Density is expressed as dwelling units per acre for residential uses, and intensity is expressed as floor area ratio or lot coverage. For mixed-use buildings containing residential and commercial uses, the calculation of floor area ratio is used. Setbacks are measured from the building to the property line.

The Specific Plan has four residential land use types and eleven non-residential land use types. The proposed Project will encompass two residential types (Village and Core) and four non-residential land use types (Neighborhood Commercial, Office Core, Ground Floor Retail/Overlay Flex Space, and Open Space).

The Project site is divided into 27parcels as shown on the Master Planning Parcel Summary, page 38 of Exhibit C to the Project resolution, of the proposed plans. A simplified version of the information is provided below. The mixed-use parcels are shaded in gray, and where a parcel exceeds minimum standards such as parking and open space, it is noted:

Parcel	**Zone**	**Building Type**	**Number of Units**	**Over minimum standards and/or requirements (indicated by "+" sign)**
N1	Village	3-Story Attached (Duplex and Triplex)	98	**Parking:** +11 guest **Open Space:** +34,803 SF common and +1,268 SF private
N2	Village	3-Story Attached (Duplex and Triplex)	56	**Parking:** +18 guest **Open Space:** +6,041 SF common
N3-A	Village	3-Story Attached (Duplex)	40	**Open Space:** +2,192 common
C1-A	Village	3-Story Attached (Townhouse)	62	**Parking:** +9 guest **Open Space:** + 10,770 SF common

C1-B	Core and Ground Floor Retail/Office	Apartments over Retail	114	**Parking:** +31 residential **Open Space:** +6,068 SF common
C2-A	Core and Ground Floor Retail/Office	Stacked Flat Condos over Retail	116	Parking: +39 residential **Open Space:** +3,187 SF common
C2-B	Village	3-Story Attached (Duplex and Triplex)	17	**Parking:** +11 guest **Open Space:** +572 SF common
C3	Village	3-Story Attached (Townhouse)	45	**Parking:** +10 guest **Open Space:** +961 SF common and +495 private
C5	Village	3-Story Attached (Townhouse)	84	**Parking:** +3 guest **Open Space:** +9,753 SF common and +920 SF private
S1	Core, Neighborhood Commercial, and Ground Floor Retail/Office	Stacked Flat Condos over Grocery	172	**Parking:** +16 residential +3 commercial **Open Space:** +6,171 common
S2	Village	3-Story Attached (Townhouse)	102	**Parking:** +16 residential +22 guest **Open Space:** +1,536 common
S3-A	Core	Apartments	152	**Open Space:** +2,3124 SF common
S3-B	Core	Apartments	200	**Open Space:** +8,075 common
S4	Village	3-Story Attached (Townhouse)	41	**Parking:** +13 residential +4 guest **Open Space:** +5,695 SF common
N3-B	Open Space	Neighborhood Park	N/A	
N3-C	Open Space	Recreation Center	N/A	

C1-C	Open Space	Pocket Plaza	N/A	
C2-C	Open Space	Pocket Plaza	N/A	
TS	Open Space	Town Square	N/A	

The Developer has prepared a matrix of required development standards and the Project's consistency with them in the Proposed Plans on sheets CM1-CM5. The matrix is organized by parcel. Where a particular development standard is met, the compliance is noted and where a development standard is not met, the matrix identifies the non-compliance. The Project is consistent with all required development standards such as setbacks, height, open space and parking, with the exception of the following Developer Density Bonus waivers:

1. In Planning Area N-1:
    a. A waiver or reduction from the applicable Specific Plan porch separation requirement for porches facing each other of 15 feet along paseos, where two particular porches in the Planning Area are separated by 7.5 feet and 9.9 feet, respectively.

2. In Planning Areas N-2 and N3-A:
    a. A waiver or reduction from the applicable Specific Plan dimension requirement for private open space, which requires a minimum of 75 square feet of open space per dwelling unit with minimum dimensions of 6 feet by 8 feet, and the Project provides certain units that include private open space that is 17 feet, 3 inches by 5 feet, 0 inches, for a total area of approximately 86.25 square feet.

3. In Planning Area CI-B:
    a. A waiver or reduction from the applicable Specific Plan front setback requirement of a 10-foot setback at the fourth floor of the proposed four-story apartment building; no setback is proposed (though decks are provided to break up the facades).
    b. A waiver or reduction from the applicable Specific Plan minimum 16-foot floor to ceiling ground floor height standard for ground floors of commercial uses within the retail/flex space overlay area; the proposed ceiling height is an average of approximately 14 feet.

4. In Planning Area C2-A:
    a. A waiver or reduction from the applicable Specific Plan front setback requirement of a 10-foot setback at the fourth floor of the proposed five-story apartment building; no setback is proposed (though decks are provided to break up the facades).
    b. A waiver or reduction of the applicable Specific Plan height limit of 490 feet Mean Sea Level (MSL), where a maximum height of approximately 499 feet MSL is provided for a portion of a building on the north end of the Planning Area.

c. A waiver or reduction from the applicable Specific Plan minimum 16-foot floor to ceiling ground floor height standard for ground floors of commercial uses within the retail/flex space overlay area; the proposed ceiling height is an average of approximately 14 feet.

5. In Planning Area S1:
    a. A waiver or reduction from the applicable Specific Plan minimum commercial FAR of 0.4:1, where an FAR of approximately 0.3:1 is provided, and
    b. A waiver or reduction of the applicable Specific Plan height limit of 485 feet above MSL, where a maximum height of approximately 497 feet above MSL is provided.

6. In Planning Area S2 and S4:
    a. A waiver or reduction from the applicable Specific Plan dimension and size requirement for private open space, which requires a minimum of 75 square feet of open space per dwelling unit with minimum dimensions of 6 feet by 8 feet, and the Project provides certain units that include private open space that is 14 feet, 2 inches by 5 feet, 4 inches, for a total area of approximately 73.3 square feet.

7. In Planning Area S3-A:
    a. A waiver or reduction of the applicable Specific Plan height limit of 485 feet MSL, where a maximum height of approximately 491 feet MSL is provided.

8. In Planning Area S3-B:
    a. A waiver or reduction of the applicable Specific Plan height limit of 475 feet MSL, where a maximum height of approximately 496 feet MSL is provided.

9. In All Planning Areas: a. A waiver or reduction of the applicable INSP requirement for a minimum of 10 percent of the project site area to be landscaped, where the Project provides approximately.

10. In All Planning Areas: a. A waiver or reduction of the applicable INSP requirement for a minimum of 16 trees per acre of site area, where the Project proposes approximately 10 trees per acre (465 total).

Design Standards

Chapter five of the Specific Plan (Urban Design) contains the Design Standards and Design Guidelines. The Standards are requirements, and the guidelines provide general direction on intended design features. The Project team and architect have worked closely with Staff on several iterations of design to produce a final design that is in

harmony with the Specific Plan's vision of creating a sense of place in this walkable, transit-oriented neighborhood that is a safe, vibrant, and attractive place to live and work.

Included in the Project design is the compatibility among existing and new residential uses. The scale (how the size or the buildings in relation to the human experience), privacy, light (both natural and artificial), and noise were all taken into consideration when applying the design standards to the siting of the buildings and determining the massing of the buildings.

Open Space, Public Plazas, Public Park and Private Recreation Area

The Project will offer well-designed open spaces within the Project. A quarter-acre town square on the southern corner of Gateway Avenue will feature an art installation, retail promenade, a gathering area with trellis, shade elements for outdoor seating, and will provide a Village Green which serves as a reservation of potential landing area for a future potential pedestrian bridge or tunnel connection across Isabel to the Valley Link station.

Across Gateway Avenue from the Town Square via enhanced pedestrian crosswalks will be a pocket plaza. This Plaza is located on the south end of the C1-B parcel (mixed use along Main Street) will feature accent paving at the bulb-out, art installations, and shaded out-door seating areas with attractive landscaping including a row of Hackberry trees. The plaza extends from the Gateway Avenue/Isabel intersection westward toward Main Street. On the other side of Main Street via an enhanced crosswalk, another pocket plaza featuring flexible seating, a flex space with string lights, seating notes, low wall, overhead shade structure, accent paving, and landscaping including Trident Maple, Crepe Myrtle, and Zelkova trees.

In the northern portion of the development along A Street, a private recreation center with two stories of amenity space and a community pool (parcel N3-C) will be available for the residents in the Village areas. To the east of N3-C is a one-and-a-half-acre neighborhood public park (N3-B). The park includes a children's playground, meandering loop trail, barbeques, picnic tables, and a large grassy field lined with Trident Maple, Coast Live Oak, California Sycamore, and Hackberry trees. Parking for these parcels is provided along A street and Main Street, and the recreation center parcel will contain two accessible parking spaces on-site.

Development Compatibility, Siting, and Building Massing

The citywide Design Standards and Guidelines referenced in the Specific Plan contain design requirements for new development. The documents aim to create new development that is compatible with existing development, yet is sited properly and broken down into subparts, as follows:

- B.2.1.5 Building design should respect the predominant characteristics of neighborhood development such as height, massing, setbacks, materials and architectural style.

- B.2.2.1 Planting strips between the sidewalk and the back of the curb are strongly encouraged. They should be a minimum of 5 feet in width.
- B.3.1.1 Neighborhood open space should be located to maximize its visual and functional benefits.
- B.6.2.1 Whenever possible, parking lots should be located behind residential structures, rather than along the primary frontage, to minimize visual impact to the street.
- C.1.1.2 Building massing should be varied by employing a variety of techniques, such as recessed porches, bay windows, dormers, and varying planes or setbacks.
- C.1.2.1 The massing of larger residential buildings shall be broken down to convey a sense of “home” and give individuality to each unit that lies within it.
- C.1.2.3 Facades of long buildings shall be architecturally subdivided into shorter segments every 25 to feet maximum.

The Village residential parcels will be a maximum of three stories in height, which is the same as the existing residential development to the north, known as the Montage Development (Montage). The proposed development site has a lower elevation than Montage and areas north of the Project site. The taller mixed-use buildings therefore result in a visually lower height when viewed in a broader perspective, especially looking south from Portola Avenue. The Project utilizes landscaped setback areas like the surrounding residential and office buildings. The proposed development will be approximately 270 feet from Montage to the north, approximately 200 feet from the office buildings to the west, and approximately 300 feet from the newly approved proposed residential development to the East known as Shea Aura. The siting of the proposed Isabel Crossing Project ensures sufficient light and air between its neighbors.

The Project provides open space in locations that are easily accessible by all residential units via the thoughtful pedestrian circulation and bike lanes see sheet L1-2 in the Landscape Plans. The Project as a whole slightly exceeds the minimum requirements for parking as shown on the Parking Analysis sheet on page 37 of Exhibit C to the Project resolution. Parking is provided by a mix of on-street and on-site for the Village areas, and on-street and within parking garages for the higher density Core areas and the commercial blocks. Therefore, parking creates minimal visual impact to the Project. In addition, on-street parking is punctuated by landscaped projections. The building massing is broken down by the use of colors, plane changes, porches, balconies, and materials, which gives each unit a sense of individuality.

Architectural Style

The Applicant’s architectural team worked with Staff through many iterations of design. The Citywide Design Standards and Guidelines and the Specific Plan, and a Staff-led architectural tour of inspirational buildings from Livermore’s Downtown and newer residential projects guided the architect’s team to produce the final products. The architect’s narrative below provides insight into the required details, colors, and materials that are used in each building of the proposed Project.

The Isabel Crossing Project is composed of numerous building types of various sizes and heights. It is our intention that this community feels cohesive within its variety. To achieve a visual order among buildings, a limited color and material palette has been conceived. An array of field colors, trim colors, accent colors, roofing, brick, and exterior light fixtures have been selected that could be employed on any building. The selected bricks have been drawn from the downtown of Livermore and its history of brick manufacturing. To further tie the Project into a whole, we have selected a white that will be used on all buildings as an element of continuity.

Lower Density Products

The lower density products within the master plan include three-story duplex, triplex, and row townhomes. Each building is composed of several different floor plans to create a variegated design. Where end conditions are visible to perimeter streets, enhanced end elevations are provided, often with wrapped porch elements.

The design aesthetic of the lower density products includes variations on traditional and contemporary motifs based on traditions of western U.S. Buildings. They will have various arrangements of brick as a base material, horizontal siding, vertical (board & batten) siding, and stucco. Buildings employ shed-roofed porches (some with gables introduced), and gables, sheds, and sloped roofs combined with flat roofs to maximize the area for solar panels. Flat roof parapets include a cornice trim.

Higher Density Products

The higher density products within the master plan include podium apartments and condominiums. A podium is a concrete structure containing parking either at-grade or below-grade. The podium structure also provides retail space as well as lobbies and building amenity spaces at street level. Above the podium are stacked flats of various sizes and types arrayed around central courtyards.

Buildings are composed in a traditional tripartite organization of base, middle and top. Each of the podium buildings employ different bricks in different patterns as base materials. Where parking is exposed at street edges, decorative grills will be inserted into openings. Above the base, each building utilizes combinations of stucco and horizontal siding, with belt courses, bay windows, articulated balconies with various railing details, with individualized cornice treatments. Window proportions and various articulations are contemporary interpretations of traditional arrangements of architectural forms influenced by sources such as Old Sacramento or old Fort Collins, CO, or downtown Livermore.

Landscape Design

The Design Standards and Guidelines and the Specific Plan contain landscape standards related to trees, shrubs, and ground covers. The standards establish minimum quantity, size, and locational parameters, as follows:

- DSG 1.4.1.a: At time of installation, trees should be a minimum 15-gallon pot size or 6 feet tall.
- DSG 1.4.1.b: At time of installation, all street trees should be 24-inch box size and comply with the City of Livermore Standard Details.
- DSG 1.4.1c: At time of installation, twenty percent of all trees should have a 24-inch box container size or larger.
- DSG 1.4.1.d: At time of installation, shrubs should have a minimum 5-gallon pot size.
- Isabel Neighborhood Specific Plan Table 2-2: Minimum on-site landscaping is 16 trees per acre for residential areas.

The project frontage along Portola Avenue will be planted with a double row of trees. Starting at the western portion of Portola Avenue and moving eastward along the Project site, Freeman Maple, California Sycamore, and Little Leaf Linden will be planted next to the existing street trees. The project frontage along Isabel Avenue will feature a double row of trees and will feature a new landscaped median. Beginning at the intersection of Isabel Avenue and Portola Avenue and moving south along the site there will be Little Leaf Linden and Freeman Maple. The median that separates the south bound traffic from northbound traffic will be planted with Columbia London Plane, Coast Live Oak, and Little Leaf Linden. No trees are being removed, and the master landscape plan will include 465 new trees. More trees will be required as the individual parcels develop, and the future applicants apply for the required Site Plan Design Review of the interior landscaping. The Project's landscape architect has provided the following narrative that describes the Isabel Crossing landscape:

> *The Isabel Transit Oriented Development in Livermore, California, offers an exciting opportunity to blend functionality with aesthetics, sustainability with community vibrancy. As we embarked on crafting its landscape design narrative, our vision intertwined seamlessly with the city's ethos, extending the essence of downtown Livermore into this new hub.*
>
> *At the heart of our inspiration was the promotion of bike and pedestrian connectivity. Bike racks and pedestrian-friendly amenities were strategically placed to encourage active transportation and reduce reliance on cars.*
>
> *Central to the Isabel Transit Oriented Development was the creation of vibrant public gathering spaces that evoked a strong sense of place. These*

spaces served as focal points for community interaction, cultural events, and relaxation. Plazas adorned with native plantings, shaded seating areas, and public art installations invite residents and visitors alike to linger, fostering a sense of belonging and civic pride. Whether it was a bustling farmers' market or a pickup soccer in the park, these gathering spaces reflect the diverse needs and interests of Livermore's residents.

Sustainability lay at the core of our design ethos, and native and pollinator plants played a starring role in shaping the landscape. By utilizing plant species adapted to the region's climate and soil conditions, we not only reduced water consumption and maintenance needs but also provided essential habitat for local wildlife. Through careful stewardship of the land, we strive to create a landscape that thrives in harmony with nature, embodying the spirit of sustainability for generations to come.

Lastly, our design narrative sought to extend the look and feel of downtown Livermore into the Isabel Transit Oriented Development, forging a seamless connection between old and new. Architectural elements inspired by Livermore's historic buildings, such as brick facades and wrought-iron accents, were incorporated into the design, paying homage to the city's rich heritage. Street furniture, lighting fixtures, and signage echoed the aesthetic character of downtown, creating a cohesive visual identity that celebrated Livermore's unique essence.

In summary, the landscape design narrative for the Isabel Transit Oriented Development was a testament to our commitment to creating a livable, sustainable, and vibrant community. Through thoughtful planning and collaboration, we hope to transform this space into a place that not only connects people and places but also nourishes community spirit.

The Project is conditioned to comply with the City's Water Efficient Landscape Ordinance (WELO) in order to conserve water, avoid invasive species, and ensure irrigation efficiency. The Project will use less water than allowed, contain no high-water using plans, utilize drip irrigation, and use recycled water for all Project irrigation. For these reasons, the Project promotes efficient use of water resources. Portions of the plant palette are California natives and pollinators that will attract birds, butterflies, and bees. In this way, the plant selection will be well suited to Livermore's climate and will promote increased biodiversity, furthering Specific Plan and Climate Action plans and goals.

All master landscaping will be maintained by the Community Facilities District. All landscaping within individual parcels will be maintained by future Homeowners' Associations. The proposed landscaping will complete the aesthetics of the high-quality architecture adding to a unique sense of place.

Fencing, Walls, Public Art, and Signage

The applicant has included a 3-foot-tall wall that will match the architecture of the homes and separate the parking lot of the parcel to the west, adjacent to parcel C-5 and C-3, as shown on sheet L1-3 in the Landscape Plans. Future fencing for the individual parcels would be included in the required Site Plan Design Review for the interior landscaping before building permit issuance.

A robust Art Master Plan for Public Art will be developed and approved, as outlined in Exhibit P of the Development Agreement and described in the Development Agreement section above. Art pieces will be phased in as the individual parcels develop, and as specified in the Art Master Plan, with respect to the master landscape areas. The Art Master Plan may include any combination of static art, programming, a gallery, and functional art.

Planning Commission will review and approve any proposed future Master Sign Program subsequent to Project approval. All future commercial and directional signs will be reviewed at staff level for consistency with a proposed Master Sign Program or the Specific Plan/ City's sign ordinance requirements. As shown on Sheets L1-5 and L1-6, Neighborhood entries will have either signage and/or features that welcome residents and guests to the neighborhood, consistent with Specific Plan polices.

This Site Plan Design Review is recommended for approval by the City Council on recommendation of the Planning Commission. The findings for the Site Plan Design Review are found in the Project Resolution.

Subdivision – Vesting Tentative Tract Map 8659

Government Code Sections 66410 - 66499.41, commonly referred to as the Subdivision Map Act: 1) Establish the statewide procedures by which land is subdivided (separated into smaller pieces) and combined; and 2) Establish the requirements for dedications, reservations, and exactions, which is the process by which local jurisdictions can require land, easements, or developer funds (fees) to be dedicated to public purposes like services and infrastructure when land is subdivided. Livermore Development Code Chapter 10 implements the Subdivision Map Act at the local level.

Generally, subdivision applications consist of maps showing the proposed division of land, any land reserved for public purposes, and proposed Project phasing, and improvement plans showing all public improvements and proposed grading. The applicant has provided the required documents in the Proposed Plans, and as described below.

Phasing and Timing

As discussed in the *Project Description* section of this report, the proposed entitlement package covers all Project building architecture and placement; all master landscaping along Project frontages and internal streets, plazas, and parks; all onsite and offsite public infrastructure; proposed master site grading; and the large lot Tentative Map. City subdivision standards require all horizontal public infrastructure, like roads, utility lines, and stormwater retention areas, to be constructed prior to Building Permit issuance and vertical construction of any structures. The Development Agreement further establishes timing requirements that stipulate when certain public infrastructure is to be completed.

In general, the Project infrastructure will be split into two phases, Phase 1 (the streets and utilities phase), and Phase 2 (the parks and plazas phase). Phase 1 includes most Project improvements, like all frontage improvements, offsite improvements, and internal improvements, including internal streets, sidewalks, bike lanes, street median, traffic signals, street trees, and street lighting; and all required utilities like water, sewer, and stormwater. Phase 2 includes primarily the public parks and plazas. Although the Developer intends to complete construction sooner, the Agreement requires Phase 1 construction to be completed in subphases, within two to five years of Improvement Plan approval, and Phase 2 construction to be completed when each adjacent Planning Area is constructed. This ensures the required and negotiated public infrastructure will be delivered within a reasonable amount of time. The full list of phased improvements and timing requirements can be found in the Agreement, and on Sheets TM 3.9.0 and TM 3.9.1 In the Civil Plans (Exhibit E to the Project resolution).

Once infrastructure is completed and lots are formed, the Developer has indicated they will sell a majority of the large lot parcels to subsequent home builders, who will then construct portions of the Project, consistent with the approved plans and Development Agreement. The Developer may retain some large lot parcels to construct themselves.

If the individual home builders wish to further subdivide each large lot shown in the Tentative Map on the Civil Plans into smaller lots, a subsequent subdivision entitlement would be required. In addition, the Project approvals do not include landscape plans for areas within each large lot Planning Area. The Conditions of Approval require subsequent approval of landscape plans for these areas prior to Building Permit issuance. Depending on proposed quantity of lots, Planning Commission and/or City Council approval of future subdivision and landscaping applications may be required.

If approved, staff anticipates full Project buildout would occur within 10 years from Project approval, starting with public utilities and improvements and followed by the townhouse/ duplex units. The mixed use commercial and higher-density residential blocks will likely take more time to construct, given current market conditions, and staff expects these to build out in the latter half of Project buildout.

Lot Size, Layout, and Circulation

The proposed Vesting Tentative Tract Map (Map) would subdivide the existing approximately 45-acre vacant Project site into 27 large lots and five major internal

streets. Of the total, 19 lots will be used for residential purposes, four will be used for park and plaza space, three will be used for mixed-use commercial buildings, and one will be used for the private recreation center.

The Specific Plan does not establish minimum or maximum lot sizes or dimensions for residential, commercial/office, or open space uses. However, for reference, the lot sizes range from approximately 0.16 to 2.8 acres. The largest lot accommodates the mixed-use Commercial Block that includes the grocery store, while the smaller lots generally accommodate the proposed public plazas. Each lot is adequate is size and shape to accommodate the proposed uses. The lots scale up in size for more intense uses like mixed-use commercial and higher-density housing, and are shaped to ensure proper ingress/ egress and access to all proposed internal streets.

The Project proposes to construct five new public streets within the site, with new connections to the existing street network on the north, east, and western Project boundaries. All proposed parcels would have access to the public right-of-way, in conformance with Subdivision Map Act standards. Primary Project entrances are located along Isabel Avenue. The new streets conform to all required City standards, including with respect to street width and shape. The new streets are also multimodal, promoting vehicular, pedestrian, and cyclist connections, and will be low-speed, neighborhood streets. For example, all streets will include public sidewalks that conform to all City dimension standards, and Street A will be specially designed to promote cycling, with a dedicated Class II bike lane. Other streets will include Class III bike lanes, where cyclists and autos share the road.

With the exception of the main Project entrance at Gateway Avenue, all streets are one lane in each direction, creating a narrower right-of-way that is easier for pedestrians to cross. All internal street intersections will feature four-way crosswalks that connect to the proposed sidewalk network. The Project conditions require a certified CASp Specialist to review and certify that all pedestrian improvements conform to all federal Americans with Disabilities Act (ADA) requirements. Main Street will feature additional enhancements to promote walkability, like angled parking and extra wide decorative sidewalks. In this way, the proposed streets create a neighborhood environment by ensuring low speeds, relatively narrow widths, special features, ample pedestrian crossings, and connecting to the citywide sidewalk network, and by supporting pedestrians, cyclists, and autos.

Emergency vehicles, trash trucks, and the service and delivery vehicles will primarily use Isabel Avenue to access the site. As described in the *Utilities, Services, and Subsurface Infrastructure* section of this report, the roadway widths are sized to accommodate all service and emergency vehicles.

The Project's proposed circulation network and pedestrian connections can be found on Sheet L1.2 of the Proposed Plans.

Utilities, Services, and Subsurface Infrastructure

Specific Plan EIR and Addendum

The Infrastructure and Public Services element of the General Plan and the City's Development Code require that all new developments have adequate provision of utilities and services like water conveyance, sewer conveyance, and urban fire protection. The Specific Plan Environmental Impact Report (EIR) and Project Addendum (Attachments 22-24) found that at Specific Plan buildout, the City's existing utility and service systems would have adequate capacity to serve all new development in the Isabel Neighborhood. The Project density is below the range contemplated by the Specific Plan, for this reason, existing utility and service systems will have sufficient capacity to serve the Project and no Project impacts will be greater than those analyzed in the EIR. As described in the *Development Agreement*

Water, Wastewater, and Stormwater

As described in the *Community Facilities District* section of this report, the Developer would construct all onsite public water, wastewater, and stormwater infrastructure, the costs of which would be financed by the Project's proposed infrastructure CFD.

The Project's water, wastewater, and stormwater service would be provided by the City. Connections would primarily occur into existing mains along Isabel Avenue, Portola Avenue, and Shea Center drive. The City Engineer has determined that all existing public utility lines, pump/ lift stations, and reservoirs are adequately sized to handle the increased water, sewer, and storm flows, and that the water treatment plant can accommodate all demand increases (Attachment 2). As required by state Public Resource Code Section 21151.9, the Project's EIR Addendum includes a Water Supply Assessment, which shows both the City of Livermore (retailer) and Zone 7 (wholesaler) have sufficient water supplies to serve the Project over the next 20 years (Attachment 2). The Project's stormwater would be primarily managed by a large underground vault, located beneath Planning Area S1, in addition to surface retention areas in the proposed street right-of-way (Sheets 3.4.0-3.4.5 on the Civil Plans).

Per City standards, water and sewer lines within each Planning Area and within the proposed public streets would be maintained by the City. The proposed stormwater lines within each Planning Area and the underground vault would be maintained by the Developer through the Project Homeowners Association (HOA). The Engineering conditions of approval require the Developer to enter into a Stormwater Maintenance Agreement to ensure proper storm facility maintenance and function. All storm infrastructure located within the proposed public streets would be maintained by the City, through the Specific Plan Maintenance CFD.

The Project conditions require trash capture devices be installed at all stormdrain inlets and that grease interceptors be installed on commercial and restaurant

sewer lines, in compliance with state and local standards and ensuring the City's utility infrastructure and the environment remain protected.

The Isabel Neighborhood also has unique access to recycled water, produced from the Livermore Water Reclamation Plant and generally used for irrigation purposes. The Project conditions require that the Project connect to the City's recycled water lines and that recycled water is used for all irrigation. In this way, potable water would be conserved.

The City Engineer has reviewed and approves of the proposed utility plan, found in Sheets 3.3.0 through 3.3.4 of the Civil Plans.

Dry Utilities and Solid Waste Collection

All dry utilities will be located within the proposed Joint Trench, to be run along all proposed public streets within the Project site. The Joint Trench will connect to an existing joint trench along Shea Center Drive and Gateway Avenue and will include electric and telecommunications service. Pacific Gas and Electric (PG&E) will provide electric service, while Comcast will provide telecommunications service. PG&E has reviewed the Project plans and provided no substantial comment, indicating sufficient capacity to serve the Project. As required by the Conditions of Approval and the Specific Plan EIR, the Project will not provide any gas infrastructure, satisfying the City's new electrification ordinance and Climate Action Plan goals. As further required by the Conditions of Approval, all existing and proposed dry utilities on the site will be undergrounded, improving the site's aesthetics and resiliency against natural hazards like winter storms.

Solid waste pickup would be provided by Livermore's solid waste franchisee, Livermore Sanitation. Solid waste within Livermore is primarily disposed of at the Vasco Road Sanitary Landfill and the Altamont Landfill. The Specific Plan EIR notes that the two landfills combined have over 15 million tons of remaining capacity. For reference, Livermore's current annual disposal tonnage is around 66,000 tons. At current rates, over the next 25 years, the landfills would have 90 percent capacity remaining. Therefore, there is sufficient solid waste capacity to serve the Project into the indefinite future.

Solid waste would be stored in townhome/ duplex unit garages and in rental/ mixed-use commercial building trash enclosures within the ground floor parking garages. Each garage and trash enclosure has sufficient space to accommodate trash, recycle, and organic bins, as required by the City's solid waste and recycling enclosure ordinance. Townhome/ duplex solid waste will be staged in front of unit garages for collection, as is typical for residential development in Livermore. As required by the Conditions of Approval, all rental/ mixed use buildings will be required to stage their bins in the public right-of-way during pickup days. Livermore Sanitation has reviewed the plans and conditions and found the Project provides functional and efficient trash truck access and pickup logistics.

Public Safety and Emergency Services

Fire Protection would be provided by the Livermore-Pleasanton Fire Department. The Specific Plan EIR notes that the Project site would be served by Fire Station #10 on Airway Boulevard. The Station can deploy front line apparatuses within 10 minutes, and the Fire Department can dispatch a ladder truck to serve the proposed five to seven story buildings. Given the proximity of Fire Station #10, current response times, and the ability to dispatch a ladder truck, existing facilities are sufficient to serve the Project. Although existing service capacity is adequate for the Project, the Fire Department is currently conducting a Community Risk Assessment to ensure that the incremental population increases across the City and within the Specific Plan do not further degrade fire service levels. The Risk Assessment will analyze whether a new fire station is needed within the Specific Plan area, among other analysis. The results of the Assessment will be completed by the end of summer 2024. Pursuant to Specific Plan policy, the Project will be required to implement the Risk Assessment recommendations. The Project's net increase in the City's tax base and contributions to the Community Benefit Fund will help fund the Project's fair share of any Risk Assessment recommendations.

All new internal streets have a sufficient width and intersection dimensions to accommodate emergency vehicles, including fire apparatuses, as shown by the vehicle turning templates on Sheet TM 3.5.1 through TM 3.7.4 on the Civil Plans. In addition, the Project proposes an Emergency Vehicle Access (EVA) road on the south side of Planning Area S1, in order to ensure aerial access to the S1 Building. Therefore, all Planning Areas have emergency vehicle access. Further, all mixed use commercial and high-density residential blocks are required to install Knox boxes, to allow fire crews access inside the building, contain ladder pads on the podium courtyards to allows for window rescue, and have stairwells that can accommodate fire crews and fire ladders. Therefore, all denser product types allow for adequate fire crew access. All buildings will have fire sprinklers, as required by the Fire Code. The Fire Department has reviewed and approves the proposed plans, finding they allow for required fire access. The Fire Department has also conditioned the Project to provide adequate fire hydrant, emergency responder radio, and fire lane marking placement around the site. For these reasons, the Project design ensures sufficient Fire Department access and fire safety.

The Livermore Police Department will provide law enforcement and public safety service to the site. The Specific Plan EIR notes that an additional 15 police officers would be needed at Specific Plan buildout. The Police Department generally increases staffing over time to keep up with the City's Population growth. Since time of EIR certification, the Police Department has hired a range of new professional staff, dispatchers, officers, and a new mental-health-crisis-focused Mobile Evaluation Team. The Police Department has also formed the new Real Time Awareness Center (RTAC) that provides live intelligence via cameras around the City. As part of the Agreement, the Project will provide approximately 45 new license plate reader and CCTV type cameras in key locations around the site.

Further, the Project is required to provide alternative law enforcement access at major building exits, and to develop a Security Plan for each commercial block. The Police Department has reviewed and approves of the proposed plans and law enforcement assets. Further, a new Police substation is planned for the future Valley Link Station across Isabel Avenue. For all these reasons, Police levels of service are adequate and the proposed Project design will ensure enhanced safety for Livermore residents.

Parks and Schools

The General Plan's Open Space and Conservation Element and the City's and Livermore Area Recreation and Park District's (LARPD) Parks, Recreation, and Trails Master Plan establish service level requirements for the amount of open space provided per resident. The standards require one neighborhood park per 3,000 – 5,000 residents. The service area is also to be one half to one mile. The Project proposes one neighborhood park and three plazas, totaling two acres in size. Given Livermore's current average household size of 2.75 persons, the Project is estimated to generate approximately 3,600 people. This results in one park per 3,600 people, which is consistent with the General Plan's required service level. Therefore, there are sufficient parklands to serve the Project. In addition, future Project residents have access to nearby Cayetano community park. LARPD will ultimately maintain the proposed park and has reviewed and approved of the proposed plans. The proposed park design can be found on the Landscape Plans, Sheet L2-1.

The Livermore Valley Joint Unified School District (School District) has reviewed the proposed Project and has found that existing school capacity at all grade levels is sufficient to provide for the Project (Attachment 11). Currently, the School District can accommodate an additional 2,000 students. Based on the projected student generation rates, the Project will likely generate around 650 students, ranging from Kindergarten through 12th Grade. Therefore, the quantity of the Project's projected students will not exceed current school capacity, and existing capacity is sufficient to accommodate the Project. In addition, schools closest to the Project – Rancho Las Positas Elementary, Lawrence Elementary, Junction TK-8, and Granada High School – have sufficient room to house these additional students. The School District will continue to monitor student population needs as the Project and the Specific Plan build out. If student generation rates are substantially higher than anticipated, the School District may explore adding a new school on School District property within the Specific Plan (at the northeast corner of the intersection between North Canyons Parkway and Constitution Drive). For all these reasons, school levels of service are sufficient to accommodate the Project and future needs of the Specific Plan.

Surface Improvements

In addition to the underground infrastructure described in the *Utilities, Services, and Subsurface Infrastructure* section of this report, the Project will provide a range of above-ground surface improvements as well such as streets, sidewalks and bike trails. Elements of the surface improvements have been discussed in other sections of this report, but are referenced here for clarity. As described in the *Phasing and Timing* section of this report, the surface improvements are to be completed in phases and between 24 and 60 months from improvement plan approval, and in conjunction with adjacent Building Permit approvals.

The surface improvements generally consist of: 1) Required frontage improvements; 2) Onsite Improvements; and 3) Offsite improvements, as also described in the *Lot Size, Layout, and Circulation* and *Alternative Transportation Infrastructure* sections of the report. The frontage improvements include approximately 0.85 miles of separated Class IV and standard Class II bike lanes; necessary lane reconfiguration; two new traffic signals; two new bus stops; CA Department of Transportation (Cal Trans) embankment landscaping; and additional street trees. The onsite improvements will consist of five new public streets, including sidewalks, crosswalks, intersections, landscape strips, street trees, and street lighting; an Emergency Vehicle Access road; new stormwater retention areas; a special Main Street with enhanced paving, street furnishings, and pedestrian features; three new Plazas of approximately 0.5 acres in size; and one neighborhood park of approximately 1.5 acres in size. The offsite improvements will consist of one mile of additional bike lanes, a fully protected bike intersection, two additional bus stops, and a 1,500-foot-long landscaped median on Isabel with trees.

The required and negotiated improvements conform to all Specific Plan active transportation standards requiring Class IV bike lanes and conform to all Specific Plan policies that seek to create a walkable, bikeable, and tree lined boulevard along Isabel Avenue and Portola Avenue. Further, the Project conforms to all required City Standard details for streets, bike lanes, and other improvements. The City Engineer, Livermore Amador Valley Transit Authority, and the Maintenance Division have reviewed and approve of the Project's proposed improvements. A list of all improvements can be found in the Development Agreement.

Community Facilities District for Maintenance

The Project would be required to annex into the Specific Plan's Maintenance Community Facilities District, as allowed by the Mello Roos Act. Together with all previously approved projects, the Project's residences would be required to pay a new tax assessment that would cover the costs of above-ground infrastructure maintenance within the Specific Plan (this is distinct from the assessment described in the *Community Facilities District* section of this report which pays for subsurface infrastructure construction). The Maintenance CFD would cover the maintenance costs for all infrastructure like public streets, landscape strips and medians, plazas, and stormwater retention areas. All bike lanes would be maintained by the City using the General Fund. Maintenance of all private surface improvements like private landscaping, alleys, signage, etc. would be paid for by the Project's Homeowners' Association.

Auto Traffic

In response to California Senate Bill 743, the Governor's Office of Planning and Research (OPR) updated the California Environmental Quality Act (CEQA) guidelines to prohibit the use of delay-based metrics (Level of Service) and instead use vehicle miles traveled (VMT) as the basis for analyzing CEQA traffic impacts. The Specific Plan Supplemental EIR found Specific Plan buildout would not result in significant VMT impacts, as measured on a per capita basis (with 15% reduction per capita as the threshold of significance). Given that the Project is within the density ranges contemplated by the EIR, no significant VMT impacts would result from the project. Further, the Project's CEQA Addendum included a VMT analysis that concluded the Project would result in lower VMT than anticipated in the EIR, given the proposed revised mix of office and residential uses. However, LOS-based methodology was also included in the EIR for significance determination, as summarized below.

The Supplemental EIR found that, when measured as Level of Service, Specific Plan traffic impacts would be significant and unavoidable at the N. Livermore/ Portola intersection (i.e. worse than mid-level D LOS, representing more than 45 seconds of average delay per vehicle) during the AM and PM peak hours and on Airway Boulevard and Isabel Avenue arterial segments. The City Council adopted a Statement of Overriding Considerations, finding the social, economic, and other Specific Plan benefits outweigh the unavoidable and adverse traffic impacts, and that the benefits justify Specific Plan adoption. The Project is consistent with the densities identified in the Specific Plan's Supplemental EIR.

Further, the Project Addendum included a Focused Transportation Analysis that found no significant impacts to LOS if the report's recommendations are met. The recommendations include two through lanes along westbound Gateway Avenue to reduce stacking onto Isabel Avenue; implementation of a TDM plan upon issuing a Certificate of Occupancy to reduce vehicle trips; and other items. The Project is conditioned to implement all required recommendations of the Focused Transportation Analysis. For example, the Project's first Certificate of Occupancy cannot be granted until the Project Homeowner's Association's Covenants, Conditions, and Restrictions (CC&Rs) include obligations to form a Transportation Management Agency/ Implement a Transportation Demand Management Plan. The TMA/ TDM must be formed within 180 days of the first Certificate of Occupancy. The TMA must also coordinate with all other Specific Plan HOAs, to ensure a comprehensive TDM program is achieved, consistent with the Specific Plan TDM Policy. For all these reasons, no impacts to LOS beyond those identified in the EIR would occur.

The City Traffic Engineer and the City Engineer have reviewed and approved of the VMT and LOS studies and the Project's proposed transportation network.

Grading and Soils

The applicant has provided a grading plan and a Geotechnical Report for the site. The existing site slopes down from north to south with an elevation change of approximately

25 feet and slopes from east to west with an elevation change of approximately 10 feet. The Project proposes to grade the site to create a generally level construction surface. Given the existing grade changes, cut and fill would need to occur onsite, as shown in on Sheet TM 3.2.5 of the Civil Plans.

Staff supports the proposed grading plan given that it facilitates the residential density contemplated by the Specific Plan, ensures functional utilities like stormwater, and has a grade that is similar in height to adjacent existing development. The City Engineer has found the grading plan to meet all City grading standards, and the geotechnical report has found the site suitable for development, if certain recommendations are met. The Project has been conditioned to implement the Geotechnical Report.

Conditional Use Permit

According to Section 9.03 of the Development Code, the purpose of a Conditional Use Permit (CUP) is to provide sufficient flexibility in the use regulations in order to further the objectives of the Development Code. A Conditional Use Permit involves the process for reviewing uses to ensure they are compatible with their surroundings. Unlisted uses might be allowed by the applicable review authority approving the Conditional Use Permit, when the uses are necessary to the development of the community and are in no way detrimental to existing uses or to those allowed in the zone. In approving this permit, the review authority may impose any conditions deemed reasonable and necessary to ensure that the approval will comply with the findings required. A CUP will run with the land upon change of ownership or use.

In Chapter Two of the Specific Plan, there is a Neighborhood Commercial zoning designation shown in Subarea 3b (Figure 2-3) – the Project is still consistent with this designation. This designation applies to one block at the intersection of Isabel Avenue and Gateway Avenue. It allows a range of commercial uses with an emphasis on neighborhood-serving uses such as grocery stores, restaurants/cafes, and personal services. Commercial retail uses must be located on the ground floor and oriented around plazas, pathways, and public streets. Other complementary uses may be located in upper stories of a mixed-use building or separate from the primary retail center. Parking may be provided in a variety of formats, including in surface lots, rooftop lots, and/or belowground. Retail development incorporates outdoor seating, pedestrian-oriented features, and community gathering spaces.

According to Table 2-1 (Permitted Land Uses), the Neighborhood Commercial designation does not allow residential development as a permitted use, however it does allow a residential component to mixed use Project with a Conditional Use Permit. The applicant is therefore requesting a Conditional Use Permit to allow for multi-family residential units above the retail ground-floor uses.

The Project Resolution contains the findings for the Conditional Use Permit. In summary, the proposed Project is consistent with the General Plan, Specific Plan, Zoning, and that it is compatible with the surrounding uses and proposed use. Staff supports the Conditional Use Permit because the residential above the commercial meets many of the

Specific Plan goals and its impacts are minimal compared to commercial uses below. There will be enough cueing distance on the surrounding streets for vehicular traffic and the parking for the residential portion is compliant with the Specific Plan.

Master Sign Program Amendment

The Project is located within a portion of the boundary of Master Sign Program #DR01-029, approved in 2001 to guide proposed signage for the proposed development of commercial uses by applicant KLA Tencor that were not built out. The proposed amendment would remove the Project Site from the Master Sign Program area. The removal of an outdated, unimplemented commercial sign program for the Project Site, which is not consistent with the Project, is consistent with the General Plan designation and applicable policies for the Project Site.

Consistency Determination

The site contains easements that will require abandonment and re-dedication to align with the proposed backbone infrastructure of the Project. Government Code Section 65402(a) requires that if a General Plan has been adopted, no real property shall be acquired by dedication or otherwise or sold for public purposes until the location, purpose, and extent of such acquisition or disposition has been reported upon by the planning agency (e.g. Planning Commission) as to conformity with its General Plan. This includes vacation of right-of-way in whole or in part. Therefore, the Planning Commission is the review authority for this Consistency Determination for this portion of the Project.

The Project Site contains easements in favor of the City, as described and depicted on page TM 2.0 of Vesting Tentative Tract Map No. 8659 on the Civil Plans and includes the following City easements:

- Easement No. 4: 44’ emergency vehicle access easement (EVAE), private access easement (PAE) and public utility easement (PUE) in favor of the City of Livermore (as shown on Parcel Map 9770, filed Sept. 10, 2008 in Book 310, Pages 3 through 8, inclusive of maps);
- Easement No. 5: 15’ PUE and sidewalk easement (SWE) in favor of the City of Livermore (Recording No: Book 293, Page 14, inclusive of maps);
- Easement No. 11: 30’ sanitary sewer easement (SSE) in favor of the City of Livermore (to be separately quitclaimed) (as shown on Parcel Map 9770, filed Sept. 10, 2008 in Book 310, Pages 3 through 8, inclusive of maps);
- Easement No. 12: 15’ PUE in favor of the City of Livermore (Recording No. 2008-189562 of official records).
- Any other easement vacations necessary for the Project.

The above easements are proposed to be abandoned or vacated, as they are not necessary for any public purpose and are inconsistent with the Project, as proposed. New easements necessary to provide public services to the Project Site and any surrounding areas or that are otherwise necessary to serve any other legitimate public purpose will be dedicated by the Project in a manner that is consistent with its proposed

design the Development Code, other applicable city codes, and state law. The proposed vacation of easements is consistent with relevant policies and objectives of the General Plan.

Sustainability

Environmental sustainability is defined as the ability to create and maintain the conditions under which humans and nature can exist in productive harmony to support present and future generations. The City's General Plan lists objectives for identifying, creating, and maintaining sustainable practices. Some of those objectives include using recycled water, solar energy, electric vehicle charging readiness, landscaping that includes native species and pollinators, transit-oriented zoning, stormwater treatment, residential and commercial waste management, recycling, etc.

As the Specific Plan states in Chapter Four, the Isabel Neighborhood is served by the City's recycled water system and is an ideal location to focus new development from a water planning perspective. The water infrastructure of the Isabel Crossing Project will connect to the "purple pipe" (recycled water) for use in landscaped areas and for firefighting.

All buildings will meet the stringent requirements of the California Green Building Code and the California Energy Code, requiring nation-leading efficiency in water conservation and energy consumption through careful design, state-of-the-art appliances, and high efficiency building systems. All residential units will have EV charging capability and EV Charging spaces will be provided in the higher density and mixed-use buildings, as shown on the Parking Analysis sheet on page 40 of Exhibit C to the Project resolution. The buildings will be all electric, consistent with Specific Plan/EIR mitigation. All new buildings will also be outfitted with solar panels. The Project is conditioned to meet the Livermore Electric Vehicle Charging Reach Code.

The landscape architect designed the landscaped areas with sustainability in mind by using native species, pollinators, and water efficient irrigation and low to moderate water demanding shrubs and trees. The Project is designed to be a walkable, livable neighborhood where an individual's needs can be met within the Project site. The proposed Valley Link station will make this area desirable for those wishing to use public transit and rely less on automobiles. The pedestrian connections, bike lanes, and bike parking throughout the site facilitates the transit-oriented theme of the development.

Each residential and commercial area will have three streams of waste collection: organics, recycling, and landfill. Livermore Sanitation will service the Project site on regular basis. Each townhouse unit will have space for bicycle parking and the higer-density products will have secure bicycle parking spaces. All Planning Areas will have guest bicycle parking on-site. Storm water treatment will take the form of using bio-retention areas and trash-capture devices to prevent unwanted debris from entering our waterways. The aforementioned Goals and Polices address these sustainability aspects and the Developer must comply with them.

PUBLIC OUTREACH AND PUBLIC COMMENT

The City began the planning process for the Isabel Neighborhood in 2015. Initial Specific Plan outreach was conducted prior to the adoption of the Specific Plan. Outreach is key to developing an effective and feasible plan, so the planning team created a webpage with information about the planning process, meeting dates, and set up a feedback comment box. Visioning outreach events were conducted, coordination with Valley Link, LAVTA, and other public agencies took place, community workshops on land use alternatives were facilitated, an online survey was created, meetings were held with surrounding neighborhoods, and an open house was held on the Preferred Plan.

The Isabel Crossing Project was presented by City Staff at a Neighborhood Meeting on February 27, 2024 at the Courtyard Marriot on Constitution Drive. Residential property owners north of the I-580 freeway, Las Positas College, and all adjacent properties received notices for the meeting and approximately 50 people attended. The Developer, Architect, and Landscape Architect were also present to answer questions. Most of the questions were about the Project's impact to the existing residential areas, such as parking and traffic, and utilities like water and sewer. Comments centered on existing residents wanting certain services available in the Isabel Crossing Project such as a grocery store and other convenient services that they would otherwise have to cross the freeway to find. In general, the attendees received the presentation positively and welcomed the Project. The Developer created and is still hosting a website (isabelcrossing.com) for the Project complete with renderings, narratives, and a question-and-answer portion.

Per Senate Bill 18 requirements, Staff sent letters of invitation on March 21, 2024, to comment on the Project to tribal elders from several local Tribes. The Tribes have 90 days to respond and request any consultation. The City received two responses requesting additional information, which Staff promptly provided. No consultations were requested.

Before the publishing of this Staff Report, Staff received seven letters of support (Attachment 12) from various community members and stakeholders, including Las Positas College, Livermore Chamber of Commerce, Wente Vineyards, Innovation Tri-Valley, and Interfaith Housing, Inc. In general, the support for the Project is for the following reasons:

- The Project provides affordable housing that is over and above the requirement and will add to the stock of work-force housing.
- The Project is well-suited for low-income seniors as it offers transportation opportunities.
- The Project offers the opportunity for food and services/conveniences within walking distance.
- The Project offers job opportunities in the commercial blocks.

- The Project offers small and medium-sized businesses an opportunity to establish themselves.
- The Project offers housing affordability options that would benefit Las Positas College students, faculty and staff.
- The Project features sustainability features such as the use of reclaimed water, drip irrigation, low-water usage landscaping, solar panels, EV charging, and efficiency energy usage.
- The Project will create new pedestrian and bike connections and will make non-vehicular travel safer.

INTEROFFICE MEMORANDUM

Date: May 14, 2024

To: Stephen Riley, Acting Planning Manager

Via: Joel Waxdeck, City Engineer

From: Rick Teczon, Senior Civil Engineer

Subject: Isabel Crossing – Wet Utility Infrastructure Assessment

The utility infrastructure capacities and demands associated with existing and future development considered in the Isabel Neighborhood planning area have been assessed as part of the City's master planning efforts. Reference the following documents publicly available on the City's website:

- *2022 Storm Drain Master Plan*, prepared by Schaaf & Wheeler Consulting Civil Engineers
- *2017 Water Master Plan*, prepared by West Yost Associates
- *2017 Sewer Master Plan*, prepared by West Yost Associates

The proposed Isabel Crossing project is included in the utility infrastructure analyses documented is these master plans. In general, the proposed Isabel Crossing project's demands for stormwater drainage, potable water supply, and sewer collection have been analyzed and can be met by the City's existing and planned utility infrastructure.

Hydraulic analyses were conducted for conveyance (i.e. pipes, pump stations, and lift stations) and storage (i.e. reservoirs) infrastructure under both existing and buildout conditions. Existing utility infrastructure is in place within the Isabel Neighborhood planning area to serve the existing developed areas. Following is additional detail regarding the City's utility infrastructure assessments.

Stormwater Drainage Collection System

Based on the stormwater drainage flow projections, the following stormwater drainage collection system improvements were recommended in the *2021 Storm Drain Master Plan*:

- Improvements to the storm drainage pipe at Airway Boulevard between Modoc Place and the Arroyo Las Positas outfall.

- Construction of a floodwall along both banks of Arroyo Las Positas between Airway Boulevard and Isabel Avenue.

However, both recommended improvements were ranked as low-priority projects in the *2021 Storm Drain Master Plan*, and as such have not been incorporated into the City's Capital Improvement Plan. Furthermore, neither of these recommended improvements are identified in the *2021 Storm Drain Master Plan* as improvements required to mitigate the impacts of future development.

Potable Water Supply Distribution System

Based on the potable water demand projections for the Isabel Neighborhood land uses, no additional potable water supply system improvements were recommended in the *2017 Water Master Plan*, other than potential extension of distribution pipelines to provide service to new development.

Sewer Discharge Collection System

Based on the sewer flow projections for the Isabel Neighborhood land uses, the following collection system improvements were recommended in the *2017 Sewer Master Plan* to serve future planned development under the proposed Isabel Neighborhood Plan:

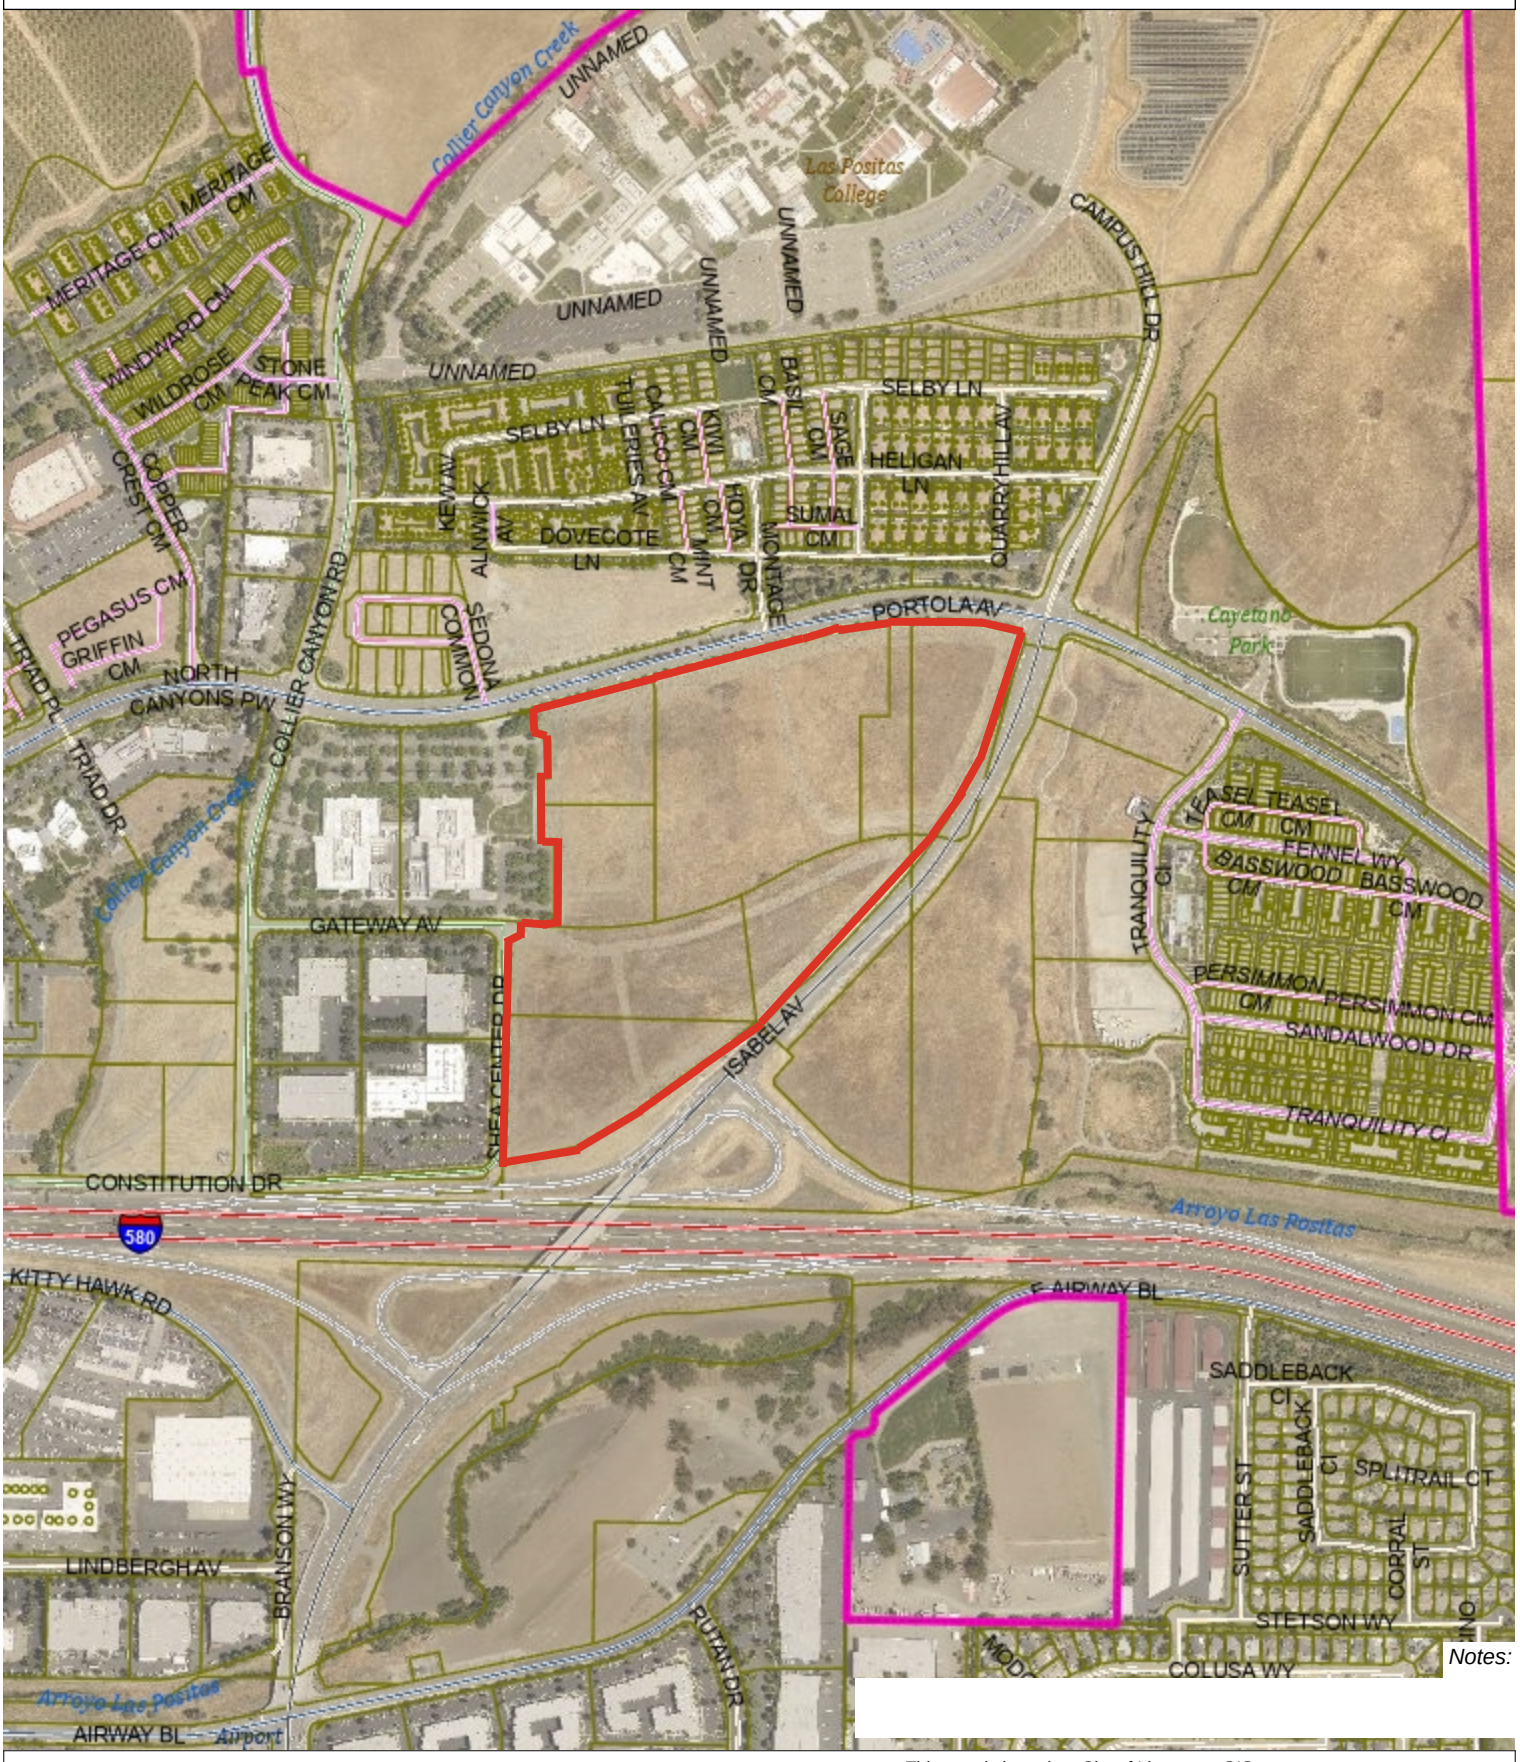
- Improvements to the gravity mains crossing Highway 580 and along Clubhouse Drive. These recommended improvements have not been incorporated into the City's Capital Improvement Plan based on further hydraulic assessment, as discussed below.

- Additional capacity at the City's Airport Lift Station. This recommended improvement has been incorporated into the City's current Capital Improvement Plan as Project No. 2025-12.

In addition to the gravity main and Airport Lift Station improvements identified in the master plan, the City subsequently assessed the capacity of the College Lift Station to serve the Isabel Neighborhood. Accordingly, HydroScience, at the City's direction, conducted a hydraulic assessment to confirm the previously identified gravity main capacities and to assess the performance of the existing College Lift Station, as documented in the *2021 Isabel Neighborhood Hydraulic Modeling and College Lift Station Evaluation Technical Memorandum*. HydroScience's assessment refined the existing hydraulic modeling included in the *2017 Sewer Master Plan* to improve accuracy and better reflect industry standards. Based on this assessment:

- The gravity mains crossing Highway 580 and along Clubhouse Drive were determined to not require upsizing.

- The College Lift Station pumps appear to be operating within acceptable parameters. However, there is less than one hour of combined emergency storage capacity at the College Lift Station wet well and collection system piping if the pumps were to fail at peak hour flow during dry weather or at any time during a 5-year storm.



Based on these results, it appears that implementing the collection piping improvements identified in the *2017 Sewer Master Plan* (i.e. I-580 Crossing upsizing and Club House Drive upsizing) are not required prior to construction of the current development uses being considered in the Isabel Neighborhood. Furthermore, modifications to the College Lift Station do not appear to be required, although the addition of dedicated onsite emergency pumping facilities to expedite response time may be worth considering and the projected capacity demands for this lift station are right at the threshold for triggering a new sewer improvement project for the College Lift Station (i.e. peak flow slightly exceeds pumping capacity, but only for a brief period that can be accommodated by the wet well storage capacity). Accordingly, the existing collection system could accommodate buildout conditions included in Appendix B to the *2017 Sewer Master Plan* (Isabel Neighborhood Plan Sewer System Evaluation Project), which includes the proposed Isabel Crossing project, but would have no excess capacity for additions to the buildout condition.

Note that there are some model revisions and refinements recommended by HydroScience that the City will consider implementing during the next update to the sewer master plan and associated hydraulic model for the collection system.

MEMORANDUM FOR: Planning Directors and Interested Parties

FROM: Zachary Olmstead, Deputy Director
Division of Housing Policy Development

SUBJECT: **No Net Loss Law**
Government Code Section 65863

The purpose of Government Code Section 65863 (No Net Loss Law), is to ensure development opportunities remain available throughout the planning period to accommodate a jurisdiction's regional housing need allocation (RHNA), especially for lower- and moderate- income households. This memorandum provides guidance on the implementation of Government Code section 65863, including amendments pursuant to Chapter 367, Statutes of 2017 (Senate Bill 166).

Summary of No Net Loss Requirements

- A jurisdiction must maintain adequate sites to accommodate its remaining unmet RHNA by each income category at all times throughout the entire planning period.

- A jurisdiction may not take any action to reduce a parcel's residential density unless it makes findings that the remaining sites identified in its Housing Element sites inventory can accommodate the jurisdiction's remaining unmet RHNA by each income category, or if it identifies additional sites so that there is no net loss of residential unit capacity.

- If a jurisdiction approves a development of a parcel identified in its Housing Element sites inventory with fewer units than shown in the Housing Element, it must either make findings that the Housing Element's remaining sites have sufficient capacity to accommodate the remaining unmet RHNA by each income level, or identify and make available sufficient sites to accommodate the remaining unmet RHNA for each income category.

- A jurisdiction may not disapprove a housing project on the basis that approval of the development would trigger the identification or zoning of additional adequate sites to accommodate the remaining RHNA.

If you have any questions, or would like additional information or technical assistance, please contact the Division of Housing Policy Development at (916) 263-2911.

Sample Housing Element Program 16
No Net Loss Law Statute (Government Code Section 65863) 17

Background

Since 1969, California has required that all jurisdictions (cities and counties) adequately plan to meet the housing needs of everyone in the community. California's local governments meet this requirement by adopting Housing Elements as part of their general plan. To demonstrate the availability of land to accommodate future housing development, a Housing Element is required to include an inventory of housing sites, or "adequate sites", with sufficient capacity by income level to accommodate a jurisdiction's RHNA by income category. (Gov. Code, § 65583, subd. (a)(3).)

Example: RHNA By Income Category	
Very Low Income	300 Units
Low Income	260 Units
Moderate Income	250 Units
Above Moderate Income	650 Units
Total RHNA	1,460 Units

To expand the supply of housing, including affordable housing, and to ensure jurisdictions do not take actions to reduce the potential capacity for new development, the Legislature adopted the No Net Loss Law in 2002. The No Net Loss Law ensures that a jurisdiction maintains a sufficient supply of adequate sites in the Housing Element sites inventory throughout the RHNA planning period. This law was amended by Chapter 367, Statutes of 2017 (Senate Bill 166), which requires sufficient adequate sites to be available at all times to meet a jurisdiction's remaining unmet housing needs for each income category. To comply with the No Net Loss Law, as jurisdictions make decisions regarding zoning and land use, or development occurs, jurisdictions must assess their ability to accommodate new housing on the remaining sites in their Housing Element site inventories. A jurisdiction must add adequate sites if land use decisions or development results in a shortfall of sufficient sites to accommodate its remaining housing need for each income category.

What is an adequate site?

Pursuant to Government Code section 65583.2, an adequate site must be available and suitable to accommodate development. Factors include:

- Have infrastructure available or planned to support a housing development.
- Be available to be developed in the planning period. For non-vacant sites, this means that the existing use is not an impediment to additional residential development.
- Be appropriately sized (larger than half an acre and smaller than 10 acres) to accommodate lower income housing.
- For sites accommodating lower income households, the sites must have appropriate zoning as demonstrated by analysis, or by meeting prescribed densities.
- Identify the number of units (capacity) that can be realistically accommodated on the site.

For more information, visit the Department's Housing Element Building Block Webpage.

No Net Loss Law and Charter Cities

Pursuant to Chapter 856, Statutes of 2018 (Senate Bill 1333), the No Net Loss Law applies to all jurisdictions, including charter cities. This requirement was effective on January 1, 2019, and applies to the current and subsequent Housing Element planning periods.

Responsibilities and Requirements Under No Net Loss Law

No Net Loss Law can be divided into three statutory areas of responsibility for jurisdictions to consider when making land-use decisions related to sites and capacity identified in the Housing Element to accommodate the RHNA:

- Maintaining Sites (Government Code section 65863(a))
- Jurisdiction Actions Relating to Zoning (Government Code section 65863(b)(1))
- Approval of Development at a Lower Density (Government Code section 65863(b)(2))

Maintaining Sites

A jurisdiction must ensure their Housing Element sites inventory continues to have capacity at all times to accommodate the RHNA by income group throughout the planning period. This requires a careful accounting of development on the sites identified in the Housing Element and residential projects throughout the jurisdiction. Action by the jurisdiction to modify development standards in a way that would result in a lower density, limit or stop development on sites identified in the inventory, exchange sites in the inventory, or downzone sites would trigger No Net Loss unless the jurisdiction can make the required findings or identify alternative sites.

If, at any time during the planning period, the jurisdiction finds that there is a shortfall of sites to accommodate its remaining RHNA, the jurisdiction must take immediate action to correct the shortfall by amending its Housing Element sites inventory to either include sites previously unidentified with capacity to accommodate the shortfall, or sites that have been rezoned to correct for the shortfall. Failure to do so constitutes a violation of the No Net Loss law. Please note, Housing Element law requires the element to identify sufficient adequate sites to accommodate the RHNA for all income levels. However, many jurisdictions choose to include sites in their Housing Element inventory above and beyond what is required to accommodate RHNA, including sites that are not considered suitable to accommodate RHNA for lower-income households (e.g., sites less than one-half acre or larger than 10 acres). When making findings that the Housing Element continues to accommodate the remaining RHNA, jurisdictions should only consider capacity of sites in the inventory that was determined adequate. Jurisdictions should not consider inadequate or unsuitable sites as adequate or available to accommodate RHNA for the purposes of No Net Loss Law.

The lack of sites to accommodate the jurisdiction's RHNA represents a fundamental alteration to the jurisdiction's ability to meet Housing Element Law. Therefore, the amended inventory must (1) demonstrate sites to address the shortfall meet the adequate site requirements of Housing Element Law, pursuant to Government Code section 65585(b), and (2) be submitted to the California Department of Housing and Community Development (Department) for review to ensure compliance with state Housing Element Law. (Cal. Gov't Code §65580 et seq.) (Housing Element Law).

Helpful Hints

To ensure that sufficient capacity exists in the Housing Element to accommodate the RHNA throughout the planning period, create a buffer in the Housing Element inventory of at least 15 to 30 percent more capacity than required, especially for capacity to accommodate the lower-income RHNA. Jurisdictions can also create a buffer by projecting capacity less than what is allowed from the maximum density to allow for some reductions in density, or rezoning additional sites above what is needed to accommodate the RHNA.

Jurisdictions should keep an updated accounting of development on the sites in the inventory and throughout the jurisdiction to ascertain the impact that development has on accommodating the remaining RHNA. This can be done in any number of ways, but an example of one methodology can be found in the Resources section below, in addition to a program committing to such an update in the Housing Element.

Decisions to Carefully Consider – Development Limitations

No Net Loss Law explicitly states that at no time may a jurisdiction take an action to permit or cause the sites inventory to be insufficient to meet its remaining RHNA without triggering the statute. The only exception is the 180-day timeframe for replacing capacity from the approval of a development at a lower density that results in a shortfall of sites to accommodate the RHNA (see page 8.) Therefore, a jurisdiction should carefully consider the introduction or adoption of development limitations (e.g., development standard limitations, policies or ordinances that affect the development potential of a site, development moratorium). A jurisdiction should carefully examine the effect of these types of actions on development capacity and consult with their legal counsel prior to approval.

Zoning and Development Standard Modifications – Changes in development standards may affect the potential capacity of a site. For example, an increase in parking requirements, reductions in height limitations or lot coverage, new design requirements, or modifications to set-back requirements, all impact the buildable area of a site and could reduce the housing unit potential. Zoning and development standard modifications should be carefully considered to ensure that they do not impact the potential capacity of a site in a jurisdiction's inventory.

Growth Control Ordinances – If a jurisdiction considers adoption of an ordinance or other measure that limits growth or development potential through unit or population caps, or limits where development can occur through the use of buffers, or by phasing development, it must consider the statewide shortage of housing and the requirements of No Net Loss Law. The adoption of one or more of these types of ordinances could prevent a jurisdiction from accommodating its RHNA either by affecting a site in the inventory, or by limiting development as a whole. Proposed growth limiting ordinances should be prudently drafted so as not to impact the accommodation of the remaining RHNA throughout the planning period. Otherwise, implementation of the ordinance may violate No Net Loss Law.

How do growth control ordinances relate to the RHNA?

Government Code section 65302.8 requires findings be made to ensure that a jurisdiction can continue to fulfill requirements of Housing Element Law, including the accommodation of the RHNA. Findings include a description of the following:

- The jurisdiction's RHNA.
- The specific housing programs and activities being undertaken by the jurisdiction to achieve RHNA objectives.
- How the public health, safety, and welfare would be promoted.
- Fiscal and environmental resources available to the local jurisdiction.

Moratoriums – Pursuant to Government Code section 65858, jurisdictions may adopt a 45-day interim ordinance prohibiting any uses, including housing, that may be in conflict with a contemplated general plan, specific plan, or zoning proposal. This applies to a general plan, specific plan, or zoning proposal that the legislative body, planning commission or the planning department is considering, studying, or intends to study within a reasonable time. While the ordinance may be extended for other uses, a moratorium on the development of multifamily housing cannot be extended unless specific findings are made. In addition, regardless of its duration, a moratorium that affects sites in the Housing Element inventory may be in conflict with the No Net Loss Law, as the law requires a jurisdiction to maintain capacity at all times to accommodate the RHNA. A jurisdiction should consult counsel prior to enacting a moratorium on housing.

Jurisdiction Actions

Jurisdiction actions include downzoning or other actions taken by a jurisdiction to reduce a parcel's allowable residential density. This can be done through a change in zoning or an imposition of density limitations that preclude that ability to achieve densities assumed in the Housing Element sites inventory. If the parcel to be downzoned is identified in the Housing Element, a jurisdiction must make written findings, supported by substantial evidence, that:

- The reduction is consistent with the jurisdiction's adopted general plan, including the Housing Element. For example, this finding could be made if downzone does not change the land use and zoning designation.

- The remaining sites identified in the Housing Element are adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction's remaining share of the RHNA for the planning period. The finding must include a quantification of the remaining unmet need for the jurisdiction's RHNA at each income level and the remaining capacity of sites identified in the Housing Element to accommodate that need by income level.

If a jurisdiction cannot make these findings, it may take action to reduce the residential density of a parcel only if it identifies or rezones additional sufficient adequate sites with an equal or greater residential density in the jurisdiction so that there is sufficient residential unit capacity appropriate to accommodate the RHNA by income level. Actions to identify additional sites or rezone must occur before or concurrently with any action or approval to reduce a parcel's density. Sites identified or rezoned must meet the following criteria:

- Must be considered an adequate site pursuant to the requirements of Government Code section 65583.2.
- If the capacity to be replaced was on a site that was zoned by-right pursuant to Government Code section 65863.2 (h) and (i), then the replacement site must also satisfy those requirements.

As these actions taken by the jurisdiction represent a fundamental alteration to the Housing Element, the Housing Element sites inventory must then be amended and, pursuant to Government Code section 65585(b), be submitted to the Department for review to ensure the compliance with state Housing Element Law, prior to, or concurrently with, any action or approval to reduce a parcel's density.

Helpful Hints

If unsure as to whether new sites identified or rezoned will meet Housing Element adequate sites requirements, contact the Department's Housing Policy Division for a Housing Element reviewer to provide technical guidance.

Rezoned sites may include sites previously identified in the sites inventory that are rezoned to a higher density zoning designation than identified in the sites inventory.

Decisions to Carefully Consider – Changes to Zoning

General Plan Updates – Sometimes land use inconsistencies arise during a general plan update when undertaken separately from the Housing Element. A jurisdiction updating the land use element of the general plan must consider the sites inventory of the Housing Element. If sites identified in the Housing Element site's inventory will be downzoned as part of the general plan update, other sites must be identified or rezoned to accommodate the resulting shortfall of capacity. Under state law, the land use element must be consistent with the Housing Element, and if the land use element does not permit the density in the Housing Element, the Housing Element or land use element must be amended to achieve consistency.

Approval of Development at a Lower Density

A jurisdiction must make written findings or identify additional site capacity if a development is allowed with a lower density than what was assumed in the sites inventory of the Housing Element. A lower residential density sometimes results from a jurisdiction either approving a development with residential units less than what was assumed for the site or affordable to a different income category than the site was assumed to accommodate. Lower residential density could also result from another use, such as commercial being approved on a site identified in the inventory for housing regardless of what the zoning allows.

What constitutes a "lower-density"?

For jurisdictions with an adopted Housing Element found in compliance with Housing Element Law:

- Fewer units will be developed on the site than projected in the sites inventory (capacity) or program of the Housing Element.

For jurisdictions out of compliance with Housing Element Law:

- A density that is lower than 80 percent of the maximum allowable residential density for that parcel, or 80 percent of the maximum density required by Government Code section 65583.2(c)(3), whichever is greater. For more information on default densities, please see the Department's Building Block website.

At the time of approval, the following written findings must be made, and supported by substantial evidence in the record:

- Remaining sites identified in the Housing Element are adequate to meet the jurisdiction's remaining RHNA for the planning period by income category.
- The findings should include a quantification of the remaining unmet need for the jurisdiction's RHNA at each income level and the remaining capacity of sites identified in the Housing Element, to accommodate that need by income level.

If the approval of a development at a lower residential density results in the remaining sites capacity becoming inadequate to accommodate the RHNA by income category, a jurisdiction has up to 180 days from the approval to identify, or rezone, "sufficient additional, adequate, and available sites" to accommodate the remaining RHNA for each income category. Sites identified or rezoned must meet the following criteria:

- Must be considered an adequate site pursuant to the requirements of Government Code section 65583.2.
- If the capacity to be replaced was on a site that was zoned by-right pursuant to Government Code section 65863.2 (h) and (i), then the replacement site must also satisfy those requirements.

A jurisdiction must report in the jurisdiction's Annual Progress Report (APR) any sites that have been identified or rezoned to accommodate the resulting shortfall due to the approval of a development at a lower density. APRs are required to be sent to the Department by all jurisdictions by April 1, pursuant to Government Code section 65400. For more information on completing this section of the APR, see the Department Webpage and select "Annual Progress Reports."

Who makes the findings?

The body that "takes action or approves" the jurisdiction action to reduce a parcel's density or approve a development at a lower density would make the findings. For example, if a zoning administrator approves a development at a lower density, as part of the approval, the administrator would include the appropriate findings. For instance, if the development approval is ministerial under the Streamlined Ministerial Approval Process (SB 35, 2017), the findings should be included as part of the plan review and approval. If the City Council is approving a zone change, it must include the findings in the resolution adopting the zone change.

Helpful Hints

The jurisdiction has only 180 days to complete any rezoning needed to accommodate a shortfall of adequate sites to accommodate the RHNA due to the approval of a development at a lower density. To ensure the rezones can be completed on time, it is recommended that the jurisdiction begin the rezone process early in the development application approval process.

Jurisdictions may post the sites inventory on their website with the capacity estimates from the Housing Element for developers to reference when considering projects on sites identified in the Housing Element.

Decisions to Carefully Consider – Development Approval

Jurisdictions out of compliance with state Housing Element Law - No Net Loss Law provisions related to approving a lower density development applies to all jurisdictions regardless of Housing Element compliance status. A jurisdiction that has not adopted a Housing Element within 90 days of the due date, or has a Housing Element out of compliance, must still comply with No Net Loss requirements, even though they may not have a Housing Element Law compliant sites inventory. If the jurisdiction does not have a current sites inventory to compare the project unit count, the determination of lower density would be required for all new housing development.

Denying an application - A jurisdiction may not deny a housing development application on the basis that approval of the development would trigger the identification, or zoning, of additional adequate sites to accommodate the remaining RHNA.

However, since the term "housing development" is used in the statute, it does not prevent a jurisdiction from denying a non-residential development on an identified site if it would trigger the identification, or rezoning, of additional adequate sites.

Requests for developer assistance with complying with No Net Loss Law – While the jurisdiction is solely responsible for compliance with No Net Loss Law, under limited circumstances the statute does allow a jurisdiction the option to require the applicant to assist the jurisdiction in meeting these provisions. Specifically, requests can be made if an applicant's initial development application requests a residential density that results in the remaining sites in the sites inventory being insufficient to accommodate it remaining RHNA. A jurisdiction cannot require developer assistance if the subsequent approval process results in a reduction of units.

Types of assistance required could include help with the identification of additional sites for potential rezones or community outreach. However, requests should be balanced with the potential impact on the overall viability of the project. Overly burdensome requirements may make a development project financially infeasible and could, in effect, constitute a denial of the project or may violate the Housing Accountability Act (Government Code section 65589.5.)

California Environment Quality Act (CEQA)

The act of identifying or making available additional adequate sites, in and of itself, to comply with the statutory requirements to accommodate the remaining unmet RHNA, does not trigger a CEQA review. However, if making available additional adequate sites requires an increase in density, a rezone, or other actions that constitute a "project" under CEQA, a CEQA analysis would be required.

When approving a site at a lower residential density, the possibility of a CEQA analysis should be considered since the CEQA review must be completed within the 180-day timeline to identify and rezone additional, adequate sites to accommodate the remaining RHNA by income category. The failure to complete a timely CEQA analysis would render the additional sites inadequate to accommodate the remaining unmet RHNA. This would be a violation of No Net Loss Law and could also render the Housing Element out of compliance with state Housing Element Law.

Failure to Comply with No Net Loss Law

In addition to violating of the No Net Loss Law, the failure to ensure that there are sufficient adequate sites to accommodate the unmet RHNA by income category throughout the entire planning period is also a violation of the Housing Element Law. This is because the Housing Element will also fail to identify adequate sites to accommodate the RHNA by income category. As a result, pursuant to Government Code section 65585 (i) and (j), the Department may revoke a jurisdiction's Housing Element compliance and/or refer the violation to the Attorney General. In addition, a third party may file an action to challenge the jurisdiction in court.

Resources

Identifying Your Remaining RHNA and Maintaining Capacity

A jurisdiction should implement an ongoing, project-by-project evaluation of each approved residential development to ensure that sufficient adequate site capacity is available to accommodate the remaining RHNA by income category throughout the planning period. This evaluation could also be used to complete the APR required to be sent to the Department by April 1 of each year.

The evaluation procedure could utilize a spreadsheet or tool, such as the No Net Loss Capacity Calculation Tool below, to subtract the number of residential units in each approved development from the RHNA to determine the remaining unmet RHNA by income category. The total number of approved units by income category could then be subtracted from the Housing Element's sites inventory site capacity by income category to determine the remaining site capacity.

No Net Loss Capacity Calculation Tool Example

Step 1: Determine remaining RHNA

- Identify the reported RHNA from permitted projects as reported in the Housing Element Annual Progress Report (Table B of the Annual Progress Report). If the jurisdiction has not yet completed those reports for the planning period, please go to the Departments Webpage and select "Annual Progress Reports."
- Identify any projects from the planning period that have received their approvals/entitlements and are anticipated to pull their building permits.
- Identify the number of units permitted or that have been approved/entitled in the current reporting year (including accessory dwelling units and other alternatives under Government Code section 65583.1.)
- Calculate the remaining RHNA to date.
- If determining potential No Net Loss capacity of a proposed development, subtract the units from the proposed development to get the remaining RHNA resulting from the proposed project.

Example:
City A has an application for a market rate project for 75 high-end multifamily apartments. This project is being proposed on a site identified in the inventory as having the ability to accommodate a portion of its very low- and low-income RHNA.

Table A: Remaining RHNA

	Very Low-Income	Low-Income	Moderate-Income	Above Moderate-Income
RHNA	300	260	250	650
Year	Reported Progress			
2014	-5	-15	-2	-50
2015			-5	-100
2016	-25	-25	-20	-60
2017				-250
2018	-15	-60	-25	-75
Project Name/APN	Projects approved/entitled anticipated to pull permits			
Siempre Verde 001-256-2154, -57				-4
Project Name/APN	Current Year Progress			
Hightop Condos 001-256-5574		-7		-75
Sunflower Apt 001-256-4475	-25	-50		
	Remaining RHNA To Date			
	230	103	198	36
Project Name/APN	Proposed Project RHNA			
Magnolia Luxury Apt 001-256-4472				-75
Remaining RHNA with Proposed Development				
	230	103	198	0

Step 2: Determine remaining capacity from the Housing Element sites inventory*

- Identify the total site capacity from the Housing Element by income category.
- List the capacity estimated in the Housing Element for an accessory dwelling unit (ADU), or other alternative site capacity methodology.
- List the capacity by income category as identified in the Housing Element inventory for each site identified in the inventory that has an approved/entitled or permitted project in the planning period (identified in the previous table).

Some projects will be developed on sites not identified in the Housing Element. These sites should not be included in the table below, as their capacity was not anticipated to accommodate a portion of the RHNA. They are included in the previous calculation to determine the remaining RHNA. As a result, the additional capacity from these projects can help mitigate loss in capacity from other projects, depending on their affordability.

- For each site rezoned that was identified in the Housing Element (but does not include a project per above) identify the adjusted capacity by income as result of the zone change.
- Calculate the remaining available capacity.
- Subtract the capacity identified in the inventory for the proposed development or rezone to calculate the remaining capacity in the sites inventory by income level.

Example Continued:

Table B: Remaining Capacity*

	Very Low-Income	Low-Income	Moderate-Income	Above Moderate-Income
Capacity from sites	325	370	260	800
Capacity from ADU or other alternative site capacity methodology	15	10		
Project Name/APN	Sites Inventory RHNA from Approved/Entitled or Permitted Project			
001-256-4758- 868				-160
001-256-5631	-25	-25		
001-256-5270 - 330				-60
Dell Webb Master Plan				-250
002-40526-7785	-50	-75		
002 -526 -7788			-15	
001-256-5575	-25	-155		
APN	Capacity changes due to rezone			
003-578-7584 (downzone to open space)			-30	
	Remaining Sites Inventory Capacity to Date			
	240	125	215	330
APN	Sites Inventory Capacity from Development or Rezone			
Magnolia Luxury Apt 001-256-4472		-75		
Remaining Sites Inventory Capacity with Proposed Development or Rezone				
	240	50	215	330

* Note: For most 5th cycle Housing Elements, jurisdictions will need to make assumptions on capacity by income category based on density and the analysis provided in the Housing Element, since the 5th cycle sites are not required to be identified by income category. However, for the 6th and subsequent cycles, sites will be required to identify capacity by income level. Some jurisdictions have chosen to combine low and very low- income RHNA for purposes of calculating site capacity, which should be reflected in supporting charts.

Step 3: Compare remaining RHNA with remaining sites inventory to determine if additional capacity will be needed.

- Input the remaining RHNA from Table A. (If this calculation is due to a proposed development, enter the remaining RHNA from the line “Remaining RHNA with Proposed Development”.)
- Input the remaining sites inventory capacity with a proposed development or rezone.
- Calculate the No Net Loss potential by subtracting the available capacity from the remaining RHNA. If the result is negative, there is a net loss in capacity, and the difference must be accommodated pursuant to No Net Loss Law.

Example:
Approval of the Magnolia Luxury Apartments would result in a net capacity loss of 53 units. City A would have to rezone or identify additional capacity for at least 53 low-income units.

Table C: No Net Loss Calculation

	Very Low-Income	Low-Income	Moderate-Income	Above Moderate-Income
Remaining Capacity (Table B)	240	50	215	330
Remaining RHNA (Table A)	230	103	198	0
No Net Loss Calculation	+10	-53	+17	+330

Please note: There may be many unique circumstances that do not fall neatly into the above example. This calculation tool is meant to be a framework to help jurisdictions think about the best way to identify potential No Net Loss situations.

No Net Loss Law Decision Flow Chart

The following flow chart is intended to help visualize how to determine if a project or a decision would be subject to No Net Loss Law and its remedies. Jurisdictions should consult with legal counsel prior to final determination on whether a project or decision triggers No Net Loss requirements.

No Net Loss Law Decision Flow Chart

Sample Housing Element Program

Sample Program: No Net Loss of Residential Capacity to Accommodate the RHNA by Income Category (Government Code section 65863)

To ensure sufficient residential capacity is maintained to accommodate the RHNA for each income category, within one year of adoption of the Housing Element, develop and implement a formal, ongoing (project-by-project) evaluation procedure pursuant to Government Code section 65863. The evaluation procedure will track the number of extremely low-, very low-, low-, moderate-, and above moderate-income units constructed to calculate the remaining unmet RHNA. The evaluation procedure will also track the number of units built on the identified sites to determine the remaining site capacity by income category and will be updated continuously as developments are approved.

No action can be taken to reduce the density or capacity of a site (e.g., downzone, moratorium), unless other additional adequate sites are identified prior to reducing site density or capacity.

If a development is being approved on an identified site at a lower density than what was assumed for that site identified in the Housing Element, additional adequate sites must be made available within 180 days of approving the development. A program to identify the replacement sites, and take the necessary actions to make the site(s) available and ensure they are adequate sites, will be adopted prior to, or at the time of, the approval of the development.

Time Frame: Within six months of adoption of the Housing Element, develop and implement a formal ongoing evaluation procedure pursuant to Government Code section 65863.

Subsequent to adopting an evaluation procedure, monitor rezones and development of residential units, and update Housing Element sites inventory. Housing Element sites inventory is posted on the Planning Department’s website and will be updated at least once a year.

At least annually, update the sites inventory in conjunction with Housing Element Annual Reports pursuant to Government Code section 65400, as necessary.

Responsibility: Community Development Department

Funding Source: General Fund

No Net Loss Law Statute (Government Code Section 65863)

65863.
(a) Each city, county, or city and county shall ensure that its housing element inventory described in paragraph (3) of subdivision (a) of Section 65583 or its housing element program to make sites available pursuant to paragraph (1) of subdivision (c) of Section 65583 can accommodate, at all times throughout the planning period, its remaining unmet share of the regional housing need allocated pursuant to Section 65584, except as provided in paragraph (2) of subdivision (c). At no time, except as provided in paragraph (2) of subdivision (c), shall a city, county, or city and county by administrative, quasi-judicial, legislative, or other action permit or cause its inventory of sites identified in the housing element to be insufficient to meet its remaining unmet share of the regional housing need for lower and moderate-income households.

(b) (1) No city, county, or city and county shall, by administrative, quasi-judicial, legislative, or other action, reduce, or require or permit the reduction of, the residential density for any parcel to, or allow development of any parcel at, a lower residential density, as defined in paragraphs (1) and (2) of subdivision (g), unless the city, county, or city and county makes written findings supported by substantial evidence of both of the following:

(A) The reduction is consistent with the adopted general plan, including the housing element.

(B) The remaining sites identified in the housing element are adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction’s share of the regional housing need pursuant to Section 65584. The finding shall include a quantification of the remaining unmet need for the jurisdiction’s share of the regional housing need at each income level and the remaining capacity of sites identified in the housing element to accommodate that need by income level.

(2) If a city, county, or city and county, by administrative, quasi-judicial, legislative, or other action, allows development of any parcel with fewer units by income category than identified in the jurisdiction’s housing element for that parcel, the city, county, or city and county shall make a written finding supported by substantial evidence as to whether or not remaining sites identified in the housing element are adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction’s share of the regional housing need pursuant to Section 65584. The finding shall include a quantification of the remaining unmet need for the jurisdiction’s share of the regional housing need at each income level and the remaining capacity of sites identified in the housing element to accommodate that need by income level.

(c) (1) If a reduction in residential density for any parcel would result in the remaining sites in the housing element not being adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction’s share of the regional housing need pursuant to Section 65584, the jurisdiction may reduce the density on that parcel if it identifies sufficient additional, adequate, and available sites with an equal or greater residential density in the jurisdiction so that there is no net loss of residential unit capacity.

(2) If the approval of a development project results in fewer units by income category than identified in the jurisdiction’s housing element for that parcel and the jurisdiction does not find that the remaining sites in the housing element are adequate to accommodate the jurisdiction’s share of the regional housing need by income level, the jurisdiction shall within 180 days identify and make available additional adequate sites to accommodate the jurisdiction’s share of the regional housing need by income level. Nothing in this section shall authorize a city, county, or city and county to disapprove a housing development project on the basis that approval of the housing project would require compliance with this paragraph.

(d) The requirements of this section shall be in addition to any other law that may restrict or limit the reduction of residential density.

(e) This section requires that a city, county, or city and county be solely responsible for compliance with this section, unless a project applicant requests in his or her initial application, as submitted, a density that would result in the remaining sites in the housing element not being adequate to accommodate the jurisdiction's share of the regional housing need pursuant to Section 65584. In that case, the city, county, or city and county may require the project applicant to comply with this section. The submission of an application for purposes of this subdivision does not depend on the application being deemed complete or being accepted by the city, county, or city and county.

(f) This section shall not be construed to apply to parcels that, prior to January 1, 2003, were either (1) subject to a development agreement, or (2) parcels for which an application for a subdivision map had been submitted.

(g) (1) If the local jurisdiction has adopted a housing element for the current planning period that is in substantial compliance with Article 10.6 (commencing with Section 65580) of Chapter 3, for purposes of this section, "lower residential density" means the following:

(A) For sites on which the zoning designation permits residential use and that are identified in the local jurisdiction's housing element inventory described in paragraph (3) of subdivision (a) of Section 65583, fewer units on the site than were projected by the jurisdiction to be accommodated on the site pursuant to subdivision (c) of Section 65583.2.

(B) For sites that have been or will be rezoned pursuant to the local jurisdiction's housing element program described in paragraph (1) of subdivision (c) of Section 65583, fewer units for the site than were projected to be developed on the site in the housing element program.

(2) (A) If the local jurisdiction has not adopted a housing element for the current planning period within 90 days of the deadline established by Section 65588 or the adopted housing element is not in substantial compliance with Article 10.6 (commencing with Section 65580) of Chapter 3 within 180 days of the deadline established by Section 65588, "lower residential density" means any of the following:

(i) For residentially zoned sites, a density that is lower than 80 percent of the maximum allowable residential density for that parcel or 80 percent of the maximum density required by paragraph (3) of subdivision (c) of Section 65583.2, whichever is greater.

(ii) For sites on which residential and nonresidential uses are permitted, a use that would result in the development of fewer than 80 percent of the number of residential units that would be allowed under the maximum residential density for the site parcel or 80 percent of the maximum density required by paragraph (3) of subdivision (c) of Section 65583.2, whichever is greater.

(B) If the council of governments fails to complete a final housing need allocation pursuant to the deadlines established by Section 65584.05, then for purposes of this paragraph, the deadline pursuant to Section 65588 shall be extended by a time period equal to the number of days of delay incurred by the council of governments in completing the final housing need allocation.

(h) An action that obligates a jurisdiction to identify and make available additional adequate sites for residential development pursuant to this section creates no obligation under the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code) to identify, analyze, or mitigate the environmental impacts of that subsequent action to identify and make available additional adequate sites as a reasonably foreseeable consequence of that action. Nothing in this subdivision shall be construed as a determination as to whether or not the subsequent action by a city, county, or city and county to identify and make available additional

adequate sites is a “project” for purposes of the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code).

(i) Notwithstanding Section 65803, this section shall also apply to a charter city.

Table A: Housing Element Sites Inventory, Table Starts in Cell A2

Assessor Parcel Number	Consolidated Sites	General Plan Designation (Current)	Zoning Designation (Current)	Minimum Density Allowed (units/acre)	Max Density Allowed (units/acre)	Parcel Size (Acres)	Existing Use/ Vacancy	Infra-structure	Publicly- Owned	Site Status	Identified in Last/Last Two Planning Cycle(s) [Lower Income Only]	Lower Income Capacity	Moderate Income Capacity	Above Moderate Income Capacity	Total Capacity	Optional Information1

2. *May have in-person contact with clients, customers or employees at the residence;*
3. *May store up to 250 cubic feet of supplies/ stock/merchandise in the unit;*
4. *May employ people who do not live in the live/work unit;*
5. *May have visible signage on vehicles and at the unit, subject to the Ground floor Retail signage standards (Chapter 5, Urban Design);*
6. *May have one commercial grade vehicle associated with the business; and*
7. *May include photography studios and retail/ wholesale sales of products as permitted business types.*

P-LU-5: Encourage the continued operation of, and investment in, existing business park, light industrial, and commercial uses.

P-LU-6: Ensure that land uses are compatible with existing residential uses and minimize conflicts between adjacent land uses with respect to scale, safety, noise, privacy, and other potential nuisances and hazards.

P-LU-7: Plan the provision of high quality, cost effective child care facilities are provided throughout the Neighborhood.

- Encourage new residential, office, and mixed use developments to incorporate child day care facilities early in the site planning and design process.
- Consider applying regulatory and/or financial incentives to support child care centers close to the Valley Link station to serve commuters.
- Partner with other public agencies such as Alameda County, non-profit organizations, and private child care providers to leverage resources and assist with planning efforts.

P-LU-8: The City shall encourage property owners to collaborate and prepare Master Plans by residential subarea. (Refer to Figure 2-3 for the subarea map.) For the purposes of this Specific Plan, Master Planning shall mean the subdivision and/or site plan design review application of at least one entire subarea. If Master Planned, residential densities may be averaged or distributed across the subarea rather than calculated at the parcel level, provided that the Master Plan complies with:

1. *The target subarea unit count and the performance measures identified in Table 2-6; and*
2. *All other applicable development and design standards for the land use.*

If Master Planning more than one subarea, the densities may be averaged or distributed across those subareas. The City may consider a unit count lower than the average subarea unit count within a Master Plan, if there are demonstrated, significant regulatory, environmental, or other constraints within the subarea, as determined by the Director.

P-LU-9: The location of the Ground Floor Retail/Flex Space Overlay on the BART property north of I-580 is diagrammatic on Figure 2-1. As the Plan is implemented, the Overlay shall apply to all building frontages along the Isabel Path between the north end of the Valley Link pedestrian bridge and Isabel Avenue.

P-LU-10: Allow mobile food vendors to operate in non-residential areas within the Isabel Neighborhood with a Temporary Use Permit (TUP), subject to the following regulations:

- Mobile food vendors are responsible for providing a solid waste receptacle and maintaining a clean environment around their facility.
- No loud music.
- No blocking driveways or taking up more than two spaces in private parking lots.
- Mobile food vendors must provide copies of relevant permits from the Alameda County Health Department and obtain a City of Livermore Business License, as part of the TUP application.
- The TUP shall identify the locations in which vendors would be allowed to locate and during which hours of the day (between 8:00 AM and 9:00 PM, for example).
- The TUP shall be effective for one calendar year with no limit on the number of days in which it can operate. Each TUP shall be

Commercial & Office Economic Feasibility

Introduction

The INSP envisioned a 106,000 SF commercial center with ground floor retail options and anchored by a grocery store. Similarly, the INSP envisions an estimated 382,000 sq. ft. for new office space.

This commercial feasibility analysis evaluates the retail and office market forces impacting the Isabel Neighborhood Specific Plan ("INSP") since the last market analysis was completed by Gruen Gruen + Associates (GG+A) in 2022. The report is intended to provide the City of Livermore with an understanding of how retail and office demand in the INSP area is impacted by market changes and, more specifically, if desired office and commercial density requirements in the INSP are economically feasible to achieve.

Relative to the project's commercial uses and compatibility with the INSP, this analysis also took into consideration the following goals and objectives taken from the INSP:

1. Complete Neighborhood
2. Access to Open Space, Arroyos, and Scenic Views
3. Well Connected Pedestrian and Bicycle Network
4. High Quality Design
5. Community Gathering Spaces
6. Compatibility with Existing Uses

For both retail and office markets, Kosmont prepared a summary evaluation of local area market data on inventory, absorption rates, lease rates and vacancy rates to demonstrate the supportable new commercial development within the Project. Kosmont's summary of the market primarily includes a specific assessment within the City of Livermore but provides a high-level analysis of the East Bay and Tri-Valley area to benchmark against regional trends.

Retail Demand Findings

Kosmont's analysis found similar market conditions from GG+A's findings in 2022. Demand for projected brick-and-mortar commercial space did increase slightly, likely due to stabilized retail vacancies and population increase. Given the recent shift in consumer preferences, demand is likely to be centered on retail that is geared toward essentials, experience, and e-commerce. Retail will increasingly be part of a more blended approach (housing, retail, open space, creative office, hotel, etc.) that appeals to those working from home looking for a live, work, play environment in a post-COVID economy.

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Total resident and employee expenditure potential for the area surrounding the Project demonstrates a maximum need of 75,200 SF upon full buildout of the Isabel Crossing project to support the influx of new residents from the Isabel neighborhood, as well as existing local area residents, students and workers. Kosmont analysis indicates the INSP target of 106,000 SF of retail is not supported under current conditions.

Local Demographics

The City of Livermore has seen a steady increase in population growth within the past decade of about 11% according to the Imagine Livermore 2045 General Plan equating to an additional 9,000 residents. As of 2023, the total population was roughly 87,500 and with approximately 31,500 households. The average household size is 2.75 and the household income is an average of $188,700. The East Bay single-family home real estate market has grown and Livermore is no exception seeing increasing home values with a median of $970,000 in 2023. The local area is comprised of primarily owner-occupied housing units (73%) but with home values continuing to climb, the number of available renter-occupied units is expected to grow the next decade.

Local Area Demographics

Variable	Livermore, CA	Radius from Project Site		
		1 mile	3 miles	5 miles
2023 Total Population	87,549	5,316	56,574	173,667

Retail Market Trends

Brick and mortar retailers across the U.S. face a dramatic decline in retail sales as the digital economy transforms the lifestyles and social patterns of every generation. Today's consumers use online websites for purchasing many hard and soft good commodities. According to Insider Intelligence, E-commerce retail sales increased by more than 30% in 2020 due to pandemic-era shopping patterns, and growth is expected to continue, particularly in clothing and general merchandise purchases.

Consumers are purchasing retail goods through multiple vehicles such as online purchasing, brick and mortar sales and buy online / pickup in store ("BOPIS"). E-Commerce sales, which have

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. increased steadily over the past 10 years, grew to $1.2 trillion in 2023. Insider Intelligence says E-commerce retail sales represents over 15% of total sales and are projected to be more than 20% of total retail sales by 2027, significantly impacting new retail development feasibility.

Livermore Retail Market Overview

The retail submarket of Livermore comprises 5.2 million SF of inventory. The Livermore retail market has a current vacancy rate of 3.5%. The highest retail vacancies come from neighborhood centers (5.7%) and shopping strip centers (5.6%), while general retail buildings are holding a 1.4% vacancy rate. There has been negative absorption of 20,000 SF for neighborhood centers and strip centers. The East Bay market vacancy rate is higher at 5.5%, which has changed very little since 2018 (5.8%).

Retail Characteristics within the City of Livermore (April 2024)

Submarket	Retail Type	Vacancy Rate (2024)	Inventory Sq. Ft. by Subcategory
Livermore	Neighborhood	5.7%	2,210,092
Livermore	Strip Centers	5.6%	380,612
Livermore	General Retail	1.4%	1,925,120
Livermore	Other	0%	697,000

Source: CoStar (Q2 - 2024)

Livermore has seen relatively little development (6% overall growth over the past decade). Retail vacancies saw their peak at 5.4% in 2020 due to the impacts of COVID-19 pandemic but have decreased since. Annual rents grew an overall 23% in the submarket in the past decade. No retail inventory is under construction despite the submarket's existing low vacancy rate of 3.3%.

Retail Market History – Livermore Submarket

Period	Vacancy Rate	Inventory SF	Available SF Direct	Net Absorption SF	Market Asking Rent/SF
2024 YTD	3.5%	5,237,084	205,915	(18,489)	$32.59
2023	2.4%	5,237,084	176,417	37,714	$32.23
2022	3.1%	5,234,884	183,788	44,118	$32.72

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Competitive Retail Centers

Within a 6-mile market area there are five (5) shopping strip centers, twenty (20) neighborhood centers, and four (4) large community centers. As seen in the map below, there are approximately 23 grocery store options within a 6-mile radius from the Project, such as Costco, Walmart, Target, Safeway, Whole Foods, including ethnic-specific grocery options like 99 Ranch, 88 Seafood Market, and Del Rancho Supermercado. Although residents of Livermore have a number of options, local neighborhood-serving grocery options do not exist in the INSP area. A Costco located one mile from the site is a regional-serving option, but a smaller grocer option to serve immediate needs for residents would be a value-add as the Project is built out.

Grocery Stores within a 6-mile radius

City Taxable Sales

Taxable retail sales have grown less than 1% overall during the past five years, with the declines in clothing and motor vehicle related categories (-4% and -11%, respectively). The largest growth in taxable retail sales is the food services and drinking places category, which expanded by 21%, followed by general merchandise with 10% growth.

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Potential Retail Demand

Kosmont performed an additional analysis to estimate brick-and-mortar retail demand by expenditures from four primary target markets: 1) households in the project site area, 2) households outside of the project site area but within the INSP area, 3) students from Las Positas College, and 4) local area workers.

New Resident Spending

Recent ESRI data shows City of Livermore with an average household income of approximately $188,700 annually. Among these households, estimated yearly spending for non-automotive brick-and-mortar retail and general services is approximately $38,300 per household.

Existing households in the entire city spend $1.2 billion annually in select brick-and-mortar retail categories with the highest proportion of expenditures going toward food at home, entertainment, and food away from home.

When considering the potential spending from an additional 1,299 new households within the proposed development in the Isabel Neighborhood, Kosmont estimates the new town center could capture annual expenditures of $44.8 million at full buildout, as shown in the Table on the following page.

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Total Demand

Annual retail expenditures from the four target markets is estimated at $132 million per year as shown in table below. Kosmont utilized $650 psf sales (an Urban Land Institute (ULI) industry average that assumes the likely sales necessary by retailers to justify development costs for new retail space. Kosmont utilized capture rates ranging from 20-50% for target markets. Capture rates are based on the groups' likelihood of patronage to the Project's new commercial uses and taking into consideration the variety of grocery and non-grocery retail options available in the local area.

Projected Retail Demand for Project Site

Potential Livermore Retail Demand	Isabel Project Households	Households in Specific Plan Area	Student Enrollment	Local Area Workers
Population	1,299	1,181	8,500	7,342
Weekly Est. Expenditure	-	-	*$50*	*$75*
Total Retail Expenditure	$44,776,600	$45,232,300	$14,875,000	$27,532,500
Retail Area Capture Rate	*50%*	*30%*	*50%*	*20%*
Projected Retail Expenditure	$22,388,300	$13,569,690	$7,437,500	$5,506,500

Projected Retail SF by Population	**34,400**	**20,900**	**11,400**	**8,500**
Total Projected Retail SF	**75,200**			

Sources: OnTheMap - Local Area Workers in Specific Plan area
ESRI - Household data
Las Positas College - enrollment from Educational Master Plan
ULI - Sales per sq. ft. assumption for likely minimum sales performance

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

The supportable SF from expected expenditures by the local target market segments is summarized below:

1. households in the Project are estimated to support up to 34,400 SF of brick-and-mortar retail space,
2. households in the INSP area are likely to support an additional 20,900 SF.
3. Factoring both the local area worker population and Las Positas College student enrollment, an additional 19,900 SF of retail demand is estimated.

Thus, total potential demand for new brick-and-mortar retail from all populations combined is a maximum of 75,200 SF following full buildout, which is much less than the INSP target of 106,000 SF.

OFFICE UPDATE

This office analysis is to evaluate changes within the Tri-Valley office market since the last analysis was completed by GG+A in 2022. The report is intended to provide the City of Livermore with an understanding of how office demand in the INSP area is affected by market forces and, more specifically, if the expected office density in the Specific Plan is economically feasible to achieve.

Kosmont prepared a summary evaluation of office market data on inventory, absorption rates, lease rates and vacancy rates to demonstrate the feasibility of the mixed-use project. Kosmont's summary of the market primarily includes a specific assessment within the City of Livermore, but provides a high-level analysis of the East Bay or Tri-Valley market, where appropriate, to benchmark City against regional trends.

Summary of Office Findings

Kosmont's findings were similar to those in the GG+A report as the statewide office market has not improved since 2022. Kosmont does not deem the Livermore office market to be established enough to support new speculative office space development. Kosmont's analysis revealed a variety of factors that do not support building speculative office space.

In particular, the Livermore market is strained by recent negative absorption (-12,382 SF), low asking rents ($32.00 / SF) that are not high enough to support new construction, and a large supply of vacant inventory (381,500 SF). Furthermore, Kosmont's analysis revealed the market

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

constraints are felt more acutely near the Project. Kosmont identified eight (8) properties closest to the project site that were experiencing an average vacancy rate of 62% and vacant inventory of over 292,000 SF.

Due to Kosmont's findings, this analysis also confirms that the INSP's buildout target of 382,000 SF of new office is not feasible. Given market fundamentals for office in the Tri-Valley and a lack of demand for speculative office space in the City of Livermore, Kosmont does not recommend any office development for the Project.

Office Market Trends

Throughout the state, the office market has struggled to adapt to the shift in fully remote or hybrid working environments since the pandemic. Vacancy rates have increased significantly in the East Bay market since its low of 8.3% in 2019 to a current vacancy rate of 14.1%. The primary reasons are moveouts of large occupiers like Bank of America and Meta/Facebook giving back 500,000 square feet in 2023, and leases that were initiated before 2020 are expiring or will expire soon.

Office Submarket History – Tri-Valley Area

Year	Inventory SF	Vacant SF	Vacancy Rate	Net Absorption	Market Rent
2023	9,884,470	1,960,534	19.8%	(458,101)	$33.70
2022	9,884,470	1,502,433	15.2%	(127,562)	$35.10
2021	9,884,470	1,374,871	13.9%	(80,733)	$34.62
2020	9,884,470	1,294,138	13.1%	(121,778)	$36.03
2019	9,884,470	1,172,360	11.9%	(24,525)	$34.93
2018	9,884,470	1,143,411	11.6%	108,480	$35.02
2017	9,884,470	1,251,891	12.7%	(275,768)	$34.44
2016	9,884,470	976,123	9.9%	63,300	$32.34
2015	9,884,470	1,040,820	10.5%	168,964	$31.77
2014	9,884,470	1,209,784	12.2%	145,928	$29.90

Source: CoStar (Q2 - 2024)

The decrease in office utilization from hybrid work can also be seen in low BART ridership levels, which are at 40% below pre-pandemic levels. The Tri-Valley office market has also seen negative net absorption of 458,101 SF and with a vacancy rate of 19.8%.

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Livermore Office Market Overview

The City of Livermore's total office vacancy rate of 16.4% is higher than the greater East Bay region, but less than the entire Tri-Valley. The office market in Livermore is not well established compared to its peer cities in the entire Tri-Valley area. Utilizing CoStar's star rating system, there are no 5-Star buildings within the City and only one 4-Star building, which is a Kaiser Permanente located on Las Positas Road. The remaining supply of office space is comprised of 1-, 2- and 3-Star buildings. Livermore's vacancy among its 3-Star buildings remains the highest (25.5%).

In general, the office inventory is outdated and City has not seen any new units come online since 2008. Net absorption for Livermore's office submarket is negative 12,382 SF across the City's full inventory of nearly 2.1 million SF. Market asking rents have decreased by 0.4% since last year (2023) to $31.92 / SF but is expected to stabilize into the second half of 2024.

Office Characteristics within the City of Livermore (April 2024)

Office Building Type	Inventory SF	Vacancy Rate (2024)	Market Asking Rent / SF	Under Construction
4 Star	70,472	0%	$37.63	0
3 Star	1,147,519	25.5%	$30.85	0
1 & 2 Star	833,834	5.2%	$32.92	0
Submarket	**2,051,825**	**16.4%**	**$31.92**	**0**

Source: CoStar (Q2 - 2024)

Historically, the vacancy rate was at its lowest point in 2020 (9.0%) just prior to the pandemic. Since then, the vacancy rates have almost doubled in four years. Increased vacancy has translated to approximately 381,000 SF of available space in the City of Livermore. Rents have also stayed flat since 2020, when compared to the year-to-date figures.

The office market in Livermore has been stagnant for years, with occupied space declining by 100,000 SF in past decade, with modified gross market rents staying flat around $30 per square foot per year.

The office inventory is unchanged since 2018. Prior to 2018 the inventory shrank as a result of approximately 33,600 SF of demolition. Given its current stock is older with primarily 2- and 3-Star buildings and with many options in the Tri-Valley area available to prospective tenants, the Livermore market vacancy rate will likely continue to climb through the end of the year with a projected vacancy rate of 17.5% by CoStar analytics.

At the time of this analysis, Kosmont identified eight (8) properties close to the Project that have an average vacancy rate of 62% and a vacant inventory of over 292,000 SF.

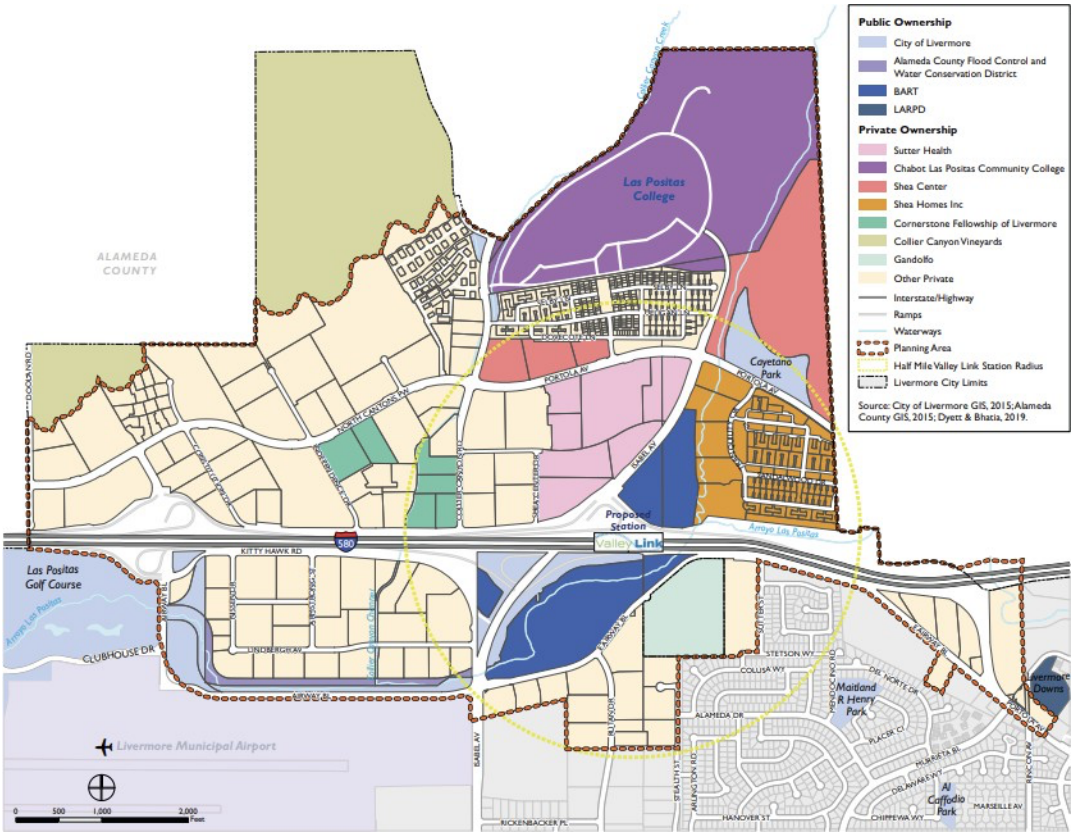
The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Office Submarket History – City of Livermore

Year	Inventory SF	Vacant SF	Vacancy Rate	Net Absorption	Market Rent
2023	2,051,825	328,456	15.5%	(5,754)	$31.62
2022	2,051,825	338,009	15.2%	33,788	$31.91
2021	2,051,825	389,997	16.9%	(161,386)	$31.66
2020	2,051,825	264,892	9.0%	143,206	$32.09
2019	2,051,825	331,306	16.0%	(85,920)	$32.49
2018	2,077,025	213,003	12.9%	6,103	$30.64
2017	2,077,025	245,281	13.1%	(80,169)	$28.83
2016	2,085,425	247,990	9.7%	(2,017)	$27.91
2015	2,085,425	241,319	9.6%	27,298	$26.03
2014	2,085,425	272,146	10.9%	38,603	$24.56

Source: CoStar (Q2 - 2024)

Conclusion



Kosmont's conclusion is that new office development is financially infeasible with modified gross market rents slightly above $30 per square foot. Operating expenses and normal vacancy factors would reduce net operating income to $20 per square foot, which indicates a stabilized value of $400 per square foot, which is dramatically lower than estimated development costs of $600 per square foot.

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

ISABEL PORTOLA CROSSING PROJECT

Fiscal / Economic Analysis

Isabel Portola Owner, LLC

Prepared By:

kosmont companies
1601 N. Sepulveda Blvd. #382
Manhattan Beach, CA 90266
www.kosmont.com

June 2024

Overview

Isabel Portola Owners, LLC ("Applicant") is seeking entitlements from the City of Livermore ("City") to develop Isabel Crossing, a significant mixed-use project on a 45-acre former Sutter Health site with an estimated 1,299 residential units, 65,900 SF of new retail/restaurants uses ("Project") surrounding almost 2 acres of public outdoor space, all within the Isabel Neighborhood Specific Plan ("INSP"), an 1,138-acre area concentrated along the I-580 freeway, adopted by the City of Livermore ("City") in 2020, and amended in 2022 as a regulatory framework for the next 20 years.

Kosmont & Associates, Inc. doing business as Kosmont Companies ("Consultant" or "Kosmont") has prepared this Fiscal and Economic Impact and a separate Commercial Feasibility Analysis ("Analysis") for the Applicant's proposed Project in the INSP.

The Fiscal Analysis evaluates net fiscal revenues and expenditures for the City, as well as direct, indirect, and induced economic benefits to the local economy resulting from development of the Project.

- The fiscal revenues were derived by estimating the various City taxes associated with the proposed Project including property taxes, business taxes, franchise taxes, direct and indirect sales taxes, transient occupancy taxes, and utility user taxes.
- The fiscal expenditures were derived from a per capita allocation ratio applied to estimated Project occupants based on the 2023-24 Adopted Budget for the City.

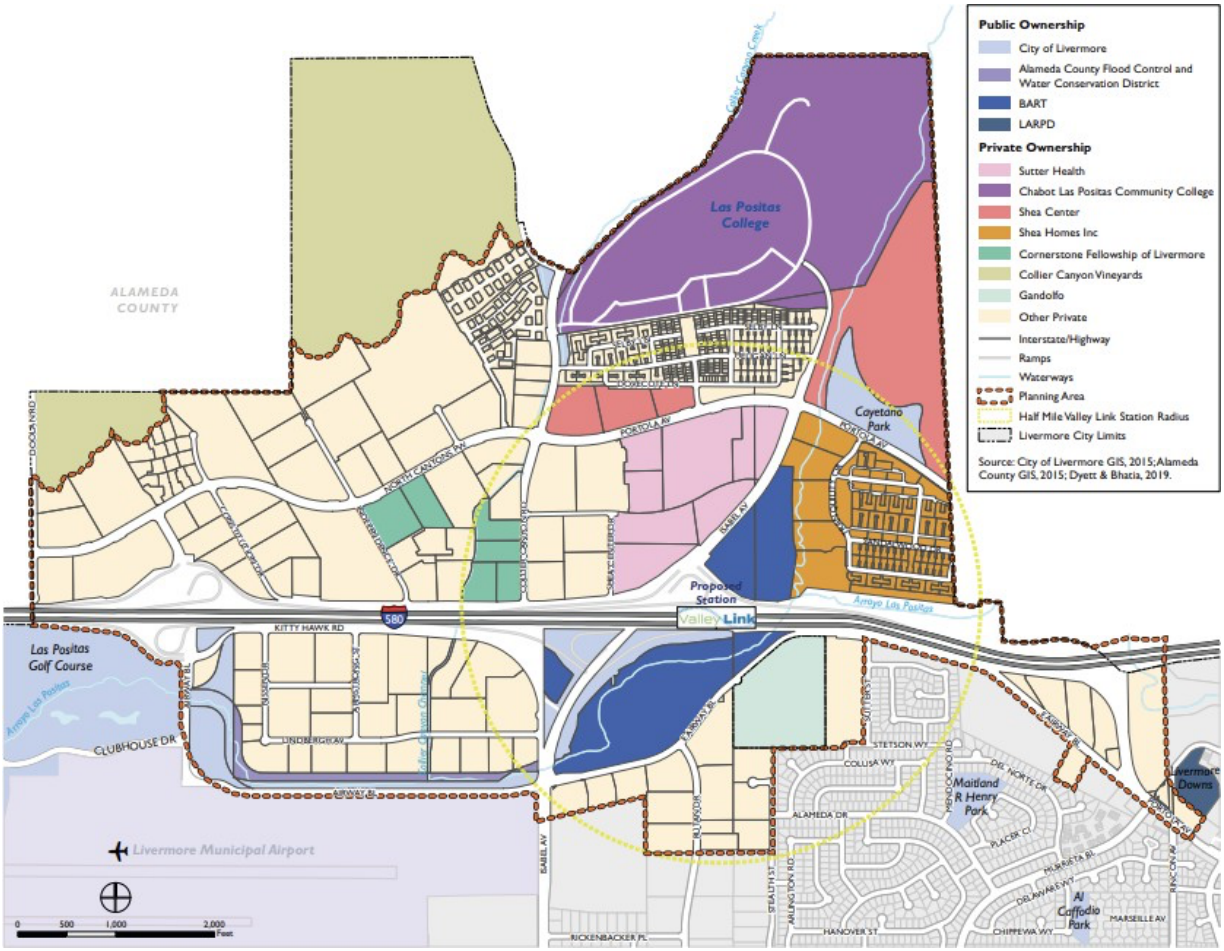
The Commercial Feasibility Analysis examined the economic and market factors affecting near term demand for retail and office uses with the Applicant property in the INSP. The INSP, developed in the past 5 years, envisioned a target level of 1,477 residential units with a mix of 20% affordable units, 106,000 SF of retail uses, and 382,000 SF of business park/office uses on the Project site.

Kosmont's analysis indicates that substantial reductions in all three land use categories (i.e., retail, residential, and office/business park) within the INSP are required for Project's feasibility given the various community benefit requirements, such as new roadway infrastructure to create a mixed-use town square, public parks, and viable neighborhoods.

Additional economic feasibility/hardship analyses related to affordable housing equivalency and Housing Density were also prepared by Kosmont under separate cover.

Isabel Neighborhood Specific Plan

The City adopted the Isabel Neighborhood Specific Plan ("INSP") in 2020 , and amended in 2022 to establish a framework for public and private development in an 1,138-acre area in the northwest sector of the City centered on the intersection of I-580 and Isabel Avenue. The major focus of the



planning effort is a ½ mile radius from the proposed Valley Link station site. The primary objectives of the INSP are to:

- Create safe vibrant neighborhood with amenities for residents, workers and students compatible with community character.
- Support citywide goals for increased housing choices and economic vitality.
- Support Valley Link rail by developing a complete neighborhood.

The planning area currently has approximately 1,380 residential units, commercial, industrial and institutional uses supporting 10,500 jobs, and it contains 250 acres of undeveloped land.

The Project site is located within the INSP at the intersection of Isabel and Portola Avenues, north of I-580 freeway interchange in the City, as shown in Figure 1.

Figure 1: Map of Isabel Neighborhood Specific Plan Area

ECONOMIC & COMMUNITY BENEFITS

Development of the Project will generate thousands of construction jobs, and hundreds of retail and service jobs following completion. Developer is estimated to pay over $125 million in impact fees to City and County agencies, and City could receive $4 million per year in general fund tax revenues, yielding a significant fiscal and economic benefit for the City of Livermore, the school districts and local business, as well as provide other significant community benefits including:

- 363 affordable housing units for very low, low, median, and moderate-income households.
- 1.5-acre public park, as well as other open space amenities including a trail system, plazas and town square
- Community recreation center
- 65,000 square foot town center

Stimulus from New Resident Spending

With approximately 1,300 new households, Kosmont estimates the Project residents at buildout will infuse approximately $43 million in local retail spending, of which Livermore businesses, outside of the Project could expect to capture an estimated 75% of this new resident spending.

Development Impact Fees

Development of the Project will require payment of $125 million in fees for City and various local agencies as summarized below. The analysis *excludes* City Transferable Development Credit ("TDC") fees, for which Applicant has not received an estimate as of the date of this report.

City will receive approximately $36 million in one-time impact fees and improvements at Project buildout:

- $14 million for traffic impacts (less earned credit of $2.2 million for Developer provided facilities),
- $15.5 million or water, sewer and drainage improvements; and
- $6.5 million for other items.

Livermore Area Recreation and Park District will receive $26.7 million for park facilities (less earned credit of $1.5 million for Developer provided land),

The Zone 7 Water Agency is expected to receive approximately $48 million in developer fees.

The Tri-Valley Transportation Authority is expected to receive close to $5 million in fees

The Livermore Valley School District is estimated to receive $8.7 million in one-time fees

Annual Fiscal Impact to City

Considering the uncertainty of future economic conditions over the likely +10-year buildout, Kosmont estimated Project's annual tax revenues in 2024 dollars of **$4.1 million** at full buildout. After deducting the estimated $3.1 million increase in City service costs, the Project is anticipated to yield a net fiscal impact to the City of approximately **$1 million** annually in 2024 dollars.

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Exhibit 1: Summary of City Fiscal Impact

Project Annual Fiscal Revenues	
City General Fund Revenues	**Estimated Annual Total**
Property Tax (Secured & Unsecured)	$1,722,000
Property Tax in Lieu of MVLF	$328,000
Sales & Use Tax (Direct On-Site)	$182,000
Sales & Use Tax (Indirect Off-Site)	$357,000
Franchise Fees	$211,900
Business Licenses	$600,700
License & Permits	$196,600
Fines & Forfeitures	$12,100
Charge for Services	$276,100
Other Taxes	$203,900
Total Estimated General Fund Revenues:	**$4,090,300**
City General Fund Expenditures	
Police	$1,241,731
Fire	$716,289
Public Works	$262,025
Library	$212,651
General Government	$694,006
Total Expenditures	**$3,127,000**
Estimated Net Fiscal Impact	**$963,000**

Source: Kosmont Companies, City of Livermore

Economic Benefits

The Analysis also includes an assessment of economic impact and job benefits using the IMPLAN (IMpact analysis for PLANning) econometric input/output model developed by the IMPLAN Group. The model quantifies the economic impact to the local region during the Project construction period as well as ongoing operations. The output includes direct and indirect jobs and wage estimates during the construction period and permanent direct and indirect jobs and wage estimates for stabilized operations.

Construction Period

This Project will yield substantial economic benefits to the City, Alameda County, and the region, as buildout will require approximately $600 million in capital expenditures (excluding land acquisition and financing costs).

Per the IMPLAN analysis, the spending is estimated to provide 3,752 Full Time Equivalent ("FTE") jobs **on site**, with additional 1,073 FTE indirect service jobs spread countywide. Combined paying

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

$475 million in wages and could yield an additional $230 million in indirect and induced regional economic output.

Operations

At full buildout, the Project will support approximately 200 FTE jobs onsite from commercial retail and office businesses, plus property management and maintenance for the residential development. Resident spending from the Project is estimated to support 533 FTE local jobs and ($40 million in wages).

Other Benefits

In addition to General Fund revenues and local job creation, Tri-Valley Transportation and Zone 7 Water fees, the Project will provide indirect benefits to City, County and Livermore Valley School District ("School District"):

- The School District will receive approximately $8.7 million in one-time developer school fees estimated at approximately $4.79 per square foot of residential and $0.62 per square foot of commercial building area.
- The School District will receive 21.5% of the basic 1% property tax levy, yielding at full buildout an estimated $1.8 million per year (shown in Section 4).

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this Analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Project Description

The Project is to be developed on the 45-acre subarea 3b and 3c site within the Isabel Neighborhood Specific Plan, just north of the I-580 freeway. The Site is adjacent to an office / business park to the west, single-family townhomes and Las Positas College to the north (across Portola Avenue), and more single-family townhomes to the east (across Isabel Avenue). Heading south on Isabel Avenue immediately south of I-580 exists a variety of commercial spaces to the southwest and office / business park space to the southeast.

Figure 2 Aerial Photo of Site and Immediate Neighborhood

Source: Google Earth

The Site is currently vacant. The Applicant's proposed multi-phase redevelopment Project will consist of 1,299 residential units, 1.5-acre neighborhood park, 3.9 acres of garden/green spaces spread throughout the Project, an approximate 9,825 SF community recreation center, and an estimated 65,900 SF of commercial retail space.

Figure 3 shows the conceptual master plan level of the site.

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Figure 3: Site Plan

Stabilized Annual Fiscal Impact

The fiscal impact analysis evaluates the stabilized annual fiscal revenues and municipal service costs expected for the City's General Fund for the Project. Fiscal revenue estimates were derived from estimating the various taxes including property taxes (secured and unsecured), business taxes, utility and franchise taxes, direct and indirect sales taxes. Municipal service costs were derived from City budget categories allocated on a per capita basis. The Analysis is based on information provided by the Applicant, City, County Property Tax Auditor-Controller's Office, California Department of Finance ("DOF"), California Board of Equalization ("BOE"), and ESRI.

General Assumptions

Given the uncertainty of actual development timing and future inflation rates for revenues and expenses, Kosmont has focused this Analysis on the estimated annual revenues and expenses at full Project buildout. All estimates are 2024 Dollars.

Fiscal Revenue Analysis

Property Tax
Property tax revenues are based on the anticipated assessed value of the Project upon full build-out and the applicable City property tax rates. The Project is predominantly located within Tax Rate Area 16-000. Based on the County Assessor allocation for TRA 16-000, the General Fund receives approximately 21% of the annual 1.0% secured property tax general levy, the Livermore Area Rec and Park District receives approximately 12% and Livermore Valley Joint Unified School District receives approximately 21.5% of the basic levy.

Based on estimated assessed value of $1,000,000 per for-sale residential unit, $500,000 for market rate rental unit and $350 per SF of retail at full buildout, Project is estimated to generate **$1.7 million** in annual property taxes to the City General fund, $**1 million** to Parks & Rec District, while School District could receive **$1.76 million** as shown below.

Exhibit 2: Property Taxes

		Project Buildout
Baseline: Existing Assessed Value		$ 50,000,000
Estimated New Assessed Value		$870,000,000
Net Assessed Value		$820,000,000
Total Secured Property Tax General Levy	1.00%	$8,200,000
Distributions to Taxing Entities		
City of Livermore	21.00%	$1,722,000
Livermore Parks and Rec District	12.00%	$984,000
School District	21.50%	$1,763,000

Source: County Assessor, Kosmont Companies

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Taxes in Lieu of VLF

Prior to 2004, a percentage of State of California motor vehicle license fee ("VLF") was distributed to cities. In 2005, the State instituted a revenue swap, guaranteeing that municipalities within California receive a distribution equal to the VLF collected, plus a percentage equal to the annual increase in assessed value, which for Livermore is equivalent to approximately 4% share of the basic levy, or estimated VLF revenues of **$328,000** for full buildout.

Sales Tax (On-Site / Direct)

California cities receive 1% of the **taxable** retail sales occurring within the City. The Project has a minimum of 65,000 SF of designated retail/restaurant space plus 25,000 SF of non-residential space. Kosmont assumed that onsite businesses generate an average of $500 per square foot in **taxable** sales or $32 million annually. Based on the basic 1.0% sales tax allocated to cities, direct sales tax revenues from the Project to the City General Fund at stabilization are estimated at approximately $325,000**.** Adding the State allocated Use Tax conservatively estimated at 12%, yields an estimated total of **$384,000** per year.

Exhibit 3: Onsite Sales Tax

		Project
Retail SF		65,000 SF
Estimated Taxable Sales - Retail	$500 PSF	$32,500,000
Sales Tax to City	1.00%	$325,000
Use Tax as % of Sales Tax	12.00%	$39,000
Total Direct Sales & Use Tax to City:		**$364,000**

Source: BOE, City of Livermore, Kosmont Companies

Sales Tax (Off-Site / Indirect)

Off-site / indirect sales tax revenue projections are estimated based on the taxable sales generated by the spending of Project residents, businesses and employees within the area. Employee spending is based on BLS Consumer Expenditure Survey data.

Annual Use Tax collected by the State is allocated to each City from County Pool taxes based fair share allocation of online sales taxes, averaging over 12% of the local sales taxes generated. At stabilized occupancy, the total annual resident retail spending is estimated $42.5 million at full buildout. Based on the Project's location, the Analysis assumes a 75% Citywide capture rate for annual spending, yielding indirect/offsite sales and use tax revenue to the General Fund estimated at **$357,000** per year as shown in Exhibit 4.

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Sales Tax to City	1.00%	$318,700
Use Tax as % of Sales Tax	12.00%	$38,244
Total Indirect Sales & Use Tax to City:		**$357,000**

Source: ESRI, Livermore, and Kosmont Companies

Other Tax Revenues

The City collects a variety of taxes and fees from residents and businesses. These include franchise fees on utility charges, business taxes, business license and permits, fines and forfeitures, charges for services, misc. taxes and business license fees for commercial and industrial uses, as summarized in Exhibit 5 and Exhibit 6.

Exhibit 5 Other Per Capita Tax Factors

City Budget Category	2024/25City Budget	Allocation Basis	Relevant City Population	Discount	Per Capita Factor
General Fund Revenues

Fiscal Expenditure Analysis

The City's General Fund expenditures will be impacted by the new development. Expenditures such as police, fire, public works, parks; museums, library, community development and general government (city council, city manager, city clerk) and other miscellaneous categories. For this analysis Kosmont estimated the per capita cost based on the City Fiscal Year 2023-2024 Adopted Budget, and the relevant resident and employee populations within the City.

Service Population

For the purpose of expenditure budget allocation, total projected employees within the City are multiplied by a factor of 0.5 to arrive at a number of equivalent residents. The sum of these "equivalent" residents plus actual City residents equal the "service population" of 116,000 referenced in Exhibit 7 below.

Exhibit 7: City Service Population

Total City Population (2023)	90,000
Total City Employee Population (2023)	52,000
Employee Weighting for Service Population	0.50
Total Weighted # Employees	26,000

Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

General Fund Expenditures

Based on the budget and service population, Kosmont estimated a fixed/variable percentage appropriate for each category to derive per capita cost factors shown in Exhibit 8.

Exhibit 8: Fiscal Expenditures

City Budget Category	2024/25City Budget	Allocation Basis	Relevant City Population	Discount for Fixed Costs	Per Capita Factor
General Fund Expenditures					
Police	$48,167,000	Service Population	116,000	20%	$332.19
Fire	$27,785,000	Service Population	116,000	20%	$191.62
Public Works	$10,164,000	Service Population	116,000	20%	$70.10
Library	$7,517,000	Resident Population	90,000	30%	$58.47
General Government					
Administration	$8,193,000	Service Population	116,000	50%	$35.31

Development Impact Fees

In addition to annual General Fund tax revenues and local job creation, the Project will provide millions of dollars in one-time impact fees to the City General Fund, local school district, recreation and parks and regional traffic and water agencies.

Exhibit 11 shows the various City impact fees for each land use type, as well as for the other agencies as summarized below:

The Livermore Area Recreation and Parks District ("LARPD") charges fees for square foot of commercial and per residential unit as shown in Exhibit 11.

The Alameda County Flood Control Dept. ("Zone 7 Water") charges significant fees equal to $36 per square foot for commercial and $59,600 for each Townhome unit and $16,200 for each apartments/stacked flat unit.

Tri-Valley Transportation Agency charges fees equal to approximately $3.74 per square foot of commercial and $3,500 per residential unit.

The School District will receive one-time developer fees at approximately $4.79 per square foot of residential ($4,800 per unit) and $0.62 per square foot of commercial/industrial building area for a total of $1.5 million.

Exhibit 11: Impact Fee Schedule

Per Unit/SF Cost Factor	Commercial	Townhomes	Apts/Flats
	PSF	Per Unit	Per Unit
LARPD Park Fees	$3.178	$21,809	$19,220
City Traffic Impact	$32.250	$9,358	$8,002
Water Connection	$2.844	$8,009	$1,709
Storm Drainage	$0.540	$1,080	$513
Sewer Connection	$1.770	$6,948	$6,108
Social/Human Services	$0.005	$1,298	$1,298
GP Cost Recovery	$0.390	$780	$371
Art in Public Places	$0.000	$4,125	$2,475
Total City Fee	**$37.799**	**$31,598**	**$20,475**
Zone 7 Fees	**$36.72**	**$59,564**	**$16,193**
Tri-Valley Transportation	**$3.740**	**$3,484**	**$3,484**
School District Fee	**$0.624**	**$9,580**	**$4,551**

Source: Isabel Portola Owners, City of Livermore

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Applying the per Unit/SF fees to the proposed land uses in Exhibit 12 shows that Project development will generate approximately $26 million to LARPD and $36 million in fees to the City, primarily for traffic and utility connection fees. Overall, the developers will pay approximately $80 per square foot of commercial, $120,000 per Townhome unit and $65,000 per multi-family unit.

Zone 7 Water fees are estimated at $48 million, while Tri-Valley transportation fees are estimated at $5 million and local school fees are estimated at $8.7 million. Note that non-residential uses generate less than 5% of the combined City, Agency and school fees.

Exhibit 12: Impact Fees By Use

Total Fee	90,000 Non-Residential	545 TownHomes	754 Apts/Flats	Total Project
LARPD Park Fees	$ 286,020	$11,885,905	$14,491,880	$26,664,000

School District Fee	**$56,000**	**$5,221,000**	**$3,431,000**	**$8,708,000**

ource: Isabel Portola Owners, City of Livermore

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Economic and Job Benefits

Construction Cost

The hard and soft construction costs for the residential mixed-use Project were estimated by Applicant at approximately $600 million for full buildout. Land acquisition and financing costs are not referenced, as they do not impact the economic benefit calculations.

IMPLAN Modeling

The Analysis uses the IMPLAN (IMpact analysis for PLANning) econometric input/output model developed by the IMPLAN Group to quantify the economic benefit to the local region from Project construction / renovation and ongoing operations. This proprietary model estimates the economic benefits on the industries in a given geographic area based on known economic inputs, such as construction costs. The model estimates direct, indirect, and induced benefits expressed in terms of increased economic activity ("output"), earnings ("labor income"), and job creation.

Direct Economic Benefits: Direct benefits refer to the short-term business activity of general contractors involved in Project construction / renovation and the ongoing business activities of Project tenants.

Indirect Economic Benefits: Indirect benefits will result when local firms directly impacted by the Project purchase materials, supplies or services from other firms. Examples would include increased sales of building materials as a result of construction activity, and increased sales of inputs related to the business operations of tenants within the Project.

Induced Economic Benefits: Induced benefits relate to the consumption spending of employees of firms that are directly or indirectly affected by the Project. These would include the goods and services associated with household consumption (e.g. housing, retail purchases, services).

Inputs for the IMPLAN economic benefit analysis include the development budget provided by the Client and permanent on-site employment information estimated by Kosmont. The permanent full-time employment estimates were derived from similar projects and industry standard per- square-foot employment densities for corresponding land use types.

The analyses, projections, assumptions and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Construction Related Economic Benefits

During the construction period, the Project is expected to produce approximately 3,752 onsite/direct FTE construction jobs, and combined with 1,073 indirect and induced job impacts, a total of 4,825 FTE jobs, $475 million in labor income, and approximately $834 million of total economic output are expected within the County, of which an estimated $615 million is within the City (see Exhibit 13).

Exhibit 13: Economic Benefits from Construction

Economic Benefits from Construction (One-Time / Short-Term)

	Employment	Labor Income	Economic Output
Direct (On-Site)	3,752	$393,100,000	$604,000,000
Indirect	261	$22,500,000	$61,200,000
Induced	812	$60,200,000	$169,300,000
Total Countywide	**4,825**	**$475,800,000**	**$834,500,000**
Estimated City Capture	**3,806**	**$397,235,000**	**$615,525,000**

Values in 2024 dollars.
Source: IMPLAN, Kosmont Companies

Economic Benefits from Ongoing Operation

At full buildout the multi-family and commercial operations are projected to provide 201 FTE jobs on site. In addition, business and resident spending is expected to support approximately 533 indirect and induced jobs, for a total of 734 countywide jobs, $50 million of labor income, and $131 million economic output. (see Exhibit 14). The City is estimated to capture 446 FTE jobs with $29 million in annual wages.

Exhibit 14: Economic Benefits from On-Going Operations - Full Buildout

Economic Benefits from Ongoing Operation (Annual)

	Employment	Labor Income	Economic Output
Direct (On-Site)	201	$10,200,000	$17,600,000
Indirect	24	$2,100,000	$5,300,000
Induced	509	$38,600,000	$108,900,000

MEMORANDUM

Date: June 21, 2024

To: Planning Division, Community Development Department, City of Livermore

From: Larry Kosmont, CEO - Kosmont Companies
Thomas Jirovsky, Senior Advisor – Kosmont Companies

Re: **Affordable Housing Economic Equivalency Analysis – Isabel Crossing**

Kosmont & Associates, Inc., doing business as Kosmont Companies ("Consultant" or "Kosmont"), presents this memorandum providing an economic analysis of the proposed affordable housing program in Isabel Portola Owner, LLC ("Applicant") master planned, mixed-use development located ("Project") located on an approximately 45-acre site within the Isabel Neighborhood of the City of Livermore, California ("City").

This memorandum provides Kosmont's high-level comparative economic equivalency assessment between the Project's proposed affordable housing program and the generally applicable affordable housing requirements as set out under the Isabel Neighborhood Specific Plan ("INSP") and the Livermore Development Code ("LDC") (collectively "City Affordable Housing Regulations"). As set out below, the Project proposes a robust affordable housing program that exceeds the requirements of the INSP and LDC in terms of supporting housing at all affordability levels. In addition, the added affordable housing units require an estimated $15-20 million greater investment by the Applicant to construct affordable housing units.

Comparative Economic Analysis

The LDC generally requires new housing developments to provide between 10 and 15% of all apartment and for-sale residential units as affordable for low income and moderate income households.[1] The LDC increases this requirement within the INSP area by requiring 20% of the units in a new housing project to be provided as covenanted affordable units.[2]

The maximum annual household income levels for an average sized household of three persons[3] needed to qualify for the affordable housing levels addressed in City regulations are summarized as follows:

---

[1] LDC, §10.06.505-A.I.a.
[2] LDC, §10.06.505-A.I.c.
[3] The average household size in Livermore is 2.82 persons, per U.S. Census Bureau 2018-2022 data. See: https://www.census.gov/quickfacts/fact/table/livermorecitycalifornia/HSD310222, last accessed April 24, 2024.

- Very Low Income: $ 64,300;
- Low Income: $ 98,650;
- Median Income: $128,500;
- Moderate Income: $154,200.[4]

The Applicant's development plan calls for a total of 1,299 dwelling units, including 466 apartment units, 288 stacked flat condominium units, and 545 townhouse units. Of these, the Project proposes to provide a total of 363 covenanted affordable housing units, 28% percent of the total units in the Project.

Of the 363 affordable units, the Project proposes a total of 306 affordable rental units and 57 affordable for-sale units. This includes a total of 65 rental units for households at the Very Low Income Level, 113 rental units for households at the Low Income Level, 65 rental units for households at the Median Income Level, 63 rental units for households at the Moderate Income Level, 18 for-sale units for households at the Median Income Level, and 39 for-sale units for households at the Moderate Income Level. The Project would thus provide 178 housing units to benefit Very Low and Low Income households earning from $60,000 to just under $100,000 per year.

By comparison, following the City's Affordable Housing Regulations' 20% inclusionary requirement, the Applicant would provide a total of 260 affordable units, including 166 affordable for sale units for median and moderate income households and 94 affordable rental units, including 30 Very Low, 32 Low, 18 Median, and 14 Moderate Income units.[5] Stated differently, compliance with the City Affordable Housing Regulations, would only yield 62 low and very low units out of the 206 total affordable units benefiting an average-sized households earning less than $100,000 per year.

The Project thus provides 103 more total affordable units than would be required by applicable City Affordable Housing Regulations. In addition, the Project would provide 178 affordable housing units for households earning under $100,000 per year, which is nearly three times more low-income units than City Affordable Housing Regulations require.

In addition, the Project's proposed housing plan will require an increased investment of approximately $15-20 million from the Applicant for the 363 affordable units' construction costs and fees, as compared to the cost to build the 260 affordable units under strict compliance with City Affordable Housing Regulations.

Under City Regulations, the Applicant would need to build 166 for-sale units ranging from 1,600 to 2,000 SF with a construction costs of $300 to $350 per SF – or ~$600,000 per unit on average, and 94 apartment units estimated to cost $400,000 per unit based on an average 1,000 SF per

[4] City of Livermore, 2024 Affordable For-Sale Prices and Rental Rates, found at: https://www.livermoreca.gov/home/showdocument?id=11243&t=638412798907201477, last visited April 23, 2024.
[5] This analysis assumes a proportionate number of for sale and rental affordable units would be provided. See LCD, §10.06.505-A.I.c.

unit (including common areas) and will cost $400 per SF including allocated parking structure costs for total investment of $135-$140 million. The proposed Project will provide 57 for sale units (@~$550,000 to $600,000) and 306 apartment units (@$400,000) with a total investment of ~$155 million, an increase investment of $15 to $20 million.

Collateral Economic Factors

The provision of affordable housing for families and persons earning under $100,000 per year is critical in light of the region and state's current, constrained housing market. Such affordable housing is needed for a variety of working professionals. This includes governmental employees, including City staff, teachers in local schools, social workers, emergency service providers, and other public professionals who serve the community. Such workers are often forced to commute into the City from long distances, a factor that produces a variety of negative economic, environmental, and personal outcomes for the workers. Such housing is also needed for many young and other working professionals and households making under $100,000 per year, including employees of non-profits/public benefit organizations, service industry workers, and restaurant, retail and hospitality industry workers.

According to Zillow, the median monthly rent for a two-bedroom market rate rental unit in Livermore is $2,895 as of April 2024.[6] In 2024, the maximum monthly rent for a covenanted Very Low Income two-bedroom rental unit in the City is $1,665, available for households or persons earning up to $66,600 per year; a 42.5% reduction from the City's median rent for a two-bedroom unit.[7] For a two-bedroom Low Income rental unit, the maximum monthly rent is $1,998, available for households or persons earning up to $79,720 per year; a 30% reduction from the City's median rent for a two-bedroom unit.

Covenanted affordable housing rents are set at levels that constitute 30% of the monthly take-home income of qualifying low-income tenants, excluding tenant utility allowances. This rent level is set to avoid negative "housing burden," which is defined to occur where a household pays more than 30% of its total household income on housing. According to a 2023 study, 56% of renter households in the Tri-Valley area were rent burdened based on 2017-2021 data, while overcrowding of housing units in the area nearly doubled between just 2015 and 2021.[8]

---

[7] City of Livermore, 2024 Affordable For-Sale Prices and Rental Rates, found at: https://www.livermoreca.gov/home/showdocument?id=11243&t=638412798907201477, last visited April 23, 2024.

[8] Tri-Valley Nonprofit Alliance, *Data Profile: Just Getting by in the Tri-Valley*, 2023 Updates, at p. 11, found at: https://tvnpa.org/wp-content/uploads/2023/10/TVAPC-Data-Profile-Final-2023.pdf, last visited April 23, 2024. Overcrowding is defined by the US Census as having more than 1.01 person per bedroom in a housing unit. *Ibid*. Notably, the City's most recent Sixth Cycle 2023-2031 Housing Element reports lower numbers of both housing burden and overcrowding, the data still demonstrates overall increases in both important housing market health metrics over time.

With the Project providing 103 units in excess of affordability requirements, Kosmont believes the Project's affordable housing program is economically superior to strict compliance with the City Affordable Housing Regulations. The Project, as proposed, provides more affordable housing units overall, and more units for persons that qualify for the lower income categories covered by City code and state law, which have the greatest economic need for financial assistance.

Regional Housing Needs Assessment (RHNA) Comparative Analysis

In the past nine years, the City has been successful in meeting its Regional Housing Needs Assessment ("RHNA") goals for Moderate and Above Moderate Income units, but has fallen short for Low and Very Low Income units. Thus, the Project's provision of greater Low and Very Low Income units provides a notable boost toward the City meeting lower income housing goals for which it has the greatest need as shown below:

2015-2022 Fifth Cycle RHNA Targets and Housing Production[9]			
Affordability Level	**RHNA Goal 2015-2022**	**Actual City Housing Production 2015-2022**	**Percentage of RHNA Target Achieved**
Very Low Income	839	196	23.3%
Low Income	474	56	8.4%
Moderate Income[10]	496	649	131%
Above Moderate Income	920	1,411	153%

The most recent Annual Housing Element Progress Report issued in March 2024 concluded that, in 2023, a total of 80 Moderate Income and 42 Above Moderate Income units were approved, while zero Very Low and Low Income Units were approved.[11]

Accordingly, the City has an acute need for an increased production of Very Low and Low Income units to meet its housing goals. The following table presents a comparative analysis that reviews the City's state-approved 2022-2030 RHNA targets for the City's current Sixth Cycle 2023-2031 Housing Element. It also compares the Project's affordable housing program with that which would occur with strict compliance with City Affordable Housing Regulations.

[9] City of Livermore, 2022 Annual Housing Element Progress Report, found at: https://legistarweb-production.s3.amazonaws.com/uploads/attachment/pdf/1848928/Livermore_2022.pdf
[10] The Moderate Income category here includes both Moderate and Median Income units.
[11] City of Livermore, 2023 Annual Housing Element Progress Report, found at: https://legistarweb-production.s3.amazonaws.com/uploads/attachment/pdf/2464483/3._2023-2031_RHNA_Progress.pdf

2023-2031 Sixth Cycle RHNA Targets and Comparison Between Proposed Project and City Affordable Housing Regulations			
Affordability Level	**City RHNA Goal 2022-2030**[12]	**Project, As Proposed**	**Project with City Affordable Housing Regulations**
Very Low Income	1,317	65	30
Low Income	758	113	32
Moderate Income	696	185	166

As indicated, the Project performs better in the provision of much needed Very Low and Low Income Unit categories, as well as for the Moderate Income category.

Conclusion

The City has the most need for housing production in the lower income categories, which consequently serve the households and individuals facing the most acute housing burden and need for economic assistance with housing costs.

Based on the foregoing analysis, Kosmont believes that the proposed Project will provide significantly greater economic benefits for affordable housing in the City, by providing a larger and more diverse offering of affordable units than the applicable 20% inclusionary policy under the City Affordable Housing Regulations.

The Project provides particular benefits for the lower income affordable housing categories where both the City and residents in need of affordable housing have the greatest need. At the same time, the Project does a better job helping the City meet all applicable RHNA affordable housing production goals for 2030.

In summary, the Project provides more of the economic equivalent of existing City Affordable Housing Regulations, including requiring an estimated $15-20 million greater investment in affordable housing by the Applicant. It is an economically superior alternative in terms of greater investment supporting affordable housing, and for the economic health of the City's housing market, and will boost the housing supply for lower income City residents.

Re: **Housing Density Economic Hardship**

Kosmont & Associates, Inc. doing business as Kosmont Companies ("Consultant" or "Kosmont") is pleased to present this **report** for the City's requested economic hardship analysis. This economic report presents Kosmont's high-level assessment of the economic challenges of meeting the Target housing density.

Developer Request
Isabel Portola Owner LLC ("Applicant") is requesting a reduction in residential density to 1,299 units from the "target" residential density of 1,477 units for the 45-acre site within Isabel Neighborhood Specific Plan (subareas 3b and 3c) in the City of Livermore ("City").

The Isabel Neighborhood Specific Plan ("INSP") identifies a range of density standards from 15 to 100 units per acre based on location within INSP to achieve a target of 3,000 to 4,000 new housing units as follows:

- Transition – 15-25 units per acre
- Village – 25-40 units per acre
- Center – 40-60 units per acre
- Core – 60-100 units per acre

Table 2-6 in the INSP identifies the residential unit development identified for Applicant's subareas as shown below:

	Minimum No. Units	Target Units
Subarea 3b	1,054	1,267
Subarea 3c	182	210
Subtotal	1,236	1,477

Background
P- LU-8 of the INSP provides that "[t]he City may consider a unit count lower than the average subarea unit count within a Master Plan, if there are demonstrated, significant regulatory, environmental, or other constraints within the subarea, as determined by the Director."

In order to meet the Specific Plan's target of 1,477 residential units, a developer would need to add 178 more multi-family units, since the development plan calls for 1,299 units, as follows:

- 833 for-sale duplex, triplex, townhomes and condos and
- 466 multi-family apartments.

The alternative plan would require eliminating approximately 4 acres of for-sale housing at 20 units/acre and replacing them with multifamily apartments at 60-80 units per acre.

Apartment Market Conditions

The INSP target density was developed with expectations of a new Valley Link (previously BART) station and high-density transit-oriented development similar to BART served communities in the East Bay approaching 100 units per acre.

Multi-Family Market Trends

Within a 3-mile radius of the site, there are around 2,541 units with no units under construction. The Livermore market has a current vacancy rate of 7.3% with 186 vacant units. With over 195 units in positive absorption since 2019 and a decrease in vacancy rates, there is some sign of a rebound of the residential rental market. Within the 3-mile radius, 246 units have been delivered since 2023 and the average rent per unit has increased slightly by 2.6% to $2,444. These rent level trends are averages for all quality types. A focused review of recent Class A product found market rents of $2,700 for 1-bedroom units, $3,200 for 2-bedroom units and $4,200 for 3-bedroom units.

Multi-Family Market History – 3-Mile Radius

Period	Inventory Units	Vacancy Units	Vacancy Percent	Absorption Units	Avg Rent Per Unit	Avg Rent Per SF
2024 YTD	2,541	186	7.3%	107	$2,444	$3.16
2023	2,517	270	10.7%	69	$2,382	$3.08
2022	2,295	117	5.1%	(35)	$2,564	$3.33
2021	2,295	81	3.5%	59	$2,389	$3.10
2020	2,253	98	4.4%	16	$2,225	$2.88
2019	2,253	114	5.1%	(21)	$2,185	$2.83
2018	2,253	94	4.2%	13	$2,149	$2.78
2017	2,253	107	4.7%	(5)	$2,064	$2.67
2016	2,253	102	4.5%	(25)	$2,009	$2.60

Source: CoStar (Q2 - 2024)

The Dublin/Pleasanton/Livermore multifamily submarket contains approximately 14,000 units of inventory. The last delivery of units in the region occurred in 2022/23 with 697 units. Historically, investors have shown a high level of interest in the submarket, although sales have slowed due to higher interest rates and tighter lending standards.

However, Livermore apartment rent levels will need to be substantially higher than current Class A market rents of approximately $2,700 to $3,400 per month in order to be financially feasible given the substantial development impact fees, high cost of parking structures, and the requirement to provide 20% of units affordable to very low, low, median and moderate-income households. This averages out to approximately $2,400 per month.

Financial Hardship

Kosmont has prepared an illustrative pro forma comparison of multi-family development under a range of densities from 25 to 80 units per acre on a hypothetical 2-acre site in INSP to show the residual value available to cover land and infrastructure costs.

Key pro forma assumptions:

- Gross building area of 1,000 SF per unit with 15% allocated to common area for a net rentable area of 850 SF
- Direct construction costs of $225 per SF rentable area and $150 per SF for common area
- Parking cost of $5,000 per space for low-density carports vs $30,000 per space for enclosed parking structures required for higher density
- City, County, School District, Tri-Valley and Zone 7 impact fees of $62,000 per unit
- Soft costs of 10-12% of hard costs
- Financing cost at 6% for an 18 month to 30-month construction period
- Average market rent of $3,100 for 1-bedroom units, 2-bedroom units and 3-bedroom units
- Vacancy rate of 5%
- Operating costs of 33% of gross revenue
- Investment Value required ROI of 5.5% per year needed to achieve a builder profit margin

As shown on the following page, the resulting residual land value for 25 units per acre is $77,000 per unit or $1.9 million per acre. With density of 80 units per acre, the per unit supportable value is reduced under current conditions to a value of only $200,000 per acre.

		MF DENSITY FEASIBILITY ILLUSTRATION					
		RESIDUAL LAND VALUE					
		2-acre site @ Various Densities					
					Apts	**Apts**	**Apts**
		Cost Assumption			**25 DU /Acre**	**40 DU /Acre**	**80 DU /Acre**

Land Value per Unit					$ 77,000	$ 15,000	$ 2,000

Source: Kosmont, Isabel Portola Owners, LLC

With land acquisition and infrastructure costs exceeding $2 million per acre, a high-density multi-family community is not feasible without a substantial for-sale townhome component.

Townhome Residual Land Value
Kosmont prepared illustrative pro forma to estimate for the per acre contribution margin for land and infrastructure. For a typical for-sale townhome product at 20 units per acre, Kosmont's preliminary research indicates the average Townhome/condo unit sells for $900,000 to $1 million while 20% median and moderate affordable 3-bedroom units would be limited to $450,000 to $550,000 and yield an average residual land value of $4 million per acre.

The table below illustrates the estimated per acre contribution margin available from For-sale Townhome products to cover land cost and community benefit costs.

Illustration of
Townhome Contribution Margin

		Towmhomes
Density Per Acre		20
Average Unit Value		$ 900,000
Direct Construction	$200/sf	400,000
Soft Costs	20%	80,000
Builder Overhead		80,000
Marketing/Sales Costs		90,000
Total Costs		650,000
Contribution Margin Per Unit		$ 250,000
Less: Infrastructure Cost per Acre		$ 1,000,000
Contribution Margin per Acre		$ 4,000,000

Source: Kosmont , Isabel Portola Owners LLC

However, by replacing 4 acres of land from for-sale townhomes with high-density apartment units it creates a potential incremental **financial loss of $15 million** to the master developer making overall development infeasible. This is based on a loss of $4 million per townhome acre x 4 acres and a gain of $200,000 per high-density multi-family acre times 4 acres.

Community Benefits Financial Impact

Unlike typical subdivisions, Applicant designed a community village with a wide range of housing types, affordability levels, open space, town square and other community benefits that require a multi-million dollar investment:

• 74,362 Retail/ Commercial space @ $350psf.	$ 26m
• 115 additional parking spaces for retail @ $40,000 per space	$ 5m
• Excess open space of 292k-155k sf @ $4m per acre	$ 12m
• Additional Affordable Subsidy (28% vs 20%)	$ 15m
TOTAL	**$ 58m**

Conclusion

Based on the analysis, Kosmont's opinion is that the INSP target density for the subject parcels is financially infeasible given the estimated +$50 million in community benefits to be contributed by the Applicant.

There is uncertain demand for creating a community with 50% of the units as rentals. Increasing the unit count through higher density will result in a net loss of an estimated $15 million in contribution margin, dramatically increasing the financial risk.

Re: Isabel Neighborhood Specific Plan, Isabel Crossing (Harridge) Development Project (SUB22-008, DA22-001, CUP 24-002, SPDR 24-003, SPPA 24-001)
Third Revised **Density Bonus Request Letter**

Dear Jake:

Isabel Portola Owner, LLC (Isabel Portola) has applied to the City of Livermore ("City") for entitlement approvals for the Isabel Crossing project (Project), a master planned mixed-use development consisting of 1,299 dwelling units, approximately 75,000 square feet of commercial uses along a new commercial main street, and public open space uses and amenities including a new neighborhood park, community center, plazas, and a public trail and bike paths on a vacant and underutilized parcel within Subareas 3b and 3c of the Isabel Neighborhood Specific Plan (INSP) area.

Under the Density Bonus Law, "[w]hen a developer agrees to construct a certain percentage of the units in a housing development for low- or very-low-income households… the city or county must grant the developer one or more itemized concessions and a 'density bonus,' which allows the developer to increase the density of the development by a certain percentage above the maximum allowable limit under local zoning law." (*Latinos Unidos Del Valle De Napa Y Solano v. County of Napa* (2013) 217 Cal.App.4th 1160, 1164.) The Legislature has stated that the Density Bonus Law "shall be interpreted liberally in favor of producing the maximum number of total housing units." (Gov't Code, § 65915(r); *Schreiber v. City of Los Angeles* (2021) 69 Cal.App.5th 549, 554-555.) Moreover, the purpose of the incentive and waiver provisions of the Density Bonus statute is to eliminate local zoning requirements that would inhibit the development of affordable housing units and "contribute significantly to the economic feasibility of lower income housing in proposed housing developments." (*Wollmer v. City of Berkeley* (2011) 193 Cal.App.4th 1329,1339.)

The Project provides a total of 363 new covenanted affordable housing units, comprising 28 percent of the total number units in the. Of the Project's affordable

units, a total of 178 units are provided as rental units at the Very Low and Low Income Levels, which is 13 percent of the total units in Project.[1] This figure exceeds the 10 percent minimum base density of Low Income units to qualify the Project for density bonus "incentives and concessions" and "waivers or reductions" of "development standards" under Government Code, Section 65915(b)(1), (d) and (e)(1) and Livermore Development Code (LDC), Section 6.02.030. The Project seeks one incentive and various waivers, as follows.

I. Incentive or Concession Request.

First, "specific incentives or concessions" under Section 65915(d) are broadly defined to include: (1) "a reduction in site development standards or a modification of zoning code requirements or architectural design requirements that exceed the minimum building standards approved by the California Building Standards Commission"; (2) approval of mixed- use zoning; or (3) other proposed regulatory incentives or concessions. (Gov't Code, § 65915(k).)

A city "shall grant the concession or incentive requested by the applicant unless the city … makes a written finding, based upon substantial evidence," of any of the following: (1) the incentive does not result in identifiable and actual cost reductions; (2) the incentive would have a specific, adverse impact on public health and safety, the physical environment or on any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the … impact; or (3) the incentive would be contrary to state or federal law. (Gov't Code, § 65915(d)(1).)

With respect to showing cost reductions under Government Code, Section 65915(d)(1)(A), the "applicant is not required to prove the requested incentives will lead to cost reductions; the incentive is presumed to result in cost reductions and the city bears the burden to demonstrate otherwise if it intends to deny the incentive." (*Bankers Hill 150 v. City of San Diego* (2022) 74 Cal.App.5th 755, 770.) Because the Project proposes to provide over 13 percent of its total density of 1,299 units, a total of 178 units, at the low and very low income level, the Project qualifies for at least one incentive, and seeks one incentive.

Isabel Portola requests the following incentive or concession:

1. Eliminate any applicable Floor Area Ratio (FAR) requirements that apply to office uses within INSP Subarea 3c set forth INSP Table 2-3.

[1] The Project proposes a total of 306 affordable rental units between the Very Low Income and Moderate Income levels and 57 for-sale affordable units at the Median and Moderate Income levels, totaling 28 percent of the total number of units in the Project.

II. Waiver or Reduction Requests.

The Project also seeks "waivers or reductions" of development standards under Government Code, Section 65915(e)(1) and LDC, Section 6.02.030-H, specified below, which are not limited in number by the State Density Bonus Law. The waiver or reduction provision of the Density Bonus Law, Government Code, Section 65915(e)(1), provides, in part, that "in no case may a city . . . apply any development standard that will have the effect of physically precluding the construction of a development meeting the criteria of subdivision (b) [a density bonus project] at the densities or with the concessions or incentives permitted by this section."

The right to waivers has also been broadly interpreted by California courts. (See *Wollmer, supra*, 193 Cal.App.4th at 1346–1347.) A city violates the Density Bonus Law where it fails to waive development standards that would physically preclude the construction of a qualifying Density Bonus project. (*Wollmer, supra*, 193 Cal.App.4th at 1347.) "If the project were not built, it goes without saying that housing units for lower income households would not be built and the purpose of the Density Bonus Law to encourage such development would not be achieved." (*Id.*) Thus, under the Density Bonus Law, "[u]nless one of the statutory exceptions applies, so long as a proposed housing development project meets the criteria of the Density Bonus Law by including the necessary affordable units, a city may not apply any development standard that would physically preclude construction of that project as designed." (*Bankers Hill 150, supra,* 74 Cal.App.5th at 775.)

"Development standard" is defined by the statute to include "a site or construction condition including, but not limited to, a height limitation, a setback requirement, a floor area ratio, an onsite open-space requirement, or a parking ratio that applies to a residential development pursuant to any ordinance, general plan element, specific plan, charter, or other local condition, law, policy, resolution, or regulation." (Gov't Code, § 65915(o)(2).) "For example, if a city ordinance imposes a building height limitation, a city must waive that limitation for a development that is eligible for a density bonus if imposing the height limit would physically preclude construction of the proposed building with the requested incentives and at the density allowed by the Density Bonus Law. There are no financial criteria for granting a waiver." (*Bankers Hill 150, supra,* 74 Cal.App.5th at 770.)

In accordance with these provisions, Isabel Portola requests the following waivers of applicable development standards, listed by the proposed Project master plan "Planning Area" requiring a waiver or reduction:

1. In Planning Area N-1:

    a. A waiver or reduction from the applicable INSP porch separation requirement for porches facing each other of 15 feet along paseos, where two particular porches in the Planning Area are separated by 7.5 feet and 9.9 feet, respectively.

2. In Planning Areas N-2 and N3-A:

    a. A waiver or reduction from the applicable INSP dimension requirement for private open space, which requires a minimum of 75 square feet of open space per dwelling unit with minimum dimensions of 6 feet by 8 feet, and the Project provides certain units that include private open space that is 17 feet, 3 inches by 5 feet, 0 inches, for a total area of approximately 86.25 square feet.

3. In Planning Area C1-B:

    a. A waiver or reduction from the applicable INSP front setback requirement of a 10-foot setback at the fourth floor of the proposed four-story apartment building; no setback is proposed (though decks are provided to break up the facades).

    b. A waiver or reduction from the applicable INSP minimum 16-foot floor to ceiling ground floor height standard for ground floors of commercial uses within the retail/flex space overlay area; the proposed ceiling height is an average of approximately 14 feet.

4. In Planning Area C2-A:

    a. A waiver or reduction from the applicable INSP front setback requirement of a 10-foot setback at the fourth floor of the proposed five-story apartment building; no setback is proposed (though decks are provided to break up the facades).

    b. A waiver or reduction of the applicable INSP height limit of 490 feet MSL, where a maximum height of approximately 499 feet MSL is provided for a portion of a building on the north end of the Planning Area.

    c. A waiver or reduction from the applicable INSP minimum 16-foot floor-to-ceiling ground floor height standard for ground floors of commercial uses within the retail/flex space overlay area; the proposed ceiling height is an average of approximately 14 feet.

5. In Planning Area S1:

    a. A waiver or reduction from the applicable INSP minimum commercial FAR of 0.4:1, where an FAR of approximately 0.3:1 is provided.

    b. A waiver or reduction of the applicable INSP height limit of 485 feet above MSL, where a maximum height of approximately 497 feet above MSL is provided.

6. In Planning Area S2 and S4:

    a. A waiver or reduction from the applicable INSP dimension requirement for private open space, which requires a minimum of 75 square feet of open space per dwelling unit with minimum dimensions of 6 feet by 8 feet, and the Project provides certain units that include private open space that is 14 feet, 2 inches by 5 feet, 4 inches, for a total area of approximately 73.3 square feet.

7. In Planning Area S3-A:

    a. A waiver or reduction of the applicable INSP height limit of 485 feet MSL, where a maximum height of approximately 491 feet MSL is provided.

8. In Planning Area S3-B:

    a. A waiver or reduction of the applicable INSP height limit of 475 feet MSL, where a maximum height of approximately 496 feet MSL is provided.

9. In All Planning Areas:

    a. A waiver or reduction of the applicable INSP requirement for a minimum of 16 trees per acre of site area, where the Project proposes approximately 10 trees per acre (465 total).

Isabel Portola expressly reserves the right to modify or add to this list any additional incentives or concessions and waivers or reductions that may arise prior to the approval of the Project's entitlements or building permits.

We thank for you for time and attention.

Sincerely,

ISABEL PORTOLA OWNER, LLC

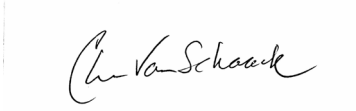
March 21, 2024

Stephen Riley, Acting Planning Manager
Community Development Department
City of Livermore

Mr. Riley:



Thank you for allowing me to review the plans for the Isabel Crossings Project and comment on its potential impact on Livermore School District schools. As you know, the City and District have been working very closely for many years to ensure that we are well positioned for the expected growth from the Isabel Neighborhood Specific Plan. It is my understanding that the Isabel Crossings Project will have approximately 1300 new units.

As a regular practice, we engage with local demographers every other year to update our projections to ensure that our enrollment capacity meets or exceeds the anticipated student growth in both the short and long term. Currently, the schools in our District as they sit today can accommodate over 15,000 students. Our current enrollment is just over 13,000. Including the completion of the Isabel Neighborhood Plan, we do not project student growth to approach our current capacity. This is based upon a student generation rate of .5 students/unit, which is a bit higher than the actual rate over the past ten years, but provides us with a small buffer. Generation rates for townhomes and apartments are even lower, at approximately .25 students/unit.

Based upon that number, we anticipate the Isabel Crossings project to produce less than 650 students, ranging from Transitional Kindergarten through 12th grade, which would not exceed our current school capacity. Schools closest to the project – Rancho Las Positas Elementary, Lawrence Elementary, Junction TK-8, and Granada High School – have the room to house these additional students. In addition, our District recently purchased land in the northwestern Livermore area (just east of Constitution Drive) that could be a future school site. Though we do not believe the students generated by Isabel Crossings would necessitate a new school, we will closely monitor the build out of the Isabel area to determine if a school in the area is warranted. Though neighborhood schools have long been desired in Livermore, we are finding that more and more students are being driven to school each day, such that having a school within walking distance is no longer as important to parents as it once was.

Again, I thank you sincerely for keeping us an active partner in these development projects. By working together as we have, we can ensure that we are providing high quality educational services to all our residents.

Sincerely,

Chris Van Schaack
Superintendent

Dear Mr. Potter,

As the Planning Commission will be discussing the Isabel Crossing project at its July 2 meeting, Interfaith Housing, Inc. would like to submit the following letter of support:

Interfaith Housing heartily endorses the proposed Isabel Crossing development as it will provide a variety of housing options for low-income to medium-income households. We are glad to see that 28% of the units--a total of 363--will be affordable instead of the required minimum of 20%, and we imagine that, as part of a commercial development, those units can be built more quickly and cost-effectively than IFH itself can provide affordable housing.

IFH serves low-income seniors, and we feel that Isabel Crossing will be well-suited to our population as it offers transportation options such as bus stops and, we hope, the future Valley Link train system, as well as a neighborhood grocery store, a park, a recreation center and several plazas with benches.

Laning Thompson
Vice-president
Interfaith Housing, Inc.

Dear Mr. Potter,

Several years ago, Livermore approved the Isabel specific plan, which will help Livermore meet its contribution to the substantial housing shortage in our region. It contributes a substantial portion of the RHNA allocations described in the City's Housing Element. Isabel Crossing as part of that specific plan is well designed, incorporating both walkability and bikeability into an attractive community. It provides a mix of housing types, including a large (28%) portion as workforce housing, which is important to support existing businesses in Livermore and the Tri-Valley. If and when mass transit comes down the I-580 corridor, Isabel Crossing will have easy access to the proposed station nearby. Of course, the jobs being created in this community do not address Livermore's broader general planning goal to provide high-paying research and manufacturing jobs for the broader community as well as preserving open space and our agricultural heritage. Although it definitely deserves approval, this project is just one small part of creating a vibrant and diverse Livermore of the future.

Alan Burnham

Hi Jake,

Thanks for the work you do for the city. I am a lifetime Livermore resident and have started multiple companies in this community. I would like to voice my support for the Isabel Crossings project as currently designed. The project is an excellent example of the types of projects we should regularly be approving.

Sincerely,
Drew Felker

Hello Jake,

Regarding the Isabel Crossing Project, part of the Isabel Neighborhood Specific Plan, please share my comments with the Planning Commission in advanced of the July 2nd meeting.

Representing six generations of Livermore residents, The Wente Family fully supports and endorses the Isabel Crossing Neighborhood. Workforce housing is very much needed in Livermore, as the majority of our viticulture and winemaking/cellar workforce does not live in Livermore. While this project will not solve the problems we are facing as a community, it is very much a step in the right direction with ~1300 units and a higher than required percentage of affordable units. We fully support public transportation and believe in a future that sees fewer cars on the road and walkable, sustainable communities.

Thanks,
KDW

Subject: Isabel Crossing Quote

Hi Sblend,

Chip Woerner here, Director of Marketing and Communications for Las Positas College. Below is a quote from LPC president, Dr. Dyrell Foster in support of the Isabel Crossing project that you requested.

"Las Positas College is excited about the Isabel Crossing project because it will make a significant impact in our local community by addressing critical housing, transportation, cultural, and economic development needs. Due to its proximity to the college, the project offers important housing affordability options that would benefit our students, faculty and staff. Isabel Crossing would also create a dynamic, transit-friendly, and walkable neighborhood that will enrich our community with new job opportunities, commercial spaces, and public open spaces all within walking distance of the college."

-Chip

Livermore, CA 94550

RE: Isabel Neighborhood Project

On behalf of the Livermore Valley Chamber of Commerce, I am writing to express support for the proposed plans for the development of the Isabel Neighborhood Plan. We appreciate having an opportunity to weigh in on this proposal supporting the business community and our members.
After reviewing the architectural drafts for the neighborhood and having many conversations with business owners in Livermore, we think that this plan fits appropriately into our community. The types of housing offered in the plan will help alleviate a need for affordable housing in Livermore. High density housing is the only option for affordable housing in our area.

This plan will also provide the housing community north of 580 freeway with retail solutions and conveniences that are current needs for those living in the established housing developments currently located in the area. This will give Livermore additional opportunities for small and medium businesses to operate outside of the downtown district at perhaps more affordable commercial lease options.

The vision for Livermore includes expanded transportation services, such as Valley Link Rail Service, Wheels Bus Services and better connections to the BART system that currently has no buy-in in our community. The Isabel Neighborhood Plan can help provide our community with options for cleaner and greener living and convenient use of public transportation systems and local retail and services that do not currently make themselves available to our community.

The Isabel Neighborhood Plan would resolve many needs of residents and business owners in Livermore and would offer options that are not currently available and also provide community for future residents and businesses. We are offering our support in favor of the Isabel Neighborhood Plan and hope the Planning Commission will move forward with this project.

Thank you for your attention on this matter and please contact us if we can be of further assistance in this important decision.

Sincerely,

Sherri Souza
CEO/President

Subject: Support for Isabel Crossing

Dear Honorable Mayor and Council Members:

On behalf of Innovation Tri-Valley Leadership Group (ITV), I am pleased to write a letter of support for the Isabel Crossing project, a model of vibrant placemaking in action.

ITV is an interconnected cross-sector network of business and community leaders working to advance the business climate and quality of life in the Tri-Valley. Our collaboration is attracting new businesses, helping existing businesses expand, attracting workforce, and branding the Tri-Valley as a region of innovation to help to create a better world. To that end, ITV spearheaded the creation of the Tri-Valley 2040 Vision Plan to provide touchstones for our region's current and future planning efforts.

We were pleased to see the alignment of the Isabel Crossings project with the recommendations outlined in the Tri-Valley 2040 Vision. Vibrant placemaking is a key pillar of the regional vision and recommendations within that theme focus on inclusive housing opportunities for all and pioneering walkable, smart and green communities.

With a strong focus on sustainability, job creation, and community well-being, Isabel Crossing sets a high standard for development in the Tri-Valley region by providing 1,299 new multi-family units with a full range of affordability levels. This includes 535 market-rate for-sale townhomes, 10 affordable for-sale townhomes, 241 market-rate for-sale condos, 47 affordable for-sale condos, 160 market-rate for-rent apartments, and 306 affordable for-rent apartments. While Isabel Crossing is only required to provide a total of 260 affordable units (20%) under the

INSP, it provides a notable 363 affordable units; 28% of the total units provided and 103 more affordable units than would otherwise be required. The affordable units will be deed restricted for sale and rent to median-, moderate-, low-income and very low-income households, with 65 very low-income rental units, 113 low-income rental units, 65 median-income rental units, 63 moderate-income rental units, 18 median-income for-sale units, and 39 moderate income for-sale units.

Emphasizing connectivity and economic development, Isabel Crossing creates a transit-friendly, walkable neighborhood with 75,000 square feet of job-creating new commercial uses oriented around a tree-lined main street. There will be a wide array of restaurants, retail options, and a community-serving grocery store and ample public open spaces including a neighborhood park, recreation center, multiple plazas, trails, bike lanes, and a public art program. Isabel Crossing also includes substantial new infrastructure and transportation features including a network of internal roads with new signalized intersections, wide sidewalks, new bus stops, hiking trails and dedicated new bike lanes within walking distance of the proposed location of a future station for the hydrogen-powered Valley Link train system. Together, these uses will make a significant contribution to the region's housing, transportation, cultural, and economic development goals.

Isabel Crossing also integrates the 2040 Vision Plan's emphasis on sustainability and building a regional Green Economy. All buildings will meet the stringent requirements of the California Green Building Code and the California Energy Code, requiring nation-leading efficiency in water conservation and energy consumption through careful design, state-of-the-art appliances and high efficiency building systems. All residential units will have EV charging capability. All new buildings will also be outfitted with solar panels.

In summary, the Isabel Crossing development provides a sustainable, transit-friendly new neighborhood with a range of housing options, commercial spaces, public open spaces, recreational amenities, public art, and new job opportunities on a vacant and underutilized site in the heart of the Tri-Valley. Given the project's compatibility with and fulfillment of what was imagined in the Tri-Valley 2040 Vision, Isabel Crossing has the full support of ITV. On behalf of our organization, we urge you to vote to approve this long-awaited project.

Sincerely,

Katie Marcel
CEO, Innovation Tri-Valley

Tim Sbranti

PLANNING COMMISSION
JULY 2, 2024

REGULAR MEETING

1. CALL TO ORDER – The meeting of the Planning Commission was called to order by Vice-Chairperson Yolanda Fintschenko at 7:00 pm, held in person at 1016 S. Livermore Avenue.

ROLL CALL – Present: Vice-Chairperson Yolanda Fintschenko, Commissioner Steven Dunbar, Commissioner Daniel Leary, Commissioner Tracy Kronzak.

Absent: Chairperson Jacob Anderson

PLEDGE OF ALLEGIANCE

2. OPEN FORUM

Vice-Chairperson Fintschenko opened and closed the public comment period.

3. CONSENT CALENDAR

3.1 Approval of the May 7, 2024 Planning Commission Draft Meeting Minutes.
Recommendation:
Staff recommends the Planning Commission approve the draft minutes.

3.2 Approval of the May 21, 2024 Planning Commission Draft Meeting Minutes.
Recommendation:
Staff recommends the Planning Commission approve the draft minutes.

ON THE MOTION OF COMMISSIONER LEARY, SECONDED BY COMMISSIONER KRONZAK AND CARRIED ON A 4-0 VOTE, THE PLANNING COMMISSION APPROVED THE CONSENT CALENDAR, WITH AS AMENDED.

4. PROJECT REVIEW – NONE.

5. PUBLIC HEARINGS

5.1 Hearing to consider a request for Vesting Tentative Tract Map, Site Plan Design Review, Development Agreement, Consistency Determination, Conditional Use Permit, Master Sign Program Amendment, and

Development Code amendment to develop vacant land located southwest of the Portola Avenue and Isabel Avenue intersection with for-sale residential townhome and condominium units and for-rent apartments with mixed commercial and office uses and a public park and public plazas, known as Isabel Crossing.

Recommendation:

Staff recommends the Planning Commission adopt a resolution approving Consistency Determination (CD) 24-004; and recommending the City Council adopt the attached resolutions to:

1. Certify/adopt an Addendum to the Isabel Neighborhood Specific Plan Environmental Impact Report, in accordance with the California Environmental Quality Act.
2. Approve Subdivision (SUB) 22-008, Conditional Use Permit (CUP) 24-002, Site Plan Design Review (SPDR) 24-003, Master Sign Plan Amendment (MSP) 24-001; the proposed Master Plan; the Alternative Affordable Plan;
3. Approve Development Agreement (DA) 22-001;
4. Approve Specific Plan Amendment (SPPA) 24-001;
5. Approve Development Code Amendment (DCA) 24-001;
6. Approve the requested Density Bonus Waiver and incentive/concessions
7. Approve the No Net Loss findings
8. Direct the Planning Manager to file a Notice of Determination, in accordance with the provisions of the California Environmental Quality Act, subject to project approval.

Senior Planner Jake Potter presented the staff report.

Vice-Chairperson Fintschenko opened the public comment period.

Splend Splendorio, legal counsel and project lead, thanked staff and the project team; introduced the project team; and presented a video depicting the proposed project.

Bill Meyers, Heritage Development, discussed the collaborative effort and thanked City staff.

In response to Commission questions, **Senior Planner Potter** explained the RHNA requirements in the Housing Element, the State's lower income requirements, and no net loss of units by rezoning the parcel across the street from office to residential; State laws related to Development Agreements and proposed amenities; risk of non-compliant Housing Element; recycled water fire hydrants; and surplus of 120 lower income units due to rezoning.

Mr. Splendorio stated a local ordinance would be required for smoke free rental properties.

Ron Nestor, Project Applicant, explained the average heights due to the sloping

street.

Vice-Chairperson Fintschenko opened the public hearing.

Brian Werner, East Bay Residents for Responsible Development, indicated support for the project since it would be built sustainability and create equity in the community.

Silray Garcia, Local 713, representing 37,000 members, discussed the core values of the union including apprenticeship, local hire, medical benefits and a fair living wage and requested making the project a union project.

Sherri Souza, Livermore Valley Chamber of Commerce, expressed support for the proposed project due to the plan providing high density housing, affordable lease options for small businesses, expanded transportation services, and cleaner and greener living.

Jean King discussed inclusionary housing and indicated support for the proposed 28% affordable and 49% low income; suggested some of the low-income units be for sale; and expressed disappointment that the affordable units were not being distributed over the entire plan.

Brandon Evans, Alameda County Electricians Union, indicated support for the Isabel Crossing Project.

Jeremy O'Donnell indicated support for the project due to the park and open spaces and commitment to use local construction workers and apprenticeship programs.

There were no more speakers, and the public comment period was closed.

The Commission discussed the required findings to approve Consistency Determination (CD) 24-004.

Commissioner Dunbar indicated he could make the findings.

In response to **Commissioner Leary**, **Senior Civil Engineer Salgado** agreed with concerns regarding the space between the Caltrans right-of-way and the buildings and indicated Staff would ensure the Water Resources Division approved and State mandated separations were maintained.

Commissioner Kronzak indicated the findings could be made and concurred with concerns regarding easements.

Vice-Chairperson Fintschenko indicated the findings could be made.

The Commission discussed the resolution to certify/adopt an Addendum to the Isabel Neighborhood Specific Plan Environmental Impact Report, in accordance with the California Environmental Quality Act.

In response to **Commissioner Dunbar**, **Senior Planner Potter** explained the condition to form the transportation demand management program and coordinate with the other HOAs within the Isabel Neighborhood.

Commissioner Kronzak indicated the addendum EIR was adequate. **Commissioner Leary** concurred.

In response to **Vice-Chairperson Fintschenko, Senior Planner Potter** explained the discrepancy between level of service and vehicle miles traveled (VMT); that there was no significant impact greater than the EIR initially established; City Council statements of overriding consideration; other locations in the City with transportation management plans; and addition of the Comcast Property in the addendum. **Vice-Chairperson Fintschenko** indicated she could find with the staff recommendations.

ON THE MOTION OF COMMISSIONER DUNBAR, SECONDED BY COMMISSIONER KRONZAK AND CARRIED ON A 4-0 VOTE, THE PLANNING COMMISSION RECOMMENDED THE CITY COUNCIL ADOPT THE FOLLOWING RESOLUTIONS:

Resolution 20-24 Approving Consistency Determination (CD) 24-004, for the Isabel Crossing Development

Resolution 21-24 Recommending that the City Council adopt an Addendum to the 2020 Isabel Neighborhood Specific Plan Supplemental Environmental Impact Report

In response to **Commissioner Kronzak**, **Senior Civil Engineer Salgado** stated there was not currently an associated traffic mitigation and calming plan but there were projects included in the current five-year CIP. **Commissioner Kronzak** pointed out impact to three or four intersections and expressed concern regarding traffic impacts.

The Commission discussed Vesting Tentative Tract Map (VTTM) 8659 - Subdivision (SUB) 22-008, Site Plan Design Review (SPDR) 24-003, Conditional Use Permit (CUP) 24-002, and Master Sign Program Amendment (MSP) 24-001; accept the Density Bonus Request; Find No Net Loss; approve a Master Plan; and approve an Alternative Affordable Plan for the Isabel Crossing Development.

Commissioner Dunbar discussed limitations on developing low-income units, the tradeoff between the number of units and dispersal, and in indicated the findings could be made.

Commissioner Leary discussed the site plan in comparison to the specific plan including crossings, inclusion of a grocery store, integration, and prime location of affordable housing; streetlights; phasing; and erosion control.

In response to **Commissioner Kronzak, Senior Planner Potter** explained that the existing conditions were considered when evaluating mitigation of exterior noise and the project would conform to Building Code standards for interior noise. **Senior Planner Potter** stated there were standards to mitigate noise in the Building Code. **Commissioner Kronzak** stated their decision was based on State law, RHNA requirements, cost of construction and green field opportunity. They discussed their personal experience with housing issues and indicated the findings could be made.

Vice-Chairperson Fintschenko concurred with the other commissioners and questioned the phasing. **Senior Civil Engineer Salgado** explained that the engineering considerations acknowledged the phasing set out in the development agreement.

Commissioner Dunbar noted the requirement to ensure infrastructure was completed or repaired, improved audio blocking of new buildings; concern with lighting; and need to mix bike racks fronting onto the commercial space. He suggested a bus stop on Gateway; improvement of the trail behind the low-income housing; reviewing whether bike lanes on Campus Hills Drive were necessary versus an access path connecting the southwest corner up to Isabel and Gateway; and reviewing design guidelines for facility selections; and directional curb ramps.

In response to **Commissioner Dunbar**, **Senior Planner Potter** explained that a lighting plan would be required prior to issuance of the building permit; off street ADA spaces were for the private recreation center.

Commissioner Leary suggested the crosswalk alignment closer to the recreation center. **Ashley Alvernaz**, civil engineer with Carlson, Barbee and Gibson, explained that the turning radius was based on City standards, which precluded directional ramps.

Commissioner Kronzak reiterated the prior concerns raised regarding safety and maintenance of the bike path underneath the highway and thanked the developer for including the native plants pallet.

Commissioner Dunbar referenced the City of Fremont protected intersections which shortened the pedestrian crossing and disentangled peds and bikes and increased level of service for vehicles. **Ms. Alvernaz** stated it was an option on the Portola side of the project but was not possible on Isabel. **Commissioner Dunbar** encouraged staff to design protected intersections on Isabel as well and that Gateway and A Street should be as safe as possible for bikes and pedestrians.

ON THE MOTION OF COMMISSIONER KRONZAK, SECONDED BY COMMISSIONER DUNBAR, AMENDED BY COMMISSIONER DUNBAR AND

ACCEPTED BY COMMISSIONER KRONZAK AND CARRIED 4-0 TO RECOMMENDED THE CITY COUNCIL ADOPT THE FOLLOWING RESOLUTION:

Resolution 16-24 Recommending that the City Council approve Vesting Tentative Tract Map (VTTM) 8659 - Subdivision (SUB) 22-008, Site Plan Design Review (SPDR) 24-003, Conditional Use Permit (CUP) 24-002, and Master Sign Program Amendment (MSP) 24-001; accept the Density Bonus Request; Find No Net Loss; approve a Master Plan; and approve an Alternative Affordable Plan for the Isabel Crossing Development, amended as follows:

1. add evaluation of the trail connection south of Building S1 up to Gateway Avenue if it can be designed;
2. consider improvements to crosswalks to be directional curb ramps, consideration of improvements to crosswalks at signalized intersections to extend the pedestrian refuge out if space allowed;
3. bike rack distribution down Main Street following the Downtown Livermore Design Standards;
4. recommending staff look at the proposal for bus stops on Gateway where warranted; and
5. consider Safe Streets on Gateway and A Street relative to Bikeway Selection Design Guidelines.

The Commission discussed the Development Agreement and indicated the findings could be made.

Vice-Chairperson Fintschenko suggested using the $2 million in park funds for other community wide facilities such as colling centers and a library.

ON THE MOTION OF COMMISSIONER DUNBAR, SECONDED BY COMMISSIONER LEARY AND CARRIED ON A 4-0 VOTE, THE PLANNING COMMISSION RECOMMENDED THE CITY COUNCIL ADOPT THE FOLLOWING RESOLUTION:

Resolution 19-24 Recommending that the City Council Approve Development Agreement (DA) 22-001, for the Isabel Crossing Project, that would vest Development Rights for 20 years, provide financial certainty for the applicant, and secure a range of Community Benefits for the City

The Commission discussed Specific Plan Amendment 24-001 and Development Code Amendment 24-001 and indicated the findings could be made.

ON THE MOTION OF COMMISSIONER KRONZAK, SECONDED BY COMMISSIONER DUNBAR AND CARRIED ON A 4-0 VOTE, THE PLANNING COMMISSION RECOMMENDED THE CITY COUNCIL ADOPT THE FOLLOWING RESOLUTIONS:

Resolution 17-24 Recommending that the City Council approve Specific Plan Amendment 24-001, for the Isabel Crossing Project, that would amend the Isabel

Neighborhood Specific Plan's Master Planning and Inclusionary Policies and amend the Land Use Map

Resolution 18-24 Recommending that the City Council approve Development Code Amendment 24-001, for the Isabel Crossing Project, that would amend the alternative means of compliance and affordability requirements in Livermore Development Code Section 10.06.050 ("Inclusionary Ordinance")

The Commission discussed the requested Density Bonus Waiver and incentive/concessions and indicated the findings could be made. The Commission also discussed how Waiver number nine was not needed, based on the applicant's earlier testimony that the project exceeded the required landscaped area standard.

ON THE MOTION OF COMMISSIONER DUNBAR, SECONDED BY COMMISSIONER KRONZAK AND CARRIED ON A 4-0 VOTE, THE PLANNING COMMISSION RECOMMEND THE CITY COUNCIL APPROVE THE DENSITY BONUS WAIVER AND INCENTIVE/CONCESSIONS, REMOVING WAIVER NO. 9.

The Commission discussed the No Net Loss findings.

In response to **Commissioner Dunbar**, **Senior Planner Potter** explained the Housing Element designation and the no net loss.

Commissioner Kronzak indicated BART had no objections and, therefore, could make the findings.

ON THE MOTION OF COMMISSIONER LEARY, SECONDED BY COMMISSIONER DUNBAR AND CARRIED ON A 4-0 VOTE, THE PLANNING COMMISSION RECOMMEND THE CITY COUNCIL APPROVE THE NO NET LOSS FINDINGS.

6. MATTERS FOR CONSIDERATION - NONE

7. MATTERS INITIATED BY PLANNING COMMISSION AND STAFF

Commissioner Dunbar suggested consideration of design standards related to sidewalks and rolled curbs.

Commissioner Kronzak discussed the powers of HOA's and encouraged a local policy or ordinance to protect residents from HOA's taking away homes.

Interim Planning Manager Riley reminded the Commissioners about the Planning conference in Riverside in late September.

8. ADJOURNMENT – at 9:49 pm to a Regular Planning Commission Meeting on Tuesday, July 16, 2024, at 7:00 pm, Civic Center Meeting Hall, City Council Chambers, 1016 S. Livermore Avenue.

IN THE CITY COUNCIL OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION ADOPTING AN ADDENDUM TO THE 2020 ISABEL NEIGHBORHOOD SPECIFIC PLAN SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT FOR THE ISABEL CROSSING PROJECT

On May 14, 2018, the Livermore City Council adopted Resolution No. 2018-063, adopting California Environmental Quality Act Findings, a Statement of Overriding Considerations, a Mitigation Monitoring and Reporting Program, and certifying the Final Environmental Impact Report for the Isabel Neighborhood Specific Plan Final Environmental Impact Report ("2018 EIR") (State Clearinghouse No. 2016042039).

On November 9, 2020, the Livermore City Council adopted Resolution No. 2020-201 adopting California Environmental Quality Act Findings, a Statement of Overriding Considerations, a Mitigation Monitoring and Reporting Program, and certifying the Final Supplemental Environmental Impact Report ("2020 SEIR") for the Isabel Neighborhood Specific Plan (State Clearinghouse No. 2016042039). The 2018 EIR and 2020 SEIR are referred to collectively herein as the Previous EIR.

On September 22, 2022, the City of Livermore ("City") received an application from Isabel Portola Owner, LLC (Harridge Development Group) ("Applicant") to develop the approximately 45-acre vacant parcel located at the southwest corner of the Portola Avenue and Isabel Avenue intersection with a mixed-use residential/ commercial development project.

On May 10, 2024, the City received an amended application from the Applicant for Vesting Tentative Tract Map (VTTM) 8659 – Subdivision (SUB) 22-008, Site Plan Design Review (SPDR) 24-003, Conditional Use Permit (CUP) 24-002, Consistency Determination (CD) 24-004, Master Sign Program Amendment (MSP) 24-001, Development Agreement (DA) 22-001, Development Code Amendment (DCA) 24-001, and Specific Plan Amendment (SPPA) 24-001 (collectively, the "Project"). The Project would develop vacant land located southwest of the Isabel Avenue and Portola Avenue intersection, implementing the Isabel Neighborhood Specific Plan ("Project"). The Project includes 1,299 residential units, including 363 units affordable to individuals and families of lower, median, and moderate incomes, approximately 90,000 square feet of ground-floor commercial, office, and amenity space, an approximately 1.5-acre neighborhood park with an additional approximately 0.5 acres of public plaza space, new bike lanes, street improvements, street trees, public art, and utility infrastructure. The residential units consist of for sale townhomes and duplexes and mid-rise rental apartments. The Project also includes a 20-year Development Agreement between the City and Developer, a new communities facilities district to finance Project infrastructure, and Specific Plan amendments. The Project is seeking relief under state housing/streamlining laws.

In June 2024, the City prepared an Addendum to the Previous EIR ("Addendum", Exhibits B, C, and D, attached hereto) pursuant to the California Environmental Quality Act ("CEQA").

On July 2, 2024, at a duly noticed public hearing, the Planning Commission considered the Project, heard public testimony, made the necessary findings, and adopted Planning Commission resolution No. 21-24, attached hereto as Exhibit A, recommending the City Council approve the Project.

On July 22, 2024, the City Council held a duly noticed public hearing to consider the Project, Planning Commission and staff recommendations, all public comments and testimony, and findings.

Together with this resolution, the City Council concurrently considered resolutions for: 1) Vesting Tentative Tract Map (VTTM) 8659 – Subdivision (SUB) 22-008, Site Plan Design Review (SPDR) 24-003, Conditional Use Permit (CUP) 24-002, Master Sign Program Amendment (MSP) 24-001, the Density Bonus request, No Net Loss, the Master Plan, and the Alternative Affordable Plan; and 2) Specific Plan Amendment (SPPA) 24-001; and ordinances for: 1) the Project's Development Agreement (DA) 22-001 application; and 2) the Project's Development Code Amendment (DCA) 24-001 application.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Livermore that prior to taking action on the Project, and at a properly noticed public hearing, the City Council reviewed written and oral staff reports, conducted a public hearing on the Project and took testimony, and received into the record all pertinent documents related to the Project (collectively, the "Record Evidence"). The City Council's determination is based on the Record Evidence, which is incorporated into this Resolution by reference.

BE IT FURTHER RESOLVED, that the City Council of the City of Livermore has considered the findings made in Planning Commission Resolution No. 21-24, attached hereto as Exhibit A, and the City Council hereby adopts the same findings by this reference and incorporates them as their own findings as part of this resolution, and as described below:

The Addendum indicates that no subsequent or supplemental Environmental Impact Report is required, under the provisions of the California Environmental Quality Act per CEQA Guidelines section 15164, given that none of the following conditions exist:

1. Substantial changes are proposed in the project which will require major revisions of the Previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

   Response: The Addendum analyzes potential project impacts on each of the environmental factors evaluated in the Previous EIR. As discussed in the staff analysis under the subheading "Specific Plan EIR and Addendum", the Addendum includes a Water Supply Assessment, a Focused Transportation Analysis, and a VMT Analysis, in addition to all the required CEQA analyses, as summarized below. The Addendum analyzes potential Project impacts, including impacts from amending the land use designation from office to residential in Specific Plan Subareas 3a and 1d. Land use changes to Subarea 3a are to be considered concurrently with the Project, while changes to Subarea 1d are not part of this Project.

Substantial changes are not proposed to the Specific Plan nor have substantial changes occurred that would require major revisions to the Previous EIR prepared for the Specific Plan. Substantially more severe impacts beyond those identified and analyzed in the Previous EIR would not occur as a result of the proposed Project. For example, the Project will still provide a mixed-use commercial development on an approximately 45-acre site. All contemplated land uses in the Specific Plan are still provided, like residential, commercial, office, and open space. The quantities of residential and open space uses are within the ranges contemplated by the Specific Plan and the site is still served by transit near the freeway interchange. No new land uses or operations have been introduced into the Specific Plan or the Project site that would cause new significant impacts or incompatibilities.

Overall, the proposed Project would result in no new impact or mitigation information of substantial importance that would generate new, more severe impacts or require new mitigation measures compared to those identified for the original project in the Previous EIR. As such, the proposed project would not result in conditions identified in *CEQA Guidelines* Section 15162 requiring supplemental environmental review or a Subsequent EIR, and these are therefore not required for the proposed Project.

For these reasons, the City concludes that the analyses conducted, the conclusions reached, and the mitigation measures adopted in the Previous EIR would not be substantially changed for the proposed Project. The proposed Project would remain subject to all previously adopted mitigation measures and uniformly applicable development policies included in the Previous EIR for Specific Plan. Based on the above analysis, no subsequent action under *CEQA Guidelines* Sections 15162 or 15164 is required.

2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

   Response: No substantial changes are proposed in the project and there are no substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the Previous EIR due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects.

   The Project site is still located on approximately 45 acres in the same location identified in the Specific Plan. No new natural hazards have been identified onsite, and the Project provides the uses and densities contemplated in the Specific Plan.

3. New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

a. The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

b. Significant effects previously examined will be substantially more severe than shown in the previous EIR;

c. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

d. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Response: There is no "new information of substantial importance" as that term is used in CEQA Guidelines Section 15162(a)(3). Therefore, the Previous EIR is adequate, and this evaluation serves as an Addendum to the City of Livermore Isabel Neighborhood Plan Environmental Impact Report (2018 EIR) and Supplemental Environmental Impact Report (2020 SEIR), SCH # 2016042039, collectively referred to as the Previous EIR.

No new operational, use, or natural hazard impacts have been identified. The Project's Biological, Geological, and Noise studies have not identified any impacts beyond those discussed in the EIR. Fire Protection would be provided by the Livermore-Pleasanton Fire Department. The Specific Plan EIR notes that the Project site would be served by Fire Station #10 on Airway Boulevard. The Station can deploy front line apparatuses within 10 minutes, and the Fire Department can dispatch a ladder truck to serve the proposed five to seven story buildings. Given the proximity of Fire Station #10, current response times, and the ability to dispatch a ladder truck, existing facilities are sufficient to serve the Project.

Although existing service capacity is adequate for the Project, the Fire Department is currently conducting a Community Risk Assessment to ensure that the incremental population increases across the City and within the Specific Plan do not further degrade fire service levels. The Risk Assessment will analyze whether a new fire station is needed within the Specific Plan area, among other analysis. The results of the Assessment will be completed by the end of summer 2024. Pursuant to Specific Plan policy, the Project will be required to implement the Risk Assessment recommendations. The Project's net increase in the City's tax base and contributions to the Community Benefit Fund will help fund the Project's fair share of any Risk Assessment recommendations. For these reasons, there is no new information of substantial importance that would cause any additional or worsened significant impacts.

BE IT FURTHER RESOLVED that, based upon the City Council's own independent review of the Record Evidence and considerations, the City Council hereby adopts the *Isabel Crossing and No Net Loss Specific Plan Amendment Project Isabel Neighborhood Specific Plan Environmental Impact Report Addendum* ("Addendum"), and finds that no subsequent or supplemental Environmental Impact Report is required, under the provisions of the California Environmental Quality Act per CEQA Guidelines section 15164, for the Isabel Crossing Project.

BE IT FURTHER RESOLVED that the City Council of the City of Livermore directs the Planning Manager to file a Notice of Determination with the Alameda County Clerk if the Project is approved.

The documents that constitute the record of proceedings upon which this decision is based can be found in the City Clerk's Office, 1052 S. Livermore Avenue, in Livermore, California. This resolution shall be effective upon adoption by the City Council.

On motion of Council Member _____, seconded by Council Member _____, the foregoing resolution was passed and adopted on July 22, 2024, by the following vote:

IN THE PLANNING COMMISSION OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION RECOMMENDING THAT THE CITY COUNCIL ADOPT AN ADDENDUM TO THE 2020 ISABEL NEIGHBORHOOD SPECIFIC PLAN SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT FOR THE ISABEL CROSSING PROJECT

On May 14, 2018, the Livermore City Council adopted Resolution No. 2018-063, adopting California Environmental Quality Act Findings, a Statement of Overriding Considerations, a Mitigation Monitoring and Reporting Program, and certifying the Final Environmental Impact Report for the Isabel Neighborhood Specific Plan Final Environmental Impact Report ("2018 EIR") (State Clearinghouse No. 2016042039).

On November 9, 2020, the Livermore City Council adopted Resolution No. 2020-201 adopting California Environmental Quality Act Findings, a Statement of Overriding Considerations, a Mitigation Monitoring and Reporting Program, and certifying the Final Supplemental Environmental Impact Report ("2020 SEIR") for the Isabel Neighborhood Specific Plan (State Clearinghouse No. 2016042039). The 2018 EIR and 2020 SEIR are referred to collectively herein as the Previous EIR.

On September 22, 2022, the City received an application from Isabel Portola Owner, LLC (Harridge Development Group) ("Applicant") to develop the approximately 45-acre vacant parcel located at the southwest corner of the Portola Avenue and Isabel Avenue intersection with a mixed-use residential/ commercial development project.

On May 10, 2024, the City received an amended application from the Applicant for Vesting Tentative Tract Map (VTTM) 8659 – Subdivision (SUB) 22-008, Site Plan Design Review (SPDR) 24-003, Conditional Use Permit (CUP) 24-002, Consistency Determination (CD) 24-004, Master Sign Program Amendment (MSP) 24-001, Development Agreement (DA) 22-001, Development Code Amendment (DCA) 24-001, and Specific Plan Amendment (SPPA) 24-001 (collectively, the "Project"). The Project would develop vacant land located southwest of the Isabel Avenue and Portola Avenue intersection, implementing the Isabel Neighborhood Specific Plan ("Project"). The Project includes 1,299 residential units, including 363 units affordable to individuals and families of lower, median, and moderate incomes, approximately 90,000 square feet of ground-floor commercial, office, and amenity space, an approximately 1.5-acre neighborhood park with an additional approximately 0.5 acres of public plaza space, new bike lanes, street improvements, street trees, public art, and utility infrastructure. The residential units consist of for sale townhomes and duplexes and mid-rise rental apartments. The Project also includes a 20-year Development Agreement between the City and Developer, a new tax district to finance Project infrastructure, and Specific Plan amendments. The Project is seeking relief under state housing/streamlining laws.

In June 2024, the City prepared an Addendum to the Previous EIR ("Addendum") pursuant to the California Environmental Quality Act ("CEQA").

On July 2, 2024, the Planning Commission held a duly noticed public hearing to consider the Project and staff recommendations, all public comments and testimony, and findings.

NOW, THEREFORE, BE IT RESOLVED, by the Planning Commission of the City of Livermore that prior to taking action on the Project, and at a properly noticed public meeting, the Planning Commission reviewed written and oral staff reports, conducted a public hearing on the Project, took testimony, and received into the record all pertinent documents related to the Project (collectively, the "Record Evidence"). The Planning Commission's determination is based on the Record Evidence, which is incorporated into this Resolution by reference.

BE IT FURTHER RESOLVED, by the Planning Commission that the Addendum indicates that no subsequent or supplemental Environmental Impact Report is required, under the provisions of the California Environmental Quality Act per CEQA Guidelines section 15164, given that none of the following conditions exist:

1. Substantial changes are proposed in the project which will require major revisions of the Previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

   Response: The Addendum analyzes potential project impacts on each of the environmental factors evaluated in the Previous EIR. As discussed in the staff analysis under the subheading "Specific Plan EIR and Addendum", the Addendum includes a Water Supply Assessment, a Focused Transportation Analysis, and a VMT Analysis, in addition to all the required CEQA analyses, as summarized below. The Addendum analyzes potential Project impacts, including impacts from amending the land use designation from office to residential in Specific Plan Subareas 3a and 1d. Land use changes to Subarea 3a are to be considered concurrently with the Project, while changes to Subarea 1d are not part of this Project.

   Substantial changes are not proposed to the Specific Plan nor have substantial changes occurred that would require major revisions to the Previous EIR prepared for the Specific Plan. Substantially more severe impacts beyond those identified and analyzed in the Previous EIR would not occur as a result of the proposed Project. For example, the Project will still provide a mixed-use commercial development on an approximately 45-acre site. All contemplated land uses in the Specific Plan are still provided, like residential, commercial, office, and open space. The quantities of residential and open space uses are within the ranges contemplated by the Specific Plan and the site is still served by transit near the freeway interchange. No new land uses or operations have been introduced into the Specific Plan or the Project site that would cause new significant impacts or incompatibilities.

   Overall, the proposed Project would result in no new impact or mitigation information of substantial importance that would generate new, more severe impacts or require new mitigation measures compared to those identified for the original project in the Previous EIR. As such, the proposed project would not result in conditions identified in *CEQA Guidelines* Section 15162 requiring supplemental environmental review or a Subsequent EIR, and these are therefore not required for the proposed Project.

   For these reasons, the City concludes that the analyses conducted, the conclusions reached and the mitigation measures adopted in the Previous EIR would not be

substantially changed for the proposed Project. The proposed Project would remain subject to all previously adopted mitigation measures and uniformly applicable development policies included in the Previous EIR for Specific Plan. Based on the above analysis, no subsequent action under *CEQA Guidelines* Sections 15162 or 15164 is required.

2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

   Response: No substantial changes are proposed in the project and there are no substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the Previous EIR due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects.

   The Project site is still located on approximately 45 acres in the same location identified in the Specific Plan. No new natural hazards have been identified onsite, and the Project provides the uses and densities contemplated in the Specific Plan.

3. New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

   a. The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

   b. Significant effects previously examined will be substantially more severe than shown in the previous EIR;

   c. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

   d. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

   Response: There is no "new information of substantial importance" as that term is used in CEQA Guidelines Section 15162(a)(3). Therefore, the Previous EIR is adequate, and this evaluation serves as an Addendum to the City of Livermore Isabel Neighborhood Plan Environmental Impact Report (2018 EIR) and Supplemental Environmental Impact Report (2020 SEIR), SCH # 2016042039, collectively referred to as the Previous EIR.

No new operational, use, or natural hazard impacts have been identified. The Project's Biological, Geological, and Noise studies have not identified any impacts beyond those discussed in the EIR. Fire Protection would be provided by the Livermore-Pleasanton Fire Department. The Specific Plan EIR notes that the Project site would be served by Fire Station #10 on Airway Boulevard. The Station can deploy front line apparatuses within 10 minutes, and the Fire Department can dispatch a ladder truck to serve the proposed five to seven story buildings. Given the proximity of Fire Station #10, current response times, and the ability to dispatch a ladder truck, existing facilities are sufficient to serve the Project.

Although existing service capacity is adequate for the Project, the Fire Department is currently conducting a Community Risk Assessment to ensure that the incremental population increases across the City and within the Specific Plan do not further degrade fire service levels. The Risk Assessment will analyze whether a new fire station is needed within the Specific Plan area, among other analysis. The results of the Assessment will be completed by the end of summer 2024. Pursuant to Specific Plan policy, the Project will be required to implement the Risk Assessment recommendations. The Project's net increase in the City's tax base and contributions to the Community Benefit Fund will help fund the Project's fair share of any Risk Assessment recommendations. For these reasons, there is no new information of substantial importance that would cause any additional or worsened significant impacts.

BE IT FURTHER RESOLVED, that the Planning Commission of the City of Livermore, based upon its own independent review of the Record Evidence and considerations, has considered the Previous EIR, and recommends the City Council: 1) determine that no subsequent or supplemental Environmental Impact Report is required given that substantial project and circumstantial changes have not occurred and no new information of substantial importance as set forth in CEQA Guidelines 15162 exists, and 2) adopt the June 2024 Addendum to the Previous EIR, in accordance with CEQA.

BE IT FURTHER RESOLVED that the Livermore Planning Commission recommends that the City Council direct the Planning Manager to file a Notice of Determination with the Alameda County Clerk if the Project is approved.

The documents that constitute the record of proceedings upon which this decision is based can be found in the Community Development Department, 1052 S. Livermore Avenue, in Livermore, California.

On the motion by Commissioner Leary, seconded by Commissioner Kronzak, the foregoing Resolution was passed and adopted at the Planning Commission meeting of July 2, 2024, by the following vote:

AYES: DUNBAR, FINTSCHENKO, KRONZAK, LEARY.
NOES: NONE.
ABSENT: ANDERSON.

1.3 Introduction and Background

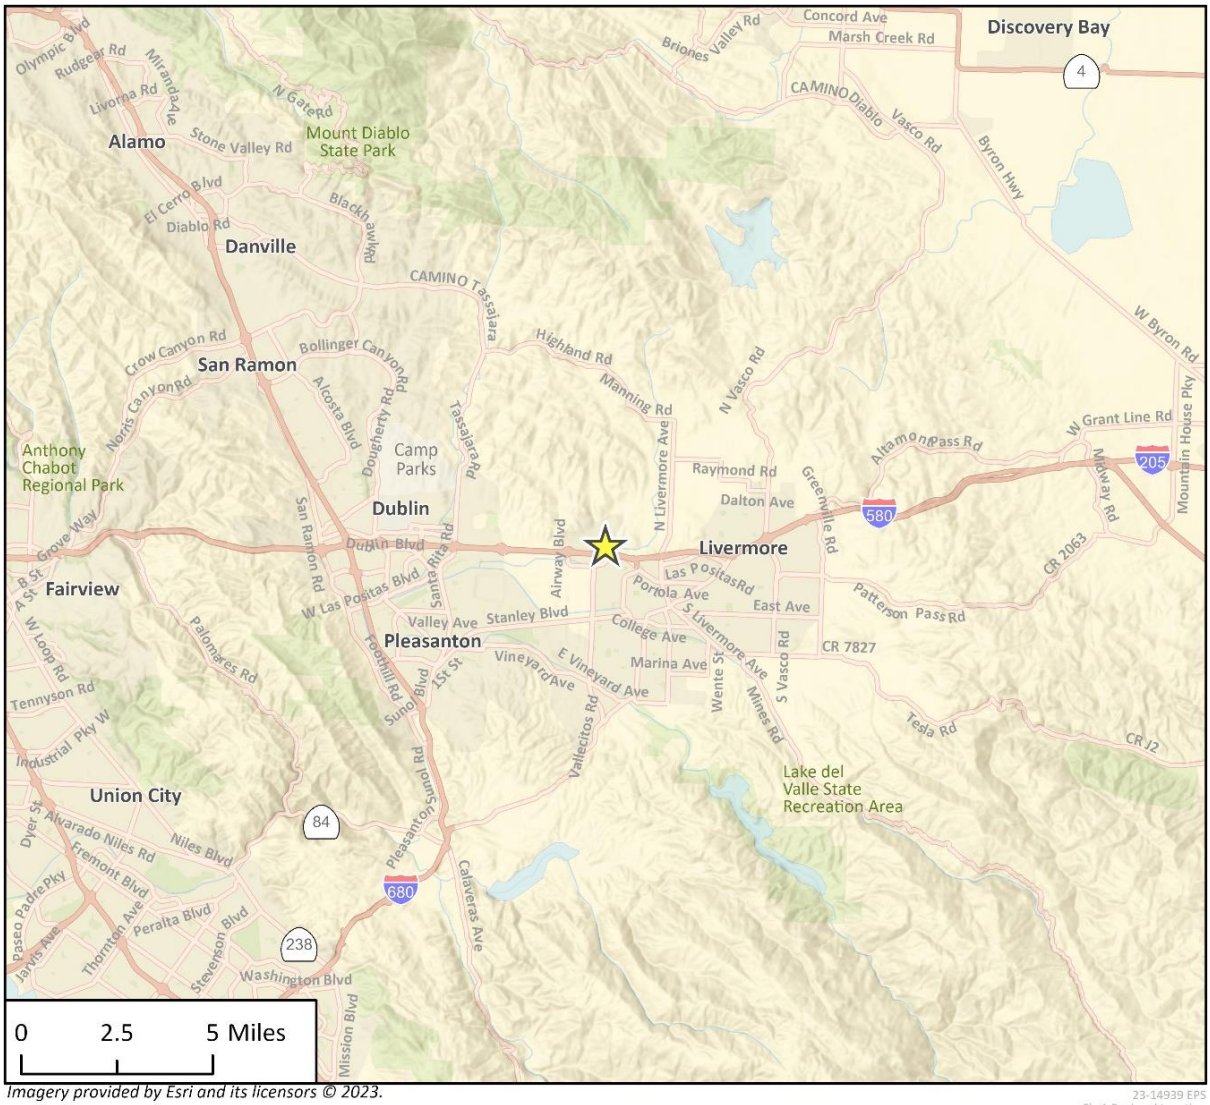
The City of Livermore was the lead agency for the certified 2018 Environmental Impact Report (EIR) (State Clearinghouse [SCH] #2016042039) and the certified 2020 Supplemental Environmental Impact Report (SEIR) (SCH #2016042039) for the Isabel Neighborhood Specific Plan (INSP) and is the lead agency for this document. This document presents the results of environmental review for the Isabel Crossing and No Net Loss Specific Plan Amendment Project, which consists of changes to the development program for a portion of the Specific Plan area; these changes are henceforth referred to as the "proposed project" or "modified project." The City has prepared this EIR Addendum pursuant to *CEQA Guidelines* Sections 15162 and 15164 because it has determined that "major revisions" to the prior 2018 EIR and 2020 SEIR are not required for the project. In accordance with CEQA, the analysis herein considers the changes in the proposed project compared to the original development program and buildout originally planned for the project site, henceforth known as the "original project," that was analyzed in the 2018 EIR and 2020 SEIR; substantial changes with respect to the surrounding circumstances under which the proposed project is undertaken; and "new information of substantial importance" that shows that the project may cause a new, previously unanalyzed significant environmental effect, a substantial increase in the severity of previously analyzed significant impact, or that mitigation previously found to be infeasible is now feasible to reduce one or more significant effects of the project but the project proponent refuses to implement it.

1.4 Project Location and Setting

The project site includes three distinct areas. The Isabel Crossing Parcels (Assessor's Parcel Numbers [APN] 903-0010-046 through -054) encompass approximately 45 acres located at the southwest corner of Isabel Avenue and Portola Avenue in the INSP area of Livermore in Alameda County. The Isabel Crossing Parcels are bounded by Isabel Avenue to the east, Portola Avenue to the north, Interstate 580 (I-580) to the south and existing office and commercial development to the west. The Isabel Crossing Parcels are located within the 3b and 3c Subareas of the INSP. Subareas 3b and 3c

are core areas of the INSP with a general objective of creating a vibrant residential neighborhood with retail uses that generate transit ridership.

The No Net Loss Parcels make up the remaining two areas of the project site. The Bay Area Rapid Transit (BART) "BART Parcel" (6.53 acres, APN 903-10-36-3) is located to the east of the intersection of I-580 and Isabel Avenue, and two contiguous "Comcast Parcels" (26.83 total acres, APNs 905-10-23 and 905-10-24) are located northwest of North Canyons Parkway at 3055 Triad Place, Livermore, California, 94551. The BART Parcel is bounded by undeveloped land planned for residential land uses to the east, Isabel Avenue to the north, and the I-580 offramp to the south and west. The BART Parcel is located within Subarea 3a of the INSP. Subarea 3a land uses include Office Core and Core Residential (60 to 100 dwelling units per acre [du/ac]). The Comcast Parcels are bounded by existing residences to the east, agricultural land and hills to the north, undeveloped parcels and North Canyons Parkway beyond to the south, and offices to the west. The Comcast Parcels are located within Subarea 1d of the INSP. Subarea 1d is designated for Business Park land uses.



The INSP Planning Area is accessible through interstate highway (I-580), State Route 84, and Vasco Road. The Isabel Crossing Parcels are accessible from Portola Avenue, Isabel Avenue, and Shae Center Drive. The BART Parcel is accessible from Isabel Avenue. The Comcast Parcels are accessible via a driveway entrance that extends from North Canyons Parkway. The future Isabel Station for the Valley Link railway is located less than 0.25 mile to the southeast of the Isabel Crossing and BART Parcel portions of the project site. The Valley Link railway is a proposed 42-mile passenger rail project that will connect the Lathrop Altamont Commuter Express (ACE) rail station with the Dublin/Pleasanton BART station. The Isabel Crossing and BART Parcel portions of the project site is located within 0.5 mile of the proposed Isabel Station platform. Figure 1 shows the regional location of the project area and Figure 2 shows the location of the site in its vicinity context.

The Isabel Crossing Parcels have gently rolling topography that slopes slightly down toward its center, and currently undeveloped with sparse vegetation. Surrounding land uses include undeveloped land, open space, and residential townhouses to the north; office and commercial buildings to the west; undeveloped land designated for residential and office land uses to the east; and undeveloped land designated for institutional and education uses to the south beyond I-580.

The Bart Parcel is relatively flat, sloping slightly downward towards the east, and currently undeveloped with sparse vegetation. Surrounding land uses include undeveloped land designated for residential and office uses to the north, east, and west; and undeveloped land planned for educational/institutional uses to the south beyond I-580.

The Comcast Parcels are currently developed with existing office buildings and parking lots. The parcels are relatively flat in the southern portion and in the northern portion slope gradually upwards to the hills to the north of the parcels. Surrounding land uses include agriculture to the north; residential to the west; offices to the east; and undeveloped land planned for residential uses to the south.

1.5 Project Description

The proposed project consists of a currently proposed mixed-used development located on 45 acres (referred to as the "Isabel Crossing Project"), and a proposed land use designation change for three additional parcels totaling approximately 33 acres from commercial and office use to residential use for three parcels (referred to as "No Net Loss Specific Plan Amendment Project"). The individual project components are described in more detail below.

Isabel Crossing Project

The Isabel Crossing Project would consist of a mixed-used development located on 45 acres. The project applicant proposes to construct 1,299 dwelling units (townhomes and mid-rise multi-family apartments) and 74,362 square feet of neighborhood serving commercial space on the 45-acre site. Commercial spaces, including retail and grocery uses, would be located on the ground floor of multi-story mixed-use buildings, and would front streets internal to the project site. Residential units would range from 453 square feet to 2,402 square feet in size, and would include flat condos, apartments, and three-story townhomes. Commercial space would be on the street level of multi-story buildings with residential condos and apartments located above. Proposed amenities include a neighborhood park, a recreation center that includes a pool, and open space at the corners of the retail-lined street including a pocket plaza and a town square.

Vehicular site access would be provided by two intersections along Portola Avenue, two intersections along Isabel Avenue, one intersection at the east end of Gateway Avenue where it meets Shea Center Drive, and one intersection along Shea Center Drive. The project would include internal roadways, pedestrian walkways, and a multi-use trail along the southern border of the site connecting the east end of the proposed Gateway Road to Shea Center Drive. Table 1 outlines characteristics of the proposed project compared to the development program and buildout for these subareas in the original project and Figure 3 illustrates the proposed plans and gross acreage of each parcel included in the proposed project.

Among its approvals, the Isabel Crossing Project requests one "incentive or concession" and a total of 12 "waivers or reductions" of "development standards" under the State and local Density Bonus law, which provides for relief from certain local zoning standards for development projects that provide affordable housing. Under these provisions, the Isabel Crossing Project seeks relief from certain standards adopted in the original INSP for the Isabel Crossing Project. This includes waiver requests for the parcels within the proposed project would exceed the height limits required in the INSP. Parcel S1 would exceed the height envelope by approximately 11.5 feet, Parcel C-2A would exceed the height envelope by approximately 8.5 feet at the north end of the building only, Parcel S3-A would exceed the height envelope by approximately 5.9 feet, and Parcel S3-B would exceed height requirements by approximately 20.5 feet. To accommodate the project, the applicant has requested the following waivers on specific parcels (parcel locations are shown in Figure 3):

- Parcel N1:
  - A waiver or reduction from the applicable INSP porch separation requirement for porches facing each other of 15 feet along paseos, where two particular porches in Parcel N1 are separated by 7.5 feet and 9.9 feet, respectively.

- Parcels N2 and N3-A:
  - A waiver or reduction from the applicable INSP dimension requirement for private open space, which requires a minimum of 75 square feet of open space per dwelling unit with minimum dimensions of 6 feet by 8 feet, and the project provides certain units that include private open space that is 17 feet and 3 inches by 5 feet and 0 inches, for a total area of approximately 86.25 square feet.
- Parcel C1-B:
  - A waiver or reduction from the applicable INSP front setback requirement of a 10-foot setback at the fourth floor of the proposed four-story apartment building; no setback is proposed (though decks are provided to break up the façades).
  - A waiver or reduction from the applicable INSP minimum 16-foot floor to ceiling ground floor height standard for ground floors of commercial uses within the retail/flex space overlay area; the proposed ceiling height is an average of approximately 14 feet.
- Parcel C2-A:
  - A waiver or reduction from the applicable INSP front setback requirement of a 10-foot setback at the fourth floor of the proposed five-story apartment building; no setback is proposed (though decks are provided to break up the façades).
  - A waiver or reduction of the applicable INSP height limit of 490 feet above mean sea level (MSL), where a maximum height of approximately 499 feet above MSL is provided for a portion of a building on the north end of Parcel C2-A.
  - A waiver or reduction from the applicable INSP minimum 16-foot floor to ceiling ground floor height standard for ground floors of commercial uses within the retail/flex space overlay area; the proposed ceiling height is an average of approximately 14 feet.
- Parcel S1:
  - A waiver or reduction from the applicable INSP minimum commercial FAR of 0.4:1, where an FAR of approximately 0.3:1 is provided.
  - A waiver or reduction of the applicable INSP height limit of 485 feet above MSL, where a maximum height of approximately 497 feet above MSL is provided.
- Parcel S2 and S4:
  - A waiver or reduction from the applicable INSP dimension requirement for private open space, which requires a minimum of 75 square feet of open space per dwelling unit with minimum dimensions of 6 feet by 8 feet, and the project provides certain units that include private open space that is 14 feet and 2 inches by 5 feet and 4 inches for a total area of approximately 73.3 square feet.
- Parcel S3-A:
  - A waiver or reduction of the applicable INSP height limit of 485 feet above MSL, where a maximum height of approximately 491 feet above MSL is provided.
- Parcel S3-B:
  - A waiver or reduction of the applicable INSP height limit of 475 feet above MSL, where a maximum height of approximately 496 feet above MSL is provided.

Table 1 Isabel Crossing Project Characteristics

Project Characteristic	Proposed Project	Original Project	Change (Proposed Project Compared to Original Project)
Non-residential Area			
Office	0 square feet	39,640 square feet[1]	-39,640 square feet
Commercial	74,362 square feet	167,185 square feet	-92,823 square feet
Common Area	2.56 acres	2.17 acres	+0.39 acres
Residential Units			
Market Rate	936 units	1,086 units	-150 units
Affordable	363 units	252 units	+111 units
Total	**1,299 units**	**1,338 units[2]**	**-39 units**
Maximum Building Height (feet above mean sea level)	498.5 feet	505 feet[3]	-6.5 feet
Parking (stalls)	2,436	At least 2,142	+294

[1] The office buildout for the project site was estimated using the acreage for proposed products within the Office Core area of the project site and a minimum floor area ratio of 1.0 as planned for the Office Core designation in the Land Use chapter of the INSP.

[2] The calculated target buildout of the project site considered in the INSP.

[3] The maximum height allowed in the project site.

No Net Loss Specific Plan Amendment Project

Since certification of the INSP EIR, proposed and constructed developments in the INSP area have not met the anticipated unit counts identified in the INSP and/or City of Livermore Housing Element; therefore, the City desires to re-designate certain parcels within the INSP to ensure that there is adequate opportunity for the development of housing within the INSP area. The current shortfall of residential units is 344 units (including the Isabel Crossing Project, described above), with the trend of housing unit shortfalls anticipated to continue as the INSP area is built-out.

The project would amend the INSP to change the land use designation of the BART Parcel to Residential Core (60-100 du/ac). The existing Commercial Overlay/Flex Space designation would remain on a portion of the BART Parcel. The project would also include a future amendment to the INSP to change the land use designation of the Comcast Parcels to Village (25-40 du/ac; eastern half) and Transition (15-25 du/ac; western half). The proposed future land use designations of the Comcast Parcels would match the existing designations of parcels located immediately south of the Comcast Parcels. The intent of the proposed and future land use designation changes is to ensure no net loss of housing opportunity sites within the INSP area, in accordance with the City's adopted Housing Element. This Addendum addresses the anticipated buildout of the No Net Loss Parcels that could result from the proposed and future land use designation changes.

Re-designation of the BART and Comcast Parcels would result in the potential to develop up to 1,775 additional residential units compared with existing land use designations on these parcels. Comcast Parcel West (APN 905-10-23) would be able to develop 350 residential units; Comcast Parcel East (APN 905-10-24) would be able to develop 512 residential units; and the BART Parcel (APN 903-10-36-3) would be able to develop 913 units. This change would also result in a net loss of 1,531,486 square feet of existing and proposed office space on the No Net Loss Parcels.

Overall Growth Projections

Because constructed and currently proposed development, including the Isabel Crossing Project, would not meet the anticipated quantity of residential units identified in the INSP and/or Housing Element, the proposed land use designation change of the No Net Loss Parcels is required so that there is no net loss of residential unit capacity. The overall project would result in a net increase of 1,431 residential units and a net decrease of 1,531,486 square feet of office space), compared to what was analyzed in the 2018 EIR and 2020 SEIR for the INSP.

Consistency of the Project with Adopted Plans and Ordinances

Isabel Neighborhood Specific Plan Background

The INSP was adopted to guide future development of the area around the planned Valley Link rail station, which is planned for the median of I-580, just east of Isabel Avenue. The INSP covers approximately 1,138 acres and allows for development of 4,095 new multi-family housing units and approximately 2.1 million square feet of net new office, business park, and commercial development (including a neighborhood commercial center) (City of Livermore 2023). It also envisions three new neighborhood parks, pedestrian and bike facilities, and infrastructure improvements. The INSP Planning Area is currently developed with a range of residential, industrial, commercial, institutional, and open space uses; the project site remains undeveloped.

The INSP underwent CEQA review in the form of an EIR (2018 EIR), which was certified in 2018. An update to the INSP was subsequently made to account for the Valley Link Rail Project, and an SEIR (2020 SEIR) was prepared to evaluate updates to the INSP. The SEIR was certified in 2020 and the INSP was adopted in November of 2020.

Isabel Crossing Project

The Isabel Crossing Project would be constructed within and would modify the approved development program for Subareas 3b and 3c of the INSP. Approved land uses in Subarea 3b include:

- Residential
  - Village: 25-40 du/ac
  - Center: 40-60 du/ac
  - Core: 60-100 du/ac
- Neighborhood commercial

Approved land uses in Subarea 3c include:

- Residential Core: 60-100 du/ac
- Office Core

Under the adopted INSP, Subareas 3b and 3c have a combined target buildout of 1,477 residential units. The Isabel Crossing project site is approximately 2.32 acres smaller than the full 3b and 3c Subareas; therefore, the buildout of the project site considered in the INSP is 1,338 residential units, which is greater than the 1,299 units proposed by the project. The Isabel Crossing project site includes the Neighborhood Commercial area of the INSP, which envisions a maximum buildout of 167,185 square feet of commercial space. The approximately 75,000 square feet of commercial space proposed by the project would not exceed the commercial space considered in the 2020 SEIR. The Isabel Crossing Project seeks a Specific Plan Amendment in a manner that enables the approval of the Isabel Crossing Project via an approved master site plan, which includes reductions of commercial and office space, a reconfiguration of the site plan and applicable zoning designations, and alternative compliance with affordable housing requirements. As mentioned above, the Isabel Crossing Project also seeks a Density Bonus law incentive to reduce any required office space and provide for waivers from certain applicable INSP development standards. Therefore, the proposed number of residential units and commercial space are less than, and are thus within, the intensity of development envisioned in the INSP for these subareas as analyzed in the 2018 EIR and 2020 SEIR.

No Net Loss Specific Plan Amendment Project

The No Net Loss Specific Plan Amendment Project would allow for the future development of higher density residential uses within Subareas 3a and 1d of the INSP and would modify the approved development program for those subareas. Approved land uses on the BART Parcel in Subarea 3a include:

- Residential Core: 60-100 du/ac
- Office Core

Approved land uses on the Comcast Parcels in Subarea 1d include:

- Business Park

The proposed land use designation change of the BART parcel would allow 913 units which is greater than is currently allowed in Subarea 3a. Subarea 1d is designated as Business Park which allows commercial and light industrial uses. Residential uses are not currently permitted on the Comcast Parcels. The City is proposing an amendment to the INSP to change the land use designation of the BART Parcel to Residential Core and the Comcast Parcels to Village and Transition (future change) to ensure that there is adequate opportunity for the development of housing within the INSP area.

State Density Bonus Law

Residential projects may in some cases use provisions of the State Density Bonus law (California Government Code Sections 65915 – 65918) to develop affordable and senior housing. The State Density Bonus law also includes incentives to make the development of affordable and senior housing economically feasible. These include waivers and concessions, such as exceptions to a zoning ordinance or other land use regulations. Projects providing sufficient affordable housing can avail themselves of any applicable combination of additional density and/or other waivers and incentives.

The Isabel Crossing Project would include 363 affordable housing units which is approximately 28 percent of the project's proposed residential buildout. Based on the percentage of affordable units, the project proponent is proposing to use the State Density Bonus law to request additional waivers and concessions, which were described above.

No Net Loss Law (Government Code Section 65863)

The purpose of Government Code Section 65863 (No Net Loss Law) is to ensure development opportunities remain available throughout the planning period to accommodate a jurisdiction's regional housing need allocation (RHNA), especially for lower- and moderate- income households. A jurisdiction may not take any action to reduce a parcel's residential density unless it makes findings that the remaining sites identified in its Housing Element sites inventory can accommodate the jurisdiction's remaining unmet RHNA by each income category, or if it identifies additional sites so that there is no net loss of residential unit capacity. If a jurisdiction approves a development of a parcel identified in its Housing Element sites inventory with fewer units than shown in the Housing Element, it must either make findings that the Housing Element's remaining sites have sufficient capacity to accommodate the remaining unmet RHNA by each income level, or identify and make available sufficient sites to accommodate the remaining unmet RHNA for each income category.

While existing and planned developments in the INSP area, including the Isabel Crossing Project, would result in a reduction of 344 units compared to what was originally planned under the INSP and accounted for in the City's Housing Element, the proposed No Net Loss Specific Plan Amendment Project would result in a net increase of 1,431 residential units compared to what was planned under the INSP and analyzed in the INSP 2018 EIR and 2020 SEIR.

1.6 Project Approvals

The City Council would need to take the following actions regarding the proposed Isabel Crossing Project:

- Adoption of this Addendum to the INSP EIR
- Approval of a Development Agreement
- Approval of a Density Bonus "Incentive and Concession" and "Waiver and Reduction" Requests
- Approval of a Conditional Use Permit (to allow residential uses in the INSP Neighborhood Commercial Zone)
- Approval of an Amendment to the INSP
- Site and Design Review
- Approval of a Vesting Tentative Tract Map
- Approval of a Master Sign Program Amendment
- General Plan Consistency Determination

The City Council would need to take the following actions regarding the proposed land use designation change of the BART Parcel:

- Adoption of this Addendum to the INSP EIR
- Approval of an Amendment to the INSP

The City Council would need to take the following actions regarding the future land use designation change of the Comcast Parcels:

- Adoption of this Addendum to the INSP EIR
- Approval of an Amendment to the INSP

1.7 Prior Environmental Document(s)

The INSP underwent environmental review in the form of an EIR certified by the City of Livermore in 2018. An update to the INSP was subsequently made to account for the Valley Link Rail Project, and an SEIR was prepared to evaluate updates to the INSP. The SEIR was certified by the City of Livermore in 2020.

- Isabel Neighborhood Plan Environmental Impact Report (2018 EIR), SCH #2016042039, certified April 2018.
- Isabel Neighborhood Plan Supplemental Environmental Impact Report (2020 SEIR), SCH #2016042039, certified June 2020.

1.8 Location of Prior Environmental Document(s)

2 Overview of CEQA Guidelines Sections 15162 and 15164

CEQA Guidelines Sections 15162 and 15164 set forth the criteria for determining the appropriate additional environmental documentation, if any, to be completed when a project has a previously certified EIR.

CEQA Guidelines Section 15164 states that a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred. *CEQA Guidelines* Section 15162(a) states that no Subsequent or Supplemental EIR shall be prepared for a project with a certified EIR unless the lead agency determines, based on substantial evidence in the light of the whole record, one or more of the following:

1. Substantial changes are proposed in the project that will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.
2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.
3. New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, shows any of the following:
    A. The project will have one or more significant effects not discussed in the previous EIR.
    B. Significant effects previously examined will be substantially more severe than shown in the previous EIR.
    C. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative.
    D. Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

The analysis pursuant to *CEQA Guidelines* Section 15162 demonstrates whether the lead agency can approve the activity as being within the scope of the existing certified EIR, that an addendum to the existing EIR would be appropriate, and no new environmental document, such as a new EIR, would be required. The addendum need not be circulated for public review but can be included in or attached to the Final EIR, and the decision-making body shall consider the addendum with the Final EIR prior to deciding on the project.

According to *CEQA Guidelines* Section 15164, an addendum to a previously certified EIR is the appropriate environmental document in instances when “only minor technical changes or additions are necessary” and when the new information does not involve new significant environmental

effects or a substantial increase in the severity of a significant effect beyond those identified in the previous EIR. *CEQA Guidelines* Section 15164 states that:

a. The lead agency or responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.
b. An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.
c. An addendum need not be circulated for public review but can be included in or attached to the final EIR or adopted negative declaration.
d. The decision-making body shall consider the addendum with the final EIR or adopted negative declaration prior to making a decision on the project.
e. A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's findings on the project, or elsewhere in the record.

15162 Standard: Substantial Changes in the Project

Pursuant to *CEQA Guidelines* Section 15162(a)(1), Section 4, *Impact Analysis*, presents a discussion of whether the proposed project constitutes a substantial change in the project analyzed in the certified EIR that would require major revisions to the certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. Please refer to Section 4, *Impact Analysis*, for a discussion of each impact and changes to such impacts resulting from project changes.

15162 Standard: Substantial Changes in the Circumstances

Pursuant to *CEQA Guidelines* Section 15162(a)(2), Section 4, *Impact Analysis*, presents a discussion of whether changes to the project site or the vicinity (environmental setting) have occurred subsequent to the certification of the EIR that would result in new significant impacts or a substantial increase in the severity of a previously identified significant impact that were not evaluated and mitigated by the previous EIR. Please refer to Section 4, *Impact Analysis*, for a discussion of each impact and change in circumstances related to such impacts.

15162 Standard: New Information of Substantial Importance

Pursuant to *CEQA Guidelines* Section 15162(a)(3), Section 4, *Impact Analysis*, includes a discussion of whether the proposed project would result in new information of substantial importance which was not known and could not have been known with the exercise of reasonable diligence at the time the INSP 2018 EIR and 2020 SEIR were certified. New information of substantial importance includes: (1) one or more significant effects not discussed in the previous EIR; (2) significant effects previously examined that are substantially more severe than shown in the previous EIR; (3) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or (4) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. Please refer to Section 4, *Impact Analysis*, for a discussion of each impact and new information related to such impacts.

3 Environmental Effects and Determination

Environmental Areas Determined to Have New or Substantially More Severe Significant Effects Compared to Those Identified in the Previous EIR

The subject areas checked below were determined to be new significant environmental effects or to be previously identified effects that have a substantial increase in severity either due to a change in project, change in circumstances, or new information of substantial importance, as indicated by the checklist and discussion on the following pages.

■ NONE

□ Aesthetics	□ Agriculture and Forestry Resources	□ Air Quality
□ Biological Resources	□ Cultural Resources	□ Energy
□ Geology and Soils	□ Greenhouse Gas Emissions	□ Hazards and Hazardous Materials
□ Hydrology and Water Quality	□ Land Use and Planning	□ Mineral Resources
□ Noise	□ Population and Housing	□ Public Services
□ Recreation	□ Transportation	□ Tribal Cultural Resources
□ Utilities and Service Systems	□ Wildfire	□ Mandatory Findings of Significance

Determination

Based on this analysis:

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous EIR due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects. Or, there is "new information of substantial importance," as that term is used in *CEQA Guidelines* Section 15162(a)(3). Therefore, a SUBSEQUENT or SUPPLEMENTAL EIR is required.

■ No substantial changes are proposed in the project and there are no substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous EIR due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects. Also, there is no "new information of substantial importance" as that term is used in *CEQA Guidelines* Section 15162(a)(3). Therefore, the previously certified EIR is adequate and this evaluation serves as an ADDENDUM to the City of Livermore Isabel Neighborhood Plan Environmental Impact Report (2018 EIR) and Supplemental Environmental Impact Report (2020 SEIR), SCH # 2016042039.

4 Impact Analysis

The analysis in this section of the potential impacts associated with the Isabel Crossing and No Net Loss Specific Plan Amendment Project compared with those of the approved INSP analyzed in the certified 2018 EIR and 2020 SEIR has been prepared using the CEQA checklist as a guide. This checklist is consistent with the format and environmental topics and questions of the checklist used in the Final EIR, but also includes recent updates to reflect the most recently adopted checklist provided in Appendix G of the 2023 *CEQA Guidelines*. The checklist considers the full range of environmental issues subject to analysis under CEQA (in rows), and then poses a series of questions (in columns) aimed at identifying the degree to which the issue was analyzed in the certified 2018 EIR and 2020 SEIR. The checklist also includes a column identifying whether there is new information of substantial importance, as defined by CEQA, relative to each environmental issue. The questions posed and addressed in the checklist are described below.

Where was Impact Analyzed in the EIR?

This column provides a cross-reference to the portions of the certified 2018 EIR and/or 2020 SEIR where information and analyses may be found relative to the environmental issue listed under each topic. The cross-references identified in this column correspond with page numbers and section numbers of the 2018 EIR and/or 2020 SEIR.

Are Major Revisions to the EIR Required?

In accordance with *CEQA Guidelines* Section 15162(a), this column indicates whether the proposed project would involve new significant environmental impacts or a substantial increase in the severity of previously identified significant impacts, new information of substantial importance, or substantial changes in the circumstances that, in turn, would require major revisions of the 2018 EIR and/or 2020 SEIR.

Are There New or Substantially More Severe Significant Impacts?

In accordance with *CEQA Guidelines* Section 15162(a)(1), this column indicates whether the proposed project would involve new significant environmental impacts or a substantial increase in the severity of previously identified significant impacts that were not discussed in the 2018 EIR and/or 2020 SEIR.

Do EIR Mitigation Measures Address and/or Resolve Impacts?

This column indicates whether mitigation measures from the 2018 EIR and/or 2020 SEIR would address and/or resolve impacts related to the modified project.

This page intentionally left blank.

4.1 Aesthetics

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Have a substantial adverse effect on a scenic vista?	Pages 3.5-8 through 3.5-10 of the 2018 EIR	No	No	N/A
b. Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	Pages 3.5-14 of the 2018 EIR	No	No	N/A
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	Pages 3.5-14 through 3.5-15 of the 2018 EIR	No	No	N/A
d. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	Pages 3.5-15 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to aesthetics were analyzed on pages 3.5-8 through 3.5-15 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to aesthetics from the 2018 EIR. Aesthetic impacts related to scenic resources, visual character, and light and glare were determined to be less than significant, while impacts related to scenic vistas were determined to be significant and unavoidable despite implementation of Goal G-LU-2 of the INSP which requires the protection of existing scenic views to the extent possible and create new view corridors from within the INSP Planning Area.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental

documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project have a substantial adverse effect on a scenic vista?

The 2018 EIR determined that impacts to scenic vistas would be significant and unavoidable due to the proposed height and intensity of development within the INSP planning area. The proposed project would be entirely within the INSP Planning Area analyzed in the 2018 EIR. As discussed in Section 1.5, *Project Description*, four of the Isabel Crossing Parcels in the proposed project would exceed the height limits required in the INSP pursuant to requested Density Bonus law "waiver and reduction" requests. Parcel S1 would exceed the height envelope by approximately 11.5 feet, Parcel C-2A would exceed the height envelope by approximately 8.5 feet at the north end of the building only, Parcel S3-A would exceed the height envelope by approximately 6.0 feet, and Parcel S3-B would exceed height requirements by approximately 20.5 feet. However, several of the proposed building heights would be reduced compared to the original project, and the overall impact on scenic vistas would be similar to and not substantially more severe than the original project. The height requirements would be consistent with INSP land uses after concessions and waivers approved under the proposed State Density Bonus. Figure 4 and Figure 5 show views of the project site from Isabel Avenue and Shea Center Drive. Development on the site would generally obscure views of the distant ridgelines regardless of the height increases proposed for the project.

Under the original project, building height was restricted to 490 to 495 feet above MSL for the BART Parcel (pursuant to Figure 2-4 of the INSP) and 30 feet in height for the Comcast Parcels (pursuant to the City's General Plan Scenic Corridor Policy). The proposed land use designation change of the No Net Loss Parcels would not modify the height limitations, and as no specific development is proposed on the No Net Loss Parcels at this time, it is reasonably assumed that future development proposals on the No Net Loss Parcels would comply with the height limitations set forth in the City's General Plan and INSP.

Therefore, the proposed project would not result in new or more severe impacts to scenic vistas beyond those identified in the 2018 EIR.

Figure 4 View of the Project Site Looking West from Isabel Avenue

Figure 5 View of the Project Site Looking North from Shea Center Drive

b. Would the project substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

The 2018 EIR indicated that the portion of I-580 that passes through the INSP planning area is an Eligible State Scenic Highway, and the Gandolfo Farm is a historic resource within the INSP Planning Area. The hills north and south of I-580 comprise the scenic resources visible from I-580, and areas with existing trees along creeks in the INSP Planning Area would be maintained as open space. There are no significant rock outcroppings within the INSP Planning Area or project site.

The project site falls within a scenic corridor zone as identified in the 2018 EIR, and the project site is visible from I-580. However, development proposed under the Isabel Crossing Project would remain in areas designated for development under the INSP and would not be located on areas designated as open space, or on the Gandolfo Farm property. Similarly, future development of the No Net Loss Parcels facilitated by the proposed and future land use changes would occur in an area designated for development under the INSP and would not be located on the Gandolfo Farm property. The proposed project would not damage historic buildings, rock outcroppings, or trees within a State Scenic Highway beyond what was considered in the 2018 EIR for the original project. Therefore, the proposed project's impacts to scenic resources would be similar to those studied in the prior EIRs and would be less than significant. The proposed project would have no new or substantially more severe significant impacts related to scenic vistas beyond those described in the certified EIR.

c. Would the project, in non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

The 2018 EIR determined that new development would be subject to development standards in Chapter 2: *Land Use* of the INSP that would regulate building height and setbacks to minimize the visual impacts of new construction and redevelopment and design standards and guidelines in

Chapter 5: *Urban Design* of the INSP*,* which address the street interface, building massing, architecture, colors, materials, landscaping, and signage.

The proposed project would be entirely within the project area for the original project. The modified project site has retained the same general appearance as was analyzed in the 2018 EIR for the original project. The Isabel Crossing Project would not substantially change the appearance of new development on the site compared to the original project analyzed in the 2018 EIR because the original project planned for new residential and commercial development on the Isabel Crossing Parcels, similar to the proposed project. The Isabel Crossing Project would be less dense than that studied in the prior EIRs, and there would be slightly more landscaping and open space, which would be an improvement to the visual character of the site compared with the original project.

The No Net Loss Specific Plan Amendment Project would allow future development of the BART and Comcast Parcels to be strictly residential use, as compared to the original project, which allowed for Business Park development on the Comcast Parcels and some Office Core development on the BART Parcel. While the allowed type of use and density of development would be modified under the No Net Loss Specific Plan Amendment Project, the proposed uses would be visually consistent with existing and planned surrounding development, which includes residential uses near the No Net Loss Parcels. In particular, the BART Parcel was designated for Residential Core (60-100 dwelling units per acre) and Office Core development and would be re-designated for exclusively Residential Core. While the Comcast Parcels would be re-designated to Village and Transition, parcels to the south and east of the Comcast Parcels are also designated for Village and Transition, and the land use change would be consistent with those adjacent designations.

Furthermore, INSP goals and policies would apply to the proposed project, like the original project. Therefore, the proposed project would result in no new or more severe impacts to visual character and quality beyond those identified in the 2018 EIR.

d. Would the project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?

The 2018 EIR found that while new development under the original project would increase sources of light and glare (through street lights, buildings, and vehicles), compliance with Livermore General Plan policies for controlling outdoor artificial light and Chapter 15.18 of the Livermore Municipal Code would reduce potentially significant long-term light and glare impacts and design standards would further help to ensure that lighting for new development is held to high design standards for light pollution and glare reduction. The proposed project would not add new sources or light or glare to the project site beyond what was considered in the 2018 EIR for the original project, as all portions of the project site were anticipated for development and not designated for open space. Therefore, the proposed project would result in no new or more severe impacts to light and glare beyond those identified in the 2018 EIR.

4.2 Agriculture and Forestry Resources

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	Page 3.14-7 of the 2018 EIR	No	No	N/A
b. Conflict with existing zoning for agricultural use or a Williamson Act contract?	Page 3.14-8 of the 2018 EIR	No	No	N/A
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	Page 3.15-1 of the 2018 EIR	No	No	N/A
d. Result in the loss of forest land or conversion of forest land to non-forest use?	Page 3.15-1 of the 2018 EIR	No	No	N/A
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	Page 3.14-8 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to agriculture and forestry resources were analyzed on pages 3.14-7 through 3.15-1 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to agriculture and forestry resources from the 2018 EIR. Impacts related to the conversion of Prime Farmland and agricultural zoning were determined to be significant and unavoidable even with implementation of INSP policies. Impacts to existing farmland were determined to be less than significant with compliance with Chapter 8.16 of the Livermore Municipal Code. The 2018 EIR determined that there would be no impact on forest resources or land zoned for forest use.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located, 2) were not previously analyzed in a previous environmental documents as significant effects, 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents, and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

b. Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?

e. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

The 2018 EIR identified one property, the Gandolfo property, as impacted by the conversion of Prime Farmland and Unique Farmland to non-agricultural use. The Isabel Crossing and No Net Loss Parcels do not include this property.

The 2018 EIR stated that there is one zoning district, PDR-01-001, in the INSP Planning Area that allows for agriculture uses. The Isabel Crossing and No Net Loss Parcels are not located within this agricultural zoning district.

The proposed project would be located on the same site as studied in the prior EIRs, on land designated as grazing land by the California Department of Conservation Farmland Mapping and Monitoring Program Important Farmlands Inventory. The Isabel Crossing and No Net Loss Parcels do not include Important Farmland and is not designated for agricultural uses. Therefore, the proposed project would result in no new or more severe impacts to Prime Farmland or Unique Farmland beyond those identified in the 2018 EIR.

c. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

d. Would the project result in the loss of forest land or conversion of forest land to non-forest use?

The 2018 EIR stated that the INSP Planning Area does not contain forest resources or land zoned for forest use. Because the proposed project is entirely within the INSP Planning Area considered under the 2018 EIR, and no forest land is located on the Isabel Crossing or No Net Loss Parcels, the proposed project would result in no new or more severe impacts beyond those identified in the 2018 EIR for the original project.

This page intentionally left blank.

4.3 Air Quality

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:					
a.	Conflict with or obstruct implementation of the applicable air quality plan?	Page 3.3-20 of the 2018 EIR Page 3.1-22 of the 2020 SEIR	No	No	No
b.	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	Pages 3.3-33 and 3.3-35 of the 2018 EIR Pages 3.1-36 and 3.1-43 of the 2020 SEIR	No	No	Yes
c.	Expose sensitive receptors to substantial pollutant concentrations?	Pages 3.3-38, 3.3-40, and 3.3-44 of the 2018 EIR Pages 3.1-43, 3.1-45, and 3.1-49 of the 2020 SEIR	No	No	Yes
d.	Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	Page 3.3-46 of the 2018 EIR Page 3.1-51 of the 2020 SEIR	No	No	No

Analysis in Previous Environmental Documents

Impacts to air quality were analyzed on pages 3.3-1 through 3.3-47 of the 2018 EIR and pages 3.1-1 through 3.1-52 of the 2020 SEIR. The certified 2018 EIR and 2020 SEIR determined that implementation of the INSP would not conflict with or obstruct implementation of the applicable air quality plan, and impacts would be less than significant.

The 2018 EIR and 2020 SEIR determined that development facilitated by the INSP, with the implementation of mitigation measures AQ-1 through AQ-3 (included below), in addition to the proposed 2018 EIR policies, would reduce construction-related emissions to a less-than-significant level. The INSP emissions in the 2018 EIR and 2020 SEIR would be generated from mobile sources (i.e., passenger vehicles) that are not regulated at the city level; therefore, no feasible mitigation measures are available to reduce these operational emissions. Operational impacts were

determined to be significant and unavoidable. The 2018 EIR and 2020 SEIR found construction and operation may expose sensitive receptors to substantial toxic air contaminant concentrations. With the Implementation of mitigation measures AQ-1 and AQ-4 (shown below), construction emissions would be reduced and a project-level evaluation within 1,000 feet of sensitive receptors would be required; however, project-specific conditions could preclude the reduction of health risk below Bay Area Air Quality Management District (BAAQMD) thresholds. Therefore, toxic air contaminant (TAC) exposure was determined to be significant and unavoidable.

MM AQ-1: Require Construction Fleet to Use Renewable Diesel. All applicants proposing development of projects within the Planning Area shall require their contractors, as a condition of contract, to reduce construction-related exhaust emissions by ensuring that all off-road equipment operating for more than 20 total hours over the entire duration of construction activities shall operate on renewable diesel (such as Diesel high performance renewable). Renewable diesel is currently commercially available in San Francisco Bay Area.

MM AQ-2: Require Use of Diesel Trucks with 2010-Compliant Model Year Engines. All applicants proposing development of projects within the Planning Area shall require their contractors, as a condition of contract, to use diesel trucks that have 2010 model year or newer engines. In the event that 2010 model year or newer diesel trucks cannot be obtained, the contractor must provide documentation to the City showing that a good faith effort to locate such engines was conducted.

MM AQ-3: Require payment of mitigation fees to offset emissions exceeding BAAQMD's daily pollutant thresholds.

MM AQ-4: Require future projects located within 1,000 feet of receptors perform a construction health risk assessment (HRA). All applicants proposing development of projects within 1,000 feet of existing sensitive receptors, as defined by BAAQMD, shall prepare a site-specific construction HRA taking into account both project-level and cumulative health risks (including existing TAC sources). If the HRA demonstrates, to the satisfaction of the City, that the health risk exposures for adjacent receptors will be less than BAAQMD project-level and cumulative thresholds (as appropriate), then additional mitigation would be unnecessary. However, if the HRA demonstrates that health risks would exceed BAAQMD project-level and/or cumulative thresholds (as appropriate), additional feasible on- and offsite mitigation shall be analyzed by the applicant to help reduce risks to the greatest extent practicable.

The following describes the analysis included in the 2018 EIR and 2020 SEIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located, 2) were not previously analyzed in a previous environmental documents as significant effects, 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents, and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project conflict with or obstruct implementation of the applicable air quality plan?

The California Clean Air Act requires that air districts create a 2017 Climate Action Plan (CAP) that describes how the jurisdiction will meet air quality standards. The most recently adopted air quality plan is the 2017 CAP. The 2017 CAP does not include control measures that apply directly to individual development projects. Instead, the control strategy includes control measures related to stationary sources, transportation, energy, buildings, agriculture, natural and working lands, waste management, water, and super-greenhouse gas (GHG) pollutants. A project that would not support the 2017 CAP's goals would not be consistent with the 2017 CAP. On an individual project basis, consistency with BAAQMD quantitative thresholds is interpreted as demonstrating support for the CAP's goals.

As noted on page 3.1-24 of the 2020 SEIR, the original project would not conflict with or obstruct implementation of the BAAQMD's 2017 CAP with the development of numerous polices that promote mixed-use and transit-oriented development. The proposed project would exceed development for the original project planned under the INSP. In addition, by adhering to INSP policies and design guidelines the proposed project would incorporate many of the 2017 Clean Air Plan control measures related to transportation, building energy, waste, and water sections discussed in Table 3.1-6 of the 2020 SEIR for the original project, such as trip reduction programs, transit efficiency, bicycle and pedestrian facilities, urban tree planting, and waste diversion. Therefore, the proposed project would not result in new or more severe impacts related to conflicts with applicable air quality plans beyond those identified in the 2018 EIR or 2020 SEIR for the original project.

b. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Isabel Crossing Project

Construction

The Isabel Crossing Project would involve the construction of 39 fewer residential units and 92,823 square feet less commercial space than the project as considered in the 2020 SEIR. In addition, the proposed project would not include office space. Similar to the 2018 EIR and 2020 SEIR, with the implementation of mitigation measures AQ-1, AQ-2, and AQ-3 from the 2018 EIR and 2020 SEIR (included above), the proposed project's construction criteria pollutant impacts would be less than significant with mitigation incorporated. No new or substantially more severe significant effects would occur to air quality with the implementation of the proposed project.

Operation

Long-term operational emissions associated with the Isabel Crossing Project were estimated using the California Emissions Estimator Model (CalEEMod) version 2022.1. During operations, the proposed uses would result in emissions of criteria pollutants from area sources (i.e., consumer products, architectural coatings, and landscaping equipment), energy sources (natural gas usage), and mobile sources (vehicle use). Table 2 below compares the proposed Isabel Crossing Project to the original project planned for the Isabel Crossing Parcels under the INSP. Operational emissions of

the proposed project would be less than the original project for nitrogen oxide, carbon monoxide (CO), particulate matter with a diameter no more than 10 microns, and particulate matter with a diameter no more than 2.5 microns because there would be less commercial retail space and no office land uses the proposed project, resulting in a corresponding decrease in emissions sources, such as vehicle trips. Reactive organic gas (ROG) emissions would increase three pounds per day compared to the original project since the proposed project would increase the total usable residential square footage, which would increase consumer product consumption. As shown in Table 3.1-7 in the 2020 SEIR, the original project's increase in ROG emissions compared to existing (2013) conditions would be 7 pounds per day below the BAAQMD threshold. Therefore, with the proposed Isabel Crossing Project increasing emissions by three pounds per day, emissions from the Isabel Crossing Project would be four pounds per day below the BAAQMD threshold. Therefore, the proposed Isabel Crossing Project would result in no new or more severe impacts related to air quality impacts and criteria pollutant emissions beyond those identified in the 2018 EIR and 2020 SEIR for the original project.

Isabel Crossing and No Net Loss Specific Plan Amendment Project

Table 2 provides the net air quality emissions associated with the potential future development that could occur as a result of the proposed land use designation change of the BART Parcel and the future land use designation change of the Comcast Parcels, when combined with the Isabel Crossing Project and existing and planned development. The overall project would result in an increase of residential units and a decrease of commercial office space compared to the original INSP. Operational emissions would be lower for ROG, nitrogen oxide, CO, particulate matter with a diameter no more than 10 microns, and particulate matter with a diameter no more than 2.5 microns as compared to the original INSP. This is due to the reduced commercial office space, leading to a corresponding decrease in emissions sources, such as vehicle trips. Additionally, operational emissions would decrease due to reduced consumption of consumer products and natural gas energy consumption. As a result, the potential development of the No Net Loss Parcels when combined with the proposed development of the Isabel Crossing Parcels would not lead to a new or more severe impact related to air quality and criteria pollutant emissions beyond those already identified in the 2018 EIR and 2020 SEIR for the original project.

Table 2 Isabel Crossing Project Operational Emissions

Sources	Average Daily Emissions (lbs./day)				
	ROG	NO_X	CO	PM_{10}	$PM_{2.5}$
Isabel Crossing Project					
2040 With Adopted INSP					
Mobile	12	30	337	164	42

Isabel Crossing Emissions	**60**	**29**	**327**	**139**	**36**
Net Difference From Adopted INSP on the Isabel Crossing Parcels	**3**	**(9)**	**(63)**	**(26)**	**(7)**
No Net Loss Specific Plan Amendment Project					
Decrease of 1,531,486 sf of Office Space					
Mobile	(27)	(27)	(261)	(100)	(26)
Area	(39)	(<1)	(33)	(<1)	(<1)
Energy	(1)	(10)	(8)	(1)	(1)
Total Emissions	**(67)**	**(37)**	**(302)**	**(101)**	**(26)**
Increase of 1,431 Residential Units[1]					
Mobile	16	16	153	58	15
Area	37	1	40	<1	<1
Energy	<1	7	3	1	1
Total Emissions	**54**	**24**	**197**	**59**	**16**
Net Difference From Adopted INSP on the No Net Loss Parcels	(13)	(13)	(105)	(42)	(10)
Isabel Crossing and No Net Loss Specific Plan Amendment Project					
Total Net Emissions from the Isabel Crossing and No Net Loss Specific Plan Amendment Project Compared with the Adopted INSP	**(10)**	**(22)**	**(168)**	**(68)**	**(17)**

[1] The increase of 1,431 residential units from the No Net Loss Parcels accounts for the overall reduction in housing units in the INSP area from the proposal Isabel Crossing Project and other planned and constructed projects in the INSP area.

Lbs./day = pounds per day; ROG = reactive organic gases; NO_X = nitrogen oxide; CO = carbon monoxide; PM_{10} = particulate matter with a diameter no more than 10 microns; $PM_{2.5}$ = particulate matter with a diameter no more than 2.5 microns; SO_X = sulfur oxide BAAQMD = Bay Area Air Quality Management District.

Notes: Parenthetical values are negative numbers and are subtracted from the total emissions rather than added.

Source: Average daily and annual emissions. See Table 2.5 "Operations Emissions by Sector, Unmitigated". See CalEEMod worksheets in Appendix B. Numbers may not add up due to rounding.

c. Would the project expose sensitive receptors to substantial pollutant concentrations?

The proposed project would involve the development of land uses and associated sensitive receptors near roadways that could emit substantial pollutant concentrations, similar to the original project analyzed in the 2018 EIR and 2020 SEIR. Implementation of the Isabel Crossing and No Net Loss Specific Plan Amendment Project would reduce the vehicle miles traveled (VMT) and average daily vehicle trips compared to the original project. As shown in Table 2, the proposed project would emit less CO emissions from mobile sources compared to the original project. Therefore, no new or significant increase in CO exposure would be anticipated under the proposed project.

Construction and operational activity from the proposed project would generate TAC emissions that could expose new and existing sensitive receptors to substantial pollutant emissions. Without project specific details, such as construction equipment, building footprints, and construction schedule, it would be speculative to determine construction impacts on sensitive receptors. With the implementation of mitigation measures AQ-1, AQ-2, and AQ-4, provided above, the proposed project would reduce construction TAC emissions and exposure to sensitive receptors. However, project-specific conditions may prevent the reduction of health risk below adopted thresholds; therefore, construction impacts would be significant and unavoidable, similar to the findings of the 2018 EIR and 2020 SEIR. Development under the proposed project may involve new stationary sources of TACs and could expose sensitive receptors to TAC emissions. Stationary sources would be subject to the permit authority of BAAQMD. Consistent with the 2020 SEIR, project-specific details could preclude the reduction of health risk below BAAQMD thresholds. However, no more stationary sources of TACs are proposed than under the original project. Therefore, there would be no new or more severe impacts related to exposure of sensitive receptors to air pollution beyond those identified in the 2018 EIR or 2020 SEIR for the original project.

d. Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The proposed project would not involve the use of construction equipment or materials that were not accounted for in the original project and analyzed in the SEIR. The proposed project would occur within the same proximity to existing residences as the construction activities anticipated for the original project and the proposed project would involve similar operational uses to those evaluated for the original project in the 2018 EIR and 2020 SEIR. Therefore, no new odors beyond those analyzed in the 2018 EIR and 2020 SEIR for the original project would result from the proposed project.

4.4 Biological Resources

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:					
a.	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	Pages 3.7-26 through 3.7-35 of the 2018 EIR	No	No	Yes
b.	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	Pages 3.7-35 through 3.7-37 of the 2018 EIR	No	No	Yes
c.	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	Pages 3.7-37 through 3.7-39 of the 2018 EIR	No	No	Yes
d.	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	Page 3.7-39 of the 2018 EIR	No	No	N/A

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
e.	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	Page 3.7-40 of the 2018 EIR	No	No	Yes
f.	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	Page 3.7-39 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to biological resources were analyzed on pages 3.7-26 through 3.7-40 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to biological resources from the 2018 EIR. The 2018 EIR determined that impacts related to adverse effects on special-status species, riparian habitat, sensitive natural communities, federally-protected wetlands and other waters regulated under Section 404 of the Clean Water Act, and the potential to conflict with local policies or ordinances protecting biological resources would be less than significant with mitigation. The 2018 EIR determined that impacts related to the movement of wildlife species would be less than significant and there would be no impact regarding the potential to conflict with the provisions of an adopted conservation plan.

The 2018 EIR determined that operational impacts to special-status wildlife would be less than significant with implementation of INSP policies. The 2018 EIR determined that construction associated with future development in the INSP Planning Area could affect special-status plant and wildlife species; however, impacts would be less than significant with the implementation of INSP policies and the following mitigation measures:

MM-BIO-1: Prepare and implement a salvage, relocation, or propagation and monitoring plan for special-status plant species.

If impacts to special-status plant species are unavoidable, prepare and implement a salvage, relocation, or propagation and monitoring plan for special-status plant species. If a protocol-level botanical survey reveals the presence of special-status plant species in the Planning Area, all directly affected areas of special-status plants will be documented by a qualified botanist or ecologist retained by project proponents prior to issuance of grading permits, consistent with Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities State of California (CDFW, 2009). Documentation will include density and percent cover; key habitat characteristics, including soil type, associated species, hydrology, and topography; and photographs of preconstruction conditions. Impacts to rare (California Rare Plant Rank 1 and 2) native plant species will be avoided where feasible. If impacts to such species are unavoidable, the

project proponent will notify USFWS and/or CDFW and a qualified botanist or restoration ecologist will prepare a salvage, relocation, or propagation and monitoring plan in coordination with USFWS and/or CDFW prior to construction to address affected special-status plant species. At least two surveys by a qualified botanist or ecologist per monitoring year.

- At least 80 percent of the planted area must support vegetation composition and density consistent with reference population conditions.
- At least 80 percent of the planted area must support target species amounts similar to reference feature conditions.
- A minimum of five consecutive years of monitoring to ensure success criteria are met
- Remedial actions to restore intended ecological function of planted areas that fail to meet the success criteria for three consecutive years.

MM-BIO-2: Avoid nesting birds where feasible.

Proponents (or their contractors) of specific projects under the proposed Plan shall conduct construction activities outside the bird nesting season (February 1 to August 31) to the extent feasible. If construction initiation is unavoidable during this time, the project proponent or its contractor will retain a qualified wildlife biologist with demonstrated nest-searching experience to conduct preconstruction surveys for nesting birds (including raptors, but excluding burrowing owl) within 300 feet and including the near-term or longer-term improvements environmental footprints. Adjacent lands outside the development footprints will be scanned with binoculars from the limit of ground-disturbance and publicly accessible areas. Preconstruction surveys will occur no more than three days prior to the onset of ground-disturbing activities (including clearing, grubbing, and staging) at each development area. If active nests are found in the development footprints, the biologist will establish a no-disturbance buffer around the nest and mark the buffer perimeter with high visibility fencing, flagging, or pin flags. The size of the buffer will be based on the species' sensitivity to disturbance and planned work activities in the vicinity; typical buffer sizes are 250 feet for raptors and 50 feet for other birds. The buffer will remain in place until the nest is no longer active, as determined by the biologist. Buffers for any nests found outside but within 300 feet of the development sites will be established based on the biologist's best professional judgment whether the work would result in nest abandonment. If a lapse in construction activities of 15 days or longer at a previously surveyed environmental footprint occurs, another preconstruction survey will be conducted. If structure demolition activities cannot occur outside of the nesting season, the project proponent or its contractor will remove inactive nests from the structure to be demolished and install nest exclusion measures (e.g., fine mesh netting, panels, or metal projectors) outside of the nesting season. All exclusionary devices will be monitored and maintained throughout the breeding season to ensure that they are successful in preventing the birds from accessing the cavities or nest sites. No more than three days prior to structure demolition activities, a qualified biologist will conduct a preconstruction survey of all potential nesting habitat on the structures to be demolished/modified and the surrounding areas for the presence of active

nests. If active nests are found on the structures or in the affected area, then demolition/modification activities will not proceed until the biologist verifies that all nests on the structures are inactive. After all surveys and/or nest deterrence activities are completed at each development footprint, the biologist will complete a memorandum detailing the survey effort and results and submit the memorandum to the project proponent within seven days of survey completion.

MM-BIO-3: Avoid burrowing owl nesting where feasible.

Prior to any construction activity planned during the fall and winter non-nesting season (September 1 through January 31) or at any time during the construction process, proponents of projects proposed within the Planning Area will retain a qualified wildlife biologist to conduct a preconstruction survey for burrowing owls. Surveys will be conducted at each area of suitable habitat that will be disturbed no more than seven days prior to ground-disturbing activities and will cover all suitable burrowing owl habitat subject to disturbance pursuant to CDFW's Staff Report on Burrowing Owl Mitigation (California Department of Fish and Game, 2012). If any burrowing owls are found within the disturbance area, the project proponent will notify CDFW and will proceed under CDFW direction. If construction is planned to occur during the nesting season (February 1 through August 31), the project proponent will retain a qualified wildlife biologist to conduct a breeding season burrowing owl survey in the year prior to construction. The survey will be conducted to determine if there is a breeding pair within approximately 500 feet of each development footprint, unless the biologist determines that a smaller survey buffer around the construction footprint is warranted based on preexisting background disturbance and conditions. Survey visits will be timed in accordance with CDFW guidelines (California Department of Fish and Game, 2012). This will provide the project team advance notice of nesting owls in the development area and allow ample time to discuss appropriate avoidance measures with CDFW. In addition, preconstruction surveys will be conducted no more than seven days prior to ground disturbance in all areas of the development footprint supporting burrowing owl habitat. If the biologist identifies the presence of a burrowing owl nest in an area scheduled to be disturbed by construction, a 660-foot no-activity buffer will be established and maintained around the nest while it is active. Surveys and buffer establishment will be performed by qualified wildlife biologists, and buffers will be coordinated with CDFW by contacting the appropriate CDFW personnel, and will be subject to CDFW review and oversight.

MM-BIO-4: Avoid tricolored blackbird breeding habitat where feasible.

If construction activities in or within 300 feet of freshwater emergent wetland habitat occur during the breeding season (February 1 through August 31), the project proponent will retain a qualified biologist to conduct surveys for the presence of a tricolored blackbird nesting colony or nests. If an active nest colony or nest is observed by the qualified biologist, then a no-disturbance buffer of 250 feet will be established until the end of the breeding season or until the nesting colony or nest is determined inactive by the biologist. Nest buffers may be reduced if site-specific conditions reduce the possibility of near-term or longer-term improvements disturbance, as determined by the qualified biologist in coordination with CDFW.

MM-BIO-5: Avoid western pond turtle where feasible.

Prior to the start of construction within western pond turtle habitat (i.e., any undeveloped areas within 400 feet of riverine aquatic habitat, freshwater emergent wetlands, vernal pools, or seasonal wetlands), proponents of proposed projects within the Planning Area shall retain a biologist approved by the CDFW to survey for western pond turtles. Surveys will be conducted at each habitat area no more than seven days prior to the initiation of ground disturbance at that location. If preconstruction surveys identify active nests, the biologist will establish 50-foot no-disturbance buffer zones around each nest using temporary orange construction fencing with a four-inch-tall gap below the fence. The fencing will be permeable to young turtles and allow them to move away from the nest following hatching. The buffer zones and fencing will remain in place until the biologist has confirmed that the young have left the nest. If non-nesting pond turtles are found in the footprint, the biologist will remove and relocate them to suitable habitat outside the environmental footprint. Relocation sites will be subject to CDFW approval.

MM-BIO-6: Avoid San Joaquin kit fox and American badger where feasible.

Within one year but no less than three months prior initiating construction, proponents of specific projects within the Planning Area will retain qualified biologists to identify potential kit fox and badger dens in the development footprint and surrounding 200 feet. The biologist will prepare a report summarizing the survey observations and results, including maps depicting the locations of potential badger dens and, if possible, occupancy. The report will be submitted to the project proponent and CDFW. Prior to construction, the project proponent will retain qualified biologists to implement preconstruction surveys of previously identified potential kit fox and badger dens to determine if they are natal kit fox or American badger dens no less than 14 days and no more than 30 days before the initiation of construction at each development footprint (e.g., one week ahead of the construction crew for linear components). Construction activities will not occur within 100 feet of a potential den during the natal period (February 1 to September 30). If a known den or natal den is present within the permanent construction footprint or within 200 feet of the construction footprint during the natal period (100-foot buffer during the non-natal period), the kit fox or badger will be excluded outside of the natal period (from November 1 to January 31). A summary report will be prepared by the biologists and submit to the project proponent and CDFW following completion of all kit fox or badger avoidance and exclusion activities.

MM-BIO-7: Avoid California tiger salamander, western spadefoot and California red-legged frog where feasible.

Proponents of specific projects within the Planning Area shall retain a USFWS and/or CDFW approved biologist (as appropriate) to identify and flag (pin flags or 4-foot lath) all suitable aquatic habitat for California tiger salamander, western spadefoot and California red-legged frog outside of but adjacent to development footprints and ground-disturbance areas prior to staging, vegetation clearing, grading, or other construction activities. The project proponent or its contractor will protect habitat areas by installing orange exclusion and erosion control fencing at the maximum practicable distance from the work site or, if feasible, at least 500 feet

from the aquatic habitat edge, wet or dry, to make it easily visible by construction crews. A qualified biologist will conduct a preconstruction survey each morning before construction activities begin and continue to monitor ground-disturbing construction activities where suitable habitat occurs during all phases of construction to remove any California tiger salamander, western spadefoot and California red-legged frogs found in the development footprint. Individual salamanders and frogs will be moved immediately to a relocation site that is a minimum of 330 feet from the construction boundary. The relocation site will be determined in coordination with USFWS and/or CDFW prior to the commencement of construction activities. Construction activities near drainages and wetland complexes identified as potential movement corridors shall take place between July 1 and October 1, when the California tiger salamander, western spadefoot and California red-legged frog are least likely to be present in the development area. To discourage California tiger salamander, western spadefoot and California red-legged frogs from entering the improvements areas via ditches, the ditches will be equipped with lightweight, one-way flow gates.

MM-BIO-8: Avoid Callippe silverspot butterfly where feasible.

Prior to construction, proponents of specific projects within the Planning Area will retain a qualified botanist or biologist with experience in identifying Viola pedunculata, the host plant for Callippe silverspot butterfly, to identify and flag (with pin flags or 4-foot lath) any Viola pedunculata individuals during its blooming season (February to April) when the species is readily identifiable in and within 50 feet of the near-term and longer-term improvements that will affect California annual grassland. The locations of Viola pedunculata outside of the ground disturbance area of the near-term or longer-term improvements will be included on grading plans and avoided by construction personnel. The biologist will document the number and density of host plants that are unavoidable in development footprints. This information shall be compiled in a report and submit to USFWS prior to initiation of ground disturbance. The project proponent or its contractor will adhere to the following host plant avoidance measures:

- No herbicide application will occur within 100 feet of host plant populations. Spot application to cut stumps, frilled stems, or injection into stems is acceptable. No broadcast herbicide applications will be used.
- Cut trees that are removed in the vicinity of host plants will be hand carried rather than dragged to disposal areas.
- Avoid or minimize the removal of host plant, Viola pedunculata.
- Avoid work in suitable habitat during the flight and mating season (mid-May to mid-July) to the extent feasible.

MM-BIO-9: Avoid roosting bats where feasible.

If tree removal and trimming cannot be conducted between September 15 and October 30, proponents of projects implemented under the proposed Plan will retain a qualified biologist to examine trees to be removed or trimmed for suitable bat roosting habitat no more than 2 weeks before removal and trimming. High-quality habitat features (large tree cavities, basal hollows, loose or peeling bark,

larger snags, palm trees with intact thatch, etc.) will be identified and the area around these features searched for bats and bat signs (e.g., guano, culled insect parts, urine staining, etc.). Mixed willow riparian scrub and stands of mature broadleaf trees should be considered potential habitat for solitary foliage-roosting bat species. Passive monitoring using full spectrum bat detectors may be needed if identification of bat species is required. Survey methods will be discussed with CDFW prior to the start of surveys. Measures to avoid and minimize impacts on sensitive bats species will be determined in coordination with CDFW and may include the following:

- Tree removal will be avoided between April 1 and September 15 (the maternity period) to avoid effects on pregnant females and active maternity roosts (whether colonial or solitary).
- All tree removal will be conducted between September 15 and October 30, which corresponds to a time period when bats have not yet entered torpor or would be caring for nonvolant (non-flying) young.
- Each tree will be removed in pieces rather than felling the entire tree.
- If a maternity roost is located, whether solitary or colonial, that roost will remain undisturbed until September 15 or a qualified biologist has determined the roost is no longer active.
- If avoidance of nonmaternity roost trees is not possible, and tree removal or trimming must occur between October 30 and September 15, qualified biologists will monitor tree trimming and removal. If possible, tree trimming and removal should occur in the late afternoon or evening when it is closer to the time that bats would normally arouse. Prior to removal and trimming, each tree will be shaken gently and several minutes should pass before felling trees or limbs to allow bats time to arouse and leave the tree. The biologists will search downed vegetation for dead and injured bats. The presence of dead or injured bats that are species of special concern will be reported to CDFW. The biologist will prepare biological monitoring report, which will be provided to the project proponent and CDFW.

The 2018 EIR determined that changes resulting from future development under the INSP would result in a potentially significant impact on riparian vegetation. However, with implementation of the proposed Plan policies, and mitigation measures listed below, this impact would be reduced to a less than significant level:

MM-BIO-10: Avoid and protect riparian habitat during construction.

Proponents of specific projects under the proposed Plan will ensure that a qualified resource specialist (i.e., biologist, botanist, or ecologist) will clearly identify riparian habitat to be preserved abutting the development area and outside of the direct construction area with high-visibility construction fencing or markers (e.g., lathe or pin flags) before site preparation. Construction will not encroach upon sensitive natural communities identified by the resource specialist. The resource specialist will use the project's verified wetland delineation, soils data, and land cover data to confirm the location of riparian habitat boundaries based on existing conditions at the time of the avoidance marking. Exclusion fencing or markers will be installed before construction activities are initiated, and the fencing will be maintained

throughout the construction period. No construction activity, traffic, equipment, or materials will be permitted in fenced sensitive natural community areas. Exclusion fencing and markers will be removed following completion of construction activities. All conditions imposed by State and federal permits for individual improvements will be clearly identified in the construction plans and specifications and monitored during and after construction to ensure compliance.

MM-BIO-11: Compensate for loss of riparian habitat.

For direct effects on woody riparian trees that cannot be avoided, proponents of specific projects under the proposed Plan will compensate for the loss of riparian habitat to ensure no net loss of habitat functions and values. Compensation ratios will be based on site-specific information and determined through coordination with the appropriate State and federal agencies during the permitting process. At a minimum, the compensation ratio will be 2:1 (e.g., two acres restored/created/enhanced or credits purchased for every 1 acre removed) for permanent impacts and 1:1 for temporary impacts (where riparian habitat will regenerate to pre-activity character within one year). Compensation may be a combination of offsite restoration or mitigation credits. The project proponent or its contractor will develop a restoration and monitoring plan that describes how riparian habitat will be enhanced or recreated and monitored over at least 5 years, or as determined by the appropriate State and federal agencies. If the project proponent identifies suitable onsite areas (adjacent to the permanent construction footprint) that are outside the development footprint and chooses to compensate onsite or in the project's vicinity, a revegetation plan will be prepared. The revegetation plan will be developed prior to the removal of existing riparian vegetation and will be conducted onsite or in the near-term or longer-term improvements vicinity to the extent feasible; however, mitigation site selection will avoid areas where future development or maintenance are likely. The revegetation plan will be prepared by a qualified botanist or restoration specialist with experience in riparian restoration and reviewed by the appropriate agencies. The revegetation plan will specify the planting stock appropriate for each riparian land cover type and each mitigation site, ensuring the use of genetic stock from the corresponding development area by project. The plan will employ the most successful techniques available at the time of planting. Success criteria will be established as part of the plan and will include a minimum of 70 percent revegetation success after three years, 80 percent revegetation success at the end of five years, and 75 percent vegetative coverage after five years. The project proponent or its contractor will retain a qualified botanist, restoration ecologist, or biologist with experience in riparian restoration to monitor the plantings as necessary for five years. The project proponent or its contractor will be responsible for maintaining the plantings, including managing invasive plants (as defined by the California Invasive Plant Council) and other weeds, and implementing irrigation and plant protection if necessary. The project proponent or its contractor will submit annual monitoring reports to the regulatory agencies issuing permits related to habitat effects, including CDFW, USACE, and USFWS. Replanting will be necessary if success criteria are not met, and replacement plants subsequently will be monitored and maintained to meet the success criteria. The riparian habitat

mitigation will be considered successful when the sapling trees established meet the success criteria, the habitat no longer requires substantial active management, and vegetation is arranged in groups that, when mature, replicate the area, natural structure, stratification, and species composition of similar riparian habitats in the region.

The 2018 EIR determined that changes resulting from future development under the INSP would result in a potentially significant impact on wetlands and other waters; however, impacts would be less than significant with implementation of INSP policies and the following mitigation measures:

MM-BIO-12: Avoid and protect wetlands during construction.

Proponents of specific projects under the proposed Plan will ensure that a qualified resource specialist (i.e., wetland biologist, ecologist, or soil scientist) will clearly identify wetland areas to be preserved abutting the development area and wetland areas outside of the direct construction area with high-visibility construction fencing or markers (e.g., lathe or pin flags) before site preparation. Construction will not encroach upon jurisdictional wetlands identified by the resource specialist. The resource specialist will use the development footprint and verified wetland delineation to confirm the location of wetland boundaries based on existing conditions at the time of the avoidance marking. Exclusion fencing or markers will be installed before construction activities are initiated, and the fencing will be maintained throughout the construction period. No construction activity, traffic, equipment, or materials will be permitted in fenced wetland areas. Exclusion fencing and markers will be removed following the completion of construction activities. All conditions imposed by the projects' State and federal permits will be implemented as part of the construction, with ultimate enforcement oversight by applicable State and federal agencies. The conditions will be clearly identified in the construction plans and specifications and monitored during and after construction to ensure compliance.

MM-BIO-13: Compensate for impacts on jurisdictional wetlands and non-wetland waters of the United States (aquatic resources) prior to near-term and longer-term improvements impacts during construction.

If projects impact jurisdictional wetlands and non-wetland waters, proponents of these specific projects under the proposed Plan will develop an aquatic resource (wetlands and non-wetland waters of the United States) mitigation plan, subject to approval by the USACE, which will ensure no net loss of wetlands from development impacts. The plan will detail the amount and type of wetlands (based on the projects' verified wetland delineation) that will be compensated for (through preservation, creation, or restoration) for impacts on existing wetlands and non-wetland waters of the United States (aquatic resources), and outline the monitoring and success criteria for the compensation wetlands and non-wetland waters of the United States. Additional enhancement options include fish barrier removal, riparian restoration, floodplain restoration, and streambank layback to improve overall ecologic function and connectivity of wetland and non-wetland waters. Enhancement sites will be located as near the impact location as possible but, in the event that local enhancement opportunities are not available, such activities will occur within the same stream system or watershed to provide improved ecologic

function and connectivity of wetlands and non-wetland waters affected by development activities.

Monitoring and success criteria applicable to created or restored wetlands will require the following:

- At least two surveys by a qualified wetland biologist, botanist, or ecologist per monitoring year.
- At least 80 percent of the created or restored features support vegetation consistent with reference feature conditions.
- At least 80 percent of the created or restored features support hydrologic regimes similar to reference feature conditions.
- A minimum of five consecutive years of monitoring to ensure success criteria are met.
- Remedial actions to restore intended ecological function of created or restored features that fail to meet the success criteria for three consecutive years.
- Once the plan is approved, the project proponent will implement the aquatic resource compensation measures prior to the initiation of development construction. The project proponent will be responsible for funding compensatory mitigation, monitoring of the created or restored features per the mitigation plan, and any remedial actions necessary. All conditions that are attached to the State and federal permits will be implemented as part of the development project, with ultimate enforcement oversight by applicable State and federal agencies. The conditions will be clearly identified in the construction plans and specifications and monitored during and after construction to ensure compliance.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. *Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

The 2018 EIR determined that operational impacts to special-status wildlife would be less than significant with implementation of INSP policies and construction associated with future development in the INSP Planning Area could affect special-status plant and wildlife species; however, impacts would be less than significant with the implementation of INSP policies and mitigation measures MM-BIO-1 through MM-BIO-9.

The biological resource assessment (BRA) (WRA 2023; included as Appendix C) prepared to assess current conditions on the Isabel Crossing Parcels determined that 12 protected species that were with potential to occur according to the 2018 EIR no longer have potential to occur, or are now unlikely to occur, on the Isabel Crossing Parcels. Unless otherwise specified below, the Isabel Crossing Parcels do not provide suitable habitat for these species:

- Big-scale balsamroot (*Balsamorhiza macrolepis*; California Rare Plant Rank 1B.2)
- Congdon's tarplant (*Centromadia parryi* ssp. *congdonii*; California Rare Plant Rank 1B.1): not observed in protocol-level surveys (October 2022), assumed absent
- Prostrate vernal pool navarretia (Navarretia prostrata; California Rare Plant Rank 1B.2)
- Callippe silverspot butterfly (*Speyeria callippe*; Federal Endangered): outside of known range, no serpentine soils are present that could support host plants
- Tricolored blackbird (*Agelaius tricolor*; State Threatened, CDFW Species of Special Concern)
- California tiger salamander (*Ambystoma californiense*; Federal Threatened, State Threatened)
- California red-legged frog (*Rana draytonii*; Federal Threatened, CDFW Species of Special Concern)
- Western pond turtle (*Actinemys marmorata*; CDFW Species of Special Concern)
- Townsend's big-eared bat (*Corynorhinus townsendii*; CDFW Species of Special Concern, WBWG High Priority): no suitable habitat
- Hoary bat (Lasiurus cinereus; WBWG Medium Priority): no suitable habitat
- American badger (*Taxidea taxus*; CDFW Species of Special Concern)
- San Joaquin kit fox (*Vulpes macrotis mutica*; Federal Endangered, State Threatened)

The BART Parcel is currently undeveloped, and may also provide suitable habitat for special-status species, similar to the Isabel Crossing Parcels, as noted above. The BART Parcel remains vacant grassland, with no substantial changes to the property having occurred since the 2018 EIR.

The Comcast Parcels are currently developed with commercial/office buildings and associated surface parking lots. The Comcast Parcels remain substantially unchanged since the 2018 EIR, with site changes limited to the growth of landscaped vegetation.

The proposed project would be entirely within the INSP Planning Area analyzed in the 2018 EIR for the original project. The project site is not located in a critical habitat for threatened or endangered species (USFWS 2022). The nearest critical habitat area for the California red-legged frog is approximately 0.2 miles northeast of the Comcast Parcels (USFWS 2022). The proposed Isabel Crossing Project would involve excavation for building foundations, associated utilities, and amenities such as a pool, which are not substantially different from expected projects discussed in the 2018 EIR. Future development of the BART and Comcast Parcels would result in a similar level of ground disturbance. The proposed level of disturbance and project footprint would not exceed what was analyzed in the 2018 EIR.

Mitigation measures MM-BIO-2 and MM-BIO-3 and INSP policies described in the 2018 EIR for the original project would continue to apply to the proposed Isabel Crossing Project. Due to the findings of the 2023 BRA, mitigation measures MM-BIO-1, -4, -5, -6, -7, -8, and -9 are not required for the proposed Isabel Crossing Project. Therefore, because under current conditions there are fewer biological resources on the site and because the level of disturbance would not be increased, the proposed project would not result in new or more severe impacts related to special-status wildlife beyond those identified in the 2018 EIR for the original project.

No specific development projects are proposed on the No Net Loss Parcels at this time. Future development would be required to adhere to applicable mitigation measures from the 2018 EIR as well as applicable INSP policies, including P-ENV-21, which requires that new development inventory sensitive resources and develop adequate measures to avoid or mitigate impacts for any parcel that may include special-status species. Therefore, the proposed project would not result in

new or more severe impacts related to protected wetlands beyond those identified in the 2018 EIR for the original project.

b. Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

The 2018 EIR determined that changes resulting from future development under the INSP would result in a potentially significant impact on riparian vegetation. However, with implementation of the INSP policies and mitigation measures MM-BIO-10 and MM-BIO-11, impacts would be less than significant.

As described in the 2023 BRA (WRA 2023; included as Appendix C), the Isabel Crossing project site does not contain any riparian habitat or other sensitive natural communities. Mitigation measures MM-BIO-10 and MM-BIO-11 are not required for the Isabel Crossing Project.

No specific development projects are proposed on the No Net Loss Parcels at this time. Future development would be required to adhere to INSP Policies P-ENV-21, which requires that new development inventory sensitive resources and develop adequate measures to avoid or mitigate impacts for any parcel that may include special-status species; and P-ENV-23, which requires that development activities either obtain compensatory habitat mitigation through the East Alameda County Conservation Strategy (EACCS), or use the mitigation prescribed in EACCS as a basis for near-term and longer-term mitigation and obtain coverage under separate applicable State and federal permits from CDFW and USFWS. Therefore, with implementation of relevant mitigation measures and INSP policies, there would be no new or more severe impacts to these biological resources beyond those identified in the 2018 EIR.

c. Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

The 2018 EIR determined that changes resulting from future development under the INSP would result in a potentially significant impact on wetlands and other waters; however, impacts would be less than significant with implementation of INSP policies and mitigation measures MM-BIO-12 and MM-BIO-13.

An aquatic resources delineation was prepared for the Isabel Crossing Parcels to assess current conditions and is included as Appendix D. During site visits in January and October 2022, qualified biologists observed and delineated a small stand of cattails (*Typha domingensis*) an obligate wetland plant species. Hydric soil indicator, surface water, and saturation indicators were met in October, meeting USACE's technical criteria for a wetland. On revisiting historic imagery, WRA determined that cattails were absent between 2008-2021, suggesting the wetland was created from a broken irrigation line; this human-made isolated wetland is unlikely to be federally jurisdictional. This feature is not adjacent to a stream or other water body and would therefore not be regulated by the CDFW. The Isabel Crossing Project would not require grading or ground disturbance that would substantially exceed that planned for the original project, and development intensity and building footprints would not exceed development discussed in the 2018 EIR for the original project.

If it is determined that the wetland is jurisdictional, INSP policies and mitigation measures described in the 2018 EIR would still apply to the proposed Isabel Crossing Project.

No specific development projects are proposed on the No Net Loss Parcels at this time; however, future development would be required to adhere to applicable mitigation measures from the 2018 EIR, and applicable INSP policies, including Policy P-ENV-21, which requires that new development inventory sensitive resources and develop adequate measures to avoid or mitigate impacts for any parcel that may include special-status species habitat; Policy P-ENV-25, which requires that project proponents or their contractors install exclusion fencing and erosion control measures prior to any ground disturbance within 50 feet of wetlands; and Policy P-ENV-26, which requires that construction within 300 feet of freshwater marsh or streambank habitat take place during the non-breeding season for tricolored blackbirds. Therefore, with implementation of relevant mitigation measures and INSP policies, there would be no new or more severe impacts to protected wetlands beyond those identified in the 2018 EIR.

d. Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

The 2018 EIR determined that due to existing human activity and visitation, and existing human and vehicle noise, the INSP Planning Area does not likely serve as a habitat corridor and development in the INSP Planning Area is unlikely to interfere with wildlife species movement, therefore, impacts would be less than significant.

The Isabel Crossing and No Net Loss Parcels are located entirely within the INSP Planning Area analyzed in the 2018 EIR for the original project. The proposed Isabel Crossing Project would involve excavation for building foundations, associated utilities, and amenities such as a pool, which are not substantially different from the level of development analyzed in the 2018 EIR. No specific development projects are proposed on the No Net Loss Parcels at this time, however, development from the proposed Isabel Crossing Project and future development that would be allowed by the No Net Loss Specific Plan Amendment Project would not exceed the development footprint identified in the INSP and analyzed in the 2018 EIR. Therefore, the proposed project would not result in new or more severe impacts related to special-status wildlife beyond those identified in the 2018 EIR for the original project.

e. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

The 2018 EIR determined that the removal of regulated trees without a permit or appropriate compensation would result in a significant impact, however, impacts would be less than significant with implementation of INSP Policy P-ENV-28, which requires project proponents to compensate for tree removal during construction, including obtaining a tree removal permit; and developing a tree avoidance, minimization, and replacement plan.

The proposed project is entirely within the INSP Planning Area analyzed in the 2018 EIR for the original project. The City of Livermore Tree Preservation Ordinance in Section 12.20 of the Livermore Municipal Code protects native tree species with a trunk circumference of 24 inches or more and non-native trees with a trunk circumference of 60 inches or more. The Isabel Crossing Parcels include trees that have not been identified as native or non-native, but have a trunk circumference greater than 24 inches; these trees are located along the west side of the project site along Shea Center Drive. If these trees are removed, the City's tree preserveration ordinance would be applicable to the proposed project, and INSP Policy P-ENV-28 would continue to apply. No specific development projects are proposed on the No Net Loss Parcels at this time; however, future

development would be required to adhere to applicable mitigation measures from the 2018 EIR, and applicable INSP policies, including Policies P-ENV-21, which requires that new development inventory sensitive resources and develop adequate measures to avoid or mitigate impacts for any parcel that may include special-status species habitat; and P-ENV-28, which requires consistency with the City of Livermore's Street Tree and Tree Preservation Ordinance Chapter 12.20. Therefore, the proposed project would not result in new or more severe impacts related to conflicts with local policies and ordinances beyond those identified in the 2018 EIR for the original project.

f. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The 2018 EIR determined that the INSP Planning Area is not located within an adopted conservation plan area; therefore, there would be no impact regarding the potential to conflict with adopted conservation plans.

The proposed project is entirely within the INSP Planning Area analyzed in the 2018 EIR for the original project, and the Isabel Crossing and No Net Loss Parcels are not located on any new Natural Wildlife Conservation Plan or California Natural Community Conservation Plan areas (CDFW 2023a, 2023b).

The proposed project is also covered by the East Alameda County Conservation Strategy (2011) which includes the City of Livermore. As described in the 2018 EIR, projects within the INSP Planning Area are requried to be consistent with this Conservation Strategy through INSP Policy P-ENV-23. Therefore, the proposed project would not conflict with this plan. The proposed project would not result in new or more severe impacts related to adopted conservation plans beyond those identified in the 2018 EIR for the original project.

4.5 Cultural Resources

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:					
a.	Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	Pages 3.13-14 through 3.13-15 of the 2018 EIR	No	No	Yes
b.	Cause a substantial adverse change in the significance of an archaeological pursuant to §15064.5?	Pages 3.13-16 of the 2018 EIR	No	No	Yes
c.	Disturb any human remains, including those interred outside of formal cemeteries?	Page 3.13-18 through 3.13-19 of the 2018 EIR	No	No	Yes

Analysis in Previous Environmental Documents

Impacts to cultural resources were analyzed on pages 3.13-14 through 3.13-19 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to cultural resources from the 2018 EIR. The 2018 EIR determined that the implementation of the Isabel Neighborhood Plan would cause a substantial change to the significance of a historical resource and impacts would be significant and unavoidable even with implementation of INSP policies. Impacts to archeological and paleontological resources were determined to be less than significant. Impacts to human remains were determined to be less than significant with implementation of P-ENV-37, which specifies the protocol in the event of the discovery of human remains, including ceasing excavation, contacting the county coroner, and contacting the Native American Heritage Commission if necessary.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?

b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

c. Would the project disturb any human remains, including those interred outside of formal cemeteries?

Cultural resources are site-specific. The project would involve construction of a mixed-use development on the Isabel Crossing Parcels and a land use designation change to allow for future residential uses on the No Net Loss Parcels. Previous and current efforts to identify cultural resources within the Isabel Crossing Parcels did not result in the identification of historic built environment resources, archaeological resources, or human remains. Records search results did not indicate the presence of recorded cultural resources within the Isabel Crossing or No Net Loss Parcels. The Isabel Crossing Project would involve significant excavation for building foundations, associated utilities, and amenities such as a pool, which are not substantially different from expected projects discussed in the 2018 EIR. However, background and archival research as well as results from a negative Sacred Lands File and records search conducted for this project in September and October 2023 indicate that the area is not sensitive to containing subsurface archaeological resources or human remains. Future development of the No Net Loss Parcels would result in similar levels of ground disturbance to the Isabel Crossing Project. Future development on the No Net Loss Parcels would be required to comply with INSP Policy P-ENV-37, which requires a project-level cultural resources study. Both the Isabel Crossing Project and future development of the No Net Loss Parcels would be required to comply with INSP Policies P-ENV-37 and P-ENV-40, which address potential impacts to archaeological resources and human remains respectively. Therefore, the proposed project would not result in new or more severe impacts related to cultural resources beyond those identified in the 2018 EIR for the original project.

4.6 Energy

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	Pages 3.4-22 through 3.4-29 of the 2018 EIR Pages 3.3-24 through 3.3-31 of the 2020 SEIR	No	No	N/A
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	N/A	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to energy were analyzed on pages 3.4-22 through 3.4-29 of the 2018 EIR and pages 3.3-24 through 3.3-31 of the 2020 SEIR. Energy impacts were determined to be less than significant in the 2018 EIR and the 2020 SEIR.

The following describes the analysis included in the 2018 EIR and 2020 SEIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. *Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?*

b. *Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?*

The 2018 EIR and 2020 SEIR determined that the original project would not result in the unnecessary consumption of energy resources.

As discussed in Section 4.14, *Population and Housing*, the proposed Isabel Crossing Project would result in fewer residents on the Isabel Crossing Parcels than the original project and would not exceed the commercial or office space planned for the original project. Development facilitated by the proposed and future land use designation changes on the No Net Loss Parcels would have the potential to increase the number of residential units compared with the INSP; however, the commercial and office space would be reduced. The proposed Isabel Crossing Project, as well as

future development of the No Net Loss Parcels, would not involve the use of unusual construction equipment or materials that were not accounted for in the original project and analyzed in the 2018 EIR and 2020 SEIR. Similar to the original project, the proposed Isabel Crossing Project and future development of the No Net Loss Parcels would be required to comply with applicable State and local energy efficiency, renewable energy, green building, water conservation, and solid waste diversion plans and requirements for new development. The proposed project would be required to comply with the policies in the INSP that encourage renewable energy production, bicycle and pedestrian trips, and carpooling. The proposed project would therefore result in no new or more severe impacts related to wasteful, inefficient, or unnecessary consumption of energy resources; or the potential to conflict with state or local plans for renewable energy or energy efficiency beyond that identified in the 2018 EIR or 2020 SEIR for the original project.

4.7 Geology and Soils

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
1. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?	Page 3.12-15 of the 2018 EIR	No	No	N/A
2. Strong seismic ground shaking?	Pages 3.12-15 through 3.12-16 of the 2018 EIR	No	No	N/A
3. Seismic-related ground failure, including liquefaction?	Page 3.12-16 of the 2018 EIR	No	No	N/A
4. Landslides?	Pages 3.12-16 through 3.12-17 of the 2018 EIR	No	No	N/A
b. Result in substantial soil erosion or the loss of topsoil?	Pages 3.12-17 through 3.12-18 of the 2018 EIR	No	No	N/A
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	Page 3.12-18 of the 2018 EIR	No	No	N/A

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
d.	Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	Pages 3.12-18 through 3.12-19 of the 2018 EIR	No	No	N/A
e.	Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	Page 3.12-19 of the 2018 EIR	No	No	N/A
f.	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	Page 3.13-17 through 3.13-18 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to geology and soils were analyzed on pages 3.12-15 through 3.13-18 of the 2018 EIR. Impacts to paleontological resources were analyzed on pages 3.13-17 through 3.13-18 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to geology and soils from the 2018 EIR. The 2018 EIR determined that seismic activity, unstable soil, expansive soils, and paleontological resources would be less than significant and that there would be no impact regarding soils incapable of supporting septic tanks.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a.1 Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

The 2018 EIR determined that there are no known active faults within the INSP planning area; therefore, there would be no impact resulting from the rupture of a known earthquake fault. Because the Isabel Crossing and No Net Loss Parcels are entirely within the INSP Planning Area

considered under the 2018 EIR, the proposed project would result in no new or more severe impacts beyond those identified in the 2018 EIR for the original project.

a.2 Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?

The 2018 EIR determined that compliance with existing CBC requirements, Caltrans standards, and standard industry practices would reduce potential impacts from ground shaking to the extent feasible and impacts would be less than significant.

Because the Isabel Crossing and No Net Loss Parcels are entirely within the INSP Planning Area considered under the 2018 EIR, the proposed project would result in no new or more severe impacts beyond those identified in the 2018 EIR for the original project. The proposed project would increase residential density and decrease commercial/office space compared with development planned for the INSP. Therefore, the proposed project would not result in new or more severe impacts from risk of loss, injury, or death related to seismic ground shaking risks beyond those identified in the 2018 EIR.

a.3 Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?

The 2018 EIR determined that in areas of moderate risk of liquefaction where buildings or roadways would be constructed, impacts from ground failure resulting from liquefaction would be addressed through site-specific geotechnical studies prepared in accordance with CBC requirements or Caltrans standards and standard industry practices. These studies would reduce potential impacts related to ground-failure resulting from liquefaction to a less than significant level.

Because the project site is entirely within the INSP Planning Area considered under the 2018 EIR, the proposed project would not result in a larger development footprint than was considered in the INSP and 2018 EIR. Like the original project, the Isabel Crossing Project and future development on the No Net Loss Parcels would be subject to site-specific geotechnical studies. Therefore, the proposed project would not result in new or more severe impacts from risk of loss, injury, or death related to seismic ground failure or liquefaction risks beyond those identified in the 2018 EIR.

a.4 Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

The 2018 EIR determined that compliance with CBC requirements or Caltrans standards and adherence to standard industry practices would ensure that adverse landslide impacts would be less than significant.

Because the project site is entirely within the INSP Planning Area considered under the 2018 EIR, the proposed project would not result in a larger development footprint than was considered in the INSP and 2018 EIR. Therefore, the proposed project would not result in new or more severe impacts from risk of loss, injury, or death associated with landslides beyond those identified in the 2018 EIR.

b. Would the project result in substantial soil erosion or the loss of topsoil?

The 2018 EIR determined that compliance with applicable codes and regulations would reduce the potential for substantial soil erosion or topsoil loss resulting from implementation of the original project to be less than significant.

Because the project site is entirely within the INSP Planning Area considered under the 2018 EIR, the proposed project would not result in a larger development footprint than was considered in the INSP and 2018 EIR. Therefore, the proposed project would not result in new or more severe impacts from risks related to soil erosion or topsoil loss beyond those identified in the 2018 EIR.

c. Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

The 2018 EIR determined that potential hazards of unstable soil or geologic units would be addressed through the integration of geotechnical information into the planning and design process for future projects within the INSP Planning Area and that geotechnical investigations would be enforced through compliance with CBC requirements or Caltrans standards. Therefore, with compliance with standard industry practices and State requirements, impacts related to landslides, lateral spreading, subsidence, liquefaction, or collapse resulting from implementation of the original project were determined to be less than significant.

Because the project site is entirely within the INSP Planning Area considered under the 2018 EIR, the proposed project would not result in a larger development footprint than was considered in the INSP and 2018 EIR. Therefore, the proposed project would not result in new or more severe impacts from unstable soils beyond those identified in the 2018 EIR.

d. Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

The 2018 EIR determined that development in areas with expansive and corrosive soils would require compliance with State and local building codes (structures) or with Caltrans standards (roadways). Compliance with these codes or standards would require soil and geologic investigations, which would ensure that the impact resulting from the location of structures on expansive or corrosive soils would be less than significant.

Because the proposed project is entirely within the INSP Planning Area considered under the 2018 EIR, the proposed project would not result in a larger development footprint than was considered in the INSP and 2018 EIR. Therefore, the proposed project would not result in new or more severe impacts from risks related to expansive soils beyond those identified in the 2018 EIR.

e. Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

The 2018 EIR determined that new development would tie into the City's existing wastewater collection system. Therefore, implementation of the INSP would have no impact related to the location of structures on soils incapable of supporting septic tanks or alternative wastewater disposal systems.

Because the proposed project is entirely within the INSP Planning Area considered under the 2018 EIR and would tie into the City's existing wastewater collection system, the proposed project would result in no new or more severe impacts beyond those identified in the 2018 EIR for the original project.

f. Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

The 2018 EIR found that the INSP Planning Area is highly sensitive for paleontological resources. However, the 2018 EIR determined that implementation of Policies P-ENV-35 and P-ENV-36 would avoid potentially significant impacts to paleontological resources, and impacts would be reduced to a less than significant level.

Paleontological resources and unique geologic features are site-specific. The Isabel Crossing and No Net Loss Parcels are entirely within the Planning Area analyzed in the 2018 EIR. The project proposes changes to land use compared to the original project; however, the overall buildout would not exceed development planned for the original project, and excavation would occur within areas identified for grading under the original project and analyzed in the 2018 EIR. Furthermore, the project would be required to implement INSP Policies P-ENV-35 and P-ENV-36, consistent with the original project. Therefore, the proposed project would result in no new or more severe impacts on paleontological resources beyond those identified in the 2018 EIR.

This page intentionally left blank.

4.8 Greenhouse Gas Emissions

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	Page 3.4-30 of the 2018 EIR Page 3.3-24 of the 2020 SEIR	No	No	Yes
b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	Page 3.4-37 of the 2018 EIR Page 3.3-40 of the 2020 SEIR	No	No	Yes

Analysis in Previous Environmental Documents

Impacts to GHG emissions were analyzed on pages 3.4-1 through 3.4-48 of the 2018 EIR and pages 3.3-1 through 3.3-52of the 2020 SEIR. Greenhouse gas emission impacts related to the generation of construction and operational GHG emissions and conflicts with applicable plans related to GHG emission reductions were determined to be less than significant with implementation of Mitigation Measure AQ-1 (provided under Section 4.3, *Air Quality*), Policy P-LU-60, Policy P-ENV-15, and Mitigation Measure GHG-1 (provided below).

MM GHG-1: Operational GHG Emissions Reduction Measures. Implement the following GHG emissions reduction strategies to guide future development within the Planning Area:

1. Require that a minimum of 20 percent of housing allowed under the proposed Project be affordable (below market-rate) housing.
2. Incorporate street and intersection traffic calming measures to a minimum of 25 percent of streets and intersections in the Planning Area. Street traffic calming features may include, but are not limited to, on-street parking, planter strips with street trees, chicanes, horizontal shifts (lane centerline that curves or shifts), bollards, rumble strips, and woonerfs, Intersection traffic calming measures may include, but are not limited to, marked crosswalks, count-down signal timers, curb extensions, channelization islands, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, and traffic circles or mini-circles.
3. Expand the existing local bus network in the Planning Area by a minimum of 25 percent by adding or modifying bus routes to increase accessibility to the Valley Link station at Isabel Avenue
4. Require all new development to install indoor water efficient appliances and fixtures to achieve a minimum of 15 percent reduction in water usage and require applicants for new development to submit landscape and irrigation plans capable of achieving a minimum of 10 percent reduction in outdoor water usage. The percent reductions should be achieved over baseline water use conditions in the City at the time of development.

5. Require a minimum solid waste diversion rate of 85 percent to be achieved by 2040.
6. Require employers with more than 50 employees to provide a suite of travel demand reduction measures (TDM) capable of reducing single-vehicle trips by at least 20 percent compared to normal trip generation rates.

The following describes the analysis included in the 2018 EIR and 2020 SEIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

The project would not involve construction equipment or material that was not accounted for in the original project, as the Isabel Crossing Project would require less structural construction activities on the Isabel Crossing Parcels because of the proposed reduction of 39 housing units and 92,823 commercial square footage compared to the 2020 SEIR. Future development facilitated by the No Net Loss Specific Plan Amendment Project would result in a net increase of residential units and net decrease in office/commercial space; however, overall development would not exceed the intensity of development planned in the INSP. Therefore, no new or more severe GHG emissions impacts beyond what was analyzed in the 2018 EIR and 2020 SEIR for the original project would result from construction of the Isabel Crossing and No Net Loss Specific Plan Amendment Project.

GHG emissions were modeled for the Isabel Crossing Project and No Net Loss Specific Plan Amendment Project separately, in order to show the net change with the currently proposed development on the Isabel Crossing Parcels as well as to show the net change associated with the overall land use modifications that would be applied under the No Net Loss Specific Plan Amendment Project. It should be noted that the net change associated with the No Net Loss Specific Plan Amendment Project takes into consideration the unit shortfall associated with the Isabel Crossing Project, in addition to the unit shortfall associated with other existing and planned development in the INSP area.

Isabel Crossing Project

Operational GHG emissions modeled for the Isabel Crossing Project include mobile source emissions, energy emissions, area emissions, refrigerant emissions, water and waste emissions. Mobile source emissions are based on Kittelson & Associates total daily VMT estimate for the Isabel Crossing Project and for development originally planned for the Isabel Crossing Parcels under the INSP, included under Section 4.17, *Transportation*, below (Kittelson & Associates 2024). The Isabel Crossing Project's CalEEMod model uses default CalEEMod assumptions for area, energy, wastewater, solid waste, and refrigerant for the proposed land uses. As shown in Table 3, the Isabel Crossing Project would decrease operational GHG emissions compared with the original project. Operational GHG emissions would decrease because there would be fewer commercial retail spaces and no office land use. Therefore, the Isabel Crossing Project would result in less energy

consumption and a decrease in vehicle miles traveled, resulting in a reduction in mobile-and energy source GHG emissions.

In addition, the residential population would decrease with the incorporation of the Isabel Crossing Project, which would decrease area, water, and waste sources GHG emissions compared to the development originally planned for the Isabel Crossing Parcels. As shown in Table 3 below, the Isabel Crossing Project would generate less GHG emissions compared to the development planned under the INSP for the Isabel Crossing Parcels. However, similar to the original project, the Isabel Crossing Project without mitigation would exceed the 2020 SEIR 2040 "Substantial Progress" Efficiency Metric. Therefore, impacts would be potentially significant.

Table 3 Combined Annual Emissions for the Isabel Crossing Project – Unmitigated

Emission Source	2040 with Original Project	2040 with Proposed Project
Annual Emissions (MT CO_2e)		
Operational		
Mobile	23,949	20,377
Area	88	84
Energy	2,258	1,113
Water	142	103
Waste	372	327
Refrigerant	2	2
Total	**26,810**	**22,005**
Service Population		
Residents	3,956	3,703
Jobs	904	358
Service Population	**4,860**	**4,061**
Net Emissions		
Original Project Net Emissions Over Existing (for entire INSP)		52,230
Isabel Crossing Project Net Emissions (Original vs Project Emissions) (for the Isabel Crossing Parcels)		(4,805)

Source: See Appendix B for the CalEEMod worksheets

Mitigation Measure GHG-1 (provided above) from the 2018 EIR and 2020 SEIR requires GHG reduction measures such as traffic calming, affordable housing, transit improvements, water conservation, and solid waste recycling and diversion. As shown in Table 4, the proposed Isabel Crossing Project, with mitigation incorporated, would be below the 2040 "Substantial Progress" efficiency metric in page 3.3-36 of the 2020 SEIR. Therefore, similar to the original project, the Isabel Crossing Project would result in GHG emissions that are less than the efficiency metric, and would result in less than significant GHG impact. The Isabel Crossing Project would result in no new or more severe impacts related to GHG emissions beyond those identified in the 2018 EIR or 2020 SEIR for the Isabel Crossing Parcels.

Table 4 Combined Annual Emissions for the Isabel Crossing Project - Mitigated

Emission Source	2040 with Original Project	2040 with Proposed Project

No Net Loss Specific Plan Amendment Project

The modeled operational GHG emissions for the No Net Loss Specific Plan Amendment Project include emissions from mobile sources, energy use, area emissions, refrigerants, water, and waste. The mobile source emissions are based on trip generation rates provided by Kittelson & Associates, Inc. for low-rise apartments near rail transit, low-rise apartments not close to rail transit, and commercial office land use (Kittelson & Associates, Inc. 2024). The modeling details described in Section 4.3, *Air Quality*, also apply to the GHG modeling. The CalEEMod model for the No Net Loss

Specific Plan Amendment Project uses default assumptions for area, energy, waste, solid waste, and refrigerant for the proposed land uses. Additionally, the GHG reduction measures outlined in Mitigation Measure GHG-1 from the 2018 EIR and 2020 SEIR, such as traffic calming, affordable housing, transit improvements, water conservation, and solid waste recycling and diversion, were applied in the modeling.

As shown in Table 5, the No Net Loss Specific Plan Amendment Project would reduce operational GHG emissions compared to development originally planned for the No Net Loss Parcels. The No Net Loss Specific Plan Amendment Project would lead to lower energy consumption and fewer total vehicle miles traveled, reducing mobile and energy source GHG emissions. Additionally, the increase in residential units under the No Net Loss Specific Plan Amendment Project would result in lower water and waste source GHG emissions and increased area source emissions due to apartment fireplaces, as compared to development planned for the No Net Loss Parcels under the INSP. The No Net Loss Specific Plan Amendment Project without mitigation would exceed the 2020 SEIR 2040 "Substantial Progress" Efficiency Metric.

Table 5 Combined Annual Emissions for the No Net Loss Specific Plan Amendment Project – Unmitigated

Emission Source	Original Project BART and Comcast Parcels: Commercial Use (Decrease of 1,531,486 sf of Office Space)	Proposed Project BART and Comcast Parcels: Residential Use (Increase of 1,431 Residential Units)
Annual Emissions (MT CO_2e)		
Operational		
Mobile	(14,986)	8,702
Area	(22)	91
Energy	(4,965)	2,021
Water	(535)	100
Waste	(445)	330
Refrigerant	(1)	2
Total	**(20,953)**	**11,246**
Service Population		
Residents	-	4,078[2]
Jobs	(5,304)[1]	-
Service Population	**(5,304)**	**4,078**
Net Emissions		
Original Project Net Emissions Over Existing (for entire INSP)		52,230
No Net Loss Specific Plan Amendment Project Net Mitigated Emissions (Commercial vs Residential Emissions)		(9,707)
2020 SEIR Buildout Mitigated Emissions Minus No Net Loss Specific Plan Amendment Project Net Mitigated Emissions		**42,523**
Original Project Net Service Population (for entire INSP)		22,329

Emission Source	Original Project BART and Comcast Parcels: Commercial Use (Decrease of 1,531,486 sf of Office Space)	Proposed Project BART and Comcast Parcels: Residential Use (Increase of 1,431 Residential Units)
Net Service Population (Original Project vs No Net Loss Specific Plan Amendment Project) (for entire INSP)[3]		21,103
No Net Loss Specific Plan Amendment Project Buildout Net Emissions per Net Service Population		**2.0**
2040 "Substantial Progress" Efficiency Metric		**1.7**
Exceed Threshold?		**Yes**

MT CO_2e = metric tons of carbon dioxide equivalent; sf = square feet
Notes: Parenthetical values are negative numbers and are subtracted from the total emissions rather than added.
[1] Based on the 2020 SEIR, 2,104,200 square feet of non-residential square feet would generate 9,200 jobs, or 288.7 square feet per job.
[2] Based on 2020 SEIR, stated that Livermore's projected household size for development through 2040 would be 2.85 persons per household
[3] No Net Loss Specific Plan Amendment Project net service population = 4,078 – 5,304 = (1,226).
Source: Appendix B

As shown in Table 6, which includes implementation of the required Mitigation Measure GHG-1 from the 2018 EIR and 2020 SEIR, the No Net Loss Specific Plan Amendment Project would result in GHG emissions below the 2040 "Substantial Progress" efficiency target identified in the 2020 SEIR. Therefore, the No Net Loss Specific Plan Amendment Project would not lead to new or more severe impacts related to GHG emissions beyond those that were identified in the 2018 EIR or 2020 SEIR for the No Net Loss Parcels.

Table 6 Combined Annual Emissions for the No Net Loss Specific Plan Amendment Project – Mitigated

Emission Source	Original Project BART and Comcast Parcels: Commercial Use (Decrease of 1,531,486 sf of Office Space)	No Net Loss Specific Plan Amendment Project BART and Comcast Parcels: Residential Use (Increase of 1,431 Residential Units)

Source: Appendix B

b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Two plans have been adopted to reduce GHG emissions in Livermore and at the State level, including CARB's Scoping Plan and the City of Livermore CAP. The 2017 Scoping Plan and City of Livermore CAP adopted in 2012 were the latest GHG reduction plans analyzed in the 2020 SEIR; therefore, the proposed project is also compared to those plans. Similar to the original project, the proposed project would be required to comply with applicable State and local energy efficiency, renewable energy, green building, water conservation, and solid waste diversion requirements for new development. The proposed project would be required to comply with the policies in the INSP that encourage increased water conservation, solid waste diversion, renewable energy production, bicycle and pedestrian trips, and carpooling. In addition, development facilitated by the proposed project would include mixed-use land uses and development on the Isabel Crossing Parcels and BART Parcel would be located near transit. As shown in Table 3 and Table 6, the proposed project would emit less GHG emissions compared to the original project. Therefore, the proposed project would have no new or more severe impacts related to GHG emissions beyond those identified in the 2018 EIR or 2020 SEIR for the original project.

4.9 Hazards and Hazardous Materials

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	Pages 3.8-17 through 3.8-18 in the 2018 EIR	No	No	N/A
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	Page 3.8-18 in the 2018 EIR	No	No	N/A
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?	Page 3.8-18 through 3.8-19 in the 2018 EIR	No	No	N/A
d. Be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	Pages 3.8-19 in the 2018 EIR	No	No	N/A
e. For a project located in an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	Pages 3.8-20 through 3.8-21 in the 2018 EIR Page 3.2-73 in the 2020 SEIR	No	No	N/A

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
f.	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	Page 3.8-22 in the 2018 EIR	No	No	N/A
g.	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	Page 3.8-23 in the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to hazards and hazardous materials were analyzed on pages 3.8-17 through 3.8-23 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to hazards and hazardous materials from the 2018 EIR. Impacts related to hazards and hazardous materials were determined to be less than significant and the 2018 EIR and 2020 SEIR determined there would be no impact regarding safety of people residing or working within the vicinity of an airstrip.

The following describes the analysis included in the 2018 EIR and 2020 SEIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

b. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

The 2018 EIR found that the INSP would result in new housing units, mixed-use facilities, commercial uses, and industrial space. The 2018 EIR determined that with implementation of existing federal, State, and local programs and regulations, impacts regarding the routine transport, use, or disposal of hazardous materials would be less than significant. The 2018 EIR found that while risks of upset and accident conditions involving the release of hazardous materials into the environment cannot be completely eliminated, they can be reduced to a manageable level. The 2018 EIR determined that with implementation of existing federal, State, and local programs and regulations, impacts regarding upset and accident conditions involving the release of hazardous materials into the environment would be less than significant.

The Isabel Crossing and No Net Loss Parcels are entirely within the INSP Planning Area evaluated under the 2018 EIR and would consist of operational uses similar to those planned for the original project. Compliance with regulations pertaining to the routine transport, handling, and disposal of hazardous materials would be mandatory and would minimize impacts of upset or hazards. Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

c. Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?

The 2018 EIR found that there are no active, existing schools within one-quarter mile of the INSP planning area. However, there is an overlay in the INSP Planning Area designating zones for K-12 school uses. The INSP includes goals and policies G-PF-3, P-PF-25, P-PF-26, and P-PF-27 to minimize the exposure of new development in the INSP Planning Area to hazardous materials which would reduce potential impacts to schools to a less than significant level.

The Isabel Crossing and No Net Loss Parcels are not located within 0.25 miles of the K-12 school overlays described in the 2018 EIR. As shown in Figure 2, land uses planned for the area south of the Isabel Crossing and BART Parcels immediately across the I-580 include education/institutional uses. This designation allows a range of uses including schools, transit facilities, public and private meeting facilities, park and recreation areas, administrative and professional offices, and research laboratories (City of Livermore 2020a). While this area is less than 0.25 miles from the Isabel Crossing Parcels and the BART Parcel, INSP goals and policies to minimize the exposure of new development in the INSP Planning Area to hazardous materials would apply to the project. The Comcast Parcels are located approximately 0.15 mile east of school overlay parcels, across Independence Drive. Similar to the Isabel Crossing and BART Parcels, while this area is less than 0.25 mile from the Comcast Parcels, INSP goals and policies to minimize the exposure of new development in the INSP Planning Area to hazardous materials would apply to the project. Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

d. Be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

The 2018 EIR found that there are three sites in the INSP Planning Area that are included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5, and five permitted underground storage tanks. However, all three of the hazardous materials sites cases are closed, representing a low to moderate risk of encountering impact during potential future redevelopment. The 2018 EIR found that future construction activities associated with implementation of the plan may also generate hazardous materials and waste, such as fuels and oils from construction equipment and vehicles; however, compliance with applicable policies, regulations, and programs would reduce the impact to less than significant.

The Isabel Crossing and No Net Loss Parcels are not located on or adjacent to any of the three sites identified in the 2018 EIR or the permitted underground storage tank sites. No new open hazardous materials sites have been identified on the Isabel Crossing or No Net Loss Parcels since the 2018 EIR (State Water Resources Control Board 2023; California Department of Toxic Substances Control 2023). The proposed project would be required to comply with applicable policies, regulations, and

programs to reduce impacts. Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

e. For a project located in an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

The 2018 EIR found that the INSP exempts development in the INSP Planning Area from a City Development Code policy limiting building height to 40 feet within 5,000 feet of an airport runway; however, new development under the INSP would be subject to ALUCP height limits and regulations on airspace protection, in addition to scenic view and land use compatibility factors. Therefore, environmental impacts from this amendment would not be significant. The 2018 EIR also determined that INSP would be consistent with the ALUCP to prevent safety hazards for people residing and working in the Planning Area near the Livermore Municipal Airport. The 2020 SEIR determined that the INSP does not propose any elements that would affect the established flight patterns for the Livermore Airport as the Plan is consistent with the ALUCP and federal aviation regulations on height and safety, therefore, the impact on flight patterns would be less than significant.

As discussed in Section 4.1, *Aesthetics*, some of the proposed buildings on the Isabel Crossing Parcels would exceed heights under the INSP scenic view requirements; however, several of the proposed building heights would be reduced compared to the original project, and these changes would be consistent with the INSP land uses with concessions and waivers approved under the State Density Bonus. Future development on the No Net Loss Parcels would be required to comply with the height requirements set forth in the INSP. The proposed project would continue to be subject to ALUCP height limits and regulations on airspace protection. Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

f. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

The 2018 EIR determined that development facilitated by the INSP would result in new development and population growth, resulting in an increase in demand for emergency services, which could affect implementation of the Alameda Local Hazard Mitigation Plan and the Tri-Valley Hazard Mitigation Plan; however, with implementation of existing local programs and regulations, impacts would be less than significant.

The project site is located within the INSP Planning Area and would not exceed the overall buildout potential of the original project. As discussed in Section 4.17, *Transportation*, a Technical Memorandum prepared by Kittelson and Associates in May 2024 (Appendix E) conducted VMT analysis for the Isabel Crossing Project and determined overall VMT would be lower compared with the original project proposed at the Isabel Crossing Parcels. A subsequent analysis prepared by Kittelson and Associates in June 2024 (Appendix E) determined that determined that fewer daily trips and less total VMT would be generated by anticipated future development of the No Net Loss Parcels compared to development planned under the INSP. Therefore, traffic impacts during an emergency or evacuation event would not exceed those considered for the original project and no revisions to the 2018 EIR or 2020 SEIR would be required. Similar to the original project, the proposed project would be required to comply with existing regulations, and policies in the Livermore General Plan including Policy P3 which requires residential, commercial, and industrial

areas to provide efficient and safe access for emergency vehicles, to reduce the potential to interference with adopted emergency response or emergency evacuation plans. Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

g. Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?

The 2018 EIR found that while the City of Livermore has identified high wildfire severity zones in the INSP Planning Area, none of the INSP Planning Area constitutes a very high fire hazard severity zone and development would be consistent with Livermore's Fire Code and Chapter 9, Fire Protection Systems, of the California Building Code, which requires improvements such as fire sprinkler systems and fire alarms. The 2018 EIR determined that with implementation of existing State and local programs and regulations as well as the policies of the INSP, impacts would be less than significant.

The Isabel Crossing and No Net Loss Parcels are entirely within the Planning Area studied in the 2018 EIR for the INSP and is not located in a fire hazard severity zone. Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

This page intentionally left blank.

4.10 Hydrology and Water Quality

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:

Analysis in Previous Environmental Documents

Impacts to hydrology and water quality were analyzed on pages 3.9-19 through 3.9-30 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to hydrology and water quality from the 2018 EIR. Hydrology and water quality impacts regarding water quality and groundwater recharge were determined to be less than significant, while impacts related to stormwater runoff capacity were determined to be less than significant with mitigation and adherence to INSP policies P-PF-39 and P-PF-42, and it was determined that there would be no impact regarding exposing people to flood hazards or the project resulting in seiche, tsunami, or mudflow.

The following describes the analysis included In the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

b. Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

e. Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

The 2018 EIR determined that future specific projects would be required to comply with, at a minimum, the Clean Water Act, the California Porter-Cologne Water Quality Control Act (Porter-Cologne Act), the San Francisco Bay Basin (Region 2) Water Quality Control Plan, and all INSP policies intended to avoid or minimize increases in stormwater flows and the associated degradation of water quality. Projects that disturb one or more acre of ground surface require a Construction General Permit which requires development and implementation of a SWPPP, which includes BMPs to eliminate or reduce stormwater and other discharge from construction sites and

ensure that water quality is not degraded. Projects would be required to comply with NPDES requirements during construction and would be designed in accordance with the Phase I MS4 Permit, Provision C.3.c, for post-construction stormwater management. Compliance with waste discharge requirements and dewatering regulations would ensure that dewatering activities are monitored and treated as required and that no violations of any water quality standards or waste discharge requirements occur. The 2018 EIR determined that compliance with all construction and design related stormwater regulatory requirements, the projects implemented under the INSP would not violate water quality standards or waste discharge requirements or provide substantial additional sources of polluted runoff and impacts would be less than significant.

The 2018 EIR determined that individual projects implemented under the INSP would be required to implement hydromodification BMPs to reduce the volume of runoff, include stormwater management measures as part of the design, and conform to INSP guidelines including stormwater runoff reduction and capture measures. The 2018 EIR found that with adherence to these requirements, development under the INSP would not change impervious surface area such that infiltration of groundwater would be affected. The 2018 EIR also found that water demand from the INSP would be accommodated by current water sources and impacts related to groundwater recharge would be less than significant.

The project site is located within the INSP Planning Area studied in the 2018 EIR for the INSP and would not exceed the buildout planned for the INSP. As discussed in Section 4.19, *Utilities and Service Systems*, water demand for the proposed Isabel Crossing and No Net Loss Specific Plan Amendment Project would be greater than the original project (Appendix F). The project would result an increase in water demand of approximately 134,514 gallons per day (GPD) and the reduction in office space would result in a decrease in approximately 32,030 GPD for a net water demand increase of approximately 102,484 GPD, or 115 acre-feet per year (AFY) compared with planned development under the INSP. The net water demand would comprise approximately 5.7 percent of the 2020 remaining water supply (Cal Water 2021). This additional demand would not be substantial and could be accommodated by the districts' existing water supply sources (Appendix F). Thus, no new or additional water infrastructure or water supply resources would be required.

The level of ground disturbance for the proposed Isabel Crossing Project and potential future development on the No Net Loss Parcels would be similar to that of the original project; therefore, impacts on groundwater supplies and groundwater recharge would be similar to the impacts determined for the original project. The proposed Isabel Crossing Project and future development on the No Net Loss Parcels would introduce new impervious surfaces such as roads and driveways which would increase surface runoff; however, new impervious surfaces from proposed development on the project site would not exceed those of development accounted for under the original project in the 2018 EIR. The proposed project would not introduce land uses that would increase the sources of polluted runoff compared to the original project. While the proposed project changes the land use compared with the original project, it would not introduce entirely new types of land use that are not already considered in the 2018 EIR for the original project and would not introduce new types of pollutants compared with the original project. Like the original project, construction and design related stormwater regulatory requirements, hydromodification BMPs, INSP policies and guidelines, and other federal, state and local regulations would apply to the proposed project, which would ensure compliance with the applicable Water Quality Control Plan (San Francisco Bay Regional Water Quality Control Board Basin Plan) and Zone 7 Alternative Groundwater Sustainability Plan. Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

c. Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. Result in substantial erosion or situation on- or off-site?

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

The 2018 EIR determined that with adherence to regulatory requirements and implementation of the policies and associated design guidelines contained in the INSP, future development within the INSP Planning Area would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on or off site. The 2018 EIR determined that with the application of the Phase I MS4 Permit, projects implemented within the INSP Planning Area would not substantially alter the existing drainage pattern of a site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site. Therefore, the 2018 EIR determined impacts would be less than significant related to erosion and siltation and on or off-site flooding. The 2018 EIR determined that projects that would create one acre or more of new impervious surface would be required to analyze the project runoff and provide on-site or regional BMPs to reduce the runoff rate. The 2018 EIR determined that with compliance with INSP Policies, P-PF-39, P- PF-42, P-ENV-33, and NPDES requirements, Phase I MS4 Permit, Provision C.3.c, for post-construction stormwater management including Low Impact Development (LID) impacts related to the potential to exceed stormwater drainage systems would be less than significant.

The proposed project would not involve work within surface waters, including streams or rivers. Total construction area and depth of excavation would not be substantially increased compared with that considered for the original project. The Isabel Crossing Project and future development on the No Net Loss Parcels would introduce new impervious surfaces such as roads and driveways which would increase surface runoff; however, new impervious surfaces from proposed development on the project site would not exceed those of development accounted for under the original project in the 2018 EIR. As described in the 2018 EIR, the proposed project would be required to implement BMPs to reduce the runoff rate, since it would create more than one acre of new impervious surfaces. The proposed Isabel Crossing Project would use biotreatment areas, on-site pervious pavers, on-site biotreatment and flowthrough planers, and a detention vault. Future development on the No Net Loss Parcels would be expected to install similar stormwater features. Therefore, construction and operation of the proposed project would not increase potential for substantial erosion compared to the original project.

The proposed project would not introduce land uses that would increase the sources of polluted runoff compared to the original project. While the proposed project changes the land use compared with the original project, it would not introduce entirely new types of land use that are not already considered in the 2018 EIR for the original project and would not introduce new types of pollutants compared with the original project.

c. Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

iv. Impede or redirect flood flows?

d. In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

The 2018 EIR found that while some portions of the INSP Planning Area are in 100-year flood hazard areas, impacts related to development within flood zones would be less than significant. The 2018 EIR found that the INSP Planning Area is not in a dam inundation area, and that there would be no impacts related to the risk of the failure of levees or dams; seiche; tsunami; or mudflow.

While the proposed project changes the land use compared with the original project, the proposed project would not introduce land uses or features that would alter the drainage pattern of the site or area more than under the original project. Similarly, the proposed project would not increase the amount of impervious surfaces beyond that of the original project. The proposed Isabel Crossing Project would include biotreatment areas, on-site pervious pavers, on-site biotreatment and flowthrough planters, and a detention vault. Similar to the original project, the proposed Isabel Crossing Project and future development on the No Net Loss Parcels would be subject to Plan Policy P-ENV-33, which requires preparation of a drainage study.

The project site is located within the INSP Planning Area studied in the 2018 EIR for the INSP. The Federal Emergency Management Agency National Flood Hazard Layer Map shows that the Isabel Crossing and No Net Loss Parcels are located in Flood Zone X, which is an area of minimal flood hazard (Federal Emergency Management Agency 2009). Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

This page intentionally left blank.

4.11 Land Use and Planning

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Physically divide an established community?	Page 3.1-16 of the 2018 EIR	No	No	N/A
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	Page 3.1-17 through 3.1-25 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to land use and planning were analyzed on pages 3.1-16 through 3.1-25 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to land use and planning. Impacts regarding the potential to divide an established community were determined to be less than significant and impacts regarding the potential to conflict with land use plans, policies, and regulations for avoiding or mitigating an environmental impact would be less than significant with the implementation of INSP goals and policies.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project physically divide an established community?

The 2018 EIR determined that the INSP would not divide an established community, and impacts would be less than significant. The project site would be entirely within the INSP Planning Area analyzed in the 2018 EIR and would not exceed development considered in the 2018 EIR or introduce new features that would divide an established community. The proposed project would result in no new or more severe impacts related to dividing established communities beyond those identified in the 2018 EIR.

b. Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

The 2018 EIR found that since the INSP would replace existing General Plan and zoning standards in the planning area, the General Plan and Development Code would be amended to accommodate development resulting from implementing the INSP, the INSP helps fulfill existing General Plan goals, and the INSP does not conflict with other applicable agencies' plans, policies, or regulations, impacts would be less than significant.

The project site would be entirely within the INSP Planning Area analyzed in the 2018 EIR and would not exceed development considered in the 2018 EIR. The Isabel Crossing Project proponent's use of the State density bonus law would not conflict with the INSP, as this provision allows for the slight modification of land uses from established land us plans to increase the availability of affordable housing throughout the state. Although the general mix of uses would shift and office and commercial uses would be reduced, land uses would remain generally similar to those envisioned in the adopted INSP. The Isabel Crossing Project's proposed Specific Plan Amendment would revise INSP Policies P-LU-8 and P-L-34 in a manner that allows the project to engage in master planning, which, under the amended INSP, would allow the averaging of densities and uses across the site, the assessment of INSP zoning and development standards based on proposed housing density and uses, the reconfiguration of site blocks, roads, and infrastructure elements, and alternative compliance with affordable housing requirements. In addition, the Isabel Crossing Project's Density Bonus "waiver or reduction" requests enable relief from certain INSP development standards, including, among others, for height in four different areas. The proposed master site plan includes a concentration of tall buildings near Gateway Avenue, transitioning downward in scale along Portola Avenue. The combined target unit count for Subareas 3b and 3c in the INSP was 1,477 housing units and a minimum unit count of 1,236 units. The Isabel Crossing project would involve construction of 1,299 housing units, with taller buildings located near Gateway Avenue, and modification of the street network as shown in the INSP. These project features are consistent with INSP Policies P-LU-8 and P-LU-37, as proposed for amendment.

The proposed land use designation change for the BART parcel would allow for the construction of 913 units, which is greater than is currently allowed in Subarea 3a. Subarea 1d is designated as Business Park which allows commercial and light industrial uses. Residential uses are not currently permitted on the Comcast Parcels. The No Net Loss Specific Plan Amendment Project would amend the INSP to change the land use designation of the BART Parcel to Residential Core, and the Comcast Parcels to Village and Transition, to ensure that there is adequate opportunity for the development of housing within the INSP area. The project would also be required to comply with INSP goals, policies, and actions described in the 2018 EIR for the original project related to environmental mitigation. The proposed project would result in no new or more severe impacts related to conflicts with any land use plan, policy, or regulation beyond those identified in the 2018 EIR.

4.12 Mineral Resources

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	Page 3.15-1 through 3.15-2 of the 2018 EIR	No	No	N/A
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	Page 3.15-1 through 3.15-2 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to mineral resources were analyzed on pages 3.15-1 through 3.15-2 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to mineral resources from the 2018 EIR. The 2018 EIR determined there would be no impact to mineral resources.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

b. Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

The 2018 EIR determined that the INSP Planning Area does not have known mineral resources of regional or statewide value, or locally-important mineral resource recovery sites that are delineated on a land use plan, therefore, the INSP would have no impact on mineral resources. The project site is entirely within the INSP Planning Area analyzed in the 2018 EIR and would result in no new or more severe impacts beyond those identified in the 2018 EIR.

This page intentionally left blank.

4.13 Noise

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Pages 3.6-20 through 3.6-34 and 3.6-38 through 3.6-39 of the 2018 EIR Pages 3.4-18 through3.4-34 and 3.4-38 through 3.4-40 of the 2020 SEIR	No	No	No
b. Generate excessive groundborne vibration or groundborne noise levels?	Pages 3.6-34 through 3.4-38 of the 2018 EIR Pages 3.4-34 through 3.4.38 of the 2020 SEIR	No	No	No
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels?	Pages 3.6-40 through 3.6-44 of the 2018 EIR Pages 3.4-40 through 3.4-44 of the 2020 SEIR	No	No	No

Analysis in Previous Environmental Documents

Impacts to noise were analyzed on pages 3.6-17 through 3.6-44 of the 2018 EIR and pages 3.4-16 through 3.4-44 of the 2020 SEIR. Noise impacts related to construction activities, stationary equipment, and airport noise were determined to be less than significant. Impacts related to traffic noise were determined to be significant and unavoidable despite implementation of Mitigation Measure NOI-1 (included below). Impacts related to groundborne vibration from construction activities were determined to be significant and unavoidable, despite implementation of Policy P-ENV-6 of the INSP.

MM NOI-1 Implement Traffic Noise Reduction Measures at Existing Sensitive Receptors.

The City shall implement off-site traffic noise reduction measures along the following three roadway segments such that the Plan-related increase in traffic noise for sensitive receptors is 3 dB or less:

- Portola, east of Tranquility Circle
- East Airway Boulevard east of Sutter Street and west of Via Mateo (around the mobile home development)
- East Airway Boulevard east of Via Mateo and West/North of Portola Avenue (around the mobile home development)

Measures that can be implemented include, but are not limited to:

- Construction of solid barriers between the roadway and adjacent residential use; and
- Installation of "quiet" pavement, such as open-graded asphalt, along the area of the roadway adjacent to residences.

The City shall prepare a noise control plan for impacted existing land uses that identifies the location, design, and effectiveness of the specific treatments to be implemented.

The following describes the analysis included in the 2018 EIR and 2020 SEIR, and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Noise-sensitive receptors closest to the Isabel Crossing Parcels include future residences currently under construction approximately 150 feet to the north across Portola Avenue and existing multi-family residences in the Montage multi-family residential neighborhood, located approximately 250 feet north of the project site on Dovecote Lane. Additional multi-family residences are located approximately 700 feet east on Tranquility Circle, and Cayetano Park approximately 540 feet northeast of the project site across Portola Avenue and Isabel Avenue.

Noise-sensitive receptors closest to the BART Parcel include residences located approximately 750 feet to the east on Tranquility Circle. Noise-sensitive receptors closest to the Comcast Parcels include residences located approximately 70 feet to the northeast on Copper Crest Common.

Construction

As described in the 2018 EIR and 2020 SEIR, construction activities associated with future projects and related construction noise impacts would be temporary. Each individual construction activity would have the potential to generate noise levels that could be in excess of applicable local

thresholds, or that could cause a disturbance to nearby noise-sensitive receptors. As stated in the 2020 SEIR, at 50 feet from the source, construction noise levels could potentially be above 80 dBA.

The City noise ordinance allows construction during daytime hours of Monday through Friday from 7:00 a.m. to 8:00 p.m., Saturday from 9:00 a.m. to 6:00 p.m., and prohibits construction on Sundays and City-observed holidays. Development under the proposed project would be required to comply with these restrictions. As stated in the 2018 EIR and 2020 SEIR, construction that complies with the time-of-day restrictions for construction activities would result in less than significant noise impacts with regard to the generation of noise in excess of thresholds. Therefore, as the Isabel Crossing Project and future development of the No Net Loss Parcels would be required to comply with the hourly restrictions for construction activities, this impact would not be more severe than identified in the 2018 EIR and 2020 SEIR.

Operation

The primary on-site operational noise source from the project would be HVAC units on each of the proposed buildings within the Isabel Crossing Parcels. According to the site plans provided by William Hezmalhalch Architects for the Isabel Crossing Project (WHA 2023; Appendix A), the closest sensitive receptor to a potential HVAC unit would be approximately 150 feet north across Portola Avenue. Specific planning data for the future HVAC systems, including any that may be proposed with development on the No Net Loss Parcels, are not available at this stage of project design. The development of new residences could result in the exposure of existing residential land uses to noise that exceeds the City's noise standards.

Future development under the project would be required to comply with policies included in the City's General Plan that would help reduce noise effects to surrounding sensitive receptors. Pursuant to the City's General Plan Objective N-1.5, Policy P1, project impacts would be significant if exterior noise levels exceed 55 dBA L50 at a residential property during the hours of 7:00 a.m. – 10:00 p.m. and 45 dBA L50 during the hours of 10:00 p.m. to 7:00 a.m. Conservatively assuming that HVAC units would be running 24 hours each day, the project would be required to comply with the City of Livermore's nighttime exterior noise policy of 45 dBA L50.

However, even with General Plan Objective N-1.5, Policy P1, it is possible that noise levels from HVAC could result in potentially significant noise at adjacent noise-sensitive residential receptors. Implementation of Policy P-ENV-7 would reduce noise impacts from HVAC to less than significant levels. Therefore, this impact would not be more severe than those identified in the 2018 EIR and 2020 SEIR.

Special Events

As discussed in the 2020 SEIR, the project would include the development of parks and plazas which could be used for gatherings or events. The types of potential events that could occur at proposed or future parks and plazas within the project site are not known at this time, so it is not possible to estimate potential temporary or periodic noise generated by gatherings in these areas. However, all special events would be required to obtain a special event permit in accordance with the City of Livermore rules. To obtain a permit, event organizers must be certain that all even activities comply with the local laws applicable to noise abatement (City of Livermore 2017). Any special event in the City would need to obtain a special event permit in accordance with the City of Livermore rules. Therefore, noise impacts related to special events occurring at the project site would not be more severe than those identified in the 2018 EIR and 2020 SEIR.

Traffic

The proposed project would involve construction of 1,431 greater residential units than the original project. This increase in residential units would balance out with the decrease in commercial and office space, resulting in a corresponding net reduction in total daily vehicle trips to and from the Isabel Crossing and No Net Loss Parcels (Appendix E). Because the project would result in a net decrease in daily vehicle trips, the project would not result in a significant traffic noise increase and this impact would not be more severe than those identified in the 2018 EIR and 2020 SEIR.

b. Would the project generate excessive groundborne vibration or groundborne noise levels?

The 2018 EIR and 2020 SEIR determined that construction groundborne vibration would be significant. Operation of the proposed and future residential development projects would not include substantial vibration sources. Thus, construction activities have the greatest potential to generate groundborne vibration affecting nearby sensitive receptors. Construction equipment would be consistent with that analyzed in the 2020 SEIR. Therefore, construction activities known to generate excessive groundborne vibration, such as pile driving, may be required for project construction. INSP Policy P-ENV-6 would help reduce construction vibration effects at sensitive land uses by requiring the project developer to implement measures to reduce vibration. Such measures could include: operating heavy equipment as far as practical from residential uses; using smaller bulldozers (operating weight less than 20,000 pounds) when grading must occur within approximately 50 feet of residential uses or other vibration sensitive uses; and using quiet pile driving technology when feasible.

For purposes of this analysis, the greatest anticipated source of vibration during general project construction activities would be from an impact pile driver, which could be used within 70 feet from the nearest residential building, located northeast of the Comcast Parcels, and 40 feet from the nearest industrial/commercial building, located west of the Comcast Parcels. As stated in the 2020 SEIR, vibration impacts would be significant if they would exceed 0.5 in/sec PPV (Caltrans 2013) at the new residential buildings and the modern industrial/commercial buildings which is the level at which structural damage may occur. At a distance of 40 feet, an impact pile driver would typically create approximately 0.384 PPV (in/sec) at the existing commercial buildings, and at a distance of 70 feet, an impact pile driver would create approximately 0.208 PPV (in/sec) at the existing residential buildings (Federal Transportation Administration 2018). This would not exceed the architectural damage criterion for new residential buildings and modern industrial/commercial buildings of 0.5 PPV (in/sec) and impacts would be less than significant. Therefore, construction vibration impacts resulting from use of an impact pile driver within 40 feet of the nearest industrial/commercial building and within 70 feet of the nearest residential building would be less severe than those identified in the 2018 EIR and 2020 SEIR.

c. Would the project be located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, and expose people residing or working in the project area to excessive noise levels?

The project site is located approximately 0.5 mile northeast of the closest public airport, the Livermore Municipal Airport. As stated in the Livermore Executive Airport, Airport Land Use Compatibility Plan (City of Livermore 2012), all project parcels are located inside the Airport Protection Area and Influence Area, and outside the limit of any noise contour. Therefore, no substantial noise exposure from airport noise would occur to people residing or working in the

project area, and impacts would not be more severe than those identified in the 2018 EIR and 2020 SEIR.

Additionally, the project site is located approximately 6.3 miles northwest of the closest private airport, Meadowlark Field Airport. As stated in the 2020 SEIR, this small private airport has only six aircraft based at the field. At this distance, and based on the size of this airstrip, no substantial noise exposure from airport noise would occur to people residing or working in the project area, and impacts would not be more severe than those identified in the 2018 EIR and 2020 SEIR.

4.14 Population and Housing

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	Page 3.1-25 through Page 3.1-29 of the 2018 EIR	No	No	N/A
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	Page 3.1-29 through Page 3.1-32 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to population and housing were analyzed on pages 3.1-25 through 3.1-32 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to population and housing from the 2018 EIR. Population and housing impacts regarding unplanned population growth were determined to be less than significant and impacts related to the displacement of people or housing would be less than significant with implementation of INSP goals and policies.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?

b. Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

The 2018 EIR determined that direct inducement of population growth through new housing and businesses would not be considered a significant impact because development facilitated by the INSP would be within the overall General Plan capacity and would be paced as part of the City's growth management program and the INSP phasing program. The 2018 EIR found that buildout of

the INSP would generate at least 20 percent subsidized housing units, which may serve people displaced from existing housing due to rising rents. The 2018 EIR determined that the INSP includes policies to reduce potential displacement and maximize affordable housing options that build upon existing City programs and policies, therefore, impacts would be less than significant.

As described in Section 1.5, *Project Description*, the Isabel Crossing and No Net Loss Specific Plan Amendment Project would result in a net increase of 1,431 residential units beyond the total residential buildout in the adopted INSP. The project would also result in a net decrease of 1,531,486 square feet of office and commercial space compared to the adopted INSP. Livermore's average household size for development is 2.6 persons per household (California Department of Finance [DOF] 2024). Using this estimate, the population increase facilitated by the proposed project would be approximately 3,720 residents beyond the original project. INSP goals and policies described for the original project in the 2018 EIR would continue to apply for the modified project. As described in the 2018 EIR, the City's General Plan establishes an overall development capacity for the city of 41,000 residential units and 9,100 new jobs. Of the total 41,000 residential units anticipated by the General Plan, 4,500 units were associated with an anticipated new BART station. The proposed project would result in 1,431 residential units beyond those considered in the INSP EIR, which would exceed the anticipated growth for the BART station area. However, at this time, only the Isabel Crossing Parcels are proposed for project-specific development. The No Net Loss Specific Plan Amendment Project would allow the BART and Comcast Parcels to be developed with residential uses at a later date. As described in the INSP EIR, the INSP includes growth management strategies to ensure there is adequate public infrastructure and services through the allocation of residential units to development projects at the entitlement phase. Additionally, it should be noted that the City has observed a shortfall in housing unit production in the INSP area from existing and proposed development projects, resulting in a unit shortfall which the No Net Loss Specific Plan Amendment Project is intended to address. Because the population increase facilitated by the proposed project would be subject to the INSP growth management strategies and is intended to address housing unit shortfalls currently experienced in the INSP area, the project would result in no new or more severe impacts related to population growth beyond those identified in the 2018 EIR. Because there are no existing residences on the project site, the project would not displace housing or people. Therefore, the proposed project would result in no new or more severe impacts to population and housing beyond those identified in the 2018 EIR.

4.15 Public Services

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:					
a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:					
1	Fire protection?	Page 3.11-13 of the 2018 EIR	No	No	N/A
2	Police protection?	Page 3.11-13 through 3.11-15 of the 2018 EIR	No	No	N/A
3	Schools?	Page 3.11-12 through 3.11-13 of the 2018 EIR	No	No	N/A
4	Parks?	Page 3.11-8 through 3.11-12 of the 2018 EIR	No	No	N/A
5	Other public facilities?	Page 3.11-15 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to public services were analyzed on pages 3.11-13 through 3.11-15 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to public services from the 2018 EIR. Impacts regarding the expansion of public services were determined to be less than significant with implementation of INSP policies.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative

impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for:*

   1. *Fire protection?*
   2. *Police protection?*
   3. *Schools?*
   4. *Parks?*
   5. *Other public facilities?*

Fire Protection Services

According to the LPFD 2020 year-end report, the department had 121 full-time employees serving a population of 171,385 (LPFD 2021). This would yield a ratio of 0.71 firefighters per 1,000 residents. The additional residential units proposed for the Isabel Crossing Project and future development facilitated by the No Net Loss Specific Plan Amendment Project would result in an increase in population of approximately 3,720 persons beyond the 2018 EIR and 2020 SEIR. This increase in population would result in a ratio of 0.69 firefighters per 1,000 residents. The change in ratio for fire protection services would not be considered substantial as the number of staff needed to offset this increase would be limited to approximately three firefighters. Although three new firefighters may be required to serve the project, the incremental increase in staff alone would not warrant construction of new or expanded fire facilities.

The Isabel Crossing Project, as well as future development facilitated by the No Net Loss Specific Plan Amendment Project, would be subject to INSP Policies P-PF-26 and P-PF-27, which require ongoing coordination between the City and the LPFD to ensure the adequate provision of fire protection services in the INSP area, as development occurs. As part of the ongoing coordination efforts, the Livermore-Pleasanton Fire Department (LFPD) has indicated there are increasing demands for fire protection services citywide, including within the INSP area. Separate from this project, the LPFD is preparing a comprehensive Community Risk Assessment report, anticipated to be completed mid-summer of 2024, that will further identify operational needs and provide recommendations to address future fire protection services citywide, including those in the INSP area. Consistent with the INSP policies cited above, the project would be subject to the recommendations of the Community Risk Assessment when completed.

Furthermore, the Isabel Crossing Project proponent would be required to pay fair share fees into the City's Community Benefit Fund, which is intended to fund infrastructure improvements, such as necessary community service facility expansions or renovations. Future development of the No Net Loss Parcels would be required to make similar fair share payments. Additionally, the Isabel Crossing Project and future development facilitated by the No Net Loss Specific Plan Amendment Project would generate tax revenue during project operation, which includes contribution to the City's

General Fund. Collectively, the project's contributions to the General Fund, in addition to the Community Benefit Fund, would be used to ensure adequate services, facilities, and infrastructure are provided within the INSP area, including fire protection services. No new impacts or substantially increased impacts related to fire protection services would occur.

Police Services

According to the Livermore Police Department (LPD) 2022 annual report, there were a total of 97 police officers employed by LPD (LPD 2023). The DOF estimates that the 2022 population was 85,769. This yields a ratio of 1.13 officers per 1,000 people.

The additional residential units proposed for the Isabel Crossing Project and future development facilitated by the No Net Loss Specific Plan Amendment Project would result in an increase in population of approximately 3,720 persons beyond the 2018 EIR and 2020 SEIR. This increase in population would result in a new ratio of 1.08 officers per 1,000 people. The decrease in office space would result in a reduced demand for police services, which would offset some of the increase in demand for police protection services from the increase in residential uses. The increase in demand for police services would not be substantial; the number of staff needed to offset this increase would be approximately four police officers. Although four new police officers may be required to serve the project, the increase in staff would not warrant construction of new or expanded police facilities. Furthermore, the Isabel Crossing Project proponent would be required to pay fair share fees into the City's Community Benefit Fund, which is intended to fund infrastructure improvements, such as necessary community service facility expansions or renovations. Future development of the No Net Loss Parcels would be required to make similar fair share payments. No new impacts or substantially increased impacts related to police services would occur.

Schools

According to the 2019 Livermore Community Services and Infrastructure Report, the Livermore Valley Joint Unified School District (LVJUSD) has a total school capacity of 16,150 students (City of Livermore 2020b). Census data shows that the 2022-23 enrollment total for LVJUSD was 12,956 students.

The additional residential units proposed for the Isabel Crossing Project and future development facilitated by the No Net Loss Specific Plan Amendment Project would result in approximately 600 new students in the LVJUSD beyond the 2018 EIR and 2020 SEIR, for a total enrollment in LVJUSD of 13,556 students, or approximately 84 percent of the total school capacity of the LVJUSD. This would remain below LVJUSD's total school capacity. No new impacts or substantially increased impacts related to schools would occur.

Parks

According to the Livermore General Plan, the Livermore Area Recreation and Park District's (LARPD) standard for neighborhood parks is 2 acres per 1,000 residents or 1 park per 3,000 to 5,000 residents, for community parks is 2 acres per 1,000 residents, for regional parks is 15 acres per 1,000 residents, and for special use parks is 3 acres per 1,000 residents (City of Livermore 2004). The INSP includes 236.1 acres of combined parkland, including three new neighborhood parks, and a buildout population in the INSP Planning Area of 13,720 residents (City of Livermore 2018).

The additional residential units proposed for the Isabel Crossing Project and future development facilitated by the No Net Loss Specific Plan Amendment Project would generate a population of

approximately 3,720 people beyond the 2018 EIR and 2020 SEIR, for a new INSP buildout population of 17,440 people. While this would exceed the 1 neighborhood park per 3,000 to 5,000 resident ratio, Policy P-PF-4 of the INSP requires individual developers to provide land and/or in lieu fees for the development of parks to maintain acceptable parks to resident ratios. Future development on the No Net Loss Parcels would be required to satisfy this INSP requirement. No new impacts or substantially increased impacts related to parks would occur.

4.16 Recreation

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:				
a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	Page 3.11-15 of the 2018 EIR	No	No	N/A
b. Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	Page 3.11-15 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to recreation were analyzed on page 3.11-15 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to recreation from the 2018 EIR. Recreation impacts were determined to be less than significant.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b. Would the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

The 2018 EIR determined that because new development is required to dedicate park and recreational facilities or pay in-lieu fees that are used to build and maintain parks and recreational facilities and INSP policies would reduce impacts, impacts related to the use and deterioration of neighborhood and regional parks would be less than significant.

The proposed Isabel Crossing project includes 2.56 acres of common open space, which is greater than the original project planned for the Isabel Crossing project site by 0.39 acres. This exceeds the Livermore Area Recreation and Parks District (LARPD) standard of 2 acres per 1,000 residents or 1 park per 3,000-5,000 residents which was considered in the 2018 EIR for the original project.

The additional residential units facilitated by the land use change proposed on the No Net Loss Parcels would generate a population of approximately 3,720 people beyond the 2018 EIR and 2020 SEIR, for a new INSP buildout population of 17,440 people. While this would exceed the 1 neighborhood park per 3,000 to 5,000 resident ratio, Policy P-PF-4 of the INSP requires individual developers to provide land and/or in lieu fees for the development of parks to maintain acceptable parks to resident ratios. Future development on the No Net Loss Parcels would be required to satisfy this INSP requirement. No new impacts or substantially increased impacts related to parks would occur beyond those identified in the 2018 EIR.

4.17 Transportation

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:					
a.	Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	Page 3.2-32 through 3.2- 46 of the 2018 EIR Pages 3.2-31 through 3.2-51 of the 2020 SEIR	No	No	Yes
b.	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	N/A	No	No	N/A
c.	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?	Page 3.2-64 of the 2018 EIR Page 3.2-73 of the 2020 SEIR	No	No	N/A
d.	Result in inadequate emergency access?	Page 3.2-64 of the 2018 EIR Page 3.2-74 of the 2020 SEIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to transportation were analyzed on pages 3.2-32 through 3.2-36 of the 2018 EIR and pages 3.2-31 through 3.2-74 of the 2020 SEIR. Impacts related to the potential for the INSP to conflict with a program, plan or ordinance addressing the circulation system were determined to be significant and unavoidable in the 2018 EIR and 2020 SEIR. Impacts related to hazards due to a geometric design feature or emergency access were determined to be less than significant in the 2018 EIR and 2020 SEIR.

The following describes the analysis included in the 2018 EIR and 2020 SEIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

The 2020 SEIR found that the INSP would result in unacceptable operations at the intersection of North Livermore Avenue & Portola Avenue (#3) during the weekday PM peak hour under Cumulative 2040 Conditions and cause vehicular delay during the PM peak hour, which is operating below the LOS D standard, to increase by more than five seconds compared the no-project (15 seconds). The 2020 SEIR included a mitigation measure which consists of adding additional left turn lanes to the impacted intersection under 2040 conditions, which would require the widening of North Livermore Avenue and Portola Avenue. However, the 2020 SEIR determined that due to right-of-way constraints on both roads, the addition of new lanes would not be feasible, and impacts would remain significant and unavoidable.

The Isabel Crossing Project would alter some aspects of the roadway system analyzed in the 2020 SEIR for the original project, including street locations and internal circulation within the Isabel Crossing Parcels. However, roadways for the Isabel Crossing Project and future roadways associated with development of the No Net Loss Parcels would be required to comply with City standards and would result in no new or substantially more severe impacts than those identified in the 2018 EIR or 2020 SEIR for the original project. The proposed project would be entirely within the Planning Area considered for the INSP in the 2018 EIR and 2020 SEIR. While the development pattern would be modified by the Isabel Crossing and No Net Loss Specific Plan Amendment Project, intersection operations would not be substantially degraded with the proposed project, and no new or more severe impacts on roadway facilities would occur (Appendix E).

The Isabel Crossing Project would include pedestrian sidewalks and a multi-use trail for bicycles and pedestrians on the Isabel Crossing Parcels. Development facilitated by the No Net Loss Specific Plan Amendment Project would similarly include bicycle and pedestrian facilities, as required by INSP policies P-TRA-1, P-TRA-3 through P-TRA-6, P-TRA-8, P-TRA-9, and P-TRA-11 through P-TRA-13, which require the provision of adequate pedestrian and bicycle facilities throughout the INSP area and as part of individual development projects. Therefore, the proposed project would result in no new or more severe impacts on bicycle and pedestrian facilities beyond those identified in the 2018 EIR or 2020 SEIR for the original project.

The proposed project would be on the same project site as the original project. Therefore, the proposed project would be in proximity to the same transit stops as the original project. As described under Section 4.14, *Population and Housing*, the proposed project would result in more residents on the project site than the original project. Accordingly, there would be a corresponding increase in demand for transit. Development facilitated by the No Net Loss Specific Plan Amendment Project would be required to satisfy INSP policies P-TRA-14 through P-TRA-19, P-TRA-21, and P-TRA-22, which require improvements to existing and planned transit facilities throughout the INSP area and as part of individual development projects. The proposed project would result in no new or more severe impacts on transit facilities beyond those identified in the 2018 EIR or 2020 SEIR for the original project.

b. Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

CEQA Guidelines Section 15064.3(b), which was added to the *CEQA Guidelines* in November 2018, defines acceptable criteria for analyzing transportation impacts under CEQA. It states that land use

projects with vehicle miles traveled (VMT) exceeding an applicable threshold of significance may indicate a significant impact, and that projects that decrease VMT compared to existing conditions should be presumed to have a less than significant transportation impact.

While the 2018 EIR and 2020 SEIR did not address VMT as an impact metric pursuant to Senate Bill 743, analysis conducted by Kittelson & Associates Inc. directly compares the INSP VMT to proposed project VMT to disclose whether there would be additional total VMT or increased VMT metrics generated by the changes in the proposed project (Appendix E). VMT was modeled for the Isabel Crossing Project and No Net Loss Specific Plan Amendment Project separately, in order to show the net change with the currently proposed development on the Isabel Crossing Parcels as well as to show the net change associated with the overall land use modifications that would be applied under the No Net Loss Specific Plan Amendment Project. It should be noted that the net change associated with the No Net Loss Specific Plan Amendment Project takes into consideration the unit shortfall associated with the Isabel Crossing Project, in addition to the unit shortfall associated with other existing and planned development in the INSP area.

Isabel Crossing Project

Table 7 shows daily VMT calculations for the original project compared with the Isabel Crossing Project for residential, employment, and retail uses. Table 8 shows VMT per capita for the original project compared with the Isabel Crossing Project for residential and employment uses.

Table 7 VMT Analysis for Original Project Compared with Isabel Crossing Project (Total VMT)

Land Use	Original Project	Isabel Crossing Project	Net Change in VMT
Residential	126,704	87,620	-39,084
Employment	50,474	44,260	-6,214
Retail	235,940	193,155	-42,785

Source: Appendix E

Table 8 VMT Analysis for Original Project Compared with Isabel Crossing Project (VMT per Capita)

Land Use	Original Project	Isabel Crossing Project	Net Change
Residential	24.5	20.8	-3.7
Employment	12.7	13.4	+0.6

Source: Appendix E

Analysis by Kittelson & Associates Inc. concluded that the Isabel Crossing Project would result in a slight increase in VMT per employee compared with the original project due to the reduction in office land use by the Isabel Crossing Project; however, the total VMT for all land uses would be lower under the Isabel Crossing Project. The Isabel Crossing Project also would be within 0.5 miles of quality transit, like the original project, and would be required to adhere to transportation demand management measures associated with INSP Policies P-TRA-19 and P-TRA-24 described in the 2020 SEIR. Therefore, the Isabel Crossing Project would not increase VMT impacts compared to impacts analyzed in the 2020 SEIR. The Isabel Crossing Project would result in no new or more severe impacts to VMT beyond those identified in the 2018 EIR or 2020 SEIR for the original project.

No Net Loss Specific Plan Amendment Project

Table 9 shows the total daily VMT calculations for the original project compared with the No Net Loss Specific Plan Amendment Project for the entire INSP area.

Table 9 Daily VMT Analysis for Original Project Compared with No Net Loss Specific Plan Amendment Project

	No Project (2013)	Original Project (2040)	No Net Loss Specific Plan Amendment Project (2040)
Daily Vehicle Trips	57,730	112,183	104,657
Daily VMT	599,393	1,168,901	1,157,280
Service Population	14,671	36,273	35,328
VMT/Service Population	40.9	32.2	32.8

Source: Appendix E

Analysis by Kittelson & Associates Inc. concluded that the No Net Loss Specific Plan Amendment Project would result in a slight increase in VMT per service population compared with the original project due updated VMT analysis methodology; however, the daily vehicle trips and total daily VMT would be lower under the No Net Loss Specific Plan Amendment Project. The BART Parcel also would be within 0.5 miles of quality transit, and future development facilitated by the No Net Loss Specific Plan Amendment Project would be required to adhere to transportation demand management measures associated with INSP Policies P-TRA-19 and P-TRA-24, described in the 2020 SEIR. Therefore, the No Net Loss Specific Plan Amendment Project would not increase VMT impacts compared to impacts analyzed in the 2020 SEIR. The No Net Loss Specific Plan Amendment Project would result in no new or more severe impacts to VMT beyond those identified in the 2018 EIR or 2020 SEIR for the original project.

Because the Isabel Crossing Project and No Net Loss Specific Plan Amendment Project would both result in less total VMT than the INSP as described in the 2018 EIR and 2020 SEIR, the proposed project as a whole would not result in a new or more severe impact to VMT beyond those identified in the 2018 EIR or 2020 SEIR for the original project.

c. Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?

The 2020 SEIR determined that implementation of the INSP would increase traffic levels in the study area and introduce new intersections and traffic signals to the existing street system. However, these new roadways and traffic signals would be designed to City Design standards and therefore should not substantially increase hazards due to a design feature or incompatible use and impacts would be less than significant.

The Isabel Crossing Project would include internal circulation within the Isabel Crossing Parcels that is different from the original project. However, like the original project, roadways and traffic signals would be designed to City Design standards and therefore should not substantially increase hazards due to a design feature or incompatible use. Similarly, future development facilitated by the No Net Loss Specific Plan Amendment Project that includes new roadways or traffic signals would similarly be required to meet City Design standards. Therefore, impacts related to design hazards and

incompatible use would not exceed those considered for the original project and no revisions to the 2018 EIR or 2020 SEIR would be required.

d. Would the project result in inadequate emergency access?

The 2020 SEIR determined that implementation of the INSP would increase traffic levels in the study area and introduce new intersections and traffic signals to the existing street system. However, these new roadways and traffic signals would be designed to City Design standards and therefore should not result in inadequate emergency access and impacts would be less than significant. The 2020 SEIR determined that new land uses would require additional emergency access to respond to emergencies, however, new roadways and intersections would be designed to City design standards that account for emergency access and impacts would be less than significant.

The Isabel Crossing Project would include internal circulation within the Isabel Crossing Parcels that is different from the original project. However, like the original project, roadways and traffic signals would be designed to City Design standards and therefore should not result in inadequate emergency access. Similarly, future development facilitated by the No Net Loss Specific Plan Amendment Project that includes new roadways or traffic signals would similarly be required to meet City Design standards. The transportation analysis conducted by TJKM in May 2024 (Appendix E) for the Isabel Crossing Project determined that fewer trips would be produced by the Isabel Crossing Project compared to the original project on the Isabel Crossing Parcels. Similarly, the transportation analysis conducted by Kittelson in June 2024 (Appendix E) for the No Net Loss Specific Plan Amendment Project determined that fewer trips would be produced by future development facilitated by the No Net Loss Specific Plan Amendment Project compared to the original project on the No Net Loss Parcels. Therefore, traffic impacts during an emergency or evacuation event would not exceed those considered for the original project and no revisions to the 2018 EIR or 2020 SEIR would be required.

This page intentionally left blank.

4.18 Tribal Cultural Resources

	Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in a Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	Page 3.13-19 of the 2018 EIR	No	No	N/A
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	Page 3.13-19 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to tribal cultural resources were analyzed on page 3.13-19 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to tribal cultural resources from the 2018 EIR. Tribal cultural resources were determined to be less than significant.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in a Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a. *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?*

b. *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?*

During preparation of the 2018 EIR, NAHC and seven Native American tribes were contacted, pursuant to AB 52 and SB 18. At the time the 2018 EIR was completed, no response had been received from the tribes. An updated sacred lands file search conducted for this project by the NAHC did not indicate the presence of additional Native American cultural resources within the planning area. The 2018 EIR determined that there would be no impact to tribal cultural resources within the planning area.

Pursuant to SB 18, the City reached out to tribes listed on the NAHC contact list. The Confederated Villages of Lisjan Nation requested information about the project and environmental documents which the City provided via email, and the North Valley Yokuts Tribe requested information regarding the Sacred Lands File Search which the City provided via email. No tribes requested further consultation at the time of this report.

The proposed project would be located at the same project site as the original project, and would not exceed the level of ground disturbance or intensity of development considered in the INSP. Therefore, the proposed project would result in no new or more severe impacts regarding tribal cultural resources beyond those identified in the 2018 EIR for the original project.

4.19 Utilities and Service Systems

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
Would the project:					
a.	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	Page 3.10-11 through 3.10-13 of the 2018 EIR	No	No	N/A
b.	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	Page 3.10-13 of the 2018 EIR	No	No	N/A
c.	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	Page 3.10-11 of the 2018 EIR	No	No	N/A
d.	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	Page 3.10-13 through 3.10-15 of the 2018 EIR	No	No	N/A
e.	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	Page 3.10-15 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to utilities and service systems were analyzed on pages 3.10-11 through 3.10-15 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to utilities and service systems from the 2018 EIR. Utilities and service systems impacts were determined to be less than significant.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. *Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*

b. *Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?*

c. *Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

d. *Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?*

e. *Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?*

The 2018 EIR determined that the INSP would not require or result in the construction of new stormwater drainage, solid waste, wastewater, or water facilities. The 2018 EIR determined that implementation of the INSP would not result in insufficient water supplies available to serve the project from existing entitlements and resources or require expanded entitlements. The 2018 EIR determined that implementation of the INSP would not exceed wastewater treatment requirements of the San Francisco Regional Water Quality Board. The 2018 EIR determined that implementation of the INSP would not result in solid waste disposal needs that exceed the permitted landfill capacity serving the INSP planning area. The 2018 EIR determined that the INSP would be required to comply with federal, State, and local statutes and regulations related to solid waste, therefore, the impacts would be less than significant.

The proposed project would be on the same project site as the original project and entirely within the INSP Planning Area analyzed in the 2018 EIR. As described under Section 4.14, *Population and Housing*, the Isabel Crossing and No Net Loss Specific Plan Amendment Project would result in a net increase of 1,431 residential units beyond the total residential buildout in the adopted INSP. The project would also result in a net decrease of 1,531,486 square feet of office and commercial space as compared to the adopted INSP.

Water

The 2020 Livermore Urban Water Management Plan (UWMP) indicates adequate available water supply during all future year scenarios to meet anticipated water demands up to 10,128 AFY, with additional unused water supply available. The 2020 total water demand in the district was 9,571 AFY, with 2,003 AFY unused.

The project would result an increase in water demand of approximately 134,514 gallons per day (GPD) and the reduction in office space would result in a decrease in approximately 32,030 GPD for a net water demand of approximately 102,484 GPD, or 115 acre-feet per year (AFY) compared with planned development under the INSP. The net water demand would comprise approximately 5.7 percent of the 2020 remaining water supply (Cal Water 2021). This additional demand would not be substantial and could be accommodated by the districts' existing water supply sources (Appendix F). Thus, no new or additional water infrastructure or water supply resources would be required. The proposed project would result in no new or more severe impacts or the need for new or expanded water facilities beyond those identified in the 2018 EIR for the original project.

Wastewater

The Livermore Water Reclamation Plant has a capacity of 8.5 million GPD and as of 2020, treats 4 to 7 million GPD according to the 2020 Livermore UWMP (Cal Water 2021). The remaining capacity would be 1.5 million GPD.

Assuming that wastewater generation is approximately 80 percent of water demand due to system losses, the wastewater generation for development facilitated by the proposed project would be 82,987 GPD. The additional wastewater generated by development facilitated by the proposed project would represent approximately 5.5 percent of the remaining capacity, which would not be a substantial increase. Thus, no new or additional wastewater infrastructure would be required. The proposed project would result in no new or more severe impacts or the need for new or expanded wastewater facilities beyond those identified in the 2018 EIR for the original project.

Stormwater

As discussed in Section 4.10, *Hydrology and Water Quality,* the proposed project would introduce new impervious surfaces, and would change the land use compared with the original project; however, the proposed project would not introduce new impervious surfaces that would exceed those considered in the 2018 EIR for the original project and would not introduce land uses or features that would substantially alter the drainage pattern of the site or area compared with the original project. The Isabel Crossing Project would include biotreatment areas, on-site pervious pavers, on-site biotreatment and flowthrough planters, and a detention vault. Future development facilitated by the No Net Loss Specific Plan Amendment Project would include similar features, as required by local and state stormwater regulations. Similar to the original project, the proposed project would be subject to regulations regarding stormwater including INSP Policy P-ENV-33, which requires preparation of a drainage study. The proposed project would result in no new or more severe impacts or the need for new or expanded stormwater facilities beyond those identified in the 2018 EIR for the original project.

Solid Waste

According to the California Department of Resources Recycling and Recovery (CalRecycle) waste characterization rates, the residential solid waste rate is 8.6 pounds per unit per day, and the office rate is 6 pounds per 1,000 square feet per day (CalRecycle 2024a).

The City of Livermore sends its waste to the Vasco Road Landfill and the Altamont Landfill. The Vasco Road Landfill has a maximum permitted throughput of 2,518 tons per day and a total remaining capacity of 11.6 million cubic yards, and the Altamont Landfill has a maximum permitted throughput of 11,150 tons per day and a total remaining capacity of 65.4 million cubic yards (CalRecycle 2024b, 2024c). This amounts to a total maximum daily throughput of 13,668 tons per day and a total remaining capacity of 77.0 million cubic yards across both landfills.

The Isabel Crossing Project would decrease residential units and commercial and office space compared to development originally planned for those parcels under the INSP, therefore, the Isabel Crossing Project would not result in new or more severe impacts or the need for new or expanded solid waste facilities beyond those identified in the 2018 EIR for the original project.

The increase in solid waste generated by new residential uses facilitated by the No Net Loss Specific Plan Amendment Project would be approximately 12,307 pounds per day[1] and the decrease in solid waste generation by the removal of office space from the No Net Loss Parcels would be approximately 9,188 pounds per day[2] for a net increase in solid waste generation from the No Net Loss Specific Plan Amendment Project of approximately 3,119 pounds per day (1.6 tons per day). This equates to approximately 33 annual cubic yards of solid waste.

This increase in solid waste generation would be less than 0.02 percent of the maximum daily throughput and less than 0.001 percent of the total remaining capacity of the Vasco Road and Altamont Landfills. Thus, the current solid waste infrastructure would be adequate to accommodate the increased solid waste generation from the No Net Loss Specific Plan Amendment Project and no new or additional solid waste infrastructure would be required.

The proposed project would continue to be subject to applicable federal, State, and local statutes and regulations related to solid waste, including Chapter 8.08 of the LMC, like the original project. The proposed project would result in no new or more severe impacts or the need for new or expanded solid waste facilities beyond those identified in the 2018 EIR for the original project.

1 1,431 residential units multiplied by 8.6 pounds per day.
2 1,531,486 square feet multiplied by 6 pounds per 1000 square feet per day.

4.20 Wildfire

		Where was Impact Analyzed in the EIR?	Are Major Revisions to the EIR Required?	Are There New or Substantially More Severe Significant Impacts?	Do EIR Mitigation Measures Address and/or Resolve Impacts?
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:					
a.	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	Page 3.8-22 of the 2018 EIR	No	No	N/A
b.	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	N/A	N/A	N/A	N/A
c.	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	N/A	N/A	N/A	N/A
d.	Expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	Page 3.8 - 23 of the 2018 EIR	No	No	N/A

Analysis in Previous Environmental Documents

Impacts to wildfire were analyzed on pages 3.8-22 through 3.8 -23 of the 2018 EIR. The 2020 SEIR did not update or modify the analysis of impacts to wildfire from the 2018 EIR. Impacts regarding wildfire were determined to be less than significant.

The following describes the analysis included in the 2018 EIR and provides a review to determine whether there would be project-specific impacts that are either 1) peculiar to the project or the parcels on which the project is located; 2) were not previously analyzed in a previous environmental documents as significant effects; 3) are potentially significant off-site impacts and cumulative impacts that were not previously discussed in the previous environmental documents; and 4) are now determined to have a more severe impact than discussed in the previous environmental documents due to substantial new information.

Project-Specific Impacts

a. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

The 2018 EIR determined that development facilitated by the INSP would result in new development and population growth, resulting in an increase in demand for emergency services, which could affect implementation of the Alameda Local Hazard Mitigation Plan and the Tri-Valley Hazard Mitigation Plan; however, with implementation of existing local programs and regulations, including the City's existing General Plan's Public Safety Element and Circulation Element, impacts would be less than significant.

The California Department of Forestry and Fire Protection (CAL FIRE) Fire Hazard Severity Zones Map for Alameda County shows that none of the project parcels are not located in a State Responsibility Area or lands classified as Very High Fire Severity Zones (CAL FIRE 2022). The nearest State Responsibility Area is located approximately 0.11 mile west of the Comcast Parcels, 0.33 mile north of the Isabel Crossing Parcels, and 0.35 mile east of the BART Parcel and is classified as moderate. The proposed project would be located within the INSP Planning Area and would not exceed the buildout anticipated by the original project. Similar to the original project, the proposed project would be subject to existing local programs and regulations including the Livermore General Plan's Circulation Element which requires all residential, commercial, and industrial areas to provide efficient and safe access for emergency vehicles. In addition, the proposed project would be reviewed by the Livermore Fire Department which reviews and approves projects to ensure that emergency access standards are met, and therefore development facilitated by the project would be reviewed to ensure that it does not hinder emergency access or evacuation plans. Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

b. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

c. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

d. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

The California Department of Forestry and Fire Protection (CAL FIRE) Fire Hazard Severity Zones Map for Alameda County shows that none of the project parcels are not located in a State Responsibility Area or lands classified as Very High Fire Severity Zones (CAL FIRE 2022). The nearest State Responsibility Area is located approximately 0.11 mile west of the Comcast Parcels, 0.33 mile north of the Isabel Crossing Parcels, and 0.35 mile east of the BART Parcel and is classified as moderate. The 2018 EIR determined that with implementation of existing State and local programs and regulations as well as the policies of the INSP, impacts would be less than significant.

While pollutant concentrations from wildfire and the installation or maintenance of associated infrastructure were not specifically addressed in the 2018 EIR, the proposed project would be on the same project site as the original project and entirely within the INSP planning area analyzed in the 2018 EIR, and would not substantially change existing conditions or require the installation or maintenance of associated infrastructure beyond what was planned for the INSP and considered in the 2018 EIR. Therefore, the proposed project would not result in new or more severe impacts beyond those identified in the 2018 EIR for the original project.

This page intentionally left blank.

5 Cumulative Impacts

In addition to the specific impacts of individual projects, CEQA requires consideration of potential cumulative impacts of the proposed project. CEQA defines "cumulative impacts" as two or more individual impacts that, when considered together, are substantial or will compound other environmental impacts. Cumulative impacts are the combined changes in the environment that result from the incremental impact of development of the proposed project and other past, present, and probable future projects producing related or cumulative impacts. For example, noise impacts of two nearby projects may be less than significant when analyzed separately but could have a significant impact when analyzed together. The cumulative impact analysis provides a reasonable forecast of future environmental conditions and can more accurately gauge the effects of a series of projects.

CEQA Guidelines Section 15130 requires cumulative impact analysis in EIRs to consider either a list of planned and pending projects that may contribute to cumulative effects or a summary of projections contained in an adopted planning document such as a general plan.

Impacts Identified in the 2018 EIR and 2020 SEIR

The cumulative setting for the analysis in the 2020 EIR is explained in Section 4.2, *Cumulative Impacts*, of the 2020 SEIR. As stated in that section, cumulative impacts of the INSP were considered in conjunction with the Valley Link Project, which would construct new rail stations at Greenville Road and Isabel Avenue in Livermore, traversing the INSP area. The 2020 SEIR indicates that some sections of the EIR are cumulative in nature, including air quality, energy, greenhouse gas emissions, noise, and transportation. The 2018 EIR provides an additional cumulative analysis for the following topics: aesthetics, agriculture and forestry resources, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, population and housing, public services, recreation, tribal cultural resources, and utilities and service systems.

The 2018 EIR and 2020 SEIR determined that the following resource areas would have a considerable contribution to a cumulative impact: aesthetics, agriculture and forestry resources, air quality, biological resources, cultural resources, greenhouse gas emissions, population and housing, noise, transportation, and tribal cultural resources.

The 2018 EIR and 2020 SEIR determined that the following resource areas would not have a considerable contribution to a cumulative impact: geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, public services, recreation, and utilities and service systems.

Impacts of the Proposed Project

Since certification of the 2018 EIR and 2020 SEIR, there has been no new development proposed within the INSP area that was not considered as part of the INSP. Similarly, the Valley Link Project has not changed substantially since the 2018 EIR and 2020 SEIR. There are no new cumulative projects in the INSP area that were not previously considered in the 2018 EIR and 2020 SEIR. The cumulative conditions in the 2018 EIR and 2020 SEIR have not substantially changed; therefore, the cumulative setting in the 2018 EIR and 2020 SEIR remains the same for the purposes of this analysis.

The proposed project would not result in new impacts compared to the INSP as analyzed in this Addendum. While the project would result in the potential future development of a greater number of housing units and less commercial and office space in the INSP area than analyzed in the 2018 EIR and 2020 SEIR, the physical development area of the INSP would not be modified. Therefore, no new or additional cumulatively considerable contributions to a significant cumulative impact would occur as a result of the project.

Conclusion

The proposed project would not result in new or more severe cumulatively considerable impacts than were identified in the 2018 EIR and 2020 SEIR. No new or substantially more severe significant effects would occur to cumulative impacts, and no new mitigation measures are required. No substantial changes have occurred that require major revisions to the 2018 EIR and 2020 SEIR. There is no new information indicating that the proposed project would have new significant impacts or substantially more severe significant impacts with respect to cumulative impacts than were identified in the 2018 EIR and 2020 SEIR. None of the conditions listed in *CEQA Guidelines* Section 15162 requiring preparation of a subsequent EIR have been met.

6 Conclusion

Analysis in Section 2, *Overview of CEQA Guidelines Section 15162 and Section 15164*, and Section 4, *Impact Analysis*, there are no project-specific significant effects which are peculiar to the proposed project or its site; potentially significant off-site impacts and cumulative impacts which were not discussed in the 2018 EIR or 2020 SEIR; or previously identified significant effects which, as a result of substantial new information, which was not known at the time the 2018 EIR or 2020 SEIR were certified, are determined to have a more severe adverse impact.

Analysis in Section 4, *Impact Analysis*, determined that substantial changes are not proposed to the original project nor have substantial changes occurred that would require major revisions to the 2018 EIR or 2020 SEIR prepared for the original project. Substantially more severe impacts beyond those identified and analyzed in the 2018 EIR and 2020 SEIR would not occur as a result of the proposed project. Overall, the proposed project would result in no new impact or mitigation information of substantial importance that would generate new, more severe impacts or require new mitigation measures compared to those identified for the original project in the 2018 EIR and 2020 SEIR. As such, the proposed project would not result in conditions identified in *CEQA Guidelines* Section 15162 requiring supplemental environmental review or a Subsequent EIR, and these are therefore not required for the proposed project.

Therefore, the City concludes that the analyses conducted, the conclusions reached, and the mitigation measures adopted in the 2018 EIR and 2020 SEIR would not be substantially changed for the proposed project. The proposed project would remain subject to all previously adopted mitigation measures and uniformly applicable development policies included in the 2018 EIR and 2020 SEIR for the original project. Based on the above analysis, no subsequent action under *CEQA Guidelines* Sections 15162 or 15164 is required.

CalEEMod Output Files

Appendix B-1

Isabel Crossing Parcels – Original Project

Harridge Development Orginal Project Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2024) - Unmitigated

3.2. Demolition (2024) - Mitigated

3.3. Site Preparation (2024) - Unmitigated

3.4. Site Preparation (2024) - Mitigated

3.5. Grading (2024) - Unmitigated

3.6. Grading (2024) - Mitigated

3.7. Building Construction (2024) - Unmitigated

3.8. Building Construction (2024) - Mitigated

3.9. Building Construction (2025) - Unmitigated

3.10. Building Construction (2025) - Mitigated

3.11. Building Construction (2026) - Unmitigated

3.12. Building Construction (2026) - Mitigated

3.13. Building Construction (2027) - Unmitigated

3.14. Building Construction (2027) - Mitigated

3.15. Building Construction (2028) - Unmitigated

3.16. Building Construction (2028) - Mitigated

3.17. Building Construction (2029) - Unmitigated

3.18. Building Construction (2029) - Mitigated

3.19. Paving (2029) - Unmitigated

3.20. Paving (2029) - Mitigated

3.21. Architectural Coating (2029) - Unmitigated

3.22. Architectural Coating (2029) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Harridge Development Orginal Project
Construction Start Date	1/1/2024
Operational Year	2040
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.00
Precipitation (days)	33.2
Location	37.706194790730734, -121.79792273434387
County	Alameda
City	Livermore
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1677
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.20

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Single Family Housing	138	Dwelling Unit	48.4	269,100	1,616,374	—	389	—
Apartments Mid Rise	451	Dwelling Unit	0.00	432,960	0.00	—	1,272	—
Apartments Low Rise	749	Dwelling Unit	0.00	793,940	0.00	—	2,112	—
General Office Building	39.6	1000sqft	0.91	39,640	0.00	—	—	—
Regional Shopping Center	167	1000sqft	3.84	167,190	0.00	—	—	—
Enclosed Parking with Elevator	819	Space	0.00	327,600	0.00	—	—	—
Parking Lot	281	Space	0.00	0.00	0.00	—	—	—
Other Asphalt Surfaces	2.17	Acre	2.17	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Transportation	T-4	Integrate A ordable and Below Market Rate Housing
Water	W-7	Adopt a Water Conservation Strategy
Waste	S-1/S-2	Implement Waste Reduction Plan

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	16.2	annual days of extreme heat

Extreme Precipitation	2.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	18.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	1	1	2
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.8
AQ-PM	20.1
AQ-DPM	8.90
Drinking Water	54.0
Lead Risk Housing	4.86
Pesticides	52.7

Toxic Releases	31.9
Traffic	89.6
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	7.19
Haz Waste Facilities/Generators	76.8
Impaired Water Bodies	23.9
Solid Waste	83.3
Sensitive Population	—
Asthma	24.3
Cardio-vascular	34.2
Low Birth Weights	40.9
Socioeconomic Factor Indicators	—
Education	12.0
Housing	1.29
Linguistic	30.7
Poverty	8.68
Unemployment	30.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	88.28435776
Employed	88.70781471
Median HI	88.66931862
Education	—

Bachelor's or higher	64.48094444

2016 Voting	60.4

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	18.0
Healthy Places Index Score for Project Location (b)	88.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Harridge Development Project Operations
Construction Start Date	1/1/2024
Operational Year	2040
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.00
Precipitation (days)	33.2
Location	37.70623392502735, -121.79859974891373
County	Alameda
City	Livermore
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1677
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.20

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Condo/Townhouse High Rise	545	Dwelling Unit	25.8	865,072	0.00	—	1,537	—
Apartments Mid Rise	716	Dwelling Unit	9.07	941,692	0.00	—	2,019	—
Regional Shopping Center	81.9	1000sqft	0.00	81,897	0.00	—	—	—
Enclosed Parking with Elevator	1,023	Space	0.00	0.00	0.00	—	—	—
Parking Lot	237	Space	0.00	0.00	0.00	—	—	—
Other Asphalt Surfaces	10.5	Acre	10.5	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Transportation	T-4	Integrate A ordable and Below Market Rate Housing
Water	W-7	Adopt a Water Conservation Strategy
Waste	S-1/S-2	Implement Waste Reduction Plan

2. Emissions Summary

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	16.2	annual days of extreme heat

Extreme Precipitation	2.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	18.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	1	1	2
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.8
AQ-PM	20.1
AQ-DPM	8.90
Drinking Water	54.0
Lead Risk Housing	4.86
Pesticides	52.7

Toxic Releases	31.9
Traffic	89.6
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	7.19
Haz Waste Facilities/Generators	76.8
Impaired Water Bodies	23.9
Solid Waste	83.3
Sensitive Population	—
Asthma	24.3
Cardio-vascular	34.2
Low Birth Weights	40.9
Socioeconomic Factor Indicators	—
Education	12.0
Housing	1.29
Linguistic	30.7
Poverty	8.68
Unemployment	30.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	88.28435776
Employed	88.70781471
Median HI	88.66931862
Education	—

Bachelor's or higher	64.48094444
High school enrollment	13.5249583
Preschool enrollment	95.7141024
Transportation	—
Auto Access	67.17567047
Active commuting	50.09624022
Social	—
2-parent households	97.21544976
Voting	59.77158989
Neighborhood	—
Alcohol availability	97.0101373
Park access	44.4629796
Retail density	7.442576671
Supermarket access	10.58642371
Tree canopy	22.91800334
Housing	—
Homeownership	95.99640703
Housing habitability	93.16052868
Low-inc homeowner severe housing cost burden	71.74387271
Low-inc renter severe housing cost burden	74.51559091
Uncrowded housing	79.21211344
Health Outcomes	—
Insured adults	80.68779674
Arthritis	73.2
Asthma ER Admissions	67.9
High Blood Pressure	95.4
Cancer (excluding skin)	45.0

Asthma	61.7
Coronary Heart Disease	87.2
Chronic Obstructive Pulmonary Disease	79.3
Diagnosed Diabetes	91.2
Life Expectancy at Birth	21.4
Cognitively Disabled	80.8
Physically Disabled	85.5
Heart Attack ER Admissions	58.5
Mental Health Not Good	68.6
Chronic Kidney Disease	85.5
Obesity	69.5
Pedestrian Injuries	19.6
Physical Health Not Good	82.3
Stroke	91.3
Health Risk Behaviors	—
Binge Drinking	5.9
Current Smoker	64.6

English Speaking	71.6
Foreign-born	23.2
Outdoor Workers	44.3
Climate Change Adaptive Capacity	—

Impervious Surface Cover	69.4
Traffic Density	76.5
Traffic Access	23.0
Other Indices	—
Hardship	15.1
Other Decision Support	—
2016 Voting	60.4

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	18.0
Healthy Places Index Score for Project Location (b)	88.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Land Use	Based on applicant provided information
Operations: Architectural Coatings	Based on BAAQMD Reg 8 Rule 3
Operations: Vehicle Data	Based on Transportation Technical Memo. It is assumed peak hour trips would be 10 percent of total average daily trips

Appendix B-3

No Net Loss Parcels – Decrease in Commercial Use

ISNP No Net Loss Rezoning - Opt 2 Decreased Commercial Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2025) - Unmitigated

3.2. Demolition (2025) - Mitigated

3.3. Site Preparation (2025) - Unmitigated

3.4. Site Preparation (2025) - Mitigated

3.5. Grading (2025) - Unmitigated

3.6. Grading (2025) - Mitigated

3.7. Building Construction (2025) - Unmitigated

3.8. Building Construction (2025) - Mitigated

3.9. Building Construction (2026) - Unmitigated

3.10. Building Construction (2026) - Mitigated

3.11. Building Construction (2027) - Unmitigated

3.12. Building Construction (2027) - Mitigated

3.13. Building Construction (2028) - Unmitigated

3.14. Building Construction (2028) - Mitigated

3.15. Paving (2028) - Unmitigated

3.16. Paving (2028) - Mitigated

3.17. Architectural Coating (2028) - Unmitigated

3.18. Architectural Coating (2028) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	16.2	annual days of extreme heat
Extreme Precipitation	2.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	18.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	1	1	2
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.8
AQ-PM	20.1
AQ-DPM	8.90
Drinking Water	54.0
Lead Risk Housing	4.86
Pesticides	52.7
Toxic Releases	31.9
Traffic	89.6
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	7.19

Haz Waste Facilities/Generators	76.8
Impaired Water Bodies	23.9
Solid Waste	83.3
Sensitive Population	—
Asthma	24.3

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	18.0
Healthy Places Index Score for Project Location (b)	88.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Operations: Vehicle Data	Close to rail trip rates provided by Kittelson & Assoc, Inc.
Operations: Architectural Coatings	Based on BAAQMD Reg 8 Rule 3

Appendix B-4

No Net Loss Parcels – Increase in Residential Use

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	ISNP No Net Loss Rezoning - Opt 2 Increased Residential
Construction Start Date	1/1/2025
Operational Year	2040
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.00
Precipitation (days)	33.2
Location	37.70567461965193, -121.80009118943576
County	Alameda
City	Livermore
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1677
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.24

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Apartments Low Rise	569	Dwelling Unit	35.6	603,140	0.00	0.00	1,605	—
Apartments Low Rise	862	Dwelling Unit	53.9	913,720	0.00	0.00	2,431	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Transportation	T-4	Integrate A ordable and Below Market Rate Housing
Water	W-7	Adopt a Water Conservation Strategy
Waste	S-1/S-2	Implement Waste Reduction Plan

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	16.2	annual days of extreme heat
Extreme Precipitation	2.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	18.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	1	1	2
Sea Level Rise	1	1	1	2

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.8
AQ-PM	20.1
AQ-DPM	8.90
Drinking Water	54.0
Lead Risk Housing	4.86
Pesticides	52.7
Toxic Releases	31.9
Traffic	89.6
Effect Indicators	—

MEMORANDUM

TO:	Bill Myers	**FROM:**	Scott Batiuk
CC:	Michael Olson		
DATE:	February 15, 2023		
SUBJECT:	Summary of Biological Evaluations at the Portola Avenue/Isabel Avenue site in Livermore, Alameda County, California		

The purpose of this memorandum is to present a summary of the results of the biological evaluations that have been conducted by WRA, Inc. (WRA) within the vacant lot located southwest of the intersection of Isabel Avenue and Portola Avenue in Livermore, Alameda County, California (Study Area). This memorandum also present avoidance and mitigation measures for potential impacts to sensitive biological resources. WRA has conducted the following tasks:

- A peer review of the Delineation of Aquatic Resources report prepared by RestorCap for the Study Area
- Assessments of the presence or potential presence of special-status species within the Study Area

The peer review focused on the presence of aquatic features within the Study Area. As part of this peer review, WRA visited the Study Area on January 13, 2022, to observe site conditions. Incidental observations were also made on October 4, 2022. The Delineation of Aquatic Resources Report prepared by RestorCap was reviewed based on the site visit and an independent review of recent and historic aerial imagery, published soils data, and the U.S. Army Corps of Engineers' (Corps) Antecedent Precipitation Tool.

The special-status species assessment was based on the January 13, 2022, site visit as well as follow-up site visits conducted on February 1 and 15 and October 4, 2022. The February 1 and 15, 2022, site visits were focused surveys for the presence of actively nesting burrowing owls (*Athene cunicularia*; California Department of Fish and Wildlife [CDFW] Species of Special Concern) or native birds while simultaneously assessing potential habitat for these species. The October 4, 2022, site visit was a late-season special-status plant survey for Congdon's tarplant (*Centromadia parryi* ssp. *congdonii*; California Rare Plant Rank 1B.1). Prior to the January 13, 2022, site visit, WRA performed a review of the following biological resources database and species occurrence resources:

- The CDFW California Natural Diversity Database
- The California Native Plant Society's Rare Plant Inventory
- The U.S. Fish and Wildlife Service's (USFWS) Information for Planning and Consultation database
- The Consortium of California Herbaria
- The USFWS Critical Habitat Mapper
- eBird Online Database

The database searches focused on the Livermore U.S. Geological Survey 7.5-minute quadrangle maps and the surrounding eight quadrangle maps. The results of the peer review and special-status species assessment are provided below.

RESULTS

DELINEATION PEER REVIEW

WRA's January 13, 2022, site visit occurred 14 days after the most recent storm event (a negligible amount of precipitation [0.02 inches] fell 6 days prior to the site visit). Precipitation during the 3-month period prior to the site visit was normal. Except for one small area along the northern boundary, WRA observed upland conditions throughout the Study Area. WRA's investigation included the two manmade basins in the southwestern portion of the Study Area, which are not specifically addressed in the RestorCap report. In that report, the manmade basins were classified as uplands. During the January site visit, WRA observed a small, 0.003-acre (131 square feet) stand of cattails (*Typha domingensis*; Attachment A) along the northern boundary in the northeastern portion of the Study Area, adjacent to the sidewalk along Portola Avenue. This feature was not described in the RestorCap report. Cattails typically only occur in areas with prolonged inundation and/or saturation and are classified as obligate wetland species by regulatory agencies such as the U.S. Army Corps of Engineers (Corps). The location of the cattails in the Study Area was atypical. First, they were growing on sloping, non-depressional topography, and second, there were no surface structures (e.g., culvert outlets) or appropriate adjacent topography (e.g., swales, depressions, or other low spots in the landscape) present that would provide the appropriate hydrology to support a stand of cattails. In fact, no wetland hydrology indicators were observed by WRA on January 13, despite the wet season timing of the site visit. This patch of cattails was again observed during the special-status plant survey on October 4, 2022. Despite the lack of any recent precipitation, the soil was saturated at the surface throughout, and a small amount water was flowing across the sidewalk adjacent to the north of the cattails. Given the unusual landscape position, the lack of surface hydrology indicators in winter, and the presence of surface hydrology indicators in early autumn, WRA believes that the hydrology is man-induced, and likely from la leaking underground pipe or other subsurface, anthropogenic water source. The subsurface water source could be associated with irrigation from the adjacent landscaped strip. If that were the source, irrigation would not likely occur during November-April (rainy season) but would occur during May-October (dry season). Thus, the subsurface infrastructure would not leak until that time, resulting in the observed dry soils in January and the uncharacteristically wet soils observed during the October site visit.

WRA observed the soils in the cattail patch as follows: the upper 8 inches of the soil was entirely comprised of dark grayish brown (2.5Y 4/2 on the Munsell Color chart) clay. From 8 to 16 inches, the soil matrix was comprised of grayish brown (2.5Y 5/2 on the Munsell Color chart) clay, and 25 percent of this layer contained strong brown (7.5 YR 4/6 on the Munsell Color chart) iron concentrations. Thus, this soil meets the Depleted Matrix (F3) hydric soil indicator.

Although wetland hydrology indicators were not observed in January, the Surface Water (A1) and Saturation (A3) indicators were met in October. Therefore, this cattail stand meets the Corps' technical criteria for a wetland. This feature is not adjacent to a stream or other waterbody and would therefore not be regulated by the CDFW. However, because it meets the wetland definitions of the Corps and Regional Water Quality Control Board (RWQCB), it may be considered jurisdictional by those agencies.

As stated above, this cattail-dominated feature was not addressed in the RestorCap report. However, upon reviewing Google Maps Street View imagery from March 2008 through March 2021, cattails were not visible at that location. The RestorCap delineation of aquatic resources occurred in March 2021, and Google Maps Street View imagery suggests that cattails were not visible in this area at the time that RestorCap conducted its delineation and drafted their report. The fact that cattails were absent during this period of time and then colonized between March 2021 and January 2022 supports the idea that the wetland hydrology, and the associated wetland feature is man-induced. No evidence of a wetland in this location is visible on aerial photographs prior to 2020, and no substantial topographic changes to the site have occurred in more than 20 years. In conclusion, the cattail patch is a result of a leaky pipe and therefore may be exempt from jurisdiction by the Corps and RWQCB.

SPECIAL-STATUS SPECIES ASSESSMENT

A table summarizing the results of the special-status species evaluation for species included in the Isabel Neighborhood Plan Environmental Impact Report (EIR) is included as Attachment B.

Special-status Plants

Based upon a review of the biological resources database and species occurrence resources listed above, 59 special-status plant species have been documented in the vicinity of the Study Area. However, nearly all are unlikely to occur or have no potential to occur for one or more of the following reasons:

- Hydrologic conditions (e.g., tidal, riverine) necessary to support the special-status plant species are not present in the Study Area;
- Edaphic (soil) conditions (e.g., volcanic tuff, serpentine) necessary to support the special-status plant species are not present in the Study Area;
- Topographic conditions (e.g., north-facing slope, montane) necessary to support the special-status plant species are not present in the Study Area;
- Unique pH conditions (e.g., alkali scalds, acidic bogs) necessary to support the special-status plant species are not present in the Study Area;
- Associated natural communities (e.g., interior chaparral, tidal marsh) necessary to support the special-status plant species are not present in the Study Area;
- The Study Area is geographically isolated (e.g. below elevation, coastal environ) from the documented range of the special-status plant species;
- The historical landscape and/or habitat(s) of the Study Area were not suitable habitat prior to land/type conversion (e.g., reclaimed shoreline) to support the special-status plant species;
- Land use history and contemporary management (e.g., grading, intensive grazing) has degraded the localized habitat necessary to support the special-status plant species.

Three were determined in the Isabel Neighborhood Plan EIR to have potential to occur in the Isabel Neighborhood Plan Area:

- big-scale balsamroot (*Balsamorhiza macrolepis*; California Rare Plant Rank 1B.2)
- Congdon's tarplant (*Centromadia parryi* ssp. *congdonii*; California Rare Plant Rank 1B.1)
- prostrate vernal pool navarretia (*Navarretia prostrata*; California Rare Plant Rank 1B.2)

Of those three species, WRA has determined that only Congdon's tarplant has moderate potential to occur within the Study Area. The other two species are unlikely or have no potential to occur for one or more of the reasons listed above. Potentially suitable habitat for Congdon's tarplant includes seasonally mesic areas such as shallow depressions in moderately alkaline clay

substrate. Consistent with Mitigation Measure MM-BIO-1 from the EIR, a protocol-level survey for Condgon's tarplant was conducted in the Study Area on October 4, 2022. Prior to the survey, WRA visited a reference population in Dublin, where Congdon's tarplant was blooming, evident, and identifiable, confirming that the timing of the survey was appropriate. Following the reference site visit, the Study Area was surveyed by walking meandering transects. No Congdon's tarplant was observed. Based on this protocol-level survey, WRA concludes that Congdon's tarplant is absent from the Study Area.

Special-status Wildlife

Based upon a review of the biological resources databases and species occurrence resources listed above, 29 special-status wildlife species have been documented in the vicinity of the Study Area. Most are excluded from the Study Area based on a lack of habitat features. Features not found within the Study Area that are required to support special-status wildlife species include:

- Vernal pools
- Perennial aquatic habitats (e.g., streams, rivers or ponds)
- Tidal marsh areas
- Old growth redwood or fir forest
- Dense riparian vegetation
- Caves, mine shafts, or abandoned buildings

The absence of aquatic habitats features eliminates components critical to the survival or movement of most special-status species found in the vicinity of the Study Area.

Twelve species documented in the vicinity of the Study Area were determined in the EIR to have potential to occur in the Isabel Neighborhood Specific Plan Area:

- Townsend's big-eared bat (*Corynorhinus townsendii*; CDFW Species of Special Concern, WBWG High Priority)
- hoary bat (*Lasiurus cinereus*; WBWG Medium Priority)
- American badger (*Taxidea taxus*; CDFW Species of Special Concern)
- San Joaquin kit fox (*Vulpes macrotis mutica*; Federal Endangered, State Threatened)
- tricolored blackbird (*Agelaius tricolor*; State Threatened, CDFW Species of Special Concern)
- burrowing owl (*Athene cunicularia*; CDFW Species of Special Concern)
- white-tailed kite (*Elanus leucurus*; CDFW Fully Protected Species)
- loggerhead shrike (*Lanius ludovicianus*; CDFW Species of Special Concern)
- western pond turtle (*Actinemys marmorata*; CDFW Species of Special Concern)
- California tiger salamander (*Ambystoma californiense*; Federal Threatened, State Threatened)
- California red-legged frog (*Rana draytonii*; Federal Threatened, CDFW Species of Special Concern)
- Callippe silverspot butterfly (*Speyeria callippe*; Federal Endangered)

Of those 12 species, WRA has determined that three have moderate potential to occur in the immediate vicinity or within the Study Area: burrowing owl, white-tailed kite, and loggerhead shrike. In addition, nesting birds with protections under the California Fish and Game Code (CFGC) may occur within the Study Area. These species or guilds are discussed in greater detail

below. The other nine species included in the EIR are unlikely to occur or have no potential to occur because of a lack of suitable habitat features, as listed above. While they are unlikely to occur or have no potential to occur in the Study Area, California tiger salamander and California red-legged frog are discussed in greater detail below due to their protection status and potential presence in the general vicinity of the Study Area.

California tiger salamander, a Federal Threatened and State Threatened species, and California red-legged frog, a Federal Threatened species and CDFW Species of Special Concern, have been documented to occur within 1 mile of the Study Area. However, the Study Area does not contain aquatic habitat to support these species. The Study Area is bordered on all sides by development, including dense commercial and residential development to the north and west and Highway 580 to the south. Isabel Avenue to the east is a four-lane road spanning greater than 100 feet in width, which is a partial barrier to dispersal from adjacent grasslands. In addition, the Study Area does not provide aquatic habitat suitable for these species and is not within a dispersal corridor between suitable aquatic habitat. As such, these species are unlikely to disperse into or through the Study Area. The evaluation of the remaining EIR species that are unlikely or have no potential to occur within the Study Area is included in Attachment B.

Burrowing owl inhabits open areas with sparse or non-existent tree or shrub canopies. This species is dependent on mammals to excavate the burrows that are characteristically used for shelter and nesting. Several burrows were observed within the site which may provide suitable habitat for this species, mainly around excavated detention basins and on the berm along the eastern site boundary. On February 1 and February 15, 2022, WRA revisited the Study Area to investigate habitat conditions as they related to burrowing owl and native nesting birds, as well as to determine if any burrowing owl or nesting birds were currently present. The site was assessed for the presence of burrowing owl in accordance with the guidelines contained within the 2012 California Department of Fish and Game Memorandum, Staff Report on Burrowing Owl Mitigation. The site was traversed on foot and periodically scrutinized with binoculars and the naked eye to determine if any burrowing owl individuals could be observed. Additionally, the site was assessed for the presence of suitable burrowing owl habitat, namely burrows of California ground squirrels and other surrogate structures in areas where vegetation was less than 6 inches in height and canopy cover was minimal. Any identified habitat features (e.g., burrows) were then additionally checked for signs of burrowing owl occupation (e.g., feathers, whitewash, or pellets). No burrowing owls were observed during the surveys. Although ground squirrel burrows have been observed within the Study Area, many of the burrow locations were on relatively steep embankments or were surrounded by dense ground vegetation greater than 6 inches in height, which are not considered hospitable conditions for burrowing owl occupation. Suitably sized burrows were most common along the eastern border of the site, within the detention basin structures on the western side of the Study Area, and along the excavated linear depression. Many of these burrows are obscured by vegetation, but some could function as a wintering or nesting burrow for dispersing burrowing owl. Although burrows of suitable size for burrowing owl were present, no sign of burrowing owl occupation was observed during either site visit. This indicates that the site has likely not recently been utilized by wintering burrowing owl and had not been occupied by breeding owls during the 2022 season up to the time of the surveys.

The white-tailed kite is a resident of open to semi-open habitats throughout the lower elevations of California, including grasslands, savannahs, woodlands, agricultural areas, and wetlands. Nests are constructed mostly of twigs and placed in trees, often at habitat edges. Nest trees are highly variable in size, structure, and immediate surroundings, ranging from

shrubs to trees greater than 150 feet tall. Potential nest trees for this species are present at the periphery of the Study Area on adjacent properties, and the grasslands within the Study Area offer potential foraging opportunities for this species. As such, white-tailed kite is considered to have moderate potential to occur.

The loggerhead shrike is a year-round resident and winter visitor in lowlands and foothills throughout California. This species is associated with open country with short vegetation and scattered trees, shrubs, fences, utility lines, and/or other perches. Nests are typically found in trees and large shrubs and are usually placed from 3 to 10 feet off the ground. Potential nest trees for this species are present at the periphery of the Study Area on adjacent properties as well as in shrubs within the Study Area itself. The grasslands within the Study Area offer potential foraging opportunities for this species. As such, loggerhead shrike is considered to have moderate potential to occur.

In addition to the special-status burrowing owl, white-tailed kite, and loggerhead shrike, a variety of non-status native bird species protected under the CFGC may use the Study Area for nesting. On February 1 and February 15, 2022, WRA revisited the Study Area to investigate habitat conditions as they related to non-status native nesting birds as well as to determine if any birds were nesting. The Study Area was investigated for any evidence of avian territorial behavior (e.g., singing, chasing intruders out of territories, etc.), nesting bird behavior (e.g., adult birds carrying nesting material or food), or the presence of active nests with eggs present and/or pre-fledged juveniles. Observations were made with binoculars and the naked eye. To the extent feasible, large trees on neighboring parcels were also visually surveyed for the presence of large stick nests typical of raptor species. No active nests were observed within the Study Area or the immediate vicinity during the survey. Most bird behavior observed during the surveys was limited to short-distance movements and foraging. Bird nesting habitat is somewhat limited within the Study Area and is most likely to occur within coyote brush (*Baccharis pilularis*) shrubs located mainly in the northeast portion of the Study Area. Street trees that border the Study Area on the north and west sides could also provide nesting substrates, including for larger birds such as American crow (*Corvus brachyrhynchos*) or various raptors. However, no large stick nests typical of these types of birds were observed in these trees that would be indicative of nesting during the previous year's breeding seasons.

AVOIDANCE AND MINIMIZATION MEASURES

Aquatic Features

A small, 0.003-acre (131 square feet) stand of cattails was present along the northern boundary in the northeastern portion of the Study Area, adjacent to the sidewalk along Portola Avenue. As described above, this feature is presumed to be the result of man-induced hydrology, likely the result of a leaky, below-ground irrigation pipe. According to the Corps Wetland Delineation manual, if the cattail stand is created by an anthropogenic source, it would not be jurisdictional under either the Corps' or RWQCB's regulations. Showing that the area is not a wetland would require identifying the source of the potential leaky pipe, repairing it, and revisiting the location to verify that the area no longer meets the wetland criteria. If repair of a leaky pipe were to eliminate wetland hydrology and cause the cattail patch to die off, the area would not be considered jurisdictional, and no Corps or RWQCB permit or mitigation would be required. If the cattail stand remains after repair of a leaky pipe, it would be assumed jurisdictional, and regulatory permits and mitigation would be required for impacts to this feature.

If the feature is jurisdictional and cannot be avoided, the following mitigation approach should be implemented pursuant to MM-BIO-13. The project applicant shall acquire the appropriate applicable permit(s) (e.g., Section 404, Section 401) from the respective regulating agency(s) (i.e. Corps and/or RWQCB). A wetland mitigation plan shall be prepared that will establish suitable compensatory mitigation based on the concept of no net loss of wetland habitat values or acreages, to the satisfaction of the regulatory agencies. The wetland mitigation plan shall include measures for avoidance, minimization, and compensation for wetland impacts. Avoidance and minimization measures may include the designation of buffers around wetland features to be avoided or project design measures. Compensation measures shall include the preservation and/or creation of wetlands or other waters. The final mitigation ratio (the amount of wetlands and other water created or preserved compared to the amount impacted) shall be determined by the applicable resource agency(s) and result in no net loss of wetland habitat value or acreages. The wetland mitigation plan shall follow guidelines detailed in MM-BIO-13, and include the following:

1. At least two surveys by a qualified wetland biologist, botanist, or ecologist per monitoring year;
2. Description of the wetland type and its expected functions and values;
3. Performance standards and monitoring protocol to ensure the success of the mitigation wetland(s) over a period of time to be determined by the resource agencies;
4. Engineering plans showing the location, size and configuration of the wetland(s) to be created or preserved;
5. An implementation schedule showing the construction or preservation of mitigation areas shall commence prior to or concurrently with the initiation of construction; and
6. A description of legal protection of the preserved wetland(s) (such as dedication of fee title, conservation easement, and/or an endowment held by an approved conservation organization, government agency, or mitigation bank).

Purchase of credits at a mitigation bank approved by the relevant regulatory agency(s) (i.e., Corps, RWQCB) at a minimum of a 1:1 ratio (one wetland credit purchased for each impacted wetland acre) may serve as mitigation in-lieu of the mitigation plan described above. All wetland mitigation shall be accomplished within the hydrologic unit code (HUC)-8 boundary for the watershed encompassing the Project.

Burrowing Owl

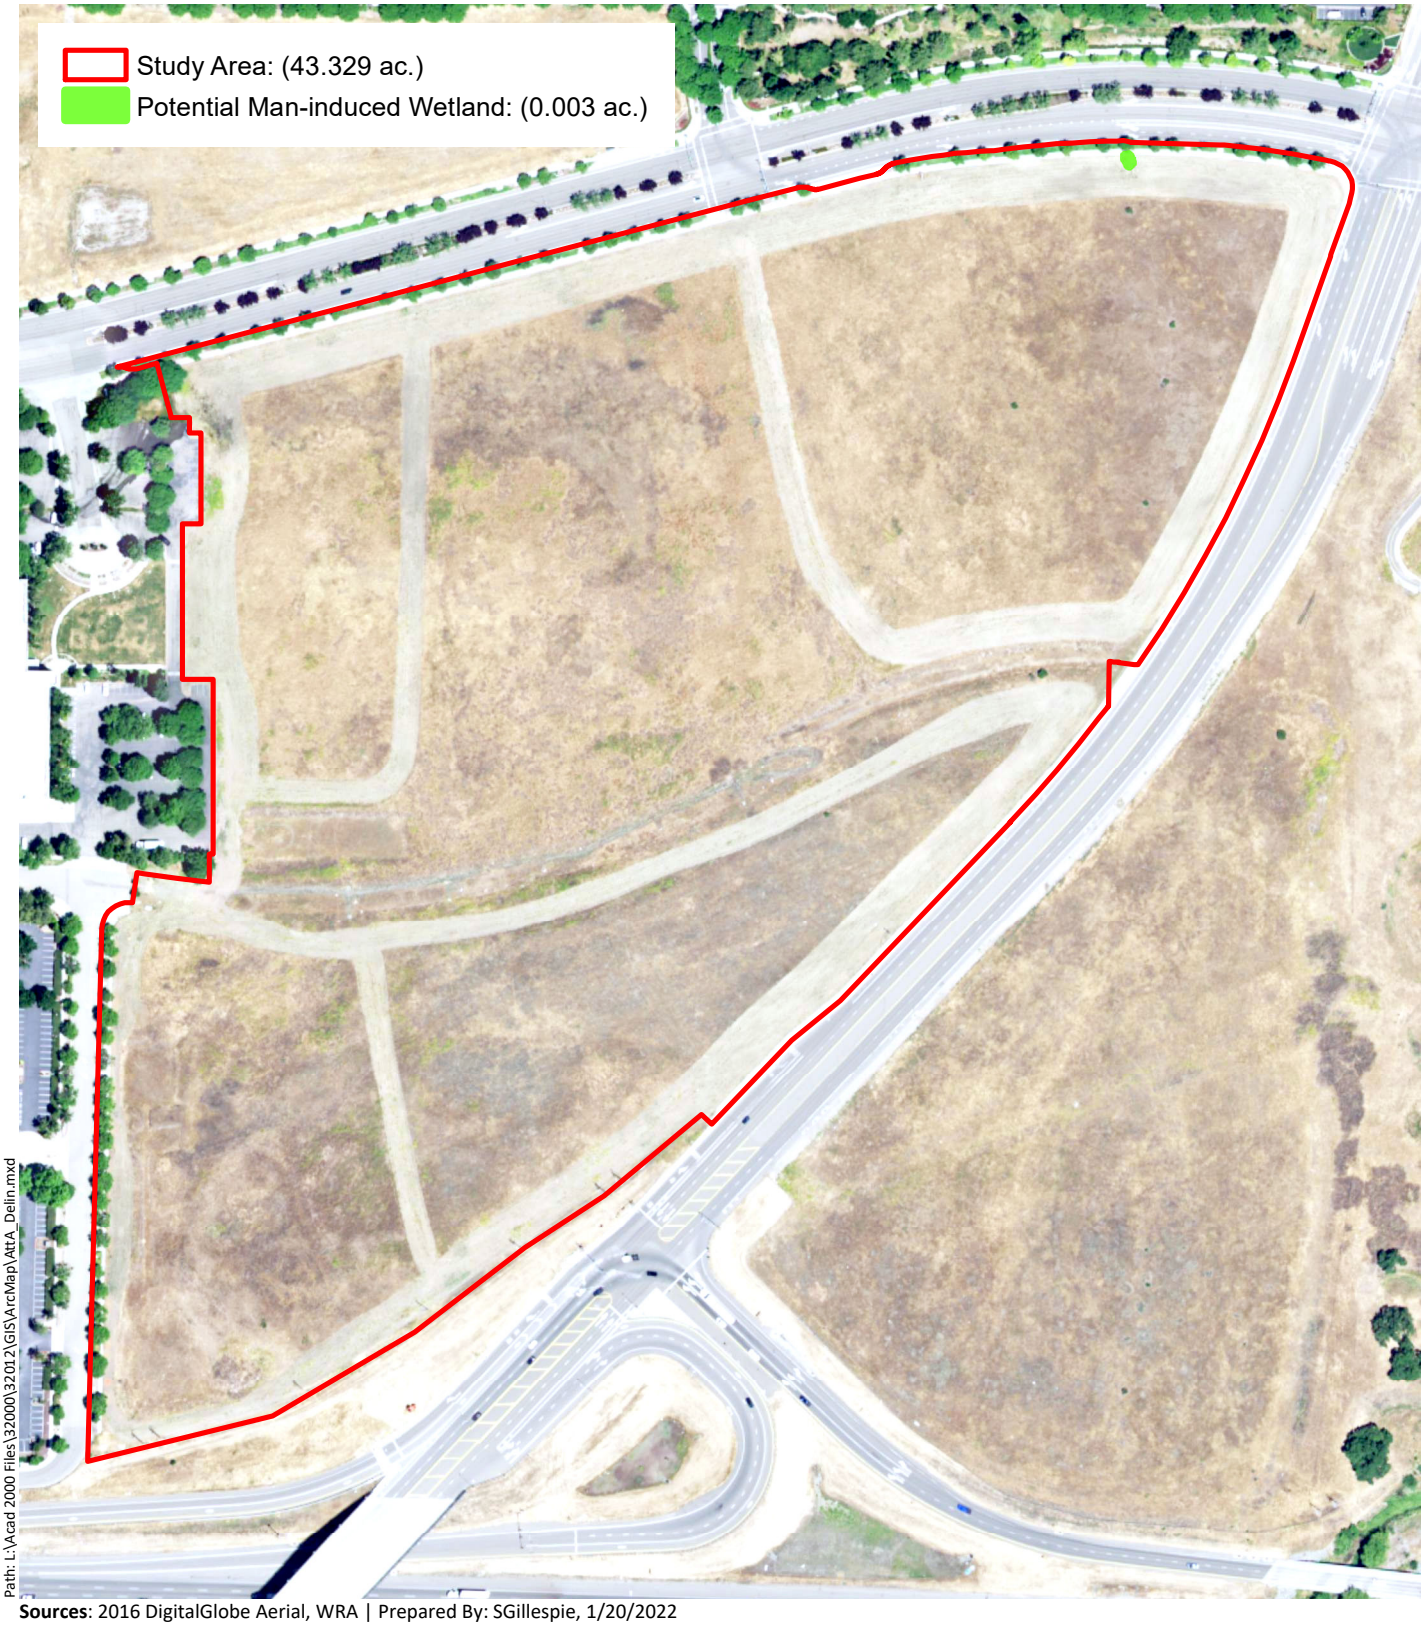
Potentially suitable habitat for burrowing owl is present in the Study Area. Impacts to burrowing owl will require mitigation. Mitigation Measure MM-BIO-3 from the EIR provides the appropriate required measures to avoid potential impacts to burrowing owl. The measure is as follows:

> *Prior to any construction activity planned during the fall and winter non-nesting season (September 1 through January 31) or at any time during the construction process, proponents of projects proposed within the Planning Area will retain a qualified wildlife biologist to conduct a preconstruction survey for burrowing owls. Surveys will be conducted at each area of suitable habitat that will be disturbed no more than seven days prior to ground-disturbing activities and will cover all suitable burrowing owl habitat subject to disturbance pursuant to CDFW's Staff Report on Burrowing Owl Mitigation (California Department of Fish and Game,*

2012). If any burrowing owls are found within the disturbance area, the project proponent will notify CDFW and will proceed under CDFW direction.

If construction is planned to occur during the nesting season (February 1 through August 31), the project proponent will retain a qualified wildlife biologist to conduct a breeding season burrowing owl survey in the year prior to construction. The survey will be conducted to determine if there is a breeding pair within approximately 500 feet of each development footprint, unless the biologist determines that a smaller survey buffer around the construction footprint is warranted based on preexisting background disturbance and conditions. Survey visits will be timed in accordance with CDFW guidelines (California Department of Fish and Game, 2012). This will provide the project team advance notice of nesting owls in the development area and allow ample time to discuss appropriate avoidance measures with CDFW. In addition, preconstruction surveys will be conducted no more than seven days prior to ground disturbance in all areas of the development footprint supporting burrowing owl habitat. If the biologist identifies the presence of a burrowing owl nest in an area scheduled to be disturbed by construction, a 660-foot no-activity buffer will be established and maintained around the nest while it is active. Surveys and buffer establishment will be performed by qualified wildlife biologists, and buffers will be coordinated with CDFW by contacting the appropriate CDFW personnel, and will be subject to CDFW review and oversight.

White-tailed Kite, Loggerhead Shrike, and Other Native Nesting Birds



Vegetation removal or ground disturbance has the potential to impact nesting birds (including active nests with eggs or young) either directly or indirectly through noise or visual disturbance. Mitigation Measure MM-BIO-2 from the EIR provides the appropriate required measures to avoid potential impacts to white tailed kite, loggerhead shrike, and other nesting native bird species. The measure is as follows:

Proponents (or their contractors) of specific projects under the proposed Plan shall conduct construction activities outside the bird nesting season (February 1 to August 31) to the extent feasible. If construction initiation is unavoidable during this time, the project proponent or its contractor will retain a qualified wildlife biologist with demonstrated nest-searching experience to conduct preconstruction surveys for nesting birds (including raptors, but excluding burrowing owl) within 300 feet and including the near-term or longer-term improvements environmental footprints. Adjacent lands outside the development footprints will be scanned with binoculars from the limit of ground-disturbance and publicly accessible areas. Preconstruction surveys will occur no more than three days prior to the onset of ground-disturbing activities (including clearing, grubbing, and staging) at each development area. If active nests are found in the development footprints, the biologist will establish a no-disturbance buffer around the nest and mark the buffer perimeter with high visibility fencing, flagging, or pin flags. The size of the buffer will be based on the species' sensitivity to disturbance and planned work activities in the vicinity; typical buffer sizes are 250 feet for raptors and 50 feet for other birds. The buffer will remain in place until the nest is no longer active, as determined by the biologist. Buffers for any nests found outside but within 300 feet

of the development sites will be established based on the biologist's best professional judgment whether the work would result in nest abandonment. If a lapse in construction activities of 15 days or longer at a previously surveyed environmental footprint occurs, another preconstruction survey will be conducted.

If structure demolition activities cannot occur outside of the nesting season, the project proponent or its contractor will remove inactive nests from the structure to be demolished and install nest exclusion measures (e.g., fine mesh netting, panels, or metal projectors) outside of the nesting season. All exclusionary devices will be monitored and maintained throughout the breeding season to ensure that they are successful in preventing the birds from accessing the cavities or nest sites. No more than three days prior to structure demolition activities, a qualified biologist will conduct a preconstruction survey of all potential nesting habitat on the structures to be demolished/modified and the surrounding areas for the presence of active nests. If active nests are found on the structures or in the affected area, then demolition/modification activities will not proceed until the biologist verifies that all nests on the structures are inactive.

After all surveys and/or nest deterrence activities are completed at each development footprint, the biologist will complete a memorandum detailing the survey effort and results and submit the memorandum to the project proponent within seven days of survey completion.

ATTACHMENT B. SPECIAL-STATUS SPECIES ASSESSMENT TABLE

SPECIES	STATUS	HABITAT REQUIREMENTS	POTENTIAL TO OCCUR IN THE STUDY AREA	RECOMMENDATIONS
Plants				
Balsamorhiza macrolepis big-scale balsamroot	Rank 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 150 to 5100 feet (45 to 1555 meters). Blooms Mar-Jun.	**No Potential.** Chaparral and woodland habitats are absent from the Study Area. Although the Study Area contains grass-dominated habitat, the topography is flat and has been highly disturbed historically and recently and would not support this species. This species is not known from valley bottoms, instead being typically found on hillslopes. The nearest occurrence of this species is in the hills approximately 7 miles southeast of the Study Area.	No further actions are recommended for this species.

ATTACHMENT B. SPECIAL-STATUS SPECIES ASSESSMENT TABLE

SPECIES	STATUS	HABITAT REQUIREMENTS	POTENTIAL TO OCCUR IN THE STUDY AREA	RECOMMENDATIONS
Centromadia parry ssp. *congdonii* Congdon's tarplant	Rank 1B.1	Coastal scrub, meadows and seeps, valley and foothill grassland, vernal pools. Elevation ranges from 10 to 3970 feet (3 to 1210 meters). Blooms Apr-Jul.	**Moderate Potential. Not Observed.** The Study Area contains potentially suitable, grass-dominated habitat and moderately alkaline clay soils. Additionally, this taxon is disturbance-tolerant. There are two occurrences of this taxon within 3 miles of the Study Area (one to the west, one to the northeast).	This taxon was not observed during a protocol-level survey on October 4, 2022, and is assumed to be absent from the Study Area. No further actions are recommended.
Navarretia prostrata prostrate vernal pool navarretia	Rank 1B.2	Coastal scrub, meadows and seeps, valley and foothill grassland, vernal pools. Elevation ranges from 10 to 3970 feet (3 to 1210 meters). Blooms Apr-Jul.	**No Potential.** No vernal pools or other seasonal wetland habitats are present in the Study Area	No further actions are recommended for this species.
Mammals				
Townsend's western big-eared bat *Corynorhinus townsendii townsendii*	SSC, WBWG High	Humid coastal regions of northern and central California. Roost in limestone caves, lava tubes, mines, buildings etc. Will only roost in the open, hanging from walls and ceilings. Roosting sites limiting. Extremely sensitive to disturbance	**No Potential.** No bat roost habitat is present within the Study Area.	No further actions are recommended for this species.
hoary bat *Lasiurus cinereus*	WBWG Medium	Prefers open forested habitats or habitat mosaics, with access to trees for cover and open areas or habitat edges for feeding. Roosts in dense foliage of medium to large trees. Feeds primarily on moths.	**No Potential.** No bat roost habitat is present within the Study Area.	No further actions are recommended for this species.

ATTACHMENT B. SPECIAL-STATUS SPECIES ASSESSMENT TABLE

SPECIES	STATUS	HABITAT REQUIREMENTS	POTENTIAL TO OCCUR IN THE STUDY AREA	RECOMMENDATIONS
American badger *Taxidea taxus*	SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Requires friable soils and open, uncultivated ground. Preys on burrowing rodents.	**Unlikely.** Soils are generally compacted within the Study Area and the potential prey base is limited.	No further actions are recommended for this species.
San Joaquin kit fox *Vulpes macrotis mutica*	FE, ST, RP	Annual grasslands or grassy open stages with scattered shrubby vegetation. Need loose-textured sandy soils for burrowing, and suitable prey base.	**Unlikely.** The Study Area is surrounded by urban development and major roadways, which isolate the Study Area from known source populations of this species.	No further actions are recommended for this species.

ATTACHMENT B. SPECIAL-STATUS SPECIES ASSESSMENT TABLE

SPECIES	STATUS	HABITAT REQUIREMENTS	POTENTIAL TO OCCUR IN THE STUDY AREA	RECOMMENDATIONS
Birds				
tricolored blackbird *Agelaius tricolor*	ST, SSC	Nearly endemic to California, where it is most numerous in the Central Valley and vicinity. Highly colonial, nesting in dense aggregations over or near freshwater in emergent growth or riparian thickets. Also uses flooded agricultural fields. Abundant insect prey near breeding areas essential.	**Unlikely.** No large swaths of emergent vegetation are present within the Study Area to support the establishment of a nesting colony for this species. May occasionally be observed foraging within the Study Area.	No further actions are recommended for this species.
burrowing owl *Athene cunicularia*	SSC	Year-round resident and winter visitor. Occurs in open, dry grasslands and scrub habitats with low-growing vegetation, perches and abundant mammal burrows. Preys upon insects and small vertebrates. Nests and roosts in old mammal burrows, most commonly those of ground squirrels.	**Moderate Potential.** Suitably sized burrows to support both breeding and wintering by this species are present in localized portions of the Study Area, mainly around excavated detention basins and on the berm along the eastern site boundary. Vegetation in these areas is sufficiently low to be considered suitable as well.	Protocol-level burrowing owl surveys should be conducted to determine if wintering or nesting birds are present. Appropriate avoidance buffers may be necessary if burrowing owl are discovered occupying suitable burrows.

ATTACHMENT B. SPECIAL-STATUS SPECIES ASSESSMENT TABLE

SPECIES	STATUS	HABITAT REQUIREMENTS	POTENTIAL TO OCCUR IN THE STUDY AREA	RECOMMENDATIONS
white-tailed kite *Elanus leucurus*	CFP	Year-round resident in coastal and valley lowlands with scattered trees and large shrubs, including grasslands, marshes and agricultural areas. Nests in trees, of which the type and setting are highly variable. Preys on small mammals and other vertebrates.	**Moderate Potential.** Trees and larger shrubs within or directly adjacent to the Study Area have some potential to support nesting by this species. May additionally forage within the Study Area.	A nesting bird survey should be conducted to determine if this species is nesting within the Study Area, and if so, appropriate avoidance buffers should be established.
loggerhead shrike *Lanius ludovicianus*	SSC	Year-round resident in open woodland, grassland, savannah and scrub. Prefers areas with sparse shrubs, trees, posts, and other suitable perches for foraging. Preys upon large insects and small vertebrates. Nests are well-concealed in densely-foliaged shrubs or trees.	**Moderate Potential.** This species may nest in shrubs or trees located within or adjacent to the Study Area.	A nesting bird survey should be conducted to determine if this species is nesting within the Study Area, and if so, appropriate avoidance buffers should be established.

ATTACHMENT B. SPECIAL-STATUS SPECIES ASSESSMENT TABLE

SPECIES	STATUS	HABITAT REQUIREMENTS	POTENTIAL TO OCCUR IN THE STUDY AREA	RECOMMENDATIONS
Reptiles and Amphibians				
California tiger salamander *Ambystoma californiense*	FT, ST	Occurs in grasslands, oak savannah, and open woodlands with a mosaic of vernal pools or similar seasonal wetlands. Requires vernal pools or similarly inundated waters for breeding and larvae. Adults are fossorial utilizing small mammal burrows for estivation.	**Unlikely.** No aquatic habitat with sufficient hydroperiod to support metamorphosis of this species is present within the Study Area. The Study Area is sufficiently isolated from source populations to preclude use of upland habitats within the Study Area as estivation habitat and to make use as a movement corridor unlikely.	No further actions are recommended for this species.
Pacific (western) pond turtle *Emys marmorata*	SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches with aquatic vegetation. Require basking sites such as partially submerged logs, vegetation mats, or open mud banks, and suitable upland habitat (sandy banks or grassy open fields) for egg-laying.	**No Potential.** No perennial aquatic habitats are present within or in the immediate vicinity of the Study Area.	No further actions are recommended for this species.

ATTACHMENT B. SPECIAL-STATUS SPECIES ASSESSMENT TABLE

SPECIES	STATUS	HABITAT REQUIREMENTS	POTENTIAL TO OCCUR IN THE STUDY AREA	RECOMMENDATIONS
California red-legged frog *Rana draytonii*	FT, SSC, RP	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11 to 20 weeks of permanent water for larval development. Associated with quiet perennial to intermittent ponds, stream pools and wetlands. Prefers shorelines with extensive vegetation. Disperses through upland habitats after rains.	**Unlikely.** No aquatic habitat with sufficient hydroperiod to support metamorphosis of this species is present within the Study Area. The Study Area is sufficiently isolated from source populations to preclude use of upland habitats within the Study Area as estivation habitat and to make use as a movement corridor unlikely.	No further actions are recommended for this species.
Invertebrates				
Callippe silverspot butterfly *Speyeria callippe callippe*	FE	Two populations in San Bruno Mountain and the Cordelia Hills are recognized. Hostplant is Viola pedunculata, which is found on serpentine soils. Most adults found on east-facing slopes; males congregate on hilltops in search of females.	**No Potential.** The Study Area is outside of the known range of this species, and no serpentine soils are present that could support host plants.	No further actions are recommended for this species.

Peer Review Letter

October 9, 2023
Project No: 23-14939

Jake Potter, MUP, Senior Planner
Community Development Department
City of Livermore
1052 South Livermore Avenue
Livermore, California 94550
Via email: japotter@livermoreca.gov

Subject: Peer Review of the Biological Resources Analysis for the Harridge Development Project, City of Livermore, Alameda County

Dear Mr. Potter:

This letter provides the results of Rincon Consultants, Inc.'s review of the Summary of Biological Evaluations (SBE) at the Portola Avenue/Isabel Avenue Site in Livermore, Alameda County, California prepared by WRA Environmental Consultants in February 2023 for the Harridge Development Project (project). This peer review was completed as part of the environmental analysis being conducted in conformance with the California Environmental Quality Act (CEQA) by the City of Livermore. This review considers if the SBE completed for the project is adequate for the purposes of preparing an Environmental Impact Report (EIR) Addendum. Rincon reviewed the SBE for completeness with respect to the following parameters:

- Methodology for conducting the SBE
- Adequate description of the project and existing conditions
- Potential project impacts to protected biological resources
- Adequacy of any mitigation measures

Summary of Biological Resources Analysis

The SBE provides a peer review of the Delineation of Aquatic Resources report (DAR) prepared by RestorCorp (May 7, 2021) for the Study Area and includes assessments of the presence or absence of special status species within the Study Area.

According to the SBE, the project would be located within the vacant lot located southwest of Isabel Avenue and Portola Avenue. The Study Area was 42.329 acres in area; however, a Project Area and buffer area are not defined in the SBE. Additional location information is provided in the DAR: the Study Area includes nine conjoined parcels (Assessor's Parcel Numbers 903-001004600, 903-001004700, 903-001004800, 903-0014900 [not included in the DAR], 903-001005000, 903-001005100, 903-001005200, 903-001005300, and 903-001005400). The DAR includes conflicting Study Area acreage amounts within itself and with the SBE. These conflicting acreages and incomplete Assessor's Parcel Numbers are not addressed in the SBE. A project description was not provided in either document. The DAR includes a description of habitat (non-native grassland) which is not referenced in the SBE and the SBE does not characterize habitat types throughout the Study Area.

The SBE determined 59 special status plants and 29 special status animal species are known within the regional vicinity of the Study Area. The Study Area was determined to lack the necessary habitat

features for presence of special status plants, except for one species: Congdon's tarplant (*Centromadia parryi* ssp. *congdonii*). A protocol-level survey for Congdon's tarplant conducted on October 4, 2022 had negative results; thus, it was concluded that the plant was absent from the Study Area. In addition to nesting birds, required habitat for special status wildlife is also present for three protected avian species within the Study Area: burrowing owl (*Athene cunicularia)*, white-tailed kite (*Elanus leucurus)*, and loggerhead shrike (*Lanius ludovicianus)*. During site visits on January 13, February 1, and February 15, 2022, there were no observations of special status plant or wildlife species. The project site was determined to not provide adequate wildlife corridors or wildlife nursery sites due to the large amount of development surrounding the site and lack of aquatic habitat with sufficient hydroperiod for metamorphosis of special status amphibian species.

The SBE concludes that a wetland exists in the Study Area, and that the wetland may be exempt from regulatory agency jurisdiction due to likely being product of a leaking pipe and no evidence of an existing wetland prior to 2020. The SBE provides recommended avoidance and minimization measures as well as mitigation measures if the wetland is determined to be jurisdictional.

The SBE also provides mitigation measures to reduce potentially significant impacts to protected species with potential to occur in the Study Area to a less than significant level.

Evaluation of Adequacy

Rincon reviewed the SBE for completeness and adequacy with emphasis on biological resources assessment methodology, description of the project and existing conditions, potential project-related impacts to biological resources, and adequacy of any mitigation measures. The following recommendations for revisions to the SBE are based on this review:

- Rincon recommends adding a brief description of the proposed project to the SBE.
- Rincon recommends adding a description of the Study Area land cover to the SBE.
- The SBE should resolve the discrepancies regarding Study Area acreage.
- Because of the urban setting, isolation caused by large roadways, and lack of suitable habitat or connectivity to habitat areas, Rincon agrees that no special status species would be expected to occur at the site; however, the full disclosure of all species known to occur in the region would result in a more defensible document. Rincon conducted a 9-quad query of the CNDDB and California Native Plant Society (CNPS) Inventory of Rare and Endangered Plants database and identified an additional 18 animal species, and one sensitive habitat. Rincon recommends including a more robust table of special status species with notes on potential to occur in the Study Area, to more clearly represent sensitive wildlife species that may occur in or near the project site.
- Finally, evaluation of three CEQA checklist items for biological resources is needed:
    - CEQA biological resources checklist item (b): Note the presence or absence of sensitive natural communities in the Study Area.
    - CEQA biological resources checklist item (e): Review literature and discuss any local policies or ordinances protecting biological resources (e.g., tree ordinances).
    - CEQA biological resources checklist item (f): Determine whether any local, regional, or state habitat conservation plans apply to the project.

Rincon found that the SBE adequately assessed the potential for species presence, avoidance, and minimization measures for protected resources, and provided adequate mitigation measures if the small wetland is determined to be jurisdictional.

Conclusion

Rincon generally agrees with the findings of the SBE but recommends that revisions be made as specified above in order to address all CEQA checklist questions. Rincon finds that, with the revisions suggested in this letter, the SBE would be adequate for the purpose of preparing a legally defensible CEQA document. Rincon Consultants is available to make these SBE revisions on behalf of the City of Livermore for an additional fee, if needed.

Sincerely,
Rincon Consultants, Inc.

Aquatic Resources Delineation

RESTORCAP

Delineation of Aquatic Resources

May 7, 2021

Travis Devan
Argent Management LLC.
2392 Morse Avenue
Irvine, CA 92614

Dear Mr. Devan,

This letter report summarizes the results of the formal jurisdictional delineation that took place on March 30, 2021 on the property (Study Area, Attachment A) located southwest of the intersection of Portola and Isabel Avenue in Livermore, Alameda County, California. The purpose of this jurisdictional delineation within the Study Area was to identify the type and extent of any jurisdictional resources as defined by the San Francisco District U.S. Army Corps of Engineers (USACE) and the San Francisco Regional Water Quality Control Board (RWQCB).

The Study Area includes nine conjoined parcels totaling approximately 45.33 acres in size, with the following assessor's parcel numbers: 903-001004600, 903-001004700, 903-001004800, 903 -001005000, 903-001005100, 903-001005200, 903-001005300, and 903-001005400. The Study Area is undeveloped, vegetated with a mixture of non-native grasses and forbs, and surrounded by urban development both residential and commercial. The Study Area is entirely within the U.S. Geological Survey's (USGS) *Livermore* 7.5-minute topographic quadrangle and Lower Arroyo Las Positas HUC8 (180500040203) Watershed (USGS, 2015).

Methods

The formal jurisdictional delineation conducted on March 30, 2021 within the Study Area followed the technical guidelines provided in the *Corps of Engineers Delineation Manual* (Environmental Laboratory, 1987) and the USACE *Arid West Regional Supplement* (USACE, 2008) that included an assessment of existing vegetation, soils, and hydrology. The Study Area was examined for the presence of "waters of the U.S." regulated under Section 404 of the Federal Clean Water Act and "waters of the State" regulated under the California Porter-Cologne Water Quality Control Act.

Prior to the jurisdictional delineation on March 30, 2021, reference materials were reviewed, including the following: the National Wetland Inventory data (U.S. Fish and Wildlife Service [USFWS], 2021), the Soil Survey of Alameda Area, California (U.S. Department of Agriculture [USDA], 1966), and historical aerial photographs (Google Earth, 2021). Biologists from RestorCap walked the entirety of the Study Area placing representative sample points into each unique habitat in addition to any areas previously identified from aerial imagery as having the potential to contain indicators of wetland conditions (vegetation, soils, and hydrology). Plant species identified in the Study Area were assigned a wetland status according to the National Wetland Plant List (Lichvar et al. 2018). Sample points were recorded using an iPad and Trimble R1 Integrated GNSS with a maximum precision of 50cm and data sheets were reported on Arid West

Supplement data forms (Attachment B). Photos were taken throughout the Study Area and are included as Attachment C.

Results

The Study Area is vegetated, undeveloped, and slightly sloping to the southwest with a large and wide depression running from east to west through the site. The surrounding area is a mixture of undeveloped parcels, residential communities, and commercial buildings, as well as associated infrastructure. The Study Area has historically been vacant apart from the installation of a 10" vitrified clay pipe prior to 2002 as part of the City of Livermore's Isabel Neighborhood Plan to support the development to the west of the Study Area, which resulted in the aforementioned low-lying area running east to west and is observable on aerial imagery (City of Livermore, 2020). Additionally, the southwestern corner of the Study Area was utilized for staging equipment for the adjacent development during the same time period as installation of the vitrified clay pipe (Google Earth, 2021).

Within the Study Area, four areas were sampled to represent the site in terms of the current conditions of vegetation, soil, and hydrology. Sampling locations were based on providing overall Study Area coverage, changes in aerial imagery signature, changes in local topography, and changes in plant species composition. One sample point was strategically placed within a low-lying area with a unique aerial signature that occurred as a result of the vitrified clay pipe installation. The rest of the points were placed in areas with distinct aerial signatures such as dark spots, denuded areas, or changes in vegetation density or composition.

Vegetation was dominated by non-native grasses and forbs such as black mustard (*Brassica nigra*, UPL), oat (*Avena* sp., UPL), rose clover (*Trifolium hirtum*, UPL), common's stork bill (*Erodium cicutarium*, UPL), hairy vetch (*Vicia villosa*), ripgut brome (*Bromus diandrus*, UPL), soft brome (*Bromus hordeaceus*, FACU), shortpod mustard (*Hirschfeldia incana*, UPL), Italian rye grass (*Festuca perennis*, FAC), and sow thistles (*Sonchus arvensis,* FACU, *S. oleraceus,* UPL). The Study Area is underlain by very dark grayish-brown to brown clay or clay loam soils, none of which are considered hydric (USDA, 2021). Hydrological inputs for the Study Area include precipitation, sheet flow, and runoff from the surrounding impervious surfaces (roads, commercial and residential development etc.).

The jurisdictional delineation occurred during precipitation conditions that placed rainfall at below the normal for the 30-year period, however,rainfall was considered normal for the prior month of February (Attachment D). Subsequently, clay soils within the Study Area contained no visible surface soil cracks and posed little resistance during excavation of sample soil pits, indicating rainfall permeated the soil profile. Despite rainfall permeating the soils during the month prior to the jurisdictional delineation, no indicators of wetland hydrology were observed within the sample points or overall Study Area. Likewise, no hydric soil indicators were observed within any of the sample points placed during the jurisdictional delineation.

Conclusion

The results of this formal jurisdictional delineation reflect the current conditions of the Study Area at the time of the jurisdictional delineation on March 30, 2021. Conditions of the Study Area may change over time due to external factors that could alter the results of this jurisdictional delineation. The Study Area contains no wetlands or other aquatic features that could be classified as potentially jurisdictional by either the USACE or SFRWQCB. No hydrophytic vegetation, hydric soils, or indicators of wetland hydrology were observed in the sample points placed within the Study Area during the jurisdictional delineation.

Sincerely,

Kari Dupler, PWS

Are climatic / hydrologic conditions on the site typical for this time of year? Yes _____ No ✓ (If no, explain in Remarks.)

Are Vegetation ✓, Soil ✓, or Hydrology _____ significantly disturbed? Are "Normal Circumstances" present? Yes _____ No ✓

Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No ✓	**Is the Sampled Area within a Wetland?** Yes _____ No ✓
Hydric Soil Present?	Yes _____	No ✓	
Wetland Hydrology Present?	Yes _____	No ✓	

Remarks:

SP01 is located within the north central portion of the Study Area and was selected based on a difference in aerial signature. SP01 did not contain hydrophytic vegetation, hydric soils, or wetland hydrology. Vegetation and soils were considered significantly disturbed, disturbance occurring in the late 1990s during the placement of sewer lines that support adjacent developments. Rainfall was considered drier than normal, with a majority of rainfall in the last three months falling in late February.

VEGETATION – Use scientific names of plants.

SP01 did not contain indicators of wetland hydrology and therefore wetland hydrology was not present.

EXHIBIT D

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Livermore Property Development Project City/County: Livermore/Alameda Sampling Date: 03-30-2021

Applicant/Owner: Argent Management LLC State: CA Sampling Point: SP01

Investigator(s): K. Dupler, R. Akiba-Hajim, RestorCap Section, Township, Range: T3S R2E

Landform (hillslope, terrace, etc.): slight depression Local relief (concave, convex, none): concave Slope (%): 0-1

Subregion (LRR): C- Mediterranean California Lat: 37.70556 Long: -121.8006 Datum: WSGS84

Soil Map Unit Name: Diablo clay, very deep, 3 to 15 percent slopes NWI classification: N/A

Are climatic / hydrologic conditions on the site typical for this time of year? Yes _____ No ✓ (If no, explain in Remarks.)

Are Vegetation ✓, Soil ✓, or Hydrology _____ significantly disturbed? Are "Normal Circumstances" present? Yes _____ No ✓

Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No ✓	**Is the Sampled Area within a Wetland?** Yes _____ No ✓
Hydric Soil Present?	Yes _____	No ✓	
Wetland Hydrology Present?	Yes _____	No ✓	

Remarks:

SP01 is located within the north central portion of the Study Area and was selected based on a difference in aerial signature. SP01 did not contain hydrophytic vegetation, hydric soils, or wetland hydrology. Vegetation and soils were considered significantly disturbed, disturbance occurring in the late 1990s during the placement of sewer lines that support adjacent developments. Rainfall was considered drier than normal, with a majority of rainfall in the last three months falling in late February.

VEGETATION – Use scientific names of plants.

INTRODUCTION

The purpose of this report is to provide a design-focused traffic analysis of the proposed mixed-use project, called Isabel Crossings (the Project).

The Project is located within a greater planning area called the Isabel Neighborhood, located within the City of Livermore. The Isabel Neighborhood Specific Plan (INSP) differs from the City's General Plan and allows for an increased intensity of land uses near the proposed Isabel Valley Link transit station. The INSP included a detailed traffic analysis as part of the Draft Environmental Impact Report dated January 12, 2018.

Since the INSP included a thorough traffic impact analysis of the planning area, and the Project aligns with the land uses identified in the INSP, this traffic analysis is focused on evaluating the proposed project's design elements such as site access, on-site circulation, parking, and conformance with transportation aspects of the INSP.

The scope of this focused traffic study was approved by City of Livermore staff on November 22, 2022 and was developed in response to a letter of incompletion dated October 25, 2022 by the City of Livermore in response to the Project's submittal for a Development Agreement.

Isabel Neighborhood Specific Plan

The Isabel Neighborhood Specific Plan (INSP) is a regulatory framework that supersedes the City of Livermore General Plan with more specific goals and policies that guide the development of the surrounding area. The INSP was adopted in November 2020 and amended in November 2022. The INSP is of particular importance to allow for development that supports and complements the future Isabel Station for the Valley Link rail system.

The INSP allows development of 4,095 new multi-family housing units and approximately 2.1 million square feet of new office and commercial development focused on the intensity of land uses near the future Isabel Valley Link transit station. The INSP included a detailed traffic analysis to support the land use framework for the Isabel Neighborhood.

The INSP planning area covers 1,138 acres, which includes the 45 acres of the Livermore Isabel Project. The project is located within the core area of the INSP with an objective of creating a vibrant neighborhood that supports a viable retail center and generates transit ridership. The INSP has identified a preliminary roadway network and land uses within the project area, as well as standards and requirements for development.

The INSP has conducted a thorough analysis of traffic impacts of the proposed land use changes, including intersection level of service (LOS). It has identified improvements that are needed to support

the developments as identified in the plan. Since the land uses proposed in the Project generate less traffic than what is proposed in the INSP, additional traffic impact analyses on the surrounding network is not necessary.

Project Description

The Isabel Crossings project is a proposed mixed-used development located on 45 acres at the southwest corner of Isabel Avenue and Portola Avenue in the City of Livermore. It is bordered by Isabel Avenue to the east, Portola Avenue to the north, I-580 to the south and existing office developments to the west. A vicinity map is included in **Figure 1**.

The Project proposes to construct 1,299 dwelling units (consisting of townhomes, condos, and mid-rise multi-family apartments) and 65,635 square feet of commercial space (a mix of retail & restaurant space) as identified in the Conceptual Plan. The commercial space is designed on the street level of multi-story buildings with residential apartments located above. Amenities within this mixed-use development include a neighborhood park, a recreation center that includes a pool, and open space at the corners of the retail-lined street including a pocket plaza, and a town square. A site plan is included in **Figure 2**.

The future Isabel Station for the Valley Link railway is located southeast from the project limits. The Valley Link railway is a proposed 42-mile passenger rail project that will connect the Lathrop Altamont Commuter Express (ACE) rail station with the Dublin/Pleasanton Bay Area Rapid Transit (BART) station. The entire Isabel Crossings project is located within a half-mile radius of the Isabel Station platform, some of it within a quarter-mile, which indicates that walkability to the Isabel Station is very high.

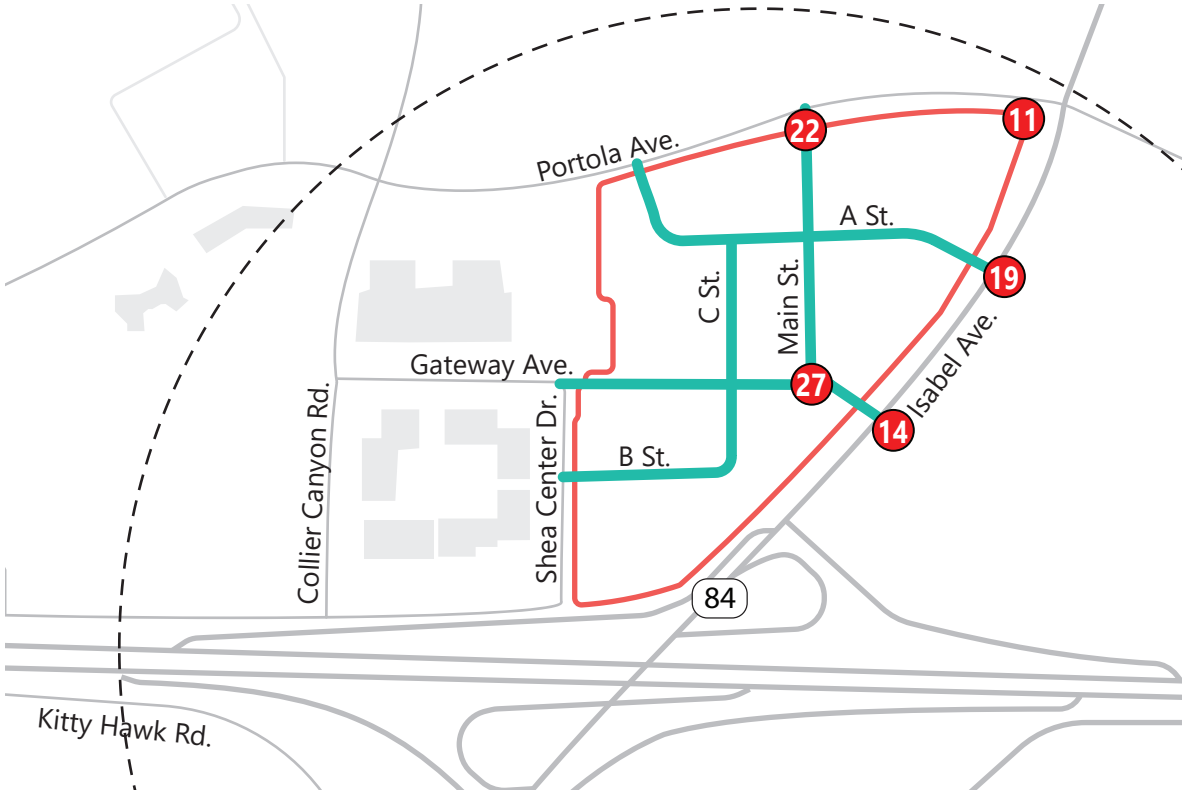
Figure 2: Site Plan

STUDY METHODOLOGY

The purpose of this traffic analysis is focused on evaluating the Project's site access along the boundary of the Project, on-site circulation within the Project, on-street and private parking supply, and conformance with transportation aspects of the INSP, such a bicycle, pedestrian and transit facilities.

Evaluating the Project's site access and on-site circulation includes conducting intersection analysis to determine appropriate intersection configuration, traffic control devices at the intersections and length of left-turn pockets. The four study intersections are as follows:

- Isabel Avenue at Gateway Avenue
- Isabel Avenue at A Street
- Portola Avenue at Main Street
- Main Street at Gateway Avenue
- Portola Avenue at Isabel Avenue (LOS analysis only)



The no project scenario is developed based on a 2040 baseline condition of build-out of the INSP without development of the project site.

The build-out scenario is the 2040 Baseline plus Project. This consists of the 2040 Baseline No Project scenario described above plus project generated trips.

The trip generation for the Project was estimated based on the published trip generation rates from the Institute of Transportation Engineers' (ITE) Trip Generation Manual (11th Edition). The Project trips are then distributed onto the roadway network based on regional destinations and the number of trips are assigned at each intersection to provide project turning movement counts.

The 2040 Baseline plus Project turning movement volumes are used to evaluate the level of service and intersection configuration using the Highway Capacity Manual (HCM) 6th Edition within the Synchro 12 software platform. SimTraffic, a microsimulation component of the Synchro software package, was used to evaluate queuing lengths at the intersections.

Figure 3: Proposed Roadway Network

- Proposed Roadway Network

2040 Baseline No Project

In order to determine the long-term impact for the Project, the analysis is based on the traffic volumes identified in the traffic study for the INSP using the 2040 Cumulative plus INSP project scenario. This scenario includes complete build-out of the INSP planning area, including the Valley Link station. However, since the Isabel Crossings project results in less traffic generation compared to the land uses proposed in the INSP, a 2040 Baseline No Project scenario was developed by subtracting the trips generated by the INSP from the 2040 Cumulative plus INSP project scenario.

The INSP trips for the Project area were identified based on a technical memo titled Livermore Isabel Transit Village Modified Project Analysis by TJKM Transportation Consultants dated December 6, 2023 and is provided in **Appendix A**. The same trip distribution used for the Project trips were applied to the INSP trips. The resulting trip assignment for the INSP trips were then subtracted from the 2040 Cumulative plus INSP project traffic volumes. The resulting trips are the 2040 Baseline No Project turning movement volumes as shown on **Figure 6**.

Project Trip Generation

The trips generated by the Project are shown on **Table 1**. Based on the ITE Trip Generation Manual 11th Edition and the Project's land uses, the Project is expected to generate 654 trips during the weekday morning (a.m.) peak hour and 919 trips during the weekday afternoon (p.m.) peak hour, as shown in Table 1 – Estimated Trip Generation.

Due to the close proximity of the future Valley Link Isabel Station and the walkability of the designed community, a trip reduction was applied for trips taken by residents walking to transit. Based on an article entitled *Vehicle Trip Reductions Impacts of Transit-Oriented Housing*, in the Journal of Public Transportation, Vol. 11, No. 3, 2008, transit-oriented developments generate on average 47 percent fewer trips compared to the ITE rate. To be conservative, it is assumed that 10 percent of trips from the single family attached residences and 15 percent of trips from the multi-family residences are walk-to-transit trips. Given the half-mile radius of the project to the future Valley Link Isabel Station, these assumptions are reasonable for transit trips in a transit-oriented development in a suburban environment.

The adjusted total project vehicle trips for the a.m. peak hour is 585 and 846 for the p.m. peak hour.

Project Trip Distribution & Assignment

According to the proposed roadway network (shown in **Figure 3**), the project proposes to construct two north-south roadways, Main Street and C Street, and three east-west roadways, A Street, B Street and Gateway Avenue. There are six proposed access points to the existing roadway network, including two new intersections on Isabel Avenue (one at Gateway Avenue and one at A Street) and two intersections on Portola Avenue (at an existing traffic signal at Montage Drive / Main Street, and a right-in/right-out intersection at A Street), an extension of the existing Gateway Avenue from Shea Center Drive, and a new intersection of B Street at Shea Center Drive.

Trip distribution is a process that determines in what proportion vehicles are expected to travel between the project site and various destinations outside the project study area based on land use and regional and local travel patterns. Assignment determines the various routes that vehicles would take from the project site to each destination using the estimated trip distribution.

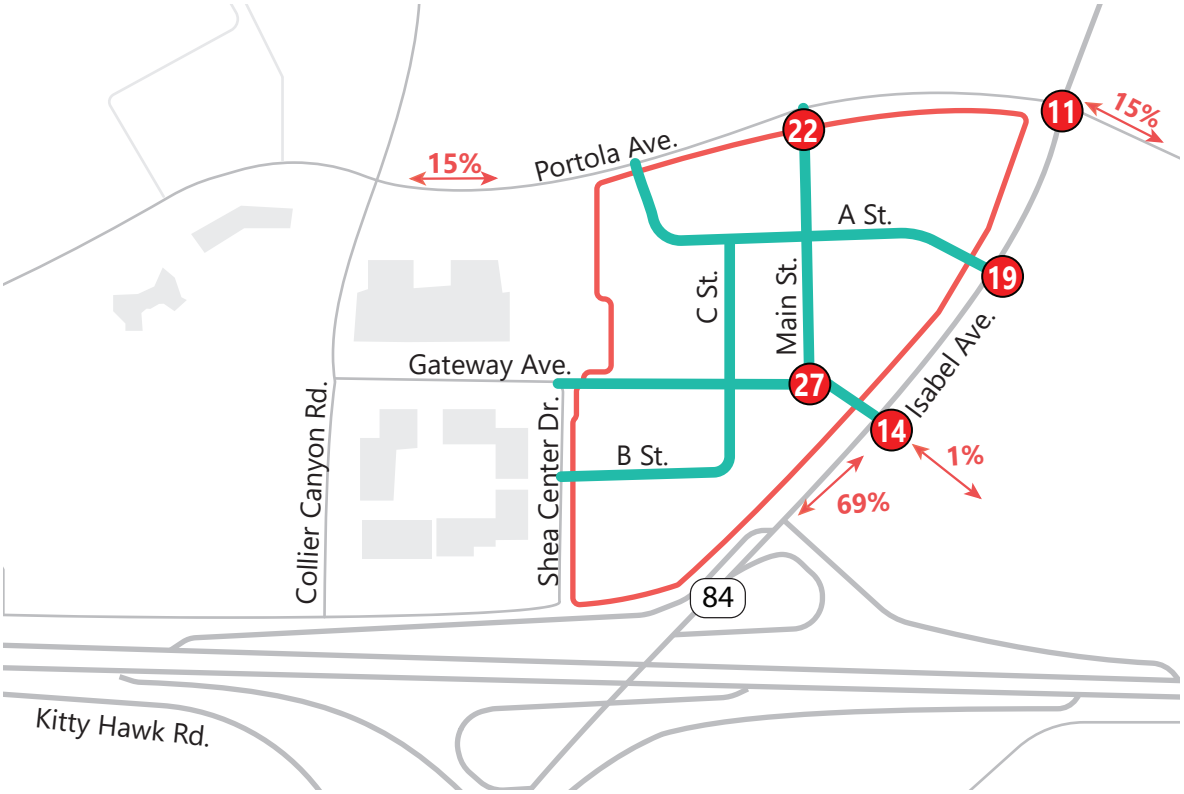

Figure 4 illustrates the overall trip distribution percentages developed for the proposed project. Net new trips associated with the proposed project were distributed as follows:

- 15 percent to/from Portola Avenue to the east,
- 15 percent to/from Portola Avenue/Airway Boulevard to the west, and
- 69 percent to/from I-580 and SR-84 to the south of the project.
- 1 percent to/from the future Valley Link station

Although an extremely small percentage of project trips may travel to/from Gateway Avenue to the west, for the purposes of this analysis, all the project trips were routed through the new intersections to evaluate a full-impact scenario.

Based on this distribution pattern, the trips were assigned through the proposed internal network to determine turning movement counts for the study intersections. See **Figure 5** for the project trips peak hour assignment.

LEVEL OF SERVICE ANALYSIS

Level of Service (LOS) is a qualitative measure that describes operational conditions as they relate to the traffic stream and perceptions by motorists and passengers. The LOS generally describes these conditions in terms of such factors as speed and travel time, delays, freedom to maneuver, traffic interruptions, comfort, convenience and safety. The operational LOS are given letter designations from A to F, with A representing the free-flow operating conditions and F representing the severely congested flow with high delays. Intersections generally are the capacity-controlling locations with respect to traffic operations on arterial and collector streets. The LOS analysis is provided as information only to determine how well the intersection operates. The following sections provide detailed study methodology based on the type of intersections.

Signalized Intersections

The study intersections were analyzed using the Highway Capacity Manual 6th Edition for signalized intersections (HCM 6th) which determines LOS based on average control delay per vehicle for the overall intersection during peak hour intersection operating conditions. **Table 2** summarizes the relationship between the control delay and LOS for signalized intersections. The LOS assessment under all scenarios is based on proposed traffic controls and optimized signal timing including parameters for the pedestrian crossings.

Table 2: Level of Service Definitions for Signalized Intersections

Level of Service	Description
A	Very low control delay, up to 10 seconds per vehicle. Progression is extremely favorable, and most vehicles arrive during the green phase. Many vehicles do not stop at all. Short cycle lengths may tend to contribute to low delay values.
B	Control delay greater than 10 and up to 20 seconds per vehicle. There is good progression or short cycle lengths or both. More vehicles stop causing higher levels of delay.
C	Control delay greater than 20 and up to 35 seconds per vehicle. Higher delays are caused by fair progression or longer cycle lengths or both. Individual cycle failures may begin to appear. Cycle failure occurs when a given green phase does not serve queued vehicles, and overflow occurs. The number of vehicles stopping is significant, though many still pass through the intersection without stopping.
D	Control delay greater than 35 and up to 55 seconds per vehicle. The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high volumes. Many vehicles stop, the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	Control delay greater than 55 and up to 80 seconds per vehicle. The limit of acceptable delay. High delays usually indicate poor progression, long cycle lengths, and high volumes. Individual cycle failures are frequent.
F	Control delay in excess of 80 seconds per vehicle. Unacceptable to most drivers. Oversaturation, arrival flow rates exceed the capacity of the intersection. Many individual cycle failures. Poor progression and long cycle lengths may also be contributing factors to higher delay.

Source: Transportation Research Board's (TRB) Highway Capacity Manual, 6th Edition

Unsignalized Intersections

LOS ratings for stop-sign controlled intersections are based on the average control delay expressed in seconds per vehicle. At one- or two-way stop controlled intersections, the control delay is calculated for each movement, not for the intersection as a whole. **Table 3** summarizes the relationship between delay and LOS for stop-controlled intersections. The delay ranges for unsignalized intersections are lower than for signalized intersections, as drivers expect less delay at stop-controlled intersections.

Each of the study intersections were analyzed using Synchro Version 12 software. The LOS assessment under all scenarios is based on current traffic controls unless otherwise noted.

Table 3: Level of Service Definitions for Stop Controlled Intersections

Level of Service	Description
A	Very low control delay less than 10 seconds per vehicle for each movement subject to delay.
B	Low control delay greater than 10 and up to 15 seconds per vehicle for each movement subject to delay.
C	Acceptable control delay greater than 15 and up to 25 seconds per vehicle for each movement subject to delay.
D	Tolerable control delay greater than 25 and up to 35 seconds per vehicle for each movement subject to delay.
E	Limit of tolerable control delay greater than 35 and up to 50 seconds per vehicle for each movement subject to delay.
F	Unacceptable control delay in excess of 50 seconds per vehicle for each movement subject to delay.

Source: Transportation Research Board's (TRB) Highway Capacity Manual, 6th Edition

Level of Service Results

The intersection level of service was calculated for the five study intersections for the 2040 Baseline No Project scenario and two 2040 Baseline plus Project scenarios. The two Project scenarios evaluated was with one lane and with two lanes westbound on Gateway Avenue between Isabel Avenue and C Street. The results are shown on **Table 4**.

Additionally, these LOS results were compared to the LOS results in the original INSP Traffic Study for informational purposes. Due to difference in signal timing parameters, the LOS analysis in the INSP study are not a direct match to the LOS analysis in this study.

All intersections are project to operate within acceptable LOS based on City adopted LOS standards. The City of Livermore General Plan policy for LOS is mid-level D except in the Downtown Area and near freeway interchanges. For intersections near freeway interchanges, the upper limit of acceptable level of service is LOS E. It is noted that Isabel Avenue at Gateway Avenue is projected to operate at LOS E and this is acceptable for intersections near freeway interchanges.

[1] As reported in the Traffic Study for the DEIR for INSP dated January 12, 2018 prepared by Kittleson & Associates

[2] LOS result is based on three eastbound and westbound travel lanes, compared to two lanes in the other scenarios

* Not studied in the Traffic Study for the DEIR for INSP

INTERSECTION FUNCTIONALITY

Four key intersections were analyzed in depth to determine appropriate traffic control types, number of travel lanes, and appropriate lengths of left turn pockets. Three of the intersections are access points to the project, and one of the intersections is the busiest internal intersection within the project. The 2040 Baseline plus Project traffic volumes, as shown in **Figure 7,** were used for this analysis.

A traffic signal warrant analysis is an evaluation of traffic conditions, including geometry, speed limit, and traffic volumes, to determine if a traffic signal is an appropriate traffic control device for an intersection. If a traffic signal is not warranted, then an alternative is for a stop sign controlled intersection, either an all-way stop or side street stop control.

Traffic signal warrant criteria are provided in the California Manual on Uniform Traffic Control Devices (CAMUTCD) and there are nine criteria known as warrants. Since these intersections do not yet exist, some data is not available yet, such as four-hour and eight-hour traffic volumes, number of pedestrians, number of collisions, etc. Therefore, the peak hour warrant (Warrant 3) was used to evaluate three of the

four study intersections, since one of the intersections is already controlled by a traffic signal. The warrant analysis is located in **Appendix B**.

To determine appropriate lane configurations and turn pocket lengths, the AM and PM peak hour analysis was conducted using Simtraffic component of the Synchro 12 software to determine the 95th percentile vehicular queues. Simtraffic is a microsimulation model whereas Synchro is a macrosimulation model, thus Simtraffic has the ability to be more realistic by evaluating the impact of queuing and blocking. The 95th percentile queue is the length of the line of vehicles that will not be exceeded 95 percent of the time during the peak hour. The Simtraffic analysis for the 95th percentile are provided in **Appendix C**.

Isabel Avenue at Gateway Avenue (#14)

Gateway Avenue is a proposed east-west street within the project, south of A Street that will intersect Isabel Avenue with a proposed traffic signal. This intersection is proposed to be 550 feet north of the existing signalized intersection of Isabel Avenue at I-580 westbound off-ramps, and 650 feet south of the proposed signalized intersection of Isabel Avenue at A Street. Gateway Avenue at the intersection approach is proposed to have three eastbound lanes, two which are right turn lanes, and one is a left turn lane. Isabel Avenue is proposed to have two through lanes, two left turn lanes, and a buffered bike lane in the northbound direction. In the southbound direction, two through lanes, one right turn lane and a buffered bike lane is proposed. There is a solid median as well as portion of painted median for a future southbound left turn lane. See **Figure 8** for the proposed intersection configuration.

Based on the Warrant 3 analysis, a warrant for traffic signal is satisfied for both the a.m. and p.m. peak hours at this intersection. ***It is recommended that the intersection of Isabel Avenue at Gateway Avenue be controlled by a traffic signal.*** Signal warrant analysis worksheets are provided in Appendix B.

A Simtraffic analysis was conducted to determine the appropriate length of the turn pockets at the intersection. **Table 5** shows the 95th percentile queue lengths for the approaches to the Isabel Avenue at Gateway Avenue intersection for the 2040 Baseline scenario and the 2040 Baseline plus Project scenario with one westbound through lane on Gateway Avenue and with two westbound through lanes on Gateway Avenue.

Table 5: 95th Percentile Queue Lengths at Isabel Avenue at Gateway Avenue

Study Intersection	Lane Group	Peak Hour	95th Queue (ft) 2040 Baseline	95th Queue (ft) 2040 Baseline Plus Project - One Lane Gateway*	95th Queue (ft) 2040 Baseline Plus Project - Two Lane Gateway*	Proposed Turn Bay Length (ft)
Isabel Ave @ Gateway Ave	Northbound Left	AM	196	**484**	**241**	205
		PM	157	**462**	**243**	
	Southbound Left	AM	67	**91**	91	120
		PM	**88**	**138**	**153**

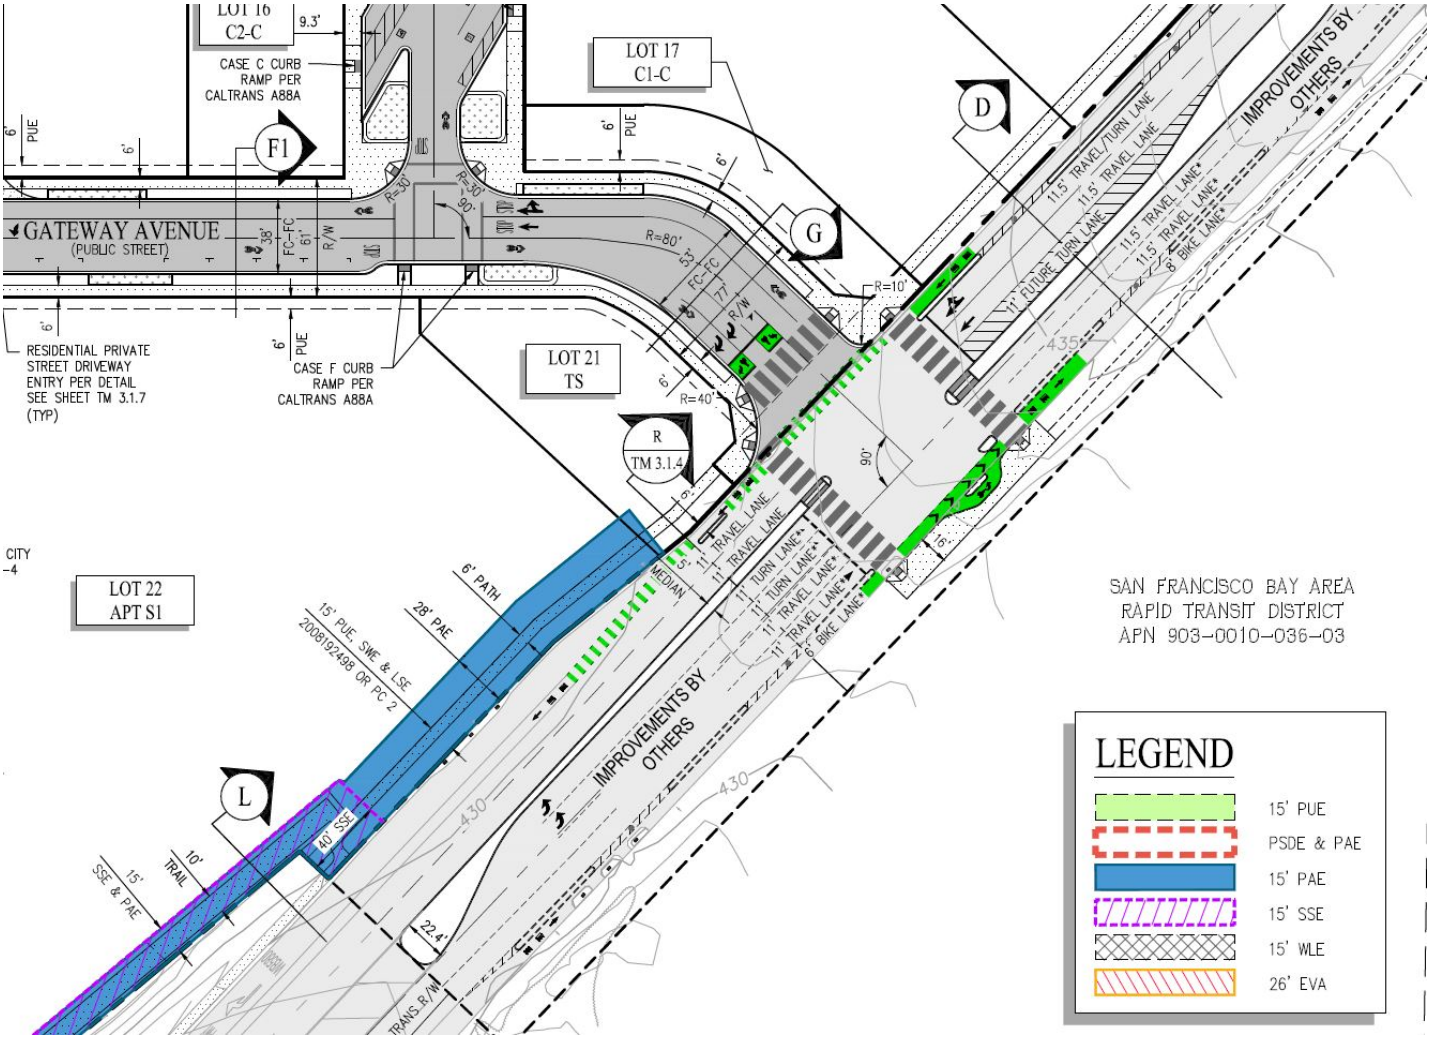
		PM	**83**	**88**	**90**	
	Eastbound Right	AM	**72**	**88**	**91**	41
		PM	**219**	**90**	**87**	

BOLD indicates that the 95th percentile queue length is estimated to exceed the proposed turn bay length

The project proposes to provide two northbound left turn pockets approximately 205 feet long. The Simtraffic analysis shows that for the 2040 Baseline plus Project with one westbound lane on Gateway Avenue, the calculated 95th percentile queue for the northbound left turn lane is 484 feet in the a.m. and 462 feet in the p.m. peak hours, which would drastically exceed the proposed turn pocket lengths. A lane utilization factor of 0.52 was utilized for the northbound left turn movement to account for the high proportion of westbound through volumes at Gateway. The westbound receiving lanes on Gateway Avenue are identified as one through lane and one right turn lane. Therefore, more vehicles will stack in the leftmost northbound left turn lane with the anticipation of continuing westbound on Gateway. Therefore, one lane on Gateway Avenue is not recommended.



In order to appropriately accommodate the queue for the northbound left turn movement, an additional westbound through lane on Gateway Avenue, from Isabel Avenue to C Street, was evaluated. With two westbound through lanes, both northbound left-turn lanes will be more evenly utilized, and thus a 0.90 lane utilization factor was used in the analysis. The Simtraffic analysis shows that the calculated 95th percentile queue is 241 feet in the a.m. and 243 feet in the p.m. peak hours. This would still exceed the proposed turn pocket length by approximately two vehicles, and these two vehicles can be accommodated within the transitional taper so the queue would not block through traffic. **It is recommended that the project provide two westbound lanes on Gateway Avenue between Isabel Avenue and C Street**. At the C Street intersection, the recommended lane configuration based on the turning movement volumes is one through lane and one left-turn only lane onto southbound C Street.

For the eastbound leg of the intersection, the 95th percentile queue is calculated to be 55 feet for the left lane and 88 feet for the right lane during the a.m. peak hour and 88 feet for the left lane and 90 feet for the right lane during the p.m. peak hour. Although the eastbound queues exceed the turn pocket length, they do not extend past the proposed all-way stop intersection of Main Street. Given the low speed and low volume characteristics of Main Street and Gateway Avenue, as well as the physical constraints, this is an acceptable condition.

For the southbound left turn, the 95th percentile queue is calculated to be 153 feet during the p.m. peak hour. The proposed 120 foot long turn pocket will accommodate this peak queue within the turn pocket and the taper length.

With the recommended configuration with two westbound lanes on Gateway, the intersection operates at LOS C during the a.m. peak period and LOS E during the p.m. peak periods. Based on the City's General Plan policy, intersections adjacent to I-580 are required to maintain a LOS of E or better.

Figure 8: Isabel Ave & Gateway Avenue Intersection Configuration

Isabel Avenue at A Street (#19)

A Street is a proposed east-west street within the project that will intersect Isabel Avenue with a new traffic signal, approximately 720 feet south of the signalized intersection of Portola Avenue. A Street at this intersection is proposed to have two eastbound lanes, one right turn and one left turn and a bike lane. Isabel Avenue at this intersection is proposed to have two through lanes and bike lanes for both the northbound and southbound directions with one southbound right turn lane and one northbound left turn lane. There is a painted median for a future southbound left turn lane. See **Figure 9** for the proposed intersection configuration. This intersection is expected to operate at LOS B and LOS C in the AM and PM peak period, respectively.

Based on the Warrant 3 analysis, a warrant for traffic signal is satisfied for both the a.m. and p.m. peak hours. Isabel Avenue north of I-580 is functionally classified as a major street in the City's General Plan and south of I-580, Isabel Avenue is classified as a highway, as it is identified as State Route 84. Based on the major roadway classification, the 45 mile per hour speed limit and the goal of organizing traffic flow and prioritizing walkability and pedestrian access, ***a traffic signal is the recommended traffic control device at Isabel Avenue at A Street.***

A Simtraffic analysis was conducted to determine the appropriate length of the turn pockets at the intersection. **Table 6** shows the 95th percentile queue lengths for the approaches to the Isabel Avenue at A Street intersection for the 2040 Baseline scenario and the 2040 Baseline plus Project scenario, along with the queue length that is added by the project and the proposed turn bay length.

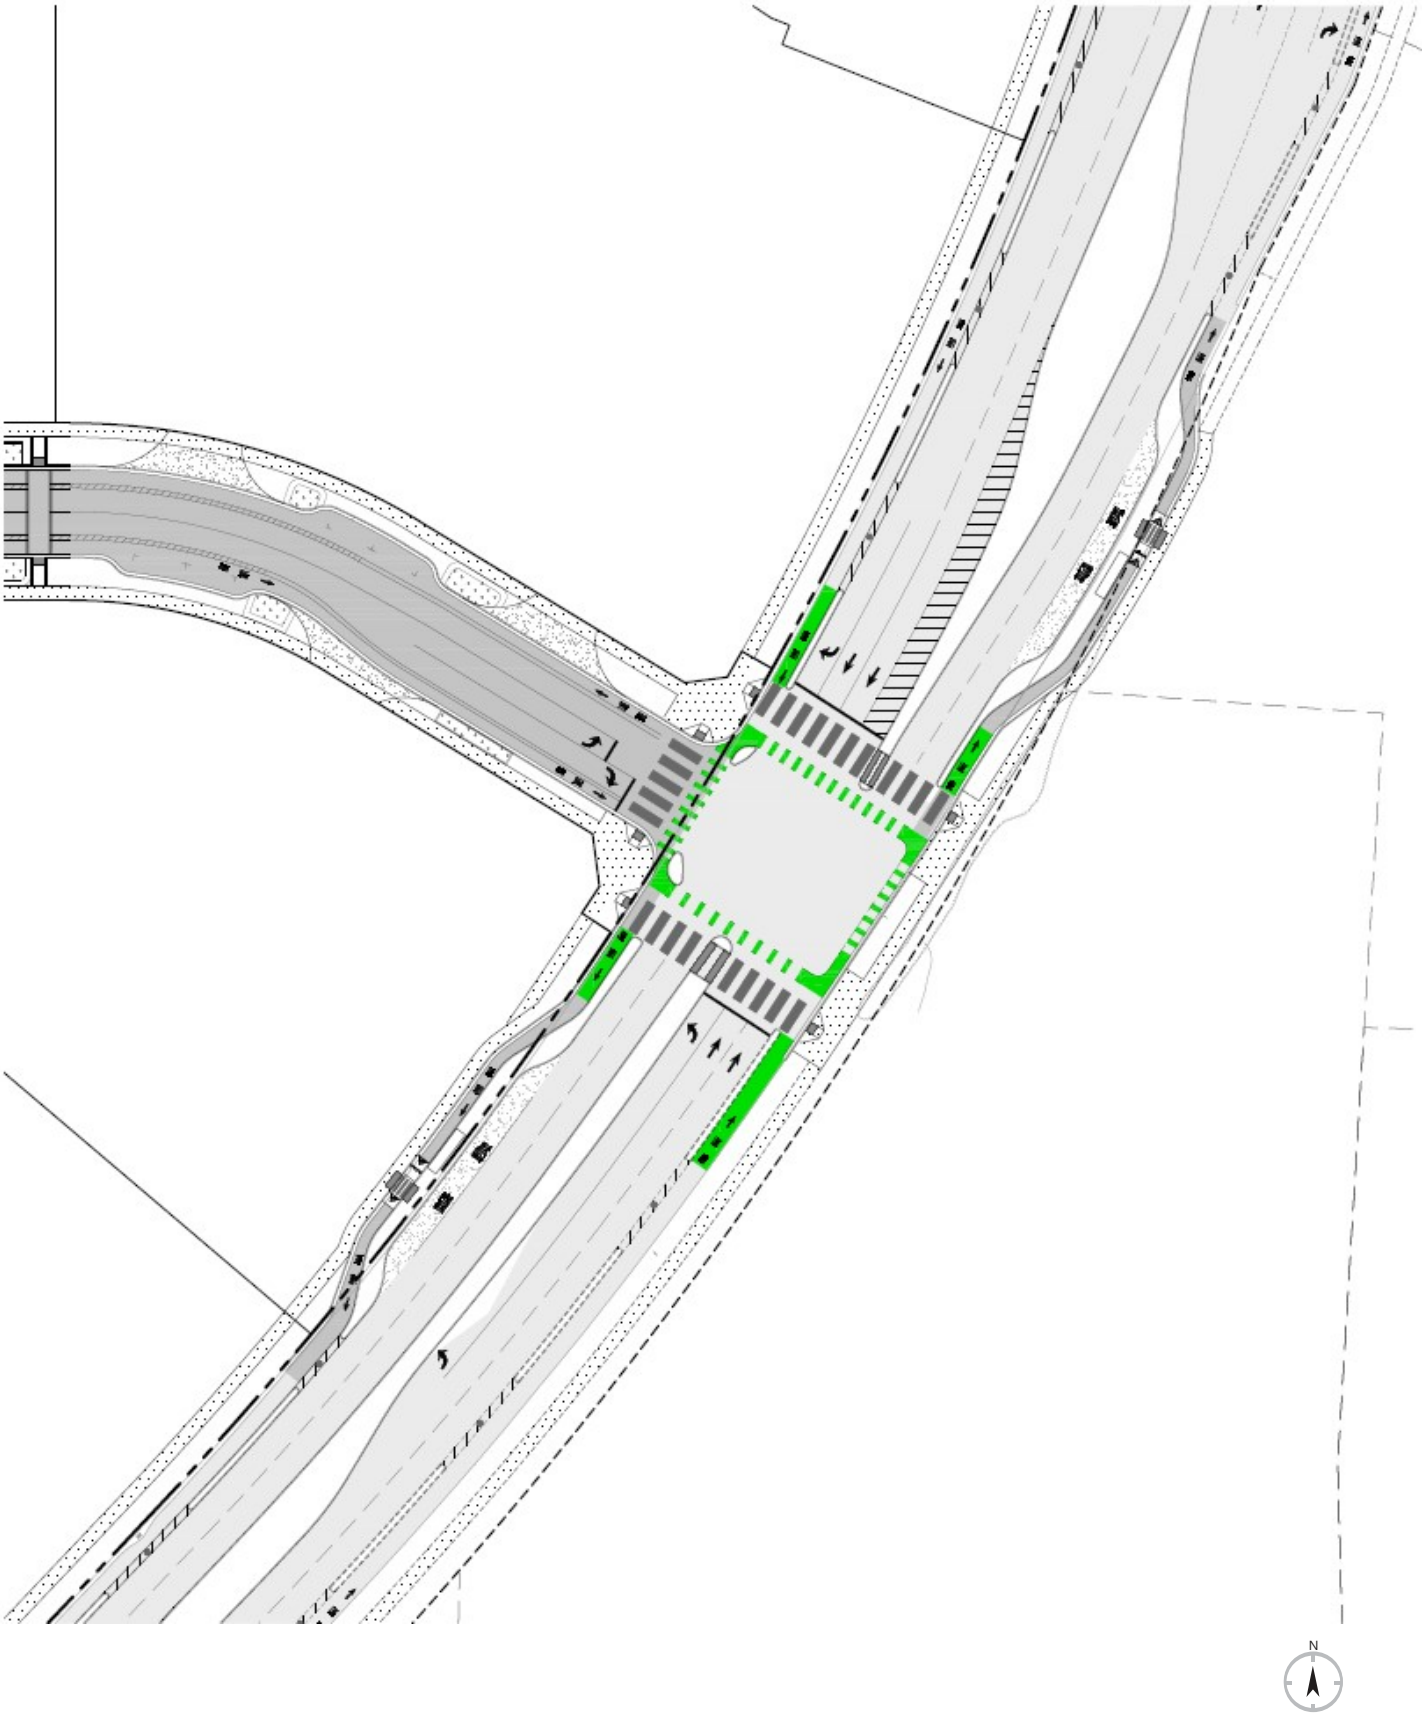


Table 6: 95th Percentile Queue Lengths at Isabel Avenue at A Street

Study Intersection	Lane Group	Peak Hour	95th Queue (ft) 2040 Baseline	95th Queue (ft) 2040 Baseline Plus Project - Two Lane Gateway*	Proposed Turn Bay Length (ft)
Isabel Ave @ A St	Northbound Left	AM	169	**215**	200
		PM	151	186	
	Southbound Left	AM	24	24	101
		PM	38	37	
	Eastbound Left	AM	26	43	95
		PM	53	67	

BOLD indicates that the queue length is estimated to exceed the proposed turn bay length

The project proposes to provide one northbound left turn pocket approximately 200 feet long, which can in total accommodate approximately eight vehicles. The calculated 95th percentile queue is 215 feet during the a.m. peak hour and 186 feet during the p.m. peak hour. The northbound left turn queue can be accommodated when the transitional taper of the turn pocket is included. The northbound left turn pocket is an appropriate length.

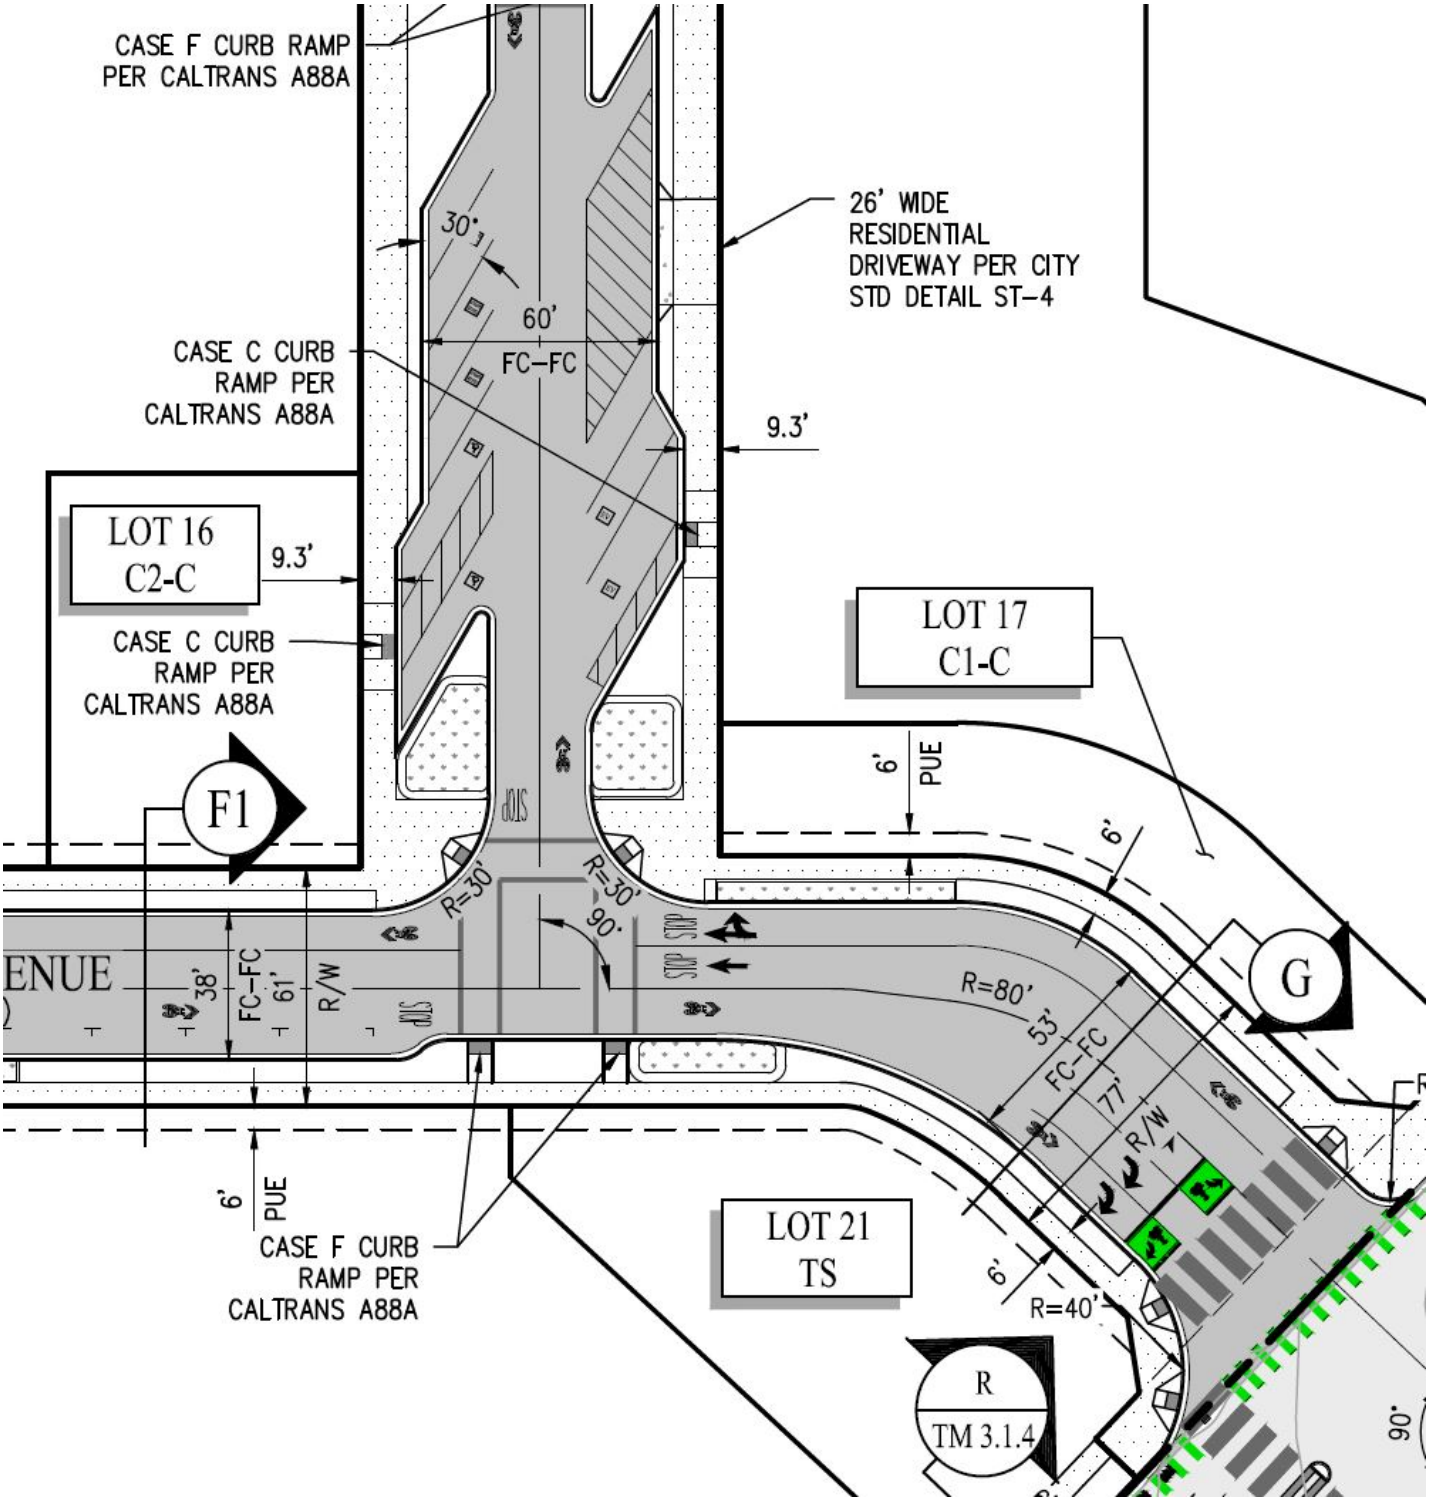
Figure 9: Isabel Avenue & A Street Intersection Configuration

Main Street at Gateway Avenue (#27)

Main Street is a proposed north-south street within the project that intersects both A Street and Gateway Avenue. Both streets are proposed with one lane in each direction with Class III bicycle routes, except the east leg of Gateway Avenue has two westbound lanes, one right-turn and one through lane. See **Figure 10** for the proposed intersection configuration.

The peak hour traffic signal warrant analysis, Warrant #3, was conducted at this intersection. This analysis determined that a traffic signal is not warranted at this location based on the projected turning movements during the a.m. and p.m. peak hours.

This intersection was evaluated with all-way stop sign control. With two westbound through lanes on Gateway Avenue, this intersection operates at LOS B with 14.9 seconds average delay during the AM peak hour and LOS D with 30.7 seconds of average delay during the PM peak hour. With only one westbound through on Gateway Avenue, the LOS degrades to LOS D during the a.m. peak hour and LOS E during the p.m. peak hour.



The critical queue length is for the westbound through to ensure that the queue does not extend into the adjacent intersection at Isabel Avenue. The 95th percentile westbound queue is 151 feet and 137 feet, in the AM and PM peak periods, respectively. The queue is accommodated within the 200 feet long lane and is not projected to extend into the adjacent intersection. The intersection configuration is appropriate.

Table 7: 95th Percentile Queue Lengths at Gateway Avenue at Main Street

Gateway Ave @ Main St	Eastbound Thru-Left	AM	84	145	350
		PM	153	176	
	Westbound Through	AM	127	151	200
		PM	100	137	
	Westbound Thru-Right	AM	138	164	189
		PM	109	139	

BOLD indicates that the 95th percentile queue length is estimated to exceed the proposed turn bay length

Figure 10: Main Street & Gateway Avenue Intersection Configuration

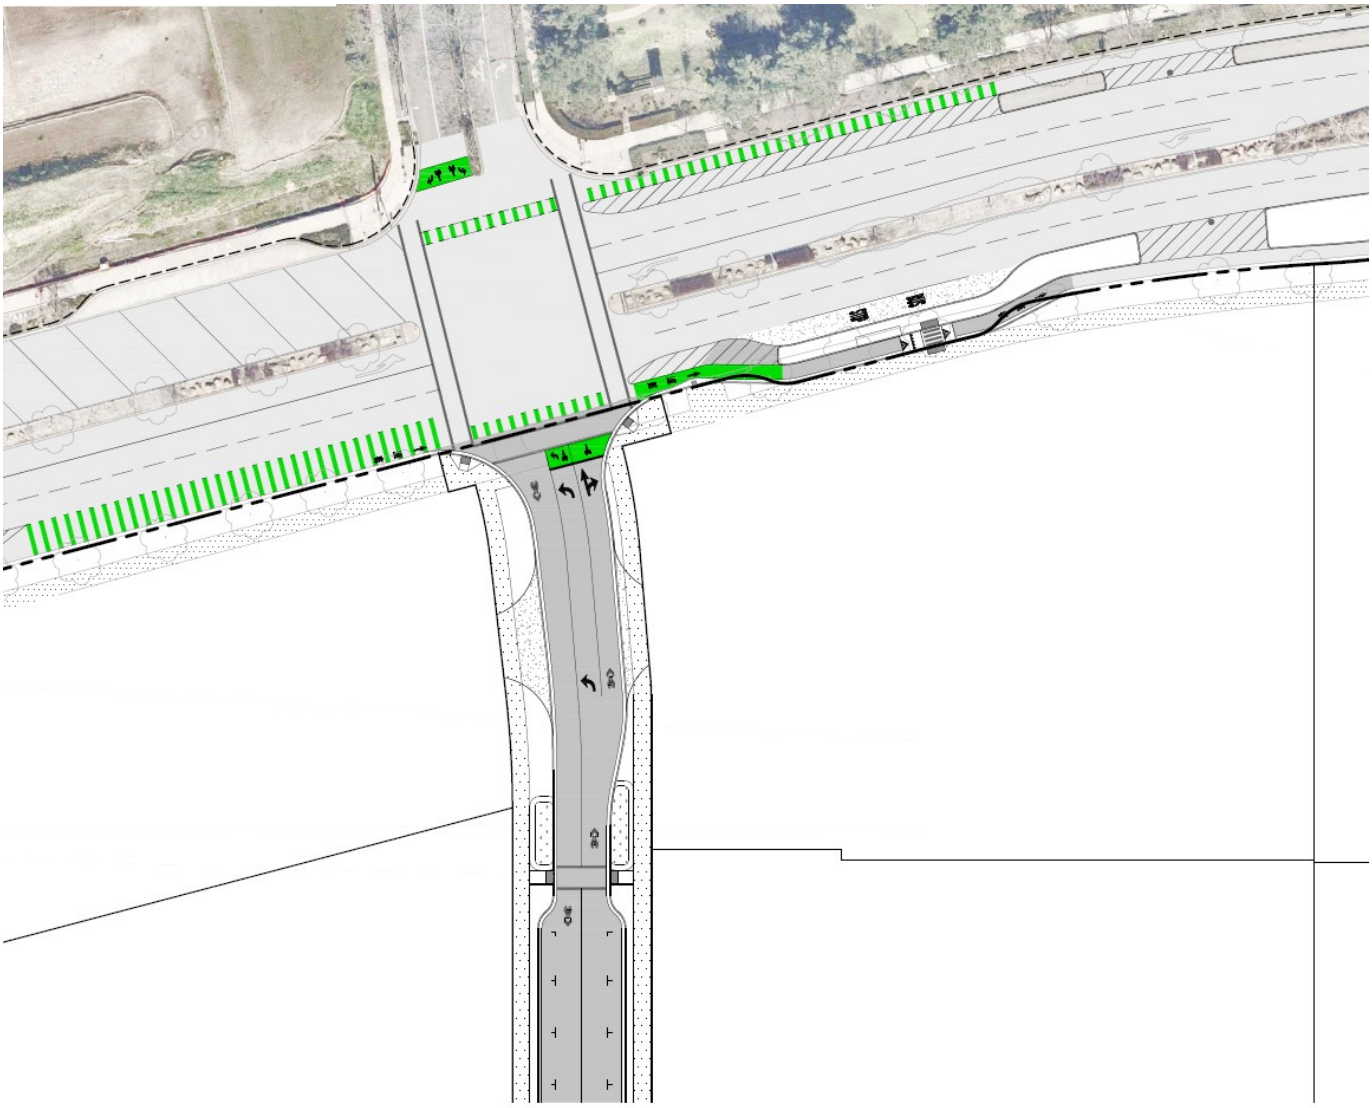
Portola Avenue at Main Street (#22)

The Project proposes to add a south leg to the existing signalized intersection of Portola Avenue at Main Street/Montage Drive. This intersection currently exists as a T-intersection with three eastbound and three westbound lanes with bike lanes. In the southbound direction, there is one left turn lane and one right turn lane.

In the recent INSP amendment in November 2022, Portola Avenue between Collier Canyon Road and Isabel Avenue is proposed to be reduced from six travel lanes to four travel lanes to accommodate a Class IV separated bicycle lane. The Project proposes to implement the lane reduction along with a Class IV bicycle lane along the Portola Avenue frontage of the project. See **Figure 11** for the project's proposed intersection configuration.

The Project adds left-turning vehicles to the existing westbound u-turn lane on Portola Avenue to access the project. For the westbound left turn pocket, the calculated 95th percentile queue is 133 feet during the a.m. peak hour and 131 feet during the p.m. peak hour. Based on vehicle queues, the westbound left turn pocket length of 298 feet is more than adequate.

The 95 percentile northbound left turn queue is 130 feet during the a.m. peak hour and 200 feet during the p.m. peak hour. The proposed turn bay length is 108 feet. The northbound queue would extend into the through-right turn lane, which is acceptable since the northbound left turn is the dominant movement.



As shown on **Table 4**, this intersection operates at LOS C with 25.9 seconds of delay in the a.m. peak hour and LOS D with 50.2 seconds of delay during the p.m. peak hour. This includes the reduction of travel lanes on Portola Avenue from three through lanes to two with the inclusion of the Class IV bike lanes on Portola Avenue. It should be noted that the LOS results from the 2040 Baseline from the INSP are based on three travel lanes on Portola Avenue so the LOS results are not a direct comparison.

Table 8: 95th Percentile Queue Lengths at Portola Avenue at Main Street / Montage Drive

Study Intersection	Lane Group	Peak Hour	95th Queue (ft) 2040 Baseline	95th Queue (ft) 2040 Baseline Plus Project - Two Lane Gateway*	Proposed Turn Bay Length (ft)
Main St/ Montage Dr @ Portola	Northbound Left	AM	103	**130**	108
		PM	65	**200**	
	Westbound Left	AM	120	133	298
		PM	103	131	

BOLD indicates that the 95th percentile queue length is estimated to exceed the proposed turn bay length

Figure 11: Portola Avenue & Main Street Intersection Configuration

BICYCLE CIRCULATION

The INSP identifies several existing and proposed bicycle facilities in the vicinity of the project as shown on **Figure 12**. Although the project's proposed roadway network does not exactly match the layout in the INSP, the key east-west and north-south running roadways correlate with the appropriate bicycle facility designation.

A Street is the northern east-west roadway and is proposed to accommodate Class IIB buffered bicycle lanes with a two-foot striped buffer and a five-foot bike lane, which conforms to the INSP.

Gateway Avenue is the southern east-west roadway and is proposed to accommodate Class III bicycle route, which conforms to the INSP. The project plans indicate Class III Shared Lane pavement markings at the beginning of each intersection and at 250 foot intervals for all Class III Bike Routes per California Manual of Uniform Traffic Control Devices (CAMUTCD) Section 9C.07.

B Street is a partial east-west roadway at the southern edge of the project and is proposed to accommodate Class III bicycle route.

C Street is a partial north-south roadway that connects A Street to Gateway Avenue and C Street. It is proposed to accommodate Class III bicycle route, which conforms to the INSP**.**

Shea Center Drive is the designated north-south roadway with a Class II bike lane designation in the INSP. The Project proposes to provide Class II bicycle lanes on Shea Center Drive along with a center two-way left turn lane.

Main Street is the eastern north-south roadway and it is proposed to accommodate a Class III bicycle route. It should be noted that bicycle designations on roadways with angled parking can cause potential conflicts; however, since this short roadway is designed with bulb-outs to reduce vehicle speeds, a bicycle route designation is an acceptable design.

There is some research that indicates that back-in angle parking reduces this conflict by increasing visibility to bicyclists and approaching vehicles (Federal Highway Administration Technical Document titled *On-Street Motor Vehicle Parking and the Bikeway Selection Process* dated February 2021). A back-in angled parking maneuver is easier than a parallel parking maneuver and it is much easier to exit. Back-in angled parking can be considered on Main Street between A Street and Gateway Avenue.

In the recent INSP amendment in November 2022, Portola Avenue between Collier Canyon Road and Isabel Avenue was proposed to be reduced from six travel lanes to four travel lanes to accommodate a Class IV separated bicycle lane. This proposed Class IV bicycle lane is proposed to continue east and west along Portola, as well as south along Isabel Avenue to the intersection of I-580 westbound off-ramp. The Project proposes to implement the lane reduction along with a Class IV bicycle lane along the Portola Avenue frontage of the project. The project also proposes to modify Isabel Avenue to provide a Class IV separated bike lane in the southbound direction.

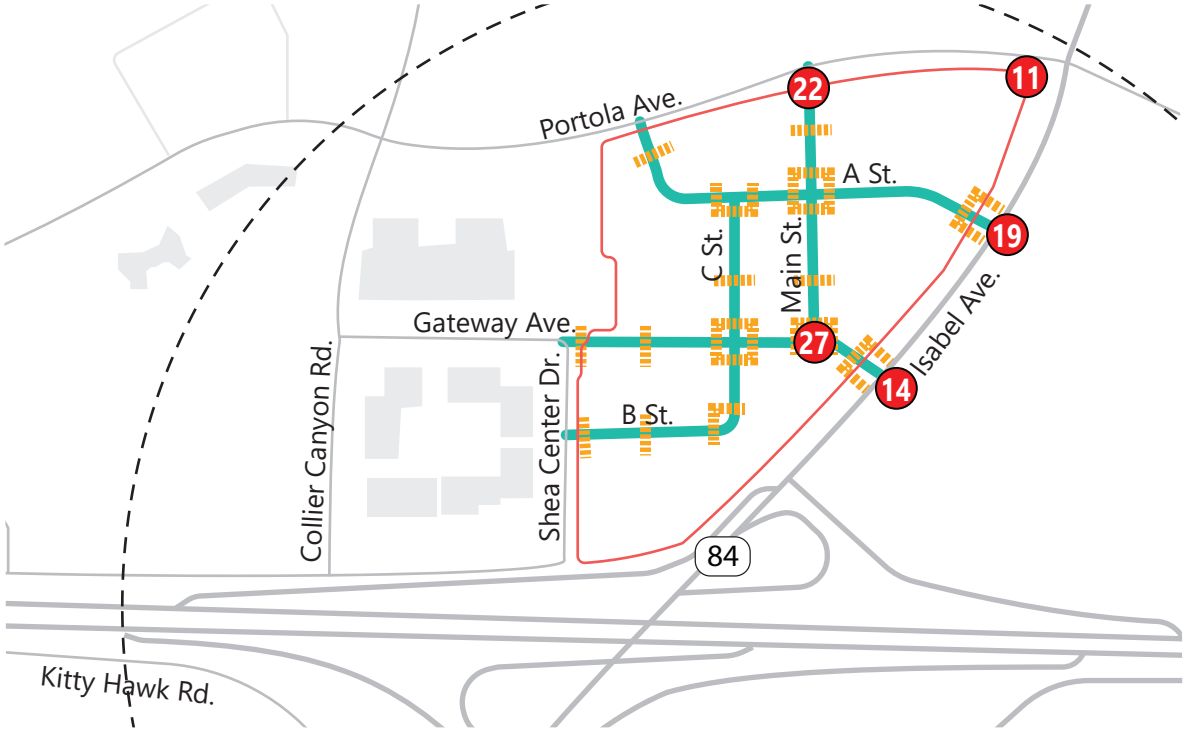
PEDESTRIAN CIRCULATION

A key marker of a successful transit-oriented multi-use development is vibrant, pedestrian-friendly design. The INSP identifies several proposed pedestrian facilities in the vicinity of the project area, such as pedestrian streets, trails, and pedestrian undercrossings, as shown on **Figure 13**. The proposed project is within the 10-minute walkshed of the Isabel Valley Link Station.

Pedestrian streets are identified as the main walking routes through the neighborhood and are designed to be comfortable for pedestrians with wider sidewalks and landscape strips, traffic calming measures (such as corner bulb-outs), and small block sizes for ease of crossing the street.

Gateway Avenue from Shea Center Drive to Isabel Avenue and C Street from A Street to the south limits of the project are designated pedestrian streets in the INSP. Gateway Avenue is designed per the standard in the INSP with six-foot wide public utility easements, a six-foot wide sidewalk, a six-foot wide landscape strip, an eight-foot wide parking lane, and ten-foot wide travel lanes.

INSP Policy P-TRA-1 requires short block lengths to create a walkable street grid. Block sizes should have a maximum length of 600 feet, and where block lengths exceed 400 feet, mid-block crossings shall be installed. Six blocks within the project are closer to 600 feet in length. Mid-block crosswalks with chokers are proposed on these blocks. Landscaping should not exceed 30 inches in height in this mid-block bulb-out area to maintain proper sight distance.



All the sidewalks within the project meet the INSP design standard with a minimum of six-foot wide sidewalks and six-foot wide landscape strips. Main Street between Gateway Avenue and A Street is designed with a 12-foot sidewalk, designated as four feet as store frontage and eight feet of walkable area, along with the four-foot landscape strip.

INSP Policy P-TRA-11 requires the incorporation of traffic calming measures to slow vehicle speeds and increase the visibility of pedestrian crossings. All of the internal roadway intersections are designed with intersection curb bulb-outs that bring the curb to the edge of the travel lane. This minimizes the pedestrian roadway crossing distance, increases pedestrian visibility, and reduces vehicle speeds through the intersection. The mid-block crosswalk chokers also act as a traffic calming measure.

Based on the above features, all the internal roadways are designed as pedestrian streets based on the standards in the INSP.

INSP Policy P-TRA-8 requires four-legged crosswalks at new signalized or stop-controlled intersections. All internal intersections are proposed to install four-legged crosswalks. The project proposes crosswalks across all legs of new intersections. At the intersection of Isabel Avenue at Gateway, the project proposes 15 foot extra-wide crosswalks with protected median refuges.

TRANSIT & FUTURE VALLEY LINK ACCESS

The project vicinity is currently served by one bus line, the 30R, operated by the Livermore-Amador Valley Transit Authority, which serves Dublin, Pleasanton and Livermore. This rapid line with service every 15 minutes on weekdays connects the Lawrence Livermore Lab, the Livermore Transit Center, which also serves as an ACE station, the Las Positas Community College and the East Dublin/Pleasanton BART Station.

Valley Link is a future rail transit service to bridge the gap between BART and the Altamont Commuter Express (ACE) rail lines. It also is to improve connections between the greater San Francisco Bay Area and San Joaquin County with a station starting in Lathrop and ending with a connection to the East Dublin/Pleasanton BART station. Isabel Valley Link Station is adjacent to the East Dublin/Pleasanton BART station. Valley Link is proposed to include train service every 12 minutes during the peak commuter periods and every 24 minutes during the off-peak periods. Based on the INSP, the percentage of expected riders that will arrive to the station by driving and parking at the station is 46 percent and 54 percent will either walk, bike, transfer from bus, or be dropped off.

It is anticipated that with the development of the Isabel Valley Link Station, additional bus routes may be added to service this station. The INSP identifies a potential bus route along Gateway Avenue, from the loop road that accesses Isabel Valley Link Station access on the north side of I-580 through the proposed project. Figure 12 identifies existing transit facilities.

Gateway Avenue is also a designated pedestrian corridor in the INSP with ten-foot wide vehicle travel lanes adjacent to an eight-foot parking strip. Based on Caltrans Design Standards, a low volume street that services buses should be at least 11 feet wide. It is noted that a bus can be physically accommodated on a 10-foot wide street at a low speed, which continues to prioritize walkability. However, this is a challenging balance.

However, with the intersection curb bulb-outs, there is not sufficient width for the bus to turn from Gateway Avenue. Based on the current proposed design, the bus route is limited to straight through movements on Gateway Avenue to Collier Canyon Road**.**

Isabel Avenue is also a designated bus route per the INSP. Typically, bus stops are provided at the egress of a signalized intersection to minimize stops. Bus turnouts are proposed along Isabel Avenue at the A Street intersection. As shown on Figure 9, the project proposes a northbound bus turnout just north of the intersection and a southbound bus turnout just south of the intersection.

TRANSPORTATION DEMAND MANAGEMENT & PARKING

Transportation demand management (TDM) is a set of strategies aimed at encouraging and facilitating walking, bicycling, and transit use with the aim of reducing solo occupant vehicles. TDM strategies tend to be operational in nature, however, they work in tandem with strategic land use and community design. Examples of strategies include identifying a TDM coordinator, education on available transportation alternatives, parking management, transit or ridesharing passes, or subsidies and preferential parking for carpools. ***It is recommended that this project develop a complete TDM plan to be enacted upon occupancy.***

Parking management is a complex strategy in balancing the parking needs of the mixed-use development while not providing too much parking, such that active modes and transit use are encouraged. Parking will need to be monitored as part of the TDM program.

The INSP identifies specific parking requirements for both vehicles and bicycles based on the development size.

Vehicle Parking Requirements

The INSP identifies vehicle parking requirements within the project area based on the various types of residential and commercial developments as shown in **Table 8**.

Table 9: Vehicle Parking Standards

Residential Land Use	Size	Minimum Parking Space per Unit	Maximum Parking Spaces per Unit
Transition and Village	Studio/1 Bedroom	1.00	1.25
	2 Bedroom	1.50	2.00
	3+ Bedrooms	2.00	2.50
	Visitor Parking	0.13	0.25
Residential Center and Core	Studio	0.75	1.00
	1 Bedroom	1.00	1.50
	2+ Bedrooms	1.25	2.00
	Visitor Parking	0.13	0.25
AB2345 Density Bonus Affordable Housing	Studio / 1 Bedroom	0.75	1.00
	2 Bedroom	1.25	1.50
	3+ Bedrooms	1.25	1.50
	Visitor Parking	0.00	0.00
Non-Residential Land Use		Minimum of One Parking Space per Square Foot	Maximum of One Parking Space per Square Foot
Neighborhood Commercial		600	300

Source: Isabel Neighborhood Specific Plan document

Table 9 shows the minimum and maximum number of parking spaces required for each parcel of development within the proposed project.

Table 10: Vehicle Parking Requirements per Parcel

Parcel	Residential Parking		Commercial Parking	
	Minimum	Maximum	Minimum	Maximum
N1	208	269.5		
N2	119	154		
N3-A	85	110		
C1-A	132	171		
C1-B	117	177	33	65
C2-A	128	197	42	83
C2-B	36	47		
C3	96	124		
C5	179	231		
S1	191	293	53	84
S2	182	246		
S3-A	245	290		
S3-B	154	192		
S4	50	79		
Total	**1920**	**2579**	**127**	**233**

The parking provided by the project meets the minimum requirements of 2,047 spaces by providing 2,291 spaces and does not exceed the maximum of 2,812 spaces.

It should be noted that the parking included by the project also consists of public on-street parallel and angled parking. This parking should be monitored to determine if parking is being used as spill-over parking from the Isabel Valley Link Station. Additionally, the parking on Main Street should allow for adequate turn-over to service the retail components of the project. A typical threshold for implementing parking management strategies is 85 percent occupancy. Typical parking management strategies include time limited parking, paid parking or parking permit programs. This could be a component of the TDM Plan.

The parking proposed by the project is adequate and appropriate. It is recommended that as the details of each parcel are developed, the parking design should continue to be evaluated for placement of visitor and resident parking, in addition to retail and commercial parking spaces.

Bicycle Parking Requirements

Bicycle parking standards are outlined in the INSP, with an update adopted in November 2022. The bicycle parking standards are shown in **Table 5.** There are two types of bicycle parking, long-term bike parking and short-term bike parking.

Long-term bike parking is defined as a secure enclosed space, either in a private residential garage, a secure enclosed bicycle locker, or an indoor, secure room dedicated to store bicycles. Long-term bike parking is aimed for residents in the residential areas or for employees of commercial space.

Short-term bike parking is defined as a secure bicycle parking space, usually bike racks, usually located near the entrance to the destination. Short-term bike parking is aimed for visitors of residents and visitors or customers of the commercial space.

Table 11: Bicycle Parking Standards based on the INSP

Land Use	Number of Bike Parking Spaces Required
Residential Transition and Village	One Long Term Bike Parking per Unit One Short Term Bike Parking per 20 Units
Residential Center and Core	One Long Term Bike Space per Four Bedrooms One Short Term Bike Parking per 20 Units
Neighborhood Commercial	One per 1,400 square feet
General Commercial	One per 2,800 square feet with at least 25% Long term and 25% Short term
Office-Core	One per 1,600 square feet with at least 25% Long Term and 25% Short Term
Office and Business Park	One per 3,200 square feet with at least 25% Long Term and 25% Short Term

Source: Isabel Neighborhood Specific Plan document

Table 12: Bicycle Parking Requirements per Parcel

Parcel	Zone	Residential Units	Bedrooms	Neighborhood Commercial Sq. Ft.	Long Term Bike Parking	Short Term Bike Parking
N1	Village	98	362		98	5
N2	Village	56	224		56	3
N3-A	Transition	40	160		40	2
C1-A	Village	62	217		62	3
C1-B	Center	114	183	19,610	53	13
C2-A	Core	116	220	25000	64	15
C2-B	Transition	17	68		68	1
C3	Transition	45	171		171	2
C5	Transition	84	320		320	4
S1	Core	172	328	21020	90	16
S2	Transition	102	236		236	5
S3-A	Core	200	272		68	10
S3-B	Core (Affordable)	152	280		70	8
S4	Core	41	97		24	2
Total		1299	3138	65630	1321	83

Table 12 lists the bicycle parking required for each parcel based on the proposed land uses and the bicycle parking standards. ***It is recommended that the proposed project identify how the bicycle parking standards will be met***, including identifying the location of long-term and short-term bicycle parking within each parcel for all the land use types.

Additionally, the recreational and open space areas, such as the plazas, recreational center, and a neighborhood park, should provide short-term bicycle parking near the entrances to each amenity.

SUMMARY OF RECOMMENDATIONS

This section summarizes all of the recommendations for changes to the proposed project based on the traffic analysis and conformance to the INSP.

1. It is recommended that westbound Gateway Avenue at Main Street consist of two westbound through lanes.
2. It is recommended that the intersection of Main Street and Gateway Avenue be operated with all-way stop-sign control.
3. It is recommended that the signal timing for Isabel Avenue at Gateway Avenue and Isabel Avenue at A Street is optimized to reduce northbound left-turn queue lengths during the a.m. and p.m. peak hour.
4. It is recommended that this project develop a complete TDM plan to be enacted upon occupancy.
5. It is recommended that as the details of each parcel are developed, the parking design should continue to be evaluated for placement of visitor and resident parking, in addition to retail and commercial parking spaces.
6. It is recommended that the proposed project identify how the bicycle parking standards will be met, including identifying the location of long-term and short-term bicycle parking within each parcel for all the land use types.

Appendix A

Livermore Isabel Transit Village Modified Project Analysis

Date:	July 17, 2023 (revised May 14, 2024)
To:	Bill Myers Harridge Development Group
From:	Anna Vickroy, PE, TE Senior Transportation Engineer, TJKM
Subject:	Livermore Isabel Transit Village Modified Project Analysis

TECHNICAL MEMORANDUM

The purpose of this technical memorandum is to determine if the potential transportation impacts of the modifications to the Isabel Neighborhood Specific Plan (INSP) proposed by the Livermore Transit Village project (Modified Project) require "major revisions" to the Environmental Impact Report (EIR) certified on May 14, 2018 and Supplemental Environmental Impact Report (SEIR) dated September 30, 2020 for the INSP. Major revisions to the EIR and SEIR would be required if the Modified Project causes a new, previously unidentified significant transportation effect or if it increases the severity of previously identified significant transportation effects in the EIR and SEIR. If no major revisions are required, no further CEQA transportation analysis would be required for the Modified Project. As analyzed below, the Modified Project reduces the development size and density of the INSP. As a result, the Modified Project produces fewer trips than identified in the INSP. Because fewer trips are produced, no major revisions are needed to be made to the EIR and SEIR.

ISABEL NEIGHBORHOOD SPECIFIC PLAN

The INSP is a specific plan that provides policy objectives, land use regulations, and development standards within approximately 1,138-acres in northwest Livermore, approximately 2.5 miles from the City's downtown neighborhood. The INSP was adopted in November 2020 and amended in November 2022. The INSP plans for development that supports and complements the future Isabel Station for the Valley Link rail system.

The INSP allows the development of up to 4,095 new multi-family housing units and approximately 2.1 million square feet of new office and commercial development.

The EIR and SEIR included and relied on a traffic study prepared by Kittleson & Associates (Traffic Study). The Traffic Study evaluated the INSP's potential transportation impacts on intersection level of service, freeway segments, bicycle and pedestrian facilities, transit service and emergency access, as well as conformance with adopted plans, policies and programs related to the performance and safety of the circulation system, taking in account all available modes of travel. Relying on the Traffic Study, the SEIR determined that the INSP would result in significant and unavoidable impacts on roadway circulation systems and freeway and arterial segments in the vicinity of the INSP.

MODIFIED PROJECT

The Modified Project is a proposed mixed-used development located on approximately 45 acres at the southwest corner of Isabel Avenue and Portola Avenue in the City of Livermore (Site). It is bordered by Isabel Avenue to the east, Portola Avenue to the north, I-580 to the south and existing office developments to the west. A vicinity map is included in **Figure 1**.

The Modified Project would be constructed within and would modify Subareas 3b and 3c of the INSP. Subareas 3b and 3c are core areas of the INSP with a general objective of creating a vibrant residential neighborhood with retail uses that generate transit ridership. The Modified Project proposes to construct 1,299 dwelling units (townhomes and mid-rise multi-family apartments) and approximately 65,635 square feet of neighborhood serving commercial space on the 45-acre Site within the core of the INSP. The commercial space is designed on the street level of multi-story buildings with residential apartments located above. Amenities within this mixed-use development include a neighborhood park, a recreation center that includes a pool, and open space at the corners of the retail-lined street including a pocket plaza, and a town square. A site plan is included in **Figure 2**.

The proposed future Isabel Station for the Valley Link railway is located a quarter mile to the southeast of the Site. The Valley Link railway is a proposed 42-mile passenger rail project that will connect the Lathrop Altamont Commuter Express (ACE) rail station with the Dublin/Pleasanton Bay Area Rapid Transit (BART) station. The Modified Project is located within a half-mile of the proposed Isabel Station platform.

Figure 1: Vicinity Map

LEGEND

- Future Isabel Valley Link Station

Figure 2: Site Plan

METHODOLOGY

To determine whether the Modified Project would require major revisions to the EIR and SEIR as a result of causing new or increased significant transportation effects, traffic generation from the size, density and mix of land uses proposed by the Modified Project are directly compared to the mix, size and density of land uses proposed in Subareas 3b and 3c by the INSP using the same methods and data to ensure a valid "apples to apples" comparison.

This comparative trip generation analysis utilizes the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition (ITE Manual). If the Modified Project results in reduced trip generation overall using ITE Manual trip rates, the Modified Project would not cause new unidentified or increase the severity of previously identified significant and unavoidable transportation effects caused by the INSP.

RESIDENTIAL LAND USES

Table 2-6 of the INSP identifies the residential performance measures by subarea. The maximum number of housing units identified for Subareas 3b and 3c is 1,717 units with a target number of 1477 residential units. The minimum number of housing units is 1,236. The target number of 1,477 residential units will be used to compare to 1,299 residential units proposed in the Modified Project.

The Modified Project proposes to construct 1,299 residential units within Subareas 3b and 3c. The comparative breakdown of residential unit types as between the original INSP and the Modified Project is set forth in the comparative Trip Generation analysis in Table 1. The breakdown for each residential unit type in the INSP was estimated based on the land area identified for each type along with the density for each type identified on Figure 2-3 of the INSP. The results of this estimation are 545 multi-family attached townhouse dwelling units, 288 multi-family stacked flat units and 466 multi-family apartment units. Land use sizes are further separated out by block within the study area, based on the proposed distribution of uses in the Modified Project and Figure 2-3 of the INSP.

NEIGHBORHOOD COMMERCIAL LAND USES

The INSP designates certain areas within Subareas 3a, 3b and 3c as having a "Neighborhood Commercial" or Ground Floor Retail/Flex Space land use designation. The Neighborhood Commercial land use is identified as 167,185 square feet on INSP Table 2-7 - Estimated Net New Development in 2040. This includes both Neighborhood Commercial and Ground Floor Retail/Flex Spaces within the INSP. We estimate, based on land area in the three subareas with the "Neighborhood Commercial" designation, that the INSP proposes 142,107 square feet of "Neighborhood Commercial" with Subareas 3b and 3c.

The Modified Project proposes to construct 65,635 square feet of retail commercial floor area. This is less than the 142,107 square feet that is proposed in the INSP for Subareas 3b and 3c.

OFFICE LAND USES

Table 2-7 Estimated Net New Development in 2040 in the INSP identifies 1,578,000 square feet of office space. Based on a proportional land use analysis using the maps from the INSP, we estimate that the office area within subarea 3c contains 10% of the total office area in the INSP, which would result in the construction of 157,800 square feet of office land uses within Subarea 3c of the INSP. No office uses are proposed by the INSP in Subarea 3b.

The Modified Project does not propose to construct any offices uses. Any potential future office uses would occur within the existing proposed commercial use areas discussed above. Therefore, this analysis accounts for the reduction in trips that would occur where all planned office uses in Subarea 3c of the INSP are eliminated in the Modified Project.

TRIP GENERATION COMPARISON

As detailed in Table 1 - Trip Generation Comparison, AM and PM peak hour trips are calculated for all the land uses described above. ITE trip generation rates are identified for the weekday AM and PM peak hours. The General Urban/Suburban setting/location types was used for each land use type.[1] The table also identifies the recommended ITE rate as either an average rate or a best fit equation. Applying the ITE trip rate for the AM or PM peak period to the size of the project results in the Trips SubTotal.

Due to the close proximity of the future Valley Link Isabel Station and the walkability of the designed community, a conservative trip reduction was applied for trips taken by residents walking to transit. Based on an article entitled *Vehicle Trip Reductions Impacts of Transit-Oriented Housing*, in the Journal of Public Transportation, Vol. 11, No. 3, 2008, transit-oriented developments generate on average 47 percent fewer trips compared to the ITE rate. To be conservative, it is assumed that 10 percent of trips from the multi-family townhouse residences and 15 percent of trips from the multi-family stacked flat and apartment residences are walk-to-transit trips. Given the half-mile radius of the project to the future Valley Link Isabel Station, these assumptions are reasonable for transit trips in a transit-oriented development in a suburban environment.

As shown in Table 1, the Modified Project is projected to generate 585 AM peak hour trips and 859 PM peak hour trips. The land uses in the INSP for the Subareas 3b and 3c are projected to generate 996 AM peak hour trips and 1,626 PM peak hour trips. The Modified Project results in 411 fewer trips in the a.m. peak hour and 767 fewer trips during the p.m. peak hour. This is 41 percent less during the a.m. peak hour and 47 percent less during the p.m. peak hour.

Notably, the reduction in commercial retail uses could also potentially decrease allowances for trip reductions as part of the ITE trip generation internal trip capture methodology outlined in the *Trip*

[1] For the Project's proposed multi-family townhouse uses, the closest analogue under the ITE categories is ITE Land Use 215, which applies to Single Family Attached Housing.

Generation Handbook, 3rd Edition. Trip reductions are applied to INSP residential uses as a result of internal trip from residential trips to commercial uses remaining within the project, thus resulting in additional trips outside of the Modified Project Site and the INSP. However, this potential increase in trips from reduced trip reduction credits would be minor compared to the overall reduction in trips due to the reduced size of the Modified Project as compared to the development proposed in Subareas 3b and 3c of the INSP.

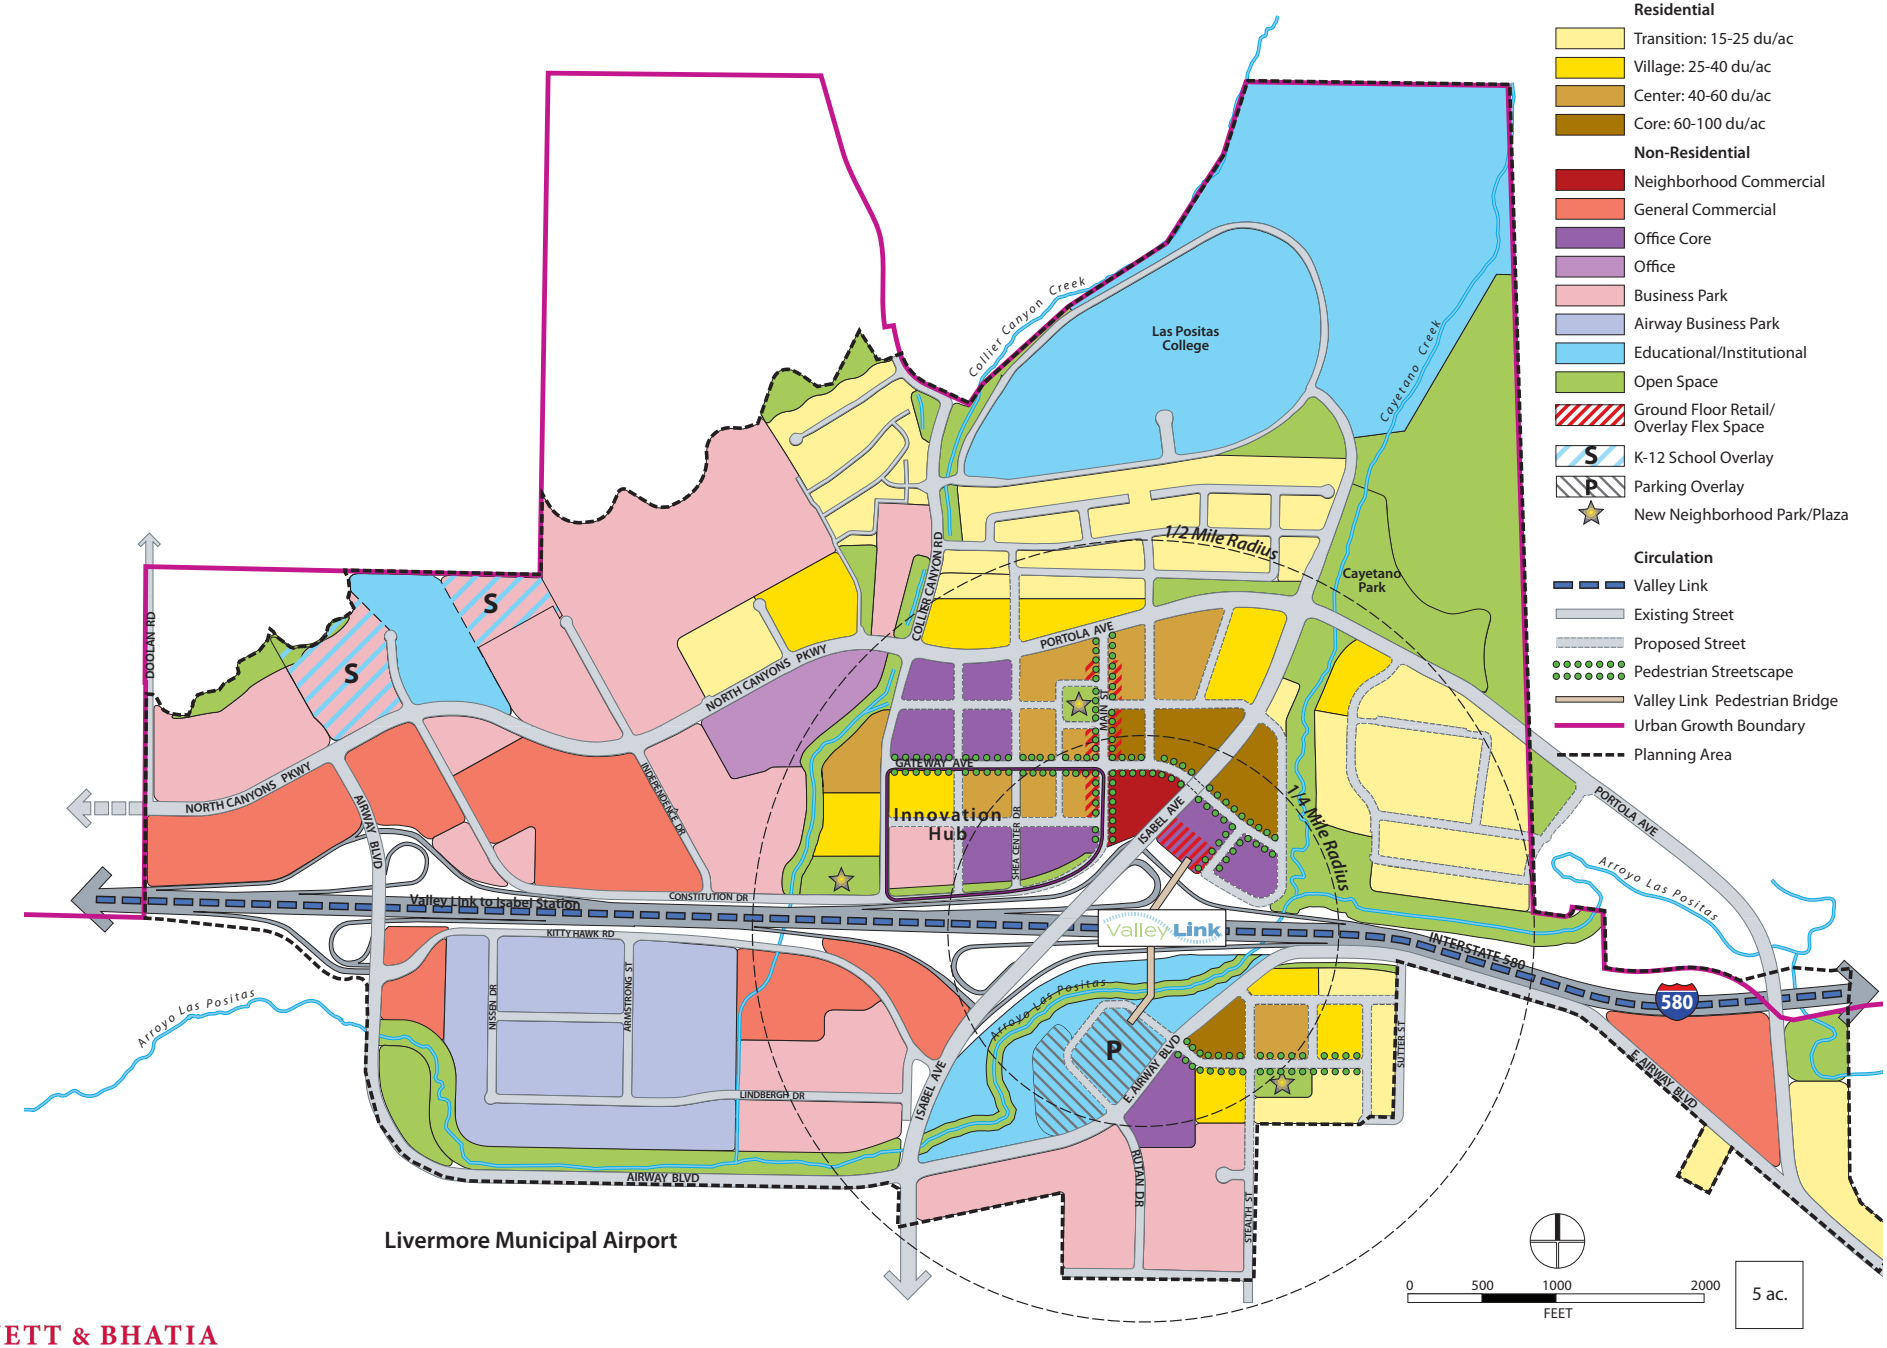
Source - Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition

CONCLUSION



The Modified Project produces fewer trips than what was proposed in the INSP during the AM and PM peak hour. Therefore, the changes to the development completed in the INSP by the Modified Project would not require major revisions to the EIR or SEIR.

TABLE 2-6: PERFORMANCE MEASURES BY SUBAREA

Sub-area	Minimum Housing Units	Target Housing Units[1]	Maximum Housing Units	Performance Measures
1a	138	184	230	a) Provide at least two residential product types.
2a	163	201	240	a) Provide at least two residential product types.
2b	299	361	422	a) Provide at least two residential product types. b) Limit the building heights of units directly facing the adjacent Montage development to 45 feet above existing grade (three stories). c) Limit building heights on the remainder of the site to 50 feet above existing grade or Scenic Corridor limit, whichever is stricter.
2c	268	327	386	a) Provide at least two residential product types. b) Limit building heights to 50 feet above existing grade or Scenic Corridor limit, whichever is stricter.
2d	200	243	286	a) Provide at least two residential product types. b) Limit building heights to 50 feet above existing grade or Scenic Corridor limit, whichever is stricter.
3a	162	244	326	a) Provide at least two residential product types. b) The exact location of new streets is flexible, as long as they align with the proposed intersections shown on the Plan figures.
3b	1,054	1,267	1,480	a) Provide at least three residential product types. b) Concentrate the tallest buildings along Gateway Avenue and transition downward in scale along Portola. c) With the exception of Gateway Avenue, Shea Center Drive, and Main Street, the exact location of the new streets is flexible.
3c	182	210	237	a) Provide at least two residential product types. b) Provide the tallest buildings along Gateway Avenue and transition downward in scale for housing along Portola Avenue.
3d	197	238	279	a) Provide at least two residential product types. b) For sites outside of the Scenic Corridor exception area, limit building heights to 40 feet above existing grade (or Scenic Corridor limit, whichever is stricter).
4	660	793	926	a) Provide at least three residential product types. b) Limit building heights along Sutter Street and adjacent to existing residential uses to three stories. c) Locate the tallest buildings closest to the Valley Link station. d) The exact location of new streets is flexible, as long as they align with the proposed intersection with the Valley Link station and there is at least one connection to Sutter Street. e) If development is phased such that redevelopment of the self-storage site occurs after development of the G&M Farms property, the first phase shall plan for future street connections with the second phase.

Notes:

1. The target unit count is based on a variety of factors including density averages, development constraints, and market conditions.

2.6 DEVELOPMENT POTENTIAL

This section summarizes the overall development potential under build-out of the Plan. Build-out refers to the future scenario in which development has occurred on all properties envisioned for development under the Plan. The buildout scenario provides estimates as to the number of new households, residents, and jobs in the Neighborhood, and serves as the overall capacity for new development under the Plan. The City and partner agencies use these estimates to analyze environmental impacts and plan needed infrastructure and public services over the long-term (see the Isabel Neighborhood Specific Plan Draft EIR and Chapters 3, 4, and 7 of this Plan).

For planning and environmental review purposes, it is assumed buildout will occur by the year 2040, although it may take longer to fully realize the vision for the Isabel Neighborhood. Ultimately, private property owners are responsible for initiating development or redevelopment of their land, which often depends on market conditions.

Table 2-7 shows the estimated net new development under buildout of the Isabel Neighborhood Specific Plan. The development potential was calculated by applying the development standards (including average densities for the residential categories) applied to the Change Areas shown on Figure 2-2. The table also breaks down the net new development within and outside of the half-mile radius of the Valley Link station.

TABLE 2-7: ESTIMATED NET NEW DEVELOPMENT IN 2040

	Within ½ mile radius of Valley Link station	*Outside ½ mile radius*	*Planning Area Total*
Residential (housing units)	***3,525***	***570***	***4,095***
Non-residential (square feet)			
Office	1,578,000[1]	152,500	1,730,500
Business Park	73,590	106,800	180,390
Neighborhood Commercial	167,185[2]	0	167,185
General Commercial	107,200	52,500	159,700
General Industrial[3]	(270,175)	0	(270,175)
Total	***1,655,800***	***311,800***	***1,967,600***
Jobs	***8,000***	***1,200***	***9,200***

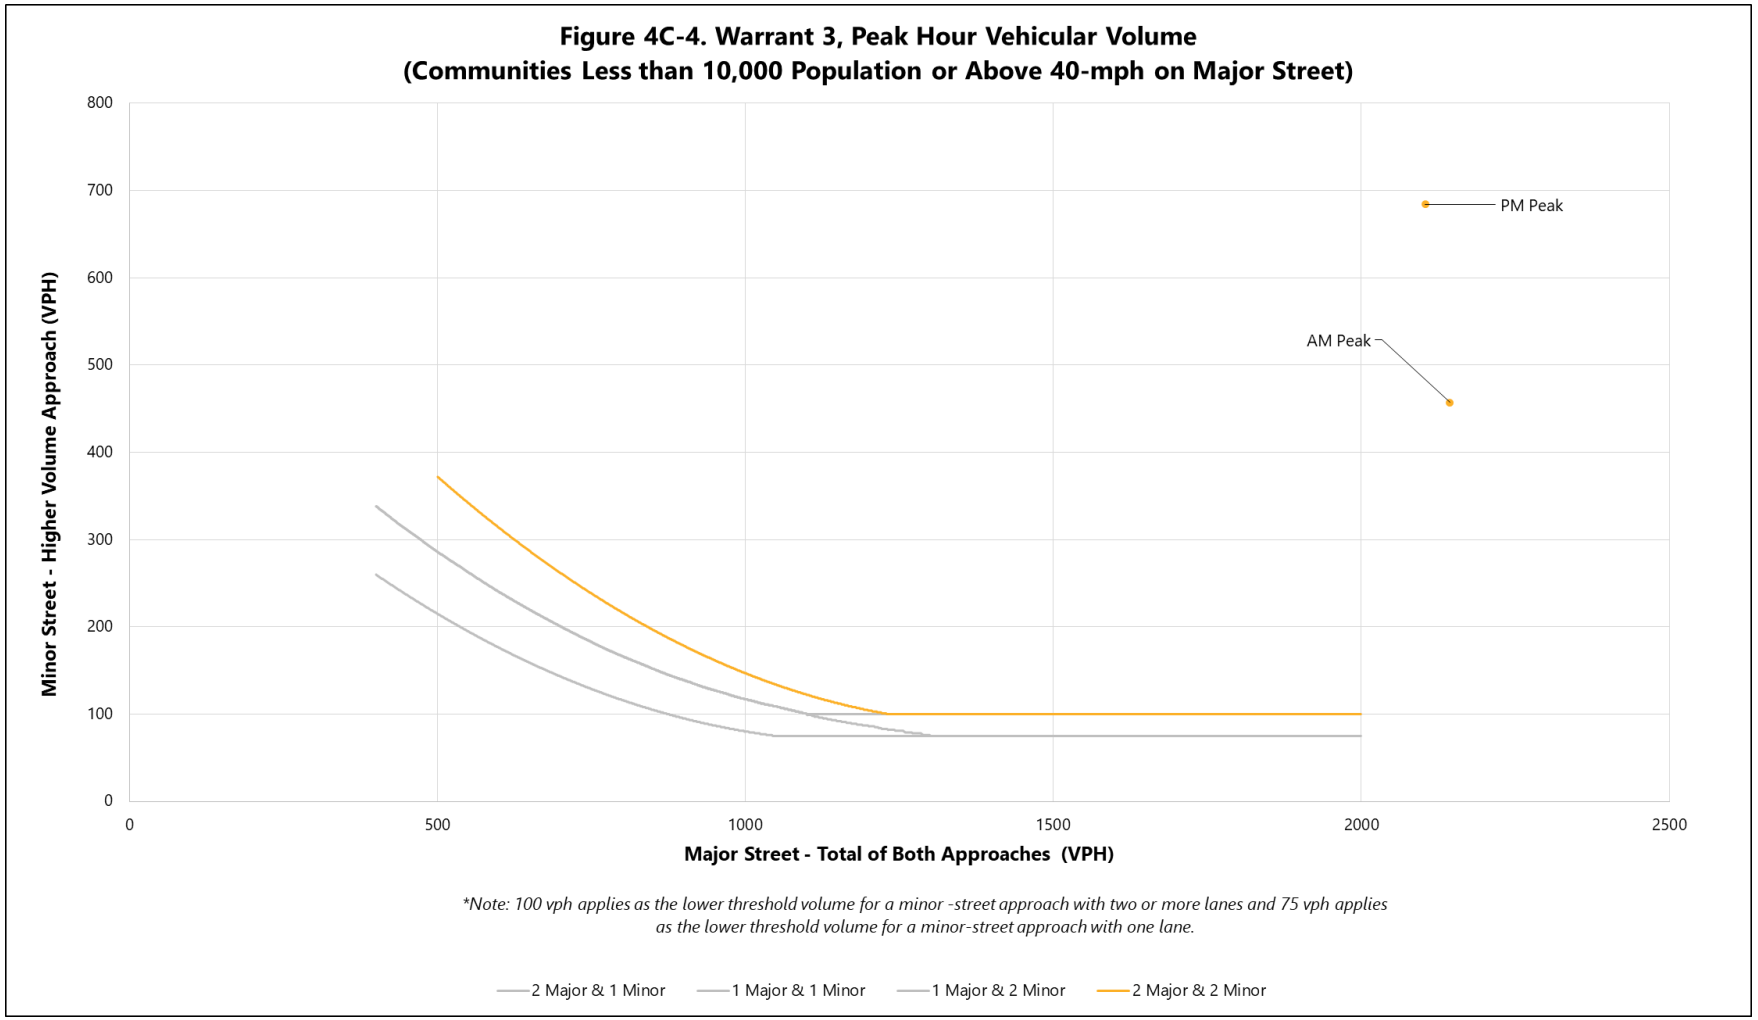
Notes:

1. *Includes existing LAM property*
2. *Includes Ground Floor Retail/Flex Space*
3. *As build out of the Planning Area occurs, General Industrial uses will be replaced with Office, Business Park, Neighborhood Commercial, and General Commercial uses.*

MARKET ANALYSIS

The market analysis prepared for the Isabel Neighborhood Specific Plan studied the potential for residential, office, and retail development in the Neighborhood based on the current real estate market in the Tri-Valley and forecasts of future economic conditions.[4]

The market analysis concluded that there is currently strong demand for multi-family residential development in the Isabel Neighborhood. With the introduction of Valley Link and a broader mix of housing formats and price points, average annual residential demand will likely be even stronger in the future.



The study concluded that development of new office space is a long-term opportunity, based on current market conditions and regional competition. However, the Valley Link project, new amenities, and implementation of economic development strategies would increase the

4. The market study considered demand for three major land use categories: residential, office, and retail; it did not consider demand for the full range of land uses that would be allowed under the Isabel Neighborhood Specific Plan.

RE: **Livermore Isabel Transit Village Modified Project – VMT Analysis**

INTRODUCTION

This technical memorandum summarizes the VMT assessment prepared by Kittelson for the Livermore Isabel Transit Village Modified Project Analysis. The VMT Analysis was prepared to determine if the proposed modifications to the Isabel Neighborhood Specific Plan (INSP) by the Livermore Transit Village project (Modified Project) incur any additional VMT impacts compared to the Environmental Impact Report (EIR) certified on May 14, 2018, and Supplemental Environmental Impact Report (SEIR) dated September 30, 2020, for the INSP.

The developer for the Modified Project proposes to reduce the development size and intensity of the INSP. This review has been prepared to indicate whether the assumptions, methodologies and conclusions of the Transportation Analysis are adequate and in accordance with the standards set in the City of Livermore General Plan and SB-743.

VMT AND SB-743

Under recent Senate Bill 743 legislation, local agencies may no longer solely rely on roadway/intersection delay and capacity-based analyses for the California Environmental Quality Act (CEQA) purposes, but rather, agencies must analyze transportation impacts utilizing vehicle miles travelled ("VMT"), which measures the number of vehicle trips generated by a project and the average distance of travel to and from the project. This is a change from the prior method of analyzing transportation impacts, which measured levels of service ("LOS") at intersections and roadway segments, graded from LOS A to LOS F. Travel delay as measured by LOS is no longer used as a metric to evaluate transportation impacts under CEQA but it's often used to assess roadway capacity and conformance with desired LOS targets as part of policies in the City of Livermore General Plan.

This memorandum describes the recommended approach to evaluate VMT impacts. Given the SEIR cleared the project for VMT, this comparison focused on comparing the VMT of the modified project with the VMT from the original INSP. If the VMT with the modified project is less than the original SEIR, then the conclusion is that the modified project does not add any new VMT impacts.

At the time the SEIR reported VMT for the project, the Office of Planning and Research (OPR) proposed using VMT as the metric for evaluating the significant traffic impacts, where projects that decrease VMT compared to existing conditions may be considered to have a less than significant transportation impact. Using this metric, the overall INSP SEIR was considered to have a less than significant impact for VMT.

Subsequent Final OPR guidelines recommended using 85% of the existing VMT as considered to have a less than significant impact.

PROJECT OVERVIEW

The Modified Project is a proposed mixed-used development located on 45 acres at the southwest corner of Isabel Avenue and Portola Avenue in the City of Livermore. It is bordered by Isabel Avenue to the east, Portola Avenue to the north, I-580 to the south and existing office developments to the west. The Modified Project would be constructed within and would modify Subareas 3b and 3c of the INSP.

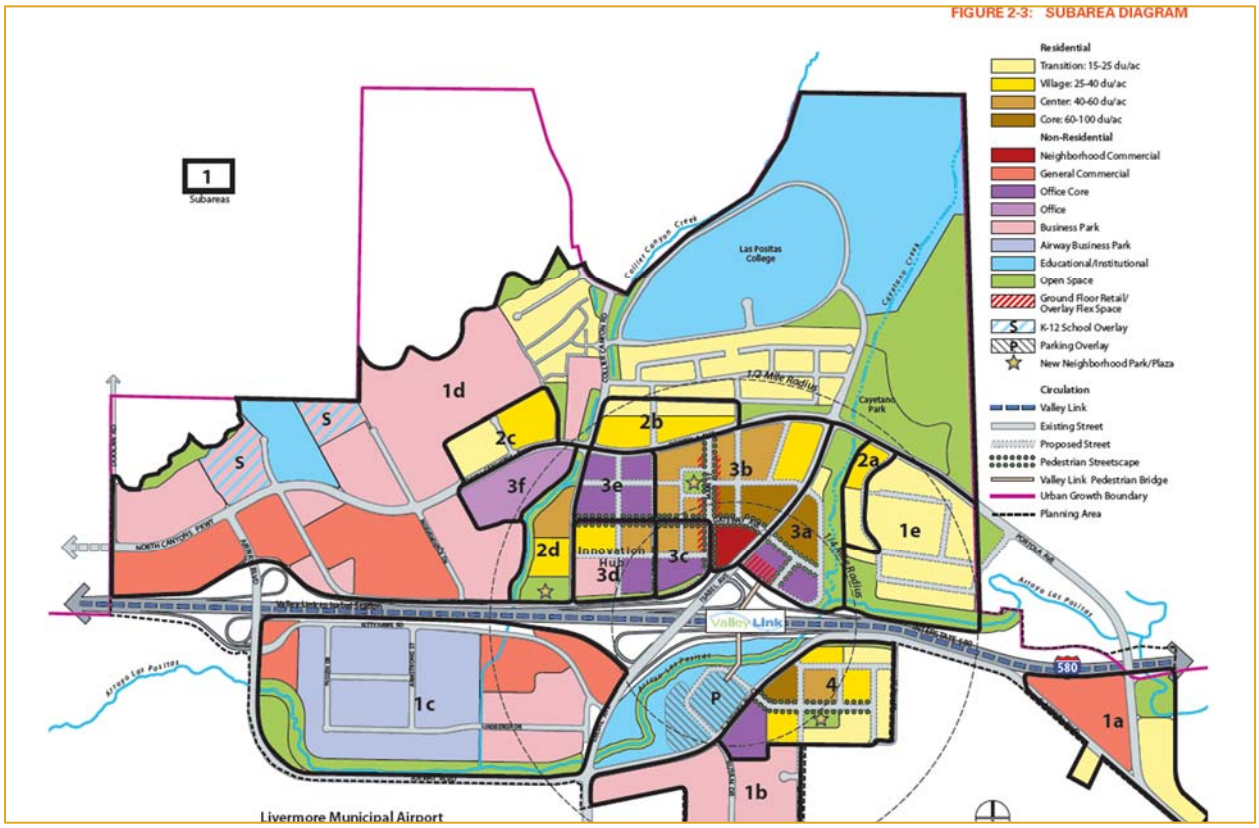

Figure 1 shows the vicinity of the modified project. Figure 2 displays the INSP to identify the location of Subareas 3b and 3c, Figure 3 displays the INSP Project Site Plan for Subareas 3b and 3c, Figure 4 displays the modified Project site plan for the same subareas, and Figure 5 displays the INSP model Traffic Analysis Zones (TAZs) identifying the TAZs that cover Subareas 3b and 3c. Note, TAZ 1303 does cover both sides of Isabel Avenue and includes subareas 3b and 3a east of Isabel Avenue.

PROJECT LAND USES

The developer for the modified project has proposed to revise the land uses within Subareas 3b and 3c compared to the INSP SEIR. Table 1 displays the proposed change in land uses within Subareas 3b and 3c for the Modified Project compared to the INSP.

Table 1 Proposed Land Use Changes, INSP vs Modified Project

Land Use	Unit	INSP SEIR	Modified Project	Change
Single Family Housing	Dwelling Units	161	546	385
Multi-family Housing (Low-Rise)	Dwelling Units	821	0	*-821*
Multi-family Housing (Mid-Rise)	Dwelling Units	495	716	221
General Office Building	1,000 Square Feet	157.8	0	*-157.8*
Shopping Plaza	1,000 Square Feet	142.1	65.6	*-76.5*

Source: TJKM Transportation Consultants, 2023

Kittelson used these revised land uses in the modeling to represent the modified project with appropriate splits between the two INSP TAZs that cover Subareas 3b and 3c.

VMT METRICS AND THRESHOLDS

VMT is determined by multiplying the number of vehicular trips by the trip distance in miles. For example, one vehicle that travels ten miles in a day generates ten vehicle miles traveled (VMT). Normally VMT is computed on a daily basis for a typical weekday. VMT can be expressed in several ways such as Total VMT, or based on efficiency metrics such as VMT per capita (aka per resident), VMT per worker (a.k.a. per employee), or VMT per service population used in the SEIR (service population is the sum of residents plus employees). VMT for land use projects are typically calculated and assessed on a per rate basis – per capita for residential projects or per employee for employment-generating projects. It should be noted that for the purposes of evaluating transportation impact under CEQA, only VMT from automobiles (not trucks) is to be considered.

For land plans such as the INSP, VMT is calculated for the full length of a given trip and are not truncated at jurisdiction boundaries. Additionally, these VMT values are for trips beginning or ending in the city (i.e., are associated with land uses within Livermore and the INSP). Trips passing through the city or INSP without stopping are not included in these VMT estimates, as the city/project has little or no control over such trips.

Although the absolute amount of VMT may be reported, transportation impact analysis is typically based on VMT expressed as an efficiency metric. VMT efficiency metrics, such as VMT per resident and VMT per employee, allow the VMT performance of different land use quantities to be compared. Such metrics provide a measure of travel efficiency and help depict whether people are traveling by vehicle more or less over time, across different areas, or across different planning scenarios. A per-capita or per-employee decline in VMT compared to a baseline condition indicates that the land use patterns and transportation network are operating more efficiently.

The City of Livermore has not adopted VMT criteria and thresholds to evaluate projects under CEQA. Therefore, Kittelson is proposing to conduct a simple comparison of the modified project VMT to the original INSP project VMT for impact assessment.

VMT Mitigation

Per OPR Guidelines, if a Project results in a VMT impact then appropriate TDM trip reduction policies would need to be applied to reduce the impact to less than significant.

Analysis Scenarios

The following scenarios are analyzed using the INSP version of the ACTC Countywide model (to be consistent with the INSP forecasting).

- **2040 INSP SEIR.** Projected 2040 buildout land use for the INSP SEIR with focus on Subareas 3b and 3c
- **2040 Modified Project.** Modified buildout land use proposed by Harridge in Subareas 3b and 3c

VMT MODELING

To evaluate impacts from the Modified Project, Kittelson applied the INSP model used in the SEIR to the land uses proposed by the modified project for the two TAZs that cover subareas 3b (TAZ 1302) and 3c (1303). There is some overlap in TAZ 1302 with existing land uses to the west, and TAZ 1303 also covers INSP areas to the east of Isabel Avenue. This overlap complicates the VMT results by including some existing land uses in subarea 3e as part of TAZ 1302, and with INSP land uses in subarea 3a as part of TAZ 1303 east of Isabel Avenue. Given these are common to both scenarios, their inclusion would not significantly compromise the VMT results. However, some office land uses do remain within TAZ 1303 but are not part of the modified project since they represent office uses east of Isabel Avenue in the same TAZ. So this VMT evaluation only focuses on subareas 3b (TAZ 1302) and 3c (1303). While Kittelson did not split the two TAZs which overlap Specific Plan parcels and existing uses since that would require significant effort, it is assumed the existing uses are common to both scenarios and would not factor into the VMT computation since the conclusions deal with net change VMT and VMT/capita and VMT/job ratios. Therefore, the VMT change is assumed to only be related to subareas 3b and 3c since the existing uses are common and included in both analyzes.

Kittelson ran the model for the modified project land uses and extracted VMT results for the comparison described below.

VMT ANALYSIS

To evaluate impacts from the Modified Project, the recommended metrics and thresholds described above for new residential, employment-generating, and retail projects would apply and are summarized in the following tables; Table 2 for residential VMT, Table 3 for Employment VMT, and Table 4 for Total VMT (used for the retail assessment).

Table 2 VMT Analysis – Residential VMT

Land Use	INSP Project VMT	INSP Project VMT/Capita	Modified Project VMT	Modified Project VMT/Capita	Net Change Modified Project – INSP Project
Project	126,704	24.5	80,020	20.8	-3.7

Table 4 VMT Analysis - Total VMT (used for Retail Assessment)

Land Use	INSP Project Total VMT	Modified Project Total VMT	Net Change VMT Modified Project – INSP Project
Project	235,940	193,155	-42,785
City	6,013,569	5,905,715	-107,854
County	74,409,848	74,327,541	-82,307
Region	359,276,156	359,181,851	-94,305

Source: INSP SEIR Model, Kittelson & Associates, Inc, 2023
Note: Net change in Total VMT is used as a metric for the retail portion.

VMT FINDINGS

The VMT impacts of the Modified Project were assessed using the INSP version of the ACTC Countywide travel demand model using the recommended metrics and thresholds described above for new residential, employment-generating, and retail projects. While the INSP SEIR did not address VMT as an impact metric per SB-743, this analysis directly compares the INSP VMT to Modified Project VMT to disclose whether there would be additional total VMT or worse VMT metrics generated by the change in the project.

- The residential VMT per capita results in Table 2 shows the Modified Project VMT (80,020) at 20.8 VMT per capita, while the INSP VMT is higher at 126,704 and 24.5 VMT per capita. The Modified project therefore reduces the residential VMT and VMT per capita. While the INSP included appropriate TDM measures and much of the area is within 0.5 miles to high quality transit (Valley Rail), the same measures would apply to the Modified Project even though it does not demonstrate a VMT impact for residential.

- The VMT per employment results in Table 3 shows the Modified Project VMT (44,260) at 13.4 VMT per employee, while the INSP VMT is higher at 50,474 but with a slightly lower VMT per employee of 12.7. This demonstrates that while the total employment VMT is lower, the loss of office land uses contributes to a slight increase in VMT per employee with the modified project. In addition, the Modified project is still within 0.5 miles to high quality transit (Valley Rail) would still adhere to appropriate TDM measures specified in the SEIR.

- The Total VMT results in Table 4 are used to demonstrate the net change in retail VMT, which show the Modified Project VMT is less than the INSP, suggesting the reduction in retail contributes to lower net overall VMT.

- Overall, the reduction in residential and retail VMT compensates for the slight increase in VMT per employee between the original and modified projects, and therefore the comparison shows the overall VMT would be lower with the modified project.

Overall VMT findings suggest the modified project would not substantially increase VMT impacts compared to the INSP SEIR and with some metrics it reduces VMT impacts.

RE: **Livermore Isabel Transit Village - Harridge Modified Isabel Crossing Project – Revised VMT Assessment**

INTRODUCTION

This technical memorandum prepared by Kittelson & Assoc., Inc, summarizes the VMT assessment for the revised Harridge Isabel Crossing project located in the future Livermore Isabel Transit Village. Previously, Kittelson had prepared a detailed VMT assessment documented in a memorandum on December, 21, 2023. Since then, the project applicant, Harridge, has revised the project with the addition of 38 multifamily residential units (from 1,261 to 1,299 units). This memorandum provides a qualitative review of VMT and a statement of whether the change in project affects the VMT findings.

Previously, Kittelson prepared a VMT Analysis to determine if the Harridge proposed modifications to the Isabel Neighborhood Specific Plan (INSP) by the Livermore Transit Village project (Modified Project) incur the same or any additional VMT impacts compared to the Environmental Impact Report (EIR) certified on May 14, 2018, and Supplemental Environmental Impact Report (SEIR) dated September 30, 2020, for the INSP. A summary of those results and findings is shown below.

Summary of Prior VMT Assessment

Previously, the VMT impacts of the Modified Project were assessed using the INSP version of the ACTC Countywide travel demand model using the recommended metrics and thresholds described previously for new residential, employment-generating, and retail projects.

- The residential VMT for the Modified Project was 80,020 and the VMT/capita was 20.8 VMT. The INSP VMT is higher at 126,704 and 24.5 VMT per capita. The Modified project therefore reduced the residential VMT and VMT per capita.

- The VMT per employment results showed the Modified Project VMT (44,260) at 13.4 VMT per employee, while the INSP VMT was higher at 50,474 and with a slightly lower VMT per employee of 12.7. This demonstrated that while the total employment VMT is lower, the loss of office land uses contributed to a slight increase in VMT per employee with the modified project.

- The Total VMT results are used to demonstrate the net change in retail VMT, which showed the Modified Project VMT was less than the INSP, suggesting the reduction in retail contributed to lower net overall VMT.

- Overall, the reduction in residential and retail VMT compensated for the slight increase in VMT per employee between the original and modified projects, and therefore the comparison showed the overall VMT would be lower with the modified project.

Overall VMT findings suggested the Modified Project would not substantially increase VMT impacts compared to the INSP SEIR, and with some metrics it actually reduced VMT impacts.

Summary of Revised VMT Assessment (with 38 additional units)

Now that the project has changed to add 38 additional multifamily units (the commercial size did not change), the VMT is expected to change:

- Given that VMT per SB 743 is assessed as an efficiency (ratio) metric, the increase in units will not appreciably change the VMT/capita ratio from the prior. As VMT increases, so does the population, so the finding of 20.8 VMT per capita will still be applicable and will remain lower than the INSP VMT/Capita of 24.5.

- The total residential VMT however will increase as a result of the additional units. This was previously reported as 80,020 VMT which is lower than the INSP VMT of 126,704. The additional units would conservatively add approximately 7,600 VMT for a net increase to 87,620 VMT, which still remains lower than the INSP VMT of 126,704.

- The commercial VMT based on VMT/employee and total retail VMT is not expected to change.

Conclusion

Based on this assessment, the increase of 38 multifamily residential units is not expected to incur any new VMT impacts and therefore the revised Project remains less than significant for VMT in accordance with the standards set in the City of Livermore General Plan and SB-743.

RE: **Livermore Isabel Neighborhood Specific Plan – No Net Loss Rezoning – Level of Service Assessment**

INTRODUCTION

This technical memorandum prepared by Kittelson & Associates, Inc, (Kittelson) summarizes the Level of Service (LOS) assessment for the rezoning of specific parcels within the Isabel Neighborhood Specific Plan (INSP) area. Following the INSP 2018 Draft Environmental Impact Report (EIR) and 2020 Supplemental EIR (D/SEIR) and the subsequent Isabel Crossing development application by Harridge, which has proposed a lower number of residential units in INSP Subareas 3b and 3c than anticipated under the INSP, we understand the City of Livermore is required to ensure no net loss of residential units to meet the City's RHNA pursuant to Government Code 65863. As a result, the City has proposed two rezoning options to replace some of the planned office development with additional residential units in the INSP area.

Kittelson has modeled the two options using the citywide INSP traffic model and extracted VMT and intersection forecasts for LOS so that the city can assess if there is a substantial increase in the environmental impact conclusions provided in D/SEIR resulting from the implementation of either rezoning option. This memorandum focuses on intersection LOS, while a previous memo addressed VMT.

This memorandum provides a quantitative analysis of LOS to disclose if either rezoning option contributes to substantially more significant impacts compared to the D/SEIR.

All informational sections from the prior D/SEIR including regulatory section, existing setting and existing conditions are incorporated by reference.

SUMMARY OF LAND USE CHANGES

We understand that the city has proposed two options for rezoning, including sites within INSP Subareas 3a and/or 1d. The intent of the proposed rezoning is to ensure no net loss of housing opportunity sites, in accordance with the City's adopted Housing Element, for the INSP area. Proposed and constructed developments in the INSP area have not met the anticipated unit counts identified in the INSP and/or Housing Element; therefore, the city desires to rezone certain parcels within the INSP area to ensure that there is adequate opportunity for the development of housing within the INSP area. The current shortfall of residential units is 344 units, with the trend of housing unit shortfalls anticipated to continue as the INSP area is built out.

The two options being considered for rezoning by the city include:

Option 1: Rezone the following parcel to residential: Assessor's Parcel Number (APN) 903-10-36-3, BART Parcel West (INSP 3a), 913 units.

- Increase of 569 residential units and decrease of 946,994 square feet (sf) of office space, as compared to the certified INSP EIR

Option 2: Rezone the following parcels to residential: APN 905-10-23, Comcast Parcel West (INSP 1d), 350 units; APN 905-10-24, Comcast Parcel East (INSP 1d), 512 units; APN 903-10-36-3, BART Parcel West (INSP 3a), 913 units.

- Increase of 1,431 residential units and decrease of 1,531,486 sf of office space, as compared to the certified INSP EIR

Figure 1 displays the location of the parcels considered for rezoning.

Figure 1: INSP Proposed Rezoning Parcels

SIGNIFICANCE CRITERIA

The criteria used for intersection level of service are summarized below from the D/SEIR. The criteria used to evaluate whether the rezoning options have substantial increased impacts under 2040 cumulative conditions compared to the D/SEIR.

City of Livermore General Plan

The City of Livermore General Plan stipulates a transportation goal to "maintain adequate levels of service for all areas of the city." "The upper limit of acceptable service at signalized intersections shall be mid level D, except in the Downtown Area and near freeway interchanges. The upper limit of acceptable level of service at selected intersections near freeway interchanges shall be LOS E" (City of Livermore, 2014). In addition, the General Plan identifies selected intersections that are exempt and may exceed the LOS standard.

The Circulation Element of the Livermore General Plan provides the policy framework for regulation and development of the City's transportation system. This Element includes policies to plan for Complete Streets, promote multimodal transportation, provide a pedestrian network that encourages walking for transportation and recreation, and provide safe and convenient bicycle parking.

Local Roadway Intersections

Performance standards from the D/SEIR for traffic at local roadway intersections are described below.

An intersection impact would occur if, in either the AM or PM peak hour, the proposed Plan resulted in the following:

- An intersection operating at an acceptable mid level LOS D or better (corresponding to an average delay of 45 seconds per vehicle) under No Project Conditions degraded to an unacceptable high of LOS D or worse under Project Conditions.
- An intersection near the freeway operating at an acceptable LOS E or better (80 seconds per vehicle) under No Project Conditions degraded to an unacceptable LOS F under Project Conditions.
- An intersection operating at substandard LOS under No Project Conditions increased average delays by more than 5 seconds per vehicle.

Note: Selected intersections with close proximity to the I-580 freeway are deemed Exempt per Livermore Policy: Goal CIR-5, Objective CIR-5.1 Policy P4, Circulation Element, Amended 2014

For signalized intersections in the study area, the analysis calculates the average delay per vehicle using the HCM 2000 methodology, via Synchro 11 traffic analysis software, to determine LOS, as shown in **Table 1**. If the V/C ratio was found to exceed 1.0, regardless of the delay, the analysis assigned LOS F.

Table 1 Level of Service Criteria – Signalized Intersections

Average Control Delay (sec/veh)	*Level of Service*
≤ 10	A
>10–20	B
>20–35	C
>35–55	D
>55–80	E
>80	F

Note: sec/veh = seconds per vehicle

Source: Transportation Research Board, 2000.

For unsignalized intersections in the study area, the analysis used HCM 2000 methodology, determining the LOS by calculating the weighted average control delay, expressed in seconds per vehicle, as illustrated in **Table 2**. Control delay includes the sum of all individual movements that a vehicle might make at an unsignalized intersection, including initial deceleration delay, queue move-up time, stopped delay, and final acceleration. At two-way stop-controlled intersections, LOS was calculated for each controlled movement, as opposed to the intersection as a whole. If the V/C ratio of a lane was found to exceed 1.0, regardless of the control delay, the analysis assigned LOS F.

Table 2 Level of Service Criteria – Unsignalized Intersections

Average Control Delay (sec/veh)	*Level of Service*
≤ 10	A
>10–15	B
>15–25	C
>25–35	D
>35–50	E
>50	F

Note: sec/veh = seconds per vehicle

Source: Transportation Research Board, 2000.

SUMMARY OF LOS ASSESSMENT

Previously, the D/SEIR summarized LOS results for 2040 plus project conditions at 25 key study intersections. This LOS assessment has developed forecasts and LOS results for two different options at the same 25 intersections.

LOS Assessment - Option 1

Table 3 summarizes the LOS results for the D/SEIR compared to Option 1 for the AM peak hour, while **Table 4** summarizes the LOS results for the D/SEIR compared to Option 1 for the PM peak hour. Detailed LOS calculations for Option 1 – AM Peak are provided in **Appendix A,** and PM Peak in **Appendix B**.

LOS Impact Comparison – Option 1

Intersection #3 - North Livermore Avenue and Portola Avenue
The intersection of North Livermore Avenue and Portola Avenue was identified as an impact for the D/SEIR, and also for Option 1 during the PM peak hour. In the D/SEIR, adding additional left turn lanes to the impacted intersection under 2040 Plus D/SEIR Project conditions were proposed as a mitigation to address impacts to intersection operations. However, the addition of left turn lanes would require that both roads be widened. Due to roadway right-of-way constraints on North Livermore Avenue and Portola Avenue, the addition of more travel lanes is not feasible. Therefore, no additional improvements would be feasible to address this significant impact, and it remains significant and unavoidable.

Level of service conditions during the PM peak hour under Option 1 exhibit the same impact as the D/SEIR which could be mitigated using the same proposed mitigation to achieve an LOS E with 56 seconds of delay. Since the mitigation was determined to be infeasible, the same condition would remain with Option 1. Therefore, no new or significant or substantial increase in an impact will occur with Option 1.

Intersection #14 – Isabel Avenue and Gateway Ave-Bart Parking (North)
The intersection of Isabel Avenue and Gateway Ave-Bart Parking (North) is identified as impacted for Option 1 during the AM peak hour. This was not identified as an impact for the D/SEIR. However, since this is a new intersection, and detailed traffic operations were evaluated at this location for the Isabel Crossing study[1], the mitigation to reduce the impact is to configure the intersection per the Isabel Crossing traffic study and optimize the cycle length and splits. This reduces the LOS to C with 34.7 seconds of delay in the AM peak, and LOS C with 28.9 seconds of delay in the PM peak, resulting in no new or significant or substantial increase in an impact with Option 1.

Mitigated LOS calculations for Option 1 are provided in **Appendix C** for AM peak, and **Appendix D** for PM peak.

LOS Assessment - Option 2

Table 5 summarizes the results for the D/SEIR compared to Option 2 for the AM peak hour, while **Table 6** summarizes the results for the D/SEIR compared to Option 2 for the PM peak hour. Detailed LOS calculations for Option 2 – AM Peak are provided in **Appendix E,** and PM Peak in **Appendix F**.

LOS Impact Comparison – Option 2

Intersection #3 - North Livermore Avenue and Portola Avenue
The intersection of North Livermore Avenue and Portola Avenue was identified as an impact for the D/SEIR, and also for Option 2 during the PM peak hour. In the D/SEIR, adding additional left turn lanes to the impacted intersection under 2040 Plus D/SEIR Project conditions were proposed as a mitigation to address impacts to intersection operations. However, the addition of left turn lanes would require that both roads be widened. Due to roadway right-of-way constraints on North Livermore Avenue and Portola Avenue, the addition of more travel lanes is not feasible. Therefore, no additional improvements would be feasible to address this significant impact, and it remains significant and unavoidable.

Level of service conditions during the PM peak hour under Option 2 exhibit the same impact as the SEIR which could be mitigated using the same proposed mitigation to achieve an LOS E with 62.7 seconds of delay. Since the mitigation was determined to be infeasible, the same condition would remain with Option 2. Therefore, no new or significant or substantial increase in an impact will occur with Option 2.

Intersection #14 – Isabel Avenue and Gateway Ave-Bart Parking (North)
The intersection of Isabel Avenue and Gateway Ave-Bart Parking (North) is identified as impacted for Option 2 during the AM peak hour. This was not identified as an impact for the D/SEIR. However, since this is a new intersection, and detailed traffic operations were evaluated at this location for the Isabel Crossing study[2], the mitigation to reduce the impact is to configure the intersection per the Isabel Crossing traffic study and optimize the cycle length and splits. This reduces the LOS to D with 37.4 seconds of delay in the AM peak, and LOS C with 30.8 seconds of delay in the PM peak, resulting in no new or significant or substantial increase in an impact with Option 2.

Mitigated LOS calculations for Option 2 are provided in **Appendix G** for AM peak, and **Appendix H** for PM peak.

FINDINGS

Kittelson modeled the two land use options proposed by the city using the citywide INSP traffic model and extracted intersection forecasts for LOS so that the city can assess if there is a substantial increase in the environmental impact conclusions provided in D/SEIR resulting from the implementation of either rezoning option.

Overall, LOS findings suggest the rezoning options, with appropriate mitigation, would not result in new or substantially increased LOS impacts compared to the INSP D/SEIR.
