Mr. Mike Miller
THE NEW HOME COMPANY
15231 Laguna Canyon Road, Suite 250
Irvine, CA 92618

Subject: Leal Master Plan Residential Parking Review and Parking Management Plan (PMP) – Phase A, City of Eastvale

Dear Mr. Miller:

Introduction

RK ENGINEERING GROUP, INC. (RK) is pleased to provide this Parking Review and Parking Management Plan for the proposed Leal Master Plan Project.

The purpose of this report is to determine appropriate residential parking rates that can effectively serve the proposed Leal Master Plan Project. This parking analysis includes a review of parking requirements from 38 comparable cities within the Inland Empire area. Furthermore, a parking management plan has been developed that aims to address parking needs and manage parking spaces efficiently. The implementation of a parking management plan (PMP) will ensure fair parking access to meet the needs of the residents and guests. The features outlined in the PMP must be integrated into the Declaration of Covenants, Conditions, and Restrictions (CC&Rs).

The proposed project will utilize recommended parking rates that are more intense than the City of Eastvale rates and the Leal Master Plan Amendment. Parking rate data from 38 comparable cities were collected to create an 85th-percentile parking rate per dwelling unit type[1]. The PMP will utilize various features for both the residents and their guests/visitors.

[1] The 85th percentile rate is what ITE (Institute of Transportation Engineers) Parking Generation Manual published as an acceptable and common methodology when combining parking ratios from multiple sources. This is also consistent with standard industry practice.

W rkengineer.com

Project Description

The proposed Leal Master Plan Project (hereinafter referred to as "project") is in the City of Eastvale. The project site is bounded by 58th Street to the north, Limonite Avenue to the south, Hamner Avenue to the east, and Scholar Avenue to the west. The project site is currently vacant. In total, the proposed project consists of approximately 2,500 residential dwelling units. This report applies to Phase A, which generally includes the southern portion of the site, including the following Planning Areas:

- PA 1 – 168 multi-family units
- PA 6 – 100 single-family units
- PA 7A – 94 single-family units
- PA 8 – 76 single-family units

The Institute of Traffic Engineers (ITE) Manual states that multi-family housing "includes apartments, townhomes, and condominiums located within the same building with at least three other dwelling units…". Therefore, buildings with four or more units are considered multi-family housing. Buildings with three or less units are considered single-family attached housing. The appropriate parking rates apply to either single or multi-family housing.

Access to the project will be provided through residential collector streets "A", "B", and "C" and direct access to each planning area will be provided via driveways.

Exhibit A shows the planning areas for Phase A of Leal Master Plan, which are analyzed in this report.

Parking Review

The following section calculates appropriate parking rates for respective dwelling unit types for the proposed project. The 85th percentile is determined by analyzing data compiled from 38 comparable cities. These rates do not assume the enforcement of a parking management plan, which will further help reduce parking demand at the project site.

City of Eastvale Parking Requirements

The City of Eastvale Municipal Code §120.05.060 – Off-Street Vehicle Parking identifies parking design standards and the number of required parking spaces to serve various land use types, including residential uses.

The Leal Master Plan project consists of the development of both single-family and multi-family residential dwelling units.

Per §120.05.060 of the City of Eastvale Municipal Code, the following parking requirement have been identified for single-family and multi-family residential dwelling units respectively:

- Single Family Dwellings – 2 spaces per dwelling unit;
- Multi-Family Dwellings
    - Single Bedroom Dwelling Unit – 1.25 spaces per unit;
    - Two Bedroom Dwelling Unit – 2.25 spaces per unit; and
    - Three or More Bedroom Dwelling Unit – 2.75 spaces per unit.

Other Local Agencies Residential Parking Requirements

The parking requirement for a development is typically estimated using the respective city's rates outlined in their municipal code or other documented sources.

To determine an adequate parking rate, parking rates from a total of 38 comparable cities in the Inland Empire were utilized in this study. The municipal code from each city was reviewed to determine parking rates based on the residential dwelling unit type (i.e., multi-family and single-family). From this, the 85th percentile parking requirements were utilized

from all cities surveyed. The 85th percentile parking ratio is identified by the ITE (Institute of Transportation Engineers) Parking Generation Manual publication as an acceptable and common methodology when combining parking ratios from multiple sources and represents a conservative calculation.

A compiled list of the cities utilized is shown in Table 1:

Table 1
Inland Empire Study Cities

County of Riverside	County of San Bernardino
Banning	Adelanto
Beaumont	Apple Valley
Calimesa	Barstow
Canyon Lake	Big Bear Lake
Corona	Chino
Hemet	Chino Hills

Moreno Valley	Hesperia
Murrieta	Highland
Norco	Loma Linda
Perris	Montclair
Riverside	Ontario
San Jacinto	Rancho Cucamonga
Temecula	Redlands
Wildomar	Rialto
	San Bernardino
	Upland
	Victorville
	Yucaipa

[1] Thirty-eight (38) cities representing the Inland Empire Region as identified per the Municipal Management Association of Southern California (MMASC) Source: https://mmasc.org/163/Inland-Empire-Region

Table 2 shows a summary of Eastvale's parking rate, the 85th percentile parking rate, and the recommended parking rates. The recommended parking rate was calculated using the 85th percentile parking rate.

The calculations yielding the 85th percentile parking rate per dwelling unit type can be seen in Appendix A.

Table 2
Parking Ratio Summary

Dwelling Unit Type[1]		City of Eastvale Parking Rate	85th Percentile Parking Rate[2]	Recommended Parking Rates	Proposed Parking Rate Increase
Multi-family	1-Bed	1.25	2.36	2.36	+1.11
	2-Bed	2.25	2.36	2.36	+0.11
	3-Bed	2.75	2.90	2.90	+0.15
	4-Bed	2.75	3.29	3.29	+0.54
	5-Bed	2.75	3.29	3.29	+0.54
Single-Family (Attached and Detached)[3]		2.00	2.00	2.20	+0.20

[1] Each dwelling unit type will have a 2-car garage.
[2] Source : https://mmasc.org/163/Inland-Empire-Region. 38 cities representing the Inland Empire Region as identified per the Municipal Management Association of Southern California (MMASC).

[3] The Recommended Parking Rates (for Single-Family) consist of the base requirement of "2.00 spaces per unit" plus an additional 0.2 guest parking spaces per unit. Typically, guest spaces are not included in the parking rates for Single-Family homes since it is assumed that there is off-street parking available. However, in the Leal Master Plan, guest parking will be provided within each planning area. Hence, this recommended rate allows for one guest space for every five units.

Based on the research, the City of Eastvale's multifamily parking rates are consistently lower than the calculated 85th percentile parking rates from other cities in the Inland Empire. Therefore, to be conservative, the recommended parking rates for the multifamily land uses are based on the 85th percentile parking rates, and would appropriately serve the proposed project.

The recommended single-family parking rate is higher than both Eastvale's and the 85th percentile parking rate. According to the Urban Land Institute (ULI) Third Edition Shared Parking, dated 2020, residential land uses utilize a 0.10 parking rate for visitors during the weekday and 0.15 during the weekend. The project utilizes an additional 0.20 guest parking spaces per unit as a conservative approach.

Parking Management Plan

The following Parking Management Plan (PMP) applies to all Planning Areas within Phase A and will be incorporated into the rules and regulations portion of the homeowner's association adopted Declaration of Covenants, Conditions, and Restrictions (CC&Rs). The purpose of the PMP is to outline the best practices (objectives, policies, and enforcement) to optimize parking for each residential planning area. Each dwelling unit will be equipped with a 2-car garage which is required to be used by residents. All other parking will be marked as parking spaces for guests only.

DEFINITIONS

The following definitions of terms are provided for this Parking Management Plan.

1. Association: Association means Association, which is the homeowners association formed under California *Civil Code* section 4080 to operate and manage the residential elements of the community, its successors and assigns.

2. Authorized Vehicle: The following vehicles are Authorized Vehicles: standard passenger vehicles including, without limitation, automobiles, passenger vans designed to accommodate ten (10) or fewer people, motorcycles and pickup trucks having a manufacturer's rating or payload capacity of one (1) ton or less.

3. Prohibited Vehicle: The following vehicles are "Prohibited Vehicles": (i) recreational vehicles (e.g., motorhomes, travel trailers, camper vans, boats, etc.), (ii) commercial-type vehicles (e.g., stake bed trucks, tank trucks, dump trucks, step vans, concrete trucks, limousines, etc.), (iii) buses or vans designed to accommodate more than ten (10) people, (iv) vehicles having more than two (2) axles, (v) trailers, inoperable vehicles or parts of vehicles, (vi) aircraft, other similar vehicles or any vehicle or vehicular equipment deemed a nuisance by the Board, (vii) any vehicles or vehicular equipment deemed a nuisance by the Board, and (viii) any other vehicles not classified as an Authorized Vehicle.

4. Parking Permit: An Association issued vehicle specific permit to a Resident which, when properly applied to and displayed, authorizes a vehicle to park in the areas designed for parking by permit only.

5. Parking Pass: An Association-issued, and vehicle-specific, temporary parking permission for Guests, which, when properly applied to and displayed, authorizes a vehicle to temporarily park in the areas designed for guest parking.

6. Resident: Any owner, tenant, or resident of the Association

7. Guest: An authorized person visiting the property that does not reside in the community.

8. Safelist: The recording of specific vehicle information for the purpose of temporarily exempting a vehicle from enforcement measures related to selected parking restrictions for a predetermined period of time.

PARKING SPACES

Parking spaces are classified as resident parking spaces and guest parking spaces. Generally, resident parking spaces occur within the resident's garage. Guest parking spaces are provided within common uncovered parking areas. Additionally, public parking spaces are provided within the community and available for public parking. The types of parking spaces are further described below.

RESIDENT PARKING AREAS

Each dwelling unit includes an enclosed two-car garage for resident parking. The Association shall adopt and administer a parking inspection program to ensure resident garages are free and clear of obstructions and available for resident parking.

GUEST PARKING AREAS

Guest parking areas are provided within uncovered surface parking areas within each Planning Area and within the uncovered surface parking area for the private recreation/park areas and Lots B and C.

PUBLIC PARKING AREAS

Residential collector streets "A", "B", and "C" are public streets that allow for on-street parking during the daytime hours. The streets will be signed to prohibit overnight parking. Vehicles in violation will be towed. The public parking on the collector streets is available to residents, guests, park users, and commercial users.

RESIDENT PARKING RESTRICTIONS

Residents shall register their Authorized Vehicles with the Association's management company. Residents will be provided with a resident Parking Permit to be displayed in accordance with the Association's rules and regulations (e.g., shall be affixed to the window or be displayed from the vehicle's rear-view mirror). The validity of a Parking Permit which has been issued by the Association shall depend on adherence to the Association's rules and regulations. The issuance of Parking Permits shall be vehicle and property address specific. Parking Permits shall be renewed annually or less frequently as may be set forth in the Association's rules and regulations.

Residents shall park in their enclosed garage spaces. Residents shall not be permitted to park in guest parking spaces. Residents with a valid resident Parking Permit may park in the private recreation/park parking area during the daytime hours, generally 6AM to 10PM. Any Resident parking in a guest parking space at any time, or in the private recreation/park parking area during nighttime hours, is subject to citation and/or towing.

GUEST PARKING RESTRICTIONS

Parking in guest parking areas is not permitted without the Authorized Vehicle being registered on the Safelist and the vehicle displaying a valid parking pass. To register an Authorized Vehicle on the Safelist, a Resident must contact the Association's management company and provide the vehicle make, model, color, and license plate number of the guest vehicle. The management company will provide the Resident a temporary parking pass to be displayed on the dashboard of the Guest vehicle. Residents shall be permitted to safelist an Authorized Vehicle a maximum of ten (10) times (days) per calendar month. Special exceptions will be made for Residents during the "moving in" period. During this period, a Resident vehicle may be placed on the safelist for up to 60 days from the close of the escrow date or execution of the lease agreement date to create space in the garage for Resident parking.

An Authorized Guest Vehicle may park overnight in a guest parking space according to the term of the temporary parking pass. Guests are permitted to park in the private recreation/park parking areas between the hours of 9 AM to 9 PM. After 9 PM, vehicles parked in the private recreation/park parking areas are subject to enforcement actions including citation and/or towing.

The residential collector streets "A", "B", and "C" will be marked for no overnight parking by any vehicle, including Authorized Guest Vehicles and Residents, and violators would be subject to citation and/or towing.

Lot B and Lot C are located along the western boundary of the project site adjacent to PA 1 and PA 7A, near Scholar Way, and will provide parking spaces for guests. All parking in Lot B and Lot C will be restricted to registered guests on the Safelist and require that the vehicle display a valid parking pass. Parking passes for Lot B and Lot C should only be provided to guests for PA 1.

ENFORCEMENT

Patrols hired by the Association will occur at random days and times overnight in marked patrol vehicles. The officers will verify permits, check for violations, and issue citations or call for the towing of the vehicle.

1. In the event that any vehicle is found to be in violation of any provisions of these guidelines, or the Association's rules and regulations, such vehicle will be cited and immediately towed, without any further warning. No exceptions or grace periods will apply to "Immediate Tow Offenses".

2. In the event that any vehicle is found to be in violation of any provision of these guidelines other than those provisions specifically identified as an "Immediate Tow Offense", such vehicles will be subject to the following enforcement measures:

- A written citation will be issued to the offending vehicle disclosing the nature of the violation, and that such vehicle is subject to towing at the vehicle owner's expense immediately upon discovery of the vehicle in subsequent violation of the same provision within the period as specified in the Association's rules and regulations (e.g., more than once within the same calendar year).

- No less than 72-hours shall pass prior to the vehicle being subsequently observed for compliance with the originally violated provision.

- In the event that the vehicle is again found to be in violation of the same provision or the guidelines within the period specified in the Association's rules and regulations, a second citation will be issued to the vehicle, at which

time the vehicle may be immediately towed at the vehicle owner's expense without additional warning.

Additional Parking Management Features

The Parking Management Plan and additional parking management features, as described below, will help further reduce parking demand on the project site.

A. Available Public Transit

To reduce the demand for parking, the Leal Master Plan proposes recommendations for alternative modes of transportation. These may include public transit, bike lanes, and pedestrian routes. Leal Master Plan includes the buildout of internal sidewalks so pedestrians can access bus stops.

Based on the "Falling Transit Ridership: California and Southern California" report prepared for the Southern California Association of Government, dated January 2018, public transit accounted for approximately 5% of trips in the SCAG area in 2012. The availability of alternative modes of transportation would allow users to access the project without the need for a passenger car and individual parking space.

The report prepared for SCAG can be seen in Appendix B.

Riverside Transportation Authority (RTA) Bus Lines 3 and 29 have five (5) stops available within one-quarter (1/4) mile of the project site. Every RTA bus is equipped with at least two bike racks that are free to use and are accepted on a first-come, first-serve basis.

More information and specific bus schedules can be found at https://www.riversidetransit.com/index.php/riding-the-bus/maps-schedules.

Omnitrans Route 87 has two (2) stops located approximately one-half mile away from the project site. Omnitrans buses are also equipped with bicycle racks that are free to use and are accepted on a first-come, first-serve basis.

More information and specific bus schedules can be found at https://omnitrans.org/plan-a-trip/routes-schedules/.

Leal Master Plan contemplates an additional bus stop within the project that will be serviced by the Riverside Transit Authority (RTA). Additional bus stops are at the discretion of the RTA, however, given the commercial activity center and number of residents, an additional stop appears warranted. This addition will further public transit access by the residents living in this community and will allow guests to be able to use the bus to visit.

B. Available Bike Racks

Based on a study by The League of American Bicyclists, dated 2021, approximately 0.71% of commuters bike in the County of Riverside. The project shall provide bicycle racks throughout the planning areas. This will encourage the use of alternative modes of transportation and reduce parking demand.

The study by The League of American Bicyclists can be seen in Appendix C.

C. Improve Transit Access, Safety, and Comfort

The California Air Pollution Control Officers Association (CAPCOA) released a handbook for quantifying greenhouse gas (and vehicle miles traveled) mitigation measures. From this handbook, measure SDT-1 is applicable to the project due to the buildout and improvement of the pedestrian network. The project will include pedestrian network improvements within the project site and connecting offsite in an urban/suburban area, therefore a 2% estimated VMT reduction is allowed per CAPCOA guidelines. Although this 2% is for VMT reduction, the same proportionality can be applied to reduce parking because of the increase in available alternative modes of transportation.

D. Resident Safelist

Residents cannot park in guest spaces as described in the Parking Management Plan, above.

E. Community Outreach/Online Portal

The project's Homeowners Association (HOA) shall provide an online portal with local transit and multi-modal transit facilities/infrastructure information, as well as current maps, routes, and schedules for public transit.

F. Two-Car Garage Features

Each residential dwelling is equipped with a 2-car garage. It is common for residents to use their garages for extra storage space or as an at-home gym which leads to insufficient space to park their vehicles. The design of the dwelling units incorporates storage in order to facilitate residents parking vehicles in the garage spaces. For example, the City of Eastvale requires a length of 36 feet for a tandem-style parking garage, however, the Leal Master Plan has designed garages to exceed minimum requirements at varying lengths. This allows for additional storage space to be utilized in every garage. Additionally, the garages have been designed to accommodate overhead storage racks and wall-mounted bicycle racks, which will also allow residents to maximize their garage space at their discretion.

G. Guest Safelist Program

The guest safelist program is described in the Parking Management Plan, above.

H. Ride-Hailing Zones

Ride-Hailing Zones are anticipated to occur within the commercial portions of the Leal Master Plan area. The ride-hailing zones are designed to reduce congestion, improve safety, and enhance the overall ride-hailing experience for both drivers and passengers. This provides another alternative mode of transportation which is similar to public transit and will help reduce the overall parking demand for the project.

Phase A – Parking Requirements by Planning Area

Table 3: Leal Master Plan 2022: Planning Area 1
Parking Calculation

Dwelling Unit Type		Number of Dwelling Units	City of Eastvale Municipal Code 120.05.060 Parking Code	City of Eastvale Parking Requirements			85th Percentile Parking Rate[1]	85th Percentile Parking Requirements			Recommended Parking Rates	Recommended Parking Requirements		
				Resident-Only Parking	Guest Parking	Total Required Parking		Resident-Only Parking (2-Car Garage)	Guest Parking	Total Required Parking		Resident-Only Parking (2-Car Garage)	Guest Parking	Total Required Parking
Multi-Family	1-Bed	16	"1.25 spaces per unit"	16	4	20	2.36	32	6	38	**2.36**	32	6	38
	2-Bed	72	"2.25 spaces per unit"	144	18	162	2.36	144	26	170	**2.36**	144	26	170
	3-Bed	80	"2.75 spaces per unit"	160	60	220	2.90	160	72	232	**2.90**	160	72	232
	Subtotal	168	--	320	82	402		336	104	440		336	104	440
Blended Rate			" 2.39 spaces per unit"				2.62				**2.62**			

[1] Sourced from 38 comparable cities in the San Bernardino / Riverside County areas.

Table 4: Leal Master Plan 2022: Planning Area 6
Parking Calculation

Dwelling Unit Type		Number of Dwelling Units	City of Eastvale Municipal Code 120.05.060 Parking Code	City of Eastvale Parking Requirements			85th Percentile Parking Rate[1]	85th Percentile Parking Requirements			Recommended Parking Rates[2]	Recommended Parking Requirements		
				Resident-Only Parking (2-Car Garage)	Guest Parking	Total Required Parking		Resident-Only Parking (2-Car Garage)	Guest Parking	Total Required Parking		Resident-Only Parking (2-Car Garage)	Guest Parking	Total Required Parking
Single-Family (Attached)	3-Bed	58	"2.00 spaces per unit"	116	0	116	2.00	116	0	116	**2.20**	116	12	128
	4-Bed	42	"2.00 spaces per unit"	84	0	84	2.00	84	0	84	**2.20**	84	8	92
	Subtotal	100	--	200	0	200		200	0	200		200	20	220
Blended Rate			" 2 spaces per unit"				2.00				**2.20**			

[1] Sourced from 38 comparable cities in the San Bernardino / Riverside County areas.

[2] The recommended rates include the base "2.00 spaces per unit" along with an additional 0.2 spaces per unit for guest parking. Single-Family parking rates generally do not include guest spaces because it's assumed that off-street parking is available. Leal Master Plan does not allow intra-street parking therefore this rate allows one guest space for every 5 units.

Single-Family parking rates generally do not include guest spaces because it's assumed that off-street parking is available. Leal Master Plan does not allow intra-street parking therefore this rate allows one guest space for every 5 units.

Table 7
Leal Master Plan 2022: Phase A
Required/Provided Parking Summary

Planning Area	No. of Units	Total Required Parking[1]	Parking Provided in Garages	Guest Parking Provided	Total Parking Provided	Surplus
PA 1	168	440	336	63	399	- -
Lot B[2]	- -	- -	- -	*32*	*32*	- -
Lot C[2]	- -	- -	- -	*20*	*20*	- -
PA 1 Subtotal	168	440	336	115	451	11
PA 6	100	220	200	38	238	18
PA 7A	94	207	188	20	208	1
PA 8	76	168	152	27	179	11
Private Recreation (Lot L)	NA	NA	NA	39	39	39
Private Recreation (Lot K)	NA	NA	NA	29	29	29
Total	**438**	**1,035**	**876**	**268**	**1,144**	**109**

1. Total required parking is based on the 85th percentile parking rate from 38 comparable cities in the San Bernardino / Riverside County areas.
2. Parking in Lot B and C will be restricted to guests only for Planning Area 1.

Conclusions

RK Engineering Group, Inc. has completed this Parking Review and Parking Management Plan for Phase A – Planning Areas 1, 6, 7A, and 8. Through this analysis, parking rates applicable to Phase A exceed the City of Eastvale's currently adopted parking standards. A Parking Management Plan places enforceable restrictions on both guest and resident parking, ensuring adequate parking is provided.

Furthermore, Phase A will provide more parking than required by the parking rates established in this study. The HOA shall be responsible for clearly informing potential new residents of the rules and regulations regarding parking in place by integrating PMP features into the CC&Rs of the community.

The HOA will also be responsible for updating, managing, and enforcing all PMP features whether that be through ongoing performance evaluations or program revisions. The HOA can enforce the PMP features through ongoing monitoring of parking adequacy and issuing citations to violators. All residents must be informed of any changes made to the rules and regulations.

RK Engineering Group, Inc. appreciates this opportunity to assist THE NEW HOME COMPANY with this project. If you have any questions regarding this study, please do not hesitate to contact us at (949) 474-0809.

Sincerely,

RK ENGINEERING GROUP, INC.

EXECUTIVE SUMMARY

In the last ten years transit use in Southern California has fallen significantly. This report investigates that falling transit use. We define Southern California as the six counties that participate in the Southern California Association of Governments (SCAG) – Los Angeles, Orange, Riverside, San Bernardino, Ventura and Imperial. We examine patterns of transit service and patronage over time and across the region, and consider an array of explanations for falling transit use: declining transit service levels, eroding transit service quality, rising fares, falling fuel prices, the growth of Lyft and Uber, the migration of frequent transit users to outlying neighborhoods with less transit service, and rising vehicle ownership. While all of these factors probably play some role, we conclude that the most significant factor is increased motor vehicle access, particularly among low-income households that have traditionally supplied the region with its most frequent and reliable transit users.

Transit service and use trends in Southern California

Long associated with the automobile, in the last 25 years Southern California has invested heavily in public transportation. Since 1990, the SCAG region has added over 100 miles of light and heavy rail in Los Angeles County, and over 530 miles of commuter rail region-wide. These investments, however, have not been matched by increases in transit ridership. Transit ridership in the SCAG region reached its postwar peak in 1985. Through the 1990s and 2000s ridership rose and fell modestly, but never again reached its 1985 level. Figure ES-1 shows that per capita trips have been mostly declining in the SCAG region since 2007, and have fallen consistently since 2013.

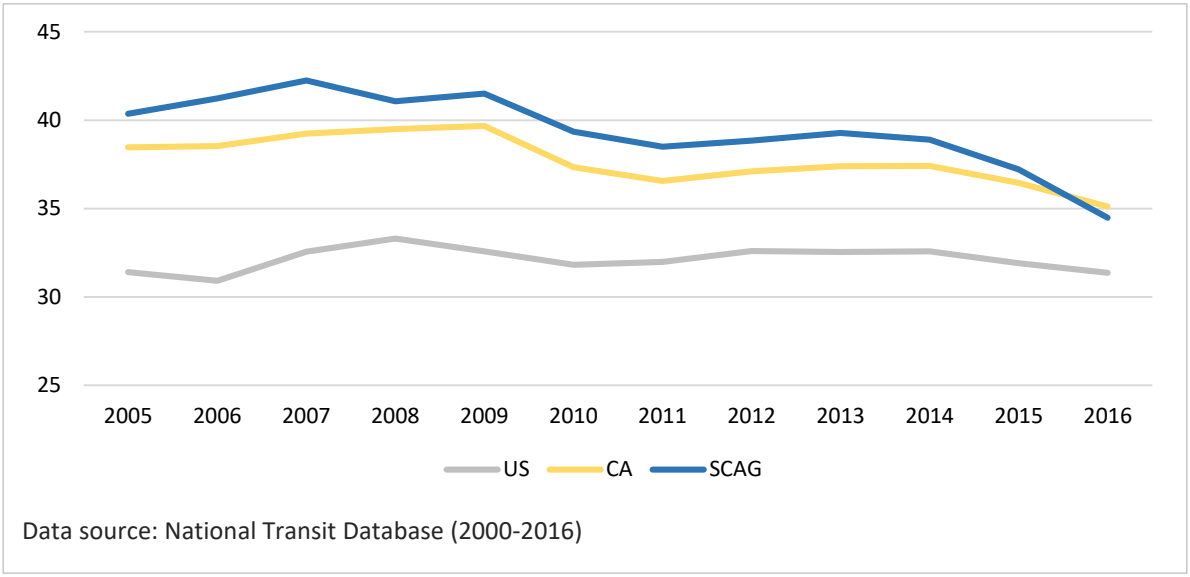

Figure ES 1. Transit trips per capita. *Relatively flat nationally, but down in California since 2009.*

This decline spans modes; it is not simply a case of bus ridership falling while rail ridership increases. Rail ridership, on net, is also down. Further, these aggregate numbers mask large asymmetries in transit service and use. Transit use in particular is heavily concentrated among a relatively small segment of the population, in a small number of the region's neighborhoods, and on a small share of the region's transit systems. As a result of these asymmetries, even small changes in these households, neighborhoods, or transit systems can have an outsized effect on regional transit use.

A few people make most of the trips

The average resident of the SCAG-region made about 35 transit trips in 2016, but the median resident made none. Only a minority of the population rides transit very frequently or even occasionally. About two percent of the population rides transit very frequently (averaging 45 trips/month), another 20 percent of the population rides transit occasionally (averaging 12 trips/month), and more than three-quarters of SCAG-region residents ride transit very little or not at all (averaging less than 1 trip/month). Heavy transit use, moreover, is concentrated among the low-income population, and especially low-income foreign born residents.

A few neighborhoods generate most of the trips

Ten percent of all of the people who commuted to and from work on transit in 2015 lived in 1.4 percent of the region's census tracts, which covered just 0.2 percent of the region's land area; the average number of transit commuters in these few tracts was almost 12 times the regional average. Fully 60 percent of the region's transit commuters lived in 21 percent of the region's census tracts, which occupied 0.9 percent of the region's land area. Overall, the most urban and transit-friendly neighborhoods in the SCAG region comprise less than one percent of the region's land area. These neighborhoods hold about 17 percent the

region's population, but 45 percent of its transit commuters. So while the region's transit systems are increasingly diverse and far reaching, transit riders remain highly concentrated.

A few operators carry most of the passengers

The SCAG region has over 100 transit operators, but just a few them carry the vast majority of riders. Figure ES-2 shows that nine percent of the region's operators are responsible for 60 percent of the region's transit service and carry about 80 percent of all transit riders.

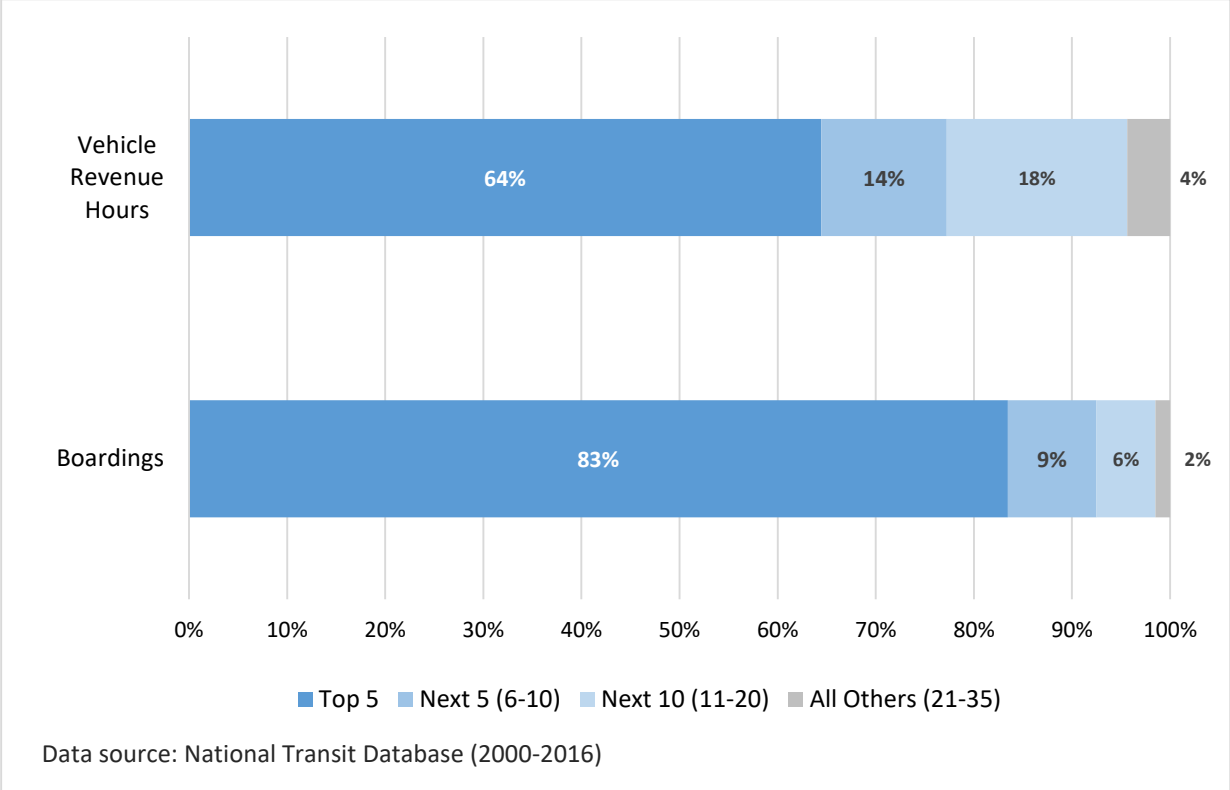

Figure ES 2. Key metrics by operating grouping. *14% of operators carry 83% of the trips.*

Because service and riders are concentrated on the largest systems, ridership losses are concentrated on these systems as well. Four SCAG-region operators—LA Metro, Orange County Transportation Authority (OCTA), Los Angeles Department of Transportation (LADOT), and the Santa Monica Big Blue Bus—accounted for 88 percent of the state's ridership losses between 2010 and 2016. LA Metro by itself accounted for a remarkable 72 percent of the state's losses. Because LA Metro's losses are themselves highly concentrated, a dozen *routes* in LA County account for 38 percent of all the lost ridership in California. In fact, half of California's total lost ridership is accounted for by 17 LA Metro routes (14 bus and 3 rail lines) and one OCTA route.

Possible causes of eroding transit use

Why is transit use falling? We consider a number of potential explanations, and review our findings below.

Changes in transit service and fares have mostly followed and not led falling ridership

Transit use can fall if transit becomes harder to use: if service declines, or fares rise. It does not appear, however, that these factors played a large role in the SCAG region's falling ridership. While transit fare increases are never popular, they are occasionally necessary to keep pace with rising costs. Figure ES-3 shows the inflation-adjusted trends in average fare paid per mile of transit travel between 2002 and 2016 in the U.S., California, and the SCAG region. Fares in Southern California are lower than those in the rest of the state and the country and have been remarkably flat over time.

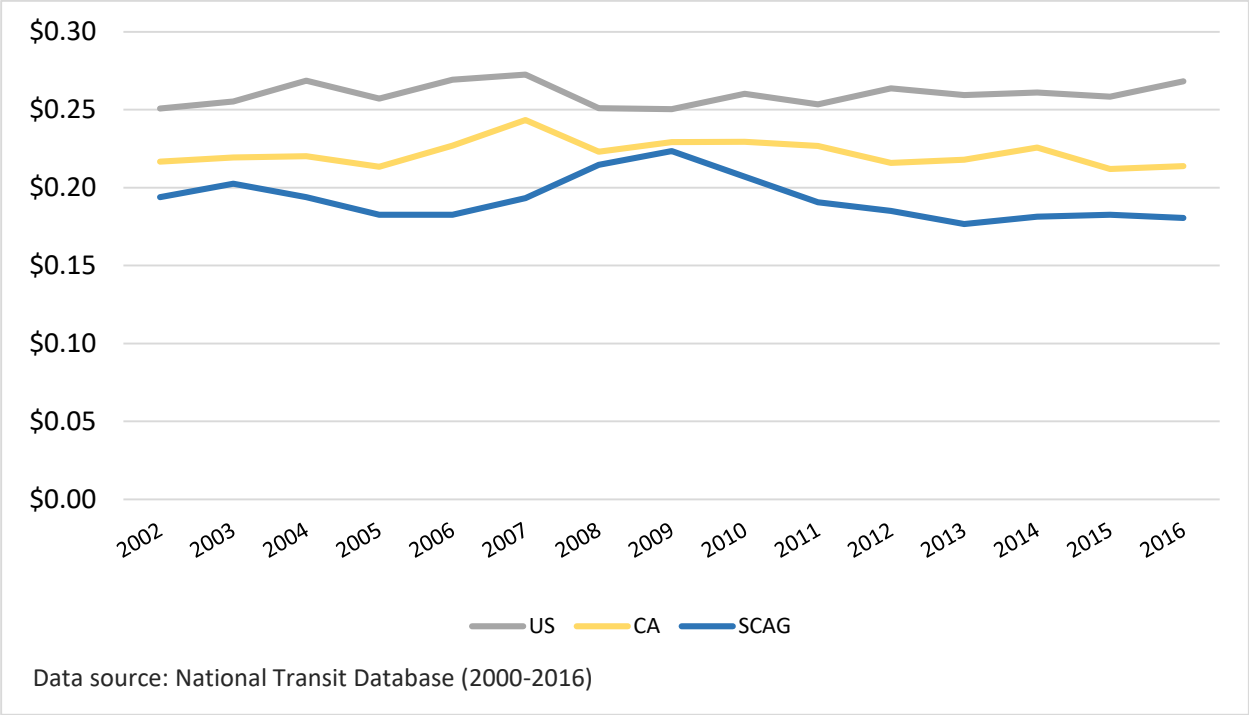

Figure ES 3. Average fare per passenger mile traveled in 2015 dollars. *Average fare per PMT remained fairly consistent and even declined a little since 2009.*

These regional averages can mask significant variation among transit operators. In particular, inflation-adjusted fares per boarding for both OCTA and the Big Blue Bus increased by about 50 percent between 2002 and 2016 — to nearly $1.25 and $0.75 per boarding respectively. So while fares have probably not caused significant ridership declines across the region, they may have played a role at operators like OCTA and Big Blue.

Transit service in the SCAG region, moreover, mostly rose while ridership was falling, and ridership fell even on routes that maintained excellent on-time records. These circumstances suggest that service quantity and reliability were not large factors in falling transit use. There is some evidence, admittedly limited, that riders felt unsafe on transit vehicles in recent years, which may have contributed to the ridership decline.

Fuel prices have likely played a contributing, but not leading role

Fuel prices have been volatile since 1998, but have fallen substantially since peaking in 2012. Figure ES-4 compares trends in fuel prices and transit use in the Los Angeles metropolitan area. While there is a generally positive relationship (as fuel prices rise so too does ridership), it is a relatively weak one – fuel prices rise and fall much more dramatically than transit patronage. The timing of transit's decline, moreover, is not conducive to a fuel price explanation. Per capita transit use in Southern California has been mostly falling since 2007, and it fell between 2009 and 2011 when fuel prices were rising sharply.

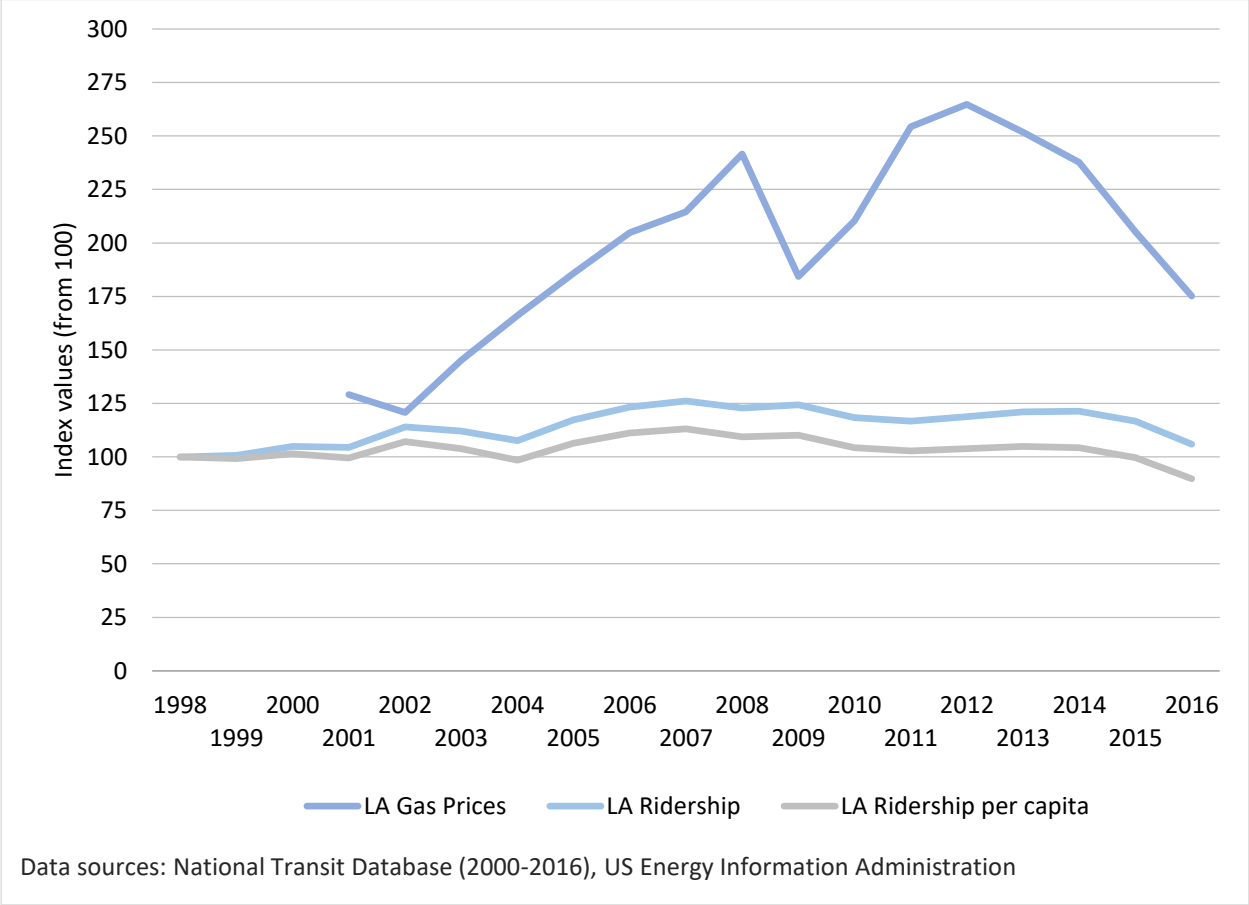

Figure ES 4. Transit ridership and gas prices in Los Angeles Metropolitan Area.

The Transportation Network Companies do not appear to have cannibalized transit

We have very little data that lets us directly measure the effect of transportation network companies (TNCs, like Lyft and Uber) on transit use. What evidence we do have suggests that most TNC trips are probably not replacing large numbers of transit trips. The typical TNC user does not resemble the typical transit rider, the typical TNC trip does not occur when and where most transit trips occur, and most TNC users report no change in their travel by other modes. However, if the pool of TNC users continues to expand, the effect of TNCs on transit use — both positive and negative — may expand as well.

Evidence about neighborhood change and migration of lower-income people is mixed, but suggestive

Transit is heavily-supplied in a small proportion of places, and heavily used by a small proportion of people. If the neighborhoods where transit quality is high change, and become less likely to hold the small group of people who use transit regularly, then transit use could fall. We find some evidence consistent with the idea that neighborhood change has been associated with less transit use. Areas that were heavily populated with transit commuters in the year 2000 became, in the next 15 years, slightly less poor, and significantly less foreign born. Perhaps most important, the share of households without vehicles in these neighborhoods fell notably. All these factors align with a narrative where a transit-using populace is replaced by people who are more likely to drive. We emphasize, however, that this relationship is not one we can measure with precision, and it would be premature to declare neighborhood change a large culprit in falling transit ridership.

Private vehicle access increased substantially from 2000 forward

A defining attribute of regular transit riders is their relative lack of private vehicle access. But between 2000 and 2015, households in the SCAG region, and especially lower-income households, dramatically increased their levels of vehicle ownership. Census data show that from 1990 to 2000 the region added 1.8 million people but only 456,000 household vehicles (or 0.25 vehicles per new resident). From 2000 to 2015, the SCAG region added 2.3 million people and 2.1 million household vehicles (or 0.95 vehicles per new resident).

The growth in vehicle access has been especially dramatic among subsets of the population that are among the heaviest users of transit. Between 2000 and 2015, the share of households in the region with no vehicles fell by 30 percent, and the share of households with fewer vehicles than adults fell 14 percent. Among foreign-born residents, zero-vehicle households were down 42 percent, and those with fewer vehicles than adults were down 22 percent. Finally, among foreign-born households from Mexico, the share of households without vehicles declined an astonishing 66 percent, while households with more adults than vehicles dropped 27 percent. Living in a household without a vehicle is perhaps the strongest single predictor of transit use; the decline of these households has powerful implications for transit in Southern California.

Vehicle ownership is not, of course, the only determinant of regional transit ridership—income, race, age, and nativity, to name a few, also matter. But vehicle access may well be the largest factor. We demonstrate the strong association between vehicle access and transit ridership by building a series of statistical models of transit ridership. The models cover the SCAG region, all of California, Los Angeles

County, and the SCAG region outside of LA County. Each model compares two predicted outcomes: the change in transit use we would expect to see based on due to changes in socioeconomic attributes *other than* vehicle ownership, and the change we would expect to see if we account, in addition, for changes in vehicle access. In short, we compare a scenario where incomes, nativity, racial composition, and various other attributes change the way they did from 2000-2015, but where vehicle access is unchanged, to a scenario where vehicle access changes as well.

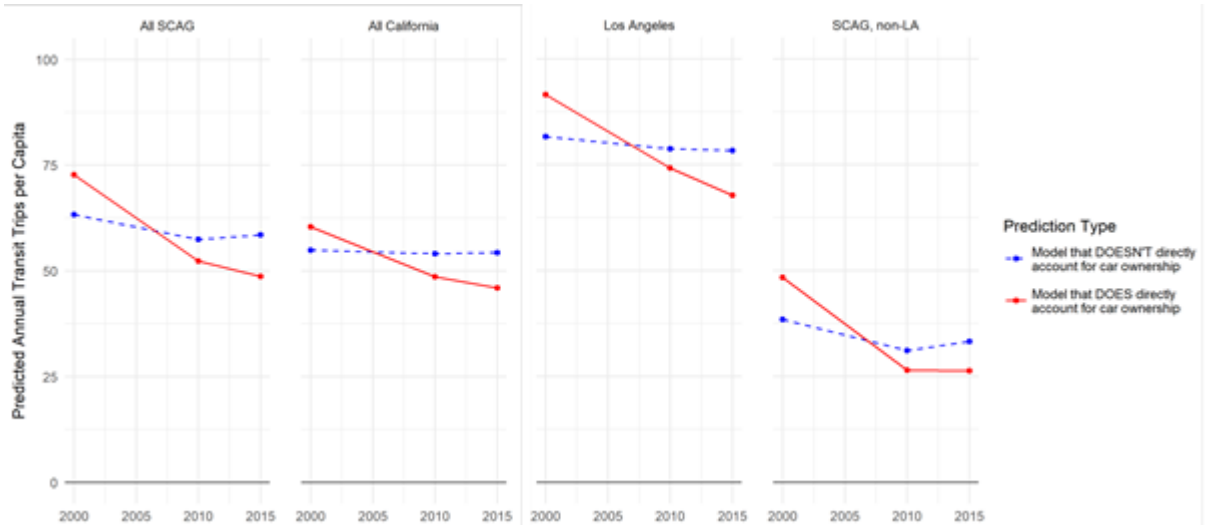

Figure ES 5. Transit use changes based on area.

Figure ES-5 shows the results of these models. The dotted blue line in each case is an estimate of transit ridership trends between 2000 and 2015 based on changes in the region's income, nativity, and so on, but assuming no change in vehicle ownership. The solid red lines represent these same models, but with the region's observed changes in vehicle access included. In all cases the blue line predicts transit use starting at a lower point and declining only modestly, while the red line shows transit use starting at a higher point and falling sharply, more in line with what we are actually observing. The models reinforce the idea that vehicle access is the decisive factor in transit use: income, age, and many other factors matter, but they matter largely because they predict the ability to access and use motor vehicles. In Southern California since 2000, that ability has increased, and transit use has fallen.

Conclusion

Public transportation is unlikely to fare well when Southern California is flooded with additional vehicles, especially when those vehicles are owned disproportionately by transit's traditional riders. Much of the region's built environment is designed to accommodate the presence of private vehicles and to punish their absence. Extensive street and freeway networks link free parking spaces at the origin and destination of most trips. Driving is relatively easy, while moving around by means other than driving is not. These circumstances give people strong economic and social incentives to acquire cars, and — once they have cars — to drive more and ride transit less.

The advantages of automobile access, which are particularly large for low-income people with limited mobility, suggest that transit agencies should not respond to falling ridership by trying to win back former riders who now travel by auto. A better approach may be to convince the vast majority of people who rarely or never use transit to begin riding occasionally instead of driving. This task is unquestionably more difficult than serving frequent-riding transit dependents, and it would likely require weakening or removing some of the state's and region's entrenched subsidies for motor vehicle use. But the opportunity is substantial. The SCAG region, between 2012 and 2016, lost 72 million transit rides annually. That number seems daunting, but the region has a population of 18.8 million, and about 77 percent of those people (roughly 14.5 million), ride transit rarely or never. If one out of every four of those people replaced a single driving trip with a transit trip once every two weeks, annual ridership would grow by 96 million — more than compensating for the losses of recent years. The future of public transit in the SCAG region, then, will be shaped less by the mobility needs of people who do not own vehicles, and more by policy decisions that encourage vehicle-owning households to drive less and use transit more.

FALLING TRANSIT RIDERSHIP: CALIFORNIA AND SOUTHERN CALIFORNIA

In the last 15 years Americans have supported public transportation more and demanded it less. California, the nation's most populous state, is in many ways emblematic of this pattern. Motivated by concerns about congestion and climate change, California's state and local governments have invested heavily in transit, often with the explicit approval of voters. This investment is particularly evident in Southern California. Since 1990, the six-county Southern California Association of Governments (SCAG) region has added over 100 miles of light and heavy rail in Los Angeles County, and over 530 miles of commuter rail region-wide. In November 2016, voters in LA County approved a $120 billion sales tax measure for transportation, with a plurality of the funding dedicated to expanding and improving transit (Measure M: Metro's Plan to Transform Transportation in LA 2016). This measure marked the third such countywide tax increase since 1990, and the fourth one overall. Other SCAG counties have also routinely passed sales tax measures for transportation and transit improvements.

Over the same period, however, California's transit use (depending on how one measures it) has varied from modest increases to relative stagnancy to—in more recent years—steep decline. Southern California is again illustrative. Despite its heavy investments in transit, in absolute terms the region's transit ridership reached its postwar peak in 1985. Through the 1990s and mid-2000s ridership rose and fell modestly, never reaching 1985 levels, and in 2012 it began declining. In per capita terms, ridership has fallen more steadily since the 1980s. Ridership per capita was flat in the early 2000s, but started trending down again in 2007. In California overall, per capita ridership was flat until 2009, when it began a decline from which it has not recovered (The National Transit Database (NTD), 2015).

Why is transit ridership falling? The question is not merely academic. The combination of rising supply and falling demand has profound fiscal implications for transit operators, since it substantially increases the public cost of moving each passenger. Increased transit supply has meant increased public investment, particularly in new rail services. Measured as a ten-year rolling average of capital and operating costs, transit investment in both the US and California rose almost 50 percent between 2000 and 2015. These rising expenditures, when combined with falling patronage, yield falling productivity. Between 2005 and 2016, transit productivity —measured as passenger boardings per vehicle revenue hour (VRH) —has fallen 5 percent in California and 14 percent in the SCAG region. Falling productivity is not sustainable; it usually ends with more subsidies or less service.

Beyond fiscal concerns, falling ridership calls into question a number of California's ambitious environmental goals. California's aggressive agenda for combatting climate change is predicated in part on many people using transit more and driving less. The carbon reduction targets set out in Senate Bill 375, California's landmark climate reduction bill of 2008, involve large mode shifts to transit and away from driving, while the California Department of Transportation's current Strategic Management Plan includes an explicit goal of doubling the state's transit mode share by 2020 (California Department of Transportation, 2015). But transit ridership, despite heavy transit investment, is trending very much in the opposite direction.

This report assesses California's, and particularly Southern California's, recent ridership downturn. We emphasize Southern California because — as we will show — California's falling ridership is in many ways Southern California's falling ridership. Had transit use not fallen in the SCAG region through 2016, it would not have fallen statewide.

Our study considers the years from 2000 to 2015 or 2016 (depending on data availability). While widespread concern about falling transit use did not begin until ridership began falling absolutely in 2012, we focus on the per capita decline that began about five years before that. The falling absolute ridership of the last few years is important, and we do pay outsized attention to it. But we view it as a particularly acute manifestation of the longer-run per capita decline, not as a phenomenon in itself. Absolute declines in ridership are at once more noticeable and less important than per capita declines. Ridership numbers that are not adjusted for population lack context, and focusing only on absolute ridership declines can for that reason yield incomplete or misleading results.

For example, since 2012 gas prices have fallen sharply, transportation network companies (TNCs) like Lyft and Uber have expanded dramatically, undocumented immigrants have been granted drivers' licenses, and the economy has rebounded from the Great Recession. All these factors may have depressed transit use, but all of them also occurred well *after* per capita transit ridership began to decline. Thus none of them, individually or in combination, can fully explain Southern California's, or California's, transit patronage losses.

Our analysis faces data limitations common to examinations of transit. Aggregate data on transit use are widely available through the National Transit Database (NTD), but users of NTD data can never be entirely sure of the data's accuracy.[1] NTD records are compiled from the reports of individual transit operators to the federal government, and for a variety of reasons — from failure to report to mistakes in reporting to errors in correcting those mistakes— NTD data do not always match up with operator data. We have checked some of the NTD data used in this report against operator data and been satisfied that they reasonably conform, but checking all the data would be impossible. We emphasize that this problem is almost universal in transit studies: all data are imperfect, but the NTD is the nation's standard source for transit data.

A second issue is that while data on transit use are easy to find, data on transit *users* are not. Public transportation is used by a small and hard-to-track subset of the population, making riders (and especially former riders) hard to study. The U.S. Census, in its annual American Community Survey (ACS), provides detailed economic and demographic information about transit commuters, but commutes are a minority of transit trips, and commuters (as we will show) are a minority of transit riders. More detailed data on transit users can be found in the California Household Travel Survey (CHTS) which provides an in-depth look at travel of all types by Californians, and complements those travel data with extensive person-level

[1] Transit operators who receive funding from the Federal Transit Administration's Urbanized Area Formula Program, or its Rural Formula program, must submit data to the NTD on the financial and operating conditions of their systems, as well as the conditions of their assets and rolling stock. Just over 660 operators receive such funding and report to the NTD. See https://www.transit.dot.gov/ntd

socioeconomic information. But the CHTS is a one-year snapshot, only available for 2012. As a result, we have a data mismatch: excellent data for a single year, but a research question – why is transit ridership declining? – that demands data on changes over time.

A last data obstacle is that the determinants of transit use are varied, ranging from gas prices to auto ownership to the quality of transit service, and no single data set contains all of them. Some factors thought to influence transit use, like the availability of free parking, are not systematically tracked at all.

To work around these limitations, we draw on an array of spatial, person-level, and administrative data. At different points we use the U.S. Census summary files, the Integrated Public Use Microdata (IPUMS) of the Census,[2] state and national travel diary data, gas price and economic data from the Energy Information Agency and the Bureau of Labor Statistics, and data and rider surveys conducted by some of Southern California's larger transit operators. One operator—the Los Angeles County Metropolitan Transportation Authority (Metro, or LA Metro)—by itself accounts for most of the region's transit use and has ample public data available. As a result, at different points in the report when data for the entire region is lacking, we draw on data specific to LA Metro.

Largely because of these data constraints, the case we build is circumstantial; we offer no definitive proof of cause-and-effect. But the evidence is nevertheless compelling. The primary factor we identify is automobile ownership. In the last 15 years, household vehicle access in the SCAG region has grown dramatically. Vehicle ownership has grown particularly sharply among subgroups most likely to use transit, such as the low-income and the foreign born from Latin America. The steep rise in vehicle access among these groups that occurred as transit ridership began to fall is not direct proof, but it is a smoldering if not a smoking gun. Public transportation is unlikely to fare well when Southern California is flooded with additional vehicles. Much of the region's built environment is designed to accommodate the presence of private vehicles and to punish their absence. Extensive street and freeway networks link free parking spaces at the origin and destination of most trips. These circumstances give people strong incentives to acquire cars, and — once they have cars — to drive more and ride transit less.

The surge in vehicle ownership does not explain all of the transit decline. And it may well have been reinforced by falling gas prices and the rise of TNCs— though again we note that increasing vehicle ownership and declining transit use began before TNCs existed and when gas prices were still high. But increased vehicle ownership by itself probably explains much of Southern California's lost transit ridership.

Our findings accord with previous research about transit patronage. Giuliano (2005) has shown that compared to Americans at large, the poor use transit more but like it less. The typical low-income rider wants to graduate to automobiles, while the typical driver might view transit positively but have little interest in using it (Manville & Cummins, 2015). These facts, coupled with the falling ridership of recent years, raise questions about transit's future.

Transit ridership is not, by itself, a legitimate goal of public policy. Transit use is instead a means to achieve other public ends. Traditionally, transit's goals have been twofold: Providing mobility to disadvantaged people who lack it, and mitigating the social and environmental costs of private automobiles by providing alternatives to them. The first goal has long accounted for more of transit's ridership, while the second

[2] The IPUMS data are from Ruggles et al (2017).

has accounted for more of its rhetoric. Throughout the United States, and particularly in Southern California, public transportation advocates have emphasized transit's potential to manage traffic and reduce pollution. In practice, however, transit has functioned overwhelmingly as a social service for low-income people with little private mobility (Taylor & Morris, 2015).

Because transit has primarily carried low-income people, rising vehicle ownership among those people suggests a future where public transportation's core ridership could dramatically shrink. While this outcome poses a grave problem for transit operators, it is not obvious that transit operators should try to win these low-income riders back, at least not to the very high levels at which they rode transit previously. With very few exceptions, acquiring an automobile in Southern California makes life easier along multiple dimensions, dramatically increasing access to jobs, educational institutions and other opportunities (Kawabata & Shen, 2006). As a result, pulling low-income former riders out of their cars and back onto trains and buses could make transit agencies healthier but the region poorer. If transit agencies want to protect their fiscal health while also increasing social welfare, they may need to convince the vast majority of people who never use transit to begin riding occasionally instead of driving. This task is unquestionably more difficult than serving a large pool of people who have few alternatives to transit. Convincing some drivers to start using transit would likely require weakening or removing some of the state's and region's entrenched subsidies for motor vehicle use. But transit is unlikely to grow substantially, to accomplish its environmental goals, if driving remains artificially inexpensive.

THE SPATIAL AND DEMOGRAPHIC DISTRIBUTION OF AMERICAN PUBLIC TRANSPORTATION

Public transportation use in the United States is distributed unevenly across people and places. Transit accounts for about two percent of all passenger miles travelled (PMT), and about two percent of personal trips overall (NHTS 2009). These small overall numbers, however, conceal transit's outsized importance to some people in some places. The average U.S. resident made about 32 transit trips in 2016 (Neff & Dickens, 2017; U.S. Census Bureau, 2016), but the modal resident made zero trips, and a small number of people rely on transit extensively. Chu (2012) shows that 20 percent of Americans live in neighborhoods without transit, while 60 percent live in neighborhoods with transit but have not used it in the previous month. Another 11 percent uses transit less than ten times per month, while eight percent take ten or more trips monthly.

The small share of people who use transit frequently is concentrated in a handful of metropolitan areas. In 2016, 65 percent of all transit boardings occurred on the nation's ten largest transit operators; the 15 systems in the New York region by themselves account for over 40 percent of the country's transit trips (FTA, 2016). Even within these transit-heavy areas, however, most people do not use transit regularly, because most transit use occurs in the central cities, and specifically among lower-income and foreign-

born people in these cities. And even within these subgroups, whose members are *more likely* to ride transit, *most* people do not use transit.

Why is transit use so rare? In the broadest terms, travelers will choose to ride transit when they believe transit has the lowest relative costs – in money, time, or risk and uncertainty – of the various transportation modes available to them. These factors help explain why so much transit use occurs in New York City. New Yorkers ride transit as much as they do not only because transit service is frequent and extensive, but also because riding a subway across Manhattan is often cheaper, faster and more reliable than driving. Manhattan's streets are clogged with unpredictable congestion and parking is scarce and expensive.[3] In most other places, driving is a faster door-to-door option, and one that people also believe is safer (Yoh, Iseki, Smart, & Taylor, 2011). Driving in these places is also more reliable: when congestion is low and transit service is sparse, riding transit might involve more time waiting at stops and transferring between vehicles, which make trips seem unpredictable, complicated and burdensome (Iseki & Taylor, 2009). For this reason, outside New York and a handful of other urban places, most transit users are people who for various reasons do not have the option of travelling by car.

The fact that so few people use transit regularly is important but often overlooked, especially in discussions about why ridership might fall. Per capita transit use can fall when current riders ride less, when the number of people who never ride grows, or both. Strictly speaking, there is no difference between these root causes. A person who rides and stops is a lost transit rider, but so is a person who moves to a transit service area and never rides. The decision to stop and the failure to start both reduce per capita transit use.

In practice, however, concerns about falling per capita ridership are rarely concerns about new residents who never start riding, and are instead concerns about current riders who leave. This dynamic is understandable, as riders who leave are easier to notice. But it is important to remember that transit riders leave transit regularly, even when ridership is stable or growing. If riders who leave are replaced by others, their departure from transit is less noticeable, and ridership might remain unchanged. For that matter, ridership can remain unchanged even when riders leave and are *not* replaced by other people. If an existing rider stops taking her daily trip and drives instead, but another frequent rider adds a daily trip, the number of riders falls but per capita ridership does not. Conversely, if two riders who take three trips a day each start taking two, the number of riders won't change but ridership will. Riders are not equivalent to ridership; stable ridership can conceal large churn among riders, and vice-versa.

The Spatial Concentration of Transit in California and Southern California

As it is in the nation at large, public transit use in California is unevenly distributed: a small share of people and places account for a large share of overall rides. Northern Californians use transit more intensively than Southern Californians, largely as a result of high ridership in San Francisco and its surrounding areas, but most of California's transit use occurs in Southern California, where a majority of the state's

[3] Manhattan also has relatively few highway lane-miles, which contributes to its surface-street congestion.

population lives (Figure 1). Transit accounts for 6 percent of all trips in the Bay Area, as opposed to 5 percent in the SCAG region, but the SCAG region – because it is so large – accounts for 52 percent of California's transit trips, while the Bay Area accounts for 28 percent. Southern California thus exerts a large influence on California's overall transit use.

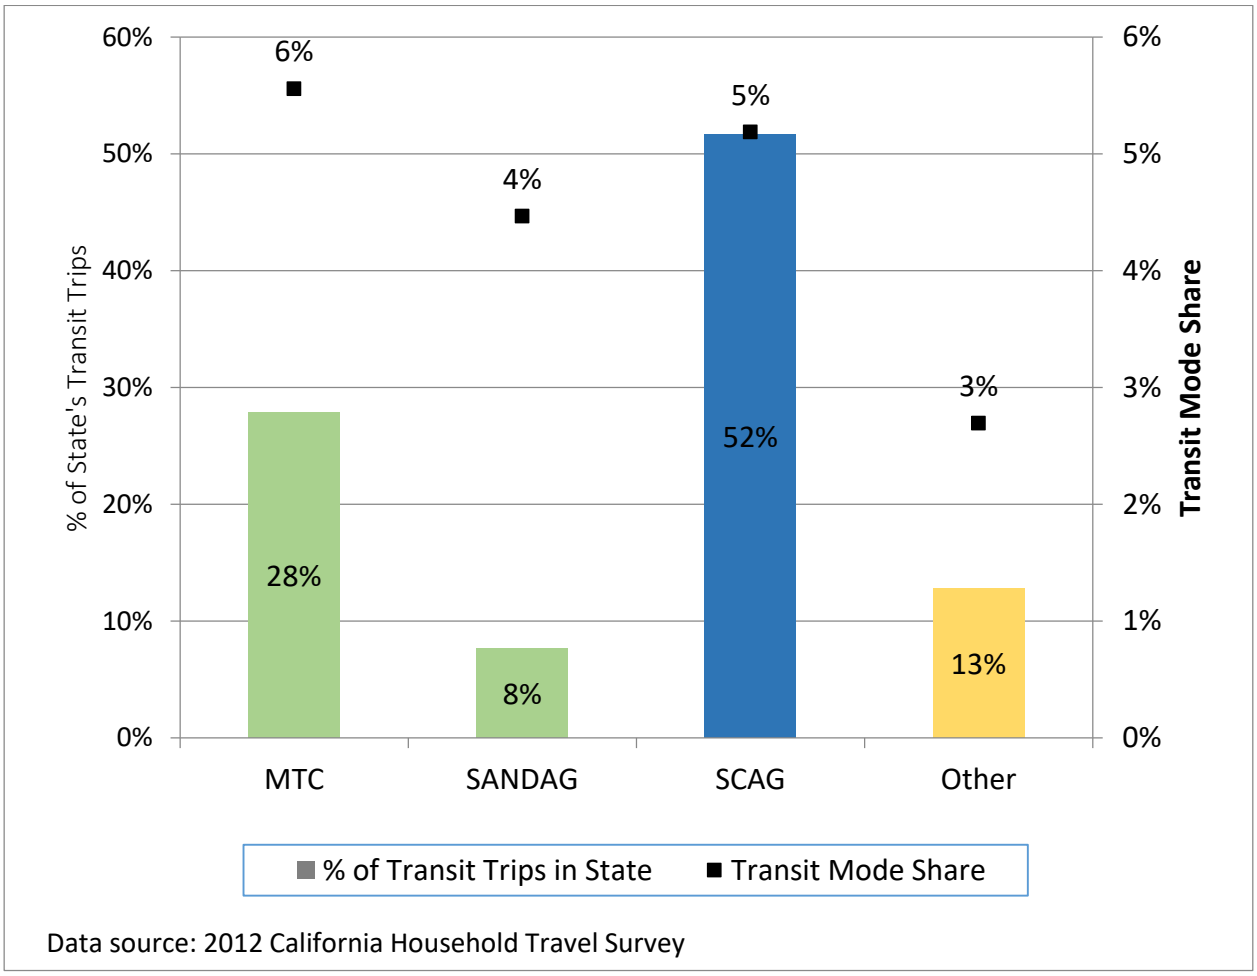

Figure 1. Transit mode share and distribution of transit trips by California region.

Figures 2 and 3 show the trend in transit boardings nationwide, in California, and the SCAG region between 2000 and 2016, first in absolute and then in relative terms. Absolute ridership was largely flat over this time in all three geographies. In relative terms ridership grew steadily between 2004 and 2007 (SCAG region), 2008 (the U.S.), and 2009 (California). This period of growth was followed by patronage losses from the start of the Great Recession through 2011, particularly in California. The recession's end brought a gradual transit patronage recovery, followed by steep declines from 2014 onward.

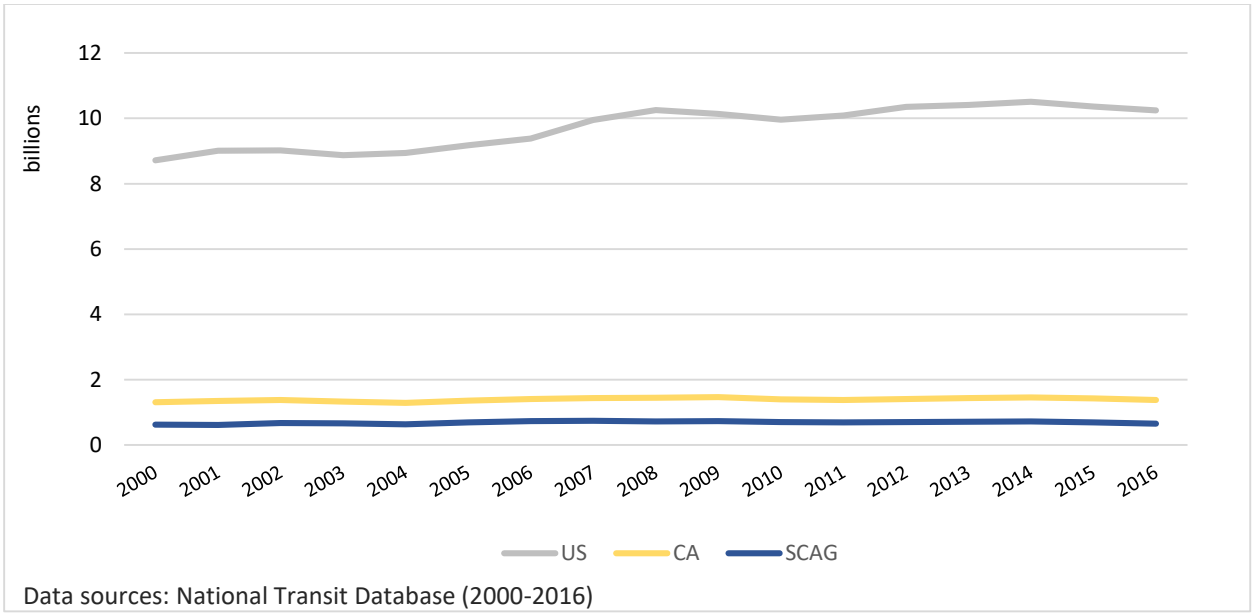

Figure 2. Boardings *(unlinked passenger trips). Growing nationwide, but relatively flat in California and SCAG.*

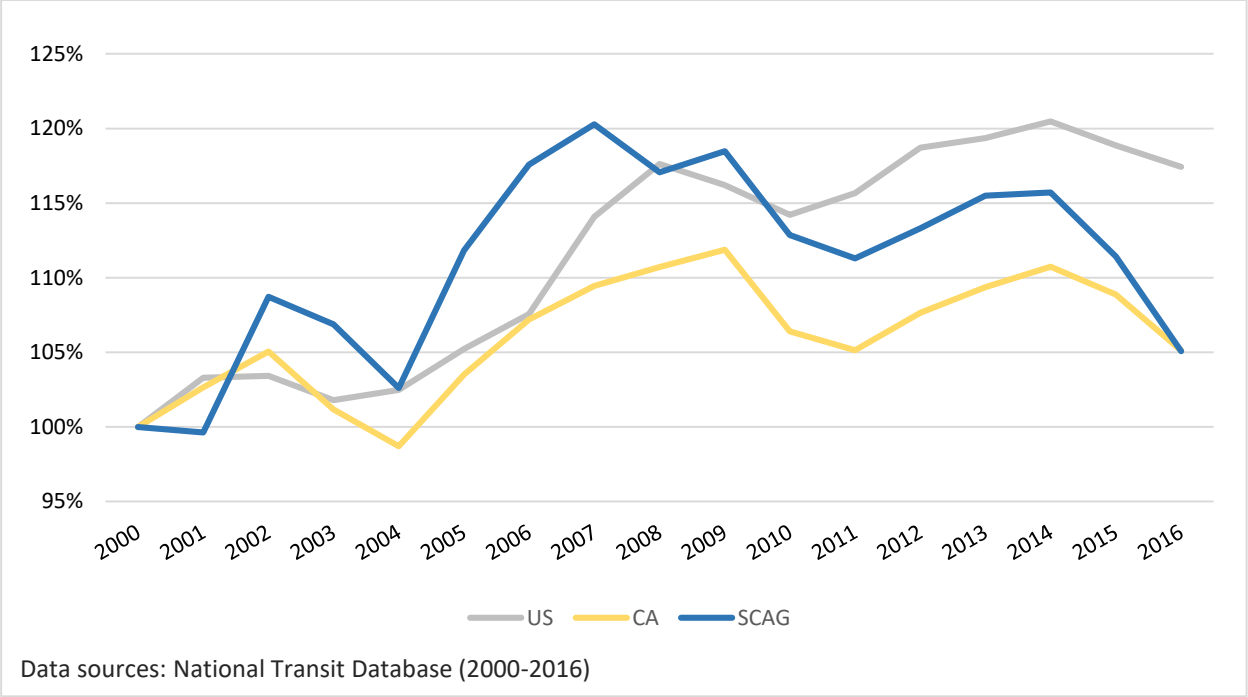

Figure 3. Indexed boardings. *Growing nationwide, but California and SCAG face steeper declines, returning to 2000 levels.*

Figure 4 expresses these ridership trends in per capita terms. Between 2005 and 2016, per capita ridership peaked in California in 2009, in the nation in 2008, and in the SCAG region in 2007. Since 2007, per capita transit use in the SCAG region has been mostly falling—before the recession, the rise of Lyft and Uber, or the post-2012 drop in fuel prices.

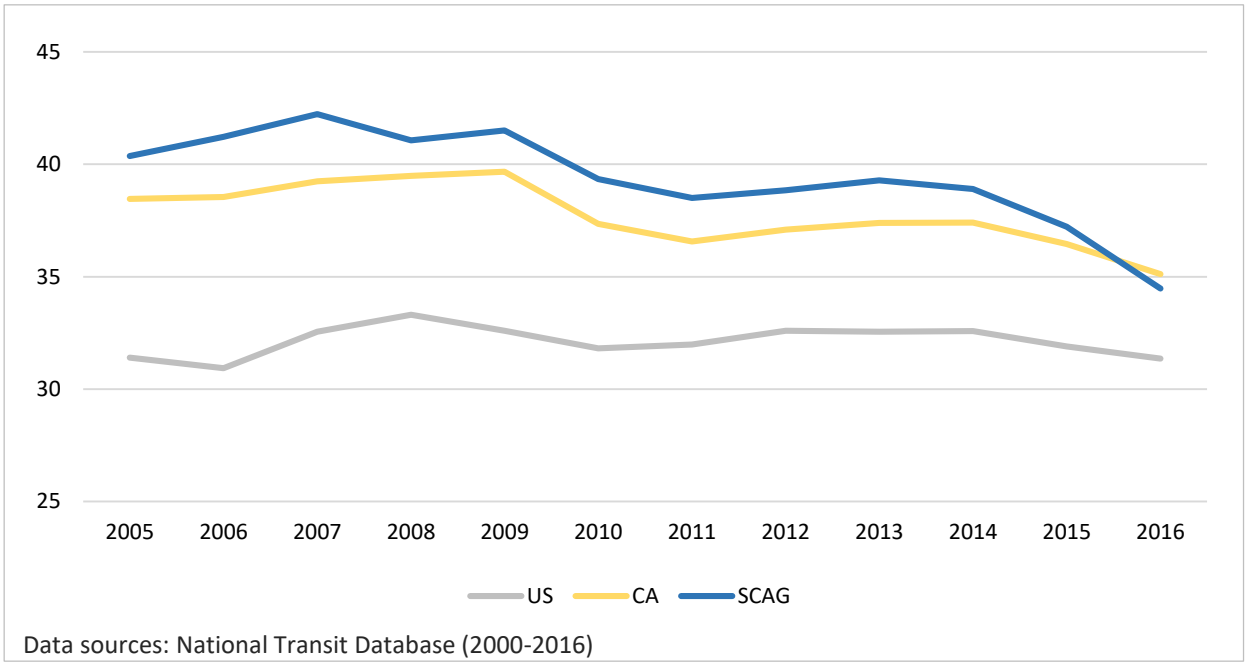

Figure 4. Transit trips per capita. *Relatively flat nationally, but down in California since 2009.*

Because the SCAG region accounts for so much of California's ridership, and because in recent years its decline has been so steep, losses in the SCAG region from 2012 to 2016 actually account for all of California's ridership losses during that time. Figure 5 shows changes in transit ridership across California from 2012 to 2016. During this time annual transit boardings statewide fell by 62.2 million. The SCAG region, however, lost *72 million* annual rides, or 120 percent of the state's total losses. Ridership outside the SCAG region actually rose 20 percent, largely as a result of gains made by transit systems in San Francisco. The Bay Area Rapid Transit District (BART) alone accounted for 28.4 percent of the state's increased transit ridership (although by 2017 ridership on BART, and in California outside the SCAG region, had also started to fall).

Figure 5. CA net change in ridership (2012-2016). *Losses in CA are driven by losses from the largest operators in the SCAG region, while Bay Area region saw growth in ridership.*

Within the SCAG region, transit trips (and lost trips) are similarly geographically concentrated. We can illustrate this concentration in a number of ways. For example, the CHTS shows that in 2012 82 percent of the transit trips in the SCAG region were in Los Angeles County. Another 8 percent were in Orange County, and the remaining ten percent were spread over the other four counties.

A second way to measure concentration, which allows us to examine smaller levels of geography, is to use census data and map the location of the region's transit commuters. While commuters are not the majority of transit riders, they do tend to use transit frequently and intensively, and we have high-quality data about their residential locations. Those locations are intensely concentrated. In 2000, 2010, and 2015, 60 percent of the SCAG region's transit commuters lived in 20 percent of its census tracts, which represented (depending on the year) one to three percent of the region's land area. In all three years, ten percent of the region's transit commuters lived in one percent of the region's census tracts, which accounted for two-tenths of one percent (0.2%) of the region's land area.[4] (Note that even in these tracts, *most* workers do not commute via transit – 7 out of 10 use some other means.) Unsurprisingly, these tracts are overwhelmingly located in LA County, followed by Orange County.

A third way to illustrate the concentration of transit use is to examine transit trips by operator. Figure 6 shows that the ten largest transit agencies in the SCAG region account for 60 percent of all transit service

[4] Calculated from summary file data of the Decennial Census 2000, and the 2010 and 2015 ACS.

(measured in vehicle-revenue hours), and 80 percent of all transit trips. The smallest 60 transit operators, by contrast, account for just over 6 percent of service and just over two percent of trips.

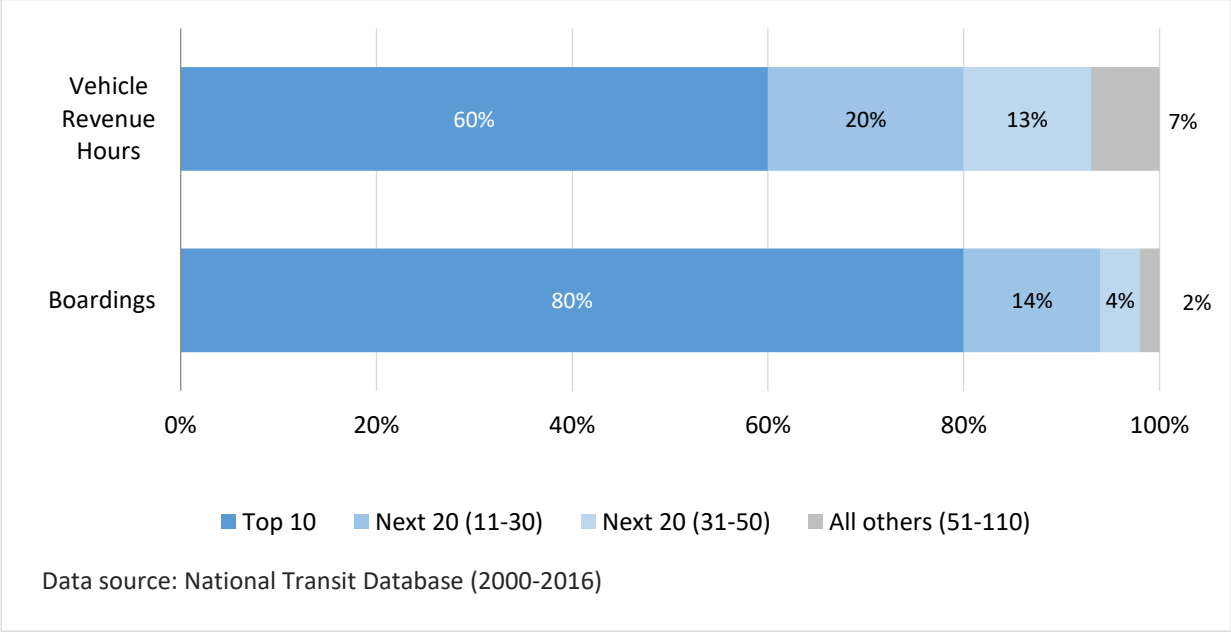

Figure 6. Key metrics by operator grouping. *9% of operators carry 80% of the trips*

Digging still deeper, the distribution of service and trips within these large operators is also highly skewed. LA Metro accounts for most of the SCAG region's trips, and LA Metro's ridership is itself highly concentrated. The agency has over 100 transit routes, but in both 2012 and 2016 over half of its total rides took place on 20 of those routes.[5] Metro's busiest routes are also, unsurprisingly, where the agency has suffered the largest ridership declines. A dozen Metro lines accounted for 53 percent of all the agency's lost rides between 2012 and 2016.

Putting all this information together, we see that declining transit patronage through 2016 in California is essentially declining patronage in Southern California, and that Southern California's ridership declines are themselves remarkably concentrated. As a result, the state's lost ridership can be traced to a small number of Southern California transit operators. Four SCAG operators (LA Metro, the Orange County Transportation Authority (OCTA), the Los Angeles Department of Transportation (LA DOT), and the Santa Monica Big Blue Bus) accounted for 88 percent of the state's ridership losses, and LA Metro by itself accounted for a remarkable 72 percent of the state's losses. Because LA Metro's losses are themselves highly concentrated, a dozen *routes* from LA Metro account for 38 percent of all the lost ridership in California. Half of California's total lost ridership is accounted for by 17 LA Metro routes (14 bus and 3 rail lines) and one OCTA route.

[5] Calculated from Metro ridership-by-line data, 2012 and 2016.

If we examine these routes more closely (Figures 7 and 8), we see that they include both bus and rail. Transit agencies nationwide – LA Metro included – have made substantial investments in rail service, but the bus remains the workhorse of public transit in the US, the SCAG region and LA County. Bus trips are 78 percent of all transit trips in California and 86 percent of transit trips in the SCAG region.[6] Given that buses carry the most passengers, it is not surprising that they have also seen the largest ridership declines, accounting for 84 percent of the lost rides between 2012 and 2016. While some bus routes gained ridership, the bus routes that lost riders lost more than the growing routes gained. The five bus lines with the largest declines were urban routes that travel in and out of downtown LA, while the five lines that gained the most ridership ran more outlying and circumferential routes.

Two Metro rail lines, meanwhile – the Gold and Expo – opened extensions after 2012, and partly as a result their ridership grew. But Metro's remaining rail lines, most of which also travel into downtown LA, saw steep ridership losses that exceeded the Gold and Expo Line's gains. The SCAG transit decline thus spans modes; it is not a simple story of buses falling behind while rail surges. Instead major routes that run into the heart of the city – the sort of routes where transit is traditionally strongest – are losing riders precipitously.

[6] Calculated from the 2012 California Household Travel Survey.

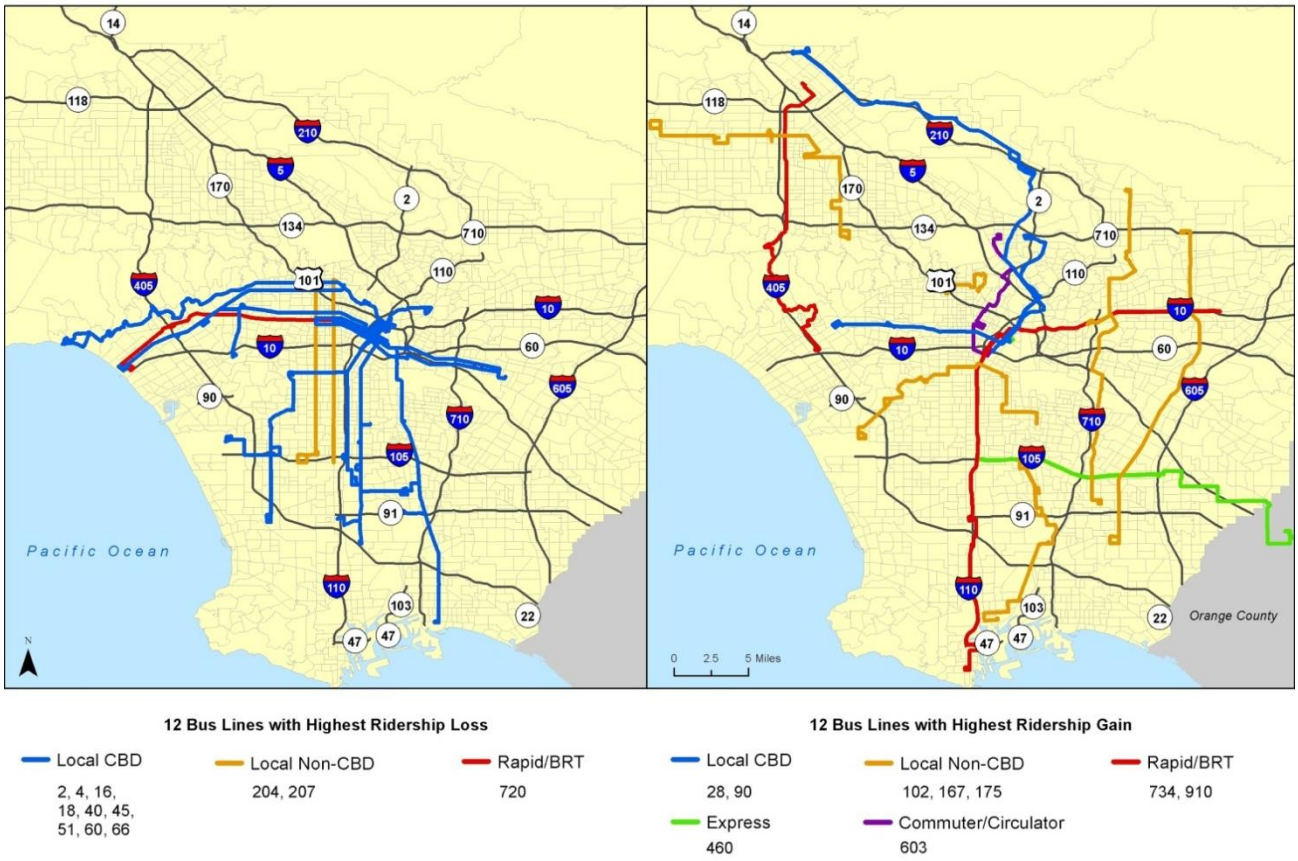

Figure 7. LA MTA: Bus lines with the most ridership change (2012-2016).

Figure 8. LA MTA: Net change in Ridership (2013-2016) by mode. *Buses made up 84% of loss and rail made up 12%.*

The Demographic Concentration of Transit Use in Southern California

Transit use in the SCAG region is concentrated among a small group of people as well as a small number of places. People ride transit for different reasons, but a common thread running through regular transit users is lack of access to a private vehicle. This trait is not universal; many commuter rail passengers, for example, could make their trips by car and choose not to, but commuter rail is a small portion of overall transit ridership. In general, transit ridership is powerfully associated with lack of vehicle access (Taylor & Fink, 2013). Note again, however, that this relationship is not symmetrical. While most regular transit users lack vehicle access, most people without vehicle access do not regularly use transit, in part because transit is unavailable in many places.

Lack of vehicle access might arise for economic reasons, for medical reasons, or out of personal preference or habit (Brown, 2017). The relationship between vehicle access and transit use could also run two ways. People might ride transit because they do not have a car (either they cannot afford a car or cannot use

one for medical or legal reasons) or they may not have access to a car *because* they ride transit (they live and work near high-quality transit and so need not spend money on vehicles).[7]

Non-economic reasons for lacking a vehicle include disabilities or medical conditions that prevent driving, and legal sanctions that forbid it (e.g. losing a license as a result of traffic infractions, or being in the country illegally). In Southern California, perhaps the largest non-economic source of low vehicle access is immigration. Even controlling for income, immigrants are less likely than the native born to have vehicles, and more likely to use public transportation. Why this is so remains something of a puzzle. Scholars have proposed various explanations, including immigrants' tendency to live in dense areas; their tendency to live in close-knit communities that allow for more communal resources, including sharing of cars; a habit of not driving carried over from the native country; and – if the immigrant is undocumented – legal barriers to owning and operating automobiles (Blumenberg & Smart, 2014; Chatman & Klein, 2009, 2013; Liu & Painter, 2012). The evidence suggests, however, that driving less and riding transit more is not universal among the foreign born – immigrants from some countries, particularly Mexico and many countries in Central America, are less likely than others to drive and more likely to ride (Chatman, Klein, & DiPetrillo, 2010). There is also substantial evidence that over time immigrants assimilate and begin to travel more like the native born, with more driving and less transit use (Blumenberg & Evans, 2010). Thus transit ridership cannot be sustained by immigration alone; it requires a steady stream of new immigrants from particular countries, who will arrive with a transit habit and replace those earlier arrivals who assimilate driving.

Economic reasons for lacking vehicle access can include both low incomes and the high cost of driving. In some parts of California, such as northeastern San Francisco, a combination of heavy congestion, high tolls, and scarce and expensive parking make the price of owning and operating a vehicle high, and encourage even affluent people to ride transit (notably, the same density that makes the city congested can makes transit service more effective by putting large numbers of trip origins and destinations within steps of transit stops). Yet there are few places in Southern California where driving is challenging in this way. Congestion is severe, but parking is abundant and often inexpensive if not free, and low-to-moderate densities make transit less able to effectively link many places. As a result, income becomes the principal determining factor in vehicle access, and thus of transit use.

Figure 9 uses CHTS data to illustrate the disproportionate propensity to use transit among the low-income, the foreign-born, and households with limited vehicle access. The figure's dashed vertical line represents the overall average of daily unlinked transit trips in the SCAG region, and the circle associated with each subgroup indicates its relative size in the overall population. The figure shows, in short, that transit use is more common among smaller segments of the population. African Americans and Hispanics ride transit about three times as much as Whites and Asians. Immigrants who have been in the country less than ten years ride substantially more than both the native-born and longtime immigrants who have been in the country longer. Households earning under $25,000 per year ride more than twice as much as households earning $25,000 to $50,000, and these households in turn ride twice as much as households earning over $50,000 annually. By far the largest differences, however, are those that represent vehicle availability. Households without vehicles take almost five times as many transit trips as households with one vehicle,

[7] These reasons might interact. People who cannot afford vehicles might choose to live near transit because of their lack of vehicle access (Glaeser, Kahn, & Rappaport, 2008).

and households with one vehicle take twice as many trips as households with two. If we measure vehicles per adult, households with one vehicle for every two adults take twice as many trips as households with one vehicle per adult. Finally, people without driver's licenses take many more transit trips than licensed residents.

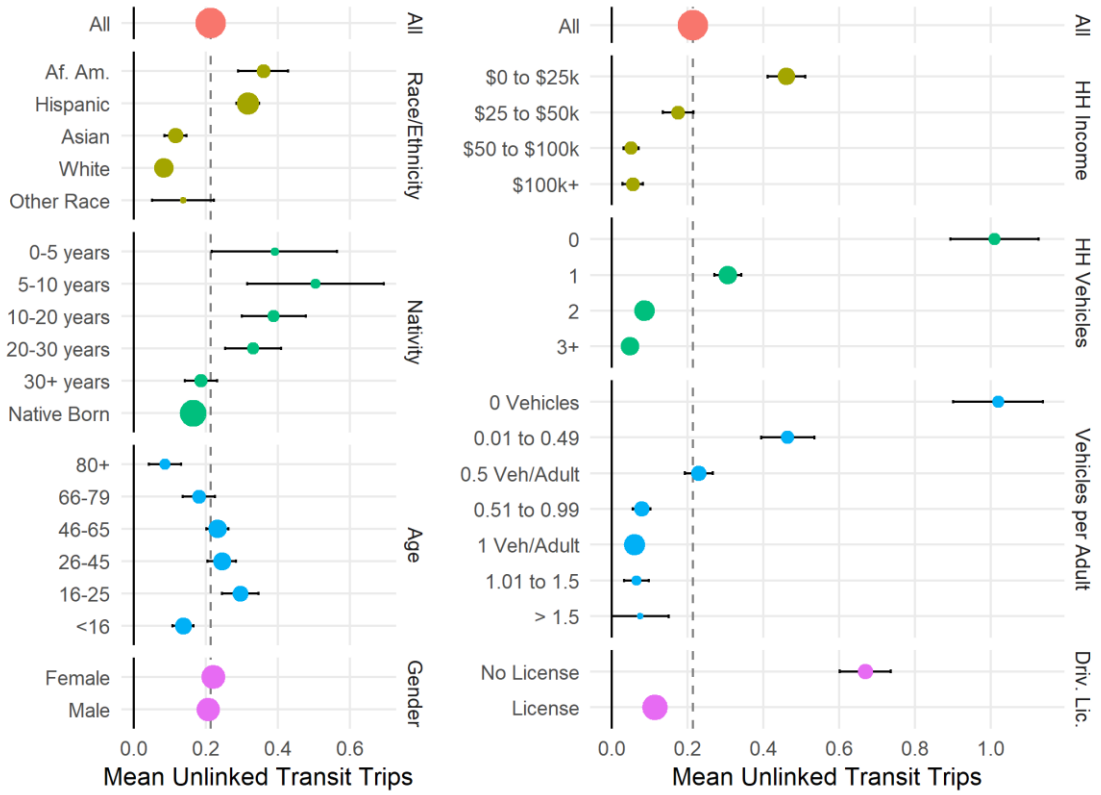

Figure 9. Mean transit trips by socio-economic characteristics and automobile access (CHTS).

The drawback of the CHTS, as we have mentioned before, is that it provides only one year of data. Table 1 uses LA Metro's annual rider surveys to show that the prevalence of people with low incomes and limited vehicle access on transit extends across years. We examine the 2005 survey (the earliest available) and then annual surveys from 2010 to 2016. Across both bus and rail riders, at least 69 percent of transit users (and often closer to 80%) report not having a vehicle available to make their trip. These proportions are higher for bus riders than rail riders, but even among rail riders between 58 and 65 percent (depending on the year) report not having a vehicle. The share of riders reporting not having a vehicle, furthermore, has grown over time.

In addition to limited vehicle access, Metro riders generally have low incomes and are strongly dependent on transit. Close to half of all surveyed LA Metro riders in each year have household incomes under $15,000. The median household income of riders hovers near $16,000, and the average income barely exceeds $25,000 in most years. In most years a strong majority of riders are habitual (riding over 4 days a

week) and a majority are longtime users (riding over 5 years). The riders are also overwhelmingly nonwhite.

All these characteristics make Metro riders – who are, again, most of SCAG's transit users – strikingly different from the population at large. The CHTS shows that in 2012, 73 percent of LA County residents took transit only occasionally or never, and the 2016 Census ACS shows that LA County residents are 26 percent non-Hispanic white, and that county median household income is $62,000. Only 5 percent of the county's households earn less than $15,000 per year. Thus SCAG's largest transit operator has for over a decade been dominated by low-income, nonwhite people with little vehicle access, people who live and move very differently from the typical Southern Californian.

	2005	2010	2012	2013	2014	2015

Source: Metro Rider Surveys. Not all questions asked every year. Dollars are nominal. "No vehicle" indicates that respondents lack access to a vehicle for the current trip.

Table 1. Characteristics of LA Metro riders, 2005-2015.

The importance of vehicle access is reinforced by evidence from other transit operators. A small operator in the SCAG region, the Montebello Bus Lines, surveyed residents (not just riders) in 2016. Most respondents did not ride transit, and 55 percent of non-riders said they would only ride if they lost access to their car. Most people who did ride did not have access to a vehicle (Diversified Transportation Solutions 2015). In 2016, the OCTA also surveyed Orange County residents about their travel behavior. The results were similar. Only three percent of people who always had vehicle access listed transit as their primary travel mode, compared to 33 percent of people who never had a vehicle (True North Research 2015).[8]

The OCTA survey also stands out for usefully disaggregating "lack of vehicle access," and demonstrating that vehicle access is not the same as vehicle ownership. Over 70 percent of OCTA transit users had a car in their household, but the car was not available to them. In most instances it was being used by someone else, but 19 percent of current riders were unable to drive, and another eight percent reported having a vehicle that was not working (True North Research 2015). People in households with vehicles can still lack

[8] Note that 2/3 of people without vehicle access still did not use transit regularly.

vehicle access. If a household has more adults than vehicles, and if most adults move around on most days, then someone is without a car, and the odds of using public transportation rise.

We emphasize again, however, that most people simply do not use public transportation very often. The four panels of Figure 10 use 2012 CHTS data to divide the California, Southern California, and LA County populations into three groups: *Transit Commuters* (respondents who use transit for the journey to work); *Transit Non-Commuters* (respondents who used transit in the week prior to the survey but do not use transit for the journey to work); and *Infrequent Transit Users* (respondents who do not use transit for the journey to work and did not use it in the previous week).

In general, and unsurprisingly, transit use is more intensive in the SCAG region than in California, and more intensive in LA County than in the SCAG region. Beyond this difference, the patterns relating to these three types of users are generally consistent across the three geographies. *Transit Commuters*, who garner perhaps the most attention from public officials and transit planners, ride most frequently (44 to 49 trips per month), but are a very small share (2% to 3%) of the population; as a result, they account for just 25 percent to 30 percent of all transit trips taken, despite their frequent use. *Transit Non-Commuters* ride transit less frequently (11 to 16 trips per month) than *Transit Commuters,* but account for a much larger share (20% to 23%) of the population, and as a result they actually account for over half (54% to 57%) of all transit trips. Finally, *Infrequent Transit Users* ride little or not at all, averaging only 0.9 to 1.5 trips per month across the three geographies. This group, however, comprises about three-quarters (73% to 78%) of the population, and because of this large base, *Infrequent Transit Users* account for better than one in seven (16% to 18%) of all transit trips.

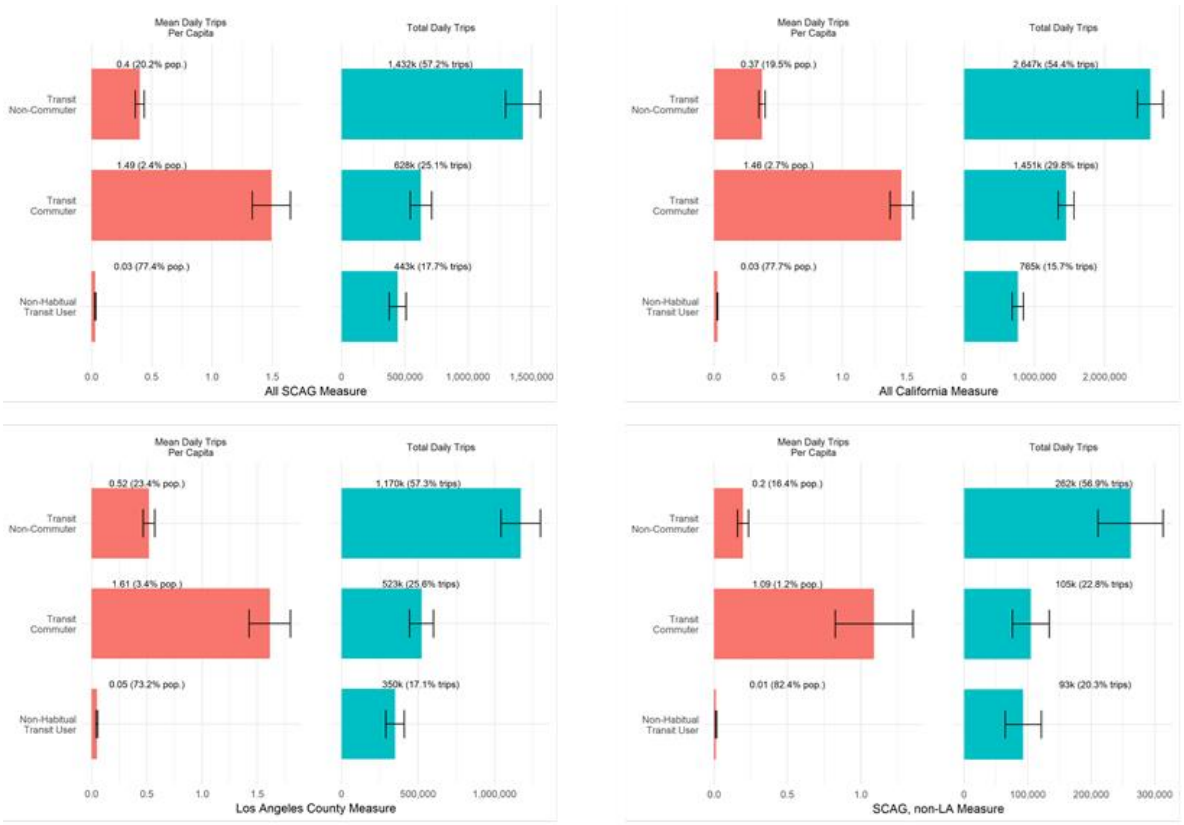

Figure 10. Mean and total daily trips by transit user group for the SCAG region, California, Los Angeles County, and non-Los Angeles SCAG region.

This snapshot of transit users is a picture of asymmetry, and this asymmetry suggests how transit ridership can fall dramatically and seemingly suddenly. The people who ride transit regularly are a narrow segment of the population. They come disproportionately from households with two or more adults per available vehicle, and especially from households with no vehicles. They have lower incomes, on average, and are more likely immigrants, young adults, and African-American or Latino. Many of them do *not* ride transit to or from work; transit commuters are just three percent of the population, and 13 percent of regular transit riders. The transit industry is thus heavily-dependent on a small subset of people, and very sensitive to even small changes in how those people choose to move around.

EXAMINING SOUTHERN CALIFORNIA'S DECLINE IN TRANSIT USE

Transit ridership can fall for multiple reasons. For convenience we divide these reasons into two categories: factors that transit operators (funding permitting) can control, and factors they cannot. We take these up in turn.

Factors Within Transit Operators' Control

The Quantity and Quality of Transit Service

People will ride transit less if service is slow, infrequent, or unreliable, and/or if rides are difficult or dangerous to take. As the quantity or quality of service falls, ridership should fall as well.

The Quantity of Transit Service

Some observers contend that recent drops in transit ridership can be tied directly to declining service quantity. For example, Hertz (2015) ties falling transit ridership to cuts in bus service, and articles in both the Wall Street Journal (Harrison, 2017) and New York Times(Rosenthal, Fitzsimmons, & LaForgia, 2017) make similar arguments. Freemark (2017) argues that LA's declining bus ridership is a function of Metro's falling service levels, and observes that average bus speeds fell 13 percent between 2005 and 2013.

Service levels certainly have a strong influence on ridership, even controlling for reverse causality – the fact that places with more riders often add more service (Alam, Nixon, & Zhang, 2015; Taylor, Miller, Iseki, & Fink, 2009). But service levels can be measured in many ways; two of the most common metrics are vehicle revenue miles (VRMs) and vehicle revenue hours (VRHs). VRM measures the distance transit vehicles cover while in service, while VRH measures the amount of time vehicles are in service. Both Hertz (2015) and Harrison (2017), in relating falling ridership to service declines, measure service using VRM. VRM alone, however, can be a problematic measure of transit service. In practical terms, VRM differentiates faster, longer-distance commuter services from lower speed local service. VRH, in contrast, measures the supply of different kinds of services (local bus service, bus rapid transit, rail transit, express bus, commuter rail, etc.) more similarly. VRH differentiates less among modes and service area types because the time between stops often varies far less than the distance travelled between them. A dozen stops spaced far apart in uncongested outlying suburbs can take a similar amount of time to serve as a dozen closely-spaced stops in a congested urban environment. The miles covered on the two routes will vary greatly, but the time required to serve them may not.

As a result, falling VRM *can* indicate service cuts, but can also reflect transit vehicles operating in higher levels of congestion, or agencies increasing local service rather than express service, or agencies redirecting service from outlying areas to central areas.

For example, if a transit agency shifts service from outlying suburban routes that travel longer distances at higher speeds to shorter, slower urban routes, VRM would almost certainly fall, as would average speed. But VRH may not change. Vehicles moved to dense areas typically cover less ground, but also move more slowly, stop more frequently, and dwell longer at each stop to allow more people to board and alight. In this case a "cut" in VRM would not necessarily be associated with a cut in VRH, and could actually deliver more service to more people.

In short, falling VRM is hard to interpret without also examining VRH. If VRM and VRH fall at roughly the same rate, then service is likely falling absolutely. But VRM falling substantially more than VRH suggests a change in service deployment or operating conditions (such as worsening congestion), rather than a service cut.

With this as background, we can consider the SCAG region's recent trends in VRM and VRH; we will show that rates of change in VRM and VRH have generally not been in concert. Figure 11 shows the relative trends in total VRM for the US, California, the SCAG region, and the SCAG region excluding LA Metro or OCTA between 2000 and 2016.

While VRM has increased across all four geographies, it has grown faster in the SCAG region than the U.S. or California as a whole, and faster still among SCAG's smaller transit operators – suggesting a relative shift in service delivery from LA Metro and OCTA to the smaller operators.

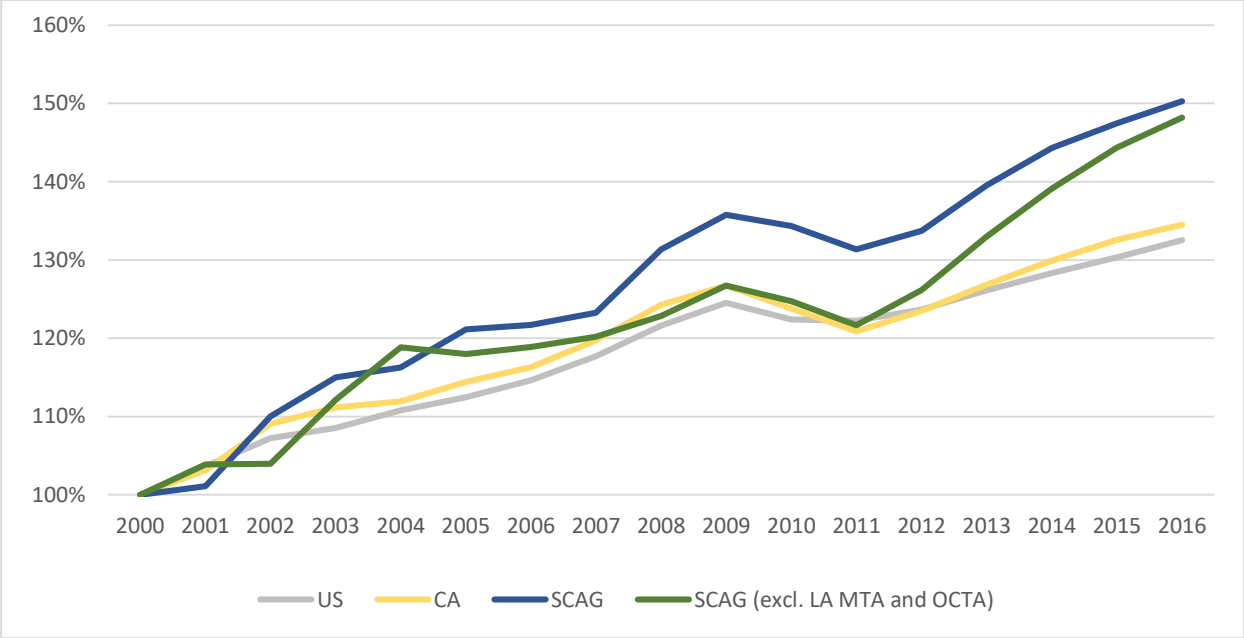

Figure 11. Indexed vehicle revenue miles. *Growth in service in the SCAG region outpaces national and state trends; within the SCAG region, all other operators have collectively added service at a faster rate than LA MTA or OCTA.*

This pattern is confirmed if we examine absolute VRM trends in the SCAG region separately for LA Metro, OCTA, and the remaining SCAG operators (Figure 12). Overall transit VRM has been growing for all three groups, but growing faster at the smaller operators.

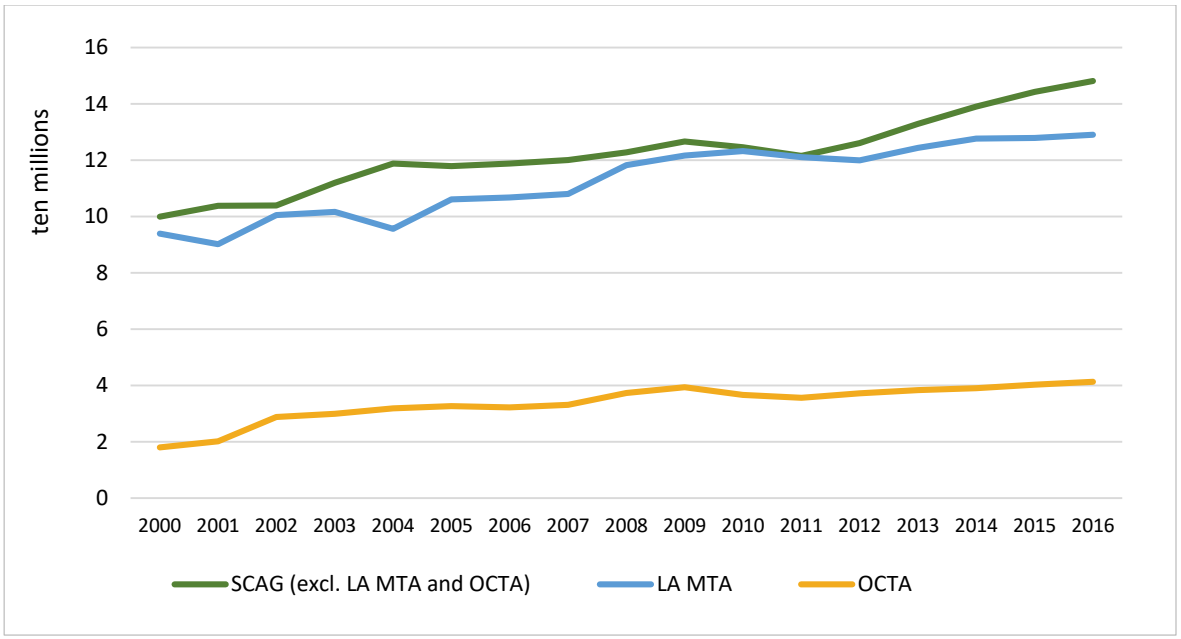

Figure 12. Vehicle revenue miles. *Service levels for LA MTA matches aggregate service provision for all other operators in the region (minus OCTA). Service is growing faster in the SCAG area excluding LA MTA and OCTA than at LA MTA or OCTA.*

While VRM rose in the aggregate from 2000 and 2016, it has not been climbing for all modes. Figure 13 shows the roller coaster that has been the VRM trend for local bus service over this period: Significant growth between 2000 and 2005, little change between 2005 and 2009, a steep drop between 2009 and 2013, and slow growth from 2014 to 2016. Rail service, in contrast, has been steadily rising, especially light rail (Figure 14).

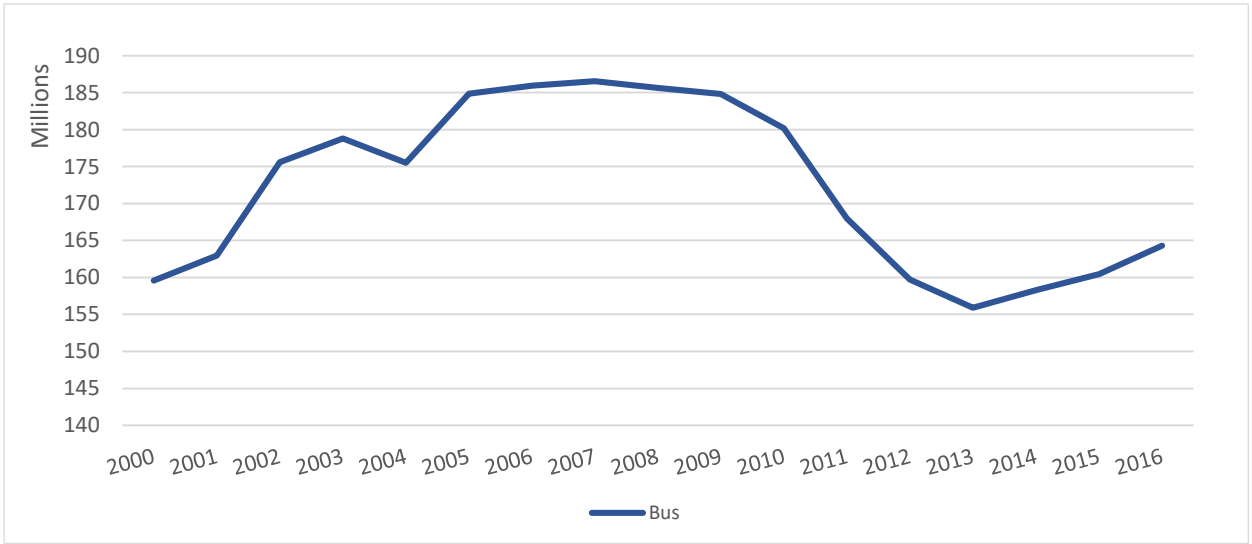

Figure 13. SCAG region: VRM for bus. *Service in miles traveled dropped by 15% between 2007 and 2013. Service has increased since. Hours of service has also declined, but not as rapidly as miles of service, indicating that service is cut on suburban bus lines.*

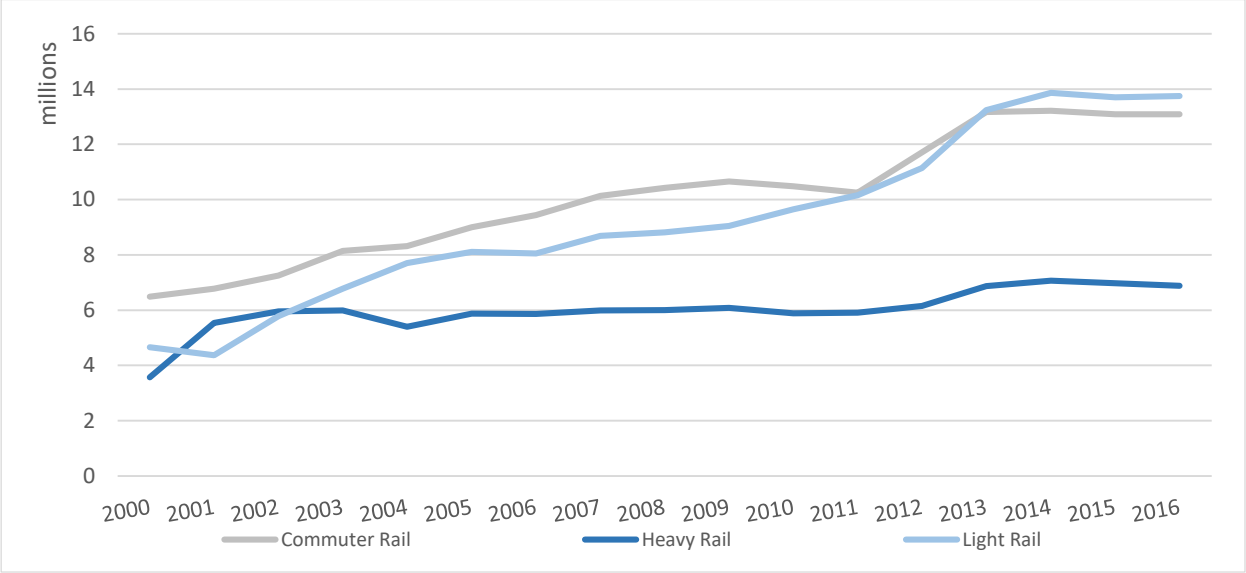

Figure 14. SCAG region: VRM for rail. *Substantial service increases for all commuter and light rail since 2000.*

If we examine service hours (VRH), we see similar aggregate trends. VRH rose from 2000 to 2009 in the US, California, and the SCAG region, fell from 2009 to 2011 during the Great Recession, and then climbed again across all three geographies through 2016 (Figure 15).

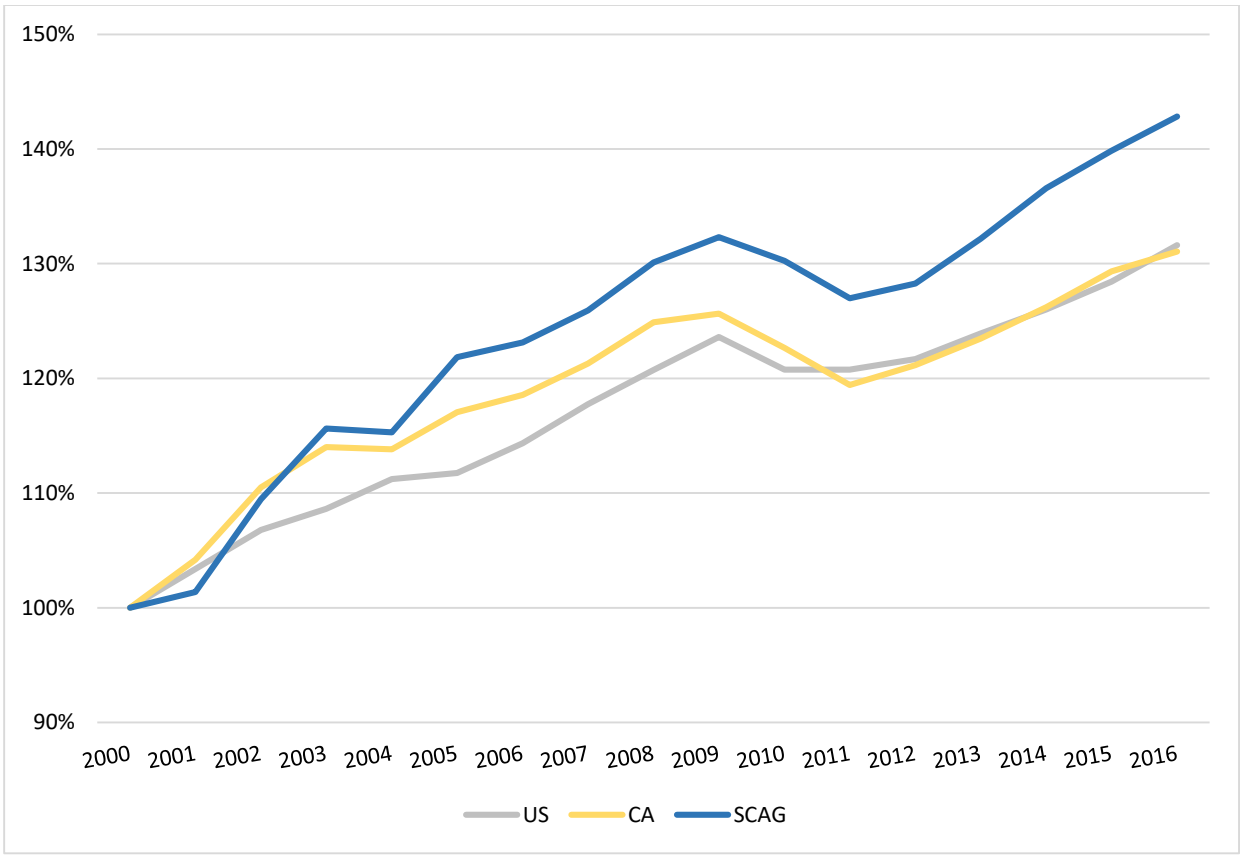

Figure 15. Indexed vehicle revenue hours. *Growth in service in the SCAG region outpaces national and state trends.*

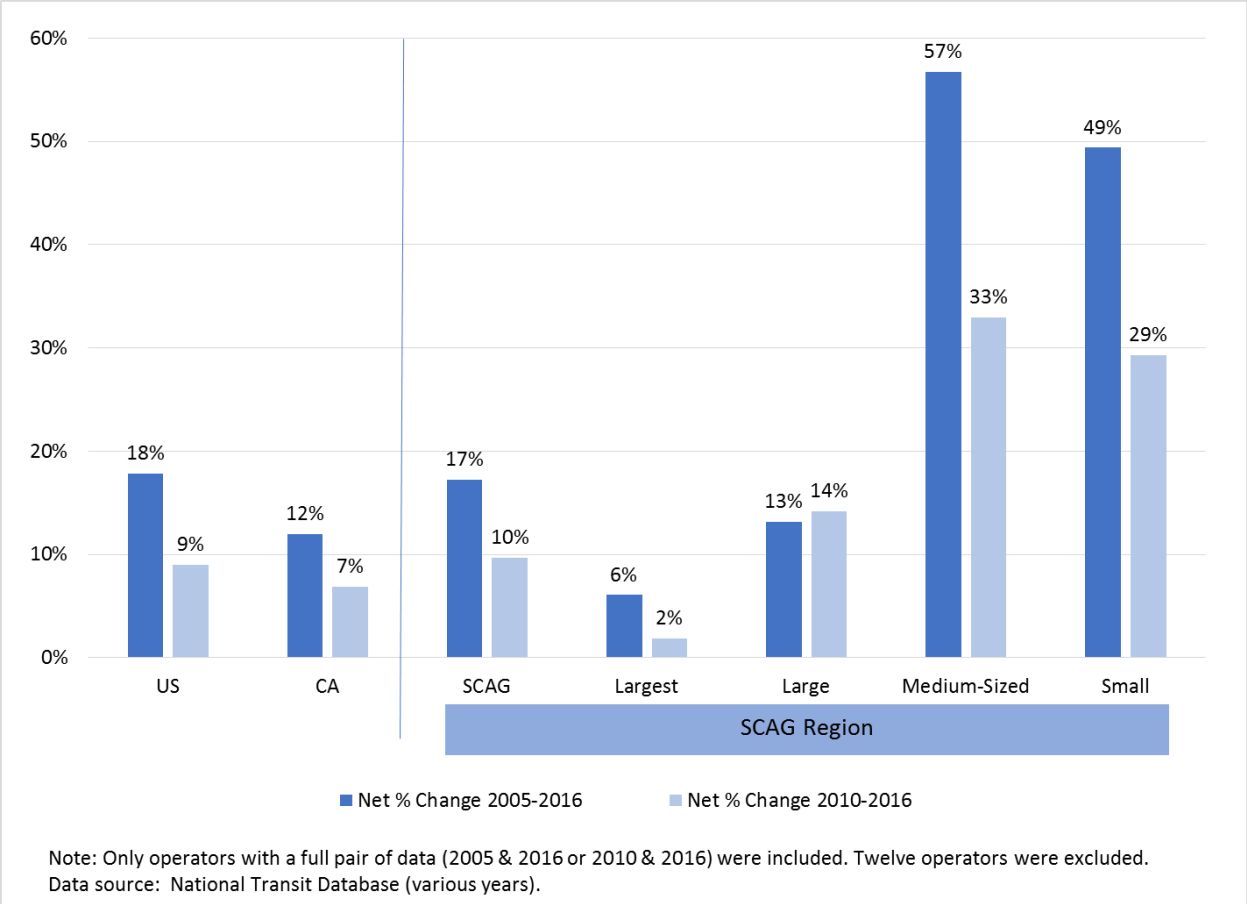
Figure 16 shows the percent change in vehicle revenue hours over two time periods – 2005 to 2016 and 2010 to 2016 – across three geographies (US, California, SCAG region) and across four types of SCAG-region transit operators (Largest, Large, Medium, and Small). The figure shows that VRH increased during both time periods across all three geographies and all four operator types. It also shows, however, that VRH grew least among the largest operators that have lost the most riders, while it increased much more among the smaller operators.



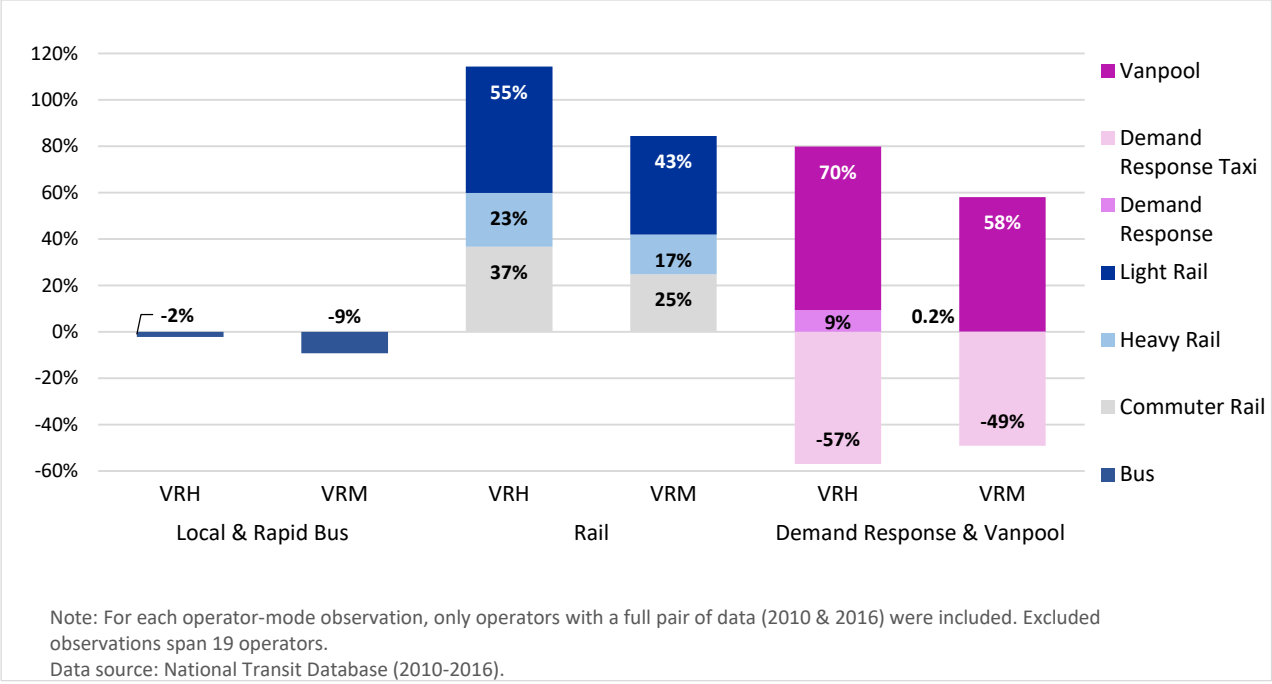


Figure 16. Changes in indexed vehicle revenue hours by region and SCAG transit operator size: 2005-2016 & 2010-2016. *Service growth among the largest SCAG operators was lower than national, state, or regional averages, and much small than smaller SCAG-region operators.*

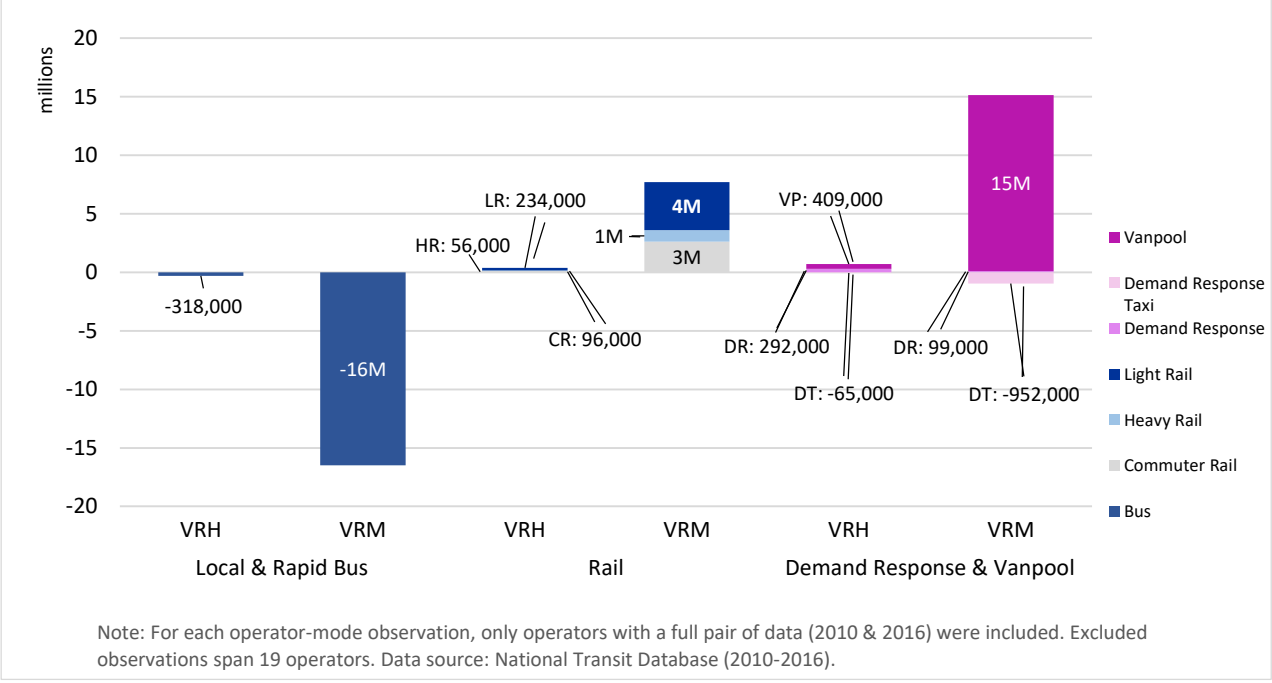

Finally, Figures 17 and 18 show the absolute and relative changes in VRM and VRH by mode between 2010 and 2016.[9] The figures show substantial overall shifts in service among modes, with local bus, rapid bus and demand response taxi service declining, while rail, commuter bus, and vanpool service increased. In absolute terms, local and rapid bus service declined most, while commuter bus and vanpool grew most; in relative terms, rail transit grew most while demand response fell most.

[9] Note that because Figure 17 shows absolute changes in both VRM and VRH on the same Y-axis, the VRM changes appear to be substantially larger than the proportional differences shown in Figure 16. These apparently large differences are mostly an artifact of transit service moving anywhere from about 6 (for the slowest urban bus service) to 40 (for the fastest commuter rail service) miles per hour, on average. This means that, for example, a one million VRH increase might be expected to have a corresponding 10 million or more VRM increase.

Note: For each operator-mode observation, only operators with a full pair of data (2010 & 2016) were included. Excluded observations span 19 operators.
Data source: National Transit Database (2010-2016).

Figure 17. Percent change in service (hours and miles) by mode: SCAG region 2010-2016. *Rail and vanpool have largest % gains, and service is added in the urban core, rather than to outlying areas. Bus service hours were slightly reduced, and came from outlying areas.*

Note: For each operator-mode observation, only operators with a full pair of data (2010 & 2016) were included. Excluded observations span 19 operators. Data source: National Transit Database (2010-2016).

Figure 18. Change in service (hours and miles) by mode: SCAG region 2010-2016. *A 9% reduction in bus service miles is equivalent to 16.5 million bus service miles cut. Vanpool had the most service miles added, reflecting the longer commutes that vanpool serves.*

Overall, these shifts in service provision reflect both the choices and mandates of public policy. For better than three decades Southern California, and Los Angeles County in particular, has chosen to invest heavily in new rail services. As these new services have come on line, they account for a growing share of the region's transit service. Second, federal civil rights legislation, in the form of the Americans with Disabilities Act, has mandated the delivery of both accessible and demand-response transportation services to a growing and aging population. In combination, these choices and mandates have shifted transit service away from buses and toward rail and van services.[10]

What do these changes in transit service supply mean for transit patronage? First, Figure 19 shows the trends per capita VRH and per capita transit boardings over the past quarter century in the SCAG region. Transit service supply has been mostly climbing in the SCAG region for better than a quarter century, while transit use has never reached the 1991 levels. Given this, there is no *prima facie* case that faltering transit service supply is driving down patronage.

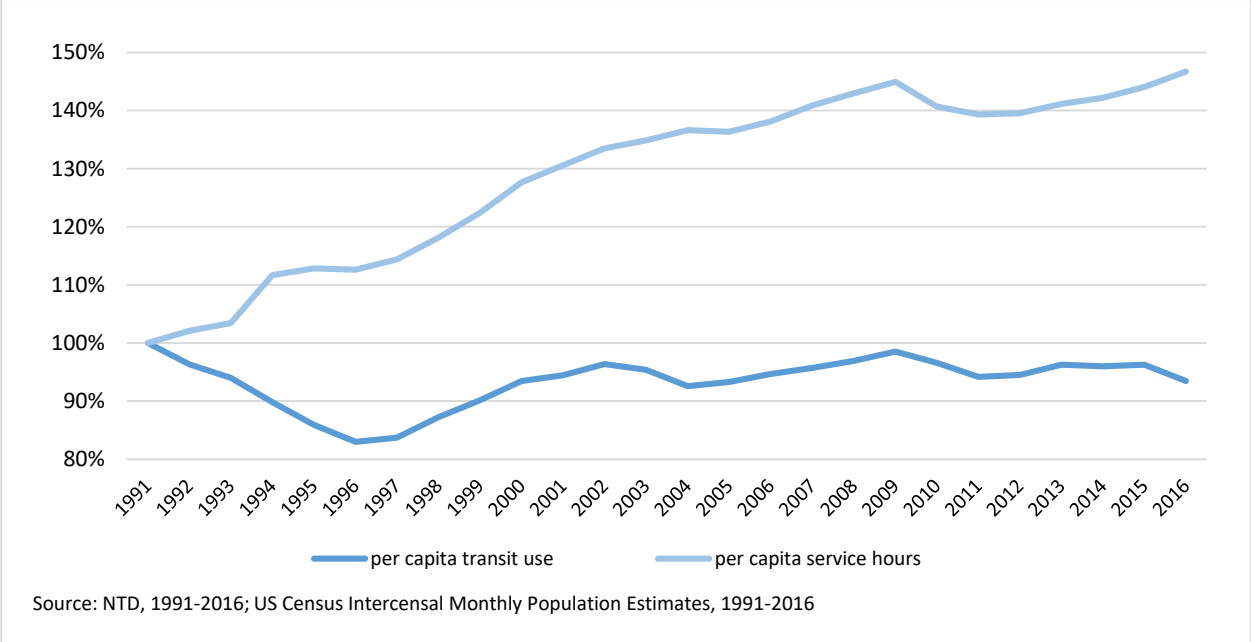

Figure 19. Transit trips and transit supply (1991-2016). *Per capita transit supply has increased 34% since 1991, while per capita transit use has not changed much.*

[10] Though not directly relevant to our question, these shifts have significant budgetary implications beyond just the deployment of various services (Taylor, Garrett, & Iseki, 2000). Local bus and bus rapid transit services (with the exception of those operating in exclusive rights-of-way) tend to be the cheapest to deliver and require the smallest per passenger subsidies. By contrast, the annualized capital plus operating expenses of rail transit tend to be substantially greater per passenger, while the per passenger subsidies for ADA demand response services tend to be the highest of all.

As a final way to examine the relationship between service levels and ridership, we examine the shifts between modes that occurred within the region's largest transit operator, LA Metro. Doing so allows us to address the possibility that aggregate increases in services are masking drops in those types of services— such as buses— that most transit riders rely on. The figures below show the indexed trends in boardings, service (VRH), and productivity (boardings/VRH) for LA Metro bus (Figure 20) and rail (Figure 21) service from 2000 to 2016, and demand response service (Figure 22) since 2008. For local bus and BRT service, transit service supply has tended to follow, rather than lead, changes in ridership — at least through 2014. Beginning in 2014, bus service rose slightly while boardings plunged. Rail service, not surprisingly, has increased more than 150 percent since 2000, and ridership has increased as well, though more slowly. Both service and patronage have tailed off since 2014, but largely in concert— there is no obvious sign of one leading the other. Finally, demand response and van service supply has grown steadily since 2008; boardings increased steadily, albeit more slowly than service, through 2015. Over the past year, service continued to gradually climb, while patronage began to fall.

Collectively, these data offer little evidence that service cuts are driving away customers. Instead service expansion has been accompanied by less ridership, with the main result being lost productivity, particularly for rapidly expanding rail and van services. Rail and van productivity (measured as boardings per VRH) has eroded steadily since 2009, while the service effectiveness of local bus and BRT service began dropping later (and more precipitously) in 2014. Falling service does not seem to be the culprit for falling ridership; falling ridership, in concert with expanding service, is the culprit for falling productivity.

Figure 20. LA MTA: Indexed bus and BRT boardings, service, and productivity. *Declining ridership since 2007, with services' slow growth in the post-recession period leading to declining productivity.*

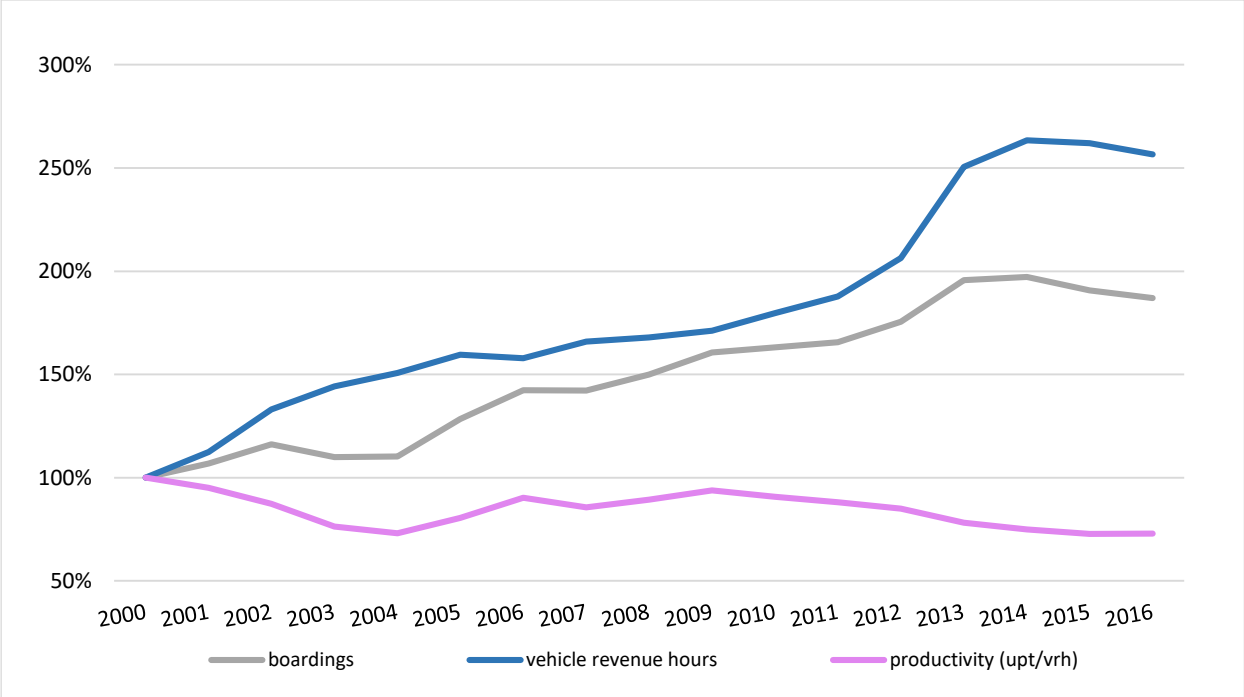

Figure 21. LA MTA: Indexed rail boardings, service, and productivity. *Light rail service doubles with the opening of the Expo Line. Boardings do increase, but slower than the amount of service added.*

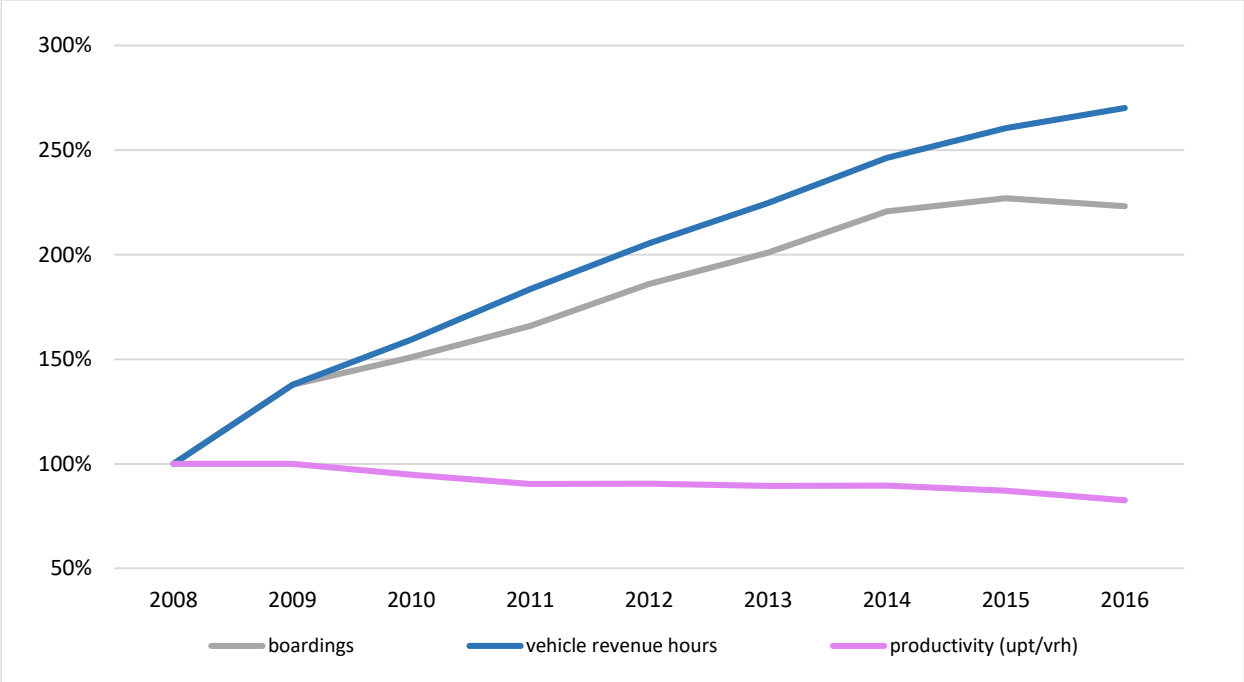

Figure 22. LA MTA: Indexed demand response boardings, service, productivity.
Ridership more than doubled, while service increased by 2.8x.

The Quality of Transit Service

Even if transit quantity does not change, transit quality might. Transit quality has no specific definition, but we can divide it into speed, reliability, and experience. Speed measures how quickly transit vehicles move throughout the region. Reliability is a measure of on-time performance: Do vehicles arrive and depart when they are supposed to? Experience is a measure of how safe or comfortable people feeling during their transit journey, including the time they spend waiting for and transferring among their buses and trains.

Local bus and BRT service in the SCAG region has been slowing down over time. This slowdown is likely a result of many factors, including worsening congestion, shifts from faster suburban to slower urban service, shorter stop spacing, and longer stop "dwell" times to load and unload passengers. Whatever the underlying causes, region-wide bus vehicle speeds declined five percent between 2000 and 2010, and another eight percent between 2010 and 2016, for a total drop in speed of nearly 13 percent over 16 years. By comparison, rail transit speeds were down only two percent between 2000 and 2016.

Falling speeds slow travel times, and if operators do not counteract falling speed by adding more vehicles, then headways (the time between vehicle arrivals at a stop) will rise. Rising headways make transit less attractive by increasing average wait times at stops and lengthening the times of transfers among vehicles. Research has shown that transit passengers find waiting for busses and trains to be especially burdensome, so increased headways can undermine the quality of transit service even if the quantity (in terms of vehicle revenue hours of service) stays unchanged (Iseki & Taylor, 2009).

The SCAG region has 41 transit agencies that operate fixed-route general public service, and on-time performance naturally varies across them.[11] Measuring reliability for all or even most of these operators is therefore beyond the scope of this report. We can, however, examine reliability for LA Metro, which again accounts for the lion's share of the SCAG region's transit trips and lost trips.

Historically, Metro has been unreliable relative to other large transit agencies. A 2008 study by the agency showed that compared to 9 peer operators, Metro had both a lower on-time target and a lower on-time percentage (a vehicle is considered "on-time" if it is less than 5 minutes late). Metro aimed to have 70 percent of its vehicles arrive on time, and attained a rate of 63 percent. In comparison, New York attempted an 83 percent on-time rate and attained an 82 percent rate (Flowers & Snoble, 2008). Metro's reliability problems occur almost entirely on buses, which can easily become trapped in congestion (and which, of course, can also exacerbate congestion).

In the intervening years, however, Metro's on-time performance appears to have improved substantially. An analysis of Metro data by local reporters (Mendelson, 2015) suggests that from 2010 to 2015 Metro rail maintained a 99 percent on-time rate (with subways being late 1 stop out of 200, and light rail 1 stop out of 50), while the buses improved their on-time rate to 81 percent. We say "appears" because this discussion comes with an important caveat: Reliability is a function of the conditions in which buses and trains operate, the efficacy of the bus and train operations, and the schedule that sets the performance expectations. Controlling for conditions or operations, schedules that assume few traffic disruptions and little layover or recovery times can be difficult to meet, while those that assume slower speeds and provide generous layover and recovery times at the ends of routes are easier to meet.

As a result, transit operators can improve measured reliability in two ways. The first involves steps like better field supervision, quicker boarding and alighting procedures that reduce dwell times, and giving buses their own lanes in chronically congested districts. All these steps can change operations, and lower the variability of travel times. But the second way to improve reliability is to change the schedule, by factoring in more slack. Doing so is not necessarily disingenuous, and may simply reflect the challenges of operating in heavy congestion. Adding slack to schedules can allow vehicles to maintain performance even in the face of disruptions (severe congestion, crashes, crowds of people boarding or alighting at particular stops, and so on). The downside to this approach, however, is that too much slack in the schedule might increase reliability on paper but manifest as poorer-quality service in the eyes of riders. As slack increases average vehicle speeds fall, headways rise, and so do timepoint holds (instances where vehicles wait at stops so as not to run ahead of schedule). A service that is on-time because its schedule makes it less frequent is not a high-quality service.

We could not, with the data and time available to us, determine if Metro's schedule adherence improved because its buses met the existing schedule more often, or because schedules themselves were changed. If bus performance improved on the street as opposed to on paper, then we would have little reason to think service reliability was a large factor in falling ridership – bus ridership would have fallen even as schedule adherence increased. But we cannot say for certain that this occurred. We do know, however,

[11] With another 69 systems operating demand-response and other types of transit services, for a total of 110 regional transit service providers.

that rail ridership fell even as rail maintained a near-perfect on-time record. So we have some reason to think that service reliability did not play a large role in the ridership downturn.

We should also note that the advent of mobile apps that track transit vehicles in real time may have diminished the problems caused by unreliable buses. Unreliability is a larger problem when it strands people at stops with little idea of when a vehicle will arrive. To the extent people can follow vehicles in real time and adjust their departures to minimize waiting, some of the worst aspects of irregular transit vehicle arrivals can be mitigated (Yoh et al., 2011). LA Metro has next bus and next train information at its rail stations and BRT stops, and real time information about local and express buses is available on multiple smartphone applications. Metro's 2016 rider survey shows that 51 percent of bus riders have a smartphone, and that 66 percent of these riders use the phone "very often" or "occasionally" to get information about Metro rides.

A transit vehicle that arrives on time can still have poor service quality, if the experience of using the vehicle – which includes walking to the stop, waiting at the stop, and riding – is unpleasant. Specifically, if people using transit feel unsafe or uncomfortable, ridership could fall (Delbosc & Currie, 2012; Iseki & Taylor, 2009). Safety perceptions are often gendered (Loukaitou-Sideris, 2015), and a slight majority of transit users in the SCAG region are women. Note that perceptions of safety are different from, and probably more important than, safety itself. Many behaviors that are not crimes, and that do not directly threaten other people, may nevertheless disturb people nearby, and can discourage them from using transit (Ellickson, 1996; Fink, 2012).

There is some reason to think that transit vehicles, stations, and stops in the SCAG region – and particularly along LA Metro routes – came to feel less safe to riders in recent years. In 2016, LA Metro surveyed former riders, and 28 percent said that the primary reason they stopped riding transit was that they felt either unsafe or uncomfortable. Unfortunately, this survey is not conclusive. Former transit riders are a hard group to reach, and there are responses in the survey that suggest that the overall sample may not have been representative. As a result, we cannot be certain that safety actually loomed so large for former riders. At the same time, even if the survey inflated safety concerns by a factor of two, a nontrivial share of former riders (14 percent) report leaving transit because they felt unsafe. And considerable anecdotal evidence suggests that in recent years transit users started to feel less safe — such reports prompted Metro to completely revamp its security procedures in 2017.

What might explain riders' perceptions that transit is less safe? Possibly some riders have *always* felt unsafe, and what changed was not conditions on transit but the option to leave (if people got access to vehicles or TNCs, for example). We do not discount this possibility, but will take it up later in this report. If we assume that perceptions of safety really did decline in recent years, one potential (and admittedly speculative) reason involves LA County's dramatic increase in homelessness after 2010. Table 2 shows changes in the LA County homeless population from 2005 to 2017, based on homeless counts done by the Los Angeles County Housing Services Administration. Homeless counts, and especially counts of the unsheltered homeless, are for obvious reasons prone to error. Nevertheless, the table suggests that homelessness, while not as severe today as it was in 2005, has in recent years both risen sharply and changed in composition. The unsheltered chronic homeless (people who are not just homeless but also have some sort of disabling condition) became a larger proportion of the homeless overall.

Year	All Homeless		Share	Chronic Homeless		Share
	Total	Unsheltered	Unsheltered	Total	Unsheltered	Unsheltered
2005	65,287	53,429	81.8%			
2007	59,956	39,168	74.0%			
2009	38,602	21,073	54.6%			
2011	39,153	20,157	52.4%			
2013	39,463	25,136	63.7%	7,475	6,652	89.0%
2015	44,359	31,025	69.9%	13,356	nd	nd
2016	46,874	34,701	74.0%	14,644	13,746	93.9%
2017	57,794	42,828	74.1%	17,531	13,321	93.1%
Pct Change, 2005-2017	-13.0%	-24.8%	-10.4%			
Pct Change, 2009-2017	33.2%	50.8%	26.3%			
Pct Change, 2013-2017	46.5%	70.4%	16.3%	57.4%	59.2%	4.4%

Table 2. Changes in LA County homeless population, 2005-2017.

Homelessness— the simple condition of people being without housing— often arises from high housing prices that push some people out of the housing market (O'Flaherty, 1998). Chronic homelessness, however, which tends to be much more visible (in part because the chronic homeless are less likely to be sheltered) often has different underlying causes related to addiction or mental illness. In conversations with transit operators during the writing of this report, some mentioned the impact of California's prison realignment program, which led to many inmates being released from prisons and jails. The state's carceral institutions have traditionally held many mentally ill persons, and discharging them without any corresponding increase in other social services may have increased the number of people with addictions and disabilities living on the streets. No government entity tracks prison realignment's impact on homelessness, but some advocates estimate that up to 20 percent of the state prisoners discharged, and up to 10 percent of county jail inmates, have now become homeless(Holland, 2015). There is also small body of evidence, some academic and some journalistic, suggesting that the unsheltered homeless gather disproportionately around transit facilities. Transit vehicles can provide shelter and protection, while transit stops can provide a roof or even just a bench (Emmons, 2013; National Academies of Sciences, Engineering, and Medicine, Transportation Research Board, Transit Cooperative Research Program, & Boyle, 2016; Trevor, n.d.; Voorhees Center for Neighborhood and Community Improvement, 2016). To the extent some of these people use transit stops and transit vehicles as ad hoc shelters, and to the extent their presence or behavior disturbs others, realignment may have played a role in making transit seem less safe, and reducing ridership. We emphasize again that this line of thinking is quite speculative and warrants further research.

Transit Fares

Potential transit riders weigh the quality of a ride against its price. Like most goods, transit, even at constant quality, will become less attractive if its price rises, and more attractive if the price falls. The postwar high-water mark for transit in Los Angeles County occurred during a three-year program that cut bus fares in half from 1982 to 1985. When this program ended and bus fares returned to their previous levels, transit ridership fell substantially (Southern California Rapid Transit District, 1986).

The inverse relationship between fares and use, however, is complicated by two factors. First, the people who use transit the most – lower-income people with limited or no vehicle access – are generally more price sensitive in that they have less income, but *less* price sensitive in that they have few viable alternatives to transit. As a result, many transit riders are less sensitive to fare increases than one might expect given their incomes. Second, although every transit operator has a posted one-way fare, relatively few riders actually pay that rate, because agencies offer a variety of discounts and bulk payment mechanisms, including daily, weekly or monthly passes, youth and elderly discount passes, and so on that offer substantial discounts to particular classes of riders, including those who ride frequently (Yoh, Taylor, & Gahbauer, 2016). Heavy users who buy monthly passes will typically pay a per-ride rate much lower than the advertised fare. LA Metro's 2016 rider survey showed nearly half (49%) used a daily, weekly, or monthly pass, while about 25 percent paid a discounted fare.

Further complicating this issue is that transit fares can be calculated on a per-trip or per-mile basis. Arguably the most intuitive way to think about fare increases is per-trip: How much does a person pay to get aboard a vehicle? But once a passenger is on board, what follows might be a local bus trip of two blocks or a light rail trip of 22 miles. With the exception of commuter rail and some express bus routes, transit fares generally do not change with distance travelled. If the average fare to board a vehicle rises less quickly than the average distance of a trip, the per-mile fare could fall more than the per-trip fare rises, and transit may in a real sense become less expensive. For our purposes, the fare per trip is probably more relevant, as it is likely more salient to potential riders, but it remains worthwhile to consider both.

This wide array of payment methods and rates, and ways of considering these rates, makes calculating the actual fare paid by different classes of users beyond the scope of this report. We can, however, easily determine the average fare paid per boarding for a given system and the SCAG region, by simply dividing total fare revenues collected by either total boardings or passenger miles. While these metrics will fail to capture some of the nuances of fare payment among different types of users (they cannot completely control, for instance, the bulk discounts for heavy users of different lines) they are a measure of the fare payments actually made by people when they ride.

Figure 23 below displays the average inflation-adjusted fare paid per boarding across all transit systems in the US, California, and the SCAG region between 2002 and 2015. The figure shows, first, that the average transit fare paid is lower in the SCAG region than for California as a whole, which in turn is lower than the average transit fare paid nationwide. Second, the figure shows that the average inflation-adjusted fare paid per boarding in California began creeping up in 2012, and to a lesser extent in the US since 2013 and the SCAG region since 2015. Overall, however, the average inflation-adjusted fare per boarding in the SCAG region has been remarkably flat since 2002.

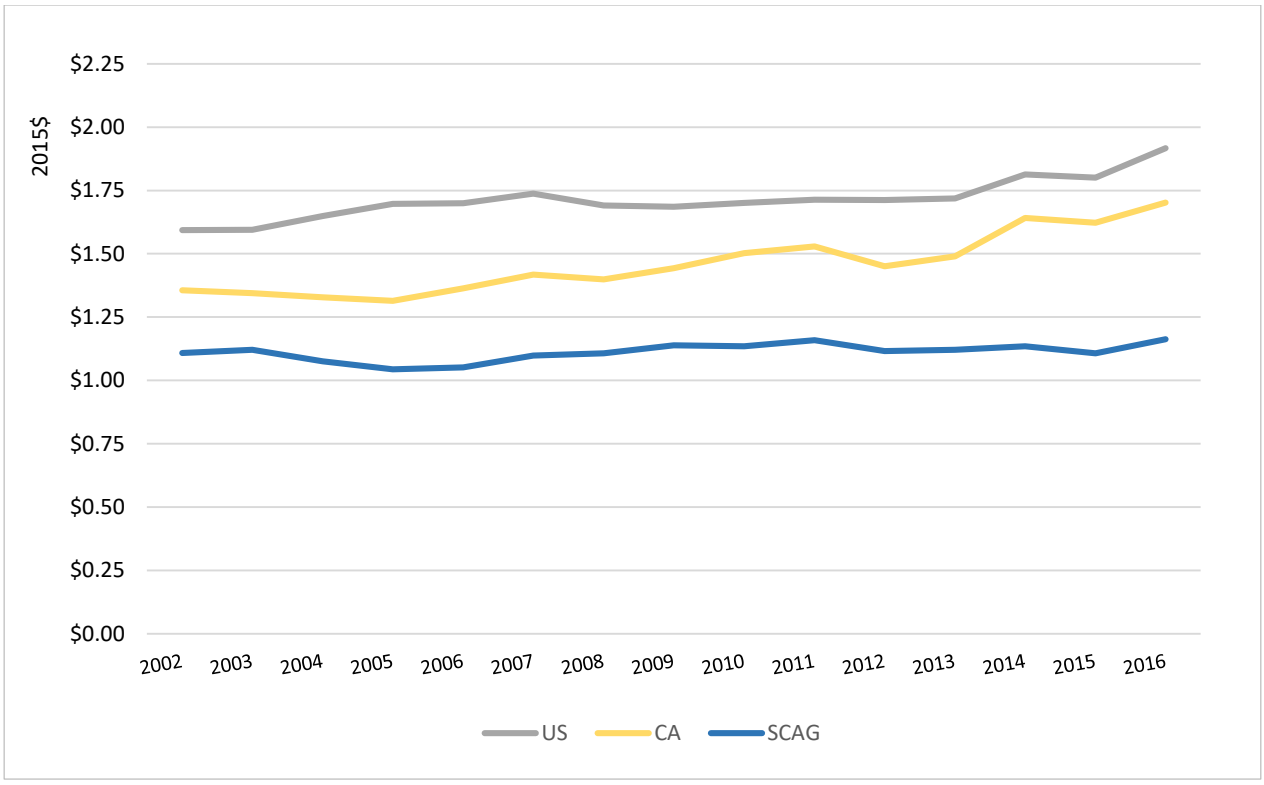

Figure 23. Average fare per boarding in 2015 dollars. *Average fare per boarding has stayed relatively constant in the SCAG region.*

National, state, and regional averages, of course, can mask considerable variation in fares paid across transit systems, services, and riders. Figure 24 shows the same inflation-adjusted trend in fares paid per boarding since 2002 for each of the six largest transit operators in the SCAG region. Focusing on these larger operators tells a different story. With the exception of Long Beach Transit, inflation-adjusted fare payments have been increasing over time on these operators. In particular, inflation-adjusted fares per boarding at both OCTA and the Big Blue Bus increased by about 50 percent between 2002 and 2016 — to nearly $1.25 and $0.75 per boarding respectively. Foothill transit had (in 2016) the highest average fares paid (at $1.25 per boarding), followed in order by OCTA, LA MTA, the Big Blue Bus and Long Beach Transit, while LA DOT had the lowest average fare paid (at just over $0.50 per boarding).

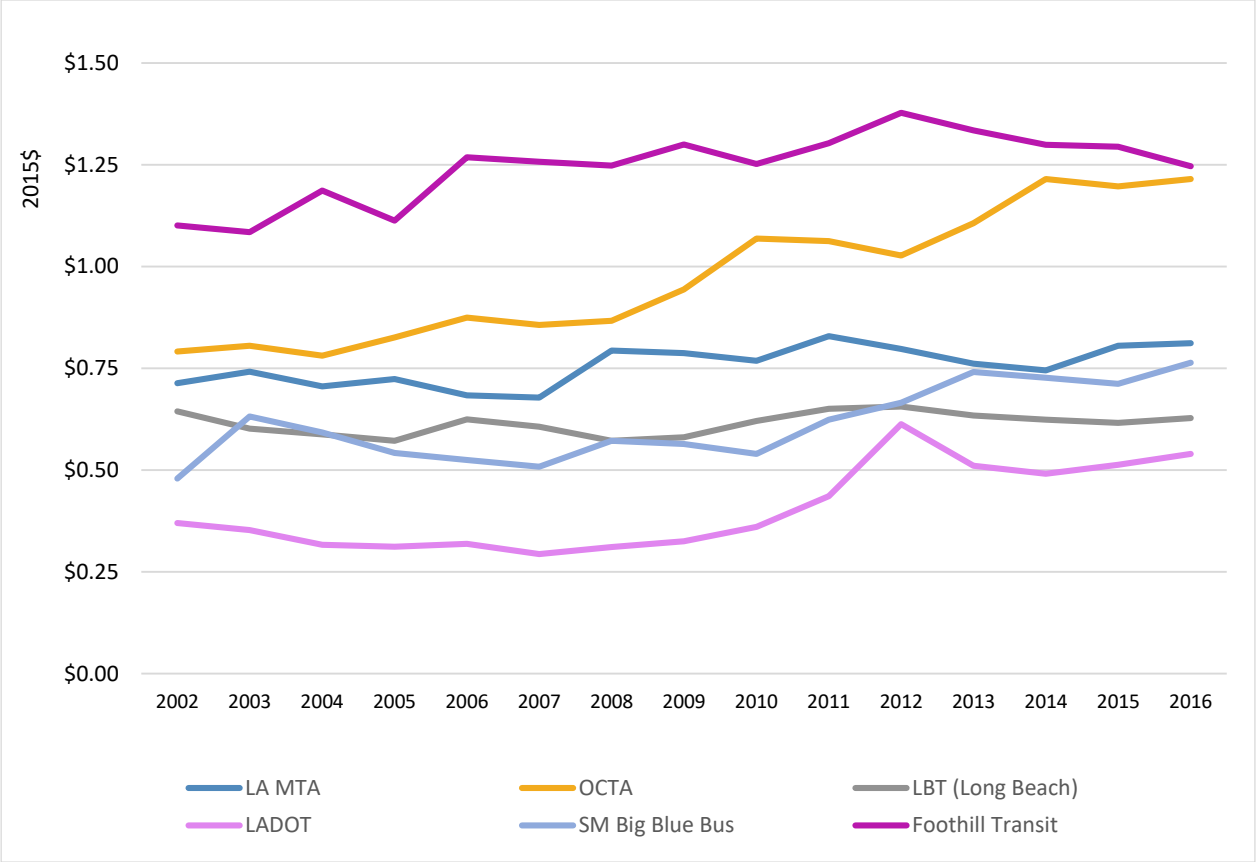

Figure 24. SCAG: Average fare per boarding for largest operators in 2015 dollars.
Inflation-adjusted average fares per boarding have increased the most rapidly for OCTA and LADOT.

Figure 25 shows the 14-year trend in real average fare paid per mile for the nation, California, and the SCAG region. Here we see that average fares paid per mile have remained largely unchanged in the U.S. and California, and in the SCAG region they have actually fallen. Despite being lower than average per mile fares in the state and nation, average per mile fares in the SCAG region have declined about 20 percent since 2009.

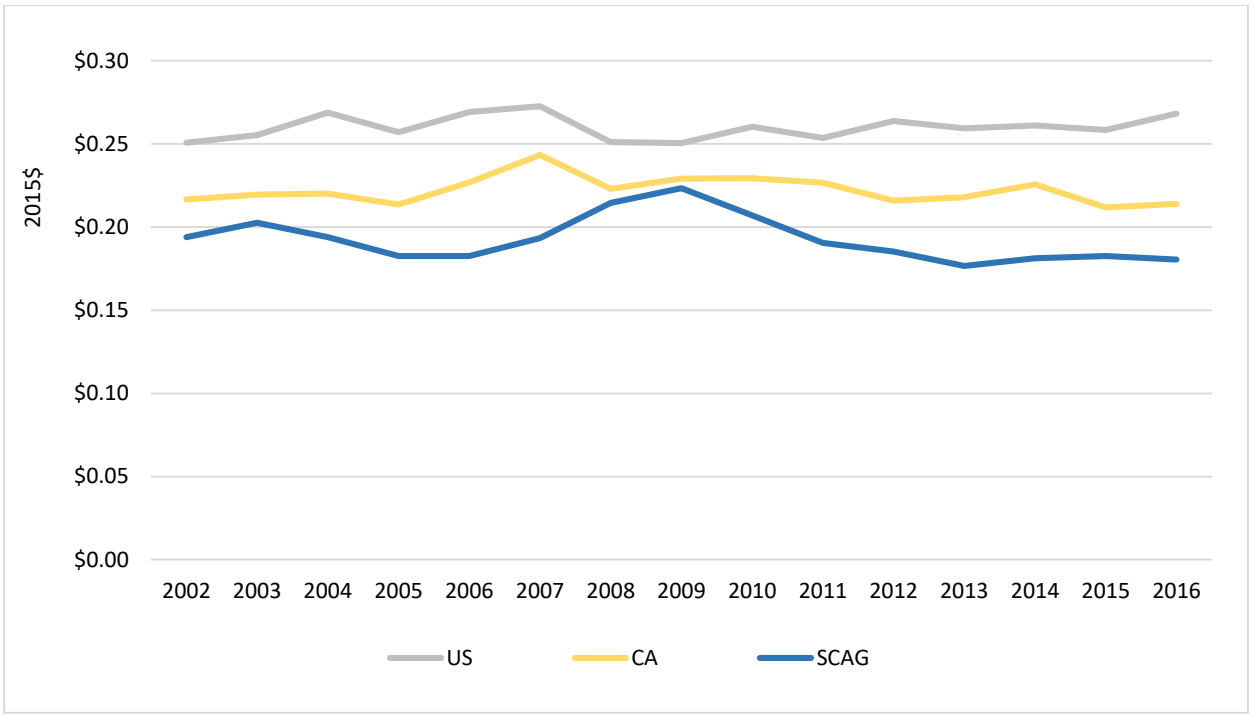

Figure 25. Average fare per passenger mile traveled in 2015 dollars. *Average fare per PMT remained fairly constant, and even declined a little since 2009.*

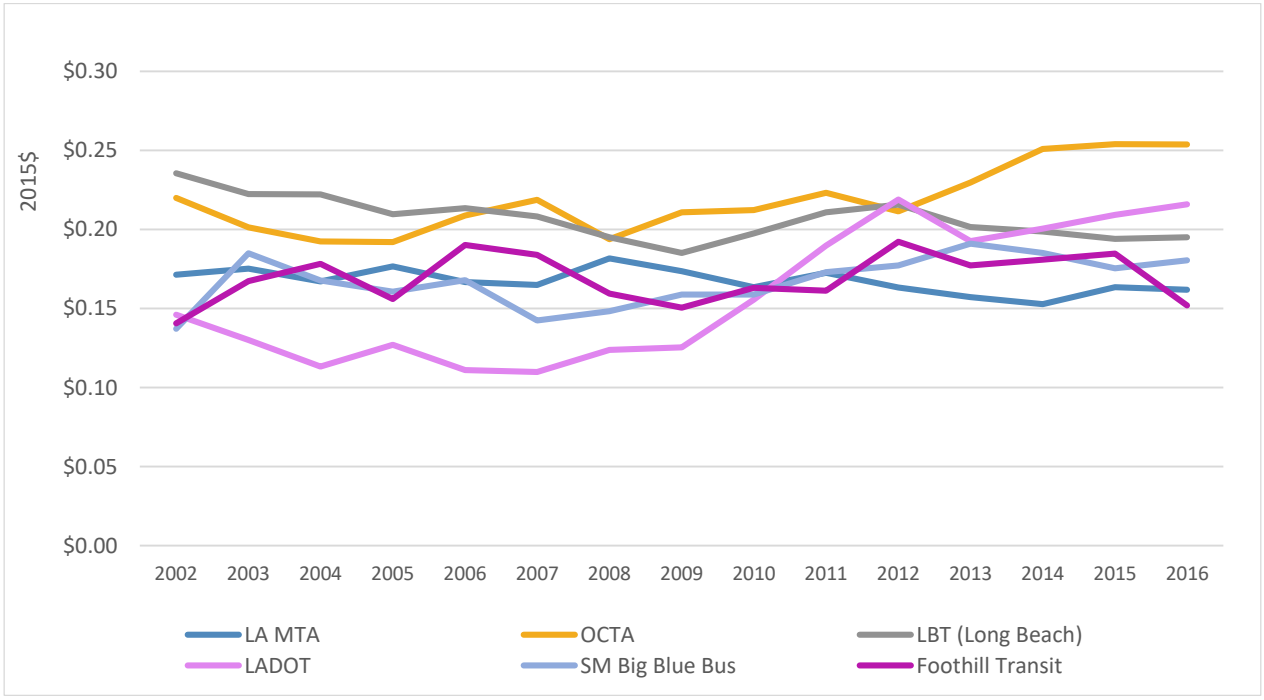

Figure 26. SCAG: Average fare per PMT for largest operators in 2015 dollars. *Average fare per PMT increased the most rapidly (about $0.07 per mile) for LADOT and slightly for OCTA ($0.04 per mile).*

If we zoom in on the six largest transit operators in the SCAG region, we see that inflation-adjusted fares per mile rose notably at two systems — LA DOT (+$0.07/mile) and OCTA (+$0.04/mile). On the Big Blue Bus and Foothill Transit per mile fares rose modestly, and at Long Beach Transit and LA Metro they fell (despite Metro's 2014 fare increase).

The most notable attribute of the figures above is the steep increase in fares for OCTA. OCTA's fares have risen over 50 percent since 2002, and OCTA is also the transit operator that has suffered the sharpest decline in ridership (about 35% since 2007). The transit industry's rule of thumb (sometimes called the Simpson-Curtin rule) suggests that a 10 percent increase in fares will be associated with about a 3 percent reduction in ridership. By this heuristic, OCTA's fare increases should have resulted in a 17 percent ridership decline.

To help isolate the association between fare increases and transit use, we estimated a multivariate regression statistical model using data for each transit operator in the SCAG region for each year between 2002 and 2016. Full details of this model are in the Appendix, but we used fixed effects to control for the panel nature of the data, and controlled for the level of service each operator provided, the average time between each bus or train arrival, and the density, size and population of the service area.

We find, after controlling for these factors, that higher fares are indeed associated with lower ridership, but by less than industry rules of thumb might suggest. Across the SCAG region over this time period, a 10 percent fare increase was associated with a roughly 1.6 percent decrease in ridership. This relationship is relatively "inelastic" (i.e. it suggests people are not very sensitive to prices) though it falls within the range of findings from other studies of how fare increases influence ridership (Cervero, 1990; Linsalata & Pham, 1991). Based on these results, we would expect OCTA patronage to have fallen about 8 percent since 2002, as a result of its fare increases.

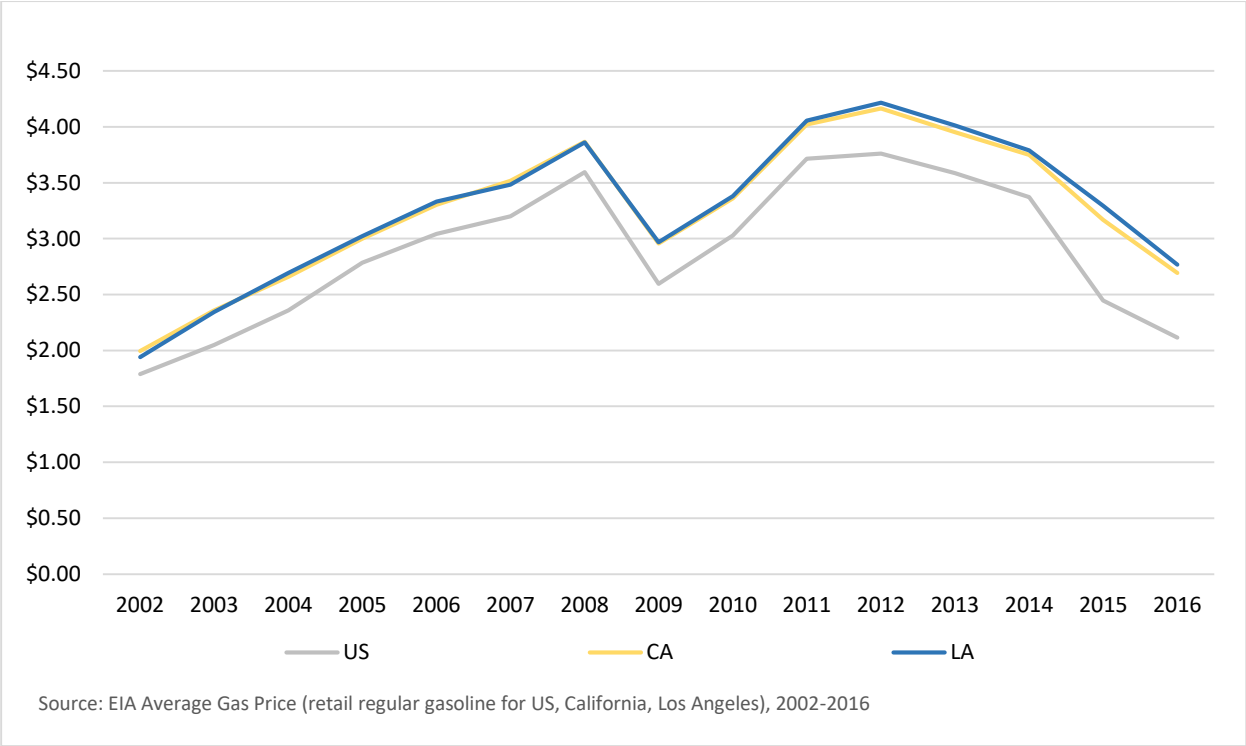
It seems plausible, in light of these data, to suggest that fare increases played some role in OCTA's lost transit trips. But OCTA's losses, as large as they are, account for a small fraction of the SCAG region's total losses. The bulk of those losses were from LA Metro, and it is harder to suggest that fare increases played a big role in Metro's ridership decline.

Factors Outside Transit Operators' Control

Fuel Prices

Fuel prices are a large and highly salient operating cost of driving. As fuel prices rise people drive less, and as they fall people drive more. In general, a ten percent increase in the price of gasoline is associated with a long-run (5 year) one to three percent reduction in vehicle travel (Goodwin, Dargay, & Hanly, 2004). Driving more, however, is not the same as using transit less, since (again) the typical driver almost never uses transit. People who drive less when gas prices are high often walk, carpool, stay home, or drive to nearer destinations (e.g. a restaurant that is 2 miles away instead of 10). Similarly, for many regular transit riders changes in the price of gasoline are immaterial, because many transit users do not have access to private vehicles. As a result of these factors, much of the adjustment to fluctuating fuel gas prices that occurs in the U.S. has no bearing on transit use, and the relationship between fuel prices and transit ridership tends to be weaker than the relationship between fuel prices and driving.

"Weaker," however, is not "nonexistent," and in both Southern California and nationwide, fuel prices rose and fell sharply from the late 1990s through 2015. Prices increased at a record pace from 1998 to 2008, declined, and then rose sharply again until 2013, after which they plunged (Figure 27). Transit ridership also fell steeply from 2013 to 2016. It is reasonable to think that falling gas prices could contribute to falling transit ridership. A steep drop in gas prices could have lured some of the minority of transit riders who do have vehicles away from transit use. Even among riders without vehicles available, falling fuel prices could have an indirect impact. When fuel is cheap rides in cars become more available: Friends or family members who become more likely to drive, and people who might otherwise have used transit might start carpooling for some trips.



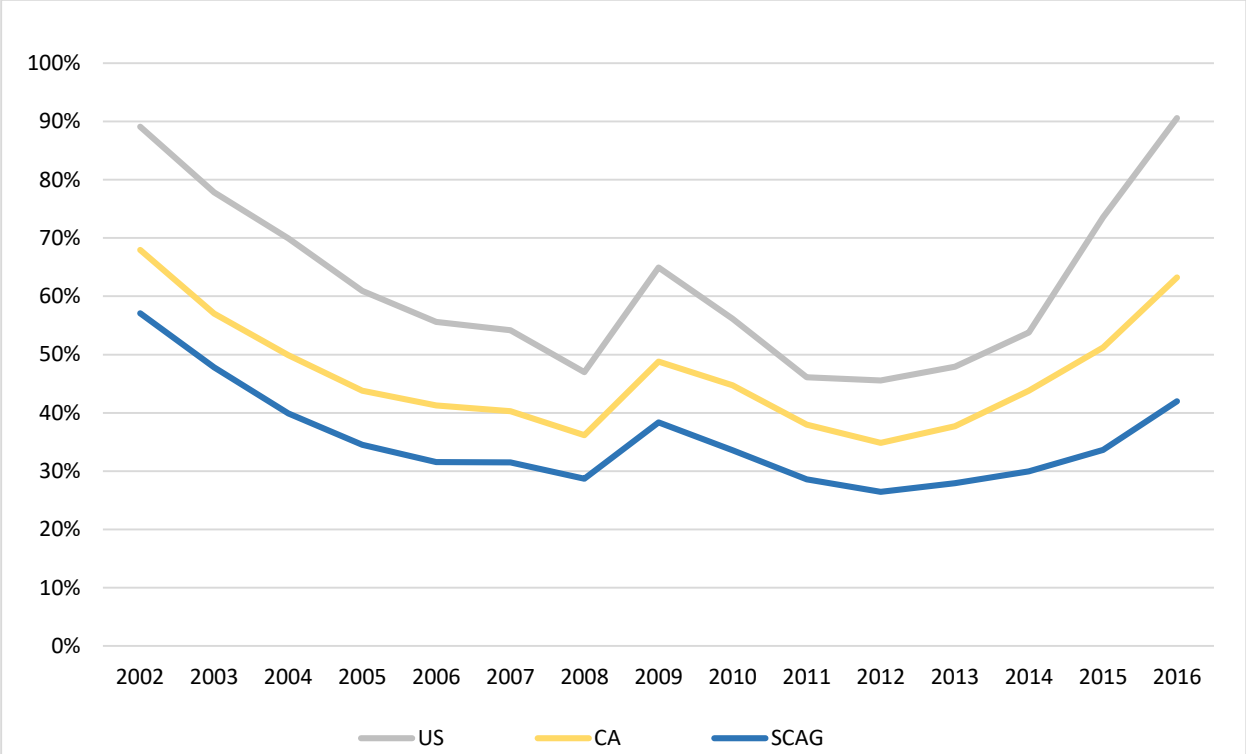


Figure 27. Average gas per gallon in 2015 dollars.

As to how much a steep drop in fuel prices might undermine transit use: the research literature reports a fairly wide array of elasticities (estimates of transit's sensitivity to gas price changes). These range from relatively large effects for commuter rail (0.37, when gasoline costs more than $3 per gallon) (Nowak & Savage, 2013) to much lower average estimates for bus ridership that range from -0.05 to 0.22 (Blanchard, 2009; Iseki & Ali, 2014; Mattson, 2008). Blanchard (2009) used gas price changes in LA County to estimate a bus ridership elasticity of 0.092, a subway elasticity of 0.011, a commuter rail elasticity of 0.126, and light rail elasticity of 0.071. Lane (2010), also studying LA, found similar results. All these estimates suggest that a 10 percent change in fuel prices is associated with about a half-percent change in transit use in the near term, and a 1 to 1.8 percent change in the longer-term. Gas prices fell 30 percent from 2012 to 2016,

which would imply a 3 percent reduction in bus ridership, and larger losses in rail and commuter rail, all else equal.

One way to consider this relationship of fuels prices to fares is to compare the ratio of average fare paid per boarding with the average price of gasoline in the SCAG region over this period (Figure 28). As with fares generally, we see that this fares-to-gas ratio is lower in the SCAG region than in California as a whole, and lower in California than the nation as a whole. Further, while the price of a transit trip relative to a gallon of gas has been climbing across all three geographies since about 2012, the ratio in the SCAG region today remains substantially lower than it was in 2002.

Source: NTD, 2002-2016; EIA Average Gas Price (retail regular gasoline), 2002-2016.
Note: Average LA gas prices are used for the SCAG region.

Figure 28. Average fare as a percent of region's average gas per gallon. *Average fare is consistently less than the cost of a gallon of gas, even as gas prices have been falling since 2014.*

Figure 29 plots the trend in gas prices against the trend in absolute and per capita transit ridership in the SCAG region (we use the Los Angeles Metropolitan Statistical Area average gas prices). The graph suggests a real but fairly modest relationship: Transit use does rise and fall with fuel prices, with a small lag. The response does not appear to be large, however, especially for ridership per capita. But with only one data point per year, we can only say so much about the role of gasoline prices. It would be surprising if falling gas prices did not contribute to the decline in transit ridership, but it is difficult to quantify their precise role. Overall, we consider falling fuel prices to be a real but probably minor driver in falling transit use.

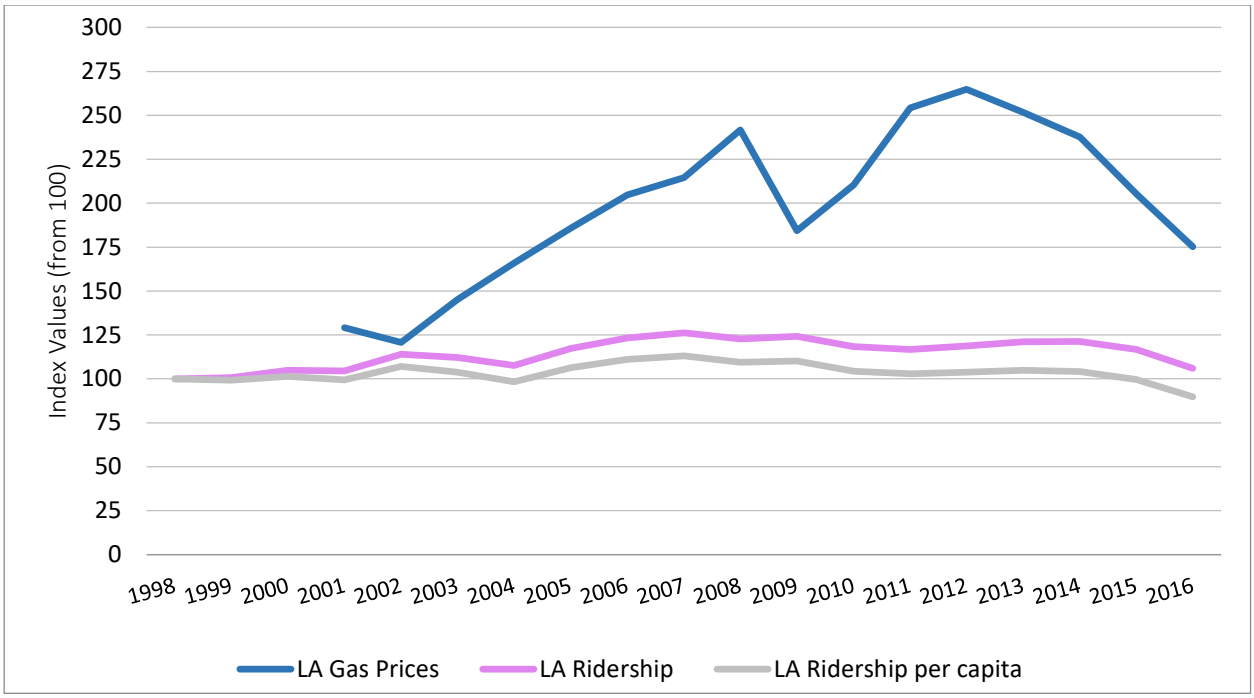

Figure 29. Transit ridership and gas prices in Los Angeles.

The Transportation Network Companies

The large absolute decline in transit ridership coincided not just with falling gas prices but also with the rise of Transportation Network Companies (TNC) like Lyft and Uber. TNCs are a plausible culprit in transit's decline. TNCs can offer the convenience of automobile travel to people who do not own automobiles, and could therefore become viable substitutes for public transportation. Any explanation for falling transit use that hinges on TNCs, however, faces a timing problem: TNCs began operating in Southern California in 2009, and did not begin serving people in large numbers until 2012. Per capita transit ridership began falling in 2007. So while the TNCs may affect transit use, they cannot by themselves explain transit's recent patronage decline.

Moreover, TNCs' influence on mode choice is theoretically ambiguous. On the one hand, TNCs let people purchase vehicle trips *a la carte*. If those trips are inexpensive, then TNCs can be a faster, more direct, less-crowded, and more comfortable substitute for transit. While some TNC trips are substantially more expensive than transit fares, the TNC shared ride services, like Lyft Line and Uber Pool, have sometimes seen fares fall low enough to be competitive with one-way transit fares. Given the speed and convenience these services offer, they could draw some riders away from transit, provided those riders have smartphones and credit cards.

On the other hand, TNCs could also *increase* transit use. TNCs could help solve first-mile/last mile problems, and get people to transit stops that are beyond walking distance. TNCs could also provide transit riders a form of insurance – if some people don't take transit because they worry an emergency might arise where they need a car (for instance, getting a sick child home from school) the option of calling

a TNC during one of those emergencies can lower the perceived risk of taking public transportation, and make it more attractive.

Finally, since most people in most regions do not use transit or even consider doing so, the average TNC trip may have little impact on transit ridership. If the typical Uber passenger has never used a bus and never considered doing so, Uber's growth cannot be blamed for transit's decline.

Because TNCs provide almost no operating data to the public, we do not have sufficient evidence to adjudicate between these scenarios. We do not know even basic information — such as the total number of TNC trips in the SCAG region year over year, or the general areas where those trips originate — that could cast light on the relationship between TNCs and public transportation (Transportation Research Board, & National Academies of Sciences, Engineering, and Medicine, 2016).[12]

What little evidence we do have suggests that most TNC trips do not replace transit trips. Surveys done by independent researchers and organizations suggest that the typical TNC user does not resemble the typical transit rider (TNC users are disproportionately college-educated and affluent), and that the most common times and places for TNC rides are Friday and Saturday nights in popular commercial districts, and trips to airports (Clewlow & Mishra, 2017; Feigon & Murphy, 2016; Rayle, Dai, Chan, Cervero, & Shaheen, 2016). Large surveys by Clewlow and Mishra (2017) and APTA (Murphy 2016) suggest that most TNC trips occur between 10 p.m. and 4 a.m., when transit runs infrequently and carries few riders. Clewlow and Mishra (2017) find that the majority of TNC users report no change in their use of other modes. All this evidence suggests little impact on transit.

The caveat attached to these findings, however, is that the subgroups most likely to take transit – low-income racial and ethnic minorities – are also difficult to survey. Even very large, well-funded surveys often struggle to get adequate coverage of poorer households. As such, we cannot rule out the possibility that actual TNC use in some poorer neighborhoods is higher than the current data suggest.

Moreover, as the pool of TNC users continues to expand, the TNCs' effect on transit use – both positive and negative – may well increase. These amplified effects will be still more likely if TNC prices fall, and TNC use grows disproportionately in dense, high transit ridership areas populated by residents with relatively low levels of household motor vehicle access. For this reason, the relationship between TNCs and transit should be monitored, and there may well be a public interest in letting transit agencies see at least basic data about the location and volume of TNC trips. But relatively little evidence suggests that TNCs are a big player in the current transit decline. The timing, again, does not match up well.

Neighborhood Change and Migration

Transit is heavily-supplied in a small proportion of places, and heavily used by a small proportion of people. This situation creates a potential matching problem. If the small group of people who use transit a lot becomes less likely to live in the small number of places that offers a lot of service, transit use could

[12] TNCs are required under California law to report a host of data on rides given, disability access, and drivers to the California Public Utilities Commission. Unlike transit data in the NTD, however, these TNC data are not public. The CPUC cannot easily turn those data over to the public or public agencies. Such conditions are common throughout the United States. For more - http://www.cpuc.ca.gov/General.aspx?id=3989

fall. Such a mismatch could occur for a number of reasons. The highest-profile explanation is gentrification-driven displacement. If gentrification pushes transit-riding lower-income households away from transit-rich neighborhoods, and replaces them with higher-income residents, transit use may fall. The new higher-income residents may use transit more than they did previously, but less than the lower-income residents they replace (Dominie, 2012).[13]

Gentrification and displacement, however, account for only a small portion of moves by poor and immigrant households. Most moves by such households are by choice, or for reasons unrelated to in-migration by the affluent—for example, a low-income resident might lose a job and be forced to move (either to find new work, or to find a place with lower rent), even if neighborhood rents are not rising (Freeman 2005; Freeman and Braconi 2004; Newman and Wyly 2006; Vigdor 2002). The relevant fact is that in recent years many poor households, when they move for whatever reason, relocate to the suburbs. As poor households suburbanize, they move farther from transit on average (Farrell, 2016; Kneebone, 2014; Kneebone & Garr, 2010; Singer, 2011; Zimmerman, Restrepo, Kates, & Joseph, 2015). Upon arriving in the suburbs, low-income people may well use transit more than other suburbanites, but less than they had used it when they lived in central-city neighborhoods. If they are not replaced in central-city neighborhoods by other people who ride at high rates, then as a result of their migration overall transit use could fall.

Ideally we could examine the extent to which migration influences transit use by following low-income households and their travel behavior over time and across neighborhoods. Unfortunately, the data that would allow us do this do not exist. What we can do instead is use census-tract level data to examine changes in the spatial location of transit commuters and in the characteristics of residents living in high-transit commuting neighborhoods. We approach this task in two ways: identifying tracts with transit-friendly built environments and seeing how they change over time, and identifying tracts with high levels of transit commuting, and examining change within those places over time. These approaches have limits, as we will explain, but in combination they show a decline in the number of transit commuters in many high-transit use neighborhoods in 2010 and 2015, a decline in transit mode share in these neighborhoods (particularly from 2000 to 2010), and a shift in the characteristics of neighborhood residents in ways that help to explain declining transit use.

We have two methods available to identify areas that are highly conducive to transit use. These are areas that, regardless of who lives in them, are transit-friendly, either because of their levels of transit service or attributes of their built environment. Our first measure of transit-conduciveness is SCAG's High Quality Transit Area designation. SCAG defines a High Quality Transit Area as an area within one-half mile of a fixed guideway transit stop or a bus transit corridor where buses arrive at a frequency of every 15 minutes or less during peak commuting hours. SCAG last identified existing High Quality Transit Areas using data for 2012. These High Quality Transit Areas are located in 762 census tracts—about 45 percent of the region's total Census tracts.

Our second measure of transit-conduciveness comes from a typology of neighborhoods developed at the UCLA Institute of Transportation Studies for the US Federal Highway Administration (Voulgaris, Taylor, Blumenberg, Brown, & Ralph, 2016), using data from 2010-2013 (Ramsey & Bell, 2014; Voulgaris et al.,

[13] This outcome could well result in lower transit ridership but also lower VMT and GHG, because the higher income in-migrants are more likely to replace driving with their transit trips (see Chapple et al. 2016, Chapter 4).

2016). This typology characterizes neighborhoods based on their built environment and transportation system characteristics (e.g. density, land use mix, age of housing stock, resident turnover, street network characteristics, and transit supply), but not on the characteristics of the people living in these neighborhoods. In this way the typology can capture how transit-friendly a neighborhood's built environment is. We focus in particular on one neighborhood type called "Old Urban," which indicates very-high density neighborhoods with high-levels of transit supply. Old Urban neighborhoods are much less common than SCAG High Quality Transit Areas—in 2010 there were 719 Old Urban neighborhoods in the region.

For our purposes, the limitations of both the SCAG designation and the Old Urban designation are that the data used to construct them are from 2010 or after. As a result, we can track changes in these neighborhoods from 2010-2015, but we do not have a good measure of tract-level transit supply or transit-conduciveness from 2000 to 2010, the time period when transit use in the SCAG region began to fall.

To examine changes from 2000 forward, we examine the clustering of transit commuters. This method is imperfect, since as we have shown commuters are a minority of transit users, but we assume for this exercise that as regular transit users, commuters tend to cluster in areas conducive to transit use. This assumption is contestable, but we have no other Census tract-level data on transit use that stretches back to 2000. We identify high-transit commuter neighborhoods with data on transit commuters by Census tract from the 2000 Decennial Census, and the 2010 and 2015 ACS.[14] For each year, we rank order tracts by the number of transit commuters in them. As we discussed earlier, transit commuters are highly concentrated in a very small fraction of the SCAG region's land area; eighty percent of transit commuters live on less than five percent of the land area and in less than 40 percent of census tracts. This distribution changed very little from 2000 to 2015.

We examine changes over time using the rank-ordered transit commuting data from the 2000 Census. We identified the census tracts that most intensively host transit commuters; these tracts, which are 1.43 percent of all census tracts in the region and 0.02 percent of the region's land area, hold ten percent of the region's transit commuters. We call these "10% Tracts." The mean number of transit commuters in these tracts is almost 12 times the regional average. For comparison, we also extracted data on the tracts where the top 60 percent of transit commuters live; these neighborhoods comprise 20.6 percent of all census tracts and 0.86 percent of the land area. We call these "60% Tracts." The mean number of transit commuters in these neighborhoods is 4.5 times the regional average. The number of ten percent tracts is extremely small: in 2000, just 48. The number of tracts that hold 60 percent of the commuters, in contrast, is 743—roughly the same number as are in the Old Urban designation.

The tracts in the 10% and 60% designations in 2000 strongly overlap with the SCAG High Quality Transit Area and Old Urban designations. If we take the 10% Tracts in 2000 and follow them forward, we see that about 85 percent are Old Urban tracts, and all of them are SCAG High Quality Transit tracts. Similarly, of the tracts in the 60% designation in 2000, in 2010 55 percent of them are Old Urban, and 85 percent are

[14] Because we are using tract-level data, the ACS data are from the 5-year samples. The 2010 data are from the 2006-2010 ACS, and the 2015 data are from the 2011-2015 ACS.

High Quality Transit. As such, following the trajectory of the 10% and especially the 60% Tracts may be a rough-but-reasonable proxy for following the trajectory of transit-rich areas.

As a first step, we follow three of these four tract designations – 60% Tracts, Old Urban, and High Quality Transit – over time, to the extent we can. For the latter two designations, this means only tracking changes from 2000 to 2015. We follow the year 2000 60% Tracts from 2000 to 2010, and then to 2015. (We use the 60% Tracts, rather than the 10% Tracts, because their numbers are more comparable to the Old Urban tracts).

Figure 30 summarizes the results. Essentially, the 60% Tracts saw substantial changes between 2000 and 2010, and these changes are consistent with the idea that the people most likely to use transit migrated away from transit-rich areas. From 2000 to 2010, the poverty rate in these tracts fell by four percentage points, the share foreign born fell from 48 percentto 45 percent, and the share of households without vehicles fell from 23 percent to 17 percent. From 2010 to 2015, in contrast, relatively little changed, and that same pattern holds if we examine Old Urban tracts and SCAG High Quality Transit Areas. Across all three neighborhood typologies, poverty rose slightly, the share of foreign born fell slightly, and – perhaps most important, given the importance of vehicle access to transit use – the share of households without vehicles stayed at the point it had fallen to. (The same general pattern holds for the 10% Tracts, although to conserve space these are not shown in the figure).

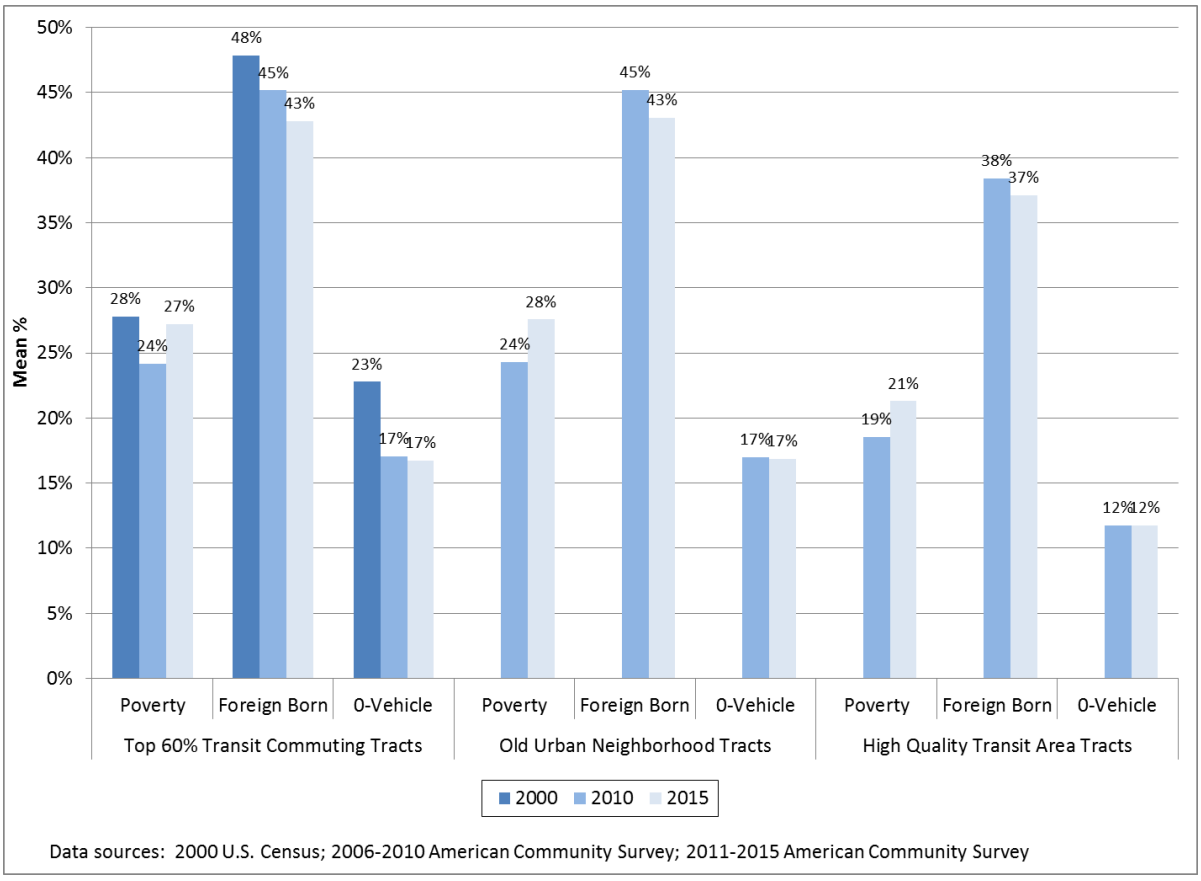

Figure 30. Characteristics of high-transit areas, 2000, 2010, and 2015 (2000 Census tracts over time)

Some additional data also suggest neighborhoods changing in ways not conducive to transit use. Figure 31, for example, shows that in both the 10% and 60% Tracts the transit commute mode share fell between 2000 and 2015 (with most of the decline occurring between 2000 and 2010.) Although not shown graphically, Census data also indicate that in these tracts, both the number of workers and overall earnings for workers rose, but earnings did *not* rise for those commuters using transit to get to work.

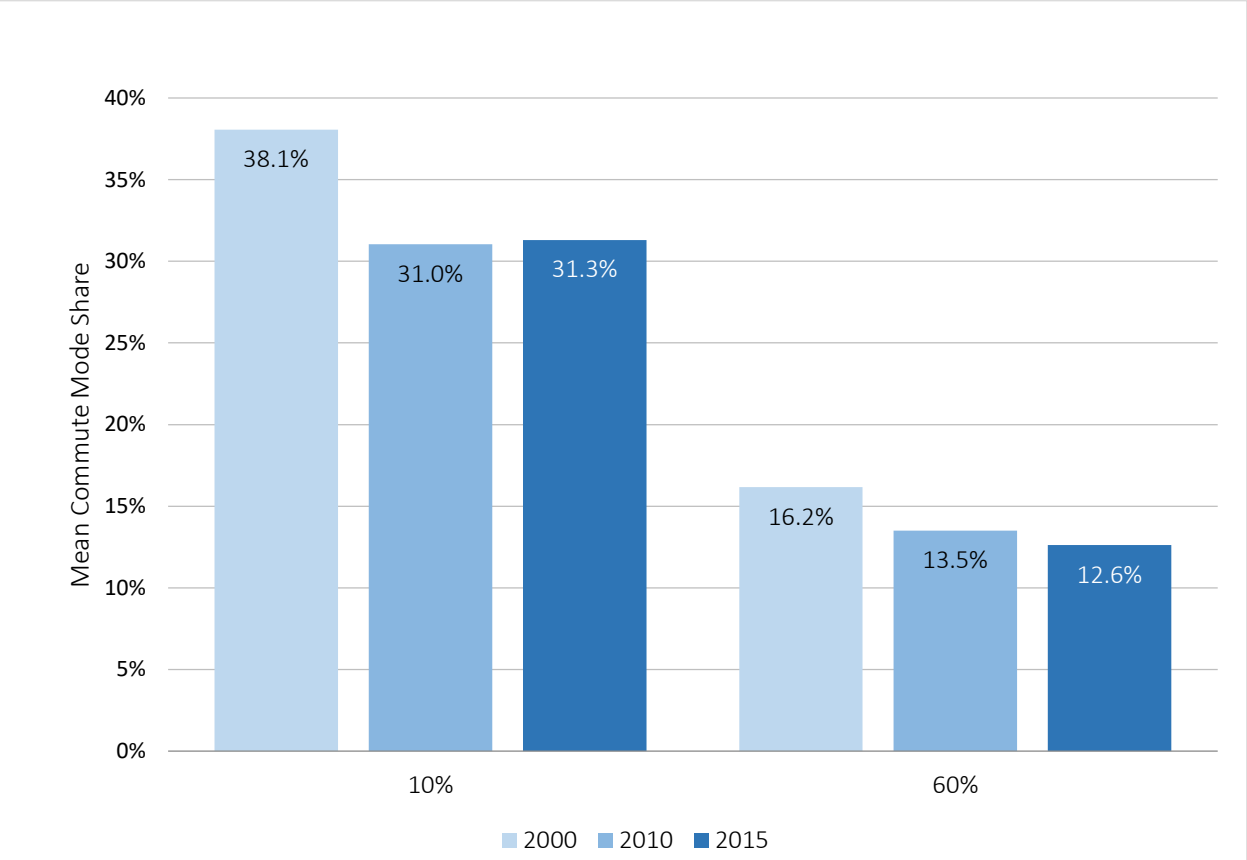

Figure 31. Mean transit commute mode share in high-transit neighborhoods, SCAG Region by year.

In summary, then, we observe changes in census tracts that in the year 2000 were most heavily-populated by transit commuters. These tracts, in turn, overlap substantially with tracts that we know in 2010 were rich in transit supply and/or had transit-friendly built environments, letting us infer (albeit with some uncertainty) that these neighborhoods were transit-rich in 2000 as well. Particularly between 2000 and 2010, in these neighborhoods we see falling transit commuting, falling population, a falling share of immigrants, falling poverty, more vehicle ownership, and higher earnings for workers overall but not those workers who commute via transit. All of this evidence is consonant with these neighborhoods becoming

more affluent, with that affluence being associated with less transit use, and with people left out of that affluence remaining on transit.

We emphasize that this story is far from conclusive. For the reasons we discussed above, the relationship between neighborhood change and transit use is very hard to measure. The data we have are consistent with neighborhood changes in the most transit-friendly SCAG-region neighborhoods contributing to falling transit use, but they are not conclusive. This is an area that warrants substantial further research.

Rising Vehicle Ownership

The defining attribute of regular transit riders is often a lack of vehicle access. Between 2000 and 2015, vehicle access in the SCAG region became much more common. Households in the SCAG region, and especially lower-income households, dramatically increased their levels of vehicle ownership. Census summary file data show that from 2000 to 2015, the SCAG region added 2.3 million people and 2.1 million household vehicles (or 0.95 vehicles per new resident). To put that growth in perspective, from 1990 to 2000 the region added 1.8 million people but only 456,000 household vehicles (0.25 vehicles per new resident). The growth of household vehicles in the last 15 years has been astonishing.

There are strong reasons to believe that this surge in vehicle ownership is largely responsible for the decline in transit use. A back of the envelope calculation can illustrate the magnitude of the problem this vehicle surge could pose for transit operators. Data from the US Consumer Expenditure Survey show that from 2000 to 2015, the average expenditure per household vehicle in LA County was about $3,729.[15] Since SCAG residents added 2.1 million vehicles in this time, a midrange estimate of private expenditures on household vehicle growth is $7.8 billion. Over the same period of time, LA Metro and Metrolink combined to spend about $6.4 billion opening new rail service, and about $7.4 billion on combined rail and Bus Rapid Transit service. Thus even a conservative estimate of private investment in vehicle growth shows it easily outpacing public investment in fixed-route, dedicated right-of-way transit— the type of transit that is supposed to be most competitive with driving. This level of increased vehicle ownership is in many ways incommensurate with robust transit use.

To be sure, much of this vehicle growth would not influence transit use. Because most SCAG residents had never used transit, increased vehicle ownership in most SCAG households would not contribute to transit's decline. The 2000s were when the Millennials, a demographically large cohort, reached ages when many would buy automobiles. Millennial car-buying could help explain the bulge in vehicle acquisition, but unless those Millennials would otherwise be on transit these additional vehicles would not necessarily explain falling transit use.

[15] The Consumer Expenditure Survey tracks the average net outlay per vehicle purchased. Data are not available for the other SCAG counties, but the average net outlays are probably similar across Southern California. Moreover, the $3,729 figure is the average of each annual average. Since more vehicles were purchased in the early to mid-2000s, and at higher prices, this figure likely underestimates the true average. See https://www.bls.gov/cex/csxmsa.htm

Some additional evidence, however, suggests that vehicle ownership did play a role in reducing ridership. When the OCTA surveyed its former riders in 2015, for example, 70 percent reported leaving transit because they had acquired a car (True North Research 2015).

Moreover, we have reason to think that the increase in vehicle ownership occurred disproportionately among populations that are more likely to take transit. Census data show that vehicle access increased most among lower-income households (we return to this point below, in Figure 40). Vehicle access also rose disproportionately among the foreign born. Table 4 shows changes in both zero-vehicle households and those with a vehicle "deficit" (that is, fewer vehicles than adults). Across the entire SCAG region, the share of households without vehicles fell 30 percent between 2000 and 2015, while the share of households with a vehicle deficit fell 14 percent. Among foreign-born households, these percent declines were larger — 42 percent and 22 percent — and among the foreign born from Mexico they were larger still. Among the foreign born from Mexico, the share of households without vehicles fell by two-thirds between 2000 and 2015, and the share with a vehicle deficit fell 28 percent. Thus car ownership rose across-the-board, but rose fastest among subgroups with a high propensity to ride transit. And these changes largely occurred between 2000 and 2010, which aligns with the timing of the transit downturn that began in 2007.

	All SCAG Share Households With:		Foreign Born Share Households With:		Mexican Foreign Born Share Households With:	
	No Vehicles	Vehicle Deficit	No Vehicles	Vehicle Deficit	No Vehicles	Vehicle Deficit
2000	10.2	30.1	14.1	47.1	15.7	57.2
2010	7.7	26.1	9.4	38.9	7.0	46.0
2015	7.1	25.9	8.2	36.6	5.4	41.6
Pct Change	-0.30	-0.14	-0.42	-0.22	-0.66	-0.27

Table 4. Vehicle ownership trends, SCAG region (US Census, Census IPUMs).

To refine our understanding of the association between vehicle ownership and transit use, we estimated a multivariate regression model. As a result of the data constraints we discussed earlier, this process involved two steps. Recall that our fundamental data obstacle was a mismatch between the availability of detailed, person-level information about travel behavior and our need to answer a question about changes over time. The CHTS provides detailed travel behavior, as well as demographic and socioeconomic data, but only for the year 2012. The Census provides detailed annual data, but for almost every category *except* travel behavior and transit use.

We resolve this problem by first using the CHTS to build a model that predicts total unlinked trips as a function of different demographic, socioeconomic, and neighborhood attributes. Importantly, all of these attributes – such as sex, nativity, income, vehicle ownership, and so on – are also tracked in 2000, 2010 and 2015 Census IPUMS microdata. This symmetry allows us to take the parameters of the CHTS model and apply them to time-series data from the Census. We use the CHTS, in short, to estimate the relationship between transit use and different social and economic characteristics, and then use the

Census to track how those characteristics have changed. Once we have measured that change in the Census, we can use the CHTS results to estimate how transit use would have changed as a result.

A core assumption of this approach is that the relationships between transit use and the socioeconomic and demographic attributes, which we can only measure in 2012, are relatively constant across time. We assume that changes in transit use from 2000 to 2015 are driven primarily by changes in the composition of the population, and not by changes in the propensity to use transit by people in different population groups. Our approach is more valid, for example, if transit use changes because there are more or fewer people in poverty, or with vehicles, and not because poor people or people with vehicles become more or less likely to use transit. The latter scenario is possible, but we cannot measure it.

We constructed models for California, the SCAG region, Los Angeles, and the SCAG region outside of Los Angeles. Figure 38 shows results from the first stage of our analysis: the major predictors of transit trips in in the SCAG region. Unsurprisingly, transit trips are highly associated with automobile ownership and access, even accounting for other potential determinants of transit use. Beyond automobile access, transit use is associated with lack of a driver's license, being nonwhite, and being foreign-born — especially being foreign-born and a new arrival.[16]

[16] While we experimented with different functional forms for the regression, we settled on a zero-inflated negative binomial regression. A negative binomial regression is a standard tool for analyzing overdispersed count data, and the zero-inflation corrects for bias that might otherwise be introduced when the value of the dependent variable is frequently zero, as it is with personal transit trips.

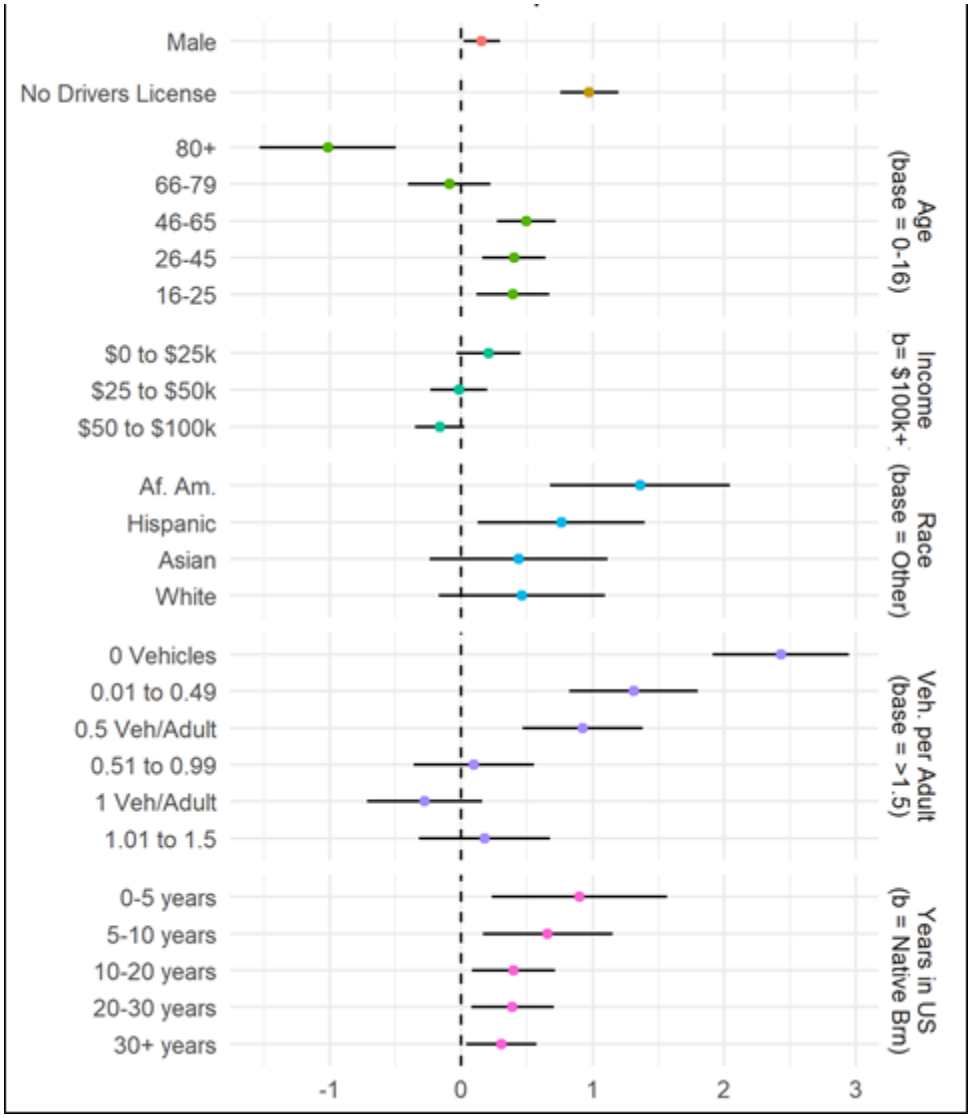

Figure 32. All SCAG unlinked trip predictors (CHTS).

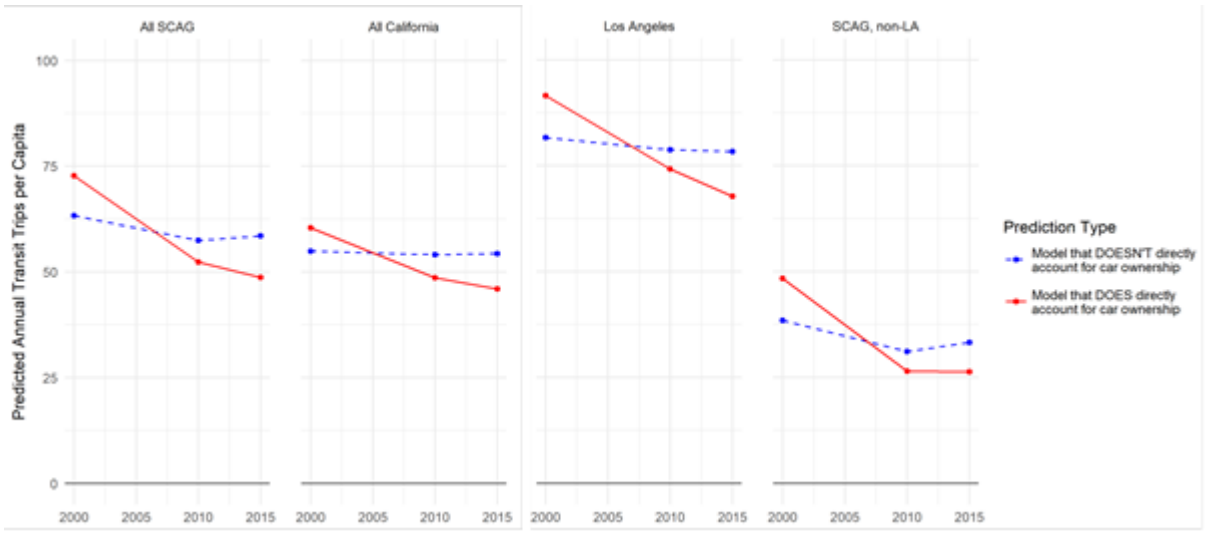

Figure 33. Relationship between increased vehicle ownership and falling transit trips (CHTS and US Census Bureau).

When we apply these parameters to Census IPUMS data from 2000, 2010 and 2015,[17] we see a powerful association between rising household vehicle access and falling transit trips. Figure 39 illustrates this relationship by graphing the results of two models. The first model, represented by the dashed line, predicts the change in county transit trips based on changes in all factors *except* vehicle access. In the SCAG region, the line has a mild negative slope from 2000 to 2010 and then a small positive slope from 2010 to 2015, suggesting that changes in these demographic, economic, and geographic factors would be associated with a small decline in transit use since 2000, albeit with a modest uptick between 2010 and 2015. The graphs for Los Angeles County and the SCAG region outside LA County suggest that this predicted modest uptick (which did not actually occur) would have taken place in SCAG's outlying counties. In Los Angeles County, transit trips were predicted to keep declining through 2015.

The second model, represented by the solid line, is identical to the first model but includes changes in automobile access. The difference in results is dramatic. This line starts at a higher point and falls sharply to a lower point, both of which suggest the important role automobile access has in influencing transit use. An absence of automobiles is associated with much more use, and the acquisition of automobiles is associated with much less. The line also suggests that many socioeconomic attributes play an essentially the intermediary role in mode choice. Income, nativity, age, location within the region, and many other factors can influence transit use, but they do so primarily by predicting people's access to private cars.

[17] A natural concern is that the CHTS might measure nativity, income, etc. differently than the Census. We validated our approach by first using the Census independent variables to replicate the CHTS estimates, suggesting this is not a problem.

Income alone, for example, does not take people off buses. Income helps people buy automobiles, and it is auto access that fuels an exodus from transit.[18]

Why did vehicle ownership rise so much? We cannot answer this question definitively, but as we discussed earlier in this report, vehicle ownership has both economic and non-economic determinants. The non-economic determinants include the growth or decline of immigrant groups who are less likely to acquire vehicles, and changes in licensure laws or other laws that surround owning and operating vehicles. The economic reasons can themselves be divided into two categories: changes in personal spending power, and changes in the price of vehicles themselves.

Since the foreign-born, and particularly the recently-arrived foreign-born, are less likely than the native-born to own vehicles, one possibility is that number or composition of immigrants changed. In absolute terms, the foreign-born population in the SCAG region grew between 2000 and 2015. However, it did not grow as fast as the overall population, so the region's share of foreign-born fell, albeit modestly (from 31% to just over 30%). This proportional decline occurred entirely within LA County, which has the most transit service. Every other SCAG county saw its share of foreign-born rise.

	Imperial	Los Angeles	Orange	Riverside	San Bernardino	Ventura	All SCAG
2000	32.2%	36.2%	29.9%	19.0%	18.6%	20.7%	31.0%
2010	31.9%	35.6%	30.5%	22.4%	21.6%	22.9%	31.0%
2015	32.6%	34.7%	30.5%	22.0%	21.3%	22.8%	30.4%
% Change	1.2%	-4.3%	2.0%	13.7%	12.6%	9.2%	-2.0%

Table 5. Share foreign born residents, Southern California counties (2000-2015). US Census.

The *composition* of immigrants, however, changed more dramatically. Table 6 shows that between 2000 and 2015 (and especially between 2000 and 2010), the share of the foreign-born from Asia rose 23 percent, while the share from Central America fell ten percent, and the share from Mexico fell over 13 percent. In 2000, 48 percent of SCAG immigrants were from Mexico, while by 2015 only 41 percent were. Because existing evidence suggests that immigrants from Mexico and Central America are less likely to have automobiles and drive than immigrants from other origin countries, this shift could contribute to rising auto use, especially among the foreign born (US Census ACS 2015).

[18] We should note that these models are *not* predictive models – their purpose is not to yield output that precisely matches the observed transit ridership in the SCAG region (and in fact our predictions do not match observed ridership). We do not build a predictive model for two reasons. First, we are not using the correct data to do so. Regional ridership counts come from annual reporting to the NTD. Because we need person-level data that includes socioeconomic attributes, we are using one-day travel diary data from the 2012 CHTS, and then matching that to person-level data from three Census years. Second and more important, the goal of the regressions is to test a particular hypothesis – that vehicle access is the decisive factor in transit use – not to predict transit ridership. Our output thus yields an estimate of the relative magnitude of the importance of auto access, *not* a precise measure of how many trips each additional increment of auto access actually cost the SCAG region.

	2000	2010	2015	Change
Asia	28.7%	33.9%	35.3%	23.0%
Americas	63.7%	59.1%	57.7%	-9.4%
Latin America	62.4%	58.0%	56.5%	-9.5%
Central America	58.8%	54.5%	53.0%	-9.9%
Mexico	47.7%	42.4%	41.3%	-13.4%
South America	2.6%	2.7%	2.7%	3.8%

Table 6. Composition of SCAG immigrants (2010-2015).

Moreover, among both the foreign-born overall and the foreign-born from Mexico, in data from the US Census IPUMs we see both an assimilation effect and a cohort effect reinforcing the trend toward more vehicles. More recent waves of immigrants are more likely to have vehicles shortly after arrival, and those who do not are faster to acquire them as time goes on.

In the year 2000, for example, 31 percent of the foreign-born households in the SCAG region that had emigrated from Mexico between 1990 and 1999 had no household vehicle, and 74 percent had a vehicle deficit. By 2010, just 9.3 percent of this same cohort of immigrant households had no vehicle, and only 51 percent had a vehicle deficit. By 2015, these figures were 7 percent and 41 percent. This is the assimilation effect; as time passes, immigrants begin to behave more like the native -born.

The cohort effect, however, is more notable. The more recent waves of immigrants to Southern California are more likely to own vehicles shortly after arrival, and as such they have not fully replenish the stock of zero-vehicle households that shrank as existing immigrants assimilated toward cars. In 2010, only 17 percent of the Mexican immigrant households in the SCAG region that had arrived in the US between 2000 and 2009 had no vehicles, compared to 31 percent for those that arrived between 1990 and 1999 in the year 2000. Similarly, only 62 percent of these 2000-2010 arrivals had a vehicle deficit in 2010; in 2000, 74 percent of Mexican immigrants who had arrived since 1990 had a vehicle deficit. By 2015 the share of zero-vehicle households in thepost-2000 cohort was down to 10 percent, and the share with vehicle deficits down to 49 percent. And by in 2015, only 11 percent of Mexican immigrant households that had arrived in 2010 or after did not have a vehicle. A similar pattern holds for the foreign-born overall. More recent waves of immigrants acquired more vehicles more quickly, meaning that as previous waves of immigrants acquired cars, the ranks of the carless were shrinking rather than being replenished.

In sum, immigrants overall are now a slightly smaller share of the population, but also more likely to own vehicles, and to own them earlier after arrival. Mexican immigrants, who are a mainstay of transit ridership in Southern California, remain more likely than the foreign-born overall to live in households without vehicles, but since 2000 they have both added household vehicles and become a smaller share of total immigrants.

It is not clear *why* the foreign-born began adding more cars. In 2015, California began issuing driver's licenses to undocumented immigrants. While licensure may have increased vehicle ownership, for a variety of reasons we do not think it played a large role. First, a license makes a vehicle more useful, but not more affordable; if the barrier to acquiring a vehicle is price, a license does little to overcome that. One might argue in response that legality and not price was the actual barrier, but existing evidence suggests this is simply not the case: many undocumented immigrants, even without licenses, were already driving (Lovejoy & Handy, 2008). Indeed, the prevalence of undocumented driving was the primary motivation for the law that authorized licensure. The decision to issue licenses was justified primarily on safety, not mobility, grounds – there were concerns, for example, that unlicensed undocumented drivers would flee the scene of accidents. It is possible that undocumented immigrants drove *less* – and took transit more – before being licensed, and that licensing did help depress transit use. Even this scenario, however, has its limits. A law that took effect in 2015 cannot explain a per capita ridership decline that began in 2007 or an explosion in vehicle ownership that began in the early 2000s.

Ruling out legal changes brings us to possible economic factors for increased vehicle ownership: Perhaps immigrants (and others) began acquiring more cars because they had more money. A small but persuasive literature on personal consumption shows that poorer people tend to convert even small increases in income into vehicle purchases – a testament to how valuable vehicle access can be (Aaronson, Agarwal, & French, 2012; Adams, Einav, & Levin, 2009; Leininger, Levy, & Schanzenbach, 2010; Parker, Souleles, Johnson, & McClelland, 2013; Souleles, 1999).

The 2000-2015 period was volatile economically, as the economy grew steadily before cratering during the Great Recession. During most of this time, furthermore, median wages and incomes were stagnant. Median household income in LA County, for example, was about $59,000 in both 2000 and 2015, and was slightly lower during the recession in 2010. The Census suggests that newer waves of immigrants are if anything slightly poorer than the cohorts that came before them: In 2000 average incomes of immigrants that had arrived since 1990 was slightly higher than the average income of immigrants in 2010 who had arrived after 2000. Finally, we can see in Figure 40 that vehicle growth occurred across all income groups, for both the foreign-born and the native-born. In 2000 just under 40 percent of households earning less than $25,000 per year had a vehicle-deficit, as did 60 percent of immigrant households in the same income bracket. In 2015 less than 30 percent of native-born households in the same income bracket had a vehicle-deficit, as did just over 50 percent of immigrant households. The pattern holds for households earning $25,000 to $50,000, and for more affluent households.

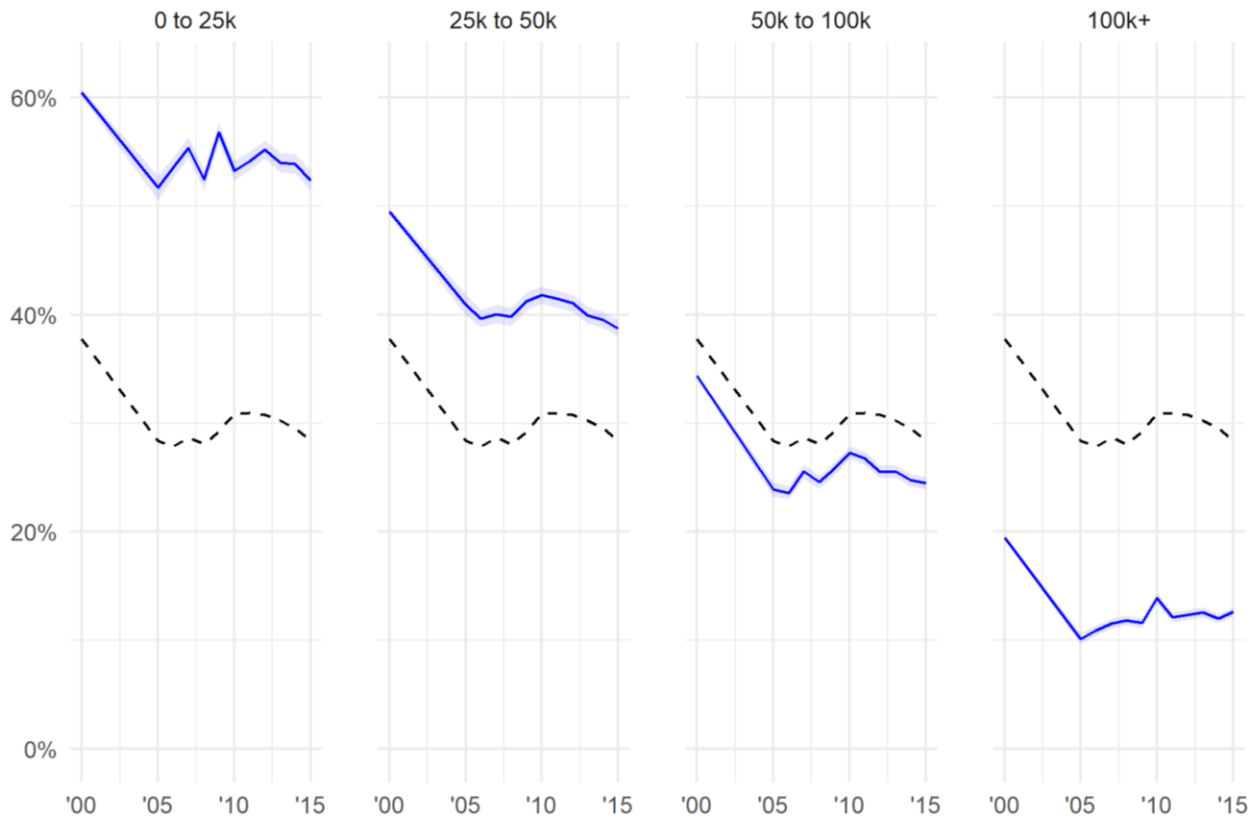

Figure 34. Share of households with vehicle deficits, by income and nativity, 2000-2015, US Census (solid line = foreign born, dashed line = native born).

It is therefore not obvious that rising incomes played a large role in rising vehicle ownership. Certainly the macro-economy played some role in changing levels of transit use. Transit use contracted during the Great Recession: A robust economy puts more people to work, which increases both commuting and discretionary travel. A faltering economy does the reverse. But these same economic trends do not appear to explain why people acquired so many more vehicles than they had in previous periods.

Even at constant incomes, households can acquire more vehicles if the effective price of those vehicles falls. The effective price reflects not the sticker price, but the actual outlay required of a consumer to drive the vehicle home. A large part of this outlay is often a down payment, meaning that vehicles can become more affordable not just if their price declines, but also if financing that price becomes easier.

Some evidence does suggest that vehicle finance became easier during this time. Although lost somewhat in the shadow of easy home-lending credit, automobile credit also surged in the run-up to the Great Recession. And unlike home lending, which tightened considerably after the crash, automobile lending has remained relatively loose. Consumers with good credit scores (typically above 700) can find auto loans with low- and sometimes even zero-interest rates. Since the recession, the share of SCAG-region residents with credit scores below 660 (considered subprime) has fallen (Figure 41), suggesting that consumers have gotten better access over time to low-interest loans (Federal Reserve Bank of New York and Equifax, various). Subprime auto loans also remain prevalent, allowing consumers with poor credit histories or low

incomes to finance vehicle purchases. U.S. auto loan originations among subprime consumers increased 140 percent from 2010 to 2015 (New York Fed Consumer Credit Panel / Equifax). We do not have local-level data on vehicle debt, but inflation-adjusted per capita vehicle debt in California rose 91 percent between 2000 and 2015 (Federal Reserve Bank of New York).[19]

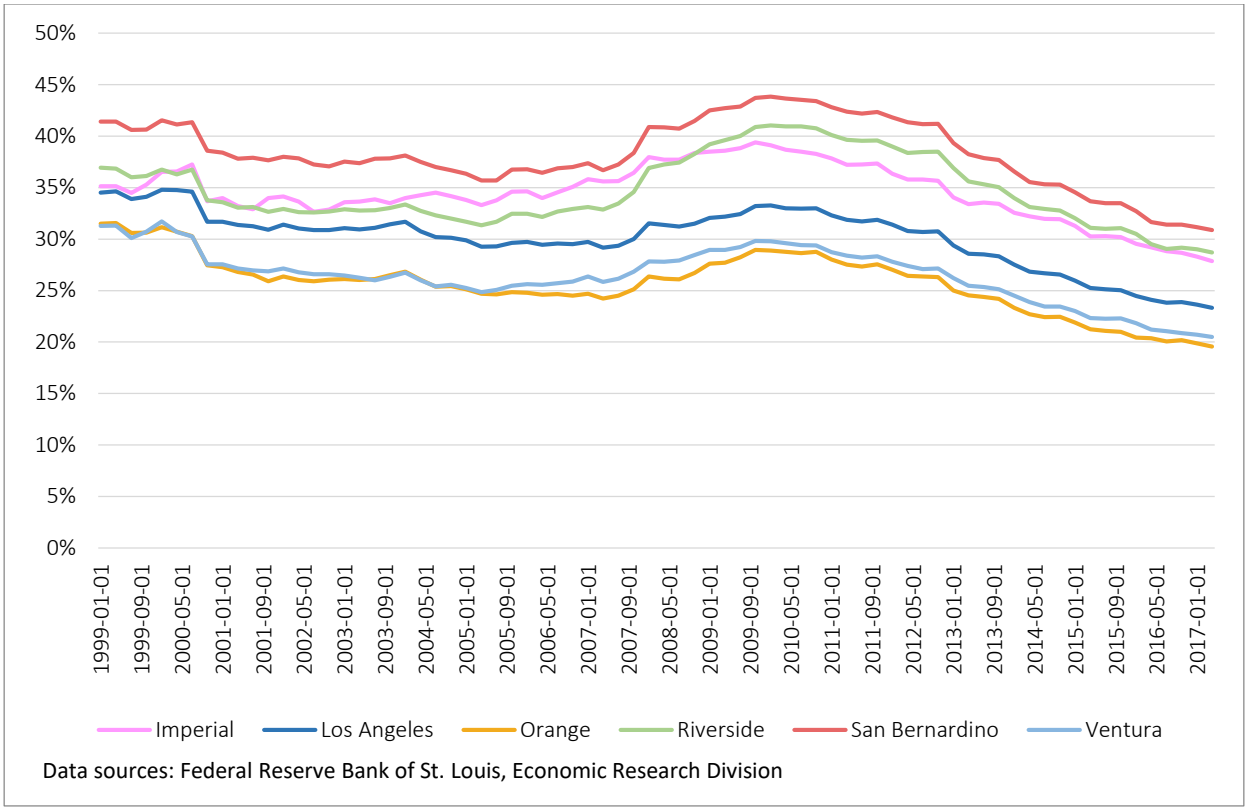

Figure 35. Percent of sample with credit scores below 660, by county in SCAG region.

CONCLUSION

Per capita transit ridership, long sluggish in Southern California, began to fall in 2007. In 2012 that per capita decline accelerated, and manifested as a more noticeable and more alarming absolute decline. The precise reasons for this decline are almost certainly manifold, and hard to disentangle. Gas prices fell sharply after rising steeply. The explosive growth of Uber and Lyft provided new mobility options to some people who had been mobility-constrained. In Orange County, fares rose substantially. On LA Metro, by at least some accounts, feelings of danger increased. Some of the people most likely to use transit moved to areas where transit was less prevalent. Especially in recent years, all these factors most likely contributed to transit's downturn.

[19] Data come from the New York Federal Reserve Bank's Consumer Credit Panel.

But in weighing the evidence, the overwhelming factor appears to be a dramatic increase in the stock of private automobiles. Between 2000 and 2015 Southern Californians acquired vehicles at nearly four times the rate they had between 1990 and 2000. This growth of the private vehicle stock lines up—in timing, in magnitude, and in theory—with the region's falling transit use. Vehicle access grew across all income levels and groups, but disproportionately among those groups, like the low-income and foreign-born, who are most likely to ride transit. Transit ridership in the SCAG region has long depended on a sizable minority of people who did not, largely for economic reasons, have access to cars. After 2000, many of these people acquired cars, and it should not surprise us that they started riding transit less.

To be sure, the case we build in reaching this conclusion is circumstantial. For reasons we have already enumerated, the data available to examine transit riders are scarce and fragmented, which leaves alternative explanations possible if not plausible. Certainly future research should emphasize more data collection. Given the data available today, however, in our judgement rising vehicle ownership is the best explanation for falling transit ridership.

If this explanation is sound, it poses a daunting problem for transit operators. When lower-income people graduate from transit to driving, transit agencies bear a cost, but the other side of that cost is a large benefit for both the people who start driving *and* for society overall. In the aggregate, Southern Californians drive too much, once the various costs of pollution, congestion and crashes are accounted for. But some Southern Californians – the poorest of them – drive *too little*, and both their lives and the region as a whole would be improved if they drove a bit more. The low-income person who acquires a vehicle often makes fewer trips than an affluent person (driving is expensive) and the trips they make are often essential, and have social benefits that exceed their social costs. A car trip by a low-income household is more likely than one by an affluent household to involve finding and keeping work, getting to school, or accessing better health and daycare options. These trips might modestly increase congestion and pollution, but they have large paybacks in employment, earnings, and overall well-being that exceed those costs. Affluent households, in contrast, make many more trips, and more trips whose social value is lower (they might increase congestion and pollution not just by driving to work, but also by driving to lunch, or to visit friends).

Given the powerful difference a car can make in the lives of low-income people, efforts by transit agencies to recapture low-income riders can have a perverse impact: they would target some of the highest-value vehicle trips in the region. Ideally, of course, transit agencies would pull people away from lower-value vehicle trips. It makes little sense to deprive a low-income person of their trip to work at a location poorly served by transit, when affluent people routinely drive for errands and visits that they could easily complete by foot or transit. A quick trip to a store a half mile away (or a trip to a store a mile away when a comparable store is a quarter mile away) is more likely to have social costs that exceed its benefits. And these trips are abundant.

Given this situation, and given the ambitious greenhouse gas reduction goals that California has assigned to transit, planners and operators may need to expand transit's target market. Transit should by no means abdicate its social service mission, but as we stated in the introduction, per capita transit use falls when current riders stop riding, and when new residents don't start. Transit today relies on a high rate of use by a narrow base of people. But if that narrow base of people is acquiring vehicles, transit's healthy future lies in reversing those circumstances, and striving for at least a low rate of use by a broad base of people. The SCAG region lost 72 million transit rides annually from 2012 to 2016. This number seems daunting,

but the region has 18.8 million people. According to the CHTS, about 77 percent of those people (roughly 14.5 million), ride transit rarely or never. Herein lies vast untapped potential. If one out of every four of those people replaced a single driving trip with a transit trip once every two weeks, annual ridership would grow by 96 million—more than compensating for the losses of recent years.

The obstacle to this outcome, however, is large and beyond the direct control of transit operators: driving is too cheap. The large subsidies given to transit in recent years pale next to the longstanding subsidies for automobiles that are hidden in unpriced road use, unpriced or underpriced street parking, high minimum parking requirements, and taxpayer- and developer-financed road-widenings. If public policy does not adequately confront underpriced driving, then transit ridership will likely continue to falter, and transit will not meet its ambitious environmental goals.

SAFETY MEASURES **CRASHES** *Crashes per 10k bicycle commuters*	537	758
SAFETY MEASURES **FATALITIES** *Fatalities per 10k bicycle commuters*	6.3	9.5

KEY STEPS TO SILVER

» Congratulations on recently adopting the Riverside PACT, including a Complete Streets Ordinance that directs transportation planners and engineers to routinely design and operate the entire right-of-way to enable safe access for all users. It is important to ensure that there is a strong implementation and compliance process for this new policy going forward. The PACT's components will serve as a blueprint for improvements and together have many great recommendations for a more connected network of safe and comfortable bicycle facilities.

» Continue to improve and expand the low-stress bike network for all ages and abilities, and ensure that your community follows a bicycle facility selection criteria that increases separation and protection of bicyclists based on levels of motor vehicle speed and volume.

» Increase the amount of high quality bicycle parking throughout the community. Conduct a bike parking study or audit to determine current conditions of bike parking, both in terms of quality and quantity. Develop community-wide Bicycle Parking Standards to ensure that APBP-compliant bicycle parking is available in areas near transit and urban activity centers. (See www.apbp.org/bicycle-parking-solutions)

» Continue efforts to re-launch a new public bike share system to replace the system that recently ceased operations. Bike sharing is a convenient, cost effective, and healthy way of encouraging locals and visitors to make short trips by bike, make bicycling more accessible to all, and to bridge the 'last mile' between public transit and destinations.

KEY STEPS CONTINUED ON PAGE 2...

RIVERSIDE, CA

Fall 2021

KEY STEPS TO SILVER CONTINUED

» Improve bicycle safety education for students of all ages by incorporating more on-bicycle education opportunities and by expanding the program to all K-12 schools. Providing bicycles in schools for on-bike education ensures that all students can learn to safely ride a bicycle regardless of the availability of a bicycle in their household. Work with the school district, local bicycle groups, and interested parents to expand and improve the Safe Routes to School program.

» Expand bicycle education opportunities for adults. Consider ways to target demographics who currently do not feel safe riding with classes or events that address their concerns and create an inclusive, welcoming environment.

» Host a League Cycling Instructor (LCI) seminar to increase the number of local LCIs in your community. Having several active instructors in the area will enable you to expand cycling education for youth and adults, recruit more knowledgeable cycling ambassadors, deliver Bicycle Friendly Driver education to motorists, and have experts available to assist in encouragement programs.

» Increase the amount of staff time spent on improving conditions for people who bike and walk, either by creating a new Bicycle & Pedestrian Coordinator position or expanding the responsibilities of current staff.

» Continue to develop a bicycle count program that utilizes several methods of data collection including automated bicycle counters to provide long-term data on bicycle use at fixed points and mobile counters to provide periodic or before/after data related to changes in your community's road or bicycle network. Observational counts and surveys can supplement automated data in order to collect demographic information and examine social equity goals.

» Adopt a goal to eliminate traffic fatalities and serious injuries and support this goal with a comprehensive road safety plan or a Vision Zero policy to identify specific strategies to reduce traffic crashes and deaths for all road users, including bicyclists and pedestrians. Introducing low stress bikeway facilities and lowering vehicle speeds through traffic calming treatments are important engineering components for addressing roadway safety.

» Continue efforts to examine and reconsider the City's policies regarding non-exclusively human powered devices on trails so that electric pedal assist bicycles can be used more freely on trails throughout the community.

RESOLUTION NO. 23-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING TENTATIVE TRACT MAP NO. 38594 TO SUBDIVIDE AND DEVELOP 69.8 ACRES OF UNDEVELOPED PROPERTY INTO 65 BUILDABLE LOTS AND 19 LETTERED LOTS FOR CONDOMINIUM, MULTI-FAMILY RESIDENTIAL, COMMERCIAL, CIVIC, OPEN SPACE, AND PUBLIC RIGHT-OF-WAY PURPOSES, LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBERS 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN22-20087) on December 21, 2022, from The New Home Company (the "Applicant") requesting Tentative Tract Map No. 38594 (the "Project") to subdivide and develop 69.8 acres of undeveloped property into 65 buildable lots and 19 lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes; and

WHEREAS, the proposed project (Project No. PLN22-20087, 88, 89, 90, 91, and 92) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; Therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 10, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN22-20087 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 20, 2023. In addition, on September 7, 2023, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for Tentative Tract Map 38594 (PLN22-20087); and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 20, 2023, at which time it received public testimony concerning Project NO. PLN22-20087, and considered proposed Tentative Tract Map 38594.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing,

the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of Tentative Tract Map 38594 requests to subdivide 69.8 acres of Tentative Tract Map 38290 into 65 buildable lots and 19 lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR TENTATIVE TRACT MAP NO. 38594

Pursuant to Title 130 of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 20, 2023, all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed tentative tract map is consistent with the City's General Plan and any applicable specific plan as specified in Government Code Section 65451.

Evidence: Tentative Tract Map 38594 will be consistent with the City's General Plan in that it is compatible with the objectives, policies, general land uses and programs specified in the General Plan as well as the Leal Master Plan, including

(a) street alignments, grades, and widths;
(b) Drainage and sanitary facilities and utilities, including alignments and grades thereof;
(c) Location and size of all required easements and right-of-way;
(d) Lot size and configuration;
(e) Traffic access;
(f) Grading;
(g) Land to be dedicated for park or recreational purposes; and

(h) Such other specific requirements in the plan and configuration of the entire subdivision as may be necessary to insure conformity to or implementation of the General Plan and Leal Master Plan.

Finding 2: The design or improvement of the proposed subdivision is consistent with the City's General Plan and any applicable specific plan.

Evidence: The proposed Tentative Tract Map 38594 has been designed to meet all City standards applicable to subdivisions, including providing satisfactory pedestrian and vehicular circulation, including emergency vehicle access and on- and off-site public improvements. All streets, utilities, and drainage facilities had been designed and were required to be constructed in conformance with City standards.

Finding 3: The site is physically suitable for the type and proposed density of development.

Evidence: On site topography is generally flat without significant slopes and consists of approximately 69.8-acres of vacant land, which had been determined to be suitable for the development of single-family, multi-family, commercial, civic, open space, and public right-of-way purposes. The site includes an existing Southern California Edison (SCE) easement that includes a multipurpose trail and vehicular parking. On January 19, 2023, the Riverside County Airport Land Use Commission (ALUC) reviewed the project design as proposed in Tentative Tract Map No. 38594 and found that the proposed project is outside the airport influence area and therefore, consistent with the Chino Airport Land Use Compatibility Plan. Finally, the applicant has submitted a conceptual development plan which illustrates that the proposed project may be constructed on the site without adversely affecting the health, safety, or welfare of anyone who will utilized the development or anyone living within the surrounding community. Finally, the size, 69.8-acres will accommodate the proposed density of the Project.

Finding 4: The design of the subdivision or proposed improvements is not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

Evidence: CSL biologist conducted an analysis of biological resources and jurisdictional waters within the project area on June 9, 2021, and focused burrowing owl surveys and narrow endemic plant surveys were conducted on June 16, 23, July 1 and 13, 2021. Delhi Sands Flower Loving Fly Assessment was performed on June 18, 2021. Based on the updated 2021 detailed biological Surveys, the Project is not anticipated to have a greater impact than what was originally analyzed in the

2015 EIR and is not likely to cause substantial environmental damage or injust fish or wild life or their habitat.

Finding 5: The design of the subdivision or type of improvements is not likely to cause serious public health problems.

Evidence: The design of the subdivision is in conformance with the City's General Plan, Leal Master Plan Amendment, and City of Eastvale Subdivision Ordinance. The construction of all improvements on the site has been conditioned to comply with all applicable City of Eastvale ordinances, codes, and standards including, but not limited to, the California Uniform Building Code and the City's ordinances relating to stormwater runoff management and controls. In addition, the design and construction of all improvements for the subdivision have been conditioned to be in conformance with adopted public works standards. The City's ordinances, codes, and standards have been created based on currently accepted standards and practices for the preservation of the public health, safety, and welfare. Finally, the proposed street system throughout the subdivision will provide emergency vehicular access I the immediate neighborhood.

Finding 6: The design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision.

Evidence: The SCE easement that bisects the project site will be improved to accommodate a new multipurpose trail and provide vehicular parking. Easement No. 4 will be vacated prior to construction of Planning Area 8. No other easements of record or easements established by judgement of a court of competent jurisdiction for public access across the site have been disclosed in a search of the title records for the site and the City does not otherwise have any constructive or actual knowledge of any such easements.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Tentative Tract Map 38594 (PLN22-20087) to subdivide and develop 69.8 acres of undeveloped property into 65 buildable lots and 19 lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes, subject to the conditions of approval.

RESOLUTION NO. 23-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE OVERALL SITE PLANNING, MASTER LANDSCAPING, STREETSCAPE DESIGN, AND OPEN SPACE AMENITIES OF PHASE A (TENTATIVE TRACT MAP NO. 38594) OF THE NEW HOME DEVELOPMENT LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBERS 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN22-20088) on December 21, 2022, from The New Home Company (the "Applicant") requesting Major Development Review for the overall site planning, master landscaping, streetscape design, and open space amenities of Tentative Tract Map No. 38594, referred as Phase A of the New Home Development (the "Project"); and

WHEREAS, the proposed project (Project No. PLN22-20088) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 10, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN22-20088 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 20, 2023. In addition, on September 7, 2023, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN22-20088; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 20, 2023, at which time it received public testimony concerning Project NO. PLN22-20088 and considered the proposed Major Development Review for the overall site planning, master landscaping, streetscape design, and open space amenities for Phase A (Tentative Tract Map 38290) of The New Home development.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN22-20088 requests Major Development Review for the overall site planning, master landscaping, streetscape design, and open space amenities for Phase A (Tentative Tract Map 38290) of The New Home. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN22-20088

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 20, 2023, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of a downtown village with a mix of uses including retail, civic, residential, and recreational through heavily landscaped spaces, high-quality architecture and design, and ample access for pedestrians, bicyclist, and automobiles. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for a vibrant mixed use downtown.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing memorable and enjoyable pedestrian experiences with the proposed urban forest and ample landscaping, wide sidewalks, multipurpose trails, decorative light fixtures, enhanced paving, and both active and passive open spaces. The proposed design is suitable for the mixed-use, downtown village, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The proposed architecture, including the character and quality of the design, are suitable for the purposes of a mixed-use, downtown village, lifestyle center by establishing a clear, unparalleled design concept to Eastvale. The project is designed for the pedestrian experience with the proposed urban forest and ample landscaping, wide sidewalks, multipurpose trails, decorative light fixtures, enhanced paving, and both active and passive open spaces. As conditioned, the proposed project will complement traditional architectural styles and introduce novel design features that will enhance the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not with the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 22-20088 for the overall site planning, master landscaping, streetscape design, and open space amenities for Phase A (Tentative Tract Map 38290) of The New Home development, subject to the conditions of approval.

RESOLUTION NO. 23-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 1 (PA-1) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 168-UNIT CONDOMINIUM AND TOWNHOME RESIDENTIAL COMMUNITY, WITH ASSOCIATED POOL/RECREATIONAL FACILITY, PARKING AREAS, LANDSCAPING, AND OPEN SPACE AMENITIES LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBERS 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN22-20089) on December 21, 2022, from The New Home Company (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 1 (PA-1) of the Leal Master Plan or Lots 1-20 and Lot N of proposed Tentative Tract Map 38594, to accommodate a 168-unit condominium and townhome residential community, with associated pool/recreational facility, parking areas, landscaping, and open space amenities (the "Project"); and

WHEREAS, the proposed project (Project No. PLN22-20089) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 10, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN22-20089 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 20, 2023. In addition, on September 7, 2023, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN22-20089; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 20, 2023, at which time it received public testimony concerning Project NO. PLN22-20089 and considered the proposed Major Development Review for the master site planning and architecture of PA-1 of the Leal Master.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN22-20089 requests Major Development Review for the master site planning and architecture of PA-1 of the Leal Master Plan to accommodate a proposed 168-unit condominium and townhome residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN22-20089

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 20, 2023, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of condominium and townhome residential communities. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and

development standards for the condominium and townhome residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project includes building facades oriented towards the street, paseos, and open space. Buildings provide transitional spaces such as porches and covered entries for ground floor units and are accentuated with a minimum of three materials. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Transitional Craftsman, Transitional Mediterranean, Vineyard, and Mediterranean with four distinct color schemes. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not with the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 5. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 22-20089 for the master site planning and architecture of Planning Area 1 (PA-1) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 20th day of September, 2023.

RESOLUTION NO. 23-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 6 (PA-6) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 100-UNIT ATTACHED SINGLE-FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS AND LANDSCAPING LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBERS 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN22-20090) on December 21, 2022, from The New Home Company (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 6 (PA-6) of the Leal Master Plan or Lots 37-51 of proposed Tentative Tract Map 38594, to accommodate a 100-unit attached single-family residential community, with associated parking areas, and landscaping (the "Project"); and

WHEREAS, the proposed project (Project No. PLN22-20090) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 10, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN22-20090 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 20, 2023. In addition, on September 7, 2023, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN22-20090; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 20, 2023, at which time it received public testimony concerning Project NO. PLN22-20090 and considered the proposed Major Development Review for the master site planning and architecture of PA-6 of the Leal Master.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN22-20090 requests Major Development Review for the master site planning and architecture of PA-6 of the Leal Master Plan to accommodate a proposed 100-unit attached single-family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN22-20090

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 20, 2023, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of attached single-family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the attached single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Spanish, Vineyard, and Farmhouse architectural styles with three distinct color schemes. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City

Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not with the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 22-20090 for the master site planning and architecture of Planning Area 6 (PA-6) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 20th day of September, 2023.

RESOLUTION NO. 23-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 7A (PA-7A) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 94-UNIT DETACHED SINGLE-FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS, LANDSCAPING, AND OPEN SPACE AMENITIES LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBERS 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN22-20091) on December 21, 2022, from The New Home Company (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 7A (PA-7A) of the Leal Master Plan or Lots 21-36, Lot O, and Lot P of proposed Tentative Tract Map 38594, to accommodate a 94-unit detached single-family residential community, with associated parking areas, landscaping, and open space amenities (the "Project"); and

WHEREAS, the proposed project (Project No. PLN22-20091) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 10, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN22-20091 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 20, 2023. In addition, on September 7, 2023, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN22-20091; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 20, 2023, at which time it received public testimony concerning Project NO. PLN22-20091 and considered the proposed Major Development Review for the master site planning and architecture of PA-7A of the Leal Master.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN22-20091 requests Major Development Review for the master site planning and architecture of PA-7A of the Leal Master Plan to accommodate a proposed 94-unit detached single-family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN22-20091

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 20, 2023, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of detached single-family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the detached single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays reloaded homes with front elevations oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Transitional Mediterranean, Transitional Craftsman, and Transitional Farmhouse architectural styles with twelve distinct color schemes. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing

conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not with the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 22-20091 for the master site planning and architecture of Planning Area 7A (PA-7A) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 20th day of September, 2023.

RESOLUTION NO. 23-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 8 (PA-8) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 76-UNIT ATTACHED SINGLE-FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS, LANDSCAPING, AND OPEN SPACES AMENITIES LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBERS 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN22-20092) on December 21, 2022, from The New Home Company (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 8 (PA-8) of the Leal Master Plan or Lots 52-61, and Lot Q of proposed Tentative Tract Map 38594, to accommodate a 76-unit attached single-family residential community, with associated parking areas, landscaping, and open space amenities (the "Project"); and

WHEREAS, the proposed project (Project No. PLN22-20092) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 10, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN22-20092 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 20, 2023. In addition, on September 7, 2023, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN22-20092; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 20, 2023, at which time it received public testimony concerning Project NO. PLN22-20092 and considered the proposed Major Development Review for the master site planning and architecture of PA-8 of the Leal Master.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN22-20092 requests Major Development Review for the master site planning and architecture of PA-8 of the Leal Master Plan to accommodate a proposed 76-unit attached single-family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN22-20092

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 20, 2023, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of attached single-family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the attached single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Spanish, Vineyard, and Farmhouse architectural styles with six distinct color schemes. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City

Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not with the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 22-20092 for the master site planning and architecture of Planning Area 8 (PA-8) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 20th day of September, 2023.

STATE OF CALIFORNIA)
COUNTY OF RIVERSIDE) §
CITY OF EASTVALE)

I, Whitney Mayo, Deputy City Clerk of the City of Eastvale, California, do hereby certify that the foregoing Planning Commission Resolution No. 23-XX, was duly adopted by the Planning Commission of the City of Eastvale, California, at a regular meeting held on the 20th day of September, 2023, by the following vote:

AYES:

NOES:

ABSENT:

ABSTAIN:

_____
Whitney Mayo
Deputy City Clerk

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN22-20087– Tentative Tract Map (TTM) No. 38594 to subdivide and develop 69.8 acres of undeveloped property into 65 buildable lots and 19 lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes, located at the northwest corner of Limonite Ave. and Hamner Avenue.
Assessor's Parcel Number: 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013.
Planning Commission Review Date: October 18, 2023

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. The signed statement of acceptance is required and must be returned to the Planning Division prior to issuance of the first residential Building Permit. Applicant Signature Date	Prior to 1st Residential Building Permit	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City as provided for in the Development Agreement by and between the applicant and the City for the project (DA 003).	Ongoing	Planning Division	
3.	The applicant shall ensure the deposit account has a balance of at least $10,000 at the time that the applicant signs these conditions of approval (per Condition No. 1) to cover staff time for follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post- approval staff work and to halt work if the deposit account is exhausted. Make check payable to the City of Eastvale and include Project No. PLN21-20039 on the check.	Ongoing	Planning Division	
4.	Applicant understands and agrees that failure to comply with all conditions of approval may result in the City Council/Planning Commission taking action	Ongoing	Planning Divisions	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	resulting in modification of conditions of approval and/or suspension or revocation of the **Tentative Tract Map.**			
5.	Revisions to the Tentative Tract Map required shall be prepared by a California registered Land Surveyor or qualified Civil Engineer and submitted to the Planning and Engineering Division for review and approval. A Title Report prepared for subdivision guarantee for the subject property, the traverse closures for the existing parcel and all lots created therefrom, and copies of record documents shall be submitted with the Tract Map to the Engineering Division as part of the review of the Map.	Ongoing	Planning and Public Works Divisions	
6.	All applicable conditions of approval for Major Development Review (PLN22-20020 DR001), Tentative Tract Map 38290 (TTM 38290), and Leal Master Amendment (SPA001) under PLN21-20039 shall be incorporated herein by reference.	Ongoing	Planning Division	
7.	The updated Mitigation Monitoring and Reporting Program included with Addendum No. 1 for the Certified PEIR for the Leal Master Plan (State Clearinghouse No. 2015031028) shall be required for development of the proposed project (**PLN22-20089**) and shall be incorporated herein by reference.	Ongoing	Planning Division	
8.	The project shall be developed in accordance with the Major Development Review application approved by the Planning Commission on **October 18, 2023**, including the approved site plan, architectural elevations, conceptual landscape plan, etc. The applicant may request modifications or revisions to the approved project as outlined in Section 120.01.050(2) of the Eastvale Zoning Code.	Ongoing	Planning Division	
9.	For any conditions on this list that are contradicting or are inconsistent with any other conditions, the Development Agreement by and between the applicant and the City for the project(DA No. 003) shall take precedence.	Ongoing	Planning and Public Works Divisions	
Prior to Map Recordation				
10.	**TTM No. 38594** is approved as shown on the tentative tract map submitted to the Planning Division, and as approved by the **APPROVING AUTHORITY,** subject to all requirements of the Development Agreement by and between the applicant and the City for the project (DA No. 003) and/or the City of Eastvale Municipal Code, as applicable.	Prior to Map Recordation	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
11.	The applicant shall submit a proposed final tract map and all supporting documents to Public Works for review and recommendation of approval.	Prior to Map Recordation	Public Works Division	
12.	All public road dedications as part of this Conditions of Approval shall utilize the following design criteria to the satisfaction of the City Engineer: • 11 feet for left/right turn pockets on Scholar Way • 12 feet for general purpose travel lanes • 14 feet for general purpose travel lanes adjacent to the right curb • 14 feet for right turn pocket adjacent to curb on Limonite Avenue and Hamner Avenue • Southbound Hamner Avenue near Limonite Avenue shall have three (3) through lanes, two (2) left turn pockets, one (1) right turn pocket, plus all other amenities (trails, landscaping, and bike lanes) shown in TTM. • Southbound Hamner Avenue north of Eastvale Gateway shall have three (3) through lanes, one (1) left turn pocket, one (1) right turn pocket, plus all other amenities (trails, landscaping, and bike lanes) shown in TTM. • • Northbound Scholar Way near Limonite Avenue shall have one (1) through lane plus all other amenities (trails, landscaping, and bike lanes) shown in TTM in addition to the existing southbound two (2) through lanes, one (1) right turn pocket, and one (1) left turn pocket. • Northbound Scholar Way near LOT L (TTM 38594) shall have one (1) through lane, one (1) right turn pocket, plus all other amenities (trails, landscaping, and bike lanes) shown in TTM 38594.	Prior to Map Recordation	Public Works Division	
13.	Backbone streets “A”, “B”, and “C” shall consist of 76’ of right-of-way developed as follows: 2’ of landscaping, an 11’ concrete dual purpose trail (evenly delineated by striping), 7’ of landscaping, 36’ for two (2) general purpose travel lanes, 7’ of landscaping, an 8’ concrete sidewalk, and 5’ of landscaping.	Prior to Map Recordation	Planning and Public Works Divisions	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
14.	Provide plans (landscape, grading, etc.) showing a multipurpose trail/Class I trail/linear park fronting the property along Hamner, Limonite Ave, and Scholar Way.	Prior to Map Recordation	Planning and Public Works Divisions	
15.	Additional right of way widths than that are shown on TTM may be required to accommodate the improvements to accommodate additional turn-pockets as needed.	Prior to Map Recordation	Public Works Division	
16.	A Final Map prepared by a California licensed Land Surveyor or registered Civil Engineer authorized to practice land surveying (pre-1982, RCE #33965 and lower) and all supporting documents shall be submitted to the Public Works Division for review and approval. A Title Report prepared for subdivision guarantee for the subject property, the traverse closures for the existing parcel and all lots created therefrom, and copies of record documents shall be submitted with the Final Map to the Engineering Division as part of the review of the Final Map. The Final Map shall be approved by the City Council prior to recordation of the Final Map.	Prior to Map Recordation	Public Works Division	
17.	The Developer shall record appropriate easement(s) to the homeowner association in perpetuity and agreement(s) for the construction and maintenance of water quality basin(s) to meet the Storm Water Permit/Water Quality Management Plan requirements and in compliance with National Pollutant Discharge Elimination System requirements. Any retention/detention basin proposed within an area of public open space shall be undergrounded with useable public open space above ground to the satisfaction of the Community Development Director and Public Works Director.	Prior to Map Recordation	Public Works Division	
18.	At the discretion of the Developer, the development may be annexed into a new City of Eastvale owned and administered CFD and/or LMD for traffic signals, street lights, and landscape maintenance of raised landscape median and public parkways, trails, linear parks, which shall be to the satisfaction of the City Engineer, or Developer shall pay applicable fees.	Prior to Map Recordation	Public Works Division	
19.	Monument bond shall be posted with the City. The Developer shall provide a cost estimate to set monuments prepared by a California licensed Land	Prior to Map Recordation	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Surveyor or registered Civil Engineer to the Public Works Division for review and approval by the City Engineer.			
20.	The Developer shall enter into an agreement with the City for bonding and improvements of all public streets and public infrastructure.	Prior to Map Recordation	Public Works Division	
21.	Existing transportation and/or utility easements that conflict with proposed development shall be quitclaimed/abandoned on the Final Map.	Prior to Map Recordation	Public Works Division	
22.	The applicant shall submit to the City Engineer for review and approval of CC&Rs and/or Property Owners Association document to maintain and operate common areas and/or facilities including but not limited to water quality basins.	Prior to Map Recordation	Public Works Division	
23.	Show on the Final Map dedication of the public ROW for Hamner Ave, Limonite Ave, and Scholar Way in accordance with Tentative Tract Map No. 38594.	Prior to Map Recordation	Public Works Division	
24.	Provide an amendment to the Geotechnical Evaluation Report ("Subject: Preliminary Geotechnical Evaluation Including Near Surface Organic Content for the Proposed Approximately 160-Acre "Leal" Property, City of Eastvale, California", dated June 21, 2021), concurrently with street improvement plans and Final Map, for the amended evaluation to include the unimproved areas between existing street and subject property line along Scholar Way, Hamner Ave, and Limonite Ave for the tests shown in Figure 2, page 31 of 111, to the satisfaction of the City Engineer.	Prior to Map Recordation	Public Works Division	
25.	Water and electric meter for all CFD/LMD area shall be designed and located independently from non-CFD/non-LMD areas.	Prior to Map Recordation	Public Works Division	
26.	The applicant shall enter into a Subdivision Improvement Agreement with the City for each applicable “B” Map, and shall guarantee by posting security(ies) to include all public improvements, not including city owned or controlled parcels, shown on Tentative Tract Map 38594 that the developer is conditioned to construct.	Prior to Map Recordation	Public Works Division	
27.	Easement Number 4 shall be removed prior to development of TTM 38290 Lot 12 (or Lots 53-55 and Lot K of TTM 38594).	Prior to Map Recordation	Public Works Division	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
28.	Unidentified easement across lots 11 and 12 of TTM 38290 shall be removed prior to "B" map recordation.	Prior to Map Recordation	Public Works Division	
29.	All easements must be shown on cross sections of Final "B" Map.	Prior to Map Recordation	Public Works Division	
30.	In the event Development Agreement 003 is terminated or canceled in compliance with the terms of Development Agreement 003, park dedication and park improvement requirements and associated fees (if fees are required after dedication, improvement and receipt of associated credits) shall be those in effect at the time of building permit issuance (or earlier if vested under state law) and the park dedication and park improvement requirements and associated fees shall be calculated, assessed, and credited in accordance with the City's ordinances and resolutions in effect at that time (or earlier if vested under state law).	Prior to Map Recordation	Planning Division	
31.	A site-specific air toxics pollutant analysis shall be conducted in accordance with the SCAQMD (2008) Final Localized Significance Threshold Methodology for operational activities. If SCAQMD screening thresholds would be exceeded, air toxic reduction measures shall be identified in order to reduce potential impacts to a level that is less than significant. If it is the case that emissions remain in excess of SCAQMD localized significance thresholds despite the imposition of air toxic reduction measures, project-specific operations-related dispersion modeling acceptable to the SCAQMD shall be used to identify potential toxic air contaminant impacts, including diesel particulate matter generated by heavy-duty haul trucks. If SCAQMD risk thresholds would be exceeded, additional mitigation measures shall be identified in the air toxics analysis to address potential impacts and shall be based on site-specific information such as the distance to the nearest sensitive receptors, project site plan details, and merchandise delivery schedule. The City shall ensure that operations include all identified measures and that the measures reduce the health risk below SCAQMD risk thresholds. Operations-generated air toxic pollutant mitigation measures may include but not be limited to:	Prior to Grading Permit	Planning, Building and Safety, or Public Works Divisions	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	1. Redesigning the project site plan to locate proposed loading dock facilities as far from sensitive receptors as possible. 2. Posting signage stating the State-mandated prohibition on all project trucks idling in excess of 5 minutes under the Heavy-Duty Vehicle City of Eastvale Page 21 Leal Master Plan EIR Addendum No. 1 Idling Emission Reduction Program. 3. Restricting the number of daily heavy-duty haul truck deliveries. *(Mitigation Measure 3.3.5b Air Quality)*			
32.	The following mitigation measures shall be implemented and specified on all project construction plans: a) Clearing and construction activities shall be conducted outside of 6:00 p.m. and 6:00 a.m. during the months of June through September, and outside of 6:00 p.m. and 7:00 a.m. during the months of October through May (Municipal Code Chapter 8.52, Noise Regulation). b) All construction equipment shall be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer. c) Construction equipment staging areas shall be centrally located on the project site or located at the farthest distance possible from nearby residential land uses. d) All motorized construction equipment and vehicles shall be turned off when not in use. *(Mitigation Measure 3.6.4 Noise)*	Prior to Grading Permit	Planning, Public Works, and Building Divisions	
33.	MM 3.7.1 All construction and clearing activities shall be conducted outside of the avian nesting season (January 15– August 31), when feasible. If clearing and/or construction activities occur during the nesting season, preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a	Prior to Grading Permit	Planning and Public Works Divisions	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds. If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged. *(Mitigation Measures 3.7.1 Biological Resources)*			
34.	If cultural resources (i.e., prehistoric sites, historic sites, and isolated artifacts) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history shall be retained to determine the significance of the discovery. The City shall consider mitigation recommendations presented by a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history for any unanticipated discoveries. The City and the project applicant of the site where the discovery is made shall consult and agree on implementation of a measure or measures that the City deems feasible. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of cultural resources. *(Mitigation Measure 3.8.2 Biological Resources)*	Prior to Grading Permit	Planning Division	
35.	If human remains are discovered during any ground-disturbing activities in the project area, all work shall be halted immediately within 50 feet of the	Prior to Grading Permit	Planning Division

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	discovery, the City Planning Department shall be notified, and the Riverside County Coroner must be notified per California Public Resources Code Section 7050.5 and California Health and Safety Code Section 5097.98. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and I shall be followed. *(Mitigation Measure 3.8.3 Cultural Resources)*			
36.	Prior to issuance of a grading permit, a certified professional paleontologist will be retained by the developer to provide professional paleontological services, which will include survey, education of construction workers, onsite construction monitoring, appropriate recovery, and reporting. A paleontological monitor shall be present during ground disturbing activities in the eastern half of the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation). 1. The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols. 2. The paleontological monitor shall be present full-time during ground disturbance in the eastern half of the Project, including but not limited to grading, trenching, utilities, and offsite easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced. 3. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered. 4. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area.	Prior to Grading Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	5. In consultation with the qualified paleontologist the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared. 6. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately. 7. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find. For the remaining portions of the Project site, if any paleontological resources (fossils) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, and the City Planning Department shall be immediately notified. At that time, the City will coordinate any necessary investigation of the discovery with a qualified paleontologist. The City shall consider the mitigation recommendations of the qualified paleontologist for any unanticipated discoveries of paleontological resources. The City and the project applicant shall consult and agree on implementation of a measure or measures that the City deems feasible and appropriate. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of paleontological resources. *(Mitigation Measure 3.8.4 Cultural Resources)*			
37.	The project applicant shall conduct a Phase II ESA and shall follow its recommendations to remediate any potentially contaminated soil or groundwater. On-site contaminants must be addressed to the satisfaction of either Cal/EPA or the Riverside County Waste Management Department, with their approval of completion of activities/remedial action plans (RAP)	Prior to Grading Permit	Building and Planning Divisions	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	submitted to the Eastvale Department of Building and Construction prior to the issuance of a grading permit. *(Mitigation Measure 3.10.2b Hazards and Hazardous Materials)*			
38.	All trash and debris observed on-site shall be removed prior to construction activities and disposed of at a landfill or approved dumpsite. *(Mitigation Measure 3.10.2c Hazards and Hazardous Materials)*	Prior to Grading Permit	Building and Planning Divisions	
39.	The applicant shall provide approval documentation from Southern California Edison for any and all improvements within the SCE easement along the project's western boundary (Scholar Way), prior to construction of improvements within easement.	Prior to construction of improvements within easement	Planning Division	
40.	The Developer shall provide Will-Serve Letters from all utility agencies.	Prior to Building Permit	Public Works Division	
41.	The Precise Grading Plan shall be approved by the City Engineer prior to issuance of a Precise Grading Permit.	Prior to Precise Grading Permit	Public Works Division	
42.	Prior to the issuance of a Building Permit, the Developer shall pay all necessary fees as determined by the City Engineer including but not limited to Multiple Species Habitat Conservation Plan ("MSHCP") fees.	Prior to Building Permit	Public Works Division	
43.	MSHCP Standard Condition: The MSHCP requires that projects pay a mitigation fee. The following requirements of the MSHCP apply to the proposed project and will be required of all subsequent development plans and/or projects within the Leal Master Plan area: A. The project applicant shall submit fees to the City in accordance with the requirements of the MSHCP Mitigation Fee Ordinance (Chapter 4.62 of the City of Eastvale Municipal Code). As noted above, because the City has adopted the MSHCP and enforces its provisions, these requirements do not need to be included as mitigation measures. *Mitigation Measure 3.7.1 Biological Resources:* All construction and clearing activities shall be conducted outside of the avian nesting season (January 15–August 31), when feasible. If clearing and/or construction activities occur during the nesting season, preconstruction surveys for nesting raptors, special-	Prior to Building Permit	Public Works Division

	status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds. If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no Ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged.			
44.	Grading in excess of 199 cubic yards will require performance security to be posted with the City.	Prior to Grading Permit	Public Works Division	
45.	A permit for the hauling of material to and from the project site shall be submitted to the City for approval.	Prior to Grading Permit	Public Works Division	
46.	Submit a California registered Civil Engineer prepared earthwork cut and fill certification letter to the Engineering Division for review. The applicant is required to pull an NPDES/Public Works permit prior to issuance of a Building Permit for record purposes.	Prior to Building Permit	Public Works Division	
47.	Development of the site is subject to the requirements of the National Pollution Discharge Elimination System (NPDES) Permit for the City of Eastvale, under the Santa Ana Regional Water Quality Control Board, Board Order No. R8-2010-0036. Pursuant to the NPDES Permit, the developer shall ensure development of the site incorporates post-construction Best Management Practices ("BMPs") in accordance with the Model Water Quality Management Plan ("WQMP") approved for use for the Santa Ana River Watershed. The developer is advised that applicable Site Design BMPs will be required to be incorporated into the final site design, pursuant to a site specific WQMP submitted to the City Engineer for review and approval. The	Prior to Precise Grading Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading/Paving Plan.			
48.	Prior to commencing with any grading, the required erosion and dust control measures shall be in place. In addition, the following shall be included if not already identified: a. 6 foot high tan colored perimeter screened fencing b. Contractor information signage including contact information along the street frontage. Post dust control signage with the following verbiage: "Project Name, WDID No., IF YOU SEE DUST COMING FROM THIS PROJECT CALL: NAME (XXX) XXX-XXX, If you do not receive a response, please call the AQMD at 1-800-CUT-SMOG/1-800-228-7664"	Prior to Grading Permit	Public Works Division	
49.	A Notice of Intent ("NOI") to comply with the California General Construction Stormwater Permit is required via the California Regional Water Quality Control Board online Stormwater Multiple Application and Report Tracking System ("SMARTS"). A copy of the executed letter issuing a Waste Discharge Identification ("WDID") number shall be provided to the City Engineer. The Construction General Permit requires the Developer's contractor to prepare and maintain a Storm Water Pollution Prevention Plan ("SWPPP"). The SWPPP requires all appropriate measures be implemented to prevent erosion and water pollution during construction.	Prior to Grading Permit	Public Works Division	
50.	A California registered Geotechnical Engineer prepared Geotechnical/Soils Report shall be required for and incorporated as an integral part of the grading/paving plan for the proposed development. A copy of the Geotechnical/Soils Report shall be submitted to the Public Works Division with the first submittal of the Precise Grading/Offsite Street Improvement Plan.	Prior to Grading Permit	Public Works Division	Condition satisfied
51.	The project shall be developed in accordance with the approved Tentative Tract Map and Major Development Review, including the approved site plan, architectural elevations, conceptual landscape plan, and interim and ultimate improvements on Hamner Avenue, Limonite Avenue, Scholar Way, and	Prior to Building Permit	Public Works Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	"Backbone" Streets. The applicant may request modifications or revisions to the approved project as provided in the City of Eastvale Zoning Code.			
52.	The Developer must provide the JCSD with fire flow requirements from the Fire Department to determine the adequacy of the existing water system.	Prior to Grading Permit	Public Works Division	Condition satisfied
53.	The Developer shall submit street improvement plans prepared by a California registered Civil Engineer to the Public Works Division for review and approval. Unless otherwise approved, the street improvement plans shall be approved concurrently with any streetlight, landscape and irrigation, and traffic signal plans.	Prior to Grading Permit	Public Works Division	Condition satisfied
54.	An on-site circulation study for **Planning Area 3** per TTM 38594 is currently being prepared by the Public Works Division. Street improvement plans shall be updated according to the recommendations of the approved circulation study which may include adjustments to lane striping only. Conditional approval of the street improvement plans may be granted by the Public Works Division as required by JCSD and SCE to proceed with underground utility plan reviews.	Prior to Grading Permit	Public Works Division	
55.	Street names shall be approved by the Community Development Director. Suggested street names and alternatives shall be submitted in writing to the Community Development Director for approval. Phonic similarity with existing street names should be avoided.	Prior to Building Permit	Planning Division	
56.	All intersections shall include decorative pavers, including but not limited to crosswalks. Final design shall be subject to the review and approval of the Public Works and Community Development Director.	Prior to Precise Grading Permit	Planning and Public Works Divisions	
57.	All dedications and each applicable “B” Final Map recordation shall be completed.	Prior to Building Permit		
58.	Developer shall post performance bonds prior to the issuance of each grading permit for the area subject to the grading permit.	Prior to Grading Plan Review	Public Works Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Developer shall post performance and material bonds for Hamner, Limonite, and Scholar, for its offsite street improvements.			
59.	An accessible pedestrian path of travel shall be provided for Phase A, as required by applicable state and federal laws.	Prior to Building Permit Issuance	Planning and Public Works Divisions	
60.	Landscape plans for all landscaping improvements within existing or future right-of-way shall be submitted to Public Works and Planning Divisions.	Applicable Street Improvement Plans	Planning and Public Works Divisions	
Prior to Issuance of Encroachment Permit				
61.	Existing SCE easement at the intersection of Limonite Avenue and Scholar Way shall be quitclaimed/abandoned or SCE shall approve the widening of Limonite Avenue and Scholar Way through a Consent Agreement.	Prior to Issuance of Encroachment Permit	Public Works Division	
62.	The minimum pavement section for all on-site pavements shall be 4 inches asphalt concrete pavement over 8 inches crushed aggregate base with a minimum subgrade of 24 inches at 95% relative compaction, or equal. Otherwise, the pavement section shall be determined using appropriate Traffic Index ("TI") accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
63.	Landscape plans for all landscaping improvements within existing or future right-of-way shall be submitted to the Public Works Division and Planning Division for review and approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
64.	Traffic Control Plan for any improvements in the public right of way prepared by a California registered Traffic Engineer shall be submitted to the City Engineer for review and approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
Prior to Issuance of Building Permit				
65.	In the event Development Agreement 003 is terminated or canceled in compliance with the terms of Development Agreement 003 the applicable development impact fees (DIF) shall be those in effect at the time of building permit issuance (or earlier if vested under state law), and the DIF shall be	Prior to Building Permit Issuance	Planning, Building and Safety, or Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	calculated, assessed, and credited in accordance with the City's DIF ordinances and resolutions in effect at that time (or earlier if vested under state law).			
66.	Fair Share of funding shall be paid for widening Limonite Avenue along the project frontage from two to three lanes in each direction. Funding shall be determined and paid via the Riverside County Transportation Uniform Mitigation Fee (TUMF). Project plans and/or phasing shall establish the timing of this improvement to ensure it is in place prior to LOS D operations and consistent with the Master Plan's infrastructure phasing provisions. *(Mitigation Measure 3.2.1a Transportation)*	Prior to Building Permit Issuance	Public Works Division	
67.	Hamner Avenue shall be widened in accordance with *Mitigation Measure 3.2.1c Transportation* as applicable to Phase A. *(Mitigation Measure 3.2.1c Transportation)*	Prior to Building Permit Issuance	Planning and Public Works Division	
68.	Nonglare glass shall be used in all nonresidential buildings to minimize and reduce impacts from glare. Buildings that are allowed to use semi-reflective glass must be oriented so that the reflection of sunlight is minimized. Types of nonglare glass shall be specified on final development plan. *(Mitigation Measure 3.5.1 Aesthetics, Light, and Glare)*	Prior to Building Permit Issuance	Planning Division	
69.	**Asbestos.** Prior to the issuance of any permit for the demolition or alteration of existing structure(s), a letter shall be provided to the Planning Department from a qualified asbestos abatement consultant indicating that no asbestos-containing materials (ACM) are present in the building. If ACMs are found to be present, they will need to be abated in compliance with the South Coast Air Quality Management District's Rule 1403 and all other applicable state and federal rules and regulations. **Lead Paint**. Prior to issuance of any permit for the demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Eastvale Building Safety and Inspection Department. Should lead-based paint materials be identified, standard	Prior to Building Permit	Building and Planning Divisions	Condition satisfied

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	handling and disposal practices shall be implemented pursuant to OSHA regulations. **Polychlorinated Biphenyls**. Prior to issuance of a demolition permit, a polychlorinated biphenyls (PCB) abatement contractor shall conduct a survey of the project site to identify and assist with compliance with applicable state and federal rules and regulations governing PCB removal and disposal. *(Mitigation Measure 3.10.2a Hazards and Hazardous Materials)*			
70.	**NOI PDF-1** Prior to the issuance of building permits, the Project will demonstrate that building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to commercial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways: • Install sound barriers (masonry walls or walls with earth berms) between residences and noise sources. • Install double-paned or upgraded STC sound rated windows. • Provide sound insulating exterior walls and roofing systems. • Locate and/or design attic vents to minimize sound propagation into each home. • Provide forced-air ventilation systems. • Provide the necessary setbacks for dwelling units fronting along major roadways. **NOI PDF-2** The Project will comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls).	Prior to Building Permit Issuance	Planning and Building Divisions	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	NOI PDF-3 For proper acoustical performance, all exterior windows, doors, and sliding glass doors will have a positive seal and leaks/cracks must be kept to a minimum. **NOI PDF-4** The final building plans will ensure that HVAC units are not located within an area of the Project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Eastvale Municipal Code requirements. To meet the City's noise standards the following measures should be followed: • All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses. • The combined noise level of all units operating simultaneously shall not exceed the City of Eastvale daytime and nighttime exterior standards at the nearest surrounding property lines. **NOI PDF-5** Future residents, property management personnel, and commercial tenants will be required to comply with the City of Eastvale Municipal Code Noise Regulations, Chapter 8.52, which specify that no person shall create loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness. To help ensure compliance with the City's Noise Regulations, the following recommendations are provided: • Deliveries, loading and unloading activities, and trash pick-up hours should be limited to daytime hours only (8 a.m. – 10 p.m.).			

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	• Limit engine idling time for all delivery vehicles and moving trucks to 5 minutes or less. **NOI PDF-6** The Project will prepare a construction management plan and obtain a construction work permit from the City of Eastvale prior to starting construction. The construction management plan will ensure all contractors implement construction best management practices to reduce construction noise levels. Examples of best management practices may include the following: • All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields). • Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible. • If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load. • Use electric air compressors and similar power tools rather than diesel equipment, where feasible. • Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible. • Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes. • Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of			

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator. • Construction activities shall not take place between the hours of 6:00 p.m. and 6:00 a.m. during the months of June through September and 6:00 p.m. to 7:00 a.m. during the months of October through May. **NOI PDF-7** The Project will not include pile driving or blasting activities during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment will be conducted prior to start of any activity.			
71.	The developer shall prepare an address blocking exhibit with the proposed addressing and street names for review and approval by the Planning Division. This plan, including updates to the plan, shall include addressing for buildings (primary address and units) and utilities such as but not limited to electrical/water/single/dual irrigation meter pedestal(s) or temporary power poles.	Prior to building permit issuance	Planning and Building Divisions	
72.	Provide pad elevation certifications for all building pads in conformance with the approved Precise Grading Plan to the Public Works Division prior to construction of any building foundation.	Prior to building permit issuance	Public Works Division	
73.	Any proposed revisions to the Tentative Tract Map required shall be prepared by a California licensed Land Surveyor or registered Civil Engineer and submitted to the Planning and Public Works Division for review and recommendation of approval. The revised Tentative Tract Map shall be approved by the Planning Commission prior to issuance of building permits.	Prior to building permit issuance	Public Works Division	
74.	The Developer shall connect to the JCSD sewer system and apply for a sewer connection account with JCSD. The project applicant, developer, or successor in interest shall provide written verification that the JCSD can and will provide sanitary sewer service to the project not including any city-owned or controlled parcels.	Prior to building permit issuance	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
75.	The Developer shall submit sewer improvement plans prepared by a California registered Civil Engineer to the JCSD/Public Works Division. The plans, not including any city-owned or controlled parcels shall be approved by the JCSD/City Engineer prior to issuance of any building permits.	Prior to building permit issuance	Public Works Division	
76.	The Developer is advised that domestic water service is provided by JCSD. The developer shall be responsible for coordinating with JCSD and complying with all requirements for establishing domestic water service to the property, not including any city-owned or controlled parcels.	Prior to building permit issuance	Public Works Division	
77.	The Developer shall submit water improvement plans prepared by a California registered Civil Engineer to the JCSD/Public Works Division. The plans shall be approved by the JCSD/City Engineer prior to issuance of any building permits, not including any city-owned or controlled parcels.	Prior to building permit issuance	Public Works Division	
78.	All off and on-site lighting shall be decorative in nature. Final design shall be approved by the City Engineer and Community Development Director.	Prior to building permit issuance	Planning and Public Works Divisions	
79.	Submit photometric plan of street lighting. All lights shall be Edison LS-3 tariff and utilize General Electric Evolve LED luminaires per City Specifications. The Developer shall be responsible for applying with Southern California Edison (“SCE”) for all appropriate service points and electrical meters early in the process to avoid delays. The Developer must pay for the electrical service of new meter pedestals installed until such time the improvements have been accepted and the underlying property is annexed into Community Facilities District ("CFD") or Landscaping Maintenance District ("LMD").	Prior to building permit issuance	Public Works Division	
80.	The Developer shall submit traffic striping and signage plans prepared by a California registered Civil Engineer, for review and approval by the City Engineer. All Phase A base-paved and “A” Street temp striping shall be completed to the satisfaction of the City Engineer.	Prior to first occupancy	Public Works Division	
81.	As applicable to Phase A, the Developer shall construct traffic signals. Unless otherwise approved, the traffic signal plans shall be approved concurrently with any street improvement, street light, landscape, and irrigation plans.	Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
82.	As applicable to Phase A, all off-site (back bone) utilities and meters shall be undergrounded to the satisfaction of the Public Works Director.	Prior to first certificate of occupancy issuance	Planning and Public Works Divisions	
83.	The applicant agrees to submit for review and approval by the Planning Division, final landscape plans to be in conformance to the extent feasible with the Limonite Gap Master Landscape and Street Lighting Plan, along the **frontage** of Limonite Ave. (**between Hamner Ave. and Scholar Ave**.) and Hamner Ave. (**between Limonite Ave. and 58th St.**) within Phase A to the satisfaction of the Public Works Director and Community Development Director. Landscaping shall be installed and verified consistent to the timing as set by Mitigation Measure 3.2.1c Transportation.	Prior to building permit issuance	Planning and Public Works Divisions	
84.	The applicant agrees to submit for review and approval by the Planning Division, final landscape plans to be in conformance to the extent feasible with the Limonite Gap Master Landscape and Street Lighting Plan, for the **landscape median** along Limonite Ave. (**between Mulan St. to Hamner Ave**.) and Hamner Ave. (**between Limonite Ave. to Eastvale Gateway**) within Phase A to the satisfaction of the Public Works Director and Community Development Director. Landscaping shall be installed and verified consistent to the timing as set by Mitigation Measure 3.2.1c Transportation.	Prior to building permit issuance	Planning and Public Works Divisions	
85.	Any future monumentation into the development shall be subject to review and approval by the Community Development Director and City Engineer.	Prior to last building permit issuance of Phase A	Planning and Public Works Divisions	
86.	All required parking area spaces shall meet the minimum dimensions of the Zoning Code Section 120.05.060 as existing prior to May 11, 2022.	Prior to building permit issuance	Planning Division	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
87.	All signs shall be in conformance Section 120.05.070 Signs of the Eastvale Zoning Code and Chapter 4.4 Signage of the Leal Master Plan as existing prior to May 11, 2022.	Prior to last building permit issuance of Phase A	Planning Division	
88.	Wall and fences shall meet the requirements Eastvale Zoning Code and Leal Master Plan as existing prior to May 11, 2022. Block walls and fencing shall be appropriately finished with decorative capping and blocks subject to review and approval of the Community Development Director.	Prior to building permit issuance	Planning Division	
89.	The Applicant shall submit a set of development plans, including a lighting plan, to the Eastvale Police Department for review and approval for appropriate safety measures including, but not limited to, the following: PROPERTY GATES AND KNOX BOX ENTRY a. The installation of the Knox Rapid Entry System if property gates are installed. This system permits law enforcement, fire, and first responders to obtain independent access to the property in the event of an emergency. The necessary order forms for the Knox Company may be obtained by contacting the Jurupa Valley Sheriff's Station Crime Prevention Programs Coordinator at (951) 955-9225. ADDRESS NUMBERING: b. Prominently displayed address numbering in size and contrasting in color from the building façade or on a fixed sign near the street/main entrances. The numbers need to be visible from the street and interior property sides for any approaching emergency vehicles. No obstructions should limit their visibility (i.e., landscaping). SECURITY AND LIGHTING PLAN	Prior to building permit issuance	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	c. Adequate crime prevention measures to assist with identifying any suspect(s) of any potential future vandalism or theft attempts. Due to the high possibility of theft/vandalism attempts during construction, additional security measures should be added during that time frame of proposed construction. All exterior access points should be properly illuminated to make clearly visible any person on or about the premises during the hours of darkness. Residential units shall be equipped with solid core doors and quality dead bolt locking devices at entry points.			
90.	All street lighting shall meet the equipment and illumination standards of the City to the satisfaction of the City Engineer.	Prior to building permit issuance	Public Works Division	
91.	Street Improvement Plans for all perimeter streets shall be submitted for plan check within Phase A at the following states of plan completion: - Limonite 100% plan complete - Hamner 100% plan complete - Scholar 60% plan complete - 58th Street 30% plan complete	Prior to first building permit within Phase 1	Public Works Division	
Prior to Issuance of Final Certificate of Occupancy				
92.	In the event Development Agreement 003 is terminated or canceled in compliance with Development Agreement 003, the public improvements that are shown on TTM 38594 and provided for in these conditions for Phase A shall be completed prior to final certificate of occupancy.	Prior to Issuance of Certificate of Occupancy	Planning and Public Works Division	
93.	The project Covenants Conditions and Restrictions (CC&Rs) shall be provided to the City for final review and approval and shall contain language stating compliance with the Leal Master Plan and Eastvale Zoning Code as existing prior to May 11, 2022.	Prior to Issuance of Certificate of Occupancy	Planning Division	
94.	The Developer shall submit to the City Engineer and Community Development Director for review and approval the Covenants, Conditions, and Restrictions ("CC&Rs") and/or a Property Owners Association document	Prior to Issuance of Certificate of Occupancy	Planning and Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	to maintain and operate common areas and/or facilities including, but not limited to, private parking areas, private utilities, and water quality basins. This condition does not apply to city-owned or controlled parcels.			
95.	The applicant shall ensure development of the site incorporates post-construction Best Management Practices ("BMPs") in accordance with the Model Water Quality Management Plan ("WQMP") approved for use for the Santa Ana River Watershed. The Applicant is advised that applicable Site Design BMPs will be required to be incorporated into the final site design, pursuant to a site specific WQMP submitted to the City Engineer for review and approval.	Prior to building permit issuance	Public Works Division	
96.	The Applicant shall submit a Water Quality Management Plan identifying site specific Best Management Practices ("BMPs") in accordance with the Model Water Quality Management Plan ("WQMP") approved for use for the Santa Ana River Watershed. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading Plan. A WQMP Maintenance Agreement shall be required, obligating the property owner(s) to appropriate operation and maintenance obligations of on-site BMPs constructed pursuant to the approved WQMP. The WQMP and Maintenance Agreement shall be approved prior to issuance of a building permit, unless otherwise allowed by the City Engineer.	Prior to building permit issuance	Public Works Division	
97.	All existing overhead utility lines shall be undergrounded within the project frontage(s). Utility undergrounding shall extend to the nearest off-site power pole. Unless City Engineer approved, no new power poles shall be installed. A letter from the owners of the affected utilities shall be submitted to the City Engineer prior to approval of the Precise Grading/Paving Plan, informing the City that they have been notified of the City's utility undergrounding requirement and their intent to commence design of utility undergrounding plans. When available, the utility undergrounding plan shall be submitted to the City Engineer identifying all above ground facilities in the area of the project to be undergrounded.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
98.	Underground all existing electrical and telecommunications distribution utilities fronting the property along Limonite.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
99.	Upon City Engineer approval of any improvement plan, the improvement plan shall be provided to the City in digital format, consisting of a DWG (AutoCAD drawing file), DXF (AutoCAD ASCII drawing exchange file), and PDF (Adobe Acrobat) formats. Variation of the type and format of the digital data to be submitted to the City may be authorized, upon prior City Engineer approval.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
100.	The original improvement plans prepared for the proposed development and approved by the City Engineer (if required) shall be documented with record drawing "as-built" information and returned to the Public Works Division prior to issuance of final Certificate of Occupancy. Any modifications or changes to approved improvement plans shall be submitted to the City Engineer for approval through an Request For Information (RFI).	Prior to Issuance of Certificate of Occupancy	Public Works Division	
101.	Mira Loma Road and Bridge Benefit Assessment District Fee ("MLRBA"), Transportation Uniform Mitigation Fee ("TUMF"), Area Drainage Plan ("ADP") fee, and any other regional pass-through fees shall be paid prior to issuance of Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
102.	Prior to issuance of a Certificate of Occupancy or final City approvals, demonstrate that all structural BMP's have been constructed and installed in conformance with approved plans and specifications, and as identified in the approved WQMP.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
103.	Development Impact Fees and/or credits shall be in accordance with the Development Agreement between City of Eastvale and The New Home Company California, LLC dated May 11, 2022 (DA 003).	Prior to Issuance of Certificate of Occupancy	Public Works Division	
104.	All sewer mains constructed by the applicant and to become part of the public sewer system shall be pressure tested and digitally video recorded by the City's wastewater system operator JCSD prior to acceptance of the sewer system for maintenance by the City. The developer shall be responsible for all costs associated with testing and inspection services. Any defects of the sewer main shall be removed, replaced, or repaired to the satisfaction of the City Engineer prior to acceptance.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
105.	The sewer lines shall require connections to occur at a manhole and no direct lateral connections to the mainlines are allowed.	Prior to Issuance of first Occupancy	Public Works Division	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
106.	The Developer shall provide certification from JCSD Water Services demonstrating that all water and/or wastewater service accounts have been documented, prior to the issuance of a Certificate of Occupancy, except city-owned or controlled parcels.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
107.	All water mains constructed by the applicant and to become part of the public water system shall be flushed, pressure tested, disinfected, Bact-T tested, and inspected by the City's water system operator JCSD prior to acceptance of the water system for maintenance by the City. The Developer shall be responsible for all costs associated with testing and inspection services. Any defects of the water main shall be removed, replaced, or repaired to the satisfaction of the City Engineer prior to acceptance.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
108.	All parkway landscaping shall be guaranteed for a period of one (1) year from the date of the City Engineer acceptance. Any landscaping that fails during the one (1) year landscape maintenance period shall be replaced with similar plant material to the satisfaction of the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
109.	All damaged, destroyed, or modified pavement legends, traffic control devices, signing, striping, and streetlights, caused by Developer of Phase A development shall be replaced as required by the City Engineer prior to issuance of a final Certificate of Occupancy for Phase A.	Prior to Issuance of final Certificate of Occupancy for Phase A	Public Works Division	TTM COA 70
110.	Construct a raised median island along frontage of property on Hamner Avenue and Limonite Avenue in accordance with the approved Street Improvement Plans.	Prior to Issuance of final Certificate of Occupancy of Phase A	Public Works Division	
111.	Construct a multipurpose trail consistent with the approved Street Improvement Plans and TTM 38594 along the project perimeter on Hamner Avenue, Limonite Avenue, and Scholar Way within Phase A.	Prior to Issuance of final Certificate of Occupancy of Phase A	Public Works Division	
112.	Construct a multipurpose trail consistent with the approved Street Improvement Plans and TTM 38594 along the interior "backbone" streets within Phase A.	Prior to Issuance of final Certificate of Occupancy of Phase A	Public Works Division	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
113.	The pavement section shall be determined using appropriate Traffic Index ("TI") accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval. Alternatively, depending on the existing street condition and as approved by the City Engineer, a street overlay, slurry seal, or other repair can be performed to preserve recent pavement improvements.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
114.	Construct an Americans with Disabilities Act ("ADA") compliant sidewalk along the entire frontage and interior streets in accordance with the approved Street Improvement Plans and TTM 38594.	Prior to Issuance of final Certificate of Occupancy of Phase A	Public Works Division	
115.	As applicable to Phase A, grind and overlay minimum half ROW width of Hamner Avenue and Scholar Way and up to raised median on Limonite Avenue within the project frontages.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
116.	As applicable to Phase A, install Class I bicycle lanes along Hamner Avenue, Limonite Avenue, as applicable to Phase A, Scholar Way consistent with the approved Street Improvement Plans and TTM 38594.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
117.	As applicable to Phase A, Install decorative streetlights with sleeves within private in-tract streets. Install streetlights consistent with SCE light standards along Hamner Avenue, Limonite Avenue, Scholar Way, and "Backbone" streets or as approved by the Public Works Division and Planning Division.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
118.	Install Pan-Tilt-Zoom ("PTZ") cameras at each signalized intersection adjacent to the Project boundaries to tie into the existing Citywide system to monitor traffic.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
119.	Install License Plate Reader ("LPR") cameras to tie into the existing Citywide system at all signalized intersections servicing the property along the project frontage on Hamner Avenue and Limonite Avenue.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
120.	Include assessment of traffic signal synchronization, LPR and cameras and streetlights in the CFD or LMD for ongoing maintenance.	Prior to Map Rerordation	Public Works Division	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
121.	Concurrent with each street improvement, install fiber optics conduit per City standard along property frontage and pull fiber through conduit along property frontage to support current and future synchronization, Intelligent Transportation Systems ("ITS"), and public safety upgrades to the satisfaction of the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
122.	As applicable to Phase A, relocate all necessary traffic signals and replace all necessary components to accommodate new street right-of-way along Hamner Avenue, Limonite Avenue, and Scholar Way to the satisfaction of the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
123.	The Developer shall be responsible for coordinating with Riverside Transit Authority ("RTA") regarding the location of existing, proposed, and future bus stops along the property frontage of all public streets. The Developer shall design street, bus pad, and sidewalk improvements in accordance with the latest RTA bus stop guidelines and in compliance with current accessibility standards pursuant to the Americans with Disabilities Act ("ADA") requirements. The Developer shall design all bus stops to accommodate the RTA Shelters. The Developer shall submit to Public Works verification from RTA acknowledging concurrence with the existing, proposed, and future bus stop improvements in conformance with the Premium Shelter design guidelines.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
124.	A minimum of ten percent (10%) of the parking area shall be landscaped. One tree shall be planted for every five (5) parking spaces within the parking area. Fifty percent of the trees shall be a minimum size of fifteen (15) gallons and fifty percent of the trees shall be a minimum size of twenty-four (24) inch box, or as specified in the Master Plan.	Prior to Issuance of Certificate of Occupancy	Planning Division	
125.	Offsite street improvements along the entire Limonite frontage shall be completed prior to the first certificate of occupancy within Phase 1.	Prior to Issuance of First Certificate of Occupancy	Public Works Division	TTM COA 25
126.	Offsite street improvements along Hamner between Limonite and Eastvale Gateway shall be completed prior to the first certificate of occupancy of Phase 1.	Prior to Issuance of First Certificate of Occupancy	Public Works Division	TTM COA 26

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
127.	Prior to the issuance of the last certificate of occupancy in Phase 1 or the first building permit in Phase 2, whichever occurs first, all off-site street improvements shall be completed on Hamner between Eastvale Gateway and 58th Street.	Prior to last certificate of occupancy in Phase 1 or first building permit in Phase 2	Public Works Division	TTM COA 27
128.	Offsite street improvements along Scholar contiguous to Phase 1 as shown in the Master Plan Amendment shall be completed prior to the first certificate of occupancy in Phase 1.	Prior to first occupancy of Phase 1	Public Works Division	TTM COA 28
129.	Street improvements for Limonite, Scholar contiguous to Phase I and Hamner between Eastvale Gateway and Limonite shall be included in one performance bond (Phase I Off-Site Performance Bond) prior to the first certificate of occupancy in Phase 1. Upon ownership of the right-of-way of Hamner from Eastvale Gateway to 58th Street, either by the City or by the Developer, bonding for those street improvements will be incorporated into the Phase I Off-Site Performance Bond and the improvements shall be completed the earlier of the last occupancy of Phase 1 or the first building permit of Phase 2.	a. Prior to the first certificate of occupancy in Phase 1. b. The earlier of the last occupancy of Phase 1 or the first building permit of Phase 2	Public Works Division	TTM COA 34
Ongoing				
130.	The quality and ongoing maintenance of decomposed granite shall be to the satisfaction of the City Engineer.	Ongoing	Planning/Community Enhancement & Safety Divisions	
131.	All trails, landscape, pedestrian zone/linear park shall be maintained by the developer to the satisfaction of the City Engineer/ Planning Manager until CFD or Special District formation is completed and appropriate levies are collected. Developer shall continue maintaining areas around Phase 2 and Phase 3 until CFD levies for subject areas are collected.	Ongoing	Public Works Division

132.	Remove all graffiti within 24 hours pre-construction, during construction, and after a Certificate of Occupancy is issued.	Ongoing	Public Works Division	
133.	To reduce fugitive dust emissions, the contractor shall provide the City with sufficient proof of compliance with Rule 403 and other dust control measures including but not limited to: • Watering active sites three times daily. • Requiring the replacement of ground cover or the application of non-toxic soil stabilizers according to manufacturer specifications to unpaved roads and all inactive construction areas (previously graded areas inactive for 10 days or more, assuming no rain). • Requiring trucks entering or leaving the site hauling dirt, sand, or soil, or other loose materials on public roads to be covered. • Suspending all excavating and grading operations when wind gusts (as instantaneous gust) exceed 25 miles per hour. • Posting contact information outside the property for the public to call if specific air quality issues arise; the individual charged with receipt of these calls shall respond to the caller within 24 hours and resolution of the air quality issue(s), if valid, or implementation of corrective action(s) will occur within 48 to 72 hours of the time that the issue first arose. • Sweeping of streets using SCAQMD Rule 1186 and 1186.1 certified street sweepers or roadway washing trucks (utilizing recycled water if it becomes available) at the end of the day if visible soil material is carried over to adjacent streets. • Posting and enforcement of traffic speed limits of 15 miles per hour or less on all unpaved roads. • Installing wheel washers or gravel pads at construction entrances where vehicles enter and exit unpaved roads onto paved roads, or wash off trucks and any equipment leaving the site each trip to prevent track-out.	Ongoing (during project construction)	Building and Public Works Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Paving of all roadways, driveways, sidewalks, etc., shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless soil stabilizers are used.			
134.	Direct release of on-site nuisance water or stormwater runoff shall not be permitted to the adjacent public streets. Provisions for the interception of nuisance water from entering adjacent public streets from the project site shall be provided through the use of a minor storm drain system that collects and conveys nuisance water to landscape or parkway areas, and in only a stormwater runoff condition, pass runoff directly to the streets through parkway or under sidewalk drains.	Ongoing	Public Works Division	TTM COA 65
135.	A City of Eastvale Encroachment Permit is required for any improvements within the public right-of-way.	Ongoing	Public Works Division	
136.	All street cuts for utilities shall be repaired in accordance with City Standard or as recommended; and any interim trench repairs shall consist of compacted backfill to the bottom of the pavement structural section followed by placement of standard base course material in accord by the City Engineer and with the Standard Specifications for Public Work Construction ("Greenbook"). The base course material shall be placed the full height of the structural section to be flush with the existing pavement surface and provide a smooth pavement surface until permanent cap paving occurs using an acceptable surface course material.	Ongoing	Public Works Division	
137.	Any and all utility trenches or other excavations within existing asphalt concrete pavement of off-site streets resulting from the proposed development shall be backfilled and repaired in accordance with City of Eastvale Standard Drawings. The developer shall be responsible for removing, grinding, paving and/or overlaying existing asphalt concrete pavement of off-site streets including pavement repairs in addition to pavement repairs made by utility companies for utilities installed for the benefit of the proposed development (i.e. Jurupa Community Services District, Southern California Edison, Southern California Gas Company, Time Warner, Verizon, etc.). Multiple excavations, trenches, and other street cuts within existing asphalt concrete pavement of off-site streets resulting from the proposed development may require complete grinding and asphalt concrete overlay of the affected off-site	Ongoing	Public Works Division	TTM COA 66

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	streets, at the discretion of the City Engineer. The pavement condition of the existing off-site streets shall be returned to a condition equal to or better than what existed prior to construction of the proposed development.			
138.	Construction signing, lighting, and barricading shall be provided during all phases of construction in accordance with City Standards and the direction of the City Engineer. As a minimum, all construction signing, lighting and barricading shall be in accordance with Part 6 "Temporary Traffic Control" of the latest California Manual on Uniform Traffic Control Devices ("CA MUTCD"), or subsequent editions in effect at the time of construction.	Ongoing	Public Works Division	TTM COA 72

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are required by the City, other local agencies, or state and federal agencies, and are not conditions of approval of the project.

1. The applicant shall obtain City approval for any modifications or revisions to the approval of this project. Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.

2. Submit a final tract map and all supporting documents for review and approval to the satisfaction of the City Engineer and Public Works Department.

3. Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

DRAFT

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN22-20088-20092 – Major Development Reviews (DR) for the overall site planning, master landscaping, streetscape design, and open space amenities of Phase A (Tentative Tract Map 38594) and the master site planning, architecture, landscaping, parking, and open space amenities of Planning Area 1, Planning Area 6, Planning Area 7A, and Planning Area 8 of the Leal Master Plan, located at the northwest corner of Limonite Avenue and Hamner Avenue.
Assessor's Parcel Number: 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013.
Planning Commission Review Date: October 18, 2023

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. The signed statement of acceptance is required and must be returned to the Planning Division prior to issuance of first residential Building Permit. Applicant Signature Date	Prior to 1st Residential Building Permit	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City as provided for in the Development Agreement by and between the applicant and the City for the project (DA 003).	Ongoing	Planning Division	
3.	The applicant shall ensure the deposit account has a balance of at least $10,000 at the time that the applicant signs these conditions of approval (per Condition No. 1) to cover staff time for follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post- approval staff work and to halt work if the deposit account is exhausted. Make check payable to the City of Eastvale and include Project No. PLN21-20039 on the check.	Ongoing	Planning Division	
4.				

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
5.	Applicant understands and agrees that failure to comply with all conditions of approval may result in the City Council/Planning Commission taking action resulting in modification of conditions of approval and/or suspension or revocation of the **project.**	Ongoing	Planning Division	
6.	**PLN22-20088-20092** is granted for the time period as provided for in the Development Agreement by and between the applicant and the City for the project (DA 003).	Ongoing	Planning Division	
7.	All applicable Major Development Review, Tentative Tract Map 38290, and Development Agreement conditions of approval for PLN21-20039 shall be incorporated herein by reference.	Ongoing	Planning Division	
8.	The project shall be developed in accordance with the Major Development Review applications approved by the Planning Commission on **October 18, 2023**, including the approved site plan, architectural elevations, conceptual landscape plans, etc. The applicant may request modifications or revisions to the approved project as outlined in Section 120.01.050(2) of the Eastvale Zoning Code, as existing prior to May 11, 2022.	Ongoing	Planning Division	
General **Prior to the Issuance of Grading Permit**				
9.	A site-specific air toxics pollutant analysis shall be conducted in accordance with the SCAQMD (2008) Final Localized Significance Threshold Methodology for operational activities. If SCAQMD screening thresholds would be exceeded, air toxic reduction measures shall be identified in order to reduce potential impacts to a level that is less than significant. If it is the case that emissions remain in excess of SCAQMD localized significance thresholds despite the imposition of air toxic reduction measures, project-specific operations-related dispersion modeling acceptable to the SCAQMD shall be used to identify potential toxic air contaminant impacts, including diesel particulate matter generated by heavy-duty haul trucks. If SCAQMD risk thresholds would be exceeded, additional mitigation measures shall be identified in the air toxics analysis to address potential impacts and shall be based on site-specific information such as the distance to the nearest sensitive receptors, project site plan details, and merchandise delivery schedule. The	Prior to Grading Permit	Planning, Building and Safety, or Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	City shall ensure that operations include all identified measures and that the measures reduce the health risk below SCAQMD risk thresholds. Operations-generated air toxic pollutant mitigation measures may include but not be limited to: 1. Redesigning the project site plan to locate proposed loading dock facilities as far from sensitive receptors as possible. 2. Posting signage stating the State-mandated prohibition on all project trucks idling in excess of 5 minutes under the Heavy-Duty Vehicle City of Eastvale Page 21 Leal Master Plan EIR Addendum No. 1 Idling Emission Reduction Program. 3. Restricting the number of daily heavy-duty haul truck deliveries. *(Mitigation Measure 3.3.5b Air Quality)*			
10.	The following Addendum No.1 to the Leal Master Plan EIR mitigation measures shall be implemented and specified on all project construction plans: a) Clearing and construction activities shall be conducted outside of 6:00 p.m. and 6:00 a.m. during the months of June through September, and outside of 6:00 p.m. and 7:00 a.m. during the months of October through May (Municipal Code Chapter 8.52, Noise Regulation). b) All construction equipment shall be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer. c) Construction equipment staging areas shall be centrally located on the project site or located at the farthest distance possible from nearby residential land uses. d) All motorized construction equipment and vehicles shall be turned off when not in use.	Prior to Grading Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	(Mitigation Measure 3.6.4 Noise)			
11.	MM 3.7.1 All construction and clearing activities shall be conducted outside of the avian nesting season (January 15– August 31), when feasible. If clearing and/or construction activities occur during the nesting season, preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds. If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged. *(Mitigation Measures 3.7.1 Biological Resources)*	Prio to Grading Permit	Planning Division	
12.	If cultural resources (i.e., prehistoric sites, historic sites, and isolated artifacts) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history shall be retained to determine the significance of the discovery. The City shall consider mitigation recommendations presented by a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history for any unanticipated discoveries. The City and the project applicant of the site where the discovery is made shall consult and agree on implementation of a measure or measures that the City deems feasible. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data	Prior to Grading Permit	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of cultural resources. *(Mitigation Measure 3.8.2 Cultural Resources)*			
13.	If human remains are discovered during any ground-disturbing activities in the project area, all work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and the Riverside County Coroner must be notified per California Public Resources Code Section 7050.5 and California Health and Safety Code Section 5097.98. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and I shall be followed. *(Mitigation Measure 3.8.3 Cultural Resources)*	Prior to Grading Permit	Planning Division	
14.	Prior to issuance of a grading permit, a certified professional paleontologist will be retained by the developer to provide professional paleontological services, which will include survey, education of construction workers, onsite construction monitoring, appropriate recovery, and reporting. A paleontological monitor shall be present during ground disturbing activities in the eastern half of the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation). 1. The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols. 2. The paleontological monitor shall be present full-time during ground disturbance in the eastern half of the Project, including but not limited to grading, trenching, utilities, and offsite easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced.	Prior to Grading Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	3. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered. 4. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area. 5. In consultation with the qualified paleontologist the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared. 6. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately. 7. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find. For the remaining portions of the Project site, if If any paleontological resources (fossils) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, and the City Planning Department shall be immediately notified. At that time, the City will coordinate any necessary investigation of the discovery with a qualified paleontologist. The City shall consider the mitigation recommendations of the qualified paleontologist for any unanticipated discoveries of paleontological resources. The City and the project applicant shall consult and agree on implementation of a measure or measures that the City deems feasible and appropriate. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of paleontological resources.

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	(Mitigation Measure 3.8.4 Cultural Resources)			
15.	The project applicant shall conduct a Phase II ESA and shall follow its recommendations to remediate any potentially contaminated soil or groundwater. On-site contaminants must be addressed to the satisfaction of either Cal/EPA or the Riverside County Waste Management Department, with their approval of completion of activities/remedial action plans (RAP) submitted to the Eastvale Department of Building and Construction prior to the issuance of a grading permit. *(Mitigation Measure 3.10.2b Hazards and Hazardous Materials)*	Prior to Grading Permit	Building and Planning Divisions	
16.	All trash and debris observed on-site shall be removed prior to construction activities and disposed of at a landfill or approved dumpsite. *(Mitigation Measure 3.10.2c Hazards and Hazardous Materials)*	Prior to Grading Permit	Building and Planning Divisions	
17.	The applicant shall provide approval documentation from Southern California Edison for any and all improvements within the SCE easement along the project's western boundary (Scholar Way), prior to issuance of a Precise Grading Permit.	Prior to Precise Grading Permit	Planning Division	
18.	The Developer shall provide Will-Serve Letters from all utility agencies.	Prior to Building Permit	Public Works Division	
19.	The Precise Grading Plan shall be City Engineer approved prior to issuance of a Precise Grading Permit.	Prior to Precise Grading Permit	Public Works Division	
20.	Prior to the issuance of a Building Permit, the Developer shall pay all necessary fees as determined by the City Engineer including but not limited to Multiple Species Habitat Conservation Plan ("MSHCP") fees.	Prior to Building Permit	Public Works Division	
21.	MSHCP Standard Condition: The MSHCP requires that projects pay a mitigation fee. The following requirements of the MSHCP apply to the proposed project and will be required of all subsequent development plans and/or projects within the Leal Master Plan area: A. The project applicant shall submit fees to the City in accordance with the requirements of the MSHCP Mitigation Fee Ordinance (Chapter 4.62 of the City of Eastvale Municipal Code). As noted above, because the City has adopted the MSHCP and	Prior to Building Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	enforces its provisions, these requirements do not need to be included as mitigation measures. *Mitigation Measure 3.7.1 Biological Resources:* All construction and clearing activities shall be conducted outside of the avian nesting season (January 15–August 31), when feasible. If clearing and/or construction activities occur during the nesting season, preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds. If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no Ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged.			
22.	Grading in excess of 199 cubic yards will require performance security to be posted with the City.	Prior to Grading Permit	Public Works Division	
23.	A permit for the hauling of material to and from the project site shall be submitted to the City for approval.	Prior to Grading Permit	Public Works Division	
24.	Submit a California registered Civil Engineer prepared earthwork cut and fill certification letter to the Engineering Division for review. The applicant is required to pull an NPDES/Public Works permit prior to issuance of a Building Permit for record purposes.	Prior to Building Permit	Public Works Division	
25.	Development of the site is subject to the requirements of the National Pollution Discharge Elimination System (NPDES) Permit for the City of Eastvale, under the Santa Ana Regional Water Quality Control Board, Board	Prior to Precise Grading Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Order No. R8-2010-0036. Pursuant to the NPDES Permit, the developer shall ensure development of the site incorporates post-construction Best Management Practices ("BMPs") in accordance with the Model Water Quality Management Plan ("WQMP") approved for use for the Santa Ana River Watershed. The developer is advised that applicable Site Design BMPs will be required to be incorporated into the final site design, pursuant to a site specific WQMP submitted to the City Engineer for review and approval. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading/Paving Plan.			
26.	Prior to commencing with any grading, the required erosion and dust control measures shall be in place. In addition, the following shall be included if not already identified: a. 6 foot high tan colored perimeter screened fencing b. Contractor information signage including contact information along the street frontage. c. Post dust control signage with the following verbiage: "Project Name, WDID No., IF YOU SEE DUST COMING FROM THIS PROJECT CALL: NAME (XXX) XXX-XXX, If you do not receive a response, please call the AQMD at 1-800-CUT-SMOG/1-800-228-7664"	Prior to Grading Permit	Public Works Division	
27.	A Notice of Intent ("NOI") to comply with the California General Construction Stormwater Permit is required via the California Regional Water Quality Control Board online Stormwater Multiple Application and Report Tracking System ("SMARTS"). A copy of the executed letter issuing a Waste Discharge Identification ("WDID") number shall be provided to the City Engineer. The Construction General Permit requires the Developer's contractor to prepare and maintain a Storm Water Pollution Prevention Plan ("SWPPP"). The SWPPP requires all appropriate measures be implemented to prevent erosion and water pollution during construction.	Prior to Grading Permit	Public Works Division	
28.	A California registered Geotechnical Engineer prepared Geotechnical/Soils Report shall be required for and incorporated as an integral part of the grading/paving plan for the proposed development. A copy of the Geotechnical/Soils Report shall be submitted to the Public Works Division	Prior to Grading Permit	Public Works Division	Conditions satisfied

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	with the first submittal of the Precise Grading/Offsite Street Improvement Plan.			
29.	The project shall be developed in accordance with the approved Tentative Tract Map and Major Development Reviews, including the approved site plans, architectural elevations, conceptual landscape plans, and interim and ultimate improvements on Hamner Avenue, Limonite Avenue, Scholar Way, and "Backbone" Streets. The applicant may request modifications or revisions to the approved project as provided in the City of Eastvale Zoning Code.	Prior to Building Permit	Public Works Division	
30.	The Developer must provide JCSD with fire flow requirements from the Fire Department to determine the adequacy of the existing water system.	Prior to Grading Permit	Public Works Division	Condition satisfied
31.	Street names shall be approved by the Community Development Director. Suggested street names and alternatives shall be submitted in writing to the Community Development Director for approval. Phonic similarity with existing street names should be avoided.	Prior to Building Permit	Planning Division.	
General **Prior to Issuance of Encroachment Permit**				
32.	Landscape plans for all landscaping improvements within existing or future right-of-way shall be submitted to the Public Works Division and Planning Division for review and approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
General **Prior to Issuance of Building Permit**				
33.	Nonglare glass shall be used in all nonresidential buildings to minimize and reduce impacts from glare. Buildings that are allowed to use semi-reflective glass must be oriented so that the reflection of sunlight is minimized. Types of nonglare glass shall be specified on final development plan. *(Mitigation Measure 3.5.1 Aesthetics, Light, and Glare)*	Prior to Building Permit Issuance	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
34.	**Asbestos.** Prior to the issuance of any permit for the demolition or alteration of existing structure(s), a letter shall be provided to the Planning Department from a qualified asbestos abatement consultant indicating that no asbestos-containing materials (ACM) are present in the building. If ACMs are found to be present, they will need to be abated in compliance with the South Coast Air Quality Management District's Rule 1403 and all other applicable state and federal rules and regulations. **Lead Paint**. Prior to issuance of any permit for the demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Eastvale Building Safety and Inspection Department. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to OSHA regulations. **Polychlorinated Biphenyls**. Prior to issuance of a demolition permit, a polychlorinated biphenyls (PCB) abatement contractor shall conduct a survey of the project site to identify and assist with compliance with applicable state and federal rules and regulations governing PCB removal and disposal. *(Mitigation Measure 3.10.2a Hazards and Hazardous Materials)*	Prior to Building Permit	Building and Planning Divisions	
35.	**NOI PDF-1** Prior to the issuance of building permits, the Project will demonstrate that building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to commercial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways: • Install sound barriers (masonry walls or walls with earth berms) between residences and noise sources. • Install double-paned or upgraded STC sound rated windows. • Provide sound insulating exterior walls and roofing systems. • Locate and/or design attic vents to minimize sound propagation into each	Prior to Building Permit	Building and Public Works Divisions	

Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
home. • Provide forced-air ventilation systems. • Provide the necessary setbacks for dwelling units fronting along major roadways. **NOI PDF-2** The Project will comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls). **NOI PDF-3** For proper acoustical performance, all exterior windows, doors, and sliding glass doors will have a positive seal and leaks/cracks must be kept to a minimum. **NOI PDF-4** The final building plans will ensure that HVAC units are not located within an area of the Project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Eastvale Municipal Code requirements. To meet the City's noise standards the following measures should be followed: • All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses. • The combined noise level of all units operating simultaneously shall not exceed the City of Eastvale daytime and nighttime exterior standards at the nearest surrounding property lines. **NOI PDF-5** Future residents, property management personnel, and commercial tenants			

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	will be required to comply with the City of Eastvale Municipal Code Noise Regulations, Chapter 8.52, which specify that no person shall create loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness. To help ensure compliance with the City's Noise Regulations, the following recommendations are provided: • Deliveries, loading and unloading activities, and trash pick-up hours should be limited to daytime hours only (8 a.m. – 10 p.m.). • Limit engine idling time for all delivery vehicles and moving trucks to 5 minutes or less. **NOI PDF-6** The Project will prepare a construction management plan and obtain a construction work permit from the City of Eastvale prior to starting construction. The construction management plan will ensure all contractors implement construction best management practices to reduce construction noise levels. Examples of best management practices may include the following: • All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields). • Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible. • If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load.			

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	• Use electric air compressors and similar power tools rather than diesel equipment, where feasible. • Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible. • Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes. • Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator. • Construction activities shall not take place between the hours of 6:00 p.m. and 6:00 a.m. during the months of June through September and 6:00 p.m. to 7:00 a.m. during the months of October through May. **NOI PDF-7** The Project will not include pile driving or blasting activities during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment will be conducted prior to start of any activity.			

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
36.	All construction shall comply with the most recently adopted City and State building codes: • 2022 California Building Code • 2022 California Residential Code • 2022 California Electrical Code • 2022 California Mechanical Code • 2022 California Plumbing Code • 2022 California Fire Code • 2022 California Green Code	Prior to building permit issuance	Building Division	
37.	Special Inspections – As indicated by California Building Code Section 1704, the owner shall employ one or more special inspectors who shall provide special inspections when required by CBC section 1704. Please contact the Building Division at the time of plan submittal to obtain an application for special inspections.	Prior to building permit issuance	Building Division	
38.	The Title Sheet of the plans shall include: • Occupancy Group • Occupant Load • Description of use • Type of Construction • Height of Building • Floor area of building(s) and/or occupancy group(s)	Prior to building permit issuance	Building Division	
39.	School impact fees shall be paid prior to building permit issuance.	Prior to building permit issuance	Building Division	
40.	Dimensioned building setbacks and property lines, street centerlines, and between buildings or other structures shall be dimensioned on the plot plan.	Prior to building permit issuance	Building Division

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
41.	All property lines and easements must be shown on the plot plan. A statement that such lines and easements are shown is required.	Prior to building permit issuance	Building Division	
42.	The project design will conform with energy conservation measures articulated in Title 24 of the California Code of Regulations and address measures to reduce energy consumption such as flow restrictors for toilets, low consumptions light fixtures, and insulation, and shall use to the extent feasible drought landscaping.	Prior to building permit issuance	Building Division	
43.	A design professional will be required at the time of construction drawings, to prepare plans for proposed improvements per the Business and Professions Code.	Prior to building permit issuance	Building Division	
44.	Public and private site improvements shall be designed in accordance with the Americans with Disabilities Act and Chapter 11 of the California Building Code. The site plan shall include a site accessibility plan identifying exterior routes of travel and detailing running slope, cross slope, width, pedestrian ramp, curb ramps, handrails, signage, and truncated domes. Path of travel shall be provided from the public right of way and accessible parking to the building. The design professional shall ensure that the site accessibility plan is in compliance with the latest Federal and State regulations.	Prior to building permit issuance	Building Division	
45.	The developer shall prepare an address blocking exhibit with the proposed addressing and street names for review and approval by the Planning Division. This plan, including updates to the plan, shall include addressing for buildings (primary address and units) and utilities such as but not limited to electrical/water/single/dual irrigation meter pedestal(s) or temporary power poles.	Prior to building permit issuance	Planning and Building Division.	
46.	The MDR has approved the overall architectural styles and enhanced elevations at specific locations as identified on the site plan for each planning area. During plan check, the City may request minor adjustments/enhancements to limited aspects of the architectural details, without wholesale change to the architectural style.	Prior to building permit issuance	Planning Division	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
47.	Construction and architectural detailing shall be in substantial conformance with the approved plans, including but not necessarily limited to elevation drawings and material/colors sample board submitted as a part of this application and as approved by the Planning Commission, except that any modification shall be subject to the discretion of the Community Development Director upon finding that any changes are comparable in substance and quality to the original approval.	Prior to building permit issuance	Planning Division	
48.	Any future modification to the building colors and materials approved by the Planning Commission shall be subject to review and approval by the Community Development Director. At the Community Development Director's discretion, proposed color and material modification may be referred to the Planning Commission for Major Development Plan review.	Prior to building permit issuance	Planning Division	
49.	AC units shall be screened to the extent feasible with a healthy and thriving hedge at all times. Where room limitations exist, the applicant shall provide a decorative screen panel to screen AC units from the public right-of-way to the extent feasible to the satisfaction of the Community Development Director	Prior to building permit issuance	Planning Division	
50.	Sectional garage doors with automatic openers shall be required where face of garage is less than eighteen feet (18') from back of sidewalk or back of curb when sidewalks are not provided.	Prior to building permit issuance	Planning Division	
51.	Any future monumentation into the development shall be subject to review and approval by the Community Development Director and City Engineer.	Prior to last building permit issuance of Phase A	Planning & Public Works Divisions	
52.	All signs and entry monumentation shall be illuminated and setback a minimum of five feet from the property line.	Prior to building permit issuance	Planning Division	
53.	All required parking area spaces shall meet the minimum dimensions of the Zoning Code Section 120.05.060, as existing prior to May 11, 2022.	Prior to building permit issuance	Planning Division	
54.	All signs shall be in conformance Section 120.05.070 Signs of the Eastvale Zoning Code and Chapter 4.4 Signage of the Leal Master Plan, as existing prior to May 11, 2022.	Prior to last building permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
		issuance of Phase A		
55.	Wall and fences shall meet the requirements Eastvale Zoning Code and Leal Master Plan, as existing prior to May 11, 2022. Block walls and fencing shall be appropriately finished with decorative capping and blocks subject to review and approval of the Community Development Director. Wall and fencing plan (or supplemental plan) shall distinguish patio/courtyard boundaries and identify public/open space vs. private areas. Subject to the Community Development Director, additional fencing and walls may be required for purposes of security and safety.	Prior to building permit issuance	Planning Division	
56.	The master conceptual wall and fence plans approved by the Planning Commission as part of **PLN22-20088-20092** shall serve as the master plan of development for community walls and fences within PA-1, PA-6, PA-7A, and PA-8. The final design and location of project walls and fences shall be subject to review and approval of the Community Development Director.	Prior to Certificate of Occupancy	Planning Division	
57.	The development shall be designed to include pet and animal waste receptacles along pedestrian pathways. Final design shall be approved by the Community Development Director.	Prior to Certificate of Occupancy	Planning Division	
58.	The final design of on and off-site amenities including, but not limited to, benches, trashcans, bike racks, pet waste receptacles, lighting, play equipment, art, furnishings, etc. shall be approved by the City Engineer and Community Development Director..	Prior to Certificate of Occupancy	Planning Division and Public Works	
59.	All off and on-site lighting shall be decorative in nature. Final design shall be approved by the City Engineer and Community Development Director.	Prior to Issuance of Building Permit	Planning and Public Works Division	
60.	Mailboxes shall be designed, installed and located by the developer to the satisfaction of the Community Development Director.	Prior to Certificate of Occupancy	Planning Division	
61.	All street lighting shall meet the equipment and illumination standards of the City to the satisfaction of the City Engineer.	Prior to Certificate of Occupancy	Public Works Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
62.	The Applicant shall submit a set of development plans, including a lighting plan, to the Eastvale Police Department for review and approval for appropriate safety measures including, but not limited to, the following: PROPERTY GATES AND KNOX BOX ENTRY a. The installation of the Knox Rapid Entry System if property gates are installed. This system permits law enforcement, fire, and first responders to obtain independent access to the property in the event of an emergency. The necessary order forms for the Knox Company may be obtained by contacting the Jurupa Valley Sheriff's Station Crime Prevention Programs Coordinator at (951) 955-9225. ADDRESS NUMBERING: b. Prominently displayed address numbering in size and contrasting in color from the building façade or on a fixed sign near the street/main entrances. The numbers need to be visible from the street and interior property sides for any approaching emergency vehicles. No obstructions should limit their visibility (i.e., landscaping). SECURITY AND LIGHTING PLAN c. Adequate crime prevention measures to assist with identifying any suspect(s) of any potential future vandalism or theft attempts. Due to the high possibility of theft/vandalism attempts during construction, additional security measures should be added during that time frame of proposed construction. All exterior access points should be properly illuminated to make clearly visible any person on or about the premises during the hours of darkness.	Prior to Certificate of Occupancy	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	d. Residential units shall be equipped with solid core doors and quality dead bolt locking devices at entry points.			
63.	Landscape construction plans shall be submitted to the Planning Division for review and approval. The plans shall be consistent with the Conceptual Landscape Plan approved by the Planning Commission on **October 18**, **2023**. The plan shall be certified by a licensed landscape architect as required, taking into account approved preliminary landscape plan (if any), adopted plant palette guides, applicable scenic and master/specific plan requirements, and water conservation measures. This submittal shall be made to the Planning Division with the appropriate Application and Fee.	Prior to building permit issuance	Planning Division	
64.	Landscape construction plans shall be designed to match and align with current WQMP and Best Management Practices (BMP) Facilities. Plans shall be designed and reviewed to ensure improvements will not conflict with underground structures, depressed basin, or park improvements.	Prior to building permit issuance	Planning and Public Works Divisions	
65.	Landscape and Civil construction plans shall be designed with any updated base (per the WQMP and BMP's) information. Applicant to include all maintenance access points such as vaults, manholes, etc. to verify their impact on planter areas.	Prior to building permit issuance	Planning and Public Works Divisions	
66.	"A," "B," and "C" Streets shall be considered Enhanced Parkways and require double row planting of trees at least 20' to 30' on center to create sufficient shade along pedestrian walkways, depending on the tree species, and subject to review by the city's landscape architect.	Prior Certificate of Occupancy	Planning and Public Works Divisions	
67.	Improved and decorative paving shall be provided at vehicular entry points, intersections, and areas of pedestrian connections to the satisfaction of the Community Development Director.	Prior to Certificate of Occupancy	Planning and Public Works Divisions	
68.	Overall landscape square footage and corresponding percentage (versus total developed area) shall be provided for verification of meeting city minimum objective standards.	Prior to building permit issuance	Planning and Public Works Divisions	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
69.	Interior parking areas shall include one (1) tree shall be planted for every five (5) parking spaces within parking areas.	Prior to Certificate of Occupancy	Planning and Public Works Divisions	
70.	All trees shall be a mix of 24" box minimum and 36" and 48" box maximum based on the current matrix. • Minimum size being 24" box- 50% of total, 36" box 30% of total, and 48" box 20% of total = 100% The minimum shrub or vine size for all areas visible from the public right-of-way shall be a mix of 1 and 5 gallons depending on availability, except for ground covers (1 gallon) or adjustments based on setback requirements for clearance for walks or drives. All ground cover located within the offsite/public areas shall be a minimum of 1 gallon. Shrubs and ground covers shall be designed for installation at reasonable spacing to allow for growth to relative maturity.	Certificate of Occupancy	Planning and Public Works Divisions	
71.	Landscape plans shall be designed to include concrete mow curbs or other approved separations for areas of landscape where separations or changes in maintenance responsibility exist. This shall be clearly defined on the plans for the purposes of understanding maintenance responsibility.	Prior to Certificate of Occupancy	Planning and Public Works Divisions	
72.	Any trees that are in conflict shall be relocated to other areas of the site, subject to the review and approval of the Community Development Director.	Prior to Certificate of Occupancy	Planning and Public Works Divisions	
73.	All landscape and irrigation plans shall be consistent with the City of Eastvale Zoning Code, with Section 5.4 Landscaping General Provisions, the City of Eastvale Design Standards and Guidelines, and the City of Eastvale Chapter	Prior to Certificate of Occupancy	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	14.24 Water Efficient Landscape Regulations, WUCOLS, and other current applicable codes and guides, in effect prior to May 11, 2022.			
74.	Planter areas shall contain a minimum width of 5 feet or greater of planting space, unless otherwise approved by the Community Development Director.	Prior to building permit issuance	Planning Division	
75.	To the extent tree species health and integrity are prioritized, mature specimen trees in 36-inch and/or 48-inch boxes shall be provided at prominent project entry statements and at major focal areas to the satisfaction of the Community Development Director.	Prior to building permit issuance	Planning Division	
76.	A top mulch layer of approved wood bark mulch shall be applied to the soil a minimum of 3 inches deep.	Prior to building permit issuance	Planning Division	
77.	To the extent tree species health and integrity are prioritized, root barriers shall be installed for all trees located within 5 feet of paving in 10 to 12 foot lengths. Trees located within 10 feet of curbs, city sidewalks, within planted parkways, and street medians shall utilize 20 lineal feet of root barrier.	Prior to building permit issuance	Planning Division	
78.	To the extent feasible, utility and trash enclosure walls shall be appropriately screened within planting areas at least 5 feet wide with shrubs and/or vines that mitigate the view of the walls and the equipment within the enclosure.	Prior to building permit issuance	Planning Division	
79.	A weather-based smart irrigation controller shall be installed. A rain shut off device or weather station shall be installed connected with the irrigation controller.	Prior to building permit issuance	Planning Division	
80.	All fertilizers and soil amendments used during planting preparation and installation shall be derived from organic based materials. Humate at 50 pounds per 1,000 square feet and mycorrhizae shall be included. Organic soil amendments at a ratio of 4 cubic yards per thousand square foot shall be incorporated into the planting preparation, unless otherwise recommended by the soil management plan.	Prior to building permit issuance	Planning Division	
81.	Provide pad elevation certifications for all building pads in conformance with the approved Precise Grading Plan to the Public Works Division prior to construction of any building foundation.	Prior to building permit issuance	Public Works Division	
General				

DRAFT

Prior/During Ground Disturbance and Construction				
82.	The City Landscape Architect shall be contacted to meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations utilizing humate, mycorrhizae, and organic fertilizer shall be presented prior to the meeting. No landscaping shall occur prior to the meeting.	Prior to initiation of landscape construction	Planning Division	
General **Prior to Issuance of Final Certificate of Occupancy**				
83.	The developer shall have the following items on permanent and prominent display in the construction office where applicable: a. A copy of the approved and recorded tract map; b. A copy of the approved Major Development Review plot plans; c. A copy of the approved landscape architecture plans; d. A copy of the approved residential parking management plan; e. A map showing the boundaries of those areas to be maintained by the Homeowners Association; f. Applicable Codes, Covenants, and Restrictions (CC&Rs);	Prior to Issuance of Certificate of Occupancy	Planning Division	
84.	All required landscaping of Phase A shall be installed and verified prior to issuance of certificate of occupancy for the last residential unit of Phase A.	Prior to Issuance of Certificate of Occupancy for last unit of Phase A	Planning Division	
85.	A minimum of ten percent (10%) of the parking area shall be landscaped. One tree shall be planted for every five (5) parking spaces within the parking area (Tree diamonds may be used. Fifty percent of the trees shall be a minimum size of fifteen (15) gallons and fifty percent of the trees shall be a minimum size of twenty-four (24) inch box, or as specified in the Master Plan.	Prior to Issuance of Certificate of Occupancy	Planning Division	
86.	The Developer shall submit to the City Engineer and Community Development Director for review and approval the Covenants, Conditions, and Restrictions ("CC&Rs") and/or a Property Owners Association document and shall contain language stating compliance with the Leal Master Plan and	Prior to Issuance of Certificate of Occupancy	Planning and Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Eastvale Zoning Code as existing prior to May 11, 2022. This condition does not apply to city-owned or controlled parcels			
87.	The CC&Rs shall address maintenance and operation of common areas and/or facilities including, but not limited to, private parking areas, private utilities, and water quality basins. The CC&Rs shall also prohibit landscaping within H.O.A.-maintained areas from being modified, trimmed, or removed in any way by the homeowner, without express authorization by the H.O.A. This condition does not apply to city-owned or controlled parcels	Prior to Issuance of Certificate of Occupancy	Planning and Public Works Division	
88.	The project CC&Rs shall prohibit the use of dedicated covered resident parking for personal storage or any use other than for the parking of operable motor vehicles at all times to the satisfaction of the City Attorney and Community Development Director.	Prior to Issuance of Certificate of Occupancy	Planning Division	
89.	Parking restrictions resultant of minimum width streets, no overnight parking, and permit parking shall be identified in the project CC&Rs.	Prior to Issuance of Certificate of Occupancy	Planning Division	
90.	The applicant shall provide and future H.O.A shall enforce a parking management plan consistent with the Leal Master Plan Residential Parking Review and Parking Management Plan (PMP)-Phase A, City of Eastvale memorandum prepared by RK Engineering Group, Inc. dated September 13, 2023, for review and approval by the Community Development Director.	Prior to Issuance of Certificate of Occupancy	Planning Division	
91.	The original improvement plans prepared for the proposed development and approved by the City Engineer (if required) shall be documented with record drawing "as-built" information and returned to the Public Works Division prior to issuance of final Certificate of Occupancy. Any modifications or changes to approved improvement plans shall be submitted to the City Engineer for approval prior to final Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
92.	Mira Loma Road and Bridge Benefit Assessment District Fee ("MLRBA"), Transportation Uniform Mitigation Fee ("TUMF"), Area Drainage Plan ("ADP") fee, and any other regional pass-through fees shall be paid prior to issuance of Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
93.	Prior to issuance of a Certificate of Occupancy or final City approvals, demonstrate that all structural BMP's have been constructed and installed in conformance with approved plans and specifications, and as identified in the approved WQMP.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
General **Ongoing**				
94.	The quality and ongoing maintenance of decomposed granite shall be to the satisfaction of the City Engineer.	Ongoing	Planning/Community Enhancement & Safety Divisions	
95.	To reduce fugitive dust emissions, the contractor shall provide the City with sufficient proof of compliance with Rule 403 and other dust control measures including but not limited to: • Watering active sites three times daily. • Requiring the replacement of ground cover or the application of non-toxic soil stabilizers according to manufacturer specifications to unpaved roads and all inactive construction areas (previously graded areas inactive for 10 days or more, assuming no rain). • Requiring trucks entering or leaving the site hauling dirt, sand, or soil, or other loose materials on public roads to be covered. • Suspending all excavating and grading operations when wind gusts (as instantaneous gust) exceed 25 miles per hour. • Posting contact information outside the property for the public to call if specific air quality issues arise; the individual charged with receipt of these calls shall respond to the caller within 24 hours and resolution of the air quality issue(s), if valid, or implementation of corrective action(s) will occur within 48 to 72 hours of the time that the issue first arose. • Sweeping of streets using SCAQMD Rule 1186 and 1186.1 certified street sweepers or roadway washing trucks (utilizing recycled water	Ongoing (during project construction)	Building and Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	if it becomes available) at the end of the day if visible soil material is carried over to adjacent streets. • Posting and enforcement of traffic speed limits of 15 miles per hour or less on all unpaved roads. • Installing wheel washers or gravel pads at construction entrances where vehicles enter and exit unpaved roads onto paved roads,or wash off trucks and any equipment leaving the site each trip to prevent track-out. Paving of all roadways, driveways, sidewalks, etc., shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless soil stabilizers are used.			
96.	All HOA maintained landscaping shall be perpetually maintained and be in a healthy and thriving manner consistent with the approved construction landscape plans. Any changes and modifications made to the approved landscape design and ground coverage shall be required to be reviewed and approved by the Community Development Director.	Ongoing	Planning/Community Enhancement & Safety Divisions	
97.	All HOA amenities (such as, but not limited to mailboxes, trashcans, landscape, lighting, signage etc.) shall be continually maintained and operational in a manner consistent with the approved plans to the satisfaction of the Community Development Director.	Ongoing	Planning/Community Enhancement & Safety Divisions	
98.	Landscaped areas between buildings and garages shall be perpetually maintained with healthy and thriving landscaping. Such areas shall not be used for personal storage and shall be kept free from residential belongings, trash carts, as well as trash.	Ongoing	Planning/Community Enhancement & Safety Divisions	
99.	Adequate exterior night lighting shall be provided adjacent to doors and windows to the satisfaction of the Community Development Director.	Ongoing	Planning Division	
100.	Private streets shall be maintained in a clean and tidy manner at all times to remove trash and debris to the satisfaction of the City Engineer. Private street maintenance may include street sweeping, to the extent necessary, for	Ongoing	Public Works Division

	consistency with the WQMP/SWPPP and the objective of maintaining clean and tidy streets.			
101.	Remove all graffiti within 24 hours pre-construction, during construction, and after a Certificate of Occupancy is issued.	Ongoing	Public Works Division	
102.	A City of Eastvale Encroachment Permit is required for any improvements within the public right-of-way.	Ongoing	Public Works Division	
103.	All street cuts for utilities shall be repaired in accordance with City Standard or as recommended; and any interim trench repairs shall consist of compacted backfill to the bottom of the pavement structural section followed by placement of standard base course material in accord by the City Engineer and with the Standard Specifications for Public Work Construction ("Greenbook"). The base course material shall be placed the full height of the structural section to be flush with the existing pavement surface and provide a smooth pavement surface until permanent cap paving occurs using an acceptable surface course material.	Ongoing	Public Works Division	
104.	Any and all utility trenches or other excavations within existing asphalt concrete pavement of off-site streets resulting from the proposed development shall be backfilled and repaired in accordance with City of Eastvale Standard Drawings. The developer shall be responsible for removing, grinding, paving and/or overlaying existing asphalt concrete pavement of off-site streets including pavement repairs in addition to pavement repairs made by utility companies for utilities installed for the benefit of the proposed development (i.e. Jurupa Community Services District, Southern California Edison, Southern California Gas Company, Time Warner, Verizon, etc.). Multiple excavations, trenches, and other street cuts within existing asphalt concrete pavement of off-site streets resulting from the proposed development may require complete grinding and asphalt concrete overlay of the affected off-site streets, at the discretion of the City Engineer. The pavement condition of the existing off-site streets shall be returned to a condition equal to or better than what existed prior to construction of the proposed development.	Ongoing	Public Works Division	
105.	Construction signing, lighting, and barricading shall be provided during all phases of construction in accordance with City Standards and the direction of	Ongoing	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	the City Engineer. As a minimum, all construction signing, lighting and barricading shall be in accordance with Part 6 "Temporary Traffic Control" of the latest California Manual on Uniform Traffic Control Devices ("CA MUTCD"), or subsequent editions in effect at the time of construction.			
106.	Utility locations (on or off-site) shall not obstruct multipurpose/pedestrian walks, trails, and paths.	Ongoing	Planning and Public Works Division	
General **Riverside County Fire Department**				
107.	Fire Department requires the following fire protection measures be provided in accordance with Riverside County Ordinances, the 2022 California Fire Code (CFC) as adopted and amended by the City of Eastvale Municipal Code and/or recognized fire protection standards as existing prior to May 11, 2022.	Prior to Building Permit Issuance	Fire Department	
108.	Fire Protection Water Supplies/Fire Flow - Minimum fire flow for the construction of all buildings is required per CFC Appendix B, or other approved method. Prior to building permit issuance for new construction, the applicant shall provide documentation to the Fire Department to show there exists a water system capable of delivering the required fire flow. Specific design features may increase or decrease the required fire flow. Reference CFC 507.3	Prior to Building Permit Issuance	Fire Department	
109.	Fire Protection Water Supplies/Hydrants - The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the CFC Appendix C. Fire hydrants shall be located no more than 600 feet from all portions of the exterior of the building along an approved route on a fire apparatus access road, unless otherwise approved by the Fire Department. Additionally, hydrants shall be spaced no more than 500 feet apart in any direction so that no point on the street is more than 250 feet from a hydrant. Where new water mains are extended along streets where hydrants are not needed for protection of structures, standard fire hydrants shall be provided at spacing not to exceed 1000 feet along streets for transportation hazards. Fire hydrants shall be provided at street intersections. The size and number of outlets required for the approved fire hydrants are 6" x 4" x 2 ½".	Prior to Building Permit Issuance	Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Final fire hydrant locations shall be determined during the fire water construction plan review. Reference CFC 507.5 and CFC Appendix C, as amended through the City of Eastvale Municipal Code.			
110.	Tract Water Plans: If fire hydrants are required to be installed, applicant/developer shall furnish two copies of the water system fire hydrant plans to Fire Department for review and approval prior to building permit issuance. Plans shall be signed by a registered civil engineer, and shall confirm hydrant type, location, spacing, and minimum fire flow. Once plans are signed and approved by the local water authority, the originals shall be presented to the Fire Department for review and approval. Reference CFC 105.4.1	Prior to Building Permit Issuance	Fire Department	
111.	Fire Department Access - Fire apparatus access roads shall be provided to within 300 feet of all exterior portions of buildings, unless otherwise approved by the Fire Department. Fire apparatus access roads shall have an unobstructed width of not less than 24 feet. Dead-end fire apparatus access roads in excess of 150 feet shall be provided with an approved turn around. The minimum required turning radius of a fire apparatus access road is 38 feet outside radius and 14 feet inside radius. The construction of the fire apparatus access roads shall be all weather and capable of sustaining 75,000 lbs. Unless otherwise approved, the grade of a fire apparatus access road shall not exceed 16 percent and the cross slope shall not exceed 2.5 percent. The angles of approach and departure for fire apparatus access roads shall be a maximum of 6 percent grade change for 25 feet of approach/departure. Reference CFC 503.1.1, 503.2.1 as amended by the County of Riverside and Riverside County Office of the Fire Marshal Technical Policy #TP22-002	Prior to Building Permit Issuance	Fire Department	
112.	Fire Department Access Turn Around - Dead-end fire apparatus access roads in excess of 150 feet in length shall be provided with a bulb turnaround at the terminus measuring a minimum of 38 feet outside radius and 14 feet inside radius. Parallel parking around the perimeter of the bulb is acceptable provided the bulb outside turning radius is increased by 8 feet. In-lieu of a bulb, a hammer-head type turnaround is acceptable where the top of the "T" dimension is 120 feet with the stem in the center. Additional turnaround designs may be acceptable as approved by the Fire Department. Reference	Prior to Building Permit Issuance	Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	CFC 503.1.1, 503.2.1 as amended by the County of Riverside and Riverside County Office of the Fire Marshal Technical Policy #TP22-002			
113.	Secondary Access – Unless otherwise approved by the Fire Department, dead end fire apparatus access roads shall not exceed 1,320 feet. Secondary egress/access fire apparatus access roads shall provide independent egress/access from/to the area or as otherwise approved by the Fire Department. Secondary egress/access fire apparatus access roads shall be as remote as practical from the primary fire apparatus access road to reduce the possibility that both routes will be obstructed by a single emergency. Additional fire apparatus access roads based on the potential for impairment by vehicle congestion, condition of terrain, climatic conditions, anticipated magnitude of a potential incident, or other factors that could limit access may be required by the Fire Department. Reference CFC 503.1.2 and Riverside County Office of the Fire Marshal Technical Policy #TP22-002	Prior to Building Permit Issuance	Fire Department	
114.	Parking is not permitted on fire apparatus access roads that are less than 28 feet in width. Parking on one side is permitted on a road that is at least 28 feet but less than 36 feet in width. Parking on two sides is permitted on a road that is 36 feet or more in width.	Prior to Building Permit Issuance	Fire Department	
115.	Fire Department Building Construction Permit Review - Submittal of construction plans to the Fire Department will be required. Final fire and life safety conditions will be addressed when the Fire Department reviews these plans. These conditions will be based on California Fire Code, California Building Code (CBC), and related codes/standards adopted at the time of construction plan submittal. Reference CFC 105.1	Prior to Building Permit Issuance	Fire Department	
116.	Residential Fire Sprinklers - Residential fire sprinklers are required in all one and two-family dwellings per the California Residential Code (CRC). Plans must be submitted to the Office of the Fire Marshal for review and approval prior to installation. Reference CRC 313.2	Prior to Building Permit Issuance	Fire Department	
117.	Phased Construction Access and Water Supply: If construction is phased, an approved phasing plan shall be approved by the Fire Department. Each phase shall provide approved access and water supply for fire protection prior to any construction. Reference CFC 503.1, 507.1, 3310 and 3312	Prior to Building Permit Issuance	Fire Department	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
118.	Prior to building plan approval and construction, applicant/developer shall route a copy of the Water Improvement Plans (offsite) to the Fire Department for review of private hydrant placement only. Water Improvement Plans (offsite) will not be reviewed or approved for the installation of onsite Private Fire Service Mains, private hydrants, or fire sprinkler system supplies. The installing contractor shall submit a separate set of working plans designed in accordance with NFPA 13 and NFPA 24 to the Fire Department for a permit to install private water mains.	Prior to Building Permit Issuance	Fire Department	
119.	New motorized gates shall be provided with means to be automatically opened remotely by emergency vehicles in accordance with Riverside County standards and policies. The system shall be compatible, but not limited to, the detection of the following manufacturers of emergency vehicle preemption: Federal Signal, Whelen, and Tomar. Upon installation of the system, compliance testing shall be completed by the Riverside County Fire Department. (RVC Amendment to CFC 503.6.1)	Prior to Building Permit Issuance	Fire Department	
120.	Provide specific fire department conditions on plans for building permit submittal.	Prior to Building Permit Issuance	Fire Department	
General **Jurupa Community Services District (JCSD)**				
121.	This project will be subject to compliance with Jurupa Community Services District's (District) rules, regulations, conditions, requirements, and payment of applicable fees for the proposed project.	Prior to Building Permit Issuance	JCSD	
122.	The applicant is required to coordinate with Jurupa Community Services District during the entire development process for their project. The District provided a Board of Directors approved water and sewer availability letter dated 5/22/2023. The Developer is required to prepare the water, sewer, and recycled water improvement plans for the District's approval.	Prior to Building Permit Issuance	JCSD	
Riverside County Flood Control				

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
123.	This project proposes channels, storm drains 36 inches or larger in diameter, or other facilities that could be considered regional in nature and/or a logical extension a District's facility, the District would consider accepting ownership of such facilities on written request by the City. The Project Applicant shall enter into a cooperative agreement establishing the terms and conditions of inspection, operation, and maintenance with the District and any other maintenance partners. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection, and administrative fees will be required. The regulatory permits' terms and conditions shall be approved by the District prior to improvement plan approval, map recordation, or finalization of the regulatory permits. There shall be no unreasonable constraint upon the District's ability to operate and maintain the flood control facility(ies) to protect public health and safety.	Prior to Building Permit Issuance	Riverside County Flood Control	
124.	An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, Eastvale Master Drainage Plan, Lines D-3 and D-5. If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.	Prior to Encroachment Permit	Riverside County Flood Control	
125.	This project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. Clearance for grading, recordation, or other final approval should not be given until the City has determined that the project has been granted a permit or is shown to be exempt. If this project involves a Federal Emergency Management Agency (FEMA) mapped floodplain, then the City should require the applicant to provide all studies, calculations, plans, and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation, or other final approval of the project and a Letter of Map Revision (LOMR) prior to occupancy.	Ongoing	Riverside County Flood Control	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	The project proponent shall bear the responsibility for complying with all applicable mitigation measures defined in the California Environmental Quality Act (CEQA) document (i.e., Negative Declaration, Mitigated Negative Declaration, Environmental Impact Report) and/or Mitigation Monitoring and Reporting Program, if a CEQA document was prepared for the project. The project proponent shall also bear the responsibility for complying with all other federal, state, and local environmental rules and regulations that may apply. If a natural watercourse or mapped floodplain is impacted by this project, the City should require the applicant to obtain a Section 1602 Agreement from the California Department of Fish and Wildlife and a Clean Water Act Section 404 Permit from the U.S. Army Corps of Engineers, or written correspondence from these agencies indicating the project is exempt from these requirements. A Clean Water Act Section 401 Water Quality Certification may be required from the local California Regional Water Quality Control Board prior to issuance of the Corps 404 permit.			
Overall Major Development Plan				
126.	A decomposed granite (DG) trail of at least four (4) feet shall be constructed adjacent to the walkway along Scholar Way.	Prior to Certificate of Occupancy	Planning and Public Works Division	
127.	Within the SCE Easement along Scholar Way, the landscape construction plans shall include pocket park design on the north and south sides of "B" Street, between "B" Street and the parking areas. The pocket parks shall include enhanced landscaping, benches, dog station, and/or similar features to create a pocket park setting.	Prior to Certificate of Occupancy	Planning and Public Works Divisions	
128.	As applicable to Phase A, construct a raised and landscaped median island along frontage of property on Hamner Avenue and Limonite Avenue in accordance with approved Street Improvement Plans.	Prior to Issuance of final Certificate	Public Works Division

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are required by the City, other local agencies, or state and federal agencies, and are not conditions of approval of the project.

1. The applicant shall obtain City approval for any modifications or revisions to the approval of this project. Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.

2. Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

DRAFT

CITY OF EASTVALE
PLANNING COMMISSION NOTICE OF PUBLIC HEARING FOR PROJECT NO. PLN22-20087, PLN22-20088, PLN22-20089, PLN22-20090, PLN22-20091 AND PLN22-20092 FOR TENTATIVE TRACT MAP NO. 38594 AND MAJOR DEVELOPMENT REVIEWS FOR PHASE A OF THE EASTWALK DEVELOPMENT (THE NEW HOME COMPANY)

NOTICE IS HEREBY GIVEN that the City of Eastvale Planning Commission will hold a public hearing on **Wednesday, September 20, 2023**, at 6:00 p.m. at the Eastvale City Hall Council Chambers located at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752, to consider the following projects:

1. **Tentative Parcel Map No. 38594 (PLN22-20087)** for the subdivision of 69.8 acres into sixty-five (65) buildable lots and nineteen (19) lettered lots;

2. **Major Development Review (PLN22-20088)** for the overall site planning, master landscaping, streetscape design, and open space amenities of Phase A of the Eastwalk residential community;

3. **Major Development Review (PLN22-20089)** for the master building architecture and site planning of 168 townhomes and condominiums with associated open space, on-site parking and landscaping amenities within Planning Area 1;

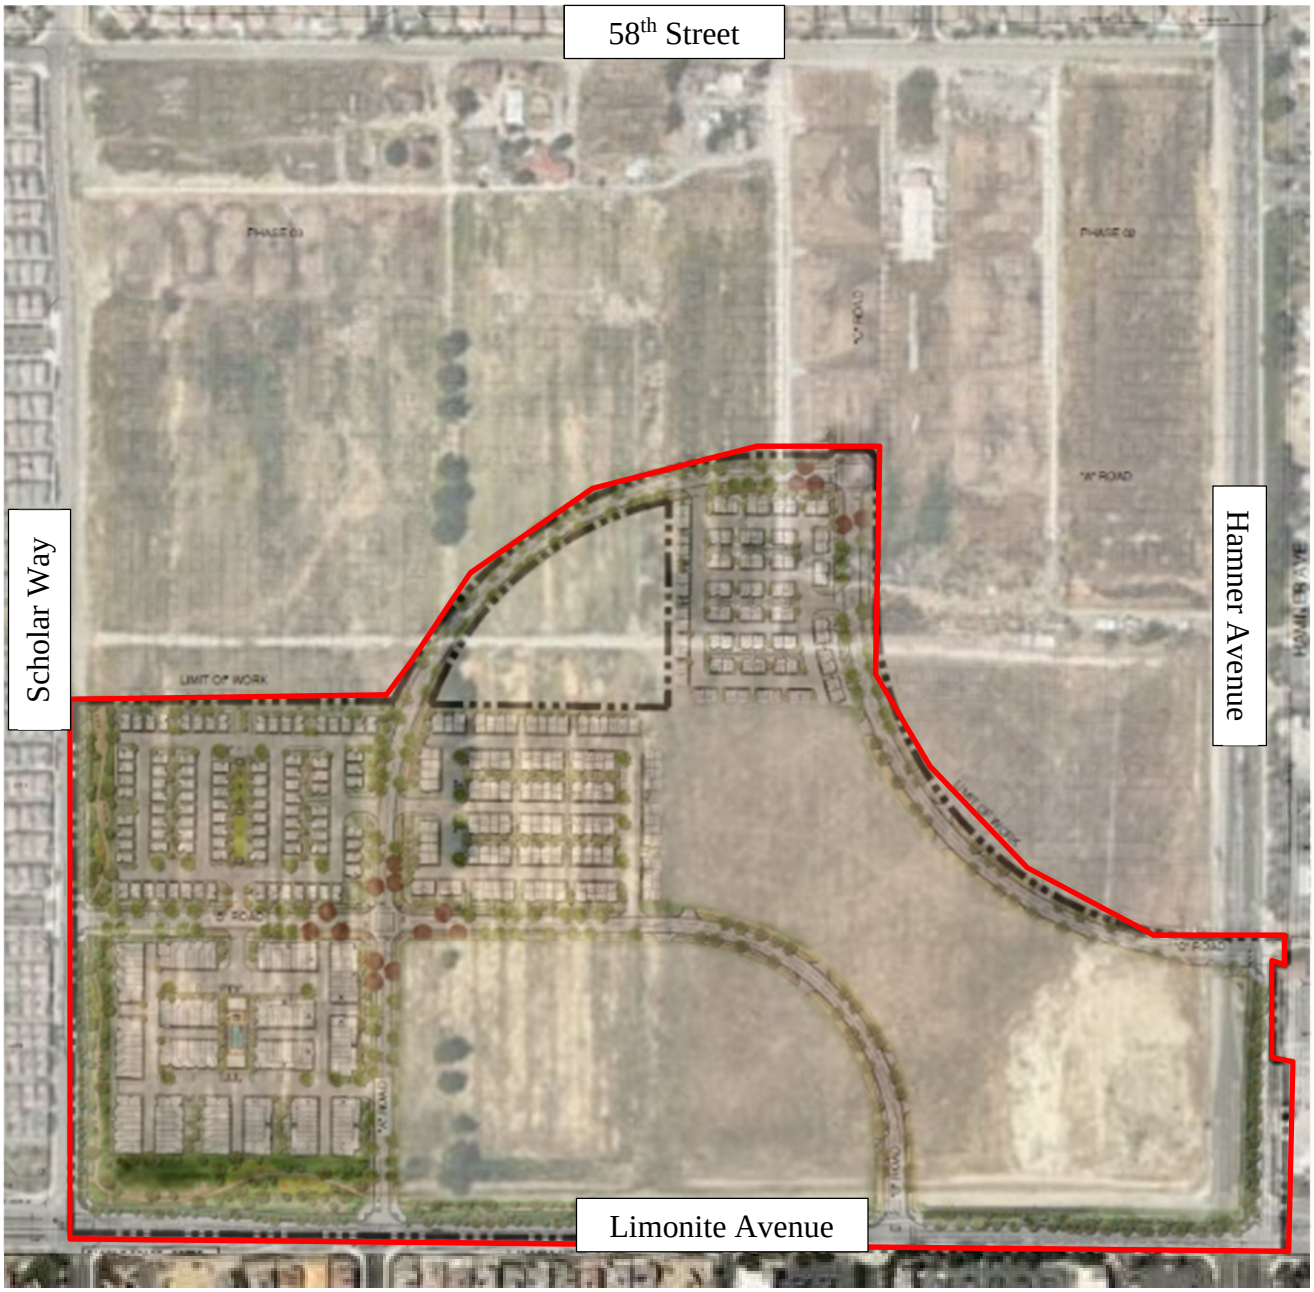
4. **Major Development Review (PLN22-20090)** for the master building architecture and site planning of 100 attached single-family residential units with associated on-site parking, and landscaping amenities within Planning Area 6;

5. **Major Development Review (PLN22-20091)** for the master building architecture and site planning of 94 detached single-family residential units with associated open space, on-site parking, and landscaping amenities within Planning Area 7A; and

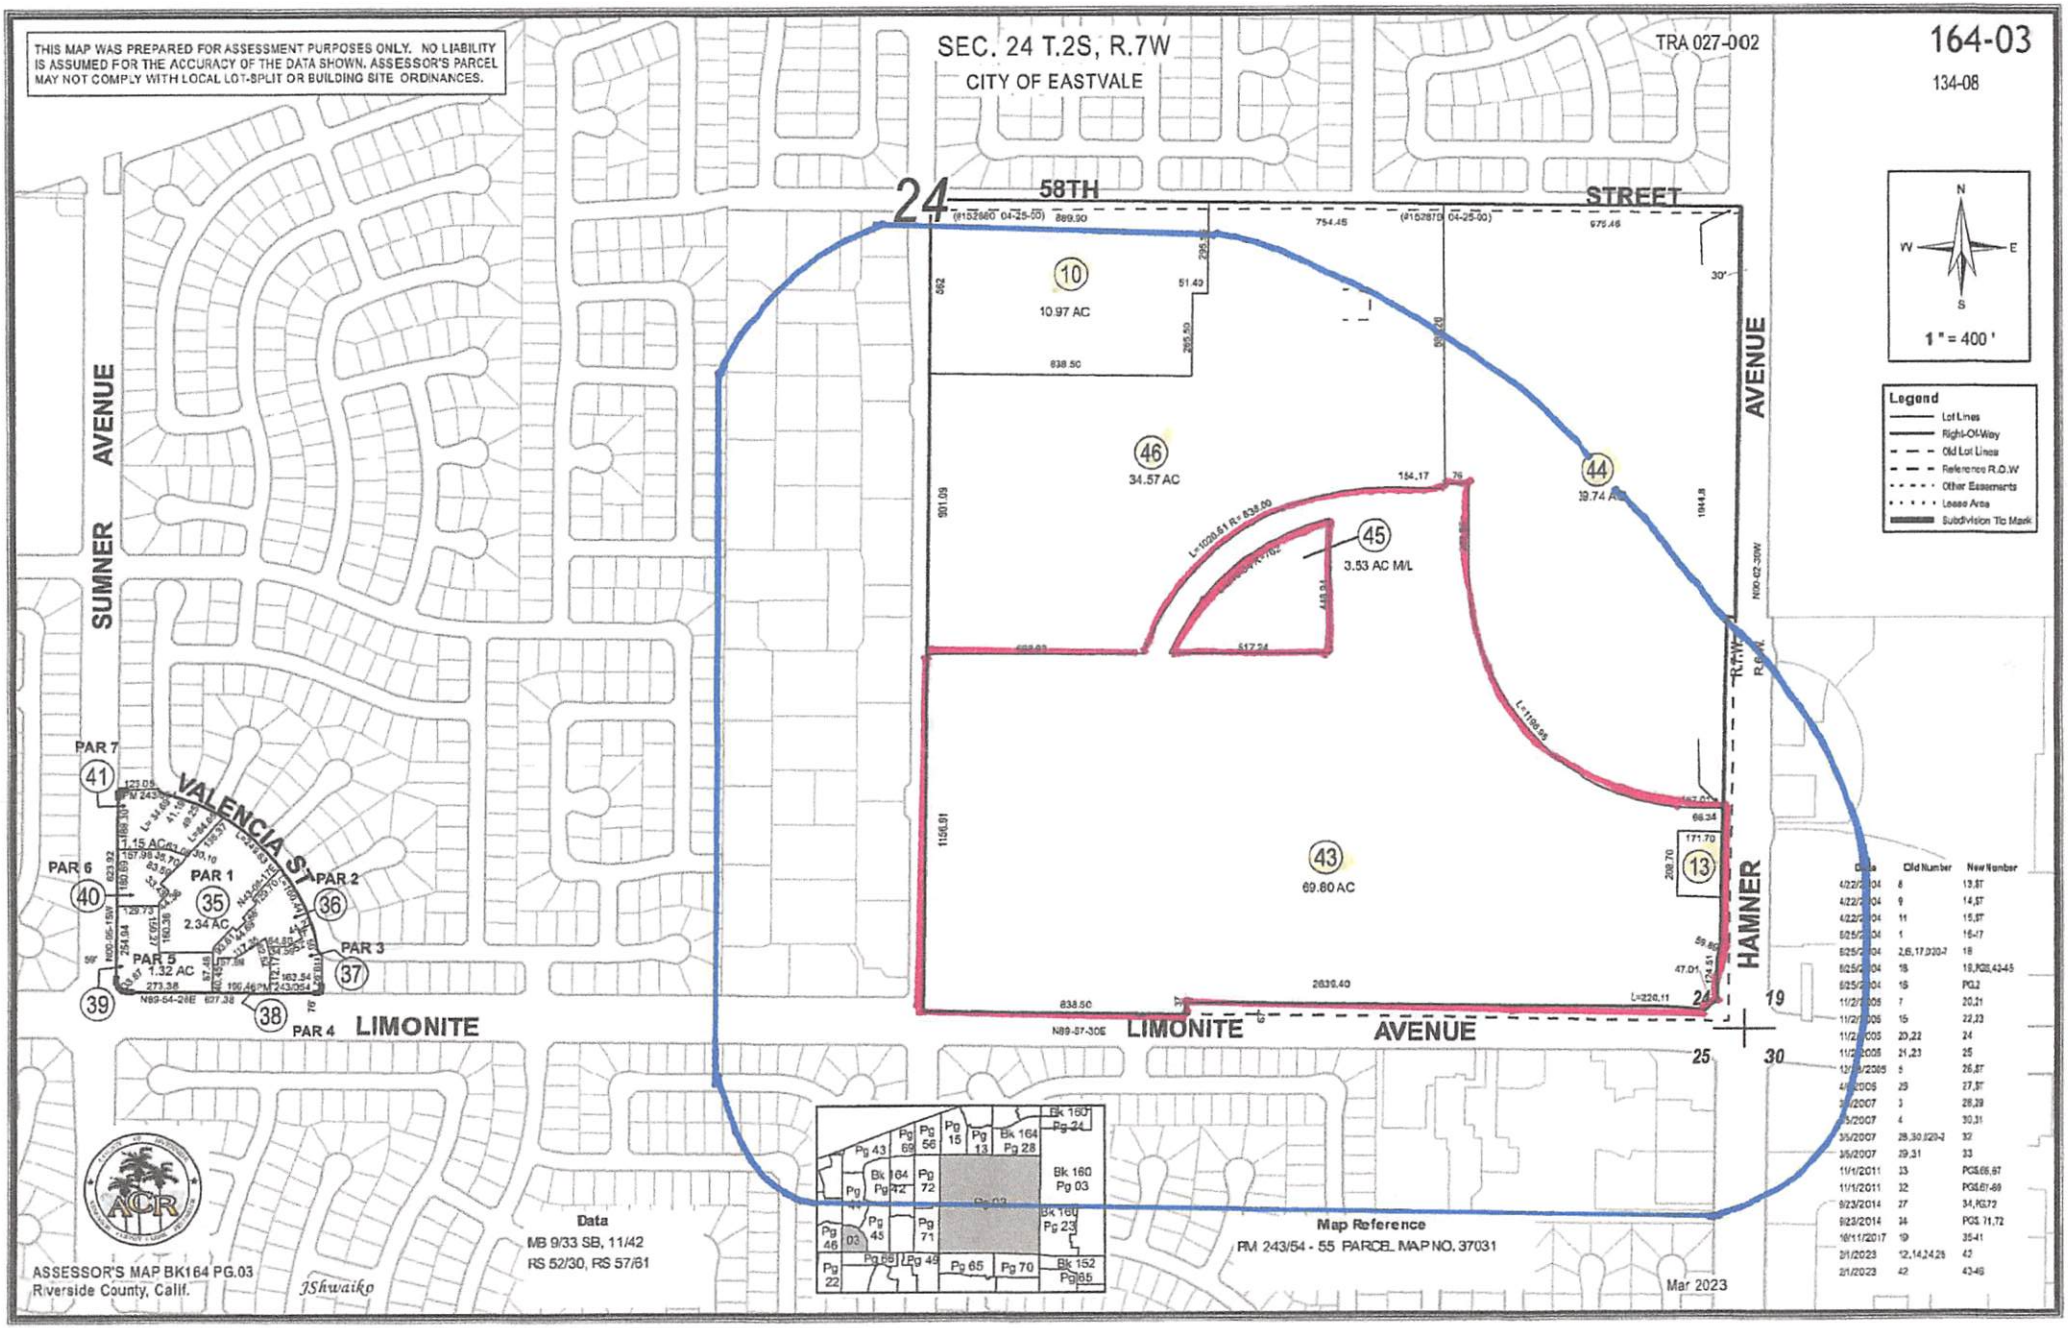
6. **Major Development Review (PLN22-20092)** for the master building architecture and site planning of 76 attached single-family residential units with associated on-site parking and landscaping amenities within Planning Area 8.

PROJECT DESCRIPTION: The proposed project includes the subdivision of 69.8 acres of undeveloped land, formally used for agricultural purposes, into sixty-five (65) buildable lots and nineteen (19) lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes. Additionally, Major Development Reviews are requested for the overall site planning, landscaping, and open space amenities of Phase A of the Eastwalk development constructed by The New Home Company and the master architecture, site planning, associated open space, on-site parking, and landscaping amenities within PA-1 (i.e., 168 townhomes and condominiums), PA-6 (i.e.,100 attached single-family residential units), PA 7A (i.e.,94 detached single-family residential units), and PA 8 (i.e., 76 attached single-family residential units) of Eastwalk Phase A.

PROJECT LOCATION: Assessor's Parcel Number: 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013; Leal Master Plan (Planning Areas 1, 2, 3, 5, 6, 7A, 8, J, L, M, P, Q) located



north of Limonite Avenue, south of 58th Street, west of Hamner Avenue, and east of Scholar Avenue. The project site is not located on a hazardous materials site listed under Government Code Section 65962.5.



ENVIRONMENTAL: Up to 2,500 residential units and 595,000 square feet of commercial space including a hotel, a civic center (i.e., City Hall, Library, Police Station) and Fire Station were contemplated in the Leal Master Plan Amendment and fully evaluated in the Addendum to the Leal Master Plan PEIR (SCH# 2015031028) certified by the City Council via Resolution No-22-25 on May 11, 2022. Staff has reviewed the environmental analysis in the Addendum to the Leal Master Plan PEIR and believes that it remains valid for the proposed project. The proposed project would not exceed the previously analyzed development in terms of size or intensity of use. Development of the proposed project would remain consistent with the analysis of the Addendum to the Leal Master Plan PEIR and would not require a change to the site's land use designation or zoning. Therefore, staff has determined the project is within the scope of the Leal Master Plan PEIR and Addendum pursuant to CEQA Guidelines Section 15168 and no additional environmental analysis is necessary. Applicable mitigation measures included in the Addendum to the Leal Master Plan PEIR would be required for the development of the proposed project, however a Notice of Determination shall be filed following any action taken on the project.

Any person may submit written comments prior to the public hearing or may appear in person before the Planning Commission to be heard. Written comments may be mailed to the City of Eastvale Planning Division located at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752 or via email to Jamie K. Cerda, at jcerda@eastvaleca.gov. **For the comments to be presented to the Planning Commission at the meeting, all comments made in writing or via e-mail prior to the public hearing must be received by the City of Eastvale Planning Division no later than Wednesday, September 20, 2023, at 5:00 p.m.** Oral and written comments may be submitted directly to the Planning Commission at the public hearing. If you challenge the project in court, you may be limited to raising only those issues you raised at the public hearing as described in this notice or in written correspondence delivered to the Eastvale Planning Commission prior to or at the public hearing.

If you have any questions on the project, contact Jamie K. Cerda at (951) 703-4432 or jcerda@eastvaleca.gov.

[The e-mail below is from an external source. Please do not open attachments or click links from an unknown or suspicious origin.]

Hello Jamie,
I am a resident of Eastvale with a request for you to answer the query most of the Eastvale residents have in their mind and also raised in the past with no action being taken.

The question being, how the current limited number of schools going to accommodate additional 2500 families going to start living in the new proposed construction?

Specially the Roosevelt high school which is already over populated.
I hope City doesn't just divert this question over to CNUSD because it is at first the city staff who needs to understand the problem rather than blaming CNUSD for not taking decision.

I hope you will address this concern of ours during the September 20th meeting.

Thanks,
Atul Deora.

CITY OF EASTVALE

AGENDA STAFF REPORT

Planning Commission Meeting
PUBLIC HEARINGS
Agenda Item No. 8.2
October 18, 2023

PLN23-20018, PLN23-20019, PLN23-20020, and PLN23-20021 – Tentative Parcel Map 37653, Major Development Reviews and Conditional Use Permits for the proposed Chandler and Archibald Commercial Retail Center

---

Prepared By:
Allen Lim

Recommended Action(s)

Staff recommends that the Planning Commission take the following actions:

1. Adopt an Addendum to a previously approved 2021 Mitigated Negative Declaration (2021 MND), and find that all impacts were adequately analyzed pursuant to applicable legal standards in the previously approved Mitigated Negative Declaration, consistent with CEQA Guidelines Section 15162 through 15164;
2. Approve Tentative Parcel Map (TPM) No. 37653, PLN23-20018, to subdivide a 2.70-acre site into three (3) parcels, with one (1) parcel for each proposed land use: drive-through coffee shop, drive-through carwash, and sit-down restaurant, subject to conditions of approval;
3. Approve a Major Development Review (DR) and Conditional Use Permit (CUP), PLN23-20019, for the development and operation of a 950 square-foot drive-through coffee shop (dba Dutch Bros), subject to conditions of approval;
4. Approve a Major Development Review (DR) and Conditional Use Permit (CUP), PLN23-20020, for the development and operation of a 3,598 square-foot drive-through carwash (dba Quick Quack), subject to conditions of approval; and
5. Approve a Major Development Review (DR), PLN23-20021, for the development of a 3,450 square-foot sit down restaurant, subject to conditions of approval.

Summary

The applicant (Schneider REA) is requesting that the Planning Commission approve a Tentative Parcel Map (TPM), two (2) Conditional Use Permits (CUP)s, and three (3) Major Development Reviews (DR) to allow the development of a new commercial retail center with a 950 square-foot drive-through coffee shop (dba Dutch Bros), a 3,598 square-foot drive-through car wash (dba Quick Quack), and a 3,500 square-footage sit-down restaurant (dba Zendejas) on a 2.70 acres site at the northwest corner of Chandler Street and Archibald Avenue. As detailed in the draft Addendum to the 2021 Initial Study/Mitigated Negative Declaration (2021 IS/MND), and as detailed in the staff report below, with implementation of the conditions of approval and mitigation measures, the requested Major DRs and CUPs are consistent with the General Plan, applicable Zoning Code Regulations and compatible with the existing surrounding uses while bringing additional services in the southwest portion of the City.

Background

In May of 2015, the City Council adopted the Chandler Area Community Vision Plan, which envisioned the properties located on the north side of Chandler Street between Selby and Archibald Avenues to have the most change from its existing land uses. The plan supports retail uses at the proposed project location.

On April 21, 2021, the Planning Commission voted to recommend that City Council, adopt a Mitigated Negative Declaration (MND), approve a General Plan Amendment (GPA) to change the land use designation from Low Density Residential to Commercial Retail, approve a Change of Zone (COZ) from Light Agriculture (A-1) to General Commercial (C-1/C-P), approve a drive-through restaurant, approve a sit-down restaurant (with on-sale alcohol – ABC Type 47), and deny the proposed gas station with off-sale beer and wine.

On August 25, 2021, the City Council upheld the Planning Commission's recommendation adopting the MND (via Resolution 21-35), approving the GPA, COZ, TPM, drive-through restaurant (dba McDonalds), sit-down restaurant (dba Zendejas with on-sale alcohol), and denied the gas station (dba Circle K) with off-sale beer and wine.

Location

The project site is located at the northwest corner of Archibald Avenue and Chandler Street within the City of Eastvale and consists of four parcels (APNs: 144-130-004, -011, -012, -013, and -004) on 2.70 acres. The project site is bounded by the Riverside County Flood Control District Flood Channel to the north, Chandler Street to the south, Archibald Avenue to the east, and a single-family residence to the west.

Project Description

As shown in the proposed site plan (**Attachment 2 – Development Plan**), the applicant is proposing to develop a new commercial retail center consisting of a 950 square-foot drive-through coffee shop, a 3,598 square-foot drive-through car wash, and a 3,450 square-foot sit-down restaurant on a 2.70-acre site at the northwest corner of Chandler Street and Archibald Avenue. Below indicates the hours of operation and number of employees for each of the proposed uses.

Business	Hours of Operation	# of Employees per Shift	Max # of Employees per Use
Dutch Bros	5:00 a.m. to 11:00 p.m., seven days a week	7-10	40
Quick Quack	7:00 a.m. to 9:00 p.m., seven days a week	2-4	18
Zendejas	11:00 a.m. to 10:00 p.m., seven days a week	12	21

Analysis

General Plan and Zoning Consistency

The General Plan land use designation for the subject site is Commercial Retail (CR) which allows for the development of commercial retail uses at a neighborhood, community, and regional level, as well as for professional office and visitor-oriented commercial uses (Figure 3 of Attachment 1). The zoning for the project site is General Commercial (C-1/C-P) which would allow a coffee shop, carwash, and sit-down restaurant, subject to the approval of a CUP for their drive-through operations (Figure 4 of Attachment 1). The applicant has filed CUP applications for the proposed coffee shop and car wash uses to establish the operation of a drive-through for each use and ensure the project is evaluated at a public hearing for potential environmental impacts, and that conditions of approval and mitigation measures may be imposed to ensure the project does not impact the health, safety, and well-being of the residents of the City. As such the proposed project is consistent with the General Plan and Zoning, subject to the recommended conditions of approval.

Compliance with the General Plan and development standards of the Zoning Code are described below.

	Existing General Plan Land Use Designation	Existing Zoning	Existing Land Use
Project Site	Commercial Retail	General Commercial (C-1/C-P)	Vacant
North (across water channel)	Medium Density Residential	One-Family Dwellings (R-1)	Single-Family Residential
South	Medium Density Residential	Planned Residential Developments (PRD)	Single-Family Residential
East	Medium-High Density Residential	Specific Plan (SP Zone)	Single-Family Residential

West	Low Density Residential	Light Agricultural (A-1)	Single-Family Residential

Major Development Review

The proposed project has been reviewed for compliance with the applicable development standards and required findings for a Major Development Review as set forth in Section 120.02.010 (C)(5) of the Zoning Code. The required findings are detailed in **Attachment 4 through 9 – Draft Resolutions.**

Compliance with Development Standards			
Standard	**Required**	**Proposed**	**Meets Standard**
Lot Size	None	2.70 acres	Yes
Lot Width	75 ft. minimum	112 ft.	Yes
Street Frontage **Building Setback**	None	Chandler: 59 ft. Archibald: 35 ft.	Yes
Building Height	50 ft. maximum	29 ft.	Yes
Off-Street Parking	Coffee (Drive-Through) Restaurant: 1 space/45 sf of serving area = 0 sf/45 sf = 0 spaces Employee: 1 space per: 2 employees = 10 employees/2 = 5 spaces Total Spaces Req. = 5 spaces	Total Provided: **13 spaces**	Yes
	Carwash (Drive-Through) Employee: 1 space: 3 employees = 4 employee/3 = 2 spaces Total Spaces Req. = 2 spaces	Total Provided: **4 spaces**	Yes
	Restaurant (Sit-Down) General: 1 space: 45 sf = 1,485 sf /45 sf = 33 spaces Employee: 1 space :2 employees = 12 employees/2 = 6 spaces Total Spaces Req. = 39 spaces	Total Provided: **38 spaces**	Yes, as conditioned for shared parking

Drive-Through Coffee Shop (Dutch Bros): Design and Architecture

The proposed building (i.e., approximately 24.5’ wide and 49.5’ long) is situated towards the corner of Chandler and Archibald with the double lane drive-through wrapping the building along the southern elevation (fronting Chandler Avenue). The site also includes a striped area along the

eastern property line (Archibald Avenue) in which patrons would be directed to pull into to wait for their order or use the area to bypass other patrons once drink orders have been dropped off to the customers vehicle.

The proposed elevations of the drive-through coffee shop (Dutch Bros) show architectural details with stone veneer along the wainscoting and columns, vertical and horizontal metal ribbed siding, and contrasting colors of blue and varying grays. In addition, the proposed project includes features such as metal awnings throughout the perimeter of the building, a covered outdoor patio for in-person orders, and outdoor seating with umbrellas for shade. In general, staff is supportive of the proposed elevations and believes the proposed building is consistent with the City's adopted Design Guidelines; however, the project has been conditioned to require the applicant to work with the staff prior to submittal of building plan check to ensure that the elevations are enhanced where possible to maintain a high level of architectural quality.

Drive-Through Carwash (Quick Quack): Design and Architecture

The proposed building (i.e. approximately 34' wide and 114' long) is situated towards the center of the retail center with its main frontage and drive-through oriented towards Archibald Avenue. The triple drive-through stacking lanes flank the building's eastern elevation allowing vehicles to queue prior to merging into the building's single wide drive-through where vehicles are washed. Vehicles enter the carwash from the building's north elevation in a singular lane being washed as they progress in a southerly direction through the building, with the option for patrons to exit toward Chandler Avenue or U-turn back northerly to access the 20 available vacuum bays.

The proposed elevations of the drive-through carwash (Quick Quack) show architectural details with stone veneer along the wainscoting and prominent edges and columns, horizontal fiberboard cladding, varying colored stucco, anodize glass windows, varying rooflines, and contrasting earth tone colors. In addition, the proposed project includes features such as metal awnings throughout the perimeter of the building and metal shade canopies for the 20 vacuum bays. Staff is supportive of the proposed elevations and believes the proposed building is consistent with the City's adopted Design Guidelines.

Sit-Down Restaurant (Zendejas): Design and Architecture

The sit-down restaurant (Zendejas) design was previously approved by City Council on August 25, 2021. Included as part of the updated proposal, Zendejas has adjusted the elevations to accommodate additional decorative elements on the structure. The proposed elevations show architectural details with stone veneer along the wainscoting, horizontal fiberwood cladding, score lined stucco, varying rooflines, contrasting earth tone colors, and decorative breaks with use of steel framed panels. While the design of the massing and footprint of this building provide good articulation, staff recommends that the applicant work with staff to enhance the building's outdoor dining area with additional shading and a larger patio cover to compliment the proposed retail center and provide a more elevated dining experience for patrons. Given these reasons, staff is generally supportive of the proposed elevations and believes the proposed building is consistent with City's adopted Design Guidelines with the changes made as mentioned above. The project has been conditioned to require the applicant to work with staff prior to submittal for building plan check to ensure that the recommended changes above are incorporated into the proposed project.

Circulation and Drive-Through

As shown in **Figure 2 of Attachment 1**, the proposed project would provide three restricted access driveways: two right-turn in/out only driveways at Archibald Avenue and one right-turn in/out only driveway at Chandler Street. All internal drive aisles within the commercial development meet the minimum 25-foot drive aisle requirement and provide access to a total of 55 parking spaces across the three parcels (which excludes vacuum stall parking).

In addition, the project has been designed to consider a future expansion of the commercial retail center to include the properties to the west. Access to a future development would be provided at the westerly terminus of the drive aisle along the northerly property line behind Zendejas and at a future access point adjacent to the entrance of the Dutch Bros drive-through along the westerly property line. This design would improve overall circulation between the two areas and reduce traffic impacts to the surrounding circulation system.

Further, the Addendum to the 2021 MND, analyzed and compared the on and off-site traffic impacts to the previously approved project (PLN19-20000). As described above, the proposed project would provide three (3) restricted access driveways, and with proposed site access improvements, the project would ensure that access is maintained for fire trucks, police units, and ambulance/paramedic vehicles. In addition, the Addendum to the 2021 MND, evaluated the anticipated trips generated in which the proposed project is forecasted to generate an estimated 3,185 fewer daily vehicle trips compared to the previous approved project. As such, the current proposed project would not exceed the trip generation assumption and would not represent an increased development intensity in this regard.

The Eastvale Zoning Code requires that all drive-through operations provide a minimum stacking of six (6) vehicles prior to the menu board, in conjunction with approval of a CUP. The proposed Dutch Bros has been designed with a double drive through (two lanes) to accommodate an 18-car stack to the order menu board (without encumbering traffic on adjacent access drive aisles or public streets) and an additional eight (8) vehicles to the pick-up window, for an overall capacity of 27 vehicles. A queuing analysis performed for the project, conducted surveys at the existing Dutch Bros location in Eastvale (13322 Limonite Ave.) on Thursday, September 22, 2022, and Saturday, September 24, 2022, where longer queues were observed on the weekend survey. The survey had reported an average queue of 24 vehicles, a 95th percentile of 27 vehicles, and a maximum of 28 vehicles. In addition, the queuing data provided information which surveyed a total of six (6) Dutch Bros coffee shops in Apple Valley, La Quinta, and Indio, illustrating that longer drive-through queues were associated with having a Dutch Bros coffee shop further from the next nearest location. As such, Dutch Bros anticipates constructing four (4) new stores (i.e., Norco, Ontario, Corona, and Rancho Cucamonga) within a 10-mile radius of the project site which has been identified in the report as a means of alleviating the maximum queues observed at the existing (13322 Limonite Avenue) and proposed Dutch Bros location in Eastvale. Based on the information provided in the prepared queuing analysis, the proposed Dutch Bros site, with staff recommended conditions of approval would provide adequate accommodation of queuing.

The same requirement would apply to the proposed drive-through carwash, where a minimum stacking of six (6) vehicles prior to the menu board, in conjunction with approval of a CUP would be required. The proposed Quick Quack will be implementing a membership program that utilizes license plate readers and an automated gate system which allows the carwash to run more efficiently as carwash members are able to pull through with a pre-selected carwash option that has already been paid through their subscription. Also, the carwash has been designed with three (3)

queue lanes which narrows to one (1) to accommodate a 23-car stack to the ordering kiosk and an additional six (6) vehicles before entering the car washing structure, for an overall capacity of 29 vehicles. As part of the queuing analysis report, surveys were conducted at the existing Quick Quack location (5116 Hamner Ave.) on Thursday, September 22, 2022, and Saturday, September 24, 2022, where longer queues were observed on the weekend survey. The results of the survey had reported an average queue of 17 vehicles, a 95th-percentile of 29 vehicles, and a maximum queue of 31 vehicles (which briefly occurred during one 5-minute interval). In summary, the queuing analysis performed for the Quick Quack project determined that the site as designed could accommodate adequate queuing for the 95th percentile; however, with the recommended conditions of approval, staff believes the proposed project would provide adequate queuing capacity. Similar to the Dutch Bros, the Queuing Analysis notes that queues are expected to result in lower than the maximum observed at the existing Eastvale Quick Quack facility.

To ensure the proposed drive-throughs will not result in the stacking of vehicles that would obstruct site drive aisles and public right-of-ways, as seen at the existing Eastvale locations, staff recommends adding additional conditions of approval. Staff recommends that should either Dutch Bros or Quick Quack drive-through queuing exceed the maximum onsite queue length on their respective sites, the drive-through operator (i.e., Dutch Bros and Quick Quack) would be required to temporarily close their drive-through lane until queuing subsides. This condition would require continual monitoring of the drive-through queue and staff resources to direct vehicles away from the drive-through should the queue exceed the maximum on-site queue length. Additionally, mitigation measure TRA-1 has been recommended as part of the conditions of approval which would require the project applicant and/or the drive-through operators to prepare a Final Traffic Management Plan (TMP) for approval by the City of Eastvale Traffic Engineer (prior to the initiation of construction) to ensure that drive-throughs will not result in stacking of vehicles that would obstruct site drive-aisles and public rights-of-way (streets, drives, walks, etc.). Also, as is common in commercial retail centers, staff recommends a shared parking and reciprocal access agreement between all parcels to ensure adequate circulation and parking is maintained for the entire center. Finally, staff recommends a six (6) month and one (1) year review from the start of operations to ensure the Planning Commission is made aware of any complaints, code enforcement cases, compliance with the conditions of approval, and whether revisions to the drive-through operation are needed.

With the recommended conditions of approval, staff believes the proposed drive-through facilities meet the requirements of the Eastvale Zoning Code and required CUP findings.

Landscaping and Screening

The conceptual landscape plan (**Figure 8 of Attachment 1**) is consistent with the design and landscape standards as referenced to Municipal Code. The proposed landscaping provides sufficient coverage while exceeding the minimum 10% landscape requirement. A variety of plant materials, such as Crape Myrtle and Arbutus trees and Texas Ranger, Mexican Sage, and Fortnight Lilies are proposed to further enhance the aesthetics of the project site and surrounding area. In lieu of a standard six foot tall block wall to minimize the visual impacts of the proposed retail center onto the adjacent residential property to the west, staff recommends that a dense evergreen screen hedge be provided along the entire westerly property line, a condition of approval has been included to reflect this in **Attachment 11, 13, 15**. A final landscape plan will be reviewed during the building permit process to ensure that the details of the proposed landscape plan comply with the City landscape regulations.

Noise

On December 16, 2022, the Archibald and Chandler Noise Impact Analysis was prepared and incorporated in the Addendum to the 2021 MND. As part of the analysis, noise level information was gathered with consideration to the Municipal Code, General Plan, and state noise requirements. Survey data captured project-related operational noise sources (drive-through queues, carwash turbine/drying system, vacuums, outdoor dining area, vehicle movements, etc. to range from 46 to 54 decibels and is not expected to exceed the General Plan noise level standard of 60 decibels or exceed the Municipal Code standard of 55 decibels. Further, project operations would be subject to the standards identified in City Municipal Code Section 8.52.040 (General Sound Level Standards) to regulate potential exterior daytime and nighttime noise levels that may result in disturbance to off-site sensitive uses and ensure that noise levels do not exceed established noise level thresholds at the property line. Mitigation measures have been included as part of the conditions of approval to ensure noise impacts as a result of construction are reduced to less than significant. Additionally, conditions have been included to ensure compliance with the City Municipal Code Noise Ordinance and for the developer to provide dense landscape screening along the western property line to ensure added visual and auditory screening. With the following data collected, mitigation measures, and conditions of approval, noise impacts are anticipated to remain less than significant and would not exceed established noise level thresholds at the property line.

Tentative Parcel Map

The applicant has filed Tentative Parcel Map (TPM) No. 37653 to consolidate four parcels totaling 3.02 acres (gross) into three parcels totaling 2.70 acres (net). The sizes of the proposed parcels are shown in the table below.

Parcel	Area	Acreage	Lot Width
1	32,592 sq. ft.	0.75	112.60 ft.
2	52,315 sq. ft.	1.20	206.51 ft.
3	32,425 sq. ft.	0.74	197.00 ft.

The C-1/C-P Zone requires a minimum lot with of 75 feet but does not require a minimum parcel size for commercial uses in this zone. As such, the proposed TPM is consistent with the C-1/C-P Zone.

ALUC – Airport Influence Area

The project site is located within the Chino Airport influence area and is subject to consistency with the Airport Land Use Compatibility Plan (ALUCP). Riverside ALUCP ("RALUCP") Policy 3.1.4(b) states that "[n]o single acre of a project site shall exceed the number of people per acre indicated in Policy 4.2.5(b) which is "intended to limit the number of people at risk in a concentrated area." The purpose of calculating usage intensity is not to establish an occupancy level but to merely estimate the expected number of persons anticipated to be in a given acre. This estimate is arrived at by using differing methodologies and assumptions, all specifically allowed for under the RALUCP (and other ALUCPs). Staff has included a table below which calculates the intensity requirements pursuant to ALUCP Policy CH 2.6.1. with consideration that the proposed project is located within Zone D of the compatibility plan.

ALUC Consistency Calculation

Business	Required	Site Calculations	Meets Standard
Dutch Bros Coffee	Coffee (Drive-Through) Zone D = Max 300 per single acre	**Coffee (Drive-Through)** 0 sf serving area/ 15 sf per occupant = 0 people (serving area) + 27 people in drive-thru area + 10 employees = 37 people max/ 0.75 acres = **49 people max per single acre**	Yes
Quick Quak Carwash Zendeja's Restaurant	Carwash (Drive-Through) Zone D = Max 300 per single acre	**Carwash (Drive-Through)** 4 employees + 20 people at vacuum stalls + 29 in queuing lane = 53 people max = 53 max / 1.2 acres = **44 people max per single acre**	Yes
	Restaurant (Sit-Down) Zone D = Max 300 per single acre	**Restaurant (Sit-Down)** 1,485 sf serving area / 15 sf per occupant = 99 people max = 99 max/ 0.75 acres = **132 people max per single acre**	Yes

Based on the information calculated in the table above, it has been determined that the entire 2.70-acre project site would accommodate 189 persons or an average of 70 people per acre. These numbers are less than the average of 100 people per acre allowed on a site and 300 people allowed to occupy any single acre of the site, pursuant to ALUCP Policy CH 2.6.1. As such, the project meets the ALUCP single and average acre intensity requirements.

The Riverside County Airport Land Use Commission (ALUC) acts in an advisory capacity when reviewing development projects for compatibility with the ALUCP and local jurisdictions are not required to adhere to the overruling process if they elect to approve a project without incorporating design changes or conditions suggested by the ALUC. Nonetheless, a condition of approval is included as part of the project's approval requiring the applicant to submit an application to ALUC and obtain an official consistency determination on the project prior to building permit issuance.

Public Hearing Notification and Comment

The project requires a minimum 10-day public hearing notification period for property owners and tenants within a 600-foot radius of the project site. The public hearing notice was published in the Press Enterprise newspaper on October 8, 2023, for the Planning Commission meeting on October 18, 2023, and mailing notices were mailed on October 6, 2023. The Notice of Public Hearing and a map showing the properties that received notification are included as **Attachment 17 and 18**. At the time of staff report preparation, one comment (**Attachment 19**) was received citing concerns regarding traffic and public safety.

Environmental

Pursuant to the provisions of the California Environmental Quality Act (CEQA California Public Resources Code, Sections 21000, et seq.) and CEQA Guidelines (California Code of Regulations, Title 14, Sections 15000, et seq.), an Addendum to the to the previously approved 2021 Initial Study/Mitigated Negative Declaration ("2021 IS/MND") has been prepared for the proposed project. The Addendum reevaluates the revised project's environmental impacts due to changes in the approved project's (PLN19-20000) tenant makeup and layout. The addendum does not set forth policy for the City of Eastvale about the proposed Project's desirability. Rather, it is an information document to be used by the decision-makers, public agencies, and the public, in accordance with CEQA. As documented herein as**Attachment 16 (Draft Addendum and Technical Appendices**) of this report, the revised project would not cause new significant environmental effects or substantially increase the severity of previously identified effects disclosed in the 2021 IS/MND. Accordingly, the revised project would not trigger expanded environmental review, beyond this Addendum nor would require the preparation of subsequent IS/MND.

Strategic Plan Action - Priority Level: 1 | Target #: B | Goal #: B

Priority Level: 1 | Target #: B | Goal #: B Create "Destination Eastvale".

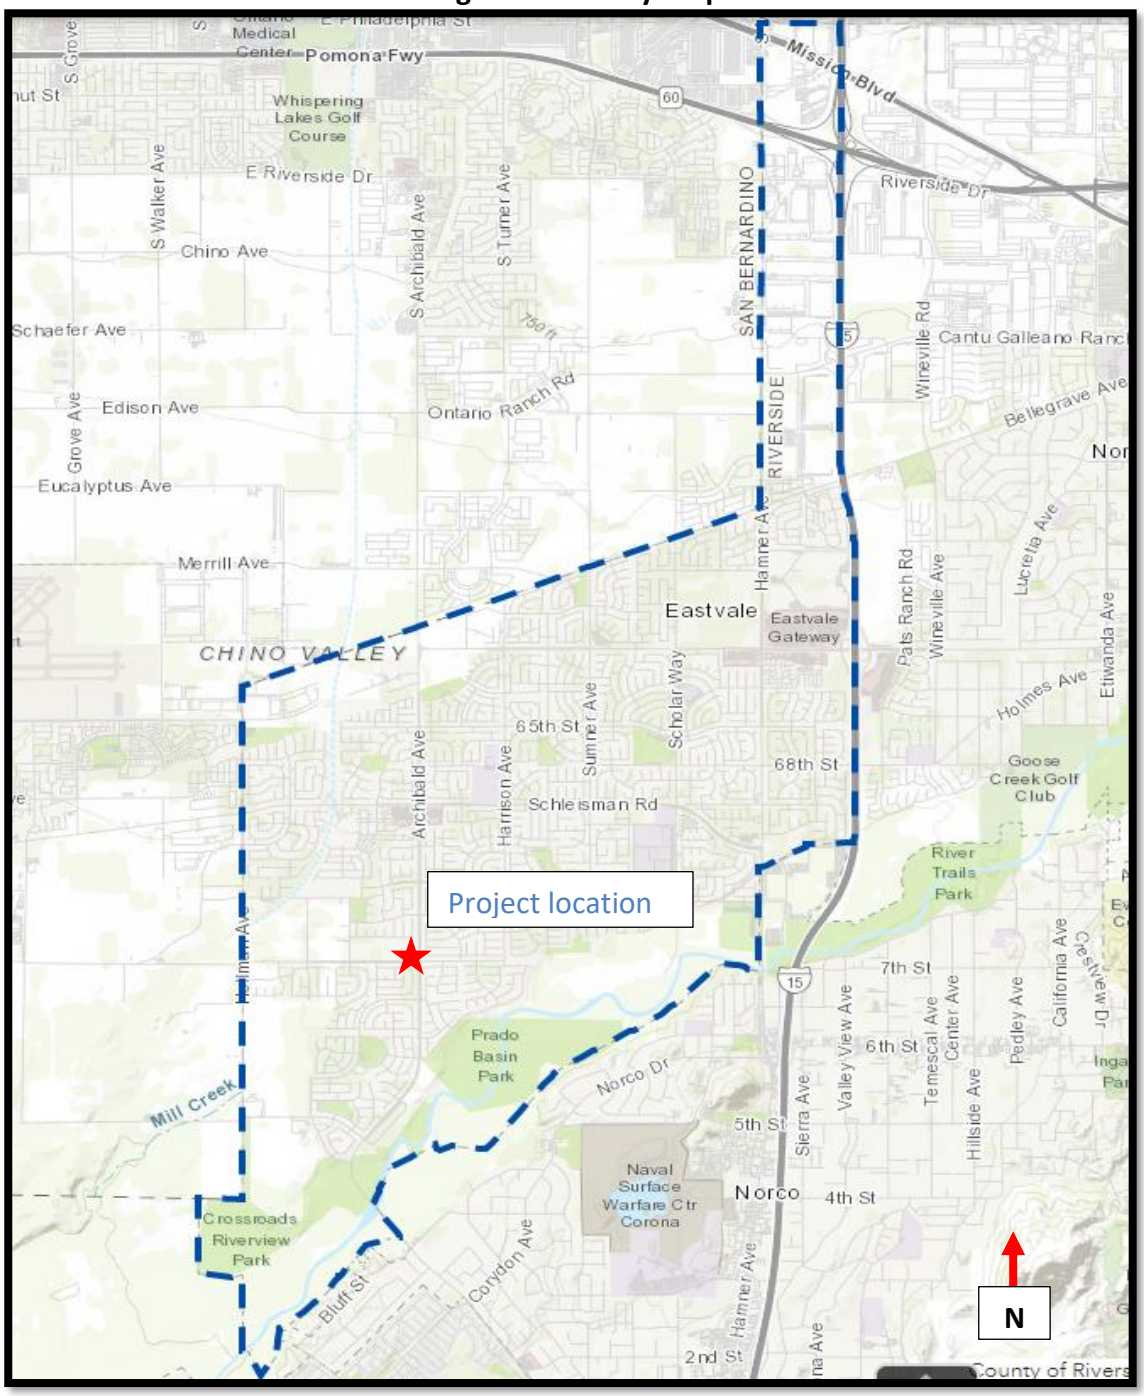
Fiscal Impact

There is no direct fiscal impact to the City for the processing of this project. The applicant is responsible for paying for staff time required to process the project and paying for all necessary modifications or improvements to the project site.

Prior City Council/Commission Action

In May of 2015, the City Council adopted the Chandler Area Community Vision Plan, which envisioned the properties located on the north side of Chandler Street between Selby and Archibald Avenues to have the most change from its existing land uses. The plan supports retail uses at the proposed project location.

On April 21, 2021, the Planning Commission voted to recommend that City Council, adopt a Mitigated Negative Declaration (MND), approve a General Plan Amendment (GPA) to change the land use designation from Low Density Residential to Commercial Retail, approve a Change of Zone (COZ) from Light Agriculture (A-1) to General Commercial (C-1/C-P), approve a drive-through restaurant, approve a sit-down restaurant (with on-sale alcohol – ABC Type 47), and deny the proposed gas station with off-sale beer and wine.



On August 25, 2021, the City Council upheld the Planning Commission's recommendation adopting the MND (via Resolution 21-35), approving the GPA, COZ, TPM, drive-through restaurant (dba McDonalds), sit-down restaurant (dba Zendejas with on-sale alcohol), and denied the gas station (dba Circle K) with off-sale beer and wine.

PROJECT SITE AREA (GROSS): 117,986 SF
LANDSCAPE AREA: 23,463 SF
LANDSCAPE PERCENTAGE: 19.9%

PARKING LOT AREA: 41,873 SF
PARKING LOT LANDSCAPE AREA: 5,969 SF
PARKING LOT LANDSCAPE PERCENTAGE: 14.3% (10% REQUIRED)

PARKING LOT STALL AREA: 8,861 SF
PARKING LOT STALL SHADED AREA: 4,472 SF
PARKING LOT STALL SHADE PERCENTAGE: 50.5% (50% REQUIRED)

IRRIGATION SYSTEM DESIGN STATEMENT

A PERMANENT AUTOMATIC IRRIGATION SYSTEM SHALL BE DESIGNED AND INSTALLED TO IRRIGATE ALL PLANTING AREAS. THE IRRIGATION CONTROLLER(S) SHALL BE EQUIPPED FROM THE MANUFACTURER WITH WEATHER/EVAPOTRANSPIRATION (ET) SENSING CAPABILITIES TO AUTOMATICALLY ADJUST WATERING SCHEDULES AND AMOUNTS. THE DESIGN OF THE IRRIGATIONS SYSTEMS SHALL EMPHASIZE WATER CONSERVATION AND PROVIDE EFFICIENT AND UNIFORM DISTRIBUTIONS OF IRRIGATION WATER.

DRIP AND/OR BUBBLER IRRIGATION, OR OTHER LOW-VOLUME, LOW-PRESSURE, MICRO-IRRIGATION SYSTEM, AS APPROVED BY THE CITY OF EASTVALE, SHALL BE INSTALLED IN PLANTER AREAS TO PROVIDE WATER DIRECTLY TO THE ROOT ZONE OF PLANTS. THE IRRIGATION SYSTEM MAY UTILIZE EFFICIENT ROTATOR NOZZLES IN LARGE PLANTING AREAS,SUBJECT TO THE APPROVAL OF THE CITY. THE AUTOMATIC IRRIGATION SYSTEM SHALL BE DESIGNED IN ACCORDANCE WITH THE CITY OF EASTVALE ORDINANCE AND LANDSCAPE STANDARDS.

FOR SITES UTILIZING POTABLE WATER FOR LANDSCAPE IRRIGATION, A REDUCED PRESSURE BACKFLOW PREVENTOR SHALL BE INSTALLED AFTER THE WATER METER TO PROTECT THE POTABLE WATER SUPPLY IN ACCORDANCE WITH STATE OF CALIFORNIA AND CITY OF EASTVALE STANDARDS AND REQUIREMENTS.

MAXIMUM ANNUAL WATER ALLOWANCE

MAWA = (Eto) (0.62) ((0.45) (LA) + (0.55) (SLA)) = GAL/YR

MAWA = (54.6) (0.62) ((0.45) (23,463 SF) + (0.55) (0)) = 357,421 GAL/YR

ESTIMATED ANNUAL WATER USE

EAWU = (Eto) (0.62) (PF) (LA) = GAL/YR

EAWU = (54.6) (0.62) (0.4) (23,463 SF) = 317,708 GAL/YR

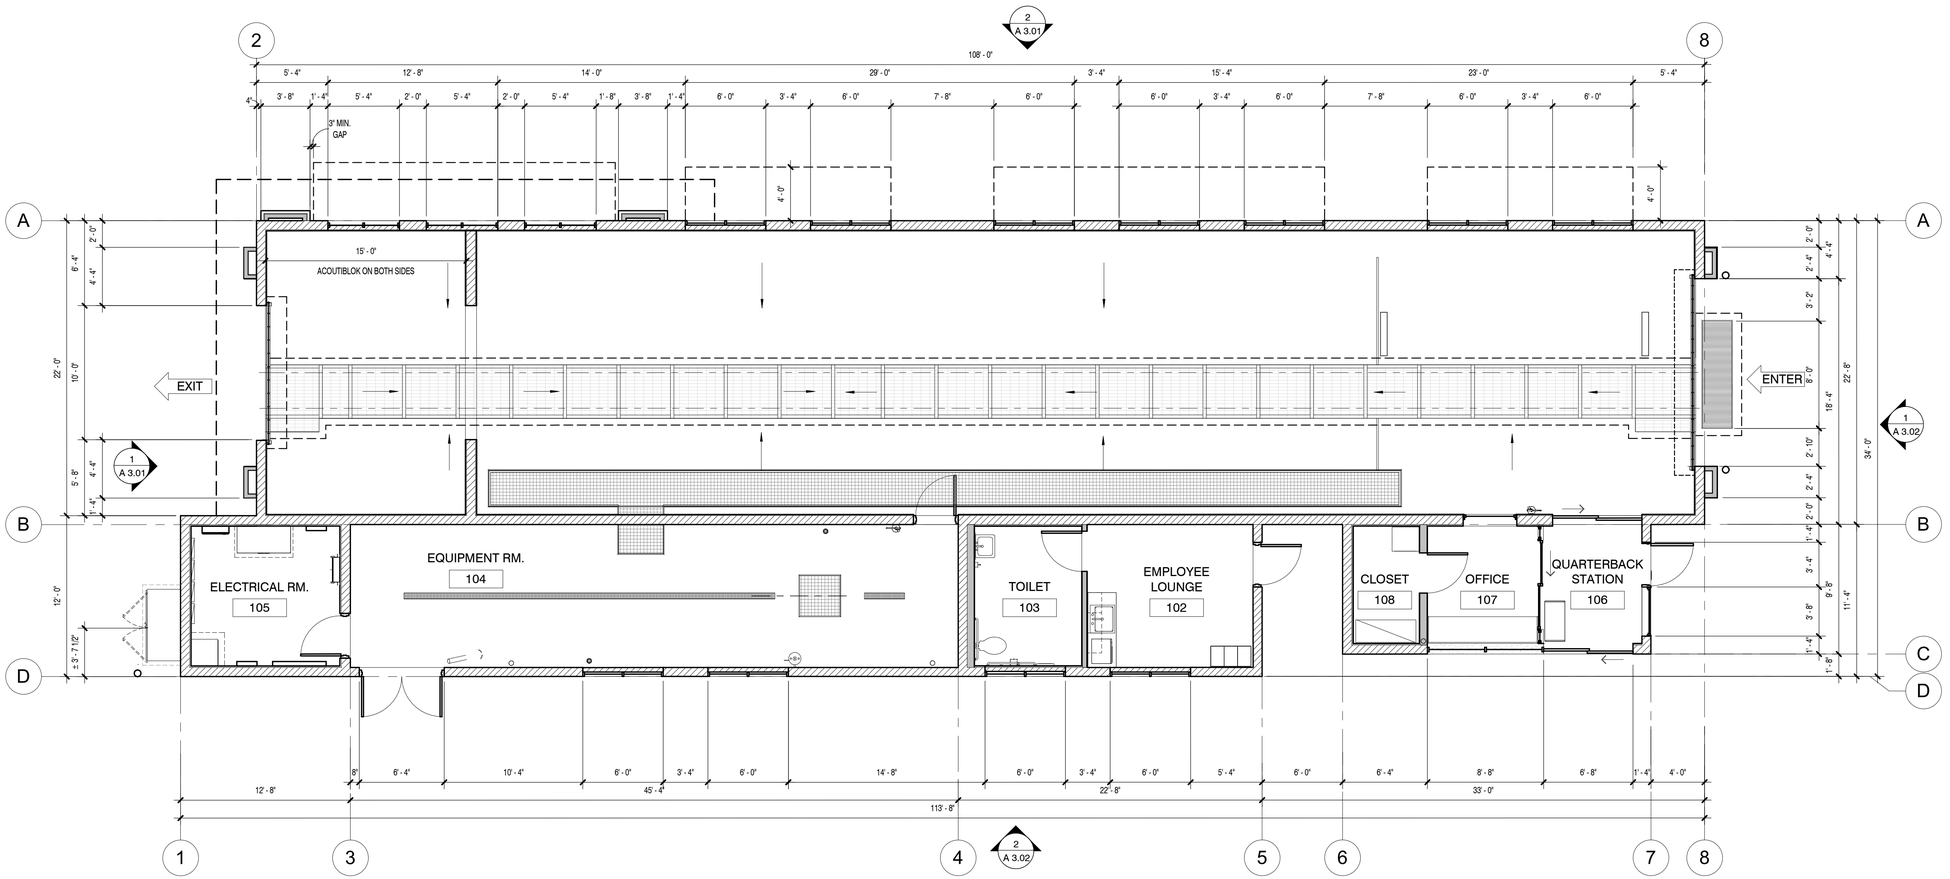
FINIAL OPTIONS

Finial color will default to frame finish selection



BF CLASSIC BALL
default style

VF VERTEX

Umbrella clearance dimensions are measured while not mounted in a base. Depending on the selected base, these clearance measurements will change. All dimensions and weights have a +/-5" tolerance based on multiple variables; pin placement height, crank tautness and fabric weight.

Please see our "Umbrella Base Guide by Application" on page 42 for recommended base options, based on the umbrella size and desired application (table use or free-standing).

FIRST AMERICAN TITLE COMPANY

ORDER NUMBER: NHSC-638067
DATE: SEPTEMBER 15, 2020

LEGAL DESCRIPTION

REAL PROPERTY IN THE CITY OF EASTVALE, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PARCEL A: (APN: 144-130-004)

PARCEL 1:

THE EAST 81 FEET OF THE WEST 110 FEET OF LOT 75 OF PERSIMMON REPUBLIC ACRES, IN THE CITY OF EASTVALE, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AS SHOWN BY MAP ON FILE IN BOOK 12, PAGE 98 OF MAPS, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM PARCEL 2230-33 AS SHOWN ON RECORD OF SURVEY FILED DECEMBER 15, 1971, IN RECORDS OF SURVEY BOOK 57, PAGES 94 TO 97, INCLUSIVE, OFFICE OF THE RECORDER, RIVERSIDE COUNTY, AS CONVEYED TO RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT BY DEED RECORDED MAY 26, 1972 AS INSTRUMENT NO. 69126 OF OFFICIAL RECORDS.

PARCEL 2:

A NON-EXCLUSIVE EASEMENT FOR INGRESS AND EGRESS OVER THE EAST 10 FEET OF THE WEST 120 FEET OF THE SOUTH 240 FEET OF LOT 75 OF PERSIMMON REPUBLIC ACRES, AS SHOWN BY MAP ON FILE IN BOOK 12, PAGE 98 OF MAPS, RIVERSIDE COUNTY RECORDS.

PARCEL 3:

A NON-EXCLUSIVE EASEMENT FOR DOMESTIC PIPE LINE PURPOSES OVER THE NORTH 10 FEET OF THE SOUTH 145 FEET OF THE EAST 21 FEET OF LOT 73 AND OVER THE NORTH 10 FEET OF THE SOUTH 145 FEET OF LOTS 74 AND 75 OF PERSIMMON REPUBLIC ACRES, AS SHOWN BY MAP ON FILE IN BOOK 12 PAGE 98 OF MAPS, RIVERSIDE COUNTY RECORDS, AND OVER THE NORTH 10 FEET OF THE SOUTH 175 FEET OF THE EAST 161 FEET OF SECTION 34, TOWNSHIP 2 SOUTH, RANGE 7 WEST, SAN BERNARDINO BASE AND MERIDIAN, AS PER MAP OF JURUPA RANCHO RECORDED IN BOOK 9 PAGE 33 OF MAPS, SAN BERNARDINO COUNTY RECORDS.

EXCEPTING THAT PORTION LYING WITHIN THE EAST 81 FEET OF THE WEST 110 FEET OF LOT 75.

PARCEL 4:

A NON-EXCLUSIVE EASEMENT FOR PIPE LINE PURPOSES OVER THE NORTH 10 FEET OF THE SOUTH 250 FEET OF THE EAST 21 FEET OF LOT 73 AND OVER THE NORTH 10 FEET OF THE SOUTH 250 FEET OF LOTS 74 AND 75 OF PERSIMMON REPUBLIC ACRES, AS SHOWN BY MAP ON FILE IN BOOK 12, PAGE 98 OF MAPS, RIVERSIDE COUNTY RECORDS AND OVER THE NORTH 10 FEET OF THE SOUTH 280 FEET OF THE EAST 181 FEET OF SECTION 34, TOWNSHIP 2 SOUTH, RANGE 7 WEST, SAN BERNARDINO BASE AND MERIDIAN AS PER MAP OF JURUPA RANCHO RECORDED IN BOOK 9 PAGE 33 OF MAPS, SAN BERNARDINO COUNTY RECORDS.

EXCEPTING THAT PORTION LYING WITHIN THE EAST 81 FEET OF THE WEST 110 FEET OF LOT 75.

PARCEL 5:

AN UNDIVIDED 1/7TH INTEREST IN TWO WELL SITES LOCATED WITHIN THE NORTH 10 FEET OF THE. SOUTH 280 FEET, AND WITHIN THE NORTH 10 FEET OF THE SOUTH 175 FEET OF THE EAST 161 FEET OF SECTION 34, TOWNSHIP 2 SOUTH, RANGE 7 WEST, SAN BERNARDINO BASE AND MERIDIAN, AS PER MAP OF JURUPA RANCHO RECORDED IN BOOK 9 PAGE 33 OF MAPS, SAN BERNARDINO COUNTY RECORDS.

TOGETHER WITH AN UNDIVIDED 1/7TH INTEREST IN AND TO THE WELL AND EQUIPMENT AND PIPES APPURTENANT THERETO.

CIVIL
STATE OF CALIFORNIA

RESOLUTION NO. 23-XX

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING PROJECT NO. PLN23-20018, TENTATIVE PARCEL MAP NO. 37653 LOCATED AT THE NORTHWEST CORNER OF CHANDLER AVENUE AND ARCHIBALD AVENUE, ASSESSOR'S PARCEL NUMBER 144-130-004, -011, -012, -013, AND -004

WHEREAS, the applicant, Schneider REA, submitted Planning Application No. PLN23-20018, Tentative Parcel Map No. 37653 to subdivide the 2.70-acre project site into three (3) parcels, located on the northwest corner of Chandler Avenue and Archibald Avenue. Assessor's Parcel Number 144-130-004, -011, -012, -013, and -004; and

WHEREAS, the proposed project (Project No. PLN23-20018) is considered a "project" as defined by the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq.; and

WHEREAS, a Mitigated Declaration (MND) was adopted by City Council on August 25, 2021 (via Resolution 21-35), that addressed physical development of the subject site; and

WHEREAS, pursuant to Section 15162 of the California Environmental Quality Act (CEQA) Guidelines, the city conducted an analysis of the proposed project that concluded there were no new significant environmental effects, or a substantial increase in the severity of identified significant effects previously identified in the Mitigated Negative Declaration;

WHEREAS, the City determined that none of the findings of Section 15162 of the State CEQA Guidelines required preparation of a Subsequent Environmental Impact Report (EIR) or Negative Declaration and prepared an Addendum to the Mitigated Negative Declaration consistent with State CEQA Guidelines Section 15162; and

WHEREAS, the Planning Division evaluated the project for consistency with the City's General Plan, City of Eastvale Municipal Code Title 120 (Planning and Zoning), and all other applicable state and local regulations; and

WHEREAS, on October 8, 2023, the City of Eastvale City Clerk published a legal notice concerning Project No. PLN23-20018 in the Press Enterprise, a local newspaper of general circulation, regarding the Planning Commission meeting on October 18, 2023. In addition, on October 6, 2022, a public hearing notice was mailed to each property owner and commercial tenant within a 600-foot radius of the project site, indicating time and place of the public hearing for Project No. PLN23-20018; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on October 18, 2023, at which public testimony was received concerning Project No. PLN23-20018, and at which time the Commission considered proposed Project No. PLN23-20018.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE DOES HEREBY RESOLVE, DETERMINE, AND ORDER AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to CEQA, within the meaning of Public Resources Code Sections 21080(e) and 21082.2 within the record and/or provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding: The proposed project is exempt from further environmental review requirements.

Evidence: Pursuant to the provisions of the California Environmental Quality Act (CEQA California Public Resources Code, Sections 21000, et seq.) and CEQA Guidelines (California Code of Regulations, Title 14, Sections 15000, et seq.), an Addendum to the to the previously approved 2021 Initial Study/Mitigated Negative Declaration ("2021 IS/MND") was prepared for the proposed project. The Addendum reevaluates the revised project's environmental impacts due to changes in the approved project's (PLN19-20000) tenant makeup and layout. The addendum does not set forth policy for the City of Eastvale about the proposed Project's desirability. Rather, it is an information document to be used by the decision-makers, public agencies, and the public, in accordance with CEQA. The revised project would not cause new significant environmental effects or substantially increase the severity of previously identified effects disclosed in the 2021 IS/MND. Accordingly, the revised project would not trigger expanded environmental review, beyond this Addendum nor would require the preparation of subsequent IS/MND.

SECTION 2. MULTIPLE SPECIES HABITAT CONSERVATION PLAN

Finding: The project is found to be consistent with the Multiple Species Habitat Conservation Plan (MSHCP).

Evidence: The project is located outside of any MSHCP criteria area.

SECTION 3. FINDINGS FOR TENTATIVE PARCEL MAP:

Finding 1: The proposed map is consistent with the City's General Plan and any applicable specific plan as specified in Government Code Section 65451.

Evidence: The General Plan land use designation for the subject site is Commercial Retail (CR) which allows for the development of commercial retail uses at a neighborhood, community, and regional level, as well as for professional office

and visitor-oriented commercial uses. The proposed Tentative Parcel Map 37653 is a land division to subdivide a 2.70 acre site into three (3) parcels to facilitate the development of a new commercial retail center. The proposed project would be consistent with the surrounding area and is consistent with the General Plan designation for the site of Commercial Retail and will further the objectives and policies of the General Plan. Further, the zoning for the project site is General Commercial (C-1/C-P) which would allow a commercial retail center; therefore, the proposed project is in compliance with the Zoning Code.

Finding 2: The design of the proposed project is consistent with the City's General Plan and any applicable specific plan.

Evidence: A site plan is proposed with Tentative Parcel Map No. 37653. The proposed site layout has been designed by the applicant to comply with the development standards provided in the Zoning Code, such as providing and exceeding the requirement of the minimum lot width, depth, lot size, and density. For these reasons, the proposed project, as conditioned, will enhance the character of the neighborhood and community.

Finding 3: The site is physically suitable for the type and proposed density of development.

Evidence: The site is physically suitable for the type of development proposed in that the infrastructure and utilities either already serve the site or can be readily expanded to serve the site, and there are no intractable topographical peculiarities associated with the physical character of the property that may prevent the development of three (3) commercial lots. Further the site is physically suitable for the proposed commercial retail center in that the applicant has submitted a conceptual development plan with illustrates that commercial retail can be constructed on this 2.70-acre site without adversely affecting the health, safety, or welfare of anyone within the community. All future development would be required to undergo analysis by the City and would be required to meet City design standards.

Finding 4: The design of the subdivision or proposed improvements is not likely to cause significant environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

Evidence: An Addendum to the to the previously approved 2021 Initial Study/Mitigated Negative Declaration ("2021 IS/MND") was prepared for the proposed project, and a Mitigation and Monitoring program was prepared for the project accordingly. As such, potential impacts to the environment or fish or wildlife will be monitored and mitigated accordingly.

Finding 5: The design of the subdivision or type of improvements is not likely to cause serious public health problems.

Evidence: The design of the subdivision is in conformance with the City's General Plan, Zoning Code, Specific Plan, and Subdivision Ordinance. Accordingly, the subdivision and improvements will comply with all applicable local, state, and federal laws to ensure the public's general health, safety, and welfare.

Finding 6: The design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision.

Evidence: The City Engineer has reviewed the subdivision map, as well as conferred with relevant agencies. As such, the requested map would not conflict with any access through or use of the property.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the City Council's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the Planning Department of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk's Office of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Tentative Parcel Map No. 37653 for the subdivision of a 2.70-acre project area into three (3) parcels located at the northwest corner of Chandler Avenue and Archibald Avenue, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 18th day of October 2023.

STATE OF CALIFORNIA)
COUNTY OF RIVERSIDE) §
CITY OF EASTVALE)

I, Whitney Mayo, Deputy City Clerk of the City of Eastvale, California, do hereby certify that the foregoing Planning Commission Resolution No. 23-XX, was duly adopted by the Planning Commission of the City of Eastvale, California, at a regular meeting thereof held on the 18th day of October, 2023, by the following vote:

AYES:

NOES:

ABSENT:

ABSTAIN:

_____
Whitney Mayo
Deputy City Clerk

RESOLUTION NO. 23-XX

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING MAJOR DEVELOPMENT REVIEW PLN23-20019 TO CONSTRUCT A NEW 950 SQUARE-FOOT COFFEE SHOP (DBA DUTCH BROS), A DOUBLE LANE DRIVE-THROUGH, ASSOCIATED OUTDOOR SEATING AREA, AND SITE IMPROVEMENTS ON A 0.75-ACRE VACANT LOT LOCATED AT THE NORTHWEST CORNER OF CHANDLER AVENUE AND ARCHIBALD AVENUE

WHEREAS, Major Development Review PLN23-20019 is requested by the applicant, Schneider REA, to construct a new 950 square-foot coffee shop (dba Dutch Bros), with a double lane drive-through, associated outdoor seating area, and site improvements on a 0.75-acre vacant lot of a proposed retail center; and

WHEREAS, Major Development Review PLN23-20019 is considered a "Project" as defined by the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq.; and

WHEREAS, a Mitigated Negative Declaration was adopted on August 25, 2021, that addressed physical development of the subject site; and

WHEREAS, pursuant to Section 15162 of the California Environmental Quality Act (CEQA) Guidelines, the city conducted an analysis of the proposed project that concluded there were no new significant environmental effects, or a substantial increase in the severity of identified significant effects previously identified in the Mitigated Negative Declaration; and

WHEREAS, the City determined that none of the findings of Section 15162 of the State CEQA Guidelines required preparation of a Subsequent Environmental Impact Report (EIR) or Negative Declaration and prepared an Addendum to the Mitigated Negative Declaration consistent with State CEQA Guidelines Section 15162; and

WHEREAS, on October 8, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning Major Development Review PLN23-20019 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on October 18, 2023. In addition, on October 6, 2023, a public hearing notice was mailed to each property owner and commercial tenant within a 600-foot radius of the project site, indicating time, date, and place of the public hearing for Major Development Review PLN23-20019.

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on October 18, 2023, at which public testimony was received concerning Major Development Review PLN23-20019, and at which time the Planning Commission considered proposed Project No. PLN23-20019.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY RESOLVE, DECLARE, DETERMINE, AND ORDER AS FOLLOWS:

SECTION 1. FINDINGS FOR CEQA:

The California Environmental Quality Act (Section 2100, et. Seq. of the California Public Resources Code, hereafter CEQA) requires analysis of agency approvals of discretionary projects. A "project", under CEQA is defined as "the whole of an action which has a potential for resulting in either a direct physical change in environment." The proposed project is a project under CEQA.

The city evaluated the potential environmental impacts of the proposed revised project against the criteria set forth in CEQA Guidelines Section 15162, 15163, 15164, and 15168(c). The city acting as the Lead Agency, has determined that substantial evidence throughout the Addendum supports the determination that the project would not have any reasonable foreseeable environmental consequences beyond that analyzed in the Mitigated Negative Declaration and its associated administrative record. There are no substantial changes to the project, no substantial changes in the circumstances under which the project is being undertaken, and no new information of substantial importance that was not known to the Lead Agency at the time the Mitigated Negative Declaration was adopted that trigger any of the conditions identified in Public Resources Code Section 21166 or State CEQA Guidelines Section 15162, which would require subsequent or supplemental CEQA documentation. The proposed changes do not involve new significant environmental effects or a substantial increase in the severity of previously identified significant effects discussed in the previous Initial Study/Mitigated Negative Declaration. The previous identified mitigation measures remain valid and adequate to reduce potential impacts to less than significant levels. Therefore, an Addendum to the previously adopted Mitigated Negative Declaration is appropriate, and no further environmental review is required.

SECTION 2. MAJOR DEVELOPMENT REVIEW FINDINGS

The criteria and required findings for a Major Development Review are outlined in Section 120.02.010 "Development Review." The Planning Commission may approve a Major Development Review, with or without conditions, only after first making specific findings. The required findings and an analysis of the merits of the Major Development Review application are listed below:

Finding 1: The proposed project is consistent with the objectives of the general plan, and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Commercial Retail (CR). The Commercial Retail land use designation allows for the development of commercial retail uses at a neighborhood, community, and regional level, as well as for professional office and visitor-oriented commercial uses. The proposed commercial retail would be consistent with the surrounding area and is consistent with the General Plan designation and Zoning.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and the site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to conform to the logical pattern of development as envisioned by the Eastvale General Plan and has been designed to satisfy the General Plan design policies. The project has been designed to meet the requirements and development standards of the Eastvale Zoning Code.

Finding 3: The architecture, including the character, scale and quality of the design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architectural theme of the proposed drive-through coffee shop is compatible with the current design of the proposed retail center. These standards focus on high quality design and articulation to provide visual interest and variety (both vertically and horizontally). The building includes stone veneer, metal siding, colored and scored stucco, and metal awnings as examples of the variation of materials designed to complement the exterior plaster and building finishes. Thus, the proposed design is consistent with the Eastvale Zoning Code and the General Plan.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have also been designed to handle the type and quantity of vehicular traffic associated with the project proposal. As conditioned, the project will include sidewalks and pedestrian and bicycle connections that will not create conflicts with motorized vehicles.

Finding 5: If the project is located within the Chino Airport influence area, the proposed project is consistent with the most recently adopted version of the airport land use compatibility plan.

Evidence: The project site is located within the Chino Airport influence area and is subject to consistency with the Airport Land Use Compatibility Plan (ALUCP). The Riverside County Airport Land Use Commission (ALUC) acts in an advisory capacity when reviewing development projects for compatibility with the ALUCP. The project has been reviewed with consideration of the intensity requirements pursuant to ALUCP Policy CH 2.6.1, the site would be able to sufficiently accommodate the intensity requirements. Conditions have also

been included as part of the project requirements for the applicant to submit an application to ALUC and obtain an official consistency determination on the project prior to building permit issuance.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN

Finding: The project is found to be consistent with the Multiple Species Habitat Conservation Plan.

Evidence: The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of MSHCP Mitigation Fees.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the environmental documents, staff reports, as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 4. DETERMINATION

Based upon the findings outlined in Sections 1 to 3 above, the Planning Commission of the City of Eastvale hereby approves Major Development Review PLN23-20019 to construct a new 950 square-foot coffee shop, with a double lane drive-through, associated outdoor seating area, and site improvements, subject to conditions of approval.

PASSED, APPROVED AND ADOPTED this 18th day of October 2023.

Deputy City Clerk

RESOLUTION NO. 23-XX

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING CONDITIONAL USE PERMIT PLN23-20019 FOR THE ESTABLISHMENT AND OPERATION OF A DOUBLE-LANE DRIVE THROUGH AT A NEW 950 SQUARE-FOOT COFFEE SHOP (DBA DUTCH BROS), LOCATED AT THE NORTHWEST CORNER OF CHANDLER AVENUE AND ARCHIBALD AVENUE

WHEREAS, Conditional Use Permit PLN23-20019 is requested by the applicant, Schneider REA, to allow the establishment and operation of a double-lane drive through at a new 950 square-foot coffee shop (dba Dutch Bros) on a 0.75-acre vacant lot of a proposed retail center; and

WHEREAS, Conditional Use Permit PLN23-20019 is considered a "Project" as defined by the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq.; and

WHEREAS, a Mitigated Negative Declaration was adopted on August 25, 2021, that addressed physical development of the subject site; and

WHEREAS, pursuant to Section 15162 of the California Environmental Quality Act (CEQA) Guidelines, the city conducted an analysis of the proposed project that concluded there were no new significant environmental effects, or a substantial increase in the severity of identified significant effects previously identified in the Mitigated Negative Declaration; and

WHEREAS, the City determined that none of the findings of Section 15162 of the State CEQA Guidelines required preparation of a Subsequent Environmental Impact Report (EIR) or Negative Declaration and prepared an Addendum to the Mitigated Negative Declaration consistent with State CEQA Guidelines Section 15162; and

WHEREAS, on October 8, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning Conditional Use Permit PLN23-20019 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on October 18, 2023. In addition, on October 6, 2023, a public hearing notice was mailed to each property owner and commercial tenant within a 600-foot radius of the project site, indicating time, date, and place of the public hearing for Major Development Review PLN23-20019.

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on October 18, 2023 at which public testimony was received concerning Conditional Use Permit PLN23-20019, and at which time the Planning Commission considered proposed Conditional Use Permit Project No. PLN23-20019.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY RESOLVE, DECLARE, DETERMINE, AND ORDER AS FOLLOWS:

SECTION 1. FINDINGS FOR CEQA:

The California Environmental Quality Act (Section 2100, et. Seq. of the California Public Resources Code, hereafter CEQA) requires analysis of agency approvals of discretionary projects. A "project", under CEQA is defined as "the whole of an action which has a potential for resulting in either a direct physical change in environment." The proposed project is a project under CEQA.

The city evaluated the potential environmental impacts of the proposed revised project against the criteria set forth in CEQA Guidelines Section 15162, 15163, 15164, and 15168(c). The city acting as the Lead Agency, has determined that substantial evidence throughout the Addendum supports the determination that the project would not have any reasonable foreseeable environmental consequences beyond that analyzed in the Mitigated Negative Declaration and its associated administrative record. There are no substantial changes to the project, no substantial changes in the circumstances under which the project is being undertaken, and no new information of substantial importance that was not known to the Lead Agency at the time the Mitigated Negative Declaration was adopted that trigger any of the conditions identified in Public Resources Code Section 21166 or State CEQA Guidelines Section 15162, which would require subsequent or supplemental CEQA documentation. The proposed changes do not involve new significant environmental effects or a substantial increase in the severity of previously identified significant effects discussed in the previous Initial Study/Mitigated Negative Declaration. The previous identified mitigation measures remain valid and adequate to reduce potential impacts to less than significant levels. Therefore, an Addendum to the previously adopted Mitigated Negative Declaration is appropriate, and no further environmental review is required.

SECTION 2. CONDITIONAL USE PERMIT FINDINGS

The criteria and required findings for a Conditional Use Permit are outlined in Section 120.02.020 "Conditional Use Permits". The Planning Commission may approve a Conditional Use Permit, with or without conditions, only after first making specific findings. The required findings and an analysis of the merits of the Conditional Use Permit application are listed below:

Finding 1: The proposed use is consistent with the General Plan and all applicable provisions of this title.

Evidence: The General Plan land use designation of the proposed site is Commercial Retail (CR). The Commercial Retail land use designation allows for the development of commercial retail uses at a neighborhood, community, and regional level, as well as for professional office and visitor-oriented commercial uses. The proposed project would be consistent with the surrounding area and is consistent with the General Plan designation and Zoning. The project consists of

a drive-through facility where vehicle queuing will occur within the proposed project site and will therefore not affect any public roadway.

Finding 2: The establishment, maintenance or operation of the use applied for will not, under the circumstances of the particular case (location, size, design, and operating characteristics), be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or working in the neighborhood of such use, or the general welfare of the city.

Evidence: The proposed use will not be detrimental or injurious to property in the vicinity nor to the public health, safety, and general welfare because staff has reviewed plans and recommended conditions of approval as preventative measures. The proposed coffee shop with a drive-through operation, subject to its conditions of approval, will integrate with the overall retail center, which has been designed to provide adequate parking, circulation, and access to major roadway systems that provide local and regional connectivity. Existing driveways for the retail center have been designed with sufficient length and width to accommodate vehicles entering and exiting the parking areas, including for the commercial retail building.

The proposed drive-through accommodates a maximum of 27 cars from the pickup window and up to 18 cars from the ordering menu board. This design, subject to the conditions, satisfies the requirement of a minimum stacking of six (6) cars to the order menu board per the City of Eastvale Zoning Code. Furthermore, in that there is sufficient queuing capacity to accommodate peak drive-through queues entirely within the drive-through lane, based on the empirical evidence provided in the queuing analysis prepared by Ganddini Group on September 19, 2023, thus maintaining unimpeded drive aisles, and allowing vehicle to circulate efficiently throughout the site as well as on public roadways. To further ensure the proposed drive-through will not be detrimental or injurious to property in the vicinity nor the public health and safety and general welfare staff has added conditions of approval requiring Dutch Bros staff to temporarily restrict access to the drive-through in the event the drive-through queue exceeds its queuing capacity as well as submit a Traffic Management Plan for review and approval by staff. Based off the Addendum to the 2021 MND, found the limited addition of project vehicle trips to existing traffic already generated by patrons traveling to and from the existing on-site retail use would not substantially increase area traffic or adversely affect local circulation patterns.

Additionally, the project operational noise, as analyzed in the Noise Impact Analysis, prepared by the Ganddini Group on December 16, 2022, would not result in significant impacts. Based off the Addendum to the 2021 MND, no mitigation is required and the project as conditioned, would not be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or working the neighborhood or such use or the general welfare of the

city.

Finding 3: If the project is located within the Chino Airport Influence Area, the proposed project is consistent with the most recently adopted version of the Airport Land Use Compatibility Plan.

Evidence: The project site is located within the Chino Airport influence area and is subject to consistency with the Airport Land Use Compatibility Plan (ALUCP). The Riverside County Airport Land Use Commission (ALUC) acts in an advisory capacity when reviewing development projects for compatibility with the ALUCP. The project has been reviewed with consideration of the intensity requirements pursuant to ALUCP Policy CH 2.6.1, the site would be able to sufficiently accommodate the intensity requirements. Conditions have also been included as part of the project requirements for the applicant to submit an application to ALUC and obtain an official consistency determination on the project prior to building permit issuance.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN

Finding: The project is found to be consistent with the Multiple Species Habitat Conservation Plan (MSHCP).

Evidence: The project is located outside of any MSHCP criteria area with no evidence of sensitive biological resources.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the environmental documents, staff reports, as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 to 3 above, the Planning Commission of the City of Eastvale hereby approves Conditional Use Permit PLN23-20019 for the establishment and operation of a double-lane drive-through coffee shop (dba Dutch Bros) on a vacant lot within a newly proposed retail center, subject to conditions of approval.

PASSED, APPROVED AND ADOPTED this 18th day of October, 2023.

RESOLUTION NO. 23-XX

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING MAJOR DEVELOPMENT REVIEW PLN23-20020 TO CONSTRUCT A NEW 3,598 SQUARE-FOOT CARWASH (DBA QUICK QUACK), A TRIPLE LANE DRIVE-THROUGH, ASSOCIATED OUTDOOR SEATING AREA, AND SITE IMPROVEMENTS ON A 1.20-ACRE VACANT LOT LOCATED AT THE NORTHWEST CORNER OF CHANDLER AVENUE AND ARCHIBALD AVENUE

WHEREAS, Major Development Review PLN23-20020 is requested by the applicant, Schneider REA, to construct a new 3,598 square-foot carwash (dba Quick Quack), with a triple lane drive-through, associated outdoor seating area, and site improvements on a 1.20-acre vacant lot of a proposed retail center; and

WHEREAS, Major Development Review PLN23-20020 is considered a "Project" as defined by the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq.; and

WHEREAS, a Mitigated Negative Declaration was adopted on August 25, 2021, that addressed physical development of the subject site; and

WHEREAS, pursuant to Section 15162 of the California Environmental Quality Act (CEQA) Guidelines, the city conducted an analysis of the proposed project that concluded there were no new significant environmental effects, or a substantial increase in the severity of identified significant effects previously identified in the Mitigated Negative Declaration; and

WHEREAS, the City determined that none of the findings of Section 15162 of the State CEQA Guidelines required preparation of a Subsequent Environmental Impact Report (EIR) or Negative Declaration and prepared an Addendum to the Mitigated Negative Declaration consistent with State CEQA Guidelines Section 15162; and

WHEREAS, on October 8, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning Major Development Review PLN23-20020 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on October 18, 2023. In addition, on October 6, 2023, a public hearing notice was mailed to each property owner and commercial tenant within a 600-foot radius of the project site, indicating time, date, and place of the public hearing for Major Development Review PLN23-20020.

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on October 18, 2023, at which public testimony was received concerning Major Development Review PLN23-20020, and at which time the Planning Commission considered proposed Project No PLN23-20020.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY RESOLVE, DECLARE, DETERMINE, AND ORDER AS FOLLOWS:

SECTION 1. FINDINGS FOR CEQA:

The California Environmental Quality Act (Section 2100, et. Seq. of the California Public Resources Code, hereafter CEQA) requires analysis of agency approvals of discretionary projects. A "project", under CEQA is defined as "the whole of an action which has a potential for resulting in either a direct physical change in environment." The proposed project is a project under CEQA.

The city evaluated the potential environmental impacts of the proposed revised project against the criteria set forth in CEQA Guidelines Section 15162, 15163, 15164, and 15168(c). The city acting as the Lead Agency, has determined that substantial evidence throughout the Addendum supports the determination that the project would not have any reasonable foreseeable environmental consequences beyond that analyzed in the Mitigated Negative Declaration and its associated administrative record. There are no substantial changes to the project, no substantial changes in the circumstances under which the project is being undertaken, and no new information of substantial importance that was not known to the Lead Agency at the time the Mitigated Negative Declaration was adopted that trigger any of the conditions identified in Public Resources Code Section 21166 or State CEQA Guidelines Section 15162, which would require subsequent or supplemental CEQA documentation. The proposed changes do not involve new significant environmental effects or a substantial increase in the severity of previously identified significant effects discussed in the previous Initial Study/Mitigated Negative Declaration. The previous identified mitigation measures remain valid and adequate to reduce potential impacts to less than significant levels. Therefore, an Addendum to the previously adopted Mitigated Negative Declaration is appropriate, and no further environmental review is required.

SECTION 2. MAJOR DEVELOPMENT REVIEW FINDINGS

The criteria and required findings for a Major Development Review are outlined in Section 120.02.010 "Development Review." The Planning Commission may approve a Major Development Review, with or without conditions, only after first making specific findings. The required findings and an analysis of the merits of the Major Development Review application are listed below:

Finding 1: The proposed project is consistent with the objectives of the general plan, and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Commercial Retail (CR). The Commercial Retail land use designation allows for the development of commercial retail uses at a neighborhood, community, and regional level, as well as for professional office and visitor-oriented commercial uses. The proposed commercial retail would be consistent with the surrounding area and is consistent with the General Plan designation and Zoning.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and the site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to conform to the logical pattern of development as envisioned by the Eastvale General Plan and has been designed to satisfy the General Plan design policies. The project has been designed to meet the requirements and development standards of the Eastvale Zoning Code.

Finding 3: The architecture, including the character, scale and quality of the design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architectural theme of the proposed drive-through carwash is compatible with the current design of the proposed retail center. These standards focus on high quality design and articulation to provide visual interest and variety (both vertically and horizontally). The building includes stone veneer, metal siding, colored and scored stucco, and metal awnings as examples of the variation of materials designed to complement the exterior plaster and building finishes. Thus, the proposed design is consistent with the Eastvale Zoning Code and the General Plan.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have also been designed to handle the type and quantity of vehicular traffic associated with the project proposal. As conditioned, the project will include sidewalks and pedestrian and bicycle connections that will not create conflicts with motorized vehicles.

Finding 5: If the project is located within the Chino Airport influence area, the proposed project is consistent with the most recently adopted version of the airport land use compatibility plan.

Evidence: The project site is located within the Chino Airport influence area and is subject to consistency with the Airport Land Use Compatibility Plan (ALUCP). The Riverside County Airport Land Use Commission (ALUC) acts in an advisory capacity when reviewing development projects for compatibility with the ALUCP. The project has been reviewed with consideration of the intensity requirements pursuant to ALUCP Policy CH 2.6.1, the site would be able to sufficiently accommodate the intensity requirements. Conditions have also

been included as part of the project requirements for the applicant to submit an application to ALUC and obtain an official consistency determination on the project prior to building permit issuance.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN

Finding: The project is found to be consistent with the Multiple Species Habitat Conservation Plan (MSHCP). The project is located outside of any MSHCP criteria area with no evidence of sensitive biological resources.

Evidence: The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of MSHCP Mitigation Fees.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the environmental documents, staff reports, as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 4. DETERMINATION

Based upon the findings outlined in Sections 1 to 3 above, the Planning Commission of the City of Eastvale hereby approves Major Development Review PLN23-20020 to construct a new 3,598 square-foot carwash (dba Quick Quack), with a triple lane drive-through, associated outdoor seating area, and site improvements, subject to conditions of approval.

PASSED, APPROVED AND ADOPTED this 18th day of October 2023.

_____
Whitney Mayo
Deputy City Clerk

RESOLUTION NO. 23-XX

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING CONDITIONAL USE PERMIT PLN23-20020 FOR THE ESTABLISHMENT AND OPERATION OF A TRIPLE-LANE DRIVE THROUGH AT A NEW 3,598 SQUARE-FOOT CARWASH (DBA QUICK QUACK), LOCATED AT THE NORTHWEST CORNER OF CHANDLER AVENUE AND ARCHIBALD AVENUE

WHEREAS, Conditional Use Permit PLN23-20020 is requested by the applicant, Schneider REA, to allow the establishment and operation of a triple-lane drive through at a new 3,598 square-foot carwash (dba Quick Quack) on a 1.20-acre vacant lot of a proposed retail center; and

WHEREAS, Conditional Use Permit PLN23-20020 is considered a "Project" as defined by the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq.; and

WHEREAS, a Mitigated Negative Declaration was adopted on August 25, 2021, that addressed physical development of the subject site; and

WHEREAS, pursuant to Section 15162 of the California Environmental Quality Act (CEQA) Guidelines, the city conducted an analysis of the proposed project that concluded there were no new significant environmental effects, or a substantial increase in the severity of identified significant effects previously identified in the Mitigated Negative Declaration; and

WHEREAS, the City determined that none of the findings of Section 15162 of the State CEQA Guidelines required preparation of a Subsequent Environmental Impact Report (EIR) or Negative Declaration and prepared an Addendum to the Mitigated Negative Declaration consistent with State CEQA Guidelines Section 15162; and

WHEREAS, on October 8, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning Conditional Use Permit PLN23-20020 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on October 18, 2023. In addition, on October 6, 2023, a public hearing notice was mailed to each property owner and commercial tenant within a 600-foot radius of the project site, indicating time, date, and place of the public hearing for Major Development Review PLN23-20020.

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on October 18, 2023 at which public testimony was received concerning Conditional Use Permit PLN23-20020, and at which time the Planning Commission considered proposed of Conditional Use Permit PLN23-20020.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY RESOLVE, DECLARE, DETERMINE, AND ORDER AS FOLLOWS:

SECTION 1. FINDINGS FOR CEQA:

The California Environmental Quality Act (Section 2100, et. Seq. of the California Public Resources Code, hereafter CEQA) requires analysis of agency approvals of discretionary projects. A "project", under CEQA is defined as "the whole of an action which has a potential for resulting in either a direct physical change in environment." The proposed project is a project under CEQA.

The city evaluated the potential environmental impacts of the proposed revised project against the criteria set forth in CEQA Guidelines Section 15162, 15163, 15164, and 15168(c). The city acting as the Lead Agency, has determined that substantial evidence throughout the Addendum supports the determination that the project would not have any reasonable foreseeable environmental consequences beyond that analyzed in the Mitigated Negative Declaration and its associated administrative record. There are no substantial changes to the project, no substantial changes in the circumstances under which the project is being undertaken, and no new information of substantial importance that was not known to the Lead Agency at the time the Mitigated Negative Declaration was adopted that trigger any of the conditions identified in Public Resources Code Section 21166 or State CEQA Guidelines Section 15162, which would require subsequent or supplemental CEQA documentation. The proposed changes do not involve new significant environmental effects or a substantial increase in the severity of previously identified significant effects discussed in the previous Initial Study/Mitigated Negative Declaration. The previous identified mitigation measures remain valid and adequate to reduce potential impacts to less than significant levels. Therefore, an Addendum to the previously adopted Mitigated Negative Declaration is appropriate, and no further environmental review is required.

SECTION 2. CONDITIONAL USE PERMIT FINDINGS

The criteria and required findings for a Conditional Use Permit are outlined in Section 120.02.020 "Conditional Use Permits". The Planning Commission may approve a Conditional Use Permit, with or without conditions, only after first making specific findings. The required findings and an analysis of the merits of the Conditional Use Permit application are listed below:

Finding 1: The proposed use is consistent with the General Plan and all applicable provisions of this title.

Evidence: The General Plan land use designation of the proposed site is Commercial Retail (CR). The Commercial Retail land use designation allows for the development of commercial retail uses at a neighborhood, community, and regional level, as well as for professional office and visitor-oriented commercial uses. The proposed project would be consistent with the surrounding area and is consistent with the General Plan designation and Zoning. The project consists of a drive-through facility where vehicle queuing will occur within the proposed project site and will therefore not affect any public roadway.

Finding 2: The establishment, maintenance or operation of the use applied for will not, under the circumstances of the particular case (location, size, design, and operating characteristics), be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or working in the neighborhood of such use, or the general welfare of the city.

Evidence: The proposed use will not be detrimental or injurious to property in the vicinity nor to the public health, safety, and general welfare because staff has reviewed plans and recommended conditions of approval as preventative measures. The proposed carwash with a drive-through operation, subject to its conditions of approval, will integrate with the overall retail center, which has been designed to provide adequate parking, circulation, and access to major roadway systems that provide local and regional connectivity. Existing driveways for the retail center have been designed with sufficient length and width to accommodate vehicles entering and exiting the parking areas, including for the commercial retail building.

The proposed drive-through accommodates a maximum of 29 cars before entering the carwash structure and up to 23 cars from the ordering kiosk. This design, subject to the conditions, satisfies the requirement of a minimum stacking of six (6) cars to the order menu board per the City of Eastvale Zoning Code. Furthermore, in that there is sufficient queuing capacity to accommodate peak drive-through queues entirely within the drive-through lane, based on the empirical evidence provided in the queuing analysis prepared by Ganddini Group on September 19, 2023, thus maintaining unimpeded drive aisles, and allowing vehicle to circulate efficiently throughout the site as well as public roadways. To further ensure the proposed drive-through will not be detrimental or injurious to property in the vicinity nor the public health and safety and general welfare, staff has added conditions of approval requiring Quick Quack staff to temporarily restrict access to the drive-through in the event the drive-through queue exceeds its queuing capacity as well as submit a Traffic Management Plan for review and approval by staff. Based off the Addendum to the 2021 MND, limited addition of project vehicle trips to existing traffic already generated by patrons traveling to and from the existing on-site retail use would not substantially increase area traffic or adversely affect local circulation patterns.

Additionally, the project operational noise as analyzed in the Noise Impact Analysis, prepared by the Ganddini Group on December 16, 2022 would not result in significant impacts, similar to that identified in the 2021 IS/MND. Therefore, no mitigation is required and the project as conditioned, would not be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or working the neighborhood or such use or the general welfare of the city.

Finding 3: If the project is located within the Chino Airport Influence Area, the proposed project is consistent with the most recently adopted version of the Airport Land Use Compatibility Plan.

Evidence: The project site is located within the Chino Airport influence area and is subject to consistency with the Airport Land Use Compatibility Plan (ALUCP). The Riverside County Airport Land Use Commission (ALUC) acts in an advisory capacity when reviewing development projects for compatibility with the ALUCP. The project has been reviewed with consideration of the intensity requirements pursuant to ALUCP Policy CH 2.6.1, the site would be able to sufficiently accommodate the intensity requirements. Conditions have also been included as part of the project requirements for the applicant to submit an application to ALUC and obtain an official consistency determination on the project prior to building permit issuance.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN

Finding: The project is found to be consistent with the Multiple Species Habitat Conservation Plan (MSHCP).

Evidence: The project is located outside of any MSHCP criteria area with no evidence of sensitive biological resources.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the environmental documents, staff reports, as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 to 3 above, the Planning Commission of the City of Eastvale hereby approves Conditional Use Permit PLN23-20020 for the establishment and operation of a triple-lane drive-through carwash (dba Quick Quack) on a vacant lot within a newly proposed retail center, subject to conditions of approval.

PASSED, APPROVED AND ADOPTED this 18th day of October 2023.

STATE OF CALIFORNIA)
COUNTY OF RIVERSIDE) §
CITY OF EASTVALE)

I, Whitney Mayo, Deputy City Clerk of the City of Eastvale, California, do hereby certify that the foregoing Planning Commission Resolution No. 23-XX, was duly adopted by the Planning Commission of the City of Eastvale, California, at a meeting held on the 18th day of October 2023, by the following vote:

AYES:

NOES:

ABSENT:

ABSTAIN:

_____
Whitney Mayo
Deputy City Clerk

RESOLUTION NO. 23-XX

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING MAJOR DEVELOPMENT REVIEW PLN23-20021 TO CONSTRUCT A NEW 3,450 SQUARE-FOOT SIT-DOWN RESTAURANT (DBA ZENDEJAS), ASSOCIATED OUTDOOR SEATING AREA, AND SITE IMPROVEMENTS ON A 0.74-ACRE VACANT LOT LOCATED AT THE NORTHWEST CORNER OF CHANDLER AVENUE AND ARCHIBALD AVENUE

WHEREAS, Major Development Review PLN23-20021 is requested by the applicant, Schneider REA, to construct a new 3,450 square-foot sit-down restaurant (dba Zendejas), associated outdoor seating area, and site improvements on a 0.74-acre vacant lot of a proposed retail center; and

WHEREAS, Major Development Review PLN23-20021 is considered a "Project" as defined by the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq.; and

WHEREAS, a Mitigated Negative Declaration was adopted on August 25, 2021, that addressed physical development of the subject site; and

WHEREAS, pursuant to Section 15162 of the California Environmental Quality Act (CEQA) Guidelines, the city conducted an analysis of the proposed project that concluded there were no new significant environmental effects, or a substantial increase in the severity of identified significant effects previously identified in the Mitigated Negative Declaration; and

WHEREAS, the City determined that none of the findings of Section 15162 of the State CEQA Guidelines required preparation of a Subsequent Environmental Impact Report (EIR) or Negative Declaration and prepared an Addendum to the Mitigated Negative Declaration consistent with State CEQA Guidelines Section 15162; and

WHEREAS, on October 8, 2023, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning Major Development Review PLN23-20021 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on October 18, 2023. In addition, on October 6, 2023, a public hearing notice was mailed to each property owner and commercial tenant within a 600-foot radius of the project site, indicating time, date, and place of the public hearing for Major Development Review PLN23-20021.

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on October 18, 2023 at which public testimony was received concerning Major Development Review PLN23-20021, and at which time the Planning Commission considered proposed Project No. PLN23-20021.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY RESOLVE, DECLARE, DETERMINE, AND ORDER AS FOLLOWS:

SECTION 1. FINDINGS FOR CEQA:

The California Environmental Quality Act (Section 2100, et. Seq. of the California Public Resources Code, hereafter CEQA) requires analysis of agency approvals of discretionary projects. A "project", under CEQA is defined as "the whole of an action which has a potential for resulting in either a direct physical change in environment." The proposed project is a project under CEQA.

The city evaluated the potential environmental impacts of the proposed revised project against the criteria set forth in CEQA Guidelines Section 15162, 15163, 15164, and 15168(c). The city acting as the Lead Agency, has determined that substantial evidence throughout the Addendum supports the determination that the project would not have any reasonable foreseeable environmental consequences beyond that analyzed in the Mitigated Negative Declaration and its associated administrative record. There are no substantial changes to the project, no substantial changes in the circumstances under which the project is being undertaken, and no new information of substantial importance that was not known to the Lead Agency at the time the Mitigated Negative Declaration was adopted that trigger any of the conditions identified in Public Resources Code Section 21166 or State CEQA Guidelines Section 15162, which would require subsequent or supplemental CEQA documentation. The proposed changes do not involve new significant environmental effects or a substantial increase in the severity of previously identified significant effects discussed in the previous Initial Study/Mitigated Negative Declaration. The previous identified mitigation measures remain valid and adequate to reduce potential impacts to less than significant levels. Therefore, an Addendum to the previously adopted Mitigated Negative Declaration is appropriate, and no further environmental review is required.

SECTION 2. MAJOR DEVELOPMENT REVIEW FINDINGS

The criteria and required findings for a Major Development Review are outlined in Section 120.02.010 "Development Review." The Planning Commission may approve a Major Development Review, with or without conditions, only after first making specific findings. The required findings and an analysis of the merits of the Major Development Review application are listed below:

Finding 1: The proposed project is consistent with the objectives of the general plan, and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Commercial Retail (CR). The Commercial Retail land use designation allows for the development of commercial retail uses at a neighborhood, community, and regional level, as well as for professional office and visitor-oriented commercial uses. The proposed restaurant would be consistent with the surrounding area and is

consistent with the General Plan designation and Zoning.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and the site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to conform to the logical pattern of development as envisioned by the Eastvale General Plan and has been designed to satisfy the General Plan design policies. The project has been designed to meet the requirements and development standards of the Eastvale Zoning Code.

Finding 3: The architecture, including the character, scale and quality of the design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architectural theme of the proposed restaurant is compatible with the current design of the proposed retail center. These standards focus on high quality design and articulation to provide visual interest and variety (both vertically and horizontally). The building includes stone veneer, decorative panels, colored and scored stucco, and metal awnings as examples of the variation of materials designed to complement the exterior plaster and building finishes. Thus, the proposed design is consistent with the Eastvale Zoning Code and the General Plan.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have also been designed to handle the type and quantity of vehicular traffic associated with the project proposal. As conditioned, the project will include sidewalks and pedestrian and bicycle connections that will not create conflicts with motorized vehicles.

Finding 5: If the project is located within the Chino Airport influence area, the proposed project is consistent with the most recently adopted version of the airport land use compatibility plan.

Evidence: The project site is located within the Chino Airport influence area and is subject to consistency with the Airport Land Use Compatibility Plan (ALUCP). The Riverside County Airport Land Use Commission (ALUC) acts in an advisory capacity when reviewing development projects for compatibility with the ALUCP. The project has been reviewed with consideration of the intensity requirements pursuant to ALUCP Policy CH 2.6.1, the site would be able to

sufficiently accommodate the intensity requirements. Conditions have also been included as part of the project requirements for the applicant to submit an application to ALUC and obtain an official consistency determination on the project prior to building permit issuance.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN

Finding: The project is found to be consistent with the Multiple Species Habitat Conservation Plan (MSHCP).

Evidence: The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of MSHCP Mitigation Fees.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the environmental documents, staff reports, as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 4. DETERMINATION

Based upon the findings outlined in Sections 1 to 3 above, the Planning Commission of the City of Eastvale hereby approves Major Development Review PLN23-20021 to construct a new 3,450 square-foot, with sit-down restaurant (dba Zendejas), associated outdoor seating area, and site improvements, subject to conditions of approval.

PASSED, APPROVED AND ADOPTED this 18th day of October 2023.

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN23-20018– Tentative Parcel Map (TPM) No. 37653 to subdivide approximately a 2.70-acre site into three (3) parcels located at the retail development on the northwest corner of Archibald Ave. and Chandler Ave.
Assessor's Parcel Number: 144-130-004, -011, -012, and -013
Planning Commission Review Date: October 18, 2023

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. Project approval is not final until a signed copy of these conditions is filed with the City. Applicant Signature Date	Must be completed to finalize approval	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, from any and all claims, demands, law suits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative, or adjudicatory in nature), and alternative dispute resolutions procedures (including but not limited to arbitrations, mediations, and other such procedures) (collectively "Actions"), brought against the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul any action of, or any permit or approval issued by, the City and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the City), for or concerning the project, whether such Actions are brought under the California Environmental Quality Act, the Planning and Zoning Law, the Subdivisions Map Act, Code of Civil Procedure Section 1085 or 1094.5, or any other state, federal, or local statute, law, ordinance, rule, regulation, or any decision of a court of competent jurisdiction. It is expressly agreed that the City shall have the right to approve,	On-Going	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	which approval will not be unreasonably withheld, the legal counsel providing the City's defense, and that applicant shall reimburse City for any costs and expenses directly and necessarily incurred by the City in the course of the defense. City shall promptly notify the applicant of any Action brought and City shall cooperate with applicant in the defense of the Action.			
3.	Any approval shall not be final until and unless the applicant's deposit account with the Planning Division has a balance of at least **$2,000** at the time that the applicant signs these conditions of approval (per **Condition No. 1**) to cover staff time for follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to halt work if the deposit account is exhausted. Make check payable to the **City of Eastvale** and include **Project No. PLN23-20018** on the check.	On-Going	Planning Division	
4.	Any approval shall not be final until and unless the applicant's deposit account with the Public Works Division has a balance of at least $10,000 to cover staff time to follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to half work if the deposit account is exhausted.	On-Going	Public Works Division	
5.	Applicant understands and agrees that failure to comply with all conditions of approval may result in the City Council/Planning Commission taking action resulting in modification of conditions of approval and/or suspension or revocation of the **Tentative Parcel Map.**	On-Going	Planning Divisions	
Mitigation Measures				
6.	**BIO-1:** Prior to the issuance of a grading permit, a preconstruction burrowing owl clearance survey shall be completed by a qualified biologist within 30 days prior to ground disturbance to avoid direct take of burrowing owls. Once complete, a written report summarizing the results of the clearance survey shall be prepared and submitted to the City of Eastvale for review and concurrence. · If no burrowing owls are detected, construction may proceed. If construction is delayed or suspended for more than 30 days during the	Prior to Issuance of Grading Permit/ Within 30 days prior to ground disturbance	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	breeding season (March 1 to August 31), the project site or work area shall be resurveyed. · If burrowing owls are detected on the project site during the breeding season (March 1 to August 31), a 300-foot "no work" buffer shall be established around the active burrow and all work within the buffer shall be halted until the qualified biologist has determined through non-intrusive methods that the nesting effort is complete (i.e., all young have fledged). Once the nesting effort is complete or if a burrowing owl burrow is detected on-site during the non- breeding season (September 1 to February 28), passive and/or active relocation of burrowing owls may be implemented by a qualified biologist following consultation and approval from the City of Eastvale, the Western Riverside County Regional Conservation Authority, and the California Department of Fish and Wildlife.			
7.	**BIO-2:** Pursuant to the Migratory Bird Treaty Act and the California Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat shall be conducted outside the avian nesting season. The nesting season generally **extends from February 1 through August 31**, but can vary slightly from year to year based on seasonal weather conditions. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a preconstruction clearance survey for nesting birds shall be conducted within 30 days of the start of any ground-disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the preconstruction clearance survey, construction activities shall stay outside of a 300-foot buffer around the active nest. For raptors and special- status species, this buffer will be expanded to 500 feet. A biological monitor shall be present to delineate the boundaries of the buffer area and to monitor the active nest to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur.	Prior to Issuance of Grading Permit/ Within 30 days of the start of any ground-disturbing activities	Planning Division	
8.	**CUL-1**: If cultural resources are encountered during ground-disturbing activities, work in the immediate area shall cease and an archaeologist meeting	Prior to Issuance of Grading Permit/	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find(s). If the discovery proves to be significant under the California Environment Quality Act, additional work such as data recovery excavation may be warranted and shall be reported to the City.	During ground-disturbing activities		
9.	**TCR-1:** Tribal Monitoring. Prior to the issuance of a grading permit, **the project applicant** shall contact the consulting tribe(s) with notification of the proposed grading and shall make a good-faith effort, as determined by the City's Development Director, to enter into a Tribal Cultural Resources Monitoring Agreement with each tribe that determines its tribal cultural resources may be present on the site. The agreements shall include, but not be limited to, outlining provisions and requirements for addressing the handling of tribal cultural resources; Project grading and development scheduling; terms of compensation for the tribal monitors; and establishing on-site monitoring provisions and/or requirements for professional tribal monitors during all ground-disturbing activities. The terms of the agreements shall not conflict with any of these mitigation measures. A copy/copies of the agreement(s) shall be provided to the City of Eastvale Planning Department prior to the issuance of a grading permit.	Prior to Issuance of Grading Permit	Planning Division	
10.	**TCR-2:** Archaeological Monitoring. At least 30 days prior to application for a grading permit and before any grading, excavation and/or ground disturbing activities on the site take place, the project applicant shall retain a Secretary of Interior Standards-qualified, Registered Professional Archaeologist (RPA), as an archaeological monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Ground-disturbing activities may include, but are not limited to, pavement removal, potholing or auguring, grubbing, weed abatement, boring, grading, excavation, drilling, and trenching. The on-site archaeological monitoring would end when the project site grading and excavation activities are completed, or when the monitor has indicated that the site has a low potential for archeological resources. The Project Registered Professional archaeologist, in consultation with consulting	At least 30 days prior to application for a grading permit and before any grading, excavation, and/or ground-disturbing activities.	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Tribe(s) identified above, and the developer, shall develop an Archaeological Monitoring Plan to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site and provide the plan to the City for approval. Details in the plan shall include: A. Project grading and development scheduling. B. The development of a rotating or simultaneous schedule in coordination with the project applicant and the project archeologist for designated Native American tribal monitors from the consulting tribes during grading, excavation and ground-disturbing activities on the site. C. The safety requirements, duties, scope of work, and Native American tribal monitors' authority to stop and redirect grading activities in coordination with all Project archaeologists. D. The protocols and stipulations that the developer, tribes and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.			
11.	**TCR-3:** Treatment and Disposition of Cultural Resources. If tribal cultural resources are inadvertently discovered during ground disturbing activities for this project. The following procedures will be carried out for treatment and disposition of the discoveries: A. Temporary Curation and Storage. During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process. B. Treatment and Final Disposition. The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the	Prior to Issuance of Grading Permit / During Ground Disturbing Activities	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City Planning Department with documentation of same: i. Reburial on-site. Accommodate the process for on-site reburial of the discovered items with the consulting tribes. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed. ii. Curation. A curation agreement with an appropriate qualified repository within Riverside County that meets Federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists or researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation. iii. Disposition Dispute. If more than one tribe is involved with the project and cannot come to a consensus as to the disposition of cultural materials, they shall be curated at the Western Science Center. iv. Final Report. At the completion of grading, excavation and ground disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and tribal monitors within 60 days of completion of grading. This report shall: o Document the impacts to the known resources on the property; o Describe how each mitigation measure was fulfilled; o Document the type of cultural resources recovered and the disposition of such resources;			

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	o Provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting; o In a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. o All reports produced will be submitted to the City, Eastern Information Center and consulting tribes.			
12.	**TCR-4:** Discovery of Human Remains. If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains. The following procedures as set forth in the California Environmental Quality Act (CEQA), Section 15064.5(e), the California Public Resources Code (PRC) (Section 5097.98), and the State Health and Safety Code (Section 7050.5) shall then be undertaken: If human remains or funerary/sacred items are encountered, the archaeological monitor or tribal monitor will halt work within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, establish an Environmentally Sensitive Area (ESA) boundary to protect the find from impact, and immediately notify the City Archaeologist. Project work outside the established ESA may continue. In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the Riverside County Coroner shall be notified within 24 hours of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within two working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, s/he shall notify the NAHC in Sacramento within 48 hours. In accordance with California Public Resources Code, Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendant from the deceased Native American. The most likely descendant shall complete their inspection within 48 hours of being granted access to the	Prior to Issuance of Grading Permit / During Ground-Disturbing Activities	Planning Division / Archeological Monitor	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.			
13.	**GHG-1:** The project shall incorporate the following California Air Pollution Control Officers Association-based reduction measures and regulatory compliance: · Utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen Standards. · Implement recycling programs that reduce waste to landfills by a minimum of 75 percent (per AB 341). · Incorporate the following land use and site enhancement reduction measures: LUT-1 Increase Density, LUT-4 Improve Destination Accessibility, LUT-5 Increase Transit Accessibility, and SDT-1 Improve Pedestrian Network.	Prior to Issuance of Building Permit/ Construction	Planning Division	
14.	**GHG-2:** The project shall incorporate the following design features: · The project applicant shall require that all faucets, toilets, and showers installed in the proposed structures utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen standards. · The project applicant shall require recycling programs that reduce waste to landfills by a minimum 75 percent per AB 341. · The project applicant shall provide sidewalks on-site and connecting off-site.	Prior to Issuance of Building Permit/ Construction	Planning Division	
15.	**NOI-1:** The construction contractor(s) shall place all stationary construction equipment so that emitted noise is directed away from the noise-sensitive receptors nearest the project site.	Prior to Issuance of Building Permit/ Construction	Building Division	
16.	**NOI-2:** The construction contractor(s) shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May).	Prior to Issuance of Building Permit/ Construction	Building Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
17.	**NOI-3:** The contractor shall install temporary construction noise barriers/blankets along the western boundary. The barrier/blankets shall be solid with no cracks or holes and shall also reach to the ground.	Prior to Issuance of Building Permit/ Construction	Building Division	
18.	**NOI-4:** During all project construction phases on-site, construction contractors shall equip all construction equipment, fixed or mobile, with either properly operating and maintained mufflers or enclosures/acoustical tents (as appropriate) that achieve at least 12 dB reduction from applicable noise level specifications.	Prior to Issuance of Building Permit/ Construction	Building Division	
19.	**NOI-5:** The contractor shall restrict the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary.	Prior to Issuance of Building Permit/ Construction	Building Division	
Tentative Parcel Map (TPM)				
20.	TPM No. 37653 is approved to subdivide a 2.70 acre parcel into three (3) parcels of land located at the northwest corner of Archibald Ave. and Chandler Ave. in the C-1/C-P (General Commercial) Zone to facilitate the development of a 950 sf drive-through coffee shop, a 3,598 sf drive-through carwash, and a 3,450 sf sit-down restaurant, as shown on the tentative parcel map submitted to the Planning Division, and as approved by the **APPROVING AUTHORITY,** subject to all requirements of the City of Eastvale Municipal Code. If the Conditions of Approval specified herein are not satisfied or otherwise completed, the Project shall be subject to revocation.	On-Going	Planning Divisions	
21.	The Developer shall enter into a Subdivision Improvement Agreement with the City, and shall guarantee by posting security(ies) to include all public improvements that the developer is conditioned to construct as part of this approval.	Prior to Map Recordation	Public Works Division	
22.	Dedicate City Engineer approved additional right-of-way along the entire frontage as may be required to provide a property line at ultimate right-of-way in accordance with the City General Plan, any applicable Specific Plan and/or as requested by the City Engineer. Dedicate 25 feet of right-of-way along	Prior to Map Recordation	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Archibald Avenue and 14 feet of right-of-way along Chandler Street to the City for public right-of-way purposes.			
23.	A Final Map prepared by a California licensed Land Surveyor or registered Civil Engineer authorized to practice land surveying (pre-1982, RCE #33965 and lower) and all supporting documents to the Public Works Division for review and approval. A Title Report prepared for subdivision guarantee for the subject property, the traverse closures for the existing parcel and all lots created therefrom, and copies of record documents shall be submitted with the Final Map to the Engineering Division as part of the review of the Final Map. The Final Map shall be approved by the City Council prior to recordation of the Final Map.	Prior to Map Recordation	Public Works Division	
24.	Provide a reciprocal access easement between Parcel 1 & Parcel 2 and Parcel 2 & Parcel 3. The applicant shall provide a copy of a reciprocal access agreement, shared parking agreement, and documentation showing the responsible entity for maintaining the parking areas (including landscaping) for the entire site including the landscaped areas along the Chandler Avenue and Archibald frontages to the City Engineer for review and approval.	Prior to Map Recordation	Planning and Public Works Divisions	
25.	Monument bond shall be posted with the City. The Developer shall provide a cost estimate to set monuments prepared by a California licensed Land Surveyor or registered Civil Engineer to the Public Works Division for review and approval by the City Engineer.	Prior to Map Recordation	Public Works Division	
26.	The Developer shall enter into an agreement with the City for bonding and improvements of all public streets, public infrastructure, private streets, and private infrastructure.	Prior to Map Recordation	Public Works Division	
27.	Various blanket and specific transportation and/or utility easements that are no longer in use are to be quitclaimed/abandoned on the Final Map.	Prior to Map Recordation	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
28.	Show on the Final Map dedication of the public right-of-way for, Archibald Avenue and Chandler Avenue, in accordance with the City of Eastvale Road Improvement Standards & Specification, Improvement Plan Check Policies and Guidelines, to the satisfaction of the City Engineer, and in coordination with the adjacent agencies as applicable.	Prior to map recordation	Public Works Division	
29.	The applicant shall provide will-serve letters from all utility agencies.	Prior to map recordation	Public Works Division	
30.	The applicant shall record appropriate easement(s) and agreement(s) for the construction and maintenance of water quality to meet the Storm Water Permit/Water Quality Management Plan Requirements.	Prior to map recordation	Public Works Division	
31.	Provide on project plans (grading, site plan, etc.) design for the roundabout to be constructed east of Cucamonga creek.	Prior to map recordation	Public Works Division	
32.	Provide safe, functional pedestrian pathways throughout the site.	Prior to map recordation	Public Works Division	
33.	The project site shall include two cross access easements to allow internal circulation with the future development of the properties located to the west.	Prior to map recordation	Planning Division	
34.	All existing overhead utility lines shall be undergrounded within the project frontage(s). Utility undergrounding shall extend to the nearest off-site power pole. Unless City Engineer approved, no new power poles shall be installed. A letter from the owners of the affected utilities shall be submitted to the City Engineer prior to approval of the Precise Grading/Paving Plan, informing the City that they have been notified of the City's utility undergrounding requirement and their intent to commence design of utility undergrounding plans. When available, the utility undergrounding plan shall be submitted to the City Engineer identifying all above ground facilities in the area of the project to be undergrounded.	Prior to Issuance of Grading Permit	Public Works Division	
35.	All transmission line poles on Archibald Avenue shall be relocated unless it is demonstrated to the satisfaction of the City Engineer that such poles can	Prior to Issuance of Grading Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	remain without impacting street improvements, vehicular circulation, and public safety. Distribution lines along Archibald which are attached to transmission line poles are allowed to remain. Distribution lines and communication lines along Chandler Street shall be undergrounded and all non-transmission poles along the property frontage shall be removed. However, any overhead distribution and communication lines shall be undergrounded across the intersection of Archibald Avenue and Chandler Street.			
36.	Prior to the issuance of a Grading Permit, the Developer shall pay all necessary fees as determined by the City Engineer including, but not limited to Multiple Species Habitat Conservation Plan ("MSHCP") fees and grading permit fees.	Prior to Issuance of Grading Permit	Public Works Division	
37.	Grading in excess of 199 cubic yards will require performance security to be posted with the City	Prior to Issuance of Grading Permit	Public Works Division	
38.	A permit for the hauling of material to and from the project site shall be submitted to the City for approval.	Prior to Issuance of Grading Permit	Public Works Division	
39.	Submit a California registered Civil Engineer prepared earthwork cut and fill certification letter to the Engineering Division for review. If the required earthwork in cubic yards is 50 CY or less, a Precise Grading/Paving Plan will not be required; however, the applicant is required to pull an NPDES/Public Works permit prior to issuance of a Building Permit for record purposes.	Prior to Issuance of Grading Permit	Public Works Division	
40.	Development of the site is subject to the requirements of the National Pollution Discharge Elimination System ("NPDES") Permit for the City of Eastvale, under the Santa Ana Regional Water Quality Control Board, Board Order No. R8-2010-0036. Pursuant to the NPDES Permit, the developer shall ensure development of the site incorporates post-construction Best Management Practices ("BMPs") in accordance with the Model Water Quality Management Plan ("WQMP") approved for use for the Santa Ana River Watershed. The developer is advised that applicable Site Design BMPs will be required to be incorporated into the final site design, pursuant to a site specific WQMP submitted to the City Engineer for review and approval. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading/Paving Plan.	Prior to Issuance of Grading Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
41.	Prior to commencing with any grading, the required erosion and dust control measures shall be in place. In addition, the following shall be included if not already identified: a. 6 foot high tan colored perimeter screened fencing b. Contractor information signage including contact information along the street frontage. c. Post dust control signage with the following verbiage: "Project Name, WDID No., IF YOU SEE DUST COMING FROM THIS PROJECT CALL: NAME (XXX) XXX-XXX, If you do not receive a response, please call the AQMD at 1-800-CUT-SMOG/1-800-228-7664"	Prior to Issuance of Grading Permit	Public Works Division	
42.	A Notice of Intent ("NOI") to comply with the California General Construction Stormwater Permit is required via the California Regional Water Quality Control Board online Stormwater Multiple Application and Report Tracking System ("SMARTS"). A copy of the executed letter issuing a Waste Discharge Identification ("WDID") number shall be provided to the City Engineer. The Construction General Permit requires the Developer's contractor to prepare and maintain a Storm Water Pollution Prevention Plan ("SWPPP"). The SWPPP requires all appropriate measures be implemented to prevent erosion and water pollution during construction.	Prior to Issuance of Grading Permit	Public Works Division	
43.	A California registered Geotechnical Engineer prepared Geotechnical/Soils Report shall be required for and incorporated as an integral part of the grading/paving plan for the proposed development. A copy of the Geotechnical/Soils Report shall be submitted to the Engineering Division with the first submittal of the Precise Grading/Paving Plan.	Prior to Issuance of Grading Permit	Public Works Division	
44.	All stormwater runoff passing through the site shall be accepted and conveyed across the property in a manner acceptable to the City Engineer. All on-site City Engineer approved retention or other facilities are required to contain the increase stormwater runoff generated from the proposed development. Provide a hydrology study to determine the volume of increased stormwater runoff due to development of the site, and to determine required stormwater runoff mitigation measures for the proposed development. The City Engineer must approve the final retention basin sizing and other stormwater runoff	Prior to Issuance of Grading Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	mitigation measures determined upon review and approval of the hydrology and may require redesign or changes to site configuration or layout consistent with the findings of the final hydrology study. The existing "pre-developed" condition compared to the proposed "developed" condition shall be used to calculate the volume of increased stormwater runoff to retain on-site under the 100-year frequency storm.			
45.	Direct release of on-site nuisance water or stormwater runoff shall not be permitted to the adjacent public streets. Provisions for the interception of nuisance water from entering adjacent public streets from the project site shall be provided through the use of a minor storm drain system that collects and conveys nuisance water to landscape or parkway areas, and in only a stormwater runoff condition, pass runoff directly to the streets through parkway or under sidewalk drains.	Prior to Issuance of Grading Permit	Public Works Division	
46.	The Developer shall connect to the JCSD sewer system and apply for a sewer connection account with JCSD. The project applicant, developer, or successor in interest shall provide written verification that the JCSD can and will provide sanitary sewer service to the project.	Prior to Issuance of Grading Permit	Public Works Division	
47.	The Developer shall submit sewer improvement plans prepared by a California registered Civil Engineer to the JCSD/Public Works Division. The plans shall be approved by the JCSD/City Engineer prior to issuance of any building permits.	Prior to Issuance of Grading Permit	Public Works Division	
48.	The Developer shall submit street improvement plans prepared by a California registered Civil Engineer to the Public Works Division for review and approval. Unless otherwise approved, the street improvement plans shall be approved concurrently with any street light, landscape and irrigation, and traffic signal plans.	Prior to Issuance of Grading Permit	Public Works Division	
49.	The Developer shall submit traffic striping and signage plans prepared by a California registered Civil Engineer, for review and approval by the City Engineer. All required traffic striping and signage improvements shall be completed concurrently with required street improvements, to the satisfaction of the City Engineer, and prior to issuance of a Building Permit.	Prior to Issuance of Grading Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
50.	An accessible pedestrian path of travel shall be provided throughout the site, as required by applicable state and federal laws.	Prior to Issuance of Grading Permit	Planning and Public Works Division	
51.	The minimum pavement section for all on-site pavements shall be 3 inches asphalt concrete pavement over 6 inches crushed aggregate base with a minimum subgrade of 24 inches at 95% relative compaction, or equal. The pavement section shall be determined using appropriate Traffic Index ("TI") accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
52.	Traffic Control Plan prepared by a California registered Civil Engineer or Traffic Engineer shall be submitted to the City Engineer for review and approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
53.	Transportation Mitigation Measure 1 (TRA-1) - Traffic Management Plan. Prior to the initiation of construction, the project applicant shall prepare a Traffic Management Plan (TMP) for approval by the City of Eastvale Traffic Engineer. The TMP shall comply with state standards set forth in the California Manual of Uniform Traffic Control Devices and include measures such as construction signage, limitations on timing for lane closures to avoid peak hours, temporary striping plans, and the need for a construction flag-person to direct traffic during heavy equipment use. The TMP shall specify that one direction of travel in each direction must always be maintained for Chandler Street throughout project construction. The TMP shall be incorporated into project specifications for verification prior to final plan approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
54.	Submit photometric plan of street lighting. All lights shall be Edison LS-3 tariff and utilize General Electric Evolve LED luminaires per City Specifications. The Developer shall be responsible for applying with Southern California Edison ("SCE") for all appropriate service points and electrical meters early in the process to avoid delays. The Developer must pay for the electrical service of new meter pedestals installed until such time the improvements have been accepted and the underlying property is annexed into	Prior to Issuance of Building Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Community Facilities District ("CFD") or Landscaping Maintenance District ("LMD").			
55.	The public street improvements outlined in these Conditions of Approval are intended to convey to the developer an accurate scope of required improvements; however, the City Engineer reserves the right to require reasonable additional improvements as may be determined in the course of the review and approval of street improvement plans required herein.	Prior to Issuance of Building Permit	Public Works Division	
56.	The Precise Grading/Paving Plan shall be City Engineer approved prior to issuance of a building permit.	Prior to Issuance of Building Permit	Public Works Division	
57.	A WQMP and Stormwater BMP Transfer, Access and Maintenance Agreement shall be required, obligating the property owner(s) to appropriate operation and maintenance obligations of on-site BMPs constructed pursuant to the approved WQMP. The WQMP and Stormwater BMP Transfer, Access and Maintenance Agreement shall be approved prior to issuance of a Building Permit and shall be recorded by the Developer at the Riverside County Recorder's Office with a recorded copy provided to the Public Works Division prior to issuance of a Certificate of Occupancy.	Prior to Issuance of Building Permit	Public Works Division	
58.	Provide pad elevation certifications for all building pads in conformance with the approved Precise Grading Plan to the Public Works Division prior to construction of any building foundation.	Prior to Issuance of Building Permit	Public Works Division	
59.	The Developer is advised that domestic water service is provided by JCSD. The developer shall be responsible for coordinating with JCSD and complying with all requirements for establishing domestic water service to the property.	Prior to Issuance of Building Permit	Public Works Division	
60.	Prior to issuance of a building permit, the developer is required to pay Traffic Impact Analysis Project Fair Share Contribution fees.	Prior to Issuance of Building Permit	Public Works Division	
61.	Prior to issuance of building permit, installation of conduit fiber optic along property frontages shall be required.	Prior to Issuance of Building Permit	Public Works Division	
62.	The Applicant shall pay all applicable development impact fees in accordance with the City of Eastvale fee ordinance in effect at the time the fees are due, prior to the issuance of any building permits related to the Project.	Prior to Issuance of Building Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
63.	Applicant shall add details of city entry gateway feature/monument including color architectural elevations and perspective views as seen coming from the corner of Chandler Avenue and Archibald Avenue to communicate scale, impact and finishes.	Prior to Issuance of Building Permit	Planning Division	
64.	The detention basin shall be hand-planted and landscaped to conform with the overall plant palette and for flexibility to seasonal water usage. Trees, shrubs, ground covers and ornamental grasses shall be included. The detention basin shall include a barrier to keep unauthorized personal from entering. Barrier shall be review and reviewed to the satisfaction of the Community Development Director and Planning Division.	Prior to Issuance of Building Permit	Planning Division	
65.	Applicant shall submit an application to ALUC and obtain an official consistency determination on the project.	Prior to Issuance of Building Permit	Planning Division	
66.	All parkway landscaping shall be guaranteed for a period of one (1) year from the date of the City Engineer acceptance. Any landscaping that fails during the one (1) year landscape maintenance period shall be replaced with similar plant material to the satisfaction of the City Engineer, and shall be subject to a subsequent one (1) year landscape maintenance period.	Prior to Issuance of Certificate of Occupancy	Planning and Public Works Division	
67.	The development shall be annexed into all applicable City of Eastvale owned and administered Community Facilities Districts (CFDs) and/or Landscaping Maintenance Districts (LMDs) for On-Going maintenance of traffic signals, traffic signal synchronization, street lights, full capture systems for all storm drains, and landscape maintenance of raised landscaped median and public parkways, to the satisfaction of the City Engineer or otherwise form a district where one is not currently in place.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
68.	Upon City Engineer approval of any improvement plan, the improvement plan shall be provided to the City in digital format, consisting of a DWG (AutoCAD drawing file), DXF (AutoCAD ASCII drawing exchange file), and PDF (Adobe Acrobat) formats. Variation of the type and format of the digital data to be submitted to the City may be authorized, upon prior City Engineer approval.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
69.	Mira Loma Road and Bridge Benefit Assessment District Fee ("MLRBA"), Transportation Uniform Mitigation Fee ("TUMF"), Area Drainage Plan ("ADP") fee, and any other regional pass-through fees in effect at that time shall be paid prior to issuance of Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
70.	The Developer shall submit to the City Engineer for review and approval the Covenants, Conditions, and Restrictions ("CC&Rs") and/or a Property Owners Association document to maintain and operate common areas and/or facilities including, but not limited to, parking areas, private utilities, and water quality basins.	Prior to Issuance of Certificate of Occupancy	Public Works and Planning Division	
71.	Prior to issuance of a Certificate of Occupancy or final City approvals, demonstrate that all structural BMP's have been constructed and installed in conformance with approved plans and specifications, and as identified in the approved WQMP.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
72.	The Developer shall provide certification from JCSD Water Services demonstrating that all water and/or wastewater service accounts have been documented, prior to the issuance of a Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
73.	All damaged, destroyed, or modified pavement legends, traffic control devices, signing, striping, and street lights, associated with the proposed development shall be replaced.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
74.	Remove existing, and construct new pavement with a minimum pavement section of 5 inches asphalt concrete pavement over 6 inches crushed aggregate base with a minimum subgrade of 24 inches at 95% relative compaction, or equal, to the existing right edge line along the entire street frontage in accordance with City of Eastvale Standard Drawings. The pavement section shall be determined using appropriate Traffic Index ("TI") accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval. Alternatively, depending on the existing street condition and as approved by the City Engineer, a street overlay, slurry seal, or other repair can be performed to preserve recent pavement improvements.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
75.	Construct an Americans with Disabilities Act ("ADA") compliant sidewalk behind curb along the entire frontage and interior streets in accordance with the General Plan, any Specific Plan, the City of Eastvale Standard Drawings, subject to the approval of the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
76.	Construct City Engineer approved commercial driveway approaches in accordance with City of Eastvale Standard Drawings. The driveway approach shall be constructed so the top of "X" is 5 feet from the property line. Nothing shall be constructed or planted in the corner cut-off area which does or will exceed 30 inches in height required to maintain an appropriate corner sight distance.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
77.	Construct a curb ramp meeting current California State Accessibility standard along both sides of the commercial driveway approaches. The developer shall ensure that an appropriate path of travel, meeting ADA guidelines, is provided across the driveway, and shall adjust the location of the access ramps, if necessary, to meet ADA guidelines, subject to the approval of the City Engineer. If necessary, additional pedestrian and sidewalk easements shall be provided on-site to construct a path of travel meeting ADA guidelines.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
78.	Grind and overlay half ROW width of Archibald Avenue and Chandler Street within the project frontages up to the existing median.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
79.	Install Class II bicycle lanes along Archibald Avenue to connect to the existing Class II bicycle lanes to the north.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
80.	Install Pan-Tilt-Zoom ("PTZ") cameras at each intersection to tie into the existing Citywide system to monitor traffic.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
81.	Install License Plate Reader ("LPR") cameras to tie into the existing Citywide system at each traffic signal servicing the property.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
82.	Upgrade traffic signals within 100 feet of the property to provide signal synchronization.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
83.	Applicant, at its sole option and cost, may install a traffic signal at the intersection of Archibald Avenue and Fairchild Drive, pending signal warrant analysis approved by the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
84.	The Developer shall be responsible for coordinating with Riverside Transit Authority ("RTA") regarding the location of existing, proposed, and future bus stops along the property frontage of all public streets. The Developer shall design street, bus pad, and sidewalk improvements in accordance with the latest RTA bus stop guidelines and in compliance with current accessibility standards pursuant to the Americans with Disabilities Act ("ADA") requirements. The Developer shall design all bus stops to accommodate the RTA Shelters. The Developer shall submit to Public Works verification from RTA acknowledging concurrence with the existing, proposed, and future bus stop improvements in conformance with the Premium Shelter design guidelines.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
85.	The Developer shall employ staff to assist with management of the drive through queue during peak periods. Specifically, staff should periodically walk along the drive through lanes encouraging vehicles to pull forward and maximize efficiently of the available storage. A Traffic Management Plan for operations and special events shall be submitted to the Public Works and Planning Divisions for review and approval and be made a part of each businesses' Standard Operating Procedures.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
86.	Grand openings for the Dutch Bros and Quick Quack Car Wash tenants shall be held a minimum of one week apart from each other.	Prior to Issuance of Certificate of Occupancy	Public Works and Planning Division	
87.	The original improvement plans prepared for the proposed development and approved by the City Engineer (if required) shall be documented with record drawing “as-built” information and returned to the Public Works Division prior to issuance of a final certificate of occupancy. Any modifications or	Prior to Certificate of Occupancy	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	changes to approved improvement plans shall be submitted to the City Engineer for approval prior to construction.			
88.	All conditions of approval for TPM No. 37653 shall be completed to the satisfaction of the City Engineer prior to the issuance of a Certificate of Occupancy.	Prior to Certificate of Occupancy	Public Works Division	
89.	All sewer mains constructed by the applicant and to become part of the public sewer system shall be pressure tested and digitally video recorded by the City's wastewater system operator JSCD prior to acceptance of the sewer system for maintenance by the City. The developer shall be responsible for all costs associated with testing and inspection services. Any defects of the sewer main shall be removed, replaced, or repaired to the satisfaction of the City Engineer prior to acceptance.	Prior to Certificate of Occupancy	Public Works Division	
90.	The Applicant shall provide certification from JCSD Water Services demonstrating that all water and/or wastewater service accounts have been documented, prior to the issuance of a Certificate of Occupancy.	Prior to Certificate of Occupancy	Public Works Division	
91.	The sewer lines shall require connections to occur at a manhole and no direct lateral connections to the mainlines are allowed.	Prior to Issuance of Grading Permit	Public Works Division	
92.	The applicant must provide the District with fire flow requirements from the Fire Department to determine the adequacy of the existing water system.	Prior to Issuance of Grading Permit	Public Works Division	
93.	The Applicant shall submit a Water Quality Management Plan identifying site specific Best Management Practices ("BMPs") in accordance with the Model Water Quality Management Plan ("WQMP") approved for use for the Santa Ana River Watershed. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading Plan. A WQMP Maintenance Agreement shall be required, obligating the property owner(s) to appropriate operation and maintenance obligations of on-site BMPs constructed pursuant to the approved WQMP. The WQMP and Maintenance Agreement shall be approved prior to issuance of a building permit, unless otherwise allowed by the City Engineer.	Prior to Issuance of Grading Permit	Public Works Division	
94.	Provide street sweeping services for onsite and offsite within project frontages weekly.	On-Going	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
95.	Remove all graffiti within 24 hours pre-construction, during construction, and after a Certificate of Occupancy is issued.	On-Going	Public Works Division	
96.	A City of Eastvale Encroachment Permit is required for any improvements within the public right-of-way.	On-going	Public Works Division	
97.	All street cuts for utilities shall be repaired in accordance with City Standard or as recommended; and any interim trench repairs shall consist of compacted backfill to the bottom of the pavement structural section followed by placement of standard base course material in accord by the City Engineer and with the Standard Specifications for Public Work Construction ("Greenbook"). The base course material shall be placed the full height of the structural section to be flush with the existing pavement surface and provide a smooth pavement surface until permanent cap paving occurs using an acceptable surface course material.	On-going	Public Works Division	
98.	In accordance with City's Moratorium policy to preserve newly paved streets, any and all street and/or trench cuts in newly paved streets will be prohibited or be subject to moratorium street repair standards as reference in Section 12.08.260 of the Eastvale Municipal Code.	On-going	Public Works Division	
99.	Any and all utility trenches or other excavations within existing asphalt concrete pavement of off-site streets resulting from the proposed development shall be backfilled and repaired in accordance with City of Eastvale Standard Drawings. The Developer shall be responsible for removing, grinding, paving and/or overlaying existing asphalt concrete pavement of off-site streets including pavement repairs in addition to pavement repairs made by utility companies for utilities installed for the benefit of the proposed development (i.e. Jurupa Community Services District, Southern California Edison, Southern California Gas Company, Time Warner, Verizon, etc.). Multiple excavations, trenches, and other street cuts within existing asphalt concrete pavement of off-site streets resulting from the proposed development may require complete grinding and asphalt concrete overlay of the affected off-site streets, at the discretion of the City Engineer. The pavement condition of the existing off-site streets shall be returned to a condition equal to or better than what existed prior to construction of the proposed development.	On-going	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
100.	Construction signing, lighting and barricading shall be provided during all phases of construction in accordance with City Standards and the direction of the City Engineer. As a minimum, all construction signing, lighting and barricading shall be in accordance with Part 6 "Temporary Traffic Control" of the latest California Manual on Uniform Traffic Control Devices, or subsequent editions in force at the time of construction.	On-Going	Public Works Division	
101.	The applicant shall record appropriate easement(s) and agreement(s) for the construction and maintenance of water quality to meet the Storm Water Permit/Water Quality Management Plan Requirements	On-Going	Planning and Public Works Division	
102.	A notice from Riverside County Airport Land Use Commission noting the site's location near the Chino Airport shall be recorded (ALUC condition).	On-Going	Planning and Public Works Division	
103.	The project shall be developed in accordance with the approved Tentative Parcel Map and Major Development Review, including the approved site plan, architectural elevations, conceptual landscape plan, and interim and ultimate improvements on Chandler Ave. and Archibald Avenue. The applicant may request modifications or revisions to the approved project as provided in the Eastvale Zoning Code.	On-Going	Planning and Public Works Division	
104.	Revisions to the Tentative Parcel Map required shall be prepared by a California registered Land Surveyor or qualified Civil Engineer and submitted to the Planning and Engineering Division for review and approval. A Title Report prepared for subdivision guarantee for the subject property, the traverse closures for the existing parcel and all lots created therefrom, and copies of record documents shall be submitted with the Parcel Map to the Engineering Division as part of the review of the Map. The Final Parcel Map shall be approved by the City Engineer and the City Council prior to issuance of any building permits.	On-Going	Public Works and Planning Division	
105.	**Expiration/Renewal of Approval:** **Tentative Parcel Map No. 37653** shall expire 36 months after such approval unless within that period of time a final map shall have been approved and	On-Going	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	filed with the county recorder. Prior to the expiration date, the land divider may apply in writing for an extension of time. Each application shall be made to the planning director **30 days prior** to expiration date of the tentative map and shall be accompanied by the fee.			

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are required by the City, other local agencies, or state and federal agencies, and are not conditions of approval of the project.

1. The applicant shall obtain City approval for any modifications or revisions to the approval of this project. Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.

2. Submit a final parcel map and all supporting documents for review and approval to the satisfaction of the City Engineer and Public Works Department.

3. Applicants are responsible for all costs associated with off-site right-of-way acquisition, including any costs associated with the eminent domain process, if necessary.

4. Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN23-20019– Major Development Review for the development of a 950 square-foot drive-through coffee shop (dba Dutch Bros) on the northwest corner of Archibald Ave. and Chandler Ave.
Assessor's Parcel Number: 144-130-004, -011, -012, and -013
Planning Commission Review Date: October 18, 2023

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. Project approval is not final until a signed copy of these conditions is filed with the City. Applicant Signature Date	Must be completed to finalize approval	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, from any and all claims, demands, law suits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative, or adjudicatory in nature), and alternative dispute resolutions procedures (including but not limited to arbitrations, mediations, and other such procedures) (collectively "Actions"), brought against the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul any action of, or any permit or approval issued by, the City and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the City), for or concerning the project, whether such Actions are brought under the California Environmental Quality Act, the Planning and Zoning Law, the Subdivisions Map Act, Code of Civil Procedure Section 1085 or 1094.5, or any other state, federal, or local statute, law, ordinance, rule, regulation, or any decision of a court of competent	On-Going	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	jurisdiction. It is expressly agreed that the City shall have the right to approve, which approval will not be unreasonably withheld, the legal counsel providing the City's defense, and that applicant shall reimburse City for any costs and expenses directly and necessarily incurred by the City in the course of the defense. City shall promptly notify the applicant of any Action brought and City shall cooperate with applicant in the defense of the Action.			
3.	Any approval shall not be final until and unless the applicant's deposit account with the Planning Division has a balance of at least **$2,000** at the time that the applicant signs these conditions of approval (per **Condition No. 1**) to cover staff time for follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to halt work if the deposit account is exhausted. Make check payable to the **City of Eastvale** and include **Project No. PLN23-20019** on the check.	On-Going	Planning Division	
4.	Any approval shall not be final until and unless the applicant's deposit account with the Public Works Division has a balance of at least $10,000 to cover staff time to follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to half work if the deposit account is exhausted.	On-Going	Public Works Division	
5.	Applicant understands and agrees that failure to comply with all conditions of approval may result in the City Council/Planning Commission taking action resulting in modification of conditions of approval and/or suspension or revocation of the Major Development Review.	On-Going	Planning Division	
6.	Major Development Review PLN23-20019 is granted contingent upon approval of PLN23-20018 (TTM 37653). Failure to approve PLN23-20018 (TTM37653) shall render any approval of Major Development Review PLN23-20019 null and void.	On-Going	Planning Division	
7.	PLN23-20019 is granted for a period of two years and shall become void as of October 18, 2025, unless building permits have been issued and construction is commenced and diligently pursued towards completion, or a time extension is requested in writing prior to that date.	On-Going	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
8.	The project shall be developed in accordance with the Major Development Review application approved by the Planning Commission on October 18, 2023,, including the approved site plan, architectural elevations, conceptual landscape plan, etc. The applicant may request modifications or revisions to the approved project as outlined in Section 120.01.050(c) the Eastvale Zoning Code. A change of tenancy of any portion of the approved project requires review and approval by the original approving authority.	On-Going	Planning Division	
9.	Applicable mitigation measures included in the Addendum to the IS/MND shall be required for development of the proposed project and shall be incorporated herein by reference.	On-Going	Planning Division	
10.	The cover sheet of the building construction drawings shall include a blue line print of the City's conditions of approval and shall be attached to each set of plans submitted for City approval.	On-Going	Planning Division	
11.	PAD 3 (Sit-Down Restaurant) shall receive Certificate of Occupancy prior to or concurrently with PAD 1 (Coffee Shop) and PAD 2 (Carwash).	On-Going	Planning Division	
Prior to Map Recordation				
12.	The Developer shall enter into a Subdivision Improvement Agreement with the City, and shall guarantee by posting security(ies) to include all public improvements that the developer is conditioned to construct as part of this approval.	Prior to Map Recordation	Public Works Division	
13.	Dedicate City Engineer approved additional right-of-way along the entire frontage as may be required to provide a property line at ultimate right-of-way in accordance with the City General Plan, any applicable Specific Plan and/or as requested by the City Engineer. Dedicate 25 feet of right-of-way along Archibald Avenue and 14 feet of right-of-way along Chandler Street to the City for public right-of-way purposes.	Prior to Map Recordation	Public Works Division	
14.	A Final Map prepared by a California licensed Land Surveyor or registered Civil Engineer authorized to practice land surveying (pre-1982, RCE #33965	Prior to Map Recordation	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	and lower) and all supporting documents to the Public Works Division for review and approval. A Title Report prepared for subdivision guarantee for the subject property, the traverse closures for the existing parcel and all lots created therefrom, and copies of record documents shall be submitted with the Final Map to the Engineering Division as part of the review of the Final Map. The Final Map shall be approved by the City Council prior to recordation of the Final Map.			
15.	Provide a reciprocal access easement between Parcel 1 & Parcel 2 and Parcel 2 & Parcel 3. The applicant shall provide a copy of a reciprocal access agreement, shared parking agreement, and documentation showing the responsible entity for maintaining the parking areas (including landscaping) for the entire site including the landscaped areas along the Chandler Avenue and Archibald frontages to the City Engineer for review and approval.	Prior to Map Recordation	Planning and Public Works Divisions	
16.	Monument bond shall be posted with the City. The Developer shall provide a cost estimate to set monuments prepared by a California licensed Land Surveyor or registered Civil Engineer to the Public Works Division for review and approval by the City Engineer.	Prior to Map Recordation	Public Works Division	
17.	The Developer shall enter into an agreement with the City for bonding and improvements of all public streets, public infrastructure, private streets, and private infrastructure.	Prior to Map Recordation	Public Works Division	
18.	Various blanket and specific transportation and/or utility easements that are no longer in use are to be quitclaimed/abandoned on the Final Map.	Prior to Map Recordation	Public Works Division	
19.	Show on the Final Map dedication of the public right-of-way for, Archibald Avenue and Chandler Avenue, in accordance with the City of Eastvale Road Improvement Standards & Specification, Improvement Plan Check Policies and Guidelines, to the satisfaction of the City Engineer, and in coordination with the adjacent agencies as	Prior to map recordation	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	applicable.			
20.	The applicant shall provide will-serve letters from all utility agencies.	Prior to map recordation	Public Works Division	
21.	The applicant shall record appropriate easement(s) and agreement(s) for the construction and maintenance of water quality to meet the Storm Water Permit/Water Quality Management Plan Requirements.	Prior to map recordation	Public Works Division	
22.	Provide on project plans (grading, site plan, etc.) design for the roundabout to be constructed east of Cucamonga creek.	Prior to map recordation	Public Works Division	
23.	Provide safe, functional pedestrian pathways throughout the site.	Prior to map recordation	Public Works Division	
24.	The project site shall include two cross access easements to allow internal circulation with the future development of the properties located to the west.	Prior to map recordation	Planning Division	
25.	A shared parking agreement and reciprocal access agreement for the entire site shall be submitted for Planning Division review. The shared parking agreement shall include all parcels included in the parcel map.	Prior to map recordation	Planning Division	
Prior to Issuance of Grading Permit				
26.	Prior to submittal for grading plan check, the site plan shall be revised to show a pathway that provides pedestrians with safe unobstructed access to the adjacent retail and restaurant pads. Pavement on all pathways and entryways shall be decorative in nature with texture, stamped concrete or pavers.	Prior to Issuance of Grading Permit	Planning Division	
27.	Prior to submittal for grading plan check, the site plan shall be revised to show one (1) loading space area for the coffee shop.	Prior to Issuance of Grading Permit	Planning Division	
28.	**BIO-1:** Prior to the issuance of a grading permit, a preconstruction burrowing owl clearance survey shall be completed by a qualified biologist within 30 days prior to ground disturbance to avoid direct take of burrowing owls. Once complete, a written report summarizing the results of the clearance survey shall be prepared and submitted to the City of Eastvale for review and concurrence.	Prior to Issuance of Grading Permit/ Within 30 days prior to ground disturbance	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	· If no burrowing owls are detected, construction may proceed. If construction is delayed or suspended for more than 30 days during the breeding season (March 1 to August 31), the project site or work area shall be resurveyed. · If burrowing owls are detected on the project site during the breeding season (March 1 to August 31), a 300-foot "no work" buffer shall be established around the active burrow and all work within the buffer shall be halted until the qualified biologist has determined through non-intrusive methods that the nesting effort is complete (i.e., all young have fledged). Once the nesting effort is complete or if a burrowing owl burrow is detected on-site during the non- breeding season (September 1 to February 28), passive and/or active relocation of burrowing owls may be implemented by a qualified biologist following consultation and approval from the City of Eastvale, the Western Riverside County Regional Conservation Authority, and the California Department of Fish and Wildlife.			
29.	**BIO-2:** Pursuant to the Migratory Bird Treaty Act and the California Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat shall be conducted outside the avian nesting season. The nesting season generally **extends from February 1 through August 31**, but can vary slightly from year to year based on seasonal weather conditions. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a preconstruction clearance survey for nesting birds shall be conducted within 30 days of the start of any ground-disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the preconstruction clearance survey, construction activities shall stay outside of a 300-foot buffer around the active nest. For raptors and special- status species, this buffer will be expanded to 500 feet. A biological monitor shall be present to delineate the boundaries of the buffer area and to monitor the active nest to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur.	Prior to Issuance of Grading Permit/ Within 30 days of the start of any ground-disturbing activities	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
30.	**CUL-1**: If cultural resources are encountered during ground-disturbing activities, work in the immediate area shall cease and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find(s). If the discovery proves to be significant under the California Environment Quality Act, additional work such as data recovery excavation may be warranted and shall be reported to the City.	Prior to Issuance of Grading Permit/ During ground-disturbing activities	Planning Division	
31.	**TCR-1:** Tribal Monitoring. Prior to the issuance of a grading permit, **the project applicant** shall contact the consulting tribe(s) with notification of the proposed grading and shall make a good-faith effort, as determined by the City's Development Director, to enter into a Tribal Cultural Resources Monitoring Agreement with each tribe that determines its tribal cultural resources may be present on the site. The agreements shall include, but not be limited to, outlining provisions and requirements for addressing the handling of tribal cultural resources; Project grading and development scheduling; terms of compensation for the tribal monitors; and establishing on-site monitoring provisions and/or requirements for professional tribal monitors during all ground-disturbing activities. The terms of the agreements shall not conflict with any of these mitigation measures. A copy/copies of the agreement(s) shall be provided to the City of Eastvale Planning Department prior to the issuance of a grading permit.	Prior to Issuance of Grading Permit	Planning Division	
32.	**TCR-2:** Archaeological Monitoring. At least 30 days prior to application for a grading permit and before any grading, excavation and/or ground disturbing activities on the site take place, the project applicant shall retain a Secretary of Interior Standards-qualified, Registered Professional Archaeologist (RPA), as an archaeological monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Ground-disturbing activities may include, but are not limited to, pavement removal, potholing or auguring, grubbing, weed abatement, boring, grading, excavation, drilling, and trenching. The on-site archaeological monitoring would end when the project site grading and excavation activities are completed, or when the monitor has indicated that	At least 30 days prior to application for a grading permit and before any grading, excavation, and/or ground-disturbing activities.	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	the site has a low potential for archeological resources. The Project Registered Professional archaeologist, in consultation with consulting Tribe(s) identified above, and the developer, shall develop an Archaeological Monitoring Plan to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site and provide the plan to the City for approval. Details in the plan shall include: A. Project grading and development scheduling. B. The development of a rotating or simultaneous schedule in coordination with the project applicant and the project archeologist for designated Native American tribal monitors from the consulting tribes during grading, excavation and ground-disturbing activities on the site. C. The safety requirements, duties, scope of work, and Native American tribal monitors' authority to stop and redirect grading activities in coordination with all Project archaeologists. D. The protocols and stipulations that the developer, tribes and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.			
33.	**TCR-3:** Treatment and Disposition of Cultural Resources. If tribal cultural resources are inadvertently discovered during ground disturbing activities for this project. The following procedures will be carried out for treatment and disposition of the discoveries: A. Temporary Curation and Storage. During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process.	Prior to Issuance of Grading Permit / During Ground Disturbing Activities	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	B. Treatment and Final Disposition. The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City Planning Department with documentation of same: i. Reburial on-site. Accommodate the process for on-site reburial of the discovered items with the consulting tribes. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed. ii. Curation. A curation agreement with an appropriate qualified repository within Riverside County that meets Federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists or researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation. iii. Disposition Dispute. If more than one tribe is involved with the project and cannot come to a consensus as to the disposition of cultural materials, they shall be curated at the Western Science Center. iv. Final Report. At the completion of grading, excavation and ground disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and tribal monitors within 60 days of completion of grading. This report shall: o Document the impacts to the known resources on the property;			

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	o Describe how each mitigation measure was fulfilled; o Document the type of cultural resources recovered and the disposition of such resources; o Provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting; o In a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. o All reports produced will be submitted to the City, Eastern Information Center and consulting tribes.			
34.	**TCR-4:** Discovery of Human Remains. If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains. The following procedures as set forth in the California Environmental Quality Act (CEQA), Section 15064.5(e), the California Public Resources Code (PRC) (Section 5097.98), and the State Health and Safety Code (Section 7050.5) shall then be undertaken: If human remains or funerary/sacred items are encountered, the archaeological monitor or tribal monitor will halt work within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, establish an Environmentally Sensitive Area (ESA) boundary to protect the find from impact, and immediately notify the City Archaeologist. Project work outside the established ESA may continue. In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the Riverside County Coroner shall be notified within 24 hours of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within two working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, s/he shall notify the NAHC in Sacramento within 48 hours. In	Prior to Issuance of Grading Permit / During Ground-Disturbing Activities	Planning Division / Archeological Monitor	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	accordance with California Public Resources Code, Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendant from the deceased Native American. The most likely descendant shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.			
35.	All existing overhead utility lines shall be undergrounded within the project frontage(s). Utility undergrounding shall extend to the nearest off-site power pole. Unless City Engineer approved, no new power poles shall be installed. A letter from the owners of the affected utilities shall be submitted to the City Engineer prior to approval of the Precise Grading/Paving Plan, informing the City that they have been notified of the City's utility undergrounding requirement and their intent to commence design of utility undergrounding plans. When available, the utility undergrounding plan shall be submitted to the City Engineer identifying all above ground facilities in the area of the project to be undergrounded.	Prior to Issuance of Grading Permit	Public Works Division	
36.	All transmission line poles on Archibald Avenue shall be relocated unless it is demonstrated to the satisfaction of the City Engineer that such poles can remain without impacting street improvements, vehicular circulation, and public safety. Distribution lines along Archibald which are attached to transmission line poles are allowed to remain. Distribution lines and communication lines along Chandler Street shall be undergrounded and all non-transmission poles along the property frontage shall be removed. However, any overhead distribution and communication lines shall be undergrounded across the intersection of Archibald Avenue and Chandler Street.	Prior to Issuance of Grading Permit	Public Works Division	
37.	Prior to the issuance of a Grading Permit, the Developer shall pay all necessary fees as determined by the City Engineer including, but not limited to Multiple Species Habitat Conservation Plan ("MSHCP") fees and grading permit fees.	Prior to Issuance of Grading Permit	Public Works Division	
38.	Grading in excess of 199 cubic yards will require performance security to be posted with the City	Prior to Issuance of Grading Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
39.	A permit for the hauling of material to and from the project site shall be submitted to the City for approval.	Prior to Issuance of Grading Permit	Public Works Division	
40.	Submit a California registered Civil Engineer prepared earthwork cut and fill certification letter to the Engineering Division for review. If the required earthwork in cubic yards is 50 CY or less, a Precise Grading/Paving Plan will not be required; however, the applicant is required to pull an NPDES/Public Works permit prior to issuance of a Building Permit for record purposes.	Prior to Issuance of Grading Permit	Public Works Division	
41.	Development of the site is subject to the requirements of the National Pollution Discharge Elimination System ("NPDES") Permit for the City of Eastvale, under the Santa Ana Regional Water Quality Control Board, Board Order No. R8-2010-0036. Pursuant to the NPDES Permit, the developer shall ensure development of the site incorporates post-construction Best Management Practices ("BMPs") in accordance with the Model Water Quality Management Plan ("WQMP") approved for use for the Santa Ana River Watershed. The developer is advised that applicable Site Design BMPs will be required to be incorporated into the final site design, pursuant to a site specific WQMP submitted to the City Engineer for review and approval. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading/Paving Plan.	Prior to Issuance of Grading Permit	Public Works Division	
42.	Prior to commencing with any grading, the required erosion and dust control measures shall be in place. In addition, the following shall be included if not already identified: a. 6 foot high tan colored perimeter screened fencing b. Contractor information signage including contact information along the street frontage. c. Post dust control signage with the following verbiage: "Project Name, WDID No., IF YOU SEE DUST COMING FROM THIS PROJECT CALL: NAME (XXX) XXX-XXX, If you do not receive a response, please call the AQMD at 1-800-CUT-SMOG/1-800-228-7664"	Prior to Issuance of Grading Permit	Public Works Division	
43.	A Notice of Intent ("NOI") to comply with the California General Construction Stormwater Permit is required via the California Regional Water	Prior to Issuance of Grading Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Quality Control Board online Stormwater Multiple Application and Report Tracking System ("SMARTS"). A copy of the executed letter issuing a Waste Discharge Identification ("WDID") number shall be provided to the City Engineer. The Construction General Permit requires the Developer's contractor to prepare and maintain a Storm Water Pollution Prevention Plan ("SWPPP"). The SWPPP requires all appropriate measures be implemented to prevent erosion and water pollution during construction.			
44.	A California registered Geotechnical Engineer prepared Geotechnical/Soils Report shall be required for and incorporated as an integral part of the grading/paving plan for the proposed development. A copy of the Geotechnical/Soils Report shall be submitted to the Engineering Division with the first submittal of the Precise Grading/Paving Plan.	Prior to Issuance of Grading Permit	Public Works Division	
45.	All stormwater runoff passing through the site shall be accepted and conveyed across the property in a manner acceptable to the City Engineer. All on-site City Engineer approved retention or other facilities are required to contain the increase stormwater runoff generated from the proposed development. Provide a hydrology study to determine the volume of increased stormwater runoff due to development of the site, and to determine required stormwater runoff mitigation measures for the proposed development. The City Engineer must approve the final retention basin sizing and other stormwater runoff mitigation measures determined upon review and approval of the hydrology and may require redesign or changes to site configuration or layout consistent with the findings of the final hydrology study. The existing "pre-developed" condition compared to the proposed "developed" condition shall be used to calculate the volume of increased stormwater runoff to retain on-site under the 100-year frequency storm.	Prior to Issuance of Grading Permit	Public Works Division	
46.	Direct release of on-site nuisance water or stormwater runoff shall not be permitted to the adjacent public streets. Provisions for the interception of nuisance water from entering adjacent public streets from the project site shall be provided through the use of a minor storm drain system that collects and conveys nuisance water to landscape or parkway areas, and in only a stormwater runoff condition, pass runoff directly to the streets through parkway or under sidewalk drains.	Prior to Issuance of Grading Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
47.	The Developer shall connect to the JCSD sewer system and apply for a sewer connection account with JCSD. The project applicant, developer, or successor in interest shall provide written verification that the JCSD can and will provide sanitary sewer service to the project.	Prior to Issuance of Grading Permit	Public Works Division	
48.	The Developer shall submit sewer improvement plans prepared by a California registered Civil Engineer to the JCSD/Public Works Division. The plans shall be approved by the JCSD/City Engineer prior to issuance of any building permits.	Prior to Issuance of Grading Permit	Public Works Division	
49.	The Developer shall submit street improvement plans prepared by a California registered Civil Engineer to the Public Works Division for review and approval. Unless otherwise approved, the street improvement plans shall be approved concurrently with any street light, landscape and irrigation, and traffic signal plans.	Prior to Issuance of Grading Permit	Public Works Division	
50.	The Developer shall submit traffic striping and signage plans prepared by a California registered Civil Engineer, for review and approval by the City Engineer. All required traffic striping and signage improvements shall be completed concurrently with required street improvements, to the satisfaction of the City Engineer, and prior to issuance of a Building Permit.	Prior to Issuance of Grading Permit	Public Works Division	
51.	An accessible pedestrian path of travel shall be provided throughout the site, as required by applicable state and federal laws.	Prior to Issuance of Grading Permit	Planning and Public Works Division	
52.	The sewer lines shall require connections to occur at a manhole and no direct lateral connections to the mainlines are allowed.	Prior to Issuance of Grading Permit	Public Works Division	
53.	The applicant must provide the District with fire flow requirements from the Fire Department to determine the adequacy of the existing water system.	Prior to Issuance of Grading Permit	Public Works Division	
54.	The Applicant shall submit a Water Quality Management Plan identifying site specific Best Management Practices (“BMPs”) in accordance with the Model Water Quality Management Plan (“WQMP”) approved for use for the Santa Ana River Watershed. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading Plan. A WQMP Maintenance Agreement shall be required, obligating the property owner(s) to	Prior to Issuance of Grading Permit	Public Works Division	

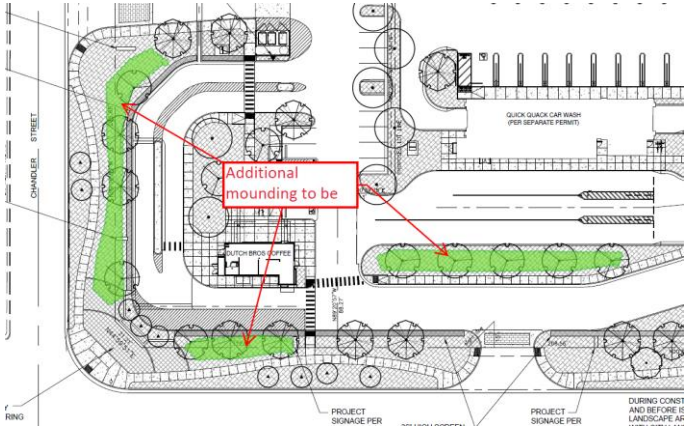
	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	appropriate operation and maintenance obligations of on-site BMPs constructed pursuant to the approved WQMP. The WQMP and Maintenance Agreement shall be approved prior to issuance of a building permit, unless otherwise allowed by the City Engineer.			
Prior to Issuance of Encroachment Permit				
55.	An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, Chandler Street Channel. If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.	Prior to Issuance of Encroachment Permit	Riverside County Flood Control	
56.	A City of Eastvale Encroachment Permit is required for any improvements within the public right-of-way.	Prior to Issuance of Encroachment Permit/On-going	Public Works Division	
57.	The minimum pavement section for all on-site pavements shall be 3 inches asphalt concrete pavement over 6 inches crushed aggregate base with a minimum subgrade of 24 inches at 95% relative compaction, or equal. The pavement section shall be determined using appropriate Traffic Index (“TI”) accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
58.	Traffic Control Plan prepared by a California registered Civil Engineer or Traffic Engineer shall be submitted to the City Engineer for review and approval.	Prior to Issuance of Encroachment Permit	Public Works	
59.	Transportation Mitigation Measure 1 (TRA-1) - Traffic Management Plan. Prior to the initiation of construction, the project applicant shall prepare a Traffic Management Plan (TMP) for approval by the City of Eastvale Traffic Engineer. The TMP shall comply with state standards set forth in the California Manual of Uniform Traffic Control Devices and include measures such as construction signage, limitations on timing for lane closures to avoid	Prior to Issuance of Encroachment Permit	Public Works	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	peak hours, temporary striping plans, and the need for a construction flag-person to direct traffic during heavy equipment use. The TMP shall specify that one direction of travel in each direction must always be maintained for Chandler Street throughout project construction. The TMP shall be incorporated into project specifications for verification prior to final plan approval.			
Prior to Issuance of Building Permit				
60.	**GHG-1:** The project shall incorporate the following California Air Pollution Control Officers Association-based reduction measures and regulatory compliance: · Utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen Standards. · Implement recycling programs that reduce waste to landfills by a minimum of 75 percent (per AB 341). · Incorporate the following land use and site enhancement reduction measures: LUT-1 Increase Density, LUT-4 Improve Destination Accessibility, LUT-5 Increase Transit Accessibility, and SDT-1 Improve Pedestrian Network.	Prior to Issuance of Building Permit/ Construction	Planning Division	
61.	**GHG-2:** The project shall incorporate the following design features: · The project applicant shall require that all faucets, toilets, and showers installed in the proposed structures utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen standards. · The project applicant shall require recycling programs that reduce waste to landfills by a minimum 75 percent per AB 341. · The project applicant shall provide sidewalks on-site and connecting off-site.	Prior to Issuance of Building Permit/ Construction	Planning Division	
62.	**NOI-1:** The construction contractor(s) shall place all stationary construction equipment so that emitted noise is directed away from the noise-sensitive receptors nearest the project site.	Prior to Issuance of Building Permit/ Construction	Building Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
63.	**NOI-2:** The construction contractor(s) shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May).	Prior to Issuance of Building Permit/ Construction	Building Division	
64.	**NOI-3:** The contractor shall install temporary construction noise barriers/blankets along the western boundary. The barrier/blankets shall be solid with no cracks or holes and shall also reach to the ground.	Prior to Issuance of Building Permit/ Construction	Building Division	
65.	**NOI-4:** During all project construction phases on-site, construction contractors shall equip all construction equipment, fixed or mobile, with either properly operating and maintained mufflers or enclosures/acoustical tents (as appropriate) that achieve at least 12 dB reduction from applicable noise level specifications.	Prior to Issuance of Building Permit/ Construction	Building Division	
66.	**NOI-5:** The contractor shall restrict the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary.	Prior to Issuance of Building Permit/ Construction	Building Division	
67.	A revised (site plan, floor plan, and building elevations) which incorporate(s) the Conditions of Approval listed herein shall be submitted to the Planning Division prior to submittal for building and/or grading plan check.	Prior to Issuance of Building Permit	Planning Division	
68.	All construction shall comply with the most recently adopted City and State building codes: • 2022 California Building Code • 2022 California Residential Code • 2022 California Electrical Code • 2022 California Mechanical Code • 2022 California Plumbing Code • 2022 California Fire Code • 2022 California Green Code	Prior to Issuance of Building Permit	Building Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
69.	Special Inspections – As indicated by California Building Code Section 1704, the owner shall employ one or more special inspectors who shall provide special inspections when required by CBC Section 1704. Please contact the Building Division at the time of plan submittal to obtain an application for special inspections.	Prior to Issuance of Building Permit	Building Division	
70.	The Title Sheet of the plans shall include: • Occupancy Group • Occupant Load • Description of use • Type of Construction • Height of Building Floor area of building(s) and/or occupancy group(s)	Prior to Issuance of Building Permit	Building Division	
71.	School impact fees shall be paid prior to permit issuance.	Prior to Issuance of Building Permit	Building Division	
72.	Dimensioned building setbacks and property lines, street centerlines, and between buildings or other structures shall be designed on the plot plan.	Prior to Issuance of Building Permit	Building Division	
73.	All property lines and easements must be shown on the plot plan. A statement that such lines and easements are shown is required.	Prior to Issuance of Building Permit	Building Division	
74.	The project design will conform with energy conservation measures articulated in Title 24 of the California Code of Regulations and address measures to reduce energy consumption such as flow restrictors for toilets, low consumptions light fixtures, and insulation, and shall use to the extent feasible drought landscaping.	Prior to Issuance of Building Permit	Building Division	
75.	A design professional will be required at the time of construction drawings, to prepare plans for proposed improvements per the Business and Professions Code.	Prior to Issuance of Building Permit	Building Division	
76.	Public and private site improvements shall be designed in accordance with the Americans with Disabilities Act and Chapter 11 of the California Building Code. The site plan shall include a site accessibility plan identifying exterior routes of travel and detailing running slope, cross slope, width, pedestrian	Prior to Issuance of Building Permit	Building Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	ramp, curb ramps, handrails, signage, and truncated domes. Path of travel shall be provided from the public right of way and accessible parking to the building. The design professional shall ensure that the site accessibility plan is in compliance with the latest Federal and State regulations.			
77.	All projects including food service or public pools and/or spas shall be checked and approved by the County Health Department as part of the building department plan review process.	Prior to Issuance of Building Permit	Building Division	
78.	The developer is responsible for requesting from the Planning Division any addresses needed for any building(s) and/or any electrical/water single/dual irrigation meter pedestal(s). An address map shall be prepared and submitted by the applicant for review and approval by the Planning Division.	Prior to Issuance of Building Permit	Planning and Building Division	
79.	All drive-thru aisles adjacent to the public right-of-way or ingress and egress points of vehicular access must include Planning Division approved screening along the perimeter.	Prior to Issuance of Building Permit	Planning and Public Works Division	
80.	The project shall incorporate fully defined architecture on all facades facing the public right of way including windows, doors and other architectural details.	Prior to Issuance of Building Permit	Planning Division	
81.	Construction and architectural detailing shall be in substantial conformance with the approved plans, including but not necessarily limited to elevation drawings and material/colors sample board submitted as a part of this application and as approved by the Planning Commission, except that any modification shall be subject to the discretion of the Community Development Director upon finding that any changes are comparable in substance and quality to the original approval.	Prior to Issuance of Building Permit	Planning Division	
82.	Elevations shall be enhanced along building frontages facing Chandler Avenue and Archibald Avenue to the satisfaction of the Community Development Director. To add architectural interest to the building visible to the public right-of-way, artwork shall be provided on the south and east	Prior to issuance of Building Permit	Planning Division	



Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	elevation. Proposed artwork shall be submitted to the Community Development Director and Planning Division for review and approval.			
83.	Site Plan and elevations shall be revised to show decorative lighting of the pedestrian walkways, entryways, and exterior doors	Prior to Issuance of Building Permit	Planning Division	
84.	There shall be no roof-mounted equipment extending above the mansard roof or parapet wall of the building.	Prior to Issuance of Building Permit	Planning Division	
85.	Trash receptacles shall be provided nearby customer entrances/exits to buildings for all commercial developments.	Prior to Issuance of Building Permit	Planning Division	
86.	Elevations for trash enclosure shall be provided prior to issuance of building permit. Trash enclosures shall be covered and shall be architecturally consistent with the proposed development. Trash enclosure elevations shall be reviewed and approved by the Planning Division.	Prior to Issuance of Building Permit	Planning Division	
87.	Any proposed signage must be reviewed and approved by the Planning Division and must comply with the City's Sign Ordinance.	Prior to Issuance of Building Permit	Planning Division	
88.	Any future monumentation into the development shall be subject to review and approval by the Community Development Director and City Engineer.	Prior to Issuance of Building Permit	Planning & Public Works Divisions	
89.	All required parking area spaces shall meet the minimum dimensions of the Zoning Code Section 120.05.060.	Prior to Issuance of Building Permit	Planning Division	
90.	Prior to the issuance of a building permit for each building, the final site plan shall indicate the location of bicycle parking installation using Class I lockers or Class II racks in an enclosed lockable area, as follows for each building (C-Store and Restaurants): • Minimum of Two (2) bicycle parking spaces for visitors and two (2) bicycle parking spaces for employees. • The location of bicycle parking is subject to approval by the Planning Department.	Prior to Issuance of Building Permit	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Applicant shall submit a design alternative to the loop-wave and ribbon rack design. Final design of bike parking shall be approved by the Planning Division prior to issuance of building permit.			
91.	Prior to the issuance of a building permit, the applicant shall submit a photometric lighting plan for review and approval to ensure that proper outdoor lighting, pursuant to City of Eastvale Municipal Code Section 120.05.050 and subject to Riverside County Sheriff's review and approval, shall be provided. In order to minimize light trespass on abutting residential property, illumination measured at the nearest residential structure or rear yard setback line shall not exceed the moon's potential ambient illumination of one-tenth footcandle through use of light shielding and through additional landscaping.	Prior to Issuance of Building Permit	Planning, Building, Public Works, and Sheriff	
92.	**Prior to the issuance of a building permit, the applicant shall submit a set of development plans to the Eastvale Sheriff's Department for review and approval to ensure compliance with the following**: PROPERTY GATES AND KNOX BOX ENTRY a) The installation of the Knox Rapid Entry System if property gates are installed. This system permits law enforcement, fire, and first responders to obtain independent access to the property in the event of an emergency. The necessary order forms for the Knox Company may be obtained by contacting the Jurupa Valley Sheriff's Station Crime Prevention Programs Coordinator at (951) 955-9225. PROPERTY SIGN b) Proper display of "No Trespassing or Loitering" signs prominently around business and any exterior perimeter fencing and adhere to City of Eastvale Municipal Code Section 120.05.070, Signs. ADDRESS NUMBERING: c) Prominently displayed address numbering in size and contrasting in color from the building façade or on a fixed sign near the street/main entrances. The numbers need to be visible from the street and interior property sides for any approaching emergency vehicles. No obstructions should limit their visibility (i.e., landscaping).	Prior to issuance of building permit	Planning, Building and Sheriff Departments	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	SECURITY PLAN Adequate crime prevention measures, such as security cameras, shall be installed to assist with identifying any suspect(s) of any potential future vandalism or theft attempts. Due to the high possibility of theft/vandalism attempts during construction, additional security measures should be added during that time frame of the proposed construction. All exterior access points should be properly secured and illuminated to make clearly visible any person on or about the premises during the hours of darkness.			
93.	A minimum of one (1) Electric Vehicle charging station per parcel shall be installed.	Prior to issuance of building permit	Planning Division	
94.	Landscape plans shall be submitted to the Planning Division for review and approval. The plan shall be certified by a licensed landscape architect as required, taking into account approved preliminary landscape plan (if any), adopted plant palette guides, applicable scenic and specific plan requirements, and water conservation measures. **This submittal shall be made to the Planning Division with the appropriate Application and Fee.**	Prior to Issuance of Building Permit	Planning Division	
95.	The above-described plans shall be in substantial conformance with the conceptual plans as requested for modification and as approved by the City Landscape Architect, City Administrative Staff, Planning Commission and/or City Council. Notes, details, and specifications shall be included.	Prior to issuance of building permit	Planning Division	
96.	Prior to the issuance of a building permit, final landscape plans shall be reviewed and approved by the Planning Division. Landscaping shall be installed and verified prior to issuance of certificate of occupancy.	Plans must be reviewed and approved prior to issuance of building permit. Landscaping shall be installed and verified prior to certificate of occupancy	Planning Division	
97.	All landscape and irrigation plans shall be consistent with the City of Eastvale Zoning Code, with Section 5.4 Landscaping General Provisions, the City of	Prior to Issuance of Building Permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Eastvale Design Standards and Guidelines, and the City of Eastvale Chapter 14.24 Water Efficient Landscape Regulations, and other applicable codes and guides.			
98.	Landscape plans shall be drawn at a scale of 20 feet equal to 1 foot or larger.	Prior to Issuance of Building Permit	Planning Division	
99.	All planting areas shall be a minimum of 5 feet wide. Tree well planting areas shall contain 25 square feet or more.	Prior to Issuance of Building Permit	Planning Division	
100.	The drive through lanes shall be appropriately screened from the Public ROW using 15-gallon shrubs spaced at between 3 and 4 feet on center.	Prior to Issuance of Building Permit	Planning Division	
101.	The trash enclosure shall include landscape screening on all 3 enclosure walls.	Prior to Issuance of Building Permit	Planning Division	
102.	Street trees shall be installed from 24-inch box container at 30 feet on center along Archibald Avenue and Chandler Street.	Prior to Issuance of Building Permit	Planning Division	
103.	Mature specimen trees in 36-inch or 48-inch boxes shall be supplied in sufficient quantity to provide a prominent project entry statement at the corner of Chandler Street and Archibald Avenue, at entry drives from the streets and other major focal areas.	Prior to Issuance of Building Permit	Planning Division	
104.	Shrubs shall be installed from a minimum of 5-gallon containers unless approved by the City of Eastvale Landscape Architect for appropriateness. Shrubs and ground covers shall be designed for installation at reasonable spacing to allow for growth and relative maturity.	Prior to Issuance of Building Permit	Planning Division	
105.	The applicant shall install and maintain dense evergreen screen hedge to provide sufficient privacy for the immediate adjacent properties to the west. The size of plants utilized and spacing shall be at the recommendation and approval of the Landscape Architect and Community Development Director and shall be maintained at 8-feet tall. The species of landscape selected shall be of a fast-growing variety such that they will attain effective screening within a 1-2 year timeframe to the satisfaction of the Community Development Director.	Prior to Issuance of Building Permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
106.	Above ground utility locations shall be located in shrub areas and screened from public view. Transformers shall be screened with a minimum of 3 foot wide planting area located outside the SCE setback to the transformer.	Prior to Issuance of Building Permit	Planning Division	
107.	No light fixture, electric transformer, fire detector check or fire hydrant shall be designed for any location in a planting area, which would make it necessary to eliminate a tree. All overhead light fixtures and utilities shall be identified on the site plan.	Prior to Issuance of Building Permit	Planning Division	
108.	All ground covers shall be installed from living plant materials. Spacing shall be such to allow plants grow to maturity in 2 years from the time of installation.	Prior to Issuance of Building Permit	Planning Division	
109.	No plants with thorns, those that would freeze, or those which do not thrive in the local environment may be used, including Lophostemon, Bougainvillea, and Phormium.	Prior to Issuance of Building Permit	Planning Division	
110.	No plant container shall be installed within 18 inches of a sidewalk, curb, patio, walkway, or equal, unless approved by the City Landscape Architect for appropriateness.	Prior to Issuance of Building Permit	Planning Division	
111.	Plant materials within planting areas shall be hydro-zoned using WUCOLS IV, Region 4 as a general guide.	Prior to Issuance of Building Permit	Planning Division	
112.	Root barriers shall be installed for all trees located within 5 feet of paving in 10 to 12 foot lengths. Trees located within 10 feet of curbs or city sidewalks and within planted parkways shall utilize 20 lineal feet of root barrier.	Prior to Issuance of Building Permit	Planning Division	
113.	A weather-based smart irrigation controller shall be installed. A rain shut off or weather station device shall be connected with the irrigation controller.	Prior to Issuance of Building Permit	Planning Division	
114.	Parking lot lighting and/or water quality design shall not prevent tree or shrub placement (used for shading) nor reduce overall tree counts per the preliminary plans. The addition of tree diamonds or other solutions for maintain tree counts presented will be required if space or conflicts arise during design development.	Prior to Issuance of Building Permit	Planning Division	
115.	Applicant shall retain the stated landscape coverage percentage throughout the design development process and final installation/project completion	Prior to Issuance of Building Permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
116.	Applicant shall install temporary curb and planter continuing screen at northwest corner of the property that shall remain in place until prospective adjacent phase is completed.	Prior to Issuance of Building Permit	Planning Division	
117.	Applicant shall screen all utilities and mechanical infrastructure in planter areas with increased sized shrub material as required by the Community Development Director or Landscape Architect.	Prior to Issuance of Building Permit	Planning Division	
118.	Landscaping shall be perpetually maintained in a healthy and thriving manner.	Prior to Issuance of Building Permit	Planning Division	
119.	Applicant shall add mounding to planter areas that will screen vehicular stacking/queuing lanes that front Chandler Avenue and Archibald Avenue. Exhibit included below:  	Prior to Issuance of Building Permit	Planning Division	
120.	Applicant shall add details of city entry gateway feature/monument including color architectural elevations and perspective views as seen coming from the corner of Chandler Avenue and Archibald Avenue to communicate scale, impact and finishes.	Prior to Issuance of Building Permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
121.	The City Landscape Architect shall be contacted to meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations utilizing humate, mycorrhizae, and organic fertilizer shall be presented prior to the meeting. No landscaping shall occur prior to the meeting.	Prior to Initiation of Landscape Construction	Planning Division	
122.	Submit photometric plan of street lighting. All lights shall be Edison LS-3 tariff and utilize General Electric Evolve LED luminaires per City Specifications. The Developer shall be responsible for applying with Southern California Edison ("SCE") for all appropriate service points and electrical meters early in the process to avoid delays. The Developer must pay for the electrical service of new meter pedestals installed until such time the improvements have been accepted and the underlying property is annexed into Community Facilities District ("CFD") or Landscaping Maintenance District ("LMD").	Prior to Issuance of Building Permit	Public Works Division	
123.	The public street improvements outlined in these Conditions of Approval are intended to convey to the developer an accurate scope of required improvements; however, the City Engineer reserves the right to require reasonable additional improvements as may be determined in the course of the review and approval of street improvement plans required herein.	Prior to Issuance of Building Permit	Public Works Division	
124.	The Precise Grading/Paving Plan shall be City Engineer approved prior to issuance of a building permit.	Prior to Issuance of Building Permit	Public Works Division	
125.	A WQMP and Stormwater BMP Transfer, Access and Maintenance Agreement shall be required, obligating the property owner(s) to appropriate operation and maintenance obligations of on-site BMPs constructed pursuant to the approved WQMP. The WQMP and Stormwater BMP Transfer, Access and Maintenance Agreement shall be approved prior to issuance of a Building Permit and shall be recorded by the Developer at the San Bernardino County Recorder's Office with a recorded copy provided to the Public Works Division prior to issuance of a Certificate of Occupancy.	Prior to Issuance of Building Permit	Public Works Division	
126.	Provide pad elevation certifications for all building pads in conformance with the approved Precise Grading Plan to the Public Works Division prior to construction of any building foundation.	Prior to Issuance of Building Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
127.	The Developer is advised that domestic water service is provided by JCSD. The developer shall be responsible for coordinating with JCSD and complying with all requirements for establishing domestic water service to the property.	Prior to Issuance of Building Permit	Public Works Division	
128.	Prior to issuance of a building permit, the developer is required to pay Traffic Impact Analysis Project Fair Share Contribution fees.	Prior to Issuance of Building Permit	Public Works Division	
129.	Prior to issuance of building permit, installation of conduit fiber optic along property frontages shall be required.	Prior to Issuance of Building Permit	Public Works Division	
130.	The Applicant shall pay all applicable development impact fees in accordance with the City of Eastvale fee ordinance in effect at the time the fees are due, prior to the issuance of any building permits related to the Project.	Prior to Issuance of Building Permit	Building and Public Works Division	
131.	Applicant shall submit an application to ALUC and obtain an official consistency determination on the project.	Prior to Issuance of Building Permit	Planning Division	
132.	A water system (hydrants - commercial with one 4” outlet and two 2-1/2” outlets) capable of delivering the required fire flow shall be provided in accordance with Appendix B and C of the California Fire Code shall be provided. A reduction of 50% is permitted in buildings equipped with fire sprinklers in accordance with City Municipal Code. On-site water supply must be available before any combustible material is placed on the construction site. No portion of a building can be more than 400 feet from a hydrant.	Prior to Issuance of Building Permit	Fire Department	
133.	Prior to building plan approval and construction, applicant/developer shall route a copy of the Water Improvement Plans (offsite) to the Fire Department for review of private hydrant placement only. Water Improvement Plans (offsite) will not be reviewed or approved for the installation of onsite Private Fire Service Mains, private hydrants, or fire sprinkler system supplies. The installing contractor shall submit a separate set of working plans designed in accordance with NFPA 13 and NFPA 24 to the Fire Department for a permit to install private water mains.	Prior to Issuance of Building Permit	Fire Department	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
134.	Fire apparatus access roads shall be at least 24 feet wide and comply with Riverside County Fire Department Standard number 06-05. Access roads shall be located outside of truck docks and between 15 and 40 feet from the building. Access roads shall not have a grade more than 16% and shall have an unobstructed vertical clearance not less than 13 feet and 6 inches. Access lanes will be designed to withstand the weight of 75,000 thousand pounds over 2 axles and shall be all-weather surface capable. Fire apparatus access roads shall have a turning radius capable of accommodating fire apparatus.	Prior to Issuance of Building Permit	Fire Department	
135.	Parking is not permitted on fire apparatus access roads that are less than 28 feet in width. Parking on one side is permitted on a road that is at least 28 feet but less than 36 feet in width. Parking on two sides is permitted on a road that is 36 feet or more in width.	Prior to Issuance of Building Permit	Fire Department	
136.	Fire apparatus access roads shall be constructed with a surface to provide all-weather driving capabilities during construction.	Prior to Issuance of Building Permit	Fire Department	
137.	Dead-end fire apparatus access roads more than 150 feet in length shall be provided with an approved area for turning around fire apparatus.	Prior to Issuance of Building Permit	Fire Department	
138.	Driveway loops, fire apparatus access lanes and entrance curb radius should be designed to adequately allow access of emergency fire vehicles. The applicant or developer shall include in the building plans the required fire lanes and include the appropriate lane printing and/or signs.	Prior to Issuance of Building Permit	Fire Department	
139.	Buildings more than 3,600 square feet shall be equipped with a fire sprinkler system. The PIV and FDC shall be located to the front, within 100 feet of a hydrant. FDC shall be located so that fire apparatus and hose connected to supply the system will not obstruct roadway access for other fire apparatus. FDCs are not allowed in the rear of any building.	Prior to Issuance of Building Permit	Fire Department	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
140.	A fire sprinkler monitoring system is required in all sprinklered buildings.	Prior to Issuance of Building Permit	Fire Department	
141.	A manual and automatic fire alarm system may be required, depending on the use and/or occupant load of the building.	Prior to Issuance of Building Permit	Fire Department	
142.	Commercial cooking equipment that produces grease-laden vapors shall be provided with a Type I hood and an automatic fire extinguishing system.	Prior to Issuance of Building Permit	Fire Department	
143.	An approved Fire Department access key lock box (minimum Knox 3200 series) shall be installed at the main entrance to any sprinklered building. Gate switches or padlocks shall be installed at each automatic or manual gate. Locations shall be shown on plans submitted for a building permit.	Prior to Issuance of Building Permit	Fire Department	
144.	New motorized gates shall be provided with means to be automatically opened remotely by emergency vehicles in accordance with Riverside County standards and policies. The system shall be compatible, but not limited to, the detection of the following manufacturers of emergency vehicle preemption: Federal Signal, Whelen, and Tomar. Upon installation of the system, compliance testing shall be completed by the Riverside County Fire Department. (RVC Amendment to CFC 503.6.1)	Prior to Issuance of Building Permit	Fire Department	
145.	The location of address numbers shall be indicated on the building plans. Street numbers shall be displayed in a prominent location on the street or fire apparatus access side of buildings. Numbers and letters shall be a minimum of 12” in height with a minimum stroke of .05 inch. Where access is by means of a private road and the building cannot be viewed from a public way, a monument, pole, or other sign shall be used to identify the structure in accordance with Riverside County Standard 07-01. Address must be legible, of a contrasting color, and adequately illuminated to be visible from the street at all hours.	Prior to Issuance of Building Permit	Fire Department	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
146.	No hazardous materials shall be stored and/or used within the building which exceeds quantities listed in the California Fire Code, without first obtaining a permit.	Prior to Issuance of Building Permit	Fire Department	
147.	Exit signs, door hardware, and exit path marking shall be as required by the California Building Code.	Prior to Issuance of Building Permit	Fire Department	
148.	Fire sprinkler riser door shall be posted "FIRE RISER" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
149.	Electrical room door shall be posted "ELECTRICAL ROOM" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
150.	Fire alarm control panel door shall be posted "FACU" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
151.	Roof access door shall be posted "ROOF ACCESS" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
152.	Provide specific fire department conditions on plans for building permit submittal.	Prior to Issuance of Building Permit	Fire Department	
Prior to Issuance of Certificate of Occupancy				
153.	All parkway landscaping shall be guaranteed for a period of one (1) year from the date of the City Engineer acceptance. Any landscaping that fails during the one (1) year landscape maintenance period shall be replaced with similar plant material to the satisfaction of the City Engineer, and shall be subject to a subsequent one (1) year landscape maintenance period.	Prior to Issuance of Certificate of Occupancy	Planning and Public Works Division	
154.	The development shall be annexed into all applicable City of Eastvale owned and administered Community Facilities Districts (CFDs) and/or Landscaping Maintenance Districts (LMDs) for On-Going maintenance of traffic signals, traffic signal synchronization, street lights, full capture systems for all storm drains, and landscape maintenance of raised landscaped median and public	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	parkways, to the satisfaction of the City Engineer or otherwise form a district where one is not currently in place.			
155.	Upon City Engineer approval of any improvement plan, the improvement plan shall be provided to the City in digital format, consisting of a DWG (AutoCAD drawing file), DXF (AutoCAD ASCII drawing exchange file), and PDF (Adobe Acrobat) formats. Variation of the type and format of the digital data to be submitted to the City may be authorized, upon prior City Engineer approval.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
156.	Mira Loma Road and Bridge Benefit Assessment District Fee ("MLRBA"), Transportation Uniform Mitigation Fee ("TUMF"), Area Drainage Plan ("ADP") fee, and any other regional pass-through fees in effect at that time shall be paid prior to issuance of Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
157.	The Developer shall submit to the City Engineer for review and approval the Covenants, Conditions, and Restrictions ("CC&Rs") and/or a Property Owners Association document to maintain and operate common areas and/or facilities including, but not limited to, parking areas, private utilities, and water quality basins.	Prior to Issuance of Certificate of Occupancy	Public Works and Planning Division	
158.	Prior to issuance of a Certificate of Occupancy or final City approvals, demonstrate that all structural BMP's have been constructed and installed in conformance with approved plans and specifications, and as identified in the approved WQMP.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
159.	The Developer shall provide certification from JCSD Water Services demonstrating that all water and/or wastewater service accounts have been documented, prior to the issuance of a Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
160.	All damaged, destroyed, or modified pavement legends, traffic control devices, signing, striping, and street lights, associated with the proposed development shall be replaced.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
161.	Remove existing, and construct new pavement with a minimum pavement section of 5 inches asphalt concrete pavement over 6 inches crushed aggregate base with a minimum subgrade of 24 inches at 95% relative compaction, or equal, to the existing right edge line along the entire street frontage in	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	accordance with City of Eastvale Standard Drawings. The pavement section shall be determined using appropriate Traffic Index ("TI") accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval. Alternatively, depending on the existing street condition and as approved by the City Engineer, a street overlay, slurry seal, or other repair can be performed to preserve recent pavement improvements.			
162.	Construct an Americans with Disabilities Act ("ADA") compliant sidewalk behind curb along the entire frontage and interior streets in accordance with the General Plan, any Specific Plan, the City of Eastvale Standard Drawings, subject to the approval of the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
163.	Construct City Engineer approved commercial driveway approaches in accordance with City of Eastvale Standard Drawings. The driveway approach shall be constructed so the top of "X" is 5 feet from the property line. Nothing shall be constructed or planted in the corner cut-off area which does or will exceed 30 inches in height required to maintain an appropriate corner sight distance.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
164.	Construct a curb ramp meeting current California State Accessibility standard along both sides of the commercial driveway approaches. The developer shall ensure that an appropriate path of travel, meeting ADA guidelines, is provided across the driveway, and shall adjust the location of the access ramps, if necessary, to meet ADA guidelines, subject to the approval of the City Engineer. If necessary, additional pedestrian and sidewalk easements shall be provided on-site to construct a path of travel meeting ADA guidelines.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
165.	Grind and overlay half ROW width of Archibald Avenue and Chandler Street within the project frontages up to the existing median.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
166.	Install Class II bicycle lanes along Archibald Avenue to connect to the existing Class II bicycle lanes to the north.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
167.	Install Pan-Tilt-Zoom ("PTZ") cameras at each intersection to tie into the existing Citywide system to monitor traffic.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
168.	Install License Plate Reader ("LPR") cameras to tie into the existing Citywide system at each traffic signal servicing the property.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
169.	Upgrade traffic signals within 100 feet of the property to provide signal synchronization.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
170.	Applicant, at its sole option and cost, may install a traffic signal at the intersection of Archibald Avenue and Fairchild Drive, pending signal warrant analysis approved by the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
171.	The Developer shall be responsible for coordinating with Riverside Transit Authority ("RTA") regarding the location of existing, proposed, and future bus stops along the property frontage of all public streets. The Developer shall design street, bus pad, and sidewalk improvements in accordance with the latest RTA bus stop guidelines and in compliance with current accessibility standards pursuant to the Americans with Disabilities Act ("ADA") requirements. The Developer shall design all bus stops to accommodate the RTA Shelters. The Developer shall submit to Public Works verification from RTA acknowledging concurrence with the existing, proposed, and future bus stop improvements in conformance with the Premium Shelter design guidelines.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
172.	The Developer shall employ staff to assist with management of the drive through queue during peak periods. Specifically, staff should periodically walk along the drive through lanes encouraging vehicles to pull forward and maximize efficiently of the available storage and temporarily close drive-through access when drive-through queue exceeds drive-through queueing capacity. A Traffic Management Plan for operations and special events shall be submitted to the Public Works and Planning Divisions for review and approval and be made a part of each businesses' Standard Operating Procedures.	Prior to Issuance of Certificate of Occupancy	Planning & Public Works Division s	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
173.	Grand openings for the Dutch Bros and Quick Quack Car Wash tenants shall be held a minimum of one week apart from each other.	Prior to Issuance of Certificate of Occupancy	Planning & Public Works Divisions	
174.	The original improvement plans prepared for the proposed development and approved by the City Engineer (if required) shall be documented with record drawing "as-built" information and returned to the Public Works Division prior to issuance of a final certificate of occupancy. Any modifications or changes to approved improvement plans shall be submitted to the City Engineer for approval prior to construction.	Prior to Certificate of Occupancy	Public Works Division	
175.	All conditions of approval for TPM No. 37653 shall be completed to the satisfaction of the City Engineer prior to the issuance of a Certificate of Occupancy.	Prior to Certificate of Occupancy	Public Works Division	
176.	All sewer mains constructed by the applicant and to become part of the public sewer system shall be pressure tested and digitally video recorded by the City's wastewater system operator JSCD prior to acceptance of the sewer system for maintenance by the City. The developer shall be responsible for all costs associated with testing and inspection services. Any defects of the sewer main shall be removed, replaced, or repaired to the satisfaction of the City Engineer prior to acceptance.	Prior to Certificate of Occupancy	Public Works Division	
177.	The Applicant shall provide certification from JCSD Water Services demonstrating that all water and/or wastewater service accounts have been documented, prior to the issuance of a Certificate of Occupancy.	Prior to Certificate of Occupancy	Public Works Division	
178.	A City business registration shall be required prior to issuance of a Certificate of Occupancy or final permits.	Prior to issuance of certificate of occupancy	Planning Division	
179.	The development shall conform to all other applicable State and local laws and ordinances and the applicant shall obtain all necessary approvals and operating permits from all State and local agencies prior to the issuance of a Certificate of Occupancy or final permits.	Prior to issuance of certificate of occupancy	Planning Division	
180.	Any missing or damaged landscaping shall be replanted to the satisfaction of the Community Development Director and Planning Division.	Prior to issuance of certificate of	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
		occupancy / Ongoing		
181.	Prior to the final landscape inspection a water audit shall be conducted by an independent water auditor and WELO documentation shall be provided to the City Planning Department and City Landscape Architect via email.	Prior to issuance of certificate of occupancy	Planning Division	
182.	All required landscaping and irrigation systems shall be installed in a condition acceptable to the City. If the Project Landscape Architect has provided inspection of the landscaping, the Project Landscape Architect shall provide the City with a Certificate of Compliance stating that the landscaping was installed per the approved plans. The City will review the Certificate of Compliance and conduct inspections to ensure that the landscape installation is in compliance with the approved landscape plans.	Prior to issuance of certificate of occupancy	Planning Division	
On-Going/During Operations				
183.	Provide street sweeping services for onsite and offsite within project frontages weekly.	On-Going	Public Works Division	
184.	Remove all graffiti within 24 hours pre-construction, during construction, and after a Certificate of Occupancy is issued.	On-Going	Public Works Division	
185.	All street cuts for utilities shall be repaired in accordance with City Standard or as recommended; and any interim trench repairs shall consist of compacted backfill to the bottom of the pavement structural section followed by placement of standard base course material in accord by the City Engineer and with the Standard Specifications for Public Work Construction ("Greenbook"). The base course material shall be placed the full height of the structural section to be flush with the existing pavement surface and provide a smooth pavement surface until permanent cap paving occurs using an acceptable surface course material.	On-going	Public Works Division	
186.	In accordance with City's Moratorium policy to preserve newly paved streets, any and all street and/or trench cuts in newly paved streets will be prohibited or be subject to moratorium street repair standards as reference in Section 12.08.260 of the Eastvale Municipal Code.	On-going	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
187.	Any and all utility trenches or other excavations within existing asphalt concrete pavement of off-site streets resulting from the proposed development shall be backfilled and repaired in accordance with City of Eastvale Standard Drawings. The Developer shall be responsible for removing, grinding, paving and/or overlaying existing asphalt concrete pavement of off-site streets including pavement repairs in addition to pavement repairs made by utility companies for utilities installed for the benefit of the proposed development (i.e. Jurupa Community Services District, Southern California Edison, Southern California Gas Company, Time Warner, Verizon, etc.). Multiple excavations, trenches, and other street cuts within existing asphalt concrete pavement of off-site streets resulting from the proposed development may require complete grinding and asphalt concrete overlay of the affected off-site streets, at the discretion of the City Engineer. The pavement condition of the existing off-site streets shall be returned to a condition equal to or better than what existed prior to construction of the proposed development.	On-going	Public Works Division	
188.	Construction signing, lighting and barricading shall be provided during all phases of construction in accordance with City Standards and the direction of the City Engineer. As a minimum, all construction signing, lighting and barricading shall be in accordance with Part 6 "Temporary Traffic Control" of the latest California Manual on Uniform Traffic Control Devices, or subsequent editions in force at the time of construction.	On-Going	Public Works Division	
189.	The applicant shall record appropriate easement(s) and agreement(s) for the construction and maintenance of water quality to meet the Storm Water Permit/Water Quality Management Plan Requirements.	On-Going	Planning and Public Works Divisions	
190.	All landscaped setbacks and planter areas shall be permanently maintained at the site and kept free of debris.	On-Going	Planning and CES Divisions	
191.	To regulate excess noise levels throughout various times of the day (day/nighttime) the operation shall not create any sound, or allow the creation of any sound on the subject property that causes the exterior sound level on any other occupied property to exceed the sound level standards set forth in	On-Going	Planning and CES Divisions	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Section 8.52.040 – "General Sound Level Standards" of the City of Eastvale Municipal Code.			
192.	A notice from Riverside County Airport Land Use Commission noting the site's location near the Chino Airport shall be recorded (ALUC condition).	On-Going	Planning and Public Works Divisions	
193.	The project shall be developed in accordance with the approved Tentative Parcel Map and Major Development Review, including the approved site plan, architectural elevations, conceptual landscape plan, and interim and ultimate improvements on Chandler Ave. and Archibald Avenue. The applicant may request modifications or revisions to the approved project as provided in the Eastvale Zoning Code.	On-Going	Planning and Public Works Divisions	
194.	A safety officer or designee may enter and inspect the site at any reasonable time without prior notice for the purpose of investigating an actual complaint or for a health and safety inspection.	On-Going	Planning and CES Divisions	
195.	Landscaping and ground coverage shall be continually maintained as consistent with the approved landscape plan. Any request or changes which deviate from the approved plan shall require a minor development review.	On-Going	Planning and CES Divisions	
196.	The outdoor dining areas, furniture, and pavement must be maintained in clean and tidy conditions at all times, free from food scrapes, refuse, etc.	On-Going	Planning and CES Divisions	
197.	The applicant must also maintain the adjacent areas and keep them free of any waste generated by outdoor dining.	On-Going	Planning and CES Divisions	
198.	Outdoor furniture must be safe, comfortable, of sturdy construction, hygienic and designed for outdoor use. Surface tops should be non-reflective and be of a design which inhibits the collection of food particles.	On-Going	Planning and CES Divisions	
199.	The District reviewed the water and sewer atlas maps to identify the nearest main lines for potential service connections. Water facilities consist of an existing 12-inch diameter water line on Chandler Street and an existing 21-inch diameter waterline on Archibald Avenue. The applicant must provide the District with fire flow requirements from the Fire Department to determine the adequacy of the existing water system.	On-Going	JCSD	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
200.	Sewer service is available from an existing 21-inch diameter sewer line on Archibald Avenue. Gravity flow to the existing sewer line is contingent upon the final grading of the site, and sewer service is contingent upon the quantity and quality of wastewater generated by the project. The sewer line will require connections to occur at a manhole, and no direct lateral connections to the mainline are allowed.	On-Going	JCSD	
201.	The District is investigating the potential use of non-potable water for the project area and will require the developer to participate in the final adopted program for parks and greenbelt areas.	On-Going	JCSD	
202.	The applicant will be required to contact Jurupa Community Services District to start the development processes for the project. The applicant must submit plans and fees for sewer and water services.	On-Going	JCSD	

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are required by the City, other local agencies, or state and federal agencies, and are not conditions of approval of the project.

1. The applicant shall obtain City approval for any modifications or revisions to the approval of this project. Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.

2. Submit a final parcel map and all supporting documents for review and approval to the satisfaction of the City Engineer and Public Works Department.

3. Applicants are responsible for all costs associated with off-site right-of-way acquisition, including any costs associated with the eminent domain process, if necessary.

4. Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN23-20019 – Conditional Use Permit to allow the establishment and operation of a double lane drive-through for a new coffee shop (Dutch Bros) at the northwest corner of Chandler Ave. and Archibald Ave.
Assessor's Parcel Number: 144-130-004, -011, -012, and -013
Planning Commission Review Date: October 18, 2023

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. Project approval is not final until a signed copy of these conditions is filed with the City. Applicant Signature Date	Must be completed to finalize approval	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, from any and all claims, demands, law suits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative, or adjudicatory in nature), and alternative dispute resolutions procedures (including but not limited to arbitrations, mediations, and other such procedures) (collectively "Actions"), brought against the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul any action of, or any permit or approval issued by, the City and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the City), for or concerning the project, whether such Actions are brought under the California Environmental Quality Act, the Planning and Zoning Law, the Subdivisions Map Act, Code of Civil Procedure Section 1085 or 1094.5, or any other state, federal, or local statute, law, ordinance, rule, regulation, or any decision of a court of competent	On-Going	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	jurisdiction. It is expressly agreed that the City shall have the right to approve, which approval will not be unreasonably withheld, the legal counsel providing the City's defense, and that applicant shall reimburse City for any costs and expenses directly and necessarily incurred by the City in the course of the defense. City shall promptly notify the applicant of any Action brought and City shall cooperate with applicant in the defense of the Action.			
3.	Any approval shall not be final until and unless the applicant's deposit account with the Planning Division has a balance of at least **$2,000** at the time that the applicant signs these conditions of approval (per **Condition No. 1**) to cover staff time for follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to halt work if the deposit account is exhausted. Make check payable to the **City of Eastvale** and include **Project No. PLN23-20019** on the check.	On-Going	Planning Division	
4.	Applicant understands and agrees that failing to comply with all Conditions of Approval, may result in the Planning Commission or Community Development Director taking action, resulting in modification of the Conditions of Approval and/or suspension or revocation of any conditional use permit.	On-Going	Planning Division	
5.	Applicable mitigation measures included in the Addendum to the IS/MND shall be required for development of the proposed project and shall be incorporated herein by reference.	On-Going	Planning Division	
6.	Conditional Use Permit PLN23-20019 is granted contingent upon approval of PLN23-20018 (TPM 37653) and Major Development Review PLN23-20019. Failure to approve PLN23-20018 (TPM37653) and Major Development Review PLN23-20019 shall render any approval of Conditional Use Permit PLN23-20019 null and void.	On-Going	Planning Division	
7.	All applicable Major Development Review conditions of approval (PLN 23-20019) and Tentative Parcel Map 37653 (PLN23-20018) shall be incorporated herein by reference.	On-Going	Planning Division	
8.	PLN23-20019 is granted for a period of two years and shall become void as of October 18, 2025, unless building permits have been issued and construction is	On-Going	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	commenced and diligently pursued towards completion, or a time extension is requested in writing prior to that date.			
Conditional Use Permit – Drive-Through Operation				
9.	Applicant understands and agrees that the operation of the drive-through shall not result in stacking of vehicles in such a manner that would cause obstruction to any access aisles or parking spaces for other tenants in the retail center, the main drive aisles for the retail center, and/or public streets/ROW (Chandler Ave. and Archibald Ave., drives, sidewalks, etc.). • If the drive-through operation fails to comply with this condition of approval herein, the Community Development Director and/or Public Works Director shall require revised site design or operational alternatives for City review and approval, to remedy any stacking or site circulation issues.	On-Going	Planning and Public Works Divisions	
10.	To prevent stacking in the drive-through lane from impacting adjacent tenants, drive-aisles, or public streets, additional measures shall be implemented, including but not limited to: • **Traffic Control Measures**: Occupant's managers and staff members shall be trained to direct drive-through traffic to line up along the parking aisle such that car stacking does not overflow onto drive aisles of the retail center. • **Use of Tablets**: Occupant's staff members shall take food orders and non-cash payments at the drive-through lanes with tablets to speed up orders in the drive-through lanes during the restaurant's peak hours. • **Online Order**: An Occupant staff member shall set up temporary parking signs for online order pickup as necessary during high demand online orders.	On-Going	Planning, Public Works, and Divisions	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	• **Temporary Drive-Through Closure**: Operators shall restrict drive-through access to customers when drive-through queue exceeds drive-through queue capacity. Operators shall close drive-through utilizing on-site cones, signage, or other measures, to the satisfaction of the Community Development Director until vehicle queuing can be accommodated/contained solely within drive-through lanes identified on the approved site plan. Cones, signage, and/or other measures shall not be placed in the public right of way			
11.	Six (6) months and one (1) year from the start of operations, the Planning Department will report to the Planning Commission on the drive-through, including any complaints, code enforcement cases, compliance with the conditions of approval, and whether revisions to the drive-through operation are needed. Continual six (6) month reviews to the Planning Commission may be required as determined by the Community Development Director.	Six (6) months and One (1) year from Start of Operations	Planning Division	
12.	The Final approved Queuing/Traffic Management Plan shall be kept onsite and made available to the store manager for implementation as required.	On-Going	Planning Division	
13.	The drive-through operator shall be required to provide notice to the City of any promotional or special events.	On-Going	Planning Division	
14.	Off duty police officers shall be used to manage traffic on-site for a minimum of one (1) week during the grand opening event and all special events/promotions.	On-Going	Planning Division	
15.	A safety officer or designee may enter and inspect the site at any reasonable time without prior notice for the purpose of investigating an actual complaint or for a health and safety inspection.	On-Going	CES and Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
16.	Grand openings/Special Events for the Dutch Bros and Quick Quack Car Wash tenants shall be held a minimum of one week apart from each other.	On-Going	Public Works and Planning Division	
Prior to Issuance of Building Permit				
17.	The Final Queuing/Traffic Management Plan shall be submitted, reviewed, and approved by the Community Development Director and/or Public Works Director prior to grading permit issuance. This plan shall include detailed information to ensure visitor vehicles shall remain completely on-site and shall not impede any public rights-of-way (streets, drives, walks, etc.), drive aisles, parking spaces, etc. Mitigation and control measures shall include but not be limited to: • **Traffic Control Measures**: Occupant's managers and staff members shall be trained to direct drive-through traffic to line up along the parking aisle such that car stacking does not overflow onto drive aisles of the retail center. • **Use of Tablets**: Occupant's staff members shall take food orders and non-cash payments at the drive-through lanes with tablets to speed up orders in the drive-through lanes during the restaurant's peak hours. • **Online Order**: An Occupant staff member shall set up temporary parking signs for online order pickup as necessary during high demand online orders. • **Temporary Drive-Through Closure**: Operators shall restrict drive-through access to customers when drive-through queue exceeds drive-through queue capacity. Operators shall close drive-through utilizing on-site cones, signage, or other measures, to the satisfaction of the Community Development Director until vehicle queuing can be accommodated/contained solely within drive-through lanes identified on the approved site plan. Cones, signage, and/or other measures shall not be placed in the public right of way.	Prior to Issuance of Building Permit	Public Works and Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	• **Office Duty Police Officers**: Off duty police officers shall be used to manage traffic for a minimum of one (1) week during the grand openings and all special events/promotions.			
18.	A directional signage and striping plan shall be submitted for review and approval to ensure that directional signs are located in appropriate locations for directing drive-through customers and to make sure that intersections of parking aisles are not blocked.	Prior to Issuance of Building Permit	Public Works and Planning Division	
Prior to Certificate of Occupancy				
19.	Prior to the issuance of certificate of occupancy, all signage and striping shall be installed per the approved signage and striping plan.	Prior to Issuance of Certificate of Occupancy	Public Works and Planning Division	

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are generally required for all projects by City ordinances, other local agencies, and state or federal agencies. PLEASE NOTE: This list is not comprehensive. The project is subject to all applicable standards, fees, policies, rules, and regulations for Eastvale and many other agencies, including but not limited to the Jurupa Community Services District, Jurupa Area Recreation and Park District, Riverside County Flood Control District, and state and federal agencies.

Developer and applicant are used interchangeably below.

1. No obstruction shall be placed which would conflict with any existing easement except with the documented approval of the easement holder(s).
2. The developer shall make best efforts to obtain written permission from the affected property owners allowing the proposed grading and/or facilities to be installed outside of the project boundaries.
3. All connection to flood control facilities shall be reviewed and permitted by the Riverside County Flood Control and Water Conservation District and shall be submitted through the City of Eastvale, unless otherwise directed by the City Engineer.
4. The developer shall prepare and submit to the City for review and approval all required development plans including but not limited to Grading (Rough and/or Precise), Street Improvement, On-Site Lighting, and Storm Drain. All applicable processing and review fees and/or deposits shall be submitted with the first plan submittal.

5. Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN23-20020– Major Development Review for the development of a 950 square-foot drive-through coffee shop (dba Quick Quack) on the northwest corner of Archibald Ave. and Chandler Ave.
Assessor's Parcel Number: 144-130-004, -011, -012, and -013
Planning Commission Review Date: October 18, 2023

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. Project approval is not final until a signed copy of these conditions is filed with the City. Applicant Signature Date	Must be completed to finalize approval	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, from any and all claims, demands, law suits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative, or adjudicatory in nature), and alternative dispute resolutions procedures (including but not limited to arbitrations, mediations, and other such procedures) (collectively "Actions"), brought against the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul any action of, or any permit or approval issued by, the City and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the City), for or concerning the project, whether such Actions are brought under the California Environmental Quality Act, the Planning and Zoning Law, the Subdivisions Map Act, Code of Civil Procedure Section 1085 or 1094.5, or any other state, federal, or local statute, law, ordinance, rule, regulation, or any decision of a court of competent	On-Going	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	jurisdiction. It is expressly agreed that the City shall have the right to approve, which approval will not be unreasonably withheld, the legal counsel providing the City's defense, and that applicant shall reimburse City for any costs and expenses directly and necessarily incurred by the City in the course of the defense. City shall promptly notify the applicant of any Action brought and City shall cooperate with applicant in the defense of the Action.			
3.	Any approval shall not be final until and unless the applicant's deposit account with the Planning Division has a balance of at least **$2,000** at the time that the applicant signs these conditions of approval (per **Condition No. 1**) to cover staff time for follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to halt work if the deposit account is exhausted. Make check payable to the **City of Eastvale** and include **Project No. PLN23-20020** on the check.	On-Going	Planning Division	
4.	Any approval shall not be final until and unless the applicant's deposit account with the Public Works Division has a balance of at least $10,000 to cover staff time to follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to half work if the deposit account is exhausted.	On-Going	Public Works Division	
5.	Applicant understands and agrees that failure to comply with all conditions of approval may result in the City Council/Planning Commission taking action resulting in modification of conditions of approval and/or suspension or revocation of the Major Development Review.	On-Going	Planning Divisions	
6.	Major Development Review PLN23-20020 is granted contingent upon approval of PLN23-20018 (TPM 37653). Failure to approve PLN23-20018 (TPM37653) shall render any approval of Major Development Review PLN23-20020 null and void.	On-Going	Planning Division	
7.	PLN23-20020 is granted for a period of two years and shall become void as of October 18, 2025, unless building permits have been issued and construction is commenced and diligently pursued towards completion, or a time extension is requested in writing prior to that date.	On-Going	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
8.	The project shall be developed in accordance with the Major Development Review application approved by the Planning Commission on October 18, 2023,, including the approved site plan, architectural elevations, conceptual landscape plan, etc. The applicant may request modifications or revisions to the approved project as outlined in Section 120.01.050(c) the Eastvale Zoning Code. A change of tenancy of any portion of the approved project requires review and approval by the original approving authority.	On-Going	Planning Division	
9.	Applicable mitigation measures included in the Addendum to the IS/MND shall be required for development of the proposed project and shall be incorporated herein by reference.	On-Going	Planning Division	
10.	The cover sheet of the building construction drawings shall include a blue line print of the City's conditions of approval and shall be attached to each set of plans submitted for City approval.	On-Going	Planning Division	
11.	PAD 3 (Sit-Down Restaurant) shall receive Certificate of Occupancy prior to or concurrently with PAD 1 (Coffee Shop) and PAD 2 (Carwash).	On-Going	Planning Division	
Prior to Map Recordation				
12.	The Developer shall enter into a Subdivision Improvement Agreement with the City, and shall guarantee by posting security(ies) to include all public improvements that the developer is conditioned to construct as part of this approval.	Prior to Map Recordation	Public Works Division	
13.	Dedicate City Engineer approved additional right-of-way along the entire frontage as may be required to provide a property line at ultimate right-of-way in accordance with the City General Plan, any applicable Specific Plan and/or as requested by the City Engineer. Dedicate 25 feet of right-of-way along Archibald Avenue and 14 feet of right-of-way along Chandler Street to the City for public right-of-way purposes.	Prior to Map Recordation	Public Works Division	
14.	A Final Map prepared by a California licensed Land Surveyor or registered Civil Engineer authorized to practice land surveying (pre-1982, RCE #33965	Prior to Map Recordation	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	and lower) and all supporting documents to the Public Works Division for review and approval. A Title Report prepared for subdivision guarantee for the subject property, the traverse closures for the existing parcel and all lots created therefrom, and copies of record documents shall be submitted with the Final Map to the Engineering Division as part of the review of the Final Map. The Final Map shall be approved by the City Council prior to recordation of the Final Map.			
15.	Provide a reciprocal access easement between Parcel 1 & Parcel 2 and Parcel 2 & Parcel 3. The applicant shall provide a copy of a reciprocal access agreement, shared parking agreement, and documentation showing the responsible entity for maintaining the parking areas (including landscaping) for the entire site including the landscaped areas along the Chandler Avenue and Archibald frontages to the City Engineer for review and approval.	Prior to Map Recordation	Planning and Public Works Divisions	
16.	Monument bond shall be posted with the City. The Developer shall provide a cost estimate to set monuments prepared by a California licensed Land Surveyor or registered Civil Engineer to the Public Works Division for review and approval by the City Engineer.	Prior to Map Recordation	Public Works Division	
17.	The Developer shall enter into an agreement with the City for bonding and improvements of all public streets, public infrastructure, private streets, and private infrastructure.	Prior to Map Recordation	Public Works Division	
18.	Various blanket and specific transportation and/or utility easements that are no longer in use are to be quitclaimed/abandoned on the Final Map.	Prior to Map Recordation	Public Works Division	
19.	Show on the Final Map dedication of the public right-of-way for, Archibald Avenue and Chandler Avenue, in accordance with the City of Eastvale Road Improvement Standards & Specification, Improvement Plan Check Policies and Guidelines, to the satisfaction of the City Engineer, and in coordination with the adjacent agencies as applicable.	Prior to map recordation	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
20.	The applicant shall provide will-serve letters from all utility agencies.	Prior to map recordation	Public Works Division	
21.	The applicant shall record appropriate easement(s) and agreement(s) for the construction and maintenance of water quality to meet the Storm Water Permit/Water Quality Management Plan Requirements.	Prior to map recordation	Public Works Division	
22.	Provide on project plans (grading, site plan, etc.) design for the roundabout to be constructed east of Cucamonga creek.	Prior to map recordation	Public Works Division	
23.	Provide safe, functional pedestrian pathways throughout the site.	Prior to map recordation	Public Works Division	
24.	The project site shall include two cross access easements to allow internal circulation with the future development of the properties located to the west.	Prior to map recordation	Planning Division	
25.	A shared parking agreement and reciprocal access agreement for the entire site shall be submitted for Planning Division review. The shared parking agreement shall include all parcels included in the parcel map.	Prior to map recordation	Planning Division	
Prior to Issuance of Grading Permit				
26.	Prior to submittal for grading plan check, the site plan shall be revised to show a pathway that provides pedestrians with safe unobstructed access to the adjacent retail and restaurant pads. Pavement on all pathways and entryways shall be decorative in nature with texture, stamped concrete or pavers.	Prior to Issuance of Grading Permit	Planning Division	
27.	**BIO-1:** Prior to the issuance of a grading permit, a preconstruction burrowing owl clearance survey shall be completed by a qualified biologist within 30 days prior to ground disturbance to avoid direct take of burrowing owls. Once complete, a written report summarizing the results of the clearance survey shall be prepared and submitted to the City of Eastvale for review and concurrence. · If no burrowing owls are detected, construction may proceed. If construction is delayed or suspended for more than 30 days during the	Prior to Issuance of Grading Permit/ Within 30 days prior to ground disturbance	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	breeding season (March 1 to August 31), the project site or work area shall be resurveyed. · If burrowing owls are detected on the project site during the breeding season (March 1 to August 31), a 300-foot "no work" buffer shall be established around the active burrow and all work within the buffer shall be halted until the qualified biologist has determined through non-intrusive methods that the nesting effort is complete (i.e., all young have fledged). Once the nesting effort is complete or if a burrowing owl burrow is detected on-site during the non- breeding season (September 1 to February 28), passive and/or active relocation of burrowing owls may be implemented by a qualified biologist following consultation and approval from the City of Eastvale, the Western Riverside County Regional Conservation Authority, and the California Department of Fish and Wildlife.			
28.	**BIO-2:** Pursuant to the Migratory Bird Treaty Act and the California Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat shall be conducted outside the avian nesting season. The nesting season generally **extends from February 1 through August 31**, but can vary slightly from year to year based on seasonal weather conditions. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a preconstruction clearance survey for nesting birds shall be conducted within 30 days of the start of any ground-disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the preconstruction clearance survey, construction activities shall stay outside of a 300-foot buffer around the active nest. For raptors and special- status species, this buffer will be expanded to 500 feet. A biological monitor shall be present to delineate the boundaries of the buffer area and to monitor the active nest to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur.	Prior to Issuance of Grading Permit/ Within 30 days of the start of any ground-disturbing activities	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
29.	**CUL-1**: If cultural resources are encountered during ground-disturbing activities, work in the immediate area shall cease and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find(s). If the discovery proves to be significant under the California Environment Quality Act, additional work such as data recovery excavation may be warranted and shall be reported to the City.	Prior to Issuance of Grading Permit/ During ground-disturbing activities	Planning Division	
30.	**TCR-1:** Tribal Monitoring. Prior to the issuance of a grading permit, **the project applicant** shall contact the consulting tribe(s) with notification of the proposed grading and shall make a good-faith effort, as determined by the City's Development Director, to enter into a Tribal Cultural Resources Monitoring Agreement with each tribe that determines its tribal cultural resources may be present on the site. The agreements shall include, but not be limited to, outlining provisions and requirements for addressing the handling of tribal cultural resources; Project grading and development scheduling; terms of compensation for the tribal monitors; and establishing on-site monitoring provisions and/or requirements for professional tribal monitors during all ground-disturbing activities. The terms of the agreements shall not conflict with any of these mitigation measures. A copy/copies of the agreement(s) shall be provided to the City of Eastvale Planning Department prior to the issuance of a grading permit.	Prior to Issuance of Grading Permit	Planning Division	
31.	**TCR-2:** Archaeological Monitoring. At least 30 days prior to application for a grading permit and before any grading, excavation and/or ground disturbing activities on the site take place, the project applicant shall retain a Secretary of Interior Standards-qualified, Registered Professional Archaeologist (RPA), as an archaeological monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Ground-disturbing activities may include, but are not limited to, pavement removal, potholing or auguring, grubbing, weed abatement, boring, grading, excavation, drilling, and trenching. The on-site archaeological monitoring would end when the project site grading and excavation activities are completed, or when the monitor has indicated that	At least 30 days prior to application for a grading permit and before any grading, excavation, and/or ground-disturbing activities.	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	the site has a low potential for archeological resources. The Project Registered Professional archaeologist, in consultation with consulting Tribe(s) identified above, and the developer, shall develop an Archaeological Monitoring Plan to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site and provide the plan to the City for approval. Details in the plan shall include: A. Project grading and development scheduling. B. The development of a rotating or simultaneous schedule in coordination with the project applicant and the project archeologist for designated Native American tribal monitors from the consulting tribes during grading, excavation and ground-disturbing activities on the site. C. The safety requirements, duties, scope of work, and Native American tribal monitors' authority to stop and redirect grading activities in coordination with all Project archaeologists. D. The protocols and stipulations that the developer, tribes and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.			
32.	**TCR-3:** Treatment and Disposition of Cultural Resources. If tribal cultural resources are inadvertently discovered during ground disturbing activities for this project. The following procedures will be carried out for treatment and disposition of the discoveries: A. Temporary Curation and Storage. During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process.	Prior to Issuance of Grading Permit / During Ground Disturbing Activities	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	B. Treatment and Final Disposition. The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City Planning Department with documentation of same: i. Reburial on-site. Accommodate the process for on-site reburial of the discovered items with the consulting tribes. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed. ii. Curation. A curation agreement with an appropriate qualified repository within Riverside County that meets Federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists or researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation. iii. Disposition Dispute. If more than one tribe is involved with the project and cannot come to a consensus as to the disposition of cultural materials, they shall be curated at the Western Science Center. iv. Final Report. At the completion of grading, excavation and ground disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and tribal monitors within 60 days of completion of grading. This report shall: o Document the impacts to the known resources on the property;			

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	o Describe how each mitigation measure was fulfilled; o Document the type of cultural resources recovered and the disposition of such resources; o Provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting; o In a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. o All reports produced will be submitted to the City, Eastern Information Center and consulting tribes.			
33.	**TCR-4:** Discovery of Human Remains. If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains. The following procedures as set forth in the California Environmental Quality Act (CEQA), Section 15064.5(e), the California Public Resources Code (PRC) (Section 5097.98), and the State Health and Safety Code (Section 7050.5) shall then be undertaken: If human remains or funerary/sacred items are encountered, the archaeological monitor or tribal monitor will halt work within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, establish an Environmentally Sensitive Area (ESA) boundary to protect the find from impact, and immediately notify the City Archaeologist. Project work outside the established ESA may continue. In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the Riverside County Coroner shall be notified within 24 hours of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within two working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, s/he shall notify the NAHC in Sacramento within 48 hours. In	Prior to Issuance of Grading Permit / During Ground-Disturbing Activities	Planning Division / Archeological Monitor	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	accordance with California Public Resources Code, Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendant from the deceased Native American. The most likely descendant shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.			
34.	All existing overhead utility lines shall be undergrounded within the project frontage(s). Utility undergrounding shall extend to the nearest off-site power pole. Unless City Engineer approved, no new power poles shall be installed. A letter from the owners of the affected utilities shall be submitted to the City Engineer prior to approval of the Precise Grading/Paving Plan, informing the City that they have been notified of the City's utility undergrounding requirement and their intent to commence design of utility undergrounding plans. When available, the utility undergrounding plan shall be submitted to the City Engineer identifying all above ground facilities in the area of the project to be undergrounded.	Prior to Issuance of Grading Permit	Public Works Division	
35.	All transmission line poles on Archibald Avenue shall be relocated unless it is demonstrated to the satisfaction of the City Engineer that such poles can remain without impacting street improvements, vehicular circulation, and public safety. Distribution lines along Archibald which are attached to transmission line poles are allowed to remain. Distribution lines and communication lines along Chandler Street shall be undergrounded and all non-transmission poles along the property frontage shall be removed. However, any overhead distribution and communication lines shall be undergrounded across the intersection of Archibald Avenue and Chandler Street.	Prior to Issuance of Grading Permit	Public Works Division	
36.	Prior to the issuance of a Grading Permit, the Developer shall pay all necessary fees as determined by the City Engineer including, but not limited to Multiple Species Habitat Conservation Plan ("MSHCP") fees and grading permit fees.	Prior to Issuance of Grading Permit	Public Works Division	
37.	Grading in excess of 199 cubic yards will require performance security to be posted with the City	Prior to Issuance of Grading Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
38.	A permit for the hauling of material to and from the project site shall be submitted to the City for approval.	Prior to Issuance of Grading Permit	Public Works Division	
39.	Submit a California registered Civil Engineer prepared earthwork cut and fill certification letter to the Engineering Division for review. If the required earthwork in cubic yards is 50 CY or less, a Precise Grading/Paving Plan will not be required; however, the applicant is required to pull an NPDES/Public Works permit prior to issuance of a Building Permit for record purposes.	Prior to Issuance of Grading Permit	Public Works Division	
40.	Development of the site is subject to the requirements of the National Pollution Discharge Elimination System ("NPDES") Permit for the City of Eastvale, under the Santa Ana Regional Water Quality Control Board, Board Order No. R8-2010-0036. Pursuant to the NPDES Permit, the developer shall ensure development of the site incorporates post-construction Best Management Practices ("BMPs") in accordance with the Model Water Quality Management Plan ("WQMP") approved for use for the Santa Ana River Watershed. The developer is advised that applicable Site Design BMPs will be required to be incorporated into the final site design, pursuant to a site specific WQMP submitted to the City Engineer for review and approval. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading/Paving Plan.	Prior to Issuance of Grading Permit	Public Works Division	
41.	Prior to commencing with any grading, the required erosion and dust control measures shall be in place. In addition, the following shall be included if not already identified: a. 6 foot high tan colored perimeter screened fencing b. Contractor information signage including contact information along the street frontage. c. Post dust control signage with the following verbiage: "Project Name, WDID No., IF YOU SEE DUST COMING FROM THIS PROJECT CALL: NAME (XXX) XXX-XXX, If you do not receive a response, please call the AQMD at 1-800-CUT-SMOG/1-800-228-7664"	Prior to Issuance of Grading Permit	Public Works Division	
42.	A Notice of Intent ("NOI") to comply with the California General Construction Stormwater Permit is required via the California Regional Water	Prior to Issuance of Grading Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Quality Control Board online Stormwater Multiple Application and Report Tracking System ("SMARTS"). A copy of the executed letter issuing a Waste Discharge Identification ("WDID") number shall be provided to the City Engineer. The Construction General Permit requires the Developer's contractor to prepare and maintain a Storm Water Pollution Prevention Plan ("SWPPP"). The SWPPP requires all appropriate measures be implemented to prevent erosion and water pollution during construction.			
43.	A California registered Geotechnical Engineer prepared Geotechnical/Soils Report shall be required for and incorporated as an integral part of the grading/paving plan for the proposed development. A copy of the Geotechnical/Soils Report shall be submitted to the Engineering Division with the first submittal of the Precise Grading/Paving Plan.	Prior to Issuance of Grading Permit	Public Works Division	
44.	All stormwater runoff passing through the site shall be accepted and conveyed across the property in a manner acceptable to the City Engineer. All on-site City Engineer approved retention or other facilities are required to contain the increase stormwater runoff generated from the proposed development. Provide a hydrology study to determine the volume of increased stormwater runoff due to development of the site, and to determine required stormwater runoff mitigation measures for the proposed development. The City Engineer must approve the final retention basin sizing and other stormwater runoff mitigation measures determined upon review and approval of the hydrology and may require redesign or changes to site configuration or layout consistent with the findings of the final hydrology study. The existing "pre-developed" condition compared to the proposed "developed" condition shall be used to calculate the volume of increased stormwater runoff to retain on-site under the 100-year frequency storm.	Prior to Issuance of Grading Permit	Public Works Division	
45.	Direct release of on-site nuisance water or stormwater runoff shall not be permitted to the adjacent public streets. Provisions for the interception of nuisance water from entering adjacent public streets from the project site shall be provided through the use of a minor storm drain system that collects and conveys nuisance water to landscape or parkway areas, and in only a stormwater runoff condition, pass runoff directly to the streets through parkway or under sidewalk drains.	Prior to Issuance of Grading Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
46.	The Developer shall connect to the JCSD sewer system and apply for a sewer connection account with JCSD. The project applicant, developer, or successor in interest shall provide written verification that the JCSD can and will provide sanitary sewer service to the project.	Prior to Issuance of Grading Permit	Public Works Division	
47.	The Developer shall submit sewer improvement plans prepared by a California registered Civil Engineer to the JCSD/Public Works Division. The plans shall be approved by the JCSD/City Engineer prior to issuance of any building permits.	Prior to Issuance of Grading Permit	Public Works Division	
48.	The Developer shall submit street improvement plans prepared by a California registered Civil Engineer to the Public Works Division for review and approval. Unless otherwise approved, the street improvement plans shall be approved concurrently with any street light, landscape and irrigation, and traffic signal plans.	Prior to Issuance of Grading Permit	Public Works Division	
49.	The Developer shall submit traffic striping and signage plans prepared by a California registered Civil Engineer, for review and approval by the City Engineer. All required traffic striping and signage improvements shall be completed concurrently with required street improvements, to the satisfaction of the City Engineer, and prior to issuance of a Building Permit.	Prior to Issuance of Grading Permit	Public Works Division	
50.	An accessible pedestrian path of travel shall be provided throughout the site, as required by applicable state and federal laws.	Prior to Issuance of Grading Permit	Planning and Public Works Division	
51.	The sewer lines shall require connections to occur at a manhole and no direct lateral connections to the mainlines are allowed.	Prior to Issuance of Grading Permit	Public Works Division	
52.	The applicant must provide the District with fire flow requirements from the Fire Department to determine the adequacy of the existing water system.	Prior to Issuance of Grading Permit	Public Works Division	
53.	The Applicant shall submit a Water Quality Management Plan identifying site specific Best Management Practices (“BMPs”) in accordance with the Model Water Quality Management Plan (“WQMP”) approved for use for the Santa Ana River Watershed. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading Plan. A WQMP Maintenance Agreement shall be required, obligating the property owner(s) to	Prior to Issuance of Grading Permit	Public Works Division	

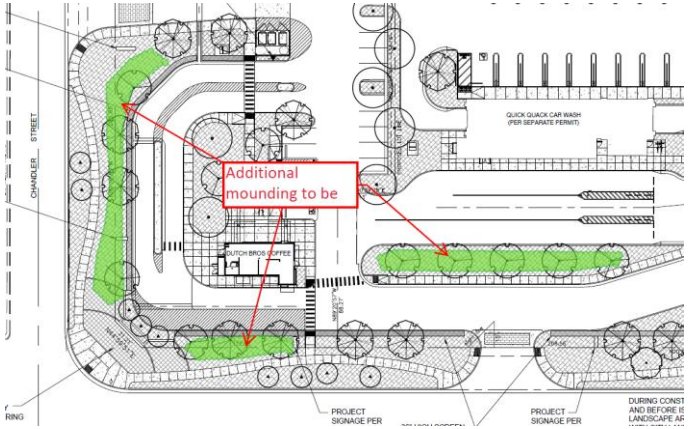
	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	appropriate operation and maintenance obligations of on-site BMPs constructed pursuant to the approved WQMP. The WQMP and Maintenance Agreement shall be approved prior to issuance of a building permit, unless otherwise allowed by the City Engineer.			
Prior to Issuance of Encroachment Permit				
54.	An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, Chandler Street Channel. If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.	Prior to Issuance of Encroachment Permit	Riverside County Flood Control	
55.	A City of Eastvale Encroachment Permit is required for any improvements within the public right-of-way.	Prior to Issuance of Encroachment Permit/On-going	Public Works Division	
56.	The minimum pavement section for all on-site pavements shall be 3 inches asphalt concrete pavement over 6 inches crushed aggregate base with a minimum subgrade of 24 inches at 95% relative compaction, or equal. The pavement section shall be determined using appropriate Traffic Index (“TI”) accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
57.	Traffic Control Plan prepared by a California registered Civil Engineer or Traffic Engineer shall be submitted to the City Engineer for review and approval.	Prior to Issuance of Encroachment Permit	Public Works	
58.	Transportation Mitigation Measure 1 (TRA-1) - Traffic Management Plan. Prior to the initiation of construction, the project applicant shall prepare a Traffic Management Plan (TMP) for approval by the City of Eastvale Traffic Engineer. The TMP shall comply with state standards set forth in the California Manual of Uniform Traffic Control Devices and include measures such as construction signage, limitations on timing for lane closures to avoid	Prior to Issuance of Encroachment Permit	Public Works	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	peak hours, temporary striping plans, and the need for a construction flag-person to direct traffic during heavy equipment use. The TMP shall specify that one direction of travel in each direction must always be maintained for Chandler Street throughout project construction. The TMP shall be incorporated into project specifications for verification prior to final plan approval.			
Prior to Issuance of Building Permit				
59.	**GHG-1:** The project shall incorporate the following California Air Pollution Control Officers Association-based reduction measures and regulatory compliance: · Utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen Standards. · Implement recycling programs that reduce waste to landfills by a minimum of 75 percent (per AB 341). · Incorporate the following land use and site enhancement reduction measures: LUT-1 Increase Density, LUT-4 Improve Destination Accessibility, LUT-5 Increase Transit Accessibility, and SDT-1 Improve Pedestrian Network.	Prior to Issuance of Building Permit/ Construction	Planning Division	
60.	**GHG-2:** The project shall incorporate the following design features: · The project applicant shall require that all faucets, toilets, and showers installed in the proposed structures utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen standards. · The project applicant shall require recycling programs that reduce waste to landfills by a minimum 75 percent per AB 341. · The project applicant shall provide sidewalks on-site and connecting off-site.	Prior to Issuance of Building Permit/ Construction	Planning Division	
61.	**NOI-1:** The construction contractor(s) shall place all stationary construction equipment so that emitted noise is directed away from the noise-sensitive receptors nearest the project site.	Prior to Issuance of Building Permit/ Construction	Building Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
62.	**NOI-2:** The construction contractor(s) shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May).	Prior to Issuance of Building Permit/ Construction	Building Division	
63.	**NOI-3:** The contractor shall install temporary construction noise barriers/blankets along the western boundary. The barrier/blankets shall be solid with no cracks or holes and shall also reach to the ground.	Prior to Issuance of Building Permit/ Construction	Building Division	
64.	**NOI-4:** During all project construction phases on-site, construction contractors shall equip all construction equipment, fixed or mobile, with either properly operating and maintained mufflers or enclosures/acoustical tents (as appropriate) that achieve at least 12 dB reduction from applicable noise level specifications.	Prior to Issuance of Building Permit/ Construction	Building Division	
65.	**NOI-5:** The contractor shall restrict the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary.	Prior to Issuance of Building Permit/ Construction	Building Division	
66.	**All construction shall comply with the most recently adopted City and State building codes:** • **2022 California Building Code** • **2022 California Residential Code** • **2022 California Electrical Code** • **2022 California Mechanical Code** • **2022 California Plumbing Code** • **2022 California Fire Code** • **2022 California Green Code**	Prior to Issuance of Building Permit	Building Division	
67.	**Special Inspections – As indicated by California Building Code Section 1704, the owner shall employ one or more special inspectors who shall provide special inspections when required by CBC Section 1704. Please contact the Building Division at the time of plan submittal to obtain an application for special inspections.**	Prior to Issuance of Building Permit	Building Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
68.	**The Title Sheet of the plans shall include:** • **Occupancy Group** • **Occupant Load** • **Description of use** • **Type of Construction** • **Height of Building** • **Floor area of building(s) and/or occupancy group(s)**	Prior to Issuance of Building Permit	Building Division	
69.	**School impact fees shall be paid prior to permit issuance.**	Prior to Issuance of Building Permit	Building Division	
70.	**Dimensioned building setbacks and property lines, street centerlines, and between buildings or other structures shall be designed on the plot plan.**	Prior to Issuance of Building Permit	Building Division	
71.	**All property lines and easements must be shown on the plot plan. A statement that such lines and easements are shown is required.**	Prior to Issuance of Building Permit	Building Division	
72.	**The project design will conform with energy conservation measures articulated in Title 24 of the California Code of Regulations and address measures to reduce energy consumption such as flow restrictors for toilets, low consumptions light fixtures, and insulation, and shall use to the extent feasible drought landscaping.**	Prior to Issuance of Building Permit	Building Division	
73.	**A design professional will be required at the time of construction drawings, to prepare plans for proposed improvements per the Business and Professions Code.**	Prior to Issuance of Building Permit	Building Division	
74.	**Public and private site improvements shall be designed in accordance with the Americans with Disabilities Act and Chapter 11 of the California Building Code. The site plan shall include a site accessibility plan identifying exterior routes of travel and detailing running slope, cross slope, width, pedestrian ramp, curb ramps, handrails, signage, and truncated domes. Path of travel shall be provided from the public right of way and accessible parking to the building. The design professional shall ensure that the site accessibility plan is in compliance with the latest Federal and State regulations.**	Prior to Issuance of Building Permit	Building Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
75.	**All projects including food service or public pools and/or spas shall be checked and approved by the County Health Department as part of the building department plan review process.**	Prior to Issuance of Building Permit	Building Division	
76.	The developer is responsible for requesting from the Planning Division any addresses needed for any building(s) and/or any electrical/water single/dual irrigation meter pedestal(s). An address map shall be prepared and submitted by the applicant for review and approval by the Planning Division.	Prior to Issuance of Building Permit	Planning and Building Division	
77.	All drive-thru isles adjacent to the public right-of-way or ingress and egress points of vehicular access must include Planning Division approved screening along the perimeter.	Prior to Issuance of Building Permit	Planning and Public Works Division	
78.	A revised (site plan, floor plan, and building elevations) which incorporate(s) the Conditions of Approval listed herein shall be submitted to the Planning Division prior to submittal for building and/or grading plan check.	Prior to Issuance of Building Permit	Planning Division	
79.	The project shall incorporate fully defined architecture on all facades facing the public right of way including windows, doors and other architectural details.	Prior to Issuance of Building Permit	Planning Division	
80.	Construction and architectural detailing shall be in substantial conformance with the approved plans, including but not necessarily limited to elevation drawings and material/colors sample board submitted as a part of this application and as approved by the Planning Commission, except that any modification shall be subject to the discretion of the Community Development Director upon finding that any changes are comparable in substance and quality to the original approval.	Prior to Issuance of Building Permit	Planning Division	
81.	Elevations shall be enhanced along building frontages facing Archibald Avenue to the satisfaction of the Community Development Director. Applicant to add architectural interest to the building visible to the public right-of-way.	Prior to issuance of Building Permit	Planning Division	



Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
82.	Site Plan and elevations shall be revised to show decorative lighting of the pedestrian walkways, entryways, and exterior doors	Prior to Issuance of Building Permit	Planning Division	
83.	There shall be no roof-mounted equipment extending above the mansard roof or parapet wall of the building.	Prior to Issuance of Building Permit	Planning Division	
84.	Trash receptacles shall be provided nearby customer entrances/exits to buildings for all commercial developments.	Prior to Issuance of Building Permit	Planning Division	
85.	Elevations for trash enclosure shall be provided prior to issuance of building permit. Trash enclosures shall be covered and shall be architecturally consistent with the proposed development. Trash enclosure elevations shall be reviewed and approved by the Planning Division.	Prior to Issuance of Building Permit	Planning Division	
86.	Any proposed signage must be reviewed and approved by the Planning Division and must comply with the City's Sign Ordinance.	Prior to Issuance of Building Permit	Planning Division	
87.	Any future monumentation into the development shall be subject to review and approval by the Community Development Director and City Engineer.	Prior to Issuance of Building Permit	Planning & Public Works Divisions	
88.	All required parking area spaces shall meet the minimum dimensions of the Zoning Code Section 120.05.060.	Prior to Issuance of Building Permit	Planning Division	
89.	Prior to the issuance of a building permit for each building, the final site plan shall indicate the location of bicycle parking installation using Class I lockers or Class II racks in an enclosed lockable area, as follows for each building (C-Store and Restaurants): • Minimum of Two (2) bicycle parking spaces for visitors and two (2) bicycle parking spaces for employees. • The location of bicycle parking is subject to approval by the Planning Department. Applicant shall submit a design alternative to the loop-wave and ribbon rack design. Final design of bike parking shall be approved by the Planning Division prior to issuance of building permit.	Prior to Issuance of Building Permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
90.	Prior to the issuance of a building permit, the applicant shall submit a photometric lighting plan for review and approval to ensure that proper outdoor lighting, pursuant to City of Eastvale Municipal Code Section 120.05.050 and subject to Riverside County Sheriff's review and approval, shall be provided. In order to minimize light trespass on abutting residential property, illumination measured at the nearest residential structure or rear yard setback line shall not exceed the moon's potential ambient illumination of one-tenth footcandle through use of light shielding and through additional landscaping.	Prior to Issuance of Building Permit	Planning, Building, Public Works, and Sheriff	
91.	**Prior to the issuance of a building permit, the applicant shall submit a set of development plans to the Eastvale Sheriff's Department for review and approval to ensure compliance with the following**: PROPERTY GATES AND KNOX BOX ENTRY a) The installation of the Knox Rapid Entry System if property gates are installed. This system permits law enforcement, fire, and first responders to obtain independent access to the property in the event of an emergency. The necessary order forms for the Knox Company may be obtained by contacting the Jurupa Valley Sheriff's Station Crime Prevention Programs Coordinator at (951) 955-9225. PROPERTY SIGN b) Proper display of "No Trespassing or Loitering" signs prominently around business and any exterior perimeter fencing and adhere to City of Eastvale Municipal Code Section 120.05.070, Signs. ADDRESS NUMBERING: c) Prominently displayed address numbering in size and contrasting in color from the building façade or on a fixed sign near the street/main entrances. The numbers need to be visible from the street and interior property sides for any approaching emergency vehicles. No obstructions should limit their visibility (i.e., landscaping). SECURITY PLAN Adequate crime prevention measures, such as security cameras, shall be installed to assist with identifying any suspect(s) of any potential future	Prior to issuance of building permit	Planning, Building and Sheriff Departments	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	vandalism or theft attempts. Due to the high possibility of theft/vandalism attempts during construction, additional security measures should be added during that time frame of the proposed construction. All exterior access points should be properly secured and illuminated to make clearly visible any person on or about the premises during the hours of darkness.			
92.	A minimum of one (1) Electric Vehicle charging station per parcel shall be installed.	Prior to issuance of building permit	Planning Division	
93.	Landscape plans shall be submitted to the Planning Division for review and approval. The plan shall be certified by a licensed landscape architect as required, taking into account approved preliminary landscape plan (if any), adopted plant palette guides, applicable scenic and specific plan requirements, and water conservation measures. **This submittal shall be made to the Planning Division with the appropriate Application and Fee.**	Prior to Issuance of Building Permit	Planning Division	
94.	The above-described plans shall be in substantial conformance with the conceptual plans as requested for modification and as approved by the City Landscape Architect, City Administrative Staff, Planning Commission and/or City Council. Notes, details, and specifications shall be included.	Prior to issuance of building permit	Planning Division	
95.	Prior to the issuance of a building permit, final landscape plans shall be reviewed and approved by the Planning Division. Landscaping shall be installed and verified prior to issuance of certificate of occupancy.	Plans must be reviewed and approved prior to issuance of building permit. Landscaping shall be installed and verified prior to certificate of occupancy	Planning Division	
96.	All landscape and irrigation plans shall be consistent with the City of Eastvale Zoning Code, with Section 5.4 Landscaping General Provisions, the City of Eastvale Design Standards and Guidelines, and the City of Eastvale Chapter 14.24 Water Efficient Landscape Regulations, and other applicable codes and guides.	Prior to Issuance of Building Permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
97.	Landscape plans shall be drawn at a scale of 20 feet equal to 1 foot or larger.	Prior to Issuance of Building Permit	Planning Division	
98.	All planting areas shall be a minimum of 5 feet wide. Tree well planting areas shall contain 25 square feet or more.	Prior to Issuance of Building Permit	Planning Division	
99.	The drive through lanes shall be appropriately screened from the Public ROW using 15-gallon shrubs spaced at between 3 and 4 feet on center.	Prior to Issuance of Building Permit	Planning Division	
100.	The trash enclosure shall include landscape screening on all 3 enclosure walls.	Prior to Issuance of Building Permit	Planning Division	
101.	Street trees shall be installed from 24-inch box container at 30 feet on center along Archibald Avenue and Chandler Street.	Prior to Issuance of Building Permit	Planning Division	
102.	Mature specimen trees in 36-inch or 48-inch boxes shall be supplied in sufficient quantity to provide a prominent project entry statement at the corner of Chandler Street and Archibald Avenue, at entry drives from the streets and other major focal areas.	Prior to Issuance of Building Permit	Planning Division	
103.	Shrubs shall be installed from a minimum of 5-gallon containers unless approved by the City of Eastvale Landscape Architect for appropriateness. Shrubs and ground covers shall be designed for installation at reasonable spacing to allow for growth and relative maturity.	Prior to Issuance of Building Permit	Planning Division	
104.	The applicant shall install and maintain dense evergreen screen hedge to provide sufficient privacy for the immediate adjacent properties to the west. The size of plants utilized and spacing shall be at the recommendation and approval of the Landscape Architect and Community Development Director and shall be maintained at 8-feet tall. The species of landscape selected shall be of a fast-growing variety such that they will attain effective screening within a 1-2 year timeframe to the satisfaction of the Community Development Director.	Prior to Issuance of Building Permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
105.	Above ground utility locations shall be located in shrub areas and screened from public view. Transformers shall be screened with a minimum of 3 foot wide planting area located outside the SCE setback to the transformer.	Prior to Issuance of Building Permit	Planning Division	
106.	No light fixture, electric transformer, fire detector check or fire hydrant shall be designed for any location in a planting area, which would make it necessary to eliminate a tree. All overhead light fixtures and utilities shall be identified on the site plan.	Prior to Issuance of Building Permit	Planning Division	
107.	All ground covers shall be installed from living plant materials. Spacing shall be such to allow plants grow to maturity in 2 years from the time of installation.	Prior to Issuance of Building Permit	Planning Division	
108.	No plants with thorns, those that would freeze, or those which do not thrive in the local environment may be used, including Lophostemon, Bougainvillea, and Phormium.	Prior to Issuance of Building Permit	Planning Division	
109.	No plant container shall be installed within 18 inches of a sidewalk, curb, patio, walkway, or equal, unless approved by the City Landscape Architect for appropriateness.	Prior to Issuance of Building Permit	Planning Division	
110.	Plant materials within planting areas shall be hydro-zoned using WUCOLS IV, Region 4 as a general guide.	Prior to Issuance of Building Permit	Planning Division	
111.	Root barriers shall be installed for all trees located within 5 feet of paving in 10 to 12 foot lengths. Trees located within 10 feet of curbs or city sidewalks and within planted parkways shall utilize 20 lineal feet of root barrier.	Prior to Issuance of Building Permit	Planning Division	
112.	A weather-based smart irrigation controller shall be installed. A rain shut off or weather station device shall be connected with the irrigation controller.	Prior to Issuance of Building Permit	Planning Division	
113.	Parking lot lighting and/or water quality design shall not prevent tree or shrub placement (used for shading) nor reduce overall tree counts per the preliminary plans. The addition of tree diamonds or other solutions for maintain tree counts presented will be required if space or conflicts arise during design development.	Prior to Issuance of Building Permit	Planning Division	
114.	Applicant shall retain the stated landscape coverage percentage throughout the design development process and final installation/project completion	Prior to Issuance of Building Permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
115.	Applicant shall install temporary curb and planter continuing screen at northwest corner of the property that shall remain in place until prospective adjacent phase is completed.	Prior to Issuance of Building Permit	Planning Division	
116.	Applicant shall screen all utilities and mechanical infrastructure in planter areas with increased sized shrub material as required by the Community Development Director or Landscape Architect.	Prior to Issuance of Building Permit	Planning Division	
117.	Landscaping shall be perpetually maintained in a healthy and thriving manner.	Prior to Issuance of Building Permit	Planning Division	
118.	Applicant shall add mounding to planter areas that will screen vehicular stacking/queuing lanes that front Chandler Avenue and Archibald Avenue. Exhibit included below:  	Prior to Issuance of Building Permit	Planning Division	
119.	Applicant to increase density of tree planting along easterly planter area (abutting drive-through queuing area) to the satisfaction of the Community Development Direct and Landscape Architect.	Prior to Issuance of Building Permit	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
120.	The City Landscape Architect shall be contacted to meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations utilizing humate, mycorrhizae, and organic fertilizer shall be presented prior to the meeting. No landscaping shall occur prior to the meeting.	Prior to Initiation of Landscape Construction	Planning Division	
121.	The City Landscape Architect shall be contacted to meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations utilizing humate, mycorrhizae, and organic fertilizer shall be presented prior to the meeting. No landscaping shall occur prior to the meeting.	Prior to Initiation of Landscape Construction	Planning Division	
122.	Submit photometric plan of street lighting. All lights shall be Edison LS-3 tariff and utilize General Electric Evolve LED luminaires per City Specifications. The Developer shall be responsible for applying with Southern California Edison (“SCE”) for all appropriate service points and electrical meters early in the process to avoid delays. The Developer must pay for the electrical service of new meter pedestals installed until such time the improvements have been accepted and the underlying property is annexed into Community Facilities District ("CFD") or Landscaping Maintenance District ("LMD").	Prior to Issuance of Building Permit	Public Works Division	
123.	The public street improvements outlined in these Conditions of Approval are intended to convey to the developer an accurate scope of required improvements; however, the City Engineer reserves the right to require reasonable additional improvements as may be determined in the course of the review and approval of street improvement plans required herein.	Prior to Issuance of Building Permit	Public Works Division	
124.	The Precise Grading/Paving Plan shall be City Engineer approved prior to issuance of a building permit.	Prior to Issuance of Building Permit	Public Works Division	
125.	A WQMP and Stormwater BMP Transfer, Access and Maintenance Agreement shall be required, obligating the property owner(s) to appropriate operation and maintenance obligations of on-site BMPs constructed pursuant to the approved WQMP. The WQMP and Stormwater BMP Transfer, Access and Maintenance Agreement shall be approved prior to issuance of a Building Permit and shall be recorded by the Developer at the San Bernardino County	Prior to Issuance of Building Permit	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Recorder's Office with a recorded copy provided to the Public Works Division prior to issuance of a Certificate of Occupancy.			
126.	Provide pad elevation certifications for all building pads in conformance with the approved Precise Grading Plan to the Public Works Division prior to construction of any building foundation.	Prior to Issuance of Building Permit	Public Works Division	
127.	The Developer is advised that domestic water service is provided by JCSD. The developer shall be responsible for coordinating with JCSD and complying with all requirements for establishing domestic water service to the property.	Prior to Issuance of Building Permit	Public Works Division	
128.	Prior to issuance of a building permit, the developer is required to pay Traffic Impact Analysis Project Fair Share Contribution fees.	Prior to Issuance of Building Permit	Public Works Division	
129.	Prior to issuance of building permit, installation of conduit fiber optic along property frontages shall be required.	Prior to Issuance of Building Permit	Public Works Division	
130.	The Applicant shall pay all applicable development impact fees in accordance with the City of Eastvale fee ordinance in effect at the time the fees are due, prior to the issuance of any building permits related to the Project.	Prior to Issuance of Building Permit	Building and Public Works Division	
131.	Applicant shall submit an application to ALUC and obtain an official consistency determination on the project.	Prior to Issuance of Building Permit	Planning Division	
132.	A water system (hydrants - commercial with one 4" outlet and two 2-1/2" outlets) capable of delivering the required fire flow shall be provided in accordance with Appendix B and C of the California Fire Code shall be provided. A reduction of 50% is permitted in buildings equipped with fire sprinklers in accordance with City Municipal Code. On-site water supply must be available before any combustible material is placed on the construction site. No portion of a building can be more than 400 feet from a hydrant.	Prior to Issuance of Building Permit	Fire Department	
133.	Prior to building plan approval and construction, applicant/developer shall route a copy of the Water Improvement Plans (offsite) to the Fire Department for review of private hydrant placement only. Water Improvement Plans (offsite) will not be reviewed or approved for the	Prior to Issuance of Building Permit	Fire Department	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	installation of onsite Private Fire Service Mains, private hydrants, or fire sprinkler system supplies. The installing contractor shall submit a separate set of working plans designed in accordance with NFPA 13 and NFPA 24 to the Fire Department for a permit to install private water mains.			
134.	Fire apparatus access roads shall be at least 24 feet wide and comply with Riverside County Fire Department Standard number 06-05. Access roads shall be located outside of truck docks and between 15 and 40 feet from the building. Access roads shall not have a grade more than 16% and shall have an unobstructed vertical clearance not less than 13 feet and 6 inches. Access lanes will be designed to withstand the weight of 75,000 thousand pounds over 2 axles and shall be all-weather surface capable. Fire apparatus access roads shall have a turning radius capable of accommodating fire apparatus.	Prior to Issuance of Building Permit	Fire Department	
135.	Parking is not permitted on fire apparatus access roads that are less than 28 feet in width. Parking on one side is permitted on a road that is at least 28 feet but less than 36 feet in width. Parking on two sides is permitted on a road that is 36 feet or more in width.	Prior to Issuance of Building Permit	Fire Department	
136.	Fire apparatus access roads shall be constructed with a surface to provide all-weather driving capabilities during construction.	Prior to Issuance of Building Permit	Fire Department	
137.	Dead-end fire apparatus access roads more than 150 feet in length shall be provided with an approved area for turning around fire apparatus.	Prior to Issuance of Building Permit	Fire Department	
138.	Driveway loops, fire apparatus access lanes and entrance curb radius should be designed to adequately allow access of emergency fire vehicles. The applicant or developer shall include in the building plans the required fire lanes and include the appropriate lane printing and/or signs.	Prior to Issuance of Building Permit	Fire Department	
139.	Buildings more than 3,600 square feet shall be equipped with a fire sprinkler system. The PIV and FDC shall be located to the front, within 100 feet of a	Prior to Issuance of Building Permit	Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	hydrant. FDC shall be located so that fire apparatus and hose connected to supply the system will not obstruct roadway access for other fire apparatus. FDCs are not allowed in the rear of any building.			
140.	A fire sprinkler monitoring system is required in all sprinklered buildings.	Prior to Issuance of Building Permit	Fire Department	
141.	A manual and automatic fire alarm system may be required, depending on the use and/or occupant load of the building.	Prior to Issuance of Building Permit	Fire Department	
142.	Commercial cooking equipment that produces grease-laden vapors shall be provided with a Type I hood and an automatic fire extinguishing system.	Prior to Issuance of Building Permit	Fire Department	
143.	An approved Fire Department access key lock box (minimum Knox 3200 series) shall be installed at the main entrance to any sprinklered building. Gate switches or padlocks shall be installed at each automatic or manual gate. Locations shall be shown on plans submitted for a building permit.	Prior to Issuance of Building Permit	Fire Department	
144.	New motorized gates shall be provided with means to be automatically opened remotely by emergency vehicles in accordance with Riverside County standards and policies. The system shall be compatible, but not limited to, the detection of the following manufacturers of emergency vehicle preemption: Federal Signal, Whelen, and Tomar. Upon installation of the system, compliance testing shall be completed by the Riverside County Fire Department. (RVC Amendment to CFC 503.6.1)	Prior to Issuance of Building Permit	Fire Department	
145.	The location of address numbers shall be indicated on the building plans. Street numbers shall be displayed in a prominent location on the street or fire apparatus access side of buildings. Numbers and letters shall be a minimum of 12” in height with a minimum stroke of .05 inch. Where access is by means of a private road and the building cannot be viewed from a public way, a monument, pole, or other sign shall be used to identify the structure	Prior to Issuance of Building Permit	Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	in accordance with Riverside County Standard 07-01. Address must be legible, of a contrasting color, and adequately illuminated to be visible from the street at all hours.			
146.	No hazardous materials shall be stored and/or used within the building which exceeds quantities listed in the California Fire Code, without first obtaining a permit.	Prior to Issuance of Building Permit	Fire Department	
147.	Exit signs, door hardware, and exit path marking shall be as required by the California Building Code.	Prior to Issuance of Building Permit	Fire Department	
148.	Fire sprinkler riser door shall be posted "FIRE RISER" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
149.	Electrical room door shall be posted "ELECTRICAL ROOM" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
150.	Fire alarm control panel door shall be posted "FACU" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
151.	Roof access door shall be posted "ROOF ACCESS" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
152.	Provide specific fire department conditions on plans for building permit submittal.	Prior to Issuance of Building Permit	Fire Department	
Prior to Issuance of Certificate of Occupancy				
153.	All parkway landscaping shall be guaranteed for a period of one (1) year from the date of the City Engineer acceptance. Any landscaping that fails during the one (1) year landscape maintenance period shall be replaced with similar plant material to the satisfaction of the City Engineer, and shall be subject to a subsequent one (1) year landscape maintenance period.	Prior to Issuance of Certificate of Occupancy	Planning and Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
154.	The development shall be annexed into all applicable City of Eastvale owned and administered Community Facilities Districts (CFDs) and/or Landscaping Maintenance Districts (LMDs) for On-Going maintenance of traffic signals, traffic signal synchronization, street lights, full capture systems for all storm drains, and landscape maintenance of raised landscaped median and public parkways, to the satisfaction of the City Engineer or otherwise form a district where one is not currently in place.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
155.	Upon City Engineer approval of any improvement plan, the improvement plan shall be provided to the City in digital format, consisting of a DWG (AutoCAD drawing file), DXF (AutoCAD ASCII drawing exchange file), and PDF (Adobe Acrobat) formats. Variation of the type and format of the digital data to be submitted to the City may be authorized, upon prior City Engineer approval.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
156.	Mira Loma Road and Bridge Benefit Assessment District Fee ("MLRBA"), Transportation Uniform Mitigation Fee ("TUMF"), Area Drainage Plan ("ADP") fee, and any other regional pass-through fees in effect at that time shall be paid prior to issuance of Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
157.	The Developer shall submit to the City Engineer for review and approval the Covenants, Conditions, and Restrictions ("CC&Rs") and/or a Property Owners Association document to maintain and operate common areas and/or facilities including, but not limited to, parking areas, private utilities, and water quality basins.	Prior to Issuance of Certificate of Occupancy	Public Works and Planning Division	
158.	Prior to issuance of a Certificate of Occupancy or final City approvals, demonstrate that all structural BMP's have been constructed and installed in conformance with approved plans and specifications, and as identified in the approved WQMP.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
159.	The Developer shall provide certification from JCSD Water Services demonstrating that all water and/or wastewater service accounts have been documented, prior to the issuance of a Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
160.	All damaged, destroyed, or modified pavement legends, traffic control devices, signing, striping, and street lights, associated with the proposed development shall be replaced.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
161.	Remove existing, and construct new pavement with a minimum pavement section of 5 inches asphalt concrete pavement over 6 inches crushed aggregate base with a minimum subgrade of 24 inches at 95% relative compaction, or equal, to the existing right edge line along the entire street frontage in accordance with City of Eastvale Standard Drawings. The pavement section shall be determined using appropriate Traffic Index ("TI") accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval. Alternatively, depending on the existing street condition and as approved by the City Engineer, a street overlay, slurry seal, or other repair can be performed to preserve recent pavement improvements.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
162.	Construct an Americans with Disabilities Act ("ADA") compliant sidewalk behind curb along the entire frontage and interior streets in accordance with the General Plan, any Specific Plan, the City of Eastvale Standard Drawings, subject to the approval of the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
163.	Construct City Engineer approved commercial driveway approaches in accordance with City of Eastvale Standard Drawings. The driveway approach shall be constructed so the top of "X" is 5 feet from the property line. Nothing shall be constructed or planted in the corner cut-off area which does or will exceed 30 inches in height required to maintain an appropriate corner sight distance.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
164.	Construct a curb ramp meeting current California State Accessibility standard along both sides of the commercial driveway approaches. The developer shall ensure that an appropriate path of travel, meeting ADA guidelines, is provided across the driveway, and shall adjust the location of the access ramps, if necessary, to meet ADA guidelines, subject to the approval of the City Engineer. If necessary, additional pedestrian and sidewalk easements shall be provided on-site to construct a path of travel meeting ADA guidelines.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
165.	Grind and overlay half ROW width of Archibald Avenue and Chandler Street within the project frontages up to the existing median.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
166.	Install Class II bicycle lanes along Archibald Avenue to connect to the existing Class II bicycle lanes to the north.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
167.	Install Pan-Tilt-Zoom ("PTZ") cameras at each intersection to tie into the existing Citywide system to monitor traffic.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
168.	Install License Plate Reader ("LPR") cameras to tie into the existing Citywide system at each traffic signal servicing the property.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
169.	Upgrade traffic signals within 100 feet of the property to provide signal synchronization.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
170.	Applicant, at its sole option and cost, may install a traffic signal at the intersection of Archibald Avenue and Fairchild Drive, pending signal warrant analysis approved by the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
171.	The Developer shall be responsible for coordinating with Riverside Transit Authority ("RTA") regarding the location of existing, proposed, and future bus stops along the property frontage of all public streets. The Developer shall design street, bus pad, and sidewalk improvements in accordance with the latest RTA bus stop guidelines and in compliance with current accessibility standards pursuant to the Americans with Disabilities Act ("ADA") requirements. The Developer shall design all bus stops to accommodate the RTA Shelters. The Developer shall submit to Public Works verification from RTA acknowledging concurrence with the existing, proposed, and future bus stop improvements in conformance with the Premium Shelter design guidelines.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
172.	The Developer shall employ staff to assist with management of the drive through queue during peak periods. Specifically, staff should periodically walk along the drive through lanes encouraging vehicles to pull forward and maximize efficiently of the available storage and temporarily close drive-through access when drive-through queue exceeds drive-through queueing capacity. A Traffic Management Plan for operations and special events shall be submitted to the Public Works and Planning Divisions for review and approval and be made a part of each businesses' Standard Operating Procedures.	Prior to Issuance of Certificate of Occupancy	Planning & Public Works Divisions	
173.	Grand openings for the Quick Quack and Quick Quack Car Wash tenants shall be held a minimum of one week apart from each other.	Prior to Issuance of Certificate of Occupancy	Planning & Public Works Divisions	
174.	The original improvement plans prepared for the proposed development and approved by the City Engineer (if required) shall be documented with record drawing "as-built" information and returned to the Public Works Division prior to issuance of a final certificate of occupancy. Any modifications or changes to approved improvement plans shall be submitted to the City Engineer for approval prior to construction.	Prior to Certificate of Occupancy	Public Works Division	
175.	All conditions of approval for TPM No. 37653 shall be completed to the satisfaction of the City Engineer prior to the issuance of a Certificate of Occupancy.	Prior to Certificate of Occupancy	Public Works Division	
176.	All sewer mains constructed by the applicant and to become part of the public sewer system shall be pressure tested and digitally video recorded by the City's wastewater system operator JSCD prior to acceptance of the sewer system for maintenance by the City. The developer shall be responsible for all costs associated with testing and inspection services. Any defects of the sewer main shall be removed, replaced, or repaired to the satisfaction of the City Engineer prior to acceptance.	Prior to Certificate of Occupancy	Public Works Division	
177.	The Applicant shall provide certification from JCSD Water Services demonstrating that all water and/or wastewater service accounts have been documented, prior to the issuance of a Certificate of Occupancy.	Prior to Certificate of Occupancy	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
178.	A City business registration shall be required prior to issuance of a Certificate of Occupancy or final permits.	Prior to issuance of certificate of occupancy	Planning Division	
179.	The development shall conform to all other applicable State and local laws and ordinances and the applicant shall obtain all necessary approvals and operating permits from all State and local agencies prior to the issuance of a Certificate of Occupancy or final permits.	Prior to issuance of certificate of occupancy	Planning Division	
180.	Any missing or damaged landscaping shall be replanted to the satisfaction of the Community Development Director and Planning Division.	Prior to issuance of certificate of occupancy / Ongoing	Planning Division	
181.	Prior to the final landscape inspection a water audit shall be conducted by an independent water auditor and WELO documentation shall be provided to the City Planning Department and City Landscape Architect via email.	Prior to issuance of certificate of occupancy	Planning Division	
182.	All required landscaping and irrigation systems shall be installed in a condition acceptable to the City. If the Project Landscape Architect has provided inspection of the landscaping, the Project Landscape Architect shall provide the City with a Certificate of Compliance stating that the landscaping was installed per the approved plans. The City will review the Certificate of Compliance and conduct inspections to ensure that the landscape installation is in compliance with the approved landscape plans.	Prior to issuance of certificate of occupancy	Planning Division	
On-Going/During Operations				
183.	Provide street sweeping services for onsite and offsite within project frontages weekly.	On-Going	Public Works Division	
184.	Remove all graffiti within 24 hours pre-construction, during construction, and after a Certificate of Occupancy is issued.	On-Going	Public Works Division	
185.	All street cuts for utilities shall be repaired in accordance with City Standard or as recommended; and any interim trench repairs shall consist of compacted backfill to the bottom of the pavement structural section followed by placement of standard base course material in accord by the City Engineer and	On-going	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	with the Standard Specifications for Public Work Construction ("Greenbook"). The base course material shall be placed the full height of the structural section to be flush with the existing pavement surface and provide a smooth pavement surface until permanent cap paving occurs using an acceptable surface course material.			
186.	In accordance with City's Moratorium policy to preserve newly paved streets, any and all street and/or trench cuts in newly paved streets will be prohibited or be subject to moratorium street repair standards as reference in Section 12.08.260 of the Eastvale Municipal Code.	On-going	Public Works Division	
187.	Any and all utility trenches or other excavations within existing asphalt concrete pavement of off-site streets resulting from the proposed development shall be backfilled and repaired in accordance with City of Eastvale Standard Drawings. The Developer shall be responsible for removing, grinding, paving and/or overlaying existing asphalt concrete pavement of off-site streets including pavement repairs in addition to pavement repairs made by utility companies for utilities installed for the benefit of the proposed development (i.e. Jurupa Community Services District, Southern California Edison, Southern California Gas Company, Time Warner, Verizon, etc.). Multiple excavations, trenches, and other street cuts within existing asphalt concrete pavement of off-site streets resulting from the proposed development may require complete grinding and asphalt concrete overlay of the affected off-site streets, at the discretion of the City Engineer. The pavement condition of the existing off-site streets shall be returned to a condition equal to or better than what existed prior to construction of the proposed development.	On-going	Public Works Division	
188.	Construction signing, lighting and barricading shall be provided during all phases of construction in accordance with City Standards and the direction of the City Engineer. As a minimum, all construction signing, lighting and barricading shall be in accordance with Part 6 "Temporary Traffic Control" of the latest California Manual on Uniform Traffic Control Devices, or subsequent editions in force at the time of construction.	On-Going	Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
189.	The applicant shall record appropriate easement(s) and agreement(s) for the construction and maintenance of water quality to meet the Storm Water Permit/Water Quality Management Plan Requirements.	On-Going	Planning and Public Works Division	
190.	All landscaped setbacks and planter areas shall be permanently maintained at the site and kept free of debris.	On-Going	Planning and CES Division	
191.	To regulate excess noise levels throughout various times of the day (day/nighttime) the operation shall not create any sound, or allow the creation of any sound on the subject property that causes the exterior sound level on any other occupied property to exceed the sound level standards set forth in Section 8.52.040 – "General Sound Level Standards" of the City of Eastvale Municipal Code.	On-Going	Planning and CES Division	
192.	There shall be no "amplified music" allowed that would disturb any adjacent business tenants or residential properties at any time. The carwash operator shall post signs throughout the property alerting customers of this regulation. Complaints of amplified music shall be verified by the Community Development Director, or their designee, and addressed accordingly. Continued violation of this condition shall be grounds for revocation of the conditional use permit.	On-Going	Planning Division	
193.	A notice from Riverside County Airport Land Use Commission noting the site's location near the Chino Airport shall be recorded (ALUC condition).	On-Going	Planning and Public Works Division	
194.	The project shall be developed in accordance with the approved Tentative Parcel Map and Major Development Review, including the approved site plan, architectural elevations, conceptual landscape plan, and interim and ultimate improvements on Chandler Ave. and Archibald Avenue. The applicant may request modifications or revisions to the approved project as provided in the Eastvale Zoning Code.	On-Going	Planning and Public Works Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
195.	A safety officer or designee may enter and inspect the site at any reasonable time without prior notice for the purpose of investigating an actual complaint or for a health and safety inspection.	On-Going	CES and Planning Division	
196.	Vehicle detailing and vacuum parking stalls must be maintained in clean and tidy conditions at all times. The applicant must also maintain the adjacent areas and keep them free of any waste generated by vehicle cleaning	On-Going	Planning Division	
197.	Trash receptacles shall be provided nearby vehicle detailing and vacuum parking stalls.	On-Going	Planning Division	
198.	Overhead canopies provided for vehicle detailing and vacuum parking stalls shall be maintained in good order, free from sun damage or fading.	On-Going	Planning Division	
199.	Landscaping and ground coverage shall be continually maintained as consistent with the approved landscape plan. Any request or changes which deviate from the approved plan shall require a minor development review.	On-Going	Planning Division	
200.	The District reviewed the water and sewer atlas maps to identify the nearest main lines for potential service connections. Water facilities consist of an existing 12-inch diameter water line on Chandler Street and an existing 21-inch diameter waterline on Archibald Avenue. The applicant must provide the District with fire flow requirements from the Fire Department to determine the adequacy of the existing water system.	On-Going	JCSD	
201.	Sewer service is available from an existing 21-inch diameter sewer line on Archibald Avenue. Gravity flow to the existing sewer line is contingent upon the final grading of the site, and sewer service is contingent upon the quantity and quality of wastewater generated by the project. The sewer line will require connections to occur at a manhole, and no direct lateral connections to the mainline are allowed.	On-Going	JCSD	
202.	The District is investigating the potential use of non-potable water for the project area and will require the developer to participate in the final adopted program for parks and greenbelt areas.	On-Going	JCSD	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
203.	The applicant will be required to contact Jurupa Community Services District to start the development processes for the project. The applicant must submit plans and fees for sewer and water services.	On-Going	JCSD	
Jurupa Community Services District				

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are required by the City, other local agencies, or state and federal agencies, and are not conditions of approval of the project.

1. The applicant shall obtain City approval for any modifications or revisions to the approval of this project. Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.

2. Submit a final parcel map and all supporting documents for review and approval to the satisfaction of the City Engineer and Public Works Department.

3. Applicants are responsible for all costs associated with off-site right-of-way acquisition, including any costs associated with the eminent domain process, if necessary.

4. Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN23-20020 – Conditional Use Permit to allow the establishment and operation of a triple lane drive-through for a carwash (Quick Quack) at the northwest corner of Chandler Ave. and Archibald Ave.
Assessor's Parcel Number: 144-130-004, -011, -012, and -013
Planning Commission Review Date: October 18, 2023

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. Project approval is not final until a signed copy of these conditions is filed with the City. Applicant Signature Date	Must be completed to finalize approval	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, from any and all claims, demands, law suits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative, or adjudicatory in nature), and alternative dispute resolutions procedures (including but not limited to arbitrations, mediations, and other such procedures) (collectively "Actions"), brought against the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul any action of, or any permit or approval issued by, the City and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the City), for or concerning the project, whether such Actions are brought under the California Environmental Quality Act, the Planning and Zoning Law, the Subdivisions Map Act, Code of Civil Procedure Section 1085 or 1094.5, or any other state, federal, or local statute, law, ordinance, rule, regulation, or any decision of a court of competent	On-Going	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	jurisdiction. It is expressly agreed that the City shall have the right to approve, which approval will not be unreasonably withheld, the legal counsel providing the City's defense, and that applicant shall reimburse City for any costs and expenses directly and necessarily incurred by the City in the course of the defense. City shall promptly notify the applicant of any Action brought and City shall cooperate with applicant in the defense of the Action.			
3.	Any approval shall not be final until and unless the applicant's deposit account with the Planning Division has a balance of at least **$2,000** at the time that the applicant signs these conditions of approval (per **Condition No. 1**) to cover staff time for follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to halt work if the deposit account is exhausted. Make check payable to the **City of Eastvale** and include **Project No. PLN23-20020** on the check.	On-Going	Planning Division	
4.	Applicant understands and agrees that failing to comply with all Conditions of Approval, may result in the Planning Commission or Community Development Director taking action, resulting in modification of the Conditions of Approval and/or suspension or revocation of any conditional use permit.	On-Going	Planning Division	
5.	Applicable mitigation measures included in the Addendum to the IS/MND shall be required for development of the proposed project and shall be incorporated herein by reference.	On-Going	Planning Divisions	
6.	Conditional Use Permit PLN23-20020 is granted contingent upon approval of PLN23-20018 (TPM 37653) and Major Development Review PLN23-20020. Failure to approve PLN23-20018 (TPM37653) and Major Development Review PLN23-20020 shall render any approval of Conditional Use Permit PLN23-20020 null and void.	On-Going	Planning Division	
7.	All applicable Major Development Review conditions of approval (PLN 23-20020) and Tentative Parcel Map 37653 (PLN23-20018) shall be incorporated herein by reference.	On-Going	Planning Division	
8.	PLN23-20020 is granted for a period of two years and shall become voide as of October 18, 2025, unless building permits have been issued and construction is	On-Going	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	commenced and diligently pursued towards completion, or a time extension is requested in writing prior to that date.			
Conditional Use Permit – Drive-Through Operation				
9.	Applicant understands and agrees that the operation of the drive-through shall not result in stacking of vehicles in such a manner that would cause obstruction to any access aisle or parking spaces for other tenants in the retail center, the main drive aisles for the retail center, and/or public streets/ROW (Chandler Ave. and Archibald Ave., drives, sidewalks, etc.). If the drive-through operation fails to comply with this condition of approval herein, the Community Development Director and/or Public Works Director shall require revised site design or operational alternatives for City review and approval, to remedy any stacking or site circulation issues.	On-Going	Planning and Public Works Divisions	
10.	To prevent stacking in the drive-through lane from impacting adjacent tenants, drive-aisles, or public streets, additional measures shall be implemented, including but not limited to: • **Traffic Control Measures**: Occupant's managers and staff members shall be trained to direct drive-through traffic to line up along the parking aisle such that car stacking does not overflow onto the drive aisles of the retail center. • **Use of Tablets**: Occupant's staff members shall take food orders and non-cash payments at the drive-through lanes with tablets to speed up orders in the drive-through lanes during the restaurant's peak hours. • **Online Order**: An Occupant staff member shall set up temporary parking signs for online order pickup as necessary during high demand online orders. • **Temporary Drive-Through Closure**: Operators shall restrict drive-through access to customers when drive-through queue exceeds	On-Going	CES and Planning, Public Works, CES Divisions	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	drive-through queue capacity. Operators shall close drive-through utilizing on-site cones, signage, or other measures, to the satisfaction of the Community Development Director until vehicle queuing can be accommodated/contained solely within drive-through lanes identified on the approved site plan. Cones, signage, and/or other measures shall not be placed in the public right of way			
11.	Six (6) months and one (1) year from the start of operations, the Planning Department will report to the Planning Commission on the drive-through, including any complaints, code enforcement cases, compliance with the conditions of approval, and whether revisions to the drive-through operation are needed. Continual six (6) month reviews to the Planning Commission may be required as determined by the Community Development Director.	Six (6) months and One (1) year from Start of Operations	Planning Division	
12.	The Final approved Queuing/Traffic Management Plan shall be kept onsite and made available to the store manager for implementation as required.	On-Going	Planning Division	
13.	The drive-through operator shall be required to provide notice to the City of any promotional or special events.	On-Going	Planning Division	
14.	Off duty police officers shall be used to manage traffic on-site for a minimum of one (1) week during the grand opening event and all special events/promotions.	On-Going	Planning Division	
15.	There shall be no “amplified music” allowed that would disturb any adjacent business tenants or residential properties at any time. The carwash operator shall post signs throughout the property alerting customers of this regulation. Complaints of amplified music shall be verified by the Community Development Director, or their designee, and addressed accordingly. Continued violation of this condition shall be grounds for revocation of the conditional use permit.	On-Going	Planning Division	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
16.	A safety officer or designee may enter and inspect the site at any reasonable time without prior notice for the purpose of investigating an actual complaint or for a health and safety inspection.	On-Going	Planning Division	
17.	Grand openings/Special Events for the Dutch Bros and Quick Quack Car Wash tenants shall be held a minimum of one week apart from each other.	On-Going	Planning Division	
Prior to Issuance of Building Permit				
18.	The Final Queuing/Traffic Management Plan shall be submitted, reviewed, and approved by the Community Development Director and/or Public Works Director prior to grading permit issuance. This plan shall include detailed information to ensure visitor vehicles shall remain completely on-site and shall not impede any public rights-of-way (streets, drives, walks, etc.), drive aisles, parking spaces, etc. Mitigation and control measures shall include but not be limited to: • **Traffic Control Measures**: Occupant's managers and staff members shall be trained to direct drive-through traffic to line up along the parking aisle such that car stacking does not overflow onto drive aisles of the retail center. • **Use of Tablets**: Occupant's staff members shall take food orders and non-cash payments at the drive-through lanes with tablets to speed up orders in the drive-through lanes during the restaurant's peak hours. • **Online Order**: An Occupant staff member shall set up temporary parking signs for online order pickup as necessary during high demand online orders. • **Temporary Drive-Through Closure**: Operators shall restrict drive-through access to customers when drive-through queue exceeds drive-through queue capacity. Operators shall close drive-through utilizing on-site cones, signage, or other measures, to the satisfaction of the Community Development Director until vehicle queuing can be accommodated/contained solely within drive-through lanes	Prior to Issuance of Building Permit	Public Works and Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	identified on the approved site plan. Cones, signage, and/or other measures shall not be placed in the public right of way. • **Office Duty Police Officers**: Off duty police officers shall be used to manage traffic for a minimum of one (1) week during the grand openings and all special events/promotions.			
19.	A directional signage and striping plan shall be submitted for review and approval to ensure that directional signs are located in appropriate locations for directing drive-through customers and to make sure that intersections of parking aisles are not blocked.	Prior to Issuance of Building Permit	Public Works and Planning Division	
Prior to Certificate of Occupancy				
20.	Prior to the issuance of certificate of occupancy, all signage and striping shall be installed per the approved signage and striping plan.	Prior to Issuance of Certificate of Occupancy	Public Works and Planning Division	

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are generally required for all projects by City ordinances, other local agencies, and state or federal agencies. PLEASE NOTE: This list is not comprehensive. The project is subject to all applicable standards, fees, policies, rules, and regulations for Eastvale and many other agencies, including but not limited to the Jurupa Community Services District, Jurupa Area Recreation and Park District, Riverside County Flood Control District, and state and federal agencies.

Developer and applicant are used interchangeably below.

1. No obstruction shall be placed which would conflict with any existing easement except with the documented approval of the easement holder(s).
2. The developer shall make best efforts to obtain written permission from the affected property owners allowing the proposed grading and/or facilities to be installed outside of the project boundaries.
3. All connection to flood control facilities shall be reviewed and permitted by the Riverside County Flood Control and Water Conservation District and shall be submitted through the City of Eastvale, unless otherwise directed by the City Engineer.

4. The developer shall prepare and submit to the City for review and approval all required development plans including but not limited to Grading (Rough and/or Precise), Street Improvement, On-Site Lighting, and Storm Drain. All applicable processing and review fees and/or deposits shall be submitted with the first plan submittal.
5. Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN23-20021– Major Development Review for the development of a 3,450 square-foot sit down restaurant (dba Zendejas) on the northwest corner of Archibald Ave. and Chandler Ave.
Assessor's Parcel Number: 144-130-004, -011, -012, and -013
Planning Commission Review Date: October 18, 2023

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. Project approval is not final until a signed copy of these conditions is filed with the City. Applicant Signature Date	Must be completed to finalize approval	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, from any and all claims, demands, law suits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative, or adjudicatory in nature), and alternative dispute resolutions procedures (including but not limited to arbitrations, mediations, and other such procedures) (collectively "Actions"), brought against the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul any action of, or any permit or approval issued by, the City and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the City), for or concerning the project, whether such Actions are brought under the California Environmental Quality Act, the Planning and Zoning Law, the Subdivisions Map Act, Code of Civil Procedure Section 1085 or 1094.5, or any other state, federal, or local statute, law, ordinance, rule, regulation, or any decision of a court of competent jurisdiction. It is expressly agreed that the City shall have the right to	On-Going	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	approve, which approval will not be unreasonably withheld, the legal counsel providing the City's defense, and that applicant shall reimburse City for any costs and expenses directly and necessarily incurred by the City in the course of the defense. City shall promptly notify the applicant of any Action brought and City shall cooperate with applicant in the defense of the Action.			
3.	Any approval shall not be final until and unless the applicant's deposit account with the Planning Division has a balance of at least **$2,000** at the time that the applicant signs these conditions of approval (per **Condition No. 1**) to cover staff time for follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to halt work if the deposit account is exhausted. Make check payable to the **City of Eastvale** and include **Project No. PLN23-20021** on the check.	On-Going	Planning Division	
4.	Any approval shall not be final until and unless the applicant's deposit account with the Public Works Division has a balance of at least $10,000 to cover staff time to follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to half work if the deposit account is exhausted.	On-Going	Public Works Division	
5.	Applicant understands and agrees that failure to comply with all conditions of approval may result in the City Council/Planning Commission taking action resulting in modification of conditions of approval and/or suspension or revocation of the **Major Development Review.**	On-Going	Planning Divisions	
6.	Major Development Review PLN23-20021 is granted contingent upon approval of PLN23-20018 (TPM 37653). Failure to approve PLN23-20018 (TPM37653) shall render any approval of Major Development Review PLN23-20020 null and void.	On-Going	Planning Division	
7.	PLN23-20021 is granted for a period of two years and shall become void as of October 18, 2025, unless building permits have been issued and construction is commenced and diligently pursued towards completion, or a time extension is requested in writing prior to that date.	On-Going	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
8.	The project shall be developed in accordance with the Major Development Review application approved by the Planning Commission on October 18, 2023, including the approved site plan, architectural elevations, conceptual landscape plan, etc. The applicant may request modifications or revisions to the approved project as outlined in Section 120.01.050(c) the Eastvale Zoning Code. A change of tenancy of any portion of the approved project requires review and approval by the original approving authority.	On-Going	Planning Division	
9.	Applicable mitigation measures included in the Addendum to the IS/MND shall be required for development of the proposed project and shall be incorporated herein by reference.	On-Going	Planning Division	
10.	The cover sheet of the building construction drawings shall include a blue line print of the City's conditions of approval and shall be attached to each set of plans submitted for City approval.	On-Going	Planning Division	
11.	PAD 3 (Sit-Down Restaurant) shall receive Certificate of Occupancy prior to or concurrently with PAD 1 (Coffee Shop) and PAD 2 (Carwash).	On-Going	Planning Division	
Prior to Map Recordation				
12.	The Developer shall enter into a Subdivision Improvement Agreement with the City, and shall guarantee by posting security(ies) to include all public improvements that the developer is conditioned to construct as part of this approval.	Prior to Map Recordation	Public Works Division	
13.	Dedicate City Engineer approved additional right-of-way along the entire frontage as may be required to provide a property line at ultimate right-of-way in accordance with the City General Plan, any applicable Specific Plan and/or as requested by the City Engineer. Dedicate 25 feet of right-of-way along Archibald Avenue and 14 feet of right-of-way along Chandler Street to the City for public right-of-way purposes.	Prior to Map Recordation	Public Works Division	
14.	A Final Map prepared by a California licensed Land Surveyor or registered Civil Engineer authorized to practice land surveying (pre-1982, RCE #33965 and lower) and all supporting documents to the Public Works Division for review and approval. A Title Report prepared	Prior to Map Recordation	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	for subdivision guarantee for the subject property, the traverse closures for the existing parcel and all lots created therefrom, and copies of record documents shall be submitted with the Final Map to the Engineering Division as part of the review of the Final Map. The Final Map shall be approved by the City Council prior to recordation of the Final Map.			
15.	Provide a reciprocal access easement between Parcel 1 & Parcel 2 and Parcel 2 & Parcel 3. The applicant shall provide a copy of a reciprocal access agreement, shared parking agreement, and documentation showing the responsible entity for maintaining the parking areas (including landscaping) for the entire site including the landscaped areas along the Chandler Avenue and Archibald frontages to the City Engineer for review and approval.	Prior to Map Recordation	Planning and Public Works Divisions	
16.	Monument bond shall be posted with the City. The Developer shall provide a cost estimate to set monuments prepared by a California licensed Land Surveyor or registered Civil Engineer to the Public Works Division for review and approval by the City Engineer.	Prior to Map Recordation	Public Works Division	
17.	The Developer shall enter into an agreement with the City for bonding and improvements of all public streets, public infrastructure, private streets, and private infrastructure.	Prior to Map Recordation	Public Works Division	
18.	Various blanket and specific transportation and/or utility easements that are no longer in use are to be quitclaimed/abandoned on the Final Map.	Prior to Map Recordation	Public Works Division	
19.	Show on the Final Map dedication of the public right-of-way for, Archibald Avenue and Chandler Avenue, in accordance with the City of Eastvale Road Improvement Standards & Specification, Improvement Plan Check Policies and Guidelines, to the satisfaction of the City Engineer, and in coordination with the adjacent agencies as applicable.	Prior to map recordation	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
20.	The applicant shall provide will-serve letters from all utility agencies.	Prior to map recordation	Public Works Division	
21.	The applicant shall record appropriate easement(s) and agreement(s) for the construction and maintenance of water quality to meet the Storm Water Permit/Water Quality Management Plan Requirements.	Prior to map recordation	Public Works Division	
22.	Provide on project plans (grading, site plan, etc.) design for the roundabout to be constructed east of Cucamonga creek.	Prior to map recordation	Public Works Division	
23.	Provide safe, functional pedestrian pathways throughout the site.	Prior to map recordation	Public Works Division	
24.	The project site shall include two cross access easements to allow internal circulation with the future development of the properties located to the west.	Prior to map recordation	Planning Division	
25.	A shared parking agreement and reciprocal access agreement for the entire site shall be submitted for Planning Division review. The shared parking agreement shall include all parcels included in the parcel map.	Prior to map recordation	Planning Division	
Prior to Issuance of Grading Permit				
26.	Prior to submittal for grading plan check, the site plan shall be revised to show a pathway that provides pedestrians with safe unobstructed access to the adjacent retail and restaurant pads. Pavement on all pathways and entryways shall be decorative in nature with texture, stamped concrete or pavers.	Prior to Issuance of Grading Permit	Planning Division	
27.	Prior to submittal for grading plan check, the site plan shall be revised to show one (1) loading space area for the restaurant.	Prior to Issuance of Grading Permit	Planning Division	
28.	**BIO-1:** Prior to the issuance of a grading permit, a preconstruction burrowing owl clearance survey shall be completed by a qualified biologist within 30 days prior to ground disturbance to avoid direct take of burrowing owls. Once complete, a written report summarizing the	Prior to Issuance of Grading Permit/ Within 30 days	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	results of the clearance survey shall be prepared and submitted to the City of Eastvale for review and concurrence. · If no burrowing owls are detected, construction may proceed. If construction is delayed or suspended for more than 30 days during the breeding season (March 1 to August 31), the project site or work area shall be resurveyed. · If burrowing owls are detected on the project site during the breeding season (March 1 to August 31), a 300-foot "no work" buffer shall be established around the active burrow and all work within the buffer shall be halted until the qualified biologist has determined through non-intrusive methods that the nesting effort is complete (i.e., all young have fledged). Once the nesting effort is complete or if a burrowing owl burrow is detected on-site during the non- breeding season (September 1 to February 28), passive and/or active relocation of burrowing owls may be implemented by a qualified biologist following consultation and approval from the City of Eastvale, the Western Riverside County Regional Conservation Authority, and the California Department of Fish and Wildlife.	prior to ground disturbance		
29.	**BIO-2:** Pursuant to the Migratory Bird Treaty Act and the California Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat shall be conducted outside the avian nesting season. The nesting season generally **extends from February 1 through August 31**, but can vary slightly from year to year based on seasonal weather conditions. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a preconstruction clearance survey for nesting birds shall be conducted within 30 days of the start of any ground-disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the preconstruction clearance survey, construction activities shall stay outside of a 300-foot buffer around the active nest. For raptors and special- status species, this buffer will be expanded to 500 feet. A biological monitor shall be present to delineate the boundaries of the buffer area and to monitor the active nest to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur.	Prior to Issuance of Grading Permit/ Within 30 days of the start of any ground-disturbing activities	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
30.	**CUL-1**: If cultural resources are encountered during ground-disturbing activities, work in the immediate area shall cease and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find(s). If the discovery proves to be significant under the California Environment Quality Act, additional work such as data recovery excavation may be warranted and shall be reported to the City.	Prior to Issuance of Grading Permit/ During ground-disturbing activities	Planning Division	
31.	**TCR-1:** Tribal Monitoring. Prior to the issuance of a grading permit, **the project applicant** shall contact the consulting tribe(s) with notification of the proposed grading and shall make a good-faith effort, as determined by the City's Development Director, to enter into a Tribal Cultural Resources Monitoring Agreement with each tribe that determines its tribal cultural resources may be present on the site. The agreements shall include, but not be limited to, outlining provisions and requirements for addressing the handling of tribal cultural resources; Project grading and development scheduling; terms of compensation for the tribal monitors; and establishing on-site monitoring provisions and/or requirements for professional tribal monitors during all ground-disturbing activities. The terms of the agreements shall not conflict with any of these mitigation measures. A copy/copies of the agreement(s) shall be provided to the City of Eastvale Planning Department prior to the issuance of a grading permit.	Prior to Issuance of Grading Permit	Planning Division	
32.	**TCR-2:** Archaeological Monitoring. At least 30 days prior to application for a grading permit and before any grading, excavation and/or ground disturbing activities on the site take place, the project applicant shall retain a Secretary of Interior Standards-qualified, Registered Professional Archaeologist (RPA), as an archaeological monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Ground-disturbing activities may include, but are not limited to, pavement removal, potholing or auguring, grubbing, weed abatement, boring, grading, excavation, drilling, and trenching. The on-site archaeological monitoring would end when the project site grading and excavation activities are completed, or when the monitor has indicated that the site has a low potential for archeological resources. The Project Registered Professional archaeologist, in consultation with consulting Tribe(s) identified above, and the developer,	At least 30 days prior to application for a grading permit and before any grading, excavation, and/or ground-disturbing activities.	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	shall develop an Archaeological Monitoring Plan to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site and provide the plan to the City for approval. Details in the plan shall include: A. Project grading and development scheduling. B. The development of a rotating or simultaneous schedule in coordination with the project applicant and the project archeologist for designated Native American tribal monitors from the consulting tribes during grading, excavation and ground-disturbing activities on the site. C. The safety requirements, duties, scope of work, and Native American tribal monitors' authority to stop and redirect grading activities in coordination with all Project archaeologists. D. The protocols and stipulations that the developer, tribes and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.			
33.	**TCR-3:** Treatment and Disposition of Cultural Resources. If tribal cultural resources are inadvertently discovered during ground disturbing activities for this project. The following procedures will be carried out for treatment and disposition of the discoveries: A. Temporary Curation and Storage. During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process. B. Treatment and Final Disposition. The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the	Prior to Issuance of Grading Permit / During Ground Disturbing Activities	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	following methods and provide the City Planning Department with documentation of same: i. Reburial on-site. Accommodate the process for on-site reburial of the discovered items with the consulting tribes. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed. ii. Curation. A curation agreement with an appropriate qualified repository within Riverside County that meets Federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists or researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation. iii. Disposition Dispute. If more than one tribe is involved with the project and cannot come to a consensus as to the disposition of cultural materials, they shall be curated at the Western Science Center. iv. Final Report. At the completion of grading, excavation and ground disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and tribal monitors within 60 days of completion of grading. This report shall: o Document the impacts to the known resources on the property; o Describe how each mitigation measure was fulfilled; o Document the type of cultural resources recovered and the disposition of such resources; o Provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting;			

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	o In a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. o All reports produced will be submitted to the City, Eastern Information Center and consulting tribes.			
34.	**TCR-4:** Discovery of Human Remains. If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains. The following procedures as set forth in the California Environmental Quality Act (CEQA), Section 15064.5(e), the California Public Resources Code (PRC) (Section 5097.98), and the State Health and Safety Code (Section 7050.5) shall then be undertaken: If human remains or funerary/sacred items are encountered, the archaeological monitor or tribal monitor will halt work within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, establish an Environmentally Sensitive Area (ESA) boundary to protect the find from impact, and immediately notify the City Archaeologist. Project work outside the established ESA may continue. In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the Riverside County Coroner shall be notified within 24 hours of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within two working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, s/he shall notify the NAHC in Sacramento within 48 hours. In accordance with California Public Resources Code, Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendant from the deceased Native American. The most likely descendant shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.	Prior to Issuance of Grading Permit / During Ground-Disturbing Activities	Planning Division / Archeological Monitor	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
35.	All existing overhead utility lines shall be undergrounded within the project frontage(s). Utility undergrounding shall extend to the nearest off-site power pole. Unless City Engineer approved, no new power poles shall be installed. A letter from the owners of the affected utilities shall be submitted to the City Engineer prior to approval of the Precise Grading/Paving Plan, informing the City that they have been notified of the City's utility undergrounding requirement and their intent to commence design of utility undergrounding plans. When available, the utility undergrounding plan shall be submitted to the City Engineer identifying all above ground facilities in the area of the project to be undergrounded.	Prior to Issuance of Grading Permit	Public Works Division	
36.	All transmission line poles on Archibald Avenue shall be relocated unless it is demonstrated to the satisfaction of the City Engineer that such poles can remain without impacting street improvements, vehicular circulation, and public safety. Distribution lines along Archibald which are attached to transmission line poles are allowed to remain. Distribution lines and communication lines along Chandler Street shall be undergrounded and all non-transmission poles along the property frontage shall be removed. However, any overhead distribution and communication lines shall be undergrounded across the intersection of Archibald Avenue and Chandler Street.	Prior to Issuance of Grading Permit	Public Works Division	
37.	Prior to the issuance of a Grading Permit, the Developer shall pay all necessary fees as determined by the City Engineer including, but not limited to Multiple Species Habitat Conservation Plan ("MSHCP") fees and grading permit fees.	Prior to Issuance of Grading Permit	Public Works Division	
38.	Grading in excess of 199 cubic yards will require performance security to be posted with the City	Prior to Issuance of Grading Permit	Public Works Division	
39.	A permit for the hauling of material to and from the project site shall be submitted to the City for approval.	Prior to Issuance of Grading Permit	Public Works Division	
40.	Submit a California registered Civil Engineer prepared earthwork cut and fill certification letter to the Engineering Division for review. If the required earthwork in cubic yards is 50 CY or less, a Precise Grading/Paving Plan will not be required; however, the applicant is	Prior to Issuance of Grading Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	required to pull an NPDES/Public Works permit prior to issuance of a Building Permit for record purposes.			
41.	Development of the site is subject to the requirements of the National Pollution Discharge Elimination System ("NPDES") Permit for the City of Eastvale, under the Santa Ana Regional Water Quality Control Board, Board Order No. R8-2010-0036. Pursuant to the NPDES Permit, the developer shall ensure development of the site incorporates post-construction Best Management Practices ("BMPs") in accordance with the Model Water Quality Management Plan ("WQMP") approved for use for the Santa Ana River Watershed. The developer is advised that applicable Site Design BMPs will be required to be incorporated into the final site design, pursuant to a site specific WQMP submitted to the City Engineer for review and approval. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading/Paving Plan.	Prior to Issuance of Grading Permit	Public Works Division	
42.	Prior to commencing with any grading, the required erosion and dust control measures shall be in place. In addition, the following shall be included if not already identified: a. 6 foot high tan colored perimeter screened fencing b. Contractor information signage including contact information along the street frontage. c. Post dust control signage with the following verbiage: "Project Name, WDID No., IF YOU SEE DUST COMING FROM THIS PROJECT CALL: NAME (XXX) XXX-XXX, If you do not receive a response, please call the AQMD at 1-800-CUT-SMOG/1-800-228-7664"	Prior to Issuance of Grading Permit	Public Works Division	
43.	A Notice of Intent ("NOI") to comply with the California General Construction Stormwater Permit is required via the California Regional Water Quality Control Board online Stormwater Multiple Application and Report Tracking System ("SMARTS"). A copy of the executed letter issuing a Waste Discharge Identification ("WDID") number shall be provided to the City Engineer. The Construction General Permit requires the Developer's contractor to prepare and maintain a Storm Water Pollution Prevention Plan ("SWPPP"). The SWPPP requires all appropriate measures be implemented to prevent erosion and water pollution during construction.	Prior to Issuance of Grading Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
44.	A California registered Geotechnical Engineer prepared Geotechnical/Soils Report shall be required for and incorporated as an integral part of the grading/paving plan for the proposed development. A copy of the Geotechnical/Soils Report shall be submitted to the Engineering Division with the first submittal of the Precise Grading/Paving Plan.	Prior to Issuance of Grading Permit	Public Works Division	
45.	All stormwater runoff passing through the site shall be accepted and conveyed across the property in a manner acceptable to the City Engineer. All on-site City Engineer approved retention or other facilities are required to contain the increase stormwater runoff generated from the proposed development. Provide a hydrology study to determine the volume of increased stormwater runoff due to development of the site, and to determine required stormwater runoff mitigation measures for the proposed development. The City Engineer must approve the final retention basin sizing and other stormwater runoff mitigation measures determined upon review and approval of the hydrology and may require redesign or changes to site configuration or layout consistent with the findings of the final hydrology study. The existing "pre-developed" condition compared to the proposed "developed" condition shall be used to calculate the volume of increased stormwater runoff to retain on-site under the 100-year frequency storm.	Prior to Issuance of Grading Permit	Public Works Division	
46.	Direct release of on-site nuisance water or stormwater runoff shall not be permitted to the adjacent public streets. Provisions for the interception of nuisance water from entering adjacent public streets from the project site shall be provided through the use of a minor storm drain system that collects and conveys nuisance water to landscape or parkway areas, and in only a stormwater runoff condition, pass runoff directly to the streets through parkway or under sidewalk drains.	Prior to Issuance of Grading Permit	Public Works Division	
47.	The Developer shall connect to the JCSD sewer system and apply for a sewer connection account with JCSD. The project applicant, developer, or successor in interest shall provide written verification that the JCSD can and will provide sanitary sewer service to the project.	Prior to Issuance of Grading Permit	Public Works Division	
48.	The Developer shall submit sewer improvement plans prepared by a California registered Civil Engineer to the JCSD/Public Works Division. The plans shall be approved by the JCSD/City Engineer prior to issuance of any building permits.	Prior to Issuance of Grading Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
49.	The Developer shall submit street improvement plans prepared by a California registered Civil Engineer to the Public Works Division for review and approval. Unless otherwise approved, the street improvement plans shall be approved concurrently with any street light, landscape and irrigation, and traffic signal plans.	Prior to Issuance of Grading Permit	Public Works Division	
50.	The Developer shall submit traffic striping and signage plans prepared by a California registered Civil Engineer, for review and approval by the City Engineer. All required traffic striping and signage improvements shall be completed concurrently with required street improvements, to the satisfaction of the City Engineer, and prior to issuance of a Building Permit.	Prior to Issuance of Grading Permit	Public Works Division	
51.	An accessible pedestrian path of travel shall be provided throughout the site, as required by applicable state and federal laws.	Prior to Issuance of Grading Permit	Planning and Public Works Division	
52.	The sewer lines shall require connections to occur at a manhole and no direct lateral connections to the mainlines are allowed.	Prior to Issuance of Grading Permit	Public Works Division	
53.	The applicant must provide the District with fire flow requirements from the Fire Department to determine the adequacy of the existing water system.	Prior to Issuance of Grading Permit	Public Works Division	
54.	The Applicant shall submit a Water Quality Management Plan identifying site specific Best Management Practices (“BMPs”) in accordance with the Model Water Quality Management Plan (“WQMP”) approved for use for the Santa Ana River Watershed. The site specific WQMP shall be submitted to the City Engineer for review and approval with the Precise Grading Plan. A WQMP Maintenance Agreement shall be required, obligating the property owner(s) to appropriate operation and maintenance obligations of on-site BMPs constructed pursuant to the approved WQMP. The WQMP and Maintenance Agreement shall be approved prior to issuance of a building permit, unless otherwise allowed by the City Engineer.	Prior to Issuance of Grading Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
Prior to Issuance of Encroachment Permit				
55.	An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, Chandler Street Channel. If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.	Prior to Issuance of Encroachment Permit	Riverside County Flood Control	
56.	A City of Eastvale Encroachment Permit is required for any improvements within the public right-of-way.	Prior to Issuance of Encroachment Permit/On-going	Public Works Division	
57.	The minimum pavement section for all on-site pavements shall be 3 inches asphalt concrete pavement over 6 inches crushed aggregate base with a minimum subgrade of 24 inches at 95% relative compaction, or equal. The pavement section shall be determined using appropriate Traffic Index ("TI") accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval.	Prior to Issuance of Encroachment Permit	Public Works Division	
58.	Traffic Control Plan prepared by a California registered Civil Engineer or Traffic Engineer shall be submitted to the City Engineer for review and approval.	Prior to Issuance of Encroachment Permit	Public Works	
59.	Transportation Mitigation Measure 1 (TRA-1) - Traffic Management Plan. Prior to the initiation of construction, the project applicant shall prepare a Traffic Management Plan (TMP) for approval by the City of Eastvale Traffic Engineer. The TMP shall comply with state standards set forth in the California Manual of Uniform Traffic Control Devices and include measures such as construction signage, limitations on timing for lane closures to avoid peak hours, temporary striping plans, and the need for a construction flag-person to direct traffic during heavy equipment use. The TMP shall specify that one direction of travel in each direction must always be maintained for Chandler Street throughout project construction. The TMP shall be incorporated into project specifications for verification prior to final plan approval.	Prior to Issuance of Encroachment Permit	Public Works	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
Prior to Issuance of Building Permit				
60.	**GHG-1:** The project shall incorporate the following California Air Pollution Control Officers Association-based reduction measures and regulatory compliance: · Utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen Standards. · Implement recycling programs that reduce waste to landfills by a minimum of 75 percent (per AB 341). · Incorporate the following land use and site enhancement reduction measures: LUT-1 Increase Density, LUT-4 Improve Destination Accessibility, LUT-5 Increase Transit Accessibility, and SDT-1 Improve Pedestrian Network.	Prior to Issuance of Building Permit/ Construction	Planning Division	
61.	**GHG-2:** The project shall incorporate the following design features: · The project applicant shall require that all faucets, toilets, and showers installed in the proposed structures utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen standards. · The project applicant shall require recycling programs that reduce waste to landfills by a minimum 75 percent per AB 341. · The project applicant shall provide sidewalks on-site and connecting off-site.	Prior to Issuance of Building Permit/ Construction	Planning Division	
62.	**NOI-1:** The construction contractor(s) shall place all stationary construction equipment so that emitted noise is directed away from the noise-sensitive receptors nearest the project site.	Prior to Issuance of Building Permit/ Construction	Building Division	
63.	**NOI-2:** The construction contractor(s) shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May).	Prior to Issuance of Building Permit/ Construction	Building Division	
64.	**NOI-3:** The contractor shall install temporary construction noise barriers/blankets along the western boundary. The barrier/blankets shall be solid with no cracks or holes and shall also reach to the ground.	Prior to Issuance of Building Permit/ Construction	Building Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
65.	**NOI-4:** During all project construction phases on-site, construction contractors shall equip all construction equipment, fixed or mobile, with either properly operating and maintained mufflers or enclosures/acoustical tents (as appropriate) that achieve at least 12 dB reduction from applicable noise level specifications.	Prior to Issuance of Building Permit/ Construction	Building Division	
66.	**NOI-5:** The contractor shall restrict the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary.	Prior to Issuance of Building Permit/ Construction	Building Division	
67.	All construction shall comply with the most recently adopted City and State building codes: • 2022 California Building Code • 2022 California Residential Code • 2022 California Electrical Code • 2022 California Mechanical Code • 2022 California Plumbing Code • 2022 California Fire Code • 2022 California Green Code	Prior to Issuance of Building Permit	Building Division	
68.	Special Inspections – As indicated by California Building Code Section 1704, the owner shall employ one or more special inspectors who shall provide special inspections when required by CBC Section 1704. Please contact the Building Division at the time of plan submittal to obtain an application for special inspections.	Prior to Issuance of Building Permit	Building Division	
69.	The Title Sheet of the plans shall include: • Occupancy Group • Occupant Load • Description of use • Type of Construction • Height of Building Floor area of building(s) and/or occupancy group(s)	Prior to Issuance of Building Permit	Building Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
70.	School impact fees shall be paid prior to permit issuance.	Prior to Issuance of Building Permit	Building Division	
71.	Dimensioned building setbacks and property lines, street centerlines, and between buildings or other structures shall be designed on the plot plan.	Prior to Issuance of Building Permit	Building Division	
72.	All property lines and easements must be shown on the plot plan. A statement that such lines and easements are shown is required.	Prior to Issuance of Building Permit	Building Division	
73.	The project design will conform with energy conservation measures articulated in Title 24 of the California Code of Regulations and address measures to reduce energy consumption such as flow restrictors for toilets, low consumptions light fixtures, and insulation, and shall use to the extent feasible drought landscaping.	Prior to Issuance of Building Permit	Building Division	
74.	A design professional will be required at the time of construction drawings, to prepare plans for proposed improvements per the Business and Professions Code.	Prior to Issuance of Building Permit	Building Division	
75.	Public and private site improvements shall be designed in accordance with the Americans with Disabilities Act and Chapter 11 of the California Building Code. The site plan shall include a site accessibility plan identifying exterior routes of travel and detailing running slope, cross slope, width, pedestrian ramp, curb ramps, handrails, signage, and truncated domes. Path of travel shall be provided from the public right of way and accessible parking to the building. The design professional shall ensure that the site accessibility plan is in compliance with the latest Federal and State regulations.	Prior to Issuance of Building Permit	Building Division	
76.	All projects including food service or public pools and/or spas shall be checked and approved by the County Health Department as part of the building department plan review process.	Prior to Issuance of Building Permit	Building Division	
77.	The developer is responsible for requesting from the Planning Division any addresses needed for any building(s) and/or any electrical/water single/dual irrigation meter pedestal(s). An address map shall be prepared and submitted by the applicant for review and approval by the Planning Division.	Prior to Issuance of Building Permit	Planning and Building Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
78.	All drive aisles adjacent to the public right-of-way or ingress and egress points of vehicular access must include Planning Division approved screening along the perimeter.	Prior to Issuance of Building Permit	Planning and Public Works Division	
79.	A revised (site plan, floor plan, and building elevations) which incorporate(s) the Conditions of Approval listed herein shall be submitted to the Planning Division prior to submittal for building and/or grading plan check.	Prior to Issuance of Building Permit	Planning Division	
80.	The project shall incorporate fully defined architecture on all facades facing the public right of way including windows, doors and other architectural details.	Prior to Issuance of Building Permit	Planning Division	
81.	Revised elevations with accurate color and materials table shall be submitted for review and approval by the Community Development Director and the Planning Division prior to submittal of Building Plan check. The revised elevations shall include the use of wall artwork, landscaping (green screen), or other alternative interesting material to decorate the tower feature closest to Archibald Ave.	Prior to issuance of Building Permit	Planning Division	
82.	A revised site and floor plan shall be submitted to the Planning Division for review and approval to ensure appropriate shading is provided for the outdoor dining area. Enhancements shall be made to enlarge the patio cover to additional provide shading.	Prior to issuance of Building Permit	Planning Division	
83.	Site Plan and elevations shall be revised to show decorative lighting of the pedestrian walkways, entryways, and exterior doors	Prior to Issuance of Building Permit	Planning Division	
84.	There shall be no roof-mounted equipment extending above the mansard roof or parapet wall of the building.	Prior to Issuance of Building Permit	Planning Division	
85.	Trash receptacles shall be provided nearby customer entrances/exits to buildings for all commercial developments.	Prior to Issuance of Building Permit	Planning Division	
86.	Elevations for trash enclosure shall be provided prior to issuance of building permit. Trash enclosures shall be covered and shall be architecturally consistent with the proposed development. Trash enclosure elevations shall be reviewed and approved by the Planning Division.	Prior to Issuance of Building Permit	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
87.	Any proposed signage must be reviewed and approved by the Planning Division and must comply with the City's Sign Ordinance.	Prior to Issuance of Building Permit	Planning Division	
88.	Any future monumentation into the development shall be subject to review and approval by the Community Development Director and City Engineer.	Prior to Issuance of Building Permit	Planning Division	
89.	All required parking area spaces shall meet the minimum dimensions of the Zoning Code Section 120.05.060.	Prior to Issuance of Building Permit	Planning Division	
90.	Prior to the issuance of a building permit for each building, the final site plan shall indicate the location of bicycle parking installation using Class I lockers or Class II racks in an enclosed lockable area, as follows for each building (C-Store and Restaurants): • Minimum of Two (2) bicycle parking spaces for visitors and two (2) bicycle parking spaces for employees. • The location of bicycle parking is subject to approval by the Planning Department. Applicant shall submit a design alternative to the loop-wave and ribbon rack design. Final design of bike parking shall be approved by the Planning Division prior to issuance of building permit.	Prior to Issuance of Building Permit	Planning Division	
91.	Prior to the issuance of a building permit, the applicant shall submit a photometric lighting plan for review and approval to ensure that proper outdoor lighting, pursuant to City of Eastvale Municipal Code Section 120.05.050 and subject to Riverside County Sheriff's review and approval, shall be provided. In order to minimize light trespass on abutting residential property, illumination measured at the nearest residential structure or rear yard setback line shall not exceed the moon's potential ambient illumination of one-tenth footcandle through use of light shielding and through additional landscaping.	Prior to Issuance of Building Permit	Planning, Building, Public Works, and Sheriff	
92.	**Prior to the issuance of a building permit, the applicant shall submit a set of development plans to the Eastvale Sheriff's Department for review and approval to ensure compliance with the following**: PROPERTY GATES AND KNOX BOX ENTRY	Prior to issuance of building permit	Planning, Building and Sheriff	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	a) The installation of the Knox Rapid Entry System if property gates are installed. This system permits law enforcement, fire, and first responders to obtain independent access to the property in the event of an emergency. The necessary order forms for the Knox Company may be obtained by contacting the Jurupa Valley Sheriff's Station Crime Prevention Programs Coordinator at (951) 955-9225. PROPERTY SIGN b) Proper display of "No Trespassing or Loitering" signs prominently around business and any exterior perimeter fencing and adhere to City of Eastvale Municipal Code Section 120.05.070, Signs. ADDRESS NUMBERING: c) Prominently displayed address numbering in size and contrasting in color from the building façade or on a fixed sign near the street/main entrances. The numbers need to be visible from the street and interior property sides for any approaching emergency vehicles. No obstructions should limit their visibility (i.e., landscaping). SECURITY PLAN Adequate crime prevention measures, such as security cameras, shall be installed to assist with identifying any suspect(s) of any potential future vandalism or theft attempts. Due to the high possibility of theft/vandalism attempts during construction, additional security measures should be added during that time frame of the proposed construction. All exterior access points should be properly secured and illuminated to make clearly visible any person on or about the premises during the hours of darkness.		Departments	
93.	A minimum of one (1) Electric Vehicle charging station per parcel shall be installed.	Prior to issuance of building permit	Planning Division	
94.	Landscape plans shall be submitted to the Planning Division for review and approval. The plan shall be certified by a licensed landscape architect as required, taking into account approved preliminary landscape plan (if any), adopted plant palette guides, applicable scenic and specific plan requirements, and water conservation measures. **This submittal shall be made to the Planning Division with the appropriate Application and Fee.**	Prior to Issuance of Building Permit	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
95.	The above-described plans shall be in substantial conformance with the conceptual plans as requested for modification and as approved by the City Landscape Architect, City Administrative Staff, Planning Commission and/or City Council. Notes, details, and specifications shall be included.	Prior to issuance of building permit	Planning Division	
96.	Prior to the issuance of a building permit, final landscape plans shall be reviewed and approved by the Planning Division. Landscaping shall be installed and verified prior to issuance of certificate of occupancy.	Plans must be reviewed and approved prior to issuance of building permit. Landscaping shall be installed and verified prior to certificate of occupancy	Planning Division	
97.	All landscape and irrigation plans shall be consistent with the City of Eastvale Zoning Code, with Section 5.4 Landscaping General Provisions, the City of Eastvale Design Standards and Guidelines, and the City of Eastvale Chapter 14.24 Water Efficient Landscape Regulations, and other applicable codes and guides.	Prior to Issuance of Building Permit	Planning Division	
98.	Landscape plans shall be drawn at a scale of 20 feet equal to 1 foot or larger.	Prior to Issuance of Building Permit	Planning Division	
99.	All planting areas shall be a minimum of 5 feet wide. Tree well planting areas shall contain 25 square feet or more.	Prior to Issuance of Building Permit	Planning Division	
100.	The trash enclosure shall include landscape screening on all 3 enclosure walls.	Prior to Issuance of Building Permit	Planning Division	
101.	The detention basin shall be hand-planted and landscaped to conform with the overall plant palette and for flexibility to seasonal water usage. Trees, shrubs, ground covers and ornamental grasses shall be included. The detention basin shall include a barrier to keep	Prior to Issuance of Building Permit	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	unauthorized personal from entering. Barrier shall be review and reviewed to the satisfaction of the Community Development Director and Planning Division.			
102.	Street trees shall be installed from 24-inch box container at 30 feet on center along Archibald Avenue and Chandler Street.	Prior to Issuance of Building Permit	Planning Division	
103.	Mature specimen trees in 36-inch or 48-inch boxes shall be supplied in sufficient quantity to provide a prominent project entry statement at the corner of Chandler Street and Archibald Avenue, at entry drives from the streets and other major focal areas.	Prior to Issuance of Building Permit	Planning Division	
104.	Shrubs shall be installed from a minimum of 5 gallon containers unless approved by the City of Eastvale Landscape Architect for appropriateness. Shrubs and ground covers shall be designed for installation at reasonable spacing to allow for growth and relative maturity.	Prior to Issuance of Building Permit	Planning Division	
105.	The applicant shall install and maintain dense evergreen screen hedge to provide sufficient privacy for the immediate adjacent properties to the west. The size of plants utilized and spacing shall be at the recommendation and approval of the Landscape Architect and Community Development Director and shall be maintained at 8-feet tall. The species of landscape selected shall be of a fast-growing variety such that they will attain effective screening within a 1-2 year timeframe to the satisfaction of the Community Development Director.	Prior to Issuance of Building Permit	Planning Division	
106.	Above ground utility locations shall be located in shrub areas and screened from public view. Transformers shall be screened with a minimum of 3 foot wide planting area located outside the SCE setback to the transformer.	Prior to Issuance of Building Permit	Planning Division	
107.	No light fixture, electric transformer, fire detector check or fire hydrant shall be designed for any location in a planting area, which would make it necessary to eliminate a tree. All overhead light fixtures and utilities shall be identified on the site plan.	Prior to Issuance of Building Permit	Planning Division	
108.	All ground covers shall be installed from living plant materials. Spacing shall be such to allow plants grow to maturity in 2 years from the time of installation.	Prior to Issuance of Building Permit	Planning Division	
109.	No plants with thorns, those that would freeze, or those which do not thrive in the local environment may be used, including Lophostemon, Bougainvillea, and Phormium.	Prior to Issuance of Building Permit	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
110.	No plant container shall be installed within 18 inches of a sidewalk, curb, patio, walkway, or equal, unless approved by the City Landscape Architect for appropriateness.	Prior to Issuance of Building Permit	Planning Division	
111.	Plant materials within planting areas shall be hydro-zoned using WUCOLS IV, Region 4 as a general guide.	Prior to Issuance of Building Permit	Planning Division	
112.	Root barriers shall be installed for all trees located within 5 feet of paving in 10 to 12 foot lengths. Trees located within 10 feet of curbs or city sidewalks and within planted parkways shall utilize 20 lineal feet of root barrier.	Prior to Issuance of Building Permit	Planning Division	
113.	A weather-based smart irrigation controller shall be installed. A rain shut off or weather station device shall be connected with the irrigation controller.	Prior to Issuance of Building Permit	Planning Division	
114.	Parking lot lighting and/or water quality design shall not prevent tree or shrub placement (used for shading) nor reduce overall tree counts per the preliminary plans. The addition of tree diamonds or other solutions for maintain tree counts presented will be required if space or conflicts arise during design development.	Prior to Issuance of Building Permit	Planning Division	
115.	Applicant shall retain the stated landscape coverage percentage throughout the design development process and final installation/project completion	Prior to Issuance of Building Permit	Planning Division	
116.	Applicant shall install temporary curb and planter continuing screen at northwest corner of the property that shall remain in place until prospective adjacent phase is completed.	Prior to Issuance of Building Permit	Planning Division	
117.	Applicant shall screen all utilities and mechanical infrastructure in planter areas with increased sized shrub material as required by the Community Development Director or Landscape Architect.	Prior to Issuance of Building Permit	Planning Division	
118.	Landscaping shall be perpetually maintained in a healthy and thriving manner.	Prior to Issuance of Building Permit	Planning Division	
119.	Parking lot lighting and/or water quality design shall not prevent tree or shrub placement (used for shading) nor reduce overall tree counts per the preliminary plans. The addition of tree diamonds or other solutions for maintain tree counts presented will be required if space or conflicts arise during design development.	Prior to Issuance of Building Permit	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
120.	Applicant shall retain the stated landscape coverage percentage throughout the design development process and final installation/project completion	Prior to Issuance of Building Permit	Planning Division	
121.	The City Landscape Architect shall be contacted to meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations utilizing humate, mycorrhizae, and organic fertilizer shall be presented prior to the meeting. No landscaping shall occur prior to the meeting.	Prior to Initiation of Landscape Construction	Planning Division	
122.	Submit photometric plan of street lighting. All lights shall be Edison LS-3 tariff and utilize General Electric Evolve LED luminaires per City Specifications. The Developer shall be responsible for applying with Southern California Edison ("SCE") for all appropriate service points and electrical meters early in the process to avoid delays. The Developer must pay for the electrical service of new meter pedestals installed until such time the improvements have been accepted and the underlying property is annexed into Community Facilities District ("CFD") or Landscaping Maintenance District ("LMD").	Prior to Issuance of Building Permit	Public Works Division	
123.	The public street improvements outlined in these Conditions of Approval are intended to convey to the developer an accurate scope of required improvements; however, the City Engineer reserves the right to require reasonable additional improvements as may be determined in the course of the review and approval of street improvement plans required herein.	Prior to Issuance of Building Permit	Public Works Division	
124.	The Precise Grading/Paving Plan shall be City Engineer approved prior to issuance of a building permit.	Prior to Issuance of Building Permit	Public Works Division	
125.	A WQMP and Stormwater BMP Transfer, Access and Maintenance Agreement shall be required, obligating the property owner(s) to appropriate operation and maintenance obligations of on-site BMPs constructed pursuant to the approved WQMP. The WQMP and Stormwater BMP Transfer, Access and Maintenance Agreement shall be approved prior to issuance of a Building Permit and shall be recorded by the Developer at the San Bernardino County Recorder's Office with a recorded copy provided to the Public Works Division prior to issuance of a Certificate of Occupancy.	Prior to Issuance of Building Permit	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
126.	Provide pad elevation certifications for all building pads in conformance with the approved Precise Grading Plan to the Public Works Division prior to construction of any building foundation.	Prior to Issuance of Building Permit	Public Works Division	
127.	The Developer is advised that domestic water service is provided by JCSD. The developer shall be responsible for coordinating with JCSD and complying with all requirements for establishing domestic water service to the property.	Prior to Issuance of Building Permit	Public Works Division	
128.	Prior to issuance of a building permit, the developer is required to pay Traffic Impact Analysis Project Fair Share Contribution fees.	Prior to Issuance of Building Permit	Public Works Division	
129.	Prior to issuance of building permit, installation of conduit fiber optic along property frontages shall be required.	Prior to Issuance of Building Permit	Public Works Division	
130.	The Applicant shall pay all applicable development impact fees in accordance with the City of Eastvale fee ordinance in effect at the time the fees are due, prior to the issuance of any building permits related to the Project.	Prior to Issuance of Building Permit	Building and Public Works Division	
131.	Applicant shall submit an application to ALUC and obtain an official consistency determination on the project.	Prior to Issuance of Building Permit	Planning Division	
132.	Decorative block wall shall be provided along the northern property line subject to the review and approval of the Community Development Director.	Prior to Issuance of Building Permit	Planning Division	
133.	A water system (hydrants - commercial with one 4” outlet and two 2-1/2” outlets) capable of delivering the required fire flow shall be provided in accordance with Appendix B and C of the California Fire Code shall be provided. A reduction of 50% is permitted in buildings equipped with fire sprinklers in accordance with City Municipal Code. On-site water supply must be available before any combustible material is placed on the construction site. No portion of a building can be more than 400 feet from a hydrant.	Prior to Issuance of Building Permit	Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
134.	Prior to building plan approval and construction, applicant/developer shall route a copy of the Water Improvement Plans (offsite) to the Fire Department for review of private hydrant placement only. Water Improvement Plans (offsite) will not be reviewed or approved for the installation of onsite Private Fire Service Mains, private hydrants, or fire sprinkler system supplies. The installing contractor shall submit a separate set of working plans designed in accordance with NFPA 13 and NFPA 24 to the Fire Department for a permit to install private water mains.	Prior to Issuance of Building Permit	Fire Department	
135.	Fire apparatus access roads shall be at least 24 feet wide and comply with Riverside County Fire Department Standard number 06-05. Access roads shall be located outside of truck docks and between 15 and 40 feet from the building. Access roads shall not have a grade more than 16% and shall have an unobstructed vertical clearance not less than 13 feet and 6 inches. Access lanes will be designed to withstand the weight of 75,000 thousand pounds over 2 axles and shall be all-weather surface capable. Fire apparatus access roads shall have a turning radius capable of accommodating fire apparatus.	Prior to Issuance of Building Permit	Fire Department	
136.	Parking is not permitted on fire apparatus access roads that are less than 28 feet in width. Parking on one side is permitted on a road that is at least 28 feet but less than 36 feet in width. Parking on two sides is permitted on a road that is 36 feet or more in width.	Prior to Issuance of Building Permit	Fire Department	
137.	Fire apparatus access roads shall be constructed with a surface to provide all-weather driving capabilities during construction.	Prior to Issuance of Building Permit	Fire Department	
138.	Dead-end fire apparatus access roads more than 150 feet in length shall be provided with an approved area for turning around fire apparatus.	Prior to Issuance of Building Permit	Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
139.	Driveway loops, fire apparatus access lanes and entrance curb radius should be designed to adequately allow access of emergency fire vehicles. The applicant or developer shall include in the building plans the required fire lanes and include the appropriate lane printing and/or signs.	Prior to Issuance of Building Permit	Fire Department	
140.	Buildings more than 3,600 square feet shall be equipped with a fire sprinkler system. The PIV and FDC shall be located to the front, within 100 feet of a hydrant. FDC shall be located so that fire apparatus and hose connected to supply the system will not obstruct roadway access for other fire apparatus. FDCs are not allowed in the rear of any building.	Prior to Issuance of Building Permit	Fire Department	
141.	A fire sprinkler monitoring system is required in all sprinklered buildings.	Prior to Issuance of Building Permit	Fire Department	
142.	A manual and automatic fire alarm system may be required, depending on the use and/or occupant load of the building.	Prior to Issuance of Building Permit	Fire Department	
143.	Commercial cooking equipment that produces grease-laden vapors shall be provided with a Type I hood and an automatic fire extinguishing system.	Prior to Issuance of Building Permit	Fire Department	
144.	An approved Fire Department access key lock box (minimum Knox 3200 series) shall be installed at the main entrance to any sprinklered building. Gate switches or padlocks shall be installed at each automatic or manual gate. Locations shall be shown on plans submitted for a building permit.	Prior to Issuance of Building Permit	Fire Department	
145.	New motorized gates shall be provided with means to be automatically opened remotely by emergency vehicles in accordance with Riverside County standards and policies. The system shall be compatible, but not limited to, the detection of the following manufacturers of emergency vehicle preemption: Federal Signal, Whelen, and Tomar. Upon installation	Prior to Issuance of Building Permit	Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	of the system, compliance testing shall be completed by the Riverside County Fire Department. (RVC Amendment to CFC 503.6.1)			
146.	The location of address numbers shall be indicated on the building plans. Street numbers shall be displayed in a prominent location on the street or fire apparatus access side of buildings. Numbers and letters shall be a minimum of 12" in height with a minimum stroke of .05 inch. Where access is by means of a private road and the building cannot be viewed from a public way, a monument, pole, or other sign shall be used to identify the structure in accordance with Riverside County Standard 07-01. Address must be legible, of a contrasting color, and adequately illuminated to be visible from the street at all hours.	Prior to Issuance of Building Permit	Fire Department	
147.	No hazardous materials shall be stored and/or used within the building which exceeds quantities listed in the California Fire Code, without first obtaining a permit.	Prior to Issuance of Building Permit	Fire Department	
148.	Exit signs, door hardware, and exit path marking shall be as required by the California Building Code.	Prior to Issuance of Building Permit	Fire Department	
149.	Fire sprinkler riser door shall be posted "FIRE RISER" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
150.	Electrical room door shall be posted "ELECTRICAL ROOM" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
151.	Fire alarm control panel door shall be posted "FACU" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
152.	Roof access door shall be posted "ROOF ACCESS" on the outside of the door.	Prior to Issuance of Building Permit	Fire Department	
153.	Provide specific fire department conditions on plans for building permit submittal.	Prior to Issuance of Building Permit	Fire Department	
Prior to Issuance of Certificate of Occupancy				
154.	All parkway landscaping shall be guaranteed for a period of one (1) year from the date of the City Engineer acceptance. Any landscaping that fails during the one (1) year landscape maintenance period shall be replaced with similar plant material to the satisfaction of the City Engineer, and shall be subject to a subsequent one (1) year landscape maintenance period.	Prior to Issuance of Certificate of Occupancy	Planning and Public Works Division	
155.	The development shall be annexed into all applicable City of Eastvale owned and administered Community Facilities Districts (CFDs) and/or Landscaping Maintenance Districts (LMDs) for On-Going maintenance of traffic signals, traffic signal synchronization, street lights, full capture systems for all storm drains, and landscape maintenance of raised landscaped median and public parkways, to the satisfaction of the City Engineer or otherwise form a district where one is not currently in place.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
156.	Upon City Engineer approval of any improvement plan, the improvement plan shall be provided to the City in digital format, consisting of a DWG (AutoCAD drawing file), DXF (AutoCAD ASCII drawing exchange file), and PDF (Adobe Acrobat) formats. Variation of the type and format of the digital data to be submitted to the City may be authorized, upon prior City Engineer approval.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
157.	Mira Loma Road and Bridge Benefit Assessment District Fee ("MLRBA"), Transportation Uniform Mitigation Fee ("TUMF"), Area Drainage Plan ("ADP") fee, and any other regional pass-through fees in effect at that time shall be paid prior to issuance of Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
158.	The Developer shall submit to the City Engineer for review and approval the Covenants, Conditions, and Restrictions ("CC&Rs") and/or a Property Owners Association document to maintain and operate common areas and/or facilities including, but not limited to, parking areas, private utilities, and water quality basins.	Prior to Issuance of Certificate of Occupancy	Public Works and Planning Division	
159.	Prior to issuance of a Certificate of Occupancy or final City approvals, demonstrate that all structural BMP's have been constructed and installed in conformance with approved plans and specifications, and as identified in the approved WQMP.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
160.	The Developer shall provide certification from JCSD Water Services demonstrating that all water and/or wastewater service accounts have been documented, prior to the issuance of a Certificate of Occupancy.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
161.	All damaged, destroyed, or modified pavement legends, traffic control devices, signing, striping, and street lights, associated with the proposed development shall be replaced.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
162.	Remove existing, and construct new pavement with a minimum pavement section of 5 inches asphalt concrete pavement over 6 inches crushed aggregate base with a minimum subgrade of 24 inches at 95% relative compaction, or equal, to the existing right edge line along the entire street frontage in accordance with City of Eastvale Standard Drawings. The pavement section shall be determined using appropriate Traffic Index ("TI") accepted by the City Engineer. A California registered Geotechnical Engineer shall design the pavement section using "R" values from the project site and submitted to the City Engineer for approval. Alternatively, depending on the existing street condition and as approved by the City Engineer, a street overlay, slurry seal, or other repair can be performed to preserve recent pavement improvements.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
163.	Construct an Americans with Disabilities Act ("ADA") compliant sidewalk behind curb along the entire frontage and interior streets in accordance with the General Plan, any Specific Plan, the City of Eastvale Standard Drawings, subject to the approval of the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
164.	Construct City Engineer approved commercial driveway approaches in accordance with City of Eastvale Standard Drawings. The driveway approach shall be constructed so the top of "X" is 5 feet from the property line. Nothing shall be constructed or planted in the corner cut-off area which does or will exceed 30 inches in height required to maintain an appropriate corner sight distance.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
165.	Construct a curb ramp meeting current California State Accessibility standard along both sides of the commercial driveway approaches. The developer shall ensure that an appropriate path of travel, meeting ADA guidelines, is provided across the driveway, and shall adjust the location of the access ramps, if necessary, to meet ADA guidelines, subject to the approval of the City Engineer. If necessary, additional pedestrian and sidewalk easements shall be provided on-site to construct a path of travel meeting ADA guidelines.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
166.	Grind and overlay half ROW width of Archibald Avenue and Chandler Street within the project frontages up to the existing median.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
167.	Install Class II bicycle lanes along Archibald Avenue to connect to the existing Class II bicycle lanes to the north.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
168.	Install Pan-Tilt-Zoom ("PTZ") cameras at each intersection to tie into the existing Citywide system to monitor traffic.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
169.	Install License Plate Reader ("LPR") cameras to tie into the existing Citywide system at each traffic signal servicing the property.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
170.	Upgrade traffic signals within 100 feet of the property to provide signal synchronization.	Prior to Issuance of Certificate of Occupancy	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
171.	Applicant, at its sole option and cost, may install a traffic signal at the intersection of Archibald Avenue and Fairchild Drive, pending signal warrant analysis approved by the City Engineer.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
172.	The Developer shall be responsible for coordinating with Riverside Transit Authority ("RTA") regarding the location of existing, proposed, and future bus stops along the property frontage of all public streets. The Developer shall design street, bus pad, and sidewalk improvements in accordance with the latest RTA bus stop guidelines and in compliance with current accessibility standards pursuant to the Americans with Disabilities Act ("ADA") requirements. The Developer shall design all bus stops to accommodate the RTA Shelters. The Developer shall submit to Public Works verification from RTA acknowledging concurrence with the existing, proposed, and future bus stop improvements in conformance with the Premium Shelter design guidelines.	Prior to Issuance of Certificate of Occupancy	Public Works Division	
173.	The original improvement plans prepared for the proposed development and approved by the City Engineer (if required) shall be documented with record drawing "as-built" information and returned to the Public Works Division prior to issuance of a final certificate of occupancy. Any modifications or changes to approved improvement plans shall be submitted to the City Engineer for approval prior to construction.	Prior to Certificate of Occupancy	Public Works Division	
174.	All conditions of approval for TPM No. 37653 shall be completed to the satisfaction of the City Engineer prior to the issuance of a Certificate of Occupancy.	Prior to Certificate of Occupancy	Public Works Division	
175.	All sewer mains constructed by the applicant and to become part of the public sewer system shall be pressure tested and digitally video recorded by the City's wastewater system operator JSCD prior to acceptance of the sewer system for maintenance by the City. The developer shall be responsible for all costs associated with testing and inspection services. Any defects of the sewer main shall be removed, replaced, or repaired to the satisfaction of the City Engineer prior to acceptance.	Prior to Certificate of Occupancy	Public Works Division	
176.	The Applicant shall provide certification from JCSD Water Services demonstrating that all water and/or wastewater service accounts have been documented, prior to the issuance of a Certificate of Occupancy.	Prior to Certificate of Occupancy	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
177.	A City business registration shall be required prior to issuance of a Certificate of Occupancy or final permits.	Prior to issuance of certificate of occupancy	Planning Division	
178.	The development shall conform to all other applicable State and local laws and ordinances and the applicant shall obtain all necessary approvals and operating permits from all State and local agencies prior to the issuance of a Certificate of Occupancy or final permits.	Prior to issuance of certificate of occupancy	Planning Division	
179.	Any missing or damaged landscaping shall be replanted to the satisfaction of the Community Development Director and Planning Division.	Prior to issuance of certificate of occupancy / Ongoing	Planning Division	
180.	Prior to the final landscape inspection a water audit shall be conducted by an independent water auditor and WELO documentation shall be provided to the City Planning Department and City Landscape Architect via email.	Prior to issuance of certificate of occupancy	Planning Division	
181.	All required landscaping and irrigation systems shall be installed in a condition acceptable to the City. If the Project Landscape Architect has provided inspection of the landscaping, the Project Landscape Architect shall provide the City with a Certificate of Compliance stating that the landscaping was installed per the approved plans. The City will review the Certificate of Compliance and conduct inspections to ensure that the landscape installation is in compliance with the approved landscape plans.	Prior to issuance of certificate of occupancy	Planning Division	
On-Going/During Operations				
182.	Provide street sweeping services for onsite and offsite within project frontages weekly.	On-Going	Public Works Division	
183.	Remove all graffiti within 24 hours pre-construction, during construction, and after a Certificate of Occupancy is issued.	On-Going	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
184.	All street cuts for utilities shall be repaired in accordance with City Standard or as recommended; and any interim trench repairs shall consist of compacted backfill to the bottom of the pavement structural section followed by placement of standard base course material in accord by the City Engineer and with the Standard Specifications for Public Work Construction ("Greenbook"). The base course material shall be placed the full height of the structural section to be flush with the existing pavement surface and provide a smooth pavement surface until permanent cap paving occurs using an acceptable surface course material.	On-going	Public Works Division	
185.	In accordance with City's Moratorium policy to preserve newly paved streets, any and all street and/or trench cuts in newly paved streets will be prohibited or be subject to moratorium street repair standards as reference in Section 12.08.260 of the Eastvale Municipal Code.	On-going	Public Works Division	
186.	Any and all utility trenches or other excavations within existing asphalt concrete pavement of off-site streets resulting from the proposed development shall be backfilled and repaired in accordance with City of Eastvale Standard Drawings. The Developer shall be responsible for removing, grinding, paving and/or overlaying existing asphalt concrete pavement of off-site streets including pavement repairs in addition to pavement repairs made by utility companies for utilities installed for the benefit of the proposed development (i.e. Jurupa Community Services District, Southern California Edison, Southern California Gas Company, Time Warner, Verizon, etc.). Multiple excavations, trenches, and other street cuts within existing asphalt concrete pavement of off-site streets resulting from the proposed development may require complete grinding and asphalt concrete overlay of the affected off-site streets, at the discretion of the City Engineer. The pavement condition of the existing off-site streets shall be returned to a condition equal to or better than what existed prior to construction of the proposed development.	On-going	Public Works Division	
187.	Construction signing, lighting and barricading shall be provided during all phases of construction in accordance with City Standards and the direction of the City Engineer. As a minimum, all construction signing, lighting and barricading shall be in accordance with Part 6 "Temporary Traffic Control" of the latest California Manual on Uniform Traffic Control Devices, or subsequent editions in force at the time of construction.	On-Going	Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
188.	The applicant shall record appropriate easement(s) and agreement(s) for the construction and maintenance of water quality to meet the Storm Water Permit/Water Quality Management Plan Requirements	On-Going	Planning and Public Works Divisions	
189.	All landscaped setbacks and planter areas shall be permanently maintained at the site and kept free of debris.	On-Going	Planning and CES Divisions	
190.	To regulate excess noise levels throughout various times of the day (day/nighttime) the operation shall not create any sound, or allow the creation of any sound on the subject property that causes the exterior sound level on any other occupied property to exceed the sound level standards set forth in Section 8.52.040 – "General Sound Level Standards" of the City of Eastvale Municipal Code.	On-Going	Planning and CES Divisions	
191.	A notice from Riverside County Airport Land Use Commission noting the site's location near the Chino Airport shall be recorded (ALUC condition).	On-Going	Planning and Public Works Divisions	
192.	The project shall be developed in accordance with the approved Tentative Parcel Map and Major Development Review, including the approved site plan, architectural elevations, conceptual landscape plan, and interim and ultimate improvements on Chandler Ave. and Archibald Avenue. The applicant may request modifications or revisions to the approved project as provided in the Eastvale Zoning Code.	On-Going	Planning and Public Works Divisions	
193.	A safety officer or designee may enter and inspect the site at any reasonable time without prior notice for the purpose of investigating an actual complaint or for a health and safety inspection.	On-Going	Planning and CES Divisions	
194.	Landscaping and ground coverage shall be continually maintained as consistent with the approved landscape plan. Any request or changes which deviate from the approved plan shall require a minor development review.	On-Going	Planning and CES Divisions	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
195.	The outdoor dining areas, furniture, and pavement must be maintained in clean and tidy conditions at all times, free from food scrapes, refuse, etc.	On-Going	Planning and CES Divisions	
196.	The applicant must also maintain the adjacent areas and keep them free of any waste generated by outdoor dining.	On-going	Planning and CES Divisions	
197.	Outdoor furniture must be safe, comfortable, of sturdy construction, hygienic and designed for outdoor use. Surface tops should be non-reflective and be of a design which inhibits the collection of food particles.	On-Going	Planning and CES Divisions	
198.	The District reviewed the water and sewer atlas maps to identify the nearest main lines for potential service connections. Water facilities consist of an existing 12-inch diameter water line on Chandler Street and an existing 21-inch diameter waterline on Archibald Avenue. The applicant must provide the District with fire flow requirements from the Fire Department to determine the adequacy of the existing water system.	On-Going	JCSD	
199.	Sewer service is available from an existing 21-inch diameter sewer line on Archibald Avenue. Gravity flow to the existing sewer line is contingent upon the final grading of the site, and sewer service is contingent upon the quantity and quality of wastewater generated by the project. The sewer line will require connections to occur at a manhole, and no direct lateral connections to the mainline are allowed.	On-Going	JCSD	
200.	The District is investigating the potential use of non-potable water for the project area and will require the developer to participate in the final adopted program for parks and greenbelt areas.	On-Going	JCSD	
201.	The applicant will be required to contact Jurupa Community Services District to start the development processes for the project. The applicant must submit plans and fees for sewer and water services.	On-Going	JCSD	

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are required by the City, other local agencies, or state and federal agencies, and are not conditions of approval of the project.

1. The applicant shall obtain City approval for any modifications or revisions to the approval of this project. Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.

2. Submit a final parcel map and all supporting documents for review and approval to the satisfaction of the City Engineer and Public Works Department.

3. Applicants are responsible for all costs associated with off-site right-of-way acquisition, including any costs associated with the eminent domain process, if necessary.

4. Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

1 INTRODUCTION

This document is an Addendum to the previously approved 2021 Initial Study/Mitigated Negative Declaration ("2021 IS/MND") for the Chandler/Archibald Retail Development ("project"). The City of Eastvale ("City"), acting as lead agency under the California Environmental Quality Act ("CEQA"), is reevaluating the revised project's environmental impacts due to changes in the approved project's tenant makeup and layout.

This Addendum evaluates whether the environmental effects of the proposed changes to the approved project would require the preparation of a subsequent or supplemental 2021 IS/MND. As documented herein, the revised project would not cause new significant environmental effects or substantially increase the severity of previously identified significant effects disclosed in the 2021 IS/MND. Accordingly, the revised project would not trigger expanded environmental review, beyond this Addendum.

1.1 CEQA GUIDELINES

This Addendum has been prepared in accordance with CEQA (California Public Resources Code, Sections 21000, et seq.) and CEQA Guidelines (California Code of Regulations, Title 14, Sections 15000, et seq.).

CEQA Guidelines Sections 15162 through 15164 set forth the criteria for determining the appropriate additional environmental documentation, if any, to be completed when there is a previously certified environmental impact report covering a project for which a subsequent discretionary action is required. CEQA Guidelines Sections 15162(a) and 15163 state that when a negative declaration has been adopted or an EIR certified for a project, no subsequent or supplemental EIR or subsequent negative declaration shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in light of the whole public record, one or more of the following:

(1) Substantial project changes are proposed that will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

(2) Substantial changes would occur with respect to the circumstances under which the project is undertaken that require major revisions to the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

(3) New information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified or the negative declaration was adopted shows any of the following:

(A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration.

(B) Significant effects previously examined will be substantially more severe than identified in the previous EIR.

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives.

(D) Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives.

CEQA Guidelines Section 15164(a) states that an addendum to a previously certified EIR may be prepared if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of subsequent or supplemental EIR have occurred. If the conditions listed in CEQA Guidelines Sections 15162, 15163, or 15164 have not occurred or are not met, no changes to the previously certified EIR or previously adopted negative declaration are necessary.

1.2 BACKGROUND

The City of Eastvale adopted the 2021 IS/MND on Wednesday, April 21, 2021 (Appendix A). The approved project included the following entitlements:

- General Plan Amendment to change the land use designation from Low Density Residential (LDR) to Commercial Retail (CR).
- Change of Zone from Light Agricultural (A-1) to General Commercial (C-1/C-P).
- Major Development Review for the development of a 3,700-square-foot convenience store with a 3,144-square-foot 10-fueling position gas station, a 4,456-square-foot drive-through restaurant, and a 3,500-square-foot fast casual restaurant.
- Conditional Use Permit for development and operation of a gas station and convenience store with the off-sale of beer and wine (ABC License Type 20).
- Conditional Use Permit for the development and operation of a drive-through fast food restaurant.
- Conditional Use Permit for the on-sale of general alcohol in conjunction with a restaurant. (ABC License Type 47).
- Tentative Parcel Map to subdivide 2.71 acres of land into three parcels.

These entitlements are hereby referred to as the "approved project," in this document.

The approved project 2021 IS/MND determined that impacts to biological resources, cultural resources, greenhouse gas emissions, hazards and hazardous materials, noise, transportation, and tribal cultural resources had the potential to be significant. Mitigation measures to these environmental factors were included within the 2021 IS/MND, reducing impacts to less than significant.

1.3 ADDENDUM PROCESS

The City of Eastvale is the CEQA lead agency for the revised project. Pursuant to CEQA Guidelines Section 15367, a lead agency has the principal responsibility for carrying out or approving a project that may have a significant effect upon the environment. The City, as the lead agency, has the authority to approve the revised project and its environmental documentation.

As documented herein, the revised project refines the tenants and layout of the approved project and does not create new or increase the severity of significant adverse environmental effects disclosed in the 2021IS/MND nor does it require the adoption of new or considerably different mitigation measures or alternatives. Therefore, the City has elected to streamline the CEQA process with the preparation of this Addendum to the 2021 IS/MND. The conditions specified in Section 15162(a) are not present and no changes to the 2021 IS/MND are necessary. Therefore, the revised project does not require the preparation of a subsequent IS/MND.

This Addendum is the primary reference document for the formulation and implementation of a mitigation monitoring plan for the revised project. All applicable measures from the mitigation monitoring program have been incorporated into this document. This Addendum is intended to provide sufficient information to allow the City and any other permitting agencies to evaluate the potential impacts from implementation of the revised project.

2 ENVIRONMENTAL SETTING

2.1 PROJECT LOCATION

The project site is located in the City of Eastvale on the northwest corner of Archibald Avenue and Chandler Street. The project site consists of four parcels, identified as Assessor Parcel Numbers 144-13-04, 144-13-11, 144-13--12, and 144-13-13. The project site is currently vacant with no existing structures. The regional and local vicinity of the project site are shown in ***Exhibit 1, Regional Vicinity***, and ***Exhibit 2, Project Location***.

2.1 EXISTING CONDITIONS

2.1.1 Land Use

The project site is currently designated by the Eastvale General Plan as Commercial Retail (CR). Refer to ***Exhibit 3, Land Use Map***.

2.1.2 Zoning

The project site is zoned General Commercial (C-1/C-P). Refer to ***Exhibit 4, Zoning Map.***

2.1.3 Surrounding Land Uses and Zoning

Land uses to the north, south, and east have been fully developed with single-family residential neighborhoods consistent with their respective permitted densities and complete with right of way improvements such as sidewalks, lighting, and landscaping. Parcels to the west along Chandler Street are zoned Light Agriculture (A-1). The neighborhood to the north is zoned One-Family Dwellings (R-1), the neighborhood to the east is classified as a Specific Plan (SP), and the neighborhood to the south is classified as a Planned Residential Development (PRD). Properties along Chandler Street have been partially improved with an asphalt sidewalk and limited lighting; there is no parkway landscaping.

3 PROJECT DESCRIPTION

3.1 CHANGES AS COMPARED TO THE APPROVED PROJECT

Since approval of the 2021 IS/MND, the project has been modified to replace the drive-through fast food restaurant to a drive-through coffeeshop, and to replace the gas station and convenience store with a carwash. The approved project's General Plan Amendment, Change of Zone, and Tentative Parcel map have already been processed, and are no longer included in the revised project. A detailed description of the revised project components is included below.

3.2 REVISED PROJECT COMPONENTS

The revised project consists of the following discretionary permits to allow the proposed development of a carwash, a coffeeshop with a drive-through, and a fast-casual restaurant. The entitlements are discussed individually in the bulleted list below and illustrated in ***Exhibit 5, Conceptual Site Plan*****.**

- **Conditional Use Permit** for the operation of a drive-through coffeeshop.
- **Conditional Use Permit** for development and operation of a carwash.
- **Minor Development Review** for the development of:
  - 950-square-foot Dutch Brothers Coffee with associated drive through,
  - 3,598-square-foot Quick Quack Carwash,
  - 3,500-square-foot Zendejas restaurant.

Development Concept

Between the three proposed buildings, the total building area for the revised project would be 8,048 square feet with a building coverage (floor area ratio) of 6.8 percent. The maximum building height would be 50 feet. The revised project would be constructed to conform with Chapter 5, *Development Standards*, of the City's Zoning Code and the City's adopted *Design Standards and Guidelines*, which include design standards related to building size, height, setback, and materials, as well as landscaping, signage, and other considerations. The revised project would be constructed in a single phase.

All revised project access and circulation improvements would be designed and constructed consistent with City design and engineering standards. Roadways adjacent to the revised project, site access points, and site-adjacent intersections would be constructed consistent with the identified roadway classifications and respective cross-sections in the City of Eastvale General Plan Circulation Plan. Specifically, the revised project would provide three restricted access driveways. Two right-turn in/out only driveways are proposed at Archibald Avenue and one right-turn in/out only driveway is proposed at Chandler Street.

The revised project would include a total of 50 parking stalls, the minimum number required in accordance with Chapter 5, *Development Standards*, of the City's Zoning Code. Of the 50 parking stalls, 4 parking stalls would be designated for accessible parking and 12 parking stalls would be designated for clean air vehicle parking. All clean air vehicle parking stalls would be provided with infrastructure for the addition of future

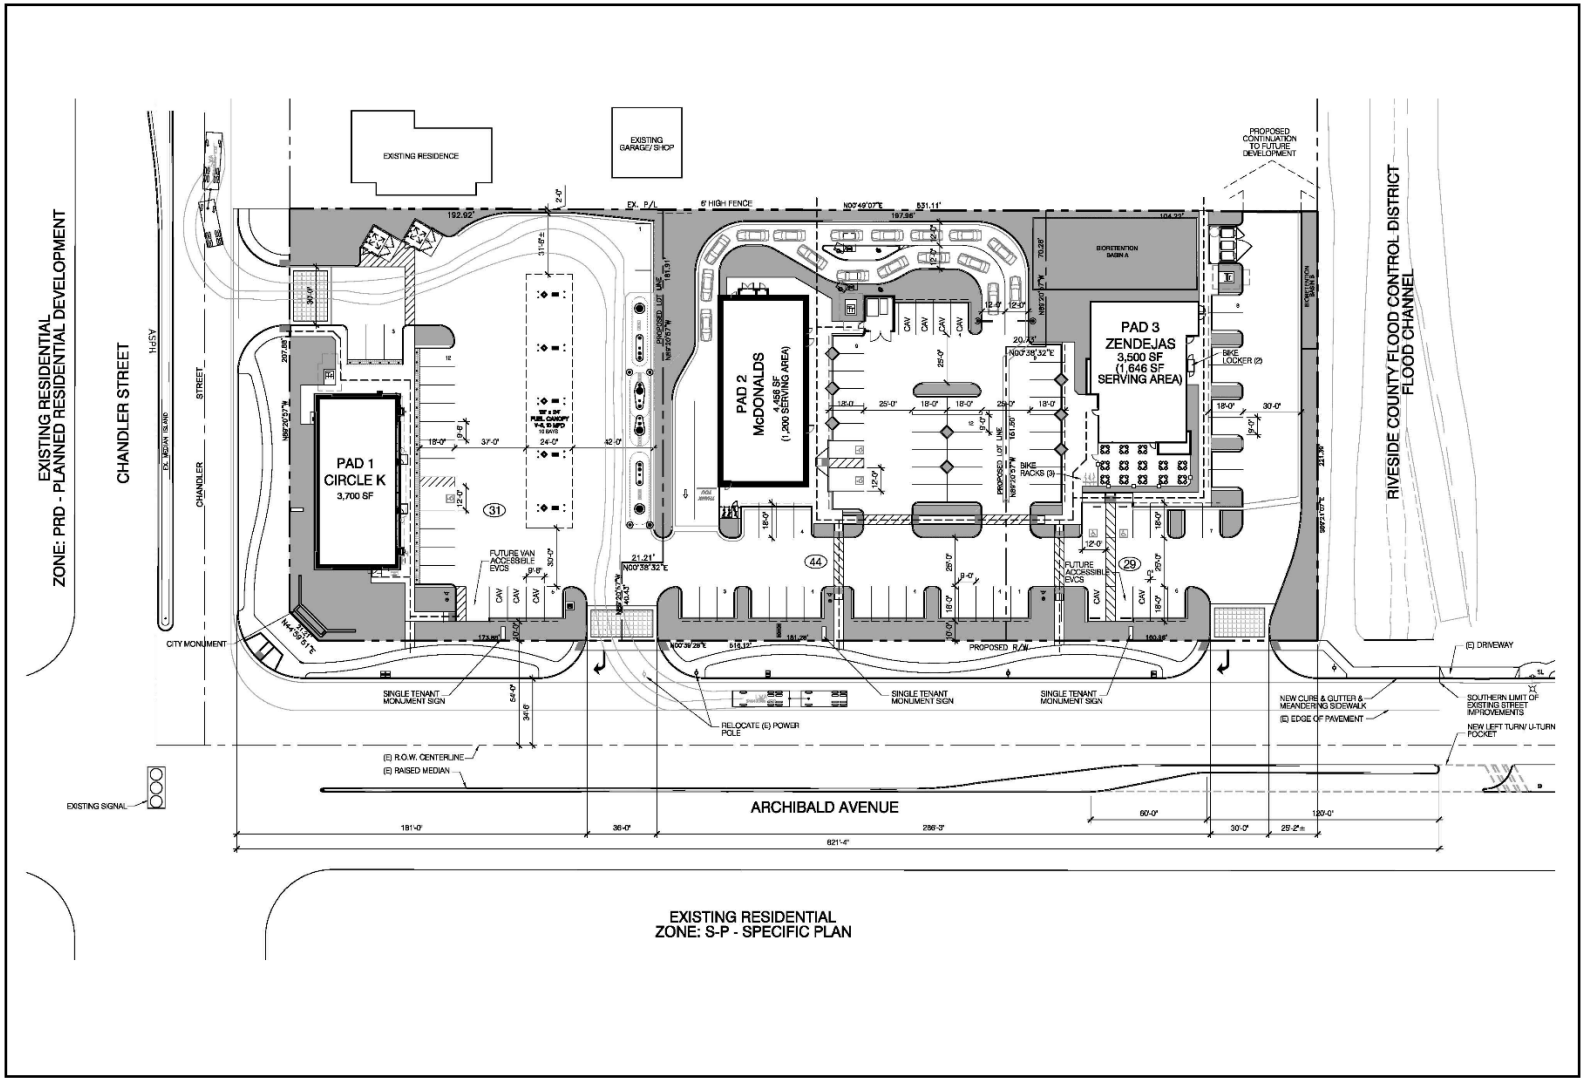
electric vehicle charging stations. A total of 8 parking stalls would be designated as future electric vehicle charging station stalls and would be constructed to meet current accessibility standards along accessible routes or have the ability to be modified without affecting required parking space quantities.

Ornamental water-efficient landscaping, including a variety of trees, shrubs, and vines, would be installed throughout the revised project site. Planting materials would be selected in accordance with Chapter 5, *Development Standards*, of the City's Zoning Code and the City's adopted *Design Standards and Guidelines*. Of the total 117,986-square-foot revised project site area, the total landscape coverage would be 25,018 square feet, equating to 21.2 percent of the revised project site.

Utilities and Drainage

The following utilities/infrastructure systems and services are available to the revised project.

- *Water and Sewer*. Water and sewer services would be provided to the revised project by the Jurupa Community Services District (JCSD).
- *Drainage*. The drainage system that would serve the revised project site is under the jurisdiction of Riverside County in accordance with the County's Master Drainage Plan (MDP).
- *Dry Utilities*. Electricity and natural gas services would be provided by Southern California Edison (SCE) and Southern California Gas Company (SoCalGas), respectively.



3.3 PROJECT ACTIONS/APPROVALS

This Addendum to the 2021 IS/MND is intended to enable the City as the lead agency, and other agencies, make informed decisions with respect to the potential changes in the environmental effects of the overall Approved Project. Table 1: Project Approvals and Activities, lists the anticipated approvals required for the Revised Project.

TABLE 1: PROJECT APPROVALS AND ACTIVITIES

Agency	Actions
City of Eastvale	Conditional Use Permits Minor Development Reviews
Jurupa Community Service Department	Water and wastewater connection permits
Santa Ana Regional Water Quality Control Board	Water Quality Management Plan (WQMP) Approval
State Water Resources Control Board	Stormwater Pollution Prevention Plan (SWPPP) Approval

Revised Site Plan

4 ENVIRONMENTAL ANALYSIS

The following environmental analysis focuses on environmental topic areas that were identified as potentially significant within the 2021 IS/MND (Biological Resources, Cultural Resources, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Noise, Transportation, and Tribal Cultural Resources). The revised project involves the same project footprint as analyzed in the 2021 IS/MND and would allow for the development of a commercial retail project involving three commercial uses. In addition, the revised project is consistent with the site's existing land use designation of Commercial Retail (CR) and General Commercial (C-1/C-P) zoning. Thus, impacts related to all remaining CEQA environmental topic areas would not be greater than identified in the 2021 IS/MND.

Summaries of the potentially significant environmental impacts of the 2021 IS/MND provided for each environmental topic evaluated in the IS/MND, followed by the revised project's impacts and a determination on whether the project or circumstances would require changes to the adopted IS/MND or if there is new information causing potentially new or increased impacts not discussed in the 2021 IS/MND or are substantially more severe than discussed in the 2021 IS/MND. Mitigation measures from the 2021 IS/MND are listed, updated, and refined, as necessary, to reflect the revised project and any new circumstances. Changes to the mitigation measures are shown in ~~strikeout text~~ to indicate deletions and underline text to signify additions and will be incorporated into the final mitigation monitoring program for the revised project.

4.1 BIOLOGICAL RESOURCES

4.1.1 Summary of Impacts in the Adopted IS/MND

Impacts to biological resources were analyzed in Section 4, Biological Resources, of the adopted IS/MND.

The analysis discussed permanent direct and on-site impacts, as well as temporary, indirect, and off-site impacts on special-status species, including threatened and endangered wildlife species, and nesting birds; riparian habitat and sensitive natural communities; jurisdictional waters including wetlands; and local policies, ordinances and adopted plans. Mitigation measures BIO-1 and BIO-2, as well as standard conditions and requirements, were identified to reduce impacts to less than significant on burrowing owl, as well as migratory bird species. With implementation of the identified mitigation measures, the adopted IS/MND identified less than significant impacts to biological resources.

The analysis and findings for the approved project were based on the *Habitat Assessment for Burrowing Owl and Narrow Endemic Plant Species; MSHCP Consistency Analysis; (Assessor's Parcel Nos. 144-130-013, -012, -011, -004) Riverside County, California* (Habitat Assessment), prepared by Osborne Biological Consulting, dated July 2, 2018.

4.1.2 Impacts Associated with the Revised Project

Since adoption of the 2021 IS/MND, are there any changes in the project, changes in circumstances under which the project is undertaken and/or "new information of substantial importance" that cause one or more effects to biological resources including: adverse effects on any sensitive natural community

(including riparian habitat or other sensitive natural community) or species identified as a candidate, sensitive, or special status species in a local or regional plan, policy, or regulation, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service; adverse effects on State or Federally protected wetlands; interference with the movement of any native resident or migratory fish or wildlife species or with wildlife corridors, or impeding the use of native wildlife nursery sites; conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; and/or conflicts with the provisions of any adopted Habitat Conservation Plan, Natural Communities Conservation Plan, or other approved local, regional or State habitat conservation plan?

Yes	No
☐	☑

On-site conditions remain similar to that previously identified and include annual grass/forbland dominated by species such as wall barley, milk thistle, cheeseweed, goosefoot, and prickly Russian thistle, which are weedy species typical of highly disturbed conditions. Historical agricultural practices and residential uses have removed natural on-site vegetation, thereby limiting the quality and availability of habitat for wildlife. No narrow endemic plant species are present nor expected to have the potential to occur on-site, and no sensitive vegetation species are present; no impacts would occur in this regard. Further, no riparian habitat, vernal pools, jurisdictional waters, or wetlands occur on-site; therefore, no impacts would occur to such resources.

As indicated in the adopted IS/MND, there are no designated wildlife corridors on or adjacent to the project site. Although the site is located in an urbanized area and supports low quality, disturbed habitat, the proposed improvements, as with the approved project, would require removal of existing on-site trees that may have the potential to provide suitable nesting opportunities for nesting birds. The Migratory Bird Treaty Act (MBTA) governs the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests. All raptors and their nests are protected from take or disturbance under the MBTA (16 United States Code [USC] Section 703 et seq.) and California statute (CFGC Section 3503.5). To reduce potential impacts to nesting birds, mitigation measure BIO-2 would be implemented to require a preconstruction nesting bird clearance survey to determine the presence/absence, location, and status of any active nests on or adjacent to the project site. If the nesting bird clearance survey indicates the presence of nesting birds and observance of buffers to ensure protections pursuant to MBTA requirements. implementation of mitigation measure BIO-2 would reduce impacts to less than significant, similar to the approved project.

No local policies or ordinances with respect to biological resources apply to the project site. The revised project would therefore not conflict with local policies or ordinances protecting biological resources. No impact would occur, similar to the finding identified in the adopted IS/MND.

The project site is located within the boundaries of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) administered by the Western Riverside County Regional Conservation Authority (RCA). The RCA MSHCP Information Map shows the project site is not located within a cell group, criteria cell, in the Stephen's Kangaroo Rat Plan Fee area or an area that requires surveys for amphibians,

criteria area species, or mammals. However, the site is located in an area requiring burrowing owl, San Diego ambrosia, Brand's phacelia, and San Miguel savory habitat assessments and surveys, if suitable habitat is present. Burrowing owl is designated as a species of special concern by the California Department of Fish and Wildlife. The project site primarily consists of disturbed land with patches of ruderal vegetation and habitat on-site is not considered to be suitable for the three narrow endemic plant species identified above. No burrowing owl individuals, surrogate burrows, or burrowing owls sign were found during prior field investigation with the approved project. Nonetheless, to ensure that burrowing owls are not adversely affected by implementation of the revised project, mitigation measure BIO-1 would be implemented to require a pre-construction survey to ensure that burrowing owl is not present on-site, similar to the approved project. Impacts would be less than significant with mitigation incorporated.

Project implementation would not cause new or substantially more severe significant impacts to biological resources compared with the significance determination in the adopted IS/MND. However, mitigation measures would be implemented to reduce potential impacts to less than significant.

4.1.3 Adopted Mitigation Measures Applicable to the Revised Project

The following mitigation measures were identified in the adopted IS/MND. Applicability of each mitigation measure has been evaluated. The mitigation measures have been modified where appropriate to reflect the revised project. Additionally, the revised project would be required to conform to Standard Conditions and Requirements relative to biological resources, as identified in the adopted IS/MND.

BIO-1 Prior to the issuance of a grading permit, a preconstruction burrowing owl clearance survey shall be completed by a qualified biologist within 30 days prior to ground disturbance to avoid direct take of burrowing owls. Once complete, a written report summarizing the results of the clearance survey shall be prepared and submitted to the City of Eastvale for review and concurrence.

- If no burrowing owls are detected, construction may proceed. If construction is delayed or suspended for more than 30 days during the breeding season (March 1 to August 31), the project site or work area shall be resurveyed.

- If burrowing owls are detected on the project site during the breeding season (March 1 to August 31), a 300-foot "no work" buffer shall be established around the active burrow and all work within the buffer shall be halted until the qualified biologist has determined through non-intrusive methods that the nesting effort is complete (i.e., all young have fledged). Once the nesting effort is complete or if a burrowing owl burrow is detected on-site during the nonbreeding season (September 1 to February 28), passive and/or active relocation of burrowing owls may be implemented by a qualified biologist following consultation and approval from the City of Eastvale, the Western Riverside County Regional Conservation Authority, and the California Department of Fish and Wildlife.

BIO-2 Pursuant to the Migratory Bird Treaty Act and the California Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat shall be conducted outside the avian nesting season. The nesting season generally extends from February 1 through August 31, but can vary

slightly from year to year based on seasonal weather conditions. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a preconstruction clearance survey for nesting birds shall be conducted within 30 days of the start of any ground-disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the preconstruction clearance survey, construction activities shall stay outside of a 300-foot buffer around the active nest. For raptors and special status species, this buffer will be expanded to 500 feet. A biological monitor shall be present to delineate the boundaries of the buffer area and to monitor the active nest to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur.

4.1.4 Level of Significance After Mitigation

Mitigation measures BIO-1 and BIO-2 as identified in the adopted IS/MND are applicable to the revised project. With the implementation of these mitigation measures, project impacts would be less than significant and would not be greater than those identified in the adopted IS/MND.

4.2 CULTURAL RESOURCES

4.2.1 Summary of Impacts in the Adopted IS/MND

Impacts to cultural resources were analyzed in Section 5, Cultural Resources, of the adopted IS/MND. The adopted IS/MND analyzed impacts to cultural resources and concluded that development of the approved project could result in the loss of unknown archaeological resources during ground disturbing activities. The adopted IS/MND determined that impacts to cultural resources would be reduced to less than significant with implementation of mitigation measure CUL-1.

The analysis and findings for the approved project were based on the *Phase I Cultural Resources Survey for Proposed Retail Development at the Corner of Archibald and Chandler* (Cultural Resources Survey) prepared by EnviroPro Consulting, LLC, dated October 17, 2018.

4.2.2 Impacts Associated with the Revised Project

Since adoption of the 2021 IS/MND, are there any changes in the project, changes in circumstances under which the project is undertaken and/or "new information of substantial importance" that cause one or more effects to cultural resources including: causing a change in the significance of a historical or archaeological resource as defined in State CEQA Guidelines Section 15064.5; and/or disturbing any human remains, including those interred outside of dedicated cemeteries?

Yes	No
☐	☑

A Sacred Lands File search with the Native American Heritage Commission; review of cultural resource records held by Soboba Cultural Resources Department; standard review of the National Register of

Historic Places and the Office of Historic Preservation Historic Property Directory; field survey conducted as part of the Cultural Resources Survey; and records search for surveys or sites within one mile of the subject site were conducted for the approved project. Such investigations did not identify any historic or prehistoric cultural resources or records within the project boundaries.

As evaluated in the adopted IS/MND, the project site is vacant, undeveloped land with no built resources. Project implementation would not result in any alterations of a historical resource, as defined by CEQA Guidelines Section 15064.5, as no such resources are present. No impacts to historical resources would occur, similar to the approved project.

Based on the records search results, the potential for cultural resources to be buried within the project site is considered low, as no indications were observed during the survey that would suggest the presence of historic or prehistoric features or artifacts. However, similar to the approved project, if previously undocumented cultural resources are identified during earthmoving activities, mitigation measure CUL-1 would be implemented to reduce potential impacts to unknown historical and archaeological resources to less than significant.

Similar to the approved project, the potential exists that human remains may be unearthed during grading and excavation activities associated with construction of the revised project. As with the approved project, standard protocols would be followed in the event that human remains are discovered during grading or excavation associated with the revised project, allowing for all work in the affected area to be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the find. A less than significant impact would occur in this regard.

There would not be new or substantially more severe impacts to cultural resources compared with the significance determination in the adopted IS/MND. No new mitigation measures are required.

4.2.3 Adopted Mitigation Measures Applicable to the Revised Project

The following mitigation measure was identified in the adopted IS/MND. Applicability of the mitigation measure has been evaluated for the current project. Additionally, the revised project would be required to conform to Standard Conditions and Requirements relative to cultural resources, as identified in the adopted IS/MND.

CUL-1 If cultural resources are encountered during ground-disturbing activities, work in the immediate area shall cease and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find(s). If the discovery proves to be significant under the California Environment Quality Act, additional work such as data recovery excavation may be warranted and shall be reported to the City.

4.2.4 Level of Significance After Mitigation

Mitigation measure CUL-1 as identified in the adopted IS/MND is applicable to the revised project. With implementation of this mitigation measure, impacts resulting with the revised project would be less than significant and would not be greater than those identified in the adopted IS/MND.

4.3 GREENHOUSE GAS EMISSIONS

4.3.1 Summary of Impacts in the 2021 IS/MND

Section 8, Greenhouse Gas Emissions, of the 2021 IS/MND analyzes impacts relative to greenhouse gas (GHG) emissions associated with the approved project. The 2021 IS/MND determined that GHG emissions resulting with the approved project would total 3,672.91 metric tons of carbon dioxide equivalent ($MTCO_2e$) per year. Per City of Eastvale guidance, a significant cumulative impact relative to global climate change would occur if project emissions from ongoing operations exceed the SCAQMD screening threshold of 3,000 $MTCO_2e$ per year for all land uses. Implementation of mitigation measures GHG-1 and GHG-2 were therefore required to reduce such impacts resulting with the approved project to a less than significant level. Further, the approved project was determined to be in conformance with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs; impacts were identified as less than significant in this regard.

The analysis and findings for the approved project were based on the *Archibald at Chandler Commercial Project Air Quality, Global Climate Change, TAC and Energy Impact Analysis*, prepared by Ganddini Group, Inc., dated November 18, 2020.

4.3.2 Impacts Associated with the Revised Project

Since adoption of the 2021 IS/MND, are there any changes in the project, changes in circumstances under which the project is undertaken and/or "new information of substantial importance" that result in generation of greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment or that result in conflict with applicable plans, policies or regulations adopted for the purpose of reducing greenhouse gas emissions?

Yes	No
☐	☑

Similar to the approved project, construction and operational activities associated with the revised project would generate GHG emissions from area sources, energy usage, mobile sources, waste, water, and construction equipment. Due to construction requirements assumed for the revised land uses resulting with the revised project, GHG emissions are anticipated to be similar to that calculated for the approved project. However, operation of the revised project would generate fewer metric tons CO_2e of GHG emissions than that analyzed in the 2021 IS/MND, largely due to the decrease in mobile-source emissions as a result of the land uses proposed and resulting trip generation (refer also to Section 4.6, Transportation, for additional discussion). However, emissions generated by the revised project are anticipated to similarly exceed the significance threshold of 3,000 $MTCO_2e$ per year during operation. As with the approved project, implementation of mitigation measures GHG-1 and GHG-2 would similarly be required with the revised project to reduce GHG emissions to below a level of significance.

As GHG emissions would be reduced below the significance threshold with incorporation of mitigation, the revised project would not interfere with applicable plans, policies, or regulations aimed at reducing

GHG emissions, including the State's goal to reduce GHG emissions under Executive Order S-3-05, to 80 percent below 1990 levels by the year 2050. As the project's emissions would meet the threshold for compliance with Executive Order S-3-05, project emissions would also comply with the goals of Assembly Bill (AB) 32 and the Western Riverside Council of Government Climate Action Plan. Additionally, as the project would meet current interim emissions targets/thresholds established by SCAQMD, the revised project would also be on track to meet the reduction target of 40 percent below 1990 levels by 2030 as mandated by Senate Bill (SB) 32. For these reasons, the revised project is not anticipated to conflict with applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions. Impacts would remain less than significant in this regard, similar to the approved project.

Therefore, revised project impacts relative to GHG emissions would not be greater than those analyzed in the 2021 IS/MND. No new mitigation measures are required.

4.3.3 Adopted Mitigation Measures Applicable to the Revised Project

The following mitigation measures were identified in the 2021 IS/MND. Applicability of each mitigation measure has been evaluated. Additionally, the revised project would be required to conform to Standard Conditions and Requirements relative to greenhouse gas emissions, as identified in the 2021 IS/MND.

GHG-1 The project shall incorporate the following California Air Pollution Control Officers Association-based reduction measures and regulatory compliance:

- Utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen Standards.
- Implement recycling programs that reduce waste to landfills by a minimum of 75 percent (per AB 341).
- Incorporate the following land use and site enhancement reduction measures: LUT-1 Increase Density, LUT-4 Improve Destination Accessibility, LUT-5 Increase Transit Accessibility, and SDT-1 Improve Pedestrian Network.

GHG-2 The project shall incorporate the following design features:

- The project applicant shall require that all faucets, toilets, and showers installed in the proposed structures utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen standards.
- The project applicant shall require recycling programs that reduce waste to landfills by a minimum 75 percent per AB 341.
- The project applicant shall provide sidewalks on-site and connecting off-site

4.3.4 Level of Significance After Mitigation

Mitigation measures GHG-1 and GHG-2 as identified in the 2021 IS/MND are applicable to the revised project. With implementation of these mitigation measures, impacts resulting with the revised project would be less than significant and would not be greater than those identified in the 2021 IS/MND.

4.4 HAZARDS AND HAZARDOUS MATERIALS

4.4.1 Summary of Impacts in the Adopted IS/MND

Section 9, Hazards and Hazardous Materials, of the adopted IS/MND analyzes potential impacts relative to hazard and hazardous materials. The adopted IS/MND concluded that project construction and operation would result in less than significant impacts relative to routine transport, use, and/or disposal of hazardous materials and/or through accidental release of hazardous materials; compliance with applicable Federal, State, and local regulations would ensure that such impacts would remain less than significant. Due to distance, the project was determined to not result in hazardous emissions within proximity to an existing school, nor would the project be located on a site identified as a hazards materials site per Government Code Section 65962.5. The site is located within the Influence Area of the Chino Airport and would be subject to review by the Riverside County Airport Land Use Commission (ALUC) to reduce potential safety hazards to less than significant. The project was also determined to result in a less than significant impact from exposure of people or structures relative to exposure of people or structures to wildland fires. However, the adopted IS/MND identified a significant impact due to the potential for project construction to interfere with emergency evacuation during project construction; mitigation measure TRA-1 (see 4.6, Transportation) was identified to require preparation of a traffic management plan to reduce potential impacts to less than significant.

The analysis provided in this section was based in part on the *Phase I Environmental Site Assessment, NWC Archibald Avenue and Chandler Street, Eastvale, CA 92880* (Phase I ESA) prepared by S&S Commercial Services, Inc., dated July 30, 2018.

4.4.2 Impacts Associated with the Revised Project

Since adoption of the 2021 IS/MND, are there any changes in the project, changes in circumstances under which the project is undertaken and/or "new information of substantial importance" that result in one or more effects from hazards and hazardous materials including: creation of a significant hazard to the public or the environment through the routine transport, storage, use, or disposal of hazardous materials; creation of a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; production of hazardous emissions or handling hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school; location on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 creating a hazard to the public or the environment; location within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport or within the vicinity of a private airstrip resulting in a safety hazard for people residing or working in the project area; impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; and/or

exposure of people or structures to a significant risk of loss, injury or death involving wild land fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Yes	No
☐	☑

Similar to the approved project, construction and operation of the revised project would be anticipated to involve small quantities of hazardous materials such as fuels, greases, paints, and cleaning materials. Similarly, project operations would require the use of small amounts of cleansers, paints, and pesticides for cleaning and maintenance purposes. The transport, use, storage, disposal, and handling of hazardous materials are governed by regulations that are enforced by the Department of Toxic Substances Control (DTSC), Environmental Protection Agency, Occupational Safety and Health Administration, and Riverside County Department of Environmental Health. Further, no recognized environmental conditions (RECs), historical recognized conditions (HRECs), other environmental hazards have been identified on-site (S&S Environmental Services 2018); no changes have occurred in such conditions since adoption of the 2021 IS/MND.

The project applicant(s) and associated construction contractors would comply with Federal, State, and local regulations concerning the handling, transport, storage and disposal of all hazardous materials and wastes during project construction and operation. As with the approved project, potential hazards to the public and environment through the routine transport, use, or disposal of hazardous materials, or through reasonably foreseeable upset and accidental conditions involving the release of hazardous materials into the environment would be less than significant.

There are no existing or proposed schools within 0.25-mile of the project site. The closest school is Rondo Elementary, approximately one mile to the northwest at 14977 Walters Street in the City of Eastvale. Any potential hazardous substances used at the site during construction or operation would occur in accordance with existing regulations. The potential for an accidental release that would adversely impact area school operations would be less than significant, similar to the approved project.

Under current conditions, the revised project site is not located on a known site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. No impact would occur in this regard, similar to the approved project.

The Riverside County Airport Land Use Compatibility Plan (ALUCP) identifies the project site as located within the Chino Airport Influence Area, although it is not located within any of the Compatibility Zones (Riverside County 2008). The ALUCP establishes various policies and compatibility maps for individual airports. Prior to City approval, the project applicant(s) would be required to document review and approval of the project by the Riverside County ALUC. Any project revisions or limitations required by the ALUC would be incorporated in the project prior to City approval. Compliance with this requirement would ensure that impacts remain less than significant.

Activities associated with the revised project would not impede existing emergency response plans for the project site and/or other land uses in the project vicinity. The project would not substantially alter the

existing circulation system or construct sharp curves or dangerous intersections that would introduce incompatible conditions with area roadways. Partial lane closures may be required as part of project construction activities. As with the approved project, a traffic management plan would be implemented (mitigation measure TRA-1) to minimize congestion and ensure safe travel, including emergency access in the project vicinity, ensuring that impacts are reduced to less than significant.

The project site is located in an urbanized area and is currently surrounded by existing residential and commercial uses. As identified in the adopted IS/MND, the site is not located in a zone designated as Very High Fire Hazard by the California Department of Forestry and Fire Protection. The revised project would be required to adhere to building codes and any conditions identified by the Riverside County Fire Department during project review. Similar to the approved project, the revised project would not expose people or structures to a significant risk of loss, injury, or death involving wildland fires. Impacts would remain less than significant.

Project impacts regarding hazards and hazardous materials would not be greater than those analyzed in the adopted IS/MND with implementation of mitigation measure TRA-1.

4.4.3 Adopted Mitigation Measures Applicable to the Revised Project

The following mitigation measure was identified in the adopted IS/MND. The mitigation measure has been evaluated for applicability to the revised project.

> Refer to mitigation measure TRA-1 in Section 4.6, Transportation.

4.4.4 Level of Significance After Mitigation

A traffic management plan has been prepared for the project; therefore, mitigation measure TRA-1 has been satisfied. With implementation of mitigation measure TRA-1, potentially significant impacts related to hazards and hazardous materials would remain less than significant and would not be greater than those identified in the adopted IS/MND.

4.5 NOISE

4.5.1 Summary of Impacts in the 2021 IS/MND

The 2021 IS/MND provides an analysis of noise impacts in Section 13, Noise. Impacts associated with noise were found to be less than significant with the implementation of mitigation measures.

The approved project was found to have a significant impact resulting from construction noise level increases which would exceed the City's established threshold at adjacent sensitive receptor locations during the daytime hours. Mitigation measures NOI-1 to NOI-4 were identified to reduce such impacts to less than significant. Additionally, operational noise levels with the addition of the project were determined to be below the allowable increase in ambient noise levels, and therefore, impacts were determined to be less than significant. Ground-borne vibration levels resulting with project construction were determined to be potentially significant, and mitigation measure NOI-5, restricting the use of certain construction equipment of the western property boundary, was identified to reduce impacts to less than

significant. Further, the project site would not be exposed to excessive noise from airport operations; impacts were determined to be less than significant.

The analysis and findings in the 2021 IS/MND were based on the *Archibald at Chandler Commercial Project Noise Impact Analysis,* prepared by Ganddini Group, Inc., dated November 17, 2020.

4.5.2 Impacts Associated with the Revised Project

The analysis in this section is based in part on the following technical report:

- *Archibald and Chandler Car Wash and Coffee Shop - Noise Impact Analysis,* City of Eastvale. December 16, 2022.

Complete copies of the report are included in Appendix B of this Addendum.

Since adoption of the 2021 IS/MND, are there any changes in the project, changes in circumstances under which the project is undertaken and/or "new information of substantial importance" that result in one or more effects from noise including: generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies; generation of excessive groundborne vibration or groundborne noise levels; or, for projects located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, or for projects within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

Yes	No
☐	☑

Construction Noise. The revised project would cause temporary noise increases from on-site construction activities. Construction activities were estimated on a worst-case basis at levels that may occur at the nearest noise-sensitive receptors. Due to the temporary, short-term nature of noise-generating construction activities, the temporary or periodic noise level increases over the existing ambient conditions due to construction activities were considered under CEQA Guideline A for the revised project. The California Department of Transportation Traffic Noise Analysis Protocol 12 dBA L_{eq} substantial noise level increase threshold was used to assess temporary noise level increases (dBA = A-weighted decibel is the relative loudness of sounds as perceived by the human ear; L_{eq} = equivalent continuous sound pressure level is the consistent noise level that would result in the same total sound energy being produced over a given period).

As analyzed in the noise impact analysis prepared for the revised project (see Appendix B), the proposed commercial uses would result in construction-related noise level increases that range between 6 and 23.5 dBA L_{eq} at nearby receiver locations. Since the revised project-related construction noise levels would generate a temporary noise level increase above the existing ambient noise levels of up to 12 dBA L_{eq}, the revised project construction noise level increases would be considered a potentially significant impact. Adherence to exempt hours of operation and implementation of the mitigation measures presented

below would reduce construction noise levels at nearby receiver locations would no longer result in increases that exceed 12 dBA L_{eq}. Revised project construction noise impacts would be further reduced to less than significant with incorporation of mitigation measures as identified in the 2021 IS/MND (mitigation measures NOI-1 to NOI-4).

Groundborne Vibration. Increases in groundborne vibration levels attributable to the revised project would be primarily associated with short-term construction activities. Construction-related ground vibration is normally associated with impact equipment such as pile drivers, jackhammers, and the operation of some heavy-duty construction equipment, such as dozers and trucks. As identified for the Approved Project, depending on the construction equipment used, the Approved Project would generate unmitigated vibration levels below the City of Eastvale's 0.0787 inches per second (in/sec) PPV threshold with exception of at the western property line. As such, mitigation measure NOI-5 was identified to reduce potential vibration levels to a less than significant level.

Similarly, the noise impact analysis prepared for the revised project (see Appendix B) determined that ground-borne vibration from project construction activities (use of heavy construction equipment and trucks) would cause only intermittent, localized intrusion. Based on the reference vibration levels provided by the Federal Transportation Authority, a large bulldozer represents the peak source of vibration with a reference velocity of 0.089 in/sec PPV at 25 feet (PPV = peak particle velocity which refers to the movement within the ground of molecular particles; used to evaluate the potential for building damage). At distances ranging from 10 to 150 feet from the project construction activities, construction vibration velocity levels are expected to range from 0.000 to 0.492 in/sec PPV. Based on the City of Eastvale vibration standard of 0.0787 in/sec PPV, the revised project construction activities would generate unmitigated vibration levels that remain below the 0.0787 in/sec PPV threshold at all identified receivers with exception of existing backyards of residential uses located to the west of the project site (Receiver 4); refer to Figure 7, Receiver Locations, in Appendix B. To satisfy the City of Eastvale vibration standard of 0.0787 in/sec PPV, mitigation measure NOI-5 would be required to restrict the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary (Receiver 4), similar to that required with the approved project. With implementation of mitigation measure NOI-5, impacts would be reduced to less than significant.

Off-Site Traffic Noise. In order to quantify the increase in vehicle noise associated with operation of the revised project, changes in traffic noise levels were modeled along roadway segments expected to be affected by the project (refer also to Section 4.6, Transportation). Traffic noise was modeled using traffic forecasts provided in the *Archibald at Chandler Commercial Project Traffic Impact Analysis* (October 28, 2022; refer to Appendix C-2 for a detailed discussion). The analysis determined that the unmitigated project-related traffic noise level increases under all traffic scenarios would be less than significant. No increase in impacts relative to that identified in the 2021 IS/MND would occur with the revised project.

Operational Noise. Noise levels associated with project operational noise sources are expected to range from 46 to 54 dBA L_{eq} and would not exceed the daytime General Plan L_{eq} noise level standard of 60 dBA L_{eq} or exceed the City's Municipal Code standard of 55 dBA L_{max} (L_{max} = maximum sound pressure level or greatest instantaneous sound pressure level observed during a single noise measurement interval). The

project would operate between the hours of 7:00 AM and 10:00 PM and therefore, would not result in any exceedances of nighttime noise standards. Operational impacts in this regard would be less than significant and no mitigation is required.

As identified in the noise impact analysis for the revised project (see Appendix B), the existing measured CNEL is 61 dB (CNEL = community noise equivalent level, or weighted average of noise level over time). Operational noise generated by the revised project during daytime hours would add approximately 1 dB to each hour. The existing plus project CNEL would still be 61 dBA with project operational noise. Residential construction methods typically provide 20 dB of exterior to interior noise reduction with provision of heating, ventilation, and air conditioning to allow for a windows-closed condition. Project operation would not result in interior noise levels that exceed the 45 dBA CNEL noise standard. Impacts in this regard would be less than significant, and no mitigation is required.

Operation of the revised project would result in increases in ambient noise levels of up to 5 dB but would not exceed any of the applicable thresholds due to relatively quiet ambient noise levels. Project operational noise would not result in significant impacts, similar to that identified in the 2021 IS/MND for the Approved Project. Therefore, no mitigation is required.

Additionally, the project site is not located within an airport land use plan or two miles of an airport; the closest airport is the Chino Airport, approximately 2.15 miles northwest of the site. Project implementation would not affect airport operations or increase exposure of noise-sensitive uses to aircraft noise. Impacts would remain less than significant with the revised project.

Project impacts relative to noise and vibration would not be greater than those analyzed in the 2021 IS/MND, and no new mitigation measures would be required.

4.5.3 Adopted Mitigation Measures Applicable to the Revised Project

The following mitigation measures were identified in the 2021 IS/MND. Applicability of each mitigation measure has been evaluated. Additionally, the revised project would be required to conform to Standard Conditions and Requirements relative to noise, as identified in the 2021 IS/MND.

NOI-1 The construction contractor(s) shall place all stationary construction equipment so that emitted noise is directed away from the noise-sensitive receptors nearest the project site.

NOI-2 The construction contractor(s) shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May).

NOI-3 The contractor shall install temporary construction noise barriers/blankets along the western boundary. The barrier/blankets shall be solid with no cracks or holes and shall also reach to the ground.

NOI-4 During all project construction phases on-site, construction contractors shall equip all construction equipment, fixed or mobile, with either properly operating and maintained mufflers

or enclosures/acoustical tents (as appropriate) that achieve at least 12 dB reduction from applicable noise level specifications.

NOI-5 The contractor shall restrict the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary.

4.5.4 Level of Significance After Mitigation

Noise and vibration impacts resulting with the revised project would be less than significant with mitigation measures incorporated. The revised project would not result in a new or substantially more severe significant impact compared with the significance determination as documented in the 2021 IS/MND.

4.6 TRANSPORTATION

4.6.1 Summary of Impacts in the 2021 IS/MND

The 2021 IS/MND provides an analysis of transportation/traffic impacts in Section 17, Transportation. As analyzed, the approved project was estimated to generate a worst-case scenario of 4,871 average daily trips, including 141 net new trips during the AM peak hour and 179 net new trips during the PM peak hour. State CEQA Guidelines Section 15064.3 currently governs the approach for determination of significance for transportation impacts based on a vehicle miles traveled (VMT) instead of congestion (such as level of service, or LOS). However, as Eastvale General Plan Policy C-10 requires that the City maintain a LOS C on all City maintained roadways, and a LOS D in employment and commercial areas, a discussion relative to project consistency with Policy C-10 was included in the 2021 IS/MND. The IS/MND determined that under all scenarios analyzed, an acceptable LOS would be maintained for all affected roadways and intersections with project implementation.

Additionally, the 2021 IS/MND determined that a less than significant impact would occur relative to vehicle miles traveled pursuant to CEQA Guidelines section 15064.3, and that the project as designed would not substantially increase hazards due to design features or incompatible uses. A significant impact was identified as project construction activities were determined to have the potential to result in temporary impacts to emergency access and evacuation routes during construction; mitigation measure TRA-1 was identified to require preparation of a traffic management plan to reduce such impacts to less than significant (Note: mitigation measure TRA-1 has been implemented to date).

The analysis and findings of this section in the 2021 IS/MND were based on the *Archibald at Chandler Commercial Project Traffic Impact Analysis* prepared by Ganddini Group, Inc., dated October 28, 2020.

4.6.2 Impacts Associated with the Revised Project

The analysis in this section is generally based in part on the following technical reports:

- *Trip Generation Analysis for the Archibald/Chandler Car Wash and Coffee Shop* (PLN22-20055). Ganddini Group, Inc. December 16, 2022.

- *Drive Through Queuing Study for the Archibald/Chandler Car Wash and Coffee Shop* (PLN22-20055). Ganddini Group, Inc. July 25, 2023.

Complete copies of these studies are included in Appendices C-1 and C-2 of this Addendum.

Since adoption of the 2021 IS/MND, are there any changes in the project, changes in circumstances under which the project is undertaken and/or "new information of substantial importance" that cause effects to transportation/traffic including: conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities; conflict or inconsistency with CEQA Guidelines Section 15064.3, subdivision (b); increased hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or, inadequate emergency access?

Yes	No
☐	☑

As noted, the project has since been revised to propose the parcellation and development of new commercial uses which would include a 950 square foot Dutch Bros. coffee shop, drive through lane with sufficient queue storage for 27 vehicles, and ancillary parking stalls, trash enclosure, and landscaping on Pad 1. The revised project also includes development of a 3,598 square foot Quick Quack Carwash with carwash tunnel, vacuums, and parking on Pad 2; and a 3,500 square foot Zendejas restaurant on Pad 3 (refer to Exhibit 6, Revised Conceptual Site Plan). The proposed coffee shop and car wash developments proposed on Pad 1 and Pad 2 of the project site are not consistent with land uses considered in the adopted 2021 IS/MND (gas station and fast food restaurant) and therefore, are further analyzed herein to determine whether potential transportation-related impacts would be increased under the current development scenario.

The land use proposed for Pad 3 (3,500-square foot Zendejas fast food restaurant) of the commercial center would remain consistent with that analyzed in the 2021 IS/MND. Therefore, an increase in vehicle trips generated by the use would not occur under the project as currently proposed, and no new or substantially more severe significant environmental impacts compared with the impacts disclosed in the approved 2021 IS/MND are anticipated.

To analyze the potential effects of the change in land uses described above, a supplemental trip generation study and drive-through queuing analysis were prepared; refer to Appendix C-1 and Appendix C-2, respectively. The 2020 traffic impact analysis (TIA) prepared for the approved project considered development of the subject site consisting of a 3,700 square foot gas station with 10 vehicle fueling positions and convenience market on Pad 1; a 4,365 square foot fast food restaurant with drive-through window on Pad 2; and a 3,500 square foot fast casual restaurant (Zendejas) on Pad 3. The proposed uses were forecast to generate a total of 4,871 daily vehicle trips. As currently proposed, the Dutch Bros. coffee shop is forecast to generate a total of 446 daily vehicle trips; the proposed carwash is forecast to generate a total of 900 daily vehicle trips. Therefore, overall, the mix of uses proposed under the revised (current) project would generate an estimated 3,185 fewer daily vehicle trips compared to the approved project as evaluated in the 2020 TIA. As such, the revised project would not exceed the trip generation assumptions in the adopted 2021 IS/MND and would not represent an increased development intensity in this regard.

The City of Eastvale has adopted Resolution No. 20-44 which establishes VMT impact thresholds for assessing consistency with CEQA Guidelines section 15064.3, subdivision (b). Resolution No. 20-44 includes screening criteria for certain types of projects that are local-serving in nature or generate a low number of vehicle trips and may be presumed to have a less than significant impact. Such projects include local-serving retail projects, defined as retail developments with less than 50,000 square feet. Local-serving retail projects generally redistribute shopping trips rather than creating new trips, and thereby tend to shorten trips and reduce VMT. The revised project meets the definition of local-serving retail as it consists of retail uses totaling less than 50,000 square feet. Therefore, similar to the approved project, the revised project satisfies the project type screening criteria for local-serving retail and, as such, would result in a less than significant VMT impact.

Similar to the approved project, the revised project does not involve any unusual conditions, or hazardous design features, such as sharp curves or dangerous intersections, or incompatible uses. All recommended improvements would be constructed to be consistent with the identified roadway classifications and respective cross-sections in the City of Eastvale General Plan Circulation and Infrastructure Element, and all project driveways and signage, buildings, and landscaping would be designed in accordance with City standards to ensure adequate sight distance for drivers entering and exiting the site. With implementation such measures, the revised project would not substantially increase hazards due to a design feature or incompatible use. Impacts would remain less than significant, similar to the approved project.

As with the approved project, access and circulation features on the project site would accommodate emergency ingress and egress and would be designed to ensure that access is maintained for fire trucks, police units, and ambulance/paramedic vehicles. All emergency access features are subject to and must satisfy the City of Eastvale design requirements and be approved by the Fire Department. As with the approved project, the revised project would implement a Traffic Management Plan (TPM) to minimize temporary impacts to emergency access and evacuation routes during the construction process; refer to mitigation measure TRA-1. With implementation of mitigation measure TRA-1, the revised project would not result in inadequate emergency access and impacts would be less than significant, similar to the approved project.

Additionally, a queuing study was prepared for the revised project to address project effects resulting with on-site vehicle circulation (see Appendix C-2). Due to the nature of the revised commercial uses and the potential for queuing to occur during peak operational hours, it is recommended that the proposed drive through facilities provide sufficient drive through storage length to accommodate the 95th-percentile queue. In statistics, the 95th percentile describes the value at which 95 percent of the samples are distributed at or below. Providing sufficient queue storage to accommodate the 95th percentile queue would ensure that drive through lane queue overflow occurs less than 5 percent of the time. Based on the queue surveys, it is recommended that the coffee shop provide sufficient queue storage for 27 vehicles. Assuming 20 feet of queue length per vehicle, the proposed drive through lane would provide storage capacity for approximately 27 vehicles, which is sufficient to accommodate the recommended 95th percentile queue of 27 vehicles. The revised project's coffee shop would provide a total drive through lane storage length of approximately 557 feet. Based on the findings of the queuing studies, the revised project as currently designed is anticipated to provide adequate drive through storage capacity to accommodate

peak queues and maintain adequate circulation/site access and to ensure that public safety in the area is not adversely affected due to project-generated vehicles encroaching onto local streets or blocking sidewalks.

Additionally, the proposed coffee shop would employ staff to assist with management of the drive-through queue during peak periods. Specifically, staff would periodically walk along the drive through lanes encouraging vehicles to pull forward and maximize efficiency of the available storage areas. In addition, use of the area east of the proposed building shall be maximized; this area is intended as a waiting area for large or complicated orders that may take longer to prepare. However, the area would be used for regular orders during peak periods to minimize queue overflow beyond the drive through lane, if necessary. To further ensure that grand openings do not create circulation issues, the revised project would require that the grand opening for the Dutch Bros and Quick Quack Car Wash tenants be held a minimum of one week apart from each other as a condition of project approval.

Further, the 2021 IS/MND identified mitigation measure TRA-1 which required preparation of a TMP to maximize drive-through operations, facilitate drive-through vehicles, and minimize the drive-through queues. As the TPM has been prepared to date, this mitigation measure has been fulfilled.

For the reasons above, it is anticipated that the revised project would not result in new or substantially more severe significant environmental impacts compared with the impacts disclosed in the approved 2021 IS/MND. No mitigation measures would be required.

4.6.3 Adopted Mitigation Measures Applicable to the Revised Project

The following mitigation measure was identified in the 2021 IS/MND. Applicability of the mitigation measure has been evaluated for the current project. As the mitigation measure has been fulfilled to date, the language has been modified as appropriate to reflect the revised project.

~~**TRA-1** Traffic Management Plan. Prior to the initiation of construction, the project applicant shall prepare a Traffic Management Plan (TMP) for approval by the City of Eastvale Traffic Engineer. The TMP shall comply with State standards set forth in the California Manual of Uniform Traffic Control Devices and include measures such as construction signage, limitations on timing for lane closures to avoid peak hours, temporary striping plans, and the need for a construction flag-person to direct traffic during heavy equipment use. The TMP shall specify that one direction of travel in each direction must always be maintained for Chandler Street throughout project construction. The TMP shall be incorporated into project specifications for verification prior to final plan approval.~~

4.6.4 Level of Significance After Mitigation

Impacts to transportation/traffic would be less than significant as mitigation measure TRA-1 has already been implemented to date. Traffic control measures, as identified in the Traffic Management Plan, have been incorporated into project design specifications and would be further implemented during the construction phase. The revised project would not result in a new or substantially more severe significant impact compared with the significance determination as documented in the 2021 IS/MND.

4.7 TRIBAL CULTURAL RESOURCES

4.7.1 Summary of Impacts in the Adopted IS/MND

Assembly Bill 52 (AB 52), which requires that tribal cultural resources be evaluated under CEQA, became effective on July 1, 2015. Projects that require a Notice of Preparation of an EIR or Notice of Intent to Adopt a Negative Declaration or Mitigated Negative Declaration on or after July 1, 2015, are subject to AB 52.

Section 18, Tribal Cultural Resources, of the 2021 IS/MND provides an analysis of tribal cultural resources. As indicated in the adopted IS/MND, pursuant to AB 52 requirements, the City of Eastvale commenced consultation with the appropriate and potentially affected Tribal Historic Preservation Officers. City staff consulted with representatives from the Soboba Band of Luiseño Indians and met to discuss the project, including mitigation for potential tribal cultural resources. As a result, requested mitigation measures were incorporated into the IS/MND. Further, the adopted IS/MND indicated that the subject site contains limited known cultural resources. To mitigate potential impacts to resources that could be discovered during project construction, mitigation measures TCR-1 to TCR-4 were identified to reduce potential impacts to tribal cultural resources to less than significant levels.

4.7.2 Impacts Associated with the Revised Project

Since adoption of the 2021 IS/MND, are there any changes in the project, changes in circumstances under which the project is undertaken and/or "new information of substantial importance" that cause one or more effects to tribal cultural resources including: causing a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resource Code Section 21074?

Yes	No
☐	☑

Consultation requirements under AB 52 do not apply to the revised project as the document is an Addendum, not a Negative Declaration, Mitigated Negative Declaration, or EIR; therefore, the results of prior consultation efforts are considered to be complete. Additionally, the project site is not listed in the California Register of Historical Resource Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k).

As noted in the adopted IS/MND, the project area is known to be sensitive for tribal cultural resources. As a result, there is the potential for discovery of subsurface resources on the project site during the construction phase. Mitigation measures TCR-1 to TCR-4 from the adopted IS/MND would be implemented to require monitoring during ground-disturbing activities by a tribal monitor and Registered Professional Archaeologist. In the event that unique archaeological resources are identified, including tribal cultural resources, the archaeologist would take appropriate actions to comply with State law. Therefore, potential impacts related to undiscovered tribal cultural resources would be reduced to less than significant, and no additional mitigation is required.

4.7.3 Adopted Mitigation Measures Applicable to the Revised Project

The following mitigation measures were identified in the adopted IS/MND. Applicability of each mitigation measure has been evaluated.

TCR-1 **Tribal Monitoring.** Prior to the issuance of a grading permit, the project applicant shall contact the consulting tribe(s) with notification of the proposed grading and shall make a good-faith effort, as determined by the City's Development Director, to enter into a Tribal Cultural Resources Monitoring Agreement with each tribe that determines its tribal cultural resources may be present on the site. The agreements shall include, but not be limited to, outlining provisions and requirements for addressing the handling of tribal cultural resources; project grading and development scheduling; terms of compensation for the tribal monitors; and establishing on-site monitoring provisions and/or requirements for professional tribal monitors during all ground-disturbing activities. The terms of the agreements shall not conflict with any of these mitigation measures. A copy/copies of the agreement(s) shall be provided to the City of Eastvale Planning Department prior to the issuance of a grading permit.

TCR-2 **Archaeological Monitoring.** At least 30 days prior to application for a grading permit and before any grading, excavation and/or ground disturbing activities on the site take place, the project applicant shall retain a Secretary of Interior Standards-qualified, Registered Professional Archaeologist (RPA), as an archaeological monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Ground-disturbing activities may include, but are not limited to, pavement removal, potholing or auguring, grubbing, weed abatement, boring, grading, excavation, drilling, and trenching. The on-site archaeological monitoring would end when the project site grading and excavation activities are completed, or when the monitor has indicated that the site has a low potential for archeological resources.

The Project Registered Professional archaeologist, in consultation with consulting Tribe(s) identified above, and the developer, shall develop an Archaeological Monitoring Plan to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site and provide the plan to the city for approval. Details in the plan shall include:

A. Project grading and development scheduling.

B. The development of a rotating or simultaneous schedule in coordination with the project applicant and the project archeologist for designated Native American tribal monitors from the consulting tribes during grading, excavation and ground-disturbing activities on the site.

C. The safety requirements, duties, scope of work, and Native American tribal monitors' authority to stop and redirect grading activities in coordination with all Project archaeologists.

D. The protocols and stipulations that the developer, tribes and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

TCR-3 Treatment and Disposition of Cultural Resources. If tribal cultural resources are inadvertently discovered during ground disturbing activities for this project. The following procedures will be carried out for treatment and disposition of the discoveries:

A. **Temporary Curation and Storage**. During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process.

B. **Treatment and Final Disposition.** The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City Planning Department with documentation of same:

i. Reburial on-site. Accommodate the process for on-site reburial of the discovered items with the consulting tribes. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed.

ii. **Curation.** A curation agreement with an appropriate qualified repository within Riverside County that meets Federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists or researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation.

iii. **Disposition Dispute**. If more than one tribe is involved with the project and cannot come to a consensus as to the disposition of cultural materials, they shall be curated at the Western Science Center.

iv. **Final Report.** At the completion of grading, excavation and ground disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and tribal monitors within 60 days of completion of grading. This report shall:

- o Document the impacts to the known resources on the property;
- o Describe how each mitigation measure was fulfilled;
- o Document the type of cultural resources recovered and the disposition of such resources;
- o Provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting;
- o In a confidential appendix, include the daily/weekly monitoring notes from the archaeologist.

o All reports produced will be submitted to the city, Eastern Information Center and consulting tribes.

TCR-4 Discovery of Human Remains. If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains. The following procedures as set forth in the California Environmental Quality Act (CEQA), Section 15064.5(e), the California Public Resources Code (PRC) (Section 5097.98), and the State Health and Safety Code (Section 7050.5) shall then be undertaken:

If human remains or funerary/sacred items are encountered, the archaeological monitor or tribal monitor will halt work within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, establish an Environmentally Sensitive Area (ESA) boundary to protect the find from impact, and immediately notify the City Archaeologist. Project work outside the established ESA may continue. In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the Riverside County Coroner shall be notified within 24 hours of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within two working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, s/he shall notify the NAHC in Sacramento within 48 hours. In accordance with California Public Resources Code, Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendant from the deceased Native American. The most likely descendant shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.

4.7.4 Level of Significance After Mitigation

With implementation of mitigation measures TCR-1 to TCR-4, potential impacts to tribal cultural resources would be less than significant. The revised project would not result in a new or substantially more severe significant impact compared with the significance determination as documented in the 2021 IS/MND.

4.8 MANDATORY FINDINGS OF SIGNIFICANCE

Since the 2021 IS/MND was adopted, are there any changes in the project, changes in circumstances under which the project is undertaken and/or "new information of substantial importance" that result in any mandatory finding of significance listed below?

Does the project degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable

when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?

Yes	No
☐	☑

The revised project would require implementation of mitigation measures identified in the 2021 2021 IS/MND (see also Section 5, Mitigation Monitoring and Reporting Program) to reduce potentially significant impacts to below a level of significance. The mitigation measures would reduce impacts to biological resources, cultural and tribal cultural resources, hazards/hazardous materials (traffic safety), and transportation (traffic safety). With the implementation of the mitigation measures, combined with project design features and standard conditions, the revised project would not degrade the quality of the environment, eliminate important examples of California history or prehistory, cause cumulatively considerable effects, or cause adverse effects on human beings. The revised project would not create any significant effects beyond what was identified in the 2021 IS/MND. Therefore, preparation of a subsequent IS/MND is not required.

5 MITIGATION MONITORING AND REPORTING

The City of Eastvale is required to adopt a program for monitoring or reporting on the implementation of the mitigation measures it has imposed to mitigate or avoid significant environmental effects. As allowed under CEQA Guidelines Section 15097(a), the City, as lead agency, may delegate reporting or monitoring responsibilities to another public agency or to a private entity which accepts the delegation, including but not limited to the project's construction contractor. However, until the mitigation measures have been completed, the City remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program.

The mitigation measures, as modified from the previously 2021 IS/MND (~~strikethrough~~ for deletion and underline for addition), that are applicable to the revised project are listed in the following table, Mitigation Monitoring and Reporting Plan, which has been prepared in conformance with CEQA Guidelines Section 15097. The table identifies the required mitigation measures, the entity(ies) responsible for implementing the mitigation measures, when the mitigation measures should be conducted, the entity responsible for ensuring the mitigation measures are implemented, and space for the monitor's signature and date to record when the measure was completed.

Mitigation Measure	Timing	Monitoring		Date Completed	Signature
Biological Resources					
BIO-1	Prior to the issuance of a grading permit, a preconstruction burrowing owl clearance survey shall be completed by a qualified biologist within 30 days prior to ground disturbance to avoid direct take of burrowing owls. Once complete, a written report summarizing the results of the clearance survey shall be prepared and submitted to the City of Eastvale for review and concurrence. • If no burrowing owls are detected, construction may proceed. If construction is delayed or suspended for more than 30 days during the breeding season (March 1 to August 31), the project site or work area shall be resurveyed. • If burrowing owls are detected on the project site during the breeding season (March 1 to August 31), a 300-foot "no work" buffer shall be established around the active burrow and all work within the buffer shall be halted until the qualified biologist has	Prior to the issuance of a grading permit, within 30 days prior to ground disturbance	Qualified Biologist		

Mitigation Measure	Timing	Monitoring		Date Completed	Signature
	determined through non-intrusive methods that the nesting effort is complete (i.e., all young have fledged). Once the nesting effort is complete or if a burrowing owl burrow is detected on-site during the non- breeding season (September 1 to February 28), passive and/or active relocation of burrowing owls may be implemented by a qualified biologist following consultation and approval from the City of Eastvale, the Western Riverside County Regional Conservation Authority, and the California Department of Fish and Wildlife.				
BIO-2	Pursuant to the Migratory Bird Treaty Act and the California Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat shall be conducted outside the avian nesting season. The nesting season generally extends from February 1 through August 31, but can vary slightly from year to year based on	Within 30 days of the start of any ground-disturbing activities	Qualified Biologist		

Mitigation Measure	Timing	Monitoring		Date Completed	Signature
	seasonal weather conditions. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a preconstruction clearance survey for nesting birds shall be conducted within 30 days of the start of any ground-disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the preconstruction clearance survey, construction activities shall stay outside of a 300-foot buffer around the active nest. For raptors and special- status species, this buffer will be expanded to 500 feet. A biological monitor shall be present to delineate the boundaries of the buffer area and to monitor the active nest to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur.				
Cultural Resources					

Mitigation Measure	Timing	Monitoring		Date Completed	Signature
CUL-1	If cultural resources are encountered during ground-disturbing activities, work in the immediate area shall cease and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find(s). If the discovery proves to be significant under the California Environment Quality Act, additional work such as data recovery excavation may be warranted and shall be reported to the City.	During ground-disturbing activities	Qualified Archaeologist		
Greenhouse Gas Emissions					
GHG-1	The project shall incorporate the following California Air Pollution Control Officers Association-based reduction measures and regulatory compliance: • Utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen Standards. • Implement recycling programs that reduce waste to landfills by a minimum of 75 percent (per AB 341). 	The following procedures will be carried out for treatment and disposition of the discoveries: A. Temporary Curation and Storage. During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process. B. Treatment and Final Disposition. The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City Planning Department with documentation of same: i. Reburial on-site. Accommodate the process for on-site reburial of the discovered items with the		City Planning Department		

Mitigation Measure	Timing	Monitoring		Date Completed	Signature
	consulting tribes. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed. ii. Curation. A curation agreement with an appropriate qualified repository within Riverside County that meets Federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists or researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation. iii. Disposition Dispute. If more than one tribe is involved with the project and cannot come to a consensus as to the disposition of cultural materials, they shall be curated at the Western Science Center. iv. Final Report. At the completion of grading, excavation and				

Mitigation Measure	Timing	Monitoring		Date Completed	Signature
	ground disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and tribal monitors within 60 days of completion of grading. This report shall: o Document the impacts to the known resources on the property; o Describe how each mitigation measure was fulfilled; o Document the type of cultural resources recovered and the disposition of such resources; o Provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting; o In a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. o All reports produced will be submitted to the City, Eastern Information Center and consulting tribes.				

Mitigation Measure	Timing	Monitoring		Date Completed	Signature
TCR-4	Discovery of Human Remains. If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains. The following procedures as set forth in the California Environmental Quality Act (CEQA), Section 15064.5(e), the California Public Resources Code (PRC) (Section 5097.98), and the State Health and Safety Code (Section 7050.5) shall then be undertaken: If human remains or funerary/sacred items are encountered, the archaeological monitor or tribal monitor will halt work within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, establish an Environmentally Sensitive Area (ESA) boundary to protect the find from impact, and immediately notify the City Archaeologist. Project work outside the established ESA may continue. In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the Riverside County Coroner shall be notified within 24 hours of the discovery. No	During ground-disturbing activities	Archaeological Monitor or Tribal Monitor		

Mitigation Measure	Timing	Monitoring		Date Completed	Signature
	further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within two working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, s/he shall notify the NAHC in Sacramento within 48 hours. In accordance with California Public Resources Code, Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendant from the deceased Native American. The most likely descendant shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.

I. INTRODUCTION AND PROJECT DESCRIPTION

A.PURPOSE AND PROJECT OVERVIEW

The City of Eastvale is processing several land use entitlements including a General Plan Amendment, Zone Change, Major Development Review, multiple Conditional Use Permits (CUP), and Tentative Parcel Map, collectively referred to as PLN19-20000, for the development of a gas station/convenience store, a drive-through restaurant, and a fast casual restaurant on 2.71 acres on the northwest corner of Archibald Avenue and Chandler Street. The project will also include CUP applications for alcohol sales at the proposed convenience store and casual dining restaurant. PLN19-20000 is further described in Section I.C, below.

This Initial Study has been prepared pursuant to the California Environmental Quality Act (CEQA; California Public Resources Code Section 21000 et seq.) and the State CEQA Guidelines (California Code of Regulations Section 15000 et seq.).

B.PROJECT LOCATION AND DESCRIPTION OF SURROUNDING AREA

The project site is located in the City of Eastvale on the northwest corner of Archibald Avenue and Chandler Street. The project site consists of four parcels, identified as Assessor Parcel Numbers 144-13-04, -11, -12, -13. The project site is currently vacant with no existing structures. The regional and local vicinity of the project site are shown in ***Exhibit 1, Regional Vicinity*****,** and ***Exhibit 2, Project Location***.

The project site is currently designated by the Eastvale General Plan as Low Density Residential (LDR) and is bounded by LDR to the west and Medium Density Residential (MDR) to the north and south, and Medium High Density Residential (MHDR) to the east. Refer to ***Exhibit 3, Land Use Map***. Land uses to the north, south, and east have been fully developed with single-family residential neighborhoods consistent with their respective permitted densities and complete with right of way improvements such as sidewalks, lighting, and landscaping. Parcels to the west of the project site are developed with single-family residential dwellings, consistent with the General Plan land use designation of LDR. Properties along Chandler Street have been partially improved with an asphalt sidewalk and limited lighting; there is no parkway landscaping.

The project site and parcels to the west along Chandler Street are zoned Light Agriculture (A-1). The neighborhood to the north is zoned One-Family Dwellings (R-1), the neighborhood to the east is classified as a Specific Plan (SP), and the neighborhood to the south is classified as a Planned Residential Development (PRD). Refer to ***Exhibit 4, Zoning Map*** and ***Section III.9, Surrounding Land Use Designations and Zoning***, below.

C.PROJECT DESCRIPTION

The project, identified as PLN19-20000, consists of six discretionary permits to allow the proposed development of a gas station with convenience store, a drive-through restaurant, and a fast-casual restaurant. The entitlements are discussed individually in the bulleted list below and illustrated in ***Exhibit 5, Conceptual Site Plan*****.**

- **General Plan Amendment** on 2.71 acres to change the land use designation from Low Density Residential (LDR) to Commercial Retail (CR) to facilitate a proposed change of zone.
- **Change of Zone** on 2.71 acres from Light Agricultural (A-1) to General Commercial (C-1/C-P).
- **Conditional Use Permit** for the operation of a drive-through fast food restaurant.
- **Conditional Use Permit** for development and operation of a gas station and convenience store with the off-sale of beer and wine (ABC License Type 20).
- **Conditional Use Permit** for the on-sale of general alcohol in conjunction with a restaurant. (ABC License Type 47).
- **Major Development Review** for the development of:
  - A 3,700-square-foot convenience store with a 3,144-square-foot 10-fueling position gas station
  - A 4,456-square-foot drive-through restaurant
  - A 3,500-square-foot fast casual restaurant
- **Tentative Parcel Map** to subdivide the 2.71 net acres into three parcels: one parcel for each proposed land use: the gas station, drive-through, and fast casual restaurant.

Additionally, the project involves grading of the project site, and the installation of right-of-way improvements, including sidewalk, street lighting, and parkway landscaping.

Development Concept

Between the three proposed buildings and fuel canopy, the total building area for the project would be 14,800 square feet with a building coverage (floor area ratio) of 12.5 percent. The maximum building height would be 50 feet. The project would be constructed to conform with Chapter 5, *Development Standards*, of the City's Zoning Code and the City's adopted *Design Standards and Guidelines*, which include design standards related to building size, height, setback, and materials, as well as landscaping, signage, and other considerations. Refer to ***Appendix 1, Architectural Plan Set***.

Utilities

The following utilities/infrastructure systems and services are available to the project. Refer to ***Appendix 2, Preliminary Water and Sewer Plan*** and ***Appendix 3, Preliminary Grading and Drainage Plan***.

- *Water and Sewer*. Water and sewer services would be provided to the project by the Jurupa Community Services District (JCSD).
- *Drainage*. The drainage system that would serve the project site is under the jurisdiction of Riverside County in accordance with the County's Master Drainage Plan (MDP).
- *Dry Utilities*. Electricity and natural gas services would be provided by Southern California

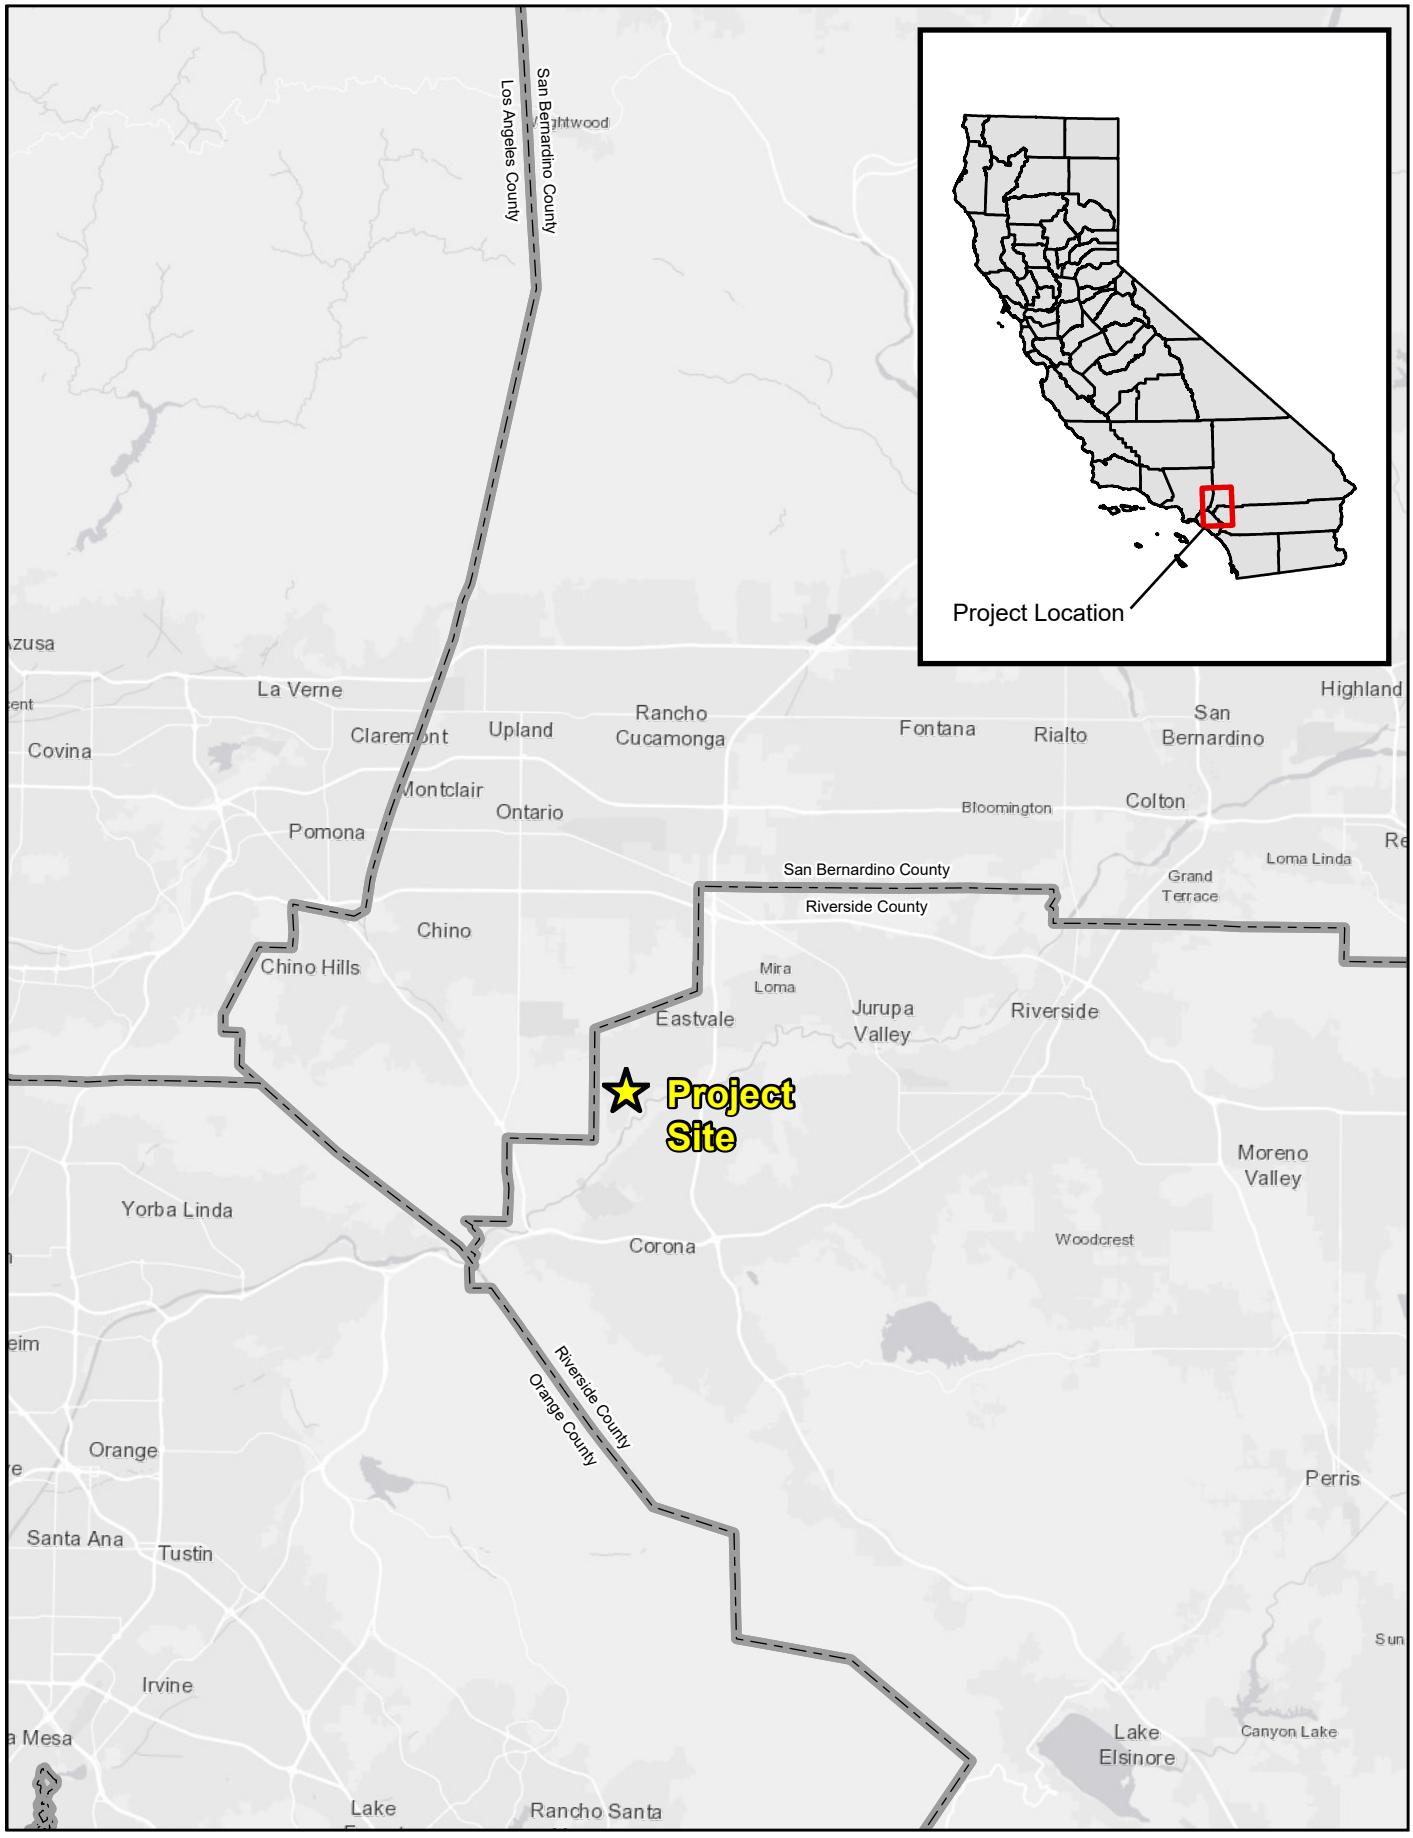
Edison (SCE) and Southern California Gas Company (SoCalGas), respectively.

Access and Circulation

All project access and circulation improvements would be designed and constructed consistent with City design and engineering standards. Roadways adjacent to the project, site access points, and site-adjacent intersections would be constructed consistent with the identified roadway classifications and respective cross-sections in the City of Eastvale General Plan Circulation Plan. Specifically, the project would provide three restricted access driveways. Two right-turn in/out only driveways are proposed at Archibald Avenue and one right-turn in/out only driveway is proposed at Chandler Street. Refer to ***Appendix 4, Preliminary Street Improvement Plan***.

Parking

The project would include a total of 104 parking stalls, which would exceed the City's minimum parking requirement of 78 parking stalls, in accordance with Chapter 5, *Development Standards*, of the City's Zoning Code. Of the 104 parking stalls, 5 parking stalls would be designated for accessible parking and 11 parking stalls would be designated for clean air vehicle parking. All clean air vehicle parking stalls would be provided with infrastructure for the addition of future electric vehicle charging stations. A total of 8 parking stalls would be designated as future electric vehicle charging station stalls and would be constructed to meet current accessibility standards along accessible routes or have the ability to be modified without affecting required parking space quantities. Refer to ***Exhibit 5, Conceptual Site Plan*****.**



Landscaping

Ornamental water-efficient landscaping, including a variety of trees, shrubs, and vines, would be installed throughout the project site. Planting materials would be selected in accordance with Chapter 5, *Development Standards*, of the City's Zoning Code and the City's adopted *Design Standards and Guidelines.* Of the total 117,986-square-foot project site area, the total landscape coverage would be 25,654 square feet, equating to 21.7 percent of the project site. Refer to ***Appendix 5, Conceptual Landscape Plan*****.**

Project Construction and Phasing

The project would be constructed in a single phase. Construction is estimated to occur in mid 2021 with operation planned for early 2022.

CITY OF EASTVALE ISMND PLN 19-2000

Conceptual Site Plan

Exhibit 5

This page is intentionally left blank.

II. ENVIRONMENTAL SETTING

A.Regulatory Setting

The Eastvale General Plan was adopted in 2012 and can be found on the City's website at https://www.eastvaleca.gov/home/showdocument?id=2360.

The City's Zoning Code was adopted in 2013 and can be found on the City's municipal code hosting website at https://library.municode.com/ca/eastvale/codes/code_of_ordinances?nodeId= PTBLADECO. The Zoning Code is located under Part B of the Municipal Code.

The Chandler Area Community Vision Plan (CAVP), adopted in May 2015, is a summary of the outcome of the community's visioning process and identifies priorities and programs that the City, landowners, and residents can spearhead to preserve or improve the community. The CAVP is a guide for decision-making in the Chandler Area and does not change the General Plan land use designation or zoning for any properties. The CAVP is not codified and is used solely for guidance when considering land use/zoning changes, and other discretionary actions related to development within the Chandler Area. A copy of the CAVP is available at https://www.eastvaleca.gov/home/showdocument?id=4205.

B.Physical Setting

The project site consists of 2.71 acres on the northwest corner of Archibald Avenue and Chandler Street. Archibald Avenue is identified as an Urban Arterial and Chandler Street is identified as an Arterial in the General Plan and this intersection is the southernmost intersection of two arterials in the City. The project site presently consists of four parcels, all of which are vacant. All parcels have street frontage on either Chandler Street or Archibald Avenue though limited improvements exist within the right-of-way. An asphalt sidewalk exists across all parcels and two streetlights are installed on the northwest corner of Archibald Avenue and Chandler Street.

The topography of the project site is relatively flat and slopes gently to the west. There are no water courses or bodies of water on the project site. Immediately north of the project is an open storm drain channel that runs parallel to Chandler Street until it discharges into Cucamonga Creek.

This page is intentionally left blank.

III. ENVIRONMENTAL CHECKLIST FORM

A.Project Information

1.	**Project Title:**	PLN19-20000
2.	**Lead Agency Name and Address**	CITY OF EASTVALE Planning Department 12363 Limonite Avenue, Suite 910 Eastvale, CA 91752
3.	**Contact Person and Phone Number**	Shawnika Johnson, Contract Planner (951) 361-0900
4.	**Project Location**	Northwest corner of Archibald Avenue and Chandler Street. Assessor Parcel Numbers 144-13-04, -11, -12, -13
5.	**Project Sponsor Name and Address**	Schneider REA Al Steward 1257 W. Colton Avenue Redlands, CA 92374
6.	**General Plan Designation Existing**	LDR, Low Density Residential
	General Plan Designation Proposed	CR, Commercial Retail
7.	**Zoning Existing**	A-1, Light Agriculture
	Zoning Proposed	C-1/C-P General Commercial
8.	**Description of Project**	The project would change the General Plan from LDR to CR; change the zone from A-1 to C-1/C-P; and construct a gas station with convenience store, a drive-through fast food restaurant, and a fast casual dine-in restaurant on 2.71 acres.

9.	**Surrounding Land Use Designations and Zoning**		
	North	Land Use Designation	MDR, Medium Density Residential
		Zoning	R-1, One-Family Dwellings
	East	Land Use Designation	MDHR, Medium High Density Residential
		Zoning	SP, Specific Plan
	South	Land Use Designation	MDR, Medium Density Residential
		Zoning	PRD, Planned Residential Development
	West	Land Use Designation	LDR, Low Density Residential
		Zoning	A-1, Light Agriculture
10.	**Other Required Public Agency Approvals**		
	• Jurupa Community Service Department – Water and wastewater connection permits		
	• Santa Ana Regional Water Quality Control Board – Water Quality Management Plan (WQMP) Approval		
	• State Water Resources Control Board – Stormwater Pollution Prevention Plan (SWPPP) Approval		
11.	**Have California Native American Tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3? If so, has consultation begun?**		
	Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21083.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File based on Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code Section 21082.3(c) contains provisions specific to confidentiality. The City has established a Tribal Historic Preservation Office (THPO) contact list pursuant to Public Resources Code Section 21080.3. The City has distributed letters to applicable THPOs on the City's contact list, providing initial information about the project and inviting consultation. See Section IV.18, Tribal Cultural Resources, of this Initial Study for additional information.		

B.Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact requiring mitigation to be reduced to a level that is less than significant as indicated in the checklist on the following pages.

☐ Aesthetics	☒ Greenhouse Gas Emissions	☐ Public Services
☐ Agriculture and Forestry Resources	☒ Hazards and Hazardous Materials	☐ Recreation
☐ Air Quality	☐ Hydrology and Water Quality	☒ Transportation
☒ Biological Resources	☐ Land Use and Planning	☒ Tribal Cultural Resources
☒ Cultural Resources	☐ Mineral Resources	☐ Utilities and Service Systems
☐ Energy	☒ Noise	☐ Wildfire
☐ Geology and Soils	☐ Population and Housing	☐ Mandatory Findings of Significance

C.Determination

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because of the incorporated mitigation measures and revisions in the project have been made by or agreed to by the project proponent. A **MITIGATED NEGATIVE DECLARATION** will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

City Representative

Gina Gibson-Williams,
Community Development Director

Date

IV. ENVIRONMENTAL ANALYSIS

1. AESTHETICS. Would the proposed project:					
Issues		Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Have a substantial adverse effect on a scenic vista?			X	
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c)	Substantially degrade the existing visual character or quality of the site and its surroundings?			X	
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	
e)	Interfere with the nighttime use of the Palomar Observatory, as protected through the Palomar Observatory Lighting Ordinance?				X

DISCUSSION

1(a) Have a substantial adverse effect on a scenic vista?

Determination: Less Than Significant Impact.

According to the City's General Plan, the Santa Ana River corridor is an important resource of scenic beauty. The project site is located approximately 0.6 miles northwest of the Santa Ana River corridor. Views of the Santa Ana River are not afforded from the project site due to intervening topography, structures, and vegetation. Thus, the project would not have a substantial adverse effect on a scenic vista in this regard and impacts would be less than significant.

1(b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Determination: No Impact.

There are no officially designated State scenic highways in the City. The nearest scenic highway is State Route 91 (SR-91) (designated as eligible for listing), which is located 4.4 miles south of the project site.[1] Views of the project site are not afforded from SR-91 due to intervening

[1] California Department of Transportation. 2019. List of Eligible and Officially Designated State Scenic

topography, structures, and vegetation. Thus, the project would not substantially damage scenic resources within a State scenic highway. No impact would occur in this regard.

1(c) Substantially degrade the existing visual character or quality of the site and its surroundings?

Determination: Less Than Significant Impact.

The topography of the project site is relatively flat and slopes gently to the west. The project site consists of four parcels, all of which are currently vacant and contain no structures. All parcels have street frontage on either Chandler Street or Archibald Avenue. An asphalt sidewalk exists across all parcels and two streetlights are installed on the northwest corner of Archibald Avenue and Chandler Street. The existing visual quality of the project site and surrounding area is low-moderate due to the urbanized setting of the project vicinity and lack of scenic resources (refer to Responses IV.1(a) and (b)).

The proposed project includes the development of a gas station with convenience store, a drive-through restaurant, and a fast casual restaurant, and involve the grading of the project site and the installation of right-of-way improvements, including sidewalk, street lighting, and parkway landscaping. The design of the project would adhere to the requirements of General Plan Policy DE-37, which states that when more than one structure is on a commercial or other nonresidential site, they should be linked visually through architectural style, colors and materials, signage, landscaping, design details such as light fixtures, and the use of arcades, trellises, or other open structures. Consistent with General Plan Policy DE-34, project design would also provide variation in color and materials to present aesthetically pleasing buildings and project features. The project design would also adhere to General Plan Policy DE-46, which states that security fencing shall be incorporated into the visual/architectural design of the project and be complementary to surrounding uses.

While project implementation would change the visual quality of the site and its surroundings, the proposed project would not degrade the visual quality of the project area because the proposed project is consistent with the surrounding development. With adherence to the City's design policies and goals, impacts would be less than significant.

1(d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Determination: Less Than Significant Impact.

As the project is located in an urbanized area, existing sources of light and glare typically come from vehicles traveling on Archibald Avenue and Chandler Street, streetlights, exterior lighting on surrounding buildings, and reflection from windows and roofs on the surrounding residential

Highways. Updated July 2019.

and commercial buildings.

Construction

Construction of the project would be restricted to the City's permitted construction hours in accordance with Eastvale Municipal Code Chapter 8.52, *Noise Regulation*, Section 8.52.020, *Exemptions*. Construction would be prohibited between 6:00 PM and 6:00 AM during the months of June through September and 6:00 PM and 7:00 AM during the months of October through May. Although some lighting may be required in the early morning or late evening, the lighting would be minimal and consistent with the surrounding residential and commercial uses as well as the lights from the traffic along Archibald Avenue and Chandler Street. Therefore, no adverse light or glare impacts to adjacent properties would result from temporary construction activities.

Operation

Project operations would create new light sources from interior and exterior illumination associated with building materials, windows, exterior lighting, and security lighting. Interior and exterior lighting would conform to California Green (CALGreen) Building Standards Code and Eastvale Municipal Code requirements. All outdoor lighting would be automatic and programmable to turn on at certain times as necessary as well as adjustable to dim the light intensity between 40 percent and 80 percent to meet the efficiency requirements of California's Building Energy Efficiency Standards (Title 24, Parts 6 and 11).

Although the project would increase light and glare in the surrounding area, light and glare produced on-site would be similar to that of the surrounding commercial and residential properties. Adherence to state and local standards and regulations would reduce impacts to a less than significant level. Impacts would be less than significant.

1(e) Interfere with the nighttime use of the Palomar Observatory, as protected through the Palomar Observatory Lighting Ordinance?

Determination: No Impact.

The Palomar Observatory, located atop Palomar Mountain in north San Diego County, is a center for astronomical research and is home to three active research telescopes. Light pollution obstructs visibility and reduces the effectiveness of the telescopes. As such, Riverside County implemented Lighting Ordinance No. 655, which regulates lighting from development within 45 miles of the Palomar Observatory to reduce light and glare. The project site is located approximately 58 miles northwest of the Palomar Observatory. Therefore, implementation of the proposed project would result in no impacts to the Palomar Observatory.

STANDARD CONDITIONS & REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

2. AGRICULTURE AND FORESTRY RESOURCES					
Issues		**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. **Would the proposed project:**					
a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?				X
b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?			X	
c)	Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?				X
d)	Result in the loss of forestland or conversion of forestland to non-forest use?				X
e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to nonagricultural use or conversion of forestland to non-forest use?			X	

DISCUSSION

2(a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?

Determination: No Impact.

According to the Department of Conservation's (DOC) California Important Farmland Finder Map, the proposed project and surrounding areas are designated as Urban and Built-Up Land.[2] Therefore, although the project site currently supports limited agricultural uses, the proposed project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), to non-agricultural use. No impact would occur in this regard.

2(b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Determination: Less Than Significant Impact.

The project site is zoned Light Agriculture (A-1) and is proposed to be rezoned to General Commercial (C-1/C-P); refer to ***Exhibit 4, Zoning Map***. The project site is vacant with no agricultural operations occurring. Further, the project site is not covered under an existing Williamson Act contract. Thus, impacts related to conflicting with existing zoning for agricultural use or a Williamson Act contract would be less than significant.

2(c) Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timber and zoned Timberland Production (as defined by Government Code Section 51104(g))?

Determination: No Impact.

The project site is zoned A-1 and is not occupied or used for forestland or timberland. Further, project implementation would not conflict with existing zoning or result in the rezoning of forestland, timberland, or timberland zoned Timberland Production. No impact would occur.

2(d) Result in the loss of forestland or conversion of forestland to non-forest use?

Determination: No Impact.

Refer to Response IV.2(c). No impact would occur in this regard.

[2] California Department of Conservation. n.d. Important Farmland Finder website. Accessed June 25, 2020. https://www.conservation.ca.gov/dlrp/fmmp.

2(e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to nonagricultural use or conversion of forestland to non-forest use?

Determination: Less Than Significant Impact.

Refer to Responses IV.2(a) through IV.2(d). Less than significant impacts would occur in this regard.

STANDARD CONDITIONS & REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

3. AIR QUALITY. Would the proposed project:					
Issues		Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Conflict with or obstruct implementation of the applicable air quality plan?			X	
b)	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?			X	
c)	Expose sensitive receptors to substantial pollutant concentrations?			X	
d)	Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?			X	

The analysis and findings throughout this section are based on the *Archibald at Chandler Commercial Project Air Quality, Global Climate Change, TAC and Energy Impact Analysis* (Air Quality, Global Climate Change, TAC and Energy Impact Analysis), prepared by Ganddini Group, Inc. and dated November 18, 2020, provided as **Appendix 6** of this IS/MND.

DISCUSSION

3(a) Conflict with or obstruct implementation of the applicable air quality plan?

Determination: Less Than Significant Impact.

The city is located within the South Coast Air Basin (SCAB). The South Coast Air Quality Management District (SCAQMD) has jurisdiction in the SCAB, which has a history of recorded air quality violations and is an area where both state and federal ambient air quality standards are exceeded. Areas that meet ambient air quality standards are classified as attainment areas, while areas that do not meet these standards are classified as nonattainment areas. The SCAQMD is required, pursuant to the federal Clean Air Act, to reduce emissions of the air pollutants for which the SCAB is in nonattainment.

In order to reduce emissions, the SCAQMD adopted the *2016 Air Quality Management Plan* (AQMP), which establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving state and federal air quality standards. The 2016 AQMP is a regional and multi-agency effort including the SCAQMD, California Air Resources Board (CARB), the Southern California Association of Governments (SCAG), and the US Environmental Protection Agency (EPA).

The 2016 AQMP pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including the *2016-2040 Regional Transportation Plan/Sustainable Communities Strategy* (RTP/SCS), updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans. The SCAQMD considers projects that are consistent with the AQMP, which is intended to bring the SCAB into attainment for all criteria pollutants, to also have less than significant cumulative impacts.

A proposed project should be considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

1. Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

2. Whether the project will exceed the assumptions in the AQMP in 2016 or increments based on the year of project buildout and phase.

Criteria 1: Increase in the Frequency or Severity of Violations?

Based on the air quality modeling analysis contained in the Air Quality, Global Climate Change, TAC and Energy Impact Analysis, short-term construction impacts would not result in significant impacts based on the SCAQMD regional and local thresholds of significance. The Air Quality, Global Climate Change, TAC and Energy Impact Analysis also found that long-term operations impacts would not result in significant impacts based on the SCAQMD local and regional thresholds of significance; refer to Responses IV.3(b) and IV.3(c).

Therefore, the proposed project is not projected to contribute to the exceedance of any air pollutant concentration standards and is found to be consistent with the AQMP for the first criterion.

Criteria 2: Exceed Assumptions in the AQMP?

Projections for achieving air quality goals are based on assumptions regarding population, housing, and growth trends, and the 2016 AQMP addresses cumulative impacts in the Basin based on growth projections in the SCAG RTP/SCS. SCAG utilizes growth projections from local jurisdictions' adopted general plans; therefore, development consistent with the applicable general plan would be generally consistent with the growth projections in the 2016 AQMP. For this project, the City of Eastvale General Plan Land Use Map defines the assumptions that are represented in the AQMP.

The project site is currently designated as Low Density Residential (LDR) on the General Plan Land Use Map. The proposed project includes a General Plan Amendment from Low Density Residential (LDR) to Commercial Retail (CR) and a Change of Zone from Light Agriculture (A-1) to General Commercial (C-1/C-P). Therefore, the proposed project is not currently consistent with the existing land use and zoning. However, upon approval of the General Plan Amendment and Change of Zone, the project would be consistent with the General Plan land use and zoning designations. Although the project may initially result in an inconsistency with the AQMP, the inconsistency would not necessarily constitute a conflict with the AQMP. Because the land use and zoning would be changed from residential to commercial, the project would not be expected to result in population growth beyond that assumed in the AQMP assumptions.

The SCAQMD acknowledges that strict consistency with all aspects of the AQMP is not required in order to make a finding of no conflict. Rather, a project is considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The project would implement contemporary energy-efficient technologies and regulatory/operational programs required per Title 24 (specifically CalGreen) and City standards. Generally, compliance with SCAQMD emissions reductions and control requirements also act to reduce project air pollutant emissions. In combination, project emissions-reducing design features and regulatory/operational programs are consistent with and support overarching AQMP air pollution reduction strategies. Project support of these strategies promotes timely attainment of AQMP air quality standards and would bring the project into conformance with the AQMP. Therefore, the proposed project is not anticipated to exceed the AQMP assumptions for the project site and is found to be consistent with the AQMP for the second criterion.

Based on the analysis above, the proposed project would not result in an inconsistency with the SCAQMD AQMP. Therefore, a less than significant impact would occur.

3(b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Determination: Less Than Significant Impact.

Short-Term Construction Impacts

Short-term project-related construction activities would have the potential to generate air emissions. The construction-related criteria pollutant emissions for each phase are shown below in ***Table 3.1, Construction-Related Regional SCAQMD Emissions***. As shown in ***Table 3.1***, none of the project's short-term construction emissions would exceed SCAQMD thresholds. Therefore, construction-related air quality impacts would be less than significant.

Table 3.1:Construction-Related SCAQMD Pollutant Emissions

Activity		Pollutant Emissions (pounds/day)[4]					
		ROG	NOx	CO	SO_2	PM10	PM2.5

(1) On-site emissions from equipment operated on-site that is not operated on public roads. On-site grading and site preparation PM10 and PM2.5 emissions show mitigated values for fugitive dust for compliance with SCAQMD Rule 403.
(2) Off-site emissions from equipment operated on public roads.
(3) Construction, painting and paving phases may overlap.
(4) ROG = reactive organic gases; NOx = nitrogen oxides; CO = carbon monoxide; SO_2 = sulfur dioxide; PM10 = particles that are less than 10 micrometers in diameter; PM2.5 = particles that are less than 2.5 micrometers in diameter.

Long-Term Operational Impacts

Long-term air quality impacts would consist of mobile source emissions generated from project-related traffic, and emissions from stationary area and energy sources. Emissions from each source are discussed in more detail below.

Mobile Sources

Mobile sources include emissions from the additional vehicle miles generated from the proposed project. The vehicle trips associated with the proposed project have been analyzed by inputting the project-generated vehicular trips from the Traffic Impact Analysis into the CalEEMod model. The Traffic Impact Analysis found that the proposed project will generate approximately 4,871 total trips per day. Trip generation rates for the proposed project include 189.8 trips per fuel pump per day for the service station with convenience market (takes into consideration the 62 percent AM and 56 percent PM pass-by trip reduction), 315.14 trips per thousand square foot per day for the restaurant, and 434.8 trips per thousand square foot per day for the fast-food restaurant (takes into consideration the 49 percent AM and 50 percent PM pass-by trip

reduction). The Traffic Impact Analysis also found a trip generation rate of 9.44 trips per dwelling unit for the three single-family detached residential dwelling units that have been removed from the site. The program then applies the emission factors for each trip, which is provided by the EMFAC2014 model to determine the vehicular traffic pollutant emissions.

Area Sources

Area sources include emissions from consumer products, landscape equipment and architectural coatings. Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chain saws, and hedge trimmers, as well as air compressors, generators, and pumps. As specifics were not known about the landscaping equipment fleet, CalEEMod defaults were used to estimate emissions from landscaping equipment. No changes were made to the default area source parameters.

Energy Usage

Energy usage includes emissions from the generation of electricity and natural gas used on-site. No changes were made to the default energy usage parameters.

Project Impacts

The worst-case summer or winter criteria pollutant emissions created from the proposed project's long-term operations were calculated and are shown below in ***Table 3.2: Regional Operational Pollutant Emissions***. The results show that even before the emissions from the residential uses were removed, none of the SCAQMD regional thresholds would be exceeded. Therefore, a less than significant regional air quality impact would occur from operation of the proposed project.

Table 3.2:Regional Operational Pollutant Emissions

Activity	Pollutant Emissions (pounds/day)					
	ROG	NOx	CO	SO_2	PM10	PM2.5
Area Sources[1]	0.31	0.00	0.01	0.00	0.00	0.00
Energy Usage[2]	0.06	0.58	0.49	0.00	0.04	0.04
Mobile Sources[3]	7.30	48.84	51.87	0.21	13.48	3.70
Subtotal Emissions	7.67	49.42	52.37	0.22	13.53	3.74
Single-family dwelling units that have been removed	-0.97	-0.53	-2.53	-0.01	-0.44	-0.29
Total Emissions	**6.70**	**48.88**	**49.83**	**0.21**	**13.08**	**3.45**
SCAQMD Thresholds	55	55	550	150	150	55
Exceeds Threshold?	No	No	No	No	No	No

Notes:
Source: Ganddini Group, Inc. Air Quality, Global Climate Change, TAC and Energy Impact Analysis, November 18, 2020, Table 9 (CalEEMod Version 2016.3.2; the higher of either summer or winter emissions)
(1) Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
(2) Energy usage consists of emissions from generation of electricity and on-site natural gas usage.
(3) Mobile sources consist of emissions from vehicles and road dust.

3(c) Expose sensitive receptors to substantial pollutant concentrations?

Determination: Less Than Significant Impact.

Those who are sensitive to air pollution include children, the elderly, and persons with preexisting respiratory or cardiovascular illness. For purposes of CEQA, the SCAQMD considers a sensitive receptor to be a location where a sensitive individual could remain for 24 hours, such as residences, hospitals, or convalescent facilities. Commercial and industrial facilities are not included in the definition because employees do not typically remain on-site for 24 hours.

Short-Term Construction Impacts

Local Air Quality Impacts from Construction

The SCAQMD has published the "Fact Sheet for Applying CalEEMod to Localized Significance Thresholds." CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily disturbance activity possible for each piece of equipment. In order to compare CalEEMod reported emissions against the localized significance threshold (LST) lookup tables, the CEQA document should contain the following parameters:

(1) the off-road equipment list (including type of equipment, horsepower, and hours of operation) assumed for the day of construction activity with maximum emissions;

(2) (2)The maximum number of acres disturbed on the peak day;

(3) Any emission control devices added onto off-road equipment; and

(4) Specific dust suppression techniques used on the day of construction activity with maximum emissions. The CalEEMod outputs in **Appendix 6** show the equipment used for this analysis.

Because CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily soil disturbance activity possible for each piece of equipment, ***Table 3.3, Maximum Number of Acres Disturbed Per Day***, is used to determine the maximum daily disturbed acreage for comparison to LSTs. As shown in ***Table 3.3***, the maximum number of acres disturbed in a day would be 2 acres during grading. ***Table 3.4: Local Construction Emissions at the Nearest Receptors*** shows the on-site emissions from the CalEEMod model for the different construction phases and the LST emissions thresholds. As shown in ***Table 3.4***, none of the analyzed criteria pollutants would exceed the local emissions thresholds at the nearest sensitive receptors. Therefore, a less than significant local air quality impact would occur from construction of the proposed project.

Table 3.3:Maximum Number of Acres Disturbed Per Day

Activity	Equipment Type	Equipment Quantity	Acres Disturbed per 8-Hour Day	Total Acres Disturbed per Day
Grading	Rubber Tire Dozers	1	0.5	0.5
	Graders	1	0.5	0.5
	Crawler Tractors	2	0.5	1

(1) Tractor/loader/backhoe is a suitable surrogate for a crawler tractor per SCAQMD staff.

Table 3.4:Local Construction Emissions at the Nearest Receptors

Activity	On-Site Pollutant Emissions			
	NO_x	CO	PM10	PM2.5
Grading	20.21	9.76	3.47	2.16
Building Construction	17.45	16.26	0.90	0.86
Paving	9.33	11.70	0.49	0.45
Architectural Coating	1.41	1.81	0.08	0.08
Total Emissions				
SCAQMD Thresholds[1]	170	1,007	6	5
Exceeds Threshold?	No	No	No	No

Notes:
Source: Ganddini Group, Inc. Air Quality, Global Climate Change, TAC and Energy Impact Analysis, November 18, 2020, Table 8 (calculated from CalEEMod and SCAQMD's Mass Rate Look-up Tables for 2 acres at a distance of 25 in SRA 22 Corona-Norco)
(1) The nearest sensitive receptors to the project include the single-family detached residential dwelling units located to the west, approximately 85 feet (~26 meters) to the north, and approximately 120 feet (~37 meters) to the east and south; therefore, the 25 meter threshold was used.

Toxic Air Contaminants

Toxic air contaminants (TACs) are another group of pollutants of concern. Sources of TACs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Cars and trucks release at least 40 different TACs. The most important of these TACs, in terms of health risk, are diesel particulates, benzene, formaldehyde, 1,3-butadiene, and acetaldehyde. Public exposure to TACs can result from emissions from normal operations as well as from accidental releases. Health effects of TACs include cancer, birth defects, neurological damage, and death.

The greatest potential for TAC emissions would be related to diesel particulate emissions associated with heavy equipment operations during construction of the proposed project. According to the Office of Environmental Health Hazard Assessment (OEHHA) and the SCAQMD *Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis* (August 2003),[3] health effects from TACs are described in

[3] Office of Environmental Health Hazard Assessment. 2015. Air Toxic Hot Spots Program Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessment.

terms of individual cancer risk based on a lifetime (i.e., 30-year) resident exposure duration. Given the temporary and short-term construction schedule (approximately 29 months), the project would not result in a long-term (i.e., lifetime or 30-year) exposure as a result of project construction.

The project would comply with the CARB Air Toxics Control Measure that limits diesel-powered equipment and vehicle idling to no more than five minutes at a location, and the CARB In-Use Off-Road Diesel Vehicle Regulation; compliance with these would minimize emissions of TACs during construction. The project would also comply with the requirements of SCAQMD Rule 1403 if asbestos is found during the renovation and construction activities. Furthermore, construction-based particulate matter emissions (including diesel exhaust emissions) do not exceed any local or regional thresholds. Therefore, no significant short-term TAC impacts would occur during construction of the proposed project and impacts from TACs during construction would be less than significant.

Long-Term Operational Impacts

Project-related air emissions may have the potential to exceed the state and federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the SCAB. The proposed project has been analyzed for the potential local carbon monoxide (CO) emission impacts from the project-generated vehicular trips and from the potential local air quality impacts from on-site operations. The following analysis addresses the vehicular CO emissions and local impacts from on-site operations per SCAQMD LST methodology.

Local CO Emission Impacts from Project-Generated Vehicular Trips

CO is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a roadway network and are used as an indicator of potential local air quality impacts. Local air quality impacts can be assessed by comparing future without and with project CO levels to the state and federal CO standards.

To determine if the proposed project could cause emission levels in excess of CO standards, a sensitivity analysis is typically conducted to determine the potential for CO "hot spots" at a number of intersections in the general project vicinity. Because of reduced speeds and vehicle queuing, "hot spots" potentially can occur at high traffic volume intersections with a level of service E or worse.

The analysis prepared for CO attainment in the SCAB by the SCAQMD can be used to assist in evaluating the potential for CO exceedances in the SCAB. CO attainment was thoroughly analyzed as part of the SCAQMD's *2003 Air Quality Management Plan* (2003 AQMP) and the 1992 Federal

https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf. South Coast Air Quality Management District. 2003. Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis. http://www.aqmd.gov/docs/default-source/ceqa/handbook/mobilesource-toxics-analysis.doc?sfvrsn=2.

Attainment Plan for Carbon Monoxide (1992 CO Plan). As discussed in the 1992 CO Plan, peak CO concentrations in the SCAB are due to unusual meteorological and topographical conditions and not due to the impact of particular intersections. Considering the region's unique meteorological conditions and the increasingly stringent CO emissions standards, CO modeling was performed as part of 1992 CO Plan and subsequent plan updates and air quality management plans. In the 1992 CO Plan, a CO hot spot analysis was conducted for four busy intersections in Los Angeles at the peak morning and afternoon time periods: South Long Beach Boulevard and Imperial Highway (Lynwood); Wilshire Boulevard and Veteran Avenue (Westwood); Sunset Boulevard and Highland Avenue (Hollywood); and La Cienega Boulevard and Century Boulevard (Inglewood). These analyses did not predict a violation of CO standards. The busiest intersection evaluated was that at Wilshire Boulevard and Veteran Avenue, which has a daily traffic volume of approximately 100,000 vehicles per day. The Los Angeles County Metropolitan Transportation Authority evaluated the level of service in the vicinity of the Wilshire Boulevard/Veteran Avenue intersection and found it to be level of service E during the morning peak hour and level of service F during the afternoon peak hour.

The Traffic Impact Analysis showed that the project would generate a maximum of approximately 4,871 net new vehicle trips per day. The intersection with the highest traffic volume is located at the intersection of Archibald Avenue and Smith River Road/Eastvale Parkway and has a Horizon Year (2040) With Project morning peak hour volume of 1,527 vehicles. The 1992 CO Plan showed that an intersection which has a daily traffic volume of approximately 100,000 vehicles per day would not violate the CO standard. Therefore, as the highest traffic volumes fall far short of 100,000 vehicles, no CO "hot spot" modeling was performed and no significant long-term air quality impact is anticipated to local air quality with the ongoing use of the proposed project.

Local Air Quality Impacts from On-Site Operations

Project-related air emissions from on-site sources such as architectural coatings, landscaping equipment, and usage of natural gas appliances as well as the operation of vehicles on-site may have the potential to exceed the state and federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the SCAB. The nearest sensitive receptor that may be impacted by the proposed project are the existing single-family detached residential dwelling units located to the west, approximately 85 feet (~26 meters) to the north, and approximately 120 feet (~37 meters) to the east and south of the proposed project site.

The proposed project was analyzed based on the Corona-Norco source receptor area (SRA 22) and, to be conservative, used the thresholds for a 2-acre project site (as the site is approximately 2.71 acres). ***Table 3.4*** shows the on-site emissions from the CalEEMod model that includes natural gas usage, landscape maintenance equipment, and vehicles operating on-site and the calculated emissions thresholds. Per LST methodology, mobile emissions include on-site vehicles which equate to approximately 10 percent of the project-related new mobile sources. The data provided in ***Table 3.4*** shows that the ongoing operations of the proposed project would not exceed the local NOx, CO, PM10 and PM2.5 thresholds of significance. Therefore, the proposed

project would create a less than significant operations-related impact to local air quality due to on-site emissions and no mitigation would be required.

3(d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?

Determination: Less Than Significant Impact.

Land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding.[4] The project does not include any such uses identified by SCAQMD as being associated with odors. Potential sources that may emit odors during the ongoing operations of the proposed project would include odor emissions from the intermittent diesel delivery truck emissions and trash storage areas. Due to the distance of the nearest receptors from the project site and through compliance with SCAQMD's Rule 402 regarding public nuisances, no significant impact related to odors would occur during the ongoing operations of the proposed project.

Construction activities associated with the project may generate detectable odors from heavy-duty equipment exhaust and architectural coatings. However, construction-related odors would be short term in nature and cease upon project completion. In addition, the project would be required to comply with the California Code of Regulations, Title 13, Sections 2449(d)(3) and 2485, which minimizes the idling time of construction equipment either by shutting it off when not in use or by reducing the time of idling to no more than five minutes. This would further reduce the detectable odors from heavy-duty equipment exhaust. The project would also comply with the SCAQMD Rule 1113, which would minimize odor impacts from ROG emissions during architectural coating. Any impacts to existing adjacent land uses would be short term and would be less than significant.

STANDARD CONDITIONS & REQUIREMENTS

1. The following measure shall be incorporated into project plans as implementation of SCAQMD Rule 402:

    - A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

2. The following measures shall be incorporated into project plans as implementation of SCAQMD Rule 403:

[4] South Coast Air Quality Management District. 1993. *CEQA Air Quality Handbook*.

- All clearing, grading, earthmoving, or excavation activities shall cease when winds exceed 25 miles per hour (mph) per SCAQMD guidelines in order to limit fugitive dust emissions.

- The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the project site are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.

- The contractor shall ensure that traffic speeds on unpaved roads and in project site areas are reduced to 15 mph or less.

3. The following measure shall be incorporated into project plans as implementation of SCAQMD Rule 1113:

    - In order to limit the volatile organic compound (VOC) content of architectural coatings used in the SCAB, architectural coatings shall be no more than a low VOC default level of 50 grams per liter (g/L) unless otherwise specified in the SCAQMD Table of Standards.

4. All applicable measures shall be incorporated into project plans as implementation of SCAQMD Rule 1403 if asbestos is found during the renovation and construction activities.

MITIGATION MEASURES

No mitigation is required.

4. BIOLOGICAL RESOURCES. Would the proposed project:					
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?		X		
b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?				X
c)	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				X
d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?		X		
e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				X
f)	Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?		X		

The analysis and findings throughout this section are based on the *Habitat Assessment for Burrowing Owl and Narrow Endemic Plant Species; MSHCP Consistency Analysis; (Assessor's Parcel Nos. 144-130-013, -012, -011, -004) Riverside County, California* (Habitat Assessment), prepared by Osborne Biological Consulting, dated July 2, 2018, and provided as **Appendix 7** of this IS/MND.

ENVIRONMENTAL SETTING

The project site currently supports exotic annual grass/forbland dominated by species such as wall barley (*Hordeum murinum),* milk thistle *(Lactuca serriola),* cheeseweed *(Malva parviflora),* goosefoot *(Chenopodium album),* and prickly Russian thistle *(Salsola tragus)*, all of which are weedy species typical of highly disturbed conditions. On-site soils consist of Waukena saline-alkali fine sandy loam. Historical agricultural practices and residential uses have removed the natural vegetation communities, limiting the quality and availability of habitat for wildlife. No narrow endemic plant species were found on the project site, and such plant species are not expected to have the potential to occur on-site. No riparian habitat or vernal pools occur on the project site. In addition, there are no potential jurisdictional waters or wetlands on the project site.

The project site is located within the boundaries of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) administered by the Western Riverside County Regional Conservation Authority (RCA). The City of Eastvale is a signatory to the MSHCP.

DISCUSSION

4(a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?

Determination: Less Than Significant Impact with Mitigation Incorporated.

Sensitive Plant Species

The MSHCP calls for focused studies of habitat evaluations for narrow endemic plant species. According to the Habitat Assessment conducted for the proposed project, no species of narrow endemic plant were encountered on the project site and habitat conditions indicate that these plant species—including San Diego ambrosia (*Ambrosia pumila)*, Brand's Phacelia (*Phacelia stellaris)*, and San Miguel savory (*Satureja chandleri)*—should not be expected on-site. In addition, due to the historical use of the project site for residential and agricultural activities, sensitive vegetation species do not occur on-site.

Sensitive Wildlife Species

According to the MSHCP, the project site is located within a mapped survey area for western burrowing owl (*Athene cunicularia*). The burrowing owl is designated as a species of special concern by the California Department of Fish and Wildlife (CDFW). The species is typically found in grassland, shrub steppe, and desert habitat types; however, the species can also be found in agricultural areas, ruderal fields, and pastures, as well as in urban environments such as vacant lots, flood control facilities, and open spaces. Burrowing owls require underground burrows or other cavities for nesting, roosting and shelter. Burrows used by the owls are usually dug by other species such as California ground squirrel (*Spermophilus beecheyi*) and round-tailed ground squirrel (*Citellus tereticaudus*). As such, the presence of colonial mammal burrows is often an indication that burrowing owl may be present. Burrowing owls have also been found occupying

man-made cavities, such as buried and non-functioning drainpipes, standpipes, and dry culverts. Although burrowing owl is unlikely to occur on-site, the proposed project would implement **Mitigation Measure BIO-1** to ensure potential impacts to burrowing owls are avoided and mitigated by requiring a preconstruction survey prior to ground-disturbing activities.

Birds

The Migratory Bird Treaty Act (MBTA) implements international treaties between the United States and other nations devised to protect migratory birds, their parts, eggs, and nests from activities such as hunting, pursuing, capturing, killing, selling, and shipping, unless expressly authorized in the regulations or by permit. The state of California has incorporated the protection of birds of prey in California Fish and Game Code (CFGC) Sections 3800, 3513, and 3503.5. All raptors and their nests are protected from take or disturbance under the MBTA (16 United States Code [USC] Section 703 et seq.) and California statute (CFGC Section 3503.5).

Direct impacts to native vegetation communities and removal of trees during project construction could result in direct impacts to bird nests, which would be considered significant absent mitigation. Impacts could result from project activities if nesting birds are present on the project site at the time of construction and if activities cause nest abandonment or mortality of young. Implementation of **Mitigation Measure BIO-2**, which requires a preconstruction nesting bird clearance survey to determine the presence/absence, location, and status of any active nests on or adjacent to the project site, would reduce potential impacts to nesting and migratory birds to less than significant by limiting the removal of trees, shrubs, or any other potential nesting habitat to outside the avian nesting season, which generally extends from February 1 through August 31. If the nesting bird clearance survey indicates the presence of nesting birds, **Mitigation Measure BIO-2** requires buffers to ensure that any nesting birds are protected pursuant to the MBTA. Impacts for both sensitive wildlife species and migratory birds would be less than significant with mitigation incorporated.

4(b) Have a substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?

Determination: No Impact.

According to the Habitat Assessment conducted for the proposed project, no jurisdictional waters, riparian, riverine, or vernal pool areas exist on the project site. No impact would occur in this regard.

4(c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Determination: No Impact.

Based on the Habitat Assessment conducted for the proposed project, no state or federally protected wetlands are located within the project site. No impact would occur in this regard.

4(d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Determination: Less Than Significant Impact with Mitigation Incorporated.

As mentioned previously, historical agricultural practices and residential uses have removed the natural vegetation communities, limiting the quality and availability of habitat for wildlife. The urbanized land uses adjacent to the project site further limit the potential for migratory wildlife to occur in the project vicinity. The project area does not support any bodies of water or wetlands that attract large migration stopovers or attractants for avian species. Furthermore, the project is proposed on lands that are low quality, disturbed habitats surrounded by disturbed residential uses. Project construction would result in the removal of existing on-site trees, which have the potential to provide suitable nesting opportunities for nesting birds. The MBTA governs the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests. To reduce potential impacts to nesting birds, **Mitigation Measure BIO-2** requires a preconstruction nesting bird clearance survey to determine the presence/absence, location, and status of any active nests on or adjacent to the project site. If the nesting bird clearance survey indicates the presence of nesting birds, **Mitigation Measure BIO-2** requires buffers to ensure that any nesting birds are protected pursuant to the MBTA. With implementation of **Mitigation Measure BIO-2**, the project's potential construction-related impacts to migratory birds would be reduced to a less than significant level.

4(e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Determination: No Impact.

There are no local policies or ordinances with respect to biological resources that apply to the project site. Therefore, the project is not in conflict with local policies or ordinances. No impact would occur.

4(f) Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?

Determination: Less Than Significant Impact with Mitigation Incorporated.

According to the MSHCP Consistency Analysis, the RCA MSHCP Information Map shows the project site is not located within a cell group, criteria cell, in the Stephen's Kangaroo Rat Plan Fee area or an area that requires surveys for amphibians, criteria area species, or mammals. However, the project is located in an area requiring burrowing owl, San Diego ambrosia, Brand's phacelia, and San Miguel savory habitat assessments and surveys, if suitable habitat is present.

The project site primarily consists of disturbed land with patches of ruderal vegetation. As discussed in Response IV.4(a), the habitat on-site is not suitable for the three narrow endemic plant species discussed above. Additionally, no burrowing owl individuals, surrogate burrows, or

burrowing owls sign were found during the field investigation. Nonetheless, to ensure that burrowing owls are not adversely affected by project implementation, the proposed project would implement **Mitigation Measure BIO-1,** which requires a preconstruction survey to be conducted to ensure that burrowing owl is not present on-site. Impacts would be less than significant with mitigation incorporated.

STANDARD CONDITIONS & REQUIREMENTS

1. City of Eastvale Municipal Code Section 4.62.100, *Payment of fees*, states that the Western Riverside County MSHCP fee shall be paid at the time a certificate of occupancy is issued for a residential unit or development project or upon final inspection, whichever occurs first. Furthermore, no final inspection shall be made, and no certificate of occupancy shall be issued, prior to full payment of the Western Riverside County Multiple Species Habitat Conservation Plan fee. However, this section shall not be construed to prevent payment of the fee prior to the issuance of an occupancy permit or final inspection.

MITIGATION MEASURES

BIO-1 Prior to the issuance of a grading permit, a preconstruction burrowing owl clearance survey shall be completed by a qualified biologist within 30 days prior to ground disturbance to avoid direct take of burrowing owls. Once complete, a written report summarizing the results of the clearance survey shall be prepared and submitted to the City of Eastvale for review and concurrence.

- If no burrowing owls are detected, construction may proceed. If construction is delayed or suspended for more than 30 days during the breeding season (March 1 to August 31), the project site or work area shall be resurveyed.

- If burrowing owls are detected on the project site during the breeding season (March 1 to August 31), a 300-foot "no work" buffer shall be established around the active burrow and all work within the buffer shall be halted until the qualified biologist has determined through non-intrusive methods that the nesting effort is complete (i.e., all young have fledged). Once the nesting effort is complete or if a burrowing owl burrow is detected on-site during the non-breeding season (September 1 to February 28), passive and/or active relocation of burrowing owls may be implemented by a qualified biologist following consultation and approval from the City of Eastvale, the Western Riverside County Regional Conservation Authority, and the California Department of Fish and Wildlife.

BIO-2 Pursuant to the Migratory Bird Treaty Act and the California Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat shall be conducted outside the avian nesting season. The nesting season generally extends from February 1 through August 31, but can vary slightly from year to year based on seasonal weather conditions. If ground disturbance and vegetation removal cannot occur

outside of the nesting season, a preconstruction clearance survey for nesting birds shall be conducted within 30 days of the start of any ground-disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the preconstruction clearance survey, construction activities shall stay outside of a 300-foot buffer around the active nest. For raptors and special-status species, this buffer will be expanded to 500 feet. A biological monitor shall be present to delineate the boundaries of the buffer area and to monitor the active nest to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur.

SIGNIFICANCE OF IMPACT AFTER MITIGATION

With implementation of **Mitigation Measures BIO-1** and **BIO-2** and adherence to the standard conditions and requirements, which includes payment of MSHCP mitigation fees, the project would comply with the requirement of the MSHCP and the MBTA. Compliance would reduce impacts to less than significant levels.

5. CULTURAL RESOURCES. Would the proposed project:					
Issues		Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?		X		
b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?		X		
c)	Disturb any human remains, including those interred outside of dedicated cemeteries?			X	

The analysis and findings throughout this section are based on the *Phase I Cultural Resources Survey for Proposed Retail Development at the Corner of Archibald and Chandler* (Cultural Resources Survey) prepared by EnviroPro Consulting, LLC, dated October 17, 2018, and provided as **Appendix 8** of this IS/MND.

DISCUSSION

5(a) Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Determination: Less Than Significant Impact with Mitigation Incorporated.

The Cultural Resources Survey conducted for the proposed project included a records search for surveys or sites within a 1-mile radius from the project site. A standard review of the National Register of Historic Places and the Office of Historic Preservation Historic Property Directory was also conducted. A second records search was conducted at the Soboba Band of Luiseño's Research Library.

Two historic sites were recorded just beyond 1 mile from the project site, both located to the northwest. These sites consist of built structures associated with a farm/dairy ranch (P#33-13347 and P#33-13348). A single prehistoric isolate (P# 33-26628) was also recorded at or beyond the 1-mile study area, southeast of the project site. A second prehistoric isolate consisting of a portable grinding stone was reported in one of the records search reports, although there was no site form or location plotted.

A Sacred Lands File search was sent to the Native American Heritage Commission (NAHC). The search results did not indicate the presence of any Native American cultural resources within the project site or its 1-mile radius. In addition, a review of cultural resource records held by Soboba Cultural Resources Department did not reveal cultural resources within the project area. Correspondence is on file at the City of Eastvale.

The field survey conducted as part of the Cultural Resources Survey confirmed that the entire project site has been disturbed by many generations of historical dairy or cattle use, and no cultural resources were visible on the property. The survey did not result in the identification of any historic or prehistoric cultural resources.

Based on the records search results, with numerous negative surveys for housing developments in the immediate vicinity, it is considered a low risk (though still possible) that cultural resources are buried within the project site, as no indications were observed during the survey that would suggest historic or prehistoric features or artifacts were present. However, if previously undocumented cultural resources are identified during earthmoving activities, **Mitigation Measure CUL-1** would be implemented to reduce potential impacts to historical and archaeological resources to less than significant levels.

5(b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Determination: Less Than Significant Impact with Mitigation Incorporated.

Refer to Response IV.5(a). Less than significant impacts to archaeological resources would occur with implementation of **Mitigation Measure CUL-1**.

5(c) Disturb any human remains, including those interred outside of formal cemeteries?

Determination: Less Than Significant Impact.

Construction activities, particularly grading, could potentially disturb human remains interred outside of a formal cemetery. Thus, the potential exists that human remains may be unearthed during grading and excavation activities associated with project construction. In the event that human remains are discovered during grading or other ground-disturbing activities associated with the proposed project, all work in that area shall be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the finds as detailed under the Standard Conditions & Requirements below. Less than significant impacts would occur.

STANDARD CONDITIONS & REQUIREMENTS

1. If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the county coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made.

   Following discovery and during assessment of the remains, work will be diverted at least 50 feet from the burial. The discovery shall be kept confidential, and secure to prevent disturbance. If left overnight, remains will be covered with a muslin cloth and steel plate over the excavation to protect the remains. If this method of protection is not feasible, a guard will be posted.

   If the Riverside County coroner determines the remains to be of Native American origin, the NAHC must be contacted by the coroner within 24 hours of the coroner's

determination. The NAHC must then immediately identify the most likely descendants(s) for purposes of receiving notification of discovery. The most likely descendant(s) shall then make recommendations within 48 hours from the time that site access is granted and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 507.98.

MITIGATION MEASURES

CUL-1 If cultural resources are encountered during ground-disturbing activities, work in the immediate area shall cease and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology shall be contacted immediately to evaluate the find(s). If the discovery proves to be significant under the California Environment Quality Act, additional work such as data recovery excavation may be warranted and shall be reported to the City.

SIGNIFICANCE OF IMPACT AFTER MITIGATION

Implementation of **Mitigation Measure CUL-1** would provide that any historical and/or archaeological resources inadvertently discovered during project grading or construction activities would be protected consistent with the recommendations of a qualified archaeologist, thereby reducing impacts to less than significant levels.

6. ENERGY. Would the proposed project:					
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			X	
b)	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			X	

The analysis and findings throughout this section are based on the *Archibald at Chandler Commercial Project Air Quality, Global Climate Change, TAC and Energy Impact Analysis* (Air Quality, Global Climate Change, TAC and Energy Impact Analysis) prepared by Ganddini Group, Inc. and dated November 18, 2020, provided as **Appendix 6** of this IS/MND.

BACKGROUND

EXISTING CONDITIONS

Electricity

Electricity would be provided to the project by Southern California Edison (SCE). SCE provides electric power to more than 15 million persons, within a service area encompassing approximately 50,000 square miles. SCE derives electricity from varied energy resources including fossil fuels, hydroelectric generators, nuclear power plants, geothermal power plants, solar power generation, and wind farms. SCE also purchases from independent power producers and utilities, including out-of-state suppliers.

Natural Gas

Natural gas would be provided to the project by Southern California Gas (SoCalGas). SoCalGas is regulated by the CPUC, which regulates natural gas rates and natural gas services, including in-state transportation over the utilities' transmission and distribution pipeline systems, storage, procurement, metering and billing.

Transportation Energy Resources

The project would attract additional vehicle trips with resulting consumption of energy resources, predominantly gasoline and diesel fuel. Gasoline (and other vehicle fuels) are commercially provided commodities and would be available to the project patrons and employees via commercial outlets. The transportation sector emits 41 percent of the total GHGs in the state and about 84 percent of smog-forming oxides of nitrogen (NOx). Petroleum comprises about 92

percent of all transportation energy use, excluding fuel consumed for aviation and most marine vessels.

DISCUSSION

6(a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Determination: Less Than Significant Impact.

Multiple energy-related regulations apply to the project including the following:

- Senate Bill (SB) 100 (Chapter 312, Statutes of 2018) requires the California Public Utilities Commission (CPUC), California Energy Commission (CEC), California Air Resources Board (CARB), and all other state agencies to incorporate that policy into all relevant planning.
- California Assembly Bill (AB) 1493 enacted on July 22, 2002, required the California Air Resources Board (CARB) to develop and adopt regulations that reduce greenhouse gases (GHGs) emitted by passenger vehicles and light duty trucks.
- The 2019 Building Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations, Title 24, Part 6) requires the design of building shells and building components to conserve energy.
- The California Green Building Standards (CALGreen) were developed in an effort to meet the goals of California's landmark initiative Assembly Bill (AB) 32, which established a comprehensive program of cost-effective reductions of GHGs to 1990 levels by 2020.

Short-Term Construction Impacts

The construction schedule is anticipated to occur between mid 2021 and the end of March 2022 and be completed in one phase. Staging of construction vehicles and equipment will occur on-site.

Construction Equipment Electricity Usage Estimates

The energy implications of the construction process involve the power cost from on-site electricity consumption during construction of the proposed project. Based on the 2017 National Construction Estimator, Richard Pray,[5] the typical power cost per 1,000 square feet of building construction per month is estimated to be $2.32. Based on the proposed project building areas, the total power cost of the on-site electricity usage during construction is estimated to be approximately $241.48.

[5] Pray, Richard. 2017. 2017 National Construction Estimator. Carlsbad: Craftsman Book Company.

Construction Equipment Fuel Estimates

Fuel consumed by construction equipment would be the primary energy resource expended over the course of project construction. Using the CalEEMod data input for the air quality and GHG analyses, the project's construction phase would consume electricity and fossil fuels as a single energy demand, that is, once construction is completed their use would cease. Project construction activities would consume an estimated 25,512 gallons of diesel fuel.

Construction Worker Fuel Estimates

It is assumed that all construction worker trips are from light duty autos along area roadways. With respect to the project's estimated vehicle miles traveled (VMT), the construction worker trips would generate an estimated 148,617 VMT. Using an aggregate fuel efficiency of 30.13 miles per gallon (mpg) to calculate VMT for construction worker trips, an estimated 4,933 gallons of fuel would be consumed for construction worker trips.

Construction Vendor/Hauling Fuel Estimates

With respect to estimated VMT, the vendor and hauling trips would generate an estimated 27,220 VMT; data regarding project-related construction worker trips were based on CalEEMod 2016.3.2 model defaults. For the architectural coatings, it is assumed that the contractors would be responsible for bringing coatings and equipment with them in their light-duty vehicles. Therefore, vendors delivering construction material or hauling debris from the site during grading would use medium- to heavy-duty vehicles with an average fuel consumption of 8.93 mpg for medium heavy-duty trucks and 6.51 mpg for heavy-duty trucks. Based on these assumptions, an estimated 3,090 gallons of fuel would be consumed for vendor and hauling trips.

Construction Energy Efficiency/Conservation Measures

Construction equipment used over the approximately nine-month construction phase would conform to CARB regulations and California emissions standards and is evidence of related fuel efficiencies. There are no unusual project characteristics or construction processes that would require the use of equipment that would be more energy intensive than is used for comparable activities or equipment that would not conform to current emissions standards (and related fuel efficiencies). Equipment employed in project construction would therefore not result in inefficient, wasteful, or unnecessary consumption of fuel. The project would use construction contractors which practice compliance with applicable CARB regulation regarding retrofitting, repowering, or replacement of diesel off-road construction equipment. Additionally, CARB has adopted the Airborne Toxic Control Measure to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter and other toxic air contaminants. Compliance with these measures would result in a more efficient use of construction-related energy and would minimize or eliminate wasteful or unnecessary consumption of energy. Idling restrictions and the use of newer engines and equipment would result in less fuel combustion and energy consumption.

Furthermore, as required by *California Code of Regulations Title 13, Motor Vehicles, section 2449(d)(3) Idling*, idling times of construction vehicles are limited to no more than five minutes, thereby minimizing or eliminating unnecessary and wasteful consumption of fuel due to

unproductive idling of construction equipment. Enforcement of idling limitations is realized through periodic site inspections conducted by County building officials, and/or in response to citizen complaints.

Based on the above, a less than significant impact would occur relative to short-term construction energy usage.

Long-Term Operational Impacts

Energy consumption in support of or related to project operations would include transportation energy demands (energy consumed by employee and patron vehicles accessing the project site) and facility energy demands (energy consumed by building operations and site maintenance activities).

Transportation Fuel Consumption

Using the CalEEMod output from the air quality and GHG analyses, an average trip for autos and light trucks was assumed to be 16.6 miles and 3-4-axle trucks were assumed to travel an average of 6.9 miles. As the project includes the development of the site with restaurant and gas station uses (which are frequently utilized on weekends), and in order to present a worst case scenario, it was assumed that vehicles would operate 365 days per year. The proposed project would generate 4,871 trips per day. An estimated 1,139,964 gallons of fuel would be consumed per year for the operation of the proposed project. Trip generation and VMT generated by the proposed project are consistent with other similar commercial uses of similar scale and configuration as reflected respectively in the Institute of Transportation Engineers (ITE) Trip Generation Manual (20th Edition, 2017). As such, the project does not propose uses or operations that would inherently result in excessive and wasteful vehicle trips and VMT, nor associated excess and wasteful vehicle energy consumption. Furthermore, the state of California consumed approximately 4.2 billion gallons of diesel and 15.1 billion gallons of gasoline in 2015. The increase in fuel consumption from the proposed project is negligible in comparison to the state's demand. Therefore, project transportation energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

Facility Energy Demands (Electricity and Natural Gas)

Building operation and site maintenance (including landscape maintenance) would result in the consumption of electricity and natural gas. The annual natural gas and electricity demands were provided per the CalEEMod output from the air quality and GHG analyses. The estimated electricity demand for the proposed project is approximately 401,547 kilowatt-hours (kWh) per year. In 2019, the nonresidential sector of the County of Riverside consumed approximately 8,183 million kWh of electricity. In addition, the estimated natural gas consumption for the proposed project is approximately 1,973,430 kilo British thermal units (kBTU) per year. In 2019, the nonresidential sector of the County of Riverside consumed approximately 148.2 million kBTU of gas. Therefore, the increase in both electricity and natural gas demand from the proposed project is negligible compared to the County's 2019 nonresidential sector demand.

Energy use in buildings is divided into energy consumed by the built environment and energy consumed by uses that are independent of building construction, such as in plug-in appliances.

In California, Title 24 governs energy consumed by the built environment, mechanical systems, and some types of fixed lighting. Non-building energy use, or "plug-in" energy use, can be further subdivided by specific end-use (refrigeration, cooking, appliances, etc.). The proposed project would be required to comply with Title 24 standards.

Furthermore, the proposed project energy demands in total would be comparable to other commercial projects of similar scale and configuration. Therefore, the project facilities' energy demands and energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary. Based on the above, a less than significant impact would occur relative to long-term operational energy usage.

6(b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Determination: Less Than Significant Impact.

The project site is located in an area that is substantially developed with an established transportation network. Access to/from the project site would occur from existing roads and, as a result, the project would not interfere with nor otherwise obstruct intermodal transportation plans or projects that may be proposed pursuant to the Intermodal Surface Transportation Efficiency Act (ISTEA) because SCAG is not planning for intermodal facilities in the project area.

Regarding the state's Energy Plan and Title 24 energy efficiency standards, the applicant is required to comply with the California Green Building Standard Code requirements for energy-efficient buildings and appliances as well as utility energy efficiency programs implemented by SCE and SoCalGas.

Regarding AB 1493 regulations, an individual project does not have the ability to comply or conflict with these regulations because they are intended for agencies and their adoption of procedures and protocols for reporting and certifying GHG emission reductions from mobile sources.

Regarding the state's Renewables Portfolio Standards, the project would be required to meet or exceed the energy standards established in the CALGreen Code. CalGreen standards require that new buildings reduce water consumption, employ building commissioning to increase building system efficiencies, divert construction waste from landfills, and install low pollutant-emitting finish materials.

The project would not engage in wasteful or inefficient uses of energy and aims to achieve energy conservations goals within the State of California. Notwithstanding, the project proposes commercial/retail uses and will not have any long-term effects on an energy provider's future energy development or future energy conservation strategies. Impacts would be less than significant.

STANDARD CONDITIONS & REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

7. GEOLOGY AND SOILS. Would the proposed project:						
Issues			Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:					
	i)	Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning map, issued by the State Geologist for the area or based on other substantial evidence of a known fault?			X	
	ii)	Strong seismic ground shaking?			X	
	iii)	Seismic-related ground failure, including liquefaction?			X	
	iv)	Landslides?			X	
b)	Result in substantial soil erosion or the loss of topsoil?				X	
c)	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?				X	
d)	Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?				X	
e)	Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?					X
f)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?				X	

The analysis and findings throughout this section are based on the *Geotechnical Engineering Investigation, Proposed Circle K Gas Station & Restaurants NWC Archibald Avenue & Chandler Street, Eastvale, California* (Geotechnical Report) prepared by Salem Engineering Group, Inc., dated January 7, 2021, and provided as **Appendix 9** of this IS/MND.

DISCUSSION

7(a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning map, issued by the State Geologist for the area or based on other substantial evidence of a known fault?

Determination: Less Than Significant Impact.

According to the Geotechnical Report prepared for the proposed project, the project site is not located in an Earthquake Fault Zone as mapped by the California Geological Survey. The closest mapped active fault that could affect the project site is the Chino-Elsinore fault, which is located approximately 4 miles to the southwest. Therefore, the potential for fault rupture at the site is considered low. Although no active faults traverse the project site, all new development and redevelopment is required to comply with the requirements of the Alquist-Priolo Earthquake Fault Zoning Act, as well as with the 2019 California Building Code (CBC), which includes specific design measures intended to maximize structural stability in the event of an earthquake. Impacts would be less than significant.

ii) Strong seismic ground shaking?

Determination: Less Than Significant Impact.

The project site is located in seismically active Southern California with numerous fault systems in the region. As such, it should be anticipated that the project site will experience moderate to strong ground shaking in the near future. However, the proposed development would be subject to the CBC seismic design force standards for the Eastvale area. Compliance with these standards would require that the structures and associated improvements are designed and constructed to withstand expected seismic activity and associated potential hazards, thereby minimizing risk to the public and property. The project would be designed and developed consistent with the CBC and standard engineering practices and reviewed in conjunction with the City Engineer. Therefore, impacts would be less than significant.

iii) Seismic-related ground failure, including liquefaction?

Determination: Less Than Significant Impact.

According to the Geotechnical Report prepared for the proposed project, the soils encountered within the depth of 50.5 feet on the project site during the field exploration consisted predominantly of sandy silt with various amounts of clay; sandy clay with silt; silty sand with various amounts of gravel; silty, clayey sand; and poorly graded sand. Free groundwater was encountered at a depth of 38.5 feet below the ground surface. As such, the project site was determined to have a moderate-to-high potential for liquefaction under seismic conditions.

The historically highest groundwater is estimated to be at a depth of 20 feet below ground surface according to the County of Riverside Geologic Hazards Map and regional groundwater well data. Low to very low cohesion strength is commonly associated with the sandy soil profile at the project site. A seismic hazard, which could cause damage to the proposed development

during seismic shaking, is the post-liquefaction settlement of liquefied sands. Regardless, implementation of standard grading and soil engineering practices and site-specific recommendations in the project's Geotechnical Report would serve to ensure that project structures are adequately supported and render the likelihood of liquefaction to very low levels. In addition, compliance with site-specific design recommendations provided in the Geotechnical Report, including using geogrid, a structural slab system, stone columns, or supporting the building on a deep foundation system, would be required as a condition of issuance of building and grading permits. Therefore, this impact would be less than significant.

iv) Landslides?

Determination: Less Than Significant Impact.

The proposed project is not expected to expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death from landslides. Although the project site is in an area of high seismic activity, because of the relatively flat terrain on the site and the surrounding properties, the site is at little risk for landslide. Impacts would be less than significant.

7(b) Result in substantial soil erosion or the loss of topsoil?

Determination: Less Than Significant Impact.

Proposed construction activities would include clearing the site of debris and/or vegetation, soil excavation, grading, asphalt paving, building construction, and landscaping. Such activities would disturb site soils, exposing them to the erosive effects of wind and water. However, all construction activities related to the proposed project would be subject to implementation of best management practices (BMPs) for erosion control, as required under National Pollution Discharge Elimination System (NPDES) regulations pursuant to the federal Clean Water Act. NPDES requirements for construction projects 1 acre or more in area are set forth in the Construction General Permit issued by the State Water Resources Control Board (State Water Board Order No. 2009-0009-DWQ). Furthermore, the project's land clearing, grading, and construction activities would be required to comply with SCAQMD Rules 403 and 403.2 regulating fugitive dust emissions, thus minimizing wind erosion from such ground-disturbing activities. Therefore, the proposed project would not generate substantial erosion. Soil erosion impacts would be less than significant.

7(c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Determination: Less Than Significant Impact.

As discussed in Responses IV.7a(iii) and IV.7a(iv), above, while the proposed project site is at little risk for landslides, it was determined to have a moderate-to-high potential for liquefaction under seismic conditions. Due to the relatively flat site topography, the likelihood of lateral spreading was determined to be low. However, implementation of standard grading and soil engineering

practices and site-specific recommendations provided in the Geotechnical Report would reduce potential impacts relative to unstable soils to less than significant levels.

7(d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Determination: Less Than Significant Impact.

According to the Geotechnical Report prepared for the proposed project, expansive soil is considered to be a geotechnical constraint at the project site. To minimize the potential soil movement due to expansive soil conditions, the Geotechnical Report recommends that the upper 18 inches of soil beneath the required subbase within slab and exterior flatwork areas be removed and replaced with non-expansive engineered fill that meets the requirements provided in the Geotechnical Report. As an alternative to the use of non-expansive soils, the upper 18 inches of soil supporting the slab areas may consist of lime or cement-treated clayey soils. Compliance with these recommendations would ensure that impacts relative to expansive soil remain less than significant.

7(e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Determination: No Impact.

The proposed project would be served by the municipal sewer system of the Jurupa Community Services District and would therefore have no need for a septic system or other alternative wastewater disposal system. There would be no impact.

7(f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Determination: Less Than Significant Impact.

The project site is located within the Inland Valley, within the Peninsular Ranges Geomorphic Province of California. The Inland Valley is situated between the San Bernardino Mountains to the northeast, the San Gabriel Mountains to the north, the Chino Hills to the southwest, and to the southeast by the hilly uplands that separate it from the San Jacinto Basin. These mountain ranges are part of the Transverse Ranges Geomorphic Province of California.

The Inland Valley is dominated by northwest-trending faults and adjacent anticlinal uplifts. The intervening deep synclinal troughs are filled with poorly consolidated Upper Pleistocene and unconsolidated Holocene sediments. Tectonism of the region is dominated by the interaction of the East Pacific Plate and the North American Plate along a transform boundary. The Inland Valley has been filled with a variable thickness of relatively young, heterogeneous alluvial deposits. These deposits typically do not contain significant vertebrate fossils, at least within the uppermost layers.

According to the Geotechnical Report prepared for the proposed project, the subsurface conditions encountered appear typical of those found in the geologic region of the site. In general, the soils within the depth of exploration consisted of alluvium deposits of soft to hard

sandy silt with various amounts of clay; sandy clay with silt; medium dense to very dense silty sand with various amounts of gravel; silty, clayey sand; and poorly graded sand. The project site is not anticipated to contain significant paleontological or geologic features. No prehistoric resources were identified during background research or field survey for the project site. As such, a less than significant impact would occur.

STANDARD CONDITIONS & REQUIREMENTS

1. The project shall comply with the California Building Code and the City of Eastvale's grading requirements in Municipal Code Section 130.08.040, *Street Grades*, and subject to the approval of the City Engineer.

MITIGATION MEASURES

None required.

8. GREENHOUSE GAS EMISSIONS. Would the proposed project:					
Issues		Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?		X		
b)	Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?		X		

DISCUSSION

The analysis and findings throughout this section are based on the *Archibald at Chandler Commercial Project Air Quality, Global Climate Change, TAC and Energy Impact Analysis* (Air Quality, Global Climate Change, TAC and Energy Impact Analysis) prepared by Ganddini Group, Inc., dated November 18, 2020, and provided as **Appendix 6** of this IS/MND.

Background

Global Climate Change

California is a substantial contributor of global greenhouse gases (GHGs), emitting over 420 million metric tons of carbon dioxide equivalent ($MTCO_2e$) per year.[6] Methane (CH_4) is also an important GHG that potentially contributes to global climate change. GHGs are global in their effect, which increases the earth's ability to absorb heat in the atmosphere. As primary GHGs have a long lifetime in the atmosphere, accumulate over time, and are generally well-mixed, their impact on the atmosphere is mostly independent of the point of emission. Every nation emits GHGs and as a result makes an incremental cumulative contribution to global climate change; therefore, global cooperation is required to reduce the rate of GHG emissions enough to slow or stop the human-caused increase in average global temperatures and associated changes in climatic conditions.

Due to the nature of global climate change, it is not anticipated that any single development project would have a substantial effect on global climate change. In actuality, GHG emissions from the proposed project would combine with emissions emitted across California, the United States, and the world to cumulatively contribute to global climate change.

[6] California Air Resources Board. 2019. California Greenhouse Gas Emissions for 2000 to 2017. Carbon dioxide equivalent (CO_2e) is a metric measure used to compare the emissions from various greenhouse gases based upon their global warming potential.

Regulations and Significance Criteria

Multiple regulations pertaining to GHG emissions apply to the project including the following, which are described in detail in the Air Quality, Global Climate Change, TAC and Energy Impact Analysis:

- Climate Change Action Plan: developed by the Intergovernmental Panel on Climate Change (IPCC) to address the reduction of GHGs in the United States, consisting of more than 50 voluntary programs. The IPCC concluded that a stabilization of GHGs at 400 to 450 ppm CO_2e concentration is required to keep global mean warming below two degrees Celsius (°C), which in turn is assumed to be necessary to avoid dangerous climate change.
- Executive Order S-3-05: issued in June 2005, which established the following GHG emission reduction targets:
  - 2010: Reduce GHG emissions to 2000 levels
  - 2020: Reduce GHG emissions to 1990 levels
  - 2050: Reduce GHG emissions to 80 percent below 1990 levels
- Executive Order B-30-15: Issued in April 2015, requires statewide GHG emissions to be reduced 40 percent below 1990 levels by 2030.
- Assembly Bill 32 (California Health and Safety Code, Division 25.5 – California Global Warming Solutions Act of 2006): Adopted in 2006, focuses on reducing GHG emissions in California to 1990 levels by 2020 and defines GHGs as CO_2, CH_4, N_2O, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride and represents the first enforceable statewide program to limit emissions of these GHGs from all major industries with penalties for noncompliance. Under HSC Division 25.5, the California Air Resources Board (CARB) has the primary responsibility for reducing GHG emissions.
- Senate Bill 32 and Assembly Bill 197: Adopted in 2016, establishes a new climate pollution reduction target of 40 percent below 1990 levels by 2030 and includes provisions to ensure the benefits of state climate policies reach into disadvantaged communities.
- California Air Resources Board 2017 Scoping Plan: establishes a range of GHG reduction actions which include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms such as a cap-and-trade system, and an AB 32 implementation fee to fund the program. The 2017 Scoping Plan Update identifies additional GHG reduction measures necessary to achieve the 2030 target. These measures build upon those identified in the First Update to the Scoping Plan (2013).
- City of Eastvale: The City of Eastvale is part of the Western Riverside Council of Government (WRCOG). The WRCOG adopted the WRCOG Subregional Climate Action Plan (CAP) in September 2014. The Subregional CAP sets forth a subregional emissions reduction target, emissions reduction measures, and action steps to assist each community to demonstrate consistency with California's Global Warming Solutions Act of

2006 (AB 32). The CAP consists of a community-wide emissions reduction target of 15 percent below 2010 levels by 2020, and 49 percent below 2010 levels by 2035.

In addition, the City of Eastvale General Plan Air Quality and Conservation Element includes policies related to greenhouse gases.

8(a)Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Determination: Less Than Significant Impact with Mitigation Incorporated.

Per City of Eastvale guidance, to determine whether the project's GHG emissions are significant, this analysis uses the SCAQMD screening threshold of 3,000 $MTCO_2e$ per year for all land uses.

Construction and operational activities associated with the proposed project would generate GHG emissions from area sources, energy usage, mobile sources, waste, water, and construction equipment; CalEEMod Version 2016.3.2 was used to calculate the GHG emissions from the proposed project. A summary of the results is shown in ***Table 8.1, Project-Related GHG Emissions***. As shown in ***Table 8.1***, project related GHG emissions would total 3,672.91 $MTCO_2e$ per year (including subtraction of emissions from residential uses that have been demolished, but without credit for any reductions from sustainable design and/or regulatory requirements). As stated above, according to the thresholds of significance, a cumulative global climate change impact would occur if GHG emissions created from the ongoing operations of the proposed project exceeded the SCAQMD draft threshold of 3,000 $MTCO_2e$ per year for all land uses. Therefore, emissions reductions are required for the project. The reductions would come from incorporation of California Air Pollution Control Officers Association-based reduction measures and regulatory compliance, described in **Mitigation Measure GHG-1**, below. In addition, project-specific design features are required to be implemented as described in **Mitigation Measure GHG-2**, below.

Table 8.1:Project-Related GHG Emissions

Category	Greenhouse Gas Emissions (Metric Tons/Year)					
	Bio-CO2	**NonBio-CO_2**	**CO_2**	**CH_4**	**N_2O**	**CO_2e**
Area Sources[1]	0.00	0.00	0.00	0.00	0.00	0.00

(CalEEMod Version 2016.3.2 for Opening Year 2022)
(1) Area sources consist of GHG emissions from consumer products, architectural coatings, and landscape equipment.
(2) Energy usage consist of GHG emissions from electricity and natural gas usage.
(3) Mobile sources consist of GHG emissions from vehicles.
(4) Solid waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
(5) Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
(6) Construction GHG emissions CO2e based on a 30-year amortization rate.

Table 8.2:Project-Related GHG Emissions with Mitigation summarizes the project's GHG emissions after implementation of **Mitigation Measures GHG-1** and **GHG-2**. As shown in ***Table 8.2***, with compliance with regulation and incorporation of sustainable design (compliance with regulation is shown as "mitigation" in the CalEEMod output), the proposed project's total emissions would be reduced to 2,609.74 $MTCO_2e$ per year.

Table 8.2:Project-Related GHG Emissions with Mitigation

Category	Greenhouse Gas Emissions (Metric Tons/Year)

Notes:
Source: Ganddini Group, Inc. Air Quality, Global Climate Change, TAC and Energy Impact Analysis, November 18, 2020, Table 13.
(CalEEMod Version 2016.3.2 for Opening Year 2022)
(1) Area sources consist of GHG emissions from consumer products, architectural coatings, and landscape equipment.
(2) Energy usage consist of GHG emissions from electricity and natural gas usage.
(3) Mobile sources consist of GHG emissions from vehicles.
(4) Solid waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
(5) Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
(6) Construction GHG emissions CO2e based on a 30-year amortization rate.
(7) Approximately 100 new trees to be planted as part of sequestration.

With implementation of these measures, impacts would be reduced to less than significant.

8(b) Conflict with an applicable plan, policy, or regulations adopted for the purpose of reducing the emissions of greenhouse gases?

Determination: Less Than Significant Impact with Mitigation Incorporated.

The proposed project could have the potential to conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. As noted above, the applicable plan for the proposed project is the WRCOG CAP.

As stated previously, the SCAQMD's tier 3 thresholds used Executive Order S-3-05 goal as the basis for deriving the screening level. Executive Order S-3-05 establishes the following reduction targets:

- 2010: Reduce greenhouse gas emissions to 2000 levels
- 2020: Reduce greenhouse gas emissions to 1990 levels
- 2050: Reduce greenhouse gas emissions to 80 percent below 1990 levels

In 2006, the California State legislature adopted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires CARB to adopt rules and regulations that would achieve GHG emissions equivalent to statewide levels in 1990 by 2020 through an enforceable statewide emission cap, which was phased in starting in 2012.

Therefore, as the project's emissions would meet the threshold for compliance with Executive Order S-3-05, the project's emissions would also comply with the goals of AB 32 and the WRCOG CAP. Additionally, as the project meets the current interim emissions targets/thresholds established by SCAQMD, the project would also be on track to meet the reduction target of 40 percent below 1990 levels by 2030 mandated by SB 32. Furthermore, the majority of the post-2020 reductions in GHG emissions are addressed via regulatory requirements at the state level, and the project would be required to comply with these regulations as they come into effect.

As discussed above, the proposed project's total emissions would be reduced to 2,609.74 $MTCO_2e$ per year with implementation of mitigation, and as such, the project's GHG emissions do not exceed the SCAQMD draft threshold of 3,000 $MTCO_2e$ per year and is in compliance with overall community-wide reduction goals of the WRCOG CAP, AB 32, and SB 32. Furthermore, the project would comply with applicable CalGreen Building Standards and City of Eastvale's policies regarding sustainability (as dictated by the City's General Plan). Impacts would be less than significant.

STANDARD CONDITIONS & REQUIREMENTS

1. The project would be required to comply with all mandates imposed by the State of California and the South Coast Air Quality Management District intended to reduce GHG emissions. The following are applicable to the project and would assist in the reduction of greenhouse gas emissions:

    - Global Warming Solutions Act of 2006 (Assembly Bill [AB] 32)

- Regional GHG Emissions Reduction Targets/Sustainable Communities Strategies (Senate Bill [SB] 375)
- Pavley Fuel Efficiency Standards (AB 1493) – establishes fuel efficiency ratings for new vehicles
- California Code of Regulations, Title 24 (California Building Standards Code) – establishes energy efficiency requirements for new construction
- California Code of Regulations, Title 20, Division 2, Chapter 4 (Appliance Efficiency Regulations) – establishes energy efficiency requirements for appliances
- California Code of Regulations, Title 17, Division 3, Chapter 1, Subchapter 10, Article 4, Subarticle 7 (Low Carbon Fuel Standard) – requires carbon content of fuel sold in California to be 10 percent less by 2020
- California Water Conservation in Landscaping Act of 2006 (AB 1881) – requires local agencies to adopt the Department of Water Resources' updated Water Efficient Landscape Ordinance or equivalent by January 1, 2010, to ensure efficient landscapes in new development and reduced water waste in existing landscapes.
- Statewide Retail Provider Emissions Performance Standards (SB 1368) – requires energy generators to achieve performance standards for GHG emissions.
- Renewables Portfolio Standard (SB 1078) – requires electric corporations to increase the amount of energy obtained from eligible renewable energy resources to 20 percent by 2010 and 33 percent by 2020.

MITIGATION MEASURES

GHG-1 The project shall incorporate the following California Air Pollution Control Officers Association-based reduction measures and regulatory compliance:

- Utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen Standards.
- Implement recycling programs that reduce waste to landfills by a minimum of 75 percent (per AB 341).
- Incorporate the following land use and site enhancement reduction measures: LUT-1 Increase Density, LUT-4 Improve Destination Accessibility, LUT-5 Increase Transit Accessibility, and SDT-1 Improve Pedestrian Network.

GHG-2 The project shall incorporate the following design features:

- The project applicant shall require that all faucets, toilets, and showers installed in the proposed structures utilize low-flow fixtures that would reduce indoor water demand by 20 percent per CALGreen standards.
- The project applicant shall require recycling programs that reduce waste to landfills by a minimum 75 percent per AB 341.

- The project applicant shall provide sidewalks on-site and connecting off-site.

SIGNIFICANCE OF IMPACT AFTER MITIGATION

With implementation of **Mitigation Measures GHG-1** and **GHG-2**, impacts relative to GHGs would be reduced to a less than significant level.

9. HAZARDS AND HAZARDOUS MATERIALS. Would the proposed project:					
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X	
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				X
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				X
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles or a public airport or public use airport, result in a safety hazard for people residing or working in the project area? For a project within the vicinity of a private airstrip, result in a safety hazard for people residing or working in the project area?			X	
f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?		X		
g)	Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?			X	

The analysis and findings throughout this section are based on the *Phase 1 Environmental Site Assessment, NWC Archibald Avenue and Chandler Street Eastvale, CA 92880* (Phase 1 ESA) prepared by S & S Commercial Environmental Services, Inc., dated July 30, 2018, and provided as **Appendix 10** of this IS/MND.

DISCUSSION

9(a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Determination: Less Than Significant Impact.

Exposure of the public or the environment to hazardous materials can occur through improper handling or use of hazardous materials or hazardous wastes particularly by untrained personnel, a transportation accident, environmentally unsound disposal methods, or fire, explosion, or other emergencies. The severity of potential effects varies with the activity conducted, the concentration and type of hazardous material or wastes present, and the proximity of sensitive receptors.

Construction and operation of the proposed project would require the routine transport, use, storage, and disposal of limited quantities of common hazardous materials such as gasoline, diesel fuel, oils, solvents, paint, fertilizers, pesticides, and other similar materials. However, the transport, use, storage, and disposal of hazardous materials are strictly regulated by state and federal agencies to minimize adverse hazards from accidental release. In addition to state and federal regulations, future project tenants are subject to the provisions of the Eastvale Municipal Code (Title 16, Health and Sanitation), which outline the handling and disposal of hazardous materials and wastes and will comply with the County of Riverside Department of Environmental Health Hazardous Materials Business Emergency Plan (HMBEP), which is a written set of procedures and information created to help minimize the effects and extent of a release or threatened release of a hazardous material. The intent of the HMBEP is to satisfy federal and state Community Right-To-Know laws and to provide detailed information for use by emergency responders.

Therefore, the proposed project would not create a significant hazard to the public or the environment related to hazardous materials. This impact would be less than significant.

9(b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Determination: Less Than Significant Impact.

One of the means through which human exposure to hazardous substance could occur is through accidental release. Incidents that result in an accidental release of hazardous substance into the environment can cause contamination of soil, surface water, and groundwater, in addition to any toxic fumes that might be generated. Human exposure of contaminated soil, soil vapor, or water

can have potential health effects on a variety of factors, including the nature of the contaminant and the degree of exposure.

Based on the Phase I ESA prepared for the proposed project, the project site appears to have been part of a larger parcel of agricultural land until it was subdivided into smaller parcels in the 1940s. However, former pesticides would be expected to have broken down into constituent components with a half-life of seven years or less on average. No operations are currently performed on the project site and the three residences and fruit stand that existed on-site at the time the Phase I ESA was conducted have since been demolished. No potential environmental concerns were identified in association with the current or former uses of the project site.

Based on the Phase I ESA, no evidence of recognized environmental conditions, controlled recognized environmental conditions, or historical recognized environmental conditions were observed. Solid waste is not currently generated at the project site. No evidence of illegal dumping of solid waste was observed.

No wetlands, sumps, pits, ponds, or lagoons were observed on the project site. No evidence of current or former aboveground storage tanks or underground storage tanks (USTs) was found on-site. No potential polychlorinated biphenyl (PCB)-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) was observed on the project site. No additional environmental hazards, including landfill activities or radiological hazards, were observed.

During project construction, there is a possibility of accidental release of hazardous substances such as petroleum-based fuels or hydraulic fluid used for construction equipment. The level of risk associated with the accidental release of hazardous substances is not considered significant due to the small volume and low concentration of hazardous materials utilized during construction. The construction contractor would be required to use standard construction controls and safety procedures that would avoid and minimize the potential for accidental release of such substances into the environment. Standard construction practices would be observed such that any materials released are appropriately contained and remediated as required by local, state, and federal law. Construction impacts in this regard would be less than significant.

Project operations could involve the temporary storage and handling of potentially hazardous materials such as detergents, pesticides, fertilizers, or paint products that are pre-packaged for distribution and use. These materials are typical of those used in commercial/retail uses and would be employed for routine cleaning, maintenance, and landscaping activities. This type of storage, transfer, use and disposal of potentially hazardous materials is extensively regulated at the local, state, and federal levels. Amounts of these materials that are stored and used on-site would be subject to guidelines and restrictions established under the HMBEP, which would be implemented by the project, as described in Response IV.9(a), above.

Additionally, the project would utilize USTs to store gas and diesel fuel on the project site associated with the proposed gas station. The USTs would consist of double-walled, fiberglass fuel storage tanks with leak detection sensors. All project USTs would be designed, installed, inspected, maintained, and monitored consistent with federal, state, and local regulatory

requirements. The containment system design is subject to design review by the Jurupa Community Services District related to protection of its water facilities such as nearby municipal wells. Additionally, gasoline fueling stations are required by the SCAQMD Rule 461, Gasoline Storage and Dispensing, to include an enhanced vapor recovery and diagnostic system.

The project would also be required to comply with the provisions established by Section 2540.7, Gasoline Dispensing and Service Stations, of the California Safety and Health (Cal/OSHA) Regulations; Chapter 38, Liquefied Petroleum Gases, of the California Fire Code; Resource Conservation and Recovery Act requirements; and the Riverside County Fire Department requirements. Collectively, the routine inspection of the gas station, the USTs, and all associated fuel delivery infrastructure, along with the continued mandated compliance with all federal, state, and local regulations, provides the framework that would reduce operational impacts relative to hazardous material releases to a less than significant level.

9(c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Determination: No Impact.

There are no existing or proposed schools within one-quarter mile of the proposed project site. The nearest school, Rondo Elementary School, is approximately one mile northwest of the proposed project site at 14977 Walters Street in the City of Eastvale. Additionally, operation and maintenance of the proposed project would not produce hazardous emissions. Therefore, the proposed project would not result in impacts related to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. No impact would occur in this regard.

9(d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Determination: No Impact.

According to the Phase 1 ESA prepared for the proposed project, the proposed project site is not located on a known site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. No impact would occur in this regard.

9(e) For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles or a public airport or public use airport, result in a safety hazard for people residing or working in the project area? For a project within the vicinity of a private airstrip, result in a safety hazard for people residing or working in the project area?

Determination: Less Than Significant Impact.

According to Exhibit CH-6, *Compatibility Factors Map*, of the Riverside County Airport Land Use Compatibility Plan Policy Document (ALUCP), the project site is located within the Chino Airport

Influence Area, although it is not located within any of the Compatibility Zones.[7] The ALUCP establishes various policies and compatibility maps for individual ALUCP airports, including Chino Airport. As discussed further in Section IV.11, *Land Use and Planning,* prior to project approval by the City, the project applicant would be required to document review and approval of the project by the Riverside County Airport Land Use Commission. Any project revisions or limitations required by the commission would be incorporated in the project prior to approval by the City. Compliance with this requirement would reduce potentially significant impacts to a less than significant level. Refer to Section IV.11 for further discussion.

9(f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Determination: Less Than Significant Impact with Mitigation Incorporated.

Activities associated with the proposed project would not impede existing emergency response plans for the project site and/or other land uses in the project vicinity. As indicated in Section IV.17, *Transportation*, the project does not propose changes to the City's circulation system, such as sharp curves or dangerous intersections, and would not introduce incompatible uses to area roadways. Further, should partial lane closures be required as part of project construction activities, implementation of a traffic management plan would minimize congestion and ensure safe travel, including emergency access in the project vicinity; refer to **Mitigation Measure TRA-1**. With implementation of **Mitigation Measure TRA-1**, impacts would be less than significant.

9(g) Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Determination: Less Than Significant Impact.

As discussed in Section IV.20, *Wildfire,* the project site is located in a developed urban area surrounded by residential and commercial uses and is not located in a zone designated as Very High Fire Hazard by the California Department of Forestry and Fire Protection. Urban levels of fire protection would be provided to the project area. In addition, the project would adhere to building codes and any conditions included through review by the Riverside County Fire Department. A less than significant impact would occur in this regard.

STANDARD CONDITIONS & REQUIREMENTS

None required.

MITIGATION MEASURES

Refer to **Mitigation Measure TRA-1** in Section IV.17, *Transportation.*

[7] Riverside County Airport Land Use Commission. 2008. West County Airports Background Data. Exhibit CH-6, *Compatibility Factors Map.* September 2008.

10. HYDROLOGY AND WATER QUALITY. Would the proposed project:					
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?			X	
b)	Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			X	
c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
	i) Result in substantial erosion or siltation on- or off-site?			X	
	ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?			X	
	iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?			X	
	iv) Impede or redirect flood flows?			X	
d)	In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?				X
e)	Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?			X	

The analysis and findings throughout this section are based on the *Preliminary Hydrology Study* (Hydrology Study), dated December 31, 2020, provided as **Appendix 11** of this IS/MND, and the *Preliminary Water Quality Management Plan* (WQMP), prepared by LN Civil Engineers, Inc. dated January 11, 2021, provided as **Appendix 12** of this IS/MND.

DISCUSSION

10(a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Determination: Less Than Significant Impact.

As part of Section 402 of the Clean Water Act, the US Environmental Protection Agency (EPA) has established regulations under the National Pollutant Discharge Elimination System (NPDES) program to control direct stormwater discharges. In California, the State Water Resources Control Board (SWRCB) administers the NPDES permitting program and is responsible for developing NPDES permitting requirements. The NPDES program regulates industrial pollutant discharges, which include construction activities. The SWRCB works in coordination with the Regional Water Quality Control Boards (RWQCB) to preserve, protect, enhance, and restore water quality. The project site is within the jurisdiction of the Santa Ana RWQCB.

Impacts related to water quality typically range over three different periods: 1) during the earthwork and construction phase, when the potential for erosion, siltation, and sedimentation would be the greatest; 2) following construction, prior to the establishment of ground cover, when the erosion potential may remain relatively high; and 3) following completion of the project, when impacts related to sedimentation would decrease markedly, but those associated with urban runoff would increase.

Project construction could result in short-term impacts to water quality due to the handling, storage, and disposal of construction materials, maintenance and operation of construction equipment, and earthmoving activities. These potential pollutants could damage downstream waterbodies. Dischargers whose projects disturb 1 or more acres of soil or whose projects disturb less than 1 acre but are part of a larger common plan of development that in total disturbs 1 or more acres, are required to obtain coverage under the SWRCB's General Permit for Discharges of Stormwater Associated with Construction Activity Construction General Permit Order 2009-0009-DWQ (Construction General Permit). The Construction General Permit requires the project applicant to prepare and implement a stormwater pollution prevention plan (SWPPP). The SWPPP would specify best management practices (BMPs) to be used during project construction to minimize or avoid water pollution, thereby reducing potential short-term impacts to water quality. Upon completion of the project, the project applicant would be required to submit a Notice of Termination to the SWRCB to indicate that construction has been completed.

To further minimize the potential for accidental release of pollutants during project construction, the routine transport, use, and disposal of construction materials would be required to adhere to applicable state and local standards and regulations for handling, storage, and disposal of hazardous substances; refer to Section IV.9, *Hazards and Hazardous Materials*. Compliance with such measures would prevent such substances from entering downstream water bodies via stormwater runoff and adversely affect existing water quality. Following conformance with the Construction General Permit, SWPPP, and implementation of BMPs, the project's short-term impacts to water quality and waste discharge requirements would be less than significant.

The project would be required to implement BMPs to minimize operational impacts to water quality. As detailed in the project's WQMP, potential sources of runoff pollutants include landscaping/outdoor pesticide use and runoff from impervious surfaces. As a result, the WQMP includes permanent and operational source control BMPs pursuant to the on-site storm drain inlets, landscaping/outdoor pesticide use, food service issues, refuse areas, fuel dispensing areas, loading docks/loading areas, and plazas/sidewalks/parking lots. With implementation of these BMPs, the project's impacts to water quality would be less than significant.

10(b) Would the project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level, which would not support existing land uses or planned uses for which permits have been granted)?

Determination: Less Than Significant Impact.

The project site is currently vacant with no existing structures. Project development would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management. The project site is not currently used for groundwater recharge purposes. Water for the project would be provided by Jurupa Community Services District (JCSD) and the project would connect to the existing water system. Thus, project implementation would not substantially decrease groundwater supplies nor interfere substantially with groundwater recharge. Impacts would be less than significant in this regard.

10(c)i) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner that would result in substantial erosion or siltation on- or offsite?

Determination: Less Than Significant Impact.

According to the project's WQMP, the total new area of impervious surfaces within the project limits would be 92,145 square feet. The project site currently has no impervious surfaces. Although the project would result in an increase in impervious surfaces, the proposed project would not substantially alter the existing drainage pattern of the site or project area, including through the alteration of the course of a stream or river because post-development drainage infrastructure would retain the project site's existing drainage pattern. Runoff would be directed into a vegetated swale along westerly property line and two bioretention basins located at the northwest corner of the project site. Treated water and excess runoff would be drained into underdrain pipes then collected by a 12-inch line that drains into Chandler Street Channel at the northwest corner of the project site. As discussed in Response IV.10(a) above, the project would comply with the requirements of the Construction General Permit under the NPDES program, which would result in preparation of an SWPPP that outlines necessary BMPs to minimize erosion and water quality impacts during construction. Therefore, project development would not result in significant erosion or siltation impacts due to changes in drainage patterns and impacts would be less than significant.

10(c)ii) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

Determination: Less Than Significant Impact.

The project site does not include any streams or rivers which could be altered by the proposed project. In addition, the project includes vegetated swale areas and two bioretention basins with underdrain pipes to treat stormwater runoff prior to releasing to the existing channel. The vegetated swale areas would be located throughout the project site including 6,845 square feet on roofing and 4,455 square feet of ornamental landscaping, as well as 28,320 square feet of asphalt/concrete pavement swale areas. Bioretention basin 1 would be 26-foot by 60-foot in size and would be located near the northeastern corner of the project site. Bioretention basin 2 would be 7-foot by 104-foot and would be located along the project site's eastern border. These drainage features would limit the release of stormwater from the site, thereby minimizing the potential for flooding to occur on-site or off-site. Therefore, impacts would be less than significant.

10(c)iii) Would the project create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?

Determination: Less Than Significant Impact.

Refer to Responses IV.10(c)(i) and IV.10(c)(ii), above. On-site stormwater runoff associated with the project would be engineered to be conveyed through public street improvements and on-site infiltration to dispose of stormwater. Additionally, with required adherence to an SWPPP and WQMP as discussed above, the proposed project would not be a substantial source of polluted runoff. The project would not create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems. A less than significant impact would occur.

10(c)iv)Would the project impede or redirect flood flows?

Determination: Less Than Significant Impact.

The project site is relatively flat. The proposed project would include the development of a storm drainage system consistent with City requirements to convey stormwater runoff to the mainline storm drain system. Stormwater management practices as required under Eastvale Municipal Code Title 14, *Water and Sewers,* would further reduce any impacts to a less than significant level. In addition, the proposed on-site vegetated swale and bioretention basins would limit the release of stormwater from the site, thereby minimizing the potential for impediment or redirect flood flows. Therefore, impacts would be less than significant.

10(d) In flood hazard, tsunami, or seiche zones, would the project result in a risk release of pollutants due to project inundation?

Determination: No Impact.

According to the Federal Emergency Management Agency's (FEMA) National Flood Hazard Layer Viewer, the project site is not located within a 100-year flood hazard area.[8] As a result, no impact would occur in this regard.

A tsunami is a series of ocean waves generated in the ocean by an impulsive disturbance. The proposed project site is located approximately 30 miles from the Pacific Ocean. Due to this location, tsunamis are not considered a threat. No impact would occur in this regard.

A seiche is an oscillating surface wave in a restricted or enclosed body of water generated by ground motion, usually during an earthquake. Inundation from a seiche can occur if the wave overflows a containment wall or the banks of a water body. However, because the proposed project is not adjacent to any marine or inland water bodies, impacts from seiche are not expected to occur. No impact would occur in this regard.

10(e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Determination: Less Than Significant Impact.

Santa Ana Regional Water Quality Control Board Basin Plan

The project site is located in the Santa Ana River Hydrologic Unit in the South Coast Hydrologic Region. The Santa Ana RWQCB oversees basin planning and water quality in the Santa Ana River Hydrologic Unit. The Santa Ana RWQCB prepares the Water Quality Control Plan for the Santa Ana River Basin (Basin Plan) to protect local surface waters and groundwater basins. The Basin Plan designates beneficial uses of waters in the region and provides objectives to maintain or improve water quality in the region.

The northern boundary of the project site is adjacent to an 85-foot-wide Riverside County flood channel that feeds into Cucamonga Creek. The flood channel is approximately 50 feet north of the project boundary. According to the US Geological Survey National Hydrography Dataset, the flood channel is considered a jurisdictional drainage. Although there are no berms or barriers preventing surface sheet flow from the project site to the flood channel, no visible on-site drainages that feed into the flood channel were observed during the field surveys and therefore, no direct connectivity to Cucamonga Creek is expected; refer to **Appendix 7: Habitat Assessment**.

As described in Responses IV.10(c)ii) and IV.10(c)iv) above, the project would install bioretention trenches along the northern project boundary to satisfy the requirements of the NPDES permit. The bioretention trenches would increase the time of concentration of the developed project, reduce pollutant generation through filtration and absorption, and reduce runoff volume through

[8] Federal Emergency Management Agency. n.d. National Flood Hazard Layer Viewer. Accessed June 25, 2020. https://www.fema.gov/national-flood-hazard-layer-nfhl.

minor infiltration, absorption, and evapotranspiration.

Since the NPDES permit is intended to protect water quality, compliance with the permit would ensure that the project would not impair existing or potential beneficial uses of nearby or downstream water bodies and would not conflict with or obstruct implementation of the Basin Plan. The proposed project would not use the existing groundwater well on-site and instead would use the existing water main to receive water from the JCSD. Since the project would not use groundwater, the project would not conflict with a groundwater management plan. Impacts would be less than significant.

STANDARD CONDITIONS & REQUIREMENTS

1. The proposed project would be required to obtain coverage under the Santa Ana regional water quality control board's statewide General Construction Permit (CGP), which requires the preparation, approval, and implementation of a Stormwater Pollution Prevention Plan (SWPPP). The SWPPP would include Best Management Practices (BMPS) to be implemented during and after project construction to minimize erosion and sedimentation of downstream watercourses.
2. The project is subject to the Riverside County Storm Water Permit, also issued by the Santa Ana RWQCB (Order No. R8-2010-003, NPDES No. CAS 618033, as amended by R8-2013-0024, NPDES No. CAS618033) for discharges into the Municipal Separate Storm Sewer Systems (MS4S) draining the county.
3. The project applicant will be required to prepare a final WQMP for the project, with Best Management Practices incorporated in the plan.

MITIGATION MEASURES

None required.

11. LAND USE AND PLANNING. Would the proposed project:					
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Physically divide an established community?			X	
b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?			X	

DISCUSSION

11(a)Physically divide an established community?

Determination: Less Than Significant Impact.

The physical division of an established community is typically associated with construction of a linear feature, such as a major highway or railroad tracks, or removal of a means of access, such as a local road or bridge, which would impair mobility within an existing community or between a community and an outlying area.

None of the propose project components would constitute a barrier that would physically divide an established community. No new linear features are included in the project. Access to and movement throughout the Chandler area and the City would not be physically impaired due to the project.

Therefore, the proposed project would not physically divide an established community. Less than significant impacts would occur.

11(b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Determination: Less Than Significant Impact.

General Plan

The project site is currently designated by the Eastvale General Plan as Low Density Residential (LDR) and is bounded by LDR to the west and Medium Density Residential (MDR) to the north and south, and Medium High Density Residential (MHDR) to the east. Refer to ***Exhibit 3, Land Use Map***. The project proposes to change the land use designation from LDR to Commercial Retail (CR) to facilitate a proposed Change of Zone. As such, approval of the proposed General Plan Amendment would make the project site land use consistent with the General Plan. Impacts would be less than significant.

Zoning Code

The project site and parcels to the west along Chandler Avenue are zoned Light Agriculture (A-1).

The neighborhood to the north is zoned One Family Dwellings (R-1), the neighborhood to the east is classified as a Specific Plan (SP), and the neighborhood to the south is classified as a Planned Residential Development (PRD). Refer to ***Exhibit 4, Zoning Map*****.** However, the project proposes a Change of Zone from Light Agricultural (A-1) to General Commercial (C-1/C-P). With concurrent approval of the proposed Change of Zone, the project would be consistent with the General Plan's proposed future commercial land use in the Chandler Area as envisioned in the Chandler Area Community Vision Plan (CVAP). The CVAP, which is a general guidance document rather than an adopted policy, identifies the area of the proposed project for future uses that include both low-density residential and commercial.

The proposed project has been designed to meet the regulations of the C-1/C-P zone. The project would comply with the minimum lot standards for area, width, and depth. The proposed buildings would comply with height, floor area ratio, and setback regulations. Therefore, the proposed project would not conflict with any applicable zoning ordinance with concurrent approval of the Change of Zone. Impacts would be less than significant.

Riverside County Airport Land Use Compatibility - Chino Airport

According to Exhibit CH-6, *Compatibility Factors Map*, of the Riverside County Airport Land Use Compatibility Plan Policy Document (ALUCP), the project site is located within the Chino Airport Influence Area, although it is not located within any of the Compatibility Zones.[9] The ALUCP establishes various policies and compatibility maps for individual ALUCP airports, including Chino Airport.

The Riverside County Airport Land Use Commission (ALUC) review is required when a project is located within the boundaries of an Airport Influence Area and the project proposes a legislative action such as a General Plan Amendment, Specific Plan Amendment, Zone Change, or Zoning Ordinance. As the project proposes a General Plan Amendment and Zone Change, review of the project by the ALUC is required. Prior to project approval by the City, the project applicant would be required to document review and approval of the project by the ALUC. Any project revisions or limitations required by the ALUC would be incorporated in the project prior approval to by the City.

Conclusion

The proposed project would not conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the General Plan, Specific Plan, Local Coastal Program, or Zoning Ordinance) adopted for the purpose of avoiding or mitigating an environmental effect, with concurrent approval of the General Plan Amendment and Change of Zone, and ALUC review and approval. Impacts would be less than significant.

STANDARD CONDITIONS & REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

12. MINERAL RESOURCES. Would the proposed project:					
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?				X
b)	Result in the loss of availability of a locally important mineral resource recovery site delineated in a local general plan, specific plan, or other land use plan?				X

DISCUSSION

12(a) Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?

Determination: No Impact.

The project site has no history of use as a mineral resource recovery operation and is located in a predominantly developed area of the City. Areas identified as Mineral Resource Zone 2 (MRZ-2) are areas that contain identified mineral resources. No areas within the project vicinity are mapped MRZ-2 by the California Department of Conservation's Temescal Valley Production Area. As such, no mineral resources are anticipated within the project area.[10] Thus, project implementation would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. No impact would occur.

12(b) Result in the loss of availability of a locally important mineral resource recovery site delineated in a local general plan, specific plan, or other land use plan?

Determination: No Impact.

Refer to **Impact 12(a),** above. No mineral resources are anticipated within the project area. No impact would occur.

STANDARD CONDITIONS & REQUIREMENTS

None required.

[10] California Department of Conservation. 2014. Special Report 231, "Update of Mineral Land Classification for Portland Cement Concrete-Grade Aggregate in the Temescal Valley Production Area, Riverside County, California, 2014." ftp://ftp.consrv.ca.gov/pub/dmg/pubs/sr/sr_231/.

MITIGATION MEASURES

None required.

13. NOISE. Would the proposed project result in:					
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?		X		
b)	Generation of excessive groundborne vibration or groundborne noise levels?		X		
c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X	

The analysis and findings throughout this section are based on the *Archibald at Chandler Commercial Project Noise Impact Analysis* (Noise Impact Analysis) prepared by Ganddini Group, Inc. and dated November 17, 2020, provided as **Appendix 13** of this IS/MND. Refer to the Noise Impact Analysis for a complete discussion regarding noise metrics and vibration fundamentals.

Multiple regulations pertaining to noise apply to the project including the following, which are described in detail in the Noise Impact Analysis:

- Federal Noise Control Act of 1972: Issued by the US Environmental Protection Agency (EPA) Office of Noise Abatement and Control and establishes programs and guidelines to identify and address the effects of noise on public health, welfare, and the environment.
- Governor's Office of Planning and Research Noise Element Guidelines: Includes recommended exterior and interior noise level standards for local jurisdictions to identify and prevent the creation of incompatible land uses due to noise.
- City of Eastvale General Plan Noise Element contains multiple policies relative to noise impacts that are applicable to the project.
- The City of Eastvale Municipal Code Section 8.52.020, *Exemptions,* and Section 8.52.040, *General sound level standards,* are applicable to the project.

EXISTING CONDITIONS

Existing Ambient Noise Measurements

Existing ambient noise levels in the project area are dominated by the transportation-related noise associated with Archibald Avenue, Chandler Street, and other surrounding roadways. Based on short- and long-term noise measurements that were taken in the project area as part of the Noise Impact Analysis, the existing ambient noise levels are as follows:

- Long-term Noise Measurement 1 (LT1) was taken toward the southern end of the project site near the western property boundary and represents noise levels at the single-family detached dwelling unit immediately west of the project site. Hourly noise levels at location LT1 ranged from 53.9 to 61.6 dBA Leq during the daytime hours and between 47.4 to 56.6 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 57 dBA Leq with an average nighttime noise level of 51.7 dBA Leq. The calculated CNEL is 56.4 dBA.

- Short-term Noise Measurement 1 (STNM1) was taken to the west of the project site and is representative of the single-family detached residential dwelling unit adjacent to the west of the project site. The short-term ambient noise level at this location was measured at 52.5 dBA Leq.

- Short-term Noise Measurement 2 (STNM2) was taken in the single-family residential neighborhood to the south of the project site and is representative of the single-family detached residential dwelling units located south of the project site across Chandler Street. The short-term ambient noise level at this location was measured at 47.3 dBA Leq.

- Short-term Noise Measurement 3 (STNM3) was taken in the single-family residential neighborhood to the east of the project site and is representative of the single-family detached residential dwelling units located east of the project site across Archibald Avenue. The short-term ambient noise level at this location was measured at 65.7 dBA Leq.

- Short-term Noise Measurement 4 (STNM4) was taken in the single-family residential neighborhood to the north of the project site and is representative of the single-family detached residential dwelling units located north of the project site. The short-term ambient noise level at this location was measured at 44.9 dBA Leq.

Noise Sensitive Receptors

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as parks, historical sites, cemeteries, and recreation areas are

considered sensitive to increases in exterior noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also considered noise-sensitive land uses.

There are five sensitive receivers located near the project site including existing residential homes, described in the Noise Impact Analysis as receptor numbers R1, R2, R3, R4, and R5. The closest sensitive receiver location is represented by R4, which is located on a residential property adjacent to the project site. Other sensitive land uses in the project study area that are located at greater distances than those identified in this noise study would experience lower noise levels due to the additional attenuation from distance and the shielding of intervening structures. Refer to the Noise Impact Analysis for the specific locations of the sensitive receptors.

13(a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Determination: Less Than Significant Impact with Mitigation Incorporated.

Table 13.1, City of Eastvale Noise Compatibility and Land Use Designation*,** shows the City's noise compatibility associated with each specific land use designation, as presented in the General Plan. ***Table 13.2, City of Eastvale Exterior Noise Level Standards for Non-Transportation Noise, shows the City's exterior noise level standards for non-transportation noise, measured as dBA Leq (30 minutes), as presented in the General Plan. ***Table 13.3, City of Eastvale Maximum Acceptable Noise Levels Created by Exterior Noise Sources*,** shows the City's maximum acceptable noise levels created by exterior noise sources, as presented in the General Plan. ***Table 13.4, City of Eastvale Sound Level Standards (dB Lmax)*,** shows the City's sound level standards (dB Lmax), as presented in the City's Municipal Code.

Table 13.1: City of Eastvale Noise Compatibility and Land Use Designation

Land Use Designations	Completely Compatible	Tentatively Compatible	Normally Incompatible	Completely Incompatible
All Residential (Single- and Multi-Family)	Less than 60 dBA	60-70 dBA	70-75 dBA	Greater than 75 dBA
All Non-Residential (Commercial, Industrial, & Institutional)	Less than 70 dBA	70-75 dBA	Greater than 75 dBA	To be determined as part of the project review process
Public Parks (Lands on which public parks are located or planned)	Less than 65 dBA	65-70 dBA	70-75 dBA	Greater than 75 dBA

Source: City of Eastvale General Plan, Table N-3.

Notes: All noise levels shown in this table are designated CNEL.

Table 13.2: City of Eastvale Exterior Noise Level Standards for Non-Transportation Noise, Measured as dBA Leq (30 Minutes)

Land Use Type	Time Period	Maximum Noise Level (dBA)
Single-Family Homes and Duplexes	10 PM to 7 AM	50
	7 AM to 10 PM	60
Multiple Residential 3 or More Units Per Building (Triplex +)	10 PM to 7 AM	55
	7 AM to 10 PM	60

SHORT-TERM CONSTRUCTION IMPACTS

Project-generated construction noise would vary depending on the construction process, type of equipment involved, location of the construction site with respect to sensitive receptors, the schedule proposed to carry out each task (e.g., hours and days of the week) and the duration of the construction work.

Construction activities for the proposed project are anticipated to occur in the following stages:

- Grading

- Building Construction
- Paving
- Architectural Coating

Roadway construction noise model noise reference levels and usage factors are shown in ***Table 13.5: Maximum Noise Levels Generated by Typical Construction Equipment***. The list shown in ***Table 13.5*** is extensive, and not all equipment listed is expected to be used on the project site.

Notes:

Lmax = maximum noise levels; dBA = A-weighted decibel

(1) Acoustical Use Factor (percent): Estimates the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation.

(2) Warehouse & Forklift Noise Exposure - NoiseTesting.info. Carl Stautins, November 4, 2014 http://www.noisetesting.info/blog/carlstrautins/ page-3/

(3) Data provided Leq as measured at the operator. Sound level at 50 feet is calculated using inverse square law.

Construction noise sources are regulated in the City of Eastvale Municipal Code Section 8.52.020 which prohibits construction activities within one-quarter of a mile from an inhabited dwelling between the hours of 6:00 PM and 6:00 AM during the months of June through September and 6:00 PM and 7:00 AM during the months of October through May. Further, Policy N-24 of the City of Eastvale General Plan requires construction equipment to be kept properly tuned and use

noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer.

In compliance with the City's Municipal Code, it is assumed that construction would not occur during the noise-sensitive nighttime hours, and noise impacts shall be considered significant if project-related construction activities:

- Occur at any time other than the permitted hours of 6:00 PM and 6:00 AM during the months of June through September and 6:00 PM and 7:00 AM during the months of October through May pursuant to Section 8.52.040 of the City of Eastvale Municipal Code; or

- Generate noise levels which exceed the 85 dBA Leq acceptable noise level threshold at the nearby sensitive receiver locations (NIOSH, Criteria for Recommended Standard: Occupational Noise Exposure); or

- Generate temporary project construction-related noise level increases which exceed the 12 dBA Leq substantial noise level increase threshold at noise-sensitive receiver locations (California Department of Transportation, Traffic Noise Analysis Protocol).

Table 13.6: Unmitigated Construction Equipment Noise Level Summary provides a summary of unmitigated noise levels from each stage of construction at each of the sensitive receiver locations. ***Table 13.6*** shows that unmitigated project construction noise levels are not anticipated to exceed the 85 dBA Leq noise criteria. Unmitigated temporary noise level increases that would be experienced at sensitive receiver locations when project construction noise is added to the ambient daytime conditions are presented in ***Table 13.7: Unmitigated Construction Noise Level Compliance***. As shown in ***Table 13.7***, the project would contribute unmitigated, worst-case construction noise level increases between 6.1 to 24.8 dBA Leq at the adjacent sensitive receiver locations during the daytime hours. Therefore, mitigation is required.

Table 13.6: Unmitigated Construction Equipment Noise Level Summary

Receiver Location	Unmitigated Construction Noise Levels (dBa Leq)				
	Grading	Building Construction	Paving	Architectural Coating	Highest Construction Noise Level[1]
R1	68.4	67.0	64.8	57.9	68.4
R2	70.6	69.1	67.0	60.0	70.6
R3	70.4	68.9	66.7	59.8	70.4
R4	77.3	75.9	73.7	66.8	77.3
R5	68.1	66.6	64.5	57.5	68.1

Notes:

(1) Estimated construction noise levels during peak operating conditions.

Table 13.7: Unmitigated Construction Noise Level Compliance

Receiver Location	Highest Construction Noise Level[1]	Measurement Location	Threshold[2]	Threshold Exceeded?	Reference Ambient Noise Level[3]	Combined Project and Ambient[4]	Temporary Worst-Case Project Contribution[5]	Threshold Exceeded[6]
R1	68.4	STNM4	85.0	No	44.9	68.4	23.5	Yes
R2	70.6	STNM3	85.0	No	65.7	71.8	6.1	No
R3	70.4	STNM3	85.0	No	65.7	71.7	6.0	No
R4	77.3	STNM1	85.0	No	52.5	77.3	24.8	Yes
R5	68.1	STNM2	85.0	No	47.3	68.1	20.8	Yes

Source: Ganddini Group, Inc. Noise Impact Analysis, November 17, 2020, Table 31.

Notes:

(1) Highest modeled construction noise level from all construction phases as shown in Table 13.6.

(2) Construction noise threshold per the Criteria for Recommended Standard: Occupational Noise Exposure prepared by the National Institute for Occupational Safety and Health (NIOSH).

(3)Measured average daytime ambient noise level (Leq) from Table 8 of the Noise Impact Analysis.

(4)Represents the combined ambient conditions plus the project construction activities.

(5)The temporary noise level increase expected with addition of the unmitigated proposed project construction activities.

(6)Based on the 12 dBA temporary increase significance criteria identified above.

Mitigation Measures NOI-1 through **NOI-4**, below, would reduce potentially significant impacts to a less than significant level.

Mitigated construction noise levels are shown in ***Table 13.8: Mitigated Construction Equipment Noise Level Summary*** and mitigated construction noise level compliance is shown in ***Table 13.9: Mitigated Construction Noise Level Compliance***. As shown, the project would contribute mitigated, worst-case construction noise level increases between 0.7 and 11.8 dBA Leq. Therefore, project construction source noise level increases would not exceed 12 dBA Leq with incorporation of **Mitigation Measures NOI-1** through **NOI-4**. All construction would be conducted during the hours allowed in the Municipal Code and therefore would be consistent with the applicable plans and policies. Further, Policy N-24 of the City of Eastvale General Plan requires construction equipment to be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer.

Table 13.8: Mitigated Construction Equipment Noise Level Summary

Receiver Location[1]	Mitigated Construction Noise Levels (dBa Leq)				
	Grading	Building Construction	Paving	Architectural Coating	Highest Construction Noise Level[2]
R1	56.4	55.0	52.8	45.9	56.4
R2	58.6	57.1	55.0	48.0	58.6
R3	58.4	56.9	54.7	47.8	58.4
R4[3]	57.3	55.9	53.7	46.8	57.3
R5	56.1	54.6	52.5	45.5	56.1

Source: Ganddini Group, Inc. Noise Impact Analysis, November 17, 2020, Table 32.

Notes:

(1) Mitigation requiring that all construction equipment include mufflers and/or enclosures or acoustical tents (as appropriate) that provide at least 12 dB of noise reduction.

(2) Estimated construction noise levels during peak operating conditions.

(3) Mitigation requiring a 10-foot wall to be constructed along the western property line adjacent to R4 before beginning all other construction activities (the 10-foot wall in this location is required for operation of the project). The wall will reduce noise levels by approximately 20 dB.

Table 13.9: Mitigated Construction Noise Level Compliance

Receiver Location	Highest Construction Noise Level[1]	Measurement Location	Threshold[2]	Threshold Exceeded?	Reference Ambient Noise Level[3]	Combined Project and Ambient[4]	Temporary Worst-Case Project Contribution[5]	Threshold Exceeded[6]
R1	56.4	STNM4	85.0	No	44.9	56.7	11.8	No
R2	58.6	STNM3	85.0	No	65.7	66.5	0.8	No
R3	58.4	STNM3	85.0	No	65.7	66.4	0.7	No
R4	57.3	STNM1	85.0	No	52.5	58.5	6.0	No
R5	56.1	STNM2	85.0	No	47.3	56.6	9.3	No

Source: Ganddini Group, Inc. Noise Impact Analysis, November 17, 2020, Table 33.

Notes:

(1) Highest modeled construction noise level from all construction phases as shown in Table 13.8 with mitigation measures implemented.

(2) Construction noise threshold per the Criteria for Recommended Standard: Occupational Noise Exposure prepared by the National Institute for Occupational Safety and Health (NIOSH).

(3) Measured average daytime ambient noise level (Leq) from Table 8 of the Noise Impact Analysis.

(4) Represents the combined ambient conditions plus the project construction activities.

(5) The temporary noise level increase expected with addition of the mitigated proposed project construction activities.

(6) Based on the 12 dBA temporary increase significance criteria identified above.

Implementation of **Mitigation Measures NOI-1** through **NOI-4**, General Plan Policy N-24, and compliance with the City's restrictions on the hours allowed for construction activities would reduce construction noise levels to a less than significant level.

LONG-TERM OPERATIONAL IMPACTS

Off-Site Transportation Noise Impacts

Increases in ambient noise along affected roadways due to project-generated vehicle traffic is considered substantial if the noise levels at existing and future noise-sensitive land uses (e.g., residential, etc.):

- are less than 60 dBA CNEL and the project creates a readily perceptible 5 dBA CNEL or greater project-related noise level increase; or
- range from 60 to 65 dBA CNEL and the project creates a barely perceptible 3 dBA CNEL or greater project-related noise level increase; or
- already exceed 65 dBA CNEL, and the project creates a community noise level impact of greater than 1.5 dBA CNEL.

As shown in ***Table 13.10: Change in Existing Noise Levels Along Roadways as a Result of the Project (dBA CNEL)***, project-generated vehicle trips are projected to result in increases in the existing ambient noise level of less than 1.5 dB for all modeled roadway segments other than the roadway segment of Grapewin Street east of Archibald Avenue. Grapewin Street east of Archibald Avenue has a projected increase of 3.0 dB; however, the modeled Existing with Project noise level is 52.3 dBA CNEL for this roadway segment, which is substantially lower than the lowest significance criteria of 60 dBA.

Table 13.10: Change in Existing Noise Levels Along Roadways as a Result of Project (dBA CNEL)

Roadway	Segment	Distance from Roadway Centerline to Nearest Receptor	Modeled Noise Levels (dBA CNEL)				
			Existing Without Project	Existing With Project	Change in Noise Level	Exceeds Standards	Increase of 3 dB or more
Archibald Avenue	North of Smith River Road/ Eastvale Parkway	65	75.6	75.8	0.2	Yes	No
	South of Smith River Road/ Eastvale Parkway	65	75.3	75.6	0.3	Yes	No
	North of Chandler Street	65	75.3	75.6	0.3	Yes	No
	Chandler Street to Wind River Road/Grapewin Street	65	76.1	76.3	0.3	Yes	No
	South of Wind River Road/ Grapewin Street	45	77.1	77.3	0.2	Yes	No
Smith River Road	West of Archibald Avenue	42	56.0	56.7	0.7	No	No
Eastvale Parkway	East of Archibald Avenue	50	59.4	59.7	0.3	No	No
Chandler Street	West of Archibald Avenue	52	71.1	72.4	1.3	Yes	No
	East of Archibald Avenue	42	69.7	70.2	0.5	Yes	No
Wind River Road	West of Archibald Avenue	40	56.8	57.5	0.6	No	No
Grapewin Street	East of Archibald Avenue	15	49.3	52.3	3.0	No	Yes

Source: Ganddini Group, Inc. Noise Impact Analysis, November 17, 2020, Table 14.

Notes:

(1) Distance calculated from the centerline of the roadway segment to the property line of the nearest adjacent land use. Distances estimated through the use of Google Earth.

Based on the significance criteria described above, the project-related noise level increases are considered less than significant.

Noise Impacts to Off-Site Receptors Due to On-Site Operational Noise

Compliance with General Plan Stationary Noise Standards

Significant impacts related to project operations would occur if project-related operational (stationary-source) noise levels:

- exceed the exterior 60 dBA Leq daytime or 50 dBA Leq nighttime noise level standards at nearby sensitive receiver locations (City of Eastvale General Plan Noise Element, Table N-4, described above and shown as Table 13.2).

Unmitigated noise levels associated with project operational noise sources are expected to range from 43.0 to 50.0 dBA Leq at sensitive off-site receiver locations R1 to R5, including backyard, first floor, and second floor building façades. Project operational noise is not expected to exceed daytime or nighttime noise standards. This impact is less than significant.

CEQA - Increase in Ambient Noise Levels

Significant impacts related to project operations would occur if the existing ambient noise levels at the noise-sensitive receivers near the project site:

- are less than 60 dBA Leq and the project creates a readily perceptible 5 dBA Leq or greater project-related noise level increase; or
- range from 60 to 65 dBA Leq and the project creates a barely perceptible 3 dBA Leq or greater project-related noise level increase; or
- already exceed 65 dBA Leq, and the project creates a community noise level impact of greater than 1.5 dBA Leq.

As shown in ***Table 13.11: Project Operational Noise Levels***, operation of the project would result in increases in ambient noise levels of up to 3.3 dB but would not result in violation of any of the above thresholds due to relatively quiet ambient noise levels.

Table 13.11: Project Operational Noise Levels

Receiver Location			Highest Operational Noise Levels (dBA Leq)	Noise Level Standard (dBA Leq)[1]		Threshold Exceeded?[2]	
ID	Modeled	Location		Daytime	Nighttime	Daytime	Nighttime
R1	1	Backyard	48.0	60.0	50.0	No	No

Receiver Location			Highest Operational Noise Levels (dBA Leq)	Noise Level Standard (dBA Leq)[1]		Threshold Exceeded?[2]	
ID	Modeled	Location		Daytime	Nighttime	Daytime	Nighttime
R5	7-2		46.0	60.0	50.0	No	No

Source: Ganddini Group, Inc. Noise Impact Analysis, November 17, 2020, Table 18.

Notes:

(1) Exterior noise level standards from the City of Eastvale General Plan Noise Element, Table N-4

(2) Do the estimated project operational noise source activities exceed the noise level threshold?

(3) R4 represents a single-story single-family detached residential dwelling unit.

Based on the significance criteria described above, impacts relative to project operational noise would be less than significant.

13(b) Generation of excessive groundborne vibration or groundborne noise levels?

Determination: Less Than Significant Impact with Mitigation Incorporated.

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from project construction activities would cause only intermittent, localized intrusion. The proposed project's construction activities most likely to cause vibration impacts are:

- Heavy Construction Equipment: Although all heavy mobile construction equipment has the potential of causing at least some perceptible vibration while operating close to buildings, the vibration is usually short term and is not of sufficient magnitude to cause building damage.
- Trucks: Trucks hauling building materials to construction sites can be sources of vibration intrusion if the haul routes pass through residential neighborhoods on streets with bumps or potholes. Repairing the bumps and potholes generally eliminates the problem.

Ground-borne vibration levels resulting from construction activities occurring within the project site were estimated by data published by the FTA. Construction activities that would have the potential to generate low levels of ground-borne vibration within the project site include grading. Project vibration impacts were estimated based on the methodology described in the Noise Impact Analysis. ***Table 13.12: Unmitigated Construction Equipment Vibration Levels*** presents the unmitigated project construction-related vibration levels at each of the sensitive receiver locations.

Based on the reference vibration levels provided by the FTA, a large bulldozer represents the peak source of vibration with a reference velocity of 0.089 in/sec PPV at 25 feet. At distances ranging from 10 to 150 feet from the project construction activities, construction vibration velocity levels are expected to range from 0.000 to 0.352 in/sec PPV. Based on the City of Eastvale vibration standard of 0.0787 in/sec PPV, the proposed project construction activities would generate unmitigated vibration levels which remain below the 0.0787 in/sec PPV threshold at R1, R2, R3, and R5; however, due to the proximity to the western property line, R4 could have potentially significant impacts. Therefore, to satisfy the City of Eastvale vibration standard of 0.0787 in/sec PPV, **Mitigation Measure NOI-5** restricts the use of jackhammers within 15 feet,

loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary (R4).

Table 13.12: Unmitigated Construction Equipment Vibration Levels

Receiver Location	Distance to Construction Activity (feet)	Receiver PPV Levels (in/sec)[1]					Threshold Exceeded?[2]
		Small Dozer	Jackhammer	Loaded Trucks	Large Bulldozer	Highest Levels (PPV)	
R1	125	0.000	0.003	0.007	0.008	0.008	No
R2	135	0.000	0.003	0.006	0.007	0.007	No
R3	150	0.000	0.002	0.005	0.006	0.006	No
R4	10	0.012	0.138	0.300	0.352	0.352	Yes
R5	140	0.000	0.003	0.003	0.007	0.007	No

Source: Ganddini Group, Inc. Noise Impact Analysis, November 17, 2020, Table 34.

Notes:

(1) Based on the vibration source levels of construction equipment included in Table 13.5.

(2) Does the peak vibration exceed the maximum acceptable vibration threshold of 0.0787 PPV in/sec per the City of Eastvale General Plan Noise Element, Policy N-3?

Implementation of **Mitigation Measure NOI-5** would reduce groundborne vibration levels to a less than significant level.

Table 13.13: Mitigated Construction Equipment Vibration Levels, presents the mitigated project construction-related vibration levels at each of the sensitive receiver locations.

Table 13.13: Mitigation Construction Equipment Vibration Levels

Receiver Location[1]	Distance to Construction Activity (feet)	Receiver PPV Levels (in/sec)					Threshold Exceeded?[2]
		Small Dozer	Jackhammer	Loaded Trucks	Large Bulldozer	Highest Levels (PPV)	
R1	125	0.000	0.003	0.007	0.008	0.008	No
R2	135	0.000	0.003	0.006	0.007	0.007	No
R3	150	0.000	0.002	0.005	0.006	0.006	No
R4	10[3]	0.012	0.075	0.076	0.075	0.076	No
R5	140	0.000	0.003	0.006	0.007	0.007	No

Notes:

Source: Ganddini Group, Inc. Noise Impact Analysis, November 17, 2020, Table 35.

(1) Based on the vibration source levels of construction equipment included in Table 13.5.

(2) Does the peak vibration exceed the maximum acceptable vibration threshold of 0.0787 PPV in/sec per the City of Eastvale General Plan Noise Element, Policy N-3?

(3) With incorporation of mitigation requiring jackhammers to be restricted within 15 feet, loaded trucks to be restricted within 25 feet and large bulldozers to be restricted within 28 feet of R4.

As shown in ***Table 13.13***, with implementation of **Mitigation Measure NOI-5**, impacts at location R4 would be reduced to a less than significant level.

13(c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Determination: Less Than Significant Impact.

The closest airport to the project site is Chino Airport, which is approximately 2.15 miles northwest of the project site boundaries. The project site is not located within 2 miles of a public airport or within an airport land use plan, nor is the project within the vicinity of a private airstrip. As such, the project site would not be exposed to excessive noise levels from airport operations, and impacts would be less than significant.

STANDARD CONDITIONS & REQUIREMENTS

1. The project will be subject to the general sound level standards of Eastvale Municipal Code Section 8.52.040, *General Sound Level Standards*.

MITIGATION MEASURES

NOI-1 The construction contractor(s) shall place all stationary construction equipment so that emitted noise is directed away from the noise-sensitive receptors nearest the project site.

NOI-2 The construction contractor(s) shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May).

NOI-3 The contractor shall install temporary construction noise barriers/blankets along the western boundary. The barrier/blankets shall be solid with no cracks or holes and shall also reach to the ground.

NOI-4 During all project construction phases on-site, construction contractors shall equip all construction equipment, fixed or mobile, with either properly operating and maintained mufflers or enclosures/acoustical tents (as appropriate) that achieve at least 12 dB reduction from applicable noise level specifications.

NOI-5 The contractor shall restrict the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary.

SIGNIFICANCE OF IMPACT AFTER MITIGATION

With implementation of **Mitigation Measures NOI-1** through **NOI-5**, impacts relative to noise would be reduced to a less than significant level.

14. POPULATION AND HOUSING. Would the proposed project:						
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			✓	
b)	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?			✓	

DISCUSSION

14(a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Determination: Less Than Significant Impact.

A project could induce population growth in an area either directly, through the development of new residences or businesses, or indirectly, through the extension of roads or other infrastructure. The project involves the development of a commercial/retail center on approximately 2.71 acres located on the northwest corner of Chandler Street and Archibald Avenue; the project does not include the construction of new homes.

The project would generate temporary construction and long-term operational employment. The Southern California Association of Governments (SCAG) estimates that employment in the City of Eastvale will increase from 7,400 jobs in 2016 to 21,600 jobs in 2045.[11] Thus, it is expected that the project would absorb workers from the regional labor force and would not attract new workers into the region. Therefore, the project would not directly induce population growth in the area through the introduction of new residents. Impacts would be less than significant.

14(b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Determination: Less Than Significant Impact.

There are currently no existing houses on the project site. Therefore, the displacement of existing housing would not occur, and no replacement of housing would be needed. Impacts would be less than significant.

[11] Southern California Association of Governments. 2020. Connect SoCal, RTP/SCS 2020-2045, Demographics and Growth Forecast. Accessed July 8, 2020. https://www.connectsocal.org/Documents/Draft/dConnectSoCal_Demographics-And-Growth-Forecast.pdf.

STANDARD CONDITIONS & REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

15. PUBLIC SERVICES. Would the proposed project:					
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public series:				
	i) Fire protection?			✓	
	ii) Police protection?			✓	
	iii) Schools?			✓	
	iv) Parks?			✓	
	v) Other public facilities?			✓	

DISCUSSION

15(a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public series:

i) Fire protection?

Determination: Less Than Significant Impact.

The Riverside County Fire Department provides fire protection and safety services to the City of Eastvale. The nearest fire station is the Chandler Fire Station #31 located at 14491 Chandler Street in Eastvale, approximately 0.35 miles west of the project site.

The proposed project would create an increased demand for fire protection services. However, as a commercial/retail development, the project would not induce significant or unplanned population growth through employment generation and would not result in the need for new or physically altered fire protection facilities; refer to Section IV.14, *Population and Housing*. Further, the proposed project would be conditioned to comply with the requirements of the Riverside County Fire

Department for emergency access, fire flow, fire protection standards, fire lanes, and other site design/building standards. The project would also be subject to the project design requirements set forth in the 2019 California Fire Code and the 2019 California Building Standards Code. The City would collect a one-time development impact fees pursuant to Municipal Code Chapter 110.28, *Development Impact Fee Program,* which is imposed on all new development to help pay fair share of costs in upgrading the Riverside County Fire Department's fire facilities, as needed. Payment of these fees would offset the project's impacts to the acquisition, design, and construction of new fire facilities. Following collection of development impact fees and compliance with Riverside County Fire Department, California Fire Code, and California Building Code requirements, impacts to fire protection facilities would be less than significant.

ii) *Police protection?*

Determination: Less Than Significant Impact.

Police protection services are provided to the City under contract from the Riverside County Sheriff's Department. Specifically, police protection services for the project area are provided by the Jurupa Valley Sheriff's Station located at 7477 Mission Boulevard in Jurupa Valley, approximately 9.5 miles northeast of the project site.

The proposed project would create an increased demand for police protection services. However, as a commercial/retail land use, the project would not induce significant or unplanned population growth through employment generation and would not result in the need for new or physically altered police protection facilities; refer to Section IV.14, *Population and Housing*. The proposed development would be conditioned for the payment of the City's development impact fees pursuant to Municipal Code Chapter 110.28. The Riverside County Sheriff's Department would have the opportunity to review the project design plans and include conditions that would be required in order for the applicant to be issued development permits. As a neighborhood-servicing commercial/retail land use, the proposed project is not expected to result in any unusual circumstances that may generate high demand for police protection services. Therefore, payment of the City's development impact fees would fully mitigate any potential impact on Sheriff's Department facilities.

iii) *Schools?*

Determination: Less Than Significant Impact.

The proposed project site is located in the Corona-Norco Unified School District. However, the proposed project would not significantly increase the need for new school facilities, as the project would not result in substantial unplanned population growth; refer to Section IV.14, *Population and Housing*. Additionally, because no new housing is proposed with the project, no additional student generation would occur.

Furthermore, the project would be required to comply with Senate Bill (SB) 50 requirements, which allow school districts to collect impact fees from developers of new projects, including commercial construction. According to Section 65997 of the California Government Code, payment of statutory fees is the exclusive method of mitigating environmental effects related to the adequacy of school facilities when considering the approval or the establishment of conditions for the approval of a development project. Thus, upon payment of required fees by the project applicant consistent with existing state requirements, impacts would be less than significant.

iv) *Parks?*

Determination: Less Than Significant Impact.

The project involves the development of commercial/retail land uses and does not propose new or physically altered parks or recreational facilities. Thus, the project would not result in substantial adverse physical impacts to any parks or recreational facilities in the Jurupa Community Services District (JCSD) or the Jurupa Area Recreation and Park District (JARPD). Upon payment of required fees to JCSD and JARPD, consistent with existing regulations, this impact would be less than significant.

v) *Other public facilities?*

Determination: Less Than Significant Impact.

The project involves the development of commercial/retail land uses and does not propose new or physically altered public facilities. Thus, the proposed project would not result in an increase in the demand for other governmental services such as the economic development and other community support services commonly provided by the City. This impact would be less than significant.

STANDARD CONDITIONS & REQUIREMENTS

1. The project applicant is required to pay the established development impact fees in compliance with the Development Impact Fee Program in Chapter 110.28 of the Eastvale Municipal Code.

2. California Government Code Section 65996 indicates that payment of school impact fees is considered full mitigation for project impacts to a school district.

MITIGATION MEASURES

None required.

16. RECREATION. Would the proposed project:					
	Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a)	Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			✓	
b)	Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			✓	

DISCUSSION

16(a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Determination: Less Than Significant Impact.

Refer to Response IV.15(a)(iv). It is not anticipated that the proposed project would generate a substantial number of new jobs or induce substantial population growth in the city. Thus, the project would not increase the use of existing neighborhood or regional parks or other recreational facilities. This impact would be less than significant.

16(b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Determination: Less Than Significant Impact.

Refer to Response IV.15(a)(iv). The proposed General Plan Amendment and Change of Zone would not include the construction or expansion of any parks or recreational facilities. As described previously, the proposed project would not increase the demand for parks or other recreational facilities and would not require the construction or expansion of any such facilities. This impact would be less than significant.

STANDARD CONDITIONS & REQUIREMENTS

1. City of Eastvale Municipal Code Chapter 110.28, *Development Impact Fee Program,* indicates that a project applicant is required to pay the established development impact fees once a development application is submitted to mitigate potential impacts on the Jurupa Community Services District, and in compliance with the Development Impact Fee Program.

MITIGATION MEASURES

None required.

17. TRANSPORTATION. Would the proposed project:					
Issues		Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			X	
b)	Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?			X	
c)	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			X	
d)	Result in inadequate emergency access?		X		

The analysis and findings throughout this section are based on the *Archibald at Chandler Commercial Project Traffic Impact Analysis* (TIA), prepared by Ganddini Group, Inc., dated October 28, 2020, and provided as **Appendix 14** of this IS/MND.

DISCUSSION

17(a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Determination: Less Than Significant Impact.

State CEQA Guidelines Section 15064.3 was released on December 28, 2018, to address the determination of significance for transportation impacts. The new guideline requires that the analysis is based on vehicle miles traveled (VMT) instead of congestion (such as level of service, or LOS). Pursuant to CEQA Guidelines Section 15064.3(c), this change in analysis is mandated to be used beginning July 1, 2020. Refer to Response IV.17(b) below for the project impacts relative to VMT. However, General Plan Policy C-10 of the Eastvale General Plan requires that the City maintain a LOS C on all City maintained roadways, and a LOS D in employment and commercial areas. Thus, a discussion relative to the project consistency with Policy C-10 has been included.

Study Area

Based on the City-approved scoping agreement for the project, ***Table 17.1, Study Area Intersections and Roadway Segments***, shows the intersections and roadway segments within the City of Eastvale jurisdiction that are included in the traffic impact study area.

Table 17.1: Study Area Intersections and Roadway Segments

		Jurisdiction
Intersections		
1. Project West Access at Chandler Street		City of Eastvale
2. Archibald Avenue at Eastvale Parkway		City of Eastvale
3. Archibald Avenue at Project North Access		City of Eastvale
4. Archibald Avenue at Project South Access		City of Eastvale
5. Archibald Avenue at Chandler Street		City of Eastvale
6. Archibald Avenue at Wind River Road		City of Eastvale
Roadway Segments		
1. Archibald Avenue	Eastvale Parkway to Chandler Street	City of Eastvale
2. Archibald Avenue	Chandler Street to Wind River Road	City of Eastvale

4. Chandler Street	East of Archibald Avenue	City of Eastvale
Source: Archibald at Chandler Commercial Project Traffic Impact Analysis. 2020. P. 1-2.		

Methodology

LOS is used to qualitatively describe the performance of a roadway facility, ranging from LOS A (free-flow conditions) to LOS F (extreme congestion and system failure). Study area intersections within the City are analyzed using the methodology in accordance with the City's *Traffic Impact Analysis Preparation Guidelines* (May 2020) (City of Eastvale TIA Guidelines). The technique used to assess the performance of an intersection is known as the intersection delay method, based on the procedures contained in the *Highway Capacity Manual* (Transportation Research Board, 6th Edition). The methodology considers the traffic volume and distribution of movements, traffic composition, geometric characteristics, and signalization details to calculate the average control delay per vehicle and corresponding LOS. Control delay is defined as the portion of delay attributed to the intersection traffic control (such as a traffic signal or stop sign) and includes initial deceleration, queue move-up time, stopped delay, and final acceleration delay. The intersection control delay is then correlated to LOS based on the thresholds shown in ***Table 17.2, Intersection LOS Thresholds***, below.

Table 17.2: Intersection LOS Thresholds

Level of Service	Intersection Control Delay (Seconds / Vehicle)	
	Signalized	Unsignalized
A	≤ 10.0	≤ 10.0
B	≤ 10.0 to ≤ 20.0	≤ 10.0 to ≤ 15.0
C	≤ 20.0 to ≤ 35.0	≤ 15.0 to ≤ 25.0
D	≤ 35.0 to ≤ 55.0	≤ 25.0 to ≤ 35.0
E	≤ 55.0 to ≤ 80.0	≤ 35.0 to ≤ 50.0
F	> 80.0	> 50.0

Source: Archibald at Chandler Commercial Project Traffic Impact Analysis. 2020. P. 6.

The technique used to assess the performance of roadway segments is known as the volume-to-capacity (V/C) analysis, based on the procedures contained in the Highway Capacity Manual. The methodology compares the average daily traffic volume using the roadway segment to the capacity of the roadway segment to calculate the V/C ratio, which is then correlated to a LOS based on the thresholds shown in ***Table 17.3, Roadway Segment LOS Thresholds***, below.

Table 17.3: Roadway Segment LOS Thresholds

Level of Service	Volume/Capacity
A	0.000 - 0.600
B	0.601 - 0.700
C	0.701 - 0.800
D	0.801 - 0.900
E	0.901 - 1.000
F	> 1.0

Source: Archibald at Chandler Commercial Project Traffic Impact Analysis. 2020. P. 7.

The City's General Plan seeks to maintain LOS C along all City-maintained roads. A peak hour LOS D may be allowed in commercial and employment areas, and at intersections of any combination of major highways, urban arterials, secondary highways, or freeway ramp intersections. The City has established LOS D as the minimum acceptable LOS. Based on General Plan Policy C-10, a project traffic impact is considered significant if the addition of project-generated trips is forecast to cause an intersection to deteriorate from an acceptable LOS (D or better) to an unacceptable LOS (E or F).

Project Trip Generation

The proposed project is forecast to generate a total of approximately 4,871 net new daily trips, including 141 net new trips during the AM peak hour and 179 net new trips during the PM peak hour.

Analysis Scenarios and Results

The following scenarios are analyzed during typical weekday AM and PM peak hour conditions:

- Existing Conditions
- Existing Plus Project Conditions
- Opening Year (2022) Without and With Project Conditions[12]
- Horizon Year (2040) Without and With Project Conditions

Existing Conditions

Regional access to the project site is provided by Interstate 15 (I-15) approximately one-half mile to the east. Local north-south circulation is provided by Archibald Avenue, and east-west circulation is provided by Chandler Street. Archibald Avenue is a north-south five-lane divided to six-lane divided roadway, classified as an Urban Arterial (six-lane divided with 152 feet of right-of-way) in the General Plan Circulation Element. Chandler Street is an east-west four-lane divided roadway, classified as an Arterial (four-lane divided with 128 feet of right-of-way) from Archibald Avenue to Harrison Avenue and a Secondary Highway (four-lane undivided with 100 feet of right-of-way) from Archibald Avenue to Harrison Avenue in the General Plan Circulation Element.

Existing sidewalks are currently provided along the roadways adjacent to the project site, except at the location of the project site. There are no existing bike lanes in the project area; however, future bicycle lanes are proposed for both Archibald Avenue and Chandler Street. Existing transit facilities provided by the Riverside Transit Agency in the project vicinity include Transit Route 3 and Route 29, which operate in the City of Eastvale; however, the study area is currently not served.

The study intersection LOS for Existing (Year 2020) conditions are shown in ***Table 17.4, Existing Intersection LOS***. As shown in ***Table 17.4***, the study intersections currently operate within acceptable LOS (D or better) for City of Eastvale intersections.

The study roadway segment volume to capacity and LOS is shown in ***Table 17.5, Existing Roadway Segment Daily Capacity Analysis***. As shown in ***Table 17.5***, the study roadway segments currently operate at an acceptable LOS (D or better) for existing conditions.

Table 17.4: Existing Intersection LOS

Existing Plus Project Conditions

The study intersection LOS for Existing Plus Project conditions are shown in ***Table 17.6, Existing Plus Project Intersection LOS***. As shown in ***Table 17.6***, the study intersections are forecast to operate within acceptable LOS (D or better) during the peak hours for Existing Plus Project conditions. A less than significant impact would occur.

Table 17.6: Existing Plus Project Intersection LOS

1 = TS = Traffic Signal; CSS= Cross Street Stop

2 = Existing Delay is shown in seconds per vehicle. For intersections with traffic signal or all way stop control, overall average intersection delay and LOS are shown. For intersections with cross street stop control, LOS is based on average delay of the worst individual lane (or movements sharing a lane).

3 = LOS = Level of Service

Opening Year (2022) Without and With Project Conditions

The study intersection LOS for Opening Year (2022) Without and With Project conditions are shown in ***Table 17.7, Opening Year (2022) Intersection LOS***. As shown in ***Table 17.7***, the study intersections are forecast to operate within acceptable LOS (D or better) during the peak hours for Opening Year (2022) Without and With Project conditions. The proposed project does not exceed the City-established operating requirements for General Plan consistency at the study intersections for Opening Year (2022) With Project conditions. A less than significant impact would occur.

Table 17.7: Opening Year (2022) Intersection LOS

For intersections with cross street stop control, LOS is based on average delay of the worst individual lane (or movements sharing a lane).

3 = LOS = Level of Service

Horizon Year (2040) Without and With Project Conditions

The study intersection LOS for Year 2040 Without and With Project conditions are shown in ***Table 17.8, Horizon Year 2040 Intersection LOS***. As shown in ***Table 17.8***, the study intersections are forecast to operate within acceptable LOS (D or better) during the peak hours for Year 2040 Without Project conditions. The proposed project does not exceed the City-established operating requirements for General Plan consistency at the study intersections for Year 2040 With Project conditions with the recommended improvements. A less than significant impact would occur.

Source: Archibald at Chandler Commercial Project Traffic Impact Analysis. 2020. Table 7, P. 55.

1 = TS = Traffic Signal; CSS= Cross Street Stop

2 = Existing Delay is shown in seconds per vehicle. For intersections with traffic signal or all way stop control, overall average intersection delay and LOS are shown. For intersections with cross street stop control, LOS is based on average delay of the worst individual lane (or movements sharing a lane).

3 = LOS = Level of Service

17(b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Determination: Less Than Significant Impact.

Changes to the CEQA Guidelines Section 15064.3 became effective July 1, 2020, which require all lead agencies to adopt VMT as a replacement for automobile delay-based LOS as the new measure for identifying transportation impacts for land use projects. On June 24, 2020, the City of Eastvale adopted Resolution No. 20-44, which establishes VMT impact thresholds for assessing consistency with CEQA Guidelines Section 15064.3, subdivision (b).

Resolution No. 20-44 includes screening criteria for certain types of projects that are local-serving in nature or generate a low number of vehicle trips and may be presumed to have a less than significant impact. Such projects include local-serving retail projects, defined as retail developments with less than 50,000 square feet. Local-serving retail projects will generally redistribute shopping trips rather than creating new trips. By adding retail opportunities into the urban fabric and thereby improving proximity, local-serving retail projects tend to shorten trips and reduce VMT. This is especially true here given that this project is significantly less than 50,000 square feet, proposes uses that are duplicative of uses at the east end of the City limits, and adds neighborhood retail uses which are largely absent from the southwest quadrant of the City.

The proposed project meets the definition of local-serving retail since it consists of retail uses totaling less than 50,000 square feet. Therefore, the proposed project satisfies the project type screening criteria for local-serving retail and, as such, would result in a less than significant VMT impact in accordance with VMT guidelines established by the City of Eastvale.

17(c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Determination: Less Than Significant Impact.

The proposed project would construct the following improvements to provide project site access:

- Project West Driveway at Chandler Street - #1
    - Install southbound stop control.
    - Construct the southbound approach to consist of one right-turn-only lane.
- Archibald Avenue at Project North Driveway - #3
    - Install eastbound stop control.
    - Construct the eastbound approach to consist of one right-turn only lane.
- Archibald Avenue at Project South Driveway - #4
    - Install eastbound stop control.
    - Construct the eastbound approach to consist of one right-turn-only lane.

The project does not involve any unusual conditions, or hazardous design features, such as sharp curves or dangerous intersections, or incompatible uses. The TIA recommended improvements would be constructed to be consistent with the identified roadway classifications and respective cross-sections in the City of Eastvale General Plan Circulation and Infrastructure Element. The project driveways and project improvements (i.e., signage, buildings, and landscaping) would be designed in accordance with City standards so that adequate sight distance for drivers entering and exiting the site is maintained. On-site traffic signing and striping would be implemented in conjunction with detailed construction plans for the project site. With implementation of the TIA recommended configuration of the driveways and frontage improvements as part of the project design, a less than significant impact would occur.

17(d) Result in inadequate emergency access?

Determination: Less Than Significant Impact With Mitigation Incorporated.

The access and circulation features on the project site would accommodate emergency ingress and egress. As discussed above, the proposed project would provide three restricted access driveways: two right-turn in/out only driveways at Archibald Avenue and one right-turn in/out only driveway at Chandler Street. The proposed site access improvements would ensure that access is maintained for fire trucks, police units, and ambulance/paramedic vehicles.

The project is subject to the City's design review to ensure that the project as designed does not temporarily or permanently interfere with the provision of emergency access or with evacuation routes. All emergency access features are subject to and must satisfy the City of Eastvale design requirements and be approved by the Fire Department. During periods when partial road closures are required, the project applicant would be required to implement a temporary Traffic Management Plan (TMP) to minimize temporary impacts to emergency access and evacuation routes during the construction process; refer to **Mitigation Measure TRA-1**. With implementation of **Mitigation Measure TRA-1**, the project would not result in inadequate emergency access and impacts would be less than significant.

STANDARD CONDITIONS & REQUIREMENTS

None required.

MITIGATION MEASURES

TRA-1 Traffic Management Plan. Prior to the initiation of construction, the project applicant shall prepare a Traffic Management Plan (TMP) for approval by the City of Eastvale Traffic Engineer. The TMP shall comply with state standards set forth in the California Manual of Uniform Traffic Control Devices and include measures such as construction signage, limitations on timing for lane closures to avoid peak hours, temporary striping plans, and the need for a construction flag-person to direct traffic during heavy equipment use. The TMP shall specify that one direction of travel in each direction must always be maintained for Chandler Street throughout project construction. The TMP shall be incorporated into project specifications for verification prior to final plan approval.

SIGNIFICANCE OF IMPACT AFTER MITIGATION

With implementation of **Mitigation Measure TRA-1**, impacts relative to traffic and transportation would be reduced to a less than significant level.

18. TRIBAL CULTURAL RESOURCES. Would the proposed project:				
Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?		X		
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.		X		

DISCUSSION

18(a)(i) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)? A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?

18(a)(ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Determination: Less Than Significant Impact With Mitigation Incorporated.

Pursuant to AB 52 requirements, the City of Eastvale commenced consultation with the appropriate and potentially affected Tribal Historic Preservation Officers (THPO). City staff consulted with representatives from the Soboba Band of Luiseño Indians and have met to discuss the project, including mitigation for potential tribal cultural resources. City Staff has closed consultation with Soboba, and incorporated the requested mitigation measures. As noted in Section 5, Cultural Resources, the project site contains limited known cultural resources. To mitigate potential impacts to resources that could be discovered during project construction, **Mitigation Measures TCR-1** through **TCR-4** have been developed in coordination with the tribes, City, and applicant. **Mitigation Measures TCR-1** through **TCR-4** would be implemented to reduce potential impacts to tribal cultural resources to less than significant levels.

STANDARD CONDITIONS & REQUIREMENTS

None required.

MITIGATION MEASURES

TCR-1 **Tribal Monitoring.** Prior to the issuance of a grading permit, the project applicant shall contact the consulting tribe(s) with notification of the proposed grading and shall make a good-faith effort, as determined by the City's Development Director, to enter into a Tribal Cultural Resources Monitoring Agreement with each tribe that determines its tribal cultural resources may be present on the site. The agreements shall include, but not be limited to, outlining provisions and requirements for addressing the handling of tribal cultural resources; Project grading and development scheduling; terms of compensation for the tribal monitors;; and establishing on-site monitoring provisions and/or requirements for professional tribal monitors during all ground-disturbing activities. The terms of the agreements shall not conflict with any of these mitigation measures. A copy/copies of the agreement(s) shall be provided to the City of Eastvale Planning Department prior to the issuance of a grading permit.

TCR-2 **Archaeological Monitoring.** At least 30 days prior to application for a grading permit and before any grading, excavation and/or ground disturbing activities on the site take place, the project applicant shall retain a Secretary of Interior Standards-qualified, Registered Professional Archaeologist (RPA), as an archaeological monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Ground-disturbing activities may include, but are not limited to, pavement removal, potholing or auguring, grubbing, weed abatement, boring, grading, excavation, drilling, and trenching. The on-site archaeological monitoring would end when the project site grading and excavation activities are completed, or when the monitor has indicated that the site has a low potential for archeological resources. The Project Registered Professional archaeologist, in consultation with consulting Tribe(s) identified above, and the developer, shall develop an Archaeological Monitoring Plan to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site and provide the plan to the

City for approval. Details in the plan shall include:

A. Project grading and development scheduling.

B. The development of a rotating or simultaneous schedule in coordination with the project applicant and the project archeologist for designated Native American tribal monitors from the consulting tribes during grading, excavation and ground-disturbing activities on the site.

C. The safety requirements, duties, scope of work, and Native American tribal monitors' authority to stop and redirect grading activities in coordination with all Project archaeologists.

D. The protocols and stipulations that the developer, tribes and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

TCR-3 **Treatment and Disposition of Cultural Resources**. If tribal cultural resources are inadvertently discovered during ground disturbing actives for this project. The following procedures will be carried out for treatment and disposition of the discoveries:

A. **Temporary Curation and Storage**. During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process.

B. **Treatment and Final Disposition.** The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City Planning Department with documentation of same:

i. **Reburial on-site.** Accommodate the process for on-site reburial of the discovered items with the consulting tribes. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed.

ii. **Curation.** A curation agreement with an appropriate qualified repository within Riverside County that meets federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists or researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate

curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation.

iii. **Disposition Dispute**. If more than one tribe is involved with the project and cannot come to a consensus as to the disposition of cultural materials, they shall be curated at the Western Science Center.

iv. **Final Report.** At the completion of grading, excavation and ground disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and tribal monitors within 60 days of completion of grading. This report shall:

- Document the impacts to the known resources on the property;
- Describe how each mitigation measure was fulfilled;
- Document the type of cultural resources recovered and the disposition of such resources;
- Provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting;
- In a confidential appendix, include the daily/weekly monitoring notes from the archaeologist.
- All reports produced will be submitted to the City, Eastern Information Center and consulting tribes.

TCR 4 **TCR-4 Discovery of Human Remains**. If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains. The following procedures as set forth in the California Environmental Quality Act (CEQA), Section 15064.5(e), the California Public Resources Code (PRC) (Section 5097.98), and the State Health and Safety Code (Section 7050.5) shall then be undertaken:

If human remains or funerary/sacred items are encountered, the archaeological monitor or tribal monitor will halt work within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, establish an Environmentally Sensitive Area (ESA) boundary to protect the find from impact, and immediately notify the City Archaeologist. Project work outside the established ESA may continue. In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the Riverside County Coroner shall be notified within 24 hours of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within two working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, s/he shall notify the NAHC in Sacramento within 48 hours. In accordance with California Public Resources Code, Section 5097.98, the NAHC must immediately notify those persons

it believes to be the most likely descendant from the deceased Native American. The most likely descendant shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.

SIGNIFICANCE OF IMPACT AFTER MITIGATION

Implementation of **Mitigation Measures TCR-1** through **TCR-4** would ensure that any tribal cultural and archaeological resources inadvertently discovered during project grading or construction activities would be protected consistent with the recommendations of a qualified archaeologist and the appropriate tribes, reducing impacts to less than significant.

19. UTILITIES AND SERVICE SYSTEMS. Would the proposed project:				
Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a) Require or result in the relocation or construction of new or expanded water, or wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			✓	
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			✓	
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			✓	
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			✓	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			✓	

DISCUSSION

19(a) Require or result in the relocation or construction of new or expanded water, or wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Determination: Less Than Significant Impact.

The project site is served by the following utilities:

- Electricity – Southern California Edison (SCE)
- Water – Jurupa Community Services District (JCSD)
- Sewer – JCSD
- Storm Drain – City of Eastvale
- Cable – Spectrum

- Telephone – AT&T
- Natural Gas – Southern California Gas Company (SoCalGas)

Electric Power, Natural Gas, and Telecommunications

The project site is located in a developed area of the City and is situated within close proximity to existing electric power, natural gas, and telecommunications facilities. Therefore, substantial new utility infrastructure would not be required with project implementation.

Water

The project would require water for the irrigation of landscaped areas. However, it is not expected that water demand would increase substantially with project implementation. Water for the project would be provided by JCSD and would connect to the existing water main. Therefore, the expansion of off-site water facilities would not be required to serve the project.

Storm Drain

The project's stormwater needs are met by the City of Eastvale and the Riverside County Flood Control and Water Conservation District. The nearest stormwater facility to the project site is the Chandler Street flood control channel, adjacent to the project boundary to the north. In the event of a storm, water would drain from the project site into underdrain pipes and overflow to a 15-inch collector pipe that drains into the Chandler Street channel at the northwest corner of the site. Therefore, the expansion of off-site storm drain facilities would not be required to serve the project.

Wastewater Treatment

The project is located within the jurisdiction of the Santa Ana Regional Water Quality Control Board (RWQCB), which applies requirements to the wastewater treatment facilities owned and operated by treatment providers. Therefore, the expansion of off-site wastewater facilities would not be required to serve the project.

19(b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Determination: Less Than Significant Impact.

Water service would be provided to the project site by JCSD. JCSD relies predominantly on groundwater and desalinated brackish groundwater from the Chino Groundwater Basin for its water supply,[13] as described in the City's General Plan. Through a joint powers authority, the JCSD partners with the Chino Desalter Authority, the owner and operator of two water treatment plants (desalters), to treat potable water for the JCSD service area. Each desalter has the current capacity to treat 12 million gallons per day (mgd) of water.

[13] City of Eastvale. 2012. General Plan. Page 7-6, Water Supply. Accessed June 25, 2020. https://www.eastvaleca.gov/home/showdocument?id=2360

JCSD estimates water supply availability for normal, single-dry, and multiple-dry year scenarios from 2020 through 2040 in its 2015 Urban Water Management Plan. For all years and all scenarios, anticipated supply exceeds anticipated demand. ***Table 19-1, JCSD Normal and Single-Dry Year Supply and Demand in Acre-Feet per Year (AFY),*** summarizes supply, demand, and excess supply for the normal and single-dry year.

Table 19.9: JCSD Normal and Single-Dry Year Supply and Demand in Acre-Feet per Year (AFY)

	2020	2025	2030	2035	2040
Supply	31,993	36,493	40,993	40,993	40,993
Demand	25,477	28,088	30,968	34,151	37,670
Excess Supply	6,516	8,405	10,025	6,842	3,323
Source: Jurupa Community Services District. 2015 Urban Water Management Plan. Table 7-3.					

The JCSD uses a water demand generation rate of 8,100 gallons per day per gross acre for nonresidential land uses.[14] Using this generation rate, the proposed project would result in an increase in water demand of 21,951 gallons per day, equivalent to approximately 0.067 acre-feet per year (AFY).[15] An increase of 0.067 AFY represents an approximately 0.00017 percent increase in demand in comparison to the current (2020) existing and excess supplies. Therefore, impacts would be less than significant.

19(c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Determination: Less Than Significant Impact.

Wastewater disposal is regulated under the federal Clean Water Act and the state Porter-Cologne Water Quality Control Act. The Santa Ana RWQCB regulates wastewater discharges in Eastvale, including the project site, and implements the Clean Water Act and the Porter-Cologne Act by administering the National Pollutant Discharge Elimination System, issuing water discharge permits, and establishing best management practices. Development of the project site would result in wastewater flows that would be collected and treated at the Western Riverside County Regional Wastewater Authority plant, which serves Eastvale.

The proposed project would receive wastewater conveyance services from the JCSD. The JCSD discharges wastewater from this area to the Inland Empire Brine Line (IEBL), which pumps the wastewater to the Orange County Sanitation District (OCSD). The JCSD estimates that wastewater treatment plant capacity is currently 9.8 mgd with the ability to expand to 17 mgd. According to

[14] Jurupa Community Services District. 2011 Standards Manual for Water and Sewer Facilities. Accessed July 9, 2020.

[15] Based on 2.71 acres x 8,100 daily gallons per acre = 21,951 gallons daily.

the JCSD Standards Manual, commercial and industrial uses in the Eastvale area are estimated to generate an average of 2,000 gallons of wastewater daily per gross acre. Therefore, the proposed project can be expected to contribute 5,420 gallons of wastewater flow to the IEBL and OCSD treatment plant daily.[16]

Since the project would only result in an increase of wastewater flows equal to 0.055 percent of current JCSD capacity,[17] adequate capacity is available to serve the proposed project. A less than significant impact would occur.

19(d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Determination: Less Than Significant Impact.

Implementation of the project is anticipated to generate additional solid waste during the temporary, short-term construction phase, as well as the operational phase, but it would not be expected to result in inadequate landfill capacity. No landfills are located in Eastvale; however, solid waste services for the City are provided by the El Sobrante Landfill near the City of Corona, approximately 13 miles southeast of the project site. According to the California Department of Resources Recycling and Recovery (CalRecycle), the landfill has a maximum throughput of 16,054 tons per day. This landfill has a maximum permitted capacity of approximately 209.9 million cubic yards, and the landfill has a remaining capacity of approximately 143.9 million cubic yards. The landfill has an expected operational life through 2051.[18]

For the proposed project, the City of Los Angeles CEQA Thresholds Guide provides an estimated generation rate for commercial uses of 10.53 pounds of waste per employee per day. Assuming an estimated operational number of employees of 190, the project would result in 2,000 pounds of waste daily.[19] Assuming operations seven days per week, the project would contribute 365 tons of waste each year. Considering the capacity of the El Sobrante Landfill, the project would not have a significant impact on local landfill capacity.

All construction activities would be subject to conformance with relevant federal, state, and local requirements related to solid waste disposal. Specifically, the project would be required to demonstrate compliance with the California Integrated Waste Management Act of 1989 (Assembly Bill [AB] 939), which requires all California cities to "reduce, recycle, and re-use solid waste generated in the State to the maximum extent feasible." The California Integrated Waste Management Act of 1989 requires that at least 50 percent of waste produced is recycled, reduced, or composted. The project would also be required to demonstrate compliance with the Green Building Code, which includes design and construction measures that act to reduce construction-related waste though material conservation measures and other construction-

[16] Based on 2.71 acres x 2,000 daily gallons per acre = 5,420 gallons daily.

[17] Based on 5,420 gallons per day demand ÷ 9,800,000 gallons per day capacity= 0.055.

[18] CalRecycle, SWIS Facility Detail, El Sobrante Landfill (33-AA-0217), accessed June 23, 2020, https://www2.calrecycle.ca.gov/swfacilities/Directory/36-AA-0055/.

[19] Based on 190 employees X 10.53 pounds of waste.

related efficiency measures. Compliance with these programs would ensure the project's construction-related solid waste impacts are less than significant.

19(e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Determination: Less Than Significant Impact.

Refer to Response IV.19(d). The project would not generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure. As such, the project would comply with federal, state, and local management and reduction statutes and regulations related to solid waste. A less than significant impact would occur.

STANDARD CONDITIONS & REQUIREMENTS

1. The project applicant will be required to comply with the recommendations of the Riverside County Waste Management Department and all federal, state, and local statutes and regulations related to solid waste, including the Solid Waste Reuse and Recycling Access Act of 1991.
2. The project applicant, developer, or successor in interest shall provide written verification that the Jurupa Community Services District can and will provide potable water service to the project.

MITIGATION MEASURES

None required.

20. WILDFIRE. Would the proposed project:				
Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?			X	
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?			X	
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			X	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			X	

DISCUSSION

20(a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Determination: Less Than Significant Impact.

The project site is located in a developed urban area surrounded by residential and commercial uses. According to the California Department of Forestry and Fire Protection (CalFire) Fire Hazard Severity Zone Viewer,[20] the project site is not located in a zone designated as Very High Fire Hazard.

Fire protection in Eastvale is provided by the Riverside County Fire Department (RCFD), which operates in coordination with CalFire. The RCFD operates two fire stations in Eastvale: Station #27, located approximately 2.1 miles northeast of the project site at 7067 Hamner Avenue, and Station #31, located adjacent and west of the project site at 14491 Chandler Street.

The proposed project would be required to comply with the provisions of the City of Eastvale Emergency Operations Plan, Riverside County All Hazard Mitigation Plan, and the emergency access requirements of the California Fire Code, which include but are not limited to providing access with adjoining uses and providing suitable access for emergency vehicles. In addition,

[20] CalFire. 2019. Fire and Resource Assessment Program: FHSZ Viewer. Accessed October 28, 2020. https://egis.fire.ca.gov/FHSZ/

emergency access to the site would be maintained during construction. Impacts would be less than significant.

20(b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Determination: Less Than Significant Impact.

The project site is generally flat and does not support areas of steep slopes. In addition, the project site is located within an urbanized area of the city, where the risk of wildland fire is decreased. As such, the proposed project would not be located in a critical fire danger zone or adjacent to wildlands subject to wildfires. Urban levels of fire protection would be provided to the project area. In addition, the project would adhere to building codes and any conditions included through review by the RCFD. Impacts would be less than significant.

20(c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Determination: Less Than Significant Impact.

The project site is located in a developed area of the city and is situated within close proximity to existing electric power, natural gas, and telecommunications facilities. The proposed commercial uses on-site would not include any features that would have the potential to exacerbate fire risk or result in temporary or ongoing impacts to the environment. The project would provide access to adjoining uses and suitable access for emergency vehicles. Emergency access to the site would be maintained during construction. Impacts would be less than significant.

20(d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Determination: Less Than Significant Impact.

The project site is relatively flat with no major changes in elevations; the average elevation at the site is 577 feet above mean sea level. There are no channels or creeks running through the project site. The project site is not located within a 100-year flood hazard area. In addition, there are no known landslides at the project site, nor is the site in the path of any known or potential landslides. Therefore, the project would not expose people or structures to risks involving flooding or landslides as a result of runoff, post-fire slope instability, or drainage changes. A less than significant impact would occur.

STANDARD CONDITIONS & REQUIREMENTS

None required.

MITIGATION MEASURES

None required.

21. MANDATORY FINDINGS OF SIGNIFICANCE. Would the proposed project:				
Issues	**Potentially Significant Impact**	**Less Than Significant Impact with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a) Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?		X		
b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)		X		
c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?		X		

The following are mandatory findings of significance in accordance with Section 15065 of the CEQA Guidelines.

DISCUSSION

21(a) Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Determination: Less Than Significant Impact with Mitigation Incorporated.

As discussed in Section IV.4, *Biological Resources*, after implementation of **Mitigation Measures BIO-1** and **BIO-2**, the proposed project would result in less than significant impacts to biological resources. Similarly, as discussed in Section IV.5, *Cultural Resources*, and Section IV.18, *Tribal Cultural Resources*, after implementation of **Mitigation Measures CUL-1, CUL-2, TCR-1, TCR-2, TCR-3**, and **TCR-4** the proposed project would result in less than significant impacts to human remains, archaeological resources, paleontological resources, and tribal cultural resources.

21(b) Have impacts that are individually limited, but cumulatively considerable?

Determination: Less Than Significant Impact with Mitigation Incorporated.

A significant impact may occur if the project, in conjunction with related projects proposed for development in the City, would result in impacts that are less than significant when viewed separately but would be significant when viewed together. When considering the proposed project in combination with other past, present, and reasonably foreseeable future projects in the vicinity of the project site, the proposed project does not have the potential to cause impacts that are cumulatively considerable. As detailed in the above discussions, the proposed project would not result in any significant and unmitigable impacts in any environmental categories. In all cases, the impacts associated with the project are limited to the project site or are of such a negligible degree that they would not result in a significant contribution to any cumulative impacts.

21(c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Determination: Less Than Significant Impact with Mitigation Incorporated.

The proposed project does not have the potential to significantly adversely affect humans, either directly or indirectly, once mitigation measures are implemented. While a number of the proposed project's impacts were identified as having the potential to significantly impact humans, with implementation of the identified mitigation measures herein, and standard requirements, these impacts would be less than significant. Therefore, the proposed project would not cause significant adverse direct or indirect impacts to humans.

EXECUTIVE SUMMARY

The purpose of this noise impact analysis to assess the noise exposure and the necessary noise mitigation measures for the proposed Archibald and Chandler Car Wash and Coffee Shop ("project").

The 2.71-acre project site is located at the northwest corner of the intersection of Archibald Avenue and Chandler Street in the City of Eastvale, California. The project site is currently vacant.

The proposed project involves construction of a commercial center comprised of a 950 square foot coffee shop (Dutch Bros) with drive through window, a 3,598 square foot express car wash (Quick Quack Car Wash) consisting of one automated tunnel and 20 vacuum bays, and one 3,500 square foot sit-down restaurant (Zendejas).

Off-Site Traffic Noise Analysis

In order to quantify the increase in vehicle noise associated with project operation, changes in traffic noise levels were modeled along roadway segments expected to be affected by the project. Traffic noise was modeled using traffic forecasts provided in the Archibald at Chandler Commercial Project Traffic Impact Analysis prepared by Ganddini Group, Inc. (October 28, 2022).[1] The analysis shows that the unmitigated project-related traffic noise level increases under all traffic scenarios will be less than significant.

Operational Noise Analysis

The SoundPLAN noise modeling software was used to estimate project-related operational (stationary-source) noise levels at the nearby noise-sensitive receiver locations. Modeled project-related operational noise sources include the proposed car wash turbine/drying system, vacuums, outdoor eating/patio areas, rooftop air conditioning units, drive-thru queues and ordering windows, and parking lot vehicle movements. It should be noted that Lmax noise levels for noise sources were utilized, and it was assumed that all sources would be in operation for the entire modeled period. Therefore, the Leq and the Lmax noise levels associated with the project are the same.

Compliance with Applicable Noise Standards

Noise levels associated with project operational noise sources are expected to range from 46 to 54 dBA Leq and will not exceed the daytime General Plan Leq noise level standard of 60 dBA Leq or exceed the Municipal Code standard of 55 dBA Lmax. The project will operate between the hours of 7:00 AM and 10:00 PM and therefore, will not result in any exceedances of nighttime noise standards. This impact would be less than significant. No mitigation is required.

The existing measured CNEL is 61 dB. Project operational noise during daytime hours will add approximately 1 dB to each hour. The existing plus project CNEL would still be 61 dBA with project operational noise. Residential construction methods typically provide 20 dB of exterior to interior noise reduction with provision of HVAC to allow for a windows-closed condition. Project operation will not result in interior noise levels that exceed the 45 dBA CNEL noise standard. This impact would be less than significant. No mitigation is required.

[1] The proposed project is to generate approximately 1,686 net new daily vehicle trips. The Archibald at Chandler Commercial Project Traffic Impact Analysis prepared by Ganddini Group, Inc. (October 28, 2020) showed that the previous version of the project was to generate approximately 4,871 net new daily vehicle trips. Therefore, as the project generated vehicle trips have decreased from that provided for the previous version of the project, and in order to provide a more conservative analysis, this analysis utilizes the higher trip generation rate provided in the 2020 Traffic Impact Analysis.

Project-Operational Noise - Increase in Ambient Noise Conditions

Operation of the project would result in increases in ambient noise levels of up to 5 dB but would not exceed any of the applicable thresholds due to relatively quiet ambient noise levels. Project operational noise would not result in significant impacts. No mitigation is required.

Construction Noise Analysis

Construction noise levels were modeled using reference noise levels from the FHWA Road Construction Noise Model User's Guide. The highest project-related short-term construction noise levels are expected to range from 68.4 to 77.3 dBA L_{eq} at nearby sensitive receptors. Using a threshold based on the National Institute for Occupational Safety and Health (NIOSH) limits for construction noise of 85 dBA L_{eq} as averaged over an eight-hour period, project construction noise would be less than significant.

The increase in ambient noise levels due to project construction activities was calculated by adding modeled construction noise levels to existing measured noise levels. The analysis shows that the project will result in noise level increases that range between 6 and 23.5 dBA L_{eq} at nearby receiver locations. The City of Eastvale has set restrictions to control noise impacts associated with the construction of the proposed project. According to the City of Eastvale Municipal Code Section 8.52.020, construction activities are exempt from noise regulation between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May.

Due to the temporary, short-term nature of noise-generating construction activities, the temporary or periodic noise level increases over the existing ambient conditions due to construction activities must be considered under CEQA Guideline A, consistent with the legal case, Friends of Riverside's Hills v. Riverside Transportation Commission, et al. (2013). Therefore, the California Department of Transportation Traffic Noise Analysis Protocol 12 dBA L_{eq} substantial noise level increase threshold is used in this analysis to assess temporary noise level increases. If the project-related construction noise levels generate a temporary noise level increase above the existing ambient noise levels of up to 12 dBA L_{eq}, then the project construction noise level increases will be considered a potentially significant impact. Although the California Department of Transportation recommendations were specifically developed to assess traffic noise impacts, the 12 dBA L_{eq} substantial noise level increase threshold is used in California to address noise level increases with the potential to exceed existing conditions (California Department of Transportation 2011).

Adherence to exempt hours of operation presented above and implementation of the measures presented below would reduce construction noise levels at nearby receiver locations would no longer result in increases that exceed 12 dBA L_{eq}. Project construction noise impacts would be less than significant with incorporation of mitigation.

Construction Noise Mitigation Measures

While not considered mitigation, the project Applicant shall comply with all City of Eastvale Municipal Code requirements (City of Eastvale Municipal Code, Section 8.52.020 et al.) acting to minimize effects of construction noise. To reduce project construction noise impacts, the following mitigation measures shall also be implemented:

Mitigation Measure 1 The construction contractor(s) shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the project site.

Mitigation Measure 2 The construction contractor(s) shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May).

Mitigation Measure 3 The contractor shall install temporary construction noise barriers/blankets that achieve a noise reduction of at least 8 dB along the western boundary of the project site in the vicinity of the existing single-family residence. The barrier/blankets shall be solid with no cracks or holes. The barrier shall also reach to the ground. It should be noted that R4 requires a total reduction of 20 dB and the calculated barrier reduction total of 8 dB takes into account 12 needed 12 dB reduction from mufflers and/or enclosures or acoustical tents required for all receptors identified in Mitigation Measure 4.

Mitigation Measure 4 During all project construction phases on-site, construction contractors shall equip all construction equipment, fixed or mobile, with either properly operating and maintained mufflers or enclosures/acoustical tents (as appropriate) that achieve at least 12 dB reduction from noise level specifications presented in Table 21 of this report.

Construction Vibration Analysis

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from project construction activities would cause only intermittent, localized intrusion. The analysis shows that the unmitigated project-construction vibration levels are expected to range from 0.000 to 0.492 in/sec PPV. Based on the City of Eastvale vibration standard of 0.0787 in/sec PPV, the proposed project construction activities will generate unmitigated vibration levels which remain below the 0.0787 in/sec PPV threshold at Receivers 1 through 3 and 5; however, due to the proximity to the western property line, Receiver 4 could have potentially significant impacts. Therefore, to satisfy the City of Eastvale vibration standard of 0.0787 in/sec PPV, Mitigation Measure 5 restricts the use of jackhammers within 15 feet, loaded trucks within 25 feet and large bulldozers within 28 feet of the residential structure located at the western project boundary (Receiver 4). With application of Mitigation Measure 5 impacts at receiver location R4 would be less than significant. Further, vibration levels at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating at the project site perimeter. Moreover, construction at the project site will be restricted to daytime hours consistent with City of Eastvale requirements thereby eliminating potential vibration impacts during the sensitive nighttime hours.

Mitigation Measure 5 The contractor shall restrict the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary.

Summary of CEQA Significance Findings

The results of this analysis are summarized below based on the significance criteria in Section 4 of this report consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines (2018). Table 1 shows the findings of significance for each potential noise and/or vibration impact under CEQA before and after any required mitigation measures described above.

Table 1
Summary of CEQA Significance Findings

Analysis	Section of Report	Significance Findings	
		Unmitigated	Mitigated
Off-Site Traffic Noise Levels	7	Less than Significant	n/a
Operational Noise Level Compliance	9	Less than Significant	n/a
Operational Noise Level Increase (Permanent)		Less than Significant	n/a
Construction Noise Level Compliance	10	Less than Significant	n/a
Construction Noise Level Increases (Temporary)		Potentially Significant	Less than Significant With Mitigation
Construction Vibration Levels		Potentially Significant	Less than Significant With Mitigation

1. INTRODUCTION

This noise impact analysis has been completed to determine the noise impacts associated with the development of the proposed Archibald and Chandler Car Wash and Coffee Shop ("project"). This noise impact analysis briefly describes the proposed project, provides information regarding noise fundamentals, describes the local regulatory setting, provides the study methods and procedures for noise analysis, and evaluates the future exterior noise environment. The noise issues related to the proposed land use and development have been evaluated in light of applicable federal, state and local policies, including those of the City of Eastvale.

Although this is a technical report, every effort has been made to write the report clearly and concisely. To assist the reader with those terms unique to noise analysis, a list of acronyms and a glossary of terms have been provided in Appendix A and Appendix B of this report, respectively.

SITE LOCATION

The 2.71-acre project site is located at the northwest corner of the intersection of Archibald Avenue and Chandler Street in the City of Eastvale, California. The project site is currently vacant. A vicinity map showing the project location is provided on Figure 1.

The project site is bounded by a flood channel to the north, Archibald Avenue to the east, Chandler Street to the south, and single-family detached residential dwelling units to the west. The Interstate 15 Freeway is located approximately 2.23 miles east of the project site. The closest airport to the project site is Chino Airport which is located roughly 2.15 miles northwest of the project site boundaries.

PROJECT DESCRIPTION

The proposed project involves construction of a commercial center comprised of a 950 square foot coffee shop (Dutch Bros) with drive through window, a 3,598 square foot express car wash (Quick Quack Car Wash) consisting of one automated tunnel and 20 vacuum bays, and one 3,500 square foot sit-down restaurant (Zendejas). Figure 2 illustrates the project site plan.

The following design measures have been implemented into the project design and are shown on the project plans per recommendations provided in a separate noise study prepared for the car wash portion of the proposed project.

1. Project operational hours will be from 7:00 AM to 9:00 PM.
2. A 12 Sonny's blower system with a silencer package (or equivalent in sound) will be installed as the car wash drying system.
3. Absorptive material (Acoustiblok perforated metal panels or equivalent with the same reduction) will line the walls and ceiling of the last fifteen feet of the car wash.
4. A six-foot-high wall will be constructed along the western property line from the south property line to the car wash turbine enclosure.
5. A ten-foot-high wing wall will extend south from the western side of the car wash tunnel for a distance of 8 feet.

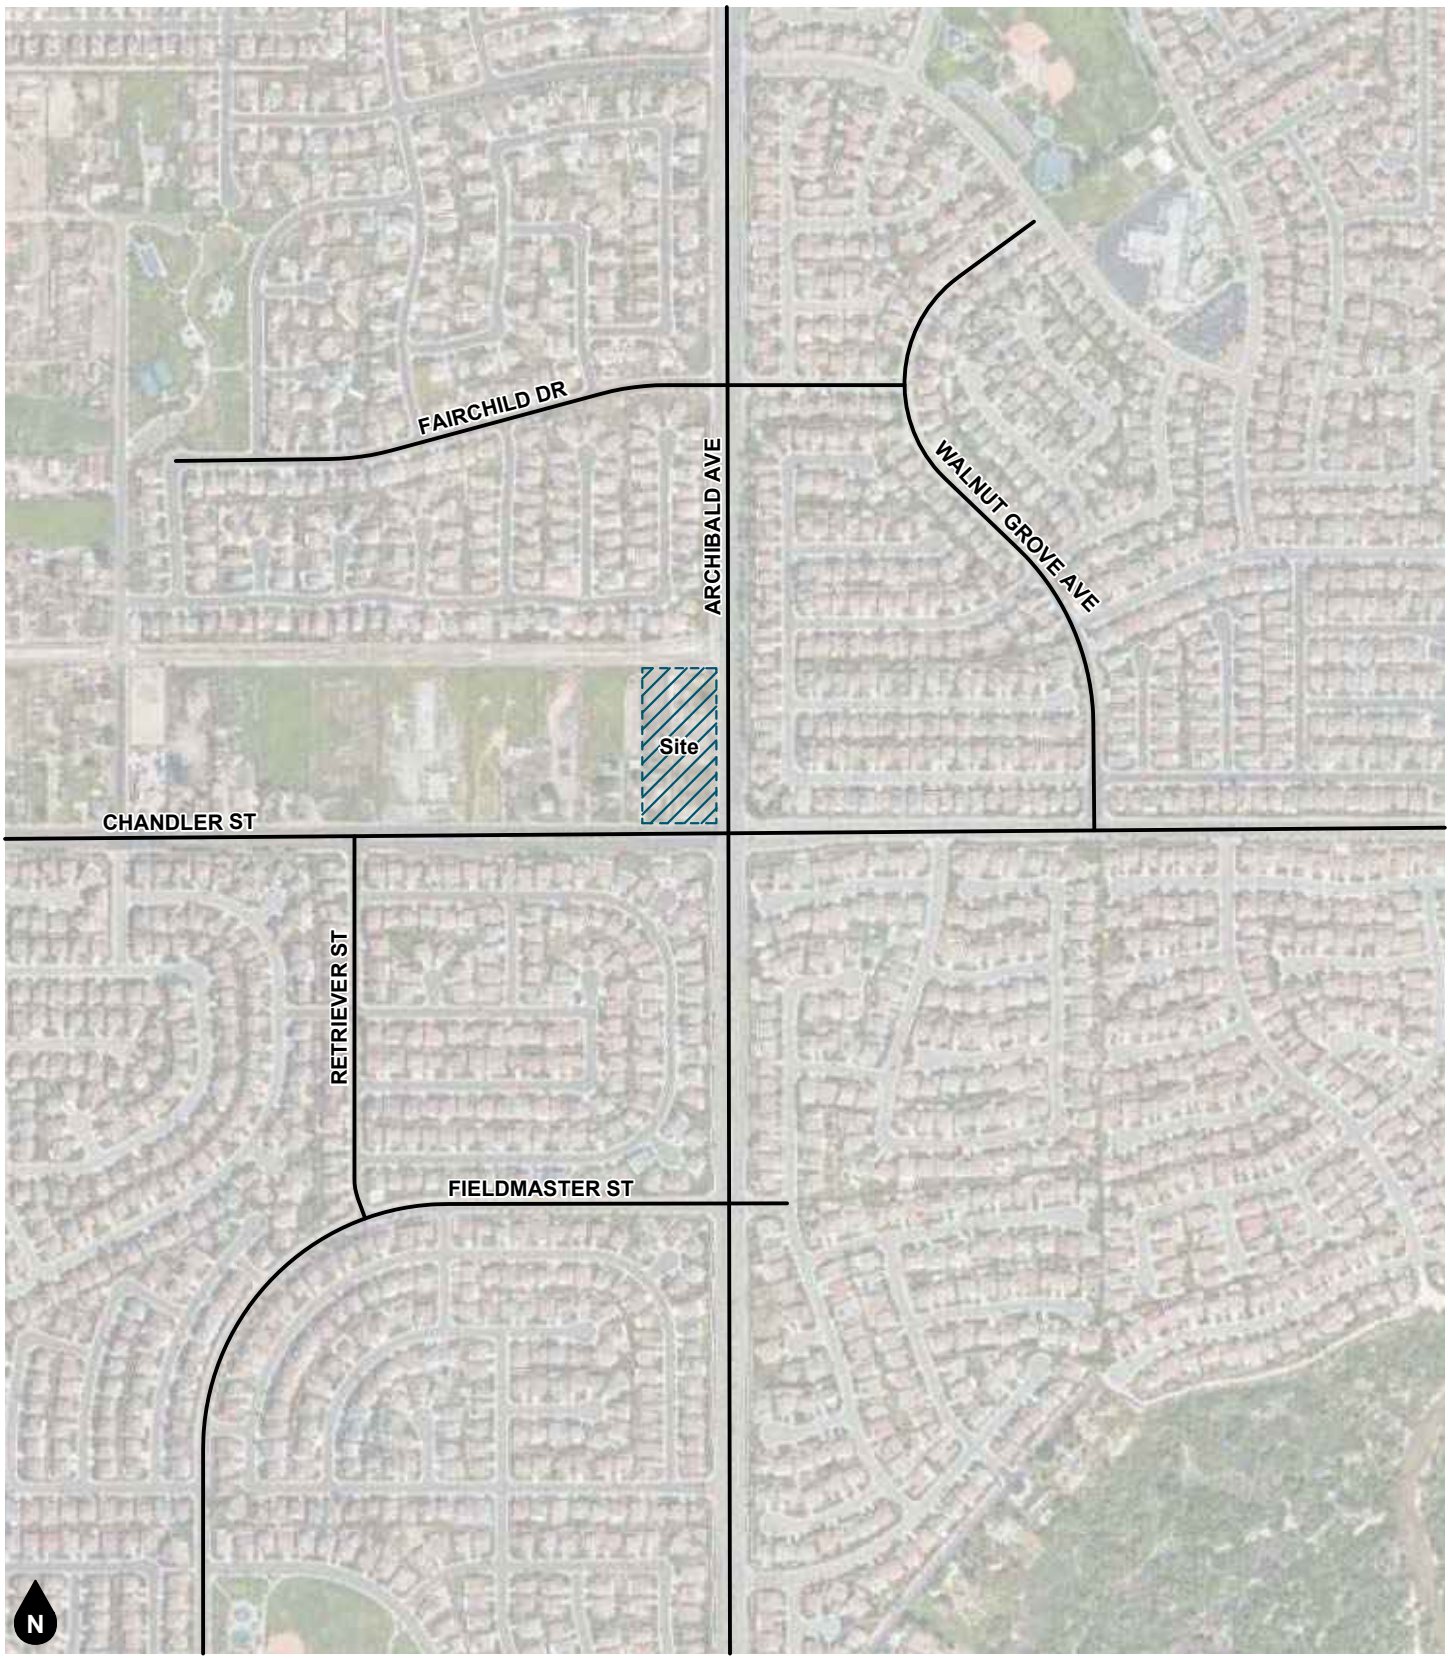

Figure 1
Project Location Map

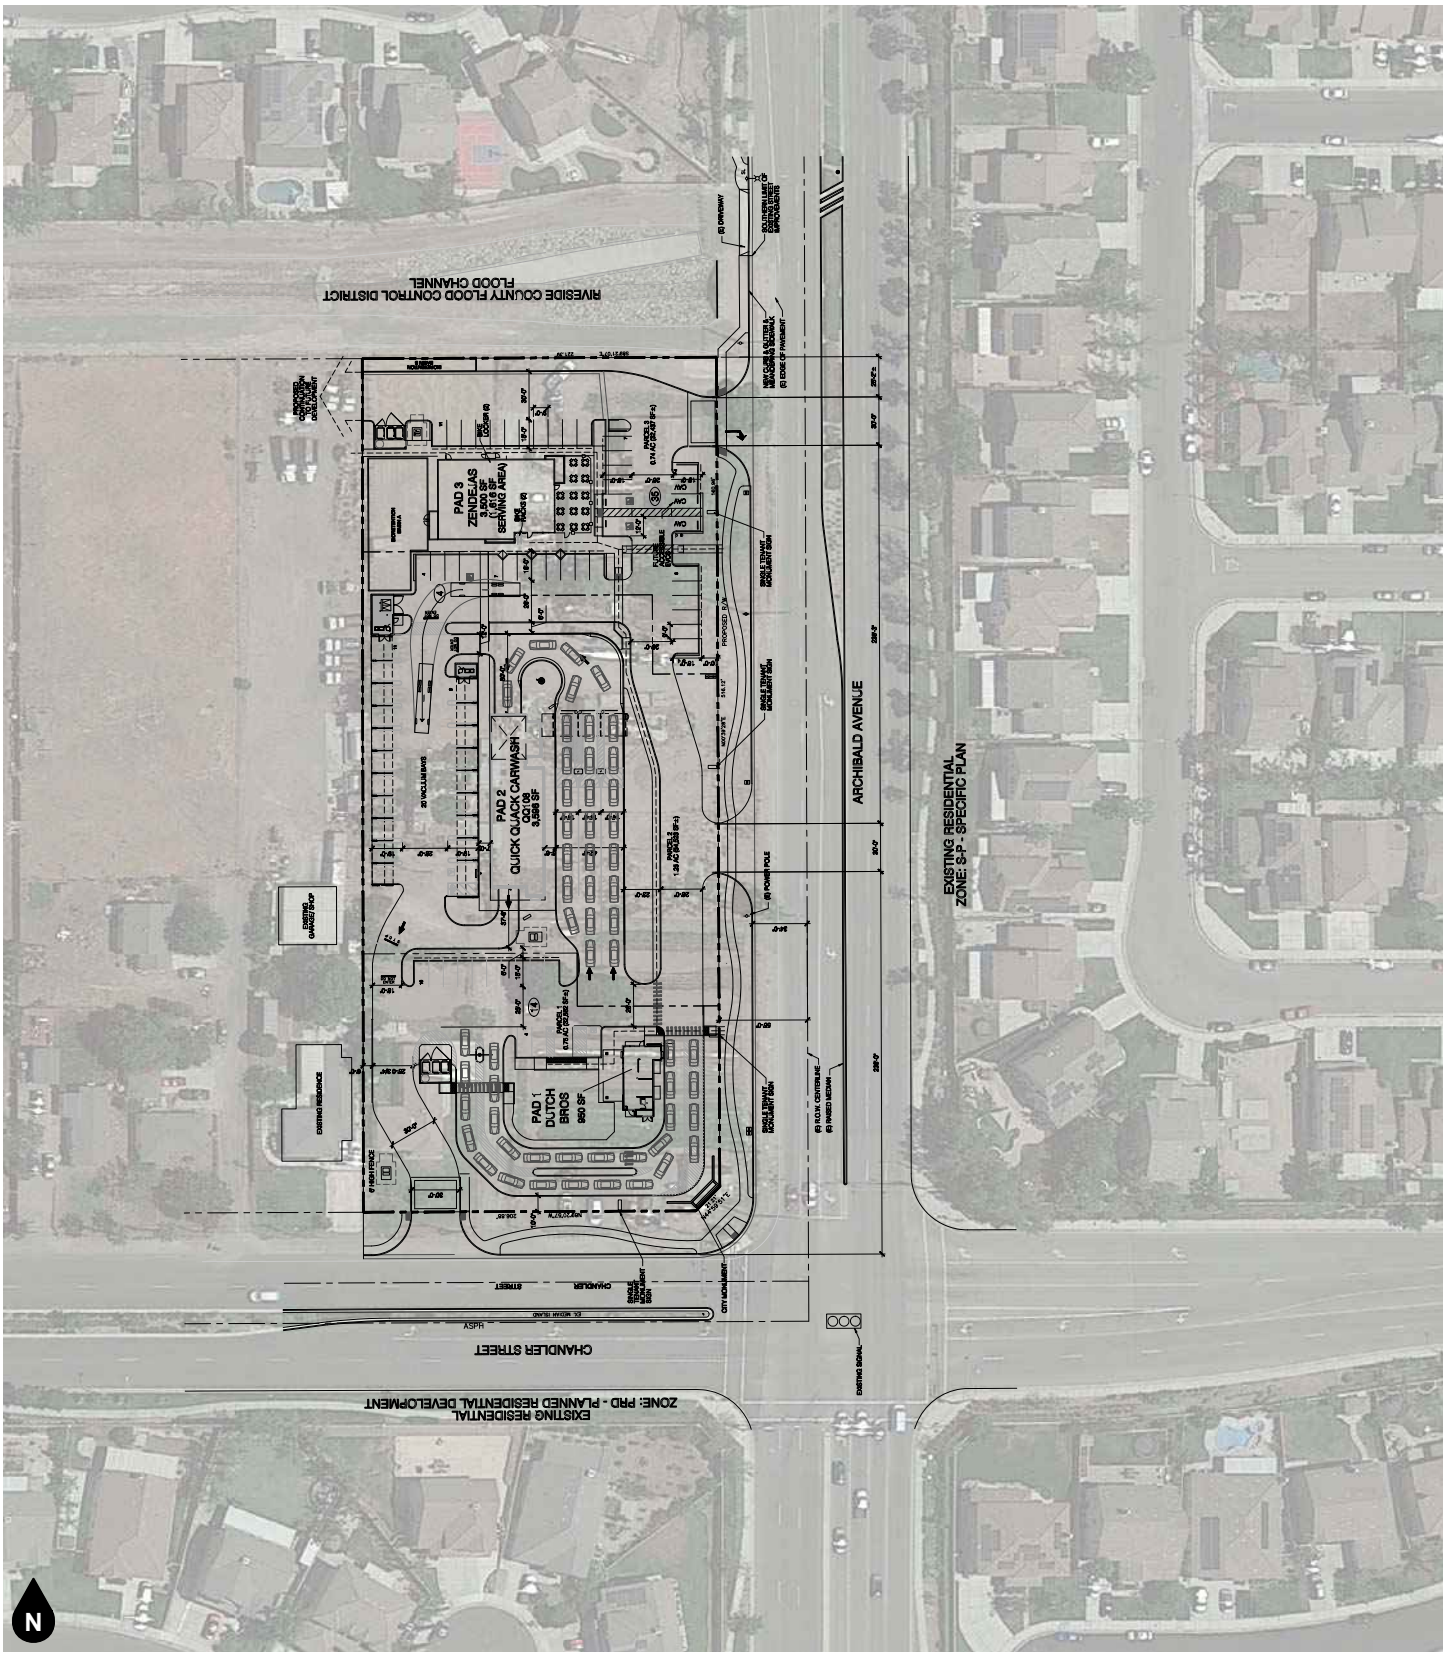

Figure 2
Site Plan

2. FUNDAMENTALS

Noise has been simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Figure 3 presents typical noise levels and their subjective loudness and effects.

RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud (California Department of Transportation 2013). The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA at approximately 100 feet, which can cause serious discomfort (Environmental Protection Agency 1974). Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages, rather than instantaneous, noise levels. The most commonly used descriptor is the equivalent level (L_{eq}). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period and is commonly used to describe the “average” noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA L_{eq} sound levels in the evening from 7:00 PM to 10:00 PM, and the addition of 10 decibels to dBA L_{eq} sound levels at night between 10:00 PM and 7:00 AM. These additions are made to account for the noise sensitive time periods during the evening and night hours when sound appears louder. CNEL does not represent the actual sound level heard at any time, but rather represents the total sound exposure. The City of Eastvale relies on the 24-hour CNEL level to assess land use compatibility with transportation related noise sources.

SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The way noise reduces with distance depends on the following factors.

Geometric Spreading

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates

outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source. (California Department of Transportation 2013).

Ground Absorption

The propagation path of noise from a highway to a receptor is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually sufficiently accurate for distances of less than 200 feet. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receptor, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receptor such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source (U.S. Department of Transportation 1995).

Atmospheric Effects

Receptors located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects (California Department of Transportation 2013).

Shielding

A large object or barrier in the path between a noise source and a receptor can substantially attenuate noise levels at the receptor. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an "out of sight, out of mind" effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearby resident. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide and dense enough to completely obstruct the line-of sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The FHWA does not consider the planting of vegetation to be a noise abatement measure (U.S. Department of Transportation 1995).

NOISE CONTROL

Noise control is the process of obtaining an acceptable noise environment for an observation point or receptor by controlling the noise source, transmission path, receptor, or all three. This concept is known as the source-path-receptor concept. In general, noise control measures can be applied to these three elements.

NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receptor, and the noise reduction may be even greater depending on the height of the barrier. Noise barriers, however, do have limitations. For a noise barrier to work, it must be high enough and long enough to block the path of the noise source (U.S. Department of Transportation 1995).

LAND USE COMPATIBILITY WITH NOISE

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized (U.S. Department of Transportation 2000).

COMMUNITY RESPONSE TO NOISE

Community responses to noise may range from registering a complaint by telephone or letter, to initiating court action, depending upon everyone's susceptibility to noise and personal attitudes about noise. Several factors are related to the level of community annoyance including:

- Fear associated with noise producing activities;
- Socio-economic status and educational level;
- Perception that those affected are being unfairly treated;
- Attitudes regarding the usefulness of the noise-producing activity;
- Belief that the noise source can be controlled.

Approximately ten percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints will occur. Another twenty-five percent of the population will not complain even in very severe noise environments. Thus, a variety of reactions can be expected from people exposed to any given noise environment. Surveys have shown that about ten percent of the people exposed to traffic noise of 60 dBA will report being highly annoyed with the noise, and each increase of one dBA is associated with approximately two percent more people being highly annoyed. When traffic noise exceeds 60 dBA or aircraft noise exceeds 55 dBA, people may begin to complain (U.S. Environmental Protection Agency 1979). Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels as shown on Figure 4. An increase or decrease of 1 dBA cannot be perceived except in carefully controlled laboratory experiments, a change of 3 dBA are considered barely perceptible, and changes of 5 dBA are considered readily perceptible (U.S. Department of Transportation 1995).

EXPOSURE TO HIGH NOISE LEVELS

The Occupational Safety and Health Administration (OSHA) sets legal limits on noise exposure in the workplace. The permissible exposure limit (PEL) for a worker over an eight-hour day is 90 dBA. The OSHA standard uses a 5 dBA exchange rate. This means that when the noise level is increased by 5 dBA, the amount of time a person can be exposed to a certain noise level to receive the same dose is cut in half. The National Institute for Occupational Safety and Health (NIOSH) has recommended that all worker exposures to noise should be controlled below a level equivalent to 85 dBA for eight hours to minimize occupational noise induced hearing loss. NIOSH also recommends a 3 dBA exchange rate so that every increase by 3 dBA doubles the amount of the noise and halves the recommended amount of exposure time.

OSHA has implemented requirements to protect all workers in general industry (e.g., the manufacturing and the service sectors) for employers to implement a Hearing Conservation Program where workers are exposed to a time weighted average noise level of 85 dBA or higher over an eight-hour work shift. Hearing Conservation Programs require employers to measure noise levels, provide free annual hearing exams and

free hearing protection, provide training, and conduct evaluations of the adequacy of the hearing protectors in use unless changes to tools, equipment and schedules are made so that they are less noisy and worker exposure to noise is less than the 85 dBA. This noise study does not evaluate the noise exposure of workers within a project or construction site, instead, it evaluates project-related operational and construction noise levels at the nearby sensitive receiver locations in the project study area in light of CEQA. Further, periodic exposure to high noise levels in short duration, such as project construction, is typically considered an annoyance and not impactful to human health.

VIBRATION

According to the Federal Transit Administration (FTA) *Transit Noise Impact and Vibration Assessment* (2006), vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of groundborne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. Decibel notation (VdB) is commonly used to measure RMS. Decibel notation (VdB) serves to reduce the range of numbers used to describe human response to vibration. Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receivers for vibration include structures (especially older masonry structures), people (especially residents, the elderly, and sick), and vibration-sensitive equipment.

The background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and vehicular volumes on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Figure 5 illustrates common vibration sources and the human and structural response to ground-borne vibration.

Common Outdoor Activities	Common Indoor Activities	A-Weighted Sound Level dBA	Subjective Loudness	Effects of Noise
Threshold of Pain		140	Intolerable or Deafening	Hearing Loss
Near Jet Engine		130		
		120		
Jet Fly-Over at 1000 ft.	Rock Band	110		
Loud Auto Horn		100

3. REGULATORY SETTING

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the state have established standards and codes to control noise. In most areas, automobile and truck trips are the major source of environmental noise. Vehicular volume activity generally produces an average sound level that remains constant with time. Air and rail, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research (2017). The purpose of the Noise Element is to limit the exposure of the community to excessive noise levels. In addition, the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

STATE OF CALIFORNIA BUILDING STANDARDS

The 2019 State of California's Green Building Standards Code contains mandatory measures for building construction in Section 5.507 on Environmental Comfort. These noise standards are applied to new construction in California for controlling interior noise levels resulting from exterior noise sources. The regulations specify that acoustical studies must be prepared when structures are developed in areas where the exterior noise levels exceed 65 dBA CNEL, such as within a noise contour of an airport, freeway, railroad, and other areas where noise contours are not readily available. If the development falls within an airport or freeway 65 dBA CNEL noise contour, the combined sound transmission class (STC) rating of the wall and roof-ceiling assemblies must be at least 50. For those developments in areas where noise contours are not readily available, and the noise level exceeds 65 dBA L_{eq} for any hour of operation, a wall and roof-ceiling combined STC rating of 45, and exterior windows with a minimum STC rating of 40 are required (Section 5.507.4.1).

CITY OF EASTVALE NOISE ELEMENT

The City of Eastvale has adopted a Noise Element of the General Plan to control and abate environmental noise, and to protect the citizens of the City of Eastvale from excessive exposure to noise. The Noise Element specifies the maximum allowable exterior noise levels for new developments impacted by transportation and stationary noise sources. To protect the City of Eastvale residents from excessive noise, the Noise Element contains the following four goals:

N-1 Prevent and mitigate the adverse impacts of excessive noise exposure on the residents, employees, visitors and noise-sensitive uses of Eastvale.
N-2 Locate noise-tolerant land uses within areas irrevocably committed to land uses that are noise-producing, such as transportation corridors.
N-3 Ensure that noise sensitive uses do not encroach into areas needed by noise generating uses.
N-4 Locate noise sources away from existing noise sensitive land uses unless appropriate noise control measures are provided.

Stationary Noise Source Standards

The City of Eastvale has adopted noise standards for stationary noise sources in the Noise Element of the General Plan and in the City's Municipal Code. The criterion in the General Plan is presented as a 30-minute Leq for exterior noise and as a Community Noise Equivalent Level for interior noise. The Municipal Code has adopted maximum noise standards with a Lmax descriptor.

The City of Eastvale General Plan Noise Element exterior and interior noise standards are presented in Table 2. Sensitive receptors that may be affected by on-site project operational noise are single family receptors; so, the applicable General Plan exterior noise level standard is 60 dBA Leq between the hours of 7:00 AM and 10:00 PM and 50 dBA Leq between the hours of 10:00 PM and 7:00 AM. The applicable interior noise standard, also shown in Table 2, is 45 dBA CNEL.

City of Eastvale Municipal Code stationary noise standards (Section 8052.040) are presented in Table 3. As shown in Table 3, the noise standard for project operational impacts to the nearby noise-sensitive single-family detached residential dwelling units is 55 dBA Lmax between the daytime hours of 7:00 AM and 10:00 PM, and 45 dBA Lmax between the nighttime hours of 10:00 PM to 7:00 AM.

Vibration Level Standards

The City of Eastvale General Plan Noise Element, Policy N-3, identifies a vibration level standard for sensitive land uses of 0.0787 inches per second peak particle velocity (PPV). Therefore, for the purposes of this analysis, the vibration level shall not exceed 0.0787 in/sec PPV at the nearby sensitive receiver locations during project construction activities capable of generating vibration levels. The construction vibration standard is provided in Table 4.

CITY OF EASTVALE MUNICIPAL CODE

Construction Noise Standards

According to the City of Eastvale Municipal Code Section 8.52.020, construction activities are exempt from noise regulation between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May. Neither the City's General Plan nor Municipal Code establish numeric maximum acceptable construction noise levels at potentially affected receivers, which would allow for a quantified determination of what CEQA constitutes a substantial temporary or periodic noise increase.

To evaluate whether the project will generate potentially significant temporary construction noise levels at off-site sensitive receiver locations, a construction-related noise level threshold is adopted from the Criteria for Recommended Standard: Occupational Noise Exposure prepared by the National Institute for Occupational Safety and Health (NIOSH). A division of the U.S. Department of Health and Human Services, NIOSH identifies a noise level threshold based on the duration of exposure to the source. The construction related noise level threshold starts at 85 dBA for more than eight hours per day, and for every 3 dBA increase, the exposure time is cut in half. This results in noise level thresholds of 88 dBA for more than four hours per day, 92 dBA for more than one hour per day, 96 dBA for more than 30 minutes per day, and up to 100 dBA for more than 15 minutes per day. For the purposes of this analysis, the lowest, more conservative construction noise level threshold of 85 dBA L_{eq} is used as an acceptable threshold for construction noise at the nearby sensitive receiver locations. Since this construction-related noise level threshold represents the energy average of the noise source over a given time period, they are expressed as L_{eq} noise levels. Therefore, the noise level threshold of 85 dBA L_{eq} over a period of eight hours or more is used to evaluate the potential project-related construction noise level impacts at the nearby sensitive receiver locations (NIOSH 1998).

The 85 dBA L_{eq} threshold is also consistent with the FTA Transit Noise and Vibration Impact Assessment criteria for construction noise which identifies an hourly construction noise level threshold of 90 dBA L_{eq} during daytime hours, and 80 dBA L_{eq} during nighttime hours for construction for general assessment at noise-

sensitive uses (e.g., residential, medical/hospital, school, etc.) (FTA 2006). Detailed assessment, according to the FTA, identifies an 8-hour dBA L_{eq} noise level threshold specific to noise-sensitive uses of 80 dBA L_{eq}. Therefore, the Noise Study relies on the NIOSH 85 dBA L_{eq} threshold, consistent with FTA general and detailed assessment criteria for noise-sensitive uses and represents an appropriate threshold for construction noise analysis. The construction noise standards are shown in Table 5.

Table 2
City of Eastvale General Plan Exterior and Interior Noise Level Standards for Non-Transportation Noise

Land Use Type	Exterior Noise Standards	
	Time Period	Maximum Noise Level (dBA)
Single-Family Homes and Duplexes	10:00 PM to 7:00 AM	50
	7:00 AM to 10:00 PM	60
Multiple Residential 3 or More Units Per Buiilding (Triplex+)	10:00 PM to 7:00 AM	55
	7:00 AM to 10:00 PM	60
Residential Living and Sleeping Areas		
Residential Living and Sleeping Areas where the dwelling unit is subject to noise from railroad tracks, aircraft overflights, or similar sources which produce clearly identifiable, discrete noise events (such as the passibng of a train as opposed to relatively steady or constant noise sources such as roadways),		
Privat & Semi-Private School Classroms (2)		
All Places of Work Other Than School Classrooms

4. SIGNIFICANCE CRITERIA

The following significance criteria are based on guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. For the purposes of this report, impacts would be potentially significant if the project results in or causes:

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise code, or applicable standards of other agencies;

b. Generation of excessive ground-borne vibration or ground-borne noise levels;

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels;

While the CEQA Guidelines and the City of Eastvale General Plan Guidelines provide direction on noise compatibility and establish noise standards by land use type that are sufficient to assess the significance of noise impacts under CEQA Guideline A, they do not define the levels at which increases are considered substantial. CEQA Guideline C applies to nearby public and private airports, if any, and the project's land use compatibility. The project site is not located within two miles of a public airport or within an airport land use plan; nor is the project within the vicinity of a private airstrip. As such, the project site would not be exposed to excessive noise levels from airport operations, and therefore, impacts are considered less than significant, and no further noise analysis is conducted in relation to Questions for Noise: C.

NOISE-SENSITIVE RECEIVERS

Noise level increases resulting from the project are evaluated based on the Appendix G CEQA Guidelines described above at the closest sensitive receiver locations. Under CEQA, consideration must be given to the magnitude of the increase, the existing ambient noise levels, and the location of noise-sensitive receivers to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes that there is no single noise increase that renders the noise impact significant (California Court of Appeal 2008). Unfortunately, there is no completely satisfactory way to measure the subjective effects of noise or of the corresponding human reactions of annoyance and dissatisfaction. This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called ambient environment.

Substantial Temporary or Periodic Noise Level Increases

According to the City of Eastvale Municipal Code Section 8.52.020, construction activities are exempt from noise regulation between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May. Due to the temporary, short-term nature of noise-generating construction activities, the temporary or periodic noise level increases over the existing ambient conditions must be considered under CEQA Guideline A, consistent with the legal case, Friends of Riverside's Hills v. Riverside Transportation Commission, et al. (2013). Therefore, the California Department of Transportation Traffic Noise Analysis Protocol 12 dBA L_{eq} substantial noise level increase threshold is used in this analysis to assess temporary noise level increases. If the project-related construction noise levels generate a temporary noise level increase above the existing ambient noise levels of up to 12 dBA L_{eq}, then the project construction noise level increases will be considered a potentially significant impact. Although the California Department of Transportation recommendations were specifically developed to assess traffic noise impacts, the 12 dBA L_{eq} substantial noise level increase threshold is used in California to address noise level increases with the potential to exceed existing conditions (California Department of Transportation 2011).

Substantial Permanent Noise Level Increases

In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will typically be judged. The Federal Interagency Committee on Noise (FICON) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level (FICON 1992). The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) or hourly logarithmic average noise levels (L_{eq}).

For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria may be exceeded. Therefore, for this analysis, FICON identifies a readily perceptible 5 dBA or greater project-related noise level increase is considered a significant impact when the noise criteria for a given land use is exceeded. Per FICON, in areas where the without project noise levels range from 60 to 65 dBA, a 3 dBA barely perceptible noise level increase appears to be appropriate for most people. When the without project noise levels already exceed 65 dBA, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded, since it likely contributes to an existing noise exposure exceedance. Table 6 provides a summary of the potential noise impact significance criteria, based on guidance from FICON.

SIGNIFICANCE CRITERIA SUMMARY

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. The significance criteria is summarized in Table 7.

Off-Site Traffic Noise

When the noise levels at existing and future noise-sensitive land uses (e.g., residential, etc.):

- are less than 60 dBA CNEL and the project creates a readily perceptible 5 dBA CNEL or greater project-related noise level increase; or
- range from 60 to 65 dBA CNEL and the project creates a barely perceptible 3 dBA CNEL or greater project-related noise level increase; or
- already exceed 65 dBA CNEL, and the project creates a community noise level impact of greater than 1.5 dBA CNEL (FICON, 1992).

Operational Noise

- If project-related operational (stationary-source) noise levels exceed 60 dBA Leq between the hours of 7:00 AM and 10:00 PM or exceed 50 dBA Leq between the hours of 10:00 PM and 7:00 AM.

- If project-related operational (stationary-source) noise levels exceed the exterior 55 dBA Lmax daytime or 45 dBA Lmax nighttime noise level standards at nearby sensitive receiver locations (City of Eastvale Municipal Code Section 8.52.040 (included in this report as Table 3) or

- If the existing ambient noise levels at the nearby noise-sensitive receivers near the project site:

    - are less than 60 dBA L_{eq} and the project creates a readily perceptible 5 dBA Leq or greater project-related noise level increase; or
    - range from 60 to 65 dBA L_{eq} and the project creates a barely perceptible 3 dBA L_{eq} or greater project-related noise level increase; or

- already exceed 65 dBA L_{eq}, and the project creates a community noise level impact of greater than 1.5 dBA Leq (FICON, 1992).

Construction Noise and Vibration

- If project-related construction activities:

  - occur at any time other than the permitted hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May (Section 8.52.040 of the City of Eastvale Municipal Code); or
  - generate noise levels which exceed the 85 dBA L_{eq} acceptable noise level threshold at the nearby sensitive receiver locations (NIOSH, Criteria for Recommended Standard: Occupational Noise Exposure); or
  - generate temporary project construction-related noise level increases which exceed the 12 dBA L_{eq} substantial noise level increase threshold at noise-sensitive receiver locations (California Department of Transportation, Traffic Noise Analysis Protocol).

- If short-term project generated construction vibration levels exceed the City of Eastvale acceptable vibration standard of 0.0787 in/sec PPV at sensitive receiver locations (City of Eastvale General Plan, Policy N-3).

Table 6
Significance of Noise Impacts at Noise-Sensitive Receptors

Without Project Noise Level	Potential Significant Impact
< 60 dBA	5 dBA or more
60 - 65 dBA	3 dBA or more
> 65 dBA	1.5 dBA or more

5. EXISTING NOISE LEVEL MEASUREMENTS

In order to document existing ambient noise levels in the project area, one (1) long-term 24-hour noise measurement and four (4) short-term 15-minute noise measurements were taken by Ganddini Group, Inc. from November 2, 2020, to November 3, 2020. Figure 6 provides the noise measurement locations. Field worksheets and noise measurement output data are included in Appendix C.

MEASUREMENT PROCEDURE AND CRITERIA

Four short-term (10 minute) noise measurements and one long-term (24-hours) noise measurement were taken at nearby sensitive receptors in order to document the existing noise environment. Measurements were taken during typical weekday conditions. An American National Standards Institute (ANSI Section SI4 1979, Type 1) Larson Davis model LxT sound level meter was used to measure existing ambient noise levels in the project area. The Larson Davis sound level meter was calibrated using a Larson-Davis calibrator, Model CAL 250. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4- 2014/IEC 61672-1:2013.

NOISE MEASUREMENT LOCATIONS

The long-term noise level measurement was positioned on the project site, where the meter could be secured, to measure the existing ambient hourly noise levels in the project vicinity. Both the California Department of Transportation and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent any part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the California Department of Transportation general site location guidelines which indicate that, sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources (California Department of Transportation 2013). Further, FTA guidance states, that it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community (FTA 2018).

Based on recommendations of the California Department of Transportation and the FTA, it is not necessary to collect measurements at each individual building or residence, because each receiver measurement represents a group of buildings that share acoustical equivalence (FTA 2006). In other words, the area represented by the receiver shares similar terrain, and geometric relationship to the reference noise source. Receivers represent a location of noise sensitive areas and are used to estimate the future noise level impacts. Collecting reference ambient noise level measurements at the nearby sensitive receiver locations allows for a comparison of the before and after project noise levels and is necessary to assess potential noise impacts due to the Project's contribution to the ambient noise levels.

NOISE MEASUREMENT RESULTS

Table 8 identifies the hourly daytime (7:00 AM to 10:00 PM) and nighttime (10:00 PM to 7:00 AM) noise levels in the vicinity of the noise measurement location, while Table 9 identifies 15-minute daytime representative noise levels at nearby sensitive receptors. Appendix C provides a summary of the existing ambient noise levels described below:

- Long-term Noise Measurement 1 (LT1) was taken at the southern end of the project site near the western property boundary and represents noise levels at the single-family detached dwelling unit located immediately west of the project site (see Figure 6 and Table 8). Hourly noise levels at location LT1 ranged

from 53.9 to 61.6 dBA L_{eq} during the daytime hours and between 47.4 to 56.6 dBA L_{eq} during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 57 dBA L_{eq} with an average nighttime noise level of 51.7 dBA L_{eq}. The calculated CNEL is 56.4 dBA.

- Short-term Noise Measurement 1 (STNM1) was taken to the west of the project site and is representative of the single-family detached residential dwelling unit located adjacent to the west of the project site (see Figure 6 and Table 9). The short-term ambient noise level at this location was measured at 52.5 dBA L_{eq}.

- Short-term Noise Measurement 2 (STNM2) was taken in the single-family residential neighborhood to the south of the project site and is representative of the single-family detached residential dwelling units located to the south of the project site across Chandler Street (see Figure 6 and Table 9). The short-term ambient noise level at this location was measured at 47.3 dBA L_{eq}.

- Short-term Noise Measurement 3 (STNM3) was taken in the single-family residential neighborhood to the east of the project site and is representative of the single-family detached residential dwelling units located to the east of the project site across Archibald Avenue (see Figure 6 and Table 9). The short-term ambient noise level at this location was measured at 65.7 dBA L_{eq}.

- Short-term Noise Measurement 4 (STNM34) was taken in the single-family residential neighborhood to the north of the project site and is representative of the single-family detached residential dwelling units located to the north of the project site (see Figure 6 and Table 9). The short-term ambient noise level at this location was measured at 44.9 dBA L_{eq}.

Existing ambient noise levels in the project area are dominated by the transportation-related noise associated with Archibald Avenue, Chandler Street, and other surrounding roadways. Noise measurement field sheets and output data are provided in Appendix C.

Table 8
Long-Term Noise Measurement Summary (LT1) (dBA)

6. METHODS AND PROCEDURES

The following section outlines the methods and procedures used to model and analyze the future traffic noise environment.

FHWA TRAFFIC NOISE PREDICTION MODEL

The estimated roadway noise impacts from vehicular volumes were calculated using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model - FHWA-RD-77-108. The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period.

Table 10 presents the roadway parameters used to assess the project's off-site transportation noise impacts for each affected roadway segment, including: the adjacent existing land use, the distance from the centerline to the nearest land use based on the functional roadway classifications per the City of Eastvale General Plan Circulation Element, and the posted vehicle speeds. For this analysis, hard site conditions are used to analyze the traffic noise impacts within the project study area to predict worst-case, conservative noise levels. A hard site, such as pavement, is highly reflective and does not attenuate noise as quickly as grass or other soft sites. The Existing and Opening Year average daily traffic volumes used for this study are presented in Table 11 and are provided by the Archibald at Chandler Commercial Project Traffic Impact Analysis prepared by Ganddini Group, Inc. (October 28, 2020).).[1] Table 11 also presents the time-of-day vehicle splits and the traffic flow distributions (vehicle mix) used for this analysis. The vehicle mix provides the hourly distribution percentages of automobile, medium trucks, and heavy trucks for input into the FHWA noise prediction model.

CONSTRUCTION NOISE MODEL

Construction noise associated with the proposed project was calculated at the sensitive receptor locations, utilizing methodology presented in the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (2018) together with several key construction parameters including: distance to each sensitive receiver, equipment usage, percent usage factor, and baseline parameters for the project site. Distances to receptors were based on the acoustical center of the project site. The equipment used to calculate the construction noise levels for each phase were based on the assumptions provided in the CalEEMod modeling in the Archibald at Chandler Commercial Project Air Quality, Global Climate Change, TAC and Energy Impact Analysis (Ganddini Group, Inc., 2020).[2] For construction noise purposes, the distance measured from the project site to sensitive receptors was assumed to be the acoustical center of the project site to the property line of residential properties with existing residential buildings. Modeling input parameters and output are provided in Appendix D.

[1] The proposed project is to generate approximately 1,686 net new daily vehicle trips. The Archibald at Chandler Commercial Project Traffic Impact Analysis prepared by Ganddini Group, Inc. (October 28, 2020) showed that the previous version of the project was to generate approximately 4,871 net new daily vehicle trips. Therefore, as the project generated vehicle trips have decreased from that provided for the previous version of the project, and in order to provide a more conservative analysis, this analysis utilizes the higher trip generation rate provided in the 2020 Traffic Impact Analysis.

[2] The Air Quality, Global Climate Change, TAC and Energy Impact Analysis prepared for the project has not been recently updated. However, as the equipment assumptions are anticipated to be similar, based on the size and type of uses proposed on the project site, the equipment assumptions from the 2020 study have been utilized in this analysis.

Noise levels generated by construction equipment generally range between 73 dBA Lmax to 101 dBA Lmax when measured at 50 feet. These maximum noise levels are expected to occur for only a portion of each hour. This percentage is referred to as the usage factor, or the percentage of time that each piece of equipment is expected to be utilized on a typical construction site. In order to calculate the Leq associated with a piece of construction equipment, the maximum noise level is adjusted to take into account the equipment's usage factor and the distance between the equipment and the receptor.

SOUNDPLAN

The SoundPLAN software utilizes algorithms (based on the inverse square law) to calculate noise level projections. The software allows the user to input specific noise sources, spectral content, sound barriers, building placement, topography, and sensitive receptor locations.

SoundPLAN was utilized to model noise associated with worst-case operation of the proposed project. On-site operational noise sources that were included in the model include: rooftop air conditioning units, drive-thru queue line and ordering, parking lot vehicle movements, outdoor eating and patio areas, car wash turbines (dryers) and vacuums. Car wash and vacuum noise was analyzed in a separate noise study and resulting noise levels are incorporated later into report findings. Modeling details are discussed below. SoundPLAN inputs and outputs are provided in Appendix E.

Rooftop Air Conditioning Units

It is expected that the buildings associated with the proposed project would include rooftop mounted heating, ventilation, and air conditioning (HVAC) units. The type, size and number of mechanical equipment are not known at this time. A conservative estimate was utilized for modeling purposes. The HVAC equipment was modeled as point sources placed on-top of each structure's roof. Specifications for a Carrier 50 Ton packaged cooling unit with a sound power level of 86 dBA were utilized for modeling purposes. No rooftop parapets were modeled. Sound level specifications are provided in Appendix E.

Drive-Thru and Queuing Line

No drive-thru speakers are proposed. Orders will be taken at the window. Drive-thru ordering was modeled as point sources and a SoundPLAN noise reference level to represent loud human voices of 70 dBA utilized.

A queuing line associated with vehicles waiting in line to order food at the proposed drive-thru was modeled utilizing a line noise source with a sound power level of 50 dBA every square meter.

Parking Lot Vehicle Movements

Noise associated with parking lots include, but are not limited to idling cars/trucks, trucks, doors closing, and starting engine noise. Noise levels associated with parking lots typically range between 44-63 dBA L_{eq} at a distance of 100 feet. Vehicle movements are the most consistent and predominant noise in parking lot areas. Noise associated with the proposed parking lots were determined based on the project trip generation rate and SoundPLAN modeling procedures. Specifically, a total of 53 parking spaces and 45 peak hour trips were entered into the SoundPLAN noise model. Trips associated with the car wash were not included in the modeling of parking areas.

Outdoor Eating Areas

An area noise source of 65 dBA per meter was used to represent conversational voices in the proposed outdoor eating and patio areas.

Car Wash

A separate noise study was prepared for the proposed project[3] and is included as Appendix F in this report. Modeled noise sources included car wash turbine (dryer) and vacuums. The drying system was modeled with a sound power level of 81 dBA and the vacuums were modeled with a sound power level of 81 dBA. Results of the car wash analysis were combined with the results of this study in Section 9 of this report.

Outdoor Dining Area

The outdoor eating area proposed at the northeast corner of the project site was modeled by utilizing SoundPLAN noise reference level for a human voice at 70 dBA/square meter within the outdoor patio and dining areas.

VIBRATION ASSESSMENT

This analysis focuses on the potential ground-borne vibration associated with vehicular volumes and construction activities. Ground-borne vibration levels from automobile volumes are generally overshadowed by vibration generated by heavy trucks that roll over the same uneven roadway surfaces. However, due to the rapid drop-off rate of ground-borne vibration and the short duration of the associated events, vehicular traffic-induced ground-borne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity.

However, while vehicular volumes are rarely perceptible, construction has the potential to result in varying degrees of temporary ground vibration, depending on the specific construction activities and equipment used. Ground vibration levels associated with various types of construction equipment are summarized in Table 12. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the human response (annoyance) using the following vibration assessment methods defined by the FTA. To describe the human response (annoyance) associated with vibration impacts the FTA provides the following equation: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$.

7. OFF-SITE TRANSPORTATION NOISE IMPACTS

NOISE CONTOURS

In order to calculate the increase in ambient noise levels due to project generated vehicle noise, noise levels associated with existing traffic conditions, existing plus the project noise conditions, opening year without the project traffic conditions, and opening year with the proposed project traffic conditions were modeled utilizing traffic data provided in the Archibald at Chandler Commercial Project Traffic Impact Analysis prepared by Ganddini Group, Inc. (October 28, 2020).).

Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway and do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the project study area. Tables 13 and 14 present exterior noise levels for Existing without Project and Existing with Project scenarios, without barrier attenuation, for the 11 study area roadway segments; and Tables 15 and 16 present exterior noise levels for Opening Year without Project and Opening Year with Project scenarios, without barrier attenuation, for the 11 study area roadway segments. Appendix G includes a summary of the traffic noise level contours for each of the traffic scenarios.

Based on the noise impact significance criteria described in Section 4 and shown in Table 7, a significant impact associated with project generated vehicle traffic would occur:

- When the noise levels at existing and future noise-sensitive land uses (e.g., residential, etc.):
  - are less than 60 dBA CNEL and the project creates a readily perceptible 5 dBA CNEL or greater project-related noise level increase; or
  - range from 60 to 65 dBA CNEL and the project creates a barely perceptible 3 dBA CNEL or greater project-related noise level increase; or
  - already exceed 65 dBA CNEL, and the project creates a community noise level impact of greater than 1.5 dBA CNEL (FICON, 1992).

EXISTING CONDITIONS PROJECT TRAFFIC NOISE LEVEL CONTRIBUTIONS

Table 13 presents the Existing without Project conditions CNEL noise levels which are expected to range between 49.3-77.1 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 14 shows the Existing with Project conditions will range from 52.3-77.3 dBA CNEL. As shown in Table 15, project generated vehicle trips are projected to result in increases in the existing ambient noise level of less than 1.5 dB for all modeled roadway segments other than the roadway segment of Grapewin Street east of Archibald Avenue. Grapewin Street east of Archibald Avenue has a projected increase of 3.0 dB; however, the modeled Existing with Project noise level is 52.3 dBA CNEL for this roadway segment, which is substantially lower than the lowest FICON significance criteria of 60 dBA. Based on the significance criteria in Section 4, the project-related noise level increases are considered less than significant. No mitigation is required.

OPENING YEAR PROJECT TRAFFIC NOISE LEVEL CONTRIBUTIONS

Table 16 presents the Opening Year without project conditions CNEL noise levels which are expected to range from 49.3 to 78.3 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 17 shows the Opening Year with project conditions will range from 52.3 to 78.4 dBA CNEL. As shown in Table 18, project generated vehicle trips are projected to result in increases in the

noise level of less than 1.5 dB for all modeled roadway segments other than the roadway segment of Grapewin Street east of Archibald Avenue. Grapewin Street east of Archibald Avenue has a projected increase of 3.0 dB; however, the modeled Opening Year With Project noise level is 52.3 dBA CNEL for this roadway segment, which is substantially lower than the lowest FICON significance criteria of 60 dBA.

Based on the significance criteria in Section 4, the project-related noise level increases are considered less than significant under Opening Year with project conditions at land uses adjacent to roadways conveying project trips.

Grapewin Street	East of Archibald Avenue	15	49.3	52.3	3.0	No	Yes

Notes:

(1) Distance calculated from the centerline of the roadway segment to the property line of the nearest adjacent land use. Distances estimated through the use of Google Earth Pro.

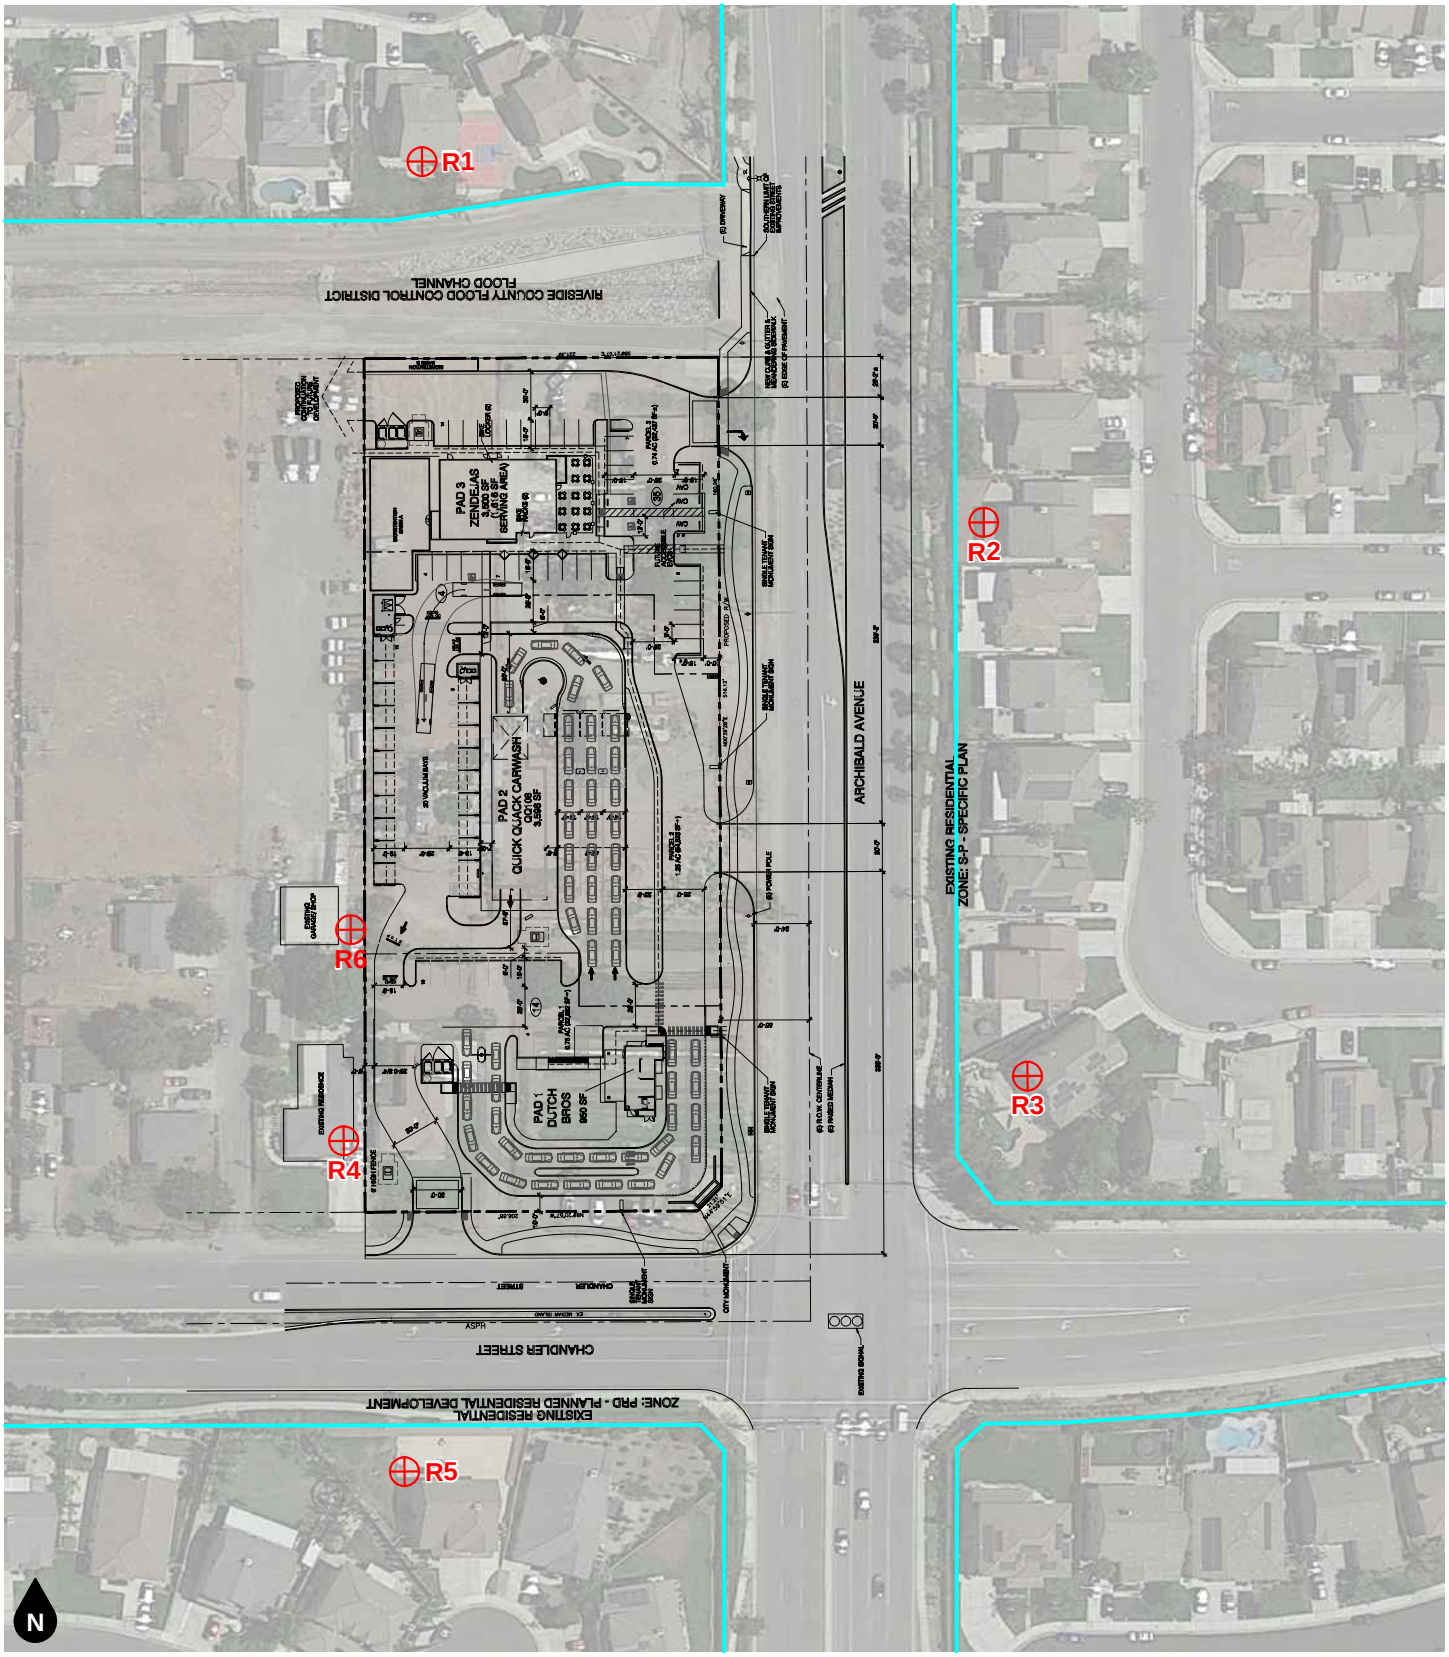
8. RECEIVER LOCATIONS

To assess the potential for long-term operational noise and short-term construction noise and vibration impacts, the following five representative receiver locations (see Figure 7) were identified as representative locations for focused analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family detached dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include multi-family attached dwellings, hotels, motels, dormitories, out-patient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered less sensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, natural open space, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

Sensitive receivers near the project site include existing residential homes as described below. The closest sensitive receiver location is represented by R4, which is located on a residential property adjacent to the project site. Other sensitive land uses in the project study area that are located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures.



R1: Located as close as 88 feet north of the project site, R1 represents existing outdoor living areas (backyards) of residential homes just north of the project site along Redwood Valley Road. A 15-minute short-term noise level measurement (STNM4) was taken near this location in order to characterize the existing ambient noise environment.

R2: Location R2 represents existing outdoor living areas (backyards) of residential homes located as close as 110 feet east of the project site along Coffeeberry Drive. Archibald Avenue lies between the project site and the sensitive receptors to the west located along Coffeeberry Drive. A 15-minute noise level measurement was taken near this location (STNM3), to characterize the existing ambient noise environment.

R3: Location R3 represents existing outdoor living area (backyard) of residential homes located as close as 115 feet east of the project site at the south end of Coffeeberry Drive. Archibald Avenue lies between the project site and the sensitive receptors to the west located along Coffeeberry Drive. A 15-minute noise level measurement, STNM3, was taken near this location to characterize the existing ambient noise environment.

R4: Location R4 represents existing outdoor living area (backyard) of residential homes located west of the project site. The closest residential property line is adjacent to the southwestern project property line. The single-family detached residential dwelling unit is approximately 8 feet from the property line. In addition, a storage/garage like structure is located just north of the dwelling unit approximately 15 feet from the property line. STNM1 was taken near this location to characterize the existing ambient noise environment.

R5: Location R5 represents existing outdoor living area (backyard) of residential homes as close as 115 feet south of the project site along Pointer Loop. Chandler Street lies between the project site and the sensitive receptors to the south. A 15-minute noise level measurement (STNM2) was taken to represent ambient noise levels at R5. Vehicle volumes on Chandler Street and Archibald Avenue is the dominant noise source at this location.

9. OPERATIONAL IMPACTS

This section analyzes the potential operational noise impacts due to the project's stationary noise sources on the off-site sensitive receiver locations identified in Section 8.

OPERATIONAL NOISE LEVELS

Figure 8 shows noise levels associated with the proposed project without the car wash because car wash noise was modeled in a separate study. Figure 9 shows operational noise levels associated with the entire project.

COMPLIANCE WITH APPLICABLE STANDARDS

The proposed project will operate between 7:00 AM and 10:00 PM and therefore, would not exceed any nighttime noise standards. Significant impacts related to project operations would occur if the project resulted in any of the following:

- If project-related operational (stationary-source) noise levels exceed 60 dBA Leq between the hours of 7:00 AM and 10:00 PM or exceed 50 dBA Leq between the hours of 10:00 PM and 7:00 AM.

- If project-related operational (stationary-source) noise levels cause interior noise levels to exceed 45 dBA, CNEL.

- If project-related operational (stationary-source) noise levels exceed the exterior 55 dBA Lmax daytime or 45 dBA Lmax nighttime noise level standards at nearby sensitive receiver locations (City of Eastvale Municipal Code Section 8.52.040 (included in this report as Table 3).

As discussed previously, Lmax noise levels for noise sources were utilized in the SoundPLAN noise model, and it was assumed that all sources would be in operation for the entire modeled period. Therefore, the Leq and the Lmax noise levels associated with the project are the same.

As shown in Figure 9 and Table 19, noise levels associated with project operational noise sources are expected to range from 46 to 54 dBA Leq and will not exceed the daytime General Plan Leq noise level standard of 60 dBA Leq or exceed the Municipal Code standard of 55 dBA Lmax. The project will operate between the hours of 7:00 AM and 10:00 PM and therefore, will not result in any exceedances of nighttime noise standards. This impact would not be significant. No mitigation is required.

The existing measured CNEL is 61 dB. Project operational noise during daytime hours will add approximately 1 dB to each hour. The existing plus project CNEL would still be 61 dBA with project operational noise. Residential construction methods typically provide 20 dB of exterior to interior noise reduction with provision of HVAC to allow for a windows-closed condition. Project operation will not result in interior noise levels that exceed the 45 dBA CNEL noise standard. This impact is less than significant. No mitigation is required.

INCREASE IN AMBIENT NOISE LEVELS

- If the existing ambient noise levels at the nearby noise-sensitive receivers near the project site:

    - are less than 60 dBA L_{eq} and the project creates a readily perceptible 5 dBA L_{eq} or greater project-related noise level increase; or
    - range from 60 to 65 dBA L_{eq} and the project creates a barely perceptible 3 dBA L_{eq} or greater project-related noise level increase; or

- already exceed 65 dBA L_{eq}, and the project creates a community noise level impact of greater than 1.5 dBA L_{eq} (FICON, 1992).

Project operational noise levels presented in Figure 9 were combined with existing ambient representative noise measurements presented in Tables 8 and 9 and compared to the existing noise level measurements in order to quantify the project's contribution to the increase in ambient noise levels. Since the units used to measure noise, decibels (dB), are logarithmic units, the project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. Instead, they must be logarithmically added using the following base equation:

$$SPLTotal = 10log10[10SPL1/10 + 10SPL2/10 + \ldots 10SPLn/10]$$

Where "SPL1," "SPL2," etc. are equal to the sound pressure levels being combined, or in this case, the project-operational and existing ambient noise levels. The difference between the combined project and ambient noise levels describe the project noise level contributions.

As shown in Table 20 operation of the project would result in increases in ambient noise levels of up to 5 dBA dB but would not result in violation of any of the above thresholds due to relatively quiet ambient noise levels. Project operational noise would not result in substantial increases in ambient noise levels. No mitigation is required.

Table 19
Compliance with Exterior Stationary Noise Standards (dBA, Leq)

Reciever Location[1]	Project Operational Leq[2]	Exceeds Daytime Leq Standard of 60 dBA?	Lmax[3]	Exceeds Lmax Standard of 55 dBA?

10. CONSTRUCTION IMPACTS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the project. For the purposes of this analysis, it is assumed that the project boundaries represent the construction activity area.

CONSTRUCTION NOISE LEVELS

Project generated construction noise will vary depending on the construction process, type of equipment involved, location of the construction site with respect to sensitive receptors, the schedule proposed to carry out each task (e.g., hours and days of the week) and the duration of the construction work. Construction activities for the proposed project are anticipated to occur in the following stages:

- Grading
- Building Construction
- Paving
- Architectural Coating

RCNM noise reference levels and usage factors are shown in Table 21. The list shown in Table 21 is extensive, and not all equipment listed is expected to be utilized on the project site.

As stated previously, construction noise associated with the proposed project was calculated at the sensitive receptor locations, utilizing methodology presented in the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (2018) together with several key construction parameters including: distance to each sensitive receiver, equipment usage, percent usage factor, and baseline parameters for the project site. Distances to receptors were based on the acoustical center of the project site. The equipment used to calculate the construction noise levels for each phase were based on the assumptions provided in the CalEEMod modeling in the Archibald at Chandler Commercial Project Air Quality, Global Climate Change, TAC and Energy Impact Analysis (Ganddini Group, Inc., 2020). For construction noise purposes, the distance measured from the project site to sensitive receptors was assumed to be the acoustical center of the project site to the property line of residential properties with existing residential buildings. Construction noise worksheets are provided in Appendix D.

Noise levels generated by construction equipment generally range between 73 dBA Lmax to 101 dBA Lmax when measured at 50 feet (see Table 21). These maximum noise levels are expected to occur for only a portion of each hour. This percentage is referred to as the usage factor, or the percentage of time that each piece of equipment is expected to be utilized on a typical construction site. In order to calculate the Leq associated with a piece of construction equipment, the maximum noise level is adjusted to take into account the equipment's usage factor and the distance between the equipment and the receptor.

CONSTRUCTION NOISE THRESHOLDS OF SIGNIFICANCE

Construction noise is considered a short-term impact and would be considered significant if construction activities:

- Occur at any time other than the permitted hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May (Section 8.52.040 of the City of Eastvale Municipal Code); or

- Generate noise levels which exceed the 85 dBA L_{eq} acceptable noise level threshold at nearby sensitive receptor locations; or

- Generate temporary project construction-related noise level increases which exceed the 12 dBA L_{eq} substantial noise level increase threshold at noise-sensitive receiver locations (California Department of Transportation, Traffic Noise Analysis Protocol).

CONSTRUCTION NOISE ANALYSIS

The unmitigated construction modeling results are presented in Tables 22 through 25. These tables show, by construction stage, the construction equipment anticipated to be used, as well as their respective anticipated noise levels at nearby sensitive receptors. As shown in Tables 22 through 25, the unmitigated construction noise levels will range from 57.5 to 77.3 dBA L_{eq} at the sensitive receiver locations. Table 26 provides a summary of unmitigated noise levels from each stage of construction at each of the sensitive receiver locations. Figure 10 shows the construction activity noise source location and the distance from the boundary of the construction activities to each nearby sensitive receiver location. Appendix D includes the construction modeling spreadsheets.

CONSTRUCTION NOISE COMPLIANCE WITH STANDARD

As shown in Table 26, the highest unmitigated construction noise levels for each construction phase are expected to range from 68.1 to 77.3 dBA L_{eq} at the modeled sensitive receptors. Table 27 shows that unmitigated project construction noise levels are not anticipated to exceed the 85 dBA L_{eq} noise criteria.

CONSTRUCTION NOISE LEVEL INCREASE IN AMBIENT NOISE LEVELS

The existing measured average daytime noise levels in the vicinity of the project range between 44.9 and 65.7 dBA L_{eq}. To describe the temporary project construction noise level contributions to the existing ambient noise environment, the project construction noise levels were combined with the existing ambient noise level measurements at the off-site receiver locations. The difference between the combined project-construction and ambient noise levels are used to describe the construction noise level contributions. Unmitigated temporary noise level increases that would be experienced at sensitive receiver locations when project construction noise is added to the ambient daytime conditions are presented in Table 27. A temporary noise level increase of 12 dBA L_{eq} is considered a potentially significant impact based on the California Department of Transportation substantial noise level increase criteria which is used to assess the project-construction noise level increases. No nighttime construction activity is permitted per the City of Eastvale Municipal Code, and therefore, nighttime noise level increases are not analyzed in this noise study.

As shown in Table 27 the project will contribute unmitigated, worst-case construction noise level increases between 6.1 to 24.8 dBA L_{eq} at the adjacent sensitive receiver locations during the daytime hours. Mitigation is required.

Mitigated construction noise is shown in Table 28. As shown in Table 29, the project will contribute mitigated, worst-case construction noise level increases between 0.7 and 11.8 dBA L_{eq}. The construction mitigation measures have been provided below. As shown below, Mitigation Measure 4 requires the contractor to equip all construction equipment with mufflers and/or enclosures/acoustical tents (as appropriate) that achieve at least 12 dB reduction. In addition, Mitigation Measure 3 requires the installation of temporary construction noise barriers/blankets along the western property line adjacent to R4 lot line before the beginning anyl construction activities. The barrier needs to provide at least 8 dB of reduction.. It should be noted that receptor R4 requires a total reduction of at least 20 dB; therefore, the calculated barrier reduction of 8 dB in Mitigation Measure 3 takes into account the 12 dB reduction from mufflers and/or enclosures or acoustical tents specified in Mitigation Measure 4. Therefore, project construction source noise level increases would not exceed 12 dBA L_{eq} with incorporation of the mitigation measures listed below.

All construction will be conducted during the hours allowed in the Municipal Code and therefore, would be consistent with the applicable plans and policies. Further, Policy N-24 of the City of Eastvale General Plan

requires construction equipment to be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer. Implementation of the following mitigation measures, General Plan Policy N-24, and compliance with the City's restrictions on the hours allowed for construction activities will reduce construction noise levels to a below the significance criteria. Project construction noise impacts are considered less than significant.

Mitigation Measure 1 The construction contractor(s) shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the project site.

Mitigation Measure 2 The construction contractor(s) shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 6:00 AM to 6:00 PM June through September, and 7:00 AM to 6:00 PM October through May).

Mitigation Measure 3 The contractor shall install temporary construction noise barriers/blankets that achieve a noise reduction of at least 8 dB along the western boundary of the project site in the vicinity of the existing single-family residence. The barrier/blankets shall be solid with no cracks or holes. The barrier shall also reach to the ground. It should be noted that R4 requires a total reduction of 20 dB and the calculated barrier reduction total of 8 dB takes into account 12 needed 12 dB reduction from mufflers and/or enclosures or acoustical tents required for all receptors identified in Mitigation Measure 4.

Mitigation Measure 4 During all project construction phases on-site, construction contractors shall equip all construction equipment, fixed or mobile, with either properly operating and maintained mufflers or enclosures/acoustical tents (as appropriate) that achieve at least 12 dB reduction from noise level specifications presented in Table 21 of this report.

CONSTRUCTION VIBRATION IMPACTS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from project construction activities would cause only intermittent, localized intrusion. The proposed project's construction activities most likely to cause vibration impacts are:

- Heavy Construction Equipment: Although all heavy mobile construction equipment has the potential of causing at least some perceptible vibration while operating close to building, the vibration is usually short-term and is not of sufficient magnitude to cause building damage.

- Trucks: Trucks hauling building materials to construction sites can be sources of vibration intrusion if the haul routes pass through residential neighborhoods on streets with bumps or potholes. Repairing the bumps and potholes generally eliminates the problem.

Ground-borne vibration levels resulting from construction activities occurring within the project site were estimated by data published by the Federal Transit Administration. Construction activities that would have the potential to generate low levels of ground-borne vibration within the project site include grading. Using the vibration source level of construction equipment provided in Table 12 and the construction vibration assessment methodology published by the FTA, it is possible to estimate the project vibration impacts. Table 30 presents the unmitigated project construction-related vibration levels at each of the sensitive receiver locations.

Based on the reference vibration levels provided by the FTA, a large bulldozer represents the peak source of vibration with a reference velocity of 0.089 in/sec PPV at 25 feet. At distances ranging from 10 to 150 feet from the project construction activities, construction vibration velocity levels are expected to range from 0.000 to 0.492 in/sec PPV. Based on the City of Eastvale vibration standard of 0.0787 in/sec PPV, the proposed project construction activities will generate unmitigated vibration levels which remain below the 0.0787 in/sec PPV threshold at Receivers 1 through 3 and 5; however, due to the proximity to the western property line, Receiver 4 could have potentially significant impacts. Therefore, to satisfy the City of Eastvale vibration standard of 0.0787 in/sec PPV, Noise Mitigation Measure 5 restricts the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary (Receiver 4). As shown in Table 31, with application of Mitigation Measure 5 impacts at receiver location R4 would be less than significant. Vibration worksheets are provided in Appendix H.

Mitigation Measure 5 The contractor shall restrict the use of jackhammers within 15 feet, loaded trucks within 25 feet, and large bulldozers within 28 feet of the residential structure located at the western project boundary (Figure 10 - Receiver 4).

R5 Yard	385	12.0	53.2

Notes:

(1) Reference noise levels and usage factors as identified the Federal Highway Administration's Roadway Construction Noise Model (RCNM) User's Guide, the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (September 2018), and/or SoundPLAN reference list.

(2) The distance measured from the project site to sensitive receptors was assumed to be the acoustical center of the project site to the property line (yard) or structure of residential properties with existing residential buildings.

(3) Per SoundPLAN modeling, existing 6-foot walls provide approximately 12 dB reduction.

(4) As calculated utilizing methodology presented in the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (2018). Worksheets are provided in Appendix D.

(2) The distance measured from the project site to sensitive receptors was assumed to be the acoustical center of the project site to the property line (yard) or structure of residential properties with existing residential buildings.

(3) Per SoundPLAN modeling, existing 6-foot walls provide approximately 12 dB reduction.

(4) As calculated utilizing methodology presented in the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (2018). Worksheets are provided in Appendix D.

Table 26
Unmitigated Construction Equipment Noise Level Summary

Receiver Location[1]	Unmitigated Construction Noise Levels (dBa L_{eq})				
	Grading	Building Construction	Paving	Architectural Coating	Highest Construction Noise Level[2]
R1	68.4	67.0	64.8	57.9	68.4
R2	70.6	69.1	67.0	60.0	70.6
R3	70.4	68.9	66.7	59.8	70.4
R4	77.3	75.9	73.7	66.8	77.3
R5	68.1	66.6	64.5	57.5	68.1

Notes:

(1) Noise receiver locations are shown on Figure 7.

(2) Estimated construction noise levels during peak operating conditions.

Table 27
Unmitigated Construction Noise Level Compliance

Receiver Location[1]	Highest Construction Noise Level[2]	Measurement Location[3]	Threshold[4]	Threshold Exceeded?	Reference Ambient Noise Level[5]	Combined Project and Ambient[6]	Temporary Worst-Case Project Contribution[7]	Threshold Exceeded[8]
R1	68.4	STNM4	85.0	No	44.9	68.4	23.5	Yes
R2	70.6	STNM3	85.0	No	65.7	71.8	6.1	No
R3	70.4	STNM3	85.0	No	65.7	71.7	6.0	No
R4	77.3	STNM1	85.0	No	52.5	77.3	24.8	Yes
R5	68.1	STNM2	85.0	No	47.3	68.1	20.8	Yes

Notes:

(1) Noise receiver locations are shown on Figure 7.

(2) Highest modeled construction noise level from all construction phases as shown in Table 31.

(3) Ambient noise measurement locations as shown on Figure 6.

(4) Construction noise threshold per the Criteria for Recommended Standard: Occupational Noise Exposure prepared by the National Institute for Occupational Safety and Health (NIOSH).

(5) Measured average daytime ambient noise level (Leq) from Table 9.

(6) Represents the combined ambient conditions plus the project construction activities.

(7) The temporary noise level increase expected with addition of the unmitigated proposed project construction activities.

(8) Based on the 12 dBA temporary increase significance criteria identified in Section 4.

Table 28
Mitigated Construction Equipment Noise Level Summary

Reciever Location[1,4]	Unmitigated Construction Noise Levels (dBa L_{eq})				
	Grading	Building Construction	Paving	Architectural Coating	Highest Construction Noise Level[2]
R1	56.4	55.0	52.8	45.9	56.4
R2	58.6	57.1	55.0	48.0	58.6
R3	58.4	56.9	54.7	47.8	58.4
R4[3]	57.3	55.9	53.7	46.8	57.3
R5	56.1	54.6	52.5	45.5	56.1

Notes:

(1) Noise receiver locations are shown on Figure 7.

(2) Estimated construction noise levels during peak operating conditions.

(3) Mitigation requiring the installation of temporary construction noise barriers/blankets along the western property line adjacent to R4 before the beginning of all construction activities. The tempoary noise barriers/blankets will need to reduce noise levels by at least approximatley 8 dB. It should be noted that R4 requires a total reduction of 20 dB and the calculated barrier reduction total of 8 dB takes into account reduction from mufflers and/or enclosures or acoustical tents required for all receptors (see footnote 4 below).

(4) Mitigation requiring that all construction equipment include mufflers and/or enclosures or acousticals tents (as appropriate) that provide at least 12 dB of noise reduction.

Table 29
Mitigated Construction Noise Level Compliance

Receiver Location[1]	Highest Construction Noise Level[2]	Measurement Location[3]	Threshold[4]	Threshold Exceeded?	Reference Ambient Noise Level[5]	Combined Project and Ambient[6]	Temporary Worst-Case Project Contribution[7]	Threshold Exceeded[8]
R1	56.4	STNM4	85.0	No	44.9	56.7	11.8	No
R2	58.6	STNM3	85.0	No	65.7	66.5	0.8	No
R3	58.4	STNM3	85.0	No	65.7	66.4	0.7	No
R4	57.3	STNM1	85.0	No	52.5	58.5	6.0	No
R5	56.1	STNM2	85.0	No	47.3	56.6	9.3	No

Notes:

(1) Noise receiver locations are shown on Figure 7.

(2) Highest modeled construction noise level from all construction phases as shown in Table 33 with mitigation measures implemented.

(3) Ambient noise measurement locations as shown on Figure 6.

(4) Construction noise threshold per the Criteria for Recommended Standard: Occupational Noise Exposure prepared by the National Institute for Occupational Safety and Health (NIOSH).

(5) Measured average daytime ambient noise level (Leq) from Table 9.

(6) Represents the combined ambient conditions plus the project construction activities.

(7) The temporary noise level increase expected with addition of the mitigated proposed project construction activities.

(8) Based on the 12 dBA temporary increase significance criteria identified in Section 4.

Table 30
Unmitigated Construction Equipment Vibration Levels

Receiver Location[1]	Distance to Construction Activity (feet)	Receiver PPV Levels (in/sec)[2]					Threshold Exceeded?[3]
		Small Dozer	Jackhammer	Loaded Trucks	Large Bulldozer	Highest Levels (PPV)	
R1	120	0.000	0.003	0.007	0.008	0.008	No
R2	130	0.000	0.003	0.006	0.008	0.008	No
R3	145	0.000	0.003	0.005	0.006	0.006	No
R4	8	0.017	0.193	0.420	0.492	0.492	Yes
R5	140	0.000	0.003	0.006	0.007	0.007	No

Notes:

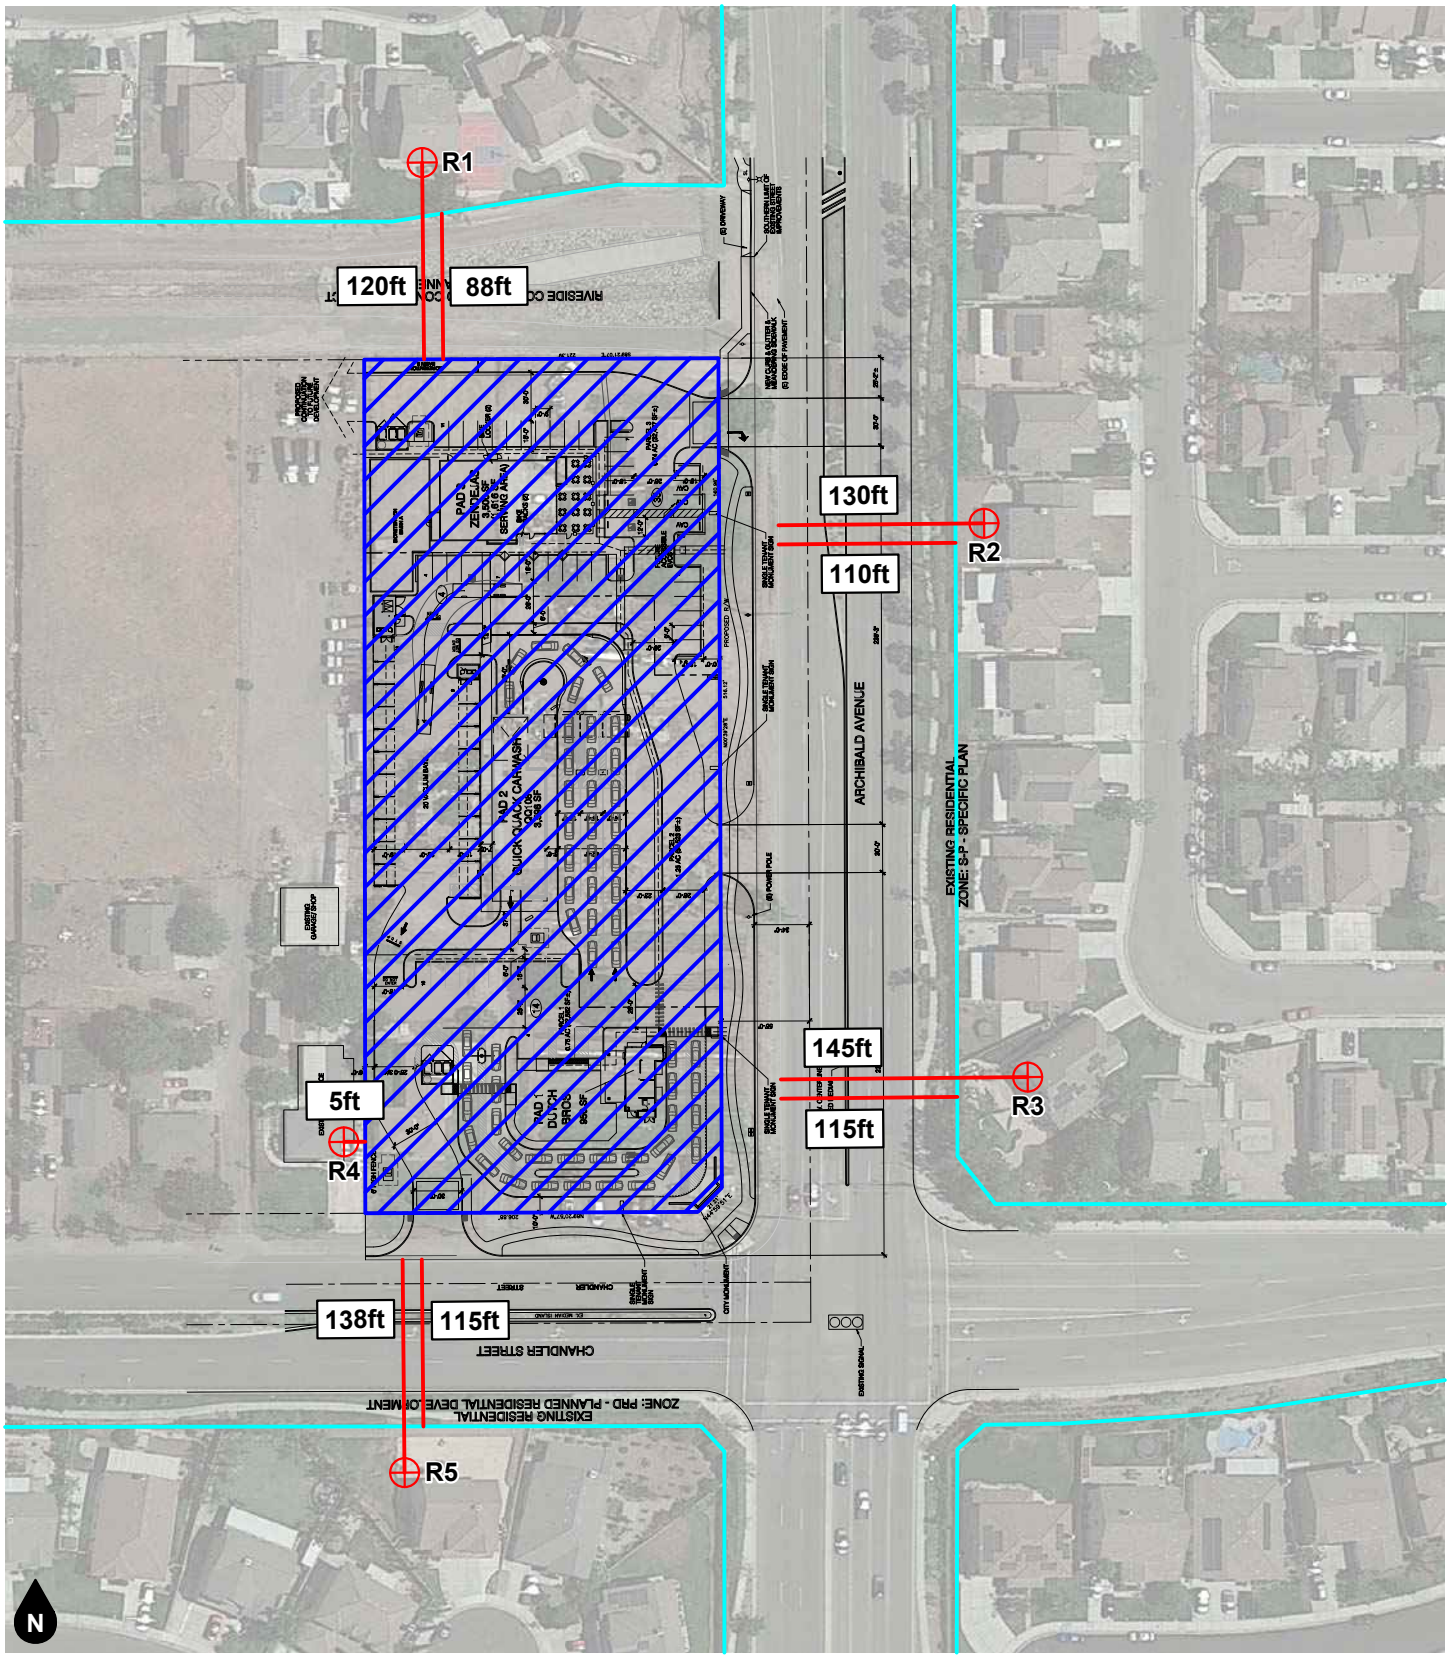
(1) Receiver locations are shown on Figure 7.

(2) Based on the Vibration Source Levels of Construction Equipment included in Table 12.

(3) Does the peak vibration exceed the maximum acceptable vibration threshold of 0.0787 PPV in/sec per the City of Eastvale General Plan Noise Element, Policy N-3.

Table 31
Mitigated Construction Equipment Vibration Levels

Receiver Location[1]	Distance to Construction Activity (feet)	Receiver PPV Levels (in/sec)[2]					Threshold Exceeded?[3]
		Small Dozer	Jackhammer	Loaded Trucks	Large Bulldozer	Highest Levels (PPV)	
R1	125	0.000	0.003	0.007	0.008	0.008	No
R2	135	0.000	0.003	0.006	0.008	0.008	No
R3	150	0.000	0.003	0.005	0.006	0.006	No
R4	10 [4]	0.012	0.075	0.076	0.075	0.076	No
R5	140	0.000	0.003	0.006	0.007	0.007	No



Notes:

(1) Receiver locations are shown on Figure 7.

(2) Based on the Vibration Source Levels of Construction Equipment included in Table 12.

(3) Does the peak vibration exceed the maximum acceptable vibration threshold of 0.0787 PPV in/sec per the City of Eastvale General Plan Noise Element, Policy N-3.

(4) With incorporation of mitigation requiring jackhammers be restricted within 15 feet, loaded trucks be restricted within 25 feet and large bulldozers be restricted within 28 feet of R4.

APPENDIX A

LIST OF ACRONYMS

Term	Definition
ADT	Average Daily Traffic
ANSI	American National Standard Institute
CEQA	California Environmental Quality Act
CNEL	Community Noise Equivalent Level
D/E/N	Day / Evening / Night
dB	Decibel
dBA or dB(A)	Decibel "A-Weighted"
dBA/DD	Decibel per Double Distance
dBA L_{eq}	Average Noise Level over a Period of Time
EPA	Environmental Protection Agency
FHWA	Federal Highway Administration
L_{02},L_{08},L_{50},L_{90}	A-weighted Noise Levels at 2 percent, 8 percent, 50 percent, and 90 percent, respectively, of the time period
DNL	Day-Night Average Noise Level
$L_{eq(x)}$	Equivalent Noise Level for '"x" period of time
L_{eq}	Equivalent Noise Level
L_{max}	Maximum Level of Noise (measured using a sound level meter)
L_{min}	Minimum Level of Noise (measured using a sound level meter)
LOS C	Level of Service C
OPR	California Governor's Office of Planning and Research
PPV	Peak Particle Velocities
RCNM	Road Construction Noise Model
REMEL	Reference Energy Mean Emission Level
RMS	Root Mean Square

APPENDIX B

DEFINITIONS OF ACOUSTICAL TERMS

Term	Definition
Ambient Noise Level	The all-encompassing noise environment associated with a given environment, at a specified time, usually a composite of sound from many sources, at many directions, near and far, in which usually no particular sound is dominant.
A-Weighted Sound Level, dBA	The sound level obtained by use of A-weighting. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear.
CNEL	Community Noise Equivalent Level. CNEL is a weighted 24-hour noise level that is obtained by adding five decibels to sound levels in the evening (7:00 PM to 10:00 PM), and by adding ten decibels to sound levels at night (10:00 PM to 7:00 AM). This weighting accounts for the increased human sensitivity to noise during the evening and nighttime hours.
Decibel, dB	A logarithmic unit of noise level measurement that relates the energy of a noise source to that of a constant reference level; the number of decibels is 10 times the logarithm (to the base 10) of this ratio.
DNL, Ldn	Day Night Level. The DNL, or Ldn is a weighted 24-hour noise level that is obtained by adding ten decibels to sound levels at night (10:00 PM to 7:00 AM). This weighting accounts for the increased human sensitivity to noise during the nighttime hours.
Equivalent Continuous Noise Level, L_{eq}	A level of steady state sound that in a stated time period, and a stated location, has the same A-weighted sound energy as the time-varying sound.
Fast/Slow Meter Response	The fast and slow meter responses are different settings on a sound level meter. The fast response setting takes a measurement every 100 milliseconds, while a slow setting takes one every second.
Frequency, Hertz	In a function periodic in time, the number of times that the quantity repeats itself in one second (i.e., the number of cycles per second).
L_{02}, L_{08}, L_{50}, L_{90}	The A-weighted noise levels that are equaled or exceeded by a fluctuating sound level, 2 percent, 8 percent, 50 percent, and 90 percent of a stated time period, respectively.
L_{max}, L_{min}	L_{max} is the RMS (root mean squared) maximum level of a noise source or environment measured on a sound level meter, during a designated time interval, using fast meter response. L_{min} is the minimum level.
Offensive/ Offending/ Intrusive Noise	The noise that intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of sound depends on its amplitude, duration, frequency, and time of occurrence, and tonal information content as well as the prevailing ambient noise level.
Root Mean Square (RMS)	A measure of the magnitude of a varying noise source quantity. The name derives from the calculation of the square root of the mean of the squares of the values. It can be calculated from either a series of lone values or a continuous varying function.

APPENDIX C

NOISE MEASUREMENT FIELD WORKSHEETS

Noise Measurement
Field Data

Project Name: Archibald Avenue & Chandler Street, City of Eastvale. **Date:** November 2, 2020

Project #: JN 19304

Noise Measurement #: STNM1 Run Time: 15 minutes (1 x 15 minutes) **Technician:** Ian Gallagher

Nearest Address or Cross Street: 14227 Chandler Street, Eastvale, California.

Site Description (Type of Existing Land Use and any other notable features): Project site: Recently cleared lot with drainage channel to north, archibald Ave to east Chandler St to south, and residential to west. Noise Measurement Site: Residential to east & west and Chandler St to south.

Weather: Sunny, clear blue skies, haze near horizon. **Settings:** SLOW FAST

Temperature: 77 deg F **Wind:** 3-5mph **Humidity:** 30% **Terrain:** Flat

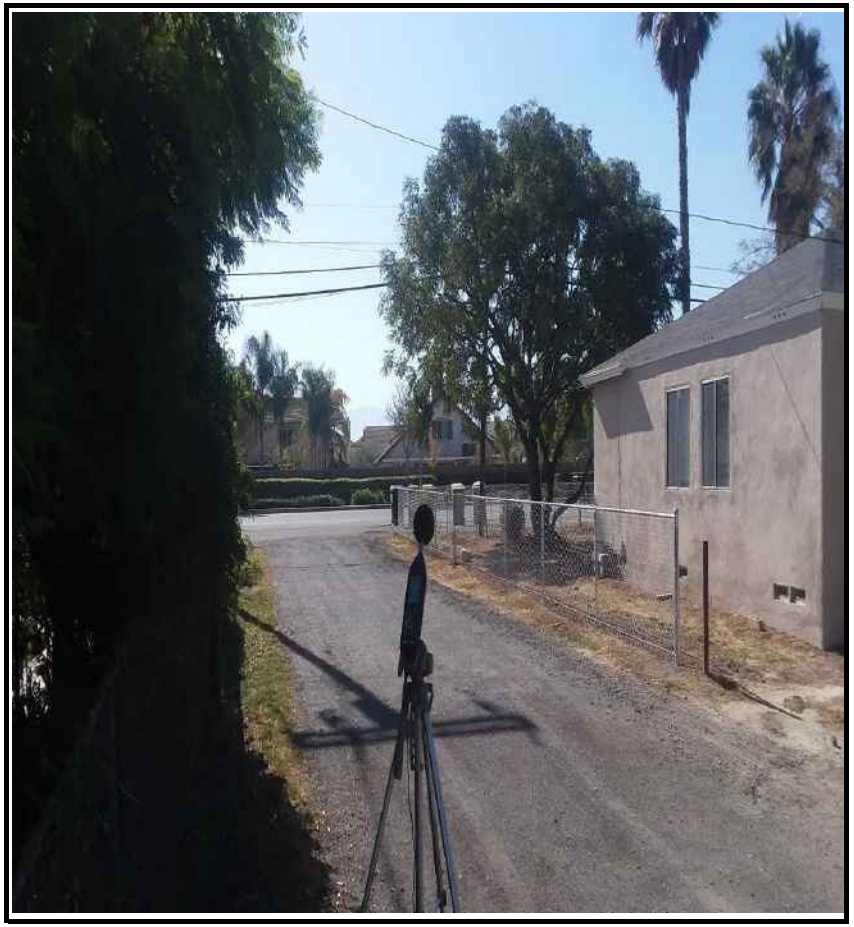
Start Time: 10:41 AM **End Time:** 10:56 AM **Run Time:**

Leq: 52.5 dB **Primary Noise Source:** Traffic noise from 96 vehicles traveling along Chandler Street .

Lmax 71.9 dB

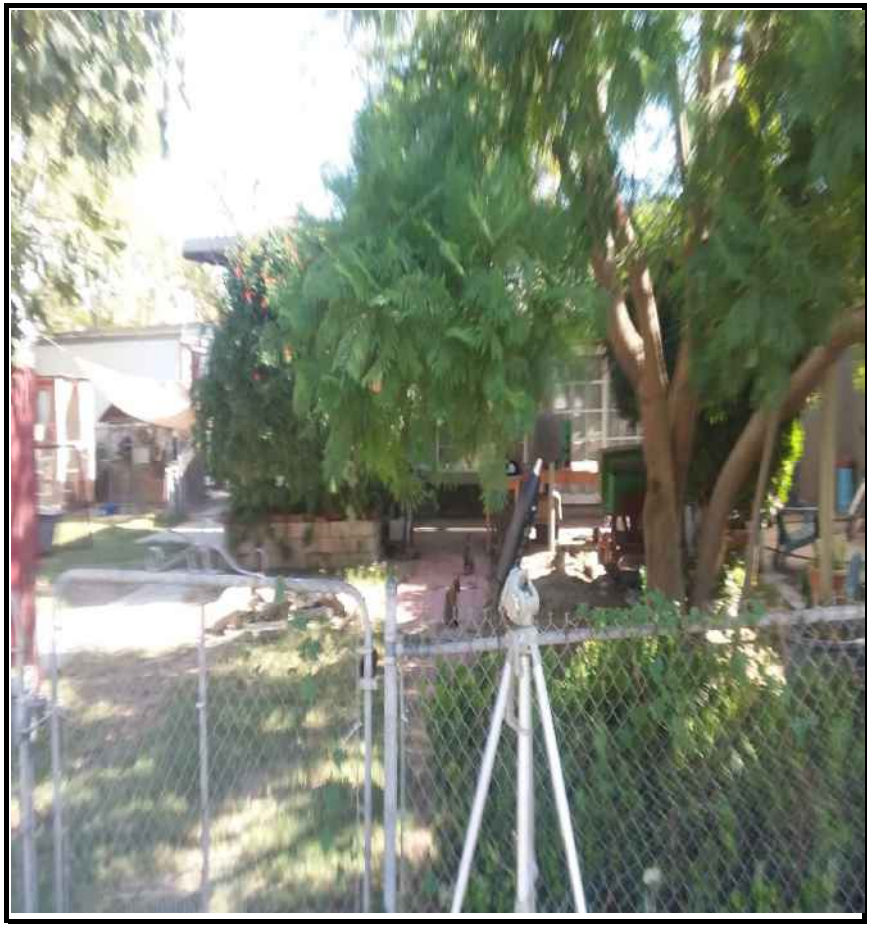
L2 59.8 dB **Secondary Noise Sources:** Residential ambiance, overhead propellor and jet aircraft. Bird song.

L8 55.3 dB Gentle breeze blowing through trees and vegetation.



L25 51.2 dB

L50 47.4 dB



NOISE METER:	SoundTrack LXT Class 1	**CALIBRATOR:**	Larson Davis CAL250
MAKE:	Larson Davis	**MAKE:**	Larson Davis
MODEL:	LXT1	**MODEL:**	Cal 250
SERIAL NUMBER:	3099	**SERIAL NUMBER:**	2733
FACTORY CALIBRATION DATE:	4/9/2020	**FACTORY CALIBRATION DATE:**	4/2/2020
FIELD CALIBRATION DATE:	11/2/2020

Noise Measurement #: STNM3 Run Time: 15 minutes (1 x 15 minutes) **Technician:** Ian Gallagher

Nearest Address or Cross Street: 7781 Coffeeberry Drive, Eastvale, California.

Site Description (Type of Existing Land Use and any other notable features): Project site: Recently cleared lot with drainage channel to north, Archibald Ave to east Chandler St to south, and residential to west. Noise Measurement Site: Residential surrouding and Coffeeberry Drive to east.

Weather: Sunny, clear blue skies, haze near horizon. **Settings:** SLOW FAST

Temperature: 82 deg F **Wind:** 3-5mph **Humidity:** 24% **Terrain:** Flat

Start Time: 11:56 AM **End Time:** 12:11 PM **Run Time:**

Leq: 65.7 dB

Lmax 84.3 dB

L2 76.2 dB

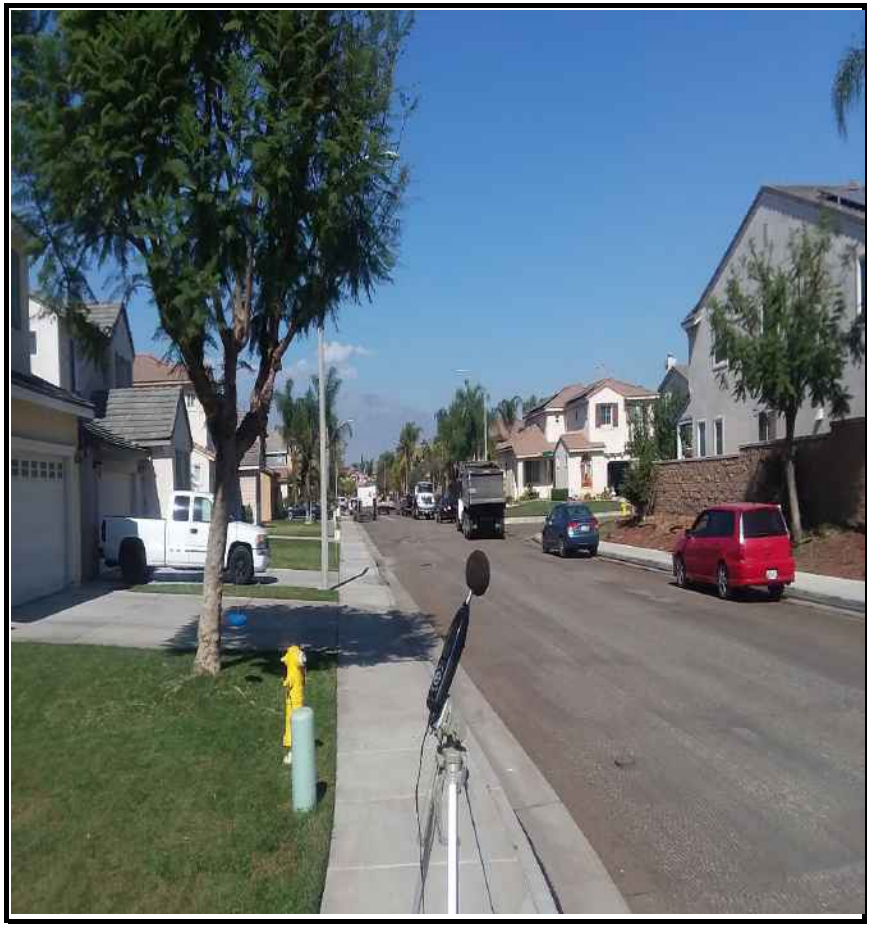
L8 69.3 dB

L25 59.4 dB

L50 54.9 dB

Primary Noise Source: Traffic ambiance from vehicles traveling along Chandler Street , Archibald Avenue & other surrounding roads. Street resurfacing on Coffeeberry Drive.

Secondary Noise Sources: Residential ambiance, overhead propellor and jet aircraft. Bird song. Gentle breeze blowing through trees and vegetation.



NOISE METER:	SoundTrack LXT Class 1	**CALIBRATOR:**	Larson Davis CAL250
MAKE:	Larson Davis	**MAKE:**	Larson Davis
MODEL:	LXT1	**MODEL:**	Cal 250

1.0 Executive Summary

This report has been prepared to provide the calculated noise projections from the proposed Quick Quack Car Wash ("Project") located near Archibald Avenue and Chandler Street in the City of Eastvale, CA. All calculations are compared to the City of Eastvale's noise ordinance as well as the existing ambient condition. The Project proposes to construct a 108-foot covered car wash tunnel with 20 vacuum stalls.

1.1 Findings and Conclusions

Three (3) baseline 15-minute ambient measurements were performed at the Project site and represent the current operational noise and ambient levels within the Project vicinity. The predominant source of noise impacting the existing site is traffic noise propagating from Archibald Avenue.

This study compares the Project's operational noise levels to two (2) different noise assessment scenarios: 1) Project only operational noise level projections, and 2) Project plus ambient noise level projections.

Project-only operational noise levels are anticipated to be 36 to 53 dBA Lmax at residential uses surrounding the Project site. Project plus ambient noise level projections are anticipated to measure 51 to 54 dBA Lmax and will increase the ambient level by 0-5 dBA, which is a perceptible change to the human ear but does not exceed the daytime noise level limit.

This assessment evaluates the baseline noise condition and compares the Project's worst-case operational noise level to the measured noise level (during the Project's proposed hours of operation).

The following outlines the project design features:

1. The Project will incorporate a 12 Sonny's blower system with the silencer package installed or equivalent.

2. Absorptive material (Acoustiblok perforated metal panels or equivalent) will line the last 15' of the exit on the walls and ceiling (see Appendix C).

3. A 6' tall wall will be built along the property line from the south property line to the turbine enclosure.

4. A 10' tall, 8' long wing wall will be added to the west side of the tunnel exit.

2.0 Introduction

2.1 Purpose of Analysis and Study Objectives

This noise impact study aims to evaluate the potential noise impacts for the Project study area and recommend noise mitigation measures, if necessary, to minimize the potential noise impacts. The assessment was conducted and compared to potentially applicable noise standards set forth by the State and/or local agencies. Consistent with the City's Noise Guidelines, the Project must demonstrate compliance with the applicable noise zoning ordinance and sound attenuation requirements.

The following is provided in this report:

- A description of the study area and the proposed Project
- Information regarding the fundamentals of noise
- A description of the local noise guidelines and standards
- An evaluation of the existing ambient noise environment
- An analysis of stationary noise impact (e.g., blowers and vacuums) from the Project site to adjacent land uses
- An analysis of construction noise to adjacent uses

2.2 Site Location and Study Area

The Project site is located near Archibald Avenue and Chandler Street in the City of Eastvale, CA, as shown in Exhibit A. The land uses directly surrounding the Project are residential uses to the north and west, Archibald Avenue to the east, and Chandler Street to the south. There are residential uses across Achibald Avenue to the east and across Chandler Street to the south.

2.3 Proposed Project Description

The Project proposes to develop a 108-foot car wash tunnel and 20 vacuum stall systems. The site plan used for this is illustrated in Exhibit B. The Project operational hours are assumed to be between 7 AM to 9 PM, seven days per week.

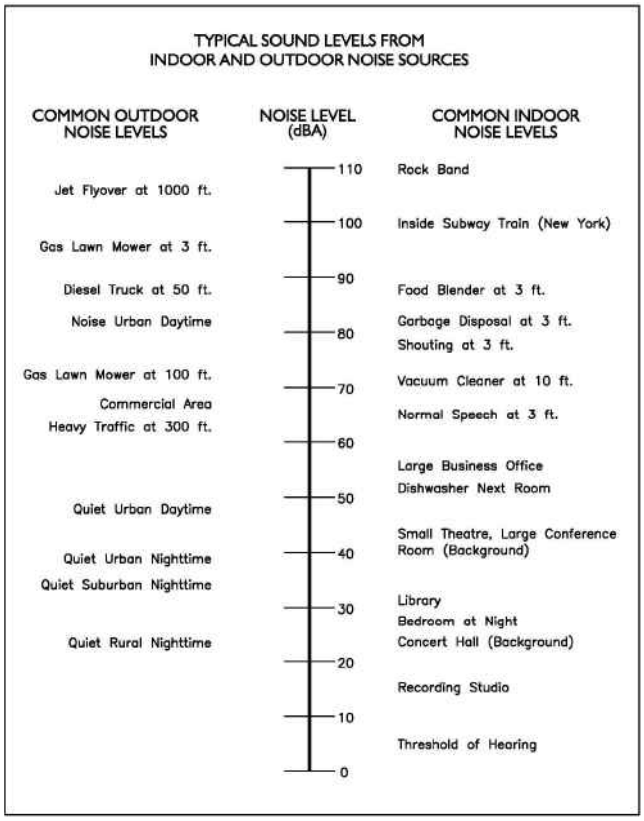
3.0 Fundamentals of Noise

This section of the report provides basic information about noise and presents some of the terms used within the report.



3.1 Sound, Noise, and Acoustics

Sound is a disturbance created by a moving or vibrating source and is capable of being detected by the hearing organs. Sound may be thought of as the mechanical energy of a moving object transmitted by pressure waves through a medium to a human ear. For traffic or stationary noise, the medium of concern is air. *Noise* is defined as sound that is loud, unpleasant, unexpected, or unwanted.

3.2 Frequency and Hertz

A continuous sound is described by its *frequency* (pitch) and *amplitude* (loudness). Frequency relates to the number of pressure oscillations per second. Low-frequency sounds are low in pitch (bass sounding), and high-frequency sounds are high in pitch (squeak). These oscillations per second (cycles) are commonly referred to as Hertz (Hz). The human ear can hear from the bass pitch starting at 20 Hz to the high pitch of 20,000 Hz.

Exhibit C: Typical A-Weighted Noise Levels

3.3 Sound Pressure Levels and Decibels

The *amplitude* of a sound determines its loudness. The loudness of sound increases or decreases as the amplitude increases or decreases. Sound pressure amplitude is measured in units of micro-Newton per square meter ($\mu N/m^2$), also called micro-Pascal (μPa). One μPa is approximately one hundred billionths (0.00000000001) of normal atmospheric pressure. Sound pressure level (SPL or L_p) is used to describe in logarithmic units the ratio of actual sound pressures to a reference pressure squared. These units are called decibels, abbreviated dB. Exhibit C illustrates reference sound levels for different noise sources.

3.4 Addition of Decibels

Because decibels are on a logarithmic scale, sound pressure levels cannot be added or subtracted by simple plus or minus addition. When two sounds or equal SPL are combined, they will produce an SPL 3 dB greater than the original single SPL. In other words, sound energy must be doubled to produce a 3 dB increase. If two sounds differ by approximately 10 dB, the higher sound level is the predominant sound.

3.5 Human Response to Changes in Noise Levels

Generally, the healthy human ear is most sensitive to sounds between 1,000 Hz and 5,000 Hz (A-weighted scale). It perceives a sound within that range as being more intense than a sound with a higher or lower frequency with the same magnitude. For purposes of this report as well as with most environmental documents, the A-scale weighting is typically reported in terms of A-weighted decibel (dBA). Typically, the human ear can barely perceive the change in the noise level of 3 dB. A change in 5 dB is readily perceptible, and a change in 10 dB is perceived as being twice or half as loud. As previously discussed, a doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g., doubling the traffic volume on a highway) would result in a barely perceptible change in sound level.

3.6 Noise Descriptors

Noise in our daily environment fluctuates over time. Some noise levels occur in regular patterns; others are random. Some noise levels are constant, while others are sporadic. Noise descriptors were created to describe the different time-varying noise levels.

A-Weighted Sound Level: The sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high-frequency components of the sound in a manner similar to the response of the human ear. A numerical method of rating human judgment of loudness.

Ambient Noise Level: The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location.

Community Noise Equivalent Level (CNEL): The average equivalent A-weighted sound level during a 24-hour day, obtained after the addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after the addition of ten (10) decibels to sound levels in the night before 7:00 AM and after 10:00 PM.

Decibel (dB): A unit for measuring the amplitude of a sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure, which is 20 micro-pascals.

dB(A): A-weighted sound level (see definition above).

Equivalent Sound Level (LEQ): The sound level corresponding to a steady noise level over a given sample period with the same amount of acoustic energy as the actual time-varying noise level. The energy average noise level during the sample period.

Habitable Room: Any room meeting the requirements of the Uniform Building Code or other applicable regulations which is intended to be used for sleeping, living, cooking, or dining purposes, excluding such enclosed spaces as closets, pantries, bath or toilet rooms, service rooms, connecting corridors, laundries, unfinished attics, foyers, storage spaces, cellars, utility rooms, and similar spaces.

L(n): The A-weighted sound level exceeded during a certain percentage of the sample time. For example, L10 in the sound level exceeded 10 percent of the sample time. Similarly, L50, L90, L99, etc.

Noise: *A*ny unwanted sound or sound which is undesirable because it interferes with speech and hearing, is intense enough to damage hearing, or is otherwise annoying. The State Noise Control Act defines noise as "...excessive undesirable sound...".

Outdoor Living Area: Outdoor spaces that are associated with residential land uses typically used for passive recreational activities or other noise-sensitive uses. Such spaces include patio areas, barbecue areas, jacuzzi areas, etc. associated with residential uses; outdoor patient recovery or resting areas associated with hospitals, convalescent hospitals, or rest homes; outdoor areas associated with places of worship which have a significant role in services or other noise-sensitive activities; and outdoor school facilities routinely used for educational purposes which may be adversely impacted by noise. Outdoor areas usually not included in this definition are: front yard areas, driveways, greenbelts, maintenance areas and storage areas associated with residential land uses; exterior areas at hospitals that are not used for patient activities; outdoor areas associated with places of worship and principally used for short-term social gatherings; and, outdoor areas associated with school facilities that are not typically associated with educational uses prone to adverse noise impacts (for example, school play yard areas).

Percent Noise Levels: See L(n).

Sound Level (Noise Level): The weighted sound pressure level obtained by use of a sound level meter having a standard frequency filter for attenuating part of the sound spectrum.

Sound Level Meter: An instrument, including a microphone, an amplifier, an output meter, and frequency weighting networks for the measurement and determination of noise and sound levels.

Single Event Noise Exposure Level (SENEL): The dB(A) level, which, if it lasted for one second, would produce the same A-weighted sound energy as the actual event.

3.7 Sound Propagation

As sound propagates from a source, it spreads geometrically. Sound from a small, localized source (i.e., a point source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates at a rate of 6 dB per doubling of distance. The movement of vehicles down a roadway makes the source of the sound appear to propagate from a line (i.e., line source) rather than a point source. This line source results in the noise propagating from a roadway in a cylindrical spreading versus a spherical spreading that results from a point source. The sound level attenuates for a line source at a rate of 3 dB per doubling of distance.

As noise propagates from the source, it is affected by the ground and atmosphere. Noise models use hard site (reflective surfaces) and soft site (absorptive surfaces) to help calculate predicted noise levels. Hard site conditions assume no excessive ground absorption between the noise source and the receiver. Soft site conditions such as grass, soft dirt, or landscaping attenuate noise at a rate of 1.5 dB per doubling of distance. When added to the geometric spreading, the excess ground attenuation results in an overall

noise attenuation of 4.5 dB per doubling of distance for a line source and 7.5 dB per doubling of distance for a point source.

Research has demonstrated that atmospheric conditions can have a significant effect on noise levels when noise receivers are located at least 200 feet from a noise source. Wind, temperature, air humidity, and turbulence can further impact how far sound can travel.

4.0 Regulatory Setting

The proposed Project is located in the City of Eastvale, California, and noise regulations are addressed through the efforts of various federal, state, and local government agencies. The agencies responsible for regulating noise are discussed below.

4.1 Federal Regulations

The adverse impact of noise was officially recognized by the federal government in the Noise Control Act of 1972, which serves three purposes:

- Publicize noise emission standards for interstate commerce
- Assist state and local abatement efforts
- Promote noise education and research

The Federal Office of Noise Abatement and Control (ONAC) was originally tasked with implementing the Noise Control Act. However, it was eventually eliminated, leaving other federal agencies and committees to develop noise policies and programs. Some examples of these agencies are as follows: The Department of Transportation (DOT) assumed a significant role in noise control through its various agencies. The Federal Aviation Agency (FAA) is responsible for regulating noise from aircraft and airports. The Federal Highway Administration (FHWA) is responsible for regulating noise from the interstate highway system. The Occupational Safety and Health Administration (OSHA) is responsible for the prohibition of excessive noise exposure to workers. The Housing and Urban Development (HUD) is responsible for establishing noise regulations as it relates to exterior/interior noise levels for new HUD-assisted housing developments near high-noise areas.

The federal government advocates that local jurisdictions use their land use regulatory authority to arrange new development in such a way that “noise sensitive” uses are either prohibited from being constructed adjacent to a highway or that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Since the federal government has preempted the setting of standards for noise levels that can be emitted by the transportation source, the City is restricted to regulating the noise generated by the transportation system through nuisance abatement ordinances and land use planning.

4.2 State Regulations

Established in 1973, the California Department of Health Services Office of Noise Control (ONC) was instrumental in developing regularity tools to control and abate noise for use by local agencies. One significant model is the “Land Use Compatibility for Community Noise Environments Matrix.” The matrix allows the local jurisdiction to clearly delineate the compatibility of sensitive uses with various incremental levels of noise.

The State of California has established noise insulation standards as outlined in Title 24 of the California Building Code (CBC), which in some cases requires acoustical analyses to outline exterior noise levels and

to ensure interior noise levels do not exceed the interior threshold. The state mandates that the legislative body of each county and City adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines published by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable, as illustrated in Exhibit D.

4.3 City of Eastvale Noise Regulations

The City of Eastvale outlines their noise regulations and standards within the Noise Element from the General Plan and Municipal Code. For purposes of this analysis, the City's General Plan and Noise Ordinance (Chapter 8.52) is used to evaluate the stationary noise impacts from the proposed Project. The Noise Element outlines Goals and Polices and establishes Noise/Land Use Compatibility Criteria. This assessment will compare the project noise levels to the residential noise limits since the proposed Project is located directly adjacent to existing residential land uses. The project impacts were compared to the City's exterior noise level standards.

City of Eastvale General Plan

The City has outlined goals, policies, and implementation measures to reduce potential noise impacts, which are presented below:

Goals, Policies, and Implementation Measures

Policies from the noise section that would mitigate potential impacts on noise include the following.

N-3 *Consider the following uses to be sensitive to noise and vibration, and discourage these uses in areas where existing or projected future noise levels would be in excess of 65 CNEL and/or vibration would be more than 0.0787 Peak Particle Velocity (inches/second):*

- *Schools;*
- *Hospitals;*
- *Rest Homes;*
- *Long Term Care Facilities;*
- *Mental Care Facilities;*
- *Residential Uses;*
- *Libraries;*
- *Passive Recreation Uses; and*
- *Places of worship*

N-4 *Require noise sensitive land uses proposed in areas where existing or projected future noise levels would be in excess of 65 CNEL to have an acoustical specialist prepare a study of the noise problems and recommend structural and site design features that will adequately mitigate the noise problem.*

N-6 *Mitigate exterior noise to the levels shown in Table N-3* (Exhibit D) *to the extent feasible.*

Exhibit D: Land Use Compatibility Guidelines

TABLE N-3: NOISE COMPATIBILITY BY LAND USE DESIGNATION[1]

Land Use Designations	Completely Compatible	Tentatively Compatible	Normally Incompatible	Completely Incompatible
All Residential (Single- and Multi-Family)	Less than 60 dBA	60-70 dBA	70-75 dBA	Greater than 75 dBA
All Non-Residential (Commercial, Industrial & Institutional)	Less than 70 dBA	70-75 dBA	Greater than 75 dBA	(2)
Public Parks (Lands on which public parks are located or planned)	Less than 65 dBA	65-70 dBA	70-75 dBA	Greater than 75 dBA

(1) All noise levels shown in this table are designated CNEL.
(2) To be determined as part of the project review process.

N-7 *Table N-4* (Table 1 in this report) *provides the City's standards for maximum exterior non-transportation noise levels to which land designated for residential land uses may be exposed for any 30-minute period on any day. Where existing ambient noise levels exceed these standards, the ambient noise level shall be highest allowable noise level as measured in dBA Leq (30 minutes).*

Table 1: Exterior Noise Level Standards for Non-Transportation Noise (dBA Leq)

Land Use Type	Time Period	Maximum Noise Level (dBA)
Single-Family Homes and Duplexes	10 p.m. to 7 a.m.	50
	7 a.m. to 10 p.m.	60
Multiple Residential 3 or More Units Per Building (Triplex +)	10 p.m. to 7 a.m.	55
	7 a.m. to 10 p.m.	60

N-8 *The noise levels specified in Policy N-7 shall be lowered by 5 dB for simple tonal noises (such as humming sounds), noises consisting primarily of speech or music, or for recurring impulsive noises (such as pile drivers, punch presses, and similar machinery). Example: the Single Family/Duplex standard from 10 p.m. to 7 a.m. for these types of noises is 45 dBA.*

N-9 *The City may impose exterior noise standards which are less restrictive than those specified in Table N-4* (Table 1)*, provided that:*

- *The noise impact on the residential or other noise-sensitive use is addressed in an environmental analysis and at least one outdoor area meets the standard; and*
- *A finding is made by the approving body specifying why the exception would not be detrimental to the public health, safety and general welfare; and*
- *The exception would not adversely affect the character of the surrounding development.*
- *The exception would not be injurious to adjacent uses, property and improvements; and,*
- *Alternatives have been considered but none are technologically feasible for the proposal; and,*
- *Interior noise levels resulting from an external source will be no more than 45dBA CNEL from 7 a.m. to 10 p.m.; and,*
- *Residents of noise sensitive uses are informed of the proposal during the review stage and prior to approval.*

N-12 *The City's preferences for providing noise mitigation are, in order of preference (#1 is most preferred; #5 is the least):*

1. *Reduce noise at the source.*
2. *If #1 is not practical, designate land uses which are compatible with projected noise levels.*
3. *If #1 or #2 are not practical, use distance from the source to reduce noise to acceptable levels.*
4. *If #1, #2, or #3 are not practical, use buildings, berms, or landscaping or a combination of these to reduce exterior noise to acceptable levels. Use construction techniques (sound-reducing windows, insulation, etc.) to reduce interior noise to acceptable levels.*
5. *The last measure which should be considered is the use of a sound wall to reduce noise to acceptable levels.*

N-17 *If noise levels in Table N-4* (Table 1) *exceed, or are projected to be exceeded as a result of the proposed commercial or industrial loading dock or delivery area, require delivery hours be limited when adjacent to noise-sensitive land uses.*

N-25 *Development should use natural barriers such as berms, setbacks and/or dense vegetation to assist in noise reduction.*

N-27 *Noise reduction measures shall be included in the design of new development through measures which may include:*

- *Separation of noise-sensitive buildings from noise-generating sources;*
- *Use of natural topography and intervening structures to shield noise-sensitive land uses; and*

- *Adequate sound proofing of noise sources or receptor structures to maintain desired interior noise levels.*

City of Eastvale Municipal Code

The City's noise ordinance is found in Chapter 8.52. – Noise Regulation.

8.52.020. – Exemptions.

Sound emanating from the following sources is exempt from the provisions of this chapter:

(9) Private construction projects located within one-quarter of a mile from an inhabited dwelling, provided that construction does not occur between the hours of:

a. 6:00 p.m. and 6:00 a.m. during the months of June through September; and

b. 6:00 p.m. and 7:00 a.m. during the months of October through May;

8.52.040. – General sound level standards.

No person shall create any sound, or allow the creation of any sound, on any property that causes the exterior sound level on any other occupied property to exceed the sound level standards set forth in the following table:

Table 2: Sound Level Standards (dB Lmax)

Land Use Designation	MAXIMUM NOISE LEVEL	
	7:00 a.m. - 10:00 p.m.	10:00 p.m. - 7:00 a.m.
Residential	55	45
Commercial	65	55
Community center	65	55
Light industrial	75	55
Heavy industrial	75	75
Business park/Public facility	56	45
Rural	45	45
Agriculture	45	45
Conservation, Recreation, Watershed	45	45
Mineral resources	75	45

5.0 Study Method and Procedure

The following section describes the noise modeling procedures and assumptions used for this assessment.

5.1 Noise Measurement Procedure and Criteria

MD conducted three (3) short-term noise measurement at the Project site, representing the noise level from the traffic conditions along Archibald Avenue and Chandler Street and some airplane noise (see Appendix A for the field sheet data).

5.2 Stationary Noise Modeling

SoundPLAN (SP) acoustical modeling software was utilized to model future worst-case stationary noise impacts to the adjacent land uses. SP is capable of evaluating multiple stationary noise source impacts at various receiver locations. SP's software utilizes algorithms (based on the inverse square law and reference equipment noise level data) to calculate noise level projections. The software allows the user to input specific noise sources, spectral content, sound barriers, building placement, topography, and sensitive receptor locations.

The future worst-case noise level projections were modeled using referenced sound level data for the various stationary on-site sources (vacuums and car wash blowers at the exit). The SP model assumes a total of 20 vacuums and the dryer systems are operating simultaneously (worst-case scenario) when the noise will, in reality, be intermittent and lower in noise level. In addition, the modeling takes into account the louver, windows, and openings on the car wash tunnel based on the plan elevations. The reference vacuum equipment and blower system sound level data are provided in Appendix C.

All other noise-producing equipment (e.g., compressors, pumps) will be housed within mechanical equipment rooms.

The following outlines the project design features incorporated into the project:

5. The Project will incorporate a 12 Sonny's blower system with the silencer package installed or equivalent.

6. Absorptive material (Acoustiblok perforated metal panels or equivalent) will line the last 15' of the exit on the walls and ceiling (see Appendix C).

7. A 6' tall wall will be built along the west property line from the south property line to the turbine enclosure.

8. A 10' tall, 8' long wing wall will be added to the west side of the tunnel exit.

6.0 Existing Noise Environment

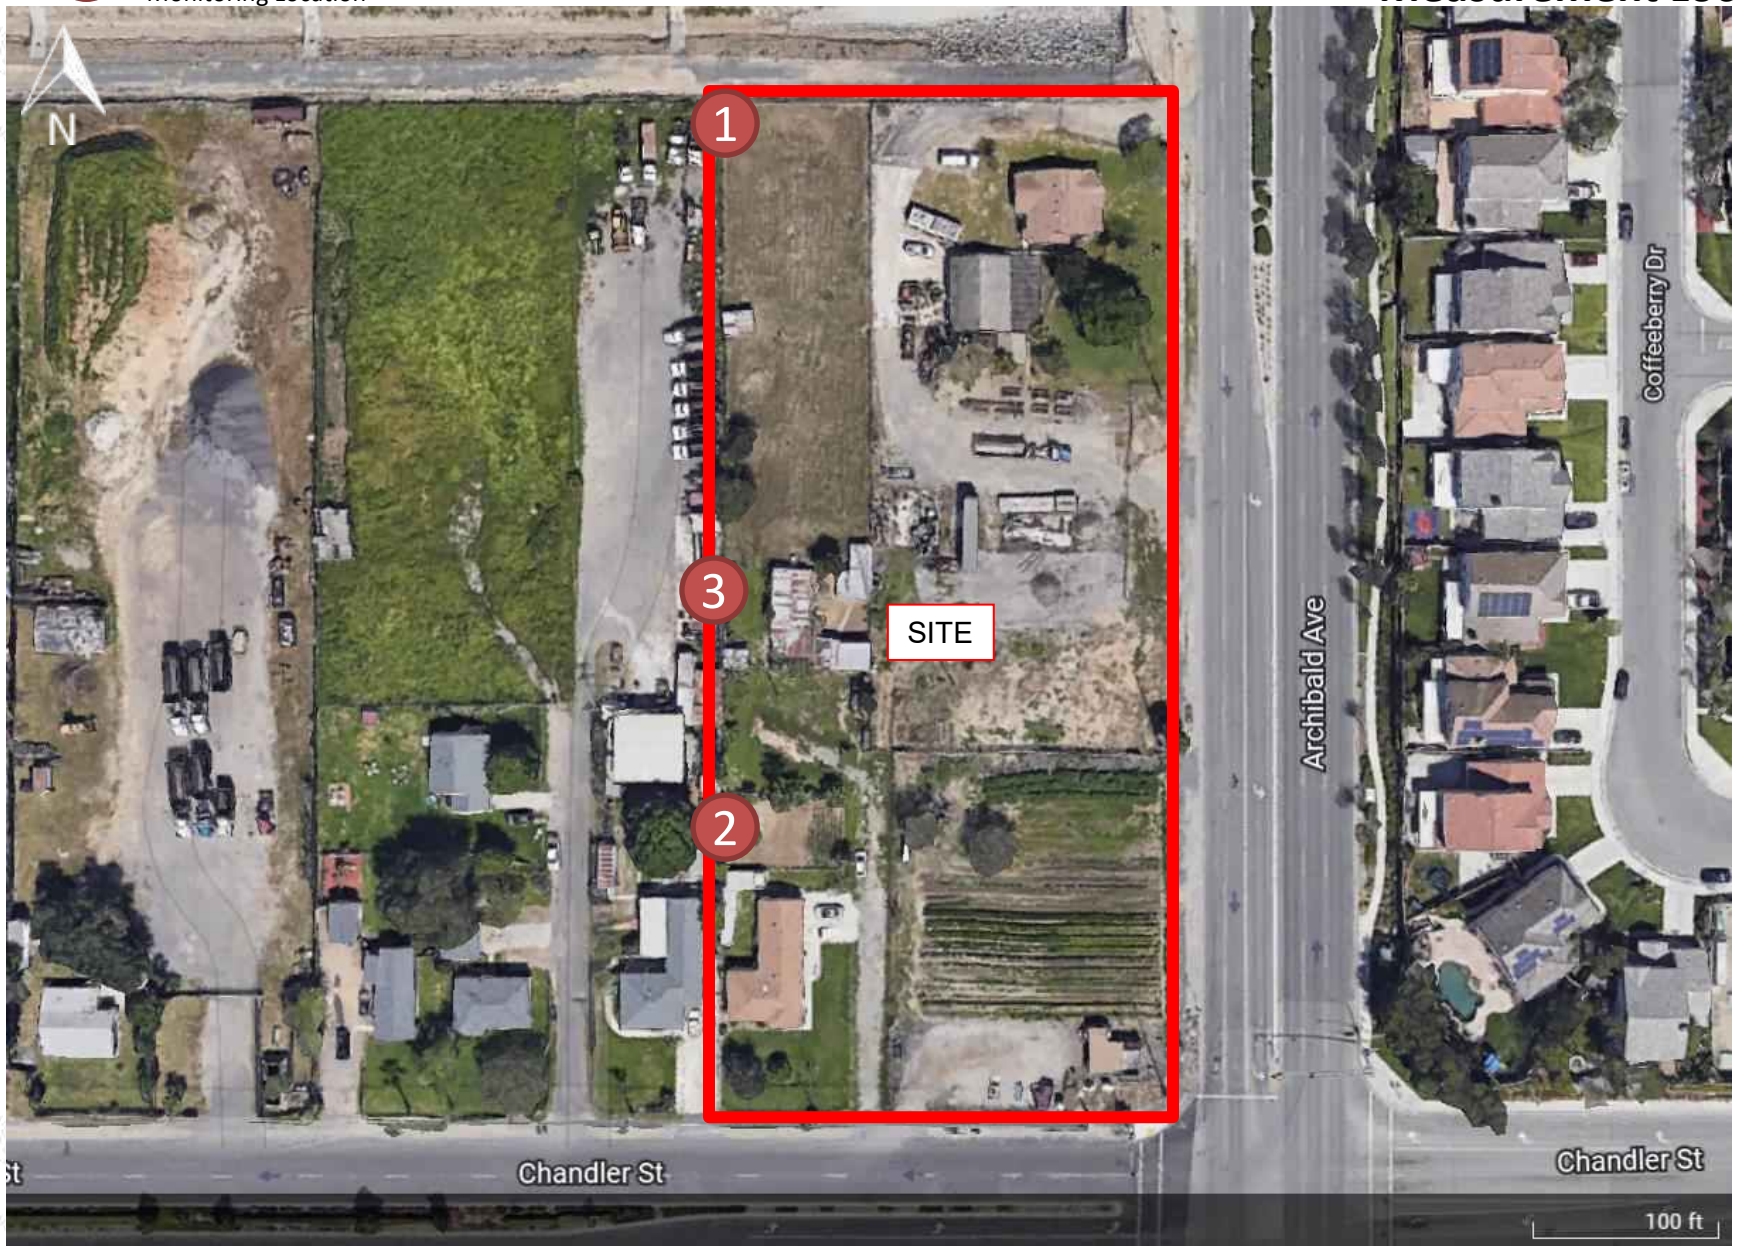
Three (3) 15-minute ambient noise measurements were taken at the project site to determine the existing ambient noise levels. Noise data indicates that traffic along Archibald Avenue and some airplane noise are the primary sources of noise impacting the site and the surrounding area.

6.1 Short-Term Noise Measurement Results

The results of the 15-minute measurements are presented in Table 3.

Table 3: Short-Term Noise Measurement Data (dBA)

Location	Start Time	Stop Time	Leq	Lmax	Lmin	L(2)	L(8)	L(25)	L(50)	L(90)
NM1	2:29 PM	2:44 PM	50.8	67.7	41.2	58.4	53.6	49.6	47.3	43.9
NM2	2:54 PM	3:09 PM	48.6	60.7	40.3	56.3	51.6	48.5	46.4	43
NM3	3:12 PM	3:27 PM	51.4	65.4	41.8	60.4	54.9	49.7	47.4	44.2



Notes:
1. Short-term noise monitoring locations are illustrated in Exhibit E.

For this evaluation, MD has utilized the measured ambient noise level of 48.6 to 51.4 dBA Leq and has compared them to the Project's projected noise levels. The ambient noise measurements NM2 and NM3 are focused on the residential locations closest to the entrance and exit points of the car wash which are the locations most likely impacted by the project noise. NM1 was placed on site furthest from the roads. NM2 is adjacent to the proposed car wash exit and was the quietest ambient measurement. As NM2 is the quietest measurement and the location most likely to be impacted by the proposed project, MD will therefore use this level to represent the adjacent residential ambient noise levels. MD cannot trespass to get ambient noise levels in the backyards of adjacent homes, however, the proximity to the roads and the masonry property line walls indicate that the levels at those locations are likely in the upper 40s as well.

Exhibit E

Measurement Locations

= Short-Term Monitoring Location

7.0 Future Noise Environment Impacts

This assessment analyzes future noise impacts as a result of the Project. The analysis details the estimated exterior noise levels. Stationary noise impacts are analyzed from the noise sources on-site such as dryers/blowers and vacuums.

7.1 Stationary Source Noise

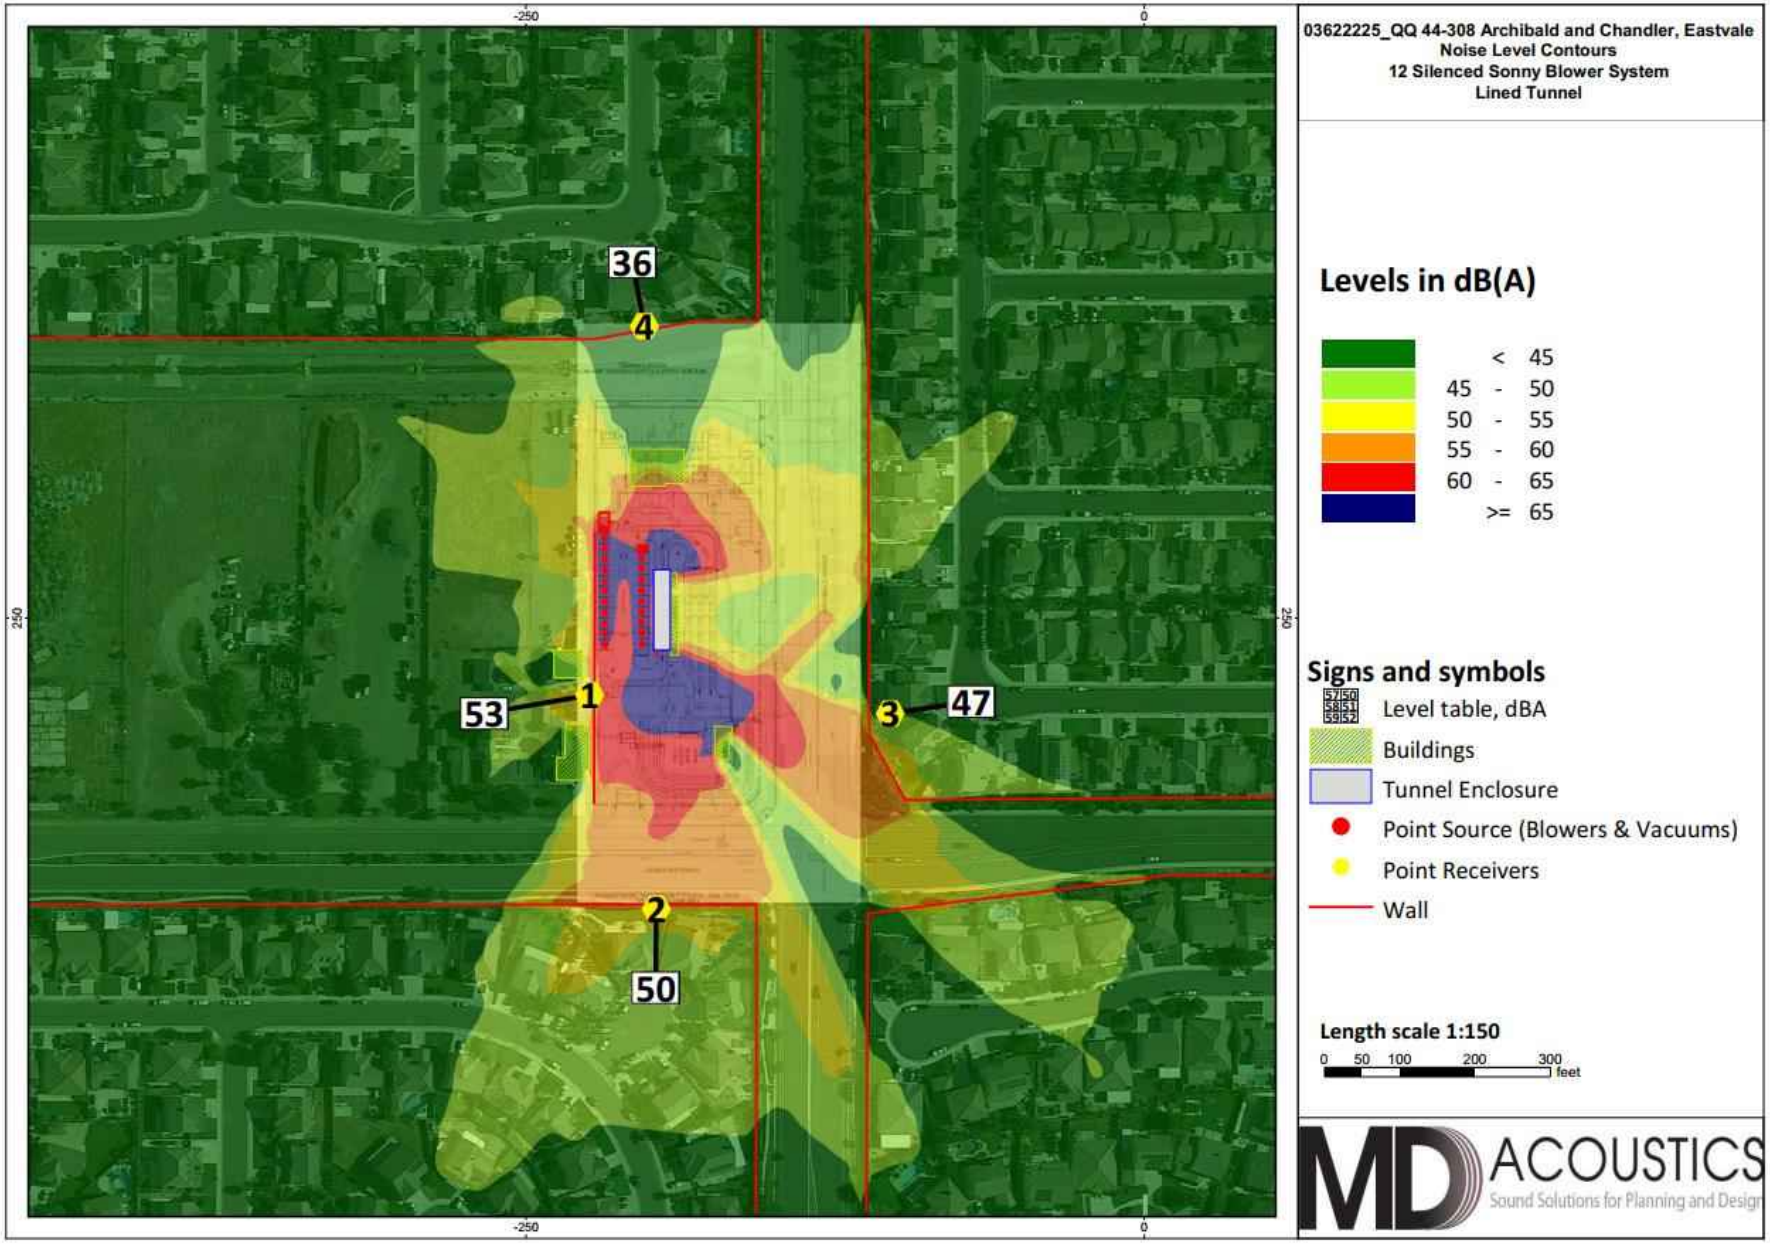
The following sections outline the exterior noise levels associated with the proposed Project.

7.1.1 Noise Impacts to Off-Site Receptors Due to Stationary Sources

Sensitive receptors affected by Project operational noise include existing residences in every direction, particularly the residences directly west of the Project site near the exit of the proposed car wash. The worst-case stationary noise was modeled using SoundPLAN acoustical modeling software. Worst-case assumes the blowers, vacuums, and equipment are always operational when in reality, the noise will be intermittent and cycle on/off depending on the customer usage.

A total of four (4) sensitive receptors (R1 – R4) were modeled to evaluate the proposed Project's operational impact. Each receptor represents residential uses potentially impacted by the Project. This study analyzes the Project-only operational noise level projections and the Project plus ambient noise level projections; see Table 4 below.

Table 4: Worst-Case Predicted Operational Noise Levels (dBA)



Receptor[1]	Existing Ambient Noise Level (dBA, Leq)[2]	Project Noise Level (dBA, Lmax)[3]	Total Combined Noise Level (dBA, Lmax)	Daytime (7AM - 10PM) Exterior Noise Limit (dBA, Lmax)	Exceeds Limit? (Yes/No)
1	49	53	54	**55**	No
2	49	50	53	**55**	No
3	49	47	51	**55**	No
4	49	36	49	**55**	No

Notes:
1. Receptor 1 through 4 represent residential uses.
2. See Appendix A for the ambient noise measurement.
3. See Exhibit F for the operational noise level projections at said receptors.

The model indicates that the project-only noise level at the surrounding residences will be 36 to 53 dBA Lmax, which is below the daytime exterior noise limit of 55 dBA Lmax for residential uses (Section 8.52.040 in the Municipal Code). The project plus ambient noise level will be 49 to 54 dBA Lmax and meets the daytime noise limit. The project noise will increase the ambient noise at the existing sensitive receptors by a maximum of 5 dBA, which is a noticeable difference but will not exceed the noise level limit.

SHEET 2 OF 2	SIZE A	SCALE N.T.S.	
MATERIAL			

Product Features

- Gain flexibility in complying with noise ordinances that limit the allowable noise levels in some zoned areas.
- Blower Inlet Silencer retrofits to an existing Sonny's blower to reduce noise level by up to 7 decibels at 50 feet (depending on site specific architecture and other variables).
- Available in three colors: **Blue (# 20018006), Black (# 20018005)** and **Red (# 20018008)**

Note: Hardware is not included. Order a self-tapping screw kit (# **10013134**) for each silencer.

INSTALLATION

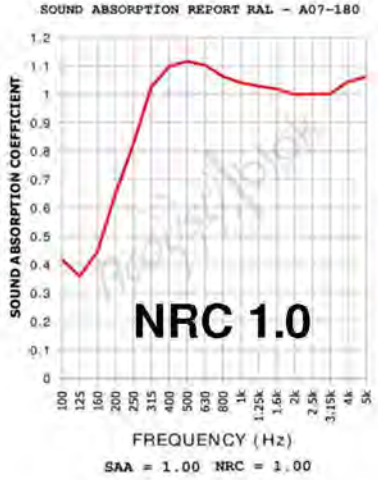
Tools
1. Safety Glasses
2. Cordless Drill
3. Drive Socket Set
4. 8' Ladder

Consumables
None

Work Force
Two (2) persons

Time (assuming no problems)
15 - 30 minutes

Caution: You must shut off all power to the conveyor and lock out the Motor Control Center before starting this install.



1. Shut off all power to the conveyor, blowers and lock out the Motor Control Center.
2. Insert the silencer over the venturi. For the gator silencer option, align notches to the gator actuator bracket (as pictured above).
3. Using the existing holes on the Silencer housing, affix the silencer to the gator housing using (8) of the provided self-tapping screws **(# 10013134**).
4. Avoid over-torqueing the self-tapping screws to prevent stripping the plastic housing.

Industrial Model All Weather Sound Panel™ (Pat. Pend)
Technical Data

Acoustiblok All Weather Sound Panels™ achieve high STC and NRC ratings. They have been specifically designed to withstand outdoor exposure in full sunlight, extreme weather conditions, and harsh industrial environments. (NRC of 1.0 is the highest sound absorption rating possible)

All Weather Sound Panels include an internal layer of U.L. classified Acoustiblok sound isolation material plus a specifically engineered 2" thick weather proof sound absorbing material.

Specifications:		
NRC (Noise Reduction Coefficient):	1.00 *	Gross dimensions: up to 48" x 120"x 2.423", ± 0.125" custom sizes available on special order.
STC (Sound Transmission Class):	29 *	Frame construction: 0.125" welded corrosion resistant 6063-T5 aluminum, mill finish, eyelets: 0.375" (18 ea.)
Weight: (8' panel)	104 lbs	Front face: 0.040 corrosion resistant 5052-H32 aluminum alloy, 3/32" round holes staggered on 5/32" centers.
UL Std 723 fire resistance: Flame spread 0, smoke developed 0.		Back face: 0.032 corrosion resistant 5052-H32 aluminum alloy, mill finish.
UV tolerant, animal resistant, washable, does not support mold growth.		

* Independent Testing by accredited NVLAP testing facility in compliance with ASTM E90, E 413, and other applicable industry standards.

Subject to change without notice, contact Acoustiblok for details.

Product Description

Basic Use

QuietFiber hydrophobic noise absorption material is an easily installed solution to many noise problems. It is engineered specifically for maximum noise absorption and is used extensively for industrial and commercial applications and is now being successfully introduced into non-industrial environments where reverberant sound and echo is a problem.

QuietFiber® QF2

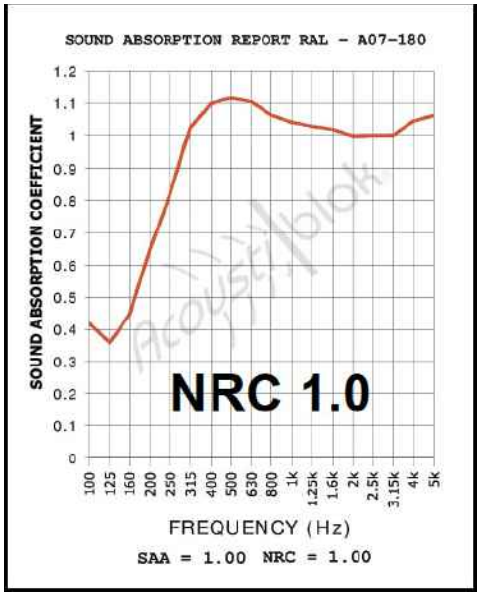
QuietFiber is rated at the highest noise reduction level – NRC 1.00. Areas of high noise levels including sound reverberation can be resolved easily and economically by introducing QuietFiber into as much of the area as possible. The amount of noise reduction in highly reflective rooms will be directly relative to how much of the QuietFiber material can be installed into the room.

Unlike other fibrous materials which do not have the same high NRC ratings, QuietFiber is hydrophobic, meaning it will not absorb nor combine with water. Marine noise reduction applications are endless.

QuietFiber® QF2

- Highest noise absorption rating of NRC 1.00
- Non Silica
- Virtually fireproof – Class A fire rating
  - 0 Smoke + 0 Flame Development
- Hydrophobic – will not combine with water
- Will not support mold or mildew growth
- Available in plain, black or white face
- Full outdoor weather and U.V. tolerant
- Significant sound benefit v. fiberglass
- Install on top of acoustical ceiling tiles
- High temperature capable
- Comprised of up to 90% recycled material
- 100% recyclable

Product Data Sheet



Product Name

QuietFiber® Hydrophobic Noise Absorption Material – QF2

NRC 1.0 Rated	125hz	250hz	500hz	1000hz	2000hz	4000hz

Project: SuperStar Car Wash Chula Vista
Site Location: 1555 W Warner Rd, Gilbert, AZ 85233
Date: 4/5/2018
Field Tech/Engineer: Robert Pearson
Source/System: Vacutec System

Location: Vac Bay 1
Sound Meter: NTi XL2 **SN:** A2A-05967-E0
Settings: A-weighted, slow, 1-sec, 10-sec duration
Meteorological Cond.: 80 degrees F, 2 mph wind

Site Observations:
Clear sky, measurements were performed within 1.5ft of source. Measurements were performed while the vacuum was positiioned at three (3) different positions. Holstered, unholstered and inside a car. This data is utilized for acoustic modeling purposes and represents an average sound level at a vacuum station.

Table 1: Summary Measurement Data

Source	System	Overall dB(A)	3rd Octave Band Data (dBA)																													
			20	25	31.5	40	50	63	80	100	125	160	200	250	315	400	500	630	800	1K	1.25K	1.6K	2K	2.5K	3.15K	4K	5K	6.3K	8K	10K	12.5K	16K	20K

SOUND LEVEL METER READINGS

MODEL: FT-DD-T340HP4 (40hp VACSTAR TURBINE VACUUM PRODUCER)

READING ONE: 43 DB-A, 3 FEET FROM TURBINE @ 45° ANGLE
AND NO BACKGROUND NOISE OR OUTSIDE INTERFERENCE.

READING TWO: 36 DB-A, 10 FEET FROM TURBINE @ 45° ANGLE
AND NO BACKGROUND NOISE OR OUTSIDE INTERFERENCE.

READING THREE: 24 DB-A, 20 FEET FROM TURBINE @ 45° ANGLE
AND NO BACKGROUND NOISE OR OUTSIDE INTERFERENCE.

READING FOUR: 12 DB-A, 30 FEET FROM TURBINE @ 45° ANGLE
AND NO BACKGROUND NOISE OR OUTSIDE INTERFERENCE.

NOTE: THESE READINGS WERE TAKEN OUTSIDE OF 8'x10'x8' CINDER BLOCK ENCLOSURE WITH CONCRETE SLAB AND WOOD JOIST ROOF.

SOUND LEVEL METER USED:

SIMPSON MODEL #40003 – MSHA APPROVED.
MEETS OSHA & WALSH-HEALY REQUIREMENTS FOR NOISE CONTROL.
CONFORMS TO ANSI S1.4-1983, IEC 651 SPECS FOR METER TYPE.

APPENDIX H

VIBRATION WORKSHEETS

GROUNDBORNE VIBRATION ANALYSIS

Project:	19566 Archibald & Chandler Car Wash & Coffee Shop	Date:	12/13/22
Source:	Small Bulldozer		
Scenario:	Unmitigated		
Location:	R1		
Address:			

PPV = PPVref(25/D)^n (in/sec)

INPUT

Equipment Type =	6	Small Bulldozer	INPUT SECTION IN GREEN
PPVref =	0.003	Reference PPV (in/sec) at 25 ft.	
D =	120.00	Distance from Equipment to Receiver (ft)	
n =	1.50	Vibration attenuation rate through the ground	

Note: Based on reference equations from Vibration Guidance Manual, California Department of Transportation, 2006, pgs 38-43.

RESULTS

PPV =	0.000	IN/SEC	OUTPUT IN BLUE

GROUNDBORNE VIBRATION ANALYSIS

Project:	19566 Archibald & Chandler Car Wash & Coffee Shop	Date:	12/13/22
Source:	Jackhammer		
Scenario:	Unmitigated		
Location:	R1		
Address:			

PPV = PPVref(25/D)^n (in/sec)

INPUT

Equipment Type =	5	Jackhammer	INPUT SECTION IN GREEN
PPVref =	0.035	Reference PPV (in/sec) at 25 ft.	
D =	120.00	Distance from Equipment to Receiver (ft)	
n =	1.50	Vibration attenuation rate through the ground	

Note: Based on reference equations from Vibration Guidance Manual, California Department of Transportation, 2006, pgs 38-43.

RESULTS

PPV =	0.003	IN/SEC	OUTPUT IN BLUE

GROUNDBORNE VIBRATION ANALYSIS

MEMORANDUM

TO: Mr. Jamie K. Cerda, Senior Planner | CITY OF EASTVALE

FROM: Giancarlo Ganddini, PE, PTP | GANDDINI GROUP, INC.

DATE: December 16, 2022

SUBJECT: Trip Generation Analysis for the Archibald/Chandler Car Wash and Coffee Shop (PLN22-20055)
Project No. 19556

The purpose of this memorandum is to document the number of trips forecast to be generated by the proposed project. We trust this analysis will aid the City of Eastvale in assessing the project.

PROJECT DESCRIPTION

The 2.71-acre project site is located at the northwest corner of the intersection of Archibald Avenue and Chandler Street in the City of Eastvale, California. The project site is currently vacant.

The proposed project involves construction of a commercial center comprised of a 950 square foot coffee shop (Dutch Bros) with drive through window, a 3,598 square foot express car wash (Quick Quack Car Wash) consisting of one automated tunnel and 20 vacuum bays, and one 3,500 square foot sit-down restaurant (Zendejas). The project site plan is provided in Attachment A.

PROJECT TRIP GENERATION

Table 1 shows the proposed project trip generation based on rates obtained from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition, 2021). Based on review of the ITE land use descriptions, trip generation rates for ITE Land Use Codes 930 (Fast Casual Restaurant), 937 (Coffee/Donut Shop with Drive-Through Window), and 948 (Automated Car Wash) were determined to adequately represent the proposed uses and were selected for calculation of the project trip generation forecast. The number of trips generated is determined by multiplying the trip generation rates and directional distributions by the land use quantity.

As shown in Table 1, the proposed project is forecast to generate a total of 1,686 daily trips, including 83 trips during the AM peak hour and 140 trips during the PM peak hour.

Comparison to 2020 Traffic Impact Analysis

Traffic impacts associated with development of the project site were previously analyzed in the *Archibald at Chandler Commercial Project Traffic Impact Analysis* (Ganddini Group, October 2020) ["2020 TIA"] for a previously proposed project consisting of a gas station with 10 vehicle fueling positions and convenience market, a 4,365 square foot fast-food restaurant with drive through window, and a 3,500 square foot fast casual restaurant (Zendejas).

Table 2 shows a trip generation comparison between the currently proposed project the trip generation previously evaluated in the 2020 TIA. As shown in Table 2, the proposed project is forecast to generate 3,185 fewer daily trips compared to the previously proposed development as evaluated in the 2020 TIA, including 58 fewer trips during the AM peak hour and 39 fewer trips during the PM peak hour. Therefore, the proposed project would result in the same or fewer impacts as those previously identified in the 2020 TIA.

CONCLUSION

We appreciate the opportunity to assist with this project. Should you have any questions or comments, please contact me at (714) 795-3100.

MEMORANDUM

TO: Ms. Jamie K. Cerda, Senior Planner | CITY OF EASTVALE

FROM: Giancarlo Ganddini, PE, PTP | GANDDINI GROUP, INC.

DATE: September 19, 2023

SUBJECT: Drive Through Queuing Study for the Archibald/Chandler Car Wash and Coffee Shop (PLN22-20055)
Project No. 19556

The purpose of this memorandum is to evaluate anticipated drive through lane operations and capacity for the proposed project based on drive through lane queue surveys observed at comparable facilities. We trust this analysis will aid the City of Eastvale in assessing the project.

PROJECT DESCRIPTION

The 2.71-acre project site is located at the northwest corner of the intersection of Archibald Avenue and Chandler Street in the City of Eastvale, California. The project site is currently vacant.

The proposed project involves construction of a commercial center comprised of a 950 square foot coffee shop (Dutch Bros) with drive through window, a 3,598 square foot express car wash (Quick Quack Car Wash) consisting of one automated tunnel and 20 vacuum bays, and one 3,500 square foot sit-down restaurant (Zendejas). The project site plan is shown on Figure 1.

DRIVE THROUGH LANE QUEUE SURVEYS

To determine the anticipated drive through queues for the project drive through uses, drive through queuing surveys were conducted on one weekday (September 22, 2022) and one Saturday (September 24, 2022) at the following comparable facilities:

- Dutch Bros, 13322 Limonite Avenue, Eastvale, CA 92880
- Quick Quack Car Wash, 5116 Hamner Avenue, Eastvale, CA 91752

The maximum number of queued vehicles at each survey site was documented in 5-minute intervals between 8:00 AM and 5:00 PM. The queue surveys were conducted by a third-party data collection service; count worksheets are provided in Attachment A.

It is noted that the Quick Quack Car Wash survey site is located next to an existing Costco Wholesale store and Costco gas station, which generates very high demand and interaction with the car wash on weekends. This survey site is expected to provide a highly conservative estimate of potential queuing demand in relation to the proposed project site. Additionally, both the proposed Dutch Bros and Quick Quack Car Wash will be the second locations within the City of Eastvale, which is expected to spread the customer base between existing and proposed facilities.

Tables 1 and 2 show the drive through lane queue survey results for the two survey sites. Table 3 shows a summary of key statistics for the two queue surveys.

Dutch Bros Queue Survey

As shown in Table 1, Dutch Bros queues were observed to be longer on the weekend survey day. The queues observed on the busier weekend survey day were an average of 24 vehicles, an 95th-percentile of 27 vehicles, and a maximum of 28 vehicles. It is noted that the maximum queue of 28 vehicles only occurred briefly during one 5-minute interval.

Quick Quack Car Wash Queue Survey

As shown in Table 2, Quick Quack Car Wash queues were observed to be longer on the weekend survey day. The queues observed on the busier weekend survey day were an average of 17 vehicles, an 95th-percentile of 29 vehicles, and a maximum of 31 vehicles. It is noted that the maximum queue of 31 vehicles only occurred briefly during one 5-minute interval.

Observed Queue Lengths

Based on review of photographs of the vehicle queues at the two survey sites, the average queue length appears to range from approximately 20 to 22 feet per vehicle.

Drive Through Service Rates

Table 4 shows the service rates for the Dutch Bros survey site and Table 5 shows the service rates for the Quick Quack Car Wash survey site. Service rates for both the Dutch Bros and Quick Quack Car Wash survey sites were determined by counting the number of vehicles exiting each drive through. Count worksheets are provided in Attachment B.

Dutch Bros Service Rate

As shown in Table 4, the Dutch Bros site served an average of 52 vehicles per hour on the weekday and 45 vehicles per hour on the weekend day. The peak hour service rate ranged from 56 to 63 seconds per vehicle.

Quick Quack Car Wash Service Rate

As shown in Table 5, the Quick Quack Car Wash site served an average of 93 vehicles per hour on the weekday and 99 vehicles per hour on the weekend day. The peak hour service rate ranged from 33 to 35 seconds per vehicle.

Recommended Queue Storage Design Value

It is recommended that the proposed drive through facilities provide sufficient drive through storage length to accommodate the 95th-percentile queue. In statistics, the 95th-percentile describes the value at which 95 percent of the samples are distributed at or below. In other words, providing sufficient queue storage to accommodate the 95th-percentile queue should ensure that drive through lane queue overflow occurs less than 5 percent of the time.

Based on the queue surveys, it is recommended that Dutch Bros provide sufficient queue storage for 27 vehicles and Quick Quack Car Wash provide sufficient queue storage for 29 vehicles.

DRIVE THROUGH LANE CAPACITIES

Dutch Bros Drive Through Lane Storage

Figure 2 shows the drive through lane storage length for the proposed Dutch Bros. As shown on Figure 2, the proposed Dutch Bros will provide a total storage length of approximately 557 feet. Assuming 20 feet of queue length per vehicle, the proposed Dutch Bros drive through lane would provide storage capacity for up to 27 vehicles, which is sufficient to accommodate the recommended 95th-percentile queue of 27 vehicles.

Based on the queue survey, the proposed storage capacity/95th-percentile queue was only exceeded by one vehicle during one out of the 108 five-minute observation intervals (i.e., 0.9% of the time) on Saturday. Based on the observed service rates, the queue is expected to move every minute. Therefore, overflow of one vehicle into the internal on-site drive aisles would be brief and impacts to on-site circulation would be minimal.

Quick Quack Car Wash Drive Through Lane Storage

Figure 3 shows the drive through lane storage length for the proposed Quick Quack Car Wash. As shown on Figure 3, the proposed Quick Quack Car Wash will provide a total storage length of approximately 582 feet. Assuming 20 feet of queue length per vehicle, the proposed Quick Quack Car Wash drive through lane would provide storage capacity for up to 29 vehicles, which is sufficient to accommodate the recommended 95th-percentile queue of 29 vehicles.

Based on the queue survey, the proposed storage capacity/95th-percentile queue was only exceeded by one to two vehicles during four out of the 108 five-minute observation intervals (i.e., 3.7% of the time) on Saturday. Based on the observed service rates, the queue is expected to move every 30-35 seconds. Therefore, any overflow into the internal on-site drive aisles would be brief and impacts to on-site circulation would be minimal.

OVERLAPPING RUSHES

Weekday queues for both the Dutch Bros and Quick Quack Car Wash are forecast to be substantially less compared to weekends and more than sufficient drive through storage capacity is proposed to accommodate the maximum weekday queues observed.

Based on the queue surveys, overlapping rushes would generally occur throughout the day on Saturdays; however, the maximum queue for Dutch Bros occurred in the morning at 9:55 AM, whereas the maximum queue for Quick Quack Car Wash occurred at 3:55 PM.

The proposed storage capacity/95th-percentile queue for Dutch Bros was only exceeded by one vehicle during one out of the 108 five-minute observation intervals (i.e., 0.9% of the time) on Saturday. The proposed storage capacity/95th-percentile queue for Quick Quack was only exceeded by one to two vehicles during four out of the 108 five-minute observation intervals (i.e., 3.7% of the time) on Saturday. Therefore, drive through queues for either facility are rarely expected to exceed the available storage and the odds of both facilities experiencing overflow at the same time would be exceedingly rare (approximately 0.03% probability).

SPECIAL EVENTS & TRAFFIC MANAGEMENT PLANS

Quick Quack Car Wash has indicated that they do not hold special events apart from grand opening. In addition to grand opening, Dutch Bros has indicated that they typically hold two to three fundraising events per year for local community groups. To ensure grand opening and any unforeseen special events do not create circulation issues, the following conditions of approval are recommended:

- Grand openings for the Dutch Bros and Quick Quack Car Wash tenants shall be held a minimum of one week apart from each other.
- On-site managers for Dutch Bros and Quick Quack Car Wash shall maintain each other's current contact information and meet periodically to review / address circulation (meetings should be held more frequently during initial months and may taper off once operations normalize).
- On-site managers for Dutch Bros and Quick Quack Car Wash shall inform each other of upcoming special events and coordinate to ensure any special events do not overlap.

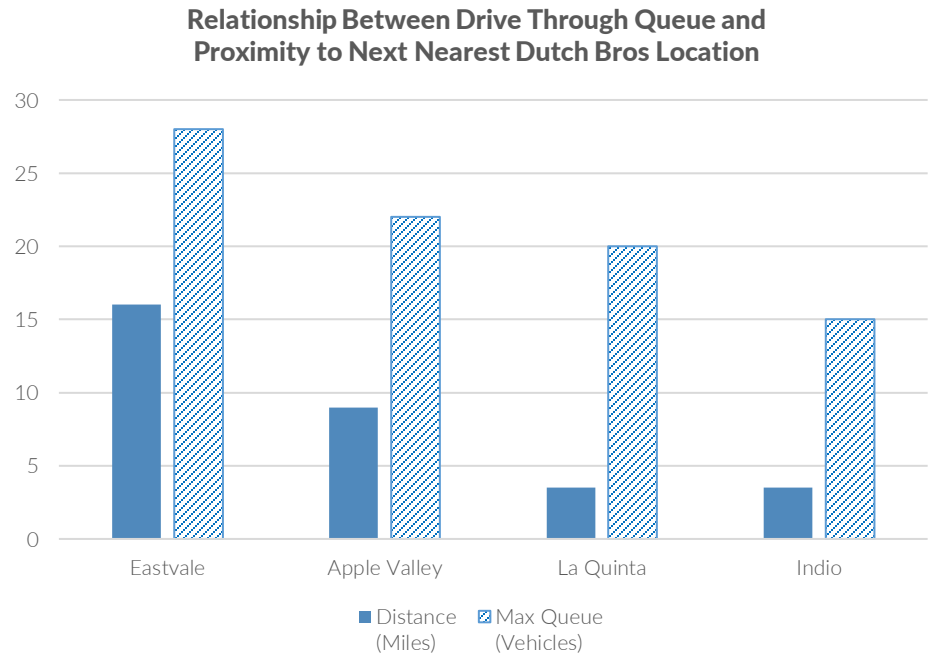
A copy of the Dutch Bros Traffic Management Plan (TMP) is included in Attachment C, which includes additional staffing (including an off-duty police officer) and directional signage. The TMP will be utilized during grand opening and whenever else necessary and may be adjusted as necessary to adapt to actual circulation needs once the store is in operation.

A copy of the Quick Quack Car Wash TMP is included in Attachment D. Similarly, the TMP will be utilized during grand opening and whenever else necessary and may be adjusted as necessary to adapt to actual circulation needs once the store is in operation. As noted in Attachment D, Quick Quack TMP measures consist of:

- two (2) directional entrance signs;
- two (2) "Pick Shortest Line" signs;
- two (2) team members assigned to queue management for ensuring 2-foot gap between cars to maximize storage capacity and providing instructions for first time customers; and
- employee parking designated at northeast of parcel to minimize conflicts with circulation.

Ingress for Quick Quack Car Wash is primarily expected from Archibald Avenue, though a smaller percentage may enter from Chandler Street; car wash/vacuum station egress will occur from the south to Chandler Street or north to Archibald Avenue. Attachment D also contains an operational statement provided by Quick Quack Car Wash, which describes the facility's membership program / license plate reader technology that allows automatic gate opening, thus increasing efficiency and minimizing queues.

Based on review of the queuing data collected and TMP implementation, vehicle queues are not expected to exceed the available storage capacities and adversely impact circulation in the public right-of-way. Notwithstanding the above, should queues from either Dutch Bros or Quick Quack Car Wash exceed the available storage areas and impede circulation, both operators have agreed to temporarily close their respective drive through lane entries, either with traffic cones or other barricade and signage indicating temporary closure, until queuing subsides. Once queuing subsides, the drive through lane entries may be re-opening.



SUPPLEMENTAL QUEUING DATA

In conjunction with development of another proposed Dutch Bros location in the City of La Mirada, the *Transportation Analysis for the La Mirada Dutch Bros. Coffee Shop Project* (LSA, March 2023) ["La Mirada Dutch Bros Study"] contains additional queuing data (see Attachment E). This study contains the following key findings relevant to the proposed project in the City of Eastvale:

1. Additional queuing observations at the existing Dutch Bros location in the City of Eastvale (13322 Limonite Avenue) were conducted on one Tuesday and one Saturday in June 2022. The maximum queues observed during this separate survey were 24 vehicles on Tuesday and 28 vehicles on Saturday. This is consistent with the queuing surveys conducted in September 2022 for this study and suggests relatively consistent demand from one month to another.

2. Drive through queuing surveys at six (6) additional Dutch Bros coffee shops in Apple Valley, La Quinta, and Indio. The queues observed at these locations ranged from 14 to 22 vehicles. The La Mirada Dutch Bros Study notes a correlation of longer drive through queues the farther a Dutch Bros coffee shop is from the next nearest location: *"the Eastvale Dutch Bros. Coffee shop, which had a maximum drive-through queue of 28 vehicles. is approximately 16 miles from the nearest Dutch Bros. Coffee shop in Rialto. The Apple Valley Dutch Bros. Coffee shop, which had a maximum drive-through queue of 22 vehicles, is approximately 9 miles from the nearest Dutch Bros. Coffee shop in Victorville. The La Quinta and Indio Dutch Bros. Coffee shops, which had maximum drive-through queues of 20 vehicles and 15 vehicles, respectively, are approximately 3.5 miles from each other."*

The chart below shows the relationship between drive through queue length and proximity to the next nearest location based on data from the La Mirada Dutch Bros Study.

Source: Based on data from *Transportation Analysis for the La Mirada Dutch Bros. Coffee Shop Project* (LSA, March 2023); see Attachment E.

The existing Dutch Bros in Eastvale is one of the first in the area, with the next nearest store located 16 miles away in the City of Rialto. The proposed store on Archibald Avenue/Chandler Street will be located 2.5 miles from the existing location on Limonite Avenue. Additionally, Dutch Bros is planning four new stores (Norco, Ontario, Corona, and Rancho Cucamonga) within a 10-mile radius of the project site. Thus, the proposed Dutch Bros on Archibald Avenue/Chandler Street (and additional planned locations) will spread demand over multiple stores and can be expected to reduce the maximum queues observed the existing Eastvale location based on data from the La Mirada Dutch Bros Study.

Similarly, the next nearest Quick Quack Car Wash from the existing Eastvale facility is located approximately 7 miles away in the City of Corona. The proposed Quick Quack Car Wash will reduce this distance to less than 4 miles and is likewise expected to result in lower queues than the maximum observed at the existing Eastvale facility.

RECOMMENDATIONS

Both the proposed Dutch Bros and Quick Quack Car Wash facilities should employ staff to assist with management of the drive through queue during peak periods. Specifically, staff should periodically walk along the drive through lanes encouraging vehicles to pull forward and maximize efficiency of the available storage areas.

In addition, Dutch Bros should maximize use of the hatched area east of the Dutch Bros building. This area is intended as a waiting area for large or complicated orders that may take longer to prepare; however, the hatched waiting area should be used for regular orders during peak periods to minimize queue overflow beyond the drive through lane, if necessary.

To ensure grand openings do not create circulation issues, the following condition of approval is recommended:

- Grand openings for the Dutch Bros and Quick Quack Car Wash tenants shall be held a minimum of one week apart from each other.

CONCLUSIONS

Based on review of all available queuing data, including drive through queue surveys of the existing Dutch Bros Coffee Shop (13322 Limonite Avenue) and Quick Quack Car Wash (5116 Hamner Avenue) in the City of Eastvale as well as review of supplemental queuing data of additional facilities, the proposed project is anticipated to provide adequate drive through storage capacity to accommodate peak queues and maintain adequate circulation/site access. Furthermore, both drive through facilities shall implement the traffic management plans (TMPs) outlined in Attachments C and D as necessary to maintain adequate on-site and off-site circulation.

We appreciate the opportunity to assist with this project. Should you have any questions or comments, please contact me at (714) 795-3100.

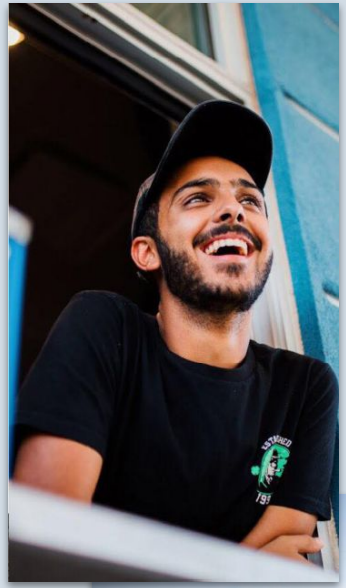
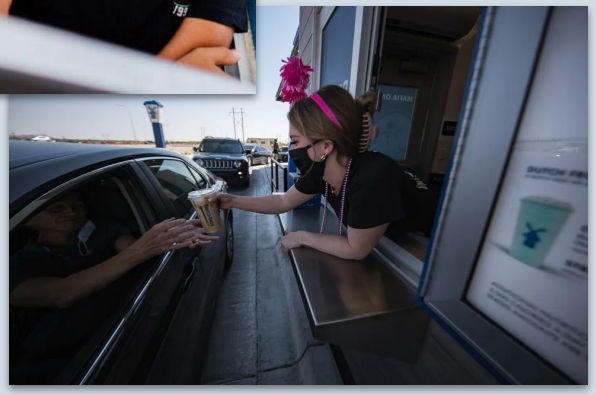
Dutch Bros Traffic Management Plan



Traffic Management Plan



Property Management Team

CA6103 - Eastvale
NWC Archibald & Chandler
Eastvale, CA 92880
West Region

Speed, Quality, Service

Timing Standards

45 seconds per car (at window). Speed timings conducted weekly in addition to a quarterly company wide evaluation.

Escape Lane

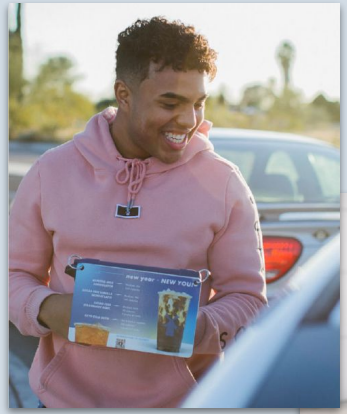
An escape lane permits customers to leave the line as soon as their drinks are delivered by a drink runner.

Peak Hours

DB will staff an additional traffic controller during peak hours as needed.

Speed, Quality, Service

Off-Site Operations



DB always evaluates the need of off-duty police officer support during our grand opening period.

Off duty police officers provide off-site support during business hours as determined necessary by DB leadership. Their job is to safely direct customer vehicles to and from a location. Prevent vehicles from blocking critical drives or otherwise restricting traffic flow (off-site).

Staffing Model

Schedules are written a minimum of 1-2 weeks in advance (in accordance with state and local guidelines) based on gross sales, trends, local events, and weather.

Speed, Quality, Service

Outside Traffic Management

Line Buster (LB)

Job Duty: Increase speed of the customers experience by taking orders while ensuring 2’ gap between cars. Ensuring when the line pulls forward the customers moves forward.

Drink Runner (DR)

Job Duty: Deliver completed drinks to the customer in line before reaching the window. Ensuring escape lane is used to minimize service time.

Dutch Bros Traffic Controller (DBTC)

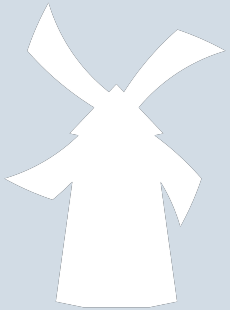
Job Duty: Direct traffic in and out of location. Ensuring vehicles from blocking critical drives or otherwise restricting traffic flow (on-site).

Training and FAQ's

Full Shop Meetings:

- Monthly meetings in which all shop personnel are required to attend. Discuss traffic plans and new commitments in detail.

Pre-Shift Huddles:



- Before each shift (morning, noon, night) the crew goes over updates, important communication, issues, and ensures strategy is set for the shift

Promotional Days / Major Holidays / Sticker Days:

- Dutch will determine if needed and hire a Third-Party Traffic Control Company to come in when the Stacking could possibly be an issue.

Evolving Traffic Plan:

- The Grand Opening plan will be utilized whenever necessary to mitigate traffic congestion that may occur from our new shop opening. We reserve the right to adjust the plan as conditions dictate, and expect that after the initial community response, our traffic patterns will settle to a predictable level within the first 90 days of operation.

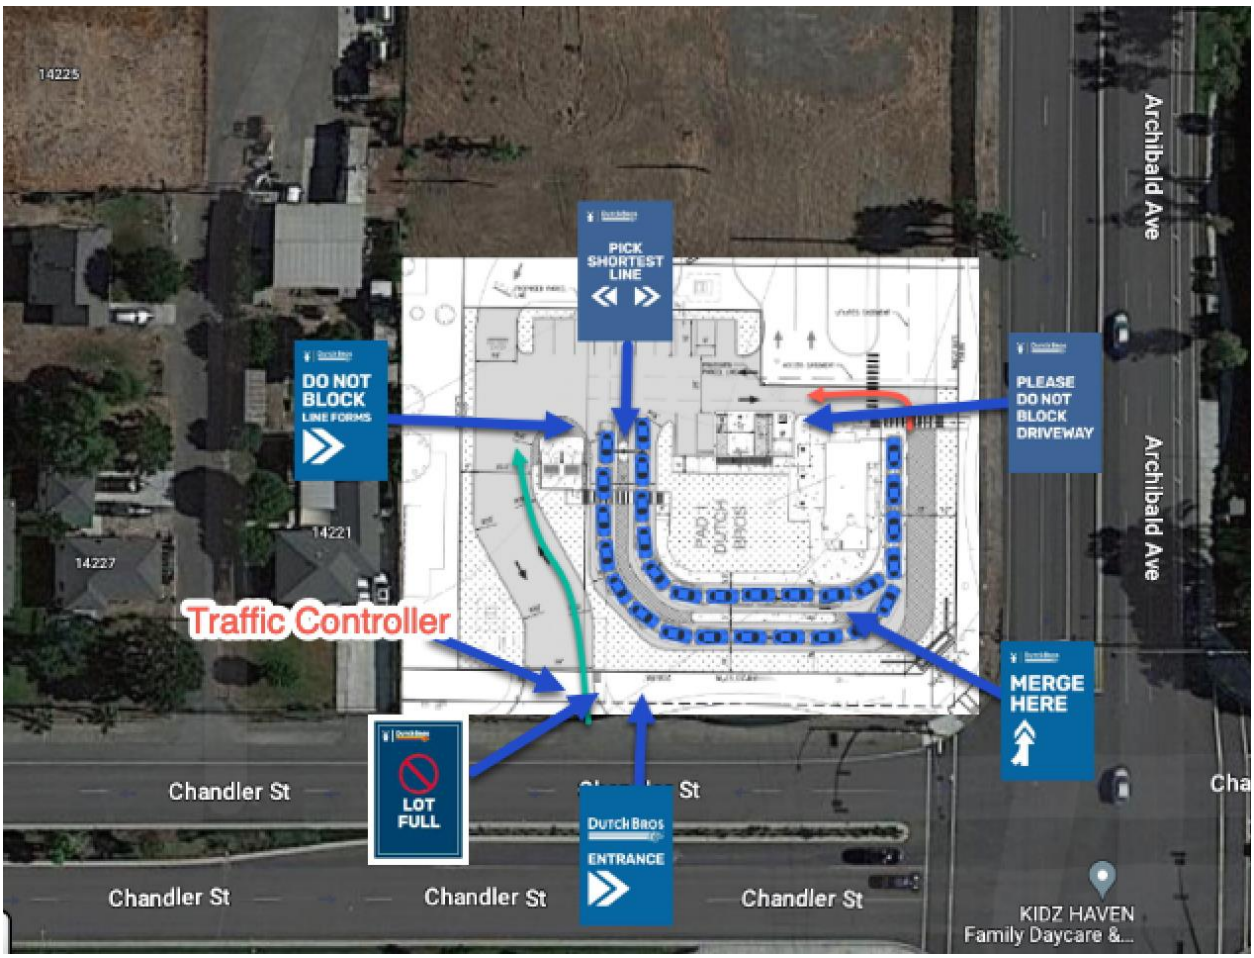
*Cones are not included in signage package. They are up to the operator and coach and ordered by operator!



Crew Parking

Dutch Bros. CA6301
NWC Archibald & Chandler
Eastvale, CA

Traffic Control Plan

To avoid a persistent issue of cars stacking on the main road of Chandler will require a combination of strategies that include market saturation, which we expect to achieve over the next 18 months in and around the Eastvale market. Traffic control measures during our grand opening phase, that may include the assistance of the city, local PD, or hired security, to keep traffic flowing and avoiding stacking onto the main road, and effective lot signage, that includes a “LOT FULL” sign and cone placement to discourage ingress traffic that can be used as needed.

Regarding: Quick Quack Queuing

Dear Mr. Ganddini,

Quick Quack site plan includes 3 long queuing lanes for a minimum stacking of 24 cars from the front of the Showroom at any given time. With this much stacking accommodations, it is extremely unlikely there will be any issues that cannot be easily overcome.

Quick Quack has the capacity to run up to 155 cars an hour through the wash, loading one car every 24 seconds onto the conveyor. Once on the conveyor, the average wash is approximately 2 minutes and 10 seconds before discharge at the front of the showroom.

Additionally, Quick Quack has a membership program that utilizes license plate readers, so when members arrive there is no wait, the gate will open automatically, and they can drive straight into the wash without stopping. This technology significantly increases the efficiency and throughput of our que lines. Unlike the many QSR drive through challenges due to managing vastly different orders, Quick Quack queuing is constant and rapid. Quick Quack has 189 stores throughout the western united states and has perfected the process of managing our queuing.

If for any reason a que line reaches maximum capacity, our team members operating the store will place traffic cones and signs at the entry stating we are temporarily closed. Once queuing subsides, we will remove the barricades and signs.
Sincerely,

Erika G. Hernandez

Transportation Analysis for the La Mirada Dutch Bros. Coffee Shop Project

CARLSBAD
CLOVIS
IRVINE
LOS ANGELES
PALM SPRINGS
POINT RICHMOND
RIVERSIDE
ROSEVILLE
SAN LUIS OBISPO

MEMORANDUM

DATE: March 31, 2023

TO: Manuel Muñoz, City of La Mirada, Community Development Director

FROM: Dean Arizabal, Principal, LSA

SUBJECT: Transportation Analysis for the La Mirada Dutch Bros. Coffee Shop Project (LSA Project No. 20231088)

LSA has prepared this transportation analysis for the proposed 950-square-foot (sf) Dutch Bros. Coffee shop with drive-through (project) at 14840 Beach Boulevard in La Mirada, California. The proposed project is at the northeast corner of the intersection of Beach Boulevard/Rosecrans Avenue. The proposed project would replace an existing 4,513 sf restaurant. Access to the proposed project is provided via one right-in/right-out (RIRO) driveway on Beach Boulevard and one RIRO driveway on Rosecrans Avenue. The proposed drive-through lane for the Dutch Bros. Coffee shop would accommodate 18 vehicles. The project site plan is provided in Attachment A.

As a result of comments from the City of La Mirada (City) and a subsequent discussion with the City's Community Development Department staff, a transportation analysis required for the proposed project. The purpose of this analysis is to identify the parking, trip generation, access and circulation, drive-through queuing, and traffic management plan (TMP) for the proposed project.

Parking

According to City Municipal Code Section 21.68.050 (Off-Street Parking Requirements), food and beverage sales (specialty food shop) require one parking space per 300 sf. The proposed 950 sf project would require 4 parking spaces. As shown on the project site plan, the proposed project would provide 8 parking spaces, including 7 regular spaces on the north side of the project and 1 American with Disabilities Act (ADA) space on the east side of the project. As such, the proposed project would meet the City's parking requirements.

Trip Generation

The daily and peak-hour trips of the proposed project and the existing (approved) use were calculated using trip rates from the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11th Edition (2021) for Coffee/Donut Shop with Drive-Through (Land Use 937) and High-Turnover (Sit-Down) Restaurant (Land Use 848). The trip generation was then reduced based on review of pass-by trip reduction percentages from the ITE *Trip Generation Manual* for each applicable land use type. Pass-by trips are made by drivers already on adjacent/nearby roadways

(e.g., stopped by the coffee shop on the way to work or home) and therefore are not additive trips to the circulation system.

Table A presents the ITE trip generation summary for the proposed project.

Table A: Project Trip Generation

Land Use	Size	Unit	Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Trip Rates[1]									
Coffee Shop		tsf	533.57	43.80	42.08	85.88	19.50	19.49	38.99
Restaurant		tsf	107.20	5.26	4.31	9.57	5.52	3.53	9.09
Project Trip Generation									
Coffee Shop	0.950	tsf	507	42	40	82	19	18	37
Pass-By Reductions[2]			(456)	(38)	(36)	(74)	(19)	(17)	(36)
Total			51	4	4	8	0	1	1
Existing Trip Generation									
Restaurant	4.513	tsf	484	24	19	43	25	16	41
Pass-By Reductions[3]			(102)	0	0	0	(11)	(7)	(18)
Total			382	24	19	43	14	9	23
Net Trips (Project - Existing)			**(331)**	**(20)**	**(15)**	**(35)**	**(14)**	**(8)**	**(22)**

Source: Compiled by LSA (2023).

[1] Trip rates from the Institute of Transportation Engineers (ITE) *Trip Generation* Manual, 11th Edition (2021).
Land Use 937 (Coffee/Donut Shop with Drive-Through Window)
Land Use 932 (High-Turnover [Sit-Down] Restaurant)

[2] 90% Daily (assumed), 90% AM, and 98% PM for ITE Land Use 938.

[3] 21% Daily (assumed), 0% AM, and 43% PM for ITE Land Use 932.

tsf = thousand square feet

As shown in Table A, the 950 sf Dutch Bros. Coffee shop with drive-through would generate 507 daily trips, including 82 trips (42 inbound and 40 outbound) in the a.m. peak hour and 37 trips (19 inbound and 18 outbound) in the p.m. peak hour. After applying ITE pass-by trip reductions, the net trip generation of the Dutch Bros. Coffee shop with drive-through is 51 daily trips, including 8 trips (4 inbound and 4 outbound) in the a.m. peak hour and 1 outbound trip in the p.m. peak hour.

The existing 4,513 sf restaurant would generate 484 daily trips, including 43 trips (24 inbound and 19 outbound) in the a.m. peak hour and 41 trips (25 inbound and 16 outbound) in the p.m. peak hour. After applying ITE pass-by trip reductions, the net trip generation of the existing restaurant is 382 daily trips, including 43 trips (24 inbound and 19 outbound) in the a.m. peak-hour and 23 trips (14 inbound and 9 outbound) in the p.m. peak hour.

The proposed project would result in a net reduction of 331 daily trips, including a reduction of 35 trips (20 inbound and 15 outbound) in the a.m. peak hour and a reduction of 22 trips (14 inbound and 8 outbound) in the p.m. peak hour.

Access and Circulation

The proposed project is at the northeast corner of the Beach Boulevard/Rosecrans Avenue intersection. One RIRO driveway on Beach Boulevard and one RIRO driveway on Rosecrans Avenue provide vehicular access to the proposed project. These two driveways, as well as internal drive aisles on the north and east sides of the proposed project, provide shared access and circulation for the project site and the neighboring commercial properties to the north and the east consistent with Parcel Map No. 7794 (recorded by Los Angeles County Recorder on April 18, 1977) and the Declaration of Establishment of Protective Covenants, Conditions, and Restrictions and Grants of Easements (recorded by Los Angeles County on April 22, 1977), which are provided in Attachment B.

Drive-Through Queuing

LSA prepared a drive-through queuing analysis for the recently approved Dutch Bros. Coffee shop project at the southwest corner of the intersection of Beach Boulevard/Lambert Road in La Habra, approximately 2.5 miles from the project site. The La Habra Dutch Bros. Coffee shop analysis (dated January 5, 2023) is provided in Attachment C and summarized below.

To determine the potential drive-through queues of the proposed La Habra Dutch Bros. Coffee shop, queuing observations were conducted by Counts Unlimited at a similar existing Dutch Bros. Coffee shop in Eastvale (13322 Limonite Avenue) on Saturday, June 25, 2022, and Tuesday, June 28, 2022. Based on the two days of survey data, the maximum observed drive-through queues at the Eastvale Dutch Bros. Coffee shop were as follows:

- Saturday (June 25, 2022): 28 vehicles (11:50 a.m. to 11:55 a.m.)
- Tuesday (June 28, 2022): 24 vehicles (11:40 a.m. to 11:45 p.m.)

Drive-through queuing surveys were also conducted by Counts Unlimited at Dutch Bros. Coffee shops in Apple Valley (21680 Bear Valley Road), La Quinta (44-175 Jefferson Street), and Indio (81-776 Highway 111) on Saturday, January 29, 2022, and Tuesday, February 1, 2022. According to the two days of survey data, the maximum observed drive-through queues at the Apple Valley, La Quinta, and Indio Dutch Bros. Coffee shops were as follows:

- Apple Valley – Saturday: 22 vehicles (11:30 a.m. to 11:40 a.m. and 1:10 p.m. to 1:15 p.m.)
- Apple Valley – Tuesday: 15 vehicles (7:10 a.m. to 7:15 a.m. and 8:10 a.m. to 8:20 a.m.)
- La Quinta – Saturday: 20 vehicles (10:05 a.m. to 10:10 a.m., 10:20 a.m. to 10:25 a.m., and 2:55 p.m. to 3:00 p.m.)
- La Quinta – Tuesday: 14 vehicles (11:10 a.m. to 11:15 a.m.)
- Indio – Saturday: 14 vehicles (11:35 a.m. to 11:45 a.m.)
