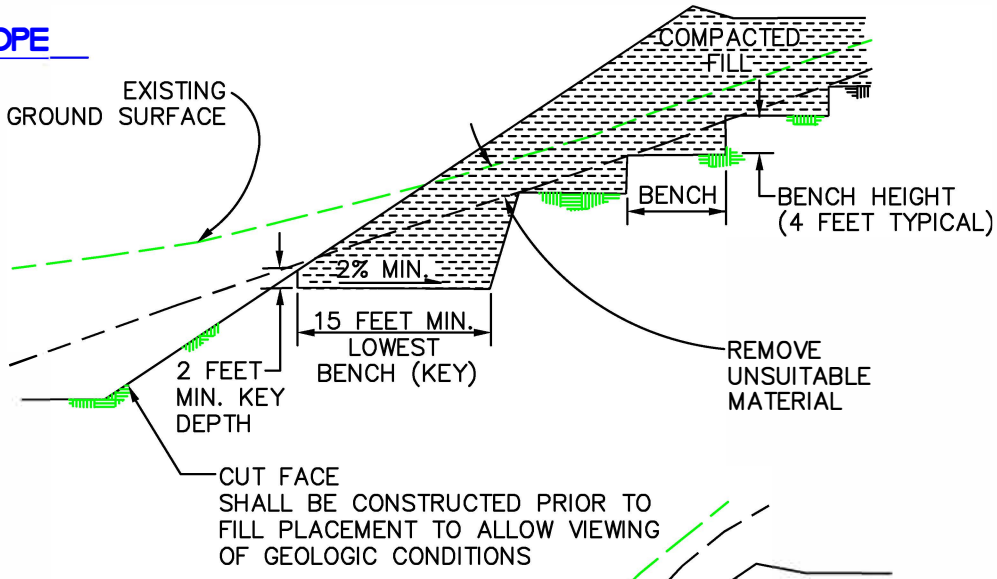
All bedding and backfill of utility trenches shall be performed in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum of 90 percent of relative compaction from 1 foot above the top of the conduit to the surface.

The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill.



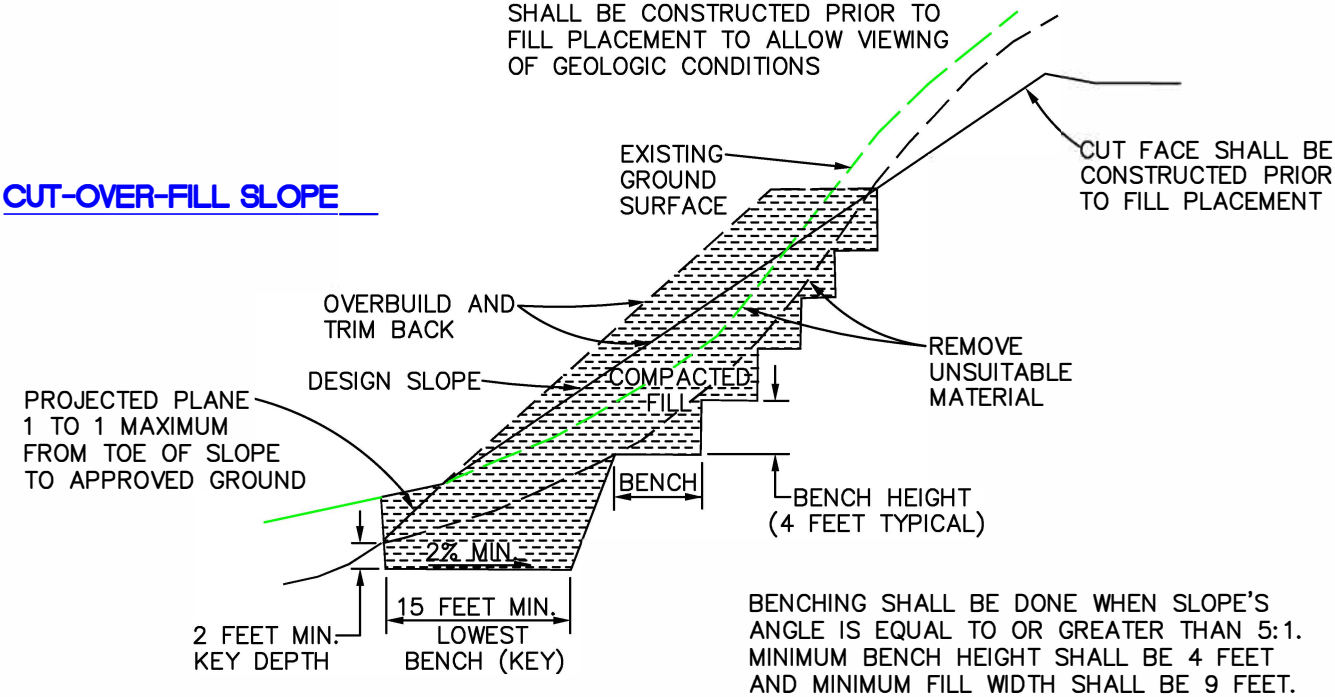
7.3 Lift Thickness

Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.



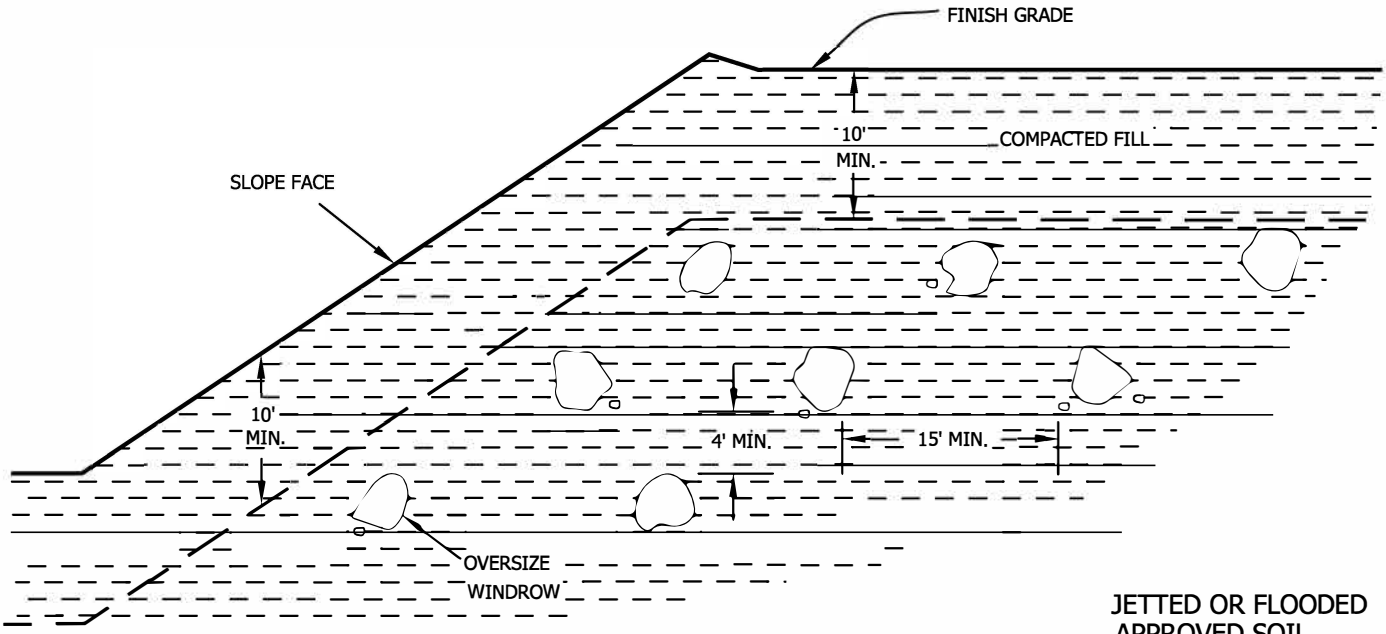
7.4 Observation and Testing

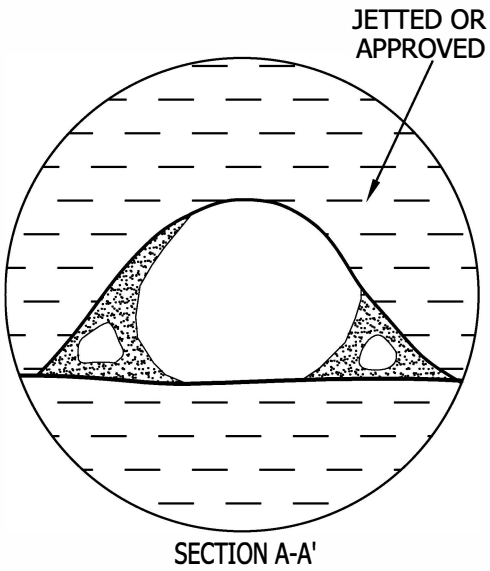
The jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.



FILL SLOPE

FILL-OVER-CUT SLOPE

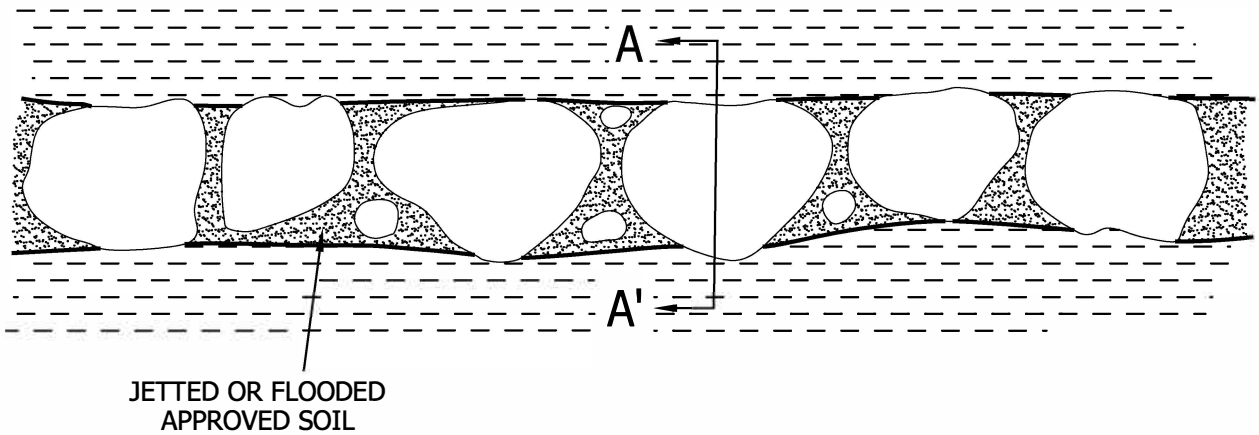




CUT-OVER-FILL SLOPE

BENCHING SHALL BE DONE WHEN SLOPE'S ANGLE IS EQUAL TO OR GREATER THAN 5:1. MINIMUM BENCH HEIGHT SHALL BE 4 FEET AND MINIMUM FILL WIDTH SHALL BE 9 FEET.

KEYING AND BENCHING	GENERAL EARTHWORK AND GRADING SPECIFICATIONS STANDARD DETAILS A	Leighton



SECTION A-A'

- Oversize rock is larger than 8 inches in largest dimension.
- Backfill with approved soil jetted or flooded in place to fill all the voids.
- Do not bury rock within 10 feet of finish grade.
- Windrow of buried rock shall be parallel to the finished slope face.

GENERAL NOTES:

* Waterproofing should be provided where moisture nuisance problem through the wall is undesirable.
* Water proofing of the walls is not under purview of the geotechnical engineer
* All drains should have a gradient of 1 percent minimum
*Outlet portion of the subdrain should have a 4-inch diameter solid pipe discharged into a suitable disposal area designed by the project engineer. The subdrain pipe should be accessible for maintenance (rodding)
*Other subdrain backfill options are subject to the review by the geotechnical engineer and modification of design parameters.

Notes:
1) Sand should have a sand equivalent of 30 or greater and may be densified by water jetting.
2) 1 Cu. ft. per ft. of 1/4- to 1 1/2-inch size gravel wrapped in filter fabric
3) Pipe type should be ASTM D1527 Acrylonitrile Butadiene Styrene (ABS) SDR35 or ASTM D1785 Polyvinyl Chloride plastic (PVC), Schedule 40, Armco A2000 PVC, or approved equivalent. Pipe should be installed with perforations down. Perforations should be 3/8 inch in diameter placed at the ends of a 120-degree arc in two rows at 3-inch on center (staggered)
4) Filter fabric should be Mirafi 140NC or approved equivalent.
5) Weephole should be 3-inch minimum diameter and provided at 10-foot maximum intervals. If exposure is permitted, weepholes should be located 12 inches above finished grade. If exposure is not permitted such as for a wall adjacent to a sidewalk/curb, a pipe under the sidewalk to be discharged through the curb face or equivalent should be provided. For a basement-type wall, a proper subdrain outlet system should be provided.
6) Retaining wall plans should be reviewed and approved by the geotechnical engineer.
7) Walls over six feet in height are subject to a special review by the geotechnical engineer and modifications to the above requirements.

RETAINING WALL BACKFILL AND SUBDRAIN DETAIL FOR WALLS 6 FEET OR LESS IN HEIGHT

APPENDIX D

GBA - IMPORTANT INFORMATION ABOUT THIS GEOTECHNICAL REPORT

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, you can benefit from a lowered exposure to problems associated with subsurface conditions at project sites and development of them that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed herein, contact your GBA-member geotechnical engineer. Active engagement in GBA exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Understand the Geotechnical-Engineering Services Provided for this Report

Geotechnical-engineering services typically include the planning, collection, interpretation, and analysis of exploratory data from widely spaced borings and/or test pits. Field data are combined with results from laboratory tests of soil and rock samples obtained from field exploration (if applicable), observations made during site reconnaissance, and historical information to form one or more models of the expected subsurface conditions beneath the site. Local geology and alterations of the site surface and subsurface by previous and proposed construction are also important considerations. Geotechnical engineers apply their engineering training, experience, and judgment to adapt the requirements of the prospective project to the subsurface model(s). Estimates are made of the subsurface conditions that will likely be exposed during construction as well as the expected performance of foundations and other structures being planned and/or affected by construction activities.

The culmination of these geotechnical-engineering services is typically a geotechnical-engineering report providing the data obtained, a discussion of the subsurface model(s), the engineering and geologic engineering assessments and analyses made, and the recommendations developed to satisfy the given requirements of the project. These reports may be titled investigations, explorations, studies, assessments, or evaluations. Regardless of the title used, the geotechnical-engineering report is an engineering interpretation of the subsurface conditions within the context of the project and does not represent a close examination, systematic inquiry, or thorough investigation of all site and subsurface conditions.

Geotechnical-Engineering Services are Performed for Specific Purposes, Persons, and Projects, and At Specific Times

Geotechnical engineers structure their services to meet the specific needs, goals, and risk management preferences of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client.

Likewise, geotechnical-engineering services are performed for a specific project and purpose. For example, it is unlikely that a geotechnical-engineering study for a refrigerated warehouse will be the same as one prepared for a parking garage; and a few borings drilled during a preliminary study to evaluate site feasibility will not be adequate to develop geotechnical design recommendations for the project.

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project or purpose;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, the reliability of a geotechnical-engineering report can be affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying the recommendations in it. A minor amount of additional testing or analysis after the passage of time – if any is required at all – could prevent major problems.

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read the report in its entirety. Do not rely on an executive summary. Do not read selective elements only. *Read and refer to the report in full.*

You Need to Inform Your Geotechnical Engineer About Change

Your geotechnical engineer considered unique, project-specific factors when developing the scope of study behind this report and developing the confirmation-dependent recommendations the report conveys. Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the elevation, configuration, location, orientation, function or weight of the proposed structure and the desired performance criteria;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project or site changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept*

responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface using various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing is performed.* The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgement to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team through project completion to obtain informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, they are not final, because the geotechnical engineer who developed them relied heavily on judgement and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* exposed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a continuing member of the design team, to:

- confer with other design-team members;
- help develop specifications;
- review pertinent elements of other design professionals' plans and specifications; and
- be available whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction-phase observations.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for information purposes only.* To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. This happens in part because soil and rock on project sites are typically heterogeneous and not manufactured materials with well-defined engineering properties like steel and concrete. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely.* Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually provide environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures.* If you have not obtained your own environmental information about the project site, ask your geotechnical consultant for a recommendation on how to find environmental risk-management guidance.

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, the engineer's services were not designed, conducted, or intended to prevent migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration. Confront the risk of moisture infiltration*** by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

I. INTRODUCTION AND LOCATION

A paleontological resource assessment has been completed for the Wildomar Trail Project, located northwest of the intersection of Clinton Keith Road and George Avenue, just east of Interstate 15, in the city of Wildomar, Riverside County, California (Figures 1 and 2). The project consists of four parcels (Assessor's Parcel Number [APN] 376-410-015 to -017 and -021) totaling 10.056 acres. On the U.S. Geological Survey 7.5-minute, 1:24,000-scale *Murrieta, California* topographic quadrangle map, the project is located in the southeast quarter of Section 36, Township 6 South, Range 4 West, of the San Bernardino Baseline and Meridian. The project proposes to construct an apartment complex.

As the lead agency, the City of Wildomar has required the preparation of a paleontological assessment to evaluate the project's potential to yield paleontological resources. The paleontological assessment of the project included a review of paleontological literature and fossil locality records in the area; a review of the underlying geology; and recommendations to mitigate impacts to potential paleontological resources, if necessary.

II. REGULATORY SETTING

The California Environmental Quality Act (CEQA), which is patterned after the National Environmental Policy Act, is the overriding environmental regulation that sets the requirement for protecting California's paleontological resources. CEQA mandates that governing permitting agencies (lead agencies) set their own guidelines for the protection of nonrenewable paleontological resources under their jurisdiction.

State of California

Under "Guidelines for Implementation of the California Environmental Quality Act," as amended in December 2018 (California Code of Regulations [CCR] Title 14, Division 6, Chapter 3, Sections 15000 et seq.), procedures define the types of activities, persons, and public agencies required to comply with CEQA. Section 15063 of the CCR provides a process by which a lead agency may review a project's potential impact to the environment, whether the impacts are significant, and provide recommendations, if necessary.

In CEQA's Environmental Checklist Form, one of the questions to answer is, "Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?" (Appendix G, Section VII, Part f). This is to ensure compliance with California Public Resources Code Section 5097.5, the law by which protects nonrenewable resources including fossils, which is paraphrased below:

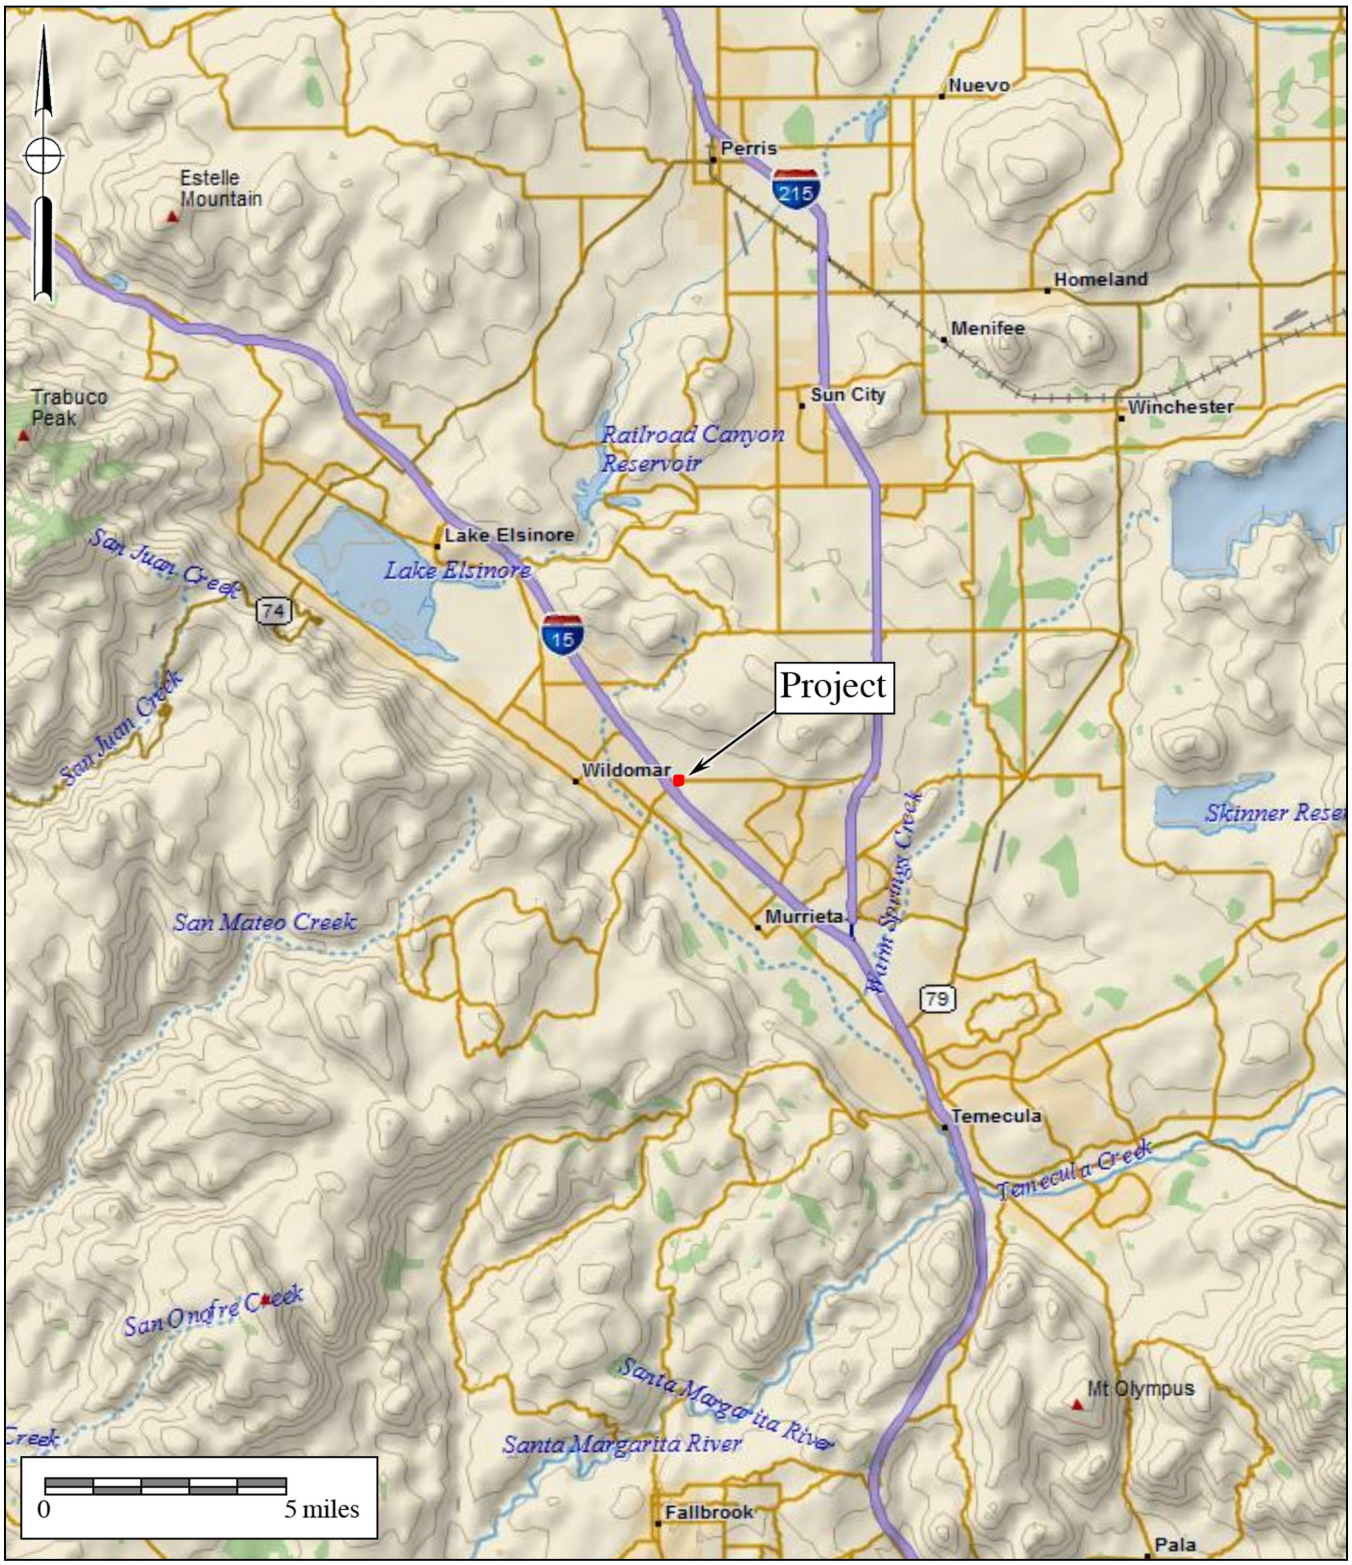

Figure 1

General Location Map

The Wildomar Trail Project

DeLorme (1:250,000)

Figure 2

Project Location Map

The Wildomar Trail Project

USGS *Murrieta* and *Wildomar* Quadrangles (7.5-minute series)

a) A person shall not knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands.
b) As used in this section, "public lands" means lands owned by, or under the jurisdiction of, the state, or any city, county, district, authority, or public corporation, or any agency thereof.
c) A violation of this section is a misdemeanor.

City of Wildomar

In the draft environmental impact report (EIR) of the City of Wildomar Housing Element Update, paleontological resources within the city are addressed (City of Wildomar 2013: 3.4-12). In the draft EIR, impacts to paleontological resources during earth disturbance activities are recognized as potentially significant. To decrease potential impacts to paleontological resources to a level below significant, the following mitigation measure is required for implementation:

MM 3.4.3 Prior to issuance of a grading permit for a project contemplated in the Housing Element, the project applicant shall retain a qualified professional to assess the potential for presence of paleontological resources and the potential for project construction to affect such resources if present. If it is determined, to the satisfaction of the City, that there is low potential for discovery or disturbance of paleontological resources, no further action shall be required.

If potential for discovery is deemed moderate to high, the project applicant shall retain a qualified paleontologist to monitor all initial ground-disturbing activities in native soils or sediments. If the paleontologist, upon observing initial earthwork, determines there is low potential for discovery, no further action shall be required and the paleontologist shall submit a memo to the City confirming findings of low potential.

Should any paleontological resources (i.e., fossils) be uncovered during project construction activities, all work within a 100-foot radius of the discovery site shall be halted or diverted to other areas on the site and the City shall be immediately notified. A qualified

paleontologist shall evaluate the finds and recommend appropriate next steps to ensure that the resource is not substantially adversely impacted, including but not limited to avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. Further ground disturbance shall not resume within a 100-foot radius of the discovery site until an agreement has been reached between the project applicant, a qualified paleontologist, and the City as to the appropriate preservation or mitigation measures to ensure that the resource is not substantially adversely impacted.

Timing/Implementation: *As a condition of project approval, and implemented during grading permit and during ground-disturbing activities*

Enforcement/Monitoring: *City of Wildomar Planning Department*

(City of Wildomar 2013: 3.4-12)

III. GEOLOGY

In the region, the project is situated within the southern portion of Elsinore Valley, which occupies the Elsinore fault zone (Morton and Miller 2006). As shown on Figure 3 (after Morton and Miller 2006), the project area is underlain entirely by the middle Pleistocene-aged sandstone member of the fossiliferous Pauba Formation (area colored orange and labeled "Qps"). The sandstone member of the Pauba Formation consists of "brown, moderately well-indurated, cross-bedded sandstone containing sparse cobble- to boulder-conglomerate beds." Nearby to the north is the Cretaceous-aged monzogranite to granodiorite of the Paloma Valley Ring Complex (plutonic rocks) (pink areas with red crosses labeled "Kpvg"). Underlying the Pauba Formation, and exposed to the south of the project, is the fossiliferous sandstone member of the Pleistocene to Pliocene-aged "unnamed sandstone and conglomerate of the Wildomar area" (area colored brownish gray and labeled "QTws"), described as friable, pale yellowish-green, medium-grained, caliche-rich sandstone (Morton and Miller 2006).

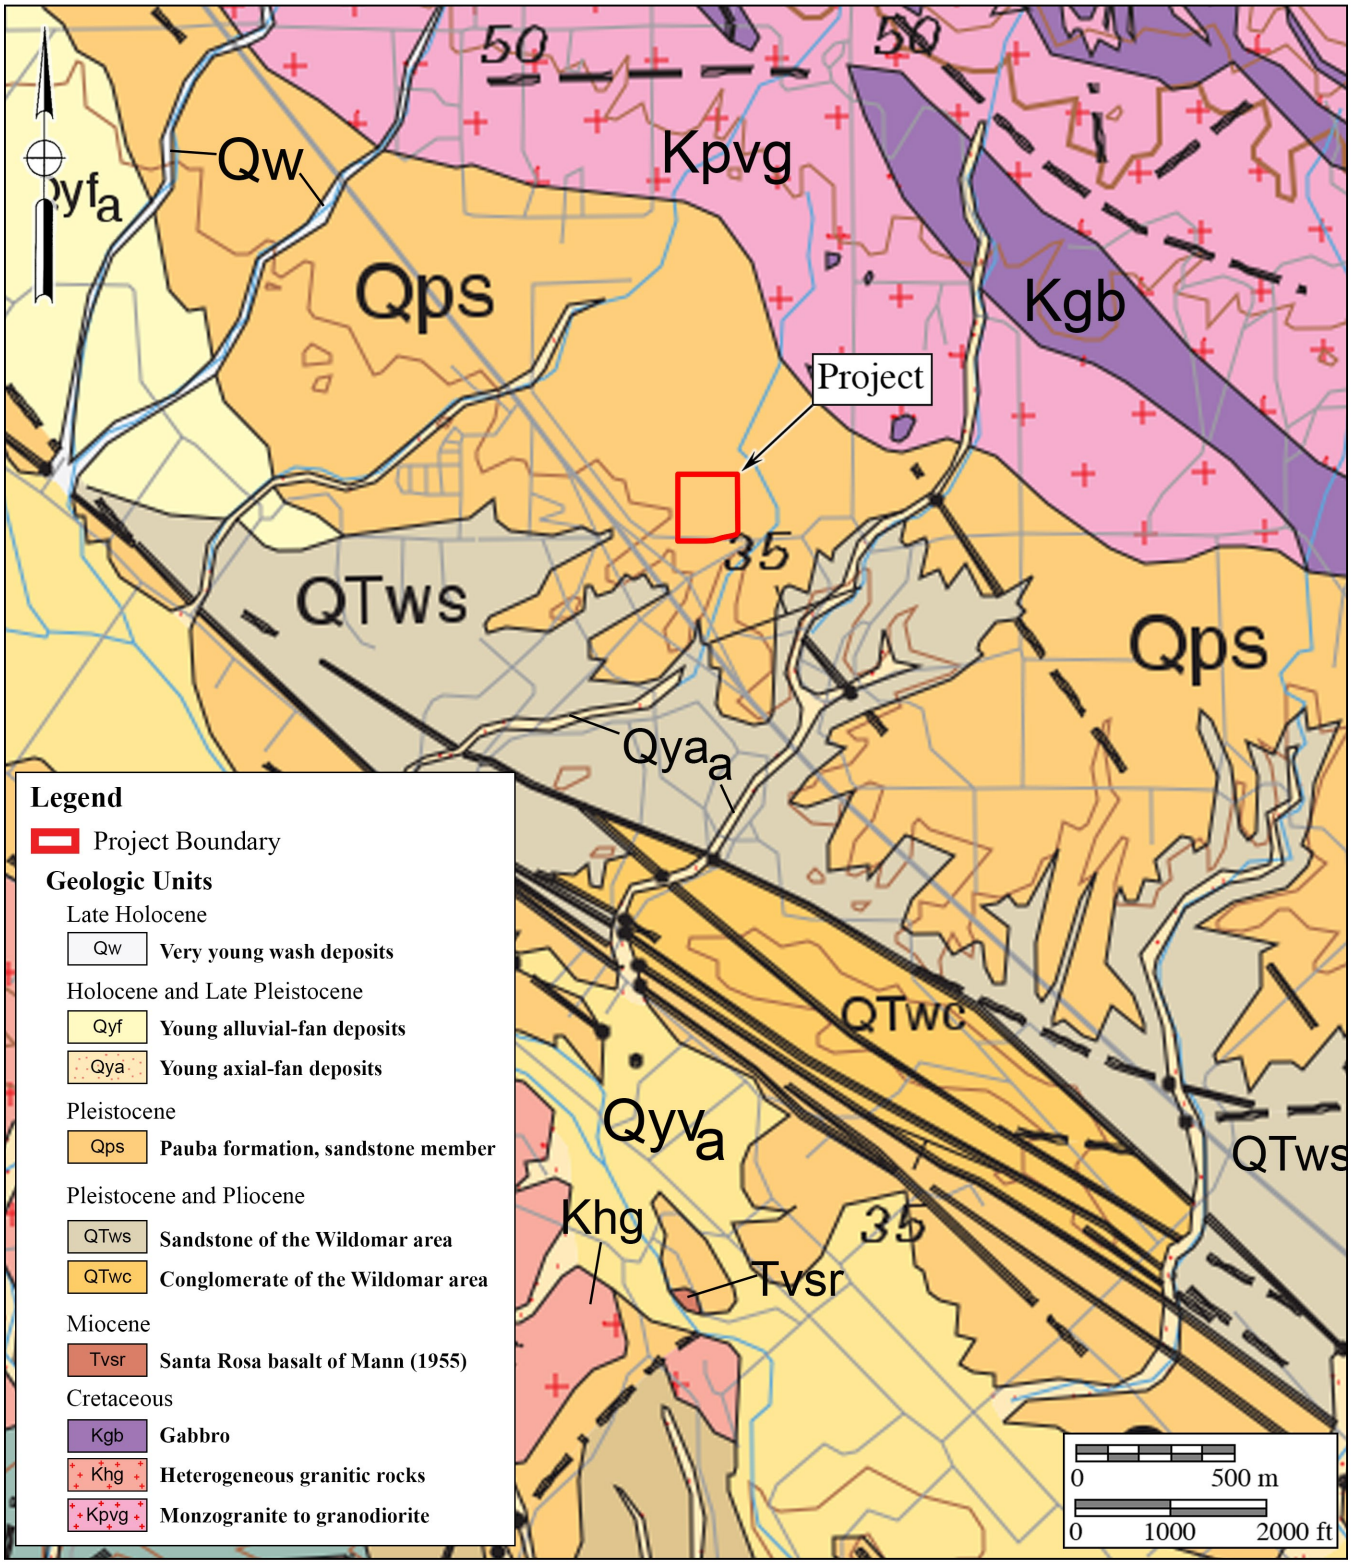

Figure 3

Project Location Map

The Wildomar Trail Project

Geology after Morton and Miller (2006)

IV. PALEONTOLOGICAL RESOURCES

Definition

Paleontological resources are the remains of prehistoric life that have been preserved in geologic strata. These remains are called fossils and include bones, shells, teeth, and plant remains (including their impressions, casts, and molds) in the sedimentary matrix, as well as trace fossils such as footprints and burrows. Fossils are considered older than 5,000 years of age (Society of Vertebrate Paleontology 2010) but may include younger remains (subfossils) when viewed in the context of local extinction of the organism or habitat, for example. Fossils are considered a nonrenewable resource under state and local guidelines (Section II of this report).

Fossil Locality Search

A paleontological literature review and collections and records search was performed for the project with collection and locality records searches using reports obtained for prior nearby projects from the Division of Geological Sciences at the San Bernardino County Museum (SBCM), the Los Angeles County Museum of Natural History (LACM), the Western Science Center (WSC), and with data from published and unpublished paleontological literature. The records search results indicated that the LACM and the WSC have no known fossil localities within the project boundaries or near the project. However, publications based on SBCM localities reveal several fossil localities yielded by the Pauba Formation and the "unnamed sandstone and conglomerate of the Wildomar area" in the region south of the project (Scott and Cox 1993; Pajak et al. 1996).

The closest known fossil localities yielded by the Pauba Formation are located a distance of about a half mile southeast of the project, and include the bones of horses and small vertebrates (SBCM locs. 5.6.325 – 5.6.336). Approximately two miles southeast of the project, fossil bones of horses (*Equus* sp., cf. *E. scotti*), a vertebra and a scapula from a camel (*Camelops* sp.), a three-foot long tusk of a mammoth (*Mammuthus* sp.), the antler of a deer (*Odocoileus* sp.), and other unidentified mammal bones, were recovered during mitigation monitoring of a development project in Murrieta (Stewart et al. 2003).

V. PALEONTOLOGICAL SENSITIVITY

Overview

The degree of paleontological sensitivity of any particular area is based on a number of factors, including the documented presence of fossiliferous resources on a site or in nearby areas, the presence of documented fossils within a particular geologic formation or lithostratigraphic unit, and whether or not the original depositional environment of the sediments is one that might have been conducive to the accumulation of organic remains that might have become fossilized over time. The Pauba Formation, as discussed in Section IV, has a proven paleontological record

(Reynolds and Reynolds 1990; Pajak et al. 1996; Hohman et al. 2020). In the greater Wildomar, Murrieta, and Temecula areas, this formation has produced abundant suites of fossil terrestrial mammals, including various reptiles and amphibians, shrew, various rodents, rabbit, giant ground sloth, saber-tooth cat, pronghorn antelope, tapir, horse, camel, mastodon, mammoth, deer, and llama, and therefore has a high paleontological resource sensitivity.

Professional Standards

The Society of Vertebrate Paleontology has drafted guidelines that include four categories of paleontological sensitivity for geologic units (formations) that might be impacted by a proposed project, as listed below:

- *High Potential:* Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered.
- *Undetermined Potential:* Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment, and that further study is needed to determine the potential of the rock unit.
- *Low Potential:* Rock units that are poorly represented by fossil specimens in institutional collections or based on a general scientific consensus that only preserve fossils in rare circumstances.
- *No Potential:* Rock units that have no potential to contain significant paleontological resources, such as high-grade metamorphic rocks and plutonic igneous rocks.

Using these criteria, based on the age of the Pauba Formation, the fossil record of the formation, and the distribution of nearby fossil localities, the Pauba Formation at the project has a high potential to yield significant paleontological resources.

VI. CONCLUSIONS AND RECOMMENDATIONS

Research has confirmed the existence of potentially fossiliferous Pleistocene Pauba Formation ("Qps") at the project. The occurrence of terrestrial vertebrate fossils from the Pauba Formation is well-documented. The "High" paleontological sensitivity rating assigned to this formation for yielding paleontological resources supports the recommendation that paleontological monitoring be implemented during mass grading and excavation activities in these deposits to mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources. Full-time monitoring of undisturbed Pauba Formation at the project is warranted starting at the surface.

Mitigation Monitoring and Reporting Program (MMRP)

The following MMRP guidelines, outlined below, are based on the findings stated above.

Paleontological monitoring may be reduced upon the observations and recommendations of the professional-level project paleontologist. The following MMRP, when implemented, would reduce potential impacts of paleontological resources to a level below significant:

1. Monitoring of mass grading and excavation activities in areas identified as likely to contain paleontological resources shall be performed by a qualified paleontologist or paleontological monitor. Monitoring will be conducted full-time in areas of grading or excavation in undisturbed sediments of the Pauba Formation.
2. Paleontological monitors will be equipped to salvage fossils as they are unearthed to avoid construction delays. The monitor must be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface, or, if present, are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources. The monitor shall notify the project paleontologist, who will then notify the concerned parties of the discovery.
3. Paleontological salvage during trenching and boring activities is typically from the generated spoils and does not delay the trenching or drilling activities. Fossils will be collected and placed in cardboard flats or plastic buckets and identified by field number, collector, and date collected. Notes will be taken on the map location and stratigraphy of the site, which is photographed before it is vacated and the fossils are removed to a safe place. On mass grading projects, discovered fossil sites will be protected by flagging to prevent them from being overrun by earthmovers (scrapers) before salvage begins. Fossils are collected in a similar manner, with notes and photographs being taken before removing the fossils. Precise location of the site is determined with the use of handheld GPS units. If the site involves remains from a large terrestrial vertebrate, such as large bone(s) or a mammoth tusk, that is/are too large to be easily removed by a single monitor, a fossil recovery crew shall excavate around the find, encase the find within a plaster and burlap jacket, and remove it after the plaster is set. For large fossils, use of the contractor's construction equipment may be solicited to help remove the jacket to a safe location.
4. Isolated fossils will be collected by hand, wrapped in paper, and placed in temporary collecting flats or five-gallon buckets. Notes will be taken on the map location and stratigraphy of the site, which is photographed before it is vacated and the fossils are removed to a safe place.
5. Particularly small invertebrate fossils typically represent multiple specimens of a limited number of organisms, and a scientifically suitable sample can be obtained from one to several five-gallon buckets of fossiliferous sediment. If it is possible to dry screen the sediment in the field, a concentrated sample may consist of one or two

buckets of material. For vertebrate fossils, the test is usually the observed presence of small pieces of bones within the sediments. If present, as many as 20 to 40 five-gallon buckets of sediment can be collected and returned to a separate facility to wet-screen the sediment.

6. In accordance with the "Microfossil Salvage" section of the Society of Vertebrate Paleontology guidelines (2010:7), bulk sampling and screening of fine-grained sedimentary deposits (including carbonate-rich paleosols) must be performed if the deposits are identified to possess indications of producing fossil "microvertebrates" to test the feasibility of the deposit to yield fossil bones and teeth.
7. In the laboratory, individual fossils are cleaned of extraneous matrix, any breaks are repaired, and the specimen, if needed, is stabilized by soaking in an archivally approved acrylic hardener (*e.g.*, a solution of acetone and Paraloid B-72).
8. Recovered specimens will be prepared to a point of identification and permanent preservation (not display), including screen-washing sediments to recover small invertebrates and vertebrates. Preparation of individual vertebrate fossils is often more time-consuming than for accumulations of invertebrate fossils.
9. Recovered specimens shall be identified and curated of specimens into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage (*e.g.*, the Western Science Center). The paleontological program should include a written repository agreement prior to the initiation of mitigation activities. Prior to curation, the lead agency (*e.g.*, the City of Wildomar) will be consulted on the repository/museum to receive the fossil material.
10. A final report of findings and significance will be prepared, including lists of all fossils recovered and necessary maps and graphics to accurately record their original location(s). The report, when submitted to, and accepted by, the appropriate lead agency, will signify satisfactory completion of the project program to mitigate impacts to any potential nonrenewable paleontological resources (*i.e.*, fossils) that might have been lost or otherwise adversely affected without such a program in place.

VII. CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this paleontological report, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief, and have been compiled in accordance with CEQA criteria.

EXECUTIVE SUMMARY

ES.1 SUMMARY OF FINDINGS

The results of this *Wildomar Crossroads Greenhouse Gas Analysis* (GHGA) is summarized below based on the significance criteria in Section 3 of this report consistent with Appendix G of the *California Environmental Quality Act (CEQA) Guidelines* (*CEQA Guidelines* (1). Table ES-1 shows the findings of significance for potential greenhouse gas (GHG) impacts under CEQA.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
GHG Impact #1: Would the Project generate GHG emissions either directly or indirectly, that may have a significant impact on the environment?	3.7	*Less Than Significant*	*n/a*
GHG Impact #2: Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?	3.7	*Less Than Significant*	*n/a*

ES.2 PROJECT REQUIREMENTS

The Project would be required to comply with regulations imposed by the State of California and the South Coast Air Quality Management District (SCAQMD) aimed at the reduction of air pollutant emissions. Those that are directly and indirectly applicable to the Project and that would assist in the reduction of GHG emissions include:

- Global Warming Solutions Act of 2006 (Assembly Bill (AB) 32) (2).
- Regional GHG Emissions Reduction Targets/Sustainable Communities Strategies (Senate Bill (SB) 375) (3).
- Pavley Fuel Efficiency Standards (AB 1493). Establishes fuel efficiency ratings for new vehicles (4).
- California Building Code (Title 24 California Code of Regulations (CCR)) and CALGreen standards. Establishes energy efficiency requirements for new construction (5).
- Appliance Energy Efficiency Standards (Title 20 CCR). Establishes energy efficiency requirements for appliances (6).
- Low Carbon Fuel Standard (LCFS). Requires carbon content of fuel sold in California to be 10 percent (%) less by 2020 (7).
- California Water Conservation in Landscaping Act of 2006 (AB 1881). Requires local agencies to adopt the Department of Water Resources updated Water Efficient Landscape Ordinance or

equivalent by January 1, 2010, to ensure efficient landscapes in new development and reduced water waste in existing landscapes (8).

- Statewide Retail Provider Emissions Performance Standards (SB 1368). Requires energy generators to achieve performance standards for GHG emissions (9).
- Renewable Portfolio Standards (SB 1078 – also referred to as RPS). Requires electric corporations to increase the amount of energy obtained from eligible renewable energy resources to 20% by 2010 and 33% by 2020 (10).
- California Global Warming Solutions Act of 2006 (SB 32). Requires the state to reduce statewide GHG emissions to 40% below 1990 levels by 2030, a reduction target that was first introduced in Executive Order B-30-15 (11).

Promulgated regulations that will affect the Project's emissions are accounted for in the Project's GHG calculations provided in this report. In particular, AB 1493, LCFS, and RPS, and therefore are accounted for in the Project's emission calculations.

1 INTRODUCTION

This report presents the results of the GHGA prepared by Urban Crossroads, Inc., for the proposed Wildomar Crossroads (Project). The purpose of this GHGA is to evaluate Project-related construction and operational emissions and determine the level of GHG impacts as a result of constructing and operating the Project.

1.1 SITE LOCATION

The proposed Project is located on the northwest corner of Clinton Keith Road and Wildomar Trail, as shown on Exhibit 1-A. The project site has a General Plan Land Use designation of Mixed-Use Planning Area (MUPA) and a zoning designation of Scenic Highway Commercial (C-P-S) with a Mixed-Use Overlay Zone. The area surrounding the Project Site consists of existing single-family residential homes to the north and west, commercial land use and the Oak Springs Ranch Apartment community located to the south, and commercial land uses east of the Project site.

1.2 PROJECT DESCRIPTION

The proposed Project is planned to consist of the following land uses as shown on Exhibit 1-B

- 23,104 square feet (sf) supermarket land use
- 5,087 sf retail/restaurants
- 2,750 sf of fast-food restaurant with drive-through window
- 1,133 sf of coffee/donut shop with drive-through window
- 3,348 sf of high-turnover (sit-down) restaurant
- 150 multi-family residential units in 3-story apartment buildings

It is anticipated that the Project would be developed in a single phase with an anticipated Opening Year of 2024.

2 CLIMATE CHANGE SETTING

2.1 INTRODUCTION TO GLOBAL CLIMATE CHANGE (GCC)

GCC is defined as the change in average meteorological conditions on the earth with respect to temperature, precipitation, and storms. The majority of scientists believe that the climate shift taking place since the Industrial Revolution is occurring at a quicker rate and magnitude than in the past. Scientific evidence suggests that GCC is the result of increased concentrations of GHGs in the earth's atmosphere, including carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and fluorinated gases. The majority of scientists believe that this increased rate of climate change is the result of GHGs resulting from human activity and industrialization over the past 200 years.

An individual project like the proposed Project evaluated in this GHGA cannot generate enough GHG emissions to affect a discernible change in global climate. However, the proposed Project may participate in the potential for GCC by its incremental contribution of GHGs combined with the cumulative increase of all other sources of GHGs, which when taken together constitute potential influences on GCC. Because these changes may have serious environmental consequences, Section 3.0 will evaluate the potential for the proposed Project to have a significant effect upon the environment as a result of its potential contribution to the greenhouse effect.

2.2 GLOBAL CLIMATE CHANGE DEFINED

GCC refers to the change in average meteorological conditions on the earth with respect to temperature, wind patterns, precipitation, and storms. Global temperatures are regulated by naturally occurring atmospheric gases such as water vapor, CO_2, N_2O, CH_4, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). These particular gases are important due to their residence time (duration they stay) in the atmosphere, which ranges from 10 years to more than 100 years. These gases allow solar radiation into the earth's atmosphere, but prevent radioactive heat from escaping, thus warming the earth's atmosphere. GCC can occur naturally as it has in the past with the previous ice ages.

Gases that trap heat in the atmosphere are often referred to as GHGs. GHGs are released into the atmosphere by both natural and anthropogenic activity. Without the natural GHG effect, the earth's average temperature would be approximately 61 degrees Fahrenheit (°F) cooler than it is currently. The cumulative accumulation of these gases in the earth's atmosphere is considered to be the cause for the observed increase in the earth's temperature.

2.3 GHGS

2.3.1 GHGS AND HEALTH EFFECTS

GHGs trap heat in the atmosphere, creating a GHG effect that results in global warming and climate change. Many gases demonstrate these properties and as discussed in Table 2-1. For the purposes of this analysis, emissions of CO_2, CH_4, and N_2O were evaluated (see Table 3-1 later in this report) because these gases are the primary contributors to GCC from development projects.

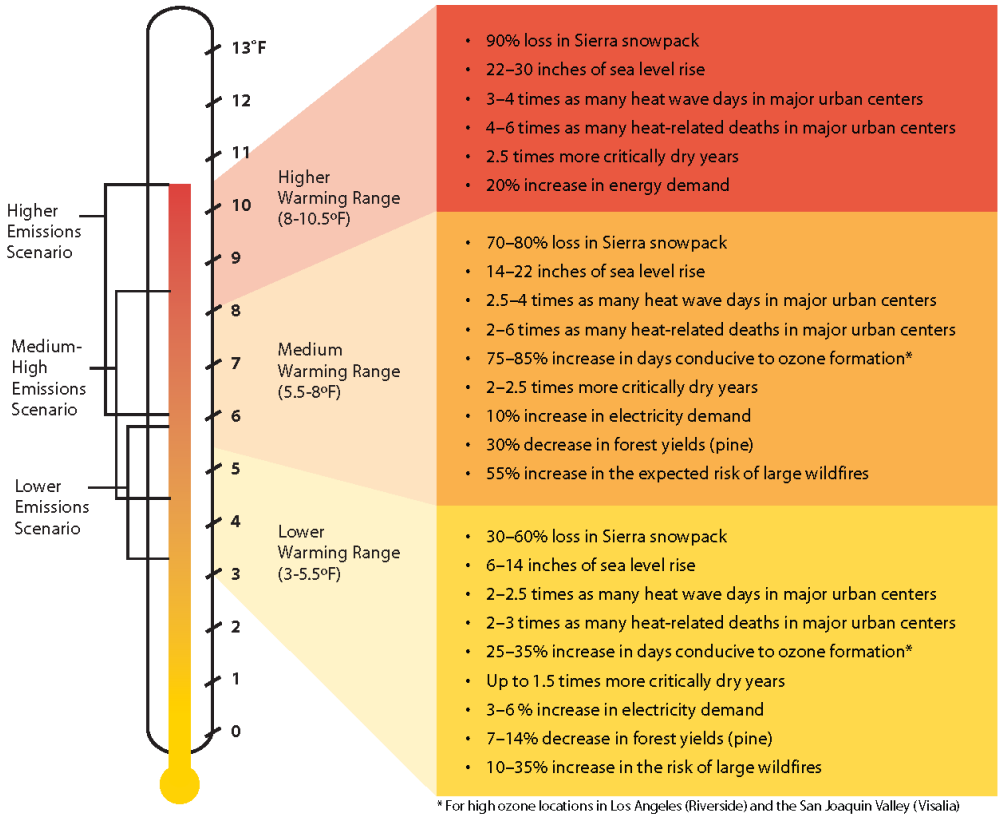
Although there are other substances such as fluorinated gases that also contribute to GCC, these fluorinated gases were not evaluated as their sources are not well-defined and do not contain accepted emissions factors or methodology to accurately calculate these gases.

TABLE 2-1: GHGS

GHGs	Description	Sources	Health Effects
Water	Water is the most abundant, important, and variable GHG in the atmosphere. Water vapor is not considered a pollutant; in the atmosphere it maintains a climate necessary for life. Changes in its concentration are primarily considered to be a result of climate feedbacks related to the warming of the atmosphere rather than a direct result of industrialization. Climate feedback is an indirect, or secondary, change, either positive or negative, that occurs within the climate system in response to a forcing mechanism. The feedback loop in which water is involved is critically important to projecting future climate change. As the temperature of the atmosphere rises, more water is evaporated from ground storage (rivers, oceans, reservoirs, soil). Because the air is warmer, the relative humidity can be higher (in essence, the air is able to 'hold' more water when it is warmer), leading to more water vapor in the atmosphere. As a GHG, the higher concentration of water vapor is then able to absorb more thermal indirect energy radiated from the Earth, thus further warming the atmosphere. The warmer atmosphere can then hold more water vapor and so on and so on. This is referred to as a "positive feedback loop." The extent to which this positive feedback loop would continue is	The main source of water vapor is evaporation from the oceans (approximately 85%). Other sources include evaporation from other water bodies, sublimation (change from solid to gas) from sea ice and snow, and transpiration from plant leaves.	There are no known direct health effects related to water vapor at this time. It should be noted however that when some pollutants react with water vapor, the reaction forms a transport mechanism for some of these pollutants to enter the human body through water vapor.

GHGs	Description	Sources	Health Effects
	unknown as there are also dynamics that hold the positive feedback loop in check. As an example, when water vapor increases in the atmosphere, more of it would eventually condense into clouds, which are more able to reflect incoming solar radiation (thus allowing less energy to reach the earth's surface and heat it up) (12).		
CO_2	CO_2 is an odorless and colorless GHG. Since the industrial revolution began in the mid-1700s, the sort of human activity that increases GHG emissions has increased dramatically in scale and distribution. Data from the past 50 years suggests a corollary increase in levels and concentrations. As an example, prior to the industrial revolution, CO_2 concentrations were fairly stable at 280 parts per million (ppm). Today, they are around 370 ppm, an increase of more than 30%. Left unchecked, the concentration of CO_2 in the atmosphere is projected to increase to a minimum of 540 ppm by 2100 as a direct result of anthropogenic sources (13).	CO_2 is emitted from natural and manmade sources. Natural sources include: the decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources include: the burning of coal, oil, natural gas, and wood. CO_2 is naturally removed from the air by photosynthesis, dissolution into ocean water, transfer to soils and ice caps, and chemical weathering of carbonate rocks (14).	Outdoor levels of CO_2 are not high enough to result in negative health effects. According to the National Institute for Occupational Safety and Health (NIOSH) high concentrations of CO_2 can result in health effects such as: headaches, dizziness, restlessness, difficulty breathing, sweating, increased heart rate, increased cardiac output, increased blood pressure, coma, asphyxia, and/or convulsions. It should be noted that current concentrations of CO_2 in the earth's atmosphere are estimated to be approximately 370 ppm, the actual reference exposure level (level at which adverse health effects typically occur) is at exposure levels of 5,000 ppm averaged over 10 hours in a 40-hour workweek and short-term reference exposure levels of 30,000 ppm averaged over a 15 minute period (15).

GHGs	Description	Sources	Health Effects
CH_4	CH_4 is an extremely effective absorber of radiation, although its atmospheric concentration is less than CO_2 and its lifetime in the atmosphere is brief (10-12 years), compared to other GHGs.	CH_4 has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of CH_4. Other anthropocentric sources include fossil-fuel combustion and biomass burning (16).	CH_4 is extremely reactive with oxidizers, halogens, and other halogen-containing compounds. Exposure to elevated levels of CH_4 can cause asphyxiation, loss of consciousness, headache and dizziness, nausea and vomiting, weakness, loss of coordination, and an increased breathing rate.
N_2O	N_2O, also known as laughing gas, is a colorless GHG. Concentrations of N_2O also began to rise at the beginning of the industrial revolution. In 1998, the global concentration was 314 parts per billion (ppb).	N_2O is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. It is used as an aerosol spray propellant, i.e., in whipped cream	N_2O can cause dizziness, euphoria, and sometimes slight hallucinations. In small doses, it is considered harmless. However, in some cases, heavy and extended use can cause Olney's Lesions (brain damage) (17).



GHGs	Description	Sources	Health Effects
		bottles. It is also used in potato chip bags to keep chips fresh. It is used in rocket engines and in race cars. N_2O can be transported into the stratosphere, be deposited on the earth's surface, and be converted to other compounds by chemical reaction (17).	
Chlorofluorocarbons (CFCs)	CFCs are gases formed synthetically by replacing all hydrogen atoms in CH_4 or ethane (C_2H_6) with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble and chemically unreactive in the troposphere (the level of air at the earth's surface).	CFCs have no natural source but were first synthesized in 1928. They were used for refrigerants, aerosol propellants and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and was extremely successful, so much so that levels of the major CFCs are now remaining steady or declining. However, their long atmospheric lifetimes mean that some of the CFCs would remain in the atmosphere for over 100 years (18).	In confined indoor locations, working with CFC-113 or other CFCs is thought to result in death by cardiac arrhythmia (heart frequency too high or too low) or asphyxiation.

GHGs	Description	Sources	Health Effects
HFCs	HFCs are synthetic, man-made chemicals that are used as a substitute for CFCs. Out of all the GHGs, they are one of three groups with the highest global warming potential (GWP). The HFCs with the largest measured atmospheric abundances are (in order), Fluoroform (HFC-23), 1,1,1,2-tetrafluoroethane (HFC-134a), and 1,1-difluoroethane (HFC-152a). Prior to 1990, the only significant emissions were of HFC-23. HCF-134a emissions are increasing due to its use as a refrigerant.	HFCs are manmade for applications such as automobile air conditioners and refrigerants.	No health effects are known to result from exposure to HFCs.
PFCs	PFCs have stable molecular structures and do not break down through chemical processes in the lower atmosphere. High-energy ultraviolet rays, which occur about 60 kilometers above earth's surface, are able to destroy the compounds. Because of this, PFCs have exceptionally long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF_4) and hexafluoroethane (C_2F_6). The EPA estimates that concentrations of CF_4 in the atmosphere are over 70 parts per trillion (ppt).	The two main sources of PFCs are primary aluminum production and semiconductor manufacture.	No health effects are known to result from exposure to PFCs.
SF_6	SF_6 is an inorganic, odorless, colorless, nontoxic, nonflammable gas. It also has the highest GWP of any gas evaluated (23,900) (19). The EPA indicates that concentrations in the 1990s were about 4 ppt.	SF_6 is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.	In high concentrations in confined areas, the gas presents the hazard of suffocation because it displaces the oxygen needed for breathing.

GHGs	Description	Sources	Health Effects
Nitrogen Trifluoride (NF_3)	NF_3 is a colorless gas with a distinctly moldy odor. The World Resources Institute (WRI) indicates that NF_3 has a 100-year GWP of 17,200 (20).	NF_3 is used in industrial processes and is produced in the manufacturing of semiconductors, Liquid Crystal Display (LCD) panels, types of solar panels, and chemical lasers.	Long-term or repeated exposure may affect the liver and kidneys and may cause fluorosis (21).

The potential health effects related directly to the emissions of CO_2, CH_4, and N_2O as they relate to development projects such as the proposed Project are still being debated in the scientific community. Their cumulative effects to GCC have the potential to cause adverse effects to human health. Increases in Earth's ambient temperatures would result in more intense heat waves, causing more heat-related deaths. Scientists also purport those higher ambient temperatures would increase disease survival rates and result in more widespread disease. Climate change would likely cause shifts in weather patterns, potentially resulting in devastating droughts and food shortages in some areas (22). Exhibit 2-A presents the potential impacts of global warming (23).

EXHIBIT 2-A: SUMMARY OF PROJECTED GLOBAL WARMING IMPACT, 2070-2099 (AS COMPARED WITH 1961-1990)

Source: Barbara H. Allen-Diaz. "Climate change affects us all." *University of California, Agriculture and Natural Resources*, 2009.

2.4 GLOBAL WARMING POTENTIAL

GHGs have varying GWP values. GWP of a GHG indicates the amount of warming a gas cause over a given period of time and represents the potential of a gas to trap heat in the atmosphere. CO_2 is utilized as the reference gas for GWP, and thus has a GWP of 1. CO_2 equivalent (CO_2e) is a term used for describing the difference GHGs in a common unit. CO_2e signifies the amount of CO_2 which would have the equivalent GWP.

The atmospheric lifetime and GWP of selected GHGs are summarized at Table 2-2. As shown in the table below, GWP for the 2nd Assessment Report, the Intergovernmental Panel on Climate Change (IPCC)'s scientific and socio-economic assessment on climate change, range from 1 for CO_2 to 23,900 for SF_6 and GWP for the IPCC's 5th Assessment Report range from 1 for CO_2 to 23,500 for SF_6 (24).

TABLE 2-2: GWP AND ATMOSPHERIC LIFETIME OF SELECT GHGS

Gas	Atmospheric Lifetime (years)	GWP (100-year time horizon)	
		2nd Assessment Report	5th Assessment Report
CO_2	See*	1	1
CH_4	12 .4	21	28
N_2O	121	310	265
HFC-23	222	11,700	12,400
HFC-134a	13.4	1,300	1,300
HFC-152a	1.5	140	138
SF_6	3,200	23,900	23,500

*As per Appendix 8.A. of IPCC's 5th Assessment Report, no single lifetime can be given.

2.5 GHG EMISSIONS INVENTORIES

2.5.1 GLOBAL

Worldwide anthropogenic GHG emissions are tracked by the IPCC for industrialized nations (referred to as Annex I) and developing nations (referred to as Non-Annex I). Human GHG emissions data for Annex I nations are available through 2018. Based on the latest available data, the sum of these emissions totaled approximately 28,768,440 gigagram (Gg) CO_2e[1] (25) (26) as summarized on Table 2-3.

[1] The global emissions are the sum of Annex I and non-Annex I countries, without counting Land-Use, Land-Use Change and Forestry (LULUCF). For countries without 2018 data, the United Nations' Framework Convention on Climate Change (UNFCCC) data for the most recent year were used U.N. Framework Convention on Climate Change, "Annex I Parties – GHG total without LULUCF," The most recent GHG emissions for China and India are from 2014 and 2010, respectively.

2.5.2 UNITED STATES

As noted in Table 2-3, the United States, as a single country, was the number two producer of GHG emissions in 2018.

TABLE 2-3: TOP GHG PRODUCING COUNTRIES AND THE EUROPEAN UNION [2]

Emitting Countries	GHG Emissions (Gg CO_2e)
China	12,300,200
United States	6,676,650
European Union (28-member countries)	4,232,274
Russian Federation	2,220,123
India	2,100,850
Japan	1,238,343
Total	**28,768,440**

2.5.3 STATE OF CALIFORNIA

California has significantly slowed the rate of growth of GHG emissions due to the implementation of energy efficiency programs as well as adoption of strict emission controls but is still a substantial contributor to the United States (U.S.) emissions inventory total (27). The California Air Resource Board (CARB) compiles GHG inventories for the State of California. Based upon the 2020 GHG inventory data (i.e., the latest year for which data are available) for the 2000-2019 GHG emissions period, California emitted an average 418.1 million metric tons of CO_2e per year ($MMTCO_2e/yr$) or 418,100 Gg CO_2e (6.26% of the total United States GHG emissions) (28).

2.6 EFFECTS OF CLIMATE CHANGE IN CALIFORNIA

2.6.1 PUBLIC HEALTH

Higher temperatures may increase the frequency, duration, and intensity of conditions conducive to air pollution formation. For example, days with weather conducive to ozone formation could increase from 25 to 35% under the lower warming range to 75 to 85% under the medium warming range. In addition, if global background ozone levels increase as predicted in some scenarios, it may become impossible to meet local air quality standards. Air quality could be further compromised by increases in wildfires, which emit fine particulate matter that can travel long distances, depending on wind conditions. Based on *Our Changing Climate Assessing the Risks to California by the California Climate Change Center*, large wildfires could become up to 55% more frequent if GHG emissions are not significantly reduced (29).

In addition, under the higher warming range scenario, there could be up to 100 more days per year with temperatures above 90°F in Los Angeles and 95°F in Sacramento by 2100. This is a

[2] Used http://unfccc.int data for Annex I countries. Consulted the CAIT Climate Data Explorer in https://www.climatewatchdata.org site to reference Non-Annex I countries of China and India.

significant increase over historical patterns and approximately twice the increase projected if temperatures remain within or below the lower warming range. Rising temperatures could increase the risk of death from dehydration, heat stroke/exhaustion, heart attack, stroke, and respiratory distress caused by extreme heat.

2.6.2 WATER RESOURCES

A vast network of man-made reservoirs and aqueducts captures and transports water throughout the state from northern California rivers and the Colorado River. The current distribution system relies on Sierra Nevada snowpack to supply water during the dry spring and summer months. Rising temperatures, potentially compounded by decreases in precipitation, could severely reduce spring snowpack, increasing the risk of summer water shortages.

If temperatures continue to increase, more precipitation could fall as rain instead of snow, and the snow that does fall could melt earlier, reducing the Sierra Nevada spring snowpack by as much as 70 to 90%. Under the lower warming range scenario, snowpack losses could be only half as large as those possible if temperatures were to rise to the higher warming range. How much snowpack could be lost depends in part on future precipitation patterns, the projections for which remain uncertain. However, even under the wetter climate projections, the loss of snowpack could pose challenges to water managers and hamper hydropower generation. It could also adversely affect winter tourism. Under the lower warming range, the ski season at lower elevations could be reduced by as much as a month. If temperatures reach the higher warming range and precipitation declines, there might be many years with insufficient snow for skiing and snowboarding.

The State's water supplies are also at risk from rising sea levels. An influx of saltwater could degrade California's estuaries, wetlands, and groundwater aquifers. Saltwater intrusion caused by rising sea levels is a major threat to the quality and reliability of water within the southern edge of the Sacramento/San Joaquin River Delta – a major fresh water supply.

2.6.3 AGRICULTURE

Increased temperatures could cause widespread changes to the agriculture industry reducing the quantity and quality of agricultural products statewide. First, California farmers could possibly lose as much as 25% of the water supply needed. Although higher CO_2 levels can stimulate plant production and increase plant water-use efficiency, California's farmers could face greater water demand for crops and a less reliable water supply as temperatures rise. Crop growth and development could change, as could the intensity and frequency of pest and disease outbreaks. Rising temperatures could aggravate ozone pollution, which makes plants more susceptible to disease and pests and interferes with plant growth.

Plant growth tends to be slow at low temperatures, increasing with rising temperatures up to a threshold. However, faster growth can result in less-than-optimal development for many crops, so rising temperatures could worsen the quantity and quality of yield for a number of California's agricultural products. Products likely to be most affected include wine grapes, fruits, and nuts.

In addition, continued GCC could shift the ranges of existing invasive plants and weeds and alter competition patterns with native plants. Range expansion could occur in many species while range contractions may be less likely in rapidly evolving species with significant populations already established. Should range contractions occur, new or different weed species could fill the emerging gaps. Continued GCC could alter the abundance and types of many pests, lengthen pests' breeding season, and increase pathogen growth rates.

2.6.4 FORESTS AND LANDSCAPES

GCC has the potential to intensify the current threat to forests and landscapes by increasing the risk of wildfire and altering the distribution and character of natural vegetation. If temperatures rise into the medium warming range, the risk of large wildfires in California could increase by as much as 55%, which is almost twice the increase expected if temperatures stay in the lower warming range. However, since wildfire risk is determined by a combination of factors, including precipitation, winds, temperature, and landscape and vegetation conditions, future risks would not be uniform throughout the state. In contrast, wildfires in northern California could increase by up to 90% due to decreased precipitation.

Moreover, continued GCC has the potential to alter natural ecosystems and biological diversity within the state. For example, alpine and subalpine ecosystems could decline by as much as 60 to 80% by the end of the century as a result of increasing temperatures. The productivity of the state's forests has the potential to decrease as a result of GCC.

2.6.5 RISING SEA LEVELS

Rising sea levels, more intense coastal storms, and warmer water temperatures could increasingly threaten the state's coastal regions. Under the higher warming range scenario, sea level is anticipated to rise 22 to 35 inches by 2100. Elevations of this magnitude would inundate low-lying coastal areas with saltwater, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats. Under the lower warming range scenario, sea level could rise 12-14 inches.

2.7 REGULATORY SETTING

2.7.1 INTERNATIONAL

Climate change is a global issue involving GHG emissions from all around the world; therefore, countries such as the ones discussed below have made an effort to reduce GHGs.

IPCC

In 1988, the United Nations (U.N.) and the World Meteorological Organization established the IPCC to assess the scientific, technical, and socioeconomic information relevant to understanding the scientific basis of risk of human-induced climate change, its potential impacts, and options for adaptation and mitigation.

UNITED NATION'S FRAMEWORK CONVENTION ON CLIMATE CHANGE (UNFCCC)

On March 21, 1994, the U.S. joined a number of countries around the world in signing the Convention. Under the UNFCCC, governments gather and share information on GHG emissions, national policies, and best practices; launch national strategies for addressing GHG emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

INTERNATIONAL CLIMATE CHANGE TREATIES

The Kyoto Protocol is an international agreement linked to the UNFCCC. The major feature of the Kyoto Protocol is that it sets binding targets for 37 industrialized countries and the European community for reducing GHG emissions at an average of 5% against 1990 levels over the five-year period 2008–2012. The Convention (as discussed above) encouraged industrialized countries to stabilize emissions; however, the Protocol commits them to do so. Developed countries have contributed more emissions over the last 150 years; therefore, the Protocol places a heavier burden on developed nations under the principle of "common but differentiated responsibilities."

In 2001, President George W. Bush indicated that he would not submit the treaty to the U.S. Senate for ratification, which effectively ended American involvement in the Kyoto Protocol. In December 2009, international leaders met in Copenhagen to address the future of international climate change commitments post-Kyoto. No binding agreement was reached in Copenhagen; however, the UN Climate Change Committee identified the long-term goal of limiting the maximum global average temperature increase to no more than 2 degrees Celsius (°C) above pre-industrial levels, subject to a review in 2015. The Committee held additional meetings in Durban, South Africa in November 2011; Doha, Qatar in November 2012; and Warsaw, Poland in November 2013. The meetings gradually gained consensus among participants on individual climate change issues.

On September 23, 2014, more than 100 Heads of State and Government and leaders from the private sector and civil society met at the Climate Summit in New York hosted by the U.N. At the Summit, heads of government, business and civil society announced actions in areas that would have the greatest impact on reducing emissions, including climate finance, energy, transport, industry, agriculture, cities, forests, and building resilience.

Parties to the UNFCCC reached a landmark agreement on December 12, 2015, in Paris, charting a fundamentally new course in the two-decade-old global climate effort. Culminating a four-year negotiating round, the new treaty ends the strict differentiation between developed and developing countries that characterized earlier efforts, replacing it with a common framework that commits all countries to put forward their best efforts and to strengthen them in the years ahead. This includes, for the first time, requirements that all parties report regularly on their emissions and implementation efforts and undergo international review.

The agreement and a companion decision by parties were the key outcomes of the conference, known as the 21st session of the UNFCCC Conference of the Parties (COP) 21. Together, the Paris Agreement and the accompanying COP decision:

- Reaffirm the goal of limiting global temperature increase well below 2°C, while urging efforts to limit the increase to 1.5 degrees;
- Establish binding commitments by all parties to make "nationally determined contributions" (NDCs), and to pursue domestic measures aimed at achieving them;
- Commit all countries to report regularly on their emissions and "progress made in implementing and achieving" their NDCs, and to undergo international review;
- Commit all countries to submit new NDCs every five years, with the clear expectation that they would "represent a progression" beyond previous ones;
- Reaffirm the binding obligations of developed countries under the UNFCCC to support the efforts of developing countries, while for the first time encouraging voluntary contributions by developing countries too;
- Extend the current goal of mobilizing $100 billion a year in support by 2020 through 2025, with a new, higher goal to be set for the period after 2025;
- Extend a mechanism to address "loss and damage" resulting from climate change, which explicitly would not "involve or provide a basis for any liability or compensation;"
- Require parties engaging in international emissions trading to avoid "double counting;" and
- Call for a new mechanism, similar to the Clean Development Mechanism under the Kyoto Protocol, enabling emission reductions in one country to be counted toward another country's NDC (C2ES 2015a) (30).

Following President Biden's day one executive order, the United States officially rejoined the landmark Paris Agreement on February 19, 2021, positioning the country to once again be part of the global climate solution. Meanwhile, city, state, business, and civic leaders across the country and around the world have been ramping up efforts to drive the clean energy advances needed to meet the goals of the agreement and put the brakes on dangerous climate change.

2.7.2 NATIONAL

Prior to the last decade, there have been no concrete federal regulations of GHGs or major planning for climate change adaptation. The following are actions regarding the federal government, GHGs, and fuel efficiency.

GHG ENDANGERMENT

In *Massachusetts v. Environmental Protection Agency* 549 U.S. 497 (2007), decided on April 2, 2007, the United States Supreme Court (Supreme Court) found that four GHGs, including CO_2, are air pollutants subject to regulation under Section 202(a)(1) of the Clean Air Act (CAA). The Supreme Court held that the EPA Administrator must determine whether emissions of GHGs from new motor vehicles cause or contribute to air pollution, which may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned

decision. On December 7, 2009, the EPA Administrator signed two distinct findings regarding GHGs under section 202(a) of the CAA:

- Endangerment Finding: The Administrator finds that the current and projected concentrations of the six key well-mixed GHGs— CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6—in the atmosphere threaten the public health and welfare of current and future generations.
- Cause or Contribute Finding: The Administrator finds that the combined emissions of these well-mixed GHGs from new motor vehicles and new motor vehicle engines contribute to the GHG pollution, which threatens public health and welfare.

These findings do not impose requirements on industry or other entities. However, this was a prerequisite for implementing GHG emissions standards for vehicles, as discussed in the section "Clean Vehicles" below. After a lengthy legal challenge, the Supreme Court declined to review an Appeals Court ruling that upheld the EPA Administrator's findings (31).

CLEAN VEHICLES

Congress first passed the Corporate Average Fuel Economy law in 1975 to increase the fuel economy of cars and light duty trucks. The law has become more stringent over time. On May 19, 2009, President Obama put in motion a new national policy to increase fuel economy for all new cars and trucks sold in the U.S. On April 1, 2010, the EPA, and the Department of Transportation's National Highway Traffic Safety Administration (NHTSA) announced a joint final rule establishing a national program that would reduce GHG emissions and improve fuel economy for new cars and trucks sold in the U.S.

The first phase of the national program applies to passenger cars, light-duty trucks, and medium-duty (MD) passenger vehicles, covering model years 2012 through 2016. They require these vehicles to meet an estimated combined average emissions level of 250 grams of CO_2 per mile, equivalent to 35.5 miles per gallon (mpg) if the automobile industry were to meet this CO_2 level solely through fuel economy improvements. Together, these standards would cut CO_2 emissions by an estimated 960 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2012–2016). The EPA and the NHTSA issued final rules on a second-phase joint rulemaking establishing national standards for light-duty vehicles for model years 2017 through 2025 in August 2012. The new standards for model years 2017 through 2025 apply to passenger cars, light-duty trucks, and MD passenger vehicles. The final standards are projected to result in an average industry fleetwide level of 163 grams/mile of CO_2 in model year 2025, which is equivalent to 54.5 mpg if achieved exclusively through fuel economy improvements.

The EPA and the U.S. Department of Transportation issued final rules for the first national standards to reduce GHG emissions and improve fuel efficiency of heavy-duty trucks (HDT) and buses on September 15, 2011, effective November 14, 2011. For combination tractors, the agencies are proposing engine and vehicle standards that begin in the 2014 model year and achieve up to a 20% reduction in CO_2 emissions and fuel consumption by the 2018 model year. For HDT and vans, the agencies are proposing separate gasoline and diesel truck standards, which phase in starting in the 2014 model year and achieve up to a 10% reduction for gasoline vehicles and a 15% reduction for diesel vehicles by the 2018 model year (12 and 17% respectively if

accounting for air conditioning leakage). Lastly, for vocational vehicles, the engine and vehicle standards would achieve up to a 10% reduction in fuel consumption and CO_2 emissions from the 2014 to 2018 model years.

On April 2, 2018, the EPA signed the Mid-term Evaluation Final Determination, which declared that the MY 2022-2025 GHG standards are not appropriate and should be revised (32). This Final Determination serves to initiate a notice to further consider appropriate standards for MY 2022-2025 light-duty vehicles. On August 2, 2018, the NHTSA in conjunction with the EPA, released a notice of proposed rulemaking, the *Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021-2026 Passenger Cars and Light Trucks* (SAFE Vehicles Rule). The SAFE Vehicles Rule was proposed to amend exiting Corporate Average Fuel Economy (CAFE) and tailpipe CO_2 standards for passenger cars and light trucks and to establish new standards covering model years 2021 through 2026. As of March 31, 2020, the NHTSA and EPA finalized the SAFE Vehicle Rule which increased stringency of CAFE and CO_2 emissions standards by 1.5% each year through model year 2026 (33).

MANDATORY REPORTING OF GHGS

The Consolidated Appropriations Act of 2008, passed in December 2007, requires the establishment of mandatory GHG reporting requirements. On September 22, 2009, the EPA issued the Final Mandatory Reporting of GHGs Rule, which became effective January 1, 2010. The rule requires reporting of GHG emissions from large sources and suppliers in the U.S. and is intended to collect accurate and timely emissions data to inform future policy decisions. Under the rule, suppliers of fossil fuels or industrial GHGs, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons per year (MT/yr) or more of GHG emissions are required to submit annual reports to the EPA.

NEW SOURCE REVIEW

The EPA issued a final rule on May 13, 2010, that establishes thresholds for GHGs that define when permits under the New Source Review Prevention of Significant Deterioration and Title V Operating Permit programs are required for new and existing industrial facilities. This final rule "tailors" the requirements of these CAA permitting programs to limit which facilities would be required to obtain Prevention of Significant Deterioration and Title V permits. In the preamble to the revisions to the Federal Code of Regulations, the EPA states:

> *"This rulemaking is necessary because without it the Prevention of Significant Deterioration and Title V requirements would apply, as of January 2, 2011, at the 100 or 250 tons per year levels provided under the CAA, greatly increasing the number of required permits, imposing undue costs on small sources, overwhelming the resources of permitting authorities, and severely impairing the functioning of the programs. EPA is relieving these resource burdens by phasing in the applicability of these programs to GHG sources, starting with the largest GHG emitters. This rule establishes two initial steps of the phase-in. The rule also commits the agency to take certain actions on future steps addressing smaller sources but excludes certain smaller sources from Prevention of Significant*

Deterioration and Title V permitting for GHG emissions until at least April 30, 2016."

The EPA estimates that facilities responsible for nearly 70% of the national GHG emissions from stationary sources would be subject to permitting requirements under this rule. This includes the nation's largest GHG emitters—power plants, refineries, and cement production facilities.

STANDARDS OF PERFORMANCE FOR GHG EMISSIONS FOR NEW STATIONARY SOURCES: ELECTRIC UTILITY GENERATING UNITS

As required by a settlement agreement, the EPA proposed new performance standards for emissions of CO_2 for new, affected, fossil fuel-fired electric utility generating units on March 27, 2012. New sources greater than 25 megawatts (MW) would be required to meet an output-based standard of 1,000 pounds (lbs) of CO_2 per MW-hour (MWh), based on the performance of widely used natural gas combined cycle technology. It should be noted that on February 9, 2016, the Supreme Court issued a stay of this regulation pending litigation. Additionally, the current EPA Administrator has also signed a measure to repeal the Clean Power Plan, including the CO_2 standards. The Clean Power Plan was officially repealed on June 19, 2019, when the EPA issued the final Affordable Clean Energy rule (ACE). Under ACE, new state emission guidelines were established that provided existing coal-fired electric utility generating units with achievable standards.

CAP-AND-TRADE

Cap-and-trade refers to a policy tool where emissions are limited to a certain amount and can be traded or provides flexibility on how the emitter can comply. Successful examples in the U.S. include the Acid Rain Program and the N_2O Budget Trading Program and Clean Air Interstate Rule in the northeast. There is no federal GHG cap-and-trade program currently; however, some states have joined to create initiatives to provide a mechanism for cap-and-trade.

The Regional GHG Initiative is an effort to reduce GHGs among the states of Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New York, Rhode Island, and Vermont. Each state caps CO_2 emissions from power plants, auctions CO_2 emission allowances, and invests the proceeds in strategic energy programs that further reduce emissions, save consumers money, create jobs, and build a clean energy economy. The Initiative began in 2008 and in 2020 has retained all participating states.

The Western Climate Initiative (WCI) partner jurisdictions have developed a comprehensive initiative to reduce regional GHG emissions to 15% below 2005 levels by 2020. The partners were originally California, British Columbia, Manitoba, Ontario, and Quebec. However, Manitoba and Ontario are not currently participating. California linked with Quebec's cap-and-trade system January 1, 2014, and joint offset auctions took place in 2015. While the WCI has yet to publish whether it has successfully reached the 2020 emissions goal initiative set in 2007, SB 32 requires that California, a major partner in the WCI, adopt the goal of reducing statewide GHG emissions to 40% below the 1990 level by 2030.

SMARTWAY PROGRAM

The SmartWay Program is a public-private initiative between the EPA, large and small trucking companies, rail carriers, logistics companies, commercial manufacturers, retailers, and other federal and state agencies. Its purpose is to improve fuel efficiency and the environmental performance (reduction of both GHG emissions and air pollution) of the goods movement supply chains. SmartWay is comprised of four components (34):

1. SmartWay Transport Partnership: A partnership in which freight carriers and shippers commit to benchmark operations, track fuel consumption, and improve performance annually.
2. SmartWay Technology Program: A testing, verification, and designation program to help freight companies identify equipment, technologies, and strategies that save fuel and lower emissions.
3. SmartWay Vehicles: A program that ranks light-duty cars and small trucks and identifies superior environmental performers with the SmartWay logo.
4. SmartWay International Interests: Guidance and resources for countries seeking to develop freight sustainability programs modeled after SmartWay.

SmartWay effectively refers to requirements geared towards reducing fuel consumption. Most large trucking fleets driving newer vehicles are compliant with SmartWay design requirements. Moreover, over time, all HDTs would have to comply with the CARB GHG Regulation that is designed with the SmartWay Program in mind, to reduce GHG emissions by making them more fuel-efficient. For instance, in 2015, 53 foot or longer dry vans or refrigerated trailers equipped with a combination of SmartWay-verified low-rolling resistance tires and SmartWay-verified aerodynamic devices would obtain a total of 10% or more fuel savings over traditional trailers.

Through the SmartWay Technology Program, the EPA has evaluated the fuel saving benefits of various devices through grants, cooperative agreements, emissions, and fuel economy testing, demonstration projects and technical literature review. As a result, the EPA has determined the following types of technologies provide fuel saving and/or emission reducing benefits when used properly in their designed applications, and has verified certain products:

- Idle reduction technologies – less idling of the engine when it is not needed would reduce fuel consumption.
- Aerodynamic technologies minimize drag and improve airflow over the entire tractor-trailer vehicle. Aerodynamic technologies include gap fairings that reduce turbulence between the tractor and trailer, side skirts that minimize wind under the trailer, and rear fairings that reduce turbulence and pressure drop at the rear of the trailer.
- Low rolling resistance tires can roll longer without slowing down, thereby reducing the amount of fuel used. Rolling resistance (or rolling friction or rolling drag) is the force resisting the motion when a tire rolls on a surface. The wheel would eventually slow down because of this resistance.
- Retrofit technologies include things such as diesel particulate filters, emissions upgrades (to a higher tier), etc., which would reduce emissions.
- Federal excise tax exemptions.

EXECUTIVE ORDER 13990

On January 20, 2021, Federal agencies were directed to immediately review, and take action to address, Federal regulations promulgated and other actions taken during the last 4 years that conflict with national objectives to improve public health and the environment; ensure access to clean air and water; limit exposure to dangerous chemicals and pesticides; hold polluters accountable, including those who disproportionately harm communities of color and low-income communities; reduce greenhouse gas emissions; bolster resilience to the impacts of climate change; restore and expand our national treasures and monuments; and prioritize both environmental justice and employment.

2.7.3 CALIFORNIA

2.7.3.1 LEGISLATIVE ACTIONS TO REDUCE GHGS

The State of California legislature has enacted a series of bills that constitute the most aggressive program to reduce GHGs of any state in the nation. Some legislation such as the landmark AB 32 was specifically enacted to address GHG emissions. Other legislation such as Title 24 and Title 20 energy standards were originally adopted for other purposes such as energy and water conservation, but also provide GHG reductions. This section describes the major provisions of the legislation.

AB 32

The California State Legislature enacted AB 32, which required that GHGs emitted in California be reduced to 1990 levels by the year 2020 (this goal has been met[3]). GHGs as defined under AB 32 include CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6. Since AB 32 was enacted, a seventh chemical, NF_3, has also been added to the list of GHGs. CARB is the state agency charged with monitoring and regulating sources of GHGs. Pursuant to AB 32, CARB adopted regulations to achieve the maximum technologically feasible and cost-effective GHG emission reductions. AB 32 states the following:

> *"Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems."*

SB 375

On September 30, 2008, SB 375 was signed by Governor Schwarzenegger. According to SB 375, the transportation sector is the largest contributor of GHG emissions, which emits over 40% of the total

[3] Based upon the 2019 GHG inventory data (i.e., the latest year for which data are available) for the 2000-2017 GHG emissions period, California emitted an average 424.1 $MMTCO_2e$ (29). This is less than the 2020 emissions target of 431 $MMTCO_2e$.

GHG emissions in California. SB 375 states, "Without improved land use and transportation policy, California would not be able to achieve the goals of AB 32." SB 375 does the following: it (1) requires metropolitan planning organizations (MPOs) to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies.

SB 375 requires MPOs to prepare a Sustainable Communities Strategy (SCS) within the Regional Transportation Plan (RTP) that guides growth while taking into account the transportation, housing, environmental, and economic needs of the region. SB 375 uses CEQA streamlining as an incentive to encourage residential projects, which help achieve AB 32 goals to reduce GHG emissions. Although SB 375 does not prevent CARB from adopting additional regulations, such actions are not anticipated in the foreseeable future.

Concerning CEQA, SB 375, as codified in Public Resources Code Section 21159.28, states that CEQA findings for certain projects are not required to reference, describe, or discuss (1) growth inducing impacts, or (2) any project-specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional transportation network, if the project:

1. Is in an area with an approved sustainable communities strategy or an alternative planning strategy that CARB accepts as achieving the GHG emission reduction targets.
2. Is consistent with that strategy (in designation, density, building intensity, and applicable policies).
3. Incorporates the MMs required by an applicable prior environmental document.

AB 1493 - Pavley Fuel Efficiency Standards

Enacted on July 22, 2002, California AB 1493, also known as the Pavley Fuel Efficiency Standards, required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. Implementation of the regulation was delayed by lawsuits filed by automakers and by the EPA's denial of an implementation waiver. The EPA subsequently granted the requested waiver in 2009, which was upheld by the U.S. District Court for the District of Columbia in 2011.

The standards phase in during the 2009 through 2016 MY. Several technologies stand out as providing significant reductions in emissions at favorable costs. These include discrete variable valve lift or camless valve actuation to optimize valve operation rather than relying on fixed valve timing and lift as has historically been done; turbocharging to boost power and allow for engine downsizing; improved multi-speed transmissions; and improved air conditioning systems that operate optimally, leak less, and/or use an alternative refrigerant.

The second phase of the implementation for the Pavley bill was incorporated into Amendments to the Low-Emission Vehicle Program (LEV III) or the Advanced Clean Cars (ACC) program. The ACC program combines the control of smog-causing pollutants and GHG emissions into a single coordinated package of requirements for MY 2017 through 2025. The regulation would reduce GHGs from new cars by 34% from 2016 levels by 2025. The new rules would clean up gasoline and diesel-powered cars, and deliver increasing numbers of zero-emission technologies, such as full battery electric cars, newly emerging plug-in hybrid electric vehicles (EV) and hydrogen fuel

cell cars. The package would also ensure adequate fueling infrastructure is available for the increasing numbers of hydrogen fuel cell vehicles planned for deployment in California.

CLEAN ENERGY AND POLLUTION REDUCTION ACT OF 2015 (SB 350)

In October 2015, the legislature approved, and Governor Jerry Brown signed SB 350, which reaffirms California's commitment to reducing its GHG emissions and addressing climate change. Key provisions include an increase in the RPS, higher energy efficiency requirements for buildings, initial strategies towards a regional electricity grid, and improved infrastructure for EV charging stations. Provisions for a 50% reduction in the use of petroleum statewide were removed from the Bill because of opposition and concern that it would prevent the Bill's passage. Specifically, SB 350 requires the following to reduce statewide GHG emissions:

- Increase the amount of electricity procured from renewable energy sources from 33% to 50% by 2030, with interim targets of 40% by 2024, and 25% by 2027.
- Double the energy efficiency in existing buildings by 2030. This target would be achieved through the California Public Utilities Commission (CPUC), the California Energy Commission (CEC), and local publicly owned utilities.
- Reorganize the Independent System Operator (ISO) to develop more regional electrify transmission markets and to improve accessibility in these markets, which would facilitate the growth of renewable energy markets in the western United States.

SB 32

On September 8, 2016, Governor Brown signed SB 32 and its companion bill, AB 197. SB 32 requires the state to reduce statewide GHG emissions to 40% below 1990 levels by 2030, a reduction target that was first introduced in Executive Order B-30-15. The new legislation builds upon the AB 32 goal and provides an intermediate goal to achieving S-3-05, which sets a statewide GHG reduction target of 80% below 1990 levels by 2050. AB 197 creates a legislative committee to oversee regulators to ensure that CARB not only responds to the Governor, but also the Legislature (11).

CARB SCOPING PLAN UPDATE

In November 2017, CARB released the *Final 2017 Scoping Plan Update* (*2017 Scoping Plan*), which identifies the State's post-2020 reduction strategy. The *2017 Scoping Plan* reflects the 2030 target of a 40% reduction below 1990 levels, set by Executive Order B-30-15 and codified by SB 32. Key programs that the proposed Second Update builds upon include the Cap-and-Trade Regulation, the LCFS, and much cleaner cars, trucks, and freight movement, utilizing cleaner, renewable energy, and strategies to reduce CH_4 emissions from agricultural and other wastes.

The *2017 Scoping Plan* establishes a new emissions limit of 260 $MMTCO_2e$ for the year 2030, which corresponds to a 40% decrease in 1990 levels by 2030 (35).

California's climate strategy would require contributions from all sectors of the economy, including the land base, and would include enhanced focus on zero and near-zero emission (ZE/NZE) vehicle technologies; continued investment in renewables, including solar roofs, wind, and other distributed generation; greater use of low carbon fuels; integrated land conservation

and development strategies; coordinated efforts to reduce emissions of short-lived climate pollutants (CH_4, black carbon, and fluorinated gases); and an increased focus on integrated land use planning to support livable, transit-connected communities and conservation of agricultural and other lands. Requirements for direct GHG reductions at refineries would further support air quality co-benefits in neighborhoods, including in disadvantaged communities historically located adjacent to these large stationary sources, as well as efforts with California's local air pollution control and air quality management districts (air districts) to tighten emission limits on a broad spectrum of industrial sources. Major elements of the *2017 Scoping Plan* framework include:

- Implementing and/or increasing the standards of the Mobile Source Strategy, which include increasing zero-emission vehicles (ZEV) buses and trucks.
- LCFS, with an increased stringency (18% by 2030).
- Implementing SB 350, which expands the RPS to 50% RPS and doubles energy efficiency savings by 2030.
- California Sustainable Freight Action Plan, which improves freight system efficiency, utilizes near-zero emissions technology, and deployment of ZEV trucks.
- Implementing the proposed Short-Lived Climate Pollutant Strategy (SLPS), which focuses on reducing CH_4 and HCF emissions by 40% and anthropogenic black carbon emissions by 50% by year 2030.
- Continued implementation of SB 375.
- Post-2020 Cap-and-Trade Program that includes declining caps.
- 20% reduction in GHG emissions from refineries by 2030.
- Development of a Natural and Working Lands Action Plan to secure California's land base as a net carbon sink.

Note, however, that the *2017 Scoping Plan* acknowledges that:

> *"[a]chieving net zero increases in GHG emissions, resulting in no contribution to GHG impacts, may not be feasible or appropriate for every project, however, and the inability of a project to mitigate its GHG emissions to net zero does not imply the project results in a substantial contribution to the cumulatively significant environmental impact of climate change under CEQA."*

In addition to the statewide strategies listed above, the *2017 Scoping Plan* also identifies local governments as essential partners in achieving the State's long-term GHG reduction goals and identifies local actions to reduce GHG emissions. As part of the recommended actions, CARB recommends that local governments achieve a community-wide goal to achieve emissions of no more than 6 metric tons of CO_2e ($MTCO_2e$) or less per capita by 2030 and 2 $MTCO_2e$ or less per capita by 2050. For CEQA projects, CARB states that lead agencies may develop evidence-based bright-line numeric thresholds—consistent with the *2017 Scoping Plan* and the State's long-term GHG goals—and projects with emissions over that amount may be required to incorporate on-site design features and MMs that avoid or minimize project emissions to the degree feasible; or a performance-based metric using a CAP or other plan to reduce GHG emissions is appropriate.

According to research conducted by the Lawrence Berkeley National Laboratory (LBNL) and supported by CARB, California, under its existing and proposed GHG reduction policies, could achieve the 2030 goals under SB 32. The research utilized a new, validated model known as the California LBNL GHG Analysis of Policies Spreadsheet (CALGAPS), which simulates GHG and criteria pollutant emissions in California from 2010 to 2050 in accordance to existing and future GHG-reducing policies. The CALGAPS model showed that by 2030, emissions could range from 211 to 428 $MTCO_2e$ per year ($MTCO_2e$/yr), indicating that "even if all modeled policies are not implemented, reductions could be sufficient to reduce emissions 40% below the 1990 level [of SB 32]." CALGAPS analyzed emissions through 2050 even though it did not generally account for policies that might be put in place after 2030. Although the research indicated that the emissions would not meet the State's 80% reduction goal by 2050, various combinations of policies could allow California's cumulative emissions to remain very low through 2050 (36) (37).

CAP-AND-TRADE PROGRAM

The *2017 Scoping Plan* identifies a Cap-and-Trade Program as one of the key strategies for California to reduce GHG emissions. According to CARB, a cap-and-trade program would help put California on the path to meet its goal of achieving a 40% reduction in GHG emissions from 1990 levels by 2030. Under cap-and-trade, an overall limit on GHG emissions from capped sectors is established, and facilities subject to the cap would be able to trade permits to emit GHGs within the overall limit.

CARB adopted a California Cap-and-Trade Program pursuant to its authority under AB 32. The Cap-and-Trade Program is designed to reduce GHG emissions from regulated entities by more than 16% between 2013 and 2020, and by an additional 40% by 2030. The statewide cap for GHG emissions from the capped sectors (e.g., electricity generation, petroleum refining, and cement production) commenced in 2013 and would decline over time, achieving GHG emission reductions throughout the program's duration.

Covered entities that emit more than 25,000 $MTCO_2e$/yr must comply with the Cap-and-Trade Program. Triggering of the 25,000 $MTCO_2e$/yr "inclusion threshold" is measured against a subset of emissions reported and verified under the California Regulation for the Mandatory Reporting of GHG Emissions (Mandatory Reporting Rule or "MRR").

Under the Cap-and-Trade Program, CARB issues allowances equal to the total amount of allowable emissions over a given compliance period and distributes these to regulated entities. Covered entities are allocated free allowances in whole or part (if eligible), and may buy allowances at auction, purchase allowances from others, or purchase offset credits. Each covered entity with a compliance obligation is required to surrender "compliance instruments" for each $MTCO_2e$ of GHG they emit. There also are requirements to surrender compliance instruments covering 30% of the prior year's compliance obligation by November of each year (38).

The Cap-and-Trade Program provides a firm cap, which provides the highest certainty of achieving the 2030 target. An inherent feature of the Cap-and-Trade program is that it does not guarantee GHG emissions reductions in any discrete location or by any particular source. Rather,

GHG emissions reductions are only guaranteed on an accumulative basis. As summarized by CARB in the *First Update to the Climate Change Scoping Plan*:

> *"The Cap-and-Trade Regulation gives companies the flexibility to trade allowances with others or take steps to cost-effectively reduce emissions at their own facilities. Companies that emit more have to turn in more allowances or other compliance instruments. Companies that can cut their GHG emissions have to turn in fewer allowances. But as the cap declines, aggregate emissions must be reduced. In other words, a covered entity theoretically could increase its GHG emissions every year and still comply with the Cap-and-Trade Program if there is a reduction in GHG emissions from other covered entities. Such a focus on aggregate GHG emissions is considered appropriate because climate change is a global phenomenon, and the effects of GHG emissions are considered cumulative."* (39)

The Cap-and-Trade Program covers approximately 80% of California's GHG emissions (35). The Cap-and-Trade Program covers the GHG emissions associated with electricity consumed in California, whether generated in-state or imported. Accordingly, GHG emissions associated with CEQA projects' electricity usage are covered by the Cap-and-Trade Program. The Cap-and-Trade Program also covers fuel suppliers (natural gas and propane fuel providers and transportation fuel providers) to address emissions from such fuels and from combustion of other fossil fuels not directly covered at large sources in the Program's first compliance period. The Cap-and-Trade Program covers the GHG emissions associated with the combustion of transportation fuels in California, whether refined in-state or imported.

2.7.3.2 EXECUTIVE ORDERS RELATED TO GHG EMISSIONS

California's Executive Branch has taken several actions to reduce GHGs through the use of Executive Orders. Although not regulatory, they set the tone for the state and guide the actions of state agencies.

EXECUTIVE ORDER S-3-05

California Governor Arnold Schwarzenegger announced on June 1, 2005, through Executive Order S-3-05, the following reduction targets for GHG emissions:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80% below 1990 levels.

The 2050 reduction goal represents what some scientists believe is necessary to reach levels that would stabilize the climate. The 2020 goal was established to be a mid-term target. Because this is an executive order, the goals are not legally enforceable for local governments or the private sector.

EXECUTIVE ORDER S-01-07 (LCFS)

Governor Schwarzenegger signed Executive Order S-01-07 on January 18, 2007. The order mandates that a statewide goal shall be established to reduce the carbon intensity of California's transportation fuels by at least 10% by 2020. CARB adopted the LCFS on April 23, 2009.

The LCFS was challenged in the U.S. District Court in Fresno in 2011. The court's ruling issued on December 29, 2011, included a preliminary injunction against CARB's implementation of the rule. The Ninth Circuit Court of Appeals stayed the injunction on April 23, 2012, pending final ruling on appeal, allowing CARB to continue to implement and enforce the regulation. The Ninth Circuit Court's decision, filed September 18, 2013, vacated the preliminary injunction. In essence, the court held that LCFS adopted by CARB were not in conflict with federal law. On August 8, 2013, the Fifth District Court of Appeal (California) ruled CARB failed to comply with CEQA and the Administrative Procedure Act (APA) when adopting regulations for LCFS. In a partially published opinion, the Court of Appeal reversed the trial court's judgment and directed issuance of a writ of mandate setting aside Resolution 09-31 and two executive orders of CARB approving LCFS regulations promulgated to reduce GHG emissions. However, the court tailored its remedy to protect the public interest by allowing the LCFS regulations to remain operative while CARB complies with the procedural requirements it failed to satisfy.

To address the Court ruling, CARB was required to bring a new LCFS regulation to the Board for consideration in February 2015. The proposed LCFS regulation was required to contain revisions to the 2010 LCFS as well as new provisions designed to foster investments in the production of the low-carbon intensity fuels, offer additional flexibility to regulated parties, update critical technical information, simplify, and streamline program operations, and enhance enforcement. On November 16, 2015, the Office of Administrative Law (OAL) approved the Final Rulemaking Package. The new LCFS regulation became effective on January 1, 2016.

In 2018, CARB approved amendments to the regulation, which included strengthening the carbon intensity benchmarks through 2030 in compliance with the SB 32 GHG emissions reduction target for 2030. The amendments included crediting opportunities to promote zero emission vehicle adoption, alternative jet fuel, carbon capture and sequestration, and advanced technologies to achieve deep decarbonization in the transportation sector (40).

EXECUTIVE ORDER S-13-08

Executive Order S-13-08 states that "climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California's economy, to the health and welfare of its population and to its natural resources." Pursuant to the requirements in the Order, the *2009 California Climate Adaptation Strategy* (*CNRA 2009*) was adopted, which is the "…first statewide, multi-sector, region-specific, and information-based climate change adaptation strategy in the United States." Objectives include analyzing risks of climate change in California, identifying, and exploring strategies to adapt to climate change, and specifying a direction for future research.

EXECUTIVE ORDER B-30-15

On April 29, 2015, Governor Brown issued an executive order to establish a California GHG reduction target of 40% below 1990 levels by 2030. The Governor's executive order aligned California's GHG reduction targets with those of leading international governments ahead of the U.N. Climate Change Conference in Paris late 2015. The Order sets a new interim statewide GHG emission reduction target to reduce GHG emissions to 40% below 1990 levels by 2030 in order to ensure California meets its target of reducing GHG emissions to 80% below 1990 levels by 2050 and directs CARB to update the *2017 Scoping Plan* to express the 2030 target in terms of $MMTCO_2e$. The Order also requires the state's climate adaptation plan to be updated every three years, and for the State to continue its climate change research program, among other provisions. As with Executive Order S-3-05, this Order is not legally enforceable as to local governments and the private sector. Legislation that would update AB 32 to make post 2020 targets and requirements a mandate is in process in the State Legislature.

EXECUTIVE ORDER B-55-18 AND SB 100

SB 100 and Executive Order B-55-18 were signed by Governor Brown on September 10, 2018. Under the existing RPS, 25% of retail sales of electricity are required to be from renewable sources by December 31, 2016, 33% by December 31, 2020, 40% by December 31, 2024, 45% by December 31, 2027, and 50% by December 31, 2030. SB 100 raises California's RPS requirement to 50% renewable resources target by December 31, 2026, and to achieve a 60% target by December 31, 2030. SB 100 also requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours (kWh) of those products sold to their retail end-use customers achieve 44% of retail sales by December 31, 2024, 52% by December 31, 2027, and 60% by December 31, 2030. In addition to targets under AB 32 and SB 32, Executive Order B-55-18 establishes a carbon neutrality goal for the state of California by 2045; and sets a goal to maintain net negative emissions thereafter. The Executive Order directs the California Natural Resources Agency (CNRA), California EPA (CalEPA), the California Department of Food and Agriculture (CDFA), and CARB to include sequestration targets in the Natural and Working Lands Climate Change Implementation Plan consistent with the carbon neutrality goal.

2.7.3.3 CALIFORNIA REGULATIONS AND BUILDING CODES

California has a long history of adopting regulations to improve energy efficiency in new and remodeled buildings. These regulations have kept California's energy consumption relatively flat even with rapid population growth.

TITLE 20 CCR SECTIONS 1601 ET SEQ. – APPLIANCE EFFICIENCY REGULATIONS

The Appliance Efficiency Regulations regulate the sale of appliances in California. The Appliance Efficiency Regulations include standards for both federally regulated appliances and non-federally regulated appliances. 23 categories of appliances are included in the scope of these regulations. The standards within these regulations apply to appliances that are sold or offered for sale in California, except those sold wholesale in California for final retail sale outside the state

and those designed and sold exclusively for use in recreational vehicles (RV) or other mobile equipment (CEC 2012).

TITLE 24 CCR PART 6 – CALIFORNIA ENERGY CODE

The California Energy Code was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption.

The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods.

TITLE 24 CCR PART 11 – CALIFORNIA GREEN BUILDING STANDARDS CODE

The California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect on January 1, 2009, and is administered by the California Building Standards Commission (CBSC).

CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2019 California Green Building Code Standards that became effective January 1, 2020.

Local jurisdictions are permitted to adopt more stringent requirements, as state law provides methods for local enhancements. CALGreen recognizes that many jurisdictions have developed existing construction waste and demolition ordinances and defers to them as the ruling guidance provided they establish a minimum 65% diversion requirement.

The code also provides exemptions for areas not served by construction waste and demolition recycling infrastructure. The State Building Code provides the minimum standard that buildings must meet in order to be certified for occupancy, which is generally enforced by the local building official.

Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases greenhouse gas (GHG) emissions. The 2019 version of Title 24 was adopted by the CEC and became effective on January 1, 2020.

The 2019 Title 24 standards would result in less energy use, thereby reducing air pollutant emissions associated with energy consumption in the SCAB and across the State of California. For example, the 2019 Title 24 standards would require solar photovoltaic systems for new homes, establish requirements for newly constructed healthcare facilities, encourage demand responsive technologies for residential buildings, and update indoor and outdoor lighting requirements for nonresidential buildings.

The CEC anticipates that single-family homes built with the 2019 standards would use approximately 7% less energy compared to the residential homes built under the 2016 standards. Additionally, after implementation of solar photovoltaic systems, homes built under the 2019 standards would use about 53% less energy than homes built under the 2016 standards. Nonresidential buildings (such as the Project) would use approximately 30% less energy due to lighting upgrade requirements (19).

Because the Project would be constructed after January 1, 2020, the 2019 CALGreen standards are applicable to the Project and require, among other items (20):

RESIDENTIAL MANDATORY MEASURES

- Electric vehicle (EV) charging stations. New construction shall comply with Section 4.106.4.1, 4.106.4.2, 4.106.4.3, to facilitate future installation and use of EV chargers. Electric vehicle supply equipment (EVSE) shall be installed in accordance with the *California Electrical Code*, Article 625. (4.106.4).
    - New one- and two-family dwellings and town-houses with attached private garages. For each dwelling unit, install a listed raceway to accommodate a dedicated 208/240-volt branch circuit. The raceway shall not be less than trade size 1 (nominal 1-inch inside diameter). The raceway shall originate at the main service or subpanel and shall terminate into a listed cabinet, box or other enclosure in close proximity to the proposed location of an EV charger. Raceways are required to be continuous at enclosed, inaccessible or concealed areas and spaces. The service panel and/or subpanel shall provide capacity to install a 40-ampere 208/240-volt minimum dedicated branch circuit and space(s) reserved to permit installation of a branch circuit overcurrent protective device.
    - New hotels and motels. All newly constructed hotels and motels shall provide EV spaces capable of supporting future installation of EVSE. The construction documents shall identify the location of the EV spaces. The number of required EV spaces shall be based on the total number of parking spaces provided for all types of parking facilities in accordance with Table 4.106.4.3.1.
- Water conserving plumbing fixtures and fittings. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with Sections 4.303.1.1, 4.303.1.2, 4.303.1.3, and 4.303.1.4.
- Outdoor potable water use in landscape areas. Residential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resource ' Model Water Efficient Landscape Ordinance (MWELO), whichever is more stringent.
- Operation and maintenance manual. At the time of final inspection, a manual, compact disc, web-based reference or other media acceptable to the enforcing agency which includes all of the following shall be placed in the building:
    - Directions to the owner or occupant that the manual shall remain with the building throughout the life cycle of the structure.
    - Operations and maintenance instructions for the following:
        - Equipment and appliances, including water-saving devices and systems, HVAC systems, photovoltaic systems, EV chargers, water-heating systems and other major appliances and equipment.
        - Roof and yard drainage, including gutter and downspouts.
        - Space conditioning systems, including condensers and air filters.
        - Landscape irrigation systems.
        - Water reuse systems.
    - Information from local utility, water and waste recovery providers on methods to future reduce resource consumption, including recycle programs and locations.

- Public transportation and/or carpool options available in the area.
- Educational material on the positive impacts of an interior relative humidity between 30-60% and what methods an occupants may use to maintain the relative humidity level in that range.
- Information about water-conserving landscape and irrigation design and controllers which conserve water.
- Instructions for maintaining gutters and downspouts and the importance of diverting water at least 5 feet away from the foundation.
- Information about state solar energy and incentive programs available.
- A copy of all special inspection verifications required by the enforcing agency of this code.
- Information from CALFIRE on maintenance of defensible space around residential structures.

- Any installed gas fireplace shall be direct-vent sealed-combustion type. Any installed woodstove or pellet stove shall comply with U.S. EPA New Source Performance Standards (NSPS) emission limits as applicable, and shall have a permanent label indicating they are certified to meet the emission limits. Woodstoves, pellet stoves and fireplaces shall also comply with applicable local ordinances.
- Paints and coatings. Architectural paints and coatings shall comply with VOC limits in Table 1 of the CARB Architectural Suggested Control Measure, as shown in Table 4.504.3, unless more stringent local limits apply. The VOC content limit for coatings that do not meet the definitions for the specialty coatings categories listed in Table 4.504.3 shall be determined by classifying the coating as a Flat, Nonflat, or Nonflat-high Gloss coating, based on its glass, as defined in subsections 4.21, 4.36, and 4.37 of the 2007 CARB, Suggested Control Measure, and the corresponding Flat, Nonflat, Nonflat-high Gloss VOC limit in Table 4.504.3 shall apply.

NONRESIDENTIAL MANDATORY MEASURES

- Short-term bicycle parking. If the new project or an additional alteration is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors' entrance, readily visible to passers-by, for 5% of new visitor motorized vehicle parking spaces being added, with a minimum of one two-bike capacity rack (5.106.4.1.1).
- Long-term bicycle parking. For new buildings with tenant spaces that have 10 or more tenant-occupants, provide secure bicycle parking for 5% of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility (5.106.4.1.2).
- Designated parking for clean air vehicles. In new projects or additions to alterations that add 10 or more vehicular parking spaces, provide designated parking for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles as shown in Table 5.106.5.2 (5.106.5.2).
- EV charging stations. New construction shall facilitate the future installation of EV supply equipment. The compliance requires empty raceways for future conduit and documentation that the electrical system has adequate capacity for the future load. The number of spaces to be provided for is contained in Table 5.106. 5.3.3 (5.106.5.3).
- Outdoor light pollution reduction. Outdoor lighting systems shall be designed to meet the backlight, uplight and glare ratings per Table 5.106.8 (5.106.8)

- Construction waste management. Recycle and/or salvage for reuse a minimum of 65% of the nonhazardous construction and demolition waste in accordance with Section
- 5.408.1.1. 5.405.1.2, or 5.408.1.3; or meet a local construction and demolition waste management ordinance, whichever is more stringent (5.408.1).
- Excavated soil and land clearing debris. 100% of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reused or recycled. For a phased project, such material may be stockpiled on site until the storage site is developed (5.408.3).
- Recycling by Occupants. Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of non-hazardous materials for recycling, including (at a minimum) paper, corrugated cardboard, glass, plastics, organic waste, and metals or meet a lawfully enacted local recycling ordinance, if more restrictive (5.410.1).
- Water conserving plumbing fixtures and fittings. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with the following:
    - Water Closets. The effective flush volume of all water closets shall not exceed 1.28 gallons per flush (5.303.3.1)
    - Urinals. The effective flush volume of wall-mounted urinals shall not exceed 0.125 gallons per flush (5.303.3.2.1). The effective flush volume of floor- mounted or other urinals shall not exceed 0.5 gallons per flush (5.303.3.2.2).
    - Showerheads. Single showerheads shall have a minimum flow rate of not more than 1.8 gallons per minute and 80 psi (5.303.3.3.1). When a shower is served by more than one showerhead, the combine flow rate of all showerheads and/or other shower outlets controlled by a single valve shall not exceed 1.8 gallons per minute at 80 psi (5.303.3.3.2).
    - Faucets and fountains. Nonresidential lavatory faucets shall have a maximum flow rate of not more than 0.5 gallons per minute at 60 psi (5.303.3.4.1). Kitchen faucets shall have a maximum flow rate of not more than 1.8 gallons per minute of 60 psi (5.303.3.4.2). Wash fountains shall have a maximum flow rate of not more than 1.8 gallons per minute (5.303.3.4.3). Metering faucets shall not deliver more than 0.20 gallons per cycle (5.303.3.4.4). Metering faucets for wash fountains shall have a maximum flow rate not more than 0.20 gallons per cycle (5.303.3.4.5).
- Outdoor portable water use in landscaped areas. Nonresidential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient (MWELO), whichever is more stringent (5.304.1).
- Water meters. Separate submeters or metering devices shall be installed for new buildings or additions in excess of 50,000 sf or for excess consumption where any tenant within a new building or within an addition that is project to consume more than 1,000 gallons per day (5.303.1.1 and 5.303.1.2).
- Outdoor water use in rehabilitated landscape projects equal or greater than 2,500 sf. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 sf requiring a building or landscape permit (5.304.3).
- Commissioning. For new buildings 10,000 sf and over, building commissioning shall be included in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (5.410.2).

CARB REFRIGERANT MANAGEMENT PROGRAM

CARB adopted a regulation in 2009 to reduce refrigerant GHG emissions from stationary sources through refrigerant leak detection and monitoring, leak repair, system retirement and retrofitting, reporting and recordkeeping, and proper refrigerant cylinder use, sale, and disposal. The regulation is set forth in sections 95380 to 95398 of Title 17, CCR. The rules implementing the regulation establish a limit on statewide GHG emissions from stationary facilities with refrigeration systems with more than 50 pounds of a high GWP refrigerant. The refrigerant management program is designed to (1) reduce emissions of high-GWP GHG refrigerants from leaky stationary, non-residential refrigeration equipment; (2) reduce emissions from the installation and servicing of refrigeration and air-conditioning appliances using high-GWP refrigerants; and (3) verify GHG emission reductions.

TRACTOR-TRAILER GHG REGULATION

The tractors and trailers subject to this regulation must either use EPA SmartWay certified tractors and trailers or retrofit their existing fleet with SmartWay verified technologies. The regulation applies primarily to owners of 53-foot or longer box-type trailers, including both dry-van and refrigerated-van trailers, and owners of the HD tractors that pull them on California highways. These owners are responsible for replacing or retrofitting their affected vehicles with compliant aerodynamic technologies and low rolling resistance tires. Sleeper cab tractors MY 2011 and later must be SmartWay certified. All other tractors must use SmartWay verified low rolling resistance tires. There are also requirements for trailers to have low rolling resistance tires and aerodynamic devices.

PHASE I AND 2 HEAVY-DUTY VEHICLE GHG STANDARDS

In September 2011, CARB has adopted a regulation for GHG emissions from HDTs and engines sold in California. It establishes GHG emission limits on truck and engine manufacturers and harmonizes with the EPA rule for new trucks and engines nationally. Existing HD vehicle regulations in California include engine criteria emission standards, tractor-trailer GHG requirements to implement SmartWay strategies (i.e., the Heavy-Duty Tractor-Trailer GHG Regulation), and in-use fleet retrofit requirements such as the Truck and Bus Regulation. The EPA rule has compliance requirements for new compression and spark ignition engines, as well as trucks from Class 2b through Class 8. Compliance requirements began with MY 2014 with stringency levels increasing through MY 2018. The rule organizes truck compliance into three groupings, which include a) HD pickups and vans; b) vocational vehicles; and c) combination tractors. The EPA rule does not regulate trailers.

CARB staff has worked jointly with the EPA and the NHTSA on the next phase of federal GHG emission standards for medium-duty trucks (MDT) and HDT vehicles, called federal Phase 2. The federal Phase 2 standards were built on the improvements in engine and vehicle efficiency required by the Phase 1 emission standards and represent a significant opportunity to achieve further GHG reductions for 2018 and later MY HDT vehicles, including trailers. The EPA and NHTSA have proposed to roll back GHG and fuel economy standards for cars and light-duty trucks, which suggests a similar rollback of Phase 2 standards for MDT and HDT vehicles may be pursued.

SB 97 AND THE CEQA GUIDELINES UPDATE

Passed in August 2007, SB 97 added Section 21083.05 to the Public Resources Code. The code states "(a) On or before July 1, 2009, the Office of Planning and Research (OPR) shall prepare, develop, and transmit to the Resources Agency guidelines for the mitigation of GHG emissions or the effects of GHG emissions as required by this division, including, but not limited to, effects associated with transportation or energy consumption. (b) On or before January 1, 2010, the Resources Agency shall certify and adopt guidelines prepared and developed by the OPR pursuant to subdivision (a)."

In 2012, Public Resources Code Section 21083.05 was amended to state:

> *"The Office of Planning and Research and the Natural Resources Agency shall periodically update the guidelines for the mitigation of greenhouse gas emissions or the effects of greenhouse gas emissions as required by this division, including, but not limited to, effects associated with transportation or energy consumption, to incorporate new information or criteria established by the State Air Resources Board pursuant to Division 25.5 (commencing with Section 38500) of the Health and Safety Code."*

On December 28, 2018, the Natural Resources Agency announced the OAL approved the amendments to the *CEQA Guidelines* for implementing CEQA. The CEQA Amendments provide guidance to public agencies regarding the analysis and mitigation of the effects of GHG emissions in CEQA documents. The CEQA Amendments fit within the existing CEQA framework by amending existing *CEQA Guidelines* to reference climate change.

Section 15064.4 was added the *CEQA Guidelines* and states that in determining the significance of a project's GHG emissions, the lead agency should focus its analysis on the reasonably foreseeable incremental contribution of the project's emissions to the effects of climate change. A project's incremental contribution may be cumulatively considerable even if it appears relatively insignificant compared to statewide, national, or global emissions. The agency's analysis should consider a timeframe that is appropriate for the project. The agency's analysis also must reasonably reflect evolving scientific knowledge and state regulatory schemes. Additionally, a lead agency may use a model or methodology to estimate GHG emissions resulting from a project. The lead agency has discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change. The lead agency must support its selection of a model or methodology with substantial evidence. The lead agency should explain the limitations of the particular model or methodology selected for use (41).

2.7.4 REGIONAL

The project is within the SCAB, which is under the jurisdiction of the SCAQMD.

SCAQMD

SCAQMD is the agency responsible for air quality planning and regulation in the SCAB. The SCAQMD addresses the impacts to climate change of projects subject to SCAQMD permit as a

lead agency if they are the only agency having discretionary approval for the project and acts as a responsible agency when a land use agency must also approve discretionary permits for the project. The SCAQMD acts as an expert commenting agency for impacts to air quality. This expertise carries over to GHG emissions, so the agency helps local land use agencies through the development of models and emission thresholds that can be used to address GHG emissions.

In 2008, SCAQMD formed a Working Group to identify GHG emissions thresholds for land use projects that could be used by local lead agencies in the SCAB. The Working Group developed several different options that are contained in the SCAQMD Draft Guidance Document – Interim CEQA GHG Significance Threshold, which could be applied by lead agencies. The working group has not provided additional guidance since release of the interim guidance in 2008. The SCAQMD Board has not approved the thresholds; however, the Guidance Document provides substantial evidence supporting the approaches to significance of GHG emissions that can be considered by the lead agency in adopting its own threshold. The current interim thresholds consist of the following tiered approach:

- Tier 1 consists of evaluating whether or not the project qualifies for any applicable exemption under CEQA.
- Tier 2 consists of determining whether the project is consistent with a GHG reduction plan. If a project is consistent with a qualifying local GHG reduction plan, it does not have significant GHG emissions.
- Tier 3 consists of screening values, which the lead agency can choose, but must be consistent with all projects within its jurisdiction. A project's construction emissions are averaged over 30 years and are added to the project's operational emissions. If a project's emissions are below one of the following screening thresholds, then the project is less than significant:
    - Residential and commercial land use: 3,000 $MTCO_2e/yr$
    - Industrial land use: 10,000 $MTCO_2e/yr$
    - Based on land use type: residential: 3,500 $MTCO_2e/yr$; commercial: 1,400 $MTCO_2e/yr$; or mixed use: 3,000 $MTCO_2e/yr$
- Tier 4 has the following options:
    - Option 1: Reduce Business-as-Usual (BAU) emissions by a certain percentage; this percentage is currently undefined.
    - Option 2: Early implementation of applicable AB 32 Scoping Plan measures
    - Option 3: 2020 target for service populations (SP), which includes residents and employees: 4.8 $MTCO_2e$ per SP per year for projects and 6.6 $MTCO_2e$ per SP per year for plans;
    - Option 3, 2035 target: 3.0 $MTCO_2e$ per SP per year for projects and 4.1 $MTCO_2e$ per SP per year for plans
- Tier 5 involves mitigation offsets to achieve target significance threshold.

The SCAQMD's interim thresholds used the Executive Order S-3-05-year 2050 goal as the basis for the Tier 3 screening level. Achieving the Executive Order's objective would contribute to worldwide efforts to cap CO_2 concentrations at 450 ppm, thus stabilizing global climate.

SCAQMD only has authority over GHG emissions from development projects that include air quality permits. At this time, it is unknown if the project would include stationary sources of emissions subject to SCAQMD permits. Notwithstanding, if the Project requires a stationary permit, it would be subject to the applicable SCAQMD regulations.

SCAQMD Regulation XXVII, adopted in 2009 includes the following rules:

- Rule 2700 defines terms and post global warming potentials.
- Rule 2701, SoCal Climate Solutions Exchange, establishes a voluntary program to encourage, quantify, and certify voluntary, high quality certified GHG emission reductions in the SCAQMD.
- Rule 2702, GHG Reduction Program created a program to produce GHG emission reductions within the SCAQMD. The SCAQMD would fund projects through contracts in response to requests for proposals or purchase reductions from other parties.

SCAQMD is the agency responsible for air quality planning and regulation in the SCAB. The SCAQMD addresses the impacts to climate change of projects subject to SCAQMD permit as a lead agency if they are the only agency having discretionary approval for the project and acts as a responsible agency when a land use agency must also approve discretionary permits for the project. The SCAQMD acts as an expert commenting agency for impacts to air quality. This expertise carries over to GHG emissions, so the agency helps local land use agencies through the development of models and emission thresholds that can be used to address GHG emissions.

3 PROJECT GHG IMPACT

3.1 INTRODUCTION

The Project has been evaluated to determine if it will result in a significant GHG impact. The significance of these potential impacts is described in the following sections.

3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related GHG impacts are taken from the Initial Study Checklist in Appendix G of the State *CEQA Guidelines* (14 CCR of Regulations §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to GHG if it would (1):

- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?
- Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?

3.2.1 DISCUSSION ON ESTABLISHMENT OF SIGNIFICANCE THRESHOLDS

The City of Wildomar has not adopted its own numeric threshold of significance for determining impacts with respect to GHG emissions. A screening threshold of 3,000 $MTCO_2e$/yr to determine if additional analysis is required is an acceptable approach for small projects. This approach is a widely accepted screening threshold used by the City of Menifee and numerous cities in the South Coast Air Basin and is based on the SCAQMD staff's proposed GHG screening threshold for stationary source emissions for non-industrial projects, as described in the SCAQMD's *Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans* ("SCAQMD Interim GHG Threshold"). The SCAQMD Interim GHG Threshold identifies a screening threshold to determine whether additional analysis is required (42). As noted by the SCAQMD:

> *"…the…screening level for stationary sources is based on an emission capture rate of 90% for all new or modified projects...the policy objective of [SCAQMD's] recommended interim GHG significance threshold proposal is to achieve an emission capture rate of 90% of all new or modified stationary source projects. A GHG significance threshold based on a 90% emission capture rate may be more appropriate to address the long-term adverse impacts associated with global climate change because most projects will be required to implement GHG reduction measures. Further, a 90% emission capture rate sets the emission threshold low enough to capture a substantial fraction of future stationary source projects that will be constructed to accommodate future statewide population and economic growth, while setting the emission threshold high enough to exclude small projects that will in aggregate contribute a relatively small fraction of the cumulative statewide GHG emissions. This assertion is based on the fact that [SCAQMD] staff estimates that these GHG emissions would account for slightly less than 1% of future 2050 statewide GHG emissions target (85 [$MMTCO_2e$/yr]). In addition, these small projects may be subject to future applicable GHG control regulations that would further reduce their*

overall future contribution to the statewide GHG inventory. Finally, these small sources are already subject to [Best Available Control Technology] (BACT) for criteria pollutants and are more likely to be single-permit facilities, so they are more likely to have few opportunities readily available to reduce GHG emissions from other parts of their facility." (43)

Thus, and based on guidance from the SCAQMD, if a non-industrial project would emit GHGs less than 3,000 $MTCO_2e$ per year, the project is not considered a substantial GHG emitter and the GHG impact is less than significant, requiring no additional analysis and no mitigation. On the other hand, if a non-industrial project would emit GHGs in excess of 3,000 $MTCO_2e$/yr, then the project could be considered a substantial GHG emitter, requiring additional analysis and potential mitigation.

As previously discussed, a screening threshold of 3,000 $MTCO_2e$/yr is an acceptable approach for small projects to determine if additional analysis is required and is therefore applied for this Project.

3.3 MODELS EMPLOYED TO ANALYZE GHGS

3.3.1 CALIFORNIA EMISSIONS ESTIMATOR MODEL (CALEEMOD)

In May 2021, the SCAQMD, in conjunction with the California Air Pollution Control Officers Association (CAPCOA) and other California air districts, released the latest version of the CalEEMod Version 2020.4.0. The purpose of this model is to calculate construction-source and operational-source criteria pollutants and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (44). Accordingly, the latest version of CalEEMod has been used for this Project to determine GHG emissions. Output from the model runs for construction and operational activity are provided in Appendices 3.1 through 3.2. CalEEMod includes GHG emissions from the following source categories: construction, area, energy, mobile, waste, water.

3.4 LIFE-CYCLE ANALYSIS NOT REQUIRED

A full life-cycle analysis (LCA) for construction and operational activity is not included in this analysis due to the lack of consensus guidance on LCA methodology at this time (45). Life-cycle analysis (i.e., assessing economy-wide GHG emissions from the processes in manufacturing and transporting all raw materials used in the Project development, infrastructure, and on-going operations) depends on emission factors or econometric factors that are not well established for all processes. At this time, an LCA would be extremely speculative and thus has not been prepared.

Additionally, the SCAQMD recommends analyzing direct and indirect project GHG emissions generated within California and not life-cycle emissions because the life-cycle effects from a project could occur outside of California, might not be very well understood, or documented, and would be challenging to mitigate (46). Additionally, the science to calculate life cycle emissions is not yet established or well defined; therefore, SCAQMD has not recommended, and is not requiring, life-cycle emissions analysis.

3.5 CONSTRUCTION EMISSIONS

Project construction actvities would generate CO_2 and CH_4 emissions The report *Wildomar Crossroads Air Quality Impact Analysis Report* (AQIA) contains detailed information regarding Project construction activities (47). As discussed in the AQIA, Construction related emissions are expected from the following construction activities:

- Demolition
- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

3.5.1 CONSTRUCTION DURATION

Construction is anticipated to begin in December 2022 and will last through February 2024. The construction schedule utilized in the analysis, shown in Table 3-1, represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent[4]. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per *CEQA Guidelines* (48).

TABLE 3-1: CONSTRUCTION DURATION

Construction Activity	Start Date	End Date	Days
Demolition	12/01/2022	12/28/2022	20
Site Preparation	12/29/2022	01/11/2023	10
Grading	01/12/2023	02/08/2023	20
Building Construction	02/09/2023	12/27/2023	230
Paving	12/28/2023	01/24/2024	20
Architectural Coating	01/25/2024	02/21/2024	20

Source: Construction schedule based on CalEEMod default parameters.

3.5.2 CONSTRUCTION EQUIPMENT

Consistent with industry standards and typical construction practices, each piece of equipment listed in Table 3-2 will operate up to a total of eight (8) hours per day, or more than two-thirds of the period during which construction activities are allowed pursuant to the code.

[4] As shown in the CalEEMod User's Guide Version 2020.4.0, Section 4.3 "OFFROAD Equipment" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

TABLE 3-2: CONSTRUCTION EQUIPMENT ASSUMPTIONS

Construction Activity	Equipment	Amount	Hours Per Day
Demolition	Concrete/Industrial Saws	1	8
	Excavators	3	8
	Rubber Tired Dozers	2	8
Site Preparation	Crawler Tractors	4	8
	Rubber Tired Dozers	3	8
Grading	Crawler Tractors	3	8
	Excavators	1	8
	Graders	1	8
	Rubber Tired Dozers	1	8
Building Construction	Cranes	1	8
	Forklifts	3	8
	Generator Sets	1	8
	Tractors/Loaders/Backhoes	3	8
	Welders	1	8
Paving	Pavers	2	8
	Paving Equipment	2	8
	Rollers	2	8
Architectural Coating	Air Compressors	1	8

Source: Construction equipment based on CalEEMod default parameters.

3.5.3 CONSTRUCTION EMISSIONS SUMMARY

For construction emissions, GHGs are quantified and amortized over the life of the Project. To amortize the emissions over the life of the Project, the SCAQMD recommends calculating the total GHG emissions for the construction activities, dividing it by a 30-year Project life then adding that number to the annual operational phase GHG emissions (49). As such, construction emissions were amortized over a 30-year period and added to the annual operational phase GHG emissions. The amortized construction emissions are presented in Table 3-3.

TABLE 3-3: AMORTIZED ANNUAL CONSTRUCTION EMISSIONS

Year	Emissions (MT/yr)			
	CO_2	CH_4	N_2O	Total CO_2e[5]
2022	41.38	0.01	1.80E-04	41.71
203	773.37	0.10	0.04	787.24
2024	27.44	6.14E-03	3.00E-04	27.68
Total GHG Emissions	842.19	0.11	0.04	856.63
Amortized Construction Emissions ($MTCO_2e$)	**28.07**	**3.81E-03**	**1.30E-03**	**28.55**

Source CalEEMod annual construction-source emissions are presented in Appendix 3.1.

3.6 OPERATIONAL EMISSIONS

Operational activities associated with the Project will result in emissions of CO_2, CH_4, and N_2O from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions
- Water Supply, Treatment, and Distribution
- Solid Waste

3.6.1 AREA SOURCE EMISSIONS

LANDSCAPE MAINTENANCE EQUIPMENT

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. It should be noted that as October 9, 2021, Governor Gavin Newsom signed AB 1346. The bill aims to ban the sale of new gasoline-powered equipment under 25 gross horsepower (known as small off-road engines [SOREs]) by 2024. For purposes of analysis, the emissions associated with landscape maintenance equipment were calculated based on assumptions provided in CalEEMod.

3.6.2 ENERGY SOURCE EMISSIONS

COMBUSTION EMISSIONS ASSOCIATED WITH NATURAL GAS AND ELECTRICITY

GHGs are emitted from buildings as a result of activities for which electricity and natural gas are typically used as energy sources. Combustion of any type of fuel emits CO_2 and other GHGs directly into the atmosphere; these emissions are considered direct emissions associated with a

[5] CalEEMod reports the most common GHGs emitted which include CO_2, CH_4, and N_2O. These GHGs are then converted into the CO_2e by multiplying the individual GHG by the GWP.

building; the building energy use emissions do not include street lighting[6]. GHGs are also emitted during the generation of electricity from fossil fuels; these emissions are considered to be indirect emissions. It should be noted that for the proposed Project, CalEEMod default parameters were used.

3.6.3 MOBILE SOURCE EMISSIONS

The Project GHG emissions derive primarily from vehicle trips generated by the Project, including employee trips to and from the site and truck trips associated with the proposed uses. Trip characteristics available from the *Wildomar Crossroads Traffic Impact Analysis* were utilized in this analysis (50).

TRIP LENGTH

Due to the predominately retail nature of the Project (supermarket, shops, fast-food restaurant with drive-thru, coffee/donut shop with drive-thru, and high-turnover (sit down) restaurant), the Project's location, a substantial amount of residential land uses within a 2-mile radius of the Project site, and other retail uses located in the Project vicinity, an average trip length for customers of 2 miles was used in the assessment as opposed to the 8.4-mile model default trip length value. As evaluated in the *Wildomar Crossroads Traffic Impact Analysis*, the Project consists of a mixed-use development which tend to shorten vehicle trips. As such, since the Project contains mixed-uses and is surrounded by residential land uses, the adjustments to the CalEEMod default trip length for retail land uses are substantiated. CalEEMod defaults for trip length were utilized for the Multifamily Housing (Mid-Rise) portion of the Project.

3.6.4 WATER SUPPLY, TREATMENT AND DISTRIBUTION

Indirect GHG emissions result from the production of electricity used to convey, treat, and distribute water and wastewater. The amount of electricity required to convey, treat, and distribute water depends on the volume of water as well as the sources of the water. Unless otherwise noted, CalEEMod default parameters were used.

3.6.5 SOLID WASTE

Industrial land uses will result in the generation and disposal of solid waste. A percentage of this waste will be diverted from landfills by a variety of means, such as reducing the amount of waste generated, recycling, and/or composting. The remainder of the waste not diverted will be disposed of at a landfill. GHG emissions from landfills are associated with the anaerobic breakdown of material. GHG emissions associated with the disposal of solid waste associated with the proposed Project were calculated by CalEEMod using default parameters.

[6] The CalEEMod emissions inventory model does not include indirect emission related to street lighting. Indirect emissions related to street lighting are expected to be negligible and cannot be accurately quantified at this time as there is insufficient information as to the number and type of street lighting that would occur.

3.6.6 EMISSIONS SUMMARY

The annual GHG emissions associated with the Project are summarized in Table 3-4. As shown in Table 3-4, construction and operation of the Project would generate a total of 2,833.80 $MTCO_2e$/yr.

TABLE 3-4: PROJECT SCENARIO GHG EMISSIONS

Emission Source	Emissions (MT/yr)			
	CO_2	CH_4	N_2O	Total CO_2e
Annual construction-related emissions amortized over 30 years	28.07	3.81E-03	1.30E-03	28.55
Area Source	38.56	0.00315	0.00066	38.84
Energy Source	573.98	0.03	0.00785	577.13
Mobile Source	1,917.05	0.17	0.13	1,960.36
Waste	62.51	3.69	0.00	154.87
Water Usage	57.40	0.52	0.01	74.04
Total CO_2e (All Sources)	**2,833.80**

3.7 GHG EMISSIONS FINDINGS AND RECOMMENDATIONS

3.7.1 GHG IMPACT 1

Potential to generate direct or indirect GHG emissions that would result in a significant impact on the environment.

The City of Wildomar has not adopted its own numeric threshold of significance for determining impacts with respect to GHG emissions. A screening threshold of 3,000 $MTCO_2e$/yr to determine if additional analysis is required is an acceptable approach for small projects. This approach is a widely accepted screening threshold used by the County of Riverside (51) and numerous cities in the SCAB and is based on the SCAQMD staff's proposed GHG screening threshold for stationary source emissions for non-industrial projects, as described in the SCAQMD's *Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans* ("SCAQMD Interim GHG Threshold"). The SCAQMD Interim GHG Threshold identifies a screening threshold to determine whether additional analysis is required (43).

The Project will result in approximately 2,833.80 $MTCO_2e$/yr as shown on Table 3-4. As such, the Project would not exceed the SCAQMD's recommended numeric threshold of 3,000 $MTCO_2e$/yr if it were applied. As such, project-related emissions would have a less than significant direct or indirect impact on GHG and climate change and no mitigation measures are required.

The Project would not have the potential to generate direct or indirect GHG emissions that would result in a significant impact on the environment.

3.7.2 GHG IMPACT 2

The Project would have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

As previously stated, pursuant to 15604.4 of the *CEQA Guidelines*, a lead agency may rely on qualitative analysis or performance-based standards to determine the significance of impacts from GHG emissions (48). As such, the Project's consistency with SB 32 (2017 Scoping Plan), is discussed below. It Consistency with AB 32 and the 2008 Scoping Plan is not necessary, since the target year for AB 32 and the 2008 Scoping Plan was 2020, and the Project's buildout year is 2024. As such the 2008 Scoping Plan does not apply and consistency with the 2017 Scoping Plan is relevant. Project consistency with SB 32 and the Western Riverside Council of Governments (WRCOG) Subregional Climate Action Plan (CAP) is evaluated in the following discussion.

SB 32/2017 SCOPING PLAN CONSISTENCY

The 2017 Scoping Plan Update reflects the 2030 target of a 40% reduction below 1990 levels, set by Executive Order B-30-15 and codified by SB 32. Table 3-5 summarizes the Project's consistency with the 2017 Scoping Plan. As summarized, the Project will not conflict with any of the provisions of the Scoping Plan and in fact supports seven of the action categories.

TABLE 3-5: 2017 SCOPING PLAN CONSISTENCY SUMMARY[7]

Action	Responsible Parties	Consistency
Implement SB 350 by 2030		
Increase the Renewables Portfolio Standard to 50% of retail sales by 2030 and ensure grid reliability.	CPUC, CEC, CARB	Consistent. This measure is not directly applicable to development projects, but the proposed Project would use energy from Southern California Edison (SCE), which has committed to diversify its portfolio of energy sources by increasing energy from wind and solar sources.
Establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030.		Consistent. The Project would be constructed in compliance with current California Building Code requirements. Specifically, new buildings must achieve compliance with 2019 Building and Energy Efficiency Standards and the 2019

[7] Measures can be found at the following link: https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf

Action	Responsible Parties	Consistency
Reduce GHG emissions in the electricity sector through the implementation of the above measures and other actions as modeled in Integrated Resource Planning (IRP) to meet GHG emissions reductions planning targets in the IRP process. Load-serving entities and publicly- owned utilities meet GHG emissions reductions planning targets through a combination of measures as described in IRPs.		California Green Building Standards requirements. The proposed Project includes energy efficient field lighting and fixtures that meet the current Title 24 Standards throughout the Project Site and would be a modern development with energy efficient boilers, heaters, and air conditioning systems.
Implement Mobile Source Strategy (Cleaner Technology and Fuels)		
At least 1.5 million zero emission and plug-in hybrid light-duty electric vehicles by 2025.	CARB, California State Transportation Agency (CalSTA), Strategic Growth Council (SGC), California Department of Transportation (Caltrans), CEC, OPR, Local Agencies	Consistent. These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards will comply with the strategy.
At least 4.2 million zero emission and plug-in hybrid light-duty electric vehicles by 2030.		Consistent. These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards will comply with the strategy.
Further increase GHG stringency on all light-duty vehicles beyond existing Advanced Clean cars regulations.		Consistent. These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards will comply with the strategy
Medium- and Heavy-Duty GHG Phase 2.		Consistent. These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards will comply with the strategy
Innovative Clean Transit: Transition to a suite of to-be-determined innovative clean transit options. Assumed 20% of new urban buses purchased beginning in 2018 will be zero emission buses with the penetration of zero-emission technology ramped up to 100% of new sales in 2030. Also, new natural gas buses, starting in 2018, and diesel buses, starting in 2020, meet the optional heavy-duty low-NO_X standard.		Not applicable. This measure is not within the purview of this Project.
Last Mile Delivery: New regulation that would result in the use of low NO_X or cleaner engines and the deployment of increasing numbers of zero-emission trucks primarily for class 3-7 last mile delivery trucks in California. This measure assumes ZEVs comprise 2.5% of new Class 3–7 truck sales in local fleets starting in 2020,		Not applicable. This Project is not responsible for implementation of SB 375 and would therefore not conflict with this measure.

Action	Responsible Parties	Consistency
increasing to 10% in 2025 and remaining flat through 2030.		
Further reduce vehicle miles traveled (VMT) through continued implementation of SB 375 and regional Sustainable Communities Strategies; forthcoming statewide implementation of SB 743; and potential additional VMT reduction strategies not specified in the Mobile Source Strategy but included in the document "Potential VMT Reduction Strategies for Discussion."		Not applicable. This Project is not responsible for implementation of SB 375 and would therefore not conflict with this measure.
Increase stringency of SB 375 Sustainable Communities Strategy (2035 targets).	CARB	Not applicable. The Project is not within the purview of SB 375 and would therefore not conflict with this measure.
By 2019, adjust performance measures used to select and design transportation facilities		
Harmonize project performance with emissions reductions and increase competitiveness of transit and active transportation modes (e.g. via guideline documents, funding programs, project selection, etc.).	CalSTA, SGC, OPR, CARB, Governor's Office of Business and Economic Development (GO-Biz), California Infrastructure and Economic Development Bank (IBank), Department of Finance (DOF), California Transportation Commission (CTC), Caltrans	Not applicable. Although this is directed towards CARB and Caltrans, the proposed Project would be designed to promote and support pedestrian activity on-site and in the Project Site area by providing pedestrian access from the residential section to the shopping center.
By 2019, develop pricing policies to support low-GHG transportation (e.g. low-emission vehicle zones for heavy duty, road user, parking pricing, transit discounts).	CalSTA, Caltrans, CTC, OPR, SGC, CARB	Not applicable. This Project is not responsible for developing pricing policies to support low-GHG transportation.

Action	Responsible Parties	Consistency
Implement California Sustainable Freight Action Plan		
Improve freight system efficiency.	CalSTA, CalEPA, CNRA, CARB, Caltrans, CEC, GO-Biz	When adopted, this measure would apply to all trucks accessing the Project site, this may include existing trucks or new trucks that are part of the statewide goods movement sector.
Deploy over 100,000 freight vehicles and equipment capable of zero emission operation and maximize both zero and near-zero emission freight vehicles and equipment powered by renewable energy by 2030.		Not applicable. This measure is not within the purview of this Project.
Adopt a Low Carbon Fuel Standard with a Carbon Intensity reduction of 18%.	CARB	LCFS, with an increased stringency (18% by 2030). When adopted, this measure would apply to all fuel purchased and used by the Project in the state.
Implement the Short-Lived Climate Pollutant Strategy by 2030		
40% reduction in methane and hydrofluorocarbon emissions below 2013 levels.	CARB, CalRecycle, CDFA, SWRCB, Local Air Districts	When adopted, the Project would be required to comply with this measure and reduce SLPS accordingly.
50% reduction in black carbon emissions below 2013 levels.		Not applicable. This measure is not within the purview of this Project.
By 2019, develop regulations and programs to support organic waste landfill reduction goals in the SLCP and SB 1383.	CARB, CalRecycle, CDFA SWRCB, Local Air Districts	Not applicable. This measure is not within the purview of this Project.
Implement the post-2020 Cap-and-Trade Program with declining annual caps.	CARB	When adopted, the Project would be required to comply with the Cap-and-Trade Program if it generates emissions from sectors covered by Cap-and-Trade.
By 2018, develop Integrated Natural and Working Lands Implementation Plan to secure California's land base as a net carbon sink		

Action	Responsible Parties	Consistency
Protect land from conversion through conservation easements and other incentives.	CNRA, Departments Within CDFA, CalEPA, CARB	Not applicable. This measure is not within the purview of this Project.
Increase the long-term resilience of carbon storage in the land base and enhance sequestration capacity		Not applicable. This measure is not within the purview of this Project.
Utilize wood and agricultural products to increase the amount of carbon stored in the natural and built environments		Not applicable. This measure is not within the purview of this Project.
Establish scenario projections to serve as the foundation for the Implementation Plan		Not applicable. This measure is not within the purview of this Project.
Establish a carbon accounting framework for natural and working lands as described in SB 859 by 2018	CARB	Not applicable. This measure is not within the purview of this Project.
Implement Forest Carbon Plan	CNRA, California Department of Forestry and Fire Protection (CAL FIRE), CalEPA and Departments Within	Not applicable. This measure is not within the purview of this Project.
Identify and expand funding and financing mechanisms to support GHG reductions across all sectors.	State Agencies & Local Agencies	Not applicable. This measure is not within the purview of this Project.

As shown above, the Project would not conflict with any of the 2017 Scoping Plan elements as any regulations adopted would apply directly or indirectly to the Project. Further, recent studies show that the State's existing and proposed regulatory framework will allow the State to reduce its GHG emissions level to 40% below 1990 levels by 2030 (36).

CONSISTENCY WITH WRCOG SUBREGIONAL CAP

The City of Wildomar is a participant in the WRCOG Subregional CAP. The specific goals and actions that are applicable to the proposed Project include those pertaining to energy and water use reduction, promotion of green building measures, waste reduction, and reduction in vehicle

miles traveled. Projects that demonstrate consistency with the strategies, actions, and emission reduction targets contained in the CAP would have a less than significant impact on climate change. The proposed Project would be required to include all mandatory green building measures for new developments under the CALGreen Code, which would require that the new buildings reduce water consumption, employ building commissioning to increase building system materials. In addition, the City's requires that all landscaping comply with water efficient landscaping requirements. The implementation of these stricter building and appliance standards would result in water, energy, and construction waste reductions for the proposed Project. The proposed Project will be compliant with the goal and objectives set forth in the WRCOG's Subregional CAP with implementation of applicable requirements of California Building Code Title 24 and the CALGreen Code. It should be noted that the CAP is currently in the process of updating its strategies to reduce GHG emissions for all sectors and establish GHG targets for the year 2050.

The Project would not have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

5 CERTIFICATIONS

The contents of this GHG study report represent an accurate depiction of the GHG impacts associated with the proposed Wildomar Crossroads Project. The information contained in this GHG report is based on the best available data at the time of preparation. If you have any questions, please contact me directly at hqureshi@urbanxroads.com.

Haseeb Qureshi
Associate Principal

APPENDIX 3.1:

CALEEMOD CONSTRUCTION EMISSIONS MODEL OUTPUTS

Wildomar Crossroads (Construction - Mitigated) - Riverside-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Wildomar Crossroads (Construction - Mitigated)

Riverside-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	30.00	1000sqft	0.69	29,996.00	0
Other Non-Asphalt Surfaces	66.55	1000sqft	1.53	66,549.00	0
Parking Lot	477.00	Space	1.81	79,056.00	0
City Park	1.32	Acre	1.32	57,591.00	0
Fast Food Restaurant with Drive Thru	3.88	1000sqft	0.09	3,883.00	0
High Turnover (Sit Down Restaurant)	3.35	1000sqft	0.08	3,348.00	0
Apartments Mid Rise	150.00	Dwelling Unit	2.84	123,862.00	429
Strip Mall	5.09	1000sqft	0.12	5,087.00	0
Supermarket	23.10	1000sqft	0.53	23,104.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area is 9.01 acres

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Hours are based on an 8-hour workday

Wildomar Crossroads (Construction - Mitigated) - Riverside-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Trips and VMT - CalEEMod only assumes Vendor Trips during Building Construction. The CalEEMod default trips were ratioed between each phase based on the number of days

Demolition -

Grading - For purposes of analysis, total acres graded per day is based on the equipment specific grading rates (CalEEMod Appendix A) and the equipment list

Architectural Coating - Rule 1113

Vehicle Trips - Construction run only

Woodstoves - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - MM AQ-1: Tier 3 for all equipment operating at >150 HP during Site Preparation activities; MM AQ-2: Increase watering to 4 times per day

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	30.00	1000sqft	0.69	29,996.00	0
Other Non-Asphalt Surfaces	66.55	1000sqft	1.53	66,549.00	0
Parking Lot	477.00	Space	1.81	79,056.00	0
City Park	1.32	Acre	1.32	57,591.00	0
Fast Food Restaurant w/o Drive Thru	1.13	1000sqft	0.03	1,133.00	0
Fast Food Restaurant with Drive Thru	2.75	1000sqft	0.06	2,750.00	0
High Turnover (Sit Down Restaurant)	3.35	1000sqft	0.08	3,348.00	0
Apartments Mid Rise	150.00	Dwelling Unit	2.84	123,862.00	429
Strip Mall	5.09	1000sqft	0.12	5,087.00	0
Supermarket	23.10	1000sqft	0.53	23,104.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area is 9.01 acres. For purposes of analysis, the Coffee/Donut Shop will be modeled as Fast-Doof Restaurant without Drive-Thru

Construction Phase - Operations run only

Wildomar Crossroads (Operations) - Riverside-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics based on information provided in the Trip Generation

Woodstoves - Rule 445

Water And Wastewater - For purposes of analysis, the Coffee/Shop (modeled as Fast-Food Restaurant without Drive-Thru) is assumed to have the same Indoor/Outdoor water usage as a Fast-Food Restaurant with Drive-Thru

Solid Waste - For purposes of analysis, the Coffee/Shop (modeled as Fast-Food Restaurant without Drive-Thru) is assumed to have the same Solid Waste Generation Rate as a Fast-Food Restaurant with Drive-Thru

Wildomar, California 92595

Leighton & Associates, Inc. (Leighton) is pleased to present this copy of the Phase I Environmental Site Assessment for the Site in Wildomar, Riverside County, California, including Assessor Parcel Numbers (APNs): 376-410-015, 376-410-016, 376-410-017, 376-410-021. Leighton declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and the ASTM International E1527-13.

Leighton has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. Leighton has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

If you have questions regarding this report, please contact us. We appreciate the opportunity to be of service to SAGE INVESTCO.

Respectfully submitted,

LEIGHTON & ASSOCIATES, INC.

1.0 INTRODUCTION

1.1 Authorization

Leighton & Associates, Inc. (Leighton) performed a Phase I Environmental Site Assessment (ESA) for the subject property (Site) located in Wildomar, California (Site Location Map – **Figure 1**). This work was completed in general accordance with our authorized agreement with Sage Investco (Client).

1.2 Purpose

The purpose of the Phase I ESA was to identify recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) in connection with the Site. The assessment was conducted in general accordance with ASTM E1527-13 guidelines (ASTM E1527-13, 2013).

According to ASTM E1527-13, RECs are defined as "*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not RECs."* De minimis conditions are defined by ASTM 1527-13 as *"a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions."*

According to ASTM E1527-13, HRECs are defined as "*a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.*"

According to ASTM E1527-13, CRECs are defined as "*a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.*"

1.3 Scope of Work

The scope of work was performed in accordance with the Leighton's proposal (TE21-126E), and included the following tasks:

- A reconnaissance-level visit of the Site for evidence of existing or potential release(s) of hazardous materials and/or petroleum products;
- A review of records (including previous environmental reports, selected governmental databases, and historical Site usage information);

- Interviews; and
- Preparation of this report presenting our findings.

1.4 Significant Assumptions

Leighton assumes that the purpose of this Phase I ESA is to provide appropriate inquiry into the previous ownership and use of the Site so that the Client may qualify for the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) landowner liability protections as defined in CERCLA, 42 USC §9601(35) (B). Leighton also assumes that the information provided by the Client and its agents, regulatory database search provider, and regulatory agencies is true and reliable.

1.5 Limitations and Exceptions

This Phase I ESA was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained during the assessment described herein. Opinions presented herein apply to property conditions existing at the time of our study, and cannot necessarily be taken to apply to property conditions or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the amount, type, distribution, and integrity of the information collected at the time of the investigation, and the methods utilized to collect and evaluate the data. Although Leighton has taken steps to obtain true copies of available information, we make no representation or warranty with respect to the accuracy or completeness of the information provided by others.

This practice does not address whether requirements, in addition to all appropriate inquiry have been met in order to qualify for the landowner liability protections including the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, or the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting obligations. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the subject site that are not addressed in this practice, and that may pose risks of civil and/or criminal sanctions for non-compliance.

The Client is referred to **Appendix H** regarding important information provided by Geoprofessional Business Association (GBA) on geoenvironmental studies and reports.

1.6 Special Terms and Conditions

The scope of work for this Phase I ESA did not include testing of electrical equipment for the presence of polychlorinated biphenyls (PCBs) or collection of other environmental samples such as air, water, building materials, paint, or other media; assessment of natural hazards such as naturally occurring asbestos, radon gas or methane gas; assessment of the potential presence of radionuclides; or assessment of nonchemical hazards such as the potential for damage from earthquakes or floods, or the presence of endangered species or wildlife habitats. This Phase I also did not include an extensive assessment of the environmental compliance status of the subject site or of businesses operating at the subject site, or a health-based risk assessment.

1.7 User Reliance

This report is for the exclusive use of Sage Investco. Use of this report by any other party shall be at such party's sole risk.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The Site is a square shaped property that is approximately 8.96 acres. It is located at the northwest corner of Clinton Keith Road and Wildomar Trail in Wildomar, California (Site Location Map - **Figure 1**). The Site consists of the following four (4) Riverside County Assessor Parcel Numbers (APNs):

- APN: 376-410-015
- APN: 376-410-016
- APN: 376-410-017
- APN: 376-410-021

Legal description of the afore-mentioned APNs is provided in **Appendix D**.

One street address was identified for an existing residence on the Site: 24850 Catt Rd. Three additional addresses are indicated on the environmental lien search reports (**Appendix D**): 24900, 23940 & 23980 Catt Road.

2.2 Property and Vicinity General Characteristics

The property is largely vacant, and the general vicinity is developed with single-family residences, commercial developments, and some vacant properties also exist..

2.3 Current Use of the Subject Property

The Site is approximately 8.96 acres total in area, and consists of one, older single-family residence with an attached garage, another dilapidated rural residential structure, a vacant metal shed, and vacant undeveloped land.

2.4 Descriptions of Structures, Roads and Other Improvements on the Property

The Site is mostly vacant, undeveloped land; however, it has one occupied single-family residential structure with an attached garage located on the southwest portion of the Site, a dilapidated rural residential structure on the west-center portion of the Site, a vacant metal shed on the northwest portion of the Site, and a small concrete foundation near the west-center portion of the Site. There are no paved roads on the Site. Several dirt roads transect the Site.

The following utilities would provide future services to the Site:

Natural Gas:	The Southern California Gas Company
Source of Potable Water:	Elsinore Valley Municipal Water District
Electric:	Southern California Edison
Sewage Disposal:	Elsinore Valley Municipal Water District
Waste Disposal:	Waste Management of the Inland Empire

2.5 Current Uses of Adjoining Properties

Properties adjoining the Site are described in the table below. Photos of adjoining properties are provided in **Appendix B**. The locations, orientations and designations of the photos referenced below are shown on **Figure 2**.

PROPERTIES ADJOINING SUBJECT SITE		
Direction	**Address**	**Company Name/Site Use**
North	N/A	Hartford Park Maintenance Association, Sensitive Habitat Area (**Photo 1** - **Appendix B**)
East	Various	Gas station and commercial developments **(Photos 2 and 3 – Appendix B)**
South	Various	Vacant, undeveloped land, commercial developments, and a gas station (**Photos 4, 5 and 6 - Appendix B**)
West	Various	Single-family residences (**Photo 7 - Appendix B**)

3.0 USER PROVIDED INFORMATION

The user of this Phase I ESA is identified as Sage Investco. As a part of the ASTM E1527-13 process, Mr. Ralph Deppisch, (Director of Development) was forwarded a questionnaire regarding the property. This completed User questionnaire is included in **Appendix C**, and is summarized below.

3.1 Environmental Liens or Activity and Use Limitations

Mr. Deppisch stated that there are no activity and use limitations or environmental liens filed against the Site. Leighton subcontracted NETR to research for potential environmental liens or activity use limitations (AULs). A copy of the lien search report is provided in **Appendix D**. The results of the search indicate no environmental liens or AULs.

3.2 Specialized Knowledge

Mr. Deppisch indicated that he does not possess any specialized knowledge or experience regarding the Site.

3.3 Commonly Known or Reasonably Ascertainable Information

Mr. Deppisch indicated that he has no knowledge of potential chemical spills, usage of chemicals at the Site, or any environmental cleanups on the Site.

3.4 Valuation Reduction for Environmental Issues

Mr. Deppisch indicated there has been no reduction of the purchase price from fair market property value as a result of environmental contamination.

3.5 Owner, Property Manager, and Occupant Information

The property owners of title are listed as:

Damas Clinton Keith LLC, and 24850-23980 Catt Rd Trust dated 11/27/2020, Lahn Valley LLC as Trustee for APNs 376-410-015 and 376-410-021.

Aram Properties, LLC for APNs 376-410-016 and 376-410-017.

3.6 Reason for Performing Phase I ESA

The Phase I ESA is being completed per the request of the client/user prior to a prospective purchase of the Site.

3.7 Other

No other significant user information was provided.

4.0 RECORDS REVIEW

4.1 Physical Setting Source(s)

Leighton reviewed pertinent maps, readily available literature and databases for information on the physiography and hydrogeology of the Site. A summary of this information is presented in the following subsections.

4.1.1 Topography

The Site is located in Township 06 South, Range 04 West, Section 36, San Bernardino Baseline and Meridian in the City of Wildomar, California.

The Site is depicted as undeveloped vacant land. The elevation is approximately 1345 feet above mean sea level (msl). Topography of the Site and immediate area slopes gradually to the southwest. Topographic map coverage of the Site vicinity is provided by the United States Geological Survey (USGS) TP, Murrieta, 2012, 7.5-minute Topographic Quadrangle, and SW, Wildomar, 2012, 7.5-Minute Topographic Quadrangle (USGS, 2012).

4.1.2 Surface Water

Surface water was not observed on Site. A dry tributary of Murrieta Creek crosses the northeast portion of the Site. There are no significant surface water bodies (i.e. oceans, lakes, rivers, creeks, reservoirs, etc.) within a one-mile radius of the Site. The closest major water body is Murrieta Creek, approximately 1.1 mile to the southwest (USGS, 2012).

The average annual precipitation in the general Site vicinity (Lake Elsinore Station) is 12.44 inches (NOAA, 2010).

4.1.3 Shallow Soils

The Site is mapped as generally being underlain by PLACENTIA, HANFORD, and MONSERATE fine to coarse sandy loam deposits. These loam deposits are composed of fine grained soils (silts and lean clays) to coarse grained soils (gravels, gravels with fines, and silty gravel), that consist of moderately well-drained to well-drained soils (**Appendix E**).

4.1.4 Geology / Hydrogeology (Groundwater Depth and Flow Direction)

The Site is located within a prominent natural geomorphic province in southwestern California known as the Peninsular Ranges. This province is characterized by steep, elongated ranges and valleys that trend northwestward. More specifically, the Site is situated within the southern portion of the Perris Block, an eroded mass of Cretaceous and older crystalline rock.

The Perris Block is approximately 20 miles by 50 miles in extent, is bounded by the San Jacinto Fault Zone to the northeast, the Elsinore Fault Zone to the southwest, the Cucamonga Fault Zone to the northwest, and the Temecula Basin to the south. The Perris Block has had a complex tectonic history, apparently undergoing relative vertical land-movements of several thousand feet in response to movement on the Elsinore and San Jacinto Fault Zones. Thin sedimentary and volcanic materials locally mantle crystalline bedrock. Young and older alluvial deposits fill the lower valley areas.

The Site is located within the Temecula Valley Groundwater Basin (DWR, 2021, SDRWCB, 2021). The basin underlies the Murrieta, Temecula, Pauba, Long, and Lancaster Valleys in southwestern Riverside County and a portion of northern San Diego County (DWR, 2003).

The San Diego Regional Water Quality Control Board (SDRWQCB) has designated the Site area as being within the Santa Margarita Hydrologic Unit, which is within the Murrieta Hydrologic Area, within the larger Temecula Valley Groundwater Basin. Designated beneficial uses of groundwater in the Santa Margarita Hydrologic Unit include: municipal, agricultural, industrial and process supply (SDRWQCB, 2021).

There are two groundwater wells located on the Site. One well, located on the west-center portion of the Site, appeared to be in operating condition and servicing the single-family residence on Site. Depth to water data from the second, DWR reported well, indicated approximately 37 feet bgs in March 1968; however, it is likely the depth to water has changed significantly since 1968 and would likely be much deeper. This well (335984N1172421W001) is located on the east-central portion of the Site (DWR, 2021). Based on Site topography, groundwater is estimated to flow to the southwest.

4.2 Standard Environmental Record Sources

Leighton contracted a search of selected environmental databases. The search was performed in general accordance with requirements of ASTM E1527-13. A copy of the database search report is provided in **Appendix E**; however, a summary of the results is discussed below.

4.2.1 Subject Property

The Site itself is not listed in the database search report.

4.2.2 Offsite

Provided below is a brief summary of notable listings based on their close proximity to the Site, or the nature of their listing:

NOTABLE OFF SITE LISTINGS	
Listing Name	**Address / Location**
Tesoro USA 68238/ Tesoro West Coast Co LLC NO 68238/ Tesoro Sierra Properties LLC #68238/ Tesoro (Speedway) 68238	**23905 Catt Road, Wildomar, CA 92595**
This facility is adjoining 115 feet southwest of the Site (across Arya Road). It is listed in the HWTS, CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, RCRA-SQG, FINDS, RCRA NONGEN/NLR, and UST databases. These database listings are related to current Underground Storage Tanks (USTs), hazardous waste generating, treatment, and disposal related to gasoline station, convenience store, and car wash operations. A review of CERS listings identified various maintenance violations with no indication of a release. This facility exists in the likely down gradient direction from the Site. **It is our judgment there is a low likelihood these listings indicate a REC on the Site.**	
KA Management Inc. DBA Clinton Keith Chevron/ Shell Oil Products/Euilon Enterprises LLC DBA Shell Oil Products/ K A Management/ Clinton Keith Shell	**23805 Clinton Keith Rd Ste H5, Wildomar, CA 92595**
This facility is a gas station approximately 520 feet southwest of the Site (across Clinton Keith Road). It is listed in the RCRA NONGEN/ NLR, HWTS, CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, UST, and EDR HIST AUTO databases. These database listings appear to be related to the current and historical Underground Storage Tanks (USTs), hazardous waste generating, treatment, and disposal related to gasoline station. A review of CERS listings identified various maintenance violations. None of the records indicated a release. **It is our judgment there is a low likelihood these listings indicate a REC on the Site.**	
Prompt Cleaners/ Laguna Beach Dental Group/ Prompt Cleaners, OK Hwan Kim DBA	**23905 Clinton Keith Road, Wildomar/ 23905 Clinton Keith Road #119, Wildomar / 23905 Clinton Keith Road 119, Wildomar, CA 92595**
This facility is a dry cleaner approximately 530 feet south of the Site (across Clinton Keith Road). It is listed in the EDR HIST CLEANER, CERS HAZ WASTE, HWTS, DRYCLEANERS, HAZNET, and RCRA NONGEN/NLR databases. These database listings appear to be related to the current and historical use of solvents for drycleaning and laundry services. Due to the distance from the Site and since it is down gradient, these CERS listings are not generally a concern or indicator of a likely REC. **It is our judgment there is a low likelihood these listings indicate a REC on the Site.**	
Andondian Enterprises Inc DBA Discount Tire Center	**23885 Clinton Keith Rd Ste H5, Wildomar, CA 92595**
This facility is a tire center approximately 0.20 miles south of the Site (across Clinton Keith Road). It is listed in the HWTS, CERS HAZ WASTE, HZNET, CERS, and RCRA NONGEN/NLR databases. These database listings are related to hazardous waste storage and handling. Due to the distance from the Site and since it is down gradient, these CERS listings are not generally a concern or indicator of a likely REC. **It is our judgment there is a low likelihood these listings indicate a REC on the Site.**	

Inland Valley Regional Medical Center/ Inland Valley Regional Medical Ctr	**36485 Inland Valley Drive, Wildomar, CA 92595**
This facility is a medical center approximately 0.45 miles southeast of the Site. It is listed in the LUST, UST, SWEEPS UST, CERS HAZ WASTE, CERS TANKS, CORTESE, EMI, and CERS databases. Most of these database listings are related to former Underground Storage Tanks (USTs) and a leaking UST (LUST) case at the Inland Valley Regional Medical Center. In regards to the LUST case, descriptions of its location relative to the subject Site indicate it was approximately 0.45 miles southeast. Further details regarding the LUST case are discussed below in **Section 4.2.3** (Geotracker). **It is our judgment there is a low likelihood these listings indicate a REC on the Site.**	

No other database listings of potential concern were reported. A review of reported "Orphan" facilities also indicated no concerns. **In summary, the database search report resulted in no On- or Off-Site listings likely to have created a REC on the Site**. A copy of the database search report is provided in **Appendix E**.

4.2.3 Regulatory Agency Contacts

Leighton staff researched other reasonably ascertainable, local and regional regulatory agency records. The results are summarized below:

City of Wildomar (COW)
A search for records was completed on-line with the City of Wildomar for copies of any building permits or documents. As of the date of this report, a response to the request has not been received; however, they have indicated they do not have any records prior to 2008. This a data gap judged likely to be insignificant.
Riverside County Department of Environmental Health (RCDEH)
A request for a records search was made to the Riverside County Department of Environmental Health (RCDEH) under the APNs and existing and previous Site addresses. The RCDEH responded stating that no records were found (**Appendix F**).
State of California Dept. of Toxic Substances Control (DTSC)
A request for a records search was made to the DTSC Cypress and Chatsworth offices under the current Site APNs. Both offices responded stating that no records were found (**Appendix F**).

State of California Regional Water Quality Control Board, San Diego Region (SDRWQCB)
A request for a records search was made to the San Diego Regional Water Quality Control Board (SDRWQCB) under the current Site APNs and addresses. As of the date of this report, the SDRWQCB has stated that no records were found for the Site APNs, and a final response has not been received regarding the Site addresses. A copy of the request is provided in **Appendix F**.

Envirostor - DTSC Envirostor Database
A review of the DTSC Envirostor database revealed one listing within an approximate 1.0-mile radius of the Site. **Proposed Elementary School No. 15** is located approximately 0.6-mile northwest of the Site. The listing is the location of an environmental investigation performed prior the construction of a new school facility. A Phase I ESA was performed for the property, and no further action was recommended (Envirostor, 2021). **It is our judgment there is a low likelihood this listing indicates a REC on the Site.** **Proposed Donald Graham Medical Therapy Unit** is located approximately 0.94-mile northwest of the Site. The listing is the location of an environmental investigation performed prior the construction of a new school facility. A Phase I ESA was performed for the property, and no further action was recommended (Envirostor, 2021). **It is our judgment there is a low likelihood this listing indicates a REC on the Site.**

GeoTracker - State of California Water Resources Control Board GeoTracker Database

A review of the GeoTracker database revealed four (4) listings within an approximate 0.5-mile radius of the Site.

- Tesoro (Speedway) 68238 (23905 Catt Road Wildomar, CA) This facility is a listed UST facility approximately 115 feet southwest of the Site and has an active permit for an underground storage tank (UST) (Geotracker, 2021). A review of CERS listings identified various maintenance violations with no indications of a release. **It is our judgment there is a low likelihood this listing indicates a REC on the Site.**

- Shell Oil Products US (23805 Clinton Keith Road, Wildomar, CA) This facility is a listed UST facility approximately 520 feet southwest of the Site and has an active permit for an underground storage tank (UST) (Geotracker, 2021). **It is our judgment there is a low likelihood this listing indicates a REC on the Site.**

- Arco AM/PM (36228 Hidden Springs Rd, Wildomar, CA) This facility is a listed UST facility approximately 0.4 miles southwest of the Site and has an active permit for an underground storage tank (UST) (Geotracker, 2021). **It is our judgment there is a low likelihood this listing indicates a REC on the Site.**

- Inland Valley Regional Medical Center (36485 Inland Valley Dr., Wildomar, CA) This facility is approximately 0 .45 miles southeast of the Site and is listed as a LUST Cleanup Site, as case closed as of 10/13/2006 (Geotracker, 2021). A Geotracker review revealed that in July 1999 a leak was discovered, stopped, and subsequently reported. In September 2000, a 20,000-gallon diesel tank was removed and five monitoring wells were installed. Remediation included soil sampling, groundwater monitoring, contaminated soil excavations, and soil vapor monitoring. **Due to distance from Site, and since this facility is down gradient, it is our judgment there is a low likelihood this listing indicates a REC on the Site.**

California Department of Conservation, Geologic Energy Management Division (CalGEM)

The CalGEM Well Finder internet database was reviewed to search for any indication of the presence of an active or abandoned oil or gas wells, on or within the vicinity of the Site. The review indicated no wells within an approximate 1.0-mile radius of the Site (CalGEM, 2021).

National Pipeline Mapping System (NPMS)

The NPMS pipeline database revealed no gas transmission pipelines, no hazardous liquid pipelines, and no pipeline incidents (gas) or accidents (liquid) within an approximate 1.0-mile radius of the Site (NPMS, 2021).

South Coast Air Quality Management District (SCAQMD)

An on-line records search was completed for the immediate site vicinity using the SCAQMD F.I.N.D database. The database reported no records associated with the Site. The closest listing was:

- Palisades Gas & Wash Inc, USA Gas #844 (23-900 Clinton Keith Road Wildomar, CA) This facility is approximately 0.40 miles southwest of the Site and has an active status with no permits listed (SCAQMD, 2021). **It is our judgment there is a low likelihood this listing indicates a REC on the Site.**

Copies of the various local and regional agency records requests and responses are provided in **Appendix F**.

4.2.4 Radon

Radon is not regulated within the State of California. Nonetheless, the California Department of Health Services (CDPH) and the USEPA both recommend a threshold of 4 picocuries per liter (pCi/L) above which certain precautions be taken to mitigate radon buildup in structures. The Site is reported to be located in Zone 2, which has a likely predicted average indoor radon screening levels between 2 and 4 pCi/L.

4.2.5 Other Reports

No other reports have been provided by the Client for the Site.

4.2.6 Vapor Encroachment

A vapor encroachment screening was completed in general accordance with ASTM Standard Guide E2600-10. Our modified Area of Concern (AOC) is defined as follows:

Direction Relative to Site	AOC - VOC Vapors	AOC - Petroleum HC Vapors
Up Gradient Source	1,760 feet	520 feet
Cross Gradient Source	365 feet	165 feet
Down Gradient Source	100 feet	100 feet

Two adjoining facilities of potential concern were identified, but are just outside of the modified AOC:
Tesoro (Speedway) 68238 (23905 Catt Road Wildomar, CA) This facility is approximately 115 feet southwest of the Site and has an active permit for an underground storage tank (UST) (Geotracker, 2021). This facility is down gradient of the Site, but no evidence of a petroleum or other VOC release was found in the database search report, indicating it is not a Vapor Encroachment Condition (VEC).

7-11 (24116 Clinton Keith Road Wildomar, CA) This facility was observed during the Site Reconnaissance as a newly constructed gas station and is approximately 120 feet east of the Site. This facility is cross gradient of the Site, but there is no evidence in the database search report of a petroleum or other VOC release, indicating it is not a VEC..

4.3 Historical Use Information on the Property

Following is a summary of our review of records regarding historical usage of the Site and adjoining properties, as this information pertains to the potential for environmental concerns.

Info Type	Years	Source	Summary of Results
Topo Maps	1901 1942 1943 1947 1953 1973 1979/82 1988 1997 2012	EDR	• **1901**: Map depicts one generally north-south-trending dirt road bisecting the center of the Site. Map shows no evidence of development on Site. • **1942-1947**: Maps depict a tributary of Murrieta Creek in the northeast portion of the Site and a generally east-trending dirt road transecting the southern portion of the Site. The north-south-trending dirt road bisecting the center of the Site is no longer depicted. • **1953**: Map depicts Catt Road as a paved road along the southern boundary of the Site. • **1973-1979/82**: Maps depict two elongated north-south-trending structures in the northwestern portion of the Site, and two smaller structures in the southwestern portion of the Site in 1973. An additional structure just east of existing structures is depicted on the 1979/82 map. • **1988-1997:** The Site is not depicted on these maps. • **2012:** The Murrieta Creek tributary is depicted in the northeastern portion of the Site. George Road is depicted along the eastern boundary of the Site. Structures are no longer depicted on the map.

Info Type	Years	Source	Summary of Results
Aerial Photos	1938 1949 1961 1967 1974 1978 1985 1989 1996 1997 2002 2006 2009 2012 2016	EDR	• **1938-1961**: The Site appears to be vacant, undeveloped land. A dirt road is visible adjoining the Site on the southern boundary of the property. A southeast trending tributary of Murrieta Creek is visible in the northeast portion of the Site. Evidence of weed abatement is visible in the 1953 photo. In 1961, an additional tributary is visible in the northwest portion of the Site. The surrounding properties appear to be vacant, undeveloped land. • **1967-1974**: An elongated north-south-trending rectangular structure, possibly a chicken ranch is visible in the northwest portion of the Site. One additional east-west-trending rectangular structure is visible just south of the larger structure. Possible covered compost piles are visible just east of the two larger structures, and a rural residence appears in the southwest portion of the Site. Dirt roads are visible along the southern boundary, surrounding the rural residence, and east of the structures. Only one Murrieta Creek tributary is visible in the northeast portion of the property. The eastern portion of the Site appears to be vacant, undeveloped land. • **1978-1985**: Elongated rectangular structure is no longer visible in the northwestern portion of the Site. Visible in the northwestern portion of the Site are what appears to be animal corrals with an adjoining L-shaped structure. Southeast of the L-shaped structure is an elongated rectangular structure. The covered compost piles are no longer visible. An additional rural residence with dirt road is visible east of the existing rectangular structure on the western portion of the Site. An additional rural residence is visible on the eastern portion of the Site with a north-south trending dirt road. The northeastern and center portion of the Site appear to be vacant. In 1978 Clinton Keith appears as a dirt road and agriculture land use (orchard) appears in the northeast and southeast portion of the Site. In 1985, a northwest adjoining rural residence appears and the south adjoining Clinton Keith Road is paved. • **1989:** Two rectangular structures and an apparent materials storage yard with various storage containers and/or trailers appear in APN 376-410-017. A smaller rectangular structure appears in the center of the Site. Additional animal pens appear in the northwest portion of the Site. • **1996-1997**: Materials storage yard is no longer visible on the Site. The north eastern structures, animal corrals, and smaller rectangular structure in the center of the Site are no longer visible. A concrete pad remnant is visible in the northeast portion of the Site. The central portion of the Site is vacant land.

			• 2002-2006: The rural residence is no longer visible in the southeast portion of the Site and the orchard no longer appears to be maintained in the eastern portion of the Site. Arya Road is paved on the southwest adjoining portion of the Site and in 2006 a gas station is visible at the intersection of Arya Road and Catt Road. Commercial development is visible in areas south of the Site. • 2009-2016: In 2009, a large north-south trending soil stock pile appears just east of the center of the Site and single-family residences appear adjoining the western boundary of the Site. Dozens of soil stock piles appear east of center near the southern boundary of the property and on top of the larger soil stock pile in the north. In 2012 the elongated structure west of center appears to be demolished and in 2016 a concrete pad is visible in place of the rural residence west of center of the Site.
Fire Insurance Maps	N/A	EDR	No coverage reported for Site.
City Directories	N/A	EDR	One (1) City Directory listing from 1980, Flora Danica Agri (23980 Catt Road, Wildomar, CA) was identified and may be potentially related to historic agriculture land use (orchards).

Summary of Historical Review – From at least the 1930's through the early 1960's, no development was visible on the Site. From approximately 1967 until the late 1970's the western portion of the Site was likely used as a chicken ranch with ancillary structures, rural residences, and dirt roads. From approximately 1978 until the mid-1980's the large structure associated with the chicken ranch appears to have been demolished and the Site was occupied by additional rural residences, ancillary structures, animal corrals, and agricultural land use (orchard) in the northeast and southeast portion of the property. In 1989, an apparent material storage yard with storage containers or trailers was visible on APN 376-410-017. By the mid-1990's this materials storage yard with containers, the northeastern structures, and animal corrals had been removed from the Site, and the L-shaped structure in the northwestern portion of the Site was replaced by a rectangular shed. Between the early 2000's and the present, the rural residence in the southeast portion was demolished, the orchard in the eastern portion of the property was removed and a large north-south trending soil stock pile appeared just east of center on the northern portion of the Site with dozens of additional smaller soil stock piles, of unknown origin, just east of center in the southern portion of the Site. A single-family residence remained in the southwest portion of the property since 1967 to the present.

Potential environmental concerns noted during the historical review include:

- **Dozens of stockpiles of soil of unknown origin, mostly on APN # 376-410-017 (TPH, Title 22 Metals, OCPs, VOCs and PCBs);**
- **Usage of the Site for potential former chicken ranch operations between approximately 1967-1974 (methane gas);**
- **Former agricultural land use (i.e. orchard) on the northeastern and southeastern portion of APN #376-410-021 (residual pesticides);**
- **The age of current and historical structures on the Site (asbestos and lead based paint).**

The above-described concerns are potential RECs, and further investigation is recommended. Copies of selected documents used to assess historical Site and adjoining property usages (i.e. topographic maps, aerial photos, city directories, etc.) are provided in **Appendix G**.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

On July 12, 2021, a representative of Leighton conducted a reconnaissance–level assessment of the Site. The reconnaissance consisted of observing and documenting existing conditions on the Site and adjoining properties.

Limitations to the Site reconnaissance included: an occupied private residence, fenced off portion along the western portion of the Site, and low weed coverage making observations of the ground (soil) surface difficult in some areas.

Photographs of the Site are provided in **Appendix B**. The locations, orientations and designations of the photographs are shown on **Figure 2**.

5.2 General Property Setting

The Site is approximately 8.96 acres total in area, and consists of a single-family residence with an attached garage, a dilapidated rural residential structure, a vacant metal shed and vacant undeveloped land. The Site is located at the northwest corner of Clinton Keith Road and Wildomar Trail. The northern adjoining property consists of the Hartford Park Association Sensitive Habitat Area, the eastern adjoining properties consist of commercial developments and a new gas station, the southern adjoining properties are a dirt lot with a strawberry stand and commercial developments, the western adjoining properties are occupied by single-family residences and the southwest adjoining property is a gas station.

5.3 Exterior and Interior Observations

Three structures are present on the Site: one single-family residence with an attached garage, a dilapidated rural residential structure, and a vacant metal shed. The exterior of the single-family residence was inspected from outside of fenced area; however, the interior was not inspected. Both interior and exterior observations were made from outside the dilapidated structure and the shed. (**Appendix B - Photos 8-15**) A concrete foundation was observed on the east-center portion of the Site east of the dilapidated structure (**Appendix B - Photo 16**). Additional remnants of previous structures, two small cinderblock walls on the northern portion of the Site (**Appendix B - Photo 17**) and concrete stairs exist in the central portion of the Site (**Appendix B - Photo 18**). Attached (**Appendix B - Photos 19-50**) show various additional views/perspectives of the Site.

5.3.1 Hazardous Substances, Drums, and Other Chemical Containers

A propane tank was observed on the western portion of the Site (**Appendix B - Photo 19)**. No staining was observed on or around the propane tank, and it was not possible to tell if the tank contained any liquids or solids, however propane does not pose a risk of contamination to the ground or soil.

5.3.2 Storage Tanks

No evidence of current or former above or underground storage tanks (USTs), containing hazardous substances or petroleum products, was observed on the Site, with the exception of the propane tank mentioned above in section 5.3.1.

5.3.3 Polychlorinated Biphenyls (PCBs)

A single pole-mounted transformer was observed on the southwestern portion of the Site (**Appendix B - Photo 20**). The transformer appeared to be new and in good working condition with no visible staining in the soil surrounding the pole. The base of the pole appeared to be coated in creosote (**Appendix B - Photo 21**). Other electrical equipment such as breaker boxes and electrical meters associated with the former structures on Site were observed on the southwestern portion of the property (**Appendix B - Photos 22-23**) No pad-mounted transformers were observed on the Site.

PCBs were once used as industrial chemicals whose high stability contributed to both their commercial usefulness and their long-term deleterious environmental and health effects. PCBs can be present in coolants or lubricating oils used in older electrical transformers, hydraulic systems, and other similar equipment. In 1979, the USEPA generally prohibited the domestic manufacture of PCBs in electrical capacitors, electrical transformers, vacuum pumps, hydraulic pumps, and gas turbines.

5.3.4 Waste Disposal

No evidence of waste disposal was observed on the Site.

5.3.5 Dumping

Dozens of stockpiles of soil, of unknown origin, were observed on APN 376-410-017. (**Appendix B - Photos 24-26**). A larger soil stock pile was observed north-south-trending in the northern portion of this same parcel (**Appendix B- Photo 40**). Debris piles of various materials such as old furniture, rubbish, wood, and concrete were observed throughout the Site (**Appendix B - Photos 27-30**). Small quantities of incidental inert refuse were observed across the Site.

5.3.6 Pits, Ponds, Lagoons, Septic Systems, Wastewater, Drains, Cisterns, and Sumps

A concrete lined storm drain with spillway from Wildomar Trail was observed on the eastern boundary of the Site (**Appendix B - Photo 31**). An additional storm drain was observed in the southeast portion of the Site (**Appendix B - Photo 32**). A corrugated metal storm sewer was observed south-east-trending in the dry creek in the northeastern portion of the Site (**Appendix B - Photo 33**).

Mr. Akbarpour, part owner of APN 376-410-015, mentioned in the Owner Questionnaire that a septic system existed on Site in the past or present; however, evidence of a septic system was not observed during the Site Reconnaissance. No evidence of pits, ponds, lagoons, wastewater, cisterns or sumps was observed on the Site.

5.3.7 Pesticide Use

No evidence of current or past pesticide use was observed at the Site.

5.3.8 Staining, Discolored Soils, Corrosion

Two soil piles (**Appendix B - Photos 34 and 35**) appeared to be darker in color than the surrounding soils, indicating some petroleum or hazardous substance may have been spilled or dumped in these areas. No other staining was observed on the Site.

5.3.9 Stressed Vegetation

No stressed vegetation was observed on the Site.

5.3.10 Unusual Odors

No unusual odors were detected at the Site.

5.3.11 Onsite Wells

Two groundwater wells were observed on the Site. An operating well with pump was observed on the western portion of the Site (**Appendix B- Photo 19**), and an additional older, inoperable domestic well was observed on the eastern portion of the Site (**Appendix B - Photo 36**).

5.3.12 Other

A potential irrigation pump, and potentially abandoned irrigation piping was observed on eastern portions of the Site (**Appendix B - Photos 37-39**).

No other evidence of potential environmental concern was observed on the Site.

6.0 INTERVIEWS

Leighton conducted interviews with persons having knowledge of current or past Site usage. Interviews were conducted either orally or in the form of a written questionnaire. Written responses are included as **Appendix C**.

6.1 Interview with Owners

Two separate owners were identified for the Site.

For APNs 376-410-015 and 376-410-021 the owners were identified as Damas Clinton Keith LLC, and 24850-23980 Catt Rd Trust dated 11/27/2020, Lahn Valley LLC as Trustee. On July 13, 2021, Mr. Sam Akbarpour, Part Owner of APNs 376-410-015 and 376-410-021, completed the Phase I ESA Owner Interview form for the Site. Mr. Akbarpour stated that for APN 376-410-015 a well (groundwater, oil, and/or gas), and a septic system, existed now or in the past onsite or on adjacent properties. Mr. Akbarpour stated that he was not aware of environmental conditions on the Site or previous reports or environmental regulatory involvement at the Site.

For APNs 376-410-016 and 376-410-017 the owner was identified as, Aram Properties, LLC. On July 13, 2021, Mr. Imdad Yusufaly, Property Owner and Manager of Aram Properties, LLC, completed the Phase I ESA Owner Interview form for the Site. Mr. Yusufaly stated that he was not aware of environmental conditions on the Site or previous reports or environmental regulatory involvement at the Site.

No other property owners were interviewed by Leighton.

6.2 Interview with Property Manager

The Site Managers were identified as the same as above. The owners/representatives completed the Phase I ESA Owner/Site Contact Interview Form and returned it to Leighton (see discussion above in **Section 6.1**).

6.3 Interviews with Occupants

Leighton did not interview the occupants of the single-family residence.

6.4 Interviews with Local Government Officials

Leighton did not interview employees with local government agencies.

6.5 Interviews with Others

Leighton did not conduct any other additional interviews. The interview with the User of the Phase I is discussed previously in **Section 3.0.**

7.0 FINDINGS

Leighton performed a Phase I ESA for the property in Wildomar, California, in general accordance with Sage Investco (Client's) authorization.

7.1 Onsite

The Site is approximately 8.96 acres of mostly vacant undeveloped land with a single-family residence, and is located at the northwest corner of Clinton Keith Road and Wildomar Trail in Wildomar, Riverside County, California (**Figure 1**). The Site consists of four (4) Riverside County Assessor Parcel Numbers (APNs): 376-410-015, 376-410-016, 376-410-017, and 376-410-021.

The Site is mostly vacant land, with a single-family residence, one dilapidated rural residential structure, and a vacant metal shed. The Site is bounded on the west by a residential community, on the south by Catt Road, an unpaved dirt road, on the southeast by Clinton Keith Road, a paved road, and on the east by Wildomar Trail, a paved road. The general Site slopes gradually to the southwest. There is an incised stream, a former tributary of Murrieta Creek, in the northeastern portion of the Site. The site is generally covered with low weed cover. The property adjoining north of the Site consists of the Hartford Park Association Sensitive Habitat Area. The property adjoining east of the Site (across Wildomar Trail) consists of a gas station and commercial developments. The properties adjoining south of the Site consist of a vacant lot with a strawberry stand and commercial developments (across Clinton Keith Road). The property adjoining southwest of the Site (across Arya Road) consists of a gas station. The properties adjoining west of the Site consist of single-family residences.

The approximate average Site elevation is 1,345 feet above msl, and gradually slopes to the southwest. There are no significant surface water bodies on the Site or within a one-mile radius. The closest major water body is Murrieta Creek, approximately 1.1 miles to the southwest (USGS, 2012). The average annual precipitation in the general Site vicinity (Lake Elsinore Station) is 12.44 inches. The Site is mapped as generally being underlain by Placentia, Hanford, and Monserate fine to coarse sandy loam deposits. These loam deposits are composed of fine grained soils (silts and lean clays) to coarse grained soils (gravels, gravels with fines, and silty gravel), that consist of moderately well-drained to well-drained soils.

The Site is located within the Santa Margarita Hydrologic Unit, within the Murrieta Hydrologic Area within the Temecula Valley Groundwater Basin (DWR, 2021, SDRWCB, 2021). The groundwater flow is assumed to flow southwest following the general topography of the area. There are two groundwater wells located on the Site. One well, located on the west-center portion of the Site, appeared to be in operating condition and servicing the single-family residence on Site. Depth to water data from the second, DWR reported well, indicated approximately 37 feet bgs in March 1968; however, it is likely depth to water has changed significantly since 1968 and would likely be much deeper. This well (335984N1172421W001) is located on the east-central portion of the Site (DWR, 2021).

An ASTM E1527-13 search of selected environmental databases indicated the Site itself is not listed. Leighton staff also researched other reasonably ascertainable, local and regional regulatory agency records using the current site APNs and listed addresses. No records were reported in

the Envirostor, GeoTracker, CalGEM, SCAQMD FINDS, or NPMS databases. DTSC and RCDEH reported no records in connection with the Site. SDRWQCB reported no records in connection with the Site APNs. A supplemental request with Site addresses was provided to the SDRWQCB and no response has been received at the time this report was written. As of the date of this report, no response to the records search request has been received by the City of Wildomar.

From at least the 1930's through the early 1960's, no development was visible on the Site. From approximately 1967 until the late 1970's the western portion of the Site was likely used as a chicken ranch with ancillary structures, rural residences, and dirt roads. From approximately 1978 until the mid-1980's the large structure associated with the chicken ranch appears to have been demolished and the Site was occupied by additional rural residences, ancillary structures, animal corrals, and agricultural land use (orchard) in the southeast portion of the property. In 1989, an apparent material storage yard with storage containers or trailers was visible on APN 376-410-017. By the mid-1990's this materials storage yard with containers, the northeastern structures, and the animal corrals had been removed from the Site, and the L-shaped structure in the northwestern portion of the Site was replaced by a rectangular shed. Between the early 2000's and the present, the rural residence in the southeast portion of the property was demolished, the orchard in the southeast portion of the property was removed, and a large north-south trending soil stock pile appeared just east of center on the northern portion of the Site with dozens of additional smaller soil stockpiles, of unknown origin, just east of center in the southern portion of the Site. A single-family residence has remained in the southwest portion of the property since at least 1967 to present. .

7.2 Offsite

A search of standard record databases indicated no adjoining or nearby facilities likely to have created a REC on the Site. A review of the Envirostor, GeoTracker, SCAQMD FINDS, CalGEM and NPMS (pipelines) databases revealed no nearby facilities likely to have created a REC on the Site.

8.0 OPINION & CONCLUSIONS

8.1 Onsite

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 for the property in Wildomar, California. Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

The Phase I ESA identified the following potential RECs on the Site:

- The presence of dozens of stockpiles of soil, of unknown origin, on APN 376-410-017 is a REC. Representative soil samples should be collected from these materials and analyzed for TPH, Title 22 Metals, OCPs, VOCs and PCBs. A few samples should focus on the stained areas discussed in **Section 5.3.8**.

- Methane may be present in the subsurface of APN 37-410-015 as a result of the former chicken ranch operations observed in historical aerial photographs from 1967 to 1974. While not a REC, local regulations require post-grading sampling for methane in former livestock operation areas, and possible methane mitigation measures (ex. vapor barriers) may be required depending upon the sampling results. Pre-grading methane sampling is not required, and may not be a reliable indicator of post grading methane conditions.

- Former agricultural land use (i.e. orchard) in the northeastern and southeastern portion of APN 376-410-021 is a concern if this area is to be developed as residential, and residual pesticide testing would be recommended. Currently, the proposed development plans indicate this area is to be developed with commercial/retail.

- Based on the age of the current and dilapidated structures on the western portion of the Site, lead based paint and asbestos are likely present, and are an environmental concern. The potential scope of this environmental liability can be further quantified by testing for these materials.

8.2 Offsite

The standard records database search, review of local agency records, review of historical adjoining property usages, and adjoining site reconnaissance identified no offsite properties likely to have created a REC on the Site.

8.3 Data Gaps

The following data gaps were identified by Leighton:

As of the date of this report the City of Wildomar has not responded to records search requests and the SDRWQCB has not provided a final response. In consideration of all other data collected during this assessment, these data gaps are judged to have a low likelihood of significance.

8.4 Other

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 for the property in Wildomar, California. Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

In general, observations should be made during future development for areas of possible contamination such as, but not limited to, the presence of underground facilities, buried debris, waste drums, and tanks, stained soil or odorous soils. Should such materials be encountered, further investigation and analysis may be necessary at that time.

9.0 DEVIATIONS

Leighton did not significantly deviate from or alter the scope of work, as defined in Section 1.3 of this report. The data gap identified was judged to be insignificant, and unlikely to affect the ability of Leighton to identify RECs at the subject site.

10.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

10.1 Corporate

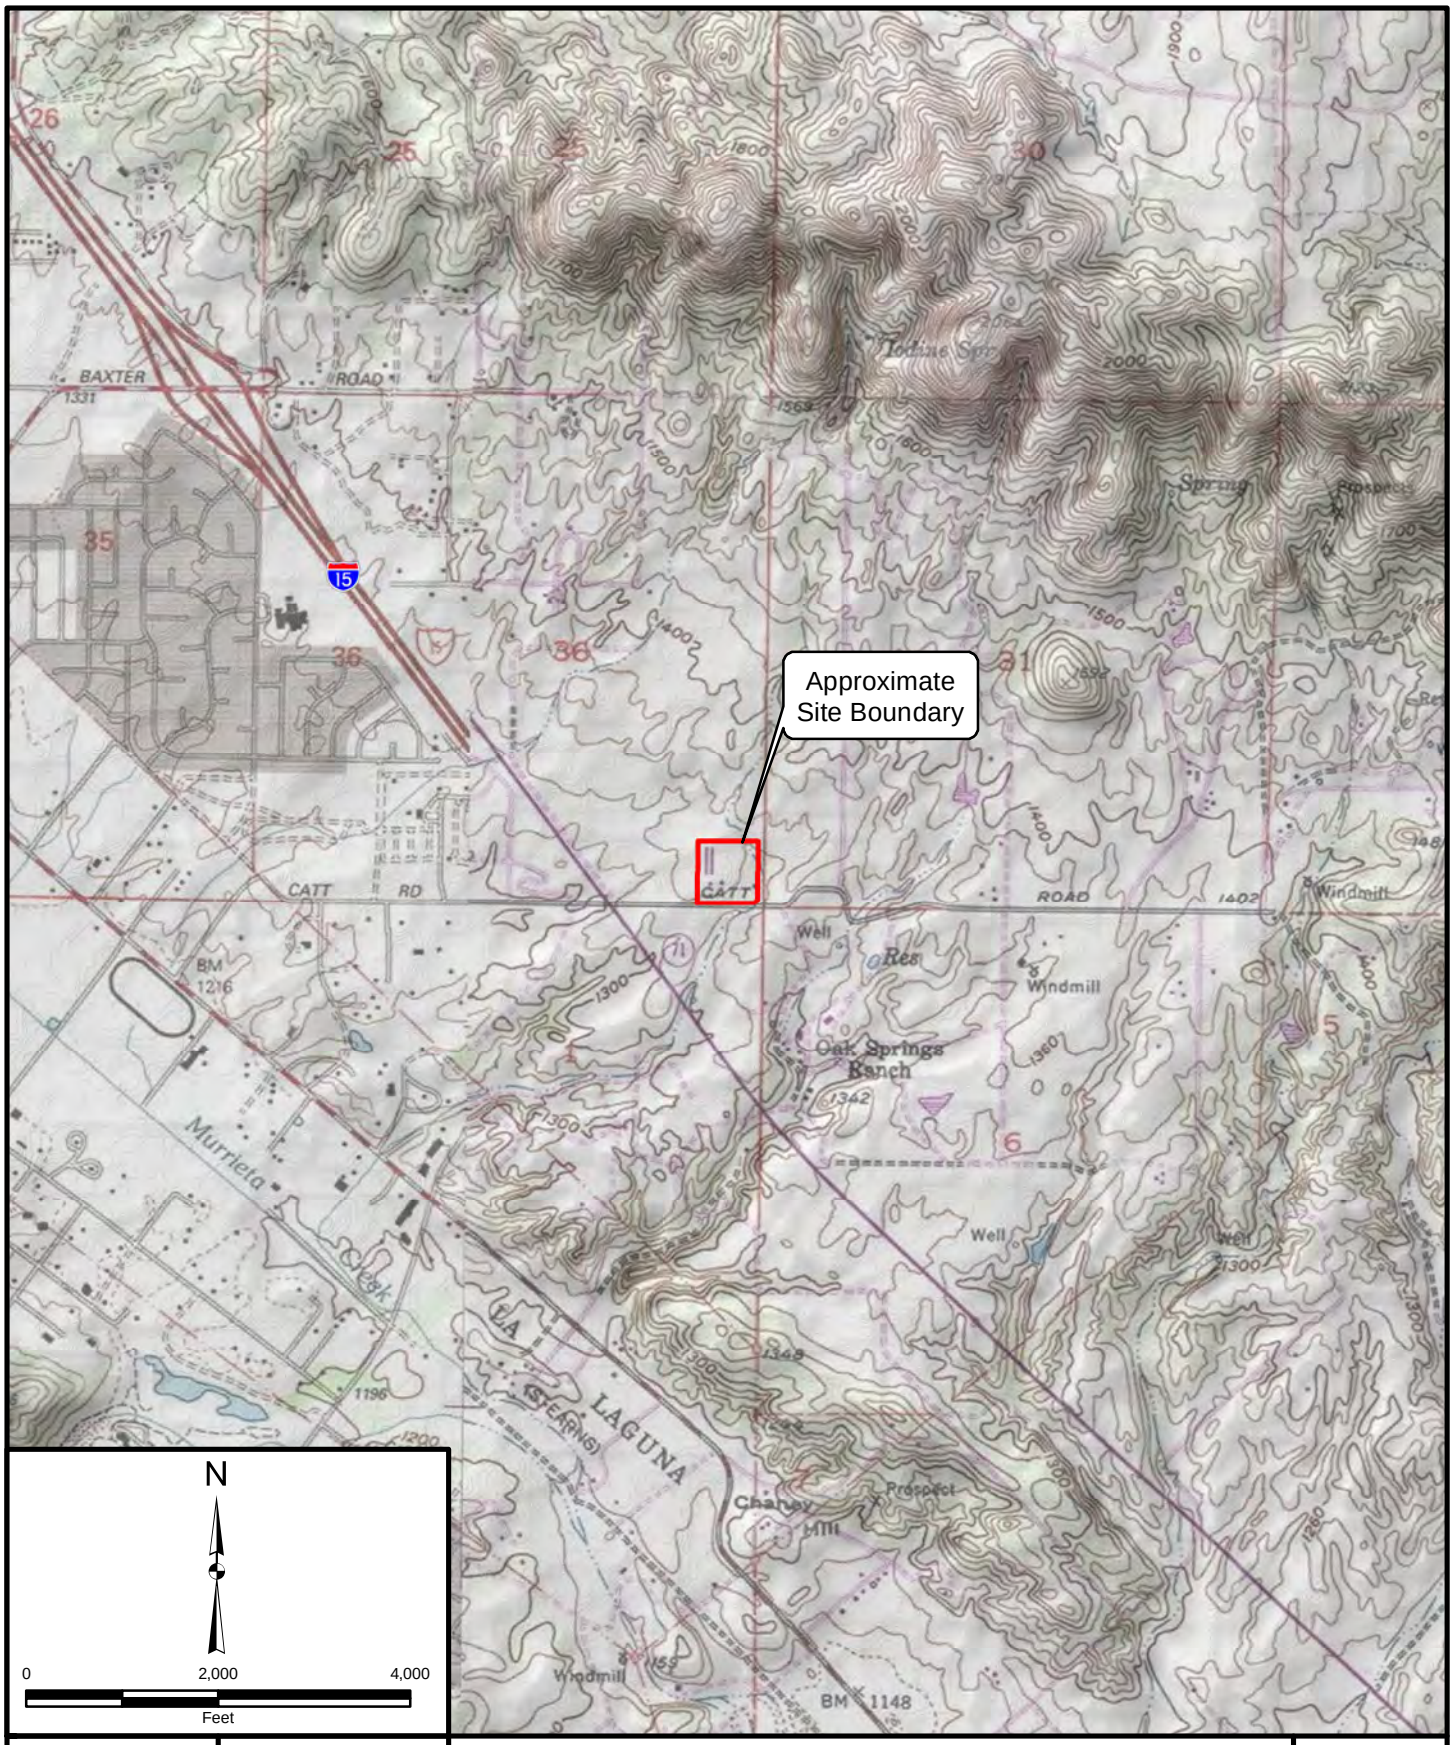
Leighton is a California corporation, providing geotechnical and environmental consulting services throughout California. We are solely a consulting firm without interests in real property other than our offices in Southern California. We provide professional environmental consulting services including application of science and engineering to environmental compliance, hazardous materials/waste assessment and cleanup, and management of hazardous, solid and industrial waste. Phase I Environmental Property Assessments are a part of this practice area and have been conducted by us.

10.2 Individual

The qualifications of the Associate Geologist and the other Leighton environmental professionals involved in this Phase I ESA meet the Leighton corporate requirements for performing Phase I ESAs as specified by ASTM E1527-13.

10.3 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined by §312.10 of 40 CFR Part 312.



I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Photo No. 49	
View of Direction of Photo: South	
Description: View of fenced off western portion of the Site and west-adjoining single family residences.	

Photo No. 50	
View of Direction of Photo: Southeast	
Description: Broad view of northwest portion of the Site.	

Appendix C
Phase I Owner and User Questionnaires

Leighton

Phase I ESA Users Questionnaire

Project Name: Wilsonart Mixed Use

Complete and Correct Address(es) of the Property and APN(s):

See "Interview" Form

User Company Name:	**User Name/Title:**
Sage Investco	Ralph Deppisch · Director of Development

User Phone/Email:

Interviewee Name and Relationship to Project:

Ralph W Deppisch - Director of Development

Site Owner: see previous

Reason Phase I is required:

Lender

Type of property:

Vacant - will be res'l + com'l

Type of property transaction (e.g., Sale, purchase, exchange):

Sale

Any scope of services beyond the ASTM Practice E 1527:

No

All Parties that will rely on the Phase I report:

Yes

Name and Contact Information for Site Contact:

Any special terms or conditions:

none I am aware of

Any other pertinent knowledge or experience with the property (e.g., prior reports, documents, correspondence concerning the environmental conditions of the property):

—

(1). Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? Yes | (No)

If Yes, Describe:

(2). Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? Yes | (No)

If Yes, Describe:

(3). Specialized knowledge or experience of the person seeking to qualify for the Landowners Liability Protections (LLP) (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes | (No)

If Yes, Describe:

(4). Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 DRF 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

(Yes) | No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? Yes | No

If Yes, Describe: N/A

(5). Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the property that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the property? Vacant Yes | (No)

(b.) Do you know of specific chemicals that are present or once were present at the property? Yes | (No)

(c.) Do you know of spills or other chemical releases that have taken place at the property? Yes | (No)

(d.) Do you know of any environmental cleanups that have taken place at the property? Yes | (No)

If Yes, Describe:

(6). The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *property*, are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*? Yes | (No)

If Yes, Describe:

Tempe, Arizona 85281

Telephone: 480-967-6752
Fax: 480-966-9422

ENVIRONMENTAL LIEN AND AUL REPORT

The NETR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

Thank you for your business
Please contact NETR at 480-967-6752
with any questions or comments

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL ---------- National Priority List Deletions

Federal CERCLIS list

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

Federal RCRA CORRACTS facilities list

CORRACTS ---------- Corrective Action Report

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Federal RCRA generators list

RCRA-LQG ---------- RCRA - Large Quantity Generators
RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List

US INST CONTROLS..... Institutional Controls Sites List

Federal ERNS list

ERNS..... Emergency Response Notification System

State- and tribal - equivalent NPL

RGA LUST ---------- Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
TESORO WEST COAST CO EPA ID:: CAR000144287	***23905 CATT RD***	***SW 0 - 1/8 (0.032 mi.)***	***A2***	***48***

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/25/2021 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ELEMENTARY SCHOOL NO	***LA ESTRELLA ROAD/GEO***	***NW 1/2 - 1 (0.842 mi.)***	***24***	***163***

DONALD GRAHAM MEDICA	***35450 FREDERICK STRE***	***WNW 1/2 - 1 (0.940 mi.)***	***25***	***166***
Facility Id: 60000994 Status: No Action Required				

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 2 LUST sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
INLAND VALLEY REGION	***36485 INLAND VALLEY***	***SSE 1/4 - 1/2 (0.464 mi.)***	***D22***	***149***
