CITY OF EASTVALE

REGULAR PLANNING COMMISSION MEETING AGENDA

Eastvale City Hall Council Chambers
12363 Limonite Avenue, Suite 900, Eastvale, CA 91752
Wednesday, October 18, 2023
Regular Planning Commission Meeting: 6:00 PM

City Commissioners
Kevin Mensen, Chair
Michael Rochelle, Vice Chair
Andrea Hove, Commissioner
Josh Lee, Commissioner
April Rodriguez-Plott, Commissioner

This Agenda contains a brief general description of each item to be considered. Except as otherwise provided by law, no action or direction shall be taken on any item not appearing on the following Agenda. Unless legally privileged, all supporting documents, including staff reports, and any writings or documents provided to a majority of the City Council after the posting of this agenda are available for review at Eastvale City Hall, 12363 Limonite Avenue, Eastvale, CA 91752 or you may contact the City Clerk's Office, at (951) 361-0900 Monday through Thursday from 7:30 a.m. to 5:30 p.m. and available online at www.eastvaleca.gov.

Members of the public can observe the meeting by viewing the live-stream at www.eastvaleca.gov and may provide public comment by sending comments to the City Clerk's Office by email at cityclerk@eastvaleca.gov. Staff will monitor emails to the extent possible during the meeting and provide comments as possible. All comments will be made part of the record. Comments will then be read into the record, with a maximum allowance of 3 minutes per individual comment, subject to the Mayor's discretion to reduce time on public comment. All comments should be a maximum of 500 words, which corresponds to approximately 3 minutes of speaking time. If a comment is received before the agenda item is heard but before the close of the meeting, the comment will all be included as a part of the record of the meeting but will not be read into the record.

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, you should contact the City Clerk's Office at (951) 361-0900.

Regular meetings are recorded and made available on the City's website at www.eastvaleca.gov. Meeting recordings are uploaded to the City's website within 24 hours (unless otherwise noted) after the completion of the meeting.

1. CALL TO ORDER

2. ROLL CALL

3. PLEDGE OF ALLEGIANCE

4. ADDITIONS / REVISIONS

The Planning Commission may only add an item to the Agenda after making a finding that there is a need to take immediate action on the item and that the item came to the attention of the agency subsequent to the posting of the agenda. An action adding an item to the agenda requires 2/3 vote of the Commission. If there is less than 2/3 of the Commissioners present, adding an item to the agenda requires a unanimous vote. Added items will be placed for discussion at the end of each section unless otherwise noted.

5. PRESENTATIONS

6. PUBLIC COMMENT

Any member of the public may address the Commission on items within the Commission's subject matter jurisdiction, but which are not listed on this agenda during PUBLIC COMMENTS. However, no action may be taken on matters that are not part of the posted agenda. We request comments made on the agenda be made at the time the item is considered and that comments be limited to three minutes per person with a maximum of six minutes (time may be donated by one person). Please address your comments to the Commission and do not engaged in dialogue with individual Commissioners, City staff, or members of the audience. Blue speaker forms are available at the front table to the entrance of Council Chambers.

7. CONSENT CALENDAR

Consent Calendar items are normally enacted in one motion. The Chair or Commission may remove a Consent Calendar item for separate action. If a member of the public would like to speak on a Consent Calendar item, please complete a blue "Public Comment Form" and submit to the City Clerk prior to the item.

7.1. Planning Commission Meeting Minutes

RECOMMENDED ACTION(S):
Staff recommends that the City Council approve the City Council meeting minutes from the regular meeting on September 20, 2023.

7.2. Planning Department Update

Submitted by: Gustavo Gonzalez, Community Development Director

RECOMMENDED ACTION(S):
Staff recommends that the Planning Commission receive and file the Planning Department Update.

7.3. Public Works Department Update

Submitted by: Jimmy Chung, Public Works Director/City Engineer

RECOMMENDED ACTION(S):
Staff recommends that the Planning Commission receive and file the Public Works Department update.

8. PUBLIC HEARINGS

The public is encouraged to express your views on any matter set for public hearing. It is our procedure to first receive the staff report, then to ask for public testimony, first from those in favor of the project followed by testimony from those in opposition to it, and if there is opposition, to allow those in favor, rebuttal testimony only as to the points brought up in opposition. To testify on the matter, you need to simply come forward to the speaker's podium at the appropriate time, give your name and address and make your statement. After a hearing is closed, you may not further speak on the matter unless requested to do so or are asked questions by the Chair or a Member of the Commission. Public comment is limited to three (3) minutes each with a maximum of six (6) minutes (time may be donated by one speaker.)

8.1. PLN22-20087, PLN22-20088, PLN22-20089, PLN22-20090, PLN22-20091, and PLN22-20092 for Tentative Tract Map 38594 and Major Development Reviews of Phase A of the Eastwalk Development – The New Home Company

RECOMMENDED ACTION(S):
Staff recommends that the Planning Commission take the following actions:

1. Find the project consistent with the Addendum to the Certified Program Environmental Impact Report prepared for the Leal Master Plan, and that all impacts were adequately analyzed pursuant to applicable legal standards in the previously adopted Certified Program Environmental Impact Report and subsequent addenda, in accordance with State CEQA Guidelines Section 15162;
2. Approve Tentative Tract Map 38594 (PLN22-20087) to subdivide and develop 69.8 acres of undeveloped property into 65 buildable lots and 19 lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes, subject to the recommended conditions of approval;
3. Approve PLN22-20088 a Major Development Review for the overall site planning, master landscaping, streetscape design, and open space amenities of Phase A of The New Home Company master development project, subject to the recommended conditions of approval;
4. Approve PLN22-20089 a Major Development Review for the master site planning and architecture of Planning Area 1 (PA 1) of the Leal Master Plan to accommodate a proposed 168-unit condominium and townhome residential community, with associated pool/recreational facility, parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval;
5. Approve PLN22-20090 a Major Development Review for the master site planning and architecture of Planning Area 6 (PA 6) of the Leal Master Plan to accommodate a proposed 100-unit, attached single family residential community with associated parking areas and landscaping, subject to recommended conditions of approval;
6. Approve PLN22-20091 a Major Development Review for the master site planning and architecture of Planning Area 7A (PA 7A) of the Leal Master Plan to accommodate a proposed 94-unit, detached single family residential community with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval; and,
7. Approve PLN22-20092 a Major Development Review for the master site planning and architecture of Planning Area 8 (PA 8) of the Leal Master Plan to accommodate a proposed 76-unit, attached single family residential community with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval.

8.2. **PLN23-20018, PLN23-20019, PLN23-20020, and PLN23-20021 –Tentative Parcel Map 37653, Major Development Reviews and Conditional Use Permits for the proposed Chandler and Archibald Commercial Retail Center**
Submitted by: Allen Lim

RECOMMENDED ACTION(S):
Staff recommends that the Planning Commission take the following actions:

1. Adopt an Addendum to a previously approved 2021 Mitigated Negative Declaration (2021 MND), and find that all impacts were adequately analyzed pursuant to applicable legal standards in the previously approved Mitigated Negative Declaration, consistent with CEQA Guidelines Section 15162 through 15164;
2. Approve Tentative Parcel Map (TPM) No. 37653, PLN23-20018, to subdivide a 2.70-acre site into three (3) parcels, with one (1) parcel for each proposed land use: drive-through coffee shop, drive-through carwash, and sit-down restaurant, subject to conditions of approval;
3. Approve a Major Development Review (DR) and Conditional Use Permit (CUP), PLN23-20019, for the development and operation of a 950 square-foot drive-through coffee shop (dba Dutch Bros), subject to conditions of approval;
4. Approve a Major Development Review (DR) and Conditional Use Permit (CUP), PLN23-20020, for the development and operation of a 3,598 square-foot drive-through carwash (dba Quick Quack), subject to conditions of approval; and
5. Approve a Major Development Review (DR), PLN23-20021, for the development of a 3,450 square-foot sit down restaurant, subject to conditions of approval.

8.3. PLN23-20043– Tentative Tract Map 38167 and Major Development Review for Magnolia Ranch Residential Development
Submitted by: Jamie K. Cerda, AICP

RECOMMENDED ACTION(S):
Staff recommends that the Planning Commission take the following actions:

1. Adopt the Mitigated Negative Declaration (SCH #2023090664) prepared for the project, based on the findings and conclusions provided in the initial study, attached hereto and the conclusion that all impacts were adequately analyzed pursuant to applicable legal standards identified in the CEQA Guidelines;
2. Approve Tentative Tract Map No. 38167 to subdivide a single 10-acre lot (8.28 net acres) into 41 residential and three (3) lettered lots, subject to conditions of approval; and
3. Approve the Major Development Review for the master building architecture and site planning of 41 single-family residential lots and communal areas, subject to conditions of approval.

9. COMMISSION BUSINESS

10. CITY STAFF REPORTS

11. COMMISSION COMMUNICATIONS

12. ADJOURNMENT

The next regular meeting of the Eastvale Planning Commission is scheduled for Wednesday, November 15, 2023, at 6:00 p.m. at Eastvale City Hall Council Chambers, 12363 Limonite Avenue, Suite 900, Eastvale, CA 91752.

AFFIDAVIT OF POSTING

I hereby certify under penalty of perjury under the laws of the State of California, that the foregoing Agenda was posted at the following locations: City Hall, 12363 Limonite Avenue, Suite 910 and website of the City of Eastvale (www.eastvaleca.gov,) not less than 72 hours prior to the meeting.

_____

Planning Commission Meeting
CONSENT CALENDAR
Agenda Item No. 7.2
October 18, 2023

Planning Department Update

Prepared By:
Gustavo Gonzalez, Community Development Director

Recommended Action(s)
Staff recommends that the Planning Commission receive and file the Planning Department Update.

Summary
Planning projects are provided in the attached Planning Project Status list. The list provides a brief summary and status of each project. New information is highlighted in yellow. A map identifying the locations of each project is also included.

Background
The purpose of the Planning Department Update is to provide a list of the current status of major projects in the City of Eastvale.

Environmental
The following update requires no environmental review as it is not considered a "project" under the California Environmental Quality Act (CEQA).

Strategic Plan Action - Priority Level: N/A | Target #: N/A | Goal #: N/A
Not Applicable.

Fiscal Impact
The following update has no applicable fiscal impacts.

Prior City Council/Commission Action

Not Applicable.

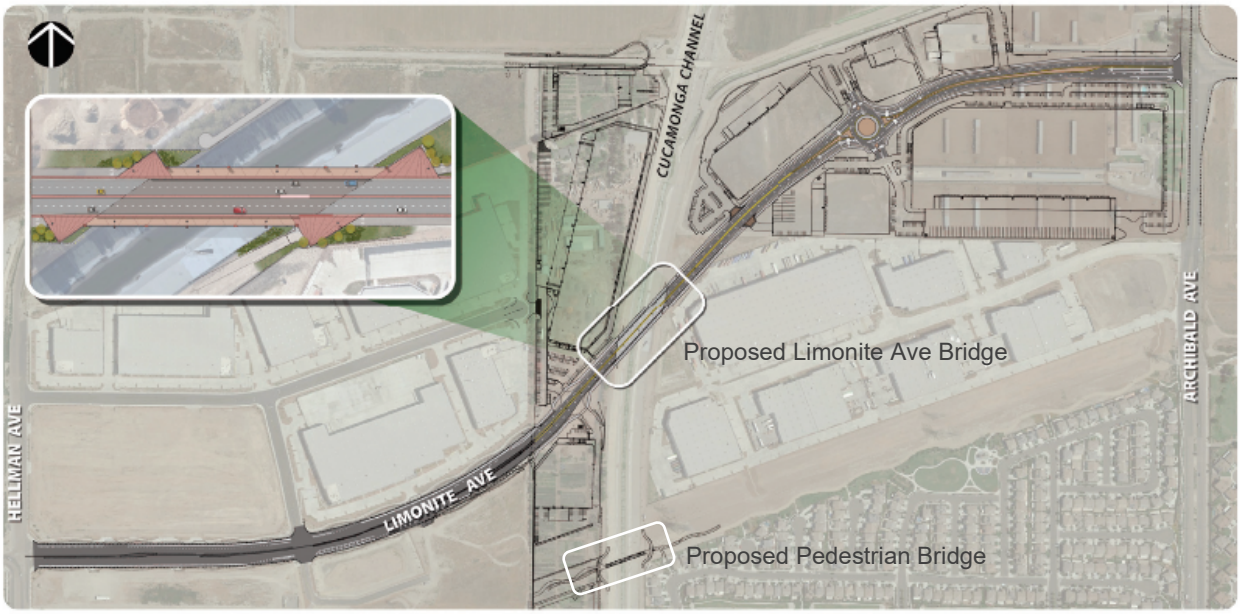
PROJECT TYPE:	Capital Improvements Project
PROJECT NAME:	Civic Center Project (Phase 1)
PROJECT DESCRIPTION:	A design build project to construct a Phase 1 of the Civic Center Project, which includes approximately 50,000 square foot City Hall, a 25,000 square foot library, a police station with an associated parking garage, a park, and a civic plaza.
PROJECT STATUS:	A consultant was procured to perform architectural, engineering, and interior design on May 10, 2023.

PROJECT SCHEDULE: **Tentative milestones:**

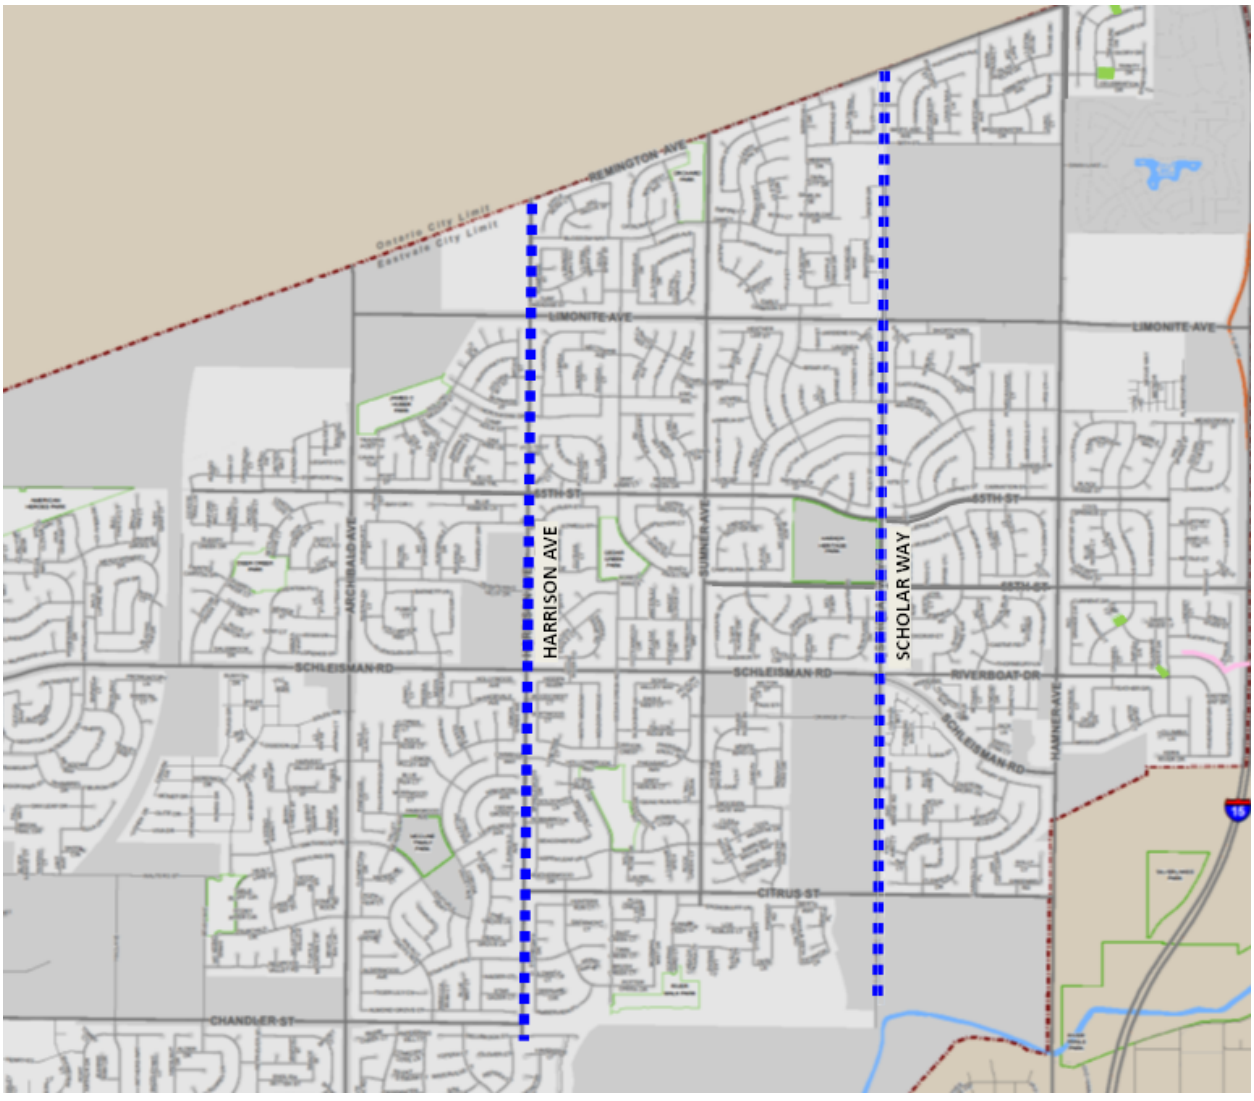
- Start architectural, engineering, and interior design: May 11, 2023;
- Construction Document Completion (100% design): June 30, 2024;
- Start Construction: December 1, 2024;
- Complete Construction: November 30, 2026;



PROJECT MAP:

EASTVALE PUBLIC WORKS PROJECT UPDATES

PROJECT TYPE:	Capital Improvements Project
PROJECT NAME:	Limonite Gap Closure
PROJECT DESCRIPTION:	Project will connect from 2,450 LF east of Hellman Ave to Archibald Avenue. The total length of the proposed project is approximately 3,200 LF including a bridge over the Cucamonga Creek. Both road and bridge will serve 4 lanes of traffic including bicycle and pedestrian facilities.
PROJECT STATUS:	Construction Management service procured. Contraction contract was awarded to Ortiz on July 26, 2023. A notice to proceed was issued to Ortiz on August 30, 2023.
PROJECT SCHEDULE:	Construction activities began on September 5, 2023 with a construction duration of 260 working days.



PROJECT MAP:

EASTVALE PUBLIC WORKS PROJECT UPDATES

PROJECT TYPE:	Capital Improvements Project
PROJECT NAME:	Improvement of Bike Network Connectivity/ATP Trails
PROJECT DESCRIPTION:	Project will design and construct nearly 5 miles of trails running along Scholar Way and Harrison Avenue. The project will provide dedicated space for people to bike and walk from north Eastvale to the Santa Ana River Trail on the south.
PROJECT STATUS:	Design contract was awarded to Mark Thomas. 30% plans and specifications have been delivered.
PROJECT SCHEDULE:	Mark Thomas is going to start Phase 2 efforts consisting of developing construction documents.

PROJECT MAP:

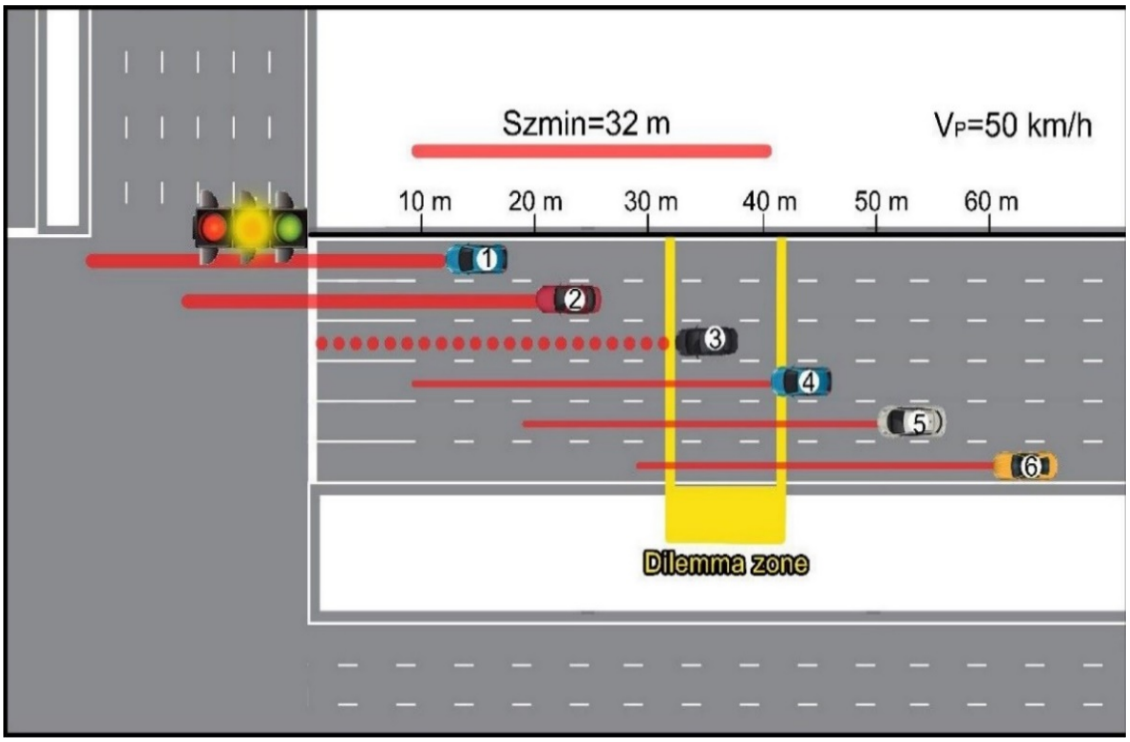
EASTVALE PUBLIC WORKS PROJECT UPDATES

PROJECT TYPE:	Capital Improvements Project
PROJECT NAME:	Local Roadway Safety Plan (LRSP)
PROJECT DESCRIPTION:	Project will identify and prioritize potential traffic safety improvements in the City as well as providing foundational information for submittal of future grant application.
PROJECT STATUS:	Consultant was procured to prepare the report. Working on the background and data collection to reflect the City's current policy and existing safety measure and most recent crash data.
PROJECT SCHEDULE:	The draft report is currently under review and it is anticipated to be taken for receive and file in October 2023.

PROJECT MAP:

EASTVALE PUBLIC WORKS PROJECT UPDATES

PROJECT NAME:	Citywide Retroreflective Backplate on Traffic Signal Indicator
PROJECT DESCRIPTION:	Project will design and install retroreflective backplate borders along backplates of traffic signal indicators at 39 signalized intersections to improve the visibility of signals.
PROJECT STATUS:	Construction contract was awarded on January 11, 2023 Council meeting, and construction management service has been procured. Contractor is working on necessary permits and ordering materials.
PROJECT SCHEDULE:	Construction is complete. An NOC will be filed once the final inspection is completed.



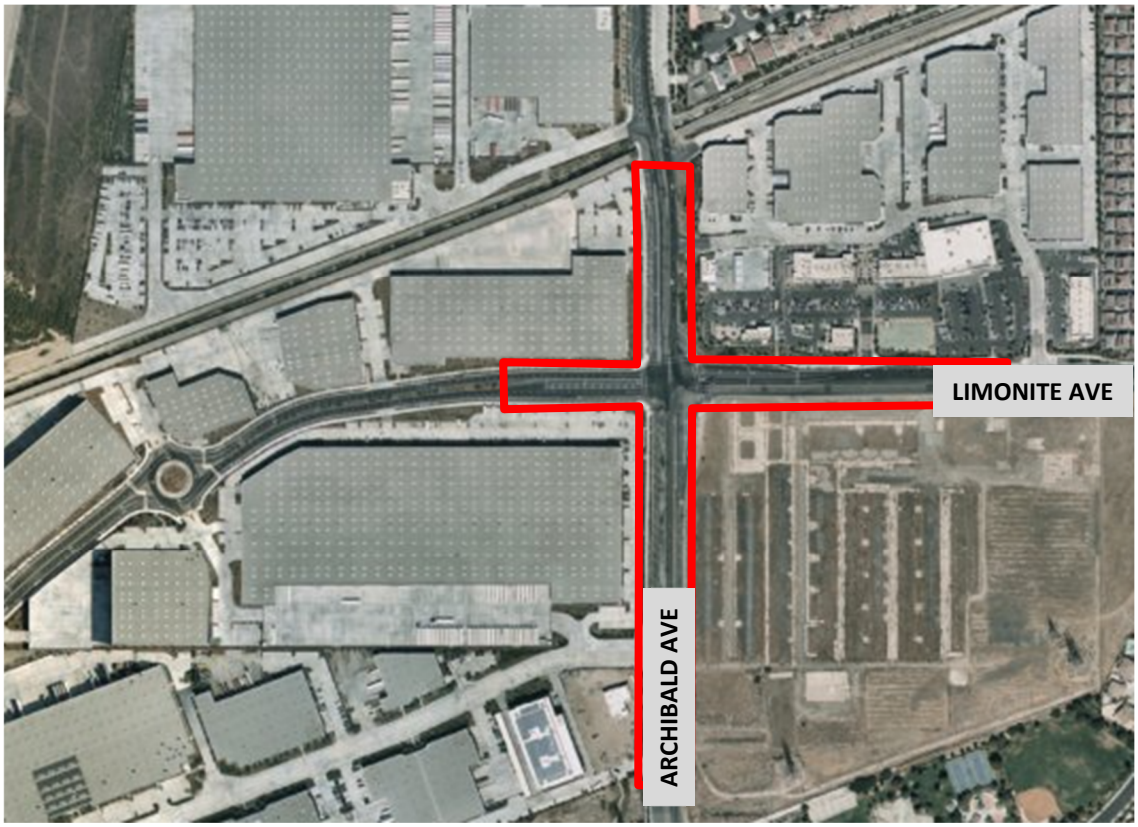
PROJECT MAP:

EASTVALE PUBLIC WORKS PROJECT UPDATES

PROJECT TYPE:	Capital Improvements Project
PROJECT NAME:	Traffic Signal Dilemma Zone Detection and Mitigation
PROJECT DESCRIPTION:	Project will install advanced dilemma zone detection system and associated equipment in existing traffic signal cabinets at 16 signalized intersections to modify signal timing to improve safety for motorists approaching intersections.
PROJECT STATUS:	Construction contract was awarded on September 13, 2023 Council meeting, and construction management service has been procured. The contractor is working on necessary permits and ordering materials.
PROJECT SCHEDULE:	Construction Award- September 13, 2023 The construction is estimated to commence in Q4 2023.

PROJECT MAP:

EASTVALE PUBLIC WORKS
PROJECT UPDATES



PROJECT TYPE:	Capital Improvements Project
PROJECT NAME:	ADA Transition Plan
PROJECT DESCRIPTION:	Program includes preparation and implementation of an ADA Self Evaluation Plan as required under the Americans with Disabilities Act (ADA). Future year funding will support removal of ADA barriers as identified in the Plan. Annual program to provide improvements focusing on ADA accessibility, including curb ramps and sidewalks throughout the City.
PROJECT STATUS:	Proposals are under review.

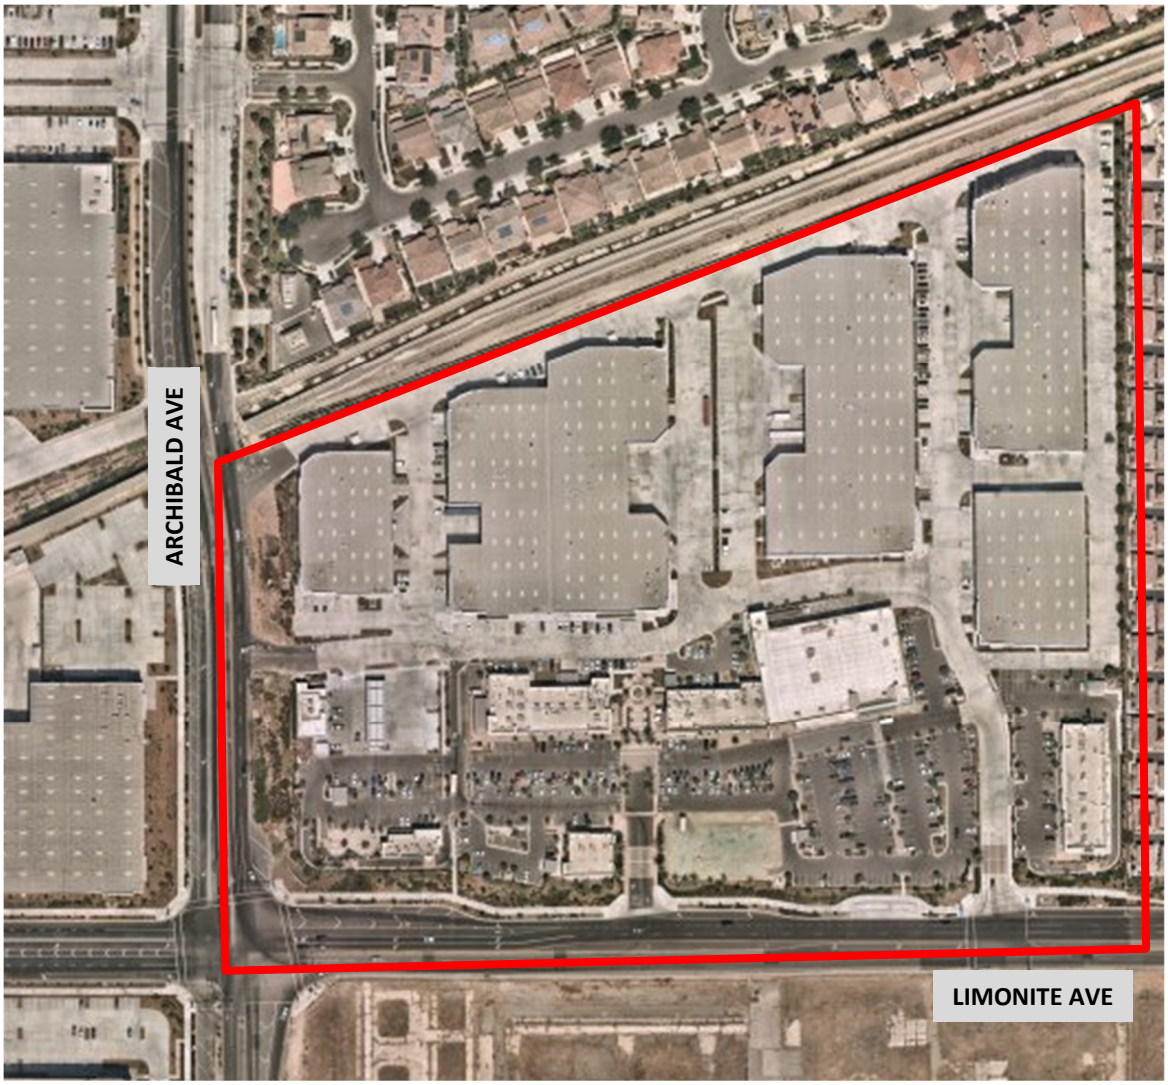
EASTVALE PUBLIC WORKS PROJECT UPDATES

PROJECT TYPE:	Capital Improvements Project
PROJECT NAME:	Archibald Avenue/Limonite Avenue Widening Project
PROJECT DESCRIPTION:	Street widening and safety project for Archibald Avenue from the City of Ontario limits south of the SCE easement, including the intersection at Limonite Avenue and portions of Limonite Avenue east and west of the intersection. The project looks to improve safety and overall circulation in conjunction with the improvements associated with the Homestead and Merge developments, and Limonite Gap Project. Components of the project include, but are not limited to, coordinating with SCE to relocate SCE high-tension support structures.
PROJECT STATUS:	• Installation of new transmission poles is completed. • Existing poles were removed mid-July, allowing the Developers to start coordinating their construction schedules. • Widening and street improvements started on September 11, 2023 with an anticipated completion by end of the year .

PROJECT MAP:

EASTVALE PUBLIC WORKS PROJECT UPDATES

PROJECT TYPE:	Residential Development
PROJECT NAME:	Prado (TR 35751)
PROJECT LOCATION:	Southeast corner of Schleisman Road and Cucamonga Flood Channel
PROJECT DESCRIPTION:	Improvements include a development of a gated community of 243 attached and detached single-family homes on approximately 19 acres.
PROJECT STATUS:	All punch list items are complete, and the project is tentatively scheduled for the October council meeting for project acceptance.



PROJECT MAP:

EASTVALE PUBLIC WORKS PROJECT UPDATES

PROJECT TYPE:	Commercial Development
PROJECT NAME:	The Merge
PROJECT LOCATION:	Northeast corner of Limonite Avenue and Archibald Avenue
PROJECT DESCRIPTION:	Improvements includes 26 gross acres.
PROJECT STATUS:	Onsite and offsite improvements ongoing Grading completed for Pad 2 Developer is also responsible for improvements along Archibald Avenue which are currently underway.

CITY OF EASTVALE

AGENDA STAFF REPORT

Planning Commission Meeting
PUBLIC HEARINGS
Agenda Item No. 8.1
October 18, 2023

PLN22-20087, PLN22-20088, PLN22-20089, PLN22-20090, PLN22-20091, and PLN22-20092 for Tentative Tract Map 38594 and Major Development Reviews of Phase A of the Eastwalk Development – The New Home Company

---

Prepared By:

Recommended Action(s)

Staff recommends that the Planning Commission take the following actions:

1. Find the project consistent with the Addendum to the Certified Program Environmental Impact Report prepared for the Leal Master Plan, and that all impacts were adequately analyzed pursuant to applicable legal standards in the previously adopted Certified Program Environmental Impact Report and subsequent addenda, in accordance with State CEQA Guidelines Section 15162;
2. Approve Tentative Tract Map 38594 (PLN22-20087) to subdivide and develop 69.8 acres of undeveloped property into 65 buildable lots and 19 lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes, subject to the recommended conditions of approval;
3. Approve PLN22-20088 a Major Development Review for the overall site planning, master landscaping, streetscape design, and open space amenities of Phase A of The New Home Company master development project, subject to the recommended conditions of approval;
4. Approve PLN22-20089 a Major Development Review for the master site planning and architecture of Planning Area 1 (PA 1) of the Leal Master Plan to accommodate a proposed 168-unit condominium and townhome residential community, with associated pool/recreational facility, parking areas, landscaping, and open space amenities, subject to the

recommended conditions of approval;

5. Approve PLN22-20090 a Major Development Review for the master site planning and architecture of Planning Area 6 (PA 6) of the Leal Master Plan to accommodate a proposed 100-unit, attached single family residential community with associated parking areas and landscaping, subject to recommended conditions of approval;
6. Approve PLN22-20091 a Major Development Review for the master site planning and architecture of Planning Area 7A (PA 7A) of the Leal Master Plan to accommodate a proposed 94-unit, detached single family residential community with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval; and,
7. Approve PLN22-20092 a Major Development Review for the master site planning and architecture of Planning Area 8 (PA 8) of the Leal Master Plan to accommodate a proposed 76-unit, attached single family residential community with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval.

Summary

The applicant (The New Home Company) is requesting approval of an application for Tentative Tract Map 38594 to subdivide and develop 69.8 acres of undeveloped property located at the northwest corner of Limonite and Hamner Avenues into 65 buildable lots and 19 lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes. In addition to Tentative Tract Map 38594, the applicant is requesting approval a total of five (5) Major Development Reviews (MDR) applications. The MDRs consist of overall site planning, landscaping, and open space amenities within Phase A of The New Home Company development project along with the site planning, architecture, landscaping, open space/recreation amenities, and parking of four (4) proposed residential communities within Phase A. These communities are identified as Planning Area 1 (PA 1), Planning Area 6 (PA 6), Planning Area 7A (PA 7A), and Planning Area 8 (PA 8), collectively known as Eastwalk. The remainder of the Planning Areas within Tentative Tract Map 38594 will be processed under separate Major Development Reviews at a future date. The requests are consistent with the General Plan, Leal Master Plan, applicable Zoning Code regulations, Subdivision Map Act, and required findings.

Background

Since the adoption of the city's first General Plan in 2012, the 158.6 acre former dairy and agricultural site located north of Limonite Avenue, south of 58th Street, west of Hamner Avenue, and east of Scholar Avenue (Assessor Parcel Nos. 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013) commonly referred to as "The Leal Property," has been identified as the centerpiece of Eastvale's future downtown, encouraging a mix of uses including retail, residential, civic, and recreation/entertainment.

Beginning in 2013, City Council initiated a long-range planning process for the property culminating in the adoption of the Leal Master Plan in 2017. On May 11, 2022, an amendment to the Leal Master Plan (LMP) was approved by City Council to refine land use and zoning designations, establish a project-wide land use, circulation, and infrastructure plan, determine project-wide development standards, design guidelines, and site characteristics. The LMP amendment allowed a maximum of 2,500 residential units and up to 595,000 square feet of commercial development. In addition, City Council approved a Development Agreement (DA) between the City and The New

Home Company (TNHC) designating a 16-acre area to develop under a future Option Agreement (OA) for the development of a city hall building, outdoor amphitheater, civic park, police station, public library, hotel, office uses, and a variety of restaurants and retail uses totaling 495,000 square feet, inclusive of the total commercial development allowed by the LMP amendment. To initiate development on the site, the City Council also approved Tentative Tract Map 38290 for the creation of 14 buildable lots, 19 lots for infrastructure purposes, trails, and open space, as well as a Major Development Review (MDR) to facilitate the development of the LMP.

The applicant is requesting to further subdivide 69.8 acres (Phase A) of Tentative Tract Map 38290 to create 65 buildable lots and 19 lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes (B map). Accompanying the request to further subdivide, the applicant requests MDRs of the Eastwalk residential communities PA 1, PA 6, PA 7A, PA 8 along with the overall site and landscape design of the public spaces within Phase A of Eastwalk.

Pursuant to Section 120.02.010 of the Eastvale Zoning Code, MDR approval by the Planning Commission is required for residential subdivision developments. It should be noted Tentative Tract Map 38594 also includes lots for civic, commercial, and multi-family residential purposes. Development on these lots will require separate entitlements to be reviewed and approved by the Planning Commission at a later date.

On September 20, 2023, the Planning Commission at their regularly scheduled meeting, opened the public hearing for the subject project, received public comment from Atul Singh Deora via an email, and continued the public hearing until the October 18, 2023, Planning Commission meeting to allow the applicant additional time to work through proposed conditions of approval.

Location

The overall Leal Master Plan site is located north of Limonite Avenue, south of 58th Street, west of Hamner Avenue, and east of Scholar Avenue (Assessor Parcel Nos. 164-030-043, 164-030-046, 164-030-010, 164-030-044, & 164-030-013). More specifically, Phase A of Eastwalk is located within PA 1, PA 2, PA 3, PA5, PA 6, PA 7A, PA 8, PA J, PA M, PA N, PA P, PA Q) of the Leal Master Plan. The project site is shown on **Sheet 1 of Attachment 1**.

Analysis

General Plan and Zoning Consistency

The subject property is classified as Leal Policy Area in the Land Use Element of the Eastvale General Plan. The LMP Amendment approved in 2022 provided the next stage in refinement of the development plan and thus refined the proposed land use mix, intensities and established the zoning for the site. The LMP Amendment includes two residential land use categories, Medium-Density and High-Density. The two residential land use types include density ranges provided in dwelling units per acre and a general description of the type of residential projects associated with each residential category. The LMP Amendment distinguishes between the two residential densities by location.

The High-density Residential is located within the Downtown area (PA 2 and PA 4) and consists of either vertical or horizontal mixed use, and primarily consisting of apartments. A maximum of 700 dwelling units are planned within the approximate 21 residential acres of downtown equating to a density of approximately 31 dwelling units per acre consistent with the High-Density residential

category (22-40 dwelling units per acre).

The remaining 1,800 dwelling units allowed on the project site would occur over approximately 87.54 acres and is intended for development of single-family detached, attached, condominiums and townhomes. This represents a density of approximately 21 dwelling units per acre, which is within the Medium-Density Residential Land Use Category of the Leal Master Plan Amendment (14-21 dwelling units per acre). Within the 87.54 acres of residential uses (Planning Areas 1, 6, 7, 8, 9, 11, 12, 13, K and L) dwelling units may be allocated within one or more planning areas provided the net density of any individual project does not exceed 40 dwelling units per acre.

The density and product type of each planning area reviewed as part of this request (PA 1, PA 6, PA 7A, PA 8) will be discussed in greater detail in their respective sections of this report but can be found summarized in the table below and in accordance with the General Plan.

Table 1: Proposed Densities

Density		
Planning Area	**Units per acre**	**Product Type**
Planning Area 1	28 (168 ÷ 5.98 = 28)	Townhomes/condominiums
Planning Area 6	17.8 (100 ÷ 5 .62 = 17.8)	Single-Family Attached
Planning Area 7A	17.2 (94 ÷ 5.46 = 17.2)	Single-Family Detached
Planning Area 8	19.3 (76 ÷ 3.93 = 19.3)	Single-Family Attached

Further, the subject property was identified in the 6th Cycle 2021-2029 Housing Element and Implementation Programs, certified on June 21, 2022, by the State Department of Housing and Community Development (HCD), as a site to support Regional Housing Needs Assessment (RHNA) housing growth targets. The Housing Element allocated 2,500 units on the subject property and were assumed to include both single-family detached and attached, and multiple-family residential housing to promote diverse and dynamic neighborhoods. The residential product types were designed to range from Medium Density (14-21 units per acre) to High Density (20-40 units per acre). Therefore, the proposed project is consistent with the General Plan.

Tentative Tract Map 38594 (PLN22-20087)

Municipal Code requirements pertaining to subdivisions (Tract Maps and/or Parcel Maps) are governed by the Subdivision Map Act (State of California Government Code § 66410-66499.58), and Title 130 (Subdivisions) of the Eastvale Municipal Code. Furthermore, all subdivision maps shall comply with the provisions of the City Zoning Code, and all other ordinances, statues and laws pertaining to the use, sale, leasing, or subdivision of land.

Tentative Tract Map 38594 proposes to further subdivide 69.8 acres of Tentative Tract Map 38290 into 65 buildable lots and 19 lettered lots for condominium, multi-family residential, commercial, civic, open space, and public right-of-way purposes. The sizes of the proposed lots are shown in the table below.

Table 2: Land Use Summary

LAND USE SUMMARY			
Lot No.	**Land Use**	**S.F.**	**Acres**
1 - 62	RESIDENTIAL	1,355,152	31.19
63 - 65	COMMERCIAL/CIVIC CENTER	708,268	16.26
A - C, E - G, N - S	OPEN SPACE	276,736	6.33
D, H - I	STREET DEDICATION	235,660	5.40
J - M	STREET	464,350	10.66
TOTAL		**3,040,184**	**69.84**

Individual unit ownership within a condominium is construed as ownership of only the interior air space confining the boundaries of the dwelling. Each unit owner within a condominium development also owns a divided interest in any common areas within the community. Each unit owner also is represented as a member of a Homeowners' Association (HOA) with responsibility for maintaining common areas, as well as other community assets, such as the exterior portions of buildings, site lighting and parking lots, swimming pool, clubhouse, and other amenities. Conditions of approval have been included to ensure that the appropriate covenants, conditions, and restrictions (CC&Rs) are in place, including the formation of an HOA.

Major Development Review (MDR)

To safeguard and enhance the appearance and quality of development in Eastvale, Section 120.02.010 of the Eastvale Zoning Code requires MDR approval for any new single-family residential subdivision (more than five lots) and any new multifamily residential building or structure with twenty or more units. This scope of review is outline in the aforementioned code section, and includes, but is not limited to, exterior design, materials, textures, colors, as well as ensuring the proposed structures will property related to the site and to the surrounding site in order to prevent structures detrimental to the character of the buildings already established in the area.

Additionally, the LMP Amendment (Chapter 2 - Project Character) identifies required development standards and key architectural and site design elements that should be considered in all residential areas within the LMP community. These requirements and guidelines are intended to establish a diversified, yet cohesive level of quality in home design that reflects the character of the surrounding environment while allowing for flexibility in design. Pursuant to Section 120.02.010 of the Eastvale Zoning Code, the applicant is requesting approval of the site planning and architectural design of four residential Planning Areas (PA 1, PA 6, PA 7A, PA 8, PA M, PA, N, PA, P, and PA Q) along with the site planning and landscape design of the public spaces within Phase A of the Eastwalk community.

Staff has reviewed the proposed project for compliance with the applicable development standards and required findings for a Major Development Review as set forth in Section 120.02.010 (C)(6) of the Eastvale Zoning Code as well as the LMP Amendment. As proposed, the project complies with both of these regulating documents.

Overall Phase 1 Major Development Plan Review (PLN22-20088)

Street Cross Sections

Backbone Streets – The proposed street cross sections for the "backbone" streets (Streets A, B, and C) show a curb-to-curb distance of 36 feet. This allows for one travel lane in each direction and on-street parking where allowed. The cross section also includes 20 feet of right-of-way on both sides of the street between the curb and the private property line. These areas are proposed to include substantial curb-adjacent parkways, wide sidewalks, and property line adjacent landscaping, in addition to an 11-foot-wide dual-purpose trail that will be delineated to separate bicycles from pedestrians. In general, staff is supportive of the proposed cross sections as they are consistent with the LMP and provide sufficient amenities to comfortably accommodate all mobility modes.

Limonite Avenue – The proposed cross section for Limonite Avenue shows a 30-foot right-of-way dedicated along the entire frontage, providing 96 feet of right-of-way from centerline. This would accommodate three vehicular travel lanes, substantial landscape buffers, a two-way protected class-1 bicycle trail, and a 30-foot-wide pedestrian zone with a 10-foot-wide meandering trail. In general, staff is supportive of the proposed cross section as it is consistent with the LMP and provide sufficient amenities to comfortably accommodate all mobility modes.

Hamner Avenue – The proposed cross section for Hamner Avenue shows a 20-foot right-of-way dedicated along the entire frontage, providing 87 feet of right-of-way from centerline. This would accommodate three vehicular travel lanes, substantial landscape buffers, a two-way protected class-1 bicycle trail, and a 20-foot-wide pedestrian zone with a 10-foot-wide meandering trail. Similar to Limonite Avenue, staff is supportive of the proposed cross section as it is consistent with the LMP and provide sufficient amenities to comfortably accommodate all mobility modes.

Scholar Way – The proposed cross section for Scholar Way shows a 10-foot right-of-way dedicated along the entire frontage, providing 54 feet of right-of-way from centerline. This would accommodate one vehicular travel lane, substantial landscape buffers, a two-way protected class-1 bicycle trail, and a 10-foot-wide meandering walkway. To improve pedestrian mobility along Scholar Way, staff is recommending the addition of a decomposed granite (DG) trail adjacent to the walkway separate by landscaping. A condition of approval has been added to reflect this recommendation. With this proposed condition, staff is supportive of the proposed cross section as it is consistent with the LMP and provide sufficient amenities to comfortably accommodate all mobility modes.

Landscaping

The applicant is providing over 20 species of trees and over 75 species of shrubs and groundcover. Based on the proposed spacing and tree species, the landscape plan includes tree plantings of sufficient spacing and type on both sides of walkways and trails to maximize shading for pedestrians. The plan also shows entryways and street intersections emphasis with larger trees and accent shrubs and groundcover to create focal points. In addition, the open space areas throughout Phase A includes enhanced landscaping and recreational area with sod to support active and passive recreational uses. Overall, staff is supportive of the proposed landscape plan.

Open Space and Amenities

As part of Phase A, the applicant is proposing a trails and open space network that will set the tone for Phase B and C (**Attachment 4 – Community Identity**). As described above, 11-foot-wide community trails are proposed along the backbone streets (Streets A, B and C) as well as the Limonite and Hamner Avenues. Scholar will also receive a 10-foot-wide walkway with a four-foot-wide DG trail as conditioned. All major existing streets will also provide a class-1 bicycle trail. Finally, all street intersections will include enhanced paving at entries and crosswalks within the right-of-way.

A 1.1-acre park is proposed at the southeast corner of Scholar Way and Limonite Avenue that will include 13,770 square feet of hardscaping and 34,730 square feet of landscaping. Amenities proposed within the proposed park include open turf areas, bench seating areas, landscape mounds, basketball court, pump track, meandering walkways, dog park, and numerous shade trees throughout. A small pocket park is proposed within the 50-foot-wide Southern California Edison (SCE) easement along Scholar Way that includes a small, decomposed granite pad with benches. In addition, bicycle racks, trash cans, benches, light bollards, pedestrian streetlights, and dog waste receptacles will be placed through Phase A to serve residents. Staff is supportive of the proposed open space and amenities package.

Signage

The overall signage plans show a primary neighborhood identification monument sign at Scholar Way and "B" Street and a secondary monument sign at Limonite Avenue and "C" Street. Several trail and paseo signs are also proposed throughout Phase A. No other signs are currently proposed. These signs will include sign copies that read "Eastwalk" to identify the branding of the residential neighborhoods in Phase A. It should be noted that signage near the civic center and downtown parcel will be proposed as part of the future development of that site and will have different branding than "Eastwalk". Overall, staff is supportive of the proposed signage.

Planning Area 1 Major Development Plan Review (PLN22-20089)

The applicant is requesting approval of an MDR application for the architectural design and site planning of a 168-unit attached townhome and condominium residential community within Planning Area 1 (PA 1) of the amended LMP. PA-1 encompasses Lots 1-20 and Lot N of Tentative Tract Map 38594 under PLN22-20087. PA 1 consists of 5.98 acres subdivided for condominium purposes with a proposed residential density of 28 dwelling units per acre, consistent with the General Plan and LMP amendment. The project site is shown on **Sheet SP-1 of Attachment 5**.

Architecture and Treatments

As depicted on the site plan, the project includes eight (8) three-story 10-plex townhomes and eight (8) three-story 11-plex condominiums for a total of 168 units and 16 buildings. All buildings adjacent to Scholar Way, 'A' Road, and 'B' Road are plotted in a manner to front onto their respective street providing direct views of the street creating an enhanced sense of security and a richness to the street environment.

The applicant is proposing four (4) architectural styles in PA 1: Transitional Craftsman, Transitional Mediterranean, Vineyard, and Mediterranean with a total of six (6) different color schemes

(**Attachment 5**).

Transitional Craftsman – The Transitional Craftsman architectural style incorporates such elements as low-pitched roofs, projecting eaves with rafter tails, clapboards, expansive porches, decorative braces underneath gables, and rectangular windows with simple window break-ups. Surfaces are finished with earth tone colors.

Transitional Mediterranean – This architectural style incorporates such elements as low-pitched hipped roofs with "S" or barrel tile, simplified forms and massing with stucco wall finishes and minimum horizontal siding, covered porches and/or decks, and large windows. Surfaces are finished with light to medium light warm colors with muted blues, greens, rust, and burgundy accents.

Vineyard – This architectural style is earthy and horizontal in nature based on farmhouse shapes and materials reflective of the agricultural past incorporating such elements as, gable roof pitches of flat concrete title or shake/raked texture, full window trim, board and batten, horizontal and stone siding.

Mediterranean – The Mediterranean architectural style is an old-world traditional style adapted to Southern California climate with shallow pitch hipped roofs with gable accents, full window trim, simple, rectangular forms, with decorative metal gate balcony elements. Exterior wall surfaces are finished with toned whites and light to medium light warm colors and vibrant shades of blues, greens, orange, and reds for accents.

Overall, staff believes all four (4) architectural styles are attractive and meet the minimum standard of design as set by the LMP.

Unit Size per Product Type

The applicant proposes product types as described in the following tables:

Table 3: 10-Plex Product

PLAN	LIVING AREA SQUARE FOOTAGE	NO. OF STORIES	NO. OF BEDROOMS	NO. OF BATHROOMS	GARAGE PARKING	Number within Project
PLAN 1A	1,398	3	2	2.5	2 (tandem)	24
PLAN 1B	1,398	3	2	2.5	2 (tandem)	8
PLAN 2A	1,579	3	2-3	2.5	2	8
PLAN 2B	1,652	3	2-3	2.5	2	8
PLAN 3A	1,708	3	3	3.5	2	24
PLAN 3B	1,708	3	3	3.5	2	8

Table 4: 11-Plex Product

PLAN	LIVING AREA SQUARE FOOTAGE	NO. OF STORIES	NO. OF BEDROOMS	NO. OF BATHROOMS	GARAGE PARKING	Number within Project
PLAN 1	772	1	1	1	2 (Tandem)	16
PLAN 2	956	1	2	2	2 (Tandem)	16
PLAN 2R	956	1	2	2	2 (Tandem)	16
PLAN 3 (Accessible*)	1,282	1	2	2	2	8
PLAN 4	1,459	1	3	2	2	16
PLAN 5	1,613	1	3	2	2 (Tandem)	16

* Plan 3 will be accessible where required, per Chapter 11A of the 2019 C.B.C

Staff believes that with the inclusion of different façade applications, the proposed mix of product types is sufficiently varied to ensure architectural variety and interest along the street. Staff has added a condition of approval requiring a varied mix of styles and colors throughout the development to ensure architectural diversity.

Open Space and Community Recreation

A community pool facility with single-story pool restroom building and equipment room is also proposed. The proposed pool building exhibits the transitional Mediterranean architectural style with trellis features serving as accents. The overall facility includes a family pool, spa, built-in barbecue and a number of seating options to serve the residents. The minimum open space requirements are analyzed in the overall Phase 1 MDR section above.

Parking

Each proposed dwelling unit is proposed to include a two-car garage (two-bay or tandem) providing a total of 336 covered parking spaces (168 x 2 = 336). Additionally, a total of 63 spaces of open guest parking would be provided within parking bays distributed throughout the project site, and an additional 52 spaces on Lot B and Lot C, adjacent to Scholar Way and within the Southern California Edison (SCE) easement for a total of 451 parking spaces provided for the PA-1 site. Condition No. 6 and 7 of the Leal Master Plan Major Development Review approved in May 2022 (PLN22-20020) requires the applicant to provide a site-specific parking study and parking management plan to demonstrate how the proposed development can adequately accommodate its parking demand and how parking will be continually managed to ensure parking issues do not occur as a result of the development. (**Attachment 9**).

In the Leal Master Plan Residential Parking Review and Parking Management Plan (PMP) memorandum prepared by RK Engineering Group, Inc dated September 13, 2023, the parking rates of 38 comparable cities in the Inland Empire were utilized to determine parking rates based on the residential dwelling unit type. From this, the 85th percentile parking requirements were utilized from all cities surveyed. The 85th percentile parking ratio is identified by the Institute of Transportation engineers (ITE) Parking Generation Manual publication as an acceptable and common methodology when combining parking ratios from multiple sources and represents a conservative calculation.

As reflected in Table 4 below, the 85th percentile parking ratios calls for higher parking ratios than the parking requirements of the City of Eastvale. In the past, City Council has stressed the importance of ample parking to ensure parking issues do not occur as a result of the development, as such staff recommends utilizing the 85th percentile parking ratios to establish the required parking rates for the residential build out of the LMP to ensure adequate parking is provided.

Environmental

***Background Continued:**

Table 5: PA-1 Parking Summary

DWELLING UNIT TYPE	EASTVALE PARKING RATE	TOTAL PARKING REQUIRED	85TH PERCENTILE (RECOMMENDED) PARKING RATE	TOTAL RECOMMENDED PARKING	TOTAL PARKING PROVIDED
1-Bedroom	1.25	20	2.36	38	41
2-Bedroom	2.25	162	2.36	170	175
3-Bedroom	2.75	220	2.90	232	235
Total	n/a	**402**	n/a	**440**	**451**

To further ensure sufficient parking is provided and maintained, the applicant has prepared a robust parking management plan. The parking management plan requires homeowners to preserve availability of garage parking spaces for the parking of operable vehicles only, since alternative garage uses, such as storage of personal goods, could potentially lower the ability of the project to adequately meet parking demand. Therefore, through the Covenants Conditions and Restrictions (CC&Rs), the use of dedicated covered resident parking for personal storage or any use other than for the parking of motor vehicles will be prohibited and the HOA will adopt and administer a parking inspection program to ensure resident garages are free and clear of obstructions and available for resident parking.

Additionally, residents will be required to register their authorized vehicles with the HOA management company. Residents will be provided with a resident parking permit to be affixed to the vehicle's window or displayed from the rear-view mirror. Parking permits will be vehicle and property address specific and be renewed annually. Residents will not be permitted to park in guest parking spaces; however, are permitted to park in the private recreation/park parking area along "A" Street and public streets during the daytime hours of 6:00 a.m. to 10:00 p.m. with a valid parking permit. Any resident found parking in a guest parking space at any time, or in the private recreation/park parking along "A" Street area, or on public streets during nighttime hours (10:00 p.m. to 6:00 a.m.) is subject to citation and/or towing.

The parking management plan further specifies parking in guest parking areas is not permitted without the authorized vehicle being registered on the "Safelist" and the vehicle displaying a valid parking pass. To register an authorized vehicle on the "Safelist", a resident must contact the HOA management company and provide the vehicle make, model, color, and license plate number of the guest vehicle. The management company will provide the resident with a temporary parking pass to be displayed on the dashboard of the guest vehicle. Residents will be permitted to "Safelist" an authorized vehicle a maximum of ten (10) times (days) per calendar month. An authorized guest vehicle may park overnight in a guest parking space, according to the term of the temporary parking

pass, and in Lot B and Lot C with a valid parking pass.

It should be noted, residential collector streets "A", "B", and "C" as well as private recreation/park parking areas will be marked for no overnight parking (10:00 p.m. to 6:00 a.m.) by any vehicle, including authorized guest vehicles and residents, and violators will be subject to citation and/or towing.

Additionally, patrols hired by the HOA will occur at random days and times overnight in marked patrol vehicles. The officers will verify permits, check for violations, and issue citations or call for the towing of the vehicle. Staff has included a condition of approval to require that a final version of the parking management plan be reviewed and approved by the Community Development Director, prior to occupancy of the first residential unit.

Finally, the City Traffic Engineer and Riverside County Fire Department have reviewed the site plan and neither party found hazardous design features or other on-site circulation constraints proposed.

Landscape and Wall Plan
The preliminary landscape plan depicts PA-1 unenclosed as a whole. A six foot (6') high block wall and six foot (6') high tubular steel fence enclosing the community pool and common open space area in the center of the site is proposed pursuant to the requirements of the California Building Code. Further, along "B" Street, the applicant proposes to construct a two-foot (2') precision block retaining wall with two-inch (2") cap in front of Building 1 and Building 16 to address the minor grade difference between the public right-of-way and PA-1.

In terms of landscaping, the applicant proposes to heavily landscape the site with a variety of both accent and screen trees, shrubs and hedges, and groundcovers. The planting legend references *Holly Oak, Australian Willow, Desert Museum Palo Verde, Purple-Leaf Baily Acaci* among others. All landscaping within the project is proposed to be constantly maintained by an HOA to ensure long-term viability.

In general, staff believes that the proposed preliminary landscape plan is satisfactory and consistent with the vision identified in LMP. Standard conditions have been included requiring the applicant to submit a final landscape and irrigation plan to the City Landscape Architect for review and approval.

<u>Planning Area 6 Major Development Plan Review (PLN22-20090)</u>

The applicant is requesting an MDR application for the architectural design and site planning of a 100 unit attached townhome residential community within Planning Area 6 (PA 6) of the amended LMP. PA-6 encompasses Lots 37-51 of Tentative Tract Map 38594 under PLN-22-20087. PA 6 consists of 5.62 acres subdivided for condominium purposes with a proposed residential density of 17.8 dwelling units per acre, consistent with the General Plan and LMP amendment. The project site is shown on **Sheet SP-1 of Attachment 6**.

Architecture and Treatments
As depicted on the site plan, the project includes thirty-two (32) three-story triplexes and two (2) duplexes for a total of 100 units and 34 buildings. It is important to note, the two (2) duplex buildings found at the northeast corner of "A" Street and "B" Street will serve as the model homes

for the proposed product found in Planning Area 8 (PA 8); hence their product type and architectural style will differ slightly than the reminder of the units found in PA 6. Discussion of these units can be found in Section Planning Area 8 Major Development Plan Review (PLN22-20092) of this report. All buildings adjacent to "A" Street, "B" Street, Lot 65 (city controlled public open space), PA L (future recreation center controlled by the HOA) are plotted in a manner to front onto their respective street or park space providing direct views, creating an enhanced sense of security and a richness to the street environment.

The applicant is proposing three (3) architectural styles in PA 6: Spanish, Vineyard, and Farmhouse.

Spanish - The Spanish architectural style includes box-like forms, shallow-pitched roofs, simple to lightly textured surfaces with clean cut openings for windows and doors. Accent materials include horizontal siding, ceramic tiles, metal elements such as pot shelves, balconies, and gates. Surfaces are finished in toned whites and light to medium light warm colors.

Vineyard - This architectural style is earthy and horizontal in nature based on farmhouse shapes and materials reflective of the agricultural past incorporating such elements as, gable roof pitches of flat concrete title or shake/raked texture, full window trim, board and batten, horizontal and stone siding.

Farmhouse - The Farmhouse architectural style incorporates such elements as front gables, porches and extended roof eaves. Simplified massing with an emphasis on vertical proportions through vertical siding. Surfaces are finished with stucco, board and batten and stone veneer.

Overall, staff believes all three (3) architectural styles are attractive and meet the minimum standard of design.

Unit Size Per Product type

The applicant proposes product types as described in the following table:

Table 6: Triplex Product

PLAN	LIVING AREA SQUARE FOOTAGE	NO. OF STORIES	NO. OF BEDROOMS	NO. OF BATHROOMS	GARAGE PARKING	Number within Project
PLAN 1	1846	3	3	3.5	2	24
PLAN 2	1977	3	4	3.5	2	32
PLAN 3	2323	3	4	3.5	2	40

Staff Believes that with the inclusion of different façade applications, the proposed mix of product types is sufficiently varied to ensure architectural variety and interest along the street. Staff has added a condition of approval requiring a varied mix of styles and colors throughout the development to ensure architectural diversity.

Parking

Each dwelling unit is proposed to include a two-car garage for a total of two hundred spaces (100 units x 2 car garage = 200 parking spaces). A total of 38 guest parking spaces are also proposed. Guest parking is proposed at a rate of twenty percent (20%) per dwelling unit or one (1) space per five (5) residential units for a total of twenty (20) uncovered guest spaces (100 units ÷ 5 guest parking rate = 20 guest parking spaces); hence, the applicant proposes a surplus of 18 parking spaces (38 spaces provided – 20 spaces recommended = 18 additional parking spaces). Guest parking is provided within parking bays distributed throughout the project site. PA 6 provides a total of 238 parking spaces and would be consistent with Section 120.05.060 of the Eastvale Zoning Code. Additionally, Condition No. 6 and 7 of the PLN22-20020 (Leal Master Plan Major Development Review) requires the applicant to provide a site-specific parking study and parking management plan to demonstrate the proposed development can adequately accommodate its parking demand and how parking will be continually managed to ensure parking issues do not occur as a result of the development. **(Attachment 9)**.

Table 7: PA-6 Parking Summary

Dwelling Unit Type	Eastvale Parking Rate	Total Parking Required	Recommend Parking	Total Parking Provided
Single-Family (Attached and Detached)	2 spaces per unit	200 spaces (100 units x 2 spaces)	200 spaces (100 units x 2 spaces)200	200 spaces
Guest Parking	0 spaces	0 spaces	20 spaces (100 units x .20)	38 spaces
Total		**200 required spaces**	**220 recommended spaces**	**238 provided spaces**

As discussed in detail under PA-1, the applicant proposes to utilize the same parking management plan for PA-6 as PA-1 and the project will be condition to provide a final version of the parking management plan for review and approval by the Community Development Director, prior to occupancy of the first residential unit. With incorporation of these conditions of approval, staff supports the parking provided for the project.

Finally, the City Traffic Engineer and Riverside County Fire Department have reviewed the site plan. No hazardous design features or other on-site circulation constraints were identified by either party.

Landscape and Wall Plan

The preliminary landscape plan depicts PA-6 unenclosed as a whole. A six-foot (6') high precision block walls with two-inch (2") caps are proposed as return/privacy walls between buildings and can be found on Sheet L-301 of **Attachment 6**. Additionally, residential units have the option of adding a front patio/courtyard which would be enclosed by a three-foot (3') high precision block with two-inch (2") caps and a three foot (3') high vinyl gate in an architectural style consistent with the main residence (i.e., Spanish, Vineyard, and Farmhouse).

In terms of landscaping, the applicant proposes to heavily landscape the site with a variety of both accent and screen trees, shrubs and hedges, and groundcovers. The planting legend references Marina Strawberry Tree, Camphor Tree, Desert Museum Palo Verde, Purple-Leaf Baily Acaci, among

others. All landscaping within the project is proposed to be constantly maintained by HOA to ensure long-term viability.

In general, staff believes that the proposed preliminary landscape plan is satisfactory and consistent with the vision identified in LMP. Standard conditions have been included requiring the applicant to submit a final landscape and irrigation plan to the City Landscape Architect for review and approval.

Planning Area 7A Major Development Plan (PLN22-20091)

The applicant is requesting approval of an MDR application for the architectural design and site planning of a 94 unit detached single-family residential community within Planning Area 7A (PA 7A) of the amended LMP. PA-7A encompasses Lots 21-36, Lot O, and Lot P of Tentative Tract Map 38594 under PLN-22-20087. PA 7A consists of 5.46 acres subdivided for condominium purposes with a proposed residential density of 17.2 dwelling units per acre, consistent with the General Plan and LMP amendment. The project site is shown on **Sheet SP-1 of Attachment 7.**

Architecture and Treatments

As depicted on the site plan, the project includes ninety-four (94) three-story detached single-family units. All buildings adjacent to "A" Street, "B" Street, Lot O and Lot P (HOA maintained community open space) are plotted in a manner to front onto their respective street or park space providing direct views, creating an enhanced sense of security and a richness to the street environment.

The applicant is proposing three (3) architectural styles in PA 7A: Transitional Mediterranean, Transitional Craftsman, and Transitional Farmhouse.

Transitional Mediterranean - This architectural style incorporates such elements as low-pitched hipped roofs with "S" or barrel tile, simplified forms and massing with stucco wall finishes and minimum horizontal siding, covered porches and/or decks, and large windows. Surfaces are finished with light to medium light warm colors with muted blues, greens, rust and burgundy accents.

Transitional Craftsman - The Transitional Craftsman architectural style incorporates such elements as low-pitched roofs, projecting eaves with rafter tails, clapboards, expansive porches, decorative braces underneath gables, and rectangular windows with simple window break-ups. Surfaces are finished with earth tone colors.

Transitional Farmhouse - The Farmhouse architectural style incorporates such elements as front gables, porches and extended roof eaves. Simplified massing with an emphasis on vertical proportions through vertical siding. Surfaces are finished with stucco, board and batten and stone veneer.

Overall, staff believes all three (3) architectural styles are attractive and meet the minimum standard of design.

Unit Size Per Product type

The applicant proposes product types as described in the following table:

Table 8: Single-Family Detached Product

PLAN	LIVING AREA SQUARE FOOTAGE	NO. OF STORIES	NO. OF BEDROOMS	NO. OF BATHROOMS	GARAGE PARKING	Number within Project
PLAN 1	1609	3	3	2.5	2	29
PLAN 2	1665	3	3	3.5	2	32
PLAN 3 & 3X	1880	3	4	3.5	2	33

Staff Believes that with the inclusion of different façade applications, the proposed mix of product types is sufficiently varied to ensure architectural variety and interest along the street. Staff has added a condition of approval requiring a varied mix of styles and colors throughout the development to ensure architectural diversity.

Open Space and Community Recreation

Centrally located within PA-7A is Lot O and Lot P, a total of 0.18 acres of land dedicated to community recreation. The applicant proposes a sunken turf area, enhanced paving, outdoor tables and chairs, community themed benches, soft seating, decorative string lights as well as ping pong tables. Creating additional synergy within this area the applicant has designed the front elevation of the units surrounding Lot O and Lot P to be oriented inward towards the open space.

Parking

Each proposed dwelling unit is proposed to include a two-car garage for a total of one hundred and eighty-eight spaces (94 units x 2 car garage = 188 parking spaces). A total of 20 guest parking spaces are also proposed by the applicant. Guest parking is proposed at a rate of twenty percent (20%) per dwelling unit or one (1) space per five (5) residential units for a total of 18.8 ≈ 19 uncovered guest spaces (94 units ÷ 5 guest parking rate ≈ 19 guest parking spaces); hence, the applicant proposes a surplus of one (1) parking space (20 spaces provided- 19 spaces recommended = 1 additional parking space). Guest parking is provided within parking bays distributed throughout the project site. PA 7A provides a total of 208 parking spaces and would be consistent with Section 120.05.060 of the Eastvale Zoning Code. Additionally, Condition No. 6 and 7 of the PLN22-20020 (Leal Master Plan Major Development Review) requires the applicant to provide a site-specific parking study and parking management plan to demonstrate the proposed development can adequately accommodate its parking demand and how parking will be continually managed to ensure parking issues do not occur as a result of the development. **(Attachment 9)**.

Table 9: PA-7A Parking Summary

Dwelling Unit Type	Eastvale Parking Rate	Total Parking Required	Recommend Parking	Total Parking Provided
Single-Family (Attached and Detached)	2 spaces per unit	188 spaces (94 units x 2 spaces)	188 spaces (94 units x 2 spaces)	188 spaces
Guest Parking	0 spaces	0 spaces	19 spaces (94 units x .20)	20 spaces

Total		**188 required spaces**	**207 recommended spaces**	**208 provided spaces**

As discussed in detail under PA-1, the applicant proposes to utilize the same parking management plan for PA-7A as PA-1 and the project will be condition to provide a final version of the parking management plan for review and approval by the Community Development Director, prior to occupancy of the first residential unit. With incorporation of these conditions of approval, staff supports the parking provided for the project.

Finally, the City Traffic Engineer and Riverside County Fire Department have reviewed the site plan. No hazardous design features or other on-site circulation constraints were identified by either party.

Landscape and Wall Plan
The preliminary landscape plan **(Sheet L-301 of Attachment 7)** depicts the PA 7A as a whole. Unique to PA-7A are proposed private yards created with six-foot (6') high precision block walls with two-inch (2") caps return/privacy walls between individual residential units. Additionally, residential units have the option of adding a front patio/courtyard which would be enclosed by a three-foot (3') high precision block with two-inch (2") cap with a three foot (3') high vinyl gate in an architectural style consistent with the main residence (i.e., Transitional Mediterranean, Transitional Craftsman, and Transitional Farmhouse). Additionally, Lot O, where the community open space and recreation area is located the developer proposes a three (3) foot tall precision block wall with two-inch (2") cap.

In terms of landscaping, the applicant proposes to heavily landscape the site with a variety of both accent and screen trees, shrubs and hedges, and groundcovers. The planting legend references *Marina Strawberry Tree, Camphor Tree, Australian Willow, Drake Lacebark Elm, Yellow Bells,* among others. All landscaping within the project is proposed to be constantly maintained by a HOA to ensure long-term viability.

In general, staff believes that the proposed preliminary landscape plan is satisfactory and consistent with the vision identified in LMP amendment. Standard conditions have been included requiring the applicant to submit a final landscape and irrigation plan to the City Landscape Architect for review and approval.

Planning Area 8 Major Development Plan (PLN23-20092)

The applicant is requesting approval of an MDR application for the architectural design and site planning of a 76 unit attached townhome residential community within Planning Area 8 (PA 8) of the amended LMP. PA-8 encompasses Lots 52-61 and Lot Q of Tentative Tract Map 38594 under PLN-22-20087. PA 8 consists of 3.93 acres subdivided for condominium purposes with a proposed residential density of 19.3 dwelling units per acre, consistent with the General Plan and LMP amendment. The project site is shown on **Sheet SP-1 of Attachment 8**.

Architecture and Treatments
As depicted on the site plan, the project includes thirty-eight (38) three-story attached duplexes for a total of 76 units and 38 buildings. All buildings adjacent to "A" Street, "C" Street, Lot 65 (city controlled public open space), and PA L (future recreation center controlled by the HOA) are plotted in a manner to front onto their respective street or park space providing direct views, creating an

enhanced sense of security and a richness to the street environment.

The applicant is proposing three (3) architectural styles in PA 8: Spanish, Vineyard, and Farmhouse.

Spanish - The Spanish architectural style includes box-like forms, shallow-pitched roofs, simple to lightly textured surfaces with clean cut openings for windows and doors. Accent materials include horizontal siding, ceramic tiles, metal elements such as pot shelves, balconies, and gates. Surfaces are finished in toned whites and light to medium light warm colors.

Vineyard - This architectural style is earthy and horizontal in nature based on farmhouse shapes and materials reflective of the agricultural past incorporating such elements as, gable roof pitches of flat concrete title or shake/raked texture, full window trim, board and batten, horizontal and stone siding.

Farmhouse - The Farmhouse architectural style incorporates such elements as front gables, porches and extended roof eaves. Simplified massing with an emphasis on vertical proportions through vertical siding. Surfaces are finished with stucco, board and batten and stone veneer.

Overall, staff believes all three (3) architectural styles are attractive and meet the minimum standard of design as set by the LMP.

Unit Size Per Product type

The applicant proposes product type as described in the following table:

Table 10: Duplex Product

PLAN	LIVING AREA SQUARE FOOTAGE	NO. OF STORIES	NO. OF BEDROOMS	NO. OF BATHROOMS	GARAGE PARKING	Number within Project
PLAN 1	1579	3	3	2.5	2	18
PLAN 2	1773	3	3	2.5	2	20
PLAN 3	1782	3	4	3.5	2	38

Staff Believes that with the inclusion of different façade applications, the proposed mix of product types is sufficiently varied to ensure architectural variety and interest along the street. Staff has added a condition of approval requiring a varied mix of styles and colors throughout the development to ensure architectural diversity.

Open Space and Community Recreation
Along the southwest corner of PA-8 is 0.03 acres (Lot Q) of dedicated open space. While not large in nature, the space provides open turf with terraced seating at a significant transitioning point within the Leal Master Plan. At Lot Q, the space transitions between public (Civic Center Park) and private open space found on PA L see **Sheet SP-3 of Attachment 8**. The unprogrammed space of Lot Q increases the perceived width of this open space corridor creating additional sense of safety and visibility.

Parking

Each proposed dwelling unit is proposed to include a two-car garage for a total of one hundred and fifty-two (152) spaces (76 units x 2 car garage = 152 covered parking spaces). A total of 27 guest parking spaces are also proposed. Guest parking is proposed at a rate of twenty percent (20%) per dwelling unit or one (1) space per five (5) residential units for a total of sixteen (16) uncovered guest spaces (76 units ÷ 5 guest parking rate = 15.2 ≈ 16 guest parking spaces); hence, the applicant proposes a surplus of 11 parking spaces (27 spaces provided – 16 spaces recommended = 11 additional parking spaces). Guest parking is provided within parking bays distributed throughout the project site. PA 8 provides a total of 179 parking spaces and would be consistent with Section 120.05.060 of the Eastvale Zoning Code. Additionally, Condition No. 6 and 7 of the PLN22-20020 (Leal Master Plan Major Development Review) requires the applicant to provide a site-specific parking study and parking management plan to demonstrate the proposed development can adequately accommodate its parking demand and how parking will be continually managed to ensure parking issues do not occur as a result of the development. **(Attachment 9)**.

Strategic Plan Action - Priority Level: 1 | Target #: E | Goal #: A

Develop and construct Civic Center and diversify the housing stock with more options.

Fiscal Impact

***Background Continued:**

Table 11: PA-8 Parking Summary

Dwelling Unit Type	Eastvale Parking Rate	Total Parking Required	Recommend Parking	Total Parking Provided
Single-Family (Attached and Detached)	2 spaces per unit	152 spaces (76 units x 2 spaces)	152 spaces (76 units x 2 spaces)	152 spaces
Guest Parking	0 spaces	0 spaces	16 spaces (76 units x .20)	27 spaces
Total		**152 required spaces**	**168 recommended spaces**	**179 provided spaces**

As discussed in detail under PA-1, the applicant proposes to utilize the same parking management plan for PA-8 as PA-1 and the project will be condition to provide a final version of the parking management plan for review and approval by the Community Development Director, prior to occupancy of the first residential unit. With incorporation of these conditions of approval, staff supports the parking provided for the project.

Finally, the City Traffic Engineer and Riverside County Fire Department have reviewed the site plan. No hazardous design features or other on-site circulation constraints were identified by either party.

Landscape and Wall Plan

The preliminary landscape plan depicts the planning area as a whole as unenclosed. Six-foot (6') high precision block walls with two-inch (2") caps are proposed as return/privacy walls between buildings and can be found on **Sheet L-301 of Attachment 8**. Additionally, residential units have the

option of adding a front patio/courtyard which would be enclosed by a three-foot (3') high precision block with two-inch (2") cap with a three foot (3') high vinyl gate in an architectural style consistent with the main residence (i.e., Spanish, Vineyard, and Farmhouse).

In terms of landscaping, the applicant proposes to heavily landscape the site with a variety of both accent and screen trees, shrubs and hedges, and groundcovers. The planting legend references Marina Strawberry Tree, Western Redbud Multi-Trunk, Desert Museum Palo Verde, Purple-Leaf Baily Acaci, among others. All landscaping within the project is proposed to be constantly maintained by a homeowner's association to ensure long-term viability.

Staff believes that the proposed preliminary landscape plan is satisfactory and consistent with the vision identified in Leal Master Plan Amendment. Standard conditions have been suggested including requiring the applicant to submit a final landscape and irrigation plan to the City Landscape Architect for review and approval.

Public Hearing Notification and Comment

The applicant's requests require a 10-day public hearing notification period for property owners and commercial tenants within a 600-foot radius of the project site. A notice of public hearing (**Attachment 18**) was published in the Press Enterprise on September 10, 2023, and mailed to property owners and commercial tenants on September 7, 2023, for the Planning Commission meeting on September 20, 2023, A map showing the properties that received notification is included as **Attachment 19** to this staff report. As of this writing, staff has received one (1) public comment letter, included as **Attachment 20**, which expresses concern over the current capacity of Corona Norco Unified School District school facilities in Eastvale.

Environmental Review

An Addendum to the previously certified PEIR for the Leal Master Plan (State Clearinghouse No. 2015031028) for up to 2,500 residential units and 595,000 square feet of commercial space including a hotel, a civic center (City Hall, Library, Police Station) and Fire Station, (the "Project") was approved by the City Council on May 11, 2022. The Addendum was prepared in accordance with the requirements of CEQA and found the proposed project would not exceed the previously analyzed development in terms of size or intensity of use. Development of the proposed project would remain consistent with the analysis of the Certified Final PEIR and would not require a change to the site's land use designation or zoning. Therefore, staff has determined the project is within the scope of the Leal Master Plan PEIR and Addendum pursuant to CEQA Guidelines Section 15168 and no additional environmental analysis is necessary. Applicable mitigation measures included in the Addendum to the Leal Master Plan PEIR would be required for the development of the proposed project, however a Notice of Determination shall be filed following any action taken on the project.

Fiscal Impact

Processing the proposed applications will have little to no fiscal impact on the City as the project is funded by the applicant.

Prior City Council/Commission Action

With the adoption of the first Eastvale General Plan in 2012, the City Council designated the Leal property as a future planning area, with a vision of a mix of retail, residential, and civic uses. In 2013, City Council authorized the preparation of the Leal Master Plan (LMP) and Environmental Impact

Report.

On December 13, 2017, with the completion of the Final Environmental Impact Report, City Council acted to certify the Final Program Environmental Impact Report (PEIR) and amend the Land Use chapter of the Eastvale General Plan to reflect the Leal Master Plan, adopt the Leal Master Plan, and amend the Zoning Map to rezone the Leal Master Plan area to "Leal Master Plan."

A special joint workshop between the Planning Commission and City Council was held on March 16, 2022, to discuss proposed amendments to the Leal Master Plan and an Addendum to the certified PEIR. Then after the recommendation of the Planning Commission on April 25, 2022, the City Council at their regularly scheduled May 11, 2022 meeting, adopted an Addendum to the Certified PEIR, an amendment to the Leal Master Plan, establish a project-wide Land Use, Circulation, and Infrastructure Plan, determine project-wide development standards, design guidelines, and site characteristics, approve Tentative Tract Map (TTM 38290) for the creation of 14 developable lots, 19 lots for infrastructure purposes, trails, and open space, approve a Major Development Plan Review to facilitate the development of 2,500 residential units and 595,000 square feet of commercial development including a hotel, civic center (City Hall, Library, Police Station) and a Fire Station as well as approved a Development Agreement between the City and The New Home Company.

On September 20, 2023, the Planning Commission at their regularly scheduled meeting, opened the public hearing for the subject project, received public comment from Atul Singh Deora via an email, and continued the public hearing until the October 18, 2023, Planning Commission meeting to allow the applicant additional time to work through proposed conditions of approval.

3. Land Use Program 3.1

4. Development Standards 4.1

5. Development Process 5.1

6. Implementation Plan 6.1

1 INTRODUCTION AND VISION

1.1. BACKGROUND AND PURPOSE

In the City of Eastvale, a recently incorporated and rapidly growing city in northwestern Riverside County, the Leal property holds significance as one of two major undeveloped pieces of land in the city. The idea of planning for the site's development originated in the 2012 Eastvale General Plan. The Land Use Chapter of the General Plan adopted at that time supported the development of a mixed-use project on the site in cooperation with the property owner and/or the developer.

City of Eastvale Demographics

Eastvale offers the developers of the Leal Master Plan excellent opportunity to serve an affluent and growing population. Current projections for 2018 show the following:

	Eastvale	10-Mile Radius
Population	68,706	1,070,150
Average Household Income	$130,730	$90,507
Average Annual Increase in Household Income 2013-2018	0.94%	3.47%

Eastvale is the most diverse high-income city in California, with a population that includes 40 percent Latino residents, 9 percent black, 24 percent Asian and 24 percent white.

In 2013, the City of Eastvale City Council initiated a long-range planning process for the property. The effort was born out of the desire to create the mixed-use town center project on the site and to safeguard against unsatisfactory development taking the project's place. The Leal Master Plan is the product of this planning process and is a critical step toward bringing unique, regionally significant development to the site. In December of 2017, the City of Eastvale adopted the initial Leal Master Plan. The multiple step process was established in the original Master Plan. This Leal Master Plan is the first amendment to the initial Master Plan as contemplated in the development process.

1.1.1. What Is a Master Plan?

This Master Plan is a long-range planning document that documents how the site will be developed. This Master Plan describes the community's vision for the project area, identifies appropriate land uses, includes the development standards that are necessary to achieve the vision, defines the character of the project's development, lists the steps involved with the development process, and provides guidance on implementation of the plan.

The adoption of this Master Plan represents the second step in planning for the site's development. This document establishes general parameters for development of the Leal property (and the process for defining more specific standards tailored to the ultimate project to be proposed by the property owner/developer). Subsequent development plans will provide precise

development plans for each planning area, facilitating the actual construction of developments.

Note to the Reader: See Chapters 4 and 5 of this Master Plan for detailed information on required future submittals.

Implementation of this Master Plan will ensure that desirable, high-quality development is constructed on the site in an orderly and cohesive fashion. All development occurring on the site is required to comply with this Master Plan.

1.1.2. Community and Stakeholder Input

The original adopted Leal Master Plan was created and adopted in a public forum. The document represents a blending of the City's goals, the owner's ambitions, and the public's aspiration for the property. The participants' contributions to the project are as follows:

1.1.2.1. City Council and Planning Commission

Throughout the planning process, staff was provided with input from the City Council and Planning Commission on important aspects of this Master Plan. Ultimately, the Planning Commission and City Council were responsible for selecting the Master Plan Amendment's overall concept and the land use program and for reviewing and approving the final Master Plan Amendment.

1.1.2.2. Property Owner

Before and during the preparation of this Master Plan, City staff met regularly with the Leal family who has for decades owned the property and the property owner's development representatives. These meetings helped establish the vision for the property and the legacy that the family hopes to leave in the form of the proposed new development.

1.1.2.3. Public Outreach

The preparation of the original Master Plan included a significant online public outreach campaign, including a website dedicated to the project and numerous postings on the City's social media outlets.

The project website provided background information on the

Big Ideas for the Leal Property

When the City asked for "big ideas" and themes for the project site, residents provided thousands of responses, mostly via social media. The following were the top listed categories:

- Lifestyle Centers
- Downtown
- Indoor Regional Mall
- Amusement
- Arts/Cultural
- Concerts/Special Events Venue
- Hospital/Medical Center
- Civic Uses
- 1950s Main Street
- University or Community College
- Sports/Recreation
- Hotel/Resort
- Giant Cow Statue

project and the property, as well as City and project-related documents, and kept the public apprised of upcoming meetings. The website also featured an interactive section that allowed users to share their input on important aspects of the project.

Initially, participants were asked to submit their suggestions for "big ideas" and "themes" for the project site. Residents responded to the City's call for ideas, submitting thousands of comments. Subsequently, an online poll was created to see which of the ideas held the greatest level of support in the community. Of the nearly 2,000 survey responses received, the three most popular categories were:

- Lifestyle Centers
- Downtown
- Indoor Regional Mall

1.2. OBJECTIVES

The General Plan goal of bringing a mixed-use development to the site will be realized through the adoption and the implementation of the Leal Master Plan. This Master Plan seeks to achieve the following objectives:

- Facilitate transformation of the project area into Eastvale's Downtown.
- Encourage a mix of uses, including retail, experiential uses, office, civic, residential, and recreation/entertainment, that respond to market demand.
- Create a Downtown Village destination in Eastvale to meet the needs of patrons from the community and the region.
- Include heavily landscaped spaces, further reinforcing Eastvale's Tree City USA designation.
- Implement high-quality architecture and design that creates a sense of place and enhances the aesthetic and visual quality of the neighborhood.
- Design the site in an efficient fashion that perpetuates a compact, urban form of development.
- Provide safe and entertaining gathering places for Eastvale residents.
- Develop the site in an orderly, comprehensive, and cohesive manner that avoids the piecemeal development of the site with a mix of incompatible uses that do not relate to one another.
- Expand the city's economic base by generating substantial property and sales tax revenue.
- Provide employment opportunities for residents, improving the city's jobs/housing balance and reducing vehicle miles traveled.
- Provide the infrastructure necessary to meet project needs in an efficient and cost-effective manner.
- Provide medium- and high-density housing opportunities.
- Provide ample access for pedestrians, bicyclists, and automobiles throughout the site.

1.3. VISION

The City envisions the project area emerging as the City's Downtown and a destination within the region. The area will be anchored by a downtown village and surrounded by a mixture of complementary office, civic, residential, and recreation/entertainment uses. All aspects of the project will exhibit the hallmarks of thoughtful, high-quality design and landscape.

Note to the Reader: For more information on the vision and the quality of the project's design, refer to Chapter 2, Project Character.

1.4. LOCATION

The project area encompasses the Leal property, an approximately 160-acre landholding that (as of 2014) included one of the city's last operating dairies and a horse farm.

Shown in Figure 1.1: Regional Context Map, the project area is in the northeastern section of Eastvale, approximately one-half mile from the Interstate 15/Limonite Avenue interchange, and south of State Route 60. The site is bounded by 58th Street to the north, Hamner Avenue to the east, Limonite Avenue to the south, and Scholar Way to the west, as shown in Figure 1.2: Local Context Map. The project area is situated immediately west and north of existing commercial and retail developments and is south and east of established and newly developed residential neighborhoods of varying densities.

1.5. RELATIONSHIP TO OTHER DOCUMENTS

1.5.1. General Plan

The Leal Master Plan implements the City of Eastvale General Plan. The land uses permitted by this Master Plan are consistent with the goals, policies, and general land uses described in the General Plan.

1.5.2. Municipal Code

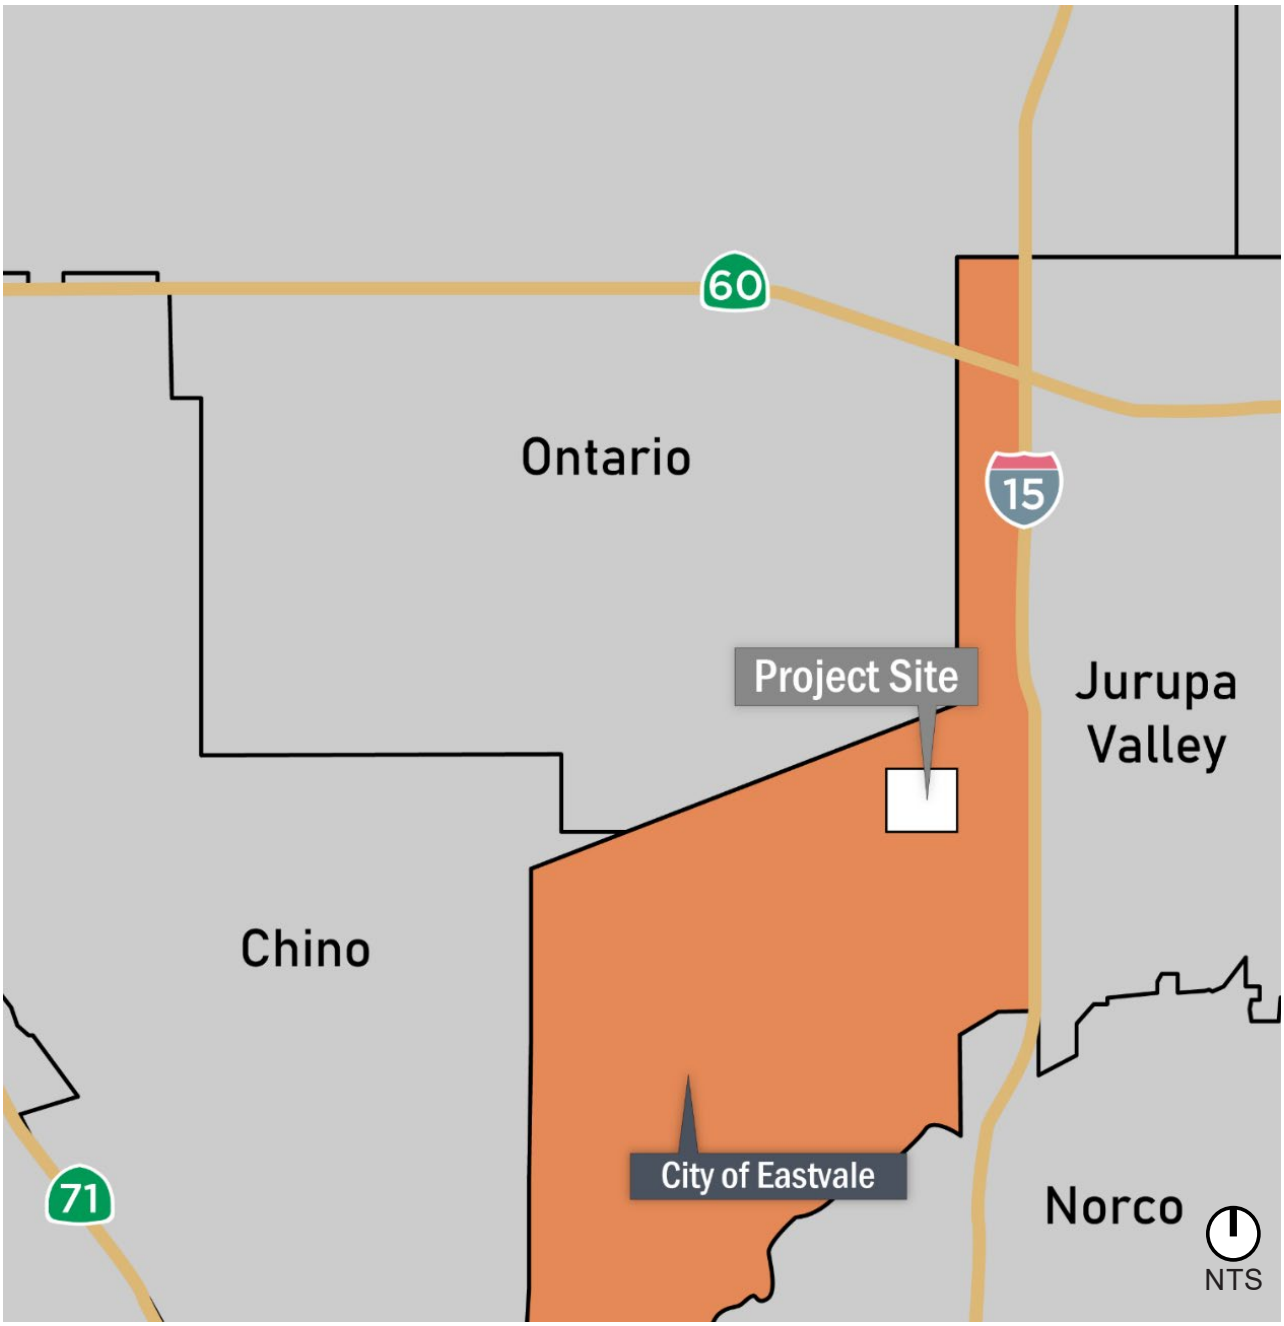
This Master Plan functions as the zoning document for the project area, except as discussed below.

This Master Plan incorporates zoning provisions that vary from, and supersede, those included in the City of Eastvale Zoning Code and introduces additional provisions not found in the Zoning Code. For these development standards, the Master Plan distinguishes between those provisions that apply to the entire project area and the provisions that only apply to individual land uses.

This Master Plan references regulations in the Eastvale Zoning Code. Where the Zoning Code is referenced, the Zoning Code in place at the time of a development project's submittal will be used.

Where this Master Plan is silent on any issue, the applicable standard in the Eastvale Zoning Code will be used.

Figure 1.1: Regional Context Map



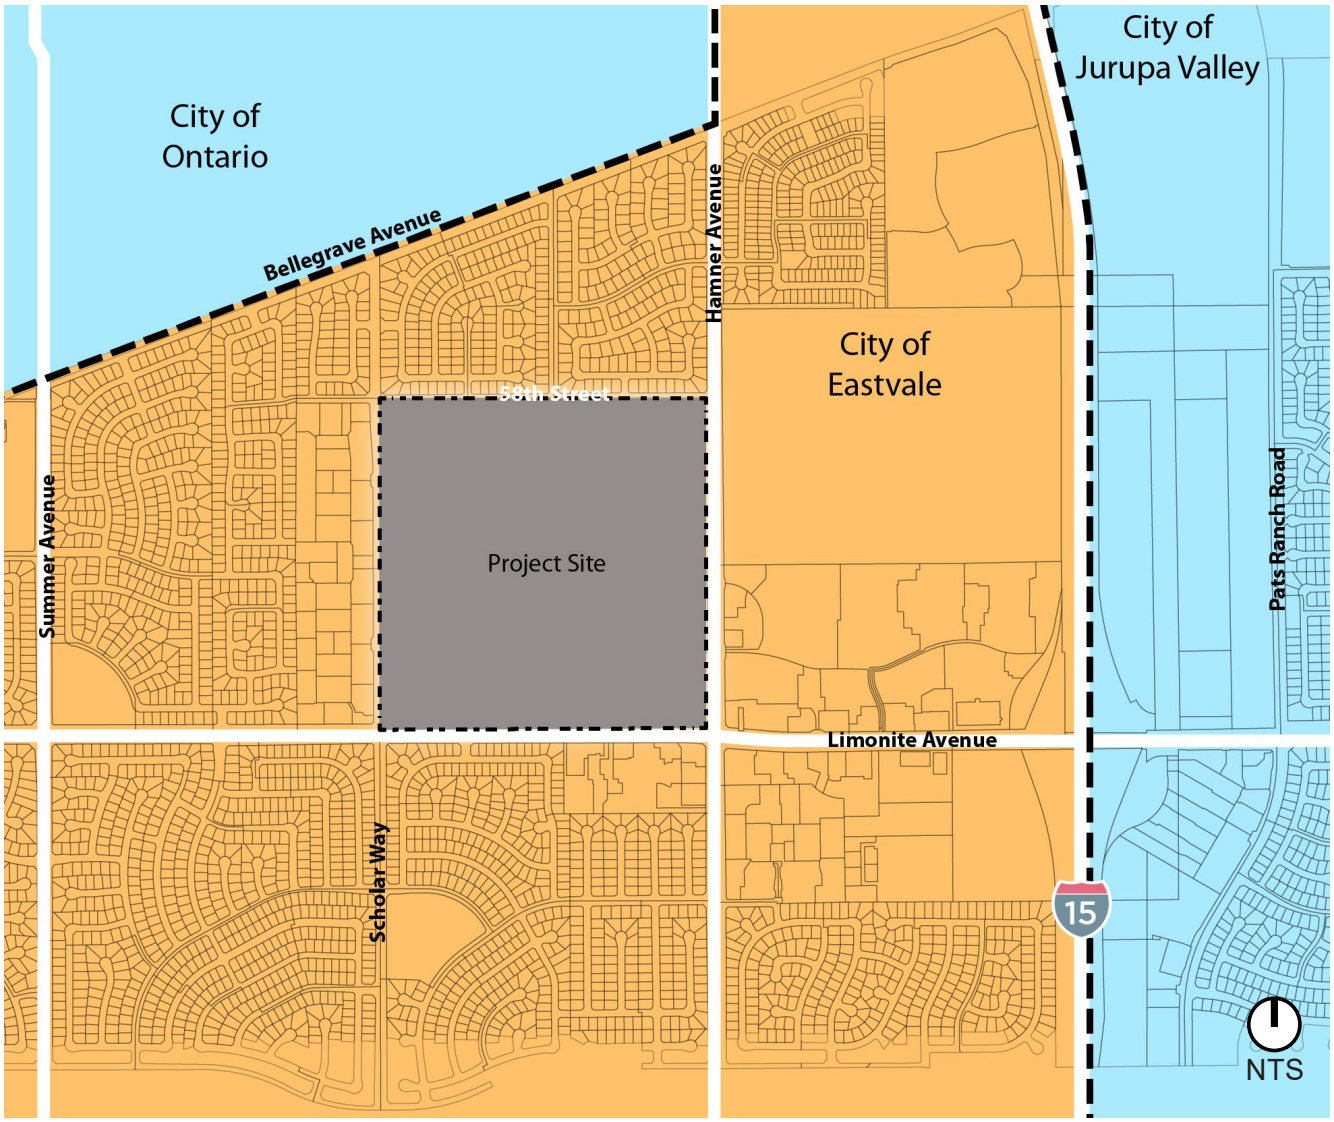


Figure 1.2: Local Context Map

1.6. PLAN ADMINISTRATION

1.6.1. Use of This Master Plan

This Master Plan will be used as the basis for establishing standards of development and evaluating proposed development projects for the Leal property and is intended to be used by a broad range of persons, including:

- The City Council and Planning Commission in decision-making activities.
- City staff in evaluating project consistency with the standards set forth in this Master Plan.
- The development community in preparing development proposals.
- Residents and citizens seeking to understand the vision for the Leal property and the type of development which may occur.

1.6.2. Interpretations of the Master Plan

The City of Eastvale Planning Department is responsible for the administration, implementation, and enforcement of this Master Plan. The Community Development Director or their designee is responsible for making determinations of consistency with this Master Plan as follows:

1.6.2.1. Determination of Intent

Whenever the Community Development Director determines that an ambiguity exists in how a particular standard or regulation applies, or a formal request for an interpretation is made by an applicant, property owner, or interested party, the Community Development Director or their designee will prepare an official interpretation of intent in accordance with the procedure set forth in Eastvale Zoning Code Section 1.5.1 (Official Zoning Interpretation).

1.6.2.2. Determination of Similar Land Use

Recognizing that every conceivable land use cannot be identified in this Master Plan and anticipating that new land uses will evolve over time, the Community Development Director or their designee has the authority to approve uses when their operation, impacts, and scale are similar to those land uses listed in this Master Plan.

Determinations of similar land use will be made pursuant to Section 1.5.1 (Official Zoning Interpretation) of the Eastvale Zoning Code.

1.6.2.3. Amendments to the Master Plan

Over time, various sections of this Master Plan may need to be revised, as economic conditions or City needs dictate. The policies presented in this Master Plan contain some degree of flexibility, but any Master Plan amendments must be judged by relatively fixed criteria. Minor modifications to the plans, guidelines,

regulations and standards contained in this Master Plan may be approved at the discretion of the Community Development Director or their designee as described in Section 5.4.1. Major modifications that do not meet the criteria for minor modifications described in Section 5.4.1 shall require a formal amendment to the adopted Master Plan. Major modifications are described in Section 5.4.2.

Amendments to this plan may be initiated by a developer, any individual property owner, or the City, in accordance with the Eastvale Zoning Code.

1.6.2.4. Actions Which Are Not Amendments to this Master Plan

The following are **not** considered amendments to this Master Plan:

- Determinations of similar use, as discussed in this chapter.
- Minor modifications to the Master Plan, as outlined in Chapter 5 of this Master plan.

2 INTRODUCTION AND VISION

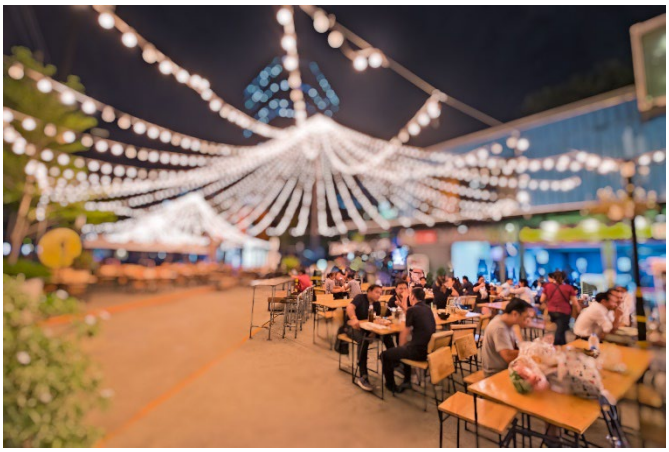
2.1. INTRODUCTION

The City's vision for the Leal Master Plan area is a development that provides employment, retail, public uses, entertainment, and housing in a carefully laid out environment designed to create a memorable and enjoyable experience for both visitors and residents. The City and community expect that development of the Leal property will be of the highest quality, both in design and construction.

The envisioned level of quality is reflected in other regionally significant projects in Southern California, such as Downtown Claremont, downtown Temecula, and downtown Brea. All of these developments are noteworthy for their focus on creating a vibrant and attractive experience for visitors, incorporating vertical development (multiple stories) into a village setting, and for their attention to detail in a variety of features.

This Chapter expresses the City's vision for the Leal Master Plan. The expected level of quality is shown as it should be expressed in various aspects of the project, including:

- Site design
- Circulation
- Architecture
- Landscaping
- Public Spaces
- Buffers/Adjacencies
- Street Furnishings
- Thematic Features
- Signage



2.2. PROJECT CHARACTERISTICS

Attention to detail and incorporation of high-quality materials is a key aspect of developing high quality projects. While the examples provided on the following pages focus on distinguishing characteristics within the Downtown concept, all portions of the project will be required to achieve a similar level of quality and attention to detail.

2.2.1 Site Design

The following principles accompany the vision for Leal Master Plan to form the foundation for the planning and design of the community.

- Create a magical destination.
- Provide energy, vitality and create a central gathering place within the City.
- Public and private spaces are designed to enhanceand complement one another.
- Along retail corridors, wide sidewalks and shaded paseos lined with street trees and outdoor seating create an inviting environment for both window shopping and socializing, focusing on the human scale and experience.
- Diversify Eastvale's economy by providing a range of uses within close proximity to each other.

2.2.1 Site Design

Effective site design facilitates access and mobility and integrates building design and orientation, private space, and public space to create a vibrant destination. The following bullets describe the site design vision.

- Downtown will provide opportunities for retail commercial and office uses, as well as central gathering places for residents to interact and connect. This commercial/retail hub should be visually prominent, as it is strategically located at the intersection of Limonite and Hamner Avenue to capture visibility and attract shoppers and direct visitors to this destination center.
- Downtown will be surrounded by higher density neighborhoods that gradually transits to lower density neighborhoods.
- A village green located adjacent to the Downtown will provide a wide variety of active and passive recreation amenities.
- Neighborhoods will be designed to connect to open space and park amenities, shopping, public and civic facilities, and recreational facilities via streets, paseos and pedestrian trails.
- A community wide linear park system will provide focus on community connections and pedestrian experience.
- Wide sidewalks and shaded paseos lined with trees and outdoor seating create an inviting environment both in the Downtown and residential areas.
- Public and private spaces are designed to enhance and complement one another.
- The project is integrated into the surrounding environment to provide for multiple points of access.
- On-street parking, landscaped bulb-outs, and special paving treatments provide convenient access in an aesthetically pleasing manner.
- Parking is conveniently located to destinations and should be tucked away or integrated into parking structures so as not to dominate the experience.

ICE CREAM

2.2.2 Circulation

A carefully devised circulation network allows pedestrians, bicyclists, automobiles, and delivery vehicles to operate without conflict.

- Entries and gateways into the project are distinct and identifiable.
- Circulation patterns are simple and obvious.
- Paving and landscaping materials distinguish the types of circulation routes.
- Plant and material selection along circulation routes are used to identify distinct districts within the overall project.

The Leal Master Plan has six major points of access: two points of access from Limonite Avenue, two points of access from Hamner Avenue, one point of access from 58th Street, and one point of access from Scholar Way, as shown in Figure 3.1, Land Use Plan.

In addition to these major entry points, secondary access may be provided from the major streets surrounding the project as part of subsequent Major Development Review for the Planning Areas.

All of the project's access points will provide an opportunity to create a sense of arrival by creating entryway statements or gateways with landscaping, signage, and buildings. See Section 4.3.3 in Chapter 4 for the design standards for the major entry points.

An internal circulation system is established and shall be designed to be consistent with Chapters 4 and 5 of the Design Standards and Guidelines for residential and nonresidential site and street design.

Pedestrian paths and bicycle lanes identified on circulation cross sections on Section 6.2 shall be designed to comply with the following:

- Pedestrian and bicycle access shall be provided along all major roadways and internally within each development to allow connectivity from the streets to the businesses and residences.
- Pedestrian and bicycle connections shall be provided from the street to the interior of the development that minimize conflicts with vehicular traffic.
- Sidewalks shall be shown on each street section.
- Pedestrian and bicycle access shall be consistent with Chapters 4 and 5 of the Design Standards and Guidelines for residential and nonresidential site design.

2.2.2 Circulation

2.2.3 Architecture

The Leal Master Plan is designed to include distinctive, identifiable neighborhoods of a walkable size and scale with an appropriate mix of housing types. This section provides the framework for high quality design and expresses the desired character of future development.

Community-wide Residential Development

This section identifies key architectural and site design elements that should be considered in all residential areas within the Leal Master Plan community. These guidelines intend to establish a diversified, yet cohesive level of quality in home design that reflects the character of the surrounding environment while allowing for flexibility in design.

Architecture Forward Design

- Within the Downtown, buildings fronting onto the street shall be designed so that active and articulated architecture visually dominates the street and allows for direct views of the street and outdoor living space to enhance the sense of security. This can be achieved by orienting doors and windows toward the streets and public areas.
- Garages shall be set behind the front face of the building or be oriented to alleys or motorcourt drives to minimize the visual dominance of garages along the street.

Building Siting and Orientation

- In general, buildings shall be located and oriented to define public streets and primary open space areas, as appropriate to the product type.
- Front entries shall face the streets, courtyards, paseos, or open spaces.
- Units shall be sited and design so that each building shall have roof exposure to the south or east, or a portion of the roof with a flat roof.
- Unit entries shall not be provided on 58th Street, Hamner Avenue, or Limonite Avenue.

Corner Lot Buildings

- Corner lots for single-family detached homes generally have wider than minimum required side setbacks from the adjacent public rights-of-way as compared to interior side setbacks (refer to product-specific standards in Chapter 4, Development Standards). This additional setback area is intended for landscaping and/or single-story architectural elements such as porches and courtyards.
- To respond to adjacent streets and intersections appropriately, buildings on corner lots shall be designed for a two-sided corner exposure, addressing the increased public visibility by allowing for architectural enhancements on the side elevation facing the street.

- Corner lot buildings shall feature enhanced elevations that provide a similar level of detail on the street side as the front elevation. Enhancements may include.
    - Wrap-around porches or courtyards
    - Principal window treatments
    - Roof plane breaks
    - Accent colors, materials and detailing
    - Garage access from the side street for conventional single-family homes

Building Form, Massing and Articulation

- Building massing (three-dimensional form of a building, referring to the perception of the general shape and form, and size) along the street shall be varied to create a quality streetscene.
- To reflect a variety of forms and create massing breaks, use horizontal and vertical offsets, such as interconnection and lapping of building forms and heights.
- Plane offsets cantilevered upper floors and varied roof forms are encouraged to avoid large expanses of flat, monotonous walls and roofs in alleys and motorcourts.
- To add interest to building facades, building articulations such as roof overhangs, balconies, and projections should be used in the design of building frontages.
- For attached residential buildings, break down the scale of the buildings into smaller elements through varied building massing and forms, such as varying setbacks on building elements/facades, varying roof lines and directions, incorporating single-story elements or open balconies that provide negative space at prominent corners, utilizing shed roof forms and trellis elements, etc.
- To prevent long expanses of blank walls, walls shall be articulated at least every 20 feet horizontally on each floor. Articulation shall mean a change in material, massing break of at least one foot (1'), or including a window, projecting porch, balcony (recessed or projecting), or other decorative element (e.g. decorative attic vent).

Colors and Materials

- Building materials and colors shall be appropriate to the overall neighborhood design theme and relate to the selected architectural style. Frequent changes in materials shall be avoided.
- Provide a variety in texture and color to allow for diversified expressions of individuality on building elevations, while maintaining visual cohesiveness throughout the community.

- Where color or material changes occur on the building, such changes shall only occur at inside corners or wrapped to appropriate termination points where they provide a finished appearance from the street.
- Color and materials should wrap columns and posts in their entirety.
- Exposed gutters and downspouts must be colored to match or complement the surface to which they are attached.
- Colors shall be neutral tones or muted colors complementary to the chosen architectural style and compatible with the character of surrounding development. Reserve bright or dark colors for trim or accents only.

Roofs

- Select simple and efficient roof forms, pitches and materials that are consistent with the architectural style of the building. Consider roof forms in relationship to the building mass to improve massing relief along public streets and on other publicly visible elevations.
- Varied roof forms, offsets and materials consistent with the architectural style of the building are encouraged to create variation in the skyline and diversity in the streetscene.
- Flat roofs with parapets or decorative cornices are permitted where appropriate to the architectural style of the building.

Mechanical Equipment

- All exposed air conditioning/heating equipment, soft water tanks, and pool and spa equipment shall be hidden from view in vaults, wells, enclosures, behind walls/fences or screened by landscape. Enclosures shall be constructed similarly and finished to match the building or material which they are attached.

Trash Enclosures

- Areas provided for trash and recycling bins shall be concealed from public view.
- Where trash and recycling material collection facilities are shared by several units/buildings, the collection facilities shall be screened by architectural enclosures. The screening enclosure materials and colors shall be similar or complementary to the exterior materials and colors used on the adjacent principal buildings.

Detached Residential Development Design Guidelines and Standards

- Side entries are allowed to give the product design greater flexibility and varies the curb appeal.
- For rear loaded and detached cluster homes, front yard and common area landscaping will be provided by the builders.
- Provide visual harmony by applying a common family of details throughout the cluster complex.
- Provide paving within the courtyards to enhance their use and identity as pedestrian entries to the homes.
- Individual unit entries of cluster homes shall be clearly discernible from the courtyard or access drive.
- Where a central courtyard is provided for detached cluster homes, living space windows shall orient toward the courtyard.
- Provide a minimum of three (3) floor plans in each Planning Area.
- There shall be a minimum of three (3) elevations for each floor plan, for a minimum total of nine elevations.
- No more than two buildings in a row may be plotted with the same elevation style.
- The same plans may be plotted adjacent to each other or across from each other, provided they have different elevation styles.
- Detached cluster units with front facades bordering streets I, E, F, H & G shall have their entries oriented to these streets.

53-59

Attached Residential Development Design Guidelines and Standards

Attached residential buildings tend to have larger building masses. As such, attached residential design should be carefully considered to convey a sense of human scale. Building typology and chosen architectural style should reflect the building's location within the community, and all buildings should exemplify quality design.

Townhomes and Attached Motorcourt Homes

- Where attached residential buildings are located adjacent to single family detached homes, minimize impacts on the adjoining residences with a sensitive transition in scale, massing and height, and design the transition to ensure resident privacy.
- Design the front elevation of attached residential buildings to clearly delineate individual units as a way of breaking up mass.
- Articulate the front building facades to promote individual unit identity by incorporating overhangs, recesses, porches, glazed doors, accent materials and colors, etc., consistent with the architectural style of the building.
- External unit and building entries shall be designed in a manner that is clearly visible to pedestrian and/or vehicular approaches.
- Rear facades along alleys, driveways, or visible from backbone streets shall not be void of articulation. These elevations shall include massing breaks and/or architectural details (i.e. shutters, gable vents), as appropriate to the architectural style of the building.
- Attached residential buildings sited adjacent to lower-density residential neighborhoods should be sensitive to the scale of those neighborhoods. Step down building heights to match the adjacent buildings as a transition to lower adjacent development heights.
- When located next to open space or a paseo, arrange groups of attached residential buildings so that the buildings front onto paseos or the open space. In the event that fronting onto these open spaces is not feasible, the residential buildings shall front onto a courtyard, pathway, or other gathering space that would directly connect to the open space or paseo.

Apartment/Flats

- Building configuration shall form adequately-sized courtyards and gathering spaces, where applicable. Accessible from inside the building or from external pedestrian pathways, courtyards or gather spaces should feature enhancements such as trellises, shade trees, or outdoor furniture.
- Step down corners and ends of multi-family buildings over two-stories in height at highly visible locations, softening the building edges and enhancing the streetscene.
- Provide pedestrian-oriented elements and details on facades facing public sidewalks. Elements such as balconies and awnings can add visual interest and richness to the street environment.

- Transitional spaces such as porches, covered entries or stoop entries shall be provided for ground floor units facing public street. Where common building entries are provided, they should be well defined along the street and/or parking lot edges.
- Arrange attached residential buildings and site landscaping in such a way that they screen parking areas from public view and minimize the impact of parking lots and garages on the public streetscape.
- Parking lots shall be broken up into smaller segments by landscaped islands, but should remain connected to facilitate internal circulation for a common complex.
- Provide a minimum of two (2) unit plans for each building, and a minimum of two (2) building plans (with the ability to add elements to corner units as necessary) in each Planning Area.
- Residential development adjacent to internal Street E, F, G, H and I shall include a primary pedestrian entry along this street frontage facing either the street or a courtyard or a paseo that is accessible by the residents.
- All primary entrances for multi-family dwellings shall provide unit identification.
- ... Exterior elevations shall include at least three (3) materials that accentuate or correspond to variations in building massing and plane changes, but not having too many different materials to avoid a chaotic appearance. Glazing (windows) and accent materials such as shutters and railings may count towards this requirement.

Downtown District Design Guidelines and Standards

The Downtown District will function as a vital commercial center for the City. Appropriate land uses for these areas include residential, commercial, retail services, restaurants, offices, paseos, recreational facilities, community venues, and civic facilities. The mixed- use areas are a place for working, shopping, dining and gathering. Businesses will be situated along the street and provide convenient access for vehicles, pedestrian walkways and landscape areas.

General Criteria

- Buildings shall front onto a street or spine, which may be designed either as a vehicle free zone or in such a manner as to allow for use by both pedestrians and motor vehicles. When vehicles are allowed, design features shall be incorporated to define pedestrian movement through changes in paving materials or grade, articulated walks with landscaping, or overhead structures.
- Both vertical (different uses within the same building, with commercial or office uses located on the ground floor and with office or residential uses located above) and horizontal (single-use buildings located side-by-side or adjacent to each other on a development site) mixed-use are encouraged in the Downtown District. The mix of land uses may be, but are not limited to, commercial mixed with residential or mix of uses of retail, restaurant, office, and civic uses.
- Vertical mixed-use projects are encouraged for 3-story and higher buildings, such as first floor retail with office or residential uses above. Visually, this arrangement divides the façade into two basic parts: the upper façade and the storefront.
- Large monolithic buildings, such as movie theaters and cultural venues, must be set back from a street designated for pedestrian activity and lined with smaller businesses in front to create a more appealing streetscene.
- Plaza areas in mixed-use settings are encouraged and may include seating, fountains, and landscaping.
- Open views into the retail space at the storefront level will enhance the pedestrian experience by providing a visual connection to the use inside the building. On upper levels, windows should continue the aesthetics of the building while serving the occupants' need for privacy.
- Primary entrances into retail buildings shall be clearly marked and provide a sense of welcome and convenient access into the building interior.
- Corner buildings shall be designed with enhanced treatments. These treatments may include: larger building element at the corner, more ornamentation than adjacent buildings, or a plaza to define the space. In addition, corner buildings typically have both primary and secondary façades that relate to the streets on which they front.
- The ground floor of the commercial component of a mixed-use building shall have a finished ceiling height of a minimum of 12 feet.

Building Form, Massing, and Articulation

- Iconic buildings in the Downtown District are encouraged and may include architectural features such as bell or clock tower or similar statements.
- Architecture shall address public areas with high quality materials and should contain architectural elements and other detail relating to the human scale.
- Groups of buildings shall be arranged in clusters around elements such as pedestrian walkways or landscaped areas.
- Retail and restaurant buildings with facades parallel to the street with covered pedestrian arcades are encouraged. Long unarticulated facades shall be avoided along the primary pedestrian corridor.
- No building wall facing a public street should extend more than 25 feet vertically or horizontally without a visual break created by a minimum 1 foot architectural/massing offset. (See graphic footnote 1 in below)

1 *For buildings with 100' or greater of street-frontage, plane breaks at least every 25 feet include glazing and provide adequate articulation.*

2 *A minimum of 30% of exterior walls on ground-floor facing the street shall include windows, doors, or other openings.*

- Within PA3 and PA5, the ground floor shall incorporate abundant glazing. At least thirty (30) percent of the exterior walls on the ground floor facing the identified pedestrian corridor shall include glass windows, glazed doors, or other openings, as illustrated in below. Percentage of fenestration shall be calculated based on the length of the facade frontage and the floor-to-ceiling height of the ground floor, excluding the areas for parking garage ingress/egress. (See graphic footnote 2, above)
- Adjacent to Streets H or G within Planning areas 2, 3, 4 and 5, at least 50 percent of the building (commercial, civic, or residential) shall be located within the 0 to 15 feet of the right-of-way from Streets H and G. The other 50 percent may be

reserved for expanded outdoor dining opportunities, courtyards, paseos, or driveways connecting to surface lots behind the building. Parking lots are not allowed between the building and the street along these corridors.

Materials and Colors

- A mixture of high-quality materials in highly visible locations and in varying quantities have a large impact on the perceived quality of the area.
- Colors should be carefully chosen to complement the architectural style or tenant of each building.
- Exterior elevations shall include at least three (3) materials that accentuate or correspond to variations in building massing and plane changes, but not having too many different materials to avoid a chaotic appearance. Glazing (windows) and accent materials such as shutters and railings may count towards this requirement.
- Colors shall be neutral tones or muted colors complementary to the chosen architectural style and compatible with the character of surrounding development. Reserve bright or dark colors for trim or accents only.

Services, Utilities, and Storage

- Service, loading, and storage areas should be located away from the streets and activity area. When service areas are not able to be located away from streets or activity areas, screening elements such as walls, fences, architectural treatments, landscaping, or similar screening element shall be incorporated. In all cases, the screening shall be integrated into the design and not appear as an afterthought.

2.2.4 Landscape

Landscaping can have a significant visual impact on a project through the quality of landscaping materials selected and the how landscaping is integrated throughout the project site. Landscaping both visually ties a project together and identifies distinct districts.

The City of Eastvale has been proudly designated as a "Tree City USA" by the Arbor Day Foundation by providing commitments to installing and maintaining an urban forest. The City and this Master Plan continues this commitment to provide an urban forest to improve the visual appeal, increase property values, reduce home colling costs, and remove air pollutants. The following landscape guidelines are required for the Master Plan:

- To create an urban forest as quickly as possible, fast-growing tree species appropriate to the area and climate shall be used.
- Trees shall be planted as soon as practicable in project phasing to encourage more mature tree growth once buildings are occupied.
- The project should have a consistent plant palette, though variations may occur from street to street.
- Streets, promenades, public plazas, and smaller open spaces should have distinctive planting and landscaping treatments, making them unique and enjoyable pedestrian experiences.
- Plants are selected for specific purposes to enhance the project experience.
- Plant and material selection along circulation routes are used to identify distinct districts within the overall project.
- Streets designated as "Enhanced Parkways' on Figure 3.2: *Open Space/Parks* shall include a double-row planting of trees where the trees are planted at an average of least 20 feet on center. This requirement does not include intersecting streets or driveways. Special exceptions may be made for portions of the right-of-way that include utilities that preclude the planting of trees and for visibility of non-residential buildings.
- Surface parking lots shall have a minimum 6-foot wide landscape buffer from all street rights of way, measured from property line. Curbs and parking overhangs may be included within this required buffer.
- Where pedestrian circulation crosses a vehicular travel zone, a change in material, color, or grade is required.
- Landscape must permit adequate sight distance for vehicular and non-vehicular circulation.
- All new landscape areas must have irrigation installed.
- No plants from the California Invasive Plant Council List shall be planted.

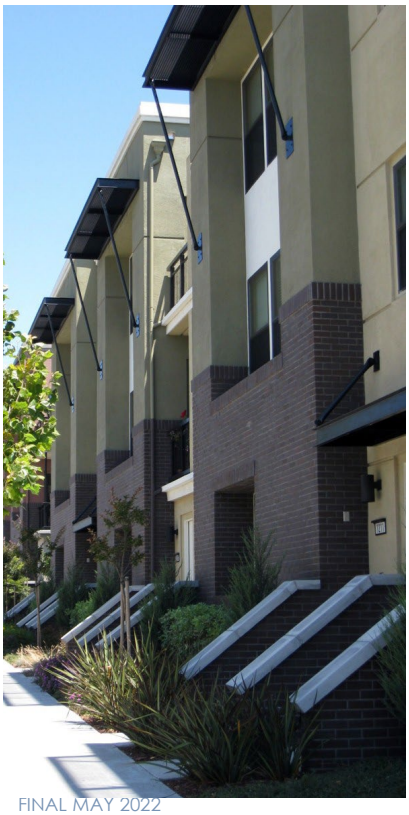
2.2.4 Landscaping

2.2.5 Public Spaces

Public spaces bring people together and allow for community events such as concerts, markets, exhibits, and celebrations.

- Public spaces reflect the needs of the community and project.
- Furniture, signage, paving materials and patterns, colors, landscaping, and other design features of the public space are used to create a sense of place and purpose.
- Surrounding buildings and uses are designed to interact with the public space and vice-versa.
- Common outdoor open space in the form of a pocket park, plaza, courtyard, garden, play area or outdoor amenity should be provided. Common outdoor open space must have a minimum dimension of 15 feet in all directions.
- In the Downtown District, the sidewalk along the designated pedestrian corridor shall have a minimum clear width of 10 feet (illustrated below). The sidewalk may

2.2.5 Public Spaces



2.2.6 Buffers & Adjacencies

The need to create buffers and address adjacencies between uses also provides an opportunity for continuation of the project theme and elevation of the quality of development.

- Freestanding and retaining walls shall have a minimum 30-inch planter on each exposed side of the wall to allow for the planting of shrubs, flowers, and/or groundcovers to help conceal the wall. Private yards for single-family and multi-family dwellings, open fencing (e.g. tubular steel), and enclosed private areas (e.g. pool deck) are not subject to this guideline.
- Landscaping shall be used as a transition between public and private space.
- Planters matching the theme of the project and planted with colorful flowers are used to separate vehicle and foot traffic and add to visual appeal of the project.

2.2.6 Buffers & Adjacencies

2.2.7 Screens, Fences, & Walls

Screens, fences, and walls act as buffers between land uses, distinguish private space from public space and provide privacy.

- Fences and walls incorporate the project theme and add to the overall visual continuity of the project.
- Landscaping is effectively employed to screen undesirable uses from sight.

2.2.7 Screens, Fences, & Walls

2.2.8 Street Furnishings

Street furnishings shall reflect and complement the overall character of the project and provide consistency between distinct districts, creating an enjoyable and memorable experience.

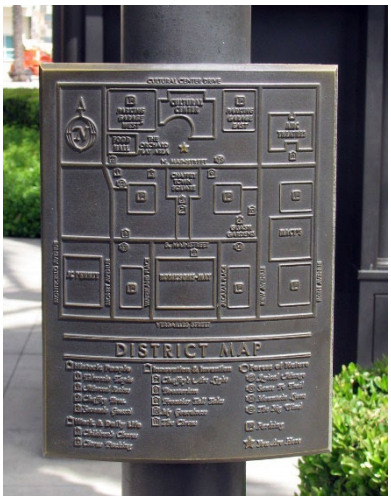
- Benches and other features are designed to reflect the project theme.
- Tree grates and other project features incorporate the project logo.
- Trash receptacles, newspaper kiosks, light fixtures all feature similar design aesthetic and accent details.
- Bicycle racks are designed for form and function.

2.2.8 Street Furnishings

2.2.9 Thematic Features

Thematic elements incorporated into various design features have a significant impact on establishing a sense of place and identity for a project.

- Project logo may be incorporated into street furnishings, walkways, and signage.
- Artwork/mural on walls within the Downtown District is allowed. Utility boxes may be wrapped with art to provide visual interest on utilitarian infrastructure and may be permitted throughout the entire Master Plan area.
- Material selection and special paving patterns for public spaces shall continue the project theme.
- Project themes are incorporated into building design to reinforce project identity.



2.2.9 Thematic Features

2.2.10 Signage

Signage plays a significant role in the visual quality of a community. Signs announce one's arrival at a distinct location, direct the flow of traffic, and provide information to the community through a variety of sign types, which are coordinated around a common theme.

General Signage Guidelines

- Signs shall be limited to a maximum of three (3) colors unless the use of corporate color schemes or logos dictates the use of more than three (3) colors. There should be a significant contrast between lettering colors and background colors for legibility.
- Signs for the Downtown District shall be enhanced, including halo-lit, reverse halo-lit, externally illuminated, non-illuminated, or other acceptable "high-quality" design acceptable to the City and approved through a comprehensive sign program.
- Sign conduits, transformers, junction boxes, etc. must be concealed from view.
- No sign shall be placed in such a manner that visibility of signs on an adjacent property is obscured.
- Signs should not extend above the eave line or parapet of the buildings on which they are located, except where such signs form an integral part of the building.
- Select sign colors and materials that contribute to legibility and design integrity.
- The sign copy shall be appropriately sized for the sign structure or wall. Signs should not be too large to overwhelm the elevation, nor should they be too small to be illegible. Sign shall not be more than 80 percent of the width of the unit frontage to which is attached.
- The sign structure shall be consistent with the architectural style of the building that it is placed on or close to.
- Signage may move or rotate, but the mechanism for moving or rotating shall not be visible.
- The use of propellors, flags, or noise-creating devices as part of a permanent sign shall not be allowed.
- The use of light-reflecting materials, messages appearing for less than 30 seconds, or flashing/moving lights is prohibited.

Major and Minor Tenant Identification

The purpose of these signs is to identify major and minor tenants within the Master Plan area. There are typically three (3) different types of signs utilized for tenant identification:

- Monument sigs.

- Walls signs.
- Projecting signs.

Monument Sign Guidelines

- Use a consistent color scheme and design on all free-standing signs within the Downtown District.
- Signs shall be constructed of permanent, durable materials.
- Monument signs should be designed with the width of the base of the sign equal to or more than the width of the sign face.
- Plastic is prohibited except for use for the sign copy. Exterior grade acrylic (e.g. plexiglass) is acceptable.

Wall and Projecting Sign Guidelines

- Locate signs as close to the customer entrance as possible.
- Raceways and sign supports shall not be visible.
- Internally illuminated box signs and banners used as permanent signs are prohibited.
- Projecting signs shall be placed perpendicular to the building wall and should not extend above building eave of a sloped roof or highest point on a flat roof.
- Projecting signs shall be attached to the building fascia or canopy with an attractive and decorative support.
- Exterior signs shall be constructed of permanent and durable materials.
- Creative signage designs and techniques are encouraged.

Changeable Signage

The purpose of changeable signage is to create excitement and provide a visually interesting commercial area. Two (2) styles of this signage used in within the Downtown District to achieve this goal are "pageantry" and "marquee signs."

Pageantry

Pageantry includes flags, pole-mounted banners, kiosks, canopies, lights, directories, ground-mounted graphics, wrapped utility boxes, or other similar, temporary or permanent (but changeable) elements. The intent is to allow regular changes to the pageantry elements in terms of color, design, and other visual content so the pageantry signage can always look current. The intent of pageantry is to help advertise for special events such as fairs, public gatherings, concerts in the park, farmer's markets, etc. and to allow for a variety of different methods to advertise community events within the plan area.

Guidelines for pageantry include:

- Pageantry may be located in any portion of the Downtown District. Pageantry may be placed on street lights and over the public rights-of-way, provided applicable permits have been obtained from Public Works.
- Air-inflated signs, moving signs, paper, cardboard, Styrofoam, stickers, and decals are not acceptable forms of pageantry (directories and kiosks excepted).
- Pageantry shall not include flashing, flickering, rotating, or moving lights.
- Temporary promotional advertising (banners) is not considered to be pageantry.
- Kiosks and directories should provide vertical breaks in the sign structure.
- Individual panels shall be recessed, framed, or treated to avoid a flat appearance of the sign face.

Marquee Signs

Marquee signs are typically used to provide information about current showings or events for theaters and live entertainment uses. Guidelines for marquee signs include:

- Marquee signs may project or be integrated into the building to promote enhanced articulation.
- Plain, rectangular marquee signs without any articulation are discouraged.
- Marquee signs may be manual or electronic.
- Marquee signs may include advertisements.

Directional Signage

The purpose of directional signage is to direct the flow of vehicular and pedestrian traffic within the Mixed-Use District.

Directional and Wayfinding Signs

Directional and wayfinding signs are typically horizontal signs with tenant names and directional arrows. Guidelines for directional/wayfinding signs include:

- Directional and information signs shall be attractive, clear, and consistent in theme, location, and design.
- Place directional signs at strategic locations throughout the Downtown district, providing directions to key destinations and facilities such as parking facilities for automobiles and bicycles, transit stops, and walking and bicycling routes to nearby parks, plazas, neighborhoods, shopping, civic and other destinations.
- The project name may be located on the sign in a smaller, more understated manner to not detract from the wayfinding.
- Directional and signs with exposed Unistrut supports shall be avoided.
- The placement of directional signs shall not limit sight lines.

- Wayfinding signs may be co-located with other streetscape furniture in the Downtown district, such as light standards and transit shelters, where possible, to enhance visibility and reduce visual clutter in the public realm.
- Provide consistency between wayfinding/information signs and street furniture throughout the Downtown district. This can include customized poles and mounts for regulatory signs and lighting fixtures, and an area logo, font, and color scheme.
- Elements such as pole banners or decorative paving elements can serve as public art, branding, and wayfinding.

Temporary Signage

The purpose of temporary signage is to inform the public of a special event of limited duration, such as a grand opening. The duration and requirements for Temporary Signs shall adhere to the provisions within Section 5.7 of the EMC. The guidelines below apply to temporary signage:

- Temporary signage should not be affixed onto the roof of a building, a window or landscape area.
- Temporary signage material should consist of vinyl, nylon, canvas, or cloth.
- Temporary signage should be well maintained.

3 LAND USE PROGRAM

3.1. INTRODUCTION

On December 13, 2017, the City of Eastvale City Council adopted a General Plan Amendment to change the land use designation for the Leal Property from Business Park, High Density Residential, and Medium Density Residential to "Leal Property" or as shown on the General Plan Land Use Map, the "Leal Policy Area." As part of this General Plan Amendment, the City Council adopted Policy LU-8.1, which is a land use table that specifies permitted land uses and development intensities. This chapter further describes the land use program for the Leal Master Plan and its consistency with General Plan Policy LU-8.1. The land use program establishes the types and intensity of development allowed within the Leal Master Plan. A land use map specifying locations for these uses is provided in Figure 3.1, Land Use Plan. Access roads showing in the Land Use Plan are described in Section 2.2.2, Circulation Plan.

Concurrent with the City Council's adoption of a General Plan Amendment in 2017 for the Leal Property, the City Council certified an Environmental Impact Report (EIR) (State Clearinghouse No. 2015031028). The adoption of this Master Plan Amendment was accompanied by an Addendum to the Leal Master Plan EIR, which provides further detailed environmental review of the land use program. The environmental analysis presented in the Addendum to the Leal Master Plan EIR determined that to avoid new or more severe significant impacts, the maximum development intensity on the Leal Property is 2,500 residential units and 595,000 square feet of general commercial, office, and civic center uses. Since that land use limitation has been established by the environmental analysis, this Master Plan Amendment incorporates that limitation as the maximum permitted land use intensities.

Figure 3.1: Land Use Plan

3.2. LAND USE TYPES AND DEVELOPMENT POTENTIALS

The City of Eastvale General Plan Policy LU-8.1 references a land use table that has been summarized as follows:

Table 3-1:General Plan Land Use Table

Land Use Type	Minimum/ Maximum Permitted	Details
Lifestyle Center	325,000 SF to 1,300,000 SF	Standard and mixed-use retail
General Commercial	Up to 225,000 SF	"Big Box" Retail
Commercial Office	Up to 920,000 SF No Minimum	
Hotel	Up to 450 rooms No Minimum	Permitted in Lifestyle and General Commercial
Civic Center	Not Specified	Permitted anywhere on Project
Residential Medium Density (14 – 21 du/ac)	No Minimum No Maximum	Single Family Attached, condominiums, townhomes,
Residential High Density (22 – 40 du/ac)	Minimum 500 du Maximum 660 du	Townhomes, condominiums, stacked flats, and apartments

This land use table was incorporated into the General Plan as a general guide to the development of the Leal Property, recognizing that further development planning and detail would occur subsequent to the General Plan Amendment. The Leal Master Plan Amendment provides the next stage in refinement of the development plan and thus refines the proposed land use mix of uses and intensities.

General Plan Policy LU-8.1 includes two residential land use categories, Medium-Density and High-Density. The two residential land use types include density ranges provided in dwelling units per acre and a general description of the types of residential products associated with each residential category.

The Leal Master Plan Amendment distinguishes between the two residential densities by location. The High-Density Residential is located within the Downtown area and consists of either vertical or horizontal mixed use, and primarily consisting of apartments[1]. Within the approximately 52-acre Downtown, residential uses could occur on approximately 21 acres[2]. The maximum of 660 dwelling units planned within the approximately 21 acres

[1] The Leal Master Plan does not regulate ownership of residential units, therefore, there are no limitations on the number of rental or owned units.

[2] The residential acreage within the downtown includes the aggregate of Planning Areas 2, 4, and 10.

where residential is permitted represents a density of approximately 31.0 dwelling units per acre, consistent with the High-Density residential category within the General Plan. The remaining 1,840 dwelling units allowed on the project site would occur over approximately 87.54 acres[3]. This represents a density of approximately 21 dwelling units per acre, which is within the Medium-Density category.

As shown in Figure 3-1, the project site has been organized into different Planning Areas. The Planning Areas represent specific development areas that would be developed either with commercial, residential or mixed-use developments. Other planning areas have been designed for parks and open space and others for right-of-way. Table 3-2, Land Use Summary by Planning Area, shows detailed information for each planning area within the Leal Master Plan area, including land use category and acreages.

Table 3-2:Land Use Summary by Planning Area

Planning Area (PA)	Land Use Category	Approximate Area (AC)	Minimum Intensity DU/AC or SQFT/FAR	Maximum Intensity DU/AC or SQFT/FAR
2	Mixed Use[4]	12.6	660 DU[5] 102,575 sqft[6]	660 DUs[7] Max 40 du/ac No Max sqft
4	Mixed Use	6.5		
5	Commercial Core	4.6		
10	Mixed Use	4.5		
3	Commercial Core	9.8	None	None
1	Residential	7.3		

[3] The residential acreage within the Medium Density category includes the aggregate of Planning Areas 1, 6, 7, 8, 9, 11, 12, 13, K, and L. The two parks are included in this acreage calculation because they serve those residential planning areas.

[4] Subsurface detention and water quality features may be located in Planning Area 2 or Planning Area 1, or a combination of both.

[5] A minimum density of 660 dwelling units is required within the Mixed Use portion of the Downtown, which equals over approximately 21 acres. The dwelling units may be allocated evenly across each planning area or clustered in one or more planning area provided the net density of any individual project does not exceed 40 dwelling units per acre. Net density is calculated by the number of dwelling units applied to only the acreage of the development less any streets, roads, parks, trails, or common open space.

[6] A minimum FAR of 0.10 is applied to Planning Areas 2, 4, and 10, resulting in a minimum requirement of approximately 102,575 square feet. The minimum square footage requirement is approximate based on project site design and for purposes of calculating the minimum square footage per this section including Table3-1, square footage is calculated based on the gross size of the building, including storage, stairwells, mechanical rooms, etc. The City may administratively reduce this minimum square footage requirement without the need for a Master Plan amendment if the City decides it would like additional commercial square footage under the 595,000 square foot cap on Lot 3 or if specific building design and/or site use warrants less square footage.

[7] A maximum of 660 dwelling units is permitted in the Downtown area for consistency with the General Plan, since General Plan density is calculated by the total number of units applied to the approximately 21 acres of Mixed Use residential area.

Planning Area (PA)	Land Use Category	Approximate Area (AC)	Minimum Intensity DU/AC or SQFT/FAR	Maximum Intensity DU/AC or SQFT/FAR
6	Residential	5.6	20 du/ac[8]	1840 DUs Max 40 du/ac[9]
7	Residential	14.1		
8	Residential	3.9		
9	Residential	4.4		
11	Residential	16.6		
12	Residential	17.3		
13	Residential	13.2		
14	Public Facility	1.2	0.6	
A - D	Right-of-Way	9.4	N/A	
E - I	Internal Streets	13.5	N/A	
J-V	Parks and Trails	14.1	N/A	
Total		158.59		
Maximum Development Intensity[10]		2,500 DU	595,000	

3.2.1. Downtown (DT)

The Downtown District (DT) land use category accommodates a mix of residential uses, commercial and office uses such as retail and restaurants, general commercial and commercial office, civic center, and residential. The vision for a lifestyle center included in the City's General Plan occurs within the Downtown District. The DT category applies to approximately 52 gross acres within planning areas 2, 3, 4, 5 and 10 located to the northwest of the Limonite Avenue/Hammer Avenue intersection, in the southeast corner of the Master Plan area. The Master Plan provides for up to 595,000 square feet of commercial, office and civic uses, under the DT land use category. Approximately 21 acres within the DT area can accommodate residential uses. A minimum of 660 dwelling units is required. The

[8] Within the 87.54 acres of Residential Uses (Planning Areas 1, 6, 7, 8, 9, 11, 12, 13, K, and L), a minimum of 730 dwelling units shall be constructed at a minimum net density of 20 dwelling units per acre. The dwelling units may be allocated within one or more planning areas provided the net density of any individual project does not exceed 40 dwelling units per acre. Net density is calculated by the number of dwelling units applied to only the acreage of the development less any streets, roads, parks, trails, or common open space.

[9] A maximum of 1840 dwelling units is permitted in the Residential Uses area for consistency with the General Plan, since General Plan density is calculated by the total number of units applied to the 87.54 acres of Residential Uses area.

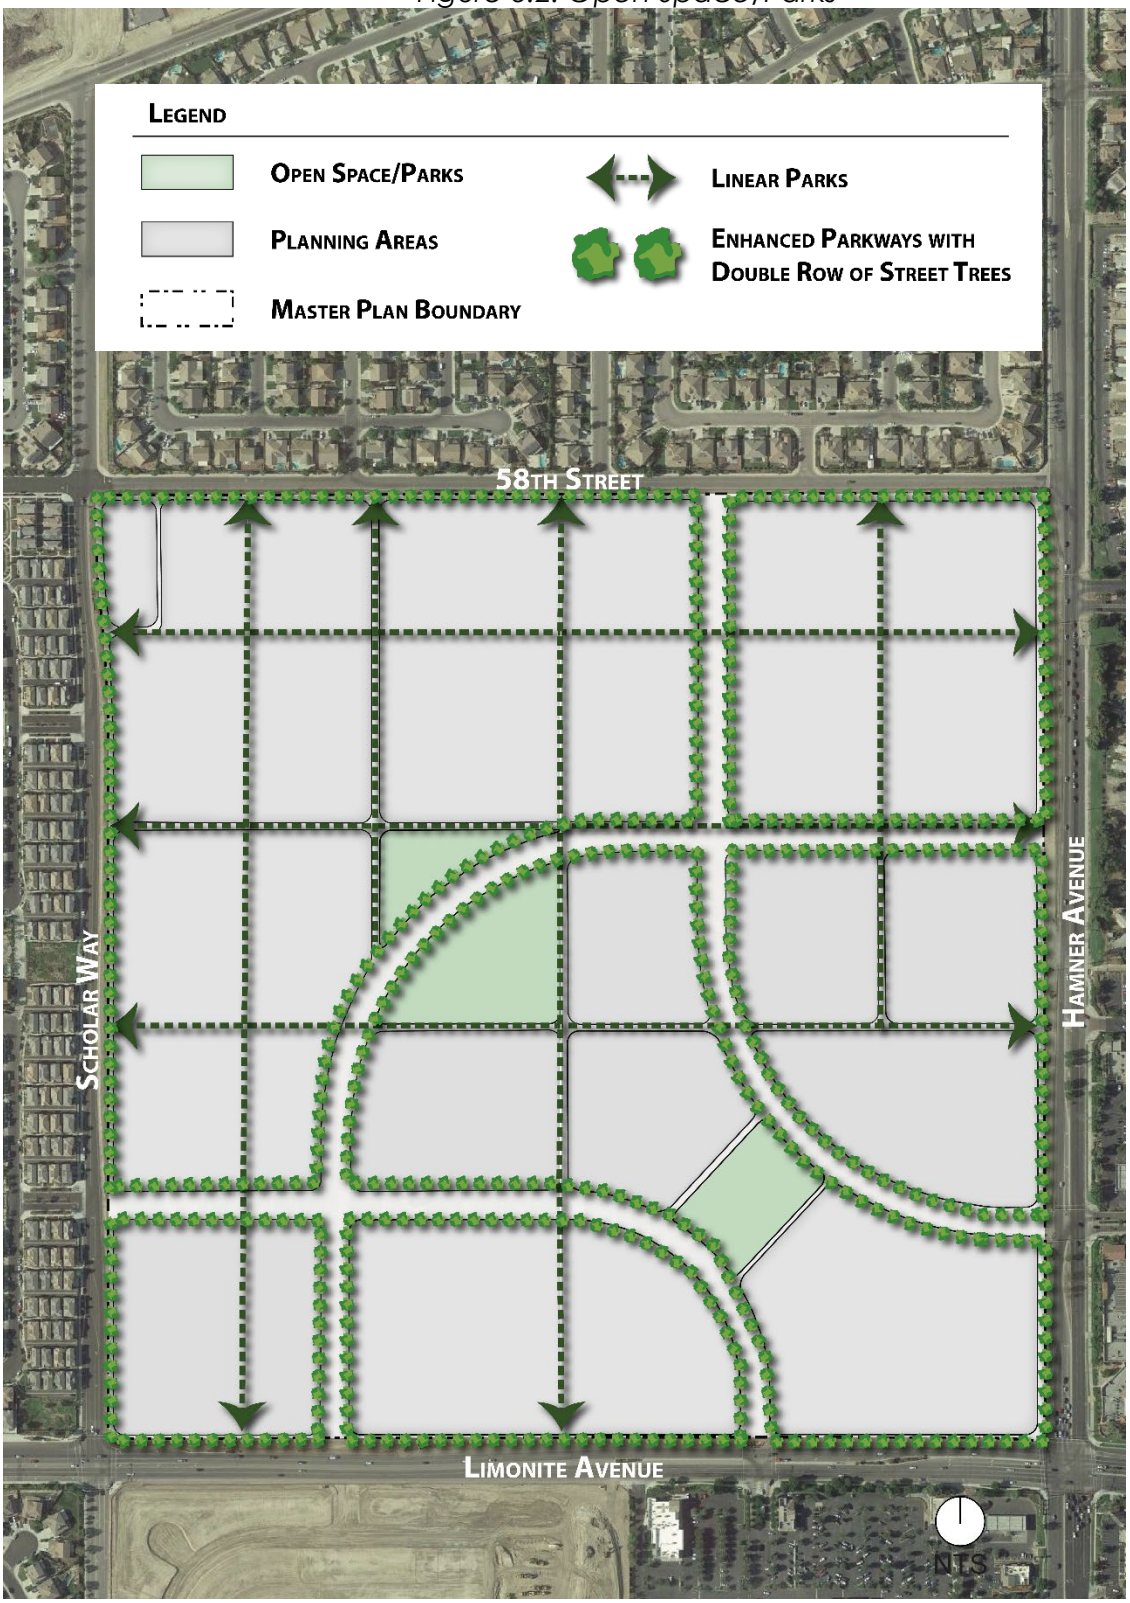
[10] Maximum development intensity was determined through the Leal Master Plan EIR and Leal Master Plan EIR Addendum.

dwelling units may be allocated within one or more planning areas provided the net density of any individual project does not exceed 40 dwelling units per acre.

3.2.2. Residential Uses (RU)

The Residential Uses (RU) land use category applies to planning areas 1, 6, 7, 8, 9, 11, 12 and 13. The Master Plan envisions variation in product types, including both detached and attached residential housing types, within the residential category to promote diversity and dynamic neighborhoods. The appropriate residential product types are discussed in Chapter 4, Development Standards. Within the 87.54 acres of Residential Uses (Planning Areas 1, 6, 7, 8, 9, 11, 12, 13, K, and L), a minimum of 730 dwelling units shall be constructed at a minimum net density of 20 dwelling units per acre. The dwelling units may be allocated within one or more planning areas provided the net density of any individual project does not exceed 40 dwelling units per acre. Net density is calculated by the number of dwelling units applied to only the acreage of the development less any streets, roads, parks, trails, or common open space. A maximum of 1,840 dwelling units[11] is permitted in the Residential Uses area for consistency with the General Plan, since General Plan density is calculated by the total number of units over the 87.54 acres of Residential Uses area.

3.2.3. Public Facilities (PF)



The Public Facility (PF) land use category applies to a 1.2-acre area within planning area 14 located at northwest corner of the Master Plan area. The PF land use designation provides for the development of a fire station.

3.2.4. Parks and Open Space (P/OS)

The Master Plan also provides for compatible recreational uses serving the needs of the residents, such as paseo, parks, recreation facilities and open space, as shown in Figure 3.2, Open Space/Parks Plan, which totals approximately 14.12 acres.

[11] The maximum number of dwelling units of 2,500 was determined by the Addendum to the Master Plan EIR to avoid new or more severe significant impacts. Assuming 660 units are constructed in the DT area, the remaining 1,840 units may be constructed in the RU area.

Figure 3.2: Open Space/Parks

Illustrative purpose only, final design may vary.

3.3. PERMITTED USES

3.3.1. Permitted Uses by Land Use Category

Permitted uses within the Leal Master Plan area are identified on Table 3-3, Permitted Uses. Other use or activity not listed in Table 3-3 may be permitted within the Master Plan area if it is compatible with the intent of the Master Plan and is similar to a permitted use, subject to approval by the Community Development Director or his/her designee.

Table 3-3: Permitted Uses

Permitted (P): Permitted by right
Conditional (C): Permitted upon issuance of a Conditional Use Permit

Note [1]: Residential uses, including live-work, are not allowed in the Planning Area 3 and 5 in Downtown (DT), except as outlined in the Development Agreement.

Note [2]: Residential use types are further defined in Chapter 4.

3.3.2. Standards Related to Specific Uses

The following standards apply to specific uses within the Leal Master Plan. Uses not listed here will be subject to a determination by the Community Development Director.

3.3.2.1. Outdoor Kiosks and Vendor Carts

A. Signage: All signs on outdoor kiosks and vendor carts shall be regulated by Section 4.5, Signage, of this Master Plan.

B. Minor Development Review: Prior to commencement of each outdoor kiosk and vendor cart on public property, the business owner shall obtain approval from the Community Development Director for the size, design, and aesthetic characteristics, to ensure the facility is consistent with the overall characteristic of the development.

3.3.2.2. Live-Work Units

For live-work development in the Planning Areas 2, 4, and 10, the following commercial/residential activities, conducted wholly within enclosed buildings,

shall be permitted, provided the commercial/office uses shall occur in conjunction with residential uses and are not standalone uses:

A. Tailor/Seamstress/Clothing Designer – custom tailoring and sales of apparel in conjunction with tailoring activities, clothing and other sewing products made on the premises

B. Artists and craft/sculpture products, sales galleries, and studios

C. Internet-based commerce (no inventory, no pornography)

D. Office - creative/tech-based offices and services

E. Office - professional offices and services

F. Photographer/photography studios

G. Residential uses in conjunction with office, retail or other work-related uses as permitted herein for live-work development

H. Spas and personal care to include esthetician/body sculpting with proof of training, nail salons and hair salons (for single patron use only and subject to Homeowners Association/Property Owners Association approval)

I. Similar uses permitted by the determination of the Community Development Director.

The property development standards set forth below shall apply to all live-work units within the confines of the Leal Master Plan:

A. Live-work units include the combination of residential living units and workspace of a building for self-employed residents. Ground floor residential living may be permitted in live-work units.

B. Where live-work uses are operated, the workspace shall be limited to a maximum of 50 percent of the entire unit (minus porches and garages).

C. The working area of a live-work unit shall be used exclusively for work activities and not for residential purposes.

D. Storage of hazardous materials necessary for work activities in live-work occupancies may be stored in controlled areas per the current California Building Code used by the City of Eastvale.

E. The residential portion of the live-work unit shall only be occupied by the individual and his/her household that has their professional occupation established in the same unit.

F. Live-work units are single-tenant spaces that include both residential and commercial/office square footage in a single unit providing for a

business to be conducted solely by the resident. In no instance shall the work portion of the live-work unit be sub-leased.

G. Noise levels generated by live-work spaces shall conform to the requirements of the Eastvale Municipal Code for residential use.

H. All signage and lighting shall comply with the requirements of the Leal Master Plan and the Eastvale Zoning Code and must be approved the City of Eastvale.

3.3.2.3. Alcohol Sales with a Bona-Fide Eating Establishment

The sale of beer, wine, or spirits is permitted as an accessory use for any bona-fide eating establishment under a "Type 41 License" or a "Type 47 License" of the California Department of the Alcoholic Beverage Control (ABC) Board.

In addition to the design guidelines and development standards contained in the Leal Master Plan, the following performance standards shall apply to accessory alcohol sales with a bone-fide eating establishment:

A. Food shall be available for purchase at all times during restaurant operating hours.

B. Alcohol sales shall not exceed 50 percent of gross receipts for the establishment.

C. Any sale of spirits for consumption off-premises is strictly prohibited. The consumption of spirits shall be limited to the restaurant area as defined per applicable license from the ABC Board.

D. Beer and wine may be purchased for off-premises consumption; however, the beer and wine sold for off-premises consumption may not be consumed on the premises that it was purchased on.

3.3.2.4. Breweries, Wine Blending Businesses, and Distilleries

Accessory beer, wine, or distilled spirit tastings is permitted within an alcoholic beverage manufacturing facility, provided the area devoted to tastings shall provide parking at the same rate as a restaurant or bar as described in Chapter 4, Table 4-8. The alcohol production area shall provide parking at the same rate as a manufacturing use as described in Chapter 4, Table 4-8. All such uses described within this section shall have an active, valid license from the ABC Board, as applicable.

In addition to the design guidelines and development standards contained in the Leal Master Plan, the following requirements shall apply to craft breweries, wine blending businesses, distilleries, and accessory tasting rooms:

A. A brewery, wine blending, or distillery use with a tasting room equal to or less than 1,000 square feet shall be permitted by right. An accessory

tasting room of more than 1,000 square feet shall be required to apply for a Conditional Use Permit.

B. A brewery, wine blending or distillery use may not exceed production of 15,000 barrels per year.

C. All production activities and on-site storage shall be located completely within the facility. Off-site storage is permitted, provided it meets all applicable provisions of the underlying zone. The display of alcoholic beverages shall be located within the manufacturing area and accessory tasting room facility.

D. The brewery, wine blending, or distillery use and accessory tasting room use shall be allowed to operate and be open to the public during the following hours:

   i. Manufacturing and Operation: 7:00 A.M. to 7:00 P.M. Monday through Saturday; and

   ii. Accessory Tasting Room Open to the Public: 11:00 A.M. to midnight daily, 11:00 A.M. to 1:00 A.M. on Friday and Saturday.

E. Service trucks used for the purposes of loading and unloading materials, ingredients, products, and equipment shall be restricted to the hours of 7:00 A.M. to 6:00 P.M. Monday through Friday and 9:00 A.M. to 6:00 P.M. on Saturday.

F. The consumption, tasting and sales of alcoholic beverages shall be limited to only those products produced on site.

G. Ancillary retail sales shall be limited to only those retail items directly associated with the on-site facility and accessory tasting room.

H. The brewery, wine blending, or distillery use or accessory tasting room shall not charge an admission fee, cover charge or require a minimum purchase.

I. A security plan, including a video surveillance system and exterior lighting plan, satisfactory to the Community Development Director, or his/her designee, shall be submitted to and approved prior to the issuing of a Certificate of Occupancy. The video surveillance system shall be installed to assist with monitoring the property on both the interior and exterior. A Digital Video Recorder (DVR) or similar video-recording device, capable of exporting images in TIFF, BMP, or JPG format shall be used. Recording shall be retained for no less than 30 days. Exterior lighting shall clearly illuminate the common areas surrounding the building including, but not limited to, the entrance and exit doors, as well as the business address.

J. No more than 10 percent of the window display area (including any transparent doors) shall be allowed to bear advertising, signs or any other obstructions. All advertising, signage or other obstructions shall be placed and maintained to ensure a clear and unobstructed view of the establishment's interior. Window signs displaying prices shall be prohibited. No advertising or signage shall be placed in the area above 3 feet or below 6 feet in height of all windows measured from grade.

K. Tours of the brewery, wine blending, or distillery use and accessory tasting room use shall occur on regularly scheduled days and times. The operator shall ensure that tours do not negatively impact adjacent businesses or property owners.

L. The use is not considered a nuisance as defined in the Eastvale Municipal Code;

3.3.2.5. Off-Premises Alcohol Sales

Boutique Wine and Beer Stores may permit the sale of wine and beer for off-premises consumptions under a "Type 20 License" of the ABC Board. General Liquor Stores may permit the sale of general alcohol sales, wine, and beer for off-premises consumptions under a "Type 21 License" of the ABC Board.

In addition to the design guidelines and development standards contained in the Leal Master Plan, the following performance standards shall apply to Boutique Wine and Beer Stores and General Liquor Stores:

A. The use does not result in any adverse effects, jeopardize, or endanger the health, peace, or safety of persons residing, visiting, or working in the surrounding area; The exterior lighting and security measures shall comply with applicable requirements.

B. The use is operated and maintained in a neat, quiet, and orderly condition and operated in a manner so as not to be detrimental to surrounding properties and occupants. This shall encompass the upkeep and maintenance of exterior facades of the building, landscaping, designated parking areas serving the use, fences, and the perimeter of the site, including all public sidewalks, alleys, and parkways;

C. The use is not considered a nuisance as defined in the Eastvale Municipal Code;

D. The exterior lighting and security measures shall comply with applicable requirements (including, but not limited to Sections 120.05.050, Outdoor Lighting; 120.05.080, Neighborhood Preservation Standards; 120.05.060, Off-Street Vehicle Parking as applicable)

E. No more than 10 percent of the square footage of the windows and transparent doors of the premises shall be allowed to bear advertising, signs or any other obstructions including products, shelving, display items

and/or coolers. All advertising, signage, product, shelving, display items and/or coolers shall be placed and maintained to ensure a clear and unobstructed view of the establishment's interior. Window signs displaying prices shall be prohibited. No advertising or signage shall be placed in the area above 3 feet or below six (6) feet in height of all windows measured from grade.

F. A copy of these performance standards, additional City or ABC Board imposed operating conditions, and a 24-hour complaint telephone number shall be posted in a conspicuous and unobstructed place visible from the entrance of the establishment in public view.

4 DEVELOPMENT STANDARDS

This chapter contains the permitted uses and development standards for the Leal Master Plan. Standards not addressed in this chapter are subject to the City of Eastvale Municipal Code in effect at the time of approval of this Master Plan. Additionally, in order to be approved by the City, development will need to comply with the quality expectations and community features identified in Chapter 2 of this Master Plan.

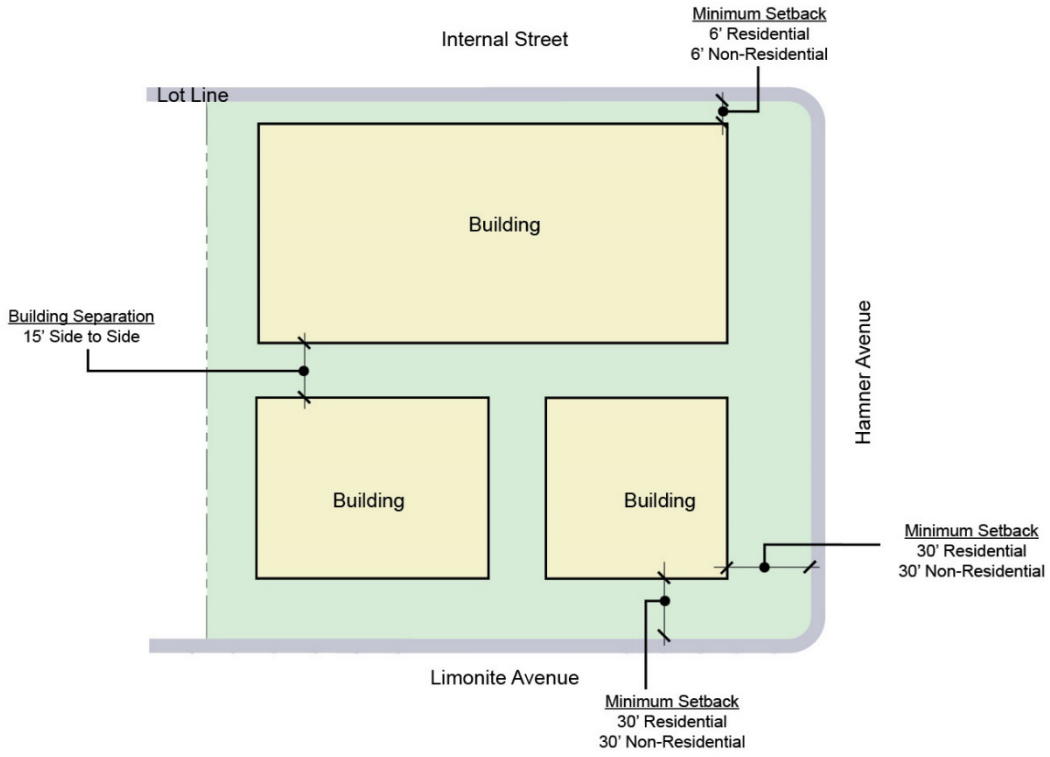
4.1. DEVELOPMENT STANDARDS

4.1.1. Downtown Development Standards

The Downtown (DT) District is envisioned to be the focal point in the City. The intent is to develop an open-air marketplace for retail and specialty uses that are not currently present in Eastvale and in nearby communities (including Live/Work units).

The mix of uses may be horizontal (different uses within a Planning Area separated horizontally) or vertical (different uses within the same building, with commercial or office uses located on the ground floor and with office or residential uses located above). The residential component of this land use district is intended to provide for the development of multi-family residential dwellings in an urban atmosphere.

Minimum and maximum development intensities and densities are outlined in Chapter 3 of this Master Plan.



DT District includes planning areas 2, 3, 4, 5 and 10.

Table 4-1 establishes the development standards for the Downtown District. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.1. Residential uses within the Downtown District are subject to the development standards provided in Table 4-1. Where Table 4-1 is silent on a development standard, the development standards presented later in this chapter for specific product types would apply for the project type proposed. If there is a conflict in development standards between Table 4-1 and the development standards for product types, Table 4-1 shall govern.

Table 4-1:Downtown Development Standards

	RESIDENTIAL BUILDINGS	NON-RESIDENTIAL/ MIXED-USE BUILDINGS
Maximum Site Coverage	75%	N/A
Maximum Building Height	65' (4 stories)	
Minimum Building Setbacks From		
Hamner Avenue ROW	30'	30'
Limonite Avenue ROW	30'	30'
Lot Line Along Internal Street	6'	6'
Minimum Building Separation		
Residential - Front to Front (entries) - at open space	20'	N/A
Residential - Side to Side (no entries) - at open space	15'	N/A
Non-Residential/Mixed-Use – Side to Side	N/A	15'

Figure 4.1 Downtown Setback Diagram

4.1.2. Residential Development Standards

The development standards and product types included herein are intended to establish the minimum design parameters. An appropriate mix of building types shall be incorporated into the residential land use and mixed-use districts to avoid monotonous neighborhoods.

Table 3-2 within Chapter 3 establishes permitted uses, including Dwelling – Multiple Family, Second Unit, Single Family, and Two-Family. Those permitted residential land use categories are further defined in this Chapter through the following description of residential product types permitted in the Master Plan area.

Development standards for residential uses within the Downtown District are presented above in Table 4-1. Development standards for residential uses within the Residential Uses District (Planning Areas 1, 6, 7, 8, 9, 11, 12 and 13) are presented below by housing type.

Conventional Single Family Detached Homes typically have street front orientation where primary entries and walks face the street or the side, and have private rear and side yards. Garages are in the front or side and face the street. Resident parking spaces are provided in garages and guest parking spaces are provided in driveways or on local streets.

Zero-Lot Line Homes are designed to fit together along a common property line by providing one home with a deeply recessed garage. Reciprocal use easements are used to maximize the side yard areas. Zero-lot line homes typically have street front orientation where primary entries face the street, and have private rear and side yards. Garages with driveways face the street. Resident parking spaces are provided in garages and guest parking spaces are provided in driveways or on local streets.

Rear Loaded Homes have street-facing primary entries and are designed to take garage access from a shared access drive behind the homes. Private yard space is provided in a side yard, a courtyard behind the front portion of the house or behind the house between a detached garage and the home. Resident parking spaces are provided in garages and guest parking spaces are provided in driveways (18' minimum in length where provided), on the street or in a common parking area. Reciprocal use easements may be used to maximize side yard areas.

Detached Cluster Homes are single-family detached dwellings oriented on a shared access drive. Each cluster module typically consists of 4 to 10 dwelling units. Resident parking spaces are provided in garages and guest parking spaces are provided on the street or in a common parking area. Reciprocal use easements may be used to maximize side yard areas.

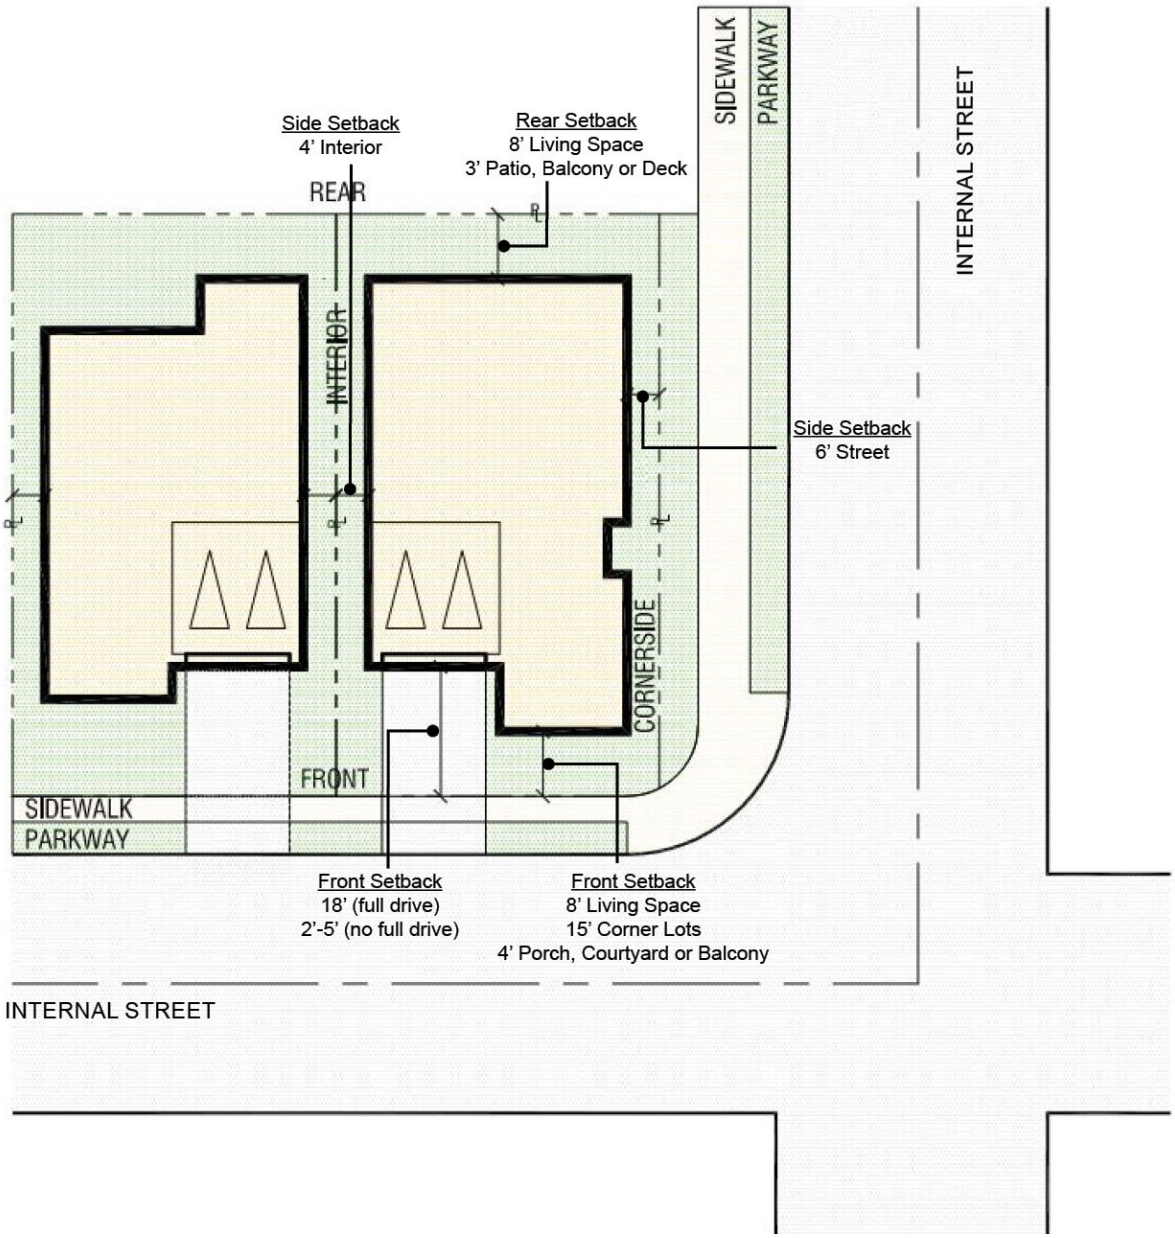
Row Townhomes are single-family attached homes with primary entries facing street or common open space. The units have private outdoor living space. Automobile access is via an alley or shared access drive. Resident parking spaces are provided in garages, and guest parking spaces are provided on public or private local streets or in designated parking areas.

Attached Motorcourt Homes are buildings mixed with townhomes and flats. The entries are from the street or common open space. Automobile access is via an alley or shared access drive. Resident parking spaces are provided in garages, and guest parking spaces are provided on public or private local streets or in designated parking areas.

Apartments/Flats are buildings with either walk-up units or flats in multiple story configurations. The entries can either be external from the street or common open space, or internal and elevator served. Resident parking spaces are provided either in garages, surface parking, or in multiple story parking structures. The units tend to be for rent as opposed to for sale.

Detailed design standards per product types are presented below and shown in Tables 4-2 to 4-7.

4.1.2.1. Conventional SFD Residential



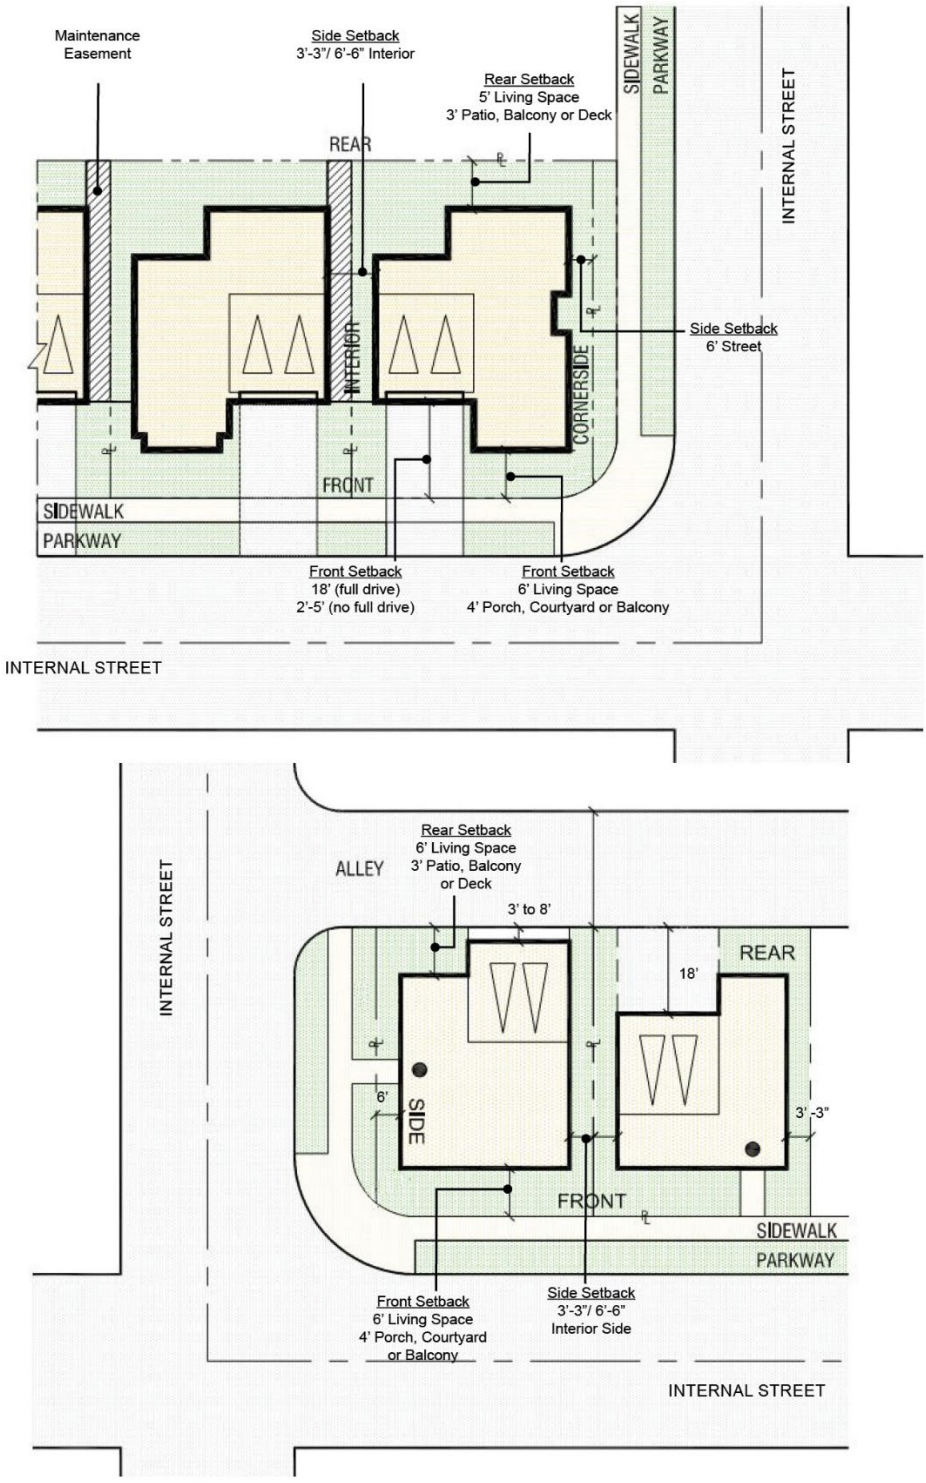
The development standards provided in Table 4-2 have been established to encourage forward-facing living space. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.3. These standards allow for the placement of entries, windows, front porches and living spaces closer to the street to provide more active and visually interesting streetscape.

Table 4-2: Conventional SFD Residential Development Standards

	Conventional SFD Homes
Minimum Lot Size	2,500 sq. ft.
Minimum Lot Width[1]	40'
Maximum Building Coverage	70%
Maximum Building Height	50' (3 stories)
Minimum Front Setback (from Property Line)	
Living Space	8' (15' at the corner lots)
Porch, Courtyard or Balcony	4'
Front Entry Garage	18' (full driveway)/ 2'-5' (no full driveway)
Minimum Side Setback (from Property Line)	
Interior Side	4'
Internal Street Right-of-Way Side	6'
Minimum Rear Setback (from Property Line)	
Living Space	10'
Patio Cover, Balcony or Deck	3'

[1] The minimum lot width for knuckle and cul-de-sac lots shall be the average of the widths measured at the front and rear edges of the lot

Figure 4.3 Conventional SFD Residential Setback Diagram



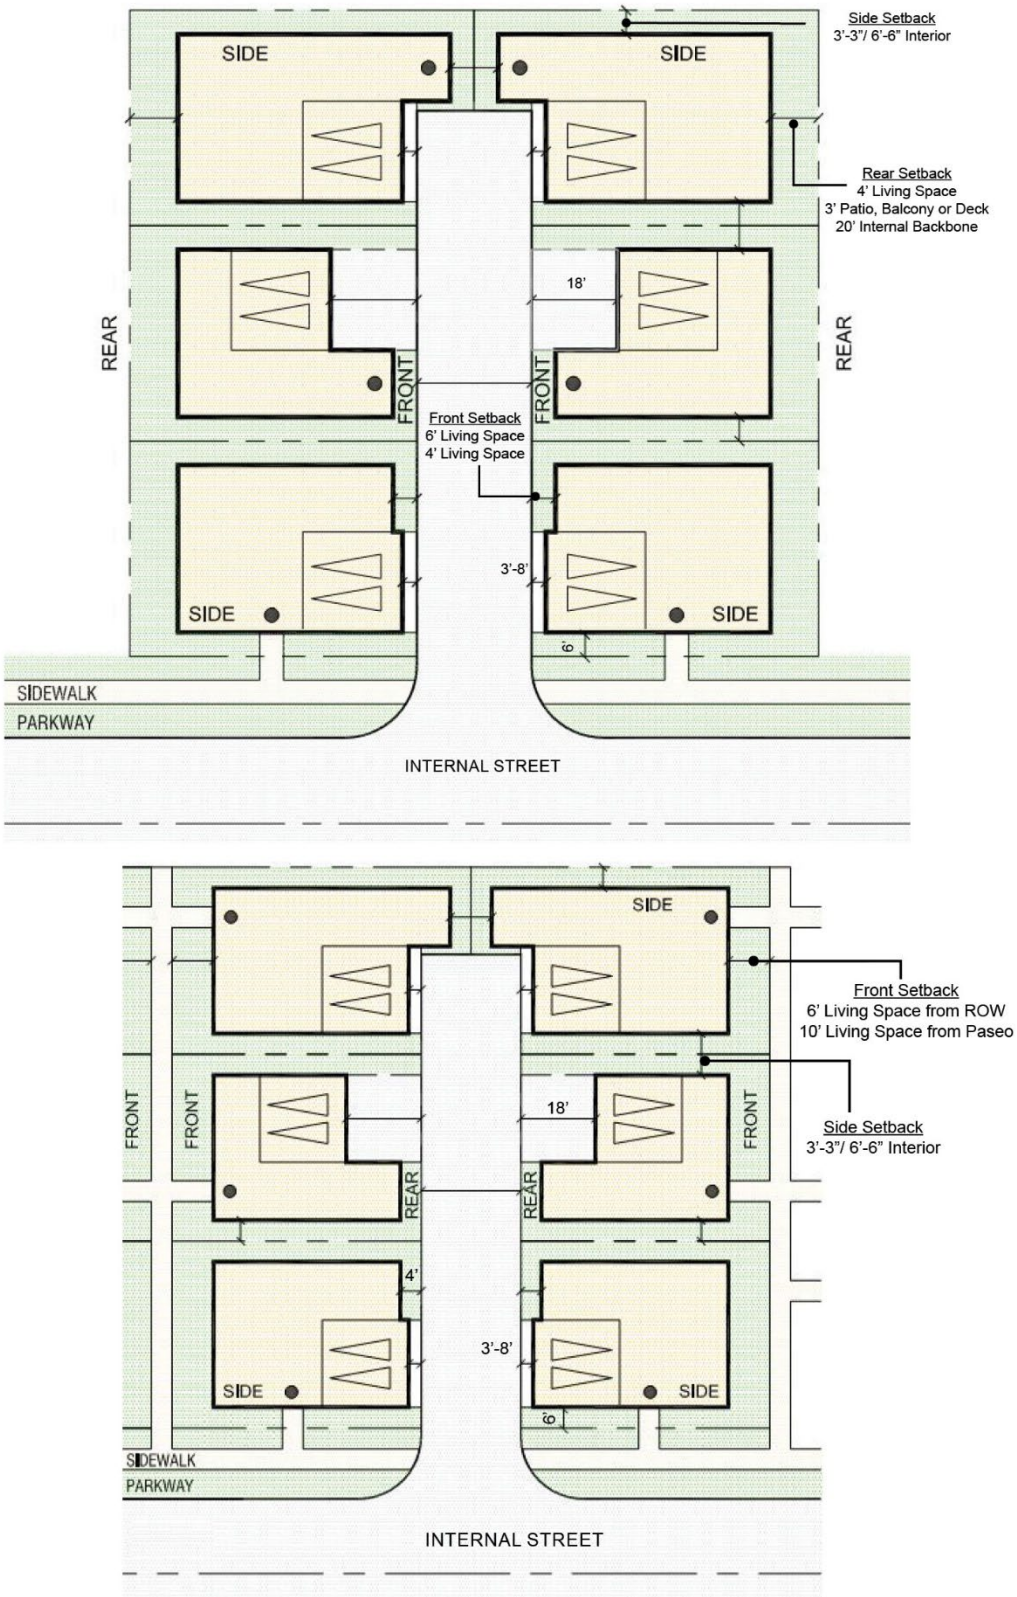
4.1.2.2. Zero-Lot Line and Rear Loaded SFD Residential

Table 4-3 establishes the development standards for front loaded zero-lot line and rear loaded SFD residential development. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.4. Note: Zero-Lot Line Homes may be front or rear loaded. In the event that a rear-loaded Zero-Lot Line Home is proposed, the Rear-Loaded Homes standards shall apply (with a maintenance easement for the side yard).

Table 4-3: Zero-Lot & Rear Loaded SFD Residential Development Standards

	Zero-Lot Line Homes	Rear Loaded Homes
Minimum Lot Size	2,500 sq. ft.	2,000 sq. ft.
Maximum Building Height	50' (3 stories)	50' (3 stories)
Maximum Building Coverage	70%	70%
Minimum Front Setback (from Property Line)		
Living Space	6'	6'
Porch, Courtyard or Balcony	4'	4'
Front Entry Garage	18' (full driveway/2'- 5')	N/A
Minimum Side Setback (from Property Line)		
Interior Side (one side/between buildings)	3'/6'	3'/6'
Internal Street Right-of-Way Side	6'	6'
Minimum Rear Setback (from Property Line)		
Living Space	5'	5'
Patio Cover, Balcony or Deck	3'	3'
Rear Entry Garage Setback (from Access Drive)	N/A	3' to 8' or 18' min.

Figure 4.4 Front Loaded Zero-Lot & Rear Loaded SFD Residential Setback Diagrams



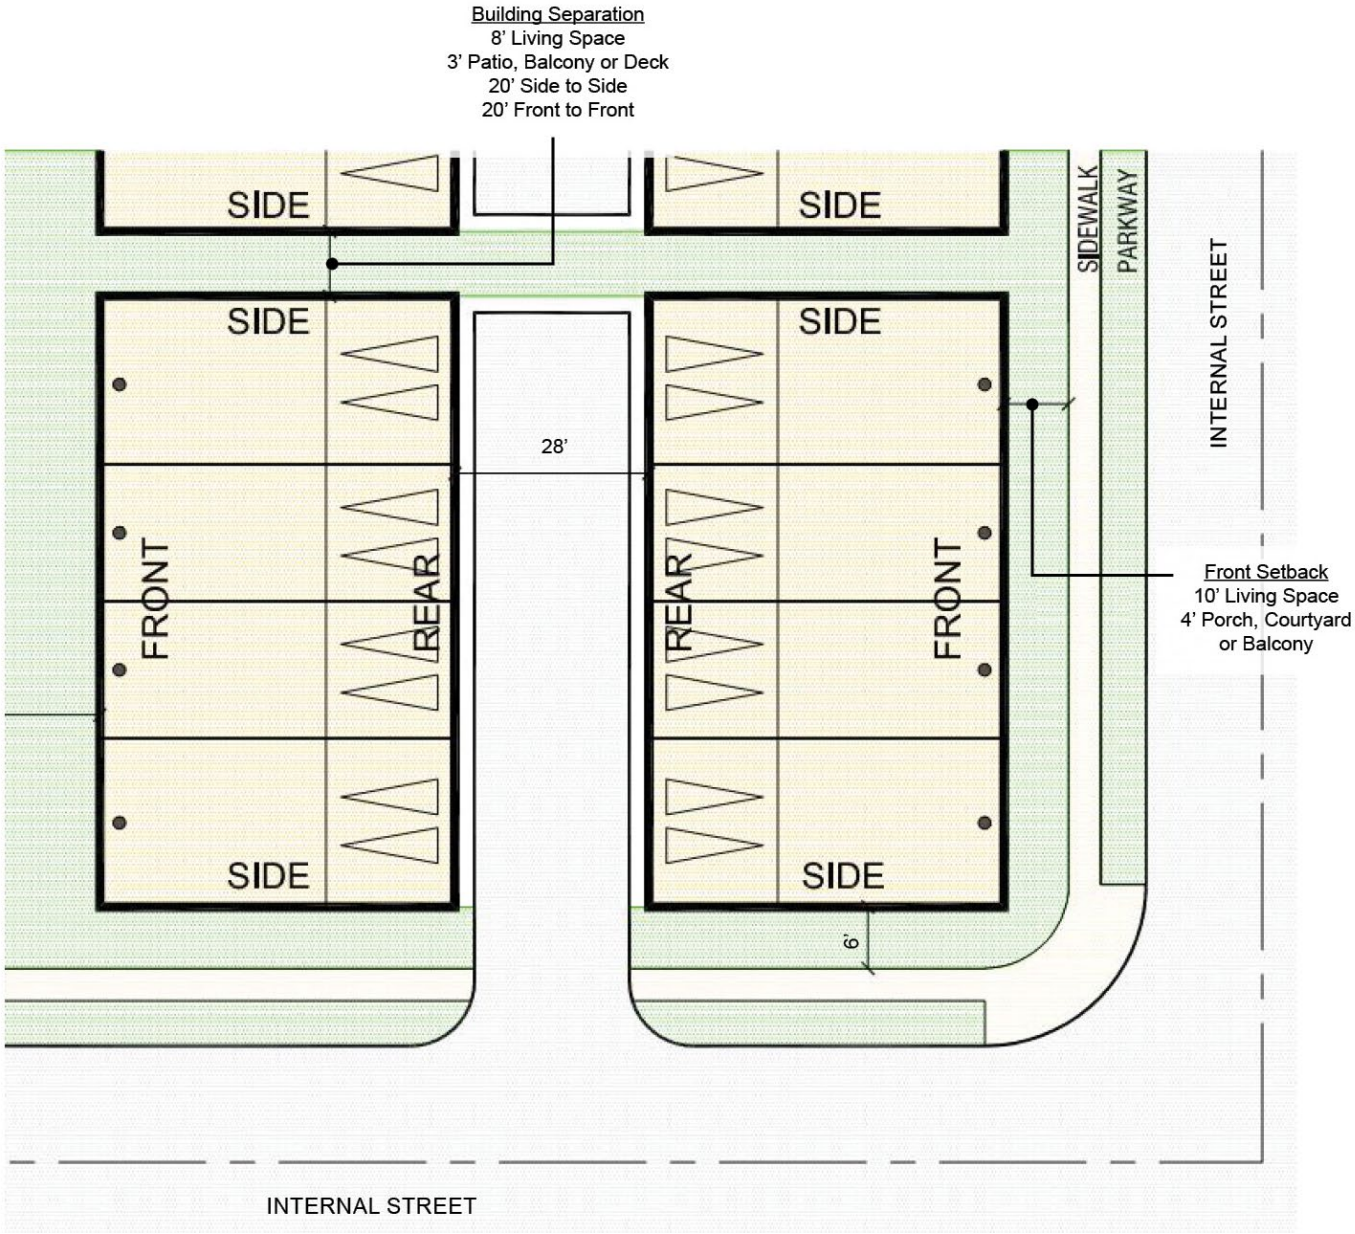
4.1.2.3. Detached Cluster Residential Development

Table 4-4 establishes the development standards for detached cluster residential development. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.5.

Table 4-4:Detached Cluster Home Development Standards

	Front-Loaded Cluster Homes	Rear-Loaded Cluster Homes
Minimum Lot Size	1,500 sq. ft. (or Condo Map)	1,500 sq. ft. (or Condo Map)
Maximum Building Height	50' (3 stories)	50' (3 stories)
Maximum Building Coverage	70%	70%
Minimum Front Setback		
Living Space from Internal Street Right-of-Way	6'	6'
Living Space from Access Drive	4'	N/A
Living Space from Paseo Walkway	N/A	10'
Minimum Side Setback		
Interior Side (one side/between buildings)	3'-3"/6'-6"	3'-3"/6'-6"
Internal Street Side (from internal street right-of-way)	6'	6'
Minimum Rear Setback (from Lot Line)		
Living Space	4'	4'
Patio Cover, Balcony or Deck	3'	N/A
Garage Face from Access Drive	3' to 8' or 18' min.	3' to 8' or 18' min.

Figure 4.5 Detached Cluster Home Setback Diagram



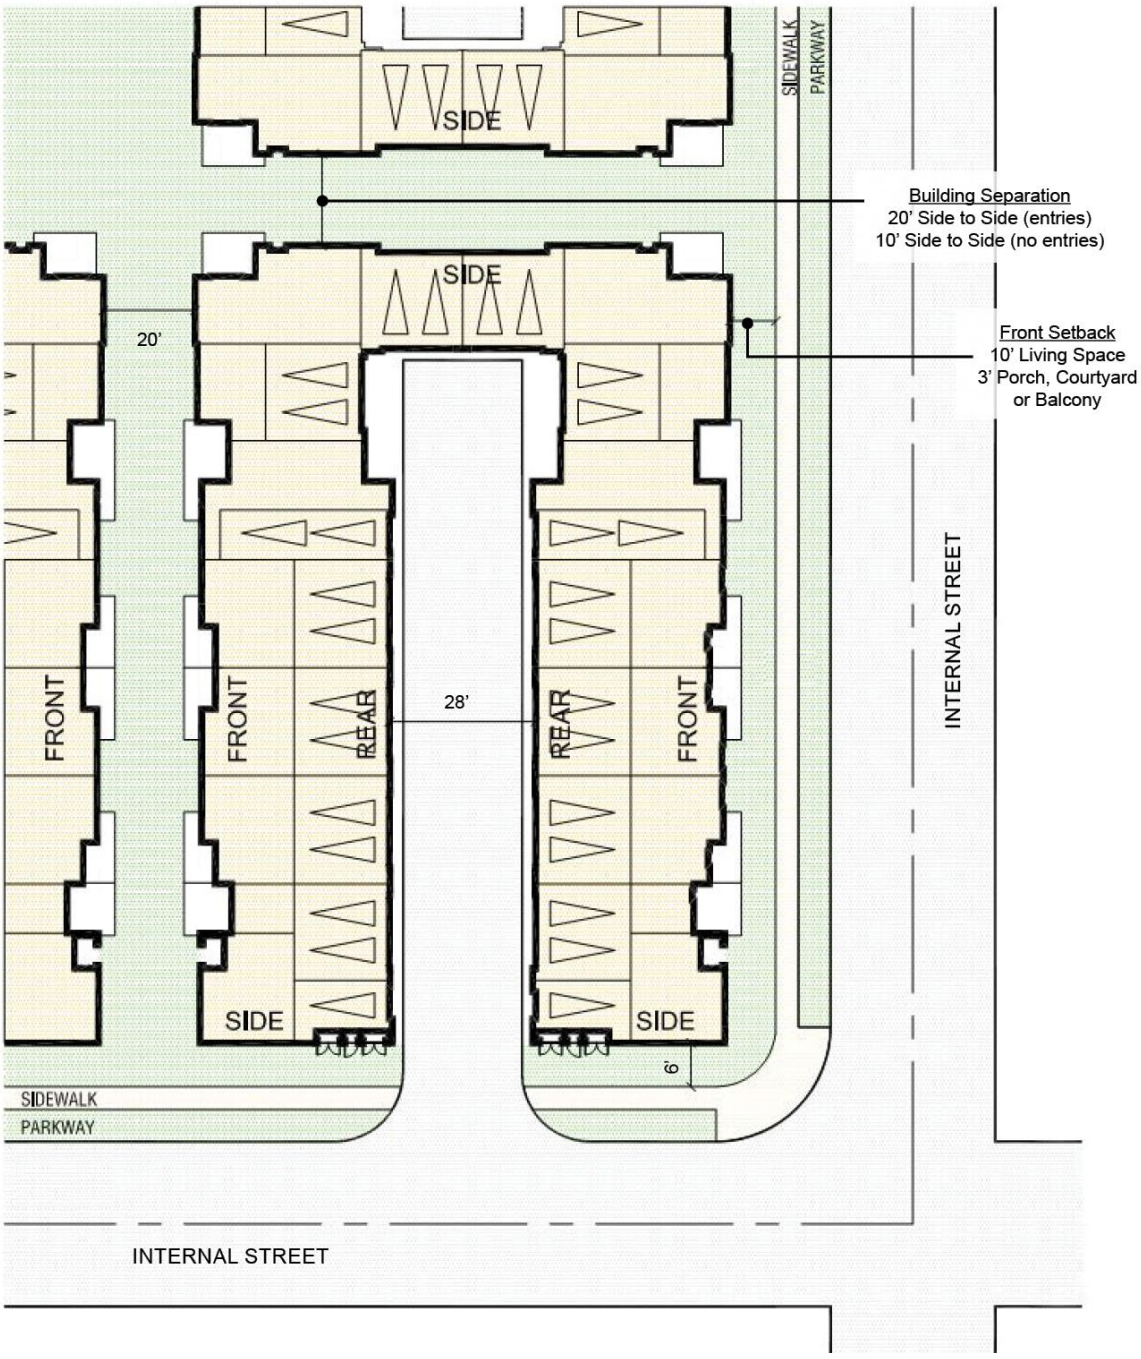
4.1.2.4. Row Townhomes

Table 4-5 establishes the development standards for row townhomes. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.6.

Table 4-5:Row Townhome Development Standards

	Row Townhomes
Minimum Parcel Size	1 ac
Maximum Site Coverage	N/A
Maximum Building Height	50' (3 stories)
Minimum Front Setback (from Internal Street Right-of-Way)	
Front Living Space	10'
Porch, Courtyard or Balcony	4'
Minimum Side Setback (from Internal Street Right-of-Way)	
Street Side	6'
Minimum Building Separation	
Living Space	8'
Patio Cover, Balcony or Deck	3'
Front to Front (entries) - at open space	20'
Side to Side with entries	20'
Garage Door to Garage Door at Alley	28'

Figure 4.6 Row Townhome Setback Diagram



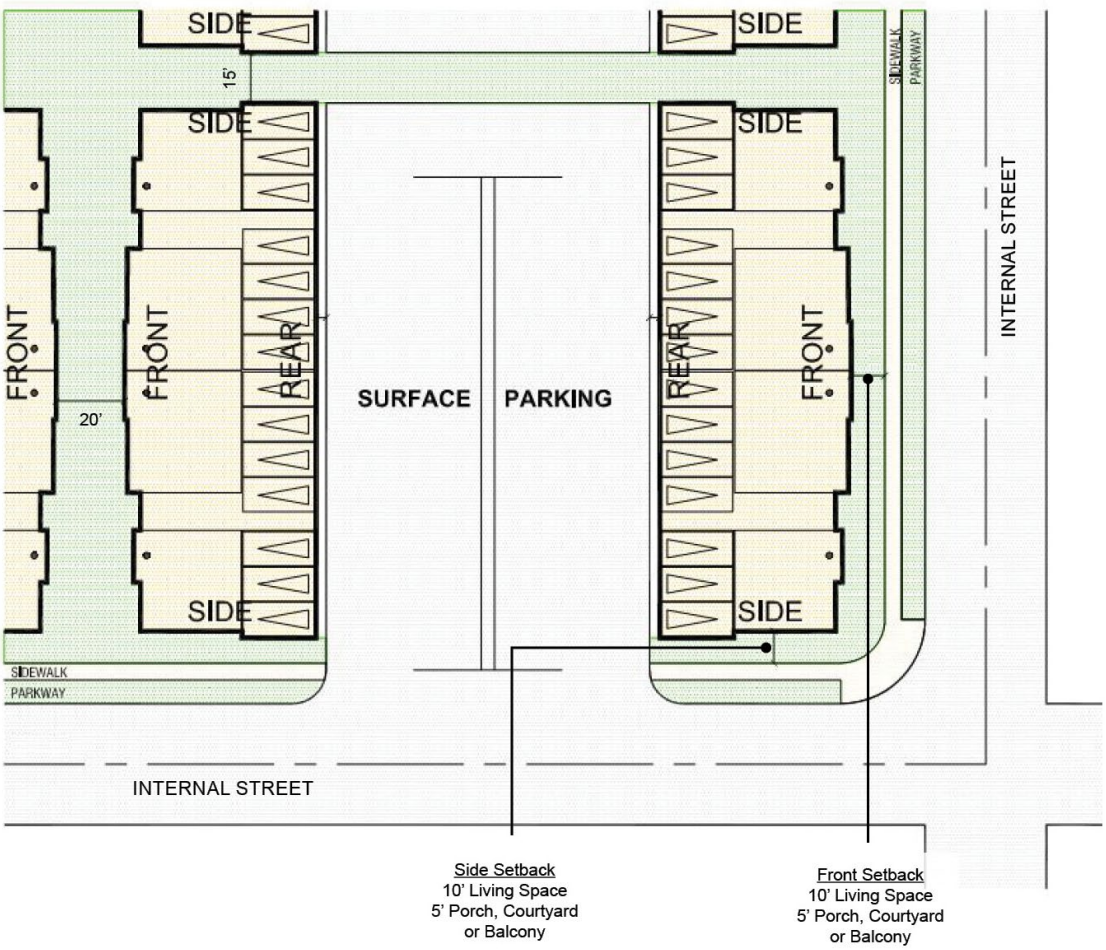
4.1.2.5. Attached Motorcourt Homes

Table 4-6 establishes the development standards for attached motorcourt homes. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.7.

Table 4-6: Attached Motorcourt Home Development Standards

	Attached Motorcourt Homes
Maximum Site Coverage	75%
Maximum Building Height	50' (3 stories)
Minimum Front Setback (from Internal Street Right-of-Way)	
Front Living Space	10'
Porch, Courtyard or Balcony	3'
Minimum Side Setback (from Internal Street Right-of-Way)	
Street Side	6'
Minimum Building Separation	
Front to Front (entries) - at open space	20'
Side to Side (entries)	20'
Side to Side (no entries)	10'
Garage Door to Garage Door at Alley	28'

Figure 4.7 Attached Motorcourt Home Setback Diagram



Apartments/Flats

Table 4-7 establishes the development standards for residential apartments/flats. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.8.

Table 4-7: Apartments/Flats Development Standards

	Apartments/Flats
Maximum Site Coverage	75%
Maximum Building Height	65' (4 stories)
Minimum Front Setback (from Internal Street Right-of-Way)	
Front Living Space	10'
Porch, Courtyard or Balcony	3'
Minimum Side Setback (from Internal Street Right-of-Way)	
Living Space	10'
Porch, Courtyard or Balcony	5'
Minimum Building Separation	
Front to Front (entries) - at open space	20'
Side to Side (no entries) - at open space	15'

Figure 4.8 Apartments/Flats Setback Diagram

4.1.3. Public Facility Standards

PA 14 is a public-institutional planning area for a fire station located at the southeast corner of Scholar Avenue and 58th Street.

- Maximum Building Height: None.

4.1.4. Parks and Open Space Standards

The Parks and Open Space (P/OS) District includes Panning Areas J through V. Planning Areas J, K, and L are parks and Planning Areas M through V are trails and open space areas. Planning Area J (PA J) is a village green located between PA 5 and 3, which could be used for community events, such as concerts, movies, art fairs, farmers markets, etc. Planning Area L (PA L) is adjacent to PA 6 and 8 and planned for a community park. Planning Area K (PA K) is adjacent to PA 7 and 12 and is planned as a private recreation facility for the residents of the Leal Master Plan.

- Parking Area Setback from Internal Backbone Street Right-of-Way: 10'
- Building and Structure Setback from Internal Backbone Street Right-of-Way: 6'
- Maximum Building Height: 40' (2 stories); 15' for accessory structure

4.1.5. Allowable Projections and Encroachments

An encroachment is a permitted allowance into a ground-floor or upper-level setback. A projection is an element that is allowed to project above the height limit. In all cases, all encroachments and projections shall comply with the California Building Code (CBC), as well as other applicable codes and regulations such as the American Disability Act. The permitted encroachments and projections are discussed below.

A. Detached accessory buildings, including garages, or parking spaces required in the absence of garages, may occupy not more than 25 percent of a required rear or interior side yard, provided such building is not more than 15 feet in height and the wall of such building or parking space is located not less than 6 feet from the nearest wall of a main building on the same lot or a contiguous lot.

B. A breezeway connecting a main building to another building may be permitted. Such breezeway shall remain open on one side and shall not be considered part of a main building.

C. A covered patio, attached or unattached, which is enclosed on not more than 3 sides may encroach into any setback provided the distance between the property line and the patio at the nearest point is not less than 6 feet.

D. Eaves, cornices, canopies, belt courses, sills, buttresses, bay windows, planter boxes, light fixtures, or other similar architectural features may encroach into any required setback, provided such extensions shall not be nearer than 2 feet to any property line. Where more than one building is located on the same lot or parcel, such features shall not be nearer than 2 feet to a line midway between the main walls of such buildings. Chimneys and fireplaces may encroach into any setback not more than 2 feet, provided such chimneys or fireplaces shall not be nearer than 3 feet to any property line. Where more than one building is located on the same lot or parcel, such chimneys or fireplaces shall not be nearer than 3 feet to a line midway between the main walls of such buildings.

E. Open, unenclosed stairways or balconies not covered by roofs or canopies may encroach into any setback not more than 3 feet.

F. Uncovered porches, platforms, or landings which do not extend above the level of the first floor of the building may encroach into any setback not more than 6 feet; provided, however, an open-work railing, glass or glass like material, no more than 3 ½ feet in height may be installed or constructed on such porch, platform, or landing.

G. Open-work fences, hedges, guard railings, or other landscaping or architectural devices for safety protection around depressed ramps may encroach into any required setback provided such devices are not more than 3 ½ feet in height.

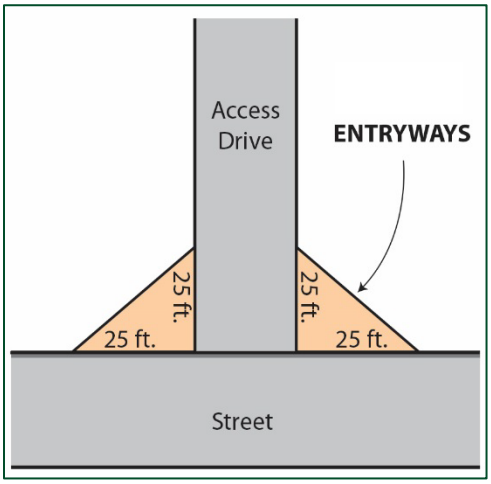
H. Fences and walls, pursuant to Section 5.3 of the Eastvale Zoning Code.

I. Signs may project and/or encroach into any required setback or public right-of-way, subject to applicable requirements in this Master Plan and the Eastvale Zoning Code.

J. Landscape elements such as benches, fountains, and other decorative features may encroach into any setback, provided they do not obstruct any path of travel or intersection visibility requirements per the Eastvale Zoning Code.

K. Mechanical equipment may encroach into any required setback area up to the property line, provided the equipment is screened by landscape or material (e.g. wall) to the maximum extent feasible and allowed by the applicable utility provider.

L. Stairwells, elevator penthouses, mechanical equipment, and roof attachments such as flagpoles, towers, wireless masts, television antennas, and similar diminutive roof attachments, may project above the height limits set forth within the Leal Master Plan, provided such projections shall not exceed 20 feet above the prescribed height limit.



M. Parapets, security railing, and other appurtenances on a flat roof may project above the height limits set forth within the Leal Master Plan,

provided such appurtenances shall not exceed forty-two (42) inches above the prescribed height limit.

4.2. COMMUNITY FEATURES STANDARDS

Community features such as entry monuments, parks, and trails are significant components in the Leal Master Plan. The development and design standards for entryway statements shall be consistent with Chapter 2, Project Character, of this Master Plan and the following:

A. Entryways into the Master Plan shall be identified with special gateway treatments to announce arrival into the project area. The minimum sizes of each are shown in the figures below.

B. Entryway feature treatments may include public art and/or special architectural elements such as sculptures, signage, or enhanced landscaping. All entry points shall be defined through the use of landscaping, trees, and/or architectural elements.

C. Entryway statements shall satisfy the design guidelines provided in the Eastvale Design Standards and Guidelines.

D. Entryways should be designed to provide a clear sense of arrival and set the tone for the overall design quality in Eastvale.

4.3. PARKING

4.3.1. Parking Requirements

Vehicular and bicycle parking shall comply with the parking standards and requirements listed in Table 4-8, *Parking Requirements*, below.

Table 4-8: Parking Requirements

USE TYPE	PARKING REQUIREMENTS
General Commercial/Retail Uses	
General Retail including, but not limited to, neighborhood, community and regional shopping centers, including those with restaurants[1]	4 spaces/1,000 sq ft. of net leasable floor area, except where reduced through a shared parking and/or TDM (see Section 4.3.4)
Professional Business Offices	3 spaces/1,000 sq. ft. of net leasable floor area
Breweries, Wine Blending Businesses and Distilleries	2 spaces/3 employees on the largest shift plus 1 parking space per 100 square feet of tasting area.
Medical Uses	
Medical and Dental Offices, Clinics, and Medical Business Offices	4 spaces/1,000 sq. ft. of net leasable floor area
Civic Uses	
Civic Center, Police Station, Fire Station and the like	3 spaces/1,000 sq. ft. of net floor area. Areas devoted to storage, hallways, restrooms, utility rooms and the like shall not be included within this calculation.
Residential Uses	
Single Family Detached Residential - Conventional SFD, Front-loaded Zero-lot Line SFD, Rear-loaded SFD, and Detached Cluster Homes	1 space/unit within a garage, 1 open space/unit within the lot
Attached Residential - Row Townhomes and Attached Motorcourt Homes	1-bedroom or studio unit: 1.25 spaces/unit 2-bedroom dwelling unit: 1.5 spaces/unit 3+ bedroom dwelling unit: 2.0 spaces/unit
Attached Residential – Apartments and Flats,	1-bedroom or studio unit: 1.25 spaces/unit 2-bedroom dwelling unit: 1.5 spaces/unit 3+ bedroom dwelling unit: 2.0 spaces/unit

[1] For designated outdoor dining areas, no parking spaces are required for the first 500 square feet. Any outdoor dining area that is more than 500 square feet in size shall provide 1 space per 100 square feet for the area beyond 500 square feet.

Residential Units in Mixed-Use Residential Buildings	

Parking requirements for uses not indicated in Table 4-8, *Parking Requirements*, shall be reviewed and approved by the Community Development Director. Uses not specified shall be compared to a similar use or uses that could satisfy the minimum parking demand. When there is no similar use in Table 4-8, *Parking Requirements*, parking requirements found in Section 5.6 of the Eastvale Zoning Code shall apply or a parking study prepared by a firm acceptable to the Community Development Director shall be submitted that provides justification, and data supporting the proposed minimum parking requirement.

Parking may be shared within the Leal Area Master Plan, with some limitations. Figure 4.9, Parking Distribution identifies the location of where parking may be shared for residential and commercial uses within the Master Plan area.

Figure 4.9 Parking Distribution

4.3.2. On-Street Parking

On-street parking spaces immediately adjacent to and on the same side of the street of a property along the internal backbone streets may be counted toward meeting the off-street parking requirement for that property. These spaces may be parallel or angled spaces. With respect to parallel parking spaces that are not marked, each 24-foot length may be counted as one space. No credit is allowed for street frontage where parking is prohibited, such as loading zones and red curb areas.

4.3.3. Tandem Parking

Tandem parking is permitted for both residential and commercial uses within the Leal Master Plan area. Two tandem parking spaces shall have a minimum depth of 36 feet and shall meet the Development Standards for Off-Street Parking Facilities in Section 5.6 of the Eastvale Zoning Code.

4.3.4. Alternative Programs for Parking

Shared parking and other alternative programs for parking may be permitted pursuant to Section 5.6.B of the Eastvale Zoning Code.

A Parking Management Plan/Transportation Demand Management is required for all non-residential uses that increase parking demand by ten (10) parking spaces. The Parking Management Plan/Transportation Demand Management Plan may reduce the overall parking requirements by up to 25 percent, depending on the findings of said plan. This plan shall include at least the following items:

- Information related to carpooling, van pools and staggered work hours.
- Projected effectiveness of carpool, vanpool, staggered work hours or similar transportation programs.
- Proximity to public transportation facilities serving a significant portion of employees and/or customers.
- Shared parking/overlapping parking demands.
- Specific parking management programs increasing parking efficiency, such as valet parking.
- Evidence that employees and/or customers utilize on transportation alternatives on a consistent basis.

4.3.5. Parking Lot Design

The design standards for the parking area shall be consistent with the Eastvale Design Standards and Guidelines and with the following:

A. Parking lots and structures shall be designed to be functionally and visually integrated and connected. Developments on separate parcels shall provide common access and parking areas.

B. All parking areas shall be screened with landscaping and/or decorative walls from all residential developments and pedestrians along the public right-of-way.

C. Parking lots should be visually separated into smaller units with landscaping or low walls however adjacent parking lots shall be connected for vehicle and pedestrian access.

D. Different landscape design should be used to differentiate major access aisles from the rest of the parking area.

E. Common parking areas shall be landscaped with shade trees to create an attractive pedestrian environment.

4.4. SIGNAGE

Except as identified in the Leal Master Plan, signage shall conform to the applicable provisions of Eastvale Zoning Code, Section 5.7, Signs.

Downtown District: A comprehensive Sign Program for the DT District identifying the location and design standards of thematic signage elements, including the sign type, size, material, and illumination, shall receive the Community Development Director's approval prior to the installation of signs. The standards shall include design standards for signs provided in the DT District and a Master Plan Area Map, consistent the signage guidelines included in Section 2.2.10 of the Leal Master Plan.

Residential Use Districts: Signage for the Residential Use (RU) Districts identifying the signage location and design standards, including the sign type, size, material, and illumination, shall receive Community Development Director's approval prior to the installation of signs.

In addition to the sign types listed in Section 2.2.10, Signage, of the Leal Master Plan, the sign standards for the DT and RU Districts shall also address standards for the following, as applicable:

- Grand opening/coming soon signs for commercial and residential development
- For sale/lease signs for commercial and residential development
- Model home signs
- Signs on kiosks

4.4.1. General Sign Standards

The following requirements shall apply to signs within the Leal Master Plan area:

A. All signs and community monumentation in the DT District shall be included as part of an approved Sign Program.

B. Projecting Signs Clearance. A minimum eight (8) feet vertical clearance is required from the bottom of a projecting sign, marquee, blade or awning to the sidewalk or grade immediately below the sign.

C. Moving or Animated Signs. Unless otherwise permitted herein, signs that include, but are not limited to, rotating, flashing, swinging, blinking, strobing, or otherwise changing appearance are prohibited, except for signs that include time and/or temperature that are located at least 100 feet away from a residential land use District. In cases where illuminated signs display temperature and time, said sign shall receive City approval and shall include a mechanism to reduce the brightness of said sign when in proximity to a residential neighborhood. Signs, except for public service time and temperature signs, shall not be flashing, animated, or revolving in nature.

D. Sign Illumination. All signs may be internally or externally illuminated. All direct light rays from all signs shall be confined onto the site on which the sign is located and shall not shine directly upon neighboring property. All exposed raceways are prohibited. Temporary lighting, such as search or flood lights that are used on a permanent basis, are prohibited.

E. Approval of Sign Modifications. The Planning Commission may grant approval of signs that do not comply with the regulations contained in the Leal Master Plan or in the approved Sign Program.

4.4.2. Changeable Signage

A. Pageantry

Pageantry is allowed in the DT District and includes flags, pole-mounted banners, community banners over the right-of-way, kiosks, canopies, lights, directories, ground-mounted graphics, and other similar temporary or permanent (but changeable) elements. The purpose of changeable pageantry signage is to create excitement and provide a visually interesting commercial area. The intent is to allow regular changes to the pageantry elements in terms of color, design, and other visual content so the pageantry signage can look current. Pageantry signage shall comply with the following:

1) No limit on the number of permitted pageantry signs. Maximum sign area per sign face shall be 24 square feet. Maximum height of the sign shall not exceed 20 feet. Minimum setbacks for the freestanding signs shall be the same as the setbacks established for the DT District. Banners over or within the public rights-of-way do not have any size limitation, however, applicable permits from Public Works shall be obtained.

2) Pageantry may consist of murals or other decorative graphics for products sold or offered on or off the premises. All pageantry with off-premises signage must be located within the commercial portion of the project and shall be oriented towards internal uses and shall not be readily visible from properties outside of the Master Plan area.

3) Pageantry may be located in any portion of the DT District, except that pageantry shall not be located at least 20 feet from the curved portion of the street corner to maintain visibility for motorists.

4) Air-inflated signs, moving signs, paper, cardboard, freestanding billboards, styrofoam, stickers, and decals are not acceptable forms of pageantry (directories and kiosks excepted).

5) Pageantry shall not include flashing, flickering, rotating, or moving lights.

6) Temporary promotional advertising (banners) is not considered to be pageantry.

7) Kiosks and directories should provide vertical breaks in the sign structure.

8) Individual panels shall be recessed, framed, or treated to avoid a flat appearance of the sign face.

B. Marquee Signs

The height of manual letters located on a marquee shall be affixed flat to the surface of the sign and shall not have a vertical height of more than 2 feet and shall not extend vertically or horizontally beyond the marquee. An electronic marquee display is permitted, provided that the individual letters shall not have a vertical height of more than 2 feet.

4.4.3. Exempted Signs

The following signs and/or sign structures are exempt from any sign permit requirement as identified in Section 5.7 of the Eastvale Zoning Code; provided, however, that such signs shall comply with all other applicable requirements of the Leal Master Plan and Eastvale Zoning Code.

A. Exempted signs identified in the Eastvale Zoning Code.

B. Temporary contractor's, future development and building sale signs that comply with the provisions in the Eastvale Zoning Code.

C. Public Notices and Signs. Public notices posted pursuant to law, signs erected by governmental agencies and public utilities and warning or information signs required by law for public health and safety.

D. Copy or Message on Changeable Copy Signs. The changing of advertising copy or message on bulletin boards and pageantry, where the basic board or pageantry is permitted under the provisions of this Master Plan, may be changed digitally or manually.

4.5. MASTER PLAN AREA MAPS

Large area maps should be placed at the information booths in the Downtown District. These maps could be combined with local area information/history, advertising, events calendars, etc.

4.6. LANDSCAPING

Landscaping within the Leal Master Plan area shall comply with Section 5.4, Landscaping, General Provisions, of the Eastvale Zoning Code.

5 DEVELOPMENT PROCESS

The goal of the Leal Master Plan is to encourage development of the desired development and level of quality (see Chapter 2, Project Character, and Chapter 3, Land Use Program), while allowing flexibility in the design and implementation of the project. To achieve this, a staged development process has been established which provides for the developer(s) flexibility while this document serves as a guide for the development of the project.

The intent of the staged development process is to allow prospective developers to respond to market demand by first creating a framework of development standards and design guidelines at the time of project conception instead of establishing strict requirements prior to any development being proposed for the Leal Master Plan. In the second phase, an amendment to the Master Plan will be conducted to establish development standards and enhanced guidelines, ensuring that overall design quality meets the City's goals for the project as stated in Chapter 2.

While the City intends to allow flexibility in the project design and layout through implementation of the staged development process, this Master Plan also establishes specific parameters for the design and quality of the project, which must be met by any future development.

Phasing requirements have also been established to ensure that a unifying theme for the Leal Master Plan and comprehensive project-wide plans are developed prior to any development taking place. These phasing requirements will ensure that the City's goal of a comprehensive, high-quality project may be updated.

This chapter establishes the process through which all proposed development is submitted, reviewed, and approved, including requirements for the staged development process and requirements for phasing of developments.

5.1. GENERAL PROVISIONS

The City of Eastvale shall administer the provisions of the Leal Master Plan in accordance with the City of Eastvale General Plan, the City of Eastvale Municipal Code, the Subdivision Map Act, and other applicable State and City regulations. The Master Plan development procedures, regulations, standards, and specifications shall supersede the relevant provisions of the City's Municipal Code, as they currently exist or may be amended in the future. Any development regulation and building requirement not addressed in this Master Plan shall be subject to the City's adopted codes and regulations.

5.1.1. Interpretation

In instances where any section, subsection, sentence, clause, phrase, portion or word contained within this Master Plan is undefined, unclear or vague, then the

Community Development Director, or his/her designee, shall make a determination as to its meaning and intent. The Community Development Director may elect to forward any item to the Planning Commission for final determination. Said determination shall be judged to be final.

5.1.2. Severability

If any section, subsection, sentence, clause, phrase, or portion of this Master Plan, or any future amendments or additions hereto, is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Master Plan, or any future amendments or additions hereto. The City hereby declares that it would have adopted these requirements and each sentence, subsection, clause, phrase, or portion or any future amendments or additions thereto, irrespective of the fact that any one or more sections, subsections, clauses, phrases, portions or any future amendments or additions thereto may be declared invalid or unconstitutional.

5.2. STAGED DEVELOPMENT PROCESS SUMMARY

The staged development process has been established for all proposed developments in the Leal Master Plan. The process consists of the following stages:

- Stage 1, Initial Leal Master Plan
- Stage 2, Master Plan Amendment to Create Development Standards and Enhanced Guidelines
- Stage 3, Rough Grading Permit
- Stage 4, Development Plan Review
- Stage 5, Precise Grading and Building Permits

Table 5-1, Staged Development Process, illustrates these steps.

Table 5-1: Staged Development Process

Stage 1: Initial Leal Master Plan (Adopted in 2017)
• Identified Project Objectives and Project Character
• Established Permitted and Conditionally Permitted Uses and Other Development Requirements
• Outlined the Staged Development Review Process
• Amended the General Plan and Zoning Code.
Stage 2: Master Plan Amendment to Create Development Standards and Enhance Guidelines (this document)
• Refine land use and zoning designations within the Master Plan.
• Establish project-wide Land Use Plan, Circulation Plan, and Infrastructure Plans.
• Determine project-wide development standards, design guidelines and project theme.
Stage 3: Rough Grading Permit
• Tentative Tract Map (A Map) will be reviewed and approved to allow to grade the site.
• The site would be cleared and backbone infrastructure such as streets and utilities would be installed.
Stage 4: Development Plan Review
• Submittal of detailed development plans. Development Plans will be reviewed per the Leal Master Plan and the Eastvale Municipal Code, as applicable.
• Any required conditional use permits for specific uses will be reviewed and approved as provided in the Eastvale Municipal Code.
Stage 5: Precise Grading and Building Permits
• Will be reviewed and issued based on the approved Development Plan.
• May occur concurrently with Stage 4.

Stage 1: Initial Leal Master Plan

This first stage in the approval process was completed with the adoption of the Initial Leal Master Plan and the associated General Plan Amendment and Change of Zone. These approvals accomplished the following:

- Identified the project objectives and project character.
- Established permitted and conditionally permitted uses and other development requirements.
- Outlined the staged development review process.
- Created an expanded General Plan policy for the Leal Master Plan and amended the General Plan Land Use Map to show uses consistent with the new Leal Master Plan policy.
- Amended the Zoning Code to provide for the creation and adoption of Master Plans (including this Master Plan) and amended the Zoning Map to reflect the Leal Master Plan.

The Stage 1 process also included the certification of a Final Environmental Impact Report (FEIR), which provided an analysis of the impacts of this Master Plan.

Stage 2: Master Plan Amendment to Create Development Standards and Enhance Guidelines

Stage 2 prepares project-wide development criteria and guidelines which are not included in the Initial Master Plan. The 2022 Amendment conducts this phase. The submittals required in Stage 2 will amend the initial Master Plan to:

- Refine land use and zoning designations within the Master Plan.
- Establish project-wide land use plan, circulation plan, and infrastructure plans.
- Determine project-wide development standards and design guidelines.
- Establish the project theme.
- Refine the permitted and conditionally permitted uses to better reflect anticipated, future development trends.

The submittal of the Stage 2 materials triggered additional environmental review in the form of an Addendum to the Leal Master Plan EIR, which concluded that no new or more severe impacts would occur as a result of the State 2 submittal. The Addendum to the Leal Master Plan EIR prepared for this stage established land use intensity limits within this Master Plan.

Stage 3: Rough Grading Permit

In Stage 3, rough grading permit(s) will be reviewed and issued pursuant to an approved Tentative Tract Map and established grading permit processes in the

City of Eastvale. This phase will consist of clearing the site and installing backbone infrastructure.

Stage 4: Development Review

Stage 4 will consist of the submittal of specific development projects through the Development Review process established in the Leal Master Plan and in the Eastvale Zoning Code, as applicable. During this stage, any required Conditional Use Permits for specific uses will be reviewed and approved as provided in the Eastvale Zoning Code.

Table 5-2, Development Process Approvals, is intended to clarify the process of entitlement through the City of Eastvale for various applications and actions. Table 5-2 applies only to future developments being implemented within the Leal Master Plan area.

Table 5-2: Development Process Approvals

	Action Required By:		
	Community Development Director	Planning Commission	City Council
Development Plan Review and Conditional Use Permits		X	
Master Plan – Interpretations	X		
Master Plan – Minor Adjustments	X		
Master Plan – Amendments		X	X
Tentative Tract Map		X	

The following administrative provisions apply to the implementation of development applications (e.g., Development Plan Reviews) for future developments within the Master Plan area:

A. No vertical development shall occur or building permits issued within the Master Plan area until the proposed development is reviewed by the City's Planning Division and found to be consistent with the adopted Master Plan. Criteria for review and approval of proposed development shall include, but not be limited to, the following:

    i. Conformance with the land use program;

    ii. Conformance with the specific development standards, goals, and policies of the Master Plan; and

B. All Tentative Tract or Parcel Maps shall be consistent with this Master Plan.

Stage 5: Precise Grading and Building Permits

Finally, grading and building permits will be reviewed and issued based on the approved development plans. This process may occur concurrently with Stage 3, pursuant to existing permit processes in the City of Eastvale.

5.3. STAGED DEVELOPMENT PROCESS SUBMITTAL REQUIREMENTS

The following sections describe the items that must be submitted at various points in the development process. Since Stages 1 and 2 were completed with the adoption of the Master Plan and subsequent amendment, no submittal requirements apply and are therefore not shown here.

5.3.1. Stage 1: Initial Leal Master Plan

The Leal Master Plan is the implementing mechanism for the MP (Master Plan) zone district for the Leal property. It sets the vision for development of the project site, assigns a land use program, establishes development standards, and outlines the process by which the property will develop, and the Master Plan will be implemented. As noted above, there are no submittal requirements for Stage 1, which was completed with the adoption of the initial Master Plan.

5.3.2. Stage 2: Master Plan Amendment to Create Development Standards and Enhance Guidelines

The Master Plan Amendment establishes the project-wide development plan components and development standards/enhanced guidelines. As noted above, there are no submittal requirements for Stage 2, which was completed with the adoption of the Master Plan Amendment. Future amendments or adjustments to the Master Plan are discussed in Section 5.4, Master Plan Adjustments and Amendments.

5.3.3. Stage 3: Rough Grading Permits

Submittals of rough grading permits for development within the Leal Master Plan area shall be pursuant to the submittal requirements and procedures established by the City of Eastvale Community Development Department.

5.3.4. Stage 4: Development Review

Each development within the Leal Master Plan must submit a development entitlement application to the City of Eastvale Planning Division for review per the Major or Minor Development Review provisions of the Eastvale Zoning Code (Section 2.1).

5.3.5. Stage 5: Precise Grading and Building Permits

Submittals of precise grading and building permits for development within the Leal Master Plan area shall be pursuant to the submittal requirements and procedures established by the City of Eastvale Community Development Department.

5.4. MASTER PLAN ADJUSTMENTS AND AMENDMENTS

5.4.1. Minor Adjustments to the Master Plan

Minor adjustments to the plans, guidelines, regulations, and standards contained in the adopted Master Plan be approved at the discretion of the Community Development Director, or his/her designee; provided, however, that such deviations are deemed to be in substantial conformance with this Master Plan and are not detrimental to the public health, safety, and welfare. Minor adjustments to the Master Plan must be consistent with the purpose and intent of the originally approved Master Plan. Any decisions made by the Community Development Director may be appealed to the Planning Commission. Decisions of the Planning Commission may be appealed to the City Council. Decisions by the City Council shall be deemed final.

All minor adjustments must comply with the following findings:

A. The total number of dwelling units within the Leal Master Plan area shall not exceed 2,500 dwelling units.[1]

B. The total gross leasable commercial area (office, retail, city hall, library, police station etc.) within the Leal Master Plan shall not exceed 595,000 square feet.[1]

C. The public health, safety, and welfare shall not be jeopardized by the proposed adjustments.

D. No potentially significant environmental impacts are expected to occur as a result of the proposed adjustments, unless if the significant impacts have already been analyzed in a previously environmental document.

E. Substantial conformance to the design guidelines included in Chapter 2, Project Character.

The following modifications constitute "minor adjustments" to the approved Master Plan and may be approved without amending the Master Plan.

A. Slight modifications to the Master Plan area boundaries, as shown in Figure 3.1, Land Use Plan, that respond to more accurate or recent data or actual on-site conditions.

[1] As established by the Leal Master Plan EIR Addendum to avoid new or more severe significant impacts.

B. Minor adjustments to a development standard or intensity limitation not exceeding 20%.

C. Modifications to individual park sizes, provided a total of 14.06 acres is provided for parks or open space.

D. Minor changes to the circulation concept to accommodate actual conditions on-site or modify ingress and egress locations, or to respond to new information that was not available at the time the Master Plan was approved.

E. Minor changes to the design of the street cross sections, provided that the streets have adequate capacity to handle the anticipated volumes of traffic and the design changes are deemed acceptable by the City's Traffic Engineer.

F. Modifications to the Master Plan that allow the Project master developer to move and adjust components of the plan; provided, however, that a plan is submitted to the City and reviewed and approved by the Community Development Director, or his/her designee, and the City Engineer. The plan shall depict the location of all land uses and the relationships of the uses to one another. In evaluating the plan, all of the following conditions must be met for the site plan to be approved:

    i. A maximum of 2,500 dwelling units and 595,000 square feet of commercial gross leasable area (which does not include any civic or public facility uses) shall be allowed within the Master Plan area.[2]

    ii. The land use modifications would not result in any new environmental impacts that were not previously assessed in the approved California Environmental Quality Act (CEQA) documentation for the Master Plan.

G. Minor modifications to the architectural or landscape design guidelines included in Chapter 2. *Project Character*.

H. Minor modifications to the water, sewer, and/or drainage plan(s).

I. Any modifications to the Master Plan phasing.

[2] As established by the Leal Master Plan EIR Addendum to avoid new or more severe significant impacts.

5.4.2. Master Plan Amendments

A. The Project master developer, property owner, or designee shall have the authority to initiate an amendment to the adopted Master Plan at any time. No authorization by City staff, the Planning Commission, or the City Council shall be necessary to initiate a Master Plan Amendment for The Leal Master Plan area. However, the City shall be the approving authority of any requested amendments.

B. Said amendment shall not require a concurrent General Plan Amendment unless it is determined by the City of Eastvale that the proposed amendment would substantively affect the General Plan goals, objectives, policies, or programs for the Leal Master Plan area.

C. All Master Plan Amendments shall be subject to the requirements of CEQA and any applicable City of Eastvale environmental guidelines.

D. The Planning Commission shall review at a noticed public hearing all proposed amendments to the adopted Master Plan. Upon the close of the required public hearing, the Planning Commission shall act by resolution to recommend to adopt, reject, or modify the proposed Master Plan Amendment and forward its recommendation and findings to the City Council for action.

E. The City Council, at a noticed public hearing, shall review the Planning Commission's findings and recommendations. Upon the close of the required public hearing, the City Council shall act by resolution to adopt, reject, or modify the proposed Master Plan Amendment.

F. Prior to approving or conditionally approving any Master Plan Amendment, the Planning Commission and City Council must make the following findings regarding the Amendment:

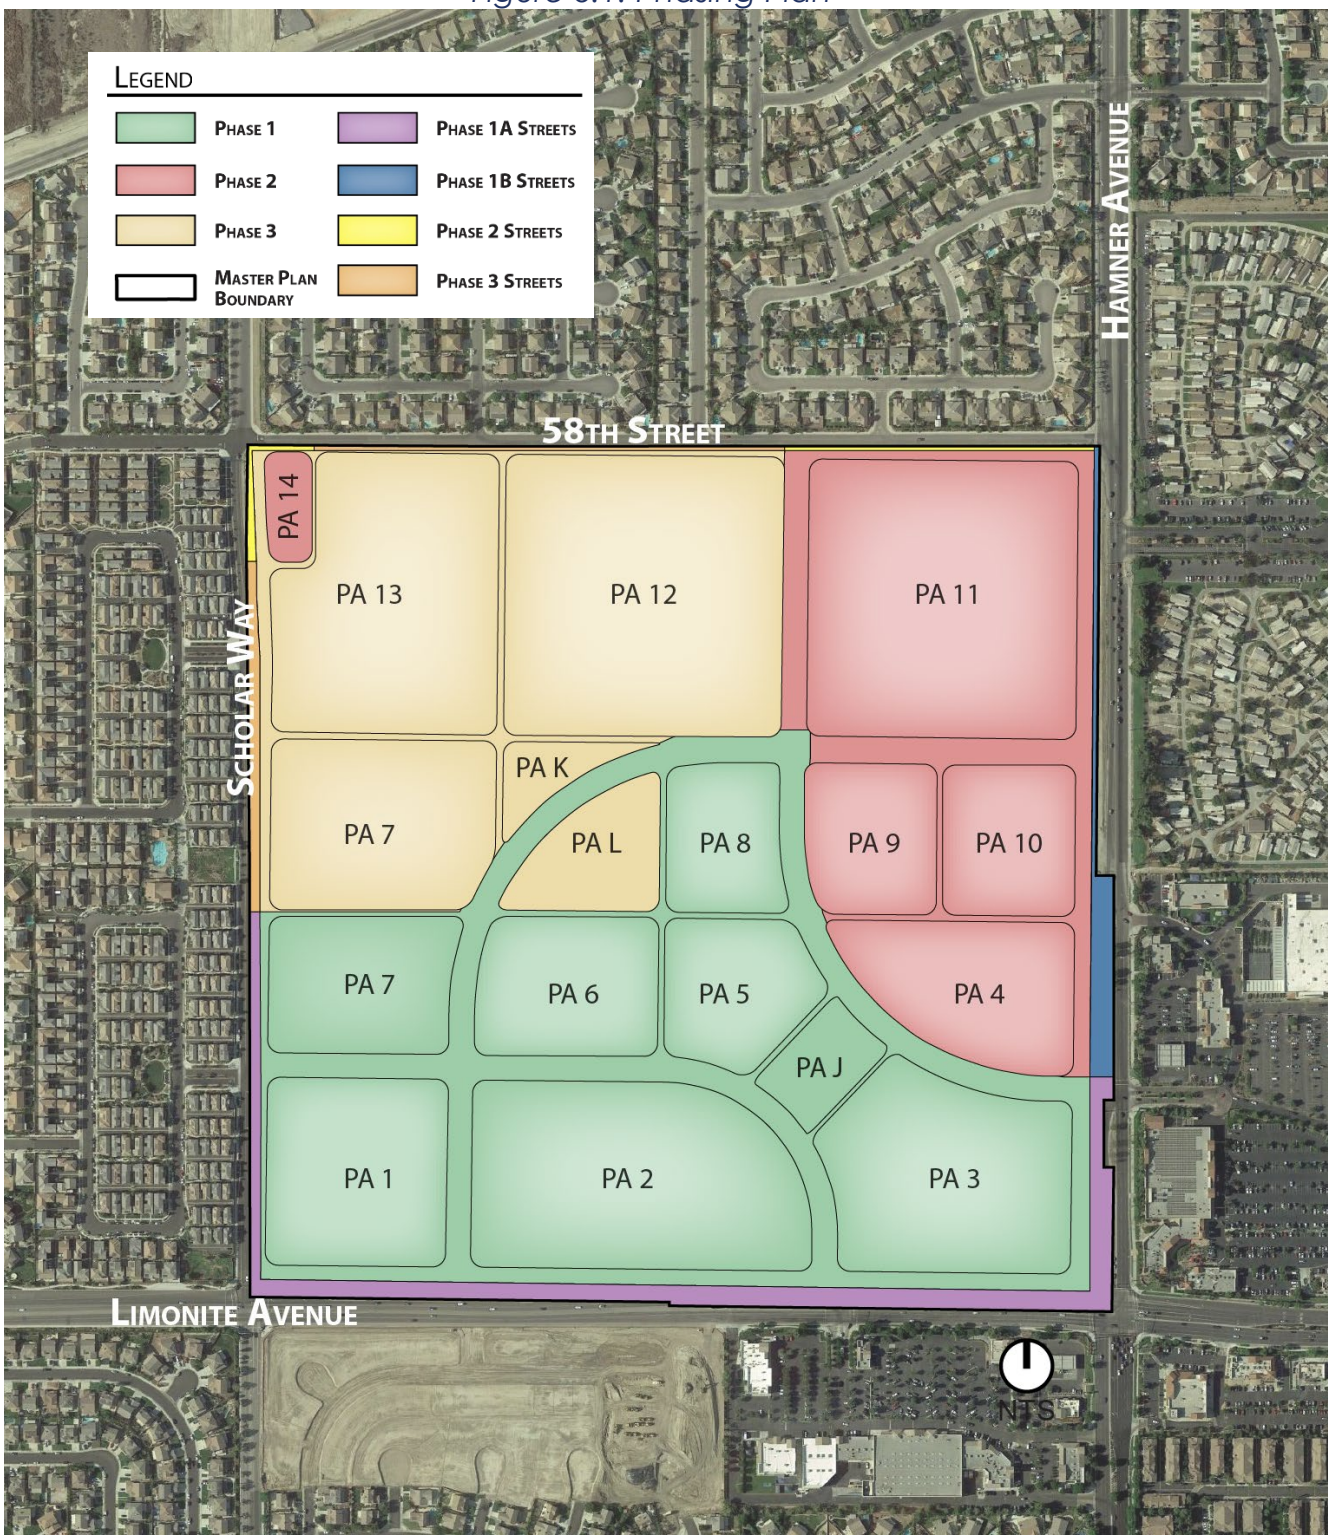
   i. It is consistent with the goals and policies of the City of Eastvale General Plan;

   ii. It is consistent with the vision, purpose and intent of the Master Plan;

   iii. Results in development of desirable character that will be compatible with existing and proposed development in the surrounding neighborhoods; and

   iv. Respects the aesthetic assets of the community consistent with economic realities.

6 IMPLEMENTATION PLAN



This chapter describes the implementation of this Master Plan, including the phasing of infrastructure and development. Information on the administration of this Master Plan can be found in Chapter 1.

6.1. PHASING

A conceptual Phasing Plan is shown in Figure 6.1. Phasing of the infrastructure as described below shall begin along Limonite Avenue and move north through the project site. The development of uses and the boundaries of each phase will be determined by market forces[1] and the developer(s) of the property, however phasing of residential uses shall be such that several different types of housing shall be offered concurrently.

[1] Since phasing is tied to market conditions, changes to the conceptual phasing plan do not require administrative approval. The Phasing Plan provides information only and is not regulatory. Phasing is at the sole discretion of the developer and may adjust according to market conditions.

Figure 6.1: Phasing Plan

Source: Hunsaker & Associates

6.2. INFRASTRUCTURE COORDINATION

To ensure that infrastructure is developed in a coordinated way and so that all phases of development will have sufficient infrastructure capacity, the following requirements are imposed. Should the project be developed in a single phase, all infrastructure will be installed in the first phase.

The following requirements relate to the coordination of infrastructure with development of uses:

1) Backbone Sewer/Water/Storm Drain Infrastructure – This infrastructure must be developed in conjunction with each phase of development as shown in Figure 6.2. Preparation of an infrastructure plan for backbone water/sewer/drainage infrastructure is a required Stage 3 component (see Chapter 5, Development Process).

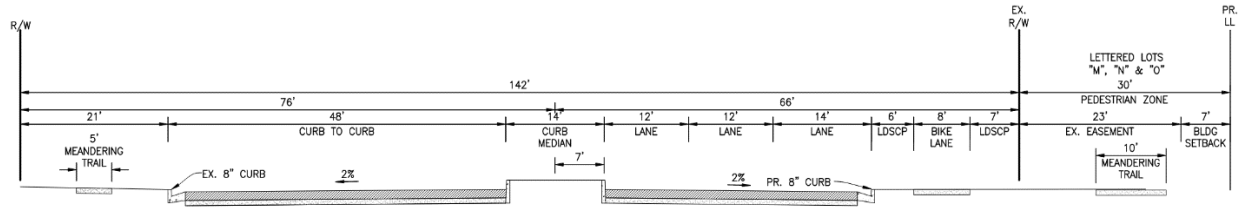
   Backbone water/sewer/storm drainage infrastructure includes:

   - Water – Hamner and Limonite Avenues have 30-inch water mains located within the rights-of-way. Water services for the project will use these existing lines to serve the project area.
   - Sewer – Sewer service is available in all of the streets bordering the project (Hamner, Limonite, Scholar, and 58th). Sewer service inside the project area will be built to accommodate development as it proceeds and will all connect to the existing sewer in Limonite.
   - Storm Drainage – These improvements will include water quality and drainage improvements to ensure that stormwater runoff from the site does not degrade downstream environments. Integration of water quality improvements into parks, parkways, and landscaped areas is encouraged throughout the Leal Master Plan.

Figure 6.2: Water Plan

Source: Hunsaker & Associates

Figure 6.3: Sewer Plan



Source: Hunsaker & Associates

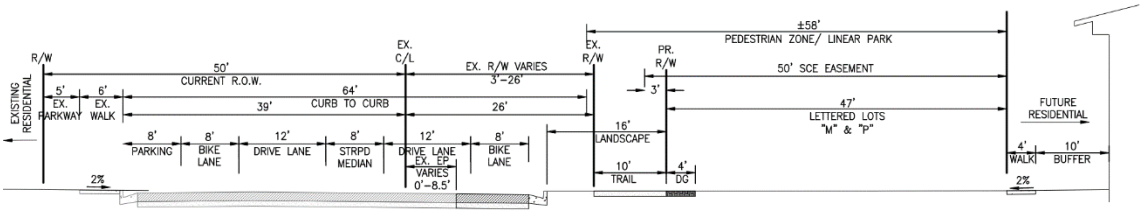


Figure 6.4: Storm Drainage Plan

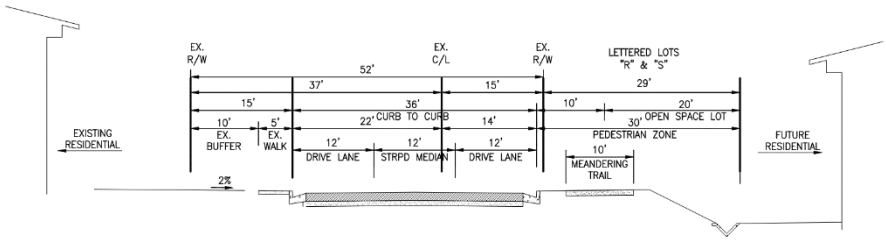

2) External Circulation – Half-width public improvements to Hamner Avenue, Limonite Avenue, Scholar Way and 58th Street shall be constructed with the Phasing Plan as shown in Figure 6.1. Improvements to Scholar Way and 58th Street may be provided in the form of half-width pavement and sidewalks, with the provision that landscaping must be installed at the time that development occurs adjacent to the street. Class I trails are provided on both sides of Limonite Avenue. Class I trails are also provided on one side of Scholar Way, 58th Street and Hamner Avenue. One bike lane is provided on one side of Limonite Avenue. Bike lanes are also provided on both sides of Scholar Way.

3) Internal Circulation – Internal roadways within the proposed phase will be constructed to provide adequate ingress/egress to all proposed development in the phase. As needed, roadways in the undeveloped portions of the site shall be constructed to provide adequate emergency access.

TYPICAL SECTION (E-E)
INTERNAL STREET
PROPOSED

Source: Hunsaker & Associates

4) Major/Minor Entries – Major and minor entries shall be developed at the time that a phase containing the entry(ies) is developed. Preparation of a detailed design for both types of entries and a plan for their locations is a required Stage 3 component (see Chapter 5).

5) Signature Iconic Element (Clock-tower, art, etc.) - A unique iconic element such as an art sculpture, mural, clock-tower, or the like that helps define the project and would be unique to the City shall be provided as part of the project. The element shall be located within a publicly accessible space or at a focal point or project entry.

Additional development standards and requirements related to each increment of development are included in Chapter 4, Development Standards, and Chapter 5, Development Process.

6.3. MAINTENANCE

Successful operation of maintenance districts and associations are important in ensuring that the Master Plan area is well-maintained. Maintenance responsibilities for the open spaces, landscape areas, lighting, and common project facilities will be maintained by the homeowner association's property manager.[2] Table 6-1, Maintenance Responsibilities, identifies the maintenance responsibilities for various infrastructure and landscape improvements associated with the project.

Table 6-1: Maintenance Responsibilities

Maintenance Area	City/JCSD	HOA	POA

Appendix L: Water Supply Assessment

SECTION 1.0 INTRODUCTION

1.1 Background

On December 13, 2017, the City of Eastvale certified an Environmental Impact Report (EIR) (State Clearinghouse No. 2015031028) for the 158.6-acre[1] Project site, adopted a Statement of Overriding Considerations for significant but unavoidable impacts, amended the Eastvale General Plan to incorporate the Leal Master Plan (including amending land use policies and the Land Use Map) and voted to adopt the Leal Master Plan and a corresponding change of zone from heavy agriculture (A-2) to Leal Master Plan. On January 10, 2018, the City held second reading and adopted the Leal Master Plan and change of zone to Leal Master Plan. The Leal Master Plan outlined a multistage planning and development process. The first stage included the adoption of the Leal Master Plan, which identified "the project objectives and specific parameters for the design and quality of overall future development of the project site."[2] Stage 2 of the development process was anticipated to focus on "preparing project-wide development criteria and guidelines that are not included in the Master Plan, creating detailed plans for the first phase(s) of development based on the criteria and guidelines included in the Master Plan."[3] The last development phase outlined in the Master Plan consists of the "submittal of specific development projects through the Development Plan Review process established in the Eastvale Zoning Code."[4]

The proposed Project is defined in Section 1.4 and is being processed through and consists of an amendment to the Leal Master Plan, Tentative Tract Map (TTM), and Development Plan Review (referred to as the "Modified Project"). The Modified Project represents Stage 2 of the development process outlined in the Leal Master Plan.

The Prior EIR analyzed the Leal Master Plan, which is further described in Tables 1 and 2 below and constitutes the "Original Project."

Plans for the Modified Project, as well as the Prior EIR, are available for review on the City's website and in hard copy at:

City of Eastvale City Hall
Contact: Gina Gibson-Williams, Community Development Director
12363 Limonite Avenue, Suite 910
Eastvale, California 91752
Email: ggibson-williams@eastvaleca.gov

[1] The Leal Master Plan EIR identifies the size of the project site as 161 acres. Based on detailed engineering, the actual size of the project site is 158.6 acres.
[2] Leal Master Plan EIR, December 2017, Project Description Page 2.0-2

1.2 Location and Surrounding Land Uses

The Modified Project site encompasses approximately 158.6 acres of former dairy farm in the northern portion of the City of Eastvale. The Modified Project site is bordered by Limonite Avenue on the south, Scholar Way on the west, 58th Street on the north, and Hamner Avenue on the east. The property is addressed as 12741 and 12745 Limonite Avenue, and 12740 58th Street, Eastvale, California. The assessor's parcel numbers are 164-030-010, 164-030-012, 164-030-013, 164-030-014, 164-030-024; 164-030-025. Figure 1 shows the location of the Project site and surrounding land uses. Figure 2 shows the Assessor's Parcel Map.

The Modified Project site is surrounded by the following uses:

South: Residential on the west and Commercial (Cloverdale Marketplace) on the east
West: Residential
North: Residential
East: Residential on the north and Commercial (Eastvale Gateway) on the south

1.3 Modified Project Site Existing Conditions

The Modified Project site is a square shaped approximately 158.6-acre flat property. The site elevation ranges between approximately 683 feet above mean sea level in the northern portion of the site and approximately 660 feet above mean sea level in the southern portion of the site. The Modified Project site has been used previously as a dairy farm, horse ranch, and orchard.

Currently the site is an inactive former dairy farm. Five residential structures exist on the site, as well as a dairy barn, horse barn, and maintenance/repair structure.

Figure 1 also graphically describes the Project location and existing conditions.

1.4 Proposed Modifications

The proposed changes associated with the Modified Project are summarized herein.

Leal Master Plan Amendment
The Modified Project includes an amendment to the Leal Master Plan, which is included in Appendix A to this Addendum. The Leal Master Plan Amendment includes the following primary changes:

- Development Intensities – The Original Leal Master Plan established the following development intensities.

Table 1. Original Leal Master Plan Permitted Development Range

Land Use Type	Minimum/Maximum Range
Lifestyle Center	325,000 to 1,300,000 square feet
General Commercial	Maximum of 225,000 square feet
Commercial Office	Maximum of 920,000 square feet
Hotel	Maximum of 450 rooms
Civic Center	No minimum/maximum
Medium Density Residential	No minimum/maximum
High Density Residential	500 to 660 dwelling units
Other Community Features	To be provided as part of the development of the Project

Source: Leal Master Plan EIR (2017) Table 2.0-2, Page 2.0-4

The Leal Master Plan did not establish a maximum number of dwelling units and no minimum development standards were identified. Therefore, development of the Project site had a wide range of flexibility. Given the wide flexibility, the following land use assumptions were established in the Prior EIR and constitute the Original Project as shown in Table 2.

Table 2. Buildout Assumptions for the Original Project

Land Use
660 multi-family homes (apartments)
1,525,000 square feet of general retail (shopping center)
460,000 square feet of general office
460,000 square feet of medical office
450 hotel rooms
100,000-square-foot civic center

Source: Leal Master Plan EIR (2017) Table 2.0-3, Page 2.0-5

The Modified Project proposes a land use intensity of 2,500 residential dwellings, 595,000 square feet of commercial uses and a fire station. As planned in the Stage 2 sequencing, the Modified Project continues to provide development flexibility to allow for development to occur in accordance with market conditions as part of Stage 3 planning. While no Stage 3 development plans have been prepared, the 2,500 dwelling units and 595,000 square feet of commercial uses have been allocated as shown in the following table for purposes of this Addendum. It is important to note that the following mix of uses is conceptual and may change during the Stage 3 planning processes. Since development of the site could take many years and each planning area requires a separate Stage 3 planning process, development of the Project site could vary from the assumptions provided in the table below. If changes to these assumptions occur in the future, the City is responsible to evaluate those changes and determine if additional environmental review pursuant to CEQA is required. The Modified Project is defined as the buildout assumptions shown in Table 3.

Table 3. Buildout Assumptions for the Modified Project

Land Use
1,840 medium density residential (400 single family detached and 1,440 single family attached)
660 high density residential (apartment units)
390,000 square feet of general retail (shopping center)
65,000 square feet of general office
65,000 square feet of medical office
75,000 square feet civic center (City Hall, Library, Police)
12,200 square feet fire station

The following table compares the development assumptions between the Original Project and the Modified Project.

Table 4. Development Comparison between Original Project and Modified Project

Land Use	Original Project	Modified Project	Difference
Medium Density Residential	0	1,840	+1,840 units
High Density Residential	660	660	no change
Retail (Shopping Center)	1,525,000	390,000	-1,135,000 sf
General Office	460,000	65,000	-395,000 sf
Medical Office	460,000	65,000	-395,000 sf
Hotel	450	0	- 450 rooms
Civic Center	100,000	75,000	- 25,000 sf
Fire Station	0	12,200	+ 12,200 sf

- Site Plan – the Leal Master Plan Amendment includes a site plan for the entire site, specifying backbone streets, development areas, and backbone parks and open space.

- Development Standards – the Leal Master Plan Amendment includes development standards, such as setbacks, height limits, etc., to guide future development.

- Design Guidelines – the Leal Master Plan Amendment includes modifications to the design guidelines.

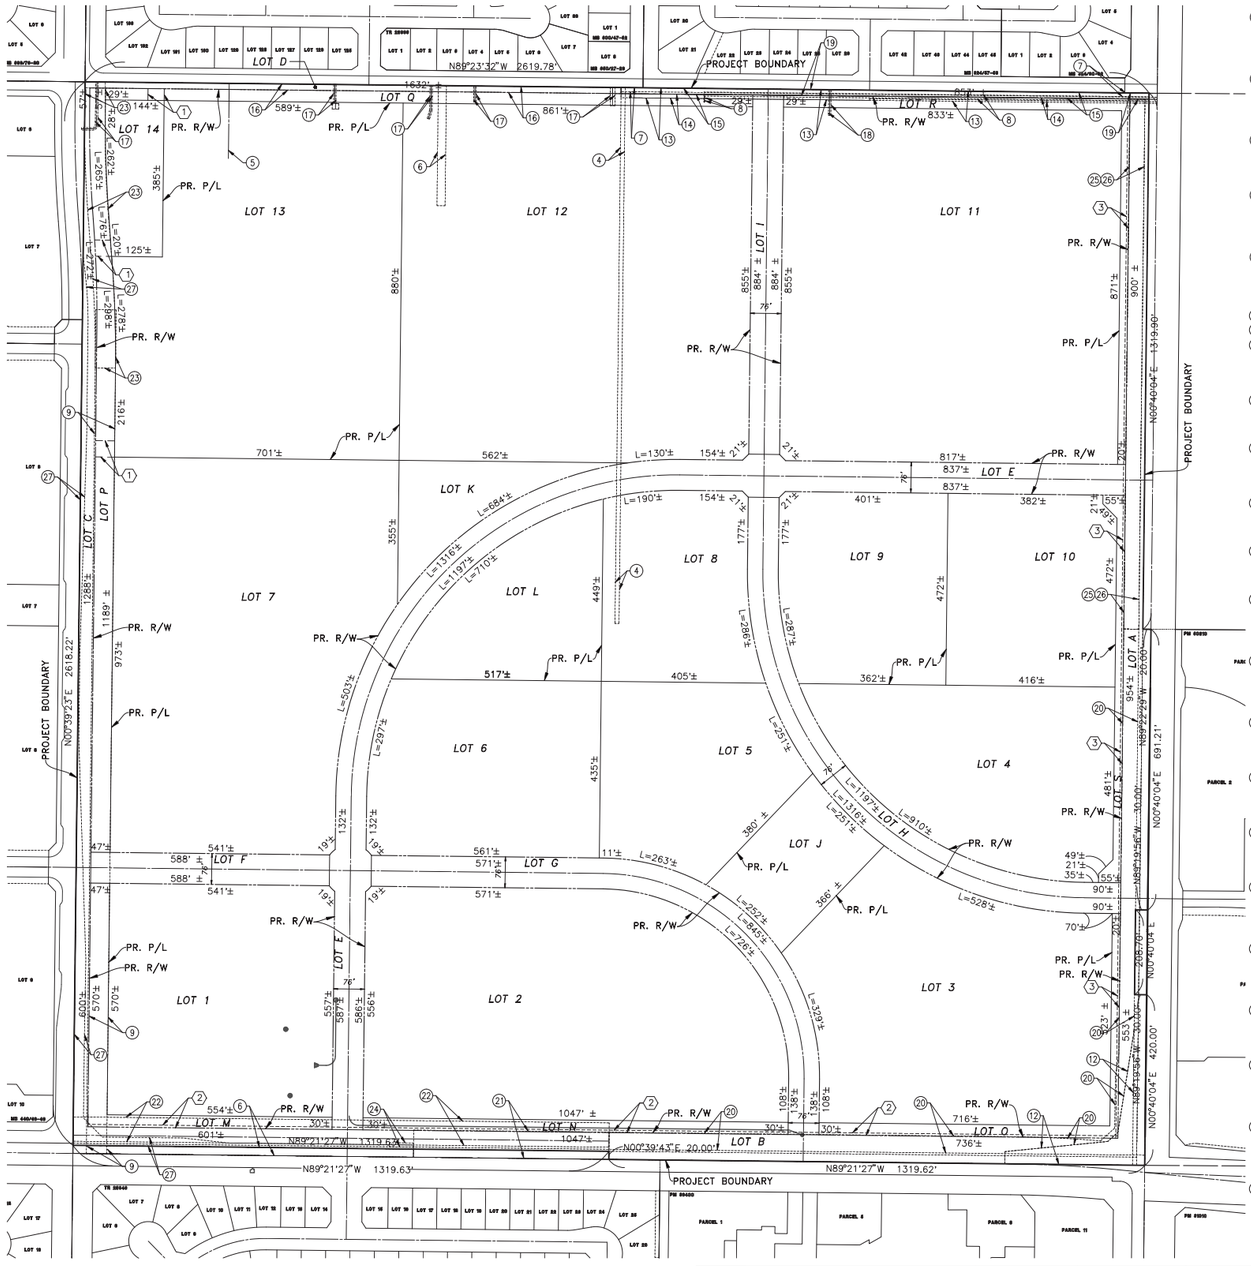
A hotel was included as part of the Original Project and is still being contemplated in the commercial area. A hotel is a permitted land use and consistent with the General Plan designation. Hotels generally have a conversion of approximately 400 square feet per hotel room. Therefore, if a hotel were included in future development plans, the square footage of the other commercial uses would need to be reduced. One scenario contemplated includes the removal of the medical and general office and a 50,000 square foot reduction of the retail space. In such scenario the overall daily traffic volumes would be reduced by 496 trips compared to the Modified Project analyzed in this Addendum. The peak hour trips for AM and PM would also be reduced by 83 trips and 158 trips, respectively.

Tentative Tract Map (TTM) 38290
TTM 38290, included as Figure 3, proposes 14 numbered lots and 19 lettered lots over the 158.6 acre Modified Project Site. The 14 numbered lots total approximately 121.54 acres of development area. The 19 lettered lots total approximately 37.04 acres of open space, parks, and streets. The following table provides a summary of approximate land use acreages.

Table 5. Summary of Land Use Acreages

Land Use	Acreage (acres)
Development Area	121.54
Streets	22.92
Parks and Open Space	14.12
Total	158.59

TTM 38290 is considered an "A" level tract map. "A" or "B" level map(s) or condominium plan(s) may be prepared for the specific development of each numbered lot. The "B" level mapping would represent Phase 3 of the multistage planning/development process.



TTM 38290 includes a rough grading plan. An earthwork cut and fill exhibit is included as Figure 4. The following table summarizes the proposed earthwork for the Modified Project.

Table 6. Modified Project Earthwork Summary

	Cut (cubic yards)	Fill (cubic yards)
Raw Earthwork Volume	436,161	289,574
Pad Over-Ex (after organics removal)	651,540	651,540
Pad Over-Ex Shrinkage		97,730
Paved Area Over-Ex (after organics removal)	41,981	41,981
Paved Area Over-Ex Shrinkage		6,300
Fill Shrinkage		65,420
Total	1,129,682	1,152,545

Leal Ranch

TTM vs Flown Topo

Notes

Existing surface is from Inland Aerial flown topo, dated July 29, 2021. Cut and Fill elevation values shown are after organics have been removed.

Proposed surface is TTM grading at time of exhibit.

Adjustments for Soils Conditions

Soil adjustments have been calculated based on LGC soils report titled "Preliminary Geotechnical Evaluation Including Near Surface Organic Content for the Proposed Approximately 160-Acre Leal Property, City of Eastvale, California", dated June 21, 2021.

Adjustments Made:
1) Top 1 ft of soil, plus deeper areas identified on Fig 2, to be removed and disposed off site.

2) Pad areas to be cut and re-compacted to 5 ft below EG, or 3 ft below FG, whichever is deeper.

3) Paved areas to be cut and re-compacted to 2 ft below EG, or 1 ft below FG, whichever is deeper.

4) Road undercut is 10 inches.

5) 10% to 15% shrinkage on cut. 15% used for numbers below.

Volume

149.68 ac	CUT	FILL
Raw Volume	436,161 CYS	289,574 CYS
Pad Over-Ex (after Organics Removal)	651,540 CYS	651,540 CYS
Pad Over-Ex Shrinkage		97,730 CYS
Paved Area Over-Ex (after Organics Removal)	41,981 CYS	41,981 CYS
Paved Area Over-Ex Shrinkage		6,300 CYS
Fill Shrinkage		65,420 CYS
Total	1,129,682 CYS	1,152,545 CYS
Net Volume		22,863 CYS SHORT

Lower site 0.09 ft to achieve theoretical balance.

Organics Removal Export

Top Organics Remove and Dispose	354,400 CYS EXPORT

N

N.T.S.

Figure 4
Cut and Fill Map

The net volume results in 22,863 cubic yards (cy) short, requiring import of 22,863 cy. The Project site also has 354,400 cy of organics from dairy operations that must be removed. In summary the Modified Project requires:

- 22,863 cy of import
- 354,400 cy of export

TTM 38290 specifies proposed street sections for internal and external streets. Street widening will occur on Limonite Avenue and Hamner Avenue. Both streets are designed with three travel lanes, a median, a bicycle lane, and landscaping with a meandering trail. The perimeter street improvements require dedication of right-of-way and easements. No new traffic signals are proposed on surrounding streets.

The Modified Project includes the provision of water quality and detention facilities. The Project site drains from north to southwest, with a storm drain connection in Limonite near the western boundary of the Project site. The water quality and detention facilities are primarily proposed as underground storage and treatment facilities. The Project site does not have infiltration rates high enough to infiltrate storm water, therefore, the storm flows must be treated and released. During final engineering surface treatment areas, such as bioswales, may be incorporated into the final design.

In addition to the description of the Modified Project above, several standard conditions, regulatory requirements, and commitments made by the Modified Project have been included herein and are referred to as Project Design Features (PDFs). The PDFs for the Modified Project include:

AQ PDF-1 A Construction Management Plan will be prepared that includes the requirements for Air Quality mitigation measures as specified in the Addendum to be submitted to the City of Eastvale for all phases of construction.

AQ PDF-2 The Project commits to following the standard South Coast Air Quality Management District (SCAQMD) rules and requirements with regards to fugitive dust control, which includes, but are not limited to the following:

1. All active construction areas shall be watered two (2) times daily.

2. Speed on unpaved roads shall be reduced to less than 15 mph.

3. Any visible dirt deposition on any public roadway shall be swept or washed at the site access points within 30 minutes.

4. Any on-site stockpiles of debris, dirt or other dusty material shall be covered or watered twice daily.

5. All operations on any unpaved surface shall be suspended if winds exceed 15 mph.

6. Access points shall be washed or swept daily.

7. Construction sites shall be sandbagged for erosion control.

8. Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).

9. Cover all trucks hauling dirt, sand, soil, or other loose materials, and maintain at least 2 feet of freeboard space in accordance with the requirements of California Vehicle Code (CVC) section 23114.

10. Pave or gravel construction access roads at least 100 feet onto the site from the main road and use gravel aprons at truck exits.

11. Replace the ground cover of disturbed areas as quickly possible.

12. A fugitive dust control plan should be prepared and submitted to SCAQMD prior to the start of construction.

AQ PDF-3 All construction equipment, to the extent feasible, will have Tier 4 low emission "clean diesel" engines (Original Equipment Manufacturer(OEM) or retrofit) that include diesel oxidation catalysts and diesel particulate filters that meet the latest California Air Resource Board (CARB) best available control technology.

AQ PDF-4 Construction equipment will be maintained in proper tune.

AQ PDF-5 All construction vehicles will be prohibited from excessive idling. Excessive idling is defined as five (5) minutes or longer.

AQ PDF-6 The Project will minimize the simultaneous operation of multiple construction equipment units, to the maximum extent feasible.

AQ PDF-7 The use of heavy construction equipment and earthmoving activity will be suspended during Air Alerts when the Air Quality Index reaches the "Unhealthy" level.

AQ PDF-8 The Project will establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

AQ PDF-9 Staging areas for the construction equipment will be located as distant as possible from adjacent residential homes.

AQ PDF-10 To the extent possible, the Project will use haul trucks with on-road engines instead of off-road engines for on-site hauling.

GEO PDF-1 The Project will implement the recommendations included in the geotechnical report, "*Preliminary Geotechnical Evaluation Including Near Surface Organic Content for the Proposed Approximately 160-Acre "Leal" Property, City of Eastvale, California,"* prepared by LGC Geotechnical, Inc. and dated June 21, 2021.

NOI PDF-1 Prior to the issuance of building permits, the Project will demonstrate that building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to commercial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways:

- Install sound barriers (masonry walls or walls with earth berms) between residences and noise sources.
- Install double-paned or upgraded sound transmission class (STC) sound rated windows.
- Provide sound insulating exterior walls and roofing systems.
- Locate and/or design attic vents to minimize sound propagation into each home.
- Provide forced-air ventilation systems.
- Provide the necessary setbacks for dwelling units fronting along major roadways.

NOI PDF-2 The Project will comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls).

NOI PDF-3 For proper acoustical performance, all exterior windows, doors, and sliding glass doors will have a positive seal and leaks/cracks must be kept to a minimum.

NOI PDF-4 The final building plans will ensure that heating, ventilation, and air conditioning (HVAC) units are not located within an area of the Project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Eastvale Municipal Code requirements. To meet the City's noise standards the following measures should be followed:

- All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses.
- The combined noise level of all units operating simultaneously shall not exceed the City of Eastvale daytime and nighttime exterior standards at the nearest surrounding property lines.

NOI PDF-5 Future residents, property management personnel, and commercial tenants will be required to comply with the City of Eastvale Municipal Code Noise Regulations, Chapter 8.52, which specify that no person shall create loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness.

To help ensure compliance with the City's Noise Regulations, the following recommendations are provided:

- Deliveries, loading and unloading activities, and trash pick-up hours should be limited to daytime hours only (8 a.m. – 10 p.m.).
- Limit engine idling time for all delivery vehicles and moving trucks to 5 minutes or less.

NOI PDF-6 The Project will prepare a construction management plan and obtain a construction work permit from the City of Eastvale prior to starting construction. The construction management plan will ensure all contractors implement construction best management practices to reduce construction noise levels. Examples of best management practices may include the following:

- All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields).
- Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.
- If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load.
- Use electric air compressors and similar power tools rather than diesel equipment, where feasible.
- Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible.
- Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes.

- Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator.
- Construction activities shall not take place between the hours of 6:00 p.m. and 6:00 a.m. during the months of June through September and 6:00 p.m. to 7:00 a.m. during the months of October through May.

NOI PDF-7 The Project will not include pile driving or blasting activities during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment will be conducted prior to start of any activity.

1.5 Prior Environmental Documentation

On December 13, 2017, the City of Eastvale certified an Environmental Impact Report (EIR) (State Clearinghouse No. 2015031028) for the 158.6-acre[5] Project site, adopted a Statement of Overriding Considerations for significant but unavoidable impacts, amended the Eastvale General Plan to incorporate the Leal Master Plan (including amending land use policies and the Land Use Map) and voted to adopt the Leal Master Plan and a corresponding change of zone from heavy agriculture (A-2) to Leal Master Plan. On January 10, 2018, the City held a second reading and adopted the Leal Master Plan and change of zone to Leal Master Plan.

The Prior EIR included two Project alternatives, as follows:

- Alternative 1: No Project

Alternative 1 assumed development consistent with the existing General Plan[6] land use designations, which were Business Park, Medium Density Residential, and High Density Residential.

- Alternative 2: Market Probable Scenario

Alternative 2, Market Probable Scenario, assumes a lower intensity buildout scenario compared to the Original Project. The Market Probable Scenario assumes the same

[5] The Leal Master Plan EIR identifies the size of the project site as 161 acres. Based on detailed engineering, the actual size of the project site is 158.6 acres.
[6] This is a reference from the Prior EIR to the existing General Plan prior to the adoption of the General Plan Amendment which changed the land use designation on the Project site to Leal Property Policy Area.

types of land uses as the Original Project, but with the non-residential uses developed at a lower intensity.

The Leal Master Plan EIR determined the Original Project would cause six (6) significant and unavoidable impacts within the following three (3) topic areas:

- Transportation / Traffic
- Air Quality
- Noise

The City has determined, for reasons specified below, that the revisions proposed as part of the Modified Project would not result in any new or more significant environmental impacts, and thus qualify for an Addendum. The prior environmental documentation, Leal Master Plan Environmental Impact Report (SCH No. 2015031028) is referred to as "Prior EIR" or "EIR" and is available at the City of Eastvale City Hall; contact Gina Gibson-Williams, Community Development Director, at 12363 Limonite Avenue, Suite 910, Eastvale, California 91752.

1.6 Basis for an Addendum

Prior to approval of subsequent actions that constitute a "project" under CEQA, the City is required to determine whether the environmental effects of such actions are within the scope of prior environmental analysis, or whether additional environmental analysis is required. That decision is influenced by whether the subsequent actions require major revisions to the EIR due to new significant impacts or an increase the severity of previously identified significant impacts.

Under CEQA, the lead agency or a responsible agency shall prepare an addendum to a previously-certified EIR if some changes or additions are necessary to the prior EIR, but none of the conditions calling for preparation of a subsequent or supplemental EIR have occurred (Public Resources Code § 21166; CEQA Guidelines §§ 15162, 15163, 15164). Once an EIR has been certified, no supplement or subsequent EIR shall be prepared unless the lead agency or responsible agency determines that one of the following conditions has been met:

(1) Substantial changes are proposed in the project, or substantial changes occur with respect to the circumstances under which the project is undertaken, which require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects [*CEQA Guidelines* § 15162(a)(1)&(2)];

(2) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, shows any of the following:

a) The project will have one or more significant effects not discussed in the previous EIR;

b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative [*CEQA Guidelines* § 15162(a)(3)].

The City has evaluated the potential environmental impacts of the proposed Modified Project against the criteria set forth in CEQA Guidelines §§ 15162, 15163, 15164, and 15168(c). The City, acting as the Lead Agency, has determined that substantial evidence throughout this Addendum supports the determination that the Modified Project would not have any reasonably foreseeable environmental consequences beyond that analyzed in the Prior EIR and its associated administrative record, that none of the conditions listed above trigging preparation of a subsequent or supplemental EIR apply and that an Addendum to the Leal Master Plan Environmental Impact Report (SCH No. 2015031028) is appropriate for the proposed Modified Project and related entitlements, and fully complies with CEQA, as described in Public Resources Code section 21166 and the *CEQA Guidelines*. The Original EIR was prepared as a Program EIR and as such was evaluated pursuant to CEQA Guidelines § 15168(c). The Lead Agency has determined that the effects of the later activity, in this case the Modified Project, were examined in the program EIR (Original EIR) and pursuant to Section 15162 no subsequent EIR is required.

Table 7 summarizes the City's determination that none of the conditions listed above trigging preparation of a subsequent or supplemental EIR apply. The following table provides a summary comparison of impacts for the Original Project and the Modified Project. The summary of comparative impacts shows both construction and operations differences.

Table 7. Impact Comparison Between Original Project and Modified Project

Environmental Issue Area	Original Project	Modified Project[1]	
		Construction	Operations
Aesthetics	Less than Significant Impact with Mitigation	Similar	Similar

Environmental Issue Area	Original Project	Modified Project[1]	
		Construction	Operations
Agriculture and Forestry Resources	Less than Significant Impact	Similar	Similar
Air Quality	Significant and Unavoidable Impact	Similar	Reduced
Biological Resources	Less than Significant Impact with Mitigation	Similar	Similar
Cultural Resources	Less than Significant Impact with Mitigation	Similar	Similar
Energy	Less than Significant Impact	Similar	Reduced
Geology and Soils	Less than Significant Impact	Similar	Similar
Greenhouse Gas Emissions	Less than Significant Impact	Similar	Reduced
Hazards and Hazardous Waste	Less than Significant Impact with Mitigation	Similar	Similar
Hydrology and Water Quality	Less than Significant Impact	Similar	Similar
Land Use and Planning	Less than Significant Impact	Similar	Similar
Mineral Resources	Less than Significant Impact	Similar	Similar
Noise	Significant and Unavoidable Impact	Similar	Reduced
Population and Housing	Less than Significant Impact	Similar	Similar
Public Services	Less than Significant Impact	Similar	Similar
Recreation	Less than Significant Impact	Similar	Similar
Transportation and Traffic	Significant and Unavoidable Impact	Similar	Reduced
Tribal Cultural Resources	Less than Significant Impact with Mitigation	Similar	Similar
Utilities and Service Systems	Less than Significant Impact	Similar	Similar
Wildfire	Less than Significant Impact	Similar	Similar

[1] This table provides a qualitative comparison of impacts between the Original and Modified Projects, including construction and operations for the Modified Project. The following Environmental Checklist in Section 2.0 of this Addendum goes into greater detail and justification of these general conclusions presented in this table.

An addendum does not need to be circulated for public review, but rather can be attached to the Prior EIR (*CEQA Guidelines* § 15164(c)). The City will consider this Addendum and will make a decision regarding the Modified Project [*CEQA Guidelines* §15164(d)].

1.7 Mitigation Measures

The City has determined that no new mitigation measures[7] are required, as documented in detail in Section 2.0 below. The Prior EIR included mitigation measures for development of the Modified Project site to reduce impacts to a level of less than significant. Where noted in Section 2.0 and the table below, certain mitigation measures have been satisfied as part of this Addendum and are shown in light grey format. One mitigation measure has been revised to clarify the results of further analysis. The other measures remain in place and are listed below.

Table 8. Mitigation Monitoring and Reporting Checklist

Aesthetics, Light, and Glare	
MM 3.5.1	Nonglare glass shall be used in all nonresidential buildings to minimize and reduce impacts from glare. Buildings that are allowed to use semi-reflective glass must be oriented so that the reflection of sunlight is minimized. Types of nonglare glass shall be specified on final development plans. *Timing/Implementation:* *Prior to approval of final development plans* *Enforcement/Monitoring:* *City of Eastvale Planning Department*
Air Quality	
MM 3.3.5a	A site-specific air toxics pollutant analysis shall be conducted in accordance with the SCAQMD (2008) Final Localized Significance Threshold Methodology for construction activities. If SCAQMD screening thresholds would be exceeded, air toxic reduction measures shall be identified in order to reduce potential impacts to a level that is less than significant. If it is the case that emissions remain in excess of SCAQMD localized significance thresholds despite the imposition of air toxic reduction measures, project-specific construction-related dispersion modeling acceptable to the SCAQMD shall be used to identify potential toxic air contaminant impacts, including diesel particulate matter. If SCAQMD risk thresholds would be exceeded, additional measures shall be identified in the air toxics analysis to address potential impacts and shall be based on site-specific information such as the distance to the nearest sensitive receptors, project site plan details, and construction schedule. The City shall ensure that construction contracts include all identified measures and that the measures reduce the health risk below SCAQMD risk thresholds.

[7] A statement of "No New Mitigation" as used in this Addendum means that there is no new mitigation required due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

	Construction-generated air toxics pollutant mitigation measures may include but not be limited to: 1. Limiting the amount of acreage to be graded in a single day. 2. Restricting intensive equipment usage and intensive ground disturbance to hours outside of hours typically spent at home. 3. Notifying affected sensitive receptors one week prior to commencing on-site construction so that any necessary precautions (such as rescheduling or relocating outdoor activities) can be implemented. The written notification shall include the name and telephone number of the individual empowered to manage construction of the project. In the event complaints are received, the individual empowered to manage construction shall respond to the complaint within 24 hours. The response shall include identification of measures being taken by the project construction contractor to reduce construction-related air pollutants. Such measures may include but are not limited to the relocation of equipment or the rescheduling of construction outside of hours typically spent at home. *Timing/Implementation:* The site-specific air toxics pollutant analysis and any necessary modeling shall be completed prior to grading permit issuance, and measures implemented during construction activities *Enforcement/Monitoring:* City of Eastvale Planning, Building and Safety, or Public Works Departments
MM 3.3.5b	A site-specific air toxics pollutant analysis shall be conducted in accordance with the SCAQMD (2008) Final Localized Significance Threshold Methodology for operational activities. If SCAQMD screening thresholds would be exceeded, air toxic reduction measures shall be identified in order to reduce potential impacts to a level that is less than significant. If it is the case that emissions remain in excess of SCAQMD localized significance thresholds despite the imposition of air toxic reduction measures, project-specific operations-related dispersion modeling acceptable to the SCAQMD shall be used to identify potential toxic air contaminant impacts, including diesel particulate matter generated by heavy-duty haul trucks. If SCAQMD risk thresholds would be exceeded, additional mitigation measures shall be identified in the air toxics analysis to address potential impacts and shall be based on site-specific information such as the distance to the nearest sensitive receptors, project site plan details, and merchandise delivery schedule. The City shall ensure that operations include all identified measures and that the measures reduce the health risk below SCAQMD risk thresholds. Operations-generated air toxic pollutant mitigation measures may include but not be limited to: 1. Redesigning the project site plan to locate proposed loading dock facilities as far from sensitive receptors as possible. 2. Posting signage stating the State-mandated prohibition on all project trucks idling in excess of 5 minutes under the Heavy-Duty Vehicle

	Idling Emission Reduction Program. 3. Restricting the number of daily heavy-duty haul truck deliveries. *Timing/Implementation:* The site-specific air toxics pollutant analysis and any necessary modeling shall be completed prior to grading permit issuance, and measures implemented during construction activities *Enforcement/Monitoring: City of Eastvale Planning, Building and Safety, or Public*
Biological Resources	
MSHCP Standard Conditions	*Note: The following discussion highlights the requirements of the MSHCP as they apply to the proposed project. Because the MSHCP has been adopted by the City, it is not necessary to adopt a mitigation measure to enforce its provisions.* The MSHCP requires that projects pay a mitigation fee, perform species-specific habitat assessments and surveys, and be reviewed for consistency with Section 6.1.2–Protection of Species Associated with Riparian/Riverine Areas and Vernal Pool, Section 6.1.3–Protection of Narrow Endemic Plan Species, Section 6.3.2–Additional Survey Needs and Procedures, and Section 6.1.4–Guidelines Pertaining to the Urban/Wildlands Interface of the MSHCP. The following requirements of the MSHCP apply to the proposed project and will be required of all subsequent development plans and/or projects within the Leal Master Plan area: A. The project applicant shall submit fees to the City in accordance with the requirements of the MSHCP Mitigation Fee Ordinance (Chapter 4.62 of the City of Eastvale Municipal Code). B. The project applicant shall assess the proposed project's consistency with Section 6.1.2, Section 6.1.3, Section 6.3.2, and Section 6.1.4 of the MSHCP. C. A qualified biologist shall conduct a burrowing owl habitat assessment. If needed, focused surveys and preconstruction surveys shall be conducted, as well as appropriate avoidance and minimization (Section 6.3.2 of the MSHCP). D. A qualified biologist shall conduct habitat assessments for the required Narrow Endemic Plant Species. If needed, focused surveys and shall be conducted, as well as appropriate avoidance and minimization (Section 6.1.3 of the MSHCP). E. A qualified biologist shall conduct a habitat assessment for Delhi sands flower-loving fly in areas underlain by Delhi soil series (Species-specific Objective 1B). As noted above, because the City has adopted the MSHCP and enforces its provisions, these requirements do not need to be included as mitigation measures.

MM 3.7.1	All construction and clearing activities shall be conducted outside of the avian nesting season (January 15–August 31), when feasible. If clearing and/or construction activities occur during the nesting season, preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds. If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged. *Timing/Implementation:* *Requirements shall be incorporated into all rough and/or precise grading plan documents. The project applicant's construction inspector shall monitor to ensure that measures are implemented during construction.* *Enforcement/Monitoring:* *City of Eastvale Planning Department*
MM 3.7.2	Prior to breaking ground, a qualified biologist shall be retained to determine whether potentially jurisdictional waters are present. If potentially jurisdictional features are identified, the project applicant shall submit a preliminary jurisdictional determination to the US Army Corps of Engineers for verification. The verified delineation will be submitted to the City for its records. *Timing/Implementation:* *Prior to approval of grading permits* *Enforcement/Monitoring:* *City of Eastvale Planning Department*
MM 3.7.3	Projects shall result in no net loss of sensitive habitats, riparian vegetation, and/or federally protected waters through impact avoidance, impact minimization, and/or compensatory mitigation, as determined in Clean Water Act Section 404 and 401 permits and/or a 1602 Streambed Alteration Agreement. Evidence of compliance with this mitigation measure shall be provided to the City prior to approval of each individual grading permit. *Timing/Implementation:* *Prior to approval of grading permits* *Enforcement/Monitoring:* *City of Eastvale Planning Department.*

Cultural Resources	
MM 3.8.1	A detailed cultural resources field survey of the subject property shall be conducted prior to approval of the project. The cultural resources field survey shall identify any cultural resource finds and will set out measures to mitigate any impacts to any significant resources as defined by CEQA, the California Register of Historical Resources, and/or the National Historic Preservation Act. Mitigation methods to be employed include but are not limited to the following: • Redesign of the development project to avoid the resource. The resource site shall be deeded to the City or a nonprofit agency to be approved by the City for maintenance of the site. • If avoidance is determined to be infeasible by the City, the resource shall be mapped, stabilized, and capped pursuant to appropriate standards. • If capping is determined to be infeasible by the City, the resource shall be excavated and recorded to appropriate standards. *Timing/Implementation: Prior to approval of development plan or project* *Enforcement/Monitoring: City of Eastvale Planning Department*
MM 3.8.2	If cultural resources (i.e., prehistoric sites, historic sites, and isolated artifacts) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history shall be retained to determine the significance of the discovery. The City shall consider mitigation recommendations presented by a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history for any unanticipated discoveries. The City and the project applicant of the site where the discovery is made shall consult and agree on implementation of a measure or measures that the City deems feasible. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of cultural resources. *Timing/Implementation: As a condition of project approval and implemented during grading and/or construction activities* *Enforcement/Monitoring: City of Eastvale Planning Department*
MM 3.8.3	If human remains are discovered during any ground-disturbing activities in the project area, all work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and the Riverside

	County Coroner must be notified per California Public Resources Code Section 7050.5 and California Health and Safety Code Section 5097.98. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and (e) shall be followed. *Timing/Implementation: As a condition of project approval and implemented during grading and/or construction activities* *Enforcement/Monitoring: City of Eastvale Planning Department*
MM 3.8.4	Prior to issuance of a grading permit, a certified professional paleontologist will be retained by the developer to provide professional paleontological services, which will include survey, education of construction workers, onsite construction monitoring, appropriate recovery, and reporting. A paleontological monitor shall be present during ground disturbing activities in the eastern half of the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation). 1. The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols. 2. The paleontological monitor shall be present full-time during ground disturbance in the eastern half of the Project, including but not limited to grading, trenching, utilities, and offsite easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced. 3. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered. 4. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area. 5. In consultation with the qualified paleontologist the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared. 6. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately. 7. In consultation with the CLIENT and CITY the qualified paleontologist

	shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find. For the remaining portions of the Project site, if ~~If~~ any paleontological resources (fossils) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, and the City Planning Department shall be immediately notified. At that time, the City will coordinate any necessary investigation of the discovery with a qualified paleontologist. The City shall consider the mitigation recommendations of the qualified paleontologist for any unanticipated discoveries of paleontological resources. The City and the project applicant shall consult and agree on implementation of a measure or measures that the City deems feasible and appropriate. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of paleontological resources.[8] *Timing/Implementation:* *As a condition of project approval and implemented during grading and/or construction activities* *Enforcement/Monitoring:* *City of Eastvale Planning Department*
Hazards and Hazardous Materials	
MM 3.10.2a	Asbestos. Prior to the issuance of any permit for the demolition or alteration of existing structure(s), a letter shall be provided to the Planning Department from a qualified asbestos abatement consultant indicating that no asbestos-containing materials (ACM) are present in the building. If ACMs are found to be present, they will need to be abated in compliance with the South Coast Air Quality Management District's Rule 1403 and all other applicable state and federal rules and regulations. Lead Paint. Prior to issuance of any permit for the demolition or alteration of

[8] The eastern portion of the Project site has a higher potential for paleontological resources than the remainder of the site. Therefore, paleontological monitoring in the eastern portion of the site is required during ground disturbance. The Prior EIR included Mitigation Measure MM 3.8.4, which requires that a qualified paleontologist evaluate any paleontological discoveries during grading. The potential for paleontological discoveries has not changed since certification of the Prior EIR and the limits of disturbance have remained the same. This mitigation measure is being revised in this Addendum to require a qualified paleontologist monitor grading activities on the eastern portion of the site, which is more efficient for grading activities, instead of the requirement to call a monitor to the site to evaluate paleontological resources if found during grading.

	the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Eastvale Building Safety and Inspection Department. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to OSHA regulations. Polychlorinated Biphenyls. Prior to issuance of a demolition permit, a polychlorinated biphenyls (PCB) abatement contractor shall conduct a survey of the project site to identify and assist with compliance with applicable state and federal rules and regulations governing PCB removal and disposal. *Timing/Implementation:* *Prior to the issuance of demolition permit* *Enforcement/Monitoring:* *City of Eastvale Building and Planning Departments*
MM 3.10.2b	Prior to the issuance of any individual grading permit, a Phase I Environmental Site Assessment (ESA) shall be conducted to determine the potential for contaminated soil or groundwater on the site. If the Phase I ESA determines that the potential exists for contaminated soil or groundwater on-site, the project applicant shall conduct a Phase II ESA and shall follow its recommendations to remediate any potentially contaminated soil or groundwater. On-site contaminants must be addressed to the satisfaction of either Cal/EPA or the Riverside County Waste Management Department, with their approval of completion of activities/remedial action plans (RAP) submitted to the Eastvale Department of Building and Construction prior to the issuance of a grading permit. *Timing/Implementation:* *Prior to issuance of individual grading permit* *Enforcement/Monitoring:* *City of Eastvale Building and Planning Departments*
MM 3.10.2c	All trash and debris observed on-site shall be removed prior to construction activities and disposed of at a landfill or approved dumpsite. *Timing/Implementation:* *Prior to construction activities* *Enforcement/Monitoring:* *City of Eastvale Building and Planning Departments*
Noise	
MM 3.6.1	An acoustical assessment shall be prepared that evaluates potential environmental noise impacts associated with the proposed project. Where the acoustical analysis determines that noise levels would exceed applicable City noise standards, noise reduction measures shall be identified and included in the project. *Timing/Implementation:* *Prior to approval of development plan or project* *Enforcement/Monitoring:* *City of Eastvale Planning Department*

MM 3.6.2	A vibration assessment shall be prepared for construction projects that would involve the use of major vibration-generating equipment (e.g., pile drivers, vibratory rollers) within 200 feet of existing structures. Measures to reduce ground vibration levels shall be identified for any potential vibration impacts exceeding a vibration threshold of 0.2 in/sec ppv. *Timing/Implementation: Prior to approval of development plan or project* *Enforcement/Monitoring: City of Eastvale Planning Department*
MM 3.6.3	A construction-related noise mitigation plan shall be submitted to the City for review and approval prior to issuance of a grading permit. The plan shall depict the location of construction equipment and specify how the noise from this equipment will be mitigated during construction of the project. *Timing/Implementation: Prior to issuance of grading permit* *Enforcement/Monitoring: City of Eastvale Planning Department*
MM 3.6.4	The following mitigation measures shall be implemented and specified on all project construction plans: a) *Clearing and construction activities shall be conducted outside of 6:00 p.m. and 6:00 a.m. during the months of June through September, and outside of 6:00 p.m. and 7:00 a.m. during the months of October through May* (Municipal Code Chapter 8.52, Noise Regulation). b) All construction equipment shall be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer. c) Construction equipment staging areas shall be centrally located on the project site or located at the farthest distance possible from nearby residential land uses. d) All motorized construction equipment and vehicles shall be turned off when not in use. *Timing/Implementation: During construction activities, noted on all project construction plans* *Enforcement/Monitoring: City of Eastvale Planning Department*
Transportation	
MM 3.2.1a	Fair Share of funding shall be paid for widening Limonite Avenue along the project frontage from two to three lanes in each direction. Funding shall be determined and paid via the Riverside County Transportation Uniform Mitigation Fee (TUMF). Project plans and/or phasing shall establish the timing of this improvement to ensure it is in place prior to LOS D operations and consistent with the Master Plan's infrastructure phasing provisions. *Timing/Implementation: Prior to approval of development plan or project* *Enforcement/Monitoring: City of Eastvale Planning Department*

MM 3.2.1b	A focused traffic study shall be prepared that demonstrates the project's consistency with the transportation impact assessment (TIA) for the Leal Master Plan prepared by Fehr & Peers (2015). The traffic study shall assess the following: • Parking; • Site access and on-site circulation; • Interaction of driveways with adjacent intersections (if appropriate); • Impacts on local intersections; • Impacts to pedestrian, transit, and bicycle facilities; and • Trip generation monitoring study to ensure that, as land develops in the Leal Master Plan area, the total development generates traffic at or below the levels assumed in this Draft EIR. *Timing/Implementation: Prior to approval of development plan or project* *Enforcement/Monitoring: City of Eastvale Planning Department*
MM 3.2.1c	Hamner Avenue shall be widened between Limonite Avenue and Bellegrave Avenue to three lanes in each direction either directly or through fair-share funding as determined by infrastructure and/or facility financing plans approved for the Leal Master Plan. Project plans and/or phasing shall establish the timing of this improvement to ensure it is in place prior to LOS F operations and consistent with infrastructure phasing provisions established as part of Master Plan implementation. *Timing/Implementation: Prior to approval of development plan or project* *Enforcement/Monitoring: City of Eastvale Planning Department*

Source: Final Environmental Impact Report Leal Master Plan EIR SCH No. 2015031028, July 2015.

1.8 Summary of Findings

The Prior EIR concluded impacts from the Original Project would result in the following significant unavoidable impacts:

- Transportation / Traffic
- Air Quality
- Noise

The City of Eastvale has determined that none of the conditions in Section 21166 of the Public Resources Code or Sections 15162, 15163 15164, and 15168 of the State CEQA Guidelines calling for preparation of a subsequent or supplemental environmental impact report have occurred. In accordance with the analysis presented in Section 2.0, and pursuant to Section 21166 of the Public Resources Code and Section 15162, 15164, 15168, and 15183 of the *State CEQA Guidelines*, the City of Eastvale has determined that:

1) The Modified Project does not propose substantial changes that would require major revisions to the previously certified EIR (Prior EIR) due to new significant environmental effects or a substantial increase in the severity of previously identified significant environmental effects; and

2) No substantial changes in circumstances have occurred that require major revisions to the previously certified EIR (Prior EIR) due to new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

3) No new information of substantial importance as described in Section 15162 (a)(3) has been identified that shows any of the following: a) The project will have one or more significant effects not discussed in the Prior EIR; b) Significant effects previously examined will be substantially more severe than shown in the Prior EIR; c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or d) Mitigation measures or alternatives which are considerably different from those analyzed in the Prior EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

4) The Original EIR was prepared as a Program EIR and as such was evaluated pursuant to CEQA Guidelines § 15168(c). The Lead Agency has determined that the effects of the later activity, in this case the Modified Project, were examined in the program EIR (Original EIR) and pursuant to Section 15162 no subsequent EIR is required.

1.9 Cumulative Impacts

The Modified Project would not change the permitted land uses, limits of disturbance or location of the Project boundary, extent of construction activities, or increase the intensity of development. The most intense short-term construction impacts entail rough grading. Since the limits of grading and the remedial grading requirements based on existing geologic conditions would remain as analyzed for the Original Project, short-term construction impacts for the Modified Project would be the same or less than the Original Project. For this reason, no new or greater cumulative impacts associated with construction activities would occur from the Modified Project. Since the Modified Project reduces the intensity of development by reducing the amount of trip generation, the long-term operational impacts associated with the Modified Project would be the same or less than analyzed in the Prior EIR and no new or greater cumulative impacts associated with operational activities would occur from the Modified Project.

Therefore, the Modified Project would not cause new or increased cumulative impacts.

SECTION 2.0 ENVIRONMENTAL CHECKLIST

The following is an analysis of the topical categories listed in Appendix G of the CEQA Guidelines. It should be noted that the topical categories in Appendix G have changed since the certification of the Prior EIR. For example, there are new sections for Tribal Cultural Resources, Energy, and Wildfire; the question for paleontological impacts has moved to the geology and soils category; and many categories have revised wording of the significance questions. This Addendum is based on the updated version of Appendix G to provide current analysis. Additionally, the findings for each topical category have been revised to be consistent with subsequent review. The findings are "New Potentially Significant Impact," "New Mitigation is Required," "No New Impact/No Impact," and "Reduced Impact." A finding of "New Mitigation is Required" means that the project has a new potentially significant impact on the environment or a substantially more severe impact than analyzed in the previously approved or certified CEQA document and that new mitigation is required to address the new or substantially more severe significant impact.

2.1 Aesthetics

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
AESTHETICS. Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Discussion: The Prior EIR determined the Original Project would cause a permanent substantial change in the existing visual character of the Project site from dairy/agricultural to developed uses, but that altering the existing visual character of the site would not necessarily degrade it, as the surrounding area is similarly developed. The Modified Project would also change the visual character of the site from dairy farm to developed uses. While the Modified Project proposes to change the mix and intensity of uses compared to the Original Project, the overall result remains the same that the character of the site would change from dairy farm to a mix of residential and commercial development.

The proposed changes associated with the Modified Project would not change the conclusions in the Prior EIR as there is no new potentially significant impact and previously identified significant impacts are not substantially more severe. The Modified Project would not cause new or increased impacts and impacts are less than significant.

a, b) The Prior EIR determined the Project site does not constitute a scenic vista and is not located near a scenic highway. Furthermore, there are no designated scenic vistas identified in the Eastvale General Plan. The Santa Ana River is identified as a scenic resource; however, the Project site is approximately two miles north of the Santa Ana River. The area surrounding the Project site is currently developed with a mix of residential and commercial uses, similar to the Modified Project.

Therefore, the conclusions presented in the Prior EIR that the Project site does not constitute a scenic vista; does not contain scenic resources; is not located near a scenic highway; and would not block views of a scenic vista, would also apply to the Modified Project.

Therefore, the Modified Project would not cause new or increased impacts and impacts are less than significant.

c) The Prior EIR determined the Original Project would not degrade the existing visual character or quality of the site or surrounding areas. The Leal Master Plan includes design guidelines to ensure the character and quality of development meet the City's goals for Project characteristics and level of quality and is visually compatible with surrounding development.

The Modified Project also includes design guidelines and adds new development standards to guide and regulate future development in greater detail than the Original Project. Furthermore, the Modified Project specifies proposed development intensity and identified the southeast corner of the Project site (Limonite and Hamner) as the Downtown area, which is adjacent to and compatible with surrounding existing commercial development (Eastvale Gateway Center and the Cloverdale Marketplace).

Since the Project site is located within an urbanized area, surrounded by residential and commercial uses, and the Modified Project is consistent with the Leal Master Plan zoning, and no other City regulations govern scenic quality, the Modified Project would have a less than significant impact.

Therefore, the conclusions presented in the Prior EIR remain unchanged as there is no new potentially significant impact and previously identified significant impacts are not substantially more severe. No new or more severe impacts would occur as a result of the Modified Project, and impacts are less than significant.

d) The Prior EIR determined the Project site is located in a suburban setting, surrounded by a developed environment with fixed and mobile sources of exterior light and glare. Fixed sources of light and glare include exterior building-mounted and freestanding light fixtures, illuminated signage on existing land uses, and street lighting along local streets near the Project. Mobile sources of light and glare originate from vehicles along surrounding streets. These existing light sources contribute to moderate levels of nighttime lighting.

Development of the Project site would add nighttime lighting for roadway visibility and safety, and lighting associated with residential and commercial development. The Original Project concluded that consistency with Section 120.05.050, Outdoor Lighting, in Chapter 120.05, Development Standards, of the Eastvale Municipal Code, would reduce impacts from all outdoor lighting fixtures to less than significant.

The Original EIR also determined that development could introduce new sources of glare from windows associated with the proposed non-residential development. Mitigation Measure MM 3.5.1 was included to require future development plans and/or Projects to utilize nonglare glass in all nonresidential buildings to minimize and reduce impacts from glare. With implementation of the mitigation measure, impacts were determined less than significant.

The Modified Project includes a similar mix of uses as the Original Project and both Section 120.05.050 of the Municipal Code and Mitigation Measure 3.5.1 would apply to the Modified Project. Therefore, the conclusions presented in the Prior EIR remain unchanged. No new or more severe impacts would occur as a result of the Modified Project, and impacts are less than significant.

Mitigation Measures: The mitigation measure included in the Prior EIR remains applicable to the Modified Project is shown below.

MM 3.5.1 Nonglare glass shall be used in all nonresidential buildings to minimize and reduce impacts from glare. Buildings that are allowed to use semi-reflective glass must be oriented so that the reflection of sunlight is minimized. Types of nonglare glass shall be specified on final development plans.

Timing/Implementation: *Prior to approval of final development plans*

Enforcement/Monitoring: *City of Eastvale Planning Department*

Conclusion: The changes associated with the Modified Project would not substantially change or increase the visibility of development or substantially change the overall character of the development from the Original Project. The Modified Project would not add new sources of light and glare compared to the Original Project and the Modified Project would have the same level of visual compatibility as the Original Project. Therefore, no changes to the conclusions presented in the Prior EIR are warranted. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant with mitigation.

2.2 Agriculture and Forestry Resources

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☒	☐
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☒	☐
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☒	☐
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☒	☐
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☒	☐

Discussion: In accordance with State CEQA Guidelines Section 15128, the Prior EIR determined that as a result of the absence of environmental resources or Project characteristics to produce impacts, the potential effect on Agriculture and Forestry Resources was found to be less than significant. The Original Project included a zone

change from Heavy Agriculture (A-2) to Leal Master Plan. In the course of that zone change, the City made findings documenting the rationale for the zone change and the justification for the conclusion that no significant impacts to agricultural resources would occur. The Prior EIR concluded,

> *"However, the City's General Plan and General Plan EIR determined that conversion of agricultural land was a significant and unavoidable impact of land development within the Eastvale city limits. General Plan Policy AQ-39 states that the loss of agricultural productivity on lands designated for urban uses within the city limits is anticipated as a consequence of the city's development.*
>
> *Because this property was designated for development, the conversion of agricultural uses is consistent with the adopted General Plan and General Plan EIR. Therefore, this impact is less than significant."*[9]

The Modified Project would not change the limits of disturbance, which encumbers the entire site, therefore the analysis and conclusions presented in the Prior EIR remain unchanged. Furthermore, no substantial changes in site conditions or substantial changes to the circumstances have occurred that would change the conclusions presented in the Prior EIR.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

a) The Original Project changed the zoning on the Project site from Heavy Agriculture (A-2) to Leal Master Plan. In the course of that zone change, the City made findings documenting the rationale for the zone change and the justification for the conclusion that no significant impacts to agricultural resources would occur. Furthermore, the Prior EIR under Impact 3.9.8 determined that conversion of mapped Farmland was a less than significant impact. The Modified Project would not change the limits of disturbance, which encumbers the entire site, therefore the analysis and conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) The Original Project changed the zoning on the Project site from Heavy Agriculture (A-2) to Leal Master Plan and no Williamson Act contract applies to the Project site. The Modified Project is consistent with the allowed uses under the Leal Master Plan zoning. No new significant impacts or substantial increase in the severity of significant

[9] Leal Master Plan Draft EIR, July 2015, Section 3.9.8, Page 3.9-6

impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

c) The Project site is currently zoned Leal Master Plan, which designates the site for a mix of residential and commercial uses. The Project site does not contain land zoned as forest land or timberland. The Modified Project is consistent with the allowed uses under the Leal Master Plan zoning conforms to the existing Leal Master Plan zoning. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

d) As discussed above, no land zoned as forest land or timberland exists within the Project site boundaries. Approval of the Modified Project would not result in the loss of forest land or conversion of forest land to other uses. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

e) The Modified Project would not involve other changes in the existing environment that, due to their location or nature, could result in conversion of farmland to non-agricultural use or forest land to non-forest use. The Modified Project would not change the limits of disturbance, which encumbers the entire site. No existing farmland occurs adjacent to the Project site. The Project site itself is no longer productive farmland. The entire Project site is surrounded by existing residential and commercial development. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: The Original Project included a zone change from Heavy Agriculture (A-2) to Leal Master Plan. In the course of that zone change, the City made findings documenting the rationale for the zone change and the justification for the conclusion that no significant impacts to agricultural resources would occur. The Modified Project would not change the limits of disturbance, which encumbers the entire site, therefore the analysis and conclusions presented in the Prior EIR remain unchanged. Furthermore, no substantial changes in site conditions or substantial changes to the circumstances have occurred that would change the conclusions presented in the Prior EIR. Therefore, the conclusions presented in the Prior EIR remain unchanged as there is no new potentially significant impact and previously identified significant impacts are not substantially more severe. No new or more severe impacts would occur as a result of the Modified Project, and impacts are less than significant.

2.3 Air Quality

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☐	☒
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

Discussion: Air Quality impacts are analyzed for both operations and construction. Operational emissions are based on the type and intensity of land use. The Prior EIR analyzed operational emissions from the Original Project land use mix and concluded operational emissions would be significant and unavoidable.

Construction emissions result from construction activities, most notably grading activities since grading tends to produce the greatest amount of daily emissions. The Prior EIR determined construction activities would result in a significant unavoidable impact.

The Prior EIR included two mitigation measures, MM 3.3.5a and 3.3.5b, requiring site specific air toxics pollutant analysis in accordance with South Coast Air Quality Management District (SCAQMD) Final Localized Significance Threshold Methodology for both construction and operational activities.

a) The Prior EIR determined that the Original Project "would not conflict with or obstruct implementation of the 2012 AQMP, as it has been anticipated in the City General Plan... The proposed Master Plan is consistent with the City's General Plan and

thus does not exceed the population or job growth projections used by the SCAQMD to develop the 2012 Air Quality Management Plan. "[10]

Since certification of the Prior EIR, a newer 2016 Air Quality Management Plan (AQMP) has been adopted. The 2016 AQMP is based on development intensities assumed in the City's adopted General Plan, which for this Project site is the Leal Master Plan. Since the Modified Project reduces the overall intensity of development compared to the Original Project, resulting in a reduction in the number of vehicle trips generated by the future development[11] and the Modified Project continues to propose a mix of residential and commercial uses, including developing a "downtown," the Modified Project is consistent with the 2016 AQMP.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) The Prior EIR analyzed both short-term construction emissions and long-term operational emissions. The Prior EIR determined short-term construction emissions and long-term operational impacts would be significant and unavoidable.

Construction

The Prior EIR determined short-term construction emissions would cause a significant unavoidable impact. The Prior EIR states:

> "Quantifying the air quality pollutant emissions from future, short-term, temporary construction activities allowed under the proposed Master Plan is not possible due to project-level variability and uncertainties related to future individual projects in terms of detailed site plans, construction schedules, equipment requirements, etc., which are not currently determined. However, depending on how development proceeds, construction-generated emissions associated with development of the Master Plan area could potentially exceed SCAQMD thresholds of significance. Therefore, future project-level analyses of air quality impacts, in accordance with California Environmental Quality Act (CEQA) requirements, would be conducted on a case-by-case basis as individual, future development projects allowed under the Master Plan proceed."[12]

The Master Plan, as part of the Stage 2 development planning process, is further defined and detailed than the Original Project. The proposed Tentative Tract Map includes a rough grading concept, and a cut/fill analysis has been performed to

[10] Leal Master Plan Draft EIR, July 2015, Section 3.3, Page 3.3-10
[11] Leal Master Plan Amendment Project Traffic Study, RK Engineering Group, Inc., December 22, 2021
[12] Leal Master Plan Draft EIR, July 2015, Section 3.3, Page 3.3-5

determine earthwork quantities. This information was used to prepare the "*Leal Master Plan Amendment Project Air Quality, Greenhouse Gas and Energy Impact Study*" by RK Engineering Group, Inc., December 22, 2021, which is included in Appendix B.

The Modified Project includes several Project Design Features (PDFs) that have emission reduction benefits.

AQ PDF-1 A Construction Management Plan will be prepared that includes the requirements for Air Quality mitigation measures to be submitted to the City of Eastvale for all phases of construction.

AQ PDF-2 The Project commits to following the standard South Coast Air Quality Management District (SCAQMD) rules and requirements with regards to fugitive dust control, which includes, but are not limited to the following:

1. All active construction areas shall be watered two (2) times daily.
2. Speed on unpaved roads shall be reduced to less than 15 mph.
3. Any visible dirt deposition on any public roadway shall be swept or washed at the site access points within 30 minutes.
4. Any on-site stockpiles of debris, dirt or other dusty material shall be covered or watered twice daily.
5. All operations on any unpaved surface shall be suspended if winds exceed 15 mph.
6. Access points shall be washed or swept daily.
7. Construction sites shall be sandbagged for erosion control.
8. Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).
9. Cover all trucks hauling dirt, sand, soil, or other loose materials, and maintain at least 2 feet of freeboard space in accordance with the requirements of California Vehicle Code (CVC) section 23114.
10. Pave or gravel construction access roads at least 100 feet onto the site from the main road and use gravel aprons at truck exits.
11. Replace the ground cover of disturbed areas as quickly possible.
12. A fugitive dust control plan should be prepared and submitted to SCAQMD prior to the start of construction.

AQ PDF-3 All construction equipment to the extent feasible will have Tier 4 low emission "clean diesel" engines (Original Equipment Manufacturer or retrofit) that include diesel oxidation catalysts and diesel particulate filters that meet the latest California Air Resources Board (CARB) best available control technology.

AQ PDF-4 Construction equipment will be maintained in proper tune.

AQ PDF-5 All construction vehicles will be prohibited from excessive idling. Excessive idling is defined as five (5) minutes or longer.

AQ PDF-6 The Project will minimize the simultaneous operation of multiple construction equipment units, to the maximum extent feasible.

AQ PDF-7 The use of heavy construction equipment and earthmoving activity will be suspended during Air Alerts when the Air Quality Index reaches the "Unhealthy" level.

AQ PDF-8 The Project will establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

AQ PDF-9 Staging areas for the construction equipment will be located as distant as possible from adjacent residential homes.

AQ PDF-10 To the extent possible, the Project will use haul trucks with on-road engines instead of off-road engines for on-site hauling.

The most notable PDF applied to the Modified Project that was not applied to the Original Project is the use of Tier 4 low emission "clean diesel" engines (AQ PDF-3). The Original Project did not mandate the use of all Tier 4 engines allowing grading activity to rely on Tier 3 engines, which emit more emissions than Tier 4 engines.[13]

The Air Quality study calculated construction emissions as summarized in the following table.[14]

[13] Leal Master Plan Draft EIR, July 2015, Section 3.3, Page 3.3-5
[14] Table 16 from "Leal Master Plan Amendment Project Air Quality, Greenhouse Gas and Energy Impact Study," prepared by RK Engineering Group, Inc., dated December 22, 2021

Table 9. Regional Construction Emissions[14]

Maximum Daily Emissions (lbs/day)[1]						
Activity	**VOC**	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**
Demolition	0.59	4.80	24.46	0.05	2.32	0.49
Site Preparation	1.66	49.77	31.79	0.24	14.65	6.20
Grading	2.98	94.62	53.41	0.45	16.97	5.81
Building Construction	12.89	40.14	145.48	0.49	41.49	11.45
Paving	1.19	1.24	17.78	0.02	0.21	0.08
Architectural Coating	73.82	1.31	22.10	0.06	7.11	1.91
Maximum[1]	**73.82**	**94.62**	**145.48**	**0.49**	**41.49**	**11.45**
SCAQMD Threshold	75	100	550	150	150	55
Exceeds Threshold (?)	**No**	**No**	**No**	**No**	**No**	**No**

[1] Maximum daily emission during summer or winter; includes both on-site and off-site project emissions.

As shown in the prior table, construction activities are anticipated to be less than SCAQMD thresholds. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project.

Operations

The Prior EIR determined long-term operational emissions would cause a significant unavoidable impact. The Prior EIR states:

> "…buildout of the Master Plan, assuming the most conservative land use potential, would result in emissions in excess of SCAQMD thresholds for criteria air pollutants and precursors for which the SoCAB is in nonattainment."[15]

The Modified Project, prepared as part of the Stage 2 development planning process, provides greater detail and definition than the Original Project, as shown in Table 3 and the Leal Master Plan Amendment (Appendix A). Similar to the Original Project, the Modified Project allows for flexibility of land uses and establishes specific land use intensities provided development is consistent with the plans and specifications included in the Leal Master Plan Amendment. The air quality analysis provided below is based on the land use intensities established for the Modified Project in Table 3.

The following table summarizes regional operational emissions from the Modified Project.[16] As shown, operational emissions from the Modified Project remain under

[15] Leal Master Plan Draft EIR, July 2015, Section 3.3, Page 3.3-8

SCAQMD thresholds of significance and less than the Original Project. The reason for this change is the reduced level of development intensity presented in the Modified Project compared to the Original Project.

Table 10. Regional Operational Emissions[16]

Maximum Daily Emissions (lbs/day)[1]						
Project Emissions	**VOC**	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**
Mobile Sources	105.36	84.22	788.32	1.58	179.11	48.35
Energy Sources	1.52	13.01	5.80	0.08	1.05	1.05
Area Sources	85.70	37.63	221.51	0.24	4.00	4.00
Total Project Emission	**192.58**	**134.86**	**1015.62**	**1.90**	**184.15**	**53.40**
SCAQMD Threshold	55	55	550	150	150	55
Exceeds Threshold (?)	Yes	Yes	Yes	No	Yes	No
LEAL Master Plan 2015 EIR	268.32	258.6	1,200.15	4.94	326.66	92.99
Exceeds 2015 EIR Levels (?)	**No**	**No**	**No**	**No**	**No**	**No**
Change in Emission Levels	-75.74	-123.742	-184.53	-3.0393	-142.5076	-39.5922
Percentage Change	**-28%**	**-48%**	**-15%**	**-62%**	**-44%**	**-43%**

[1] Maximum daily emission during summer or winter; includes both on-site and off-site project emissions.

Therefore, the Modified Project would not cause new or increased operational impacts to occur.

Cumulative

Air pollution is largely a cumulative impact. Therefore, by SCAQMD policy, if a Project's individual emissions exceed significance thresholds, the project's impacts would be cumulatively considerable. If a project's individual emissions do not exceed significance thresholds, the project's impacts would not be cumulatively considerable.

The Prior EIR concluded the Original Project would cause a significant and unavoidable cumulative impact because individual construction and operational emissions would exceed significance thresholds. The individual construction and operational emissions for the Modified Project are less than the Original Project. Since the Modified Project would not increase the amount of daily nonattainment pollutant emissions as discussed in above, no new significant impacts or substantial increase in

[16] Table 18, from "Leal Master Plan Amendment Project Air Quality, Greenhouse Gas and Energy Impact Study," prepared by RK Engineering Group, Inc., dated December 22, 2021

the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary.

c) The Prior EIR determined Project construction would emit localized pollutants through the on-site use of heavy-duty construction equipment as well as fugitive dust from demolition and ground-disturbing activities on site. These localized emissions could expose nearby sensitive receptors to substantial pollutant concentrations. Similarly, long-term Project operations would emit pollutants that could result in local Carbon Monoxide (CO) hotspots.

The Air Quality Study for the Modified Project calculated Localized Construction Emissions for the Modified Project. The Prior EIR included a requirement for Localized Construction Emissions as Mitigation Measure 3.3.5a, which this analysis satisfies. As shown in the following table, Localized Construction Emissions would be below the SCAQMD thresholds of significance.

Table 11. Localized Construction Emissions[17]

Maximum Daily Emissions (lbs/day)[1]				
Activity	**NOx**	**CO**	**PM_{10}**	**$PM_{2.5}$**
On-site Emissions	3.30	33.00	7.72	3.95
SCAQMD Construction Threshold[2]	235.0	1,461.0	10.0	6.9
Exceeds Threshold (?)	**No**	**No**	**No**	**No**

[1] Maximum daily emission during summer or winter; includes on-site project emissions only.
[2] Reference 2006-2008 SCAQMD Mass Rate Localized Significant Thresholds for construction and operation. SRA-22, Corona/Norco, 4-acre site, receptor distance 25 meters.

A CO hot spot is a localized concentration of carbon monoxide (CO) that is above the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm. The Prior EIR conducted a CO hot spot analysis and determined emission levels would be below the California Ambient Air Quality Standards (CAAQS) levels.[18] Since the Modified Project would generate approximately 27,764 fewer daily vehicle trips, it can also be concluded that no new CO hotspots would occur as a result of the Modified Project.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Mitigation Measure 3.3.5.b. would remain applicable.

d) The Prior EIR determined short-term odors can occur during construction, both during grading and painting of structures. Long-term operational odors commonly

[17]Table 17, from "Leal Master Plan Amendment Project Air Quality, Greenhouse Gas and Energy Impact Study," prepared by RK Engineering Group, Inc., dated December 22, 2021.
[18] Leal Master Plan Draft EIR, July 2015, Table 3.3-5, Page 3.3-12

occur from land uses such as, agricultural uses (farming and livestock), chemical plants, composting operations, dairies, fiberglass molding facilities, food processing plants, landfills, refineries, rail yards, and wastewater treatment plants. Since the construction operations would remain similar to the Original Project, and the Modified Project does not contain any new odor producing land uses, the Modified Project would not cause new significant impacts or substantial increase in the severity of significant impacts and no new mitigation is necessary. Impacts would be less than significant.

Mitigation Measures: Mitigation Measures MM 3.3.5b remains applicable to the Modified Project.

MM 3.3.5a A site-specific air toxics pollutant analysis shall be conducted in accordance with the SCAQMD (2008) Final Localized Significance Threshold Methodology for construction activities. If SCAQMD screening thresholds would be exceeded, air toxic reduction measures shall be identified in order to reduce potential impacts to a level that is less than significant. If it is the case that emissions remain in excess of SCAQMD localized significance thresholds despite the imposition of air toxic reduction measures, project-specific construction-related dispersion modeling acceptable to the SCAQMD shall be used to identify potential toxic air contaminant impacts, including diesel particulate matter. If SCAQMD risk thresholds would be exceeded, additional measures shall be identified in the air toxics analysis to address potential impacts and shall be based on site-specific information such as the distance to the nearest sensitive receptors, project site plan details, and construction schedule. The City shall ensure that construction contracts include all identified measures and that the measures reduce the health risk below SCAQMD risk thresholds. Construction-generated air toxics pollutant mitigation measures may include but not be limited to:

1. Limiting the amount of acreage to be graded in a single day.

2. Restricting intensive equipment usage and intensive ground disturbance to hours outside of hours typically spent at home.

3. Notifying affected sensitive receptors one week prior to commencing on-site construction so that any necessary precautions (such as rescheduling or relocating outdoor activities) can be implemented. The written notification shall include the name and telephone number of the individual empowered to manage construction of the project. In the event complaints are received, the individual empowered to manage construction shall respond to the complaint within 24 hours. The response shall include identification of measures being taken by the project construction contractor to reduce construction-related air

pollutants. Such measures may include but are not limited to the relocation of equipment or the rescheduling of construction outside of hours typically spent at home.

Timing/Implementation: *The site-specific air toxics pollutant analysis and any necessary modeling shall be completed prior to grading permit issuance, and measures implemented during construction activities*

Enforcement/Monitoring: *City of Eastvale Planning, Building and Safety, or Public Works Departments*

MM 3.3.5b A site-specific air toxics pollutant analysis shall be conducted in accordance with the SCAQMD (2008) Final Localized Significance Threshold Methodology for operational activities. If SCAQMD screening thresholds would be exceeded, air toxic reduction measures shall be identified in order to reduce potential impacts to a level that is less than significant. If it is the case that emissions remain in excess of SCAQMD localized significance thresholds despite the imposition of air toxic reduction measures, project-specific operations-related dispersion modeling acceptable to the SCAQMD shall be used to identify potential toxic air contaminant impacts, including diesel particulate matter generated by heavy-duty haul trucks. If SCAQMD risk thresholds would be exceeded, additional mitigation measures shall be identified in the air toxics analysis to address potential impacts and shall be based on site-specific information such as the distance to the nearest sensitive receptors, project site plan details, and merchandise delivery schedule. The City shall ensure that operations include all identified measures and that the measures reduce the health risk below SCAQMD risk thresholds. Operations-generated air toxic pollutant mitigation measures may include but not be limited to:

1. Redesigning the project site plan to locate proposed loading dock facilities as far from sensitive receptors as possible.

2. Posting signage stating the State-mandated prohibition on all project trucks idling in excess of 5 minutes under the Heavy-Duty Vehicle Idling Emission Reduction Program.

3. Restricting the number of daily heavy-duty haul truck deliveries.

Timing/Implementation: *The site-specific air toxics pollutant analysis and any necessary modeling shall be completed prior to grading permit issuance, and measures implemented during construction activities*

Enforcement/Monitoring: *City of Eastvale Planning, Building and Safety, or Public Works Departments*

Conclusion: The Modified Project would cause similar daily emissions from construction activities and less operational emissions as a result of approximately 27,764 fewer daily vehicle trips, compared to the Original Project. Therefore, no changes to the conclusions presented in the Prior EIR are necessary. Mitigation Measure MM 3.3.5b required by the Prior EIR remains applicable to the Modified Project. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary.

2.4 Biological Resources

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Discussion: The Prior EIR performed a records search and determined no previously recorded sensitive biological resources have occurred on the Project site. The Project site is disturbed and was previously used as a dairy farm. No surveys for sensitive species were conducted as part of the Prior EIR and mitigation measures were added requiring future surveys. The Prior EIR concluded that with mitigation, all potential biological impacts would be reduced to less than significant.

The potential for biological impacts depends on the area of impact and the condition of the Project site. The Modified Project would not change the limits of disturbance, which encumbers the entire site, and the condition of the Project site remains

essentially unchanged from the time of the Prior EIR. Therefore, the analysis and conclusions presented in the Prior EIR remain unchanged.

In support of this Addendum, a Biological Assessment was conducted for the Modified Project. That assessment, "*Biological Assessment of the Leal Property*," prepared by Carlson Strategic Land Solutions, March 2021, is included as Appendix C. The Biological Assessment included a field survey on June 9, 2021, to map vegetation communities and conduct a jurisdictional delineation. Focused burrowing owl surveys and narrow endemic plant surveys were conducted on June 16, June 23, July 1, and July 13, 2021. Furthermore, a Delhi Sands Flower Loving Fly Assessment was performed on June 18, 2021.

No special status species were observed on-site and none are expected to occur given current site conditions and habitat type. The vegetation communities mapped on the Project site are as follows:

Table 12. Vegetation Communities Observed[19]

Vegetation Community	Acreage within in the Project Site
Ruderal	96.82
Historical Dairy Farm	25.82
Disturbed/Developed	37.87
TOTAL	160.0

The Project site is located within the Western Riverside Multiple Species Habitat Conservation Program (MSHCP) boundaries. However, the Project site is not located within any MCHCP Criteria Areas, Cell Groups, or Subunits, and the Project site is not located in survey areas for Amphibians, Mammals, or Special Linkage areas. The Project site is subject to Riparian and Riverine Areas pursuant to MSHCP Section 6.1.2, Narrow Endemic Plants (Survey Area 7) pursuant to MSHCP Section 6.1.3, Urban/Wildlands Interface guidelines pursuant to MSHCP Section 6.1.4, and Western Burrowing Owl overlay pursuant to MSHCP Section 6.3.2.

The field surveys conducted as part of the Biological Assessment satisfy several of the prior mitigation measures, as described below. Project site conditions have remained very similar to that analyzed in the Prior EIR. There is no evidence of changes that could result in occupation by special status species or riparian/wetland habitats that would be subject to state and federal permits, and the analysis and conclusions presented in the Prior EIR remain valid.

[19] Table 2, from "Biological Assessment of the Leal Property located in the City of Eastvale," prepared by Carlson Strategic Land Solutions, dated November 2, 2021.

a) The Biological Assessment determined no previously recorded sensitive biological resources (i.e., special-status species populations, sensitive habitats, or jurisdictional features) occur on the Project site or within the Study Area. Furthermore, no sensitive biological resources, including, special-status species populations, sensitive habitats, or jurisdictional features occur on the Project site.

The Project site does not contain any suitable habitat for special status species or sensitive species, nor were any observed on-site during recent surveys. The Modified Project would include the removal of non-native and ruderal species; therefore, impacts would not be considered a significant impact and no mitigation is required.

The Modified Project would cause the disruption and removal of ruderal and developed habitat and the loss and displacement of non-sensitive common wildlife species. Due to the level of existing disturbance from the historical use as a dairy farm, human activity on-site and within the vicinity (e.g., nearby development), these impacts would not be expected to reduce the general wildlife populations below self-sustaining levels within the region and impacts to non-sensitive wildlife species do not meet the significance thresholds. Therefore, impacts to common wildlife species would not be considered a significant impact and no mitigation is required.

The Prior EIR identified a potential for impacts to nesting birds. The Project site consists of suitable habitat for nesting, foraging, and/or wintering avian species. While none of the common species carry a Federal or State listing as threatened or endangered, they are all protected under the Migratory Bird Treaty Act (MBTA) during breeding season. Therefore, a pre-construction survey is required in compliance with the MBTA. Implementation of Mitigation Measure MM 3.7.1 from the Prior EIR would reduce potential impacts to the avian species to a less than significant level if nesting individuals are present.

The biological evaluation of the Project site provides greater site-specific detail and analysis than the information presented in the Prior EIR, but this is not a substantial change with respect to the circumstances under which the Modified Project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. The Modified Project would not change the limits of disturbance, which encumbers the entire site, and the existing site conditions of a dairy farm remain consistent with that analyzed in the Prior EIR. Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant with implementation of Mitigation Measure 3.7.1 as presented in the Prior EIR.

b, c) Based on the field surveys and focused surveys conducted as part of the Biological Assessment of the Modified Project, no sensitive plant communities or habitats occur on the Project site. Sensitive habitats include those that are of special

concern to resource agencies and those that are protected under the MSHCP, CEQA, Section 1600 of the California Fish and Game Code, and Section 404 of the Clean Water Act.

Furthermore, the Biological Assessment included a formal jurisdictional delineation on the Project site. Based on those results, no jurisdictional features were identified on the Project site subject to Section 1602 of the California Fish and Game Code and the Porter Cologne Act, as regulated by the California Department of Fish and Wildlife (CDFW) and the Regional Water Quality Control Board (RWQCB), and no jurisdictional non-wetland or wetland waters regulated under Section 404 of the Clean Water Act were identified on the Project site.

The Biological Assessment has determined that no sensitive biological resources or jurisdictional features occur on the Project site; therefore, no impacts would occur. Mitigation Measures 3.7.2 and 3.7.3 included in the Prior EIR have been fulfilled by the Biological Assessment.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant and Mitigation Measures 3.7.2 and 3.7.3 presented in the Prior EIR have been fulfilled.

d) The Project site has been disturbed by development and intense historical dairy and agricultural uses and is unlikely to facilitate local wildlife movement. In addition, the Project site is completely surrounded by dense urban development, further impairing wildlife movement.

The Project site supports potential live-in and movement habitat for species on a local scale (i.e., some limited live-in and marginal movement habitat for reptile, bird, and mammal species), however, the Project site provides little to no function to facilitate wildlife movement on a regional scale. Furthermore, the site is not identified as a Special Linkage area within the MSHCP. Movement on a local scale likely occurs with species adapted to urban environments due to the surrounding development and disturbances in the vicinity of the site. Implementation of the Modified Project would not change the lack of wildlife movement across the Project site nor the classification of the Project site in the MSHCP that the Project site is not a Special Linkage area or integral to wildlife movement.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

e) As indicated in the Prior EIR, "The City of Eastvale has no policies or ordinances relating to biological resources."[20] Therefore, the Project site is not subject to any local policies, such as a tree preservation ordinance, and no impacts would occur and no mitigation is required. No change in conclusion from what was analyzed in the Prior EIR would occur.

f) As analyzed in the Prior EIR, and applicable to the Modified Project, the Project site is located within the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP) and is not located within any MSHCP Criteria Areas, Cell Groups, or Subunits. Furthermore, the Project site is not located in survey areas for Amphibians, Mammals, or Special Linkage areas. The Project site is subject to Riparian and Riverine Areas pursuant to MSHCP Section 6.1.2, Narrow Endemic Plants Overlay, pursuant to MSHCP Section 6.1.3, Urban/Wildland Interface pursuant to Section 6.1.4, and Western Burrowing Owl overlay pursuant to MSHCP Section 6.3.2.

The Biological Assessment determined no previously recorded sensitive biological resources (i.e., special-status species populations, sensitive habitats, or jurisdictional features) occur on the Project site or within the Study Area. Furthermore, no sensitive biological resources, including i.e., special-status species populations, sensitive habitats, or jurisdictional features occur on the Project site. The MSHCP includes standard measures, some of which apply to the Modified Project as documented in the Biological Assessment. The Biological Assessment provides greater site-specific detail and analysis than the information presented in the Prior EIR, but the assessment and compliance with the MSHCP are not new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR.

Suitable habitat for burrowing owl, white-tailed kite, grasshopper sparrow, and mountain plover exists within the Study Area. These animal species are all covered under the MSHCP. With the City's participation and implementation of the MSHCP, any direct and indirect impacts to sensitive species would be less than significant with the payment of the mitigation fee and compliance with all applicable requirements of the MSHCP. This provides full mitigation under the California Environmental Quality Act (CEQA), the National Environmental Policy Act (NEPA), the Endangered Species Act (ESA), and the California Endangered Species Act (CESA) for impacts to MSHCP covered species and habitats. Compliance with the MSHCP and payment of MSHCP fees are not new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR.

Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would

[20] Leal Master Plan Draft EIR, July 2015, Page 3.7-7

occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: Several measures have already been satisfied and are shown in light grey format. The mitigation measures applicable to the Modified Project are listed below.

MSHCP Standard Condition: *Note: The following discussion highlights the requirements of the MSHCP, which are standard requirements applicable to project sites within the MSHCP boundaries. Because the MSHCP has been adopted by the City, it is not necessary to adopt a mitigation measure to enforce its provisions.*

The MSHCP requires that projects pay a mitigation fee, perform species-specific habitat assessments and surveys, and be reviewed for consistency with Section 6.1.2–Protection of Species Associated with Riparian/Riverine Areas and Vernal Pool, Section 6.1.3–Protection of Narrow Endemic Plan Species, Section 6.3.2–Additional Survey Needs and Procedures, and Section 6.1.4–Guidelines Pertaining to the Urban/Wildlands Interface of the MSHCP.

The following requirements of the MSHCP apply to the proposed Project and will be required of all subsequent development plans and/or projects within the Leal Master Plan area:

A. The Project applicant shall submit fees to the City in accordance with the requirements of the MSHCP Mitigation Fee Ordinance (Chapter 4.62 of the City of Eastvale Municipal Code).
B. The project applicant shall assess the proposed project's consistency with Section 6.1.2, Section 6.1.3, Section 6.3.2, and Section 6.1.4 of the MSHCP.
C. A qualified biologist shall conduct a burrowing owl habitat assessment. If needed, focused surveys and preconstruction surveys shall be conducted, as well as appropriate avoidance and minimization (Section 6.3.2 of the MSHCP).
D. A qualified biologist shall conduct habitat assessments for the required Narrow Endemic Plant Species. If needed, focused surveys and shall be conducted, as well as appropriate avoidance and minimization (Section 6.1.3 of the MSHCP).
E. A qualified biologist shall conduct a habitat assessment for Delhi sands flower-loving fly in areas underlain by Delhi soil series (Species-specific Objective 1B).

As noted above, because the City has adopted the MSHCP and enforces its provisions, these requirements are fully enforceable under the City's Code as standard conditions.

MM 3.7.1 All construction and clearing activities shall be conducted outside of the avian nesting season (January 15–August 31), when feasible. If clearing and/or construction activities occur during the nesting season, preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds.

If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the Project applicant shall establish an exclusion zone (no ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged.

Timing/Implementation: *Requirements shall be incorporated into all rough and/or precise grading plan documents. The Project applicant's construction inspector shall monitor to ensure that measures are implemented during construction.*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.7.2 Prior to breaking ground, a qualified biologist shall be retained to determine whether potentially jurisdictional waters are present. If potentially jurisdictional features are identified, the project applicant shall submit a preliminary jurisdictional determination to the US Army Corps of Engineers for verification. The verified delineation will be submitted to the City for its records.

Timing/Implementation: *Prior to approval of grading permits*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.7.3 Projects shall result in no net loss of sensitive habitats, riparian vegetation, and/or federally protected waters through impact avoidance, impact minimization, and/or compensatory mitigation, as determined in Clean Water Act Section 404 and 401 permits and/or a 1602 Streambed Alteration Agreement. Evidence of compliance with this mitigation measure shall be provided to the City prior to approval of each individual grading permit.

Timing/Implementation: *Prior to approval of grading permits*

Enforcement/Monitoring: *City of Eastvale Planning Department*

Conclusion: A Biological Assessment of the Modified Project determined impacts to biological resources would be less than significant with mitigation incorporated. Mitigation Measures 3.7.2 and 3.7.3 presented in the Prior EIR have been fulfilled. Mitigation Measure 3.7.1 remains applicable as presented in the Prior EIR to reduce impacts to nesting birds to less than significant. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Mitigation Measure 3.7.1 remains applicable to the Modified Project.

2.5 Cultural Resources

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☐	☐	☒	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☒	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

Discussion: The Prior EIR conducted a records search and determined that no designated or previously identified cultural resources, such as prehistoric sites, historic sites, historic buildings/structures, and isolated artifacts, occur on the Project site. However, the Prior EIR indicated that a formal analysis had not been conducted and whether cultural resources or human remains are present could not be determined.[21] Mitigation Measure 3.8.1 required that future development plans and Projects prepare site-specific cultural resource field surveys and studies.

A site-specific cultural resources study has been prepared for the Modified Project. The report, "*Cultural and Paleontological Resources Assessment, October 2021,*" prepared by Duke CRM is included in Appendix D. The study included a records search and intensive pedestrian field survey of the site on June 17 and 18, 2021.

a) The Prior EIR concluded that while there are no designated or previously identified cultural resources, the Project area had not been formally evaluated for the cultural resources and as a result it was unknown at the time whether cultural resources or human remains were present onsite. As a result, Mitigation Measure 3.8.1 was required within the Prior EIR, which included a detailed, site-specific cultural resource field survey to identify any cultural resources onsite. As part of the Modified Project a Cultural and Paleontological Resources Assessment was prepared (Appendix D) and included both a records search and field survey, which satisfies this mitigation measure. The records search identified two previously recorded cultural resources with ½ mile of the Project site. The resource located off the Project site consists of historic debris, which would not be impacted by the proposed Project. The second result of the records search is the Leal Property itself. A thorough assessment of the Leal Property, including the structures on the property, determined that Property is not

[21] Leal Master Plan Draft EIR, July 2015, Section 3.8.5, Page 3.8-3

eligible for the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), or local designation. Additionally, the field survey did not identify any cultural resources on the Project site. Based on the low sensitivity for cultural resources occurring on the Project site, no archaeological monitoring is required during ground disturbing activities.

Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project. Mitigation Measure MM 3.8.1 has been satisfied and no new mitigation is necessary. While determined to be highly unlikely, Mitigation Measures MM 3.8.2 and MM 3.8.3 would remain applicable to the Modified Project. Impacts would remain less than significant with mitigation.

b) Archaeological record surveys were conducted as part of the Prior EIR and as part of the Cultural and Paleontological Resources Assessment prepared for the Modified Project. Furthermore, an extensive pedestrian field survey of the Project site took place over two days for the Modified Project. No archaeological resources were identified on the Project site from the records search or the field surveys. The Cultural Resources Assessment for the Modified Project concluded that a low sensitivity exists for archaeological resources to occur on site and therefore, no archaeological monitoring is required during site disturbance activities, such as grading.

The Modified Project would not change the limits of disturbance, which encumbers the entire site, therefore the analysis and conclusions presented in the Prior EIR remain unchanged. Mitigation Measure MM 3.8.1 has been satisfied and no new mitigation is necessary. While determined to be highly unlikely, Mitigation Measures MM 3.8.2 and MM 3.8.3 would remain applicable to the Modified Project. Impacts would remain less than significant with mitigation.

c) The Prior EIR did not identify any evidence suggesting the Project site was used in the past for human burials. The Modified Project would not change the limits of disturbance, which encumbers the entire site, therefore the analysis and conclusions presented in the Prior EIR remain unchanged. Because existing laws and regulations would ensure that impacts on any buried human remains would be reduced to a level below significance, the Modified Project's impact related to the potential of encountering human remains would be less than significant.

Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: Mitigation Measure MM 3.8.1 has already been satisfied and is shown in light grey format. The mitigation measures applicable to the Modified Project that remain in place are listed below.

MM 3.8.1 A detailed cultural resources field survey of the subject property shall be conducted prior to approval of the project. The cultural resources field survey shall identify any cultural resource finds and will set out measures to mitigate any impacts to any significant resources as defined by CEQA, the California Register of Historical Resources, and/or the National Historic Preservation Act. Mitigation methods to be employed include but are not limited to the following:

- Redesign of the development project to avoid the resource. The resource site shall be deeded to the City or a nonprofit agency to be approved by the City for maintenance of the site.
- If avoidance is determined to be infeasible by the City, the resource shall be mapped, stabilized, and capped pursuant to appropriate standards.
- If capping is determined to be infeasible by the City, the resource shall be excavated and recorded to appropriate standards.

Timing/Implementation: *Prior to approval of development plan or project*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.8.2 If cultural resources (i.e., prehistoric sites, historic sites, and isolated artifacts) are discovered during grading or construction activities in the Project area, work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history shall be retained to determine the significance of the discovery.

The City shall consider mitigation recommendations presented by a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history for any unanticipated discoveries. The City and the Project applicant of the site where the discovery is made shall consult and agree on implementation of a measure or measures that the City deems feasible. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The Project applicant shall be required to implement any mitigation necessary for the protection of cultural resources.

Timing/Implementation: *As a condition of project approval and implemented during grading and/or construction activities*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.8.3 If human remains are discovered during any ground-disturbing activities in the Project area, all work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and the Riverside County Coroner must be notified per California Public Resources Code Section 7050.5 and California Health and Safety Code Section 5097.98. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and (e) shall be followed.

Timing/Implementation: *As a condition of project approval and implemented during grading and/or construction activities*

Enforcement/Monitoring: *City of Eastvale Planning Department*

Conclusion: The Modified Project would not change the limits of disturbance compared to the Original Project and no conditions or circumstances have changed relative to historical, archaeological, or tribal cultural resources on the Project site. Therefore, the analysis and conclusions presented in the Prior EIR remain unchanged for the Modified Project. The Prior EIR identified Mitigation Measures MM 3.8.1 through 3.8.4 to reduce impacts associated with archaeological and paleontological resources to less than significant. Mitigation Measure MM 3.8.1 has been satisfied and is no longer applicable, and Mitigation Measures MM 3.8.2 and 3.8.3 remain applicable to the Modified Project. Mitigation Measure 3.8.4 has been revised and is presented in Section 2.7 Geology and Soils, consistent with the revisions to CEQA Guidelines Appendix G.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and impacts remain less than significant with mitigation as presented in the Prior EIR.

2.6 Energy

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

Discussion: Since preparation of the Prior EIR, CEQA Guidelines Appendix G has been revised to include a specific section on Energy. The Prior EIR analyzed potential impacts associated with energy consumption in the Utilities section. A Project-specific energy analysis was prepared for the Modified Project. The analysis is included in "*Air Quality, GHG, and Energy Impact Study*", prepared by RK Engineering Group, Inc., dated December 22, 2021, is included in Appendix B. The Prior EIR concluded the increase in energy consumption from the Original Project would be less than significant. No changes to the conclusions presented in the Prior EIR would occur for the Modified Project as confirmed by the Energy Study.

a, b) The Energy Study for the Modified Project quantified projected energy use of electricity, natural gas, and petroleum. The Energy Study determined the Modified Project would not cause a wasteful, inefficient, or unnecessary consumption of energy resources with implementation of the mandatory requirements of California's Building Energy Efficiency Standards (Title 24, Part 6) and Green Building Standards (CALGreen, Title 24, Part 11). California's building energy efficiency standards are some of the strictest in the nation and the Project's compliance with California's building code will ensure that wasteful, inefficient or unnecessary consumption of energy is minimized. The building standards code is designed to reduce the amount of energy needed to heat or cool a building, reduce energy usage for lighting and appliances and promote usage of energy from renewable sources.

Additionally, the Modified Project would not obstruct or conflict with renewable energy plans. Future occupants of the Modified Project will purchase electricity through Southern California Edison which is subject to the requirements of California Senate Bill 100 (SB 100). SB 100 is the most stringent and current energy legislation in California; requiring that renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers and 100% of electricity procured to serve all state agencies by December 31, 2045.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: The Energy Study prepared for the Modified Project provides greater site-specific detail and analysis than the information presented in the Prior EIR, but the assessment and compliance with energy standards and regulations are not new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. The changes associated with the Modified Project would not cause wasteful, inefficient, or unnecessary consumption of energy resources or obstruct renewable energy plans. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

2.7 Geology and Soils

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:	☐	☐	☒	☐
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☒	☐
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐

Discussion: The analysis presented in the Prior EIR was based on a review of published information, surveys, and reports regarding regional geology and soils. Information was obtained from private and governmental agencies and Internet websites,

including the Natural Resources Conservation Service (NRCS), the California Geological Survey (CGS), and the US Geological Survey (USGS).[22]

A site-specific geotechnical evaluation was prepared for the Modified Project. The report, "*Preliminary Geotechnical Evaluation Including Near Surface Organic Content for the Proposed Approximately 160-Acre "Leal" Property, City of Eastvale, California,"* prepared by LGC Geotechnical, Inc. and dated June 21, 2021, and *"Geotechnical Responses to City Reviewer Geotechnical Review Comments dated February 16, 2022 for the Proposed Approximately 160-Acre "Leal" Property, City of Eastvale, California,"* prepared by LGC Geotechnical, Inc. and dated April 5, 2021, is included in Appendix E.

a- i) As indicated in the Prior EIR, the Project site is not located within a State of California Alquist-Priolo Earthquake Fault Zone. The Geotechnical Evaluation prepared for the Modified Project confirmed this conclusion and determined that no faults were identified on the Project site as part of the site evaluation. The Modified Project does not change the Project boundary or the conclusion that the potential for rupture of an earthquake fault is less than significant. Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

a – ii) The Project site would be subject to strong ground shaking, as is most of Southern California. The Prior EIR concluded that impacts would be less than significant. The Modified Project does not change the limits of disturbance or the underlying geology. The Modified Project is subject to California Building Code (CBC), which establishes seismic standards for new construction. Furthermore, the Geotechnical Evaluation report evaluated seismic characteristics of the Project site and found no unique conditions, new information, or changes in circumstances pertaining to seismic impacts that were not known or could not have been known with the exercise of reasonable diligence at the time of the Prior EIR.

The Modified Project includes a Project Design Feature (PDF), which is a component of the Modified Project's Project Description, that incorporates the recommendations presented in the Geotechnical Evaluation report. Many of these recommendations require compliance with adopted standards and codes. Some of the recommendations provide greater site-specific details and analysis than the information presented in the Prior EIR, but these recommendations are not a substantial change with respect to the circumstances under which the project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. With

[22] Leal Master Plan Draft EIR, July 2015, Section 3.9.4, Page 3.9-2

incorporation of the geotechnical recommendations, impacts from ground shaking would be less than significant.

Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

a-iii) The Prior EIR concluded based on Map My County[23], the Project site is located in an area mapped as having "moderate" and "high" liquefaction potential and concluded the potential impact is less than significant. The Geotechnical Evaluation prepared for the Modified Project determined that site soils are not generally susceptible to liquefaction due to a lack of groundwater in the upper 50 feet. Records indicate groundwater levels recorded in the area are at depths greater than 100 feet below the ground surface. However, isolated layers are susceptible to dry sand seismic settlement. Total dynamic settlement is estimated to be on the order 0.5-inch or less. Differential settlement is estimated as half of the total settlement over a horizontal span of 40 feet, which would be minimal.

The Geotechnical Evaluation provides greater site-specific detail and analysis than the information presented in the Prior EIR, but this is not a substantial change with respect to the circumstances under which the project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

a-iv) The Prior EIR determined that given the flatness of the Project site, there is no potential for landslides to occur on or near the Project site. The Geotechnical Evaluation for the Modified Project confirms that conclusion. Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) As analyzed in the Prior EIR, the loss of topsoil or soil erosion can occur with any development of the Project site regardless of design. The design revisions associated with the Modified Project would not substantially increase the risk of topsoil loss or erosion. As indicated in the Geotechnical Response dated April 5, 2022 (Appendix E), "The proposed grading activities that will be part of the development of the subject site will include removal of the topsoil across the site and replacement with engineered fill material. The proposed grading plan does not have any natural or

[23] Leal Master Plan Draft EIR, July 2015, Section 3.9.3, Page 3.9-3

steep slopes that would be subject to excessive erosion. The ground surface at the completion of grading will be engineered fill with typical site drainage and typical slope inclinations." During construction, the Modified Project site is subject to the requirements of a National Pollutant Discharge Elimination System (NPDES) General Construction Permit, which requires Best Management Practices (BMPs) to prevent erosion or soil loss during construction.

Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

c) The stability of the geologic unit underlying the Project site was analyzed in the Prior EIR and impacts were determined to be less than significant. The Geotechnical Evaluation provides a site-specific evaluation and determined the near-surface loose and compressible soils are not suitable for development in the present condition given the quantity of organic rich soils. The Geotechnical Evaluation provides greater site-specific detail and analysis than the information presented in the Prior EIR, but this is not a substantial change with respect to the circumstances under which the project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR.

Total organic carbon content generally greater than 2 percent is not suitable for compacted fill soils. From a geotechnical perspective, onsite soils are anticipated to be suitable for use as general compacted fill provided the high organic content soils (soils with organic content greater than 5 percent) are removed from the site and the remaining soils with organic content between 2 and 5 percent are blended and mixed with "clean" soils and screened of construction debris and any oversized material (8 inches in greatest dimension). Therefore, as described in the Project Description and included in Project Design Feature PDF GEO-1, the top layer of organic materials must be removed from the Project site, resulting in approximately 354,400 cubic yards of export. With implementation of the PDFs, the Project site would be suitable for development.

Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

d) The Prior EIR concluded that based on literature and mapping, the on-site soils would not have a high expansion potential. The Geotechnical Evaluation prepared for the Modified Project includes a more detailed site-specific analysis and concludes based on laboratory testing that site soils are anticipated to have "Very Low" expansion potential.

Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

e) No septic tanks or alternative wastewater disposal systems were proposed with the Original Project. The Modified Project also does not propose the use of septic systems. Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

f) The Cultural and Paleontological Resources Assessment prepared for the Modified Project determined the Project site includes areas of high sensitivity for paleontological deposits (*Cultural and Paleontological Resources Assessment, October 2021,* prepared by Duke CRM; Appendix D). While no paleontological resources were identified on the Project site during the field surveys, multiple fossil localities have been documented with three miles of the Project site. The eastern portion of the Project site has a higher potential for paleontological resources than the remainder of the site. Therefore, paleontological monitoring in the eastern portion of the site is required during ground disturbance. The Prior EIR included Mitigation Measure MM 3.8.4, which requires that a qualified paleontologist evaluate any paleontological discoveries during grading. The potential for paleontological discoveries has not changed since certification of the Prior EIR and the limits of disturbance have remained the same. This mitigation measure is being revised in this Addendum to require a qualified paleontologist monitor grading activities on the eastern portion of the site, which is more efficient for grading activities instead of the requirement to call a monitor to the site to evaluate paleontological resources if found during grading. Therefore, no change in analysis from the Prior EIR would occur and Mitigation Measure MM 3.8.4 remains applicable to the Modified Project as modified.

Therefore, the conclusions presented in the Prior EIR remain unchanged. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant with implementation of the following mitigation measure as presented in the Prior EIR.

Mitigation Measures: The mitigation measure applicable to the Modified Project, which was previously included within the Cultural Resource Section, remains in place, however this mitigation measure has been modified to require paleontological monitoring during ground disturbing activities. The revised language is in underline and strike-through format as shown below.

MM 3.8.4 Prior to issuance of a grading permit, a certified professional

paleontologist will be retained by the developer to provide professional paleontological services, which will include survey, education of construction workers, onsite construction monitoring, appropriate recovery, and reporting.

A paleontological monitor shall be present during ground disturbing activities in the eastern half of the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation).

1. The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols.

2. The paleontological monitor shall be present full-time during ground disturbance in the eastern half of the Project, including but not limited to grading, trenching, utilities, and offsite easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced.

3. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered.

4. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area.

5. In consultation with the qualified paleontologist the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared.

6. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately.

7. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find.

For the remaining portions of the Project site, if ~~If~~ any paleontological resources (fossils) are discovered during grading or construction activities in the Project area, work shall be halted immediately within 50 feet of the discovery, and the City Planning Department shall be immediately notified. At that time, the City will coordinate any necessary investigation of the discovery with a qualified paleontologist.

The City shall consider the mitigation recommendations of the qualified paleontologist for any unanticipated discoveries of paleontological resources. The City and the Project applicant shall consult and agree on implementation of a measure or measures that the City deems feasible and appropriate. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The Project applicant shall be required to implement any mitigation necessary for the protection of paleontological resources.

Timing/Implementation: *As a condition of project approval and implemented during grading and/or construction activities*

Enforcement/Monitoring: *City of Eastvale Planning Department*

Conclusion: A site-specific Geotechnical Evaluation report was prepared for the Modified Project. The Geotechnical Evaluation provides greater site-specific detail and analysis than the information presented in the Prior EIR but not new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. The additional analysis performed for the Modified Project introduces additional evidence in the record that impacts remain as described in the Prior EIR and less than significant. Therefore, no changes to the conclusions presented in the Prior EIR are warranted No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant with mitigation incorporated.

2.8 Greenhouse Gas Emissions

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☐	☒
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☐	☒

Discussion: The Prior EIR analyzed Greenhouse Gas (GHG) emissions from the Original Project by quantifying emissions of metric tons (MT) of Carbon Dioxide (CO_2) equivalents (CO_2e) from construction and operations. The Prior EIR relied on the California Emissions Estimator Model (CalEEMod) version 2013.2.2 computer program developed by the South Coast Air Quality Management District (AQMD). The Prior EIR determined the Original Project would generate 105,649 CO_2e metric tons (MT) per year. The analysis took credit for State-led GHG reduction measures, such as low carbon fuel standards and green building code standards. The reduction dropped CO_2e emissions to 77,375 MT per year[24]. The Prior EIR concluded that emissions from the Original Project represented a 26.7 percent reduction from Business as Usual, greater than the threshold of significance of 21.7 percent, resulting in a less than significant impact.

An analysis of the GHG emissions for the Modified Project is included in the report, "*Leal Master Plan Amendment Project Air Quality, Greenhouse Gas, and Energy Impact Study,*" prepared by RK Engineering Group, Inc. and dated December 22, 2021, included in Appendix B. The GHG Study determined the Modified Project would generate approximately 32,220 MT CO_2e per year. Compared to the Original Project with CO_2e emissions of 77,375 MT per year, the Modified Project (32,220 MT CO_2e per year) would reduce GHG emissions by 45,155 MT CO_2e per year, which represents an approximately 58% reduction in GHG emissions.

a) The Prior EIR determined the Original Project would generate 77,375 MT CO_2e, which represented a 26.7% reduction from Business as Usual, which is a greater reduction than the 21.7% threshold of significance. By comparison, the Modified Project would generate approximately 32,220 MT CO_2e per year, which is 45,155 MT

[24] The 77,375 MT CO_2e emissions per year are 2035 levels. The GHG Study prepared by RK Engineering Group (Appendix B) used 2020 emission levels of 74,317 MT CO_2e per year in Table 20 for comparison with the Modified Project emissions. Since 2020 emission levels have passed, this Addendum relies on the 2035 emission levels for comparison.

CO_2e per year less than the Original Project, which represents an approximately 58% reduction in GHG emissions. Therefore, the Modified Project would generate less GHG emissions than the Original Project.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) The project will be required to comply with the mandatory requirements of the latest 2019 California Building Standards Code, including Title 24, Part 11, CALGreen and Title 24, Part 6, Energy Code. The purpose of the building standards is to reduce negative impacts on the environment through improved planning and design, energy efficiency, water efficiency and conservation and material and resource conservation. The California Building Standards were developed to help meet the requirements of the Global Warming Solutions Act (AB 32). As part of the latest Energy Code requirements, the project will be required to include rooftop solar panels, community solar panels, and/or other sources of on-site renewable energy capable of meeting the required California Energy Code Energy Design Rating. Therefore, by complying with the City's GHG reduction policy the project would not conflict with an applicable plan, policy, or regulation for the purpose of reducing the emissions of greenhouse gases.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: The Modified Project would reduce the amount of GHG emissions by approximately 58% compared to the Original Project and remain consistent with State policies for the reduction in GHG emissions. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

2.9 Hazards and Hazardous Materials

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e) For a project within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excess noise for people residing or working in the project area?	☐	☐	☒	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☒	☐

Discussion: The Prior EIR evaluated the Project site as a former dairy farm and agricultural use and concluded that the Project site was suitable for development with a mix of residential and commercial uses. The Prior EIR also concluded that the existing buildings on the Project site may contain asbestos, lead paint, or polychlorinated biphenyls (PCB) and that demolition of the existing structures could expose the environment or humans to hazardous materials. Mitigation Measures MM 3.10.2a, 3.10.2b, and 3.10.2c were included to reduce all impacts related to potential hazardous building materials on-site to less than significant.

The Modified Project includes two site-specific analysis of the Project site. The first study is a "*Phase I Environmental Site Assessment"* prepared by Hillmann Consulting, March 23, 2022, and included in Appendix F.1. The second study, also prepared by Hillmann Consulting is a "*Limited Phase II Subsurface Investigation Report"* dated March 23, 2022, and included in Appendix F.2.

The Phase I Environmental Site Assessment identified five Recognized Environmental Conditions (RECs) on the Project site as follows:

REC #1 There is a possibility for elevated methane gas in soil vapor at areas where livestock wastes accumulated.

REC #2 A historical 550-gallon gasoline underground storage tank (UST) is considered to be a REC due to the possibility for undocumented spills to have occurred.

REC #3 Maintenance and repair of farm equipment and vehicles appears to have been conducted for an extended period of time in an area of the northern portion of the Property, which could have resulted in undocumented spills.

REC #4 The Property was utilized as orchards since approximately 1931 to 1950s, resulting in the potential for residual pesticide concentrations in shallow soils due to historic application of pesticides.

REC #5 The presence of discarded/abandoned drums due to the unknown content and possibility of undocumented chemical spills/releases.

In response to the RECs identified as part of the Phase I Environmental Site Assessment, a Limited Phase II Subsurface Investigation of the Project site was conducted. The Phase II investigation included 96 near surface soil samples and methane testing. The results of the analysis conclude:

- Soil samples detected low levels of 4,4'-dichlorodiphenyldichleorethylene (DDE) and 4,4'-dichlorodiphenyltrichoroethane (DDT), which did not exceed the applicable screening levels for residential applications. DDT was a common pesticide once widely used in the past for insect control for agriculture purposes. DDE is a breakdown product of DDT.

- Soil sample analysis for heavy metals identified low background levels of metals, which did not exceed the applicable screening levels for residential applications.

- Soil gas sampling determined no detectable concentrations of petroleum hydrocarbons or volatile organic compounds (VOC), and no heavy metal concentrations exceeding residential screening levels.

- One sample had benzene concentrations that slightly exceed proposed residential screening levels (if they were to be adopted) but given the depth of the sample (14 feet) and consideration for attenuation provided by new construction, these very low concentrations do not pose a significant environmental or human health concern for the proposed residential use.

- Methane testing identified three samples out of fifteen with detectable concentrations of methane. The methane distribution was determined to not be widespread and the areas that were investigated were still covered with animal waste. The treatment for the areas with detectable methane includes removal of animal waste (organics), which is planned as part of the Project Description and PDFs.

The Phase I and Phase II assessments provide greater site-specific detail and analysis than the information presented in the Prior EIR, but this is not a substantial change with respect to the circumstances under which the project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. The Prior EIR evaluated the site as a former agricultural use being converted to allow a mix of uses including residential and commercial. The Modified Project would not change the limits of disturbance, which encumbers the entire site, or the existing site conditions.

a) The Original Project included the same project boundaries and a mix of commercial and residential land uses. The Modified Project would change the intensity of certain land uses but retain the same mix of land uses. The Prior EIR concluded that neither commercial nor residential development is expected to involve the routine transport, use, or disposal of hazardous materials in significant quantities.[25] The same conclusion would apply to the Modified Project because of the same mix of residential and commercial land uses.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) The Prior EIR determined construction activities could release hazardous materials into the environment, such as petroleum-based fuels or hydraulic fluid used for construction equipment. These materials are routine in construction projects and the risk would apply similarly to the Modified Project. Given the age of the structures on site, a possibility exists for asbestos and/or lead paint to occur within the construction materials used in the structures. The Prior EIR included three mitigation measures to reduce impacts to less than significant. Mitigation Measure MM 3.10.2a requires

[25] Leal Master Plan Draft EIR, July 2015, Section 3.10.5, Page 3.10-3

testing for asbestos, lead paint, and polychlorinated biphenyls (PCB) prior to demolition of the existing structures on site. This mitigation measure would apply to the Modified Project and reduce impacts to less than significant.

Mitigation Measure MM 3.10.2b requires preparation of a Phase I Environmental Site Assessment prior to grading. A Phase I has been prepared for the Modified Project and is included in Appendix F.1. A portion of this mitigation measure has been satisfied, however compliance with the recommendations from a Phase II assessment remains a requirement.

Mitigation Measure MM 3.10.2c requires all trash and debris be removed from the Project site and disposed of properly. This mitigation measure would apply to the Modified Project and reduce impacts to less than significant.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant with implementation of mitigation measures.

c) The Project site is located within 0.20 miles of Harada Elementary School. The Prior EIR concluded:

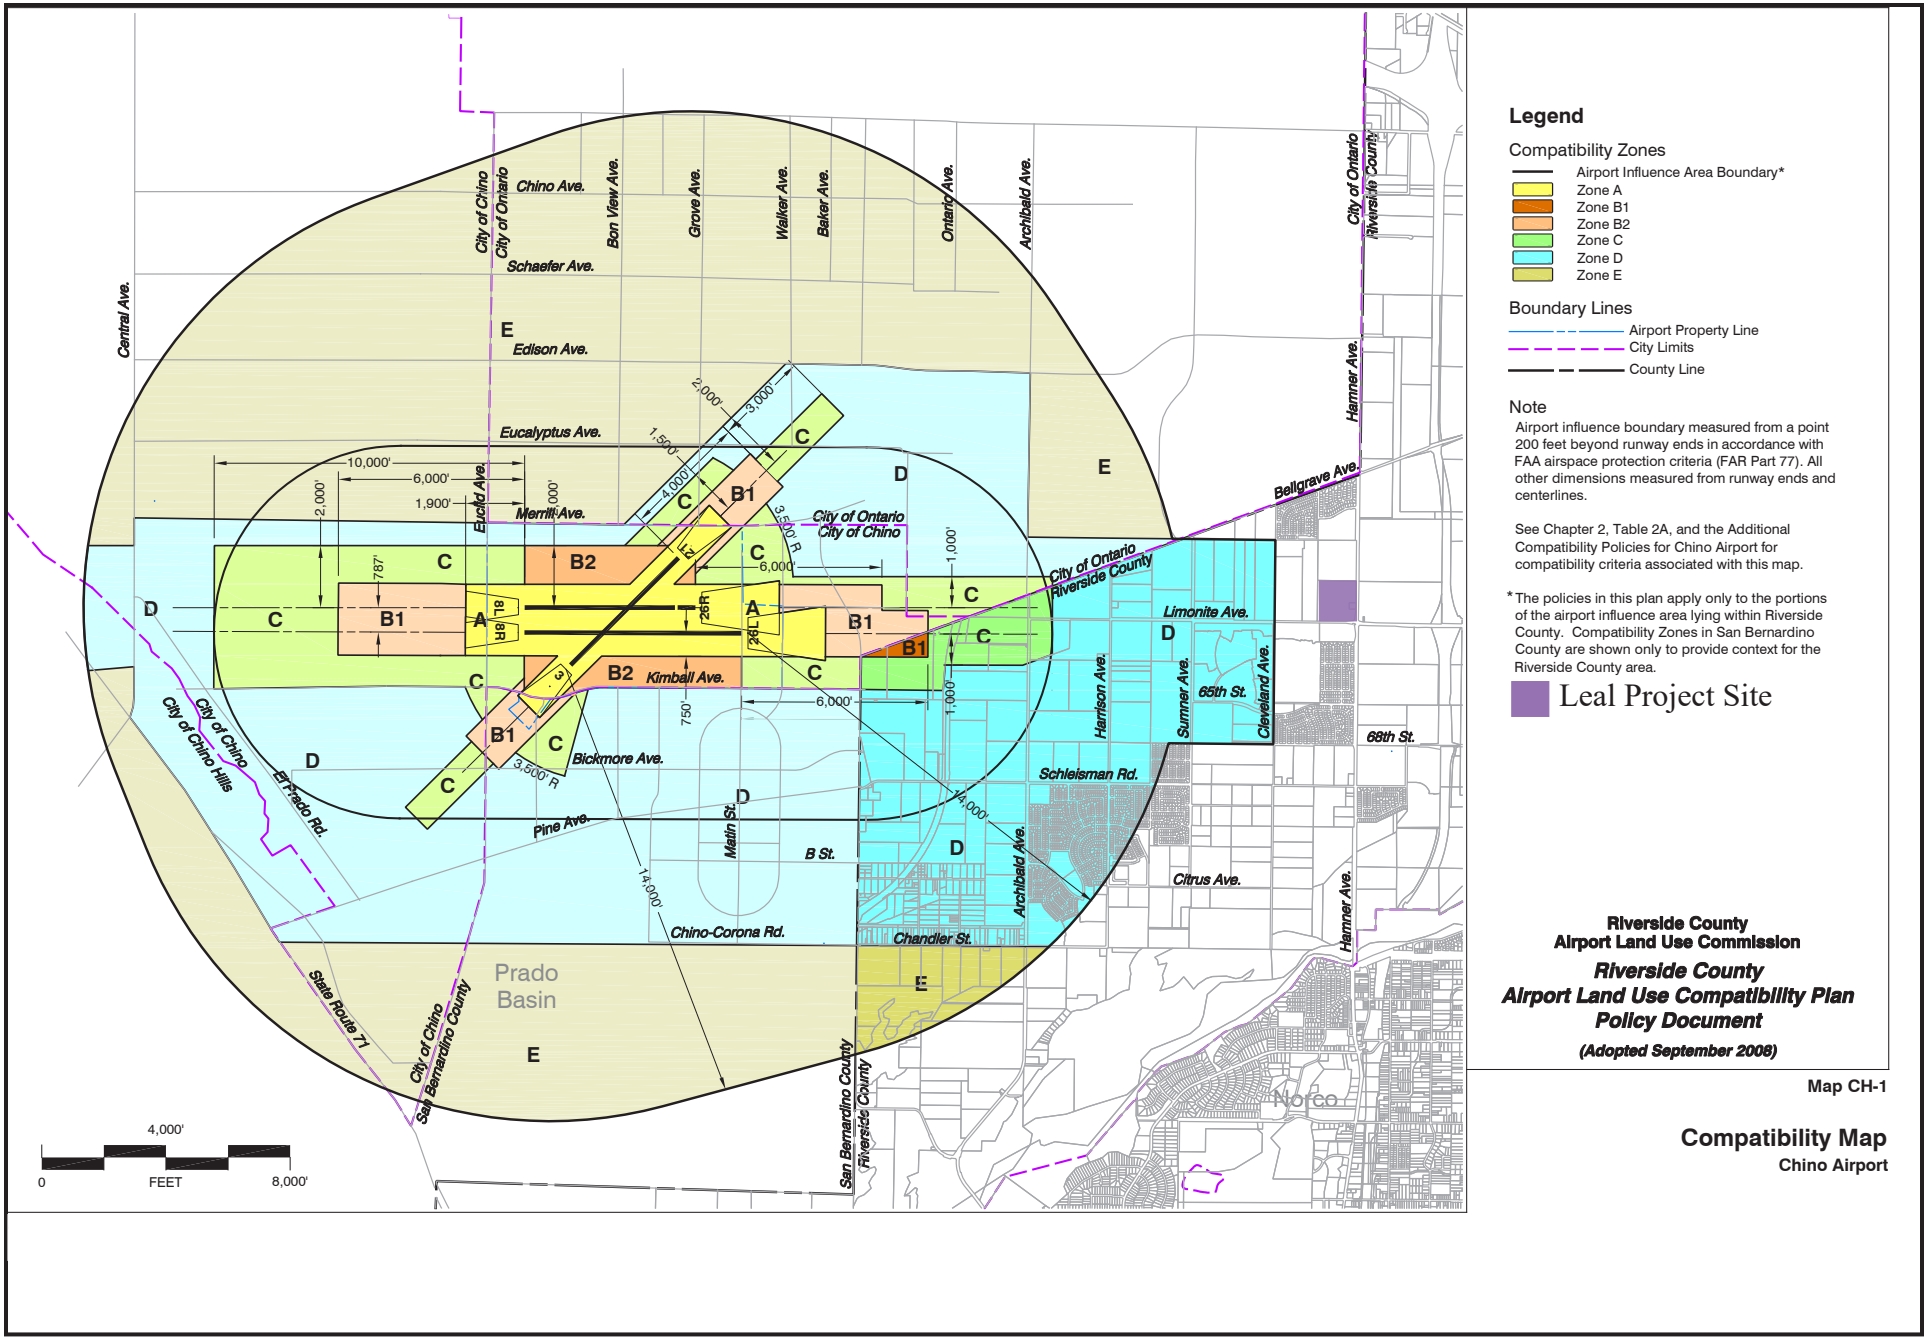
> "However, as described in response to Threshold 1, hazards to the public or to the environment through the routine use, handling, transport, and storage of hazardous materials would be subject to federal, state, and local health and safety requirements. The storage, handling, and disposal of hazardous materials are regulated by the EPA, OSHA, and the Fire Department. Therefore, the proposed Project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials."[26]

The Modified Project proposes the same mix of residential and commercial uses as the Original Project. Therefore, there is no change in the potential for release of hazardous materials during construction or operation of the Modified Project. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

d) The Phase I Environmental Site Assessment prepared for the Modified Project determined the Project site is not included on a list of hazardous materials sites and does not pose a risk to the public. Recent site inspections confirm no change in conditions would alter that conclusion presented in the Prior EIR. Therefore, no new

[26] Leal Master Plan Draft EIR, July 2015, Section 3.10.3, Page 3.10-6

significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.



e) The Project site is not located in an airport land use plan (see Figure 5) or near a private or public airstrip. The Modified Project would not change these findings. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

f) The Prior EIR concluded the Original Project would not impair the City's ability to implement its emergency response plan or use its emergency evacuation routes. The Modified Project includes less intensive development than the Original Project. As shown in Section 2.17, the Modified Project would reduce trip generation by 27,764 average daily vehicle trips, thereby reducing the number of potential vehicles on local roadways that may be used by emergency vehicles or for evacuation in the event of an emergency. The Modified Project would improve the surrounding circulation system with additional travel lanes on Limonite and Hamner and the Modified Project would contribute to fewer local roadway trips than the Original Project. The Modified Project would complete street improvements on all four surrounding streets. Therefore, as a result of the Modified Project proposing less intensive development than the Original Project and proposing to complete the surrounding street system, no new impacts would occur, and the conclusions presented in the Prior EIR remain unchanged.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

g) The Prior EIR concluded the Project site is not designated as a fire hazard severity zone. Since there are no changes to the boundaries of the Modified Project, the conclusions in the Prior EIR remain applicable. Furthermore, the California Department of Forestry and Fire Protection (CalFire) website was reviewed; and no change of fire hazard severity designation has occurred on the Project site since the Prior EIR was prepared and adopted[27]. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

N.T.S.

Figure 5
Airport Land Use Plan Map

Mitigation Measures: The measure that has already been satisfied is shown in light grey format. The mitigation measures applicable to the Modified Project that remain in place are listed below.

MM 3.10.2a Asbestos. Prior to the issuance of any permit for the demolition or alteration of existing structure(s), a letter shall be provided to the Planning Department from a qualified asbestos abatement consultant indicating that no asbestos-containing materials (ACM) are present in the building. If ACMs are found to be present, they will need to be abated in compliance with the South Coast Air Quality Management District's Rule 1403 and all other applicable state and federal rules and regulations.

Lead Paint. Prior to issuance of any permit for the demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Eastvale Building Safety and Inspection Department. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to OSHA regulations.

Polychlorinated Biphenyls. Prior to issuance of a demolition permit, a polychlorinated biphenyls (PCB) abatement contractor shall conduct a survey of the Project site to identify and assist with compliance with applicable state and federal rules and regulations governing PCB removal and disposal.

Timing/Implementation: *Prior to the issuance of demolition permit*

Enforcement/Monitoring: *City of Eastvale Building and Planning Departments*

MM 3.10.2b Prior to the issuance of any individual grading permit, a Phase I Environmental Site Assessment (ESA) shall be conducted to determine the potential for contaminated soil or groundwater on the site. If the Phase I ESA determines that the potential exists for contaminated soil or groundwater on-site, the project applicant shall conduct a Phase II ESA and shall follow its recommendations to remediate any potentially contaminated soil or groundwater. On-site contaminants must be addressed to the satisfaction of either Cal/EPA or the Riverside County Waste Management Department, with their approval of completion of activities/remedial action plans (RAP) submitted to the Eastvale Department of Building and Construction prior to the issuance of a grading permit.

Timing/Implementation: *Prior to issuance of individual grading permit*

Enforcement/Monitoring: *City of Eastvale Building and Planning Departments*

MM 3.10.2c All trash and debris observed on-site shall be removed prior to construction activities and disposed of at a landfill or approved dumpsite.

Timing/Implementation: *Prior to construction activities*

Enforcement/Monitoring: *City of Eastvale Building and Planning Departments*

Conclusion: A site-specific Phase I Environmental Site Assessment and a Limited Phase II Subsurface Investigation were prepared for the Modified Project. Those studies provide greater site-specific detail and analysis than the information presented in the Prior EIR. The additional analysis performed for the Modified Project introduces additional evidence in the record that impacts remain as described in the Prior EIR and less than significant with mitigation incorporated. The information provided is not a substantial change with respect to the circumstances under which the project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. Therefore, no changes to the conclusions presented in the Prior EIR are warranted. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant with mitigation.

2.10 Hydrology and Water Quality

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	☐	☐	☒	☐
i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☒	☐
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) impede or redirect flood flows?	☐	☐	☒	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

Discussion: The analysis in the Prior EIR determined the Original Project would have less than significant hydrology and water quality impacts. The Project site is located in Flood Hazard Zone X according to the Federal Emergency Management Agency

(FEMA) Flood Insurance Rate Maps (FIRM)[28]. Flood Zone X indicates the site is subject to minimal risk of flooding.

Two site-specific technical studies were prepared for the Modified Project. One report is titled, "*Preliminary Hydrology Analysis for Leal Ranch (Tentative Map No. 38290)*" prepared by Hunsaker & Associates Irvine, Inc., and dated November 29, 2021 (Appendix G). The second report is the "*Preliminary Water Quality Management Plan (PWQMP) for Tentative Map No. 38290*," prepared by Hunsaker & Associates Irvine, Inc., and dated November 29, 2021 (Appendix H).

The Modified Project proposes a series of storm drains to convey runoff from the Project site to an existing storm drain system within Limonite Avenue. This drainage pattern is consistent with the Eastvale Master Plan of drainage. The Modified Project also includes improvements, including catch basins within 58th Street, Hamner Avenue, Limonite Avenue, and Scholar Way. Catch basin laterals are proposed to join the existing storm drains within those perimeter streets. The Modified Project also includes two (2) water quality basins and one combined water quality/detention basin. These basins may be located either on the surface or buried beneath the surface. Current plans show these facilities buried beneath the surface, allowing for parks, parking lots, or other improvements on the surface above these facilities.

The proposed underground detention basin is currently sized approximately 360 feet long, 120 feet wide, and 6 feet deep. These dimensions may vary as long as equivalent storage is provided. Since the Original Project and Modified Project would convert the Project site from primarily pervious surface to largely impervious (80%), the detention basin is necessary to reduce peak storm flow rates to existing storm drain design flows.

The 100-year storm event is the major storm event used to size storm drain facilities. During a 100-year storm event, storm flow of 252 cubic feet per second (cfs) would flow into the detention basin and flows of 82 cfs would flow out of the basin. The detention provided by the basin allows the runoff from the Modified Project to be less than the existing storm drain design flow rate, as shown in the following table.

Table 13. Existing Storm Drain Design Flow Rate[29]

Node	Flow without Detention (cfs)	Flow Reduction from Detention (cfs)	Flow after Detention (cfs)	Existing Storm Drain Design Flow Rate (cfs)
75	322.0	170.1	151.9	160.0

[28] FEMA (Federal Emergency Management Agency). 2021. Flood Insurance Rate Map (FIRM) Panel 06065Co681G and 06065CO677G. Visited December 2021. http://msc.fema.gove/portal.
[29] Table 2, from "Preliminary Hydrology Analysis for Leal Ranch (Tentative Map No. 38290)," prepared by Hunsaker & Associates Irvine, dated November 29, 2021.

The PWQMP identified potential treatment options for runoff prior to discharge from the Project site in accordance with the Regional Water Quality Control Board Order No. R8-2010-0033 (MS4 Permit). The Original Project and Modified Project would change the existing Project site from largely pervious to a mix of 80% impervious and 20% pervious. As such, the Modified Project is required to treat runoff from the Project site. The MS4 Permit requires projects implement Low Impact Development (LID) principles to the extent feasible. The primary LID principle each Project must analyze is infiltration. Infiltration testing was conducted, and the infiltration rates do not meet minimum standards, therefore, infiltration cannot be relied upon as the primary treatment option. The Modified Project proposes biotreatment/bioretention basins that will allow for incidental infiltration. The biotreatment/bioretention basins rely on proprietary treatment of flows prior to discharge into the storm drain system off the Project site.

a) Short-term water quality requirements apply during construction and long-term water quality requirements apply for the built condition. The Prior EIR analyzed both conditions and determined impacts would be less than significant. During construction water quality impacts could occur from surface water pollutants such as sediment, oil, grease, and trash. Since the development area is greater than 1 acre, a Stormwater Pollution Prevention Plan (SWPPP) must be prepared to identify the best management practices (BMPs) to be implemented during construction. Implementation of the SWPPP would reduce impacts to less than significant. The Modified Project includes the same amount of grading area as the Original Project and would also be subject to a SWPPP. Therefore, the analysis and conclusions presented in the Prior EIR remain unchanged for the Modified Project.

A Preliminary Water Quality Management Plan (PWQMP) was prepared for the Modified Project. The Modified Project relies on two underground biotreatment/bioretention basins that rely on proprietary treatment systems. An example of proprietary treatment system is a modular wetland, which has been accepted by most agencies. The Project site does not qualify to rely on infiltration as the primary source of treatment, however, the treatment basins will allow for incidental infiltration.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) The Prior EIR determined the Original Project would have a less than significant impact on groundwater recharge. Percolation tests were performed as part of the PWQMP for the Modified Project, which determined that existing percolation rates do not meet the minimum standards to rely on infiltration. Furthermore, the Geotechnical Study for the Modified Project determined that existing groundwater levels are greater than 100-feet below the ground surface (*Preliminary Geotechnical Evaluation Including Near Surface Organic Content for the Proposed Approximately 160-Acre "Leal"*

Property, City of Eastvale, California, prepared by LGC Geotechnical, Inc; Appendix E). The low infiltration rates and low groundwater depth both indicate that the Project site is not substantially contributing to groundwater recharge.

Therefore, the analysis presented in the Prior EIR would apply to the Modified Project because the conditions remain the same. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

c.i, c.iv) The Modified Project would not change the drainage patterns as analyzed in the Prior EIR for the Original Project. Runoff from the Project site continues to flow from north to south, collecting in the southwestern portion of the Project site near Limonite Avenue. No stream or river is located on the Project site. Storm flows are primarily captured in streets or sheet flow over vegetated land. The Modified Project includes details of a storm drain system that would collect surface flows in catch basin inlets in the streets and convey flows via a storm drain system under on-site roadways to an underground detention vault located southwest portion of the Project site.

The Modified Project would increase the amount of impervious surface compared to existing conditions. This increase in impervious surface would increase the amount of runoff, however, through the Project design, peak discharge from the Modified Project would be less than the existing condition and less than the design flows of the existing storm drain in Limonite Avenue. By containing the runoff within proposed and existing storm drains, the Modified Project would not cause erosion or siltation on or off the Project site. The Hydrology Study for the Modified Project provides greater site-specific detail and analysis than the information presented in the Prior EIR, but this is not a substantial change with respect to the circumstances under which the project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR.

Therefore, the analysis and conclusions presented in the Prior EIR remain unchanged and no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

c.ii - c.iii) As described above, the Modified Project includes a large subsurface detention basin to restrict peak flows during a 100-year storm event. The detention basin would outlet flows less than the design flows of the existing storm drain in Limonite Avenue. Therefore, the Modified Project would not create or contribute runoff water that would exceed the capacity of the existing stormwater drainage systems. Also as previously described, the Modified Project includes two biotreatment/bioretention facilities designed to treat initial storm flows to meet applicable local and state water quality requirements. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with

the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

d) The Original Project boundary is not located within a FEMA designated 100-year flood zone. The Modified Project does not change the Project boundary and is therefore also located outside of a FEMA designated 100-year flood zone. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

The Original Project site is located over 30 miles from the Pacific Ocean and not located near a large body of water, therefore, the Project site is outside of a tsunami inundation area and not at risk of impacts from a seiche. The Modified Project does not change the Project boundaries and is therefore located outside of a flood zone, and tsunami and seiche inundation area, and therefore not at risk of discharging pollutants during a flood, tsunami or seiche. Furthermore, areas disturbed by grading and construction for the Modified Project would be either paved or landscaped with vegetation to control surface erosion. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

e) The Original Project boundaries are not located within a sustainable ground water management plan. The Modified Project does not change the Project boundaries and is therefore also located outside of a sustainable ground water management plan. The Project site is subject to the Regional Permit issued by the Regional Water Quality Control Board (MS4) and a PWQMP has been prepared to show how the Modified Project will comply with the MS4 requirements. Percolation tests were performed as part of the PWQMP for the Modified Project, which determined that existing percolation rates do not meet the minimum standards to rely on infiltration. Furthermore, the Geotechnical Study for the Modified Project determined that existing groundwater levels are greater than 100-feet below the ground surface. The low infiltration rates and low groundwater depth both indicate that the Project site is not substantially contributing to groundwater recharge.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: The Modified Project includes a site-specific hydrology study and preliminary water quality management plan that confirm the analysis and conclusions presented in the Prior EIR. The information provided in the hydrology study and PWQMP is not a substantial change with respect to the circumstances under which the

project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. The Modified Project would reduce peak stormflow discharge below the design flow of the existing storm drain in Limonite Avenue and include water treatment measures consistent with the MS4 requirements. Therefore, the analysis and conclusions presented in the Prior EIR remain unchanged for the Modified Project. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

2.11 Land Use and Planning

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

Discussion: On December 13, 2017, the City of Eastvale certified an Environmental Impact Report (EIR) (State Clearinghouse No. 2015031028) for the 158.6-acre[30] Project site, adopted a Statement of Overriding Considerations for significant but unavoidable impacts, amended the Eastvale General Plan to incorporate the Leal Master Plan (including amending land use policies and the Land Use Map) and voted to adopt the Leal Master Plan and a corresponding change of zone from heavy agriculture (A-2) to Leal Master Plan. On January 10, 2018, the City held the second reading and adopted the Leal Master Plan and change of zone to Leal Master Plan. The Leal Master Plan outlined a multistage planning and development process. The first stage included the adoption of the Leal Master Plan, which identified "the project objectives and specific parameters for the design and quality of overall future development of the project site."[31] Stage 2 of the development process was anticipated to focus on "preparing project-wide development criteria and guidelines that are not included in the Master Plan, creating detailed plans for the first phase(s) of development based on the criteria and guidelines included in the Master Plan."[32] The last development phase outlined in the Master Plan consists of the "submittal of specific development projects through the Development Plan Review process established in the Eastvale Zoning Code."[33]

The Modified Project consists of an amendment to the Leal Master Plan, Development Agreement, Tentative Tract Map (TTM), and Major Development Review. This represents Stage 2 of the development process outlined in the Leal Master Plan. The Leal Master Plan Amendment provides a Project-wide site plan and identifies

[30] The Leal Master Plan EIR identifies the size of the Project site as 161 acres. Based on detailed engineering, the actual size of the Project site is 158.6 acres.
[31] Leal Master Plan EIR, December 2017, Project Description Page 2.0-2
[32] Leal Master Plan EIR, December 2017, Project Description Page 2.0-2
[33] Leal Master Plan EIR, December 2017, Project Description Page 2.0-2

permitted development intensities and development standards. The TTM creates both numbered lots for development areas and lettered lots for streets, parks, and open space.

a) The Prior EIR determined the Original Project would not physically divide an existing community. The Modified Project provides additional planning detail on future development of the Project site, consistent with the original Leal Master Plan. The boundaries of the Project site remain unchanged and the type of future development continues to provide a mix of residential and commercial uses.

Therefore, the Modified Project would not physically divide an existing community and no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) The Original Leal Master Plan did not establish a maximum number of dwelling units and no minimum development standards were identified. Therefore, development of the Project site had a wide range of flexibility. Given the wide flexibility, the Original Project established the following land use assumptions that were used in the Original Leal Master Plan EIR.

Table 14. Buildout Assumptions for the Original Project

Land Use
660 multi-family homes (apartments)
1,525,000 square feet of general retail (shopping center)
460,000 square feet of general office
460,000 square feet of medical office
450 hotel rooms
100,000-square-foot civic center

The Modified Project proposes a land use intensity of 2,500 residential dwellings, 595,000 square feet of commercial uses and a fire station. As planned in the Stage 2 sequencing, the Modified Project continues to provide development flexibility to allow for development to occur in accordance with market conditions as part of Stage 3 planning. While no Stage 3 development plans have been prepared, the 2,500 dwelling units and 595,000 square feet of commercial uses have been allocated as shown in the following table for purposes of this Addendum. It is important to note that the following mix of uses is conceptual and may change during the Stage 3 planning processes. Since development of the site could take many years and each planning area requires a separate Stage 3 planning process, development of the Project site could vary from the assumptions provided in the table below. If changes to these assumptions occur in the future, the City is responsible to evaluate those changes and determine if additional environmental review pursuant to CEQA is required.

Table 15. Buildout Assumptions for the Modified Project

Land Use
1,840 medium density residential (400 single family detached and 1440 single family attached)
660 high density residential (apartment units)
390,000 square feet of general retail (shopping center)
65,000 square feet of general office
65,000 square feet of medical office
75,000 square feet civic center (City Hall, Library, Police)
12,200 square feet fire station

The following table compares the development assumptions between the Original Project and the Modified Project.

Table 16. Land Use Comparison Table

Land Use	Original Project	Modified Project	Difference
Medium Density Residential	0	1,840	+1,840 units
High Density Residential	660	660	no change
Retail (Shopping Center)	1,525,000	390,000	-1,135,000 sf
General Office	460,000	65,000	-395,000 sf
Medical Office	460,000	65,000	-395,000 sf
Hotel	450	0	- 450 rooms
Civic Center	100,000	75,000	- 25,000 sf
Fire Station	0	12,200	+ 12,200 sf

Therefore, the Modified Project is consistent with adopted plans and policies governing the Project site. Furthermore, as analyzed in the Prior EIR and applicable to the Modified Project, the Project site is located within the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP); however, is not located within any MSHCP Criteria Areas, Cell Groups, or Subunits and is not located in survey areas for Amphibians, Mammals, or Special Linkage areas. As analyzed in Section 2.4, Biological Resources, the Project is consistent with the MSHCP and does not provide suitable habitat for sensitive species. Furthermore, as analyzed in the Prior EIR and applicable to the Modified Project, the Project site is not subject to any local policies, such as a tree preservation ordinance.

The conclusions presented in the Prior EIR remain unchanged and no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: The Modified Project is consistent with the City's General Plan land use designation, density limit, and policies. The Modified Project is also consistent with the existing Zoning for the Project site as it continues to contain a mix of residential and non-residential uses. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. No impacts would occur.

2.12 Mineral Resources

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☒	☐
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☒	☐

Discussion: In accordance with State CEQA Guidelines Section 15128, the Prior EIR determined that as a result of the absence of environmental resources or Project characteristics to produce impacts, the potential effect on Mineral Resources was found to be less than significant. The Modified Project would not change the limits of disturbance, which encumbers the entire site, therefore the analysis and conclusions presented in the Prior EIR remain unchanged. Furthermore, the site-specific geotechnical analysis evaluated the Project site's soil conditions and found no mineral resources that would be a value to the region (*Preliminary Geotechnical Evaluation Including Near Surface Organic Content for the Proposed Approximately 160-Acre "Leal" Property, City of Eastvale, California,* prepared by LGC Geotechnical, Inc; Appendix E).

Therefore, the Modified Project would not create any new or greater significant impacts.

a) Consistent with the findings in the Prior EIR, no known mineral resources are located on the Modified Project site, which is further evidenced by the fact that during extensive geologic subsurface exploration across the entire Project site, no mineral resources were observed. The Project site is mapped Mineral Resource Zone (MRZ) - 3 by the California Department of Conservation[34]. MRZ-3 identifies areas containing mineral deposits, the significance of which cannot be evaluated from available data, however, the extensive geologic subsurface exploration across the entire Project site confirmed no mineral resources are located onsite. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

[34] California Department of Conservation. 2022. California Department of Conservation Mineral Lands Classification website. https://maps.conservation.ca.gov/mineralresources/.

b) The Eastvale General Plan designates the Project site for Leal Master Plan, permitting future development of residential and commercial uses. Therefore, no loss of mineral resources identified on any City land use maps would occur as a result of the Modified Project. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project. No new mitigation is necessary and impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: The Modified Project would not change the analysis or conclusions found in the Prior EIR and no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

2.13 Noise

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☐	☒
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☐	☒
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐

Discussion: The Prior EIR analyzed potential construction, operation, and vibration noise associated with development of the Original Project and determined impacts associated with a substantial permanent increase in ambient noise levels would be significant and unavoidable, even after implementation of mitigation measures.

A Project-specific noise study was prepared for the Modified Project. The study, "*Leal Master Plan Amendment Noise Impact Study*" prepared by RK Engineering Group, Inc. on December 21, 2021, is included in Appendix I. The Noise study analyzed impacts associated with construction and operation of the Modified Project as presented in the Project Description.

The Modified Project includes the following Project Design Features (PDFs) that are recognized for reducing noise levels. The PDFs include:

NOI PDF-1 Prior to the issuance of building permits, the Project will demonstrate that building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to commercial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways:

- Install sound barriers (masonry walls or walls with earth berms) between residences and noise sources.

- Install double-paned or upgraded STC sound rated windows.
- Provide sound insulating exterior walls and roofing systems.
- Locate and/or design attic vents to minimize sound propagation into each home.
- Provide forced-air ventilation systems.
- Provide the necessary setbacks for dwelling units fronting along major roadways.

NOI PDF-2 The Project will comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls).

NOI PDF-3 For proper acoustical performance, all exterior windows, doors, and sliding glass doors will have a positive seal and leaks/cracks must be kept to a minimum.

NOI PDF-4 The final building plans will ensure that HVAC units are not located within an area of the Project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Eastvale Municipal Code requirements. To meet the City's noise standards the following measures should be followed:

- All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses.
- The combined noise level of all units operating simultaneously shall not exceed the City of Eastvale daytime and nighttime exterior standards at the nearest surrounding property lines.

NOI PDF-5 Future residents, property management personnel, and commercial tenants will be required to comply with the City of Eastvale Municipal Code Noise Regulations, Chapter 8.52, which specify that no person shall create loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness.

To help ensure compliance with the City's Noise Regulations, the following recommendations are provided:

- Deliveries, loading and unloading activities, and trash pick-up hours should be limited to daytime hours only (8 a.m. – 10 p.m.).
- Limit engine idling time for all delivery vehicles and moving trucks to 5 minutes or less.

NOI PDF-6 The Project will prepare a construction management plan and obtain a construction work permit from the City of Eastvale prior to starting

construction. The construction management plan will ensure all contractors implement construction best management practices to reduce construction noise levels. Examples of best management practices may include the following:

- All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields).
- Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.
- If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load.
- Use electric air compressors and similar power tools rather than diesel equipment, where feasible.
- Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible.
- Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes.
- Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator.
- Construction activities shall not take place between the hours of 6:00 p.m. and 6:00 a.m. during the months of June through September and 6:00 p.m. to 7:00 a.m. during the months of October through May.

NOI PDF-7 The Project will not include pile driving or blasting activities during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment will be conducted prior to start of any activity.

With implementation of the PDFs, the Modified Project would not generate a substantial temporary or permanent increase in ambient noise levels in excess of City standards. The Modified Project would generate approximately 27,764 fewer average daily trips than the Original Project, resulting in less traffic noise contribution to the surrounding roadways than previously analyzed in the Prior EIR. Lastly, the Modified Project has reduced the amount of commercial land use in favor of a greater amount

of residential use, which is generally considered a more compatible land use with the surrounding community from a noise standpoint.

a) The Noise Study prepared for the Modified Project analyzed noise impacts from long-term operations of the proposed development and short-term construction noise impacts. The Modified Project would generate approximately 27,764 fewer average daily trips than the Original Project, resulting in less operational traffic noise contribution to the surrounding roadways than previously analyzed in the Prior EIR. Furthermore, the Modified Project would not cause a significant impact associated with a change in roadway noise levels as shown in the following table.

Table 17. Roadway Noise Impact Analysis (dBA CNEL)[1] Existing Year Conditions[35]

Roadway[2]	Segment	CNEL at the Nearest Façade			
		Existing Without Project	Existing with Project	Change as a Result of Project	Significant Impact?[3]
Limonite Avenue	Archibald Ave to Harrison Ave	68.2	69.0	0.8	NO
Limonite Avenue	Harrison Avenue to Scholar Way	69.7	70.3	0.6	NO
Limonite Avenue	Scholar Way to Hamner Avenue	69.0	71.3	2.3	NO
Limonite Avenue	Hamner Avenue to I-15 Ramps	70.8	72.2	1.4	NO
Limonite Avenue	I-15 Ramps to Wineville Avenue	70.8	71.3	0.5	NO
Hamner Avenue	Citrus Street to Schleisman Rd	68.7	69.4	0.7	NO
Hamner Avenue	Schleisman Road to 68th Street	65.1	66.2	1.1	NO
Hamner Avenue	68th Street to 58th Street	67.4	67.8	0.4	NO
Hamner Avenue	Limonite Avenue to 58th Street	66.3	69.4	3.1	NO
Hamner Avenue	58th Street to Bellgrave Avenue	66.3	69.4	3.1	NO
Scholar Way	Limonite Avenue to 58th Street	57.8	59.2	1.4	NO
Scholar Way[5]	58th Street to Bellgrave Avenue	54.4	57.0	2.6	NO

[1] Exterior noise levels are calculated at 5 feet above ground level.
[2] Noise levels are calculated approximately 100 feet from the centerline of the subject roadway.
[3] A significant noise impact would occur when project operational activities cause an increase in ambient noise levels of 5 dBA or more and the resulting noise level exceeds 60 dBA CNEL/Ldn.

The land uses proposed as part of the Modified Project are compatible with surrounding land uses and none of the land uses are considered substantial noise generators. Furthermore, future tenants within the commercial areas would be subject to the City's noise ordinance, which places limits on noise generated from stationary

[35] CNEL = Community Noise Equivalent Level, dBA = decibels A ;Table 8, from "Leal Master Plan Amendment Noise Impact Study," prepared by RK Engineering Group, Inc., dated December 21, 2021.

uses. The proposed Project includes several Project Design Features that would further reduce operational noise levels, as follows:

NOI PDF-1 Prior to the issuance of building permits, the Project will demonstrate that building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to commercial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways:

- Install sound barriers (masonry walls or walls with earth berms) between residences and noise sources.
- Install double-paned or upgraded sound transmission class (STC) sound rated windows.
- Provide sound insulating exterior walls and roofing systems.
- Locate and/or design attic vents to minimize sound propagation into each home.
- Provide forced-air ventilation systems.
- Provide the necessary setbacks for dwelling units fronting along major roadways.

NOI PDF-2 The Project will comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls).

NOI PDF-3 For proper acoustical performance, all exterior windows, doors, and sliding glass doors will have a positive seal and leaks/cracks must be kept to a minimum.

NOI PDF-4 The final building plans will ensure that heating, ventilation, and air conditioning (HVAC) units are not located within an area of the Project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Eastvale Municipal Code requirements. To meet the City's noise standards the following measures should be followed:

- All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses.
- The combined noise level of all units operating simultaneously shall not exceed the City of Eastvale daytime and nighttime exterior standards at the nearest surrounding property lines.

NOI PDF-5 Future residents, property management personnel, and commercial tenants will be required to comply with the City of Eastvale Municipal Code Noise Regulations, Chapter 8.52, which specify that no person shall create loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness.

To help ensure compliance with the City's Noise Regulations, the following recommendations are provided:

- Deliveries, loading and unloading activities, and trash pick-up hours should be limited to daytime hours only (8 a.m. – 10 p.m.).

- Limit engine idling time for all delivery vehicles and moving trucks to 5 minutes or less.

Therefore, no new significant impacts or increase in severity of impacts would occur from long-term operation of the Modified Project.

The Noise Study prepared for the Modified Project analyzed potential construction noise impacts. The Noise Study analyzes potential noise impacts during all expected phases of construction, including, demolition, site preparation, grading, building construction, paving, and architectural coating. Noise levels are calculated based on an average distance of equipment over a 1-hour period to the nearest adjacent property. Demolition activities are expected to occur at approximately 50 feet from the nearest existing residential uses to the north. Therefore, noise levels from demolition activities are analyzed at 50 feet. Noise levels from all other construction activities are conservatively estimated from 200 feet, whereas, in reality, the degree of construction noise will vary depending on the type of construction activity taking place and the location of the activity relative to the surrounding properties.

The proposed Project includes several Project Design Features that would further reduce construction noise levels, as follows:

NOI PDF-6 The Project will prepare a construction management plan and obtain a construction work permit from the City of Eastvale prior to starting construction. The construction management plan will ensure all contractors implement construction best management practices to reduce construction noise levels. Examples of best management practices may include the following:

- All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields).

- Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.

- If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load.

- Use electric air compressors and similar power tools rather than diesel equipment, where feasible.

- Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible.

- Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes.

- Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator.

- Construction activities shall not take place between the hours of 6:00 p.m. and 6:00 a.m. during the months of June through September and 6:00 p.m. to 7:00 a.m. during the months of October through May.

NOI PDF-7 The Project will not include pile driving or blasting activities during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment will be conducted prior to start of any activity.

The following table summarizes construction noise levels and documents that construction noise would not cause a significant impact.

Table 18. Project Construction Noise Levels[36]

Phase	Equipment	Quantity	Equipment Noise Level (dBA Leq)	Combined Noise Level (dBA Leq)
Demolition[2]	Concrete/Industrial Saw	1	74.8	84.6
	Excavators	3	76.7	
	Rubber Tired Dozers	2	77.7	
Site Preparation[1]	Rubber Tired Dozers	3	65.6	75.6
	Tractors/Loaders/Backhoes	4	68.0	
Grading[1]	Excavators	2	64.7	76.2
	Graders	1	69.0	
	Rubber Tired Dozers	1	65.6	
	Scrapers	2	67.6	
	Tractors/Loaders/Backhoes	2	68.0	
Building Construction[1]	Cranes	1	60.6	74.2
	Forklifts	3	59.0	
	Generator Sets	1	65.6	
	Tractors/Loaders/Backhoes	3	68.0	
	Welders	1	58.0	
Paving[1]	Pavers	1	62.2	67.3
	Paving Equipment	1	61.0	
	Rollers	2	61.0	
Architectural Coating[1]	Air Compressors	1	61.6	61.6
Worst Case Construction Phase Noise Level – Leq (dBA)				84.6
FTA Construction Noise Criteria (General Assessment)				90.0
Noise level exceeds FTA criteria?				**NO**

[1] Construction Noise Levels are analyzed at 200 feet

[2] Demolition noise levels are conservatively analyzed at 50 feet. Noise level does not take into account of existing six (6) foot wall along residential uses to the north.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts were originally determined to be significant and unavoidable, however subsequent analysis prepared for the Modified Project with implementation of Project Design Features determined impacts are less than the Original Project and less than significant.

The Prior EIR included Mitigation Measures MM 3.6.1 and 3.6.3, which requires a Project-specific acoustical assessment and a construction-related noise mitigation plan, respectively. Mitigation Measure MM 3.6.1 and Mitigation Measure MM 3.6.3

[36] dBA Leq = Equivalent Continuous Level ;Table 11, from "Leal Master Plan Amendment Noise Impact Study," prepared by RK Engineering Group, Inc., dated December 21, 2021.

have been satisfied with the Project specific Noise Analysis prepared for this Addendum (Appendix I). The Prior EIR included Mitigation Measure MM 3.6.4, which includes several requirements very similar to the PDFs included in the Project Description. Mitigation Measure 3.6.4 would continue to apply to the Modified Project.

b) The Prior EIR concluded the Original Project would have a less than significant impact from groundborne vibration with implementation of Mitigation Measure MM 3.6.2, which requires preparation of a vibration assessment for construction activities. The Noise Study prepared for the Modified Project (Appendix I) includes a groundborne vibration assessment of the Modified Project, which satisfies Mitigation Measure MM 3.6.2. The construction of the proposed Project is not expected to require the use of substantial vibration inducing equipment or activities, such as pile drivers or blasting. The main sources of vibration impacts during construction of the Project would be the operation of equipment such as bulldozer activity during demolition, scrapers and loading trucks during grading and excavation, and vibratory rollers during paving. Based on standard construction equipment, vibration impacts would be less than significant as shown in the following table.

Table 19. Construction Vibration Impact Analysis[37]

Construction Activity	Distance to Nearest Structure (ft)	Duration	Calculated Vibration Level - PPV (in/sec)	City of Eastvale Vibration Threshold- PPV (in/sec)	Significant Impact
Large Bulldozer	100	Continuous/Frequent	0.019	0.0787	NO
Vibratory Roller	100	Continuous/Frequent	0.046		NO
Loaded Trucks	100	Continuous/Frequent	0.017		NO
Caisson Drilling	100	Continuous/Frequent	0.019		NO

The Noise Study prepared for the Modified Project provides greater site-specific detail and analysis than the information presented in the Prior EIR, but this is not a substantial change with respect to the circumstances under which the project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. Therefore, the analysis and conclusions presented in the Prior EIR remain unchanged for the Modified Project and no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant. Mitigation Measure MM 3.6.2 requiring preparation

[37] PPV = peak particle velocity; Table 13, from "Leal Master Plan Amendment Noise Impact Study," prepared by RK Engineering Group, Inc., dated December 21, 2021.

of a vibration assessment has been satisfied and is no longer applicable to the Modified Project.

c) The Modified Project site is not located near a public or private airport or airstrip; therefore, the Modified Project would not alter the analysis or conclusions presented in the Prior EIR. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: Several mitigation measures have already been satisfied and are shown in light grey format. The mitigation measures applicable to the Modified Project that remain in place are listed below.

MM 3.6.1 An acoustical assessment shall be prepared that evaluates potential environmental noise impacts associated with the proposed project. Where the acoustical analysis determines that noise levels would exceed applicable City noise standards, noise reduction measures shall be identified and included in the project.

Timing/Implementation: *Prior to approval of development plan or project*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.6.2 A vibration assessment shall be prepared for construction projects that would involve the use of major vibration-generating equipment (e.g., pile drivers, vibratory rollers) within 200 feet of existing structures. Measures to reduce ground vibration levels shall be identified for any potential vibration impacts exceeding a vibration threshold of 0.2 in/sec ppv.

Timing/Implementation: *Prior to approval of development plan or project*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.6.3 A construction-related noise mitigation plan shall be submitted to the City for review and approval prior to issuance of a grading permit. The plan shall depict the location of construction equipment and specify how the noise from this equipment will be mitigated during construction of the project.

Timing/Implementation: *Prior to issuance of grading permit*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.6.4 The following mitigation measures shall be implemented and specified on all project construction plans:

a) Clearing and construction activities shall be conducted outside of 6:00 p.m. and 6:00 a.m. during the months of June through September, and outside of 6:00 p.m. and 7:00 a.m. during the months of October through May. (Municipal Code Chapter 8.52, Noise Regulation).
b) All construction equipment shall be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer.
c) Construction equipment staging areas shall be centrally located on the Project site or located at the farthest distance possible from nearby residential land uses.
d) All motorized construction equipment and vehicles shall be turned off when not in use.

Timing/Implementation: *During construction activities, noted on all project construction plans*

Enforcement/Monitoring: *City of Eastvale Planning Department*

Conclusion: A Project-specific Noise and Vibration Study was prepared for the Modified Project, including Project Design Features. This Study provides greater site-specific detail and analysis than the information presented in the Prior EIR but this is not a substantial change with respect to the circumstances under which the project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR. The additional analysis performed for the Modified Project introduces additional evidence in the record that impacts from the Modified Project would be less than the Original Project and less than significant. Therefore, where the Prior EIR had concluded a significant unavoidable impact, the analysis of the Modified Project documents that impacts would be less than significant. Mitigation Measure MM 3.6.4 from the Prior EIR remains applicable and Mitigation Measures 3.6.1, 3.6.2, and 3.6.3 have been satisfied by the Noise Study prepared for the Modified Project. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts from the Modified Project would be less than significant with mitigation.

2.14 Population and Housing

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
POPULATION AND HOUSING. Would the project:				
d) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☒	☐
e) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☒	☐

Discussion: The Prior EIR concluded:

> "…that while the proposed Leal Master Plan would facilitate growth on the project site, the growth would be an implementation of the long-range planning process for the project site as envisioned in the City's General Plan. The project would be consistent with the City's General Plan policies and goals intended to promote smart growth. The project requires no mitigation measures to conclude that no impact would occur or impacts would be less than significant and less than cumulatively considerable."[38]

The Original Leal Master Plan allows for residential medium density (14–21 units per acre) with no minimum or maximum and residential high density (22–40 units per acre) with a minimum of 500 dwelling units and a maximum of 660 dwelling units. The Modified Project proposes residential development up to 2,500 dwellings units, which is consistent with the flexibility and mix of uses specified in the Original Leal Master Plan and General Plan.

The State Legislature has declared that California has a housing crisis, and the Legislature has taken steps to encourage the production of additional housing. Through California Government Code Section 65584, the State and Southern California Association of Governments (SCAG) determines a Regional Housing Needs Assessment (RHNA), which is a number of dwelling units local jurisdictions must accommodate through zoning and policies. The City of Eastvale has a RHNA of 3,028 dwelling units from 2021 to 2029. The Modified Project is one component of the City's ability to reach its RHNA target.

[38] Leal Draft Master Plan EIR, July 2015, Section 3.12.1, Page 3.12-1

The Project site has several houses owned by one landowner who is voluntarily selling the property. Therefore, no residents would be unwillingly displaced. Therefore, the Modified Project would not displace people or housing, or induce substantial unplanned population growth or create a need for replacement housing. The analysis and conclusions presented in the Prior EIR remain unchanged for the Modified Project.

a) The Modified Project would provide population growth consistent with the Original Leal Master Plan analyzed in the Prior EIR. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) The Project site has several houses owned by one landowner who is voluntarily selling the property. Therefore, no residents would be unwillingly displaced. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: The analysis and conclusions presented in the Prior EIR remain unchanged. The Modified Project provides residential housing consistent with the Original Leal Master Plan and consistent with the City's General Plan and its policies. Population growth is not unplanned and growth anticipated as a result of the Master Plan is an implementation of the long-range planning process for the site as envisioned in the City's General Plan. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

2.15 Public Services

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
PUBLIC SERVICES.				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	☐	☐	☒	☐
i) Fire protection?	☐	☐	☒	☐
ii) Police protection?	☐	☐	☒	☐
iii) Schools?	☐	☐	☒	☐
iv) Parks?	☐	☐	☒	☐
v) Other public facilities?	☐	☐	☒	☐

Discussion: The Prior EIR analyzed impacts on public services including, fire protection, police protection, schools, parks, and other public facilities, and concluded impacts would be less than significant. In general, the potential for impacts to public services is based on population growth. The larger the population increase, the more demand is generally placed on public services. The number of residential dwelling units identified in the Modified Project is consistent with the Original Leal Master Plan, but greater than analyzed in the Prior EIR.

a) The analysis and conclusions presented in the Prior EIR remain unchanged as follows:

i) Fire Protection: The Prior EIR stated that the Project site would be served within standard response times by existing stations. At the request of the City and not in order to reduce response times to the Project site, the Modified Project includes dedication of 1.22 acres at the corner of Scholar Way and 58th Street for a new fire station. The City has funding to construct the fire station, resulting in greater fire protection services and lower response times to the Project site than analyzed in the Prior EIR. The Original Project planned for 100,000 square feet of civic center uses and the Modified Project proposes approximately 75,000 square feet of civic center uses, consistent with the Original Leal Master Plan. The proposed fire station is approximately 12,200 square feet and combined with the other proposed civic center uses remains less than the 100,000 square feet analyzed in the Prior EIR.

The Project site is not located in a high fire hazards area and the Modified Project is not gated, thereby allowing for unrestricted emergency access. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

ii) Police Protection: The Riverside County Sheriff's Department (RCSD) provides police protection services to the City of Eastvale. Police response times do not come from a fixed location, like a fire station, because RCSD is continuously on patrol throughout the City. The Prior EIR indicated that the City of Eastvale is served by approximately 18 patrol officers operating from the Jurupa Valley Station[39]. At the request of the City, the Modified Project includes a proposal to dedicate several acres of land to the City for the construction of a new Civic Center campus, which would include City Hall, a Library, and a Police Station. While police services would continue to be provided by RCSD, a new Police Station in the City would serve as the law enforcement headquarters for the City instead of deputies stationed at the Jurupa Valley Station. The Modified Project would dedicate the land for the Police Station and the City has funds to construct and operate the facility. The Original Project planned for 100,000 square feet of civic center uses and the Modified Project proposes 75,000 square feet of civic center uses, consistent with the Original Leal Master Plan.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

iii) Schools: The Prior EIR determined student generation from the Original Project would constitute a less than significant impact. Furthermore, Pursuant to Government Code Section 65996, mitigation of impacts on school facilities is limited to the imposition of statutory school fees. The Modified Project would cause an increase in student enrollment in the Corona-Norco Unified School District (CNUSD). The Prior EIR indicates that enrollment at Harada Elementary School exceeds capacity and enrollment at Eleanor Roosevelt High School is projected to exceed capacity in 2024. According to CNUSD facilities staff, enrollment within CNUSD is declining within the center of the District in the Corona and Norco areas, and increasing in the perimeter of the District, in Eastvale and the Temescal Valley. The CNUSD is analyzing the additional students from the Modified Project and considering whether potential changes to school attendance boundaries would be necessary.[40]

Given the payment of school fees pursuant to Government Code Section 65996 and the ability of CNUSD to adjust attendance boundaries as necessary, no new significant impacts or substantial increase in the severity of significant impacts would occur with

[39] Leal Draft Master Plan EIR, July 2015, Section 3.13.2, Page 3.13-3
[40] Personal Communication with CNUSD facilities staff on December 2, 2021

the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

iv) Parks: The Prior EIR concluded that future development on the Project site would be required to comply with City standards including General Plan Policy OS-6, which states that new residential developments would be required to, at a minimum, provide parks consistent with the Quimby Act (California Government Code Section 66477), through land dedication, fees in lieu, or on-site improvements . The Modified Project is subject to the City's policies and regulations, similar to the Original Project and therefore, would not change the conclusions presented in the Prior EIR. Furthermore, the Modified Project has identified approximately 14 acres of parkland, for which the construction and operation of has been analyzed in this Addendum. At the time of the Stage 3 planning process, that amount of park acreage will be assessed against the City's Quimby Act requirement and if a shortfall exists, additional parkland may be added on-site to the Modified Project and/or park fees will be paid.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

v) Other Public Facilities: Other public facilities include libraries and government offices. The Prior EIR determined that impacts to Other Public Facilities from the Original Project would be less than significant. The Modified Project proposes to dedicate land to the City for civic center uses including a new Library and City Hall. This dedication of land would allow the City to expand City Hall and provide a state of the art library within the City. The Original Project planned for 100,000 square feet of civic center uses and the Modified Project proposes 75,000 square feet of civic center uses, consistent with the Original Leal Master Plan.

Therefore, no new impacts or intensification of impacts to other government facilities would occur as a result of the Modified Project and impacts are less than significant.

Mitigation Measures: No mitigation required.

Conclusion: No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

2.16 Recreation

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
RECREATION. Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	☐	☐	☒	☐

Discussion: The City of Eastvale General Plan Policy OS-6 states that new residential developments would be required to, at a minimum, provide parks consistent with the Quimby Act (California Government Code Section 66477), through land dedication, fees in lieu, or on-site improvements. The Modified Project provides approximately 14 acres of parkland for which the construction and operation of has been analyzed in this Addendum. At the time of the Stage 3 planning process, that amount of park acreage will be assessed against the City's Quimby Act requirement and if a shortfall exists park fees will be paid. Therefore, the Modified Project would not cause any new or more intense impacts on recreation facilities as compared to the Prior EIR.

a) The Prior EIR concluded that future development on the Project site would be required to comply with City standards including General Plan Policy OS-6, which states that new residential developments would be required to, at a minimum, provide parks consistent with the Quimby Act (California Government Code Section 66477), through land dedication, fees in lieu, or on-site improvements. Since the Modified Project would continue to satisfy local park code requirements through the provision of park acreage and/or payment of park fees, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) The Prior EIR concluded that future development on the Project site would be required to comply with City standards including General Plan Policy OS-6, which states that new residential developments would be required to, at a minimum, provide parks consistent with the Quimby Act (California Government Code Section 66477), through land dedication, fees in lieu, or on-site improvements. The Modified Project does not trigger the need to construct new or expand existing park or recreation facilities beyond the Project boundaries because the local park code requirement would be satisfied by the creation of on-site parks and/or payment of park fees. The Modified Project currently proposes approximately 14 acres of new on-site parkland.

Since the Modified Project would continue to satisfy local park code requirements, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: The analysis or conclusions presented in the Prior EIR remain unchanged for the Modified Project. The Modified Project will comply with the City's local park code requirement through provision of approximately 14 acres of on-site parkland and/or payment of in-lieu fees, which offsets any increase in demand for park or recreation facilities associated with the Modified Project. Therefore, no additional demands on recreation would be created as part of the Modified Project, and no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

2.17 Transportation/Traffic

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
TRANSPORTATION/TRAFFIC. Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

Discussion: The Prior EIR included a Traffic Impact Analysis (TIA) prepared by Fehr and Peers for the Original Project. The TIA determined that with implementation of mitigation measures, traffic volumes from the Original Project would result in direct significant and unavoidable impacts to three roadway segments and cumulatively significant and unavoidable impacts to four roadway segments.

It should be noted that at the time the Prior EIR was prepared, traffic analysis and impacts were based on how roadway intersections and segments function. Traffic studies used a volume to capacity (V/C) methodology to calculate the level of service (LOS) of intersections and roadway segments. Following certification of the Prior EIR, the State Legislature adopted Senate Bill 743 (SB 743), which revised the CEQA Guidelines to add Section 15064.3, removing roadway function as the basis for analysis and replacing it with an analysis of vehicle miles traveled (VMT).[41] The premise is the fewer vehicle miles traveled the less impact would occur to the roadway network. Automobile delay, as described by LOS or similar measures of vehicular capacity or traffic congestion, is no longer considered a significant impact on the environment under CEQA under Public Resources Code section 21099 and case law. (Citizens for Positive Growth & Preservation v. City of Sacramento (2019) 43 Cal.App.5th 609).

[41] The adoption of guidelines for analyzing and evaluating the significance of data does not constitute new information if the underlying information was otherwise known or should have been known at the time the EIR was certified. *Concerned Dublin Citizens v. City of Dublin* (2013) 214 Cal.App.4th 1301

A traffic study was prepared for the Modified Project titled, "*Leal Master Plan Amendment Project Traffic Study*," by RK Engineering Group, Inc., and dated November 17, 2021 (Appendix J). Since the Prior EIR was based on a LOS analysis, the Traffic Study for the Modified Project includes a LOS analysis for informational purposes and for the City's discretionary review and approval process, as well as a VMT analysis to be consistent with the current CEQA Guidelines. The Traffic Study for the Modified Project relied on the development mix presented in the Project Description.

Trip generation is the number of vehicle trips generated on a daily (24 hour) basis. The trip generation for each land use is obtained from the Institute of Traffic Engineers (ITE), which is the industry standard. The following table shows a comparison of the trip generation for the Modified Project compared to the Original Project. As shown in this table, the Modified Project reduces the number of daily vehicle trips by 27,764.

Table 20. Modified Project Net Trip Generation Compared to Leal Specific Plan TIA[42]

Land Use	AM			PM			Daily
	In	Out	Total	In	Out	Total	
Modified Project	765	1,066	1,831	1,726	1,605	3,331	36,652
Leal Specific Plan TIA (Fehr & Peers, May 12, 2015)	2,120	911	3,030	2,569	3,740	6,309	64,416
Net Difference	**-1,355**	**155**	**-1,200**	**-842**	**-2,136**	**-2,978**	**-27,764**

The Modified Project would also generate 1,200 fewer AM peak hour trips and approximately 2,978 fewer PM peak hours trips compared to the Original Project.

The Original Project analyzed the buildout of Limonite Avenue and Hamner Avenue both to six lanes. That requires the addition of a travel lane on westbound Limonite Avenue between Hamner Avenue and Scholar Way, and the addition of a southbound travel lane on Hamner Avenue between 58th Street and Limonite Avenue.

The analysis included in the Modified Project Traffic Study does not assume additional travel lanes on Limonite and Hamner. Instead, the Traffic Study assumes two travel lanes and a third drive isle associated with on-street parking for both of the Limonite and Hamner roadway segments.[43] This would reduce each segment by one travel lane compared to what was analyzed in the Prior EIR.

[42] Table 4-3, from "Leal Master Plan Amendment Project Traffic Study," prepared by RK Engineering Group, Inc., dated November 17, 2021.

[43] An early design of the Modified Project proposed two westbound lanes on Limonite with on-street parking and two southbound lanes on Hamner with on-street parking. Shortly before publication of this Addendum the Modified Project was revised to eliminate on-street parking from both Limonite and Hamner and provide three travel lanes on westbound Limonite and three travel lanes on southbound Hamner. Since this late project revision adds more roadway capacity, similar to the Original Project, the

The Modified Project Traffic Study documents within Tables 6-1 and 6-2 that in the existing plus Project conditions and in the cumulative conditions, the Modified Project with two travel lanes on Limonite and Hamner would have a reduced volume to capacity ratio than the Original Project. The result of this study is that the reduction in the trip generation associated with the Modified Project is sufficient to improve the function of Limonite and Hamner with only two travel lanes on each roadway segment, compared to the Original Project. Therefore, the traffic impacts would remain significant and unavoidable, however the Modified Project would reduce the intensity of the impact.

It should be noted that the Modified Project does not propose only two travel lanes on Limonite and Hamner as analyzed in the Traffic Study. As shown on Tentative Tract Map No. 38290, both segments of Limonite and Hamner include three travel lanes, a median, and an access road serving on-street diagonal parking. The Traffic Study analyzed the "worst-case scenario" of only two travel lanes. The Modified Project as proposed with three travel lanes will only improve traffic conditions compared to the Original Project and represented in the TIA for the Modified Project.

Following certification of the Prior EIR, SB 743 was adopted, which changed how traffic is analyzed. Instead of V/C and LOS, traffic analysis in CEQA is now based on VMT. The City's VMT Guidelines state:

> "Residential and office projects located within a low VMT-generating area, as identified in the WRCOG screening tool, may be presumed to have a less than significant impact. In addition, other employment-related and mixed-use land use projects may be screened if the project can reasonably be expected to generate VMT per resident, per worker, or per service population that is similar to the existing land uses in the low VMT area"

Based on the Western Riverside Council of Governments (WRCOG) VMT screening tool, the Project is located in a low-VMT area because both the residential home-based VMT and home-based work VMT for this area are less than the City of Eastvale city-wide average. Furthermore, the Project consists of residential, employment and retail uses similar in nature to the existing land uses surrounding the site (which also consist of residential and commercial uses). Therefore, the Project would be expected to exhibit similar VMT patterns as the existing uses and utilization of the WRCOG screening maps is appropriate for screening purposes. Lastly, the Modified Project also includes an extensive network of sidewalks and trails to promote and encourage non-motorized mobility, which further reduces VMT.

Leal Master Plan Amendment Project Traffic Study was not updated with the additional travel lanes because the Traffic Study analysis a more conservative and constrained roadway network. The revisions to the Modified Project provide greater roadway capacity, which would further reduce traffic impacts.

A comparison of VMT generated from the Modified Project to the Original Project was performed using CalEEMod. The analysis determined the Modified Project would generate less VMT than the Original Project as shown in the following table.

Table 21. Comparison of VMT from the Modified Project to the Original Project[44]

Scenario	Total Annual VMT (CalEEMod)
Current Project	68,221,050
2015 Project	150,029,705
Delta	-81,808,655

a) The Prior EIR analyzed consistency with adopted plans and policies through a LOS analysis of roadway segments and intersections. The Prior EIR concluded the Original Project would result in significant unavoidable impacts after mitigation because several intersections with operate at deficient LOS standards in conflict with the City's plans and policies.

The Modified Project would reduce trip generation by approximately 27,764 daily trips compared to the Original Project. The Traffic Study for the Modified Project determined that the Modified Project would continue to cause intersections to operate at deficient LOS compared to City policies, however the Modified Project would cause a less intensive significant impact than the Original Project.

The Prior EIR included three mitigation measures, which were part of the original LOS analysis and remain applicable to the Modified Project even though the CEQA Guidelines have changed to a VMT metric. Mitigation Measure MM 3.2.1a and 3.2.1c require the widening of Limonite and Hamner to three lanes, respectively. These two mitigation measures remain applicable to the Modified Project and have been incorporated into the Modified Project design as shown on TTM 38290. Mitigation Measure MM 3.2.1b requires a focused traffic study for the proposed Project. This mitigation measure has been satisfied by the Traffic Study prepared for the Modified Project.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain significant and unavoidable with mitigation incorporated.

[44] "Leal Master Plan Amendment Project Traffic Study," prepared by RK Engineering Group, Inc., dated November 17, 2021

b) The Western Riverside County Council of Governments (WRCOG) has developed a screening tool for VMT analysis. Based on the WRCOG screening tool, the Project site is located within a low VMT generating zone. Land use projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. Utilizing the WRCOG Screening Tool, the Modified Project is located within a low-VMT generating zone based on residential home-based VMT and home-based work VMT. As a result, the Modified Project is exempt from further VMT analysis and the Project consists of residential, employment and retail uses similar in nature to the existing land uses surrounding the site (which also consist of residential and commercial uses). Therefore, the Project would be expected to exhibit similar VMT patterns as the existing uses and utilization of the WRCOG screening maps is appropriate for screening purposes. Lastly, the Modified Project also includes an extensive network of sidewalks and trails to promote and encourage non-motorized mobility, which further reduces VMT. Refer to Attachment A of Appendix J. Therefore, the Modified Project is consistent with CEQA Guidelines Section 15064.3.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would be less than significant.

c) The Prior EIR determined the Original Project would not increase hazards because of design or incompatible uses. The Modified Project relies on roadway networks consistent with City standards and similarly proposes a mix of land uses. Furthermore, the Traffic Study prepared for the Modified Project did not identify any hazardous design features. Additional engineering details will be added during the Stage 3 planning process and those engineering details will be reviewed and checked against adopted standard plans and design criteria for roadway design.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

d) The Modified Project is surrounded by four City streets all of which provide emergency access. The Modified Project proposes to improve all four perimeter roadways to City standards. The Modified Project also proposes to dedicate 1.22 acres for a future fire station.

The Modified Project includes less intensive development than the Original Project by reducing trip generation by 27,764 average daily vehicle trips. The Modified Project would improve the surrounding circulation system with additional travel lanes as contemplated in the Original Project and the Modified Project would contribute to fewer local roadway trips than the Original Project helping to improve emergency access and circulation in the area. The Modified Project would complete street improvements on all four surrounding streets as proposed under the Original Project.

Therefore, as a result of the Modified Project proposing less intensive development than the Original Project and proposing to complete the surrounding street system, no new impacts would occur, and the conclusions presented in the Prior EIR remain unchanged.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: Several measures have already been satisfied and are shown in light grey format. The mitigation measures applicable to the Modified Project that remain in place are listed below.

MM 3.2.1a Fair share of funding shall be paid for widening Limonite Avenue along the Project frontage from two to three lanes in each direction. Funding shall be determined and paid via the Riverside County Transportation Uniform Mitigation Fee (TUMF). Project plans and/or phasing shall establish the timing of this improvement to ensure it is in place prior to LOS D operations and consistent with the Master Plan's infrastructure phasing provisions.

Timing/Implementation: *Prior to approval of development plan or project*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.2.1b A focused traffic study shall be prepared that demonstrates the project's consistency with the transportation impact assessment (TIA) for the Leal Master Plan prepared by Fehr & Peers (2015). The traffic study shall assess the following:

- Parking;
- Site access and on-site circulation;
- Interaction of driveways with adjacent intersections (if appropriate);
- Impacts on local intersections;
- Impacts to pedestrian, transit, and bicycle facilities; and
- Trip generation monitoring study to ensure that, as land develops in the Leal Master Plan area, the total development generates traffic at or below the levels assumed in this Draft EIR.

Timing/Implementation: *Prior to approval of development plan or project*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.2.1c Hamner Avenue shall be widened between Limonite Avenue and Bellegrave Avenue to three lanes in each direction either directly or through fair-share funding as determined by infrastructure and/or facility financing plans approved for the Leal Master Plan. Project plans and/or phasing shall establish the timing of this improvement to ensure it is in place prior to LOS F operations and consistent with infrastructure phasing provisions established as part of Master Plan implementation.

Timing/Implementation: *Prior to approval of development plan or project*

Enforcement/Monitoring: *City of Eastvale Planning Department*

Conclusion: The changes associated with the Modified Project would reduce trip generation by approximately 27,764 average daily trips. Level of service impacts would remain significant and unavoidable; however, the Modified Project would reduce the severity of the significant impact. As evaluated again the new SB 743 standards, the Modified Project is consistent with CEQA Guidelines section 15064.3 and impacts would be less than significant. The Prior EIR included three mitigation measures. Mitigation Measure MM 3.2.1a and 3.2.1c require the widening of Limonite and Hamner to three lanes, respectively. These two mitigation measures remain applicable to the Modified Project. Mitigation Measure MM 3.2.1b requires a focused traffic study for the proposed Project. This mitigation measure has been satisfied by the Traffic Study prepared for Modified Project and is therefore no longer applicable.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain significant and unavoidable.

2.18 Tribal Cultural Resources

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☒	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	☐	☐	☒	☐

Discussion: Since preparation of the Prior EIR, CEQA Guidelines Appendix G has been revised to include a specific section on Tribal Cultural Resources.[45] The Prior EIR analyzed potential impacts associated with tribal cultural resources in the Cultural Resources section. The Prior EIR concluded that potential impacts to cultural resources would be less than significant with mitigation. No changes to the analysis or conclusions presented in the Prior EIR would occur for the Modified Project.

Notification pursuant to State Bill (SB) 18 and Assembly Bill (AB) 52 was distributed to the Native American Heritage Commission and local tribes as part of the Prior EIR. SB 18 requires local jurisdictions to provide opportunities for involvement of California Native Americans tribes in the land planning process for the purpose of preserving

[45] The adoption of guidelines for analyzing and evaluating the significance of data does not constitute new information if the underlying information was otherwise known or should have been known at the time the EIR was certified. *Concerned Dublin Citizens v. City of Dublin* (2013) 214 Cal.App.4th 1301

traditional tribal cultural places. The Final Tribal Guidelines recommend that the Native American Heritage Commission (NAHC) provide written information as soon as possible but no later than 30 days after receiving notice of the Project to inform the lead agency if the proposed Project is determined to be in proximity to a traditional tribal cultural places (TTCP) and another 90 days for tribes to respond to a local government if they want to consult with the local government to determine whether the project would have an adverse impact on the TTCP. Per SB 18, the law requires a city or county to consult with the NAHC and any appropriate Native American tribe for the purpose of preserving relevant TTCP prior to the adoption, revision, amendment, or update of a City's or County's general plan.

AB 52 took effect July 1, 2015 and incorporates tribal consultation and analysis of impacts to tribal cultural resources (TCR) into the CEQA process. It requires TCRs to be analyzed like any other CEQA topic and establishes a consultation process for lead agencies and California tribes. A significant impact on a TCR is considered a significant environmental impact, requiring feasible mitigation measures.

Consultation with the Soboba Band of Luiseno Indians occurred on May 21, 2015. The Prior EIR concluded that a potential for archaeological and paleontological resources exists and included mitigation measures to reduce impacts to a less than significant level.

The potential for tribal cultural resource impacts depends on the area of impact and the condition of the Project site. The Modified Project would not change the area of impact or grading limits compared to the Original Project. Furthermore, Project site conditions for tribal cultural resources have not changed since preparation of the Prior EIR. Therefore, the analysis and conclusions presented in the Prior EIR remain valid and unchanged.

a, b) During preparation of the Prior EIR, the City consulted with the Native American Heritage Commission in accordance with AB 52 and SB 18. No additional consultation has occurred. The Prior EIR conducted archaeological record surveys, which did not identify known tribal, cultural, or paleontological resources on the Project site. However, since site-specific surveys were not conducted as part of the Prior EIR, the Prior EIR included several mitigation measures and determined impacts would be less than significant with implementation of the mitigation measures.

This Addendum includes preparation of the Cultural and Paleontological Resources Assessment prepared for the Modified Project (*Cultural and Paleontological Resources Assessment, October 2021,* prepared by Duke CRM; Appendix D), which included additional record searches and an extensive pedestrian field survey of the Project site over two days on June 17 and June 18, 2021. No archaeological resources were identified on the Project site from the records search or the field surveys. The Cultural and Paleontological Resources Assessment concluded that a low sensitivity exists for

archaeological resources to occur on-site and therefore, no archaeological monitoring is required during site disturbance activities, such as grading.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Several of the mitigation measures included in the Prior EIR have been satisfied with the detailed Cultural and Paleontological Resources Assessment prepared for the Modified Project. Impacts would remain less than significant with mitigation.

Mitigation Measures: Several measures have already been satisfied and are shown in light grey format. The mitigation measures applicable to the Modified Project that remain in place are listed below.

MM 3.8.1 A detailed cultural resources field survey of the subject property shall be conducted prior to approval of the project. The cultural resources field survey shall identify any cultural resource finds and will set out measures to mitigate any impacts to any significant resources as defined by CEQA, the California Register of Historical Resources, and/or the National Historic Preservation Act. Mitigation methods to be employed include but are not limited to the following:

- Redesign of the development project to avoid the resource. The resource site shall be deeded to the City or a nonprofit agency to be approved by the City for maintenance of the site.
- If avoidance is determined to be infeasible by the City, the resource shall be mapped, stabilized, and capped pursuant to appropriate standards.
- If capping is determined to be infeasible by the City, the resource shall be excavated and recorded to appropriate standards.

Timing/Implementation: *Prior to approval of development plan or project*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.8.2 If cultural resources (i.e., prehistoric sites, historic sites, and isolated artifacts) are discovered during grading or construction activities in the Project area, work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history shall be retained to determine the significance of the discovery.

The City shall consider mitigation recommendations presented by a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history for any unanticipated discoveries. The City and the Project applicant of the site where the discovery is made shall consult and agree on implementation of a measure or measures that the City deems feasible. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The Project applicant shall be required to implement any mitigation necessary for the protection of cultural resources.

Timing/Implementation: *As a condition of project approval and implemented during grading and/or construction activities*

Enforcement/Monitoring: *City of Eastvale Planning Department*

MM 3.8.3 If human remains are discovered during any ground-disturbing activities in the Project area, all work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and the Riverside County Coroner must be notified per California Public Resources Code Section 7050.5 and California Health and Safety Code Section 5097.98. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and (e) shall be followed.

Timing/Implementation: *As a condition of project approval and implemented during grading and/or construction activities*

Enforcement/Monitoring: *City of Eastvale Planning Department*

Conclusion: The Modified Project would not change the limits of disturbance or grading, which encumbers the entire site, therefore the analysis and conclusions presented in the Prior EIR remain unchanged. Mitigation Measure MM 3.8.1 has been satisfied and no new mitigation is necessary. While determined to be highly unlikely, Mitigation Measures MM 3.8.2 and MM 3.8.3 would remain applicable to the Modified Project. Impacts would remain less than significant with mitigation.

2.19 Utilities and Service Systems

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Discussion: The Prior EIR determined impacts from the Original Project on utility and service systems would be less than significant. The following site-specific utility studies were prepared for the Modified Project.

- "*Sewer System Development Analysis*" prepared by Hunsaker & Associates Irvine, Inc. dated December 6, 2021, is included in Appendix K.
- "*Water Supply Assessment*" dated December 2021, prepared by Kimley Horn is included in Appendix L.
- "*Preliminary Hydrology Analysis for Leal Ranch (Tentative Map No. 38290)*" prepared by Hunsaker & Associates Irvine, Inc., and dated November 29, 2021 (Appendix G).
- "*Preliminary Water Quality Management Plan (PWQMP) for Tentative Map No. 38290*," prepared by Hunsaker & Associates Irvine, Inc., and dated November 29, 2021 (Appendix H).

These studies provide greater site-specific detail and analysis than the information presented in the Prior EIR, but this is not a substantial change with respect to the circumstances under which the project is undertaken or new information that was not known and could not have been known with the exercise of reasonable diligence at the time of the Prior EIR.

a, c) The Prior EIR concluded sufficient capacity exists for wastewater treatment from the Original Project and impacts would be less than significant. The Project site lies within the jurisdiction of Jurupa Community Services District (JCSD) for wastewater treatment. In August 2021, JCSD provided a preliminary hydraulic analysis of the existing sewer system to that would be impacted by the Modified Project. The analysis determined the maximum average daily sewer generation from the Modified Project without causing downstream sewer capacity issues or requiring upsizing of sewer lines. The analysis determined a maximum of 555,000 gallons per day (gpd) from the Modified Project could be accommodated within the existing sewer infrastructure without impacts. The Modified Project is estimated to generate 544,710 gpd, or 1.85% less than the maximum allowed average sewer flows from the Project site.

The Prior EIR also determined that expanded water facilities would not be required. JCSD provides domestic water and service connection points are located within the existing surrounding streets. Sufficient pressure and storage capacity exist such that no additional facilities would be required to serve the Modified Project.

As detailed in Section 2.10, storm water flows to the southwest portion of the Project site. Existing storm drain facilities exist within Limonite Ave. The Modified Project includes a subterranean detention and water quality treatment basin that will reduce peak period discharge rates to existing levels and meet the water quality standards. No new off-site storm drain or water quality infrastructure is required.

According to the Prior EIR, "Southern California Edison (SCE) currently provides electrical service to the Master Plan area and Southern California Gas Company provides natural gas service; properties surrounding the project site have already been developed and are served by existing SCE and Gas Company infrastructure. Per discussions with SCE staff, implementation of the proposed project would not be expected to require the construction of any off-site transmission or distribution infrastructure (Ditta 2015)."[46] The Modified Project would rely on electrical and natural gas service from existing facilities in surrounding streets. The existing above-ground electrical lines along Limonite would be placed underground. No additional off-site improvements are anticipated.

[46] Leal Draft Master Plan EIR, July 2015, Section 3.13.2, Page 3.13-10

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

b) The Original EIR concluded, "Furthermore, the JCSD has demonstrated capacity in its water supply and wastewater treatment systems to accommodate growth in the city, including the proposed project and future development would obtain a water/sewer availability letter from the JCSD and pay any district fees and facilities charges in order to fund any off-site improvements."[47]A Project level water supply analysis was prepared for the Modified Project. The Modified Project is of sufficient size that in accordance with Senate Bill (SB) 610 a Water Supply Assessment (WSA) is required. Appendix L includes the WSA prepared for the Modified Project.

JCSD is the water supplier for the Project site and prepared a 2020 Urban Water Management Plan (UWMP) for its service area. The UWMP analyzes growth assumptions and determines if sufficient domestic water is available to serve the growth assumptions in wet years and dry years.

The WSA relied upon duty factors supplied by JCSD in the UWMP to calculate Project Water Demand as shown in the following table.[48]

Table 22. Project Water Demand[49]

Land Use Category	Duty Factor (gpd/ac)	Area (ac)	Demand (gpd)	Demand (AFY)
Residential	3,600	82.23	296,021	331.59
Mixed Use (Residential)	3,600	14.21	51,151	57.30
Mixed Use (Commercial)	2,000	14.21	51,151	57.30
Commercial Retail	2,000	11.02	22,040	24.69
Open Space Recreation	2,000	7.16	14,312	16.03
Roadway	0	29.76	0	0
Total	--	**158.58**	**411,940**	**461.43**

The 2020 UWMP assumed future growth on the Project site and projected a water demand of 505 acre feet per year (AFY) for the Project site. Based on Table 2-2 and 2-3 from the WSA, the Modified Project will generate a water demand of approximately 461 AFY, less than the 505 AFY assumed in the 2020 UWMP.

The Prior EIR calculated a potable water demand for the Original Project. These estimates are found in Tables 3.13-1 and 3.13-2 of the Prior EIR. The projected water

[47] Leal Draft Master Plan EIR, July 2015, Section 3.13.5, Page 3.13-9
[48] Water Supply Assessment, Kimley Horn, December 2021, Table 2-2, Page 6
[49] gpd/ac = gallons per day per acre; ac=acres; gpd = gallons per day; AFY = acres feet per year. Table 2-2, from "Eastvale Leal Property Water Supply Assessment," prepared by Kimberly Horn, dated December 2021.

demand for the Original Project was 734 AFY or 470,320 gpd. In both cases the potable water demand is less for the Modified Project compared to the Original Project. Furthermore, the WSA determined that sufficient water supplies are available to service this project during normal, dry, and very dry years.

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

c) The Prior EIR determined, "The JCSD has a 3.25 million gallons per day (mgd) capacity right, although the ultimate estimated flow rate from the JCSD to the plant is projected to be 5.7 mgd, based on the projections in the 2007 Master Sewer Plan Addendum. This represents an increase of 2.45 mgd and would still be below the operating capacity of 8.0 mg. The JCSD has a proposed project in its 20-year Capital Improvement Program to obtain additional treatment capacity at the WWTP (JCSD 2011, p.57). As of 2007, the plant was not operating at capacity (treating approximately 5.5 mgd), and the JCSD obtaining additional treatment capacity to accommodate growth in its service area would not necessarily result in expansion of the WWTP. Potential impacts resulting from additional treatment capacity would be subject to CEQA review if necessary."[50]

As demonstrated in the "*Sewer System Development Analysis*" prepared by Hunsaker & Associates Irvine, Inc. dated December 6, 2021, and included in Appendix K, JCSD determined the maximum allowed average daily flows from the Project site would be 555,000 gpd, which accounts for transmission pipe capacity and treatment capacity. The Modified Project is planned to generate 544,710 gpd or 1.85% less than the maximum allowed sewer flows from the site.[51]

Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

d – e) The Prior EIR determined impacts from solid waste would be less than significant since each of the landfills serving the Project site have remaining capacity over 179 million cubic yards.[52] The Modified Project proposes less development intensity, likely resulting in equal or less solid waste generation. Furthermore, the Modified Project would be required to comply with applicable waste reduction regulations found in AB 939, the Green Building Code, and the Eastvale Municipal Code, which apply restrictions to solid waste disposal. Therefore, no new significant impacts or substantial

[50] Leal Draft Master Plan EIR, July 2015, Section 3.13.5, Page 3.13-8 and 9
[51] "*Sewer System Development Analysis*" prepared by Hunsaker & Associates Irvine, Inc. dated December 6, 2021, Page 2
[52] Leal Draft Master Plan EIR, July 2015, Section 3.13.6, Page 3.13-9

increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: Additional Project-specific analysis of utility systems was performed for the Modified Project. This analysis provides evidence supporting the conclusions presented in the Prior EIR. The Prior EIR determined impacts for the Original Project would be less than significant. Based on the more detailed analysis and less intensive development associated with the Modified Project, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

2.20 Wildfire

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
WILDFIRE. Would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☒	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

Discussion: Since preparation of the Prior EIR, CEQA Guidelines Appendix G has been revised to include a specific section on Wildfire.[53] The Prior EIR analyzed potential impacts associated with wildfires in the Hazards and Hazardous Materials and Public Services sections. The Prior EIR concluded that potential impacts from wildfires would be less than significant. No changes to the analysis or conclusions presented in the Prior EIR would occur for the Modified Project.

The Project site is designated a Local Responsibility Area (LRA), which means the City of Eastvale is responsible for fire protection services[54]. The City of Eastvale contracts with Riverside County for fire protection. The Project site is not located in a fire hazard severity zone[54]. The Project site is completely surrounded by development and no wildland areas are within close proximity to the Project site[54].

[53] The adoption of guidelines for analyzing and evaluating the significance of data does not constitute new information if the underlying information was otherwise known or should have been known at the time the EIR was certified. *Concerned Dublin Citizens v. City of Dublin* (2013) 214 Cal.App.4th 1301

[54] CalFire (California Department of Forestry and Fire Protection). 2022. CalFire website. http://www.fire.ca.gov/.

a) The Prior EIR concluded the Original Project would not impair the City's ability to implement its emergency response plan or use its emergency evacuation routes. The Modified Project includes less intensive development than the Original Project. As shown in Section 2.17, the Modified Project would reduce trip generation by 27,764 average daily vehicle trips. The Modified Project would improve the surrounding circulation system with additional travel lanes as contemplated in the Prior EIR and the Modified Project would contribute to fewer local roadway trips than the Original Project. The Modified Project would complete street improvements on all four surrounding streets. Therefore, because of the Modified Project proposing less intensive development than the Original Project and proposing to complete the surrounding street system, no new impacts would occur, and the conclusions presented in the Prior EIR remain unchanged.

b) The Prior EIR determined, "The project site is not designated as a fire hazard severity zone within the Local Responsibility Area (LRA) for Eastvale (Cal Fire 2015). Therefore, no impact would occur."[55] The Project site is not located in a fire hazard severity zone[56]. The Project site is generally flat, completely surrounded by development and no wildland areas are within close proximity to the Project site per the California Depart of Forestry and Fire Protection (CalFire) website. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

c) No infrastructure that could exacerbate wildfire is proposed as part of the Modified Project. The Original Project included underground utility lines in the streets, as is proposed with the Modified Project. Underground utility lines do not pose a risk of starting or exacerbating a wildfire. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

d) The Project site is generally flat with no slope areas or areas that could cause mudslides. The Project site currently drains from north to south. The southern boundary of the Project site is Limonite Avenue, a six-lane arterial roadway with a 14-foot wide median. Storm flows will be collected in storm drains within the Project site and connected to an existing storm drain in Limonite Avenue. The Hydrology Study for the Modified Project prepared by Hunsaker & Associates Irvine, Inc. (Appendix G), documents that post-development flows would be captured in a detention basin and metered out into the existing storm drain. If runoff was to exceed the storm drain system, flows would be captured in Limonite Avenue. Downstream flooding as a result

[55] Leal Draft Master Plan EIR, July 2015, Section 3.10.6, Page 3.10-7
[56] CalFire (California Department of Forestry and Fire Protection). 2022. CalFire website. http://www.fire.ca.gov/.

of runoff or drainage changes is not anticipated. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

Mitigation Measures: No mitigation required.

Conclusion: The Modified Project is not located in a fire hazard severity zone. The Project site is completely surrounded by development and no wildland areas are within close proximity to the Project site. The Modified Project would not conflict with or impede implementation of the City's emergency response plan nor cause significant risk as a runoff, post-fire slope instability, or drainage changes. Therefore, no new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant.

2.21 Mandatory Findings of Significance

Issues:	New Potentially Significant Impact	New Mitigation is Required	No New Impact/No Impact	Reduced Impact
MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☒	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☒	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

a) The Modified Project would not change the biological conclusions included in the Prior EIR. The Modified Project would not change the limits of disturbance, which encumbers the entire site, and the condition of the Project site remains essentially unchanged from the time of the Prior EIR. The Modified Project would not cause impacts to sensitive species or habitats. The Prior EIR determined impacts to biological resources would be less than significant with mitigation. A Biological Assessment of the Modified Project determined impacts to biological resources would be less than significant with mitigation incorporated. Mitigation Measures 3.7.2 and 3.7.3 presented in the Prior EIR have been fulfilled. Mitigation Measure 3.7.1 remains applicable as presented in the Prior EIR to reduce impacts to nesting birds to less than significant. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant with implementation of Mitigation Measure 3.7.1.

The Modified Project would also not change the conclusions presented in the Prior EIR regarding impacts to major periods of California history or prehistory. The Modified Project would not change the limits of disturbance compared to the Original Project

and no conditions or circumstances have changed relative to historical, archaeological, or tribal cultural resources on the Project site. Therefore, the analysis and conclusions presented in the Prior EIR remain unchanged for the Modified Project. The Prior EIR identified Mitigation Measures MM 3.8.1 through 3.8.4 to reduce impacts associated with archaeological and paleontological resources to less than significant. Mitigation Measure MM 3.8.1 has been satisfied and is no longer applicable, and Mitigation Measures MM 3.8.2 and 3.8.3 remain applicable to the Modified Project. Mitigation Measure 3.8.4 has been revised, which requires that a qualified paleontologist evaluate any paleontological discoveries during grading. The potential for paleontological discoveries has not changed since certification of the Prior EIR and the limits of disturbance have remained the same. This mitigation measure is being revised in this Addendum to require a qualified paleontologist monitor grading activities on the eastern portion of the site, which is more efficient for grading activities instead of the requirement to call a monitor to the site to evaluate paleontological resources if found during grading. Therefore, no change in analysis from the Prior EIR would occur and Mitigation Measure MM 3.8.4 remains applicable to the Modified Project as modified. No new significant impacts or substantial increase in the severity of significant impacts would occur with the Modified Project and no new mitigation is necessary. Impacts would remain less than significant with implementation of mitigation measures.

b) The Modified Project would not change the permitted land uses, limits of disturbance or extent of construction activities, and the condition of the Project site remains essentially unchanged from the time of the Prior EIR. The Project site is surrounded by urban development and represents one of the last remaining undeveloped areas of the City and the General Plan calls for a mix of uses. The Modified Project reduces development intensity which would in turn reduce the number of average daily vehicle trips by approximately 27,764 trips as compared to the Original Project. Therefore, the short-term construction impacts and long-term operational impacts would remain consistent with the analysis provided in the Prior EIR. There would be no changes to the analysis or conclusions regarding cumulative impacts as a result of the Modified Project. The findings of significance presented in the Prior EIR would remain without change and without intensification as a result of the Modified Project.

c) The Master Plan and Original Project contemplated refinement when additional Project-specific details became available and contemplated flexibility to address future market demand. The Modified Project is consistent with the Original Project, the City's General Plan, the City's Zoning Code, and the vision of future development on the Project site. As under the Original Leal Master Plan, the Modified Project's growth would be an implementation of the long-range planning process for the project site as envisioned in the City's General Plan. The Prior EIR determined the Original Project would cause six (6) significant and unavoidable impacts within the following three (3) topic areas: Transportation/ Traffic, Air Quality, and Noise. Throughout the analysis in

this Addendum, evidence has been provided that while those significant and unavoidable impacts would remain, the Modified Project would not cause new impacts or more severe impacts to human beings, either directly or indirectly.

1 INTRODUCTION AND VISION

1.1. BACKGROUND AND PURPOSE

In the City of Eastvale, a recently incorporated and rapidly growing city in northwestern Riverside County, the Leal property holds significance as one of two major undeveloped pieces of land in the city. The idea of planning for the site's development originated in the 2012 Eastvale General Plan. The Land Use Chapter of the General Plan adopted at that time supported the development of a mixed-use project on the site in cooperation with the property owner and/or the developer.

City of Eastvale Demographics

Eastvale offers the developers of the Leal Master Plan excellent opportunity to serve an affluent and growing population. Current projections for 2018 show the following:

	Eastvale	10-Mile Radius
Population	68,706	1,070,150
Average Household Income	$130,730	$90,507
Average Annual Increase in Household Income 2013-2018	0.94%	3.47%

Eastvale is the most diverse high-income city in California, with a population that includes 40 percent Latino residents, 9 percent black, 24 percent Asian and 24 percent white.

In 2013, the City of Eastvale City Council initiated a long-range planning process for the property. The effort was born out of the desire to create the mixed-use town center project on the site and to safeguard against unsatisfactory development taking the project's place. The Leal Master Plan is the product of this planning process and is a critical step toward bringing unique, regionally significant development to the site. In December of 2017, the City of Eastvale adopted the initial Leal Master Plan. The multiple step process was established in the original Master Plan. This Leal Master Plan is the first amendment to the initial Master Plan as contemplated in the development process.

1.1.1. What Is a Master Plan?

This Master Plan is a long-range planning document that documents how the site will be developed. This Master Plan describes the community's vision for the project area, identifies appropriate land uses, includes the development standards that are necessary to achieve the vision, defines the character of the project's development, lists the steps involved with the development process, and provides guidance on implementation of the plan.

The adoption of this Master Plan represents the second step in planning for the site's development. This document establishes general parameters for development of the Leal property (and the process for defining more specific standards tailored to the ultimate project to be proposed by the property owner/developer). Subsequent development plans will provide precise

development plans for each planning area, facilitating the actual construction of developments.

Note to the Reader: See Chapters 4 and 5 of this Master Plan for detailed information on required future submittals.

Implementation of this Master Plan will ensure that desirable, high-quality development is constructed on the site in an orderly and cohesive fashion. All development occurring on the site is required to comply with this Master Plan.

1.1.2. Community and Stakeholder Input

The original adopted Leal Master Plan was created and adopted in a public forum. The document represents a blending of the City's goals, the owner's ambitions, and the public's aspiration for the property. The participants' contributions to the project are as follows:

1.1.2.1. City Council and Planning Commission

Throughout the planning process, staff was provided with input from the City Council and Planning Commission on important aspects of this Master Plan. Ultimately, the Planning Commission and City Council were responsible for selecting the Master Plan Amendment's overall concept and the land use program and for reviewing and approving the final Master Plan Amendment.

1.1.2.2. Property Owner

Before and during the preparation of this Master Plan, City staff met regularly with the Leal family who has for decades owned the property and the property owner's development representatives. These meetings helped establish the vision for the property and the legacy that the family hopes to leave in the form of the proposed new development.

1.1.2.3. Public Outreach

The preparation of the original Master Plan included a significant online public outreach campaign, including a website dedicated to the project and numerous postings on the City's social media outlets.

The project website provided background information on the

Big Ideas for the Leal Property

When the City asked for "big ideas" and themes for the project site, residents provided thousands of responses, mostly via social media. The following were the top listed categories:

- Lifestyle Centers
- Downtown
- Indoor Regional Mall
- Amusement
- Arts/Cultural
- Concerts/Special Events Venue
- Hospital/Medical Center
- Civic Uses
- 1950s Main Street
- University or Community College
- Sports/Recreation
- Hotel/Resort
- Giant Cow Statue

project and the property, as well as City and project-related documents, and kept the public apprised of upcoming meetings. The website also featured an interactive section that allowed users to share their input on important aspects of the project.

Initially, participants were asked to submit their suggestions for "big ideas" and "themes" for the project site. Residents responded to the City's call for ideas, submitting thousands of comments. Subsequently, an online poll was created to see which of the ideas held the greatest level of support in the community. Of the nearly 2,000 survey responses received, the three most popular categories were:

- Lifestyle Centers
- Downtown
- Indoor Regional Mall

1.2. OBJECTIVES

The General Plan goal of bringing a mixed-use development to the site will be realized through the adoption and the implementation of the Leal Master Plan. This Master Plan seeks to achieve the following objectives:

- Facilitate transformation of the project area into Eastvale's Downtown.
- Encourage a mix of uses, including retail, experiential uses, office, civic, residential, and recreation/entertainment, that respond to market demand.
- Create a Downtown Village destination in Eastvale to meet the needs of patrons from the community and the region.
- Include heavily landscaped spaces, further reinforcing Eastvale's Tree City USA designation.
- Implement high-quality architecture and design that creates a sense of place and enhances the aesthetic and visual quality of the neighborhood.
- Design the site in an efficient fashion that perpetuates a compact, urban form of development.
- Provide safe and entertaining gathering places for Eastvale residents.
- Develop the site in an orderly, comprehensive, and cohesive manner that avoids the piecemeal development of the site with a mix of incompatible uses that do not relate to one another.
- Expand the city's economic base by generating substantial property and sales tax revenue.
- Provide employment opportunities for residents, improving the city's jobs/housing balance and reducing vehicle miles traveled.
- Provide the infrastructure necessary to meet project needs in an efficient and cost-effective manner.
- Provide medium- and high-density housing opportunities.
- Provide ample access for pedestrians, bicyclists, and automobiles throughout the site.

1.3. VISION

The City envisions the project area emerging as the City's Downtown and a destination within the region. The area will be anchored by a downtown village and surrounded by a mixture of complementary office, civic, residential, and recreation/entertainment uses. All aspects of the project will exhibit the hallmarks of thoughtful, high-quality design and landscape.

Note to the Reader: For more information on the vision and the quality of the project's design, refer to Chapter 2, Project Character.

1.4. LOCATION

The project area encompasses the Leal property, an approximately 160-acre landholding that (as of 2014) included one of the city's last operating dairies and a horse farm.

Shown in Figure 1.1: Regional Context Map, the project area is in the northeastern section of Eastvale, approximately one-half mile from the Interstate 15/Limonite Avenue interchange, and south of State Route 60. The site is bounded by 58th Street to the north, Hamner Avenue to the east, Limonite Avenue to the south, and Scholar Way to the west, as shown in Figure 1.2: Local Context Map. The project area is situated immediately west and north of existing commercial and retail developments and is south and east of established and newly developed residential neighborhoods of varying densities.

1.5. RELATIONSHIP TO OTHER DOCUMENTS

1.5.1. General Plan

The Leal Master Plan implements the City of Eastvale General Plan. The land uses permitted by this Master Plan are consistent with the goals, policies, and general land uses described in the General Plan.

1.5.2. Municipal Code

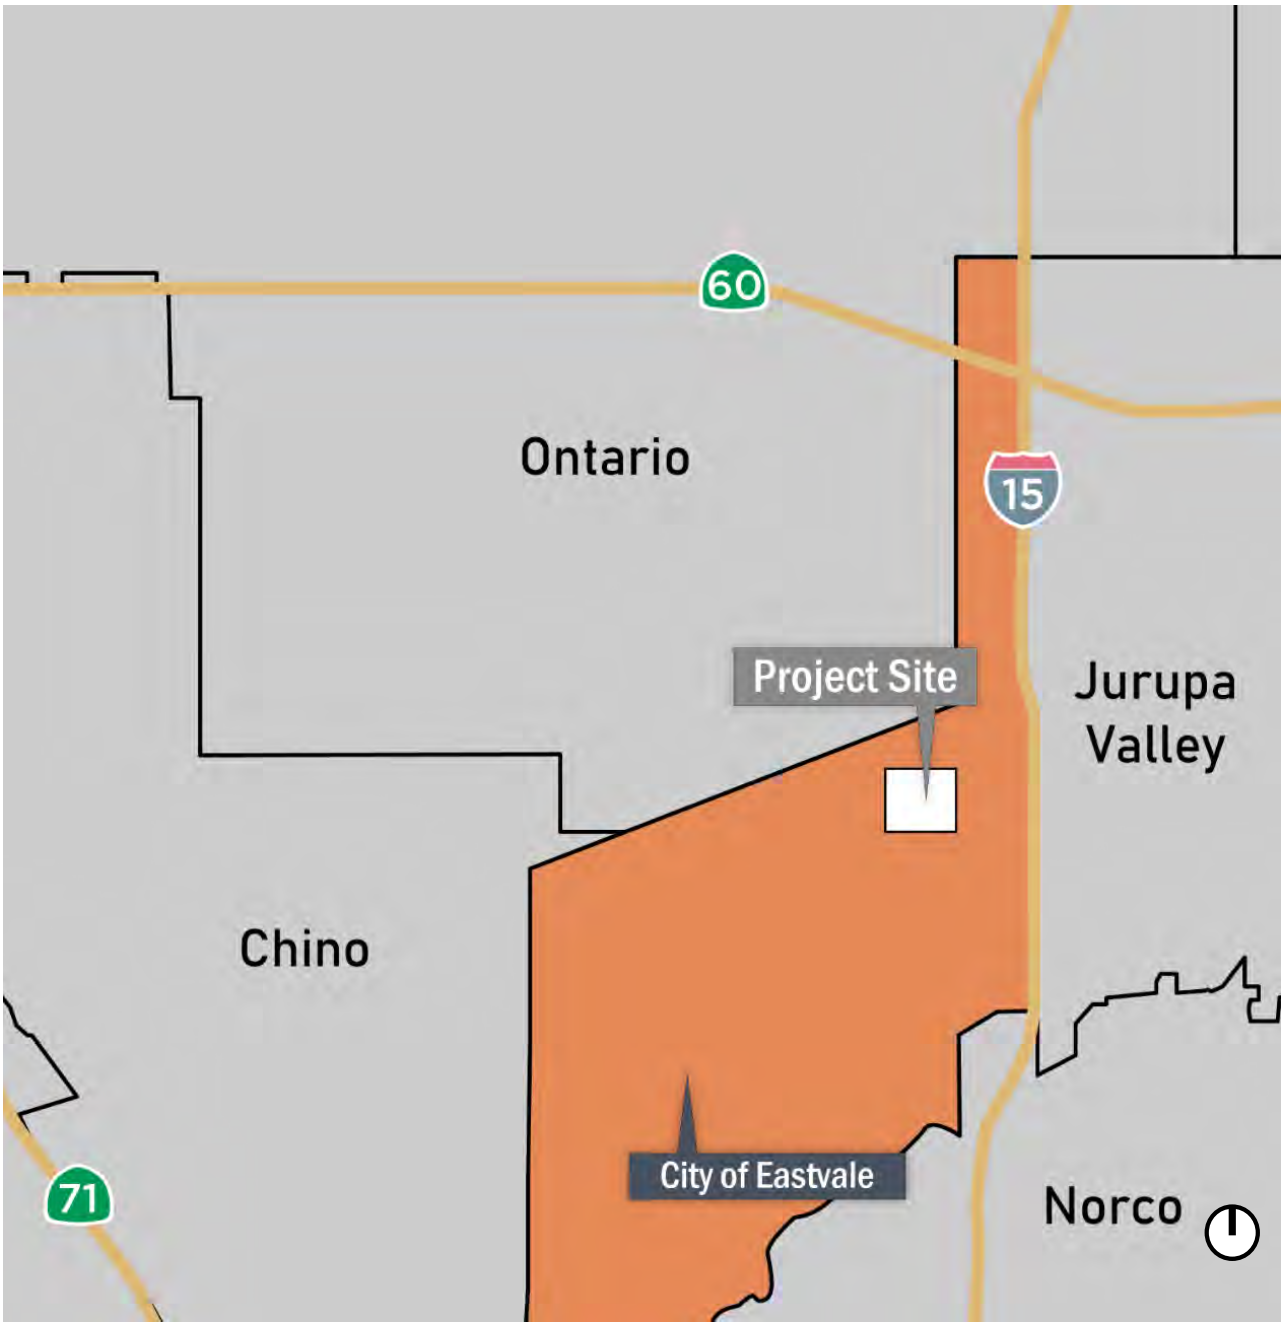
This Master Plan functions as the zoning document for the project area, except as discussed below.

This Master Plan incorporates zoning provisions that vary from, and supersede, those included in the City of Eastvale Zoning Code and introduces additional provisions not found in the Zoning Code. For these development standards, the Master Plan distinguishes between those provisions that apply to the entire project area and the provisions that only apply to individual land uses.

This Master Plan references regulations in the Eastvale Zoning Code. Where the Zoning Code is referenced, the Zoning Code in place at the time of a development project's submittal will be used.

Where this Master Plan is silent on any issue, the applicable standard in the Eastvale Zoning Code will be used.

Figure 1.1: Regional Context Map



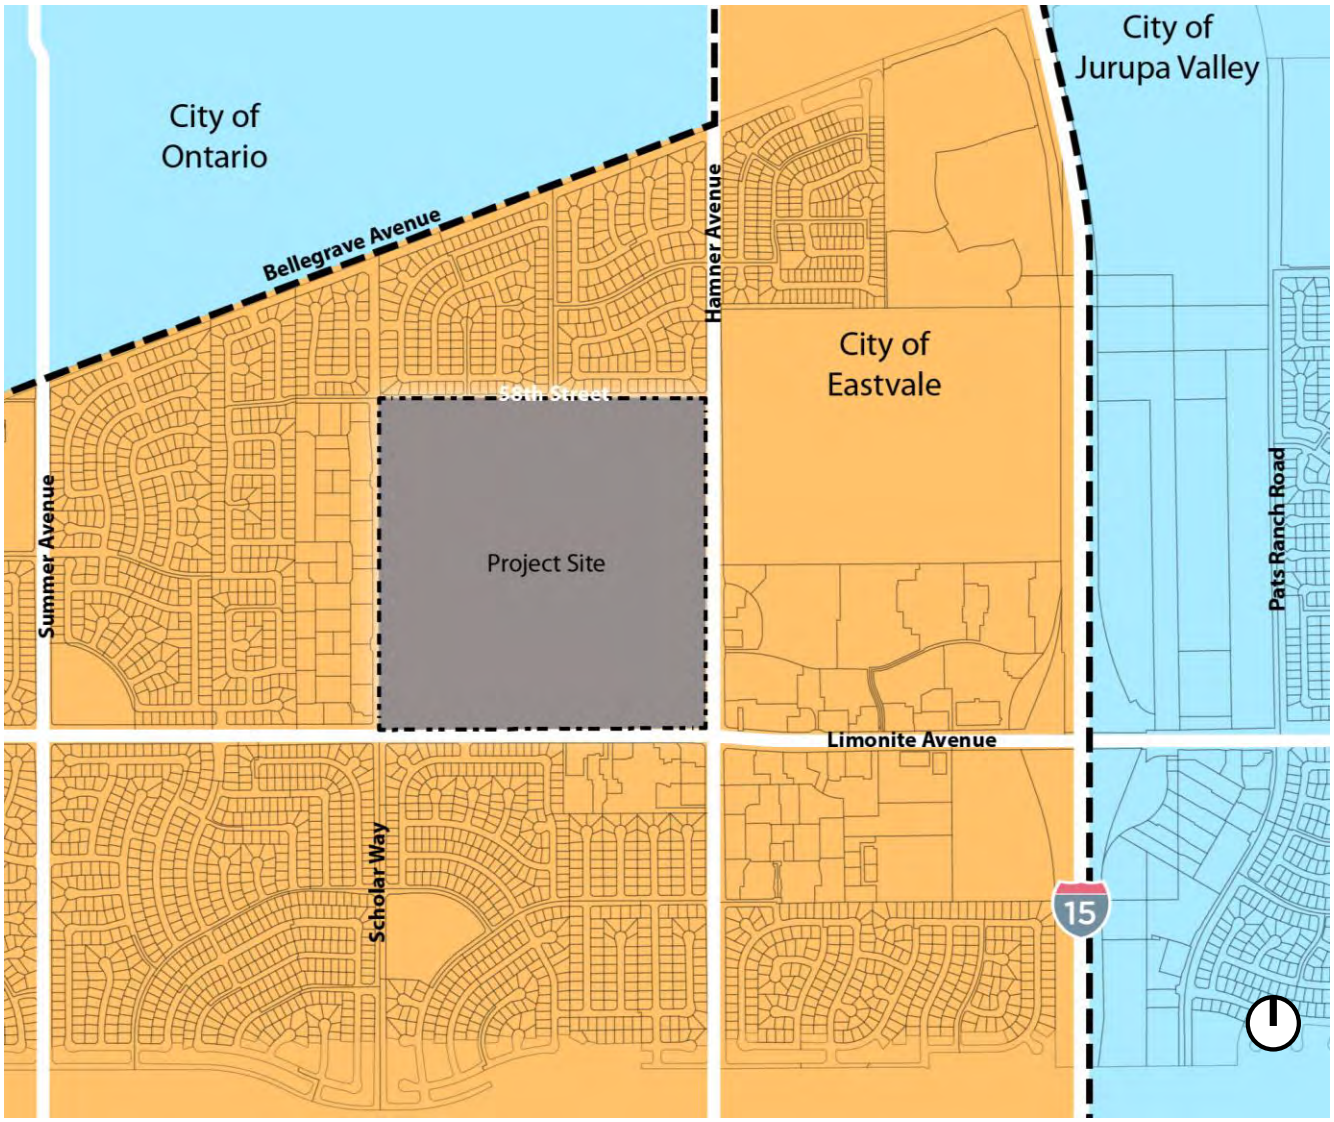


Figure 1.2: Local Context Map

1.6. PLAN ADMINISTRATION

1.6.1. Use of This Master Plan

This Master Plan will be used as the basis for establishing standards of development and evaluating proposed development projects for the Leal property and is intended to be used by a broad range of persons, including:

- The City Council and Planning Commission in decision-making activities.
- City staff in evaluating project consistency with the standards set forth in this Master Plan.
- The development community in preparing development proposals.
- Residents and citizens seeking to understand the vision for the Leal property and the type of development which may occur.

1.6.2. Interpretations of the Master Plan

The City of Eastvale Planning Department is responsible for the administration, implementation, and enforcement of this Master Plan. The Community Development Director or their designee is responsible for making determinations of consistency with this Master Plan as follows:

1.6.2.1. Determination of Intent

Whenever the Community Development Director determines that an ambiguity exists in how a particular standard or regulation applies, or a formal request for an interpretation is made by an applicant, property owner, or interested party, the Community Development Director or their designee will prepare an official interpretation of intent in accordance with the procedure set forth in Eastvale Zoning Code Section 1.5.1 (Official Zoning Interpretation).

1.6.2.2. Determination of Similar Land Use

Recognizing that every conceivable land use cannot be identified in this Master Plan and anticipating that new land uses will evolve over time, the Community Development Director or their designee has the authority to approve uses when their operation, impacts, and scale are similar to those land uses listed in this Master Plan.

Determinations of similar land use will be made pursuant to Section 1.5.1 (Official Zoning Interpretation) of the Eastvale Zoning Code.

1.6.2.3. Amendments to the Master Plan

Over time, various sections of this Master Plan may need to be revised, as economic conditions or City needs dictate. The policies presented in this Master Plan contain some degree of flexibility, but any Master Plan amendments must be judged by relatively fixed criteria. Minor modifications to the plans, guidelines,

regulations and standards contained in this Master Plan may be approved at the discretion of the Community Development Director or their designee as described in Section 5.4.1. Major modifications that do not meet the criteria for minor modifications described in Section 5.4.1 shall require a formal amendment to the adopted Master Plan. Major modifications are described in Section 5.4.2.

Amendments to this plan may be initiated by a developer, any individual property owner, or the City, in accordance with the Eastvale Zoning Code.

1.6.2.4. Actions Which Are Not Amendments to this Master Plan

The following are **not** considered amendments to this Master Plan:

- Determinations of similar use, as discussed in this chapter.
- Minor modifications to the Master Plan, as outlined in Chapter 5 of this Master plan.

2 INTRODUCTION AND VISION

2.1. INTRODUCTION

The City's vision for the Leal Master Plan area is a development that provides employment, retail, public uses, entertainment, and housing in a carefully laid out environment designed to create a memorable and enjoyable experience for both visitors and residents. The City and community expect that development of the Leal property will be of the highest quality, both in design and construction.

The envisioned level of quality is reflected in other regionally significant projects in Southern California, such as Downtown Claremont, downtown Temecula, and downtown Brea. All of these developments are noteworthy for their focus on creating a vibrant and attractive experience for visitors, incorporating vertical development (multiple stories) into a village setting, and for their attention to detail in a variety of features.

This Chapter expresses the City's vision for the Leal Master Plan. The expected level of quality is shown as it should be expressed in various aspects of the project, including:

- Site design
- Circulation
- Architecture
- Landscaping
- Public Spaces
- Buffers/Adjacencies
- Street Furnishings
- Thematic Features
- Signage

2.2. PROJECT CHARACTERISTICS

Attention to detail and incorporation of high-quality materials is a key aspect of developing high quality projects. While the examples provided on the following pages focus on distinguishing characteristics within the Downtown concept, all portions of the project will be required to achieve a similar level of quality and attention to detail.

2.2.1 Site Design

The following principles accompany the vision for Leal Master Plan to form the foundation for the planning and design of the community.

- Create a magical destination.
- Provide energy, vitality and create a central gathering place within the City.
- Public and private spaces are designed to enhance and complement one another.
- Along retail corridors, wide sidewalks and shaded paseos lined with street trees and outdoor seating create an inviting environment for both window shopping and socializing, focusing on the human scale and experience.
- Diversify Eastvale's economy by providing a range of uses within close proximity to each other.

2.2.1 Site Design

Effective site design facilitates access and mobility and integrates building design and orientation, private space, and public space to create a vibrant destination. The following bullets describe the site design vision.

- Downtown will provide opportunities for retail commercial and office uses, as well as central gathering places for residents to interact and connect. This commercial/retail hub should be visually prominent, as it is strategically located at the intersection of Limonite and Hamner Avenue to capture visibility and attract shoppers and direct visitors to this destination center.
- Downtown will be surrounded by higher density neighborhoods that gradually transits to lower density neighborhoods.
- A village green located adjacent to the Downtown will provide a wide variety of active and passive recreation amenities.
- Neighborhoods will be designed to connect to open space and park amenities, shopping, public and civic facilities, and recreational facilities via streets, paseos and pedestrian trails.
- A community wide linear park system will provide focus on community connections and pedestrian experience.
- Wide sidewalks and shaded paseos lined with trees and outdoor seating create an inviting environment both in the Downtown and residential areas.
- Public and private spaces are designed to enhance and complement one another.
- The project is integrated into the surrounding environment to provide for multiple points of access.
- On-street parking, landscaped bulb-outs, and special paving treatments provide convenient access in an aesthetically pleasing manner.
- Parking is conveniently located to destinations and should be tucked away or integrated into parking structures so as not to dominate the experience.

ICE CREAM

2.2.2 Circulation

A carefully devised circulation network allows pedestrians, bicyclists, automobiles, and delivery vehicles to operate without conflict.

- Entries and gateways into the project are distinct and identifiable.
- Circulation patterns are simple and obvious.
- Paving and landscaping materials distinguish the types of circulation routes.
- Plant and material selection along circulation routes are used to identify distinct districts within the overall project.

The Leal Master Plan has six major points of access: two points of access from Limonite Avenue, two points of access from Hamner Avenue, one point of access from 58th Street, and one point of access from Scholar Way, as shown in Figure 3.1, Land Use Plan.

In addition to these major entry points, secondary access may be provided from the major streets surrounding the project as part of subsequent Major Development Review for the Planning Areas.

All of the project's access points will provide an opportunity to create a sense of arrival by creating entryway statements or gateways with landscaping, signage, and buildings. See Section 4.3.3 in Chapter 4 for the design standards for the major entry points.

An internal circulation system is established and shall be designed to be consistent with Chapters 4 and 5 of the Design Standards and Guidelines for residential and nonresidential site and street design.

Pedestrian paths and bicycle lanes identified on circulation cross sections on Section 6.2 shall be designed to comply with the following:

- Pedestrian and bicycle access shall be provided along all major roadways and internally within each development to allow connectivity from the streets to the businesses and residences.
- Pedestrian and bicycle connections shall be provided from the street to the interior of the development that minimize conflicts with vehicular traffic.
- Sidewalks shall be shown on each street section.
- Pedestrian and bicycle access shall be consistent with Chapters 4 and 5 of the Design Standards and Guidelines for residential and nonresidential site design.

2.2.2 Circulation

2.2.3 Architecture

The Leal Master Plan is designed to include distinctive, identifiable neighborhoods of a walkable size and scale with an appropriate mix of housing types. This section provides the framework for high quality design and expresses the desired character of future development.

Community-wide Residential Development

This section identifies key architectural and site design elements that should be considered in all residential areas within the Leal Master Plan community. These guidelines intend to establish a diversified, yet cohesive level of quality in home design that reflects the character of the surrounding environment while allowing for flexibility in design.

Architecture Forward Design

- Within the Downtown, buildings fronting onto the street shall be designed so that active and articulated architecture visually dominates the street and allows for direct views of the street and outdoor living space to enhance the sense of security. This can be achieved by orienting doors and windows toward the streets and public areas.
- Garages shall be set behind the front face of the building or be oriented to alleys or motorcourt drives to minimize the visual dominance of garages along the street.

Building Siting and Orientation

- In general, buildings shall be located and oriented to define public streets and primary open space areas, as appropriate to the product type.
- Front entries shall face the streets, courtyards, paseos, or open spaces.
- Units shall be sited and design so that each building shall have roof exposure to the south or east, or a portion of the roof with a flat roof.
- Unit entries shall not be provided on 58th Street, Hamner Avenue, or Limonite Avenue.

Corner Lot Buildings

- Corner lots for single-family detached homes generally have wider than minimum required side setbacks from the adjacent public rights-of-way as compared to interior side setbacks (refer to product-specific standards in Chapter 4, Development Standards). This additional setback area is intended for landscaping and/or single-story architectural elements such as porches and courtyards.
- To respond to adjacent streets and intersections appropriately, buildings on corner lots shall be designed for a two-sided corner exposure, addressing the increased public visibility by allowing for architectural enhancements on the side elevation facing the street.

- Corner lot buildings shall feature enhanced elevations that provide a similar level of detail on the street side as the front elevation. Enhancements may include.
    - Wrap-around porches or courtyards
    - Principal window treatments
    - Roof plane breaks
    - Accent colors, materials and detailing
    - Garage access from the side street for conventional single-family homes

Building Form, Massing and Articulation

- Building massing (three-dimensional form of a building, referring to the perception of the general shape and form, and size) along the street shall be varied to create a quality streetscene.
- To reflect a variety of forms and create massing breaks, use horizontal and vertical offsets, such as interconnection and lapping of building forms and heights.
- Plane offsets cantilevered upper floors and varied roof forms are encouraged to avoid large expanses of flat, monotonous walls and roofs in alleys and motorcourts.
- To add interest to building facades, building articulations such as roof overhangs, balconies, and projections should be used in the design of building frontages.
- For attached residential buildings, break down the scale of the buildings into smaller elements through varied building massing and forms, such as varying setbacks on building elements/facades, varying roof lines and directions, incorporating single-story elements or open balconies that provide negative space at prominent corners, utilizing shed roof forms and trellis elements, etc.
- To prevent long expanses of blank walls, walls shall be articulated at least every 20 feet horizontally on each floor. Articulation shall mean a change in material, massing break of at least one foot (1'), or including a window, projecting porch, balcony (recessed or projecting), or other decorative element (e.g. decorative attic vent).

Colors and Materials

- Building materials and colors shall be appropriate to the overall neighborhood design theme and relate to the selected architectural style. Frequent changes in materials shall be avoided.
- Provide a variety in texture and color to allow for diversified expressions of individuality on building elevations, while maintaining visual cohesiveness throughout the community.
- Where color or material changes occur on the building, such changes shall only occur at inside corners or wrapped to appropriate termination points where they provide a finished appearance from the street.

- Color and materials should wrap columns and posts in their entirety.
- Exposed gutters and downspouts must be colored to match or complement the surface to which they are attached.
- Colors shall be neutral tones or muted colors complementary to the chosen architectural style and compatible with the character of surrounding development. Reserve bright or dark colors for trim or accents only.

Roofs

- Select simple and efficient roof forms, pitches and materials that are consistent with the architectural style of the building. Consider roof forms in relationship to the building mass to improve massing relief along public streets and on other publicly visible elevations.
- Varied roof forms, offsets and materials consistent with the architectural style of the building are encouraged to create variation in the skyline and diversity in the streetscene.
- Flat roofs with parapets or decorative cornices are permitted where appropriate to the architectural style of the building.

Mechanical Equipment

- All exposed air conditioning/heating equipment, soft water tanks, and pool and spa equipment shall be hidden from view in vaults, wells, enclosures, behind walls/fences or screened by landscape. Enclosures shall be constructed similarly and finished to match the building or material which they are attached.

Trash Enclosures

- Areas provided for trash and recycling bins shall be concealed from public view.
- Where trash and recycling material collection facilities are shared by several units/buildings, the collection facilities shall be screened by architectural enclosures. The screening enclosure materials and colors shall be similar or complementary to the exterior materials and colors used on the adjacent principal buildings.

Detached Residential Development Design Guidelines and Standards

- Side entries are allowed to give the product design greater flexibility and varies the curb appeal.
- For rear loaded and detached cluster homes, front yard and common area landscaping will be provided by the builders.
- Provide visual harmony by applying a common family of details throughout the cluster complex.
- Provide paving within the courtyards to enhance their use and identity as pedestrian entries to the homes.
- Individual unit entries of cluster homes shall be clearly discernible from the courtyard or access drive.
- Where a central courtyard is provided for detached cluster homes, living space windows shall orient toward the courtyard.
- Provide a minimum of three (3) floor plans in each Planning Area.
- There shall be a minimum of three (3) elevations for each floor plan, for a minimum total of nine elevations.
- No more than two buildings in a row may be plotted with the same elevation style.
- The same plans may be plotted adjacent to each other or across from each other, provided they have different elevation styles.
- Detached cluster units with front facades bordering streets I, E, F, H & G shall have their entries oriented to these streets.

53-59

Attached Residential Development Design Guidelines and Standards

Attached residential buildings tend to have larger building masses. As such, attached residential design should be carefully considered to convey a sense of human scale. Building typology and chosen architectural style should reflect the building's location within the community, and all buildings should exemplify quality design.

Townhomes and Attached Motorcourt Homes

- Where attached residential buildings are located adjacent to single family detached homes, minimize impacts on the adjoining residences with a sensitive transition in scale, massing and height, and design the transition to ensure resident privacy.
- Design the front elevation of attached residential buildings to clearly delineate individual units as a way of breaking up mass.
- Articulate the front building facades to promote individual unit identity by incorporating overhangs, recesses, porches, glazed doors, accent materials and colors, etc., consistent with the architectural style of the building.
- External unit and building entries shall be designed in a manner that is clearly visible to pedestrian and/or vehicular approaches.
- Rear facades along alleys, driveways, or visible from backbone streets shall not be void of articulation. These elevations shall include massing breaks and/or architectural details (i.e. shutters, gable vents), as appropriate to the architectural style of the building.
- Attached residential buildings sited adjacent to lower-density residential neighborhoods should be sensitive to the scale of those neighborhoods. Step down building heights to match the adjacent buildings as a transition to lower adjacent development heights.
- When located next to open space or a paseo, arrange groups of attached residential buildings so that the buildings front onto paseos or the open space. In the event that fronting onto these open spaces is not feasible, the residential buildings shall front onto a courtyard, pathway, or other gathering space that would directly connect to the open space or paseo.

Apartment/Flats

- Building configuration shall form adequately-sized courtyards and gathering spaces, where applicable. Accessible from inside the building or from external pedestrian pathways, courtyards or gather spaces should feature enhancements such as trellises, shade trees, or outdoor furniture.
- Step down corners and ends of multi-family buildings over two-stories in height at highly visible locations, softening the building edges and enhancing the streetscene.
- Provide pedestrian-oriented elements and details on facades facing public sidewalks. Elements such as balconies and awnings can add visual interest and richness to the street environment.

- Transitional spaces such as porches, covered entries or stoop entries shall be provided for ground floor units facing public street. Where common building entries are provided, they should be well defined along the street and/or parking lot edges.
- Arrange attached residential buildings and site landscaping in such a way that they screen parking areas from public view and minimize the impact of parking lots and garages on the public streetscape.
- Parking lots shall be broken up into smaller segments by landscaped islands, but should remain connected to facilitate internal circulation for a common complex.
- Provide a minimum of two (2) unit plans for each building, and a minimum of two (2) building plans (with the ability to add elements to corner units as necessary) in each Planning Area.
- Residential development adjacent to internal Street E, F, G, H and I shall include a primary pedestrian entry along this street frontage facing either the street or a courtyard or a paseo that is accessible by the residents.
- All primary entrances for multi-family dwellings shall provide unit identification.
- ... Exterior elevations shall include at least three (3) materials that accentuate or correspond to variations in building massing and plane changes, but not having too many different materials to avoid a chaotic appearance. Glazing (windows) and accent materials such as shutters and railings may count towards this requirement.

Downtown District Design Guidelines and Standards

The Downtown District will function as a vital commercial center for the City. Appropriate land uses for these areas include residential, commercial, retail services, restaurants, offices, paseos, recreational facilities, community venues, and civic facilities. The mixed- use areas are a place for working, shopping, dining and gathering. Businesses will be situated along the street and provide convenient access for vehicles, pedestrian walkways and landscape areas.

General Criteria

- Buildings shall front onto a street or spine, which may be designed either as a vehicle free zone or in such a manner as to allow for use by both pedestrians and motor vehicles. When vehicles are allowed, design features shall be incorporated to define pedestrian movement through changes in paving materials or grade, articulated walks with landscaping, or overhead structures.
- Both vertical (different uses within the same building, with commercial or office uses located on the ground floor and with office or residential uses located above) and horizontal (single-use buildings located side-by-side or adjacent to each other on a development site) mixed-use are encouraged in the Downtown District. The mix of land uses may be, but are not limited to, commercial mixed with residential or mix of uses of retail, restaurant, office, and civic uses.
- Vertical mixed-use projects are encouraged for 3-story and higher buildings, such as first floor retail with office or residential uses above. Visually, this arrangement divides the façade into two basic parts: the upper façade and the storefront.
- Large monolithic buildings, such as movie theaters and cultural venues, must be set back from a street designated for pedestrian activity and lined with smaller businesses in front to create a more appealing streetscene.
- Plaza areas in mixed-use settings are encouraged and may include seating, fountains, and landscaping.
- Open views into the retail space at the storefront level will enhance the pedestrian experience by providing a visual connection to the use inside the building. On upper levels, windows should continue the aesthetics of the building while serving the occupants' need for privacy.
- Primary entrances into retail buildings shall be clearly marked and provide a sense of welcome and convenient access into the building interior.
- Corner buildings shall be designed with enhanced treatments. These treatments may include: larger building element at the corner, more ornamentation than adjacent buildings, or a plaza to define the space. In addition, corner buildings typically have both primary and secondary façades that relate to the streets on which they front.
- The ground floor of the commercial component of a mixed-use building shall have a finished ceiling height of a minimum of 12 feet.

Building Form, Massing, and Articulation

- Iconic buildings in the Downtown District are encouraged and may include architectural features such as bell or clock tower or similar statements.
- Architecture shall address public areas with high quality materials and should contain architectural elements and other detail relating to the human scale.
- Groups of buildings shall be arranged in clusters around elements such as pedestrian walkways or landscaped areas.
- Retail and restaurant buildings with facades parallel to the street with covered pedestrian arcades are encouraged. Long unarticulated facades shall be avoided along the primary pedestrian corridor.
- No building wall facing a public street should extend more than 25 feet vertically or horizontally without a visual break created by a minimum 1 foot architectural/massing offset. (See graphic footnote 1 in below)

1 *For buildings with 100' or greater of street-frontage, plane breaks at least every 25 feet include glazing and provide adequate articulation.*

2 *A minimum of 30% of exterior walls on ground-floor facing the street shall include windows, doors, or other openings.*

- Within PA3 and PA5, the ground floor shall incorporate abundant glazing. At least thirty (30) percent of the exterior walls on the ground floor facing the identified pedestrian corridor shall include glass windows, glazed doors, or other openings, as illustrated in below. Percentage of fenestration shall be calculated based on the length of the facade frontage and the floor-to-ceiling height of the ground floor, excluding the areas for parking garage ingress/egress. (See graphic footnote 2, above)
- Adjacent to Streets H or G within Planning areas 2, 3, 4 and 5, at least 50 percent of the building (commercial, civic, or residential) shall be located within the 0 to 15 feet of the right-of-way from Streets H and G. The other 50 percent may be reserved for expanded outdoor dining opportunities, courtyards, paseos, or

driveways connecting to surface lots behind the building. Parking lots are not allowed between the building and the street along these corridors.

Materials and Colors

- A mixture of high-quality materials in highly visible locations and in varying quantities have a large impact on the perceived quality of the area.
- Colors should be carefully chosen to complement the architectural style or tenant of each building.
- Exterior elevations shall include at least three (3) materials that accentuate or correspond to variations in building massing and plane changes, but not having too many different materials to avoid a chaotic appearance. Glazing (windows) and accent materials such as shutters and railings may count towards this requirement.
- Colors shall be neutral tones or muted colors complementary to the chosen architectural style and compatible with the character of surrounding development. Reserve bright or dark colors for trim or accents only.

Services, Utilities, and Storage

- Service, loading, and storage areas should be located away from the streets and activity area. When service areas are not able to be located away from streets or activity areas, screening elements such as walls, fences, architectural treatments, landscaping, or similar screening element shall be incorporated. In all cases, the screening shall be integrated into the design and not appear as an afterthought.

OPEN

2.2.4 Landscape

Landscaping can have a significant visual impact on a project through the quality of landscaping materials selected and the how landscaping is integrated throughout the project site. Landscaping both visually ties a project together and identifies distinct districts.

The City of Eastvale has been proudly designated as a "Tree City USA" by the Arbor Day Foundation by providing commitments to installing and maintaining an urban forest. The City and this Master Plan continues this commitment to provide an urban forest to improve the visual appeal, increase property values, reduce home colling costs, and remove air pollutants. The following landscape guidelines are required for the Master Plan:

- To create an urban forest as quickly as possible, fast-growing tree species appropriate to the area and climate shall be used.
- Trees shall be planted as soon as practicable in project phasing to encourage more mature tree growth once buildings are occupied.
- The project should have a consistent plant palette, though variations may occur from street to street.
- Streets, promenades, public plazas, and smaller open spaces should have distinctive planting and landscaping treatments, making them unique and enjoyable pedestrian experiences.
- Plants are selected for specific purposes to enhance the project experience.
- Plant and material selection along circulation routes are used to identify distinct districts within the overall project.
- Streets designated as "Enhanced Parkways' on Figure 3.2: *Open Space/Parks* shall include a double-row planting of trees where the trees are planted at an average of least 20 feet on center. This requirement does not include intersecting streets or driveways. Special exceptions may be made for portions of the right-of-way that include utilities that preclude the planting of trees and for visibility of non-residential buildings.
- Surface parking lots shall have a minimum 6-foot wide landscape buffer from all street rights of way, measured from property line. Curbs and parking overhangs may be included within this required buffer.
- Where pedestrian circulation crosses a vehicular travel zone, a change in material, color, or grade is required.
- Landscape must permit adequate sight distance for vehicular and non-vehicular circulation.
- All new landscape areas must have irrigation installed.

  No plants from the California Invasive Plant Council List shall be planted.

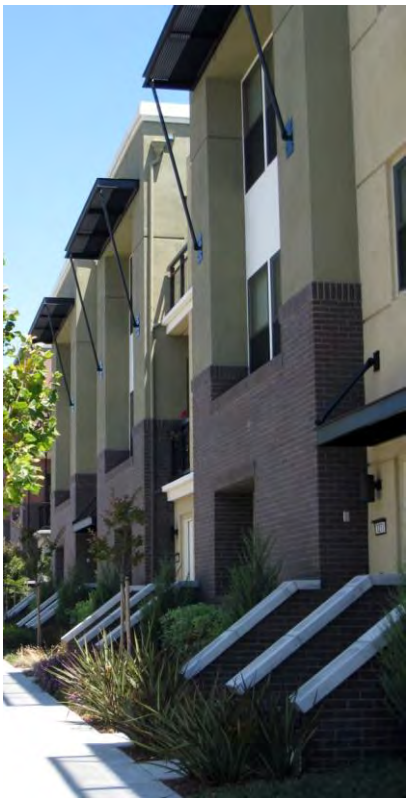
2.2.4 Landscaping

2.2.5 Public Spaces

Public spaces bring people together and allow for community events such as concerts, markets, exhibits, and celebrations.

- Public spaces reflect the needs of the community and project.
- Furniture, signage, paving materials and patterns, colors, landscaping, and other design features of the public space are used to create a sense of place and purpose.
- Surrounding buildings and uses are designed to interact with the public space and vice-versa.
- Common outdoor open space in the form of a pocket park, plaza, courtyard, garden, play area or outdoor amenity should be provided. Common outdoor open space must have a minimum dimension of 15 feet in all directions.
- In the Downtown District, the sidewalk along the designated pedestrian corridor shall have a minimum clear width of 10 feet (illustrated below). The sidewalk may incorporate pedestrian-friendly amenities

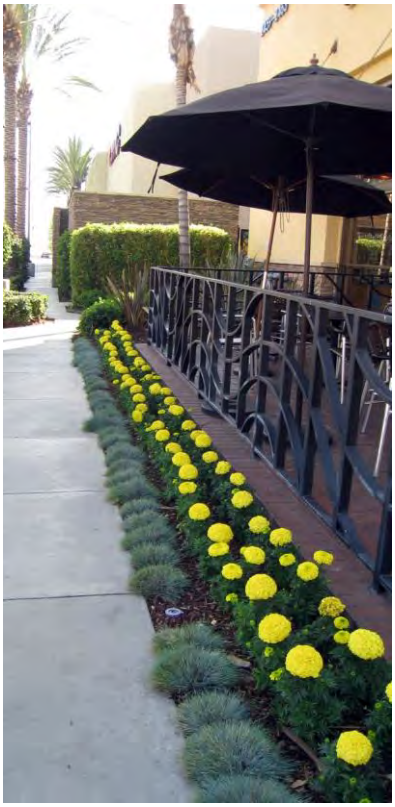
2.2.5 Public Spaces



2.2.6 Buffers & Adjacencies

The need to create buffers and address adjacencies between uses also provides an opportunity for continuation of the project theme and elevation of the quality of development.

- Freestanding and retaining walls shall have a minimum 30-inch planter on each exposed side of the wall to allow for the planting of shrubs, flowers, and/or groundcovers to help conceal the wall. Private yards for single-family and multi-family dwellings, open fencing (e.g. tubular steel), and enclosed private areas (e.g. pool deck) are not subject to this guideline.
- Landscaping shall be used as a transition between public and private space.
- Planters matching the theme of the project and planted with colorful flowers are used to separate vehicle and foot traffic and add to visual appeal of the project.



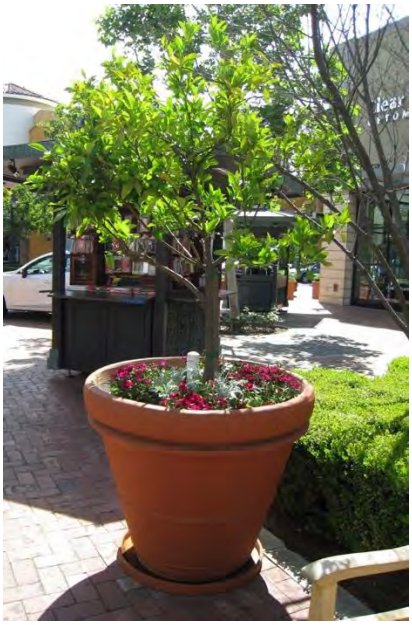
2.2.6 Buffers & Adjacencies

2.2.7 Screens, Fences, & Walls

Screens, fences, and walls act as buffers between land uses, distinguish private space from public space and provide privacy.

- Fences and walls incorporate the project theme and add to the overall visual continuity of the project.
- Landscaping is effectively employed to screen undesirable uses from sight.

2.2.7 Screens, Fences, & Walls



2.2.8 Street Furnishings

Street furnishings shall reflect and complement the overall character of the project and provide consistency between distinct districts, creating an enjoyable and memorable experience.

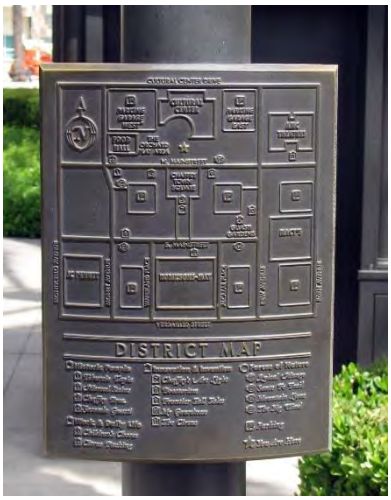
- Benches and other features are designed to reflect the project theme.
- Tree grates and other project features incorporate the project logo.
- Trash receptacles, newspaper kiosks, light fixtures all feature similar design aesthetic and accent details.
- Bicycle racks are designed for form and function.

2.2.8 Street Furnishings

2.2.9 Thematic Features

Thematic elements incorporated into various design features have a significant impact on establishing a sense of place and identity for a project.

- Project logo may be incorporated into street furnishings, walkways, and signage.
- Artwork/mural on walls within the Downtown District is allowed. Utility boxes may be wrapped with art to provide visual interest on utilitarian infrastructure and may be permitted throughout the entire Master Plan area.
- Material selection and special paving patterns for public spaces shall continue the project theme.
- Project themes are incorporated into building design to reinforce project identity.



2.2.9 Thematic Features

2.2.10 Signage

Signage plays a significant role in the visual quality of a community. Signs announce one's arrival at a distinct location, direct the flow of traffic, and provide information to the community through a variety of sign types, which are coordinated around a common theme.

General Signage Guidelines

- Signs shall be limited to a maximum of three (3) colors unless the use of corporate color schemes or logos dictates the use of more than three (3) colors. There should be a significant contrast between lettering colors and background colors for legibility.
- Signs for the Downtown District shall be enhanced, including halo-lit, reverse halo-lit, externally illuminated, non-illuminated, or other acceptable "high-quality" design acceptable to the City and approved through a comprehensive sign program.
- Sign conduits, transformers, junction boxes, etc. must be concealed from view.
- No sign shall be placed in such a manner that visibility of signs on an adjacent property is obscured.
- Signs should not extend above the eave line or parapet of the buildings on which they are located, except where such signs form an integral part of the building.
- Select sign colors and materials that contribute to legibility and design integrity.
- The sign copy shall be appropriately sized for the sign structure or wall. Signs should not be too large to overwhelm the elevation, nor should they be too small to be illegible. Sign shall not be more than 80 percent of the width of the unit frontage to which is attached.
- The sign structure shall be consistent with the architectural style of the building that it is placed on or close to.
- Signage may move or rotate, but the mechanism for moving or rotating shall not be visible.
- The use of propellors, flags, or noise-creating devices as part of a permanent sign shall not be allowed.
- The use of light-reflecting materials, messages appearing for less than 30 seconds, or flashing/moving lights is prohibited.

Major and Minor Tenant Identification

The purpose of these signs is to identify major and minor tenants within the Master Plan area. There are typically three (3) different types of signs utilized for tenant identification:

- Monument sigs.

- Walls signs.
- Projecting signs.

Monument Sign Guidelines

- Use a consistent color scheme and design on all free-standing signs within the Downtown District.
- Signs shall be constructed of permanent, durable materials.
- Monument signs should be designed with the width of the base of the sign equal to or more than the width of the sign face.
- Plastic is prohibited except for use for the sign copy. Exterior grade acrylic (e.g. plexiglass) is acceptable.

Wall and Projecting Sign Guidelines

- Locate signs as close to the customer entrance as possible.
- Raceways and sign supports shall not be visible.
- Internally illuminated box signs and banners used as permanent signs are prohibited.
- Projecting signs shall be placed perpendicular to the building wall and should not extend above building eave of a sloped roof or highest point on a flat roof.
- Projecting signs shall be attached to the building fascia or canopy with an attractive and decorative support.
- Exterior signs shall be constructed of permanent and durable materials.
- Creative signage designs and techniques are encouraged.

Changeable Signage

The purpose of changeable signage is to create excitement and provide a visually interesting commercial area. Two (2) styles of this signage used in within the Downtown District to achieve this goal are "pageantry" and "marquee signs."

Pageantry

Pageantry includes flags, pole-mounted banners, kiosks, canopies, lights, directories, ground-mounted graphics, wrapped utility boxes, or other similar, temporary or permanent (but changeable) elements. The intent is to allow regular changes to the pageantry elements in terms of color, design, and other visual content so the pageantry signage can always look current. The intent of pageantry is to help advertise for special events such as fairs, public gatherings, concerts in the park, farmer's markets, etc. and to allow for a variety of different methods to advertise community events within the plan area.

Guidelines for pageantry include:

- Pageantry may be located in any portion of the Downtown District. Pageantry may be placed on street lights and over the public rights-of-way, provided applicable permits have been obtained from Public Works.
- Air-inflated signs, moving signs, paper, cardboard, Styrofoam, stickers, and decals are not acceptable forms of pageantry (directories and kiosks excepted).
- Pageantry shall not include flashing, flickering, rotating, or moving lights.
- Temporary promotional advertising (banners) is not considered to be pageantry.
- Kiosks and directories should provide vertical breaks in the sign structure.
- Individual panels shall be recessed, framed, or treated to avoid a flat appearance of the sign face.

Marquee Signs

Marquee signs are typically used to provide information about current showings or events for theaters and live entertainment uses. Guidelines for marquee signs include:

- Marquee signs may project or be integrated into the building to promote enhanced articulation.
- Plain, rectangular marquee signs without any articulation are discouraged.
- Marquee signs may be manual or electronic.
- Marquee signs may include advertisements.

Directional Signage

The purpose of directional signage is to direct the flow of vehicular and pedestrian traffic within the Mixed-Use District.

Directional and Wayfinding Signs

Directional and wayfinding signs are typically horizontal signs with tenant names and directional arrows. Guidelines for directional/wayfinding signs include:

- Directional and information signs shall be attractive, clear, and consistent in theme, location, and design.
- Place directional signs at strategic locations throughout the Downtown district, providing directions to key destinations and facilities such as parking facilities for automobiles and bicycles, transit stops, and walking and bicycling routes to nearby parks, plazas, neighborhoods, shopping, civic and other destinations.
- The project name may be located on the sign in a smaller, more understated manner to not detract from the wayfinding.
- Directional and signs with exposed Unistrut supports shall be avoided.
- The placement of directional signs shall not limit sight lines.

- Wayfinding signs may be co-located with other streetscape furniture in the Downtown district, such as light standards and transit shelters, where possible, to enhance visibility and reduce visual clutter in the public realm.
- Provide consistency between wayfinding/information signs and street furniture throughout the Downtown district. This can include customized poles and mounts for regulatory signs and lighting fixtures, and an area logo, font, and color scheme.
- Elements such as pole banners or decorative paving elements can serve as public art, branding, and wayfinding.

Temporary Signage

The purpose of temporary signage is to inform the public of a special event of limited duration, such as a grand opening. The duration and requirements for Temporary Signs shall adhere to the provisions within Section 5.7 of the EMC. The guidelines below apply to temporary signage:

- Temporary signage should not be affixed onto the roof of a building, a window or landscape area.
- Temporary signage material should consist of vinyl, nylon, canvas, or cloth.
- Temporary signage should be well maintained.

3 LAND USE PROGRAM

3.1. INTRODUCTION

On December 13, 2017, the City of Eastvale City Council adopted a General Plan Amendment to change the land use designation for the Leal Property from Business Park, High Density Residential, and Medium Density Residential to "Leal Property" or as shown on the General Plan Land Use Map, the "Leal Policy Area." As part of this General Plan Amendment, the City Council adopted Policy LU-8.1, which is a land use table that specifies permitted land uses and development intensities. This chapter further describes the land use program for the Leal Master Plan and its consistency with General Plan Policy LU-8.1. The land use program establishes the types and intensity of development allowed within the Leal Master Plan. A land use map specifying locations for these uses is provided in Figure 3.1, Land Use Plan. Access roads showing in the Land Use Plan are described in Section 2.2.2, Circulation Plan.

Concurrent with the City Council's adoption of a General Plan Amendment in 2017 for the Leal Property, the City Council certified an Environmental Impact Report (EIR) (State Clearinghouse No. 2015031028). The adoption of this Master Plan Amendment was accompanied by an Addendum to the Leal Master Plan EIR, which provides further detailed environmental review of the land use program. The environmental analysis presented in the Addendum to the Leal Master Plan EIR determined that to avoid new or more severe significant impacts, the maximum development intensity on the Leal Property is 2,500 residential units and 595,000 square feet of general commercial, office, and civic center uses. Since that land use limitation has been established by the environmental analysis, this Master Plan Amendment incorporates that limitation as the maximum permitted land use intensities.

Figure 3.1: Land Use Plan

3.2. LAND USE TYPES AND DEVELOPMENT POTENTIALS

The City of Eastvale General Plan Policy LU-8.1 references a land use table that has been summarized as follows:

Table 3-1:General Plan Land Use Table

Land Use Type	Minimum/ Maximum Permitted	Details
Lifestyle Center	325,000 SF to 1,300,000 SF	Standard and mixed-use retail
General Commercial	Up to 225,000 SF	"Big Box" Retail
Commercial Office	Up to 920,000 SF No Minimum	
Hotel	Up to 450 rooms No Minimum	Permitted in Lifestyle and General Commercial
Civic Center	Not Specified	Permitted anywhere on Project
Residential Medium Density (14 – 21 du/ac)	No Minimum No Maximum	Single Family Attached, condominiums, townhomes,
Residential High Density (22 – 40 du/ac)	Minimum 500 du Maximum 660 du	Townhomes, condominiums, stacked flats, and apartments

This land use table was incorporated into the General Plan as a general guide to the development of the Leal Property, recognizing that further development planning and detail would occur subsequent to the General Plan Amendment. The Leal Master Plan Amendment provides the next stage in refinement of the development plan and thus refines the proposed land use mix of uses and intensities.

General Plan Policy LU-8.1 includes two residential land use categories, Medium-Density and High-Density. The two residential land use types include density ranges provided in dwelling units per acre and a general description of the types of residential products associated with each residential category.

The Leal Master Plan Amendment distinguishes between the two residential densities by location. The High-Density Residential is located within the Downtown area and consists of either vertical or horizontal mixed use, and primarily consisting of apartments[1]. Within the approximately 52-acre Downtown, residential uses could occur on approximately 21 acres[2]. The maximum of 660 dwelling units planned within the approximately 21 acres

[1] The Leal Master Plan does not regulate ownership of residential units, therefore, there are no limitations on the number of rental or owned units.
[2] The residential acreage within the downtown includes the aggregate of Planning Areas 2, 4, and 10.

where residential is permitted represents a density of approximately 31.0 dwelling units per acre, consistent with the High-Density residential category within the General Plan. The remaining 1,840 dwelling units allowed on the project site would occur over approximately 87.54 acres[3]. This represents a density of approximately 21 dwelling units per acre, which is within the Medium-Density category.

As shown in Figure 3-1, the project site has been organized into different Planning Areas. The Planning Areas represent specific development areas that would be developed either with commercial, residential or mixed-use developments. Other planning areas have been designed for parks and open space and others for right-of-way. Table 3-2, Land Use Summary by Planning Area, shows detailed information for each planning area within the Leal Master Plan area, including land use category and acreages.

Table 3-2: Land Use Summary by Planning Area

Planning Area (PA)	Land Use Category	Approximate Area (AC)	Minimum Intensity DU/AC or SQFT/FAR	Maximum Intensity DU/AC or SQFT/FAR
2	Mixed Use[4]	12.6	660 DU[5] 102,575 sqft[6]	660 DUs[7] Max 40 du/ac No Max sqft
4	Mixed Use	6.5		
5	Commercial Core	4.6		
10	Mixed Use	4.5		
3	Commercial Core	9.8	None	None
1	Residential	7.3		

[3] The residential acreage within the Medium Density category includes the aggregate of Planning Areas 1, 6, 7, 8, 9, 11, 12, 13, K, and L. The two parks are included in this acreage calculation because they serve those residential planning areas.

[4] Subsurface detention and water quality features may be located in Planning Area 2 or Planning Area 1, or a combination of both.

[5] A minimum density of 660 dwelling units is required within the Mixed Use portion of the Downtown, which equals over approximately 21 acres. The dwelling units may be allocated evenly across each planning area or clustered in one or more planning area provided the net density of any individual project does not exceed 40 dwelling units per acre. Net density is calculated by the number of dwelling units applied to only the acreage of the development less any streets, roads, parks, trails, or common open space.

[6] A minimum FAR of 0.10 is applied to Planning Areas 2, 4, and 10, resulting in a minimum requirement of approximately 102,575 square feet. The minimum square footage requirement is approximate based on project site design and for purposes of calculating the minimum square footage per this section including Table3-1, square footage is calculated based on the gross size of the building, including storage, stairwells, mechanical rooms, etc. The City may administratively reduce this minimum square footage requirement without the need for a Master Plan amendment if the City decides it would like additional commercial square footage under the 595,000 square foot cap on Lot 3 or if specific building design and/or site use warrants less square footage.

[7] A maximum of 660 dwelling units is permitted in the Downtown area for consistency with the General Plan, since General Plan density is calculated by the total number of units applied to the approximately 21 acres of Mixed Use residential area.

Planning Area (PA)	Land Use Category	Approximate Area (AC)	Minimum Intensity DU/AC or SQFT/FAR	Maximum Intensity DU/AC or SQFT/FAR
6	Residential	5.6	20 du/ac[8]	1840 DUs Max 40 du/ac[9]
7	Residential	14.1		
8	Residential	3.9		
9	Residential	4.4		
11	Residential	16.6		
12	Residential	17.3		
13	Residential	13.2		
14	Public Facility	1.2	0.6	
A - D	Right-of-Way	9.4	N/A	
E - I	Internal Streets	13.5	N/A	
J-V	Parks and Trails	14.1	N/A	
Total		158.59		
Maximum Development Intensity[10]		2,500 DU	595,000	

3.2.1. Downtown (DT)

The Downtown District (DT) land use category accommodates a mix of residential uses, commercial and office uses such as retail and restaurants, general commercial and commercial office, civic center, and residential. The vision for a lifestyle center included in the City's General Plan occurs within the Downtown District. The DT category applies to approximately 52 gross acres within planning areas 2, 3, 4, 5 and 10 located to the northwest of the Limonite Avenue/Hammer Avenue intersection, in the southeast corner of the Master Plan area. The Master Plan provides for up to 595,000 square feet of commercial, office and civic uses, under the DT land use category. Approximately 21 acres within the DT area can accommodate residential uses. A minimum of 660 dwelling units is required. The

[8] Within the 87.54 acres of Residential Uses (Planning Areas 1, 6, 7, 8, 9, 11, 12, 13, K, and L), a minimum of 730 dwelling units shall be constructed at a minimum net density of 20 dwelling units per acre. The dwelling units may be allocated within one or more planning areas provided the net density of any individual project does not exceed 40 dwelling units per acre. Net density is calculated by the number of dwelling units applied to only the acreage of the development less any streets, roads, parks, trails, or common open space.

[9] A maximum of 1840 dwelling units is permitted in the Residential Uses area for consistency with the General Plan, since General Plan density is calculated by the total number of units applied to the 87.54 acres of Residential Uses area.

[10] Maximum development intensity was determined through the Leal Master Plan EIR and Leal Master Plan EIR Addendum.

dwelling units may be allocated within one or more planning areas provided the net density of any individual project does not exceed 40 dwelling units per acre.

3.2.2. Residential Uses (RU)

The Residential Uses (RU) land use category applies to planning areas 1, 6, 7, 8, 9, 11, 12 and 13. The Master Plan envisions variation in product types, including both detached and attached residential housing types, within the residential category to promote diversity and dynamic neighborhoods. The appropriate residential product types are discussed in Chapter 4, Development Standards. Within the 87.54 acres of Residential Uses (Planning Areas 1, 6, 7, 8, 9, 11, 12, 13, K, and L), a minimum of 730 dwelling units shall be constructed at a minimum net density of 20 dwelling units per acre. The dwelling units may be allocated within one or more planning areas provided the net density of any individual project does not exceed 40 dwelling units per acre. Net density is calculated by the number of dwelling units applied to only the acreage of the development less any streets, roads, parks, trails, or common open space. A maximum of 1,840 dwelling units[11] is permitted in the Residential Uses area for consistency with the General Plan, since General Plan density is calculated by the total number of units over the 87.54 acres of Residential Uses area.

3.2.3. Public Facilities (PF)

The Public Facility (PF) land use category applies to a 1.2-acre area within planning area 14 located at northwest corner of the Master Plan area. The PF land use designation provides for the development of a fire station.

3.2.4. Parks and Open Space (P/OS)

The Master Plan also provides for compatible recreational uses serving the needs of the residents, such as paseo, parks, recreation facilities and open space, as shown in Figure 3.2, Open Space/Parks Plan, which totals approximately 14.12 acres.

[11] The maximum number of dwelling units of 2,500 was determined by the Addendum to the Master Plan EIR to avoid new or more severe significant impacts. Assuming 660 units are constructed in the DT area, the remaining 1,840 units may be constructed in the RU area.

Figure 3.2: Open Space/Parks

Illustrative purpose only, final design may vary.

3.3. PERMITTED USES

3.3.1. Permitted Uses by Land Use Category

Permitted uses within the Leal Master Plan area are identified on Table 3-3, Permitted Uses. Other use or activity not listed in Table 3-3 may be permitted within the Master Plan area if it is compatible with the intent of the Master Plan and is similar to a permitted use, subject to approval by the Community Development Director or his/her designee.

Table 3-3: Permitted Uses

Permitted (P): Permitted by right
Conditional (C): Permitted upon issuance of a Conditional Use Permit
Not Permitted (blank): Not permitted
Temporary Use (T): Permitted short-term activities

Indoor Amusement/Entertainment Facility: Establishments providing indoor amusement and entertainment services as primary uses for a fee or admission charge, including dance halls, ballrooms, electronic game arcades, dance classes, karate, yoga, etc.		C		
Establishments with four or more electronic games or coin-operated amusements, or where 50 percent or more of the floor area is occupied by amusement devices, are considered an electronic game arcade as described above; three or fewer machines are not considered a land use separate from the primary use of the site.		C		
Indoor Fitness and Sports Facility: Predominantly participant sports and health activities conducted entirely within an enclosed building. Typical uses include bowling alleys,		C		

LAND USE	RU	DT	PF	P/OS
billiard parlors, ice/roller skating rinks, indoor racquetball courts, indoor climbing facilities, soccer areas, athletic clubs, and health clubs.				
Outdoor Commercial Recreation: Facility for various outdoor participant sports and types of recreation where a fee is charged for use (e.g., amphitheaters, amusement and theme parks, golf driving ranges, health and athletic clubs with outdoor facilities, miniature golf courses, skateboard parks, stadiums and coliseums, swim and tennis clubs, water slides, zoos)		C		P
Private Recreation or Event Facilities				P
Public Recreation, Nonprofit Community Centers and Clubhouses, Social Halls, Parks, Playgrounds, Community Recreation Facilities, Plazas, Trails and Paseos, Community Gardens, Open Space and other similar recreational uses				P
Recycling Collection Facilities				
Schools, Private		C		

Note [1]: Residential uses, including live-work, are not allowed in the Planning Area 3 and 5 in Downtown (DT), except as outlined in the Development Agreement.

Note [2]: Residential use types are further defined in Chapter 4.

3.3.2. Standards Related to Specific Uses

The following standards apply to specific uses within the Leal Master Plan. Uses not listed here will be subject to a determination by the Community Development Director.

3.3.2.1. Outdoor Kiosks and Vendor Carts

A. Signage: All signs on outdoor kiosks and vendor carts shall be regulated by Section 4.5, Signage, of this Master Plan.

B. Minor Development Review: Prior to commencement of each outdoor kiosk and vendor cart on public property, the business owner shall obtain approval from the Community Development Director for the size, design, and aesthetic characteristics, to ensure the facility is consistent with the overall characteristic of the development.

3.3.2.2. Live-Work Units

For live-work development in the Planning Areas 2, 4, and 10, the following commercial/residential activities, conducted wholly within enclosed buildings, shall be permitted, provided the commercial/office uses shall occur in conjunction with residential uses and are not standalone uses:

A. Apparel - custom tailoring and sales of apparel, clothing and other sewing products made on the premises

B. Artists and craft/sculpture products, sales galleries, and studios

C. Internet-based commerce (no inventory, no pornography)

D. Office - creative/tech-based offices and services

E. Office - professional offices and services

F. Photographer/photography studios

G. Residential uses in conjunction with office, retail or other work-related uses as permitted herein for live-work development

H. Spas and personal care to include esthetician/body sculpting with proof of training, nail salons and hair salons (for single patron use only and subject to Homeowners Association/Property Owners Association approval)

I. Similar uses permitted by the determination of the Community Development Director.

The property development standards set forth below shall apply to all live-work units within the confines of the Leal Master Plan:

A. Live-work units include the combination of residential living units and workspace of a building for self-employed residents. Ground floor residential living may be permitted in live-work units.

B. Where live-work uses are operated, the workspace shall be limited to a maximum of 50 percent of the entire unit (minus porches and garages).

C. The working area of a live-work unit shall be used exclusively for work activities and not for residential purposes.

D. Storage of hazardous materials necessary for work activities in live-work occupancies may be stored in controlled areas per the current California Building Code used by the City of Eastvale.

E. The residential portion of the live-work unit shall only be occupied by the individual and his/her household that has their professional occupation established in the same unit.

F. Live-work units are single-tenant spaces that include both residential and commercial/office square footage in a single unit providing for a business to be conducted solely by the resident. In no instance shall the work portion of the live-work unit be sub-leased.

G. Noise levels generated by live-work spaces shall conform to the requirements of the Eastvale Municipal Code for residential use.

H. All signage and lighting shall comply with the requirements of the Leal Master Plan and the Eastvale Zoning Code and must be approved the City of Eastvale.

3.3.2.3. Alcohol Sales with a Bona-Fide Eating Establishment

The sale of beer, wine, or spirits is permitted as an accessory use for any bona-fide eating establishment under a "Type 41 License" or a "Type 47 License" of the California Department of the Alcoholic Beverage Control (ABC) Board.

In addition to the design guidelines and development standards contained in the Leal Master Plan, the following performance standards shall apply to accessory alcohol sales with a bone-fide eating establishment:

A. Food shall be available for purchase at all times during restaurant operating hours.

B. Alcohol sales shall not exceed 50 percent of gross receipts for the establishment.

C. Any sale of spirits for consumption off-premises is strictly prohibited. The consumption of spirits shall be limited to the restaurant area as defined per applicable license from the ABC Board.

D. Beer and wine may be purchased for off-premises consumption; however, the beer and wine sold for off-premises consumption may not be consumed on the premises that it was purchased on.

3.3.2.4. Breweries, Wine Blending Businesses, and Distilleries

Accessory beer, wine, or distilled spirit tastings is permitted within an alcoholic beverage manufacturing facility, provided the area devoted to tastings shall provide parking at the same rate as a restaurant or bar as described in Chapter 4, Table 4-8. The alcohol production area shall provide parking at the same rate as a manufacturing use as described in Chapter 4, Table 4-8. All such uses described within this section shall have an active, valid license from the ABC Board, as applicable.

In addition to the design guidelines and development standards contained in the Leal Master Plan, the following requirements shall apply to craft breweries, wine blending businesses, distilleries, and accessory tasting rooms:

A. A brewery, wine blending, or distillery use with a tasting room equal to or less than 1,000 square feet shall be permitted by right. An accessory tasting room of more than 1,000 square feet shall be required to apply for a Conditional Use Permit.

B. A brewery, wine blending or distillery use may not exceed production of 15,000 barrels per year.

C. All production activities and on-site storage shall be located completely within the facility. Off-site storage is permitted, provided it meets all applicable provisions of the underlying zone. The display of alcoholic beverages shall be located within the manufacturing area and accessory tasting room facility.

D. The brewery, wine blending, or distillery use and accessory tasting room use shall be allowed to operate and be open to the public during the following hours:

   i. Manufacturing and Operation: 7:00 A.M. to 7:00 P.M. Monday through Saturday; and

   ii. Accessory Tasting Room Open to the Public: 11:00 A.M. to midnight daily, 11:00 A.M. to 1:00 A.M. on Friday and Saturday.

E. Service trucks used for the purposes of loading and unloading materials, ingredients, products, and equipment shall be restricted to the hours of 7:00 A.M. to 6:00 P.M. Monday through Friday and 9:00 A.M. to 6:00 P.M. on Saturday.

F. The consumption, tasting and sales of alcoholic beverages shall be limited to only those products produced on site.

G. Ancillary retail sales shall be limited to only those retail items directly associated with the on-site facility and accessory tasting room.

H. The brewery, wine blending, or distillery use or accessory tasting room shall not charge an admission fee, cover charge or require a minimum purchase.

I. A security plan, including a video surveillance system and exterior lighting plan, satisfactory to the Community Development Director, or his/her designee, shall be submitted to and approved prior to the issuing of a Certificate of Occupancy. The video surveillance system shall be installed to assist with monitoring the property on both the interior and exterior. A Digital Video Recorder (DVR) or similar video-recording device, capable of exporting images in TIFF, BMP, or JPG format shall be used. Recording shall be retained for no less than 30 days. Exterior lighting shall clearly illuminate the common areas surrounding the building including, but not limited to, the entrance and exit doors, as well as the business address.

J. No more than 10 percent of the window display area (including any transparent doors) shall be allowed to bear advertising, signs or any other obstructions. All advertising, signage or other obstructions shall be placed and maintained to ensure a clear and unobstructed view of the establishment's interior. Window signs displaying prices shall be prohibited. No advertising or signage shall be placed in the area above 3 feet or below 6 feet in height of all windows measured from grade.

K. Tours of the brewery, wine blending, or distillery use and accessory tasting room use shall occur on regularly scheduled days and times. The operator shall ensure that tours do not negatively impact adjacent businesses or property owners.

L. The use is not considered a nuisance as defined in the Eastvale Municipal Code;

3.3.2.5. Off-Premises Alcohol Sales

Boutique Wine and Beer Stores may permit the sale of wine and beer for off-premises consumptions under a "Type 20 License" of the ABC Board. General Liquor Stores may permit the sale of general alcohol sales, wine, and beer for off-premises consumptions under a "Type 21 License" of the ABC Board.

In addition to the design guidelines and development standards contained in the Leal Master Plan, the following performance standards shall apply to Boutique Wine and Beer Stores and General Liquor Stores:

A. The use does not result in any adverse effects, jeopardize, or endanger the health, peace, or safety of persons residing, visiting, or working in the surrounding area; The exterior lighting and security measures shall comply with applicable requirements.

B. The use is operated and maintained in a neat, quiet, and orderly condition and operated in a manner so as not to be detrimental to surrounding properties and occupants. This shall encompass the upkeep and maintenance of exterior facades of the building, landscaping, designated parking areas serving the use, fences, and the perimeter of the site, including all public sidewalks, alleys, and parkways;

C. The use is not considered a nuisance as defined in the Eastvale Municipal Code;

D. The exterior lighting and security measures shall comply with applicable requirements (including, but not limited to Sections 120.05.050, Outdoor Lighting; 120.05.080, Neighborhood Preservation Standards; 120.05.060, Off-Street Vehicle Parking as applicable)

E. No more than 10 percent of the square footage of the windows and transparent doors of the premises shall be allowed to bear advertising, signs or any other obstructions including products, shelving, display items

and/or coolers. All advertising, signage, product, shelving, display items and/or coolers shall be placed and maintained to ensure a clear and unobstructed view of the establishment's interior. Window signs displaying prices shall be prohibited. No advertising or signage shall be placed in the area above 3 feet or below six (6) feet in height of all windows measured from grade.

F. A copy of these performance standards, additional City or ABC Board imposed operating conditions, and a 24-hour complaint telephone number shall be posted in a conspicuous and unobstructed place visible from the entrance of the establishment in public view.

4 DEVELOPMENT STANDARDS

This chapter contains the permitted uses and development standards for the Leal Master Plan. Standards not addressed in this chapter are subject to the City of Eastvale Municipal Code in effect at the time of approval of this Master Plan. Additionally, in order to be approved by the City, development will need to comply with the quality expectations and community features identified in Chapter 2 of this Master Plan.

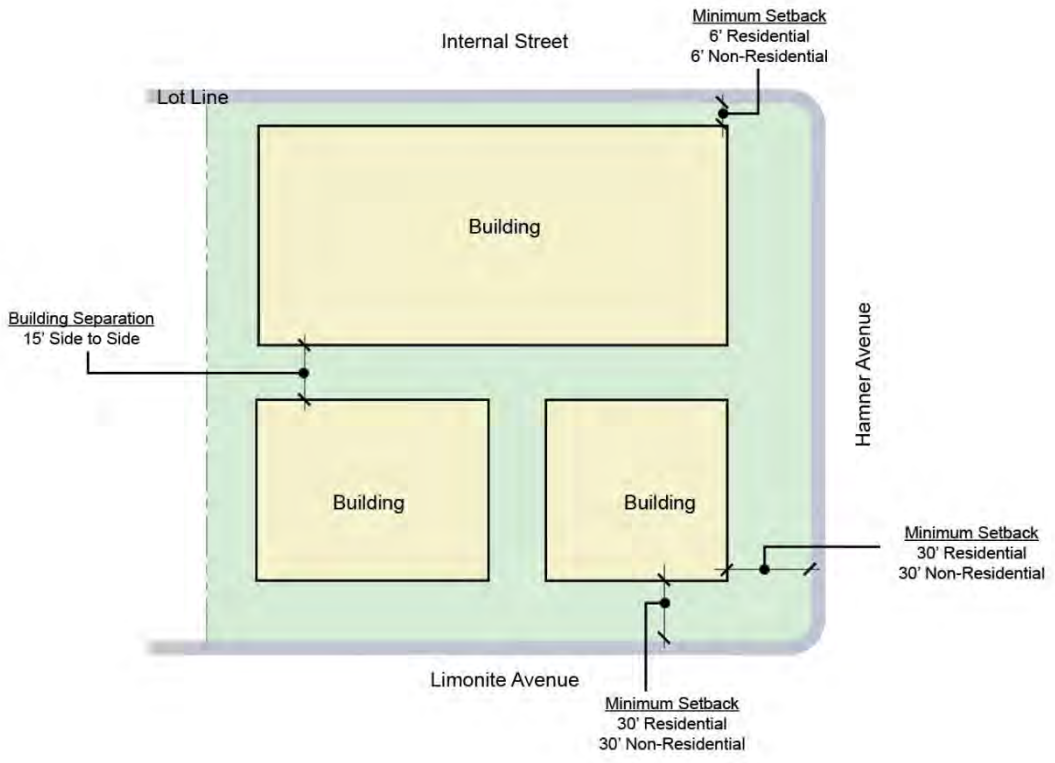
4.1. DEVELOPMENT STANDARDS

4.1.1. Downtown Development Standards

The Downtown (DT) District is envisioned to be the focal point in the City. The intent is to develop an open-air marketplace for retail and specialty uses that are not currently present in Eastvale and in nearby communities (including Live/Work units).

The mix of uses may be horizontal (different uses within a Planning Area separated horizontally) or vertical (different uses within the same building, with commercial or office uses located on the ground floor and with office or residential uses located above). The residential component of this land use district is intended to provide for the development of multi-family residential dwellings in an urban atmosphere.

Minimum and maximum development intensities and densities are outlined in Chapter 3 of this Master Plan.



DT District includes planning areas 2, 3, 4, 5 and 10.

Table 4-1 establishes the development standards for the Downtown District. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.1. Residential uses within the Downtown District are subject to the development standards provided in Table 4-1. Where Table 4-1 is silent on a development standard, the development standards presented later in this chapter for specific product types would apply for the project type proposed. If there is a conflict in development standards between Table 4-1 and the development standards for product types, Table 4-1 shall govern.

Table 4-1:Downtown Development Standards

	RESIDENTIAL BUILDINGS	NON-RESIDENTIAL/ MIXED-USE BUILDINGS
Maximum Site Coverage	75%	N/A
Maximum Building Height	65' (4 stories)	
Minimum Building Setbacks From		
Hamner Avenue ROW	30'	30'
Limonite Avenue ROW	30'	30'
Lot Line Along Internal Street	6'	6'
Minimum Building Separation		
Residential - Front to Front (entries) - at open space	20'	N/A
Residential - Side to Side (no entries) - at open space	15'	N/A
Non-Residential/Mixed-Use – Side to Side	N/A	15'

Figure 4.1 Downtown Setback Diagram

4.1.2. Residential Development Standards

The development standards and product types included herein are intended to establish the minimum design parameters. An appropriate mix of building types shall be incorporated into the residential land use and mixed-use districts to avoid monotonous neighborhoods.

Table 3-2 within Chapter 3 establishes permitted uses, including Dwelling – Multiple Family, Second Unit, Single Family, and Two-Family. Those permitted residential land use categories are further defined in this Chapter through the following description of residential product types permitted in the Master Plan area.

Development standards for residential uses within the Downtown District are presented above in Table 4-1. Development standards for residential uses within the Residential Uses District (Planning Areas 1, 6, 7, 8, 9, 11, 12 and 13) are presented below by housing type.

Conventional Single Family Detached Homes typically have street front orientation where primary entries and walks face the street or the side, and have private rear and side yards. Garages are in the front or side and face the street. Resident parking spaces are provided in garages and guest parking spaces are provided in driveways or on local streets.

Zero-Lot Line Homes are designed to fit together along a common property line by providing one home with a deeply recessed garage. Reciprocal use easements are used to maximize the side yard areas. Zero-lot line homes typically have street front orientation where primary entries face the street, and have private rear and side yards. Garages with driveways face the street. Resident parking spaces are provided in garages and guest parking spaces are provided in driveways or on local streets.

Rear Loaded Homes have street-facing primary entries and are designed to take garage access from a shared access drive behind the homes. Private yard space is provided in a side yard, a courtyard behind the front portion of the house or behind the house between a detached garage and the home. Resident parking spaces are provided in garages and guest parking spaces are provided in driveways (18' minimum in length where provided), on the street or in a common parking area. Reciprocal use easements may be used to maximize side yard areas.

Detached Cluster Homes are single-family detached dwellings oriented on a shared access drive. Each cluster module typically consists of 4 to 10 dwelling units. Resident parking spaces are provided in garages and guest parking spaces are provided on the street or in a common parking area. Reciprocal use easements may be used to maximize side yard areas.

Row Townhomes are single-family attached homes with primary entries facing street or common open space. The units have private outdoor living space. Automobile access is via an alley or shared access drive. Resident parking spaces

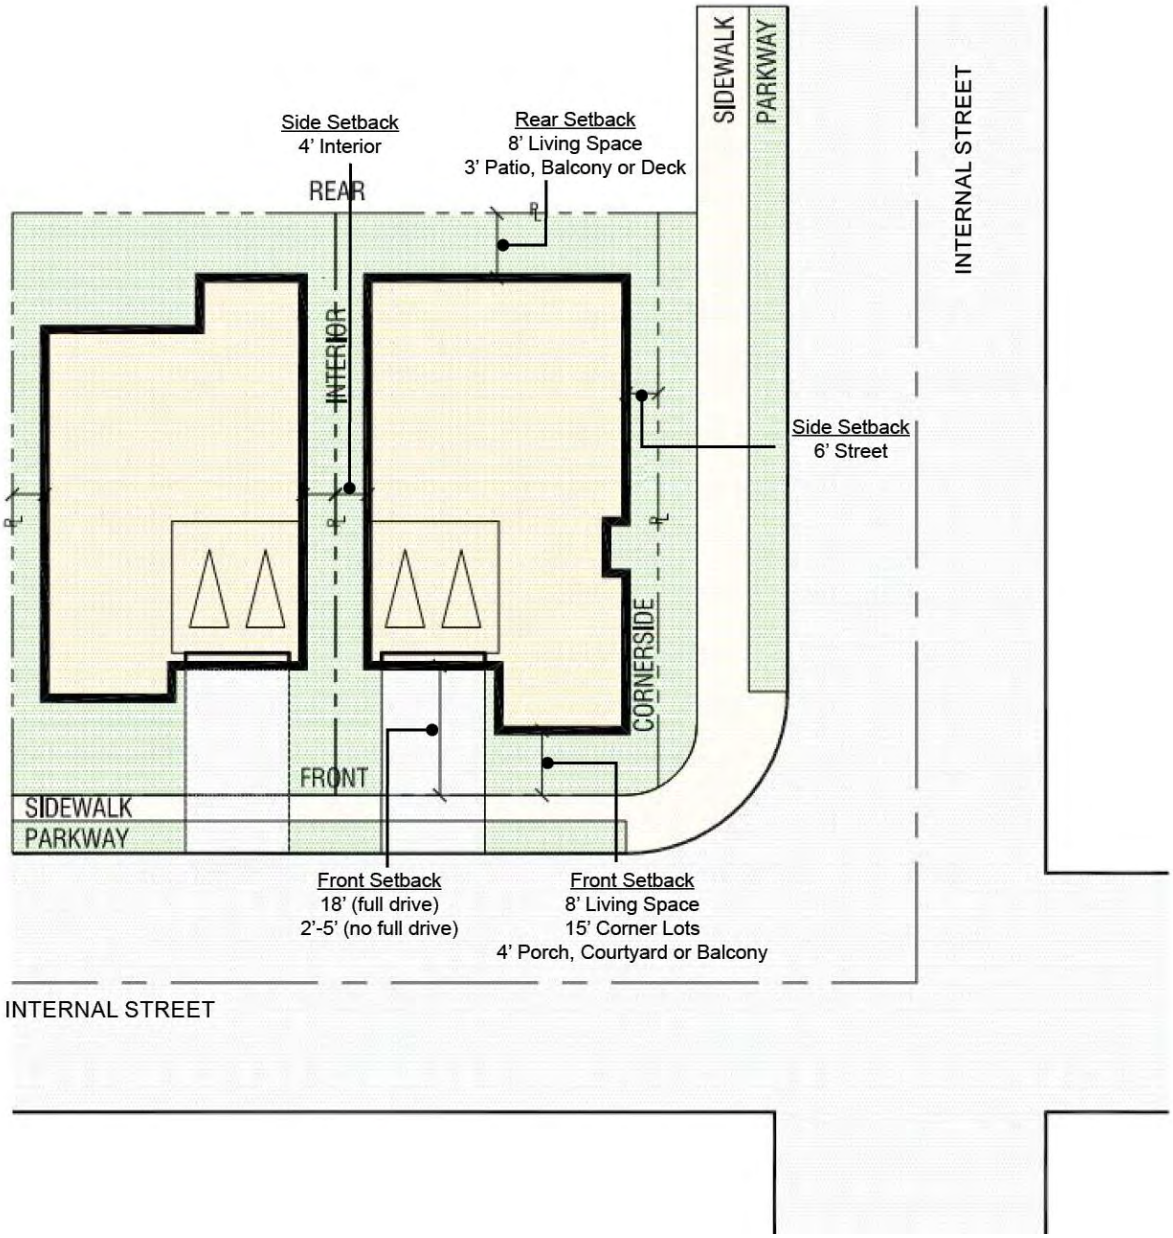
are provided in garages, and guest parking spaces are provided on public or private local streets or in designated parking areas.

Attached Motorcourt Homes are buildings mixed with townhomes and flats. The entries are from the street or common open space. Automobile access is via an alley or shared access drive. Resident parking spaces are provided in garages, and guest parking spaces are provided on public or private local streets or in designated parking areas.

Apartments/Flats are buildings with either walk-up units or flats in multiple story configurations. The entries can either be external from the street or common open space, or internal and elevator served. Resident parking spaces are provided either in garages, surface parking, or in multiple story parking structures. The units tend to be for rent as opposed to for sale.

Detailed design standards per product types are presented below and shown in Tables 4-2 to 4-7.

4.1.2.1. Conventional SFD Residential



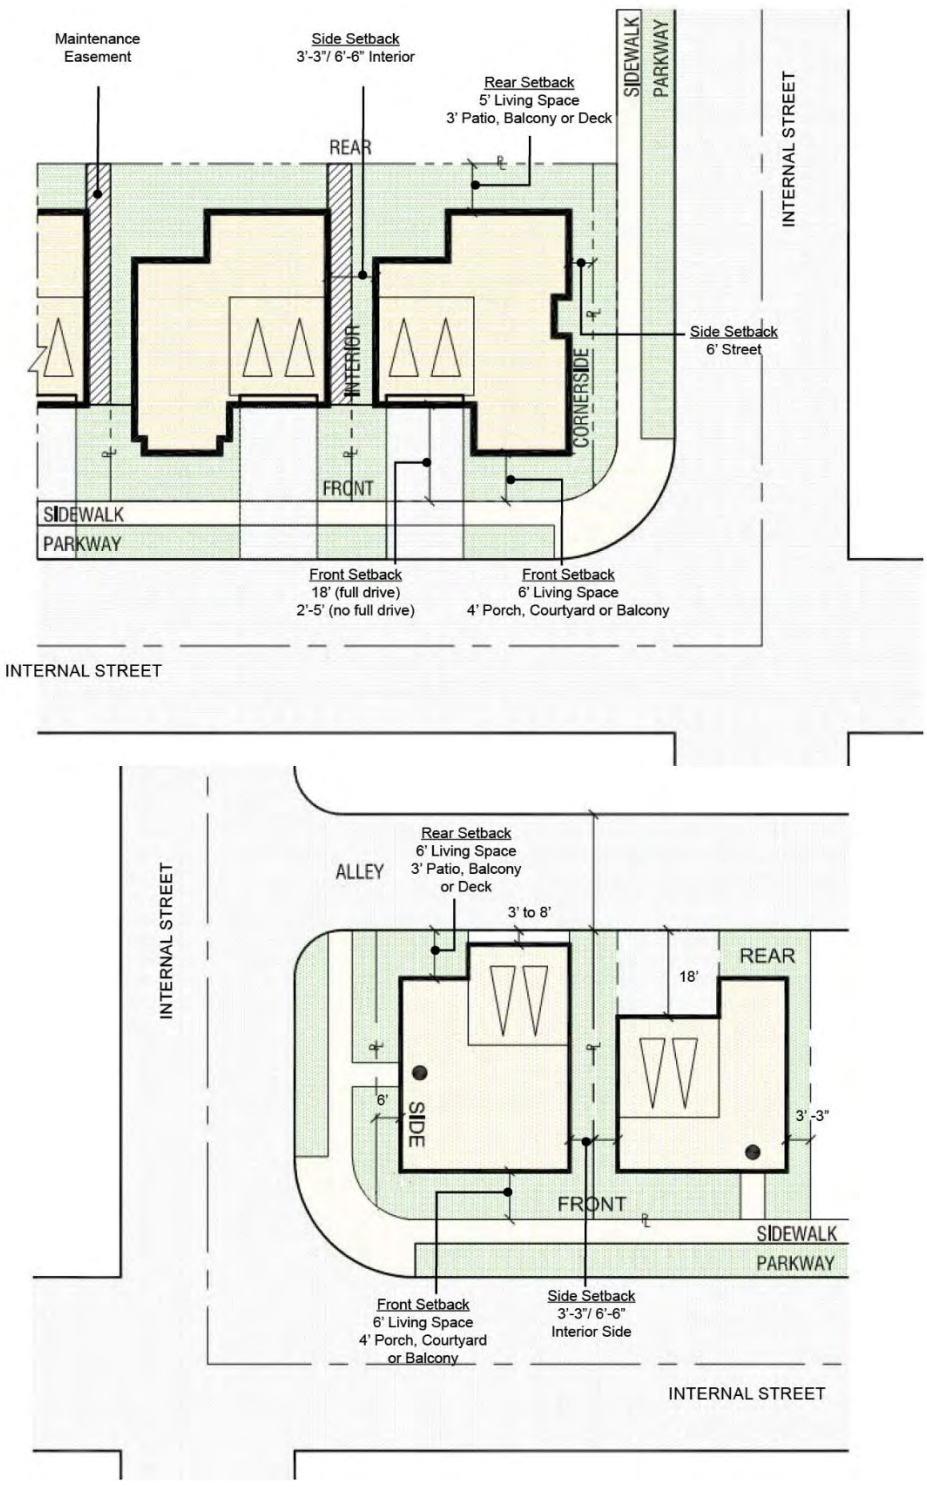
The development standards provided in Table 4-2 have been established to encourage forward-facing living space. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.3. These standards allow for the placement of entries, windows, front porches and living spaces closer to the street to provide more active and visually interesting streetscape.

Table 4-2:Conventional SFD Residential Development Standards

	Conventional SFD Homes
Minimum Lot Size	2,500 sq. ft.
Minimum Lot Width[1]	40'
Maximum Building Coverage	70%
Maximum Building Height	50' (3 stories)
Minimum Front Setback (from Property Line)	
Living Space	8' (15' at the corner lots)
Porch, Courtyard or Balcony	4'
Front Entry Garage	18' (full driveway)/ 2'-5' (no full driveway)
Minimum Side Setback (from Property Line)	
Interior Side	4'
Internal Street Right-of-Way Side	6'
Minimum Rear Setback (from Property Line)	
Living Space	10'
Patio Cover, Balcony or Deck	3'

[1] The minimum lot width for knuckle and cul-de-sac lots shall be the average of the widths measured at the front and rear edges of the lot

Figure 4.3 Conventional SFD Residential Setback Diagram



4.1.2.2. Zero-Lot Line and Rear Loaded SFD Residential

Table 4-3 establishes the development standards for front loaded zero-lot line and rear loaded SFD residential development. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.4. Note: Zero-Lot Line Homes may be front or rear loaded. In the event that a rear-loaded Zero-Lot Line Home is proposed, the Rear-Loaded Homes standards shall apply (with a maintenance easement for the side yard).

Table 4-3: Zero-Lot & Rear Loaded SFD Residential Development Standards

	Zero-Lot Line Homes	Rear Loaded Homes
Minimum Lot Size	2,500 sq. ft.	2,000 sq. ft.
Maximum Building Height	50' (3 stories)	50' (3 stories)
Maximum Building Coverage	70%	70%
Minimum Front Setback (from Property Line)		
Living Space	6'	6'
Porch, Courtyard or Balcony	4'	4'
Front Entry Garage	18' (full driveway/2'- 5')	N/A
Minimum Side Setback (from Property Line)

4.1.3. Public Facility Standards

PA 14 is a public-institutional planning area for a fire station located at the southeast corner of Scholar Avenue and 58th Street.

- Maximum Building Height: None.

4.1.4. Parks and Open Space Standards

The Parks and Open Space (P/OS) District includes Panning Areas J through V. Planning Areas J, K, and L are parks and Planning Areas M through V are trails and open space areas. Planning Area J (PA J) is a village green located between PA 5 and 3, which could be used for community events, such as concerts, movies, art fairs, farmers markets, etc. Planning Area L (PA L) is adjacent to PA 6 and 8 and planned for a community park. Planning Area K (PA K) is adjacent to PA 7 and 12 and is planned as a private recreation facility for the residents of the Leal Master Plan.

- Parking Area Setback from Internal Backbone Street Right-of-Way: 10'
- Building and Structure Setback from Internal Backbone Street Right-of-Way: 6'
- Maximum Building Height: 40' (2 stories); 15' for accessory structure

4.1.5. Allowable Projections and Encroachments

An encroachment is a permitted allowance into a ground-floor or upper-level setback. A projection is an element that is allowed to project above the height limit. In all cases, all encroachments and projections shall comply with the California Building Code (CBC), as well as other applicable codes and regulations such as the American Disability Act. The permitted encroachments and projections are discussed below.

A. Detached accessory buildings, including garages, or parking spaces required in the absence of garages, may occupy not more than 25 percent of a required rear or interior side yard, provided such building is not more than 15 feet in height and the wall of such building or parking space is located not less than 6 feet from the nearest wall of a main building on the same lot or a contiguous lot.

B. A breezeway connecting a main building to another building may be permitted. Such breezeway shall remain open on one side and shall not be considered part of a main building.

C. A covered patio, attached or unattached, which is enclosed on not more than 3 sides may encroach into any setback provided the distance between the property line and the patio at the nearest point is not less than 6 feet.

D. Eaves, cornices, canopies, belt courses, sills, buttresses, bay windows, planter boxes, light fixtures, or other similar architectural features may encroach into any required setback, provided such extensions shall not be nearer than 2 feet to any property line. Where more than one building is located on the same lot or parcel, such features shall not be nearer than 2 feet to a line midway between the main walls of such buildings. Chimneys and fireplaces may encroach into any setback not more than 2 feet, provided such chimneys or fireplaces shall not be nearer than 3 feet to any property line. Where more than one building is located on the same lot or parcel, such chimneys or fireplaces shall not be nearer than 3 feet to a line midway between the main walls of such buildings.

E. Open, unenclosed stairways or balconies not covered by roofs or canopies may encroach into any setback not more than 3 feet.

F. Uncovered porches, platforms, or landings which do not extend above the level of the first floor of the building may encroach into any setback not more than 6 feet; provided, however, an open-work railing, glass or glass like material, no more than 3 ½ feet in height may be installed or constructed on such porch, platform, or landing.

G. Open-work fences, hedges, guard railings, or other landscaping or architectural devices for safety protection around depressed ramps may encroach into any required setback provided such devices are not more than 3 ½ feet in height.

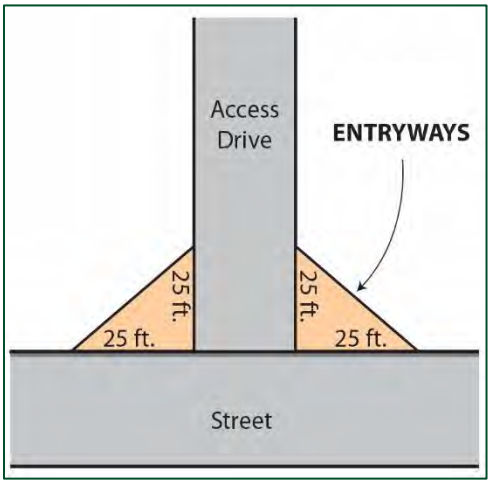
H. Fences and walls, pursuant to Section 5.3 of the Eastvale Zoning Code.

I. Signs may project and/or encroach into any required setback or public right-of-way, subject to applicable requirements in this Master Plan and the Eastvale Zoning Code.

J. Landscape elements such as benches, fountains, and other decorative features may encroach into any setback, provided they do not obstruct any path of travel or intersection visibility requirements per the Eastvale Zoning Code.

K. Mechanical equipment may encroach into any required setback area up to the property line, provided the equipment is screened by landscape or material (e.g. wall) to the maximum extent feasible and allowed by the applicable utility provider.

L. Stairwells, elevator penthouses, mechanical equipment, and roof attachments such as flagpoles, towers, wireless masts, television antennas, and similar diminutive roof attachments, may project above the height limits set forth within the Leal Master Plan, provided such projections shall not exceed 20 feet above the prescribed height limit.



M. Parapets, security railing, and other appurtenances on a flat roof may project above the height limits set forth within the Leal Master Plan,

provided such appurtenances shall not exceed forty-two (42) inches above the prescribed height limit.

4.2. COMMUNITY FEATURES STANDARDS

Community features such as entry monuments, parks, and trails are significant components in the Leal Master Plan. The development and design standards for entryway statements shall be consistent with Chapter 2, Project Character, of this Master Plan and the following:

A. Entryways into the Master Plan shall be identified with special gateway treatments to announce arrival into the project area. The minimum sizes of each are shown in the figures below.

B. Entryway feature treatments may include public art and/or special architectural elements such as sculptures, signage, or enhanced landscaping. All entry points shall be defined through the use of landscaping, trees, and/or architectural elements.

C. Entryway statements shall satisfy the design guidelines provided in the Eastvale Design Standards and Guidelines.

D. Entryways should be designed to provide a clear sense of arrival and set the tone for the overall design quality in Eastvale.

4.3. PARKING

4.3.1. Parking Requirements

Vehicular and bicycle parking shall comply with the parking standards and requirements listed in Table 4-8, *Parking Requirements*, below.

Table 4-8: Parking Requirements

USE TYPE	PARKING REQUIREMENTS
General Commercial/Retail Uses	
General Retail including, but not limited to, neighborhood, community and regional shopping centers, including those with restaurants[1]	4 spaces/1,000 sq ft. of net leasable floor area, except where reduced through a shared parking and/or TDM (see Section 4.3.4)
Professional Business Offices	3 spaces/1,000 sq. ft. of net leasable floor area
Breweries, Wine Blending Businesses and Distilleries	2 spaces/3 employees on the largest shift plus 1 parking space per 100 square feet of tasting area.
Medical Uses	
Medical and Dental Offices, Clinics, and Medical Business Offices	4 spaces/1,000 sq. ft. of net leasable floor area
Civic Uses	
Civic Center, Police Station, Fire Station and the like	3 spaces/1,000 sq. ft. of net floor area. Areas devoted to storage, hallways, restrooms, utility rooms and the like shall not be included within this calculation.
Residential Uses	
Single Family Detached Residential - Conventional SFD, Front-loaded Zero-lot Line SFD, Rear-loaded SFD, and Detached Cluster Homes	1 space/unit within a garage, 1 open space/unit within the lot
Attached Residential - Row Townhomes and Attached Motorcourt Homes	1-bedroom or studio unit: 1.25 spaces/unit 2-bedroom dwelling unit: 1.5 spaces/unit 3+ bedroom dwelling unit: 2.0 spaces/unit
Attached Residential – Apartments and Flats, Residential Units in Mixed-Use Residential Buildings	1-bedroom or studio unit: 1.25 spaces/unit 2-bedroom dwelling unit: 1.5 spaces/unit 3+ bedroom dwelling unit: 2.0 spaces/unit

[1] For designated outdoor dining areas, no parking spaces are required for the first 500 square feet. Any outdoor dining area that is more than 500 square feet in size shall provide 1 space per 100 square feet for the area beyond 500 square feet.

Parking requirements for uses not indicated in Table 4-8, *Parking Requirements*, shall be reviewed and approved by the Community Development Director. Uses not specified shall be compared to a similar use or uses that could satisfy the minimum parking demand. When there is no similar use in Table 4-8, *Parking Requirements*, parking requirements found in Section 5.6 of the Eastvale Zoning Code shall apply or a parking study prepared by a firm acceptable to the Community Development Director shall be submitted that provides justification, and data supporting the proposed minimum parking requirement.

Parking may be shared within the Leal Area Master Plan, with some limitations. Figure 4.9, Parking Distribution identifies the location of where parking may be shared for residential and commercial uses within the Master Plan area.

Figure 4.9 Parking Distribution

4.3.2. On-Street Parking

On-street parking spaces immediately adjacent to and on the same side of the street of a property along the internal backbone streets may be counted toward meeting the off-street parking requirement for that property. These spaces may be parallel or angled spaces. With respect to parallel parking spaces that are not marked, each 24-foot length may be counted as one space. No credit is allowed for street frontage where parking is prohibited, such as loading zones and red curb areas.

4.3.3. Tandem Parking

Tandem parking is permitted for both residential and commercial uses within the Leal Master Plan area. Two tandem parking spaces shall have a minimum depth of 36 feet and shall meet the Development Standards for Off-Street Parking Facilities in Section 5.6 of the Eastvale Zoning Code.

4.3.4. Alternative Programs for Parking

Shared parking and other alternative programs for parking may be permitted pursuant to Section 5.6.B of the Eastvale Zoning Code.

A Parking Management Plan/Transportation Demand Management is required for all non-residential uses that increase parking demand by ten (10) parking spaces. The Parking Management Plan/Transportation Demand Management Plan may reduce the overall parking requirements by up to 25 percent, depending on the findings of said plan. This plan shall include at least the following items:

- Information related to carpooling, van pools and staggered work hours.
- Projected effectiveness of carpool, vanpool, staggered work hours or similar transportation programs.
- Proximity to public transportation facilities serving a significant portion of employees and/or customers.
- Shared parking/overlapping parking demands.
- Specific parking management programs increasing parking efficiency, such as valet parking.
- Evidence that employees and/or customers utilize on transportation alternatives on a consistent basis.

4.3.5. Parking Lot Design

The design standards for the parking area shall be consistent with the Eastvale Design Standards and Guidelines and with the following:

A. Parking lots and structures shall be designed to be functionally and visually integrated and connected. Developments on separate parcels shall provide common access and parking areas.

B. All parking areas shall be screened with landscaping and/or decorative walls from all residential developments and pedestrians along the public right-of-way.

C. Parking lots should be visually separated into smaller units with landscaping or low walls however adjacent parking lots shall be connected for vehicle and pedestrian access.

D. Different landscape design should be used to differentiate major access aisles from the rest of the parking area.

E. Common parking areas shall be landscaped with shade trees to create an attractive pedestrian environment.

4.4. SIGNAGE

Except as identified in the Leal Master Plan, signage shall conform to the applicable provisions of Eastvale Zoning Code, Section 5.7, Signs.

Downtown District: A comprehensive Sign Program for the DT District identifying the location and design standards of thematic signage elements, including the sign type, size, material, and illumination, shall receive the Community Development Director's approval prior to the installation of signs. The standards shall include design standards for signs provided in the DT District and a Master Plan Area Map, consistent the signage guidelines included in Section 2.2.10 of the Leal Master Plan.

Residential Use Districts: Signage for the Residential Use (RU) Districts identifying the signage location and design standards, including the sign type, size, material, and illumination, shall receive Community Development Director's approval prior to the installation of signs.

In addition to the sign types listed in Section 2.2.10, Signage, of the Leal Master Plan, the sign standards for the DT and RU Districts shall also address standards for the following, as applicable:

- Grand opening/coming soon signs for commercial and residential development
- For sale/lease signs for commercial and residential development
- Model home signs
- Signs on kiosks

4.4.1. General Sign Standards

The following requirements shall apply to signs within the Leal Master Plan area:

A. All signs and community monumentation in the DT District shall be included as part of an approved Sign Program.

B. Projecting Signs Clearance. A minimum eight (8) feet vertical clearance is required from the bottom of a projecting sign, marquee, blade or awning to the sidewalk or grade immediately below the sign.

C. Moving or Animated Signs. Unless otherwise permitted herein, signs that include, but are not limited to, rotating, flashing, swinging, blinking, strobing, or otherwise changing appearance are prohibited, except for signs that include time and/or temperature that are located at least 100 feet away from a residential land use District. In cases where illuminated signs display temperature and time, said sign shall receive City approval and shall include a mechanism to reduce the brightness of said sign when in proximity to a residential neighborhood. Signs, except for public service time and temperature signs, shall not be flashing, animated, or revolving in nature.

D. Sign Illumination. All signs may be internally or externally illuminated. All direct light rays from all signs shall be confined onto the site on which the sign is located and shall not shine directly upon neighboring property. All exposed raceways are prohibited. Temporary lighting, such as search or flood lights that are used on a permanent basis, are prohibited.

E. Approval of Sign Modifications. The Planning Commission may grant approval of signs that do not comply with the regulations contained in the Leal Master Plan or in the approved Sign Program.

4.4.2. Changeable Signage

A. Pageantry

Pageantry is allowed in the DT District and includes flags, pole-mounted banners, community banners over the right-of-way, kiosks, canopies, lights, directories, ground-mounted graphics, and other similar temporary or permanent (but changeable) elements. The purpose of changeable pageantry signage is to create excitement and provide a visually interesting commercial area. The intent is to allow regular changes to the pageantry elements in terms of color, design, and other visual content so the pageantry signage can look current. Pageantry signage shall comply with the following:

1) No limit on the number of permitted pageantry signs. Maximum sign area per sign face shall be 24 square feet. Maximum height of the sign shall not exceed 20 feet. Minimum setbacks for the freestanding signs shall be the same as the setbacks established for the DT District. Banners over or within the public rights-of-way do not have any size limitation, however, applicable permits from Public Works shall be obtained.

2) Pageantry may consist of murals or other decorative graphics for products sold or offered on or off the premises. All pageantry with off-premises signage must be located within the commercial portion of the project and shall be oriented towards internal uses and shall not be readily visible from properties outside of the Master Plan area.

3) Pageantry may be located in any portion of the DT District, except that pageantry shall not be located at least 20 feet from the curved portion of the street corner to maintain visibility for motorists.

4) Air-inflated signs, moving signs, paper, cardboard, freestanding billboards, styrofoam, stickers, and decals are not acceptable forms of pageantry (directories and kiosks excepted).

5) Pageantry shall not include flashing, flickering, rotating, or moving lights.

6) Temporary promotional advertising (banners) is not considered to be pageantry.

7) Kiosks and directories should provide vertical breaks in the sign structure.

8) Individual panels shall be recessed, framed, or treated to avoid a flat appearance of the sign face.

B. Marquee Signs

The height of manual letters located on a marquee shall be affixed flat to the surface of the sign and shall not have a vertical height of more than 2 feet and shall not extend vertically or horizontally beyond the marquee. An electronic marquee display is permitted, provided that the individual letters shall not have a vertical height of more than 2 feet.

4.4.3. Exempted Signs

The following signs and/or sign structures are exempt from any sign permit requirement as identified in Section 5.7 of the Eastvale Zoning Code; provided, however, that such signs shall comply with all other applicable requirements of the Leal Master Plan and Eastvale Zoning Code.

A. Exempted signs identified in the Eastvale Zoning Code.

B. Temporary contractor's, future development and building sale signs that comply with the provisions in the Eastvale Zoning Code.

C. Public Notices and Signs. Public notices posted pursuant to law, signs erected by governmental agencies and public utilities and warning or information signs required by law for public health and safety.

D. Copy or Message on Changeable Copy Signs. The changing of advertising copy or message on bulletin boards and pageantry, where the basic board or pageantry is permitted under the provisions of this Master Plan, may be changed digitally or manually.

4.5. MASTER PLAN AREA MAPS

Large area maps should be placed at the information booths in the Downtown District. These maps could be combined with local area information/history, advertising, events calendars, etc.

4.6. LANDSCAPING

Landscaping within the Leal Master Plan area shall comply with Section 5.4, Landscaping, General Provisions, of the Eastvale Zoning Code.

5 DEVELOPMENT PROCESS

The goal of the Leal Master Plan is to encourage development of the desired development and level of quality (see Chapter 2, Project Character, and Chapter 3, Land Use Program), while allowing flexibility in the design and implementation of the project. To achieve this, a staged development process has been established which provides for the developer(s) flexibility while this document serves as a guide for the development of the project.

The intent of the staged development process is to allow prospective developers to respond to market demand by first creating a framework of development standards and design guidelines at the time of project conception instead of establishing strict requirements prior to any development being proposed for the Leal Master Plan. In the second phase, an amendment to the Master Plan will be conducted to establish development standards and enhanced guidelines, ensuring that overall design quality meets the City's goals for the project as stated in Chapter 2.

While the City intends to allow flexibility in the project design and layout through implementation of the staged development process, this Master Plan also establishes specific parameters for the design and quality of the project, which must be met by any future development.

Phasing requirements have also been established to ensure that a unifying theme for the Leal Master Plan and comprehensive project-wide plans are developed prior to any development taking place. These phasing requirements will ensure that the City's goal of a comprehensive, high-quality project may be updated.

This chapter establishes the process through which all proposed development is submitted, reviewed, and approved, including requirements for the staged development process and requirements for phasing of developments.

5.1. GENERAL PROVISIONS

The City of Eastvale shall administer the provisions of the Leal Master Plan in accordance with the City of Eastvale General Plan, the City of Eastvale Municipal Code, the Subdivision Map Act, and other applicable State and City regulations. The Master Plan development procedures, regulations, standards, and specifications shall supersede the relevant provisions of the City's Municipal Code, as they currently exist or may be amended in the future. Any development regulation and building requirement not addressed in this Master Plan shall be subject to the City's adopted codes and regulations.

5.1.1. Interpretation

In instances where any section, subsection, sentence, clause, phrase, portion or word contained within this Master Plan is undefined, unclear or vague, then the

Community Development Director, or his/her designee, shall make a determination as to its meaning and intent. The Community Development Director may elect to forward any item to the Planning Commission for final determination. Said determination shall be judged to be final.

5.1.2. Severability

If any section, subsection, sentence, clause, phrase, or portion of this Master Plan, or any future amendments or additions hereto, is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Master Plan, or any future amendments or additions hereto. The City hereby declares that it would have adopted these requirements and each sentence, subsection, clause, phrase, or portion or any future amendments or additions thereto, irrespective of the fact that any one or more sections, subsections, clauses, phrases, portions or any future amendments or additions thereto may be declared invalid or unconstitutional.

5.2. STAGED DEVELOPMENT PROCESS SUMMARY

The staged development process has been established for all proposed developments in the Leal Master Plan. The process consists of the following stages:

- Stage 1, Initial Leal Master Plan
- Stage 2, Master Plan Amendment to Create Development Standards and Enhanced Guidelines
- Stage 3, Rough Grading Permit
- Stage 4, Development Plan Review
- Stage 5, Precise Grading and Building Permits

Table 5-1, Staged Development Process, illustrates these steps.

Table 5-1: Staged Development Process

Stage 1: Initial Leal Master Plan (Adopted in 2017)
• Identified Project Objectives and Project Character
• Established Permitted and Conditionally Permitted Uses and Other Development Requirements
• Outlined the Staged Development Review Process
• Amended the General Plan and Zoning Code.
Stage 2: Master Plan Amendment to Create Development Standards and Enhance Guidelines (this document)
• Refine land use and zoning designations within the Master Plan.
• Establish project-wide Land Use Plan, Circulation Plan, and Infrastructure Plans.
• Determine project-wide development standards, design guidelines and project theme.
Stage 3: Rough Grading Permit
• Tentative Tract Map (A Map) will be reviewed and approved to allow to grade the site.
• The site would be cleared and backbone infrastructure such as streets and utilities would be installed.
Stage 4: Development Plan Review
• Submittal of detailed development plans. Development Plans will be reviewed per the Leal Master Plan and the Eastvale Municipal Code, as applicable.
• Any required conditional use permits for specific uses will be reviewed and approved as provided in the Eastvale Municipal Code.
Stage 5: Precise Grading and Building Permits
• Will be reviewed and issued based on the approved Development Plan.
• May occur concurrently with Stage 4.

Stage 1: Initial Leal Master Plan

This first stage in the approval process was completed with the adoption of the Initial Leal Master Plan and the associated General Plan Amendment and Change of Zone. These approvals accomplished the following:

- Identified the project objectives and project character.
- Established permitted and conditionally permitted uses and other development requirements.
- Outlined the staged development review process.
- Created an expanded General Plan policy for the Leal Master Plan and amended the General Plan Land Use Map to show uses consistent with the new Leal Master Plan policy.
- Amended the Zoning Code to provide for the creation and adoption of Master Plans (including this Master Plan) and amended the Zoning Map to reflect the Leal Master Plan.

The Stage 1 process also included the certification of a Final Environmental Impact Report (FEIR), which provided an analysis of the impacts of this Master Plan.

Stage 2: Master Plan Amendment to Create Development Standards and Enhance Guidelines

Stage 2 prepares project-wide development criteria and guidelines which are not included in the Initial Master Plan. The 2022 Amendment conducts this phase. The submittals required in Stage 2 will amend the initial Master Plan to:

- Refine land use and zoning designations within the Master Plan.
- Establish project-wide land use plan, circulation plan, and infrastructure plans.
- Determine project-wide development standards and design guidelines.
- Establish the project theme.
- Refine the permitted and conditionally permitted uses to better reflect anticipated, future development trends.

The submittal of the Stage 2 materials triggered additional environmental review in the form of an Addendum to the Leal Master Plan EIR, which concluded that no new or more severe impacts would occur as a result of the State 2 submittal. The Addendum to the Leal Master Plan EIR prepared for this stage established land use intensity limits within this Master Plan.

Stage 3: Rough Grading Permit

In Stage 3, rough grading permit(s) will be reviewed and issued pursuant to an approved Tentative Tract Map and established grading permit processes in the

City of Eastvale. This phase will consist of clearing the site and installing backbone infrastructure.

Stage 4: Development Review

Stage 4 will consist of the submittal of specific development projects through the Development Review process established in the Leal Master Plan and in the Eastvale Zoning Code, as applicable. During this stage, any required Conditional Use Permits for specific uses will be reviewed and approved as provided in the Eastvale Zoning Code.

Table 5-2, Development Process Approvals, is intended to clarify the process of entitlement through the City of Eastvale for various applications and actions. Table 5-2 applies only to future developments being implemented within the Leal Master Plan area.

Table 5-2: Development Process Approvals

	Action Required By:		
	Community Development Director	Planning Commission	City Council
Development Plan Review and Conditional Use Permits		X	
Master Plan – Interpretations	X		
Master Plan – Minor Adjustments	X		
Master Plan – Amendments		X	X
Tentative Tract Map		X	

The following administrative provisions apply to the implementation of development applications (e.g., Development Plan Reviews) for future developments within the Master Plan area:

A. No vertical development shall occur or building permits issued within the Master Plan area until the proposed development is reviewed by the City's Planning Division and found to be consistent with the adopted Master Plan. Criteria for review and approval of proposed development shall include, but not be limited to, the following:

    i. Conformance with the land use program;

    ii. Conformance with the specific development standards, goals, and policies of the Master Plan; and

B. All Tentative Tract or Parcel Maps shall be consistent with this Master Plan.

Stage 5: Precise Grading and Building Permits

Finally, grading and building permits will be reviewed and issued based on the approved development plans. This process may occur concurrently with Stage 3, pursuant to existing permit processes in the City of Eastvale.

5.3. STAGED DEVELOPMENT PROCESS SUBMITTAL REQUIREMENTS

The following sections describe the items that must be submitted at various points in the development process. Since Stages 1 and 2 were completed with the adoption of the Master Plan and subsequent amendment, no submittal requirements apply and are therefore not shown here.

5.3.1. Stage 1: Initial Leal Master Plan

The Leal Master Plan is the implementing mechanism for the MP (Master Plan) zone district for the Leal property. It sets the vision for development of the project site, assigns a land use program, establishes development standards, and outlines the process by which the property will develop, and the Master Plan will be implemented. As noted above, there are no submittal requirements for Stage 1, which was completed with the adoption of the initial Master Plan.

5.3.2. Stage 2: Master Plan Amendment to Create Development Standards and Enhance Guidelines

The Master Plan Amendment establishes the project-wide development plan components and development standards/enhanced guidelines. As noted above, there are no submittal requirements for Stage 2, which was completed with the adoption of the Master Plan Amendment. Future amendments or adjustments to the Master Plan are discussed in Section 5.4, Master Plan Adjustments and Amendments.

5.3.3. Stage 3: Rough Grading Permits

Submittals of rough grading permits for development within the Leal Master Plan area shall be pursuant to the submittal requirements and procedures established by the City of Eastvale Community Development Department.

5.3.4. Stage 4: Development Review

Each development within the Leal Master Plan must submit a development entitlement application to the City of Eastvale Planning Division for review per the Major or Minor Development Review provisions of the Eastvale Zoning Code (Section 2.1).

5.3.5. Stage 5: Precise Grading and Building Permits

Submittals of precise grading and building permits for development within the Leal Master Plan area shall be pursuant to the submittal requirements and procedures established by the City of Eastvale Community Development Department.

5.4. MASTER PLAN ADJUSTMENTS AND AMENDMENTS

5.4.1. Minor Adjustments to the Master Plan

Minor adjustments to the plans, guidelines, regulations, and standards contained in the adopted Master Plan be approved at the discretion of the Community Development Director, or his/her designee; provided, however, that such deviations are deemed to be in substantial conformance with this Master Plan and are not detrimental to the public health, safety, and welfare. Minor adjustments to the Master Plan must be consistent with the purpose and intent of the originally approved Master Plan. Any decisions made by the Community Development Director may be appealed to the Planning Commission. Decisions of the Planning Commission may be appealed to the City Council. Decisions by the City Council shall be deemed final.

All minor adjustments must comply with the following findings:

A. The total number of dwelling units within the Leal Master Plan area shall not exceed 2,500 dwelling units.[1]

B. The total gross leasable commercial area (office, retail, city hall, library, police station etc.) within the Leal Master Plan shall not exceed 595,000 square feet.[1]

C. The public health, safety, and welfare shall not be jeopardized by the proposed adjustments.

D. No potentially significant environmental impacts are expected to occur as a result of the proposed adjustments, unless if the significant impacts have already been analyzed in a previously environmental document.

E. Substantial conformance to the design guidelines included in Chapter 2, Project Character.

The following modifications constitute "minor adjustments" to the approved Master Plan and may be approved without amending the Master Plan.

A. Slight modifications to the Master Plan area boundaries, as shown in Figure 3.1, Land Use Plan, that respond to more accurate or recent data or actual on-site conditions.

[1] As established by the Leal Master Plan EIR Addendum to avoid new or more severe significant impacts.

B. Minor adjustments to a development standard or intensity limitation not exceeding 20%.

C. Modifications to individual park sizes, provided a total of 14.06 acres is provided for parks or open space.

D. Minor changes to the circulation concept to accommodate actual conditions on-site or modify ingress and egress locations, or to respond to new information that was not available at the time the Master Plan was approved.

E. Minor changes to the design of the street cross sections, provided that the streets have adequate capacity to handle the anticipated volumes of traffic and the design changes are deemed acceptable by the City's Traffic Engineer.

F. Modifications to the Master Plan that allow the Project master developer to move and adjust components of the plan; provided, however, that a plan is submitted to the City and reviewed and approved by the Community Development Director, or his/her designee, and the City Engineer. The plan shall depict the location of all land uses and the relationships of the uses to one another. In evaluating the plan, all of the following conditions must be met for the site plan to be approved:

   i. A maximum of 2,500 dwelling units and 595,000 square feet of commercial gross leasable area (which does not include any civic or public facility uses) shall be allowed within the Master Plan area.[2]

   ii. The land use modifications would not result in any new environmental impacts that were not previously assessed in the approved California Environmental Quality Act (CEQA) documentation for the Master Plan.

G. Minor modifications to the architectural or landscape design guidelines included in Chapter 2. *Project Character*.

H. Minor modifications to the water, sewer, and/or drainage plan(s).

I. Any modifications to the Master Plan phasing.

[2] As established by the Leal Master Plan EIR Addendum to avoid new or more severe significant impacts.

5.4.2. Master Plan Amendments

A. The Project master developer, property owner, or designee shall have the authority to initiate an amendment to the adopted Master Plan at any time. No authorization by City staff, the Planning Commission, or the City Council shall be necessary to initiate a Master Plan Amendment for The Leal Master Plan area. However, the City shall be the approving authority of any requested amendments.

B. Said amendment shall not require a concurrent General Plan Amendment unless it is determined by the City of Eastvale that the proposed amendment would substantively affect the General Plan goals, objectives, policies, or programs for the Leal Master Plan area.

C. All Master Plan Amendments shall be subject to the requirements of CEQA and any applicable City of Eastvale environmental guidelines.

D. The Planning Commission shall review at a noticed public hearing all proposed amendments to the adopted Master Plan. Upon the close of the required public hearing, the Planning Commission shall act by resolution to recommend to adopt, reject, or modify the proposed Master Plan Amendment and forward its recommendation and findings to the City Council for action.

E. The City Council, at a noticed public hearing, shall review the Planning Commission's findings and recommendations. Upon the close of the required public hearing, the City Council shall act by resolution to adopt, reject, or modify the proposed Master Plan Amendment.

F. Prior to approving or conditionally approving any Master Plan Amendment, the Planning Commission and City Council must make the following findings regarding the Amendment:

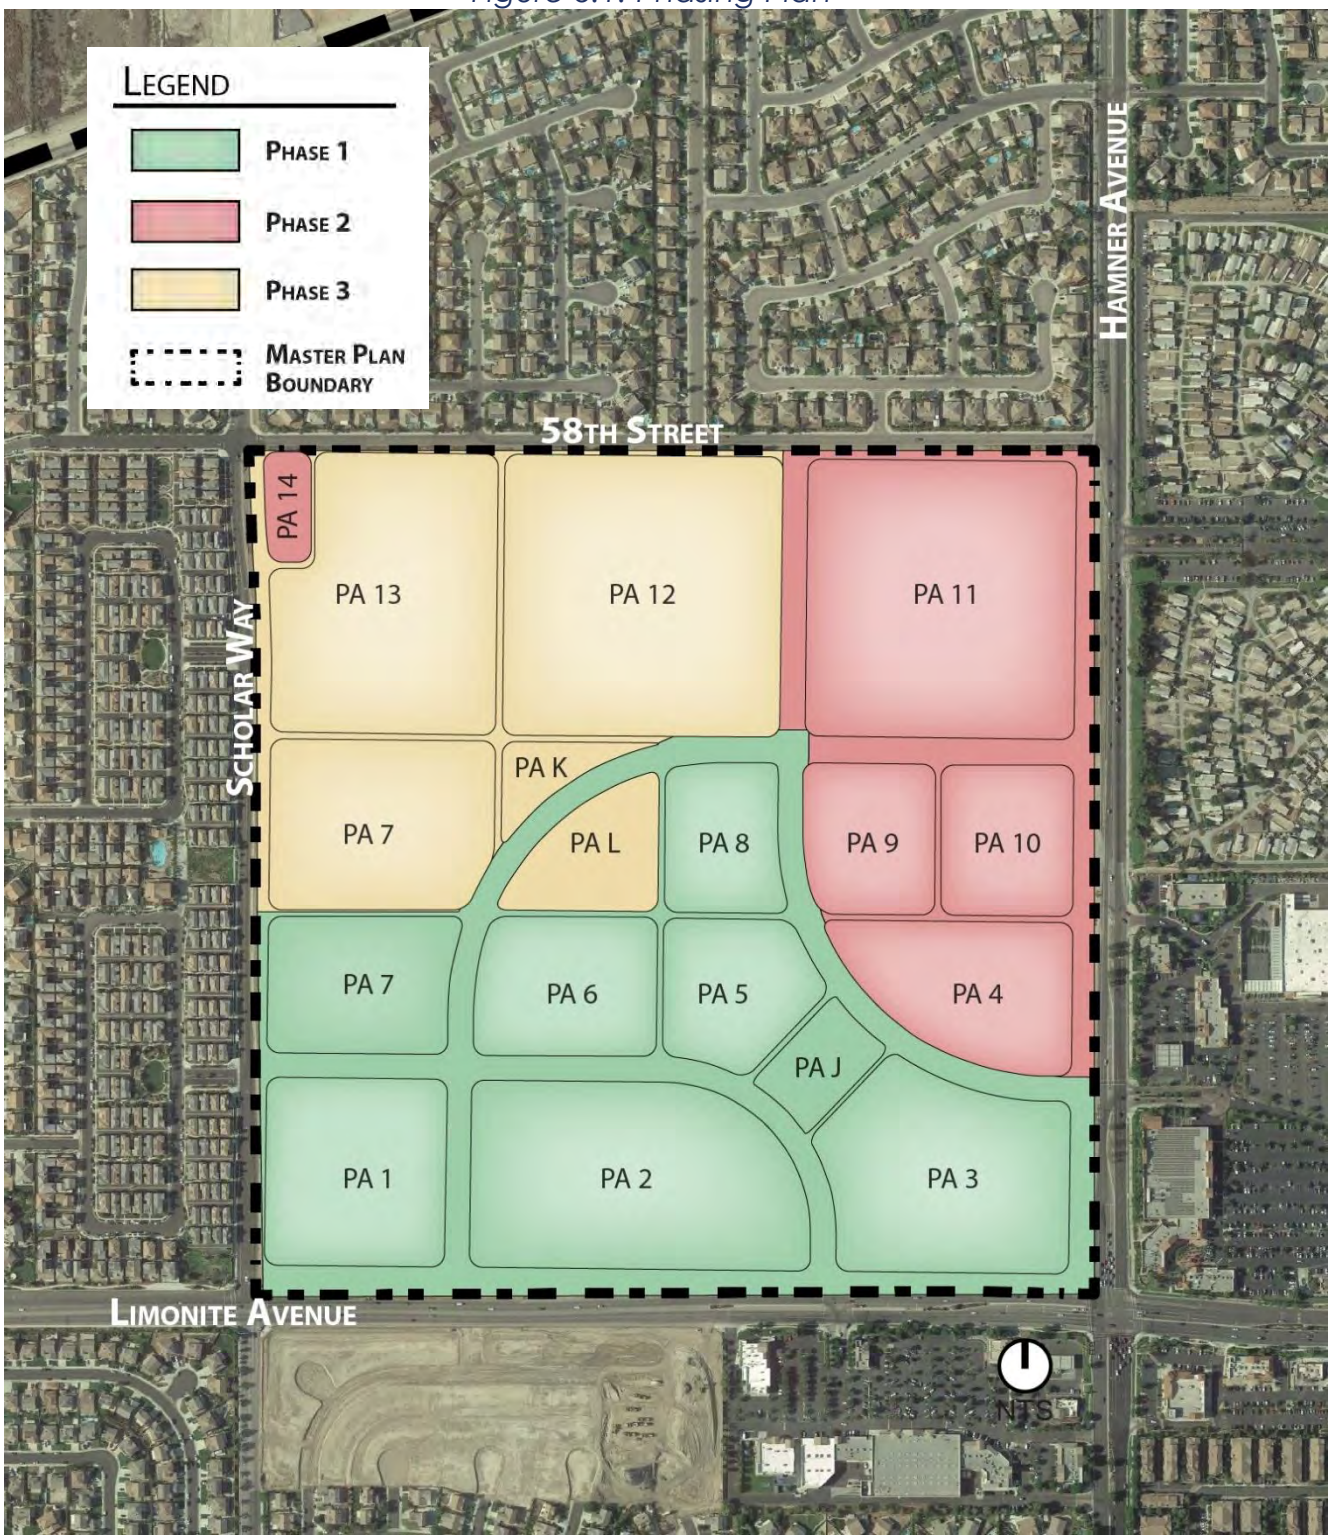
   i. It is consistent with the goals and policies of the City of Eastvale General Plan;

   ii. It is consistent with the vision, purpose and intent of the Master Plan;

   iii. Results in development of desirable character that will be compatible with existing and proposed development in the surrounding neighborhoods; and

   iv. Respects the aesthetic assets of the community consistent with economic realities.

6 IMPLEMENTATION PLAN



This chapter describes the implementation of this Master Plan, including the phasing of infrastructure and development. Information on the administration of this Master Plan can be found in Chapter 1.

6.1. PHASING

A conceptual Phasing Plan is shown in Figure 6.1. Phasing of the infrastructure as described below shall begin along Limonite Avenue and move north through the project site. The development of uses and the boundaries of each phase will be determined by market forces[1] and the developer(s) of the property, however phasing of residential uses shall be such that several different types of housing shall be offered concurrently.

[1] Since phasing is tied to market conditions, changes to the conceptual phasing plan do not require administrative approval. The Phasing Plan provides information only and is not regulatory. Phasing is at the sole discretion of the developer and may adjust according to market conditions.

Figure 6.1: Phasing Plan

Source: Hunsaker & Associates

6.2. INFRASTRUCTURE COORDINATION

To ensure that infrastructure is developed in a coordinated way and so that all phases of development will have sufficient infrastructure capacity, the following requirements are imposed. Should the project be developed in a single phase, all infrastructure will be installed in the first phase.

The following requirements relate to the coordination of infrastructure with development of uses:

1) Backbone Sewer/Water/Storm Drain Infrastructure – This infrastructure must be developed in conjunction with each phase of development as shown in Figure 6.2. Preparation of an infrastructure plan for backbone water/sewer/drainage infrastructure is a required Stage 3 component (see Chapter 5, Development Process).

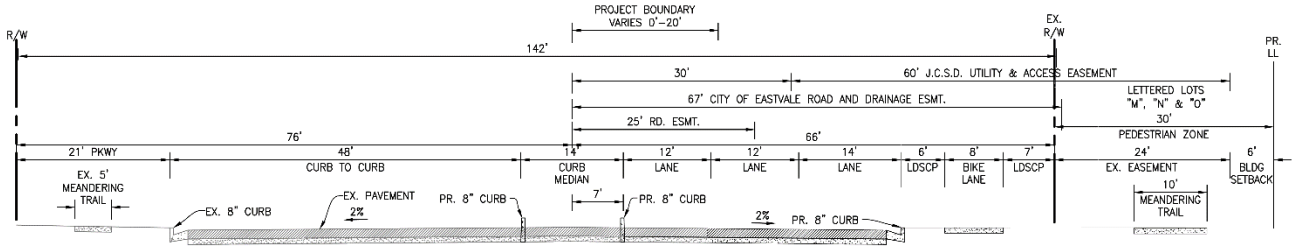
   Backbone water/sewer/storm drainage infrastructure includes:

   - Water – Hamner and Limonite Avenues have 30-inch water mains located within the rights-of-way. Water services for the project will use these existing lines to serve the project area.
   - Sewer – Sewer service is available in all of the streets bordering the project (Hamner, Limonite, Scholar, and 58th). Sewer service inside the project area will be built to accommodate development as it proceeds and will all connect to the existing sewer in Limonite.
   - Storm Drainage – These improvements will include water quality and drainage improvements to ensure that stormwater runoff from the site does not degrade downstream environments. Integration of water quality improvements into parks, parkways, and landscaped areas is encouraged throughout the Leal Master Plan.

Figure 6.2: Water Plan

Source: Hunsaker & Associates

Figure 6.3: Sewer Plan



Source: Hunsaker & Associates

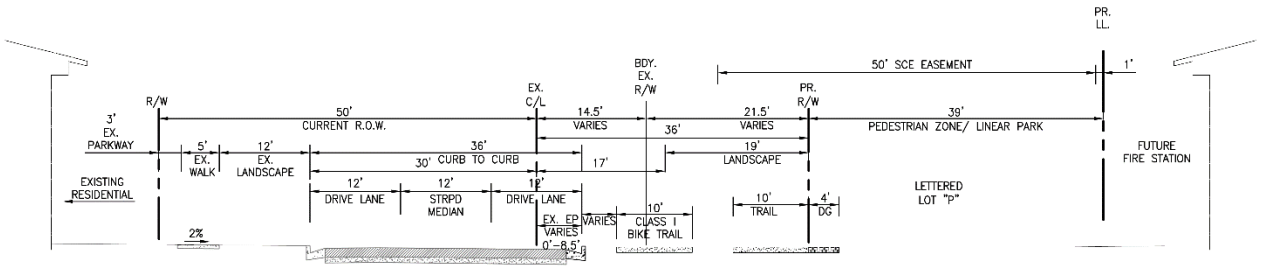


Figure 6.4: Storm Drainage Plan

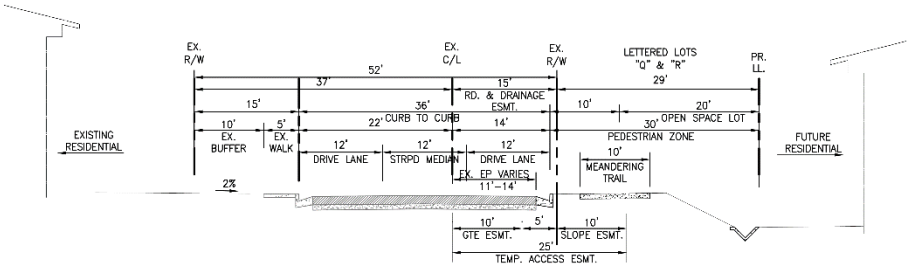

2) External Circulation – Half-width public improvements to Hamner Avenue, Limonite Avenue, Scholar Way and 58th Street shall be constructed with the Phasing Plan as shown in Figure 6.1. Improvements to Scholar Way and 58th Street may be provided in the form of half-width pavement and sidewalks, with the provision that landscaping must be installed at the time that development occurs adjacent to the street. Class I trails are provided on both sides of Limonite Avenue. Class I trails are also provided on one side of Scholar Way, 58th Street and Hamner Avenue. One bike lane is provided on one side of Limonite Avenue. Bike lanes are also provided on both sides of Scholar Way.

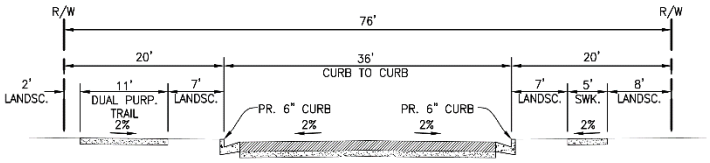
SECTION F-F
SCHOLAR WAY PROPOSED



SECTION C-C
58TH STREET PROPOSED

SECTION D-D
HAMNER AVE. PROPOSED

Source: Hunsaker & Associates

3) Internal Circulation – Internal roadways within the proposed phase will be constructed to provide adequate ingress/egress to all proposed development in the phase. As needed, roadways in the undeveloped portions of the site shall be constructed to provide adequate emergency access.

SECTION E-E
INTERNAL STREET PROPOSED

Source: Hunsaker & Associates

4) Major/Minor Entries – Major and minor entries shall be developed at the time that a phase containing the entry(ies) is developed. Preparation of a detailed design for both types of entries and a plan for their locations is a required Stage 3 component (see Chapter 5).

5) Signature Iconic Element (Clock-tower, art, etc.) - A unique iconic element such as an art sculpture, mural, clock-tower, or the like that helps define the project and would be unique to the City shall be provided as part of the project. The element shall be located within a publicly accessible space or at a focal point or project entry.

Additional development standards and requirements related to each increment of development are included in Chapter 4, Development Standards, and Chapter 5, Development Process.

6.3. MAINTENANCE

Successful operation of maintenance districts and associations are important in ensuring that the Master Plan area is well-maintained. Maintenance responsibilities for the open spaces, landscape areas, lighting, and common project facilities will be maintained by the homeowner association's property manager.[2] Table 6-1, Maintenance Responsibilities, identifies the maintenance responsibilities for various infrastructure and landscape improvements associated with the project.

Table 6-1: Maintenance Responsibilities

Maintenance Area	City/JCSD	HOA	POA

1.0 Introduction

This report contains analyses of air quality and greenhouse gas (GHG) emissions and energy usage for the proposed Leal Master Plan Amendment Project (hereinafter referred to as project). This assessment was conducted within the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.).

The methodology follows the California Air Resources Board (CARB), the South Coast Air Quality Management District (SCAQMD), and City of Eastvale recommendations for quantification of emissions and evaluation of potential impacts.

The purpose of this analysis is to review changes in air quality and GHG emissions that would occur as a result of the proposed project in comparison to the previously approved project described in the Leal Master Plan Draft Environmental Impact Report, prepared by Michael Baker International, July 2015 (hereinafter referred to as 2015 EIR).

1.1 Site Location

The proposed project site is located near the northwest corner (NWC) of Hamner Avenue and Limonite Avenue, in the City of Eastvale. The project site is bound by 58th Street to the north, Limonite Avenue to the south, Hamner Avenue to the east, and Scholar Avenue to the west.

The project site is located within the South Coast Air Basin (SCAB), the SCAQMD Riverside Valley General Forecast Area, and the Corona/Norco air monitoring area-22.

The project site is currently vacant and is zoned as the Leal Master Plan in the City of Eastvale Zoning Map. The City of Eastvale General Plan Land Use Map designates the project site as Leal Policy Area.

The project location map is provided in Exhibit A.

1.2 Project Description

The project consists of amending the Leal Master Plan to allow for the construction and operation of a total of 2,500 residential dwelling units, a 1.6 acre community recreational center, 12.5 acres of community park, and 28.17 acres of mixed use development (including a new civic center, retail/commercial and residential uses).

.

The total gross site area is approximately 158.6 acres.

The buildout of the project will also include approximately 22.9 acres of roadway improvement to 58th Street, Limonite Avenue, Hamner Avenue and Scholar Way, along with new internal street improvements.

The site plan used for this analysis, provided by the HUNSAKER & ASSOCIATES, is illustrated in Exhibit B. Table 1 summarizes the land use assumptions used for this analysis.

Table 1
Land Use Summary

Land Use	CalEEMod Use	Quantity	Metric[1]	Acre
Single Family Residential	Single Family Detached	400	DU	47.148
Multifamily Residential	Townhomes/Condos	1,000	DU	35.277
	Apartments	1,100	DU	28.169
Retail	Regional Shopping Center	390.0	TSF	
General Office	General Office	65.0	TSF	
Medical Office	Medical Office Building	65.0	TSF	
Civic Center	Government (Civic Center)	40.0	TSF	11.019
Fire Station		12.2	TSF	
Police		10.0	TSF	
Library	Library	25.0	TSF	
Parking	Parking Structure	2,820.0	Spaces	
Parking	Parking Lot	978.0	Spaces	
Recreational Center	City Park	1.584	Acre	1.584
Park	City Park	12.478	Acre	12.478
On-site / Off-site Street Improvements	Parking Lot	22.9	Acre	22.917
Total				**158.592**

[1] D.U. – Dwelling units; T.S.F. – Thousand Square Feet

Construction of the project is estimated to begin in the year 2022 and last approximately 56 months. Construction activities are expected to consist of demolition, site preparation, grading, building construction, paving, and architectural coating. The construction phase length is provided by the applicant.

RK engineering group, inc.
rkengineer.com

The project is expected to demolish approximately 67,500 square feet of the exiting on-site building structures and export approximately 340,000 cubic yards of on-site dairy waste. The project is also expected to require the import of approximately 542,000 cubic yards of earthwork materials during site grading. The project is expected to be operational in the year 2026.

1.3 Sensitive Receptors

Sensitive receptors are considered land uses or other types of population groups that are more sensitive to air pollution exposure. Sensitive population groups include children, the elderly, the acutely and chronically ill, and those with cardio-respiratory diseases.

For CEQA purposes, the SCAQMD considers a sensitive receptor to be a location where a sensitive individual could remain for 24-hours or longer, such as residences, hospitals, and schools. Several sensitive land use areas are present surrounding the project site, including;

- Existing residential dwelling units located to the north, south, east and west of the project site.

The sensitive receptors are expected to be located less than 25 meters from the project site

1.4 Recommended Project Design Features

The following section provides a summary of the recommended project design features that are expected to be included in the latest project to help reduce Air Quality and GHG emissions. The recommended project design features include several standard rules and requirements, best practices and project design elements know for reducing Air Quality and GHG emissions.

Construction Design Features:

DF-1 Prepare and implement a Construction Management Plan which shall include the Air Quality design features to be submitted to the City of Eastvale for all phases of construction.

DF-2 Follow the SCAQMD rules and requirements for fugitive dust control, which includes, but are not limited to the following:

1. All active construction areas shall be watered two (2) times daily.

2. Speed on unpaved roads shall be reduced to less than 15 mph.

3. Any visible dirt deposition on any public roadway shall be swept or washed at the site access points within 30 minutes.

4. Any on-site stockpiles of debris, dirt or other dusty material shall be covered or watered twice daily.

5. All operations on any unpaved surface shall be suspended if winds exceed 15 mph.

6. Access points shall be washed or swept daily.

7. Construction sites shall be sandbagged for erosion control.

8. Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).

9. Cover all trucks hauling dirt, sand, soil, or other loose materials, and maintain at least 2 feet of freeboard space in accordance with the requirements of California Vehicle Code (CVC) section 23114.

10. Pave or gravel construction access roads at least 100 feet onto the site from the main road and use gravel aprons at truck exits.

11. Replace the ground cover of disturbed areas as quickly possible.

12. A fugitive dust control plan should be prepared and submitted to SCAQMD prior to the start of construction.

DF-3 Require all construction equipment to have Tier 4 low emission "clean diesel" engines (OEM or retrofit) that include diesel oxidation catalysts and diesel particulate filters that meet the latest CARB best available control technology.

DF-4 Construction equipment shall be maintained in proper tune.

DF-5 All construction vehicles shall be prohibited from excessive idling. Excessive idling is defined as five (5) minutes or longer.

DF-6 Minimize the simultaneous operation of multiple construction equipment units, to the maximum extent feasible.

DF-7 The use of heavy construction equipment and earthmoving activity should be suspended during Air Alerts when the Air Quality Index reaches the "Unhealthy" level.

DF-8 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

DF-9 Establish staging areas for the construction equipment that are as distant as possible from adjacent residential homes.

DF-10 Use haul trucks with on-road engines instead of off-road engines for on-site hauling.

Operational Design Features:

DF-11 Implement trip reduction measures and project design features to reduce the number of auto-based trips generated by the project and encourage the use of transit, bicycling, and walking through the following measures;

1. Improve the walkability design of the project by providing pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e. sidewalks, bike lanes, trails, parcel-to-parcel connections, crosswalks, wayfinding signage, etc.).

2. Provide traffic calming measures (i.e. marked crosswalks, count-down signal timers, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others.)

3. Provide bicycle parking at the commercial, civic center and community center areas.

4. Provide secure bicycle parking areas at the multi-family uses.

5. Provide electric vehicle charging stations and parking for all uses (i.e. common area charging stations for the multi-family, retail/commercial, and civic center uses and garages setup with dedicated circuits and plugs for single family/condos).

DF-12 No wood burning fireplaces will be allowed in any residential dwelling.

DF-13 Install rooftop solar panels, community solar panels, and/or other sources of on-site renewable energy capable of meeting the required California Energy Code Energy Design Rating for all single family, multifamily residences and municipal building uses.

DF-14 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

DF-15 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod.

DF-16 Participate in the local waste management recycling and composting programs.

DF-17 The home-owners associations and property management companies should encourage landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

2.0 Air Quality Setting

The Federal Clean Air Act (§ 7602) defines air pollution as any agent or combination of such agents, including any physical, chemical, biological, or radioactive substance which is emitted into or otherwise enters the ambient air. Household combustion devices, motor vehicles, industrial facilities and forest fires are common sources of air pollution. Air pollution can cause disease, allergies and death. It affects soil, water, crops, vegetation, manmade materials, animals, wildlife, weather, visibility, and climate. It can also cause damage to and deterioration of property, present hazards to transportation, and negatively impact the economy.

This section provides background information on criteria air pollutants, the applicable federal, state and local regulations concerning air pollution, and the existing physical setting of the project within the context of local air quality.

2.1 Description of Air Pollutants[1].

The following section describes the air pollutants of concern related to the project. Criteria air pollutants are defined as those pollutants for which the federal and state governments have established air quality standards for outdoor or ambient concentrations to protect public health. The following descriptions of criteria air pollutants have been provided by the SCAQMD.

- **Carbon Monoxide (CO)** is a colorless, odorless, toxic gas produced by incomplete combustion of carbon-containing fuels (e.g., gasoline, diesel fuel, and biomass). Sources include motor vehicle exhaust, industrial processes (metals processing and chemical manufacturing), residential wood burning, and natural sources. CO is somewhat soluble in water; therefore, rainfall and fog can suppress CO conditions. CO enters the body through the lungs, dissolves in the blood, and competes with oxygen, often replacing it in the blood, thus reducing the blood's ability to transport oxygen to vital organs in the body. The ambient air quality standard for carbon monoxide is intended to protect persons whose medical condition already compromises their circulatory system's ability to deliver oxygen. These medical conditions include certain heart ailments, chronic lung diseases, and anemia. Persons with these conditions have reduced exercise capacity even when exposed to relatively low levels of CO. Fetuses are at risk because their blood has an even greater affinity to bind with CO. Smokers are also at risk from ambient CO levels because smoking

[1] SCAQMD. Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning (May 6, 2005)

increases the background level of CO in their blood. The South Coast basin has recently achieved attainment status for carbon monoxide by both USEPA and CARB.

- **Nitrogen Dioxide (NO_2)** is a byproduct of fuel combustion. The principal form of nitrogen oxide produced by combustion is nitric oxide (NO), but NO reacts quickly to form NO_2, creating the mixture of NO and NO_2 commonly called NO_x. NO_2 acts as an acute irritant and, in equal concentrations, is more injurious than NO. At atmospheric concentrations, however, NO_2 is only potentially irritating. There is some indication of a relationship between NO_2 and chronic pulmonary fibrosis. Some increase in bronchitis in young children has also been observed at concentrations below 0.3 parts per million (ppm). NO_2 absorbs blue light which results in a brownish red cast to the atmosphere and reduced visibility. Although NO_2 concentrations have not exceeded national standards since 1991 and the state hourly standard since 1993, NO_x emissions remain of concern because of their contribution to the formation of O_3 and particulate matter.

- **Ozone (O_3)** is one of a number of substances called photochemical oxidants that are formed when volatile organic compounds (VOC) and NO_x react in the presence of ultraviolet sunlight. O_3 concentrations in the South Coast basin are typically among the highest in the nation, and the damaging effects of photochemical smog, which is a popular name for a number of oxidants in combination, are generally related to the concentrations of O_3. Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the subgroups most susceptible to O_3 effects. Short-term exposures (lasting for a few hours) to O_3 at levels typically observed in southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. In recent years, a correlation between elevated ambient O_3 levels and increases in daily hospital admission rates, as well as mortality, has also been reported. The South Coast Air Basin is designated by the USEPA as an extreme non-attainment area for ozone. Although O_3 concentrations have declined substantially since the early 1990s, the South Coast basin continues to have peak O_3 levels that exceed both state and federal standards.

- **Fine Particulate Matter (PM_{10})** consists of extremely small suspended particles or droplets 10 microns or smaller in diameter that can lodge in the lungs, contributing to respiratory problems. PM_{10} arises from such sources as re-entrained road dust, diesel soot, combustion products, tire and brake abrasion, construction operations, and fires. It is also formed in the atmosphere from NO_x and SO_2 reactions with ammonia. PM_{10} scatters light and significantly reduces visibility. Inhalable particulates

pose a serious health hazard, alone or in combination with other pollutants. More than half of the smallest particles inhaled will be deposited in the lungs and can cause permanent lung damage. Inhalable particulates can also have a damaging effect on health by interfering with the body's mechanism for clearing the respiratory tract or by acting as a carrier of an absorbed toxic substance. The South Coast basin has recently achieved federal attainment status for PM_{10}, but is non-attainment based on state requirements.

- **Ultra-Fine Particulate Matter ($PM_{2.5}$)** is defined as particulate matter with a diameter less than 2.5 microns and is a subset of PM_{10}. $PM_{2.5}$ consists mostly of products from the reaction of NO_x and SO_2 with ammonia, secondary organics, finer dust particles, and the combustion of fuels, including diesel soot. $PM_{2.5}$ can cause exacerbation of symptoms in sensitive patients with respiratory or cardiovascular disease, declines in pulmonary function growth in children, and increased risk of premature death from heart or lung diseases in the elderly. Daily fluctuations in $PM_{2.5}$ levels have been related to hospital admissions for acute respiratory conditions, school absences, and increased medication use in children and adults with asthma. The South Coast basin is designated as non-attainment for $PM_{2.5}$ by both federal and state standards.

- **Sulfur dioxide (SO_2)** is a colorless, pungent gas formed primarily by the combustion of sulfur-containing fossil fuels. Health effects include acute respiratory symptoms and difficulty in breathing for children. Individuals with asthma may experience constriction of airways with exposure to SO_2. Though SO_2 concentrations have been reduced to levels well below state and federal standards, further reductions in SO_2 emissions are needed because SO_2 is a precursor to sulfate and PM_{10}. The South Coast basin is considered a SO_2 attainment area by USEPA and CARB.

- **Lead (Pb)** is a toxic heavy metal that can be emitted into the air through some industrial processes, burning of leaded gasoline and past use of lead-based consumer products. Lead is a neurotoxin that accumulates in soft tissues and bones, damages the nervous system, and causes blood disorders. It is particularly problematic in children, in that permanent brain damage may result, even if blood levels are promptly normalized with treatment. Concentrations of lead once exceeded the state and federal air quality standards by a wide margin, but as a result of the removal of lead from motor vehicle gasoline, ambient air quality standards for lead have not been exceeded since 1982. Though special monitoring sites immediately downwind of lead sources recorded localized violations of the state standard in 1994, no violations have been recorded since. Consequently, the South Coast basin is designated as an attainment area for lead by both the USEPA and CARB. This report

does not analyze lead emissions from the project, as it is not expected to emit lead in any significant measurable quantity.

- **Volatile Organic Compounds (VOC),** although not actually a criteria air pollutant, VOCs are regulated by the SCAQMD because they cause chemical reactions which contribute to the formation of ozone. VOCs are also transformed into organic aerosols in the atmosphere, contributing to higher PM_{10} and lower visibility levels. Sources of VOCs include combustion engines, and evaporative emissions associated with fuel, paints and solvents, asphalt paving, and the use of household consumer products such as aerosols. Although health-based standards have not been established for VOCs, health effects can occur from exposures to high concentrations of VOC. Some hydrocarbon components classified as VOC emissions are hazardous air pollutants. Benzene, for example, is a hydrocarbon component of VOC emissions that are known to be a human carcinogen. The term reactive organic gases (ROG) are often used interchangeably with VOC.

- **Toxic Air Contaminants (TACs)** are defined as air pollutants which may cause or contribute to an increase in mortality or serious illness, or which may pose a hazard to human health, and for which there is no concentration that does not present some risk. This contrasts with the criteria pollutants, in that there is no threshold level for TAC exposure below which adverse health impacts are not expected to occur. The majority of the estimated health risk from TACs can be attributed to a relatively few compounds, the most common being diesel particulate matter (DPM) from diesel engine exhaust. In addition to DPM, benzene and 1,3-butadiene are also significant contributors to overall ambient public health risk in California.

2.2 Federal and State Ambient Air Quality Standards

The Federal Clean Air Act, which was last amended in 1990, requires the EPA to set National Ambient Air Quality Standards (NAAQS) for criteria pollutants considered harmful to public health and the environment. The State of California has also established additional and more stringent California Ambient Air Quality Standards (CAAQS) in addition to the seven criteria pollutants designated by the federal government.

AAQS are designed to protect the health and welfare of the populace with a reasonable margin of safety. The standards are divided into two categories, primary standards and secondary standards. Primary standards are implemented to provide protection for the "sensitive" populations such as those with asthma, or the children and elderly. Secondary standards are to provide protection against visible pollution as well as damage to the surrounding environment, including animals, crops, and buildings.

Table 2 shows the Federal and State Ambient Air Quality Standards.

Table 2
Federal and State Ambient Air Quality Standards (AAQS)[1]

Air Pollutant	Averaging Time [2]	Federal Standard (NAAQS)[2]	California Standard (CAAQS)[2]
Ozone	1 Hour	--	0.09 ppm
	8 Hour	0.070 ppm	0.070 ppm
Carbon Monoxide (CO)	1 Hour	35 ppm	20 ppm
	8 Hour	9 ppm	9 ppm
Nitrogen Dioxide (NO_2)	1 Hour	0.100 ppm	0.18 ppm
	Annual	0.053 ppm	0.030 ppm
Sulfur Dioxide (SO_2)	1 Hour	0.075 ppm	0.25 ppm
	3 Hour	0.5 ppm[3]	--
	24 Hour	--	0.04 ppm
Particulate Matter (PM_{10})	24 Hour	150 $\mu g/m^3$	50 $\mu g/m^3$
	Mean	--	20 $\mu g/m^3$
Particulate Matter (PM2.5)	24 Hour	35 $\mu g/m^3$	--
	Annual	12 $\mu g/m^3$	12 $\mu g/m^3$
Lead	30-day	--	1.5 $\mu g/m$
	Quarter	1.5 $\mu g/m$	--
	3-month average	0.15 $\mu g/m$	--
Visibility reducing particles	8 Hour	--	0.23/km extinction coefficient. (10-mile visibility standard)
Sulfates	24 Hour	--	25 $\mu g/m$
Vinyl chloride	24 Hour	--	0.01 ppm
Hydrogen sulfide	24 Hour	--	0.03 ppm

[1] Source: USEPA: https://www.epa.gov/criteria-air-pollutants/naaqs-table and
CARB: https://ww2.arb.ca.gov/resources/california-ambient-air-quality-standards

[2] ppm = parts per million of air, by volume; µg/m3 = micrograms per cubic meter; Annual = Annual Arithmetic Mean; 30-day = 30-day average; Quarter = Calendar quarter.

[3] Secondary standards

Several pollutants listed in Table 2 are not addressed in this analysis. Lead is not included because the project is not anticipated to emit lead. Visibility-reducing particles are not explicitly addressed in this analysis because particulate matter is addressed. The project is not expected to generate or be exposed to vinyl chloride because proposed project uses do not utilize the chemical processes that create this pollutant and there are no such uses in the project vicinity. The proposed project is not expected to cause exposure to hydrogen sulfide because it would not generate hydrogen sulfide in any substantial quantity.

2.3 Attainment Status

The Clean Air Act requires states to prepare a State Implementation Plan (SIP) to ensure air quality meets the NAAQS. The California Air Resources Board (CARB) provides designations of attainment for air basins where AAQS are either met or exceeded. If the AAQS are met, the area is designated as being in "attainment", if the air pollutant concentrations exceed the AAQS, than the area is designated as being "nonattainment". If there is inadequate or inconclusive data to make a definitive attainment designation, the area is considered "unclassified."

National nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Each standard has a different definition, or 'form' of what constitutes attainment, based on specific air quality statistics. For example, the Federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring values exceeds the threshold per year. In contrast, the federal annual $PM_{2.5}$ standard is met if the three-year average of the annual average $PM_{2.5}$ concentration is less than or equal to the standard.

When a state submits a request to the EPA to re-designate a nonattainment area to attainment, the Clean Air Act (CAA) section 175A(a) requires that the state (or states, if the area is a multi-state area) submit a maintenance plan ensuring the area can maintain the air quality standard for which the area is to be re-designated for at least 10 years following the effective date of re-designation. Table 3 lists the attainment status for the criteria pollutants in the South Coast Air Basin (SCAB).

Table 3
South Coast Air Basin Attainment Status[1]

Pollutant	State Status	National Status
Ozone	Nonattainment	Nonattainment (Extreme)[2]
Carbon monoxide	Attainment	Attainment (Maintenance)
Nitrogen dioxide	Attainment	Attainment (Maintenance)
PM_{10}	Nonattainment	Attainment (Maintenance)
$PM_{2.5}$	Nonattainment	Nonattainment
Lead	Attainment	Nonattainment (Partial)[3]

2.4 South Coast Air Quality Management District (SCAQMD)

The agency responsible for air pollution control for the South Coast Air Basin (SCAB) is the South Coast Air Quality Management District (SCAQMD). SCAQMD is responsible for controlling emissions primarily from stationary sources. SCAQMD maintains air quality monitoring stations throughout the SCAB. SCAQMD, in coordination with the Southern California Association of Governments, is also responsible for developing, updating, and implementing the Air Quality Management Plan (AQMP) for the SCAB. An AQMP is a plan prepared and implemented by an air pollution district for a county or region designated as nonattainment of the federal and/or California ambient air quality standards. The term nonattainment area is used to refer to an air SCAB where one or more ambient air quality standards are exceeded.

Every three (3) years the SCAQMD prepares a new AQMP, updating the previous plan and having a 20-year horizon. The latest version is the 2016 AQMP. The 2016 AQMP is a regional blueprint for achieving the federal air quality standards and healthful air. While air quality has dramatically improved over the years, the SCAB still exceeds federal public health standards for both ozone and particulate matter (PM) and experiences some of the worst air pollution in the nation. The 2016 AQMP includes both stationary and mobile source strategies to ensure that rapidly approaching attainment deadlines are met, that public health is protected to the maximum extent feasible, and that the region is not faced with burdensome sanctions if the Plan is not approved or if the NAAQS are not met on time.

The most significant air quality challenge in the SCAB is to reduce nitrogen oxide (NOx) emissions sufficiently to meet the upcoming ozone standard deadlines. Based on the inventory and modeling results, 522 tons per day (tpd) of total SCAB NOx 2012 emissions are projected to drop to 255 tpd and 214 tpd in the 8-hour ozone attainment years of 2023 and 2031 respectively, due to continued implementation of already adopted regulatory actions ("baseline emissions"). The analysis suggests that total SCAB emissions of NOx must be reduced to approximately 141 tpd in 2023 and 96 tpd in 2031 to attain the 8-hour ozone standards. This represents an additional 45 percent reduction in NOx in 2023, and an additional 55 percent NOx reduction beyond 2031 levels.

The SCAQMD establishes a program of rules and regulations to obtain attainment of the state and federal standards in conjunction with the AQMP. Several of the rules and regulations that may be applicable to this project include, but are not limited to, the following:

SCAQMD Rule 402 prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

SCAQMD Rule 403 governs emissions of fugitive dust during construction and operation activities. Compliance with this rule is achieved through application of standard Best Management Practices, such as application of water or chemical stabilizers to disturbed soils, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 miles per hour, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 mph, and establishing a permanent ground cover on finished sites.

SCAQMD Rule 445 restricts wood burning devices from being installed into any new development and is intended to reduce the emissions of particulate matter for wood burning devices.

SCAQMD Rule 1113 governs the sale, use, and manufacturing of architectural coating and limits the VOC content in paints and paint solvents. This rule regulates the VOC content of paints available during construction. Therefore, all paints and solvents used during construction and operation of project must comply with Rule 1113.

SCAQMD Rule 1143 governs the manufacture, sale, and use of paint thinners and solvents used in thinning of coating materials, cleaning of coating application equipment,

and other solvent cleaning operations by limiting their VOC content. This rule regulates the VOC content of solvents used during construction. Solvents used during the construction phase must comply with this rule.

SCAQMD Rule 1186 limits the presence of fugitive dust on paved and unpaved roads and sets certification protocols and requirements for street sweepers that are under contract to provide sweeping services to any federal, state, county, agency or special district such as water, air, sanitation, transit, or school district.

SCAQMD Rule 1303 governs the permitting of re-located or new major emission sources, requiring Best Available Control Measures and setting significance limits for PM10 among other pollutants.

SCAQMD Rule 2202 On-Road Motor Vehicle Mitigation Options, is to provide employers with a menu of options to reduce mobile source emissions generated from employee commutes, to comply with federal and state Clean Air Act requirements, Health & Safety Code Section 40458, and Section 182(d)(1)(B) of the federal Clean Air Act. It applies to any employer who employs 250 or more employees on a full or part-time basis at a worksite for a consecutive six-month period calculated as a monthly average.

Connect SOCAL 2024: On September 3, 2020, the Southern California Association of Governments (SCAG) adopted the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal or "Plan" herein) for the six-county region including Imperial, Los Angeles, Orange, Riverside, San Bernardino and Ventura Counties. Connect SoCal reflects the region's commitment to improve the region's mobility, sustainability and economy. To achieve these goals, the Plan demonstrates how the region will reduce greenhouse gas (GHG) emissions from transportation sources to comply with Senate Bill 375 (SB 375) and meet Federal Transportation Conformity Requirements pursuant to the Federal Clean Air Act.

2.5 South Coast Air Basin

The project is located within the South Coast Air Basin (SCAB). To the west of the SCAB is the Pacific Ocean. To the north and east are the San Gabriel, San Bernardino, and San Jacinto mountains, while the southern limit of the SCAB is the San Diego County line. The SCAB consists of Orange County, all of Los Angeles County except for the Antelope Valley, the non-desert portion of western San Bernardino County, and the western and Coachella Valley portions of Riverside County.

The local dominant wind blows predominantly from the south-southwest with relatively low velocities. The annual average annual wind speed is about 10 miles per hour. Summer wind speeds average slightly higher than winter wind speeds. Low average wind speeds, together with a persistent temperature inversion limit the vertical dispersion of air pollutants throughout the SCAB.

The region also experiences periods of hot, dry winds from the desert, known as Santa Ana winds. If the Santa Ana winds are strong, they can surpass the sea breeze, which blows from the ocean to the land, and carry the suspended dust and pollutants out to the ocean. If the winds are weak, they are opposed by the sea breeze and cause stagnation, resulting in high pollution events.
The annual average temperature varies little throughout much of the SCAB, ranging from the low to middle 60s (°F). With more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas.

The mountains surrounding the region form natural horizontal barriers to the dispersion of air contaminants. Air pollution created in the coastal regions and Los Angeles metropolitan area are transported inland until reaching the mountains, where the combination of mountains and temperature inversion layers generally prevent further dispersion. This poor ventilation results in a gradual degradation of air quality from the coastal areas to inland areas of the SCAB. Air stagnation may occur during the early evening and early morning periods of transition between day and nighttime flows.

Temperature inversions are an important feature that limits the vertical depth through which pollution can be mixed. During the summer, coastal areas are characterized by a sharp discontinuity between the cool marine air at the surface and the warm, sinking air aloft within the high-pressure cell over the ocean to the west. This marine/subsidence inversion allows for good local mixing, but acts like a giant lid over the SCAB. The air remains stagnant, as the average wind speed in downtown Los Angeles becomes less than five mph.

The second type of inversion forms on clear winter nights when cold air off the mountains sinks to the valley floor while the air aloft over the valley remains warm. This forms radiation inversions. These inversions, in conjunction with calm winds, trap pollutants such as those from automobile exhaust near their source. They lead to air pollution "hotspots" in heavily developed coastal areas of the SCAB, although onshore breezes often push the pollutants along canyons into the inland valleys. Summers are often periods of hazy visibility and occasionally unhealthful air, while winter air quality impacts tend to be highly localized and can consist of elevated levels of nitrogen dioxide and fine particulate matter.

2.6 Local Climate and Meteorology

The weather station closest to the project site is a National Weather Service Cooperative weather station located at Corona Station, (042031). Climatological data from the National Weather Service at this station is summarized in Table 4.

Table 4
Meteorological Summary[1]

Month	Temperature (˚F)			Mean Precipitation (inches)
	Max.	Min.	Mean	Max.
January	65.3	39.7	52.5	2.61
February	67.7	41.2	54.4	2.62
March	70.5	42.8	56.6	2.00
Total	74.9	45.7	60.3	0.98
May	79.3	49.9	64.6	0.26
June	85.5	53.7	69.6	0.04
July	92.3	57.7	75.0	0.02
August	92.2	58.3	75.2	0.09
September	89.1	55.6	72.4	0.25
October	81.6	50.2	65.9	0.55
November	73.5	44.3	58.9	1.14
December	66.8	40.4	53.6	2.15
Annual	**78.2**	**48.3**	**63.3**	**12.71**

2.7 Local Air Quality

The air quality at any site is dependent on the regional air quality and local pollutant sources. Regional air quality is determined by the release of pollutants throughout the air basin. Estimates of the existing emissions in the Basin provided in the Final 2016 Air Quality Management Plan, prepared by SCAQMD, March 2017, indicate that collectively, mobile sources account for 60 percent of the VOC, 90 percent of the NOx emissions, 95 percent of the CO emissions and 34 percent of directly emitted PM2.5, with another 13 percent of PM2.5 from road dust.

The SCAQMD has divided the SCAB into fourteen general forecasting areas and thirty eight Source Receptor Areas (SRA) for monitoring and reporting local air quality. The SCAQMD provides daily reports of the current air quality conditions in each general forecast area and

SRA. The monitoring areas provide a general representation of the local meteorological, terrain, and air quality conditions within the SCAB.

The project is located within the Riverside Valley general forecasting area and Corona/Norco air monitoring area (SRA-22). Due to lack of sufficient data at Corona/Norco air monitoring station, air quality data is derived from the nearest adjacent Metropolitan Riverside Station-1 (SRA-23).

Table 5 summarizes the published air quality monitoring data from 2018 through 2020, which is the most recent 3-year period available. These pollutant levels were used to comprise a "background" for the project location and existing local air quality.

Table 5
Local Air Quality

Air Pollutant Location	Averaging Time	Item	2018	2019	2020
Carbon Monoxide -- Metropolitan Riverside County 1	1 Hour	Max 1-Hour (ppm)	2.2	1.5	1.9
		Exceeded State Standard (20 ppm)	No	No	No
		Exceeded National Standard (35 ppm)	No	No	No
	8 Hour	Max 8 Hour (ppm)	2.0	1.2	1.4
		Days > State Standard (9 ppm)	No	No	No
		Days >National Standard (9 ppm)	No	No	No
Ozone -- Metropolitan Riverside County 1	1 Hour	Max 1-Hour (ppm)	0.123	0.123	0.143
		Days > State Standard (0.09 ppm)	22.0	24.0	46.0
	8 Hour	Max 8 Hour (ppm)	0.101	0.096	0.115
		Days > State Standard (0.070 ppm)	53	59	81
		Days >National Standard (0.070 ppm)	53	59	81
Nitrogen Dioxide -- Metropolitan Riverside County 1	1 Hour	Max 1-Hour (ppm)	0.055	0.056	0.066
		Exceeded State Standard (0.18 ppm)	No	No	No
	Annual	Annual Average (ppm)	0.014	0.014	0.014
		Exceeded State Standard (0.030 ppm)	No	No	No
		Exceeded National Standard (0.053 ppm)	No	No	No
Sulfur Dioxide -- Metropolitan Riverside County 1	1 Hour	Max 1 Hour (ppm)	0.0017	0.0018	0.0022
		Exceeded State Standard (0.25 ppm)	No	No	No
		Exceeded National Standard (0.075 ppm)	No	No	No
Suspended Particles (PM10) -- Metropolitan Riverside County 1	24 Hour	Max 24-Hour ($\mu g/m^3$)	126	99	104
		Days > State Standard (50 $\mu g/m^3$)	132	21	110
		Days >National Standard (150 $\mu g/m^3$)	0	0	0
	Annual	Annual Average ($\mu g/m^3$)	44.00	34.40	30.00
		Exceeded State Standard (20 $\mu g/m^3$)	Yes	Yes	Yes
Fine Particulates (PM2.5) -- Metropolitan Riverside County 1	24 Hour	Max 24-Hour ($\mu g/m^3$)	50.70	46.70	41.00
		Days >National Standard (35 $\mu g/m^3$)	2	4	4
	Annual	Annual Average ($\mu g/m^3$)	12.41	11.13	12.63
		Exceeded State Standard (12 $\mu g/m^3$)	Yes	No	Yes
		Exceeded National Standard (15 $\mu g/m^3$)	No	No	No

$\mu g/m^3$ = micrograms per cubic meter
ppm = part per million

3.0 Global Climate Change Setting

Global climate change is the change in the average weather of the earth that is measured by such things as alterations in temperature, wind patterns, storms, and precipitation. Current data shows that the recent period of warming is occurring more rapidly than past geological events. The average global surface temperature has increased by approximately 1.4° Fahrenheit since the early 20th Century. 1.4° Fahrenheit may seem like a small change, but it's an unusual event in Earth's recent history, and as we are seeing, even small changes in temperature can cause enormous changes in the environment.

The planet's climate record, preserved in tree rings, ice cores, and coral reefs, shows that the global average temperature has been stable over long periods of time. For example, at the end of the last ice age, when the Northeast United States was covered by more than 3,000 feet of ice, average global temperatures were only 5° to 9° Fahrenheit cooler than today. The Intergovernmental Panel on Climate Change (IPCC), which includes more than 1,300 scientists from the United States and other countries, forecasts a temperature rise of 2.5° to 10° Fahrenheit over the next century. Therefore, significant changes to the environment are expected in the near future.

The consequences of global climate change include more frequent and severe weather, worsening air pollution by increasing ground level ozone, higher rates of plant and animal extinction, more acidic and oxygen depleted oceans, strain on food and water resources, and threats to densely populated coastal and low lying areas from sea level rise.

The impacts of climate change are already visible in the Southwest United States. In California, the consequences of climate change include;

- A rise in sea levels resulting in the displacement of coastal businesses and residencies
- A reduction in the quality and supply of water from the Sierra snowpack
- Increased risk of large wildfires
- Exacerbation of air quality problems
- Reductions in the quality and quantity of agricultural products
- An increased temperature and extreme weather events
- A decrease in the health and productivity of California's forests

3.1 Greenhouse Gases

Most scientists agree the main cause of the current global warming trend is anthropogenic (human-induced) augmentation of the greenhouse effect. The greenhouse effect refers to the way gases in the earth's atmosphere trap and re-emits long wave infrared radiation, acting like a blanket insulating the earth. Activities such as fossil fuel combustion, industrial processes, agriculture, and waste decomposition have elevated the concentration of greenhouse gases in the atmosphere beyond the level of naturally occurring concentrations.

GHGs comprise less than 0.1 percent of the total atmospheric composition, yet they play an essential role in influencing climate. Greenhouse gases include naturally occurring compounds such as carbon dioxide (CO_2), methane (CH_4), water vapor (H_2O), and nitrous oxide (N_2O), while others are synthetic. Man-made GHGs include the chlorofluorocarbons (CFCs), hydrofluorocarbons (HFCs) and Perfluorocarbons (PFCs), as well as sulfur hexafluoride (SF_6). Different GHGs have different effects on the Earth's warming. GHGs differ from each other in their ability to absorb energy (their "radiative efficiency") and how long they stay in the atmosphere, also known as the "lifetime".

The Global Warming Potential (GWP) was developed to allow comparisons of the global warming impacts of different gases. Specifically, it is a measure of how much energy the emissions of 1 ton of a gas will absorb over a given period of time, relative to the emissions of 1 ton of CO_2. The larger the GWP, the more than a given gas warms the Earth compared to CO_2 over that time period. The time period usually used for GWPs is 100 years. GWPs provide a common unit of measure, which allows analysts to add up emissions estimates of different gases and allows policymakers to compare emissions reduction opportunities across sectors and gases.

Table 6 lists the 100-year GWP of GHGs from the Intergovernmental Panel on Climate Change (IPCC) fifth assessment report (AR5).

Table 6
Global Warming Potential of Greenhouse Gases[1, 2]

Gas Name	Formula	Lifetime (years)	GWP
Carbon Dioxide	CO_2		1
Methane	CH_4	12	28
Nitrous Oxide	N_2O	114	265
Sulphur Hexafluoride	SF_6	3200	23,500
Nitrogen Trifluoride	NF_3	740	16,100
Hexafluoroethane (PFC-116)	C_2F_6	10,000	11,100
Octafluoropropane (PFC-218)	C_3F_8	2,600	8,900
Octafluorocyclobutane (PFC-318)	C_4F_8	3,200	9,540
Tetrafluoromethane (PFC-14)	CF_4	50,000	6,630
Hydrofluorocarbon 125	HFC-125	29	3,170
Hydrofluorocarbon 134a	HFC-134a	14	1,300
Hydrofluorocarbon 143a	HFC-143a	52	4,800
Hydrofluorocarbon 152a	HFC-152a	1	138
Hydrofluorocarbon 227ea	HFC-227ea	34	3,350
Hydrofluorocarbon 23	HFC-23	270	12,400
Hydrofluorocarbon 236fa	HFC-236fa	240	8,060
Hydrofluorocarbon 245fa	HFC-245fa	8	858
Hydrofluorocarbon 32	HFC-32	5	677
Hydrofluorocarbon 365mfc	HFC-365mfc	9	804
Hydrofluorocarbon 43-10mee	HFC-43-10mee	16	1,650

[2] GWPs are used to convert GHG emission values to "carbon dioxide equivalent" (CO_2e) units

3.2 GHG Regulatory Setting - International

Intergovernmental Panel on Climate Change. In 1988, the United Nations and the World Meteorological Organization established the Intergovernmental Panel on Climate Change to assess the scientific, technical and socio-economic information relevant to understanding the scientific basis of risk of human-induced climate change, its potential impacts, and options for adaptation and mitigation.

United Nations. The United States participates in the United Nations Framework Convention on Climate Change (UNFCCC) (signed on March 21, 1994). Under the Convention, governments gather and share information on greenhouse gas emissions, national policies, and best practices; launch national strategies for addressing greenhouse gas emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change. The 2014 UN Climate Change Conference in Lima Peru provided a unique opportunity to engage all countries to assess how developed countries are implementing actions to reduce emissions.

Kyoto Protocol. The Kyoto Protocol is a treaty made under the UNFCCC and was the first international agreement to regulate GHG emissions. It has been estimated that if the commitments outlined in the Kyoto Protocol are met, global GHG emissions could be reduced by an estimated 5 percent from 1990 levels during the first commitment period of 2008 – 2012 (UNFCCC 1997). On December 8, 2012, the Doha Amendment to the Kyoto Protocol was adopted. The amendment includes: New commitments for Annex I Parties to the Kyoto Protocol who agreed to take on commitments in a second commitment period from 2013 – 2020, a revised list of greenhouse gases (GHG) to be reported on by Parties in the second commitment period, and Amendments to several articles of the Kyoto Protocol, which specifically referenced issues pertaining to the first commitment period and which needed to be updated for the second commitment period.

The Paris Agreement. The Paris agreement is the first comprehensive global climate agreement to be ratified by the United States, United Nations, China, and India; the largest producers of greenhouse gas emissions in the world. The agreement was negotiated by a total of 195 nations and entered into force on November 4, 2016. The central aim is to strengthen the global response to the threat of climate change by keeping the global temperature rise this century well below 2 degrees Celsius compared to pre-industrial levels and to pursue efforts to limit the temperature increase even further to 1.5 degrees Celsius.

Additionally, the agreement aims to strengthen the ability of countries to deal with the impacts of climate change. Currently, 123 parties have ratified the agreement.

3.3 GHG Regulatory Setting – National

Greenhouse Gas Endangerment. On December 2, 2009, the EPA announced that GHGs threaten the public health and welfare of the American people. The EPA also states that GHG emissions from on-road vehicles contribute to that threat. The decision was based on *Massachusetts v. EPA* (Supreme Court Case 05-1120) which argued that GHGs are air pollutants covered by the Clean Air Act and that the EPA has authority to regulate those emissions.

Clean Vehicles. Congress first passed the Corporate Average Fuel Economy (CAFE) law in 1975 to increase the fuel economy of cars and light duty trucks. The law has become more stringent over time. On May 19, 2009, President Obama put in motion a new national policy to increase fuel economy for all new cars and trucks sold in the United States. On April 1, 2010, the EPA and the Department of Transportation's National Highway Traffic Safety Administration (NHTSA) announced a joint final rule establishing a national program that would reduce greenhouse gas emissions and improve fuel economy for new cars and trucks sold in the United States.

The first phase of the national program applied to passenger cars, light-duty trucks, and medium-duty passenger vehicles, covering model years 2012 through 2016. They required these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide per mile, equivalent to 35.5 miles per gallon if the automobile industry were to meet this carbon dioxide level solely through fuel economy improvements. Together, these standards were estimated to cut carbon dioxide emissions by an estimated 960 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2012-2016).

The second phase of the national program for passenger cars, light-duty trucks, and medium-duty passenger vehicles covers model years 2017 through 2025. The final standards were established in 2012 and were projected to result in an average industry fleetwide level of 163 grams/mile of carbon dioxide (CO2) in model year 2025, which is equivalent to 54.5 miles per gallon (mpg) if achieved exclusively through fuel economy improvements.

The EPA and the U.S. Department of Transportation also implemented the first national standards to reduce greenhouse gas emissions and improve the fuel efficiency of medium-

and heavy-duty engines and vehicles trucks and buses in 2010. The standards applied to all on-road vehicles rated at a gross vehicle weight at or above 8,500 pounds, and the engines that power them, except those covered by the current GHG emissions and CAFE standards for light duty vehicles, for model year 2014 to 2018. In 2016, the EPA and NHTSA finalized phase 2 of the standards which applied to model years 2018 through 2027.

The Safer Affordable Fuel Efficient (SAFE) Vehicles. The National Highway Traffic Safety Administration (NHTSA) and the Environmental Protection Agency (EPA) have amended certain previous Corporate Average Fuel Economy (CAFE) and greenhouse gas emissions standards for passenger cars and light trucks and establish new standards, covering model years 2021 through 2026. The (SAFE) Vehicles Rule published on April 30, 2020 and is effective as of June 29, 2020.

Mandatory Reporting of Greenhouse Gases. On January 1, 2010, the EPA started requiring large emitters of heat-trapping emissions to begin collecting GHG data under a new reporting system. Under the rule, suppliers of fossil fuels or industrial greenhouse gases, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of greenhouse gas emissions are required to submit annual reports to the EPA.

Climate Adaptation Planning. The EPA's Climate Change Adaptation Plan identifies priority actions the EPA will take to incorporate considerations of climate change into its programs, policies, rules and operations to ensure they are effective under future climatic conditions. Under the Trump administration, the EPA has said it would continue to advance climate adaptation efforts and that the agency recognizes the challenges that communities face in adapting to a changing climate. The EPA currently runs the Climate Change Adaptation Resource Center (ARC-X) to help local governments prepare for climate change.

3.4 GHG Regulatory Setting – State of California

The State of California has been a leader in climate change legislation and has passed numerous bills to reduce greenhouse gas emissions across all sectors of the economy. Some of the key climate legislation in the State include the following:

Assembly Bill (AB) 32, California Global Warming Solutions Act of 2006. AB 32 set the stage for the State's transition to a sustainable, low-carbon future. AB 32 was the first program in the country to take a comprehensive, long-term approach to addressing

climate change.[2] AB 32 was followed by Senate Bill (SB) 32, which further requires GHG emissions to be reduced to 40% below 1990 levels by 2030 and appointing CARB to develop policies (i.e. cap-and-trade) to achieve this goal.

Senate Bill (SB) 375, Sustainable Communities & Climate Protection Act of 2008. SB 375 requires the Air Resources Board to develop regional greenhouse gas emission reduction targets for passenger vehicles GHG reduction targets for 2020 and 2035 for each region covered by the State's 18 metropolitan planning organizations.[3]

Senate Bill (SB) 100, California Renewables Portfolio Standard Program. SB 100 established a landmark policy requiring renewable energy and zero-carbon resources supply 100 percent of electric retail sales to end-use customers by 2045.[4]

3.5 GHG Emissions Inventory

Table 7 shows the latest GHG emission inventories at the national, state, regional and local levels.

Table 7
GHG Emissions Inventory[1]

United States (2019)[2]	State of California (2019)[3]	SCAG (2020)[4]	City of Eastvale
6,558 $MMTCO_2e$	418.2 $MMTCO_2e$	216.4 $MMTCO_2e$	--

4.0 Modeling Parameters and Assumptions

The California Emissions Estimator Model Version 2020.4.0 (CalEEMod) was used to calculate criteria air pollutants and GHG emissions from the construction and operation of the project. CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify criteria air pollutant and GHG emissions.

The model quantifies direct emissions from construction and operation activities (including vehicle use), as well as indirect emissions, such as GHG emissions from off-site energy generation, solid waste disposal, vegetation planting and/or removal, and water use. The model also identifies mitigation measures to reduce criteria pollutant and GHG emissions. The model was developed for the California Air Pollution Control Officers Association (CAPCOA) in collaboration with the California air districts.

4.1 Construction Assumptions

Construction of the project is assumed to begin in the year 2022 and last approximately 56 months. Construction activity will consist of demolition, site preparation, grading, building construction, paving, and architectural coating.

The project is expected to demolish approximately 67,500 square feet of existing on-site building structures and export approximately 340,000 cubic yards of on-site dairy waste. The project is also expected to require the import of approximately 542,000 cubic yards of earthwork materials.

The project is expected to be operational in the year 2026. The construction phase lengths are provided by the applicant and has been adjusted to meet 2026 opening year deadline.

The CalEEMod default construction equipment list is used and is based on survey data and the size of the site. The parameters used to estimate construction emissions, such as the worker and vendor trips and trip lengths, utilize the CalEEMod defaults. The construction equipment list is shown in Table 8.

A soil disturbance rate is applied to tractors/loaders/backhoes as a worst-case estimate of fugitive dust emissions and is based on similar type equipment, such as rubber-tired dozers and crawler tractors. The maximum daily disturbance footprint is calculated to be 4.0 acres per 8-hour day with all equipment in use.

Table 8
Construction Equipment Assumptions Phase[1]

Phase	Equipment	Amount	Hours Per Day	Soil Disturbance Rate (Acres/ 8hr-Day)	Equipment Daily Disturbance Footprint (Acres)	Total Phase Daily Disturbance Footprint (Acres)
Demolition	Concrete/Industrial Saw	1	8	0.0	0.00	1.0
	Excavators	3	8	0.0	0.00	
	Rubber Tired Dozers	2	8	0.5	1.00	
Site Preparation	Rubber Tired Dozers	3	8	0.5	1.50	3.5
	Tractors/Loaders/Backhoes	4	8	0.5	2.00	
Grading	Excavators	2	8	0.0	0.00	4.0
	Graders	1	8	0.5	0.50	
	Rubber Tired Dozers	1	8	0.5	0.50	
	Scrapers	2	8	1.0	2.00	
	Tractors/Loaders/Backhoes	2	8	0.5	1.00	
Building Construction	Cranes	1	7	0.0	0.00	1.3
	Forklifts	3	8	0.0	0.00	
	Generator Sets	1	8	0.0	0.00

Architectural Coating	Air Compressors	1	6	0.0	0.00	0.0

[1] CalEEMod Defaults

4.2 Localized Construction Analysis Modeling Parameters

CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily disturbance activity possible for each piece of equipment. This report identifies the following parameters in the project design in order to compare CalEEMod reported emissions against the localized significance threshold lookup tables:

1) The off-road equipment list (including type of equipment, horsepower, and hours of operation) assumed for the day of construction activity with maximum emissions.
2) The maximum number of acres disturbed on the peak day.
3) Any emission control devices added onto off-road equipment.
4) Specific dust suppression techniques used on the day of construction activity with maximum emissions.

4.3 Operational Assumptions

Operational emissions occur over the life of the project and are considered "long-term" sources of emissions. Operational emissions include both direct and indirect sources. This section briefly describes the operational sources of emissions analyzed for the project.

4.3.1 Mobile Source Emissions

Mobile source emissions are the largest source of long-term air pollutants from the operation of the project. Mobile sources are direct sources of project emissions that are primarily attributed to tailpipe exhaust and road dust (tire, brake, clutch, and road surface wear) from motor vehicles traveling to and from the site.

Estimates of mobile source emissions require information on four parameters: trip generation, trip length, vehicle type (also known as fleet mix), and emission factors (quantity of pollutants emitted for each mile traveled or time spent idling by each vehicle).

The trip generation estimates are based on the LEAL Master Plan Amendment Project Traffic Study Scoping Agreement, RK Engineering Group, Inc., November 2021 and the latest version of the ITE Trip Generation Manual.

The Emission Factors (EMFAC) 2017 model is used to estimate the mobile source emissions are embedded in the CalEEMod emissions model. No adjustments have been made to default emission factors.

The project's total unmitigated vehicle miles traveled is shown in the Table 9.

Table 9
Operational Vehicle Miles Traveled

Land Use	Annual Vehicle Miles Traveled (VMT)[1]
Project Total	68,221,050

[1] CalEEMod Default VMT, with project design features.

The operational vehicle fleet mix has been adjusted to reflect vehicle types used for typical residential home-based trips and retail/commercial (non-industrial) land uses. To be conservative, the Air Quality/GHG analysis has assumed that 2% of the total home-based

trips will include trucks with a gross vehicle weight rating (GVWR) of 10,000 pound or greater. This includes LHD2, MHD, HHD, OBUS, UBUS, and SBUS vehicles. The 2% mix is also consistent with the default Highway Capacity Manual (HCM) assumptions.

Table 10 summarizes vehicle mix used for this project.

Table 10
Operational Vehicle Fleet Mix[1]

YUY	Vehicle Mix (%)
Light Duty Automobile (LDA)	55.64%
Light Duty Truck (LDTI)	5.81%
Light Duty Truck (LDT2)	17.88%
Medium Duty Truck (MDV)	13.74%
Light Heavy Truck (LHD1)	2.53%
Light Heavy Truck (LHD2)	0.32%
Medium Heavy Truck (MHD)	0.53%
Heavy Heavy Truck (HHD)	0.85%
Other Bus (OBUS)	0.03%
Urban Bus (UBUS)	0.01%
Motorcycle (MCY)	2.40%
School Bus (SBUS)	0.05%
Motor Home (MH)	0.21%
Total	**100.0%**

[1] Adjusted fleet mix to include 2% total trucks over 10,000 lbs GVWR. (LHD2, MHD, HHD, OBUS, UBUS, SBUS, MH)

4.3.2 Energy Source Emissions

Energy usage includes both direct and indirect sources of emissions. Direct sources of emissions include on-site natural gas usage (non-hearth) for heating, while indirect emissions include electricity generated by offsite power plants. Natural gas use is measured in units of a thousand British Thermal Units (kBTU) per size metric for each land use subtype and electricity use is measured in kilowatt hours (kWh) per size metric for each land use subtype.

CalEEMod divides building electricity and natural gas use into uses that are subject to Title 24 standards and those that are not. Lighting electricity usage is also calculated as a separate category in CalEEMod. For electricity, Title 24 uses include the major building envelope systems covered by Part 6 (California Energy Code) of Title 24, such as space heating, space cooling, water heating, and ventilation. Non-Title 24 uses include all other end uses, such as appliances, electronics, and other miscellaneous plug-in uses. Because some lighting is not considered as part of the building envelope energy budget, CalEEMod makes lighting a separate category.

For natural gas, uses are likewise categorized as Title 24 or Non-Title 24. Title 24 uses include building heating and hot water end uses. Non-Title 24 natural gas uses include cooking and appliances (including pool/spa heaters).

The baseline values are based on the California Energy Commission (CEC) sponsored California Commercial End Use Survey (CEUS) and Residential Appliance Saturation Survey (RASS) studies.

The total annual electricity and natural gas usage for the proposed project is discussed further in Section 9 of this report.

The project will be required to provide on-site renewable energy photovoltaic installations (solar panels) for the residential uses, as required by the latest 2019 CA Energy Code requirements. The Energy Code requires all new residential construction to achieve net-zero emissions associated with electricity usage through the use of on-site renewable sources. However, for purposes of this analysis, no reductions in emissions have been accounted for as a result of on-site renewables. The result is a conservative estimate of energy source emissions.

4.3.3 Area Source Emissions

Area source emissions are direct sources of emissions that fall under four categories: hearths, consumer products, architectural coatings, and landscaping equipment. Per SCAQMD rule 445, no wood burning devices are allowed in new developments; therefore, no wood hearths are included in this project. Consumer products are various solvents used in non-industrial applications which emit ROGs during their product use. These typically include cleaning supplies, kitchen aerosols, cosmetics, and toiletries.

4.3.4 Other Sources of Operational Emissions

Water. Greenhouse gas emissions are generated from the upstream energy required to supply and treat the water used on the project site. Indirect emissions from water usage are counted as part of the project's overall impact. The estimated water usage for the project is reported in Table 11 and recommendations to reduce water usage are discussed in Section 6.0.

Waste. CalEEMod calculates the indirect GHG emissions associated with waste that is disposed of at a landfill. The program uses annual waste disposal rates from the California Department of Resources Recycling and Recovery (CalRecycle) data for individual land uses. The program quantifies the GHG emissions associated with the decomposition of the waste which generates methane based on the total amount of degradable organic carbon.

The estimated waste generation by the project is reported in Table 11 and recommendations to reduce waste generation in landfills are discussed in Section 6.0

Table 11
Operational Water Usage and Waste Generation

Land Use	Water Usage (gallons/year)			Waste Generation (tons/year)[1]
	Indoor	Outdoor	Total	
Apartments Low Rise	71,669,400	45,182,900	116,852,300	506.00
City Park	0	16,752,200	16,752,200	1.21
Condo/Townhouse	65,154,000	41,075,400	106,229,400	460.00
General Office Building	11,552,700	7,080,680	18,633,380	60.45
Government (Civic Center)	12,356,600	7,573,420	19,930,020	354.54
Library	782,223	1,223,480	2,005,703	23.02
Medical Office Building	8,156,230	1,553,570	9,709,800	702.00

Single Family Housing	26,061,600	16,430,100	42,491,700	469.04
Total	**224,621,053**	**154,577,450**	**379,198,503**	**2,985.76**

[1] CalEEMod default estimates.

5.0 Significance Thresholds

5.1 Air Quality Regional Significance Thresholds

The SCAQMD has established air quality emissions thresholds for criteria air pollutants for the purposes of determining whether a project may have a significant effect on the environment per Section 15002(g) of the Guidelines for implementing CEQA. By complying with the thresholds of significance, the project would be in compliance with the SCAQMD Air Quality Management Plan (AQMP) and the federal and state air quality standards.

Table 12 lists the air quality significance thresholds for the six air pollutants analyzed in this report. Lead is not included as part of this analysis as the project is not expected to emit lead in any significant measurable quantity.

Table 12
SCAQMD Regional Significance Thresholds

Pollutant	Construction (lbs/day)	Operation (lbs/day)
NO_X	100	55
VOC	75	55
PM_{10}	150	150
$PM_{2.5}$	55	55
SO_X	150	150
CO	550	550

[1] Source: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf

5.2 Air Quality Localized Significance Thresholds

Air quality emissions were analyzed using the SCAQMD's Mass Rate Localized Significant Threshold (LST) Look-up Tables.

Table 13 lists the Localized Significance Thresholds (LST) used to determine whether a project may generate significant adverse localized air quality impacts. LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard.

LSTs are developed based on the ambient concentrations of four applicable air pollutants for source receptor area (SRA-22) – Corona/Norco.

The nearest existing sensitive receptors are located along the northern and eastern property line of the site, less than 25 meters from potential areas of on-site construction and operational activity. Although receptors may be located closer than 25 meters to the site, SCAQMD LST methodology states that projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters.

The daily disturbance area is calculated to be 4 acres, however LST thresholds are only based on 1, 2 and 5-acre sites. In order to be conservative, a linear progression model was used to estimate the threshold for 4-acre site based on the established LST thresholds.

Table 13
SCAQMD Localized Significance Thresholds[1] (LST)

Pollutant	Construction (lbs/day)	Operational (lbs/day)
NO_X	235.2	235.2
CO	1,461.2	1,461.2
PM_{10}	10.0	2.6
$PM_{2.5}$	6.9	1.9

[1] Source: SCAQMD Mass Rate Localized Significance Thresholds for 4-acre site in SRA-22 at 25 meters

According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings).

5.3 Microscale CO Concentration Standards

The significance of localized CO impacts depends on whether ambient CO levels in the vicinity of the project are above or below federal or state standards. If ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of the AAQS. If ambient levels already exceed State or federal standards, project emissions are considered significant if they increase 1-hour CO concentrations by 1.0 ppm or more or 8-hour CO concentrations by 0.45 ppm or more.

Current CO levels in the SCAB are in attainment of both federal and state standards, and local air quality monitoring data indicates there have not been any localized exceedances of CO over the past three years. As described in subsequent sections of this report, the project's impact to CO concentrations is reviewed based upon the changes in regional emissions and vehicular trip generation in relation to the previous estimates from the 2015 EIR.

5.4 GHG Significance Thresholds

5.4.1 SCAQMD Recommended GHG Thresholds

SCAQMD has developed recommended GHG thresholds of significance to assist local agencies with determining the impact of a project for CEQA. SCAQMD's objective in providing the GHG guidelines is to establish a performance standard that will ultimately contribute to reducing GHG emissions below 1990 levels, and thus achieve the requirements of the California Global Warming Solutions Act (AB 32).

SCAQMD first issued the *Interim CEQA Greenhouse Gas (GHG) Significance Thresholds* guidance document in October 2008, and has since help several stakeholder working group meetings where staff has presented updated recommendations that serve in addendum to the interim document. The latest recommended GHG thresholds are based on the GHG CEQA Significance Threshold Stakeholder Working Group #15, September 2010.

The SCAQMD describes a five-tiered approach for determining GHG Significance Thresholds.

- **Tier 1 -** If a project is exempt from CEQA, project-level and cumulative GHG emissions are less than significant.

- **Tier 2 -** If the project complies with a GHG emissions reduction plan or mitigation program that avoids or substantially reduces GHG emissions in the project's geographic area (i.e., city or county), project-level and cumulative GHG emissions are less than significant.

For projects that are not exempt or where no qualifying GHG reduction plans are directly applicable, SCAQMD requires an assessment based on the following tiers.

- **Tier 3 -** Consists of screening values that are intended to capture 90 percent of the GHG emissions from projects. If a project's emissions are under the screening

thresholds, then the project is less than significant. SCAQMD has presented two options that lead agencies could choose for screening values. Option #1 sets the thresholds for residential projects to 3,500 $MTCO_2e$/year, commercial projects to 1,400 $MTCO_2e$/year), and the mixed use to 3,000 $MTCO_2e$/year. Option #2 sets a single numerical threshold for all non-industrial projects of 3,000 $MTCO_2e$/year. The current staff recommendation is to use option #2, but allows lead agencies to choose option #1 if they prefer. Regardless of which option a lead agency chooses to follow, it is recommended that the same option is consistently used for all projects.

Table 14 shows the screening levels described in option #2, which has been used previously in the City of Eastvale.

Table 14
SCAQMD Tier 3 GHG Screening Values

Land Use	Screening Value
Industrial Projects	10,000 $MTCO_2e$/Yr
Residential/Commercial Projects	3,000 $MTCO_2e$/Yr

- **Tier 4 -** includes performance standards compliance options to demonstrate that a project is not significant for GHG emissions.

  Compliance Option 3 consists of staffs currently proposed Tier 4 performance standards for establishing efficiency-based standards at the plan level (program-level projects such as general plans and specific plans) and project level. Efficiency standards are based on the amount of GHG emissions ($MTCO_2e$/year) per Service Population (SP). SP is defined as the sum of the residential and employment populations provided by a project.

Table 15
SCAQMD Tier 4 Efficiency Thresholds

Project Type	Efficiency Thresholds[1]
	Target Year 2035
Plan (Program) Level	4.1 $MTCO_2e$/yr/SP
Project Level	3.0 $MTCO_2e$/yr/SP

RK engineering group, inc.
rkengineer.com

- **Tier 5 –** involves implementing off-site mitigation or the purchasing of offsets to reduce GHG emissions to less than the proposed screening level. The project proponent would be required to provide offsets for the life of the project, which is defined as 30 years.

By complying with the SCAQMD GHG thresholds of significance, the project is considered to be in compliance with the applicable State GHG legislation.

5.4.2 City of Eastvale GHG Thresholds

The City of Eastvale does not have an adopted threshold of significance for GHG emissions, and that the City has selected the 10,000MTCO2e/Yr significance criterion for CEQA purposes, based on substantial evidence.

6.0 Air Quality Impact Analysis

Consistent with CEQA and the State CEQA Guidelines, a significant impact related to air quality would occur if the proposed project is determined to:

a) Conflict with or obstruct implementation of the applicable air quality plan.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or State ambient air quality standard.

c) Expose sensitive receptors to substantial pollutant concentrations.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

6.1 Short Term Air Quality Impacts - Construction

6.1.1 Regional Emissions - Construction

Regional air quality emissions include both on-site and off-site emissions associated with construction of the project. Regional daily emissions of criteria pollutants are compared to the SCAQMD regional thresholds of significance.

As shown in Table 16, regional daily emissions of criteria pollutants are expected to be below the allowable thresholds of significance.

CalEEMod daily emissions outputs are provided in Appendix A.

Table 16
Regional Construction Emissions

Maximum Daily Emissions (lbs/day)[1]						
Activity	**VOC**	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**
Demolition	0.59	4.80	24.46	0.05	2.32	0.49
Site Preparation	1.66	49.77	31.79	0.24	14.65	6.20
Grading	2.98	94.62	53.41	0.45	16.97	5.81
Building Construction	12.89	40.14	145.48	0.49	41.49	11.45
Paving	1.19	1.24	17.78	0.02	0.21	0.08
Architectural Coating	73.82	1.31	22.10	0.06	7.11	1.91
Maximum[1]	**73.82**	**94.62**	**145.48**	**0.49**	**41.49**	**11.45**
SCAQMD Threshold	75	100	550	150	150	55
Exceeds Threshold (?)	**No**	**No**	**No**	**No**	**No**	**No**

[1] Maximum daily emission during summer or winter; includes both on-site and off-site project emissions.

The project must follow all standard SCAQMD rules and requirements with regards to fugitive dust control, as described in Section 6.1.3. SCAQMD dust control requirements are assumed to be included as part of the project design features.

Table 16 shows that the project's daily construction emissions will be below the applicable SCAQMD regional air quality standards and thresholds of significance. As a result, the project would not contribute substantially to an existing or projected air quality violation.

Furthermore, by complying with the SCAQMD standards, the project would not contribute to a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

The project's short-term construction impact on regional air resources is less than significant with mitigation.

6.1.2 Localized Emissions - Construction

Table 17 illustrates the construction related localized emissions and compares the results to SCAQMD LST thresholds. As shown in Table 17, the emissions will be below the SCAQMD thresholds of significance for localized construction emissions. The project must follow all standard SCAQMD rules and requirements with regards to fugitive dust control, as described in Section 6.1.3. Compliance with the dust control is considered a standard requirement and included as part of the project's design features, not mitigation.

The project's short-term construction impact to localized air resources is less than significant.

Table 17
Localized Construction Emissions

Maximum Daily Emissions (lbs/day)[1]				
Activity	**NOx**	**CO**	**PM_{10}**	**$PM_{2.5}$**
On-site Emissions	3.30	33.00	7.72	3.95
SCAQMD Construction Threshold[2]	235.0	1,461.0	10.0	6.9
Exceeds Threshold (?)	**No**	**No**	**No**	**No**

[1] Maximum daily emission during summer or winter; includes on-site project emissions only.
[2] Reference 2006-2008 SCAQMD Mass Rate Localized Significant Thresholds for construction and operation. SRA-22, Corona/Norco, 4-acre site, receptor distance 25 meters.

6.1.3 Fugitive Dust - Construction

The Project is required to comply with regional rules that assist in reducing short-term air pollutant emissions associated with suspended particulate matter, also known as fugitive dust. Fugitive dust emissions are commonly associated with land clearing activities, cut-and-fill grading operations, and exposure of soils to the air and wind. SCAQMD Rule 403 requires that fugitive dust is controlled with best-available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. In addition, SCAQMD Rules 402 and 403 require implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site.

To ensure full compliance with the applicable dust control standards, the following design features are recommended for the project:

DF-1 Prepare and implement a Construction Management Plan which shall include the Air Quality design features to be submitted to the City of Eastvale for all phases of construction.

DF-2 Follow the standard SCAQMD rules and requirements with regards to fugitive dust control, which includes, but are not limited to the following:

1. All active construction areas shall be watered two (2) times daily.
2. Speed on unpaved roads shall be reduced to less than 15 mph.
3. Any visible dirt deposition on any public roadway shall be swept or washed at the site access points within 30 minutes.
4. Any on-site stockpiles of debris, dirt or other dusty material shall be covered or watered twice daily.
5. All operations on any unpaved surface shall be suspended if winds exceed 15 mph.
6. Access points shall be washed or swept daily.
7. Construction sites shall be sandbagged for erosion control.
8. Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).
9. Cover all trucks hauling dirt, sand, soil, or other loose materials, and maintain at least 2 feet of freeboard space in accordance with the requirements of California Vehicle Code (CVC) section 23114.
10. Pave or gravel construction access roads at least 100 feet onto the site from the main road and use gravel aprons at truck exits.
11. Replace the ground cover of disturbed areas as quickly possible.
12. A fugitive dust control plan should be prepared and submitted to SCAQMD prior to the start of construction.

The regional and localized analysis of daily fugitive dust emissions, as shown in Table 18 and Table 19, indicate that with standard control measures the project would be below the

applicable thresholds established by the SCAQMD. **The proposed project's short-term construction activities would cause less than significant fugitive dust impacts.**

6.1.4 Odors - Construction

Heavy-duty equipment in the project area during construction will emit odors; however, the construction activity would cease to occur after individual construction is completed. The project is required to comply with Rule 402 during construction, which states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. No other sources of objectionable odors have been identified for the proposed Project.

Therefore, the project impact from odor emissions is less than significant.

6.1.5 Asbestos - Construction

Asbestos is a carcinogen and is categorized as a hazardous air pollutant by the Environmental Protection Agency (EPA) and regulated through the National Emissions Standards for Hazardous Air Pollutants (NESHAP). Asbestos fibers imbedded within construction materials become a health hazard once they are disturbed and rendered airborne, such as through physical contact like building renovation and demolition activities.

SCAQMD is the local enforcement authority for asbestos. SCAQMD Rule 1403 establishes the survey requirements, notification, and work practices to prevent asbestos emissions from emanating during building renovation and demolition activities.

Asbestos also occurs naturally in serpentine and ultramafic rock. Based on the California Division of Mines and Geology General Location Guide for Ultramafic Rocks in California - Areas More Likely to Contain Naturally Occurring Asbestos, naturally occurring asbestos has not been shown to occur within in the vicinity of the project site. Therefore, the potential risk for naturally occurring asbestos (NOA) during project construction is small. However, in the event NOA is found on the site, the project will be required to comply with SCAQMD and NESHAP standards.

The project also includes demolition of existing structures that would be subject to the National Emissions Standards for Asbestos (40CFR Part 61 Subpart M). Prior to demolition of existing structures, an asbestos evaluation must be completed in accordance with the Asbestos NESHAP regulations. Section 61.145 requires written notification of demolition operations. Asbestos NESHAP demolition/Renovation Notification Form can be downloaded at http://www.arb.ca.gov/enf/asbestosform.pdf.

By following the required asbestos abatement protocols, **the project impact is less than significant**.

6.1.6 Diesel Particulate Matter - Construction

The California Office of Environmental Health Hazard Assessment (OEHHA) adopted the Guidance Manual for Preparation of Health Risk Assessments (HRA Guidelines) to provide procedures for use in the Air Toxics Hot Spots Program or for the permitting of existing, new, or modified stationary sources.[5] The HRA Guidelines provide risk factors based on exposure to toxic substances over a 30-year lifetime span.

The project will generate diesel particulate matter (DPM) during construction from off-road diesel equipment and trucks. However, the project's construction activity is not expected to be a long-term (i.e., 30 years) source of toxic air contaminant emissions and short-term risk factors have not been developed. Due the significantly reduced risk from short-term exposure, SCAQMD does not typically require the evaluation of long-term cancer risk or chronic health impacts for construction operations from a project such as the one being proposed.

Hence, the impacts from short-term exposure to DMP during project construction are presumed to be less than significant without the need for a detailed HRA study.

To help further reduce the potential health risks associated with DPM exposure during construction, the following project design features are recommended. Project design features include a recommendation for Tier 4 engines on all off-road diesel equipment. Tier 4 engines, along with the latest national fuel standards, have been shown to yield PM reductions of over 95% from the typical Tier 2 and Tier 3 engines.[6]

[5] OEHHA. Air Toxics Hot Spots Program. Risk Assessment Guidelines. Guidance for Preparation of Health Risk Assessments. February 2015.
[6] EPA. Control of Emissions of Air Pollution from Nonroad Diesel Engines and Fuel; Final Rule. (40 CFR Parts 9, 69, et al.)

DF-3 Require all construction equipment to have Tier 4 low emission "clean diesel" engines (OEM or retrofit) that include diesel oxidation catalysts and diesel particulate filters that meet the latest CARB best available control technology.

DF-4 Construction equipment shall be maintained in proper tune.

DF-5 All construction vehicles shall be prohibited from excessive idling. Excessive idling is defined as five (5) minutes or longer.

DF-6 Minimize the simultaneous operation of multiple construction equipment units, to the maximum extent feasible.

DF-7 The use of heavy construction equipment and earthmoving activity should be suspended during Air Alerts when the Air Quality Index reaches the "Unhealthy" level.

DF-8 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

DF-9 Establish staging areas for the construction equipment that are as distant as possible from adjacent residential homes.

DF-10 Use haul trucks with on-road engines instead of off-road engines for on-site hauling.

6.2 Long Term Air Quality Impacts - Operation

6.2.1 Regional Emissions - Operation

Long-term operational air pollutant impacts from the project are shown in Table 18 and are compared to the previously approved 2015 EIR emission levels. As shown in Table 18, the project is expected to generate fewer emissions compared to the previously approved 2015 EIR emission levels.

As a result, the proposed project would not result in any additional regional operational impacts. CalEEMod daily emissions outputs are provided in Appendix A.

All previously identified mitigation measures to reduced operational emissions in the 2015 EIR are still applicable.

Table 18
Regional Operational Emissions

Maximum Daily Emissions (lbs/day)[1]						
Project Emissions	**VOC**	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**
Mobile Sources	105.36	84.22	788.32	1.58	179.11	48.35
Energy Sources	1.52	13.01	5.80	0.08	1.05	1.05
Area Sources	85.70	37.63	221.51	0.24	4.00	4.00
Total Project Emission	**192.58**	**134.86**	**1015.62**	**1.90**	**184.15**	**53.40**
SCAQMD Threshold	55	55	550	150	150	55
Exceeds Threshold (?)	Yes	Yes	Yes	No	Yes	No
LEAL Master Plan 2015 EIR	268.32	258.6	1,200.15	4.94	326.66	92.99
Exceeds 2015 EIR Levels (?)	**No**	**No**	**No**	**No**	**No**	**No**
Change in Emission Levels	-75.74	-123.742	-184.53	-3.0393	-142.5076	-39.5922
Percentage Change	**-28%**	**-48%**	**-15%**	**-62%**	**-44%**	**-43%**

[1] Maximum daily emission during summer or winter; includes both on-site and off-site project emissions.

6.2.2 Odors - Operation

Land uses that commonly receive odor complaints include agricultural uses (farming and livestock), chemical plants, composting operations, dairies, fiberglass molding facilities, food processing plants, landfills, refineries, rail yards, and wastewater treatment plants. The proposed project does not contain land uses that would typically be associated with significant odor emissions.

The project will be required to comply with standard building code requirements related to exhaust ventilation, as well as comply with SCAQMD Rule 402. Rule 402 requires that a person may not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. Project related odors are not expected to meet the criteria of being a nuisance. **The project's operation would result in less than significant odor impacts.**

6.2.3 Toxic Air Contaminants - Operations

The project would consist of mixed used residential and commercial/retail land uses with civic center, community parks and a community center. This type of project does not include major sources of toxic air contaminants (TAC) emissions that would result in significant exposure of sensitive receptors to substantial pollutant concentrations. Therefore, **the project impact is considered less than significant.**

6.3 CO Hot Spot Emissions

A CO hot spot is a localized concentration of carbon monoxide (CO) that is above the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm. At the time of the publishing of the 1993 CEQA Air Quality Handbook, the SCAB was designated nonattainment, and projects were required to perform hot spot analyses to ensure they did not exacerbate an existing problem. Since this time, the SCAB has achieved attainment status and the potential for hot spots caused by vehicular traffic congestion has been greatly reduced. In fact, the SCAQMD Air Quality Management Plan (AQMP) found that peak CO concentrations were primarily the result of unusual meteorological and topographical conditions, not traffic congestion. Additionally, the 2003 SCAQMD AQMP found that, at four of the busiest intersections in SCAB, there were no CO hot spots concentrations. Therefore, it is reasonable to conclude that the project would not significantly increase traffic congestion in the vicinity of the site that would lead to the formation of CO Hot Spots.

Based on the 2015 EIR report the CO hot spot emission levels are predicted to be below the California Ambient Air Quality Standards (CAAQS) levels. Since, the proposed project is expected to generate approximately 27,764 fewer daily trips and is not expected to have any additional traffic impacts on the roadways, it can also be concluded that no new CO hotspots would occur as a result of the project. **The project impact to CO Hot Spots is considered to be less than significant.**

7.0 Greenhouse Gas Impact Analysis

Consistent with CEQA Guidelines, a significant impact related to greenhouse gas would occur if the proposed project is determined to:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.

b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of greenhouse gases.

7.1 Greenhouse Gas Emissions - Construction

Greenhouse gas emissions are estimated for on-site and off-site construction activity using CalEEMod. Table 19 shows the construction greenhouse gas emissions, including equipment and worker vehicle emissions for all phases of construction. Construction emissions are amortized over 30 years and added to the long-term operational emissions, pursuant to SCAQMD recommendations. CalEEMod annual GHG output calculations are provided in Appendix B.

Table 19
Construction Greenhouse Gas Emissions

Activity	Emissions ($MTC0_2e$)[1]		
	On-site	Off-site	Total
Demolition	25.67	9.93	35.60
Site Preparation	202.26	1,248.17	1,450.43
Grading	274.88	1,932.38	2,207.26
Building Construction	676.34	12,097.70	12,774.04
Paving	70.63	4.26	74.89
Architectural Coating	42.70	842.76	885.46
Total	1,292.48	16,135.20	17,427.68
Amortized over 30 years[2]	43.08	537.84	580.92

[1] $MTCO_2e$ = metric tons of carbon dioxide equivalents (includes carbon dioxide, methane, nitrous oxide, and/or hydrofluorocarbon).
[2] The emissions are amortized over 30 years and added to the operational emissions, pursuant to SCAQMD recommendations.

RK engineering group, inc.
rkengineer.com

Because impacts from construction activities occur over a relatively short-term period of time, they contribute a relatively small portion of the overall lifetime project GHG emissions. By itself, the construction activities from this project are less than significant when compared to the thresholds recommended by SCAQMD. However, SCAQMD recommends that construction emissions be amortized over a 30-year project lifetime and added to the overall project operational emissions. In doing so, construction GHG emissions are included in the overall contribution of the project, as further discussed in the following section.

7.2 Greenhouse Gas Emissions - Operation

Greenhouse gas emissions are estimated for on-site and off-site operational activity using CalEEMod. Greenhouse gas emissions from mobile sources, area sources and energy sources are shown in Table 20. CalEEMod annual GHG output calculations are provided in Appendix B.

Table 20
Operational Greenhouse Gas Emissions

Emission Source	Unmitigated GHG Emissions ($MTCO_2e$)[1]
Mobile Source	21,034.65
Energy Source	7,413.89
Area Source	556.56
Water	1,133.26
Waste	1,501.54
Construction (30-year amortization)	580.92
Total Annual Emissions	32,220.82
LEAL Master Plan 2015 EIR Emission Levels[2]	74,317
Change in Emission Levels	-42,096.18
Percentage Change	**-57%**

[1] $MTCO_2e$ = metric tons of carbon dioxide equivalents.

[2] As stated in the 2015 EIR, emissions account for 2035 vehicle fleet modernization associated with the turnover of older, less efficient makes and models. All other emission sources are limited to the 2020 condition due to lack of specific GHG-reducing regulatory mechanisms for target years beyond 2020.

As shown in Table 20, project GHG emissions are not expected to exceed LEAL Master Plan EIR 2015 – Master Plan Buildout GHG Emissions Year 2035 conditions. The project's operational GHG emissions are expected to be 57% less than the previously approved 2015 EIR levels. All previously identified mitigation measures to reduced operational emissions in the 2015 EIR are still applicable.

7.3 Project Consistency With GHG Reduction Plans

The project will be required to comply with the mandatory requirements of the latest 2019 California Building Standards Code, including Title 24, Part 11, CALGreen and Title 24, Part 6, Energy Code. The purpose of the building standards is to reduce negative impacts on the environment through improved planning and design, energy efficiency, water efficiency and conservation and material and resource conservation. The California Building Standards were developed to help meet the requirements of the Global Warming Solutions Act (AB 32). The project shall design all project buildings to meet the California Building

Code (CBC) Title 24 energy standard, including, but not limited to, any combination of the following:

- Increase insulation such that heat transfer and thermal bridging are minimized.
- Limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.
- Incorporate Energy Star or better rated windows, space heating and cooling equipment, light fixtures, appliances, or other applicable electrical equipment.
- Install energy-efficient lighting (e.g., light-emitting diodes [LEDs] and lighting control systems). Use daylight as an integral part of the lighting systems in buildings.
- Install light-colored "cool" roofs (e.g., Energy Star roofing) or other highly reflective, highly emissive roofing materials.

Also, as part of the latest Energy Code requirements, the project will be required to include rooftop solar panels, community solar panels, and/or other sources of on-site renewable energy capable of meeting the required California Energy Code Energy Design Rating. Therefore, by complying with the City's GHG reduction policy the project would not conflict with an applicable plan, policy, or regulation for the purpose of reducing the emissions of greenhouse gases and the impact is considered less than significant.

7.4 Project Design Features

The mixed-use Master Plan project includes many design features that will help reduce Air Quality and GHG emissions. The following operational project features will be included as part of the project's design:

Operational Design Features:

DF-11 Implement trip reduction measures and project design features to reduce the number of auto-based trips generated by the project and encourage the use of transit, bicycling, and walking through the following measures;

1. Improve the walkability design of the project by providing pedestrian and bicycling connections within the project site and to adjacent off-

site facilities (i.e. sidewalks, bike lanes, trails, parcel-to-parcel connections, crosswalks, wayfinding signage, etc.).

2. Provide traffic calming measures (i.e. marked crosswalks, count-down signal timers, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others.)

3. Provide bicycle parking at the commercial, civic center and community center areas.

4. Provide secure bicycle parking areas at the multi-family uses.

5. Provide electric vehicle charging stations and parking for all uses (i.e. common area charging stations for the multi-family, retail/commercial, and civic center uses and garages setup with dedicated circuits and plugs for single family/condos).

DF-12 No wood burning fireplaces will be allowed in any residential dwelling.

DF-13 Install rooftop solar panels, community solar panels, and/or other sources of on-site renewable energy capable of meeting the required California Energy Code Energy Design Rating for all single family, multifamily residences and municipal building uses.

DF-14 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

DF-15 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod.

DF-16 Participate in the local waste management recycling and composting programs.

DF-17 The home-owners associations and property management companies should encourage landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

8.0 Energy Conservation Analysis

8.1 Study Objectives

The purpose of this energy conservation analysis is to review the energy implications of the proposed LEAL Master Plan Amendment (project) and provide recommendations to reduce wasteful, inefficient and unnecessary consumption of energy during construction and operation. This analysis has been prepared within the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.).

CEQA Guidelines, Appendix F, Energy Conservation, describes the framework within which energy conservation should be analyzed. Conserving energy implies the wise and efficient use of energy through decreasing overall per capita energy consumption, decreasing reliance on fossil fuels (such as coal, natural gas and oil), and increasing reliance on renewable energy sources. This analysis considers energy impacts to include:

1. The project's energy requirements and its energy use efficiencies by amount and fuel type for each stage of the project including construction and operation.

2. The effects of the project on local and regional energy supplies and on requirements for additional capacity.

3. The effects of the project on peak and base period demands for electricity and other forms of energy.

4. The degree to which the project complies with existing energy standards.

5. The effects of the project on energy resources.

8.2 Utility Providers

The project will be served by the following utility providers, as shown in Table 21.

Table 21
Utility Providers

Utility	Provider
Electricity	Southern California Edison
Natural Gas	Southern California Gas Company
Water	Jurupa Community Service
Sewer	Waste Management / Burrtec Waste Industries
Telephone	T-Mobile, AT&T, Spectrum & Google Fi
Cable	Direct TV, Spectrum & Verizon

8.3 Energy Consumption Methodology

The three (3) main types of energy expected to be consumed by the project include electricity, natural gas and petroleum products in the form of gasoline and diesel fuel.

The California Emissions Estimator Model Version 2020.4.0 (CalEEMod) is used to calculate energy usage from project construction and operational activities.

The CalEEMod Unmitigated Reports for the project are provided in Appendix A.

8.4 Electricity Consumption

The project will use electricity for many different operational activities including, but not limited to, building heating and cooling, lighting, appliances, electronics, mechanical equipment, electric vehicle charging, and parking lot lighting. Indirect electricity usage will also be required to supply, distribute, and treat water and wastewater. Electricity will be provided to the site by Southern California Edison.

Temporary electricity usage for construction activities may include lighting, electric equipment and mobile office uses, however, CalEEMod does not calculate electricity usage during construction. Electricity usage during construction is expected to be short-term and relatively minor compared to the operational demand, and therefore electricity usage during construction is not counted in this analysis.

Table 22 shows the project's estimated operational electricity consumption in kilowatt-hours per year (kWh/year) and millions of Btu per year.

Table 22
Project Electricity Consumption

Land Use/Activity	Electricity Consumption[1]	
	(kWhr/yr)[2]	(MBtu/yr)[2]
General Office Building	597,350.00	2,038.16
Government (Civic Center)	571,618.00	1,950.36
Medical Office Building	597,350.00	2,038.16
Library	248,000.00	846.18
Enclosed Parking with Elevator	6,136,320.00	20,937.12
Parking Lot	136,920.00	467.17
Street Lighting	349,438.00	1,192.28
Apartments Low Rise	4,586,950.00	15,650.67
Condo/Townhouse	4,973,760.00	16,970.47
Single Family Housing	3,185,860.00	10,870.15
Regional Shopping Center	4,734,600.00	16,154.46
Water Supply and Treatment	2,394,345.79	8,169.51
Total	28,512,511.79	97,284.69

[1] Source: CalEEMod Unmitigated Default.

[2] kWhr/yr = Kilowatt Hours per Year
MBtu/yr = Million British Thermal Units per Year

8.5 Natural Gas Consumption

The project will use natural gas for such things as building heating and cooling, cooking, kitchen appliances, and gas water heaters. Natural gas is not expected to be used during construction in any significant quantities and is not included in the overall calculation of the project's natural gas consumption.

Table 23 shows the project's estimated operational natural gas consumption in millions of Btu per year.

Table 23
Project Natural Gas Consumption

Land Use/Activity	Natural Gas Consumption[1] (MBtu/yr)[2]
General Office Building	0.22
Government (Civic Center)	0.21
Medical Office Building	0.22
Library	0.81
Apartments Low Rise	16.64
Condo/Townhouse	21.10
Single Family Housing	11.31
Regional Shopping Center	0.86
Total	51.38

[1] Source: CalEEMod Unmitigated Default.
[2] MBtu/yr = Millions of British Thermal Units per Year

8.6 Petroleum Consumption

The project's energy consumption from petroleum products is primarily associated with transportation related activities. This includes gasoline and diesel fuel usage for auto and truck trips during construction and operation and off-road equipment usage during construction.

8.6.1 Petroleum Consumption - Construction

Construction of the project is estimated to last approximately 14 months and consist of site preparation, grading, building construction, paving, and architectural coating phases. Construction activities will consume energy in the form of motor vehicle fuel (gasoline and diesel) for off-road construction equipment and on-road vehicle trips. Vehicle trips include workers and vendors traveling to and from the job-site.

Table 24 shows the project's energy consumption for all off-road equipment during construction. For purposes of this analysis, all off-road equipment is assumed to run on diesel fuel. Table 25 shows the project's energy consumption from on-road vehicle trips during construction.

Table 24

[3] Mbtu = Millions of Btu; assuming 1 gallon of gasoline fuel = 120,429 Btu and 1 gallon of diesel fuel = 137,381 Btu

8.6.2 Petroleum Consumption - Operation

The project is expected to consume energy from auto and truck trips generated by the proposed land uses. Operational vehicle trips are associated with workers, customers and vendors/non-workers (i.e., delivery, service, maintenance vehicles, etc.) traveling to and from the site. EMFAC2017 vehicle fuel consumption data is provided in Appendix C.

Table 26 shows the project's petroleum energy consumption for all operational trips generated by the project on an annual basis.

Table 26
Operational Trips Energy Consumption - Annual

Vehicle Class	Vehicle Mix	Average Fuel Economy (MPG)	Annual VMT	Gasoline		Diesel		MBtu

8.7 Summary of Project Energy Consumption

Table 27 provides a summary of the project's annual operational energy consumption.

Table 27
Annual Energy Consumption

Activity	Energy Consumption (MBtu/yr)[1]
Electricity	97,284.69
Natural Gas	51.38
Petroleum	323,569.88
Total Annual Operational Energy Consumption	**420,905.94**

[1] MBtu/yr = Millions of Btu per year. Operational activities only.

8.8 Energy Impact Analysis

This analysis has been prepared within the context of the CEQA Guidelines, Appendix F, Energy Conservation, and Appendix G, Environmental Checklist Form. According to CEQA, the goal of conserving energy implies the wise and efficient use of energy through decreasing overall per capita energy consumption, decreasing reliance on fossil fuels (such as coal, natural gas and oil), and increasing reliance on renewable energy sources.

8.9 Energy Impact – 1

Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

The project's impact is considered less than significant with the inclusion of the mandatory requirements of California's Building Energy Efficiency Standards (Title 24, Part 6) and Green Building Standards (CALGreen, Title 24, Part 11). California's building energy efficiency standards are some of the strictest in the nation and the project's compliance with California's building code will ensure that wasteful, inefficient or unnecessary consumption of energy is minimized. The building standards code is designed to reduce the amount of energy needed to heat or cool a building, reduce energy usage for lighting and appliances and promote usage of energy from renewable sources.

The project will also implement several project design features for reducing energy demand, as described in Section 1.4 of this report.

8.10 Energy Impact – 2

Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The project's impact is considered less than significant as the project will purchase electricity through Southern California Edison which is subject to the requirements of California Senate Bill 100 (SB 100). SB 100 is the most stringent and current energy legislation in California; requiring that renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers and 100% of electricity procured to serve all state agencies by December 31, 2045.[7]

The project will be required to comply with the mandatory requirements of California's Green Building and Building Energy Efficiency standards that promote renewable energy and energy efficiency. The project will include on-site solar for all new single family homes and low-rise multifamily homes, per the requirements of the California Energy Code Energy Design Rating.

The project will also comply with the City of Eastvale General Plan applicable goals and policies regarding energy efficiency and conservation policies including but not limited to the following goals as shown in Table 28.

[7] SB-100 California Renewables Portfolio Standard Program. http://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201720180SB100

Table 28
Project Consistency with the City of Eastvale
Applicable Energy Efficiency and Conservation Policies

Energy Efficiency and Conservation Policies	Project's Consistency
Policy AQ-26: Permit and encourage the use of passive solar devices and other state-of-the-art energy conservation measures.	The project will include on-site solar for all new single-family homes and low-rise multifamily homes, per the requirements of the California Energy Code Energy Design Rating.
POLICY AQ-27: Support and encourage voluntary efforts to provide active and passive solar access opportunities in new developments.	
POLICY AQ-30: Promote coordination of new public facilities with mass transit service and other alternative transportation services, including bicycles, and design structures to promote mass transit, bicycle, and pedestrian use.	As previously explained in Design Feature – 11 (DF-11), the project will include alternative transportation services, including bicycles, and design structures to promote mass transit, bicycle, and pedestrian use.
POLICY AQ-32: Utilize source reduction, recycling, and other appropriate measures to reduce the amount of solid waste disposed of in landfills.	The project will participate in the local waste management recycling and composting programs.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

LEAL Master Plan Modification Project-Unmitigated - Riverside-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Land Use - The project land uses are summarized in Table 1: Land Use Summary in the Air Quality Report.

Construction Phase - The construction phases has been updated to meet opening year 2026.

Demolition - The project is expected to demolish all existing structures of approximately 67,500 square feet of building material.

Grading - The project is expecting to export approx. 340,000 cy of organic dairy waste and import approx. 542,000 cy of earthwork material.

Architectural Coating -

Vehicle Trips - Project Trip Generation Rates are based on LEAL Masterplan Amendment Project Traffic Study, by RK Engineering Group.

Woodstoves - SCAQMD Rule 445 restricts wood burning hearths/fireplaces from being installed in new development.

Consumer Products -

Area Coating -

Construction Off-road Equipment Mitigation - Project will be required to comply with SCAQMD Rule 403 regarding fugitive dust control. The project is expected to use Tier 4 diesel engine construction equipment.

Area Mitigation - The project is expected use only natural gas hearth.

Energy Mitigation -

Fleet Mix - Operational fleet mix adjusted to equal 2% trucks with GVWR > 10,000 lbs.

Trips and VMT -

Mobile Land Use Mitigation - The project is proposing to implement traffic calming measures as a part of their design feature.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

LEAL Master Plan Modification Project-Unmitigated - Riverside-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Land Use - The project land uses are summarized in Table 1: Land Use Summary in the Air Quality Report.

Construction Phase - The construction phases has been updated to meet opening year 2026.

Demolition - The project is expected to demolish all existing structures of approximately 67,500 square feet of building material.

Grading - The project is expecting to export approx. 340,000 cy of organic dairy waste and import approx. 542,000 cy of earthwork material.

Architectural Coating -

Vehicle Trips - Project Trip Generation Rates are based on LEAL Masterplan Amendment Project Traffic Study, by RK Engineering Group.

Woodstoves - SCAQMD Rule 445 restricts wood burning hearths/fireplaces from being installed in new development.

Consumer Products -

Area Coating -

Construction Off-road Equipment Mitigation - Project will be required to comply with SCAQMD Rule 403 regarding fugitive dust control. The project is expected to use Tier 4 diesel engine construction equipment.

Area Mitigation - The project is expected use only natural gas hearth.

Energy Mitigation -

Fleet Mix - Operational fleet mix adjusted to equal 2% trucks with GVWR > 10,000 lbs.

Trips and VMT -

Mobile Land Use Mitigation - The project is proposing to implement traffic calming measures as a part of their design feature.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

LEAL Master Plan Modification Project-Unmitigated - Riverside-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Land Use - The project land uses are summarized in Table 1: Land Use Summary in the Air Quality Report.

Construction Phase - The construction phases has been updated to meet opening year 2026.

Demolition - The project is expected to demolish all existing structures of approximately 67,500 square feet of building material.

Grading - The project is expecting to export approx. 340,000 cy of organic dairy waste and import approx. 542,000 cy of earthwork material.

Architectural Coating -

Vehicle Trips - Project Trip Generation Rates are based on LEAL Masterplan Amendment Project Traffic Study, by RK Engineering Group.

Woodstoves - SCAQMD Rule 445 restricts wood burning hearths/fireplaces from being installed in new development.

Consumer Products -

Area Coating -

Construction Off-road Equipment Mitigation - Project will be required to comply with SCAQMD Rule 403 regarding fugitive dust control. The project is expected to use Tier 4 diesel engine construction equipment.

Area Mitigation - The project is expected use only natural gas hearth.

Energy Mitigation -

Fleet Mix - Operational fleet mix adjusted to equal 2% trucks with GVWR > 10,000 lbs.

Trips and VMT -

Mobile Land Use Mitigation - The project is proposing to implement traffic calming measures as a part of their design feature.

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Water Unpaved Roads

Reduce Vehicle Speed on Unpaved Roads

LEAL Master Plan Modification Project-Unmitigated - Riverside-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

3.2 Demolition - 2022

Unmitigated Construction On-Site

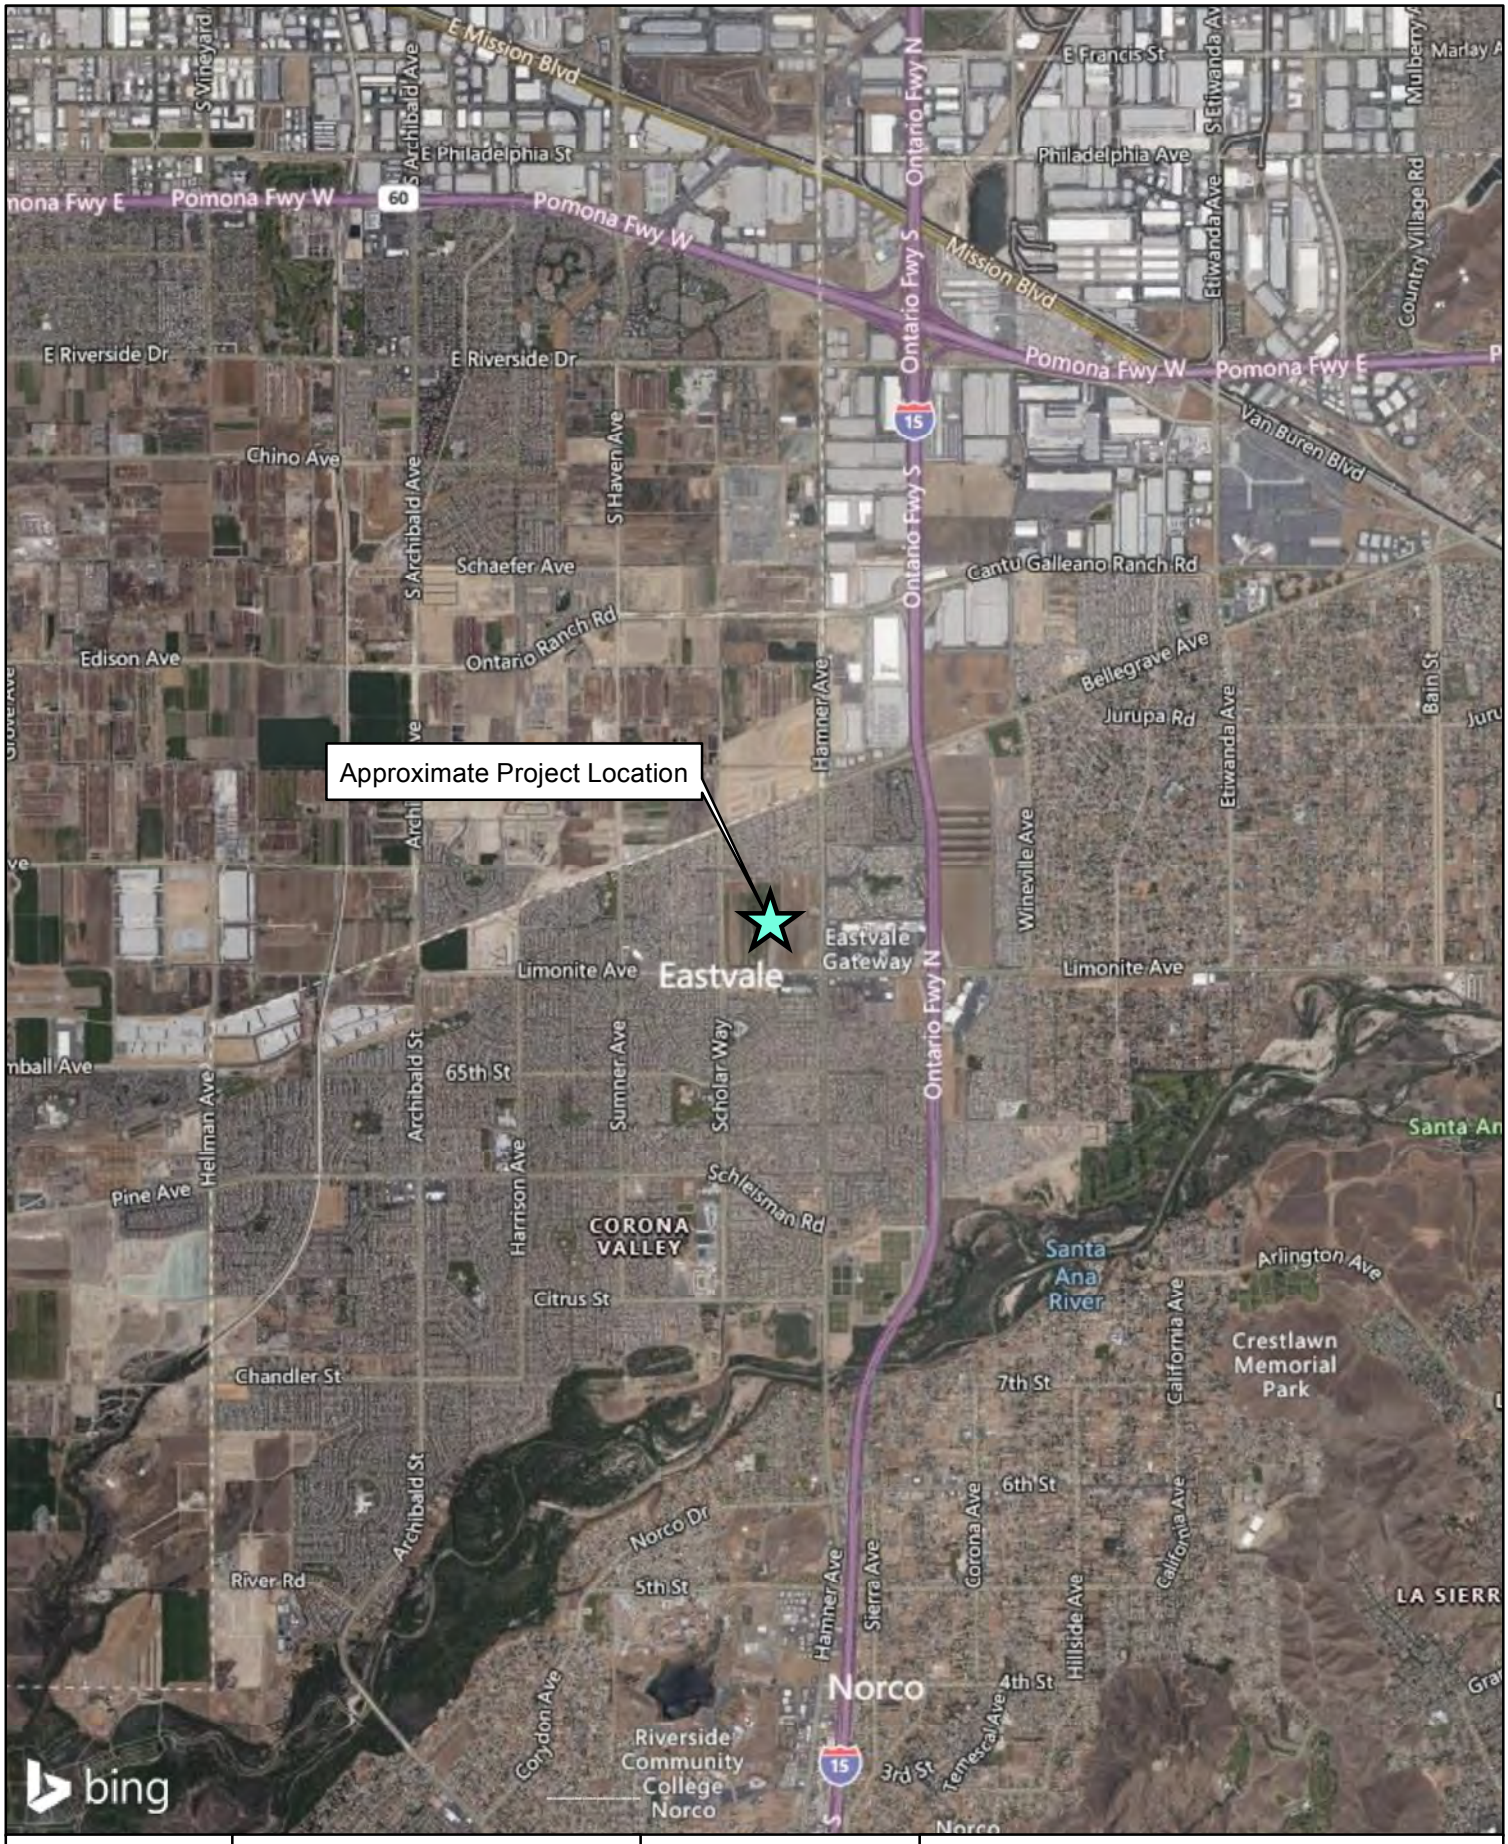
AJ Jarvis
The New Home Company
15231 Laguna Canyon Road, Suite 250
Irvine, CA 92618

Subject: Biological Assessment of the Leal Property located in the City of Eastvale



Dear Mr. Jarvis:

On behalf of The New Home Company (Applicant), Carlson Strategic Land Solutions (CSLS) prepared a focused biological assessment, summarized in the following letter report and graphics, documenting the findings of the biological field review of the proposed 160-acres Leal Project site (Project site) and surrounding 500-feet (Study Area). The Study Area is located within the City of Eastvale in the County of Riverside (Figures 1 and 2). In support of Project efforts, CSLS biologist Brianna Bernard and Justinne Manahan conducted an analysis of biological resources and jurisdictional waters within the Study Area on June 9, 2021, and focused burrowing owl surveys and narrow endemic plant surveys on June 16, 23, July 1 and 13, 2021. Furthermore, a Delhi Sands Flower Loving Fly Assessment was performed on June 18, 2021. The results of the field surveys are described in further detail below.

1.0 Project Location

The Project site is bounded by 58th Street to the north, Hamner Avenue to the east, Limonite Avenue to the south, and Scholar Way to the west. It is situated immediately west and north of existing commercial and retail developments and south and east of established residential neighborhoods of varying densities. The Project site is located approximately half a mile west of Interstate 15 (I-15). The Project site is within the *Corona North* U.S. Geological Survey 7.5-minute topographic map. Please refer to attached Figure 1 and Figure 2. Access to the Project site is provided off the Hamner Avenue or 58th Street.

The Assessor's Parcel Numbers include: 164-030-010, 164-030-012, 164-030-013, 164-030-014, 164-030-024, and 164-030-025.

2.0 Background and Existing Conditions

The Project site historically functioned as a dairy with associated agriculture, a horse farm, and the Leal family home. The dairy activities and associated agriculture is no longer in use. The Project site currently has 3 horses and associated horse corrals, several homes and associated trailers found scattered around the property, along with dairy and farm equipment. The Project site consists primarily of disturbed land associated with historical dairy activities, as well as developed and ruderal habitat communities.

The Leal Master Plan Environmental Impact Report (EIR) was completed and adopted in 2015. The document identified the general parameters for future development of the 160-acre Project site. The overall approach to planning for development of the Project site, including the envisioned level of quality, expected project characteristics, allowed land uses, etc., is discussed within the adopted Master Plan. The Master Plan is proposed to occur in stages from Adoption of the Master Plant to physical Development of the Project Site.

As part of the 2015 EIR and Master Plan, a brief biological assessment and database search was completed in order to determine the level of impacts to biological resources as a result of the potential Project construction. It was determined that many of the biological impacts would be less than significant with mitigation measures incorporated or no impact. Minor biological impacts occur as a result of potential develop and would require mitigation measures to lessen impacts to a less than significant level. Those Mitigation Measures (MM) include the following:

MM 3.7.1 *All construction and clearing activities shall be conducted outside of the main avian nesting season (January 15– August 31), when feasible. Preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds.*

If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged.

MM 3.7.2 *Prior to breaking ground, a qualified biologist shall be retained to determine whether potentially jurisdictional waters are present. If potentially jurisdictional features are identified, the project applicant shall submit a preliminary jurisdictional determination to the US Army Corps of Engineers for verification. The verified delineation will be submitted to the City for its records.*

MM 3.7.3 *Projects shall result in no net loss of sensitive habitats, riparian vegetation, and/or federally protected waters through impact avoidance, impact minimization, and/or compensatory mitigation, as determined in Clean Water Act Section 404 and 401 permits and/or a 1602 Streambed Alteration Agreement. Evidence of compliance with this mitigation measure shall be provided to the City prior to approval of each individual grading permit.*

Furthermore, since the Project site occurs within the Western Riverside Multiple Species Conservation Plan (MSHCP) Area, and the City of Eastvale is a participating entity (signatory participant). As such, the following mitigation measures and standard conditions also apply to the Project.

MSHCP A. *The project applicant shall submit fees to the City in accordance with the requirements of the MSHCP Mitigation Fee Ordinance (Chapter 4.62 of the City of Eastvale Municipal Code).*

MSHCP B. *The project applicant shall assess the proposed project's consistency with Section 6.1.2, Section 6.1.3, Section 6.3.2, and Section 6.1.4 of the MSHCP.*

MSHCP C. *A qualified biologist shall conduct a burrowing owl habitat assessment. If needed, focused surveys and preconstruction surveys shall be conducted, as well as appropriate avoidance and minimization (Section 6.3.2 of the MSHCP).*

MSHCP D. *A qualified biologist shall conduct habitat assessments for the required Narrow Endemic Plant Species. If needed, focused surveys and shall be conducted, as well as appropriate avoidance and minimization (Section 6.1.3 of the MSHCP).*

MSHCP E. *A qualified biologist shall conduct a habitat assessment for Delhi sands flower-loving fly in areas underlain by Delhi soil series (Species-specific Objective 1B).*

3.0 Methodology

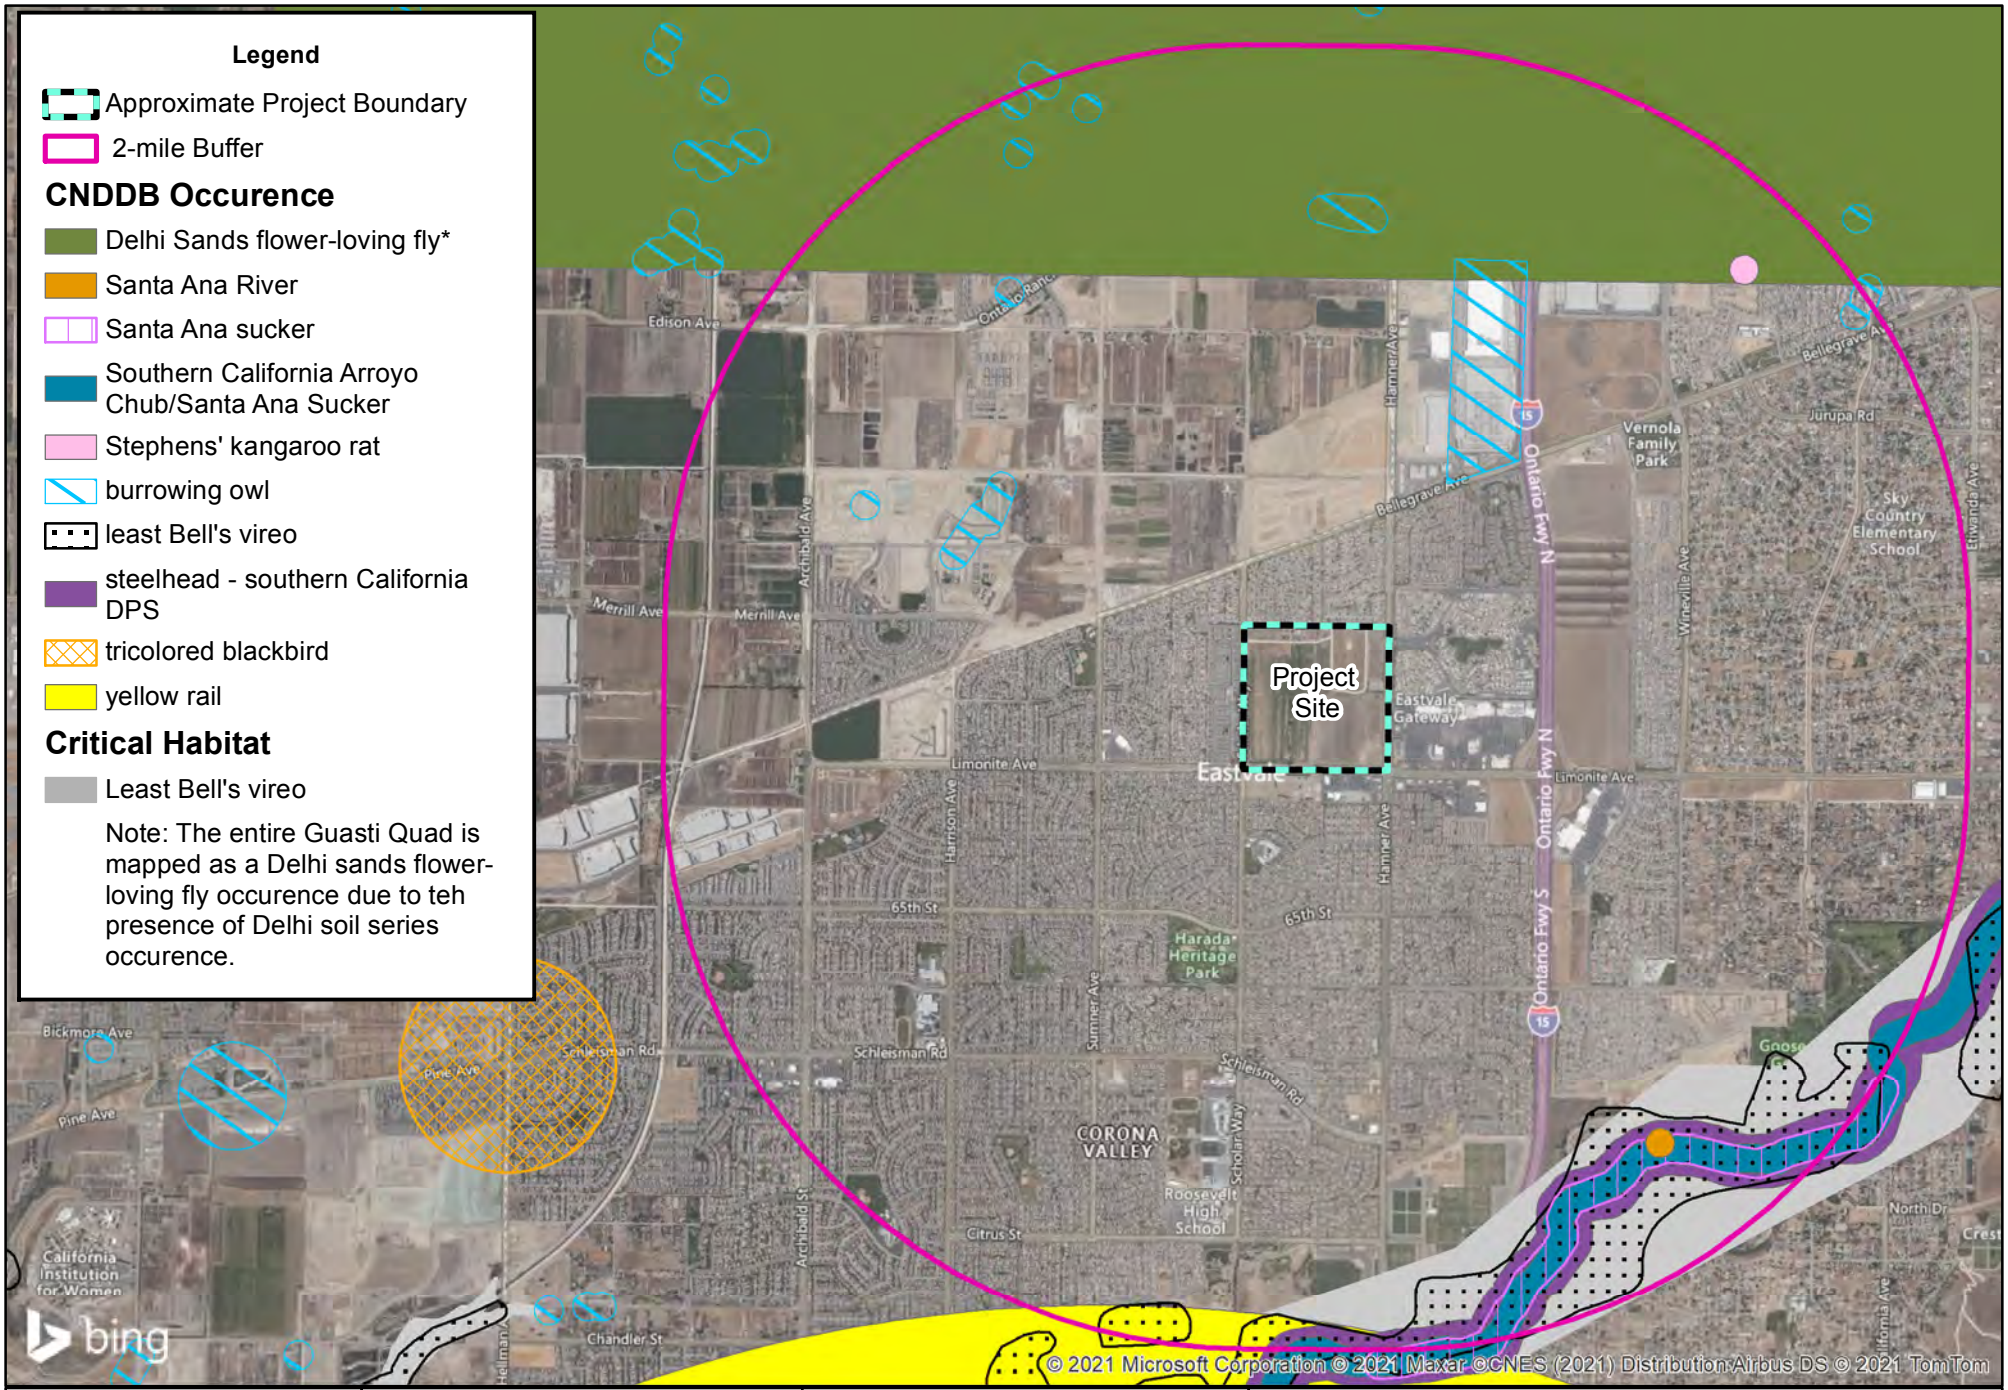
3.1 Historical Documentation

Prior to the field investigation, the original Environmental Documents and historical aerials were reviewed and utilized to understand prior biological components, jurisdictional delineation, and authorized impacts. These documents included the following:

- City of Eastvale Leal Master Plan Draft Environmental Impact Report (SCH 2015031028)
- City of Eastvale Leal Master Plan Final Environmental Impact Report (SCH 2015031028)
- Google Earth Historical Imagery

3.2 Biological Survey

Available literature and databases were reviewed regarding sensitive habitats and special status plant and wildlife species occurring within the Project vicinity. CSLS reviewed and consulted literature and databases focused on Riverside County, California, including the California Natural Diversity Database (CNDDB) and the U.S. Fish and Wildlife Service (USFWS) Critical Habitat. The CNDDB is a California Department of Fish and Wildlife (CDFW) species account database that inventories status and locations of rare plants and wildlife in California. The Project Site is located within the United States Geological Survey (USGS) 7.5-Minute Topographic Map *Corona North* Quadrangle. The CNDDB was used to identify any sensitive plant communities and special status plants and wildlife that have potential to occur within the Study Area and the adjacent quadrangles (Corona South, Black Star Canyon, Prado Dam, Riverside West, Lake Mathews, Fontana, Guasti, and Ontario).



A two-mile radius surrounding the Study Area was assessed for special status plant and wildlife occurrences (Figure 3).

3.2.1 General Plant Inventory

All plant species observed during the general and focused surveys were either identified in the field or collected and later identified using taxonomic keys. Vegetation communities were characterized utilizing vegetation alliances in accordance with The Manual of California Vegetation, Second Edition (MCVII) (Sawyer et al. 2009). All plant species observed were recorded in field notes.

3.2.2 General Wildlife Inventory

All wildlife species observed on the Project site, as well as any diagnostic sign (call, tracks, nests, scat, remains, or other sign), were recorded in field notes. Binoculars and regional field guides were utilized for the identification of wildlife, as necessary. Wildlife taxonomy follows Stebbins (2003) and California Herps (2015) for amphibians and reptiles, the American Ornithologists' Union (1998) for birds, and Jameson and Peeters (1988) for mammals. All wildlife species detected were recorded in field notes.

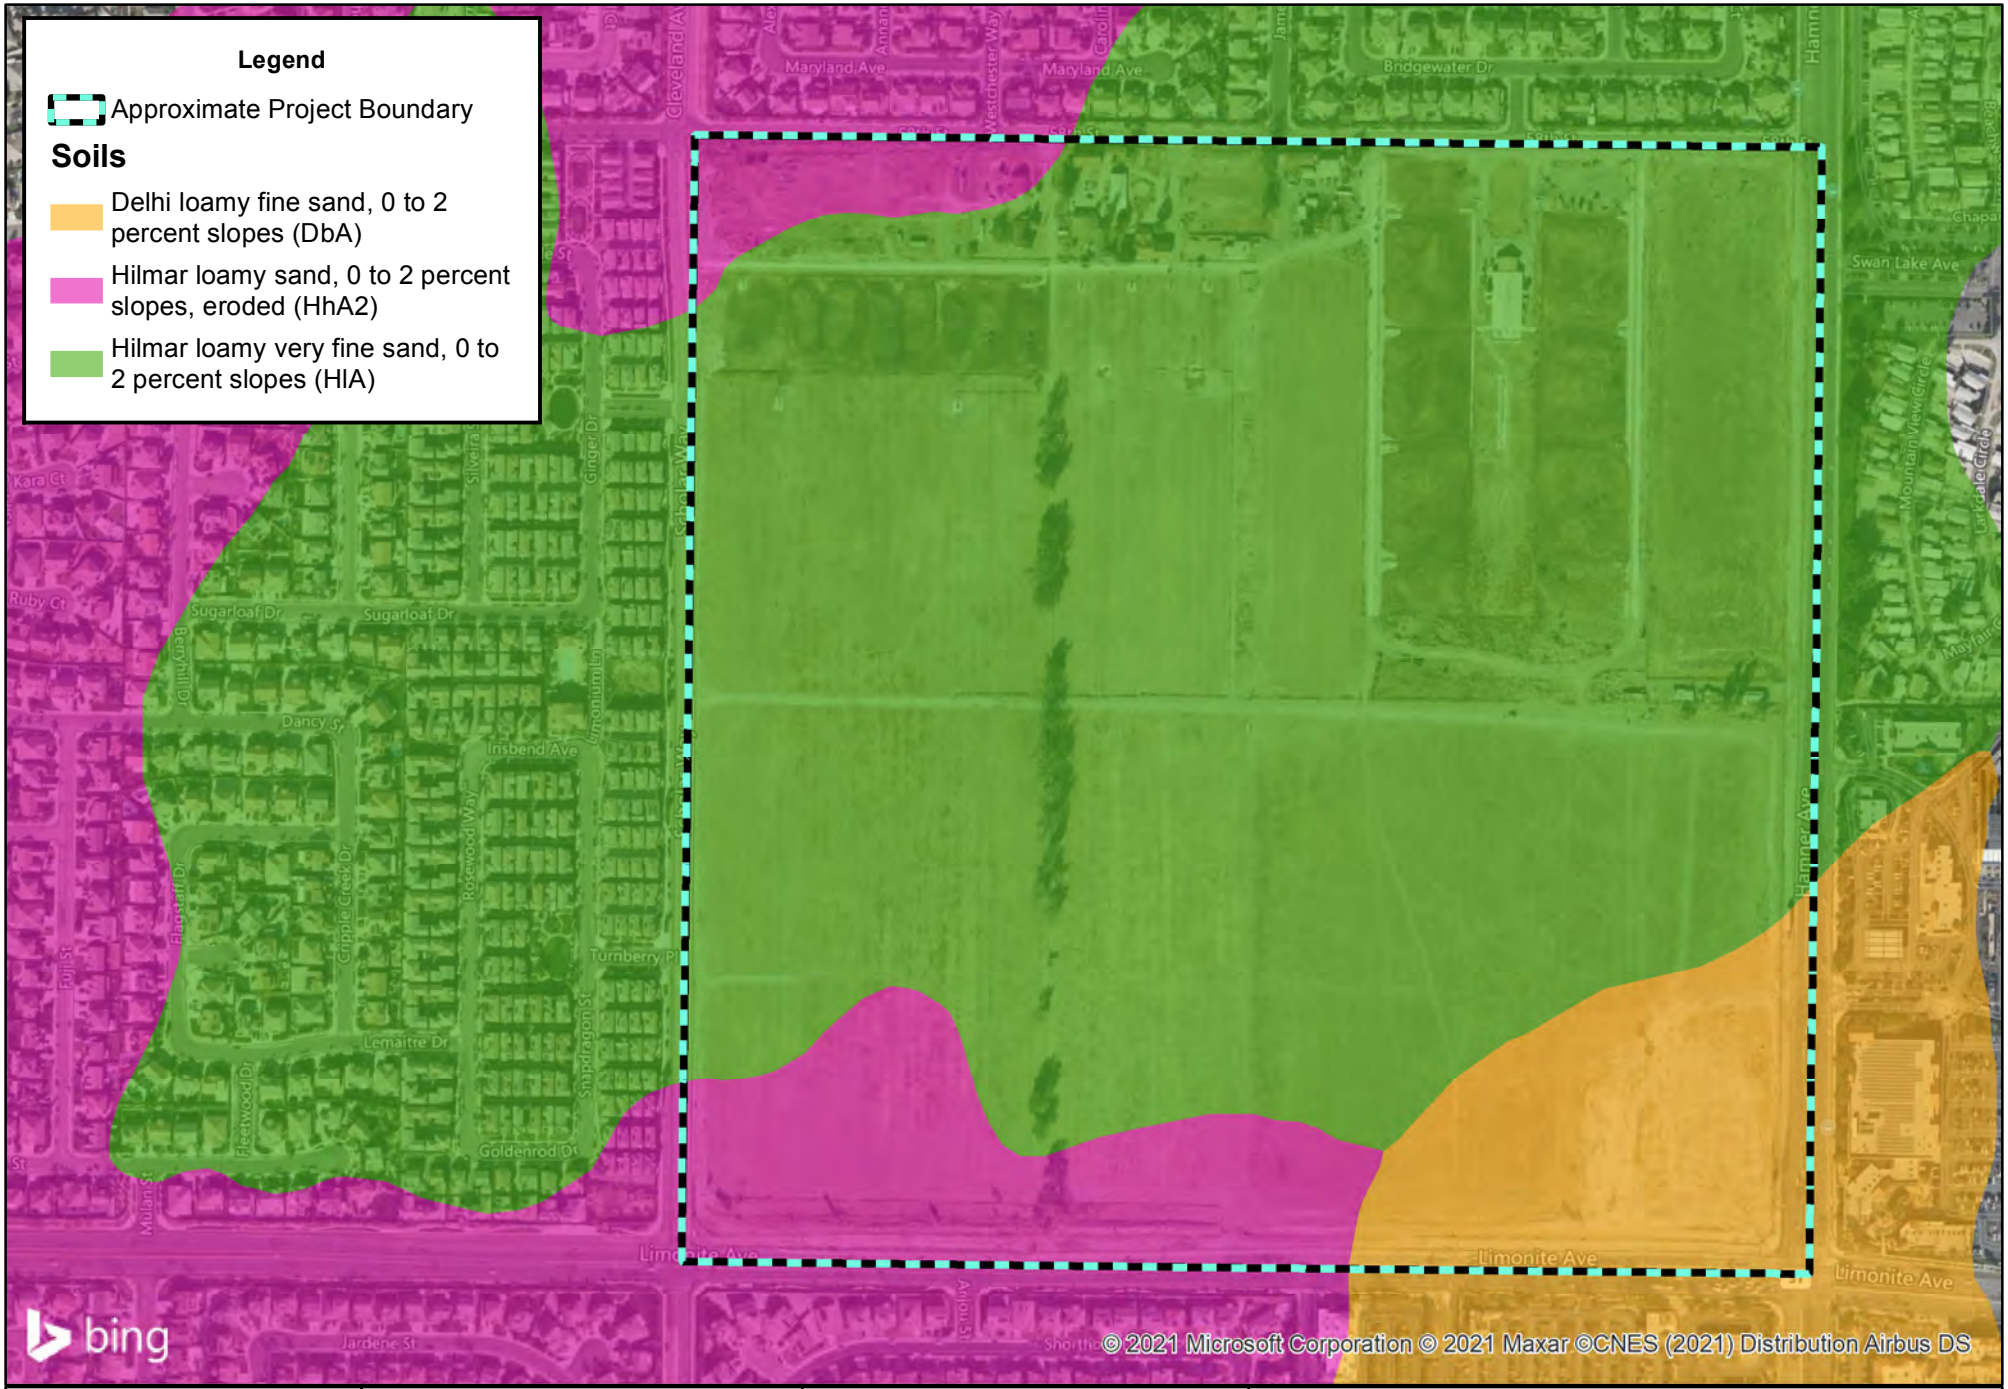
CNDDB Occurences and Critical Habitat

FIGURE 3

3.2.3 Delhi Sands Flower-loving Fly Assessment



Approximately 15-acres of the southeastern portion of the Project site consist of Delhi loamy fine sands (Figure 4). This soil series is suitable to the Delhi Sands Flower-Loving Fly (DSF). Due to the presence of the soil series a DSF Assessment was conducted. Prior to a site visit, soil maps covering the Project site were reviewed, along with aerial imagery to gain an understanding of historical land use regimens. Photographs were taken of the site, along with field notes on vegetation and soil conditions. The site is then rated based on its potential to support DSF based on the following scale of 1 to 5, with 5 being the best quality and most suitable habitat:

1. Developed areas, non-Delhi sands soils with high clay, silt, and/or gravel content. Delhi sands extensively and deeply covered by dumping of exotic soils, rubble, trash, manure, or organic debris. *Unsuitable*.
2. Delhi sands are present, but the soil characteristics include a predominance of exotic soils such as alluvial materials, or predominance of other foreign contamination as gravels, manure, or organic debris. Severe and frequent disturbance (such as a maintenance yard or high use roadbed). *Very Low Quality*.
3. Moderately contaminated Delhi sands. Delhi sands with moderate to high disturbance (such as annual disking). Sufficient Delhi Sands are present to prevent soil compaction (related to contamination by foreign soils). Some sandy soils exposed on the surface due to fossorial animal activity. *Low Quality*.
4. Abundant clean Delhi Sands with little or no foreign soils (such as alluvial material) present. Moderate abundance of exposed sands on the soil surface. Low vegetative cover. Evidence of moderate degree of fossorial animal activity by vertebrates and invertebrates. May represent high quality habitat with mild or superficial disturbance. *Moderate Quality*.
5. Sand dune habitat with clean Delhi Sands. High abundance of exposed sands on the soil surface. Low vegetative cover. Evidence (soil surface often gives under foot) of high degree of fossorial animal activity by vertebrates and invertebrates. Sand associated plant and arthropod species may be abundant and vegetation species composition is often indicative of low disturbance. *High Quality*.

It should be noted that habitat qualities often vary spatially within a site and may range in quality of suitability for DSF habitat. Further, overall habitat quality is affected by the overall habitat area on a site, such that very small areas diminish the overall habitat value of a site. Habitat conditions rated from Very Low Quality up to High Quality, are formally considered as representing Suitable conditions for the DSF.

3.3 Multiple Species Habitat Conservation Plan (MSHCP)

The Project site is not located within MSHCP Criteria Cell, or Criteria Area Plant Species, Amphibians, Mammals, or Special Linkage Areas. The Study Area was assessed for MSHCP Section 6.1.2 Riparian and Riverine Areas and associated species; MSHCP Section 6.1.4 Urban/Wildlands Interface; MSHCP Section 6.1.3 Narrow Endemic Plant Species, and Section 6.3.2 Species Survey Requirements for the western burrowing owl (*Athene cunicularia hypugaea* [BUOW]) habitat (Figure 5).

MSHCP Overlays

FIGURE 5

3.3.1 Section 6.1.2 Riparian/Riverine Areas and Vernal Pools

Volume I, Section 6.1.2 of the MSHCP describes the process through which protection of riparian/riverine areas and vernal pools would occur within the MSHCP Plan Area. The purpose is to ensure that the biological functions and values of these areas throughout the MSHCP Conservation Area are maintained. The MSHCP requires that as projects are proposed within the overall Plan Area, the effect of those projects on riparian/riverine areas and vernal pools must be addressed. The Study Area was evaluated for the presence/absence of MSHCP riparian/riverine areas and vernal pools. With respect to riparian habitat, the Study Area was evaluated for the potential habitat to support the special status species including the least Bell's vireo (*Vireo bellii pusillus*), southwestern willow flycatcher (*Empidonax traillii traillii*), the western yellow-billed cuckoo (*Coccyzus americanus occidentalis*), listed fairy shrimp, and other species identified in Section 6.1.2 of the MSHCP.

The Project site was evaluated to determine the limits of MSHCP riparian/riverine areas and vernal pools. Suspected areas were field checked for the presence of definable channels and/or wetland vegetation, soils and hydrology. Any MSHCP riparian/riverine limits were recorded onto a 200-scale (1" = 200') color aerial photograph and a GPS unit paired with the ARCGIS Collector Application.

3.3.1 Section 6.1.3 Narrow Endemic Plants- Survey Area Number 7

The Project site falls within Narrow Endemic Plants (Survey Area Number 7). The CNDDB and MSHCP were reviewed to determine known occurrences of special- status plants in the region. Based on this information, a list of target plants (including their suitable habitats and soil) was developed and incorporated into a survey program to achieve the following goals: (1) characterize the vegetation associations and land use; (2) prepare a detailed floral compendium; and (3) document the distribution and abundance of any special-status plant species within the Project site.

General surveys were conducted to identify potential sensitive plant habitats, and to establish the accuracy of the data identified from the literature review and previous biological assessment and search. An aerial photograph and topographic map were used to determine the community types and other physical features that may support sensitive species or communities within the Project site and surrounding buffer area. The reconnaissance surveys also considered the guidelines adopted by CNPS and CDFW (Nelson 1984, CNPS 2001).

Where potentially suitable habitat was present, focused plant surveys included those MSCHP Covered Species identified by the NEPSSA Survey Area Number 7. For any locations with positive survey results, the MSHCP requires that 90 percent of those portions of the property that provide for long-term conservation value for the identified species shall be avoided until it is demonstrated that conservation goals for the particular species are met. Findings of equivalency shall be made demonstrating that the 90-percent standard has been met.

3.3.2 Section 6.1.4 Urban/Wildlands Interface

The MSHCP Urban/Wildlands Interface guidelines presented in Section 6.1.4 are intended to address indirect effects associated with locating commercial, mixed uses and residential developments in proximity to an MSHCP Conservation Area. In order to evaluate direct, indirect, and cumulative impacts of the proposed Project on urban/wildlands interface, an analysis of wildlife use/movement was conducted for the Project site and adjacent buffer area. The analysis considered the movement and use of large mammals (i.e., mountain lion and mule deer), medium-sized mammals (mesocarnivores), and other wildlife such as small mammals, birds, reptiles, and amphibians. Methods utilized for the wildlife analysis included a review of existing information on wildlife use (including the MSHCP), general and focused biological surveys to document the presence/absence of wildlife, and opportunistic observations of mammal tracks and scat.

3.3.3 Section 6.3.2 Burrowing Owl Habitat Assessment

Prior to the field survey, available literature and databases including the CNDDB, were reviewed to identify sensitive habitats and special status wildlife species, including BUOW in the vicinity of the Study Area. Consistent with the MSHCP Survey Instructions, pedestrian survey transects were spaced approximately 10 to 15 meters apart to allow 100 percent visual coverage of the ground surface.

Consistent with the MSHCP guidelines and where feasible, CSLS biologists walked the perimeter of the property, which consists of a 150-meter (approximately 500 feet) buffer zone around the Project boundary. Parcels of land that could not be accessed (e.g. private property) were viewed using binoculars from vantage points to survey for BUOW activity or signs thereof, as well as other nesting bird activity.

3.4 Jurisdictional Waters

Prior to the field investigation, CSLS biologist reviewed historic aerial imagery, topographic maps, and background information for the Study Area to determine the potential for perennial, intermittent, or ephemeral drainages and associated riparian resources.

3.4.1 Federal Clean Water Act (CWA)

The Clean Water Act (CWA), Section 401 provides guidance for the restoration and maintenance of the chemical, physical, and biological integrity of the nation's waters. Section 401 requires a project applicant to obtain a federal license or permit that allows activities resulting in a discharge to waters of the United States to obtain state certification, thereby ensuring that the discharge will comply with provisions of the CWA. The Regional Water Quality Control Board administers the certification program in California. Section 404 establishes a permit program administered by the United States Army Corps of Engineers (Corps) that regulates the discharge of dredged or fill material into waters of the United States, including wetlands. The Corps implementing regulations are found at 33 CFR 320 and 330. Guidelines for implementation are referred to as the Section 404(b)(1) Guidelines, which were developed

by the United States Environmental Protection Agency in conjunction with the Corps (40 CFR 230). The guidelines allow the discharge of dredged or fill material into the aquatic system only if there is no practicable alternative that would have less adverse impacts.

3.4.2 Wetlands and Other Waters of the United States

Aquatic resources, including riparian areas, wetlands, and certain aquatic vegetation communities, are considered sensitive biological resources and fall under the jurisdiction of several regulatory agencies. The Corps exerts jurisdiction over waters of the United States, including all waters that are subject to the ebb and flow of the tide; wetlands and other waters such as lakes, rivers, streams (including intermittent or ephemeral streams), mudflats, sandflats, sloughs, prairie potholes, vernal pools, wet meadows, playa lakes, or natural ponds; and tributaries of the above features. The extent of waters of the United States is generally defined as the portion that falls within the limits of the Ordinary High-Water Mark (OHWM). The OHWM is defined as the "line on the shore established by the fluctuation of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas."

The definition of Navigable Waters has undergone several iterations, including a much more streamlined definition which was published and formally adopted in April 2020. However, in August 2021, the April 2020 Navigable Waters definition was challenged in the case *Pascua Yaqui Tribe v. U.S. Environmental Protection Agency*. In light of this case and subsequent order from US District Court for the District of Arizona, the U.S. Environmental Protection Agency (EPA) and Corps have halted implementation of the Navigable Waters Protection Rule from 2020 and are interpreting "waters of the United States" consistent with the pre-2015 regulatory regime until further notice.

The pre-2015 definition of Navigable Waters includes (1) all waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide; (2) All interstate waters including interstate wetlands; (3) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters: (4) All impoundments of waters otherwise defined as waters of the United States under this definition; (5) Tributaries of waters identified in paragraphs (s)(1) through (4) of this section; (6) The territorial sea; and (7) Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (s)(1) through (6) of this section.

Wetlands, including swamps, bogs, seasonal wetlands, seeps, marshes, and similar areas, are defined by Corps as "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33

CFR 328.3[b]; 40 CFR 230.3[t]). Indicators of three wetland parameters (i.e., hydric soils, hydrophytic vegetation, and wetlands hydrology), as determined by field investigation, must be present for a site to be classified as a wetland by Corps (USACE 1987).

It is important to note that the RWQCB definition of wetland was redefined and the new definition went into effect May 28, 2020. The definition of a wetland is as follows: An area is wetland if, under normal circumstances, (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation. This RWQCB modified three-parameter definition is similar to the federal definition in that it identifies three wetland characteristics that determine the presence of a wetland: wetland hydrology, hydric soils, and hydrophytic vegetation. Unlike the federal definition, however, the RWQCB wetland definition allows for the presence of hydric substrates as a criterion for wetland identification (not just wetland soils) and wetland hydrology for an area devoid of vegetation (less than 5% cover) to be considered a wetland.

However, if any vegetation is present, then the Corps delineation procedures would apply to the vegetated component (i.e., hydrophytes must dominate). Examples of waters that would be considered wetlands by the RWQCB definition, but not by the federal wetland definition, are non-vegetated wetlands, or wetlands characterized by exposed bare substrates like mudflats and playas, as long as they meet the three-parameters as described in the RWQCB definition. It is important to note that while the Corps may not designate a feature as a wetland, that feature could be considered a special aquatic site or other water of the U.S. by the Corps and potentially subject to Corps' jurisdiction.

3.4.3 Porter-Cologne Water Quality Act – California Code, Division 7

The RWQCB also has jurisdiction over waters deemed "isolated" or not subject to Section 404 jurisdiction under the Solid Waste Agency of Northern Cook County v. Corps decision. Dredging, filling, or excavation of isolated waters constitutes a discharge of waste to waters of the state and prospective dischargers are required to obtain authorization through an Order of Waste Discharge or waiver thereof from the RWQCB and comply with other requirements of Porter-Cologne Act.

Under Section 401 of the CWA, the local RWQCB must certify that actions receiving authorization under Section 404 of the CWA also meet state water quality standards. The RWQCB requires projects to avoid impacts to wetlands if feasible and requires that projects do not result in a net loss of wetland acreage or a net loss of wetland function and values. Compensatory mitigation for impacts to wetlands and/or waters of the state is required.

3.4.4 California Fish and Game Code Section 1600-1616

Waters of the State are regulated by the California Department of Fish and Wildlife (CDFW) through Section 1600 et seq. of the California Fish and Game Code. Section 1600 et seq. requires notifying the CDFW prior to any project activity that might (1) substantially divert or

obstruct the natural flow of any river, stream, or lake; (2) substantially change or use any material from the bed, channel, or bank of any river, stream, or lake; or (3) deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake. If, after this notification, the CDFW determines that the activity may substantially adversely affect fish and wildlife resources, a Lake or Streambed Alteration Agreement will need to be obtained. CDFW may then place conditions in the Section 1602 Streambed Alteration Agreement to avoid, minimize, and mitigate any potentially significant adverse impacts within CDFW jurisdictional limits.

The limits of Waters of the State are defined as the "body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having surface or subsurface flow that supports or has supported riparian vegetation." Therefore, the limits extend from the channel bed to the top of the bank, with the addition of the canopy of any riparian habitat associated with the watercourse.

4.0 Project Description

The Applicant proposes to construct a mix of residential units and commercial development and associated infrastructure on the site.

5.0 Results

5.1 Biological Survey

CSLS biologist conducted an analysis of biological resources and jurisdictional waters within the Study Area on June 9, 2021, and focused burrowing owl surveys and narrow endemic plant surveys on June 16, 23, July 1, and 13, 2021. Furthermore, a Delhi Sands Flower Loving Fly Assessment was performed on June 18, 2021. The June 9 Biological assessment survey was performed between 7:00 am and 1:50 pm, the temperature measured 82° F with clear skies. CSLS biologists conducted all the surveys by foot, hiking all accessible areas. Any inaccessible or restricted areas were surveyed using binoculars. The vegetation, jurisdictional waters, and wildlife observed were documented and representative photographs of the Study Area were taken (Attachment A). The following table summarized the field survey data.

Table 1. Survey Information

Survey Date	Time	Surveys	Surveyors
June 9, 2021	0700 - 1350	Biological Assessment, Jurisdictional Delineation, Burrowing Owl Assessment, Narrow Endemic Plant Survey.	Brianna Bernard
June 16, 2021	0715 - 1208	Biological Assessment, Jurisdictional Delineation,	Brianna Bernard

Survey Date	Time	Surveys	Surveyors
		Burrowing Owl Survey #1, Narrow Endemic Plant Survey.	
June 18, 2021	1200 - 1300	Delhi Sands Flower Loving Fly Assessment	Ken Osborne
June 23, 2021	0730 - 1145	Burrowing Owl Survey #2, Narrow Endemic Plant Survey.	Brianna Bernard
July 1, 2021	0658 - 1054	Burrowing Owl Survey #3, Narrow Endemic Plan Survey.	Brianna Bernard and Justinne Manahan
July 13, 2021	0715 - 1100	Burrowing Owl Survey #4, Narrow Endemic Plan Survey.	Brianna Bernard and Justinne Manahan

5.1.1 Vegetation Communities

The vegetation community remains consistent with the original assumptions in the 2015 Biological Assessment. The communities include disturbed historic dairy farm, ruderal, and developed vegetation communities. Vegetation communities were mapped in the field directly onto a 200-scale (1" = 200') aerial photograph and CSLS biologists utilized a Trimble R1 GNSS Receiver paired with the ARCGIS Collector Application. Vegetation mapping and acreages for each vegetation community is based on the observations of the field survey and is listed below in Table 2 and graphically depicted on Figure 6.

The surrounding 500 feet consists of developed vegetation community, including residential development and commercial development.

Table 2. Vegetation Communities Observed

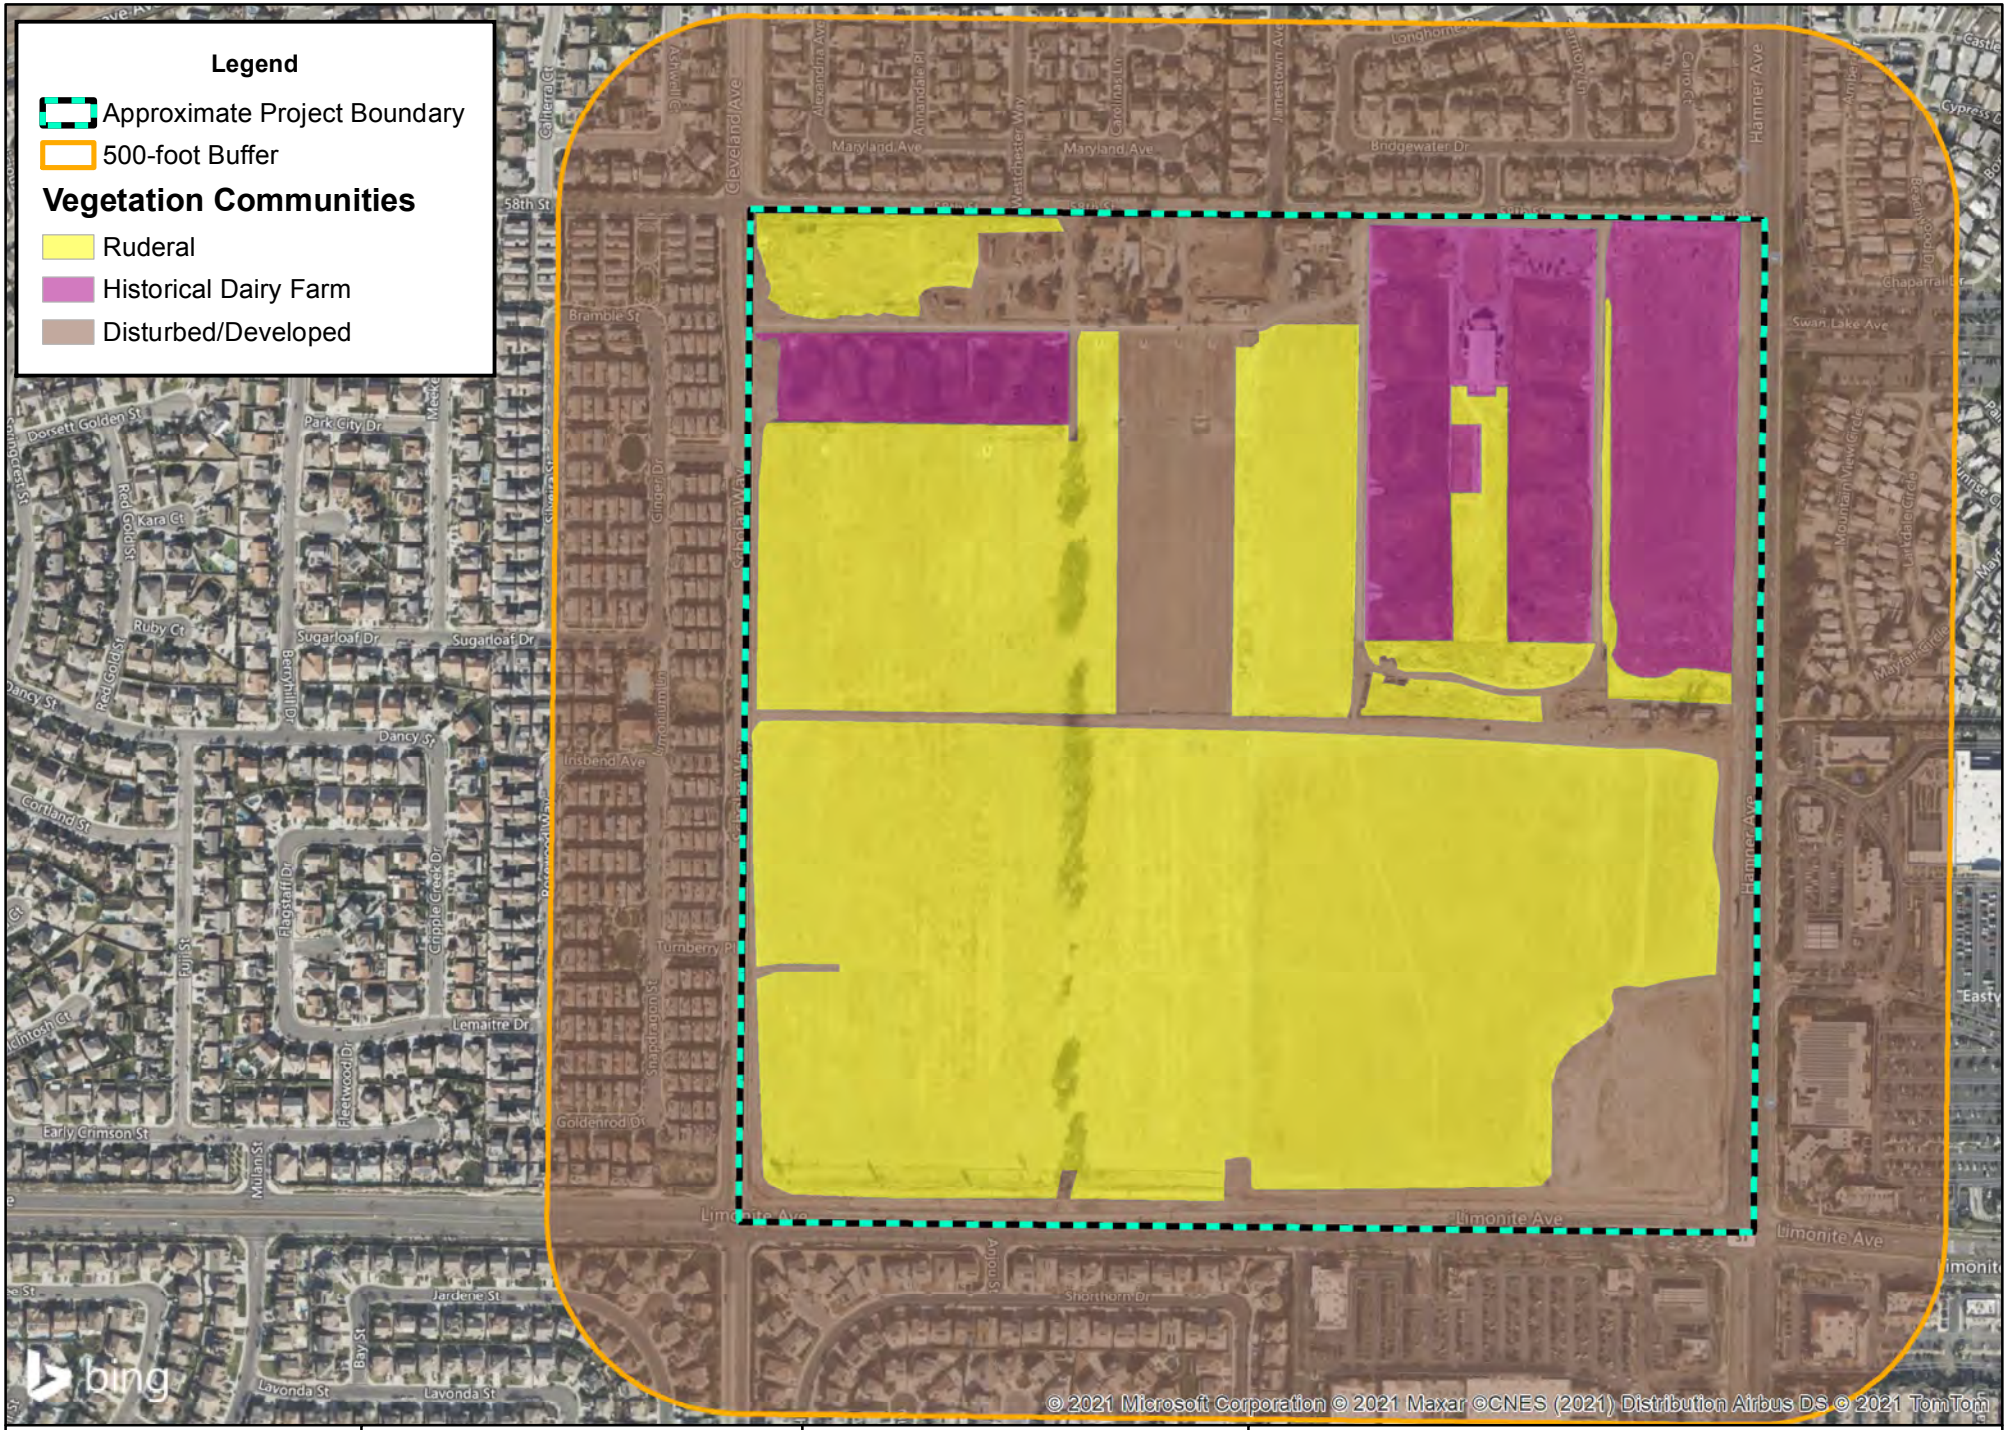
Vegetation Community	Acreage within in the Project Site	Acreage within in the Surrounding Buffer	Total Acreage within the Study Area
Ruderal	96.82	-	96.82
Historical Dairy Farm	25.82	-	25.82
Disturbed/Developed	37.87	138.64	176.51
TOTAL	160.0	138.64	299.15

The general description of the vegetation communities observed during the 2021 field surveys are described below.

Ruderal

A majority of the ruderal vegetation community occurs within the southern 80-acres. The vegetation within this area is comprised of predominantly of London rocket (*Sisymbrium irio*) and summer mustard (*Hirschfeldia incana*). Other species include Russian thistle (*Salsola tragus*), cheeseweed (*Malva parviflora*), rat-tail fescue (*Festuca microstachys*), foxtail brome (*Bromus madritensis ssp. rubens*), ripgut brome (*Bromus diandrus*), tocalote (*Centaurea melitensis*), Jimson weed (*Datura stramonium*), and scattered Mexican fan palms (*Washingtonia robusta*),

and mulefat (*Baccharis salicifolia*). A row of trees bisects the Project site from the north to south and includes mulberry trees (*Morus alba*), and Shamuel ash (*Fraxinus uhdei*).



Historical Dairy Farm
This community consists of former dairy activities. The historical dairy farm includes old cow-pens and dried manure settling basins, prior grazing areas, and associated outbuildings and infrastructure. The dairy farm is no longer in use and includes areas mostly devoid of vegetation, with the exception of patchy areas supporting non-native ruderal vegetation.

Disturbed/Developed
This community includes bare dirt, residential structures, concrete roads, dirt roads and asphalt roads.

5.1.1 CNDDB and Critical Habitat

The Study Area contains no special-status vegetation type listed by the CNDDB and CDFW. No sensitive wildlife species were observed during the 2021 surveys.

The Study Area is not located within any designated critical habitat. The closest designated critical habitat is for the least Bell's vireo (*Vireo bellii pusillus* [LBV]) and it is located an approximate 1.5 miles to the south of the Project site (Figure 3). No habitat suitable for LBV occurs on the Project site.

5.1.2 Wildlife Species

Observations regarding the wildlife species present were made during the field visit (Table 3). Other species observed include California ground squirrel (Otospermophilus beecheyi), desert cottontail *(Sylvilagus audubonii),* and coyote *(Canis latrans*).

Table 3. Wildlife Species Observed Onsite

Scientific Name	Common Name
Buteo jamaicensis	red-tailed hawk
Calypte anna	Anna's hummingbird
Cathartes aura	turkey vulture
Carpodacus mexicanus	house finch
Charadrius vociferus	killdeer
Corvus brachyrhynchos	American crow
Corvus corax	common raven
Eremophila alpestris	California horned lark
Euphagus cyanocephalus	Brewer's blackbird
Falco sparverius	American kestrel
Hirundo rustica	Barn swallow
Icterus cucullatus	Hooded oriole
Melospiza melodia	song sparrow
Mimus polyglottos	Northern mockingbird
Pyrocephalus rubinus	Vermilion flycatcher
Sayornis nigricans	black phoebe
Sayornis saya	Say's phoebe
Spinus psaltria	Lesser goldfinch
Tyrannus vociferans	Cassin's kingbird
Zenaida macroura	mourning dove

5.1.3 Sensitive Wildlife Species

Sensitive wildlife include those species listed as Endangered or Threatened under the Federal Endangered Species Act (FESA) or the California Endangered Species Act (CESA), candidates for listing by the USFWS or CDFW, and California Watch List, Fully Protected and Species of Special Concern to CDFW. No listed wildlife was identified or observed within the Project site during the field surveys.

5.2 CMSHCP Assessment

The Project site is not located within any MSHCP Criteria Areas, Cell Groups, or Subunits. Furthermore, the Project site is not located within any MSHCP Criteria Areas, Cell Groups, or Subunits, and the Project site is not located in survey areas for Amphibians, Mammals, or Special Linkage areas. The Project site is subject to Riparian and Riverine Areas pursuant to MSHCP Section 6.1.2, Narrow Endemic Plants (Survey Area 7) pursuant to MSHCP Section 6.1.3, Urban/Wildlands Interface guidelines pursuant to MSHCP Section 6.1.4, and Western Burrowing Owl overlay pursuant to MSHCP Section 6.3.2.

5.2.1 Riparian and Riverine Areas and Vernal Pools (Section 6.1.2)

The Project site was assessed for MSHCP riparian/riverine areas and vernal pools pursuant to Section 6.1.2 of the MSHCP. The Project site does not contain any MSHCP riparian/riverine features.

Species Protected under Section 6.1.2

During vegetation mapping conducted for the Project site, no special status plants were detected during the 2021 surveys. Likewise, the Project site did not contain any suitable habitat for the avian species listed in Section 6.1.2: Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools.

Vernal Pools

The Project site does not contain vernal pools or any suitable habitat for any of the riparian/riverine vernal pool species listed in Section 6.1.2 of the MSHCP, including listed fairy shrimp.

5.2.2 Narrow Endemic Plant – Survey Area Number 7 (Section 6.1.3)

The Project site is located within the Narrow Endemic Plant Species Survey Areas (NEPSSA) Number 7 overlay, which include the following target species:

- San Diego ambrosia (*Ambrosia pumila*)
  Status: California Rare Plant Rank 1B.1, federally endangered
  Distribution: Riverside and San Diego Counties.
  Habitat(s): Habitats supporting chaparral, coastal scrub, valley and foothill grasslands, and vernal pools. Observed in sandy loam or clay soils, sometimes alkaline soils. Known from 20 to 415 meters (65 to 1360 feet) MSL. Blooms April through October.
  Status onsite: None. The Project site lacks suitable habitat and soils. Not observed during field visit.

- Brand's phacelia (*Phacelia stellaris*)
  Status: California Rare Plant Rank 1B.1
  Distribution: Orange, Riverside, San Bernardino, and San Diego Counties.
  Habitat(s): Habitats supporting coastal dunes and coastal scrub. Known from 1 to 400 meters (5 to 1,310 feet) MSL. Blooms May through June.
  Status onsite: None. The Project site lacks suitable habitat and soils. Not observed during field visit.

- San Miguel savory (*Satureja chandleri*)
  Status: California Rare Plant Rank 1B.2
  Distribution: Orange, Riverside, and San Diego Counties.
  Habitat(s): Habitats supporting chaparral, cismontane woodland, coastal scrub, riparian woodland, and valley and foothill grasslands. Observed in rocky, gabbroic, or

metavolcanic soils. Known from 120 to 1,075 meters (395 to 3,525 feet) MSL. Blooms March through July.
Status onsite: None. The Project site lacks suitable habitat and soils. Not observed during field visit.

No special status plant species were observed during the 2021 surveys and none are expected to occur onsite due to the lack of suitable habitat or suitable soil found on the Project site.

5.2.3 Urban/Wildlands Interface (Section 6.1.4)

The Project site is not located adjacent to an existing or proposed MSHCP Conservation Area. Furthermore, the Project site is isolated from any large open space areas and instead is surrounded by residential and commercial development and does not function as a regional movement corridor.

5.2.4 Focused Burrowing Owl Survey (Section 6.3.2)

Step I Habitat Assessment survey was conducted on June 9, 2021 to determine if the Project site contains suitable BUOW habitat. Based on the Habitat Assessment it was determined the Project site does contain suitable habitat for BUOW. Therefore, a total of four focused burrowing owl surveys were performed on June 16, 23, July 1, and 13, 2021. The surveys took place between 6:45 a.m. and 12:00 p.m. Temperatures during the survey ranged between 65° F and 85° F, with generally predominant sunny, clear skies and 0-2 mph winds. The surveys were conducted during typical BUOW peak activity time and was not conducted during rain, high winds (> 20 miles per hour), dense cloud cover >75%. Prior to the commencement of the survey, CSLS biologist scanned the Study Area, consisting of the Project site and the surrounding 500-foot buffer, using binoculars to look for burrowing owl. The Study Area was assessed for the suitability to support burrowing owls and all suitable burrows were inspected for signs of use by burrowing owls.

No BUOWs or evidence of BUOWs were observed within the Study Area during the focused survey. A majority of the Project site is characterized by disturbed dairy land, ruderal, and developed vegetation communities, lacking necessary sized burrows to provide suitable nesting habitat for BUOW. The surrounding buffer area is developed with residential and commercial developments. California ground squirrels and their burrows were observed within the Study Area. These burrows were actively utilized by the California ground squirrels and contained no BUOW or keys signs (sight, whitewash, burrows, bones, feathers, pellets, nests, and calls). Furthermore, debris piles and farm equipment were thoroughly examined for any BUOW key signs. Based on the results of the focused surveys and lack of diagnostic signs for burrowing owl, the Project site is not occupied by the burrowing owl. Please refer to Attachment B for the complete results for the focused survey.

5.2.5 Delhi Sands Flower-Loving Fly Assessment

Due to the location of the Project site within the Ontario Recovery Unit for the Delhi Sands flower-loving fly, a habitat assessment for this species was conducted by Ken Osborne on June 18, 2021 (see Attachment C). The Delhi Sands flower-loving fly is a Federally Endangered

species which is dependent on Delhi sands and Delhi sand dunes with less than 50% vegetation cover. Typical vegetation includes California buckwheat (Eriogonum fasciculatum), California croton (Croton californicus), and telegraph weed (Heterotheca grandiflora).

The Project site contains a total of 13-acres of Delhi sand series located in the south eastern portion of the property (Figure 4). The remaining portions of the site includes Hilmar loamy sands. Of the total 13-acres, a total of 5-acres of Delhi sands is overlain with a meter depth of exotic soils dominated by alluvial gravely materials. Remaining peripheral areas mapped with Delhi fine soils are intermixed with fine loam soils (Hilmar classification), the mixing and contamination likely the result of decades of dairy operations where pasture lands have been disked. The site has been largely surrounded by residential and commercial development since 2004, isolating the Project site from areas with Delhi Sands Flower-loving fly populations. The last known extant Delhi Sands Flower-loving fly population site in the Ontario Recovery Unit area is located some six kilometers north northeast of the site. Plant species normally associated with Delhi sands ecosystems do not occur on the site.

The entire site is in historical dairy and associated developed residential and dairy infrastructure. Aerial imagery available on Google Earth, shows that the dairy operations have been maintained since 1985 and is no longer in use today. Site conditions feature continuously irrigated pastures, cattle pens, and developed buildings (including residences) with irrigated landscaping, and ponds. Lands so managed with dairy operations are not suitable for the Delhi Sands flower-loving fly. Northern, western, and central portions of the site are mapped (and field investigation confirms) with Hilmar loamy sands – soils unsuitable for Delhi Sands flower-loving fly. The site is further set within the larger context of adjacent and surrounding developed lands, further reinforcing the unsuitability of habitat conditions for Delhi Sands flower-loving fly. The entire Project site is determined to be Unsuitable for Delhi Sands flower-loving fly.

5.3 Jurisdictional Waters

The National Wetlands Inventory map was reviewed, along with USGS 7.5-minute topo map to determine the potential presence or absence of jurisdictional streams/drainages, wetlands, and their location within any watersheds associated with the site, and other features that might contribute to federal authority located within watersheds associated with the Project Site. Lastly, a field survey was performed on June 9 and 16, 2021.

California Department of Fish and Wildlife (CDFW) commented on the Draft EIR in 2015 regarding a potential jurisdictional feature on the southwestern portion of the Project Site. The entire site was inspected for jurisdictional features, specifically the area CDFW referenced in the comment letter, was thoroughly examined for any signs meeting the definition of jurisdictional waters. The Project site consists primarily of disturbed agriculture lands, ruderal, and developed vegetation communities. No wetlands, riparian, or drainage features were observed.

Based on the field survey, there are no features identified on the Project site that meet the definition and are considered jurisdictional Waters of the United States or Waters of the State, pursuant to Section 1600-1603 of the California Fish and Game Code and Section 401 and 404 of the Clean Water Act, respectively.

6.0 Thresholds of Significance

The Draft EIR, and subsequent Final EIR, analyzed Biological Impacts as a result of Project implementation. The thresholds below mimic those found within the EIR for the Leal Master Plan.

The thresholds include the following:

Threshold 1 Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.

Threshold 2 Have a substantial adverse effect on any riparian habitat or other sensitive plant community identified in local or regional plans, policies, regulations, or by the CDFW or USFWS.

Threshold 3 Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the CWA (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

Threshold 4 Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery areas.

Threshold 5 Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Threshold 6 Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State Habitat Conservation Plan.

Threshold 7 Reduce the number or restrict the range of an endangered, rare, or threatened plant or animal species or biotic community, thereby causing the species or community to drop below self-sustaining levels.

Threshold 8 Cumulative impacts to biological resources.

The 2015 EIR analyzed the Project based on a biological desktop review. In 2021, the Project site was formally evaluated for sensitive resources, including performing a jurisdictional delineation and all focused surveys for sensitive wildlife and plant species, as specified within the MSHCP and 2015 EIR. Based on the 2021 results, the Project site does not contain any sensitive biological resources. Below is a summary of the impact analysis and determination within the 2015 EIR in comparison to the 2021 field results and results from the jurisdictional delineation and additional special status species focused surveys. As part of the Project implementation the entire 160-acre site will be permanently impacted.

Table 4. Threshold Comparison

Threshold Number	2015 Determination	2021 Determination	Change from 2015 to 2021
1	Less Than Significant with Mitigation	Less Than Significant with Mitigation	No change
2	Less Than Significant with Mitigation	No Impact	Less impactful
3	Less Than Significant with Mitigation	No Impact	Less impactful
4	Less Than Significant	Less Than Significant	No change
5	No Impact	No Impact	No change
6	Less Than Significant	Less Than Significant	No change
7	Less Than Significant with Mitigation	Less Than Significant	Less impactful
8	Less Than Cumulatively Considerable with Mitigation	Less Than Cumulatively Considerable with Mitigation	No change

6.1 Threshold 1

Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Less than Significant with Mitigation.

6.1.1 Sensitive Plant Species

Development of the Project site would result in the direct removal of non-native and ruderal plant species. The Project site does not contain any suitable habitat for special status species or sensitive species, nor were any observed onsite. The Project would include the removal of non-native and ruderal species; therefore, impacts would not be considered a significant impact and no mitigation is required. No change from what was analyzed in the 2015 EIR.

6.1.2 Sensitive Wildlife Species

Development of the Project site would result in the disruption and removal of ruderal and developed habitat and the loss and displacement of non-sensitive common wildlife species. Due to the level of existing disturbance from the historical use as a dairy farm, human activity onsite and within the vicinity (e.g., nearby development), these impacts would not be expected to reduce the general wildlife populations below self-sustaining levels within the region and impacts to non-sensitive wildlife species do not meet the significance thresholds. Therefore, impacts to common wildlife species would not be considered a significant impact and no mitigation is required. No change from what was analyzed in the 2015 EIR.

As stated in the 2015 EIR analysis, the Project site consists of suitable habitat for nesting, foraging, and/or wintering avian species. While none of the common species carry a Federal or State listing as threatened or endangered, they are all protected under the MBTA during breeding season. Therefore, a pre-construction survey is required in compliance with the MBTA. Implementation of Mitigation Measure MM 3.7.1 would reduce potential impacts to the avian species to a less than significant level if nesting individuals are present. This 2015 mitigation measure is still applicable following the 2021 field survey and biological analysis.

MM 3.7.1 *All construction and clearing activities shall be conducted outside of the main avian nesting season (January 15– August 31), when feasible. Preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds.*

If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged.

6.2 Threshold 2

Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Widlife or U.S. Fish and Wildlife Service?

No impact.

Based on the 2021 field surveys and focused surveys, no sensitive plant communities or habitats occur on the Project site. Sensitive habitats include those that are of special concern to resource agencies and those that are protected under the MSHCP, CEQA, Section 1600 of the California Fish and Game Code, and Section 404 of the Clean Water Act.

Furthermore, the 2021 included a formal jurisdictional delineation on the Project site. Based on those results, no jurisdictional features were identified on the Project site subject to Section 1602 of the California Fish and Game Code, as regulated by CDFW.

Based on the detailed 2021 biological surveys and investigations of the Project site, no sensitive biological resources or jurisdictional features were identified on the Project site, therefore, no impacts would occur. Mitigation Measure 3.7.2 and 3.7.3 have been fulfilled and are no longer required.

~~*MM 3.7.2 Prior to breaking ground, a qualified biologist shall be retained to determine whether potentially jurisdictional waters are present. If potentially jurisdictional features are identified, the project applicant shall submit a preliminary jurisdictional determination to the US Army Corps of Engineers for verification. The verified delineation will be submitted to the City for its records.*~~

~~*MM 3.7.3 Projects shall result in no net loss of sensitive habitats, riparian vegetation, and/or federally protected waters through impact avoidance, impact minimization, and/or compensatory mitigation, as determined in Clean Water Act Section 404 and 401 permits and/or a 1602 Streambed Alteration Agreement. Evidence of compliance with this mitigation measure shall be provided to the City prior to approval of each individual grading permit.*~~

The analysis from the 2015 EIR concluded the impacts less than significant with mitigation. However, based on the lack of sensitive biological resources and jurisdictional resources found onsite during the field investigations, the 2021 conclusion is no impact. The 2021 conclusion is less impactful than what was analyzed in the 2015 EIR.

6.3 Threshold 3

Would the project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact.

No jurisdictional non-wetland or wetland waters regulated under Section 404 of the CWA were identified on the Project site. Based on the detailed 2021 biological surveys and jurisdictional investigations of the Project site, no sensitive biological resources or jurisdictional features were identified on the Project site, therefore, no impacts would occur and Mitigation Measure 3.7.2 and 3.7.3 have been fulfilled and are no longer required.

The analysis from the 2015 EIR concluded the impacts less than significant with mitigation. However, based on the lack of jurisdictional resources found onsite during field investigations, the 2021 conclusion is no impact. The 2021 conclusion is less impactful than what was analyzed in the 2015 EIR.

6.4 Threshold 4

Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory corridors, or impede the use of native wildlife nursery sites?

Less than Significant.

6.4.1 Wildlife Movement

As stated in the 2015 EIR analysis and verified during the 2021 field surveys, the entire Project site has been disturbed by development and intense historical dairy and agricultural uses and is unlikely to facilitate local wildlife movement. In addition, the Project site is completely surrounded by dense urban development, further impairing wildlife movement.

The site supports potential live-in and movement habitat for species on a local scale (i.e., some limited live-in and marginal movement habitat for reptile, bird, and mammal species), however, the site provides little to no function to facilitate wildlife movement on a regional scale. Furthermore, the site is not identified as a Special Linkage area within the MSHCP. Movement on a local scale likely occurs with species adapted to urban environments due to the surrounding development and disturbances in the vicinity of the site. Although implementation of the Project would result in disturbances to local wildlife movement within the site, those species adapted to urban areas would be expected to persist on-site following construction. As such, impacts would be less than significant, and no mitigation measures would be required. No change in conclusion from what was analyzed in the 2015 EIR.

6.5 Threshold 5

Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact.

The Project is not subject to any local policies, such as a tree preservation ordinance. Therefore, no impacts would occur, and no mitigation is required. No change in conclusion from what was analyzed in the 2015 EIR.

6.6 Threshold 6

Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Less than Significant.

The Project site is located within the MSHCP. The Project site is not located within any MSHCP Criteria Areas, Cell Groups, or Subunits. Furthermore, the Project site is not located in survey areas for Amphibians, Mammals, or Special Linkage areas. The Project site is subject to Riparian and Riverine Areas pursuant to MSHCP Section 6.1.2, Narrow Endemic Plants Overlay, pursuant to MSHCP Section 6.1.3, Urban/Wildland Interface pursuant to Section 6.1.4, and Western Burrowing Owl overlay pursuant to MSHCP Section 6.3.2. Detailed biological surveys and investigations of the Project site were conducted in 2021 for MSHCP riparian/riverine features and associated special status species, narrow endemic plants, burrowing owl, and Delhi Sands Flower-Loving Fly. Results of the 2021 surveys are discussed below. Since the Project site occurs within the MSHCP and the City of Eastvale is a participating entity several mitigation measure and standard conditions were applied to the Project within the 2015 EIR. The following MSHCP measures still apply. Several of the measures were completed as part of the field surveys and detail investigations conducted for the 2021 update. Those measures are discussed below.

MSHCP A. *The project applicant shall submit fees to the City in accordance with the requirements of the MSHCP Mitigation Fee Ordinance (Chapter 4.62 of the City of Eastvale Municipal Code).*

~~*MSHCP B.* *The project applicant shall assess the proposed project's consistency with Section 6.1.2, Section 6.1.3, Section 6.3.2, and Section 6.1.4 of the MSHCP.*~~

~~*MSHCP C.* *A qualified biologist shall conduct a burrowing owl habitat assessment. If needed, focused surveys and preconstruction surveys shall be conducted, as well as appropriate avoidance and minimization (Section 6.3.2 of the MSHCP).*~~

~~*MSHCP D. A qualified biologist shall conduct habitat assessments for the required Narrow Endemic Plant Species. If needed, focused surveys and shall be conducted, as well as appropriate avoidance and minimization (Section 6.1.3 of the MSHCP).*~~

~~*MSHCP E. A qualified biologist shall conduct a habitat assessment for Delhi sands flower-loving fly in areas underlain by Delhi soil series (Species-specific Objective 1B).*~~

6.6.1 Riparian and Riverine Areas and Vernal Pools (Section 6.1.2)

There are no features identified on the Project site that are considered riparian and/or riverine, nor meet the definition of riparian and/or riverine as outline within the MSHCP Section 6.1.2. The Project site does not contain suitable habitat for any of the riparian/riverine vernal pool species listed in Section 6.1.2 of the MSHCP, including listed fairy shrimp. No impacts to those species listed in Section 6.1.2 of the MSHCP are associated with Project implementation due to the lack of suitable habitat onsite. Therefore, the Project is consistent with MSHCP Section 6.1.2. As part of the 2015 EIR, MSHCP B standard condition was to be applied to the Project because the City is a signatory to the MSHCP. MSHCP B has been fulfilled and is considered complete with the 2021 field surveys and detailed jurisdictional investigations.

6.6.2 Narrow Endemic Plant – Survey Area Number 7 (Section 6.1.3)

Portions of the Project site are located within the Narrow Endemic Plant Species Survey Areas Number 7, which include the following target species:

- San Diego ambrosia (*Ambrosia pumila*)
- Brand's phacelia (*Phacelia stellaris*)
- San Miguel savory (*Satureja chandleri*)

No special status plant species were observed during the 2021 surveys and none are expected to occur onsite due to the lack of suitable habitat or suitable soil found on the Project site; therefore, there are no potential impacts to special status plants due to Project implementation. As part of the 2015 EIR, MSHCP D standard condition was to be applied to the Project because the City is a signatory to the MSHCP. MSHCP D has been fulfilled and is considered complete with the 2021 field surveys and detailed investigations.

6.6.3 Urban/Wildlands Interface (Section 6.1.4)

The Project site is not located to an existing or proposed MSHCP Conservation Area as pursuant to Section 6.1.4 of the MSHCP. Therefore, there are no potential impacts to Urban/Wildlands Interface due to Project implementation. As part of the 2015 EIR, MSHCP B standard condition was to be applied to the Project because the City is a signatory to the MSHCP. MSHCP B has been fulfilled and is considered complete with the 2021 field surveys and detailed investigations.

6.6.4 Focused Burrowing Owl Surveys (Section 6.3.2)

Based on the Habitat Assessment it was determined the Project site contains suitable habitat for BUOW; therefore, four additional focused BUOW surveys were conducted by qualified

biologist. Based on the focus surveys, no BUOWs or evidence of BUOWs were observed within the Study Area during the focused surveys. A majority of the Project site is characterized by disturbed dairy land, ruderal, and developed vegetation communities, lacking necessary sized burrows to provide suitable nesting habitat for BUOW. The surrounding buffer area is developed with residential and commercial developments. California ground squirrels and their burrows were observed within the Study Area. These burrows were actively utilized by the California ground squirrels and contained no BUOW or keys signs (sight, whitewash, burrows, bones, feathers, pellets, nests, and calls). Furthermore, debris piles and farm equipment were thoroughly examined for any BUOW key signs. Based on the results of the focused surveys and lack of diagnostic signs for burrowing owl, the Project site is not occupied by the burrowing owl. As part of the 2015 EIR, MSHCP C standard conditions were to be applied to the Project because the City is a signatory to the MSHCP. MSHCP C has been partially fulfilled with the 2021 field surveys and detailed investigations. As part of MSHCP C standard condition, should suitable habitat be observed, a pre-construction burrowing owl survey is to be performed within 30-days of ground disturbances. The following Standard Conditions is to be incorporated as part of MSHCP C measure.

SC MSHCP C: *Prior to impacts, a pre-construction survey for burrowing owl within the Study Area (Project site and surrounding 500-foot buffer) shall be conducted by a qualified biologist where suitable habitat is present within 30 days to the commencement of ground disturbing activities.*

If active burrowing owl burrows are detected during the breeding season, all work within 300 feet of any active burrow will be halted until that nesting effort is finished. The on-site biologist will review and verify compliance with these boundaries and will verify the nesting effort has finished. Work can resume when no other active burrowing owl nesting efforts are observed.

If active burrowing owl burrows are detected outside the breeding season, then passive and/or active relocation pursuant to a Burrowing Owl Exclusion Plan that shall be prepared by the Applicant and approved by the County of Riverside Environmental Programs Department (EPD) in consultation with CDFW. The Burrowing Owl Exclusion Plan shall be prepared in accordance with guidelines in the CDFW Staff Report on Burrowing Owl (March 2012) and MSHCP.

Burrowing owl burrows shall be excavated with hand tools by a qualified biologist when determined to be unoccupied, and backfilled to ensure that animals do not reenter the holes/dens.

6.6.5 Delhi Sands Flower-Loving Fly (Species-specific Objective 1B)

Due to the location of the Project site within the Ontario Recovery Unit for the Delhi Sands flower-loving fly, a habitat assessment for this species was conducted. The entire site is in

historical dairy and associated developed residential and dairy infrastructure. Aerial imagery available on Google Earth, shows that the dairy operations have been maintained since 1985 to the up to 2020. Site conditions feature continuously irrigated pastures, cattle pens, and developed buildings (including residences) with irrigated landscaping, and ponds. Lands so managed with dairy operations are not suitable for the Delhi Sands flower-loving fly. Northern, western, and central portions of the site are mapped (and field investigation confirms) with Hilmar loamy sands – soils unsuitable for Delhi Sands flower-loving fly. The site is further set within the larger context of adjacent and surrounding developed lands, further reinforcing the unsuitability of habitat conditions for Delhi Sands flower-loving fly. The entire Project site is determined to be Unsuitable for Delhi Sands flower-loving fly. As part of the 2015 EIR, MSHCP E standard condition was to be applied to the Project because the City is a signatory to the MSHCP. MSHCP E has been fulfilled and is considered complete with the 2021 field surveys and detailed investigations.

6.7 Threshold 7

> *Reduce the number or restrict the range of an endangered, rare, or threatened plant or animal species or biotic community, thereby causing the species or community to drop below self-sustaining levels.*

Less than Significant.

There are no previously recorded sensitive biological resources (i.e., special-status species populations, sensitive habitats, or jurisdictional features) within the Study Area. No sensitive biological resources, including i.e., special-status species populations, sensitive habitats, or jurisdictional features occur onsite as confirmed by the 2021 Biological Surveys.

However, suitable habitat for burrowing owl, white-tailed kite, grasshopper sparrow, and mountain plover exists within the Study Area. All of these animal species are covered under the MSHCP. With the City's participation and implementation of the MSHCP, any direct and indirect impacts to sensitive species would be less than significant with the payment of the mitigation fee and compliance with all applicable requirements of the MSHCP. This provides full mitigation under the California Environmental Quality Act (CEQA), the National Environmental Policy Act (NEPA), the Endangered Species Act (ESA), and the California Endangered Species Act (CESA) for impacts to MSHCP covered species and habitats. The MSHCP also addresses indirect impacts through cores and linkages, criteria cells, and plan fees.

Project compliance with the MSHCP A standard condition fully mitigates impacts for these covered species. Additional surveys/assessments were performed in 2021, and no burrowing owl, narrow endemic plant species, or Delhi sands flower-loving fly occur onsite and no mitigation is required.

The analysis from the 2015 EIR concluded the impacts less than significant with mitigation. However, based on the lack of sensitive biological resources (i.e., special-status species

populations, sensitive habitats, or jurisdictional features) within the Study Area, the 2021 conclusion is less than significant. The 2021 conclusion is less impactful than what was analyzed in the 2015 EIR.

6.8 Threshold 8

Cumulative impacts to biological resources.

Less than Cumulatively Considerable with Mitigation.

The City participates in the MSHCP, which is designed to protect over 150 species and conserve over 500,000 acres in western Riverside County. Project compliance with the MSHCP fully mitigates for impacts on covered species and ensures large segments of natural communities in western Riverside County will be preserved.

Adherence to the standards and conditions of the MSHCP, and implementation of mitigation measure MM 3.7.1, ensures that impacts to avian species and their habitats are minimized. Based on the detailed 2021 biological surveys and investigations of the Project site, no sensitive biological resources or jurisdictional features were identified on the Project site, therefore, no impacts would occur. MM 3.7.2 and MM 3.7.3 have been fulfilled and are no longer required.

Detailed biological surveys and investigations of the Project site were conducted in 2021 for MSHCP riparian/riverine features and associated special status species, narrow endemic plants, burrowing owl, and Delhi Sands Flower-Loving Fly. Based on those results, Standard Conditions MSHCP B, MSHCP D, and MSHCP E have been fulfilled and are no longer required. MSHCP A is the fulfillment of MSHCP Fees and still applicable. Furthermore, a portion of MSHCP C is fulfilled with focused protocol Burrowing Owl Surveys. It was determined that the Study Area is not occupied with burrowing owls, however, due to the suitable habitat found onsite, avoidance and minimization measures for the Burrowing Owl are still appliable. Participation in and implementation of the MSHCP will effectively reduce the project's contribution to cumulative impacts to less than cumulatively considerable.

7.0 Summary

In summary, the 2015 EIR analyzed the Project based on a biological desktop review. In 2021, the Project site was formally evaluated for sensitive resources, including performing a jurisdictional delineation and all focused surveys for sensitive wildlife and plant species, as specified within the MSHCP and 2015 EIR. Based on the 2021 results, the Project site does not contain any sensitive biological resources. As part of the Project implementation the entire 160-acre site will be permanently impacted.

The Project site is located within the MSHCP. The Project site is not located within any MSHCP Criteria Areas, Cell Groups, or Subunits. Furthermore, the Project site is not located in survey

areas for Amphibians, Mammals, or Special Linkage areas. The Project site is subject to Riparian and Riverine Areas pursuant to MSHCP Section 6.1.2, Narrow Endemic Plants Overlay, pursuant to MSHCP Section 6.1.3, Urban/Wildland Interface pursuant to Section 6.1.4, and Western Burrowing Owl overlay pursuant to MSHCP Section 6.3.2.

Adherence to the standards and conditions of the MSHCP, and implementation of mitigation measure MM 3.7.1, ensures that impacts to special-status avian species and their habitats are minimized. Based on the detailed 2021 biological surveys and investigations of the Project site, no sensitive biological resources or jurisdictional features were identified on the Project site, therefore, no impacts would occur. MM 3.7.2 and MM 3.7.3 have been fulfilled and are no longer required.

Detailed biological surveys and investigations of the Project site were conducted in 2021 for MSHCP riparian/riverine features and associated special status species, narrow endemic plants, burrowing owl, and Delhi Sands Flower-Loving Fly. Based on those results, Standard Conditions MSHCP B, MSHCP D, and MSHCP E have been fulfilled and are no longer required. MSHCP A is the fulfillment of MSHCP Fees and still applicable. Furthermore, a portion of MSHCP C is fulfilled with focused protocol Burrowing Owl Surveys. It was determined that the Study Area is not occupied with burrowing owls, however, due to the suitable habitat found onsite, avoidance and minimization measures for the Burrowing Owl are still appliable.

Based on the updated 2021 detailed Biological Surveys, it is determined that impacts are either the same as analyzed in the 2015 EIR or less impactful with Project implementation. The Project is not anticipated to have a greater impact than what was originally analyzed in the 2015 EIR.

Report Summary

This letter describes the methods and results of a focused burrowing owl (*Athene cunicularia* [BUOW]) survey for the Leal Project (Project) located in the City of Eastvale. The Project site is generally located in the Hemet area of Riverside County. The Project site is bounded by 58th Street to the north, Hamner Avenue to the east, Limonite Avenue to the south, and Scholar Way to the west. It is situated immediately west and north of existing commercial and retail developments and south and east of established residential neighborhoods of varying densities. The Project site is located approximately half a mile west of Interstate 15 (I-15). The Project site is within the *Corona North* U.S. Geological Survey 7.5-minute topographic map. Please refer to attached Figure 1 and Figure 2. Access to the Project site is provided off the Hamner Avenue or 58th Street. The Project site and surrounding 500-foot buffer (Study Area) was surveyed.

The surveys were performed on the following days:

Survey	Survey Date	Time	Surveyors
Burrowing Owl Assessment	June 9, 2021	0700 - 1350	Brianna Bernard
Burrowing Owl Survey #1	June 16, 2021	0715 - 1208	Brianna Bernard
Burrowing Owl Survey #2	June 23, 2021	0730 - 1145	Brianna Bernard
Burrowing Owl Survey #3	July 1, 2021	0658 - 1054	Brianna Bernard and Justinne Manahan

Survey	Survey Date	Time	Surveyors
Burrowing Owl Survey #4	July 13, 2021	0715 - 1100	Brianna Bernard and Justinne Manahan

The Project site historically functioned as a dairy with associated agriculture, a horse farm, and the Leal family home. The Project site currently has 3 horses and associated horse corrals, several homes and associated trailers found scattered around the property, along with dairy and farm equipment. The Project site consists primarily of disturbed land associated with historical dairy activities, as well as developed and ruderal habitat communities. Scattered burrows were observed on the Project site. All observed burrows were inspected carefully for any evidence of BUOW presence. Based on the lack of direct observation of BUOW or evidence of BUOW activity (e.g. evidence of active burrows with whitewash, pellets, feather, etc.) during the survey, the Study Area is not currently considered occupied by BUOW.

Field Survey Methods

Prior to the field survey, available literature and databases including the California Natural Diversity Database (CNDDB), were reviewed to identify sensitive habitats and special status wildlife species, including BUOW in the vicinity of the Study Area. Consistent with the MSHCP Survey Instructions, a burrowing owl habitat assessment was conducted on June 9, 2021 and pedestrian survey transects were spaced approximately 15 to 25 meters apart to allow 100 percent visual coverage of the ground surface.

According to the MSHCP guidelines, the biologist should also walk the perimeter of the property, which consists of a 150-meter (approximately 500 feet) buffer zone around the Project boundary. If permission to access the buffer area cannot be obtained, the biologist shall not trespass, but visually inspect adjacent habitats with binoculars. Parcels of land that could not be accessed (e.g. private property) were viewed using binoculars from vantage points to survey for BUOW activity or signs thereof, as well as other nesting bird activity.

The Project site and surrounding 500-foot buffer, collectively referred to as the Study Area, was assessed for the suitability to support burrowing owls and all suitable burrows were inspected for signs of use by burrowing owls. After the initial assessment of the site and surrounding areas, the Project site was systematically walked in an east-west direction of the Project site within suitable habitat for BUOW. Adjacent suitable areas, where accessible, were also surveyed to determine possible presence of owls within the buffer area (500-feet surrounding the Project site). Areas not accessible were surveyed using binoculars.

All encountered burrows or structure entrances were checked for the presence of BUOWs, molted feathers, cast pellets, prey remains, eggshell fragments, tracks, or

excrement at or near a burrow entrance. Natural or man-made structures and debris piles that could support BUOWs were also surveyed.

All wildlife species encountered, visually or audibly during the field survey, were identified and recorded in the field notes. Binoculars were used to aid in the identification of observed wildlife. Photographs were taken to document existing conditions within the Project site (Attachment A).

Results

The BUOW survey was performed on June 9, 2021 between the hours of 7:00 a.m. – 1:50 p.m. on the Project site and surrounding 500-foot area within suitable Burrowing Owl habitat (Figure 2). The survey was performed by Carlson Strategic Land Solutions (CSLS) biologists Brianna Bernard. The Biologists performed transects within areas that could potentially provide suitable BUOW habitat. Weather conditions during the survey was conducive to observing signs of BUOW activity, such as owls outside burrows. Temperatures during the survey ranged from 68° F to 90° F with clear skies and winds from 0-1 mph. The survey was conducted during typical BUOW peak activity time and was not conducted during rain, high winds, or dense fog.

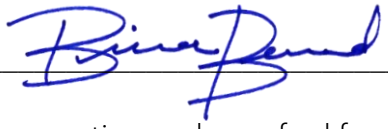
Following the habitat assessment, additional focused surveys took place on June 16, June 23, July 1, and July 13, 2021 generally between 7:00 a.m. and 12:00 p.m. by CSLS Biologists Brianna Bernard and Justinne Manahan on select dates. Temperatures during the surveys ranged between 70° F and 98° F, with predominant sunny, clear skies and 0-2 mph winds. The survey was conducted during typical BUOW peak activity time and was not conducted during rain, high winds (> 20 miles per hour), dense cloud cover >75%, or extreme temperatures.

The Study Area consist primarily of historical dairy activities, ruderal habitat, and disturbed/developed habitat. The ruderal habitat appears to be routinely maintained. The ruderal habitat is dominated by London rocket (*Sisymbrium irio*) and summer mustard (*Hirschfeldia incana*). Other species include Russian thistle (*Salsola tragus*), cheeseweed (*Malva parviflora*), rat-tail fescue (*Festuca microstachys*), foxtail brome (*Bromus madritensis ssp. rubens*), ripgut brome (*Bromus diandrus*), tocalote (*Centaurea melitensis*), Jimson weed (*Datura stramonium*), and scattered Mexican fan palms (*Washingtonia robusta*), and mulefat (*Baccharis salicifolia*). A row of trees bisects the Project site from the north to south and includes mulberry trees (*Morus alba*), and Shamuel ash (*Fraxinus uhdei*).

The Study Area contains a small population of California ground squirrels (*Spermophilus beecheyi*), specifically located in the historical dairy activities community, which in turn results in various burrows that could potentially support suitable BUOW foraging and nesting habitat. These areas were inspected carefully for the presence of

BUOWs and active nests. No pellets, whitewash, feathers, tracks or any other signs indicative of burrowing owl presence were observed within the Study Area.

The Study Area provides suitable foraging and nesting habitats to support wildlife. Bird activity during the survey was moderate. During the field surveys the following species were observed/detected:



- red-tailed hawk *(Buteo jamaicensis)*
- Anna's hummingbird (*Calypte anna)*
- Coyote (*Canis latrans)*
- house finch (*Carpodacus mexicanus)*
- Turkey Vulture (*Cathartes aura)*
- Killdeer (*Charadrius vociferus)*
- American crow (*Corvus brachyrhynchos)*
- California horned lark (*Eremophila alpestris*)
- Common raven (*Corvus corax)*
- Brewer's blackbird (Euphagus cyanocephalus)
- American Kestrel (*Falco sparverius*)
- Barn swallow (Hirundo rustica)
- Hooded oriole (*Icterus cucullatus)*
- Song Sparrow *(Melospiza melodia)*
- Northern mockingbird (*Mimus polyglottos*)
- Vermilion flycatcher (*Pyrocephalus rubinus*)
- Black phoebe (*Sayornis nigricans*)
- Say's phoebe (*Sayornis saya*)
- California ground squirrel *(Spermophilus (Otospermophilus) beecheyi)*
- lesser goldfinch *(Spinus psaltria)*
- desert cottontail *(Sylvilagus audubonii)*
- mourning dove *(Zenaida macroura)*

Conclusion

Based on the lack of direct observation of BUOW or evidence of BUOW activity (e.g. evidence of active burrows with whitewash, pellets, feather, etc.) during the survey, the Study Area is not currently considered occupied by BUOW.

Certification

I hereby certify that the statements furnished above and in the attached exhibits present data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

RE: Habitat conditions for Delhi Sands Flower-loving Fly on a portion of a proposed Leal development site located at the northwestern intersection of Limonite Avenue and Hamner Avenue, Eastvale.

To Whom It May Concern:

At the request of Carlson Strategic Land Solutions and on behalf of The New Home Company, I have conducted an evaluation of habitat suitability for the federally endangered Delhi Sands Flower-loving Fly (DSF, *Rhaphiomidas terminatus abdominalis*), for a 160-acre proposed Leal Project in Eastvale, California, with Assessor's Parcel Numbers 164-030-010, 164-030-012, 164-030-013, 164-030-014, 164-030-024, and 164-030-025. This area is indicated on the attached maps (Figures 1 and 2), and is located northwest of the intersection of Limonite Avenue and Hamner Avenue, Eastvale. For the purpose of this habitat assessment, I have evaluated site conditions for DSF suitability in terms of site characteristics on the basis of a detailed grading system I have developed in recent years.

Summary Conclusions: All lands on the subject site have a long history (since before 1985) in active dairy use. Site conditions feature continuously irrigated pastures, cattle pens, and developed buildings (including residences) with irrigated landscaping, and ponds. Lands so managed with dairy operations are not suitable for the DSF. Northern, western, and central portions of the site are mapped (and field investigation confirms) with Hilmar loamy sands – soils unsuitable for DSF. The site is further set within the larger context of adjacent and surrounding developed lands, further reinforcing the unsuitability of habitat conditions for DSF. The entire project area is determined to be Unsuitable for DSF.

Qualifications: Although I possess USFWS 10(a) permitting to survey for the federally endangered Delhi Sands Flower-loving Fly, such permitting is generally awarded to biologists only on the basis of a biologist's experience with and/or ability to identify adult DSF, such permitting not awarded on the basis of any real understanding of DSF biology, ecology, or habitat requirements. Traditionally, USFWS considered any land (within the known range of DSF) to have been mapped with Delhi Sands soils (Woodruff 1980) as subject to formal survey for the DSF. Thus, my additional qualifications in this regard include BS, MS, degrees in entomology, 45 years general entomological experience, thirty years experience with, research, and discoveries, in

Rhaphiomidas, life history, biology, and ecology, such that I am now a leading expert in this narrow field of study.

Methods: On June 18, 2021, I visited the study site in order to investigate habitat suitability for the DSF. I have reviewed soil maps covering the subject site, prepared by the California Department of Agriculture (Woodruff 1980, Knecht 1971). Aerial imagery covering the site, dating from 1985 to 2020 (Google Earth) was reviewed in order to gain an understanding of land use regimens in recent years. Photographs were taken of the site along with field notes on vegetation and soil conditions. I examined the subject site to rate its potential to support DSF, the rating based on the following scale of 1 to 5, with 5 being the best quality and most suitable habitat in my judgment:

1. Developed areas, non-Delhi sands soils with high clay, silt, and/or gravel content. Delhi sands extensively and deeply covered by dumping of exotic soils, rubble, trash, manure, or organic debris. *Unsuitable.*

2. Delhi sands are present but the soil characteristics include a predominance of exotic soils such as alluvial materials, or predominance of other foreign contamination as gravels, manure, or organic debris. Severe and frequent disturbance (such as a maintenance yard or high use roadbed). *Very Low Quality.*

3. Moderately contaminated Delhi sands. Delhi sands with moderate to high disturbance (such as annual disking). Sufficient Delhi Sands are present to prevent soil compaction (related to contamination by foreign soils). Some sandy soils exposed on the surface due to fossorial animal activity. *Low Quality.*

4. Abundant clean Delhi Sands with little or no foreign soils (such as alluvial material) present. Moderate abundance of exposed sands on the soil surface. Low vegetative cover. Evidence of moderate degree of fossorial animal activity by vertebrates and invertebrates. May represent high quality habitat with mild or superficial disturbance. *Moderate Quality*

5. Sand dune habitat with clean Delhi Sands. High abundance of exposed sands on the soil surface. Low vegetative cover. Evidence (soil surface often gives under foot) of high degree of fossorial animal activity by vertebrates and invertebrates. Sand associated plant and arthropod species may be abundant and vegetation species composition is often indicative of low disturbance. *High Quality*

It should be noted that habitat qualities often vary spatially within a site so that conditions on a site fall within a range of qualities. Further, overall habitat quality is affected by the overall habitat area on a site, such that very small areas diminish the overall habitat value of a site. Habitat conditions rated from *Very Low Quality* up to *High Quality*, are formally considered as representing *Suitable* conditions for the DSF. Use of this habitat rating system is somewhat subjective and best undertaken by a biologist who has extensive experience with *Rhaphiomidas* species. It must be noted that these ratings do not infer or imply actual occupancy by DSF, only relative potential to harbor the species, and relative conservation value of the land should DSF be found.

Results: Department of Agriculture, Soil Conservation Service map (Woodruff 1980) and associated web based resources (https://casoilresource.lawr.ucdavis.edu/gmap/) show the site to have Delhi fine sand soils on a southeastern portion of the site, amounting to approximately 13 acres (Figure 3). The remaining portions of the site are on Hilmar loamy sands (Knecht 1971). Soil conditions on the extreme southeastern corner of the site, over an area of approximately five acres, where mapped with Delhi fine sands, is overlain with a meter depth of exotic soils dominated by alluvial gravely materials. Remaining peripheral areas mapped with Delhi fine soils are intermixed with fine loam soils (Hilmar classification)) – the mixing and contamination likely the result of decades of dairy operations where pasture lands have been disked. Aerial imagery available on Google Earth, shows that the dairy operations have been maintained since at least 1985 up to 2020 for the entire site. The site has been largely surrounded by residential and commercial development since 2004 (Google Earth), isolating the site from areas with Delhi Sands Flower-loving fly populations. The last known extant DSF population site in the Ontario area is located some six kilometers north northeast of the site. Plant species normally associated with Delhi sands ecosystems do not occur on the site. The entire site (160 acres) has been used in dairy operations and is so developed and/or covered in manure, ponds, irritated pasture, or with developed residences with irrigated landscaping, developed dairy buildings, storage facilities, gravel paved roads, drives, stalls or equipment lots, that the entire site has no potential for the DSF and is rated *Unsuitable* for the species. A list of plant species (not including exotic landscape plants) on the site and their context as to whether marginal, or dominant, is presented in Table 1.

Discussion: A long history of agricultural use has likely resulted in onsite cross contamination of Delhi sand soils with fine silty loamy soils on southeastern portions of the site, and the importation of approximately 24,000 cubic yards of exotic alluvial soils onto the southeastern portion of the site (seen to be underway in June 2004, Google Earth) with the result that all soils on the site that were mapped as Delhi sands (Knecht 1971) actually contain significant quantities contaminating soils rendering them *Unsuitable* for DSF beyond the long history of diary operation.

In general, the northern, western, and central portions of the project site may be ruled as *Unsuitable* for DSF on the basis of soil conditions (Figure 3) alone. A long and ongoing history (since before 1985) of agricultural dairy use further foreclosed on DSF suitability for the entire site. The southeastern portions of the site, where they occur over mapped Delhi sands also must be rated as *Unsuitable* for DSF due to intense degradation of habitat conditions and natural ecological function owing to contaminated soils. Similar findings have previously been made on similar agricultural and dairy lands of southern Ontario on consultation with USFWS (Osborne 2004) and areas with active irrigated agriculture (Osborne 2019).

Conclusions and Recommendations: On the basis of my experience, conditions on the subject site are *Unsuitable* for DSF. Interim General Survey Guidelines for the DSF, suggested by the USFWS (1996) typically recommend protocol surveys for DSF where undeveloped Delhi sands occur, and agency biologists sometimes assert that such undeveloped areas have potential for DSF. I would strongly disagree with such and assertion, and view it as an absurdity.

MANAGEMENT SUMMARY

Duke Cultural Resources Management, LLC (DUKE CRM) is under contract to Carlson Strategic Land Solution and The New Home Company, to provide cultural and paleontological resources services for the Leal Master Plan Project, located in the City of Eastvale, Riverside County, California. The property is approximately 156 acres in size. The purpose of this study is to provide the necessary information and analysis to the City of Eastvale (CITY) as the lead agency to determine whether the proposed Project would cause impacts to historical, archaeological, or paleontological resources that may exist in or adjacent to the Project area. This work was conducted in compliance with the California Environmental Quality Act (CEQA).

The cultural and paleontological resources assessment included a records search for cultural resources at the Eastern Information Center (EIC), and a records search for paleontological resources at the Western Science Center (WSC) and locality searches on the University of California Museum of Paleontology (UCMP) and San Diego Natural History Museum (online collections, the online Paleobiology Database and FAUNMAP, and other published resources.

Cultural Resources

The results of the EIC records search indicate that there is one previously recorded cultural resource within ½ mile of the Project and one resource located within the Project. The resource within the Project is the Leal Property, resource (33-015333). The survey and evaluation of the properties found it to be ineligible for the National Register of Historic Place (NRHP), the California Register of Historical Resources (CRHR), or local designation (6Z). Additionally, the field survey did not identify any cultural resources within the Project boundary. The research conducted indicates a low sensitivity for prehistoric cultural resources and a low sensitivity for historic resources within the Project boundaries. Therefore, any disturbance of native soils has a low potential to directly impact unique cultural resources according to CEQA. According to CEQA, a "unique archaeological resource" is defined as an "archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria: contains information needed to answer important scientific research questions, has a special and particular quality, or is directly associated with a scientifically recognized important prehistoric or historic event or person (Section 21083.2 (g)).DUKE CRM does not recommend any further cultural resources efforts. However, if any cultural resources are discovered during grading and/or ground disturbance during construction an archaeologist shall be retained to assess the nature and significance of the discovery and make recommendations.

If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials.

Paleontological Resources

The records searches by the WSC and other resources indicate that there are no known fossil specimens within the Project boundaries but did indicate multiple fossil localities from similar deposits nearby (within 3 miles). The Project is situated on young alluvial-fan deposits (middle Holocene Epoch, *Qyf*), young eolian deposits (late Pleistocene to Holocene Epochs, *Qye*), and very old axial channel deposits (early to middle Pleistocene Epoch, *Qvoa*). Due to their age (early Pleistocene to late Pliocene Epochs) and history of producing fossil material nearby, the young eolian deposits (*Qye*) and very old axial channel deposits (*Qvoa*) underlying the Project area are assigned a high paleontological sensitivity.

Ground disturbance in the eastern half of the Project area will impact high-sensitivity deposits (*Qye* and *Qvoa*), and has the potential to directly impact unique paleontological resources. This would result in potentially significant impacts to paleontological resources according to CEQA. Therefore, paleontological construction monitoring is recommended during ground disturbance in this area. This, along with appropriate recording and recovery efforts, will mitigate the potential impact to a level that is less than significant for the purposes of CEQA.

Paleontological Monitoring - A paleontological monitor shall be present during ground disturbing activities in the eastern half of the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation).

1. The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols.
2. The paleontological monitor shall be present full-time during ground disturbance in the eastern half of the Project, including but not limited to grading, trenching, utilities, and off-site easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced.
3. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered.
4. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area.
5. In consultation with the qualified paleontologist the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared.
6. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately.
7. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find.

INTRODUCTION

Duke Cultural Resources Management, LLC (DUKE CRM) is under contract to Carlson Strategic Land Solution (CLIENT) to provide cultural and paleontological resources services for the Leal Master Plan, Eastvale Project, located in the City of Eastvale, Riverside County, California. The property is approximately 156-acres in size. The purpose of this study is to provide the necessary information and analysis to the City of Eastvale (CITY) as the lead agency to determine whether the proposed Project would cause substantial significant impacts to historical, archaeological, or paleontological resources that may result from the Project in or adjacent to the Project area to comply with the California Environmental Quality Act (CEQA).

PROJECT DESCRIPTION

The Project is situated on the Leal dairy farm property located on Limonite Avenue, with 58th street to the north, Hamner Avenue to the east and Scholar Way to the west (see Figure 1, Project Vicinity Map). The Project is located in the Section 24, Township 2 South, Range 7 West, San Bernadino Base and Meridian, USGS *Corona North, Calif.* 7.5-minute quadrangle (see Figure 2, USGS Project Location Map). The Project is located within a dairy farm that is no longer in use (see Figure 3, Project Aerial Photograph). The Project will have 660 multi-family homes and 1840 single-family/single-family attached homes. Maximum depth will be 15 feet (ft.), with the majority of the project being excavated down to 3 ft.

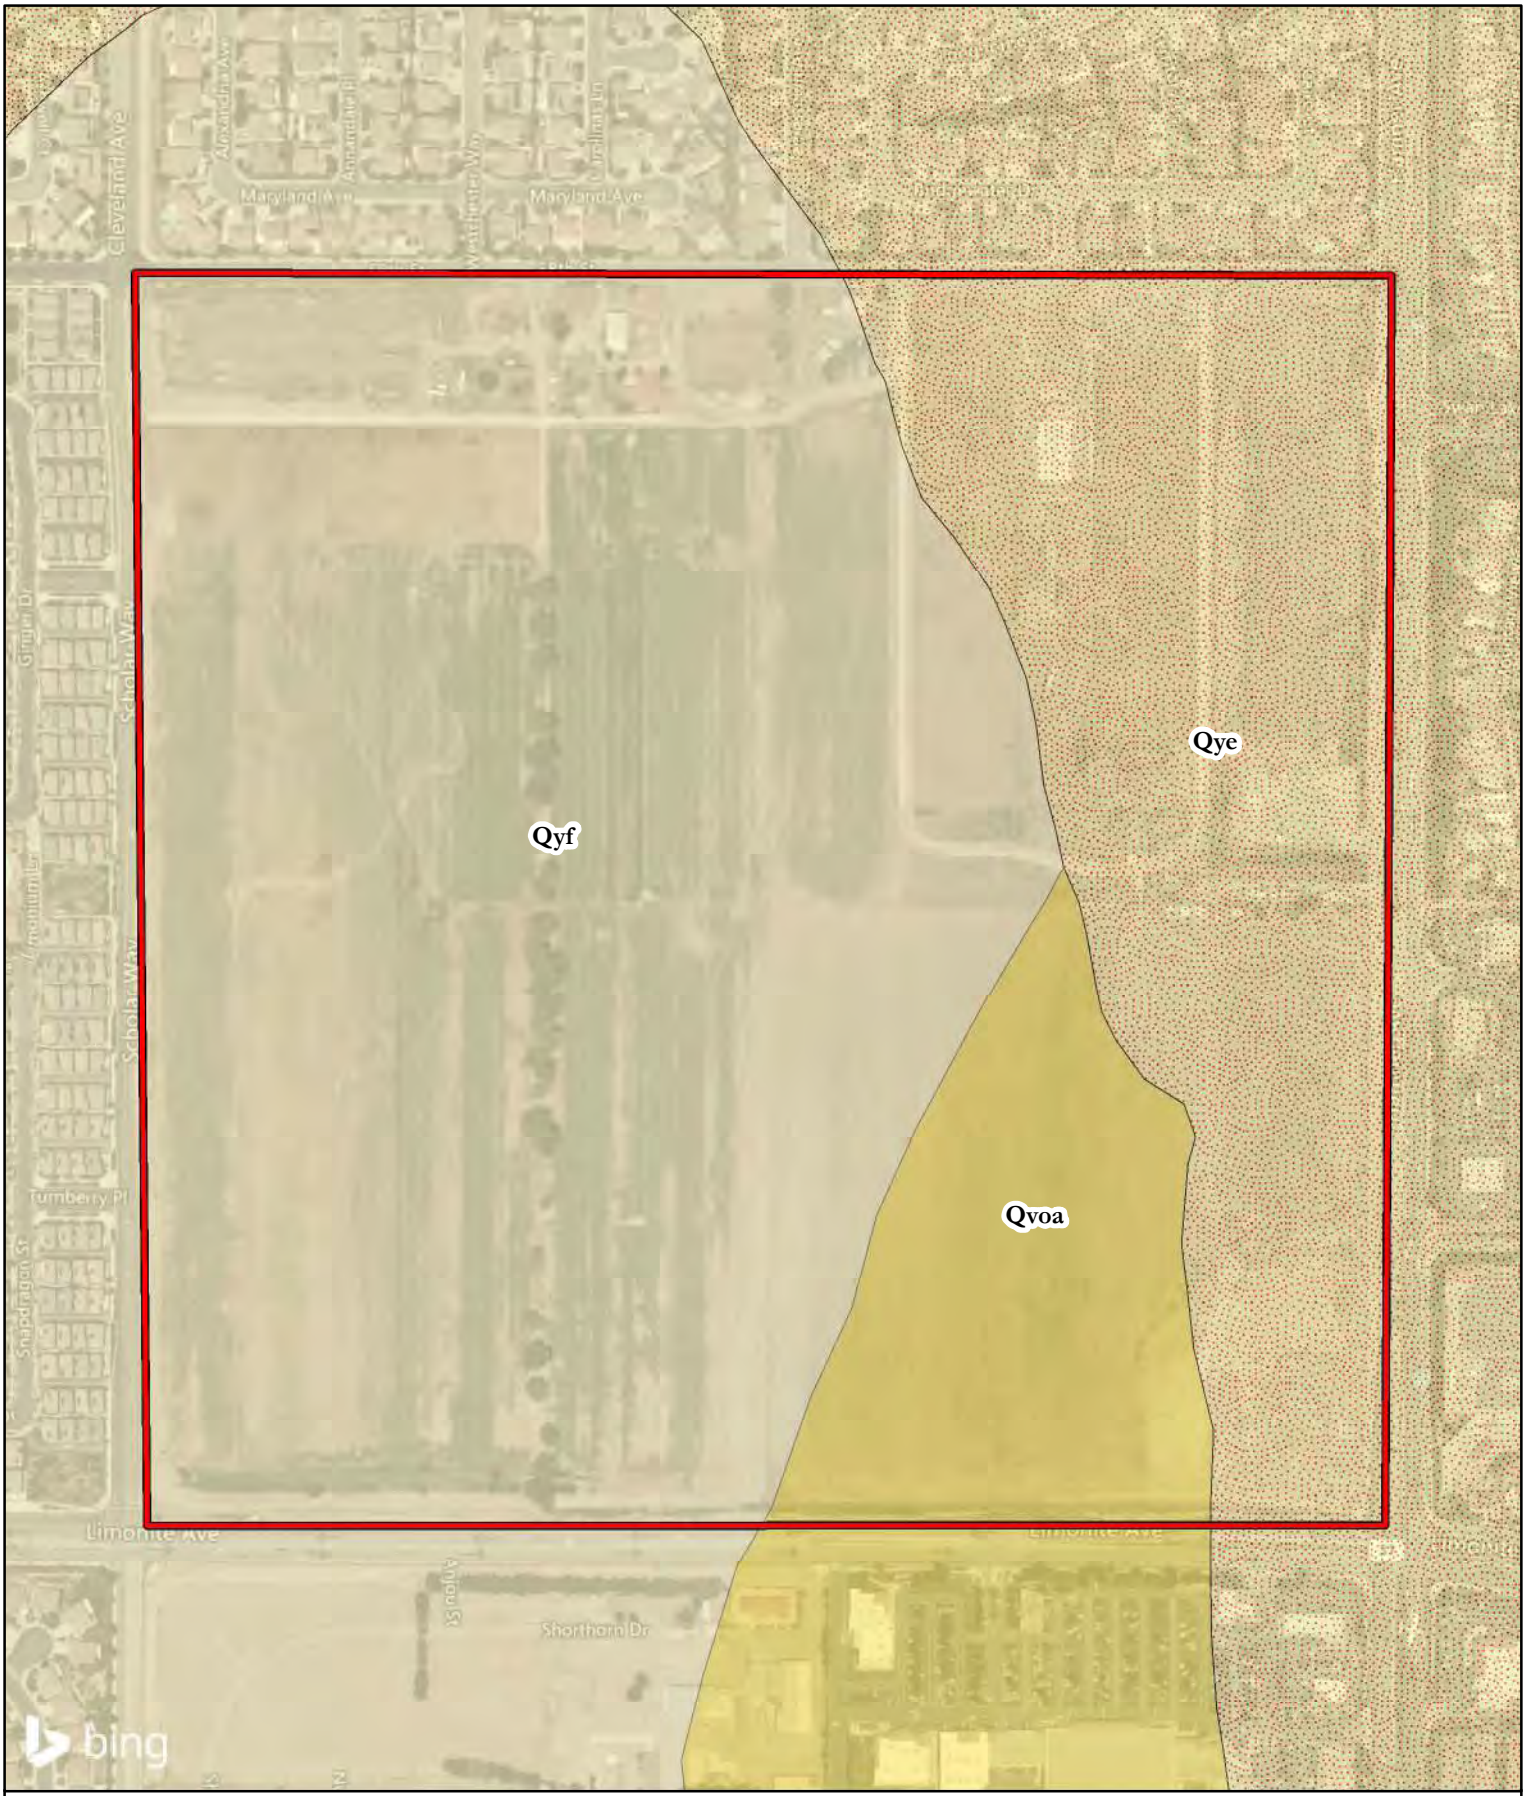
SETTING

Geology

California is divided into 11 geomorphic provinces, each naturally defined by unique geologic and geomorphic characteristics. The Project is located in the northwestern portion of the Peninsular Ranges geomorphic province. The Peninsular Ranges province is distinguished by northwest trending mountain ranges and valleys following faults branching from the San Andreas Fault. The Peninsular Ranges are bound to the east by the Colorado Desert and extend north to the San Bernardino – Riverside County line (Norris and Webb 1976), west into the submarine continental shelf, and south to the tip of Baja California.

Project elevation is approximately 730 feet above mean sea level. The geology of the Project area has been mapped by Morton and Miller (2006) at a scale of 1:250,000 (Figure 4). A review of this map indicated that the Project area is predominantly underlain in the western half by young alluvial-fan deposits (*Qyf*), and in the eastern half by young eolian deposits (*Qye*) and very old axial channel deposits (*Qvoa*).

Vegetation within the Project is dominated by grasses and other shrubs present in high density on the south side. The northern half of the site has little vegetation due to the soil being recently turned and several residential and dairy properties along the northern edge.



Cultural

Prehistory

Two primary regional schema are commonly cited in the archaeological literature for western Riverside County where the Project is located. These schema or syntheses generalize the presence or absence of certain artifact types into explanatory frameworks of temporal chronologies and/or subsistence practices. Schemas are necessary because many archaeological sites lack absolute datable material (ex. carbon for radiometric C_{14} dating) and so researchers need to cross-date sites by comparison to either coastal or desert chronologies with established chronological sequences backed by absolute dates. In western Riverside County, where the Project is located, it is thought to be the meeting ground of both schemas and consequently neither schema (coastal vs inland desert) exclusively explain prehistoric finds.

The first schema, advanced by Wallace (1955), defines four cultural horizons for the southern California coastal province, each with characteristic local variations:

I. Early Man (~9000–8500 B.P.) is a hunting culture based on almost exclusive evidence of chipped-stone hunting materials: dart points, scrapers, choppers, and bifaces.
II. Milling Stone (8500–4000 B.P.) reflects a change to a more sedentary, plant-collecting lifestyle as evidenced by the introduction and dominance of milling stone artifacts and a decrease in well-made projectile points.
III. Intermediate (4000–1500 B.P.) is characterized by a larger dependency on hunting, introduction of the bow and arrow, and the shift from using the mano/metate to mortar/pestle. However, knowledge of this horizon suffers from lack of knowledge about what occurred during this time, not a lack of inhabitants along the southern California coast.
IV. Late Prehistoric (1500~200 B.P.) contains a more nuanced artifact assemblage indicative of a more complex lifestyle and an increase of population. This horizon is characterized by an increase in bow and arrow use, steatite containers, pottery, circular fishhooks, perforated stones, asphaltum, diversified bone tools, ample shell ornaments, and elaborate mortuary customs.

Qye: young eolian deposits, Holocene and late Pleistocene

Qvoa: very old axial-channel deposits, middle to early Pleistocene

0 200 400 Feet

N

1 inch =400 feet

1:4,800

Warren and Crabtree (1986) employ a more ecological approach to the deserts of southern California, defining five traditions in prehistory:

I. Lake Mojave (12000–7000 B.P.)
II. Pinto (7000–4000 B.P.)
III. Gypsum (4000–1500 B.P.)
IV. Saratoga Springs (1500–800 B.P.)
V. Shoshonean (800~200 B.P.)

Warren and Crabtree (1986) viewed cultural continuity and change in terms of various significant environmental shifts, defining the cultural ecological approach for archaeological research of the California deserts. The authors viewed changes in settlement pattern and subsistence as cultural adaptations to a changing environment, beginning with the gradual environmental warming in the late Pleistocene, the desiccation of the desert lakes during the early Holocene, the short return to pluvial conditions during the middle Holocene, and the general warming and drying trend, with periodic reversals, that continues to this day. The work by Warren and Crabtree (1986) is built upon, in part, Warren (1980) in which he argued for a chronology based on projectile points as period markers backed by radiocarbon assays providing absolute dates.

The two-schema contrast in important ways. The units employed by Warren are "traditions," and in contrast to Wallace (1955), traditions may be spatially restricted but display temporal continuity. For Wallace, "horizons" or "periods," are extensive through space but restricted in time. More recent schema has been attempted to reconcile these differences. More recently, Koerper and Drover (1983) synthesized chronologies for coastal southern California and employed Wallace's (1955) horizon terminology but use radiometric data to sequence stylistic changes observed in the artifact assemblages, which they interpreted as material indication of cultural change through time. Regardless of the overall schema to best explain the prehistory of western Riverside County, the region can be understood within broad chronological frameworks and as the meeting ground of the coastal and desert subsistence patterns.

Early Holocene (11,600 – 7,600 BP)

Traditional models of the prehistory of California hypothesize that its first inhabitants were the big game hunting Paleoindians who lived at the close of the last ice-age (~11,000 years before present [BP]). As the environment warmed and dried, large Ice Age fauna died out, requiring adaption by groups to survive. The western Great Basin and deserts of southern California were characterized by large pluvial (rainfall-fed) lakes, streams, marshes, and grasslands. The human response to this environment is known as the Western Pluvial Lakes Tradition (WPLT) (Moratto 1984). The WPLT is generally identified by an advanced flaked-stone industry of foliate knives/points, Silver Lake and Lake Mojave points, lanceolate bifaces, and long-stemmed points (Warren & Crabtree 1986). Other flaked-stone tools include crescents, scrapers, choppers, scraper-planes, hammer stones, cores, drills, and gravers. People of this period hunted diverse populations of smaller animals and collected a wide number of plants from diverse eco-zones. Importantly, this period lacks widespread evidence of milling stones, and, therefore, hard seed processing was likely not widely practiced. Sites are generally found along the shores of former pluvial lakes, marshes, and streams (Moratto 1984). The desert manifestation of the WPLT is the Lake Mojave Complex, while along the coast the WPLT is seen in the San Dieguito Complex. Along the coast, rising sea levels created bays and estuaries. Following initial settlement along the coast, groups adopted marine subsistence including fish and shellfish. These shell middens contain flaked cobble tools, metates, manos, discoidals, and flexed burials and allowed for a semi sedentary lifestyle (Byrd and Raab 2007). Eventually, shellfish became the primary source of food, while plant gathering, hunting and fishing were less important.

Middle Holocene (7,600 – 3,650 BP)

The middle Holocene is a time of change and transition. As conditions continued to warm and dry, lakes and streams in the desert disappeared. This resulted in a shift in subsistence strategies, namely a shift to the gathering of plant seeds, grasses and shellfish along the coast as the primary dietary staple. Fishing and the

hunting of smaller animals played a less important role in day-to-day activity. This shift in subsistence is what Wallace named the Millingstone Horizon (Wallace 1955) and this name has continued among archaeologists working on the coastal province of southern California. Large habitations are seen in the inland areas and considerable variability is seen along coastal occupation of southern California. Occupation revolved around seasonal and semi-sedentary movements in coastal Orange and San Diego counties. Trade networks are postulated by researchers that have dated *Olivella* grooved rectangle shell beads as far north as central Oregon dating to 4900-3500 BP (Byrd and Raab 2007). Characteristics of the middle Holocene sites include ground stone artifacts (manos and metates) used for processing plant material and shellfish, flexed burial beneath rock or milling stone cairns, flaked core or cobble tools, dart points, cogstones, discoidals, and crescentics.

Late Holocene (3,650 – 233 BP)

During the late Holocene there was a migration of Takic speakers from the Great Basin into southern California. This intrusion is known as the "Takic Wedge." Characteristics of the late Holocene include the introduction of the bow and arrow, mortar and pestle, use of ceramics, and a change in mortuary behavior from inhumations to cremations in much of southern California. This was also a period of climatic fluctuation. Paleoenvironmental data show that periods of drought alternated with cooler and moister periods (Vellanoweth and Grenda 2002; Byrd and Raab 2007; Jones et al. 2004). This resulted in dynamic regional cultural patterns with considerable local variation. Byrd and Raab (2007) suggest that foragers in southern California over-exploited high-ranked food, such as shellfish, fish, marine and land mammals, and plant remains. This led to resource depression, causing people to forage more costly resources that were more abundant, such as acorns.

Ethnography

The Project is located along the periphery of the traditional territory of four Native American groups, the Gabrielino, the Luiseno, the Cahuilla, and the Serrano (Kroeber 1925). The Native American languages of these Tribes are part of the Takic subfamily of the larger Uto-Aztecan language family. Similarly, these groups were organized into independent but interconnected village communities. These groups were hunters and gatherers who exploited both large and small game, as well as numerous plant resources.

Gabrielino

The Gabrielino are one of the least ethnographically understood Native American groups in California. Generally, their territory included all of the Los Angeles Basin, parts of the Santa Ana and Santa Monica Mountains along the coast from Aliso Creek in the south to Topanga Canyon in the north, and San Clemente, San Nicolas, and Santa Catalina Islands. The environmental conditions within this territory are very diverse, including the following zones: interior mountains/foothills, Prairie, exposed coast, and sheltered coast (Bean and Smith 1978a, Shipley 1978).

The Gabrielino lived in villages year-round and utilized smaller camps from which they could hunt and gather, likely on a seasonal basis. Villages were almost always situated near water. Gabrielino families lived in domed, round structures with thatching made from local plants. Other structures included semi-circular, earth covered sweathouses, menstrual huts, and ceremonial structures. Villages were politically autonomous from other villages, while each village was led by a chief who would, at times, reign over several villages (Bean and Smith 1978a). Acorns were the most important food for the Gabrielino; although the types and quantity of different foods varied by season and locale, common and important sources of food were acorn, piñon nuts, yucca, cacti, many varieties of seeds and grasses, deer, rabbit, jackrabbit, woodrat, mice, ground squirrels, quail, doves, ducks and other fowl, fish, shellfish, and marine mammals (Bean and Smith 1978a, Shipley 1978).

Luiseño

The Luiseño share many similar cultural traits to the Gabrielino. The Luiseño lived in sedentary and independent village groups, each with specific subsistence territories encompassing hunting, food gathering, and fishing areas. Villages were usually located in valley basins, along creeks and streams adjacent to mountain ranges where water was available and where the villages would be protected from environmental conditions

and potential enemies. Most inland populations had access to fishing and food gathering sites on the coast (Bean and Shipek 1978).

Luiseño economic and subsistence practices centered upon the seasonal gathering of acorns and seeds; the hunting of deer and small mammals such as rabbits, wood rats, ground squirrels, and birds. Coastal foods included sea mammals, fish and shellfish. Tool technologies were organized around food collection, storage, and preparation strategies, which was reflected in the type, size, and quantity of food items gathered. Stone (lithic) tools included two types: ground stone and flaked stone tools. Ground stone equipment included: mortars, pestles, manos and metate grinding slicks, made from granite, schist, and gneiss. Flaked tools included: bifaces, projectile points, scrapers, and gravers, fabricated from siliceous rock such as chert and jasper, microcrystalline chalcedony, obsidian, fine grain ingenious rocks such as basalt rhyolite, and andesite, and hard silica such as quarts and quartzite. Utilitarian tools were constructed from wood, animal bones, skins, and/or woven from flora materials depending on need (Lovin 1963). Hunting activities were conducted both on an individual basis and/or organized into group activities, depending on seasonal factors and the game hunted. Acorns encompassed as much 50 percent of the Luiseño diet (White 1963). Acorns provided a reliable and abundant food source that was high in calories and could be easily stored for future use. Acorn collection was a central tenant in the lives of the Luiseños and dominated their economic and social structure (Basgall 1987, Johnson and Earle 1987).

Villages were organized around an inherited chief who exerted sole control over the economy, religious rituals, and territorial matters within the village (Bean and Shipek 1978:555). The chief at times would consult with a council of elders and shamans on matters of religious practices and on environmental conditions effecting village life. Large villages may have had a complex behavioral and political structure due to their territorial size and economic control, while the smaller villages' political complexity was limited by their territorial size (Strong 1929; Bean and Shipek 1978:555).

Cahuilla

The Project is located near the western boundaries of Cahuilla Indians. The center of their territory included the Coachella Valley, the San Jacinto and Santa Rosa Mountain ranges. Ethnographers have divided this population by habitation locale (Mountain, Pass, and Desert) whereas the Cahuilla divided themselves by patrilineal descent clans and one of two moieties (Wildcat and Coyote). Further distinctions were made within clans of politically important and independent subsidiary lineages. These lineages occupied their own villages as documented by Cahuilla ethnographic consultants in the early 20th century and from Franciscan Mission records (Earle 2004).

The three ethnographically documented zones of Cahuilla habitation (Pass, Mountain, and Desert) serve as general guidelines for understanding their subsistence practices. In general, Mountain and Pass Cahuilla diet emphasized acorn, salvia islay, yucca, agave and pinyon gathering in the mountain and foothill regions. In contrast Desert Cahuilla focused on the gathering of mesquite, cactus, and hard seeds such as screwbean, juniper and mesquite (Bean and Saubel 1972). These generalizations can only be broadly applied as the Cahuilla inhabiting different zones however were not mutually exclusive to each other. Desert Cahuilla in the Coachella Valley retained gathering areas in the Santa Rosa Mountains or other upland regions. Desert Cahuilla also utilized the resources in the foothills. The eastern foothills of the Coachella Valley produced agave and hard seeds. Also, the foothills on the western side of the Coachella Valley produced cactus, agave and hard seeds and higher upslope, pinyon, for the Desert Cahuilla.

The Cahuilla were also observed to cultivate small quantities of corn, beans, squashes, pumpkins, melons and wheat as early as 1824 by the Romero expedition. These crops and the cultivation of them potentially made their way from the Colorado River area to the Coachella Valley. The inhabitants of the Coachella did not practice flood recessional agriculture of the Colorado River groups (Bean and Lawton 1973). Based upon ethnographic interviews, Strong (1929:38) noted that he had been told by *Francisco Nombre* that his grandfather told him that the cultivation of corn and other crops by the Cahuilla was a recent practice and that the Cahuilla used to obtain corn from the "Yumas". Corn would likely have been available to the Cahuilla via

exchange systems between foraging groups who have access to resources outside of the Colorado River and horticulturalists along the river. Regardless of the timing of cultivation of these crops, by the 1850s oasis gardens and to a lesser extent, canyon gardens were important sources of foodstuffs (Bean et al. 1995).

Serrano

The Project is located within the southwester area of the Serrano Indians, though Bean and Smith (1978b:570) note difficulty of determining traditional Serrano use-areas due to the lack of data and the nature of Serrano sociopolitical structure in that, as Strong (1929) organized themselves into autonomous localized lineages that favored a home base from which generalized land usage was practiced, no a pan-tribal land holding. Serrano territory extends across the San Bernardino Mountains east of the Cajon Pass south to and in the Yucaipa Valley and north to at least to the area of Victorville and as far east as Twentynine Palms.

Water availability was a large determining factor of Serrano habitation though they lived in diverse ecozones such as the high desert basins of the Lower Sonoran, the Upper Sonoran, and the Transition zone as well as a range of elevations from as low as 1,500 feet to over 11,000 feet in the mountains. Like their neighboring groups, the Serranos were hunter-gathers but with their diverse topographical access to different ecozones, food varied by elevation. They hunted mountain sheep, deer, rabbits, antelope, and small rodents; and gathered acorns, piñon nuts, berries, mesquite, yucca, and various bulbs, seed-grasses, tubers, roots and shoots. Also, like other Native groups in Southern California, the Serrano situated their most dense populations around water sources. Their houses were round, with a domed of willow frames and thule thatching protecting the inhabitants during sleep. Additional structures consisted of a ramada where most of the day's activities occurred, and each family had a central fire pit. Each village had a large ceremonial structure ore the leader of the lineage of the village lived. Other structures included sweat lodges, and granaries. Serrano material culture closely resembled the Cahuilla (Bean and Smith 1978b).

History

In California, the historic era is generally divided into three periods: the Spanish or Mission Period (1769 to 1821), the Mexican or Rancho Period (1821 to 1848), and the American Period (1848 to present). The first Europeans in the Jurupa Valley/Eastvale area came through the area in the 1770's. But no known settlements occurred in the area until in 1838 when *Rancho Jurupa* was granted to Juan Bandini. Within a few years Bandini divided *Rancho Jurupa* into two properties. He sold Able Stearns, his son-in-law, approximately 25,000 acres which continued to operate as *Rancho Jurupa*. About 1889 a six square mile portion of the Rancho was purchased by the Fuller family who established the Pioneer Ranch. The following history is largely adapted from Meissner's (2014) book, "Fuller Ranch at Eastvale" which is a comprehensive history of the area. The Fuller family owned the bulk of the ranch until 1954 and during the early 20th century the ranch had a reputation as one of the best cattle and racehorse ranches in California. Also, according to Meissner, the name of the ranch was changed to the Fuller Rancho and became a guest ranch in the 1930's, hosting some of the biggest names in entertainment at the time. The main Hacienda of the ranch was approximately a half mile northeast of the Project property. In 1954 the ranch was sold to dairyman Walter Koenig who, according to Meissner, almost immediately sold off parcels of the ranch to individual buyers. Historic aerial photographs show that the Project property was being used for agriculture in 1938 and that purpose continued until the first home appeared on the property sometime after 1994 (HistoricAerials.com 2021).

Research Objectives

The manner by which archaeological material is recovered and analyzed at each site is based on the formulation of research questions and associated research domains. The domains focus data recovery efforts on regionally important archaeological research issues and have been developed to identify basic knowledge common to archaeological research. These research objectives include:

1. Conduct a record search with the EIC and other archives.
2. Conduct an intensive pedestrian survey of the property.
3. Document and evaluate the three historic buildings on the property.
4. Summarize survey results in report.

METHODS

Research

On June 6, 2021, Morgan Bender, M.A., RPA, DUKE CRM conducted a records search at the EIC. The EIC is the Riverside County regional office of the California Historical Resources Information System (CHRIS) and is located at the University of California, Riverside. This research was undertaken to establish the status and extent of previous surveys in the Project and to note what types of cultural resources have been identified or might be expected to occur within or adjacent to the Project. In addition, the records search identified cultural resources listed on or determined eligible for listing on the NRHP and/or CRHR located within or near the Project area. In addition, Ms. Bender contacted the NAHC for a search of the Sacred Land Files on June 8, 2021. The internal archives at DUKE CRM along with a review of historic aerial photographs and historical USGS topographical maps were also inspected for relevant background information.

DUKE CRM requested a paleontological records search from the Western Science Center (WSC), and received the response on June 15, 2021. On June 16, 2021 (Appendix A), DUKE CRM Paleontologist Benjamin Scherzer conducted locality searches on the University of California Museum of Paleontology (UCMP) and San Diego Natural History Museum (online collections, the online Paleobiology Database and FAUNMAP, and other published resources.

Field Survey

On June 17 and 18, 2021, a pedestrian survey of the property was conducted by Morgan Bender, M.A., RPA, Benjamin Scherzer, M.S, Edgar Alverez, B.S., and Zachary Duke. The goal of the pedestrian survey was to identify all historic built environment resources, prehistoric/ historic period archaeological resources, and paleontological resources within the Project boundaries. Transects were spaced no greater than 15 meters apart. A Garmin Etrex GPS, an IPhone X with Google Earth, and field map was used to locate the Project boundary and to record the location of identified cultural resources. Built-environment resources were documented on State of California Department of Parks and Recreation (DPR) 523 series forms. Photographs were taken on a Fuji FinePix XP70 16.0 MP digital camera, an IPhone X camera.

CRHR Criteria

The regulatory framework for this historic resource study and the evaluation lies within the guidelines imposed for the CEQA and the CRHR under Public Relations Code section 5024.1. CEQA guidelines define a significant cultural resource as "a resource listed in or eligible for the listing on the CRHR". A historical resource may be eligible for inclusion in the CRHR if it:

1. Is associated with events that made a significant contribution to the broad patters of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, represents the work of an important creative individual, or possess high artistic values; or
4. Has yielded, or may likely to yield, information important to prehistory or history.

The CRHR also requires that a resource possess integrity, which is defined as the ability of a property to convey its significance. The aspects of integrity are location, design, setting, materials, workmanship, feeling, and association. To determine which of these factors are most important will depend on the particular CRHR criterion under which the resource is considered eligible for listing.

Key Personnel

This report was prepared by Morgan Bender, M.A, RPA and Benjamin Scherzer, M.S., under the direct supervision of Curt Duke, MA, RPA. Ms. Bender holds a Bachelor of Arts degree in Anthropology/ Sociology and minored in Classical Studies from Agnes Scott College in Decatur, Georgia. She received her

MA in Anthropology California State University, Los Angeles. She meets the Secretary of Interior Standards for principal investigator, is RPA-certified and has over four years of experience in California archaeology. Ms. Bender acted as field technician and the laboratory director for the Project and assisted in artifact analysis.

Mr. Scherzer has worked in all phases of paleontology (archival research, field survey, excavation, laboratory analysis, construction monitoring) since 2006. Mr. Scherzer is a certified paleontologist for Riverside County. Mr. Scherzer holds a Master of Science degree in Earth Sciences with an emphasis in vertebrate paleontology from Montana State University, Bozeman, and a Bachelor of Arts degree in Geosciences and Math from Earlham College, Indiana. Mr. Scherzer has worked throughout southern California, Nevada, South Dakota, Utah, and Wyoming.

Edgar Alvarez (DUKE CRM) holds a Bachelor of Arts degree in Anthropology from California State University, Northridge and has five years of experience in California archaeology. Mr. Alvarez served as field technician and GPS/GIS specialist.

Mr. Duke is the Principal Archaeologist of DUKE CRM. Mr. Duke meets the professional qualifications of the Secretary of the Interior for prehistoric and historical archaeology; he is also a Registered Professional Archaeologist (RPA) who has worked in all phases of archaeology (archival research, field survey, testing and data recovery excavation, laboratory analysis, construction monitoring) since 1994. He is also listed on the County of Riverside's list of qualified archaeologists. Mr. Duke holds a Master of Arts degree in Anthropology with an emphasis in archaeology from California State University, Fullerton and a Bachelor of Arts degree in Anthropology from the University of California, Santa Cruz. Mr. Duke has worked throughout southern and Northern California and parts of Arizona and Nevada. Please see Appendix B for Mr. Duke's resume.

RESULTS

Records Search

Cultural Resources

The map data from the EIC records search indicates that there are two previously recorded cultural resources within ½ mile of the Project area. These resources are summarized below in Table 1. Additionally, On June 29, 2021, the NAHC responded with a negative result for tribal resources within the Project (See Appendix C). DUKE CRM did not conduct any tribal outreach.

Table 1. Previously Recorded Cultural Resources Within ½ Mile of the Project

Site No.	Age	Description	Distance
P-33-001848	Historic	Historic Debris	2,500 ft. east
P-33-015333	Historic	Leal Property	Project

Site P-33-015333 was recorded by Bai "Tom" Tang and Kelli Olgren-Leblond from December 2005 – August 2006 during an intensive survey. In addition to the pedestrian survey, the westernmost house was also evaluated. The survey found the westernmost building to be ineligible for NRHP, CRHR, or local designation (6Z).

Reports

Twenty-one (21) reports within ½ mile of the Project area are on file at the EIC. Of these, one is the Project area property. *Historical/Archaeological Resources Survey Report: The Leal Property Near the City of Norco, Riverside County, California* as a result of the intensive survey done by Tang et al. (2005). One of the historical buildings on the property was recorded, however no other cultural or historical resources were recorded within the Project.

Paleontological Resources

The paleontological records search by the WSC did not produce any documented fossil localities in the Project but did produce one fossil locality 2 miles north of the Project. In addition, the review of other online and published databases produced two additional fossil localities within 3 miles of the Project:

- Vanderham produced limb remains from *Camelops* (Western camel) at a depth of 11 ft approximately 2 miles north of the Project in young eolian deposits (*Qye*) (Appendix A);
- Corona East (UCRV 8601) produced remains of *Mammut* (mastodon), horse (*Equus*), western camel (*Camelops*), bison (*Bison*), rabbit/hare (lagomorphs), rodent (rodentia), lizard (sauria), and bony fish (Osteichthyes) approximately 3 miles southeast of the Project in deposits from the Pleistocene Epoch (UCMP, Jefferson 1991a, b);
- Corona (LACM 1207) produced remains of deer (*Odocoileus*) approximately 3 miles south of the Project in deposits from the Pleistocene Epoch (Jefferson 1991b)

The young alluvial-fan deposits (*Qyf*) underlying the western half of the Project are too young to have accumulated or preserved significant biological material and have a low potential for containing paleontological resources. The young eolian deposits (*Qye*) and very old axial channel deposits (*Qvoa*) in the eastern half of the Project have a high potential to contain paleontological resources, and ground disturbing activities in this area has the potential to impact these resources.

.

Field Survey

An intensive pedestrian survey was conducted on June 17 and 18, 2021. Ground visibility varied, with 0-15 percent visibility in the south half and 100% visibility in the north half where the soil has been turned (Figures 6 and 7). Visible sediment is 10YR 4/2 dark gray silt. Gravel density varied throughout site but on average was low. The land within the Project has been disturbed by activities such as cattle and farming (Figures 8 through 13). The three historic homes were photographed and documented as well as the non-historic buildings on the property. Other than the homes, no additional cultural resources were observed.

CRHR Evaluation

The subject property, which encompasses 160-acres, is today one of the last remaining dairy farms left in present-day Eastvale. The dairy, however, was established in the mid to late-1950s by John C. and Elizabeth Leal, who later passed the ranch onto their son Bradley Leal, who owned and operated it until his death in 2016. The Leal Ranch and Dairy was not one of the first or pioneer dairy operations in Corona in what later became Eastvale. Historic photographs and maps indicate that the subject property was cultivated with a walnut orchard in the late-1920s, which included a small residence, barn, and outbuildings. Between 1954-1967, the westernmost residence, dating to the late-1920s, was likely demolished and replaced with the current Spanish Revival style residence, which was the former home of John C. and Elizabeth Leal. On the far east of the main core buildings and structures within the ranch was a bunkhouse, which dates before 1954. Between 1967 and 1980, as well as other improvements.

In order for a property to be significant under any criteria, it must retain integrity. The National Park Service, along with state and local agencies, define integrity as retaining location, design, setting, materials, workmanship, feeling, and association. In applying the definition of integrity to the subject property, the following findings are made below:

Location – The subject property retains its original location, although the original function of the property has changed since it was settled in the 1920s from a cultivated orchard to a ranch and dairy.

Design – The original farmhouse was either demolished or rebuilt in its current configuration. Two other residences were built in subsequent years, both of which appear to retain their original architectural design, but the easternmost house is in very poor condition with structural deterioration, and it partially collapsed.

Setting – The setting of the property has changed since its initial development. Today, the property is surrounded by contemporary residential housing tracts and commercial shopping centers.

Materials- All three residences retain most of their original materials, although the westernmost residence may have been rebuilt with more contemporary materials, such as windows and doors.

Workmanship – The workmanship of the three residences is consistent with the post-World War popularity of California Ranch architecture in the "Spanish" or "Mediterranean" style. None of the residences display a high-level or workmanship or craftsmanship.

Feeling – The feeling of the original pre-1950s orchard and farm no longer exists, however, the property as a whole still looks and feels like a dairy and cattle ranch.

Association – The property's association with its original owner and occupant no longer exists. The property bears a strong association with post-1950s dairy operations in Eastvale.

In summary, the subject property does not appear to be eligible for the CRHR under Criterion 1 since it is not associated with a significant event or events in the History of Corona or Eastvale. Under CRHR Criterion 2, the subject property does not appear to be associated with a person or persons of significance in the history of Corona or Eastvale, however, Brad Leal, the former owner of the Leal Ranch, was a respected rancher, who served on numerous agricultural related committees and commissions locally, regionally, and statewide, and was a person of importance in Eastvale before and after its incorporation as a city. Under CRHR Criterion 3, as a whole, the extant residences and outbuildings remaining within the ranch do not appear to be significant examples of Spanish Revival or California Ranch style architecture. Finally, under Criterion 4, there is no evidence that the various properties within the ranch have the potential to provide "significant" archaeological data associated with early-day ranching, farming, dairying, given that most of the development on the property occurred in the late 1950s-1980s with early-day ranching, farming, dairying, given that most of the development on the property occurred between the 1950s-1980s. See Appendix C for the DPR 523 site record.

IMPACTS ANALYSIS AND RECOMMENDATIONS

DUKE CRM evaluated the proposed Project for impacts to cultural and paleontological resources according to CEQA. The records search and field survey identified one previously recorded cultural resource within the Leal Project area. The pedestrian survey did not yield significant cultural resources, this indicates a low sensitivity for prehistoric cultural resources and a low sensitivity for historic cultural resources. None of the three extant buildings are recommended CRHR-eligible or important cultural resources under CEQA. Based on the low sensitivity for cultural resources DUKE CRM recommends an archaeologist does not need to be present during ground disturbing activity. Therefore, any disturbance of native soils has a low potential to directly impact unique cultural resources according to CEQA. DUKE CRM does not recommend any further cultural resources efforts. However, if any cultural resources are discovered during grading and/or ground disturbance during construction an archaeologist shall be retained to assess the nature and significance of the discovery and make recommendations.

If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the NAHC, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials.

No paleontological resources were identified within the Project boundaries, but multiple fossil localities in similar deposits are documented nearby (within 3 miles). Ground disturbance in the eastern half of the Project area will impact high-sensitivity deposits (*Qye* and *Qvoa*) and has the potential to directly impact unique paleontological resources. This would result in a potentially significant impact to paleontological resources according to CEQA. Therefore, paleontological construction monitoring is recommended during ground disturbance in this area. This will mitigate the potential impact to a level that is less than significant for the purposes of CEQA.

Paleontological Monitoring- A paleontological monitor shall be present during ground disturbing activities in the eastern half of the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation).

1. The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols.
2. The paleontological monitor shall be present full-time during ground disturbance in the eastern half of the Project, including but not limited to grading, trenching, utilities, and off-site easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced.
3. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered.
4. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area.
5. In consultation with the qualified paleontologist the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared.
6. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately.
7. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, and removal of the find, removal of sediment from around the specimen (in the laboratory), research to

identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find.

APPENDIX A (CONFIDENTIAL)
Paleontological Record Searches

WESTERN SCIENCE CENTER

Duke CRM
Benjamin Scherzer
18 Technology Drive, Suite 103
Irvine, CA 92618

June 15, 2021

Dear Mr. Scherzer,

This letter presents the results of a record search conducted for the Leal MP Eastvale Project in Riverside County, California. The project site is located north of Limonite Avenue, south of 58th Street, west of Hamner Avenue, and east of Scholar Way in Section 24 of Township 2 South and Range 7 West on the *Corona North, CA* USGS 7.5 minute topographic quadrangles.

The geologic units underlying the project area are mapped entirely as Quaternary alluvial fan and channel deposits dating from the early Pleistocene to Holocene epochs (Morton, Gray, Bovard & Dawson, 2002). Pleistocene sedimentary units are considered to be of high paleontological sensitivity. The Western Science Center does not have localities within the project area or a one mile radius, but does have numerous localities throughout the region in similarly mapped sediments including one locality associated with the Vanderham Project that is less than two miles northeast of the Leal MP Eastvale Project area. The Vanderham Project locality produced a camleops specimen that indicates the alluvial units in the area are indeed Pleistocene in age.

Any fossils recovered from the Leal MP Eastvale Project area would be scientifically significant. Excavation activity associated with development of the area has the potential to impact the paleontologically sensitive Pleistocene units and it is the recommendation of the Western Science Center that a paleontological resource mitigation plan be put in place to monitor, salvage, and curate any recovered fossils associated with the current study area.

If you have any questions, or would like further information about the Vanderham Project, please feel free to contact me at dradford@westerncentermuseum.org

Sincerely,

Darla Radford
Collections Manager

Professional Experience

Ms. Bender attended Agnes Scott College in Decatur, Georgia where she obtained her BA in 2014 in Anthropology/ Sociology and minored in Classical Studies. During her time there, she studied abroad and traveled throughout Turkey where she visited many archaeological sites. Ms. Bender attended California State University, Los Angeles where she received her MA in Anthropology, emphasis in California Archaeology in 2019. Her thesis focused on tracking climatic shifts using crab and sea urchin remains from a Middle Holocene site on San Nicolas Island, California (CA-SNI-40). She has four years of professional experience as a staff archaeologist where she became a Registered Professional Archaeologist. During this time, she has monitored major infrastructure sites such as Metro and utility projects as well as private commercial and residential developments projects. While monitoring, she identifies historic and prehistoric resources and is cross trained in paleontology. Additionally, she prepares the necessary DPR and archaeological reports for these finds. She has also surveyed sites in Arizona and California. Ms. Bender partook in the Woolsey Fire reconnaissance work with Cardno and Southern California Edison. She has training and significant experience in faunal and shellfish analysis, and lithic identification.

Re: Leal MP (C-0362) Project, Riverside County

Dear Ms. Bender:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Department of Parks and Recreation (DPR) 523 Record

State of California — The Resources Agency
DEPARTMENT OF PARKS AND RECREATION

PRIMARY RECORD

Primary # _____
HRI # _____
Trinomial _____
NRHP Status Code: _____
Other Listings _____
Review Code ____ Reviewer _____ Date _____

 ***Resource Name or #:** Leal Ranch and Dairy

P1. Other Identifier: Leal Ranch and Dairy
***P2. Location:** ☐ **Not for Publication** ■ **Unrestricted** ***a. County:** Riverside
***b. USGS 7.5' Quadrangle**: Corona North, California 1967 and 2012 Portion of SE 1/4 of Section 24 Township 2 South Range 7 West
c. Address: 12740 58th Street **City:** Eastvale **Zip**: 92880
d. UTM:
e. Other Locational Data (APN #164030025**):** The ranch is bordered on the north by 58th Street, on the west by Scholar Way, on the east by Hammer Avenue, and on the south by Limonite Avenue.

***P3a. Description:** The property consists of a part of a former 160-acre ranch and dairy located in Eastvale, Riverside County, California. The ranch was acquired by John and Elizabeth Leal and later owned and managed by their son Brad Leal until his death in 2016. Besides a cow barn, Quonset hut, sheds, calving barns, pastures, cross-fencing, corrals, and other ranch related infrastructure, there are four single-family residences built from the 1950s through the 1980s. Three of the oldest residences are described in this record. The first house is the westernmost residence, which appears to have either replaced an older residence built in the late-1920s or the older residence was extensively remodeled when the Leal family acquired the ranch in the 1950s. The residence is characterized by a red clay barrel tile cross-gable roof, stucco exterior wall cladding, wood-sash and metal windows, French doors, an arcaded veranda along the building's south elevation, and shed roof verandas along the building's south elevation. The second residence lies to the east and is characterized by its irregular-shape created through numerous additions to the original residence. Like the westernmost house, the second residence features an intersecting gable roof, asphalt shingles atop the roof, brick walls covered with stucco and painted white, along with wood shingle sided exterior walls. The residence also features an arched brick entryway facing north, vertical board cladding above some of the gable ends, metal and aluminum casement and slider windows, replacement doors with security metal screens, shed-roof porches supported by 4" x 4" wood columns, a brick exterior chimney on the gable end, a leaded and stained-glass window to the left of the chimney, and a shed-roof veranda facing south towards the pastures (refer to Primary Record, Page 2 of 2).

***P3b. Resource Attributes:** HP33 – Ranch/Dairy
***P4. Resources Present:** ■ Building ■ Structure ☐ Object ☐ Site ☐ District ☐ Element of District

P5a. Photograph or Drawing (Photograph required for buildings, structures, and objects).

P5b. Description of Photo: View looking northeast at the westernmost residence.

***P6. Date Constructed/Age and Sources:** ■ Historic Circa 1950-1980.

***P7. Owner and Address:**

***P8. Recorded by:** Dana E. Supernowicz, Historic Resource Associates, 3142 Bird Rock Road, Pebble Beach, CA 93953.

***P9. Date Recorded:** July 2021

***P10. Type of Survey:** ■ Architectural
Describe: CEQA Evaluation

***P11. Report Citation:** Architectural Assessment Study of 12740 58th Street, Eastvale, Riverside County, California 92880. Prepared for Duke Cultural Resources Management, LLC, 18 Technology Drive, Suite 103, Irvine, CA 92618. Prepared by Historic Resource Associates, 3142 Bird Rock Road, Pebble Beach, CA 93953. July 2020.

***Attachments:** Building, Structure, and Object Record; Photograph Record

***P3a. Description: (Continued):**

Immediately to the east of the irregular-shaped residence is a third residence, a contemporary Spanish style residence reportedly built in the 1980s. Further to the east is what is referred to as the "bunkhouse." The bunkhouse is a simple rectangular-shaped, gabled-roof painted brick building with a detached chimney that appears to have once been part of the house. The grouting technique used on the brick masonry walls of the residence was designed to give it the appearance of adobe bricks. The gabled roof of the building is in very poor condition and is clad with wood shingles, with stucco used beneath the gable ends. The south elevation of the residence features a large, rectangular picture style window with a large wooden header. The west elevation of the residence once included a shed-roof porch supported by simple wood columns, but is now largely collapsed. The most unusual feature of the residence is a wrap-around metal-sash corner Modernist style window.

B1. Historic Name: Leal Ranch
B2. Common Name: Same as above
B3. Original Use: Walnut Orchard and Farm/Cattle Ranch/Dairy **B4. Present Use:** Ranch
***B5. Architectural Style:** California Ranch/Mediterranean/Vernacular
***B6. Construction History:** Based upon oral history and historic aerial photographs, the Leal Ranch began as a cultivated walnut orchard during the 1920s through the late-1940s. By the late-1950s, the farm transitioned to a dairy and cattle ranch after it was acquired by the Leal family. The westernmost house appears to have been the first residence constructed within the 160-acre farm, although it may have been added on to and remodeled when the Leals purchased the property since historic topographic maps suggest it started as a simple rectangle. Besides one primary residence, there was once a small shed to its east and another barn or shed further east. Later, a cow barn was built near 58th Street at the entrance to the ranch. By 1959, a second residence had been constructed to the east of the original farm residence, and during the 1970s, yet another house was built further to the east. By the 1980s, a more contemporary or modern residence was built, that in later years had multiple additions. Besides the residences, development on the property included a Quonset hut, cross-fencing, corrals, wells, pastures, cultivated fields, and sheds where feed was stored and dairy cows were raised.
***B7. Moved?** ■ No ☐ Yes ☐ Unknown **Date:** **Original Location:**
***B8. Related Features:** Outbuildings, a Quonset hut, barn, sheds, corrals, wells, pastures, and cross-fencing.
B9a. Architect: Undetermined **B9b. Builder:** Undetermined
***B10. Significance: Theme:** Agriculture/Ranching/Dairies **Area:** Eastvale **Period of Significance:** 1950s-1974
Property Type: Farm/Ranch/Dairy **Applicable Criteria:** CRHR 1, 2, 3, and 4

The historic context of the subject parcel is largely tied to the development of Corona and the area that later became part of Eastvale during the 1950s. Eastvale's history is associated with its neighbors - Corona, Norco, Chino, and Ontario. For at least the last 176 years, the land now part of Eastvale was used for ranching and farming, particularly dairies. It wasn't until 1893, that Riverside County was created. In the minutes of one of the first meetings of the Riverside County Board of Commissioners, "East Vale" is listed as one of 53 school districts. During the late-1920s much of Eastvale, like other parts of Riverside County, featured walnut orchards and citrus groves intermixed with farms and ranches (Netronline Website 2021). By the 1950s, Los Angeles' population had expanded into outlying farm lands and dairymen began moving their operations into the valley. Dairies in Eastvale, the Chino Valley, and Ontario were owned and primarily operated by Dutch and Portuguese (Azorean) families. In the spring of 2007, five individuals were tasked by residents to explore cityhood for Eastvale. These five residents formed the Eastvale Incorporation Committee. Today, Eastvale is still tied to Corona and Norco as a member of the Corona-Norco Unified School District and shares a zip code with the City of Corona (92880) and the City of Jurupa Valley (91752). Until incorporation, Eastvale was a community residing in an unincorporated area of Western Riverside County (City of Eastvale Website. "History." 2021). Refer to BSO, Page 2 of 18.

B13. Remarks:
B14. Evaluator: Dana E. Supernowicz, Architectural Historian, 3142 Bird Rock Road, Pebble Beach, CA 93953
Date of Evaluation: July 2020

Aerial Photograph (Google Earth 2021)

(This space reserved for official comments.)

***B10. Significance (Continued):**

Figure 1: 3D Aerial view of the former Leal Ranch (Google Earth 2021).

Figure 2: 3D Aerial view looking north at the main buildings, structures, and objects within the former Leal Ranch and Dairy. The three black boxes represent the evaluated residences in the ranch built from the 1950s-1970s.

***B10. Significance (Continued):**

Figure 3: Street view of the entrance to the Leal Ranch from 58th Streeet.

The Leal family are of Portuguese descent, and Portuguese immigrants began settling in California in the mid-1800s with a dream to build a new life for their families and to escape the restrictions of the old world that limited their opportunities. With varied skills and little education, they were determined to improve their quality of life. A number of Portuguese Americans have been prominent in contributing to the development of American culture and society. Benjamin Cardoza, the Supreme Court Justice (1932-1938), John Dos Passos (1896-1970), the author of the famous USA trilogy and other works on American society, and John Phillip Sousa (1854-1932), the composer of many of America's best-loved marching songs, were men of Portuguese heritage who played important roles in the history of the United States. Just as important, but rarely told, is the story of the everyday immigrant, such as those who established farms and dairies throughout parts of Riverside County during the first few decades the twentieth century (Portuguese Historical Museum 2016).

The area that was once part of Corona and later became Eastvale attracted a wide range of immigrants, many of whom came from the Azores, Portugal, as well as the Netherlands. Most came for economic reasons and particularly the lands surrounding Eastvale that were conducive to dairy operations. Portuguese immigrant dairy owners and workers had a large presence in Eastvale and many reportedly settled in and around Chandler Street, between Archibald and Hellman Avenues, an area that had been subdivided before 1915 as part of the Persimmon Acres Tract. Over time, people constructed houses afterwhich the area was common referred to as "Portugee Village" (Meissner and Johnson 2013: 119-120). Around 1900, there were an estimated 80 dairies in what is now Eastvale with about 90,000 cows. Beginning in the late-twentieth century and early twenty-first century, Eastvale dairy farmers began a mass migration to other parts of California and other states to escape urban sprawl, stricter regulations, and aging dairy machinery (Stockley 2013; City of Eastvale Website. "Leal Master Plan." 2021). By the time the city was incorporated in 2010, nine dairies remained. By 2020, there was reportedly only one dairy still operating in Eastvale owned by the David Downey (Press-Enterprise Website 2020).

***B10. Significance (Continued):**

In 1881, the lands that were later acquired by the Leal family and other Portuguese ranchers had not as yet been subdivided into smaller parcels (Figure 4). The Leal Ranch was located just south of the border of San Bernardino County in Section 24.

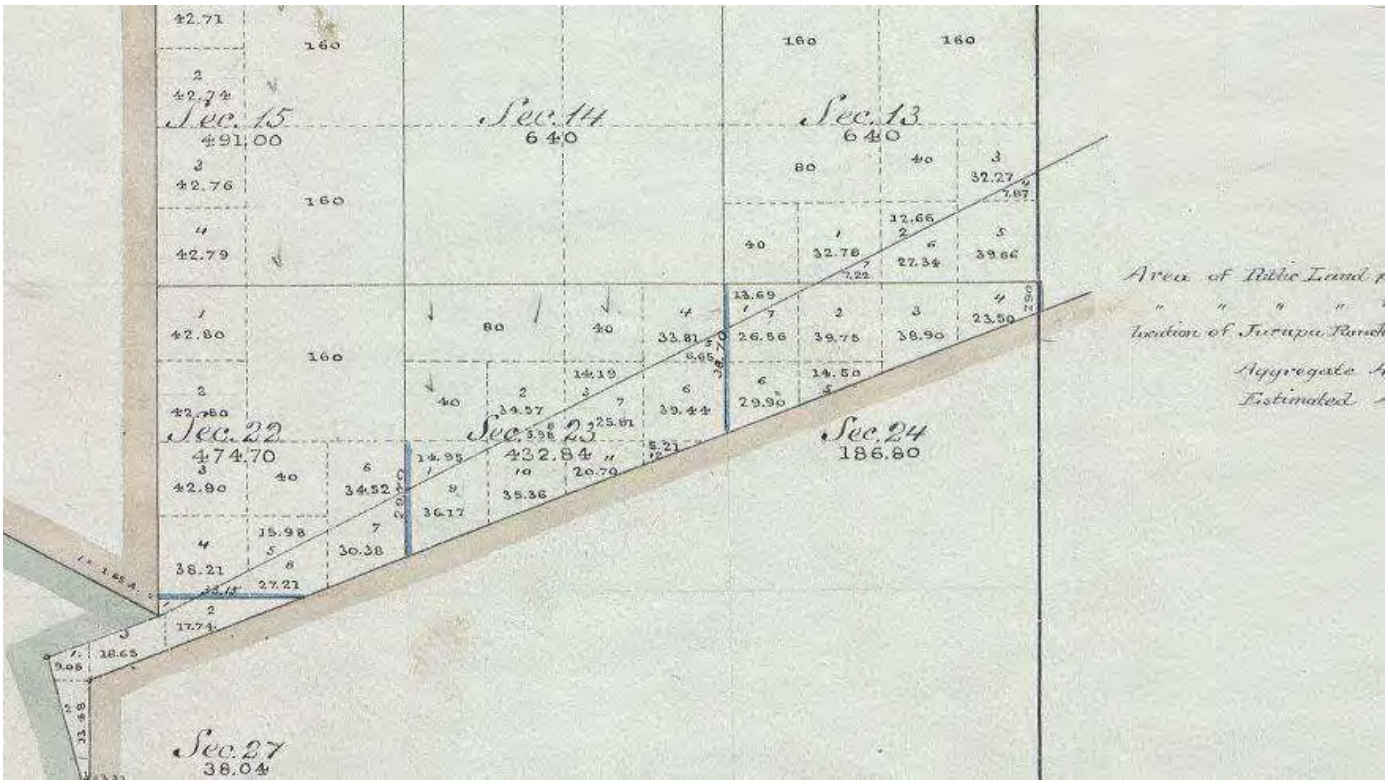

Figure 4: General Land Office Survey Plat Map 1881 (T2S, R7E).

While the Leal Ranch appears to have been established in the mid to late-1950s by John and Elizabeth (nee Kruidhof) Leal, and later owned and operated by their son Bradley Leal, the 160-acre parcel appears to have been previously cultivated as a walnut orchard with a single residence and a small barn or shed (Ancestry.com Website 2021; Netronline Website 2021). Elizabeth Leal, whose parent were from the Netherlands, was born on March 10, 1932 and died on July 22, 2009, while her husband, John C. Leal was born in 1923 and died in 1978. John and Elizabeth were married in Los Angeles in 1949, and had four children: Sonia, Bradley, Brenda, and Craig. The various residences within the ranch were built by the Leal family and occupied by different family member from the 1950s through the 2010s. Bradley was apparently the primary heir to the ranch.

On November 11, 2016, Bradley William Leal passed away. According to his obituary in 2016, Brad was survived by his brother, Craig Leal of Corona; sister, Brenda Martin of Porterville; and sister, Sonia Leal of Chino. Besides his dairy business for over 40 years, Bradley was chairman on multiple boards in the dairy industry, including the Southern Dairyman's Association, Southern California Producers Council, and "Land O Lakes." He was on the Board of Directors for the Southern California Environmental Foundation, Chairman for the Leadership Council, Nominating Committee, Leader Development Committee, Credentials Committee, and the "Policy and Resolutions" Committee. On a state level, Brad was appointed to the State of California Department of Food and Agriculture Producers Review Board. He also acted as a lobbyist in the House of Congress on Capitol Hill, Washington DC. advocating special interests for the Agricultural Industry (Legacy Website 2016).

***B10. Significance (Continued):**

A review of historic topographic maps and aerial photographs helped illustrate the evolution of the Leal Ranch. As previously described the ranch evolved in the second decade of the twentieth century as a small farm producing walnuts. The farm remained largely intact through the early 1950s, with the main residence on the left adjacent to an outbuilding on the right, perhaps a detached garage, a barn to the north still intact, and to the right of another residence referred to as the "bunkhouse" (Figure 5). By 1967, the westernmost residence (Figure 6) was enlarged or entirely rebuilt, creating an "L" shaped residence, the bunkhouse to the east remained intact, and other outbuildings had been constructed.

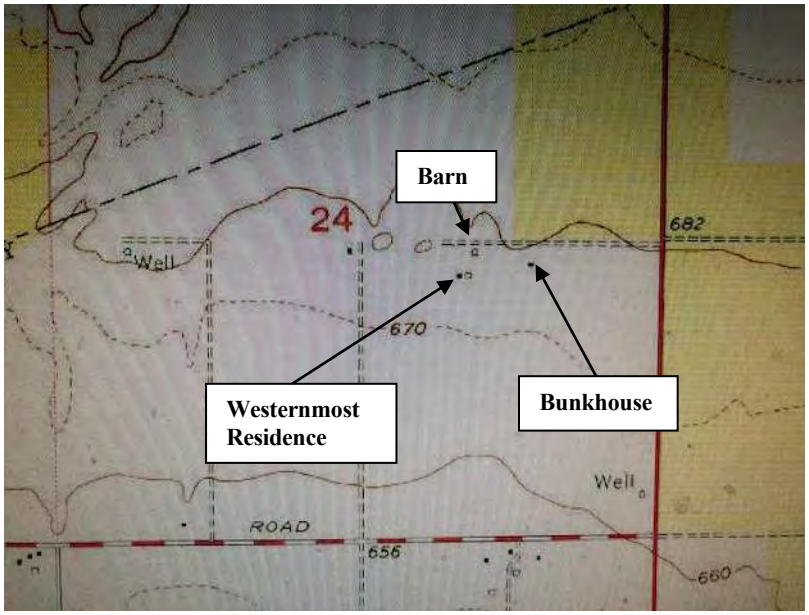

Figure 5: USGS 7.5' Corona North, CA Topographic Map, 1954.

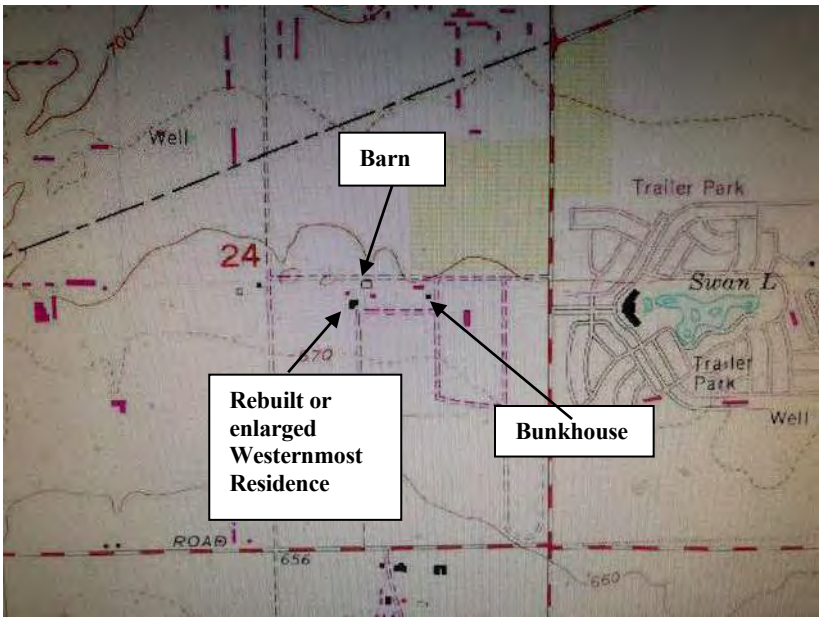

Figure 6: USGS 7.5' Corona North, CA Topographic Map, 1967.

***B10. Significance (Continued):**

REGULATORY AND EVALUATION FRAMEWORK

The regulatory framework for this historic resource study and the evaluation lies within the guidelines imposed for the California Environmental Quality Act (CEQA) and the California Register of Historic Resources (CRHR) under Public Resources Code section 5024.1. CEQA guidelines define a significant cultural resource as "a resource listed in or eligible for listing on the CRHR. A historical resource may be eligible for inclusion in the CRHR if it:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important to prehistory or history.

Even if a resource is not listed in, or determined eligible for listing in the CRHR, the lead agency may consider the resource to be an "historical resource" for the purposes of CEQA provided that the lead agency determination is supported by substantial evidence (CEQA Guidelines 14 CCR 15064.5). According to the state guidelines, a project with an effect that may cause a substantial adverse change in the significance of a historical resource or a unique archaeological resource is a project that may have a significant effect on the environment (14 CCR 15064.5[b]). CEQA further states that a substantial adverse change in the significance of a resource means the physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired. Actions that would materially impair the significance of a historical resource are any actions that would demolish or adversely alter those physical characteristics of a historical resource that convey its significance and qualify it for inclusion in the CRHR or in a local register or survey that meet the requirements of PRC 5020.1(k) and 5024.1(g).

STATEMENT OF SIGNIFICANCE

The subject property, which encompasses 160 acres, is today one of the last remaining dairy farms left in present-day Eastvale. The dairy, however, was established in the mid to late-1950s by John C. and Elizabeth Leal, who later passed the ranch onto their son Bradley Leal, who owned and operated it until his death in 2016. The Leal Ranch and Dairy was not one of the first or pioneer dairy operations in Corona in what later became Eastvale. Historic photographs and maps indicate that the subject property was cultivated with a walnut orchard in the late-1920s, which included a small residence, barn, and outbuildings. Between 1954 and 1967, the westernmost residence, dating to the late-1920s, was likely demolished and replaced with the current Spanish Revival style residence, which was the former home of John C. and Elizabeth Leal. On the far east of the main core of buildings and structures within the ranch was a bunkhouse, which dates before 1954. Between 1967 and 1980, two other residential California Ranch style houses were built between the 1950s residence and the bunkhouse, as well as other improvements.

In order for a property to be significant under any criteria, it must retain integrity. The National Park Service, along with state and local agencies, define integrity. Integrity is defined as retaining location, design, setting, materials, workmanship, feeling, and association. In applying the definition of integrity to the subject property, the following findings are made below:

Location - The subject property retains its original location, although the original function of the property has changed since it was settled in the 1920s from a cultivated orchard to a ranch and dairy.

Design - The original farm house was either demolished or rebuilt in its current configuration. Two other residences were built in subsequent years, both of which appear to retain their original architectural design, but the easternmost house is in very poor condition with structural deterioration and is partially collapsed.

***B10. Significance (Continued):**

Setting - The setting of the property has changed since its initial development. Today, the property is surrounded by contemporary residential housing tracts and commercial shopping centers.

Materials - All three residences retain most of their original materials, although the westernmost residence may have been rebuilt with more contemporary materials, such as windows and doors.

Workmanship - The workmanship of the three residences is consistent with the post-World War popularity of California Ranch architecture in the "Spanish" or "Mediterranean" style. None of the residences display a high-level or workmanship or craftsmanship.

Feeling - The feeling of the original pre-1950s orchard and farm no longer exists, however, the property as a whole still looks and feels like a dairy and cattle ranch.

Association - The property's association with its original owner and occupant no longer exists. The property bears a strong association with post-1950s dairy operations in Eastvale.

APPLICATION OF THE SIGNIFICANCE CRITERIA

In summary, the subject property does not appear to be eligible for the CRHR under Criterion 1, since it is not associated with a significant event or events in the history of Corona or Eastvale Under CRHR Criterion 2, the subject property does not appear to be associated with a person or persons of significance in the history of Corona or Eastvale, however, Brad Leal, the former owner of the Leal Ranch was a respected rancher, who served on numerous agricultural related committees and commissions locally, regionally, and statewide, and was a person of importance in Eastvale before and after its incorporation as a city. Under CRHR Criterion 3, as a whole, the extant residences and outbuildings remaining within the ranch lack integrity and do not appear to be significant examples of Spanish Revival or California Ranch style architecture. Finally, under CRHR Criterion 4, there is no evidence that the various properties within the ranch have the potential to provide "significant" archaeological data associated with early-day ranching, farming, dairying, given that most of the development on the property occurred in the late-1950s-1980s.

Subject: ***Preliminary Geotechnical Evaluation Including Near Surface Organic Content for the Proposed Approximately 160-Acre "Leal" Property, City of Eastvale, California***

In accordance with your request, LGC Geotechnical, Inc. has performed a geotechnical evaluation including near surface organic content for the proposed approximate 160-acre "Leal" property located southwest of the intersection of Hamner Avenue and 58th Street in the City of Eastvale, California. This report summarizes the results of our background review, subsurface exploration, and geotechnical analyses of the data collected, and presents our findings, conclusions, and preliminary recommendations for the proposed residential project.

If you should have any questions regarding this report, please do not hesitate to contact our office. We appreciate this opportunity to be of service.

Respectfully,

LGC Geotechnical, Inc.

1.0 INTRODUCTION

1.1 Purpose and Scope of Services

This report presents the results of our geotechnical evaluation including near surface organic content for the proposed approximately 160-acre "Leal" property in the City of Eastvale, California (see Site Location Map, Figure 1). The purpose of our work was to collect subsurface data in order to prepare a geotechnical report providing recommendations for design and construction of the proposed project. Our scope of services included:

- Review of pertinent readily available geotechnical information and geologic maps (Appendix A).
- Subsurface investigation including excavation, sampling, and logging of ten small-diameter hollow stem borings.
- Excavation of 10 exploratory geotechnical trenches throughout the site to aid in estimating the depth of required removals during grading and assist in characterizing the near surface soils.
- Excavation of 25 shallow trenches to assess the organic content of near surface "soils".
- Laboratory testing of representative samples obtained during our subsurface investigation (Appendix C).
- Geotechnical analysis and evaluation of the data obtained, including:
  - Suitability of the site for the proposed development from a geotechnical standpoint;
  - Description of the site geology, and subsurface soil and groundwater conditions;
  - Assessment of the organic content of near surface "soils" including recommendations for offsite organic export and/or mixing;
  - Evaluation of the seismic conditions at the site, including seismic design criteria based on the 2019 California Building Code (CBC); and
  - Recommendations for remedial grading operations and site preparation.
- Preparation of this report presenting our findings, conclusions and recommendations with respect to the proposed site development.

1.2 Existing Site Conditions and Proposed Improvements

The square shaped site is approximately 160 acres in size with minor relief. The site is composed of four adjacent 40-acre parcels, and is bounded to the north by 58th street, the south by Limonite Avenue, the west by Scholar Way, and to the East by Hamner Avenue. The northern portion of the site is a former dairy that has been inactive for several years, while the south has remained as open pasture for decades. A review of historic aerial photographs suggests the site has been used as a dairy or agricultural farm dating back to the earliest available photos in 1938.

As of the date of this report, neither a conceptual plan nor grading plan was available. It is our understanding that the site will most likely consist of residential units, parks and associated street improvements and underground utilities. We expect the proposed residential development will be at-grade with relatively light building loads (column and wall loads assumed to be a maximum of approximately 30 kips and 3 kips per lineal foot, respectively). A preliminary grading plan was not available at this time either.

The recommendations provided herein are based upon the estimated structural loading and expected layout information above. We understand that the project plans are currently being developed at this time; LGC Geotechnical should be provided with updated project plans and any changes to the assumed structural loads when they become available, in order to either confirm or modify the recommendations provided herein.

1.3 Subsurface Evaluation

LGC Geotechnical performed a subsurface geotechnical evaluation of the site consisting of the excavation of 10 hollow-stem auger borings, 2 infiltration borings, 10 exploratory geotechnical trenches with organic testing, and 25 near surface organic trenches.

10 hollow-stem borings (HS-1 through HS-10) were drilled to depths ranging from approximately 25 to 50 feet below existing grade. An LGC Geotechnical representative observed the drilling operations, logged the borings, and collected soil samples for laboratory testing. The borings were excavated using a track-mounted drill rig equipped with 8-inch-diameter hollow-stem augers. Driven soil samples were collected by means of the Standard Penetration Test (SPT) and Modified California Drive (MCD) sampler generally obtained at 2.5 to 5-foot vertical increments. The MCD is a split-barrel sampler with a tapered cutting tip and lined with a series of 1-inch-tall brass rings. The SPT sampler and MCD sampler were driven using a 140-pound automatic hammer falling 30 inches to advance the sampler a total depth of 18 inches. The raw blow counts for each 6-inch increment of penetration were recorded on the boring logs. Bulk samples were also collected and logged at select depths for laboratory testing. At the completion of drilling, the borings were backfilled with the native soil cuttings and tamped. Some settlement of the backfill soils may occur over time.

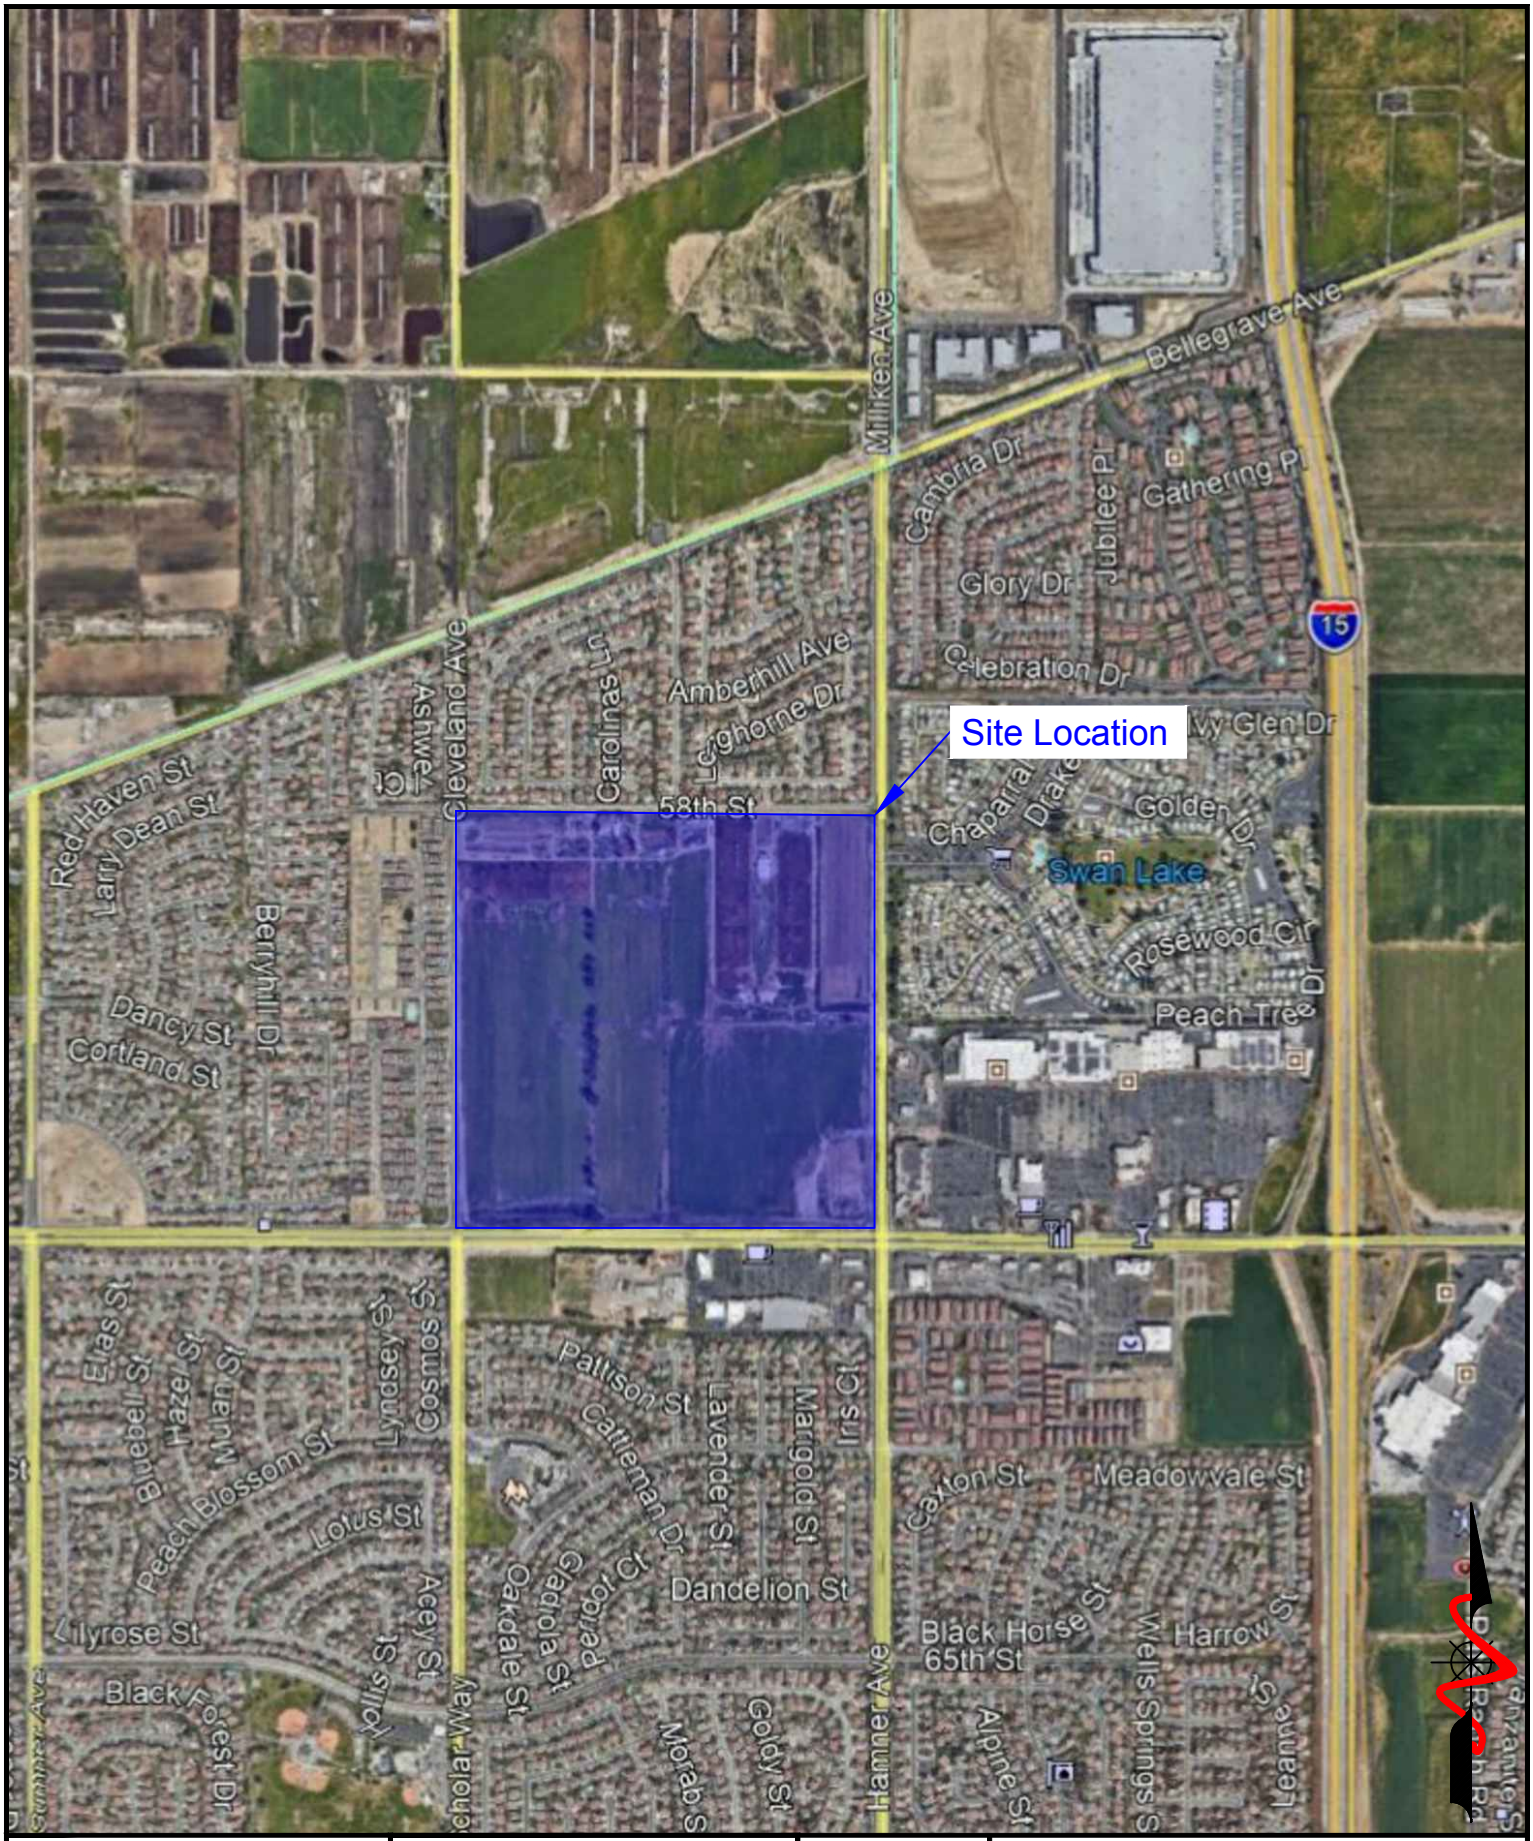
Ten exploratory geotechnical trenches (TP-1 through TP-10) were excavated utilizing a standard backhoe in order to estimate removal depths and obtain samples for laboratory testing. A staff geologist observed the operation, logged the geotechnical trenches and collected the soil samples. Each exploratory geotechnical trench was also logged and sampled for the organic content of the near surface "soils." The exploratory geotechnical trenches were subsequently backfilled with tamped native soils.

Twenty-five additional shallow trenches (T-1 through T-25) were excavated utilizing a standard backhoe in order to assess the organic content of near surface "soils". Samples were collected at various depths within each trench. In general, based on visual observations, 2 layers of soil were identified including 1) near surface heavily tainted organic "soils" and 2) "clean" (organic free) soils. In some areas there was a "transitional" layer in between these two. The shallow trenches were subsequently backfilled and tamped with native soils. There are 4 areas identified as having thick zones of buried or stockpiled high-organic material. These 4 areas have been outlined on our Geotechnical Map (Figure 2).

LGC Geotechnical, Inc. was asked to avoid the northwest corner of the property during our evaluation as this area is currently occupied by a local farmer. This area was not explored during our evaluation. The boundary for this area is shown on the Geotechnical Map (Figure 2).

The approximate locations of borings and trenches are shown on the Geotechnical Map (Figure

2). Boring and geotechnical trench logs are presented in Appendix B. The Encumbrance Map prepared by Hunsaker & Associates (H&A, 2021) was utilized as a base map for our Geotechnical Map.



1.4 Laboratory Testing

Laboratory testing was performed on representative soil samples obtained from our subsurface evaluation. Laboratory testing included in-situ moisture and density tests, fines content/sieve analysis, Atterberg Limits (liquid limit and plastic limits), consolidation, collapse/swell potential, expansion index, laboratory compaction and corrosion (sulfate and chloride). Additionally, the near surface organic content trench samples were tested for characterization of the organic content (ASTM 2974).

The following is a summary of the laboratory test results.

- Dry density of the samples collected ranged from approximately 90 pounds per cubic foot (pcf) to 122 pcf, with an average of approximately 109 pcf. Field moisture contents ranged from approximately 1.1 percent to 32.0 percent, with an average of approximately 12 percent.
- One sample tested for fines content indicated a fines content (passing No. 200 sieve) of 83 percent. According to the Unified Soils Classification System (USCS), the tested sample is classified as "fine grained" soil.
- One Atterberg Limit (liquid limit and plastic limit) test was performed. The result indicated a Plasticity Index value of 11.
- One consolidation test was performed. The deformation versus vertical stress plot is provided in Appendix C.
- One swell/collapse test was performed. The plots are provided in Appendix C.
- One Expansion Index (EI) test was performed. The result indicates an EI value of 11, corresponding to "Very Low" expansion potential.
- One laboratory compaction test of a near surface sample indicated maximum dry density of 125.0 pcf with an optimum moisture content of 8.5 percent.
- Corrosion testing indicated soluble sulfate content of 78 parts per million (ppm) and chloride content of 100 ppm.
- The organic content of the samples ranged from approximately 0.1 to 33.2 percent.

A summary of the results is presented in Appendix C. The moisture and dry density test results are presented on the boring logs in Appendix B.

FIGURE 1
Site Location Map

2.0 GEOTECHNICAL CONDITIONS

2.1 Regional Geology

The subject site is located south of the San Gabriel Mountains within the broad alluvial plain of the Santa Ana River Basin, within the Peninsular Ranges Geomorphic Province. Specifically, the site is located within the northern portion of the Perris Block, a geologic zone consisting of granitics overlain by sedimentary deposits that are bounded by active faults including the northwest-trending Whittier-Elsinore Fault Zone at the southwest and the northwest-trending San Jacinto Fault Zone at the northeast (USGS, 2002). The roughly rectangular Perris Block is transected by the southwest-trending Santa Ana River that passes approximately 2 miles south of the subject site.

Regional geologic mapping and local topographic expressions do not indicate the presence of large-scale landslides within or adjacent to the project area.

2.2 Site Geology and Generalized Subsurface Conditions

Based on regional mapping (USGS, 2002 & 2003), the subject site is underlain by Holocene- to Pleistocene-age alluvial fan deposits (Qyf), minor amounts of similar age eolian (wind-blown) deposits (Qye), and older early Pleistocene age alluvial channel deposits at depth. For this report however, alluvial and eolian deposits have been undifferentiated as general Quaternary deposits. As indicated in our field explorations, soils generally consisted of medium dense to dense sands and silty sands with thinner layers of stiff to very stiff fine-grained soils (i.e., silts and clays) to the maximum explored depth of approximately 50 feet below existing grade. Descriptions of the subsurface conditions are presented on the boring and geotechnical trench logs located in Appendix B. A brief description of the site geologic units can be found below.

2.3 Groundwater

Groundwater was not encountered in any of our borings. Groundwater levels recorded in the area by California Department of Water Resources are at depths greater than 100 feet below the ground surface (CDWR, 2021).

In general, groundwater levels fluctuate with the seasons and local zones of perched groundwater may be present within the near-surface deposits due to local seepage or during rainy seasons. Groundwater conditions below the site may be variable, depending on numerous factors including seasonal rainfall, local irrigation and groundwater pumping, among others.

2.4 Field Infiltration Testing

Two field percolation tests were performed on Borings I-1 and I-2 to approximate depths of 10 feet below existing grade, respectively. Estimation of infiltration rates was performed in general accordance with guidelines set forth by the Riverside County Flood Control (2011). In general, a 3-inch diameter perforated PVC pipe was placed in each borehole to be tested and

the annulus was backfilled with gravel, including placement of about 2 inches of gravel at the bottom of the borehole. The infiltration wells were pre-soaked prior to testing. Based on the County of Riverside methodology, the calculated (observed) infiltration rates are provided in Table 1 below. These infiltration rates do not include any factor of safety (to be determined by the project Civil Engineer); however, they have been normalized to correct the 3-D flow that occurs within the field test to 1-D flow out of the bottom of the boring only. The locations and depths of the infiltration tests were coordinated with the civil engineer. The approximate infiltration test locations are shown on the Geotechnical Map (Figure 2) and the infiltration test data is included in Appendix D and summarized below.

TABLE 1

Summary of Infiltration Testing

Infiltration Test Location	Infiltration Test Depth Below Existing Grade (ft)	Observed Infiltration Rate* (Inch/Hr.)
I-1	10	3.8
I-2	10	0.6

*Normalized to One-Dimensional Flow, does not include any Factor of Safety.

It should be emphasized that infiltration test results are only representative of the location and depth where they are performed. Varying subsurface conditions may exist outside of the test locations which could alter the calculated infiltration rates indicated above. Infiltration tests are performed using relatively clean water free of particulates, silt, etc. Refer to Section 4.8 for subsurface water infiltration recommendations.

2.5 Faulting and Seismic Hazards

Prompted by damaging earthquakes in California, State legislation and policies concerning the classification and land-use criteria associated with faults have been developed. Their purpose was to prevent the construction of urban developments across the trace of active faults, resulting in the Alquist-Priolo Earthquake Fault Zoning Act. Earthquake Fault Zones have been delineated along the traces of active faults within California. Where developments for human occupation are proposed within these zones, the State requires detailed fault evaluations be performed so that engineering geologists can mitigate the hazards associated with active faulting by identifying the location of active faults and allowing for a setback from zones of previous ground rupture.

The subject site is not located within an Alquist-Priolo Earthquake Fault Zone and no faults were identified on the site during our site evaluation. The possibility of damage due to ground rupture is considered low since no active faults are known to cross the site.

Secondary effects of seismic shaking resulting from large earthquakes on the major faults in the Southern California region, which may affect the site, include ground lurching, shallow ground rupture, soil liquefaction and dynamic settlement. These secondary effects of seismic shaking

are a possibility throughout the Southern California region and are dependent on the distance between the site and causative fault and the onsite geology. Some of the major active nearby faults that could produce these secondary effects include the Chino-Central, Elsinore, Cucamonga and San Andreas Faults, among others (CGS, 2018). A discussion of these secondary effects is provided in the following sections.

2.5.1 Liquefaction and Dynamic Settlement

Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to a fluid when subject to high-intensity ground shaking. Liquefaction occurs when three general conditions coexist: 1) shallow groundwater; 2) low density non-cohesive (granular) soils; and 3) high-intensity ground motion. Studies indicate that loose, saturated, near-surface, cohesionless soils exhibit the highest liquefaction potential, while dry, dense, cohesionless soils, and cohesive soils exhibit low to negligible liquefaction potential. In general, cohesive soils are not considered susceptible to liquefaction. Effects of liquefaction on level ground include settlement, sand boils, and bearing capacity failures below structures. Furthermore, dynamic settlement of dry sands can occur as the sand particles tend to settle and densify as a result of a seismic event.

Based on our review of the City of Eastvale General Plan (CE, 2012), the subject site is located in an area of "High" liquefaction susceptibility based only on soil type (sediments being less than 10,000 years old and unconsolidated). Site soils are not generally susceptible to liquefaction due to a lack of groundwater in the upper 50 feet. However, isolated layers may be susceptible to dry sand seismic settlement. Seismically induced dry sand settlements were estimated by the procedures outlined by Pradel (Pradel, 1998) using the PGA_M per the 2019 CBC and a moment magnitude of 6.71 (USGS, 2014). Based on the data obtained from our field evaluation, seismic settlement due to dry sands is estimated to be on the order of about 0.5-inch or less. Differential settlement may be estimated as half of the total settlement over a horizontal span of 40 feet.

2.5.2 Lateral Spreading

Lateral spreading is a type of liquefaction induced ground failure associated with the lateral displacement of surficial blocks of sediment resulting from liquefaction in a subsurface layer. Once liquefaction transforms the subsurface layer into a fluid mass, gravity plus the earthquake inertial forces may cause the mass to move downslope towards a free face (such as a river channel or an embankment). Lateral spreading may cause large horizontal displacements and such movement typically damages pipelines, utilities, bridges, and structures.

Due to the depth to groundwater, low potential for liquefaction and lack of nearby "free face" conditions, the potential for lateral spreading is considered extremely low.

2.6 Seismic Design Criteria

The site seismic characteristics were evaluated per the guidelines set forth in Chapter 16, Section 1613 of the 2019 California Building Code (CBC) and applicable portions of ASCE 7-16 which has been adopted by the CBC. **Please note that the following seismic parameters are only applicable for code-based acceleration response spectra and are not applicable for where site-specific ground motion procedures are required by ASCE 7-16.** Representative site coordinates of latitude 33.975696 degrees north and longitude -117.566832 degrees west were utilized in our analyses. The maximum considered earthquake (MCE) spectral response accelerations (S_{MS} and S_{M1}) and adjusted design spectral response acceleration parameters (S_{DS} and S_{D1}) for Site Class D are provided in Table 1 on the following page. Since site soils are Site Class D, additional adjustments are required to code acceleration response spectrums as outlined below and provided in ASCE 7-16. The structural designer should contact the geotechnical consultant if structural conditions (e.g., number of stories, seismically isolated structures, etc.) require site-specific ground motions.

A deaggregation of the PGA based on a 2,475-year average return period (MCE) indicates that an earthquake magnitude of 6.71 at a distance of approximately 14.03 km from the site would contribute the most to this ground motion. A deaggregation of the PGA based on a 475-year average return period (Design Earthquake) indicates that an earthquake magnitude of 6.7 at a distance of approximately 17.24 km from the site would contribute the most to this ground motion (USGS, 2014).

Section 1803.5.12 of the 2019 CBC (per Section 11.8.3 of ASCE 7) states that the maximum considered earthquake geometric mean (MCE_G) Peak Ground Acceleration (PGA) should be used for liquefaction potential. The PGA_M for the site is equal to 0.74g (SEAOC, 2021).

TABLE 2

Seismic Design Parameters

Selected Parameters from 2019 CBC, Section 1613 - Earthquake Loads	Seismic Design Values	Notes/Exceptions
Distance to applicable faults classifies the site as a "Near-Fault" site.		Section 11.4.1 of ASCE 7
Site Class	D*	Chapter 20 of ASCE 7
Ss (Risk-Targeted Spectral Acceleration for Short Periods)	1.63g	From SEAOC, 2021
S_1 (Risk-Targeted Spectral Accelerations for 1-Second Periods)	0.586g	From SEAOC, 2021
F_a (per Table 1613.2.3(1))	1.0	For Simplified Design Procedure of Section 12.14 of ASCE 7, F_a shall be taken as 1.4 (Section 12.14.8.1)
F_v (per Table 1613.2.3(2))	1.714	Value is only applicable per requirements/exceptions per Section 11.4.8 of ASCE 7
S_{MS} for Site Class D [Note: $S_{MS} = F_aS_S$]	1.63g	-
S_{M1} for Site Class D [Note: $S_{M1} = F_vS_1$]	1.004g	Value is only applicable per requirements/exceptions per Section 11.4.8 of ASCE 7
S_{DS} for Site Class D [Note: $S_{DS} = (^2/_3)S_{MS}$]	1.087g	-
S_{D1} for Site Class D [Note: $S_{D1} = (^2/_3)S_{M1}$]	0.669g	Value is only applicable per requirements/exceptions per Section 11.4.8 of ASCE 7
C_{RS} (Mapped Risk Coefficient at 0.2 sec)	0.941	ASCE 7 Chapter 22
C_{R1} (Mapped Risk Coefficient at 1 sec)	0.918	ASCE 7 Chapter 22
*Since site soils are Site Class D and S_1 is greater than or equal to 0.2, the seismic response coefficient Cs is determined by Eq. 12.8-2 for values of $T \leq 1.5T_s$ and taken equal to 1.5 times the value calculated in accordance with either Eq. 12.8-3 for $T_L \geq T > T_s$, or Eq. 12.8-4 for $T > T_L$. Refer to ASCE 7-16.		

2.7 Organic Rich Soils

Approximately 60 bag soil samples were collected to determine their organic content (based on ASTM 2974). The organic content of the samples ranged from approximately 0.1 to 33.2 percent. In general, the organic content is higher near existing grade and decreases with depth. Table 6 (Appendix C) summarizes the measured organic content and also notes where the

organic content was estimated to be greater than 10% based on observation.

For most of the site there is a distinct contact between high organic content (greater than 5%) and low organic content (less than 2%) at the 1-foot depth. This upper 1-foot of soil across the site requires removal and disposal off-site due to high organic content (greater than 5.0 percent). In a few areas, there is a "transition zone" from 1-foot below the ground surface to approximately 2 feet below the ground surface where the organic content is greater than 2%. Below approximately 2 feet on average is generally free of organics.

There are 4 locations noted on our geotechnical map where appreciable amounts of high organic material is known to be stockpiled above the adjacent ground surface or buried below the ground surface. The depths of high organic material within these areas are noted on the Geotechnical Map (Figure 2). The material noted in these areas will need to be disposed of off-site.

Recommendations for off-site disposal and/or mixing to dilute organics to geotechnically acceptable organic levels (less than 2 percent) are provided in the following "Organic Rich Soil Recommendations" Section 4.1.2.

3.0 CONCLUSIONS

Based on the results of our subsurface geotechnical evaluation, it is our opinion that the proposed improvements are feasible from a geotechnical standpoint, provided that the recommendations contained in the following sections are incorporated during site grading and development. A summary of our geotechnical conclusions are as follows:

- The near-surface loose and compressible soils are not suitable for the planned improvements in their present condition (refer to Section 4.1). Organic rich soils (total organic carbon content generally greater than 2 percent) are not suitable for compacted fill soils from a geotechnical perspective.
- From a geotechnical perspective, onsite soils are anticipated to be suitable for use as general compacted fill provided the high organic content soils (soils with organic content greater than 5 percent) are removed from the site and the remaining soils with organic content between 2 and 5 percent are blended and mixed with "clean" soils and screened of construction debris and any oversized material (8 inches in greatest dimension).
- Records indicate groundwater levels recorded in the area are at depths greater than 100 feet below the ground surface.
- The subject study area is not located within a mapped State of California Earthquake Fault Zone, and based upon our review of published geologic mapping, no known active or potentially active faults are known to exist within or in the immediate vicinity of the site. Therefore, the potential for ground rupture as a result of faulting is considered very low.
- The main seismic hazard that may affect the site is ground shaking from one of the active regional faults. The subject site will likely experience strong seismic ground shaking during its design life.
- Site soils are not generally susceptible to liquefaction due to a lack of groundwater in the upper 50 feet. However, isolated layers are susceptible to dry sand seismic settlement. Total dynamic settlement is estimated to be on the order 0.5-inch or less. Differential settlement may be estimated as half of the total settlement over a horizontal span of 40 feet.
- Based on the results of preliminary laboratory testing, site soils are anticipated to have "Very Low" expansion potential. Final design expansion potential must be determined at the completion of grading.
- Based on the corrosion test results, soils are not considered corrosive per the Caltrans criteria (Caltrans, 2015).
- Excavations into the existing site soils should be feasible with heavy construction equipment in good working order. We anticipate that the sandy and silty earth materials generated from the excavations will be generally suitable for re-use as compacted fill, provided they are relatively free of rocks larger than 8 inches in dimension, construction debris, and significant organic material.
- Some portion of the onsite soils have high fines content; therefore, are not suitable for backfill of site retaining walls. Therefore, import of sandy soils meeting project recommendation is required.
- Field testing resulted in observed infiltration rates ranging from 0.6 to 3.8 inches per hour. The observed infiltration rates do not include a factor of safety. Discussion regarding infiltration is provided in Section 4.8.

4.0 RECOMMENDATIONS

The following recommendations are to be considered preliminary and should be confirmed upon completion of grading and earthwork operations. In addition, they should be considered minimal from a geotechnical viewpoint, as there may be more restrictive requirements from the architect, structural engineer, building codes, governing agencies, or the owner.

It should be noted that the following geotechnical recommendations are intended to provide sufficient information to develop the site in general accordance with the 2019 CBC requirements. With regard to the possible occurrence of potentially catastrophic geotechnical hazards such as fault rupture, earthquake-induced landslides, liquefaction, etc. the following geotechnical recommendations should provide adequate protection for the proposed development to the extent required to reduce seismic risk to an "acceptable level." The "acceptable level" of risk is defined by the California Code of Regulations as "that level that provides reasonable protection of the public safety, though it does not necessarily ensure continued structural integrity and functionality of the project" [Section 3721(a)]. Therefore, repair and remedial work of the proposed improvement may be required after a significant seismic event. With regards to the potential for less significant geologic hazards to the proposed development, the recommendations contained herein are intended as a reasonable protection against the potential damaging effects of geotechnical phenomena such as expansive soils, fill settlement, groundwater seepage, etc. It should be understood, however, that our recommendations are intended to maintain the structural integrity of the proposed development and structures given the site geotechnical conditions but cannot preclude the potential for some cosmetic distress or nuisance issues to develop as a result of the site geotechnical conditions.

The geotechnical recommendations contained herein must be confirmed to be suitable or modified based on the actual as-graded conditions.

4.1 Site Earthwork

Rough grading shall include removal of high organic content soils, remedial earthwork grading and placement of engineered compacted fill to design grades. Geotechnical recommendations for precise grading and construction of the proposed new improvements will be provided, as necessary.

We recommend that earthwork onsite be performed in accordance with the following recommendations, future grading plan review report(s), the 2019 CBC/City of Eastvale requirements, and the General Earthwork and Grading Specifications for Rough Grading included in Appendix D. In case of conflict, the following recommendations shall supersede those included in Appendix D. The following recommendations may be revised within future grading plan review reports or based on the actual conditions encountered during site grading.

4.1.1 Site Preparation

Prior to grading, areas to be developed should undergo the stripping and clearing of vegetation, high organic content soil removal/export and clearing of surface obstructions, pavements, foundation and slab elements from the site. Vegetation, debris and excessive organic material from livestock holding areas should be removed and properly disposed of offsite. Recommendations for removal of organic rich soils are provided in the following section. Holes resulting from removals of buried obstructions, which extend below proposed remedial and/or finish grades, should be replaced with suitable compacted fill material.

If cesspools or septic systems are encountered, they should be removed in their entirety. The resulting excavation should be backfilled with properly compacted fill soils. As an alternative, cesspools can be backfilled with lean sand-cement slurry. Any encountered wells should be properly abandoned in accordance with regulatory requirements.

4.1.2 Organic Rich Soil Recommendations

We recommend soils with an organic content greater than 5 percent be removed and exported from the site. For most of the site this is the top 1 foot. Figure 2 outlines areas that contains high organic content with more than 1-foot in thickness. Our recommendations are based on the following assumptions; 1) all soils with "high" organic contents greater than 5 percent shall be removed and disposed of off-site, 2) "transitional" soils (soils with organic content ranging from 2 to 5 percent) shall be adequately mixed or blended with the "clean" soils (soils with organic content less than 2.0 percent), and 3) There will be sufficient "clean" soils to dilute the limited "transitional" soils during the grading operation. From a geotechnical perspective, organic content of compacted fill soils should not exceed 2 percent.

After export of the top 1 foot of material, remedial grading as described in the following section should result in organic content of the fill materials to be approximately 1 percent. To satisfy the City's requirement of documenting the organic content in the fill, samples should be collected during grading and tested for organic content.

We recommend the geotechnical consultant be present during grading to observe the mixing of the onsite soils and perform periodic testing of the compacted fill. Organic materials shall be thoroughly mixed such that no nesting of organic materials occurs. Removal of organic materials is to satisfy geotechnical concerns and does not mitigate the potential for methane gas. Some methane gas should be expected after grading especially in former wastewater areas. Methane potential shall be evaluated by others.

4.1.3 Removal Depths and Limits

In order to provide a relatively uniform bearing condition for the planned improvements, we recommend the site soils be removed and recompacted. We recommend that soils within building pads be removed and recompacted to a minimum depth of 5 feet below

existing grade (not below base of organic removal). The envelope for removal and recompaction should extend laterally a minimum distance of 5 feet beyond the edges of the proposed improvements. In areas of design cut, over-excavation shall extend a minimum of 5 feet below existing grade or a minimum of 3 feet below finished grade, whichever is deeper. In the design cut areas, this depth may be reduced if in-place alluvial materials are tested and found to have an in-situ dry density equal or greater than 90 percent relative compaction (based on American Standard of Testing and Materials [ASTM] Test Method D1557) and exhibit uniform conditions. The Remedial Grading Diagram (Figure 5) provides a simplified example of the building pad remedial recommendations.

As shown on the attached Geotechnical Map (Figure 2), there is one isolated area of the site on the eastern edge of the property where removals will extend a minimum of 15 feet to remove a buried stockpile of manure. A representative from LGC geotechnical should be on site to approve the removal bottom to ensure it is acceptable from a geotechnical standpoint, and free of organic content.

For minor site structures such as free-standing and screen walls, the removals should extend at least 3 feet beneath the existing grade or 2 feet beneath the base of foundations, whichever is deeper. Within pavement and hardscape areas, removals should extend to a depth of at least 2 feet below the existing grade. The over-excavation in any design cut areas of the pavement may be reduced by the depth of the design cut but should not be less than 1-foot below the finished subgrade (i.e., below planned aggregate base/asphalt concrete). In general, the envelope for over-excavation should extend laterally a minimum distance of 2 feet beyond the edges of the proposed improvements mentioned above.

Local conditions may be encountered during excavation that could require additional over-excavation beyond the above-noted minimum in order to obtain an acceptable subgrade. The actual depths and lateral extents of grading will be determined by the geotechnical consultant, based on subsurface conditions encountered during grading. Removal areas and areas to be over-excavated should be accurately staked in the field by the Project Surveyor.

4.1.4 Temporary Excavations

Temporary excavations should be performed in accordance with project plans, specifications, and applicable Occupational Safety and Health Administration (OSHA) requirements. Excavations should be laid back or shored in accordance with OSHA requirements before personnel or equipment are allowed to enter. Based on our field investigation, the majority of site soils are anticipated to be OSHA Type "C" soils (refer to the attached boring logs). Sandy soils are present and should be considered susceptible to caving. Soil conditions should be regularly evaluated during construction to verify conditions are as anticipated. The contractor shall be responsible for providing the "competent person" required by OSHA standards to evaluate soil conditions. Close coordination with the geotechnical consultant should be maintained to facilitate construction while providing safe excavations. Excavation safety is the sole responsibility

of the contractor.

Vehicular traffic, stockpiles, and equipment storage should be set back from the perimeter of excavations a minimum distance equivalent to a 1:1(horizontal to vertical) projection from the bottom of the excavation or 5 feet, whichever is greater. Once an excavation has been initiated, it should be backfilled as soon as practical. Prolonged exposure of temporary excavations may result in some localized instability. Excavations should be planned so that they are not initiated without sufficient time to shore/fill them prior to weekends, holidays, or forecasted rain.

It should be noted that any excavation that extends below a 1:1 (horizontal to vertical) projection of an existing foundation will remove existing support of the structure foundation. If requested, temporary shoring parameters will be provided.

4.1.5 Subgrade Preparation

In general, areas to receive compacted fill should be scarified to a minimum depth of 6 inches, brought to a near-optimum moisture condition (generally within optimum and 2 percent above optimum moisture content), and re-compacted per project requirements. Removal bottoms and areas to receive fill should be observed and accepted by the geotechnical consultant prior to subsequent fill placement.

4.1.6 Material for Fill

From a geotechnical perspective, the onsite soils are generally considered suitable for use as general compacted fill, provided they are screened of organic materials, construction debris and any oversized material (8 inches in greatest dimension). From a geotechnical perspective, soils with an organic content of less than 2 percent are generally considered suitable for re-use as compacted fill.

From a geotechnical viewpoint, import soils for general fill (i.e., non-retaining wall backfill) should consist of clean, granular soils of Very Low expansion potential (expansion index 20 or less based on ASTM D4829). Import for retaining wall backfill should meet the criteria outlined in the paragraph below. Source samples should be provided to the geotechnical consultant for laboratory testing a minimum of three working days prior to any planned importation.

Retaining wall backfill should consist of granular free draining soils (sand equivalent of 30 or greater as determined by ASTM D2419 or CTM 217). Soils should also be screened of organic materials, construction debris, and any material greater than 3 inches in maximum dimension. The onsite soils are not considered suitable for retaining wall backfill due to their fines content (i.e., silt and clay content). Therefore, import of suitable soils meeting the criteria outlined above will be required.

Aggregate base should conform to the requirements of Section 200-2 of the most recent version of the Standard Specifications for Public Works Construction ("Greenbook") for

untreated base materials and/or City of Ontario requirements. It is our understanding that the City of Ontario only allows crushed aggregate base (CAB) and crushed miscellaneous base (CMB) is not allowed.

4.1.7 Placement and Compaction of Fills

Material to be placed as fill should be brought to near-optimum moisture content (generally within optimum and 2 percent above optimum moisture content) and recompacted to at least 90 percent relative compaction (per ASTM D1557). Moisture conditioning of site soils will be required in order to achieve adequate compaction. Drying and/or mixing the very moist soils will be required prior to reusing the materials in compacted fills. Soils are also present that will require additional moisture in order to achieve the required compaction.

The optimum lift thickness to produce a uniformly compacted fill will depend on the type and size of compaction equipment used. In general, fill should be placed in uniform lifts not exceeding 8 inches in compacted thickness. Each lift should be thoroughly compacted and accepted prior to subsequent lifts. Generally, placement and compaction of fill should be performed in accordance with local grading ordinances and with observation and testing by LGC Geotechnical. Oversized material as previously defined should be removed from site fills.

During backfill of excavations, the fill should be properly benched into firm and competent soils of temporary backcut slopes as it is placed in lifts.

Aggregate base material should be compacted to a minimum of 95 percent relative compaction at or slightly above optimum moisture content per ASTM D1557. Subgrade below aggregate base should be compacted to a minimum of 90 percent relative compaction per ASTM D1557 at near-optimum moisture content (generally within optimum and 2 percent above optimum moisture content).

4.1.8 Trench and Retaining Wall Backfill and Compaction

The onsite soils may generally be suitable as trench backfill, provided the soils are screened of rocks and other material greater than 6 inches in diameter and organic matter. If trenches are shallow or the use of conventional equipment may result in damage to the utilities, sand having a sand equivalent (SE) of 30 or greater (per California Test Method [CTM] 217) may be used to bed and shade the pipes. Sand backfill within the pipe bedding zone may be densified by jetting or flooding and then tamping to ensure adequate compaction. Subsequent trench backfill should be compacted in uniform thin lifts by mechanical means to at least the recommended minimum relative compaction (per ASTM D1557).

Retaining wall backfill should consist of sandy soils as outlined in preceding Section 4.1.6. The contractor should anticipate the importing of soils for the required retaining wall backfill. The limits of select sandy backfill should extend a minimum ½ the height of the

retaining wall or the width of the heel (if applicable), whichever is greater, refer to Figures 3 and 4 (rear of text). Retaining wall backfill soils should be compacted in relatively uniform thin lifts to at least 90 percent relative compaction (per ASTM D1557). Jetting or flooding of retaining wall backfill materials should not be permitted.

A representative from LGC Geotechnical should observe, probe, and test the backfill to verify compliance with the project recommendations.

4.1.9 Shrinkage and Subsidence

Allowance in the earthwork volumes budget should be made for an estimated 0 to 5 percent reduction in volume of near-surface (upper approximate 5 feet) soils. It should be stressed that these values are only estimates and that an actual shrinkage factor would be extremely difficult to predetermine. Subsidence due to earthwork equipment is expected to be up to 0.1 feet. These values are estimates only and exclude losses due to removal of vegetation or debris. The effective change in volume of onsite soils will depend primarily on the type of compaction equipment, method of compaction used onsite by the contractor, and accuracy of the topographic survey.

Due to the combined variability in topographic surveys, inability to precisely model the removals and variability of on-site near-surface conditions, it is our opinion that the site will not balance at the end of grading. If importing/exporting a large volume of soils is not considered feasible or economical, we recommend a balance area be designated onsite that can fluctuate up or down based on the actual volume of soil. We recommend a "balance" area that can accommodate on the order of 5 percent (plus or minus) of the total grading volume be considered.

4.2 Preliminary Foundation Recommendations

Provided that the remedial grading recommendations provided herein are implemented, the site may be considered suitable for the support of the residential structures using a conventional or post-tensioned foundation system. Site soils are anticipated to be "Very Low" expansion potential (EI of 20 or less per ASTM D4829) and special design considerations from a geotechnical perspective is not required, however, this must be verified based on as-graded conditions. Please note that the following foundation recommendations are preliminary and must be confirmed by LGC Geotechnical.

Preliminary foundation recommendations are provided in the following sections. Recommended soil bearing and estimated settlement due to structural loads are provided in Section 4.3.

4.2.1 Provisional Conventional Foundation Design

Due to the very low expansion potential of the onsite soils, the foundation/structural engineer may design a conventional foundation system that is tied together based upon the anticipated dead and live loads (wind, seismic) that will be imparted by the

structure. The recommendations provided in the "Soil Bearing and Lateral Resistance" section may be utilized in the design of a rigid slab-on-grade conventional foundation designed in accordance with Section 1808 of the 2019 C.B.C.

4.2.2 Provisional Post-Tensioned Foundation Design Parameters

The foundation designer may use a modulus of vertical subgrade reaction (k) of 200 pounds per cubic inch (pounds per square inch per inch of deflection). This value is for a 1-foot by 1-foot square loaded area and should be adjusted by the structural designer for the area of the proposed footing using the following formula:

$k = 200 \times [(B+1)/2B]^2$
k = modulus of vertical subgrade reaction, pounds per cubic inch (pci)
B = foundation width (feet)

The moisture content of near surface fill soils should be maintained at the level it was placed up to the time of concrete placement.

4.2.3 Shallow Foundation Maintenance

The geotechnical parameters provided herein assume that if the areas adjacent to the foundation are planted and irrigated, these areas will be designed with proper drainage and adequately maintained so that ponding, which causes significant moisture changes below the foundation, does not occur. Our recommendations do not account for excessive irrigation and/or incorrect landscape design. Plants should only be provided with sufficient irrigation for life and not overwatered to saturate subgrade soils. Sunken planters placed adjacent to the foundation, should either be designed with an efficient drainage system or liners to prevent moisture infiltration below the foundation. Some lifting of the perimeter foundation beam should be expected even with properly constructed planters.

In addition to the factors mentioned above, future owners/property management personnel should be made aware of the potential negative influences of trees and/or other large vegetation. Roots that extend near the vicinity of foundations can cause distress to foundations. Future owners (and the owner's landscape architect) should not plant trees/large shrubs closer to the foundations than a distance equal to half the mature height of the tree or 20 feet, whichever is more conservative unless specifically provided with root barriers to prevent root growth below the building foundation.

It is the owner's responsibility to perform periodic maintenance during hot and dry periods to ensure that adequate watering has been provided to keep soil from separating or pulling back from the foundation. Future owners and property management personnel should be informed and educated regarding the importance of maintaining a constant level of soil-moisture. The owners should be made aware of the potential negative consequences of both excessive watering, as well as allowing potentially expansive soils to become too dry. Expansive soils can undergo shrinkage

during drying, and swelling during the rainy winter season, or when irrigation is resumed. This can result in distress to building structures and hardscape improvements. The builder should provide these recommendations to future owners and property management personnel.

4.2.4 Slab Underlayment Guidelines

The following is for informational purposes only since slab underlayment (e.g., moisture retarder, sand or gravel layers for concrete curing and/or capillary break) is unrelated to the geotechnical performance of the foundation and thereby not the purview of the geotechnical consultant. Post-construction moisture migration should be expected below the foundation. The foundation engineer/architect should determine whether the use of a capillary break (sand or gravel layer), in conjunction with the vapor retarder, is necessary or required by code. Sand layer thickness and location (above and/or below vapor retarder) should also be determined by the foundation engineer/architect.

4.3 Soil Bearing and Lateral Resistance

Provided our earthwork recommendations are implemented, an allowable soil bearing pressure of 2,000 pounds per square foot (psf) may be used for the design of footings having a minimum width of 12 inches and minimum embedment of 15 inches below lowest adjacent ground surface. This value may be increased by 400 psf for each additional foot of embedment and 200 psf for each additional foot of foundation width to a maximum value of 3,000 psf. A mat foundation a minimum of 6 inches below lowest adjacent grade may be designed for an allowable soil bearing pressure of 1,200 psf. These allowable bearing pressures are applicable for level (ground slope equal to or flatter than 5H:1V) conditions only. Bearing values indicated are for total dead loads and frequently applied live loads and may be increased by ⅓ for short duration loading (i.e., wind or seismic loads).

Soil settlement is a function of footing dimensions and applied soil bearing pressure. In utilizing the above-mentioned allowable bearing capacity, assumed structural loads, and provided our earthwork recommendations are implemented, foundation settlement due to structural loads is anticipated to be on the order of 1-inch or less and ½-inch over a horizontal span of 40 feet for total and differential settlement, respectively. Differential settlement should be anticipated between nearby columns or walls where a large differential loading condition exists Furthermore, seismic settlement due to dry-sand settlement is anticipated to be 0.5 inches or less. Differential seismic settlement may be taken as half of the seismic settlement (i.e., ¼-inch over a horizontal span of 40 feet).

Resistance to lateral loads can be provided by friction acting at the base of foundations and by passive earth pressure. For concrete/soil frictional resistance, an allowable coefficient of friction of 0.35 may be assumed with dead-load forces. An allowable passive lateral earth pressure of 270 psf per foot of depth (or pcf) to a maximum of 2,700 psf may be used for the sides of footings poured against properly compacted fill. Allowable passive pressure may be increased to 360 pcf (maximum of 3,600 psf) for short duration seismic loading. This passive pressure is applicable for level (ground slope equal to or flatter than 5H:1V) conditions only. Frictional resistance and

passive pressure may be used in combination without reduction. We recommend that the upper foot of passive resistance be neglected if finished grade will not be covered with concrete or asphalt. The provided allowable passive pressures are based on a factor of safety of 1.5 and 1.1 for static and seismic loading conditions, respectively. The structural designer should incorporate appropriate factors of safety and/or load factors in their design.

4.4 Lateral Earth Pressures and Retaining Wall Design Considerations

Lateral earth pressures are provided as equivalent fluid unit weights, in pound per square foot (psf) per foot of depth or pcf. The values for the active condition do not contain an appreciable factor of safety, so the retaining wall designer should apply the applicable factors of safety and/or load factors during design. A soil unit weight of 120 pcf may be assumed for calculating the actual weight of soil over the wall footing.

Lateral earth pressures are presented in Table 2. Table 2 contains values for approved select sandy backfill for both drained and undrained conditions. Typically, retaining walls are designed for a drained condition with select sandy soils used as backfill. Should retaining walls have constraints limiting the ability to install or drain or appropriately outlet a drain, the values for undrained conditions should be used. Approved select sandy soils should have a sand equivalent of 30 or greater as determined by ASTM D2419.

The retaining wall designer should clearly indicate on the retaining wall plans if drains are required.

TABLE 3

Lateral Earth Pressures – Select Sand Backfill

Condition	**Equivalent Fluid Weight (pcf)**	
	Level Backfill	
	Approved Sandy Backfill Material - Drained	**Approved Sandy Backfill Material - Undrained**
Active	35	80

The drained equivalent fluid pressure values assume free-draining conditions and a drainage system will be installed and maintained to prevent the build-up of hydrostatic pressures. A relatively sandy backfill along with a subdrain pipe wrapped in drainage aggregate and filter fabric (e.g., “burrito” subdrain) properly outletted to a suitable discharge point is typically used for conventional retaining walls. Retaining wall structures should be provided with appropriate drainage and appropriately waterproofed. Typical conventional (i.e., backfilled) retaining wall drainage is shown in Figure 3. At similar sites, wall drainage through the face has been a preferred option. For this condition wall drainage is shown in Figure 4. If conditions other than

those assumed above are anticipated, the equivalent fluid pressure values should be provided on an individual-case basis by the geotechnical consultant.

Surcharge loading effects from any adjacent structures should be evaluated by the retaining wall designer. In general, structural loads within a 1:1 (horizontal to vertical) upward projection from the bottom of the proposed retaining wall footing will surcharge the proposed retaining structure. Uniform surcharges may be estimated using the applicable coefficient of lateral earth pressure using a rectangular distribution. A factor of 0.5 and 0.33 may be used for at-rest and active conditions, respectively. The retaining wall designer should contact the geotechnical engineer for any required geotechnical input in estimating any applicable surcharge loads.

If required, the retaining wall designer may use a seismic lateral earth pressure increment of 5 pcf for retaining walls up to a maximum of 10 feet in height with level backfill. This increment should be applied in addition to the applicable static lateral earth pressure using a triangular distribution with the resultant acting at H/3 in relation to the base of the retaining structure (where H is the retained height). For the restrained, at-rest condition, the seismic increment may be added to the applicable active lateral earth pressure (in lieu of the at-rest lateral earth pressure) when analyzing short duration seismic loading. Per Section 1803.5.12 of the 2019 CBC, the seismic lateral earth pressure is applicable to structures assigned to Seismic Design Category D through F for retaining wall structures supporting more than 6 feet of backfill height. This seismic lateral earth pressure is estimated using the procedure outlined by the Structural Engineers Association of California (Lew, et al, 2010). The provided seismic lateral earth pressure is for a level backfill condition and a maximum of 10 feet in height; a sloping backfill condition and greater retaining wall heights are not anticipated. However, if a sloping backfill condition or retaining walls greater than 10 feet in height are proposed, the retaining wall designer should contact the geotechnical engineer for specific seismic lateral earth pressure increments based on the configuration of the planned retaining wall structures.

For soil bearing and lateral resistance (friction coefficient and passive resistance) is provided in Section 4.3 “Soil Bearing and Lateral Resistance”. Earthwork considerations (temporary backcuts, backfill, compaction, etc.) for retaining walls are provided in Section 4.1 “Site Earthwork” and the subsequent earthwork related sub-sections.

4.5 Corrosivity to Concrete and Metal

Although not corrosion engineers (LGC Geotechnical is not a corrosion consultant), several governing agencies in Southern California require the geotechnical consultant to determine the corrosion potential of soils to buried concrete and metal facilities. We therefore present the results of our testing with regard to corrosion for the use of the client and other consultants, as they determine necessary.

Corrosion testing of near-surface bulk samples indicated a soluble sulfate content value of 78 ppm (less than 0.02 percent) and a chloride content of 100 ppm. Based on Caltrans Corrosion Guidelines (2015), soils are considered corrosive if the chloride concentration is 500 ppm or greater, or the sulfate concentration is 2,000 ppm (0.2 percent) or greater. Based on the test results, soils are not considered corrosive using Caltrans criteria.

Based on our laboratory test results of representative site soil samples, onsite soils should be considered as having a severity categorization of "not applicable" and are designated class "S0" per ACI 318, Table 19.3.1.1, sulfate. As a result, the minimum compressive strength of the concrete shall be 2,500 psi.

Laboratory testing may need to be performed at the completion of grading by the project corrosion engineer to further evaluate the as-graded soil corrosivity characteristics. Accordingly, revision of the corrosion potential may be needed, should future test results differ substantially from the conditions reported herein. The client and/or other members of the development team should consider this during the design and planning phase of the project and formulate an appropriate course of action.

4.6 Preliminary Asphalt Concrete Pavement Sections

For the purposes of these preliminary recommendations, we have selected a preliminary design R-value of 40 and calculated pavement sections for Traffic Indices of 5.5, 6.0 and 6.5. R-value testing of the street subgrade will need to be performed to confirm our preliminary testing results/assumptions once the streets have been graded to finish subgrade elevations and the final Traffic Index is determined by the Civil Engineer. It is our understanding that the City of Ontario requires that local streets have a minimum pavement section consisting of 4 inches of asphalt over 6 inches of crushed aggregate base (CAB).

TABLE 4

Preliminary Pavement Sections

Assumed Traffic Index	5.5	6.0	6.5
R -Value Subgrade	40	40	40
AC Thickness	4.0 inches	4.0 inches	4.0 inches
CAB Thickness	6.0 inches	6.0 inches	6.0 inches

Increasing the thickness of asphalt or adding additional base material will reduce the likelihood of the pavement experiencing distress during its service life. The above recommendations are based on the assumption that proper maintenance and irrigation of the areas adjacent to the roadway will occur through the design life of the pavement. Failure to maintain a proper maintenance and/or irrigation program may jeopardize the integrity of the pavement.

Earthwork recommendations regarding aggregate base and subgrade are provided in the previous Section "Site Earthwork" and the related sub-sections of this report.

4.7 Nonstructural Concrete Flatwork

Nonstructural concrete (such as flatwork, sidewalks, patios, etc.) has a potential for cracking due to changes in soil volume related to soil-moisture fluctuations. To reduce the potential for excessive cracking and lifting, concrete should be designed in accordance with the minimum guidelines outlined in Table 5 below. These guidelines will reduce the potential for irregular cracking and promote cracking along construction joints but will not eliminate all cracking or lifting. Thickening the concrete and/or adding additional reinforcement will further reduce cosmetic distress.

TABLE 5

Preliminary Geotechnical Parameters for Nonstructural Concrete Flatwork Placed on Very Low to Low Expansion Potential Subgrade

	Homeowner Sidewalks	**Private Drives**	**Patios/Entryways**	**City Sidewalk Curb and Gutters**
Minimum Thickness (in.)	4 (nominal)	4 (full)	4 (full)	City/Agency Standard
Presoaking	Wet down prior to placing	Wet down prior to placing	Wet down prior to placing	City/Agency Standard
Reinforcement	—	No. 3 at 24 inches on centers	No. 3 at 24 inches on centers	City/Agency Standard
Thickened Edge (in.)	—	8 x 8	—	City/Agency Standard
Crack Control Joints	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	City/Agency Standard
Maximum Joint Spacing	5 feet	10 feet or quarter cut whichever is closer	6 feet	City/Agency Standard
Aggregate Base Thickness (in.)	—	—	—	City/Agency Standard

To reduce the potential for driveways to separate from the garage slab, the builder may elect to install dowels to tie these two elements together. Similarly, future homeowners should

consider the use of dowels to connect flatwork to the foundation.

4.8 Subsurface Water Infiltration

Recent regulatory changes have occurred that mandate storm water be infiltrated below grade rather than collected in a conventional storm drain system. Typically, a combination of methods are implemented to reduce surface water runoff and increase infiltration including; permeable pavements/pavers for roadways and walkways, directing surface water runoff to grass-lined swales, retention areas, and/or drywells, etc. It should be noted that collecting and concentrating surface water for the purpose of intentionally infiltrating below grade, conflicts with the geotechnical engineering objective of directing surface water away from slopes, structures and other improvements. The geotechnical stability and integrity of a site is reliant upon appropriately handling surface water. In general, we do not recommend that surface water be intentionally infiltrated into the subsurface soils.

Considering the results of the infiltration testing, if required, stormwater may be infiltrated into the subsurface soils at the depths tested below existing grade, using the values presented in Table 1 and the appropriate County of Riverside Flood Control (2011) safety factors. The Civil Engineer should determine the appropriate safety factor applicable to the proposed infiltration system. Results of field infiltration testing are provided in Appendix D.

The following should be considered for design of any required infiltration system:

- Water discharge from any infiltration systems should not occur within the zone of influence of foundation footings (column and load bearing wall locations). For preliminary purposes we recommend a minimum setback of 15 feet from the structural improvements, or the County recommended minimum setback, whichever is more conservative.
- An adequate setback distance between any infiltration facility and adjacent private property should be maintained.
- It may be prudent to provide an overflow system directly connected to the storm drain system in order to prevent failure of the infiltration system, either as a result of lower than anticipated infiltration and/or very high flow volumes. It should be noted that if pretreatment of runoff to remove debris, soil particles, etc., cannot be performed, design infiltration rates may need to be further reduced. Over time, siltation and plugging may reduce the infiltration rate and subsequent effectiveness of the infiltration system.
- Any designed infiltration system will require routine periodic maintenance.
- As with any systems that are designed to concentrate the surface flow and direct the water into the subsurface soils, some type of nuisance water and/or other water-related issues should be expected.

LGC Geotechnical should be provided with details for any planned required infiltration system early in the design process for geotechnical input.

4.9 Control of Surface Water and Drainage Control

From a geotechnical perspective, we recommend that compacted finished grade soils adjacent to proposed structures be sloped away from the proposed structures and towards an approved drainage device or unobstructed swale. Drainage swales, wherever feasible, should not be constructed within 5 feet of buildings. Where lot and building geometry necessitates that drainage swales be routed closer than 5 feet to structural foundations, we recommend the use of area drains together with drainage swales. Drainage swales used in conjunction with area drains should be designed by the project civil engineer so that a properly constructed and maintained system will prevent ponding within 5 feet of the foundation. Code compliance of grades is not the purview of the geotechnical consultant.

Planters with open bottoms adjacent to buildings should be avoided. Planters should not be designed adjacent to buildings unless provisions for drainage, such as catch basins, liners, and/or area drains, are made. Overwatering must be avoided.

4.10 Supplemental Field Explorations

It should be noted that a portion in the northwestern corner of the site was not accessible at the time of our field evaluation (see Figure 2). This area was not explored and did not receive testing for near surface organic rich soils. We recommend performing a future evaluation addressing the organic content of the area prior to the export of high organic "soils" from the site.

4.11 Geotechnical Plan Review

Project plans (grading, foundation, etc.) should be reviewed by this office prior to construction to verify that our geotechnical recommendations have been incorporated. Additional or modified geotechnical recommendations may be required based on the proposed layout.

4.12 Geotechnical Observation and Testing

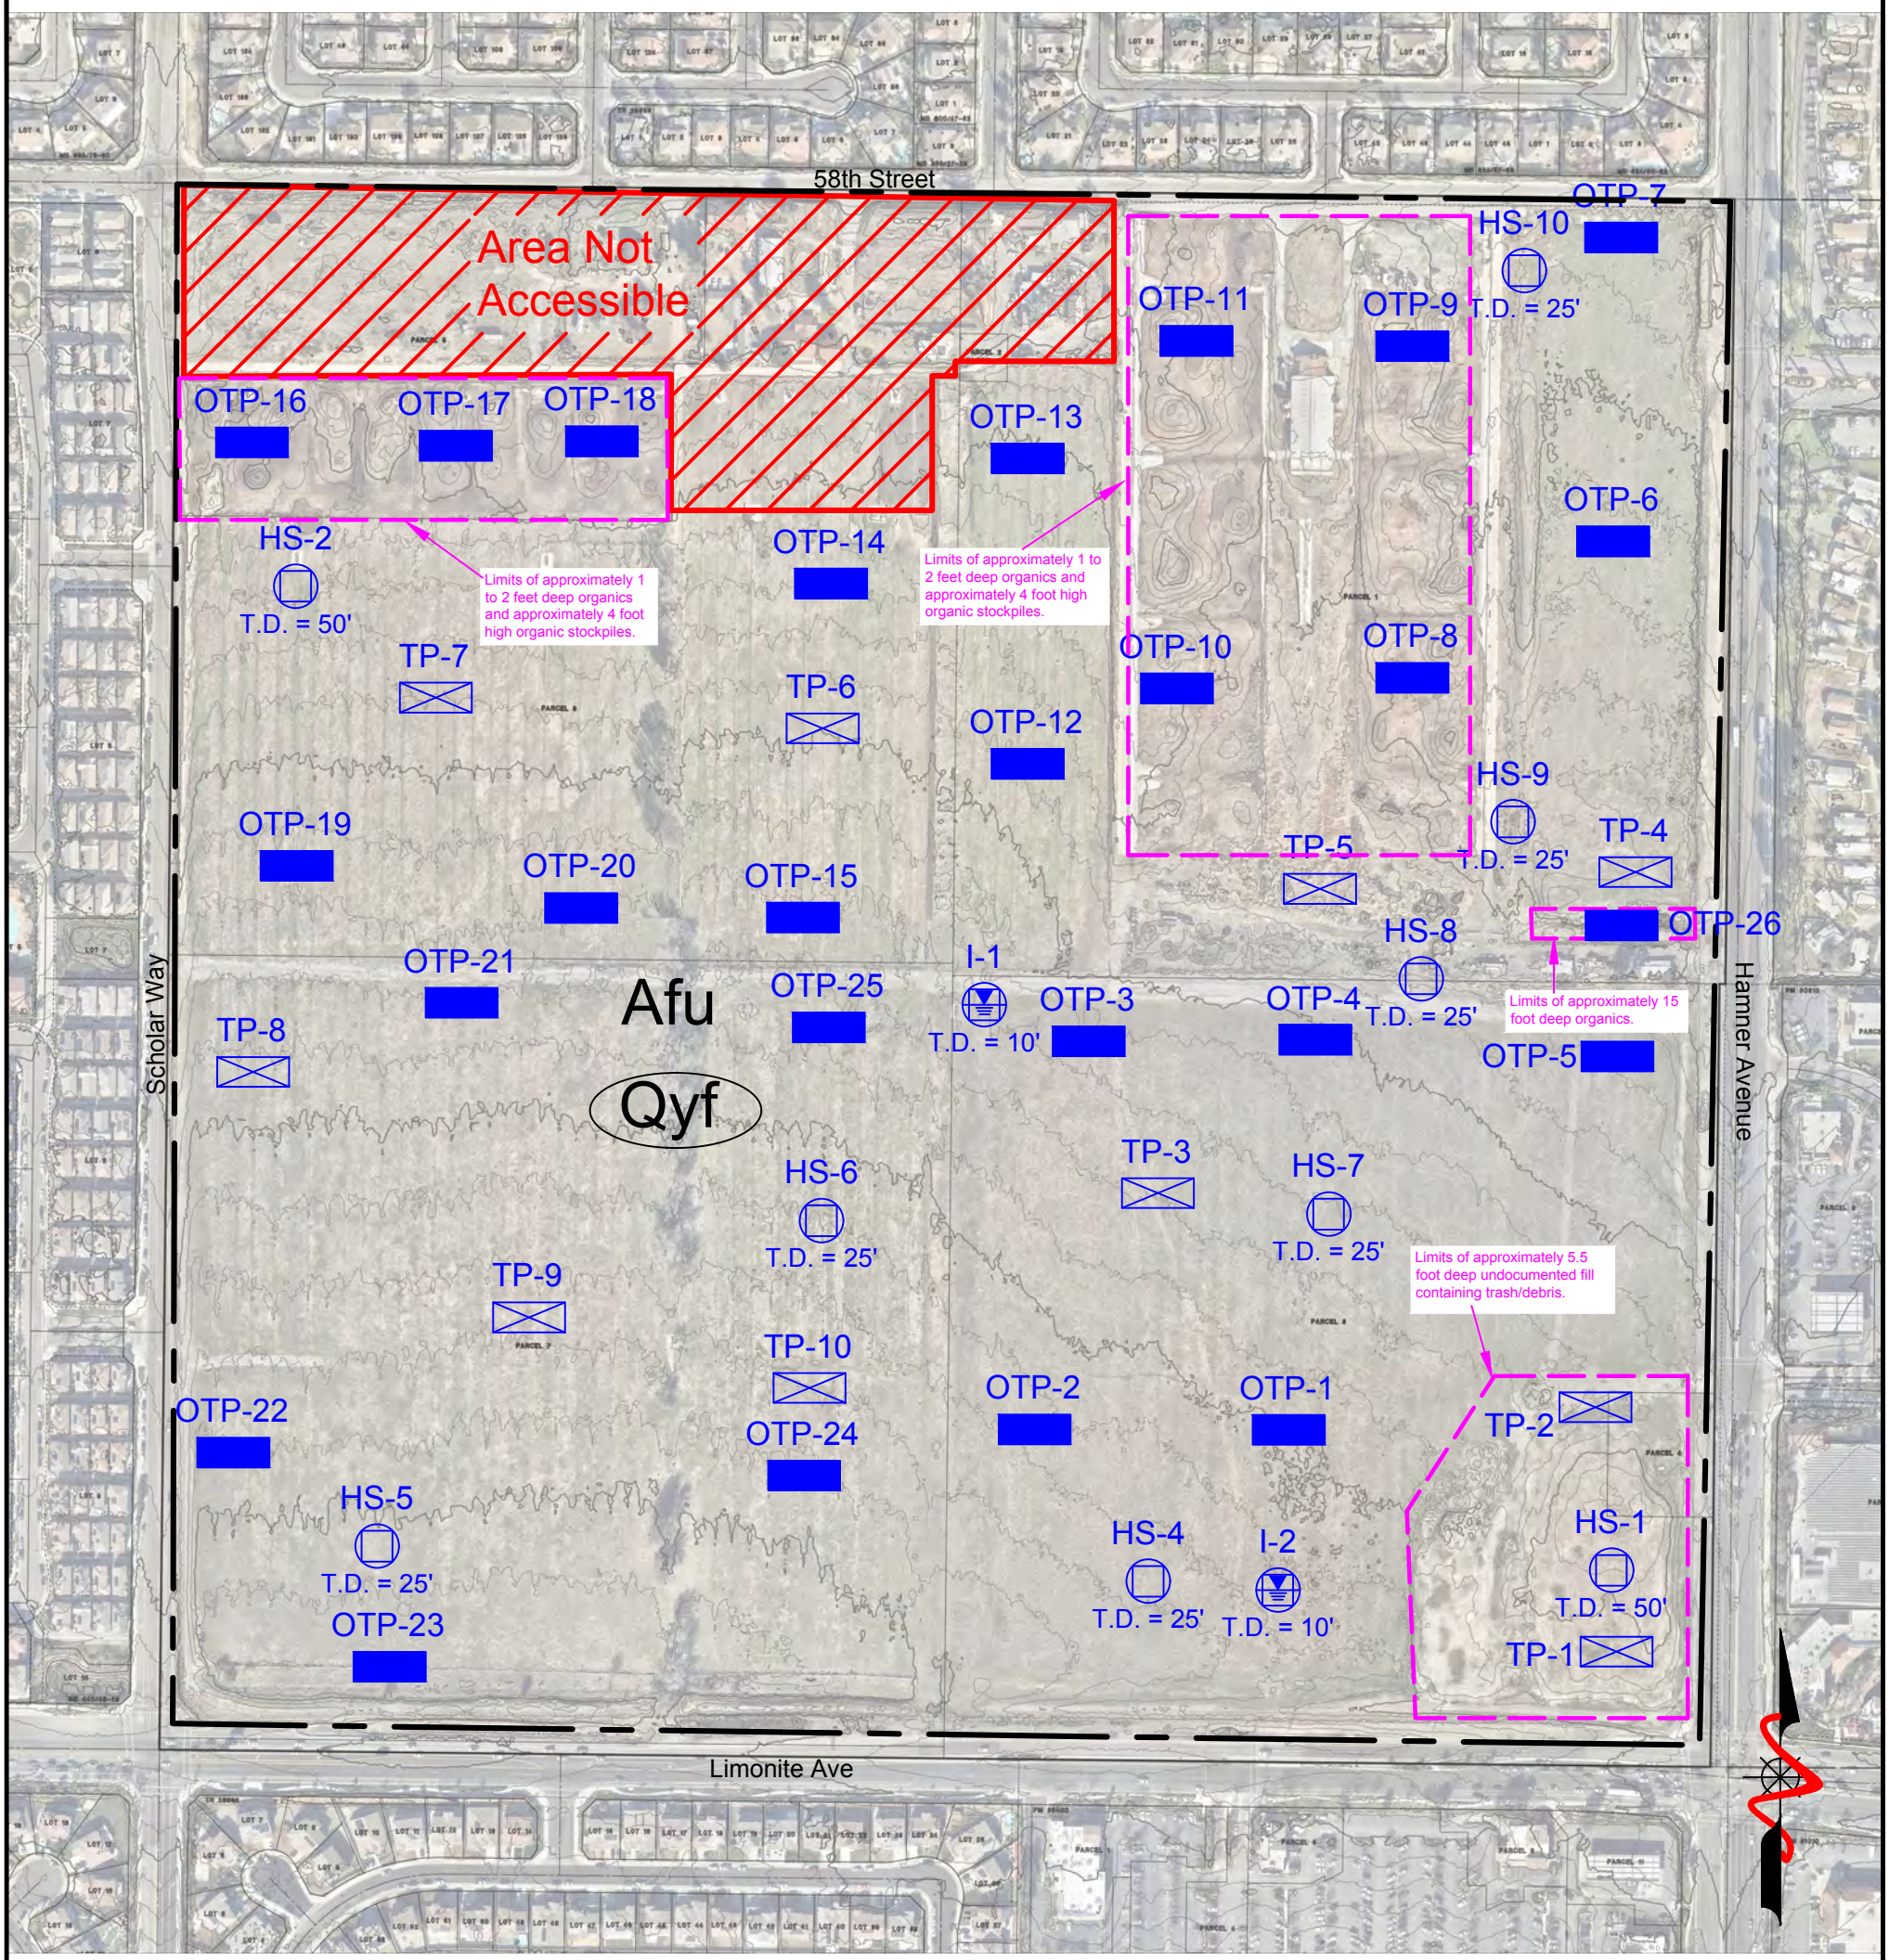
The recommendations provided in this report are based on limited subsurface observations and geotechnical analysis. The interpolated subsurface conditions should be checked in the field during construction by a representative of LGC Geotechnical. Geotechnical observation and testing is required per Section 1705 of the 2019 California Building Code (CBC).

Geotechnical observation and/or testing should be performed by LGC Geotechnical at the following stages:

- During grading (removal bottoms, fill placement, etc.);
- During retaining wall backfill and compaction;
- During utility trench backfill and compaction;

- After presoaking building pad and other concrete-flatwork subgrades, and prior to placement of aggregate base or concrete;
- Preparation of pavement subgrade and placement of aggregate base;
- After building and wall footing excavation and prior to placement of steel reinforcement and/or concrete; and
- When any unusual soil conditions are encountered during any construction operation subsequent to issuance of this report.

5.0 LIMITATIONS



Our services were performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable soils engineers and geologists practicing in this or similar localities. No other warranty, expressed or implied, is made as to the conclusions and professional advice included in this report.

This report is based on data obtained from limited observations of the site, which have been extrapolated to characterize the site. While the scope of services performed is considered suitable to adequately characterize the site geotechnical conditions relative to the proposed development, no practical evaluation can completely eliminate uncertainty regarding the anticipated geotechnical conditions in connection with a subject site. Variations may exist and conditions not observed or described in this report may be encountered during grading and construction.

This report is issued with the understanding that it is the responsibility of the owner, or of his/her representative, to ensure that the information and recommendations contained herein are brought to the attention of the other consultants (at a minimum the civil engineer, structural engineer, landscape architect) and incorporated into their plans. The contractor should properly implement the recommendations during construction and notify the owner if they consider any of the recommendations presented herein to be unsafe, or unsuitable.

The findings of this report are valid as of the present date. However, changes in the conditions of a site can and do occur with the passage of time, whether they be due to natural processes or the works of man on this or adjacent properties. The findings, conclusions, and recommendations presented in this report can be relied upon only if LGC Geotechnical has the opportunity to observe the subsurface conditions during grading and construction of the project, in order to confirm that our preliminary findings are representative for the site. This report is intended exclusively for use by the client, any use of or reliance on this report by a third party shall be at such party's sole risk.

In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and modification.

Appendix C
Laboratory Test Results

APPENDIX C

Laboratory Test Results

The laboratory testing program was directed towards providing quantitative data relating to the relevant engineering properties of the site soils. Samples considered representative of site conditions were tested in general accordance with American Society for Testing and Materials (ASTM) procedure and/or California Test Methods (CTM), where applicable. The following summary is a brief outline of the test type and a table summarizing the test results.

Moisture and Density Determination Tests: Moisture content (ASTM D2216) and dry density determinations (ASTM D2937) were performed on driven samples obtained from the test borings. The results of these tests are presented in the boring logs. Where applicable, only moisture content was determined from undisturbed or disturbed samples.

Grain Size Distribution/Fines Content: Representative samples were dried, weighed, and soaked in water until individual soil particles were separated (per ASTM D421) and then washed on a No. 200 sieve (ASTM D1140). Where applicable, the portion retained on the No. 200 sieve was dried and then sieved on a U.S. Standard brass sieve set in accordance with ASTM D6913 (sieve).

Sample Location	Description	% Passing # 200 Sieve
I-2	Clay with Sand	83

Atterberg Limits: The liquid and plastic limits ("Atterberg Limits") were determined per ASTM D4318 for engineering classification of fine-grained material and presented in the table below. The USCS soil classification indicated in the table below is based on the portion of sample passing the No. 40 sieve and may not necessarily be representative of the entire sample. The plot is provided in this Appendix.

Sample Location	Liquid Limit (%)	Plastic Limit (%)	Plasticity Index (%)	USCS Soil Classification
HS-8 @ 7.5 ft	32	21	11	CL

Consolidation: One consolidation test was performed per ASTM D2435. A sample (2.4 inches in diameter and 1-inch in height) was placed in a consolidometer and increasing loads were applied. The sample was allowed to consolidate under "double drainage" and total deformation for each loading step were recorded. The percent consolidation for each load step was recorded as the ratio of the amount of vertical compression to the original sample height. The consolidation pressure curve is provided in this Appendix.

Collapse/Swell Potential: One collapse test was performed per ASTM D4546. A sample (2.4 inches in diameter and 1-inch in height) was placed in a consolidometer and loaded to the approximate in-situ effective stress. The curve is presented in this Appendix.

Maximum Density Tests: The maximum dry density and optimum moisture content of a typical material was determined in accordance with ASTM D1557. The result of this test is presented in the table below:

Sample Location	Sample Description	Maximum Dry Density (pcf)	Optimum Moisture Content (%)
HS-3 @ 0-5 ft	Brown Silty Sand	125.0	8.5

Expansion Index: The expansion potential of selected representative samples was evaluated by the Expansion Index Test per ASTM D4829.

Sample Location	Expansion Index	Expansion Potential*
HS-2 @ 0-5 ft	11	Very Low

* Per ASTM D4829

Soluble Sulfates: The soluble sulfate content of a select sample was determined by standard geochemical methods (CTM 417). The test result is presented in the table below.

Sample Location	Sulfate Content, ppm
HS-1 @ 0-5 ft	78

Chloride Content: Chloride content was tested per CTM 422. The results are presented below.

Sample Location	Chloride Content, ppm
HS-1 @ 0-5 ft	100

Organic Matter Content of Soils: Organic matter content tests were performed in general accordance with ASTM D 2974 (Test Methods A & C). The results are presented in this Table 6.

Appendix E
General Earthwork and Grading Specifications for Rough Grading

General Earthwork and Grading Specifications for Rough Grading

1.0 General

1.1 Intent

These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 The Geotechnical Consultant of Record

Prior to commencement of work, the owner shall employ a qualified Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultant shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to confirm that the attained level of compaction is being accomplished as specified. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.

1.3 The Earthwork Contractor

The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with the project plans and specifications. The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of “equipment” of work and the estimated quantities of daily earthwork

contemplated for the site prior to commencement of grading. The Contractor shall inform the owner and the
Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate personnel will be available for observation and testing. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified. It is the contractor's sole responsibility to provide proper fill compaction.

2.0 Preparation of Areas to be Filled

2.1 Clearing and Grubbing

Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed. The contractor is responsible for all hazardous waste relating to his work. The Geotechnical Consultant does not have expertise in this area. If hazardous waste is a concern, then the Client should acquire the services of a qualified environmental assessor.

2.2 Processing

Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be over-excavated as specified in the following section. Scarification shall continue until soils are broken down and free of oversize material and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.

2.3 Over-excavation

In addition to removals and over-excavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be over-excavated to competent ground as evaluated by the Geotechnical Consultant during grading.

2.4 Benching

Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. Please see the Standard Details for a graphic illustration. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise over-excavated to provide a flat subgrade for the fill.

2.5 Evaluation/Acceptance of Fill Areas

All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

3.0 Fill Material

3.1 General

Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 Oversize

Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.

3.3 Import

If importing of fill material is required for grading, proposed import material shall meet the requirements of the geotechnical consultant. The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

4.0 Fill Placement and Compaction

4.1 Fill Layers

Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 Fill Moisture Conditioning

Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557).

4.3 Compaction of Fill

After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.

4.4 Compaction of Fill Slopes

In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557.

4.5 Compaction Testing

Field tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.6 Frequency of Compaction Testing

Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soils embankment. In addition, as a guideline, at least one test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.7 Compaction Test Locations

The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than
5 feet apart from potential test locations shall be provided.

5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan, and the Standard Details. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

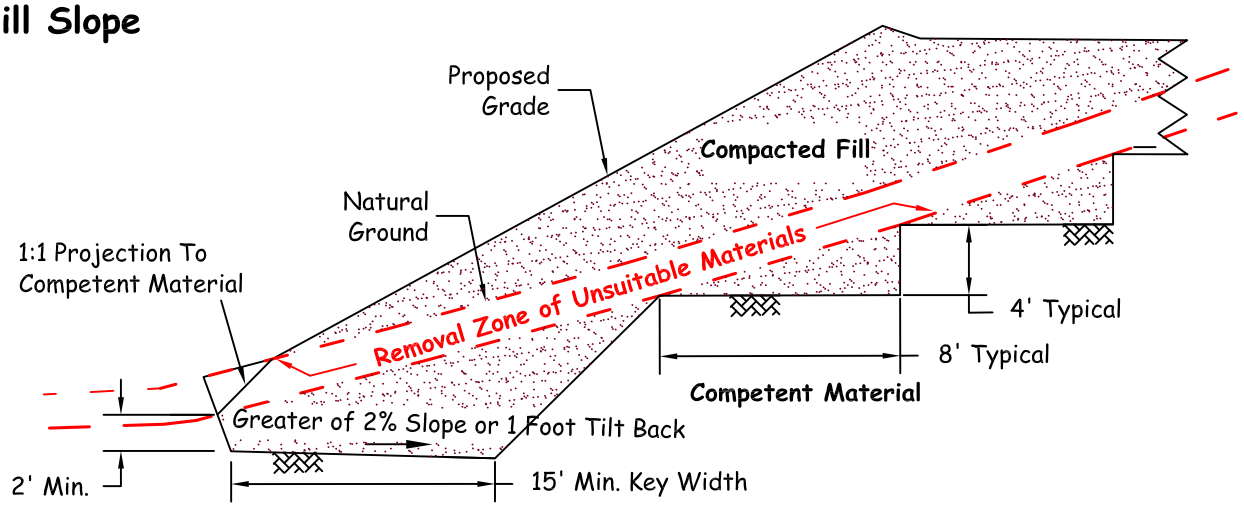
6.0 Excavation

Excavations, as well as over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical plans are estimates only. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 Trench Backfills

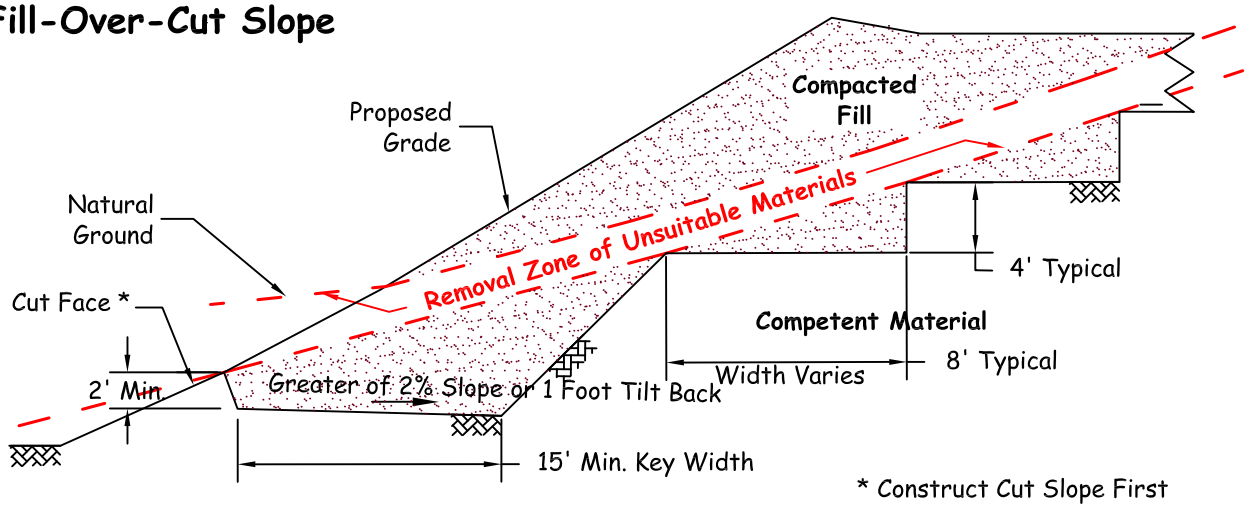
7.1 The Contractor shall follow all OHSA and Cal/OSHA requirements for safety of trench excavations.

7.2 All bedding and backfill of utility trenches shall be done in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over



the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum of 90 percent of maximum from 1 foot above the top of the conduit to the surface.

7.3 The jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.



7.4 The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill.

7.5 Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

Subject: ***Geotechnical Responses to City Reviewer Geotechnical Review Comments dated February 16, 2022 for the Proposed Approximately 160-Acre "Leal" Property, City of Eastvale, California***

Introduction

In accordance with your request, LGC Geotechnical, Inc. has prepared this geotechnical response-report to the Eastvale City Reviewer's (Michael Baker International) geotechnical review comments dated February 16, 2022 (Michael Baker, 2022) regarding the proposed approximately 160-acre residential development located known as "Leal" in the City of Eastvale, California. It is our understanding the review comments are based on the review of the referenced geotechnical evaluation (LGC Geotechnical, 2021).

This response report should be considered as part of the project design documents in conjunction with our referenced geotechnical report (LGC Geotechnical, 2021). In the case of conflict, the recommendations contained herein should supersede those provided in our previous reports. The remaining recommendations provided in our reference geotechnical reports (LGC Geotechnical, 2021) remain valid and applicable.

GEOTECHNICAL REVIEW COMMENT DATED February 16, 2022

For your convenience, the geotechnical review comments have been repeated below along with our response.

First Comment

"Suggest including a brief description of potential erosion impacts.in response to CEQA Appendix G Checklist question for Geology and Soils b) "Would the project result in substantial soil erosion of the loss of topsoil?"

Response to First Comment

The proposed grading activities that will be part of the development of the subject site will include removal of the topsoil across the site and replacement with engineered fill material. The proposed grading plan does not have any natural or steep slopes that would be subject to excessive erosion. The ground surface at the completion of grading will be engineered fill with typical site drainage and typical slope inclinations.

Second Comment

"Please indicate whether the project site has a low or high potential for expansive soil."

Response to Second Comment

As mentioned within sections 1.4, 3.0 and 4.2, along with the lab test result presented in Appendix C, of the provided geotechnical report (LGC, 2021) the site soils expansion potential is classified as "Very Low".

Should you have any questions regarding this report, please do not hesitate to contact this office.

Sincerely,

LGC Geotechnical, Inc.

Blake J. Elliott, RCE 70705
Project Engineer

RE: Phase I Environmental Site Assessment
Leal Ranch
12741 and 12745 Limonite Avenue and 12740 58th Street
Eastvale, California 92880
Hillmann Project No: C3-8458

Dear Mr. Gibson:

Hillmann Consulting LLC is pleased to provide the results of our Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in general accordance with the scope and limitations of ASTM Practice E1527-13, which is the latest version of the E1527 standard published by the ASTM.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact our office at 714-634-9500.

Sincerely,

Hillmann Consulting, LLC

List of Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM	– Asbestos Containing Material
AOC	– Area of Concern
AST	– Aboveground Storage Tank
ASTM	– American Society for Testing Materials
BER	– Business Environmental Risk
CEA	– Classification Exception Area
CERCLA	– Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	– Comprehensive Environmental Response Compensation and Liability Information System
CESQG	– Conditionally Exempt Small Quantity Generator
COC	– Chemicals of Concern
CORRACTS	– Corrective Action Sites
CREC	– Controlled Recognized Environmental Condition
DNPL	– Delisted National Priority List
DTSC	– Department of Toxic Substances Control
ENG	– Engineering
ERNS	– Emergency Response Notification System
FDEP	– Florida Department of Environmental Protection
FDNY	– Fire Department, City of New York
FDOT	– Florida Department of Transportation
FOI/FOIA/FOIL	– Freedom of Information / Freedom of Information Act / Freedom of Information Letter
HVAC	– Heating Ventilation & Air Conditioning
HREC	– Historic Recognized Environmental Condition
IAQ	– Indoor Air Quality
ISRA	– Industrial Site Recovery Act
LBP	– Lead-Based Paint
LQG	– Large Quantity Generator
LTANK	– Leaking Storage Tank
LUST	– Leaking Underground Storage Tank
MassDEP	– Massachusetts Department of Environmental Protection
SDS/MSDS	– Safety Data Sheet / Material Safety Data Sheet
NA	– Not Applicable
NCDOH	– Nassau County Department of Health
NFA	– No Further Action
NFRAP	– No Further Remedial Actions Planned
NJDEP	– New Jersey Department of Environmental Protection
NPDES	– National Pollutant Discharge Elimination System
NPL	– National Priority List
NYCDEP	– New York City Department of Environmental Protection
NYCDOB	– New York City Department of Buildings
NYCOER	– New York City Office of Environmental Remediation
NYSDEC	– New York State Department of Environmental Conservation
OPRA	– Open Public Records Act
PADEP	– Pennsylvania Department of Environmental Protection
PAH	– Polycyclic Aromatic Hydrocarbon
PCE	– Perchloroethylene
RAO	– Response Action Outcome
RCRA	– Resource Conservation and Recovery Act
RCRIS	– Resource Conservation and Recovery Information System
REC	– Recognized Environmental Condition
RWQCB	– Regional Water Quality Control Board
SCAQMD	– South Coast Air Quality Management District
SCDHS	– Suffolk County Department of Health Services
SDG	– Significant Data Gap
SEMS	– Superfund Enterprise Management System
SRP	– Site Remediation Program
SQG	– Small Quantity Generator
SVOC	– Semi-Volatile Organic Compound
TCE	– Trichloroethylene
TSDF	– Treatment Storage and/or Disposal Facility
USEPA	– United States Environmental Protection Agency
UST	– Underground Storage Tank
VEC	– Vapor Encroachment Condition
VOC	– Volatile Organic Compound

1.0 FINDINGS, OPINIONS, AND CONCLUSIONS

Hillmann Consulting, LLC (Hillmann) performed a Phase I Environmental Site Assessment (ESA) of 12741 and 12745 Limonite Avenue and 12740 58th Street, Eastvale, California (the "Property"). The assessment has been conducted in accordance with our contracted scope of work and the ASTM Standard Practice E 1527-13 for Phase I Environmental Site Assessments and All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312. This section contains a summary of findings, opinions and conclusions made by this assessment. However, this section, alone, does not constitute the complete assessment. The report must be read in its entirety.

1.1 Summary of Project Details

Primary Street Address:		12741 and 12745 Limonite Avenue and 12740 58th Street			
City:	Eastvale	**County:**	Riverside	**State:**	California
Tax ID/Parcel Number:		164030010, 164030012, 164030013, 164030014, 164030024, 162030025			
Property Owner:		James Borba			
Zoning Designation:		Leal Master Plan			
Approx. Property Area:		153.3 acres			
Buildings/# of Floors		Five (5), residential structures/single-story Dairy Barn Horse Barn Maintenance/Repair Structure			
Approx. Building Area:		N/A			
Approx. Year Built:		1931			
Commercial Occupants:		None			
Current Use:		Dairy farm with five (5) residential structures			
Prior Uses:		Dairy farm, horse ranch, orchard			
Inspected By:		Ms. Gabriela Cyrulik			
Site Contact/Company:		Mr. Matt Gibbson/New Home Company			
Site Escort/Company:		Mr. Craig Leal/Property Owner			
Inspection Date:		June 21, 2021			
Weather Conditions:		Sunny, 81 degrees F

Data Gaps:	X				2.3

1.3 Findings, Opinions and Conclusions

1.3.1 Recognized Environmental Conditions

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E1527-13 of the Property as described in Section 2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except for the following:

RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No RECs were identified.
HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No HRECs were identified.
CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No CRECs were identified.
SIGNIFICANT DATA GAPS	
	No SDGs were identified.

1.3.2 REC Response Action Recommendations

The following table presents recommended response actions to the issues noted for further investigation and/or corrective action:

REC RESPONSE ACTION SUMMARY TABLE	
REC	**Response Action**
	None identified

1.3.3 Notable Environmental Conditions / *De Minimis* Conditions

The following environmental conditions were identified, but are not considered to be a REC in connection with the Property:

NOTABLE ENVIRONMENTAL CONDITIONS / DE MINIMIS CONDITIONS	
1.	Leal Ranches at 12740 58th Street (Property) is listed on the FINDS, ECHO, ENF, CIWQS, CERS database. The FINDS listing is associated with the facility being registered as a NPDES point source. Available records identified no violations. The ECHO listing is related to the Clean Water Act compliance as administered by the state of California. No violations were noted for the past five years. The ENF listing is associated with an apparent violation observed and corrected during a 2008 inspection. The CIWQS listing identified no violations observed in the past five years. The CERS listing is associated with an inspection of the facility in accordance with the California Water Code. Violations were noted in 2007, 2008, and 2010 associated with animal waste disposal documentation and associated with implementing the BMP (Best Management Practices) for the facility. No additional violations were noted in the record. Because these listings do not indicate a material threat of a release, Hillmann concludes they are unlikely to represent an environmental concern to the Property and recommends no further investigation regarding this issue.
2.	Portions of the Property were utilized for dairy operations from approximately the 1970s to 2019. Hillmann observed areas of residual livestock waste accumulations on the east and west portions of the Property. Elevated concentrations of methane gas are sometimes associated with areas where livestock wastes accumulate, and can sometimes give rise to the need for mitigation prior to development. A methane survey was conducted in July of 2021, which indicated that most samples had insignificant concentrations of subsurface methane gas, and field screening indicated just three (3) samples (of 15) had detectable concentrations of methane. However, it is important to note that the methane distribution is not widespread and that the areas investigated are still covered with animal waste. This material should be removed in connection with site development activities. Ultimately, Hillmann concludes that the residual livestock does not indicate a REC with connection to the Property.
3.	The Property is registered as having a 550-gallon historical fuel UST present on the Property in 1988. The Property owner indicated that the UST was removed from the ground in the late 1980s and subsequently utilized as an AST. The former UST was reported to have been located on the northern portion of the Property. No tank closure records for the former were available. However, a Limited Phase II Investigation and GPR Investigation was conducted in July 2021 within the vicinity of the former UST. Soil and soil gas samples were collected within the historical UST, which indicated no detectable concentrations of petroleum hydrocarbons or VOC (*i.e.*, the results were "non-detect"), and no heavy metal concentrations exceeding residential screening levels. The results from soil gas sampling in these areas indicated no VOC concentrations exceeding current residential screening levels and these very low concentrations likely do not pose a significant environmental or human health concern for the proposed residential use. Additionally, the GPR Investigation identified no evidence of the presence of the former UST. Therefore, the historical 550-gallon UST on the Property does not indicate a REC with connection to the Property and Hillmann recommends no further investigation regarding this issue.
4.	Maintenance and repair of farm equipment and vehicles appear to have been conducted for an extended period of time in an area of the northern portion of the Property. Hillmann observed a significant amount of equipment, vehicles, trash, drums, and other materials in this area. Soil staining was observed within the vicinity of the maintenance repair area, and by the entrance of the dairy barn at 12741 Limonite Avenue. However, a Limited Phase II Investigation was conducted in July 2021 within the vicinity of the former maintenance repair area. Soil and soil gas samples were collected within the targeted areas of the Property. Results from soil sampling in the maintenance areas were "non-detect" for petroleum hydrocarbons and VOCs, and no heavy metal concentrations were detected at levels exceeding residential screening levels. The results from soil gas sampling in these areas indicated no VOC concentrations exceeding current residential screening levels, and the very low

	concentrations of detected chemicals are unlikely to represent an environmental or human health concern for the proposed residential use. Therefore, the historical maintenance operations do not indicate a REC with connection to the Property and Hillmann recommends no further investigation regarding this issue.
5.	The Property was utilized as orchards since approximately 1931 to the 1950s. Concentrations of pesticides are commonly associated with shallow soils at sites with historical agricultural use. In addition, there is a potential for pesticide impacts to soil in the vicinity of the older farm structures along the northern perimeter of the Property where pesticide storage and mixing may have occurred. Accordingly, ninety-six (96) individual samples were collected, and analyzed for OCPs and Title 22 Metals, which are sometimes associated with the application of heavy-metal containing herbicides. Results of the OCP analysis indicated low levels of 4,4'-DDE and 4,4'-DDT which were below the applicable RSLs for residential applications. The results from heavy metal analysis indicate the samples had low, naturally-occurring background levels of metals, which did not exceed the applicable RSLs for residential applications. Therefore, the historical orchard operations on the Property do not indicate a REC with connection to the Property and Hillmann recommends no further investigation regarding this issue.
6.	Hillmann observed the presence of discarded drums located in the maintenance repair area. The drums indicated a concern due to the unknown content and possibility of undocumented chemical spills/releases to have occurred in the past and/or occur when the site is cleared for development. However, a Limited Phase II Investigation was conducted in July 2021 within the vicinity of the discarded industrial drums. Soil samples that were collected within the area indicated no detectable concentrations of petroleum hydrocarbons or VOCs, and no heavy metal concentrations exceeding residential screening levels. The results from soil gas sampling in these areas indicated no VOC concentrations exceeding current residential screening levels. These very low concentrations likely do not pose a significant environmental or human health concern for the proposed residential use. Therefore, the historical discarded industrial drums on the Property did not indicate a REC with connection to the Property. Hillmann recommends no further investigation regarding this issue.
7.	Hillmann observed piles of concrete, abandoned drums, heavy machinery, equipment, cars, tires, furniture, and other miscellaneous trash and debris present throughout the northern boundary of the Property. These features do not appear to represent an environmental concern to the Property. It is recommended all trash and debris be properly disposed off-site during Property redevelopment. Otherwise, Hillmann recommends no further action or investigation regarding this issue.
8.	Septic systems are present on the north side of the Property by the former residential homes. The Property owner indicated that there are two (2) 1,500-gallon, and one (1) 500-gallon septic tanks on the northern area of the Property, and that the tanks are utilized for the residential structures on the Property. Based on their use, these features appear unlikely to represent an environmental concern and Hillmann recommends no further investigation regarding this issue.
9.	Harada Elementary School - Echeverria Dairy/Cleveland Ave is listed on the Envirostor, LUST, SCH database. The site is adjacent to the southwest and is down gradient relative to the Property. The facility is incorrectly reported as being adjacent to the Property. The school is located approximately 1,200 feet south, and the facility has been investigated for potential contaminants of concern including arsenic, DDD, DDE, DDT and methane with a no further action status received. The LUST record is associated with a historic gasoline UST located approximately 1 mile south of the Property at the Eastvale Elementary School property. These issues do not represent an environmental concern and Hillmann recommends no further investigation regarding this issue.
10.	Ralphs Grocery #45 Fuel Center-12618 Limonite Avenue, is listed on the UST, CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, HWTS, RCRA-LQG, CHMIRS databases. The site is adjacent to the south and is down-gradient relative to the Property. The facility is registered and currently operates as an automotive filling station utilizing USTs for petroleum storage. Minor violations associated with the fuel dispensing systems were historically noted and returned to compliance. A release of seven gallons of gasoline was reported to the concrete and asphalt and was cleaned up by a contractor. The waste disposal records did not identify any violations or releases to the Property. Based on the down-gradient location and lack of leaking UST database listings, the adjoining filling station is not considered to be a REC in connection to the Property. Hillmann recommends no further investigation regarding this issue.
11.	Vons Fuel Center #2688 at 6110 Hamner Ave is listed on the UST, CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, HWTS, RCRA NonGen/NLR databases. The site is adjacent to the east, and is down-gradient relative to the Property. The facility operates a vehicular fuel dispensary utilizing USTs for petroleum distillate storage. The records indicate the facility is in compliance. A surficial, *de minimis* release of two (2) gallons of gasoline was reported in 2012. A surficial, *de minimis* release of four (4) gallons of diesel was reported in 2006.

	Minor violations associated with the fuel dispensing systems were historically noted and returned to compliance. No releases to soil or groundwater were identified. The waste disposal records did not identify any violations or releases to the Property. Based on the down-gradient location and lack of leaking UST database listings, the adjoining filling station is not considered to be a REC in connection to the Property.

1.3.4 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the subject *property*. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Professional

1.4 Business Environmental Risks / Non-ASTM Scope

Hillmann has performed a limited review of the following potential Business Environmental Risks (BER), also known as "Non-ASTM Scope concerns", in accordance with the contracted scope of work scope for this assessment. The following is a summary of findings for applicable BERs. For a more detailed discussion of the findings and contracted scope of work, please see the referenced report section.

BUSINESS ENVIRONMENTAL RISKS / NON-ASTM SCOPE			
Subject	**Findings**	**Not Appl.**	**Rpt. Ref.**
Asbestos	Existing dwelling and farm structures may contain ACM and should undergo asbestos surveys and abatement prior to demolition. Suspected ACM noted during a cursory visual screening included sheetrock wall systems, brick and mastic, floor tile with associated mastics, and roofing materials.		7.1
Lead Paint	Existing dwelling and farm structures may have components coated with lead containing paint, and undergo testing to determine appropriate worker safety and waste handling/disposal practices.		7.2
Radon	Property is located in the USEPA radon designation Zone 2 or 'moderate risk' area for radon. According to the CA Radon database, fifteen (15) recorded tests in zip code 92880 recorded 1 pCi/L indoor concentrations. Radon appears unlikely to represent an environmental concern.		7.3
Mold / Microbial Damage	Hillmann did not observe any evidence of significant problems with moisture intrusion or mold/microbial growth at the Property.		7.4
NWI Wetlands	No mapped wetland areas were depicted at the Property by NWI wetland maps.		7.5

Lead in Drinking Water	Potable water at the Property is provided via an on-site well installed in 2010. No water quality testing of the well water was available.		7.6

2.0 INTRODUCTION

2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E1527-13. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The primary goal of the processes established by ASTM E1527-13 is to identify *recognized environmental conditions* in connection with the Property.

The term *recognized environmental condition (REC)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The ASTM has also defined the terms *historical recognized environmental conditions* and *controlled recognized environmental conditions* as two additional types of RECs. The term *historical recognized environmental condition (HREC)* is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls or engineering controls).

The term *controlled recognized environmental condition (CREC)* is defined as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Conditions determined to be *"de minimis conditions"* are not considered to be RECs, HRECs or CRECs. *De minimis condition* is defined by the ASTM, "…as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

The chief components of this assessment are generally described as follows:

- A non-invasive visual reconnaissance of the Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.
- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Property.

- A review of standard physical record sources for available topographic, geologic and groundwater data.

- A review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Property from the present, back to the Property's first developed use, or back to 1940, whichever is earlier.

- A review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Property, adjoining properties and properties located within the surrounding area.

An evaluation of environmental or other regulatory compliance matters is excluded from the scope of this assessment.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

2.1.1 Business Environmental Risks/Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental subject matters that are outside of the requirements of the ASTM E1527-13 standard:

Asbestos-Containing Materials (ACM): A non-intrusive visual screening for the presence of suspect ACM within the accessed areas of buildings built prior to 1990 on the Property. It is emphasized that this non-intrusive visual screening does not constitute an asbestos survey/inspection of the premises. An asbestos survey/inspection should be sought by the report User(s) if more certainty is desired regarding ACM and potential asbestos hazards at the Property. Furthermore, a review of regulatory compliance matters pertaining to asbestos is excluded from the scope of work.

Lead-Based Paint (LBP): A non-intrusive visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980 on the Property. It is emphasized that this non-intrusive visual screening does not constitute a comprehensive survey for LBP or potential lead hazards. A comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding LBP at the Property. Furthermore, a review of regulatory compliance matters pertaining to lead-based paint is excluded from the scope of work.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the Radon Zone classification for the area of the Property.

Mold/Microbial Damage: A non-intrusive visual screening within the accessed areas of buildings on the Property for evidence of systemic microbial problems, including visible mold growth, water damaged building materials or musty odors. It is emphasized that this non-intrusive visual screening does not constitute a comprehensive survey for moisture/mold/microbial damage. A more comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding the potential for moisture/mold/microbial damages at the Property.

NWI Wetlands: Review of US Fish and Wildlife Service National Wetland Inventory digitized data of mapped wetlands as presented in the attached EDR Radius Map plus Geocheck Report.

It is emphasized that, regardless of the wetlands data obtained via the EDR Geocheck-Physical Setting Source Addendum, a delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Property.

Lead in Drinking Water: Review of the potential for elevated levels of lead in the drinking water by determining the source of the drinking water supply and a review of available testing or compliance data reports.

2.2 Property Location/Legal Description

Property location and legal description details are described as follows:

Primary Street Address:	12741 and 12745 Limonite Avenue and 12740 58th Street				
City:	Eastvale	**County:**	Riverside	**State:**	California
Tax ID/Parcel Number:	164030010, 164030012, 164030013, 164030014, 164030024, 162030025				
Approx. Land Area:	153.3 acres				
Apprx. Latitude/Longitude:	North 33.9791850 degrees/West 117.5629320 degrees				
Additional Details (if appl.):	N/A				
Property Owner:	James Borba				
Zoning Designation:	Leal Master Plan				

2.3 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized

environmental conditions. The following table summarizes data gaps encountered during the assessment as well as a discussion of their significance.

Data Gap:	Significant (Yes/No)?	Discussion
Historical records data failure	No	The date and/or type of the first developed use of the Property was not documented. Record gaps exceeding five years were encountered; however, no significant site use changes are suspected during these intervals. The lack of this information does not represent a significant data gap.
Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt. Based on its review of information from other sources, however, Hillmann believes the lack of this information is unlikely to affect the conclusions or recommendations of this report. The lack of this information does not represent a significant data gap.

2.4 User Reliance

This report is for the exclusive use of the User(s) named on the front cover. No other party(ies) shall have any right to rely on the content of this report without first obtaining the consent of the original report User; and without obtaining written consent from Hillmann in the form of a letter of reliance or report recertification.

2.5 Significant Assumptions

The following significant assumptions are made:

- The site operations at the time of the site visit are assumed to reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, it is assumed that no areas of the Property with potential environmental concerns or RECs were concealed or otherwise not reported, intentionally or unknowingly, by the Property owners/occupants and/or site escort at the time of the site visit.

- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, an assumption has been made that the gradient of groundwater flow follows the surface topography of the Property and immediate surrounding area.

2.6 General Limitations and Exceptions

2.6.1 Limitations

The report turnaround time specified by the contract agreement for this assessment may present a limitation to the availability of pertinent regulatory agency records. Such limitations, if encountered, are further specified in Section 4.4.

Significant limitations related to the condition or accessibility of the Property at the time of the site reconnaissance, if encountered, are reported in Section 5.1.

2.6.2 Other Exceptions or Deletions

No other exceptions or deletions from the ASTM Standard E1527-13 are reported.

2.6.3 Special Terms and Conditions

This Phase I Environmental Site Assessment has been prepared using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. Findings within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, site development, redevelopment, or other construction purposes. No representation or warranty is made that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on visual observations of the Property, interviews conducted, the records reviewed, information provided by the Client, and/or a review of readily available and supplied drawings and documents. The accuracy and completeness of information obtained during the assessment, whether written, graphic or verbal, provided by the Property contact(s) or as shown on any documents reviewed or received from the Property contact, owner or agent, or government agency source can neither be warranted nor guaranteed. Independent verification of the accuracy or completeness of all information reviewed or received during the course of this assessment is not made and excluded from the scope of work for this assessment. No warranty or guarantee is made of the accuracy or completeness of information that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The regulatory research is designed to meet the requirements of ASTM Standard E1527-13. Hillmann can neither warrant nor guarantee the accuracy or completeness of the information obtained from the regulatory database report provider during the course of this assessment.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. Reasonable efforts are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify surficial and subsurface features that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

No guarantee, explicit or implied, is made that the records pertaining to historical ownership or occupancy which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

The ASTM E1527-13 standard states that recommendations are not required to be included in a Phase I ESA report; however, further that recommendations are an additional service that may be useful in the User's analysis of landowner liability protections or business environmental risks; and that the User should consider whether recommendations for additional inquiries or other services are desired.

The recommended response actions to the identified RECs presented in Section 1.3, if any, are not intended to represent the only course(s) of action to take; nor does it imply any opinion as to the timing of the action. Furthermore, it is emphasized that additional response actions may become warranted depending on the outcome of the initial action(s) taken. Hillmann advises that consultation with legal counsel familiar with environmental and real estate law may be beneficial to the decision making process for the type and timing of a response action to identified RECs, if any.

Due to the limited nature of our review of potential Business Environmental Risks, the User of the report should consider whether to take additional action(s) to further define, properly manage and/or mitigate potential BERs.

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the consulting services agreement for this project, the consulting services agreement shall control.

3.0 USER PROVIDED INFORMATION

The term "User" is defined by ASTM as the party seeking to use Practice E1527 to complete an environmental site assessment of the Property; specifically, the entities named on the front cover to which the report has been addressed.

3.1 Prior Environmental Reports/Documentation

No prior environmental reports/documentation were provided.

3.2 User Questionnaire

Section 6 of the ASTM E1527-13 standard describes certain tasks required to be performed by the report User in order to qualify for landowner liability protections to CERCLA liability. To assist the report User to meet these requirements, the ASTM E1527-13 standard recommends a questionnaire of inquiries (User Questionnaire) specified in 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31 be provided to the original report User. The following is a summary of the User's response:

Question:	Yes/No:	Detail:
Environmental liens that are filed or recorded against the property: Did a search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	No	
Activity and use limitations that are in place on the property or that have been filed or recorded against the property: Did a search of recorded land title records (or judicial records where appropriate, identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	No	
Specialized knowledge or experience of the person seeking to qualify for the LLP: Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	No	
Relationship of the purchase price to the fair market value of the property if it were not contaminated: Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Yes	

Commonly Known or Reasonably Ascertainable Information: Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,		
-Do you know the past uses of the property?	Yes	Dairy Farm
-Do you know of specific chemicals that are present or were once present at the property?	No	
-Do you know of spills or other chemical releases that have taken place at the property?	No	
-Do you know of any environmental cleanups that have taken place at the property?	No	
The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation: Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	No	
Litigation/Administrative Proceedings/Government Notices As the User of this ESA, do you have knowledge of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	No	

NR-no response

3.3 Reason for Performing Phase I ESA

The User did not indicate the purpose of the assessment. In accordance with ASTM E1527-13, it is assumed that the Phase I ESA was being performed in order to qualify for landowner liability protection to CERCLA liability.

4.0 RECORDS REVIEW

4.1 Physical Setting Sources

The following physical setting sources were reviewed:

Source	Discussion
USGS 7.5 minute Topographic Map Data: (EDR Geocheck-Physical Setting Source Addendum)	The Property lies at an elevation of approximately 669 feet above mean sea level. An interpretation of topographic contour lines as well as a review of the EDR Geocheck-General Topographic Gradient suggested terrain sloping downward towards the south-southwest. The closest down-gradient waterbody is the Santa Ana River, located approximately 1.8 miles to the southeast.
USDA SCS Soil Data: (EDR Geocheck-Physical Setting Source Addendum)	The primary soil type at the Property is classified as "Hilmar". This soil type is described as soils with moderate infiltration rates, with deep and moderately deep, moderately well drained soils, loamy fine sand with a moderately coarse grain texture.
Geologic Data: (EDR Geocheck-Physical Setting Source Addendum)	The geologic formation in the vicinity of the Property is described as a stratified sequence of the Cenozoic Era, Quaternary System, and Quaternary Series.
Prior Env. Reports: (Section 3.1)	No additional relevant site specific geologic data was noted from a review of the prior environmental reports listed in Section 3.1.
Additional Sources/ Data:	No additional physical setting sources or data was obtained.
Groundwater Flow Discussion:	Based on a review of the above information as well as observation of the site, the direction of shallow groundwater flow at the site is inferred to be towards the south-southwest.
NWI Wetlands Data: (EDR Geocheck-Physical Setting Source Addendum)	No NWI mapped wetlands areas were depicted at the Property.

4.2 Historical Use – Property and Adjoining Properties

Research has been conducted in an attempt to develop a history of the previous uses of the property and surrounding area, in order to help identify the likelihood of past uses having led to RECs in connection with the property. Standard historical sources have been sought in an attempt to document the past uses of the Property as far back as it can be shown that the Property contained structures; or from the time the Property was first used for residential, agricultural, commercial, industrial or governmental purposes.

4.2.1 Fire Insurance Maps

A Certified Sanborn Map Report was obtained from EDR for a review of published historic fire insurance maps for the Property and surrounding area. The following is a summary of site uses and notable details depicted by the available maps:

Year(s)	Prop/Adj	Depicted Use(s)	Notable Details
	Property:	(No coverage)	
	Adjoining:		

A copy of the Certified Sanborn Map Report is attached in Appendix D.

4.2.2 City Directories

An EDR City Directory Abstract report was reviewed for data of former occupants of the Property's street address. The following is a generalized summary of the findings of city directory research for past occupants of the Property.

Property	
Use(s) / Occupant(s):	**Years**
12740 58th Street – John Leal	2017
Jese Zunig	2014
Leal Ranches	2009
Leight Medbury	1999 - 2009
Sterling Silver Trucking	2009

The EDR City Directory Abstract report was also reviewed for listings of historical occupants of the adjoining properties. The following is a general summary of listings of historic adjoining property occupants:

Adjoining Properties	
Use and/or Occupant(s)	**Years**
12569 Limonite Avenue - Multi-tenant Commercial Shopping Plaza such as; restaurants, supermarket, banks, and retail stores	2009 – 2017
12762 Limonite Avenue - Cloverdale Marketplace, Soccer Warehouse, and Waba Grill	2014 - 2017
Residential	1999 – 2017

A copy of the EDR City Directory report is attached in Appendix D.

4.2.3 Historical Topographic Maps

Historical topographic maps of the Property and vicinity obtained from an EDR Historical Topographic Map report (as attached in Appendix D) have been reviewed. The following interpretation of land usage was made by review of the maps:

Year(s)	Summary of Interpretation	
1902	**Property:**	A roadway is depicted running from north to south in the eastern portion. A roadway is depicted in the southeast corner.
	Adjoining:	No improvements and/or special depictions are shown.
1942	**Property:**	A structure is depicted in the north central portion. An unimproved road is depicted running through the western portion then east along the north boundary.
	Adjoining:	An improved roadway is depicted to the east and south. Several structures are present to the south. An unimproved road is depicted to the east with a structure to the northeast.
1947	**Property:**	Four (4) structures are depicted on the north central portion. An orchard is depicted on the Property. The previous access road is depicted.
	Adjoining:	As previously described, orchards are depicted to the south and west. An unimproved roadway is present along the northern boundary connecting to the eastern roadway. A well is depicted in the southeast corner.

1954	**Property:**	Four (4) structures are depicted in the north central portion.
	Adjoining:	Shading indicative of orchards is present to the north and east. Several structures are depicted south of the improved roadway (Cloverdale Road). An unimproved road is present to the east with a structure depicted to the northwest.
1967	**Property:**	Five (5) structures are depicted in the north central portion. An access road is depicted on the western half terminating at the northern unimproved road. An unimproved road, indicative of a horse track, is depicted on the southeastern portion, looping around a previously identified well.
	Adjoining:	As previously described, Swan Lake Trailer Park is depicted to the east.
1973	**Property:**	As previously described, six (6) new structures are present in the northeast portion, consistent with the current dairy barn present today. A small pond is depicted in the east center portion.
	Adjoining:	As previously described, additional buildings are depicted to the southeast and south. An orchard is depicted to the northeast.
1981	**Property:**	As previously described, unimproved roadways are now depicted on the eastern portion around the presumed dairy barn. A structure is depicted in the east central portion at the apex of the presumed horse track on the southeast.
	Adjoining:	As previously described.
2012	**Property:**	Roadways are illustrated in the north portion.
	Adjoining:	Roadways are depicted on adjacent properties to the east and north.

4.2.4 Historical Aerial Photographs

Historical aerial photographs of the Property and vicinity obtained from an EDR Aerial Photo Decade Package report, as attached in Appendix D, were reviewed. The following interpretation of land usage was made by review of the aerial photographs:

Additional aerial photographs were reviewed online at the Riverside County Map My County website (Map My County v10 (countyofriverside.us))

Year(s)	Summary of Interpretation	
1931, 1938, 1948	**Property:**	Appears to be an active orchard, farm structures, and dwellings appear in north central portion. Apparent barns are present in north central portion. Parcel 064030013 appears densely vegetated and structures are present.
	Adjoining:	Orchards, residences, barns, row crops.
1953	**Property:**	As previously described, the eastern 2/3 of the orchard has been cleared and appears planted with row crops.
	Adjoining:	As previously described.
1967	**Property:**	Orchards no longer present; horse track is in southeast portion. Parcel 064030013 now cleared and part of the presumed horse track.
	Adjoining:	As previously described, adjacent eastern property now developed with trailer homes.
1975, 1985, 1989, 1990, 1994, 1996	**Property:**	As previously described, northeast portion now developed with a barn and apparent feeding shelters. Borrow area appears in central portion of west side.
	Adjoining:	As previously described.
2002	**Property:**	As previously described, portions of the northwest appear to be used as an equipment lay down area.
	Adjoining:	As previously described, northern properties are being or have been developed with residential structures.

2004, 2006, 2007, 2012	**Property:**	As previously described.
	Adjoining:	Residential to the north, northeast, and southwest. Shopping centers and out parcels to the south and south east, agriculture to the west. Commercial operation to the south, west portion. Apparent gasoline dispensary present to the east in 2007, and one (1) under construction to the south clearly visible in 2012.
2016	**Property:**	As previously described.
	Adjoining:	As previously described, residential structures and residential development to the west.
2019	**Property:**	As previously described.
	Adjoining:	As previously described.

4.2.5 EDR High-Risk Historical Records

The EDR Radius Map™ report, which is discussed in greater detail in Section 4.3, provided a search of proprietary databases of potential historical high-risk uses at or in the vicinity of the Property. These databases include EDR Historic Cleaners – a database of property addresses with records of historical occupancy by suspected cleaners businesses; EDR Historic Auto – a database of property addresses with records of historical occupancy by potential automotive gas/filling stations and repair facilities; and EDR MGP- a database of sites historically occupied by manufactured gas plants and related facilities.

EDR Database	On-site Listings:	Adjoining/Off-Site Listings
Historic Cleaners: (on-site/adjoining only)	None	None
Historic Auto: (on-site/adjoining only)	None	Tierra Fina, 12672 Limonite Ave; which adjoins the Property to southeast was listed as a gasoline service station for the year 2014.
MGP: (1-mile distance)	None	None

4.2.6 Petroleum/Natural Gas Well Review

The historical record sources and the California Geologic Energy Management Division (CalGEM) online mapping application were reviewed for records of historic petroleum and/or natural gas wells at the Property. No record of any historical petroleum/natural gas wells at or adjoining the Property was identified.

4.2.7 Additional Historical Data

Where applicable, the following additional pertinent historical data was obtained:

Interviews/Anecdotal:	The following additional pertinent historical data was obtained: Mr. Craig Leal, Property owner, indicated that a UST containing oil was excavated from the northern boundary of the Property in 1980. He indicated the UST was then utilized as an AST; however, there is no records associated with the closure documents for the historical UST. (Note: a Phase II subsurface investigation was subsequently performed in the specified area, the results of which are discussed herein.)

	Additionally, Mr. Leal indicated that the Property currently has two (2) 1,500-gallon septic tanks, and one (1) 500-gallon septic tank location within the vicinity of residential homes on the northern boundary of the Property.
Local Gov't Records:	No additional pertinent historical data was obtained.
Prior Env. Reports: (Section 3.1)	Not applicable; no prior reports were provided.
Site Observations:	Indications of historic uses of the Property or adjoining properties were not observed during the site reconnaissance.
Other Sources:	No additional pertinent historical data was obtained.

4.2.8 Summary of Identified Historic Uses

The following table presents a summary of the types and approximate date ranges of identified prior uses of the Property:

Property	
Date Range	**Use**
1931 to 1953	Orchard
1967 – 1975	Horse farm
2009	Trucking company; however, Property owner indicated that no trucking activities were done on the Property
1975 – Present	Dairy farm

The following table presents a summary of the types of identified prior uses of the adjoining properties:

Adjoining Properties	
Date Range	**Use**
1931 – 1953	Agriculture
1957 - 1996	Agriculture/residential
2002 – Present	Residential/commercial (shopping center, outparcels, gasoline station)

4.2.9 Historical Records Data Failure

The ASTM E1527-13 standard defines data failure as a failure to achieve the ASTM specified historical research objectives after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. The objective is to identify all obvious uses of the property from the present, back to the property's first developed use, or back to 1940, whichever is earlier. Furthermore, records of historic use/conditions should be sought in intervals no less than approximately five years, unless the property conditions appear unchanged over a longer interval.

Objective	Met?	Detail	Significant?
First developed use/date determined?	No	The earliest documented use of the Property was as orchards circa 1930s, the lack of further information does not represent a significant data gap.	No
Record sources at 5-year intervals back to 1940 or first developed use?	No	Historical record gaps exceeding five years were encountered. However, significant site-use changes or undiscovered site uses appear unlikely to have occurred	No

		during the record gaps. The lack of further information does not represent a significant data gap.	
All obvious prior uses identified?	Yes	See Section 4.2.8.	NA

Please refer to Section 2.3 for additional discussion of data gaps and their significance to the findings of the assessment.

4.2.10 Potential Environmental Issues Evaluated by Subsurface Investigation

- The Property was utilized as orchards since approximately 1931 to the 1950s. Concentrations of pesticides are commonly associated with shallow soils at sites with historical agricultural use. In addition, there is a potential for pesticide impacts to soil in the vicinity of the older farm structures along the northern perimeter of the Property where pesticide storage and mixing may have occurred. Accordingly, ninety-six (96) individual samples were collected, and analyzed for OCPs and Title 22 Metals, which are sometimes associated with the application of heavy-metal containing herbicides. Results of the OCP analysis indicated low levels of 4,4'-DDE and 4,4'-DDT which were below the applicable RSLs for residential applications. The results from heavy metal analysis indicate the samples had low, naturally-occurring background levels of metals, which did not exceed the applicable RSLs for residential applications. Therefore, the historical orchard operations on the Property do not indicate a REC with connection to the Property and Hillmann recommends no further investigation regarding this issue.

- Maintenance and repair of farm equipment and vehicles appear to have been conducted for an extended period of time in an area of the northern portion of the Property. Hillmann observed a significant amount of equipment, vehicles, trash, drums, and other materials in this area. Soil staining was observed within the vicinity of the maintenance repair area, and by the entrance of the dairy barn at 12741 Limonite Avenue. However, a Limited Phase II Investigation was conducted in July 2021 within the vicinity of the former maintenance repair area. Soil and soil gas samples were collected within the targeted areas of the Property. Results from soil sampling in the maintenance areas were "non-detect" for petroleum hydrocarbons and VOCs, and no heavy metal concentrations were detected at levels exceeding residential screening levels. The results from soil gas sampling in these areas indicated no VOC concentrations exceeding current residential screening levels, and the very low concentrations of detected chemicals are unlikely to represent an environmental or human health concern for the proposed residential use. Therefore, the historical maintenance operations do not indicate a REC with connection to the Property and Hillmann recommends no further investigation regarding this issue.

- The Property is registered as having a 550-gallon historical fuel UST present on the Property in 1988. The Property owner indicated that the UST was removed from the ground in the late 1980s and subsequently utilized as an AST. The former UST was reported to have been located on the northern portion of the Property. No tank closure records for the former were available. However, a Limited Phase II Investigation and GPR Investigation was conducted in July 2021 within the vicinity of the former UST. Soil and soil gas samples were collected

within the historical UST, which indicated no detectable concentrations of petroleum hydrocarbons or VOC (*i.e.*, the results were "non-detect"), and no heavy metal concentrations exceeding residential screening levels. The results from soil gas sampling in these areas indicated no VOC concentrations exceeding current residential screening levels and these very low concentrations likely do not pose a significant environmental or human health concern for the proposed residential use. Additionally, the GPR Investigation identified no evidence of the presence of the former UST. Therefore, the historical 550-gallon UST on the Property does not indicate a REC with connection to the Property and Hillmann recommends no further investigation regarding this issue.

- Portions of the Property were utilized for dairy operations from approximately the 1970s to 2019. Hillmann observed areas of residual livestock waste accumulations on the east and west portions of the Property. Elevated concentrations of methane gas are sometimes associated with areas where livestock wastes accumulate, and can sometimes give rise to the need for mitigation prior to development. A methane survey was conducted in July of 2021, which indicated that most samples had insignificant concentrations of subsurface methane gas, and field screening indicated just three (3) samples (of 15) had detectable concentrations of methane. However, it is important to note that the methane distribution is not widespread and that the areas investigated are still covered with animal waste. This material should be removed in connection with site development activities. Ultimately, Hillmann concludes that the residual livestock does not indicate a REC with connection to the Property.

- Hillmann observed the presence of discarded drums located in the maintenance repair area. The drums indicated a concern due to the unknown content and possibility of undocumented chemical spills/releases to have occurred in the past and/or occur when the site is cleared for development. However, a Limited Phase II Investigation was conducted in July 2021 within the vicinity of the discarded industrial drums. Soil samples that were collected within the area indicated no detectable concentrations of petroleum hydrocarbons or VOCs, and no heavy metal concentrations exceeding residential screening levels. The results from soil gas sampling in these areas indicated no VOC concentrations exceeding current residential screening levels. These very low concentrations likely do not pose a significant environmental or human health concern for the proposed residential use. Therefore, the historical discarded industrial drums on the Property did not indicate a REC with connection to the Property. Hillmann recommends no further investigation regarding this issue.

The Property was utilized as a dairy farm since approximately the 1970s. During the site visit, Mr. Leal, Property owner, indicated the dairy farm operational ceased in October 2019.

The review of historical records did not indicate evidence of a REC in connection with the Property.

4.3 Standard Environmental Record Sources

A regulatory database report, titled EDR Radius Map™ Report, prepared by Environmental Data Resources of Shelton, CT was obtained and reviewed. The report provided a search of standard

environmental record sources for listings of the Property, adjoining properties and sites within the surrounding area; and has been reviewed for the purpose of identifying listings suggesting a potential impact to the Property due to presence or migration of hazardous substances and/or petroleum products. Additional descriptions of the meaning and significance of the regulatory databases can be found in the regulatory database report in Appendix E. The EDR Radius Map™ Report provided a search of the following database categories in accordance with the requirements of the ASTM Standard E1527-13:

Regulatory Database	Search Distance
Fed. National Priorities List (NPL/a.k.a. "Superfund" sites) & Proposed NPL	1-mile
Fed. Delisted NPL	½-mile
Fed. Superfund Enterprise Management System (SEMS; formerly CERCLIS)	½-mile
Fed. SEMS-ARCHIVE (formerly known as CERCLIS NFRAP)	½-mile
Fed. RCRA Corrective Action Sites (CORRACTS)	1-mile
Fed. RCRA Transport/Storage/Disposal (TSD) sites	½-mile
Fed. RCRA Generators (LQG, SGQ & CESQG)	Site & Adjoining
Fed. Institutional Control/Engineering Control (IC/EC) Registries	Site only
Fed. Emergency Response Notification System (ERNS)	Site only
State/Tribal Hazardous Waste Sites (SHWS)	1-mile
State/Tribal Landfill and/or Solid Waste Disposal (LF/SWF)	½-mile
State/Tribal Leaking Storage Tanks	½-mile
State/Tribal Registered Storage Tanks	Site & Adjoining
State/Tribal IC/EC Registries	Site
State/Tribal Voluntary Cleanup Sites	½-mile
State/Tribal Brownfields	½-mile
Additional Federal, State, Tribal and Local Environmental Databases	Variable

Reported distances for adjoining listings discussed in Section 4.3.4, if applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property.

The reported gradients indicated where applicable in Sections 4.3.4 and 4.3.5 have been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

4.3.1 Supplemental Database Listings

The regulatory database report was also reviewed for listings on supplemental databases, in addition to the Standard Environmental Record Sources. Any property or adjoining property listings on such databases of significant concern, if identified, is discussed in Sections 4.3.3 and 4.3.4. Otherwise, none of the other supplemental database listings identified by the regulatory database report are considered to be a REC in connection with the Property.

4.3.2 Limited Tier I Vapor Encroachment Screening

Limited analysis of the details of on-site, adjoining and vicinity database sites was conducted to identify potential sources of sub-surface vapor encroachment. This review was based on elements of the ASTM "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E 2600-15); and also on elements of "Methodology for Identifying the Area of Concern Around a Property Potentially Impacted by Vapor Migration from Nearby Contaminated Sources" (Buonicore, 2011-S-103-AWMA). Vicinity database sites pertaining to non-petroleum product releases within 1,760 feet of the Property in the up-gradient direction, 365 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction; and vicinity database sites pertaining to petroleum product releases within 528 feet of the Property in the up-gradient direction, 165 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction were reviewed to identify active contamination sites with the potential to affect subsurface vapor conditions at the subject property. The potential for vapor encroachment was considered in assessing whether or not a REC exists in connection with the Property when reviewing applicable sites within those distances.

Regulatory database sites with active petroleum or non-petroleum releases that have the potential to constitute a vapor encroachment condition (VEC) to the Property, if any, are evaluated in Sections 4.3.3, 4.3.4 and 4.3.5, below. Ultimately, Hillmann concludes that there are no VECs in relation to the Property.

4.3.3 Property Listings

The following listings of the Property were identified:

Name/Address:	Leal Ranches/12740 58th Street
Database(s):	FINDS, ECHO, ENF, CIWQS, CERS
Data Discussion:	The FINDS listing is associated with the facility being registered as a NPDES point source. Available records did not identify any violations. The ECHO listing is related to the Clean Water Act compliance as administered by the state of California. No violations were noted for the past five years. The ENF listing is associated with an apparent violation observed and corrected during a 2008 inspection. The CIWQS listing did not identify any violations observed in the past five years. The CERS listing is associated with an inspection of the facility in accordance with the California Water Code. Violations were noted in 2007, 2008, 2010 associated with animal waste disposal documentation and associated with implementing the BMP for the facility. No additional violations were noted in the record.
REC Discussion:	Based on the details provided above, this issue does not represent a REC.
VEC Discussion:	Based on the available data, this issue does not represent a VEC.

Name/Address:	Leal Ranches/12714 Cloverdale Ave.
Database(s):	HIST UST
Data Discussion:	The facility is registered as operating a 550-gallon gasoline UST in 1988. No records of spills, cleanup, or removal were identified.
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.
VEC Discussion:	Based on the available data, a VEC is not suspected.

4.3.4 Adjoining Property Listings

The following adjoining property listings were identified. Reported distances, where applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property. The reported gradient has been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

Name/Address:	Harada Elementary School - Echeverria Dairy/Cleveland Ave				
Database(s):	Envirostor, LUST, SCH				
Distance in feet:	1200	**Direction:**	SW	**Gradient:**	Down
Data Discussion:	The facility is incorrectly reported as adjacent to the Property, the school is actually located 1,200 feet to the south. The facility has been investigated for potential contaminants of concern including arsenic, DDD, DDE, DDT, and methane with a no further action status. The LUST record is associated with a historical gasoline UST located approximately 1 mile south of the Property at the Eastvale Elementary School property.				
REC Discussion:	Based on the details provided above, this issue does not represent a REC.				
VEC Discussion:	Based on the available data, this site does not represent a VEC.				

Name/Address:	Western Sky Dairy/6500 Hamner				
Database(s):	ENF, HIST CORTESE, NPDES, WDS, CIQS				
Distance in feet:	118	**Direction:**	SE	**Gradient:**	Down
Data Discussion:	The facility historically operated to the southeast. The facility is closed and has been redeveloped into residential subdivisions.				
REC Discussion:	Based on the details provided above, the facility does not represent a REC.				
VEC Discussion:	Based on the available data, this facility does not represent a VEC.				

Name/Address:	Mountain View Tire & Service/6080 Hamner Ave. #105				
Database(s):	CERS HAZ WASTE, CERS, RCRA NonGen/NLR,				
Distance in feet:	122	**Direction:**	E	**Gradient:**	Up
Data Discussion:	The facility is registered as a CERS hazardous waste generator. An inspection in 2020 identified a violation, which was that a bung cap was not present on an anti-freeze. Additionally, a violation for not inspecting hazardous waste storage weekly was noted. The records indicated the facility was in compliance eight days after the violations were noted. The RCRA NonGen/NLR listing is associated with the facility being a universal waste generator. No violations were reported.				
REC Discussion:	Based on the details provided above, this facility does not represent a REC.				
VEC Discussion:	Based on the available data, this facility does not represent a VEC.				

Name/Address:	Ralphs Grocery #45 Fuel Center/12618 Limonite Ave				
Database(s):	UST, CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, HWTS, RCRA-LQG CHMIRS				
Distance in feet:	126	**Direction:**	S	**Gradient:**	Down
Data Discussion:	The facility is registered and currently operates as a vehicular fuel dispensary utilizing USTs for petroleum distillate storage. The records indicate the facility is in compliance. Minor violations associated with the fuel dispensing systems were historically noted and returned to compliance. A release of seven (7) gallons of gasoline was reported to the concrete and asphalt and was cleaned up by a contractor. The waste disposal records did not identify any violations or releases to the Property.				

REC Discussion:	Based on the details provided above, this facility does not represent a REC.
VEC Discussion:	Based on the available data, this facility does not represent a VEC.

Name/Address:	Ralphs Grocery #45/12618 Limonite Ave				
Database(s):	RCRA NonGen/NLR, CERS HAZ WASTE, CERS, HAZNET, HWTS				
Distance in feet:	463	**Direction:**	S	**Gradient:**	Down
Data Discussion:	The facility is identified as a USEPA non generator of hazardous waste. No violations were identified. The records identified that the facility disposes of pharmaceutical waste, off spec, aged or surplus organics, liquids with a pH <=2, other organic solids, aqueous solution containing reactive anions, alkaline solution without metals. No violations were noted.				
REC Discussion:	Based on the details provided above, this facility does not represent a REC.				
VEC Discussion:	Based on the available data, this facility does not represent a VEC.				

Name/Address:	Vons Fuel Center #2688/6110 Hamner Ave.				
Database(s):	UST, CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, HWTS, RCRA NonGen/NLR				
Distance in feet:	122	**Direction:**	E	**Gradient:**	Up
Data Discussion:	The facility operates a vehicular fuel dispensary utilizing USTs for petroleum distillate storage. The records indicate the facility is in compliance. A surficial release of two (2) gallons of gasoline was reported in 2012. A surficial release of four (4) gallons of diesel was reported in 2006. Minor violations associated with the fuel dispensing systems were historically noted and returned to compliance. No releases to soil or groundwater were identified. The waste disposal records did not identify any violations or releases to the Property.				
REC Discussion:	Based on the details provided above, this facility does not represent a REC.				
VEC Discussion:	Based on the available data, this facility does not represent a VEC.				

Name/Address:	Vons A Safeway Company #2688/6110 Hamner Ave.				
Database(s):	CERS HAZ WASTE, CERS RCRA LQG, FINDS				
Distance in feet:	122	**Direction:**	E	**Gradient:**	Up
Data Discussion:	The records identify that the facility is designated as a state hazardous waste generator, chemical storage facility. Paperwork and filing violations were historically identified and promptly rectified. The RCRA LQG and FINDS listings did not identify any violations.				
REC Discussion:	Based on the details provided above, this facility does not represent a REC.				
VEC Discussion:	Based on the available data, this facility does not represent a VEC.				

Name/Address:	Pulte Homes Company, LLC/12774 Limonite Ave				
Database(s):	RCRA NonGen/NLR				
Distance in feet:	142	**Direction:**	S	**Gradient:**	Down
Data Discussion:	This listing is for a historic facility associated with the development of the residential community to the south. No violations were noted.				
REC Discussion:	Based on the details provided above, this facility does not represent a REC.				
VEC Discussion:	Based on the available data, this facility does not represent a VEC.				

Name/Address:	Walgreens #13657/12574 Limonite Ave				
Database(s):	RCRA NonGen/NLR, CERS HAZ WASTE, HAZNET, HWTS				
Distance in feet:	142	**Direction:**	S	**Gradient:**	Down
Data Discussion:	This listing is associated with an operating drug store. The data indicated the facility was listed as a Small Quantity Generator. and a Conditionally Exempt Small Quantity Generator. The records identified that the facility disposes of pharmaceutical waste, off spec, aged or surplus organics, liquids with a pH <=2, other organic solids, aqueous solution containing reactive anions, alkaline solution without metals. No violations were noted.				

REC Discussion:	Based on the details provided above, this facility does not represent a REC.
VEC Discussion:	Based on the available data, this facility does not represent a VEC.

Name/Address:	Riverside Medical Clinic/12742 Limonite Ave				
Database(s):	RCRA NonGen/NLR				
Distance in feet:	144	**Direction:**	S	**Gradient:**	Down
Data Discussion:	This listing is described as an office of all other miscellaneous health practitioners. The data indicated the facility not a generator of hazardous waste. No violations were noted.				
REC Discussion:	Based on the details provided above, this facility does not represent a REC.				
VEC Discussion:	Based on the available data, this facility does not represent a VEC.				

Name/Address:	Bright Now Dental A Dental Office of Sahawneh Dent/12636 Limonite Ave				
Database(s):	RCRA NonGen/NLR				
Distance in feet:	556	**Direction:**	S	**Gradient:**	Down
Data Discussion:	This listing is described as an offices of dentists. The data indicated the facility as not a generator of hazardous waste. No violations were noted.				
REC Discussion:	Based on the details provided above, this facility does not represent a REC.				
VEC Discussion:	Based on the available data, this facility does not represent a VEC.				

Name/Address:	Home Depot USA Inc HD1084/6140 Hamner Avenue				
Database(s):	RCRA SQG, CERS HAZ WASTE, CERS, HAZNET, HWTS				
Distance in feet:	463	**Direction:**	S	**Gradient:**	Down
Data Discussion:	The facility is identified as a USEPA small quantity generator of hazardous waste. No violations were identified. Further, the state records identified that the facility disposes of waste oil, unspecified solvent mixtures, other inorganic solid waste, unspecified organic liquid mixtures, off spec, aged or surplus organics, alkaline solution without metals, paperwork and filing violations were historically identified and promptly rectified. No violations associated with on-site releases were noted.				
REC Discussion:	Based on the details provided above, this facility does not represent a REC.				
VEC Discussion:	Based on the available data, this facility does not represent a VEC.				

4.3.5 ASTM Search Distance Findings

The following is a discussion of non-adjoining sites identified as located within the ASTM specified search distance surrounding the Property. In order to keep this discussion informative and concise, discussion(s) is/are provided of the listed site(s) for each database category that appears most likely to impact the Property based on distance, area topography and/or regulatory status. Listings of sites within the applicable search distances not specifically discussed below were reviewed and concluded not to be RECs in connection with the Property or VECs based on various factors including distance, area topography, known or inferred groundwater flow direction and/or regulatory status. Listings for the following databases, if identified, have been discussed above in Sections 4.3.3 and 4.3.4: Registered Storage Tanks, Federal RCRA Generators, Federal and State EC/IC, ERNS. A copy of the full regulatory database report, including available details of all listed sites, is included in Appendix E.

Federal NPL				**# of sites:**	0	**Search Distance:**	1-mile
Notable Listing:	None						
Distance in feet:		**Direction:**		**Gradient:**			
Data Discussion:							
REC Discussion:							
VEC Discussion:							

Federal Delisted NPL				**# of sites:**	0	**Search Distance:**	1-mile
Notable Listing:	None						
Distance in feet:		**Direction:**		**Gradient:**			
Data Discussion:							
REC Discussion:							
VEC Discussion:							

Federal SEMS				**# of sites:**	0	**Search Distance:**	½-mile
Notable Listing:	None						
Distance in feet:		**Direction:**		**Gradient:**			
Data Discussion:							
REC Discussion:							
VEC Discussion:							

Federal SEMS-ARCHIVE				**# of sites:**	0	**Search Distance:**	½-mile
Notable Listing:	None						
Distance in feet:		**Direction:**		**Gradient:**			
Data Discussion:							
REC Discussion:							
VEC Discussion:							

Federal CORRACTS				**# of sites:**	0	**Search Distance:**	1-mile
Notable Listing:	None						
Distance in feet:		**Direction:**		**Gradient:**

VEC Discussion:							

UNMAPPED/ORPHAN LIST SITES	
	Hillmann has also reviewed a list of unmapped sites (a.k.a. "Orphan List" sites) indicated by the database report. Unmapped sites that were identified as falling within an applicable specific search distance or warranting discussion have either been discussed in the preceding tables or are detailed below:
Notable Listings:	None

4.4 Additional Environmental Record Sources

Requests have been submitted to local, municipal and state agencies for pertinent records pertaining to the Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Where applicable, internet research of government

environmental regulatory databases was also conducted, as well as a general cursory internet search of the Property address, for information indicative of a REC. The following table summarizes the findings of the research:

Source	Type of Request	Outcome
EPA MyProperty	Online search	Hillmann searched online for records pertaining to the Property. No records pertaining to the property were found.
EPA Envirofacts	Online search	Hillmann searched online for records pertaining to the Property. No records pertaining to the property were found.
CA SWRCB (GeoTracker)	FOI request	Hillmann searched online for records pertaining to the Property. No records pertaining to the property were found.
CA DTSC (Envirostor)	FOI request	A response was recieved stating that no records were found.
Regional Water Quality Control Board (RWQCB)	FOI request	A response was recieved stating that no records were found.
South Coast Air Quality Management District (SCAQMD)	FOI request	A response was recieved stating that no records were found.
Fire Prevention/Marshall and Hazardous Material	FOI request	No response was received prior to report issuance.
Riverside Agricultural Commission	FOI request	A response was recieved stating that no records were found.
Health Department	FOI request	No response was received prior to report issuance.
Internet Search Engine	Online search	Hillmann searched online for records pertaining to the Property. No records pertaining to the property were found.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of the Property and improvements, adjoining properties as viewed from the Property boundaries and the surrounding area based on visual observations from adjoining public thoroughfares. Building exteriors were observed at ground level, unless otherwise indicated. Where applicable, representative areas of building interiors were accessed and observed to the extent they were made safely accessible with the cooperation of the site escort.

Site Inspection Personnel:	Ms. Gabriela Cyrulik
Property Escort/Company:	Mr. Craig Leal/Property Owner
Inspection Date:	June 21, 2021
Weather Conditions:	Sunny, 81 degrees F

5.1.1 Significant Inaccessible Areas

The following significant areas of the Property were not accessed at the time of the site visit:

Hillmann did not gain access into the five (5) occupied residential structures on the Property.

5.1.2 Significant Limiting Site Conditions

No significant limiting site conditions were noted at the time of the site reconnaissance.

5.2 General Site Setting

5.2.1 Site and Vicinity Characteristics

Abutting Roadways:	58th Street to the north; Hamner Avenue to the east; Limonite Avenue to the south; Scholar Way to the west
Current Property Use:	Dairy farm with five (5) residential structures
Evidence of Past Property Uses:	Remnants of cattle maneuver were observed on the northeast and northwest corner of the Property
Evidence of Past Adjoining Property Uses:	None observed
Surrounding Area Uses:	Residential, commercial shopping plazas and institutional uses (i.e., Harada Elementary School)

5.2.2 Current Adjoining Property Uses

Dir	Street Address	Description
N	Rancho Vista Road	Residential
E	Swan Lake Apartments	Residential
S/SE	Limonite & Hamner Ave	Multi-tenant commercial shopping plaza with restaurants, retail stores, gas stations, banks
W	Scholar Way	Residential

No visual observations indicative of a potential environmental concern were noted on the adjoining properties.

5.2.3 Topographic Characteristics

Terrain:	Flat to gently sloping
Direction of Downward Slope:	Towards the south
On-site Water Bodies:	None observed
Other Significant Features:	None observed

5.2.4 General Description of Structures

Buildings/# of Floors	Five (5) residential structures/single-story
Approx. Building Area:	N/A
Approx. Year Built:	1931
Ancillary Structures:	None observed
Sources of Heating & Cooling:	Natural gas fired heating systems/no central cooling systems noted
Potable Water/Sewage Disposal:	Potable well and septic system. See Sections 5.3.15 and 5.3.16 for additional details.

5.3 Interior & Exterior Observations

5.3.1 Storage/Usage of Hazardous Substances and Petroleum Products

The following hazardous substances and petroleum products were observed to be stored and used by property occupants:

Occupant	Substance	Qty/Container Type	Storage Conditions
Leal Ranch	Hydraulic fluid	1-gallon/one	Good
Leal Ranch	Machine lubricant	5-gallon/one	Good

5.3.2 Drums

The following hazardous substance or petroleum product drums were noted on the Property:

Hillmann observed seven (7) unidentified drums stored in the same location, and in one area outside the maintenance repair station, along the northern perimeter of the Property. Seven (7) of the unidentified containers were located without secondary containment, and were placed on the pavement. Hillmann observed that one (1) of the unidentified substance containers was leaking and had stained the pavement along the maintenance repair area on the northeastern corner of the repair shop on the Property. This area was evaluated by a Phase II subsurface investigation and determined to not represent a Recognized Environmental Condition.

5.3.3 Unidentified Substance Containers

The following unidentified substance containers suspected of containing hazardous substance or petroleum product were noted on the Property:

Hillmann observed that drums described in Section 5.3.2 were unlabeled and unidentified, and could contain hazardous substance and/or petroleum products. In addition, Hillmann noted several unlabeled one-gallon and five-gallon containers in the maintenance repair area, within the northern perimeter of the Property. As discussed in this report, these features were determined to not represent a concern.

5.3.4 Other Hazardous Substances/Petroleum Products

No other containers of hazardous substances or petroleum products were noted on the Property.

5.3.5 Bulk Petroleum/Hazardous Material Storage Tanks

The following storage tanks for bulk petroleum or hazardous material storage were identified or reported to be present; or are suspected to be present based on visual observations:

AST/ UST	Product	Capacity	Construction	Year Installed	Status	Location/Notes
UST	Gasoline	550-gallon	Double-walled steel	1970s	Excavated	Mr. Leal indicated the UST was excavated in the late 1980s. Hillmann observed an unlabeled and unidentified UST along the Horse Barn on the north perimeter of the Property
AST	Petroleum	600-gallon	Metal	N/A	N/A	Located in the maintenance repair area

5.3.6 PCBs in Oil Filled Electrical/Hydraulic Equipment

No oil-filled electrical or hydraulic equipment was identified at the Property.

5.3.7 Odors

No strong, pungent or noxious odors were noted at the Property.

5.3.8 Pools of Liquid

No standing water or pools of liquid likely to contain hazardous substances or petroleum products were noted at the Property.

5.3.9 Interior Stains or Corrosion

The following interior stains and/or corrosion due to hazardous substance/petroleum products spills/releases were noted at the Property:

Hillmann observed spills/releases from one (1) out of seven (7) unidentified hazardous drums stored outside the northwest corner of the maintenance repair shop, along the northern perimeter of the Property. Additionally, another spill/release was observed within the vicinity of the Dairy Barn (12741 Limonite Ave), located on the gravel at the northeastern corner of the Property by the entrance of the building. The staining is considered to be *de minimis.*

5.3.10 Interior Drains/Sumps

No floor drains or sump pits were noted at the Property other than for storm water or sewage management.

5.3.11 Exterior Pits/Ponds/Lagoons

No exterior pits, ponds or lagoons was identified on the Property in connection with waste treatment or disposal.

5.3.12 Stained Soil, Pavement/Stressed Vegetation

The following stained soil, pavement and/or stressed vegetation was observed at the Property:

Hillmann observed tall grass and vegetation present throughout the southern perimeter of the Property.

5.3.13 On-Site Solid Waste Disposal/Fill Material

The following evidence of on-site solid waste dumping/disposal was observed:

Hillmann observed piles of concrete, abandoned drums, farm machinery/equipment, cars, tires, furniture, piping, wood, and other miscellaneous trash and debris present along two isolated on the northeastern and northwestern perimeter of the Property. As discussed in this report, these features are unlikely to represent an environmental concern.

5.3.14 Waste Water

Sanitary sewage generated at the Property is discharged via an on-site septic system. See Section 5.3.15 for additional details regarding the septic system.

5.3.15 Septic Systems

A septic system is present and utilized for on-site disposal of sanitary sewage. The system is located to the north side of the Property by the former residential homes. Mr. Leal, Property Owner, indicated that there is two (2) 1,500-gallon, and one (1) 500-gallon septic tanks located on the northern area of the Property, and utilized for the residential structures on the Property.

5.3.16 Wells

The following groundwater wells were identified at the Property:

Hillmann observed a water well on the east-southeast perimeter of the Property. Additionally, another groundwater production well, and storage cistern were observed on the northern perimeter of the Property.

5.3.17 Railroad Spurs

No railroad spurs were identified on the Property.

6.0 INTERVIEWS

6.1 Interviews with Past and Present Owners and Occupants

Subject	Name/Affiliation	Summary
Property Owner / Representative	Mr. Craig Leal/Property Owner	Mr. Leal was provided with an environmental questionnaire, and was interviewed during the site inspection. However, a completed environmental questionnaire has not been returned prior to report issuance.
Property Occupants	Not applicable	Property was occupied by Leal Ranch.
Past Owners, Occupants, Operators	Not applicable	Past owners/occupants of the Property were not available for interview at the time of the assessment.
Owners/Occupants of Adjoining or Nearby Properties	Not applicable	The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjoining or nearby property owners or occupants were not conducted.

6.2 Interviews with State and/or Local Government Officials

Written and on-line requests for environmental records of the Property from State and Local governmental agencies are detailed in Section 4.4.

7.0 BUSINESS ENVIRONMENTAL RISKS

In accordance with the contract agreement for this assessment, Hillmann has performed cursory reviews of several potential Business Environmental Risks (also known as "Non-Scope Considerations"). The ASTM E1527-13 standard defines the term business environmental risk (BER) as, *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."*

7.1 Asbestos-Containing Material (ACM)

The contracted scope of work included a cursory visual screening of the accessed portions of buildings at the Property built prior to 1990 for suspect asbestos containing materials (ACM). The information provided in this section, where applicable, is limited to identification of potential suspect materials in the readily accessible and observed areas of the building, and their general condition. This is not intended to be a comprehensive survey for the presence of ACM, and no testing has been conducted.

Suspected ACM noted during a cursory visual screening included sheetrock wall systems, brick and mastic, and floor tile with associated mastics. Although not observed, the roofing materials may contain asbestos. Additional types of suspect ACM may exist in enclosed areas or areas not accessed during the assessment. It is emphasized that this limited screening does not constitute a comprehensive asbestos survey of the premises and is meant only to provide a cursory evaluation regarding the potential presence of ACM at the Property.

7.2 Lead-Based Paint

The contracted scope of work included a cursory visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980. This is not intended to constitute a comprehensive survey for LBP or potential lead hazards, and no testing has been conducted.

No access was available into the on-site dwelling structures. Dwelling and farm structures at the Property have the potential to have components coated with lead containing paint.

7.3 Radon

Data compiled by the USEPA, as summarized by the regulatory database report, indicated that the Property is located in an area classified as Zone 2 or 'moderate risk' area for radon. Radon testing was not included in the scope of this assessment. According to the CA Radon database, fifteen recorded tests in zip code 92880 recorded 1 pCi/L indoor concentrations. Radon appears unlikely to represent an environmental concern.

7.4 Mold/Microbial Damage

As per the contracted scope of work, Hillmann conducted a cursory visual screening of the accessed areas of the building for evidence of significant damage to building materials and finishes as result of moisture intrusion and/or mold/microbial growth. Hillmann did not observe evidence of significant problems with moisture intrusion or mold/microbial growth at the Property.

7.5 NWI Mapped Wetlands

As indicated in the Physical Setting Source table of Section 4.1, no NWI mapped wetlands areas were depicted at the Property by the EDR Geocheck-Physical Setting Source Addendum (attached in Appendic E).

The scope of work for this assessment excludes a visual determination of regulated wetlands at the Property. It is emphasized that, regardless of the wetlands data obtained via the EDR Geocheck-Physical Setting Source Addendum, a delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Property.

7.6 Lead in Drinking Water

The scope of work for this assessment included a review of the potential for elevated levels of lead in drinking water by determining the source of the drinking water supply and a review of available compliance or testing data.

Potable water service at the Property is provided by a utility connection with the Western Municipal Water District. A recently published water quality report from the utility indicated compliance with USEPA water quality standards for lead in drinking water. A copy of the report has been attached in Appendix F.

QUESTIONNAIRES/USER PROVIDED DOCUMENTATION

HILLMANN
CONSULTING

ASTM E 1527-13/AAI - USER QUESTIONNAIRE

Instructions: This form should be completed by a representative of the USER of the Phase I ESA report and returned to Hillmann via email or in-person. **The report USER is the entity on whose behalf the assessment is being prepared and that will be relying on the report for liability protections.**

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"),188 the USER must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete. Please complete the following questionnaire and provide any of the referenced information (if available) to Hillmann.

USER Company Name:	The New Home Company Southern California LLC	**USER Mailing Address:**	15231 Laguna Canyon Rd, suite 250 Irvine CA 92618
Respondent Name & Email Address:	Matt Blain mblain@nwhm.com	**Date of Completion:**	09/14/2021

Property Address:	12745 Limonite Avenue, Eastvale CA	**YES**	**NO**	**DETAIL (optional):**
Environmental liens that are filed or recorded against the property: Did a search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?		☐	☑	
Activity and use limitations that are in place on the property or that have been filed or recorded against the property: Did a search of recorded land title records (or judicial records where appropriate, identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?		☐	☑	
Specialized knowledge or experience of the person seeking to qualify for the LLP: Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?		☐	☑	
Relationship of the purchase price to the fair market value of the property if it were not contaminated: Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?		☑	☐	

HILLMANN CONSULTING

Property Address:	12745 Limonite Avenue, Eastvale CA	YES	NO	DETAIL (optional):
Commonly Known or Reasonably Ascertainable Information: Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? **ANSWER BELOW**				
- Do you know the past uses of the property?		☑	☐	Dairy Farm
- Do you know of specific chemicals that are present or were once present at the property?		☐	☑	
- Do you know of spills or other chemical releases that have taken place at the property?		☐	☑	
- Do you know of any environmental cleanups that have taken place at the property?		☐	☑	
The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation: Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?		☐	☑	
Litigation/Administrative Proceedings/Government Notices As the User of this ESA, do you have knowledge of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		☐	☑

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Limited Permission To Make Copies

Hillmann Environmental Co. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

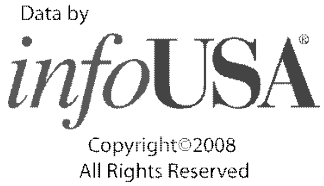
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 2640 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY
