AGENDA
TUESDAY, DECEMBER 17, 2024

PLANNING COMMISSION REGULAR MEETING – 7:00 PM

MEETING PARTICIPATION INFORMATION CAN BE FOUND AT THE END OF THE AGENDA

IN PERSON INFORMATION:
CIVIC CENTER MEETING HALL
CITY COUNCIL CHAMBERS
1016 S. LIVERMORE AVENUE

Tracy Kronzak, Commissioner
Daniel Leary, Commissioner
Yolanda Fintschenko, Vice Chair
Jacob M Anderson, Chair

1. CALL TO ORDER

ROLL CALL

Commissioner Tracy Kronzak
Commissioner Daniel Leary
Commissioner Vacant
Vice Chairperson Yolanda Fintschenko
Chairperson Jacob Anderson

PLEDGE OF ALLEGIANCE

2. OPEN FORUM

- In conformance with the Brown Act, no Planning Commission action can occur on items presented during Open Forum.
- To provide public comment, please submit a speaker card. When your name is called, walk to the lectern to address the Planning Commission.
- Comments are limited to a maximum of 3 minutes per person, per item. The Chair may reduce the amount of time based on the number of persons wishing to speak.
- Open Forum will conclude after 30 minutes; however, if there are additional speakers, Open Forum will reconvene after Matters for Consideration.

3. CONSENT CALENDAR

Consent Calendar items are considered routine and are acted upon by the Planning Commission with a single action. Members of the audience wishing to provide public input must submit a speaker card.

4. PROJECT REVIEW

5. PUBLIC HEARINGS

5.1 **THE PREVIOUSLY NOTICED ITEM HAS BEEN CONTINUED TO THE JANUARY 7, 2025 PLANNING COMMISSION MEETING.**

Hearing to consider a request for a Municipal Code Amendment, Development Code Amendment, Conditional Use Permit Modification, Development Agreement, Site Plan Design Review, and Site Plan Design Review Modification for the Parkwest Casino 580 Expansion Project.
Staff Report

5.2 Hearing to consider a request for Vesting Tentative Tract Map, Site Plan Design Review, Conditional Use Permit, and Consistency Determination to develop vacant land located at the northwest corner of the Collier Canyon Road and Constitution Drive intersection, with a residential project known as Cornerstone.

Recommendation:
Staff recommends the Planning Commission adopt Resolutions:

1. Approving Consistency Determination (CD) 24-010;

2. Recommending the City Council adopt a resolution finding that the project is exempt under the California Environmental Quality Act, in accordance with California Government Code Section 65457 and CEQA Guidelines Section 15182 (c), Projects Pursuant to a Specific Plan, and CEQA Section 21083.3 and CEQA Guidelines Section 15183, Projects Consistent with a Community Plan, General Plan, or Zoning;

3. Recommending the City Council adopt a resolution approving Vesting Tentative Tract Map (VTTM) 8669 – Subdivision (SUB) 22-006, Site Plan Design Review (SPDR) 22-004, together with the requested Density Bonus waivers and concessions, and Conditional Use Permit (CUP) 24-009, subject to the attached Conditions of Approval;

4. Recommending the City Council direct the Planning Manager to file a Notice of Exemption, in accordance with the provisions of the California Environmental Quality Act, subject to project approval.

Staff Report

Attachments:

1. Staff Analysis Memorandum
2. Location Maps
3. Development Plans
4. Summary of No Net Loss
5. Resolution - Consistency Determination
6. Resolution - Environmental
7. Exhibit A - Initial Study
8. Resolution - Project
9. Exhibit A - Conditions of Approval
10. Exhibit A - Engineering Considerations
11. Exhibit B - MMRP
12. Exhibit C - Trail Location
13. Exhibit D - Bridge Easement

6. MATTERS FOR CONSIDERATION

6.1 Comprehensive General Plan Update – Draft Land Use Map and Policy Topics

Recommendation:

Staff recommends the Planning Commission:

- Review and ask clarifying questions on the Draft Preferred Land Use Map
- Receive an overview of the Open Space and Conservation Element, Safety Element, and Noise Element
- Consider General Plan Advisory Committee (GPAC) feedback on policy options for the Open Space and Conservation, and Safety Elements
- Recommend policy updates for City Council consideration and direction

1. Supplemental Materials

9. ADJOURNMENT

To a regular Planning Commission meeting on Tuesday, January 7, 2025 at 7:00 pm, Civic Center Meeting Hall, City Council Chambers, 1016 S. Livermore Avenue.

10. HOW TO PARTICIPATE IN THE MEETING

You can participate in the meeting in a number of ways:

Open Forum is an opportunity for the public to speak regarding items not listed on the agenda. Speakers are limited to a maximum of 3 minutes per person. To address the Planning Commission you must submit a speaker card to the Planning Commission Liaison prior to the start of that item. Please note that the Planning Commission is prohibited by State law from taking action on any items that are not listed on the agenda. However, if your item requires action, the Planning Commission l may place it on a future agenda or direct staff to work with you and/or report to the Planning Commission on the issue.

Public Hearings - The topic of the hearing is typically summarized by staff, followed by a presentation by the applicant, and then questions from the Planning Commission. The Chair will then open the hearing to the public and offer an opportunity for public comments. Speakers are limited to a maximum of 3 minutes per person. To address the Planning Commission, you must submit a speaker card to the Planning Commission Liaison prior to the start of the presentation of the item.

Other Agenda Items are also open for public input including Consent Calendar or Matters for Consideration items. These comments are also subject to the 3-minute limit.

Special Meetings, Workshops - The public will have the opportunity to address the Planning Commission regarding the item that is the subject of the special meeting or workshop. Public comments are limited to a maximum of 3 minutes per person.

Submission of Comments Prior to the Meeting:

Email Comments may be submitted by the public to the Planning Commission Liaison (planning@LivermoreCA.gov). Items received no later than 12:00 pm on the day of the meeting will be provided to the Commission and available on the City website prior to the meeting. These items will NOT be read into the record.

eComments may be submitted by the public using the eComment link here. Comments may be up to 1000 characters in length and will be accepted up until 6:00 pm the day of the meeting. These items will NOT be read into the record and are viewable by the the Commission and the public upon submittal.

Submission of Comments During the Meeting:

Speakers are limited to a maximum of 3 minutes per person. To submit a comment in person, you must complete a speaker card for each item. Speaker cards are available in the Civic Center Meeting Hall lobby. Indicate on the card the item number you wish to comment on and submit the card directly to the Planning Commission Liaison prior to the start of the item. Please note that the Planning Commission is prohibited by State law from taking action on any items that are not listed on the agenda. However, if your item requires action, the Planning Commission may place it on a future agenda or direct staff to work with you and/or report to the Planning Commission on the issue.

If you would like to deliver written materials to the Commission as part of your public comments, please provide 8 copies of to the Planning Commission Liaison with your speaker card.

The **Planning Commission Agenda and Agenda Reports** are prepared by City staff and are available for public review on Friday evening, three days prior to the Planning Commission meeting at 1016 South Livermore Avenue, Livermore. The Agenda is also available on the City's website, http://livermoreca.gov/agenda.

Under Government Code §54957.5, any supplemental material distributed to the members of the Planning Commission after the posting of this agenda will be available for public review at City Hall, 1052 South Livermore Avenue, Livermore, and included in the agenda packet available on the City's web site at http://livermoreca.gov/agenda.

PURSUANT TO TITLE II OF THE AMERICANS WITH DISABILITIES ACT (CODIFIED AT 42 UNITED STATES CODE SECTION 12101 AND 28 CODE OF FEDERAL REGULATIONS PART 35), AND SECTION 504 OF THE REHABILITATION ACT OF 1973, THE CITY OF LIVERMORE DOES NOT DISCRIMINATE ON THE BASIS OF RACE, COLOR, RELIGION, NATIONAL ORIGIN, ANCESTRY, SEX, DISABILITY, AGE OR SEXUAL ORIENTATION IN THE PROVISION OF ANY SERVICES, PROGRAMS, OR ACTIVITIES. TO ARRANGE AN ACCOMMODATION IN ORDER TO PARTICIPATE IN THIS PUBLIC MEETING, PLEASE CONTACT THE ADA COORDINATOR AT ADACOORDINATOR@LIVERMORECA.GOV OR CALL (925) 960-4170 (VOICE) OR (925) 960-4104 (TDD) AT LEAST THREE (3) BUSINESS

DAYS IN ADVANCE OF THE MEETING.

PLANNING COMMISSION STAFF REPORT **ITEM NO. 5.2**

DATE: December 17, 2024

TO: Chairperson and Members of the Planning Commission

FROM: Steve Riley, Planning Manager

SUBJECT: Hearing to consider a request for Vesting Tentative Tract Map, Site Plan Design Review, Conditional Use Permit, and Consistency Determination to develop vacant land located at the northwest corner of the Collier Canyon Road and Constitution Drive intersection, with a residential project known as Cornerstone.

RECOMMENDED ACTION

Staff recommends the Planning Commission adopt Resolutions:

1. Approving Consistency Determination (CD) 24-010;

2. Recommending the City Council adopt a resolution finding that the project is exempt under the California Environmental Quality Act, in accordance with California Government Code Section 65457 and CEQA Guidelines Section 15182 (c), Projects Pursuant to a Specific Plan, and CEQA Section 21083.3 and CEQA Guidelines Section 15183, Projects Consistent with a Community Plan, General Plan, or Zoning;

3. Recommending the City Council adopt a resolution approving Vesting Tentative Tract Map (VTTM) 8669 – Subdivision (SUB) 22-006, Site Plan Design Review (SPDR) 22-004, together with the requested Density Bonus waivers and concessions, and Conditional Use Permit (CUP) 24-009, subject to the attached Conditions of Approval;

4. Recommending the City Council direct the Planning Manager to file a Notice of Exemption, in accordance with the provisions of the California Environmental Quality Act, subject to project approval.

SUMMARY

The Isabel Neighborhood Specific Plan (Specific Plan) guides development in the northwestern part of Livermore. It seeks to create a complete neighborhood with a mix of uses that is walkable, bikeable, and served by transit. The City Council adopted the amended Specific Plan and its Supplemental Environmental Impact Report in November 2020. The proposed site and project are one of several new developments within the Specific Plan area. The applicant proposes 253 residences, of which 143 units

will be for-sale condominium units with six units affordable to moderate-income households, and 108 units will be for-rent units that will be affordable to low-, lower, very low- and extremely low-income households, and two (2) market rate apartment manager units. The project also includes a public: neighborhood park, pocket park and bike and pedestrian trail. The project site is shown on Attachment 2.

The project is consistent with the General Plan and will make progress towards meeting the City's current Regional Housing Needs Assessment (RHNA) housing unit allocation. The project implements and is consistent with the Specific Plan development standards (except for Density Bonus waivers and concessions allowed by State law) and conforms to required design standards and guidelines. The use and density are consistent with the Specific Plan and compatible with surrounding properties and the Livermore Municipal Airport. The site is of a size and shape that can accommodate the use, and the project will be adequately served by all necessary utilities and services. The project conforms with the provisions of the California Housing Crisis Act and State density bonus law and is exempt from further California Environmental Quality Act review.

A full description and analysis of the project is included in Attachment 1.

DISCUSSION

BACKGROUND

In November of 2020, the City Council adopted the amended Isabel Neighborhood Specific Plan (Specific Plan). The Specific Plan, which was originally adopted in 2018, covers approximately 1,138 acres in the northwest part of the City surrounding the Isabel Avenue/Interstate-580 interchange. The Specific Plan contemplates future land uses and public improvements in the Isabel Neighborhood to create a complete and vibrant neighborhood with a mix of housing, businesses, and community uses. The Isabel Neighborhood will address citywide goals by providing increased transportation options, housing choices, and supporting economic vitality. Residents and workers will have access to regional and local transit, a variety of amenities, and basic services for meeting daily needs, such as a grocery store and restaurants. The future Valley Link regional rail service will have a station in the I-580 median at Isabel with transit and pedestrian connection to the Isabel neighborhood.

The Specific Plan proposes development of a complete, transit-oriented neighborhood that includes up to approximately 4,095 new attached single-family and multi-family housing units, approximately 1,000 of which will be affordable housing units. In addition, the Specific Plan includes approximately 1.97 million square feet of net new office, business park, and commercial development (including a neighborhood commercial center), three new neighborhood parks, pedestrian and bicycle facilities, and infrastructure improvements. The Specific Plan is intended to streamline the City’s development review process for development of the type and character contemplated in the Specific Plan Area. However, all of the Plan’s development projects require review through the City's entitlement process. This project is the sole residential project in the Specific Plan Subarea 2d, and meets the land use and density requirements of this subarea.

PROJECT DESCRIPTION

The proposed project would develop vacant land located northwest of the Collier Canyon Road and Constitution Drive intersection (APNs: 905-0015-026, 905-0015-027, 905-0015-028, 905-0015-029, and

905-0015-008), implementing the Isabel Neighborhood Specific Plan. The applicant proposes (a) 253 residences, of which 143 units will be for-sale condominium townhome units with six units affordable to moderate-income households, and 108 units will be for-rent units that will be affordable to low-, lower, very low- and extremely low-income households, and two (2) market rate apartment manager units (b) public open space areas including a neighborhood park along Constitution Drive, a path along Collier Canyon Creek connecting Collier Canyon Road with Constitution Drive, a pocket park along the project's new Collier Canyon Creek path, and an off-site path from the site to North Canyons Parkway (see Attachment 3 Development Plans) and (c) street frontage landscaping and connections from units to public streets.

The applicant has submitted for relief under the Housing Crisis Act of 2019 (CA SB330) and Density Bonus under Government Code section 65915, including requesting two concessions and 11 waivers to: exceed the height limit for the apartment building, not mixing of affordable units throughout the project, and not having affordable units be comparable with market-rate units and other development standards like open space and podium parking height (see Attachment 1, Affordable Housing). The proposed project requires approval of the following land use entitlements: (a) Vesting Tentative Tract Map (SUB 22-006), which subdivides the property into (i) 22 building lots, (ii) three lots for the public neighborhood park, pocket park, and path, (iii) numerous additional smaller parcels for circulation and landscaping and (iv) establishes the site grading, circulation, public infrastructure; (b) Site Plan Design Review (SPDR 22-004), which is for review of the proposed site design, architecture, and landscaping; (c) Conditional Use Permit (CUP 24-009) for grading that is within 150 feet of Collier Canyon Creek, and (d) Consistency Determination (CD24-005) to determine that the City to acquiring approximately 2.53 acres of land through dedication for a neighborhood park is consistent with the General Plan.

The Livermore Development Code requires Planning Commission recommendation and City Council approval for projects with subdivisions of five or more parcels. The Planning Commission will operate in its quasi-judicial role in reviewing the proposed project, focusing their recommendation on the project's consistency with the Isabel Neighborhood Specific Plan, the General Plan, and any other applicable requirements.

DESCRIPTION, CONTEXT, AND ANALYSIS

For a complete project description, site context, and analysis of applicable State and local standards, please review the attached Staff Analysis memo (Attachment 1).

ENVIRONMENTAL DETERMINATION

As described in the Environmental Resolution (Attachment 6), the project is exempt from the California Environmental Quality Act (CEQA) under Government Code 65457 and CEQA Guidelines Section 15182(c), which exempts residential projects that implement a Specific Plan and CEQA Section 21083.3 and CEQA Guidelines Section 15183, which exempts projects consistent with a Community Plan, General Plan, or Zoning.

PLANNING COMMISSION STAFF MEMORANDUM

TO: Chairperson Anderson and
Members of the Planning Commission

PREPARED BY: Emily LaDue, Assistant Planner
Vernon Umetsu, Contract Planner

REVIEWED BY: Stephen Riley, Planning Manager

DATE: December 17, 2024

SUBJECT: Vesting Tentative Tract Map (Map) 8669 – Subdivision (SUB) 22-006, Site Plan Design Review (SPDR) 22-004, Conditional Use Permit (CUP) 24-009 and Consistency Determination (CD) 24-010 for 143 for-sale condominium residential units and two (2) market rate apartments and 108 for-rent affordable apartments that will rent at prices that are: low, lower-, very low and extremely low; at the northwest corner of Collier Canyon Road and Constitution Drive. The project is known as Cornerstone.

PROJECT DESCRIPTION

The proposed project would develop the vacant, 13.09-acre lot at the northwest corner of Collier Canyon Road and Constitution Drive with a total 253 residential units (units). The proposed Development Plans for the subdivision, architecture, and landscaping are shown in Attachment 3 to this staff report.

There are 143, for-sale townhomes in 21 buildings that have four to nine units in each building. The townhomes have three architectural styles, and range in size from 922 to 2,004 square feet, have front porches and decks, and attached, two-car garages (except that three units have one-car garages).

There are 110 for-rent apartments in one, T-shaped building with five stories. Apartment units are designed as one-story flats, that range in size from 411 square feet to 1,079 square feet. Parking is provided on the first floor as 87 podium parking spaces, and 17 uncovered spaces.

Of the proposed 253 units, 114 will be deed-restricted affordable units. Six of the for-sale townhome units will be priced for moderate income households (making 120% of the Area Median Income), with the remainder sold at market rate. Of the 110 for-rent apartments, 108 will be affordable units[1] with rental prices as follows:

- 20% of units to be priced for Low-income households making 80% of the Area Median Income
- 60%of units to be priced for Lower-income households making 60% of the Area Median Income
- 10% of units to be priced for Very Low-income households making 50% of the Area Median Income and
- 10% of units to be priced for Extremely Low-income households making 30% of the Area Median Income.

The project will improve and dedicate four areas for park and recreation uses as shown on Attachment 3 of the staff report, as summarized below:

1. A 2.53-acre parcel will be improved and dedicated to the City and managed by the LAPRD, as a public park along Constitution Drive. Amenities include walking paths, picnic areas, a play area, and a multipurpose lawn. This park area includes the existing property owner's offer to dedicate an approximately 50-foot-wide strip to allow the widening of I-580 for the future Valley Link regional rail project.

2. A pocket park with a public access easement on Parcel J (in the northwest corner of the site adjacent to Collier Creek) will be improved with bike parking, a community garden area, and optional play area.

3. A public 1,490-foot-long trail easement along Collier Creek will be improved to link Constitution Drive in the southwest property corner with Collier Canyon Road on the property's northeast corner that will also be extended off-site, to North Canyons Parkway.

4. An easement for a future pedestrian/bicycle bridge across Collier Creek, and a $200,000 contribution as the project's fair share portion of the cost of the bridge across Collier Canyon Creek per the attached Conditions of Approval (Attachment 10), and

5. Street improvements along Collier Canyon Road and Constitution Drive, including marked on street parking and potentially improved bicycle infrastructure.

The proposed project requires approval of the following entitlement applications:

- Vesting Tentative Tract Map 8669 (SUB 22-006), which subdivides the property and establishes the site grading, circulation and supporting infrastructure.

[1] Two units will be occupied by on-site managers as market rate units.

- Site Plan Design Review (SPDR) 22-004, for review of the proposed site design, architecture and landscaping,

- Conditional Use Permit (CUP) 24-009, to review proposed grading that is within 150 feet of the Collier Canyon Creek top of bank, and

- Consistency Determination (CD) 24-010, to determine if the City's in-fee acquisition of the 2.53-acre Parcel M of SUB 22-006, is consistent with the General Plan.

The State of California encourages the production of affordable housing through its Density Bonus statute [California Government Code Section 65915-65918]. These provisions are for projects with a certain percentage of units for low- to extremely low-income households. Staff has determined that this project qualifies for the requested two concessions and eleven waivers from City development standards, to allow the project to be built at the proposed density. The concessions are: (a) to allow 108 affordable units to be in the one apartment building and (b) to allow affordable units to be concentrated in the rental apartment building instead of dispersed through the rental units and the for-sale units.. Four waivers are related to building design and view protection, and seven waivers are related to comparability of the affordable for-rent and for-sale units with the for-sale market rate units. Since the concessions and waivers do not compromise health and safety or violate State or Federal law, the concessions and waivers must be granted. Attachment 3 to the staff report (Development Plans) shows the project with the requested waivers.

PROJECT SITE CONTEXT

The Cornerstone site is a vacant, 13.09-acre parcel, that is located at the northwest corner of Collier Canyon Road and Constitution Drive as shown in Attachment 2 to the staff report – Site Location. Photos of the site and surrounding areas are shown in Attachment 3 and Attachment 2. The site is a grassland field with 39 protected trees in the north portion of the site, and the Collier Canyon Creek along the west and north boundary. The site is largely flat except for the Collier Canyon Creek banks.

The site is generally bounded by Constitution Drive and I-580 on the south and business park and office uses on all other sides, with Collier Canyon Creek flowing through the north and west property lines. The following table summarizes the General Plan land use designation, current zoning classification, and existing land use on the subject property and surrounding properties.

Table 1: Project Site Context

	General Plan Designation	**Current Zoning Classification**	**Existing Land Use** (Refer to Attachment 3 and Attachment 2, Figure 1)
Subject Site	Isabel Neighborhood	Isabel Neighborhood Specific Plan shows 3 zones on this site per INSP Ch. 2, Figure 2-1: (1) Village and (2) Center zones for this parcel are to have a combined minimum 200 units and a maximum 286 units (INSP Ch. 2, Figure 2-3 and Table 2-6 for Subarea 2d) and (3) Open Space - New Neighborhood Park/Plaza	Vacant
North	Isabel Neighborhood	Isabel Neighborhood Specific Plan: Office	Collier Canyon Creek then offices beyond
South	Isabel Neighborhood	Isabel Neighborhood Specific Plan: Existing Street and Valley Link beyond	Constitution Drive and I-580/Valley Link alignment
East	Isabel Neighborhood	Isabel Neighborhood Specific Plan: Office Core, Village (25-40 du/ac) Business Park	Collier Canyon Road, then office and business park beyond and the approved future Isable Crossing mixed use project.
West	Isabel Neighborhood	Isabel Neighborhood Specific Plan: Open Space (Collier Canyon Creek) then Office and Business Park	Collier Canyon Creek then office and business park beyond

STAFF ANALYSIS

General Plan

The project site has a General Plan land use designation of Isabel Neighborhood Specific Plan. The Isabel Neighborhood Specific Plan seeks to create a safe, vibrant, complete neighborhood; ensure that new development is compatible with existing

development and community character; and support transit ridership and citywide goals for increased transportation options and housing choices (Livermore General Plan Land Use Element, p. 3-23). The proposal to develop the project site with a residential use is consistent with the "Village" and "Center" land use designations, with the proposed public parks per the Open Space designation and implements the General Plan goals for the Isabel Neighborhood.

The proposal supports the Land Use Element and the 2023-2031 Housing Element to develop housing for all income levels, on a location that is near major transit stops by:

1. Providing 253 housing units for all income levels within 1/4-mile of a major bus transit stop (Route 30R) at the intersection of Triad Drive and North Canyons Parkway

2. Provide 108 rental apartments that are priced for affordability to low, lower, very low, and extremely low-income households as discussed in Project Description (above),

3. Increase the housing options within Livermore by providing a mix of smaller, affordable, residential rental unit sizes (411, 547, and 791 square-foot units per Attachment 3), and

4. Provide 143 for sale townhome condominiums, six of which are priced for affordability to moderate-income households.

The Applicant would increase alternative transportation options by providing a landscaped parkway and sidewalk on Collier Canyon Road. The project would also provide a new, lighted, pervious, hard-surface pedestrian and bicycle path along Collier Canyon Creek, to join Constitution Drive and Collier Canyon Road, and extend to North Canyons Parkway per the attached Conditions of Approval. Previously dedicated right-of-way and utility easements along the streets would remain and no new street-facing road and utility easements are needed.

The project will also be providing open space/park dedications and improvements which, in combination, will exceed the common open space area required per the Isabel Neighborhood Specific Plan for a 3-acre, neighborhood park (INSP Chapter 4 (pg. 4-6)), and the 18,975 sq. ft. of Common Open Space required per INSP Chapter 4, Table 2-2. The proposed public common open space improvements are described below:

1. A new 2.3-acre, neighborhood park is identified at the south end of the development in INSP Chapter 4 (pg. 4-6). The project will build this park along Constitution Drive, as located on Parcel M of Attachment 3. A conceptual park design is shown on Attachment 3. The park area will be reduced by approximately 50 feet for the future relocation of Constitution Drive, as needed to build the Valley Link rail system along I-580.

2. A new, 0.4-acre, pocket park with public access will also be built on Parcel J. A conceptual park design is shown in Attachment 3.

3. Along Collier Canyon Creek: the project will provide a new, minimum 10-foot wide by 1,490-foot long, lighted, multi-use trail that connects Constitution Drive with Collier Canyon Road, and extends off-site to North Canyon Parkway.

4. An easement for a future bridge crossing of Collier Canyon Creek will be dedicated per INSP Chapter 4, Figure 4-1 (pg. 4-8) and Chapter 3, Figure 3-12 (pg. 3-13). In addition, the Applicant will be conditioned to provide a $200,000 fair share contribution towards the future construction cost of the bridge across Collier Canyon Creek, per Pedestrian and Bike Bridge C-14 in INSP Chapter 3, Figure 3-12 (pg. 3-13), and Chapter 4, Figurer 4-1 (pg. 4-7). This public improvement is similar to the requirement to build the neighborhood park and public road improvements that serve the area, which are identified in the General Plan and Specific Plans.

The General Plan Community Character Element and INSP Chapter 5 contains objectives and policies to encourage high quality design that enhances Livermore's urban design quality, prohibits exterior facades with minimal detailing, and ensures compatibility with existing development. The proposed project achieves these objectives and policies by providing three different townhome architectural styles - Farmhouse, Craftsman, and Regency, with detailing that includes inset windows, extruded porches, wall articulation, and colors and materials changes to support the wall articulation and architectural details (see Attachment 3). Similar building articulation, colors and materials changes, and window fenestration is provided as part of the apartment building's mix of more contemporary building wall architecture and traditional, sloped roof with gables (see colored building perspectives on Attachment 3). The project's streetscape with trees on Collier Canyon Road, and the Neighborhood Park along Constitution Drive are shown in Attachment 3.

The project implements policies in the Climate Change Element. For example, the project provides residences near existing job centers and within 1/4-mile walking distance of LAVTA transit service (Route 30R) at Triad Drive and North Canyons Parkway, and extends a permeable, hard-surface, off-site path next to the off-site sidewalk, as an enhanced link from the project site to North Canyons Parkway and the transit stop beyond. The project also complies with City requirements for water conservation and energy efficiency and implements Climate Best Management Practices by providing waste stream separation (e.g., recycling and yard waste containers), and use of reclaimed water for landscape irrigation. Electric vehicle charging stations will be provided in both the townhome garages and apartment building parking, 2 chargers per garage and 13 stalls respectively. The combined surface parking for both the townhomes and the apartments will provide 37 EV stalls.

No Net Loss Law

California Government Code Section 65863 establishes the state's No Net Loss standards (summary attached as Attachment 4). Generally, the standards require that:

1. Each local jurisdiction's Housing Element Sites Inventory accommodates all required RHNA units at all times.

2. If the City approves a Project that contains less units than anticipated in the Sites Inventory, or modifies the Zoning to allow for less units than anticipated in the Sites Inventory, then the Sites Inventory must have enough remaining sites/units to accommodate the jurisdiction's RHNA requirement for all required affordability levels. Or, if there are not enough units in the remaining Sites Inventory to accommodate the RHNA requirements, then the City must increase the amount of residential units permitted (aka "upzoning") elsewhere in the City to satisfy the RHNA requirement.

The project would subdivide and develop six existing parcels, all of which are identified in the Housing Element's Site Inventory. Together, the Site Inventory identifies these parcels' development capacity at 173 lower-income units and 177 above moderate-income units.

Although the project exceeds the required percentage of affordable units as described in the affordable housing section of this report, the project provides 108 lower income units compared to Housing Element's assumed 173 lower-income units, resulting in a 65-unit deficit. The project provides 139 above moderate units compared to the 177 Above Moderate-Income units assumed in the Housing Element Sites Inventory, resulting in a 38-unit deficit. However, based on the Site Inventory and housing projects approved within the 2023-2031 RHNA Cycle, the City currently has a surplus of 120 Lower Income units, 264 Moderate Income units, and 804 Above Moderate units. This surplus is sufficient to offset the project deficit and result in an overall City surplus as shown in the table below:

	Lower Income	Moderate Income	Above Moderate
Housing Element Sites Inventory RHNA Requirement for the Cornerstone project site	173	0	177
Proposed Cornerstone Project	108	6	139
Housing Element/Approved Project Surplus	120	264	804
Net Difference and City-wide surplus compared to RHNA allocation.	+55	+270	+766

Per the findings in the attached project resolution, the City's overall capacity for Lower-Income and Above Moderate-Income units is adequate to meet the jurisdiction's remaining RHNA allocation for the planning period. Therefore, there is no net loss.

<u>Isabel Neighborhood Specific Plan</u>

Use and Density

The two residential zones located on this project site are shown in Attachment 2 to the staff report. The proposed three-story townhome units are proposed for the site area zoned as Village, to be consistent with that zoning designation. Similarly, the proposed five-story apartment building is proposed for the site area zoned Center, to be consistent with that zoning designation.

The Isabel Neighborhood Specific Plan (INSP) establishes minimum and maximum densities in each subarea in order to appropriately manage growth and ensure adequate housing supply. The project site is in INSP Subarea 2d, with the site having zoning of: (a) Center (40-60 dwellings/acre), (b) Village (25-40 dwellings/acre), and (c) Open Space - New Neighborhood Park/Plaza. The proposed 253 housing units are between the minimum required 200 units and the maximum allowed 286 units (INSP, Chapter 2, Table 2-6). Therefore, the proposed 143 townhomes and 110 apartments are consistent with the INSP density envisioned for this site.

Policies

The project is consistent with the policies established in the Specific Plan, including:

- P-LU-6: Ensure that land uses are compatible with existing residential uses and minimize conflicts between adjacent land uses with respect to scale, safety, noise, privacy, and other potential nuisances and hazards.

- P-LU-17: Ensure that all new development provides ample landscaped areas, private open space, common open space, and publicly accessible open space. Up to 10 percent of the common area requirement may be satisfied through the provision of common indoor areas.

- P-LU-22: Site plans must incorporate pathways to the larger street network, and, where feasible, the open space and trails network.

- P-LU-30: Each product type within new residential developments shall provide at least two-unit types which differ in the number of bedrooms.

- G-TRA-2: Establish a comfortable, safe, and efficient network for pedestrians and bicyclists.

The project is compatible with the surrounding office and business park uses that are beyond the adjacent streets and Collier Canyon Creek, exceeds required landscaping and publicly accessible common open space, provides pedestrian pathways as well as a new, lighted pedestrian and bicycle path along Collier Canyon Creek from the project's interior to adjacent streets and a trail extension on Collier Canyon Road off-site to North Canyons Parkway, and provides townhomes and apartments with floor plans ranging from studio to four bedroom unit types. These proposed improvements are shown in Attachment 3 and discussed in Project Description.

Livermore Municipal Airport

The Livermore Municipal Airport is located approximately 1/2-mile south of the project site. In order to protect the airport's operations and to ensure safety and compatibility of surrounding uses, the County established the Livermore Airport Land Use Compatibility Plan (Compatibility Plan). The Compatibility Plan applies to all properties within the Airport Influence Area, which generally extends from Santa Rita Road to North Livermore Avenue, and from Stanley Boulevard to north of the City Boundary.

A majority of the Isabel Neighborhood is located within the designated Airport Influence Area, including the project site. During its adoption, the Specific Plan was found to be consistent with the Compatibility Plan with respect to building heights, uses, and noise levels. Given that the project is within the allowed density and use of the Specific Plan, it is also consistent with the Compatibility Plan. However, both the Compatibility Plan and Specific Plan require the provision of avigation easements and buyer awareness measures for properties within the Influence Area [INSP P-ENV-1]. The Engineering conditions of approval include the avigation easement requirements. To ensure airport operations remain protected and property owners remain informed about potential noise impacts, staff also recommends the following Condition:

> **Recommended Condition:** Prior to occupancy, applicant shall record the deed notification provided in the Livermore Executive Airport - Airport Land Use Compatibility Plan, Chapter 3.3.4.6, on the property for which this discretionary development permit is issued, as follows:
>
> *NOTICE OF AIRPORT IN VICINITY*
>
> *This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.*

The Specific Plan also contains development standards that regulate height, setbacks, and bulk, which are discussed further in the Site Plan Design Review section of this report.

<u>Subdivision - Vesting Tentative Tract Map 8669</u>

Lot Size and Residential Condominiums

The proposed Vesting Tentative Tract Map 8669 (Map) will subdivide the existing 13.09-acre vacant parcel into a total of 22 numbered building lots. Lettered Parcels J, L, and M will be used for publicly accessible open space lots and remaining lettered lots will be used for interior streets. All lots are shown on Attachment 3.

The Specific Plan does not establish minimum or maximum residential lot sizes or dimensions. However, for reference, the lots range in size from Lot 17 with 0.15 acre for a four-plex townhome, to Lot 22 with 1.66 acres for the 110-unit apartment building. The residential lots are of a typical size and shape for condominium style multifamily housing and can adequately accommodate the use. The proposed Map includes all shared common and open space areas and private trash collection areas (i.e. within townhome garages and the podium parking enclosure), as required by Livermore's Subdivision Ordinance. A Map will be filed with the State of California Department of Real Estate if the entitlement is approved, pursuant to State standards.

Circulation, Streets, and Traffic

Project vehicular connections to the public streets and on-site driveways are shown on Attachment 3. Two project driveways provide vehicle access onto Collier Canyon Road. All parcels would have access to the public right-of-way via two new driveways, in conformance with Livermore's Development Code and the State Subdivision Map Act. All new driveways would have a minimum 26-foot width, which exceeds the minimum dimensions established by the Development Code and City Standard Details and would be privately maintained by the project's Homeowners' Association (HOA).

A sidewalk would be built along Collier Canyon Road with a 5-foot-wide parkway and 5-foot-wide sidewalk. In addition, an off-site hard-surface public trail along Collier Canyon Road, from the north end of the project site to North Canyons Parkway, will be designed and built. The existing, 5-foot-wide sidewalk on Constitution Drive will remain. It will be rebuilt when this street is relocated as part of the Valley Link rail line construction.

On-site pedestrian and bicycle paths as well as pedestrian-only paths connect residences with the adjacent streets and the common/public open space, parks, trails and future pedestrian and bike bridge over Collier Canyon Creek.

Proposed sidewalks will meet both Livermore development standards and the Americans with Disabilities Act (ADA). The proposed sidewalks thus promote a strong project connection between public and private areas per City Design Standards and Guidelines.

Alternative Transportation

The City maintains an Active Transportation Plan (ATP) that identifies existing and proposed, required trails and bike lanes throughout the City, and identifies key locations for new bicycle lane and trail segments, in order to promote connectivity and encourage use of alternative modes of transportation. As stated in the ATP, Specific Plan standards with respect to active transportation take precedence in the Isabel Neighborhood.

The project will build a new, lighted pedestrian and bicycle trail along Collier Canyon Creek, that links Constitution Drive with Collier Canyon Road. Per Pedestrian and Bike Bridge C-14 in INSP Chapter 3, Figure 3-12 (pg. 3-13), the applicant will dedicate an easement across Collier Canyon Creek and contribute $200,000 towards building a

future bridge across the Creek. In addition, the project will design and build an off-site public trail next to the existing sidewalk along Collier Canyon Road, from the north end of the project site to North Canyons Parkway. The path and sidewalk will provide an improved pedestrian link from the project site to the bus transit stops at Triad Drive and North Canyons Parkway.

Bicycle lanes on both Collier Canyon Road and Constitution Drive are Existing Class II, in Chapter 2, Figure 3-15 (INSP Bicycle Circulation Plan). No change to the existing bicycle lane on Constitution Drive is proposed due to this street's pending relocation for construction due to the Valley Link rail line construction. In addition, there is a condition of approval to maintain the bike lane to the extent feasible on Collier Canyon Road while also adding marked parking spaces on that street. Finally, the applicant will install a new east-west crosswalk across the intersection of Collier Canyon Road and Gateway Avenue that will provide a safe connection to the core of the INSP and the future Valley Link station.

Parking

The INSP establishes vehicular parking requirements INSP Chapter 3, Table 3-2 (pg. 3-26). However, State regulations over-ride local regulations as discussed in Project Description above[2]. Per Government Code (GC) Section 65915(p)(2)(A): the City may not require more than 0.5 parking spaces for all project units (but the applicant can choose to provide more spaces). This reduced development standard is a State-mandated Density Bonus development standard that replaces all local parking standards.

The project meets the State required parking standards for the proposed for townhomes and apartments as follows:

1. Townhomes: One-hundred forty (140) townhome units have 2 garage spaces per unit (280 spaces), three townhome units have one garage space per unit, and 19 uncovered guest parking spaces, and one handicapped parking space are provided for a total of 303 parking spaces.

2. Apartments: The 110 apartment units are provided with 104 parking spaces. This parking consists of 75 stacker spaces and 29 single spaces. All spaces are within the podium parking garage except for 17 outside spaces.

[2] In the specific case of parking, only units that are affordable by lower-income households or below can be used to qualify for parking waivers. The project also provides an additional 22 units that are affordable to low-income households (i.e., that have a higher income limit than lower-income households). This project has 66 lower-income units, 11 very-low-income units, and 11 extremely low income units (see Project Description). The project therefore provides 88 units that are affordable to lower-income households or below, out of 253 total project units, or 34.8%. The project thus provides over 20% of its units affordable to lower income households and qualifies for reduced parking that the City must approve.

The proposed 407 parking spaces for 253 residences, is a minimum 1.60 spaces per unit. The minimum State required parking at 0.5 spaces per unit is thus met.

Utilities, Services, and Infrastructure

The Infrastructure and Public Services element of the General Plan and the City's Subdivision ordinance require that all new developments provide adequate utilities and services such as water conveyance, sewer conveyance, and urban fire protection. The Specific Plan EIR found that at Specific Plan buildout, the City's existing utility and service systems would have adequate capacity to serve all new development in the Isabel Neighborhood. The project density is within the range contemplated by the Specific Plan. Therefore, existing utility and service systems will have sufficient capacity to serve the project.

On-site utility improvements are shown on Attachment 3. All on-site utilities, services and infrastructure will meet City of Livermore development standards as illustrated below:

1. Emergency service access will be provided from two driveways on Collier Canyon Road, minimum 26-foot-wide driveways and roof access to the five-story apartment building is provided,

2. Water, Sewer, and Power will be provided from lines along Collier Canyon Road, and

3. Trash and recycling containers will be located in garages for townhomes. Apartments will have trash and recycling containers in a common area in the podium parking structure. The trash service plan shows how both the townhome units and apartment building will be served (Attachment 3).

Grading and Soils

The applicant has provided: (a) a grading plan, (b) a geotechnical report that shows no hazardous conditions on site, with recommended construction measures to ensure that the proposed buildings will meet California Building Code standards that will be implemented during building permit plan review as is normally done, and (c) a Phase I environmental assessment which shows no hazardous contamination. The site is relatively flat, except for the steeper banks of Collier Canyon Creek.

The City Engineer has found the grading plan to meet all City grading standards, the geotechnical report has found the site suitable for development, and the Phase I study has not identified any potential subsurface hazards.

<u>Site Plan Design Review</u>

The Isabel Neighborhood Specific Plan establishes residential development standards that regulate height, setbacks, and design standards and guidelines that regulate design for all sites within the plan area. The City also utilizes citywide Design Standards and Guidelines that generally apply to all residential projects throughout Livermore. The project complies

with the development standards for the Specific Plan's Center and Village areas and the residential Design Standards and Guidelines (subject to Density Bonus waivers) as described below.

Development Standards

Development Criteria INSP Ch. 2 Village Area	INSP Standard	Proposed	Analysis
Height (INSP Table 2-2)			
Minimum height	Two stories for the Village and Center zones	Townhomes in the Village zone will be three stories high and the apartment building in the Center zone will be five feet high	Complies
Maximum height	Three stories in the Village zone and five stories in the Center zone. Maximum heights and compliance with the City's Scenic Corridor policy are not applicable as a waiver from maximum building heights has been requested and must be granted (see Project Description)	Townhomes in the Village zone will be three stories. The apartment building in the Center zone will be five stories and 61 feet to the roof ridge, with several nine-foot-high roof accessory structures for a total of 70 feet.	Complies based on State waiver
Setbacks (INSP Table 2-2)			
Front setback facing major streets	20 feet minimum for buildings	No adjacent major streets	Complies

Development Criteria INSP Ch. 2 Village Area	INSP Standard	Proposed	Analysis
Setback facing all other streets	10 feet minimum from Collier Canyon Road from Constitution Drive	Both Collier Canyon Road and Constitution Drive are Neighborhood Streets. The setback from Collier Canyon Road is 35 feet. The setback for Constitution Drive from the right-of-way dedication line (50 ft. in from the existing property line is over 115 feet.	Complies
Interior Setback (side/ rear)	Min. 15 ft. where abutting existing residential uses; otherwise, Min. 5 ft. for first and second stories; Min. 10 ft. for third story and above	The project does not abut residential use. The minimum interior setback is over 40 feet from the north side of the apartment building toward the property line along Collier Canyon Creek	Complies
Building Separation	Min. 10 ft. separation between primary windows (living, dining, bedroom) of residential units. Porches facing each other must be separated by minimum 15 feet along paseos.	Minimum porch separation is 15 feet.	Complies
Common Open Space	75 sq. ft. per unit. 10-foot dimension in any direction = 18,975 sq. ft. (0.44-ac.), which will be part of the 3-acre Neighborhood Park	In combination, the neighborhood park (2.53-ac.), the pocket park (0.4-ac.) and the new, lighted, 1,490-ft. long, public trail along Collier Canyon Creek (0.34-ac), will meet this standard. In addition, the applicant will build a sidewalk/trail extension from the north end of their new sidewalk on Collier Canyon Road, northward to join the sidewalk and public trail on North Canyons Parkway.	Complies
	Village (for townhomes)	Over 100 sq. ft. per unit in front porch and second floor balconies.	Complies

Development Criteria INSP Ch. 2 Village Area	INSP Standard	Proposed	Analysis
Private Open Space	75 sq. ft. per unit. Total for 143 units = 10,075 sq. ft.		
	Center (for apartment bldg.) 50 sq. ft. per unit. Total for 110 units = 5,500 sq. ft.	State Density Bonus waiver requested and granted. No private open space provided. A common outdoor amenity area is provided on the second floor of the apartment building for the residents. Note that the apartment building is also adjacent to a 17,424 sq. ft. pocket park	Complies based on State waiver
Minimum On-site Landscaping	16 Trees per acre for the 13.09-acre site = 210 trees	The project would provide 284 trees	Complies
Protected Trees	Protected trees that are to be removed to be replaced per the Livermore Municipal Code Section 12.20.230.B.2.	The project meets the required tree replacement ratio.	Complies

Design Standards and Guidelines

Compatibility, Siting, and Massing

The citywide Design Standards and Guidelines (DSG) contain design requirements for new development. The DSG aims to create new development that is compatible with existing development, yet is sited properly and broken down into subparts, as follows:

- B.2.1.5 Building design should respect the predominant characteristics of neighborhood development, such as height, massing, setbacks, materials and architectural style.
- B.2.2.1 Planting strips between the sidewalk and the back of the curb are strongly encouraged. They should be a minimum of 5 feet in width.
- B.3.1.1 Neighborhood open space should be located to maximize its visual and functional benefits.
- B.6.2.1 Whenever possible, parking lots should be located behind residential

structures, rather than along the primary frontage, to minimize visual impact to the street.

- C.1.1.2 Building massing should be varied by employing a variety of techniques, such as recessed porches, bay windows, dormers and varying planes or setbacks.
- C.1.2.1 The massing of larger residential buildings shall be broken down to convey a sense of “home” and give individuality to each unit that lies within it.
- C.1.2.3 Façades of long buildings shall be architecturally subdivided into shorter segments every 25 to 50 feet maximum

Along Collier Canyon Road, the proposed, three-story townhomes would have a street facade of four townhome buildings with six units each (131 ft.), an 18-ft. building separation with trees between buildings, and setbacks of 35 ft. with a double row of trees that are planted on both sides of the parkway sidewalk – a double row of trees is an INSP design standard. The proposed apartment building is located in the northern portion of the site. It is 296 feet long, five-stories high (61-ft.), and setback 13.5 ft. behind a similar double row of trees (see Attachment 3). The townhomes are compatible with the 20 to 24 foot high, modern, business park buildings across Collier Canyon Road due to the townhome setbacks and intervening landscaping.

The six-plex townhomes along Collier Canyon Road are architecturally separated into individual units using wall articulation, extruded porch and balcony structures, material and color changes, and detailing. The porches provide a transition from semi-public walkways to semi-private entrance spaces.

The 296-foot-long apartment building is visually separated into three segments that are loosely related to the three pairs of extruded, gable-topped columns, different wall textures between columns, and wall colors that are distinct for each segment (white for the south, darker for the center, and a mix for the north). The 17-foot-high podium parking level forms a dark (heavier) horizontal base that helps to unify the building.

Based on the above, the proposed project respects the neighborhood's development, uses landscaping to minimize the visual impact on the street, and visually reduces building mass by using wall articulation and massing elements, materials and colors. An important element to providing a compatible transition from the street to the project buildings is tree size at installation. Staff recommends that all trees on each side of the Collier Canyon Road sidewalk, at the driveway entries, and the front tree between the buildings facing the public street, be a minimum 24-inch box size with a minimum 8-foot height and not 15-gallon (i.e., 3-4 feet high) as shown in the Conditions of Approval.

Architecture, Colors and Materials

The Specific Plan Design Standards and Guidelines call for traditional or contemporary variations of architectural designs and building materials. Preferred materials are to be durable and generally include stucco, stone, wood, and metal. In addition, the Planning

Commission had previously expressed a desire for incorporating traditional elements into the Specific Plan's contemporary design direction.

The INSP Design Standards and Guidelines aim to create developments with high-quality architectural style, rich materials, and compatible colors, as follows:

- INSP-DS-30: Development shall include a variety of architectural styles, emphasizing contemporary designs and building materials.
- INSP-DS-74: The design of townhomes must be articulated such that individual units are differentiated from each other.
- DSG 1.2.4: Each vertical module of units shall incorporate architectural features that help to individually distinguish them, such as wall breaks, projections, distinct color schemes and individual roof treatments.
- DSG-4.1.2: Windows shall be used as architectural elements that add relief to the façade and wall surface.
- DSG-6.1.1: A variety of materials shall be used that emphasize a differentiation between the various components of the building.
- DSG-7.1.1: Exterior building colors should be compatible with the surrounding neighborhood setting and should be in keeping with the geographic and climatic conditions specific to Livermore

The project proposes two product types: three-story townhomes and a five-story (61-ft.) larger apartment building. Townhomes have more traditional architectural styles: Craftsman, Farmhouse and Regency. Each townhome unit is individualized using wall articulation, extruded porch and balcony structures, material and color changes, and detailing. This is illustrated in the longest row of nine townhome units on Attachment 3.

The five-story apartment building has a more modern design with some traditional design elements. Residential finish materials are used such as the smooth vertical panels at the extruded, gable-topped columns and "stone" panels to create visual breaks along the building's length.

Based on the above, architectural shapes, materials, and color have been used to create a project with buildings that differentiate between their various components, have a design richness, and reflect the design requirements of the Specific Plan and the city-wide Design Standards and Guidelines.

Landscape Design

The Design Standards and Guidelines and Specific Plan contain landscape standards related to trees, shrubs, and groundcovers. The standards establish minimum quantity, size, and locational parameters, as follows:

- DSG-1.4.1.a: At time of installation, trees should be a minimum 15-gallon pot size or 6 feet tall and have a one-inch caliper size at chest height, whichever is greater.
- DSG-1.4.1.b: At time of installation, all street trees should be 24-inch box size and comply with the City of Livermore Standard Details.

- DSG-1.4.1.c: At time of installation, twenty percent of all trees should have a 24-inch box container size or larger.
- DSG-1.4.1.d: At time of installation, shrubs should have a minimum 5-gallon pot size.
- INSP-Table 2-2: Minimum on-site landscaping is 16 trees per acre.

The project's landscape plan includes a mix of trees, shrubs, grasses, and groundcovers. The Overall Landscape Plan is shown in Attachment 3. The streetscape reflects a proposed parkway sidewalk with a row of trees on each side on the Collier Canyon Road, and the new neighborhood park on Constitution Drive. Staff recommends a Condition that all trees facing Collier Canyon Road be at least 24-inch box size to provide an effective transition from surroundings to site buildings (see Conditions of Approval).

All landscaping associated with the project will be maintained by the project's future Homeowners Association (HOA). The proposed trees and shrubs will create a welcoming and comfortable outdoor space and, as conditioned, are consistent with the citywide Design Standards and Guidelines and the Specific Plan.

Fencing, Walls, Public Art, and Signage

There is no fencing proposed on site. The applicant is choosing to pay the Art in Public Places in-lieu fee instead of providing art on site, which is allowed by the Municipal Code. Signage will be reviewed with building permit plans or later for consistency with the Isabel Neighborhood Specific Plan all other City regulations, per Conditions of Approval.

Conditional Use Permit CUP24-009

A Conditional Use Permit (CUP) is required of any project that is grading to within 150 feet of the top of the bank of a creek bank per LDC Section 4.02.080.B.3. The proposed minor trail grading would reach the top of the Collier Canyon Creek bank (Attachment 3). Per the findings in the attached project Resolution, staff recommends approval of CUP24-009.

Consistency Determination

California Government Code Section 65402(a) requires that if a General Plan has been adopted, no real property shall be acquired by dedication or otherwise or sold for public purposes until the location, purpose, and extent of such acquisition or disposition has been shown to be consistent with a local jurisdiction's adopted General Plan. This includes acquiring real property through dedication as proposed by the applicant.

The applicant proposes the real property (in-fee) dedication of Parcel M (2.53-acres) for (a) a public neighborhood park and (b) the south end of the public path along Collier Canyon Creek where it joins Constitution Drive. The applicant would build the park improvements to City required standards. The Livermore Area Recreation and Parks District would maintain the park grounds and improvements.

The Planning Commission is the final decision maker for this Consistency Determination and additional justification can be found in the attached Consistency Determination resolution. Accepting Parcel M for a neighborhood park is consistent with the General Plan through the Isabel Neighborhood Specific Plan, which designates the south portion of the project site (along Constitution Drive), as the location of a Neighborhood Park/Plaza per INSP Chapter 2, Figure 2-1. Therefore, the proposed dedications are consistent with the General Plan. Upon project approval, staff supports acceptance of the proposed dedication of Parcel M for a public park.

Affordable Housing

The proposed project meets the City's housing affordability requirements as shown below:

INSP Ch. 2, Policy P-LU-33 and corresponding LDC 10.06.050.D.4.c(2), require that: 20% of rental units, or 22 units, be set aside for very-low, low-, median, and moderate-income households, with at least 6% reserved for very-low-income households, 4% reserved for median-income households, and 3% reserved for moderate-income households. Project rental units meet these standards by providing that 108 units to be priced for low-income households or below, and 20% to be priced for very-low income and extremely-low-income households.

INSP Ch. 2, Policy P-LU-33 and corresponding LDC 10.06.050.D.4.c(1) require that 20% or more of for sale units (29-units) being affordable to median- and moderate-income households, with at least 5% of reserved units (8-units) being set aside for median-income households. Permanent provision of low-income units is being provided by the project's rental units that exceed the LDC specified minimum units. Six of the 143, for sale units would be priced to be affordable by moderate-income households. The applicant is not meeting the for-sale requirement but is instead asking for a Density Bonus waiver to concentrate most of its affordable units in the apartment building as explained below.

The City Council has also adopted an Inclusionary Housing Ordinance, which establishes citywide affordability requirements that identify performance standards for affordable units (LDC Section 10.06.050.D.7.a-f, 10.06.050.D.8, and 10.06.050.D.9). As required by the Inclusionary Housing Ordinance, all affordable units must:

1. Be representative of the project as a whole, with comparable unit type and bedroom mix.
2. Appear the same as the market-rate units.
3. Contain the same average number of bedrooms as market-rate units.
4. Contain the same bathroom to bedroom ratio as market-rate units.
5. Have the same market-rate amenities, like air conditioning and laundry facilities.
6. Meet or exceed the minimum floor areas identified in the Inclusionary Housing Ordinance (LDC 10.06.050 - Table 10.2).
7. Reflect the overall market-rate product type mix.
8. Be dispersed throughout the project site.

The applicant has requested Density Bonus concessions and waivers from the above standards based on the project becoming infeasible if these standards were applied, based on State of California Housing Crisis Act (Government Code Section 65915) and State Density Bonus law. The State of California Housing Crisis Act is discussed below.

Housing Crisis Act

The Housing Crisis Act (SB 330) became California law on January 1, 2020, and made numerous changes to the procedures for processing, reviewing, and approving housing development projects during the declared statewide housing emergency. The law remains in effect until January 1, 2030, unless extended. Specifically, the new law:

- Created an optional "preliminary application" process for housing developers that freezes development standards and fees as of the submittal date;
- Amended the Permit Streamlining Act to clarify the timeframe and procedures for determining whether a development application is complete;
- Added provisions to the Housing Accountability Act to ensure only objective standards are used to deny or reduce the density of a housing development project;
- Limited the number of hearings that may be held on a housing development project to five; and
- Limits actions to reduce residential development capacity or implement growth control measures and imposes replacement housing and relocation requirements for projects that demolish residential units.

The applicant provided all the necessary information to qualify for relief under the Housing Crisis Act upon initial application submittal on April 20, 2022. Therefore, all development standards and fees applying to the project were vested at that date. The most recent changes made to the INSP as part of the approved Isabel Crossing project are not applicable to the project, as the project was deemed complete prior to the adoption of the amendments. In addition, given that the Specific Plan was adopted after January 1, 2020, all subjective design standards within the plan cannot be used to evaluate the project (but the INSP objective standards can still be used). However, the Specific Plan references the citywide Design Standards and Guidelines, which were adopted prior to January 1, 2020. Therefore, subjective standards from the adopted 2004 citywide Design Standards and Guidelines were still used during project review.

The project review has taken place within the timelines and quantity of hearings specified in the law. No residential demolition nor growth control is part of this project, and the City has terminated its Housing Implementation Program (HIP), which generally limited the annual number of units constructed. For these reasons, the project review process and the review standards used are consistent with the provisions of the Housing Crisis Act.

Density Bonus

The State of California encourages the production of affordable housing through its Density Bonus statute [California Government Code Section 65915-65918]. These

provisions allow projects that contain a certain percentage of low- to extremely-low units to qualify for:

- Density Bonus - no request to exceed the maximum residential density on this parcel has been submitted;

- Waivers of development standards - allows a project to disregard one or more development standards that precludes building to the allowed density. An unlimited number of Waivers may be granted. and

- Developer incentives/concessions - allows this project to disregard up to three development standards if removing the standard would result in quantifiable cost reduction (very similar to a Waiver).

The applicant has requested the following concessions and waivers:

Concessions

The Applicant is entitled to three (3) concessions under the State Density Bonus Law based on the number and affordability of the units proposed in the project which are 108 low, very low, and extremely low-income units, and six (6) moderate income units. The following requirements, if enforced, would make the development of the project as proposed economically infeasible, and thus eligible for a concession under the State Density Bonus Law.

1. Livermore Development Code Section 10.06.050(D)(9): Affordable units to be dispersed throughout the project rather than concentrated in one portion or area of the project. The moderate-income units are dispersed throughout the townhomes. Units that are affordable to households with low-income and below are all in the apartment building.

2. LDC Section 10.06.050(D)(4)(c): Affordable units to be concentrated in rental apartment building instead of dispersed between the rental units and the for sale units.

According to State Density Bonus law, the City shall grant developer Incentives/concessions for affordable housing projects unless one of the following findings can be made [Government Code Section 65915 (d)(1)]:

1. The Concession or Incentive does not result in identifiable and actual cost reductions, consistent with subdivision (k), to provide for affordable housing costs, as defined in Section 50052.5 of the Health and Safety Code, or for rents for the targeted units to be set as specified in subdivision (c).

   Findings: The requested Incentive/ Concession to waive the affordable comparability requirement and concentrate the affordable units as median income units in Floor Plan One of the Back-to-Back townhome building types and extremely-, very-, and

low-income units in the apartment building will result in identifiable, financially sufficient, and actual cost reduction. The applicant has indicated actual costs savings of approximately $2,217,000. This amount represents the estimated additional loss of project revenue that would be the result of providing a representative mix of floorplans as affordable units compared to the units the applicant has proposed to be designated affordable. The units requested by staff also have higher construction costs than the units proposed by the applicant, which is separate category of cost savings. For this reason, overall project costs will be less, and revenues will be more by concentrating the affordable units as median-income units in Floor Plan One of the Back-to-Back townhome building types and extremely-, very-, and low-income units in the apartment building, rather than providing affordable units in each floor plan type.

2. The developer incentives would have a specific adverse impact, as defined in paragraph (2) of Subdivision (d) of Section 65589.5, upon public health and safety or the physical environment or an any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to low- and moderate-income households.

   Findings: Designating different affordable units would not result in a specific adverse impact upon public health and safety, the physical environment, or any real property that is listed in the California Register of Historical Resources. Modifying which units are affordable does not impact the physical development or environment and is instead a regulatory action. In addition, all affordable units will still provide for sleeping, restroom, and cooking areas. The for-sale affordable units would have the same amenities as the market rate for-sale units, like laundry and air conditioning, and will be otherwise indistinguishable from the market rate for-sale units, except for their duet type design. All affordable units will be adequately served by water, wastewater, and electrical service. For these reasons, concentrating the affordable units into the Back-to-Back townhome building type with Floor Plan One will not adversely impact the health, safety, or wellbeing of affordable residents. The property is not listed as historic in any local, state or national historical register.

3. The developer incentives would be contrary to State or Federal law.

   Findings: Affordability requirements are established by local ordinance. The affordable comparability incentive/concession would not violate any State or Federal law.

Given that none of the findings above can be made, the City is required to grant the requested Incentives/Concessions to the project applicant. In addition, based on correspondence with the California Department of Housing and Community Development, using the Density Bonus to waive Inclusionary Housing Ordinance requirements is an appropriate use of the law, and furthers the California Legislature's goal to increase the state’s production of market-rate and affordable housing.

Waivers

The Applicant is entitled to unlimited waivers under the State Density Bonus Law based on the number and affordability of the units provided in the proposed project as described in Concessions above. The following requirements, if enforced, would physically preclude the construction of the project as proposed, and thus are eligible for a waiver under the State Density Bonus Law.

1. Citywide Design Standards and Guidelines, Chapter 6, Section D, Design Standard 3.1.2 (CDSG Ch. 6, Sec. D, Standard 3.1.2): "Residential entries shall be located on the front façade and shall directly access the sidewalk or street." Residential entries face internal corridors of the proposed apartment building.

2. Isabel Neighborhood Specific Plan, Chapter 2, Table 2.2-Development Standards, Private Open Space (INSP, Ch. 2, Table 2.2, Private Open Space): In the Center zone, each unit must have one private open space and 50 sq. ft. min. with a minimum dimension of 4-ft by 8-ft. (50-ft. may be averaged). No apartment units have private open space (e.g. an outdoor patio).

3. Livermore Development Code (LDC) Section 10.06.050(D)(7)(a): Affordable, reserved units to be "representative of the project as a whole" and minimum unit sizes to be per Table 10.2 as summarized below.

No. Bedrooms	For Sale Minimum Size/Proposed	For Rent Minimum Size/Proposed
Studio	600 s.f. / None proposed	600 s.f. / 411 s.f.
1	750 s.f. / None proposed	750 s.f. / 547 s.f.
2	1,000 s.f. / None proposed	900 s.f. / 791 s.f.
3	1,250 s.f. / Unit 4 (3) = 922 s.f. & Unit 5 (3) = 1,311 s.f.	1,000 s.f. / 1,079 s.f.

   The apartment units are physically different from the townhome units. Also, proposed townhome Unit 4 and all apartment studio, 1-bedroom and 2-bedroom units do not meet the City's unit size requirement.

4. LDC Section 10.06.050(D)(7)(b): Affordable units [i.e., low-income units and below] shall have air-conditioning, enclosed garages, and laundry facilities to the extent market-priced units have those amenities. Affordable apartment units have less parking (see Parking) and common laundry rooms on each residential floor instead of laundry facilities in each unit.

5. LDC Section 10.06.050(D)(8): The mix of affordable reserved residential units shall reflect the overall mix of market-rate units in the project. The 108, affordable, one-story apartments with studio, 1-bedroom, 2-bedroom, and 3-bedroom units do not reflect the 3-story, 3-bedroom townhomes.

6. INSP Chapter 5, Design Standard DS-62 (pg. 5-32): Parking podiums shall not project more than five feet above the level of the sidewalk or grade, whichever is lower, and shall be screened. The top of the proposed parking podium is 17 feet above the

Collier Canyon Road sidewalk. Therefore, the parking podium does not meet the INSP Design Standard.

7. General Plan Scenic Corridor Policy G-LU-2 as implemented in INSP Chapter 2, Tables 2-2, 2-4, and 2-6, that limits building height to 35 feet, 50 feet, or as specified in the General Plan Scenic Corridor Policies for the proposed, five-story apartment building that is 61 feet high to the roof ridgeline, plus an additional nine-foot-high rooftop accessory structures. The proposed townhomes and apartment building height are not consistent with INSP standards as shown in Attachment 3 because they exceed the Scenic Corridor height limitation.

8. LDC Section 10.06.050(D)(7)(c): "The average number of bedrooms for all affordable units in a project shall equal the average number of bedrooms for all other units in the project." All 137-market rate townhome units have a minimum of three bedrooms. The six affordable townhome units have one to two bedrooms. Twenty-six out of 110 apartment units have three bedrooms (23.6%) - the remaining 84 apartments are studio to 2-bedroom units (76.4%) (per Attachment 3). Therefore, the average number of bedrooms for all affordable units in a project is not equal to the average number of bedrooms for all other units in the project.

9. LDC Section 10.06.050(D)(7)(c): "The number of bathrooms per bedroom shall equal the proportion of bathrooms in the market-priced units." All median income townhome units (120% of AMI) have 3.5 bathrooms for 3-bedroom units to 3 bathrooms for 4-bedroom units. All affordable apartments have one bathroom except the 26, 3-bedroom units that have two bathrooms. Therefore, the proportion of bathrooms per bedroom for all affordable units in the project is not equal to the market-priced units in the project.

10. LDC Section 10.06.050(D)(7)(e): "Affordable units shall have air-conditioning, enclosed garages, and laundry facilities to the extent market-priced units have those amenities." Market-priced units are air-conditioned, have enclosed 2-car garages, and each unit is plumbed for a washer and dryer. The affordable apartments are air-conditioned; 104 parking spaces are proposed for 110 units consisting of 87 spaces within first-floor podium parking (75 spaces that are stacked one above the other and independently accessible using a mechanical shuffle system and 12 single spaces) and 17 outside spaces; and each residential floor has a common, 13 ft. x 30 ft., laundry room with multiple washers and dryers. Thus, affordable units do not have equivalent parking and laundry facilities.

11. INSP Chapter 2, Table 2-2 (pg. 2-22) requires 50 sq. ft. of Private Open Space per residential unit in the Center zone. The proposed affordable apartments have no private open space, but a private common open space area on the second floor. Therefore, the proposed apartments lack the total 5,500 sq. ft. of private open space for the apartment units, that is required by Table 2-2. Note that the apartment building is adjacent to a 17,424 sq. ft. pocket park.

The requested waivers would allow construction of the densities and housing affordability envisioned in the Specific Plan and facilitate the City to achieve the General Plan goals for affordable housing.

According to State Density Bonus law, the City shall grant development standard Concessions and Waivers for affordable housing projects that qualify, unless one of the following findings can be made:

1. The waiver or reduction would have a specific, adverse impact, as defined in paragraph (2) of subdivision (d) of Section 65589.5, upon health or safety, and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact.

   Findings: The project as proposed and conditioned, incorporates the requested waivers. Staff concluded that the proposed project would not impact public health or safety as part of the recommended reuse of the INSP Environmental Impact Report and this specific project review. Therefore, the proposed waivers would not have a specific, adverse impact upon health or safety.

2. The waiver or reduction would have an adverse impact on any real property that is listed in the California Register of Historical Resources.

   Findings: The property is not listed on the National Register of Historical Resources, the California Register of Historical Resources, nor on the City of Livermore's Historical Resources Inventory. Therefore, no historic resources would be materially impaired.

Sustainability

In support of the General Plan, Climate Action Plan, and Specific Plan, the proposed project will incorporate sustainability measures into its construction and operations. For example, all appliances will be powered by electricity (instead of natural gas), spaces within the condominium garages and the apartment podium parking will be Electric Vehicle (EV) ready and capable (providing the necessary wiring and power), allowing residents to more easily use and charge electric vehicles. Garages and trash enclosures will also have sufficient space to accommodate trash, organic, and recycling bins, encouraging composting and recycling activities for all residents. All on-site fixtures would be water and energy efficient.

The project will also efficiently use and treat water onsite. Recycled water will be used for all irrigation and all plants will be medium or low water users. In addition, many species will be natives and pollinators, which are well suited to Livermore's climate and attract beneficial insects, like bees. Stormwater will be treated in a retention area with natural grasses. The project provides ample pedestrian connections, a Class II bike lane along its frontages, making alternative travel modes more comfortable. The project is also located within 1/4 mile of the LAVTA 30R bus line at Triad Drive and North Canyons Parkway, which serves the West Dublin/Pleasanton BART station. In addition, the project

is collocated nearby existing job centers. And is within 1/2 mile of the future Valley Link regional rails system that will connect resident in San Joaquin County, the Tri-Valley and the Bay Area. Thus, residents would have walking access to jobs and more efficient forms of transportation, providing more options and potentially reducing their reliance on personal automobiles.

RECOMMENDATION

Staff recommends the Planning Commission adopt the attached Resolutions:

1. Approving Consistency Determination 24-010;

2. Recommending the City Council adopt a resolution finding that the project is exempt under the California Environmental Quality Act, in accordance with CEQA Guidelines Section 15182 (c) and that no events described in CEQA Guidelines Section 15162 have occurred and that the project is adequately covered by the Isabel Neighborhood Specific Plan Final and Supplemental EIR;

3. Recommending the City Council adopt a resolution approving Vesting Tentative Tract Map (VTTM) 8669 – Subdivision (SUB) 22-006, Site Plan Design Review (SPDR) 22-004, and Conditional Use Permit (24-010) subject to the attached Conditions of Approval; and

4. Recommending the City Council direct the Planning Manager to file a Notice of Exemption, in accordance with the provisions of the California Environmental Quality Act, subject to project approval.

23.	COMMON AREAS:	COMMON AREAS TO BE MAINTAINED BY THE HOMEOWNERS ASSOCIATION OR AFFORDABLE HOUSING PROPERTY OWNER.
24.	TREES:	ALL EXISTING TREES SHALL BE REMOVED, SEE TM 2.0.
25.	BENCHMARK:	CITY BENCHMARK 2K-207: BRASS DISK IN MONUMENT WELL STAMPED LS 3273 AT WESTERLY END OF A CURVE ON EAST AIRWAY BOULEVARD, APPROXIMATELY 570' EAST OF RUTAN DRIVE WITH A CITY OF LIVERMORE DATUM ELEVATION OF 414.24.
26.	BASIS OF BEARINGS:	THE BASIS OF BEARINGS FOR THIS SURVEY IS THE MONUMENT LINE OF COLLIER CANYON ROAD, THE BEARING BEING N00°25'01"E PER PARCEL MAP 9270 (304 M 1).
27.	CONDOMINIUM PLAN:	A CONDOMINIUM PLAN WILL BE RECORDED FOR LOTS 1 THROUGH 21. THE SUBDIVISION IS A CONDOMINIUM PROJECT AS DEFINED IN SECTION 4285 ET. SEQ. OF THE CIVIL CODE OF THE STATE OF CALIFORNIA AND FILED PURSUANT TO THE SUBDIVISION MAP ACT. THE TOTAL NUMBER OF CONDOMINIUM DWELLING UNITS SHALL BE NO MORE THAN 143 RESIDENTIAL CONDOMINIUM UNITS FOR LOTS 1 THROUGH 21.
28.	FLOOD ZONE:	ZONE X: AREAS OF 0.2% ANNUAL CHANCE FLOOD; AREAS OF 1% ANNUAL CHANCE FLOOD WITH AVERAGE DEPTHS OF LESS THAN 1 FOOT OR WITH DRAINAGE AREAS LESS THAN 1 SQUARE MILE; AND AREAS PROTECTED BY LEVEES FROM 1% ANNUAL CHANCE FLOOD. (FEMA), FLOOD INSURANCE RATE MAP, MAP NUMBER 06001C0533G. DATED: AUGUST 3, 2009.
29.	ONSITE WELLS:	PER ZONE 7 REFERRAL 25-006 GROUNDWATER USE MAP, THREE (3) WELLS EXIST ONSITE, AND ONE (1) OFFSITE WITHIN COLLIER CANYON ROAD. SEE TM 2.0 FOR APPROXIMATE LOCATIONS.

NOTES
1. MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120, 208, 240 or 277 options only when ordering with Tuning (DS, DF options) or photocontrol (PE option).
2. 480V driver (480) is for use on 480V nominal, not 277V/480V. Not available with PIR, PIRH.
3. Not available with HS degree mounting. Not recommended for 90° arms.
4. Photocontrol (PE) requires 120, 208, 240, 277 or 347 voltage option. Not available with motion/ambient light sensors (PIR or PIRH).
5. Motion/ambient light sensors (PIR, PIRH, PER, PERH) are factory preset. Refer to Motion Sensor Default Settings Guide for details. Ordering three identical, includes a three-pack. Not available with "PE" option. Button type photocell.
6. Not available with 20 LED/1000 mA configurations (DSXOPM LED 20C 1000).
7. Single fuse (SF) requires 120, 277, or 347 voltage option. Double fuse (DF) requires 208, 240, or 480 voltage option.
8. Also available as a separate accessory; see Accessories information.

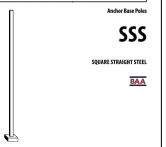
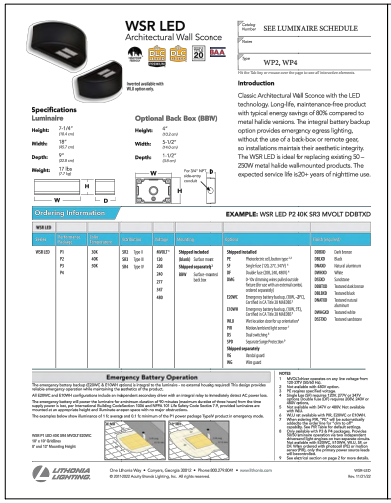
LITHONIA LIGHTING



Catalog Number: SEE LUMINAIRE SCHEDULE
Notes:
Type: P2, P3, P3H, P4



FEATURES & SPECIFICATIONS

INTENDED USE — These specifications are for SSS standard models. Square Straight Steel is a general purpose light pole for up to 24-foot mounting heights. This pole provides a basic yet cost-effective option for mounting area and roadway lighting.

CONSTRUCTION
Poles Shaft: Pole is made from a uniform dimension and wall thickness steel or made of a weldable grade, hot-rolled, commercial-quality steel tubing with a minimum yield of 50 KSI (35 gauge, 0.135"), or ASTM A 53 grade, A (GPY). Shaft is then given a 60-grit blast finish (roughness of high frequency electric resistance weld). Uniformly supports cross-sections with flat sides, small corner radii and excellent torsional qualities. Available shaft widths are 4", 5" and 6".
Pole Top: Optional pole top is 4" tenon top, drilled to slip over mast arms. Welded drilling (tubular cross-section) and cope top. Side drilled and cope top poles include a removable cap.
Handhole: A reinforced handhole with grounding provision is provided at 16" from the base on side A. Positioning the handhole lower may not be possible and requires engineering review; consult Tech Support/Solution for further information. Every handhole includes a cover and cover attachment hardware. The handhole has a nominal dimension of 2.5" x 5".
Base Covers: A durable ABS plastic two-piece full base cover, finished to match the pole, is provided with each pole assembly. Additional base cover options are available upon request.
Anchor Base Notes: Anchor base is fabricated from steel that meets ASTM A36 standards and can be altered to match existing foundations; consult factory for modifications. Anchor bolts are manufactured from A36 steel, ASTM F1554 Grade 36 with a 2" hook. Nuts and washers are heavy hex steel. Bolt covers are supplied. Top threaded to allow for a minimum of 12" to be aligned grade level per ANSI A 133.
HARDWARE — All structural fasteners are high-strength galvanized carbon steel. All non-structural fasteners are galvanized or zinc-plated carbon steel or stainless steel.
FINISH — Poles standard painted finish is coated with TGIC (Triglycidyl Isocyanurate) Polyester powder that meets 3.0 mil DFT specifications of ASTM D3359. Powder-coat finishes include Dark Bronze, White, Black, and Natural Aluminum colors. Architectural Colors and Special Finishes are available by quote and include, but are not limited to Fluoropon Vari-Depth Galvanized, RAL Colors, Custom Colors and Extended Warranty Finishes.
BUY AMERICAN ACT — Product with the BAA option is assembled in the USA and meets the Buy American(x) guaranteed procurement requirements under AAL, ERARRA and DOE regulations.
Please refer to www.acuitybrands.com/buy-american for additional information.
INSTALLATION — Do not erect poles without having thoroughly familiar with all factory-supplied templates must be used when setting anchor bolts. Lithonia Lighting will not accept claim for incorrect anchorage placement due to improper use of templates. Lithonia Lighting bears no direct control, supervision or responsibility for the manner in which the various pole components are assembled and erected in the field. Lithonia Lighting is not responsible for the foundation design.
WARRANTY — 1-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other expressed implied warranties are disclaimed. Complete warranty terms located at www.acuitybrands.com/support/warranty/terms-and-conditions
NOTE: Actual performance may differ as a result of end-user environment and application. Specifications subject to change without notice.

Emergency Battery Operation
The emergency battery backup (DCENC & DCNEN options) is integral to the luminaire - no external housings required. This design provides reliable emergency operation while maintaining the aesthetics of the product.
All DCENC and DCNEN configurations include an independent secondary driver with an integral battery to immediately detect AC power loss.
Single fuse (SF) requires 120, 277 or 347V option. Double fuse (DF) requires 208, 240 or 480V option. Not available with DCENC, DCNEN, PIR, PIRH, PER, PERH, WLS or DS options.
Note: The standard WSR LED wall pack luminaire comewith field-adjustable drive current feature. This feature allows tuning the output current of the LED drivers to adjust the lumen output to dim the luminaire.

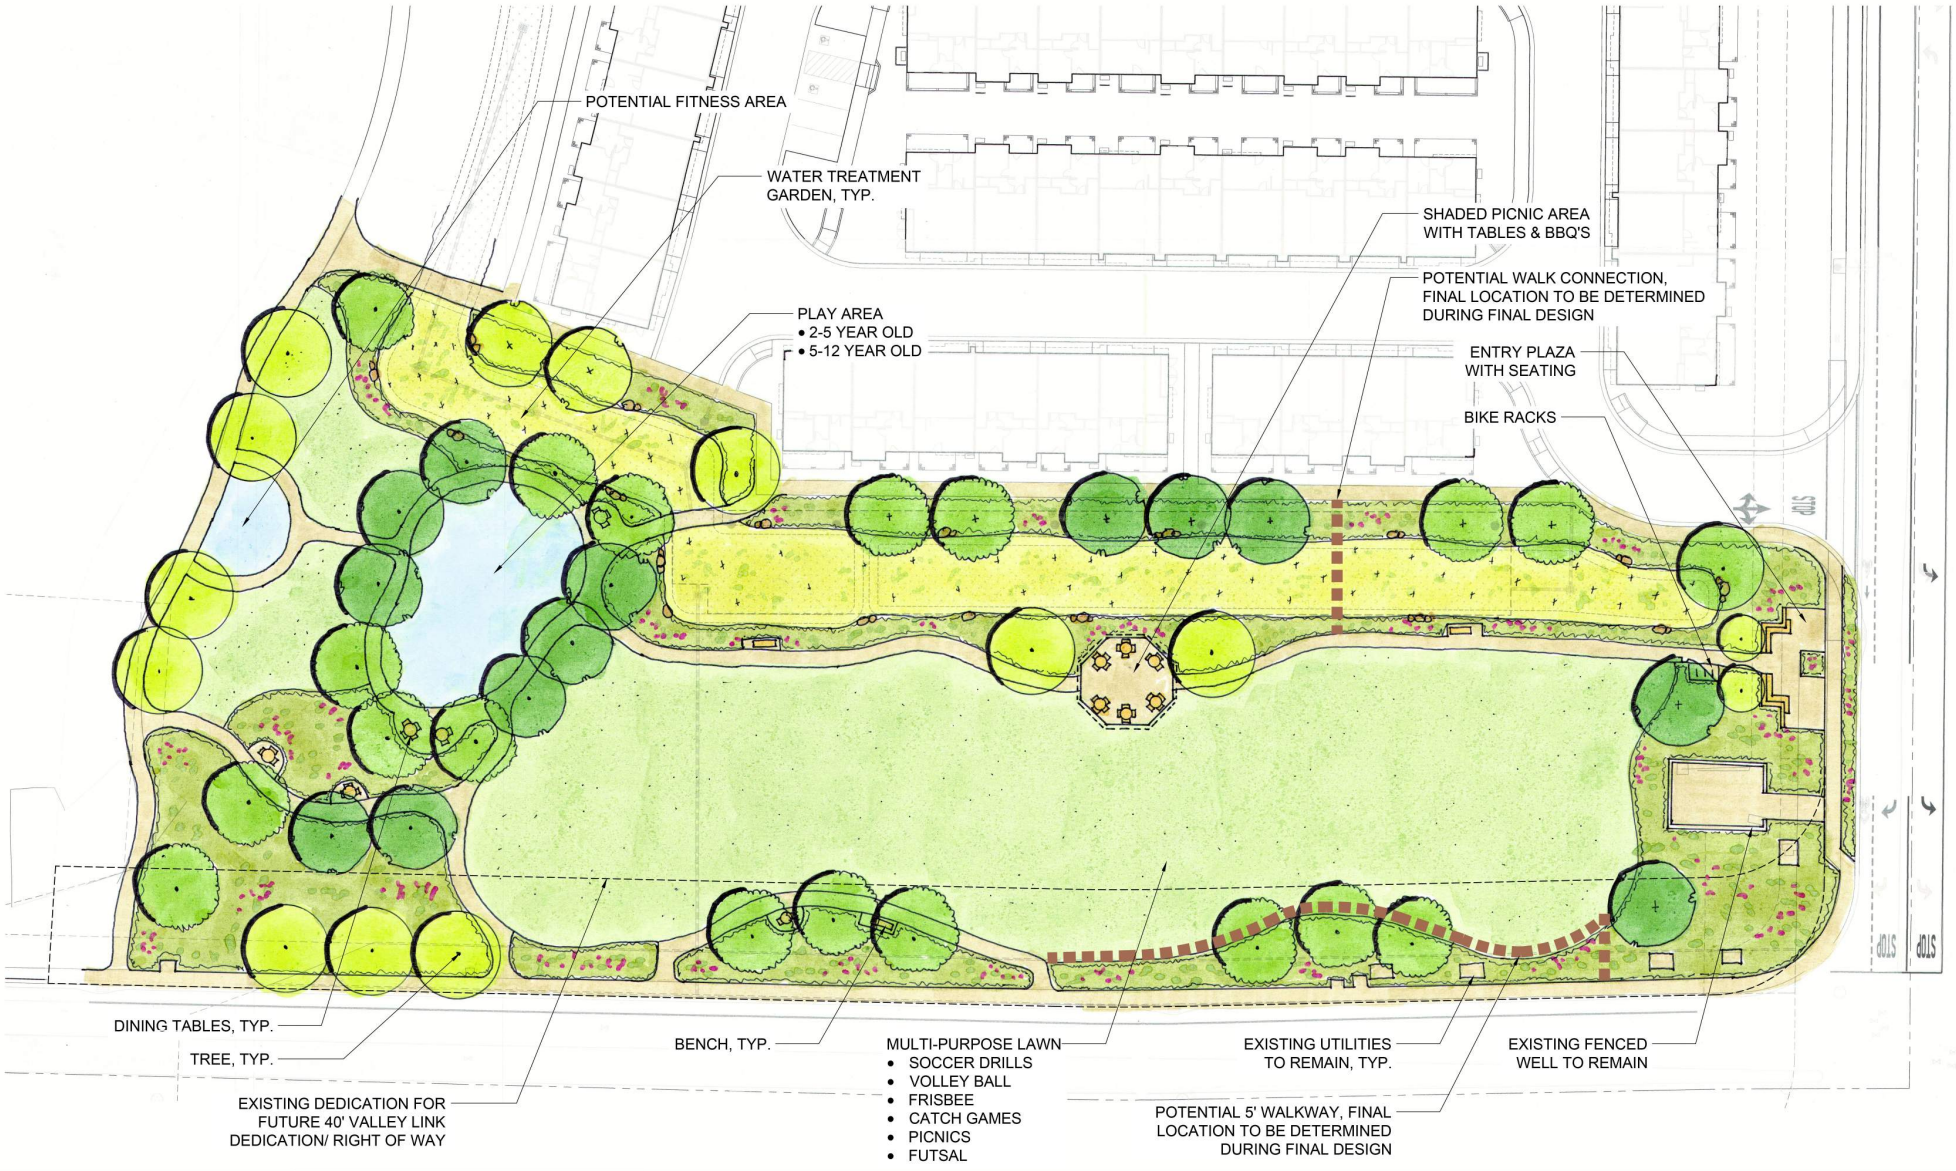
NOTES
1. All WPX wall packs come with 4KV surge protection standard, except WPX1 LED P1 package. 6KV surge protection is available on all WPX configurations by adding SPD6KV to the end of the product number (example: WPX1 LED P1 40K MVOLT SPD6KV DDBXD).
2. Battery pack options only available on WPX1 and WPX2.
3. Battery pack options not available with 347V and Photocell.

FEATURES & SPECIFICATIONS



INTENDED USE
The WPX LED wall packs are designed to provide a cost-effective, energy-efficient solution for those in-use replacement of existing HID wall packs. The WPX1, WPX2 and WPX3 are ideal replacements for 70W, 150W and 250W HID wall packs, respectively. WPX luminaires deliver a uniform, wide distribution. WPX is rated for -30°C to 30°C.

CONSTRUCTION
WPX features a die-cast aluminum main body with optimal thermal management that both enhances LED efficacy and extends component life. The luminaires are IP66-rated, and sealed against moisture and environmental contaminants.

ELECTRICAL
Light engine(s) configurations consist of high-efficacy LEDs and LED lumen maintenance of 60,000 hours at 25°C (77°F) ambient operation (L70 per TM-21 calculation). Class 2 electronic drivers with 0.90 PF. Electronic drivers ensure system power factor of 90% and THD <20%. All luminaires have 6kV surge protection (Note: WPX1 LED P1 package comes with a standard surge protection rating of 4kV. For 6kV surge protection, please order SPD6KV as listed above). Aluminum heat sinks are standard. Optional IP65 spares are an MVOLT 2.5kV, 277V fuse.

INSTALLATION
WPX can be mounted directly over a standard electrical junction box. Three 1/2-inch conduit ports in three sides allow for surface conduit wiring. A port in the back surface allows pass-through wiring for continuous runs. Internal wiring is rated for 90°C. Especially WPX luminaires deliver a uniform, wide distribution. WPX is rated for -30°C to 30°C.

LISTINGS
CSA Certified to meet U.S. and Canadian standards. Suitable for wet locations. IP66 Rated. Luminaire is Dark-Sky Friendly, compliant with IDA requirements. Meets Buy American(x) and BAA requirements. Certified to NEC Classified Products listed www.design.lithonia.com/DLC to confirm DLC qualified configurations. Consult factory for current information

MEMORANDUM FOR: Planning Directors and Interested Parties

FROM: Zachary Olmstead, Deputy Director
Division of Housing Policy Development

SUBJECT: **No Net Loss Law**
Government Code Section 65863

The purpose of Government Code Section 65863 (No Net Loss Law), is to ensure development opportunities remain available throughout the planning period to accommodate a jurisdiction's regional housing need allocation (RHNA), especially for lower- and moderate- income households. This memorandum provides guidance on the implementation of Government Code section 65863, including amendments pursuant to Chapter 367, Statutes of 2017 (Senate Bill 166).

Summary of No Net Loss Requirements

- A jurisdiction must maintain adequate sites to accommodate its remaining unmet RHNA by each income category at all times throughout the entire planning period.

- A jurisdiction may not take any action to reduce a parcel's residential density unless it makes findings that the remaining sites identified in its Housing Element sites inventory can accommodate the jurisdiction's remaining unmet RHNA by each income category, or if it identifies additional sites so that there is no net loss of residential unit capacity.

- If a jurisdiction approves a development of a parcel identified in its Housing Element sites inventory with fewer units than shown in the Housing Element, it must either make findings that the Housing Element's remaining sites have sufficient capacity to accommodate the remaining unmet RHNA by each income level, or identify and make available sufficient sites to accommodate the remaining unmet RHNA for each income category.

- A jurisdiction may not disapprove a housing project on the basis that approval of the development would trigger the identification or zoning of additional adequate sites to accommodate the remaining RHNA.

If you have any questions, or would like additional information or technical assistance, please contact the Division of Housing Policy Development at (916) 263-2911.

No Net Loss Law Statute (Government Code Section 65863) 17

Background

Since 1969, California has required that all jurisdictions (cities and counties) adequately plan to meet the housing needs of everyone in the community. California's local governments meet this requirement by adopting Housing Elements as part of their general plan. To demonstrate the availability of land to accommodate future housing development, a Housing Element is required to include an inventory of housing sites, or "adequate sites", with sufficient capacity by income level to accommodate a jurisdiction's RHNA by income category. (Gov. Code, § 65583, subd. (a)(3).)

Example: RHNA By Income Category	
Very Low Income	300 Units
Low Income	260 Units
Moderate Income	250 Units
Above Moderate Income	650 Units
Total RHNA	1,460 Units

To expand the supply of housing, including affordable housing, and to ensure jurisdictions do not take actions to reduce the potential capacity for new development, the Legislature adopted the No Net Loss Law in 2002. The No Net Loss Law ensures that a jurisdiction maintains a sufficient supply of adequate sites in the Housing Element sites inventory throughout the RHNA planning period. This law was amended by Chapter 367, Statutes of 2017 (Senate Bill 166), which requires sufficient adequate sites to be available at all times to meet a jurisdiction's remaining unmet housing needs for each income category. To comply with the No Net Loss Law, as jurisdictions make decisions regarding zoning and land use, or development occurs, jurisdictions must assess their ability to accommodate new housing on the remaining sites in their Housing Element site inventories. A jurisdiction must add adequate sites if land use decisions or development results in a shortfall of sufficient sites to accommodate its remaining housing need for each income category.

What is an adequate site?

Pursuant to Government Code section 65583.2, an adequate site must be available and suitable to accommodate development. Factors include:

- Have infrastructure available or planned to support a housing development.
- Be available to be developed in the planning period. For non-vacant sites, this means that the existing use is not an impediment to additional residential development.
- Be appropriately sized (larger than half an acre and smaller than 10 acres) to accommodate lower income housing.
- For sites accommodating lower income households, the sites must have appropriate zoning as demonstrated by analysis, or by meeting prescribed densities.
- Identify the number of units (capacity) that can be realistically accommodated on the site.

For more information, visit the Department's Housing Element Building Block Webpage.

No Net Loss Law and Charter Cities

Pursuant to Chapter 856, Statutes of 2018 (Senate Bill 1333), the No Net Loss Law applies to all jurisdictions, including charter cities. This requirement was effective on January 1, 2019, and applies to the current and subsequent Housing Element planning periods.

Responsibilities and Requirements Under No Net Loss Law

No Net Loss Law can be divided into three statutory areas of responsibility for jurisdictions to consider when making land-use decisions related to sites and capacity identified in the Housing Element to accommodate the RHNA:

- Maintaining Sites (Government Code section 65863(a))
- Jurisdiction Actions Relating to Zoning (Government Code section 65863(b)(1))
- Approval of Development at a Lower Density (Government Code section 65863(b)(2))

Maintaining Sites

A jurisdiction must ensure their Housing Element sites inventory continues to have capacity at all times to accommodate the RHNA by income group throughout the planning period. This requires a careful accounting of development on the sites identified in the Housing Element and residential projects throughout the jurisdiction. Action by the jurisdiction to modify development standards in a way that would result in a lower density, limit or stop development on sites identified in the inventory, exchange sites in the inventory, or downzone sites would trigger No Net Loss unless the jurisdiction can make the required findings or identify alternative sites.

If, at any time during the planning period, the jurisdiction finds that there is a shortfall of sites to accommodate its remaining RHNA, the jurisdiction must take immediate action to correct the shortfall by amending its Housing Element sites inventory to either include sites previously unidentified with capacity to accommodate the shortfall, or sites that have been rezoned to correct for the shortfall. Failure to do so constitutes a violation of the No Net Loss law. Please note, Housing Element law requires the element to identify sufficient adequate sites to accommodate the RHNA for all income levels. However, many jurisdictions choose to include sites in their Housing Element inventory above and beyond what is required to accommodate RHNA, including sites that are not considered suitable to accommodate RHNA for lower-income households (e.g., sites less than one-half acre or larger than 10 acres). When making findings that the Housing Element continues to accommodate the remaining RHNA, jurisdictions should only consider capacity of sites in the inventory that was determined adequate. Jurisdictions should not consider inadequate or unsuitable sites as adequate or available to accommodate RHNA for the purposes of No Net Loss Law.

The lack of sites to accommodate the jurisdiction's RHNA represents a fundamental alteration to the jurisdiction's ability to meet Housing Element Law. Therefore, the amended inventory must (1) demonstrate sites to address the shortfall meet the adequate site requirements of Housing Element Law, pursuant to Government Code section 65585(b), and (2) be submitted to the California Department of Housing and Community Development (Department) for review to ensure compliance with state Housing Element Law. (Cal. Gov't Code §65580 et seq.) (Housing Element Law).

Helpful Hints

To ensure that sufficient capacity exists in the Housing Element to accommodate the RHNA throughout the planning period, create a buffer in the Housing Element inventory of at least 15 to 30 percent more capacity than required, especially for capacity to accommodate the lower-income RHNA. Jurisdictions can also create a buffer by projecting capacity less than what is allowed from the maximum density to allow for some reductions in density, or rezoning additional sites above what is needed to accommodate the RHNA.

Jurisdictions should keep an updated accounting of development on the sites in the inventory and throughout the jurisdiction to ascertain the impact that development has on accommodating the remaining RHNA. This can be done in any number of ways, but an example of one methodology can be found in the Resources section below, in addition to a program committing to such an update in the Housing Element.

Decisions to Carefully Consider – Development Limitations

No Net Loss Law explicitly states that at no time may a jurisdiction take an action to permit or cause the sites inventory to be insufficient to meet its remaining RHNA without triggering the statute. The only exception is the 180-day timeframe for replacing capacity from the approval of a development at a lower density that results in a shortfall of sites to accommodate the RHNA (see page 8.) Therefore, a jurisdiction should carefully consider the introduction or adoption of development limitations (e.g., development standard limitations, policies or ordinances that affect the development potential of a site, development moratorium). A jurisdiction should carefully examine the effect of these types of actions on development capacity and consult with their legal counsel prior to approval.

Zoning and Development Standard Modifications – Changes in development standards may affect the potential capacity of a site. For example, an increase in parking requirements, reductions in height limitations or lot coverage, new design requirements, or modifications to set-back requirements, all impact the buildable area of a site and could reduce the housing unit potential. Zoning and development standard modifications should be carefully considered to ensure that they do not impact the potential capacity of a site in a jurisdiction's inventory.

Growth Control Ordinances – If a jurisdiction considers adoption of an ordinance or other measure that limits growth or development potential through unit or population caps, or limits where development can occur through the use of buffers, or by phasing development, it must consider the statewide shortage of housing and the requirements of No Net Loss Law. The adoption of one or more of these types of ordinances could prevent a jurisdiction from accommodating its RHNA either by affecting a site in the inventory, or by limiting development as a whole. Proposed growth limiting ordinances should be prudently drafted so as not to impact the accommodation of the remaining RHNA throughout the planning period. Otherwise, implementation of the ordinance may violate No Net Loss Law.

How do growth control ordinances relate to the RHNA?

Government Code section 65302.8 requires findings be made to ensure that a jurisdiction can continue to fulfill requirements of Housing Element Law, including the accommodation of the RHNA. Findings include a description of the following:

- The jurisdiction's RHNA.
- The specific housing programs and activities being undertaken by the jurisdiction to achieve RHNA objectives.
- How the public health, safety, and welfare would be promoted.
- Fiscal and environmental resources available to the local jurisdiction.

Moratoriums – Pursuant to Government Code section 65858, jurisdictions may adopt a 45-day interim ordinance prohibiting any uses, including housing, that may be in conflict with a contemplated general plan, specific plan, or zoning proposal. This applies to a general plan, specific plan, or zoning proposal that the legislative body, planning commission or the planning department is considering, studying, or intends to study within a reasonable time. While the ordinance may be extended for other uses, a moratorium on the development of multifamily housing cannot be extended unless specific findings are made. In addition, regardless of its duration, a moratorium that affects sites in the Housing Element inventory may be in conflict with the No Net Loss Law, as the law requires a jurisdiction to maintain capacity at all times to accommodate the RHNA. A jurisdiction should consult counsel prior to enacting a moratorium on housing.

Jurisdiction Actions

Jurisdiction actions include downzoning or other actions taken by a jurisdiction to reduce a parcel's allowable residential density. This can be done through a change in zoning or an imposition of density limitations that preclude that ability to achieve densities assumed in the Housing Element sites inventory. If the parcel to be downzoned is identified in the Housing Element, a jurisdiction must make written findings, supported by substantial evidence, that:

- The reduction is consistent with the jurisdiction's adopted general plan, including the Housing Element. For example, this finding could be made if downzone does not change the land use and zoning designation.

- The remaining sites identified in the Housing Element are adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction's remaining share of the RHNA for the planning period. The finding must include a quantification of the remaining unmet need for the jurisdiction's RHNA at each income level and the remaining capacity of sites identified in the Housing Element to accommodate that need by income level.

If a jurisdiction cannot make these findings, it may take action to reduce the residential density of a parcel only if it identifies or rezones additional sufficient adequate sites with an equal or greater residential density in the jurisdiction so that there is sufficient residential unit capacity appropriate to accommodate the RHNA by income level. Actions to identify additional sites or rezone must occur before or concurrently with any action or approval to reduce a parcel's density. Sites identified or rezoned must meet the following criteria:

- Must be considered an adequate site pursuant to the requirements of Government Code section 65583.2.
- If the capacity to be replaced was on a site that was zoned by-right pursuant to Government Code section 65863.2 (h) and (i), then the replacement site must also satisfy those requirements.

As these actions taken by the jurisdiction represent a fundamental alteration to the Housing Element, the Housing Element sites inventory must then be amended and, pursuant to Government Code section 65585(b), be submitted to the Department for review to ensure the compliance with state Housing Element Law, prior to, or concurrently with, any action or approval to reduce a parcel's density.

Helpful Hints

If unsure as to whether new sites identified or rezoned will meet Housing Element adequate sites requirements, contact the Department's Housing Policy Division for a Housing Element reviewer to provide technical guidance.

Rezoned sites may include sites previously identified in the sites inventory that are rezoned to a higher density zoning designation than identified in the sites inventory.

Decisions to Carefully Consider – Changes to Zoning

General Plan Updates – Sometimes land use inconsistencies arise during a general plan update when undertaken separately from the Housing Element. A jurisdiction updating the land use element of the general plan must consider the sites inventory of the Housing Element. If sites identified in the Housing Element site's inventory will be downzoned as part of the general plan update, other sites must be identified or rezoned to accommodate the resulting shortfall of capacity. Under state law, the land use element must be consistent with the Housing Element, and if the land use element does not permit the density in the Housing Element, the Housing Element or land use element must be amended to achieve consistency.

Approval of Development at a Lower Density

A jurisdiction must make written findings or identify additional site capacity if a development is allowed with a lower density than what was assumed in the sites inventory of the Housing Element. A lower residential density sometimes results from a jurisdiction either approving a development with residential units less than what was assumed for the site or affordable to a different income category than the site was assumed to accommodate. Lower residential density could also result from another use, such as commercial being approved on a site identified in the inventory for housing regardless of what the zoning allows.

What constitutes a "lower-density"?

For jurisdictions with an adopted Housing Element found in compliance with Housing Element Law:

- Fewer units will be developed on the site than projected in the sites inventory (capacity) or program of the Housing Element.

For jurisdictions out of compliance with Housing Element Law:

- A density that is lower than 80 percent of the maximum allowable residential density for that parcel, or 80 percent of the maximum density required by Government Code section 65583.2(c)(3), whichever is greater. For more information on default densities, please see the Department's Building Block website.

At the time of approval, the following written findings must be made, and supported by substantial evidence in the record:

- Remaining sites identified in the Housing Element are adequate to meet the jurisdiction's remaining RHNA for the planning period by income category.
- The findings should include a quantification of the remaining unmet need for the jurisdiction's RHNA at each income level and the remaining capacity of sites identified in the Housing Element, to accommodate that need by income level.

If the approval of a development at a lower residential density results in the remaining sites capacity becoming inadequate to accommodate the RHNA by income category, a jurisdiction has up to 180 days from the approval to identify, or rezone, "sufficient additional, adequate, and available sites" to accommodate the remaining RHNA for each income category. Sites identified or rezoned must meet the following criteria:

- Must be considered an adequate site pursuant to the requirements of Government Code section 65583.2.
- If the capacity to be replaced was on a site that was zoned by-right pursuant to Government Code section 65863.2 (h) and (i), then the replacement site must also satisfy those requirements.

A jurisdiction must report in the jurisdiction's Annual Progress Report (APR) any sites that have been identified or rezoned to accommodate the resulting shortfall due to the approval of a development at a lower density. APRs are required to be sent to the Department by all jurisdictions by April 1, pursuant to Government Code section 65400. For more information on completing this section of the APR, see the Department Webpage and select "Annual Progress Reports."

Who makes the findings?

The body that "takes action or approves" the jurisdiction action to reduce a parcel's density or approve a development at a lower density would make the findings. For example, if a zoning administrator approves a development at a lower density, as part of the approval, the administrator would include the appropriate findings. For instance, if the development approval is ministerial under the Streamlined Ministerial Approval Process (SB 35, 2017), the findings should be included as part of the plan review and approval. If the City Council is approving a zone change, it must include the findings in the resolution adopting the zone change.

Helpful Hints

The jurisdiction has only 180 days to complete any rezoning needed to accommodate a shortfall of adequate sites to accommodate the RHNA due to the approval of a development at a lower density. To ensure the rezones can be completed on time, it is recommended that the jurisdiction begin the rezone process early in the development application approval process.

Jurisdictions may post the sites inventory on their website with the capacity estimates from the Housing Element for developers to reference when considering projects on sites identified in the Housing Element.

Decisions to Carefully Consider – Development Approval

Jurisdictions out of compliance with state Housing Element Law - No Net Loss Law provisions related to approving a lower density development applies to all jurisdictions regardless of Housing Element compliance status. A jurisdiction that has not adopted a Housing Element within 90 days of the due date, or has a Housing Element out of compliance, must still comply with No Net Loss requirements, even though they may not have a Housing Element Law compliant sites inventory. If the jurisdiction does not have a current sites inventory to compare the project unit count, the determination of lower density would be required for all new housing development.

Denying an application - A jurisdiction may not deny a housing development application on the basis that approval of the development would trigger the identification, or zoning, of additional adequate sites to accommodate the remaining RHNA.

However, since the term "housing development" is used in the statute, it does not prevent a jurisdiction from denying a non-residential development on an identified site if it would trigger the identification, or rezoning, of additional adequate sites.

Requests for developer assistance with complying with No Net Loss Law – While the jurisdiction is solely responsible for compliance with No Net Loss Law, under limited circumstances the statute does allow a jurisdiction the option to require the applicant to assist the jurisdiction in meeting these provisions. Specifically, requests can be made if an applicant's initial development application requests a residential density that results in the remaining sites in the sites inventory being insufficient to accommodate it remaining RHNA. A jurisdiction cannot require developer assistance if the subsequent approval process results in a reduction of units.

Types of assistance required could include help with the identification of additional sites for potential rezones or community outreach. However, requests should be balanced with the potential impact on the overall viability of the project. Overly burdensome requirements may make a development project financially infeasible and could, in effect, constitute a denial of the project or may violate the Housing Accountability Act (Government Code section 65589.5.)

California Environment Quality Act (CEQA)

The act of identifying or making available additional adequate sites, in and of itself, to comply with the statutory requirements to accommodate the remaining unmet RHNA, does not trigger a CEQA review. However, if making available additional adequate sites requires an increase in density, a rezone, or other actions that constitute a "project" under CEQA, a CEQA analysis would be required.

When approving a site at a lower residential density, the possibility of a CEQA analysis should be considered since the CEQA review must be completed within the 180-day timeline to identify and rezone additional, adequate sites to accommodate the remaining RHNA by income category. The failure to complete a timely CEQA analysis would render the additional sites inadequate to accommodate the remaining unmet RHNA. This would be a violation of No Net Loss Law and could also render the Housing Element out of compliance with state Housing Element Law.

Failure to Comply with No Net Loss Law

In addition to violating of the No Net Loss Law, the failure to ensure that there are sufficient adequate sites to accommodate the unmet RHNA by income category throughout the entire planning period is also a violation of the Housing Element Law. This is because the Housing Element will also fail to identify adequate sites to accommodate the RHNA by income category. As a result, pursuant to Government Code section 65585 (i) and (j), the Department may revoke a jurisdiction's Housing Element compliance and/or refer the violation to the Attorney General. In addition, a third party may file an action to challenge the jurisdiction in court.

Resources

Identifying Your Remaining RHNA and Maintaining Capacity

A jurisdiction should implement an ongoing, project-by-project evaluation of each approved residential development to ensure that sufficient adequate site capacity is available to accommodate the remaining RHNA by income category throughout the planning period. This evaluation could also be used to complete the APR required to be sent to the Department by April 1 of each year.

The evaluation procedure could utilize a spreadsheet or tool, such as the No Net Loss Capacity Calculation Tool below, to subtract the number of residential units in each approved development from the RHNA to determine the remaining unmet RHNA by income category. The total number of approved units by income category could then be subtracted from the Housing Element's sites inventory site capacity by income category to determine the remaining site capacity.

No Net Loss Capacity Calculation Tool Example

Step 1: Determine remaining RHNA

- Identify the reported RHNA from permitted projects as reported in the Housing Element Annual Progress Report (Table B of the Annual Progress Report). If the jurisdiction has not yet completed those reports for the planning period, please go to the Departments Webpage and select "Annual Progress Reports."
- Identify any projects from the planning period that have received their approvals/entitlements and are anticipated to pull their building permits.
- Identify the number of units permitted or that have been approved/entitled in the current reporting year (including accessory dwelling units and other alternatives under Government Code section 65583.1.)
- Calculate the remaining RHNA to date.
- If determining potential No Net Loss capacity of a proposed development, subtract the units from the proposed development to get the remaining RHNA resulting from the proposed project.

Example:
City A has an application for a market rate project for 75 high-end multifamily apartments. This project is being proposed on a site identified in the inventory as having the ability to accommodate a portion of its very low- and low-income RHNA.

Table A: Remaining RHNA

	Very Low-Income	Low-Income	Moderate-Income	Above Moderate-Income
RHNA	300	260	250	650
Year	Reported Progress			
2014	-5	-15	-2	-50
2015			-5	-100
2016	-25	-25	-20	-60
2017				-250
2018	-15	-60	-25	-75
Project Name/APN	Projects approved/entitled anticipated to pull permits			
Siempre Verde 001-256-2154, -57				-4
Project Name/APN	Current Year Progress			
Hightop Condos 001-256-5574		-7		-75
Sunflower Apt 001-256-4475	-25	-50		
	Remaining RHNA To Date			
	230	103	198	36
Project Name/APN	Proposed Project RHNA			
Magnolia Luxury Apt 001-256-4472				-75
Remaining RHNA with Proposed Development				
	230	103	198	0

Step 2: Determine remaining capacity from the Housing Element sites inventory*

- Identify the total site capacity from the Housing Element by income category.
- List the capacity estimated in the Housing Element for an accessory dwelling unit (ADU), or other alternative site capacity methodology.
- List the capacity by income category as identified in the Housing Element inventory for each site identified in the inventory that has an approved/entitled or permitted project in the planning period (identified in the previous table).

Some projects will be developed on sites not identified in the Housing Element. These sites should not be included in the table below, as their capacity was not anticipated to accommodate a portion of the RHNA. They are included in the previous calculation to determine the remaining RHNA. As a result, the additional capacity from these projects can help mitigate loss in capacity from other projects, depending on their affordability.

- For each site rezoned that was identified in the Housing Element (but does not include a project per above) identify the adjusted capacity by income as result of the zone change.
- Calculate the remaining available capacity.
- Subtract the capacity identified in the inventory for the proposed development or rezone to calculate the remaining capacity in the sites inventory by income level.

Example Continued:

Table B: Remaining Capacity*

	Very Low-Income	Low-Income	Moderate-Income	Above Moderate-Income
Capacity from sites	325	370	260	800
Capacity from ADU or other alternative site capacity methodology	15	10		
Project Name/APN	Sites Inventory RHNA from Approved/Entitled or Permitted Project			
001-256-4758- 868				-160
001-256-5631	-25	-25		
001-256-5270 - 330				-60
Dell Webb Master Plan				-250
002-40526-7785	-50	-75		
002 -526 -7788			-15	
001-256-5575	-25	-155		
APN	Capacity changes due to rezone			
003-578-7584 (downzone to open space)			-30	
	Remaining Sites Inventory Capacity to Date			
	240	125	215	330
APN	Sites Inventory Capacity from Development or Rezone			
Magnolia Luxury Apt 001-256-4472		-75		
Remaining Sites Inventory Capacity with Proposed Development or Rezone				
	240	50	215	330

* Note: For most 5th cycle Housing Elements, jurisdictions will need to make assumptions on capacity by income category based on density and the analysis provided in the Housing Element, since the 5th cycle sites are not required to be identified by income category. However, for the 6th and subsequent cycles, sites will be required to identify capacity by income level. Some jurisdictions have chosen to combine low and very low- income RHNA for purposes of calculating site capacity, which should be reflected in supporting charts.

Step 3: Compare remaining RHNA with remaining sites inventory to determine if additional capacity will be needed.

- Input the remaining RHNA from Table A. (If this calculation is due to a proposed development, enter the remaining RHNA from the line “Remaining RHNA with Proposed Development”.)
- Input the remaining sites inventory capacity with a proposed development or rezone.
- Calculate the No Net Loss potential by subtracting the available capacity from the remaining RHNA. If the result is negative, there is a net loss in capacity, and the difference must be accommodated pursuant to No Net Loss Law.

Example:
Approval of the Magnolia Luxury Apartments would result in a net capacity loss of 53 units. City A would have to rezone or identify additional capacity for at least 53 low-income units.

Table C: No Net Loss Calculation

	Very Low-Income	Low-Income	Moderate-Income	Above Moderate-Income
Remaining Capacity (Table B)	240	50	215	330
Remaining RHNA (Table A)	230	103	198	0
No Net Loss Calculation	+10	-53	+17	+330

Please note: There may be many unique circumstances that do not fall neatly into the above example. This calculation tool is meant to be a framework to help jurisdictions think about the best way to identify potential No Net Loss situations.

No Net Loss Law Decision Flow Chart

The following flow chart is intended to help visualize how to determine if a project or a decision would be subject to No Net Loss Law and its remedies. Jurisdictions should consult with legal counsel prior to final determination on whether a project or decision triggers No Net Loss requirements.

No Net Loss Law Decision Flow Chart

Sample Housing Element Program

Sample Program: No Net Loss of Residential Capacity to Accommodate the RHNA by Income Category (Government Code section 65863)

To ensure sufficient residential capacity is maintained to accommodate the RHNA for each income category, within one year of adoption of the Housing Element, develop and implement a formal, ongoing (project-by-project) evaluation procedure pursuant to Government Code section 65863. The evaluation procedure will track the number of extremely low-, very low-, low-, moderate-, and above moderate-income units constructed to calculate the remaining unmet RHNA. The evaluation procedure will also track the number of units built on the identified sites to determine the remaining site capacity by income category and will be updated continuously as developments are approved.

No action can be taken to reduce the density or capacity of a site (e.g., downzone, moratorium), unless other additional adequate sites are identified prior to reducing site density or capacity.

If a development is being approved on an identified site at a lower density than what was assumed for that site identified in the Housing Element, additional adequate sites must be made available within 180 days of approving the development. A program to identify the replacement sites, and take the necessary actions to make the site(s) available and ensure they are adequate sites, will be adopted prior to, or at the time of, the approval of the development.

Time Frame: Within six months of adoption of the Housing Element, develop and implement a formal ongoing evaluation procedure pursuant to Government Code section 65863.

Subsequent to adopting an evaluation procedure, monitor rezones and development of residential units, and update Housing Element sites inventory. Housing Element sites inventory is posted on the Planning Department’s website and will be updated at least once a year.

At least annually, update the sites inventory in conjunction with Housing Element Annual Reports pursuant to Government Code section 65400, as necessary.

Responsibility: Community Development Department

Funding Source: General Fund

No Net Loss Law Statute (Government Code Section 65863)

65863.
(a) Each city, county, or city and county shall ensure that its housing element inventory described in paragraph (3) of subdivision (a) of Section 65583 or its housing element program to make sites available pursuant to paragraph (1) of subdivision (c) of Section 65583 can accommodate, at all times throughout the planning period, its remaining unmet share of the regional housing need allocated pursuant to Section 65584, except as provided in paragraph (2) of subdivision (c). At no time, except as provided in paragraph (2) of subdivision (c), shall a city, county, or city and county by administrative, quasi-judicial, legislative, or other action permit or cause its inventory of sites identified in the housing element to be insufficient to meet its remaining unmet share of the regional housing need for lower and moderate-income households.

(b) (1) No city, county, or city and county shall, by administrative, quasi-judicial, legislative, or other action, reduce, or require or permit the reduction of, the residential density for any parcel to, or allow development of any parcel at, a lower residential density, as defined in paragraphs (1) and (2) of subdivision (g), unless the city, county, or city and county makes written findings supported by substantial evidence of both of the following:

(A) The reduction is consistent with the adopted general plan, including the housing element.

(B) The remaining sites identified in the housing element are adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction's share of the regional housing need pursuant to Section 65584. The finding shall include a quantification of the remaining unmet need for the jurisdiction's share of the regional housing need at each income level and the remaining capacity of sites identified in the housing element to accommodate that need by income level.

(2) If a city, county, or city and county, by administrative, quasi-judicial, legislative, or other action, allows development of any parcel with fewer units by income category than identified in the jurisdiction's housing element for that parcel, the city, county, or city and county shall make a written finding supported by substantial evidence as to whether or not remaining sites identified in the housing element are adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction's share of the regional housing need pursuant to Section 65584. The finding shall include a quantification of the remaining unmet need for the jurisdiction's share of the regional housing need at each income level and the remaining capacity of sites identified in the housing element to accommodate that need by income level.

(c) (1) If a reduction in residential density for any parcel would result in the remaining sites in the housing element not being adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction's share of the regional housing need pursuant to Section 65584, the jurisdiction may reduce the density on that parcel if it identifies sufficient additional, adequate, and available sites with an equal or greater residential density in the jurisdiction so that there is no net loss of residential unit capacity.

(2) If the approval of a development project results in fewer units by income category than identified in the jurisdiction's housing element for that parcel and the jurisdiction does not find that the remaining sites in the housing element are adequate to accommodate the jurisdiction's share of the regional housing need by income level, the jurisdiction shall within 180 days identify and make available additional adequate sites to accommodate the jurisdiction's share of the regional housing need by income level. Nothing in this section shall authorize a city, county, or city and county to disapprove a housing development project on the basis that approval of the housing project would require compliance with this paragraph.

(d) The requirements of this section shall be in addition to any other law that may restrict or limit the reduction of residential density.

(e) This section requires that a city, county, or city and county be solely responsible for compliance with this section, unless a project applicant requests in his or her initial application, as submitted, a density that would result in the remaining sites in the housing element not being adequate to accommodate the jurisdiction's share of the regional housing need pursuant to Section 65584. In that case, the city, county, or city and county may require the project applicant to comply with this section. The submission of an application for purposes of this subdivision does not depend on the application being deemed complete or being accepted by the city, county, or city and county.

(f) This section shall not be construed to apply to parcels that, prior to January 1, 2003, were either (1) subject to a development agreement, or (2) parcels for which an application for a subdivision map had been submitted.

(g) (1) If the local jurisdiction has adopted a housing element for the current planning period that is in substantial compliance with Article 10.6 (commencing with Section 65580) of Chapter 3, for purposes of this section, "lower residential density" means the following:

(A) For sites on which the zoning designation permits residential use and that are identified in the local jurisdiction's housing element inventory described in paragraph (3) of subdivision (a) of Section 65583, fewer units on the site than were projected by the jurisdiction to be accommodated on the site pursuant to subdivision (c) of Section 65583.2.

(B) For sites that have been or will be rezoned pursuant to the local jurisdiction's housing element program described in paragraph (1) of subdivision (c) of Section 65583, fewer units for the site than were projected to be developed on the site in the housing element program.

(2) (A) If the local jurisdiction has not adopted a housing element for the current planning period within 90 days of the deadline established by Section 65588 or the adopted housing element is not in substantial compliance with Article 10.6 (commencing with Section 65580) of Chapter 3 within 180 days of the deadline established by Section 65588, "lower residential density" means any of the following:

(i) For residentially zoned sites, a density that is lower than 80 percent of the maximum allowable residential density for that parcel or 80 percent of the maximum density required by paragraph (3) of subdivision (c) of Section 65583.2, whichever is greater.

(ii) For sites on which residential and nonresidential uses are permitted, a use that would result in the development of fewer than 80 percent of the number of residential units that would be allowed under the maximum residential density for the site parcel or 80 percent of the maximum density required by paragraph (3) of subdivision (c) of Section 65583.2, whichever is greater.

(B) If the council of governments fails to complete a final housing need allocation pursuant to the deadlines established by Section 65584.05, then for purposes of this paragraph, the deadline pursuant to Section 65588 shall be extended by a time period equal to the number of days of delay incurred by the council of governments in completing the final housing need allocation.

(h) An action that obligates a jurisdiction to identify and make available additional adequate sites for residential development pursuant to this section creates no obligation under the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code) to identify, analyze, or mitigate the environmental impacts of that subsequent action to identify and make available additional adequate sites as a reasonably foreseeable consequence of that action. Nothing in this subdivision shall be construed as a determination as to whether or not the subsequent action by a city, county, or city and county to identify and make available additional

adequate sites is a “project” for purposes of the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code).

(i) Notwithstanding Section 65803, this section shall also apply to a charter city.

IN THE PLANNING COMMISSION OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION APPROVING CONSISTENCY DETERMINATION (CD) 24-010 FOR THE CORNERSTONE RESIDENTIAL DEVELOPMENT

On April 20, 2022, the City received an application from Cornerstone for Vesting Tentative Tract Map (VTTM) 8669, Subdivision (SUB) 22-006, Site Plan Design Review (SPDR) 22-004, Conditional Use Permit (CUP) 24-009 and Consistency Determination 24-010. to develop five vacant lots at the northwest corner of the intersection of Collier Canyon Road and Constitution Drive. The project will consist of 21 three story residential buildings and one 5 story apartment building for a total of 253 residential units. The project includes 114 affordable units and four accessible units, one public park and a smaller pocket park, public trail, and related landscaping, parking, stormwater, and frontage improvements. The applicant has submitted for relief under the Housing Crisis Act of 2019 (CA SB330) and Density Bonus under Government Code section 65915.

The Planning Commission, as the City's planning agency, is required by Government Code Section 65402(a) to determine the consistency of the acquisition of real property for public purposes with the City's General Plan.

A Consistency Determination for the acquisition of real property does not constitute a project for the purposes of the California Environmental Quality Act (CEQA) per section 21065 of the California Environmental Quality Act and CEQA Guidelines. Therefore, no environmental review under CEQA is required for CD 24-010.

On December 17, 2024, the Planning Commission held a duly noticed public hearing to consider the Project, staff recommendations, all public comments and testimony, and findings.

NOW, THEREFORE, BE IT RESOLVED by the Planning Commission of the City of Livermore that prior to taking action on the Project, and at a properly noticed public hearing, the Planning Commission reviewed written and oral staff reports, conducted a public hearing on the Project and took testimony, and received into the record all pertinent documents related to the Project (collectively, the "Record Evidence"). The Planning Commission's determination is based on the Record Evidence, which is incorporated into this Resolution by reference.

BE IT FURTHER RESOLVED with respect to the Consistency Determination application, the Planning Commission finds based upon the information presented that:

1. Acquisition of real property as proposed, is determined to be consistent with the City of Livermore General Plan.

2. The subject real property to be acquired are necessary for present or prospective public use.

Finding: The City's acquisition through dedication of real property that is identified as Parcel M and the 10 foot wide Public Access Easement along Collier Canyon Creek in Vesting Tentative Tract Map 8669 for public purposes, does not conflict with any General Plan policies and does not detrimentally affect the implementation of the General Plan. Accepting this dedication of property would implement the General Plan through the Isabel Neighborhood Specific Plan (INSP) by meeting the INSP Open Space-Neighborhood Park requirement on this property (INSP Chapter 2, Figure 2-1 (Pg. 2-5)) and meeting the following General Plan policies and actions:

- Land Use Element (Goal LU-3) (Objective LU-3.1): Create neighborhoods near transit that include a mix of uses and a range of housing types to meet the needs of all residents.
- Objective OSC-5.1 Provide a comprehensive system of parks and recreation facilities in Livermore.
- Objective OSC-5.2 Provide a full range of recreational activities within Livermore's park system.

BE IT FURTHER RESOLVED that the Livermore Planning Commission, based upon its own independent review of the Record Evidence and considerations, and based on the above findings which are necessary to protect the public health, safety, and general welfare, hereby approves Consistency Determination (CD) 24-010.

BE IT FURTHER RESOLVED that the Livermore Planning Commission finds that a Consistency Determination for the acquisition of real property does not constitute a project for the purposes of the California Environmental Quality Act (CEQA) per section 21065 of the California Environmental Quality Act and CEQA Guidelines. Therefore, no environmental review under CEQA is required for CD 24-010.

The documents that constitute the record of proceedings upon which this decision is based can be found in the Community Development Department 1052 S. Livermore Avenue, in Livermore, California.

On the motion by Commissioner _____ , seconded by Commissioner _____, the foregoing Resolution was adopted at the Planning Commission meeting of December 17, 2024, by the following vote:

AYES:

NOES:

ABSENT:

Jacob Anderson, Chairperson

by Stephen Riley, Acting Planning Manager

Secretary to the Planning Commission

IN THE PLANNING COMMISSION OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION RECOMMENDING THE CITY COUNCIL FIND THAT THE CORNERSTONE RESIDENTIAL DEVELOPMENT IS EXEMPT FROM THE PROVISIONS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

On April 20, 2022, the City received an application from Cornerstone for Vesting Tentative Tract Map (VTTM) 8669, Subdivision (SUB) 22-006, Site Plan Design Review (SPDR) 22-004, Conditional Use Permit (CUP) 24-009 and Consistency Determination 24-010 to develop five vacant lots at the northwest corner of the intersection of Collier Canyon Road and Constitution Drive. The project will consist of 21 three story residential buildings and one 5 story apartment building for a total of 253 residential units. The project includes 114 affordable units and four accessible units, one public park and a smaller pocket park, public trail, and related landscaping, parking, stormwater, and frontage improvements. The applicant has submitted for relief under the Housing Crisis Act of 2019 (CA SB330) and Density Bonus under Government Code section 65915.

On December 17, 2024, the Planning Commission held a duly noticed public hearing to consider the Project and staff recommendations, all public comments and testimony, and findings.

NOW, THEREFORE, BE IT RESOLVED by the Planning Commission of the City of Livermore that prior to taking action on the Project, and at a properly noticed public meeting, the Planning Commission reviewed written and oral staff reports, conducted a public hearing on the Project, took testimony, and received into the record all pertinent documents related to the Project (collectively, the “Record Evidence”). The Planning Commission’s determination is based on the Record Evidence, which is incorporated into this Resolution by reference.

BE IT FURTHER RESOLVED, that the Planning Commission of the City of Livermore, based upon its own independent review of the Record Evidence and considerations, recommends the City Council find that the Project is exempt from the California Environmental Quality Act ("CEQA") pursuant to California Government Code Section 65457 and CEQA Guidelines Section 15182(c), which exempts residential projects that implement a Specific Plan where: 1) a public agency has prepared an EIR on a Specific Plan after January 1, 1980, and the residential project conforms to the Specific Plan; and 2) no events described in CEQA Guidelines Section 15162 have occurred (see Exhibit A – Initial Study).

1. Findings: The Isabel Neighborhood Specific Plan and its Supplemental EIR were adopted and certified in 2020 (SCH #2016042039). The Project is located within the Specific Plan’s Village and Center zoning districts. The Project is consistent with the allowed residential uses of the Village and Center and Open Space zoning districts and is within the minimum and maximum densities of 25 to 40 and 40 to 60 dwelling units per acre, respectively. All required development standards have been met, upon making the findings precedent to granting the requested density bonus waivers and incentives/concessions for height, residential entries, podium parking height, open space and comparability of affordable units, but all other design requirements have been fulfilled. Given that State law supersedes local ordinance, the Project’s use of State Density Bonus Law to waive the aforementioned standards does not result in a

Specific Plan inconsistency.

The Project provides more public open space than required through the provision of a 2.5-acre public park, 0.4-acre public pocket park, and 0.34-acre public trail. The project meets the private open space standards through the provision of private balconies on each condominium unit and the use of a waiver for the affordable apartments. The project meets street frontage setbacks with well landscaped frontages and the required parking through the State Density Bonus Law. The Project provides frontage improvements along the Collier Canyon Road and Constitution Drive frontages as required by the Specific Plan. Proposed apartment building architecture has a high-quality contemporary design with traditional elements, and proposed townhome architecture has a high-quality traditional design, both with articulated facades, plane changes, and multiple material types, as required by the Specific Plan and citywide Design Standards and Guidelines.

As called for in the Specific Plan, the Project provides six for-sale affordable units to residents with moderate incomes, and 108 for-rent affordable units to residents with extremely-, very-, and low incomes. The Project also implements Specific Plan policies for a walkable neighborhood that provides housing variety by proposing unit types with a range of floor plans and connecting the site to the existing pedestrian circulation network through multiple connection points. The proposed landscape plan conforms to Specific Plan and Design Standards and Guidelines by exceeding the required number of trees per acre and providing large shade trees along walks and the public right-of-way. Specific Plan sustainability requirements are also satisfied given that the Project proposes rooftop solar arrays, California native landscape species, and electric vehicle charging spaces.

The Project is conditioned to comply with the Mitigation, Monitoring, and Reporting Program (MMRP) adopted with the certified 2020 Supplemental EIR. In addition, the applicant prepared Phase I Environmental Site Assessment (Phase I), geotechnical (soils), biological, traffic, and noise studies that found no significant impacts would occur beyond those identified in the EIR. For these reasons, the Project wholly conforms with the Isabel Neighborhood Specific Plan, which was prepared and approved after January 1, 1980.

2. Findings: No substantial Project changes are proposed which would require major revisions to the previous Supplemental EIR. The Project proposes 253 residential units, consistent with the allowed uses and densities contemplated in the Supplemental EIR. Substantial changes in circumstances have not occurred requiring major revisions to the previous Supplemental EIR, as the site remains vacant, rough graded in the developable areas, and is surrounded by urban development. There is no new information of substantial importance that would result in new impacts not previously discussed, result in more severe impacts, or require modifications to the existing mitigation measures. The applicant-prepared a Phase I, geotechnical (soils), biological, traffic, and noise studies, and found no significant impacts would occur beyond those identified in the EIR and did not yield any new information of substantial

importance. For these reasons, no events described in CEQA Section 15162 have occurred and therefore no further environmental review is required.

BE IT FURTHER RESOLVED, that the Planning Commission of the City of Livermore, based upon its own independent review of the Record Evidence and considerations, recommends that the City Council find that the Project is exempt from the California Environmental Quality Act ("CEQA") pursuant to CEQA Section 21083.3 and CEQA Guidelines Section 15183, which exempts projects consistent with a Community Plan, General Plan, or Zoning where: 1) the project is consistent with a Community Plan, General Plan, or Zoning Action for which a Lead Agency has certified an EIR; and 2) project-specific impacts are not peculiar to the project site.

1. Findings: An Isabel Neighborhood Specific Plan (Specific Plan) zoning district was established as part of the overall Specific Plan project, as approved by City Council in November 2020. Therefore, the Specific Plan can be considered a “Zoning Action” for purposes of CEQA Section 21083.3 and CEQA Guidelines Section 15183. The City Council certified the Specific Plan’s Supplemental EIR (SCH #2016042039) in November 2020 with Specific Plan adoption.

As described in the Planning Commission staff report, dated December 17, 2024, the Project is consistent with the uses, densities, development standards, and design requirements of the Specific Plan. Given that State law supersedes local ordinance, the Project’s use of State Density Bonus Law waivers and incentives/concessions does not result in a Specific Plan inconsistency. The Project is located within the Specific Plan’s Village and Center and Open Space zoning districts. The Project is consistent with the allowed residential uses of the Transition zoning district and is within the Village and Center zoning districts and is within the minimum and maximum densities of 25 to 40 and 40 to 60 dwelling units per acre, respectively. All required development standards have been met, upon making the findings precedent to granting the requested density bonus waivers and incentives/concessions for height, residential entries, podium parking height, open space and comparability of affordable units, but all other development requirements have been fulfilled. The Project provides more public open space than required through the provision of a 2.5-acre public park, 0.4-acre public pocket park, and 0.34-acre public trail. The project meets the private open space standards through the provision of private balconies on each condominium townhome unit and the use of a waiver for the affordable apartments. The project meets street frontage setbacks with well landscaped frontages and the required parking through the State Density Bonus Law. The Project provides frontage improvements along the Collier Canyon Road and Constitution Drive frontages as required by the Specific Plan.

As called for in the Specific Plan, the Project provides six for-sale affordable units to residents with moderate incomes, and 108 for-rent affordable units to residents with extremely-, very-, and low incomes. The Project also implements Specific Plan policies for a walkable neighborhood that provides housing variety by proposing unit types with a range of floor plans and connecting the site to the existing pedestrian circulation network through multiple connection points. The proposed landscape plan

conforms to Specific Plan and Design Standards and Guidelines standards by exceeding the required number of trees per acre and providing large shade trees along walks and the public right-of-way. Specific Plan sustainability requirements are also satisfied given that the Project proposes rooftop solar arrays, California native landscape species, and electric vehicle charging spaces.

2. Findings: There are no specific significant environmental effects which are peculiar to the Project or Project Site, as stipulated in CEQA Guidelines subsection 15183(b)(1) through (b)(4), and as described below:

i. Impacts Peculiar to the Project. The Project is consistent with the uses and intensities contemplated in the Specific Plan. Since Specific Plan adoption, no substantial changes have occurred to the project site nor its surroundings. The site remains undeveloped and rough graded in the areas to be developed. The applicant prepared Phase I, geotechnical (soils), biological, traffic, and noise studies that found no significant impacts would occur beyond those identified in the EIR. For these reasons, no additional project-specific impacts have occurred that are peculiar to the project site.

ii. Environmental Impacts not Previously Analyzed as Significant. The Project is consistent with the uses and intensities contemplated in the Specific Plan, therefore, all potential Project impacts have been previously anticipated and analyzed in the Specific Plan EIR. In addition, the Project is conditioned to comply with the Mitigation, Monitoring, and Reporting Program (MMRP) adopted with the certified 2020 Supplemental EIR. The Project will implement the mitigation measures, reducing significant Project impacts to a less than significant level. The City Council adopted a Statement of Overriding Considerations with the certified 2020 Supplemental EIR. The Project will not exacerbate any significant impacts deemed acceptable in the Statement of Overriding Considerations. The applicant also prepared Phase I, geotechnical (soils), biological, traffic, and noise studies, that found no significant impacts would occur beyond those identified in the EIR. For these reasons, there are no significant environmental impacts that were not previously analyzed.

iii. Potentially Significant Offsite or Cumulative Impacts. Since Specific Plan adoption, no substantial changes have occurred to the project site nor its immediate surroundings. Surrounding residential uses that were present during the 2020 Supplemental EIR analysis remain. Therefore, the EIR already anticipated the cumulative impacts of these projects. For these reasons, there are no potentially significant offsite or cumulative impacts not previously analyzed in the 2020 Supplemental EIR.

iv. Substantial New Information. Since Specific Plan adoption, no substantial changes have occurred to the project site nor its surroundings. The site remains undeveloped and rough graded in developable areas. The applicant also prepared Phase I, geotechnical

(soils), biological, traffic, and noise studies that found no significant impacts would occur beyond those identified in the EIR. For these reasons, there is no substantial new information that was not known at the time of EIR adoption.

v. Uniform Mitigations and Development Standards. The Project is subject to complying with all applicable mitigation measures adopted pursuant to the Mitigation Monitoring and Reporting Program (MMRP) for the Specific Plan's 2020 Supplemental EIR in addition to the uniformly applied development standards of the Specific Plan and Livermore Development Code. The combination of applicable mitigation measures and uniform standards would reduce all potentially significant impacts to a less than significant level. The applicant, or their successors in interest, is required to implement applicable mitigation measures applicable through conditions of approval.

BE IT FURTHER RESOLVED that the Livermore Planning Commission recommends the City Council direct the Planning Manager to file a Notice of Exemption with the Alameda County Clerk if the Project is approved.

The documents that constitute the record of proceedings upon which this decision is based can be found in the Community Development Department, 1052 S. Livermore Avenue, in Livermore, California.

On the motion by Commissioner _____ seconded by Commissioner _____, the foregoing Resolution was passed and adopted at the Planning Commission meeting of December 17, 2024, by the following vote:

INITIAL STUDY/15182 CHECKLIST
DECEMBER 2024

A. BACKGROUND

1. Project Title: Cornerstone Townhomes and Apartment Project

2. Lead Agency Name and Address: City of Livermore
Community Development Department
1052 S. Livermore Avenue
Livermore, CA 94550

3. Contact Person and Phone Number: Steve Riley
Planning Manager
(925) 960-4461

4. Project Location: Northwest corner of Collier Canyon Road and Constitution Drive
Livermore, CA 94550
Assessor's Pacel Numbers (APNs) 905-0015-008, -026, -027, -028, and -029

5. Project Sponsor's Name and Address: The Pacific Companies
430 E. State Street, Suite 100
Eagle, ID 83616

6. General Plan Designation: Isabel Neighborhood Specific Plan, Subarea 2d

7. Specific Plan Designation: Residential Village, Residential Center, and Open Space

8. Zoning Designation: Isabel Neighborhood Specific Plan

9. Required Approvals from Other Public Agencies: None

10. Surrounding Land Uses and Setting:

The approximately 13-acre project site is located northwest of the intersection of Collier Canyon Road and Constitution Road in the City of Livermore, California, and identified as Subarea 2d in the Isabel Neighborhood Specific Plan (INSP), north of Interstate 580 (I-580). The project site is identified by Assessor's Parcel Numbers (APNs) 905-0015-008, -026, -027, -028, and -029. The project site is generally undeveloped and currently contains trees and grassland. Collier Creek and its associated riparian corridor run from the northeast corner of the site to the southwest corner and serve as the site's western property boundary. The northernmost portion of the project site (APN 905-0015-008) was previously developed with a single-family residence, which was demolished in 2019. Three existing wells are located on the project site. An east/west private dirt pedestrian walkway bisects the site, and two private gravel roadways extend into the project site from the southwestern site corner. The first roadway proceeds along the western site boundary, immediately east of the Collier Creek corridor. The second roadway bisects the southern

half of the site, from southwest to northeast. Surrounding existing land uses include undeveloped land and the Livermore Zone 7 Water Agency office building to the north; manufacturing facilities and a business park to the east, across Collier Canyon Road; I-580, undeveloped land, and auto dealerships to the south; and vacant land, a business park, the Alameda County Social Services Agency, Livermore Social Services office, a senior care center, and Costco to the west. In addition, Isabel Station, the future site of Phase I of the Valley Link Rail Project, is located 0.41-mile east of the project site. The project site is designated INSP by the City's General Plan; Residential Village, Residential Center, and Open Space by the INSP; and zoned INSP.

11. Project Description Summary:

The proposed project would include the subdivision of the project site into 13 non-residential parcels (Parcels A through M) and a total of 22 lots for residential uses. A total of 253 dwelling units and 2.42 acres of private open space area would be provided as part of the project. Lots 1 through 21 would be developed with 21 three-story residential buildings comprised of six affordable and 137 market-rate townhomes. The affordable townhome units would include three 922-square-foot (sf) one-bedroom units and three 1,311-sf two-bedroom units. The market-rate townhome units would include 31 1,726-sf three-bedroom units, 67 1,844-sf four-bedroom units, and 39 2,004-sf four-bedroom units. Lot 22 would be developed with a five-story apartment complex with 110 residential units, 108 of which would be affordable and two of which would be market-rate manager units. The units would be a mix of 411-sf studios, 547-sf one-bedroom units, 796-sf two-bedroom units, and 1,079-sf three-bedroom units. The apartment complex would include a first-level podium parking garage with up to 104 vehicle stalls for residents, and storage for 48 bicycles for residents and six bicycles for guests.

In addition, a 2.53-acre public park/open space area would be developed on Parcel M on the southern portion of the site and would include a multi-purpose lawn, a water treatment garden, a picnic area with tables and shade structure, paths, trees, and a children's playground. Parcel L would serve as a 1.61-acre conservation easement and would include a 0.61-acre linear park/trail and a new pedestrian and bicycle path.

The project would require City approval of a Vesting Tentative Map, Site Plan and Design Review, Conditional Use Permit, and Consistency Determination. In addition, as allowed under State Density Bonus Law, the project applicant is requesting waivers and concessions to the City of Livermore development standards from the City of Livermore.

B. BACKGROUND AND INTRODUCTION

The following provides a description of this Modified Initial Study's approach to evaluating the proposed project's consistency with California Environmental Quality Act (CEQA) Guidelines Section 15182 and Government Code Sections 65915 through 65918.

Background

The 2018 INSP[1] was adopted and the associated EIR (#SCH #2016042039) certified by the Livermore City Council in May 2018 however, implementation of the 2018 INSP was contingent upon the extension of San Francisco Bay Area Rapid Transit (BART) to Isabel Avenue in the City of Livermore. The Livermore City Council rescinded the approval actions of the 2018 INSP

[1] City of Livermore. *Isabel Neighborhood Specific Plan.* Amended November 2022.

(Resolution #2018-067) after the BART extension to Livermore failed to pass voting by the BART Board of Directors.

In 2020, the City of Livermore prepared an updated INSP, which included modifications to the INSP policies and maps related to the proposed Valley Link Rail system, as well as minor land use map adjustments to better reflect the existing development. A Supplemental EIR (SEIR) to the 2018 INSP EIR[2] was prepared and certified for the 2020 INSP update.

The INSP identifies the approximately 13-acre project site as Residential Village, Residential Center, and Open Space, which assumed the development of residential uses with densities of 25-40 dwelling units per acre (du/acre) within the Residential Village, and 40-60 du/acre in the Residential Center.

CEQA Guidelines Section 15182

This Initial Study/15182 Checklist identifies and analyzes the potential environmental impacts of the proposed project. The information and analysis presented in this document is organized in accordance with the order of the CEQA checklist in Appendix G of the CEQA Guidelines.

Government Code Section 65457 and CEQA Guidelines Section 15182 provide an exemption from CEQA for residential projects undertaken pursuant to and in conformity with that specific plan. The scope of this residential exemption applies to land subdivisions, zoning changes, and residential planned unit developments. The requirements of Section 15182 state the following:

> (a) General. Certain residential, commercial and mixed-use projects that are consistent with a specific plan adopted pursuant to Title 7, Division 1, Chapter 3, Article 8 of the Government Code are exempt from CEQA, as described in subdivisions (b) and (c) of this section.
>
> (b) Projects Proximate to Transit.
> (1) Eligibility. A residential or mixed-use project, or a project with a floor area ratio of at least 0.75 on commercially-zoned property, including any required subdivision or zoning approvals, is exempt if the project satisfies the following criteria:
> (A) It is located within a transit priority area as defined in Public Resources Code section 21099(a)(7);
> (B) It is consistent with a specific plan for which an environmental impact report was certified; and
> (C) It is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy for which the State Air Resources Board has accepted the determination that the sustainable communities strategy or the alternative planning strategy would achieve the applicable greenhouse gas emissions reduction targets.
> (2) Limitation. Additional environmental review shall not be required for a project described in this subdivision unless one of the events in section 15162 occurs with respect to that project.
> (3) Statute of Limitations. A challenge to a project described in this subdivision is subject to the statute of limitations periods described in section 15112.
>
> (c) Residential Projects Implementing Specific Plans
> (1) Eligibility. Where a public agency has prepared an EIR on a specific plan after January 1, 1980, a residential project undertaken pursuant to and in conformity to that specific plan is

[2] City of Livermore. *Isabel Neighborhood Specific Plan Public Review Draft Supplemental Environmental Impact Report.* June 23, 2020.

exempt from CEQA if the project meets the requirements of this section. Residential projects covered by this section include but are not limited to land subdivisions, zoning changes, and residential planned unit developments.

(2) Limitation. If after the adoption of the specific plan, an event described in Section 15162 occurs, the exemption in this subdivision shall not apply until the city or county which adopted the specific plan completes a subsequent EIR or a supplement to an EIR on the specific plan. The exemption provided by this section shall again be available to residential projects after the Lead Agency has filed a Notice of Determination on the specific plan as reconsidered by the subsequent EIR or supplement to the EIR.

(3) Statute of Limitations. A court action challenging the approval of a project under this subdivision for failure to prepare a supplemental EIR shall be commenced within 30 days after the lead agency's decision to carry out or approve the project in accordance with the specific plan.

As discussed above, 2020 INSP update included development of the project site with residential uses. The proposed project would be consistent with the site's INSP designation of Residential Village, Residential Center, and Open Space. With respect to Section 15182(b)(1) and Section 15182(c)(1), the proposed project would be a residential project involving land subdivision. The project site is located within a "transit priority area," pursuant to CEQA Section 21099(a)(7). A transit priority area is defined therein as an area within 0.5-mile of an existing or planned major transit stop, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program or applicable regional transportation plan. The 2020 updated INSP included development of two new Valley Link Rail Project stations in the City. One station is the Isabel Station, the future site of Phase I of the Valley Link Rail Project, which is located 0.41-mile east of the project site.

The project site is located within Subarea 2d of the INSP, in which between 200 and 286 housing units are required, with a target of 243 units. The proposed project would include a total of 253 units, which is within the Subarea 2d Performance Measure specified range of units. Subarea 2d Performance Measure (a) requires at least two residential product types consistent with INSP Policy P-LU-29. The proposed project would include two residential product types, including 143 affordable and market-rate townhomes and 110 affordable and market-rate apartment units. Subarea 2d Performance Measure (b) requires building heights to be less than 50 feet above existing grade, or less than the Scenic Corridor limit. While the apartment complex component of the proposed project would result in a maximum building height greater than 50 feet, as allowed under State Density Bonus Law (Government Code Sections 65915 through 65918), the project applicant is requesting waivers and concessions to deviate from Performance Measures and development standards. With the exception of the waivers and concessions allowed under the State Density Bonus Law, the proposed project would otherwise meet the development standards set forth for the site. Given that State law supersedes local ordinance, the proposed project's use of State Density Bonus Law to waive the INSP Scenic Corridor Policy requirements related to building height and setback requirements does not result in a Specific Plan inconsistency.

As set forth by Section 15182(b)(2) and Section 15182(c)(2), the proposed project may only qualify for exemption under Section 15182 if none of the conditions identified in CEQA Guidelines Section 15162 are present. The following identifies the standards set forth in Section 15162(a):

1. Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement

of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3. New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

   (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

   (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR [or negative declaration];

   (C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

   (D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

The following discussion herein confirms that the project has been evaluated for significant impacts pursuant to CEQA. The determination in this document is that the project's impacts have been considered in previous CEQA documents (i.e., the 2018 INSP EIR and 2020 INSP SEIR) that were certified by the City of Livermore and deemed a sufficient and adequate analysis of the environmental impacts of the INSP. The discussion concludes that the conditions set forth in Section 15162 are not triggered by the proposed project. As such, a 15182 Checklist is the appropriate environmental document for the proposed project, pursuant to CEQA Guidelines Section 15182.

C. PROJECT DESCRIPTION

The following provides a description of the project site's current location and setting, as well as the proposed project components and the discretionary actions required for the project.

Project Location and Setting

The project site is located at the northwest corner of the intersection of Collier Canyon Road and Constitution Drive in the City of Livermore, California (see Figure 1 and Figure 2). The approximately 13-acre site (APNs 905-0015-008, -026, -027, -028, and -029) is generally undeveloped and currently contains trees and grassland. Collier Creek and its associated riparian corridor run from the northeast corner of the site to the southwest corner and serves as the site's western property boundary. The northernmost portion of the project site (APN 905-0015-008) was previously developed with a single-family residence, which was demolished in 2019; three existing wells are located on-site. An east/west private dirt pedestrian walkway bisects the site, and two private gravel roadways extend into the project site from the southwestern site corner. The first roadway proceeds along the western site boundary, immediately east of the Collier Creek corridor. The second roadway bisects the southern half of the site, from southwest to northeast. The topography of the site is relatively flat, with elevations ranging from approximately 415 to 435 feet above mean sea level (amsl).

Surrounding existing land uses include undeveloped land and the Livermore Zone 7 Water Agency office building to the north; manufacturing facilities and a business park to the east, across Collier Canyon Road; I-580, undeveloped land, and auto dealerships to the south; and vacant land, a business park, the Alameda County Social Services Agency, Livermore Social Services office, a

senior care center, and Costco to the west. In addition, Isabel Station, the future site of Phase I of the Valley Link Rail Project, is located 0.41-mile east of the project site. The project site is located within INSP Subarea 2d. The INSP designates the site as Residential Village, Residential Center, and Open Space, and the site is zoned INSP.

Project Components

The proposed project would include the subdivision of the project site into 13 non-residential parcels (Parcels A through M) and a total of 22 lots for residential uses. A total of 253 residential units, 2.53 acres of public park, and 2.42 acres of private open space area would be provided as part of the project.

Lots 1 through 21 would be developed with 21 three-story residential buildings comprised of six affordable and 137 market-rate townhomes. The affordable townhome units would include three 922-sf one-bedroom units and three 1,311-sf two-bedroom units. The market-rate townhome units would include 31 1,726-sf three-bedroom units, 67 1,844-sf four-bedroom units, and 39 2,004-sf four-bedroom units. Each unit would include a one- or two-car garage, a porch, and a deck. The maximum building height of the townhome buildings would be 40 feet and two inches. On-site amenities for the townhome residents would be located within Parcel J on the northern portion of the site and would include a 0.4-acre pocket park, a turf activity area, community garden, and picnic area with shade structure and tables.

Lot 22 would be developed with a five-story apartment complex with 110 residential units, 108 of which would be affordable, and two of which would be market-rate manager units. The units would be a mix of 411-sf studios, 547-sf one-bedroom units, 796-sf two-bedroom units, and 1,079-sf three-bedroom units. The affordable residential units would be deed-restricted and required to meet the income category criteria pursuant to Government Code Sections 65915 through 65918. The complex would include a 32,745-sf first-level podium parking garage with up to 104 vehicle stalls, and storage for 48 bicycles for residents and six bicycles for guests. The maximum building height of the five-story building would be 61 feet and one inch, with a few architectural features that would be up to 71 feet. On-site amenities for the apartment residents would include a children's playground area, community garden, two outdoor picnic areas, and a dog run.

A 2.53-acre public park would be developed on Parcel M on the southern portion of the site and would include a multi-purpose lawn, a water treatment garden, a picnic area with tables and shade structure, paths, trees, and a children's playground (see Figure 4).

Parcels J, K, and L would include a total of 2.42 acres of open space uses. Parcel J, located in the northwestern portion of the project site, would serve as an approximately 0.4-acre pocket park. Parcel K, located along the eastern site boundary, adjacent to Collier Canyon Road, would include approximately 0.42-acre of landscaping and open space, and includes existing easements for public utilities and a new water well. Parcel L, located along the western boundary of the project site, would also serve as an approximately 1.61-acre conservation easement and would include a 0.61-acre linear park/trail and a new pedestrian and bicycle path.

The project would require City approval of a Vesting Tentative Map, Site Plan Design Review, and Consistency Determination. Pursuant to Livermore Development Code Section 4.02.080, the proposed project would also require a Conditional Use Permit (CUP) for grading activities within 150 feet of the top of the Collier Creek bank. In addition, as allowed under State Density Bonus Law, the project applicant is requesting waivers and concessions to the City of Livermore development standards.

Figure 1
Regional Vicinity Map

Figure 2
Project Site Boundaries

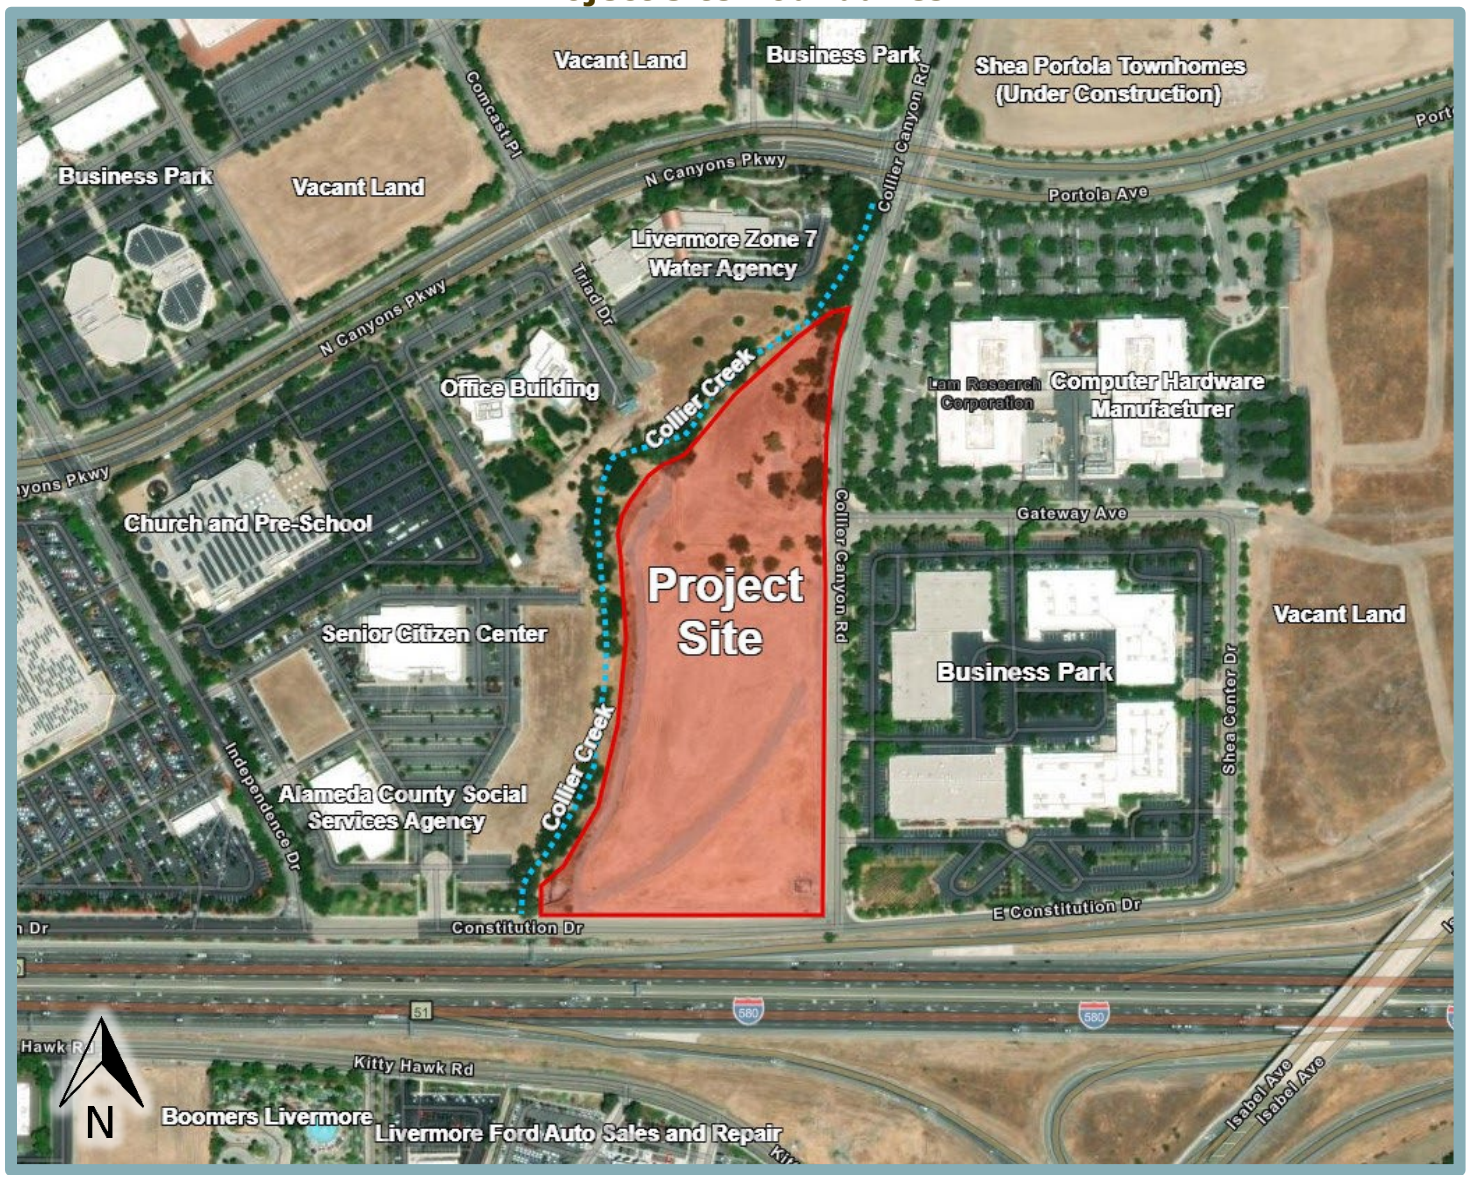

Figure 3
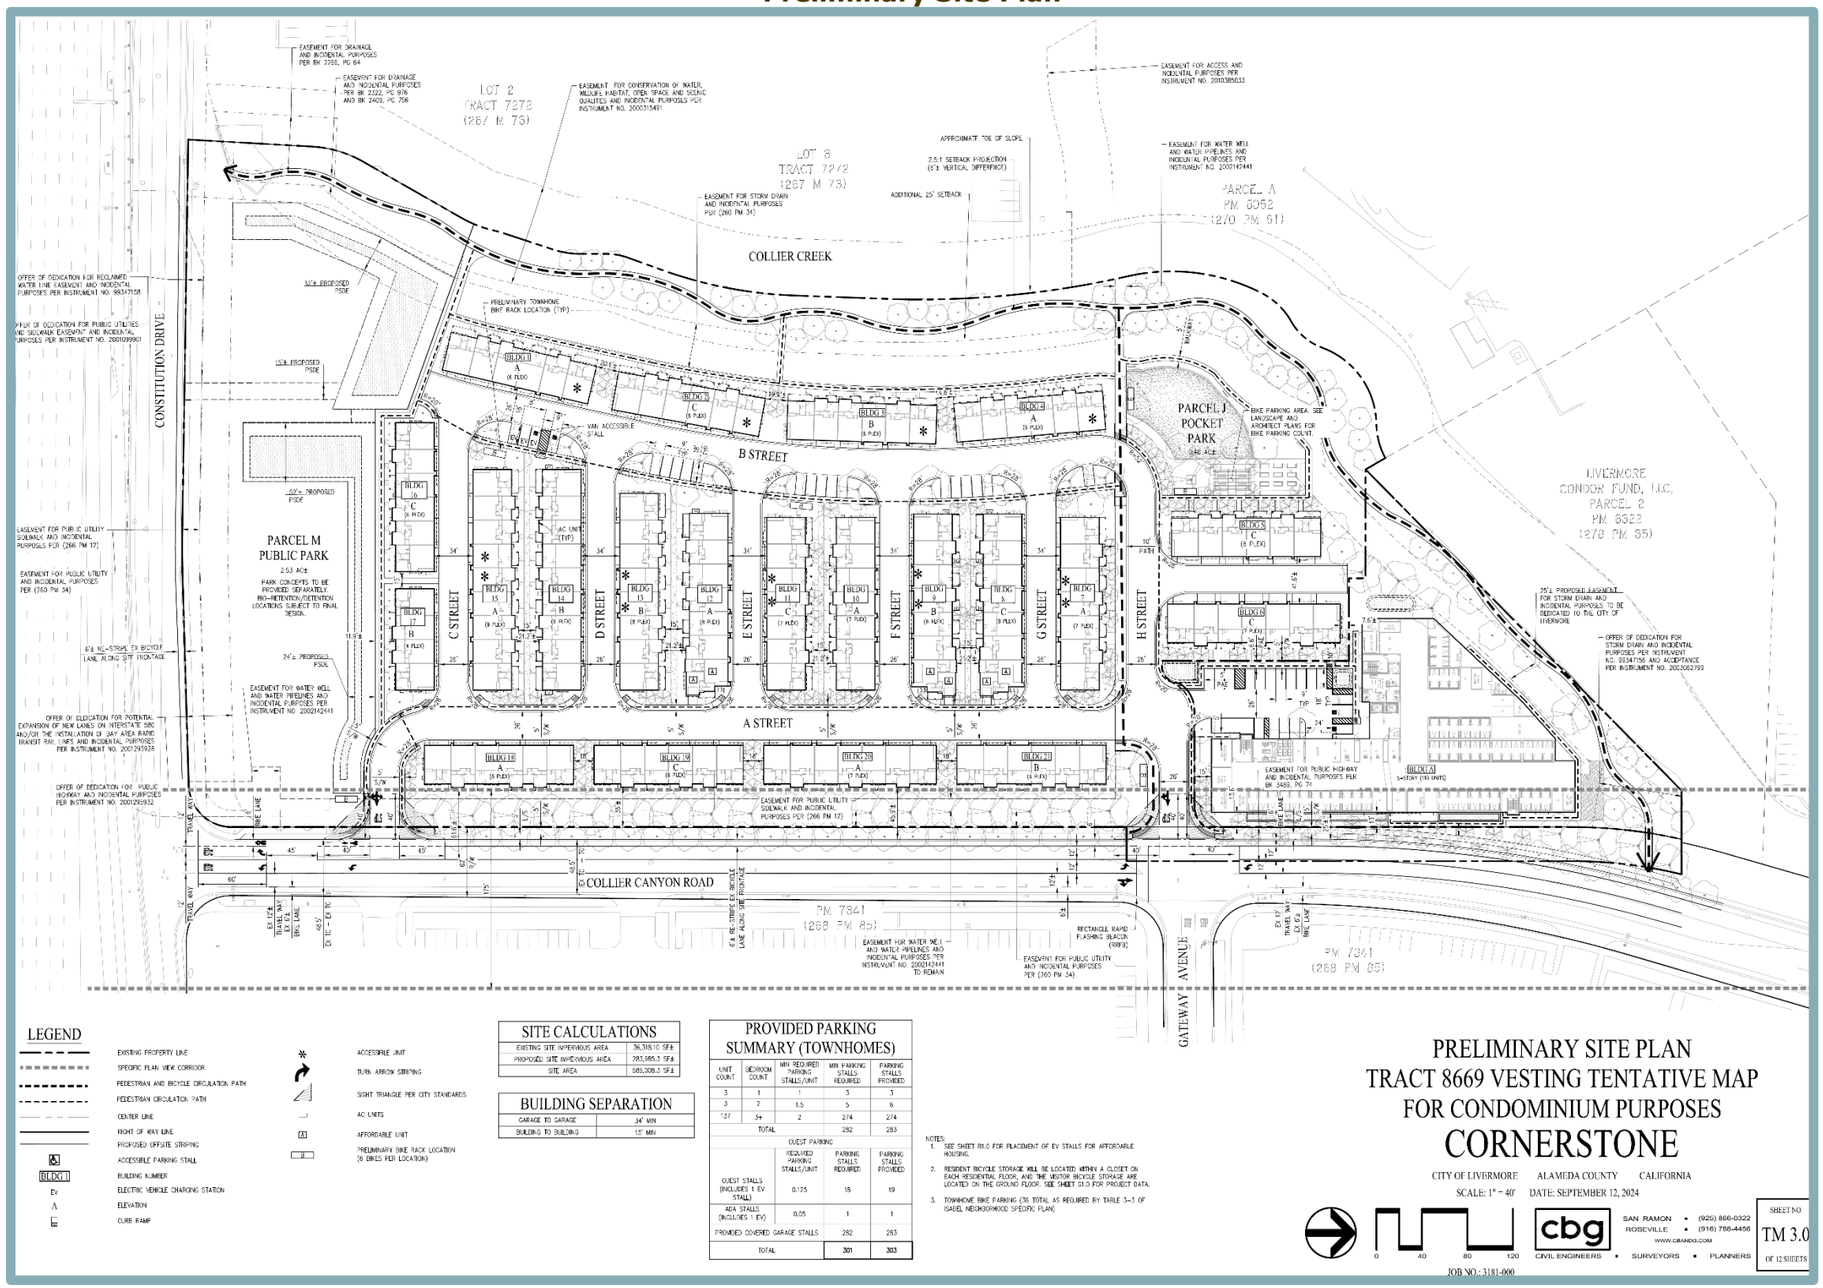
Preliminary Site Plan



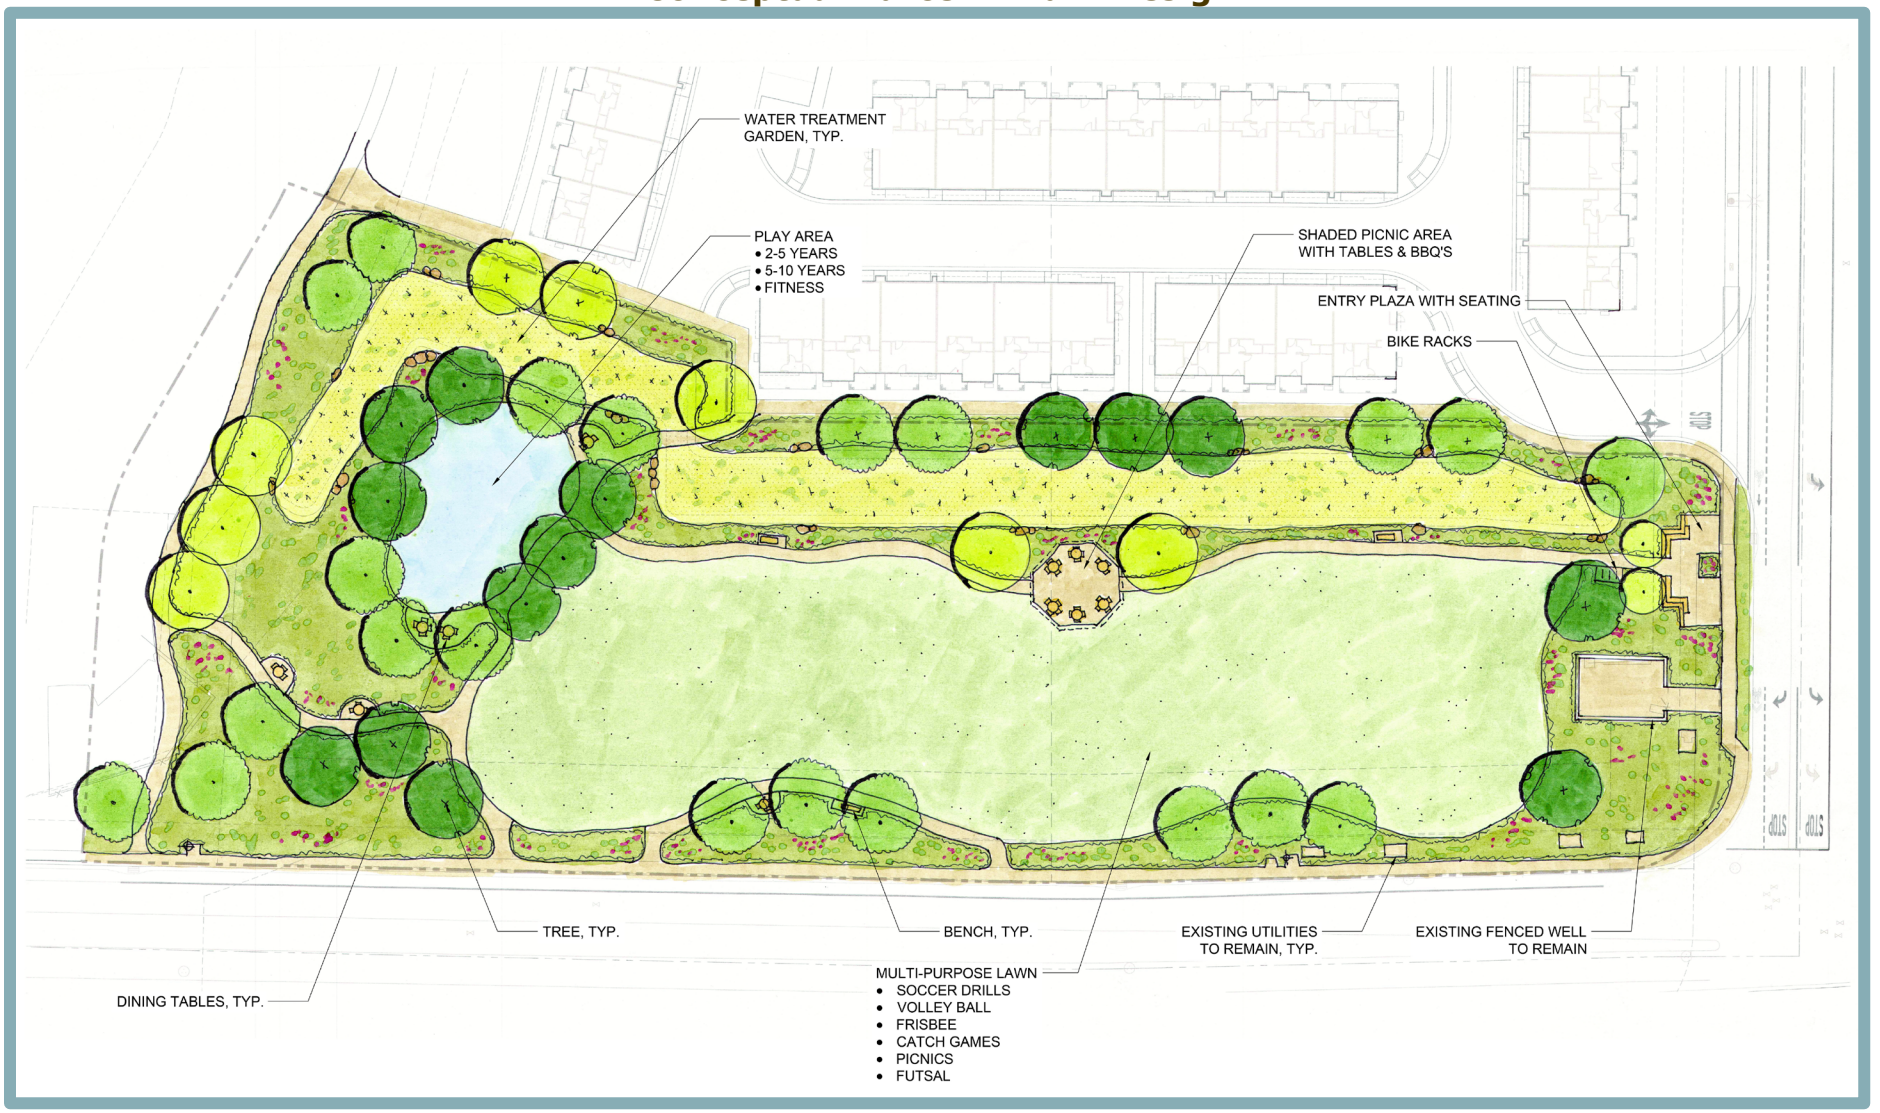


Figure 4
Conceptual Parcel M Park Design

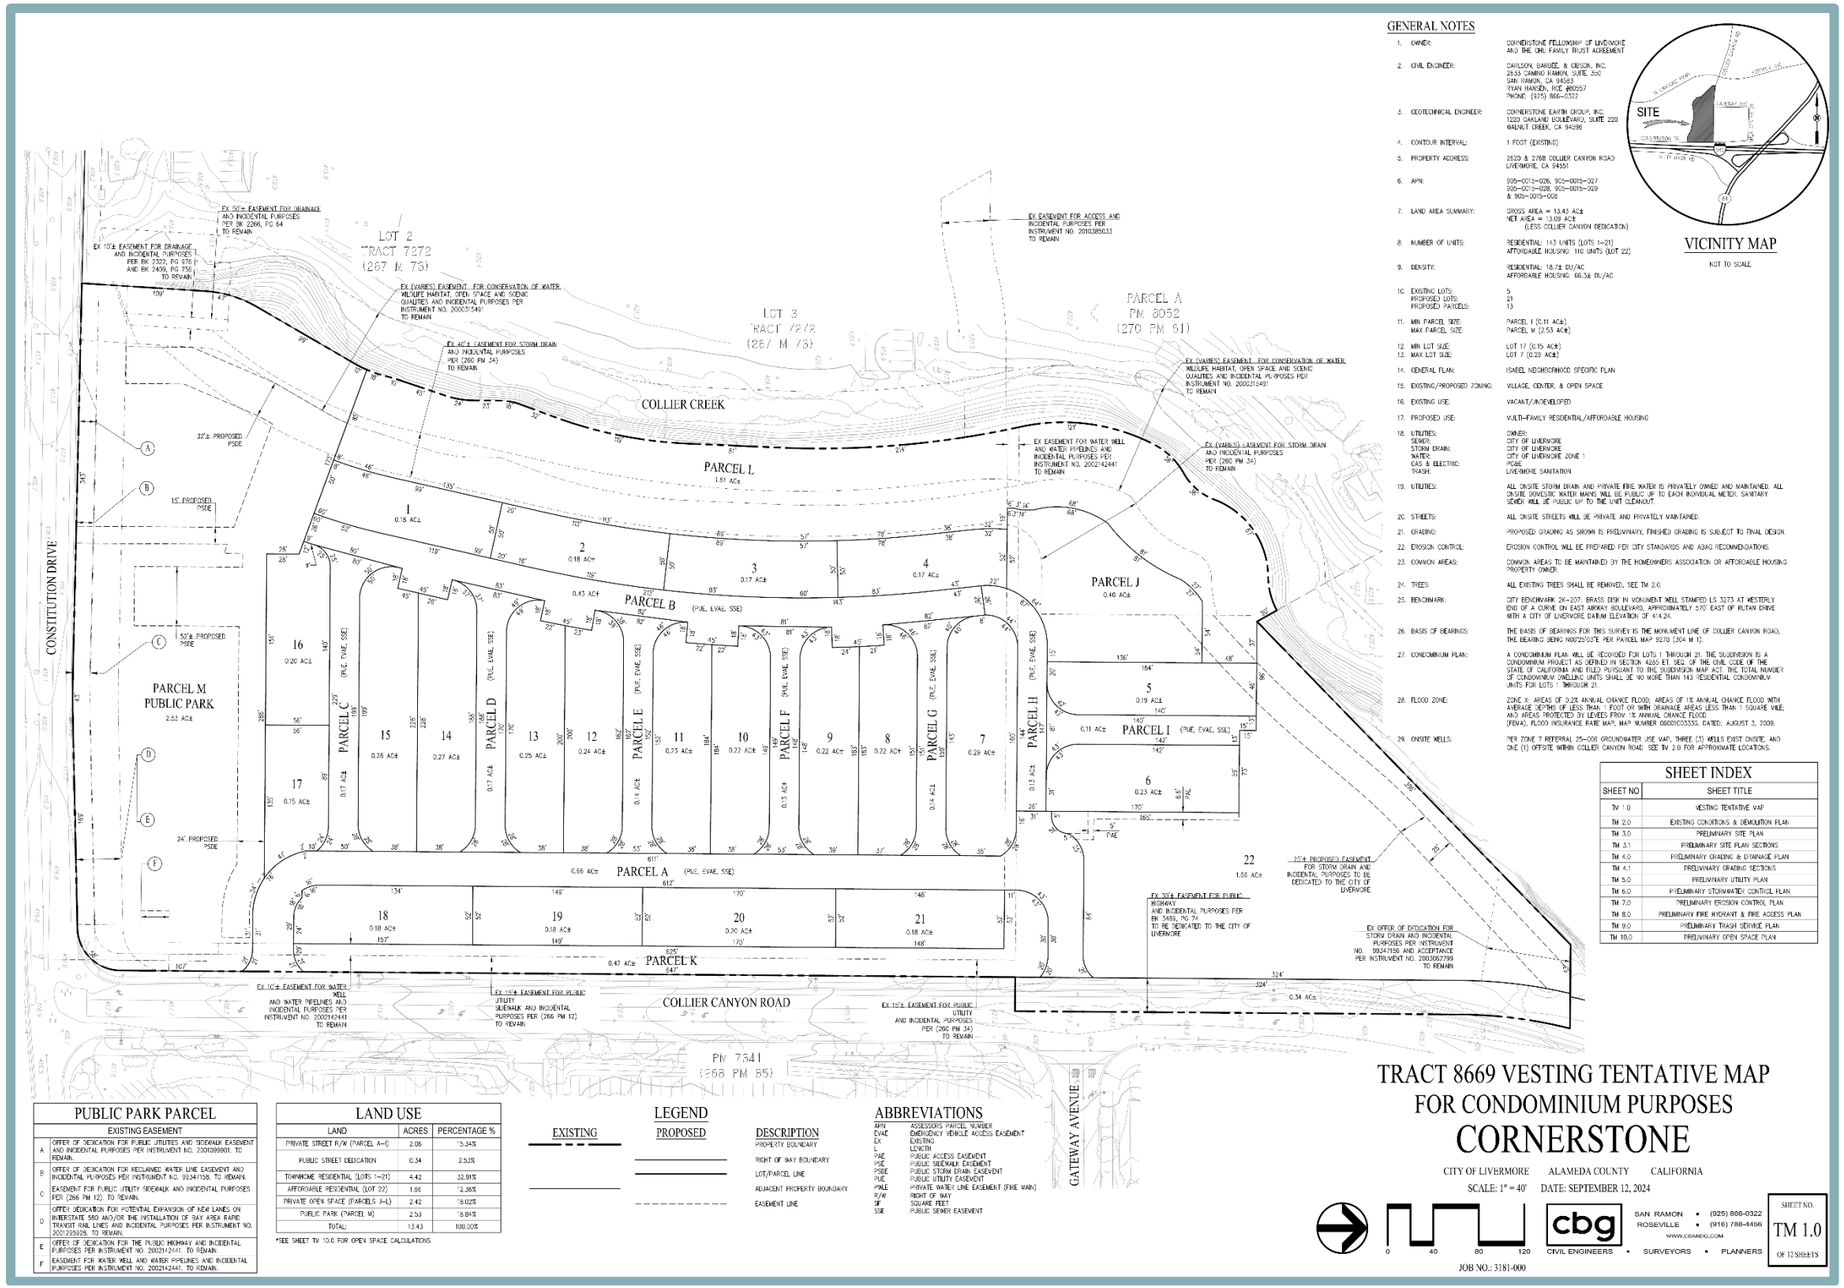
Vesting Tentative Map

The Vesting Tentative Map would subdivide the project site into 13 parcels (see Figure 5). Parcels A through I would include a total of 2.06 acres of private streets.

Parcels J through L would include a total of 2.42 acres of private open space. Parcel M would include a total of 2.53 acres of public park. Lots 1 through 21 would range in size from 0.17-acre to 0.29-acre, and include a total of 4.42 acres of townhome residential uses. Lot 22 would include a total of 1.66 acres of affordable apartment residential uses.

Below is additional detail regarding the site access and circulation, landscaping, utility infrastructure, and off-site improvements.

Site Access and Circulation, and Roadway Improvements



Parcels A through I would include a total of 2.06 acres of private roadways. Site access would be provided by a new internal roadway system that would connect to two new 26-foot wide driveway entrances from Collier Canyon Road along the eastern site boundary. The internal roadway system would form a grid pattern, with A Street and B Street running north-south, and C Street through H Street running east-west. All roadways would be 26 feet wide. Four- and five-foot wide sidewalks would be provided along all internal roadways.

Each unit within Lots 1 through 21 would include a one-or two-car garage, for a total of 283 garage parking spaces. The townhome portion of the proposed project would also include 19 uncovered guest parking spaces, one Americans with Disabilities Act (ADA) compliant guest parking space, for a total of 303 parking spaces. A total of 36 visitor bicycle stalls would be provided for the townhomes. The affordable housing complex within Lot 22 would include a first-level podium parking garage with 87 covered stalls and 17 uncovered stalls, for a total of 104 vehicle stalls, and storage for 48 bicycles for residents and six bicycles for guests.

As discussed above, Parcel L would serve as a 1.61-acre conservation easement and would include a 0.61-acre linear park/trail and a new pedestrian and bicycle path. The new path would run adjacent to Collier Creek and would connect to the sidewalks on Collier Canyon Road and Constitution Drive. New five-foot wide sidewalks would be included intermittently along the internal roadways.

Landscaping

All on-site trees would be removed as part of the proposed project; however, as shown in Figure 5

GENERAL NOTES

JOB NO.: 3181-000

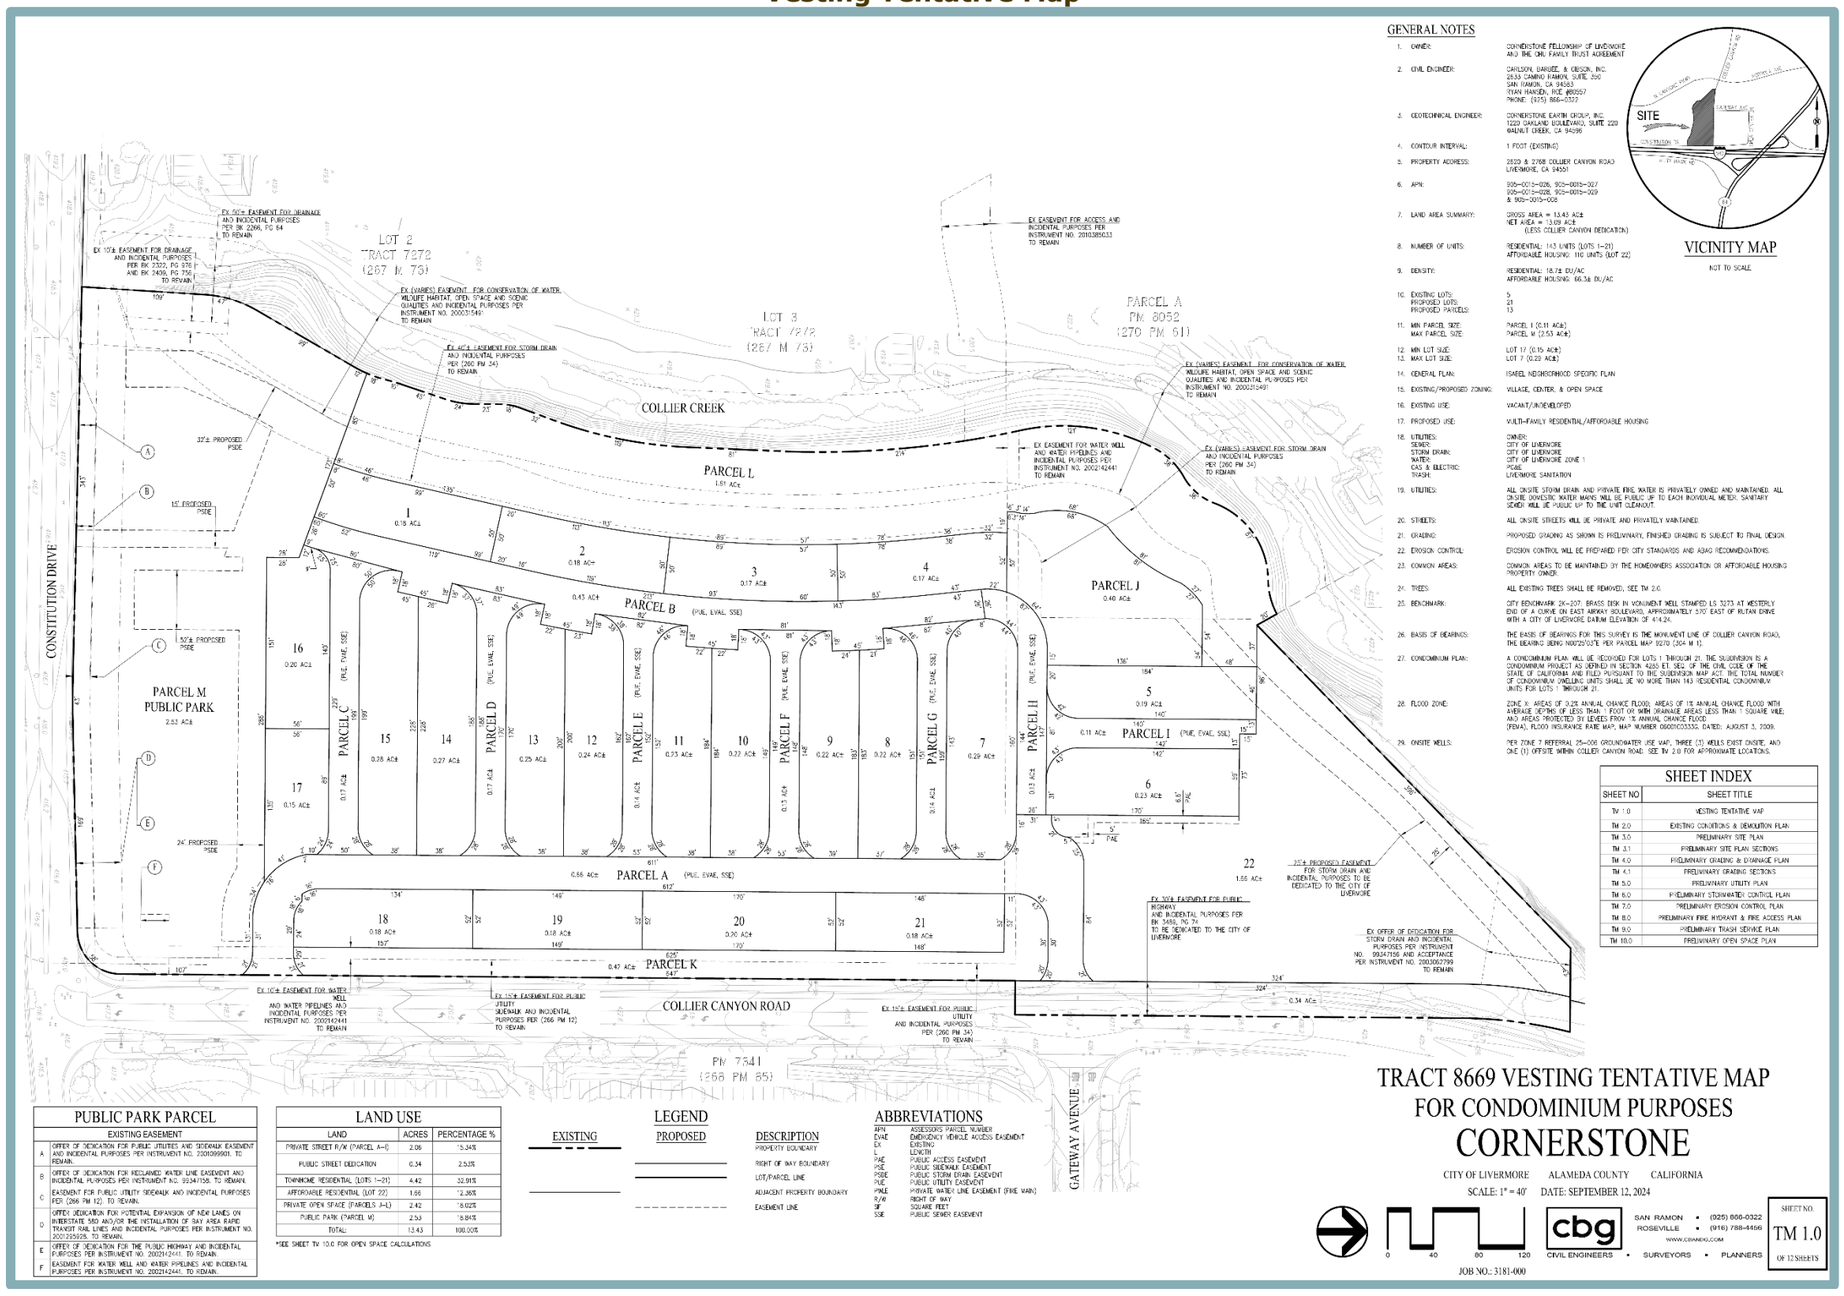
SHEET NO. TM 1.0 OF 10 SHEETS

Figure 6, an assortment of shade trees, accent trees, and native tree species would be planted throughout the project site. In addition, a variety of groundcover and grasses would be planted throughout the project site. All landscaping improvements would be consistent with Section 13.25 of the Municipal Code, Water Efficient Landscape, and would be irrigated by an automatic irrigation system.

Utilities

Water and sewer service for the proposed development would be provided through connections to existing City infrastructure located in the site vicinity (see Figure 7). The proposed project would include installation of new eight-inch water lines throughout the project site. The water system within the project site would connect to an existing 14-inch water main within Collier Canyon Road.

Figure 5
Vesting Tentative Map



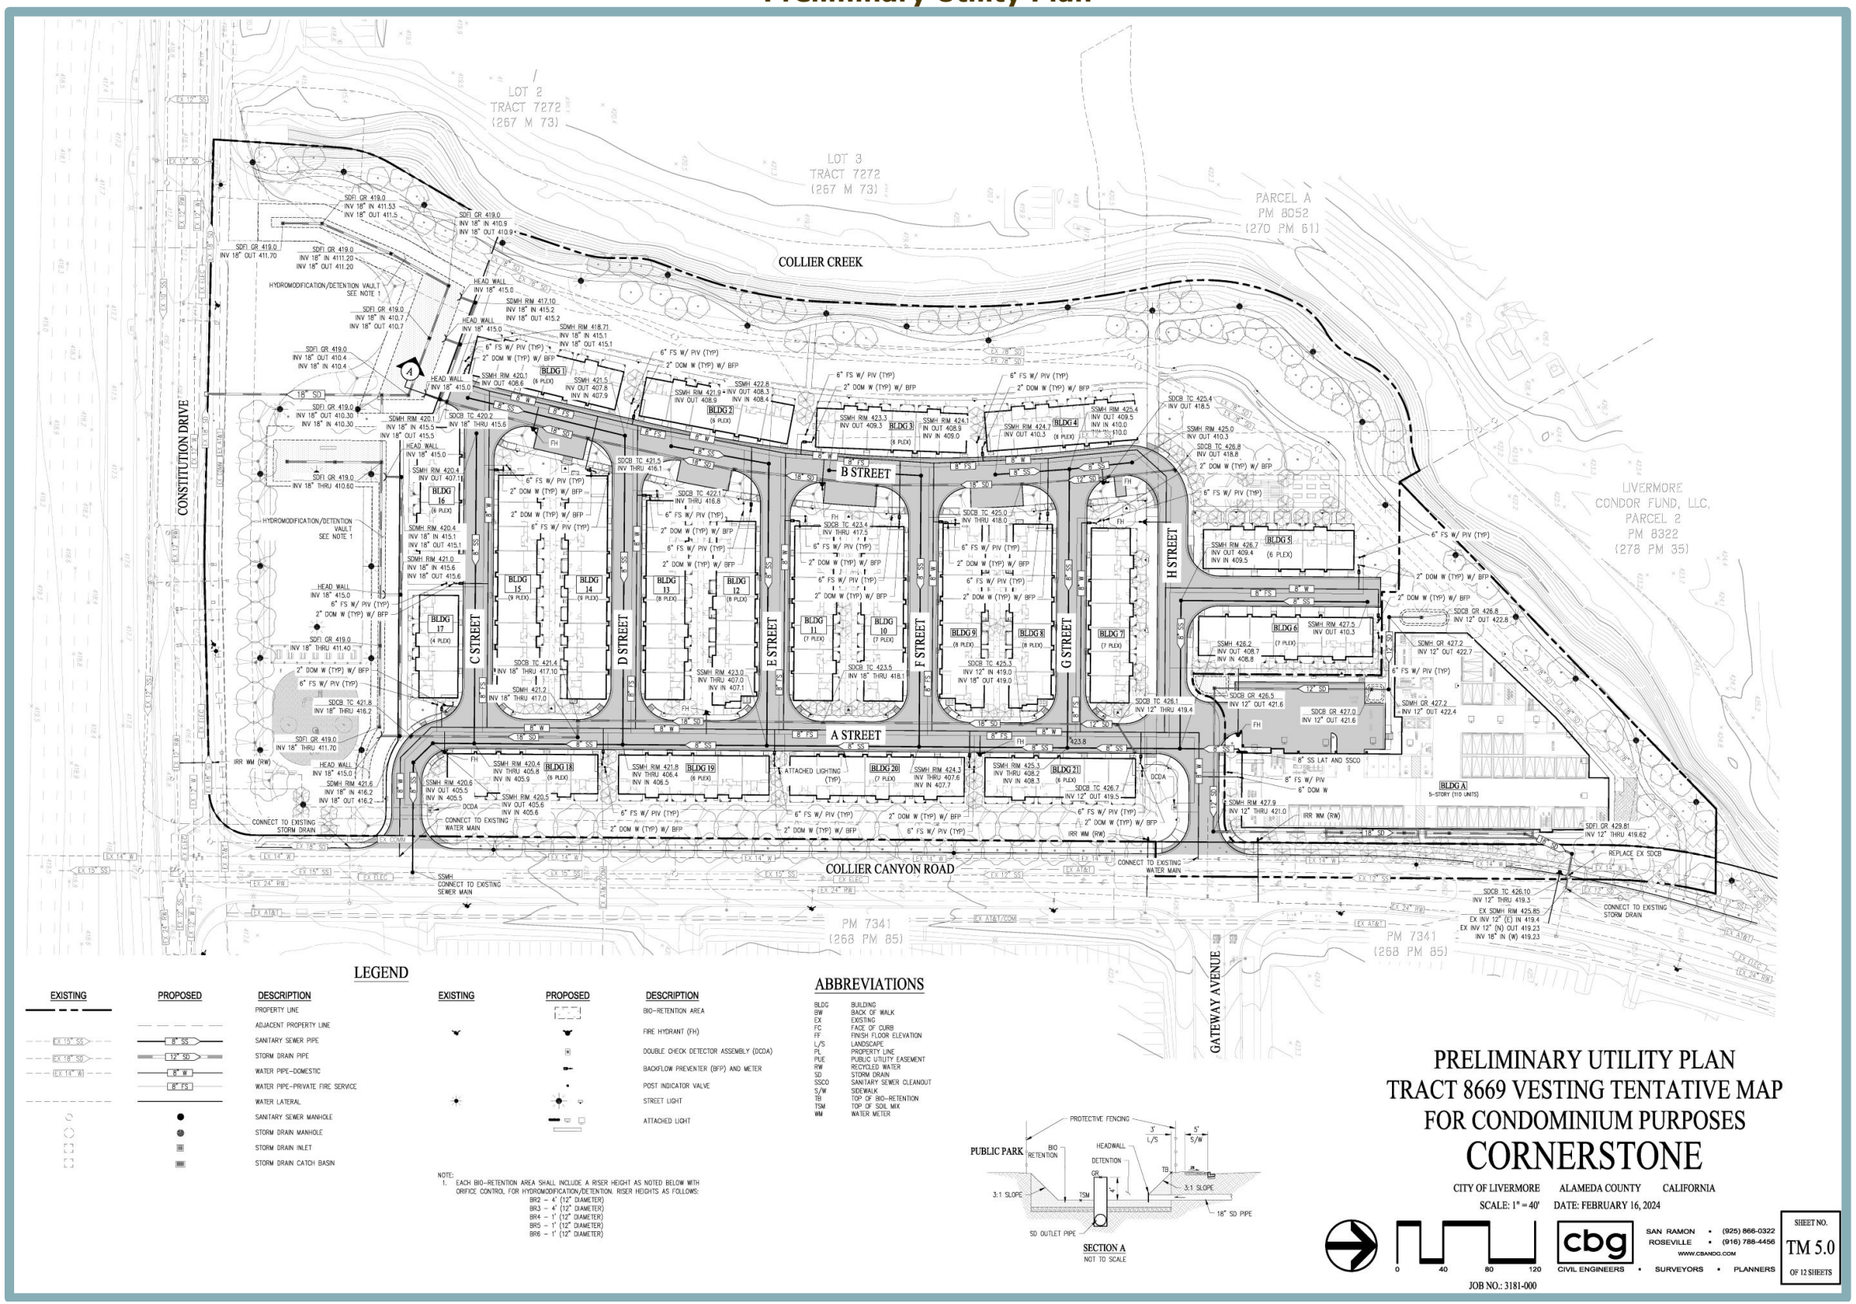


Figure 6
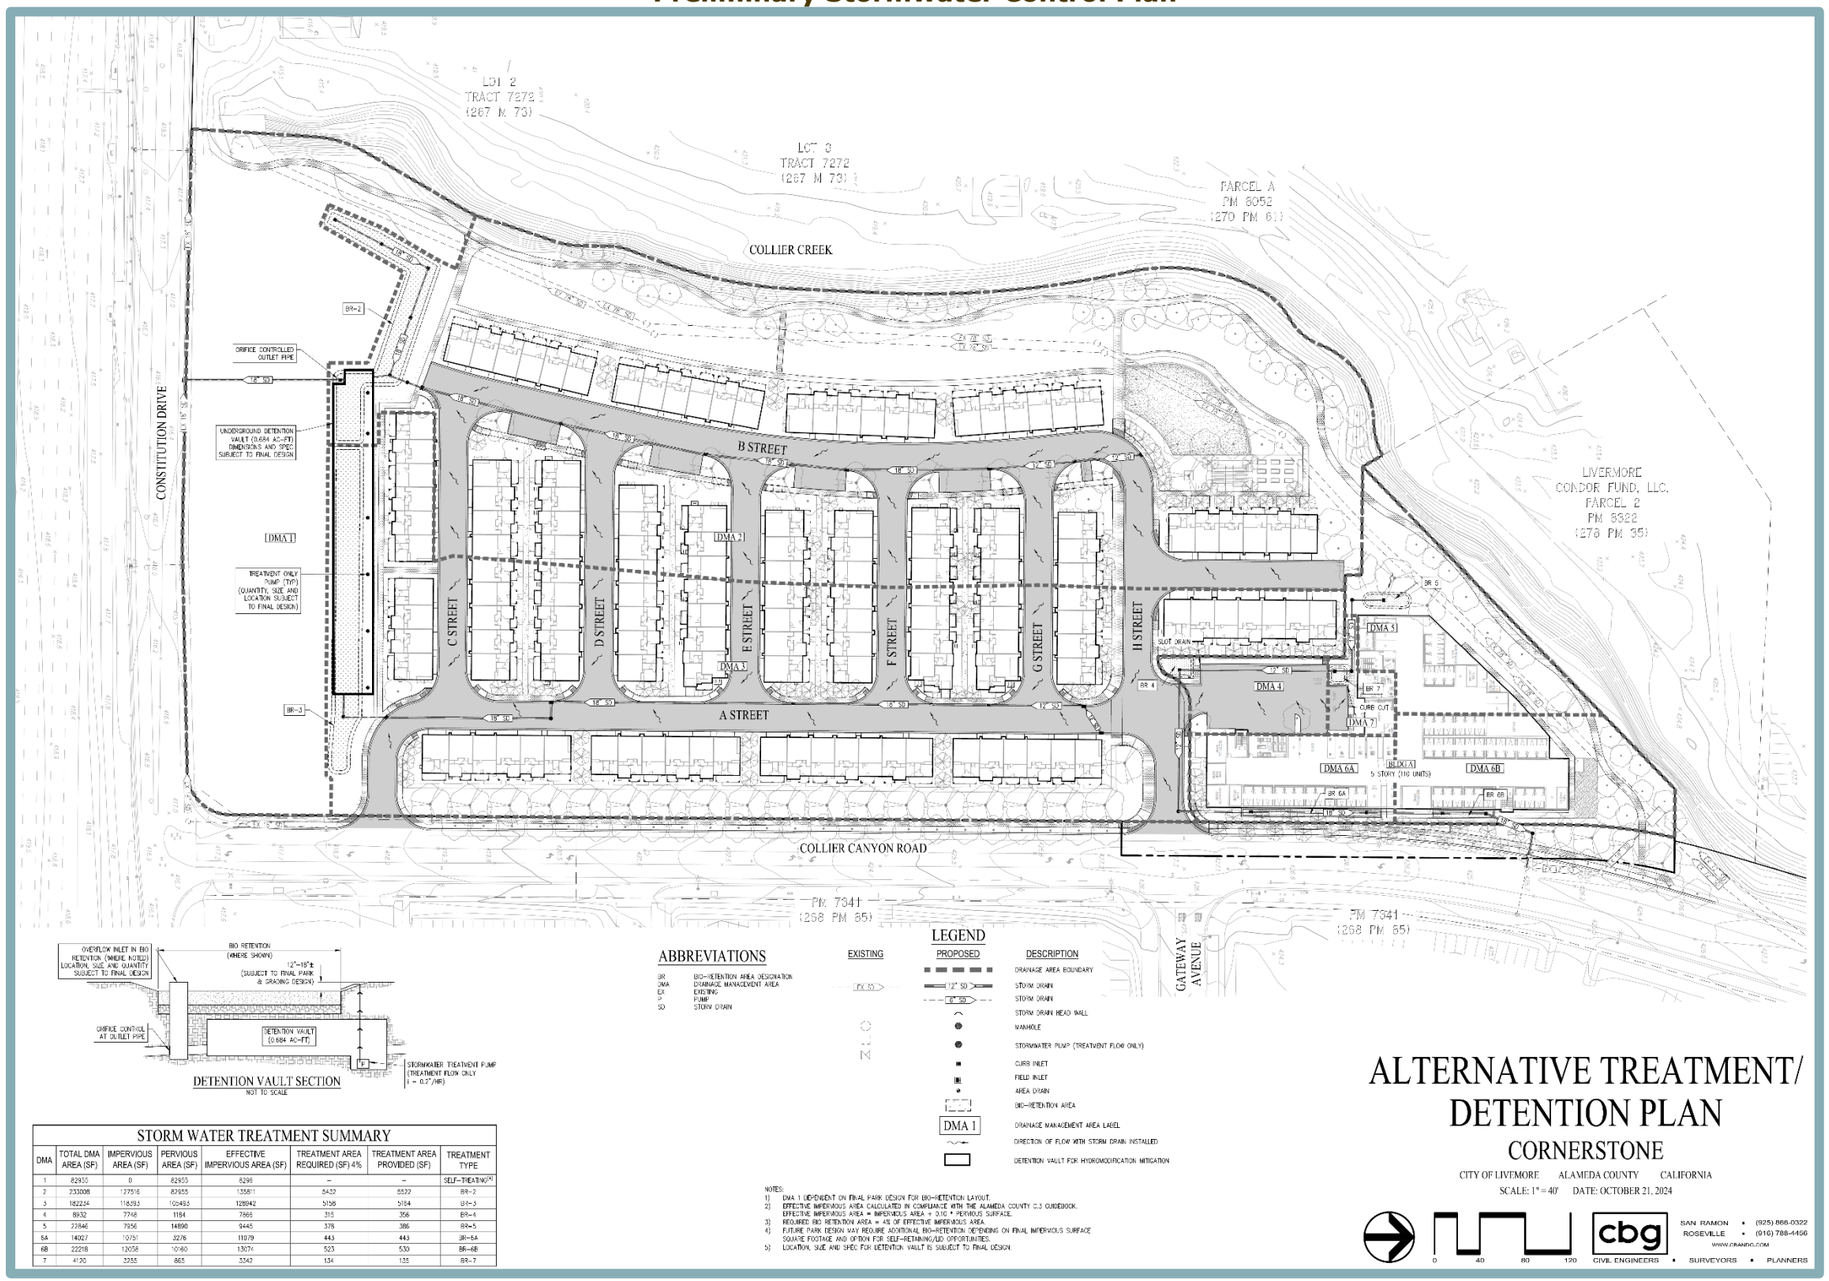
Landscaping Plan

Figure 7
Preliminary Utility Plan

The proposed project would also include construction of new eight-inch sanitary sewer lines and sanitary sewer manholes throughout the project site, which would then direct wastewater to the existing 15-inch sanitary sewer main within Collier Canyon Road.

A Preliminary Stormwater Control Plan has been prepared for the proposed project (see Figure 8). In compliance with C.3 stormwater guidelines, the drainage design would provide quality treatment for 10 percent equivalent impervious surface area.



The proposed stormwater design would comply with the City's Municipal Regional Stormwater Permit (MRP) using the guidelines provided in the Clean Water Program's C.3 Stormwater Technical Guidance Manual. In order to manage and treat stormwater, the project site would be divided into various Drainage Management Areas (DMAs) to collect and convey stormwater to the various on-site Low Impact Development (LID) treatment features, including LID measures located in Parcel M. Once stormwater has passed through the LID treatment measure, the stormwater would be conveyed to the City's existing storm drain system in either Collier Canyon Road or Constitution Drive. Hydromodification measures would be implemented as required by the MRP utilizing the Alameda County Clean Water Program's C.3 Stormwater Technical Guidance Manual.

Requested Entitlements

The proposed project would require the following approvals from the City of Livermore:

- Approval of a Vesting Tentative Map;
- Approval of State Density Bonus Law waivers and concessions;
- Site Plan and Design Review;
- Conditional Use Permit; and
- Consistency Determination.

E. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

On the basis of the following Initial Study/15182 Checklist, the City has determined that the proposed project is consistent with the 2018 INSP EIR and/or the 2020 INSP SEIR. All project impacts have been determined to be less than significant, or can be mitigated to a less-than-significant level given required compliance with mitigation measures specified by the 2018 INSP EIR and/or 2020 INSP SEIR. Therefore, none of the environmental factors below are significantly affected.

☐ **Aesthetics**	☐ **Agriculture and Forest Resources**	☐ **Air Quality**
☐ **Biological Resources**	☐ **Cultural Resources**	☐ **Energy**
☐ **Geology and Soils**	☐ **Greenhouse Gas Emissions**	☐ **Hazards and Hazardous Materials**
☐ **Hydrology and Water Quality**	☐ **Land Use and Planning**	☐ **Mineral Resources**
☐ **Noise**	☐ **Population and Housing**	☐ **Public Services**
☐ **Recreation**	☐ **Transportation**	☐ **Tribal Cultural Resources**
☐ **Utilities and Service Systems**	☐ **Wildfire**	☐ **Mandatory Findings of Significance**

F. DETERMINATION

On the basis of this Addendum:

☐ I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the applicant. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

G. ENVIRONMENTAL CHECKLIST

The purpose of the comparison is to evaluate the categories in terms of any "**changes**" or "**new information**" that may result in a changed environmental impact evaluation. A "no" answer does not necessarily mean that potential impacts do not exist relative to the environmental category, but that a relevant change would not occur in the condition or status of the impact due to its insignificance or its treatment in a previous environmental document. The following impact evaluation categories will be used to evaluate the proposed project as compared to the INSP EIR and SEIR:

Explanation Of Impact Evaluation Categories

This section describes the organization of the sections for each CEQA Appendix G environmental resource area included in this Initial Study/15182 Checklist.

Where Impact Was Analyzed in the Previous CEQA Documents: This column provides a reference to the page(s) of the INSP EIR and SEIR where information and analysis may be found relative to the environmental issue listed under each topic.

Do Proposed Changes Involve New or More Severe Impacts? Pursuant to Section 15162(a)(1) of the CEQA Guidelines, this column indicates whether the changes represented by the current project would result in new significant impacts that have not already been considered and mitigated by a previous EIR or that substantially increase the severity of a previously identified significant impact. If a "yes" answer is given and new or more severe significant impacts are specified, additional mitigations will be specified in the discussion section including a statement of impact status after mitigation.

Any New Circumstances Involving New or More Severe Impacts? Pursuant to Section 15162(a)(2) of the CEQA Guidelines, this column indicates whether there have been changes to the project site or the vicinity (environmental setting) that have occurred subsequent to the certification of an EIR, which would result in the current project having significant impacts that were not considered or mitigated by that EIR or which substantially increase the severity of a previously identified significant impact.

Any New Information Requiring New Analysis or Verification? Pursuant to Section 15162(a)(3)(A-D) of the CEQA Guidelines, this column indicates whether new information of substantial importance which was not known and could not have been known with the exercise of reasonable diligence at the time the previous environmental documents were certified as complete is available, requiring an update to the analysis of the previous environmental documents to verify that the environmental conclusions and mitigation measures remain valid. If the new information shows that: (A) the project will have one or more significant effects not discussed in the prior environmental documents; or (B) that significant effects previously examined will be substantially more severe than shown in the prior environmental documents; or (C) that mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects or the project, but the project proponents decline to adopt the mitigation measure or alternative; or (D) that mitigation measures or alternatives which are considerably different from those analyzed in the prior environmental documents would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative, the question would be answered 'Yes' requiring the preparation of a subsequent EIR or supplement to the EIR. However, if the additional analysis completed as part of this Environmental Checklist Review finds that the conclusions of the prior environmental documents remain the same and no new significant impacts are identified, or identified significant environmental impacts are not found to be

substantially more severe, the question would be answered 'No' and no additional EIR documentation (supplement to the EIR or subsequent EIR) would be required.

Prior Mitigation Measures

Applicable mitigation measures from the previous CEQA document(s) that apply to the changes or new information are referenced under each environmental category. These mitigation measures follow the numbering scheme of the INSP EIR and SEIR.

I. AESTHETICS. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Have a substantial adverse effect on a scenic vista?	2018 EIR pgs. 3.5-8 to 3.5-10	No	No	No
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?	2018 EIR pg. 3.5-14	No	No	No
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	2018 EIR pg. 3.5-14 to 3.5-15	No	No	No
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	2018 EIR pg. 3.5-15	No	No	No

Discussion

a,c. Examples of typical scenic vistas include mountain ranges, ridgelines, or bodies of water as viewed from a highway, public space, or other area designated for the express purpose of viewing and sightseeing. In general, a project's impact to a scenic vista would occur if development of the project would substantially change or remove a scenic vista. The City's General Plan identifies a number of roadways within the Planning Area that are considered scenic routes. Scenic routes are designated as such because they pass through areas of high scenic value or provide access to important scenic, recreational, cultural, or historic points.[3] Scenic routes identified in the project vicinity include I-580, Doolan Road, and Isabel Avenue. In addition, the General Plan identifies specific scenic vista points throughout the City. Figure 4-1 of the City's General Plan identifies the area looking south from I-580 towards the Las Positas Golf Course as a scenic vista. Figure 2-6 of the INSP includes a scenic viewpoint from I-580 looking northwest toward the project site. As noted therein, the existing riparian corridor of Collier Canyon Creek creates a natural viewshed in the area. Development along the creek is subject to existing Scenic Corridor policies to ensure views of the ridge-lines. According to the INSP, the public park component of the proposed project, located adjacent to Collier Canyon Creek, would enhance the views of ridgelines along the segment of I-580 adjacent to the project site.[4]

As discussed in the ISNP, the project site is subject to existing General Plan Scenic Corridor policies and maximum building height development standards. The Scenic Corridor policy protects key views of the hills from I-580 within the Planning Area. The stretch of freeway through the City is divided into subareas, each with a set of policies that limit building heights. For Subarea 2d, buildings are limited to heights of 50 feet above

[3] City of Livermore. *City of Livermore General Plan 2003-2025*. Amended December 2014.
[4] City of Livermore. *Isabel Neighborhood Specific Plan* [pg. 2-33]. Amended November 2022.

existing grade or the Scenic Corridor limit, whichever is stricter. The townhome component of the proposed project would be constructed with a maximum building height of 40 feet and two inches, which would be below the 50 feet but would exceed the Scenic Corridor height limit set forth in the INSP by approximately 22 feet. The affordable apartment complex component of the proposed project would result in a maximum building height of 61 feet and one inch (with a few architectural features up to 71 feet), which is greater than 50 feet and would exceed the Scenic Corridor height limit set forth in the INSP by approximately 10 feet. However, as allowed under State Density Bonus Law (Government Code Sections 65915 through 65918), the project applicant is requesting waivers and concessions to exceed the Performance Measure maximum building height. With the exception of the requested waivers and concessions allowed under the State Density Bonus Law, the proposed project would otherwise meet the development standards set forth for the site.

Most subareas within the INSP area establish a "view angle" below which buildings must be located. The view angle runs perpendicular (90 degrees) from the freeway and starts four feet above the outermost lane of the I-580 freeway as of 2008. In addition to building height limits, the Scenic Corridor Policy also limits ground contour changes.

The 2018 INSP EIR concluded that a significant and unavoidable impact would occur related to scenic vistas. The project site is not located within an area identified in the INSP for amendments to the I-580 Scenic Corridor policies; thus, the proposed project would normally need to comply with all applicable I-580 Scenic Corridor policies. However as stated earlier, the applicant is requesting the use of Density Bonus waivers and concessions to exceed the INSP height limitations for this project.

In addition, the 2018 INSP EIR evaluated the potential for development of the INSP area to degrade the existing visual character or quality of the site and its surroundings. As discussed therein, the INSP would enhance the visual character of the existing area with well-designed urban development through compliance with the INSP development standards and guidelines related to building height, setbacks, architecture, and landscaping. Thus, impacts were determined to be less than significant.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts related to scenic vistas or substantial degradation of visual character or quality of the site and its surroundings than were previously analyzed in the 2018 INSP EIR. The project site is currently vacant and undeveloped. However, development of the townhomes and public park component of the proposed project would be subject to Site Plan and Design Review pursuant to Section 9.07.020 of the City's Development Code. Chapter 9.07 of the City's Development Code specifies that the purpose of Site Plan and Design Review "is to provide a process for the appropriate review of construction and development projects." As part of the design review process, the project would be reviewed for conformance with the City of Livermore INSP and Citywide Design Standards and Guidelines, which include provisions related to architectural design, landscaping, exterior materials, and compatibility with existing uses.[5] Compliance with such would ensure consistency with all applicable policies and guidelines related to visual resources in the project vicinity. With respect to the affordable apartments component of the proposed project, as discussed above, the project applicant is requesting waivers and concessions to exceed the Performance Measure maximum building height, as allowed under State Density Bonus Law (Government Code Sections

[5] City of Livermore. *Design Standards and Guidelines*. Adopted June 28, 2004.

65915 through 65918). All required development standards would be met, upon approval from the City of Livermore of State Density Bonus Law waivers and concessions, and all design requirements would be fulfilled. Given that State law supersedes local ordinance, the proposed project's use of State Density Bonus Law to waive the INSP Scenic Corridor Policy requirements related to building height and setback requirements does not result in a Specific Plan inconsistency.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

b. According to the California Scenic Highway Mapping System, the project site is not located within the vicinity of an officially designated State Scenic Highway.[6] I-580, located south of the project site, is an Eligible State Scenic Highway, but has not been officially designated. The 2018 INSP EIR determined that implementation of the INSP and associated General Plan amendments would not result in a significant impact to scenic vistas along I-580. Based on the above information, the proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the INSP 2018 EIR.

d. Due to the undeveloped nature of the project site, existing sources of light and glare do not currently exist within the site. However, the 2018 INSP EIR determined that a number of existing light sources are located within the INSP Planning Area, including street lights, buildings, and vehicles.

Development of the project site with residential uses, park uses, and internal roadways would involve sources of light and glare associated with interior light spilling through windows, vehicle headlights entering and exiting the project site, exterior lighting on the proposed structure, and associated with the internal drive aisles, and light reflected off windows. However, the INSP identifies the 13-acre project site as Residential Village, Residential Center, and Open Space, which assumes the development of a residential uses. As a result, such sources of light and glare would be consistent with the type of lighting anticipated for the project site.

The Livermore General Plan contains policies for controlling outdoor artificial light, including Objective LU-6.1 Policy 3, and Chapter 15.18 of the Livermore Municipal Code includes lighting regulations for residential areas. The 2018 EIR concluded that compliance with the aforementioned policies would reduce potentially significant long-term light and glare impacts, and INSP design standards would further help to ensure that lighting for new development is held to high design standards for light pollution and glare reduction. Specifically, INSP DS-90 requires lighting to be designed and shielded to direct light downward to minimize glare onto adjacent areas, avoid light impact to upper story living spaces, and minimize night-sky light pollution.

Furthermore, through the City's Site Plan and Design Review process, the proposed project would be reviewed for consistency with the City's Design Standards and

[6] California Department of Transportation. *California Scenic Highway Mapping System*. Available at: https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa. Accessed March 2023.

Guidelines.[7] Section F, Lighting, of Chapter 4 of the City's Design Standards and Guidelines contains specific restrictions to ensure that the design of fixtures and the light provided contributes to the character of development and does not adversely affect adjacent development. Pursuant to Section 5.1.1 of the Guidelines, area lighting should be designed so as to avoid light being directed off-site. In addition, Section 2.1.4 states that lighting should be directed downward to avoid lighting of the night sky. Compliance with the foregoing sections of the City's Design Standards and Guidelines and INSP would ensure that lighting from the proposed project would not be directed off-site, and would not adversely affect the business park development around the site. Therefore, the proposed project would not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe impacts than were previously analyzed in the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

[7] City of Livermore. *Design Standards and Guidelines*. Adopted June 28, 2004.

II. AGRICULTURE AND FORESTRY RESOURCES. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping Program of the California Resources Agency, to non-agricultural use?	2018 EIR pgs. 3.14-6 to 3.14-7	No	No	No
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	2018 EIR pg. 3.14-7	No	No	No
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	2018 EIR pg. 3.15-1	No	No	No
d. Result in the loss of forest land or conversion of forest land to non-forest use?	2018 EIR pg. 3.15-1	No	No	No
e. Involve other changes in the existing environment which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use?	2018 EIR pg. 3.14-8	No	No	No

Discussion

a. Active agricultural land use accounts for approximately two percent of the INSP existing land use. Areas of Prime and Unique Farmland are located along East Airway Boulevard, and areas of Unique Farmland and Farmland of Statewide Important are located along the northwestern edge of the Planning Area, at the northern end of Constitution Drive and the northernmost portion of the lands designated as Business Park and Residential Transition under the INSP.

Overall, the 2018 INSP EIR determined that buildout of the INSP would result in the full conversion and loss of this Prime Farmland. INSP Policies P-LU-21 through -24 would reduce the significant impact by requiring compensatory mitigation. However, as full implementation of the INSP would rely on the conversion of the Prime Farmland on the Gandolfo property to non-agricultural use, mitigation is not available that would reduce impacts to a level that is less than significant, and the impact was determined to be significant and unavoidable.

Currently, the project site is generally undeveloped and contains trees and grassland. The site is largely characterized by ruderal habitat. According to the Phase I Environmental Site Assessment (ESA) prepared for the proposed project, the project site was previously used for agriculture until at least 1982. However, as shown in Figure 3.14-1 of the 2018 INSP EIR, the California Department of Conservation Farmland Mapping and Monitoring Program designates the project site as Urban and Built-Up Land. Prime Farmland is not

mapped on-site. Urban and Built-up Land is used for residential, industrial, commercial, institutional, and other developed purposes. Therefore, the proposed project would not involve conversion of Farmland, as shown on the maps prepared pursuant to the Farmland Mapping Program of the California Resources Agency or identified in the 2018 INSP EIR, to non-agricultural use.

Based on the above, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

b. According to the 2018 INSP EIR, existing Williamson Act contracts are not located within the INSP planning area at the time the 2018 INSP EIR was drafted. However, one zoning district, PDR-01-001, in the INSP area allows for agriculture uses. The INSP designated both parcels as Transition Residential, which does not allow for agricultural uses. Thus, the 2018 INSP EIR determined that a significant and unavoidable impact related to zoning for agricultural use would occur, and mitigation measures that would reduce the impact to a less than significant level do not exist.

None of the land within the project site is currently held under Williamson Act contracts. Additionally, the project site is designated INSP Subarea 2d and is zoned INSP. The site is not zoned for agricultural use. Furthermore, according to the Specific Plan, the City has designated the site for residential and open space uses. Therefore, buildout of the proposed project would not conflict with agricultural zoning. As such, the currently proposed project would have no impacts related to conflicts with a Williamson Act contract or agricultural zoning.

Based on the above, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

c,d. The 2018 INSP EIR determined that the Planning Area does not have forest resources or land zoned for forest use, and the INSP would have no impact on forest resources. The project site is not considered forest land (as defined in PRC section 12220[g]), timberland (as defined by PRC section 4526), and is not zoned Timberland Production (as defined by Government Code section 51104[g]). As noted above, the project site is currently zoned INSP. Therefore, the proposed project would have no impact with regard to conversion of forest land or any potential conflict with forest land, timberland, or Timberland Production zoning. The currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

III. AIR QUALITY. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Conflict with or obstruct implementation of the applicable air quality plan?	2018 EIR pgs. 3.3-20 to 3.3-32 2020 SEIR pgs. 3.1-22 to 3.1-43	No	No	No
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	2018 EIR pgs. 3.3-33 to 3.3-43 2020 SEIR pgs. 3.1-43 to 3.1-45	No	No	No
c. Expose sensitive receptors to substantial pollutant concentrations?	2018 EIR pg. 3.3-44 2020 SEIR pgs. 3.1-45 to 3.1-50	No	No	No
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	2018 EIR pgs. 3.3-46 to 3.3-47 2020 SEIR pgs. 3.1-50 to 3.1-52	No	No	No

Discussion

a,b. The City of Livermore is located in the San Francisco Bay Area Air Basin (SFBAAB), which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). The 2020 INSP SEIR assessed the potential for the INSP to conflict with the BAAQMD 2017 Clean Air Plan and determined that the INSP could result in conflicting population and employment growth. However, per capita emissions in the INSP area in 2040 would be lower than forecasted under the 2017 Clean Air Plan, as the 2017 Clean Air Plan would not have assumed the sustainability policies and transit-oriented development patterns that would be implemented under the INSP, and a less-than-significant impact would occur. The currently proposed project would be consistent with the project site's INSP land use designation and would adhere to all applicable INSP policies. As such, the proposed project would not conflict with or obstruct implementation of the applicable air quality plan.

The 2020 INSP SEIR assessed the potential for buildout of the INSP to result in impacts related to the generation of temporary, short-term construction-related emissions of criteria air pollutants, and the generation of long-term operational emissions of criteria pollutants. According to the 2020 INSP SEIR, construction emissions generated in the INSP area by implementation of the INSP would result in a potentially significant impact on air quality. INSP Policy PENV-15 requires the use of Tier 4 engines for off-road equipment to reduce Nitrogen Oxides (NO_X) and particulate matter (PM) exhaust emission levels and use of low volatile organic compound (VOC) paints to reduce Reactive Organic Gasses (ROG) emission levels during construction activities. Additionally, INSP Policy P-ENV-14 requires construction projects to implement best management practices (BMPs) as recommended by the BAAQMD to reduce fugitive dust emissions. Thus, the implementation of BMPs under Policies P-ENV14 and P-ENV-15 would reduce fugitive

PM 2.5 microns in diameter ($PM_{2.5}$) and particulate matter 10 microns in diameter (PM_{10}) emissions to less-than-significant levels.

However, with respect to ROG, NO_X and PM_{10} and $PM_{2.5}$ exhaust emissions, the INSP EIR determined that construction activity for an individual development project, or a combination of projects, could result in the generation of pollutant emissions that exceed the respective BAAQMD significance thresholds (see Table 1)

Table 1
BAAQMD Thresholds of Significance

Pollutant	Construction	Operational	
	Average Daily Emissions (lbs/day)	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tons/year)
ROG	54	54	10
NO_x	54	54	10
PM_{10}	82 (exhaust only)	82	15
$PM_{2.5}$	54 (exhaust only)	54	10

Source: BAAQMD, CEQA Guidelines, May 2017.

To ensure impacts related to construction emissions would be less than significant, the 2020 INSP SEIR included Mitigation Measures AQ-1, AQ-2, and AQ-3, which require offroad equipment to utilize renewable diesel; all on-road diesel trucks used for construction activities to have 2010 model year or newer engines; and the City shall track all land use development construction activities occurring in the INSP area, assess and determine the estimated total emissions for all construction activities that would be concurrently ongoing, and determine the mitigation fees for each development project to pay on a pro rata basis to BAAQMD to offset their pollutant emissions as necessary such that daily pollutant thresholds would not be exceeded. The 2020 INSP SEIR concluded that with implementation of the aforementioned mitigation measures, impacts related to construction emissions would be less than significant.

With regard to operational emissions, based on the emissions presented in Table 3.1-7 of the 2020 INSP SEIR, the SEIR determined that INSP generated automobile traffic would incrementally increase air pollutant emissions in the region beyond the applicable BAAOMD thresholds of significance for PM_{10} and $PM_{2.5}$. The 2020 INSP SEIR included Mitigation Measure GHG-1, which establishes strategies to reduce vehicle miles traveled (VMT). However, the 2020 INSP SEIR concluded that Mitigation Measure GHG-1 would not reduce emissions of PM_{10} to below the applicable threshold. Therefore, impacts on regional air quality were determined to remain significant and unavoidable.

The SFBAAB area is currently designated as a nonattainment area for the State and federal ozone, State and federal $PM_{2.5}$, and State respirable PM_{10} ambient air quality standards (AAQS). The SFBAAB is designated attainment or unclassified for all other AAQS. It should be noted that on January 9, 2013, the U.S. Environmental Protection Agency (USEPA) issued a final rule to determine that the Bay Area has attained the 24-hour $PM_{2.5}$ federal AAQS. Nonetheless, the Bay Area must continue to be designated as nonattainment for the federal $PM_{2.5}$ AAQS until such time as the BAAQMD submits a redesignation request and a maintenance plan to the USEPA, and the USEPA approves the proposed redesignation. The USEPA has not yet approved a request for redesignation of the SFBAAB; therefore, the SFBAAB remains in nonattainment for 24-hour $PM_{2.5}$.

In compliance with regulations, due to the nonattainment designations of the area, the BAAQMD periodically prepares and updates air quality plans that provide emission reduction strategies to achieve attainment of the AAQS, including control strategies to reduce air pollutant emissions through regulations, incentive programs, public education, and partnerships with other agencies. The current air quality plans are prepared in cooperation with the Metropolitan Transportation Commission and the Association of Bay Area Governments (ABAG).

The most recent federal ozone plan is the 2001 Ozone Attainment Plan, which was adopted on October 24, 2001 and approved by the California Air Resources Board (CARB) on November 1, 2001. The plan was submitted to the USEPA on November 30, 2001 for review and approval. The most recent State ozone plan is the 2017 Clean Air Plan, adopted on April 19, 2017. The 2017 Clean Air Plan was developed as a multi-pollutant plan that provides an integrated control strategy to reduce ozone, PM, toxic air contaminants (TACs), and greenhouse gases (GHGs). Although a plan for achieving the State PM_{10} standard is not required, the BAAQMD has prioritized measures to reduce PM in developing the control strategy for the 2017 Clean Air Plan. The control strategy serves as the backbone of the BAAQMD's current PM control program.

The aforementioned air quality plans contain mobile source controls, stationary source controls, and transportation control measures to be implemented in the region to attain the State and federal AAQS within the SFBAAB. Adopted BAAQMD rules and regulations, as well as the thresholds of significance, have been developed with the intent to ensure continued attainment of AAQS, or to work towards attainment of AAQS for which the area is currently designated nonattainment, consistent with applicable air quality plans. The BAAQMD's established significance thresholds associated with development projects for emissions of the ozone precursors ROG and NO_X, as well as for PM_{10}, and $PM_{2.5}$, expressed in pounds per day (lbs/day) and tons per year (tons/yr), are listed above in Table 1.

By exceeding the BAAQMD's mass emission thresholds for operational emissions of ROG, NO_X, PM_{10}, or $PM_{2.5}$, a project would be considered to conflict with or obstruct implementation of the BAAQMD's air quality planning efforts.

Particulate matter can be split into two categories: fugitive and exhaust. The BAAQMD thresholds of significance for exhaust are presented in Table 1. BAAQMD does not maintain quantitative thresholds for fugitive emissions of PM_{10} or $PM_{2.5}$, rather, BAAQMD requires all projects within the district's jurisdiction to implement Basic Construction Mitigation Measures (BCMMs) related to dust suppression.

In order to compare the proposed project's emissions to the most recent BAAQMD thresholds, air quality modeling was conducted for the proposed project. The proposed project's construction and operational emissions were quantified using the California Emissions Estimator Model (CalEEMod) web-based version 2022.1.1.26 – a statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify air quality emissions, including GHG emissions, from land use projects. The model applies inherent default values for various land uses, including construction data, trip generation rates, vehicle mix, trip length, average speed, compliance with the California Building Standards Code (CBSC), etc. Where project-specific information is available, such information is applied in the model. For the proposed project, project-specific trip generation rates provided by Fehr & Peers

were input into the model,[8] as well as information related to the anticipated construction schedule for the proposed project. In addition, the modeling assumed that the grading phase of construction would require the import of approximately 19,500 cubic yards (CY) of material and removal of approximately 11,200 CY of material from the site. All CalEEMod results are included as Appendix A to this Initial Study/15182 Checklist.

The proposed project's estimated emissions associated with construction and operations are presented and discussed in further detail below. A discussion of the proposed project's contribution to cumulative air quality conditions is provided below as well.

Construction Emissions

According to the CalEEMod results, the proposed project would result in maximum unmitigated construction criteria air pollutant emissions as shown in Table 2. As shown in the table, the proposed project's construction emissions would be below the applicable thresholds of significance for ROG, NO_X, PM_{10}, and $PM_{2.5}$.

Table 2
Maximum Unmitigated Construction Emissions (lbs/day)

Pollutant	Proposed Project Emissions	Threshold of Significance	Exceeds Threshold?
ROG	11.1	54	**NO**
NO_X	51.4	54	**YES**
PM_{10}*	1.57	82	**NO**
$PM_{2.5}$*	1.47	54	**NO**

Note:
* Denotes emissions from exhaust only. BAAQMD has not yet adopted PM thresholds for fugitive emissions.

Source: CalEEMod, October 2024 (see Appendix A).

All projects under the jurisdiction of the BAAQMD are required to implement all of the BAAQMD's BCMMs, which include the following:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 mph.
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.

[8] Fehr & Peers. *Cornerstone Church and Chu Property Residential Development – Transportation Assessment*. January 11, 2023.

7. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator.
8. Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.

The proposed project's required implementation of the BAAQMD's BCMMs listed above would further reduce the construction-related emissions.

Based on the above, impacts related to construction-generated criteria air pollutant emissions of would be less-than-significant.

Operational Emissions

According to the CalEEMod results, the proposed project would result in maximum unmitigated operational criteria air pollutant emissions as shown in Table 3. As shown in the table, the proposed project's operational emissions would be below the applicable thresholds of significance.

Because the proposed project's operational emissions would be below the applicable thresholds of significance, the proposed project would not be considered to result in a potentially significant air quality impact during operations. It should also be noted that because Mitigation Measure GHG-1 of the 2020 INSP SEIR establishes measures for individual development projects, Mitigation Measure GHG-1 of the 2020 INSP SEIR would still be applicable to the proposed project.

Table 3
Unmitigated Maximum Operational Emissions

Pollutant	Proposed Project Emissions		Threshold of Significance		Exceeds Threshold?
	lbs/day	tons/yr	lbs/day	tons/yr	
ROG	17.8	3.07	54	10	**NO**
NO_X	4.98	0.96	54	10	**NO**
PM_{10}*	0.17	0.03	82	15	**NO**
$PM_{2.5}$*	0.17	0.03	54	10	**NO**

Note:
* Denotes emissions from exhaust only. BAAQMD has not yet adopted PM thresholds for fugitive emissions.

Source: CalEEMod, October 2024 (see Appendix A).

Cumulative Emissions

Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By nature, air pollution is largely a cumulative impact. A single project is not sufficient in size to, by itself, result in nonattainment of AAQS. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant. In developing thresholds of significance for air pollutants, BAAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. The thresholds of significance presented in Table 1 represent the levels at which a project's

individual emissions of criteria air pollutants or precursors would result in a cumulatively considerable contribution to the SFBAAB's existing air quality conditions. If a project exceeds the significance thresholds presented in Table 1, the proposed project's emissions would be cumulatively considerable, resulting in significant adverse cumulative air quality impacts to the region's existing air quality conditions. The proposed project would be below all applicable thresholds for criteria pollutants during both construction and operation. In addition, the proposed project would be required to comply with additional 2020 INSP SEIR Mitigation Measures AQ-1, AQ-2, and AQ-3, as presented below, which would ensure all impacts related to construction-generated criteria air pollutant emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$ would be reduced.

Conclusion

Based on the above, the proposed project would not result in new significant impacts or substantially more severe significant impacts related to exposure to substantial pollutant concentrations than were analyzed in the 2020 INSP SEIR. Therefore, the proposed project remains consistent with the conclusions of the 2020 INSP SEIR.

c. The major pollutant concentrations of concern are toxic air contaminant (TAC) emissions and localized CO emissions, which are addressed in further detail below.

TAC Emissions

Another category of environmental concern is TACs. The CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* (Handbook) provides recommended setback distances for sensitive land uses from major sources of TACs, including, but not limited to, freeways and high traffic roads, distribution centers, and rail yards. The CARB has identified diesel particulate matter (DPM) from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM. Health risks from TACs are a function of both the concentration of emissions and the duration of exposure. Health-related risks associated with DPM in particular are primarily associated with long-term exposure and associated risk of contracting cancer.

The 2020 INSP SEIR determined that a significant and unavoidable impact would occur related to health impacts from TAC exposure due to increased vehicle traffic, potential installation or operation of new stationary sources of TACs, and construction activities. The nearest sensitive receptor to the project site is the Lily of the Valley Early Elementary and Preschool, located within the existing building to the west of the project site, at the southwest corner of North Canyons Parkway and Independence Drive. However, the nearest area proposed for on-site disturbance associated with project construction is located over 1,000 feet from the outdoor play areas associated with Lily of the Valley Early Elementary and Preschool. In addition, construction activities associated with the proposed project would be separated from nearby sensitive receptors by existing development and vegetation. Thus, Mitigation Measure AQ-4 of the 2020 INSP SEIR, which requires future projects located within 1,000 feet of existing sensitive receptors to perform a Construction Health Risk Assessment, would not be applicable to the proposed project.

The proposed residential units, public park, and open space associated with the proposed project would not involve any land uses or operations that would be considered major sources of TACs, including DPM. As such, the project would not generate any substantial pollutant concentrations during operations. Short-term, construction-related activities

could result in the generation of TACs, specifically DPM, from on-road haul trucks and off-road equipment exhaust emissions. Construction is temporary and occurs over a relatively short duration in comparison to the operational lifetime of the proposed project. Health risks are typically associated with exposure to high concentrations of TACs over extended periods of time (e.g., 30 years or greater), whereas the construction period associated with the proposed project would likely be limited to approximately four years.

All construction equipment and operation thereof would be regulated per the In-Use Off-Road Diesel Vehicle Regulation, which is intended to help reduce emissions associated with off-road diesel vehicles and equipment, including DPM. Project construction would also be required to comply with all applicable BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources. In addition, construction equipment would operate intermittently throughout the day and only on portions of the site at a time.

Because construction equipment on-site would not operate for long periods of time and would be used at varying locations within the site, associated emissions of DPM would not occur at the same location (or be evenly spread throughout the entire project site) for long periods of time. Due to the temporary nature of construction and the relatively short duration of potential exposure to associated emissions, the potential for any one sensitive receptor in the area to be exposed to concentrations of pollutants for a substantially extended period of time would be low. Therefore, construction of the proposed project would not be expected to expose nearby sensitive receptors to substantial pollutant concentrations.

Based on the above, the proposed project would not result in new significant impacts or substantially more severe significant impacts related to the exposure of sensitive receptors to operational emissions beyond what was analyzed in the 2020 INSP SEIR.

Localized CO Emissions

Emissions of CO result from the incomplete combustion of carbon-containing fuels such as gasoline or wood and are particularly related to traffic levels. Localized concentrations of CO are related to the levels of traffic and congestion along streets and at intersections. As older, more polluting vehicles are retired and replaced with newer, cleaner vehicles, the overall rate of emission of CO for vehicle fleets throughout the State has been and is expected to continue to decrease.

Under existing and future vehicle emission rates, a plan would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour or 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited by bridges or tunnels in order to generate a significant CO impact. According to the 2020 INSP SEIR, implementation of the INSP would increase traffic volumes at a single intersection up to 18,800 vehicles per day (North Canyons Parkway west of Gateway Drive), and would result in up to 27,965 vehicles per day where a road does not currently exist (Isabel Avenue south of Valley Link Parking Road/Access). Additionally, traffic volumes along segments of the I-580 within the INSP area would increase up to 29,282 vehicles per day under the INSP. Implementation of the INSP would increase peak hour AM and PM traffic volumes at a single intersection by less than 1,780 vehicles per hour and 2,111 vehicles per hour, respectively. In addition, implementation of the INSP was determined to significantly decrease daily operational emissions of CO from mobile sources, counteracting a slight increase in CO from area and energy sources in 2040. Therefore,

the 2020 INSP SEIR concluded that impacts related to CO emissions would be less than significant.

As discussed throughout this Initial Study/15182 Checklist, the proposed project would be constructed within the footprint of the previously analyzed INSP. Moreover, the INSP identifies the project site as Residential Village, Residential Center, and Open Space, which assumed the development of residential and open space/park uses. As such, traffic generated by the proposed project, and associated CO emissions, were previously anticipated within the 2020 INSP SEIR.

Accordingly, the proposed project would not result in new significant impacts or substantially more severe significant impacts related to localized CO concentrations or other emissions from vehicles on roadways or intersections in the vicinity of the project site.

Conclusion

Based on the above information, the proposed project would not result in new significant impacts or substantially more severe significant impacts related to exposure to substantial pollutant concentrations than were analyzed in the 2020 INSP SEIR. Therefore, the proposed project remains consistent with the conclusions of the 2020 INSP SEIR.

d. Emissions of concern include those leading to odors, emission of dust, or emissions considered to constitute air pollutants. Air pollutants and emissions of dust have been discussed in sections “a” through “c” above. Therefore, the following discussion focuses on emissions of odors.

The 2020 INSP SEIR noted that while the INSP would include development of odor-generating uses, such uses would be located only in areas zoned for industrial or manufacturing uses, which would minimize impacts associated with odor nuisance. Furthermore, the INSP also contains Design Standard DS-37, which minimizes potential nuisances including odors from the siting of new uses next to existing uses, and DS-46, which promotes locating loading and service entrances such that noise and odor impacts on nearby uses would be minimized. Additionally, given mandatory compliance with BAAQMD rules, construction activities or materials are not proposed that would create a significant level of objectionable odors. Accordingly, the INSP concluded that odor impacts would be less than significant.

According to the BAAQMD CEQA Guidelines, odors are generally regarded as an annoyance rather than a health hazard.[9] Manifestations of a person’s reaction to odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache). The presence of an odor impact is dependent on a number of variables including: the nature of the odor source; the frequency of odor generation; the intensity of odor; the distance of odor source to sensitive receptors; wind direction; and sensitivity of the receptor.

Due to the subjective nature of odor impacts, the number of variables that can influence the potential for an odor impact, and the variety of odor sources, quantitative analysis to determine the presence of a significant odor impact is difficult. Typical odor-generating

[9] Bay Area Air Quality Management District. *California Environmental Quality Act Air Quality Guidelines* [pg. 7-1]. May 2017.

land uses include, but are not limited to, wastewater treatment plants, landfills, and composting facilities. The proposed project would not introduce any such land uses and is not located in the vicinity of any such existing or planned land uses.

Construction activities often include diesel-fueled equipment and heavy-duty trucks, which could create odors associated with diesel fumes that may be considered objectionable. However, construction activities would be temporary, and hours of operation for construction equipment would be restricted per Section 9.36.080 of the Municipal Code. Project construction would also be required to comply with all applicable BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources. The aforementioned regulations would help to minimize emissions, including emissions leading to odors. Accordingly, substantial objectionable odors would not be expected to occur during construction activities.

It should be noted that BAAQMD regulates objectionable odors through Regulation 7, Odorous Substances, which does not become applicable until the Air Pollution Control Officer (APCO) receives odor complaints from ten or more complainants within a 90-day period. Once effective, Regulation 7 places general limitation on odorous substances and specific emission limitations on certain odorous compounds, which remain effective until such time that citizen complaints have been received by the APCO for one year. The limits of Regulation 7 become applicable again when the APCO receives odor complaints from five or more complainants within a 90-day period. Thus, although not anticipated, if odor complaints are made after the proposed project is developed, the BAAQMD would ensure that such odors are addressed and any potential odor effects reduced to less than significant.

As noted previously, all projects under the jurisdiction of BAAQMD are required to implement the BAAQMD's BCMMs. The aforementioned measures would act to reduce construction-related dust by ensuring that haul trucks with loose material are covered, reducing vehicle dirt track-out, and limiting vehicle speeds within project site, among other methods, which would ensure that construction of the proposed project does not result in substantial emissions of dust. Following project construction, most areas of the project site would be paved or landscaped.

Based on the above, the proposed project would not result in new significant impacts or substantially more severe significant impacts related to exposure to substantial pollutant concentrations than were analyzed in the 2020 INSP SEIR. Therefore, the proposed project remains consistent with the conclusions of the 2020 INSP SEIR.

Prior Mitigation Measures

As previously discussed, MM-AQ-4 would not be applicable to the proposed project. The following mitigation measure(s) from the 2020 INSP SEIR would apply to the proposed project, as well as MM-GHG-1 as presented in Section VIII, Greenhouse Gas Emissions, of this Initial Study/15182 Checklist:

MM-AQ-1: Require Construction Fleet to Use Renewable Diesel. All applicants proposing development of projects within the Planning Area shall require their contractors, as a condition of contract, to reduce construction-related exhaust emissions by ensuring that all off-road equipment operating for more than 20 total hours over the entire duration of construction activities shall operate on renewable diesel (such as Diesel high performance renewable). Renewable diesel is currently commercially available in San Francisco Bay Area.

MM-AQ-2: Require Use of Diesel Trucks with 2010-Compliant Model Year Engines. All applicants proposing development of projects within the Planning Area shall require their contractors, as a condition of contract, to use diesel trucks that have 2010 model year or newer engines. In the event that 2010 model year or newer diesel trucks cannot be obtained, the contractor must provide documentation to the City showing that a good faith effort to locate such engines was conducted.

MM-AQ-3: Require Payment of Mitigation Fees to Offset Emissions Exceeding BAAQMD Daily Pollutant Thresholds.

This mitigation will either be conducted by the City through BAAQMD or by the City itself.

BAAQMD Mitigation Fee Approach

The City shall work with BAAQMD Office of Community Investment and Infrastructure (OCII) to establish City-specific construction emissions offset guidance that can be implemented to assess, determine, and issue mitigation fees that project applicants would be required to pay BAAQMD on a pro rata basis for all concurrently ongoing construction projects in the Planning Area to offset all pollutant emissions exceeding BAAQMD's daily pollutant thresholds. The offset fees will be paid into BAAQMD's Bay Area Clean Air Foundation (Foundation) in an amount to be determined at the time of mitigation.

City Mitigation Fee Approach

If for any reason providing mitigation fees through BAAQMD is not pursued, then the City shall administer the mitigation funds directly for emissions reductions. The offset mitigation program shall follow the BAAQMD Guidance for Lead Agencies to Develop and Offset Mitigation Program (BAAQMD 2012). The offset fees with this approach will be paid into the City's mitigation program in an amount to be determined at the time of mitigation. This mitigation (AQ-3) does not apply if builder contractor documents show they will not exceed BAAQMD/s daily pollutant thresholds.

This mitigation (AQ-3) does not apply if builder/contractor documents show they will not exceed BAAQMD's daily pollutant threshold.

Specific Requirements

This mitigation includes the following specific requirements:

- For all construction projects occurring in the Planning Area, the applicants for each project shall require their construction contractors to estimate annual construction activity monitoring data for the following year. All applicants shall submit their estimated construction-related emissions to the City for review by November 1 of each year for the following construction year.
- The City shall review all received construction estimates to ensure they are representative, total the emissions estimates for all construction projects that had activities that would be ongoing during the following construction year, and determine the total mitigation fee that would need to be submitted to BAAQMD to fund offsets for the portion of annual emissions that exceed BAAQMD's average daily thresholds for criteria pollutants.
- In light of the total mitigation fee that was determined, and based on the construction emission amounts submitted by each applicant, the City shall appropriate the mitigation fee amount that would need to be submitted by each project applicant on a pro rata basis.

The City shall issue the required mitigation fee amounts to each applicable project applicant.

- Upon receiving the City's assigned mitigation fee amount, the applicants shall enter into a construction mitigation contract with BAAQMD to submit their apportioned mitigation fees or enter into an agreement with the City to submit their apportioned mitigation fees.

Examples of Potential Offset Actions

There are a wide range of feasible actions to offset emissions (through BAAQMD or the City) including, but not limited to, the following:

- Retrofitting and/or replacing heavy duty diesel engines and trucks (on or off road) with new, cleaner engines and trucks.
- Retrofitting stationary sources such as backup generators or boilers with new technologies that reduce emissions.
- Replacing diesel agriculture water pumps with alternative fuels.
- Fund projects within a jurisdiction's adopted bicycle/pedestrian plans.
- Replace non-EPA wood burning devices with natural gas or EPA approved fireplaces.
- Provide energy efficiency upgrades at residential, commercial, or government buildings. • Electrification of loading docks at distribution warehouses.
- Install alternative energy supply on buildings.
- Replace older landscape maintenance equipment with newer, lower-emission equipment.

IV. BIOLOGICAL RESOURCES. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	2018 EIR pgs. 3.7-26 to 3.7-35	No	No	No
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	2018 EIR pgs. 3.7-35 to 3.7-37	No	No	No
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	2018 EIR pgs. 3.7-37 to 3.7-39	No	No	No
d. Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?	2018 EIR pg. 3.7-39	No	No	No
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	2018 EIR pg. 3.7-40	No	No	No
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan?	2018 EIR pg. 3.7-39	No	No	No

Discussion

a. The 2018 INSP EIR analyzed the potential for buildout of the INSP to substantially impact a candidate, sensitive, or special-status plant or wildlife species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS). According to the 2018 INSP EIR, future development within the INSP area would have the potential to affect habitat suitable for a number of special-status species. Existing habitat within the INSP area includes California annual grassland, mixed willow riparian scrub, ruderal (e.g., vacant fields), seasonal wetlands, freshwater emergent wetlands, and aquatic riverine and drainage features, which represent suitable habitat for special-status species. Construction associated with future development in the Planning Area could affect special-status plant and wildlife species such as big-scale balsamroot, Congdon's tarplant, prostrate vernal pool navarretia, Callippe silverspot butterfly, vernal pool fairy shrimp, California red-legged frog,

California tiger salamander, western pond turtle, burrowing owl, loggerhead shrike, tricolored blackbird, white-tailed kite, American badger, hoary bat, and Townsend's big-eared bat. The 2018 INSP EIR included MM-BIO-1, which requires a salvage, relocation, or propagation and monitoring plan for special-status plant species, and MM-BIO-2 through -9, which requires avoidance of nesting birds, burrowing owl nesting, tricolored blackbird breeding habitat, western pond turtle, San Joaquin kit fox, American badger, California tiger salamander, California red-legged frog, Callippe silverspot butterfly, and roosting bats where feasible. Therefore, the 2018 INSP EIR concluded that with implementation of the aforementioned mitigation measures and INSP polices, impacts to protected species would be less than significant.

The proposed project's area of impact would be within the footprint of the previously analyzed INSP. As such, impacts to special-status species associated with the proposed project were previously anticipated within the 2018 INSP EIR. Nonetheless, to ensure that additional special-status species have not populated the project site since the 2018 INSP EIR was drafted, a Brief Biological Constraints Analysis was prepared for the proposed project by Johnson Marigot Consulting (see Appendix B).[10]

As part of the Brief Biological Constraints Analysis, a search of published records of special-status plant and wildlife species was conducted using the California Natural Diversity Database (CNDDB). The intent of the database review was to identify documented occurrences of special-status species in the vicinity of the project area, to determine their locations relative to the project site, and for use in the field assessment of habitats suitable for special-status species within the site. On November 22, 2019 a site visit was conducted to determine the potential for the project site to provide suitable habitat for special-status species and sensitive habitats. The results of the database searches and field survey are discussed below.

Special-Status Plants

As noted in the Brief Biological Constraints Analysis, a total of 10 records for special-status plant species have been documented within three miles of the site and/or within the same U.S. Geological Survey (USGS) 7.5' topographic quadrangle (quad) as the project site (Livermore quad), including brittlescale (*Atriplex depressa*), lesser saltscale (*Atriplex minuscula*), big-scale balsamroot (*Balsamorhiza macrolepis*), Congdon's tarplant (*Centromadia parryi* ssp. *congdonii*), palmate- bracted bird's-beak (*Chloropyron palmatum*), San Joaquin spearscale (*Extriplex joaquinana*), prostrate vernal pool navarretia (*Navarretia prostrata*), long-styled sand-spurrey (*Spergularia macrotheca*), saline clover (*Trifolium hydrophilum*), and caper-fruited tropidocarpum (*Tropidocarpum capparideum*).

Three of the aforementioned species require specialized habitats that do not occur on the site such as mesic soils (prostrate vernal pool navarretia and saline clover) and meadows, seeps, marshes, and swamps (long-styled sand-spurrey). As such, the species are not expected to occur onsite. However, the on-site soils, which are considered to be mildly alkaline, provide potentially suitable habitat for the remaining seven species. In the absence of protocol-level rare plant surveys, the presence of special-status plants on the site cannot be ruled out. Rare plant surveys should be conducted during the appropriate season, for these seven species.

[10] Johnson Marigot Consulting. *Brief Biological Constraints Analysis for the Collier Canyon Parcels – Alameda County, California*. January 2020.

It should be noted that the site is within the boundaries of the East Alameda County Conservation Strategy (EACCS) within Conservation Zone (CZ) 4. However, according to maps in Appendix D of the EACCS, the site is not within the range of potential habitat for any plant species covered under the EACCS (i.e., San Joaquin spearscale, recurved larkspur, big tarplant, and Congdon's tarplant).

Special-Status Wildlife

According to the Brief Biological Constraints Analysis, total of six special-status wildlife species have been documented within three miles of the site, inlcuding burrowing owl (*Athene cunicularia*), California red-legged frog (*Rana draytonii*), California tiger salamander (*Ambystoma californiense*), tricolored blackbird (*Agelaius tricolor*), vernal pool fairy shrimp (*Branchinecta lynchi*), and western pond turtle (*Emys marmorata*). Four of the aforementioned species require specialized habitats that do not occur on-site, including vernal pools (vernal pool fairy shrimp), grasslands adjacent to seasonal wetlands/ponds that constitute aquatic breeding habitat (California tiger salamander), wetlands with tall emergent vegetation (tricolored blackbird), and upland habitats with adjacent permanent or nearly permanent water (western pond turtle). However, the potential exists for burrowing owl (California Species of Special Concern) and California red-legged frog (federally threatened and California Species of Special Concern) to occur on-site.

While burrowing owls or evidence of their use of the site was not observed during the site visit, the on-site grasslands support numerous ground squirrel burrows that could provide suitable nesting sites for burrowing owl. Additionally, California red-legged frogs have been documented within Collier Canyon Creek, just 0.2-mile upstream from the project site. While the onsite grasslands are unlikely to be used by the species and the on-site portion of the creek does not provide suitable breeding habitat, the riparian corridor could support dispersing individuals. Lastly, according to the Brief Biological Constraints Analysis, while records for special-status bat species do not exist in the vicinity of the project site, the riparian corridor provides suitable habitat for roosting bats.

Given that trees exist on-site, the potential exists for nesting raptors or migratory birds, including species protected by the Migratory Bird Treaty Act (MBTA), to be present within the site at certain times of year. All nesting raptors and migratory birds, regardless of their status, are protected by State and federal laws. Therefore, construction activities that adversely affect the nesting success of raptors and migratory birds (i.e., lead to the abandonment of active nests) or result in mortality of individual birds constitute a violation of State and federal laws. Thus, project construction-related activities that would occur during the breeding season could result in an adverse effect to species protected under State Fish and Game Code and the MBTA, should such species be present on or adjacent to the project site.

As discussed above, the site is within the boundaries of the EACCS, within Conservation Zone (CZ) 4. However, according to maps in Appendix D of the EACCS, the site is not within the range of potential habitat for the majority of wildlife species covered under the EACCS (i.e., longhorn fairy shrimp, vernal pool fairy shrimp, Callippe silverspot butterfly, foothill yellow-legged frog, Alameda whipsnake, Central California Coast steelhead, golden eagle, tricolored blackbird, western burrowing owl, American badger, and San Joaquin kit fox). The project site is within the range of potential upland habitat for California tiger salamander and California red-legged frog.

Conclusion

The proposed project would be subject to INSP Policies related to biological resources, as well as applicable 2018 INSP EIR mitigation measures, including MM-BIO-1, which requires a salvage, relocation, or propagation and monitoring plan for special-status plant species, and MM-BIO-2, MM-BIO -3, MM-BIO -7, MM-BIO -9 through -9, which requires avoidance of nesting birds, burrowing owl nesting, California tiger salamander, California red-legged frog, and roosting bats where feasible. As such, the proposed project would not result in new significant impacts or substantially more severe significant impacts than what were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

b,c According to the 2018 INSP EIR, development within the INSP could affect up to one acre of riparian vegetation, both during construction and operations. The changes resulting from future development under the INSP would result in a potentially significant impact on riparian vegetation. However, the 2018 INSP EIR determined that with implementation of INSP polices, and mitigation measures MM-BIO-10 and MM-BIO-11, impacts to riparian habitat would be less than significant.

According to the 2018 INSP EIR, seasonal wetlands, freshwater emergent wetlands, and drainages occur within the INSP area. Such features are expected to be subject to USACE jurisdiction. Additionally, riparian habitat may be subject to USACE jurisdiction and falls under the purview of CDFW. New development associated with the INSP could affect such protected features, both during construction and operation; thus, a potentially significant impact on wetlands and other waters could occur. However, the 2018 INSP EIR determined that with implementation of INSP polices, and mitigation measures MM-BIO-12 and MM-BIO-13, impacts to federally protected wetlands and other waters regulated under Section 404 of the Clean Water Act would be less than significant.

According to the Brief Biological Constraints Analysis, Collier Canyon Creek transects the northern portion of the project site and defines the western boundary of the project site. The riparian corridor associated with the creek is primarily dominated by a dense canopy cover comprised of willow (*Salix lasiandra* and *S. lasiolepis*), coast live oak (*Quercus agrifolia*), Fremont cottonwood (*Populus fremontii*), and black walnut (*Juglans hindsii*). Breaks in the canopy are scattered along the length of the corridor, with understory plants such as beardless wildrye (*Elymus triticoides*), fennel (*Foeniculum vulgare*), and coyote brush (*Baccharis pilularis*) dominating the openings. The intermittent creek was completely dry along the north-south stretch, but had standing water in the upper reaches during the November 22, 2019 site visit. The incised creek channel ranges between 2 and 4-feet-wide at ordinary high water mark (OHWM) and eight and 20-feet-wide at top of bank (TOB). Any proposed modification of Collier Creek, including modification to the bed, banks, or riparian vegetation, would trigger permitting requirements by the CDFW.

Collier Canyon Creek is a jurisdictional water of the U.S. and State. Any modification of Collier Creek, including placement of any fill materials, or modification of the bed, banks, or riparian vegetation, will trigger permitting requirements from the US Army Corps of Engineers (USACE), the Regional Water Quality Control Board (RWQCB), pursuant to the Clean Water Act, and the CDFW, pursuant to California Fish and Game Code (CFGC).

In addition, a single potential seasonal wetland occurs in the southwestern portion of the project site. The topographically low area exhibited 100 percent cover of saltgrass (*Distichlis spicata*), a facultative wetland plant that could indicate the presence of a

jurisdictional seasonal wetland. Due to the ephemeral nature of seasonal wetlands, observation of wetland character is best completed during the winter and spring months. Surveys conducted out of season are limited, and more features may be observed when a formal wetland delineation is completed. In order for wetlands to be jurisdictional, they must meet federal or state standards which typically includes a 3-parameter test (hydrology, soils, vegetation). If the wetland feature is determined to be a regulated water of the U.S. or State, any subsequent fill of the feature would trigger permitting requirements from the USACE and the RWQCB.

According to the Aquatic Resource Delineation report prepared for the proposed project, (see Appendix C)[11] a total of 513 linear feet and 0.18-acre of potential wetland and non-wetland waters of the U.S. and State are present in the project site, as well as 1.02 acres of CDFW-regulated riparian zones. All delineated wetland and non-wetland waters are assumed to be subject to USACE and RWQCB jurisdiction for the purposes of the proposed project, and all delineated streams, wetlands, and riparian zones are assumed to be subject to CDFW jurisdiction.

The currently proposed project's area of impact is within the previously analyzed area of impact of the 2018 INSP EIR. In addition, the proposed project would be subject to applicable INSP policies and mitigation measures, which would require compensation of jurisdictional wetlands and non-wetland waters. Therefore, the proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. As such, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

d. According to the 2018 INSP EIR, given the surrounding network of existing developed parcels and roads, existing human activity and visitation, and existing human and vehicle noise, the INSP area does not likely serve as a habitat corridor; thus, further development projects within the INSP is not anticipated to significantly block or interfere with wildlife species movement. As a result, the 2018 INSP EIR concluded that impacts would be less than significant.

The project site is located in an urbanized area and is bordered by existing roadways to the south and east and commercial development to the north. While the Collier Canyon Creek is located adjacent to the western border of the project site, the 2018 INSP EIR noted that Collier Canyon Creek is fragmented by multiple road crossings, and, therefore does not likely serve as a wildlife corridor due to the presence of human activity and noise. As such, the project would not interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites.

Based on the above, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. As such, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

e. According to the 2018 INSP EIR, implementation of future projects within the INSP area may result in the removal of trees subject to the City of Livermore's jurisdiction. The City

[11] Johnson Marigot Consulting, LLC. *U.S. Army Corps of Engineers Aquatic Resource Delineation Report Collier Canyon Parcels Project Alameda County, California*. March 2022.

of Livermore Department of Public Works and/or the Community Development Department ultimately determines the replacement ratio during the permitting process. The removal of regulated trees without a permit or appropriate compensation would result in a significant impact; however, the 2018 INSP EIR concluded that implementation of INSP Policy P-ENV-28, which requires a tree removal permit and a tree avoidance, minimization, and replacement plan consistent with the City of Livermore's Street Tree and Tree Preservation Ordinance, impacts related to conflicts with local policies or ordinances protecting biological resources would be less than significant.

Because the proposed project would require the removal of any trees, the Site Plan Design Review application would cover any tree removals and would be subject to Sections 12.20.080 and 12.20.190 of the City's Municipal Code. Said tree removal may require mitigation for removal of native species and/or mature trees.

Based on the above information, the proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. As a result, the proposed project would be consistent with the conclusions of the 2018 INSP EIR.

f. The project site is not located in an area with an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other adopted local or State HCP. Therefore, the INSP concluded that no impact would occur related to conflicting with such plans. It should be noted that the project site is within the boundaries of the EACCS, a guidance document for regional conservation and environmental permitting for private and public development projects. However, while conservation strategies are provided by the EACCS, the document is not considered an adopted HCP/NCCP.

Based on the above information, the proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. As a result, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

Because the proposed project would not result in potential impacts related to tricolored blackbird, western pond turtle, San Joaquin kit fox, American badger, or Callippe silverspot butterfly, MM-BIO-4, MM-BIO-5, MM-BIO-6, or MM-BIO-8 would not be applicable to the proposed project. The following mitigation measure(s) from the 2018 INSP EIR would apply to the proposed project:

MM-BIO-1: Prepare and implement a salvage, relocation, or propagation and monitoring plan for special-status plant species.

If a protocol-level botanical survey reveals the presence of special-status plant species in the Planning Area, all directly affected areas of special-status plants will be documented by a qualified botanist or ecologist retained by project proponents prior to issuance of grading permits. Documentation will include density and percent cover; key habitat characteristics, including soil type, associated species, hydrology, and topography; and photographs of preconstruction conditions. The project proponent will notify USFWS and/or CDFW and a qualified botanist or restoration ecologist will prepare a salvage, relocation, or propagation and monitoring plan in coordination with USFWS and/or CDFW prior to construction to address affected special-status plant species. The plan will include provisions that address the

techniques, location, and procedures required for the successful establishment of the plant populations. The plan will include provisions for performance that address survivability requirements, maintenance, monitoring, implementation, and the annual reporting requirements.

Monitoring and success criteria applicable to special-status plant salvage, relocation, or propagation will require the following.

- At least two surveys by a qualified botanist or ecologist per monitoring year.
- At least 80 percent of the planted area must support vegetation composition and density consistent with reference population conditions.
- At least 80 percent of the planted area must support target species amounts similar to reference feature conditions.
- A minimum of five consecutive years of monitoring to ensure success criteria are met.

MM-BIO-2: Avoid nesting birds where feasible.

Proponents (or their contractors) of specific projects under the proposed Plan shall conduct construction activities outside the bird nesting season (February 1 to August 31) to the extent feasible. If construction initiation is unavoidable during this time, the project proponent or its contractor will retain a qualified wildlife biologist with demonstrated nest-searching experience to conduct preconstruction surveys for nesting birds (including raptors, but excluding burrowing owl) within 300 feet and including the near-term or longer-term improvements environmental footprints. Adjacent lands outside the development footprints will be scanned with binoculars from the limit of ground-disturbance and publicly accessible areas. Preconstruction surveys will occur no more than three days prior to the onset of ground-disturbing activities (including clearing, grubbing, and staging) at each development area. If active nests are found in the development footprints, the biologist will establish a no-disturbance buffer around the nest and mark the buffer perimeter with high-visibility fencing, flagging, or pin flags. The size of the buffer will be based on the species' sensitivity to disturbance and planned work activities in the vicinity; typical buffer sizes are 250 feet for raptors and 50 feet for other birds. The buffer will remain in place until the nest is no longer active, as determined by the biologist. Buffers for any nests found outside but within 300 feet of the development sites will be established based on the biologist’s best professional judgment whether the work would result in nest abandonment. If a lapse in construction activities of 15 days or longer at a previously surveyed environmental footprint occurs, another preconstruction survey will be conducted.

If structure demolition activities cannot occur outside of the nesting season, the project proponent or its contractor will remove inactive nests from the structure to be demolished and install nest exclusion measures (e.g., fine mesh netting, panels, or metal projectors) outside of the nesting season. All exclusionary devices will be monitored and maintained throughout the breeding season to ensure that they are successful in preventing the birds from accessing the cavities or nest sites. No more than three days prior to structure demolition activities, a qualified biologist will conduct a preconstruction survey of all potential nesting habitat on the structures to be demolished/modified and the surrounding areas for the presence of active nests. If active nests are found on the structures or in the affected area, then

demolition/modification activities will not proceed until the biologist verifies that all nests on the structures are inactive.

After all surveys and/or nest deterrence activities are completed at each development footprint, the biologist will complete a memorandum detailing the survey effort and results and submit the memorandum to the project proponent within seven days of survey completion.

MM-BIO-3: Avoid burrowing owl nesting where feasible.

Prior to any construction activity planned during the fall and winter non-nesting season (September 1 through January 31) or at any time during the construction process, proponents of projects proposed within the Planning Area will retain a qualified wildlife biologist to conduct a preconstruction survey for burrowing owls. Surveys will be conducted at each area of suitable habitat that will be disturbed no more than seven days prior to ground-disturbing activities and will cover all suitable burrowing owl habitat subject to disturbance pursuant to CDFW's Staff Report on Burrowing Owl Mitigation (California Department of Fish and Game, 2012). If any burrowing owls are found within the disturbance area, the project proponent will notify CDFW and will proceed under CDFW direction.

If construction is planned to occur during the nesting season (February 1 through August 31), the project proponent will retain a qualified wildlife biologist to conduct a breeding season burrowing owl survey in the year prior to construction. The survey will be conducted to determine if there is a breeding pair within approximately 500 feet of each development footprint, unless the biologist determines that a smaller survey buffer around the construction footprint is warranted based on preexisting background disturbance and conditions. Survey visits will be timed in accordance with CDFW guidelines (California Department of Fish and Game, 2012). This will provide the project team advance notice of nesting owls in the development area and allow ample time to discuss appropriate avoidance measures with CDFW. In addition, preconstruction surveys will be conducted no more than seven days prior to ground disturbance in all areas of the development footprint supporting burrowing owl habitat. If the biologist identifies the presence of a burrowing owl nest in an area scheduled to be disturbed by construction, a 660-foot no-activity buffer will be established and maintained around the nest while it is active. Surveys and buffer establishment will be performed by qualified wildlife biologists, and buffers will be coordinated with CDFW by contacting the appropriate CDFW personnel, and will be subject to CDFW review and oversight.

MM-BIO-7: Avoid California tiger salamander and California red-legged frog where feasible.

Proponents of specific projects within the Planning Area shall retain a USFWS and/or CDFW-approved biologist (as appropriate) to identify and flag (pin flags or 4-foot lath) all suitable aquatic habitat for California tiger salamander and California red-legged frog outside of but adjacent to development footprints and ground-disturbance areas prior to staging, vegetation clearing, grading, or other construction activities. The project proponent or its contractor will protect habitat areas by installing orange exclusion and erosion control fencing at the maximum practicable distance from the work site or, if feasible, at least 500 feet from the aquatic habitat edge, wet or dry, to make it easily visible by construction crews.

A qualified biologist will conduct a preconstruction survey each morning before construction activities begin and continue to monitor ground-disturbing construction activities where suitable habitat occurs during all phases of construction to remove any California tiger salamander and California red-legged frogs found in the development footprint. Individual salamanders and frogs will be moved immediately to a relocation site that is a minimum of 330 feet from the construction boundary. The relocation site will be determined in coordination with USFWS and/or CDFW prior to the commencement of construction activities.

Construction activities near drainages and wetland complexes identified as potential movement corridors shall take place between July 1 and October 1, when the California tiger salamander and California red-legged frog are least likely to be present in the development area.

To discourage California tiger salamander and California red-legged frogs from entering the improvements areas via ditches, the ditches will be equipped with lightweight, one-way flow gates. These will be designed so that water can easily pass from the construction site to the ditches, but small vertebrates such as the salamander or frog cannot move upstream from ditches to the development area.

MM-BIO-9: Avoid roosting bats where feasible.

If tree removal and trimming cannot be conducted between September 15 and October 30, proponents of projects implemented under the proposed Plan will retain a qualified biologist to examine trees to be removed or trimmed for suitable bat roosting habitat no more than 2 weeks before removal and trimming. High-quality habitat features (large tree cavities, basal hollows, loose or peeling bark, larger snags, palm trees with intact thatch, etc.) will be identified and the area around these features searched for bats and bat signs (e.g., guano, culled insect parts, urine staining, etc.). Mixed willow riparian scrub and stands of mature broadleaf trees should be considered potential habitat for solitary foliage-roosting bat species. Passive monitoring using full spectrum bat detectors may be needed if identification of bat species is required. Survey methods will be discussed with CDFW prior to the start of surveys.

Measures to avoid and minimize impacts on sensitive bats species will be determined in coordination with CDFW and may include the following.

- Tree removal will be avoided between April 1 and September 15 (the maternity period) to avoid effects on pregnant females and active maternity roosts (whether colonial or solitary).
- All tree removal will be conducted between September 15 and October 30, which corresponds to a time period when bats have not yet entered torpor or would be caring for nonvolant (non-flying) young.
- Each tree will be removed in pieces rather than felling the entire tree. • If a maternity roost is located, whether solitary or colonial, that roost will remain undisturbed until September 15 or a qualified biologist has determined the roost is no longer active.
- If avoidance of nonmaternity roost trees is not possible, and tree removal or trimming must occur between October 30 and September 15, qualified biologists will monitor tree trimming and removal. If possible, tree trimming and

removal should occur in the late afternoon or evening when it is closer to the time that bats would normally arouse. Prior to removal and trimming, each tree will be shaken gently and several minutes should pass before felling trees or limbs to allow bats time to arouse and leave the tree. The biologists will search downed vegetation for dead and injured bats. The presence of dead or injured bats that are species of special concern will be reported to CDFW. The biologist will prepare biological monitoring report, which will be provided to the project proponent and CDFW.

MM-BIO-10: Avoid and protect riparian habitat during construction.

Proponents of specific projects under the proposed Plan will ensure that a qualified resource specialist (i.e., biologist, botanist, or ecologist) will clearly identify riparian habitat to be preserved abutting the development area and outside of the direct construction area with high-visibility construction fencing or markers (e.g., lathe or pin flags) before site preparation. Construction will not encroach upon sensitive natural communities identified by the resource specialist. The resource specialist will use the project's verified wetland delineation, soils data, and land cover data to confirm the location of riparian habitat boundaries based on existing conditions at the time of the avoidance marking. Exclusion fencing or markers will be installed before construction activities are initiated, and the fencing will be maintained throughout the construction period. No construction activity, traffic, equipment, or materials will be permitted in fenced sensitive natural community areas. Exclusion fencing and markers will be removed following completion of construction activities.

All conditions imposed by State and federal permits for individual improvements will be clearly identified in the construction plans and specifications and monitored during and after construction to ensure compliance.

MM-BIO-11: Compensate for loss of riparian habitat.

For direct effects on woody riparian trees that cannot be avoided, proponents of specific projects under the proposed Plan will compensate for the loss of riparian habitat to ensure no net loss of habitat functions and values. Compensation ratios will be based on site-specific information and determined through coordination with the appropriate State and federal agencies during the permitting process. At a minimum, the compensation ratio will be 2:1 (e.g., two acres restored/created/enhanced or credits purchased for every 1 acre removed) for permanent impacts and 1:1 for temporary impacts (where riparian habitat will regenerate to pre-activity character within one year). Compensation may be a combination of offsite restoration or mitigation credits. The project proponent or its contractor will develop a restoration and monitoring plan that describes how riparian habitat will be enhanced or recreated and monitored over at least 5 years, or as determined by the appropriate State and federal agencies.

If the project proponent identifies suitable onsite areas (adjacent to the permanent construction footprint) that are outside the development footprint and chooses to compensate onsite or in the project's vicinity, a revegetation plan will be prepared. The revegetation plan will be developed prior to the removal of existing riparian vegetation and will be conducted onsite or in the near-term or longer-term

improvements vicinity to the extent feasible; however, mitigation site selection will avoid areas where future development or maintenance are likely. The revegetation plan will be prepared by a qualified botanist or restoration specialist with experience in riparian restoration and reviewed by the appropriate agencies. The revegetation plan will specify the planting stock appropriate for each riparian land cover type and each mitigation site, ensuring the use of genetic stock from the corresponding development area by project. The plan will employ the most successful techniques available at the time of planting. Success criteria will be established as part of the plan and will include a minimum of 70 percent revegetation success after three years, 80 percent revegetation success at the end of five years, and 75 percent vegetative coverage after five years.

The project proponent or its contractor will retain a qualified botanist, restoration ecologist, or biologist with experience in riparian restoration to monitor the plantings as necessary for five years. The project proponent or its contractor will be responsible for maintaining the plantings, including managing invasive plants (as defined by the California Invasive Plant Council) and other weeds, and implementing irrigation and plant protection if necessary. The project proponent or its contractor will submit annual monitoring reports to the regulatory agencies issuing permits related to habitat effects, including CDFW, USACE, and USFWS. Replanting will be necessary if success criteria are not met, and replacement plants subsequently will be monitored and maintained to meet the success criteria. The riparian habitat mitigation will be considered successful when the sapling trees established meet the success criteria, the habitat no longer requires substantial active management, and vegetation is arranged in groups that, when mature, replicate the area, natural structure, stratification, and species composition of similar riparian habitats in the region.

MM-BIO-12: Avoid and protect wetlands during construction.

Proponents of specific projects under the proposed Plan will ensure that a qualified resource specialist (i.e., wetland biologist, ecologist, or soil scientist) will clearly identify wetland areas to be preserved abutting the development area and wetland areas outside of the direct construction area with high-visibility construction fencing or markers (e.g., lathe or pin flags) before site preparation. Construction will not encroach upon jurisdictional wetlands identified by the resource specialist. The resource specialist will use the development footprint and verified wetland delineation to confirm the location of wetland boundaries based on existing conditions at the time of the avoidance marking. Exclusion fencing or markers will be installed before construction activities are initiated, and the fencing will be maintained throughout the construction period. No construction activity, traffic, equipment, or materials will be permitted in fenced wetland areas. Exclusion fencing and markers will be removed following the completion of construction activities.

All conditions imposed by the projects' State and federal permits will be implemented as part of the construction, with ultimate enforcement oversight by applicable State and federal agencies. The conditions will be clearly identified in the construction plans and specifications and monitored during and after construction to ensure compliance.

MM-BIO-13: Compensate for impacts on jurisdictional wetlands and non-wetland waters of the United States (aquatic resources) prior to near-term and longer-term improvements impacts during construction.

If projects impact jurisdictional wetlands and non-wetland waters, proponents of these specific projects under the proposed Plan will develop an aquatic resource (wetlands and non-wetland waters of the United States) mitigation plan, subject to approval by the USACE, which will ensure no net loss of wetlands from development impacts. The plan will detail the amount and type of wetlands (based on the projects' verified wetland delineation) that will be compensated for (through preservation, creation, or restoration) for impacts on existing wetlands and non-wetland waters of the United States (aquatic resources), and outline the monitoring and success criteria for the compensation wetlands and non-wetland waters of the United States. Additional enhancement options include fish barrier removal, riparian restoration, floodplain restoration, and streambank layback to improve overall ecologic function and connectivity of wetland and non-wetland waters. Enhancement sites will be located as near the impact location as possible but, in the event that local enhancement opportunities are not available, such activities will occur within the same stream system or watershed to provide improved ecologic function and connectivity of wetlands and non-wetland waters affected by development activities.

Monitoring and success criteria applicable to created or restored wetlands will require the following.

- At least two surveys by a qualified wetland biologist, botanist, or ecologist per monitoring year.
- At least 80 percent of the created or restored features support vegetation consistent with reference feature conditions.
- At least 80 percent of the created or restored features support hydrologic regimes similar to reference feature conditions.
- A minimum of five consecutive years of monitoring to ensure success criteria are met.
- Remedial actions to restore intended ecological function of created or restored features that fail to meet the success criteria for three consecutive years.

Once the plan is approved, the project proponent will implement the aquatic resource compensation measures prior to the initiation of development construction. The project proponent will be responsible for funding compensatory mitigation, monitoring of the created or restored features per the mitigation plan, and any remedial actions necessary. All conditions that are attached to the State and federal permits will be implemented as part of the development project, with ultimate enforcement oversight by applicable State and federal agencies. The conditions will be clearly identified in the construction plans and specifications and monitored during and after construction to ensure compliance.

V. CULTURAL RESOURCES. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	2018 EIR pgs. 3.13-14 to 3.13-16	No	No	No
b. Cause a substantial adverse change in the significance of a unique archaeological resource pursuant to Section 15064.5?	2018 EIR pg. 3.13-16	No	No	No
c. Disturb any human remains, including those interred outside of dedicated cemeteries.	2018 EIR pgs. 3.13-18 to 3.13-19	No	No	No

Discussion

a. The 2018 INSP EIR assessed the potential for buildout of the INSP to cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5 of the CEQA Guidelines and determined that the Gandolfo Ranch historic district was identified for listing in the National Register of Historic Places (NRHP). The 2018 INSP EIR determined that development of the agricultural property as part of the INSP would result in the demolition, destruction, relocation, and/or alteration of the historical resource such that the significance of the resource would be materially impaired. Given that the Gandolfo Ranch is a known historical resource, the site of which would be substantially altered under the INSP, even with implementation of INSP Policies P-ENV-34 through P-ENV-37, would a substantial change to the significance of a historical resource would likely occur, and known feasible policies and mitigation measures are not available to reduce the impact to a less-than-significant level, the INSP determine that the impact would remain significant and unavoidable. The project site is not located within the Gandolfo Ranch.

A field survey of the project site was conducted on August 6, 2024 as part of the Cultural Resources Study prepared for the proposed project by Tom Origer & Associates.[12] Buildings or structures were not determined to be present within the project site. A small memorial was observed in the northern portion of the project site; however, because the memorial is modern and does not represent a human burial, the memorial is not determined to be a historic resource. Thus, the project site does not contain any structures which would be considered historical, nor would the project result in removal of any possible historic resources. In addition, the proposed project would be implemented within the previously analyzed footprint of the 2018 INSP EIR, and is not located within an area for which the 2018 INSP EIR identified any historic resources. As such, the proposed project would not result in new significant impacts or substantially more severe significant impacts than what were previously analyzed in the 2018 INSP EIR. As a result, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

b,c. The 2018 INSP EIR assessed the potential for buildout of the INSP to cause a substantial adverse change in the significance of a unique archaeological resource pursuant to

[12] Tom Origer & Associates. *Cultural Resources Study for the Cornerstone Townhomes Project Livermore, Alameda County, California*. August 13, 2024.

Section 15064.5 of the CEQA Guidelines, or disturb any human remains, including those interred outside of dedicated cemeteries. The 2018 INSP EIR concluded that future development would involve grading, excavation, or other ground-disturbing activities, which could potentially disturb or destroy significant buried archaeological resources and/or human remains. Nonetheless, the 2018 INSP EIR determined that with implementation of INSP Policies P-ENV-34 and P-ENV-37, all potential impacts would be less than significant. The proposed project would be subject to the requirements of the aforementioned policies related to archeological resources and inadvertent discovery of human remains.

In compliance with INSP Policy P-ENV-34 and to ensure that any additional resources have not been discovered since the adoption of the 2018 INSP EIR, as part of the Cultural Resources Study prepared for the proposed project, a records search of the California Historic Resources Information System (CHRIS) was performed by the Northwest Information Center (NWIC) for cultural resource site records and survey reports within the project area. The NWIC concluded that the project site does not contain any recorded archaeological resources nor any historic buildings or structures on any lists of historic resources. A review of 19th and 20th century maps showed that buildings did not exist within the study area prior to 1953. However, aerial photos show buildings present within the study area by 1949. Topographic maps also show two buildings at the north end and four buildings in the southern half of the study area. By 1972, the building complex near the southwest corner of the study area was removed, an additional building complex was present in the north end, and a road was being developed through the study area. Most of the buildings were removed between 1993 and 2002, and the last complex was removed by 2020. In addition, a search of the Native American Heritage Commission (NAHC) Sacred Lands File search did not yield any information regarding the presence of Tribal Cultural Resources within the project site or the immediate area.

Based on the above, the proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. As a result, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

VI. ENERGY. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	2018 EIR pgs. 3.4-22 to 3.4-29 2020 SEIR pgs. 3.3-24 to 3.3-31	No	No	Yes
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	N/A	No	No	Yes

Discussion

a,b. It should be noted that since the preparation of the 2020 INSP SEIR, regulations pertaining to energy use have become much more stringent. Therefore, the construction and operational energy demand associated with the proposed project is anticipated to be less than what was assumed in the 2020 INSP SEIR analysis.

Through existing infrastructure, electrical and natural gas services are provided to the site by Pacific Gas and Electric Co. (PG&E). During construction and operations, the currently proposed project would be subject to regulations required by the CARB, the 2022 Building Energy Efficiency Standards, and the 2022 CALGreen standards.

A description of the California Green Building Standards Code and the Building Energy Efficiency Standards follows, as well as discussions regarding the proposed project's potential effects related to energy demand during construction and operations.

California Green Building Standards Code

The 2022 California Green Building Standards Code, otherwise known as the CALGreen Code (CCR Title 24, Part 11), is a portion of the CBSC, which became effective with the rest of the CBSC on January 1, 2023.[13] The purpose of the CALGreen Code is to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices. The CALGreen standards regulate the method of use, properties, performance, types of materials used in construction, alteration repair, improvement and rehabilitation of a structure or improvement to property. The provisions of the code apply to the planning, design, operation, construction, use, and occupancy of every newly constructed building or structure throughout California. Requirements of the CALGreen Code include, but are not limited to, the following measures:

- Compliance with relevant regulations related to future installation of electric vehicle (EV) charging infrastructure in residential and non-residential structures;
- Indoor water use consumption is reduced through the establishment of maximum fixture water use rates;
- Outdoor landscaping must comply with the California Department of Water Resources' Model Water Efficient Landscape Ordinance, or a local ordinance, whichever is more stringent, to reduce outdoor water use;
- Diversion of 65 percent of construction and demolition waste from landfills;

[13] California Building Standards Commission. *2022 California Green Building Standards Code*. 2023.

- Incentives for installation of electric heat pumps, which use less energy than traditional heating, ventilation, and air conditioning (HVAC) systems and water heaters;
- Required solar PV system and battery storage standards for certain buildings; and
- Mandatory use of low-pollutant emitting interior finish materials such as paints, carpet, vinyl flooring, and particle board.

Building Energy Efficiency Standards

The 2022 Building Energy Efficiency Standards is a portion of the CBSC, which expands upon energy-efficiency measures from the 2019 Building Energy Efficiency Standards, went into effect starting January 1, 2023. The 2022 standards provide for additional efficiency improvements beyond the 2019 standards. The proposed project would be subject to all relevant provisions of the most recent update of the CBSC, including the Building Energy Efficiency Standards. Adherence to the most recent CALGreen Code and Building Energy Efficiency Standards would ensure that the proposed structure would consume energy efficiently.

Construction Energy Use

The 2020 INSP SEIR concluded that the land uses proposed under the INSP would not require extraordinary amounts of energy during construction, and construction would represent a relatively short demand on local and regional fuel supplies that could be accommodated. Thus, the 2020 INSP SEIR concluded that construction activities would not result in the wasteful, inefficient, and unnecessary usage of direct or indirect energy.

Construction of the proposed project would involve on-site energy demand and consumption related to use of oil in the form of gasoline and diesel fuel for construction worker vehicle trips, hauling and materials delivery truck trips, and operation of off-road construction equipment. In addition, diesel-fueled portable generators may be necessary to provide additional electricity demands for temporary on-site lighting, welding, and for supplying energy to areas of the site where energy supply cannot be met via a hookup to the existing electricity grid. Project construction would not involve the use of natural gas appliances or equipment.

All construction equipment and operation thereof would be regulated per the CARB In-Use Off-Road Diesel Vehicle Regulation. The In-Use Off-Road Diesel Vehicle Regulation is intended to reduce emissions from in-use, off-road, heavy-duty diesel vehicles in California by imposing limits on idling, requiring all vehicles to be reported to CARB, restricting the addition of older vehicles into fleets, and requiring fleets to reduce emissions by retiring, replacing, or repowering older engines, or installing exhaust retrofits. In addition, as a means of reducing emissions, construction vehicles are required to become cleaner through the use of renewable energy resources. The In-Use Off-Road Diesel Vehicle Regulation would therefore help to improve fuel efficiency for equipment used in construction of the proposed project. Technological innovations and more stringent standards are being researched, such as multi-function equipment, hybrid equipment, or other design changes, which could help to further reduce demand on oil and limit emissions associated with construction.

Based on the above, the temporary increase in energy use occurring during construction of the proposed project would not result in a significant increase in peak or base demands or require additional capacity from local or regional energy supplies. In addition, the proposed project would be required to comply with all applicable regulations related to

energy conservation and fuel efficiency, which would help to reduce the temporary increase in demand. Therefore, construction energy usage related to the proposed project would be similar to what was anticipated in the 2020 INSP SEIR.

Operational Energy Use

The 2020 INSP SEIR determined that operation of the INSP would decrease demand for energy- and fuel-related energy resources on a per capita basis, and thus, operation of future land uses associated with development of the INSP would not result in a wasteful, inefficient, and unnecessary usage of direct or indirect energy.

Energy use associated with operation of the proposed project would be typical of residential and public park development, requiring electricity for interior and exterior building lighting, HVAC, electronic equipment, machinery, refrigeration, appliances, security systems, and more. Maintenance activities during operations, such as landscape maintenance, would involve the use of electric or gas-powered equipment. In addition to on-site energy use, the proposed project would result in transportation energy use associated with vehicle trips generated by the proposed residential units.

The proposed project would be subject to all relevant provisions of the most recent update of the CBSC, including the Building Energy Efficiency Standards. Adherence to the most recent CALGreen Code and the Building Energy Efficiency Standards would ensure that the proposed structures would consume energy efficiently. Required compliance with the CBSC would ensure that the building energy use associated with the proposed project would not be wasteful, inefficient, or unnecessary. In addition, electricity supplied to the project by PG&E would comply with the State's Renewable Portfolio Standard (RPS), which requires investor-owned utilities, electric service providers, and community choice aggregators to increase procurement from eligible renewable energy resources to 60 percent of total procurement by 2030. Thus, a portion of the energy consumed during project operations would originate from renewable sources.

As discussed in Section VIII, Greenhouse Gas Emissions, of this Initial Study/15182 Checklist, the proposed project would be built all-electric, which is consistent with the requirements of the 2022 Green Building Standards Code, as well as Strategy B-1 of the City of Livermore Climate Action Plan (CAP). Furthermore, consistent with the 2022 CALGreen Code requirements, 100 percent of the townhome electricity would be generated by rooftop solar panels. The inclusion of solar panels would drastically reduce the demand for grid supplied electricity of the proposed project.

With regard to transportation energy use, the proposed project would comply with all applicable regulations associated with vehicle efficiency and fuel economy. In addition, as discussed in Section XVII, Transportation, of this Initial Study/15182 Checklist, the project site is located within close proximity to existing bicycle infrastructure and transit infrastructure, and would also provide EV charging stations, pursuant to the City's Reach Code. Bicycle parking would be included on-site, which would encourage patrons to use alternative transportation.

Based on the above, operational energy usage from buildout of the proposed project would be similar to what was anticipated in the 2020 INSP SEIR.

Conclusion

Based on the above information, the currently proposed project would involve energy use associated with construction activities and operations; however, the proposed project would comply with all applicable State energy standards, which would ensure that construction and operation of the proposed project would not result in wasteful, inefficient, or unnecessary consumption of energy resources or conflict with or obstruct a State or local plan for renewable energy or energy efficiency. Therefore, energy usage from buildout of the proposed project would be less than what was anticipated in the 2020 INSP SEIR, and impacts related to energy use would be less than significant.

Prior Mitigation Measures

None Required.

VII. GEOLOGY AND SOILS. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?

Discussion

ai.-aii. The 2018 INSP EIR collectively analyzed the potential of buildout of the INSP to expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving the rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault or strong seismic ground shaking under Impact 3.12-1. As discussed therein, faults zoned under the Alquist-Priolo Earthquake Fault Zoning Act are not present within the INSP Planning Area. The Alquist-Priolo Earthquake Fault Zones nearest to the Planning Area are associated with the Calaveras Fault, approximately 5.5 miles to the southwest, and the Greenville Fault, approximately 6.3 miles to the northeast. Because known active faults do not exist within

the INSP Planning Area, the 2018 INSP EIR concluded that there would be no impact related to the rupture of a known earthquake fault.

With regard to seismic ground shaking, the 2018 EIR determined that, due to the proximity of the Calaveras and Greenville Faults, locations within the Planning Area could experience considerable ground shaking in the event of an earthquake. However, compliance with CBSC requirements, California Department of Transportation (Caltrans) roadway development standards, and standard industry practices would reduce potential impacts from ground shaking to the greatest extent feasible and the 2018 EIR concluded that impacts would be less than significant.

Potential seismic hazards resulting from a nearby moderate to major earthquake can generally be classified as primary and secondary. The primary effect is ground rupture, also called surface faulting. The common secondary seismic hazards include ground shaking and ground lurching. Because the project site does not contain any known active faults and is not located within an Alquist-Priolo Earthquake Fault Zone, ground rupture is unlikely at the project site.

Based on past events, an earthquake of moderate to high magnitude generated by the San Francisco Bay Region could cause considerable ground shaking at the project site. However, the CBSC provides minimum standards to ensure that the proposed structures would be designed using sound engineering practices and appropriate engineering standards for the seismic area in which the project site is located. Projects designed in accordance with the CBSC should be able to: 1) resist minor earthquakes without damage, 2) resist moderate earthquakes without structural damage but with some nonstructural damage, and 3) resist major earthquakes without collapse but with some structural as well as nonstructural damage. Although conformance with the CBSC does not guarantee that substantial structural damage would not occur in the event of a maximum magnitude earthquake, conformance with the CBSC can reasonably be assumed to ensure that the proposed structure would not collapse, resulting in a loss of life in a major earthquake.

Based on the above information, the proposed project would not result in new significant impacts or substantially more severe significant impacts than what were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would be consistent with the conclusions of the 2018 INSP EIR.

aiii, aiv,

c. The 2018 INSP EIR determined that the potential hazards of unstable soil or geologic units, liquefaction, or landslides would be addressed through the integration of geotechnical information into the planning and design process for future projects within the INSP area. Geotechnical investigations for specific projects within the INSP area would be required to thoroughly evaluate site-specific geotechnical characteristics such as subsurface soils and bedrock to assess potential hazards and recommend site preparation and design measures to address any hazards which may be present. Such measures would be enforced through compliance with CBSC requirements to avoid or reduce hazards relating to unstable soils and slope failure or Caltrans standards. Therefore, with compliance with standard industry practices and State requirements, the 2018 INSP EIR concluded that impacts related to landslides, lateral spreading, subsidence, liquefaction, or collapse resulting from implementation of the INSP would be less than significant.

According to Figure 3.12-2 of the 2018 INSP EIR, the project site is located in an area with low potential for liquefaction hazards. Most areas bordering the Arroyo Las Positas and Collier Canyon Creek are at very high risk of liquefaction due to the presence of soils that are often saturated or characteristic of wetlands. However, as noted in the 2018 INSP EIR, the majority of the high-risk areas, including the portion adjacent to the project site, would be preserved as open space and would not be developed with buildings or roadways.

Landslides may occur on slopes of 15 percent or less; however, the probability is greater on steeper slopes that exhibit old landslide features such as steep slopes or banks, slanted vegetation, and transverse ridges. Landslide-susceptible areas are characterized by steep slopes and downslope creep of surface materials. According to Figure 3.12-3 of the 2018 INSP EIR, the project site is located on an area with slopes between zero and 10 percent. Given the relatively level surface of the project site, land sliding as a result of a seismic activity would not be likely. Thus, the proposed project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides. Furthermore, the project site does not contain any open faces that would be considered susceptible to lateral spreading, and based on topographic and lithologic data, the risk of regional subsidence or uplift, lateral spreading, and landslides is low to negligible at the project site.

However, based on the Feasibility Evaluation and Preliminary Geotechnical Recommendations prepared for the proposed project (see Appendix D)[14], localized areas of undocumented fill should be expected, especially in areas of past development. Existing underground improvements, such as buried utilities or tanks, will need to be removed or demolished during construction. Non-engineered fill can undergo excessive settlement, especially under new fill or building loads. Such settlement could result in hazards to the proposed structures. As such, the Feasibility Evaluation and Preliminary Geotechnical Recommendations included recommendations to ensure that all undocumented fill encountered within the project site would be removed and placed back as engineered fill within the project site. The recommendations included therein are consistent with typical engineering practices required pursuant to the CBSC. The proposed project would be conditioned by the City of Livermore to adhere to all geotechnical recommendations prior to building construction, which would ensure hazards due to undocumented fill within the site would not occur.

Therefore, compliance with all applicable INSP policies, as well as implementation of common engineering practices pursuant to the CBSC, would ensure that the proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would be consistent with the conclusions of the 2018 INSP EIR.

b. The 2018 INSP EIR analyzed the INSP's potential to result in substantial soil erosion or the loss of topsoil, and determined that construction associated with the INSP would include earthwork activities that could expose soils to the effects of erosion or loss of topsoil.

Livermore Development Code Section 4.02.080, Grading Activities, requires a CUP for grading activities within a flood hazard zone or within 150 feet of the top of the bank of any creek, arroyo, or drainage channel. Because a portion of the proposed townhomes and

[14] Cornerstone Earth Group. *Feasibility Evaluation and Preliminary Geotechnical Recommendations Cornerstone Church and Chu Properties Livermore, California*. October 25, 2022.

the apartment building would be located within 150 feet of the top of the Collier Creek bank, approval of a CUP for grading activities would be required for the proposed project. The CUP would include measures to protect exposed soils. A CUP for other grading activities that could potentially lead to erosion and ground movement would also be required. The 2018 INSP EIR determined that compliance with the grading ordinance or Caltrans standards would minimize erosion impacts.

In addition, construction that disturbs more than one acre would be subject to compliance with a National Pollutant Discharge Elimination System (NPDES) permit. The NPDES permit requires implementation of BMPs and a storm water pollution prevention plan (SWPPP). BMPs that are required under a SWPPP include erosion prevention measures that have proven effective in limiting soil erosion and loss of topsoil. Generally, once construction is complete and exposed areas are revegetated or covered by buildings, asphalt, or concrete, the erosion hazard is substantially eliminated or reduced. The 2018 INSP EIR concluded that compliance with applicable codes and regulations would reduce the potential for substantial soil erosion or topsoil loss to be less than significant.

The currently proposed project's area of impact would be within the footprint of the previously analyzed INSP. Moreover, the INSP assumed the development of residential uses on the project site. The proposed project would be subject to all applicable regulations, such as the CBSC. In addition, accordance with NPDES regulations, in order to minimize the potential effects of construction runoff on receiving water quality, any construction activity affecting one acre or more must obtain a General Construction Permit. Permit applicants are required to prepare a SWPPP and implement BMPs to reduce construction effects on receiving water quality by implementing erosion control measures. As such, the proposed project would be designed in accordance with the necessary specifications to reduce impacts associated with substantial soil erosion and loss of topsoil.

Based on the above information, the proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would be consistent with the conclusions of the 2018 INSP EIR.

d. Expansive soils are soils which undergo significant volume change with changes in moisture content. Specifically, such soils shrink and harden when dried and expand and soften when wetted, potentially resulting in damage to building foundations. Placement of buildings on unstable soils can result in structural failure. According to the 2018 INSP EIR, soils present in the INSP area have moderate to high expansion potential. The 2018 INSP EIR concluded that compliance with applicable State and local building codes would ensure that development in the INSP area would not result in hazards due to expansive soils, and a less-than-significant impact would occur.

Based on the Feasibility Evaluation and Preliminary Geotechnical Recommendations, expansive clay was observed near the surface of the project site. Therefore, recommendations included that slabs-on-grade should have sufficient reinforcement and be supported on a layer of non-expansive fill; foundations should be designed to extend below the zone of seasonal moisture fluctuation or to resist uplift forces; and moisture changes in the surficial soils should be limited by using positive drainage away from the building as well as limiting landscaping watering. The proposed project would be conditioned by the City of Livermore to adhere to all geotechnical recommendations prior

to building construction, which would ensure hazards due to expansive soils would not occur on-site.

Based on the above, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would be consistent with the conclusions of the 2018 INSP EIR.

e. Because future development within the INSP area would obtain wastewater treatment and sewer services from the City of Livermore, and septic systems would not be developed as part of the project, the 2018 INSP EIR concluded that no impact would occur related to the location of structures on soils incapable of supporting septic tanks or alternative wastewater disposal systems.

The proposed project would not include installation of septic tanks or construction of alternative wastewater systems. Therefore, the proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. As such, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

f. According to the 2018 INSP EIR, vertebrate fossils have been recovered from geologic units in the Livermore vicinity, making the INSP area highly sensitive for paleontological resources. Paleontological resources may be present in construction areas at ground surface and at excavation depths in sensitive geologic units. However, the 2018 INSP EIR concluded that with implementation of INSP Policies P-ENV-35 and P-ENV-36, impacts to paleontological resources, site, or unique geological features would be less than significant. The policies requires future project proponents to engage a qualified paleontologist to monitor for discovery of paleontological resources, evaluate found resources, and prepare and follow a recovery plan if necessary.

Because the project site is highly sensitive to the occurrence of unknown paleontological resources to exist within the project site, ground-disturbing activity, such as grading, trenching or excavating, associated with implementation of the proposed project would have the potential to disturb or destroy such features. However, implementation of INSP Policies P-ENV-35 and P-ENV-36 would be required to ensure that the proposed project would not result in the destruction of a unique paleontological resource. With implementation of the aforementioned policies, which are standard requirements to address the handling of unexpected paleontological discoveries, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. As such, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None required.

VIII. GREENHOUSE GAS EMISSIONS. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	2018 EIR pgs. 3.4-30 to 3.4-37 2020 SEIR pgs. 3.3-32 to 3.3-39	No	No	Yes
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?	2018 EIR pgs. 3.4-37 to 3.4-47 2020 SEIR pgs. 3.3-40 to 3.3-51	No	No	Yes

Discussion

a,b. Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Therefore, the cumulative global emissions of GHGs contributing to global climate change can be attributed to every nation, region, and city, and virtually every individual on Earth. An individual project's GHG emissions are at a micro-scale level relative to global emissions and effects to global climate change; however, an individual project could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. As such, impacts related to emissions of GHG are inherently considered cumulative impacts.

Implementation of the proposed project would cumulatively contribute to increases of GHG emissions. Estimated GHG emissions attributable to future development would be primarily associated with increases of carbon dioxide (CO_2) and, to a lesser extent, other GHG pollutants, such as methane (CH_4) and nitrous oxide (N_2O) associated with area sources, mobile sources or vehicles, utilities (electricity), water usage, wastewater generation, and the generation of solid waste. The primary source of GHG emissions for the project would be mobile source emissions. The common unit of measurement for GHG is expressed in terms of annual metric tons of CO_2 equivalents ($MTCO_2e$/yr).

The 2020 INSP SEIR assessed the potential for the INSP to conflict with the Assembly Bill (AB) 32 Scoping Plan and the 2012 City of Livermore CAP. As demonstrated therein, the 2020 INSP SEIR concluded that the INSP would not conflict with the 2012 City of Livermore CAP, AB 32 Scoping Plan, 2017 Scoping Plan, Senate Bill (SB) 375 and Plan Bay Area, or SB 32, and implementation of Mitigation Measure GHG-1 would reduce INSP emissions below the applicable efficiency metric and render such emissions to be consistent with the GHG emissions reduction trajectory for 2050. Thus, the 2020 INSP SEIR concluded that with mitigation, implementation of the INSP would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, and this impact would be less than significant.

The proposed project is located within the jurisdictional boundaries of BAAQMD. While updated CEQA Guidelines have not yet been released, on April 20, 2022, the BAAQMD Board of Directors held a public meeting and adopted proposed CEQA Thresholds for Evaluating the Significance of Climate Change Impacts from Land Use Projects and

Plans.[15] The updated GHG thresholds address more recent climate change legislation, including SB 32, and provide qualitative thresholds of significance related to Buildings and Transportation.

BAAQMD Thresholds of Significance

According to BAAQMD's new CEQA Thresholds for Evaluating the Significance of Climate Change Impacts from Land Use Projects and Plans, a project must either include specific project design elements (e.g., exclude use of natural gas, achieve a specific reduction in project-generated VMT below the regional average) or be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).[16]

On November 28, 2022, the City of Livermore adopted the updated 2022 CAP, which, according to Section 2 of Appendix D of the CAP, meets the criteria to be a GHG reduction strategy under CEQA Guidelines Section 15183.5(b). Therefore, the following analysis is based on the proposed project's consistency with City's 2022 CAP.

City of Livermore CAP Consistency

The 2022 CAP is intended to create a roadmap to achieve emissions reductions of 40 percent below 1990 levels by 2030, and carbon neutrality (i.e., net zero carbon emissions) by 2045. The CAP contains mitigation strategies and actions, consistent with State climate mitigation targets, which were developed to reduce the City's GHG emissions to reach its adopted reduction targets for 2030 and 2045. It should be noted that the 2022 CAP was adopted after preparation of the 2020 INSP SEIR. Therefore, the project's consistency with the updated applicable mitigation strategies and actions is assessed in Table 4 below. As shown in the table, the proposed project would be consistent with the applicable strategies and actions of the City's CAP.

Table 4
Project Consistency with the Livermore Climate Action Plan

Strategies and Actions	Consistency Discussion
Strategy D-1: Improve water conservation and reuse.	All landscaping improvements would be consistent with Section 13.25 of the Municipal Code, Water Efficient Landscape, and would be irrigated by an automatic irrigation system using recycled water. Therefore, the proposed project would generally be consistent with Strategy D-1.
Action D-1.3: Continue implementing the Water Efficient Landscape Ordinance.	As discussed above, all landscaping improvements would be consistent with Section 13.25 of the Municipal Code, Water Efficient Landscape, and would be irrigated by an automatic irrigation system using recycled water. Therefore, the proposed project would be consistent with Action D-1.3.
Action F-1.5: Require new hardscape to be permeable.	Page 46 of the Livermore CAP recognizes that for Action F-1.5, the City must first update standards

[15] Bay Area Air Quality Management District. *CEQA Thresholds and Guidelines Update.* Available at: https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines. Accessed March 2023.

[16] Bay Area Air Quality Management District. *CEQA Thresholds for Evaluating the Significance of Climate Impacts From Land Use Projects and Plans*. April 2022.

Table 4
Project Consistency with the Livermore Climate Action Plan

Strategies and Actions	Consistency Discussion
	for new development hardscape to be consistent with CALGreen Tier 1 and/or increase the current fee for installation of new impervious surfaces. The City has not yet updated its standards and, thus, consistency with Action F-1.5 is not required.
Strategy B-1: Require new buildings to be all-electric and incentivize electrification retrofits of existing buildings.	As stated on page 55 of the Livermore CAP for Strategy B-1: Adopt an electrification ordinance which requires all new construction to be all-electric. Conduct a cost-effectiveness study to develop an ordinance that facilitates both construction and on-bill cost savings. Minimize the number of exemptions associated with the ordinance to limit the number of stranded natural gas lines in the city. Allow case by case allowances for certain site development standards when an applicant can demonstrate infeasibility. Leverage partnerships with the Building Decarbonization Coalition, EBCE, StopWaste, and others, to engage with local building industry stakeholders in development of the ordinance. The City of Livermore has adopted the 2022 Green Building Standards Code, which includes all-electric building requirements for new construction and a limited number of exceptions. The proposed residential units would be constructed to be all-electric, pursuant to Chapter 15.26 of the Livermore Municipal Code. Therefore, the proposed project would be consistent with Strategy B-1.
Action B-1.1: Require new construction to be all-electric.	See consistency discussion for Strategy B-1.
Action T-1.1: Expand EV infrastructure to support EV adoption.	The City of Livermore has adopted Reach Code amendments to the CBSC, which include EV charging requirements for new development projects within the City. For town-houses with attached garaged, such as the townhome component of the proposed project, the City's Reach Code requires that one parking space provided per unit shall be a Level 2 EV Ready space. If a second parking space is provided, the space shall be provided with a Level 2 EV Ready space. New multifamily dwellings and new residential parking facilities, such as the affordable apartment complex portion of the proposed project, a total of 15 percent of dwelling units with parking spaces shall be electric vehicle charging stations (EVCS) with Level 2 Ready. A total of 85 percent

Table 4
Project Consistency with the Livermore Climate Action Plan

Strategies and Actions	Consistency Discussion
	of dwelling units with parking spaces shall be provided with a Low Power 2 EV ready space. The proposed project is anticipated to include 283 parking stalls within the attached garages. Therefore, based on the City's Reach Code requirements, the townhome component of the proposed project would be required to provide Level 2 EV Ready spaces for all garage parking spaces. In addition, the multi-family affordable apartment component of the proposed project would include a total of 104 parking spaces. Therefore, based on the City's Reach Code requirements, the affordable apartment component of the proposed project would be required to provide 16 EVCS with Level 2 EV Ready, and 88 parking stalls with Low Power Level 2 EV Ready. The City would include a condition of project approval to ensure compliance with Action T-1.1.
Strategy W-1: Reduce the amount of waste that is landfilled.	The project would be required to comply with all applicable provisions of Chapter 8.08, Solid Waste Management, of the City's Municipal Code. In addition, as discussed below, the proposed project would be required to comply with CALGreen construction waste diversion standards during construction of the proposed project. Therefore, the proposed project would be consistent with Strategy W-1.
Action W-1.5: Reduce construction waste.	The CALGreen Code requires all new construction projects to recycle and/or salvage for reuse a minimum 65 percent of all non-hazardous construction and demolition waste. The proposed project would be required to comply with the CALGreen Code standards, and, therefore, would be consistent with Action W-1.5.
Source: City of Livermore, 2022.	

Conclusion

Based on the above, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than what were previously analyzed in the 2020 INSP SEIR. However, as discussed above, 2020 INSP SEIR Mitigation Measure GHG-1 would remain applicable to the proposed project.

Prior Mitigation Measures

The following mitigation measure from the 2020 INSP SEIR would apply to the proposed project:

MM-GHG-1: Operational GHG Emissions Reduction Measures. Implement the following GHG emissions reduction strategies to guide future development within the Planning Area:

1. Require that a minimum of 20 percent of housing allowed under the proposed Project be affordable (below market-rate) housing.
2. Incorporate street and intersection traffic calming measures to a minimum of 25 percent of streets and intersections in the Planning Area. Street traffic calming features may include, but are not limited to, on-street parking, planter strips with street trees, chicanes, horizontal shifts (lane centerline that curves or shifts), bollards, rumble strips, and woonerfs, Intersection traffic calming measures may include, but are not limited to, marked crosswalks, count-down signal timers, curb extensions, channelization islands, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, and traffic circles or mini-circles.
3. Expand the existing local bus network in the Planning Area by a minimum of 25 percent by adding or modifying bus routes to increase accessibility to the Valley Link station at Isabel Avenue.
4. Require all new development to install indoor water efficient appliances and fixtures to achieve a minimum of 15 percent reduction in water usage and require applicants for new development to submit landscape and irrigation plans capable of achieving a minimum of 10 percent reduction in outdoor water usage. The percent reductions should be achieved over baseline water use conditions in the City at the time of development.
5. Require a minimum solid waste diversion rate of 85 percent to be achieved by 2040.
6. Require employers with more than 50 employees to provide a suite of travel demand reduction measures (TDM) capable of reducing single-vehicle trips by at least 20 percent compared to normal trip generation rates.

IX. HAZARDS AND HAZARDOUS MATERIALS. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	2018 EIR pgs. 3.8-17 to 3.8-18	No	No	No
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment?	2018 EIR pg. 3.8-18	No	No	No
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	2018 EIR pgs. 3.8-18 to 3.8-19	No	No	No
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	2018 EIR pg. 3.8-19	No	No	No
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	2018 EIR pgs. 3.8-20 to 3.8-22	No	No	No
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	2018 EIR pg. 3.8-22	No	No	No
g. Expose people or structures, either directly or indirectly, to the risk of loss, injury or death involving wildland fires?	2018 EIR pg. 3.8-23	No	No	No

Discussion

a. The 2018 INSP EIR determined that while implementation of the INSP could include land uses that would require the routine use, transport, and disposal of hazardous materials and waste and may increase exposure to risk of hazards, with implementation of federal and State regulations and the City of Livermore General Plan's Public Safety Element, impacts would be less than significant.

Residential land uses are not typically associated with the routine transport, use, disposal, or generation of substantial amounts of hazardous materials. Maintenance and operation of the proposed project may use common household cleaning products, fertilizers, and herbicides on-site, any of which could contain potentially hazardous chemicals; however, such products would be expected to be used in accordance with label instructions. Due to the regulations governing use of such products and the amount anticipated to be used on the site, routine use of such products would not represent a substantial risk to public health

or the environment. Therefore, the proposed project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, and would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR.

b. According to the 2018 INSP EIR, individual projects under the INSP for which there are potential significant impacts related to hazards require a project-level environmental review. The City of Livermore General Plan requires environmental investigation as necessary to ensure that soils, groundwater, and buildings affected by hazardous material releases from prior land uses, and lead and asbestos potentially present in building materials, would not have the potential to affect the environment or the health and safety of future property owners or users.

The following discussion provides an analysis of potential hazards and hazardous materials associated with upset or accident conditions related to the proposed construction activities and existing on-site conditions.

Construction Activities

Construction activities associated with the proposed project would involve the use of heavy equipment, which would contain fuels and oils, and various other products such as concrete, paints, and adhesives. Small quantities of potentially toxic substances (e.g., petroleum and other chemicals used to operate and maintain construction equipment) would be used at the project site and transported to and from the site during construction. However, the project contractor would be required to comply with all California Health and Safety Codes and local City ordinances regulating the handling, storage, and transportation of hazardous and toxic materials. Thus, construction of the proposed project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment.

Existing On-Site Hazardous Materials

A Phase I ESA was prepared for the proposed project by KCE Matrix for the purpose of identifying potential recognized environmental conditions (RECs) associated with the project site (see Appendix E)[17] A REC is defined by ASTM International as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The Phase I ESA included a survey of the project site and a review of historical documentation, aerial photography, regulatory agency files, and environmental site radius reports. Historical sources reviewed as part of the Phase I ESA indicates that the project site was previously used for agriculture until at least 1982. The project site was previously developed with one residential structure, but has been vacant since at least 2020.

Pursuant to the Phase I ESA, features such as septic systems, above-ground storage tanks, underground storage tanks, asbestos containing materials, and lead based paint

[17] KCE Matrix. *Phase I Environmental Site Assessment – Vacant Land Client Project Identification: Constitution Drive (APNs: 905-0015-008, 905-0015-026, 905-0015-027, 905-0015-028 & 905-0015-029) 2620 & 2768 Collier Canyon Road Livermore, California 94551*. February 1, 2023.

were not identified on the project site. According to the Phase I ESA, the project site was listed in the Facility Index System (FINDS), Hazardous Waste Generators, (RCRA NonGen/NLR), Enforcement and Compliance History Online (ECHO), Hazardous Waste Tracking System (HWTS), and Hazardous waste Information System (HAZNET) databases. However, violations for the project site were not found in the database searches, or the status is listed as inactive. Property listings within 500 feet of the project site were identified from several environmental databases; however, the Phase I ESA did not identify potential RECs related to properties in the vicinity of the project site.

As such, the Phase I ESA concluded that evidence or indication of RECs or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the project site has not been revealed, with the exception of historic agricultural uses. The Phase I ESA included recommendations to conduct subsurface environmental assessment work to determine whether or not the project site has been impacted by the potential usage of pesticides. Additionally, potential vapor encroachment conditions were recommended to be addressed as part of the subsurface assessment. The proposed project would be conditioned by the City of Livermore to adhere to all recommendations included within the Phase I ESA prior to building construction.

Any conditions associated with the historic agricultural use of the project site would be considered existing conditions. Impacts of the environment on a project (as opposed to impacts of a project on the environment) are beyond the scope of required CEQA review. "[T]he purpose of an EIR is to identify the significant effects of a project on the environment, not the significant effects of the environment on the project." (*Ballona Wetlands Land Trust v. City of Los Angeles,* [2011] 201 Cal.App.4th 455, 473 [*Ballona*]). The California Supreme Court has held that "CEQA does not generally require an agency to consider the effects of existing environmental conditions on a proposed project's future users or residents. What CEQA does mandate… is an analysis of how a project might exacerbate existing environmental hazards." (*California Building Industry Assn. v. Bay Area Air Quality Management Dist.* [2015] 62 Cal.4th 369, 392; see also *Mission Bay Alliance v. Office of Community Investment & Infrastructure* [2016] 6 Cal.App.5th 160, 197 ["identifying the effects on the project and its users of locating the project in a particular environmental setting is neither consistent with CEQA's legislative purpose nor required by the CEQA statutes"], quoting *Ballona*, *supra*, 201 Cal.App.4th at p. 474). Therefore, for the purposes of the CEQA analysis, the relevant inquiry is not whether the proposed project's future residents would be exposed to existing or post-construction environmental effects, but instead whether the proposed project would exacerbate the existing conditions. Any on-site soils identified as being impacted by the prior agricultural use of the site would be removed from the site and properly handled and disposed of consistent with existing State and local regulations, which would ensure any hazards due to past agricultural use of the site or vapor encroachment would not occur.

Three Zone 7 supply wells are located within the project site. One existing well, located within Parcel M in the southeastern corner of the project site, would remain and be protected within the existing 25-foot easement. As a condition of project approval, the project applicant would be required to field verify and report the wells to Zone 7, and either obtain an abandonment permit to properly abandon the well, or, if required by Zone 7, implement other measures identified by Zone 7, such as providing any necessary upgrades or adjustments to the well and/or well box elevation to match the final grade.

Conclusion

Based on the above, the proposed project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment. Therefore, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR.

c. According to the 2018 INSP EIR, active and existing schools do not exist within 0.25-mile of the INSP area; however, a school overlay zone is proposed within the INSP area, and concluded that implementation of INSP goals and policies to minimize the exposure of new development in the INSP area to hazardous materials, impacts would be less than significant. For example, INSP Policy P-ENV-29 requires documentation of site investigation and any required cleanup to be submitted to City staff during the entitlement review process for individual development projects, and remediation and cleanup of any contaminated sites in the INSP area shall be in accordance with federal and State standards. Since the preparation of the 2018 INSP EIR, the Lily of the Valley Early Education and Preschool has opened, and is located approximately 0.15-mile from the project site. Nonetheless, with implementation of INSP goals and policies, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts beyond what were analyzed in the 2018 INSP EIR.

d. As discussed in the 2018 INSP EIR, three sites within the INSP area are included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5. However, all three cases are closed and are not located within the vicinity of the project site. Components of the Cortese List include the California Department of Toxic Substances Control (DTSC) EnviroStor Database, the list of leaking underground storage tank sites from the State Water Resources Control Board's (SWRCB's) GeoTracker database, the list of solid waste disposal sites identified by the SWRCB, and the list of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO) from the SWRCB. The project site is not located on any of the aforementioned components of the Cortese List.[18] Therefore, the proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR.

e. The nearest airport to the project site is the Livermore Municipal Airport, located approximately 0.5-mile southwest of the site. However, as discussed in the 2018 INSP EIR, all areas proposed for residential development in the INSP area are located within and consistent with Safety Zone 6 of the Airport Land Use Compatibility Plan (ALUCP). The ALUCP does not include restrictions on residential development within Zone 6.[19] Therefore, the proposed project would not result in a safety hazard for people residing or working in the project area.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR.

---

[18] CalEPA. *Cortese List Data Resources*. Available at: https://calepa.ca.gov/sitecleanup/corteselist/. Accessed October 2024.

[19] Alameda County Community Development Agency. *Livermore Executive Airport Airport Land Use Compatibility Plan*. August 2012.

f. The 2018 INSP EIR concluded that INSP development could impair implementation of the Alameda County Operations Plan, the Alameda County Local Hazard Mitigation Plan (LHMP), or the Tri-Valley Hazard Mitigation Plan, but compliance with the City of Livermore General Plan and INSP policies would result in less-than-significant impacts related to impairment of implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

Since the preparation of the 2018 INSP EIR, the City of Livermore adopted the City of Livermore Emergency Operations Plan in January 2018.[20] The plan provides a basis for future responses to a wide range of citywide hazards and vulnerabilities. The plan outlines the general authority, organization, and response actions for City of Livermore staff when disasters occur. Implementation of the proposed project would not result in any substantial modifications to the existing roadway system and, thus, would not physically interfere with the Emergency Operations Plan, particularly with any emergency evacuation routes. In addition, since the preparation of the 2018 INSP EIR, the City has updated and adopted the Tri-Valley Local Hazard Mitigation Plan (LHMP),[21] which guides hazard mitigation planning to protect the people and property of the Tri-Valley region from the effects of hazard events. The proposed project would be consistent with what has been planned for the site and would not include land uses or operations that could impair implementation of the Emergency Operations Plan or LHMP. Therefore, the proposed project would not interfere with an emergency evacuation or response plan, and the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR.

g. According to the 2018 INSP EIR, none of the INSP area is located within a Very High Fire Hazard Severity Zone (FHSZ), and the 2018 INSP EIR concluded that with implementation of existing State and local programs and regulations, as well as INSP policies, impacts would be less than significant.

The proposed project is consistent with the type and intensity of development anticipated by the INSP for the project site, which assumed the development of residential and open space uses. According to the California Department of Forestry and Fire Protection (CAL FIRE) Fire and Resource Assessment Program, while the project site is not located within or near a Very High FHSZ or State Responsibility Area, a High FHSZ is located to the east in close proximity to the project site.[22] However, the proposed project would include the removal of existing on-site vegetation, which would reduce wildfire risks. Furthermore, residential development would be required to include fire sprinklers, and other fire suppression features, consistent with the CBSC and California Fire Code (CFC).

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

X. HYDROLOGY AND WATER QUALITY. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	2018 EIR pgs. 3.9-19 to 3.9-23, and pg. 3.9-28	No	No	No
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	2018 EIR pgs. 3.9-24 to 3.9-25	No	No	No
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site;	2018 EIR pgs. 3.9-25 to 3.9-26	No	No	No
ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	2018 EIR pgs. 3.9-25 to 3.9-26	No	No	No
iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	2018 EIR pgs. 3.9-26 to 3.9-28	No	No	No
iv. Impede or redirect flood flows?	2018 EIR pg. 3.9-29	No	No	No
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	2018 EIR pgs. 3.9-29 to 3.9-30	No	No	No
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	N/A	No	No	No

Discussion

a. The 2018 INSP EIR analyzed the INSP's potential to result in impacts related to water quality and concluded that future projects implemented under the INSP would be required to comply with NPDES requirements during construction and would be designed in accordance with the Phase I Municipal Separated Storm Sewer Systems (MS4) Permit, Provision C.3.c, for post-construction stormwater management including low impact development (LID). Future specific projects would also be required to adhere to all INSP intended to avoid or minimize increases in stormwater flows and the associated degradation of water quality. As such, impacts related to water quality were determined to be less than significant.

The currently proposed project would be constructed within the footprint of the previously analyzed project site. As such, impacts to water quality associated with the proposed project were previously considered within the 2018 INSP EIR. Nonetheless, the following discussion demonstrates how the proposed project would not violate water quality standards/waste discharge requirements or otherwise degrade water quality during construction and operation.

Construction

During the early stages of construction activities, topsoil would be exposed during ground-disturbance. Prior to overlaying the ground surface with impervious surfaces and structures, the potential exists for wind and water erosion to discharge sediment and/or urban pollutants into stormwater runoff, which could adversely affect water quality downstream.

The SWRCB regulates stormwater discharges associated with construction activities where clearing, grading, or excavation results in a land disturbance of one or more acres. The City's NPDES permit requires applicants to show proof of coverage under the State's General Construction Permit prior to receipt of any construction permits. The State's General Construction Permit requires a SWPPP to be prepared for the site. A SWPPP describes BMPs to control or minimize pollutants from entering stormwater and must address both grading/erosion impacts and non-point source pollution impacts of the development project. Because the proposed project would disturb greater than one acre of land, the proposed project would be subject to the requirements of the State's General Construction Permit.

In addition, the proposed project would be required to comply with Chapter 13.45, Stormwater Management and Control Program, of the City's Municipal Code, which includes standards for managing stormwater runoff during construction and operation. Pursuant to Section 13.45.090, any construction contractor performing work in the City must provide filter materials at the catch basin to retain any debris and dirt flowing into the City's stormwater system. Therefore, the proposed project would not discharge sediment or urban pollutants through soil erosion, violate any water quality standards or waste discharge requirements, or otherwise substantially degrade surface or ground water quality during construction.

Operation

The proposed residential and open space uses would not involve operations typically associated with the generation or discharge of polluted water. Following completion of project buildout, disturbed areas of the site would be largely covered with impervious surfaces or landscaping, and topsoil would no longer be exposed. All municipalities within Alameda County (and the County itself) are required to develop more restrictive surface water control standards for new development projects as part of the renewal of the Countywide NPDES permit. Thus, typical operations on the project site would not violate any water quality standards or waste discharge requirements, nor degrade water quality.

A Preliminary Stormwater Quality Control Plan has been prepared for the proposed project that demonstrates the project's compliance with the most recent Alameda Countywide Clean Water Program C.3 Stormwater Technical Guidance,[23] as well as all applicable City

[23] Alameda Countywide Clean Water Program. *C.3 Stormwater Technical Guidance.* February 8, 2021.

stormwater requirements. In compliance with the C.3 Stormwater Technical Guidance (see Figure 8).

The proposed stormwater design would comply with the City's MRP using the guidelines provided in the Clean Water Program's C.3 Stormwater Technical Guidance Manual. In order to manage and treat stormwater, the project site would be divided into various DMAs to collect and convey stormwater to the various on-site -LID treatment features, including LID measures located in Parcel M. Once stormwater has passed through the LID treatment measure, the stormwater would be conveyed to the City's existing storm drain system in either Collier Canyon Road or Constitution Drive. Hydromodification measures would be implemented as required by the MRP utilizing the Alameda County Clean Water Program's C.3 Stormwater Technical Guidance Manual.

Based on the above, the proposed project would comply with the requirements of the SWRCB and the RWQCB, and would meet or exceed C.3 Standards. Therefore, during operation, the project would comply with all relevant water quality standards and waste discharge requirements, and would not degrade water quality.

Conclusion

Based on the above information, through required compliance with federal, State, and local regulations, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

b,e. It should be noted that the 2020 INSP SEIR did not expressly address the INSP's potential to conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. However, the 2018 INSP EIR analyzed the INSP's potential to substantially deplete groundwater supplies or interfere substantially with groundwater recharge and concluded buildout of the INSP would result in a less-than-significant impact due to implementation of hydromodification BMPs, LID measures, and design guidelines, as well as adequate water supply to accommodate buildout.

Water supplies in the northwest, northeast, and eastern portions of the City of Livermore, including the project site, are provided by Livermore Municipal Water. Pursuant to the City of Livermore 2020 Urban Water Management Plan (UWMP), the City does not pump groundwater to meet any water demands of the municipal water service area and does not overly an adjudicated/unadjudicated basin. However, the City does retain a pumping quota of approximately 30 acre-feet per year (AFY) from the Livermore-Amador Valley Groundwater Basin, an unadjudicated basin.

Bulletin 118 – Interim Update 2016 defines 517 groundwater basins and subbasins in California. Per the Sustainable Groundwater Management Act (SGMA), the Department of Water Resources (DWR) is required to prioritize the 517 groundwater basins and subbasins as either High, Medium, Low, or Very Low. Prioritization is based on the following considerations:

- The population overlying the basin or subbasin;
- The rate of current and projected growth of the population overlying the basin or subbasin;
- The number of public supply wells that draw from the basin or subbasin;

- The total number of wells that draw from the basin or subbasin;
- The irrigated acreage overlying the basin or subbasin;
- The degree to which persons overlying the basin or subbasin rely on groundwater as their primary source of water;
- Any documented impacts on the groundwater within the basin or subbasin, including overdraft, subsidence, saline intrusion, and other water quality degradation; and
- Any other information determined to be relevant by the department, including adverse impacts on local habitat and local streamflows.

Each basin's priority determines which provisions of California Statewide Groundwater Elevation Monitoring and SGMA apply. SGMA requires Medium and High priority basins to develop groundwater sustainability agencies, develop groundwater sustainability plans, and manage groundwater for long-term sustainability. The Livermore-Amador Valley Groundwater Basin is considered Medium Priority per the DWR[24] and is addressed by the Zone 7 Groundwater Management Plan (2005 GMP).[25] The DWR has not identified the Basin as either in overdraft or expected to be in overdraft.[26]

Pursuant to the 2020 UWMP, water supplies are projected to meet expected demand during five-year droughts beginning in 2025, 2030, 2035, 2040, and 2045. The proposed project would be consistent with the General Plan and INSP land use designations of the project site, and would not be anticipated to result in increased demand than what was previously analyzed. In addition, all landscaping improvements would be consistent with Section 13.25 of the Municipal Code, Water Efficient Landscape, and would be irrigated by an automatic irrigation system. Therefore, the project would not result in substantially increased use of groundwater supplies beyond what has been anticipated for the site by the City and accounted for in the UWMP.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would be consistent with the conclusions of the 2018 INSP EIR.

c.i-iii. The 2018 INSP EIR analyzed the INSP's potential to alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion, siltation, or flooding on- or off-site, or result in polluted runoff. The 2018 INSP EIR concluded that impacts would be less than significant with implementation of existing regulations, including NPDES requirements, Phase I MS4 Permit, Provision C.3.c, for post-construction stormwater management, as well as INSP policies and design guidelines.

As discussed above, the project is required to comply with C.3 Standards. Specifically, post-project stormwater discharge rates and durations may not exceed pre-project discharge rates and durations. Compliance with C.3 Standards would be sufficient to ensure that the proposed project does not exceed the capacity of existing storm drain

[24] Department of Water Resources. *Sustainable Groundwater Management Act 2018 Basin Prioritization* [Table A-1]. January 2019.
[25] Zone 7 Water Agency. *Groundwater Management Plan for Livermore-Amador Valley Groundwater Basin.* September 2005.
[26] Zone 7 Water Agency. *2015 Urban Water Management Plan* [pg. 6-7]. March 31, 2016.

infrastructure, cause flooding on- or off-site, or result in off-site erosion or siltation after development of the site.

As discussed previously and demonstrated in Figure 8, the proposed project has been designed to incorporate operational design features that would provide on-site stormwater treatment. Specifically, on-site stormwater treatment would be provided by the proposed bioretention areas located throughout the project site, as well as the raised bioretention planters. As shown in Figure 8, the bioretention areas would be adequately sized to handle stormwater runoff from all areas within the project site. Thus, development of the project site would not contribute substantial amounts of stormwater.

The proposed project would be implemented within the footprint of the previously analyzed INSP area, and would result in similar development as what was anticipated in the 2018 INSP EIR.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would be consistent with the conclusions of the 2018 INSP EIR.

c.iv, d. According to the 2018 INSP EIR, the INSP area is not located within a tsunami inundation area, and large bodies of freshwater, such as reservoirs or lakes, are not located within the INSP area. Landslide susceptible land is not designated for residential uses under the INSP. Therefore, the 2018 INSP EIR concluded that no impact related to inundation by seiche, tsunami, or mudflow would occur.

The currently proposed project would be constructed within the footprint of the previously analyzed project site. According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map number 06001C0344G, the project site is located within an Area of Minimal Flood Hazard (Zone X).[27] The site is not classified as a Special Flood Hazard Area or otherwise located within a 100-year or 500-year floodplain. In addition, given the site is not located in proximity to a coastline or near a large closed body of water, the risk of tsunamis, flooding, or seiches is low to negligible at the project site.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would be consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

[27] Federal Emergency Management Agency. *Flood Insurance Rate Map 06001C0333G.* Effective August 2, 2009.

XI. LAND USE AND PLANNING. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Physically divide an established community?	2018 EIR pg. 3.1-16	No	No	No
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	2018 EIR pg. 3.1-17 to 3.1-25	No	No	No

Discussion

a. According to the 2018 INSP EIR, the INSP goals and policies, along with the land use diagram and development standards for each land use designation, were designed to promote compatibility with existing uses. The INSP does not allow for development of new neighborhoods distant or divided from established communities. As such, the 2018 INSP EIR concluded the INSP would not divide an established community, and a less-than-significant impact would occur.

The currently proposed project would be consistent with the General Plan land use and zoning designations of the project site. Furthermore, the currently proposed project would be built within the footprint of the previously analyzed INSP area, and would be consistent with the type of residential uses anticipated for development on the site within the INSP. The proposed project does not include any linear features, such as roads, walls, or railroad lines, that would physically divide an established community. Therefore, the proposed project would not divide an established community.

Based on the above, the proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR and would remain consistent with the conclusions of the 2018 INSP EIR.

b. The 2018 INSP EIR assessed the INSP's potential to cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect specifically related to the project's consistency with the City of Livermore General Plan and zoning ordinance.

According to the 2018 INSP EIR, because the INSP would update policies and land use designations for future development in the INPS area, the INSP is inconsistent with existing regulations by nature. The INSP's regulatory framework would replace the existing General Plan land use designations and zoning standards regulating the development of properties in the INSP area. The INSP also includes amendments to General Plan policies and zoning regulations related to scenic views and airport compatibility. Amendments may also be needed to conform to State or federal law passed following adoption of the INSP, and to eliminate or modify policies that may become obsolete or unrealistic due to changed conditions. However, the General Plan and Development Code would be amended to accommodate development resulting from implementing the INSP. The INSP would help to fulfill existing General Plan goals, and the INSP does not conflict with other applicable agencies' plans, policies, or regulations. Thus, the impact was determined to be less than significant.

The currently proposed project would be consistent with the existing General Plan land use and zoning designations of the project site. Furthermore, as the currently proposed project would be built within the footprint of the previously analyzed INSP area, and would be consistent with the site's INSP land use designations, the proposed park project would not conflict with the INSP. As discussed previously, the project applicant is requesting waivers and concessions to exceed the Performance Measure maximum building height. With the exception of the requested waivers and concessions allowed under State Density Bonus Law, the proposed project would otherwise meet the design requirements set forth for the site. Given that State law supersedes local ordinance, the proposed project's use of State Density Bonus Law to waive the INSP Scenic Corridor Policy requirements related to building height and setback requirements does not result in a Specific Plan inconsistency. Therefore, the proposed project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

Based on the above, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

XII. MINERAL RESOURCES. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	2018 EIR pgs. 3.15-1 to 3.15-2	No	No	No
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	2018 EIR pgs. 3.15-1 to 3.15-2	No	No	No

Discussion

a,b. According to the 2018 INSP EIR, the INSP area does not have known mineral resources of regional or statewide value, or locally-important mineral resource recovery sites that are delineated on a land use plan, and the INSP would have no impact on mineral resources.

Currently, the site is vacant and undeveloped and is not used for mining of mineral resources. In addition, the proposed project would be implemented within the previously analyzed footprint of the 2018 INSP EIR. As such, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. Therefore, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

XIII. NOISE. *Would the project result in:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	2018 EIR pgs. 3.6-20 to 3.6-34, pgs. 3.6-38 to 3.6-39 2020 SEIR pgs. 3.4-18 to 3.4-33, 3.4-38 to 3.4-40	No	No	No
b. Generation of excessive groundborne vibration or groundborne noise levels?	2018 EIR pgs. 3.6-34 to 3.6-38 2020 SEIR pgs. 3.4-34 to 3.4-38	No	No	No
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	2018 EIR pgs. 3.6-40 to 3.6-44 2020 SEIR pgs. 3.4-40 to 3.4-44	No	No	No

Discussion

a. The 2020 INSP SEIR analyzed the INSP's potential to generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established by the City of Livermore. Temporary noise increases associated with construction of individual development projects within the INSP area were determined to be less than significant given that construction would be required to comply with the hourly restrictions for construction activities or receive approval from the City to deviate from the limitations, pursuant to Chapter 9.36 of the Livermore Municipal Code. With respect to operational noise associated with traffic, potentially significant traffic noise impacts to existing residences would be expected to occur along three roadway segments under the INSP (Portola east of Tranquility Circle, East Airway Boulevard east of Sutter Street and west of Via Mateo, and East Airway Boulevard east of Via Mateo and West/N of Portola Avenue). With the exception of the freeway soundwall along Portola Avenue, other intervening soundwalls or other features that would reduce the contribution of future projects under the INSP are not feasible along the aforementioned roadway segments. Therefore, the 2020 INSP SEIR concluded that project-related traffic noise impacts along three roadway segments would be significant and unavoidable.

The following provides a discussion of noise associated with construction and operation of the proposed project.

Construction Noise

The 2020 INSP SEIR's analysis of potential noise impacts associated with buildout of the INSP accounted for noise generated during construction activities. Implementation of the proposed project would generate noise during construction by the use of construction equipment. Construction activities associated with residential development include grading, excavation work, pouring of foundations, and framing and finishing of structures. Infrastructure work would also include building new roadways and installing utilities. Such construction activities typically generate noise levels ranging from 75 to 85 dBA at a distance of 50 feet. Construction-related noise would drop off at the rate of about six decibels (6 dBA) with each doubling of the distance. Therefore, construction noise levels would fluctuate during the buildout period and occasionally and intermittently would exceed existing ambient noise levels substantially at adjacent land uses.

The nearest sensitive receptors to the project site would be the Lily of the Valley Early Elementary and Preschool. The nearest on-site construction would occur approximately 1,050 feet to the east of the common outdoor area associated with the preschool. In addition, multi-family residences are located north of the project site, across Portola Avenue, approximately 1,000 feet away from the project site. Noise levels experienced at the preschool and the nearest residences would likely be reduced by at least 29.5 dB, resulting in a maximum noise level exposure of 59.5 dB. In addition, construction activities associated with the proposed project would be separated from nearby sensitive receptors by existing development and vegetation, which would help to dissipate noise levels.

Because the proposed project would be subject to the required construction hours pursuant to Chapter 9.36 of the Livermore Municipal Code, the proposed project would not cause any additional construction noise that would exceed what was already evaluated in the 2020 INSP SEIR. Therefore, the proposed project would not result in any changes, new circumstances, or new information that would involve new significant impacts or substantially more severe significant impacts from what has been anticipated for the INSP.

Project Operational Noise

The operation of the proposed project would include typical residential noise such as landscape maintenance, HVAC systems, etc., which would be compatible with the adjacent existing commercial uses. As such, the proposed project is not anticipated to contribute a measurable operational noise level increase to the existing ambient noise environment at any sensitive receptor locations.

The primary noise source associated with the operation of the proposed project would be traffic noise on local roadways. As part of the Transportation Assessment conducted for the proposed project, Fehr & Peers determined the proposed project would generate an increase of approximately 1,466 trips per day, including 96 AM peak hour trips and 112 PM peak hour trips.[28]

Based on Figure 3.4-2 of the 2020 INSP SEIR, the project site is located in an area with existing noise levels of 60 to 75 dBA CNEL. Pursuant to the Federl Interagency Committee on Noise (FICON) criteria presented in Table 5, where existing traffic noise levels are between 60 and 65 dB L_{dn} at the outdoor activity areas of noise-sensitive uses, a +3 dB L_{dn} increase in roadway noise levels would be considered significant. Generally, a doubling in traffic volumes is required to increase traffic noise levels by 3.0 dB, which

[28] Fehr & Peers. *Cornerstone Church and Chu Property Residential Development – Transportation Assessment*. January 11, 2023.

is considered to be the threshold for a significant increase pursuant to the FICON. The increase of approximately 1,466 trips per day associated with the proposed project would not result in a doubling of traffic volumes along area roadways. Therefore, the proposed project would not result in a substantial increase in noise levels related to vehicle traffic, and increased traffic noise generated from implementation of the proposed project would result in a less-than-significant impact related to transportation noise.

Table 5
FICON Noise Exposure Increases for Determining Level of Significance

Noise Exposure without Project	Potential Significant Impact
< 60 dB CNEL	5 dB or more
60-65 dB CNEL	3 dB or more
>65 dB CNEL	1.5 dB or more

Source: Federal Interagency Committee on Noise.

Therefore, the proposed project would not cause any additional operational noise that would exceed what was already anticipated in the 2020 INSP SEIR. Therefore, additional noise control mitigation measures would not be required for operational noise, and proposed project would not result in any changes, new circumstances, or new information that would involve new significant impacts or substantially more severe significant impacts than were anticipated for the 2020 INSP SEIR.

Conclusion

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2020 INSP SEIR. Therefore, the proposed project would be consistent with the conclusions of the 2020 INSP SEIR.

b. Similar to noise, vibration involves a source, a transmission path, and a receiver. However, noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to the vibration depends on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration is measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration in terms of peak particle velocities (PPV) in inches per second (in/sec). Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of PPV.

Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 6, which was developed by Caltrans, shows the vibration levels that would normally be required to result in damage to structures.

Table 6
Effects of Vibration on People and Buildings

PPV		Human Reaction	Effect on Buildings
mm/sec	in/sec		
0.15 to 0.30	0.006 to 0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10 to 15	0.4 to 0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage

Source: Caltrans. Transportation Related Earthborne Vibrations. TAV-02-01-R9601. February 20, 2002.

As shown in the table, the threshold for architectural damage to structures is 0.20 in/sec PPV and continuous vibrations of 0.10 in/sec PPV, or greater, would likely cause annoyance to sensitive receptors.

The 2020 INSP SEIR determined that future construction activities associated with buildout of the INSP could result in significant vibration impacts due to the use of pile drivers within the vicinity of sensitive receptors. The 2020 INSP SEIR concluded that even with implementation of INSP Policy P-ENV-6, which requires construction contractors to implement measures to help reduce vibration levels at nearby sensitive receptors, impacts would remain significant and unavoidable. Additional mitigation measures were not available.

The proposed project would only cause elevated vibration levels during construction, as the proposed project would not involve any uses or operations that would generate substantial groundborne vibration. Although noise and vibration associated with the construction phase of the project would add to the noise environment in the immediate project vicinity, construction activities would be temporary in nature and occur during normal daytime working hours. Because the proposed project would not cause continuous, long-term vibrations, the project would not be expected to result in extended annoyance to sensitive receptors.

The primary vibration-generating activities associated with the proposed project would occur during grading, placement of utilities, and construction of foundations. Table 7 shows the typical vibration levels produced by construction equipment at various

distances. The most substantial source of groundborne vibrations associated with project construction would be the use of vibratory compactors.

Table 7
Vibration Levels for Various Construction Equipment

Type of Equipment	PPV at 25 feet (in/sec)	PPV at 50 feet (in/sec)
Large Bulldozer	0.089	0.029
Loaded Trucks	0.076	0.025
Small Bulldozer	0.003	0.000
Auger/drill Rigs	0.089	0.029
Jackhammer	0.035	0.011
Vibratory Hammer	0.070	0.023
Vibratory Compactor/roller	0.210	0.070

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Guidelines, May 2006.

Operation of vibratory compactors/rollers used for construction of the proposed internal roadway would operate at a distance of 1,000 feet or further from the nearest existing residential structure. Thus, pursuant to the vibration levels shown in Table 7, groundborne vibrations would be less than 0.070 in/sec PPV, which would be below the 0.10 in/sec PPV threshold established by Caltrans for annoyance to sensitive receptors. In addition, the proposed project would be subject to INSP Policy P-ENV-6.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than what were previously analyzed in the 2020 INSP SEIR.

c. The 2020 INSP SEIR concluded that all proposed land uses under the INSP would be compatible with the Noise Compatibility Criteria included in the Livermore Municipal Airport ALUCP, and, therefore, impacts related to the exposure of people residing or working in the INSP area to excessive noise levels from aircraft at a public airport would be less than significant. The proposed project would be consistent with the land uses assumed for the project site within the INSP. Therefore, the proposed project would not expose people residing or working in the project area to excessive noise levels.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts beyond what were analyzed in the 2020 INSP SEIR.

Prior Mitigation Measures

None required.

XIV. POPULATION AND HOUSING. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure)?	2018 EIR pg. 3.1-25 to 3.1-29	No	No	No
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	2018 EIR pg. 3.1-29 to 3.1-32	No	No	No

Discussion

a. According to the 2018 INSP EIR, the INSP could result in the addition of approximately 9,800 new residents, which would represent a substantial share of planned growth in the City. However, the direct inducement of population growth through new housing and businesses would not be considered a significant impact because such level of development is within the overall General Plan capacity. In addition, the 2018 INSP EIR further noted that infrastructure and roadway improvements would serve infill development of vacant and underutilized parcels and to a lesser degree, redevelopment of existing uses. Additionally, the INSP focuses on policies for making streets more efficient for transit, bicycles, and walking rather than adding capacity for automobiles. As such, the 2018 INSP EIR concluded that significant growth-inducing impacts would not occur.

The proposed project would include the development of a total of 253 residential units on a site long designated for such specific residential uses. The proposed project would include the development of 253 residential units. Using the U.S. Census Bureau average person per household value for the City of 2.82, the proposed project would generate approximately 714 additional residents (253 x 2.82 = 713.46).[29] The increase in population associated with the proposed project is within the 9,800 new residents anticipated within the 2018 INSP EIR. The proposed project would include connection to existing City utility infrastructure and would not result in the need for expansion of services. Given the consistency of the proposed project with the INSP land use designations and the zoning designation for the site, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts beyond those analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

b. The 2018 INSP EIR determined that existing residential areas within the INSP area would retain a residential land use designation, consistent with existing densities, and the INSP would not result in the direct displacement of any housing or residents. While the INSP could result in displacement due to increased property values leading to rising housing costs in the INSP area, the 2018 INSP EIR concluded that the INSP would not result in regional displacement. The project site is currently vacant and does not include existing housing or other habitable structures. As such, the proposed project would not displace a substantial number of existing housing or people and would not necessitate the construction of replacement housing elsewhere. Therefore, the currently proposed project

[29] U.S. Census Bureau. *Quick Facts, City of Livermore, California.* Available at: https://www.census.gov/quickfacts/livermorecitycalifornia. Accessed October 2024.

would not result in new significant impacts or substantially more severe significant impacts beyond those analyzed in the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

XV. PUBLIC SERVICES.

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Fire protection?	2018 EIR pgs. 3.11-12 to 3.11-17	No	No	No
b. Police protection?	2018 EIR pgs. 3.11-12 to 3.11-17	No	No	No
c. Schools?	2018 EIR pgs. 3.11-12 to 3.11-17	No	No	No
d. Parks?	2018 EIR pgs. 3.11-10 to 3.11-12	No	No	No
e. Other Public Facilities?	2018 EIR pgs. 3.11-12 to 3.11-17	No	No	No

Discussion

a. The 2018 INSP EIR analyzed the potential for buildout of the INSP to result in substantial adverse physical impacts related to fire protection and concluded that a less-than-significant impact would occur. According to the 2018 INSP EIR, the Livermore-Pleasanton Fire Department (LPFD) would provide fire protection services to the INSP area, and the existing nearby fire stations would provide sufficient coverage for the INSP area, and new facilities would be not required to serve new development resulting from implementation of the INSP.

The proposed project's area of impact would be within the footprint of the previously analyzed INSP. The nearest fire station to the project site is Station #10, located at 330 Airway Boulevard, approximately 1.4 miles from the project site. The INSP identifies the 13-acre project site as Residential Village, Residential Center, and Open Space, which assumed the development of residential uses and open space. As such, demand associated with the proposed project was previously anticipated within the 2018 INSP EIR. In addition, the proposed project would be required to install appropriate fire suppression systems in accordance with the Uniform Fire Code and the California Fire Code requirements.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in

the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

b. The City of Livermore Police Department (LPD) would provide police services to the INSP area. According to the 2018 INSP EIR, while development of the INSP would require a small police substation within the INSP area, impacts resulting from increased demand on police services and construction of the substation would be less than significant.

The City's Police Department headquarters is located at 1197 South Livermore Avenue, approximately 4.5 miles from the project site. The INSP identifies the 13-acre project site as Residential Village, Residential Center, and Open Space, which assumed the development of residential uses and open space. As such, demand associated with the proposed project was previously anticipated within the 2018 INSP EIR. Therefore, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

c. According to the 2018 INSP EIR, based on development of approximately 3,890 housing units at buildout, implementation of the INSP would add a maximum of approximately 1,930 students to Livermore Valley Joint Unified School District (LVJUSD) enrollment. When combined with the LVJUSD current student population of 13,331 students, the increase of 1,930 students would result in a total of 15,261 students, which would remain within the LVJUSD overall capacity of 15,500 students. The combination of Statutory Developer fees and INSP policies listed below that support school resources are expected to provide adequate capacity to meet demand for school facilities, and development of the INSP would result in a less-than-significant impact related to school facilities.

Operation of the LVJUSD is funded primarily through School Impact Mitigation Development Fees, which the proposed project would be required to pay. Proposition 1A/SB 50 prohibits local agencies from using the inadequacy of school facilities as a basis for denying or conditioning approvals of any "[…] legislative or adjudicative act…involving …the planning, use, or development of real property" (Government Code 65996(b)). Satisfaction of the Proposition 1A/SB 50 statutory requirements by a developer is deemed to be "full and complete mitigation." As such, the increase in students to the surrounding schools from the 253 proposed residential units would not be substantial, and would be compensated for through payment of the appropriate fee School Impact Mitigation Development Fees.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts beyond what were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

d. The 2018 INSP EIR analyzed the potential for buildout of the INSP to result in substantial adverse physical impacts related to increased demand on parks and determined that development of new recreational facilities within the INSP area would be subject to existing building and construction regulations that would ensure that construction activities have a minimal effect on the surrounding environment. Existing regulations, the General Plan, and INSP policies would ensure that development of the INSP would result in a less-than-significant impact related to construction of park facilities.

Pursuant to City of Livermore Municipal Code Section 12.60.020(D), the City of Livermore requires 5.5 acres of park facilities per 1,000 residents. As noted previously, buildout of the proposed project would result in an increase of approximately 714 new residents to the INSP area. As a result, approximately 3.927 acres of parkland would be required to achieve the desired parkland ratio (0.0055 acres of parkland per resident x 714 new residents = 3.927 acres of parkland).The proposed project would include the development of a 2.53 acre public park, which would serve the residents of the proposed project. However, the proposed project would be required to pay a park facilities fee. The amount of the fee would be calculated based on Section 12.60.050 of the Municipal Code. The park facilities fee would be used to fund park facilities within the City, including land for public parks and capital improvements necessary to provide park and recreation services.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

e. Other public facilities analyzed within the 2018 INSP EIR included public libraries. According to the 2018 INSP EIR, an established industry standard for the amount of library space per capita of population does not exist. Because population growth associated with development of the INSP is accounted for under the remaining General Plan capacity, existing library facilities would accommodate the additional demand for library services. As such, the 2018 INSP EIR concluded that impacts would be less than significant.

The proposed project would include the development of *253* residential units designated for such uses. The nearest Livermore Public Library to the project site is the Rincon Branch, located at 725 Rincon Avenue, approximately 2.5 miles southeast of the project site, which could potentially be used by residents of the proposed project. While the proposed project's increase to the City's population could result in increased demand for services offered by the Rincon Branch, such demand would not exceed what was previously analyzed in the 2018 INSP EIR. Therefore, the proposed project could result in increased demand on existing library facilities or necessitate the construction or expansion of new facilities. Therefore, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

XVI. RECREATION. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	2018 EIR pgs. 3.11-8 to 3.11-10	No	No	No
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	2018 EIR pgs. 3.11-10 to 3.11-12	No	No	No

Discussion

a,b. As discussed above, the 2018 INSP EIR analyzed the potential for buildout of the INSP to result in substantial adverse physical impacts related to increased demand on parks and determined that development of the INSP area could result in a new population at buildout of approximately 13,720 total residents, which would generate demand for approximately 40 acres of parkland. While the proposed 38.4-acre park and plaza space would not meet such parkland demand, the INSP area would include a total of approximately 236.1 acres of combined park, plaza, and passive and scenic open space at buildout. The INSP would include development of a total of 7.4 acres of neighborhood parks located throughout the INSP area. Additionally, new development within the INSP area would be required to dedicate park and recreational facilities or pay in-lieu fees that are used to build and maintain parks and recreational facilities. As such, the 2018 INSP EIR determined that all impacts related to recreational facilities would be less than significant.

The proposed project would include the development of 2.53 acres of public park facilities and a public trail. In addition, the proposed project would be required to pay a park facilities fee. The amount of the fee would be calculated based on Section 12.60.050 of the Municipal Code. The park facilities fee would be used to fund park facilities within the City, including land for public parks and capital improvements necessary to provide park and recreation services.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

XVII. TRANSPORTATION. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	2018 EIR pgs. 3.2-32 to 3.2-63, and 3.2-65 2020 SEIR pgs. 3.2-31 to 3.2-50, and 3.2-74	No	No	No
b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	N/A	No	No	Yes
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	2018 EIR pg. 3.2-64 2020 SEIR pg. 3.2-73	No	No	No
d. Result in inadequate emergency access?	2018 EIR pg. 3.2-64 2020 SEIR pg. 3.2-74	No	No	No

Discussion

a. The 2018 EIR and the 2020 INSP SEIR both performed a level of service (LOS) analysis for several roadway segments and intersections within the project vicinity and concluded that a significant and unavoidable impact would occur, with mitigation measures unavailable. However, the law has changed with respect to how transportation-related impacts may be addressed under CEQA. Traditionally, lead agencies used LOS to assess the significance of such impacts, with greater levels of congestion considered to be more significant than lesser levels. In 2013, however, the Legislature passed legislation with the intention of ultimately doing away with LOS in most instances as a basis for environmental analysis under CEQA. Pursuant to SB 743, the Natural Resources Agency promulgated CEQA Guidelines Section 15064.3 in late 2018. Subdivision (a) of that section provides that "[g]enerally, vehicle miles traveled is the most appropriate measure of transportation impacts. For the purposes of this section, 'vehicle miles traveled' refers to the amount and distance of automobile travel attributable to a project. Other relevant considerations may include the effects of the project on transit and non-motorized travel. Except as provided in subdivision (b)(2) below (regarding roadway capacity), a project's effect on automobile delay shall not constitute a significant environmental impact."[30]

Subdivision (c) of Section 15064.3 (Applicability) states that "[t]he provisions of this section shall apply prospectively *as described in Section 15007*. A lead agency may elect to be governed by the provisions of this section immediately. Beginning on July 1, 2020, the provisions of this section shall apply statewide." (Italics added) CEQA Guidelines Section

[30] Subdivision (b)(2) of section 15064.3 ("transportation projects") provides that "[t]ransportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, such as in a regional transportation plan EIR, a lead agency may tier from that analysis as provided in Section 15152."

15007, subdivision (b), provides that "[a]mendments to the Guidelines apply *prospectively only*. New requirements in amendments will apply to steps in the CEQA process not yet undertaken by the date when agencies must comply with the amendments." (Italics added) Subdivision (c) adds that "[i]f a document meets the content requirements in effect when the document is sent out for public review, the document shall not need to be revised to conform to any new content requirements in Guideline amendments taking effect before the document is finally approved." These provisions, read together with Section 15064.3, subdivision (c), make it clear that the VMT requirement did not apply to Draft EIRs issued before July 1, 2020. And where a Draft EIR has been issued prior to July 1st, the Final EIR need not address the issue either. This position was articulated by Jeannie Lee, legal counsel in the Governor's OPR, in publicly broadcast webcasts in 2020. In addition, VMT guidance by the Governor's Office of Planning and Research ("OPR") specifically confirms that when relying on an EIR prepared before the introduction of VMT analysis, the lead agency may use its discretion to conclude that VMT analysis is not required for projects consistent with the earlier EIR (see https://opr.ca.gov/ceqa/sb-743/faq.html). OPR's guidance reflects the fact that the agency construes VMT as a new standard to be phased in over time for new environmental analysis, rather than as a policy that invalidates the many prior EIRs previously certified under then-applicable thresholds of significance.

Thus, the former obligation under CEQA to address LOS in transportation analyses has ceased to exist, except (at agencies' discretion) with respect to transportation projects. EIRs for land use projects such as the INSP are therefore not required to address LOS issues, and "automobile delay," as described in terms of LOS, "shall not be considered a significant impact on the environment." This Initial Study/15182 Checklist, prepared pursuant to CEQA Guidelines Section 15182, represents a very late stage in the CEQA process that follows long after the issuance of a draft program EIR. The new VMT requirement, then, does not apply to this Initial Study/15182 Checklist. Here, the most recent SEIR at issue was published in June 2020, before the VMT requirement took effect statewide.

The following sections provide a discussion regarding impacts bicycle, pedestrian, and transit facilities.

Transit Facilities

According to the 2020 INSP SEIR, development of the INSP would be transit-oriented and would create a diverse mix of land uses, resulting in a concentration of housing, jobs and shopping within walking and bicycle distance. Thus, the 2020 INSP SEIR determined that the INSP would have no impact related to transit facilities.

Public transit within Livermore is provided by the Livermore Amador Valley Transit Authority (LAVATA). The LAVATA provides the WHEELS service, which provides local public transit to the cities of Dublin, Livermore, and Pleasanton, as well as the adjacent unincorporated areas of Alameda County. LAVATA provides a variety of transportation services, including fixed routes, direct access responsive transit (DART), prime time express bus routes, shuttle service, and Dial-A-Ride. The main transit center in the City is the Livermore Transit Center, located in Downtown Livermore. From the Transit Center, riders can connect to Dublin/Pleasanton BART, Lawrence Livermore National Laboratory, Las Positas College, as well as local destinations.

Route 30R provides a loop service to destinations throughout the City of Dublin and the City of Livermore and stops near the project site on Collier Canyon Road. Route 30R

operates Monday through Sunday from 4:43 AM to 11:16 PM.[31] The proposed project does not include any features which could conflict with existing or planned transit facilities, including the Valley Link Project. A number of planned active transportation program (ATP) improvements are anticipated for the INSP area that would facilitate improved pedestrian and bicycle connections to the future Valley Link station. Existing pedestrian facilities in the project vicinity provide adequate connectivity for pedestrians to the transit stops. In addition, the proposed project would not conflict with any planned ATP improvements in the vicinity. Therefore, current transit facilities are adequate and the proposed project would not result in any significant impacts to the nearby transit network. In addition, the currently proposed project is consistent with the scope of development anticipated by the INSP for the project site.

Bicycle and Pedestrian Facilities

The 2020 INSP SEIR determined that implementation of the INSP would include new pedestrian and bicycle connections supporting and expanding upon the improvements identified in the Livermore Bikeways and Trails Master Plan, and concluded that INSP would have no impact related to bicycle and pedestrian facilities.

As shown on Figure 3.2-4 of the 2020 INSP SEIR, existing Class II bike lanes are located in the vicinity of the project site on both sides of Collier Canyon Road, North Canyons Parkway, and Constitution Drive. The proposed project would include a 0.61-acre linear park/trail and a new pedestrian and bicycle path. The new path would run adjacent to Collier Creek and would connect to the sidewalks on Collier Canyon Road and Constitution Drive. The aforementioned path was included as a planned Class I paved shared use path in the City of Livermore Bicycle, Pedestrian, and Trails Active Transportation Plan.[32] In addition, an existing sidewalk along Collier Canyon Road extends north and south with connection to several main roads in the area. As proposed, site access for all travel modes, including bicyclists, would be provided by Collier Canyon Road and the project driveways, which would adequately accommodate both vehicle and bicycle travel.

Conclusion

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2020 INSP SEIR. Thus, the proposed project is consistent with the conclusions of the 2020 INSP SEIR.

b. The 2020 INSP SEIR calculated that VMT would increase significantly with buildout of the INSP, but with the addition of the new service population, the per service population VMT would be reduced compared to existing conditions and to the 2040 No Project Condition. As discussed above, because VMT analysis is not required for a 15182 Checklist to an EIR that was issued in draft form prior to July 1, 2020, additional traffic analysis is not required for this Initial Study/15182 Checklist. Although an analysis of VMT is not required, it should be noted that pursuant to the Governor's Office of Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA,[33] projects located less than 0.5-mile from an existing major transit stop, and projects consisting of a high

[31] Livermore Amador Valley Transit Authority. *30R Dublin-Livermore via Las Positas College*. August 10, 2024.
[32] City of Livermore. *Bicycle, Pedestrian, & Trails Active Transportation Plan*. June 11, 2018.
[33] Governor's Office and Planning and Research. *Technical Advisory on Evaluating Transportation Impacts in CEQA*. December 2018.

percentage of affordable housing, will have a less-than-significant impact related to VMT. As discussed above, the project site is located within a transit priority area and would also include a total of 114 affordable units. Therefore, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts beyond what were analyzed in the 2020 INSP SEIR.

c,d. The 2020 INSP SEIR analyzed the potential of the INSP to result in increased hazards due to design features or incompatible uses or result in inadequate emergency access. The 2020 INSP SEIR determined that new roadways, traffic signals, and intersections would be designed in accordance with City design standards that account for emergency access and would not result in increased hazards. As such, the 2020 INSP SEIR concluded that impacts would be less than significant.

As discussed above, the proposed project is consistent with the scope of development anticipated by the INSP for the project site. According to the Transportation Assessment prepared for the proposed project by Fehr & Peers (see Appendix F),[34] vehicular access to the project site would be provided by way of two new roadway connections to Collier Canyon Road. Both access points would have stop sign control on the driveway approaches, with the Collier Canyon Road approach uncontrolled. Both approaches to the northern project driveway access and the southbound approach to the south driveway would meet the Caltrans Highway Design Manual stopping and corner sight distance requirements for a 40-miles per hour (mph) design speed. The southern driveway would meet the 15-mph design speed stopping sight distance (100 feet) and corner sight distance (165 feet) looking to the south to observe vehicles traveling northbound on Collier Canyon Road. Thus, adequate sight distance would be provided at both proposed driveways.

In addition, the portion of Collier Canyon Road along the project site frontage currently serves low traffic volume generated by demand from local residences and businesses. The proposed throat depths of the driveways would provide adequate internal queuing capacity for vehicles exiting the project site. Project driveways and internal roadways, except for townhouse driveways, are generally 26 feet in width. Townhouse driveways are generally 20 feet in width, which should provide sufficient emergency vehicle access throughout the project site.

Based on the above, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2020 INSP SEIR. Thus, the proposed project is consistent with the conclusions of the 2020 INSP SEIR.

Prior Mitigation Measures

None Required.

XVIII. TRIBAL CULTURAL RESOURCES. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k).	2018 EIR pg. 3.13-19	No	No	No
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	2018 EIR pg. 3.13-19	No	No	No

Discussion

a,b. The NAHC and seven Native American tribes were contacted, pursuant to AB 52 and SB 18, as part of preparation of the 2018 INSP EIR. A response was not received from the tribes regarding preparation of the 2018 INSP EIR. A records search of the NAHC Sacred Lands File did not indicate the presence of Native American cultural resources within the INSP area. Therefore, the 2018 INSP EIR concluded that no impact to tribal cultural resources would occur within the INSP area.

As discussed in Section V, Cultural Resources, of this Initial Study/15182 Checklist, the 2018 INSP EIR assessed the potential for buildout of the INSP to cause a substantial adverse change in the significance of a unique archaeological resource pursuant to Section 15064.5 of the CEQA Guidelines, or disturb any human remains, including those interred outside of dedicated cemeteries. The 2018 INSP EIR concluded that construction activities could potentially disturb or destroy significant buried archaeological resources and/or human remains. Nonetheless, the 2018 INSP EIR determined that with implementation of INSP Policies P-ENV-34 and P-ENV-37, all potential impacts would be less than significant.

The proposed project's area of impact would be within the footprint of the previously analyzed INSP. In addition, the proposed project would be consistent with what has been anticipated for the site in the INSP. As such, impacts related to tribal cultural resources

associated with development of the project site with such uses were previously anticipated within the 2018 INSP EIR.

As discussed above, in compliance with INSP Policy P-ENV-34 and to ensure that any additional resources have not been discovered since the adoption of the 2018 INSP EIR, a records search of the CHRIS was performed by the NWIC for cultural resource site records and survey reports within the project area.[35] The NWIC concluded that the project site does not contain any recorded archaeological resources nor any historic buildings or structures on any lists of historic resources. In addition, a search of the NAHC Sacred Lands File search did not yield any information regarding the presence of Tribal Cultural Resources within the project site or the immediate area.[36]

The proposed project would also be subject to INSP Policy P-ENV-37, related to the inadvertent discovery of human remains. Specifically, if human remains of Native American origin are discovered during project construction, the developer and/or the City of Livermore Planning Department shall comply with State laws relating to the disposition of Native American burials, which fall within the jurisdiction of the NAHC.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR. As a result, the proposed project would remain consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

XIX. UTILITIES AND SERVICE SYSTEMS. *Would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	2018 EIR pgs. 3.10-11 to 3.10-12	No	No	No
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	2018 EIR pgs. 3.10-12 to 3.10-13	No	No	No
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	2018 EIR pgs. 3.10-13 to 3.10-15	No	No	No
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	2018 EIR pgs. 3.10-13 to 3.10-15	No	No	No
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	2018 EIR pg. 3.10-15	No	No	No

Discussion

a. According to the 2018 INSP EIR, water infrastructure requirements needed to meet the demand of new development under the INSP. While the Livermore Water Reclamation Plant (WRP) pump system would need to be upgraded, regardless of implementation of the INSP, the pump station improvements would be subject to State and local regulations regarding environmental review and the minimization of impacts from construction related activities such as grading, as well as policies in the General Plan that require that new utilities be designed and constructed in such a manner as to minimize potential environmental impacts. Additionally, deficiencies in the INSP area stormwater system that development of the INSP would exacerbate do not exist. Therefore, the INSP would have a less-than-significant impact related to the expansion of water, wastewater, or stormwater drainage facilities.

The proposed project would be constructed within the footprint of the previously analyzed INSP, which assumed the development of residential and open space uses. With regard to project-specific utility needs, as part of the proposed project, a new eight-inch sewer line would connect to the City's existing 15-inch sewer line in Collier Canyon Road. In addition, the proposed project would include a new eight-inch water line connection to the City's existing 14-inch water line in Collier Canyon Road. The project would also include an on-site stormwater collection and treatment system connecting to the City's existing 72-inch storm drain located within the project site. Electricity and telecommunications utilities would be provided by way of connections to existing infrastructure located within the immediate project vicinity. The analysis of the 2018 INSP EIR included an assessment

of the INSP's utilities needs at buildout. Therefore, the utility needs associated with the proposed project were previously considered within the 2018 INSP EIR, and the conclusions of the 2018 INSP EIR would not be altered such that the proposed project would require or result in the relocation or construction of new or expanded utilities, the construction or relocation of which could cause significant environmental effects.

Based on the above, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

b. As discussed throughout this Initial Study/15182 Checklist, the proposed project would be constructed within the footprint of the previously analyzed INSP, which assumed the development of residential and open space uses on the project site. As such, water demand associated with the proposed project was previously considered within the 2018 INSP EIR, which concluded that impacts would be less than significant, and the conclusions of the 2018 INSP EIR would not be altered such that water demand would increase. In addition, the proposed project is consistent with the project site's current General Plan land use and zoning designations. The project would not result in increased use of water supplies beyond what has been anticipated by the City and accounted for in the City's UWMP. According to the 2020 UWMP, water supplies are projected to meet expected demand during five-year droughts beginning in 2025, 2030, 2035, 2040, and 2045. Furthermore, all landscaping improvements would be consistent with Section 13.25 of the Municipal Code, Water Efficient Landscape, and would be irrigated by an automatic irrigation system.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

c. The 2018 INSP EIR analyzed the INSP's potential impacts on wastewater capacity to determine if adequate capacity exists to serve the project's projected demand in addition to the provider's existing commitments. According to the 2018 INSP EIR, the WRP has the capacity to treat 8.5 million gallons per day (MGD) and is currently treating only six MGD, resulting in a difference of 2.5 MGD between capacity and current treatment level. According to the Isabel Neighborhood Plan Sewer System Evaluation, additional development resulting from implementation of the INSP would require treatment of an additional 0.42 MGD of Average Dry Weather Flow. Therefore, the 2018 INSP EIR concluded that implementation of the INSP would not cause the WRP to exceed treatment requirements and a less-than-significant impact would occur.

As discussed throughout this Initial Study/15182 Checklist, the proposed project would be constructed within the footprint of the previously analyzed INSP, which assumed the development of residential and open space uses. As such, wastewater generation associated with the proposed project was previously considered within the 2018 INSP EIR, and the conclusions of the 2018 INSP EIR would not be altered such that wastewater generation would increase. In addition, the project would be subject to payment of the City's sanitary sewer impact fee, which would ensure that funds are available to provide for future expansion of the City's WWTP, as necessary.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

d,e. Solid waste, recyclable materials, and compostable material collection within the City of Livermore is provided through a franchise agreement with Livermore Sanitation, Inc. Solid waste from the City is ultimately disposed of at the Republic Services Vasco Road Landfill, located at 4001 North Vasco Road. As of 2017, the landfill had approximately 6,800,000 CY of remaining capacity, or 20.6 percent of the total permitted capacity of the landfill (32,970,000 CY).[37]

The 2018 INSP EIR concluded that, given the City's ability to meet disposal targets, as well as the remaining capacity in area landfills, the collection, transfer, recycling, and disposal needs of the projected population increase under the INSP would not result in adverse impacts on landfill facilities, and impacts would be less-than-significant. The proposed project would be constructed within the footprint of the previously analyzed INSP, which assumed the development of residential and open space uses on the project site. In addition, the proposed project is consistent with the project site's current General Plan land use and zoning designations. Therefore, construction and operation of the proposed project would not result in increased solid waste generation beyond what has been previously anticipated for the site by the City. In addition, the project would be required to comply with all applicable provisions of Chapter 8.08, Solid Waste Management, of the City's Municipal Code. Therefore, the proposed project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals and would comply with federal, State, and local management and reduction statutes and regulations related to solid waste. As a result, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

XX. WILDFIRE. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:*	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	N/A	No	No	No
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	N/A	No	No	No
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	N/A	No	No	No
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	N/A	No	No	No

Discussion

a-d. Wildfire is an environmental issue area that was included in CEQA Guidelines Appendix G subsequent to the approval of the 2018 INSP EIR. As such, the 2018 INSP EIR did not include an analysis specifically dedicated to wildfire; however, the INSP EIR analyzed the INSP's potential impacts related to wildfires within Chapter 3.8, Hazards and Hazardous Materials. As noted therein while the City of Livermore has identified high wildfire severity zones in the INSP Planning Area, according to CAL FIRE maps of fire threat potential, none of the Planning Area constitutes a very high fire hazard. Additionally, development would be consistent with Livermore's Fire Code and Chapter 9, Fire Protection Systems, of the California Building Code, which requires improvements such as fire sprinkler systems and fire alarms. Implementation of existing State and local programs and regulations, as well as INSP policies that address emergency access and fire-fighting facilities and services, development would result in a less-than-significant impact related to wildfire.

The proposed project's area of impact would be within the footprint of the previously analyzed INSP. According to the CAL FIRE Fire and Resource Assessment Program, while the project site is not located within a Very High FHSZ or State Responsibility Area, a High FHSZ is located to the east in close proximity to the project site.[38] However, the proposed project would include the removal of existing on-site vegetation, which would reduce wildfire risks. Furthermore, residential development would be required to include fire sprinklers, and other fire suppression features, consistent with the CBSC and CFC. In

[38] California Department of Forestry and Fire Protection. *Alameda County, Very High Fire Hazard Severity Zones in LRA*. September 3, 2006.

addition, the proposed project is consistent with the site's current INSP land use and zoning designations.

Based on the above information, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were analyzed in the 2018 INSP EIR. Thus, the proposed project is consistent with the conclusions of the 2018 INSP EIR.

Prior Mitigation Measures

None Required.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE.	Where Impact Was Analyzed in Previous CEQA Document(s)	Do Proposed Changes Involve New or More Severe Impacts?	Any New Circumstances Involving New or More Severe Impacts?	Any New Information Requiring New Analysis or Verification?
a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	N/A	No	No	No
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	N/A	No	No	No
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	N/A	No	No	No

Discussion

a. As discussed in Section IV, Biological Resources, of this Initial Study/15182 Checklist, the proposed project would be subject to INSP Mitigation Measures BIO-1, 2, 3, 7, and 9, which require avoidance of special-status species during construction. Additionally, while the project site could contain unidentified cultural or tribal cultural resources beneath the ground surface, compliance with INSP Policies P-ENV-34 and P-ENV-37 would ensure that adverse effects to inadvertently discovered resources would be minimized during construction activities, consistent with the requirements of CEQA.

Considering the above, the proposed project would not: 1) degrade the quality of the environment; 2) substantially reduce or impact the habitat of fish or wildlife species; 3) cause fish or wildlife populations to drop below self-sustaining levels; 4) threaten to eliminate a plant or animal community; 5) reduce the number or restrict the range of a rare or endangered plant or animal; or 6) eliminate important examples of the major periods of California history or prehistory. Impacts associated with such resources have been adequately addressed and would not change from what was identified in the 2018 INSP EIR and 2020 INSP SEIR , and the criteria for requiring further CEQA review are not met.

b. The proposed project was included in the future development assumptions evaluated in the 2018 INSP EIR and 2020 INSP SEIR. The currently proposed project would be constructed within the footprint of the previously analyzed project site, which assumed the development of residential and open space uses. The project would include waivers and

concessions to deviate from Performance Measures and development standards. With the exception of the requested waivers and concessions allowed under State Density Bonus Law, the proposed project would otherwise meet the design requirements ser forth for the project site. The development waivers and concessions would not be substantial such that the conclusions of the 2018 INSP EIR and 2020 INSP SEIR would change, as demonstrated throughout this Initial Study/15182 Checklist. Therefore, the currently proposed project would not result in new significant impacts or substantially more severe significant impacts than were previously analyzed in the 2018 INSP EIR and 2020 INSP SEIR, and further analysis is not required in this Initial Study/15182 Checklist.

c. As described in this Initial Study/15182 Checklist, the proposed project would not cause substantial effects to human beings, including effects related to exposure to air pollutants, geologic hazards, hazardous materials, and excessive noise, beyond those effects previously analyzed as part of the 2018 INSP EIR and 2020 INSP SEIR. Therefore, further analysis is not required.

SECTION 1. INTRODUCTION

Johnson Marigot Consulting, LLC (JMC) has been retained to provide a brief biological constraints analysis for the approximately 15.1-acre Collier Canyon Parcels site (comprised of 6 parcels) (herein referred to as the site) located in Livermore, Alameda County, California (Assessor's Parcel Numbers: 905-15-8, -25, -26, -27, -28, and -29) (Figures 1 and 2). The purpose of this report is to qualitatively identify potential occurrences and/or habitat for special-status plant and wildlife species on the site and to identify local, state, and/or federal biological constraints and ordinances applicable to the development of the site. This document is intended to represent a due-diligence evaluation only, and is not intended to be submitted to agencies.

SECTION 2. METHODOLOGY

A literature review was conducted for special-status species known to occur in the vicinity of the site. In addition to a literature review, the California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDB) and the California Native Plant Society (CNPS) Inventory of Rare, Threatened, and Endangered Plants of California were queried for occurrences of special-status species in the vicinity of the site. A list of these special-status species has been compiled in tables (Table 2 and 3) which also discuss listing/ranking status, required habitat components, proximity of records to the site, and probability of occurrence onsite.

Additional research was conducted to identify local, state, and federal natural resource ordinances and laws that would be applicable to the development of the site; these ordinances and laws are discussed below. It should be noted however, that although some local entitlement requirements are addressed below (e.g. Livermore General Plan 2003-2025), this report does not provide a summary of all local entitlement requirements.

On November 22, 2019, JMC personnel Cameron Johnson and Sadie McGarvey conducted a site visit to evaluate biological resources present on the accessible portions of the site. At the time of the site visit, Mr. Johnson and Ms. McGarvey had received authorization to survey the 5 southern parcels. Site assessment included a reconnaissance level survey of the accessible portions of the site to characterize vegetation, topography, and current and historic uses of the site (as well as the surrounding properties), and to investigate potential presence of waters of the U.S./State. Observations made during site visits were used to determine the potential for the site to provide suitable habitat for special-status species (presence of habitat components necessary to support the species) and sensitive habitats.

Mr. Johnson and Ms. McGarvey performed an additional analysis of the inaccessible parcel (APN 905-15-25) based on an assessment of publicly available aerial imagery (Google Earth), and in light of observations made from the accessible and adjacent parcels during the site visit. This assessment included an evaluation of the likelihood of presence of waters of the U.S./State, as well as the likelihood of presence of suitable habitat for special-status species and sensitive habitats.

SECTION 3. EXISTING SITE CONDITIONS

The approximately 15.1-acre site is located in the northwestern corner of Livermore, Alameda County, California (the approximate center of the site is 37.703075°N, 121.807020°W). The site is located immediately northwest of the intersection of Collier Canyon Road and Constitution Drive. The site is bound to the south by Constitution Drive, to the east by Collier Canyon Road, to the west by Collier Canyon Creek, and to the north and northwest by Alameda County Flood Control and Water Conservation District (Zone 7) and Cornerstone Church campuses. Overall, the site is relatively flat, occurring on a gentle southwestern-facing slope, with elevations ranging from approximately 435 feet above mean sea level (AMSL) at the northern boundary to approximately 415 feet AMSL at the southwestern corner.

Onsite waters drain to Collier Canyon Creek which runs along the western site boundary. Collier Canyon Creek, in turn, flows into a concrete-lined canal (located at the southwestern corner of the site) that acts as the confluence for waters transported via two 72-inch culverts that run below-ground along the western portion of the site, as well as a 24-inch culvert that transports flows that run below-ground along the southern portion of the site. These combined waters then flow offsite through two box culverts that flow southerly underneath Constitution Drive and Interstate 680.

3.1 LAND COVER TYPES

The site is largely characterized by ruderal habitat, with the Collier Canyon Creek corridor traversing the northern portion of the site and flowing southerly along the western site boundary, a former homestead occurring in the northeastern corner of the site, and hardscape scattered throughout the site. Figure 2 presents an overall land cover map for the site.

3.1.1 RUDERAL

A majority of the site is fairly disturbed due to its open access to the public via the "prayer walk" as well as its location immediately adjacent to the moderately trafficked Collier Canyon Road and Constitution Drive, as well as the heavily trafficked Interstate 580. Accordingly, this area is dominated by species that colonize and thrive in disturbed areas, collectively referred to as ruderal species. These species may be native or non-native, but are often thought of as "weedy" species. The ruderal areas are sparely vegetated, with existing vegetation dominated by non-native herbaceous species such as stinkwort (*Dittrichia graveolens*), short podded mustard (*Hirschfeldia incana*), and prickly wild lettuce (*Lactuca serriola*), and rose clover (*Trifolium hirtum*), with lesser dominants including slender wild oat (*Avena barbata*) and alkali mallow (*Malvella leprosa*).

3.1.2 RIPARIAN

Collier Canyon Creek transects the northern portion of the site and defines the western boundary of the site. The vegetation community surrounding and reliant on this creek is referred to as "riparian". The riparian corridor is primarily dominated by a dense canopy cover comprised of willow (*Salix lasiandra* and *S. lasiolepis*), coast live oak (*Quercus agrifolia*), Fremont cottonwood (*Populus fremontii*), and black walnut (*Juglans hindsii*). Breaks in the canopy are scattered along the length of the corridor, with understory plants such as beardless wildrye (*Elymus triticoides*), fennel (*Foeniculum vulgare*), and coyote brush (*Baccharis pilularis*) dominating the openings. The northern portion of the riparian

canopy is fenced on both sides. Any proposed modification of Collier Creek, including modification to the bed, banks, or riparian vegetation, would trigger permitting requirements by the California Department of Fish & Wildlife pursuant to CDFG codes.

3.1.3 FORMER HOMESTEAD

The northeastern portion of the site was formerly occupied by a homestead, which has been abandoned and all structures removed from the site. The term homestead is generally taken to mean a home and adjoining land, especially a farmhouse with outbuildings; often using the term homestead instead of "single-family home" implies an agricultural and/or rural aspect to the property. This portion of the site has evidence of former residential occupation as it is dominated by ornamental vegetation including pink jasmine (*Jasminum polyanthum*), ornamental sage (*Artemisia* sp.), ice plant (*Carpobrotus edulis*), palms (*Phoenix canariensis*), ash (*Fraxinus* sp.), and numerous tree of heaven (*Ailanthus altissima*) trees and offshoots, scattered among ruderal vegetation consistent with that observed throughout the majority of the site.

3.1.4 HARDSCAPE

A trail ("prayer walk") winds through much of the southern portion of the site. The trail consists of an asphalt road (former alignment of Collier Canyon Road), a gravel road (occurring over the right-of-way for the undergrounded stormwater system along the western length of the site), and a minimally upkept dirt path. The trail is largely denuded, with scattered stinkwort growing through cracks in the hardscape. In addition, the concrete-lined canal that occurs at the southwestern corner of the site, the fenced off electrical enclosure that occurs at the southeastern corner of the site, and the areas immediately adjacent to the southern sidewalk and the northern parking lot are all comprised of hardscape (concrete and gravel), supporting little to no vegetation.

3.2 POTENTIAL WATERS OF THE U.S./STATE

3.2.1 COLLIER CANYON CREEK

Collier Canyon Creek runs east to west, traversing the northern portion of the site and then turning in a southerly direction, defining the western site boundary. This intermittent creek was completely dry along the north-south stretch, but had standing water in the upper reaches during the November 22, 2019 site visit. The incised creek channel ranges between 2 and 4-feet-wide at ordinary high water mark (OHWM) and 8 and 20-feet-wide at top of bank (TOB). In-channel vegetation is sparse, but occurs in dense clusters, with dominant species including Perennial pepperweed (*Lepidium latifolium*) and bulrush (*Bolboschoenus* sp.). Collier Canyon Creek is a jurisdictional water of the U.S. and State. Any modification of Collier Creek, including placement of any fill materials, or modification of the bed, banks, or riparian vegetation, will trigger permitting requirements from the US Army Corps of Engineers (Corps), the Regional Water Quality Control Board (RWQCB) pursuant to the Clean Water Act, and the CDFW, pursuant to Fish and Game codes.

3.2.2 SEASONAL WETLAND

A single potential seasonal wetland occurs in the southwestern portion of the site, immediately adjacent to the gravel portion of the trail. While an aerial signature of this potential feature cannot be observed in publicly available aerial photographs (Google Earth), the topographically low area exhibited 100%

cover of saltgrass (*Distichlis spicata*), a facultative wetland plant that could indicate the presence of a jurisdictional seasonal wetland. Due to the ephemeral nature of seasonal wetlands, observation of wetland character is best completed during the winter and spring months. Surveys conducted out of season are limited, and more features may be observed when a formal wetland delineation is completed. In order for wetlands to be jurisdictional, they must meet federal or state standards which typically includes a 3-parameter test (hydrology, soils, vegetation). This test should be applied to determine agency jurisdiction. If this feature is determined to be a regulated water of the U.S. or State, any subsequent fill of the feature would trigger permitting requirements from the Corps and the RWQCB.

3.3 SOILS

According to the Natural Resource Conservation Service, a single soil unit, or type, has been mapped within the site (NRCS 2019): Diablo clay, very deep, 3 to 15 percent slopes. Diablo clay, very deep, 3 to 15 percent slopes (Figure 3) is a well-drained soil derived from shale and siltstone alluvium, and is found in large bodies on hillsides. This clayey to silty-clay soil has a slow permeability and a high runoff class, resulting in a slight to moderate erosion hazard. Available water holding capacity is high; the water table generally occurs more than 6.5 feet below the surface. This soil type is not known to flood or pond. Diablo clay, very deep, 3 to 15 percent slopes is on the California Hydric Soils List. The onsite soils exhibited deep fissures and cracking during the November 22, 2019 site visit.

3.4 HYDROLOGY

The site primarily derives its hydrology from direct precipitation, however, some portions of the site may occur within the active floodplain of Collier Canyon Creek.

SECTION 4. BIOLOGICAL RESOURCE CONSTRAINTS

4.1 SPECIAL STATUS SPECIES

Special-status species include those considered to be rare by state and federal resource agencies (CDFW and the United States Fish and Wildlife Service [USFWS]) and/or the scientific community (CNPS), and are accordingly legally protected via local, state, and/or federal law. For purposes of this assessment, special-status species are defined as plants or animals protected pursuant to:

1. Federal Endangered Species Act (FESA),
2. State Endangered Species Act (CESA),
3. California Fish and Game Codes that protect nesting birds (Section 3503), raptors (Section 3503.5), and "fully protected species" (Sections 3511, 4700, 5050, and 5515)
4. Migratory Bird Treaty Act,
5. CNPS "rare" designation - all of the plants constituting California Rare Plant Rank 1A, 1B, and 2 meet the definitions of Sec. 1901, Chapter 10 (Native Plant Protection Act) or Secs. 2062 and 2067 of the CESA of the California Department of Fish and Game Code, and are eligible for state

listing (CNPS Inventory, 6th Edition, 2001), and/or

6. CDFW "species of special concern" (SSC) designation.

For a brief description of all special-status wildlife known to occur in the vicinity of the site, see the attached Special-Status Plant/Wildlife Species Known to Occur in the Vicinity of the Collier Canyon Parcels Site tables (Tables 2 and 3). Figure 4 depicts the locations of the recorded occurrences for these species.

4.1.1 PLANTS

According to the CNDDB and the CNPS Inventory of Rare, Threatened, and Endangered Plants of California, a total of 10 records for special-status plant species have been documented within three miles of the site and/or within the same U.S. Geological Survey (USGS) 7.5' topographic quadrangle (quad) as the site (Livermore quad): brittlescale (*Atriplex depressa*), lesser saltscale (*Atriplex minuscula*), big-scale balsamroot (*Balsamorhiza macrolepis*), Congdon's tarplant (*Centromadia parryi* ssp. *congdonii*), palmate-bracted bird's-beak (*Chloropyron palmatum*), San Joaquin spearscale (*Extriplex joaquinana*), prostrate vernal pool navarretia (*Navarretia prostrata*), long-styled sand-spurrey (*Spergularia macrotheca*), saline clover (*Trifolium hydrophilum*), and caper-fruited tropidocarpum (*Tropidocarpum capparideum*).

Three of these species require specialized habitats that do not occur on the site such as mesic soils (prostrate vernal pool navarretia and saline clover) and meadows, seeps, marshes, and swamps (long-styled sand-spurrey). As such, these species are not expected to occur onsite. However, the onsite soils which are considered to be mildly alkaline provide potentially suitable habitat for the remaining seven species. In the absence of protocol-level rare plant surveys, the presence of special-status plants on the site cannot be ruled out. Rare plant surveys should be conducted during the appropriate season, for these seven species.

4.1.2 WILDLIFE

4.1.2.1 State and Federally Listed Wildlife

According to the CNDDB, a total of six special-status wildlife species have been documented within three miles of the site: burrowing owl (*Athene cunicularia*), California red-legged frog (*Rana draytonii*), California tiger salamander (*Ambystoma californiense*), tricolored blackbird (*Agelaius tricolor*), vernal pool fairy shrimp (*Branchinecta lynchi*), and western pond turtle (*Emys marmorata*). Four of these species require specialized habitats that do not occur onsite including, vernal pools (vernal pool fairy shrimp), grasslands adjacent to seasonal wetlands/ponds that constitute aquatic breeding habitat (California tiger salamander), wetlands with tall emergent vegetation (tricolored blackbird), and upland habitats with adjacent permanent or nearly permanent water (western pond turtle).

There exists the potential for occurrence for two regionally known special-status species: burrowing owl (California Species of Special Concern) and California red-legged frog (federally threatened and California Species of Special Concern).

While no burrowing owls or evidence of their use of the site was observed during JMC's November survey, the onsite grasslands support numerous ground squirrel burrows that could provide suitable nesting sites for this species. In the absence of preconstruction surveys for burrowing owls,

development-related impacts to this species cannot be ruled out. Site survey for burrowing owls is recommended prior to any site development. These surveys typically include two survey dates during the nesting season for this species (generally taken to mean February 1 through August 31), and a pre-construction survey to occur not more than 14 days prior to site construction. If preconstruction surveys find that the site is occupied by burrowing owls, then Avoidance Measures must be implemented pursuant to the CDFG protocol. These include the establishment of an avoidance and minimization plan, approval by the implementing agency (CEQA lead), and CDFW, and onsite biological monitoring. In some cases, projects may be approved for relocation of onsite burrowing owls.

- California red-legged frogs have been documented within Collier Canyon Creek, just 0.2 mile upstream from the site, and as such, while the onsite grasslands are unlikely to be used by this species, the riparian corridor could support dispersing individuals (the onsite portion of the creek does not provide suitable breeding habitat - i.e., plunge pools, undercut banks, etc.). Site surveys (diurnal and nocturnal) for California red-legged frogs should be conducted within and adjacent to Collier Canyon Creek between January and September in the year permitting efforts are initiated.
- A single potential wetland feature was observed during the site visit that should be evaluated to determine if it meets the 3-parameter test of a jurisdictional wetland. If it is determined to be a jurisdictional feature, it should be further evaluated to determine if it could represent habitat for vernal pool fairy shrimp (i.e. is it a vernal pool?).

If a federally listed species is observed onsite during additional site surveys, or impact to this species is assumed, take coverage from the USFWS should be obtained. Projects that do not result in take are not required to attain take coverage. Similarly, while the site is not located within designated critical habitat for any regionally known federally listed species, the site may provide potential habitat for federally listed species; if impacts to waters of the U.S. would be incurred as part of project-related activities, through the authorization process for impacts to the Army Corps of Engineers' jurisdiction, it is likely that the Corps will request consultation with the USFWS pursuant to Section 7 of the Federal Endangered Species Act.

4.1.2.2 Nesting Birds

The trees and grassland/herbaceous habitats that occur onsite provide suitable nesting habitat for many species of passerine (perching) birds and raptors (birds of prey), including white-tailed kite (*Elanus leucurus*) (CDFW fully protected species) and burrowing owl (State Species of Special Concern). No nests were observed onsite, however owing to the mobile nature of birds and the seasonality of their nesting cycle, and in light of the presence of abundant suitable nesting habitat onsite, these birds could nest onsite during future nesting seasons. In the absence of preconstruction surveys for nesting birds, development-related impacts to nesting birds cannot be ruled out. If project-related activities associated with the development of the site were to commence during the bird nesting season (generally taken to mean February 1 through August 31), preconstruction nesting bird surveys would be required.

4.1.2.3 Roosting Bats

Several species of special-status bats are known to occur in Alameda County. While there are no records for special-status bat species in the vicinity of the site, the riparian corridor provides suitable habitat for roosting bats, and as such, the City of Livermore and/or CDFW may request special Avoidance and Minimization Measures be implemented prior to vegetation removal. A survey should be conducted for

tree-roosting bats prior to trimming/tree removal within the riparian corridor.

4.4 WATERS OF THE U.S./STATE

The potential seasonal wetland and creek on the site are likely regulated by the state (Regional Water Quality Control Board [RWQCB]) and federal (U.S. Army Corps of Engineers [Corps]) jurisdiction, pursuant to the Clean Water Act. Similarly, the California Department of Fish and Wildlife would likely have jurisdiction over the creek corridor and associated riparian canopy (to the dripline), pursuant to Section 1600 of the California Fish and Game Code. If seasonal wetlands and/or the creek are to be impacted by the development of the site, or stormwater is to be directed toward one or more of these features, permits may be required from one or all of these agencies. Determination of the limits of agency jurisdiction (Clean Water Act, Porter Cologne Act, and CDFW codes) is recommended.

4.5 OTHER CONSTRAINTS

4.5.1 LOCAL, STATE, AND FEDERAL PLANS

4.5.1.1 City of Livermore General Plan 2003-2025

The City of Livermore General Plan 2003-2025 was adopted in 2004 as the City of Livermore's (City) fundamental land use and development policy document, intended to guide development and conservation in the City through 2025.

Riparian Protection

Livermore stream corridors are protected pursuant to the Open Space and Conservation Element of the City of Livermore General Plan 2003-2025 (2025 General Plan) (Objective OSC-1.2 [related policies P1-P13] and OSC-2.1 [related policies P1-5]). These protections include the establishment of setbacks (to be determined in coordination with resource agencies), enhancement and protection of native Creekside vegetation, preservation of riparian woodlands, and native landscaping requirements. It is of note that the 2025 General Plan does not provide allowances for development within a riparian corridor, with riparian corridor defined as "areas within 200 feet from the center of a permanent or intermittent stream."

North Livermore Urban Growth Boundary Initiative

The North Livermore Urban Growth Boundary Initiative was enacted in 2002 to amend the City's General Plan by establishing land uses and regulations for property in North Livermore, including, but not limited to, placing restrictions on development affecting wetlands, riparian corridors and wildlife habitats, and on slopes. Relevant policies include requirements for retention or replacement of mature trees, and a 100-foot minimum setback for structures on either side of the center line of the creek.

4.5.1.2 East Alameda Conservation Strategy

The East Alameda County Conservation Strategy (Conservation Strategy) was developed to streamline the environmental permitting process for infrastructure and development projects, within a framework focused on the protection, enhancement, and restoration of natural resources (including special-status species and sensitive habitats) in eastern Alameda County. The Conservation Strategy

acts as a guiding document for local projects, ensuring compliance with local, state, and federal regulatory requirements, and assuring consistent and standardized mitigation requirements.

Conservation goals have been developed for focal species within the Conservation Strategy study area including the following plant and wildlife species: San Joaquin spearscale, big tarweed (*Blepharizonia plumosa*), Congdon's tarplant, palmate-bracted bird's-beak, Livermore Valley tarplant (*Deinandra bacigalupii*), recurved larkspur (*Delphinium recurvatum*), vernal pool and longhorn fairy shrimp (*Branchinecta lynchi* and *B. longiantenna*, respectively), Callippe silverspot butterfly (*Speyeria callippe callippe*), California red-legged frog, California tiger salamander, foothill yellow-legged frog (*Rana boylii*), Alameda whipsnake (*Masticophis lateralis euryxanthus*), golden eagle (*Aquila chrysaetos*), tricolored blackbird, burrowing owl, American badger (*Taxidea taxus*), San Joaquin kit fox (*Vulpes macrotis mutica*), and central California coast steelhead (*Oncorhynchus mykiss irideus*). While many of these species are not known to occur in the immediate vicinity of the site, they are species of concern for eastern Alameda County.

As detailed in Section 4.1.1, the mildly alkaline soils and grasslands present on the project site are considered suitable habitat for many of the regionally known rare plants, including big tarweed, Livermore Valley tarplant, and recurved larkspur. While the onsite habitats are suitable for California red-legged frog and burrowing owl (as detailed in Section 4.1.2), due to the site's distance and isolation from regionally known occurrences and/or lack of suitable habitat, the remaining wildlife species identified as focal species by the Conservation Strategy are not expected to occur on the site (see Tables 2 and 3 for further detail).

The Conservation Strategy's study area boundaries are based on political, ecological, and hydrologic factors. The study area encompasses the eastern half of Alameda County (approximately 271,485 acres). Because the study area is so large, and represents significant ecological diversity, it has been broken down into 18 discrete Conservation Zones (CZs) that encompass similar habitat types. By breaking the study area down into habitat types and areas, appropriate conservation goals can be established for each CZ. Per the Conservation Strategy, the project site is located within CZ4. Conservation goals for CZ4 are as follows:

- Protection and management of alkali meadow and scald, valley sink scrub seasonal wetland, and perennial freshwater marsh in the Springtown Alkali Sink and surrounding watershed.
- Protection of the palmate-bracted bird's beak population.
- Protection of Frick Lake and surrounding uplands for California tiger salamander.
- Protection within vernal pool species recovery units.
- Protection of vernal pool and longhorn fairy shrimp habitat.
- Protection of designated critical habitat for vernal pool and longhorn fairy shrimp.
- Surveys for vernal pool and longhorn fairy shrimp and protection of documented occurrences.
- Protection of known occurrences of San Joaquin spearscale and surveys of other potential habitat.*
- Protection of known occurrences of Congdon's tarplant and surveys of other potential habitat.*
- Protection of designated critical habitat for California red-legged frog.
- Protection and restoration of Cayetano Creek, Arroyo Los Positas, and Altamont Creek.
- Protection of suitable habitat for Alameda whipsnake.

- Protection and enhancement of linkages across I-580 and Vasco Road for San Joaquin kit fox and American badger, including protection of lands on both sides of the roadways.

* These conservation goals are of note as these species and/or habitats have been documented on or near the site.

It is of note that a Programmatic Biological Opinion has been issued for the area within the East Alameda Conservation Strategy's study area (*Programmatic Biological Opinion for U.S. Army Corps of Engineers (Corps) Permitted Projects Utilizing the East Alameda County Conservation Strategy that May Affect Federally Listed Species in East Alameda County, California (Corps File Number 2011-00230S)*). It is possible that the City of Livermore will request that conditions presented within the Programmatic Biological Opinion be adhered to as part of the City's permitting process.

4.5.1.3 Livermore Tree Preservation Ordinance

The Livermore City Council has enacted the Livermore Tree Preservation Ordinance (Tree Ordinance) to establish basic standards for the preservation and protection of a healthy and sustainable urban forest through the implementation of policies, regulations, and standards for the protection of trees on any parcel of land within the City of Livermore. Pursuant to the Tree Ordinance, the removal trees that have been designated as a "Protected tree" requires a permit. Protected trees include single-trunked tree, a multi-trunked tree, or a stand of trees dependent upon each other for survival that meets any one or more of the following criteria:

1. Any tree located on private property occupied by single-family residential development that meets the following criteria:

a. Any tree with a circumference (CBH) of 60 inches or more; or

b. Any California native tree having a circumference (CBH) of 24 inches or more;

2. Any tree located on private property occupied by commercial, industrial, institutional (i.e., religious, public agency, hospital, care facilities, etc.), mixed-use or multifamily residential (two or more units) development with a circumference (CBH) of 24 inches or more; or

3. Any tree located on an undeveloped or underdeveloped property, regardless of zoning district, use, or development status, for which new development is proposed, with a circumference (CBH) of 18 inches or more; or

4. Any tree located in an open space, riparian, or habitat area with a circumference (CBH) of 18 inches or more; or

5. Any tree approved as part of a site plan approval, or required as a condition of approval for a development project, zoning use permit, use permit or other site development review; or

6. Any tree designated by the City Council as determined to be an ancestral tree; and/or

7. Any tree listed on the City's ancestral tree inventory; or

8. Any tree required to be planted as mitigation for unlawfully removed trees.

It is likely that many of the onsite trees would be designated as protected, and as such, if the development of the site requires the removal of any trees, a tree removal permit from the City of Livermore may be required. Such a permit may require mitigation for removal of native species and/or

mature trees.

4.5.2 EXISTING EASEMENTS

The western and southwestern portions of the site are overlaid by existing easements. The western extent of the site is overlaid by a RWQCB easement for conservation of water, wildlife habitat, open space and scenic qualities and incidental purposes. This easement extends to 100 feet from the centerline of Collier Canyon Creek and includes restrictions on development. The easement does, however, include provisions for construction of pedestrian, utility access paths and other improvements as well as low impact recreational uses, wetland construction, and maintenance and landscaping. The southwestern corner of the site is overlaid by an additional 6 easements for various utility and infrastructure requirements.

SECTION 5. CONCLUSIONS AND RECOMMENDATIONS

While a majority of the site is highly disturbed, the open, partially vegetated ruderal areas and the onsite portion of the fairly unimpacted Collier Canyon Creek may provide suitable habitat for multiple special-status plant and wildlife species. Protocol-level rare plant surveys are recommended, out of an abundance of caution, to ensure that special-status plants will not be negatively impacted by development of the site. Similarly, as the site provides suitable nesting habitat for many regionally known birds, if work is scheduled to commence during the nesting season (February 1 through August 31), impacts to these species cannot be ruled out in the absence of nesting bird surveys. A preconstruction survey should be conducted of all suitable nesting habitat prior to the commencement of vegetation removal/ground disturbance, if such work is scheduled to commence during the nesting season (this includes the onsite burrows to ensure that they are not occupied by burrowing owls). In addition, a roosting bat survey should be conducted prior any tree trimming/removal within the riparian corridor.

A determination of jurisdiction pursuant to Clean Water Act, Porter Cologne Act, and CDFG codes (i.e., wetland delineation and riparian habitat mapping) is recommended. This effort would include onsite data collection as well as site mapping of jurisdictional limits. A single seasonal wetland (potential) and the intermittent Collier Canyon Creek occur onsite. In order to determine the extent and location of waters of the U.S./State, a jurisdictional determination mapping, reporting, and verification effort would be required for the site. If impacts would be incurred to the onsite seasonal wetlands or creeks as a result of project implementation, authorization from the Corps and RWQCB pursuant to section 404 and section 401 of the Clean Water Act, and/or the CDFW pursuant to section 1600 of the Fish and Game Code would be required.

Johnson Marigot Consulting, LLC recommends the following survey efforts prior to any site disturbance:

- Jurisdictional determination for regulated waters of the U.S and State (including CDFW codes)
- Survey for Western burrowing owl

- Survey for California red-legged frog
- Survey for roosting bat species
- Survey for nesting birds, including raptors and passerines
- Survey for rare plants
- Tree survey pursuant to City of Livermore Ordinance

As the site occurs in close proximity to records for regionally known federally listed plant and wildlife species, and provides potentially suitable habitat for these species, development of the site will require and effects determination for these listed species. If impacts are incurred to federal jurisdiction (i.e., wetlands or the bed of the creek) the Corps would likely require consultation with the USFWS pursuant to Section 7 of the Endangered Species Act prior to issuance of a Clean Water Act authorization for placement of fill within waters of the U.S. Purchase of mitigation credits at a USFWS- and CDFW-approved mitigation bank (or other agency-approved mitigation) may be required.

Table 3. Special-Status Wildlife Species Presumed Extant in the Vicinity of the Collier Canyon Parcels Site

Table 1. Plants Observed within the Surveyed Portions of the Collier Canyon Parcels Site

Scientific Name	Common Name
Aesculus californica	Buckeye
Ailanthus altissima	Tree of heaven
Amaranthus albus	Tumbleweed
Artemisia sp.	Ornamental sage
Avena barbata	Slender wild oat
Baccharis pilularis	Coyote brush
Bromus catharticus	Rescue grass
Bolboschoenus sp.	Bulrush
Carpobrotus edulis	Iceplant
Centaurea solstitialis	Yellow starthistle
Cirsium vulgare	Bull thistle
Convolvulus arvensis	Orchard morningglory
Croton setiger	Turkey-mullein
Cynara cardunculus	Cardoon
Distichlis spicata	Salt grass
Dittrichia graveolens	Stinkwort
Elymus triticoides	Beardless wild rye
Epilobium ciliatum	Fringed willowherb
Eucalyptus globulus	Blue gum
Euphorbia maculata	Spotted spurge
Foeniculum vulgare	Fennel
Fraxinus sp.	Ash
Heliotropium europaeum	European heliotrope
Helminthotheca echioides	Bristly ox-tongue
Hirschfeldia incana	Short podded mustard
Hordeum marinum	Seaside barley
Jasminum polyanthum	Pink jasmine
Juglans hindsii	Northern california black walnut
Lactuca serriola	Prickly wild lettuce
Lepidium latifolium	Perennial pepperweed
Malva parviflora	Cheeseweed
Malvella leprosa	Alkali mallow
Phoenix canariensis	Canary island date palm
Pinus radiata	Monterey Pine
Populus fremontii	Fremont cottonwood
Quercus agrifolia	Coast live oak
Rumex crispus	Curly dock
Salix lasiandra	Pacific willow
Salix lasiolepis	Arroyo willow
Schinus molle	Peruvian pepper tree
Silybum marianum	Milk thistle
Tragopogon porrifolius	Purple salsify
Trifolium hirtum	Rose clover

Table 2. Special-Status Plant Species Presumed Extant in the Vicinity of the Vicinity of the Collier Canyon Parcels Site

Common Name	Scientific Name	Status	Habitat Type/Components	Occurrence Information	Probability of Occurring on the Project Site
Brittlescale	***Atriplex depressa***	CNPS Rank 1B.2	Alkaline clays in chenopod scrub, meadows and seeps, playas, valley and foothill grassland, and vernal pools	The closest record for this species is located approximately 1.8 miles east of the site (CNDDB Occurrence No. 65).	**Low.** No species in the Atriplex genus were observed onsite during the November 2019 survey. However, the onsite soils are considered mildly alkaline and could potentially support this species.
Lesser Saltscale	***Atriplex minuscula***	CNPS Rank 1B.1	Alkaline, sandy soils in chenopod scrub, playas, and valley and foothill grassland	CNPS 1 Quad Search	**Low.** No species in the Atriplex genus were observed onsite during the November 2019 survey. However, the onsite soils are considered mildly alkaline and could potentially support this species.
Big-scale Balsamroot	***Balsamorhiza macrolepis***	CNPS Rank: 1B.2	Sometimes serpentine soils in chaparral, cismontane woodland, and valley and foothill grassland	CNPS 1 Quad Search	**Low.** The onsite grassland vegetation community is comprised of species that thrive in disturbed environments. Regardless, the site does provide potentially suitable habitat for this species.
Big Tarplant	***Blepharizonia plumosa***	CNPS Rank 1B.1	Usually clay soils in valley and foothill grassland	Focal Species within the East Alameda County Conservation Strategy	**Low.** The onsite grassland vegetation community is comprised of species that thrive in disturbed environemnts. Regardless, the site does provide potentially suitable habitat for this species.
Congdon's Tarplant	***Centromadia parryi* ssp. *congdonii***	CNPS Rank 1B.1	Alkaline soils in valley and foothill grassland	The closest record for this species is located approximately 1.8 miles west of the site (CNDDB Occurrence No. 11).	**Low.** No tarplant species were observed onsite during the November 2019 survey. However, the onsite soils are considered mildly alkaline and could potentially support this species.
Palmate-bracted Bird's-beak	***Chloropyron palmatum***	Federally Endangered California Endangered CNPS Rank 1B.1	Alkaline soils in chenopod scrub and valley and foothill grassland	CNPS 1 Quad Search	**Low.** The onsite grassland vegetation community is comprised of species that thrive in disturbed environemnts. Regardless, the site does provide potentially suitable habitat for this species.
Livermore Valley tarplant	***Deinandra bacigalupii***	California Endangered CNPS Rank 1B.1	Alkaline meadows and seeps	Focal Species within the East Alameda County Conservation Strategy	**Low.** The onsite grassland vegetation community is comprised of species that thrive in disturbed environments. Regardless, the site does provide potentially suitable habitat for this species.
Recurved Larkspur	***Delphinium recurvatum***	CNPS Rank: 1B.2	Alkaline soils in chenopod scrub, cismontane woodland, and valley and foothill grassland	Focal Species within the East Alameda County Conservation Strategy	**Low.** The onsite grassland vegetation community is comprised of species that thrive in disturbed environments. Regardless, the site does provide potentially suitable habitat for this species.
San Joaquin Spearscale	***Extriplex joaquinana***	CNPS Rank: 1B.2	Alkaline soils in chenopod scrub, meadows and seeps, playas, and valley and foothill grassland	The closest record for this species is located approximately 1.6 miles northwest of the site (CNDDB Occurrence No. 82).	**Low.** No species in the Extriplex genus were observed onsite during the November 2019 survey. However, the onsite soils are considered mildly alkaline and could potentially support this species.

Prostrate Vernal Pool Navarretia	***Navarretia prostrata***	CNPS Rank 1B.1	Mesic soils in coastal scrub, meadows and seeps, valley and foothill grassland, and vernal pools	The closest record for this species is located approximately 2.0 miles west of the site (CNDDB Occurrence No. 61).	**None**. The onsite grassland and riparian habitats do not provide suitable habitat for this species.
Long-styled Sand-spurrey	***Spergularia macrotheca***	CNPS Rank 1B.2	Alkaline soils in meadows and seeps and marshes and swamps	CNPS 1 Quad Search	**None**. The onsite grassland and riparian habitats do not provide suitable habitat for this species.
Saline Clover	***Trifolium hydrophilum***	CNPS Rank 1B.2	Mesic soils in marshes and swamps, valley and foothill grassland, and vernal pools	CNPS 1 Quad Search	**None**. The onsite grassland and riparian habitats do not provide suitable habitat for this species.
Caper-fruited Tropidocarpum	***Tropidocarpum capparideum***	CNPS Rank 1B.1	Alkaline hills within valley and foothill grassland	An historic record (1897) for this species has been documented in the vicinity of the site (CNDDB Occurrence No. 11). Exact location is unknown.	**Low.** The onsite grasslands do not occur hillside, regardless, the site does provide potentially suitable habitat for this species.

Table 3. Special-Status Wildlife Species Presumed Extant in the Vicinity of the Collier Canyon Parcels Site

Common Name	Scientific Name	Status	Habitat Type/Components	Occurrence Information	Probability of Occurring on the Project Site
Alameda Whipsnake	***Masticophis lateralis ssp. euryxanthus***	Federally Threatened State Threatened	Sage scrub, chaparral and open woodlands, as well as herbaceous grasslands	Focal Species within the East Alameda County Conservation Strategy	**None**. The site is isolated from suitable habitat and is not sufficiently close to core scrub/chaparral habitat to be considered potentially suitable habitat.
American Badger	***Taxidea taxus***	California Species of Special Concern	Drier open stages of most shrub, forest, and herbaceous habitats, with friable soils	Focal Species within the East Alameda County Conservation Strategy	**None**. The dense clay soils do not provide suitable burrowing habitat for this species.
Burrowing Owl	***Athene cunicularia***	California Species of Special Concern	Open, dry grassland and desert habitats, and in grass, forb and open shrub habitats	The closest record for this species is located approximately 1.1 miles northeast of the site (CNDDB Occurrence No. 2017).	**Moderate**. While this species was not observed onsite, the site provides suitable habitat for this species, including abundant ground squirrel burrows.
California Red-Legged Frog	***Rana draytonii***	Federally Threatened California Species of Special Concern	Grassland and riparian habitats adjacent to creeks/streams with plunge pools or ponds	The closest record for this species is located approximately 0.2 mile northeast of the site (CNDDB Occurrence No. 281).	**Moderate**. Records for this species occur within Collier Canyon Creek, upstream from the site. The onsite portion of Collier Canyon Creek could be used by this species.
California Tiger Salamander	***Ambystoma californiense***	Federally Threatened California Threatened	Grasslands adjacent to seasonal wetlands and ponds (aquatic breeding habitat)	The closest record for this species is located approximately 0.5 mile northwest of the site (CNDDB Occurrence No. 1166).	**None**. The site is separated fom extant records for this species by significant barriers to dispersal.
Callippe Silverspot Butterfly	***Speyeria c. callippe***	Federally Endangered	Hilly grasslands with host plant *Viola pedunculata*	Focal Species within the East Alameda County Conservation Strategy	**None**. The site does not provide suitable habitat for this species due to the location of the site in the flatlands of Livermore, the disturbed nature of the onsite grassland, and the lack of host plants.
Steelhead - Central California Coast DPS	***Oncorhynchus mykiss***	Federally Threatened	Permanent coastal streams, and/or lagoons below natural and manmade barriers from the Russian River (Sonoma Co.) south to Aptos Creek (Santa Cruz Co.), and the drainages of San Francisco Bay eastward to the Napa River (inclusive), excluding the Sacramento-San Joaquin River Basin	Focal Species within the East Alameda County Conservation Strategy	**None**. Steelhead are not known to occur in Collier Canyon Creek.
Foothill Yellow-legged Frog	***Rana boylii***	California Species of Concern	In or near rocky streams in a variety of habitats	Focal Species within the East Alameda County Conservation Strategy	**None**. The site does not provide suitable habitat for this species (no rocky streams on or near the site).
Golden Eagle	***Aquila chrysaetos***	California Fully Protected	Nests on secluded cliffs with overhanging ledges and in large trees in open areas within rolling foothills, mountain areas, sage-juniper flats, and desert	Focal Species within the East Alameda County Conservation Strategy	**None**. The site is surrounded by development and occurs within an area considered too urbanized to support this species.

San Joaquin Kit Fox	***Vulpes macrotis mutica***	Federally Endangered California Threatened	Regionally known to occur in hillside grazed grassland, pasture, annual grassland and alkali sink scrub	Focal Species within the East Alameda County Conservation Strategy	**None**. The site is isolated from suitable habitat known to support this species and the dense clay soils onsite do not provide suitable burrowing habitat for this species.
Swainson's Hawk	***Buteo swainsoni***	California Threatened	Roosts/nests in large trees within/adjacent to grasslands or suitable grain or alfalfa fields, or livestock pastures (wherein they forage)	This species is known to occur regionally.	**Low.** The site is surrounded by development and does not provide sufficient foraging habitat for this species. Regardless, the onsite trees provide potentially suitable nesting habitat for this species.
Tricolored Blackbird	***Agelaius tricolor***	California Species of Special Concern	Nests in emergent wetland with tall, dense cattails or tules, or thickets of willow, blackberry, or tall herbs.	The closest record for this species is located approximately 1.0 mile southwest of the site (CNDDB Occurrence No. 254).	**None**. The site does not provide suitable habitat for this species (i.e., no emergent wetland).
Vernal Pool Fairy Shrimp	***Branchinecta lynchi***	Federally Threatened	Vernal pools, seasonal wetlands, and stagnant ditches that fill with water during fall/winter rains and dry up in spring/summer	The closest record for this species is located approximately 1.6 mile northeast of the site (CNDDB Occurrence No. 254).	**Low**. A single potential wetland occurs onsite - this feature should be evaluated for jurisdiction and a determination regarding habitat potential for this species should occur.
White-tailed Kite	***Elanus leucurus***	California Fully Protected	Forages in grasslands, nests in proximally located trees with dense canopy	This species is known to occur regionally.	**Low.** The site is surrounded by development and does not provide sufficient foraging habitat for this species. Regardless, the onsite trees provide potentially suitable nesting habitat for this species.
Western Pond Turtle	***Emys marmorata***	California Species of Special Concern	A variety of habitats adjacent to permanent or nearly permanent water.	The closest record for this species is located approximately 1.0 mile norththwest of the site (CNDDB Occurrence No. 254).	**None**. The site does not provide suitable habitat for this species.

SECTION 1. Introduction

This report describes the extent and location of potential waters of the United States (U.S.) subject to the U.S. Army Corps of Engineers (USACE) jurisdiction pursuant to Section 404 of the Clean Water Act (CWA) (33 U.S.C. Section 1344), potential waters of the State subject to Regional Water Quality Control Board (RWQCB) jurisdiction pursuant to the Porter-Cologne Water Quality Control Act (Porter-Cologne Act) within the Collier Canyon Parcels Project Study Area (Study Area). This investigation of potentially jurisdictional waters of the U.S. and State follows the methods described in *A Field Guide to the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States* (USACE 2008a); the *Army Corps of Engineers Wetlands Delineation Manual* (Environmental Laboratory 1987), supplemented with guidance as directed by the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region (Version 2.0)* (USACE 2008b); and the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (SWRCB 2021). The waters of the U.S. boundaries depicted in this report represent a calculated estimation of the jurisdictional area within the site and are subject to modification following the USACE review process. All provided maps are consistent with the most recent Map and Drawing Standards for the South Pacific Division Regulatory Program.

1.1 Study Area Location

The approximately 15.1-acre site is located in the northwestern corner of Livermore, Alameda County, California (the approximate center of the site is 37.703075°N, 121.807020°W). The Study Area contains multiple parcels including Assessor's Parcel Numbers (APNs) 905-15-8, -25, -26, -27, -28, and -29 (Appendix A: Figures 1 and 2). The Study Area is within the Livermore U.S. Geological Survey (USGS) 7.5-minute quadrangle. The Study Area is located immediately northwest of the intersection of Collier Canyon Road and Constitution Drive. The Study Area is bound to the south by Constitution Drive, to the east by Collier Canyon Road, to the west by Collier Canyon Creek, and to the north and northwest by Alameda County Flood Control and Water Conservation District (Zone 7) and Cornerstone Church campuses.

1.2 Watershed

The Study Area is located in the southwestern portion of the Arroyo Las Positas watershed, an 81 square mile sub-watershed of the 660 square mile Alameda Creek Watershed. The Study Area is within the 12-digit Hydrologic Unit Code (HUC): 180500040203 (Appendix A: Figure 3). Segments of Collier Canyon Creek flow through the Study Area; this creek connects through engineered waterways to the Arroyo Las Positas approximately 0.4 miles to the south. The flow of water continues from Arroyo Las Positas to Arroyo Mocho, Arroyo de la Laguna, Alameda Creek and ultimately to San Francisco Bay.

Onsite waters drain to Collier Canyon Creek which runs along the western site boundary. Collier Canyon Creek, in turn, flows into a concrete-lined canal (located at the southwestern corner of the site) that acts as the confluence for waters transported via two 72-inch culverts that run below-ground along the western portion of the site, as well as a 24-inch culvert that transports flows that run below-ground along the southern portion of the site. These combined waters then flow offsite through two box culverts that flow southerly underneath Constitution Drive and Interstate 680.

1.3 Climate

According to the Köppen climate classification system, the Study Area has a Mediterranean climate, characterized by hot, dry summers and mild, moist winters. The Study Area generally experiences precipitation between mid-October and mid-April. A climate summary for the Livermore Municipal Airport weather station, reports the following precipitation and temperature information (Western Regional Climate Center 2022) from the years 1991-2020:

- Average annual rainfall is 15.18 inches
- Average annual maximum temperature is 72.7 degrees Fahrenheit (°F)
- Average annual minimum temperature is 47.0 °F

The maximum average monthly temperature reported for the Study Area was 87.7 °F in July, and the minimum average monthly temperature was 37.5 °F in December. The wettest month of the year is February with an average rainfall of 2.92 inches, and the driest month is July with average rainfall of 0.00 inches.

1.4 Surrounding Land Use

The primary land uses immediately surrounding the Study Area include public roadways (including Highway 580 immediately south of Constitution Drive and city streets) and commercial development. Commercial development of adjacent parcels includes office buildings, a research facility, and church complex. The majority of the developed portion of the City of Livermore lies to the south of the Study Area. Undeveloped and agricultural land occurs approximately 0.5 mile north of the Study Area.

1.5 Topography

The Study Area is located immediately below the foothills of the northern extent of the Diablo Range, between Mount Diablo and Mount Boardman. Overall, the site is relatively flat, occurring on a gentle southwestern-facing slope, with elevations ranging from approximately 435 feet above mean sea level (AMSL) at the northern boundary to approximately 415 feet AMSL at the southwestern corner.

1.6 Existing Site Conditions

A majority of the site is disturbed due to its open access to the public via the "prayer walk" as well as its location immediately adjacent to the moderately trafficked Collier Canyon Road and Constitution Drive, as well as the heavily trafficked Interstate 580. This ruderal area is dominated by species that colonize and thrive in disturbed areas, collectively referred to as ruderal species. These species may be native or non-native, but are often thought of as "weedy" species. The ruderal areas are sparely vegetated, with existing vegetation dominated by non-native herbaceous species such as stinkwort (*Dittrichia graveolens*), short podded mustard (*Hirschfeldia incana*), and prickly wild lettuce (*Lactuca serriola*), and rose clover (*Trifolium hirtum*), with lesser dominants including slender wild oat *(Avena barbata*) and alkali mallow (*Malvella leprosa*).

A trail ("prayer walk") winds through much of the southern portion of the site. The trail consists of an asphalt road (former alignment of Collier Canyon Road), a gravel road (occurring over the right-of-way for the undergrounded stormwater system along the western length of the site), and a minimally upkept dirt path. The trail is largely denuded, with scattered stinkwort growing through cracks in the hardscape. In addition, the concrete-lined canal that occurs at the southwestern corner of the site, the fenced off electrical enclosure that occurs at the southeastern corner of the site, and the areas immediately adjacent to the southern sidewalk and the northern parking lot are all comprised of hardscape (concrete and gravel), supporting little to no vegetation.

Collier Canyon Creek transects the northern portion of the site and defines the western boundary of the site. The vegetation community surrounding and reliant on this creek is referred to as "riparian". The riparian corridor is primarily dominated by a dense canopy cover comprised of willow (*Salix lasiandra* and *S. lasiolepis*), coast live oak (*Quercus agrifolia*), Fremont cottonwood (*Populus fremontii*), and black walnut (*Juglans hindsii*). Breaks in the canopy are scattered along the length of the corridor, with understory plants such as beardless wildrye (*Elymus triticoides*), fennel (*Foeniculum vulgare*), and coyote brush (*Baccharis pilularis*) dominating the openings. The northern portion of the riparian canopy is fenced on both sides.

1.7 Soils

According to the Natural Resource Conservation Service, a single soil unit, or type, has been mapped within the site (NRCS 2022): Diablo clay, very deep, 3 to 15 percent slopes. Diablo clay, very deep, 3 to 15 percent slopes (Appendix A: Figure 3) is a well-drained soil derived from shale and siltstone alluvium and is found in large bodies on hillsides. This clayey to silty-clay soil has a slow permeability and a high runoff class, resulting in a slight to moderate erosion hazard. Available water holding capacity is high; the water table generally occurs

more than 6.5 feet below the surface. This soil type is not known to flood or pond. Diablo clay, very deep, 3 to 15 percent slopes is on the California Hydric Soils List. The onsite soils exhibited deep fissures and cracking during the November 22, 2019 site visit.1.8 Hydrology

The Study Area primarily derives its hydrology from direct precipitation, however, some portions of the site occur within the active floodplain of Collier Canyon Creek.

SECTION 2. Regulatory Setting

2.1 Waters of the United States

Waters of the United States are regulated by USACE and the RWQCB in accordance with Section 404 and 401 the Clean Water Act, respectively. The scope of federally jurisdictional "waters of the United States" has been the subject of significant litigation and regulatory revisions and is subject to an ongoing federal rulemaking. (*See* "Revised Definition of 'Waters of the United States,' 86 Fed. Reg. 69372 (Dec. 7, 2021)). At present, pursuant to federal district court order, the Corps is enforcing the "pre-2015" version of the federal jurisdictional definition.

Under the pre-2015 rules, pursuant to 33 C.F.R. § 328.3(a) [51 F.R. 41250, November 13, 1986], the term "waters of the United States" means:

(1) All water which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
(2) All interstate waters including interstate wetlands;
(3) All other waters such as interstate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:
    i. Which are or could be used by interstate or foreign travelers for recreational or other purposes; or
    ii. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
    iii. Which are used or could be used for industrial purpose by industries in interstate commerce;
(4) All impoundments of waters otherwise defined as waters of the United States under the definition;
(5) Tributaries of waters identified in paragraphs (a)(1)-(4) of this section;
(6) The territorial seas; and
(7) Wetlands adjacent to waters (other than water that are themselves wetlands) identified in paragraphs (a)(1)-(6) of this section.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirement of CWA (other than cooling ponds defined in 40 CFR 123.11(m) which also meet the criteria of this definition) are not waters of the United States.

Wetlands are defined as "those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" [33 C.F.R. § 328.3(b), 51 F.R. 41251, November 13, 1986]. Wetlands can be perennial or intermittent and isolated or adjacent to other waters. Adjacent means "bordering, contiguous, or neighboring," and "wetlands separated from other waters of the United States by man-made dikes or barriers, natural river berms, beach dunes and the like are 'adjacent wetlands'" [33 C.F.R. § 328.3(c), 51 F.R. 41251, November 13, 1986]. Methods to determine the presence of wetlands are outlined below in Section 3.1.

The limit of USACE jurisdiction for non-tidal watercourses (without adjacent wetlands) is defined in 33 C.F.R. § 328.4(c)(1) as the "ordinary high water mark" (OHWM). The OHWM is defined as the "line on the shore established by the fluctuations of water and indicated by physical characteristics such as clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas" [33 C.F.R. § 328.3(e), 51 F.R. 41251, November 13, 1986]. The bank-to-bank extent of the channel that contains the water-flow during a normal rainfall year generally serves as a good first approximation of the lateral limit of USACE jurisdiction. The upstream limits of other waters are defined as the point where the OHWM is no longer perceptible.

Waters of the United States do not include waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of the Clean Water Act [33 C.F.R. § 328.3(a), 51 F.R. 41250, November 13, 1986]. Additionally, waters of the U.S. generally do not include non-tidal drainage and irrigation ditches excavated on dry land; artificially irrigated areas which would revert to upland if the irrigation ceased; artificial lakes or ponds created by excavating and/or diking dry land to collect and retain water and which are used exclusively for such purposes as stock watering, irrigation, settling basins, or rice growing; artificial reflecting or swimming pools or other small ornamental bodies of water created by excavating and/or diking dry land to retain water for primarily aesthetic reasons: and waterfilled depressions created in dry land incidental to construction activity and pits excavated in dry land for the purpose of obtaining fill, sand, or gravel unless and until the construction or excavation operation is abandoned and the resulting body of water meets the definition of waters of the U.S. [51 F.R. 41217, November 13, 1986].

2.1.1 *Rapanos v. United States* and *Carabell v. United States*

As stated in Section 2.1, pursuant to 33 C.F.R. § 328.3(a) [51 F.R. 41250, November 13, 1986], waters of the United States include tributaries to and wetlands adjacent to waters identified as waters of the United States. The Supreme Court's decision in the consolidated cases *Rapanos v. United States* and *Carabell v. United States*, 126 S. Ct. 2208 (2006) (referred to as

"Rapanos") addressed which aquatic features qualify as tributaries and adjacent wetlands under the Clean Water Act. The separate opinion of Justice Kennedy in *Rapanos*, which is treated by federal courts as controlling law in California, concluded that adjacent wetlands are "waters of the United States" "if the wetlands, either alone or in combination with similarly situated lands in the region, significantly affect the chemical, physical, and biological integrity of other covered waters more readily understood as 'navigable.' When, in contrast, wetlands' effects on water quality are speculative or insubstantial, they fall outside the zone fairly encompassed by the statutory term 'navigable waters.' More generally, under the test articulated by Justice Kennedy in *Rapanos*, the key question under Section 404 is whether a waterbody has a "significant nexus" to currently or conceivably navigable waters. This fact-based inquiry requires a determination, based on consideration of hydrologic and ecological factors, of whether the waterbody may "significantly affect the chemical, physical and biological integrity of other covered waters more readily understood as 'navigable'."

In 2008, USACE and the U.S. Environmental Protection Agency (EPA) provided guidance on implementing the Rapanos decision, identifying the criteria to be considered when determining jurisdictional status and those wetlands and other waters over which the agencies will assert jurisdiction categorically versus on a case-by-case basis. The 2008 USACE guidance is nonbinding and calls for a fact-specific analysis as to whether there is a "significant nexus" between a feature and navigable waters in cases where the feature is not categorically considered a water of the U.S. Key points of the guidance document are summarized as follows:

> The federal agencies will assert jurisdiction over the following waters:
>
> - Traditional navigable waters
> - Wetlands adjacent to traditional navigable waters
> - Non-navigable tributaries of traditional navigable waters that are relatively permanent where the tributaries typically flow year-round or have continuous flow at least seasonally (e.g., typically three months)
> - Wetlands that directly abut such tributaries
>
> The federal agencies will decide jurisdiction over the following waters based on a fact-specific analysis to determine whether they have a significant nexus with a traditional navigable water:
>
> - Non-navigable tributaries that are not relatively permanent
> - Wetlands adjacent to non-navigable tributaries that are not relatively permanent

- Wetlands adjacent to but that do not directly abut a relatively permanent non-navigable tributary.

The federal agencies generally will not assert jurisdiction over the following features:

- Swales or erosional features (e.g., gullies, small washes characterized by low volume, infrequent, or short duration flow)
- Ditches (including roadside ditches) excavated wholly in and draining only uplands and that do not carry a relatively permanent flow of water

The agencies will apply the significant nexus standard as follows:

- A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by all wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical and biological integrity of downstream traditional navigable waters
- Significant nexus includes consideration of hydrologic and ecologic factors

2.1.2 Wetland Determinations

Consistent with the Corps' 1987 Wetland Delineation Manual (Environmental Laboratory 1987) and its 2008 Arid West Regional Supplement (USACE 2008b) to be determined a wetland, the following three parameters must be met if normal circumstances are present:

1. a majority of dominant vegetation species are wetland associated species;
2. hydrologic conditions exist that result in periods of flooding, ponding, or saturation during the growing season; and
3. hydric soils are present.

The criteria necessary to meet these three wetland parameters is outlined below.

Vegetation

Hydrophytic vegetation is defined as "the sum total of macrophytic plant life that occurs in areas where the frequency and duration of inundation or soil saturation produce permanent or periodically saturated soils of sufficient duration to exert a controlling influence on the plant species present" (Environmental Laboratory 1987). The USACE definition of wetlands includes "a prevalence of vegetation typically adapted for life in saturated soil conditions," with prevalence determined by the dominant plant species comprising the plant community (op. cit.).

The "50/20 rule" is used to determine dominant plant species at each sample point location. The rule states that for each stratum in the plant community, dominant species are the most abundant plant species (when ranked in descending order of abundance and cumulatively totaled) that immediately exceed 50 percent of the total dominance measure for the stratum, plus any additional species that individually comprise 20 percent or more of the total dominance measure for the stratum (HQUSACE 1992). Dominant plant species observed at each sample point are classified according to their indicator status (probability of occurrence in wetlands) (Table 1). If the majority (greater than 50 percent) of the dominant vegetation on a site is classified as obligate (OBL), facultative wetland (FACW), or facultative (FAC), then the site is considered to be dominated by hydrophytic vegetation.

Table 1. Classification of Wetland-Associated Plant Species

Plant Species Classification	Abbreviation	Probability of Occurring in Wetland
Obligate	OBL	Almost always occur in wetlands.
Facultative Wetland	FACW	Usually occur in wetlands, but may occur in non-wetlands.
Facultative	FAC	Occur in wetlands and non-wetlands.
Facultative Upland	FACU	Usually occur in non-wetlands, but may occur in wetlands.
Upland	UPL	Almost never occur in wetlands.
Plants That Are Not Listed	NL (UPL)	Assumed upland species.

Hydrology

Wetlands, by definition, are seasonally inundated or saturated at or near (within 12 inches of) the soil surface. To be classified as a wetland, a site should have at least one primary indicator or two secondary indicators of wetland hydrology. Primary indicators of wetland hydrology may include but are not limited to: oxidized root channels in the upper 12 inches, water-stained leaves, and local soil survey data. In addition to the primary indicators, there are a variety of secondary wetland hydrology indicators. Secondary indicators include, but are not limited to: water marks, drift lines, sediment deposition, drainage patterns, visual observation of saturated soils, and visual observation of inundation. When no primary indicators of wetland hydrology are observed at a sample point, two or more secondary indicators are required to confirm wetland hydrology.

Soils

A hydric soil is defined as a soil that is formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part (NRCS 2003). Indicators that a hydric soil is present include soil color (gleyed soils and soils with bright mottles and/or low matrix chroma), aquic or preaquic moisture regime, reducing soil conditions, sulfidic material (odor), soils listed on hydric soils list, iron and manganese concretions, organic soils (Histosols), histic epipedon, high organic content in surface layer in sandy soils, and organic streaking in sandy soils. A soil pit is excavated to the depth of refusal at each sample point. The soil is then examined for hydric soil indicators. The matrix color and mottle color (if present) of the soil are determined using the Munsell Soil Color Charts.

2.2 Waters of the State

The RWQCB also is authorized under Section 13263 of the Porter-Cologne Act to regulate discharges to waters of the State through issuance of permits referred to as waste discharge requirements (WDRs). In Section 13050(e), the act defines waters of the State to mean any surface water or groundwater, including saline waters, within the boundaries of California. This definition may include wetlands and drainages that are outside federal jurisdiction.

The State Water Resources Control Board (SWRCB) further clarified the definition of wetlands that qualify as waters of the State through adoption of the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (Procedures) (SWRCB 2021). Under the Procedures, the State defines wetlands as follows:

> "An area is wetland if, under normal circumstances, (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation."

The Procedures further state that waters of the State include all waters of the U.S., including all "features that are consistent with any current or historic final judicial interpretation of 'waters of the U.S.' or any current or historic federal regulation defining 'waters of the U.S.' under the Clean Water Act." USACE wetland delineation procedures are to be used to identify State-regulated wetlands, and the following wetland types are waters of the State:

1. natural wetland;
2. wetlands created by modification of a surface water of the State; and
3. artificial wetlands that meet certain criteria.

2.3 CDFW Jurisdiction

The CDFW also regulates diversions and obstructions of the natural flows, and material changes or uses of the beds, channels, or banks, of rivers, streams, and lakes under Section 1602 of California Fish and Game Code (CFGC). The term stream, which includes creeks and rivers, is defined in Title 14, California Code of Regulations (CCR), Section 1.72 as follows: "A stream is a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation." Per Section 1.56, the term lake "includes natural lakes or man-made reservoirs."

Per *A Field Guide to Lake and Streambed Alteration Agreements: Section 1600-1607 California Fish and Game Code* (Field Guide; California Department of Fish and Game (CDFG) 1994), this definition is not complete with respect to Sections 1601 or 1603 because it does not define the terms bed, channel or bank and does not define stream related features such as aquatic life, riparian vegetation, etc. The Field Guide clarifies this definition as follows.

1. The term stream can include intermittent and ephemeral streams, rivers, creeks, dry washes, sloughs, blue-line streams (USGS Maps), and watercourses with subsurface flow. Canals, aqueducts, irrigation ditches, and other means of water conveyance can also be considered streams if they support aquatic life, riparian vegetation, or stream-dependent wildlife.
2. Biologic components of a stream may include aquatic and riparian vegetation.
3. A stream not only includes water (at least on an intermittent or ephemeral basis), but also a bed, bank, and/or levee.
4. The lateral extent of a stream can be measured in ways depending on a particular situation and the type of fish or wildlife resources at risk. The following criteria are applicable to the proposed project.
    a. The outer edge of riparian vegetation is generally used as the line of demarcation between riparian and upland habitats and is therefore a reasonable and identifiable boundary for the lateral extent of a stream.
    b. Most streams have a natural bank which confines flows to the bed or channel except during flooding. In some instances, particularly on smaller streams or dry washes with little or no riparian habitat, the bank should be used to mark the lateral extent of a stream.
    c. A levee or other artificial stream bank could be used to mark the lateral extent of a stream. However, in many instances, there can be extensive areas of valuable riparian habitat located behind a levee (CDFG 1994).

SECTION 3. Methods

Aquatic features in the Study Area were mapped using data derived from field surveys. Field surveys were conducted on January 25, 2022, by Sadie McGarvey and Haley Henderson of Johnson Marigot Consulting, LLC (JMC). The boundaries of potential waters of the U.S./State and sample point locations were mapped using a Juniper Systems Geode Global Navigation Satellite System (GNSS) with sub-meter accuracy using standard field methodologies (i.e., paired data set analyses). All wetland data was recorded on Arid West Routine Wetland Determination Data Forms (Appendix B). The shapefiles obtained from the mapping effort were projected onto an aerial map using QGIS, Version 3.22.1 (see Appendix A: Figure 4). Munsell Soil Color Charts (Kollmorgen Instruments Co. 1990) were used to aid in identifying hydric soils in the field. The Jepson eFlora (Jepson Flora Project 2022) was used for plant nomenclature and identification. Plant wetland indicator status was provided by The National Wetland Plant List 2018 wetland ratings (USACE 2018). Representative photographs of the project site are provided in Appendix C.

SECTION 4. Results

A total of 513 linear feet (LF) of the Collier Canyon Creek occurs within the Study Area, including three in-channel wetlands totaling approximately 0.18 acre. In addition, approximately 1.02 acres of CDFW-regulated riparian zone associated with both onsite and offsite portions of Collier Canyon Creek occurs within the Study Area (Table 2). Delineation maps and riparian maps are provided in Appendix A, Figures 4 and 5 respectively. Representative photographs of the Study Area are included in Appendix C. A discussion of aquatic features in the Study Area is provided below.

Table 2. Potentially Jurisdictional Waters and Riparian Zones*

Feature Type	Acreage	Linear Feet	USACE Jurisdiction	RWQCB Jurisdiction	CDFW Jurisdiction
Potential Waters of the U.S. and State					
Streams	**--**	**513**	**X**	**X**	**X**
In-Channel Wetlands	**0.18**	**--**	**X**	**X**	**X**
W1	0.08	--	X	X	X
W2	0.06	--	X	X	X
W3	0.04	--	X	X	X
CDFW Jurisdiction					
Riparian Zones	1.02	1,560			X

*The regulatory agencies have final say over which aquatic features they consider jurisdictional.

4.1 Intermittent Stream

Collier Canyon Creek traverses the northern portion of the Study Area, flowing northeast to southwest, then turns southerly, roughly defining the western boundary of the Study Area. The ordinary high-water mark (OHWM) within the onsite portion of Collier Canyon Creek ranges between 1 and 6 feet wide, and 4 and 8 inches deep. The channel bed substrate is generally sandy/gravelly. The streambanks are densely vegetated with ruderal species from the adjacent uplands.

4.2 In-Channel Wetlands

Three locations within the Collier Canyon Creek streambed are dominated by dense wetland vegetation, primarily bulrush (*Schoenoplectus* sp.). One wetland is transected by the approximately 1-foot-wide and 4-inch-deep low-flow channel of Collier Canyon Creek (W1). Immediately upstream from the remaining wetlands (W2 and W3), the low flow channel flattens out (with no defined thalweg) and water flows across these in-channel wetlands before reentering the low-flow channel between 25 and 85 feet downstream.

4.3 Riparian Zones

The Study Area contains approximately 1.02 acres of riparian habitat along Collier Canyon Creek. Canopy cover ranges between 80% and 100% along much of the 1,560 LF stretch of riparian zone occurring onsite, with several non-contiguous stretches exhibiting 0% canopy cover. The edge of the riparian corridor was delineated at the TOB of Collier Canyon Creek and/or the edge of overlapping canopy cover - whichever is greater. The riparian corridor extended as much as 70 feet from the OHWM of Collier Canyon Creek.

SECTION 5. Conclusion

A total of 513 LF and 0.18 acre of potential wetland and non-wetland waters of the U.S. and State are present in the Study Area, as well as 1.02 acres of CDFW-regulated riparian zones. All delineated wetland and non-wetland waters are assumed to be subject to USACE and RWQCB jurisdiction for the purposes of the Collier Canyon Parcels Project, and all delineated streams, wetlands, and riparian zones are assumed to be subject to CDFW jurisdiction. These conclusions are subject to modification following USACE's PJD process and review by State agencies.

APPENDIX D

FEASIBILITY EVALUATION AND PRELIMINARY GEOTECHNICAL RECOMMENDATIONS

CORNERSTONE EARTH GROUP

Date:	October 25, 2022
Project No.:	209-2-1
Prepared For:	Mr. Don Slattery **THE PACIFIC COMPANIES** 348 North Canyon Parkway Livermore, California 94551
Re:	Feasibility Evaluation and Preliminary Geotechnical Recommendations Cornerstone Church and Chu Properties Livermore, California

Dear Mr. Slattery:

This letter provides the results of our geotechnical feasibility evaluation and updated preliminary recommendations for the project referenced above. For our use, we have been provided a copy of the Preliminary Site Plan prepared by CBG Civil Engineers, dated January 17, 2022.

Findings and recommendations provided herein are intended for preliminary project planning purposes only and are not intended to be used in final design or construction.

Project Understanding

GENERAL

As referenced in this letter, we understand this geotechnical evaluation is intended to provide feasibility-level recommendations for your planning purposes. This feasibility evaluation is provided to help determine potential design constrains for your forward planning and entitlement.

BRIEF PROJECT DESCRIPTION

Based on the conceptual plans provided, the project will consist of redeveloping the approximately 10½-acre site for new townhome and affordable housing units. The project site is split into two main parcels identified as “Parcel A” at the northern end and “Parcel B”, which constitutes the central and southern site area. Parcel A will include at-grade asphalt parking and a five-story structure with 110 affordable housing units; the ground floor of which is anticipated to be at-grade parking. Parcel B will include a total of 31 townhome structures with between 3 to 7 townhomes per structure, for a total of 125 units. New private streets are planned to connect the entire development. Appurtenant flatwork, landscape, utilities and other pertinent site improvements are also anticipated for construction.

CORNERSTONE EARTH GROUP

Site Exploration

EXISTING SITE CONDITIONS

The site is located north of Highway 580 and west of Collier Canyon Road in Livermore, California. The site is bounded by an existing residence to the north, existing commercial developments to the west, Constitution Drive to the south, and Collier Canyon Road to the east. At the time of our exploration, the site was undeveloped and covered with tall vegetation. An asphalt concrete (AC) road ran generally in a southwest – northeast direction. In addition, a gravel access road ran the entire length along the western site boundary. An enclosed structure was located in the southeast corner. Based on our observations, areas of undocumented fill and soil stockpiles were located throughout the site. Various debris including concrete and construction materials were also noted. The fill and debris could have been placed during past site developments and/or during construction of nearby projects.

SUBSURFACE CONDITIONS

Based on exploratory borings performed during our investigation, the site is generally blanketed by very stiff to hard fat clay to depths ranging from approximately 3 to 17 feet below the existing ground surface. Below the surface clayey soils, our borings encountered interbedded medium stiff to hard lean clays with varying sand contents to a depth of 45 feet, the maximum depth explored during this investigation. The attached site plan shows approximately boring locations and associated boring logs.

We performed two Plasticity Index (PI) tests on representative samples of the clayey soils at depths of 2 and 6½ feet. Tests resulted in PIs of 39 and 40 with liquid limits of 56 and 58, indicating a high expansion potential to wetting and drying cycles.

GROUND WATER

Borings performed during this investigation encountered ground water at depths ranging from 19½ to 23½ feet below the ground surface during drilling. Maps published by the California Geological Survey indicate historical high ground water depths range from approximately 20 to 30 feet below the existing grade. Fluctuations in the level of the ground water may occur due to variations in rainfall, underground drainage patterns, and other factors not evident at the time measurements were made.

Findings and Recommendations

GEOTECHNICAL DESIGN CONSIDERATIONS

Based on exploratory borings performed, available information to date, and our engineering judgment, the planned residential mixed-use project is feasible from a geotechnical standpoint. This letter report and preliminary recommendations are intended to assist you for the project planning purposes only. A design-level geotechnical investigation should be performed once development plans are finalized.

Potential geotechnical concerns, design considerations, and preliminary recommendations are provided herein. A brief description of these concerns follows.

- Undocumented fill
- Very highly expansive clayey soils

Undocumented Fill

Our borings did not encounter undocumented fill. However, based on our site observations, localized areas of undocumented fill should be expected, especially in areas of past development. Existing underground improvements, such as buried utilities or tanks, will need to be removed or demolished during construction.

If undocumented fill is encountered during site grading, it should be removed and replaced as engineered fill. Any fill should be completely removed from within building and bridge foundation areas and to a lateral distance of at least 5 feet beyond the structural footprint or to a lateral distance equal to fill depth below the perimeter footing, whichever is greater. Fills extending into planned pavement and flatwork areas may be left in place provided they are determined to be a low risk for future differential settlement and that the upper 12 to 18 inches of fill below pavement subgrade is re-worked and compacted.

We recommend this concern be evaluated further during the design-level geotechnical investigation. As exploratory borings are relatively small in diameter, it may be beneficial to use exploratory test pits with a backhoe to evaluate fill depths and limits.

Very Highly Expansive Clayey Soils

The surficial clayey soil is very highly expansive. Expansive soils can undergo significant volume change with changes in moisture content. They shrink and harden when dried and expand and soften when wetted. To reduce the potential for damage to the planned structures and slabs-on-grade should have sufficient reinforcement and be supported on a layer of non-expansive fill; foundations should be designed to extend below the zone of seasonal moisture fluctuation or to resist uplift forces. In addition, it is important to limit moisture changes in the surficial soils by using positive drainage away from the building as well as limiting landscaping watering.

FOUNDATIONS

Based on available information to date, the planned residential buildings can likely be supported on conventional continuous and/or isolated spread footings bearing entirely on natural, undisturbed soil, or compacted fill. For your forward planning purposes, maximum allowable bearing pressures on the order of 2,000 to 3,000 pounds per square foot (psf) for dead plus live loads may be feasible. As an alternative, mat foundations are also feasible, from a geotechnical standpoint. The feasibility spread footings and mat foundations should be evaluated further during the design-level geotechnical investigation.

ASPHALT CONCRETE PAVEMENT SECTIONS

For your project planning purposes, a preliminary pavement section consisting of 2½ to 3 inches of asphalt concrete over 7 to 12 inches of aggregate base may be used for Traffic Index (TI)

ranging from approximately 4.0 to 5.5. These estimates and corresponding section alternatives are based on a designed resistance value (R-value) of 5. Above pavement sections should be evaluated further during the design-level geotechnical investigation.

As the surficial soil is highly expansive, and to provide better subgrade support, consideration may be given to chemical-treating (lime-treating) the subgrade prior to paving. For your project budgeting and preliminary design purposes, we estimate the native clayey soil will need to be mixed with approximately 4 percent quicklime (CaO) by weight. If lime-treating is performed, AC pavement section alternatives provided above may be reduced to 2½ to 3 inches of AC over 4½ inches of AB or allow for increased traffic.

If this option is considered, additional laboratory tests should be performed during the design-level geotechnical investigation to further evaluate the optimum percentage of chemical treatment required.

DESIGN-LEVEL GEOTECHNICAL INVESTIGATION

Preliminary recommendations in this feasibility study are based on limited site development information and limited exploration. As site conditions may vary significantly between the widely-spaced, small-diameter borings performed during this investigation, we also recommend that we be retained to 1) perform a design-level geotechnical investigation, once detailed site development plans are available; 2) to review the geotechnical aspects of the project structural, civil, and landscape plans and specifications, allowing sufficient time to provide the design team with any comments prior to issuing the plans for construction; and 3) be present to provide geotechnical observation and testing during earthwork and foundation construction.

Closure

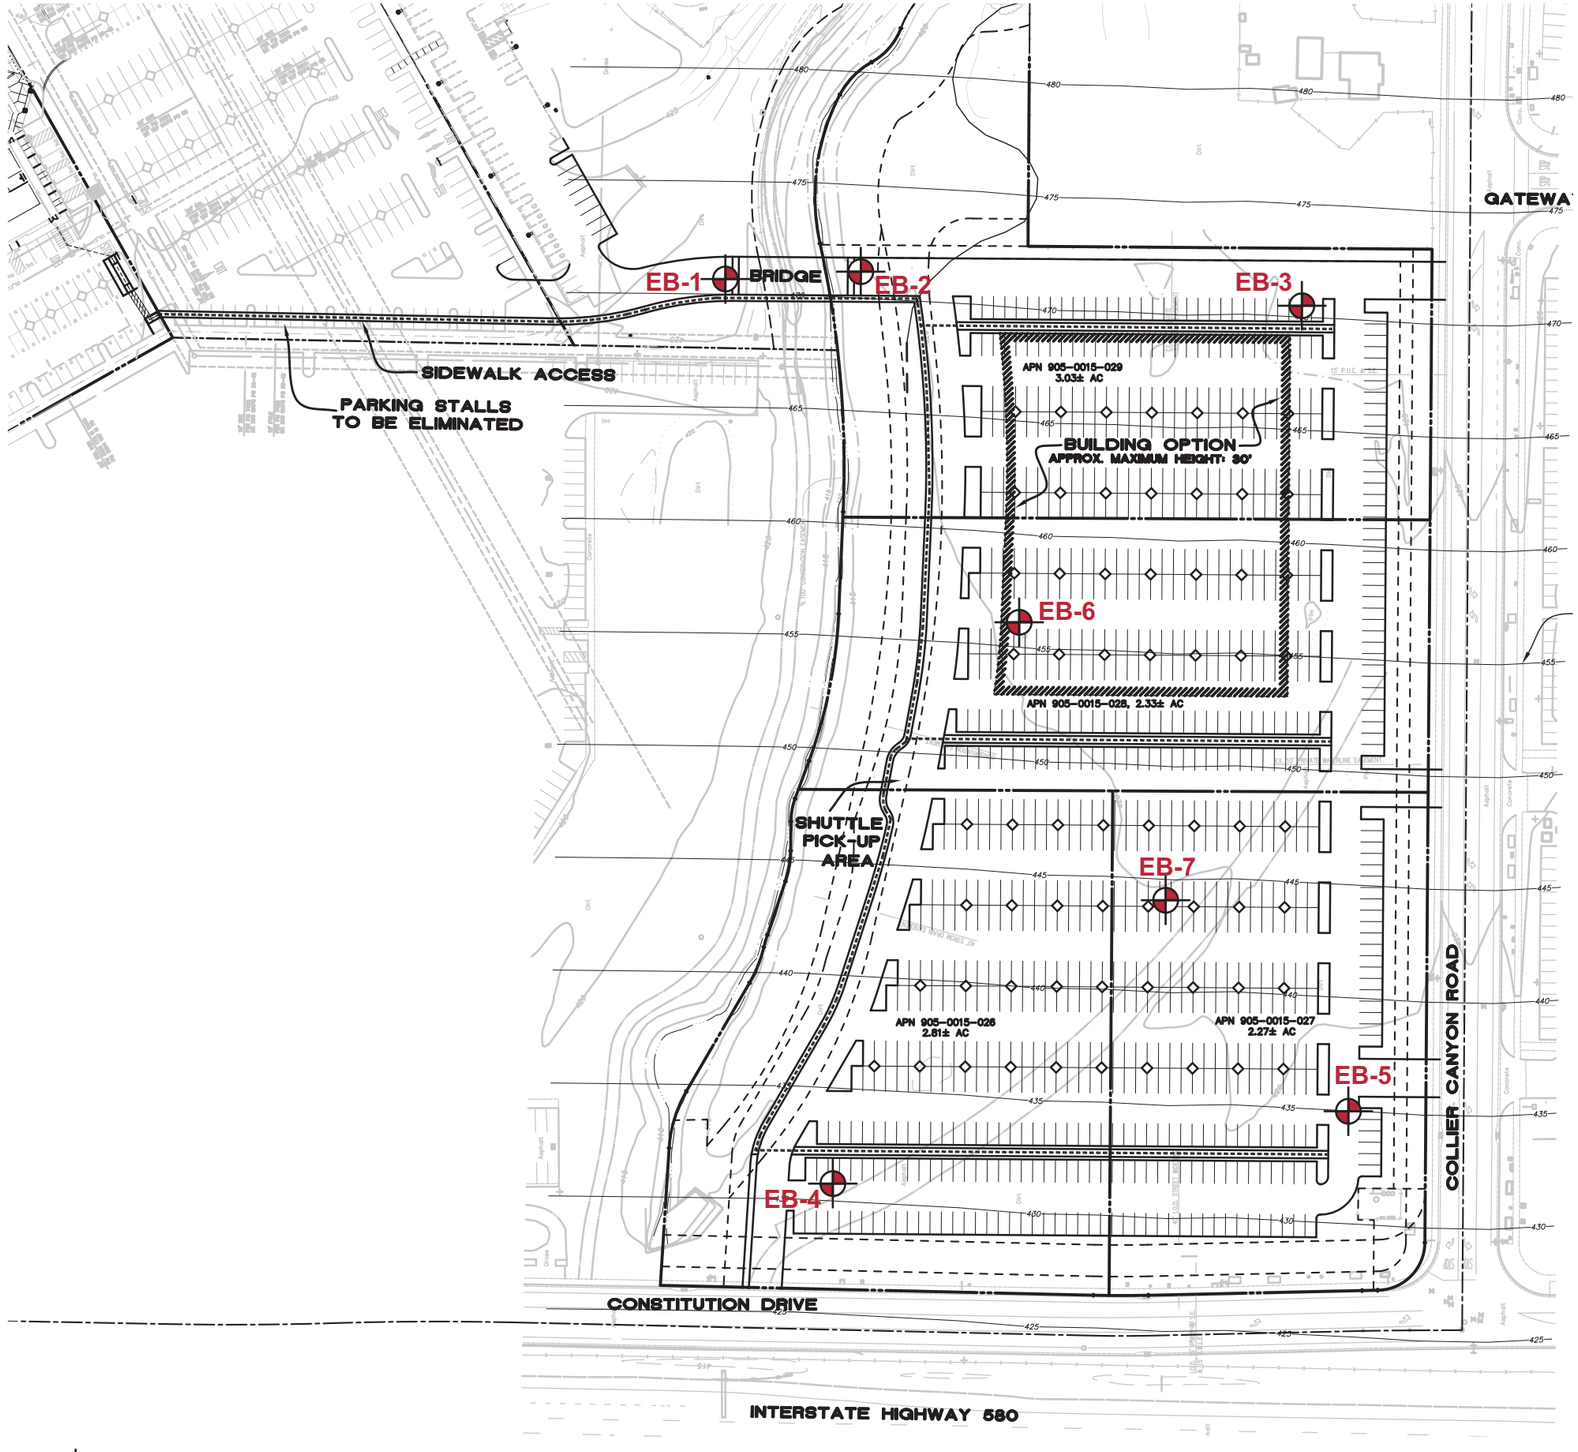
This letter has been prepared for the sole use of The Pacific Companies for the Cornerstone Church and Chu Properties project in Livermore, California. Our professional services were performed, our findings obtained, and our recommendations prepared in accordance with generally accepted geotechnical engineering principles and practices at this time and location. No warranties are expressed or implied.

If you have any questions or need any additional information from us, please call and we will be glad to discuss them with you.

Sincerely,

Cornerstone Earth Group, Inc.

Stephen C. Ohlsen, P.E.
Project Engineer



Danh T. Tran, P.E.

I. SUMMARY AND CONCLUSIONS

KCE Matrix, Inc. (KCE Matrix) has been retained by Pacific West Communities, Inc. (referred to as "the client" and/or "the user" in this report) to conduct a Phase I Environmental Site Assessment (ESA) in accordance with the American Society of Testing and Materials (ASTM) standard practice E1527-13 for the property consisting of vacant land, located at 2620 & 2768 Collier Canyon Road, and has the Assessor's Parcel Numbers (APNs) of 905-0015-008, 905-0015-026, 905-0015-027, 905-0015-028 & 905-0015-029, Livermore, California (referred to as "the subject property" in this report).

The following summarizes the findings of this Phase I ESA:

- The subject property is located in an essentially commercial area along the western side of Collier Canyon Road, on the northwest corner of the intersection of Collier Canyon Road and Constitution Drive, in Livermore, California. The property consists of five parcels of land with Assessor's Parcel Numbers (APNs) of 905-0015-008, 905-0015-026, 905-0015-027, 905-0015-028 and 905-0015-029; measures approximately 570,636 square feet (13.1 acres) in size; has an irregular-shaped configuration; appears to be relatively flat and has an approximate elevation of 420 feet above mean sea level. The property currently consists of vacant unoccupied land with no structures and has a dirt and grass surface that covers a majority of the site. A walkway is located along the western property line, and another walkway is located through the southern central portion of the property. An equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment. The site can be accessed from the vacant properties located along the northwestern and western property lines, from the eastern property line along Collier Canyon Road and from the southern property line along Constitution Drive.

- Based on the historic information obtained during this investigation (including research of Sanborn Maps, Aerial Photographs, regulatory records and city directories), the subject property consisted of vacant land in 1940. Between 1949 and 1998, the property was occupied by several relatively small structures (residential in use) located along the southern and eastern property lines. From at least 1966 and through 1982, large areas of the central and southern portions of the property appear to have been used for agricultural purposes. Between 2006 and 2016, only one residential structure remained on the northern central portion of the site along with a barn and accessory structure. As of 2020, this residence, barn and accessory structure were demolished and removed from the site and the property appears to have been vacant unoccupied land with no structures with a dirt or grassy surface for a majority of the site. A pathway has been located through the central portion of the site from at least 1979 and through the present, and a second pathway was located along the western perimeter of the site from at least 2006 and through the present. Finally, an equipment enclosure was located on the southeastern corner of the subject property from at least 2006 and through the present. On January 19, 2023, a representative of KCE Matrix conducted site inspection for the subject property and confirmed that the property currently consists of vacant

unoccupied land with no structures and has a dirt and grass surface for a majority of the site. In addition, an equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment.

- As reported in the search of government and regulatory environmental databases and as presented in Section V-A2 and Section VI-D of this report, the subject property is located in an essentially commercial area where information related to environmental assessment, remediation and/or management practices is documented for other properties in the general vicinity of the subject site. Eight such sites were identified as being located in the vicinity of the subject property within a radius of approximately 500 feet. Two of these sites were reported as not having Federal RCRA waste. One of these sites that consists of the local Water Agency property was identified under CUPA. Another one of these sites was identified as a laboratory that reportedly maintains small quantities of hazardous materials and generates small quantities of hazardous waste with no reported subsurface storage of such materials; and there were no violations reported. In summary, none of these other nearby facilities have been identified as facilities with Underground Storage Tanks (USTs), or sites with Leaking USTs (LUST). Moreover, based on the information obtained during this investigation and the site vicinity reconnaissance performed, KCE Matrix did not discover or observe subsurface environmental site assessment activity that would indicate potential migration of contamination from other nearby sites towards the subject property.

- Based on the VES conducted during this investigation, a VEC originating from the subject site could not be ruled out. Furthermore, based on the research conducted during this investigation for other sites in the general site vicinity (particularly as related to past agricultural land usage over an extended period of time), a VEC originating from other sites for the subject property could not be ruled out.

- KCE Matrix conducted a search of groundwater monitoring data as maintained by the State Water Resources Control Board (SWRCB) – Geotracker database for hydrology information for the site and site vicinity. Based on monitoring data collected from wells located on a property that is approximately 0.56-mile west of the subject property, the depth to groundwater was reported to range between 21.90 feet and 25.20 feet below the surface as monitored in February of 2008. Based on monitoring data collected from wells located at a second site that is approximately 1.3-miles southeast of the subject site, the depth to groundwater was reported to range between 33.95 feet and 36.28 feet below the surface as monitored in September of 2006.

The ASTM standard practice E1527-13 defines the following terms:

Recognized Environmental Condition (REC) as “the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment”.

Historical Recognized Environmental Condition (HREC) as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria as established by the regulatory authority, without subjecting the property to any required controls".

Controlled Recognized Environmental Condition (CREC) as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls".

KCE Matrix has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13 of the property consisting of vacant land, located at 2620 & 2768 Collier Canyon Road, and has the APNs of 905-0015-008, 905-0015-026, 905-0015-027, 905-0015-028 & 905-0015-029, Livermore, California, the subject property. Any exceptions to, or deletions from, this practice are described in this report. This assessment has revealed no evidence of a REC, an HREC or a CREC in connection with the subject property, except as follows:

- REC – Historic agricultural land use. Parcel (2) through Parcel (5) of the subject property appears to have been used for agricultural purposes over an extended period of time from at least 1966 through 1982. As such, KCE Matrix recommends that subsurface environmental assessment work be performed for Parcel (2) through Parcel (5) of the subject property to determine whether or not the property has been impacted by the potential usage of pesticides over an extended period of time, and to assess any potential impact from metals (such as Arsenic and Lead). The proposed subsurface assessment work should also be conducted in a manner so as to address potential vapor encroachment conditions.

II. INTRODUCTION

A. Purpose

This report presents the results of a Phase I ESA conducted by KCE Matrix for the subject property. The purpose of this investigation is to research and report existing environmental conditions for the subject property based on the American Society of Testing and Materials (ASTM) standard practice E1527-13. Performing a Phase I ESA according to the ASTM Standard E1527-13 is intended to permit a user to satisfy one of the requirements in qualifying for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limitations on Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability (the "*landowner liability protections*," or "*LLPs*"). This practice constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice".

B. Detailed Scope-of-Services

The scope of services performed during this Phase I ESA project includes:

1. Collecting available information concerning the property as it pertains to:
   a. Past land use
   b. Past owners
   c. Location of buried storage tanks, hazardous waste storage, wastewater treatment facilities and/or on-site landfills, etc.
   d. Types of chemicals used on site, past and present
   e. Geologic and hydrogeologic features
   f. Past geotechnical investigations (if available)
   g. Other data pertinent to the specific site
2. Conducting a site visit to:
   a. Identify vegetative features
   b. Locate surface waters
   c. Assess physical features
   d. Observe adjacent land use
   e. Gather evidence of indiscriminate and/or illegal waste disposal
3. Conducting a review of records maintained by regulatory agencies as follows:
   a. Reviewing regulatory files regarding the property in question
   b. Contacting appropriate regulatory personnel
4. Conducting a Vapor Encroachment Screen.
5. Preparing the Phase I Environmental Site Assessment Report, summarizing our findings and inclusive of supporting documentation.

C. Significant Assumptions

No significant assumptions were made during the course of this investigation.

D. Limitations and Exceptions

This type of ESA does not include air, soil or water sampling; or sampling of building materials. Site-specific conditions such as soil deposits and rock formations may vary in thickness, lithology, saturation strength, and other properties across any site beyond what available documentation indicates. Therefore, it is possible that undocumented or concealed improvements or alterations to the property could exist beyond the inquiry of the activities conducted during this site assessment. In addition, environmental changes, either naturally occurring or artificially induced, may cause changes or alterations (which can be significant) to the property as compared to the conditions found at the time that this assessment was conducted.

Based on the best available investigative technologies, no amount of assessment can guarantee that the subject property does not contain contaminants or hazardous substances. The activities conducted during this limited investigation cannot identify all potential concerns for the subject

property, and do not eliminate the possibility that the subject property is completely free of environmental concerns.

KCE Matrix has analyzed and evaluated the information collected during this investigation using what we believe to be the currently applicable assessment and engineering techniques and principles. KCE Matrix assumes no liability from other parties involved in losses sustained as a result of decisions made based on interpretations of this report. KCE Matrix makes no warranty, either expressed or implied, regarding the work conducted, except that our services were performed in accordance with the generally accepted professional principles and practices existing for such work.

There are no significant data gaps to report during this investigation.

E. Special Terms and Conditions

This report and all information obtained during this site assessment are considered confidential and will not be released without written permission by the owner of the subject property, the owner authorized entity conducting this assessment, or as required by law. The owner of the subject property is typically responsible for mitigation of contamination, corrective or remedial action, and disclosure of any information related to environmental issues that may or may not be discovered during this site assessment.

F. User Reliance

This report was prepared for the exclusive use of the client and/or user. No other person or entity is entitled to rely upon this report without the specific written authorization of KCE Matrix. Any such reliance by any third party is at the sole risk of said third party, and such reliance is subject to the same limitations, terms and conditions as the original contract with the client. KCE Matrix specifically disclaims any responsibility for any unauthorized use of this report.

III. SITE DESCRIPTION

A. Location and Description

The subject property is located along the western side of Collier Canyon Road, on the northwest corner of the intersection of Collier Canyon Road and Constitution Drive, in Livermore, California. A Location Map, Site Plan, and Site Vicinity Map are presented in Appendix A, as Figures 1, 2 and 3, respectively.

B. Site and Vicinity General Characteristics

The subject property is located in an essentially commercial area. The property consists of five parcels of land with Assessor's Parcel Numbers (APNs) of 905-0015-008, 905-0015-026, 905-0015-027, 905-0015-028 and 905-0015-029; measures approximately 570,636 square feet (13.1

acres) in size; has an irregular-shaped configuration; appears to be relatively flat and has an approximate elevation of 420 feet above mean sea level. The property currently consists of vacant unoccupied land with no structures and has a dirt and grass surface that covers a majority of the site. A walkway is located along the western property line, and another walkway is located through the southern central portion of the property. The site can be accessed from the vacant properties located along the northwestern and western property lines, from the eastern property line along Collier Canyon Road and from the southern property line along Constitution Drive.

In addition, an equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment.

C. Current Use of the Property

The property currently consists of vacant unoccupied land with no structures and has a dirt and grass surface for a majority of the site. In addition, an equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment.

D. Description of Structures and Other Improvements

The subject property is located in an essentially commercial area. The property consists of five parcels of land with APNs of 905-0015-008, 905-0015-026, 905-0015-027, 905-0015-028 and 905-0015-029; measures approximately 570,636 square feet (13.1 acres) in size; has an irregular-shaped configuration; appears to be relatively flat. The property currently consists of vacant unoccupied land with no structures and has a dirt and grass surface that covers a majority of the site. A walkway is located along the western property line, and another walkway is located through the southern central portion of the property. The site can be accessed from the vacant properties located along the northwestern and western property lines, from the eastern property line along Collier Canyon Road and from the southern property line along Constitution Drive.

In addition, an equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment.

E. Current Uses of the Adjoining Properties

The adjoining properties are comprised of the following:

- North: Vacant property, Collier Canyon Creek, Offices occupied by the Zone 7 Water Agency (water supply agency for the cities of Pleasanton, Livermore, Dublin and the San Ramon areas), North Canyons Parkway (Portola Avenue), commercial properties and other vacant areas.

- East: Collier Canyon Road and commercial properties.

- South: Constitution Drive, Interstate 580, Kitty Hawk Road and commercial/retail properties.

- West: Collier Canyon Creek, vacant land, Triad Drive and commercial properties.

IV. USER PROVIDED INFORMATION

A user questionnaire was completed by the client and was provided to KCE Matrix during this investigation. A copy of the completed user questionnaire is presented in Appendix E of this report.

A. Title Records

The client provided KCE Matrix with a copy of a Preliminary Title Report for the subject property as prepared by First American Title Company, dated December 22, 2022. Based on review of the title report for the subject property, no environmental liens and/or Activity and Use Limitations (AUL's), which indicate a past or present release of a hazardous substance or petroleum products, were presented or recorded. A copy of the title report as prepared by First American Title Company dated December 22, 2022 is presented in Appendix E.

B. Environmental Liens or Activity and Use Limitations

The user reported that he is not aware of any environmental cleanup liens that are filed or recorded against the property under federal, tribal, state or local law. The user also reported that he is not aware of any Activity and Use Limitations (AUL's) that are filed or recorded against the property.

C. Specialized Knowledge

The user did not report any specialized knowledge related to the property or to nearby properties.

D. Commonly Known or Reasonably Ascertainable Information

The user did not report any commonly known or reasonably ascertainable information related to the property.

E. Valuation Reduction for Environmental Issues

The user reported that the purchase price of this property reasonably reflects the fair market value of the property. The user did not report any other information with regard to the value of the subject property based on environmental issues.

F. Owner, Property Manager, and Occupant Information

The user identified Mr. Mark Pleis as a site contact for the subject property. The user did not provide any other information regarding the ownership, management or occupancy of the subject property.

G. Reason for Performing Phase I

This Phase I ESA is being performed for the client as part of a due diligence investigation of the subject property for property entitlement, vesting and sale purposes.

H. Vapor Encroachment

The user reported that the site currently consists of vacant land. The user reported that the future development will consist of residential construction that will have a slab-on-grade foundation. The user also reported that the future structure(s) on site will use electricity as the fuel energy type. The user also reported that neither a gas station nor a dry cleaner operates or will operate on site.

I. Other

The user did not report any other knowledge or experience for the subject property with regard to environmental condition.

V. RECORDS REVIEW

A. Standard Environmental Record Sources

KCE Matrix retained Environmental Data Resources, Inc. (EDR) to conduct a search of government and regulatory databases in an attempt to locate and obtain information about the subject site and other sites in the vicinity of the subject property that may affect the environmental quality of the property. The environmental disclosure report prepared by EDR provides a summary of the various databases searched and is presented in Appendix B of this report. The database research presents summaries for the subject site and selected adjoining properties as follows:

A1. Subject Site

The databases identified the subject property as Pacific West Communities, Inc. The information for the subject property is presented in Appendix B, on pages nine through 13 of the referenced EDR report.

Facility Name	Facility Address	Database	Regulatory History and/or Reported Impact and Current Status
Pacific West Communities, Inc.	2768 Collier Canyon Rd	ECHO	Listed the facility in the Enforcement and Compliance History Online database. Reported the registry ID number.

Facility Name	Facility Address	Database	Regulatory History and/or Reported Impact and Current Status
Pacific West Communities, Inc.	2768 Collier Canyon Rd	FINDS	Reported the registry ID number.
Pacific West Communities, Inc.	2768 Collier Canyon Rd	HAZNET	Listed one summary report dated 2019. The information reported included that the site had asbestos containing waste (0.92 tons). Reported the TSD EPA ID numbers, and the methods of disposal as landfill or surface impoundment that will be closed as landfill (to include on-site treatment and/or stabilization).
Pacific West Communities, Inc.	2768 Collier Canyon Rd	HWTS	Listed the facility on the Hazardous Waste Tracking System database. Reported the status as "Inactive" as of 03/04/2020.
Pacific West Communities, Inc.	2768 Collier Canyon Rd	RCRA NonGen / NLR	Classified the facility as not being a generator of Federal RCRA waste. No violations were reported.

A2. Site Vicinity

With regard to the summary report prepared by EDR, KCE Matrix has prepared the following table listing other sites located in the general vicinity of the subject property up to a reported radius of approximately 500 feet. This summary table includes the site names, the reported distances from the subject property, as well as a brief summary of the information reported by the databases searched.

Facility Name	Address	Dist. (ft)	Database	Regulatory History and/or Reported Impact and Current Status
Caltrol Inc	2685 Collier Canyon Rd	60 NE	RCRA NonGen / NLR	Classified the facility as not being a generator of Federal RCRA waste. No violations were reported.
3055 Livermore Owner Llc	3077 Triad Dr	256 NNW	RCRA NonGen / NLR	Classified the facility as not being a generator of Federal RCRA waste. No violations were reported.
Zone 7 Water Agency, Administration/Laboratory	100 North Canyons Parkway	273 N	CUPA Listings	Reported the facility status as "Active" and the permit as "Hazardous Materials Business Plan".
(Not Reported)	2304 Kittyhawk Rd.	386 SSW	AST	Reported the owner as "Livermore Auto Grp - Chrysler" and the capacity as 1,715 gallons.
LAM Research Corporation - Livermore Campus	1 Portola Ave	423 NNE	RCRA-SQG	Classified the facility as a small-quantity generator. No violations were reported.
LAM Research Corporation - Livermore Campus	1 Portola Ave	423 NNE	FINDS	Reported the registry ID number.
LAM Research Corporation - Livermore Campus	1 Portola Ave	423 NNE	ECHO	Listed the facility in the Enforcement and Compliance History Online database. Reported the registry ID number.
LAM Research Corporation - Livermore Campus	1 Portola Ave	423 NNE	HAZNET	Listed three summary reports dated 2020 and seven summary reports dated 2021. The information reported included that the site had aqueous solution with total organic residues less than 10 percent, Laboratory waste chemicals, liquids with pH <= 2, off-specification, aged or surplus organics, unspecified organic liquid mixture, oxygenated solvents (acetone, butanol, ethyl acetate, etc.), other inorganic solid waste and other organic solids. Reported the TSD EPA ID numbers, and the methods of disposal as storage, bulking, and/or transfer off site - no treatment/recovery, incineration - thermal destruction other than use as a fuel, and other recovery of reclamation for reuse including acid regeneration, organics recovery.
LAM Research Corporation - Livermore Campus	1 Portola Ave	423 NNE	NPDES	Reported the regulatory measure type as “Industrial” and the status as “Active” as of 09/30/2015.
LAM Research Corporation - Livermore Campus	1 Portola Ave	423 NNE	CIWQS	Listed the facility in the California Integrated Water Quality System. Reported the project type as "Industrial - Special Industry Machinery, NEC". Reported the effective dated as of 09/30/2015.
LAM Research Corporation - Livermore Campus	1 Portola Ave	423 NNE	CERS	Reported the CERS description as "US EPA Air Emission Inventory System (EIS)".
LAM Research Corporation - Livermore Campus	1 Portola Ave	423 NNE	HWTS	Listed the facility on the Hazardous Waste Tracking System database.
LAM Research Corporation (CA31)	1 Portola Ave	423 NNE	CERS	Reported the CERS description as "Chemical Storage Facilities".

Facility Name	Address	Dist. (ft)	Database	Regulatory History and/or Reported Impact and Current Status
LAM Research Corporation (CA31)	1 Portola Ave	423 NNE	CERS HAZ WASTE	Reported the CERS description as "Hazardous Waste Generator".
LAM Research Corporation	1 Portola Avenue	423 NNE	CUPA Listings	Reported the facility status as "Active" and the permit as "Hazardous Materials Business Plan/Hazardous Waste Generator".
AT&T California - PE321	198 N Canyons Pkwy	427 N	CUPA Listings	Reported the facility status as "Active" and the permit as "Hazardous Materials Business Plan".
AT&T California - PE321	198 N Canyons Pkwy	427 N	CERS	Reported the CERS description as "Chemical Storage Facilities".
Eurofins Sensory Consumer Research and Product Design US, Inc	2441 Constitution Drive	431 W	RCRA-LQG	Classified the facility as a large-quantity generator. No violations were reported.
Olympian Gulf Properties	2441 Constitution Drive	431 W	RCRA NonGen / NLR	Classified the facility as not being a generator of Federal RCRA waste. No violations were reported.
Olympian Gulf Properties	2441 Constitution Drive	431 W	RCRA NonGen / NLR	Classified the facility as not being a generator of Federal RCRA waste. No violations were reported.
The National Food Laboratory, Inc.	2441 Constitution Drive	431 W	RCRA-LQG	Classified the facility as a large-quantity generator. No violations were reported.
Tech Center	2441 Constitution Dr	431 W	HAZNET	Listed 10 summary reports dated 2020. The information reported included that the site alkaline solution without metals pH >= 12.5, laboratory waste chemicals, liquids with pH <= 2, off-specification, aged or surplus inorganics, off-specification, aged or surplus organics and other organic solids. Reported the TSD EPA ID numbers, and the methods of disposal as storage, bulking, and/or transfer off site - no treatment/recovery and fuel blending prior to energy recovery at another site.
Tech Center	2441 Constitution Dr	431 W	CERS HAZ WASTE	Reported the CERS description as "Hazardous Waste Generator".
KLA-Tencor Corporation	(37.70582/-121.80499)	454 NNE	PFAS ECHO	Reported the type as "Electronics Industry".
LAM Research Corporation	(37.70582/-121.80499)	454 NNE	PFAS ECHO	Reported the type as "Metal Machinery Mfg".

B. Additional Environmental Record Sources

Regional Water Quality Control Board

On December 20, 2022, KCE Matrix submitted a written request to the Regional Water Quality Control Board (RWQCB), San Francisco Bay Region – File Review Department; for information regarding Underground Storage Tanks (USTs) and hazardous materials for the subject property. Based on an email response issued by the RWQCB dated December 23, 2022, this agency does not maintain any records for the subject property. A copy of the written request made by KCE Matrix dated December 20, 2022 and a copy of the RWQCB email response dated December 23, 2022 are presented in Appendix C-1.

KCE Matrix also researched the records maintained by the State Water Resources Control Board (SWRCB) – Geotracker Database online for information regarding Underground Storage Tanks (USTs) and hazardous materials for the subject property. This database typically contains records that are also maintained by the various local RWQCB's. The results of this online research indicated that the SWRCB-RWQCB does not maintain such records for the subject property.

Department of Toxic Substances Control

On December 20, 2022, KCE Matrix submitted a written request to the California State Department of Toxic Substances Control (DTSC) – Berkeley Regional Office, for information regarding hazardous materials and USTs for the subject property. Based on a letter response issued by the DTSC to KCE Matrix dated December 29, 2022, this agency does not maintain any such records for the subject property. A copy of the written request made by KCE Matrix dated December 20, 2022 and a copy of the DTSC letter response dated December 29, 2022 are presented in Appendix C-2.

KCE Matrix also researched the records maintained by the DTSC Envirostor Database online for information regarding environmental assessment and remediation matters for the subject property. The results of this online research indicated that the DTSC Envirostor Database does not maintain such records for the subject property.

In addition, KCE Matrix researched the records maintained by the DTSC Hazardous Waste Tracking System database online for information regarding hazardous wastes generated and/or stored at the subject property. Based on the research conducted, the subject property was identified as "Pacific West Communities, Inc." with the address of 2768 Collier Canyon Road and the ID number of CAC003045840. The database reported the facility status as "Inactive" as of March 4, 2020. Copies of the Waste Code Matrix pages as generated by the DTSC Hazardous Waste Tracking System online is presented in Appendix C-2.

Alameda County Department of Environmental Health

On December 20, 2022, KCE Matrix submitted written requests to the Alameda County Department of Environmental Health (ACDEH) Certified Unified Program Agency (CUPA); for

information regarding Underground Storage Tanks (USTs) and hazardous materials for the subject property. Based on email responses issued by the ACDEH-CUPA dated December 20, 2022, this agency does not maintain any records for the subject property. Copies of the ACDEH-CUPA email responses dated December 20, 2022 are presented in Appendix C-3.

City of Livermore – City Clerk's Office – Fire Department

On December 20, 2022, KCE Matrix submitted a written request to the City of Livermore – City Clerk's Office; regarding any records that may be maintained by the City Departments, including the Fire Department, particularly as may be related to USTs and hazardous materials. Based on an email response issued by the City of Livermore – City Clerk's Office dated December 27, 2022, the City of Livermore Fire Department does not maintain any such records for the subject property. A copy of the request made by KCE Matrix dated December 20, 2022 and a copy of the City Clerk's Office email response dated December 27, 2022 are presented in Appendix C-4.

California Geologic Energy Management Division

KCE Matrix researched the records maintained by the California Geologic Energy Management (CalGEM) Division (formerly known as the Division of Oil, Gas, and Geothermal Resources (DOGGR)) Database online for information regarding oil and natural gas wells for the subject property and the general vicinity. The results of this online research did not indicate references to any oil and/or natural gas wells as being located on the subject property.

California Environmental Protection Agency

KCE Matrix researched the records maintained by the California Environmental Protection Agency (CalEPA) Database online for information regarding environmentally regulated sites and facilities. The results of this online research indicated that the CalEPA Database does not maintain such records for the subject property.

C. Physical Setting Source(s)

C1. Topography

The site has an approximate elevation of 420 feet above mean sea level. A Location Map that shows the physical setting of the subject property and vicinity is presented in Appendix A, as Figure 1.

C2. Geology/Hydrogeology

KCE Matrix conducted a search of groundwater monitoring data as maintained by the State Water Resources Control Board (SWRCB) – Geotracker database for hydrology information for the site and site vicinity. Based on monitoring data collected from wells located on a property that is approximately 0.56-mile west of the subject property, the depth to groundwater was reported to range between 21.90 feet and 25.20 feet below the surface as monitored in February of 2008. Based

on monitoring data collected from wells located at a second site that is approximately 1.3-miles southeast of the subject site, the depth to groundwater was reported to range between 33.95 feet and 36.28 feet below the surface as monitored in September of 2006. The groundwater information obtained from the SWRCB Geotracker Database for the general site vicinity is presented in Appendix C-5.

The surface of the subject property is essentially flat and has an approximate elevation of 420 feet above mean sea level. With regard to the surrounding area, the general topographic gradient is reported to have a gradual slope down to the south based on information obtained from EDR. General subsurface soil and topographic gradient information for the site and vicinity is presented in the Physical Setting Source Summary Report prepared by EDR in Appendix B (pages A-1 through A-6).

The National Wetlands Inventory (NWI) was established by the United States (U.S.) Fish and Wildlife Service (Service) in 1974 to conduct a nationwide inventory of U.S. wetlands to provide its biologists and others with information on the distribution of wetlands to aid in wetland conservation efforts. Based on review of information obtained from the NWI as maintained by the Service online, the subject property does not appear to be a designated wetland area. The NWI map identifies the following wetland(s) as the closest designated wetland area(s) in the vicinity of the subject property:

Wetland	Distance
Creek	Along the western and northern property lines
Arroyo Las Positas Creek	0.25-mile to the southeast of the subject site
Creek	0.55-mile to the east of the subject site
Cottonwood Creek	1.0-mile to the west of the subject site

The NWI wetland map for the vicinity of the subject property is presented in Appendix C-6. In addition, references to the nearest wetland areas are presented in the maps presented in the Executive Summary of the EDR report presented in Appendix B.

The Federal Emergency Management Agency (FEMA) has defined geographic areas as Flood Zones according to varying levels of flood risk. These zones are depicted on a community's Flood Insurance Rate Map (FIRM) or Flood Hazard Boundary Map. Each zone reflects the severity or type of flooding in the area. Based on review of information obtained from the FEMA's National Flood Hazard Layer (NFHL) Viewer online, the subject property is located in Zone X, an area of minimal flood hazard. The NFHL map for the general vicinity of the subject property is presented in Appendix C-7.

D. Historical Use Information - Subject Property

D1. Building Records

On December 20, 2022, KCE Matrix submitted a written request to the City of Livermore – City Clerk's Office; regarding any records that may be maintained by the City Departments, including the Building Department. On December 27, 2022, KCE Matrix received a response from the City

of Livermore that provided information with regard to the records maintained by this agency. These records consisted of permit related information as issued by the City of Livermore as follows:

2620 Collier Canyon Road:

Record #	Record Status	Record Type	Opened Date	Permit Description
BLDG000389	Expired	Dwelling Permit	9/22/2000	10 Day Letter Sent 6/19/02. Demolish Single Family Home and Sheds.

2768 Collier Canyon Road:

Permit #	Record Status	Record Type	Opened Date	Permit Description
DEM200002	Finaled	Demolition	1/8/2020	Demolish Three Existing Buildings: Residence (1,000 Sf), Barn (700 Sf) And Accessory Structure (400 Sf). Project Must Comply with Coa19-021.
E010001	Finaled	Electrical	1/3/2001	Relocate P.G.&E. Electric Meter and Install New Panel.
65116	FINALED	Building History	4/12/1993	Zone 7 Water Connection Fee For 5/8" Meter

A copy of the written request made by KCE Matrix dated December 20, 2022 and copies of the list of permits and associated information related to the subject property as provided to KCE Matrix by the City of Livermore are presented in Appendix D-1.

D2. Historic Maps

KCE Matrix contacted EDR in an effort to obtain historic Sanborn® Maps of the subject site and vicinity. Based on a search of the EDR historic map collection, no such historic maps were maintained by EDR for the subject property and immediate vicinity. A copy of the Sanborn® Map Report dated December 20, 2022 indicating that there is no coverage for the subject property and vicinity is presented in Appendix D-2.

D3. Aerial Photographs

KCE Matrix contacted EDR in an effort to obtain historic and/or recent Aerial Photographs of the subject site and vicinity. Based on the Aerial Photographs for the subject property dated from 1940 through 2020 as obtained by KCE Matrix from EDR, it appears that the subject property consisted of vacant land in 1940. Between 1949 and 1998, the property was occupied by several relatively

small structures (residential in use) located along the southern and eastern property lines. From at least 1966 and through 1982, large areas of the central and southern portions of the property appear to have been used for agricultural purposes. Between 2006 and 2016, only one structure remained on the northern central portion of the site. In 2020, the property appears to have been vacant unoccupied land with no structures with a dirt or grassy surface for a majority of the site. In addition, a pathway is evident as being located through the central portion of the site between 1979 and 2020, and a second pathway is located along the western perimeter of the site between 2006 and 2020. Finally, an equipment enclosure is also evident as being located on the southeastern corner of the subject property from at least 2006 and through 2020. Copies of aerial photographs dated 1940, 1949, 1958, 1963, 1966, 1979, 1982, 1993, 1998, 2006, 2009, 2012, 2016 and 2020 for the subject property and site vicinity as obtained by KCE Matrix from EDR are presented in Appendix D-3.

D4. Historical Topographic Maps

KCE Matrix contacted EDR in an effort to obtain historic and/or recent Topographic Maps of the subject site and vicinity. Based on the historic and/or recent Topographic Maps dated 1906 through 2018 as obtained by KCE Matrix from EDR, it appears that the subject property consisted of vacant land between 1906 and 1947. Between 1953 and 1980, several structures were located along the southern and eastern property perimeter of the site. Detailed information was not provided regarding the subject property and the vicinity on the Topographic Maps dated 2012 through 2018. Copies of the Historical Topographic Maps dated 1906, 1941, 1947, 1953, 1961, 1968, 1973, 1980, 2012, 2015 and 2018 as obtained from EDR and reviewed by KCE Matrix are presented in Appendix D-4.

D5. City Directory Abstract

The following presents a review of the City Directory Abstract for the subject property as obtained by KCE Matrix from EDR.

2620 Collier Canyon Road

Year	Occupant Name
1986	Cardoza John
1979	Haapanen Dennis
1979	Haapanen Martha
1975	Haepanen Martha
1970	Haapanen Martha
1965	Haapanen Martha
1960	Haapanen Martha

2768 Collier Canyon Road

Year	Occupant Name
2002	Chu Miriam
2002	Chu Miriam
1986	Waters Al

Year	Occupant Name
1984	Waters A L
1979	Waters A L
1975	Waters A L

A copy of the City Directory Abstract obtained from EDR and reviewed by KCE Matrix is presented in Appendix D-5.

D6. Recorded Land Title Records

The client provided KCE Matrix with a copy of a Preliminary Title Report for the subject property as prepared by First American Title Company, dated December 22, 2022. Based on review of the title report for the subject property, no environmental liens and/or Activity and Use Limitations (AUL's), which indicate a past or present release of a hazardous substance or petroleum products, were presented or recorded. A copy of the title report as prepared by First American Title Company dated December 22, 2022 is presented in Appendix E.

E. Historical Use Information - Adjoining Properties

E1. Historic Maps

KCE Matrix contacted EDR in an effort to obtain historic Sanborn® Maps of the subject site and vicinity. Based on a search of the EDR historic map collection, no such historic maps were maintained by EDR for the subject property and immediate vicinity. A copy of the Sanborn® Map Report dated December 20, 2022 indicating that there is no coverage for the subject property and vicinity is presented in Appendix D-2.

E2. Aerial Photographs

KCE Matrix contacted EDR in an effort to obtain historic and/or recent Aerial Photographs of the subject site and vicinity. Based on the Aerial Photographs for the subject property and vicinity dated from 1940 through 2020 as obtained by KCE Matrix from EDR, the general site vicinity consisted of essentially vacant land between 1940 and 1982. Between 1993 and 1998, gradual development of essentially commercial structures is evident in the general vicinity, particularly in the areas to the northwest and west of the subject property. As of 2006 and through 2020, further development of commercial properties is evident in the general vicinity of the subject property. In addition, areas located to the north, east and southeast of the subject property were intermittently used for agricultural purposes through the years from at least 1940 and through 2006. Copies of aerial photographs dated 1940, 1949, 1958, 1963, 1966, 1979, 1982, 1993, 1998, 2006, 2009, 2012, 2016 and 2020 for the subject property and site vicinity obtained by KCE Matrix from EDR are presented in Appendix D-3.

E3. Historical Topographic Maps

KCE Matrix contacted EDR in an effort to obtain historic and/or recent Topographic Maps of the subject site and vicinity. Based on the historic and/or recent Topographic Maps for the subject

property and the general vicinity dated from 1906 through 2018 as obtained by KCE Matrix from EDR, the general vicinity appears to have been comprised of vacant land with a few dispersed developed properties between 1906 and 1980. Between 2012 and 2018, gradual development of properties is evident in the general site vicinity. Copies of the Historical Topographic Maps dated 1906, 1941, 1947, 1953, 1961, 1968, 1973, 1980, 2012, 2015 and 2018 as obtained from EDR and reviewed by KCE Matrix are presented in Appendix D-4.

E4. City Directory Abstract

Based on review of the City Directory Abstract report obtained by KCE Matrix from EDR; additional information with regard to addresses in the site vicinity is presented. Information with regard to listings that are or were located in the immediate vicinity of the subject property is presented on pages three through seven of the referenced EDR City Directory Abstract report. A copy of the City Directory Abstract report obtained from EDR and reviewed by KCE Matrix is presented in Appendix D-5.

VI. SITE RECONNAISSANCE

A. Non-ASTM Scope Considerations

Site reconnaissance is limited to the areas accessible and inspected during this investigation. There were no buildings or structures observed on site during this investigation. As such, KCE Matrix did not observe any suspect Asbestos Containing Material (ACM) or Lead-Based Paint (LBP) in association with the subject property. No sampling or analysis of any building materials for asbestos content or paint for lead content was conducted during this assessment.

Exposure to asbestos is a health concern when building materials are friable. In working near, repairing or replacing materials such as these, a licensed asbestos abatement contractor, or personnel specially trained in working with or near asbestos should be employed. With regard to LBP, exposure to lead from LBP is a health concern when lead dust is created and can be inhaled or LBP chips are accessible for ingestion. In working near, assessing, repairing or replacing materials that contain LBP, certified lead professionals specially trained in working with or near LBP should be employed.

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The United States Environmental Protection Agency (EPA) and the California EPA have prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. It is important to note that the EPA has found homes with elevated levels of radon in all three designated zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures. The map divides the country into three Radon Zones as follows:

- Zone 1: Highest Potential - Counties that have a predicted average indoor radon screening level greater than 4 picocuries per liter (pCi/L), the US EPA Action Limit.

- Zone 2: Moderate Potential - Counties that have a predicted average indoor radon screening level between 2 and 4 pCi/L.

- Zone 3: Low Potential - Counties that have a predicted average indoor radon screening level less than 2 pCi/L.

Radon sampling was not conducted as part of this assessment. Review of the California EPA Map of Radon Zones places the subject property in Zone 2, where average predicted radon levels are between 2.0 and 4.0 pCi/L. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

B. General Site Setting

The subject property is located in an essentially commercial area along the western side of Collier Canyon Road, on the northwest corner of the intersection of Collier Canyon Road and Constitution Drive, in Livermore, California. The property consists of five parcels of land with Assessor's Parcel Numbers (APNs) of 905-0015-008, 905-0015-026, 905-0015-027, 905-0015-028 and 905-0015-029; measures approximately 570,636 square feet (13.1 acres) in size; has an irregular-shaped configuration; appears to be relatively flat and has an approximate elevation of 420 feet above mean sea level. The property currently consists of vacant unoccupied land with no structures and has a dirt and grass surface that covers a majority of the site. A walkway is located along the western property line, and another walkway is located through the southern central portion of the property. An equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment. The site can be accessed from the vacant properties located along the northwestern and western property lines, from the eastern property line along Collier Canyon Road and from the southern property line along Constitution Drive.

A Location Map, a Site Plan and a Site Vicinity Map are presented in Appendix A, as Figures 1, 2 and 3, respectively. During site reconnaissance, KCE Matrix also obtained photographs of the subject property and vicinity. Selected photographs are presented in Appendix F.

C. Observations

On January 19, 2023, a representative of KCE Matrix inspected the subject property and recorded the following observations:

	Description	Comments
1	Industrial Use	None observed
2	Gas Station	None observed
3	Motor Repair Facility	None observed
4	Commercial Printing Facility	None observed
5	Dry Cleaning	None observed

	Description	Comments
6	Photo Development Laboratory	None observed
7	Junkyard	None observed
8	Landfill	None observed
9	Waste Treatment	None observed
10	Storage Facility	None observed
11	Disposal Facility	None observed
12	Processing Facility	None observed
13	Recycling Facility	None observed
14	Batteries	None observed
15	Pesticides or agricultural activity	None observed
16	Paints	None observed
17	HazMat storage or use	None observed
18	Potential HazMat storage or use	None observed
19	Dumping or Improper Disposal of HazMat	None observed
20	Drums and Other Containers	None observed
21	PCB's, Transformers, Capacitors or Hydraulic equipment, other equipment	None observed
22	Chemical Products	None observed
23	Asbestos, Age of Building, Blueprints	None observed, the site is vacant land with no structures
24	Paint Condition, LBP	None observed, the site is vacant land with no structures
25	Building Demolition or Renovation	None observed
26	Fill Dirt From Other Locations	None observed
27	Stained Soil or Spills	None observed
28	Oil or Gas Wells	None observed
29	Underground Storage Tanks (USTs)	None observed
30	Above-ground Storage Tanks (ASTs)	An equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment including above ground tanks and piping.
31	Hydraulic Hoists	None observed
32	Clarifier/Wastewater Interceptor	None observed
33	Subsurface or Underground Pipes	The site is vacant land with no structures.
34	Above Ground Pipes	An equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment including above ground tanks and piping.
35	Flooring, Drains or Walls Emitting Foul Odors	None observed
36	Pits, Pounds, Lagoons or Cesspools	None observed
37	Distressed Vegetation	None observed
38	Pools of Liquid, Drains, Sumps, Stains, Septic Tanks	None observed
39	Environmental Liens	None observed
40	Government Notifications Regarding Environmental Violation	None observed
41	HazMat Inventory	None
42	Disclosure of Hazardous Substances or Petroleum Products	None observed
43	Previously Conducted Environmental Site Assessments	None observed
44	Wastewater Generation or Disposal	None observed
45	Water Supply System, Water Usage	None observed
46	Regulated Air Emissions	None observed

	Description	Comments
47	Heating/Cooling	None observed, the site is vacant land with no structures
48	Potable, Irrigation, or Monitoring Wells	None observed
49	Storm water drainage	Dirt surface
50	Odors	Not perceived
51	Solid Waste	None observed
52	Others	None observed

D. Site Vicinity Reconnaissance

KCE Matrix conducted a brief inspection of the immediate vicinity of the subject property. The adjoining properties are comprised of the following:

- North: Vacant property, Collier Canyon Creek, Offices occupied by the Zone 7 Water Agency (water supply agency for the cities of Pleasanton, Livermore, Dublin and the San Ramon areas), North Canyons Parkway (Portola Avenue), commercial properties and other vacant areas.

- East: Collier Canyon Road and commercial properties.

- South: Constitution Drive, Interstate 580, Kitty Hawk Road and commercial/retail properties.

- West: Collier Canyon Creek, vacant land, Triad Drive and commercial properties.

VII. INTERVIEWS

A. Interview with Owner

KCE Matrix did not conduct an interview with the current owner of the subject property during this investigation.

B. Interview with Site Manager

KCE Matrix did not conduct an interview with the current occupant of the property during this investigation. The property consists of vacant unoccupied land with a dirt and grass surface for a majority of the site, and no structures.

C. Interviews with Occupants

KCE Matrix did not conduct an interview with the current occupant of the property during this investigation. The property consists of vacant unoccupied land with a dirt and grass surface for a majority of the site, and no structures.

D. Interviews with Local Government Officials

KCE Matrix did not interview any local government officials regarding the subject property during this investigation.

E. Interviews with Others

KCE Matrix did not conduct any other interviews regarding the subject property during this investigation.

VIII. VAPOR ENCROACHMENT SCREEN

During this investigation, KCE Matrix conducted a Vapor Encroachment Screen (VES) for the subject property based on the ASTM E2600-10 guideline. The goal of conducting a VES as established by the ASTM, is to identify a potential Vapor Encroachment Condition (VEC) for the subject property, which is defined as the presence or likely presence of Chemicals of Concern (COC) vapors in the subsurface of the subject property caused by the release of vapors from contaminated soil or groundwater either on or near the subject site. Detailed information with regard to the VES evaluation conducted, the methodology used, and the information for other sites located in the immediate vicinity of the subject property as provided to KCE Matrix by EDR is presented in a VES summary report presented in Appendix G of this report.

A. Subject Property - VES

Based on the research conducted during this investigation, the subject property consisted of vacant land in 1940. Between 1949 and 1998, the property was occupied by several relatively small structures (residential in use) located along the southern and eastern property lines. From at least 1966 and through 1982, large areas of the central and southern portions of the property appear to have been used for agricultural purposes. Between 2006 and 2016, only one residential structure remained on the northern central portion of the site along with a barn and accessory structure. As of 2020, this residence, barn and accessory structure were demolished and removed from the site and the property appears to have been vacant unoccupied land with no structures with a dirt or grassy surface for a majority of the site. A pathway has been located through the central portion of the site from at least 1979 and through the present, and a second pathway was located along the western perimeter of the site from at least 2006 and through the present. Finally, an equipment enclosure was located on the southeastern corner of the subject property from at least 2006 and through the present.

On January 19, 2023, a representative of KCE Matrix conducted site inspection for the subject property and confirmed that the property currently consists of vacant unoccupied land with no structures and has a dirt and grass surface for a majority of the site. In addition, an equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment.

Based on the site history of the subject property, the central and southern portions of the subject property have been used as agricultural land from at least 1966 through 1982. As such, a VEC originating from these areas of the subject site could not be ruled out.

B. Site Vicinity - VES

Based on the research conducted during this investigation for other sites located in the general vicinity of the subject property, several other sites were identified and/or evaluated during this VES. The evaluation of these other sites located closest to the subject property includes the following:

Facility Name	Facility Address	Database
Caltrol Inc	2685 Collier Canyon Rd	RCRA NONGEN / NLR
3055 Livermore Owner Llc	3077 Triad Dr	RCRA NONGEN / NLR
Zone 7 Water Agency, Administration/Laboratory	100 North Canyons Parkway	CUPA LISTINGS
(Not Reported)	2304 Kittyhawk Rd.	AST
LAM Research Corporation - Livermore Campus	1 Portola Ave	HWTS, RCRA-SQG, FINDS, ECHO, HAZNET, NPDES, CIWQS, CERS
LAM Research Corporation (CA31)	1 Portola Ave	CERS HAZ WASTE, CERS
LAM Research Corporation	1 Portola Avenue	CUPA LISTINGS
AT&T California - PE321	198 N Canyons Pkwy	CUPA LISTINGS, CERS
Eurofins Sensory Consumer Research and Product Des	2441 Constitution Drive	RCRA-LQG
Olympian Gulf Properties	2441 Constitution Drive	RCRA NONGEN / NLR
Olympian Gulf Properties	2441 Constitution Drive	RCRA NONGEN / NLR
The National Food Laboratory, Inc.	2441 Constitution Drive	RCRA-LQG
Tech Center	2441 Constitution Dr	CERS HAZ WASTE, HAZNET
KLA-Tencor Corporation	37.70582/-121.80499	PFAS ECHO
LAM Research Corporation	37.70582/-121.80499	PFAS ECHO

Based on the research conducted, none of the above-listed facilities have been identified as facilities with Underground Storage Tanks (USTs), or sites with Leaking USTs (LUST). Moreover, based on the information obtained during this investigation and the site vicinity reconnaissance performed, KCE Matrix did not discover or observe subsurface environmental site assessment activity that would indicate potential migration of contamination from other nearby sites towards the subject property. Furthermore, based on the information obtained during this assessment, the general site vicinity was developed relatively recently, with significant development beginning in approximately 1993. As such, a VEC originating from these other nearby sites was not identified for the subject property.

Based on the research performed during this investigation, areas located to the north, east and southeast of the subject property were intermittently used for agricultural purposes through the years from at least 1940 and through 2006. Based on the agricultural usage of other nearby properties over an extended period of time, a VEC originating from these other nearby properties for the subject site could not be ruled out.

Detailed information with regard to the VES evaluation conducted is presented in a VES summary report presented in Appendix G of this report.

IX. FINDINGS

The following presents our findings based on the work performed during this Phase I ESA:

- The subject property is located in an essentially commercial area along the western side of Collier Canyon Road, on the northwest corner of the intersection of Collier Canyon Road and Constitution Drive, in Livermore, California. The property consists of five parcels of land with Assessor's Parcel Numbers (APNs) of 905-0015-008, 905-0015-026, 905-0015-027, 905-0015-028 and 905-0015-029; measures approximately 570,636 square feet (13.1 acres) in size; has an irregular-shaped configuration; appears to be relatively flat and has an approximate elevation of 420 feet above mean sea level. The property currently consists of vacant unoccupied land with no structures and has a dirt and grass surface that covers a majority of the site. A walkway is located along the western property line, and another walkway is located through the southern central portion of the property. An equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment. The site can be accessed from the vacant properties located along the northwestern and western property lines, from the eastern property line along Collier Canyon Road and from the southern property line along Constitution Drive.

- Based on the historic information obtained during this investigation (including research of Sanborn Maps, Aerial Photographs, regulatory records and city directories), the subject property consisted of vacant land in 1940. Between 1949 and 1998, the property was occupied by several relatively small structures (residential in use) located along the southern and eastern property lines. From at least 1966 and through 1982, large areas of the central and southern portions of the property appear to have been used for agricultural purposes. Between 2006 and 2016, only one residential structure remained on the northern central portion of the site along with a barn and accessory structure. As of 2020, this residence, barn and accessory structure were demolished and removed from the site and the property appears to have been vacant unoccupied land with no structures with a dirt or grassy surface for a majority of the site. A pathway has been located through the central portion of the site from at least 1979 and through the present, and a second pathway was located along the western perimeter of the site from at least 2006 and through the present. Finally, an equipment enclosure was located on the southeastern corner of the subject property from at least 2006 and through the present. On January 19, 2023, a representative of KCE Matrix conducted site inspection for the subject property and confirmed that the property currently consists of vacant unoccupied land with no structures and has a dirt and grass surface for a majority of the site. In addition, an equipment enclosure is located on the southeastern corner of the subject property, that contains what appears to be water filtration pumps and related equipment.

- As reported in the search of government and regulatory environmental databases and as presented in Section V-A2 and Section VI-D of this report, the subject property is located in an essentially commercial area where information related to environmental assessment, remediation and/or management practices is documented for other properties in the general vicinity of the subject site. Eight such sites were identified as being located in the vicinity of the subject property within a radius of approximately 500 feet. Two of these sites were reported as not having Federal RCRA waste. One of these sites that consists of the local Water Agency property was identified under CUPA. Another one of these sites was identified as a laboratory that reportedly maintains small quantities of hazardous materials and generates small quantities of hazardous waste with no reported subsurface storage of such materials; and there were no violations reported. In summary, none of these other nearby facilities have been identified as facilities with Underground Storage Tanks (USTs), or sites with Leaking USTs (LUST). Moreover, based on the information obtained during this investigation and the site vicinity reconnaissance performed, KCE Matrix did not discover or observe subsurface environmental site assessment activity that would indicate potential migration of contamination from other nearby sites towards the subject property.

- Based on the VES conducted during this investigation, a VEC originating from the subject site could not be ruled out. Furthermore, based on the research conducted during this investigation for other sites in the general site vicinity (particularly as related to past agricultural land usage over an extended period of time), a VEC originating from other sites for the subject property could not be ruled out.

- KCE Matrix conducted a search of groundwater monitoring data as maintained by the State Water Resources Control Board (SWRCB) – Geotracker database for hydrology information for the site and site vicinity. Based on monitoring data collected from wells located on a property that is approximately 0.56-mile west of the subject property, the depth to groundwater was reported to range between 21.90 feet and 25.20 feet below the surface as monitored in February of 2008. Based on monitoring data collected from wells located at a second site that is approximately 1.3-miles southeast of the subject site, the depth to groundwater was reported to range between 33.95 feet and 36.28 feet below the surface as monitored in September of 2006.

X. SIGNATURE

KCE Matrix appreciates the opportunity to have provided services for this project. Should you have any questions regarding this report and the assessment work performed, please do not hesitate to contact our office at 818-559-5500.

Sincerely,

KCE Matrix, Inc.

Aram B. Kaloustian, P.E.
Project Manager

XI. QUALIFICATIONS

KCE Matrix declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Detailed information with regard to the qualifications of the personnel who have worked on this project is presented in Appendix H of this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/25/2022 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/21/2022 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 01/03/2022 has revealed that there are 4 PFAS ECHO sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

EUROFINS SENSORY CONSUMER RESEARCH AND PRODUCT DESIGN US, IN (Continued) **1014387138**

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D011
Waste Description: SILVER

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U236
Waste Description: 2,7-NAPHTHALENEDISULFONIC ACID,3,3'-[(3,3'-DIMETHYL[1,1'-BIPHENYL]-4,4'-DIYL)BIS(AZO)BIS[5-AMINO -4-HYDROXY]-, TETRASODIUM SALT (OR) TRYPAN BLUE

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:
Site ID: 384213
Site Name: Admedes Inc.
Violation Date: 02-03-2015
Citation: 22 CCR 15 66265.177 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.177
Violation Description: Failure to ensure incompatible waste and/or materials are not placed or stored in the same container or nearby or into an unwashed container, which previously contained incompatible waste and/or materials, so that it does not potentially result in the following: 1) Generate extreme heat or pressure, fire or explosion, or violent reaction; 2) Produce uncontrolled toxic mists, fumes, dusts, or gases in sufficient quantities to threaten human health or the environment; 3) Produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions; 4) Damage the structural integrity of the device or facility containing the waste; or 5) Through other like means threaten human health or the environment.
Violation Notes: Returned to compliance on 03/05/2015.
Violation Division: Livermore-Pleasanton FD
Violation Program: CA
Violation Source: CERS,

Site ID: 384213
Site Name: Admedes Inc.
Violation Date: 02-27-2013
Citation: 22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52
Violation Description: Failure to include all of the following in the Contingency Plan: 1) A description of actions the facility personnel shall take response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility; 2) A description of arrangements agreed to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services; 3) All names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator and this list shall be kept up to date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they will

ADMEDES INC. (Continued) **S121770719**

assume responsibility as alternates; 4) A list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. This list shall be kept up to date. In addition, the plan shall include the location and a physical description of each item on the list, and a brief outline of its capabilities; 5) An evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan is to describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires); 6) The current telephone number of the California Emergency Management Agency; and 7) If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the requirements of this chapter.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D009
Waste Description:	MERCURY

ADMEDES INC (Continued) **1014387367**

Waste Code: D011
Waste Description: SILVER

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: U159
Waste Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Description:	Caller states a 300 gallon tank was being refilled with De-Ionized water. The tank had a valve left open which resulted in the release. Caller states substance released to a storm drain. Caller states this occurred between 2330 Hrs 09/23/13 and 0630 Hrs 09/24/13. Caller states this was a continual release as water was going into the tank and exiting from the open valve on the tank. Caller stated that the release was a solution of approximately 99% De-Ionized water and 1% Industrial Salt. Caller states the valve has been closed and the release is secure. Clean-up has been completed.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER
US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D005
Waste Description: BARIUM

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

COSTCO WHOLESALE (Continued) **1001023189**

Waste Code: D011
Waste Description: SILVER

Waste Code: D013
Waste Description: LINDANE (1,2,3,4,5,6-HEXA-CHLOROCYCLOHEXANE, GAMMA ISOMER)

Waste Code: D016
Waste Description: 2,4-D (2,4-DICHLOROPHENOXYACETIC ACID)

Waste Code: D018
Waste Description: BENZENE

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D024
Waste Description: M-CRESOL

Waste Code: D026
Waste Description: CRESOL

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P046
Waste Description: ALPHA,ALPHA-DIMETHYLPHENETHYLAMINE (OR) BENZENEETHANAMINE, ALPHA, ALPHA-DIMETHYL-

COSTCO WHOLESALE (Continued) **1001023189**

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: P188
Waste Description: BENZOIC ACID, 2-HYDROXY-, COMPD. WITH (3AS-CIS)-1,2,3,3A,8,8A-HEXAHYDRO-1,3A,8-TRIMETHYLPYRROLO[2,3-B]INDOL-5-YL METHYLCARBAMATE ESTER (1:1) (OR) PHYSOSTIGMINE SALICYLATE

Waste Code: P204
Waste Description: PHYSOSTIGMINE (OR) PYRROLO[2,3-B]INDOL-5-OL, 1,2,3,3A,8,8A-HEXAHYDRO-1,3A,8-TRIMETHYL-METHYLCARBAMATE (ESTER), (3AS-CIS)-

Waste Code: U010
Waste Description: AZIRINO [2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-METHOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA, 8AALPHA, 8BALPHA)]- (OR) MITOMYCIN C

Waste Code: U015
Waste Description: AZASERINE (OR) L-SERINE, DIAZOACETATE (ESTER)

Waste Code: U034
Waste Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U057
Waste Description: CYCLOHEXANONE (I)

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U059
Waste Description: 5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

Waste Code: U075
Waste Description: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U089
Waste Description: DIETHYLSTILBESTEROL (OR) PHENOL, 4,4'-(1,2-DIETHYL-1,2-ETHENEDIYL)BIS, (E)-

Waste Code: U121
Waste Description: METHANE, TRICHLOROFLUORO- (OR) TRICHLOROMONOFLUOROMETHANE

Waste Code: U122
Waste Description: FORMALDEHYDE

COSTCO WHOLESALE (Continued) **1001023189**

Waste Code:	U129
Waste Description:	CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE
Waste Code:	U132
Waste Description:	HEXACHLOROPHENE (OR) PHENOL, 2,2'-METHYLENEBIS[3,4,6-TRICHLORO-
Waste Code:	U150
Waste Description:	L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN
Waste Code:	U151
Waste Description:	MERCURY
Waste Code:	U159
Waste Description:	2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)
Waste Code:	U182
Waste Description:	1,3,5-TRIOXANE, 2,4,6-TRIMETHYL- (OR) PARALDEHYDE
Waste Code:	U187
Waste Description:	ACETAMIDE, N-(4-ETHOXYPHENYL)- (OR) PHENACETIN
Waste Code:	U188
Waste Description:	PHENOL
Waste Code:	U200
Waste Description:	RESERPINE (OR) YOHIMBAN-16-CARBOXYLIC ACID, 11,17-DIMETHOXY-18-[(3,4,5-TRIMETHOXYBENZOYL)OXY]-, METHYL ESTER, (3BETA, 16BETA, 17ALPHA, 18BETA, 20ALPHA)-
Waste Code:	U201
Waste Description:	1,3-BENZENEDIOL (OR) RESORCINOL
Waste Code:	U205
Waste Description:	SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)
Waste Code:	U206
Waste Description:	D-GLUCOSE, 2-DEOXY-2-[[(METHYLNITROSOAMINO)-CARBONYL]AMINO]- (OR) GLUCOPYRANOSE, 2-DEOXY-2-(3-METHYL-3-NITROSOUREIDO)-,D- (OR) STREPTOZOTOCIN
Waste Code:	U220
Waste Description:	BENZENE, METHYL- (OR) TOLUENE
Waste Code:	U237
Waste Description:	2,4-(1H,3H)-PYRIMIDINEDIONE, 5-[BIS(2-CHLOROETHYL)AMINO]- (OR) URACIL MUSTARD
Waste Code:	U239
Waste Description:	BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)
Waste Code:	U240
Waste Description:	2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D
Waste Code:	U279
Waste Description:	U279

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	0.0015
Year:	2021
Gepaid:	CAR000005470
TSD EPA ID:	IDD073114654
CA Waste Code:	791 - Liquids with pH <= 2
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	0.0285
Year:	2021
Gepaid:	CAR000005470
TSD EPA ID:	IDD073114654
CA Waste Code:	122 - Alkaline solution without metals pH >= 12.5
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	0.0175
Year:	2021
Gepaid:	CAR000005470
TSD EPA ID:	CAT080013352
CA Waste Code:	134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method:	H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons:	0.39765

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
