Presentations:

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society.* Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution.* Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluoroctanoic Acid (PFOA) and Perfluoroactane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P**. (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water.* Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting.* Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition.* Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

EXHIBIT C

SWAPE Technical Consultation, Data Analysis and Litigation Support for the Environment

1640 5th St.., Suite 204 Santa
Santa Monica, California 90401
Tel: (949) 887-9013
Email: mhagemann@swape.com

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

RE: SMP 38, SMP 39. SMP 40

Dear Ms. Vera,

I write to comment on potential impacts to biological resources that could result from the proposed SMP 38, SMP 39. SMP 40 Project, which I understand would add 1,514,275 square feet of floor space in eight speculative industrial buildings up to 55 feet tall on 217.04 acres located on APNs) 904-1-7-21; 904-1-2-12; 904-1-7-32; 904-3-1-4; 904-10-2-2, -3, -5, -7, and -8 west of Isabel Avenue, north of Stanley Boulevard, south of West Jack London Boulevard, and east of El Charro Road. I comment on the analyses of impacts to biological resources in the DEIR and in Monk & Associates (2021).

My qualifications for preparing expert comments are the following. I hold a Ph.D. degree in Ecology from University of California at Davis, where I also worked as a post-graduate researcher in the Department of Agronomy and Range Sciences. My research has been on animal density and distribution, habitat selection, wildlife interactions with the anthrosphere, and conservation of rare and endangered species. I authored many papers on these and other topics. I served as Chair of the Conservation Affairs Committee for The Wildlife Society – Western Section. I am a member of The Wildlife Society and Raptor Research Foundation, and I've lectured part-time at California State University, Sacramento. I was Associate Editor of wildlife biology's premier scientific journal, The Journal of Wildlife Management, as well as of Biological Conservation, and I was on the Editorial Board of Environmental Management. I have performed wildlife surveys in California for thirty-seven years. My CV is attached.

SITE VISIT

I visited the SMP 40 for 2.22 hours from 14:43 to 16:35 hours on 28 November 2023, and SMP 38 and SMP 39 for 2.83 hours from 06:45 to 09:35 hours on 29 November 2023. At SMP 40, I surveyed from a cul-du-sac on the north edge of the site. At SMP 38 and SMP 39, I walked the northern perimeters, stopping to scan for wildlife with use of binoculars. I recorded all species of vertebrate wildlife I detected, including those whose members flew over the sites or were seen nearby, off the sites. Animals of uncertain species identity were either omitted or, if possible, recorded to the Genus or higher taxonomic level.

Conditions were mostly cloudy still with temperatures of 62-55° F on the 28th and 46-50° F on the 29th. The sites have been previously disked, and at the time of the surveys they were covered by annual grasses and ruderal vegetation (Photos 1—2).

Photos 1–2. Views of SMP 40 (top) and SMP 39 with a flock of Canada goose (bottom), 28-29 November 2023.

I detected 46 species of vertebrate wildlife at or adjacent to the project site, including 10 species with special status (Table 1). I saw Botta's pocket gopher (Photo 3) and California ground squirrel (Photo 4), both species of which are ecological keystone species. I saw loggerhead shrike (Photo 5), Cooper's hawk and American kestrel (Photos 6 and 7), western meadowlark (Photo 8), house finch and killdeer (Photos 9 and 10), black phoebe and white-crowned sparrow (Photos 11 and 12), mourning dove (Photo 13), Say's phoebe and yellow-rumped warbler (Photos 14 and 15), savannah sparrow (Photo 16), and lesser goldfinch and bushtit (Photos 17 and 18), among the other species listed in Table 1. Many of the species actively foraged on the site, including coyote, Cooper's hawk, red-tailed hawk, horned lark, Canada goose and Aleutian cackling goose, killdeer, western meadowlark, house finch and others. I observed Some species in high abundance, including western meadowlark and mourning dove. California ground squirrels occupied all three sites, but were particularly abundant on SMP 40.

Table 1. Species of wildlife I observed during 5.05 hours of survey on 28-29 November 2023.

Common name	*Species name*	Status[1]	Notes	SMP			Just offsite

I fit nonlinear regression models to the cumulative numbers of vertebrate species I detected with time into my surveys to predict the number of species that I would have detected with a longer survey or perhaps with additional biologists available to assist. The models are logistic growth models which reach asymptotes that correspond with the maximum numbers of vertebrate wildlife species that could have been detected during each survey. In this case, the models predict 46 and 118 species of vertebrate wildlife were available to be detected on the evening of the 28th and the morning of the 29th, respectively, the difference likely due to the onset of darkness during the evening survey of the 28th. Compared to models fit to data I collected from 18 other sites in the region between 2019 and 2023, the data from this project site exceeds the upper bound of the 95% confidence interval of the rate of accumulated species detections with time into the survey (Figure 1). Importantly, however, the species I detected on November 28-29 composed only a fraction of the species that would occur at the project site over the period of a year or longer. This is because many species are seasonal in their occurrence.

Figure 1. Actual and predicted relationships between the number of vertebrate wildlife species detected and the elapsed survey time based on visual-scan surveys on 28-29 November 2023. Note that the relationships would differ if the surveys were based on another method or during another season.

At least a year's worth of surveys would be needed to more accurately report the number of vertebrate species that occur at the project site, but I only have Noriko's one survey. However, by use of an analytical bridge, a modeling effort applied to a large, robust data set from a research site can predict the number of vertebrate wildlife species that likely make use of the site over the longer term. As part of my research, I completed a much larger survey effort across 167 km² of annual grasslands of the Altamont Pass Wind Resource Area, where from 2015 through 2019 I performed 721 1-hour visual-scan surveys, or 721 hours of surveys, at 46 stations. I used binoculars and otherwise the methods were the same as the methods I and other consulting biologists use for surveys at proposed project sites. At each of the 46 survey stations, I tallied new species detected with each sequential survey at that station, and then related the cumulative species detected to the hours (number of surveys, as each survey lasted 1 hour) used to accumulate my counts of species detected. I used combined quadratic and simplex methods of estimation in Statistica to estimate least-squares, best-fit nonlinear models of the number of cumulative species detected regressed on hours of survey (number of surveys) at the station: $\hat{R} = \frac{1}{1/a+b\times(Hours)^c}$, where $\hat{R}$ represented cumulative species

richness detected. The coefficients of determination, r^2, of the models ranged 0.88 to 1.00, with a mean of 0.97 (95% CI: 0.96, 0.98); or in other words, the models were excellent fits to the data.

I projected the predictions of each model to thousands of hours to find predicted asymptotes of wildlife species richness. The mean model-predicted asymptote of species richness was 57 after 11,857 hours of visual-scan surveys among the 46 stations of my research site. I also averaged model predictions of species richness at each incremental increase of number of surveys, i.e., number of hours (Figure 2). On average I would have detected 17.5 species over my first 5.05 hours of surveys at my research site in the Altamont Pass (5.05 hours to match the 5.05 hours I surveyed at the project site), which composed 30.7% of the predicted total number of species I would detect with a much larger survey effort at the research site. Given the example illustrated in Figure 2, the 46 species I detected after my 5.05 hours of survey at the project site likely represented 30.7% of the species to be detected after many more visual-scan surveys over another year or longer. With many more repeat surveys through the year, I would likely detect $^{46}/_{0.307} = 150$ species of vertebrate wildlife at the site. Assuming my ratio of special-status to non-special-status species was to hold through the detections of all 150 predicted species, then continued surveys would eventually detect 33 special-status species of vertebrate wildlife.

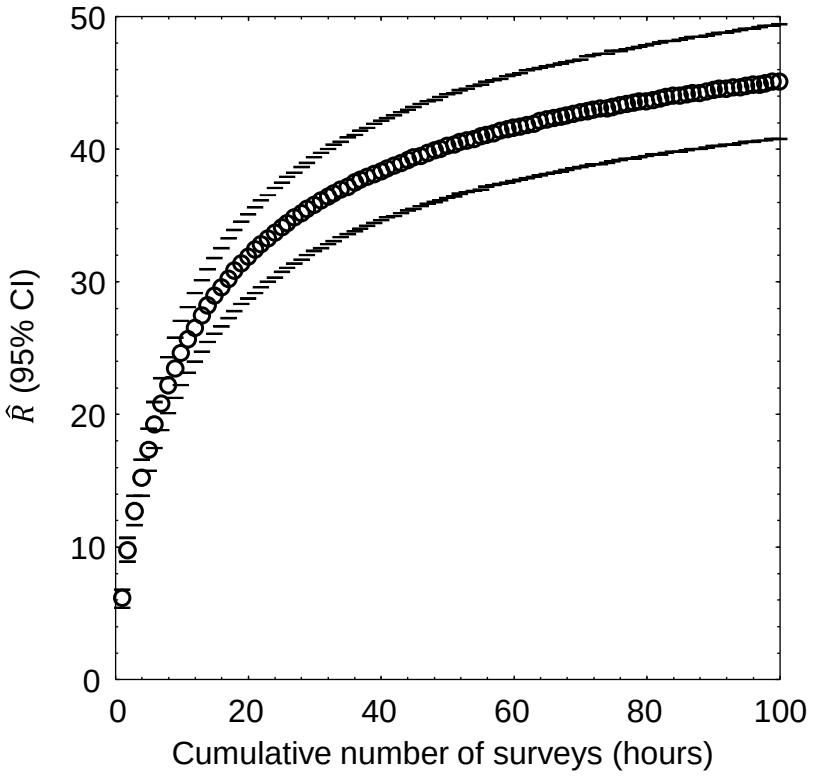

Figure 2. Mean (95% CI) predicted wildlife species richness, $\hat{R}$, as a nonlinear function of hour-long survey increments across 46 visual-scan survey stations across the Altamont Pass Wind Resource Area, Alameda and Contra Costa Counties, 2015–2019. Note that the location of the study is largely irrelevant to the utility of the graph to the interpretation of survey outcomes at the project site. It is the pattern in the data that is relevant, because the pattern is typical of the pattern seen elsewhere.

Because my prediction of 150 species of vertebrate wildlife, including 33 special-status species of vertebrate wildlife, is derived from daytime visual-scan surveys, and would detect few nocturnal mammals such as bats, the true number of species composing the wildlife community of the site must be larger. My reconnaissance surveys should serve

only as a starting point toward characterization of the site's wildlife community, but they certainly cannot alone inform of the inventory of species that use the site. More surveys are needed than my two survey to inventory use of the project site by wildlife. Nevertheless, the large number of species I predict at the project site is indicative of a relatively species-rich wildlife community that warrants a serious survey effort.

EXISTING ENVIRNMENTAL SETTING

The first step in analysis of potential project impacts to biological resources is to accurately characterize the existing environmental setting, including the biological species that use the site, their relative abundances, how they use the site, key ecological relationships, and known and ongoing threats to those species with special status. A reasonably accurate characterization of the environmental setting can provide the basis for determining whether the site holds habitat value to wildlife, as well as a baseline against which to analyze potential project impacts. For these reasons, characterization of the environmental setting, including the project site's regional setting, is one of CEQA's essential analytical steps. Methods to achieve this first step typically include (1) surveys of the site for biological resources, and (2) reviews of literature, databases and local experts for documented occurrences of special-status species. In the case of the proposed project, these needed steps have been inadequate.

Environmental Setting informed by Field Surveys

To CEQA's primary objective to disclose potential environmental impacts of a proposed project, the analysis should be informed of which biological species are known to occur at the proposed project site, which special-status species are likely to occur, as well as the limitations of the survey effort directed to the site. Analysts need this information to characterize the environmental setting as a basis for opining on, or predicting, potential project impacts to biological resources.

Herein I discuss several types of surveys, which are common to environmental review, but which are often misunderstood and misapplied. A *reconnaissance survey*, also often referred to as a general biological survey, is intended to (1) detect as many of the species as feasible during the time of the survey, (2) search for and map the locations of approximate boundaries of wetlands and coarse representations of vegetation cover, and (3) assess the likelihood of occurrences of special-status species. The latter objective is often referred to as habitat assessment. CDFW (2018) provides guidelines for reconnaissance surveys directed toward plant species, but there are no guidelines for reconnaissance-level wildlife surveys, other than the expected use of sound scientific methodology. A *protocol-level survey* is a survey guided by a written protocol, usually by a resource agency or professional group of biologists. Such surveys can be for various objectives, but in environmental review they are usually intended for detection surveys. *Detection surveys* are formulated by experts on a particular species to, at reasonable cost, give survey personnel the best chance at detecting members of a species if the species is indeed present. The additional purpose of detection surveys is to support absence determinations when the protocol was followed but the species was nevertheless not detected. Absence determinations made for special-status species are

supportable only if the results of detection surveys were negative, or when the site is outside the species' geographic range or clearly does not provide habitat.

Preconstruction surveys are take-avoidance surveys intended to be completed after reconnaissance surveys and detection surveys and just prior to construction ground-disturbance activities such as clearing and grubbing or grading. For some species, protocols for preconstruction surveys are included in mitigation guidelines. The preconstruction survey is a mitigation measure, and therefore not to be confused with other types of surveys. This type of survey will be discussed in the Mitigation section near the end of my comments.

Monk & Associates (2021) performed a reconnaissance survey of the SMP 39 project site on 5 November 2021 "to record biological resources and to assess the likelihood of resource agency regulated areas occurring on the project site," and "searching all habitats on the site and recording all plant and wildlife species observed," and "examination of the site to determine if there could be potential areas within the project site that would be regulated as waters of the United States and/or State." Monk & Associates (2023) performed two reconnaissance surveys of the SMP 40 project site on 10 June 2019 and 10 September 2021. The objectives of the surveys at SMP 40 were essentially the same as those for the survey of SMP 39. In all three of these surveys, Monk & Associates recorded all the species observed. A wetland delineation was alco completed at SMP 40.

For none of the above surveys was there reporting of what time the surveys began, or how long the surveys lasted. No checklist is shared of habitat elements that the biologists might have used during their survey to later crosscheck against documented habitats of each special-status species. No explanation is provided of whether or how animal behavior data or other evidence contributed to the biologist's assessment of the site for its importance to animal movement. It is therefore difficult to assess survey outcomes relative to survey effort and methods.

Monk & Associates (2021) detected 14 species of vertebrate wildlife on SMP 39, and Monk & Associates (2023) detected 22 species of vertebrate wildlife on SMP 40. In comparison, and even though I was unable to access either of the project sites, I detected 34 species in only 1.83 hours at SMP 39, and 29 species in only 2.22 hours at SMP 40. I also detected twice the number of special-status species at SMP 39 and 1.5 times the number of special-status species at SMP 40. Based on my surveys of the project sites, the existing environmental setting of each appears substantially different from the setting characterized by Monk & Associates (2021, 2023). Considering the differences between what Monk & Associates and what I found, I suggest that Monk & Associates must have either been distracted by other too many survey objectives, or lacked the skill needed to perform the surveys. The results of the Monk and Associates (2021, 2023) surveys have been misinterpreted in the reports, resulting in inaccurate characterizations of the existing environmental settings of SMP 39 and SMP 40.

Combining my survey results with those of Monk & Associates (2021, 2023), 38 species of vertebrate wildlife have been detected at SMP 39, and 44 species have been detected

at SMP 40. These combined results increase the documented number of species at SMP 39 by nearly 3-fold and they double the number of species at SMP 40. In other words, the combined survey outcomes support my modeling predictions of much larger numbers of species of wildlife making use of the project sites than can be demonstrated by one or two reconnaissance surveys. My modeling predicts at least 150 species of vertebrate wildlife make use of the two sites, and this prediction was based solely on diurnal visual-scan surveys, and not on live-trapping for small mammals and nocturnal surveys for nocturnally active animals. The wildlife communities of SMP 39 and SMP 40 are much richer than portrayed in the DEIR.

The DEIR (page 4.3-25) reports that "western burrowing owls have not been observed within SMP 39 or SMP 40." This is factually incorrect, as CNDDB includes a record of burrowing owl occurrence on SMP 39 (Monk & Associates 2023: Figure 4). Even if this reporting was correct, it would still qualify as pseudoscientific. The appropriate surveys for detecting burrowing owls are detailed in the survey guidelines of CDFW (2012). Lack of detections of burrowing owls during reconnaissance surveys would be meaningful only after completion of many reconnaissance surveys at the appropriate time of year and by qualified biologists. Considering that ground squirrels occur in abundance on SMP 39 and SMP 40, and considering that one of California's most significant populations of burrowing owls occurs within the nearby Altamont Pass (Smallwood et al. 2013), and considering that the appropriate detection surveys have not been completed at SMP 39 and SMP 40, it would be prudent to assume that burrowing owls occur on the project sites.

Regarding tricolored blackbird, the DEIR (page 4.3-26) reports that "the species has not been observed near SMP 39 in nearly 40 years." This is factually incorrect, as eBird includes a 2003 record of tricolored blackbird occurrence only 300 m north of SMP 39. The DEIR also reports that tricolored blackbird would not occur on SMP 9 because "aquatic habitat does not exist within SMP 39." But this is also factually incorrect. I have many times recorded tricolored blackbird occurrences on grasslands of the Altamont Pass far from bodies of water (Photos 19 and 20). Grassland environments is where tricolored blackbirds do most of their foraging in Alameda County, and it is where they sometimes nest within the Altamont Pass (Photo 20).

The DEIR reports that loggerhead shrikes do not occur on SMP 39. But again, the DEIR is factually inaccurate. I observed a loggerhead shrike on SMP 39 (Photo 21), which as it turned out, was near where a loggerhead shrike sighting was also reported to eBird in 2018. Loggerhead shrike does occur on SMP 39, as well as on SMP 40.

The DEIR reports that SMP 39 and SMP 40 contains potential habitat of raptors. However, the word "potential" insinuates uncertainty remains on the question of whether the sites provide raptor habitat. Of course, they do. Those portions of the environment used by raptors are considered raptor habitat. Between my surveys and those of Monk & Associates, and including CNDDB and eBird records, the following raptors have been seen on SMP 39 and SMP 40: turkey vulture, northern harrier, white-tailed kite, red-tailed hawk, ferruginous hawk, Cooper's hawk, American kestrel, merlin,

and burrowing owl. There should be no ambiguity around the question of whether raptor habitat occurs on SMP 39 and SMP 40; raptor habitat is present.

Photos 19 and 20. Top, tricolored blackbirds forage on grassland far from aquatic environments, and bottom, they breed on rapeseed and thistle in the Altamont Pass Wind Resource Area.

Photo 21. Loggerhead shrike on the SMP 39 portion of the project site, 29 November 2023.

Reconnaissance surveys for wildlife are not designed to detect special-status species. Special-status species can be detected during such surveys, as has been the case for 10 special-status species at the project site, but these surveys are not formulated to detect them, nor are there minimum standards to be met in these surveys to support absence determinations. For the latter purpose, protocol-level detection surveys have been formulated by species experts. Monk & Associates (2021, 2023) did not perform any detection surveys. Based on Monk & Associates (2021, 2023), the DEIR's characterization of the existing environmental setting is therefore incomplete and inaccurate.

The same is true for special-status species of plants. According to the DEIR (page 4.3-25), "special-status plants have not been observed during several surveys of the project sites conducted during various months over the years." However, this reporting is misleading, because only one of the several surveys was conducted during the plant blooming season. Monk and Associates (2021, 2023) did not meet the minimum standards of CDFW's (2018) plant survey guidelines.

Environmental Setting informed by Desktop Review

The purpose of literature and database review and of consulting with local experts is to inform the field survey, and to augment interpretation of its outcome. Analysts need this information to identify which species are known to have occurred at or near the project site, and to identify which other special-status species could conceivably occur at the site due to geographic range overlap and migration flight paths.

Monk & Associates (2021) did not reportedly review eBird (https://eBird.org) or iNaturalist (https://www.inaturalist.org) for documented occurrence records at or near the project site. Instead, Monk & Associates (2021, 2023) queried the California Natural Diversity Data Base (CNDDB) for documented occurrences of special-status species within the three miles of the project sites. By taking this approach, Monk & Associates (2021, 2023) and the DEIR screen out many special-status species from further consideration in the characterization of the wildlife community as part of the existing environmental setting. CNDDB is not designed to support absence determinations or to screen out species from characterization of a site's wildlife community. As noted by CNDDB, "*The CNDDB is a positive sighting database. It does not predict where something may be found. We map occurrences only where we have documentation that the species was found at the site. There are many areas of the state where no surveys have been conducted and therefore there is nothing on the map. That does not mean that there are no special status species present*." Monk & Associates (2021, 2023) and the DEIR misuse CNDDB.

According to Monk & Associates (2021:6), "No special-status animal records have ever been mapped on the project site." The word "ever" adds emphasis to the finding. However, by implication, Monk & Associates (2021) misrepresents CNDDB as a database with uniform representation of California properties, which is far from the case. CNDDB relies entirely on volunteer reporting from biologists who were allowed access to whatever properties they report from. Many properties have never been surveyed by biologists. Many properties have been surveyed, but the survey outcomes never reported to CNDDB. Many properties have been surveyed multiple times, but not all survey outcomes reported to CNDDB. Furthermore, CNDDB is interested only in the findings of special-status species, which means that species more recently assigned special status will have been reported many fewer times to CNDDB than were species assigned special status since the inception of CNDDB. The lack of many CNDDB records for species recently assigned special status had nothing to do with whether the species' geographic ranges overlapped the project site, but rather more to do with the brief time for records to have accumulated since the species were assigned special status. And because negative findings are not reported to CNDDB, CNDDB cannot provide the basis for estimating occurrence likelihoods, either.

In my assessment based on database reviews and site visits, 128 special-status species of wildlife are known to occur near enough to the site (SMP 38, SMP 39, SMP 40) to warrant analysis of occurrence potential (Table 2). Of these 128 species, 19 (15%) were recorded on the project site, and another 35 (27%) species have been documented within 1.5 miles of the site ('Very close'), another 13 (10%) within 1.5 and 4 miles

('Nearby'), and another 57 (45%) within 4 to 30 miles ('In region'). More than half (52%) of the species in Table 2 have been reportedly seen within 4 miles of the project site. The site therefore supports multiple special-status species of wildlife and carries the potential for supporting many more special-status species of wildlife based on proximity of recorded occurrences. The site is far richer in special-status species than is characterized in the DEIR.

Whereas Monk & Associates (2021, 2023) reportedly queried CNDDB for occurrence records within three miles of the project sites, the DEIR analyzes the occurrence likelihoods of only 6 (<5%) of the species in Table 2. That only 6 special-status species were identified from occurrence records within 3 miles strains credulity. As noted above, using eBird and iNaturalist, I found records of 54 special-status species of wildlife within only 1.5 miles of the project sites, and 67 within 4 miles of the sites.

Of the 6 species included in Monk & Associates (2021, 2023) analyses of occurrence likelihoods, the DEIR concludes that 4 have no chance of occurrence, 1 has low to no chance, and 1 has low to moderate chance of occurrence. Except for species whose habitat is compellingly absent from the site, absence determinations are inappropriate based on the evidence gathered by Monk & Associates (2021, 2023). Absence determinations are supportable only after species-specific protocol-level detection surveys have been completed to the standards of the protocols, and the species were nevertheless not detected. No such surveys have been completed. It is inappropriate to conclude that a species is absent simply by looking at a site, and it is especially inappropriate to do so for 125 species of wildlife. Important findings of Monk & Associates (2021, 2023) and the DEIR are not supportable.

Of the special-status species that Monk & Associates (2021, 2023)) claims to be absent from one or both of the project sites, two – burrowing owl and loggerhead shrike – have been seen where they were reported to be absent. Occurrence records of another 2 supposedly absent special-status species have been reported within only 1.5 miles of the site, and another has been reported within 1.5 and 4 miles of the project site. Important findings of Monk & Associates (2021, 2023) and the DEIR are not supportable.

Of the 122 special-status species in Table 2, but which the DEIR does not analyze for occurrence potential, some are unlikely to occur, whereas many *are* likely to occur. With ground squirrels known to be present on SMP 39 and SMP 40, there is reason to expect the occurrences of American badger, ferruginous hawk, bald eagle and golden eagle. I regularly observed these species in the Altamont Pass Wind Resource Areas while I performed various studies there from 1999 through 2019. Golden eagles, I continue to record both in the Altamont Pass and over and on the project sites (Figure 3). Of the 45 golden eagles that Douglas Bell captured and fit with GPS telemetry backpacks since 2013, 11 have flown to or perched in the areas of the project sites (Figure 3).

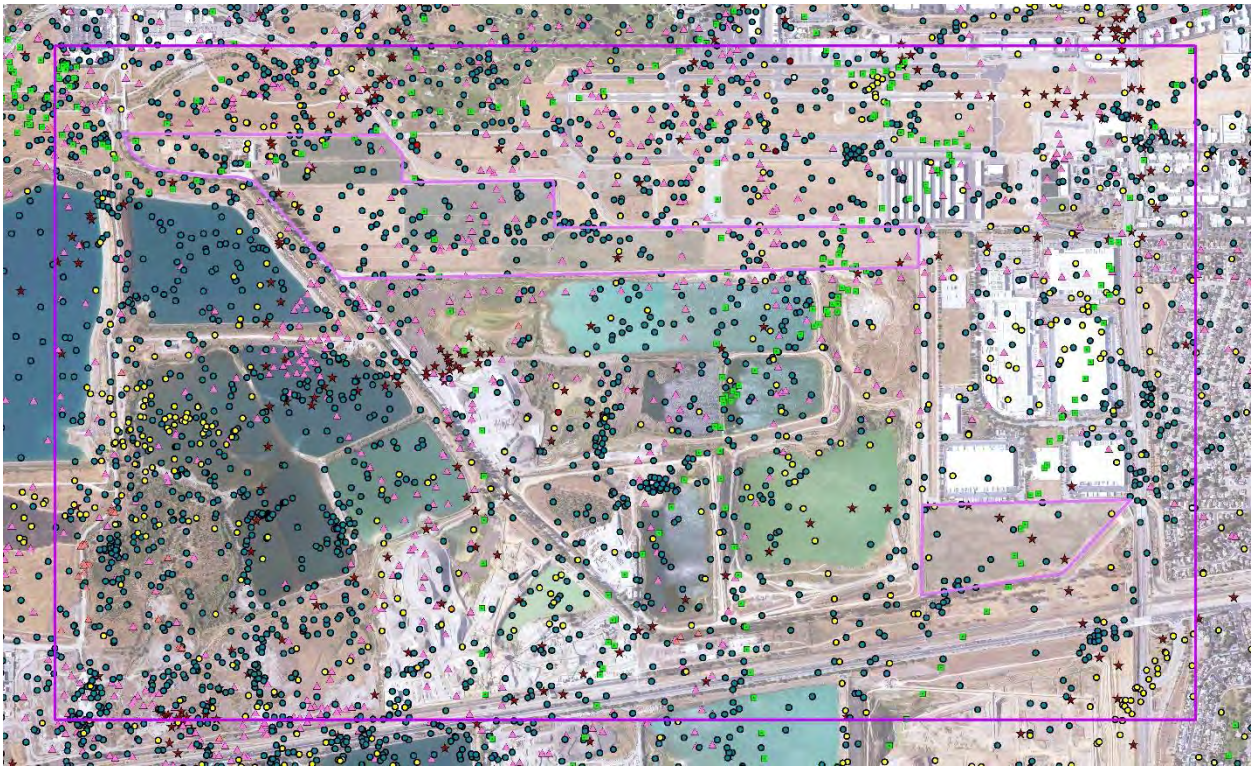

Figure 3. GPS telemetry positions (N = 3,478) of 11 golden eagles from 2014 through 2023, each distinct color-symbol combination representative of one golden eagle. Many of the positions are on SMP 38, SMP 39, and SMP 40. Many of the positions are of flying golden eagles, and some are of perched golden eagles.

Considering the inaccuracies of the DEIR's characterization of the existing environmental setting, the reasonable course of action would be to withdraw the current draft EUIR and prepare a new one to appropriately characterize the existing environmental setting. The public needs to understand the nature of the sensitive biological assets that exist on the project sites.

Table 2. Occurrence likelihoods of special-status bird species at or near the proposed project site, according to eBird/iNaturalist records (https://eBird.org, https://www.inaturalist.org) and on-site survey findings, where 'Very close' indicates within 1.5 miles of the site, "nearby" indicates within 1.5 and 4 miles, and "in region" indicates within 4 and 30 miles, and 'in range' means the species' geographic range overlaps the site. Entries in bold font indicate those species I detected during my reconnaissance surveys.

Common name	*Species name*	Status[1]	DEIR occurrence potential	Data base records, Site visits
Longhorn fairy shrimp	*Branchinecta longiantenna*	FE		In region

POTENTIAL BIOLOGICAL IMPACTS

An impacts analysis should consider whether and how a proposed project would affect members of a species, larger demographic units of the species, the whole of a species, and ecological communities. The accuracy of this analysis depends on an accurate characterization of the existing environmental setting. In the case of the proposed project, the existing environmental setting has not been accurately characterized, and several important types of potential project impacts have been inadequately analyzed. These types of impacts include habitat loss, interference with wildlife movement, and wildlife-automobile collision mortality.

HABITAT LOSS

Habitat loss results in a reduced productive capacity of affected wildlife species, but the DEIR offers no prediction of this lost capacity for any of the wildlife species potentially affected. In the case of birds, two methods exist for estimating the loss of productive capacity that would be caused by the project. One method would involve surveys to count the number of bird nests and chicks produced. The alternative method would be to infer productive capacity from estimates of total nest density elsewhere.

Because the project is located within an area that has undergone severe habitat fragmentation, the habitat that remains in fragmented patches probably no longer supports its original productive capacity of wildlife (Smallwood 2015, Smallwood and Smallwood 2023). However, several studies have estimated total avian nest density at locations that had likewise been highly fragmented. Two study sites in grassland/wetland/woodland complexes within agricultural matrices had total bird nesting densities of 32.8 and 35.8 nests per acre (Young 1948, Yahner 1982) for an average 34.3 nests per acre. Assuming total nest density at the project site is about a third of that of the above-cited study sites due to the annual disking of the project site's interior areas, I predict SMP 38 (111.7 acres), SMP 39 (51.9 acres) and SMP 40 (41 acres) support 11.4 bird nests/acre/year. Based on this assumption, the combined projects, SMP 39 and SMP 40, on 92.9 acres would eliminate 1,059 nest sites, and assuming SMP 38 is also later developed, then the combined projects, SMP 38, SMP 39, and SMP 40, on 204.6 would eliminate 2,332 nest sites.

The loss of 1059 to 2,332 nest sites would easily qualify as a significant project impact that has not been quantitatively addressed in the DEIR. But the impact would not end with the immediate loss of nest sites as nest substrate is removed and foraging grounds graded in preparation for impervious surfaces. The reproductive capacity of the site would be lost. The average number of fledglings per nest in Young's (1948) study was 2.9. Assuming Young's (1948) study site typifies bird productivity, the project would prevent the production of 3,071 to 6,763 fledglings per year, depending on whether SMP 38 is developed. Assuming an average bird generation time of 5 years, the lost capacity of both breeders and annual fledgling production can be estimated from an equation in Smallwood (2022): {(nests/year × chicks/nest × number of years) + (2 adults/nest × nests/year) × (number of years ÷ years/generation)} ÷ (number of years) = 3,495 to 7,696 birds per year denied to California, depending on whether SMP 38 is developed.

These losses of birds from California would be substantial, nearly equal to the annual loss of birds caused by wind turbine collision mortality in the nearby Altamont Pass Wind Resource Area (Adams Broadwell Joseph & Cardozo 8 January 2021 letter to Alameda County Planning Department regarding Comments on the Draft Subsequent Environmental Impact Report for the Mulqueeney Ranch Wind Repowering Project (SCH No. 2010082063), CUP Application No. PLN2019-00226). These losses would be highly significant.

INTERFERENCE WITH WILDLIFE MOVEMENT

One of CEQA's principal concerns regarding potential project impacts is whether a proposed project would interfere with wildlife movement in the region. Unfortunately, the DEIR's analysis of whether the project would interfere with wildlife movement in the region is flawed and misleading. According to the DEIR, "The project area does not fall within an Essential Habitat Connectivity area mapped by the CDFW." However, at https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=18486, the California Essential Habitat Connectivity Project specifically points out that it is not: "A California Department of Fish and Game or US Fish and Wildlife Service response to potential impacts to a habitat or species from a project subject to the California Environmental Quality Act (CEQA)," nor "Fine scale, with every important piece of habitat identified" nor ""Essential", meaning the only places of importance" nor "A solution by itself for how to provide necessary linkages for any given species of plant or animal... Linkage designs will vary depending on focal species chosen and the goal of providing connected habitat for a chosen species might be met several different ways" nor "The final word on connectivity for California." With analytical grid cells of 2,000 acres, the spatial grain of the California Essential Habitat Connectivity Project is much too coarse for the conclusion the DEIR draws from it.

The next flaw in the DEIR is in the argument that SMP 39 is cut off from open areas by well-trafficked roads, the airport, the gravel quarries, and therefore cannot function as a wildlife movement corridor. The same argument is made for SMP 40. On this point, the DEIR merely speculates, and offers no supporting evidence to its assertion. Monk & Associates (2021, 2023) report no survey methodology designed to determine whether wildlife rely on the site for movement in the region. They implemented no sampling regime nor a program of observation to record wildlife movement patterns. They failed to quantitatively or qualitatively analyze movement patterns of observed wildlife. Based on what is reported, Monk & Associates (2021, 2023) did not record or measure wildlife movement in any way. The conclusions of the DEIR regarding wildlife movement on the project site are speculative and conclusory.

On the other hand, the coyote I saw on site got there somehow, and so did the ground squirrels and pocket gophers, and so did all of the birds I saw on and over SMP 39. I observed hundreds if not thousands of gulls of multiple species flying in both easterly and westerly directions across SMP 38, SMP 39, and SMP 40. I observed Canada geese and Aleutian cackling geese flying to and from the quarry ponds and the project sites to forage. I saw a Cooper's hawk fly from the airport to SMP 39 to forage, crossing the well-trafficked road in about 2 seconds of flight time. Figure 3 illustrates that our telemetered

golden eagles from the Altamont Pass make frequent visits to the project site. That thousands of our golden eagle telemetry positions appear in the project area is consistent with the pattern that my co-investigators and I have noticed about golden eagle movement across California and beyond to other states and border nations, and that is that golden eagles carefully select open spaces as parts of their travel routes. The project area is important to golden eagle movement in the region, just as it is important to the 10 special-status species I observed on the project site, and to the 19 special-status species so far documented on the project site. Th evidence is overwhelming that the project site is important to wildlife movement in the region. Losing the open space of this site would be devastating to many species of wildlife, including to golden eagle.

Furthermore, whether the site includes or is within a wildlife movement corridor is not the only consideration when it comes to the standard CEQA Checklist question of whether the project would interfere with wildlife movement in the region. The primary phrase of the CEQA standard goes to wildlife movement regardless of whether the movement is channeled by a corridor. In fact, a site such as the project site is critically important for wildlife movement because it composes an increasingly diminishing area of open space within a growing expanse of anthropogenic uses, forcing more species of volant wildlife to use the site for stopover and staging during migration, dispersal, and home range patrol (Warnock 2010, Taylor et al. 2011, Runge et al. 2014). The project, due to its elimination of at least 92.9 acres of open space, and more realistically 204.6 acres of open space, and due to its insertion of multiple new buildings into the aerospace currently used by birds, bats and butterflies. would cut wildlife off from one of the last remaining stopover and staging opportunities in the region, forcing volant wildlife to travel even farther between remaining stopover sites. This impact would be significant, and as the project is currently proposed, it would be unmitigated.

TRAFFIC IMPACTS TO WILDLIFE

Project-generated traffic would endanger wildlife that must, for various reasons, cross roads used by the project's traffic to get to and from the project site (Photos 22—26), including along roads far from the project footprint. Vehicle collisions have accounted for the deaths of many thousands of amphibian, reptile, mammal, bird, and arthropod fauna, and the impacts have often been found to be significant at the population level (Forman et al. 2003). Across North America traffic impacts have taken devastating tolls on wildlife (Forman et al. 2003). In Canada, 3,562 birds were estimated killed per 100 km of road per year (Bishop and Brogan 2013), and the US estimate of avian mortality on roads is 2,200 to 8,405 deaths per 100 km per year, or 89 million to 340 million total per year (Loss et al. 2014). Local impacts can be more intense than nationally.

The nearest study of traffic-caused wildlife mortality was performed only 11 miles away, along a 2.5-mile stretch of Vasco Road in Contra Costa County, California. Fatality searches in this study found 1,275 carcasses of 49 species of mammals, birds, amphibians and reptiles over 15 months of searches (Mendelsohn et al. 2009). This fatality number needs to be adjusted for the proportion of fatalities that were not found due to scavenger removal and searcher error. This adjustment is typically made by placing carcasses for searchers to find (or not find) during their routine periodic fatality

searches. This step was not taken at Vasco Road (Mendelsohn et al. 2009), but it was taken as part of another study I completed next to Vasco Road concurrent to the Mendelsohn et al. study (Brown et al. 2016). Brown et al.'s (2016) adjustment factors for carcass persistence resembled those of Santos et al. (2011), which were derived from carcasses placed along roads. Applying searcher detection rates from Brown et al. (2016), the adjusted total number of fatalities was estimated at 12,187 animals killed by traffic on the reach of road that was studied. This fatality number over 1.25 years and 2.5 miles of road translates to 3,900 wild animals per mile per year. In terms comparable to the national estimates, the estimates from the Mendelsohn et al. (2009) study would translate to 243,740 animals killed per 100 km of road per year, or 29 times that of Loss et al.'s (2014) upper bound estimate and 68 times the Canadian estimate. An analysis is needed of whether increased traffic generated by the project site would similarly result in local impacts on wildlife.

Photo 22. A Gambel's quail dashes across a road on *3 April 2021. Such road crossings are usually successful, but too often prove fatal to the animal. Photo by Noriko Smallwood*.

Photo 23. California ground squirrel in the middle of an eastern Alameda County road on 13 March 2014.

Photo 24. Western Pacific rattlesnake on an eastern Alameda County road, 23 August 2011. Photo by Shawn Smallwood.

Photo 25. Mourning dove killed by vehicle on a California road. Photo by Noriko Smallwood, 21 June 2020.

Photo 26 Raccoon killed on Road 31 just east of Highway 505 in Solano County. Photo taken on 10 November 2018.

For wildlife vulnerable to front-end collisions and crushing under tires, road mortality can be predicted from the study of Mendelsohn et al. (2009) as a basis, although it would be helpful to have the availability of more studies like that of Mendelsohn et al. (2009) at additional locations. My analysis of the Mendelsohn et al. (2009) data resulted in an estimated 3,900 animals killed per mile along a county road in Contra Costa County. Two percent of the estimated number of fatalities were birds, and the balance was composed of 34% mammals (many mice and pocket mice, but also ground squirrels, desert cottontails, striped skunks, American badgers, raccoons, and others), 52.3% amphibians (large numbers of California tiger salamanders and California red-legged frogs, but also Sierran treefrogs, western toads, arboreal salamanders, slender salamanders and others), and 11.7% reptiles (many western fence lizards, but also skinks, alligator lizards, and snakes of various species). VMT is useful for predicting wildlife mortality because I was able to quantify miles traveled along the studied reach of Vasco Road during the time period of the Mendelsohn et al. (2009), hence enabling a

rate of fatalities per VMT that can be projected to other sites, assuming similar collision fatality rates.

From October 2016 through December 2019, I maintained my own database of wildlife mortality I encountered on Vasco Road between Marsh Creek Road and Livermore, which encompassed the wildlife mortality study site of Mendelsohn et al. (2009). Table 3 includes the wildlife I found as fatalities, and it compares my crudely calculated ratio of observed fatalities per mile. From Table 3, it is apparent that mortality along the reach of road studied by Mendelsohn et al. (2009) was relatively low compared to the rest of Vasco Road: $^{19.178}/_{13.200} = 5{,}667$ fatalities per mile predicted for the 14.1 miles of Vasco Road that were not studies by Mendelsohn et al. (2009).

Table 3. Fatalities I found along Vasco Road from October 2016 though December 2019, and along 14.1 miles of road that was not studied by Mendelsohn et al. (2009) and 2.5 miles that were studied.

		Observed fatalities		Observed fatalities/mile

Predicting project-generated traffic impacts to wildlife

The DEIR predicts the project would generate 8,622,395 annual VMT. During the Mendelsohn et al. (2009) study, 19,500 cars traveled Vasco Road daily, so the vehicle miles that contributed to my estimate of non-volant fatalities was 19,500 cars and trucks × 2.5 miles × 365 days/year × 1.25 years = 22,242,187.5 vehicle miles per 12,187 wildlife fatalities, or 1,825 vehicle miles per fatality. This rate divided into the predicted annual VMT, above, would predict 4,725 vertebrate wildlife fatalities per year. My analysis of data in Table 3 suggests that the project-caused mortality along local roadways would be even higher.

Based on my analysis, the project-generated traffic would cause substantial, significant impacts to wildlife. The DEIR does not address this potential impact, let alone propose to mitigate it. Mitigation measures to improve wildlife safety along roads are available and are feasible, and they need exploration for their suitability with the proposed project. Given the predicted level of project-generated, traffic-caused mortality, and the lack of any proposed mitigation, it is my opinion that the proposed project would result in potentially significant adverse biological impacts. The DEIR should be withdrawn

from circulation and revised to appropriately analyze the potential impacts of project-generated automobile traffic on wildlife.

CUMULATIVE IMPACTS

The DEIR attempts to minimalize the project's contributions to cumulative impacts to biological resources by asserting that "ruderal herbaceous land is not considered sensitive wildlife habitat." However, CEQA does not require that the habitat that would be lost to a project be labeled as sensitive; no such standard exists.

The DEIR presents a flawed analysis of cumulative impacts, including to biological resources. The DEIR asserts that it "sets forth mitigation measures to ensure all potential project-specific impacts that would occur to biological resources are reduced to a less-than-significant level." And therefore, "the proposed project would not result in substantial adverse effects to biological resources protected by CEQA." The DEIR contrives the false standard that a given project impact is cumulatively considerable only when it has not been fully mitigated at the project level. The DEIR implies that cumulative impacts are really residual impacts left over by inadequate mitigation of project impacts. This notion of residual impacts being the source of cumulative impacts is inconsistent with CEQA's definition of cumulative effects. Individually mitigated projects do not negate the significance of cumulative impacts. If they did, then CEQA would not require a cumulative effects analysis. To summarize, the DEIR presents no cumulative effects analysis as defined in two ways by CEQA.

MITIGATION

Western Burrowing Owl

4.3-2(a) If project construction begins during the western burrowing owl nesting season (February 15 to August 31), a qualified biologist shall conduct targeted burrowing owl nest surveys within 14 days prior to construction activities using seven- to 20-foot transects. ... The survey shall ... follow CDFW guidelines outlined in the 2012 Staff Report on Burrowing Owl Mitigation.

The avian breeding season recognized by the CDFW is now 1 February through 15 September. The DEIR should be revised accordingly.

Whereas I concur that preconstruction, take-avoidance surveys should be completed, the DEIR falsely characterizes preconstruction surveys as detection surveys by insinuating that conducting preconstruction surveys without first having completed detection surveys would follow CDFW guidelines. Detection surveys are entirely different than preconstruction surveys, and are implemented to achieve a different set of objectives. Contrary to the DEIR's implication, preconstruction surveys are not designed to detect burrowing owls with anywhere close to the same likelihood as are protocol-level detection surveys that are designed for this purpose. It would be very easy for a preconstruction survey to fail to detect burrowing owls that are in fact present. Therefore, implementing a preconstruction survey as a surrogate for detection surveys would be reckless and would fail to meet the minimum standard of care for wildlife

protection. In any case, preconstruction surveys need to be implemented after completion of detection surveys per CDFW (2012).

Tricolored Blackbird

4.3-2(c) Prior to any ground disturbance on SMP 40, a qualified biologist shall conduct a preconstruction survey in all accessible areas identified as supporting potential tricolored blackbird nesting habitat. The survey shall document the current, and to the extent possible, historical presence or absence of nesting colonies of tricolored blackbird. …

Whereas I concur that preconstruction, take-avoidance surveys should be completed, a detection survey is needed first to inform the readers of the DEIR of whether and where tricolored blackbirds occur on or near the project sites. A detection survey would likely also improve the efficacy of the preconstruction survey.

Nesting Birds and Raptors (Including Loggerhead Shrike)

4.3-2(d) If project construction begins during the nesting season (February 1 to August 31), a qualified biologist shall conduct a nesting bird survey within 7 days prior to construction activities. … If migratory birds are identified nesting on or within the zone of influence, … A qualified biologist shall establish a temporary protective nest buffer around the nest(s). The nest buffer shall be staked with orange construction fencing. The buffer must be of sufficient size to protect the nesting site from construction-related disturbance and shall be established by a qualified ornithologist or biologist with extensive experience working with nesting birds near and on construction sites.

Typically, adequate nesting buffers are 75 feet from the nest site or nest tree dripline for small birds and up to 300 feet for sensitive nesting birds that include several raptor species known in the region of the project site but that are not expected to occur on the project site. Upon completion of nesting surveys, if nesting birds are identified on or within a zone of influence of the project site, a qualified ornithologist/biologist that frequently works with nesting birds shall prescribe adequate nesting buffers to protect the nesting birds from harm while the project is constructed.

First, the avian breeding season recognized by the CDFW is now 1 February through 15 September. The DEIR should be revised accordingly.

Second, whereas I concur that preconstruction, take-avoidance surveys should be completed, in my experience the majority of bird nests would not be found by biologists assigned to the survey. For instance, I surveyed for grassland nesters as part of an intensive survey effort that I performed from March through mid-August 2023 on a Central Valley site. I surveyed the site 30 times. I found that the nests of grassland birds are the most difficult to locate. Cavity nesters can more effectively defend their nests against predators, whereas ground nesters are highly vulnerable to predation, and thus the most cryptic of nesters. Ground nesters, which include bird species that occur at the project site, are highly adept at concealing their nests both physically and behaviorally. Based on my experience, it is highly likely that preconstruction survey would fail to find

any of the nests of ground-nesting birds that truly occur on the project site. The DEIR's implication that preconstruction survey would reduce potential impacts to nesting birds to less-than-significant is unsubstantiated by evidence in the DEIR.

The mitigation measure appears to be specifically directed toward loggerhead shrike, presumably because this special-status species was detected during a reconnaissance survey of SMP 40. Finding the nests of loggerhead shrikes is particularly difficult, as this species is expert at deceiving observers as to the whereabouts of their nests (Smallwood and Smallwood 2021). To adequately survey for nest sites of loggerhead shrike, many surveys are needed, and the survey methods need to include long sessions of visual-scans, preferably from blinds such as automobiles. Observers would need to be experienced in bird behavior, and capable of tracking the movements of individual loggerhead shrikes. A preconstruction survey for loggerhead shrike nest would be ineffective by having inexperienced biologists walk back and forth along transects.

Third, the mitigation language (second italicized paragraph above) allows a single individual to make a subjective decision, outside the public's view, to determine the buffer area for any given species. This measure lacks objective criteria, and is unenforceable.

Even assuming some or even all of the nests would be found and salvaged, this benefit to birds nesting on site would apply only to a single breeding season of nesters. The project would nevertheless eliminate the site's productive capacity to birds.

SMP 40 and Trail Connection Option 2
4.3-3(c) Prior to the commencement of ground-disturbing activities for SMP 40 or Trail Connection Option 2, … [Six minimization and mitigation measures follow, one of which is] *… the riparian corridor of Arroyo Mocho, disturbed areas shall be revegetated with native riparian plant species. Replacement of riparian trees to be removed shall be planted near the creek as feasible and/or adjacent to the existing limits of the riparian corridor to contribute to the existing riparian canopy. Riparian plantings shall be maintained for a minimum of 5 years to ensure that the canopy is enhanced and the understory restored.*

Trail Connection Option 2 – Undercrossing at Isabel Bridge
4.3-3(d) Prior to initiation of any groundbreaking activity associated with Trail Connection Option 2, … The project applicant shall ensure that the proposed project replaces, restores, or enhances on a "no net loss" basis (in accordance with the RWQCB) the acreage of all riparian habitat and waters of the State that would be removed, lost, and/or degraded due to project implementation by methods agreeable to the RWQCB and the City, as appropriate, depending on agency jurisdiction, and as determined during the Section 401 permitting processes. Methods include, but are not limited to implementation of a riparian enhancement planting plan and/or tree planting mitigation at a 1:1 ratio, or as otherwise prescribed by the RWQCB.

Trail Connection Option 2 – Undercrossing at Isabel Bridge

4.3-3(e) If it is determined that work below the OHWM cannot be avoided for Trail Connection Option 2, … Waters that would be lost or disturbed shall be restored, replaced, or rehabilitated on a "no-net-loss" basis. Habitat restoration, rehabilitation, and/or replacement, including the purchase of credits from a USACE approved mitigation bank at a 1:1 ratio, shall be at a location and by methods acceptable to the USACE.

I concur that all of the measures described above should be implemented if the project goes forward. However, these measure alone would be inadequate. Also needed is monitoring of wildlife that is integrated with thresholds of success and failure. If thresholds of failure are exceeded, then the City should be required to take additional steps to achieve success. To this end, an adequate performance bond should be provided by the applicant to the City.

RECOMMENDED MEASURES

Road Mortality: Compensatory mitigation is needed for the increased wildlife mortality that would be caused by bird-window collisions and the project-generated road traffic in the region. I suggest that this mitigation can be directed toward funding research to identify fatality patterns and effective impact reduction measures such as reduced speed limits and wildlife under-crossings or overcrossings of particularly dangerous road segments. Compensatory mitigation can also be provided in the form of donations to wildlife rehabilitation facilities (see below).

Fund Wildlife Rehabilitation Facilities: Compensatory mitigation ought also to include funding contributions to wildlife rehabilitation facilities to cover the costs of injured animals that will be delivered to these facilities for care. Many animals would likely be injured by collisions with automobiles traveling to and from the project's buildings.

Landscaping: If the project goes forward, California native plant landscaping (i.e., chaparral, grassland, and locally appropriate scrub plants) should be considered to be used as opposed to landscaping with lawn and exotic shrubs. Native plants offer more structure, cover, food resources, and nesting substrate for wildlife than landscaping with lawn. Native plant landscaping has been shown to increase the abundance of arthropods which act as importance sources of food for wildlife and are crucial for pollination and plant reproduction (Narango et al. 2017, Adams et al. 2020, Smallwood and Wood 2022.). Further, many endangered and threated insects require native host plants for reproduction and migration, e.g., monarch butterfly. Around the world, landscaping with native plants over exotic plants increases the abundance and diversity of birds, and is particularly valuable to native birds (Lerman and Warren 2011, Burghardt et al. 2008, Berthon et al. 2021, Smallwood and Wood 2022). Landscaping with native plants is a way to maintain or to bring back some of the natural habitat and lessen the footprint of urbanization by acting as interconnected patches of habitat for wildlife (Goddard et al. 2009, Tallamy 2020). Lastly, not only does native plant landscaping benefit wildlife, it requires less water and maintenance than traditional landscaping with lawn and hedges.

Thank you for your consideration,

_____

Subject: **City of Livermore SMP 38/SMP 39/SMP 40 Project**
Review of DEIR Noise Section & Appendices

Dear Stephanie:

We have completed a review of Section 4.6 (Noise), as well as Appendices J and K (Environmental Noise Assessments) of the Draft Environmental Impact Report for the City of Livermore SMP 38/SMP 39/SMP 40 Project, focusing on the adequacy of the noise impact analyses. Here are our findings:

OVERVIEW

Section 4.6 of the DEIR is based on environmental noise assessments prepared by Salter.

- Significance Standards

  The DEIR significance standards for noise and vibration impacts are based directly on Section XIII of the Environmental Checklist in Appendix G of the current CEQA Guidelines, which reads as follows:

  XIII. NOISE - Would the project result in:

  a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of the local general plan or noise ordinance, or applicable standards of other agencies?

  b) Generation of excessive groundborne vibration or groundborne noise levels?

  c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the area to excessive noise levels?

  Salter has proposed a 3 dBA increase in ambient noise levels as the threshold for a "substantial increase". We concur that this is a reasonable value for CEQA evaluation of this project.

- Operational Noise & Construction Vibration

  The analysis in Section 4.6 shows that noise impacts from operational noise (loading dock activity, HVAC, on-site vehicle movements) as well as vibration during on-site construction are less-than-significant. Generally, the analysis supporting this finding appears to be methodical and well done, consistent with current CEQA Guidelines, and we take no exception to it.

- Construction Noise Impacts

  Section 4.6 also includes an analysis of construction noise impacts on the nearest sensitive uses – i.e.: the single-family residential neighborhood to the east of the project sites. This analysis covers on-site construction activity for SMP 40 as well as the construction of off-site trail connections at three potential locations (each within 200-feet of the nearest residential use).

The impact of construction noise on the SMP 39 site is not covered in the DEIR.

For the off-site trail connection construction, the DEIR states that noise impacts are significant without mitigation and provides a list of mitigation measures (4.6-1) to reduce this impact to less-than-significant level. Generally, we agree with this finding and the proposed mitigation measures.

For on-site construction, the DEIR states that noise impacts will be less-than-significant. However, the analysis presented in the DEIR does not – in our opinion – adequately support this conclusion, for the reasons outlined below.

PROBLEMS WITH THE ON-SITE CONSTRUCTION NOISE IMPACT ANALYSIS

- <u>SMP 39 is Excluded</u>

  Construction noise from the SMP 39 site is not included in the analysis in Section 4.6 of the DEIR. An explanation for this omission is provided in the final paragraph on page 4.6-21, which reads in part:

  "Due to the substantial distance between SMP 39 and the sensitive noise receptors, it was anticipated that construction noise associated SMP 39 would be below the City of Livermore's exterior noise level threshold of 60 dBA DNL at the nearest sensitive receptor locations. Thus, construction noise levels for SMP 39 were not evaluated as part of the Environmental Noise Study for SMP 39."

  There are two problems with this explanation:

  First, CEQA requires an actual analysis to show whether a project impact is significant or less-than-significant. Simply "anticipating" that there will be no significant impact falls short of the standard required for a CEQA study.

  Second, the 60 dBA DNL exterior noise standard (which comes from the land-use compatibility table in the Noise Element of the City of Livermore General Plan) is only one of the applicable local regulations. The DEIR analysis should address all applicable regulations in both the General Plan and Municipal Code.

- <u>Analysis for SMP 40 is Incomplete</u>

  The noise impact analysis for construction on the SMP 40 site compares Salter's noise level predictions with instantaneous maximum noise level (Lmax) limits of 70 dBA during the day and 60 dBA at night, which are taken from Policy N-1.5.P3 of the City of Livermore General Plan.

  However, these Lmax noise limits are not the only local regulations that would apply to construction noise on the SMP 40 site.

  For example, the DEIR does not show how construction noise from SMP 40 would compare to Policy N-1.5.P2 of the General Plan, which prescribes the following noise limits, depending on the cumulative duration of the noise:

Daytime Noise Limit (7AM – 10PM)	Nighttime Noise Limit (10PM – 7AM)	Cumulative Duration
60 dBA	50 dBA	No more than 15-minutes in any hour.
65 dBA	55 dBA	No more than 5-minutes in any hour.
70 dBA	60 dBA	No more than 1-minute in any hour.

Similarly, the DEIR does not include an DNL analysis for construction noise from SMP 40 to show that it will be below the 60 dBA exterior noise standard taken from land-use compatibility table (Table 9-7) in the General Plan. This will be particularly important if any construction work is to occur at night.

- <u>There is an Error in the Calculations for SMP 40</u>

  Table 4.6-6 of the DEIR lists estimated Lmax noise levels for various pieces of construction equipment at a distance of 50-feet (these are standard reference values, taken from the FHWA Construction Noise Handbook) and extrapolates them to a distance of 884 feet.

  According to Table 4.6-6, the equipment noise levels received at a distance of 884 are 57 dBA lower than lower than those received at a distance of 50-feet. This is incorrect. According to the radiation equation for point sources (such as individual pieces of construction equipment) the reduction in noise level from 50-feet to 884 feet is:

  $10 \times LOG_{10}(884/50) = 25$ dBA

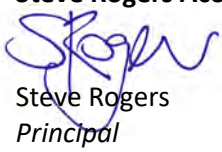
  So, the estimated Lmax noise levels provided in Table 4.6-6 are 32 dBA lower than they should be. Which means that noise from several of the pieces of equipment listed should be expected to produce a maximum level of noise at the nearest residences that is either right at the 60 dBA nighttime limit or, in the case of paving equipment, 4 dBA above it.

- <u>Construction on the East Side of the SMP 40 Site is Overlooked</u>

  The construction noise analysis in the DEIR for SMP 40 considers assumes receivers 884-feet away from the equipment – which is the distance between the location proposed for Building 2 and the nearest residences. However, there will be certain phases of construction – such as site preparation and paving/landscaping/site concrete – when noisy equipment could be operating closer than 884-feet from nearby residential uses.

  For example, the eastern corner of the SMP 40 site is within 600-feet of the nearest residential use. Received noise levels at a distance of 600-feet from the equipment would be 3 dBA higher than those received at 884-feet, which means that the expected noise level at the nearest residences when paving equipment is in use in the eastern corner of the site would be 67 dBA, Lmax and not 32 dBA, Lmax as reported in Table 4.6-6.

SUMMARY & RECOMMENDATIONS



We find that, while much of the noise analysis in the DEIR has been done to the standard expected of a CEQA study, the evaluation of noise impacts during the construction phases is incomplete and contains a significant calculation error. We therefore recommend that the preparers be requested to revise/correct the Noise Section (4.6) of the DEIR as follows:

- Include SMP 39 in the on-site construction noise impact analysis. The analysis should take account of the anticipated number of pieces of equipment in use at any one time during each phase as well as estimated usage factors, so that construction noise impacts can be evaluated in the in the context of the City of Livermore General Plan DNL 60 dBA exterior noise standard (from Table 9-7) and the time-dependent noise limits in Policy N-1.5.P2, as well as the Lmax noise limits in Policy N-1.5.P3.
- For on-site construction on the SMP 40 site, the noise impact analysis should be expanded to take account of the anticipated number of pieces of equipment in use at any one time during each phase as well as estimated usage factors, so that construction noise impacts can be evaluated in the in the

context of the City of Livermore General Plan DNL 60 dBA exterior noise standard (from Table 9-7) and the time-dependent noise limits in Policy N-1.5.P2, as well as the Lmax noise limits in Policy N-1.5.P3.

- Table 4.6-6 should be revised to show the correct (25 dBA) reduction in point-source noise levels from 50-feet to 884-feet.
- Provide additional analysis for any construction activity on the SMP 40 site (such as site preparation, paving/landscaping) that could occur closer than 884-feet from the nearest residential use.

Yours sincerely,
Steve Rogers Acoustics, LLC

RE: City of Livermore's SMP 39 and 40 Planning Commission Meeting

Dear Ashley Vera,

On behalf of "**Carpenters Local 713**", my Office is submitting these supplemental comments for the City of Livermore's ("**City**") Draft Environmental Impact Report ("**Draft EIR**" or "**DEIR**") and Final Environmental Impact Report ("**Final EIR**" or "**FEIR**") for the **March 5, 2024 Planning Commission Meeting** for the SMP 39 and 40 Project ("**Project**").

According to the Project's Notice of Availability ("**NOA**") of a Draft EIR Project Description:

> "On **SMP 38**, the proposed project includes a Sphere of Influence (SOI) Amendment to **include** SMP 38 within the **City of Livermore** SOI and **remove** it from the **City of Pleasanton's** SOI. The City of Livermore General Plan land use designation for SMP 38 would remain Limited Agriculture and Open Space/Sand and Gravel and the Alameda County zoning designation would remain Agriculture. **Development of SMP 38** is **not proposed**.
>
> For **SMP 39**, the proposed project would include development of a total of **up to six light industrial buildings**, consisting of **up to approximately 755,500 square feet** (sf) of new building space, and associated **internal roadways** and **other** improvements. **For SMP 40**, the proposed project would include development of **two industrial buildings** containing up to **759,275 sf of new building space** with

related **internal roadways** and **other** improvements. A number of approvals would be required for development of SMP 39 and SMP 40, including a **SOI Amendment for SMP 39**, **General Plan Amendment**, **Pre-zoning** and **Annexation**, **Zoning Map Amendment**/Planned Development, Vesting Tentative Subdivision **Maps**, a **Pre-Annexation Agreement**, and **Development Agreement**. A **Site Plan Design Review** entitlement is required for SMP 39 and SMP 40, which would include a review of the site plan, building, and landscape design; however, the entitlement is **only proposed for SMP 40 at this time**. A Site Plan Design Review entitlement will be required **at a later date** for the future development of **SMP 39**. In addition, the proposed project would include **annexation of four additional parcels** (APNs 904-10-2-3, -5, -7, and -8) located **east of SMP 40**. Development is **not proposed** on the additional parcels **as part** of the proposed project.

The project would include a **paved at-grade, on-site trail along the boundaries** of the SMP 40 site, consistent with the City's Active Transportation Plan. Specifically, the on-site trail would extend from the northeastern corner of the site, along the project site's eastern, southern, and western boundaries, before connecting to an existing off-site paved shared-use path at the northwestern corner of site, which extends along the west side of the Oaks Business Park to the north and connects to West Jack London Boulevard.

In addition, the project would include a **new off-site connection to the existing Arroyo Mocho Trail**, located on the east side of Isabel Avenue/SR 84. For the purposes of the Draft EIR analysis, three alternatives for the proposed off-site Isabel Avenue/SR 84 crossing to the existing Arroyo Mocho Trail are considered and evaluated in the Draft EIR, including the following, and described in more detail in the Draft EIR:

- Trail Connection Option 1 – **At-Grade** Crossing at **Discovery Drive**;
- Trail Connection Option 2 – **Undercrossing** at **Isabel** Bridge; and
- Trail Connection Option 3 – **Overcrossing** of **Isabel** Avenue/SR 84."

NOA of Draft EIR, pp. 1-2, emph. added.

The concurrently circulated Draft EIR contains the same project description. DEIR, pp. 1-2—1-4.

Carpenters Local 713 is a labor union representing union carpenters in Alameda County , and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Local 713 members live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

Carpenters Local 713 expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

Carpenters Local 713 incorporates by reference all comments related to the Project or its CEQA review, including the Environmental Impact Report. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, Carpenters Local 713 requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

I. CEQA REQUIRES SUBSEQUENT OR SUPPLEMENTAL ENVIRONMENTAL REVIEW WHEN SUBSTANTIAL CHANGES OR NEW INFORMATION COMES TO LIGHT

Section 21092.1 of the California Public Resources Code requires that "[w]hen significant new information is added to an environmental impact report after notice has been given pursuant to Section 21092 … but prior to certification, the public agency shall give notice again pursuant to Section 21092, and consult again pursuant to Sections 21104 and 21153 before certifying the environmental impact report" in order to give the public a chance to review and comment upon the information. (CEQA Guidelines § 15088.5.)

Significant new information includes "changes in the project or environmental setting as well as additional data or other information" that "deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative)." (CEQA Guidelines § 15088.5(a).) Examples of significant new information requiring recirculation include "new significant environmental impacts from the project or from a new mitigation measure," "substantial increase in the severity of an environmental impact," "feasible project alternative or mitigation measure considerably different from others previously analyzed" as well as when "the draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded." (Id.)

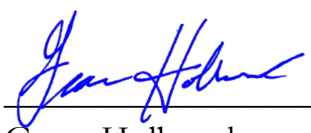
An agency has an obligation to recirculate an environmental impact report for public notice and comment due to "significant new information" regardless of whether the agency opts to include it in a project's environmental impact report. (Cadiz Land Co. v. Rail Cycle (2000) 83 Cal.App.4th 74, 95 [finding that in light of a new expert report disclosing potentially significant impacts to groundwater supply "the EIR should have been revised and recirculated for purposes of informing the public and governmental agencies of the volume of groundwater at risk and to allow the public and governmental agencies to respond to such information."].) If significant new information was brought to the attention of an agency prior to certification, an agency is required to revise and recirculate that information as part of the environmental impact report.

The City's Supplemental Memorandum ("**Exhibit A**") identifies numerous substantial changes to the EIR. Most notably Noise Impacts section was dramatically changed based on updated Noise Studies for SMP 39 and 40 and newly determined significance thresholds were applied. These updated studies were only finalized one day ago and given to the public ***less than four hours*** before the Planning Commission hearing. Moreover, the updated studies and significance thresholds resulted in an entirely new

mitigation measure in the MMRP. (See **Exhibit A** at 695). Indeed, the most recent revision now predicts SMP 40 construction-related noise will exceed the thresholds established by the City. As such, the dramatic change in the findings of the EIR ***requires recirculation*** so that the public may provide its input.

II. THE FEIR IS IMPROPER AS IT DOES NOT INCLUDE ALL CHANGES TO THE DEIR

The FEIR cannot be certified by the Planning Commission as it does not include the numerous changes created by the Supplemental Memorandum released mere hours before the Planning Commission Hearing. Under CEQA Guidelines Section 15132, a FEIR shall include:



> "(a) The draft EIR or a revision of the draft.
> (b) Comments and recommendations received on the draft EIR either verbatim or in summary.
> (c) A list of persons, organizations, and public agencies commenting on the draft EIR.
> (d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process.
> (e) Any other information added by the Lead Agency."

As the FEIR has received ***two rounds of revisions*** since it was originally prepared in January 2024, the document proposed for certification is an inaccurate reflection of the FEIR. As such, the Planning Commission must not certify the FEIR until, at a minimum, the document reflects the most up-to-date version.

III. CONCLUSION

Based on the foregoing, the Planning Commission should deny the FEIR's certification, and the Environmental Impact Report should be revised and recirculated pursuant to CEQA, consistent with the comments and issues identified in this and previous comment letters.

Sincerely,

Grace Holbrook
Attorneys for Carpenters Local 713

Supplemental Memorandum (Exhibit A).

LIVERMORE
CALIFORNIA

PLANNING COMMISSION STAFF REPORT **ITEM NO. 10.1**

DATE: March 5, 2024

TO: Chairperson and Members of the Planning Commission

FROM: Steve Riley, Acting Planning Manager

SUBJECT: Supplemental Materials received prior to the meeting.

RECOMMENDED ACTION

SUMMARY

These materials were posted online and made available to the public at the same time that they were distributed to the Planning Commission.

5.1 - Hearing to consider a request for an Annexation/Prezoning, Pre-Annexation and Development Agreements, General Plan Amendment, Zoning Map Amendment, Development Code Amendment, Vesting Tentative Parcel Map, Vesting Tentative Tract Map, Planned Development, and Site Plan Design Review for the SMP 39 and 40 Project to zone for and develop light industrial uses near the northwest part of the City.

Materials: Response to comments memorandum and errata, Conceptual site plan for SMP 39, Revised engineering consideration, Letters received in advance of the meeting, and Development agreements signed by the applicant.

DISCUSSION

ATTACHMENTS

1. Supplemental Materials

Prepared by: Michele Donley
Division Clerk

SMP 39/SMP 40 Project
Supplemental Responses to Comments Received After the Close of the Draft Environmental Impact Report Public Review Period and Erratum

As mentioned in the memorandum entitled, "Responses to Comments Received After the Close of the Draft Environmental Impact Report Public Review Period and Erratum", the City would be following up with a supplemental memorandum to provide responses to the "Attorneys for Carpenters Local 713" letter, dated February 14, 2024, which was received after the release of the Final Environmental Impact Report (EIR) for the SMP 39/SMP 40 Project (proposed project). This supplemental memorandum provides the responses to the above-referenced letter.

While CEQA does not require that written responses be provided for letters received after the close of the public review period, the comments are acknowledged by the City, and the City has chosen to prepare written responses to the comments for the decision-makers consideration in making an informed decision. Responses to the "Attorneys for Carpenters Local 713" comment letter, which is included as Attachment 1, are provided below. Where revisions to the EIR text are required in response to a comment, new text is double underlined and deleted text is ~~struck through~~.

The comments received did not identify any new significant impact, substantial increase in severity of a significant impact identified in the EIR, or any significant new information. Therefore, recirculation of the EIR is not required.

Response to Stephanie Papayanis, Attorneys for Carpenters Local 713
The majority of the comment letter, including the entirety of Comment I and Comment II(A) of the comment letter, is identical to the comment letter submitted by Attorneys for Carpenters Local 713 during the Draft EIR comment period. As such, with regard to Comment I and Comment II(A) included in the comment letter, please see Responses to Comments 5-3 and 5-5 included in the Final EIR.

The new concerns brought forth in the comment letter are limited to Comment II(B) and Comment II(C) related to biological resources and construction noise. Thus, responses to Comment II(B) and Comment II(C) are provided below.

Comment II(B) Related to Biological Resources
Responses to the commenter's concerns regarding biological resources are provided below, as informed by Monk & Associates (M&A), who prepared the project-specific Biological Resources Assessments (BRAs) used within the Draft EIR analysis. It should be noted that Comment II(B) is a summary of the comments provided in Exhibit D to the Attorneys for Carpenters Local 713 comment letter, which is a letter authored by Shawn Smallwood, PhD. As such, the following responses are organized based on the comments presented in Exhibit D of the Attorneys for Carpenters Local 713 comment letter.

Environmental Setting Informed by Field Surveys
Page 16 of the Exhibit D comment letter states: "The results of the Monk and Associates (2021, 2023) surveys have been misinterpreted in the reports, resulting in inaccurate characterizations of the existing environmental settings of SMP 39 and SMP 40." The commenter is referring to the fact that M&A biologists recorded fewer bird species on-site and flying overhead than the commenter did during a reconnaissance visit. The environmental setting or environmental

baseline of a project site is informed by much more than the number of birds and mammals one sees in a certain amount of time.

The CEQA Guidelines Section 15125(a) requires that the CEQA document prepared for a project discuss the "baseline" environmental conditions at and in the vicinity of the project sites. CEQA Guidelines Section 15125 (see also Section 15126.6(e)(2)) states the following regarding the environmental setting as it relates to baseline:

> (a) [the CEQA review document] must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant. The description of the environmental setting shall be no longer than is necessary to understanding the significant effects of the proposed project.

M&A conducted several surveys on each of the project sites. As explained in the SMP 39 BRA included as Appendix D to the Draft EIR, M&A survey work in the project area dates to the year 2000. However, because CEQA requires current baseline conditions, none of the plants or wildlife observed in the early 2000s were reported in the BRAs. The 2021 surveys are the baseline surveys that were conducted to record existing biological resources and to assess the likelihood of resource agency regulated areas on the project sites. The surveys involved searching all habitats on the sites and recording all plant and wildlife species observed. M&A cross-referenced the habitats found on the project sites against the habitat requirements of local or regionally known special-status species to determine if the proposed project could directly or indirectly impact such species and if additional protocol level surveys would be necessary to assess potential impacts to special status species.

CEQA does not require an exhaustive list of all bird species that could occur on a project site, nor does CEQA require a discussion of what each species is doing at the time the species is observed. Rather, CEQA requires an analysis of potential impacts to special-status birds and/or nesting habitat for common birds that rise to the level of significance pursuant to CEQA as determined by an expert, based on database searches, field surveys, etc. M&A's BRAs provide that analysis and recommend pre-construction surveys to address potentially significant impacts. Overall, the BRAs meet the standards of care warranted under CEQA.

Habitat Loss

The commenter's estimate on the number of birds "denied to California" is primarily based on two studies. The commenter states that the two study sites have grassland/wetland/woodland complexes within agricultural matrices, and found total bird nesting densities of 32.8 and 35.8 nests per acre. The commenter uses one-third of such estimates for the project sites' calculation due to the annual discing that occurs on the project sites. However, the estimation is likely still an overestimate, as one study was conducted in a five-acre, undisturbed, unfragmented and preserved area within the over-500-acre University of Wisconsin Arboretum dedicated in 1934, adjacent to a 321-acre lake (Lake Wingra). The SMP 39 and SMP 40 project sites are not surrounded by hundreds of acres of preserved natural lands but rather the relatively small project sites are fragmented from natural areas by surrounding, existing development (busy roads, an airport, and active industrial uses).

The other study mentioned by the commenter was conducted within farmstead shelterbelts, or "man-made habitats consisting of parallel rows of trees and shrubs designed to protect farmsteads from damaging winds, drifting snow and blowing soil…" referred to as "wooded

islands." The study determined that the wooded islands are important for avifauna in regions of intensive agriculture and found many nests within the wooded region. The SMP 40 project site has a similar "wooded island," in that the wooded area that is a riparian corridor along Arroyo Mocho is being preserved within a riparian set back and will provide high-quality habitat for many nesting birds post-development. The preservation of Arroyo Mocho's riparian habitat was not considered in the commenter's calculations.

Further, the commenter's comparison of development of the proposed project to the high avian mortality rate by wind turbine collision in the Altamont Pass Wind Resource Area is not an appropriate comparison. The commenter is comparing 50-foot-tall buildings on the project sites to 430-foot-tall wind turbines with active, moving blades in a known avian migration zone; an area that supports the highest number of nesting Golden Eagles in the world.[1]

Regardless of the commenter's inappropriate comparison and overestimate of the number of birds "denied to California" due the loss of nesting habitat by the proposed projects, CEQA requires an analysis of potential impacts to special-status birds and/or nesting habitat for common birds that raise to the level of significance. Therefore, impacts to nesting birds were regarded as significant pursuant to CEQA in the Draft EIR. However, mitigation measures to protect special-status birds and all nesting birds have been prescribed in the Draft EIR (see Mitigation Measures 4.3-2[a] through 4.3-2[d] in the Draft EIR). The mitigation measures included therein reduce impacts to nesting birds to a less-than-significant level pursuant to the CEQA. Thus, the commenter's concerns about the projects' impacts to nesting birds have been sufficiently addressed.

Interference with Wildlife Movement

The commenter is correct that the Essential Habitat Connectivity Area mapped by the California Department of Fish and Wildlife (CDFW) is focused on connecting very large blocks of mostly protected natural lands. While the Draft EIR does state that the project sites are not located in this mapped area, that is only one sentence of the three-paragraph description under the Wildlife Movement Corridor section of the Draft EIR (see pages 4.3-14 to 4.3-15 of the Draft EIR). The comment implies that sufficient research and in-person assessments were not conducted accordingly, and that the determination that the project sites will not impact significant wildlife corridors was solely based on using the CDFW's Essential Habitat Connectivity Area map, which simply is not true.

For example, M&A conducted online research and project-specific field surveys to become informed about the project sites' habitats and the potential for any impacts to regional wildlife corridors based on development of the proposed projects. M&A recorded wildlife observed during site visits, in addition to extensively noting the habitat types and surrounding land uses during their visits and how the surrounding land uses would affect wildlife movement. As such, the commenter's statement that the conclusions of the Draft EIR regarding wildlife movement on the project site are speculative and conclusory is untrue.

Wildlife corridors are linear and/or regional habitats that provide connectivity to other natural vegetation communities within a landscape fractured by urbanization and other development. Wildlife corridors are extremely important habitats to preserve and are valuable for wildlife. While local wildlife may use the undeveloped sites in their current state, neither of the project sites currently provide a significant regional wildlife corridor that may be impacted by the proposed project. The project sites are regularly disced or disturbed for agriculture. For SMP 40, an

[1] National Audubon Society. *National Audubon Society Sues California County to Improve Bird Protections in Controversial Wind Energy Project.* Available at: https://www.audubon.org/news/national-audubon-society-sues-california-county-improve-bird-protections#:~:text=17%2C%202021)%2D%2DThe%20National,turbine%20facility%20at%20Altamont%20Pass%2C. Accessed February 2024.

industrial development, Oaks Business Park, is located to the north of the project site, east of the project site is Isabel Avenue, a heavily-trafficked road, south is an active railroad track and Stanley Boulevard, another heavily-trafficked road, and west of the project site are quarry ponds. SMP 39 is bordered by West Jack London Boulevard, a well-trafficked road, the Livermore Municipal Airport, the Oaks Business Park, and quarry ponds. The quarry ponds were excavated in uplands and, thus, are not associated with a creek or drainage, and have nearly vertical slopes, preventing wildlife from traversing the ponds easily or using the quarry area as a corridor. As mentioned in M&A's BRAs, both SMP 39 and SMP 40 are isolated from regional open spaces, and, as such, do not have regional wildlife corridor value for terrestrial mammals and contain minimal habitat that could be used by some migrating avian species.

The commenter states: "On the other hand, the coyote I saw on site got there somehow, and so did the ground squirrels and pocket gophers, and so did all of the birds I saw on and over SMP 39." One might infer from this statement that M&A's reports and the Draft EIR implied that wildlife do not use, or could not be found on the project sites, which is incorrect. Each of M&A's BRAs included a table of wildlife species observed on the project sites during site visits, which, as described in the BRAs, is not intended to be exhaustive or to describe the only species that could be found on the project sites. Rather, the focus was, as required by CEQA and as appropriate, on the assessment of biological resources with regard to suitable habitat and potential for the occurrence of any special-status species, as determined by a qualified biologist for the purposes of an impact analysis. Movement of a species through an area or an area's incidental use does not necessarily imply importance to the species, the characteristics of the habitat are more relevant.

For example, Figure 3 of the commenter's report shows the fly over and resting locations of Golden Eagles, which provides an example of how local wildlife may use the project sites as well as all surrounding areas, including properties completely developed with warehouses and surrounded by busy roads. However, while species such as the Golden Eagle may use the project site for foraging or resting on occasion, or may flyover, it is clear that the project sites are not the main sites that are relied upon by these large raptors for any of the above functions, or for nesting, as the existing trees are too small and in close proximity to disturbance.

The SMP 40 riparian area may provide significantly more suitable rest, foraging and nesting habitat for many bird species than the open and disturbed grassland does. However, as previously described, the riparian area on SMP 40 will be completely preserved within a riparian setback and will continue to connect local wildlife within the riparian corridor along the Arroyo Mocho.

The commenter also mentions that 19 special-status species so far have been documented on the project site, as further detailed in Table 1 of the commenter's report. However, the commenter's list includes species that do not meet the definition of "rare" pursuant to the CEQA. For example, Table 1 includes Red-tailed Hawk (*Buteo jamaicensis*), California Gull (*Laus californicus*), Double-crested Cormorant (*Phalacrocorax auritus*), Nuttall's Woodpecker (*Picoides nuttallii*), and Oak Titmouse (*Baeolophus inornatus*), which are designated as Birds of Prey (BOP), Birds of Conservation Concern (BCC) by U.S. Fish and Wildlife Service, and Taxa to Watch List. However, the aforementioned listings are not considered special-status under the California or Federal Endangered Species Acts (CESA and FESA), by other regulations, or by the scientific community pursuant to the CEQA. Nonetheless, it should be noted that these species, their nests, eggs and/or young are provided protection pursuant to other resource agency regulations such as the Migratory Bird Treaty Act (MTBA) and the California Fish and Game Code Sections 3503, 3503.5, 3511, and 3513C, which are both fully accounted for and discussed in M&A's BRAs and the Draft EIR.

In addition, the commenter does not specify which of the 19 species were observed during his site visit, or which were taken as observations from eBird. While many experienced birders may use eBird, anyone can report incidental bird sightings to eBird without any way to confirm the qualifications of the observer. As such, relying only on eBird data to say confidently that a special-status species is present on a property is not sufficient and would need to be confirmed by a qualified biologist. As mentioned by the commenter, several of the species sightings are birds flying over the project sites. As discussed in sections above, observing sensitive birds flying over a property, foraging over the site, or using the habitat on the sites during the non-nesting season does not warrant reporting to the California Natural Diversity Database (CNDDB), as such sightings are not of permanent breeding/nesting/larval development habitat (dependent on what type of animal it is) that warrant protection. The types of "incidental" sightings of common bird species do not necessarily translate into a "potentially significant biological impact" pursuant to CEQA Guidelines and regulations.

Further, while the project sites in their current state may be used by local wildlife, they provide very low value for foraging, resting or nesting, as the project sites are mainly comprised of non-native ruderal herbaceous habitats and are highly disturbed due to agricultural practices. The project sites are not one of the last remaining stopover and staging opportunities in the region, as stated by the commenter, as acres of undeveloped land similar to the project sites is located within the very immediate area, as well as dozens of local parks. The 80-acre Shadow Cliffs Regional Recreation Area is less than two miles from the project sites and the 160-acre Doolan Canyon Regional Preserve beyond provides more undeveloped land to the north. All of the aforementioned habitats in the region provide habitat for the species listed in the table of wildlife observed included in Exhibit D of the comment letter, and have far greater wildlife corridor habitat value than the project sites. The commenter's concerns about the loss of the ruderal habitats on-site should be assuaged by the fact that more trees and shrubs will be planted on the project sites post-development than are currently on site, which will provide additional stopover opportunities for birds.

Finally, as previously mentioned, the Arroyo Mocho runs along the southern project site boundary of SMP 40. Arroyo Mocho may serve as a local movement corridor for mammals, amphibians, and reptiles to move unobtrusively through the general geographic area. Animals moving along Arroyo Mocho could leave the Arroyo and enter the project site to move across the landscape. Such animals expected to migrate along the Arroyo and possibly enter the upland areas of the project site are common species such as coyote, raccoons, skunks, deer, and rodents, and would be able to navigate their way around SMP 40 even after the site was developed. The Arroyo Mocho would remain unchanged by the proposed project and as such, the wildlife corridor values of the channel would remain intact. Under all circumstances, any disruption to the very localized use of the project sites by common wildlife species would not be regarded as a potentially significant impact pursuant to CEQA.

Traffic Impacts to Wildlife

Common wildlife associated with humans and urban development such as Virginia opossum (*Didelphis virginiana*), striped skunk (*Mephitis mephitis*) and raccoon (*Procyon lotor*) are often involved in vehicle collisions. However, the aforementioned species and other common wildlife species, including Mourning Dove (*Zenaida macroura*) and northern pacific rattlesnake (*Crotalus oreganus*), are not considered special-status or rare. In addition, while roadkill is present in the vicinity of the project sites, as is the case at any area with road traffic, the approximation included in Exhibit D of the comment letter is likely an overestimate, as the numbers are based on another study that is not directly comparable to the project area. Vasco Road is the principal north-south route between eastern Alameda and Contra Costa Counties, traveled by approximately 22,000 vehicles per day. Increased traffic to the project sites on local roadways, Isabel Avenue and West

Jack London Boulevard, is not comparable to the heavily trafficked Vasco Road, which is a corridor in the middle of hundreds of acres of protected open space lands and significant wildlife habitat. By contrast, Stanley Boulevard and I-580, near the project sites, are already heavily trafficked roads in a developed region and the increase in vehicles associated with the project sites would not contribute significantly to the existing traffic volumes on these roads daily. Moreover, regulations that protect common wildlife species that could be killed by vehicular traffic do not exist. As such, vehicle collisions that result in the mortality of wildlife do not constitute a significant impact pursuant to CEQA.

Western Burrowing Owl Mitigation

The CDFW has not released an official statement that the avian breeding season has changed. In M&A's experience, when permits are acquired from the CDFW, the nesting season window can vary slightly. Some permits say February 1 through August 31, while others say February 15 through September 1. The variation in start and end dates could be based on geography, as different geographic regions have slightly different nesting windows. In fact, the CDFW acknowledges a certain amount of variation in the 2012 CDFW Staff Report on Burrowing Owl Mitigation, which states, "In California, the burrowing owl breeding season extends from 1 February to 31 August (Haug et al. 1993, Thompsen 1971) with some variances by geographic location and climatic conditions." Nonetheless, in response to the comment, Mitigation Measure 4.3-2(a) included in the Draft EIR is hereby revised as follows:

Western Burrowing Owl

4.3-2(a) *If project construction begins during the western burrowing owl nesting season (February 1~~5~~ to August 31), a qualified biologist shall conduct targeted burrowing owl nest surveys within 14 days prior to construction activities using seven- to 20-foot transects. A separate preconstruction survey shall be conducted for SMP 39 and SMP 40 (including the off-site trail connection area) if the components of the project are not constructed concurrently. The survey shall include the project site and all accessible areas within 500 feet of the project impact zone, and shall follow CDFW guidelines outlined in the 2012 Staff Report on Burrowing Owl Mitigation. The results of the survey shall be submitted to the City of Livermore Community Development Department within 30 days of the completed survey. The survey report shall be valid for one construction season.*

If western burrowing owls are not detected on-site during the survey, further mitigation shall not be required. If any western burrowing owls are detected on-site, pursuant to the CDFW's 2012 Staff Report on Burrowing Owl Mitigation, the following restricted activity dates and setback distances shall be implemented:

- *From April 1 through October 15, low disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests.*
- *From April 1 through August 15, medium disturbance activities shall have a 500-meter buffer from occupied nests. Medium disturbance activities can have a reduced buffer of 200 meters starting August 16 through October 15.*
- *From October 16 through March 31, low disturbance activities shall have a 50-meter buffer, medium disturbance activities shall have a 100-meter buffer, and high disturbance activities shall have a 500-meter buffer from occupied nests.*
- *Earth-moving activities or other disturbance shall not occur within the aforementioned buffer zones of occupied burrows*

unless monitoring of the nest site by a qualified biologist determines that the owls are acclimated to the disturbance and would not be disturbed by a smaller buffer. The buffer zones shall be fenced.

- *A qualified biologist shall delineate the extent of burrowing owl habitat on the site.*
- *Owls may be passively relocated from the project site between October 1 and February 1. Passive removal shall be conducted by a qualified biologist with demonstrated experience with passive relocation.*
- *Credits shall be purchased from a mitigation bank in coordination with CDFW and the City of Livermore to offset the project's habitat loss on the burrowing owl.*

A report detailing compliance with the provisions set forth herein shall be prepared by the qualified biologist and submitted for review and approval to the City of Livermore Community Development Department.

Further, M&A biologists have conducted several surveys, some of which are dated October 2000; March 11, 2002; May 11 and 20, 2002; June 14 and 25, 2002; September 2003, November 2013, June 10, 2019, November 2019, September 10, 2021, November 13, 2021, and June 15, 2022. The aforementioned surveys conducted in May and June were focused Burrowing Owl breeding season surveys conducted in accordance with the CDFW 1995 Staff Report protocol. Burrowing owl, or signs of burrowing owl, were not observed during any of the M&A surveys. Thus, based upon M&A's multiple surveys of the project site spanning multiple years, evidence suggests that burrowing owls have not nested on-site for the following reasons: (1) the grass grows very tall on SMP 40 in between discing activities, which does not allow ground nesting birds, such as the burrowing owl, an opportunity to detect aerial predators, which likely discourages them from nesting; (2) discing activities may disrupt nesting attempts.

Based on habitat assessments and past negative survey results, M&A believes that burrowing owls are unlikely to nest on-site. However, given that the burrowing owl is a mobile species, a mitigation measure for preconstruction surveys was provided in the Draft EIR to ensure that "take" of burrowing owls does not occur. The prescribed preconstruction surveys, consistent with "take avoidance surveys" outlined in the CDFW's Staff Report 2012, are sufficient and appropriate to detect nesting owls should the species be present on-site in light of the prior surveys' negative results, including a year of protocol-level breeding season surveys. Burrowing owls residing in topographically flat areas are typically easy to detect if surveys consist of walking transects using high-powered binoculars. As such, the mitigation measure included in the Draft EIR is sufficient to reduce any potential project impacts on burrowing owl to a less-than-significant level.

Tricolored Blackbird Mitigation

As stated above, M&A biologists have been on both project sites multiple times over the last 20 years. Tricolored blackbirds have not been observed on-site and on-site habitat for the species is marginal, as the sites are routinely disturbed, water is not present on SMP 39, and Arroyo Mocho at SMP 40 is typically dry during the middle to end of the nesting season. The tricolored blackbird prefers nesting near water. The preconstruction surveys proposed in the Draft EIR to determine if tricolored blackbird is nesting on-site are sufficient to detect the species' presence. The species can also be looked for during the burrowing owl surveys, which will take place at the same time as tricolored blackbird nesting season.

Nesting Bird and Raptor Mitigation
As discussed above, the CDFW has not released an official statement that the avian breeding season has changed. In M&A's experience when permits are acquired from the CDFW, the nesting season window can vary slightly, as different geographic regions have slightly different nesting windows.

In addition, with regard to nest detection, while grassland nesting birds are difficult to detect, M&A biologists are experienced in surveying for ground-nesting and short grass nesting birds and have had success finding nests in the past. Typically, if pedestrian walking transect surveys are conducted by two or more people walking closely together, nests will be found. Further, if experienced consulting biologists are hired to conduct the nesting bird surveys, the biologists will know the appropriate methods to survey for nesting passerine birds, including the Loggerhead Shrike, and raptors. The most suitable habitat for Loggerhead Shrike on the project sites is along SMP 40's riparian corridor, which will be preserved by the project. Many trees along the riparian corridor and south of the project site could serve as a blind for the observer to hide behind and watch bird behavior to determine if birds are nesting. Finally, the qualified biologist making the nesting buffer determination would provide a report to the City of Livermore and communication between the City of Livermore, the applicant's biologist, and the construction team would be ongoing throughout the construction period. The biologist will ensure that the buffer is maintained throughout construction to ensure that the nesting attempt is protected.

While development does remove potential bird nesting habitat, the project applicant is avoiding the riparian corridor on the SMP 40 project site, which is the most valuable nesting habitat on-site. Additionally, in accordance with City of Livermore General Plan Policy OSC-1.3 P1, as presented on page 4.3-21 of the Draft EIR, the proposed project is required to landscape with native vegetation.

Based on the above, changes to the Draft EIR mitigation for nesting birds and raptors are not warranted.

<u>Comment II(C) Related to Construction Noise</u>
As discussed on page 4.6-21 of the Draft EIR, due to the substantial distance between SMP 39 and the sensitive noise receptors, it was anticipated, based on the professional judgment of the project noise consultant, that construction noise associated with SMP 39 would be below the City of Livermore's exterior noise level threshold at the nearest sensitive receptor locations. In response to the comments regarding construction noise impacts associated with SMP 39, Salter, the project noise consultant who prepared the project-specific Environmental Noise Studies used in the Draft EIR analysis, estimated the construction noise levels associated with SMP 39 at the nearest noise sensitive receptor to the site (see Attachment 2). In addition, in response to the comments regarding construction noise impacts associated with SMP 40, Salter provided an updated analysis of construction noise associated with SMP 40 (see Attachment 3). Because construction is not permitted during nighttime hours (pursuant to Section 9.36.080 of the Livermore Municipal Code), the applicable noise level threshold for construction noise levels associated with SMP 39 and SMP 40 would be 70 dBA L_{max}, as established by the City of Livermore (see Draft EIR page 4.6-14 and General Plan Policy N-1.5 P3).

The commenter alleges that Table 9-7, Land Use Compatibility Guidelines for Exterior Noise, of the General Plan applies to construction noise; this is not correct. As stated in General Plan Policy N-1.1 P4, presented on page 4.6-8 of the Draft EIR, the City shall use the Land Use Compatibility Guidelines for Exterior Noise (measured in dBA CNEL or L_{dn}) contained in Table 9-7 (i.e., the DNL 60 dBA exterior noise level standard referenced in the comment letter) to direct the siting, design, and insulation of new development to reduce exposure to excessive noise. Construction

noise standards are established in General Plan Policies N-1.5 P2, P3, and P4, as presented on page 4.6-12 of the Draft EIR, which do not include a DNL standard. In particular, General Plan Policy N-1.5 P3 states that in order to allow for temporary construction, demolition or maintenance noise and other necessary short-term noise events, the stationary noise standards in Policy N-1.5.P1 shall not be exceeded within the receiving land use by more than 15 dBA for any period of time. General Plan Policy N-1.5.P1 requires that industrial and commercial uses be designed and operated so as to avoid the generation of noise effects on surrounding sensitive land uses from exceeding 55 dBA L_{50} during the hours of 7:00 AM to 10:00 PM and 45 dBA L_{50} during the hours of 10:00 PM to 7:00 AM. Thus, for analysis purposes of project construction noise within the Draft EIR, the threshold of significance for the maximum allowable construction noise level at a sensitive receptor is 70 dB L_{max} during daytime hours and 60 dB L_{max} during nighttime hours (i.e., 15 dB above the numerical criteria listed in P1). Consequently, the DNL 60 dBA exterior noise level standard included in the comment letter would not apply to the temporary, intermittent construction noise associated with either SMP 39 or SMP 40.

Based on the comments regarding construction noise impacts associated with SMP 39 and SMP 40, pages 4.6-21 through 4.6-24 of the Draft EIR are hereby revised as follows. Such revisions are also reflected in the Revised Environmental Noise Studies for SMP 39 and SMP 40, included as Attachment 2 and Attachment 3 to this memo. It should be noted that all revisions to pages 4.6-22 through 4.6-24 of the Draft EIR previously included in the Final EIR are also shown in ~~strikethrough~~ and <u>double underlined</u> text below.

> ~~Due to the substantial distance between SMP 39 and the sensitive noise receptors, it was anticipated that~~ <u>The noise levels generated by construction equipment would vary greatly depending upon factors such as the type and specific model of the equipment, the operation being performed, the condition of the equipment and the prevailing wind direction. Table 4.6-6 shows maximum noise levels associated with each piece of construction equipment anticipated to be used during construction of SMP 39 at a reference level of 50 feet, as well as at 2,640 feet, which is the distance from Building 1 on the SMP 39 site to the nearest sensitive receptors (the residences located across Isabel Avenue to the east). Based on the project-specific construction schedule assumed in the air quality analysis conducted for SMP 39, Table 4.6-7 summarizes the anticipated construction equipment associated with each phase of project construction, and the relative sound levels at the nearest residential property (approximately 2,640 feet away), assuming that equipment is running simultaneously during each phase of construction. As shown in Table 4.6-7,</u> construction noise associated with SMP 39 <u>would range between 59 and 61 dBA L_{max},</u> ~~be~~ <u>which would be</u> below the City of Livermore's exterior noise level threshold of ~~60~~ <u>70</u> dBA ~~DNL~~ <u>L_{max}</u> at the nearest sensitive receptor locations. ~~Thus, construction noise levels for SMP 39 were not evaluated as part of the Environmental Noise Study prepared for SMP 39. Therefore, the following discussion focuses on SMP 40 and the off-site trail connections.~~

Table 4.6-6
Typical Construction Equipment Noise at SMP 39

Source: Salter, 2024.

As shown in ~~the table~~ Table 4.6-7, construction of SMP 40 is predicted to generate noise levels ranging between ~~16~~ 70 to ~~32~~ 73 dBA L_{max} at the nearest noise-sensitive receptors. As discussed in detail above, for analysis purposes of project construction noise within this EIR, a threshold of significance for the maximum allowable construction noise level at a sensitive receptor has been assumed to be 70 dB L_{max} during daytime hours ~~and 60 dB L_{max} during nighttime hours~~. Because construction is not permitted during nighttime hours (pursuant to Section 9.36.080 of the Livermore Municipal Code), the 60 dB L_{max} noise level standard for nighttime hours would not apply to the proposed project. ~~Accordingly~~ Nonetheless, the maximum predicted construction noise level of ~~32~~ 73 dBA L_{max} associated with SMP 40 would be ~~below~~ above the threshold~~s~~ of significance being applied.

The three potential off-site trail connection options would be located approximately 160 feet, 150 feet, and 200 feet, respectively, west of the nearest single-family residences. The anticipated construction activities required for the trail connection options would use construction equipment anticipated to generate maximum noise levels of up to 85 dB at a distance of 50 feet. As previously noted, stationary noise sources lessen at a rate of approximately six dB per doubling of distance from the source. Therefore, at a distance of 160 feet, construction equipment associated with Trail Connection Option 1 would generate maximum noise levels of up to 75 dB L_{max}; at a distance of 150 feet, construction equipment associated with Trail Connection Option 2 would generate maximum noise levels of up to 76 dB L_{max}; and at a distance of 200 feet, construction equipment associated with Trail Connection Option 3 would generate maximum noise levels of up to 73 dB L_{max}. Thus, construction activities associated with development of the off-site trail connection options would exceed the thresholds of significance being applied of 70 dB L_{max} during daytime hours ~~and 60 dB L_{max} during nighttime hours~~.

Based on the above, construction-related noise associated with SMP 39 ~~and SMP 40~~ would not result in the generation of a substantial temporary increase in ambient noise levels in the vicinity of the project in excess of standards established in the local

general plan or noise ordinance, or applicable standards of other agencies. However, while construction activities are temporary in nature and would be exempt during the hours of 7:00 AM to 8:00 PM, construction-related noise associated with SMP 40 and the off-site trail connection could result in disturbance to existing noise-sensitive land uses in the project vicinity.

Therefore, construction-related noise associated with the proposed project could be considered to result in generation of a substantial temporary increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies, and impacts would be considered ***significant***.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

4.6-1(a) *Prior to issuance of a grading permit for SMP 40, the project applicant shall prepare a construction noise management plan that identifies measures to be taken to minimize construction noise on surrounding sensitive land uses and include specific noise management measures to be included within the plans and specifications for SMP 40, subject to review and approval by the City of Livermore Community Development Department. The project applicant shall demonstrate, to the satisfaction of the City that the project complies with the following:*

- *Consistent with the Livermore Municipal Code, construction shall be limited to weekdays between the hours of 7:00 AM and 8:00 PM and Saturdays through Sunday between the hours of 9:00 AM and 6:00 PM.*
- *Either a temporary noise barrier shall be built prior to development of the planned berm on the east side of the project site, or the berm shall be built prior to construction activities. The barrier/berm shall be a minimum of 10 feet tall. The barrier can be field-built provided it meets the following criteria:*
  - *The barrier shall be constructed to have a minimum surface density of four pounds per square foot (psf). For example, a stud wall with exterior-grade plywood sheathing and a stucco finish (or two layers of 5/8-inch thick plywood).*
  - *The barrier shall be free of cracks, and drainage holes/slots along the bottom of the barrier shall be kept to a minimum. Where needed, drainage holes/slots shall be covered by one psf mass-loaded vinyl flaps (e.g., Kinetics KNM-100) so water can flow around the vinyl and still drain.*
  - *Joints between sheathing layers shall be offset by 16 inches minimum.*
- *Contractors shall use "quiet" models of air compressors and other stationary noise sources, where technology exists.*
- *Internal combustion engine-driven equipment shall be equipped with mufflers which are in good condition and appropriate for the equipment.*
- *Stationary noise-generating equipment, such as air compressors and portable power generators, shall be located as far away as possible from adjacent property lines.*

- *Staging areas and construction material areas shall be located as far away as feasible from adjacent residences.*
- *All unnecessary idling of internal combustion engines should be prohibited.*
- *The contractor shall designate a "noise disturbance construction superintendent" who will be responsible for tracking and responding to any complaints about construction noise. The noise disturbance construction superintendent shall determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and shall require that reasonable measures are implemented to correct the problem. The telephone number for the noise disturbance construction superintendent shall be posted at the construction site and included in any construction notices sent to neighbors.*

4.6-1(b) *Prior to issuance of a grading permit for the chosen off-site trail connection option, the project applicant shall prepare a construction noise management plan that identifies measures to be taken to minimize construction noise on surrounding sensitive land uses and include specific noise management measures to be included within the plans and specifications for the trail connection option, subject to review and approval by the City of Livermore Community Development Department. The project applicant shall demonstrate, to the satisfaction of the City that the project complies with the following:*

- *All heavy construction equipment used on the proposed project shall be maintained in good operating condition, with all internal combustion, engine-driven equipment fitted with intake and exhaust mufflers that are in good condition.*
- *All mobile or fixed noise producing equipment used on the proposed project that is regulated for noise output by a local, state, or federal agency shall comply with such regulations while ~~in the source of~~ involved with a project activity.*
- *Where feasible, electrically-powered equipment shall be used instead of pneumatic or internal combustion powered equipment.*
- *All stationary noise-generating equipment shall be located as far away as possible from the nearest residential uses.*
- *Signs prohibiting unnecessary idling of internal combustion engines shall be posted at entrances to construction sites and at construction equipment staging areas.*
- *The use of noise-producing signals, including horns, whistles, alarms and bells shall be for safety warning purposes only.*
- *The use of temporary sound barriers shall be incorporated along the outer work area of the construction site, east of Isabel Avenue/SR 84. Barrier height and location(s) shall be determined by a qualified acoustical engineer to ensure that the resultant construction noise levels at the nearest residence would meet the applicable standard. The sound barrier fencing shall consist of 0.5-inch plywood or minimum STC 27 sound curtains placed to shield nearby sensitive receptors. The plywood barrier shall be free from gaps, openings, or penetrations to ensure maximum performance.*

Due to the addition of Table 4.6-7, all subsequent tables included in Chapter 4.6, Noise, of the Draft EIR are hereby renumbered accordingly.

While a new mitigation measure (Mitigation Measure 4.6-1[a]) has been added as part of the text revisions above, under *Laurel Heights Improvement Ass'n v Regents of Univ. of Cal.* (1993) 6 C4th 1112 (*Laurel Heights II*) and Section 15088.5 of the State CEQA Guidelines,[2] a lead agency is only required to recirculate a draft EIR when "significant new information" is added to the document after public notice is given of the availability of the Draft EIR for public review under Section 15087 but before certification. Pursuant to CEQA Guidelines Section 15088.5, the term "information" can include changes in the project or environmental setting, as well as additional data or other information. New information added to an EIR is not considered "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the City has decided not to implement. "Significant new information" requiring recirculation includes any of the following:

1. A new significant environmental impact would result from the project or for a new mitigation measure proposed to be implemented.
2. A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
3. A feasible project alternative or mitigation measure considerably different from other previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to adopt it.
4. The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

In the case of the proposed project, the Draft EIR already determined that the proposed project would result in a significant temporary construction noise impact (see page 4.6-23 of the Draft EIR). Thus, a new noise impact has not been identified in response to public comments. Rather, in response to public comments, a new construction noise mitigation measure (Mitigation Measure 4.6-1[a]) has been added that would clearly lessen the potential environmental impact to a less-than-significant level, and the applicant has agreed to adopt Mitigation Measure 4.6-1(a). In addition, the requirements of Mitigation Measure 4.6-1(a) are similar to the requirements already included in Mitigation Measure 4.6-1 of the Draft EIR. Thus, according to Section 15188.5(a)(3), recirculation is not required.

The Mitigation Monitoring and Reporting Program, as well as the Findings, Facts in Support Of Findings, and Statement Of Overriding Considerations, will be updated in accordance with the changes shown above and included in the staff report packet for the City Council hearing on the proposed project.

This letter is to serve as further comment in addition to all previously submitted comments and documents by Golden State Environmental Justice Alliance.

CalEnviroScreen Information

CalEnviroScreen is a mapping tool that helps identify California communities that are most affected by many sources of pollution, and where people are often especially vulnerable to pollution's effects. CalEnviroScreen uses environmental, health, and socioeconomic information to produce scores for every census tract in the state. The scores are mapped so that different communities can be compared. An area with a high score is one that experiences a much higher pollution burden than areas with low scores. CalEnviroScreen ranks communities based on data that are available from state and federal government sources. CalEnviroScreen is updated and maintained by The Office of Environmental Health Hazard Assessment, on behalf ofthe California Environmental Protection Agency.

CalEnviroScreen Data on : SMP 38/39/40 EIR Project Location/Area

The above listed project is in census tract **(6001451300)**. Overall, when compared to other census tracts, the project site census tract is in the 83rd percentile regarding pollution. As far as pollution burden is concerned, this census tract is in the 85th percentile. In terms of Ozone, this census tract is in the 85th percentile, Particulate Matter 2.5 98th percentile, Diesel Particulate Matter 41st percentile, Toxic Releases 43rd percentile and Traffic 8th percentile to name a few.

Conclusion

Consider the above referenced information when making this important decision. Realize that you and the citizens of this area face some of the WORST POLLUTION in the entire state of California.

It is the responsibility of the City's elected and appointed officials to make environmentally responsible development decisions. Based on the CalEnviroScreen data, this is more than sufficient evidence of the further air quality impacts that the citizenry of Livermore will continue to encounter with further development of another warehouse. We are not against development, as we believe it is necessary for further economic growth in our current society. Development needs to be conducted with the highest of expectations to ensure the local population does not suffer further air quality burdens.

We stand by our comments and believe the EIR is flawed and should be redrafted and recirculated for public review.

Respectfully Submitted,

Pete Sheehan

Glossary of Terms

Ozone - Amount of daily maximum 8-hour Ozone concentration

Particulate Matter 2.5 - Annual mean PM 2.5 concentrations

Diesel Particulate Matter - Diesel PM emissions from on-road and non-road sources

Toxic Releases - Toxicity-weighted concentrations of modeled chemical releases to air from
facility emissions and off-site incineration.

Traffic -Traffic density, in vehicle-kilometers per hour per road length, within 150 meters of the census tract boundary.

Re: Public Comment on SMP-39 and SMP-40 Project
Planning Commission Meeting March 5, 2024

Planning Commission of the City of Livermore:

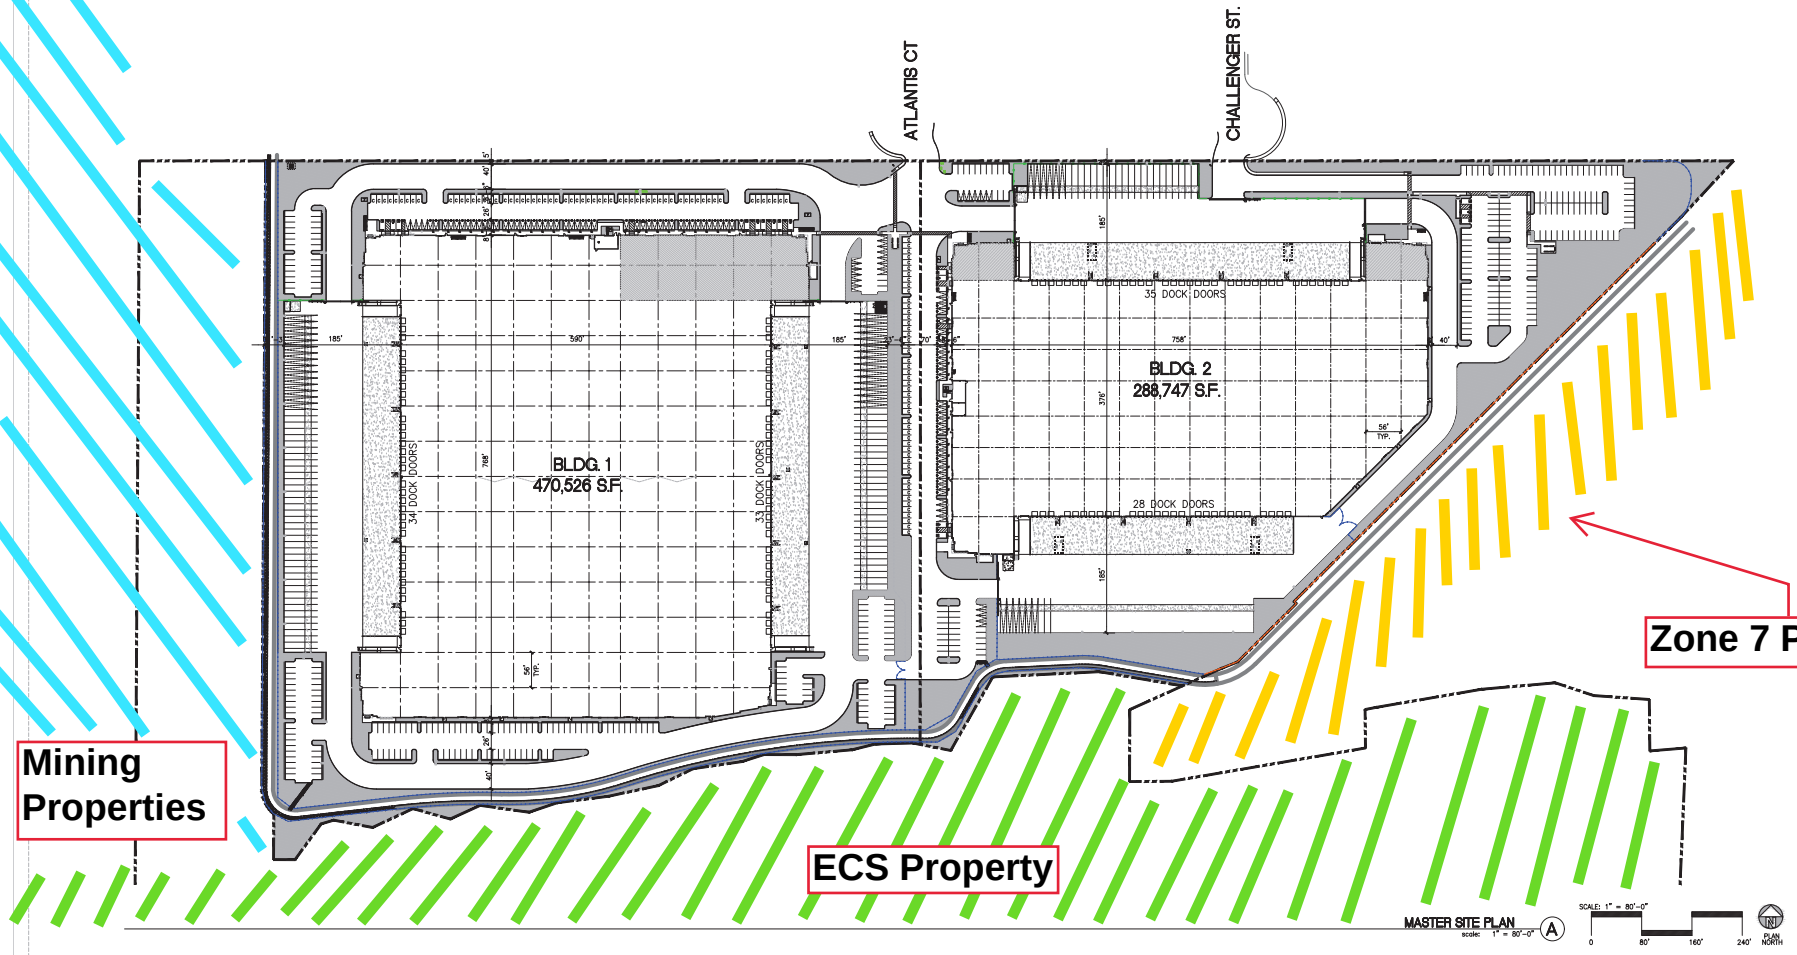
We represent El Charro Spur LLC, which owns the approximately 69-acre parcel ("**ECS Property**") directly south of and abutting the SMP-40 property, which is the subject of the proposed SMP-39 and SMP-40 project before the Planning Commission on March 5, 2024. On behalf of El Charro Spur LLC, we submit this public comment regarding the SMP-39/SMP-40 project. As explained in more detail below, the SMP-39/SMP-40 project proposes in part to construct a public trail along the Arroyo Mocho that will create a significant health and safety hazard that was not acknowledged or studied in the project's Environmental Impact Report (SCH# 2023010091) ("**EIR**") nor addressed in the project's conditions of approval.

Enclosed with this letter is a copy of Exhibit C to the proposed Development Agreement for SMP-40, which we have annotated for illustrative purposes. Exhibit C depicts that the SMP-39/SMP-40 project will include construction of a public trail running along the southern and western property lines of the SMP-40 property. This proposed public trail on the SMP-40 property proposes to continue at the southeast corner of the SMP-40 property onto the Alameda County Flood Control and Water Conservation District (Zone 7) property abutting the SMP-40 property's eastern property line, proceeding northeasterly, along the course of Zone 7's present maintenance road, which is not currently accessible to the public. Evidently, the proposal entails opening the Zone 7 maintenance road for the public's use as a trail. The proposed public trail would follow the course of the Arroyo Mocho, which passes through the Zone 7 property and along the northern edge of the ECS Property.

Exhibit C indicates that a chain link fence will be constructed along the northern and southern edges of the trail segment on the SMP-40 property. When the trail reaches the Zone 7 property, the northerly fence will connect to an existing Zone 7 fence that lies north of the

maintenance road. However, Exhibit C shows that the southerly fence will simply end at the Zone 7 property. This means that, if the path is constructed as shown in Exhibit C, members of the public using the trail would be able to simply leave the Zone 7 portion of the proposed path and enter the Arroyo Mocho which is immediately adjacent south of the path, without restriction. This in turn would permit members of the public to head west through the Arroyo Mocho onto El Charro Spur's private property without restriction, and further west, access the active mining operations of Vulcan Materials on the properties north and west of the ECS Property. The public cannot currently access these areas because the Zone 7 property, and maintenance road, are fenced off. The annotations on Exhibit C that we have added are intended to show the locations of the ECS Property, Zone 7 property, and mining properties.

Providing the public unfettered direct access to the Arroyo Mocho, private property and an active mining operation, both in the dry months and in the rainy season when it regularly carries high water volumes, are health and safety hazards that must be considered as part of the SMP-39/SMP-40 project. However, the EIR does not address the fact that the proposed trail may be creating this dangerous public safety hazard. The EIR discusses the potential routes for the trail (see, e.g., EIR p. 3-22), but it does not analyze the risk posed by providing public access to the Arroyo Mocho and mining properties to the west nor what safety features the trail would have, such as fencing, to protect members of the public using it. The SMP-40 Development Agreement and the SMP-39/SMP-40 project conditions of approval also do not address how this safety issue will be mitigated. At minimum, the conditions of approval should require the project applicant to work with Zone 7 to ensure that a fence is constructed on the Zone 7 property south of the trail so that the fence south of the path on the SMP-40 property can connect to it. The ECS Property owner and the owner of the mining properties cannot themselves block access to their properties from the proposed public path because they cannot construct obstructions within the Arroyo Mocho. That is why public access must be contained continuously along the path on the Zone 7 property.



We ask that the Planning Commission consider the safety issues raised by this letter when evaluating the SMP-39/SMP-40 project and recommend appropriate conditions and mitigation measures to address them.

Regards,

Margaret R. Akerblom

Title: MASTER SITE PLAN

Project Number: 19177
Drawn by: DZ
Date: 11/21/2023
Revision:

Sheet: A1.0

IN THE CITY COUNCIL OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION APPROVING GENERAL PLAN AMENDMENT (GPA) 21-001, VESTING TENTATIVE PARCEL MAP (SUB) 21-008, VESTING TENTATIVE TRACT MAP (SUB) 21-009, SITE PLAN DESIGN REVIEW (SPDR) 21-008, SUBJECT TO THE CONDITIONS OF APPROVAL, FOR THE SMP 39/SMP 40 PROJECT

The City of Livermore ("City") received applications General Plan Amendment (GPA) 21-001, Annexation/Prezoning (APZ) 21-003, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, Site Plan Design Review (SPDR) 21-008, Pre-annexation and Development Agreement (DA) 21-001, and Pre-annexation and Development Agreement (DA) 23-002 for the SMP 39/SMP 40 Project ("Project") to develop approximately 1.51 million square feet of industrial development and associated parking, lighting, landscaping, and other improvements.

At a duly noticed public hearing on March 5, 2024, the Planning Commission considered the Project and staff recommendation, heard public testimony, made the necessary findings and adopted Planning Commission Resolution No. 03-34, attached hereto as Exhibit A, containing the Planning Commission's actions and/or recommendations thereon.

On March 25, 2024, the City Council held a duly noticed public hearing to consider the Project, Planning Commission and staff recommendations, all public comments and testimony, and findings.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Livermore that prior to taking action on the Project, and at a properly noticed public hearing, the City Council reviewed written and oral staff reports, conducted a public hearing on the Project and took testimony, and received into the record all pertinent documents related to the Project (collectively, the "Record Evidence"). The City Council's determination is based on the Record Evidence, which is incorporated into this Resolution by reference.

BE IT FURTHER RESOLVED that the City Council of the City of Livermore has considered the Record Evidence and adopted a resolution certifying a Final Environmental Impact Report.

BE IT FURTHER RESOLVED that the City Council of the City of Livermore has considered the findings made in Planning Commission Resolution No. 03-24, attached hereto as Exhibit A, and the City Council hereby adopts the same findings by this reference and incorporates them as their own findings as part of this resolution. Based upon the City Council's own independent review of the Record Evidence and considerations, the City Council hereby approves General Plan Amendment (GPA) 21-

001, attached hereto as Exhibit B, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, and Site Plan Design Review (SPDR) 21-008, subject to the Conditions of Approval, attached hereto as Exhibit C, for the SMP 39/SMP 40 Project.

BE IT FURTHER RESOLVED that the City Council of the City of Livermore directs the Planning Manager to file a Notice of Determination with the Alameda County Clerk.

The documents that constitute the record of proceedings upon which this decision is based can be found in the City Clerk's Office, 1052 S. Livermore Avenue, in Livermore California.

On motion of Council Member _____, seconded by Council Member _____, the foregoing resolution was passed and adopted on March 25, 2024, by the following vote:

Exhibit A – Planning Commission Resolution No. 03-24
Exhibit B – General Plan Amendment (GPA) 21-001
Exhibit C – Conditions of Approval

IN THE PLANNING COMMISSION OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION RECOMMENDING THAT THE CITY COUNCIL APPROVE GENERAL PLAN AMENDMENT (GPA) 21-001, ANNEXATION/PREZONING (APZ) 21-003, ZONING MAP AMENDMENT (ZMA) 21-002, PLANNED DEVELOPMENT-INDUSTRIAL (PD-I) 22-001, DEVELOPMENT CODE AMENDMENT (DCA) 21-005, VESTING TENTATIVE PARCEL MAP (SUB) 21-008, VESTING TENTATIVE TRACT MAP (SUB) 21-009, SITE PLAN DESIGN REVIEW (SPDR) 21-008, PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA) 21-001, AND PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA) 23-002 FOR THE SMP 39/SMP 40 PROJECT

The City received an application General Plan Amendment (GPA) 21-001, Annexation/Prezoning (APZ) 21-003, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, Site Plan Design Review (SPDR) 21-008, Pre-annexation and Development Agreement (DA) 21-001, and Pre-annexation and Development Agreement (DA) 23-002 for the SMP 39/SMP 40 Project ("Project") to develop approximately 1.51 million square feet of industrial development and associated parking, lighting, landscaping, and other improvements.

On March 5, 2024, the Planning commission held a duly noticed public hearing to consider the Project and staff recommendations, all public comments and testimony, and findings.

NOW, THEREFORE, BE IT RESOLVED, by the Planning Commission of the City of Livermore that prior to taking action on the Project, and at a properly noticed public meeting, the Planning Commission reviewed written and oral staff reports, conducted a public hearing on the Project and took testimony, and received into the record all pertinent documents related to the Project (collectively, the "Record Evidence"). The Planning Commission's determination is based on the Record Evidence, which is incorporated into this Resolution by reference.

BE IT FURTHER RESOLVED with respect to General Plan Amendment (GPA) 21-003 (attached hereto as Exhibit A) the Planning Commission of the City of Livermore finds based on the information presented:

1. The amendment is internally consistent with all other provisions of the General Plan.

   Response: The General Plan currently designates the SMP 39, SMP 40, and the Additional Annexation Only Parcels as Open Space/Sand and Gravel (OSP/S&G) and is adjacent to land designated by the General Plan as Low-Intensity Industrial (LII). The Project proposes to modify the General Plan designation for SMP 39 and SMP 40 to LII to permit light industrial development and the Additional Annexation Only Parcels to Parks, Trailways, and Recreation Areas (OSP). Development is not proposed on the Additional Annexation Only Parcels and the OSP designation is

consistent with the parcels' natural features and attributes, including their proximity to Arroyo Mocho. The change to a LII land use designation for the site supports and implements the General Plan and will be compatible with the existing and adjacent industrial uses in the Oaks Business Park and Livermore Municipal Airport, maximizing the use of existing public streets, services, and facilities. Therefore, the proposed changes are internally consistent with all other provisions of the General Plan.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

   Response: The proposed General Plan Amendment will enable SMP 39 and SMP 40 to be developed with light industrial uses and achieve the General Plan Goals, Objectives, and Policies to focus light industrial uses around the Livermore Municipal Airport. In addition, the development will not include objectionable levels of noise, vibration, odors, glare, or hazard that would create a nuisance for surrounding uses. Planned Development – Industrial (PD-I) 22-001 zoning will implement the General Plan land use designation through use restrictions and development standards to ensure orderly and thoughtful development of the site with respect to the site's location and physical characteristics. Development is not proposed on the Additional Annexation Only Parcels. The Additional Annexation Only Parcels will be designated as OSP designation and rezoned to Open Space – Floodplain which is consistent with the parcels' natural features and attributes, including their proximity to Arroyo Mocho.

   In addition, the Project, including the necessary General Plan and Zoning amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA) and found to have no adverse effect on the environment with mitigation incorporated, with the exception of converting agricultural land to non-agricultural uses as defined by the Alameda County Local Agency Formation Commission. However, the California Department of Conservation's Farmland Mapping and Monitoring Program does not classify the project site as Farmland. Therefore, the proposed amendment would not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

3. The affected site is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

   Response: Based on the plans and specifications provided by the Developer and reviewed by City staff, the SMP 39 and SMP 40 sites are physically suitable to

accommodate the industrial land use designation at the proposed intensity. In addition, the Project, including the necessary General Plan and Zoning Map Amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA), which found the site was suitable in terms of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment and disposal, etc.). The proposed land use designation and the anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

BE IT FURTHER RESOLVED with respect to Annexation/Prezoning (APZ 21-003), Development Code Amendment (DCA) 21-005, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001 (attached hereto as Exhibits B and C) the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed amendment is consistent with the General Plan and any applicable Specific Plan.

   Response: The SMP 39 and SMP 40 properties will be prezoned to PD-I 22-001, which is consistent with the proposed General Plan land use designation of LII. The zone will be similar to the adjacent existing industrial uses and developed in compliance the PD-I 22-001 and Livermore Development Code standards. In addition, the Additional Annexation Only Parcels will be prezoned to OS-F zone, which is consistent with the proposed General Plan land use designation of OSP.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

   Response: Based on staff analysis contained in the Planning Commission staff report and the SMP 39/SMP 40 EIR, there is no evidence that approval of the Zoning Map Amendment will be detrimental to the public interest, health, safety, convenience, or welfare of the City.

3. The proposed amendment is internally consistent with other applicable provisions of this Development Code.

   Response: The proposed Zoning Map Amendment would prezone SMP 39 and SMP 40 to PD-I 22-001 and prezone the Additional Annexation Only Parcels to OS-F. Prezoning is required prior to annexation of territory into the City. Therefore, the proposed amendment is consistent with all other applicable provisions of the Development Code.

4. The affected site is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm

drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the requested zone designation and the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

Response: Based on the plans and specifications provided by the Developer and reviewed by City staff, the SMP 39 and SMP 40 sites are physically suitable to accommodate the industrial land use designation at the proposed intensity. In addition, the Project, including the necessary General Plan and Zoning Map Amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA), which found the site was suitable in terms of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment and disposal, etc.). The proposed land use designation and the anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

BE IT FURTHER RESOLVED with respect to the Vesting Tentative Parcel Map (SUB) 21-008 and Vesting Tentative Tract Map (SUB) 21-009 the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed map is consistent with the General Plan and any applicable specific plan, any policy or guideline implementing the General Plan (including the City's Design Standards and Guidelines), or other applicable provisions of this Development Code.

   Response: The Vesting Tentative Parcel Map and Vesting Tentative Tract Map were submitted with applications for a General Plan Amendment and Zoning Map Amendments (Annexation/Prezoning). Based on the approvals to change the General Plan land use designation to an industrial use and the proposed PD-I 22-001 zone, the proposed maps are consistent with the General Plan and the Development Code.

2. The site is physically suitable for the proposed type of development.

   Response: The development of approximately 1.51 million square feet of industrial development is consistent with the Low Intensity General Plan land uses, PD-I 22-001 zoning, and the Livermore Development Code, which confirms the proposed intensity and type of development are suitable for the site.

3. The design of the subdivision or the proposed improvements will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. Notwithstanding the foregoing, the Commission or Council may approve a tentative map if an Environmental Impact Report was prepared with respect to the project and a statement of overriding considerations was made to the effect that specific economic, social, or other considerations make infeasible the

mitigation measures or project alternatives identified in the Environmental Impact Report.

Response: The project involves the development of two undeveloped sites with industrial uses. An Environmental Impact Report (EIR) was prepared for the project. The EIR finds that with mitigation measures (protocol surveys, state and federal agency coordination, and avoidance strategies for special status species), any potential impacts to fish or wildlife or their habitat will be reduced to less than significant.

4. The design of the subdivision or the type of improvements will not cause serious public health problems.

   Response: An EIR has been prepared for the project. The EIR finds that with mitigation measures, any potential impacts to public health will be reduced to less than significant.

5. The design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision (The Commission or Council may approve a tentative map if it finds that alternative easements for access will be provided, and that these will be substantially equivalent to ones previously acquired by the public. This Subparagraph shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction, and no authority is hereby granted to the Commission to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision.)

   Response: There are no existing easements on SMP 39 or SMP 40. The Project includes an at-grade, paved trail within a 38.5-foot trail easement along the SMP 39 frontage on West Jack London Boulevard, consistent with the City's Active Transportation Plan. There is an access easement and public use easements on a portion of the Additional Annexation Only Parcels. However, this area will not be developed as part of the Project, with the exception of an at-grade trail along a portion of the Additional Annexation Only Parcels. The design of the subdivisions and the proposed development improvements avoids these easements and thus does not conflict with any public easements.

6. Any proposed phases and their proposed sequence of construction are identified on the submitted tentative map. The City may impose reasonable conditions relating to the filing of multiple final maps in conjunction with the approval of the tentative map (Section 66456.1).

   Response: The subdivision does not involve multiple phases.

BE IT FURTHER RESOLVED with respect to the Site Plan Design Review (SPDR) 21-008 the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed development will be allowed within the subject zone.

   Response: Based on the approval of the General Plan Amendment application to change the site to industrial use, in concert with prezoning the site to Planned Development – Industrial 22-001 zoning district, which permits light industrial uses and establishes appropriate development standards, the proposed development of industrial buildings is permitted within the subject zone.

2. Be designed such that:
   a. The project will not be detrimental to the public health, safety, or general welfare, and not detrimental to adjacent property;
   b. Architectural design and functional plan of the structure(s) and related improvements are of reasonable aesthetic quality and compatible with adjacent developments;
   c. Structure(s) and related improvements are suitable for the proposed use of the property and provide adequate consideration of the existing and contemplated uses of land and orderly development in the general area of the subject site; and
   d. The project's site plan and design is consistent with the City's Design Standards and Guidelines.

   Response: An Environmental Impact Report (EIR) was prepared for the project. The EIR does not find any significant impacts on the public health, safety, or general welfare to adjacent properties. Based on the review of the development plans for the Project, the design of the proposed development is compatible with adjacent developments and consistent with the Design Standards and Guidelines. No aspect of the proposed development will be detrimental to the existing uses of land and the orderly development in the general area.

3. Be designed to include the following criteria, as applicable:
   a. Compliant with this Chapter, this Development Code, Municipal Code Title 15 (Buildings and Construction), and all other applicable City regulations and policies;
   b. Efficient site layout and design;
   c. Compatible and appropriate scale to neighboring properties and developments;
   d. Efficient and safe public access (both pedestrian and vehicular) and parking;
   e. Appropriate and harmonious arrangement and relationship of proposed structures and signs to one another and to other development in the vicinity, based on good standards of design;
   f. Appropriate relationship to land use and development of adjacent properties, including topographic and other physical characteristics of the land;

g. Proper site utilization and the establishment of a physical and architectural relationship to existing and proposed structures on the site;
h. Compatible architectural style with the character of the surrounding area, both to avoid repetition of identical design where not desired, and to ensure compatibility in design where desired;
i. Harmonious relationship with existing and proposed developments and the avoidance of both excessive variety and monotonous repetition;
j. Compatible in color, material, and composition of the exterior elevations to neighboring visible structures;
k. Appropriate exterior lighting which provides for public safety and is not of a nature that will constitute a hazard or nuisance to adjacent properties;
l. Compatible in scale and aesthetic treatment of proposed structures with public areas;
m. Appropriate open space and use of water efficient landscaping; and
n. Consistent with the General Plan and any applicable Specific Plan.

Response: The Project is designed to be compatible and in scale with the existing surrounding developments. The Project is designed to provide adequate on-site improvements including parking, lighting and landscaping. Based on the design review of the project, as documented in the Planning Commission staff report, the Project meets all the design criteria identified above.

BE IT FURTHER RESOLVED with respect to the Pre-annexation and Development Agreement (DA) 21-001 and Pre-annexation and Development Agreement (DA) 23-002 (attached hereto as Exhibits D and E, respectively) the Planning Commission of the City of Livermore finds based on the information presented:

1. The Development Agreement provides benefit to the City.

   Response: The Development Agreements establish terms and obligations for public benefits, including the Applicant's financial contribution toward and construction of the off-site trail improvements and financial contribution to the City's Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001. For these reasons, the Development Agreements will provide benefit to the City.

2. The Development Agreement is consistent with the purpose, intent, goals, policies, programs, and land use designations of the General Plan, any applicable Specific Plan, and this Development Code.

   Response: The Development Agreements require the Applicant to provide a financial contribution to the City's Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001. This is consistent with the purpose, intent, goals, policies, and programs, of the General Plan. Specifically, this will implement policies and actions in the General Plan Economic Development element to encourage existing businesses to remain and grow in

Livermore, and attract a range of new businesses to locate in Livermore. The Development Agreements also include financial contribution toward and construction of the off-site trail improvements identified in the City's Active Transportation Plan. This is consistent with the purpose, intent, goals, policies, and programs of the General Plan and the Active Transportation Plan to improve bicycle and pedestrian circulation and connectivity.

3. The Development Agreement complies with the requirements of Government Code Sections 65864 through 65869.5

   Response: The proposed development complies with the requirements of Government Code Section 65864 through 65869.5 by securing the terms and timing for off-site improvements and amenities for the benefit of the broader Livermore community.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the Record Evidence and adopted a resolution recommending the City Council certify an Environmental Impact Report.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the findings set forth above and adopts these findings as part of this resolution. Based upon the Planning Commission's independent review of the Record Evidence and considerations, the Planning Commission recommends that the City Council approve General Plan Amendment (GPA) 21-001, Annexation/Prezoning (APZ) 21-003, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, and Site Plan Design Review (SPDR) 21-008, subject to the Conditions of Approval attached hereto as Exhibit F, for the SMP 39/SMP 40 Project.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the findings set forth above and adopts these findings as part of this resolution. Based upon the Planning Commission's independent review of the Record Evidence and considerations, the Planning Commission recommends that the City Council approve Pre-annexation and Development Agreement (DA) 21-001, and Pre-annexation and Development Agreement (DA) 23-002 in substantial conformance with Exhibits D and E, subject to the Conditions of Approval attached hereto as Exhibit F, for the SMP 39/SMP 40 Project.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore recommends the City Council authorize submission of an application to the Alameda County Local Agency Formation Commission to initiate a sphere of influence modification and annexation proceedings for the Subject Property.

BE IT FURTHER RESOLVED, the Planning Commission of the City of Livermore recommends that the City Council direct the Planning Manager to file a Notice of Determination with the Alameda County Clerk, if the project is approved.

The documents that constitute the record of proceedings upon which this decision is based can be found in the Community Development Department, 1052 S. Livermore Avenue, in Livermore, California.
On the motion by Commissioner Leary, seconded by Commissioner Fintschenko, the foregoing Resolution was passed and adopted at the Planning Commission meeting of March 5, 2024, by the following vote:

AYES: ANDERSON, DUNBAR, FINTSCHENKO, KRONZAK, LEARY.
NOES: NONE.
ABSENT: NONE.

CONDITIONS OF APPROVAL

Surface Mining Permit (SMP) 39/SMP 40 Project

Annexation/Prezoning (APZ) 21-003, Pre-Annexation and Development Agreement (DA) 21-001, Pre-Annexation and Development Agreement (DA) 23-002, General Plan Amendment (GPA) 21-001, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, and Site Plan Design Review (SPDR) 21-008

To develop +/- 1.51 million square feet of industrial development and associated parking, lighting, landscaping, and other improvements.

Approved by City Council: March 25, 2024

PROJECT AUTHORIZATION

1. This project shall be in conformance with all City Ordinances, rules, regulations, and policies. The conditions listed below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.
2. The Developer agrees that mining operations shall not occur on the SMP 39 or SMP 40 properties following project approval. Upon annexation of SMP 39 and SMP 40, Developer agrees that all mining permits previously granted by Alameda County on the SMP 39 and SMP 40 properties shall be null and void. No later than 60 days from the date LAFCo approves annexation of the SMP 39 and SMP 40 properties, subject to any extension granted by the City, Developer shall coordinate with Alameda County to complete any final actions required to remove the mining permits and all associated permissions related to mining operations from the SMP 39 and SMP 40 properties.
3. Approval is limited to the conformance of the land use and the Development Code requirements. Use of the property shall be limited to those permitted by the Planned Development-Industrial (PD-I) 22-001 zoning and the approved Pre-Annexation and Development Agreements, as stated in Development Agreement (DA) 21-001 and DA 23-002. Use of the property shall be limited to those permitted by the Planned Development zoning and the Development Code as it exists now or may be amended in the future.
4. Vesting Tentative Parcel Map 11219 (SUB 21-009) and associated Site Plan Design Review (SPDR 21-008) for SMP 40 shall expire unless a Final Map is filed by March 25, 2026, or as long as specified in DA 21-001, unless a request for extension is received and approved by the City.
5. Vesting Tentative Tract Map 8656 (SUB 1-008) for SMP 39 shall expire unless a Final Map is filed by March 25, 2026, or as long as specified in DA 23-002, unless a request for extension is received and approved by the City.

6. Future development on SMP 39 must be reviewed and approved in compliance with a Site Plan Design Review entitlement and other entitlements deemed necessary per Livermore Development Code Chapter 9.

PROJECT SPECIFIC CONDITIONS

Prior to approval of a Final Map, the applicant shall demonstrate conformance to the following conditions to the satisfaction of the Planning Division:

1. The applicant shall respond in writing to all conditions contained in this document and its attachments. Responses shall describe how the condition has been met and shall, where applicable, direct the plan checker to the page and/or drawing detail that demonstrates compliance with the condition. A copy of these responses shall be provided with each set of improvement and revised plans.
2. The development of this project shall conform to the standards of the PD-I 22-001 zone and all applicable sections of the Livermore Development Code, unless otherwise specified in Development Agreement (DA) 21-001 and DA 23-002.
3. Applicant shall comply with terms outlined in DA 21-001 and DA 23-002, as it exists now or may be amended in the future.
4. The applicant shall comply with all applicable Mitigation Measures required by the SMP 39/40 Environmental Impact Report Mitigation Monitoring and Reporting Program, attached hereto as Attachment 1.
5. Avigation Easements shall be required on SMP 39 and SMP 40.
    a. The avigation easement shall:
        i. Identify the potential hazard associated with the proposed project and its location within protected airspace;
        ii. Identify the airport owner's right to clear or maintain the airspace from potential hazards;
        iii. Identify the right to mark potential obstructions and notify aviators of such hazards; and
        iv. Provide the right to pass within the identified airspace.
    b. Neither a separate overflight easement nor a separate real estate disclosure is required for properties for which an avigation easement is required.
    c. An example of an avigation easement is provided in Attachment 2, Livermore Municipal Airport Land Use Compatibility Plan – Appendix E, Sample Implementation Documents.
6. The applicant shall record the deed notification provided in the Livermore Executive Airport - Airport Land Use Compatibility Plan, Chapter 3.3.4.6, on the property for which this discretionary development permit is issued, as follows:

NOTICE OF AIRPORT IN VICINITY
This property is presently located in the vicinity of an airport, within what

is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

7. Project applicant shall file a Federal Aviation Administration (FAA) Form 7460-1 (Notice of Proposed Construction or Alteration) at least 90 days before construction of SMP 39. Filing 120 days ahead of construction is recommended.
8. Given the proximity to the airport, interior building noise levels attributable to exterior sources shall not exceed 45 dB Ldn or CNEL, consistent with Title 24 requirements.
9. Consistent with the PD-I 22-001 zoning, no use shall be permitted which creates an ambient noise level greater than 75 decibels (dBA) beyond the boundaries of the site, nor greater than 60 decibels at the boundary of a Residential District.
10. Consistent with the PD-I 22-001 zoning, on SMP 39, semi-truck access to the site (arrivals and departures) shall be limited to 96 trips between the hours of 10:00 PM and 7:00 AM.
11. Consistent with the PD-I 22-001 zoning, on SMP 40, semi-truck access to the site (arrivals and departures) shall be limited to 40 trips between the hours of 10:00 PM and 7:00 AM.
12. Consistent with the PD-I 22-001 zoning, between the hours of 10:00 PM and 7:00 AM single-event noise levels (e.g., backup alarm, truck brakes, etc.) shall not exceed 55 dBA, measured at the property line of the nearest residential use.

Prior to Building Permit issuance, the applicant shall demonstrate conformance to the following conditions to the satisfaction of the Planning Division:

13. All rooftop mechanical equipment shall be designed to be fully screened from public view by roof parapet or architecturally integrated roof screen. Construction drawings shall include section drawings and roof plans demonstrating conformance with this requirement. To the extent practical, all ground-mounted mechanical equipment shall be located on roof areas. Ground mounted equipment to remain shall be fully screened from public view, as approved by the Community Development Department Director.
14. Project construction shall implement the Bay Area Air Quality Management District (BAAQMD) Basic Construction Mitigation Measures, listed in the BAAQMD CEQA Guidelines, whether or not construction-related emissions exceed applicable Thresholds of Significance.
15. Project construction shall include implementation of BAAQMD's enhanced best management practices to control fugitive dust emissions.
16. Require that construction and structure demolition/modification activities be conducted outside of bird nesting season (February 1 to August 31) to the extent feasible. Construction activities may be permitted to occur within bird nesting season

if a qualified biologist conducts a pre-construction survey, as described in the SMP 39/40 Environmental Impact Report Mitigation Monitoring and Reporting Program, attached hereto as Attachment 1.

17. All trees adjacent to public infrastructure shall use control features like root barriers and engineered soils to prevent infrastructure damage, as approved by the Community Development Department Director.

18. The plans shall show how exterior backflow preventers are screened from public view with landscape or by other appropriate means, as approved by the Community Development Department Director.

19. The applicant shall satisfy the Public Art requirement pursuant to the Livermore Municipal Code (LMC Chapter 12.51) by paying the in-lieu fee.

20. The project applicant and/or contractor shall treat any human remains encountered during ground-disturbing activities in accordance with California Health and Safety Code Section 7050.5.

21. Prior to excavation, grading, or construction on the development site, the applicant shall contact the Alameda County Vector Control Services District to determine if any pre-baiting requirements are necessary to control migration of vermin to adjacent property.

22. All newly constructed buildings shall be all-electric buildings consistent with Chapter 15.26.280 of the Livermore Municipal Code.

23. The plans shall include a photometric plan to verify adequate site lighting and shielding without adverse impact on surrounding streets, properties, the Airport (SMP 39) and the Arroyo Mocho (SMP 40). The plan shall include a height detail of the proposed pole lights. The pole lights shall not exceed 18 feet in height.

24. Gate access from the parking lots/landscaped areas of buildings 1 and 2 to the trail will be provided on the site plans prior to issuance of building permits. Paved ramps shall be provided from each building to their respective parking lots at the access gates to the on-site trail.

25. The project applicant shall be required to develop a Transportation Demand Management (TDM) Program for SMP 39 and SMP 40 as noted in more detail by the SMP 39/40 Environmental Impact Report Mitigation Monitoring and Reporting Program, attached hereto as Attachment 1. The applicant is encouraged to coordinate the TDM Program for SMP 39 and SMP 40 with the existing Oaks Business Park TDM program.

26. The Crape Myrtle trees near the Employee Amenity Area on SMP 40 shall be replaced with Chinese Pistache trees.

27. The project applicant shall provide a revised landscape plan for the western parcel on SMP 40. The revised landscape plan shall meet the Chapter 4.05, Landscape Standards per the Livermore Development Code including but not limited to the landscaping requirements in Table 4.13, Required Shade Trees.

GENERAL CONDITIONS OF APPROVAL

1. Development shall conform to the plans designated by the City as Exhibit B-1. Exhibit B-1 plans shall include but are not limited to subdivision, landscape, and architectural plans (for SMP 39 and 40) reviewed and approved by the Planning Commission and City Council and amended by the applicant to reflect any changes indicated above in the Project Specific Conditions or required by the City in the approval process. The applicant shall submit any required amended plans to the Community Development Department within 90 days of project approval.
2. The Developer shall pay the processing and development impact fees applicable City-wide that are in effect at the time the fees are paid. Payment for said fees shall be made prior to issuance of any building permits.
3. The Community Development Department may approve minor amendments to the permit, provided that the permit is still in substantial conformance with the original approval.
4. Approval of the Site Plan Design Review for SMP 40, Tentative Tract Map, and Tentative Parcel Map entitlements is not an authorization to commence construction. Building construction, alterations, repairs, sign erection, or occupancy shall not be permitted without prior approval of the Building Division through issuance of any required permits.
5. To the extent permitted by law, the project applicant shall defend, indemnify and hold harmless the City, its City Council, its officers, boards, commissions, employees and agents from and against any claim, action, or proceeding brought by a third party against the indemnified parties and the applicant to attack, set aside, or void the approval of the project or any permit authorized hereby for the project, including (without limitation) reimbursing the City its attorney's fees and costs incurred in defense of the litigation. The City may, in its sole discretion, elect to defend any such action with attorneys of its choice.

ENGINEERING DIVISION – DEVELOPMENT

1. Development shall conform to the attached Engineering Considerations for SMP 39 and SMP 40, dated March 5, 2024, respectively (refer to Attachment 3).

BUILDING DIVISION

1. Future development shall conform to California codes adopted at time of Building permit submittal.
2. Building permit issuance is contingent on parcels having been annexed into the City of Livermore and recording of final maps.

FIRE DEPARTMENT

1. On preliminary utility plans, relocate post indicators immediately upstream of single check valves in vaults which feed ASR manifolds and single ASR's
2. FIRE HAZARDS: The project developer shall keep the site free of fire hazards from the start of lumber construction until the final inspection.

3. FIRE CODE: All construction shall conform to the requirements of the 2022 Livermore Fire Code and local ordinances. All required permits shall be obtained prior to work commencement.
4. SITE SAFETY: Site safety during construction shall be in accordance with Fire Code chapter 33.
5. FIRE SPRINKLERS: Automatic fire sprinklers shall be installed in all occupancies in accordance with the 2022 Pleasanton Building, Fire and Residential Codes with local amendments and ordinances.
6. EMERGENCY RESPONDER RADIO: Emergency responder radio coverage shall be provided in accordance with section 510 of the Fire Code.
7. FIRE PROTECTION FACILITIES: Prior to any construction framing, the applicant shall provide adequate fire protection facilities, including, but not limited to a water supply and water flow in conformance to the City's Fire Department Standards able to suppress a major fire.
8. WATER FLOW AND CONTROL VALVES: All fire sprinkler system water flow and control valves shall be complete and serviceable prior to final inspection. Prior to the occupancy of a building having a fire alarm system, the Fire Department shall test and witness the operation of the fire alarm system.
9. ELECTRICAL CONDUIT: Electrical conduit shall be provided to each fire protection system control valve including all valve(s) at the water connections. The Livermore-Pleasanton Fire Department requires electronic supervision of all valves for automatic sprinkler systems and fire protection systems.
10. LISTED: All commercial, industrial, and multi-family residential occupancies shall have valve tamper and water flow connected to a listed Central Station Service in accordance with NFPA 72. Fire Department plan check includes specifications, monitoring, installation, and alarm company certificates. Fire alarm control panel and remote annunciation shall be at location(s) approved by the Fire Prevention Bureau. All systems shall be point identified by individual device and annunciated by device type and point.
11. HAZARDOUS MATERIALS DECLARATION: A Hazardous Materials Declaration shall be provided for this tenant and/or use. The form shall be signed by the owner/manager of company occupying the suite/space/building. No building permit shall be issued until the Hazardous Materials Declaration is provided. The form is available from the Livermore-Pleasanton Fire Department, Fire Prevention Bureau.
12. HAZARDOUS MATERIALS: Should any operation or business activity involve the use, storage or handling of hazardous materials, the firm shall be responsible for contacting the Livermore-Pleasanton Fire Department prior to commencing operations. Please contact the Hazardous Materials Coordinator at 925/454-2361.
13. FIRE HYDRANTS: Fire hydrants shall be installed at spacing not greater than 300 feet in industrial and commercial developments. Fire hydrants shall be installed at spacing not greater than 400 feet in residential developments.
14. FIRE LANE MARKING: On-site access ways, turn arounds, and internal drives shall be designated as fire lanes and identified as such by red curb striping and

posted with signs at locations approve by the Fire Department. Signs shall be according to State standards and read “No Parking – Fire Lane” and must be shown on the plans. The red curb striping, sign location(s), and sign language shall be included in the building permit submittal for review and approval by the Livermore-Pleasanton Fire Department prior to building permit issuance.

a. The following schedule for NO PARKING signs shall apply:

Width	*Requirements*
36 feet or greater	No requirements
Between 28 and 36 feet	Post one side
Between 20 and 28 feet	Post both sides
Less than 20 feet	Not permitted
Cul-de-Sac	Not permitted

15. EMERGENCY VEHICLE ACCESS ROADS: Access roads shall have 13 feet, 6 inches unobstructed vertical clearance, 20 feet of unobstructed width (26 feet where occupied building floors exceed 30 feet height), and inside turning radius of 31 feet and outside turning radius of 51 feet. Unobstructed shall mean a clear travel way, excluding parking width, and designed for an emergency vehicle weight of 70,000 pounds under all weather conditions. Unobstructed width shall not include the width of rolled curbs, sidewalks, or non-drivable surfaces. All exterior portions of buildings must be within 200 feet of an access road. Yard and parking area may be able to be located farther than 200 feet from access roads, depending on the specific use.
16. EMERGENCY VEHICLE ACCESS ROADS – ADDITIONAL CRITERIA FOR COMMERCIAL: Buildings or facilities exceeding 62,000 square feet (non-sprinklered) and 124,000 square feet (sprinklered) of gross building area shall be provided with two separate and approved fire apparatus access roads. The roads shall be placed a distance apart equal to not less than one-half of the length of the maximum overall diagonal dimension of the property or area to be served, measured in a straight line between accesses.
17. FIRE VEHICLE TURNAROUNDS: Where Fire Department vehicle access through or around a site involves changes in direction or curves, inside radius of 45 feet and outside radius of 55 feet shall be provided to facilitate fire truck turning radius for entry and exit from the site. Dead-end access ways and internal drives shall not exceed 300 feet in length and shall terminate in cul-de-sacs no less than 96 feet in diameter or hammer-head (tee). Standards and options are available through the Livermore-Pleasanton Fire Department, Fire Prevention Bureau.
18. PREMISES IDENTIFICATION: Address numbers shall be installed on the front or primary entrance for all buildings. Minimum building address character size shall be 12-inch high by 1-inch stroke. In all cases address numerals shall be of contrasting background and clearly visible in accordance with the Livermore-Pleasanton Fire Department Premises Identification Standards. This may warrant field verification and adjustments based upon topography, landscaping or other obstructions.

19. COMMERCIAL – NEW CONSTRUCTION: The following items shall be provided prior to any construction above the foundation or slab.
    a. Emergency vehicle access shall be provided to the site, including areas where construction is occurring. If Public Works Improvements are part of the project to access the site, an emergency vehicle access plan shall be submitted for review and approval to the Fire Department.
    b. If permanent access or site paving is not provided, the carrying capacity of the emergency vehicle access shall be 70,000 pounds under all weather conditions.
    c. Site staging area(s) shall be provided for materials and equipment. All staging areas shall be outside of the emergency vehicle access route shown on the approved plans.
    d. Where on-site fire hydrant(s) are required, they shall be installed, flushed and all valves open prior to any construction above the foundation or slab. This includes concrete tilt-up and masonry buildings.
    e. On-site fire hydrant(s) shall not be obstructed and shall be sufficiently above grade to have all hydrant valves and outlets accessible for emergency use.
    f. Where a project is phased as part of the development, specific access, water supply and fire hydrant installations will be required as part of each phase. As needed a phasing plan with these improvements will be required.
    g. Where on-site grading/utility plans are submitted for review and approval prior to building construction drawings, emergency vehicle access routes, fire hydrant locations, material staging areas, etc. shall be provided.
20. FINAL INSPECTION: Prior to request for final inspection, all access roads, on-site access and fire hydrants shall be provided. All fire hydrants shall be accepted, inspected and tested to applicable City Standards.

POLICE DEPARTMENT

1. The project shall be required to conform to the provisions of the security section of the Livermore Municipal Code.

ZONE 7

1. Zone 7 records indicate that there are 11 wells in or immediately adjacent to the project area. All of these wells must be protected during construction. Additionally, one destroyed well exists at the site. Please be advised that Zone 7 program wells must remain operational during and following construction as they are essential to Zone 7's regional groundwater monitoring program. Contact Zone 7 to coordinate any necessary upgrades or adjustments in the well and/or well box elevation to match the final grade. The Applicant shall coordinate with Zone 7 Water Agency concerning the decommissioning of any wells onsite.
2. Please immediately notify Zone 7 if any other wells exist in the project area. All well locations should be field verified and noted on the plans. A Zone 7 drilling permit is needed for any well or soil boring work that may be planned for this project. The drilling permit application and permit fee schedule can be downloaded from our website: https://www.zone7water.com/post/well-drilling-and-soil-boring-permits. For additional information please email wellpermits@zone7water.com.

3. It should be noted that the subject property (or project) is located within the basin area under sustainable groundwater management by Zone 7 as per the Alternative Groundwater Sustainability Plan for the Livermore Valley Groundwater Basin (https://www.zone7water.com/sites/main/files/fileattachments/alt_gw_sustainability_plan-4.pdf?1656015908) and is subject to all relevant sustainable groundwater management actions.
4. Developments creating new impervious areas within the Livermore-Amador Valley are subject to the assessment of the Development Impact Fee for Flood Protection and Storm Water Drainage. These fees are collected for Zone 7 by the local governing agency: 1) upon approval of final map for public improvements creating new impervious areas; and/or 2) upon issuance of a building or use permit required for site improvements creating new impervious areas. Fees are dependent on whether post-project impervious area conditions are greater than pre-project conditions and/or whether fees have previously been paid.

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
4.2 Air Quality and Greenhouse Gas Emissions					
4.2-1	Conflict with or obstruct implementation of the applicable air quality plan during project construction.	*4.2-1(a)* *Prior to approval of any Improvement Plans, the project applicant shall provide proof of compliance with the following to the satisfaction of the City of Livermore Community Development Department:* *The project applicant shall show on the plans via notation that the contractor shall ensure that the heavy-duty off-road vehicles (50 horsepower or more) to be used in the construction of all project components (i.e., construction of SMP 39, SMP 40, and the chosen off-site trail connection option), including owned, leased, and subcontractor vehicles, shall be a combination of engine Tier 3 or Tier 4 off-road construction equipment, or hybrid, electric, or alternatively fueled equipment (or any combination of the above), sufficient to achieve a fleet-wide average reduction in construction-related ROG and NOX emissions to below the applicable BAAQMD thresholds of significance (54 lbs/day). For instance, the emissions presented in Table 4.2-8 were achieved by requiring all equipment used during construction to be engine Tier 4 final.*	City of Livermore Community Development Department	Prior to approval of any Improvement Plans	

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		In addition, all off-road equipment operating at the construction site must be maintained in proper working condition according to manufacturer's specifications. Idling shall be limited to five minutes or less in accordance with the In-Use Off-Road Diesel Vehicle Regulation as required by CARB. Clear signage regarding idling restrictions shall be placed at the entrances to the construction site. *Portable equipment over 50 horsepower must have either a valid BAAQMD Permit to Operate (PTO) or a valid statewide Portable Equipment Registration Program (PERP) placard and sticker issued by CARB.* *Conformance with the foregoing requirements shall be included as notes and be confirmed through review and approval of grading plans by the City of Livermore Community Development Department.*			
		4.2-1(b) The project applicant shall show on Improvement Plans via notation that the project contractor shall restrict the building construction and architectural coating phases of construction for SMP 39 from occurring simultaneously with the building construction and architectural coating phases of construction for SMP 40.	City of Livermore Community Development Department	Prior to approval of any Improvement Plans

		construction activities using seven- to 20-foot transects. A separate preconstruction survey shall be conducted for SMP 39 and SMP 40 (including the off-site trail connection area) if the components of the project are not constructed concurrently. The survey shall include the project site and all accessible areas within 500 feet of the project impact zone, and shall follow CDFW guidelines outlined in the 2012 Staff Report on Burrowing Owl Mitigation. The results of the survey shall be submitted to the City of Livermore Community Development Department within 30 days of the completed survey. The survey report shall be valid for one construction season. *If western burrowing owls are not detected on-site during the survey, further mitigation shall not be required. If any western burrowing owls are detected on-site, pursuant to the CDFW's 2012 Staff Report on Burrowing Owl Mitigation, the following restricted activity dates and setback distances shall be implemented:* • *From April 1 through October 15, low disturbance activities shall have a 200-meter buffer while high disturbance activities shall have a 500-meter buffer from occupied nests.* • *From April 1 through August 15, medium disturbance activities shall have a 500-meter buffer from*		burrowing owl nesting season (February 15 to August 31)

Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		offset the project's habitat loss on the burrowing owl. *A report detailing compliance with the provisions set forth herein shall be prepared by the qualified biologist and submitted for review and approval to the City of Livermore Community Development Department.*			
		Western Burrowing Owl (Trail Connection Options 2 and 3) *4.3-2(b) In the event that Trail Connection Option 2 – Undercrossing at Isabel Bridge or Trail Connection Option 3 – Overcrossing of Isabel Avenue/SR 84 is the selected trail connection option for the proposed project, the requirements of Mitigation Measure 4.3-2(a) shall be implemented for the disturbance area associated with the trail connection option.*	City of Livermore Community Development Department	Within 14 days prior to construction activities if project construction begins during the western burrowing owl nesting season (February 15 to August 31)	
		Tricolored Blackbird *4.3-2(c) Prior to any ground disturbance on SMP 40, a qualified biologist shall conduct a preconstruction survey in all accessible areas identified as supporting potential tricolored blackbird nesting habitat. The survey shall document the current, and to the extent possible, historical presence or absence of nesting colonies of tricolored blackbird. Surveys shall conclude no more than two calendar days prior to construction. If a tricolored blackbird nesting colony is present, a 250-foot buffer shall be applied*	City of Livermore Community Development Department	Prior to any ground disturbance on SMP 40

Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		from the outer edge of all hydrophytic vegetation associated with the site and the site plus buffer shall be avoided. The Wildlife Agencies shall be notified immediately of nest locations. All survey results shall be submitted to the City of Livermore Community Development Department prior to the start of construction. If current or recent tricolored blackbird nesting colonies are not identified, further action is not required. *If construction takes place during the breeding season when an active colony is present, a qualified biologist shall monitor construction to ensure that the 250-foot buffer zone is enforced. If monitoring indicates that construction outside of the buffer is affecting a breeding colony, the buffer shall be increased if space allows (e.g., move staging areas farther away). If space does not allow, construction shall cease until the colony abandons the site or until the end of the breeding season, whichever occurs first. The biological monitor shall also conduct training of construction personnel on the avoidance procedures, buffer zones, and protocols in the event that tricolored blackbirds fly into an active construction zone (i.e., outside the buffer zone).* *Nesting Birds and Raptors (Including Loggerhead Shrike)*			

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		4.3-2(d) *If project construction begins during the nesting season (February 1 to August 31), a qualified biologist shall conduct a nesting bird survey within 7 days prior to construction activities. A separate preconstruction survey shall be conducted for SMP 39 and SMP 40 (including the off-site trail connection area) if the components of the project are not constructed concurrently. The nesting bird survey shall include walking transects to search for ground nesting birds, and an examination of all trees on-site and within all accessible areas within 200 feet of the entire project site and off-site improvement areas (i.e., within a zone of influence of nesting birds). If nesting birds are not found within the project site or off-site improvement areas, further mitigation shall not be required.* *If migratory birds are identified nesting on or within the zone of influence, the Wildlife Agencies shall be notified immediately of nest locations. A qualified biologist shall establish a temporary protective nest buffer around the nest(s). The nest buffer shall be staked with orange construction fencing. The buffer must be of sufficient size to protect the nesting site from construction-related disturbance and shall be established by a qualified ornithologist or biologist with extensive experience working with nesting birds near and on construction sites. Typically, adequate nesting buffers are 75*	City of Livermore Community Development Department	Within seven days prior to construction activities, if project construction begins during the nesting season (February 1 to August 31)	

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		feet from the nest site or nest tree dripline for small birds and up to 300 feet for sensitive nesting birds that include several raptor species known in the region of the project site but that are not expected to occur on the project site. Upon completion of nesting surveys, if nesting birds are identified on or within a zone of influence of the project site, a qualified ornithologist/biologist that frequently works with nesting birds shall prescribe adequate nesting buffers to protect the nesting birds from harm while the project is constructed. *Construction or earth-moving activity shall not occur within any established nest protection buffer prior to September 1 unless a qualified ornithologist/biologist determines that the young have fledged and have attained sufficient flight skills to avoid project construction zones, or that the nesting cycle is otherwise completed. In the region of the project site, most species complete nesting by mid-July; however, the date may be significantly earlier or later, and would have to be determined by the qualified biologist. At the end of the nesting cycle, and fledging from the nest by its occupants, as determined by a qualified biologist, temporary nesting buffers may be removed and construction may commence in established nesting buffers without further regard for the nest site. If active nesting buffers are established and a biologist does*			

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		not confirm that the nesting cycle is completed, then the nesting buffers must be maintained until the end of the CDFW recognized nesting season (September 1). *Should construction activities cause a nesting bird to do any of the following in a way that would be considered a result of construction activities, then the exclusionary buffer shall be increased such that activities are far enough from the nest to stop the following agitated behavior: vocalize, make defensive flights at intruders, get up from a brooding position, or fly off the nest. The revised non-disturbance buffer shall remain in place until the chicks have fledged or as otherwise determined by a qualified biologist in consultation with the City of Livermore.* *A report detailing compliance with the provisions set forth herein shall be prepared by the qualified biologist and submitted for review and approval to the City of Livermore Community Development Department.*			
4.3-3	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or USFWS, or State or Federally protected wetlands	*Trail Connection Option 2 – Undercrossing at Isabel Bridge* *4.3-3(a)* *Prior to the initiation of ground-disturbing activities, the project applicant shall submit a formal wetland delineation to the USACE for Trail Connection Option 2 for verification to determine the extent of all hydrological features, their jurisdictional status, and the extent of any impacts resulting from the proposed project. A copy of the wetland*	City of Livermore Community Development Department USACE	Prior to initiation of ground-disturbing activities

		Resources Assessments prepared for SMP 40 by Monk & Associates. Impacts for each activity shall be broken down by temporary and permanent impacts. A description of the proposed mitigation for biological resource impacts shall be outlined per activity and then by temporary and permanent impact. Information regarding project-specific drainage and hydrology changes resulting from project implementation shall be provided, as well as a description of stormwater treatment methods. Minimization and avoidance measures shall be proposed, as appropriate, and may include the following: • *To avoid fuels, lubricants, soils and other pollutants from entering Arroyo Mocho, wildlife friendly hay wattles (that is, no mono-filament netting) and silt fencing shall be installed at the top of bank. The use of mulch or any other substitute that may enter into the creek shall be prohibited.* • *Staging, operation and maintenance of heavy duty construction equipment shall be located away from Arroyo Mocho at all times and well outside of the riparian corridor unless the equipment is needed to specifically work on the realignment of Arroyo Mocho or the outfalls for the project.* • *To mitigate for any impacts to the riparian corridor of Arroyo Mocho,*			

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		disturbed areas shall be revegetated with native riparian plant species. Replacement of riparian trees to be removed shall be planted near the creek as feasible and/or adjacent to the existing limits of the riparian corridor to contribute to the existing riparian canopy. Riparian plantings shall be maintained for a minimum of 5 years to ensure that the canopy is enhanced and the understory restored. • *Non-native and invasive ornamental landscaping shall be precluded from use proximate to Arroyo Mocho.* • *To avoid debris from entering Arroyo Mocho, the final project design shall provide for enclosed and accessible trash receptacles (located outside of the riparian corridor).* • *New lighting introduced by the project shall be downcast and precluded from spilling over to the riparian corridor as direct lighting along creek corridors has a negative impact on nocturnal wildlife.* *Mitigation shall not result in a net loss of a Sensitive Natural Community. Written verification of Section 1600 of the LSAA shall be submitted to the City of Livermore Community Development Department.*			

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		Trail Connection Option 2 – Undercrossing at Isabel Bridge *4.3-3(d) Prior to the initiation of groundbreaking activity associated with Trail Connection Option 2, if selected, the project applicant shall ensure that authorization pursuant to the Clean Water Act (CWA) Section 401 from the San Francisco Bay Regional Water Quality Control board (RWQCB) is obtained.* *If Trail Connection Option 2 will result in impacts to features under the RWQCB's jurisdiction, the construction contractor shall adhere to all conditions outlined in the permit. The project applicant shall ensure that the proposed project replaces, restores, or enhances on a "no net loss" basis (in accordance with the RWQCB) the acreage of all riparian habitat and waters of the State that would be removed, lost, and/or degraded due to project implementation by methods agreeable to the RWQCB and the City, as appropriate, depending on agency jurisdiction, and as determined during the Section 401 permitting processes. Methods include, but are not limited to implementation of a riparian enhancement planting plan and/or tree planting mitigation at a 1:1 ratio, or as otherwise prescribed by the RWQCB.* *Trail Connection Option 2 – Undercrossing at Isabel Bridge* *4.3-3(e) If it is determined that work below the OHWM cannot be avoided for Trail Connection*	The San Francisco Bay Regional Water Quality Control board (RWQCB) City of Livermore	Prior to the initiation of ground-breaking activity associated with Trail Connection Option 2 (if selected) Prior to issuance of grading permits, if it

			to provide a measure acceptable to the landowner. In such case, the landowner or his authorized representative shall rebury the human remains and grave goods with appropriate dignity at a location on the property not subject to further disturbances. Should human remains be encountered, a copy of the resulting County Coroner report noting any written consultation with the NAHC shall be submitted as proof of compliance to the City of Livermore Community Development Department.			
4.4-4	Cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC Section 21074.	*4.4-4*	*Implement Mitigation Measures 4.4-2 and 4.4-3.*	See Mitigation Measures 4.4-2 and 4.4-3	See Mitigation Measures 4.4-2 and 4.4-3	
Hydrology and Water Quality						
4.5-1	Violate any water quality standards or waste discharge requirements or otherwise substantially degrade water quality during construction.	*4.5-1*	*Prior to issuance of any grading permits, the contractor shall prepare a Storm Water Pollution Prevention Plan (SWPPP) for review and approval by the San Francisco Bay RWQCB. The contractor shall file the Notice of Intent (NOI) and associated fee to the SWRCB. A separate SWPPP shall be prepared for SMP 39 and SMP 40 (including the off-site trail connection area) if the components of the project are not constructed concurrently. The SWPPP shall serve as the framework for identification, assignment, and implementation of BMPs. The contractor shall implement BMPs to reduce pollutants in stormwater discharges to the maximum extent practicable.*	City of Livermore Public Works Director City Engineer	Prior to issuance of any grading permits	

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project						
Impact Number	**Impact**		**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
			Construction (temporary) BMPs for the project may include, but are not limited to: fiber rolls, straw bale barrier, straw wattles, storm drain inlet protection, velocity dissipation devices, silt fences, wind erosion control, stabilized construction entrance, hydroseeding, revegetation techniques, and dust control measures. The SWPPP shall be submitted to the City's Director of Public Works and the City Engineer for review and approval and shall remain on the project site during all phases of construction. Following implementation of the SWPPP, the contractor shall subsequently demonstrate the SWPPP's effectiveness and provide for necessary and appropriate revisions, modifications, and improvements to reduce pollutants in stormwater discharges to the maximum extent practicable.			
4.5-2	Violate any water quality standards or waste discharge requirements or otherwise substantially degrade water quality during operations.	*4.5-2(a)*	*Prior to approval of final project improvement plans for SMP 39, SMP 40, and the selected off-site trail connection option, a final Stormwater Control Plan and Maintenance Plan shall be submitted to the City Director of Public Works, and the City Engineer for review and approval. A separate Stormwater Control Plan and Maintenance Plan shall be prepared for SMP 39, SMP 40, and the selected off-site trail connection option, if the components of the project are not constructed concurrently. The final Stormwater Control Plan and Maintenance Plan shall be in compliance with all applicable provisions of the C.3 Standards,*	City of Livermore Public Works Director City Engineer City of Livermore Public Works Department	Prior to approval of final project improvement plans for SMP 39, SMP 40, and the selected off-site trail connection option

		be 2,088 gallons per minute (gpm). The subsequent evaluation shall confirm the aforementioned estimate and be submitted for review and approval to the City of Livermore Community Development Department. *If the Airport Lift Station pumping capacity is determined to be inadequate, the project applicant shall ensure the pumping capacity is increased to the necessary gpm determined by the subsequent analysis, with all design recommendations contained therein incorporated into the improvement plans for SMP 39 or SMP 40, whichever is developed second as part of the proposed project. Incorporation of the design recommendations to increase the Airport Lift Station pumping capacity shall be submitted for review and approval to the City Engineer.*			
Transportation					
4.8-1	Conflict with a program, plan, ordinance, or policy addressing the circulation system during construction activities.	*4.8-1* *Prior to grading permit issuance for the SMP 39 and SMP 40 sites, as well as the chosen off-site trail connection option, the project applicant shall prepare a Construction Traffic Management Plan for review and approval by the City Engineer. The plan shall include the following:* • *A project staging plan to maximize on-site storage of materials and equipment;* • *A set of comprehensive traffic control measures, including scheduling of*	City Engineer	Prior to grading permit issuance for the SMP 39 and SMP 40 sites, as well as the chosen off-site trail connection option	

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		major truck trips and deliveries to avoid peak hours; lane closure proceedings; signs, cones and other warning devices for drivers; and designation of construction access routes; • *Provisions for maintaining adequate emergency access to the project site;* • *Permitted construction hours, per City of Livermore standards;* • *Designated locations for construction staging areas;* • *Identification of parking areas for construction employees, site visitors, and inspectors, including on-site locations;* • *Signs posted at the entrances to the construction sites noting who to contact if there are questions or concerns, along with a contact phone number; and* • *Provisions for street sweeping to remove construction-related debris on public streets.*			
4.8-3	Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).	*4.8-3* *Prior to the issuance of the first building permit, the project applicant shall be required to develop a Transportation Demand Management (TDM) Program for SMP 39 and SMP 40. The TDM Program shall be monitored by the project applicant/operator on an annual basis to determine the efficacy of the selected TDM strategies in achieving the reduction below the regional average VMT per employee of*	City of Livermore Engineering Division Chief Building Official	Prior to the issuance of the first building permit	

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		three percent (i.e., the performance target). An Annual Status Report on the TDM Program shall be submitted to the City of Livermore Engineering Division beginning a year after the issuance of any certificate of occupancy and shall include details on the TDM strategies, including an Employer Carpool Program which has a goal to reduce VMT per employee by approximately four percent and, thus, would meet and exceed the performance target. The Employer Carpool Program shall implement a ridesharing program and establish a permanent transportation management association with funding requirements for employers. Data shall be collected in October of each year and the Annual Status Report shall be submitted by December 31st of each year. The report shall be prepared in the form and format designated by the City. The data shall include project-generated VMT estimates compatible with the methodology used to estimate the benchmark VMT so that performance comparisons can be made. If the Annual Status Report demonstrates that the project is not in compliance with the performance target set forth in this mitigation measure, the project must incorporate additional TDM strategies to meet the performance target in coordination with City staff. The project applicant/operator may propose new TDM strategies that develop over time to further reduce project-generated VMT if substantial			

MITIGATION MONITORING AND REPORTING PROGRAM SMP 39/SMP 40 Project					
Impact Number	**Impact**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-off**
		evidence is provided to support the efficacy of the strategy. If the Annual Status Reports demonstrate that the performance target has been achieved for five consecutive years once SMP 39 and SMP 40 are both fully occupied and operational, the project shall no longer need to provide annual reporting. The five-year reporting requirement shall reset when a new use occupies any portion of the SMP 39 or SMP 40 property.			
Initial Study					
I-a,b.	Would the project have a substantial adverse effect on a scenic vista? Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?	*I-1.*	*In the event that Trail Connection Option 3 – Overcrossing of Isabel Avenue/SR 84 is the selected Trail Connection Option for the proposed project, improvement plans associated with the proposed above-grade crossing shall be submitted to the City's Community Development Department for review and approval to ensure that the proposed above-grade crossing is constructed using soft earth tone colors that help the bridge blend in with the surrounding landscape.*	City of Livermore Community Development Department	In the event that Trail Connection Option 3 is the selected trail connection option for the proposed project	
VII-a.iii, a.iv,c,d.	Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: seismic-related ground failure, including liquefaction or landslides?	*VII-1.*	*All grading and foundation plans for the development shall be designed by a Civil and Structural Engineer and reviewed and approved by the City Engineer, Chief Building Official, and a qualified Geotechnical Engineer prior to the issuance of building permits or grading permits, whichever comes first, to ensure that all geotechnical recommendations specified in the geotechnical recommendations*	City Engineer Chief Building Official Qualified Geotechnical Engineer	Prior to issuance of building permits or grading permits, whichever comes first

			and shall be subject to review and approval by the City Engineer.			
VII-f.	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	*VII-3.*	*The applicant shall retain the services of a professional paleontologist to educate the construction crew that will be conducting grading and excavation at the project site, as well as the off-site trail improvement areas. The education shall consist of an introduction to the geology of the project site and the kinds of fossils that may be encountered, as well as what to do in case of a discovery. Should any vertebrate fossils (e.g., teeth, bones), an unusually large or dense accumulation of intact invertebrates, or well-preserved plant material (e.g., leaves) be unearthed by the construction crew, then ground-disturbing activity shall be diverted to another part of the project site and the paleontologist shall be called on-site to assess the find and, if significant, recover the find in a timely matter. Finds determined significant by the paleontologist shall then be conserved and deposited with a recognized repository, such as the University of California Museum of Paleontology. The alternative mitigation would be to leave the significant finds in place, determine the extent of significant deposit, and avoid further disturbance of the significant deposit. Proof of the construction crew awareness training shall be submitted to the City's Community Development Department in the form of a copy of training materials and the completed training attendance roster.*	City of Livermore Community Development Department	Prior to any ground-disturbing activities

		abandonment permit from ACDEH to properly abandon the well. Alternatively, if required by Zone 7, the applicant shall implement other measures identified by Zone 7, such as providing any necessary upgrades or adjustments to the well and/or well box elevation to match the final grade.			
		IX-2. In the event that Trail Connection Option 2 – Undercrossing at Isabel Bridge or Trail Connection Option 3 – Overcrossing of Isabel Avenue/SR 84 is the selected Trail Connection Option for the proposed project, in conjunction with the submittal of improvement plans associated with the proposed above-grade crossing, a Phase I Environmental Site Assessment (ESA) shall be prepared and submitted to the City for review and approval. The Phase I Environmental Site Assessment (ESA) shall be prepared by a licensed contractor with the purpose of observing and assessing the conditions encountered at the proposed undercrossing or above-grade crossing sites and providing conclusions and recommendations relative to any hazardous conditions or materials identified on-site. All recommendations set forth in the Phase I Environmental Site Assessment (ESA) shall be appropriately incorporated into the project and shall be subject to review and approval by the City of Livermore Community Development Department.	City of Livermore Community Development Department	In the event that Trail Connection Option 2 or Trail Connection Option 3 is the selected trail connection option for the proposed project in conjunction with the submittal of improvement plans associated with the proposed above-grade crossing	

APPENDIX E
Sample Implementation Documents

The responsibility for implementation of the policies set forth in the compatibility plans adopted by airport land use commissions rests largely with the affected local jurisdictions. Implementation tools fall into the categories of notification and regulation. The state requires certain notification requirements effective January 1, 2004 (as a result of Assembly Bill 2776). Additional notification, in the form of a recorded deed notice, may also be appropriate. Regulation may take the form of individual property restrictions (avigation easements) or additional development controls in areas within the vicinity of an airport (an airport combining zone ordinance).

Required Notification—State law requires any person who intends to offer subdivided lands within California for sale or lease to file with the Department of Real Estate an application for a public report consisting of a notice of intention and a completed questionnaire. The notice shall include, for property within an AIA to include the following notice:

> NOTICE OF AIRPORT IN VICINITY
>
> This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

Recorded Deed Notice—Deed notices are a form of buyer awareness measure whose objective is to ensure that prospective buyers of airport area property, particularly residential property, are informed about the airport's impact on the property. Unlike easements, deed notices do not convey property rights from the property owner to the airport and do not restrict the height of objects. They only document the existence of certain conditions which affect the property—such as the proximity of the airport and common occurrence of aircraft overflights at or below the airport traffic pattern altitude. ALUCs may make recording of deed notices a requirement for project approval within portions of the airport influence area where avigation easements are not essential. Included in this Appendix is sample of a deed notice (from the California Airport Land Use Planning Handbook, 2002).

Avigation Easement—Avigation easements transfer certain property rights from the owner of the underlying property to the owner of an airport. ALUCs may require avigation easement dedication as a condition for approval of development on property subject to high noise levels or a need to restrict heights of structures and trees to less than what might ordinarily occur on the property. Also, airports may require avigation easements in conjunction with programs for noise insulation of existing structures in the airport vicinity. Included in this Appendix is a sample avigation easement (from the California Airport Land Use Planning Handbook, 2002).

Airport Combining Zone Ordinance—An additional type of implementation document available to local jurisdictions is an airport combining zone ordinance. Possible components for such an ordinance are described in Table E-1.

TABLE E-1
POSSIBLE AIRPORT COMBINING ZONE COMPONENTS

An airport compatibility combining zoning ordinance might include some or all of the following components:

- **Airspace Protection**—A combining district can establish restrictions on the height of buildings, antennas, trees, and other objects as necessary to protect the airspace needed for operation of the airport. These restrictions should be based upon the current version of Federal Aviation Regulations (FAR) Part 77, Objects Affecting Navigable Airspace, Subpart C. Additions or adjustment to take into account instrument approach (TERPS) surfaces should be made as necessary. Provisions prohibiting smoke, glare, bird attractions, and other hazards to flight should also be included.

- **FAA Notification Requirements**—Combining districts also can be used to ensure that project developers are informed about the need for compliance with the notification requirements of FAR Part 77. Subpart B of the regulations requires that the proponent of any project which exceeds a specified set of height criteria submit a Notice of Proposed Construction or Alteration (Form 7460-1) to the Federal Aviation Administration prior to commencement of construction. The height criteria associated with this notification requirement are lower than those spelled out in Part 77, Subpart C, which define airspace obstructions. The purpose of the notification is to determine if the proposed construction would constitute a potential hazard or obstruction to flight. Notification is not required for proposed structures that would be shielded by existing structures or by natural terrain of equal or greater height, where it is obvious that the proposal would not adversely affect air safety.

- **Maximum Densities/Intensities**—Airport noise and safety compatibility criteria are frequently expressed in terms of dwelling units per acre for residential uses and people per acre for other land uses. These standards can either be directly included in a combining zone or used to modify the underlying land use designations. For residential land uses, the correlation between the compatibility criteria and land use designations is direct. For other land uses, the method of calculating the intensity limitations needs to be defined. Alternatively, a matrix can be established indicating whether each specific type of land use is compatible with each compatibility zone. To be useful, the land use categories need to be more detailed than typically provided by general plan or zoning ordinance land use designations.

- **Open Areas for Emergency Landing of Aircraft**—In most circumstances in which an accident involving a small aircraft occurs near an airport, the aircraft is under control as it descends. When forced to make an off-airport emergency landing, pilots will usually attempt to do so in the most open area readily available. To enhance safety both for people on the ground and the occupants of aircraft, airport compatibility plans often contain criteria requiring a certain amount of open land near airports. These criteria are most effectively carried out by planning at the general or specific plan level, but may also need to be included in a combining district so that they will be applied to development of large parcels. Adequate open areas can often be provided by clustering of development on adjacent land.

TABLE E-1
POSSIBLE AIRPORT COMBINING ZONE COMPONENTS

An airport compatibility combining zoning ordinance might include some or all of the following components:

- **State Regulation of Obstructions**—State law prohibits anyone from constructing or altering a structure or permitting an object of natural growth to exceed the heights established by FAR Part 77, Subpart C, unless the FAA has determined the object would not or does not constitute a hazard to air navigation (Public Utilities Code, Section 21659). Additionally, a permit from the Department of Transportation is required for any structure taller than 500 feet above the ground unless the height is reviewed and approved by the Federal Communications Commission or the FAA (Section 21656).
- **Designation of High Noise-Impact Areas**—California state statutes require that multi-family residential structures in high-noise exposure areas be constructed so as to limit the interior noise to a Community Noise Equivalent Level of no more than 45 dB. A combining district could be used to indicate the locations where special construction techniques may be necessary in order to ensure compliance with this requirement. The combining district also could extend this criterion to single-family dwellings.
- **Areas of Special Compatibility Concern**—A significant drawback of standard general plan and zoning ordinance land use designations is that they can be changed. Uses that are currently compatible are not assured of staying that way in the future. Designation of areas of special compatibility concern would serve as a reminder that airport impacts should be carefully considered in any decision to change the existing land use designation. [A legal consideration which supports the value of this concept is that down-zoning of a property to a less intensive use is becoming more difficult. It is much better not to have inappropriately up-zoned the property in the first place.]
- **Real Estate Disclosure Policies**—The geographic extent and specific language of recommended real estate disclosure statements can be described in an airport combining zone ordinance.

Sample Avigation Easement

This indenture made this _____ day of _____, 20___, between_____ herein after referred to as Grantor, and the [Insert County or City name], a political subdivision in the State of California, hereinafter referred to as Grantee. The Grantor, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, does hereby grant to the Grantee, its successors and assigns, a perpetual and assignable easement over the following described parcel of land in which the Grantor holds a fee simple estate. The property which is subject to this easement is depicted as _____ on “Exhibit A” attached and is more particularly described as follows:

[Insert legal description of real property] The easement applies to the Airspace above an imaginary plane over the real property. The plane is described as follows:

The imaginary plane above the hereinbefore described real property, as such plane is defined by Part 77 of the Federal Aviation Regulations, and consists of a plane [describe approach, transition, or horizontal surface]; the elevation of said plane being based upon the _____ Airport official runway end elevation of _____ feet Above Mean Sea Level (AMSL), as determined by [Insert name and Date of Survey or Airport Layout Plan that determines the elevation] the approximate dimensions of which said plane are described and shown on Exhibit A attached hereto and incorporated herein by reference.

The aforesaid easement and right-of-way includes, but is not limited to:

1) For the use and benefit of the public, the easement and continuing right to fly, or cause or permit the flight by any and all persons, or any aircraft, of any and all kinds now or hereafter known, in, through, across, or about any portion of the Airspace hereinabove described; and

2) The easement and right to cause or create, or permit or allow to be caused or created within all space above the existing surface of the hereinabove described real property and any and all Airspace laterally adjacent to said real property, such noise, vibration, currents and other effects of air, illumination, and fuel consumption as may be inherent in, or may arise or occur from or during the operation of aircraft of any and all kinds, now or hereafter known or used, for navigation of or flight in air; and

3) A continuing right to clear and keep clear from the Airspace any portions of buildings, structures, or improvements of any kinds, and of trees or other objects, including the right to remove or demolish those portions of such buildings, structures, improvements, trees, or other things which extend into or above said Airspace, and the right to cut to the ground level and remove, any trees which extend into or above the Airspace; and

4) The right to mark and light, or cause or require to be marked or lighted, as obstructions to air navigation, any and all buildings, structures, or other improvements, and trees or other objects, which extend into or above the Airspace; and

5) The right of ingress to, passage within, and egress from the hereinabove described real property, for the purposes described in subparagraphs (3) and (4) above at reasonable times and after reasonable notice.

For and on behalf of itself, its successors and assigns, the Grantor hereby covenants with the [Insert County or City name], for the direct benefit of the real property constituting the _____ Airport hereinafter described, that neither the Grantor, nor its successors in interest or assigns will construct, install, erect, place or grow in or upon the hereinabove described real property, nor will they permit to allow, any building structure, improvement, tree or other object which extends into or above the Airspace, or which constitutes an obstruction to air navigation, or which obstructs or interferes with the use of the easement and rights-of-way herein granted.

The easements and rights-of-way herein granted shall be deemed both appurtenant to and for the direct benefit of that real property which constitutes the _____ Airport, in the [Insert County or City name], State of California; and shall further be deemed in gross, being conveyed to the Grantee for the benefit of the Grantee and any and all members of the general public who may use said easement or right-of-way, in landing at, taking off from or operating such aircraft in or about the _____ Airport, or in otherwise flying through said Airspace.

Grantor, together with its successors in interest and assigns, hereby waives its right to legal action against Grantee, its successors, or assigns for monetary damages or other redress due to impacts, as described in Paragraph (2) of the granted rights of easement, associated with aircraft operations in

the air or on the ground at the airport, including future increases in the volume or changes in location of said operations. Furthermore, Grantor, its successors, and assigns shall have no duty to avoid or mitigate such damages through physical modification of airport facilities or establishment or modification of aircraft operational procedures or restrictions. However, this waiver shall not apply if the airport role or character of its usage (as identified in an adopted airport master plan, for example) changes in a fundamental manner which could not reasonably have been anticipated at the time of the granting of this easement and which results in a substantial increase in the impacts associated with aircraft operations. Also, this grant of easement shall not operate to deprive the Grantor, its successors or assigns, of any rights which may from time to time have against any air carrier or private operator for negligent or unlawful operation of aircraft.

These covenants and agreements run with the land and are binding upon the heirs, administrators, executors, successors and assigns of the Grantor, and, for the purpose of this instrument, the real property firstly hereinabove described is the servient tenement and said _____ Airport is the dominant tenement.

DATED: _____
STATE OF:
COUNTY OF:

On _____, before me, the undersigned, a Notary Public in and for said County and State, personally appeared _____, and _____ known to me to be the persons whose names are subscribed to the within instrument and acknowledged that they executed the same.

WITNESS my hand and official seal.

_____
Notary Public

Sample Deed Notice

A statement similar to the following should be included on the deed for any real property subject to the deed notice requirements set forth in the [Insert ALUC name] *Airport Land Use Compatibility Plan*. Such notice should be recorded by the county of [Insert County name]. Also, this deed notice should be included on any parcel map, tentative map, or final map for subdivision approval.

The *Alameda County Airport Land Use Compatibility Plan* and [Insert County/City name] Ordinance (Ordinance No. _____) identify a [Insert Airport name] Airport Influence Area. Properties within this area are routinely subject to overflights by aircraft using this public-use airport and, as a result, residents may experience inconvenience, annoyance, or discomfort arising from the noise of such operations. State law (Public Utilities Code Section 21670 et seq.) establishes the importance of public-use airports to protection of the public interest of the people

of the state of California. Residents of property near such airports should therefore be prepared to accept the inconvenience, annoyance, or discomfort from normal aircraft operations. Residents also should be aware that the current volume of aircraft activity may increase in the future in response to Alameda County population and economic growth. Any subsequent deed conveying this parcel or subdivisions thereof shall contain a statement in substantially this form.

Sample Overflight Notification

This *Overflight Notificaiton* concerns the real property situated in the City of _____, County of Alameda, State of California, described as _____ [APN]_____.

This *Overflight Notification* provides notification of the condition of the above described property in recognition of, and in compliance with, CALIFORNIA BUSINESS & PROFESSIONS CODE Section 11010 and CALIFORNIA CIVIL CODE Sections 1102.6, 1103.4, and 1353, effective January 1, 2004, and related state and local regulations and consistent with policies of the Airport Land Use Commission for Alameda County for overflight notification provided in the Livermore Municipal Airport Land Use Compatibility Plan.

NOTICE OF AIRPORT IN VICINITY: *This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.*

The Federal Aviation Administration (FAA) has regulatory authority over the operation of aircraft in flight and on the runway and taxiway surfaces at Livermore Municipal Airport. The FAA is, therefore, exclusively responsible for airspace and air traffic management, including ensuring the safe and efficient use of navigable airspace, developing air traffic rules, assigning the use of airspace and controlling air traffic. Please contact the FAA for more detailed information regarding overflight and airspace protection issues associated with the operation of aircraft.

The Airport Operator, The City of Livermore, maintains information regarding hours of operation and other relevant information regarding airport operations. Please contact your local airport operator for more detailed information regarding airport-specific operational issues including hours of operation.

This *Overflight Notification* shall run with the Property and shall be binding upon all parties having or acquiring any right, title, or interest in the Property.

Effective Date: _____, 20__

DATE: March 5, 2024

ENGINEERING CONSIDERATIONS - EXHIBIT "A"
(Subject to revision prior to final approval
by Planning Commission and City Council)

TENTATIVE TRACT MAP: 8656 (SUB21-009), APZ21-003, DA21-002

LOCATION: SMP 39 – Jack London Blvd

APPLICANT: Overton Moore Properties

Note: Special conditions are shown in standard type. Standard conditions that apply to this project are shown in italics. In addition, standard conditions of approval for this project are listed in Section II of the Development Plan Check and Procedures Manual.

1. DEFINITIONS

For the purpose of this agreement, the following words shall have the meanings respectively ascribed to them by this section:

Developer :	*Person(s) or Corporation(s) signing final map(s) and subdivision agreement(s)*
Improvement Plans:	*Construction drawings for required public and private improvements*
Services:	*Utility lateral, or any portions of a conduit cable or duct, between a utility distribution line and the site it serves*
Project:	*The work to be performed by Developer*

2. VESTING TENTATIVE MAP

Approval or conditional approval of this vesting tentative map shall not limit the City Engineer's ability to require workable designs on future grading and improvement plans based upon these Engineering Considerations and the City's standard engineering specifications and details.

In addition to these Engineering Considerations the Developer shall comply with all requirements set forth in Development Agreement 21-001.

The tract map shall include easement dedications to the public for a multi-use trail and an Emergency Vehicle Access. The tract map shall also include private easement dedications for shared access and utilities.

3. GENERAL

The project shall be in conformance with all City Ordinances, rules, regulations, and policies. The conditions listed below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

All required improvements shall be constructed prior to occupancy of the new buildings on this site and in accordance with DA21-002.

A. IMPROVEMENT PLANS - Exhibit A-1

An engineered improvement plan shall be prepared by the Developer for approval by the City's Departments (including the Community Development, Public Works, Fire, and Police Department), which shall include, but not necessarily be limited to, existing site conditions, dedications, grading plans, street design and grades, curb, gutter, sidewalk and driveway grades, and type, size and location of all public works improvements as herein required. Approval of this tentative map does not constitute approval of the details shown thereon. If there is any conflict between the tentative map and these Engineering Considerations, the Engineering Considerations shall govern.

No specific phased development plan has been submitted with this tentative tract application. Therefore, all required improvements for this tentative map shall be constructed as one phase. A phased map could only be considered if a specific phasing plan is submitted for consideration as a tentative map amendment.

B. STANDARDS FOR IMPROVEMENT PLANS AND MAPS

All improvement plans and maps shall conform to the following City of Livermore documents except as modified by these engineering considerations:

1. *City of Livermore Standard Specifications and Details*
2. *Development Plan Check and Procedures Manual*

Completed final map and improvement plan checklists from the manual entitled "City of Livermore, Development Plan Check and Procedures Manual" shall be submitted with the first plan check submittal for each phase.

C. STANDARD CONDITIONS OF APPROVAL IN THE DEVELOPMENT PLAN CHECK AND PROCEDURES MANUAL

All of the standard conditions of approval for subdivisions and major projects as listed in Part II of the City of Livermore Development Plan Check and Procedures Manual apply except for the following: A-2, A-9, A-13, A-14, A-15, A-16, A-17, B-5, B-16, K-1, K-2, K-3, N-1, U-1, U-2, U-3.

D. WORK IN OTHER JURISDICTIONS

The Developer is responsible for obtaining permits and approvals for construction work and property acquisition that are required by agencies other than the City of Livermore.

Creek improvements may be subject to requirements of any or all of the following agencies: (1) California Department of Fish and Game, (2) the Army Corps of Engineers, (3) the Regional Water Quality Control Board, (4) State Department of Water Resources (5) the U.S. Fish and Wildlife Service, and (6) Alameda County Flood Control and Water Conservation District (Zone 7).

E. SPECIFIC CONDITIONS

The project is proposing to install an Emergency Vehicle Access and Storm Drain main on City owned land subject to FAA regulations and requirements. The use of the City owned land will be subject to additional requirements including but not limited to FAA approval, Consistency Determination, compensation for use of City land, appraisals, and additional mapping. All actions necessary for the project's use of City owned land shall be processed prior to the filing of the final map.

The Developer shall file a Tract Map as described in Section 2 of these Engineering Consideration and comply with the following conditions:

A. Relocate the multi-use trail along the Jack London Boulevard frontage.

B. Install trail signs per current City standards and specifications.

4. STREETS

A. SPECIFIC REQUIREMENTS:

The Developer shall offer easements and dedications for, and shall improve his share of the ultimate street widths for the following named streets in accordance with the City's General Plan:

West Jack London Boulevard

West Jack London Boulevard is a major street in the General Plan with an ultimate right-of-way width of 110 feet along the project frontage to accommodate 2 travel lanes and a bike lane in each direction separated by a 16 foot raised landscape median. The current configuration consists of one 12 foot travel lane in each direction.

Along the project frontage, the Developer shall widen West Jack London Boulevard to accommodate the following configuration in the eastbound direction:

8' bike lane
2' striped separation
12' travel lane

12' travel lane
16' raised and landscaped median

The centerline of the ultimate right-of-way for Jack London Boulevard shall be located approximately 52 feet from the existing north curb face.

The tract map shall include dedication of right-of-way for the widened portion of West Jack London Boulevard along the project frontage. Because West Jack London is planned to be realigned west of the project, the tract map shall also include a dedication for the right-of-way for the future extension of West Jack London Boulevard.

Additionally, the existing trail along the southern edge of Jack London Boulevard shall be relocated southerly outside of the new Jack London right-of-way into a new easement that will incorporate the trial, landscaping and stormwater treatment for the widened road as shown on the tentative map.

Final design of the widened Jack London Boulevard shall include but is not limited to appropriate transitions to and from the existing street; modifications to signing and striping; and any surface treatments and/or structures.

Jack London Boulevard shall be given a 1-1/2" A.C. overlay across the full width. Key cutting will be required at the conform points and along the gutter.

The widening of West Jack London Boulevard shall include the installation of street lights. The final layout of the street lights will be determined by the City Engineer during the development of improvement plans for the street widening.

Emergency Vehicle Access

The project is proposing both an on-site and off-site emergency vehicle access. Both EVAs shall be designed to be an all weather access for emergency vehicles and must be able to withstand a vehicle loading of 75,000 lbs. For the on-site EVA, the Developer shall dedicate an Emergency Vehicle Access Easement on the map to the City. For the off-site portion of the EVA the Developer shall prepare easement dedication documents for the City to grant the EVA to the project and shall enter into a maintenance agreement with the City to ensure the ensure the long term maintenance of the emergency vehicle access.

CASp Certification for Public Walkways/Sidewalks

The Developer shall have a certified CASp Specialist review and certify that the design for all pedestrian improvements within the public right-of-way or a public easement complies with the following applicable regulations: American with Disabilities Act (ADA) requirements, the Public Rights-of-Way Accessibility Guidelines (PROWAG), and the requirements found in Chapter 11B of the 2019 California Building Code. If an accessibility design cannot meet the above listed applicable standards, the Developer shall propose and the CASp Specialist shall concur with a design exception request for approval by the City Engineer or their designee. In addition, the

Developer shall have the certified CASp Specialist inspect and certify that pedestrian improvements are installed per the CASp certified design. Pedestrian improvements include new trails, walkways, sidewalks, accessible ramps, connections between existing and new pedestrian improvements, and modifications to existing pedestrian improvements within or adjacent to the project site, as shown on the approved plans.

5. TRAFFIC SIGNALS- Not Used

6. TRAFFIC IMPACT FEE CREDITS AND REIMBURSEMENTS:

A. CREDITS

The Developer will be eligible for credit against their traffic impact fee for the TIF eligible portions of the following construction: West Jack London Boulevard.

Traffic impact fee credits will be calculated at the time the subdivision agreement is prepared prior to final parcel map approval. The traffic impact fee credit for construction will be based on cost estimates for the TIF work as approved by the City Engineer. The traffic impact fee for the development will also be calculated based on the traffic impact fee per unit of development at that time to determine how TIF credits will be applied to the building permits.

7. SANITARY SEWERS

The project is proposing to install a force main to serve Lots 1-2. This force main shall connect to an on-site private pump station before connecting to the public pump station on West Jack London Boulevard. The remaining lots shall connect directly to the public sewer main in West Jack London Boulevard.

Sewer laterals with two way cleanouts behind the curb shall be installed to each lot or site before the streets are surfaced.

8. STORM WATER DRAINAGE AND TREATMENT REQUIREMENTS

A. General

1. This site is subject to the National Pollutant Discharge Elimination System (NPDES) Program. Prior to the issuance of the initial grading or building permit, the Developer shall provide evidence that the site is covered by the statewide General Permit to Discharge Storm Water associated with construction activity. This requires confirmation that a Notice of Intent (NOI) and the applicable fee was sent to the State Water Resources Control Board. In addition, the grading plans need to state: "All grading shall be in accordance with the Storm Water Pollution Prevention Plan prepared by the Developer per the Notice of Intent on file with the State Water Resources Control Board".

2. Necessary interceptor ditches shall be concrete. Field inlets and storm drainage pipe may be necessary in conjunction with concrete interceptor ditches as secondary drainage releases. All interceptor ditches shall be privately maintained.

B. Storm Drainage Requirements

The project is proposing to install an off-site storm drain main through City property to coincide with an off-site Emergency Vehicle Access. The private storm drain shall be located in an all weather access road and the Developer shall comply with any necessary requirements for the installation of this main as noted in Section 3.E above.

Per the City's Facilities Planning Guidelines (dated June 2005), the flows must have the following characteristics:

For a 10-year design discharge: a hydraulic grade line (HGL) is no higher than 1.25 feet below the top of curb elevation at any manhole or inlet.

For a 100-year design discharge: a HGL does not exceed the top of curb elevation.

For additional detail on these guidelines, the applicant should refer to the following resources: City of Livermore Storm Drain Master Plan & City of Livermore Facilities Planning Guidelines (both available at the Engineering counter at City Hall).

C. Stormwater Infrastructure Maintenance Funding

The cost to maintain all private storm water infrastructure installed with this project shall be funded by the Developer.

D. Channels – Not Used

E. Storm Water Treatment, Detention and Low Impact Development Requirements

1. *The Developer shall treat the storm water runoff from this site prior to having the storm water enter the City's storm water distribution system. Stormwater Treatment, Low Impact Development, and Trash Capture is required by the Regional Water Quality Control Board. The Developer shall complete and or update the Stormwater Requirements Checklist. The Developer shall provide a storm water treatment plan with calculations indicating treatment that meets the latest requirements described in Section C.3 of the City's NPDES Permit with the Regional Water Quality Control Board. City approval of this plan and calculations is required prior to the approval of the improvement plans.*

2. *If this project is greater than one acre, the Developer shall provide a Hydrograph Modification Plan (HMP) with calculations in accordance with the Alameda Countywide Cleanwater Program (ACCWP) Bay Area Hydrology Model (BAHM) guidelines. The software for the design of control measures to meet the Flow Duration Control is available to download from* www.bayareamodel.org. *For additional information you may contact Debbie Salgado in the City's Engineering Department at (925-960-4558)*

3. *Prior to final map approval, the applicant shall enter into a maintenance agreement with the City of Livermore for all storm water treatment devices deemed necessary on this site. If the stormwater treatment devices will be maintained by the individual homeowners a cleanout will be necessary at the property lines to allow the residents to maintain their portion of the private stormdrain underdrain. If the stormwater treatment device will be maintained by a Homeowners Association then the cleanouts at each of the property lines may not be needed. The stormdrain treatment devices shall be shown on the plat plans and included in the Operations and Maintenance Agreement. The Operations and Maintenance Agreement(s) shall be recorded prior to recordation of the Final Map.*

F. Stormwater Treatment Infrastructure Maintenance Funding

The cost to maintain all storm water treatment, detention and low impact development infrastructure installed with this project shall be funded by the Developer.

9. REQUIRED SOURCE CONTROL STORMWATER MEASURES

The Regional Water Quality Control Board adopted Order R2-2022-0018 issuing the Alameda Countywide NPDES municipal storm water permit for the Alameda Countywide Clean Water Program. The 17 member agencies, including Livermore, are subject to this permit and all its requirements including the following:

> *"The Permittees shall, as part of their continuous improvement process, submit enhanced new development and significant redevelopment Performance Standards that summarize source control requirements for such projects to limit pollutant generation, discharge, and runoff, to the maximum extent practicable..."*

In accordance with this requirement, the following source control measures, included as part of these Conditions of Approval, shall be implemented as a part of this project.

A. Structural Control Measures

1. Illegal Dumping to Storm Drain Inlets and Waterways

On-site storm drain inlets, except inlets located in landscaped areas, shall be clearly marked with the words "No Dumping! Flows to Bay" on a plastic marker. The plastic markers are available for purchase from the Water Resources Division. For ordering information, please call 925-960-8100. For projects with newly-developed, privately-maintained streets, agency staff will verify that storm drain inlets have been marked before the final sign-off on the project's building permit or encroachment permit.

2. Interior Floor Drains

Approved interior floor drains shall be plumbed to the sanitary sewer system and shall not be connected to the storm drain system. The applicant shall contact the Water Resources Division for specific connection and discharge requirements.

3. Parking Garages – Not Used

4. Pesticide/Fertilizer Application and Irrigation

   a. Landscaping shall be designed to minimize irrigation and runoff, promote surface infiltration where possible, minimize the use of fertilizers and pesticides that can contribute to storm water pollution, and incorporate appropriate Bay-Friendly Landscaping principles.

   b. If a landscaping plan is required as part of a development project application, the plan shall meet the following conditions related to reduction of pesticide use on the project site:

      I. Where feasible, landscaping shall be designed and operated to treat storm water runoff by incorporating elements that collect, detain, and infiltrate runoff. In areas that provide detention of water, plants that are tolerant of saturated soil conditions and prolonged exposure to water shall be specified.

      II. Plant materials selected shall be appropriate to site specific characteristics such as soil type, topography, climate, amount and timing of sunlight, prevailing winds, rainfall, air movement, patterns of land use, ecological consistency and plant interactions to ensure successful establishment.

      III. Existing native trees, shrubs, and ground cover shall be retained and incorporated into the landscape plan to the maximum extent practicable.

      IV. Unless otherwise specified, proper maintenance of landscaping shall be the responsibility of the property owner.

      V. Integrated pest management (IPM) principles and techniques shall be encouraged as part of the landscaping design. Some examples of IPM principles and techniques include the following:

         i. Select plants that are well adapted to soil conditions at the site.

         ii. Select plants that are well adapted to sun and shade conditions at the site. Consider future conditions when plants reach maturity. Consider seasonal changes and time of day.

         iii. Provide irrigation appropriate to the water requirements of the selected plants.

         iv. Select pest and disease resistant plants.

         v. Plant a diversity of species to prevent a potential pest infestation from affecting the entire landscaping plan.

vi. Use "insectary" plants in the landscaping to attract and keep beneficial insects.

VI. Landscaping shall also comply with City of Livermore's "Water Efficient Landscape Ordinance". However, areas of a site used for bio-swales or other landscaped areas that function as a storm water treatment measure shall be exempt from the Water Efficient Landscaping requirements.

VII. An efficient irrigation system shall be installed in areas requiring irrigation. An example of an efficient irrigation system is one that includes a weather-based (automatic, self-adjusting) irrigation controller with a moisture and/or rain sensor shutoff, and in which sprinkler and spray heads are not permitted in areas less than 8 feet wide.

5. Pool, Spa, and Fountain Discharges – Not Used

6. Food Service Equipment Cleaning – Not Used

7. Refuse Areas

   a. New or redevelopment projects shall provide a roofed and enclosed area for dumpsters, recycling containers, compactors, and food waste containers. The area shall be designed to prevent water run-on to the area, to prevent runoff from the refuse area and to properly contain litter and trash. Dumpster leakage from covered trash and food compactor enclosures shall drain to the sanitary sewer via connection to an approved oil and grease interceptor device if required.

   b. Runoff from trash enclosures, recycling areas, and/or food compactor enclosures or similar facilities shall not discharge to the storm drain system. Trash enclosure areas shall be designed to avoid run-on to the trash enclosure area. In most cases, drains are not permitted within trash enclosure areas. A drain, however, must be provided for compactors. If a drain is required in or beneath dumpsters, compactors, and tallow bin areas, it shall be connected to a grease removal device prior to discharging to the sanitary sewer.

8. Outdoor Process Activities/Equipment[1] – Not Used

   a. Process activities shall be performed either indoors or in roofed outdoor areas. If performed outdoors, the area shall be designed to prevent the "run-on" of storm water drainage, as well, as the runoff from the area with process activities.

   b. Process equipment areas shall drain to the sanitary sewer system. The applicant shall contact the Water Resources Division for specific connection and discharge requirements.

9. Outdoor Equipment/Materials Storage – Not Used

10. Vehicle/Equipment and Commercial/Industrial Cleaning

11. Vehicle/Equipment Repair and Maintenance – Not Used

12. Fuel Dispensing Areas – Not Used

13. Loading Docks

a. Loading docks shall be graded to minimize run-on to and runoff from the loading area. Storm water runoff from loading dock areas shall be directed or connected to a post-construction storm water treatment measure(s) prior to discharge to the storm drain system.

b. Door skirts between the trailers and the building shall be installed to prevent exposure of loading activities to rain, unless one of the following conditions applies: the loading dock is covered, or the applicant demonstrates that rainfall will not result in an exposure of storm water to pollutants.

14. Fire Sprinkler Test Water

Provisions shall be made in the project design and construction to allow for the discharge of fire sprinkler test water to an onsite vegetated area. If this is not feasible, provide for discharge to the sanitary sewer in accordance with current plumbing codes.

15. Miscellaneous Drain or Wash Water

a. Boiler drain lines shall be connected to the sanitary sewer system and may not discharge to the storm drain system.

b. For small air conditioning units, air conditioning condensate shall be directed to landscaped areas as a minimum BMP. For large air conditioning units, in new developments or significant redevelopments, condensation lines shall be connected to the sanitary sewer system, wherever feasible.

c. Roof drains shall discharge and drain away from the building foundation to landscaped areas wherever feasible.

d. Washing and/or steam cleaning activities must be performed at an appropriately equipped facility that drains to the sanitary sewer as specified in Section J. Any outdoor washing or pressure washing must be in compliance with the City's Stormwater Management Program requirements and managed in such a way that there is no discharge of soaps or other pollutants to the storm drain system. The applicant shall contact the Water Resources Division for specific discharge requirements.

16. Architectural Copper Installation – Not Used

B. II. OPERATIONAL BMPS

This section details Best Management Practices (BMP) that private property owners and/or the occupants of private property must implement following the construction of projects. Ultimately, the responsibility for implementation of these BMPs rests with the property owners. The City of Livermore's Source Control Program routinely performs inspections of industrial and commercial sites to verify BMP implementation and effectiveness.

1. Paved Sidewalks and Parking Lots

Sidewalks and parking lots shall be swept regularly to minimize the accumulation of litter and debris. Wash water resulting from the pressure washing of parking lots must be captured, pretreated (if necessary) to meet local discharge limits, and discharged to the sanitary sewer. Wash water resulting from the pressure washing of sidewalks may be allowed to drain to the storm drain system provided that (a) no soap or other cleaning agents are used, and (b) all debris are trapped and collected to prevent entry into the storm drain system. Under no circumstances shall washwater containing any soap or other cleaning agents be discharged to the storm drain system.

2. Private Streets, Utilities and Common Areas

   a. The owner of private streets and storm drains shall prepare and implement a plan for street sweeping of paved private roads and cleaning of all storm drain inlets.

3. Vehicle/Equipment Repair and Maintenance – Not Used

4. Fueling Areas – Not Used

5. Loading Docks

The property owner shall ensure that BMPs are implemented to prevent potential storm water pollution. These BMPs shall include, but are not limited to, a regular program of sweeping, litter control, and spill clean-up.

6. On-site Storm Drains

All on-site storm drains must be inspected and, if necessary, cleaned at least once a year immediately prior to the rainy season.

7. Architectural Copper Cleaning, Treating or Washing – Not Used

10. WATER SUPPLY (CITY)

Water mains shall be extended across all frontages of each phase and all waterline valves must notate "EPDM" on the valve body.

The developer shall install pressure reduction valves (PRVs), backflow prevention devices and appurtenances on the potable and reclaimed water services as directed by the City Engineer.

The fire service backflow preventer(s) shall be effectively screened from the public right-of-way while at the same time preserving ease of maintenance access to the backflow preventer(s). Screening shall be as specified on City Standard Detail W-10A, B and C. The fire service backflow preventer(s) shall meet the performance standards of the backflow preventer shown in City Standard Detail W-10A, B and C.

Prior to removal of a 1-inch, a 1.5-inch, or a 2-inch water service, the Developer shall contact the City's Water Resources Division at (925) 960-8100, and ask if the City would like to convert the service to a water sampling station. Existing water services (of any size) that will not be used by the proposed development shall be abandoned at the main. Large services shall be abandoned by placing a blind flange on the tee at the main. Small services shall be abandoned by removing the corporation stop valve and installing the appropriate plug in the service saddle. Any valves or meters on abandoned services shall be removed. The meters shall be returned to the Water Resources Division if they are not reused. The Developer shall coordinate water service removals with the City's Water Resources Division as well as with the public works inspector.

Because the project is located within the reclaimed water service area, the irrigation system shall be connected to the reclaimed water system. If the Reclaimed water main is not currently located along the sight frontage of this project, the Developer shall extend the water main as necessary to connect to the main along said project site frontage.

Submit an application for a permit to use recycled water to the Water Resources Division of Public Works.

11. UNDERGROUNDING OF UTILITIES:

All existing and new electric (with the exception of any 60 KV and higher voltage wires) and communication lines along the project frontage and within the project shall be placed underground. Electric, gas, Comcast and SBC utilities are required and shall be placed in a common trench. All electric transformers shall be placed underground. (Commercial and industrial developments may have above ground transformers).

12. TRAILWAY/BIKEWAY REQUIREMENTS

Active Transportation Plan

Certain portions of this development are within the City of Livermore Active Transportation Plan established and adopted as part of the General Plan. The Developer will be required to dedicate and develop that certain land within and adjacent to this development for various trail and bikeway transportation purposes.

13. MEDIANS AND OTHER LANDSCAPED AREAS

Since the City has a new centralized irrigation system with a computer terminal and modem located at the City's Maintenance Service Center, the Developer shall install a City standard centralized irrigation controller system with communication accessories as approved by the City. The City may exempt this requirement based on the limited size of the landscape area.

14. HORTICULTURIST'S REPORT – Not Used

15. SPECIAL DISTRICTS

A. Landscaping and Lighting Maintenance and Operation – Not Used

B. Assessment District

The development shall annex into Community Facilities District No. 2021-1 (Citywide Maintenance) to provide for maintenance funds for public infrastructure installed with this project. The public infrastructure to be included in the CFD shall include but is not limited to:

1. Public trail along Jack London Boulevard

The Developer shall initiate and bear the costs for the annexation into CFD 2021-1.

Annexation documents shall be filed with the filing of the final map. The necessary documentation shall be submitted for City review with the first improvement plan submittal.

16. AIRPORT LOCATION

This development is located in the vicinity of the Livermore Municipal Airport. Aircraft operations in the vicinity of the property may potentially create nuisances, including but not limited to noise, vibration or odors. The owner and or future buyer should be aware that operations and flight numbers at the Livermore Municipal Airport could increase in the future. A report must be filed with the Division of Real Estate relative to this matter.

An avigation easement shall be granted to the City. The grant shall be made on the City's "Avigation Easement" form.

17. SUBDIVISION AGREEMENT AND SECURITY

Following tentative map approval, the Subdivision Improvement Agreement will not be submitted to the City Council until the Developer has submitted all of the documents indicated in the "Final Approval of Tract Map Checklist" in the Development Plan Check and Procedures Manual (28) days prior to the city council meeting at which the final map will be considered for final approval by the City Council.

18. FEE AMOUNTS

The Developer will be required to pay the applicable development impact fees and project processing fees due in connection with this subdivision. The fee shall be the amount in effect at the time the fee is required to be paid.

19. VEHICLE ACCESS

Prior to or with the submittal for the first plan check of the tract improvement plans and final map, the Developer shall submit for review and approval a traffic control plan for providing safe entry to and exit from the site. The purpose of the plan is to insure that there will be safe entry and exit by construction and other vehicles prior to the installation of the required permanent improvements on Jack London Boulevard.

Access to the development by construction equipment, material delivery and other heavy loads shall be limited by the Developer to the following route:

Isabel Avenue, Jack London Boulevard

Such heavy loads will not be allowed on existing residential streets in the vicinity of the development.

The wheel-loading on the above routes shall not exceed State load limits.

JW:DES

EC SMP 39 3-5-24 des

DATE: March 1, 2024
Revised: March 5, 2024 PC

ENGINEERING CONSIDERATIONS - EXHIBIT "A"
(Subject to revision prior to final approval
by Planning Commission and City Council)

TENTATIVE PARCEL MAP: 11219 (SUB21-008),
APZ21-003, DA21-001

LOCATION: SMP 40 – End of Atlantis Ct and Challenger St

APPLICANT: Overton Moore Properties

Note: Special conditions are shown in standard type. Standard conditions that apply to this project are shown in italics. In addition, standard conditions of approval for this project are listed in Section II of the Development Plan Check and Procedures Manual.

1. DEFINITIONS

For the purpose of this agreement, the following words shall have the meanings respectively ascribed to them by this section:

Developer :	*Person(s) or Corporation(s) signing final map(s) and subdivision agreement(s)*
Improvement Plans:	*Construction drawings for required public and private improvements*
Services:	*Utility lateral, or any portions of a conduit cable or duct, between a utility distribution line and the site it serves*
Project:	*The work to be performed by Developer*

2. VESTING TENTATIVE MAP

Approval or conditional approval of this vesting tentative map shall not limit the City Engineer's ability to require workable designs on future grading and improvement plans based upon these Engineering Considerations and the City's standard engineering specifications and details.

In addition to these Engineering Considerations the Developer shall comply with all requirements set forth in Development Agreement 21-001.

The project is proposing to modify the floodway of the Arroyo Mocho to minimize flooding potential of the project and has applied to FEMA for a LOMR to effectuate the change in the floodway. Prior

to the filing of the final parcel map the Developer shall obtain the final LOMR from FEMA for this change.

The final parcel map shall show the flood plain and the revised floodway with base flood elevation noted from the current Flood Insurance Rate Maps and Flood Insurance Study.

The Parcel Map shall show the creek set-back area as defined by Alameda County Zone 7 Water Agency.

The parcel map shall include easement dedications to the public for a multi-use trail and an Emergency Vehicle Access. The parcel map shall also include private easement dedications for shared access and utilities.

3. GENERAL

The project shall be in conformance with all City Ordinances, rules, regulations, and policies. The conditions listed below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

All required improvements shall be constructed prior to occupancy of the new buildings on this site and in accordance with DA21-001.

A. IMPROVEMENT PLANS - Exhibit A-1

An engineered improvement plan shall be prepared by the Developer for approval by the City's Departments (including the Community Development, Public Works, Fire, and Police Department), which shall include, but not necessarily be limited to, existing site conditions, dedications, grading plans, street design and grades, curb, gutter, sidewalk and driveway grades, and type, size and location of all public works improvements as herein required. Approval of this tentative map does not constitute approval of the details shown thereon. If there is any conflict between the tentative map and these Engineering Considerations, the Engineering Considerations shall govern.

No specific phased development plan has been submitted with this tentative tract application. Therefore, all required improvements for this tentative map shall be constructed as one phase. A phased map could only be considered if a specific phasing plan is submitted for consideration as a tentative map amendment.

B. STANDARDS FOR IMPROVEMENT PLANS AND MAPS

All improvement plans and maps shall conform to the following City of Livermore documents except as modified by these engineering considerations:

1. *City of Livermore Standard Specifications and Details*
2. *Development Plan Check and Procedures Manual*

Completed final map and improvement plan checklists from the manual entitled "City of Livermore, Development Plan Check and Procedures Manual" shall be submitted with the first plan check

submittal for each phase.

C. STANDARD CONDITIONS OF APPROVAL IN THE DEVELOPMENT PLAN CHECK AND PROCEDURES MANUAL

All of the standard conditions of approval for subdivisions and major projects as listed in Part II of the City of Livermore Development Plan Check and Procedures Manual apply except for the following: A-2, A-9, A-13, A-14, A-15, A-16, A-17, B-5, B-16, K-1, K-2, K-3, N-1, U-1, U-2, U-3.

D. WORK IN OTHER JURISDICTIONS

The Developer is responsible for obtaining permits and approvals for construction work and property acquisition that are required by agencies other than the City of Livermore.

Creek improvements may be subject to requirements of any or all of the following agencies: (1) California Department of Fish and Game, (2) the Army Corps of Engineers, (3) the Regional Water Quality Control Board, (4) State Department of Water Resources (5) the U.S. Fish and Wildlife Service, and (6) Alameda County Flood Control and Water Conservation District (Zone 7).

Isabel Avenue is Caltrans right-of-way and requires a permit from Caltrans.

E. SPECIFIC CONDITIONS

The Developer shall file a Parcel Map as described in Section 2 of these Engineering Consideration and comply with the following conditions:

A. The finished floor elevation of the new buildings shall be set at an elevation one foot above the FEMA base flood elevation in compliance with City floodplain requirements for pad and compaction certifications. The certifications are required before building construction can begin and after the final grading is complete.

B. Because the buildings are proposed to be constructed adjacent to the floodplain, elevation certificates are required per City floodplain requirements to document the building elevations and provide the information needed to accurately rate any future flood insurance policy in the event the floodplain changes in the future. Provide a FEMA elevation certificate before and after construction to certify both the elevations of the proposed structures and as-built structures. The elevation certificate for the proposed structure shall be submitted prior to the issuance of a building permit and the elevation certificate certifying the as-built structure shall be submitted and approved prior to occupancy.

C. Construct the multi-use Arroyo Mocho Trail from its existing southern terminus on the adjacent property to the north through the site. The remaining trail shall then be constructed off-site through the following properties: Alameda County Flood Control and Water Conservation District (APN 904-0010-002-05) utilizing the existing bridge crossing the Arroyo Mocho and City of Livermore (APN 904-0019-002-08). The trail will then cross

Isabel Avenue with a pedestrian bridge in Caltrans right-of-way connecting to the western terminus of the Arroyo Mocho Trail recently constructed by the City. Plans for the trail may be separated into an on-site set and an off-site set for ease of review and construction. In accordance with DA 22-001, the Developer shall contribute $750,000 towards construction of the pedestrian bridge.

D. The Developer shall conduct a scour analysis of the Arroyo Mocho, or any other analysis as determined by the City Engineer, to ensure stability and minimize long term erosion of the multi-use trail. The results of the analysis shall be incorporated into the final design of the trail.

E. Install trail signs per current City standards and specifications.

4. STREETS

A. SPECIFIC REQUIREMENTS:

The Developer shall offer easements and dedications for, and shall improve his share of the ultimate street widths for the following named streets in accordance with the City's General Plan:

Atlantis Court and Challenger Street

Atlantis Court and Challenger Street are local streets in the General Plan. Both streets are fully improved except at the cul-de-sac ends just north of the project. In order to provide access to the site for both buildings through fully completed streets, the Developer shall construct the remaining portions of the cul-de-sacs. Improvements to be constructed include but are not limited to sidewalk, curb and gutter.

Atlantis Court and Challenger Street shall be given a Type II Microseal overlay across the full width where new utilities are installed.

CASp Certification for Public Walkways/Sidewalks

The Developer shall have a certified CASp Specialist review and certify that the design for all pedestrian improvements within the public right-of-way or a public easement complies with the following applicable regulations: American with Disabilities Act (ADA) requirements, the Public Rights-of-Way Accessibility Guidelines (PROWAG), and the requirements found in Chapter 11B of the 2019 California Building Code. If an accessibility design cannot meet the above listed applicable standards, the Developer shall propose and the CASp Specialist shall concur with a design exception request for approval by the City Engineer or their designee. In addition, the Developer shall have the certified CASp Specialist inspect and certify that pedestrian improvements are installed per the CASp certified design. Pedestrian improvements include new trails, walkways, sidewalks, accessible ramps, connections between existing and new pedestrian

improvements, and modifications to existing pedestrian improvements within or adjacent to the project site, as shown on the approved plans.

5. TRAFFIC SIGNALS- Not Used

6. TRAFFIC IMPACT FEE CREDITS AND REIMBURSEMENTS:

A. CREDITS

The Developer will be eligible for credit against their traffic impact fee for the following construction on Isabel Avenue:

Pedestrian Bridge crossing over Isabel Avenue and the off-site portion of the trail from the north end of the Zone 7 bridge to the connection with the Arroyo Mocho Trail

Traffic impact fee credits will be calculated at the time the subdivision agreement is prepared prior to final parcel map approval. The traffic impact fee credit for construction will be based on cost estimates for the TIF work as approved by the City Engineer. The traffic impact fee for the development will also be calculated based on the traffic impact fee per unit of development at that time to determine how TIF credits will be applied to the building permits

7. SANITARY SEWERS

The project shall connect to the public sewer main in Atlantis Court terminating at a manhole at or near the property line. Because the extended sewer will be shared by both project parcels, a private sewer easement shall be dedicated on the parcel map to serve both properties.

8. STORM WATER DRAINAGE AND TREATMENT REQUIREMENTS

A. General

1. This site is subject to the National Pollutant Discharge Elimination System (NPDES) Program. Prior to the issuance of the initial grading or building permit, the Developer shall provide evidence that the site is covered by the statewide General Permit to Discharge Storm Water associated with construction activity. This requires confirmation that a Notice of Intent (NOI) and the applicable fee was sent to the State Water Resources Control Board. In addition, the grading plans need to state: "All grading shall be in accordance with the Storm Water Pollution Prevention Plan prepared by the Developer per the Notice of Intent on file with the State Water Resources Control Board".

2. Necessary interceptor ditches shall be concrete. Field inlets and storm drainage pipe may be necessary in conjunction with concrete interceptor ditches as secondary drainage releases. All interceptor ditches shall be privately maintained.

B. Storm Drainage Requirements

Per the City's Facilities Planning Guidelines (dated June 2005), the flows must have the following characteristics:

For a 10-year design discharge: a hydraulic grade line (HGL) is no higher than 1.25 feet below the top of curb elevation at any manhole or inlet.

For a 100-year design discharge: a HGL does not exceed the top of curb elevation. (This is required for item 3 above.)

For additional detail on these guidelines, the applicant should refer to the following resources: City of Livermore Storm Drain Master Plan & City of Livermore Facilities Planning Guidelines (both available at the Engineering counter at City Hall).

C. Stormwater Infrastructure Maintenance Funding

The cost to maintain all private storm water infrastructure installed with this project shall be funded by the Developer.

D. Channels – Not Used

E. Storm Water Treatment, Detention and Low Impact Development Requirements

1. *The Developer shall treat the storm water runoff from this site prior to having the storm water enter the City's storm water distribution system. Stormwater Treatment, Low Impact Development, and Trash Capture is required by the Regional Water Quality Control Board. The Developer shall complete and or update the Stormwater Requirements Checklist. The Developer shall provide a storm water treatment plan with calculations indicating treatment that meets the latest requirements described in Section C.3 of the City's NPDES Permit with the Regional Water Quality Control Board. City approval of this plan and calculations is required prior to the approval of the improvement plans.*

2. *If this project is greater than one acre, the Developer shall provide a Hydrograph Modification Plan (HMP) with calculations in accordance with the Alameda Countywide Cleanwater Program (ACCWP) Bay Area Hydrology Model (BAHM) guidelines. The software for the design of control measures to meet the Flow Duration Control is available to download from* www.bayareamodel.org. *For additional information you may contact Debbie Salgado in the City's Engineering Department at (925-960-4558)*

3. *Prior to final map approval, the applicant shall enter into a maintenance agreement with the City of Livermore for all storm water treatment devices deemed necessary on this site. If the stormwater treatment devices will be maintained by the individual homeowners a cleanout will be necessary at the property lines to allow the residents to maintain their portion of the private stormdrain underdrain. If the stormwater treatment device will be maintained by a Homeowners Association then the cleanouts at each of the property lines may not be needed. The stormdrain treatment devices shall be shown on the plat plans and included in the Operations and Maintenance Agreement. The Operations and Maintenance Agreement(s) shall be recorded prior to recordation of the Final Map.*

F. Stormwater Treatment Infrastructure Maintenance Funding

The cost to maintain all storm water treatment, detention and low impact development infrastructure installed with this project shall be funded by the Developer.

9. REQUIRED SOURCE CONTROL STORMWATER MEASURES

The Regional Water Quality Control Board adopted Order R2-2022-0018 issuing the Alameda Countywide NPDES municipal storm water permit for the Alameda Countywide Clean Water Program. The 17 member agencies, including Livermore, are subject to this permit and all its requirements including the following:

> *"The Permittees shall, as part of their continuous improvement process, submit enhanced new development and significant redevelopment Performance Standards that summarize source control requirements for such projects to limit pollutant generation, discharge, and runoff, to the maximum extent practicable..."*

In accordance with this requirement, the following source control measures, included as part of these Conditions of Approval, shall be implemented as a part of this project.

A. Structural Control Measures

1. Illegal Dumping to Storm Drain Inlets and Waterways

On-site storm drain inlets, except inlets located in landscaped areas, shall be clearly marked with the words "No Dumping! Flows to Bay" on a plastic marker. The plastic markers are available for purchase from the Water Resources Division. For ordering information, please call 925-960-8100. For projects with newly-developed, privately-maintained streets, agency staff will verify that storm drain inlets have been marked before the final sign-off on the project's building permit or encroachment permit.

2. Interior Floor Drains

Approved interior floor drains shall be plumbed to the sanitary sewer system and shall not be connected to the storm drain system. The applicant shall contact the Water Resources Division for specific connection and discharge requirements.

3. Parking Garages – Not Used

4. Pesticide/Fertilizer Application and Irrigation

   a. Landscaping shall be designed to minimize irrigation and runoff, promote surface infiltration where possible, minimize the use of fertilizers and pesticides that can

contribute to storm water pollution, and incorporate appropriate Bay-Friendly Landscaping principles.

b. If a landscaping plan is required as part of a development project application, the plan shall meet the following conditions related to reduction of pesticide use on the project site:

I. Where feasible, landscaping shall be designed and operated to treat storm water runoff by incorporating elements that collect, detain, and infiltrate runoff. In areas that provide detention of water, plants that are tolerant of saturated soil conditions and prolonged exposure to water shall be specified.

II. Plant materials selected shall be appropriate to site specific characteristics such as soil type, topography, climate, amount and timing of sunlight, prevailing winds, rainfall, air movement, patterns of land use, ecological consistency and plant interactions to ensure successful establishment.

III. Existing native trees, shrubs, and ground cover shall be retained and incorporated into the landscape plan to the maximum extent practicable.

IV. Unless otherwise specified, proper maintenance of landscaping shall be the responsibility of the property owner.

V. Integrated pest management (IPM) principles and techniques shall be encouraged as part of the landscaping design. Some examples of IPM principles and techniques include the following:

i. Select plants that are well adapted to soil conditions at the site.

ii. Select plants that are well adapted to sun and shade conditions at the site. Consider future conditions when plants reach maturity. Consider seasonal changes and time of day.

iii. Provide irrigation appropriate to the water requirements of the selected plants.

iv. Select pest and disease resistant plants.

v. Plant a diversity of species to prevent a potential pest infestation from affecting the entire landscaping plan.

vi. Use "insectary" plants in the landscaping to attract and keep beneficial insects.

VI. Landscaping shall also comply with City of Livermore's "Water Efficient Landscape Ordinance". However, areas of a site used for bio-swales or other landscaped areas that function as a storm water treatment measure shall be exempt from the Water Efficient Landscaping requirements.

VII. An efficient irrigation system shall be installed in areas requiring irrigation. An example of an efficient irrigation system is one that includes a weather-based (automatic, self-adjusting) irrigation controller with a moisture and/or rain sensor shutoff, and in which sprinkler and spray heads are not permitted in areas less than 8 feet wide.

5. Pool, Spa, and Fountain Discharges – Not Used

6. Food Service Equipment Cleaning – Not Used

7. Refuse Areas

   a. New or redevelopment projects shall provide a roofed and enclosed area for dumpsters, recycling containers, compactors, and food waste containers. The area shall be designed to prevent water run-on to the area, to prevent runoff from the refuse area and to properly contain litter and trash. Dumpster leakage from covered trash and food compactor enclosures shall drain to the sanitary sewer via connection to an approved oil and grease interceptor device if required.

   b. Runoff from trash enclosures, recycling areas, and/or food compactor enclosures or similar facilities shall not discharge to the storm drain system. Trash enclosure areas shall be designed to avoid run-on to the trash enclosure area. In most cases, drains are not permitted within trash enclosure areas. A drain, however, must be provided for compactors. If a drain is required in or beneath dumpsters, compactors, and tallow bin areas, it shall be connected to a grease removal device prior to discharging to the sanitary sewer.

8. Outdoor Process Activities/Equipment[1] – Not Used

   a. Process activities shall be performed either indoors or in roofed outdoor areas. If performed outdoors, the area shall be designed to prevent the "run-on" of storm water drainage, as well, as the runoff from the area with process activities.

   b. Process equipment areas shall drain to the sanitary sewer system. The applicant shall contact the Water Resources Division for specific connection and discharge requirements.

9. Outdoor Equipment/Materials Storage – Not Used

10. Vehicle/Equipment and Commercial/Industrial Cleaning

11. Vehicle/Equipment Repair and Maintenance – Not Used

12. Fuel Dispensing Areas – Not Used

13. Loading Docks

a. Loading docks shall be graded to minimize run-on to and runoff from the loading area. Storm water runoff from loading dock areas shall be directed or connected to a post-construction storm water treatment measure(s) prior to discharge to the storm drain system.

b. Door skirts between the trailers and the building shall be installed to prevent exposure of loading activities to rain, unless one of the following conditions applies: the loading dock is covered, or the applicant demonstrates that rainfall will not result in an exposure of storm water to pollutants.

14. Fire Sprinkler Test Water

Provisions shall be made in the project design and construction to allow for the discharge of fire sprinkler test water to an onsite vegetated area. If this is not feasible, provide for discharge to the sanitary sewer in accordance with current plumbing codes.

15. Miscellaneous Drain or Wash Water

a. Boiler drain lines shall be connected to the sanitary sewer system and may not discharge to the storm drain system.

b. For small air conditioning units, air conditioning condensate shall be directed to landscaped areas as a minimum BMP. For large air conditioning units, in new developments or significant redevelopments, condensation lines shall be connected to the sanitary sewer system, wherever feasible.

c. Roof drains shall discharge and drain away from the building foundation to landscaped areas wherever feasible.

d. Washing and/or steam cleaning activities must be performed at an appropriately equipped facility that drains to the sanitary sewer as specified in Section J. Any outdoor washing or pressure washing must be in compliance with the City's Stormwater Management Program requirements and managed in such a way that there is no discharge of soaps or other pollutants to the storm drain system. The applicant shall contact the Water Resources Division for specific discharge requirements.

16. Architectural Copper Installation – Not Used

B. II. OPERATIONAL BMPS

This section details Best Management Practices (BMP) that private property owners and/or the occupants of private property must implement following the construction of projects. Ultimately, the responsibility for implementation of these BMPs rests with the property owners. The City of

Livermore's Source Control Program routinely performs inspections of industrial and commercial sites to verify BMP implementation and effectiveness.

1. Paved Sidewalks and Parking Lots

Sidewalks and parking lots shall be swept regularly to minimize the accumulation of litter and debris. Wash water resulting from the pressure washing of parking lots must be captured, pretreated (if necessary) to meet local discharge limits, and discharged to the sanitary sewer. Wash water resulting from the pressure washing of sidewalks may be allowed to drain to the storm drain system provided that (a) no soap or other cleaning agents are used, and (b) all debris are trapped and collected to prevent entry into the storm drain system. Under no circumstances shall washwater containing any soap or other cleaning agents be discharged to the storm drain system.

2. Private Streets, Utilities and Common Areas

   a. The owner of private streets and storm drains shall prepare and implement a plan for street sweeping of paved private roads and cleaning of all storm drain inlets.

3. Vehicle/Equipment Repair and Maintenance – Not Used

4. Fueling Areas – Not Used

5. Loading Docks

The property owner shall ensure that BMPs are implemented to prevent potential storm water pollution. These BMPs shall include, but are not limited to, a regular program of sweeping, litter control, and spill clean-up.

6. On-site Storm Drains

All on-site storm drains must be inspected and, if necessary, cleaned at least once a year immediately prior to the rainy season.

7. Architectural Copper Cleaning, Treating or Washing – Not Used

10. WATER SUPPLY (CITY)

Water mains shall be extended across all frontages of each phase and all waterline valves must notate "EPDM" on the valve body.

The developer shall install pressure reduction valves (PRVs), backflow prevention devices and appurtenances on the potable and reclaimed water services as directed by the City Engineer

The fire service backflow preventer(s) shall be effectively screened from the public right-of-way while at the same time preserving ease of maintenance access to the backflow preventer(s).

Screening shall be as specified on City Standard Detail W-10A, B and C. The fire service backflow preventer(s) shall meet the performance standards of the backflow preventer shown in City Standard Detail W-10A, B and C.

Prior to removal of a 1-inch, a 1.5-inch, or a 2-inch water service, the Developer shall contact the City's Water Resources Division at (925) 960-8100, and ask if the City would like to convert the service to a water sampling station. Existing water services (of any size) that will not be used by the proposed development shall be abandoned at the main. Large services shall be abandoned by placing a blind flange on the tee at the main. Small services shall be abandoned by removing the corporation stop valve and installing the appropriate plug in the service saddle. Any valves or meters on abandoned services shall be removed. The meters shall be returned to the Water Resources Division if they are not reused. The Developer shall coordinate water service removals with the City's Water Resources Division as well as with the public works inspector.

Because the project is located within the reclaimed water service area, the irrigation system shall be connected to the reclaimed water system. If the Reclaimed water main is not currently located along the sight frontage of this project, the Developer shall extend the water main as necessary to connect to the main along said project site frontage.

Submit an application for a permit to use recycled water to the Water Resources Division of Public Works.

11. UNDERGROUNDING OF UTILITIES:

All existing and new electric (with the exception of any 60 KV and higher voltage wires) and communication lines along the project frontage and within the project shall be placed underground. Electric, gas, Comcast and SBC utilities are required and shall be placed in a common trench. All electric transformers shall be placed underground. (Commercial and industrial developments may have above ground transformers).

12. TRAILWAY/BIKEWAY REQUIREMENTS

Active Transportation Plan

Certain portions of this development are within the City of Livermore Active Transportation Plan established and adopted as part of the General Plan. The Developer will be required to dedicate and develop that certain land within and adjacent to this development for the construction of the Arroyo Mocho Trail.

The alignment of the Arroyo Mocho Trail shall follow the alignment as described in Section E.C. above and shall be comprised of various sections as follows:

On-site:

Within a 20' minimum trail easement the trail shall be constructed with a minimum 10'AC and 5'gravel sections with 3'shoulders on both sides.

Paved ramps shall be provide from each building connecting their respective parking lots at the access gates to the on-site trail. March 5, 2024 PC

Off-site:

The trail portion within the Arroyo Mocho Access Road will narrow to fit within the existing 15' road section and will be comprised on a 10' AC section with 2.5' gravel shoulders on both sides.

The remaining portion of the off-site trail will be constructed with a minimum 10'AC and 2'shoulders on both sides.

The Developer shall prepare exhibits for the portion on the trail located on the Alameda County Flood Control and Water Conservation District property for inclusion in the City's Recreational Use License Agreement with the agency.

13. MEDIANS AND OTHER LANDSCAPED AREAS

Since the City has a new centralized irrigation system with a computer terminal and modem located at the City's Maintenance Service Center, the Developer shall install a City standard centralized irrigation controller system with communication accessories as approved by the City. The City may exempt this requirement based on the limited size of the landscape area.

14. HORTICULTURIST'S REPORT – Not Used

15. SPECIAL DISTRICTS

A. Landscaping and Lighting Maintenance and Operation – Not Used

B. Assessment District

The development shall annex into Community Facilities District No. 2021-1 (Citywide Maintenance) to provide for maintenance and replacement funds for public infrastructure installed with this project. The public infrastructure to be included in the CFD shall include but is not limited to:

1. On-site public trail and associated landscaping and retaining walls
2. Off-site public trail on Zone 7 property and associated landscaping and retaining walls

The Developer shall initiate and bear the costs for the annexation into CFD 2021-1.

Annexation documents shall be filed with the filing of the final map. The necessary documentation shall be submitted for City review with the first improvement plan submittal.

16. AIRPORT LOCATION

This development is located in the vicinity of the Livermore Municipal Airport. Aircraft operations

in the vicinity of the property may potentially create nuisances, including but not limited to noise, vibration or odors. The owner and or future buyer should be aware that operations and flight numbers at the Livermore Municipal Airport could increase in the future. A report must be filed with the Division of Real Estate relative to this matter.

An avigation easement shall be granted to the City. The grant shall be made on the City's "Avigation Easement" form.

17. SUBDIVISION AGREEMENT AND SECURITY

Following tentative map approval, the Subdivision Improvement Agreement will not be submitted to the City Council until the Developer has submitted all of the documents indicated in the "Final Approval of Tract Map Checklist" in the Development Plan Check and Procedures Manual (28) days prior to the city council meeting at which the final map will be considered for final approval by the City Council.

18. FEE AMOUNTS

The Developer will be required to pay the applicable development impact fees and project processing fees due in connection with this subdivision. The fee shall be the amount in effect at the time the fee is required to be paid.

19. VEHICLE ACCESS

Prior to or with the submittal for the first plan check of the tract improvement plans and final map, the Developer shall submit for review and approval a traffic control plan for providing safe entry to and exit from the site. The purpose of the plan is to insure that there will be safe entry and exit by construction and other vehicles prior to the installation of the required permanent improvements on Atlantis Court.

Access to the development by construction equipment, material delivery and other heavy loads shall be limited by the Developer to the following route:
St

Isabel Avenue, Discovery Drive, Atlantis Ct or Challenger St

Such heavy loads will not be allowed on existing residential streets in the vicinity of the development.

The wheel-loading on the above routes shall not exceed State load limits.

JW:DES

EC SMP 40 3-5-24 des

IN THE CITY COUNCIL OF THE CITY OF LIVERMORE, CALIFORNIA

AN ORDINANCE ADOPTING ANNEXATION/PREZONING (APZ) 21-003, PLANNED DEVELOPMENT – INDUSTRIAL (PD-I) 22-001, DEVELOPMENT CODE AMENDMENT (DCA) 21-005, AND ZONING MAP AMENDMENT (ZMA) 21-002 OF THE CITY OF LIVERMORE FOR THE SMP 39/SMP 40 PROJECT

THE CITY COUNCIL OF THE CITY OF LIVERMORE DOES ORDAIN AS FOLLOWS:

Section 1. *Recommendation*. The Planning Commission held a duly noticed public hearing on March 5, 2024, to consider Planned Development – Industrial 22-001 and recommended that the City Council approve the Planned Development in Planning Commission Resolution No.03-24, attached hereto as Exhibit A.

Section 2. *Environmental*. The City Council considered the environmental review and certified the SMP 39/SMP 40 Final Environmental Impact Report by Resolution No. ____.

Section 3. *Consistency.* The ordinance is consistent with the Livermore General Plan, any applicable specific plan, and the Livermore Development Code.

Section 4. *Adoption.* The City Council of the City of Livermore has considered the findings made in Planning Commission Resolution No.03-24, attached hereto as Exhibit A, and hereby adopts the same findings by this reference and incorporates them as part of this resolution, and based upon the City Council's own independent review and considerations, the City Council hereby approves Annexation/Prezoning (APZ) 21-003 to pre-zone the Subject Property to Planned Development – Industrial 22-001 and Open Space-Floodplain, Planned Development - Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, and Zoning Map Amendment (ZMA) 21-002, amending the Zoning Map of the City of Livermore as shown in the attached Exhibit B.

Section 5. *Zoning Standards*. The zoning standards for this district shall be those set forth in the Planned Development - Industrial (PD-I) 22-001 Standards, attached hereto as Exhibit C.

Section 6. *Publication and Effective Date.* This ordinance or a comprehensive summary thereof shall be published once in a newspaper of general circulation of the City of Livermore within 15 days after its adoption and shall take effect and be in force thirty days from and after its adoption.

Section 7. *Filing.* The Planning Manager is directed to file a Notice of Determination with the Alameda County Clerk.

Section 8. *Documents.* The documents that constitute the record of proceedings upon which this decision is based on can be found in the City Clerk's Office, 1052 S. Livermore Avenue, Livermore, California.

Section 9. *Severability.* If any part of this ordinance is declared unconstitutional or invalid by a court, such unconstitutionality or invalidity shall not affect any remaining parts.

The foregoing ordinance was introduced at the meeting of the City Council of the City of Livermore held on March 25, 2024, by the following vote:

AYES: COUNCIL MEMBERS:
NOES: COUNCIL MEMBERS:
ABSENT: COUNCIL MEMBERS:
ABSTAIN: COUNCIL MEMBERS:

The ordinance was adopted at the regular meeting of the City Council held on _____, by the following vote:

AYES: COUNCIL MEMBERS:
NOES: COUNCIL MEMBERS:
ABSENT: COUNCIL MEMBERS:
ABSTAIN: COUNCIL MEMBERS:

_____
Mayor, City of Livermore

ATTEST:

/s/ Kimberly D. Cilley
Kimberly D. Cilley
Senior Assistant City Attorney

Exhibit A – Planning Commission Resolution No. 03-24
Exhibit B – Zoning Map Amendment (ZMA) 21-002
Exhibit C – Planned Development – Industrial 22-001 Zoning Standards

IN THE PLANNING COMMISSION OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION RECOMMENDING THAT THE CITY COUNCIL APPROVE GENERAL PLAN AMENDMENT (GPA) 21-001, ANNEXATION/PREZONING (APZ) 21-003, ZONING MAP AMENDMENT (ZMA) 21-002, PLANNED DEVELOPMENT-INDUSTRIAL (PD-I) 22-001, DEVELOPMENT CODE AMENDMENT (DCA) 21-005, VESTING TENTATIVE PARCEL MAP (SUB) 21-008, VESTING TENTATIVE TRACT MAP (SUB) 21-009, SITE PLAN DESIGN REVIEW (SPDR) 21-008, PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA) 21-001, AND PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA) 23-002 FOR THE SMP 39/SMP 40 PROJECT

The City received an application General Plan Amendment (GPA) 21-001, Annexation/Prezoning (APZ) 21-003, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, Site Plan Design Review (SPDR) 21-008, Pre-annexation and Development Agreement (DA) 21-001, and Pre-annexation and Development Agreement (DA) 23-002 for the SMP 39/SMP 40 Project ("Project") to develop approximately 1.51 million square feet of industrial development and associated parking, lighting, landscaping, and other improvements.

On March 5, 2024, the Planning commission held a duly noticed public hearing to consider the Project and staff recommendations, all public comments and testimony, and findings.

NOW, THEREFORE, BE IT RESOLVED, by the Planning Commission of the City of Livermore that prior to taking action on the Project, and at a properly noticed public meeting, the Planning Commission reviewed written and oral staff reports, conducted a public hearing on the Project and took testimony, and received into the record all pertinent documents related to the Project (collectively, the "Record Evidence"). The Planning Commission's determination is based on the Record Evidence, which is incorporated into this Resolution by reference.

BE IT FURTHER RESOLVED with respect to General Plan Amendment (GPA) 21-003 (attached hereto as Exhibit A) the Planning Commission of the City of Livermore finds based on the information presented:

1. The amendment is internally consistent with all other provisions of the General Plan.

   Response: The General Plan currently designates the SMP 39, SMP 40, and the Additional Annexation Only Parcels as Open Space/Sand and Gravel (OSP/S&G) and is adjacent to land designated by the General Plan as Low-Intensity Industrial (LII). The Project proposes to modify the General Plan designation for SMP 39 and SMP 40 to LII to permit light industrial development and the Additional Annexation Only Parcels to Parks, Trailways, and Recreation Areas (OSP). Development is not proposed on the Additional Annexation Only Parcels and the OSP designation is

consistent with the parcels' natural features and attributes, including their proximity to Arroyo Mocho. The change to a LII land use designation for the site supports and implements the General Plan and will be compatible with the existing and adjacent industrial uses in the Oaks Business Park and Livermore Municipal Airport, maximizing the use of existing public streets, services, and facilities. Therefore, the proposed changes are internally consistent with all other provisions of the General Plan.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

   Response: The proposed General Plan Amendment will enable SMP 39 and SMP 40 to be developed with light industrial uses and achieve the General Plan Goals, Objectives, and Policies to focus light industrial uses around the Livermore Municipal Airport. In addition, the development will not include objectionable levels of noise, vibration, odors, glare, or hazard that would create a nuisance for surrounding uses. Planned Development – Industrial (PD-I) 22-001 zoning will implement the General Plan land use designation through use restrictions and development standards to ensure orderly and thoughtful development of the site with respect to the site's location and physical characteristics. Development is not proposed on the Additional Annexation Only Parcels. The Additional Annexation Only Parcels will be designated as OSP designation and rezoned to Open Space – Floodplain which is consistent with the parcels' natural features and attributes, including their proximity to Arroyo Mocho.

   In addition, the Project, including the necessary General Plan and Zoning amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA) and found to have no adverse effect on the environment with mitigation incorporated, with the exception of converting agricultural land to non-agricultural uses as defined by the Alameda County Local Agency Formation Commission. However, the California Department of Conservation's Farmland Mapping and Monitoring Program does not classify the project site as Farmland. Therefore, the proposed amendment would not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

3. The affected site is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

   Response: Based on the plans and specifications provided by the Developer and reviewed by City staff, the SMP 39 and SMP 40 sites are physically suitable to

accommodate the industrial land use designation at the proposed intensity. In addition, the Project, including the necessary General Plan and Zoning Map Amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA), which found the site was suitable in terms of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment and disposal, etc.). The proposed land use designation and the anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

BE IT FURTHER RESOLVED with respect to Annexation/Prezoning (APZ 21-003), Development Code Amendment (DCA) 21-005, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001 (attached hereto as Exhibits B and C) the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed amendment is consistent with the General Plan and any applicable Specific Plan.

   Response: The SMP 39 and SMP 40 properties will be prezoned to PD-I 22-001, which is consistent with the proposed General Plan land use designation of LII. The zone will be similar to the adjacent existing industrial uses and developed in compliance the PD-I 22-001 and Livermore Development Code standards. In addition, the Additional Annexation Only Parcels will be prezoned to OS-F zone, which is consistent with the proposed General Plan land use designation of OSP.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

   Response: Based on staff analysis contained in the Planning Commission staff report and the SMP 39/SMP 40 EIR, there is no evidence that approval of the Zoning Map Amendment will be detrimental to the public interest, health, safety, convenience, or welfare of the City.

3. The proposed amendment is internally consistent with other applicable provisions of this Development Code.

   Response: The proposed Zoning Map Amendment would prezone SMP 39 and SMP 40 to PD-I 22-001 and prezone the Additional Annexation Only Parcels to OS-F. Prezoning is required prior to annexation of territory into the City. Therefore, the proposed amendment is consistent with all other applicable provisions of the Development Code.

4. The affected site is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm

drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the requested zone designation and the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

Response: Based on the plans and specifications provided by the Developer and reviewed by City staff, the SMP 39 and SMP 40 sites are physically suitable to accommodate the industrial land use designation at the proposed intensity. In addition, the Project, including the necessary General Plan and Zoning Map Amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA), which found the site was suitable in terms of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment and disposal, etc.). The proposed land use designation and the anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

BE IT FURTHER RESOLVED with respect to the Vesting Tentative Parcel Map (SUB) 21-008 and Vesting Tentative Tract Map (SUB) 21-009 the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed map is consistent with the General Plan and any applicable specific plan, any policy or guideline implementing the General Plan (including the City's Design Standards and Guidelines), or other applicable provisions of this Development Code.

   Response: The Vesting Tentative Parcel Map and Vesting Tentative Tract Map were submitted with applications for a General Plan Amendment and Zoning Map Amendments (Annexation/Prezoning). Based on the approvals to change the General Plan land use designation to an industrial use and the proposed PD-I 22-001 zone, the proposed maps are consistent with the General Plan and the Development Code.

2. The site is physically suitable for the proposed type of development.

   Response: The development of approximately 1.51 million square feet of industrial development is consistent with the Low Intensity General Plan land uses, PD-I 22-001 zoning, and the Livermore Development Code, which confirms the proposed intensity and type of development are suitable for the site.

3. The design of the subdivision or the proposed improvements will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. Notwithstanding the foregoing, the Commission or Council may approve a tentative map if an Environmental Impact Report was prepared with respect to the project and a statement of overriding considerations was made to the effect that specific economic, social, or other considerations make infeasible the

mitigation measures or project alternatives identified in the Environmental Impact Report.

Response: The project involves the development of two undeveloped sites with industrial uses. An Environmental Impact Report (EIR) was prepared for the project. The EIR finds that with mitigation measures (protocol surveys, state and federal agency coordination, and avoidance strategies for special status species), any potential impacts to fish or wildlife or their habitat will be reduced to less than significant.

4. The design of the subdivision or the type of improvements will not cause serious public health problems.

   Response: An EIR has been prepared for the project. The EIR finds that with mitigation measures, any potential impacts to public health will be reduced to less than significant.

5. The design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision (The Commission or Council may approve a tentative map if it finds that alternative easements for access will be provided, and that these will be substantially equivalent to ones previously acquired by the public. This Subparagraph shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction, and no authority is hereby granted to the Commission to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision.)

   Response: There are no existing easements on SMP 39 or SMP 40. The Project includes an at-grade, paved trail within a 38.5-foot trail easement along the SMP 39 frontage on West Jack London Boulevard, consistent with the City's Active Transportation Plan. There is an access easement and public use easements on a portion of the Additional Annexation Only Parcels. However, this area will not be developed as part of the Project, with the exception of an at-grade trail along a portion of the Additional Annexation Only Parcels. The design of the subdivisions and the proposed development improvements avoids these easements and thus does not conflict with any public easements.

6. Any proposed phases and their proposed sequence of construction are identified on the submitted tentative map. The City may impose reasonable conditions relating to the filing of multiple final maps in conjunction with the approval of the tentative map (Section 66456.1).

   Response: The subdivision does not involve multiple phases.

BE IT FURTHER RESOLVED with respect to the Site Plan Design Review (SPDR) 21-008 the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed development will be allowed within the subject zone.

   Response: Based on the approval of the General Plan Amendment application to change the site to industrial use, in concert with prezoning the site to Planned Development – Industrial 22-001 zoning district, which permits light industrial uses and establishes appropriate development standards, the proposed development of industrial buildings is permitted within the subject zone.

2. Be designed such that:
   a. The project will not be detrimental to the public health, safety, or general welfare, and not detrimental to adjacent property;
   b. Architectural design and functional plan of the structure(s) and related improvements are of reasonable aesthetic quality and compatible with adjacent developments;
   c. Structure(s) and related improvements are suitable for the proposed use of the property and provide adequate consideration of the existing and contemplated uses of land and orderly development in the general area of the subject site; and
   d. The project's site plan and design is consistent with the City's Design Standards and Guidelines.

   Response: An Environmental Impact Report (EIR) was prepared for the project. The EIR does not find any significant impacts on the public health, safety, or general welfare to adjacent properties. Based on the review of the development plans for the Project, the design of the proposed development is compatible with adjacent developments and consistent with the Design Standards and Guidelines. No aspect of the proposed development will be detrimental to the existing uses of land and the orderly development in the general area.

3. Be designed to include the following criteria, as applicable:
   a. Compliant with this Chapter, this Development Code, Municipal Code Title 15 (Buildings and Construction), and all other applicable City regulations and policies;
   b. Efficient site layout and design;
   c. Compatible and appropriate scale to neighboring properties and developments;
   d. Efficient and safe public access (both pedestrian and vehicular) and parking;
   e. Appropriate and harmonious arrangement and relationship of proposed structures and signs to one another and to other development in the vicinity, based on good standards of design;
   f. Appropriate relationship to land use and development of adjacent properties, including topographic and other physical characteristics of the land;

g. Proper site utilization and the establishment of a physical and architectural relationship to existing and proposed structures on the site;
h. Compatible architectural style with the character of the surrounding area, both to avoid repetition of identical design where not desired, and to ensure compatibility in design where desired;
i. Harmonious relationship with existing and proposed developments and the avoidance of both excessive variety and monotonous repetition;
j. Compatible in color, material, and composition of the exterior elevations to neighboring visible structures;
k. Appropriate exterior lighting which provides for public safety and is not of a nature that will constitute a hazard or nuisance to adjacent properties;
l. Compatible in scale and aesthetic treatment of proposed structures with public areas;
m. Appropriate open space and use of water efficient landscaping; and
n. Consistent with the General Plan and any applicable Specific Plan.

Response: The Project is designed to be compatible and in scale with the existing surrounding developments. The Project is designed to provide adequate on-site improvements including parking, lighting and landscaping. Based on the design review of the project, as documented in the Planning Commission staff report, the Project meets all the design criteria identified above.

BE IT FURTHER RESOLVED with respect to the Pre-annexation and Development Agreement (DA) 21-001 and Pre-annexation and Development Agreement (DA) 23-002 (attached hereto as Exhibits D and E, respectively) the Planning Commission of the City of Livermore finds based on the information presented:

1. The Development Agreement provides benefit to the City.

   Response: The Development Agreements establish terms and obligations for public benefits, including the Applicant's financial contribution toward and construction of the off-site trail improvements and financial contribution to the City's Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001. For these reasons, the Development Agreements will provide benefit to the City.

2. The Development Agreement is consistent with the purpose, intent, goals, policies, programs, and land use designations of the General Plan, any applicable Specific Plan, and this Development Code.

   Response: The Development Agreements require the Applicant to provide a financial contribution to the City's Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001. This is consistent with the purpose, intent, goals, policies, and programs, of the General Plan. Specifically, this will implement policies and actions in the General Plan Economic Development element to encourage existing businesses to remain and grow in

Livermore, and attract a range of new businesses to locate in Livermore. The Development Agreements also include financial contribution toward and construction of the off-site trail improvements identified in the City's Active Transportation Plan. This is consistent with the purpose, intent, goals, policies, and programs of the General Plan and the Active Transportation Plan to improve bicycle and pedestrian circulation and connectivity.

3. The Development Agreement complies with the requirements of Government Code Sections 65864 through 65869.5

   Response: The proposed development complies with the requirements of Government Code Section 65864 through 65869.5 by securing the terms and timing for off-site improvements and amenities for the benefit of the broader Livermore community.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the Record Evidence and adopted a resolution recommending the City Council certify an Environmental Impact Report.

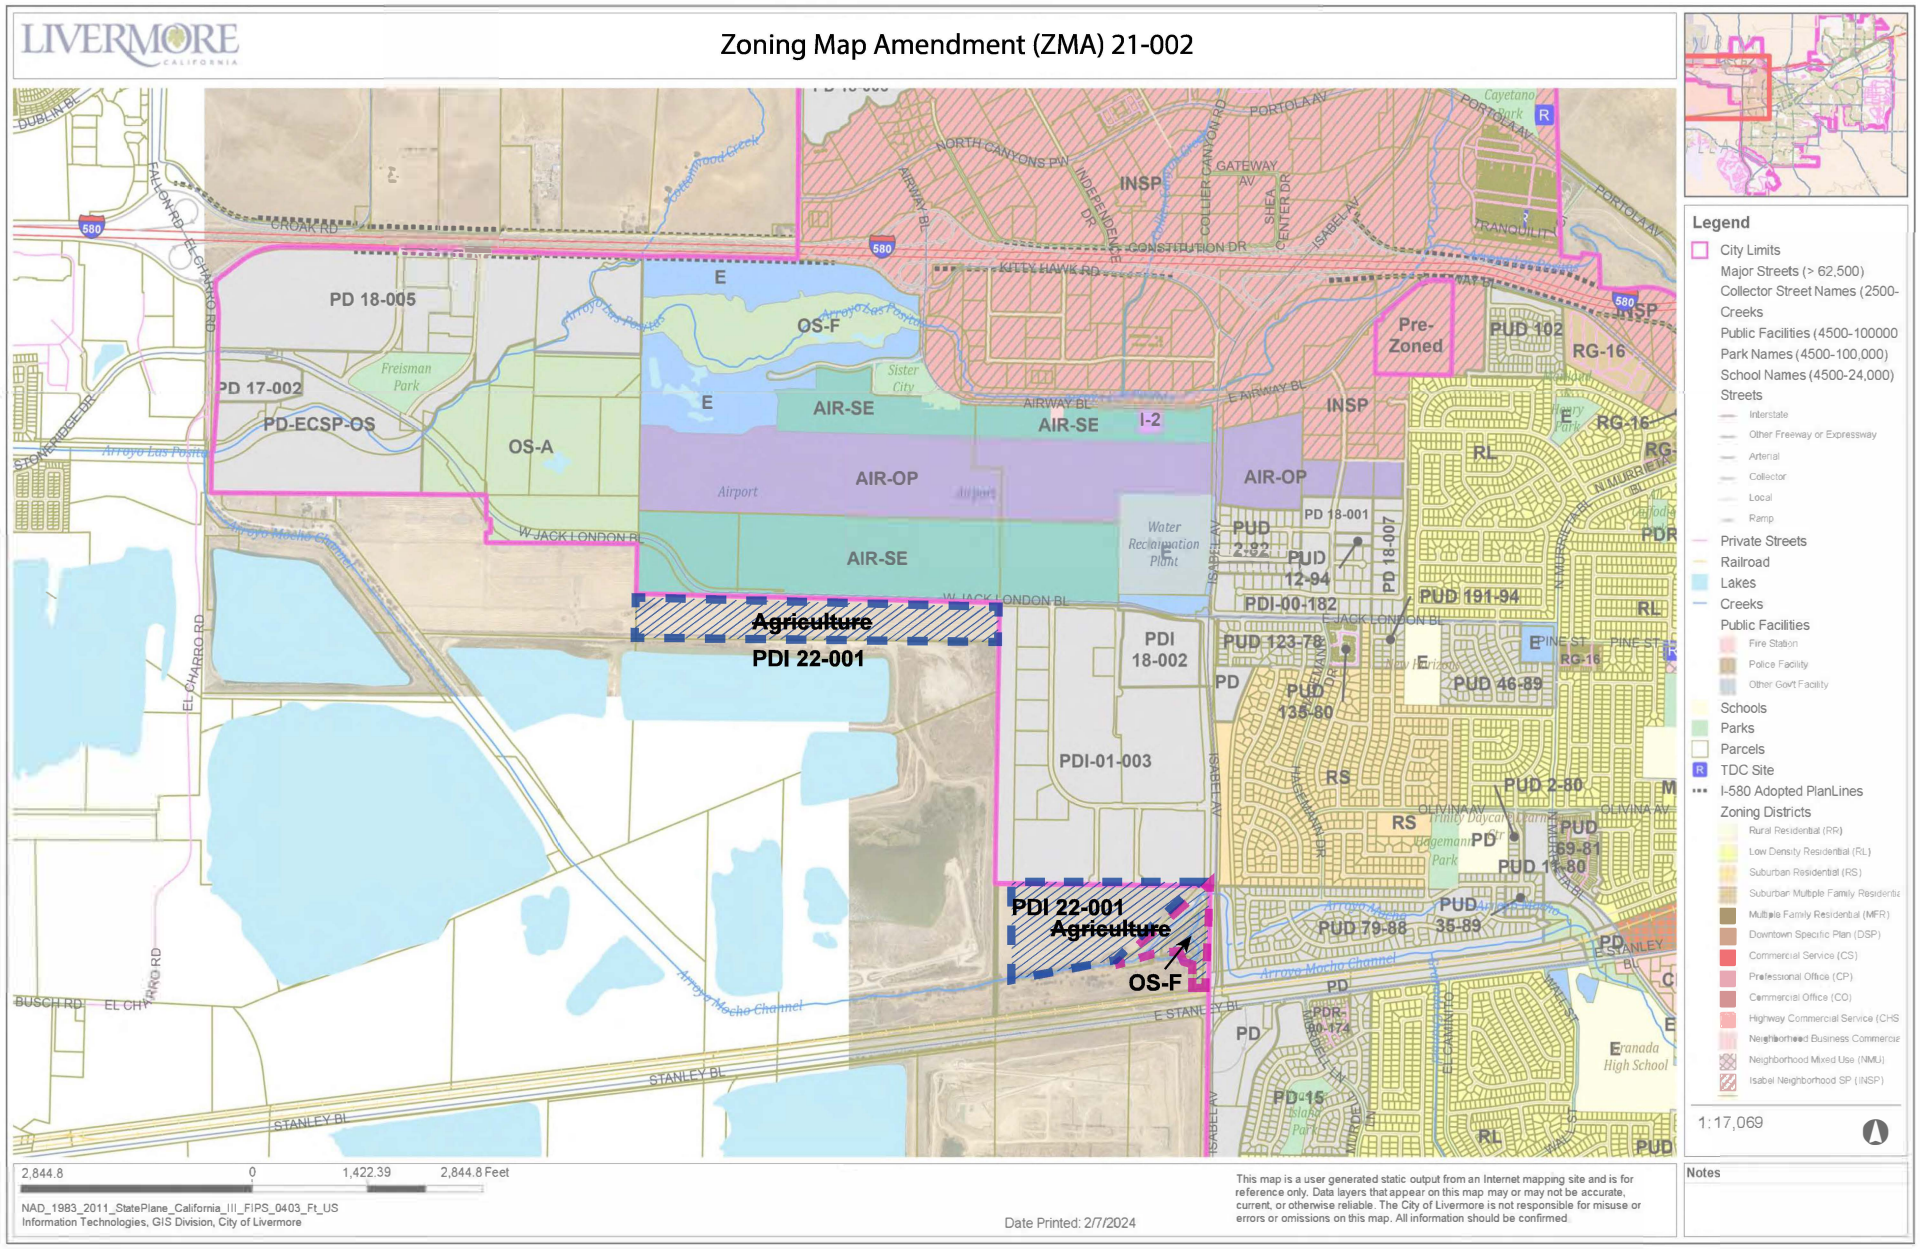
BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the findings set forth above and adopts these findings as part of this resolution. Based upon the Planning Commission's independent review of the Record Evidence and considerations, the Planning Commission recommends that the City Council approve General Plan Amendment (GPA) 21-001, Annexation/Prezoning (APZ) 21-003, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, and Site Plan Design Review (SPDR) 21-008, subject to the Conditions of Approval attached hereto as Exhibit F, for the SMP 39/SMP 40 Project.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the findings set forth above and adopts these findings as part of this resolution. Based upon the Planning Commission's independent review of the Record Evidence and considerations, the Planning Commission recommends that the City Council approve Pre-annexation and Development Agreement (DA) 21-001, and Pre-annexation and Development Agreement (DA) 23-002 in substantial conformance with Exhibits D and E, subject to the Conditions of Approval attached hereto as Exhibit F, for the SMP 39/SMP 40 Project.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore recommends the City Council authorize submission of an application to the Alameda County Local Agency Formation Commission to initiate a sphere of influence modification and annexation proceedings for the Subject Property.

BE IT FURTHER RESOLVED, the Planning Commission of the City of Livermore recommends that the City Council direct the Planning Manager to file a Notice of Determination with the Alameda County Clerk, if the project is approved.

The documents that constitute the record of proceedings upon which this decision is based can be found in the Community Development Department, 1052 S. Livermore Avenue, in Livermore, California.
On the motion by Commissioner Leary, seconded by Commissioner Fintschenko, the foregoing Resolution was passed and adopted at the Planning Commission meeting of March 5, 2024, by the following vote:



AYES: ANDERSON, DUNBAR, FINTSCHENKO, KRONZAK, LEARY.
NOES: NONE.
ABSENT: NONE.

Planned Development – Industrial (PD-I) 22-001

Reviewed by Planning Commission: March 5, 2024
Approved by City Council: March 25, 2024

Purpose: The purpose of establishing this Planned Development-Industrial (PD-I 22-001) District (District) is to regulate the development of ± 51.9 acres of land located on Jack London Boulevard, west of Oaks Business Park and south of Livermore Municipal Airport (commonly referred to as "SMP 39") and ± 41 acres of land located south of Oaks Business Park, at the south end of Atlantis Street and Challenger Street (commonly referred to as "SMP 40"), as shown in the attached figure (Figure 1). The intent of this District is to accomplish the following:

1. PD-I 22-001 is intended to provide an environment exclusively for and conducive to the development and protection of modern professional and administrative facilities, research institutions, manufacturing operations, experimental and testing laboratory and related uses, any similar employment generating high-end industrial users, all of a non-nuisance type.
2. The District is intended to provide for an aesthetically attractive working environment with park- and/or campus-like grounds, attractive buildings, employee parking, and other amenities appropriate to a mix of office and industrial uses.
3. The District is intended to establish development standards and regulations consistent with the intent of the Low Intensity Industrial General Plan designation.
4. Any land use that utilizes hazardous materials shall be subject to the regulations of Section 6.02.040, Hazardous Materials, of the Livermore Development Code, as it exists now or is amended in the future.
5. Development shall be in conformance with the requirements of the Livermore Development Code as it exists now or is amended in the future, except as modified by the following regulations.
6. Development is subject to the Citywide Design Standards and Guidelines as they exist now or may be amended in the future unless otherwise modified by the following regulations.

A. Principal Permitted Uses:

The following are the principal permitted uses for SMP 39[1] and SMP 40:

1. Research and development facilities
2. Professional and administrative offices
3. Experimental and testing laboratories
4. Manufacture of electric and electronic circuits, instruments, and devices
5. Manufacture of pharmaceutical products or life science facility, not exceeding Biosafety Level 2[2]
6. Medical diagnostic and manufacturing facilities
7. Manufacturing and assembly of motor vehicle parts, including but not limited to dashboards, parts, component systems, electrical connectors, sensors, panels, airbags, seats, tires, windows etc. for all vehicles and similar equipment (e.g. automobiles, motorcycle, construction equipment, farm equipment, buses).
8. Similar uses as determined by the Community Development Director to be of the same general character as the listed uses.

Additional Permitted Uses for SMP 39 only:

1. Restaurants, except fast food

Additional Permitted Uses for SMP 40 only:

1. Warehousing and distribution facilities, dry or refrigerated
2. Warehousing and distribution facility – E-commerce/Third Party Logistics (3PL)
3. Manufacturing, assembly, processing, storage, or packaging of products from previously prepared materials such as, but not limited to, cloth, plastic, paper, leather, and precious or semi-precious metals or stones, <u>but not including the following</u>:
   A. Operations such as saw and planing mills, any manufacturing uses involving primary production of wood, metal, or chemical products from raw materials, and similar uses
   B. Vehicle dismantling yards, scrap and waste yards
   C. Manufacturing, processing, storing, or packaging chemicals, petroleum, heavy agricultural products or other hazardous materials.

[1] SMP 39 and SMP 40 are located with the Airport Influence Area and the Livermore Airport Protection Area. Per the Alameda County Airport Land Use Compatibility Plan, the majority of SMP 39 is located in Safety Zone 6, with a portion of the site located in Safey Zone 3. The principal permitted land uses are intended to be located in buildings that are only within the portion of SMP 39 that is located in Safety Zone 6.

[2] Per the Centers for Disease Control and Prevention, Biosafety Level 2 laboratories involve work that poses moderate hazards to laboratory workers and the environment. Biosafety Level 2 laboratories require safety protocols to contain microbes and biological agents.

4. Sale of heavy equipment and construction related vehicles and equipment, including associated repair, service, and parts distribution facilities. Showrooms related to this use may be a conditionally permitted ancillary use.
5. Similar uses as determined by the Community Development Director to be of the same general character as the listed uses.

B. Conditional Uses for SMP 39 and 40:

1. Public and quasi-public uses.
2. Manufacture of pharmaceutical products or life science facility, not exceeding Biosafety Level 3[3]
3. Similar uses as determined by the Planning Commission to be of the same general character as the listed uses.

Conditional Uses for SMP 39 only:

1. Fast-food businesses, banks, personal services, or goods required for the convenience and support of occupants of uses in the surrounding district(s).
2. Warehouse and distribution facilities, including E-commerce/Third Party Logistics (3PL) uses, with the condition that these uses may only occupy up to 20 percent of the total buildable site area.
3. Sale of heavy equipment and construction related vehicles and equipment, including associated repair, service, and parts distribution facilities, provided they are manufactured and/or sold on-site. Showrooms related to this use may be a conditionally permitted ancillary use.
4. Similar uses as determined by the Planning Commission to be of the same general character as the listed uses.

C. Accessory Uses Permitted on SMP 39 and 40:

1. Signs subject to the requirements established by the Livermore Development Code, as well as the Citywide Design Standards and Guidelines, as it exists now or is amended in the future.
2. Accessory uses and buildings customarily appurtenant to a permitted use.
3. Living quarters determined by the Community Development Director to be necessary for surveillance purposes.
4. Fuel stations subject to the requirements of Section 6.03.160, Vehicle Services, of the Livermore Development Code, as it exists now or is amended in the future.

[3] Per the Centers for Disease Control and Prevention, laboratories designated Biosafety Level 3 involve work that poses a safety hazard greater than Biosafety Level 2 laboratories, defined above. Biosafety Level 3 laboratories require additional safety protocols beyond those required for Biosafety Level 2 laboratories to contain microbes and biological agents.

D. Special Development Requirements for SMP 39 and 40:

1. Uses shall be designed and integrated into the site in a manner that maintains and is complementary to the corporate and professional character of the nearby Oaks Business Park.
2. Outdoor service and storage yards shall be screened from public view consistent with Livermore Development Code Section 6.03.100, Outdoor Storage, as it exists today or is amended in the future.
3. For SMP 40 only: Commercial/Industrial buildings shall be located a distance of at least 500 feet from Isabel Avenue.

E. Site Development Regulations for SMP 39 and 40:

The following minimum requirements shall be observed, except where increased for conditional uses:

1. Lot Area: Twenty thousand square feet
2. Lot Width: One hundred feet
3. Setbacks: Setback requirements are established below. Buildings shall not be permitted within required setbacks.

A. SMP 39

1) Front or Street Side: 40-feet on West Jack London Boulevard, and 30-feet on frontage roads and interior streets, except as required by subsection E.4. All required setbacks adjacent to streets shall be landscaped, except for driveways, sidewalks, and trails that are found to be necessary for the efficient use of the property. Where a building front is visible from the street, a minimum five-foot wide landscaped strip abutting the foundation shall be included, allowing for necessary entrances.
2) Rear and Side: None.

B. SMP 40

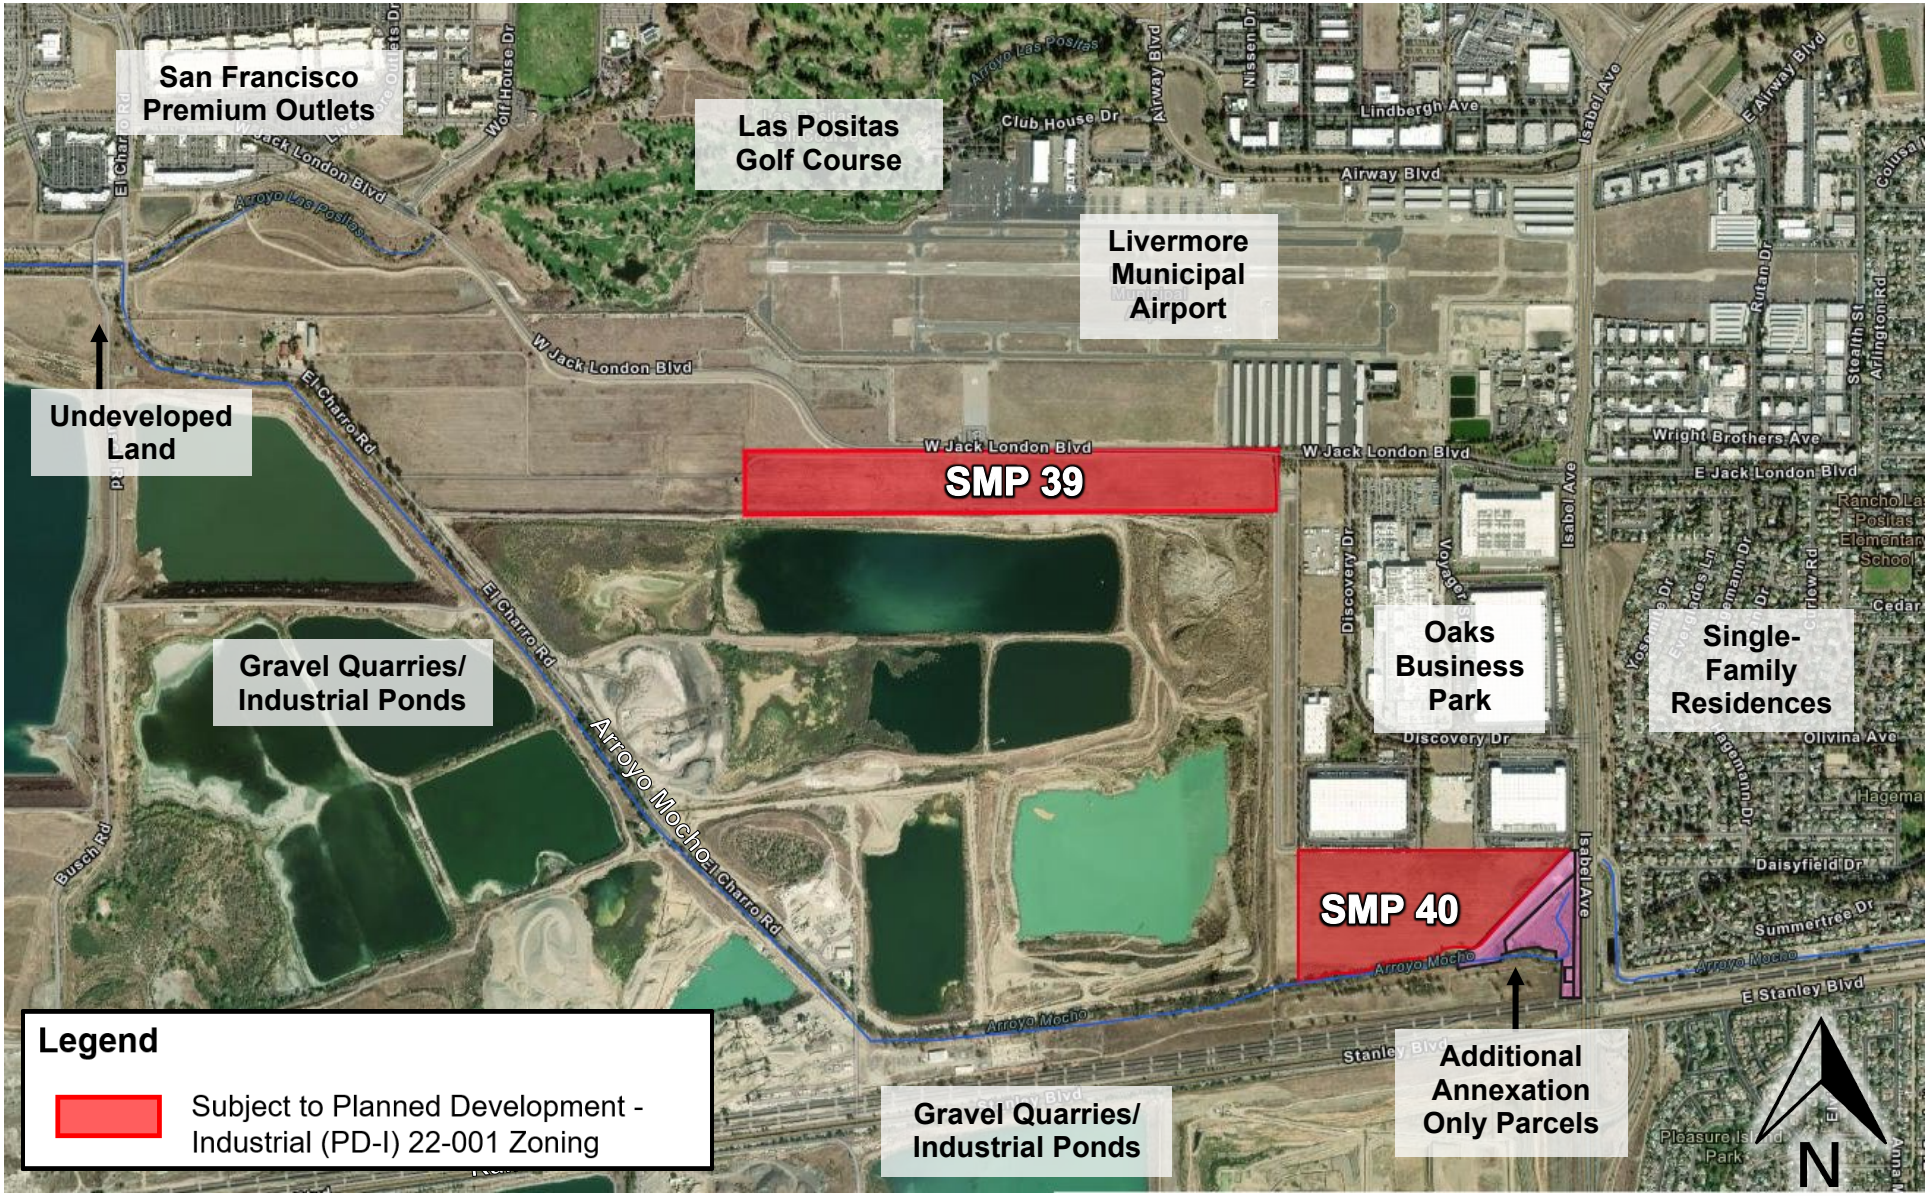
1) Front or Street Side: 500-feet from Isabel Avenue, and 30-feet on frontage roads and interior streets, except as required by subsection E.4. All required setbacks adjacent to streets shall be landscaped, except for driveways and sidewalks that are found to be necessary for the efficient use of the property. Where a building front is visible from the street, a minimum five-foot wide landscaped strip abutting the foundation shall be included, allowing for necessary entrances
2) Rear and Side: None, except for a 20-foot setback from the top of the Arroyo Mocho bank on SMP 40 which should be determined from a 2.5:1 slope projection from the toe of

channel/mining pit to the top, as required in the Environmental Impact Report for the project.

4. Height Regulations: The height of all on-site structures, including roof-top mechanical equipment, is limited to 50 feet or the height permitted by the Federal Aviation Administration (FAA) review under FAA regulations – Part 77, whichever is more restrictive. Upon providing a minimum 40-foot setback from street rights-of-way, a Conditional Use Permit may be requested to increase height to a maximum of 55 feet, or the height permitted under FAA regulations – Part 77, whichever is more restrictive. The height of pole-and building-mounted lights may be approved up to 28 feet by an administrative site plan and design review, if found necessary for the health and safety of a site designed for truck or other large vehicle maneuvering and documented by a light study to not cause glare off-site.
5. Lot Coverage: The building coverage maximum shall be 45 percent.

F. Signs

1. Industrial Uses. Signs for industrial uses shall be subject to the sign regulations contained in Livermore Development Code section 4.06.230 (sign standards for I-1, I-2 and I-3) and the Citywide Design Standards Guidelines as it exists now or is amended in the future.
2. Commercial Uses. Signs for commercial uses shall be subject to the sign regulations contained in Livermore Development Code section 4.06.170 (sign standards for CNB) and the Citywide Design Standards Guidelines as it exists now or is amended in the future.



G. Other Required Standards for SMP 39 and 40:

1. Noise. No use shall be permitted which creates an ambient noise level greater than 75 decibels (dBA) beyond the boundaries of the site, nor greater than 60 decibels at the boundary of a Residential District.
   A. On SMP 39, semi-truck access to the site (arrivals and departures) shall be limited to 96 trips between the hours of 10:00 PM and 7:00 AM.
   B. On SMP 40, semi-truck access to the site (arrivals and departures) shall be limited to 40 trips between the hours of 10:00 PM and 7:00 AM
   C. Between the hours of 10:00 PM and 7:00 AM single-event noise levels (e.g., backup alarm, truck brakes, etc.) shall not exceed 55 dBA, measured at the property line of the nearest residential use.
2. Air Pollution. All uses shall comply with regulations of the San Francisco Bay Area Air Pollution Control District.
3. Vibration, Heat, Glare, Electrical Disturbance. No use shall be permitted which creates noise, odors, vibrations, heat, glare, or electrical disturbances beyond the

boundaries of the site. Lighting used to illuminate buildings, structures, uses, or parking and loading areas shall not be directed toward any public right-of-way.

4. Fire, Explosion. All uses shall provide adequate safety devices and adequate firefighting and fire suppression equipment to protect against fire, explosion, and other hazards.
5. Solid and Liquid Wastes. No solid or liquid waste discharges, other than permitted discharges into a public sewage disposal system, shall be permitted. The chemical composition and volume of industrial effluent discharged shall be subject to the wastewater permit requirements established by LMC Title 13, Division II. (Ord. 442 § 14.80).

IN THE CITY COUNCIL OF THE CITY OF LIVERMORE, CALIFORNIA

AN ORDINANCE APPROVING A DEVELOPMENT AGREEMENT WITH LIVERMORE INDUSTRIAL PARTNERS 39, LLC AND SMP-39, LLC FOR THE SMP 39/SMP 40 PROJECT

(Development Agreement 21-001)

THE CITY COUNCIL OF THE CITY OF LIVERMORE DOES ORDAIN AS FOLLOWS:

Section 1. *Authority*. Pursuant to Government Code Section 65864 et seq., the City Council considers that certain document under City Application No. Development Agreement 21-001 and entitled "Pre-Annexation and Development Agreement (DA 21-001) [Surface Mining Permit (SMP) 39/40 Project – SMP 39 Property] ("Development Agreement"). The Development Agreement is attached hereto as Exhibit A.

Section 2. *Recommendation*. The Planning Commission held a duly noticed public hearing on March 5, 2024, to consider adoption of an ordinance approving the Development Agreement and by its Resolution No. 03-24, attached hereto as Exhibit B, recommended that the City Council adopt the ordinance and approve the Development Agreement.

Section 3. *Environmental Review*. The City Council considered the environmental review and certified the SMP 39/SMP 40 Final Environmental Impact Report by Resolution No. ____.

Section 4. *Consistency*. Development Agreement 21-001 is consistent with the General Plan and the Livermore Development Code Chapter 9.04.

Section 5. *Approval*. The City Council has considered the findings made by the Planning Commission for adoption of the Development Agreement in Planning Commission Resolution No. 03-24, and hereby adopts the same findings by this reference and incorporates them as part of this resolution, and based on the City Council's own independent review and considerations, hereby adopts this ordinance approving Development Agreement 21-001.

Section 6. *Signing Authority*. The City Manager is hereby authorized to sign the Development Agreement, attached hereto as Exhibit A, on behalf of the City of Livermore.

Section 7. *Publication and Effective Date.* This ordinance or a comprehensive summary thereof shall be published once in a newspaper of general circulation of the City of Livermore within 15 days after its adoption and shall take effect and be in force thirty days from and after its adoption.

Section 8. *Filing.* Planning Manager is directed to file a Notice of Determination for the SMP 39/SMP 40 Project Environmental Impact Report with the Alameda County Clerk.

Section 9. *Recording.* The City Clerk is directed to record the Development Agreement within 10 days after the effective date of the Development Agreement.

Section 10. *Documents.* The documents that constitute the record of proceedings upon which this decision is based on can be found in the City Clerk's Office, 1052 S. Livermore Avenue, Livermore, California.

Section 11. *Severability.* If any part of this ordinance is declared unconstitutional or invalid by a court, such unconstitutionality or invalidity shall not affect any remaining parts.

The foregoing ordinance was introduced at the meeting of the City Council of the City of Livermore held on March 25, 2024, by the following vote:

AYES: COUNCIL MEMBERS:
NOES: COUNCIL MEMBERS:
ABSENT: COUNCIL MEMBERS:
ABSTAIN: COUNCIL MEMBERS:

PRE-ANNEXATION AND DEVELOPMENT AGREEMENT

BY AND BETWEEN

THE CITY OF LIVERMORE

AND

LIVERMORE INDUSTRIAL PARTNERS 39, LLC; AND SMP-39, LLC

PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA 21-001)
[SURFACE MINING PERMIT (SMP) 39/40 PROJECT – SMP 39 PROPERTY]

This Pre-annexation and Development Agreement ("Agreement") is entered into on _____, 2024 between the City of Livermore, a municipal corporation ("City"), Livermore Industrial Partners 39, LLC ("Developer") and SMP-39, LLC ("Seller"). The City, Developer, and Seller are sometimes referred to below each individually as a "Party" and collectively as the "Parties."

RECITALS

This Agreement is based on the following facts:

A. The City has the authority to enter into a development agreement under Government Code section 65864 *et seq.* ("Development Agreement Statutes") and Chapter 9.04 of the Livermore Development Code to vest certain rights to the Developer and to meet certain public purposes of the local government.

B. Seller owns approximately +/- 51.9 acres located on Jack London Boulevard, west of Oaks Business Park and south of Livermore Municipal Airport (commonly referred to as "SMP 39" or, for purposes of this Agreement, "SMP 39 Property"), which is the subject of this Agreement. SMP-40, LLC, an affiliate of Seller owns approximately +/- 41 acres (commonly referred to as "SMP 40". The aforementioned SMP numbers reference the Surface Mining Permit (SMP) numbers applicable to each site. The Surface Mining Permits for each of the sites were approved by Alameda County in 2004 to allow for the extraction of sand and gravel (i.e., aggregate) within the sites; however, aggregate mining has not occurred within either of the sites.

C. Four additional parcels that total approximately +/- 12.9 acres are located east of SMP 40 and are included in the overall project area (as set forth in more detail in Recital F and referred to as the "Additional Annexation Only Parcels"). The City has chosen to include the parcels in the proposed annexation area for purposes of efficiency and to create logical boundaries.

D. The SMP 39 Property consists of one parcel (Assessor Parcel Number (APN) 904-0003-001-04) and is situated in Alameda County, within the City of Pleasanton's Sphere of Influence ("SOI") and the City of Livermore's South Livermore Urban Growth Boundary ("UGB"). The SMP 39 Property is zoned Agriculture by Alameda County and has a County General Plan designation of Industrial. SMP 39 has a City of Livermore General Plan designation of Open Space/Sand and Gravel. The Developer is required to change the SOI for SMP 39 from the City of Pleasanton to the City of Livermore and to annex SMP 39 into the City to facilitate the SMP 39/SMP 40 Project, defined below in Recital G.

The SMP 39 Property is described more specifically in the attached **Exhibit A**. The SMP 39 Property does not include property located within SMP 40 or the Additional Annexation Only Parcels, as described in Recitals D (above) and F (below). Development of the SMP 39 Property is described in Recitals G and H, below, and set forth in more detail in **Exhibit B** (SMP 39 Development Description) and **Exhibit C** (Conceptual Site Plan for the SMP 39 Property). Developer is in contract to purchase SMP 39 Property from Seller, and under that contract has the primary rights and obligations regarding application for and funding the Entitlements, described below in Recital I, for the SMP 39 Property as set forth in this Agreement. Developer is required to annex the SMP 39 Property into the City to facilitate the SMP 39/SMP 40 Project, defined below in Recital G.

E. SMP-40 LLC, an affiliate of Seller, owns certain real property consisting of one parcel (APN 904-0010-002-02) and is generally located south of Oaks Business Park, at the south end of Atlantis Street and Challenger Street ("SMP 40" or "SMP 40 Property"). It is situated in Alameda County and is within the City of Livermore's SOI and the City of Livermore's South Livermore UGB. SMP 40 is zoned Agriculture by Alameda County with a County General Plan designation of Industrial. SMP 40 has a City of Livermore General Plan designation of Open Space/Sand and Gravel.

F. Four additional parcels (APNs 904-0010-002-03, -5, -7, and -8) are within unincorporated Alameda County, the City of Livermore SOI, and the City of Livermore South Livermore UGB ("Additional Annexation Only Parcels"). APN 904-0010-002-03 is an approximately 0.20-acre parcel owned by the Pacific Gas and Electric Company (PG&E) and is developed with existing PG&E infrastructure. APN 904-0010-002-05 is an approximately 5.76-acre parcel owned by the Zone 7 Water Agency and serves as a flood control channel. APN 904-0010-002-07 is an approximately 1.57-acre parcel owned by the California Department of Transportation (Caltrans) and is currently undeveloped. APN 904-0010-002-08 is an approximately 5.46-acre parcel owned by the City of Livermore and is currently undeveloped with scattered trees throughout the parcel. The City of Livermore General Plan designates the Additional Annexation Only Parcels as Open Space/Sand and Gravel. The Additional Annexation Only Parcels are also within the East County Area Plan of the Alameda County General Plan, which designates the parcels as Industrial. The parcels are zoned Agriculture by Alameda County. The Developer is required to annex the Additional Annexation Only Parcels into the City to facilitate the SMP 39/SMP 40 Project, defined below in Recital G.

G. Due to their interrelated nature, activities involving SMP 39, SMP 40, and the Additional Annexation Only Parcels (together, the "SMP 39/SMP 40 Project") are considered in a single Environmental Impact Report ("EIR") (SCH #2023010091) for purposes of the City's environmental review under the California Environmental Quality Act ("CEQA"). The SMP 39/SMP 40 Project evaluated in the EIR includes a SOI amendment for SMP 39 and a General Plan Amendment, Pre-zoning and Annexation, Development Code Amendment/ Zoning Map Amendment/ Planned Development, Vesting Tentative Subdivision Maps, and Pre-annexation and Development Agreements for SMP 39 and SMP 40. A Site Plan Design Review entitlement is also included for SMP 40. The SMP 39/SMP 40 Project evaluated in the EIR also includes annexation of the Additional Annexation Only Parcels.

H. SMP 39 and SMP 40 shall be developed with light industrial development uses consistent with the City's *Low-Intensity Industrial* General Plan designation, including research and development, professional and administrative offices, experimental and testing laboratories, manufacturing of electronic and other high-end complex products, a limited amount of warehouse and distribution, and similar uses as stated in PD-I 22-001, the zoning for the property (**Exhibit D**). The SMP 39/SMP 40 Project includes (i) on SMP 39, approximately six light industrial buildings consisting of up to 755,500 square feet (sf) of development and, (ii) on SMP 40, two light industrial buildings consisting of up to 759,275 sf of development. **Exhibit C** shows the conceptual site plan for the SMP 39 Development. Developer and City intend that separate Pre-annexation and Development Agreements will be entered into for SMP 39 and SMP 40, respectively, in order to segregate the rights and obligations related to each property. This Agreement, as reflected herein, addresses the SMP 39 Property and no other property.

I. The Developer has applied for the following entitlements ("Entitlements") for the SMP 39 Property from the City of Livermore as required under the Livermore Development Code, to be vested in accordance with this Agreement pending a SOI change and annexation of the SMP 39 Property into the City of Livermore:

- General Plan Amendment (GPA 21-001) to change the City of Livermore designation of SMP 39 and SMP 40 from *Open Space/Sand and Gravel* (OSP/S&G) to *Low-Intensity Industrial* (LII) and to change the City of Livermore designation of the Additional Annexation Only Parcels from *Open Space/Sand and Gravel* (OSP/S&G) to *Parks, Trailways, Recreation Areas* (OSP) (the "General Plan Amendment" or "GPA");

- Pre-zoning of SMP 39 and SMP 40 (DCA 21-005, ZMA 21-002 and PD-I 22-001) by (i) amending the City's zoning map to rezone SMP 39 and SMP 40 to the *Planned Development - Industrial* (PD-I) 22-001 zoning district, which includes the "Planned Development Standards" described more fully in attached **Exhibit D**; and (ii) pre-zoning the Additional Annexation Only Parcels to *Open Space Flood Plain* (the "Prezoning"). The Prezoning shall become effective with respect to SMP 39, SMP 40, and the Additional Annexation Only Parcels upon their annexation to the City in accordance with California Government Code section 65859;

- SOI Amendment and Annexation (APZ 21-003) authorizing submittal of an application to the Alameda County Local Agency Formation Commission ("LAFCo") to (i) include SMP 39 within the City of Livermore's SOI (and remove SMP 39 from the City of Pleasanton's SOI); and (ii) annex SMP 39, SMP 40, and the Additional Annexation Only Parcels from Alameda County into the City;

- Vesting Tentative Tract Map 8656 (SUB 21-008) authorizing the creation of six development parcels for the SMP 39 Property, (the "Tentative Map"); and

- This Pre-annexation and Development Agreement (DA 21-001) to vest certain rights to the Developer and to provide specific public benefits that meet certain public purposes of the local government.

In addition to the above listed Entitlements, an EIR (SCH #2023010091) for the SMP 39/SMP 40 Project has been prepared in accordance with CEQA to evaluate potential impacts to the environment of the SMP 39/SMP 40 Project, including the Entitlements.

J. The City Council finds that the SMP 39/SMP 40 Project is in the public interest; will establish land uses compatible with the physical nature of the SMP 39 Property and the surrounding area; will generate light industrial development and activity to meet local and regional goals; and will provide certain substantial public benefits and help attain certain other public objectives including, without limitation: (i) including construction of and a $750,000 financial contribution toward off-site trail improvements, creating connections to the City's existing trail networks as identified in the *Active Transportation Plan* ("ATP"); and (ii) a commitment to the funding of $100,000, payable over a two-year term in increments of $50,000 per year, to facilitate uses that support an innovation-driven economy, generate high wage jobs, or generate substantial sales tax revenues as determined by the Director of Innovation and Economic Development. Items (i) through (ii) above, and as described more fully in Section 4, are collectively referred to as the "Public Benefits".

K. This Agreement will promote and encourage the SMP 39 Development by providing the Developer and its creditors with a greater degree of certainty of the Developer's ability to expeditiously and economically complete the development effort for the SMP 39 Property, and the Parties agree that the consideration to be received by the City pursuant to this Agreement and the rights secured to the Developer hereunder constitute sufficient consideration to support the covenants and agreements of the City and the Developer. By entering into this Agreement, the City desires to allow the Developer to design, apply for, and if approved to develop the SMP 39 Property pursuant to this Agreement, the land use ordinances, rules, regulations, and policies applicable on the "Effective Date," as defined in Section 2, and to vest in Developer, upon annexation, to the fullest extent possible under the law, development entitlements in order to complete the SMP 39 Development, consistent with Section 5 of this Agreement.

L. The SMP 39 Development has been extensively reviewed and considered by the City and its officers, agencies, and departments. The proposed uses have been found to accommodate the City's recommendations and suggestions in order to protect the public's interest and to enhance the desirability, from the public's perspective, of the SMP 39 Development.

M. The City conducted duly noticed public hearings on this Agreement pursuant to Government Code section 65867 and Livermore Development Code sections 9.04.040 and 9.04.050 and found that the provisions of this Agreement and its purposes are consistent with the objectives, policies, general land uses, and programs specified in the City's General Plan and Livermore Development Code.

N. This Agreement was adopted by ordinance of the City Council on _____, 2024 and approved upon a second reading on _____, 2024 after notice and public hearings before the Planning Commission and City Council, and after City Council certification of an EIR in accordance with CEQA, Public Resources Code section 21000 *et seq.*

NOW, THEREFORE, the City and Developer hereby agree that the aforementioned recitals are true and correct and incorporated by reference as fully set forth below, and further agree as follows:

1. The Property. The SMP 39 Property is described in **Exhibit A**, attached hereto. The SMP 39 Development includes six light industrial buildings consisting of up to 755,500 sf of development. A comprehensive description of the SMP 39 Development is in attached **Exhibit B** (SMP 39 Development Description) and **Exhibit C** (Conceptual Site Plan for the SMP 39 Property). A future Site Plan Design Review land use entitlement will be required to be approved prior to the development of SMP 39.

2. Effective Date. The effective date of this Agreement (the "Effective Date") is the later of (a) thirty (30) days after the date the Ordinance approving this Agreement is adopted by the City Council and attested by the City Clerk, (b) if a referendum petition is timely and duly circulated, filed and qualified by the Elections Official, the date the election results on the ballot measure by City voters approving this Agreement are certified by the City Council in the manner provided by the Elections Code, or (c) the date the sphere of influence amendment and annexation proceedings are complete. This Agreement shall be executed by the City within ten (10) days after the Effective Date and recorded as provided in Government Code Section 65868.5.

3. Term. The term of this Agreement is ten (10) years ("Term"), beginning on the Effective Date as defined in Section 2 of this Agreement. The Agreement may be extended as provided for in the Development Agreement Statutes and the Livermore Development Code, subject to the written consent of the City and Developer. The terms of the Entitlements shall be automatically extended such that the Entitlements remain in effect for any extended Term.

   Following the earlier of the expiration of the Term, the completion of development of the SMP 39/SMP 40 Project and all of Developer's obligations in connection therewith, or the failure of SMP 39, SMP 40, or the Additional Annexation Only Parcels to be annexed into the City of Livermore in accordance with Section 5(g) of this Agreement, this Agreement shall be terminated and shall have no further force and effect, subject, however to the provisions of Sections 10, 13 and 16.

4. Developer Obligations; Schedule of Performance. The Developer shall comply with the requirements set forth in the Schedule of Performance and tasks listed below. The Schedule of Performance is subject to revision from time-to-time as mutually agreed upon in writing between the City and the Developer, which shall be accomplished through a separate document and without the need to amend this Agreement. The City Manager shall have the authority to approve on behalf of the City any revision to a date in the Schedule of Performance that he or she deems appropriate, provided that the

revision extends the performance deadline for a time period no longer than one year. Developer shall comply with the following Schedule of Performance:

a. Developer shall initiate and pay all costs associated with timely applications for the SOI amendment for SMP 39 and the annexation for SMP 39, SMP 40, and the Additional Annexation Only Parcels, which shall be reviewed by the appropriate decision-making bodies for each parcel, which may include the City of Pleasanton, Livermore City Council and Alameda County LAFCo.

b. The SMP 39 Development includes installation of an Emergency Vehicle Access and Storm Drain main on City owned land subject to FAA regulations and requirements. The use of the City owned land shall be subject to additional requirements including but not limited to FAA approval, Consistency Determination, compensation for use of City land, appraisals, and additional mapping. All actions necessary for the project's use of City owned land shall be processed prior to the filing of the Final Map for SMP 39.

c. Developer shall pay a $100,000 cash contribution to the City of Livermore Office of Innovation and Economic Development Department for marketing SMP 39 for the desired land uses identified in PD-I 22-001.

    i. Prior to issuance of the first building permit for the SMP 40 Property, the Developer shall pay an initial $50,000 cash contribution to the City of Livermore Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001.

    ii. Developer shall pay a second $50,000 contribution to the City of Livermore Office of Innovation and Economic Development Department no later than one (1) year following the receipt of the initial $50,000 contribution, to be used toward further marketing SMP 39 for the desired land uses identified in PD-I 22-001.

    iii. The SMP 40 Development Agreement contains the same contribution requirements in Section 4(b) of that agreement. For avoidance of doubt, there is a total $100,000 obligation between the two Development Agreements and a payment under one Development Agreement shall automatically satisfy this obligation under the other Development Agreement.

    iv. The Development Agreement for the SMP 40 property (DA 23-002) describes the Developers requirements related to the off-site trail improvements. In the event that the development of SMP 39 proceeds in advance of the development of SMP 40, the Developer is required to amend this Development Agreement and DA 23-002 prior to issuance of any building permit for SMP 39, in accordance with Livermore Development Code Chapter 9.04.

5. Vested Development Rights. Subject to annexation into the City and the terms of this Agreement, SMP 39 Development shall vest in accordance with this Agreement, and the Developer has the right to develop and use the SMP 39 Property in accordance with:

   a. The City's General Plan, the Livermore Development Code, and the Entitlements in effect on the Effective Date;

   b. All other City policies, ordinances, resolutions, rules, regulations, and standards applicable to development or use of the SMP 39 Property on the Effective Date, except that Developer shall:

      (1) Pay the processing and development impact fees applicable City-wide that are in effect at the time the fees are paid. Payment for said fees shall be made prior to issuance of any building permits.

      (2) Comply with Building Code requirements in effect on a City-wide basis at time of Building permit submittal;

      (3) Comply with construction and technical design standards or specifications for public improvements that are applicable City-wide at time of Building permit submittal;

      (4) Comply with changes in City laws, regulations, plans, or policies applicable City-wide, the terms of which are found by the City Council, based on substantial evidence, to be necessary to protect members of the public from a condition dangerous to public health or safety;

      (5) Comply with a change in City law, regulations, plans, or policies that is:

         i. Specifically mandated by state or federal law, or by any regional governmental agency that has legal authority over the City under state law or a joint powers agreement; or

         ii. A result of or in response to state or federal law, or regional agency action, made necessary in order for the City to avoid losing or not receiving substantial funding or other substantial public benefits or facilities that would be available to the City only if it makes such a change; or

         iii. Specifically mandated by, or necessary for compliance with or implementation of, the terms of any permit, entitlement, or other authorization necessary for the development of the Property that is issued or granted to the City, County, and/or Developer by any federal, state or regional agency;

      (6) Following any subsequent environmental review, comply with required mitigation measures; and

c. In the event that Developer applies for any subsequent entitlements, including but not limited to a Site Plan Design Review for the SMP 39 Property, subsequent entitlements shall be subject to the City's ordinances, rules, regulations and policies in effect on the date of submittal of the subsequent entitlements.

d. If there is any inconsistency between this Development Agreement and a permit or entitlement issued for the SMP 39 Property, this Development Agreement shall control.

e. Developer acknowledges that execution of this Agreement by the City does not constitute approval of any required permits, applications, or allocations, and in no way limits the discretion of the City in the permit, allocation, and approval process in accordance with the limitations set forth herein.

f. Upon annexation of SMP 39 and 40, Developer agrees that all mining permits previously granted by Alameda County on the SMP 39 and SMP 40 properties shall be forfeited, and no mining operations shall occur on the SMP 39 Property or the SMP 40 Property. No later than 60 days from the date LAFCo approves annexation of the SMP 40 Property, subject to any extension granted by the City, Developer shall coordinate with Alameda County to complete any final actions required to remove the mining permits and all associated permissions related to mining operations from the SMP 39 and SMP 40 properties.

g. The Parties agree that the obligations set forth in this Agreement are conditioned upon the passing of a City Council Resolution authorizing submittal of an application to LAFCo for SOI amendment and Annexation, the filing of an application with LAFCo to amend the SOI for SMP 39, annex SMP 39, SMP 40 and the Additional Annexation Only Parcels, requesting waiver of notice, hearing and protest from LAFCo, subject to LAFCo approval. Furthermore, the Parties also agree that the obligations set forth in this Agreement are conditioned upon the approved and finalized SOI amendment and annexation of the SMP 39 and SMP 40 Properties and the Additional Annexation Only Parcels into the City of Livermore. Upon approval of the SMP 39/SMP 40 Project by the City, the City agrees to act in good faith, in collaboration with the Developer, to support and timely process the SOI amendment and annexation application with LAFCo. The Developer shall be responsible for all costs associated with the SOI amendment and annexation proceedings, including but not limited to preparation of the LAFCo application, LAFCo application submittal fees, and any other City-related annexation fees. The SOI amendment and annexation of SMP 39, SMP 40, and the Additional Annexation Only Parcels shall be completed no later than 18 months from the Effective Date of this Agreement, unless extended by written agreement of the Parties. If the SOI and annexation proceedings are not completed within this time period, subject to any agreed upon extension, this Agreement shall be terminated and shall have no further force and effect, subject however to the provisions of Sections 10, 13, and 17.

h. Developer shall not dispute or challenge the validity of the Pre-annexation and Development Agreement for SMP 40. Any legal challenge to the validity or

enforceability of the Pre-annexation and Development Agreement for SMP 40 shall constitute a legal challenge to the Pre-annexation and Development Agreement for SMP 39 and the SMP 39/SMP 40 Project. In the event of a valid legal challenge, this Agreement shall be terminated after all appeals have been exhausted before a final court of judgment, or issuance of a final court order directed to the City to set aside, withdraw or abrogate the City's approval of this Agreement or the Pre-annexation and Development Agreement for SMP 40.

7. Periodic Review. Review of this Agreement shall be made annually, consistent with Government Code section 65865.1 and Livermore Development Code Chapter 9.04.

8. Amendments. The Agreement may be amended in writing by the Parties, by mutual agreement, consistent with the procedures set forth in the Development Agreement Statutes and the Livermore Development Code, as they are amended from time-to-time.

9. Force Majeure. The Term of this Agreement shall be extended by, and the performance by any Parties of their obligations hereunder (other than for payment of money) shall be excused during, any period of "Force Majeure" as hereinafter defined. "Force Majeure" means a delay caused by any labor disputes or strikes, labor or material shortages or embargoes, pandemic, fire, unusual delay in transportation, earthquakes, floods, tornadoes or extreme wind or other adverse weather conditions not reasonably foreseeable by Developer, or material adverse underground conditions not reasonably foreseeable by Developer.

10. Remedies for Default. If a Party is in default under this Agreement, another Party may pursue one or more of the following courses of action after providing 30 days' written notice to the purportedly defaulting Party (or such longer period as may be required to cure the default, so long as such Party commences the cure within such 30-day period and diligently pursues the cure to completion): (a) waive the default; (b) in the City's case, pursue administrative remedies, including denial or otherwise withholding issuance of building permits, certificates of occupancy, or other approvals; (c) pursue judicial remedies; or (d) terminate this Agreement. Any purported default by a Party hereunder shall be subject to, and tolled by, any event of Force Majeure that prevents such Party from performing the act necessary to avoid or cure such purported default. Any such tolling shall end at the termination of the event of Force Majeure.

11. Termination. This Agreement shall terminate upon the earlier of (i) expiration of the Term, or (ii) in the event that SMP 39, SMP 40, or the Additional Annexation Only Parcels are not annexed into the City in accordance with Section 5(g) of this Agreement (iii) when the SMP 39/SMP 40 Project has been completed and all of Developer's obligations have been fully satisfied as reasonably determined by the City, or (iv) after all appeals have been exhausted before a final court of judgment, or issuance of a final court order directed to the City to set aside, withdraw or abrogate the City's approval of this Agreement or any material part thereof, or the Pre-annexation and Development Agreement for SMP 39 or any material part thereof.

Upon termination of this Agreement as to the SMP 39/SMP 40 Project, at the request of Developer, the City shall record a Notice of Termination for each affected parcel in a form satisfactory to the City Attorney in the Office of the Alameda County Recorder. In the event this Agreement is terminated, neither party shall have any further rights or obligations hereunder except for those obligations of Developer set forth in Section 10 (Remedies for Default), Section 13 (No Damages Relief) and Section 17 (Legal Action; Attorneys' Fees).

12. Mortgagee Protection.

i. This Agreement shall not prevent or limit Developer in any manner, at Developer's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust, or other security device securing financing with respect to the Property ("Mortgage"). This Agreement shall be superior and senior to any lien placed upon the Property or any portion thereof after the date of recording this Agreement, including the lien of any Mortgage. Notwithstanding the foregoing, no breach hereof shall defeat, render invalid, diminish, or impair the lien of any Mortgage made in good faith and for value, but all of the terms and conditions contained in this Agreement shall be binding upon and effective against and inure to the benefit of any person or entity, including any deed of trust beneficiary or mortgagee ("Mortgagee") who acquires title to the Property, or any portion thereof, by foreclosure, trustee's sale, deed in lieu of foreclosure, or otherwise.

ii. *Liability for Past Defaults*. Any Mortgagee, including the successful bidder at a foreclosure sale, who takes title and possession of the Property, or any portion thereof, pursuant to such foreclosure, shall take the Property, or portion thereof, subject to the provisions of this Agreement; provided, however, in no event shall such Mortgagee be liable for any defaults or monetary obligations of Developer arising prior to acquisition of title to the Property by such Mortgagee. Notwithstanding the preceding sentence, in no event shall any such Mortgagee or its successors or assigns be entitled to a building permit, final inspection, or occupancy certificate until all fees and other monetary obligations due under this Agreement have been paid to the City and any other existing defaults under this Agreement that are reasonably subject to cure are cured.

iii. *Notice of Default to Mortgagee; Right of Mortgagee to Cure.* If City receives a notice from a Mortgagee requesting a copy of any Notice of Default given to Developer hereunder and specifying the address for service thereof, then City shall deliver to such Mortgagee, concurrently with service thereon to Developer, any notice given to Developer with respect to any claim by City that Developer has committed a default. If the City makes a determination of noncompliance hereunder, City shall likewise serve notice of such noncompliance on such Mortgagee concurrently with service thereof on Developer. Each Mortgagee shall have the right (but not the obligation) during

the same period available to Developer to cure or remedy, or to commence to cure or remedy, the event of default claimed or the areas of noncompliance set forth in City's notice.

13. No Damages Relief. The Parties acknowledge that the City would not have entered into this Agreement were it exposed to damages claims from Developer for any breach thereof. As such, the Parties agree that in no event shall Developer be entitled to recover damages against City for breach of this Agreement. To the extent permitted by law, specific enforcement of this Agreement, including specific performance of Developer's payment obligations set forth in Sections 4(b) and 4(c), is the proper and desirable remedy.

14. Recordation: Binding Effect. This Agreement shall be recorded in the office of the Alameda County Recorder and shall be binding upon and inure to the benefit of any successors in interest to the Parties. The Parties acknowledge that, as of the date of preparing this Agreement, the Property is owned in fee by Seller and that Seller shall have all rights and obligations of "Developer" under this Agreement.

15. Release Upon Transfer. Upon the sale, transfer, or assignment, in whole or in part, of Developer's right and interest to all or any portion of the Property, Developer shall be released from its obligations hereunder with respect to the portion so conveyed, provided: (i) Developer (or transferee) was not in default of this Agreement at the time of conveyance, (ii) Developer provided to City prior written notice of such transfer, and (iii) with respect to sale or transfer of any lot that has not been fully improved, the transferee executes and delivers to City a written assumption agreement in which: (a) the name and address of the transferee is set forth, and (b) the transferee expressly assumes the obligations of Developer under this Agreement as to the portion of the Property conveyed. Failure to deliver a written assumption agreement hereunder shall not negate, modify, or otherwise affect the liability of any transferee pursuant to the provisions of this Agreement.

16. Timing of Development.

    a. Because the California Supreme Court held in *Pardee Construction Co. v. City of Camarillo*, 37 Cal.3d 465 (1984), that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over the parties' agreement, it is the Parties' intent to avoid that result by acknowledging, that unless provided for in this Agreement, Developer shall have the right (without obligation) to develop the Property in such order and at such rate and at such times as Developer deems appropriate within the exercise of its subjective business judgment, subject to the terms, requirements and conditions of the Entitlements and this Agreement.

    b. Developer will use its best efforts, in accordance with its own business judgment and taking into consideration market conditions and other economic factors influencing Developer's business decision, to commence or to

continue development, and to develop the Project in a regular, progressive, and timely manner in accordance with the terms, requirements and conditions of the Entitlements and this Agreement.

17. Legal Action; Attorneys' Fees. If the City chooses to defend any third party claim or suit challenging any action taken by the City with regard to this Agreement or any procedure or aspect of the City's approval of the development of the SMP 39 Development, including the environmental review process, the Developer in its capacity as either Developer or owner of the Property agrees to reimburse the City for the City's reasonable attorneys' fees, expert witness fees, and related costs as the City may incur in connection with its retention of outside counsel, and for any award of court costs or fees against the City. The City has the right to choose and retain such legal counsel as the City deems appropriate. After expenses reach $100,000, and each $100,000 thereafter, the Parties will confer to review the status of the litigation and their options for proceeding or settling, and they will negotiate in good faith about how the expenses will be allocated. The Developer, in its capacity as the Developer or owner of the Property, shall have no obligation to reimburse the City for costs incurred after the date on which the Developer or owner of the Property give the City written notice of their decision to settle a case, even if the City does not agree to the settlement. If legal action is brought by one of the Parties to enforce a provision of this Agreement, the prevailing party is entitled to reasonable attorneys' fees, expert witness fees, and court costs.

18. Notices. The address of each party for the purpose of all notices permitted or required by this Agreement is as follows:

To City:
City of Livermore
1052 South Livermore Avenue
Livermore, CA 94550
Attention: Community Development Director
and Ashley Vera, Senior Planner

With a copy to:
City Attorney
City of Livermore
1052 South Livermore Avenue
Livermore, CA 94550

To Developer:
Overton Moore Properties
19700 South Vermont Avenue, Suite 101
Torrance, CA 90502
Attention: Timur Tecimer

With a copy to:
Cox, Castle & Nicholson LLP
50 California Street, Suite 3200
San Francisco, CA 94111
Attention: Christian Cebrian

To Seller: SMP-39, LLC
1459 18th St #317
San Francisco, CA 94107
Attention: Jennifer Jimenez-Cruz

With a copy to: Allen Matkins
Three Embarcadero Center
12th Floor
San Francisco, CA 94111
Attention: Marshall Wallace

The written address of each Party set forth above may be changed by written notice given not less than five (5) days prior to the date such change is to be in effect. All notices under this Agreement shall be in writing, shall be properly addressed, and shall be sent by personal delivery, United States mail (registered, certified, or Express Mail, return receipt requested and postage prepaid), or by overnight courier delivery service. All such notices shall be considered delivered: (i) if personally delivered, on the date of delivery; (ii) if sent by United States mail in the manner prescribed above, on the date shown on the return receipt for acceptance or rejection; or (iii) if sent by overnight courier delivery service, on the date of delivery or attempted delivery as shown by the written delivery record of such service.

19. Severability; Choice of Law. If any term, provision, condition, or covenant of this Agreement, or the application thereof to any Party or circumstances, shall to any extent be held invalid or unenforceable, the remainder of the instrument, or the application of such term, provision, condition, or covenant, or the application of such term, provision, condition, or covenant to persons or circumstances other than those as to whom or which it is held invalid or unenforceable, shall not be affected thereby and each term and provision of this Agreement shall be valid and enforceable to the fullest extent permitted by law. This Agreement shall be governed by the laws of the State of California.

20. Covenants Run with the Land. All of the terms, provisions, covenants, conditions, rights, powers, duties and obligations contained in this Agreement shall be binding upon the parties and their respective heirs, successors and assigns acquiring any portion of the Property and shall inure to the benefit of the parties and their respective heirs, successors and assigns.

21. No Third Party Beneficiaries. This Agreement is entered only for the benefit of the Parties executing this Agreement, and their successors in interest. This Agreement is not for the benefit of any other individual, entity or person. Nothing herein shall be construed to create any right of any third party to enforce this Agreement or to seek any benefit therefrom.

22. Time Is of the Essence. Time is of the essence for each provision of this Agreement for which time is an element.

23. Certificate of Compliance. Any Party may, at any time, request that the City indicate in writing: (i) whether this Agreement is in full force and effect; (ii) whether this Agreement has been amended or modified, and if so amended, the nature of any such amendments; or (iii) whether to the best of City's knowledge the requesting Party is in default in the performance of any of its obligations under this Agreement, and if in default, the nature of any such default. City shall endeavor in good faith to respond to any such request within thirty (30) days following the receipt thereof. The Parties shall be entitled to one certificate of compliance per year without any fee being assessed by the City. For any additional certificates of compliance requested in a single year, the City may charge the requesting party a reasonable fee related to the actual cost to prepare the certificate.

24. Counterparts. This Agreement may be executed in one or more counterparts, each of which shall be deemed an original, but all of which constitute one and the same instrument.

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF LIVERMORE, IN THE COUNTY OF ALAMEDA, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

ALL THAT REAL PROPERTY SITUATE IN THE SANTA RITA RANCHO, ALAMEDA COUNTY, CALIFORNIA, BEING A PORTION OF THE LAND DESCRIBED AS PARCELS 1 AND 2 IN THE GRANT DEED TO PLEASANTON GRAVEL COMPANY, A CALIFORNIA CORPORATION, AS RECORDED DECEMBER 15, 1977, ON REEL 5181, AT IMAGE 177 (SERIES NO. 77-247154), ALAMEDA COUNTY RECORDS, BEING DESCRIBED AS FOLLOWS:

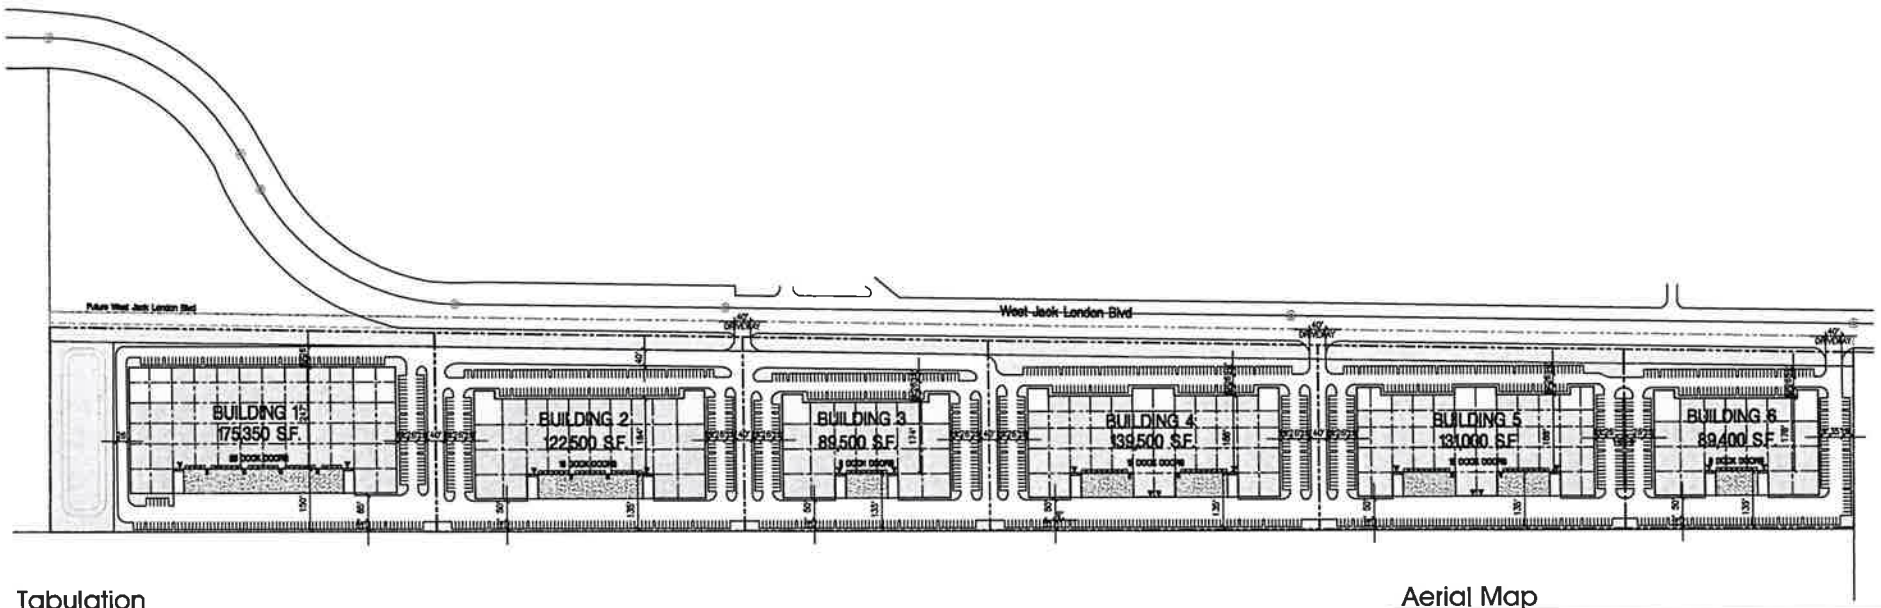
COMMENCING AT THE NORTHWEST CORNER OF SAID PARCEL 1; THENCE ALONG THE WESTERLY LINE OF SAID PARCEL 1, SOUTH 00° 28' 57" WEST, 1000.01 FEET MORE OR LESS TO A POINT DISTANT 1000 FEET SOUTHERLY OF, MEASURED AT RIGHT ANGLES, TO THE NORTHERLY LINE OF SAID PARCELS 1 AND 2 AND THE POINT OF BEGINNING OF THIS DESCRIPTION; THENCE PARALLEL TO THE NORTH LINE OF SAID PARCELS 1 AND 2, SOUTH 89° 24' 17" EAST, 4493.91 FEET TO A POINT ON THE EASTERLY LINE OF SAID PARCEL 2; THENCE ALONG THE EAST LINE OF SAID PARCEL 2, SOUTH 00° 16' 36" WEST, 469.21 FEET; THENCE LEAVING SAID EAST LINE, SOUTH 89° 39' 52" WEST, 4496.04 FEET TO INTERSECT THE WEST LINE OF SAID PARCEL 1; THENCE ALONG THE SAID WEST LINE, NORTH 00° 28' 57" EAST, 542.25 FEET TO THE POINT OF BEGINNING.

ASSESSOR'S PARCEL NO. 904-0003-001-04

SMP 39 Development Description

Assessor Parcel Number 904-3-1-4 is also known as SMP 39 ("SMP 39 Property"). The aforementioned SMP number references the Surface Mining Permit (SMP) numbers applicable to the site. The Surface Mining Permit for the SMP 39 Property was approved by Alameda County in 2004 to allow for the extraction of sand and gravel (i.e., aggregate) within the site; however, aggregate mining has not occurred within the SMP 39 Property. The SMP 39 Property is approximately 51.9 acres and is located within unincorporated Alameda County, the City of Pleasanton (SOI), and the City of Livermore South Livermore Urban Growth Boundary (UGB). The Property is zoned Agriculture by Alameda County with a County General Plan designation of Industrial. The SMP 39 Property has a City of Livermore General Plan designation of Open Space/Sand and Gravel.

Surrounding existing uses include a paved shared-use path and the Livermore Municipal Airport to the north, the Oaks Business Park to the east; and the Arroyo Mocho Trail and single-family residences further east, across Isabel Avenue/SR 84; gravel quarries and industrial ponds associated with mining operations to the south and SMP 38, Arroyo Mocho and industrial ponds to the west.



Developer shall construct six light industrial buildings on the SMP 39 Property totaling up to 755,500 square feet (sf) of new building area and associated internal roadways, parking, landscaping, utilities and other improvements ("SMP 39 Development").

The SMP 39 Development shall comply with the development requirements including land use, building and landscape setbacks, height, lot coverage, parking, and other required standards as set forth in the Planned Development-Industrial 22-001 (PD-I 22-001) zone. The loading docks shall be located on the south side of each building, opposite from West Jack London Boulevard, accessible through a larger drive aisle along the southern portion of the site.

The SMP 39 Development shall include frontage improvements to and right-of-way dedication for the ultimate buildout of West Jack London Boulevard. Ultimate buildout of the roadway shall consist of four through lanes, including two 12-foot through lanes on each side, a 16-foot raised and landscaped median in the center of the roadway, as well as an eight-foot bike line on each side of the roadway, separated from the through lanes by a two-foot buffer. As part of the proposed frontage improvements, the SMP 39 Development shall include an at-grade, paved shared-use path within a 38.5-foot trail easement along the project frontage, consistent with the City's Active Transportation Plan (ATP), which shall provide a connection to the existing path along the western boundary of the Oaks Business Park and eventually to the Arroyo Mocho Trail. The proposed path shall be similar to the existing path along the Oaks Business Park site.

PLANNED DEVELOPMENT STANDARDS SMP 39 & SMP 40

Planned Development – Industrial (PD-I) 22-001

Reviewed by Planning Commission: March 5, 2024
Approved by City Council: March 25, 2024

Purpose: The purpose of establishing this Planned Development-Industrial (PD-I 22-001) District (District) is to regulate the development of ± 51.9 acres of land located on Jack London Boulevard, west of Oaks Business Park and south of Livermore Municipal Airport (commonly referred to as "SMP 39") and ± 41 acres of land located south of Oaks Business Park, at the south end of Atlantis Street and Challenger Street (commonly referred to as "SMP 40"), as shown in the attached figure (Figure 1). The intent of this District is to accomplish the following:

1. PD-I 22-001 is intended to provide an environment exclusively for and conducive to the development and protection of modern professional and administrative facilities, research institutions, manufacturing operations, experimental and testing laboratory and related uses, any similar employment generating high-end industrial users, all of a non-nuisance type.
2. The District is intended to provide for an aesthetically attractive working environment with park- and/or campus-like grounds, attractive buildings, employee parking, and other amenities appropriate to a mix of office and industrial uses.
3. The District is intended to establish development standards and regulations consistent with the intent of the Low Intensity Industrial General Plan designation.
4. Any land use that utilizes hazardous materials shall be subject to the regulations of Section 6.02.040, Hazardous Materials, of the Livermore Development Code, as it exists now or is amended in the future.
5. Development shall be in conformance with the requirements of the Livermore Development Code as it exists now or is amended in the future, except as modified by the following regulations.
6. Development is subject to the Citywide Design Standards and Guidelines as they exist now or may be amended in the future unless otherwise modified by the following regulations.

A. Principal Permitted Uses:

The following are the principal permitted uses for SMP 39[1] and SMP 40:

1. Research and development facilities
2. Professional and administrative offices
3. Experimental and testing laboratories
4. Manufacture of electric and electronic circuits, instruments, and devices
5. Manufacture of pharmaceutical products or life science facility, not exceeding Biosafety Level 2[2]
6. Medical diagnostic and manufacturing facilities
7. Manufacturing and assembly of motor vehicle parts, including but not limited to dashboards, parts, component systems, electrical connectors, sensors, panels, airbags, seats, tires, windows etc. for all vehicles and similar equipment (e.g. automobiles, motorcycle, construction equipment, farm equipment, buses).
8. Similar uses as determined by the Community Development Director to be of the same general character as the listed uses.

Additional Permitted Uses for SMP 39 only:

1. Restaurants, except fast food

Additional Permitted Uses for SMP 40 only:

1. Warehousing and distribution facilities, dry or refrigerated
2. Warehousing and distribution facility – E-commerce/Third Party Logistics (3PL)
3. Manufacturing, assembly, processing, storage, or packaging of products from previously prepared materials such as, but not limited to, cloth, plastic, paper, leather, and precious or semi-precious metals or stones, but not including the following:
   A. Operations such as saw and planing mills, any manufacturing uses involving primary production of wood, metal, or chemical products from raw materials, and similar uses
   B. Vehicle dismantling yards, scrap and waste yards
   C. Manufacturing, processing, storing, or packaging chemicals, petroleum,

[1] SMP 39 and SMP 40 are located with the Airport Influence Area and the Livermore Airport Protection Area. Per the Alameda County Airport Land Use Compatibility Plan, the majority of SMP 39 is located in Safety Zone 6, with a portion of the site located in Safey Zone 3. The principal permitted land uses are intended to be located in buildings that are only within the portion of SMP 39 that is located in Safety Zone 6.

[2] Per the Centers for Disease Control and Prevention, Biosafety Level 2 laboratories involve work that poses moderate hazards to laboratory workers and the environment. Biosafety Level 2 laboratories require safety protocols to contain microbes and biological agents.

heavy agricultural products or other hazardous materials.

4. Sale of heavy equipment and construction related vehicles and equipment, including associated repair, service, and parts distribution facilities. Showrooms related to this use may be a conditionally permitted ancillary use.
5. Similar uses as determined by the Community Development Director to be of the same general character as the listed uses.

B. Conditional Uses for SMP 39 and 40:

1. Public and quasi-public uses.
2. Manufacture of pharmaceutical products or life science facility, not exceeding Biosafety Level 3[3]
3. Similar uses as determined by the Planning Commission to be of the same general character as the listed uses.

Conditional Uses for SMP 39 only:

1. Fast-food businesses, banks, personal services, or goods required for the convenience and support of occupants of uses in the surrounding district(s).
2. Warehouse and distribution facilities, including E-commerce/Third Party Logistics (3PL) uses, with the condition that these uses may only occupy up to 20 percent of the total buildable site area.
3. Sale of heavy equipment and construction related vehicles and equipment, including associated repair, service, and parts distribution facilities, provided they are manufactured and/or sold on-site. Showrooms related to this use may be a conditionally permitted ancillary use.
4. Similar uses as determined by the Planning Commission to be of the same general character as the listed uses.

C. Accessory Uses Permitted on SMP 39 and 40:

1. Signs subject to the requirements established by the Livermore Development Code, as well as the Citywide Design Standards and Guidelines, as it exists now or is amended in the future.
2. Accessory uses and buildings customarily appurtenant to a permitted use.
3. Living quarters determined by the Community Development Director to be necessary for surveillance purposes.
4. Fuel stations subject to the requirements of Section 6.03.160, Vehicle Services,

[3] Per the Centers for Disease Control and Prevention, laboratories designated Biosafety Level 3 involve work that poses a safety hazard greater than Biosafety Level 2 laboratories, defined above. Biosafety Level 3 laboratories require additional safety protocols beyond those required for Biosafety Level 2 laboratories to contain microbes and biological agents.

of the Livermore Development Code, as it exists now or is amended in the future.

D. Special Development Requirements for SMP 39 and 40:

1. Uses shall be designed and integrated into the site in a manner that maintains and is complementary to the corporate and professional character of the nearby Oaks Business Park.
2. Outdoor service and storage yards shall be screened from public view consistent with Livermore Development Code Section 6.03.100, Outdoor Storage, as it exists today or is amended in the future.
3. For SMP 40 only: Commercial/Industrial buildings shall be located a distance of at least 500 feet from Isabel Avenue.

E. Site Development Regulations for SMP 39 and 40:

The following minimum requirements shall be observed, except where increased for conditional uses:

1. Lot Area: Twenty thousand square feet
2. Lot Width: One hundred feet
3. Setbacks: Setback requirements are established below. Buildings shall not be permitted within required setbacks.

A. SMP 39

1) Front or Street Side: 40-feet on West Jack London Boulevard, and 30-feet on frontage roads and interior streets, except as required by subsection E.4. All required setbacks adjacent to streets shall be landscaped, except for driveways, sidewalks, and trails that are found to be necessary for the efficient use of the property. Where a building front is visible from the street, a minimum five-foot wide landscaped strip abutting the foundation shall be included, allowing for necessary entrances.

2) Rear and Side: None.

B. SMP 40

1) Front or Street Side: 500-feet from Isabel Avenue, and 30-feet on frontage roads and interior streets, except as required by subsection E.4. All required setbacks adjacent to streets shall be landscaped, except for driveways and sidewalks that are found to be necessary for the efficient use of the property. Where a building front is visible from the street, a minimum five-foot wide landscaped strip abutting the foundation shall be included, allowing for necessary entrances.

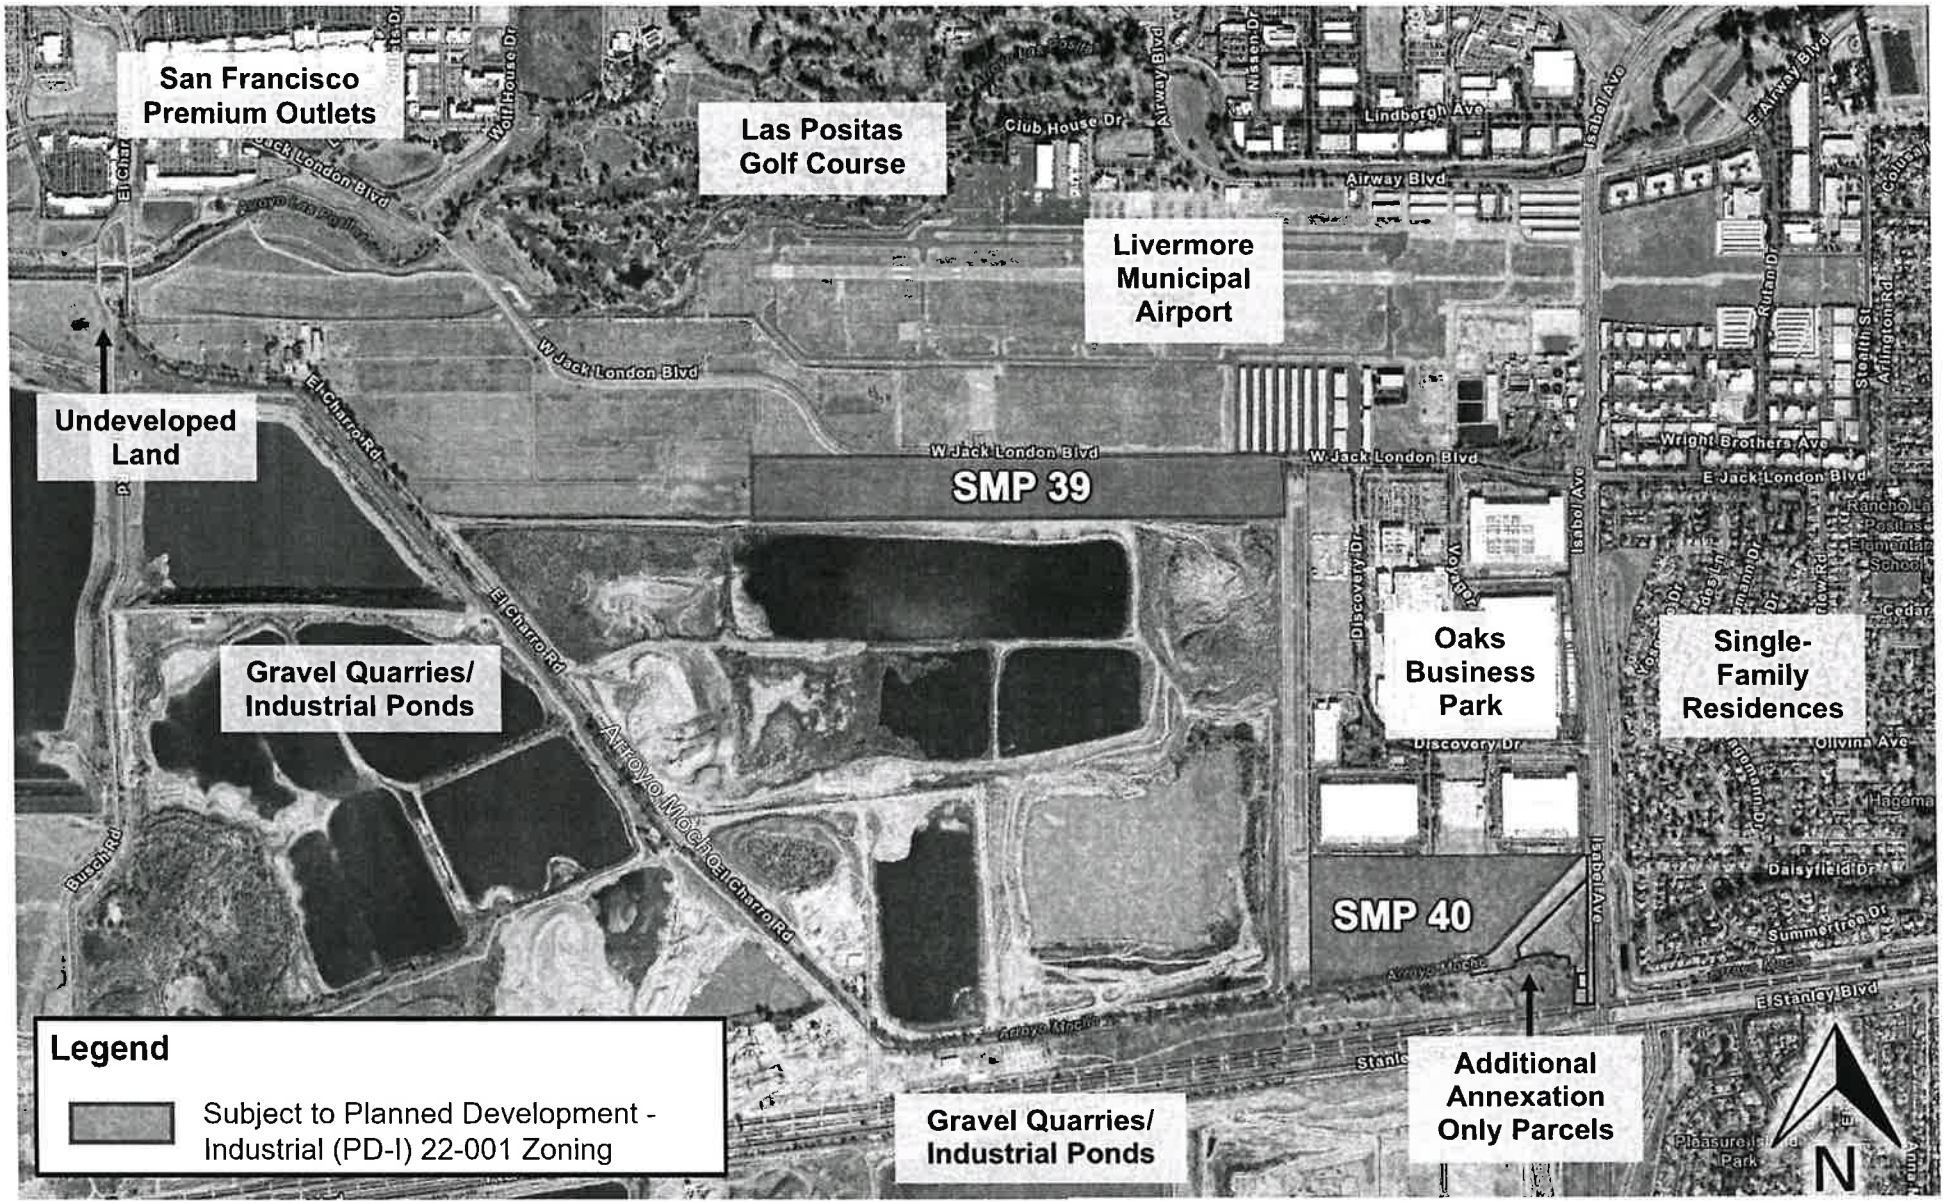
2) Rear and Side: None, except for a 20-foot setback from the top of the Arroyo Mocho bank on SMP 40 which should be

determined from a 2.5:1 slope projection from the toe of channel/mining pit to the top, as required in the Environmental Impact Report for the project.

4. Height Regulations: The height of all on-site structures, including roof-top mechanical equipment, is limited to 50 feet or the height permitted by the Federal Aviation Administration (FAA) review under FAA regulations – Part 77, whichever is more restrictive. Upon providing a minimum 40-foot setback from street rights-of-way, a Conditional Use Permit may be requested to increase height to a maximum of 55 feet, or the height permitted under FAA regulations – Part 77, whichever is more restrictive. The height of pole-and building-mounted lights may be approved up to 28 feet by an administrative site plan and design review, if found necessary for the health and safety of a site designed for truck or other large vehicle maneuvering and documented by a light study to not cause glare off-site.
5. Lot Coverage: The building coverage maximum shall be 45 percent.

F. Signs

1. Industrial Uses. Signs for industrial uses shall be subject to the sign regulations contained in Livermore Development Code section 4.06.230 (sign standards for I-1, I-2 and I-3) and the Citywide Design Standards Guidelines as it exists now or is amended in the future.
2. Commercial Uses. Signs for commercial uses shall be subject to the sign regulations contained in Livermore Development Code section 4.06.170 (sign standards for CNB) and the Citywide Design Standards Guidelines as it exists now or is amended in the future.



G. Other Required Standards for SMP 39 and 40:

1. Noise. No use shall be permitted which creates an ambient noise level greater than 75 decibels (dBA) beyond the boundaries of the site, nor greater than 60 decibels at the boundary of a Residential District.
   A. On SMP 39, semi-truck access to the site (arrivals and departures) shall be limited to 96 trips between the hours of 10:00 PM and 7:00 AM.
   B. On SMP 40, semi-truck access to the site (arrivals and departures) shall be limited to 40 trips between the hours of 10:00 PM and 7:00 AM
   C. Between the hours of 10:00 PM and 7:00 AM single-event noise levels (e.g., backup alarm, truck brakes, etc.) shall not exceed 55 dBA, measured at the property line of the nearest residential use.
2. Air Pollution. All uses shall comply with regulations of the San Francisco Bay Area Air Pollution Control District.
3. Vibration, Heat, Glare, Electrical Disturbance. No use shall be permitted which

creates noise, odors, vibrations, heat, glare, or electrical disturbances beyond the boundaries of the site. Lighting used to illuminate buildings, structures, uses, or parking and loading areas shall not be directed toward any public right-of-way.

4. Fire, Explosion. All uses shall provide adequate safety devices and adequate firefighting and fire suppression equipment to protect against fire, explosion, and other hazards.
5. Solid and Liquid Wastes. No solid or liquid waste discharges, other than permitted discharges into a public sewage disposal system, shall be permitted. The chemical composition and volume of industrial effluent discharged shall be subject to the wastewater permit requirements established by LMC Title 13, Division II. (Ord. 442 § 14.80).

IN THE PLANNING COMMISSION OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION RECOMMENDING THAT THE CITY COUNCIL APPROVE GENERAL PLAN AMENDMENT (GPA) 21-001, ANNEXATION/PREZONING (APZ) 21-003, ZONING MAP AMENDMENT (ZMA) 21-002, PLANNED DEVELOPMENT-INDUSTRIAL (PD-I) 22-001, DEVELOPMENT CODE AMENDMENT (DCA) 21-005, VESTING TENTATIVE PARCEL MAP (SUB) 21-008, VESTING TENTATIVE TRACT MAP (SUB) 21-009, SITE PLAN DESIGN REVIEW (SPDR) 21-008, PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA) 21-001, AND PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA) 23-002 FOR THE SMP 39/SMP 40 PROJECT

The City received an application General Plan Amendment (GPA) 21-001, Annexation/Prezoning (APZ) 21-003, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, Site Plan Design Review (SPDR) 21-008, Pre-annexation and Development Agreement (DA) 21-001, and Pre-annexation and Development Agreement (DA) 23-002 for the SMP 39/SMP 40 Project ("Project") to develop approximately 1.51 million square feet of industrial development and associated parking, lighting, landscaping, and other improvements.

On March 5, 2024, the Planning commission held a duly noticed public hearing to consider the Project and staff recommendations, all public comments and testimony, and findings.

NOW, THEREFORE, BE IT RESOLVED, by the Planning Commission of the City of Livermore that prior to taking action on the Project, and at a properly noticed public meeting, the Planning Commission reviewed written and oral staff reports, conducted a public hearing on the Project and took testimony, and received into the record all pertinent documents related to the Project (collectively, the "Record Evidence"). The Planning Commission's determination is based on the Record Evidence, which is incorporated into this Resolution by reference.

BE IT FURTHER RESOLVED with respect to General Plan Amendment (GPA) 21-003 (attached hereto as Exhibit A) the Planning Commission of the City of Livermore finds based on the information presented:

1. The amendment is internally consistent with all other provisions of the General Plan.

   Response: The General Plan currently designates the SMP 39, SMP 40, and the Additional Annexation Only Parcels as Open Space/Sand and Gravel (OSP/S&G) and is adjacent to land designated by the General Plan as Low-Intensity Industrial (LII). The Project proposes to modify the General Plan designation for SMP 39 and SMP 40 to LII to permit light industrial development and the Additional Annexation Only Parcels to Parks, Trailways, and Recreation Areas (OSP). Development is not proposed on the Additional Annexation Only Parcels and the OSP designation is

consistent with the parcels' natural features and attributes, including their proximity to Arroyo Mocho. The change to a LII land use designation for the site supports and implements the General Plan and will be compatible with the existing and adjacent industrial uses in the Oaks Business Park and Livermore Municipal Airport, maximizing the use of existing public streets, services, and facilities. Therefore, the proposed changes are internally consistent with all other provisions of the General Plan.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

   Response: The proposed General Plan Amendment will enable SMP 39 and SMP 40 to be developed with light industrial uses and achieve the General Plan Goals, Objectives, and Policies to focus light industrial uses around the Livermore Municipal Airport. In addition, the development will not include objectionable levels of noise, vibration, odors, glare, or hazard that would create a nuisance for surrounding uses. Planned Development – Industrial (PD-I) 22-001 zoning will implement the General Plan land use designation through use restrictions and development standards to ensure orderly and thoughtful development of the site with respect to the site's location and physical characteristics. Development is not proposed on the Additional Annexation Only Parcels. The Additional Annexation Only Parcels will be designated as OSP designation and rezoned to Open Space – Floodplain which is consistent with the parcels' natural features and attributes, including their proximity to Arroyo Mocho.

   In addition, the Project, including the necessary General Plan and Zoning amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA) and found to have no adverse effect on the environment with mitigation incorporated, with the exception of converting agricultural land to non-agricultural uses as defined by the Alameda County Local Agency Formation Commission. However, the California Department of Conservation's Farmland Mapping and Monitoring Program does not classify the project site as Farmland. Therefore, the proposed amendment would not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

3. The affected site is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

   Response: Based on the plans and specifications provided by the Developer and reviewed by City staff, the SMP 39 and SMP 40 sites are physically suitable to

accommodate the industrial land use designation at the proposed intensity. In addition, the Project, including the necessary General Plan and Zoning Map Amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA), which found the site was suitable in terms of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment and disposal, etc.). The proposed land use designation and the anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

BE IT FURTHER RESOLVED with respect to Annexation/Prezoning (APZ 21-003), Development Code Amendment (DCA) 21-005, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001 (attached hereto as Exhibits B and C) the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed amendment is consistent with the General Plan and any applicable Specific Plan.

   Response: The SMP 39 and SMP 40 properties will be prezoned to PD-I 22-001, which is consistent with the proposed General Plan land use designation of LII. The zone will be similar to the adjacent existing industrial uses and developed in compliance the PD-I 22-001 and Livermore Development Code standards. In addition, the Additional Annexation Only Parcels will be prezoned to OS-F zone, which is consistent with the proposed General Plan land use designation of OSP.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

   Response: Based on staff analysis contained in the Planning Commission staff report and the SMP 39/SMP 40 EIR, there is no evidence that approval of the Zoning Map Amendment will be detrimental to the public interest, health, safety, convenience, or welfare of the City.

3. The proposed amendment is internally consistent with other applicable provisions of this Development Code.

   Response: The proposed Zoning Map Amendment would prezone SMP 39 and SMP 40 to PD-I 22-001 and prezone the Additional Annexation Only Parcels to OS-F. Prezoning is required prior to annexation of territory into the City. Therefore, the proposed amendment is consistent with all other applicable provisions of the Development Code.

4. The affected site is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm

drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the requested zone designation and the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

Response: Based on the plans and specifications provided by the Developer and reviewed by City staff, the SMP 39 and SMP 40 sites are physically suitable to accommodate the industrial land use designation at the proposed intensity. In addition, the Project, including the necessary General Plan and Zoning Map Amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA), which found the site was suitable in terms of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment and disposal, etc.). The proposed land use designation and the anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

BE IT FURTHER RESOLVED with respect to the Vesting Tentative Parcel Map (SUB) 21-008 and Vesting Tentative Tract Map (SUB) 21-009 the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed map is consistent with the General Plan and any applicable specific plan, any policy or guideline implementing the General Plan (including the City's Design Standards and Guidelines), or other applicable provisions of this Development Code.

   Response: The Vesting Tentative Parcel Map and Vesting Tentative Tract Map were submitted with applications for a General Plan Amendment and Zoning Map Amendments (Annexation/Prezoning). Based on the approvals to change the General Plan land use designation to an industrial use and the proposed PD-I 22-001 zone, the proposed maps are consistent with the General Plan and the Development Code.

2. The site is physically suitable for the proposed type of development.

   Response: The development of approximately 1.51 million square feet of industrial development is consistent with the Low Intensity General Plan land uses, PD-I 22-001 zoning, and the Livermore Development Code, which confirms the proposed intensity and type of development are suitable for the site.

3. The design of the subdivision or the proposed improvements will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. Notwithstanding the foregoing, the Commission or Council may approve a tentative map if an Environmental Impact Report was prepared with respect to the project and a statement of overriding considerations was made to the effect that specific economic, social, or other considerations make infeasible the

mitigation measures or project alternatives identified in the Environmental Impact Report.

Response: The project involves the development of two undeveloped sites with industrial uses. An Environmental Impact Report (EIR) was prepared for the project. The EIR finds that with mitigation measures (protocol surveys, state and federal agency coordination, and avoidance strategies for special status species), any potential impacts to fish or wildlife or their habitat will be reduced to less than significant.

4. The design of the subdivision or the type of improvements will not cause serious public health problems.

   Response: An EIR has been prepared for the project. The EIR finds that with mitigation measures, any potential impacts to public health will be reduced to less than significant.

5. The design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision (The Commission or Council may approve a tentative map if it finds that alternative easements for access will be provided, and that these will be substantially equivalent to ones previously acquired by the public. This Subparagraph shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction, and no authority is hereby granted to the Commission to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision.)

   Response: There are no existing easements on SMP 39 or SMP 40. The Project includes an at-grade, paved trail within a 38.5-foot trail easement along the SMP 39 frontage on West Jack London Boulevard, consistent with the City's Active Transportation Plan. There is an access easement and public use easements on a portion of the Additional Annexation Only Parcels. However, this area will not be developed as part of the Project, with the exception of an at-grade trail along a portion of the Additional Annexation Only Parcels. The design of the subdivisions and the proposed development improvements avoids these easements and thus does not conflict with any public easements.

6. Any proposed phases and their proposed sequence of construction are identified on the submitted tentative map. The City may impose reasonable conditions relating to the filing of multiple final maps in conjunction with the approval of the tentative map (Section 66456.1).

   Response: The subdivision does not involve multiple phases.

BE IT FURTHER RESOLVED with respect to the Site Plan Design Review (SPDR) 21-008 the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed development will be allowed within the subject zone.

   Response: Based on the approval of the General Plan Amendment application to change the site to industrial use, in concert with prezoning the site to Planned Development – Industrial 22-001 zoning district, which permits light industrial uses and establishes appropriate development standards, the proposed development of industrial buildings is permitted within the subject zone.

2. Be designed such that:
   a. The project will not be detrimental to the public health, safety, or general welfare, and not detrimental to adjacent property;
   b. Architectural design and functional plan of the structure(s) and related improvements are of reasonable aesthetic quality and compatible with adjacent developments;
   c. Structure(s) and related improvements are suitable for the proposed use of the property and provide adequate consideration of the existing and contemplated uses of land and orderly development in the general area of the subject site; and
   d. The project's site plan and design is consistent with the City's Design Standards and Guidelines.

   Response: An Environmental Impact Report (EIR) was prepared for the project. The EIR does not find any significant impacts on the public health, safety, or general welfare to adjacent properties. Based on the review of the development plans for the Project, the design of the proposed development is compatible with adjacent developments and consistent with the Design Standards and Guidelines. No aspect of the proposed development will be detrimental to the existing uses of land and the orderly development in the general area.

3. Be designed to include the following criteria, as applicable:
   a. Compliant with this Chapter, this Development Code, Municipal Code Title 15 (Buildings and Construction), and all other applicable City regulations and policies;
   b. Efficient site layout and design;
   c. Compatible and appropriate scale to neighboring properties and developments;
   d. Efficient and safe public access (both pedestrian and vehicular) and parking;
   e. Appropriate and harmonious arrangement and relationship of proposed structures and signs to one another and to other development in the vicinity, based on good standards of design;
   f. Appropriate relationship to land use and development of adjacent properties, including topographic and other physical characteristics of the land;

g. Proper site utilization and the establishment of a physical and architectural relationship to existing and proposed structures on the site;
h. Compatible architectural style with the character of the surrounding area, both to avoid repetition of identical design where not desired, and to ensure compatibility in design where desired;
i. Harmonious relationship with existing and proposed developments and the avoidance of both excessive variety and monotonous repetition;
j. Compatible in color, material, and composition of the exterior elevations to neighboring visible structures;
k. Appropriate exterior lighting which provides for public safety and is not of a nature that will constitute a hazard or nuisance to adjacent properties;
l. Compatible in scale and aesthetic treatment of proposed structures with public areas;
m. Appropriate open space and use of water efficient landscaping; and
n. Consistent with the General Plan and any applicable Specific Plan.

Response: The Project is designed to be compatible and in scale with the existing surrounding developments. The Project is designed to provide adequate on-site improvements including parking, lighting and landscaping. Based on the design review of the project, as documented in the Planning Commission staff report, the Project meets all the design criteria identified above.

BE IT FURTHER RESOLVED with respect to the Pre-annexation and Development Agreement (DA) 21-001 and Pre-annexation and Development Agreement (DA) 23-002 (attached hereto as Exhibits D and E, respectively) the Planning Commission of the City of Livermore finds based on the information presented:

1. The Development Agreement provides benefit to the City.

   Response: The Development Agreements establish terms and obligations for public benefits, including the Applicant's financial contribution toward and construction of the off-site trail improvements and financial contribution to the City's Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001. For these reasons, the Development Agreements will provide benefit to the City.

2. The Development Agreement is consistent with the purpose, intent, goals, policies, programs, and land use designations of the General Plan, any applicable Specific Plan, and this Development Code.

   Response: The Development Agreements require the Applicant to provide a financial contribution to the City's Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001. This is consistent with the purpose, intent, goals, policies, and programs, of the General Plan. Specifically, this will implement policies and actions in the General Plan Economic Development element to encourage existing businesses to remain and grow in

Livermore, and attract a range of new businesses to locate in Livermore. The Development Agreements also include financial contribution toward and construction of the off-site trail improvements identified in the City's Active Transportation Plan. This is consistent with the purpose, intent, goals, policies, and programs of the General Plan and the Active Transportation Plan to improve bicycle and pedestrian circulation and connectivity.

3. The Development Agreement complies with the requirements of Government Code Sections 65864 through 65869.5

   Response: The proposed development complies with the requirements of Government Code Section 65864 through 65869.5 by securing the terms and timing for off-site improvements and amenities for the benefit of the broader Livermore community.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the Record Evidence and adopted a resolution recommending the City Council certify an Environmental Impact Report.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the findings set forth above and adopts these findings as part of this resolution. Based upon the Planning Commission's independent review of the Record Evidence and considerations, the Planning Commission recommends that the City Council approve General Plan Amendment (GPA) 21-001, Annexation/Prezoning (APZ) 21-003, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, and Site Plan Design Review (SPDR) 21-008, subject to the Conditions of Approval attached hereto as Exhibit F, for the SMP 39/SMP 40 Project.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the findings set forth above and adopts these findings as part of this resolution. Based upon the Planning Commission's independent review of the Record Evidence and considerations, the Planning Commission recommends that the City Council approve Pre-annexation and Development Agreement (DA) 21-001, and Pre-annexation and Development Agreement (DA) 23-002 in substantial conformance with Exhibits D and E, subject to the Conditions of Approval attached hereto as Exhibit F, for the SMP 39/SMP 40 Project.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore recommends the City Council authorize submission of an application to the Alameda County Local Agency Formation Commission to initiate a sphere of influence modification and annexation proceedings for the Subject Property.

BE IT FURTHER RESOLVED, the Planning Commission of the City of Livermore recommends that the City Council direct the Planning Manager to file a Notice of Determination with the Alameda County Clerk, if the project is approved.

The documents that constitute the record of proceedings upon which this decision is based can be found in the Community Development Department, 1052 S. Livermore Avenue, in Livermore, California.
On the motion by Commissioner Leary, seconded by Commissioner Fintschenko, the foregoing Resolution was passed and adopted at the Planning Commission meeting of March 5, 2024, by the following vote:

AYES: ANDERSON, DUNBAR, FINTSCHENKO, KRONZAK, LEARY.
NOES: NONE.
ABSENT: NONE.

IN THE CITY COUNCIL OF THE CITY OF LIVERMORE, CALIFORNIA

AN ORDINANCE APPROVING A DEVELOPMENT AGREEMENT WITH LIVERMORE INDUSTRIAL PARTNERS 40, LLC AND SMP-40, LLC FOR THE SMP 39/SMP 40 PROJECT

(Development Agreement 23-002)

THE CITY COUNCIL OF THE CITY OF LIVERMORE DOES ORDAIN AS FOLLOWS:

Section 1. *Authority*. Pursuant to Government Code Section 65864 et seq., the City Council considers that certain document under City Application No. Development Agreement 23-002 and entitled "Pre-Annexation and Development Agreement (DA 23-002) [Surface Mining Permit (SMP) 39/40 Project – SMP 40 Property] ("Development Agreement"). The Development Agreement is attached hereto as Exhibit A.

Section 2. *Recommendation*. The Planning Commission held a duly noticed public hearing on March 5, 2024, to consider an ordinance approving the Development Agreement and by its Resolution No. 03-24, attached hereto as Exhibit B, recommended that the City Council adopt the ordinance and approve the Development Agreement.

Section 3. *Environmental Review.* The City Council considered the environmental review and certified the SMP 39/SMP 40 Final Environmental Impact Report by Resolution No. ____.

Section 4. *Consistency*. Development Agreement 23-002 is consistent with the General Plan and the Livermore Development Code Chapter 9.04.

Section 5. *Approval*. The City Council has considered the findings made by the Planning Commission for adoption of the Development Agreement in Planning Commission Resolution No. 03-24, and hereby adopts the same findings by this reference and incorporates them as part of this resolution, and based on the City Council's own independent review and considerations, hereby adopts this ordinance and approves Development Agreement 23-002.

Section 6. *Signing Authority*. The City Manager is hereby authorized to sign the Development Agreement, attached hereto as Exhibit A, on behalf of the City of Livermore.

Section 7. *Publication and Effective Date.* This ordinance or a comprehensive summary thereof shall be published once in a newspaper of general circulation of the City of Livermore within 15 days after its adoption and shall take effect and be in force thirty days from and after its adoption.

Section 8. *Filing.* Planning Manager is directed to file a Notice of Determination for the SMP 39/SMP 40 Project Environmental Impact Report with the Alameda County Clerk.

Section 9. *Recording.* The City Clerk is directed to record the Development Agreement within 10 days after the effective date of the Development Agreement.

Section 10. *Documents.* The documents that constitute the record of proceedings upon which this decision is based on can be found in the City Clerk's Office, 1052 S. Livermore Avenue, Livermore, California.

Section 11. *Severability.* If any part of this ordinance is declared unconstitutional or invalid by a court, such unconstitutionality or invalidity shall not affect any remaining parts.

The foregoing ordinance was introduced at the meeting of the City Council of the City of Livermore held on March 25, 2024, by the following vote:

AYES: COUNCIL MEMBERS:

PRE-ANNEXATION AND DEVELOPMENT AGREEMENT

BY AND BETWEEN

THE CITY OF LIVERMORE

AND

LIVERMORE INDUSTRIAL PARTNERS 40, LLC; AND SMP-40, LLC

PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA 23-002)
[SURFACE MINING PERMIT (SMP) 39/40 PROJECT – SMP 40 PROPERTY]

This Pre-annexation and Development Agreement ("Agreement") is entered into on _____, 2024 between the City of Livermore, a municipal corporation ("City"), Livermore Industrial Partners 40, LLC ("Developer") and SMP-40, LLC ("Seller"). The City, Developer, and Seller are sometimes referred to below each individually as a "Party" and collectively as the "Parties."

RECITALS

This Agreement is based on the following facts:

A. The City has the authority to enter into a development agreement under Government Code section 65864 *et seq.* ("Development Agreement Statutes") and Chapter 9.04 of the Livermore Development Code to vest certain rights to the Developer and to meet certain public purposes of the local government.

B. SMP-39, LLC, an affiliate of Seller, owns approximately +/- 51.9 acres located on Jack London Boulevard, west of Oaks Business Park and south of Livermore Municipal Airport (commonly referred to as "SMP 39"). Seller owns approximately +/- 41 acres (commonly referred to as "SMP 40" or, for purposes of this Agreement, "SMP 40 Property"), which is the subject of this Agreement. The aforementioned SMP numbers reference the Surface Mining Permit (SMP) numbers applicable to each site. The Surface Mining Permits for each of the sites were approved by Alameda County in 2004 to allow for the extraction of sand and gravel (i.e., aggregate) within the sites; however, aggregate mining has not occurred within either of the sites.

C. Four additional parcels that total approximately +/- 12.9 acres are located east of SMP 40 and are included in the overall project area (as set forth in more detail in Recital F and referred to as the "Additional Annexation Only Parcels"). The City has chosen to include the parcels in the proposed annexation area for purposes of efficiency and to create logical boundaries.

D. The SMP 40 Property consists of one parcel (Assessor Parcel Number (APN) 904-0010-002-02) and is generally located south of Oaks Business Park, at the south end of Atlantis Street and Challenger Street. It is situated in Alameda County and is within the City of Livermore's Sphere of Influence ("SOI") and the City of Livermore's South Livermore Urban Growth Boundary ("UGB"). The SMP 40 Property is zoned Agriculture by Alameda County with a County General Plan designation of Industrial. The SMP 40 Property has a City of Livermore General Plan designation of Open Space/Sand and Gravel.

The SMP 40 Property is described more specifically in the attached **Exhibit A**. The SMP 40 Property does not include property located within SMP 39 or the Additional Annexation Only

Parcels, as described in Recitals E and F below. Development of the SMP 40 Property is described in Recitals G and H, below, and set forth in more detail in **Exhibit B** (SMP 40 Development Description) and **Exhibit C** (Site Plan for the SMP 40 Property). Developer is in contract to purchase SMP 40 Property from Seller, and under that contract has the primary rights and obligations regarding application for and funding the Entitlements, described below in Recital I, for the SMP 40 Property as set forth in this Agreement. Developer is required to annex the SMP 40 Property into the City to facilitate the SMP 39/SMP 40 Project, defined below in Recital G.

E. SMP-39, LLC, an affiliate of Seller, owns certain real property consisting of one parcel (APN 904-0003-001-04) and is situated in Alameda County, within the City of Pleasanton's SOI and the City of Livermore's South Livermore UGB ("SMP 39"). SMP 39 is zoned Agriculture by Alameda County and has a County General Plan designation of Industrial. SMP 39 has a City of Livermore General Plan designation of Open Space/Sand and Gravel. The Developer is required to change the SOI for SMP 39 from the City of Pleasanton to the City of Livermore and to annex SMP 39 into the City to facilitate the SMP 39/SMP 40 Project, defined below in Recital G.

F. Four additional parcels (APNs 904-0010-002-03, -5, -7, and -8) located immediately east of SMP 40 are within unincorporated Alameda County, the City of Livermore SOI, and the City of Livermore South Livermore UGB ("Additional Annexation Only Parcels"). APN 904-0010-002-03 is an approximately 0.20-acre parcel owned by the Pacific Gas and Electric Company (PG&E) and is developed with existing PG&E infrastructure. APN 904-0010-002-05 is an approximately 5.76-acre parcel owned by the Zone 7 Water Agency and serves as a flood control channel. APN 904-0010-002-07 is an approximately 1.57-acre parcel owned by the California Department of Transportation (Caltrans) and is currently undeveloped. APN 904-0010-002-08 is an approximately 5.46-acre parcel owned by the City of Livermore and is currently undeveloped with scattered trees throughout the parcel. The City of Livermore General Plan designates the Additional Annexation Only Parcels as Open Space/Sand and Gravel. The Additional Annexation Only Parcels are also within the East County Area Plan of the Alameda County General Plan, which designates the parcels as Industrial. The parcels are zoned Agriculture by Alameda County. The Developer is required to annex the Additional Annexation Only Parcels into the City to facilitate the SMP 39/SMP 40 Project, defined below in Recital G.

G. Due to their interrelated nature, activities involving SMP 39, SMP 40, and the Additional Annexation Only Parcels (together, the "SMP 39/SMP 40 Project") are considered in a single Environmental Impact Report ("EIR") (SCH #2023010091) for purposes of the City's environmental review under the California Environmental Quality Act ("CEQA"). The SMP 39/SMP 40 Project evaluated in the EIR includes a SOI amendment for SMP 39 and a General Plan Amendment, Pre-zoning and Annexation, Development Code Amendment/ Zoning Map Amendment/ Planned Development, Vesting Tentative Subdivision Maps, Pre-annexation Agreements, and Development Agreements for SMP 39 and SMP 40. A Site Plan Design Review entitlement is also included for SMP 40. The SMP 39/SMP 40 Project evaluated in the EIR also includes annexation of the Additional Annexation Only Parcels.

H. SMP 39 and SMP 40 shall be developed with light industrial development uses consistent with the City's *Low-Intensity Industrial* General Plan designation, including research

and development, professional and administrative offices, experimental and testing laboratories, manufacturing of electronic and other high-end complex products, a limited amount of warehouse and distribution, and similar uses as stated in PD-I 22-001, the zoning for the property (**Exhibit D**). The SMP 39/SMP 40 Project includes (i) on SMP 39, approximately six light industrial buildings consisting of up to 755,500 square feet (sf) of development and, (ii) on SMP 40, two light industrial buildings consisting of up to 759,275 sf of development. **Exhibit C** shows the proposed site plan for the SMP 40 Development. Developer and City intend that separate Pre-annexation and Development Agreements will be entered into for SMP 39 and SMP 40, respectively, in order to segregate the rights and obligations related to each property. This Agreement, as reflected herein, addresses the SMP 40 Property and no other property.

I. The Developer has applied for the following entitlements ("Entitlements") for the SMP 40 Property from the City of Livermore as required under the Livermore Development Code, to be vested in accordance with this Agreement pending annexation of the SMP 40 Property into the City of Livermore:

- General Plan Amendment (GPA 21-001) to change the City of Livermore designation of SMP 39 and SMP 40 from *Open Space/Sand and Gravel* (OSP/S&G) to *Low-Intensity Industrial* (LII) and to change the City of Livermore designation of the Additional Annexation Only Parcels from *Open Space/Sand and Gravel* (OSP/S&G) to *Parks, Trailways, Recreation Areas* (OSP) (the "General Plan Amendment" or "GPA");

- Pre-zoning of SMP 39 and SMP 40 (DCA 21-005, ZMA 21-002 and PD-I 22-001) by (i) amending the City's zoning map to rezone SMP 39 and SMP 40 to the *Planned Development - Industrial* (PD-I) 22-001 zoning district, which includes the "Planned Development-Industrial 22-001 Zoning Standards" described more fully in attached **Exhibit D**; and (ii) pre-zoning the Additional Annexation Only Parcels to *Open Space Flood Plain* (the "Prezoning"). The Prezoning shall become effective with respect to SMP 39, SMP 40, and the Additional Annexation Only Parcels upon their annexation to the City in accordance with California Government Code section 65859;

- SOI Amendment and Annexation (APZ 21-003) authorizing submittal of an application to the Alameda County Local Agency Formation Commission ("LAFCo") to (i) include SMP 39 within the City of Livermore's SOI (and remove SMP 39 from the City of Pleasanton's SOI); and (ii) annex SMP 39, SMP 40, and the Additional Annexation Only Parcels from Alameda County into the City;

- Vesting Tentative Parcel Map 11219 (SUB 21-009) authorizing the creation of two development parcels for the SMP 40 Property, (the "Tentative Map");

- Site Plan Design Review (SPDR 21-008) certifying compliance with the "Applicable Rules" (meaning the rules, regulations, and official policies of the City, including but not limited to the City's General Plan and Livermore

Development Code, as they existed on the Effective Date, except as otherwise amended by the approved Entitlements or this Agreement) and the Planned Development Standards with respect to the development proposed on the SMP 40 Property (the "SPDR Approval"); and

- This Pre-annexation and Development Agreement (DA 23-002) to vest certain rights to the Developer and to provide specific public benefits that meet certain public purposes of the local government.

In addition to the above listed Entitlements, an EIR (SCH #2023010091) for the SMP 39/SMP 40 Project has been prepared in accordance with CEQA to evaluate potential impacts to the environment of the SMP 39/SMP 40 Project, including the Entitlements.

J. The City Council finds that the SMP 39/SMP 40 Project is in the public interest; will establish land uses compatible with the physical nature of the SMP 40 Property and the surrounding area; will generate light industrial development and activity to meet local and regional goals; and will provide certain substantial public benefits and help attain certain other public objectives including, without limitation: (i) including construction of and a $750,000 financial contribution toward off-site trail improvements, creating connections to the City's existing trail networks as identified in the *Active Transportation Plan* ("ATP"); and (ii) a commitment to the funding of $100,000, payable over a two-year term in increments of $50,000 per year, to facilitate uses that support an innovation-driven economy, generate high wage jobs, or generate substantial sales tax revenues as determined by the Director of Innovation and Economic Development. Items (i) through (ii) above, and as described more fully in Section 4, are collectively referred to as the "Public Benefits".

K. This Agreement will promote and encourage the SMP 40 Development by providing the Developer and its creditors with a greater degree of certainty of the Developer's ability to expeditiously and economically complete the development effort for the SMP 40 Property, and the Parties agree that the consideration to be received by the City pursuant to this Agreement and the rights secured to the Developer hereunder constitute sufficient consideration to support the covenants and agreements of the City and the Developer. By entering into this Agreement, the City desires to allow the Developer to design, apply for, and if approved to develop the SMP 40 Property pursuant to this Agreement, the land use ordinances, rules, regulations, and policies applicable on the "Effective Date," as defined in Section 2, and to vest in Developer, upon annexation, to the fullest extent possible under the law, development entitlements in order to complete the SMP 40 Development, consistent with Section 5 of this Agreement.

L. The SMP 40 Development has been extensively reviewed and considered by the City and its officers, agencies, and departments. The proposed uses have been found to accommodate the City's recommendations and suggestions in order to protect the public's interest and to enhance the desirability, from the public's perspective, of the SMP 40 Development.

M. The City conducted duly noticed public hearings on this Agreement pursuant to Government Code section 65867 and Livermore Development Code sections 9.04.040 and

9.04.050 and found that the provisions of this Agreement and its purposes are consistent with the objectives, policies, general land uses, and programs specified in the City's General Plan and Livermore Development Code.

N. This Agreement was adopted by ordinance of the City Council on _____, 2024 and approved upon a second reading on _____, 2024 after notice and public hearings before the Planning Commission and City Council, and after City Council certification of an EIR in accordance with CEQA, Public Resources Code section 21000 *et seq*.

NOW, THEREFORE, the City and Developer hereby agree that the aforementioned recitals are true and correct and incorporated by reference as fully set forth below, and further agree as follows:

1. The Property. The SMP 40 Property is described in **Exhibit A**, attached hereto. The SMP 40 Development includes two light industrial buildings consisting of up to 759,275 sf of development. A comprehensive description of the SMP 40 Development and a proposed site plan is in attached **Exhibit B** (SMP 40 Development Description) and **Exhibit C** (Site Plan for the SMP 40 Property).

2. Effective Date. The effective date of this Agreement (the "Effective Date") is the later of (a) thirty (30) days after the date the Ordinance approving this Agreement is adopted by the City Council and attested by the City Clerk, (b) if a referendum petition is timely and duly circulated, filed and qualified by the Elections Official, the date the election results on the ballot measure by City voters approving this Agreement are certified by the City Council in the manner provided by the Elections Code, or (c) the date the sphere of influence amendment and annexation proceedings are complete. This Agreement shall be executed by the City within ten (10) days after the Effective Date and recorded as provided in Government Code Section 65868.5.

3. Term. The term of this Agreement is ten (10) years ("Term"), beginning on the Effective Date as defined in Section 2 of this Agreement. The Agreement may be extended as provided for in the Development Agreement Statutes and the Livermore Development Code, subject to the written consent of the City and Developer. The terms of the Entitlements shall be automatically extended such that the Entitlements remain in effect for any extended Term.

   Following the earlier of the expiration of the Term, the completion of development of the SMP 39/SMP 40 Project and all of Developer's obligations in connection therewith, or the failure of either SMP 39,SMP 40 or the Additional Annexation Only Parcels to be annexed into the City of Livermore in accordance with Section 5(g) of this Agreement, this Agreement shall be terminated and shall have no further force and effect, subject, however to the provisions of Sections 10, 13 and 17.

4. Developer Obligations; Schedule of Performance. The Developer shall comply with the requirements set forth in the Schedule of Performance and tasks listed below. The Schedule of Performance is subject to revision from time-to-time as mutually agreed upon in writing between the City and the Developer, which shall be accomplished

through a separate document and without the need to amend this Agreement. The City Manager shall have the authority to approve on behalf of the City any revision to a date in the Schedule of Performance that he or she deems appropriate, provided that the revision extends the performance deadline for a time period no longer than one year. Developer shall comply with the following Schedule of Performance:

a. Developer shall initiate timely applications for the SOI amendment for SMP 39 and the annexation for SMP 39, SMP 40, and the Additional Annexation Only Parcels, which shall be reviewed by the appropriate decision-making bodies for each parcel, which may include the City of Pleasanton, Livermore City Council and LAFCo.

b. Developer shall pay a $100,000 cash contribution to the City of Livermore Office of Innovation and Economic Development Department for marketing SMP 39 for the desired land uses identified in PD-I 22-001.

    i. Prior to issuance of the first building permit for the SMP 40 Property, the Developer shall pay an initial $50,000 cash contribution to the City of Livermore Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001.

    ii. Developer shall pay a second $50,000 contribution to the City of Livermore Office of Innovation and Economic Development Department no later than one (1) year following the receipt of the initial $50,000 contribution, to be used toward further marketing SMP 39 for the desired land uses identified in PD-I 22-001.

c. In addition to the on-site trail required by the Project, as set forth in the Conditions of Approval, Developer shall construct an off-site grade-separated overcrossing (bridge) of Isabel Avenue/State Route 84 north of the existing railroad tracks and Stanley Boulevard as a required public benefit ("the Trail Overcrossing"). Developer shall also construct trail connections from the terminus of the bridge to the existing off-site Arroyo Mocho trail east of Isabel Avenue and from the terminus of the bridge west of Isabel Avenue, north to the existing trail along the Zone 7 property (north of the Arroyo Mocho Channel) ("the Trail Connections"). The Trail Overcrossing shall have a span of approximately 190-210 feet and shall run parallel with the existing railroad tracks. The materials shall consist of a fabricated truss and a weathered steel span bridge with concrete flooring. The Trail Overcrossing shall be supported by two cast-in-place concrete abutments which are supported by cast-in-drilled-hole concrete piles. An approach retaining wall shall be required on the east end. The Trail Overcrossing shall be cambered so it will drain from the middle to each end and then drain to the edges and connect to Caltrans storm drains. A site plan and preliminary design details are provided in **Exhibit E**. Final designs shall be conditioned to meet the requirements of applicable permitting agencies. Permits shall be required from the City of Livermore and Caltrans. In addition, an encroachment permit will be required from Caltrans. The Trail Overcrossing and Trail Connections shall be designed as described above or with similar design features as approved by the Community

Development Director. The Trail Overcrossing and Trail Connection design shall include lighting, cameras, and/or other safety and security measures as required by the City's Chief of Police and City Engineer.

i. As part of Final Map submittal for the SMP 40 Property, the Developer shall pay for and submit design plans, Engineer's cost estimates, and project bids to the City for review and approval for the Trail Overcrossing and the Trail Connections. Developer shall work to secure and provide a competitive cost for the bridge, consistent with commercially reasonable costs and construction practices. The Trail Overcrossing and Trail Connections design shall be approved by the City before the Developer can apply for any permits related to the Trail Overcrossing and Trail Connections. Developer may submit the Final Map to the City without the Trail Overcrossing and Trail Connections details if the City Engineer determines, in his or her discretion, that the delay in the preparation of said details was due solely to delay by a public agency other than the City.

ii. The Developer's monetary contribution towards the costs of the Trail Overcrossing and Trail Connections shall equal Seven-Hundred-Fifty-Thousand Dollars ($750,000.00) (the "Developer Obligation"). The $750,000 Developer Obligation is in addition to the design and permitting costs the Developer is responsible for, as set forth in the Agreement. As part of Final Map approval, Developer shall enter into a Subdivision Improvement Agreement which shall include the Developer Obligation.

iii. Prior to Final Map approval, the Developer shall enter into a Community Facilities District to fund long-term maintenance and replacement of the on-site trail improvements and associated landscaping and retaining walls and the off-site trail improvements located within the Zone 7 trail easement associated landscaping and retaining walls.

iv. Prior to issuance of Certificate of Occupancy for Building 2 on the SMP 40 Property, the Developer shall pay for and obtain all necessary permits and approvals from all applicable government agencies, including but not limited to the City and Caltrans and complete all on- and off-site trail improvements including the Trail Overcrossing and the Trail Connections, subject to acceptance of the public improvements by the Livermore City Council.

v. If Developer fails to complete the Trail Overcrossing and Trail Connections prior to the issuance of the Certificate of Occupancy of Building 2 on the SMP 40 Property, Developer shall provide an irrevocable letter of credit from J.P. Morgan Chase, Wells Fargo Bank, or Bank of America in the amount of the remaining estimated cost of construction of the Trail Overcrossing and the Trail Connections, plus a 25 percent contingency added to the remaining estimated cost. The irrevocable letter of credit shall provide the City with sole and unilateral release of funds and shall be in a form approved by the City Attorney. The remaining estimated cost shall be determined by an updated Engineer's cost estimated provided and approved by the City Engineer prior

to the issuance of Certificate of Occupancy for Building 2. Unless the City Engineer determines in his or her discretion that a delay by a public agency other than the City was the sole reason for Developer's failure to complete to the Trail Overcrossing or Trail Connection, the Developer Obligation to the Trail Overcrossing and Trail Connections shall increase every six months following issuance of the Certificate of Occupancy of Building 2 on the SMP 40 Property until the Trail Overcrossing and the Trail Connections have been completed, including acceptance of the public improvements by the Livermore City Council as follows: $25,000 every six months during year one, $50,000 every six months during year two, and $75,000 every six months during year three. The Developer shall remain responsible for paying for and obtain all necessary permits and approvals from all applicable government agencies as noted in Section 4(c) and completing all on- and off-site trail improvements including the Trail Overcrossing and the Trail Connections, subject to acceptance of the public improvements by the Livermore City Council. The obligation to provide an irrevocable letter of credit shall replace the bond requirements for the off-site trail improvements in the Subdivision Improvement Agreement.

vi. In accordance with Chapter 12.30, Traffic Impact Fee on Development Section 12.30.080, Credit and Reimbursement, the Developer shall be eligible for Traffic Impact Fee (TIF) credits to construct the Trail Overcrossing and Trail Connection costs, less the $750,000 Developer Obligation. As described further in attached **Exhibit F**, City shall provide Developer a TIF credit of the SMP 40 Project's Traffic Impact Fees (the "Impact Fee Credit") for the identified Engineer's cost estimate (or up to 10 percent over this estimate as specified above). If the construction cost estimate exceeds 10 percent of the Engineer's cost estimate, the Developer shall pay the remaining Trail Overcrossing and Trail Connections cost over the Engineers estimate. The Impact Fee Credit shall be credited against the TIF that are collected at the time each building permit is paid, and on a permit-by-permit basis as Developer's obligations to pay such impact fees accrue until the last SMP 40 Project building permit is issued. Notwithstanding anything to the contrary in this Agreement, if the Engineer's cost estimate has not been prepared and/or approved prior to when payment of TIF is due, Developer shall pay the applicable TIF when due and City shall provide Developer a cash reimbursement in the dollar amount of TIF Credit within thirty (30) business days after City Engineer's review and approval of the Engineer's cost estimate, such approval not being unreasonably withheld, conditioned, or delayed.

5. Vested Development Rights. Subject to annexation into the City and the terms of this Agreement, the SMP 40 Development shall vest in accordance with this Agreement, and the Developer has the right to develop and use the SMP 40 Property in accordance with:

   a. The City's General Plan, the Livermore Development Code, and the Entitlements in effect on the Effective Date;

b. All other City policies, ordinances, resolutions, rules, regulations, and standards applicable to development or use of the SMP 40 Property on the Effective Date, except that Developer shall:

(1) Pay the processing and development impact fees applicable City-wide that are in effect at the time the fees are paid. Payment for said fees shall be made prior to issuance of any building permits.

(2) Comply with Building Code requirements in effect on a City-wide basis at time of Building permit submittal;

(3) Comply with construction and technical design standards or specifications for public improvements that are applicable City-wide at time of Building permit submittal;

(4) Comply with changes in City laws, regulations, plans, or policies applicable City-wide, the terms of which are found by the City Council, based on substantial evidence, to be necessary to protect members of the public from a condition dangerous to public health or safety;

(5) Comply with a change in City law, regulations, plans, or policies that is:

i. Specifically mandated by state or federal law, or by any regional governmental agency that has legal authority over the City under state law or a joint powers agreement; or

ii. A result of or in response to state or federal law, or regional agency action, made necessary in order for the City to avoid losing or not receiving substantial funding or other substantial public benefits or facilities that would be available to the City only if it makes such a change; or

iii. Specifically mandated by, or necessary for compliance with or implementation of, the terms of any permit, entitlement, or other authorization necessary for the development of the Property that is issued or granted to the City, County, and/or Developer by any federal, state or regional agency;

(6) Following any subsequent environmental review, comply with required mitigation measures.

c. In the event that Developer applies for any subsequent entitlements, subsequent entitlements shall be subject to the City's ordinances, rules, regulations and policies in effect on the date of submittal of the subsequent entitlements.

d. If there is any inconsistency between this Development Agreement and a permit or entitlement issued for the SMP 40 Property, this Development Agreement shall control.

e. Developer acknowledges that execution of this Agreement by the City does not constitute approval of any required permits, applications, or allocations, and in no way limits the discretion of the City in the permit, allocation, and approval process in accordance with the limitations set forth herein.

f. Upon annexation of SMP 39 and 40, Developer agrees that all mining permits previously granted by Alameda County on the SMP 39 and SMP 40 properties shall be forfeited, and no mining operations shall occur on the SMP 39 Property or the SMP 40 Property. No later than 60 days from the date LAFCo approves annexation of the SMP 40 Property, subject to any extension granted by the City, Developer shall coordinate with Alameda County to complete any final actions required to remove the mining permits and all associated permissions related to mining operations from the SMP 39 and SMP 40 properties.

g. The Parties agree that the obligations set forth in this Agreement are conditioned upon the passing of a City Council Resolution authorizing submittal of an application to LAFCo for SOI amendment and Annexation, the filing of an application with LAFCo to amend the SOI for SMP 39, annex SMP 39, SMP 40 and the Additional Annexation Only Parcels, requesting waiver of notice, hearing and protest from LAFCo, subject to LAFCo approval. Furthermore, the Parties also agree that the obligations set forth in this Agreement are conditioned upon the approved and finalized SOI amendment and annexation of the SMP 39 and SMP 40 Properties and the Additional Annexation Only Parcels into the City of Livermore. Upon approval of the SMP 39/SMP 40 Project by the City, the City agrees to act in good faith, in collaboration with the Developer, to support and timely process the SOI amendment and annexation application with LAFCo. The Developer shall be responsible for all costs associated with the SOI amendment and annexation, including but not limited to preparation of the LAFCo application, LAFCo application submittal fees, and any other City-related annexation fees. The SOI amendment and annexation of SMP 39, SMP 40, and the Additional Annexation Only Parcels shall be completed no later than 18 months from the Effective Date of this Agreement, unless extended by written agreement of the Parties. If the SOI amendment and annexation proceedings are not completed within this time period, subject to any agreed upon extension, this Agreement shall be terminated and shall have no further force and effect, subject however to the provisions of Sections 10, 13 and 17.

h. Developer shall not dispute or challenge the validity of the Pre-annexation and Development Agreement for SMP 39. Any legal challenge to the validity or enforceability of the Pre-annexation and Development Agreement for SMP 39 shall constitute a legal challenge to the Pre-annexation and Development Agreement for SMP 40 and the SMP 39/SMP 40 Project. In the event of a valid legal challenge, this Agreement shall be terminated after all appeals have been

exhausted before a final court of judgment, or issuance of a final court order directed to the City to set aside, withdraw or abrogate the City's approval of this Agreement or the Pre-annexation and Development Agreement for SMP 39.

7. Periodic Review. Review of this Agreement shall be made annually, consistent with Government Code section 65865.1 and Livermore Development Code Chapter 9.04.

8. Amendments. The Agreement may be amended in writing by the Parties, by mutual agreement, consistent with the procedures set forth in the Development Agreement Statutes and the Livermore Development Code, as they are amended from time-to-time.

9. Force Majeure. The Term of this Agreement shall be extended by, and the performance by any Parties of their obligations hereunder (other than for payment of money) shall be excused during, any period of "Force Majeure" as hereinafter defined. "Force Majeure" means a delay caused by any labor disputes or strikes, labor or material shortages or embargoes, pandemic, fire, unusual delay in transportation, earthquakes, floods, tornadoes or extreme wind or other adverse weather conditions not reasonably foreseeable by Developer, or material adverse underground conditions not reasonably foreseeable by Developer.

10. Remedies for Default. If a Party is in default under this Agreement, another Party may pursue one or more of the following courses of action after providing 30 days' written notice to the purportedly defaulting Party (or such longer period as may be required to cure the default, so long as such Party commences the cure within such 30-day period and diligently pursues the cure to completion): (a) waive the default; (b) in the City's case, pursue administrative remedies, including denial or otherwise withholding issuance of building permits, certificates of occupancy, or other approvals; (c) pursue judicial remedies; or (d) terminate this Agreement. Any purported default by a Party hereunder shall be subject to, and tolled by, any event of Force Majeure that prevents such Party from performing the act necessary to avoid or cure such purported default. Any such tolling shall end at the termination of the event of Force Majeure.

11. Termination. This Agreement shall terminate upon the earlier of (i) expiration of the Term (ii) in the event that SMP 39, SMP 40, or the Additional Annexation Only Parcels are not annexed into the City in accordance with Section 5(g) of this Agreement (iii) when the SMP 39/SMP 40 Project has been completed and all of Developer's obligations have been fully satisfied as reasonably determined by the City, or (iv) after all appeals have been exhausted before a final court of judgment, or issuance of a final court order directed to the City to set aside, withdraw or abrogate the City's approval of this Agreement or any material part thereof, or the Pre-annexation and Development Agreement for SMP 39 or any material part thereof. Upon termination of this Agreement as to the SMP 39/SMP 40 Project, at the request of Developer, the City shall record a Notice of Termination for each affected parcel in a form satisfactory to the City Attorney in the Office of the Alameda County Recorder. In the event this Agreement is terminated, neither party shall have any further rights or obligations hereunder except for those obligations of Developer set forth in Section 10 (Remedies for Default), Section 13 (No Damages Relief) and Section 17 (Legal Action; Attorneys' Fees).

12. Mortgagee Protection.

a. This Agreement shall not prevent or limit Developer in any manner, at Developer's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust, or other security device securing financing with respect to the Property ("Mortgage"). This Agreement shall be superior and senior to any lien placed upon the Property or any portion thereof after the date of recording this Agreement, including the lien of any Mortgage. Notwithstanding the foregoing, no breach hereof shall defeat, render invalid, diminish, or impair the lien of any Mortgage made in good faith and for value, but all of the terms and conditions contained in this Agreement shall be binding upon and effective against and inure to the benefit of any person or entity, including any deed of trust beneficiary or mortgagee ("Mortgagee") who acquires title to the Property, or any portion thereof, by foreclosure, trustee's sale, deed in lieu of foreclosure, or otherwise.

b. *Liability for Past Defaults*. Any Mortgagee, including the successful bidder at a foreclosure sale, who takes title and possession of the Property, or any portion thereof, pursuant to such foreclosure, shall take the Property, or portion thereof, subject to the provisions of this Agreement; provided, however, in no event shall such Mortgagee be liable for any defaults or monetary obligations of Developer arising prior to acquisition of title to the Property by such Mortgagee. Notwithstanding the preceding sentence, in no event shall any such Mortgagee or its successors or assigns be entitled to a building permit, final inspection, or occupancy certificate until all fees and other monetary obligations due under this Agreement have been paid to the City and any other existing defaults under this Agreement that are reasonably subject to cure are cured.

c. *Notice of Default to Mortgagee; Right of Mortgagee to Cure*. If City receives a notice from a Mortgagee requesting a copy of any Notice of Default given to Developer hereunder and specifying the address for service thereof, then City shall deliver to such Mortgagee, concurrently with service thereon to Developer, any notice given to Developer with respect to any claim by City that Developer has committed a default. If the City makes a determination of noncompliance hereunder, City shall likewise serve notice of such noncompliance on such Mortgagee concurrently with service thereof on Developer. Each Mortgagee shall have the right (but not the obligation) during the same period available to Developer to cure or remedy, or to commence to cure or remedy, the event of default claimed or the areas of noncompliance set forth in City's notice.

13. No Damages Relief. The Parties acknowledge that the City would not have entered into this Agreement were it exposed to damages claims from Developer for any breach thereof. As such, the Parties agree that in no event shall Developer be entitled to recover damages against City for breach of this Agreement. To the extent permitted by law, specific enforcement of this Agreement, including specific performance of Developer's payment obligations set forth in Sections 4(b) and 4(c) and the City's TIF credit obligations set forth in Exhibit F, is the proper and desirable remedy.

14. Recordation: Binding Effect. This Agreement shall be recorded in the office of the Alameda County Recorder and shall be binding upon and inure to the benefit of any successors in interest to the Parties. The Parties acknowledge that, as of the date of preparing this Agreement, the Property is owned in fee by Seller and that Seller shall have all rights and obligations of "Developer" under this Agreement.

15. Release Upon Transfer. Upon the sale, transfer, or assignment, in whole or in part, of Developer's right and interest to all or any portion of the Property, Developer shall be released from its obligations hereunder with respect to the portion so conveyed, provided: (i) Developer (or transferee) was not in default of this Agreement at the time of conveyance, (ii) Developer provided to City prior written notice of such transfer, and (iii) with respect to sale or transfer of any lot that has not been fully improved, the transferee executes and delivers to City a written assumption agreement in which: (a) the name and address of the transferee is set forth, and (b) the transferee expressly assumes the obligations of Developer under this Agreement as to the portion of the Property conveyed. Failure to deliver a written assumption agreement hereunder shall not negate, modify, or otherwise affect the liability of any transferee pursuant to the provisions of this Agreement.

16. Timing of Development.

    a. Because the California Supreme Court held in *Pardee Construction Co. v. City of Camarillo*, 37 Cal.3d 465 (1984), that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over the parties' agreement, it is the Parties' intent to avoid that result by acknowledging, that unless provided for in this Agreement, Developer shall have the right (without obligation) to develop the Property in such order and at such rate and at such times as Developer deems appropriate within the exercise of its subjective business judgment, subject to the terms, requirements and conditions of the Entitlements and this Agreement.

    b. Developer will use its best efforts, in accordance with its own business judgment and taking into consideration market conditions and other economic factors influencing Developer's business decision, to commence or to continue development, and to develop the Project in a regular, progressive, and timely manner in accordance with the terms, requirements and conditions of the Entitlements and this Agreement.

17. Legal Action; Attorneys' Fees. If the City chooses to defend any third party claim or suit challenging any action taken by the City with regard to this Agreement or any procedure or aspect of the City's approval of the development of the SMP 40 Development, including the environmental review process, the Developer in its capacity as either Developer or owner of the Property agrees to reimburse the City for the City's reasonable attorneys' fees, expert witness fees, and related costs as the City may incur in connection with its retention of outside counsel, and for any award of court costs or fees against the City. The City has the right to choose and retain such legal counsel as the City deems appropriate. After expenses reach $100,000, and each $100,000 thereafter, the Parties

will confer to review the status of the litigation and their options for proceeding or settling, and they will negotiate in good faith about how the expenses will be allocated. The Developer, in its capacity as the Developer or owner of the Property, shall have no obligation to reimburse the City for costs incurred after the date on which the Developer or owner of the Property give the City written notice of their decision to settle a case, even if the City does not agree to the settlement. If legal action is brought by one of the Parties to enforce a provision of this Agreement, the prevailing party is entitled to reasonable attorneys' fees, expert witness fees, and court costs.

18. Notices. The address of each party for the purpose of all notices permitted or required by this Agreement is as follows:

To City:	City of Livermore 1052 South Livermore Avenue Livermore, CA 94550 Attention: Community Development Director and Ashley Vera, Senior Planner
With a copy to:	City Attorney City of Livermore 1052 South Livermore Avenue Livermore, CA 94550
To Developer:	Overton Moore Properties 19700 South Vermont Avenue, Suite 101 Torrance, CA 90502 Attention: Timur Tecimer
With a copy to:	Cox, Castle & Nicholson LLP 50 California Street, Suite 3200 San Francisco, CA 94111 Attention: Christian Cebrian
To Seller:	SMP-40, LLC 1459 18th St #317 San Francisco, CA 94107 Attention: Jennifer Jimenez-Cruz
With a copy to:	Allen Matkins Three Embarcadero Center 12th Floor San Francisco, CA 94111 Attention: Marshall Wallace

The written address of each Party set forth above may be changed by written notice given not less than five (5) days prior to the date such change is to be in effect. All notices under this Agreement shall be in writing, shall be properly addressed, and shall be sent by personal delivery, United States mail (registered, certified, or Express Mail, return receipt requested and postage prepaid), or by overnight courier delivery service. All such notices shall be considered delivered: (i) if personally delivered, on the date of delivery; (ii) if sent by United States mail in the manner prescribed above, on the date shown on the return receipt for acceptance or rejection; or (iii) if sent by overnight courier delivery service, on the date of delivery or attempted delivery as shown by the written delivery record of such service.

19. Severability; Choice of Law If any term, provision, condition, or covenant of this Agreement, or the application thereof to any Party or circumstances, shall to any extent be held invalid or unenforceable, the remainder of the instrument, or the application of such term, provision, condition, or covenant, or the application of such term, provision, condition, or covenant to persons or circumstances other than those as to whom or which it is held invalid or unenforceable, shall not be affected thereby and each term and provision of this Agreement shall be valid and enforceable to the fullest extent permitted by law. This Agreement shall be governed by the laws of the State of California.

20. Covenants Run with the Land. All of the terms, provisions, covenants, conditions, rights, powers, duties and obligations contained in this Agreement shall be binding upon the parties and their respective heirs, successors and assigns acquiring any portion of the Property and shall inure to the benefit of the parties and their respective heirs, successors and assigns.

21. No Third Party Beneficiaries. This Agreement is entered only for the benefit of the Parties executing this Agreement, and their successors in interest. This Agreement is not for the benefit of any other individual, entity or person. Nothing herein shall be construed to create any right of any third party to enforce this Agreement or to seek any benefit therefrom.

22. Time Is of the Essence. Time is of the essence for each provision of this Agreement for which time is an element.

23. Certificate of Compliance. Any Party may, at any time, request that the City indicate in writing: (i) whether this Agreement is in full force and effect; (ii) whether this Agreement has been amended or modified, and if so amended, the nature of any such amendments; or (iii) whether to the best of City's knowledge the requesting Party is in default in the performance of any of its obligations under this Agreement, and if in default, the nature of any such default. City shall endeavor in good faith to respond to any such request within thirty (30) days following the receipt thereof. The Parties shall be entitled to one certificate of compliance per year without any fee being assessed by the City. For any additional certificates of compliance requested in a single year, the City may charge the requesting party a reasonable fee related to the actual cost to prepare the certificate.

24. Counterparts. This Agreement may be executed in one or more counterparts, each of which shall be deemed an original, but all of which constitute one and the same instrument.

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE UNINCORPORATED AREA IN THE COUNTY OF ALAMEDA, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

LAND DESCRIPTION OF REAL PROPERTY SITUATE IN THE UNINCORPORATED AREA OF COUNTY OF ALAMEDA, AND STATE OF CALIFORNIA; AND BEING A PORTION OF PARCEL 1 DESCRIBED IN THE QUITCLAIM DEED TO SMP-40, LLC, A CALIFORNIA LIMITED LIABILITY COMPANY RECORDED ON OCTOBER 15, 2018 UNDER DOCUMENT NUMBER 2018-200199, OFFICIAL RECORDS OF SAID COUNTY, AND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT THE MOST NORTHEASTERLY CORNER OF SAID PARCEL 1; THENCE ALONG THE GENERALLY EASTERLY LINE OF SAID PARCEL THE FOLLOWING SIX (6) COURSES:

1) SOUTH 43°34'49" WEST 122.15 FEET;
2) SOUTH 45°46'50" WEST 867.93 FEET;
3) SOUTH 44°11'58" EAST 4.92 FEET;
4) SOUTH 45°46'50" WEST 131.51 FEET;
5) SOUTH 68°51'35" WEST 26.89 FEET; AND
6) SOUTH 66°23'54" WEST 68.62 FEET;

THENCE ACROSS SAID PARCEL 1 THE FOLLOWING TWENTY-FIVE (25) COURSES:

1) NORTH 79°43'36" WEST 133.99 FEET;
2) SOUTH 87°47'59" WEST 169.88 FEET;
3) SOUTH 30°22'01" WEST 134.90 FEET;
4) NORTH 78°13'02" WEST 61.26 FEET;
5) SOUTH 89°02'56" WEST 59.76 FEET;
6) SOUTH 76°41'58" WEST 38.45 FEET;
7) SOUTH 85°37'00" WEST 88.93 FEET;
8) NORTH 89°20'02" WEST 51.57 FEET;
9) SOUTH 72°51'21" WEST 36.16 FEET;
10) SOUTH 82°16'37" WEST 78.80 FEET;
11) SOUTH 64°37'46" WEST 61.50 FEET;
12) SOUTH 78°31'36" WEST 81.76 FEET;
13) SOUTH 83°24' 14" WEST 81.60 FEET;
14) SOUTH 72°01'56" WEST 47.59 FEET;
15) NORTH 81°21 '57" WEST 78.32 FEET;
16) SOUTH 66°04'08" WEST 52.31 FEET;
17) NORTH 73°49'03" WEST 61.50 FEET;
18) SOUTH 65°34'35" WEST 70.95 FEET;
19) NORTH 78°45'27" WEST 62.83 FEET;
20) SOUTH 74°17'49" WEST 20.74 FEET;
21) SOUTH 36°43'43" WEST 70.68 FEET;
22) NORTH 89°03'53" WEST 34.19 FEET;
23) NORTH 00°56'07" EAST 72.40 FEET;
24) NORTHWESTERLY ALONG A NON-TANGENT CURVE TO THE RIGHT, WHICH A RADIAL BEARS NORTH 40°08'24" EAST TO THE RADIUS POINT, HAVING A RADIUS OF 53.00 FEET, A CENTRAL ANGLE OF 50°47'43" AND AN ARC LENGTH OF 46.99 FEET; AND
25) NORTH 00°56'07" EAST 997.87 FEET TO THE NORTHERLY LINE OF SAID PARCEL 1;

THENCE ALONG LAST SAID LINE SOUTH 89°25'04" EAST 2335.28 FEET TO THE POINT OF BEGINNING.

SAID DESCRIPTION IS PURSUANT TO THE CERTIFICATE OF COMPLIANCE AND LOT LINE ADJUSTMENT PLN2022-00260 RECORDED MAY 3, 2023 AS INSTRUMENT NO. 2023050039, AND PERFECTED BY THE GRANT DEED RECORDED MAY 24, 2023 AS INSTRUMENT NO. 2023059060 OF OFFICIAL RECORDS.

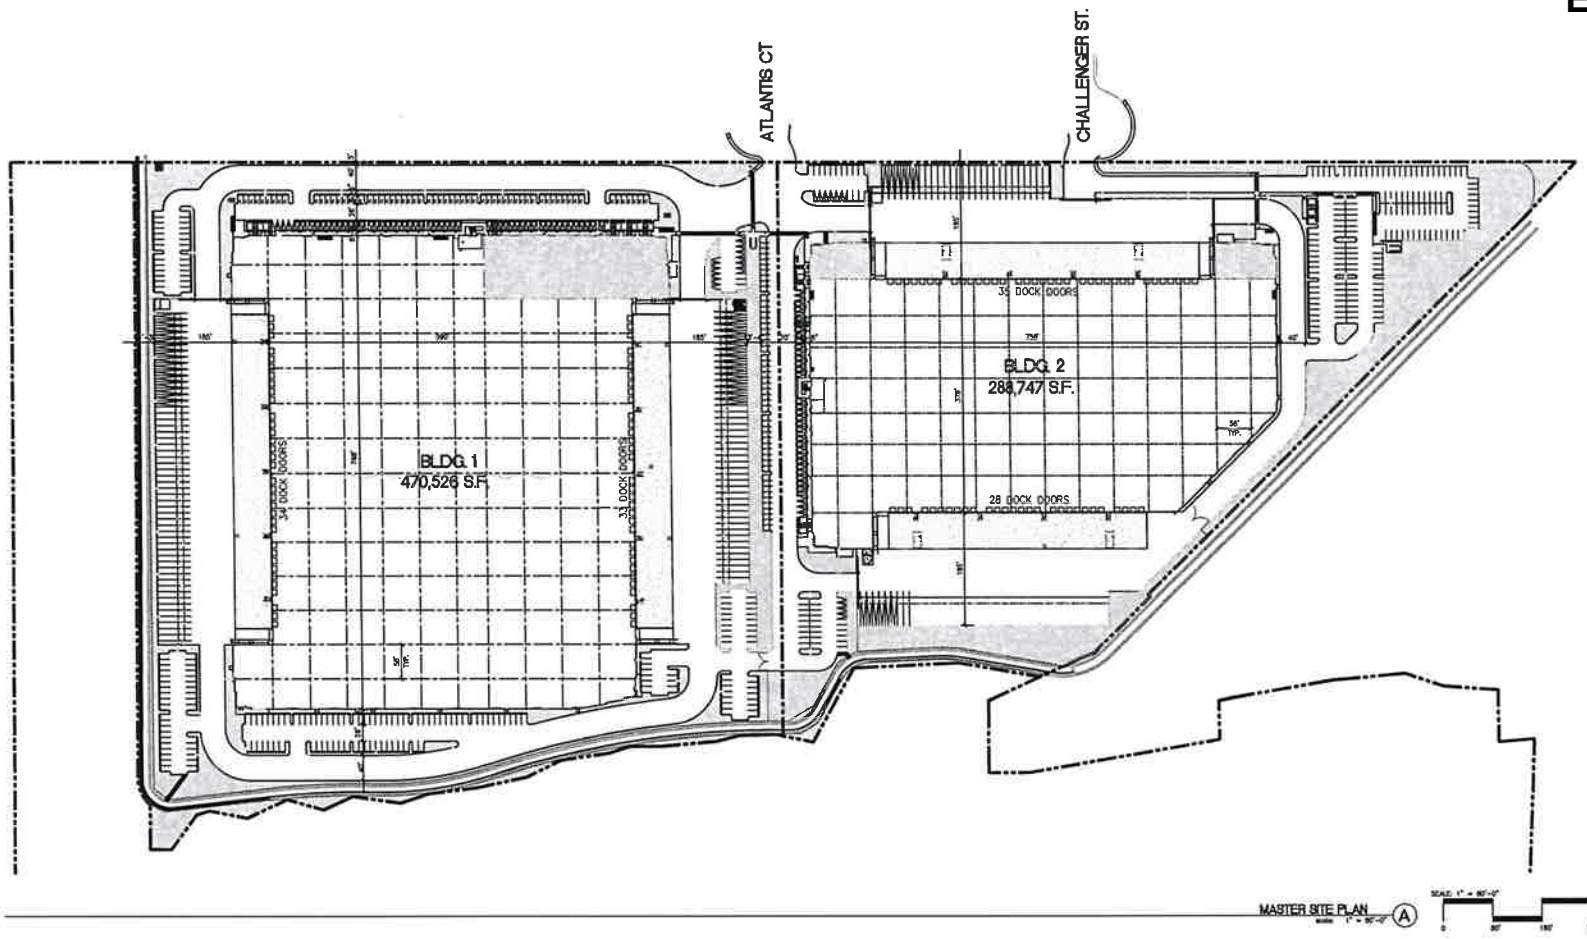
SMP 40 Development Description

Assessor Parcel Number 904-10-2-2 is also known as SMP 40 ("SMP 40 Property"). The aforementioned SMP number references the Surface Mining Permit (SMP) numbers applicable to the site. The Surface Mining Permit for the SMP 40 Property was approved by Alameda County in 2004 to allow for the extraction of sand and gravel (i.e., aggregate) within the site; however, aggregate mining has not occurred within the SMP 40 Property. The SMP 40 Property is approximately 41 acres and is located within unincorporated Alameda County, the City of Livermore Sphere of Influence (SOI), and the City of Livermore South Livermore Urban Growth Boundary (UGB). The Property is zoned Agriculture by Alameda County with a County General Plan designation of Industrial. The SMP 40 Property has a City of Livermore General Plan designation of Open Space/Sand and Gravel.

Surrounding existing uses include the Oaks Business Park to the north; single-family residences to the east, across Isabel Avenue/SR 84; the Arroyo Mocho, open fields, railroad tracks, and gravel quarries associated with mining operations to the south, across Stanley Boulevard; and vacant land, gravel quarries, and industrial ponds associated with mining operations to the west.

Developer shall construct two light industrial buildings on the SMP 40 Property totaling up to 759,275 square feet (sf) of new building area and associated internal roadways, parking, landscaping, utilities, on- and off-site trail improvements, and other improvements ("SMP 40 Development"). The approximately 470,530-sf Building 1 shall be located on the western portion of the SMP 40 Property and include a total of 68 loading dock doors along the western and eastern sides of the building (34 on each side). The approximately 288,750-sf Building 2 shall be located on the eastern portion of the SMP 40 Property and include a total of 62 loading dock doors along the northern and southern sides of the building (34 on the north and 28 on the south). A total of 742 vehicle parking stalls and 90 trailer parking stalls shall be provided at the SMP 40 Property. Each building shall have a maximum height of 50 feet or 55 feet with a Conditional Use Permit.

The SMP 40 Development shall comply with the development requirements including land use, building and landscape setbacks, height, lot coverage, parking, and other required standards as set forth in the Planned Development - Industrial 22-001 (PD-I 22-001) zone. Access to the SMP 40 Property shall be provided through new internal roadway connections to Atlantis Street and Challenger Street to the north, which currently serve the existing Oaks Business Park. The new roadway connections shall be located between Buildings 1 and 2 and shall provide access to the internal drive aisles around each building.



The SMP 40 Development includes a paved at-grade, on-site trail along the boundaries of the SMP 40 Property, consistent with the City's Active Transportation Plan. Specifically, the on-site trail shall extend from the northeastern corner of the site, along the SMP 40 Property's eastern, southern, and western boundaries, before connecting to the existing off-site trail at the northwestern corner of SMP 40 Property, which extends along the west side of the Oaks Business Park to the north and connects to West Jack London Boulevard. The portion of the on-

site trail located along the SMP 40 Property's eastern and southern boundaries shall be located within a Zone 7 easement north of the Arroyo Mocho.

In addition to the on-site trail required on the SMP 40 Property, an off-site grade-separated overcrossing (bridge) of Isabel Avenue/State Route 84 north of the existing railroad tracks and Stanley Boulevard is a required public benefit ("the Trail Overcrossing"). The SMP 40 Development shall include construction of trail connections from the terminus of the bridge to the existing off-site Arroyo Mocho trail east of Isabel Avenue and to the future on-site trail along the SMP 40 Property frontage to the west of Isabel Avenue ("the Trail Connections"). The Trail Overcrossing shall have a span of approximately 190-210 feet and shall run parallel with the existing railroad tracks. The materials shall consist of a fabricated truss and a weathered steel span bridge with concrete flooring. The Trail Overcrossing shall be supported by two cast-in-place concrete abutments which are supported by cast-in-drilled-hole concrete piles. An approach retaining wall shall be required on the east end. The Trail Overcrossing shall be cambered so it will drain from the middle to each end and then will drain to the edges and connect to Caltrans storm drains. A site plan and preliminary design details are provided in **Exhibit E**. Final designs shall be conditioned to meet the requirements of applicable permitting agencies. Permits shall be required from the City of Livermore and Caltrans. In addition, an encroachment permit will be required from Caltrans. The Trail Overcrossing and Trail Connections shall be designed as described above or with similar design features as approved by the Community Development Director. The Trail Overcrossing and Trail Connections design shall include lighting, cameras, and/or other safety and security measures as required by the City's Chief of Police and City Engineer.

PLANNED DEVELOPMENT STANDARDS SMP 39 & SMP 40

Planned Development – Industrial (PD-I) 22-001

Reviewed by Planning Commission: March 5, 2024
Approved by City Council: March 25, 2024

Purpose: The purpose of establishing this Planned Development-Industrial (PD-I 22-001) District (District) is to regulate the development of ± 51.9 acres of land located on Jack London Boulevard, west of Oaks Business Park and south of Livermore Municipal Airport (commonly referred to as "SMP 39") and ± 41 acres of land located south of Oaks Business Park, at the south end of Atlantis Street and Challenger Street (commonly referred to as "SMP 40"), as shown in the attached figure (Figure 1). The intent of this District is to accomplish the following:

1. PD-I 22-001 is intended to provide an environment exclusively for and conducive to the development and protection of modern professional and administrative facilities, research institutions, manufacturing operations, experimental and testing laboratory and related uses, any similar employment generating high-end industrial users, all of a non-nuisance type.
2. The District is intended to provide for an aesthetically attractive working environment with park- and/or campus-like grounds, attractive buildings, employee parking, and other amenities appropriate to a mix of office and industrial uses.
3. The District is intended to establish development standards and regulations consistent with the intent of the Low Intensity Industrial General Plan designation.
4. Any land use that utilizes hazardous materials shall be subject to the regulations of Section 6.02.040, Hazardous Materials, of the Livermore Development Code, as it exists now or is amended in the future.
5. Development shall be in conformance with the requirements of the Livermore Development Code as it exists now or is amended in the future, except as modified by the following regulations.
6. Development is subject to the Citywide Design Standards and Guidelines as they exist now or may be amended in the future unless otherwise modified by the following regulations.

A. Principal Permitted Uses:

The following are the principal permitted uses for SMP 39[1] and SMP 40:

1. Research and development facilities
2. Professional and administrative offices
3. Experimental and testing laboratories
4. Manufacture of electric and electronic circuits, instruments, and devices
5. Manufacture of pharmaceutical products or life science facility, not exceeding Biosafety Level 2[2]
6. Medical diagnostic and manufacturing facilities
7. Manufacturing and assembly of motor vehicle parts, including but not limited to dashboards, parts, component systems, electrical connectors, sensors, panels, airbags, seats, tires, windows etc. for all vehicles and similar equipment (e.g. automobiles, motorcycle, construction equipment, farm equipment, buses).
8. Similar uses as determined by the Community Development Director to be of the same general character as the listed uses.

Additional Permitted Uses for SMP 39 only:

1. Restaurants, except fast food

Additional Permitted Uses for SMP 40 only:

1. Warehousing and distribution facilities, dry or refrigerated
2. Warehousing and distribution facility – E-commerce/Third Party Logistics (3PL)
3. Manufacturing, assembly, processing, storage, or packaging of products from previously prepared materials such as, but not limited to, cloth, plastic, paper, leather, and precious or semi-precious metals or stones, but not including the following:
   A. Operations such as saw and planing mills, any manufacturing uses involving primary production of wood, metal, or chemical products from raw materials, and similar uses
   B. Vehicle dismantling yards, scrap and waste yards
   C. Manufacturing, processing, storing, or packaging chemicals, petroleum,

[1] SMP 39 and SMP 40 are located with the Airport Influence Area and the Livermore Airport Protection Area. Per the Alameda County Airport Land Use Compatibility Plan, the majority of SMP 39 is located in Safety Zone 6, with a portion of the site located in Safey Zone 3. The principal permitted land uses are intended to be located in buildings that are only within the portion of SMP 39 that is located in Safety Zone 6.

[2] Per the Centers for Disease Control and Prevention, Biosafety Level 2 laboratories involve work that poses moderate hazards to laboratory workers and the environment. Biosafety Level 2 laboratories require safety protocols to contain microbes and biological agents.

heavy agricultural products or other hazardous materials.

4. Sale of heavy equipment and construction related vehicles and equipment, including associated repair, service, and parts distribution facilities. Showrooms related to this use may be a conditionally permitted ancillary use.
5. Similar uses as determined by the Community Development Director to be of the same general character as the listed uses.

B. Conditional Uses for SMP 39 and 40:

1. Public and quasi-public uses.
2. Manufacture of pharmaceutical products or life science facility, not exceeding Biosafety Level 3[3]
3. Similar uses as determined by the Planning Commission to be of the same general character as the listed uses.

Conditional Uses for SMP 39 only:

1. Fast-food businesses, banks, personal services, or goods required for the convenience and support of occupants of uses in the surrounding district(s).
2. Warehouse and distribution facilities, including E-commerce/Third Party Logistics (3PL) uses, with the condition that these uses may only occupy up to 20 percent of the total buildable site area.
3. Sale of heavy equipment and construction related vehicles and equipment, including associated repair, service, and parts distribution facilities, provided they are manufactured and/or sold on-site. Showrooms related to this use may be a conditionally permitted ancillary use.
4. Similar uses as determined by the Planning Commission to be of the same general character as the listed uses.

C. Accessory Uses Permitted on SMP 39 and 40:

1. Signs subject to the requirements established by the Livermore Development Code, as well as the Citywide Design Standards and Guidelines, as it exists now or is amended in the future.
2. Accessory uses and buildings customarily appurtenant to a permitted use.
3. Living quarters determined by the Community Development Director to be necessary for surveillance purposes.
4. Fuel stations subject to the requirements of Section 6.03.160, Vehicle Services,

[3] Per the Centers for Disease Control and Prevention, laboratories designated Biosafety Level 3 involve work that poses a safety hazard greater than Biosafety Level 2 laboratories, defined above. Biosafety Level 3 laboratories require additional safety protocols beyond those required for Biosafety Level 2 laboratories to contain microbes and biological agents.

of the Livermore Development Code, as it exists now or is amended in the future.

D. Special Development Requirements for SMP 39 and 40:

1. Uses shall be designed and integrated into the site in a manner that maintains and is complementary to the corporate and professional character of the nearby Oaks Business Park.
2. Outdoor service and storage yards shall be screened from public view consistent with Livermore Development Code Section 6.03.100, Outdoor Storage, as it exists today or is amended in the future.
3. For SMP 40 only: Commercial/Industrial buildings shall be located a distance of at least 500 feet from Isabel Avenue.

E. Site Development Regulations for SMP 39 and 40:

The following minimum requirements shall be observed, except where increased for conditional uses:

1. Lot Area: Twenty thousand square feet
2. Lot Width: One hundred feet
3. Setbacks: Setback requirements are established below. Buildings shall not be permitted within required setbacks.

A. SMP 39

1) Front or Street Side: 40-feet on West Jack London Boulevard, and 30-feet on frontage roads and interior streets, except as required by subsection E.4. All required setbacks adjacent to streets shall be landscaped, except for driveways, sidewalks, and trails that are found to be necessary for the efficient use of the property. Where a building front is visible from the street, a minimum five-foot wide landscaped strip abutting the foundation shall be included, allowing for necessary entrances.

2) Rear and Side: None.

B. SMP 40

1) Front or Street Side: 500-feet from Isabel Avenue, and 30-feet on frontage roads and interior streets, except as required by subsection E.4. All required setbacks adjacent to streets shall be landscaped, except for driveways and sidewalks that are found to be necessary for the efficient use of the property. Where a building front is visible from the street, a minimum five-foot wide landscaped strip abutting the foundation shall be included, allowing for necessary entrances.

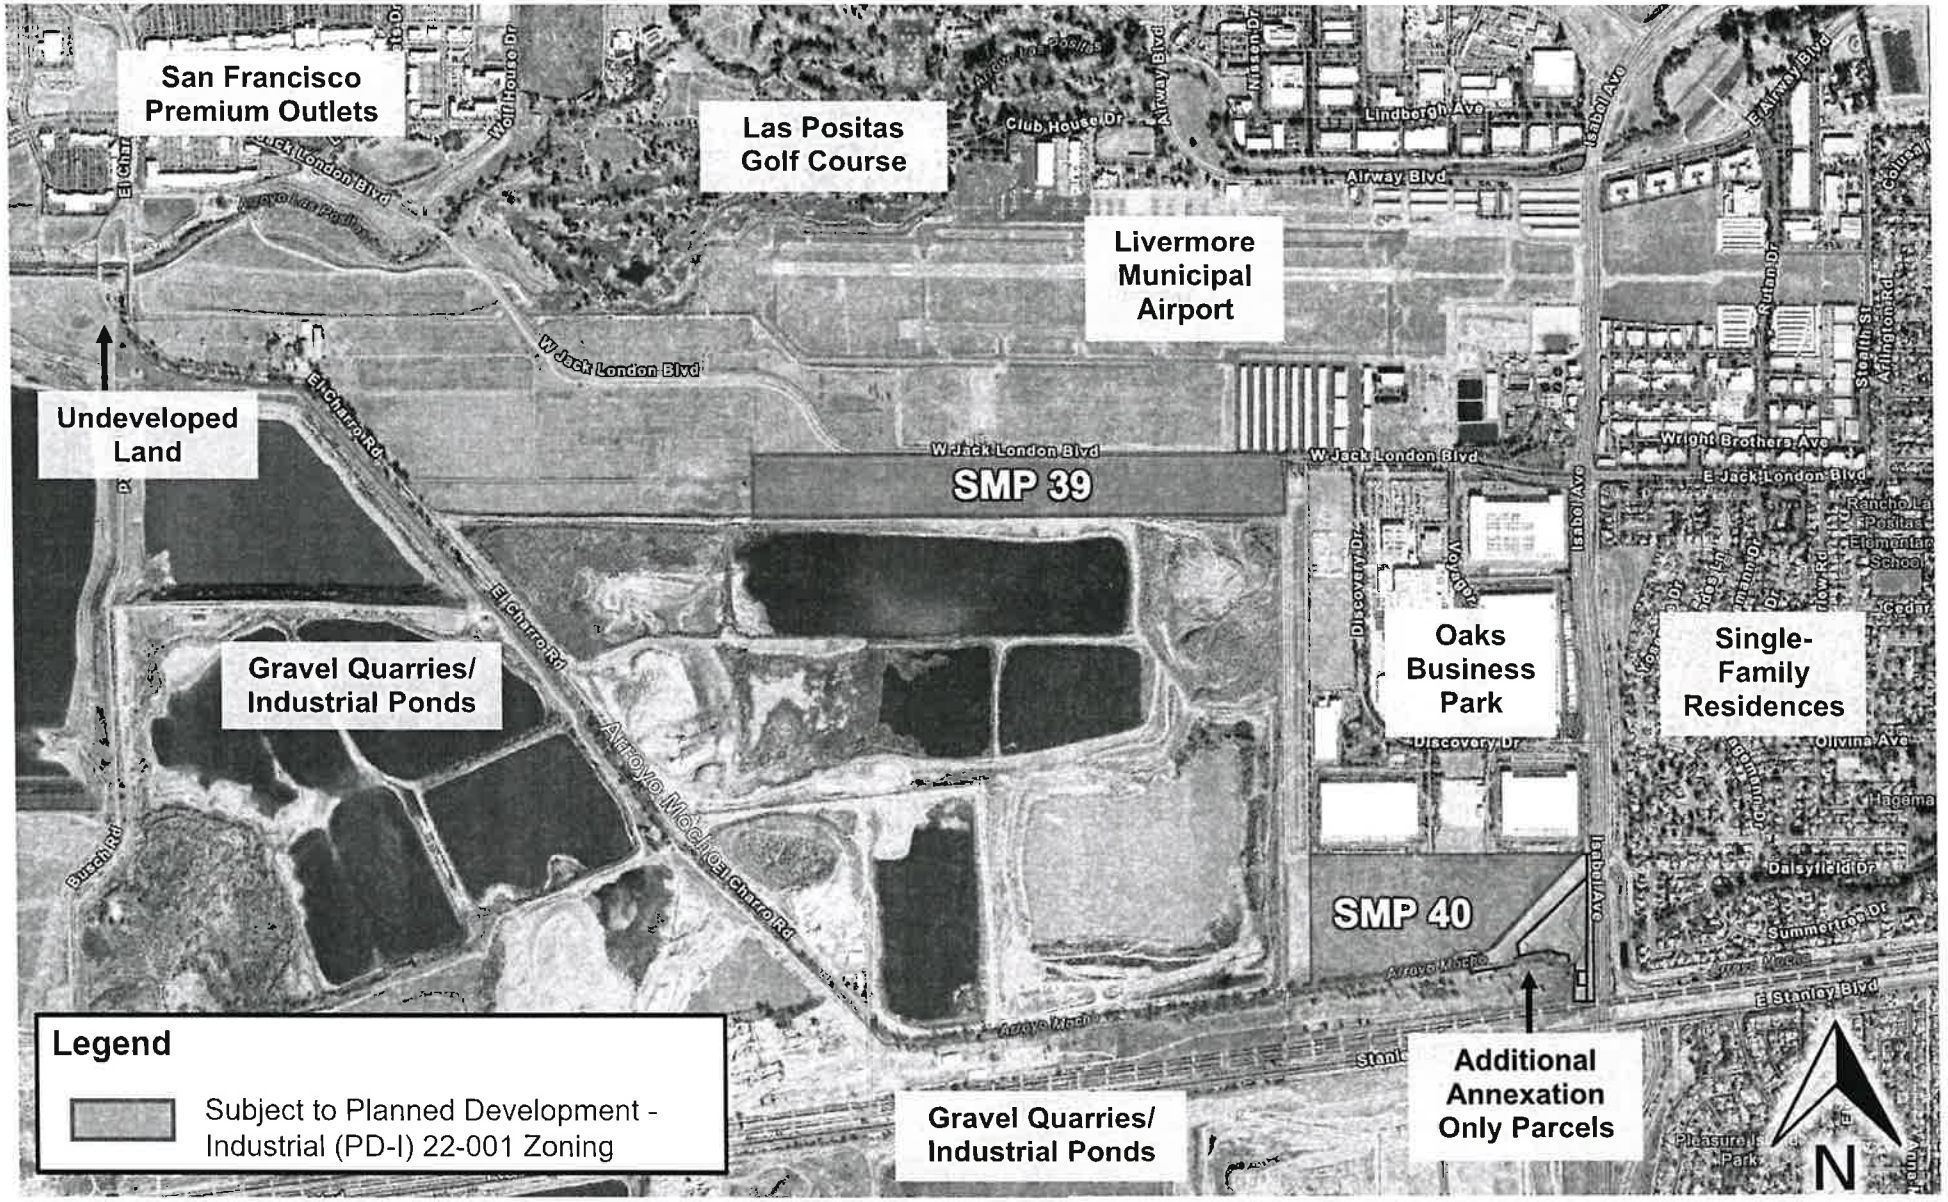
2) Rear and Side: None, except for a 20-foot setback from the top of the Arroyo Mocho bank on SMP 40 which should be

determined from a 2.5:1 slope projection from the toe of channel/mining pit to the top, as required in the Environmental Impact Report for the project.

4. Height Regulations: The height of all on-site structures, including roof-top mechanical equipment, is limited to 50 feet or the height permitted by the Federal Aviation Administration (FAA) review under FAA regulations – Part 77, whichever is more restrictive. Upon providing a minimum 40-foot setback from street rights-of-way, a Conditional Use Permit may be requested to increase height to a maximum of 55 feet, or the height permitted under FAA regulations – Part 77, whichever is more restrictive. The height of pole-and building-mounted lights may be approved up to 28 feet by an administrative site plan and design review, if found necessary for the health and safety of a site designed for truck or other large vehicle maneuvering and documented by a light study to not cause glare off-site.
5. Lot Coverage: The building coverage maximum shall be 45 percent.

F. Signs

1. Industrial Uses. Signs for industrial uses shall be subject to the sign regulations contained in Livermore Development Code section 4.06.230 (sign standards for I-1, I-2 and I-3) and the Citywide Design Standards Guidelines as it exists now or is amended in the future.
2. Commercial Uses. Signs for commercial uses shall be subject to the sign regulations contained in Livermore Development Code section 4.06.170 (sign standards for CNB) and the Citywide Design Standards Guidelines as it exists now or is amended in the future.



G. Other Required Standards for SMP 39 and 40:

1. Noise. No use shall be permitted which creates an ambient noise level greater than 75 decibels (dBA) beyond the boundaries of the site, nor greater than 60 decibels at the boundary of a Residential District.
   A. On SMP 39, semi-truck access to the site (arrivals and departures) shall be limited to 96 trips between the hours of 10:00 PM and 7:00 AM.
   B. On SMP 40, semi-truck access to the site (arrivals and departures) shall be limited to 40 trips between the hours of 10:00 PM and 7:00 AM
   C. Between the hours of 10:00 PM and 7:00 AM single-event noise levels (e.g., backup alarm, truck brakes, etc.) shall not exceed 55 dBA, measured at the property line of the nearest residential use.
2. Air Pollution. All uses shall comply with regulations of the San Francisco Bay Area Air Pollution Control District.
3. Vibration, Heat, Glare, Electrical Disturbance. No use shall be permitted which

creates noise, odors, vibrations, heat, glare, or electrical disturbances beyond the boundaries of the site. Lighting used to illuminate buildings, structures, uses, or parking and loading areas shall not be directed toward any public right-of-way.

4. Fire, Explosion. All uses shall provide adequate safety devices and adequate firefighting and fire suppression equipment to protect against fire, explosion, and other hazards.
5. Solid and Liquid Wastes. No solid or liquid waste discharges, other than permitted discharges into a public sewage disposal system, shall be permitted. The chemical composition and volume of industrial effluent discharged shall be subject to the wastewater permit requirements established by LMC Title 13, Division II. (Ord. 442 § 14.80).

Trail Overcrossing and Trail Connections Credits

The Developer's monetary contribution towards the costs of the Trail Overcrossing and Trail Connections shall equal Seven-Hundred-Fifty-Thousand Dollars ($750,000.00) (the "Developer Obligation"). The $750,000 Developer Obligation is in addition to the design and permitting costs the Developer is responsible as set forth in the Agreement. City and Developer shall diligently pursue grant funding opportunities to fund the remaining Trail Overcrossing and Trail Connections, less the Developer Obligation. In the event that a grant funding opportunity is not successful, City shall credit Developer using Traffic Impact Fees (TIF) less the Developer Obligation, in accordance with Livermore Municipal Code Section 12.30.080, Credit and Reimbursement, and as set forth below in exchange for Developer constructing the Trail Overcrossing and Trail Connections.

The Developer shall provide, at its own cost, an Engineer's cost estimate for the Trail Overcrossing and Trail Connections, subject to the City Engineer's review and approval. The Engineer's cost estimate shall be submitted as part of the Final Map submittal as described in Section 4(c) of this Agreement.

The Engineer's cost estimate shall include all hard costs (including, without limitation, contractor time, materials), management costs (equaling 5% of the hard costs), City plan check and inspection, third party inspections, ten percent contingency (10%) applied to construction costs only, City building permit fees (if any), all other permitting and regulatory fees/costs, costs (including consultant costs) for environmental and regulatory approval of the Trail Overcrossing and Trail Connections, and construction bonds and insurance. The City's TIF credits shall equal up to a maximum of 10 percent over the Engineer's cost estimate; if the final cost estimate exceeds the Engineer's cost estimate by more than 10 percent, the Developer shall pay the remaining Trail Overcrossing and Trail Connections cost over the Engineer's estimate. For avoidance of doubt, Developer shall have no right of credits or reimbursements for the design costs of the Trail Overcrossing or Trail Connections. City shall credit Developer for the Trail Overcrossing and Trail Connections as follows:

City shall provide Developer a TIF credit of the SMP 40 Project's Traffic Impact Fees (the "Impact Fee Credit") for the identified Engineer's cost estimate for the Trail Overcrossing and Trail Connections (or up to a maximum of 10 percent over this estimate as specified above). The Impact Fee Credit shall be credited against the TIF that are collected at the time each building permit is paid, and on a permit-by-permit basis as Developer's obligations to pay such impact fees accrue until the last SMP 40 Project building permit is issued.

IN THE PLANNING COMMISSION OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION RECOMMENDING THAT THE CITY COUNCIL APPROVE GENERAL PLAN AMENDMENT (GPA) 21-001, ANNEXATION/PREZONING (APZ) 21-003, ZONING MAP AMENDMENT (ZMA) 21-002, PLANNED DEVELOPMENT-INDUSTRIAL (PD-I) 22-001, DEVELOPMENT CODE AMENDMENT (DCA) 21-005, VESTING TENTATIVE PARCEL MAP (SUB) 21-008, VESTING TENTATIVE TRACT MAP (SUB) 21-009, SITE PLAN DESIGN REVIEW (SPDR) 21-008, PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA) 21-001, AND PRE-ANNEXATION AND DEVELOPMENT AGREEMENT (DA) 23-002 FOR THE SMP 39/SMP 40 PROJECT

The City received an application General Plan Amendment (GPA) 21-001, Annexation/Prezoning (APZ) 21-003, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, Site Plan Design Review (SPDR) 21-008, Pre-annexation and Development Agreement (DA) 21-001, and Pre-annexation and Development Agreement (DA) 23-002 for the SMP 39/SMP 40 Project ("Project") to develop approximately 1.51 million square feet of industrial development and associated parking, lighting, landscaping, and other improvements.

On March 5, 2024, the Planning commission held a duly noticed public hearing to consider the Project and staff recommendations, all public comments and testimony, and findings.

NOW, THEREFORE, BE IT RESOLVED, by the Planning Commission of the City of Livermore that prior to taking action on the Project, and at a properly noticed public meeting, the Planning Commission reviewed written and oral staff reports, conducted a public hearing on the Project and took testimony, and received into the record all pertinent documents related to the Project (collectively, the "Record Evidence"). The Planning Commission's determination is based on the Record Evidence, which is incorporated into this Resolution by reference.

BE IT FURTHER RESOLVED with respect to General Plan Amendment (GPA) 21-003 (attached hereto as Exhibit A) the Planning Commission of the City of Livermore finds based on the information presented:

1. The amendment is internally consistent with all other provisions of the General Plan.

   Response: The General Plan currently designates the SMP 39, SMP 40, and the Additional Annexation Only Parcels as Open Space/Sand and Gravel (OSP/S&G) and is adjacent to land designated by the General Plan as Low-Intensity Industrial (LII). The Project proposes to modify the General Plan designation for SMP 39 and SMP 40 to LII to permit light industrial development and the Additional Annexation Only Parcels to Parks, Trailways, and Recreation Areas (OSP). Development is not proposed on the Additional Annexation Only Parcels and the OSP designation is

consistent with the parcels' natural features and attributes, including their proximity to Arroyo Mocho. The change to a LII land use designation for the site supports and implements the General Plan and will be compatible with the existing and adjacent industrial uses in the Oaks Business Park and Livermore Municipal Airport, maximizing the use of existing public streets, services, and facilities. Therefore, the proposed changes are internally consistent with all other provisions of the General Plan.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

   Response: The proposed General Plan Amendment will enable SMP 39 and SMP 40 to be developed with light industrial uses and achieve the General Plan Goals, Objectives, and Policies to focus light industrial uses around the Livermore Municipal Airport. In addition, the development will not include objectionable levels of noise, vibration, odors, glare, or hazard that would create a nuisance for surrounding uses. Planned Development – Industrial (PD-I) 22-001 zoning will implement the General Plan land use designation through use restrictions and development standards to ensure orderly and thoughtful development of the site with respect to the site's location and physical characteristics. Development is not proposed on the Additional Annexation Only Parcels. The Additional Annexation Only Parcels will be designated as OSP designation and rezoned to Open Space – Floodplain which is consistent with the parcels' natural features and attributes, including their proximity to Arroyo Mocho.

   In addition, the Project, including the necessary General Plan and Zoning amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA) and found to have no adverse effect on the environment with mitigation incorporated, with the exception of converting agricultural land to non-agricultural uses as defined by the Alameda County Local Agency Formation Commission. However, the California Department of Conservation's Farmland Mapping and Monitoring Program does not classify the project site as Farmland. Therefore, the proposed amendment would not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

3. The affected site is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

   Response: Based on the plans and specifications provided by the Developer and reviewed by City staff, the SMP 39 and SMP 40 sites are physically suitable to

accommodate the industrial land use designation at the proposed intensity. In addition, the Project, including the necessary General Plan and Zoning Map Amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA), which found the site was suitable in terms of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment and disposal, etc.). The proposed land use designation and the anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

BE IT FURTHER RESOLVED with respect to Annexation/Prezoning (APZ 21-003), Development Code Amendment (DCA) 21-005, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001 (attached hereto as Exhibits B and C) the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed amendment is consistent with the General Plan and any applicable Specific Plan.

   Response: The SMP 39 and SMP 40 properties will be prezoned to PD-I 22-001, which is consistent with the proposed General Plan land use designation of LII. The zone will be similar to the adjacent existing industrial uses and developed in compliance the PD-I 22-001 and Livermore Development Code standards. In addition, the Additional Annexation Only Parcels will be prezoned to OS-F zone, which is consistent with the proposed General Plan land use designation of OSP.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

   Response: Based on staff analysis contained in the Planning Commission staff report and the SMP 39/SMP 40 EIR, there is no evidence that approval of the Zoning Map Amendment will be detrimental to the public interest, health, safety, convenience, or welfare of the City.

3. The proposed amendment is internally consistent with other applicable provisions of this Development Code.

   Response: The proposed Zoning Map Amendment would prezone SMP 39 and SMP 40 to PD-I 22-001 and prezone the Additional Annexation Only Parcels to OS-F. Prezoning is required prior to annexation of territory into the City. Therefore, the proposed amendment is consistent with all other applicable provisions of the Development Code.

4. The affected site is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm

drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the requested zone designation and the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

Response: Based on the plans and specifications provided by the Developer and reviewed by City staff, the SMP 39 and SMP 40 sites are physically suitable to accommodate the industrial land use designation at the proposed intensity. In addition, the Project, including the necessary General Plan and Zoning Map Amendments, was analyzed in conformance with the California Environmental Quality Act (CEQA), which found the site was suitable in terms of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment and disposal, etc.). The proposed land use designation and the anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.

BE IT FURTHER RESOLVED with respect to the Vesting Tentative Parcel Map (SUB) 21-008 and Vesting Tentative Tract Map (SUB) 21-009 the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed map is consistent with the General Plan and any applicable specific plan, any policy or guideline implementing the General Plan (including the City's Design Standards and Guidelines), or other applicable provisions of this Development Code.

   Response: The Vesting Tentative Parcel Map and Vesting Tentative Tract Map were submitted with applications for a General Plan Amendment and Zoning Map Amendments (Annexation/Prezoning). Based on the approvals to change the General Plan land use designation to an industrial use and the proposed PD-I 22-001 zone, the proposed maps are consistent with the General Plan and the Development Code.

2. The site is physically suitable for the proposed type of development.

   Response: The development of approximately 1.51 million square feet of industrial development is consistent with the Low Intensity General Plan land uses, PD-I 22-001 zoning, and the Livermore Development Code, which confirms the proposed intensity and type of development are suitable for the site.

3. The design of the subdivision or the proposed improvements will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. Notwithstanding the foregoing, the Commission or Council may approve a tentative map if an Environmental Impact Report was prepared with respect to the project and a statement of overriding considerations was made to the effect that specific economic, social, or other considerations make infeasible the

mitigation measures or project alternatives identified in the Environmental Impact Report.

Response: The project involves the development of two undeveloped sites with industrial uses. An Environmental Impact Report (EIR) was prepared for the project. The EIR finds that with mitigation measures (protocol surveys, state and federal agency coordination, and avoidance strategies for special status species), any potential impacts to fish or wildlife or their habitat will be reduced to less than significant.

4. The design of the subdivision or the type of improvements will not cause serious public health problems.

   Response: An EIR has been prepared for the project. The EIR finds that with mitigation measures, any potential impacts to public health will be reduced to less than significant.

5. The design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision (The Commission or Council may approve a tentative map if it finds that alternative easements for access will be provided, and that these will be substantially equivalent to ones previously acquired by the public. This Subparagraph shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction, and no authority is hereby granted to the Commission to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision.)

   Response: There are no existing easements on SMP 39 or SMP 40. The Project includes an at-grade, paved trail within a 38.5-foot trail easement along the SMP 39 frontage on West Jack London Boulevard, consistent with the City's Active Transportation Plan. There is an access easement and public use easements on a portion of the Additional Annexation Only Parcels. However, this area will not be developed as part of the Project, with the exception of an at-grade trail along a portion of the Additional Annexation Only Parcels. The design of the subdivisions and the proposed development improvements avoids these easements and thus does not conflict with any public easements.

6. Any proposed phases and their proposed sequence of construction are identified on the submitted tentative map. The City may impose reasonable conditions relating to the filing of multiple final maps in conjunction with the approval of the tentative map (Section 66456.1).

   Response: The subdivision does not involve multiple phases.

BE IT FURTHER RESOLVED with respect to the Site Plan Design Review (SPDR) 21-008 the Planning Commission of the City of Livermore finds based on the information presented:

1. The proposed development will be allowed within the subject zone.

   Response: Based on the approval of the General Plan Amendment application to change the site to industrial use, in concert with prezoning the site to Planned Development – Industrial 22-001 zoning district, which permits light industrial uses and establishes appropriate development standards, the proposed development of industrial buildings is permitted within the subject zone.

2. Be designed such that:
   a. The project will not be detrimental to the public health, safety, or general welfare, and not detrimental to adjacent property;
   b. Architectural design and functional plan of the structure(s) and related improvements are of reasonable aesthetic quality and compatible with adjacent developments;
   c. Structure(s) and related improvements are suitable for the proposed use of the property and provide adequate consideration of the existing and contemplated uses of land and orderly development in the general area of the subject site; and
   d. The project's site plan and design is consistent with the City's Design Standards and Guidelines.

   Response: An Environmental Impact Report (EIR) was prepared for the project. The EIR does not find any significant impacts on the public health, safety, or general welfare to adjacent properties. Based on the review of the development plans for the Project, the design of the proposed development is compatible with adjacent developments and consistent with the Design Standards and Guidelines. No aspect of the proposed development will be detrimental to the existing uses of land and the orderly development in the general area.

3. Be designed to include the following criteria, as applicable:
   a. Compliant with this Chapter, this Development Code, Municipal Code Title 15 (Buildings and Construction), and all other applicable City regulations and policies;
   b. Efficient site layout and design;
   c. Compatible and appropriate scale to neighboring properties and developments;
   d. Efficient and safe public access (both pedestrian and vehicular) and parking;
   e. Appropriate and harmonious arrangement and relationship of proposed structures and signs to one another and to other development in the vicinity, based on good standards of design;
   f. Appropriate relationship to land use and development of adjacent properties, including topographic and other physical characteristics of the land;

g. Proper site utilization and the establishment of a physical and architectural relationship to existing and proposed structures on the site;
h. Compatible architectural style with the character of the surrounding area, both to avoid repetition of identical design where not desired, and to ensure compatibility in design where desired;
i. Harmonious relationship with existing and proposed developments and the avoidance of both excessive variety and monotonous repetition;
j. Compatible in color, material, and composition of the exterior elevations to neighboring visible structures;
k. Appropriate exterior lighting which provides for public safety and is not of a nature that will constitute a hazard or nuisance to adjacent properties;
l. Compatible in scale and aesthetic treatment of proposed structures with public areas;
m. Appropriate open space and use of water efficient landscaping; and
n. Consistent with the General Plan and any applicable Specific Plan.

Response: The Project is designed to be compatible and in scale with the existing surrounding developments. The Project is designed to provide adequate on-site improvements including parking, lighting and landscaping. Based on the design review of the project, as documented in the Planning Commission staff report, the Project meets all the design criteria identified above.

BE IT FURTHER RESOLVED with respect to the Pre-annexation and Development Agreement (DA) 21-001 and Pre-annexation and Development Agreement (DA) 23-002 (attached hereto as Exhibits D and E, respectively) the Planning Commission of the City of Livermore finds based on the information presented:

1. The Development Agreement provides benefit to the City.

   Response: The Development Agreements establish terms and obligations for public benefits, including the Applicant's financial contribution toward and construction of the off-site trail improvements and financial contribution to the City's Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001. For these reasons, the Development Agreements will provide benefit to the City.

2. The Development Agreement is consistent with the purpose, intent, goals, policies, programs, and land use designations of the General Plan, any applicable Specific Plan, and this Development Code.

   Response: The Development Agreements require the Applicant to provide a financial contribution to the City's Office of Innovation and Economic Development Department, which is to be used towards marketing SMP 39 for the desired land uses identified in PD-I 22-001. This is consistent with the purpose, intent, goals, policies, and programs, of the General Plan. Specifically, this will implement policies and actions in the General Plan Economic Development element to encourage existing businesses to remain and grow in

Livermore, and attract a range of new businesses to locate in Livermore. The Development Agreements also include financial contribution toward and construction of the off-site trail improvements identified in the City's Active Transportation Plan. This is consistent with the purpose, intent, goals, policies, and programs of the General Plan and the Active Transportation Plan to improve bicycle and pedestrian circulation and connectivity.

3. The Development Agreement complies with the requirements of Government Code Sections 65864 through 65869.5

   Response: The proposed development complies with the requirements of Government Code Section 65864 through 65869.5 by securing the terms and timing for off-site improvements and amenities for the benefit of the broader Livermore community.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the Record Evidence and adopted a resolution recommending the City Council certify an Environmental Impact Report.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the findings set forth above and adopts these findings as part of this resolution. Based upon the Planning Commission's independent review of the Record Evidence and considerations, the Planning Commission recommends that the City Council approve General Plan Amendment (GPA) 21-001, Annexation/Prezoning (APZ) 21-003, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, and Site Plan Design Review (SPDR) 21-008, subject to the Conditions of Approval attached hereto as Exhibit F, for the SMP 39/SMP 40 Project.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore has considered the findings set forth above and adopts these findings as part of this resolution. Based upon the Planning Commission's independent review of the Record Evidence and considerations, the Planning Commission recommends that the City Council approve Pre-annexation and Development Agreement (DA) 21-001, and Pre-annexation and Development Agreement (DA) 23-002 in substantial conformance with Exhibits D and E, subject to the Conditions of Approval attached hereto as Exhibit F, for the SMP 39/SMP 40 Project.

BE IT FURTHER RESOLVED that the Planning Commission of the City of Livermore recommends the City Council authorize submission of an application to the Alameda County Local Agency Formation Commission to initiate a sphere of influence modification and annexation proceedings for the Subject Property.

BE IT FURTHER RESOLVED, the Planning Commission of the City of Livermore recommends that the City Council direct the Planning Manager to file a Notice of Determination with the Alameda County Clerk, if the project is approved.

The documents that constitute the record of proceedings upon which this decision is based can be found in the Community Development Department, 1052 S. Livermore Avenue, in Livermore, California.
On the motion by Commissioner Leary, seconded by Commissioner Fintschenko, the foregoing Resolution was passed and adopted at the Planning Commission meeting of March 5, 2024, by the following vote:

AYES: ANDERSON, DUNBAR, FINTSCHENKO, KRONZAK, LEARY.
NOES: NONE.
ABSENT: NONE.

IN THE CITY COUNCIL OF THE CITY OF LIVERMORE, CALIFORNIA

A RESOLUTION AUTHORIZING SUBMITTAL OF AN APPLICATION TO THE ALAMEDA COUNTY LOCAL AGENCY FORMATION COMMISSION TO REQUEST INITIATION OF SPHERE OF INFLUENCE AMENDMENT AND ANNEXATION PROCEEDINGS AND AUTHORIZING THE EXCHANGE OF PROPERTY TAX REVENUE AND EXECUTION OF THE TRANSFER OF PROPERTY TAX REVENUES AGREEMENT FOR THE SMP 39/SMP 40 PROJECT

The City of Livermore ("City") received applications for Annexation/Prezoning (APZ) 21-003 concurrently with General Plan Amendment (GPA) 21-001, Zoning Map Amendment (ZMA) 21-002, Planned Development-Industrial (PD-I) 22-001, Development Code Amendment (DCA) 21-005, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, Site Plan Design Review (SPDR) 21-008, Pre-Annexation and Development Agreement (DA) 21-001, and Pre-Annexation and Development Agreement (DA) 23-002 for the SMP 39/SMP 40 Project ("Project") to develop approximately 1.51 million square feet of industrial development and associated parking, lighting, landscaping, and other improvements.

The Project site is comprised of six parcels (Assessor Parcel Numbers 904-3-1-4 known as SMP 39, APN 904-10-2-2 known as SMP 40, and 904-10-2-3, -5, -7, and -8 known as Additional Annexation Only Parcels) (hereinafter referred to as "the Subject Properties"), is in unincorporated Alameda County. Maps depicting the Subject Properties are attached hereto as Exhibits A and B.

The City has an interest and authority in protecting the public's general health, safety, and welfare, as well as facilitating orderly development within its City limits and sphere of influence.

Pursuant to the Cortese-Knox-Hertzberg Local Government Reorganization Act, beginning with section 56000 of the California Government Code, an affected city, as therein defined, may make a proposal for an annexation and request initiation of proceedings by resolution adopted by its legislative body. The City of Livermore is an "affected city" for an annexation proposal because its sphere of influence contains territory for which a change of organization is proposed.

Revenue and Taxation Code Section 99 provides, among other requirements, that no local agency jurisdictional change can be completed without the agencies affected first having agreed upon an exchange of property tax revenue. On August 15, 1995, the Alameda County Board of Supervisors adopted a policy on annexation and tax sharing agreements that provided, in part, "that it is the policy of this Board that the County will negotiate all tax sharing agreements in good faith and consider compensation to the County for the full range of costs associated with providing Countywide facilities and services". Each specific annexation requires a resolution from the annexing city and the County agreeing to the exchange of property tax revenues as a requisite before the annexation can be completed and filed with the State.

The City of Livermore now desires to enter into a tax exchange agreement specific to the Subject Property for the proposed annexation.

At a duly noticed public hearing on March 5, 2024, the Planning Commission considered the staff recommendation for approval and heard public testimony.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Livermore that on March 25, 2024, the City Council considered in public hearings the proposals, staff recommendations, recommendations of the Planning Commission, public testimony, and findings, and certified by resolution the Final Environmental Impact Report for the SMP 39/SMP 40 Project pursuant to the California Environmental Quality Act, and introduced an ordinance to pre-zone the Subject Property to Planned Development – Industrial 22-001 and Open Space-Floodplain.

BE IT FURTHER RESOLVED that the City Council of the City of Livermore authorizes submission of an application to the Alameda County Local Agency Formation Commission to initiate sphere of influence amendment and annexation proceedings for the Subject Property.

BE IT FURTHER RESOLVED that the City Council of the City of Livermore requests the Auditor-Controller of the County of Alameda to cause an exchange of property tax revenues pursuant to the provisions of, and in substantial conformance with, the draft Property Tax Sharing Agreement, attached hereto as Exhibit C, between the County of Alameda and the City of Livermore, pursuant to the foregoing policies. The City Council hereby authorizes the Mayor to execute the Property Tax Sharing Agreement on behalf of the City of Livermore, subject to review and approval by the City Attorney.

On motion of Council Member _____, seconded by Council Member _____, the foregoing resolution was passed and adopted on March 25, 2024, by the following vote:

JOB NO.: 96562-54

SHEET 1 OF 1 SHEETS

AGREEMENT BETWEEN THE COUNTY OF ALAMEDA AND THE CITY OF LIVERMORE REGARDING TRANSFER OF PROPERTY TAX REVENUES IN CONNECTION WITH THE SMP 39 & SMP 40 PROJECT

This Agreement is made pursuant to the provisions of Revenue and Taxation Code Section 99 and shall constitute the agreement for exchange of property tax revenues required by the Revenue and Taxation Code Section 99(b)(6). Furthermore, Revenue and Taxation Code Section 99(b)(5) provides that if a jurisdictional change will alter the service area or service responsibility of a special district, the Board of Supervisors of the county in which the special district is located shall negotiate any exchange of property tax revenues on behalf of the special district.

The parties agree that the lands to be annexed is described as follows:

The subject property consists of six parcels: i) Assessor Parcel Number (APN) 904-3-1-4 known as SMP 39, generally located north of Stanley Boulevard, east of SMP 38, south of West Jack London Boulevard, and west of Discovery Drive; ii) APN 904-10-2-2 known as SMP 40 and 904-10-2-3, -5, -7, and -8 known as Additional Annexation Only Parcels are generally located north of Stanley Boulevard, east of El Charro Road, south of West Jack London Boulevard and west of Isabel Avenue/State Route 84. SMP 39 is approximately 52 acres, SMP 40 is approximately 41 acres, and the Additional Annexation Only Parcels are collectively approximately 13 acres. The subject properties are currently vacant and SMP 39 and 40 propose development under City regulations. Development is not proposed on the Additional Annexation Only Parcels.

Attachment 1 lists all applicable parcel numbers to this agreement and is incorporated herein. The parties agree that for the annexation of these parcels, the Auditor-Controller of the County of Alameda is directed to cause an exchange of property tax revenue as follows:

A. The City is entitled to receive an allocation of computed property tax revenue equivalent to the share of property tax revenue it receives on a weighted average citywide. The weighted citywide average shall be computed annually as follows: multiply the city's current ABB factor in each tax rate area within the city by the current secured assessed valuation in each tax rate area to arrive at a product for each tax rate area. The sum of those products is divided by the total secured assessed valuation within the city to arrive at a

weighted citywide average. The secured tax roll is used here to establish the weighted citywide average. However, the factors resulting from application of the formula will apply to all tax rolls.

B. In the event that the City currently provides a service within its incorporated City limits such as Fire or Library, and if that service is currently being provided by a County taxing agency or special district in the territory proposed for annexation, the County shall receive an allocation of computed property tax revenue equivalent to the share of property tax revenue received by the County taxing agency or special district in the territory proposed for annexation. The County's receipt of that allocation shall not diminish the City's receipt of its allocation calculated under A above.

C. In the event that the City assumes full responsibility for a service not currently being provided by the City within its incorporated city limits, but being provided by a separate County taxing agency or special district within the territory proposed for annexation, pursuant to Revenue and Taxation Code 99(b), the City shall receive, in addition to the allocation determined in A above, an allocation of computed property tax revenue equivalent to the share of property tax revenue received by the County taxing agency or special district in the territory proposed for annexation.

D. The County shall receive an allocation of computed property tax revenue equivalent to its current share of property tax revenue in the territory proposed for annexation plus the share or shares of property tax revenue allocated to it in section B above, less the share of computed property tax revenue allocated to the City in section A above, and in section C above as applicable.

E. In the event that this annexation includes or results in the detachment of one or more parcels or portions thereof from the City and those parcels or portions thereof are transferred to the County or to another jurisdiction, the City hereby waives any right, interest, or claim to property tax on such parcels or portions thereof as identified in Exhibit A. The parcels or portions thereof shall be transferred to the County or jurisdiction subject to the conditions of paragraphs A through Das specified in this agreement.

This exchange of property tax revenues will be effective as to each property annexed within the subject annexation area for the fiscal year following the filing with the State Board of Equalization of the Certificate of Completion for such property providing the filing occurs prior to December 31 of the preceding year.

Subject: Airport Development

[redacted] [redacted]

[redacted]

Exercise Caution: This message is from outside the City email system. Do not open links or attachments from untrusted sources.

The City of Livermore has asked for input from the community regarding the potential development options for the Livermore Airport as they complete the Airport Land Development Framework. The citizens of Livermore should have the predominant voice in the future development of the airport as Livermore is their home. The city mentions having focus groups with current and prospective airport users, why not a focus group of the citizens and community who will be most impacted by development of the airport?

We would like and hope that the city will maintain a small regional airport that will enhance the quality of life here in Livermore. A small regional airport is an asset to the community whereas increasing fixed-base operators (FBOs) with larger aircraft has detrimental impacts to air quality, water pollution, biodiversity loss, greenhouse gas emissions, and noise pollution. If the airport is expanded and larger aircraft are allowed to operate it will diminish the health, comfort and happiness of the citizens not to mention lower property values. Noise levels from the airport need to decrease not increase. We do not need any more jet traffic. Reduce the size and height of hangers to keep the aircraft that inhabit the airport small and noise levels reduced along with protecting the view of the surrounding hills.

The Livermore city government continues to push the boundaries with the airport and development. The airport should not be viewed as a revenue stream but an amenity that benefits the community, not something that constantly has its citizens fighting city government to maintain the character and value of their way of life.

Livermore Airport Secret Focus Groups - Land Use Call to Action

[redacted]

Livermore Airport Alert - Land Use Input by Citizens **March 21, 2024 4-7 PM,** Livermore Library.

Secret focus groups with land developers, aviation, air taxis and more have already been done.

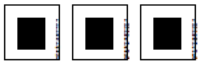
If the Aviation / Development focus groups say they want AMAZON Cargo, or Air Taxi Service, or Large Jet planes -- then this is what the consultants will report out as what the People "want".
After pressure by public citizens, the City is taking input from Citizens:
https://www.livermoreca.gov/departments/public-works/airport/airport-land-use-analysis-development-project

You must contact the city to be heard -- or the only input are the airport developers and aviation industry who want to EXPAND THE AIRPORT.

Call to Action:
1. Attend City open house and give input to the consultants:
Date & Time: March 21, 2024, Drop-in Hours between from 4:00 – 7:30pm
Topic: Livermore Airport Land Use Analysis & Development Project
Location: Livermore Public Library Community Rooms; 1188 S. Livermore Avenue.
2. Demand specific focus groups. This is important -- or get ready for future.

BE CLEAR WHAT YOU WANT THE AIRPORT TO BE IN EMAILS TO THE CITY AS INPUT INTO THE FUTURE LAND USE:

- MORE Expansion with more JET Services?
- MORE Noise?
- MORE AIR TAXI SERVICE?
- MORE AIR CARGO SERVICE?
- MORE FBOs to attract more aviation services?



- MORE Pollution?

Subject: Airport Expansion

To All in involved,
Please, please, please do not expand the airport!!!!! Those of us living on this side of town close to the airport knowingly bought homes here with the size of the airport as it exists now. But no one who bought a house by the airport wanted any kind of jet flying in there. How much does Livermore want to grow. Enough is enough. I'm not anti growth but this directly hurts many of the Livermore citizens as it will lower the value of our homes, create too much noise, and more pollution. Once and for all will you stop thinking of all the outside business Livermore could get and consider the people you are representing.

No more expansion with jet service
No More noise than we already have
No air taxi service
No air cargo service
No FBO's to attract more aviation service (the students in the helicopters are ridiculously loud and pose danger to those of us living here, especially the schools under their path)
No more pollution

Yes, please include my comment. I made one correction- the word “citizens” was changed to “citizen”. Please see below.

Thank you,

Mike Vickers

Good afternoon,

My name is Mike Vickers. My family and I have been residents of Pleasanton for more than 27 years. I'm writing to you as a private citizen, not in my official capacity as a Pleasanton Parks and Recreation Commissioner.

I'm speaking on behalf of hundreds of people in our community that urge you to resist the temptation to expand Livermore Municipal Airport or allow cargo planes to land at the airport.

This is a quality of life issue. Air pollution, noise pollution and reduced

home property values are very real front and center issues.

Traffic impact and road safety are also important considerations if the Tri-Valley becomes a distribution hub.

No Amazon and other cargo planes.
No Air Taxi Service.
No Large Jet planes.
Yes to citizen focus groups.

///

One additional issue is leaded fuel being used for private aircrafts. Please transition to an unleaded fuel airport as soon a possible- the health of all life forms, and especially our youngest children, is at stake.

Sincerely your,

Mike Vickers

March 21, 2024

To: Whom It May Concern
Re: Community Input for Livermore Airport Expansion and Land Use

Dear Gentlemen/Ladies:
I am putting faith in the process of public comment input, both for its efficacy and value.
I am a 36 year citizen and private home owner here in Livermore. My wife and I live south of Jack London Blvd., bordered by Isabel to the West and Murrieta in the North South direction. We are in proximity to Rancho Elementary in the bird names streets, on Egret Road specifically.
Of course, 36 years ago, this location was so much open space. Isabel as a semi freeway did not exist. The business park off Discovery on the back side of the airport did not exist…including the Gillig plant and all those large warehouses added in recent years.
Growth is to be expected to a degree. Those folks in that business park had to amend some of their practices including sound abatement for delivery and back up alerts all hours of the night. And, they respectively did.
We have certainly seen many changes in the local airport, enjoyed the many airshows, i.e. Wings of Charity, antique aircraft displays, and enjoyment of the new dining facilities (Elevation) during these many years.
However, as we live in the flight path on many days of the year, we have grown increasingly disturbed by both the flight noise, constant touch and goes, low flight patterns, bombardment of particulates in the airspace over our home of unspecified non-environmentally friendly leaded fuel, etc. Sitting in our backyard, we can no longer expect quiet enjoyment or even reasonable quiet enjoyment.
Conversation is halted and irritation is increased as we are exposed to one loud assault after the next. Now, larger jets of mixed use add to the early morning wake up calls we are enduring. The rumbling is not pleasant, so we are forced to use sound machines to drown out the thunderous noise.
You folks want to add to this by allowing larger commercial hangers, carriers, air taxi service and possibly drone deliveries based from the airport?
Sincerely, I ask…how many of you are living in the nearby area to REALLY experience what this means as it is played out in everyday lives?.
This is or was an outlying rural atmosphere town. What are you wanting to turn it into…a San Jose?
We vehemently object to that agenda and so consider this a no vote from this family for your expansion proposals…except the addition of reconfiguring to accommodate unleaded fuels that should be mandatory.

I'll thank you in advance for your serious consideration of these comments. I speak for many who feel the same but did not write. Hard to fight City Hall!
Please keep us updated as to any meetings or further focus groups
so that we be given the voice to help keep this beautiful area liveable.
James and Resa Arnold ++Livermore

Subject: HALT Livermore Airport expansion!

[redacted] [redacted]

Exercise Caution: This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hello Good People,

HALT Livermore Airport expansion! END Livermore's bad-faith secret, non-public behind-the scenes maneuvering! Any future airport plans are more than Livermore's sole decision, this would greatly impact Pleasanton, Dublin and the whole of the Tri-Valley area.

Our communities do not need or want an increase in noise or air pollution. The airport greatly impacts our quality of life in Pleasanton. It is difficult to have our windows open because the noise of the airplanes is so very loud. Please think of the children and elderly with breathing issues. Please do not do this to the Tri-Valley.

Please STOP this effort NOW!

Thank you,
Teresa Basalyga

Subject: Livermore Airport Land Use Analysis & Development Study Input

[redacted] [redacted]

Exercise Caution: This message is from outside the City email system. Do not open links or attachments from untrusted sources.

As 31-year residents of the Tri-Valley, we are especially interested in the future development of the Livermore Municipal Airport. In recent years, we have actively voiced our concerns over the continued desire to expand the use of this small regional airport. The discussions about this expansion continue to be quietly organized disregarding any input from the Tri-Valley community residents who are directly impacted by changes to the airport. The safety and financial future of the Tri-Valley requires all of the valley (Livermore, Pleasanton and Dublin) to work together for a healthy and successful future.

The recent focus groups which were quietly held by the Airport Management consultants with local aviation companies and developers failed to include any local residents' comments. We are very fortunate that the community is closely watching the airport management's actions and demanded an opportunity for the public to comment on the future development of the airport. This lack of transparency adds to our concerns about the on-going changes secretly planned at the airport.

We were not able to participate at the March 21, 2024 public focus group due to illness but understand from those who participated that the consultants were not present and the City staff had limited information on airport concerns and issues. There were no newspaper articles in the local papers promoting participation in this community focus group which adds to the lack of transparency and a lack of interest in including the residents. The Tri-Valley impact of expanding the airport with more air traffic including larger jets has a direct long-term impact on all Tri-Valley residents.

In the Independent Newspaper dated March 21, 2024, which arrived to our house before the focus group, Pete Sandhu, owner of Five Rivers Aviation, is quoted as saying in the article about Livermore's acquisition of more land near the airport "I'm working with aviation companies that need more R&D space, and some of their projects need direct access to the runway and some of them don't. I think ZeroAvia, Verne, and Apricus might consider building something on that property." Clearly, discussions and decisions are already being made on who is going to be part of

the airport expansion and how the land will be developed. Providing a community focus group when decisions have already been made is really a joke and insulting to the community at large.

Our input for future use of the Livermore Municipal Airport is the following:

- The first priorities should be to focus on the on-going current issues such as low flying jets, airport noise, and use of unleaded fuel which are concerning to many residents.

- Keep the original vision of the airport as a small regional airport for small recreational planes.

- Do not expand the use of private jets which regularly fly over our homes in Pleasanton at low attitude as they take off or land. Why is luxury jet traffic by a small exclusive group permitted at the Livermore airport given that common wind conditions force jets to fly very low for extended distances over residential neighborhoods and schools?

- Focus on safety issues around the current jet traffic which has continued to increase and caused noise and air pollution concerns for our community as well as others living in the Tri-Valley.

- Re-examine with the FAA the current flight patterns to reduce the need to fly over homes, schools, and community areas at such low altitudes. The Vasco area which has few homes should be discussed as a possible flight pattern.

- Continued focus on strategies such using unleaded fuel to improve the air quality for tri-valley residents. We appreciate that this is slowly moving forward but do not understand as also noted in The Independent Editorial, why it can't be a priority achieved sooner.

- Develop an active Tri-Valley airport commission (Livermore, Pleasanton, Dublin reps) that provides input and action steps to the municipal airport and the Livermore City Council so that planning is done together and successfully instead of in unannounced meetings which lack transparency and create mistrust. This type of Tri-Valley planning is done on other important valley issues such has transportation and is very successful. Consensus building is the key!

We understand that life does change and we must plan carefully as a valley to make good decisions so that there are positive outcomes for all. So far with the planning of changes for the Livermore Municipal Airport we have not seen this done. We urge that a Tri-Valley approach with safety and consensus building be considered as you move forward.

CITY OF LIVERMORE CALIFORNIA

INTEROFFICE MEMORANDUM

Date: March 25, 2024

To: Honorable Mayor and City Council Members

From: Marie Weber, Deputy City Manager

Subject: Item 5.6 – 2024 City of Livermore State and Federal Legislative Platform

The redlined draft of the 2024 City of Livermore Legislative Platform (Attachment 1) and Exhibit A to the Resolution have been updated to include additional language related to the City's bonus density stance to include "that density bonus incentives, concessions, and waivers cannot be used to reduce the quantity of required affordable units."

City of Livermore
2024~~43~~ State and Federal Legislative Platform

(DRAFT)

CITY OF
LIVERMORE
CALIFORNIA

The City of Livermore ("City") 2024~~3~~ State and Federal Legislative Platform ("Platform") highlights the position of the City Council on important issues that align with community goals and policy documents such as the General Plan. City staff monitor bills introduced into the California Legislature and United States Congress. The Platform provides staff direction and allows the City, on the City Council's behalf, to respond quickly in support of or opposition to bills and other legislative or administrative actions in time-sensitive situations. The City Council delegates its authority to the mayor to sign support or opposition letters, consistent with the Platform. Additionally, the Platform enables staff to communicate on behalf of the City to state legislators and federal elected officials.

The Platform is developed through review of City needs and issues, staff input, and review of League of California Cities priorities and strategies. City Council adopted the first Platform in 2013. At its April 13, 2015, meeting, City Council directed staff to use the Platform as a guide for federal bill tracking and action, too. Typically, the City Council reviews and updates the Platform annually.

The 2024~~3~~ City of Livermore Platform categories are:

- Community-Focused Governance
- Fiscal Stability
- Affordable Housing and Homelessness
- Planning and Sustainability
- Building Safety
- Infrastructure
- Job Creation and Economic Development
- Libraries
- Public Safety and Emergency Management
- Science, Technology, and Innovation
- Transportation and Parking
- Water

The State and Federal Legislative Platform evolves as City needs adjust, new issues arise, and conditions at the regional, state, and federal level change. Platform adjustments, whether due to federal policy changes or state policy reactions, may be considered at a future City Council meeting or at the next annual review in 2025~~4~~.

Once approved by the City Council, the 2024~~3~~ State and Federal Legislative Platform will be posted on the City's website at www.LivermoreCA.gov/Legislation. Staff also provides the City Council with periodic updates on letters sent, bill progress, and legislative developments.

When appropriate, the City of Livermore joins its Tri-Valley neighbors to advocate for issues and funding at the regional, state, and federal levels. The cities of Livermore, Dublin, Pleasanton, San Ramon, and the town of Danville develop a Tri-Valley Cities Legislative Framework. The Tri-Valley Framework overlaps many of the items in the City's Platform and provides another opportunity for advocacy progress and success.

The Tri-Valley Cities Legislative Framework is available to view at www.LivermoreCA.gov/Legislation.

Community-Focused Governance

The City values its ability to create policies that best fit the needs of the Livermore community. It is important to advocate for state legislation the provides framework guidance and allows local implementation.

1. **Support** legislation that enhances or streamlines local governance and allows cities to address the needs of local constituents within a framework of regional cooperation.

2. **Monitor** legislation that affects the ability of City Council to effectively govern.

3. **Monitor** cannabis-related legislation.

4. **Oppose** legislation that would prohibit or limit local governments' ability to contract out for services.

5. **Support** legislation that updates both the Brown Act and Public Records Act regarding electronic records and activities that support local decision-making without significant fiscal impact and new regulations that require staff resources.

6. **Oppose** legislation that requires or expands state involvement in City financial audits, fiscal monitoring, general oversight, or assistance by the State Treasurer, State Controller, or other state agencies.

7. **Support** a wording change in the Communications Act of 1934 that removes the distinction between "capital" and "operating" funds in order to provide more local control for community television stations in the use of their public, educational and government (PEG) channel fees with no rise in taxes or a reduction in revenue to the cable industry.

Fiscal Stability

Fiscal stability and financial independence are necessary to provide desired services and programs for residents and local businesses. City Council policy decisions direct staff to ensure the City's long-term financial stability. Unexpected diversion of local funds by the state or federal government erodes the ability of a city to plan and budget for short-and-long term service needs.

1. **Oppose** legislation that imposes unfunded or inadequate state or federal mandates.

2. **Support** legislation that updates the tax structure to enhance local government revenues that have declined due to the expansion of e-commerce, increased

consumption of services rather than durable goods, and innovations in technology.

3. **Oppose** legislation that reduces local government's ability to levy fees

4. **Monitor** legislation regarding new fees or other revenue-enhancements.

5. **Oppose** legislation that reduces or eliminates payments to cities for use of property and rights-of-way for telecommunications.

6. **Support** legislation that provides sustainable and secure public pensions and other post-retirement benefits to ensure responsive and affordable public services.

7. **Support** legislation that streamlines the Workers' Compensation system.

8. **Oppose** legislation that would remove the federal tax exemption for municipal bonds.

Affordable Housing and Homelessness

The availability of a suitable living environment is essential to quality-of-life. It is important to support adequate and affordable housing opportunities and housing-related service needs.

1. **Support** regional solutions that balance housing, transportation/transit, and jobs together. Building housing without adequate transportation infrastructure may exacerbate, not alleviate, the affordable housing crisis.

2. **Support** legislation that protects existing affordable housing stock, including rental apartments, deed-restricted units, and mobile homes, and promotes affordable housing that includes long-term affordability agreements.

3. **Support** legislation that ensures: 1) incentives and density bonus provisions are directly linked to the level and percentage of affordable units provided for each project; and 2) that density bonus incentives, concessions, and waivers cannot be used to reduce the quantity of required affordable units.

4. **Support** legislation that enables cities to develop locally appropriate plans that meet state objectives in a manner that is compatible with existing community character.

5. **Support** legislation that facilitates accessory dwelling units and encourages development of "missing-middle" housing that is compatible with suburban community character.

6. **Oppose** housing legislation that is not accompanied by funding that can support expanded transportation, transit, and infrastructure, including planning, and capital improvement programs and funding to support new school facilities.

7. **Oppose** housing legislation that results in a net loss of local funding.

8. **Support** housing legislation that promotes the development and enhancement of a diverse workforce, as long as the legislation does not create an unfunded mandate or conflict with local land use authority and financial stability.

9. **Oppose** housing legislation that unduly impacts local taxation capacity or diverts financial resources from essential local public services and infrastructure programs.

10. **Support** legislation that increases financial assistance to cities, non-profit organizations, and local partnerships to provide affordable, transitional, special needs, and emergency housing to the homeless, seniors, veterans, and people with special needs.

11. **Support** legislation that increases financial assistance to cities, non-profit organizations, and local partnerships to provide and promote self-empowerment for homeless individuals or families through counseling, job training, and other related services.

12. **Support** legislation that provides financial assistance, improved access to, and expansion of health care, mental health, and drug addiction services for low income and homeless individuals.

13. **Support** legislation that removes fair housing barriers and prevents displacement.

Planning and Sustainability

The City prioritizes comprehensive land use planning that creates complete neighborhoods, promotes a jobs/housing match, strengthens Livermore's economic and fiscal base, provides housing choice, promotes local control with public input, streamlines the permitting process, conserves wildlands, promotes environmental stewardship while reducing the City's environmental footprint, and generally improves the community's quality of life. ~~Comprehensive land use planning coupled with environmental stewardship, such as mandatory reductions in greenhouse gases, emissions, solid waste generation, and energy consumption are vital to a community's quality of life.~~

1. **Oppose** legislation that diminishes cities' decision-making authority over land use decisions, ~~or~~ zoning, or permit process and timelines.

2. **Support** legislation preserving or enhancing the federal Community Development Block Grant (CDBG) program.

3. **Support** land use patterns that maintain safe ~~residential~~ neighborhoods, bolster

economic prosperity, provide local jobs, preserve open space, protect the environment, and enhance overall quality of life.

4. **Oppose** state or federal efforts to further erode local government authority regarding the location or permit review of small cell wireless equipment, cellular towers, transmission sites, or other devices on public infrastructure or in the public right of way.

5. **Support** funding and incentives for smart growth and sustainable development.

6. **Support** CEQA-reform legislation that improves the cost-effective and timely delivery of projects and decreases the ability for spurious lawsuits.

7. **Support** RHNA- and APR-reform legislation that adequately provides necessary housing while reducing municipal administrative burden.

8. Support tax rebate programs, like the Williamson Act or Mills Act, to promote agriculture, open space preservation, historic preservation, and good design.

9. **Support** legislation or grant opportunities for cities that provide funding for developing or enhancing alternative vehicle fueling stations.

10. **Support** rebate programs, tax credits, and other financial incentives that encourage property owners to invest in energy efficiency and renewable energy systems, greenhouse gas-reducing technology, and alternative vehicle fueling stations in parking areas.

11. **Monitor** state and federal legislation related to climate adaptation.

12. **Support** measures that increase funding to local governments for landfill diversion programs such as food recovery, composting, and recycling.

13. **Support** Extended Producer Responsibility (EPR) legislation to encourage manufacturers to design environmentally friendly products by holding producers responsible for the costs of managing their products at end of life.

Building Safety

The City prioritizes protection of public health, safety and welfare by proper building design and construction practices.

1. **Support** legislation that increases the safety of buildings, reduces potential hazards and protects against fire and structure collapse.

2. **Support** legislation for seismic earthquake retrofits to protect individuals and structures.

3. **Support** legislation that contributes to the quality and durability of construction methods and materials

4. ~~**Monitor**~~ **Oppose** legislation to restrict number of inspections needed to verify safety of the built environment and other components.

5. **Support** measures to streamline photovoltaic and electrical vehicle charging permitting and installation.

6. **Support** legislation that contributes to the wellbeing of a community, preservation of life safety, and property maintenance.

7. **Support** legislation that promotes barrier removal and sustainable practices in the built environment.

8. **Oppose** legislation that establishes unrealistic timeliness for building project review that will potentially create an unsafe built environment.

Infrastructure

The condition of a city's infrastructure affects the community's quality-of-life. Sewer and water systems, sidewalks, and roads are subject to a wide number of regulations and must be maintained or replaced to ensure the health of the community.

1. **Support** state and federal legislation that would expand connectivity and access to digital resources.

2. **Oppose** legislation regarding infrastructure such as sidewalk repair that increases a city's unfunded infrastructure liability.

3. **Support** state and federal legislation that provides additional funding and/or preferred financing for local critical unmet infrastructure needs.

4. **Support** legislation that reduces or streamlines state and federal permitting requirements.

5. **Support** legislation that enhances the reliability of water transmission and storage through the Delta to the Tri-Valley.

6. **Support** legislation that provides new funding methods for flood control and stormwater management.

7. **Support** legislation that would acknowledge an adopted California Environmental Quality Act (CEQA) document can be substituted for a federal National Environmental Protection Agency (NEPA) document for infrastructure projects.

8. **Monitor** legislation that alters the state's agency permitting requirements and how they impact the timeliness and viability of natural resource projects planned by government agencies and special districts at the local and regional level including Fish and Game endowments.

Job Creation and Economic Development

The City encourages and supports business through strategic economic development initiatives. Fostering a strong business environment requires job creation, educational opportunities, and workforce development programs.

1. **Support** legislation that enhances or expands community and economic development tools and funding to address development and revitalization needs.

2. **Support** legislation or grants that focus on downtown development.

3. **Support** legislation that promotes and funds workforce development and re-training efforts focused on high-skilled jobs required by emerging industries.

4. **Support** legislation that encourages entrepreneurship, facilitates resource-sharing models, or otherwise reduces barriers to entry for small business.

5. **Support** legislation that provides insurance or loan guarantees for small business loans during recessionary periods.

6. **Support** legislation or grants that focus on walkable, transit oriented, and complete districts with access to jobs and services.

Libraries

The Livermore Public Library connects people with information and education, and inspires experiences that support lifelong learning, personal growth, and enhanced quality of life. With strong community support, the Library offers programs, materials, materials, and services most valued by residents.

1. **Support** legislation that increases financial assistance to cities to ~~provide~~ fund and promote local library programs and literacy services.

2. **Support** legislation that seeks to close the digital divide through funding local library~~ies~~ efforts to ~~such a way they~~ provide broadband internet and ~~devices~~ technology through devices such as hotspots, computers, and tablets, for community members to access.

3. **Support** legislation and funding efforts relating to early literacy, school readiness, adult literacy, career development, vocational support, and assistance to vulnerable and under-served populations.

4. **Oppose** censorship and efforts to limit the public's intellectual freedom and access to information and resources.

5. **Support** the enhancement of inclusivity, efforts to offer open and unfettered access to information, ~~and~~ the exchange of ideas, and the welcoming of all people to express themselves regardless of their politics or beliefs.

6. **Support** legislation that fosters growth during the transformation of libraries and library services in a dynamic and increasingly global digital information environment.

7. **Support** legislation that protects the privacy of patrons and their associated library records and data.

8. **Support** legislation that enhances equitable, diverse, and inclusive initiatives and opportunities.

Public Safety and Emergency Management

Effective public safety significantly enhances a community's quality-of-life. Maintaining a strong safety presence requires ongoing local, regional, state, and federal support.

1. **Support** legislation and grants that fund police and fire equipment upgrades, training, and capital improvements.

2. **Support** legislation that promotes and funds emergency management and recovery efforts.

3. **Support** legislation that maintains and increases grant funding for the Community Oriented Police Services (COPS) hiring program.

4. **Monitor** legislation pertaining to unmanned aircrafts (drones) and Federal Aviation Administration regulations.

5. **Support** legislation to increase penalty for prohibited persons in possession of firearms and use of firearms in the commission of a crime.

6. **Support** legislation that penalizes individuals who engage in drug and/or distracted driving activities.

7. **Support** legislative efforts to address the negative impacts of Proposition 47 (Reduced Penalties for Some Crimes, 2014) and Proposition 57 (Parole for Non-Violent Criminals and Juvenile Court Trial Requirements Initiative, 2016) and provide local law enforcement with tools to reduce criminal activity.

8. **Support** legislation that would provide funding and increase access to mental health care, response to mental health related calls for service, and drug/ alcohol treatment programs.

Science, Technology, and Innovation

As the only City in the United States with two national laboratories, science, technology, and innovation play an important role in the Livermore economy, workforce, and community values. Additionally, the City partnership with the labs and i-GATE fosters innovation, job creation, and economic development opportunities.

1. **Support** legislation that advances or encourages innovation, entrepreneurship, start-ups, small business opportunities, and/or workforce development.

2. **Support** legislation that encourages the expansion of STEM (Science, Technology, Engineering, and Mathematics) programs in K-12, higher education, libraries, and community-based organizations.

3. **Support** legislation that encourages and supports the transfer of technology from the national laboratories.

4. **Support** legislation that provides competitive grants, state partnerships, or other resources to encourage innovation and the science, technology, and innovation economies.

5. **Support** legislation that improves the abilities of the federal laboratories to update or expand their infrastructure.

Transportation and Parking

Regional and local transportation play a key role in a community's economic vitality and quality-of-life.

1. **Support** legislation that reduces congestion along Tri-Valley area freeways or reduces truck traffic along I-580 through roadway or rail improvements.

2. **Support** legislation that enhances the ability of local agencies to finance local transportation programs and facilities.

3. **Support** legislation that facilitates connectivity between major regional rail/transit systems.

4. **Support** legislation that provides incentives for rail and multimodal transit stations and transit-oriented development projects.

5. **Oppose** legislation mandating "one-size-fits-all" parking space requirements for future housing, entertainment, or retail developments or impinging on how parking spaces can be used.

6. **Support** legislation that provides incentives for shared public/private partnerships.

7. **Monitor** legislation that defines "high quality transit" for purposes of transit-oriented development as anything with service headways above hourly. Review on case-by-case basis to determine any impacts and/or benefits.

8. **Support** legislation to encourage the sale of unleaded fuel and assistance to pilots for Supplemental Type Certificate acquisition for non- American Society for Testing and Materials unleaded fuels at airports nationwide.

Water

Water, both quantity and quality, is essential to residential quality-of-life as well as agricultural and economic vitality and growth.

1. **Oppose** legislation that imposes a state tax or fee on customers of a public water system for drinking water.

2. **Monitor** legislation developing new water conveyance systems such as peripheral canals or tunnels (as mentioned in the proposed Bay Delta

Conservation Plan) to deliver adequate water to the Tri-Valley and the Silicon Valley.

3. **Support** legislation that expands the production and use of recycled water or increases local control of water supplies.

4. **Oppose** legislation that expands statewide mandatory water conservation and/or rationing unless the conservation measures are triggered in response to specific local water supply conditions.

5. **Support** legislation that allows direct and indirect potable water reuse.

6. **Oppose** legislation that allows the State Water Resources Control Board or Regional Water Quality Control Board to establish more stringent, clean water objectives unless the legislation provides a demonstrated water quality benefit as well as the means for jurisdictions to achieve the objectives.

7. **Support** regulations to protect drinking water from the impacts of hydrological fracturing (hydro-fracking) related to oil and gas exploration and extraction.

8. **Support** legislation and programs that make water, sewer, and/or storm services more affordable for customers.

City of Livermore
2024 State and Federal Legislative Platform

(DRAFT)

CITY OF
LIVERMORE
CALIFORNIA

The City of Livermore ("City") 2024 State and Federal Legislative Platform ("Platform") highlights the position of the City Council on important issues that align with community goals and policy documents such as the General Plan. City staff monitor bills introduced into the California Legislature and United States Congress. The Platform provides staff direction and allows the City, on the City Council's behalf, to respond quickly in support of or opposition to bills and other legislative or administrative actions in time-sensitive situations. The City Council delegates its authority to the mayor to sign support or opposition letters, consistent with the Platform. Additionally, the Platform enables staff to communicate on behalf of the City to state legislators and federal elected officials.

The Platform is developed through review of City needs and issues, staff input, and review of League of California Cities priorities and strategies. City Council adopted the first Platform in 2013. At its April 13, 2015, meeting, City Council directed staff to use the Platform as a guide for federal bill tracking and action, too. Typically, the City Council reviews and updates the Platform annually.

The 2024 City of Livermore Platform categories are:

- Community-Focused Governance
- Fiscal Stability
- Affordable Housing and Homelessness
- Planning and Sustainability
- Building Safety
- Infrastructure
- Job Creation and Economic Development
- Libraries
- Public Safety and Emergency Management
- Science, Technology, and Innovation
- Transportation and Parking
- Water

The State and Federal Legislative Platform evolves as City needs adjust, new issues arise, and conditions at the regional, state, and federal level change. Platform adjustments, whether due to federal policy changes or state policy reactions, may be considered at a future City Council meeting or at the next annual review in 2025.

Once approved by the City Council, the 2024. State and Federal Legislative Platform will be posted on the City's website at www.LivermoreCA.gov/Legislation. Staff also provides the City Council with periodic updates on letters sent, bill progress, and legislative developments.

When appropriate, the City of Livermore joins its Tri-Valley neighbors to advocate for issues and funding at the regional, state, and federal levels. The cities of Livermore, Dublin, Pleasanton, San Ramon, and the town of Danville develop a Tri-Valley Cities Legislative Framework. The Tri-Valley Framework overlaps many of the items in the City's Platform and provides another opportunity for advocacy progress and success.

The Tri-Valley Cities Legislative Framework is available to view at www.LivermoreCA.gov/Legislation.

Community-Focused Governance

The City values its ability to create policies that best fit the needs of the Livermore community. It is important to advocate for state legislation the provides framework guidance and allows local implementation.

1. **Support** legislation that enhances or streamlines local governance and allows cities to address the needs of local constituents within a framework of regional cooperation.

2. **Monitor** legislation that affects the ability of City Council to effectively govern.

3. **Monitor** cannabis-related legislation.

4. **Oppose** legislation that would prohibit or limit local governments' ability to contract out for services.

5. **Support** legislation that updates both the Brown Act and Public Records Act regarding electronic records and activities that support local decision-making without significant fiscal impact and new regulations that require staff resources.

6. **Oppose** legislation that requires or expands state involvement in City financial audits, fiscal monitoring, general oversight, or assistance by the State Treasurer, State Controller, or other state agencies.

7. **Support** a wording change in the Communications Act of 1934 that removes the distinction between "capital" and "operating" funds in order to provide more local control for community television stations in the use of their public, educational and government (PEG) channel fees with no rise in taxes or a reduction in revenue to the cable industry.

Fiscal Stability

Fiscal stability and financial independence are necessary to provide desired services and programs for residents and local businesses. City Council policy decisions direct staff to ensure the City's long-term financial stability. Unexpected diversion of local funds by the state or federal government erodes the ability of a city to plan and budget for short-and-long term service needs.

1. **Oppose** legislation that imposes unfunded or inadequate state or federal mandates.

2. **Support** legislation that updates the tax structure to enhance local government revenues that have declined due to the expansion of e-commerce, increased

consumption of services rather than durable goods, and innovations in technology.

3. **Oppose** legislation that reduces local government's ability to levy fees.

4. **Monitor** legislation regarding new fees or other revenue-enhancements.

5. **Oppose** legislation that reduces or eliminates payments to cities for use of property and rights-of-way for telecommunications.

6. **Support** legislation that provides sustainable and secure public pensions and other post-retirement benefits to ensure responsive and affordable public services.

7. **Support** legislation that streamlines the Workers' Compensation system.

8. **Oppose** legislation that would remove the federal tax exemption for municipal bonds.

Affordable Housing and Homelessness

The availability of a suitable living environment is essential to quality-of-life. It is important to support adequate and affordable housing opportunities and housing-related service needs.

1. **Support** regional solutions that balance housing, transportation/transit, and jobs together. Building housing without adequate transportation infrastructure may exacerbate, not alleviate, the affordable housing crisis.

2. **Support** legislation that protects existing affordable housing stock, including rental apartments, deed-restricted units, and mobile homes, and promotes affordable housing that includes long-term affordability agreements.

3. **Support** legislation that ensures: 1) incentives and density bonus provisions are directly linked to the level and percentage of affordable units provided for each project; and 2) that density bonus incentives, concessions, and waivers cannot be used to reduce the quantity of required affordable units.

4. **Support** legislation that enables cities to develop locally appropriate plans that meet state objectives in a manner that is compatible with existing community character.

5. **Support** legislation that facilitates accessory dwelling units and encourages development of "missing-middle" housing that is compatible with suburban community character.

6. **Oppose** housing legislation that is not accompanied by funding that can support expanded transportation, transit, and infrastructure, including planning, and capital improvement programs and funding to support new school facilities.

7. **Oppose** housing legislation that results in a net loss of local funding.

8. **Support** housing legislation that promotes the development and enhancement of a diverse workforce, as long as the legislation does not create an unfunded mandate or conflict with local land use authority and financial stability.

9. **Oppose** housing legislation that unduly impacts local taxation capacity or diverts financial resources from essential local public services and infrastructure programs.

10. **Support** legislation that increases financial assistance to cities, non-profit organizations, and local partnerships to provide affordable, transitional, special needs, and emergency housing to the homeless, seniors, veterans, and people with special needs.

11. **Support** legislation that increases financial assistance to cities, non-profit organizations, and local partnerships to provide and promote self-empowerment for homeless individuals or families through counseling, job training, and other related services.

12. **Support** legislation that provides financial assistance, improved access to, and expansion of health care, mental health, and drug addiction services for low income and homeless individuals.

13. **Support** legislation that removes fair housing barriers and prevents displacement.

Planning and Sustainability

The City prioritizes comprehensive land use planning that creates complete neighborhoods, promotes a jobs/housing match, strengthens Livermore's economic and fiscal base, provides housing choice, promotes local control with public input, streamlines the permitting process, conserves wildlands, promotes environmental stewardship while reducing the City's environmental footprint, and generally improves the community's quality of life.

1. **Oppose** legislation that diminishes cities' decision-making authority over land use decisions, zoning, or permit process and timelines.

2. **Support** legislation preserving or enhancing the federal Community Development Block Grant (CDBG) program.

3. **Support** land use patterns that maintain safe neighborhoods, bolster economic prosperity, provide local jobs, preserve open space, protect the environment, and enhance overall quality of life.

4. **Oppose** state or federal efforts to further erode local government authority regarding the location or permit review of small cell wireless equipment, cellular towers, transmission sites, or other devices on public infrastructure or in the public right of way.

5. **Support** funding and incentives for smart growth and sustainable development.

6. **Support** CEQA-reform legislation that improves the cost-effective and timely delivery of projects and decreases the ability for spurious lawsuits.

7. **Support** RHNA- and APR-reform legislation that adequately provides necessary housing while reducing municipal administrative burden.

8. Support tax rebate programs, like the Williamson Act or Mills Act, to promote agriculture, open space preservation, historic preservation, and good design.

9. **Support** legislation or grant opportunities for cities that provide funding for developing or enhancing alternative vehicle fueling stations.

10. **Support** rebate programs, tax credits, and other financial incentives that encourage property owners to invest in energy efficiency and renewable energy systems, greenhouse gas-reducing technology, and alternative vehicle fueling stations in parking areas.

11. **Monitor** state and federal legislation related to climate adaptation.

12. **Support** measures that increase funding to local governments for landfill diversion programs such as food recovery, composting, and recycling.

13. **Support** Extended Producer Responsibility (EPR) legislation to encourage manufacturers to design environmentally friendly products by holding producers responsible for the costs of managing their products at end of life.

Building Safety

The City prioritizes protection of public health, safety and welfare by proper building design and construction practices.

1. **Support** legislation that increases the safety of buildings, reduces potential hazards and protects against fire and structure collapse.

2. **Support** legislation for seismic earthquake retrofits to protect individuals and structures.

3. **Support** legislation that contributes to the quality and durability of construction methods and materials

4. **Oppose** legislation to restrict number of inspections needed to verify safety of the built environment and other components.

5. **Support** measures to streamline photovoltaic and electrical vehicle charging permitting and installation.

6. **Support** legislation that contributes to the wellbeing of a community, preservation of life safety, and property maintenance.

7. **Support** legislation that promotes barrier removal and sustainable practices in the built environment.

8. **Oppose** legislation that establishes unrealistic timeliness for building project review that will potentially create an unsafe built environment.

Infrastructure

The condition of a city's infrastructure affects the community's quality-of-life. Sewer and water systems, sidewalks, and roads are subject to a wide number of regulations and must be maintained or replaced to ensure the health of the community.

1. **Support** state and federal legislation that would expand connectivity and access to digital resources.

2. **Oppose** legislation regarding infrastructure such as sidewalk repair that increases a city's unfunded infrastructure liability.

3. **Support** state and federal legislation that provides additional funding and/or preferred financing for local critical unmet infrastructure needs.

4. **Support** legislation that reduces or streamlines state and federal permitting requirements.

5. **Support** legislation that enhances the reliability of water transmission and storage through the Delta to the Tri-Valley.

6. **Support** legislation that provides new funding methods for flood control and stormwater management.

7. **Support** legislation that would acknowledge an adopted California Environmental Quality Act (CEQA) document can be substituted for a federal National Environmental Protection Agency (NEPA) document for infrastructure projects.

8. **Monitor** legislation that alters the state's agency permitting requirements and how they impact the timeliness and viability of natural resource projects planned by government agencies and special districts at the local and regional level including Fish and Game endowments.

Job Creation and Economic Development

The City encourages and supports business through strategic economic development initiatives. Fostering a strong business environment requires job creation, educational opportunities, and workforce development programs.

1. **Support** legislation that enhances or expands community and economic development tools and funding to address development and revitalization needs.

2. **Support** legislation or grants that focus on downtown development.

3. **Support** legislation that promotes and funds workforce development and re-training efforts focused on high-skilled jobs required by emerging industries.

4. **Support** legislation that encourages entrepreneurship, facilitates resource-sharing models, or otherwise reduces barriers to entry for small business.

5. **Support** legislation that provides insurance or loan guarantees for small business loans during recessionary periods.

6. **Support** legislation or grants that focus on walkable, transit oriented, and complete districts with access to jobs and services.

Libraries

The Livermore Public Library connects people with information and education, and inspires experiences that support lifelong learning, personal growth, and enhanced quality of life. With strong community support, the Library offers programs, materials, materials, and services most valued by residents.

1. **Support** legislation that increases financial assistance to cities to fund and promote local library programs and literacy services.

2. **Support** legislation that seeks to close the digital divide through funding local library efforts to provide broadband internet and technology through devices such as hotspots, computers, and tablets, for community members to access.

3. **Support** legislation and funding efforts relating to early literacy, school readiness, adult literacy, career development, vocational support, and assistance to vulnerable and under-served populations.

4. **Oppose** censorship and efforts to limit the public's intellectual freedom and access to information and resources.

5. **Support** the enhancement of inclusivity, efforts to offer open and unfettered access to information, the exchange of ideas, and the welcoming of all people to express themselves regardless of their politics or beliefs.

6. **Support** legislation that fosters growth during the transformation of libraries and library services in a dynamic and increasingly global digital information environment.

7. **Support** legislation that protects the privacy of patrons and their associated library records and data.

8. **Support** legislation that enhances equitable, diverse, and inclusive initiatives and opportunities.

Public Safety and Emergency Management

Effective public safety significantly enhances a community's quality-of-life. Maintaining a strong safety presence requires ongoing local, regional, state, and federal support.

1. **Support** legislation and grants that fund police and fire equipment upgrades, training, and capital improvements.

2. **Support** legislation that promotes and funds emergency management and recovery efforts.

3. **Support** legislation that maintains and increases grant funding for the Community Oriented Police Services (COPS) hiring program.

4. **Monitor** legislation pertaining to unmanned aircrafts (drones) and Federal Aviation Administration regulations.

5. **Support** legislation to increase penalty for prohibited persons in possession of firearms and use of firearms in the commission of a crime.

6. **Support** legislation that penalizes individuals who engage in drug and/or distracted driving activities.

7. **Support** legislative efforts to address the negative impacts of Proposition 47 (Reduced Penalties for Some Crimes, 2014) and Proposition 57 (Parole for Non-Violent Criminals and Juvenile Court Trial Requirements Initiative, 2016) and provide local law enforcement with tools to reduce criminal activity.

8. **Support** legislation that would provide funding and increase access to mental health care, response to mental health related calls for service, and drug/ alcohol treatment programs.

Science, Technology, and Innovation

As the only City in the United States with two national laboratories, science, technology, and innovation play an important role in the Livermore economy, workforce, and community values. Additionally, the City partnership with the labs and i-GATE fosters innovation, job creation, and economic development opportunities.

1. **Support** legislation that advances or encourages innovation, entrepreneurship, start-ups, small business opportunities, and/or workforce development.

2. **Support** legislation that encourages the expansion of STEM (Science, Technology, Engineering, and Mathematics) programs in K-12, higher education, libraries, and community-based organizations.

3. **Support** legislation that encourages and supports the transfer of technology from the national laboratories.

4. **Support** legislation that provides competitive grants, state partnerships, or other resources to encourage innovation and the science, technology, and innovation economies.

5. **Support** legislation that improves the abilities of the federal laboratories to update or expand their infrastructure.

Transportation and Parking

Regional and local transportation play a key role in a community's economic vitality and quality-of-life.

1. **Support** legislation that reduces congestion along Tri-Valley area freeways or reduces truck traffic along I-580 through roadway or rail improvements.

2. **Support** legislation that enhances the ability of local agencies to finance local transportation programs and facilities.

3. **Support** legislation that facilitates connectivity between major regional rail/transit systems.

4. **Support** legislation that provides incentives for rail and multimodal transit stations and transit-oriented development projects.

5. **Oppose** legislation mandating "one-size-fits-all" parking space requirements for future housing, entertainment, or retail developments or impinging on how parking spaces can be used.

6. **Support** legislation that provides incentives for shared public/private partnerships.

7. **Monitor** legislation that defines "high quality transit" for purposes of transit-oriented development as anything with service headways above hourly. Review on case-by-case basis to determine any impacts and/or benefits.

8. **Support** legislation to encourage the sale of unleaded fuel and assistance to pilots for Supplemental Type Certificate acquisition for non- American Society for Testing and Materials unleaded fuels at airports nationwide.

Water

Water, both quantity and quality, is essential to residential quality-of-life as well as agricultural and economic vitality and growth.

1. **Oppose** legislation that imposes a state tax or fee on customers of a public water system for drinking water.

2. **Monitor** legislation developing new water conveyance systems such as peripheral canals or tunnels (as mentioned in the proposed Bay Delta

Conservation Plan) to deliver adequate water to the Tri-Valley and the Silicon Valley.

3. **Support** legislation that expands the production and use of recycled water or increases local control of water supplies.

4. **Oppose** legislation that expands statewide mandatory water conservation and/or rationing unless the conservation measures are triggered in response to specific local water supply conditions.

5. **Support** legislation that allows direct and indirect potable water reuse.

6. **Oppose** legislation that allows the State Water Resources Control Board or Regional Water Quality Control Board to establish more stringent, clean water objectives unless the legislation provides a demonstrated water quality benefit as well as the means for jurisdictions to achieve the objectives.

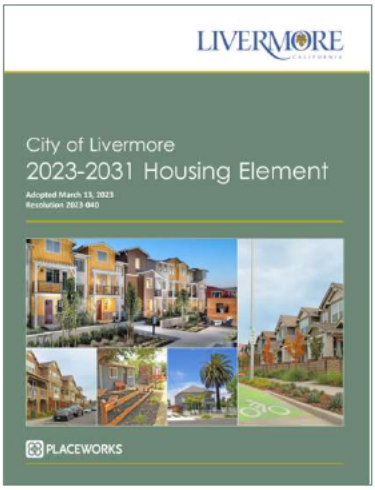
7. **Support** regulations to protect drinking water from the impacts of hydrological fracturing (hydro-fracking) related to oil and gas exploration and extraction.

8. **Support** legislation and programs that make water, sewer, and/or storm services more affordable for customers.

2023 Housing Element Annual Progress Report

City Council

March 25, 2024



Presented by:

Shannon Pagan, Assistant Planner

1

Housing Element Annual Progress Report

- Annual Progress Report tracks progress meeting the goals and objectives in the City's Housing Element
- First year implementing the 2023-2031 Housing Element adopted on March 13, 2023, certified by HCD on March 24, 2023
- Filing the report is required by State law and maintains the City's eligibility for grant programs
- Due to the State by April 1st

LIVERMORE

2

APR Reporting Requirements

- Building permits issued by income level to demonstrate progress meeting RHNA
- Progress implementing housing programs
- Housing units proposed, approved, and constructed by income level
- Housing units developed pursuant to streamlining provisions
- Sites rezoned to accommodate RHNA
- Surplus property central inventory
- Housing units constructed with a commercial development bonus
- Above moderate units converted to moderate units
- Lower income student housing units approved under a density bonus
- Status of projects that received LEAP funding

LIVERMORE CALIFORNIA

3

Regional Housing Needs Allocation (RHNA)

Income Category	Percent of Median Family Income	Income Range – 4-Person Household	Livermore's RHNA Allocation 2023-2031
Very Low	50% or less	≤ $71,400	1,317
Low	51% to 80%	$71,401 - $109,600	758
Moderate	81% to 120%	$109,601 - $171,350	696

Permanent Local Housing Allocation (PLHA) 2019-2023 Plan Amendment

03/25/2024

Presented by Natalia Gilina, Housing Administrative Technician

CITY OF LIVERMORE CALIFORNIA

1

PLHA Grant Requirements

- The City is an entitlement recipient of Permanent Local Housing Allocation (PLHA) program funds from the State of California Department of Housing & Community Development (CA HCD). The total estimated award for the 5-year plan is up to $1,251,240.
- On November 14, 2022, City Council adopted a five-year PLHA plan and approved an application to CA HCD for 2019-2021 PLHA allocations for two plan activities: Supportive Shared Housing Rehabilitation and Vineyard's Resource Center navigation and operating subsidies.
- CA HCD requires 5-year Plan amendment to reallocate 2020 funding between two activities.
- On December 29, 2023, CA HCD issued a Notice of Funding Availability (NOFA) for 2022-23 PLHA funding applications.

CITY OF LIVERMORE CALIFORNIA

2

PLHA Completed Activities

Adopted uses for 2019 – 2020 funding

Supportive Housing Rehabilitation

- 2019 PLHA funds were used to provide loans for the rehabilitation projects to Tri-Valley REACH for:
  - Colgate Rehabilitation project (completed in 2023);
  - Camden Rehabilitation and Expansion project (completed in 2024)
  - 2019 PLHA funds expended - $208,540
- 2020 PLHA funds were budgeted for these purposes, but no additional projects have been identified.
- Funds for 2020 need to be reprogrammed for other activities.

Colgate Rehab Project

Camden Expansion Project

CITY OF LIVERMORE CALIFORNIA

3

PLHA Current 2019-2023 Plan

- Reallocate 2020 funds (highlighted) from the current Shared Housing Rehabilitation Program to other activities that assist Vineyard operations and support persons experiencing homelessness.

PLHA Activity / Funding Year	2019	2020	2021	2022	2023	Total
Shared Housing Rehabilitation	**$208,540 (Spent)**	**$307,930**	--	--	--	$516,470
Vineyard 2.0 Operations/ Navigation Center	--	--	$338,867	$169,841	$173,927	$682,635
Total	**$208,540**	**$307,930**	**$338,867**	**$169,841**	**$173,927**	**$1,199,105**

CITY OF LIVERMORE CALIFORNIA

4

PLHA Amended Plan

- Staff recommends City Council approve activities to be funded with 2020 – 2023 PLHA funding.
- Activities include Vineyard housing navigation, rental assistance, expanded overnight shelter operations at Vineyard and rental assistance for unsheltered persons through City Serve.
- Designate 2022-2023 applications for the stated above activities.

PLHA Activity/Funding Year	2019	2020	2021	2022	2023	Total
Shared Housing Rehabilitation Program	$208,540 (Spent)	--	--	--	--	$208,540
Vineyard Shelter Operations/Housing Navigation/Rental Assistance (HCEB, Open Heart Refuge, City Serve)	--	$307,930	$267,527	$134,085	$137,311	$846,853
Activity Total	$208,540	**$307,930**	**$267,527**	**$134,085**	**$137,311**	**$1,055,393**

CITY OF LIVERMORE CALIFORNIA

5

PLHA Proposed Activities

Vineyard Housing Resource Center & Rental Assistance

Opened doors in January 2024 and currently assisting the homeless population providing:

- Shower and laundry services
- Hot meals
- Open Heart Refuge 20-bed overnight shelter operated by Open Heart Kitchen

Additional funding for much-needed seven-day per week Open Heart Refuge shelter operations, Housing Navigation, and Rental Assistance programs may be provided by Plan amendment and reallocation of 2020-2023 PLHA funds to the stated plan activity.

Open Heart Kitchen

Open Heart Refuge

CITY OF LIVERMORE CALIFORNIA

6

Recommendation

Staff recommends the City Council adopt two resolutions:

1. Authorizing, Approving, and adopting an amended Permanent Local Housing Allocation (PLHA) Plan for 2019-2023;
2. Authorizing the City Manager to execute the PLHA program application for the 2023 PLHA Notice of Funding Availability (NOFA), the PLHA standard agreement, and any subsequent amendments or modifications thereto, as well as any other documents that are related to the PLHA program or the PLHA grant awarded to the City of Livermore;
3. Authorizing the City Manager to accept and appropriate the allocations for the amended PLHA plan, if awarded, and directing the City Manager, or her designee, to sign and submit funds requests and all required reporting forms and documentation as may be required by the State in connection with the grant; and,
4. Authorizing the City Manager to sign all documents related to the execution of grant agreements with subgrantees receiving allocations of funds from the PLHA program.

EIR Impact Summary

Less than Significant with Mitigation:

- Air Quality, Greenhouse Gases and Energy
- Biological Resources
- Cultural and Tribal Cultural Resources
- Hydrology and Water Quality
- Public Services, Utilities and Service Systems
- Noise
- Transportation

Significant and Unavoidable:

- Agricultural Resources

LIVERMORE CALIFORNIA

12

Statement of Overriding Considerations

- Revitalizes underutilized lands appropriate for infill development and which are compatible with surrounding development
- Promotes industrial development consistent with the General Plan
- Provides opportunity for local jobs with competitive salaries
- Creates logical boundaries which align with the City's UGB
- Includes improvements to West Jack London Boulevard and on and off-site trail improvements
- Generates long-term sustainable property and potential sales tax revenue

LIVERMORE CALIFORNIA

13

Previous Public Hearings

Alameda County Airport Land Use Commission
- Project is compatible with the ALUCP

Airport Commission
- Project is compatible with the Livermore APA and the ALUCP
- Condition that avigation easements be required for each of the project properties

Planning Commission
- Recommended approval of the project
- Conditioned recommendation on minor modifications to the design of on-site trail connection, the Transportation Demand Management (TDM) Program reporting requirements, and tree species located near the proposed employee break areas.

City of Pleasanton City Council
- Supports SOI modification on SMP 39

LIVERMORE CALIFORNIA

14

Next Steps

Local Agency Formation Commission (LAFCo):

- State mandated local agency that oversees boundary changes to cities and special districts
- Public Hearing anticipated Spring/Summer 2024

LIVERMORE CALIFORNIA

15

Recommendation

Planning Commission and staff recommend the City Council take the following actions to authorize the future development of light industrial buildings on the SMP 39 and SMP 40 properties:

1. Adopt a resolution certifying the Final Environmental Impact Report for the SMP 39/SMP 40 Project and adopting California Environmental Quality Act Findings, A Statement of Overriding Considerations, and a Mitigation Monitoring and Reporting Program;
2. Adopt a resolution approving General Plan Amendment (GPA) 21-001, Vesting Tentative Parcel Map (SUB) 21-008, Vesting Tentative Tract Map (SUB) 21-009, and Site Plan Design Review (SPDR) 21-008;
3. Introduce an ordinance and waive the first reading pre-zoning the SMP 39 and SMP 40 properties to Planned Development - Industrial (PD-I) 22-001 and the Additional Annexation Only Parcels to Open Space - Floodplain (OS-F) consistent with Planned Development - Industrial (PD-I) 22-001, Zoning Map Amendment (ZMA) 21-002, and Development Code Amendment (DCA) 21-005;
4. Introduce an ordinance and waive the first reading authorizing execution of Pre-Annexation and Development Agreement (DA) 21-001;
5. Introduce an ordinance and waive the first reading authorizing execution of Pre-Annexation and Development Agreement (DA) 23-002; and
6. Adopt a resolution authorizing submittal of an application to LAFCo for a Sphere of Influence and Annexation modification consistent with Annexation and Prezoning (APZ) 21-003.

PROPOSED ELEVATIONS SMP 39

OMP OAKS BUSINESS PARK

LIVERMORE

6

PROJECT DESCRIPTION- SMP 40

- Two buildings- 477,000 and 280,000 sf
- Building 1 Pre-leased to Lam Research- Expanding in Livermore
- Building 2 Design: Sensitive to Neighbors to the east
  - North/South loading
  - Screened loading areas
  - 884-1,000' from neighbors to the East
  - Limited night time truck trips

OMP OAKS BUSINESS PARK

LIVERMORE

7

PROJECT DESCRIPTION- SMP 40

- Roofs designed to accommodate PV
- TDM to reduce VMT's
- Abundant EV Charging Stations – 75 at CofO
- Electrical conduit in the Truck Court for future truck use
- NO Natural Gas connections
- Commence grading 7/15/24

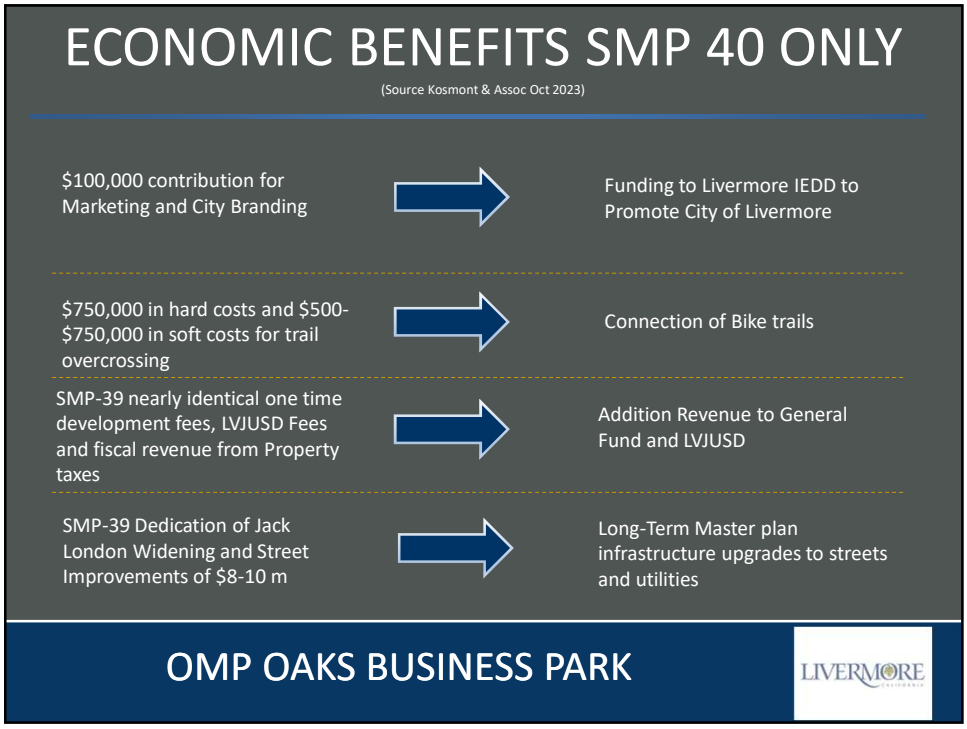
PROJECT BENEFITS
• Hundreds of new high quality jobs and tens of millions of dollars in annual salaries and wages
• Annex property into the City of Livermore. Long term tax revenue
• Combination of warehouse/Dist. and Advance Mfg. jobs
• Hundreds of new construction jobs- Sheet Metals Workers Local 104, IBEW, Sprinkler Fitters, Ironworkers, UA P&S
OMP OAKS BUSINESS PARK
LIVERMORE



11

PROJECT BENEFITS
• Additional Revenue for the City of Livermore, MUSD, and other agencies
• Improved Jobs – Housing Balance- reduce commute times
• Expansion Opportunities for a new or existing companies in Livermore- Building 1
• Support for Livermore retail and restaurants
• Arroyo Mucho Trail Connection- get bikes off Isabel/Jack London

Subject: GSEJA Public Comment Livermore City Council Meeting 3-25-24 SMP 39/40 Project EIR Public Hearing Item 6.3

To Whom It May Concern,

Attached are public comments on behalf of Golden State Environmental Justice Alliance. These comments are submitted to the City Council to be included in the record for the City Council's consideration regarding GSEJA Public Comment Livermore City Council Meeting 3-25-24 SMP 39/40 Project EIR Public Hearing Item 6.3

For clarification purposes, only the highlighted yellow portion of the body of this email is the public comment to be added into the record along with the two attachments.

Please confirm receipt of this email.

Public Comment
Good evening, my name is Pete Sheehan and I'm with the Golden State Environmental Justice Alliance. We submitted a comment letter to the Draft Environmental Impact Report. Our letter identified several deficiencies with the EIR. In addition to the comment letter and subsequent public comments, we have also submitted a rebuttal letter by SWAPE(Soil Water Air Protection Enterprise). This rebuttal is in regard to the City's response to our original comment letter.

During these turbulent times, we as citizens expect and deserve our local government's elected and appointed officials to protect us from environmental and social injustice, to aid in the preservation and rehabilitation of the environment in which we all share, and to ensure accountability and responsibility regarding the environmental decisions they may make.

We stand by our comment letter and believe the EIR is flawed, and must be redrafted and recirculated for public review. In closing we call on this commission to be a leader on the aforementioned issues and be the first line of defense for our citizenry and environment. Only by working together can we continue to be excellent stewards of our environment, outstanding stewards to our citizens and each other. Thank You.

Please confirm receipt of this email.

Thank You,

Pete Sheehan

Subject: Comments on the SMP 39/SMP 40 Project (SCH No. 2017091054)

Dear Mr. Ho,

We have reviewed the January 2024 Final Environmental Impact Report ("FEIR") and the August 2023 Draft Environmental Impact Report ("DEIR") for the SMP 39/SMP 40 Project ("Project") located in the City of Livermore ("City"). Upon review, we find that the FEIR is insufficient in addressing our concerns regarding the Project's health risk impacts. As asserted in our October 11th, 2023 comment letter, a revised EIR should be prepared to adequately evaluate the Project's potential impacts on the environment.

Air Quality

Unsubstantiated Input Parameters Used to Estimate Project Emissions

In our October 11th comment letter, we identified several issues with the DEIR's air model (California Emissions Estimator Model, "CalEEMod")[1] that reduced the Project's construction and operational emissions. After review of the FEIR's response to our comments, we found that the FEIR fails to address all our concerns and maintain that the DEIR's CalEEMod models are flawed and fail to accurately estimate the Project's criteria air pollutant emissions. Specifically, the FEIR fails to adequately address our comments regarding the changes to individual construction phase lengths. Consequently, we find the DEIR and FEIR to be inadequate and maintain that a revised EIR should be prepared to adequately evaluate the Project's local and regional air quality impacts. Until a proper air quality analysis is conducted, the Project should not be approved.

[1] "CalEEMod Version 2020.4.0." California Air Pollution Control Officers Association (CAPCOA), May 2021, *available at:* https://www.aqmd.gov/caleemod/download-model.

Unsubstantiated Changes to Individual Construction Phase Lengths

As stated in our October 11th comment letter, the "SMPs Project (SMP 39)" and "SMPs Project - SMP 40" CalEEMod models include several changes to the default individual construction phase lengths (Appendix C, pp. 1272, 1306, 1335, 1375, 1409, 1438, 1478, 1512, 1541, 1672, 1702, 1727, 1763, 1793, 1818). Review of the FEIR's response to comments demonstrates that while the Project justifies the total construction duration, the FEIR again fails to justify that the *individual* construction phase lengths were provided by the Project applicant.

Regarding our comment on construction phase lengths, the FEIR responds:

> "Because project-specific information was provided by the applicant, the default construction phase lengths were adjusted to match the actual anticipated construction schedule for the project" (p. 2.109).

The FEIR continues, stating:

> "Nevertheless, in response to the comment, page 4.2-42 of the Draft EIR hereby revised as show below to provide greater specificity regarding the overall length of construction that was assumed within the emissions modeling prepared for the proposed project and included as Appendix A t the Draft EIR:
>
> The following inherent design features and project-specific information were included in the modeling conducted for SMP 39:
>
> - Construction would begin in September of 2024;
> - Construction would occur over approximately two years 22 months;
> - 24,000 cubic yards (CY) of soil import would be required; and
> - Tier 3 engines would be used for all off-road heavy-duty equipment over 150
> - horsepower.
>
> Similarly, the following inherent design features and project-specific information were included in the modeling conducted for SMP 40:
>
> - Construction would begin in September of 2023;
> - Construction would occur over approximately two years 15 months;
> - 7,000 CY of soil import would be required; and
> - Tier 3 engines would be used for all off-road heavy-duty equipment over 150
> - horsepower.
>
> The foregoing minor text revisions clarify the inputs used in the emissions modeling and reproduces information that was available in Appendix A of the Draft EIR. The foregoing changes do not affect the conclusions presented within the Draft EIR" (p. 2-109).

As discussed, the FEIR substantiates the overall length of construction of 22 months, among other Project details. However, the FEIR again fails to substantiate the individual construction phase lengths.

Rather, the FEIR states the individual phase lengths were altered to match the proposed total duration provided by the Project applicant. While adjusting the individual phase lengths to match the total duration is common practice, disproportionately adjusting the individual phase lengths without substantial evidence by the Project applicant can potentially demonstrate underestimated emission rates. As stated in our October 11th comment letter, by disproportionately altering and extending some of the individual construction phase lengths without proper justification, the models assume there are a greater number of days to complete the construction activities required by the prolonged phases. As a result, there will be less construction activities required per day and, consequently, less pollutants emitted per day.

As demonstrated in the following section, "SWAPE's Analysis Indicates a Potential Significant Air Quality Impact," we proportionately altered the individual construction phase lengths.[2] We found our new model resulted in emission estimates that exceed thresholds. Until the FEIR properly substantiates the revised construction phase lengths, we cannot verify that the models, and consequent less-than-significant impact conclusion, are accurate. We reiterate our October 11th comment that the Project's CalEEMod models are unsubstantiated, and the DEIR's and FEIR's less-than-significant air quality impact conclusions should not be relied upon.

SWAPE's Analysis Indicates a Potentially Significant Air Quality Impact

In an effort to more accurately estimate the Project's construction-related emissions, we prepared two updated CalEEMod models based on the "SMPs Project (SMP 39)" and "SMPs Project - SMP 40" models and used the Project-specific information provided by the FEIR and associated documents. In our updated models, we proportionately altered the individual construction phase lengths to match the 22-month construction schedule.[3,4] We matched all other input parameters to be consistent with the respective models.

Our updated analysis estimates that the reactive organic gases ("ROG") emissions associated with Project construction for both SMP 39 and SMP 40 exceed the applicable Bay Area Air Quality Management District ("BAAQMD") threshold of 54 pounds per day ("lbs/day"), as referenced by the DEIR (p. 4.2-49, Table 4.2-8) (see table below).[5]

SWAPE Criteria Air Pollutant Emissions		
Model	**SMP 39 Construction ROG** (lbs/day)	**SMP 40 Construction ROG** (lbs/day)
DEIR	29.0	36.8

[2] See Attachment A for updated construction schedules.
[3] See Attachment A for updated construction schedules.
[4] See Attachment B for SWAPE's CalEEMod models.
[5] "California Environmental Quality Act Air Quality Guidelines." BAAQMD, May 2017, *available at:* https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf.pdf?la=en&rev=0d2d971e661d41f28a56953f1776bdde, p. 2-2.

SWAPE	679.7	402.6
% Increase	2,244%	994%
BAAQMD Threshold	**54**	**54**
Exceeds?	***Yes***	***Yes***

As demonstrated above, construction-related ROG emissions for both the SMP 39 and SMP 40 models, as estimated by SWAPE, increase by approximately 2,244% and 994%, respectively, and exceed the applicable BAAQMD significance thresholds. Our updated modeling demonstrates that the Project may result in a potentially significant air quality impact that was not previously identified or addressed by the FEIR or associated documents. As a result, a revised EIR should be prepared to adequately assess and mitigate the potential air quality impacts that the Project may have on the environment.

Mitigation

Feasible Mitigation Measures Available to Reduce Emissions

Our analysis demonstrates that the Project would result in potentially a significant air quality impact that should be mitigated further. In an effort to reduce emissions, the Project should consider the implementation of the following mitigation measures found in the California Department of Justice Warehouse Project Best Practices document.[6]

- Prohibiting off-road diesel-powered equipment from being in the "on" position for more than 10 hours per day.
- Designating an area in the construction site where electric-powered construction vehicles and equipment can charge.
- Limiting the amount of daily grading disturbance area.
- Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.
- Forbidding idling of heavy equipment for more than three minutes.
- Keeping onsite and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.
- Conducting an on-site inspection to verify compliance with construction mitigation and to identify other opportunities to further reduce construction impacts.
- Requiring all heavy-duty vehicles engaged in drayage to or from the project site to be zero-emission beginning in 2030.
- Requiring tenants to use zero-emission light- and medium-duty vehicles as part of business operations.
- Forbidding trucks from idling for more than three minutes and requiring operators to turn off engines when not in use.

[6] "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act." State of California Department of Justice, September 2022, *available at*: https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf, p. 8 – 10.

- Installing solar photovoltaic systems on the project site of a specified electrical generation capacity that is equal to or greater than the building's projected energy needs, including all electrical chargers.
- Designing all project building roofs to accommodate the maximum future coverage of solar panels and installing the maximum solar power generation capacity feasible.
- Constructing zero-emission truck charging/fueling stations proportional to the number of dock doors at the project.
- Running conduit to designated locations for future electric truck charging stations.
- Unless the owner of the facility records a covenant on the title of the underlying property ensuring that the property cannot be used to provide refrigerated warehouse space, constructing electric plugs for electric transport refrigeration units at every dock door and requiring truck operators with transport refrigeration units to use the electric plugs when at loading docks.
- Oversizing electrical rooms by 25 percent or providing a secondary electrical room to accommodate future expansion of electric vehicle charging capability.
- Constructing and maintaining electric light-duty vehicle charging stations proportional to the number of employee parking spaces (for example, requiring at least 10% of all employee parking spaces to be equipped with electric vehicle charging stations of at least Level 2 charging performance)
- Running conduit to an additional proportion of employee parking spaces for a future increase in the number of electric light-duty charging stations.
- Installing and maintaining, at the manufacturer's recommended maintenance intervals, air filtration systems at sensitive receptors within a certain radius of facility for the life of the project.
- Installing and maintaining, at the manufacturer's recommended maintenance intervals, an air monitoring station proximate to sensitive receptors and the facility for the life of the project, and making the resulting data publicly available in real time. While air monitoring does not mitigate the air quality or greenhouse gas impacts of a facility, it nonetheless benefits the affected community by providing information that can be used to improve air quality or avoid exposure to unhealthy air.
- Requiring all stand-by emergency generators to be powered by a non-diesel fuel.
- Requiring facility operators to train managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.
- Requiring operators to establish and promote a rideshare program that discourages single-occupancy vehicle trips and provides financial incentives for alternate modes of transportation, including carpooling, public transit, and biking.
- Meeting CalGreen Tier 2 green building standards, including all provisions related to designated parking for clean air vehicles, electric vehicle charging, and bicycle parking.
- Designing to LEED green building certification standards.
- Providing meal options onsite or shuttles between the facility and nearby meal destinations.
- Posting signs at every truck exit driveway providing directional information to the truck route.

- Improving and maintaining vegetation and tree canopy for residents in and around the project area.
- Requiring that every tenant train its staff in charge of keeping vehicle records in diesel technologies and compliance with CARB regulations, by attending CARB-approved courses. Also require facility operators to maintain records on-site demonstrating compliance and make records available for inspection by the local jurisdiction, air district, and state upon request.
- Requiring tenants to enroll in the United States Environmental Protection Agency's SmartWay program, and requiring tenants who own, operate, or hire trucking carriers with more than 100 trucks to use carriers that are SmartWay carriers.

These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the proposed Project, which subsequently, reduce emissions released during Project construction and operation. A revised EIR should be prepared to include all feasible mitigation measures, as well as include an updated air quality analysis to ensure that the necessary mitigation measures are implemented to reduce emissions to below thresholds. The revised EIR should also demonstrate a commitment to the implementation of these measures prior to Project approval, to ensure that the Project's significant emissions are reduced to the maximum extent possible.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	755.50	1000sqft	44.28	755,500.00	0
Parking Lot	1,647.00	Space	14.82	658,800.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2026
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with the DEIR's model.

Land Use - Consistent with the DEIR's model.

Construction Phase - See SWAPE's comment on "Unsubstantiated Changes to Individual Construction Phase Lengths."

Grading - Consistent with the DEIR's model.

Vehicle Trips - Consistent with the DEIR's model.

Construction Off-road Equipment Mitigation - Consistent with the DEIR's model.

Operational Off-Road Equipment - Consistent with the DEIR's model.

Stationary Sources - Emergency Generators and Fire Pumps - Consistent with the DEIR's model.

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	758.81	1000sqft	33.31	758,808.00	0
Parking Lot	799.00	Space	7.19	319,600.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2025
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with the DEIR's model.

Land Use - Consistent with the DEIR's model.

Construction Phase - See SWAPE's comment on "Unsubstantiated Changes to Individual Construction Phase Lengths."

Trips and VMT - Consistent with the DEIR's model.

Grading - Consistent with the DEIR's model.

Vehicle Trips - Consistent with the DEIR's model.

Construction Off-road Equipment Mitigation - Consistent with the DEIR's model.

Operational Off-Road Equipment - Consistent with the DEIR's model.

Stationary Sources - Emergency Generators and Fire Pumps - Consistent with the DEIR's model.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	758.81	1000sqft	33.31	758,808.00	0
Parking Lot	799.00	Space	7.19	319,600.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2025
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with the DEIR's model.

Land Use - Consistent with the DEIR's model.

Construction Phase - See SWAPE's comment on "Unsubstantiated Changes to Individual Construction Phase Lengths."

Trips and VMT - Consistent with the DEIR's model.

Grading - Consistent with the DEIR's model.

Vehicle Trips - Consistent with the DEIR's model.

Construction Off-road Equipment Mitigation - Consistent with the DEIR's model.

Operational Off-Road Equipment - Consistent with the DEIR's model.

Stationary Sources - Emergency Generators and Fire Pumps - Consistent with the DEIR's model.

SWAPE Technical Consultation, Data Analysis and Litigation Support for the Environment

2656 29th Street, Suite 201
Santa Monica, CA 90405

Matt Hagemann, P.G, C.Hg.
(949) 887-9013
mhagemann@swape.com

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
Industrial Stormwater Compliance
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2104, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 100 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Focus on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years of experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

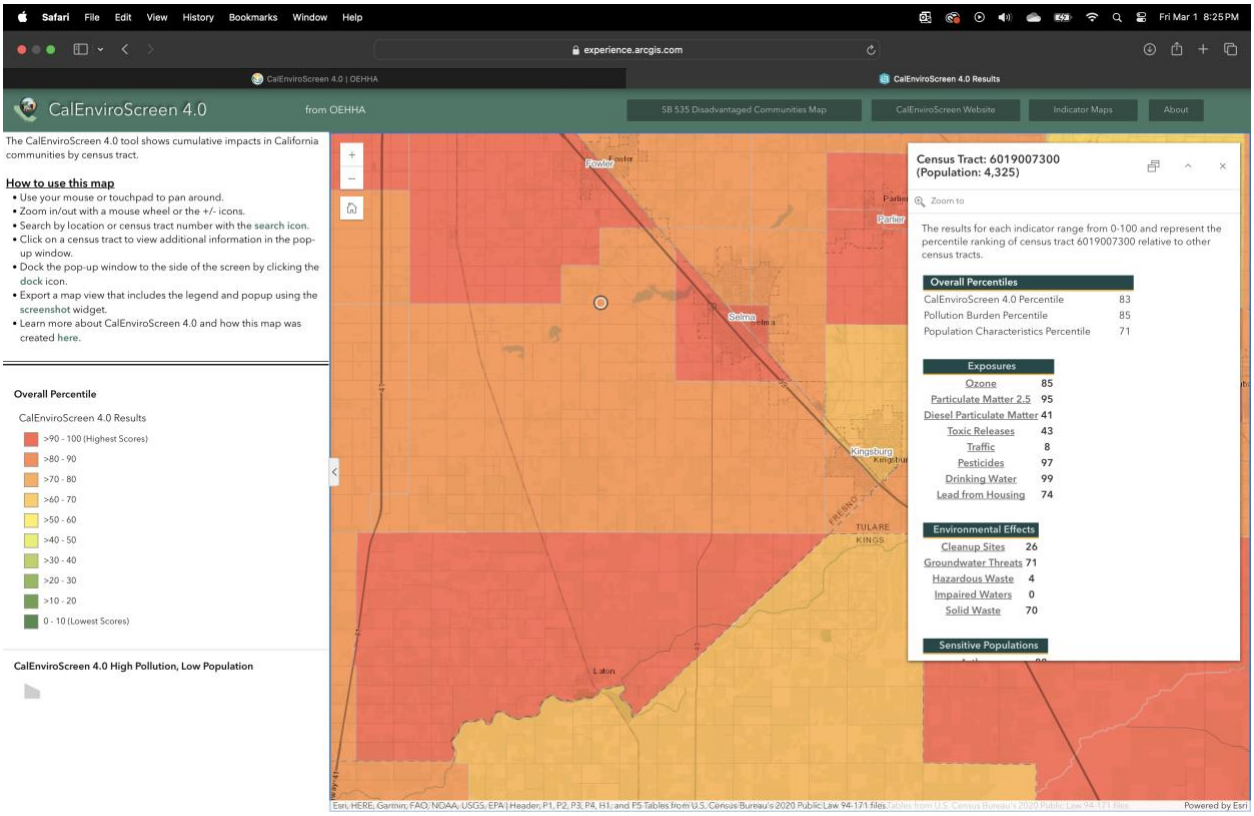
Golden State Environmental Justice Alliance
Green Jobs & Clean Communities
P.O. Box 79222
Corona, CA 92877

To: City of Livermore City Council

From: Golden State Environmental Justice Alliance

Subject: SMP 39/40 Project EIR



This letter is to serve as further comment in addition to all previously submitted comments and documents by Golden State Environmental Justice Alliance.

CalEnviroScreen Information

CalEnviroScreen is a mapping tool that helps identify California communities that are most affected by many sources of pollution, and where people are often especially vulnerable to pollution's effects. CalEnviroScreen uses environmental, health, and socioeconomic information to produce scores for every census tract in the state. The scores are mapped so that different communities can be compared. An area with a high score is one that experiences a much higher pollution burden than areas with low scores. CalEnviroScreen ranks communities based on data that are available from state and federal government sources. CalEnviroScreen is updated and maintained by The Office of Environmental Health Hazard Assessment, on behalf ofthe California Environmental Protection Agency.

CalEnviroScreen Data on : SMP 39/40 EIR Project Location/Area

The above listed project is in census tract **(6001451300)**. Overall, when compared to other census tracts, the project site census tract is in the 83rd percentile regarding pollution. As far as pollution burden is concerned, this census tract is in the 85th percentile. In terms of Ozone, this census tract is in the 85th percentile, Particulate Matter 2.5 98th percentile, Diesel Particulate Matter 41st percentile, Toxic Releases 43rd percentile and Traffic 8th percentile to name a few.

Conclusion

Consider the above referenced information when making this important decision. Realize that you and the citizens of this area face some of the WORST POLLUTION in the entire state of California.

It is the responsibility of the City's elected and appointed officials to make environmentally responsible development decisions. Based on the CalEnviroScreen data, this is more than sufficient evidence of the further air quality impacts that the citizenry of Livermore will continue to encounter with further development of another warehouse. We are not against development, as we believe it is necessary for further economic growth in our current society. Development needs to be conducted with the highest of expectations to ensure the local population does not suffer further air quality burdens.

We stand by our comments and believe the EIR is flawed and should be redrafted and recirculated for public review.

Respectfully Submitted,

Pete Sheehan

Glossary of Terms

Ozone - Amount of daily maximum 8-hour Ozone concentration

Particulate Matter 2.5 - Annual mean PM 2.5 concentrations

Diesel Particulate Matter - Diesel PM emissions from on-road and non-road sources

Toxic Releases - Toxicity-weighted concentrations of modeled chemical releases to air from
facility emissions and off-site incineration.

Traffic -Traffic density, in vehicle-kilometers per hour per road length, within 150 meters of the census tract boundary.

Re: Public Comment on SMP-39 and SMP-40 Project
City Council Meeting March 25, 2024

City Council of the City of Livermore:

We represent El Charro Spur LLC, which owns the approximately 69-acre parcel ("**ECS Property**") directly south of and abutting the SMP-40 property, which is the subject of the proposed SMP-39 and SMP-40 project before the City Council on March 25, 2024. On behalf of El Charro Spur LLC, we submitted a public comment to the Planning Commission for its March 5, 2024 meeting at which the Commission considered the SMP-39/SMP-40 project.

Specifically, we raised the issue that the SMP-39/SMP-40 project proposes to construct a public trail for biking, walking and other public access along the southern property line of the SMP-40 property, and the adjoining land owned by the Zone 7 Water Agency ("**Zone 7**") that will create a significant health and safety hazard given the proposed trail's immediate proximity to the Arroyo Mocho, the ECS Property, and active mining areas, which we explain in more detail in our March 5, 2024 letter to the Commission. While the plan calls for fencing along the southern side of the proposed public trail for the length of the SMP-40 property, which will prevent public access to the Arroyo from that location, it provides for no similar southerly fencing along the Zone 7 portion of the trail. Left unchanged, the design of the trail would allow direct, unimpeded access to the Arroyo Mocho via the Zone 7 property by anyone using the trail – including during flood events. This public access would invite trespassing across ECS property to the west of the Zone 7 property, and into the active mining operation of Vulcan Materials Company. This heightened public safety risk was not acknowledged or studied in the project's Environmental Impact Report (SCH# 2023010091) ("**EIR**") nor addressed in the project's conditions of approval.

The Commission did not address our comments at its March 5, 2024 meeting, so we are requesting the City Council to carefully consider the impacts that the proposed public trail may cause. Instead of repeating the points in our March 5, 2024 letter, we attach a copy of it and

incorporate its contents herein. We stress that El Charro Spur LLC cannot solve this problem itself or it would. El Charro Spur LLC does not have authority to secure the Zone 7 property nor would it be permitted to install fencing or obstructions in the Arroyo Mocho to stop the public from using Zone 7 property to enter the Arroyo Mocho and by extension the ECS Property and mining areas. Zone 7, however, could construct a fence on its property south of the proposed trail which could then connect to the proposed fence south of the trail on the SMP-40 property, thereby preventing public access to the Arroyo Mocho.

To be clear, ECS supports the SMP-40 project and the benefits it brings to the City and the community. The Council should approve the project at its March 25 meeting, but we ask the Council to include a condition of approval requiring the project applicant to work with Zone 7 to ensure that a fence is constructed on the Zone 7 property south of the trail connecting to the fence on the SMP-40 property.

Regards,

Margaret R. Akerblom

Re: Public Comment on SMP-39 and SMP-40 Project
Planning Commission Meeting March 5, 2024

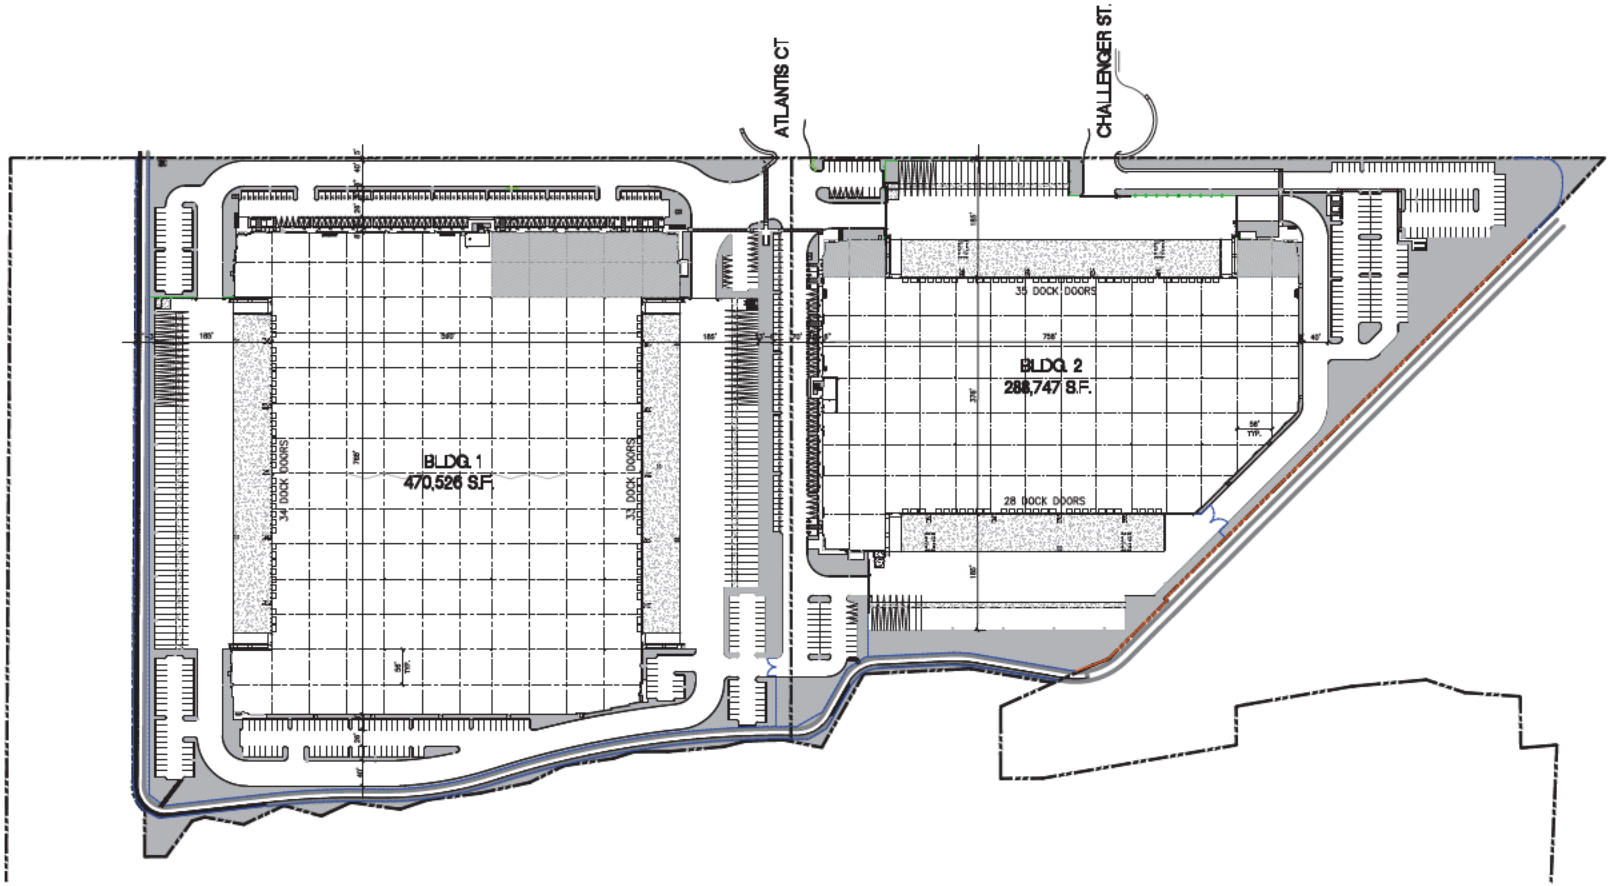
Planning Commission of the City of Livermore:

We represent El Charro Spur LLC, which owns the approximately 69-acre parcel ("**ECS Property**") directly south of and abutting the SMP-40 property, which is the subject of the proposed SMP-39 and SMP-40 project before the Planning Commission on March 5, 2024. On behalf of El Charro Spur LLC, we submit this public comment regarding the SMP-39/SMP-40 project. As explained in more detail below, the SMP-39/SMP-40 project proposes in part to construct a public trail along the Arroyo Mocho that will create a significant health and safety hazard that was not acknowledged or studied in the project's Environmental Impact Report (SCH# 2023010091) ("**EIR**") nor addressed in the project's conditions of approval.

Enclosed with this letter is a copy of Exhibit C to the proposed Development Agreement for SMP-40, which we have annotated for illustrative purposes. Exhibit C depicts that the SMP-39/SMP-40 project will include construction of a public trail running along the southern and western property lines of the SMP-40 property. This proposed public trail on the SMP-40 property proposes to continue at the southeast corner of the SMP-40 property onto the Alameda County Flood Control and Water Conservation District (Zone 7) property abutting the SMP-40 property's eastern property line, proceeding northeasterly, along the course of Zone 7's present maintenance road, which is not currently accessible to the public. Evidently, the proposal entails opening the Zone 7 maintenance road for the public's use as a trail. The proposed public trail would follow the course of the Arroyo Mocho, which passes through the Zone 7 property and along the northern edge of the ECS Property.

Exhibit C indicates that a chain link fence will be constructed along the northern and southern edges of the trail segment on the SMP-40 property. When the trail reaches the Zone 7 property, the northerly fence will connect to an existing Zone 7 fence that lies north of the

maintenance road. However, Exhibit C shows that the southerly fence will simply end at the Zone 7 property. This means that, if the path is constructed as shown in Exhibit C, members of the public using the trail would be able to simply leave the Zone 7 portion of the proposed path and enter the Arroyo Mocho which is immediately adjacent south of the path, without restriction. This in turn would permit members of the public to head west through the Arroyo Mocho onto El Charro Spur's private property without restriction, and further west, access the active mining operations of Vulcan Materials on the properties north and west of the ECS Property. The public cannot currently access these areas because the Zone 7 property, and maintenance road, are fenced off. The annotations on Exhibit C that we have added are intended to show the locations of the ECS Property, Zone 7 property, and mining properties.



Providing the public unfettered direct access to the Arroyo Mocho, private property and an active mining operation, both in the dry months and in the rainy season when it regularly carries high water volumes, are health and safety hazards that must be considered as part of the SMP-39/SMP-40 project. However, the EIR does not address the fact that the proposed trail may be creating this dangerous public safety hazard. The EIR discusses the potential routes for the trail (see, e.g., EIR p. 3-22), but it does not analyze the risk posed by providing public access to the Arroyo Mocho and mining properties to the west nor what safety features the trail would have, such as fencing, to protect members of the public using it. The SMP-40 Development Agreement and the SMP-39/SMP-40 project conditions of approval also do not address how this safety issue will be mitigated. At minimum, the conditions of approval should require the project applicant to work with Zone 7 to ensure that a fence is constructed on the Zone 7 property south of the trail so that the fence south of the path on the SMP-40 property can connect to it. The ECS Property owner and the owner of the mining properties cannot themselves block access to their properties from the proposed public path because they cannot construct obstructions within the Arroyo Mocho. That is why public access must be contained continuously along the path on the Zone 7 property.

We ask that the Planning Commission consider the safety issues raised by this letter when evaluating the SMP-39/SMP-40 project and recommend appropriate conditions and mitigation measures to address them.

Regards,

Margaret R. Akerblom

Sheet: A1.0

THE CITY OF PLEASANTON

March 22, 2024

Marianna Marysheva
City Manager
City of Livermore
1052 S. Livermore Ave
Livermore, CA 94550

Subject: SMP 39 and SMP 40/ Sphere of Influence Amendment and Annexation

Dear Ms. Marysheva:

As you are aware, the City of Livermore is currently processing applications that would include annexation of properties referred to as SMP-39 and SMP-40 into Livermore. SMP-39 is within the City of Pleasanton's SOI, and an amendment to the SOI is also proposed to include this property within Livermore's Sphere. Livermore requested an indication of support for these applications which are to be brought to Alameda County LAFCO for their consideration and approval in the coming months. We have appreciated Livermore's partnership in providing opportunities for Pleasanton's review of the development proposal and CEQA document for the project, and your agreement to not include SMP-38, which lies closest to Pleasanton and is also within our SOI, in the amendment and annexation request.

I am pleased to inform you that at its March 19, 2024 meeting, the Pleasanton City Council reviewed the proposed annexation and SOI amendment, and on a 3-2 vote, indicated its support for the proposal, based on the parcels' location within the Livermore Urban Growth Boundary, contiguous to the City of Livermore and near to available utilities.

In transmitting the City Council's vote of support, I did want to note that a member of the public spoke at the meeting to raise concerns about preservation of an urban separator between Livermore and Pleasanton; members of the City Council noted this same concern and expressed further concerns about potential for Livermore Airport uses to expand into the newly-annexed area. While we understand no such proposal is currently under consideration by Livermore, as you are aware, airport uses and expansion are of significant concern to the City Council and the Pleasanton community, and as such, the City of Pleasanton would strongly oppose any proposal in that regard.

Deputy City Clerk

Approved by:

Marianna Marysheva
City Manager

Fiscal Review by:

Tina Olson
Administrative Services Director

March 25,2024

To City Council Members:

Why don't we have unleaded aviation fuel at Livermore Airport (LVK) ? What is causing the delays? This is an URGENT public health and safety issue. The negative impacts of lead in humans, especially children and the elderly, are well-documented. A 4 year old who lived near LVK tested positive for lead in his bloodstream. We need to act now.

At least 10 municipal airports in CA and 35 airports nationwide offer UL 94; Hayward,the only other municipal airport in Alameda County, has two FBOs and both offer UL 94. How did all of these airports obtain UL 94 before us? Why are we last??

The City Manger says the BAAQMD still requires a 30 day comment period but this can be waived for health issues that exist at LVK.
It is critical for the City Council to directly email Ms.Becky Yu at BAAQMD and ask to have the permit fast-tracked.
Start selling UL 94 in the existing 1,000 gallon fuel tank.
The City can separate the fuel contract with the current Fixed Based Operator (FBO) and require the FBO to sell unleaded av fuel.

Please provide updates concerning GAMI 100, a "drop in" av fuel that can be used in any tank or aircraft.

In March 2024, the FAA certified and authorized the sale of unleaded GAMI 100 UL for piston engine aircraft

The City says on Facebook and Next Door that staff is working to get unleaded fuel and is in **Contact** with GAMI ---
but the City does NOT provide the public with any concrete steps
Could you please verify if Livermore is in negotiations with GAMI distributors to receive G100UL?

The timeline to transition to unleaded aviation fuel must be accelerated. The City Council should complete the following steps:
1 Require the FBO to initiate a contract with G100 UL distributors in CA
2 The City will recoup $200,000 from Elevation LVK cafe ; (5.5 on tonight's consent calendar);consider using this money to buy a 8,500 hundred gallon tank for G100UL

The benefits of offering unleaded fuel will 1) reduce the lead poisoning of residents and 2) allow piston aircraft to continue to have a future at LVK.

Please agendize updates on getting unleaded fuel at the next City Council meeting.

Sincerely,
Donna Cabanne Donna Cabanne

RE: City of Livermore's SMP 39 and 40 Project (Agenda Item 6.3)

Dear Mayor Marchand, Vice Mayor Carling, and Honorable Councilmembers,

On behalf of "**Carpenters Local 713**", my Office is submitting these comments for the City of Livermore's ("**City**") March 25, 2024, City Council Meeting regarding Agenda Item 6.3: SMP 39 and 40 Project ("**Project**").

According to the Final Environmental Impact Report ("**FEIR**"), the Project seeks to develop two parcels, SMP 39 and SMP 40. For SMP 39, the proposed project would include development of a total of up to six light industrial buildings, consisting of up to approximately 755,500 square feet (sf) of new building space, and associated internal roadways and other improvements. For SMP 40, the proposed project would include development of two industrial buildings consisting of up to 759,275 sf of new building space with related internal roadways and other improvements. (FEIR, pg. 3-7).

Carpenters Local 713 is a labor union representing union carpenters in Alameda County that has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Local 713 members live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

Carpenters Local 713 expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

Carpenters Local 713 incorporates by reference all comments related to the Project or its CEQA review, including the Environmental Impact Report. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, Carpenters Local 713 requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using local workers who have graduated from a Joint Labor-Management Apprenticeship Program and make a commitment to hiring a local workforce.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.[1]

[1] See March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling, included in previous comment letters submitted by Local 713.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

> [L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[2]

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.[3]

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.[4]

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT

---

[2] California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf.

[3] South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10.

[4] California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf

reductions given that the skill requirements of available local jobs must match those held by local residents.[5] Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 ("**AB2011**"). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations ("**CEQA Guidelines**"), § 15002, subd.

[5] Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf.

(a)(1).[6] At its core, its purpose is to "inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made." *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

B. CEQA Requires Subsequent or Supplemental Environmental Review When Substantial Changes or New Information Comes to Light

Section 21092.1 of the California Public Resources Code requires that "[w]hen significant new information is added to an environmental impact report after notice has been given pursuant to Section 21092 … but prior to certification, the public agency shall give notice again pursuant to Section 21092, and consult again pursuant to Sections 21104 and 21153 before certifying the environmental impact report" in order to give the public a chance to review and comment upon the information. (CEQA Guidelines § 15088.5.)

Significant new information includes "changes in the project or environmental setting as well as additional data or other information" that "deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative)." (CEQA Guidelines § 15088.5(a).) Examples of significant new information requiring recirculation include "new significant environmental impacts from the project or from a new mitigation measure," "substantial increase in the severity of an environmental impact," "feasible project alternative or mitigation measure considerably different from others previously analyzed" as well as when "the draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded." (*Id.*)

An agency has an obligation to recirculate an environmental impact report for public notice and comment due to "significant new information" regardless of whether the agency opts to include it in a project's environmental impact report. (*Cadiz Land Co. v. Rail Cycle* (2000) 83 Cal.App.4th 74, 95 [finding that in light of a new expert report disclosing potentially significant impacts to groundwater supply "the EIR should have been revised and recirculated for purposes of informing the public and governmental

[6] The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given "great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous." *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

agencies of the volume of groundwater at risk and to allow the public and governmental agencies to respond to such information."].) If significant new information was brought to the attention of an agency prior to certification, an agency is required to revise and recirculate that information as part of the environmental impact report.

1. The Severity of the Predicted Noise Impact has Increased for On-Site Construction Operations.

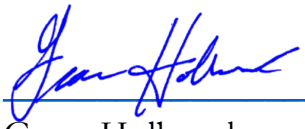
The DEIR found that there would be a significant noise impact during the construction phase at the ***off-site*** trail location. The March 4, 2024, Updated Noise Study ("**Exhibit A**") identified significant ***on-site*** noise impacts during the construction phase at the SMP 40 location. This resulted in a substantial change to the findings of the noise impact as sensitive residential users would now be exposed to excessive noise and the noise level would exceed the limits set by the City's Noise Ordinance and the General Plan Noise Objectives N-1.1 and N-1.5.

2. A New Mitigation Measure was Implemented.

A new mitigation measure was added to the FEIR in response to inadequacies of the original noise study. In the previous iteration of the FEIR, the sensitive users near SMP 40 were not expected to face significant noise impacts during the construction phase. Mitigation measure 4.6-1(a) was introduced to mitigate the significant noise impact the on-site construction at SMP 40 would have on nearby sensitive users.

3. The DEIR Noise Analysis was Fundamentally Conclusory and Inadequate.

The DEIR was fundamentally inadequate and conclusory in relation to the noise impacts stemming from the Project. Indeed, the DEIR failed to analyze the noise impacts for SMP 39, stating that "[d]ue to the substantial distance between SMP 39 and the sensitive noise receptors, . . . construction noise levels for SMP 39 were not evaluated as part of the Environmental Noise Study prepared for SMP 39." (DEIR, pg. 4.6-21).



Further, the analysis for SMP 40's noise impacts was wholly inadequate, as the updated study now shows the construction phase of the Project will produce significant noise impacts on nearby residences and will exceed the City's Noise Ordinance and the General Plan Noise Objectives.

These significant changes to the noise impacts require revision and recirculation of the FEIR.

III. CONCLUSION

Based on the foregoing, the City should adopt the FEIR until the significant changes are incorporated into a revised and recirculated document. Adopting the FEIR as-is would result in a clear violation of CEQA. If the City has any questions, please feel free to contact my Office.

Sincerely,

Grace Holbrook
Attorneys for Carpenters Local 713

Salter Project 21-0471

INTRODUCTION

This report summarizes our study of environmental noise of the proposed project (Livermore Oaks Business Park SMP-40) on nearby land uses. The project site is west of Isabel Avenue (State Highway 84), north of Stanley Boulevard, and south of Discovery Drive in Livermore, California. The purpose of the study was to determine whether estimated activity noise and construction noise from the proposed facility will meet the relevant requirements of the City General Plan Noise Element and Noise Ordinance at adjacent land uses.

EXECUTIVE SUMMARY

- Noise from the project's loading docks, future intra-project vehicle traffic, and likely HVAC equipment will increase CNEL[1] or DNL[2] noise levels at noise-sensitive receiver locations at most by 3 dB. An increase of 3 dB or less DNL is not expected to be noticeable and is not considered significant.
- Noise from project-created traffic would not result in a significant increase in noise levels on Isabel Avenue at adjacent properties.
- Temporary construction noise will exceed the City's Noise Ordinance and will need mitigation measures not to exceed the criteria established by General Plan Noise Objectives N-1.1 and N-1.5.

REPORT ORGANIZATION

This report is organized into the following sections:

- Project Site
- Acoustical Criteria
- Existing Noise Environment
- Noise Impact Assessment
  - Construction Noise
  - Loading Dock and Intra-Project Traffic Noise (Parking Lot)
  - Tenant HVAC Equipment Noise

[1] Community Noise Equivalent Level (CNEL) – A descriptor for the 24-hour A-weighted average noise level. The CNEL concept accounts for the increased acoustical sensitivity of people to noise during the evening and nighttime hours. Sound levels during the hours from 7 pm to 10 pm are penalized 5 dB; sound levels during the hours from 10 pm to 7 am are penalized 10 dB. A 10-dB increase in sound level is perceived by people to be a doubling of loudness.

[2] Day-Night Average Sound Level (DNL) – A descriptor established by the U.S. Environmental Protection Agency to describe the average day-night level with a penalty applied to noise occurring during the nighttime hours (10 pm - 7 am) to account for the increased sensitivity of people during sleeping hours. Also noted as Ldn. The difference between CNEL and DNL is often less than 1 dB.

PROJECT SITE

The proposed project will have a total area of approximately 40 acres, west of Isabel Avenue (State Highway 84) and between Stanley Boulevard and Discovery Drive in the City of Livermore. Warehouse Building 1 will be about 470,350 square feet with 68 loading docks, while Building 2 will be 288,750 square feet with 62 loading docks. The site is adjacent to existing industrially zoned warehouse facilities with loading docks to the north. Noise-sensitive residential receivers are located across Isabel Avenue to the east about 1,785-feet away from Building 1, and 600-feet away the northeast corner of the SMP-40 site. Two berms have been incorporated on the project site: a 6-foot by 125-foot landscape berm on the Northeast corner of the project property line, and a 10-foot by 60-foot screening wall east of Building 2's southern loading docks.

ACOUSTICAL CRITERIA

The following are project criteria and/or guidelines per the City of Livermore and State of California.

City of Livermore 2003-2025 General Plan Noise Element

Policy P4, Objective N-1.1

The Noise Element of the Livermore General Plan (Chapter 9, Policy P4 of Objective N-1.1) contains land use compatibility guidelines for environmental noise in the community. Table 1, below, summarizes these guidelines for residential and industrial land uses[3] in terms of CNEL or DNL. The definitions of each land use category follow below the table.

Table 1: Summary of Table 9-7 – Land Use Compatibility Guidelines for Community Noise CNEL or DNL, dB

Land Use Category	Normally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable
Residential Low-Density[4], Single-family, Duplex, Mobile Homes	≤60	55-70	70-75	>75
Industrial, Manufacturing, Utilities, Agricultural	≤75	70-80	>75	--

[3] Table 9-7 of the Noise Element, page 9-27.

[4] Per General Plan Noise Ordinance Objective N-1.4, Policy P4, the criterion for single-family residential back yards is 60 dB CNEL/DNL.

Normally Acceptable: *If the noise level is within the "normally acceptable" level, noise exposure would be acceptable for the intended land use. Development may occur without requiring an evaluation of the noise environment unless the use could generate noise impacts on adjacent uses.*

Conditionally Acceptable: *If the noise level is within the "conditionally acceptable" level, noise exposure would be conditionally acceptable; a specified land use may be permitted only after detailed analysis of the noise environment and the project characteristics to determine whether noise insulation or protection features are required. Such noise insulation features may include measures to protect noise-sensitive outdoor activity areas (e.g., at residences, schools, or parks) or may include building sound insulation treatments such as sound-rated windows to protect interior spaces in sensitive receptors.*

Normally Unacceptable: *If the noise level is within the "normally unacceptable" level, analysis and mitigation are required. Development should generally not be undertaken unless adequate noise mitigation options have been analyzed and appropriate mitigations incorporated into the project to reduce the exposure of people to unacceptable noise levels.*

Clearly Unacceptable: *New construction should not be undertaken unless all feasible noise mitigation options have been analyzed and appropriate mitigation incorporated into the project to adequately reduce exposure of people to unacceptable noise levels.*

Noise Element Objective N-1.5

Objective N-1.5 seeks to reduce the level of noise generated by "stationary mechanical and other noise-generating equipment". Policy P1 states that "the City shall require that industrial and commercial uses be designed and operated to avoid the generation of noise effects on surrounding land uses from exceeding the following noise levels for exterior environments, operating longer than half an hour per hour:

- 55 dBA[5] L50[6] (7:00am to 10:00pm)
- 45 dBA L50 (10:00pm to 7:00am)

Policy P2 allows short-term events to have levels louder than those cited above. For events that occur less than 15 minutes per hour, levels can be increased by 5 dBA; events no more than 5 minutes per hour are allowed an additional 10 dBA, and those taking place one minute or less per hour are allowed an additional 15 dBA.

[5] A-Weighted Sound Level – The A-weighted sound pressure level, expressed in decibels (dB). Sometimes the unit of sound level is written as dB(A). A weighting is a standard weighting that accounts for the sensitivity of human hearing to the range of audible frequencies. People perceive a 10 dB increase in sound level to be twice as loud.

[6] L50 – The noise level exceeded 50% of the time. For a discussion of environmental acoustics, please refer to Appendix A.

Policy P4 allows an exemption from Policy P1 for motor vehicles on public streets between the hours of 7:00am and 8:00pm. We understand that Policies P1, P2, and P4 could apply to the noise from backup alarms (aka "beepers" or "squawkers").

Objective N-1.5 specifically describes "stationary source noises", so when referring to L_{50} noise levels we analyzed the noise of trucks that are expected to sit in the loading dock area, estimated to be at least 1,025 feet from the nearest residence.

Policy P3 establishes instantaneous maximum noise levels allowed (Lmax[7]) of 70 dBA during the day and 60 dBA during the night.

California Department of Transportation (CalTrans) Construction Vibration Criteria

The California Department of Transportation[8] (DOT) provides vibration guidelines for two scenarios: human perception and construction damage. These tables are included below as guidelines for potential project vibration levels. "Transient" vibrations are classified as impulsive events that are short in duration (e.g., debris falling, blasting). "Continuous" vibrations are more sustained vibration events over longer periods of time (e.g., jackhammering, drilling). Table 2 describes the human response to different levels of ground-borne vibration for transient and continuous events.

Table 2: Guideline Vibration Annoyance Potential Threshold Criteria[9]

Human Response	Maximum PPV[10] (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Barely perceptible	0.04	0.01
Distinctly perceptible	0.25	0.04
Strongly perceptible	0.90	0.10
Severe	2.00	0.40

7 L_{max} (Maximum Sound Level) – The maximum sound level for a specified measurement period of time as defined in ASTM E1686.

8 Transportation and Construction Vibration Guidance Manual September 2013 (DOT Document).

9 This is Table 20 from the DOT document.

10 (PPV): Peak Particle Velocity.

Table 3 provides a guideline for vibration criteria to assess the damage potential from ground vibration induced by construction equipment. Thresholds for continuous vibrations are lower than those for transient vibrations and are therefore considered more "conservative". These are standard significance thresholds used in the industry to determine impacts of ground borne vibrations on structures.

Table 3: Guideline Vibration Damage Potential Threshold Criteria[11]

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.20	0.10
Historic and some old buildings	0.50	0.25
Older residential structures	0.50	0.30
New residential structures	1.00	0.50
Modern industrial/commercial buildings	2.00	0.50

The immediate adjacent properties are all modern industrial or commercial buildings. Across Isabel Avenue/Highway 84 to the east are existing single-family residences. Based on Table 3, we have applied the more stringent residential criteria of 1.0 PPV for transient events and 0.50 PPV for continuous events.

State of California CEQA Guidelines and Impact Criteria

The California Environmental Quality Act (CEQA) contains guidelines that evaluate the significance of noise attributable to a proposed project. This would include (but is not limited to) added traffic noise, mechanical equipment noise, and construction noise. CEQA asks the following applicable questions. Would the project result in:

1. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
2. Generation of excessive ground borne vibration or ground borne noise levels?
3. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public-use airport, would the project expose people residing or working in the project area to excessive noise levels?

11 This is Table 19 of the DOT document.

CEQA does not define the noise level increase that is considered "substantial". Typically, the local general plan would establish limits with respect to allowable noise and vibration increases. However, the City of Livermore General Plan does not contain numerical standards of significance for noise increases. For the items above, noise level increases of 3 dBA or less are generally considered less-than-significant. Substantial adverse community response would be expected only for increases of 5 dBA or more.

EXISTING NOISE ENVIRONMENT

Project Site Description

To quantify the existing site noise environment, two monitors continuously measured noise levels along the project property lines to the north and east between 2 and 4 November 2021. Table 4 summarizes measured data and Figure 1, attached, shows the approximate measurement locations. Locations were selected based not only on project setbacks but also on what nearby locations were accessible via public rights-of-way.

Table 4: Measured Environmental Noise Levels

Site	Location	Measured DNL (dBA)
LT-1	Business Park, approximately 10-feet above grade	65
LT-2	Arroyo Bike Trail, approximately 10-feet above grade	67

Site Noise Context

Noise measurements at the project site (see Figure 1), collected data from vehicle pass-bys on nearby roads. Measured on-site noise levels were DNL 65 dB and 67 dB at the project site (see Figure 1). LT-1 was placed near the nearest existing warehouse across from residences, and LT-2 was placed on the closest accessible utility pole across from residences. Adjustments were made, as appropriate, to estimate the change in noise levels from the long-term monitor location to the locations of the nearest residences east of Isabel Avenue.

We have combined cumulative existing and future noise sources that would result from the project's completion. Future project sources include the proposed loading dock noise, rooftop HVAC equipment, parking areas, and estimated traffic contribution, while the existing noise sources are the existing traffic. Adding expected noise contribution to the existing noise environment logarithmically would result in a noise level of approximately DNL 67 dB from all contributing noise sources upon the project's completion.

DNL 29[a] dB [Future HVAC] + DNL 29[b] dB [employee lot] + DNL 52 [c] dB [trucks] = DNL 52 [d] dB [future noise level at receivers]

a = cumulative building rooftop HVAC noise
b = employee parking lot noise
c = truck noise at loading docks

d = cumulative future project sources

DNL 67[e] dB [existing traffic] + DNL 52[e] dB [combined future sources] = DNL 67[f] dB [future noise level at receivers]

e = measured at project site, see **Figure 1**
e = determined from loading docks + HVAC noise + parking lots
f = calculated

See Appendix A for additional information on decibel mathematics.

NOISE IMPACT ASSESSMENT ANALYSIS

We evaluated the following noise sources from the proposed project on the surrounding environment:

- Potential rooftop mechanical equipment noise
- Short-term construction noise and vibration
- Project-related traffic increases

We have drawn the following conclusions from the analysis:

The following summarizes the portion of the CEQA checklist pertaining to noise.

Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

A: Permanent Increase in Noise Levels due to Project-Generated Noise

The owner anticipates that tenant office spaces located on the corners of each building will be mechanically ventilated with typical 5-ton package units located above the offices in each corner of each building. No other outdoor mechanical equipment has been specified at this time. Specific equipment will be confirmed during the design phase.

Preliminary sound power level data has been provided for these 5-ton outdoor package fan units indicating that combined noise from these units sums to approximately DNL 29 dB at the nearest property lines. This assumes 24-hour operation of this equipment (in line with the operation hours of the building). The rooftop parapet is assumed to provide acoustical shielding to nearby neighbors because they would break line-of-sight to the nearest receivers.

Depending on the final equipment placement, as well as any specific parapets, barriers, and shielding provided by buildings (which would reduce noise levels at the property lines), noise levels may vary. We do not expect the noise contribution to be significant in these aspects.

B: Predicted Permanent Increase in Noise Levels due Project Traffic Volumes

It has been communicated by the team that the projected truck trips per day will be approximately as shown below in Table 5.

Table 5: SMP-40 Truck Trips

Hour	Percent	ITE Trips
7 – 9 AM	9.4%	20
9 AM – 4 PM	42.7%	91
4 – 6 PM	12.7%	27
6 – 10 PM	16.4%	35
10 PM – 7 AM	18.8%	40
Total	100 %	213

Overall, the project would result in a net increase in daily trips by 213, amounting to an overall traffic noise DNL increase of approximately 2 dB. Therefore, this would not result in a significant increase in noise levels at existing adjacent properties.

C: Temporary Increase in Noise Levels due to Construction

Construction activities will likely include the use of heavy equipment for grading and other activities, through completion of buildings and landscaping. Heavy trucks would travel to, from, and within the site hauling soil, equipment, and building materials. Smaller equipment, such as jackhammers, pneumatic tools, and saws could also be used throughout the demolition and construction phases in various areas. The noise and vibration associated with these activities would be generated within the entire project area.

Based on our experience with similar projects' construction methods and phasing, our preliminary understanding and assumptions of expected equipment is shown in Table 6. Reference levels for construction equipment are listed in Table 7, both at the reference distance of 50-feet and at 600-feet, which is the closest distance between the project and the residences across Isabel Avenue.

Table 6: List of Typical Construction Equipment and Phasing

Phase	Equipment
Demolition	Concrete/Industrial Saws, Excavators, Rubber-Tired Dozers, Tractors/Loaders/Backhoes
Site Preparation	Graders, Rubber-Tired Dozers, Tractors/Loaders/Backhoes
Grading/Excavation	Excavators, Drill Rig for Shoring Beams (Caisson Drilling), Rubber-Tired Dozers, Tractors/Loaders/Backhoes
Trenching	Tractor/Loader/Backhoe, Excavators
Building Exterior	Cranes, Forklifts, Generator Sets, Tractors/Loaders/Backhoes, Welders
Building Interior/ Architectural Coating	Air Compressors, Aerial Lift
Paving/Landscaping/ Site Concrete	Cement and Mortar Mixers, Paving Equipment, Rollers, Tractors/Loaders/Backhoes

Table 7: Construction Equipment Reference Noise Levels[12]

Typical Equipment	Estimated Maximum Instantaneous L_{max}[13] Noise Level (dBA at 50 feet)	Estimated Maximum Instantaneous L_{max} Noise Level (dBA at 600 feet)
Aerial Lift	83	61
Air Compressors	81	59
Cement and Mortar Mixers	85	63
Concrete/Industrial Saws	76	54
Cranes	83	61
Drill Rig for Shoring Beams (Caisson Drilling)	85	63
Excavators	85	63
Forklifts	83	61
Generator Sets	81	59
Graders	85	63
Paving Equipment	89	67
Rollers	74	52
Rubber-Tired Dozers	85	63
Tractors/Loaders/Backhoes	84	62
Welders	73	51

Actual construction noise levels will vary based on distance to each piece of equipment or work area from the receiver and shielding from adjacent buildings and construction elements. It should be noted that construction activities are prohibited during the specific time period outlined in Section 9.36.080 of the City's Municipal Code. Section 9.36.080 is as follows:

12 Equipment noise levels at 50-feet are from Section 9, Federal Highway Administration Highway Traffic Noise Construction Noise Handbook (August 2006) and Table 12-2, Transit Noise and Vibration Impact Assessment, United States Department of Transportation, Office of Planning and Environment, Federal Transit Administration, May 2006.

13 L_{max} (Maximum Sound Level) – The maximum sound level for a specified measurement period of time as defined in ASTM E1686.

Section 9.36.080 Hammers, pile drivers, pneumatic tools and similar equipment

The operation between the hours of 6:00 p.m. Saturday to 7:00 a.m. Monday; 8:00 p.m. to 7:00 a.m. on Monday, Tuesday, Wednesday and Thursdays; 8:00 p.m. Friday to 9:00 a.m. on Saturday or at all on city-observed holidays of any pile driver, pneumatic tools, derrick, electric hoist, sandblaster or other equipment used in construction, demolition or other repair work, the use of which is attended by loud or unusual noise, is prohibited. (Ord. 1672 § 2, 2002; Ord. 1128 § 2, 1983; 1960 code § 13B.3(f))

Construction Equipment Schedule

We received the following equipment schedule that CalEEMod utilized for their model for air quality emissions. Table 8 below summarizes the equipment and associated sound levels at the nearest residential property (approximately 600 feet away).

Table 8: Construction Equipment Schedule

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Resulting DNL	Resulting Lmax
Grading	Excavators	2	8	67	66
Grading	Graders	1	8	67	63
Grading	Rubber Tired Dozers	1	8	67	63
Grading	Scrapers	2	8	67	66
Grading	Tractors/Loaders/Backhoes	2	8	67	65
Total Grading Phase	**All Equipment Running Simultaneously**			**70**	**72**
Paving	Pavers	2	8	69	70
Paving	Paving Equipment	2	8	69	70
Paving	Rollers	2	8	66	55
Total Paving Phase	**All Equipment Running Simultaneously**			**70**	**73**
Building Construction	Cranes	1	7	67	61
Building Construction	Forklift	3	8	67	66
Building Construction	Generator Sets	1	8	67	59
Building Construction	Tractors/Loaders/Backhoes	3	7	68	67
Building Construction	Welders	1	8	66	51
Total Building Construction	**All Equipment Running Simultaneously**			**69**	**70**
Architectural Coating	Air Compressors	1	8	67	59

It should be noted that the DNL was calculated using daytime construction noise levels for daytime hours for the listed hours of operation and measured nighttime hours from existing traffic. Despite restrictions of nighttime construction activities, from the noise levels shown above in Table 8, it could be possible to exceed the General Plan Objectives as follows:

Objective N-1.5 P3

- As shown above in Table 8, with all the phases running construction equipment as intended, the resulting Lmax would range between 70 and 73 dBA. Since construction is not permitted during nighttime hours, only the daytime Lmax criterion of 70 dBA would be applicable and would not be met. Therefore, it will be necessary to implement the mitigation measures shown below.

Due to these possibilities, the following is a list of measures that are required to be adopted by the contractor to reduce the impact of construction noise on neighbors:

1. Consistent with the Livermore Municipal Code, construction will be limited to weekdays between the hours of 7:00 a.m. and 8:00 p.m. and Saturdays through Sunday between the hours of 9:00 a.m. and 6:00 p.m.
2. There are residences located approximately 600 feet from the project site. Thus, to help reduce the impact of noise construction, it will be necessary that a barrier be built prior to the planned permanent 10-foot tall berm on the east side of the project. If this is not feasible, we recommend building the planned permanent 10-foot tall berm before construction activities. This will be necessary to reduce construction noise impacts on the residences. The barrier/berm should be 10 feet tall. This would help reduce the construction noise impacts on the residences by approximately 10 dB.
3. The barrier can be field-built provided they meet the following criteria:
    a. Minimum surface density of 4 psf.

       Many constructions could meet the surface density requirement. For example, a stud wall with exterior-grade plywood sheathing and a stucco finish (or two layers of 5/8-inch thick plywood) would meet this requirement.

    b. The barrier should be free of cracks and drainage holes/slots along the bottom of the barrier be kept to a minimum. Where needed, they should be covered by 1 psf mass-loaded vinyl flaps (e.g., Kinetics KNM-100) so water can flow around the vinyl and still drain.

    c. Joints between sheathing layers be offset by 16 inches minimum.
4. Contractors shall utilize “quiet” models of air compressors and other stationary noise sources where technology exists.
5. Internal combustion engine-driven equipment shall be equipped with mufflers which are in good condition and appropriate for the equipment.

6. Stationary noise-generating equipment, such as air compressors and portable power generators, shall be located as far away as possible from adjacent property lines.
7. Staging areas and construction material areas shall be located as far away as feasible from adjacent residences.
8. All unnecessary idling of internal combustion engines should be prohibited.
9. The contractor should designate a "noise disturbance construction superintendent" who will be responsible for tracking and responding to any complaints about construction noise. The noise disturbance construction superintendent will determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and will require that reasonable measures are implemented to correct the problem. The telephone number for the noise disturbance construction superintendent will be posted at the construction site and included in any construction notices sent to neighbors.

Would the project result in generation of excessive ground-borne vibration or ground-borne noise levels?

A: Permanent Increase in Vibration Levels due to Project-Generated Vibration

The planned use for the site, as warehouse buildings, is not expected to generate significant amounts of ground-borne noise or vibration.

B: Temporary Increase in Vibration Levels due to Construction

The nearest and most sensitive adjacent receivers include residences to the east approximately 500 feet from the closest area of construction on the project site. Industrial-zoned parcels to the north are assumed to be less sensitive.

Project construction may include activities such as the use of concrete saws, excavation and grading, and the use of rolling stock equipment (tracked vehicles, compactors, etc.). Typical construction vibration levels at 50-feet are listed in Table 9, below. Most of the construction will occur set back from the property line. As indicated in the criteria section above, the risk of damage to nearby structures may begin to occur at a limit of 1.0 in/sec PPV for transient vibration events and 0.50 PPV for continuous events.

Table 9: Example Construction Vibration Levels[14]

Equipment	PPV at 50 ft. (in/sec)[15]
Vibratory Roller	0.049
Hydraulic Breaker	0.03 to 0.08
Large Bulldozer	0.03
Loaded Trucks	0.03
Excavator	0.03
Caisson/pier drilling	0.03
Jackhammer	0.01
Small Bulldozer	0.001
Crane, Forklift, Bobcat	No significant vibration

Based on the vibration levels shown in Table 9, construction equipment is not expected to cause structural damage to adjacent properties because project construction is not expected to exceed the thresholds for new residential buildings or commercial/industrial structures as shown above in Table 3. Ground-borne noise would also not be expected to be significant at these vibration levels.

FUTURE LOADING DOCK AND INTRA-PROJECT TRAFFIC NOISE

Future Loading Dock Calculation Methodology

Operational noise from the proposed facility is expected to consist primarily of tractor-trailers accessing loading dock areas. To estimate truck noise at the proposed facility, we referenced recently measured noise levels at a local distribution facility which involved semi-trucks similar in size to those that are expected to access the proposed project's facility.

Calculations for resulting noise levels due to on-site truck and car trip generation durations and activities were based on the measurements at this local distribution facility with ancillary information provided to us for that project on 15 February 2018 and 20 December 2023.

Based on the assumptions described below, estimated noise levels were then compared to applicable criteria to determine if noise from the proposed facility would exceed the City's noise goals (described above) at adjacent residences.

14 Table 12-2, Transit Noise and Vibration Impact Assessment, United States Department of Transportation, Office of Planning and Environment, Federal Transit Administration, May 2006.

15 Using a value of n = 1.5 per FTA recommendation, where n is the attenuation rate through the ground

Traffic volumes produced by the proposed project were provided by TJKM in December 2023. Their study estimated that a total of 213 truck trips[16] would occur at the facilities throughout the 24 hours of operation. Overton Moore Properties provided further details about the potentially likely distribution of those trucks each hour throughout the 24-hour operation period.

Intra-Project Traffic Analysis Methodology

Intra-project traffic noise will consist of traffic noise associated with future warehouse employee vehicles within the designated parking lots. To estimate vehicle noise at the employee parking lots, we referenced the TJKM provided traffic volumes for the proposed project.

Noise Source Analysis and Assumptions

Future Loading Docks

Our analysis estimated future noise from the facility based on the following assumptions discussed with the client via email, and per the overall site plan:

1. Trucks will enter and exit the site from Atlantis Court and Challenger Street, from the north (via Discovery Drive).
2. Non-truck noises associated with loading/unloading activity (i.e., forklifts, rolling doors, carts, pallet crushing, items dropping), are assumed to be located near the dock doors and are included in our analysis.
3. An average truck trip (not including unloading/loading) is estimated to last for a cumulative period of about 2 minutes and be at least 1025 feet from the nearest residential property line.
4. Trucks occupy the loading dock in their loading area that is nearest to noise-sensitive receiver (Residents across Isabel Avenue, to the east of the building).
5. Total number of loading docks: 130 (68 in Building 1 and 62 in Building 2)
6. Number and distribution of truck trips is based on TJKM's traffic study estimate, with approximately 213 total truck trips per 24-hour period (continuous 24/7 operation) distributed as follows:
    - AM Peak is 7-9 AM – 9.4%
    - 9-4 PM – 42.7%
    - PM Peak is 4 PM - 6 PM – 12.7%
    - 6 PM - 10 PM – 16.4%
    - 10 PM - 7 AM – 18.8%

[16] Email correspondence provided on 12/20/23 confirmed the 213 daily truck trips as 20% of total vehicle trips based in ITE data (TJKM Study)

7. Building 2 provides substantial acoustical shielding for most of Building 1 and its operations to the eastern residents. Because of this, Building 1 is not expected to have a meaningful impact on the residential receivers' sound environment to the east.
8. Loading docks in Building 2 are located on the north and south facades, configured to maintain the maximum possible distance away from the residential area to the east.
9. North-facing docks of Building 2 will have a direct line-of-sight to the warehouse to the north. We assume that some shielding is provided by the perpendicular orientation of the docks of Building 1, which would slightly reduce our overall calculated noise contribution of the loading docks to the northern warehouse receivers because of the partial line-of-sight.
10. 24-hour operation assumed.
11. Loading docks not in use on each building have closed doors.
12. A typical truck "trip" consists of the following events (estimated sound levels based on aforementioned measurements at similar facilities):
    a. Truck passby (arrival, departure at slow speed): 69 dBA at 30 feet
    b. Truck airbrakes: 72 dBA at 25 feet
    c. Truck backup alarm: 79 dBA at 30 feet
    d. Brief idle before engine shutoff: 70 dBA at 25 feet
    e. Truck engine ignition and airbrakes: 71 dBA at 25 feet
    f. Truck accelerating from stop: 74 dBA at 25 feet
    g. Truck noise source reference heights[17] (above grade)
        i. Passby, brief idle, acceleration, and ignition: 8 feet
        ii. Back-up beeper and airbrake: 2.5 feet
        iii. Topographical site analysis included in Section C3.1 of the Grading and Drainage Plan show potential terrain shielding of about three feet between the dock elevation and receivers to the east of Isabel Avenue

Intra-Project Traffic Noise

Our analysis estimated future noise from the facility parking lots is based on the following assumptions:

1. Employees will enter and exit the site from Atlantis Court and Challenger Street, from the north (via Discovery Drive).
2. Once on site, vehicles will move at 15 miles per hour or less.
3. Vehicles will be spread out evenly amongst the seven parking areas.

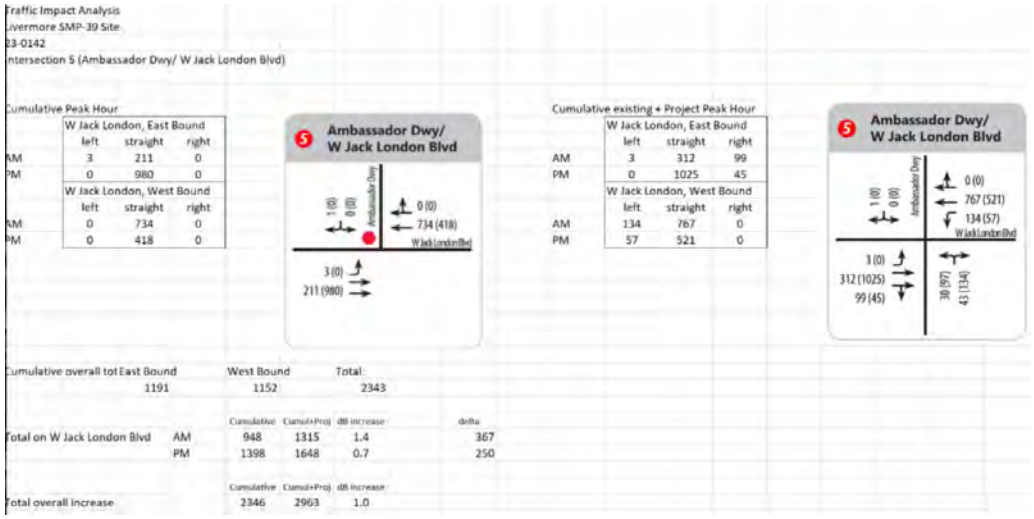
[17] Truck source heights excerpted from Caltrans Technical Noise Supplement document (TeNS) document dated October 1998.

4. An average vehicle trip is estimated to last for a cumulative period of about 2 minutes and be at least 550 feet from the nearest residential property line.
5. Similar proportional percentages were assumed for vehicle trips in the project parking lots as were the truck trips, as shown in the distribution below.
    - AM Peak is 7 AM - 9 AM- 9.4%
    - 9 AM – 4 PM -42.7%
    - PM Peak is 4 PM -6 PM -12.7%
    - 7 PM - 10 PM 16.4%
    - 10 PM - 7 AM 18.8%

Estimated Future Noise Levels

Future Average Noise Levels (CNEL/DNL)

We estimated noise levels at local receptors from the sources described in the previous section. To account for future increases in local traffic noise levels (growth in traffic on Isabel Avenue and other local roadways), we added 1 dB DNL to the measured levels[18] (see Table 4 above).



We calculated the acoustical impact of project traffic increase due to both projects SMP-39 and SMP-40 with the provided peak hour traffic volumes for the cumulative without project and cumulative with project scenarios. The analysis used the FHWA-RD-77-108 traffic noise calculation model. The figures below show the various calculations for the intersections of interest (i.e., 5, 9, 10, and 11) as provided to us via the traffic volume study developed for both SMP-39 and SMP-40.

Figure A: Intersection Map Legend

[18] The California Department of Transportation assumes a traffic volume increase of three-percent per year, which corresponds to a 1 dBA increase in DNL over a ten-year period.

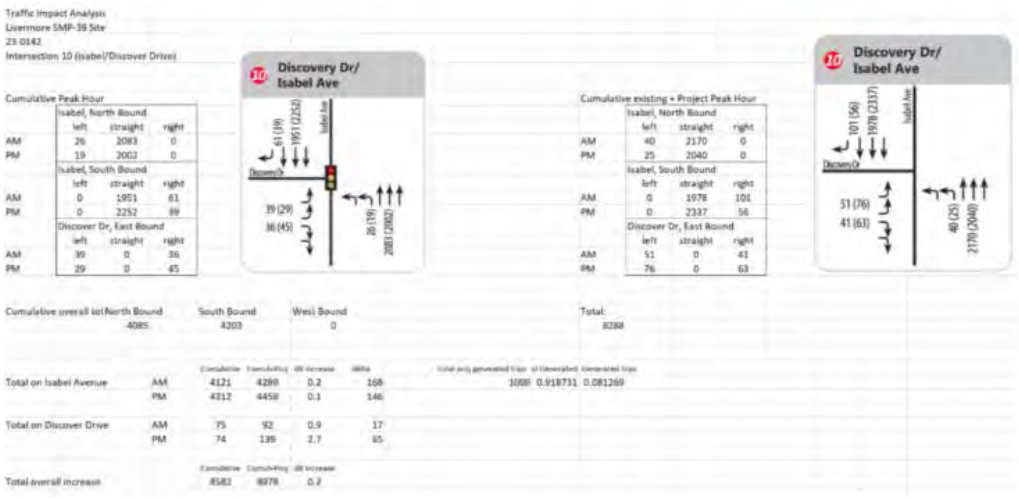
Figure D: Traffic Volume Analysis for Intersection 10



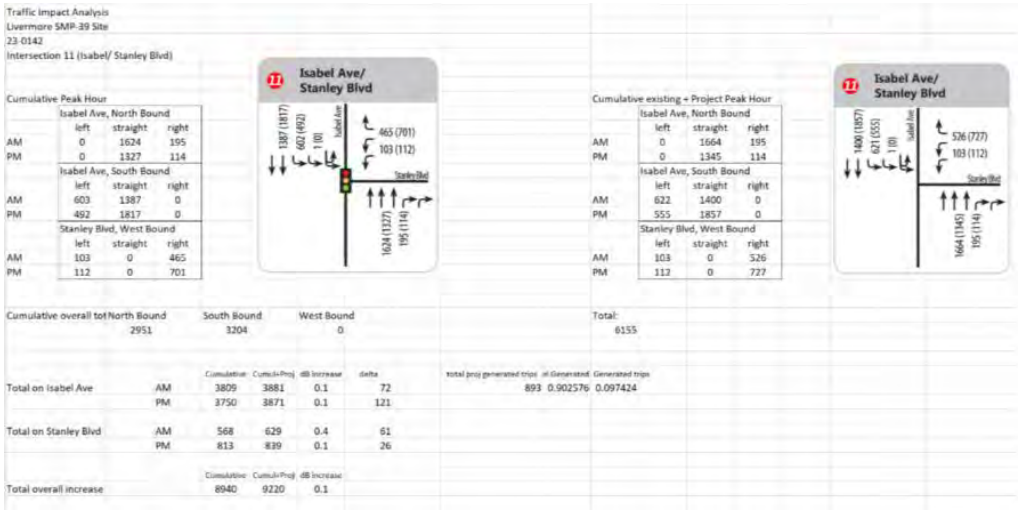


Figure E: Traffic Volume Analysis for Intersection 11

As shown above, the increase in traffic due to the project would be approximately 1 to 2 dBA to the DNL when combined.

Table 10 below summarizes the estimated DNL levels at the closest property plane to the east of the building, under the assumption that the facility would receive its trucking and commuting employee activities during the 24 hours of operation.

Table 10: Calculated 24-Hour Future Facility Noise at Nearest Noise-Sensitive Land Uses: CNEL/DNL, dBA

Nearby Receiving Locations	Existing Noise at Receiver (Residences)	Loading Docks at Receiver	Intra-Project Traffic Noise Levels at Receiver	Combined Existing plus Project	Change (dBA)
East Property Line (Residences across Isabel)	67	60	32	69	+2
North Property Line (Neighboring Warehouse)	65	65	36	68	+3

The calculated increase in DNL at the residential property line with the project and future traffic noise levels (near term 2025) will be approximately 2 dB. At the northern industrial uses, a DNL 3 dB change is predicted. A change of 3 dB or less is not expected to be noticeable and is not considered significant.

Our calculations of maximum noise levels assume that the trucks operating at the closest docks to the residences will be active at the same proportion as stated above. The noise analysis also assessed the increase in traffic noise levels resulting from project traffic in combination with future traffic noise level increases on the surrounding roadway network resulting from other anticipated development in the region. The resultant cumulative increase is 3 dB. This would not be considered a significant increase to the predicted project operation noise environment.

Future L_{50} Noise Levels

The following assumptions were made about the 24-hour operation of the project in our estimated L_{50} calculations:

- The volume of expected truck trips is consistent with the truck trip distribution established in item 6 of the Noise Source Analysis and Assumptions section (i.e., a maximum of 5 trucks per hour at nighttime, or 18.8% of trucks between 10:00 pm and 7:00 am).
- The 6- and 10-foot berms will be incorporated into the project.
- Backup alarms are expected to be at a height of approximately 2.5 feet.
- Trucks do not move great distances when their backup alarm is engaged.

Table 11 summarizes the estimated daytime and nighttime L_{50} for the proposed project. Since backup alarms for nighttime are predicted to occur less than 15 minutes per hour, the criterion can increase by 5 dBA per Policy P2. However, since back up alarms would be more than 15 minutes per hour during the daytime, no additional increases are accounted for in our analysis.

Table 11: Calculated 24-Hour Future Facility L_{50} Value: L_{50}, dBA

Time of Day	Estimated L_{50} Value	Criterion L_{50} Value
Daytime (7am-10pm)	50 dBA	55 dBA
Nighttime (10pm-7am)	45 dBA	50 dBA

Although our calculations of overall operational L_{50} noise levels do not exceed the allowable values stated by the City (i.e., Policy P1, Objective N-1.5), backup alarm noise may be audible at residences to the east during quieter nighttime hours. It is our understanding that other current similar projects in the vicinity have caused local neighbor complaints due to trucks' back-up alarms at those locations in the past.

Back-up alarms were assumed to be 79 dB at a reference distance of 30 feet. The distance attenuation between the loading dock to the façade of the nearest residence provides a 31 dB reduction. Although backup alarms would be audible from the residences, the L_{50} threshold of 50 dBA will not be exceeded due to the limited number of trips during this timeframe (estimated at 40 trips in 9-hour time frame).

Calculations assumed the source height of these backup alarms to be approximately 2.5 feet from grade. The incorporation of the proposed 6- and 10-foot-tall berms would adequately obstruct the direct line-of-sight of these backup alarms to the residential receivers. The dimensions of the proposed berms are calculated to reduce intermittent noise levels (such as those produced by backup alarms) by up to 6 dB at the closest residents.

Quieter backup alarms (aka "squawkers"), which are becoming more prevalent in delivery vehicles for various large e-commerce websites, and other vendors, may be used by trucking operators visiting this site in the future, therefore beeper noise has the potential to be reduced. A best practice for consideration would be to implement these alternative devices in other truck populations in the future.

CONCLUSIONS AND COMMENTS

1. Future cumulative project site noise from rooftop HVAC equipment, loading dock-generated noise, stationary trucks, and employee vehicles, is not expected to significantly impact receivers to the east or to the north. The calculated increase in CNEL/DNL for the warehouse receivers to the north will be 3 dB, while the closest residential receivers across Isabel Avenue will have a 2dB increase from the existing environment under the expected 24-hour operations.

   A change of 3 dB or less is not considered significant for residents to the east or the commercial neighbors to the north of the project site. A cumulative DNL of 69 dB for the receivers does not exceed the industrial 75 dB DNL threshold defined in Table 9-7 of the Livermore Noise Element as well as the L_{50} level from Objective N-1.5 of the General Plan.

   Considering the 1,025-foot distance between the nearest loading dock and the closest residents, and the trucks being a stationary source rather than a moving vehicle once the leaving the loading dock area of the project site, the city's L_{50} criterion is not applicable once a truck begins moving closer to the residential area. Given the minority of expected project truck trips conducted in the nighttime

hours (less than 5 trips per hour on average from 10 PM to 7 AM), noise from stationary trucks at the nearest loading dock are expected to comply with the City's L_{50} nighttime requirement assuming backup alarms are not continuously operating for more than 30 minutes per hour.

2. Temporary construction noise will impact the residences, and thus, it will be necessary to incorporate mitigation measures such as a 10-foot-tall berm or barrier on the east side of the project to reduce the noise by 10 dB.

3. It is our understanding that there are no State or Federal requirements for noise levels of backup alarms except for OSHA, which only requires them to be "significantly louder" than the surrounding environment. Because the background noise levels around most facilities are not known, manufacturers typically increase the alarm volume to compensate.

   Best practices to reduce alarm audibility at the facility to be evaluated would be to require users to limit alarm volume levels, employ signal personnel, lights, and other means to notify people about ongoing truck activities within the facility.

APPENDIX A: FUNDAMENTAL CONCEPTS OF ENVIRONMENTAL NOISE

This section provides background information to aid in understanding the technical aspects of this report.

Three dimensions of environmental noise are important in determining subjective response. These are:

- The intensity or level of the sound
- The frequency spectrum of the sound
- The time-varying character of the sound

Airborne sound is a rapid fluctuation of air pressure above and below atmospheric pressure. Sound levels are usually measured and expressed in decibels (dBA), with 0 dBA corresponding roughly to the threshold of hearing.

The "frequency" of a sound refers to the number of complete pressure fluctuations per second in the sound. The unit of measurement is the cycle per second (cps) or hertz (Hz). Most of the sounds, which we hear in the environment, do not consist of a single frequency, but of a broad band of frequencies, differing in level. The name of the frequency and level content of a sound is its sound spectrum. A sound spectrum for engineering purposes is typically described in terms of octave bands, which separate the audible frequency range (for human beings, from about 20 to 20,000 Hz) into ten segments.

Many rating methods have been devised to permit comparisons of sounds having quite different spectra. Surprisingly, the simplest method correlates with human response practically as well as the more complex methods. This method consists of evaluating all of the frequencies of a sound in accordance with a weighting that progressively de-emphasizes the importance of frequency components below 1000 Hz and above 5000 Hz. This frequency weighting reflects the fact that human hearing is less sensitive at low frequencies and at extreme high frequencies relative to the mid-range.

The weighting system described above is called "A"-weighting, and the level so measured is called the "A-weighted sound level" or "A-weighted noise level." The unit of A-weighted sound level is sometimes abbreviated "dBA." In practice, the sound level is conveniently measured using a sound level meter that includes an electrical filter corresponding to the A-weighting characteristic. All U.S. and international standard sound level meters include such a filter. Typical sound levels found in the environment and in industry are shown in Figure A-1.

Although a single sound level value may adequately describe environmental noise at any instant in time, community noise levels vary continuously. Most environmental noise is a conglomeration of distant noise sources, which results in a relatively steady background noise having no identifiable source. These distant sources may include traffic, wind in trees, industrial activities, etc. and are relatively constant from moment to moment. As natural forces change or as human activity follows its daily cycle, the sound level may vary slowly from hour to hour. Superimposed on this slowly varying background is a succession of

identifiable noisy events of brief duration. These may include nearby activities such as single vehicle pass-bys, aircraft flyovers, etc. which cause the environmental noise level to vary from instant to instant.

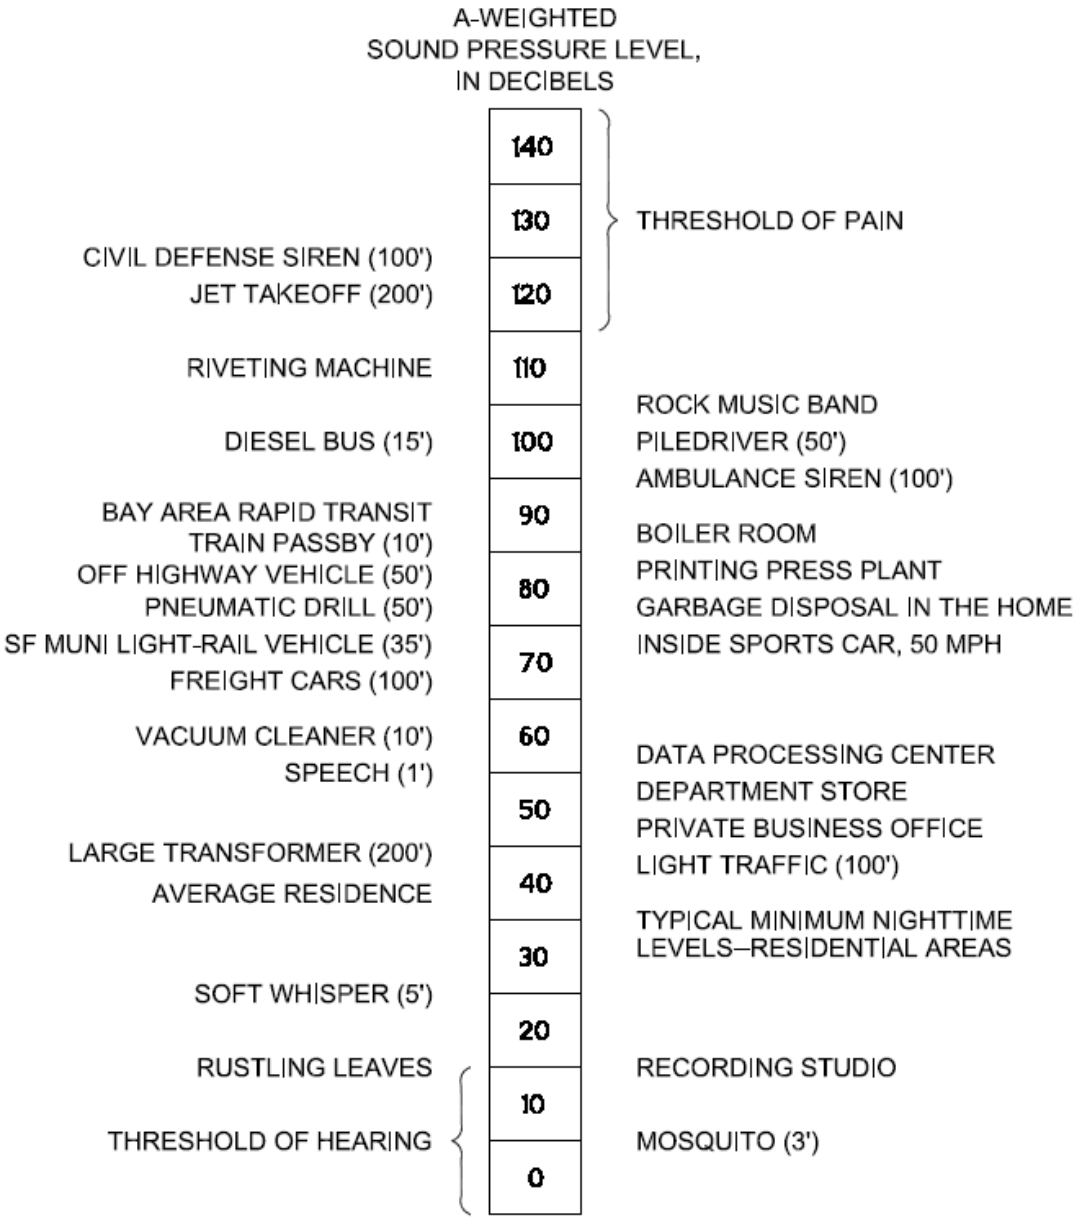
To describe the time-varying character of environmental noise, statistical noise descriptors were developed. "L10" is the A-weighted sound level equaled or exceeded during 10 percent of a stated time period. The L10 is considered a good measure of the maximum sound levels caused by discrete noise events. "L50" is the A-weighted sound level that is equaled or exceeded 50 percent of a stated time period; it represents the median sound level. The "L90" is the A-weighted sound level equaled or exceeded during 90 percent of a stated time period and is used to describe the background noise.

As it is often cumbersome to quantify the noise environment with a set of statistical descriptors, a single number called the average sound level or "L_{eq}" is now widely used. The term "L_{eq}" originated from the concept of a so-called equivalent sound level which contains the same acoustical energy as a varying sound level during the same time period. In simple but accurate technical language, the L_{eq} is the average A-weighted sound level in a stated time period. The L_{eq} is particularly useful in describing the subjective change in an environment where the source of noise remains the same but there is change in the level of activity. Widening roads and/or increasing traffic are examples of this kind of situation.

In determining the daily measure of environmental noise, it is important to account for the different response of people to daytime and nighttime noise. During the nighttime, exterior background noise levels are generally lower than in the daytime; however, most household noise also decreases at night, thus exterior noise intrusions again become noticeable. Further, most people trying to sleep at night are more sensitive to noise. To account for human sensitivity to nighttime noise levels, a special descriptor was developed. The descriptor is called the L_{dn} (Day/Night Average Sound Level), which represents the 24-hour average sound level with a penalty for noise occurring at night. The L_{dn} computation divides the 24-hour day into two periods: daytime (7:00 am to 10:00 pm); and nighttime (10:00 pm to 7:00 am). The nighttime sound levels are assigned a 10 dBA penalty prior to averaging with daytime hourly sound levels.

For highway noise environments, the average noise level during the peak hour traffic volume is approximately equal to the L_{dn}.

The effects of noise on people can be listed in three general categories:



- Subjective effects of annoyance, nuisance, dissatisfaction
- Interference with activities such as speech, sleep, and learning
- Physiological effects such as startle, hearing loss

The sound levels associated with environmental noise usually produce effects only in the first two categories. Unfortunately, there has never been a completely predictable measure for the subjective effects of noise nor of the corresponding reactions of annoyance and dissatisfaction. This is primarily because of the wide variation in individual thresholds of annoyance and habituation to noise over time.

Thus, an important factor in assessing a person's subjective reaction is to compare the new noise environment to the existing noise environment. In general, the more a new noise exceeds the existing, the less acceptable the new noise will be judged.

With regard to increases in noise level, knowledge of the following relationships will be helpful in understanding the quantitative sections of this report:

Except in carefully controlled laboratory experiments, a change of only 1 dBA in sound level cannot be perceived. Outside of the laboratory, a 3 dBA change is considered a just-noticeable difference. A change in level of at least 5 dBA is required before any noticeable change in community response would be expected. A 10 dBA change is subjectively heard as approximately a doubling in loudness, and would almost certainly cause an adverse community response.
