Application Form and Planning Survey Report

To Comply With and Receive Permit Coverage Under The East Contra Costa County Habitat Conservation Plan and Natural Community Conservation Plan

Please complete this application to apply for take authorization under the state and federal East Contra Costa County HCP/NCCP incidental take permits. The East Contra Costa County Habitat Conservancy ("Conservancy") or local jurisdiction (City of Brentwood, City of Clayton, City of Oakley, City of Pittsburg, and Contra Costa County) may request more information in order to deem the application complete.

I. PROJECT OVERVIEW

PROJECT INFORMATION	
PROJECT NAME: Oakley Logistics Center	
PROJECT TYPE: ☐ Residential ☒ Commercial ☐ Transportation ☐ Utility ☐ Other	
PROJECT DESCRIPTION (BRIEF): The project is to construct an approximate 150-acre logistics center to transport and distribute goods by various operators on a commercial basis. A detailed project description is included in Attachment A.	
PROJECT ADDRESS/LOCATION: East of Highway 160, located at 6000 Bridgehead Road, Oakley, CA.	
PARCEL/PROJECT SIZE (ACRES): The overall 375.70+/- acre Property spans the ECCCHCP Permit boundary. Development will occur in 164.91+/- acres in the south part of the property, and 1.51+/- acres for off-site road improvements. This PSR addresses the 142.10+/- acres of the site (i.e., the "Study Area") that is within the ECCCHCP Permit Area (140.59+/- acres of the property and 1.51+/- acres of off-site road improvements).	
PROJECT APN(S): Parcels Within ECCCHCP: 037 -020-008, 037-020-009, 037-020-014, 037-020-015, 037-020-016 (portion), 037-020-018, 037-020-019, 037-020-020, 037-020-021, and 037-020-022 (portion). **Parcels Outside ECCCHCP:** 037-020-010, 037-020-016 (portion), 037-020-017, and 037-020-022 (portion).	
APPLICATION SUBMITTAL DATE: July 2019	**FINAL PSR DATE:** (City/County/Conservancy use)
LEAD PLANNER: Joshua McMurray	
JURISDICTION: ☐ City of Brentwood ☐ City of Clayton ☒ City of Oakley ☐ City of Pittsburg ☐ Contra Costa County ☐ Participating Special Entity* *Participating Special Entities are organizations not subject to the authority of a local jurisdiction. Such organizations may include school districts, irrigation districts, transportation agencies, local park districts, geological hazard abatement districts, or other utilities or special districts that own land or provide public services.	
DEVELOPMENT FEE ZONE: ☒ Zone I ☐ Zone II ☐ Zone III ☐ Zone IV See figure 9-1 of the HCP/NCCP at www.cocohcp.org for a generalized development fee zone map. Detailed development fee zone maps by jurisdiction are available from the jurisdiction.	

PROJECT APPLICANT INFORMATION	
APPLICANT'S NAME: NorthPoint Development	
AUTHORIZED AGENT'S NAME AND TITLE: Andrew Grunloh, Project Manager	
PHONE NO.: (816) 381-2903	**APPLICANT'S E-MAIL:** agrunloh@northpointkc.com
MAILING ADDRESS: 12977 N. Outer Forty, Suite 203, St. Louis, MO 63141	

BIOLOGIST INFORMATION[1]	
BIOLOGICAL/ENVIRONMENTAL FIRM: Moore Biological Consultants	
CONTACT NAME AND TITLE: Diane S. Moore, M.S., Principal Biologist	
PHONE NO.: (209) 745-1159	**CONTACT'S E-MAIL:** moorebio@softcom.net
MAILING ADDRESS: 10330 Twin Cities Rd., Ste 30, Galt, CA 95632	

[1] A USFWS/CDFW-approved biologist (project-specific) is required to conduct the surveys. Please submit biologist(s) approval request to the Conservancy.

[2] For PSEs and city or county public works projects, please also identify permanent and temporary impact areas by overlaying crosshatching (permanent impacts) and

II. PROJECT DETAILS

Please complete and/or provide the following attachments:

1) **Project Description**
Attach as **Attachment A: Project Description**. Provide a detailed written description that concisely and completely describes the project and location. Include the following information:
   - All activities proposed for the site or project, including roads utilized, construction staging areas, and the installation of underground facilities, to ensure the entire project is covered by the HCP/NCCP permit
   - Proposed construction dates, including details on construction phases, if applicable
   - Reference a City/County application number for the project, if applicable
   - General Best Management Practices, if applicable
   - If the project will have temporary impacts, please provide a restoration plan describing how the site will be restored to pre-project conditions, including revegetation seed mixes or plantings and timing

2) **Project Vicinity Map**
Provide a project vicinity map. Attach as **Figure 1** in **Attachment B: Figures**.

3) **Project Site Plans**
Provide any project site plans for the project. Attach as **Figure 2** in **Attachment B: Figures**.

4) **CEQA Document**
Indicate the status of CEQA documents prepared for the project. Provide additional comments below table if necessary.

Type of Document	Status	Date Completed
☒ Initial Study	Complete	February 2019
☒ Notice of Preparation	Complete	February 2019
☒ Draft EIR	In preparation	
☐ Final EIR		
☐ Notice of Categorical Exemption		
☐ Notice of Statutory Exemption		
☐ Other (describe)		

III. EXISTING CONDITIONS AND IMPACTS

Please complete and/or provide the following attachments:

1) **Field-Verified Land Cover Map**[2]
Attach a field-verified land cover map in **Attachment B: Figures** and label as **Figure 3**. The map should contain all land cover types present on-site overlaid on aerial/satellite imagery. Map colors for the land cover types should conform to the HCP/NCCP (see *Figure 3-3: Landcover in the Inventory Area* for land cover type legend).

2) **Photographs of the Project Site**
Attach representative photos of the project site in **Attachment B: Figures** and label as **Figure 4**. Please provide captions for each photo.

[2] For PSEs and city or county public works projects, please also identify permanent and temporary impact areas by overlaying crosshatching (permanent impacts) and hatching (temporary impacts) on the land cover map.

3) Land Cover Types and Impacts and Supplemental Tables

- For all terrestrial land cover types please provide calculations to the nearest **hundredth of an acre (0.01)**.
  For aquatic land cover types please provide calculations to the nearest **thousandth of an acre (0.001)**.
- **Permanent Impacts** are broadly defined in the ECCC HCP/NCCP to include all areas removed from an undeveloped or habitat-providing state and includes land in the same parcel or project that is not developed, graded, physically altered, or directly affected in any way but is isolated from natural areas by the covered activity. Unless such undeveloped land is dedicated to the Preserve System or is a deed-restricted creek setback, the development mitigation fee will apply (if proposed, would require Conservancy approval).
- **Temporary Impacts** are broadly defined in the ECCC HCP/NCCP as any impact on vegetation or habitat that does not result in permanent habitat removal (i.e. vegetation can eventually recover).
- If **wetland (riparian woodland/scrub, wetland, or aquatic)** land cover types are present on the parcel but will not be impacted please discuss in the following section 4) Jurisdictional Wetlands and Waters. Wetland impact fees will only be charged if wetland features are impacted. However, development fees will apply to the entire parcel.
- **Stream** land cover type is considered a linear feature where impacts are calculated based on length impacted. The acreage within a stream, below Top of Bank (TOB), must be assigned to the adjacent land cover type(s). Insert area of impact to stream below TOB in parentheses after the Land Cover acreage number (e.g., Riparian Woodland/Scrub: 10 (0.036) – where 10 is the total impacted acreage including 0.036 acre, which is the acreage within stream TOB). Complete following supplemental **Stream Feature Detail** table to provide information for linear feet.
- **Total Impacts** acreage should be the total parcel acreage (development project) or project footprint acreage (rural infrastructure or utility project).

Table 1: Land Cover Types and Impacts

Identify any uncommon vegetation and uncommon landscape features[3]:

Supplemental to Table 1: Uncommon Vegetation and Landscape Features

	Permanent Impacts	Temporary Impacts
Uncommon Grassland Alliances		
Purple Needlegrass Grassland		
Blue Wildrye Grassland		
Creeping Ryegrass Grassland		
Wildflower Fields		
Squirreltail Grassland		
One-sided Bluegrass Grassland		
Serpentine Bunchgrass Grassland		
Saltgrass Grassland		
Alkali Sacaton Bunchgrass Grassland		
☐ Other		
Uncommon Landscape Features		
Rock Outcrops		
Caves		
Springs and seeps		
Scalds		
Sand Deposits		
☐ Mines[4]		
☐ Buildings (bat roosts)[3]		
☒ Potential nest sites (trees or cliffs)[3]	595 Trees (most will be removed)	

Please provide details of impacts to stream features: Not Applicable.

Stream Name:

Watershed:

Supplemental to Table 1: Stream Feature Detail[5]

Stream Width	Stream Type[6]	Permanent Impacts (linear feet)[7]	Temporary Impacts (linear feet)[7]
☐ ≤ 25 feet wide ☐ > 25 feet wide	☐ Perennial ☐ Intermittent ☐ Ephemeral, 3rd or higher order ☐ Ephemeral, 1st or 2nd order		
☐ ≤ 25 feet wide ☐ > 25 feet wide	☐ Perennial ☐ Intermittent ☐ Ephemeral, 3rd or higher order ☐ Ephemeral, 1st or 2nd order		
☐ ≤ 25 feet wide ☐ > 25 feet wide	☐ Perennial ☐ Intermittent ☐ Ephemeral, 3rd or higher order ☐ Ephemeral, 1st or 2nd order		

[3] These acreages are for Conservancy tracking purposes. Impacts to these uncommon vegetation and landscape features should be accounted for within the land cover types in Table 1 (e.g., x acres of purple needlegrass in this supplemental table should be accounted for within annual grassland in Table 1).

[4] Insert amount/number, not acreage. Provide additional information on these features in Attachment A: Project Description.

[5] Use more than 1 row as necessary to describe impacts to streams on site.

[6] See glossary (Appendix A) for definition of stream type and order.

[7] Stream length is measured along stream centerline, based on length of impact to any part of the stream channel, TOB to TOB.

4) Summary of Land Cover Types

Please provide a written summary of descriptions for land cover types found on site including characteristic vegetation.

General Setting: The project site is located in northwest Oakley, in Contra Costa County, California (Figure 1). The overall 375.70+/- acre property is within Sections 15 and 22 in Township 2 North, Range 2 East of the USGS 7.5-minute Jersey Island topographic quadrangle. The project site is situated at elevations of approximately 10 to 30 feet above mean seal level. Land uses in this portion of Oakley are primarily industrial and commercial.

The 166.42+/- acre "Oakley Logistics Center" will be developed on 164.91+/- acres of land in the south part of the property and 1.51+/- acres of road improvements along the west edge of the property (outside the property boundary) (Figure 3). This PSR addresses the 142.10+/- acres of the site located within the ECCCHCP Permit Area. The remaining 24.32+/- acres of the site are outside the ECCCHCP Permit Area.

The project site is bounded by State Route 160 and Bridgehead Road to the west and a vineyard and tidal wetlands on the east. There is grassland and tidal wetlands associated with the San Joaquin River to the north of the site. The Burlington Northern Santa Fe Railroad bounds the site on the south and there is a vineyard to the south of the tracks.

Site History: The site is highly disturbed and land cover types have been altered by historical activities at the site. DuPont, a chemical manufacturing facility previously occupied the property and then ceased production activities in 1998. All manufacturing facilities at the project site have since been decommissioned and demolished to their foundations. In 2013, DuPont separated its chemicals segment from its other businesses and remedial obligations of the site were transferred to Chemours, which is working with the Department of Toxic Substance Control (DTSC) to remediate the site. The site is currently being remediated for future development. Once the remediation is completed, most of the upland areas in the site will be redeveloped for industrial and commercial uses by the Oakley Logistics Center.

Overview: There are several land cover types within the overall property, including expansive tidally influenced wetlands in the northeast part of the property. In contrast, the majority of the 142.10+/- acre Study Area primarily consists of previously developed areas and ruderal grasslands (Figure 3). The Study Area also includes a small sliver of vineyard in the panhandle extending southeast from the body of the site, right along the railroad tracks. There are also three seasonal wetlands in the Study Area (Figure 3).

Ruderal Grassland: Much of the Study Area is vegetated with ruderal grassland vegetation that has been highly disturbed by past development, soil remediation, and other human activities (Figures 4A, 4B, and 4C). Most of the ruderal grassland areas in the Study Area appear to be periodically mowed and or disked for weed abatement. The ruderal grasslands have varying amounts of cover ranging from relatively weedy grasslands to essentially bare soil. The ruderal grassland vegetation consists primarily of non-native, weedy species. Dominant grassland species in the site include oats (*Avena fatua*), soft chess brome (*Bromus hordeaceus*), ripgut brome (*Bromus diandrus*), red brome (*Bromus madritensis*), wall barley (*Hordeum murinum*), perennial ryegrass (*Lolium perenne*), yellow star thistle (*Centaurea solstitialis*), Italian thistle (*Carduus pycnocephalus*), bull thistle (*Cirsium vulgare*), black mustard (*Brassica nigra*) and filaree (*Erodium* sp.).

Seasonal Wetlands: There are three seasonal wetlands in the Study Area (Figures 3, 4C and 4D). The seasonal wetlands are located in the west part of the site, just east of Bridgehead Road. The seasonal wetlands are labeled Seasonal Wetlands "SW-D", "SW-F", and "SW-E", from the north to south respectively, on the Wetland Delineation Map (Attachment E). The seasonal wetlands are inside of shallow basins incised several feet below adjacent grasslands. Soils in the wetlands are sandy and appear well draining. None of these wetlands have habitat attributes resembling vernal pools.

Seasonal Wetlands SW-E and SW-F are surrounded by woody riparian species including California black walnut (*Juglans californica*), Gooding's black willow (*Salix goodingii*), Pacific willow (*Salix lasiandra*), Fremont's cottonwoods (*Populus* fremontii) and coast live oak (*Quercus agrifolia*) (Figures 4C and 4D). Seasonal Wetland SW-D contains only a few willow saplings in the southwest tip of the basin (Figure 4D). Dominant wetland species in floors of these seasonal wetlands in the site includes seaside barley (*Hordeum*

marinum, perennial ryegrass (*Lolium perenne*), annual rabbit's-foot grass (*Polypogon monspeliensis*), and curly dock (*Rumex crispus*). There are also some patches of saltgrass (*Distichlis spicata*), hard-stem club-rush (i.e., tules) (*Schoenoplectus acutus*), and cattails (*Typha* sp.) in some of the seasonal wetlands.

Vineyard: There is a small area of vineyard in the panhandle extending southeast from the body of the Study Area (Figure 3). The vineyard is bounded by a farm road on the north and railroad tracks on the south. The floor of the vineyard supports ruderal grassland vegetation.

Urban/Developed: The Study Area contains several urban/developed areas, some with evidence of former buildings, and many with foundations still present (Figures 3 and 4A). Other urban or previously developed areas in the site are evident with gravel or pavement. There is an administrative building complex in the west part of the Study Area being used as the on-site "office" associated with on-site remediation efforts. The body of the Study Area has been heavily disturbed by past development and evidence of former buildings still remains, with foundations and graveled areas still present.

Trees: Trees, Bugs & Dirt conducted an inventory of trees within the site in 2018; this report is on file in the City. There are several rows of large trees scattered in the site, mostly *Eucalyptus* spp. and tamarisk (*Tamarix* sp.), as well as some pines (*Pinus* spp.) and coastal live oaks (*Quercus agrifolia*). There are also isolated trees in various parts of the site and ornamental trees surrounding the administration building in the west part of the site. Fremont cottonwoods, willows, and black walnuts surround some of the wetlands. Most of the trees in the site will be removed.

5) Jurisdictional Wetlands and Waters

If wetlands and waters are present on the project site, project proponents must conduct a delineation of jurisdictional wetlands and waters. Jurisdictional wetlands and waters are defined on pages 1-18 and 1-19 of the ECCC HCP/NCCP as the following land cover types: permanent wetland, seasonal wetland, alkali wetland, aquatic, pond, slough/channel, and stream. It should be noted that these features differ for federal and state jurisdictions. If you have identified any of these land cover types in Table 1, complete the section below.

a) Attach the wetland delineation report as **Attachment E: Wetland Delineation.** If a wetland delineation has not been completed, please explain below in section 4c.

b) Please check the following permits the project may require. Please submit copies of these permits to the Conservancy prior to the start of construction:

☒ CWA Section 404 Permit[8] ☒ CWA Section 401 Water Quality Certification

☒ Waste Discharge Requirements ☒ Lake and Streambed Alteration Agreement

c) Provide any additional information on impacts to jurisdictional wetland and waters below, including status of the permit(s):

A Wetland Delineation of the overall property was completed in 2006 and was verified by the USACE in 2008 (SPK-2007-01861) (Attachment E). An updated Wetland Delineation was conducted in 2016 and refined in 2018, and was verified by USACE in March 2019 (SPK-2018-00848).

The delineation of the overall parcel (2018 delineation awaiting verification) includes a total of 176.15+/- acres of potentially jurisdictional Waters of the U.S. This total includes 64.19+/- acres of Open Water, 103.67+/- acres of Permanent Wetlands, a 6.49-acre Slough, and 1.80+/- acres of Seasonal Wetlands.

The 142.10+/- acre Study Area includes a portion of the verified Wetland Delineation (see "Potential Waters of the U.S. and Wetlands – Oakley Logistics Center" map in Attachment E). The Study Area contains 1.608+/- acres Seasonal Wetlands. The project will involve filling two seasonal wetlands (SW-D and SW-F)

[8] The USACE Sacramento District issued a Regional General Permit 1 (RGP) related to ECCC HCP/NCCP covered activities. The RGP is designed to streamline wetland permitting in the entire ECCC HCP/NCCP Plan Area by coordinating the avoidance, minimization, and mitigation measures in the Plan with the Corps' wetland permitting requirement. Applicants seeking authorization under this RGP shall notify the Corps in accordance with RGP general condition number 18 (Notification).

encompassing a total of 0.983+/- acres. The fill will be authorized under Regional General Permit 1. Permit applications for the fill of wetlands will be submitted in June 2019.

6) Species-Specific Planning Survey Requirements

Based on the land cover types found on-site and identified in Table 1, check the applicable boxes in Table 2a.

Table 2a. Species –Specific Planning Survey Requirements

Land Cover Type in Project Area	Required Survey Species	Habitat Element in Project Area	Planning Survey Requirement[9]	Info in HCP
☒ Grasslands, oak savannah, agriculture, or ruderal	☐ San Joaquin kit fox	Assumed if within modeled range of species	If within modeled range of species, identify and map potential breeding or denning habitat within the project site and a 250-ft radius around the project footprint.	pp. 6-37 to 6-38
	☒ Western burrowing owl	Assumed	Identify and map potential breeding habitat within the project site and a 500-ft radius around the project footprint. Please note the HCP requires buffers for occupied burrows. Surveys may need to encompass an area larger than the project footprint.	pp. 6-39 to 6-41
☐ Aquatic (ponds, wetlands, streams, sloughs, channels, and marshes)	☐ Giant garter snake	Aquatic habitat accessible from the San Joaquin River	Identify and map potential habitat.	pp. 6-43 to 6-45
	☐ California tiger salamander	Ponds and wetlands Vernal pools Reservoirs Small lakes	Identify and map potential breeding habitat. Document habitat quality and features. Provide the Conservancy with photo-documentation and report.	pp. 6-45
	☐ California red-legged frog	Slow-moving streams, ponds and wetlands	Identify and map potential breeding habitat. Document habitat quality and features. Provide the Conservancy with photo-documentation and report.	p. 6-46
	☐ Covered shrimp	Seasonal wetlands Vernal pools Sandstone rock outcrops Sandstone depressions	Identify and map potential habitat. Please note the HCP requires a 50 foot non-disturbance buffer from seasonal wetlands that may be occupied by covered shrimp. Surveys may need to encompass an area larger than the project footprint.	pp. 6-46 to 6-48
☒ Any	☐ Townsend's big-eared bat	Rock formations with caves Mines Abandoned buildings outside urban area	Map and document potential breeding or roosting habitat.	pp. 6-36 to 6-37
	☒ Swainson's hawk	Potential nest sites within 1,000 feet of project	Inspect large trees for presence of nest sites. Document and map.	pp. 6-41 to 6-43
	☒ Golden Eagle	Potential nest sites with ½ mile of project	Inspect large trees for presence of nest sites. Document and map.	pp. 6-38 to 6-39
Surveys for all covered species must be conducted by a qualified biologist (USFWS/CDFW project-specific approved). Please submit biologist approval request to the East Contra Costa County Habitat Conservancy. Surveys for all covered species must be conducted according to the respective USFWS or CDFW survey protocols, as identified in Chapter 6.4.3 in the HCP/NCCP.				

7) Planning Survey Species Habitat Maps

Provide Planning Survey Species Habitat Maps as required in Table 2a, attach as **Figure 5** in **Attachment B: Figures**.

[9] The planning survey requirements in this table are not comprehensive. Please refer to Chapter 6.4.3 in the ECCC HCP/NCCP for more detail.

8) Results of Species Specific Surveys

Provide a written summary describing the results of the planning surveys. Please discuss the location, quantity, and quality of suitable habitat for specified covered wildlife species on the project site.

Western Burrowing Owl: The site contains potions of ruderal grassland (Figure 5a) that is within the range of western burrowing owl (*Athene cunnicularia*). The site and visible areas on adjacent lands were inspected for burrowing owls and ground squirrel burrows with evidence of burrowing owl occupancy (i.e., white wash, pellets, feathers). Comprehensive inspection of potential burrowing owl habitat was accomplished by walking throughout the project site. No western burrowing owls or burrows with evidence of burrowing owl occupancy were observed. The nearest occurrence of burrowing owl in the California Department of Fish and Wildlife's California Natural Diversity Database (CNDDB, 2019) is a few records just southwest of the project site in a now developed residential subdivision.

Swainson's Hawk: There are several trees within and surrounding the project site large enough to support nesting Swainson's hawks (*Buteo swainsoni*) and the site is within the western edge of the range of Swainson's hawks. California Department of Fish and Wildlife's California Natural Diversity Database contains a 2012 record of Swainson's hawks nesting in a redwood tree in the project site near Bridgehead Road. This record indicates two juvenile Swainson's hawks successfully fledged in 2011 and there were several failed nesting attempts in 2012 before the nesting tree was removed.

There are numerous potential nest trees for Swainson's hawks (Figure 5a). No Swainson's hawks were observed during the 2018 field surveys, which were conducted outside the nesting season of this species. A pair of Swainson's hawks was documented nesting in one of the eucalyptus trees in the southwest part of the site during 2018 and Swainson's hawks were observed soaring around the same trees during a March 21, 2019 site visit. The CNDDB (2019) does not yet contain this occurrence. Given the species' nest site affinity it is likely Swainson's hawks will return to the site to try to nest in future years.

Golden Eagle: The site is within the range of golden eagles (*Aquila chrysaetos*). There are several trees within the site large enough to support golden eagle (Figure 5a). There are also a few potential nest trees near and visible from the site. No golden eagles were observed and this species nests more often on cliffs in remote natural areas than in trees in or near urban settings. There are no records in the CNDDB of golden eagle in the search area.

9) Covered and No-Take Plants

Please check the applicable boxes in Table 2b based on the land cover types found in the project area. If suitable land cover types are present on site, surveys must be conducted using approved CDFW/USFWS methods during the appropriate season for identification of covered and no-take species (see page 6-9 of the ECCC HCP/NCCP). Reference populations of covered and no-take plants should be visited, where possible, prior to conducting surveys to confirm that the plant species is visible and detectable at the time surveys are conducted. In order to complete all the necessary covered and no-take plant surveys, spring, summer, and fall surveys may be required.

Table 2b. Covered and No-Take Plant Species

Plant Species	Covered (C) or No-Take (N)	Associated Land Cover Type	Typical Habitat or Physical Conditions, if Known	Typical Blooming Period	Suitable Land Cover Type Present
Adobe navarretia (*Navarretia nigelliformis* ssp. *radians*) [a]	C	Annual Grassland	Generally found on clay barrens in Annual Grassland [b]	Apr–Jun	☐ Yes ☒ No
Alkali milkvetch (*Astragalus tener* ssp. *tener*)	N	Alkali grassland Alkali wetland Annual grassland Seasonal wetland	Generally found in vernally moist habitat in soils with a slight to strongly elevated pH	Mar–Jun	☐ Yes ☒ No
Big tarplant (*Blepharizonia plumosa*)	C	Annual grassland	Elevation below 1500 feet [d] most often on Altamont Series or Complex soils	Jul–Oct	☐ Yes ☒ No

Brewer's dwarf flax (*Hesperolinon breweri*)	C	Annual grassland Chaparral and scrub Oak savanna Oak woodland	Generally, restricted to grassland areas within a 500+ buffer from oak woodland and/or chaparral/scrub [d]	May–Jul	☐ Yes ☒ No
Brittlescale (*Atriplex depressa*)	C	Alkali grassland Alkali wetland	Restricted to soils of the Pescadero or Solano soil series; generally found in southeastern region of plan area [d]	May–Oct	☐ Yes ☒ No
Caper-fruited tropidocarpum (*Tropidocarpum capparideum)*	N	Alkali grassland		Mar–Apr	☐ Yes ☒ No
Contra Costa goldfields (*Lasthenia conjugens*)	N	Alkali grassland Alkali wetland Annual grassland Seasonal wetland	Generally found in vernal pools	Mar–Jun	☐ Yes ☒ No
Diablo Helianthella (*Helianthella castanea*)	C	Chaparral and scrub Oak savanna Oak woodland	Elevations generally above 650 feet [d]	Mar–Jun	☐ Yes ☒ No
Diamond-petaled poppy (*Eschscholzia rhombipetala*)	N	Annual grassland		Mar–Apr	☐ Yes ☒ No
Large-flowered fiddleneck (*Amsinckia grandiflora*)	N	Annual grassland	Generally on clay soil	Apr–May	☐ Yes ☒ No
Mount Diablo buckwheat (*Eriogonum truncatum*)	N	Annual grassland Chaparral and scrub	Ecotone of grassland and chaparral/scrub	Apr–Sep	☐ Yes ☒ No
Mount Diablo fairy-lantern (*Calochortus pulchellus*)	C	Annual grassland Chaparral and scrub Oak savanna Oak woodland	Elevations generally between 650 and 2,600[d]	Apr–Jun	☐ Yes ☒ No
Mount Diablo Manzanita (*Arctostaphylos auriculata*)	C	Chaparral and scrub	Elevations generally between 700 and 1,860 feet; restricted to the eastern and northern flanks of Mt. Diablo [d] and the vicinity of Black Diamond Mines	Jan–Mar	☐ Yes ☒ No
Recurved larkspur (*Delphinium recurvatum*)	C	Alkali grassland Alkali wetland		Mar–Jun	☐ Yes ☒ No
Round-leaved filaree (*California macrophylla*) [c]	C	Annual grassland		Mar–May	☐ Yes ☒ No
San Joaquin spearscale (*Extriplex joaquiniana*) [e]	C	Alkali grassland Alkali wetland		Apr–Oct	☐ Yes ☒ No
Showy madia (*Madia radiata*)	C	Annual grassland Oak savanna Oak woodland	Primarily occupies open grassland or grassland on edge of oak woodland	Mar–May	☐ Yes ☒ No

[a] The species *Navarretia nigelliformis* subsp. *nigelliformis* is no longer considered to occur within Contra Costa County based on specimen annotations at the UC and Jepson Herbaria at the University of California Berkeley as well as the opinions of experts in the genus. This taxon is now recognized as *Navarretia nigelliformis* subsp. *radians.* Any subspecies of *Navarretia nigelliformis* encountered as a part of botanical surveys in support of a PSR should be considered as covered under this HCP/NCCP.

[b] Habitat for the *Navarretia nigelliformis* subspecies that occurs within the inventory are is inaccurately described in the HCP/NCCP as vernal pools. The entity within the Inventory generally occupies clay barrens within Annual Grassland habitat, which is an upland habitat type.

[c] From California Native Plant Society. 2007. *Inventory of Rare and Endangered Plants* (online edition, v7-07d). Sacramento, CA. Species may be identifiable outside of the typical blooming period; a professional botanist shall determine if a covered or no take plant occurs on the project site. Reference population of covered and no-take plants should be visited, where possible, prior to conducting surveys to confirm that the plant is visible and detectable at the time surveys are conducted.

[d] See Species Profiles in Appendix D of the Final HCP/NCCP. Reference populations of covered and no-take plants should be visited, where possible, prior to conducting surveys to confirm that the plant species is visible and detectable at the time surveys are conducted.

[e] In the recent update to the Jepson eflora (JFP 2013) *Atriplex joaquinana* has been circumscribed and segregated into a new genus called *Extriplex* based on the work of Elizabeth Zacharias and Bruce Baldwin (2010). The etymology of the genus *Extriplex* means, "beyond or outside Atriplex".

10) Results of Covered and No-Take Plant Species

Provide a written summary describing the results of the planning surveys conducted as required in Table 2b. Describe the methods used to survey the site for all covered and no-take plants, including the dates and times of all surveys conducted (see Tables 3-8 and 6-5 of the ECCC HCP/NCCP for covered and no-take plants), including reference populations visited prior to conducting surveys.

If any covered or no-take plant species were found, include the following information in the results summary:

- Description and number of occurrences and their rough population size.
- Description of the "health" of each occurrence, as defined on pages 5-49 and 5-50 of the HCP/NCCP.
- A map of all the occurrences.
- Justification of surveying time window, if outside of the plant's blooming period.
- The CNDDB form(s) submitted to CDFW (if this is a new occurrence).
- A description of the anticipated impacts that the covered activity will have on the occurrence and how the project will avoid impacts to all covered and no-take plant species. If impacts to covered plant species cannot be avoided and plants will be removed by covered activity, the Conservancy must be notified and has the option to salvage the covered plants. All projects must demonstrate avoidance of all six no-take plants (see table 6-5 of the HCP/NCCP).

Survey Methods

Surveys to assess potentially suitable habitat for special-status plants were undertaken on October 8 and 19, November 2 and 15, 2018, and March 21, 2019. The site was systematically searched by walking throughout the site.

Survey Results and Discussion

Several rare plant surveys have been conducted at the project site associated with the environmental review and permitting of the Chemours Remediation Project. SWCA Environmental Consultants conducted a rare plant survey in 2013 and Parsons conducted a rare plant survey in 2015. Following the 2015 rare plant survey performed by Parsons, a targeted list of 10 special-status species with the potential to occur in the Chemours Remediation project area was compiled. The most recent survey for special-status plants and to assess potentially suitable habitat for special-status plants was completed in the spring (June 27th) and summer (August 3rd) in 2017 by Californian Environmental Services, Inc. (CES). The targeted list of the 10 special-status species provided by Parsons was utilized by CES in the 2017 survey. No special-status plant species were observed during the most recent survey in 2017 conducted by CES.

As described in Section 4, the site is mostly urbanized or ruderal grassland that is periodically mowed and/or disked. Due to an absence of potentially suitable habitat for special-status plants, focused surveys during the blooming period of each species in Table 2b were not warranted.

The seasonal wetlands in the site are not vernal pools and do not provide suitable habitat for Contra Costa goldfields (*Lasthenia conjugens*).

V. SPECIES-SPECIFIC AVOIDANCE AND MINIMIZATION REQUIREMENTS

Please complete and/or provide the following attachments:

1) Species-Specific Avoidance and Minimization for Selected Covered Wildlife

Complete the following table and check the applicable box for covered species determined by the planning surveys.

Table 3. Summary of Applicable Preconstruction Surveys, Avoidance and Minimization, and Construction Monitoring Requirements[10]

[10] The requirements in this table are not comprehensive; they are detailed in the next section on the following page.

Species	Preconstruction Survey Requirements	Avoidance and Minimization Requirements	Construction Monitoring Required	Info in HCP
☐ San Joaquin kit fox	• On project footprint and 250-ft radius, map all dens (>5 in. diameter) and determine status • Provide written survey results to USFWS within 5 working days after surveying	• Monitor dens • Destroy unoccupied dens • Discourage use of occupied (non-natal) dens	• Establish exclusion zones (>50 ft for potential dens, and >100 ft for known dens) • Notify USFWS of occupied natal dens	pp. 6-37 to 6-38
☒ Western burrowing owl	• On project footprint and 500-ft radius, identify and map all owls and burrows, and determine status • Document use of habitat (e.g. breeding, foraging)	• Avoid occupied nests during breeding season (Feb-Sep) • Avoid occupied burrows during nonbreeding season (Sep – Feb) • Install one-way doors in occupied burrow (if avoidance not possible) • Monitor burrows with doors installed	• Establish buffer zones (250 ft around nests) • Establish buffer zones (160 ft around burrows)	pp. 6-39 to 6-41
☐ Giant garter snake	• Delineate aquatic habitat up to 200 ft from water's edge on each side • Document any occurrences	• Limit construction to Oct-May • Dewater habitat April 15 – Sep 30 prior to construction • Minimize clearing for construction	• Delineate 200 ft buffer around potential habitat near construction • Provide field report on monitoring efforts • Stop construction activities if snake is encountered; allow snake to passively relocate • Remove temporary fill or debris from construction site • Mandatory training for construction personnel	pp. 6-43 to 6-45
☐ California tiger salamander	• Provide written notification to USFWS and CDFW regarding timing of construction and likelihood of occurrence on site	• Allow agency staff to translocate species, if requested	• None	p. 6-45
☐ California red-legged frog	• Provide written notification to USFWS and CDFW regarding timing of construction and likelihood of occurrence on site	• Allow agency staff to translocate species, if requested	• None	p. 6-46
☐ Covered shrimp	• Establish presence/absence • Document and evaluate use of all habitat features (e.g. vernal pools, rock outcrops)	• Establish buffer near construction activities • Prohibit incompatible activities	• Establish buffer around outer edge of all hydric vegetation associated with habitat (50 ft or immediate watershed, whichever is larger) • Mandatory training for construction personnel	pp. 6-46 to 6-48
☐ Townsend's big-eared bat	• Establish presence/absence • Determine if potential sites were recently occupied (guano)	• Seal hibernacula before Nov • Seal nursery sites before April • Delay construction near occupied sites until hibernation or nursery seasons are over	• None	pp. 6-36 to 6-37
☒ Swainson's hawk	• Determine whether potential nests are occupied	• No construction within 1,000 ft of occupied nests within breeding season (March 15 - Sep 15) • If necessary, remove active nest tree after nesting season to prevent occupancy in second year.	• Establish 1,000 ft buffer around active nest and monitor compliance (no activity within established buffer)	pp. 6-41 to 6-43
☒ Golden Eagle	• Establish presence/absence of nesting eagles	• No construction within ½ mile near active nests (most activity late Jan – Aug)	• Establish ½ mile buffer around active nest and monitor compliance with buffer	pp. 6-38 to 6-39

2) Required Preconstruction Surveys, Avoidance and Minimization, and Construction Monitoring

All preconstruction surveys shall be conducted in accordance with the requirements set forth in Section 6.4.3, Species-Level Measures, and Table 6-1 of the ECCC HCP/NCCP. Detailed descriptions of preconstruction surveys, avoidance and minimization, and construction monitoring applicable to each of the wildlife species in Table 3 are located below. Please remove the species-specific measures that do not apply to your project (highlight entire section and delete).

WESTERN BURROWING OWL

Preconstruction Surveys

Prior to any ground disturbance related to covered activities, a USFWS/CDFW- approved biologist will conduct a preconstruction survey in areas identified in the planning surveys as having potential burrowing owl habitat. The surveys will establish the presence or absence of western burrowing owl and/or habitat features and evaluate use by owls in accordance with CDFW survey guidelines (California Department of Fish and Game 1995).

On the parcel where the activity is proposed, the biologist will survey the proposed disturbance footprint and a 500-foot radius from the perimeter of the proposed footprint to identify burrows and owls. Adjacent parcels under different land ownership will not be surveyed. Surveys should take place near sunrise or sunset in accordance with CDFW guidelines. All burrows or burrowing owls will be identified and mapped. Surveys will take place no more than 30 days prior to construction. During the breeding season (February 1– August 31), surveys will document whether burrowing owls are nesting in or directly adjacent to disturbance areas. During the nonbreeding season (September 1–January 31), surveys will document whether burrowing owls are using habitat in or directly adjacent to any disturbance area. Survey results will be valid only for the season (breeding or nonbreeding) during which the survey is conducted.

Avoidance and Minimization and Construction Monitoring

This measure incorporates avoidance and minimization guidelines from CDFW's *Staff Report on Burrowing Owl Mitigation* (California Department of Fish and Game 1995).

If burrowing owls are found during the breeding season (February 1 – August 31), the project proponent will avoid all nest sites that could be disturbed by project construction during the remainder of the breeding season or while the nest is occupied by adults or young. Avoidance will include establishment of a non-disturbance buffer zone (described below). Construction may occur during the breeding season if a qualified biologist monitors the nest and determines that the birds have not begun egg-laying and incubation or that the juveniles from the occupied burrows have fledged. During the nonbreeding season (September 1 – January 31), the project proponent should avoid the owls and the burrows they are using, if possible. Avoidance will include the establishment of a buffer zone (described below).

During the breeding season, buffer zones of at least 250 feet in which no construction activities can occur will be established around each occupied burrow (nest site). Buffer zones of 160 feet will be established around each burrow being used during the nonbreeding season. The buffers will be delineated by highly visible, temporary construction fencing.

If occupied burrows for burrowing owls are not avoided, passive relocation will be implemented. Owls should be excluded from burrows in the immediate impact zone and within a 160-foot buffer zone by installing one-way doors in burrow entrances. These doors should be in place for 48 hours prior to excavation. The project area should be monitored daily for 1 week to confirm that the owl has abandoned the burrow. Whenever possible, burrows should be excavated using hand tools and refilled to prevent reoccupation (California Department of Fish and Game 1995). Plastic tubing or a similar structure should be inserted in the tunnels during excavation to maintain an escape route for any owls inside the burrow.

SWAINSON'S HAWK

Preconstruction Survey

Prior to any ground disturbance related to covered activities that occurs during the nesting season (March 15–September 15), a qualified biologist will conduct a preconstruction survey no more than 1 month prior to construction to establish whether Swainson's hawk nests within 1,000 feet of the project site are occupied. If potentially occupied nests within 1,000 feet are off the project site, then their occupancy will be determined by observation from public roads or by observations of Swainson's hawk activity (e.g., foraging) near the project site. If nests are occupied, minimization measures and construction monitoring are required (see below).

Avoidance and Minimization and Construction Monitoring

During the nesting season (March 15–September 15), covered activities within 1,000 feet of occupied nests or nests under construction will be prohibited to prevent nest abandonment. If site-specific conditions or the nature of the covered activity (e.g., steep topography, dense vegetation, limited activities) indicate that a smaller buffer could be used, the Implementing Entity will coordinate with CDFW/USFWS to determine the appropriate buffer size.

If young fledge prior to September 15, covered activities can proceed normally. If the active nest site is shielded from view and noise from the project site by other development, topography, or other features, the project applicant can apply to the Implementing Entity for a waiver of this avoidance measure. Any waiver must also be approved by USFWS and CDFW. While the nest is occupied, activities outside the buffer can take place.

All active nest trees will be preserved on site, if feasible. Nest trees, including non-native trees, lost to covered activities will be mitigated by the project proponent according to the requirements below.

Mitigation for Loss of Nest Trees

The loss of non-riparian Swainson's hawk nest trees will be mitigated by the project proponent by:

- If feasible on-site, planting 15 saplings for every tree lost with the objective of having at least 5 mature trees established for every tree lost according to the requirements listed below.

  AND either

  1) Pay the Implementing Entity an additional fee to purchase, plant, maintain, and monitor 15 saplings on the HCP/NCCP Preserve System for every tree lost according to the requirements listed below, OR

  2) The project proponent will plant, maintain, and monitor 15 saplings for every tree lost at a site to be approved by the Implementing Entity (e.g., within an HCP/NCCP Preserve or existing open space linked to HCP/NCCP preserves), according to the requirements listed below.

The following requirements will be met for all planting options:

- Tree survival shall be monitored at least annually for 5 years, then every other year until year 12. All trees lost during the first 5 years will be replaced. Success will be reached at the end of 12 years if at least 5 trees per tree lost survive without supplemental irrigation or protection from herbivory. Trees must also survive for at least three years without irrigation.
- Irrigation and fencing to protect from deer and other herbivores may be needed for the first several years to ensure maximum tree survival.
- Native trees suitable for this site should be planted. When site conditions permit, a variety of native trees will be planted for each tree lost to provide trees with different growth rates, maturation, and life span, and to provide a variety of tree canopy structures for Swainson's hawk. This variety will help to ensure that nest trees will be available in the short term (5-10 years for cottonwoods and willows) and in the long term (e.g., Valley oak, sycamore). This will also minimize the temporal loss of nest trees.
- Riparian woodland restoration conducted as a result of covered activities (i.e., loss of riparian woodland) can be used to offset the nest tree planting requirement above, if the nest trees are riparian species.
- Whenever feasible and when site conditions permit, trees should be planted in clumps together or with existing trees to provide larger areas of suitable nesting habitat and to create a natural buffer between nest trees and adjacent development (if plantings occur on the development site).
- Whenever feasible, plantings on the site should occur closest to suitable foraging habitat outside the UDA.
- Trees planted in the HCP/NCCP preserves or other approved offsite location will occur within the known range of Swainson's hawk in the inventory area and as close as possible to high-quality foraging habitat.

GOLDEN EAGLE

Preconstruction Survey

Prior to implementation of covered activities, a qualified biologist will conduct a preconstruction survey to establish whether nests of golden eagles are occupied (see Section 6.3.1, *Planning Surveys*). If nests are occupied, minimization requirements and construction monitoring will be required.

Avoidance and Minimization

Covered activities will be prohibited within 0.5 mile of active nests. Nests can be built and active at almost any time of the year, although mating and egg incubation occurs late January through August, with peak activity in March through July. If site-specific conditions or the nature of the covered activity (e.g., steep topography, dense

vegetation, limited activities) indicate that a smaller buffer could be appropriate or that a larger buffer should be implemented, the Implementing Entity will coordinate with CDFW/USFWS to determine the appropriate buffer size.

Construction Monitoring

Construction monitoring will focus on ensuring that no covered activities occur within the buffer zone established around an active nest. Although no known golden eagle nest sites occur within or near the ULL, covered activities inside and outside of the Preserve System have the potential to disturb golden eagle nest sites. Construction monitoring will ensure that direct effects to golden eagles are minimized.

3) Construction Monitoring Plan

Before implementing a covered activity, the applicant will develop and submit a construction monitoring plan to the planning department of the local land use jurisdiction and the East Contra Costa County Habitat Conservancy for review and approval. Elements of a brief construction monitoring plan will include the following:

- Results of planning and preconstruction surveys.[11]
- Description of avoidance and minimization measures to be implemented, including a description of project-specific refinements to the measures or additional measures not included in the HCP/NCCP.
- Description of monitoring activities, including monitoring frequency and duration, and specific activities to be monitored.
- Description of the onsite authority of the construction monitor to modify implementation of the activity.

☒ Check box to acknowledge this requirement.

[11] If the preconstruction surveys do not trigger construction monitoring, results of preconstruction surveys should still be submitted to the local jurisdiction and the East Contra Costa County Habitat Conservancy.

V. SPECIFIC CONDITIONS ON COVERED ACTIVITIES

1) Check off the HCP conservation measures that apply to the project.

APPLIES TO ALL PROJECTS

☒ **Conservation Measure 1.11. Avoid Direct Impacts on Extremely Rare Plants, Fully Protected Wildlife Species, or Migratory Birds.** This conservation measure applies to all projects. All projects will avoid all impacts on extremely rare plants and fully protected species listed in Table 6-5 of the ECCC HCP/NCCP. See HCP pp. 6-23 to 6-25, and Table 6-5.

APPLIES TO PROJECTS THAT IMPACT COVERED PLANT SPECIES

☐ **Conservation Measure 3.10. Plant Salvage when Impacts are Unavoidable.** This condition applies to projects that cannot avoid impacts on covered plants and help protect covered plants by prescribing salvage whenever avoidance of impacts is not feasible. Project proponents wishing to remove populations of covered plants must notify the Conservancy of their construction schedule to allow the Conservancy the option of salvaging the populations. See HCP pp. 6-48 to 6-50.

APPLIES TO PROJECTS THAT INCLUDE ARE ADJACENT TO STREAMS, PONDS, OR WETLANDS

☒ **Conservation Measure 2.12. Wetland, Pond, and Stream Avoidance and Minimization.** All projects will implement measures described in the HCP to avoid and minimize impacts on wetlands, ponds, streams, and riparian woodland/scrub. See HCP pp. 6-33 to 6-35.

APPLIES TO NEW DEVELOPMENT PROJECTS

☒ **Conservation Measure 1.10. Maintain Hydrologic Conditions and Minimize Erosion.** All new development must avoid or minimize direct and indirect impacts on local hydrological conditions and erosion by incorporating the applicable Provision C.3 Amendments of the Contra Costa County Clean Water Program's (CCCCWP's) amended NPDES Permit (order no. R2-2003-0022; permit no. CAS002912). The overall goal of this measure is to ensure that new development covered under the HCP has no or minimal adverse effects on downstream fisheries to avoid take of fish listed under ESA or CESA. See HCP pp. 6-21 to 6-22.

APPLIES TO NEW DEVELOPMENT PROJECTS THAT INCLUDE OR ARE ADJACENT TO STREAMS, PONDS, OR WETLANDS

☐ **Conservation Measure 1.7. Establish Stream Setbacks.** A stream setback will be applied to all development projects covered by the HCP according to the stream types listed in Table 6-2 of the HCP. See HCP pp. 6-15 to 6-18 and Table 6-2.

APPLIES TO NEW DEVELOPMENT PROJECTS ADJACENT TO EXISTING PUBLIC OPEN SPACE, HCP PRESERVES, OR LIKELY HCP ACQUISITION SITES

☐ **Conservation Measure 1.6. Minimize Development Footprint Adjacent to Open Space.** Project applicants are encouraged to minimize their development footprint and set aside portions of their land to contribute to the HCP Preserve System. Land set aside that contributes to the HCP biological goals and objectives may be credited against development fees. See HCP pages 6-14 to 6-15.

☐ **Conservation Measure 1.8. Establish Fuel Management Buffer to Protect Preserves and Property.** Buffer zones will provide a buffer between development and wildlands that allows adequate fuel management to minimize the risk of wildlife damage to property or to the preserve. The minimum buffer zone for new development is 100 feet. See HCP pages 6-18 to 6-19.

☐ **Conservation Measure 1.9. Incorporate Urban-Wildlife Interface Design Elements.** These projects will incorporate design elements at the urban-wildlife interface to minimize the indirect impacts of development on the adjacent preserve. See HCP pp. 6-20 to 6-21.

APPLIES TO ROAD MAINTENANCE PROJECTS OUTSIDE THE UDA

☐ **Conservation Measure 1.12. Implement Best Management Practices for Rural Road Maintenance.** Road maintenance activities have the potential to affect covered species by introducing sediment and other pollutants into downstream waterways, spreading invasive weeds, and disturbing breeding wildlife. In order to avoid and minimize these impacts, BMPs described in the HCP will be used where appropriate and feasible. See HCP pp. 6-25 to 6-26.

APPLIES TO NEW ROADS OR ROAD IMPROVEMENTS OUTSIDE THE UDA

☐ **Conservation Measure 1.14. Design Requirements for Covered Roads Outside the Urban Development Area (UDA).** New roads or road improvements outside the UDA have impacts on many covered species far beyond the direct impacts of their project footprints. To minimize the impacts of new, expanded, and improved roads in agricultural and natural areas of the inventory area, road and bridge construction projects will adopt siting, design, and construction requirements described in the HCP and listed in Table 6-6. See HCP pp. 6-27 to 6-33 and Table 6-6.

APPLIES TO FLOOD CONTROL MAINTENANCE ACTIVITIES

☐ **Conservation Measure 1.13. Implement Best Management Practices for Flood Control Facility Maintenance.** Flood control maintenance activities have the potential to affect covered species by introducing sediment and other pollutants into downstream waterways and disturbing breeding wildlife. In order to avoid and minimize these impacts, BMPs described in the HCP will be used where appropriate and feasible. See HCP pp. 6-26 to 6-27.

2) **For all checked conservation measures, describe how the project will comply with each measure. Attach as Attachment C: Project Compliance to HCP Conditions.**

VI. MITIGATION MEASURES

1) **Mitigation Fee Calculator(s)**
Complete and attach the fee calculator (use permanent and/or temporary impact fee calculator as appropriate), and attach as **Attachment D: Fee Calculator(s)**.

2) **Briefly describe the amount of fees to be paid and when applicant plans to submit payment.**

The 142.10+/- acres Study Area is within Fee Zone 1 and construction is expected to commence in 2019.

Based on 2019 rates, the fees for this 142.10+/- acre area can be estimated as follows:

64.10 acres of permanent impacts within Fee Zone 1 at a cost of $16,757.65 per acre (= $1,074,165.37)

0.984 acres of permanent impacts to seasonal wetlands at a cost of $243,783.31 per acre (= $239,882.78)

Total Fees for development within the ECCCHCP Permit Area = $1,074,165.37 + $239,882.78 = $1,314,048.14

The fees will be paid prior to the start of construction at the current fee in place at that time.

ATTACHMENT A: PROJECT DESCRIPTION

OAKLEY LOGISTICS CENTER
Oakley, California

Project Description
July 2019

Project Location and Surrounding Land Uses

The project site is located on the northwest side of the City of Oakley, adjacent to State Route (SR) 160, on Bridgehead Road, north of Main Street and the BNSF Railroad, with entrance provided by Wilbur Avenue. The entire property is approximately 375 acres. However, the proposed project would only develop approximately 145 acres of the property. The remainder of the property would be undisturbed. The site is bounded by commercial and industrial uses to the west, vacant land to the east, the BNSF railroad and a mobile home park to the south, and the Delta and Lauritzen Yacht Harbor to the north (see Figure 1).

East Contra Costa County Habitat Conservation Plan

The overall 375.70+/- acre Property spans the ECCCHCP Permit boundary. Development will occur within 164.91+/- acres in the south part of the property, and 1.51+/- acres for off-site road improvements. While the PSR addresses the 142.10+/- acres of the site (i.e., the "Study Area") that is within the ECCCHCP Permit Area, the following description is for the entire project, including 24.32+/- acres of the site that is outside the ECCCHCP Permit Area.

Project Components

The proposed project includes construction of six buildings across the project site ranging in size from 48,000+/- ft^2 to 560,000+/- ft^2, for a total approximately 2.2 million ft^2 (see Figure 2A). The buildings would include front load and cross docked

warehouses. The proposed project would include demolition of the existing structures and construction of the proposed buildings over six phases.

Construction and Proposed Uses

The development of the proposed project would be spread over six phases, with full buildout expected to occur over three to five years. Phase I would include construction of Building 1 as well as all related infrastructure necessary to circulate around the building, provide parking, and construct truck court areas. Phase I would also include construction of two additional entry points south and north of the main Wilbur Avenue entry point. Phases II through VI would involve construction of Buildings 2 through 6. Additionally, each phase would develop parking areas, truck court areas, and associated connection points to circulate the project site. The proposed project would provide spaces for light industrial, warehousing, and manufacturing uses consistent with the General Plan.

Grading

Existing grades within the project site range from a low of about seven feet at the northwest corner of the site to a high of about 23 feet in the southwest corner. Proposed grading will consist of a series of cuts and fills to produce an overland release path towards the proposed detention basin and Delta edges. Two existing wetlands along Bridgehead Road (one near the northwest corner of the site and one closer to the projection of Wilbur Avenue) will be filled but the existing mitigation site wetland closer to the PG&E parcel will not be altered. Finished floor elevations for buildings are currently proposed between approximately 19 feet to 24 feet with adjacent truck docks being approximately 4 feet below the finished floors. It is anticipated that cuts and fills for the site will roughly balance resulting in no net import/export. If import/export is necessary it will likely be less than 25,000 cubic yards of material.

Project Site Access

The main entrance to the project site would be located on the eastern side of the intersection of Wilbur Avenue and Bridgehead Road. Two secondary access points

would also be provided on Bridgehead Road. Two secondary access points will also be provided on Bridgehead Road. One would be located to the north of the Wilbur Avenue entrance and another would be located to the south.

Roadway Improvements

Consistent with the Oakley 2020 General Plan, roadway infrastructure would be constructed to meet the needs of a planned unit development and provide access to this portion of Oakley. Street widths would be designed in accordance with traffic studies completed for the project as well as the specifications within the Oakley 2020 General Plan.

Utilities

The following is a discussion of the planned utility services of the proposed project. See Figure 2B for the proposed utilities site plan.

Water: Diablo Water District (DWD) provides potable water service to the project area. DWD has existing water lines along the southern boundary of the site, extending north and south. The private on-site water system will be removed completely. In addition, a portion of the existing DWD 24" line conflicts with the location of proposed Building 1 (the most southwesterly) and will be relocated west into the proposed parking area and drive aisles/streets. Per DWD standards, any waterline serving more than one building must be owned and operated by DWD and each building must have its own metered potable water service. DWD facilities must be in public right of way or within an easement granted to DWD. Accordingly, the proposed water line in the main drive aisle/street extending from Wilbur will be owned and operated by DWD to the proposed cul-de-sac. From that point on the individual services to Buildings 2 and 5 will be privately owned and operated. Buildings 1, 3, 4 and 6 will also be served from connections off the DWD line at connections along the main drive aisle/streets.

Sewer: Iron House Sanitary District (ISD) provides sanitary sewer collection and treatment for the project area. ISD operates the existing Lauritzen Sewer Pump Station

in Lauritzen Lane at the north edge of the site. Wastewater flows generated from the buildings would be collected in a pipe network that circulates within the parking and drive aisles of the project area and connects to the Lauritzen Pump Station.

Storm Drainage: The City of Oakley operates and maintains the public storm drain system in the vicinity of the project area. The site currently does not contain existing or planned public storm drain facilities. Storm water from impervious building roofs and pavement areas will be conveyed to bio-filtration basins located throughout the site as required by Provision C.3 of the Municipal Regional Permit. Water from these basins will then be conveyed in a series of pipes and shallow ditches to a new outfall in the marsh just east of the site. The outfall apron will be armored to prevent scour and erosion and will be equipped with a flap gate, if necessary, to prevent inflows from the Delta during high tide events..

If the outfall cannot be constructed as part of the early phases of site development due to permitting or other reasons interim detention basins will be constructed near early phase building pads to provide storage opportunities for storm water. These basins will be filled in once the outfall is available.

NOTES:

1. THE PROJECT IS DESIGNED TO COMPLY WITH THE REQUIREMENTS OUTLINED IN THE CONTRA COSTA CLEAN WATER PROGRAM'S (CCCWP) STORMWATER C.3 GUIDEBOOK, 7TH EDITION.
2. PER TABLE 3-8 OF THE CCCWP STORMWATER C.3 GUIDEBOOK, 7TH EDITION, THE PROJECT MAY USE UP TO 25% NON-LID TREATMENT DUE TO ITS LOCATION IN A PRIORITY DEVELOPMENT AREA.
3. THE PROJECT IS EXEMPT FROM HYDROMODIFICATION REQUIREMENTS DUE TO TIDAL INFLUENCE.
4. LID TREATMENT SHALL BE SIZED USING THE CCCWP IMP SIZING CALCULATOR.
5. MEDIA FILTER VAULTS SHALL BE SIZED PER THE METHOD OUTLINED IN APPENDIX E OF THE CCCWP STORMWATER C.3 GUIDEBOOK, 7TH EDITION..
6. THE SITE SOIL IS CLASSIFIED AS HYDROLOGIC SOIL GROUP A PER THE USDA WEB SOIL SURVEY.

ATTACHMENT C: PROJECT COMPLIANCE TO HCP CONDITIONS

OAKLEY LOGISTICS CENTER
Oakley, California

Project Compliance to HCP Conditions
July 2019

HCP/NCCP Conservation Measure 1.11. Avoid Direct Impacts on Extremely Rare Plants, Fully Protected Wildlife Species, or Covered Migratory Birds:

The potential for special-status plants to occur within the site is considered low, as described in Section III (10).

Species-specific pre-construction surveys, and if needed, monitoring and avoidance requirements for burrowing owl, Swainson's hawk, and golden eagle will be conducted as described in Section IV (2). There is no suitable habitat in the site for ringtail (*Bassariscus astutus*), a "fully protected species," per California Fish and Game Code Section 4700. Similarly, there is no suitable nesting habitat in the site for peregrine falcon (*Falco peregrinus*), a "fully protected species," per California Fish and Game Code Section 3511.

White-tailed kite (*Elanus caeruleus*), another "fully protected species," per California Fish and Game Code Section 3511 could potentially nest in trees in or near the site. Prior to any ground disturbance related to covered activities that occur during the nesting season (March 15-August 31), a qualified biologist will conduct a preconstruction survey no more than 1 month prior to construction to establish whether white-tailed kite is nesting in trees within or visible from the site. In the event active nests are found, the applicant shall notify the Implementing Entity and consult with CDFW for further guidance.

On-site grasslands and trees could be used by other species of nesting birds protected by the Migratory Bird Treaty Act. If possible, vegetation removal will occur outside of the general bird nesting season (February 1 through August 31). Alternately, a qualified biologist will conduct a preconstruction survey no more than 2 weeks prior to vegetation removal. In the event active nests are found, the applicant shall notify the Implementing Entity and consult with CDFW for further guidance.

HCP/NCCP Conservation Measure 2.12. Wetland, Pond, and Stream Avoidance and Minimization:

Potentially jurisdictional Waters of the U.S. and wetlands in the Study Area are being avoided to the maximum extent practicable. Seasonal Wetland E in the southwest part of the site will not be impacted by the project.

The other two seasonal wetlands in the Study Area (i.e., Seasonal Wetlands D and F) will be filled for construction of the project. Due to site topography and location in the interior parts of the proposed logistic center, impacts to these wetlands are unavoidable.

The following measures from pages 6-33 through 6-35 will be implemented avoid and minimize impacts of covered activities on wetlands:

- The project will comply with the guidelines in Conservation Measure 1.10 to minimize the effects of urban development on downstream hydrology, streams, and wetlands.
- All wetlands to be avoided by covered activities will be temporarily staked in the field by a qualified biologist.
- Personnel conducting ground-disturbing activities within or adjacent to wetlands will be trained by a qualified biologist in these avoidance and minimization measures and the permit obligations of project proponents working under the ECCCHCP.
- Trash generated during project construction will be promptly and properly removed from the site.
- No construction or maintenance vehicles will be refueled within 200 feet of wetlands unless a bermed and lined refueling area is constructed and hazardous material absorbent pads are available in the event of a spill.
- Appropriate erosion-control measures (e.g., fiber rolls, filter fences, vegetative buffer strips) will be used on site to reduce siltation and runoff of contaminants into the wetlands. Filter fences and mesh will be of material that will not entrap reptiles and amphibians. Erosion control blankets shall be used as a last resort because of their tendency to biodegrade slowly and trap reptiles and amphibians.
- Fiber rolls used for erosion control will be certified as free of noxious weed seed.
- Seed mixtures applied for erosion control will not contain invasive non native species, and will be composed of native species or sterile nonnative species.
- Herbicides will not be applied within or adjacent to on-site wetlands unless needed to control serious invasive plants. In this case, herbicides that have been approved for use by EPA in or adjacent to aquatic habitats may be used as long as label instructions are followed and applications avoid or minimize impacts on covered species and their habitats. Appropriate herbicides may be applied to the ruderal grassland within the buffer area during the dry season to control nonnative invasive species such as yellow star-thistle. Herbicide drift shall be minimized by applying the herbicide as close to the target area as possible.

HCP/NCCP Conservation Measure 1.10. Maintain Hydrologic Conditions and Minimize Erosion:

The project has been designed to maintain hydrologic conditions and minimize erosion. Site drainage will be cleansed and treated in a series of swales and shallow basins, and will then be conveyed to storm drain outfall that discharges to the delta

The project applicant will develop a Storm Water Pollution Prevention Plan (SWPPP) that will identify best management practices (BMPs) to be implemented to minimize the introduction of foreign material into waterbodies, control stormwater runoff, minimize erosion and sedimentation, and limit the amount of surface disturbance to the area.

Standard construction BMPs will be employed during construction to minimize the potential for erosion and off-site transport of fines. BMPs will include use of water trucks, appropriate compaction of soil, and installation of straw wattles, silt fences or other technologies along the perimeter of the site during construction, and stabilization of bare soils as appropriate with seeding, straw, and/or hydrolmulch.

	Reduction Total	= **$0.00**

FINAL FEE CALCULATION			
	Development Fee Total		$1,074,165.37
	Wetland Mitigation Fee Total	+	$239,882.78
	Fee Subtotal	=	**$1,314,048.14**
	Contribution to Recovery	+	
	TOTAL AMOUNT TO BE PAID	=	**$1,314,048.14**

[1] City/County planning staff will consult the land cover map in the Final HCP/NCCP and will reduce the acreage subject to the Development Fee by the acreage of the subject property that was identified in the Final HCP/NCCP as urban, turf, landfill or aqueduct land cover.

[2] Development Fees are adjusted annually according to a formula that includes both a Home Price Index (HPI) and a Consumer Price Index (CPI). The Wetland Mitigation Fees are adjusted according to a CPI. The Conservancy conducted the 2013 periodic fee audit required by the HCP/NCCP. Action by the County and participating cities is pending, which could result in adjustments to some or all fees in 2019.

[3] Fee reductions must be reviewed and approved by the Conservancy.

Ramon Aberasturi
Project Manager
Sacramento Delta Regulatory Section
U.S. Army Corps of Engineers Sacramento District Regulatory Division
1325 J Street, Room 1350
Sacramento, CA, 95814

Subject: Request for Preliminary Jurisdictional Determination for the Chemours Oakley Remediation Project (SPK-2018-00848)

Dear Mr. Aberasturi:

Per the guidance you provided following our preapplication meeting on October 4, 2018, we are sending a request for preliminary jurisdictional determination (PJD) for all aquatic resources on the Chemours property located at 6000 Bridgehead Road, Oakley, California, in Section 15, Township 2 North, Range 2 East in Contra Costa County. The project site contains six aquatic resource features delineated in 2006, 2007, 2008, and 2016 in accordance with standard United States Army Corps of Engineers (USACE) procedures. The delineation conducted in 2016 focused on wetlands A, B, and C. On November 15, 2018, Moore Biological Consultants conducted a field assessment of wetlands D, E, and F (Attachment A) and found the boundary of Wetland D to have changed in size (increased from 0.38 acre to 0.61 acre) and shape from what was previously delineated. The current boundaries of all the aquatic resources on the property are shown on the maps provided in Attachment B and Table 1 provides the name, Cowardin classification code, and acreage of each aquatic resource on the property. A copy of the preapplication meeting notes are provided in Attachment C.

Table 1 Aquatic resources on the Chemours Oakley Property

Resource ID	Resource Name	Cowardin Code	Size (acres)*
Wetland A	Little Break	PEM Wetland R1AB2/4 Open Water	103.67 64.19
Wetland B	Central Slough	PEM/POW	6.50
Wetland C	Red Pipe Area	PSS	0.20
Wetland D	Fallow Vineyard	PEM	0.61
Wetland E	Mitigation Area	PEM	0.62
Wetland F	Administrative Area	PEM	0.37
		Total	176.15

*Note that the minor change in acreage of Wetland A from the 2016 delineation report (168.23 acres) to current (167.86 acres) is because the 2016 report included some areas of Wetland A that are outside of the property boundary.

2018 Delineation of Wetland D Memo

MOORE BIOLOGICAL CONSULTANTS

November 20, 2018

Mr. Troy Bussey, Jr., P.E.

PIONEER Technologies Corporation

5205 Corporate Ctr. Ct. SE, Ste. A

Olympia, WA 98503-5901

SUBJECT: "CHEMOURS OAKLEY SITE", OAKLEY, CALIFORNIA: UPDATED DELINEATION OF "WETLAND D" (SPK-2007-01861)

Dear Troy:

Thank you for asking Moore Biological Consultants to assist with this project in Oakley, Contra Costa County (see Site Map in Attachment A). We understand Chemours has submitted an updated wetland delineation for verification and will be applying for a Clean Water Act Section 404 permit related to upcoming remediation activities at the site. The updated wetland delineation was focused on Wetlands "A", "B" and "C", in the heart of the remediation activities.

Parson's 2016 Wetland Delineation only cursorily addressed Wetlands "D", "E" and "F", which were verified by Corps as non-jurisdictional in 2008. The 2016 delineation relied upon the 2008 boundaries of wetlands "D", "E" and "F". To expedite re-verification, we understand there has been a recent decision to treat Wetlands "D", "E" and "F" as jurisdictional under the Corps' "Preliminary Jurisdictional Determination" (PJD) process.

At your request, we conducted a field assessment of Wetlands "D", "E" and "F" on November 15, 2018. With the Parson's 2016 wetland polygons in our Trimble GeoXH Global Positioning System (GPS) unit, we visited each wetland. We found Wetland "D" to be notably different in size and shape than that delineated in 2008 (Attachment B). The wetland has increased in size from 0.38 acres to 0.61 acres. The west edge of the wetland remains comparable to that delineated

10330 Twin Cities Rd., Ste. 30 • Galt, CA 95632
(209) 745-1159 • Fax (209) 745-7513
e-mail: moorebio@softcom.net

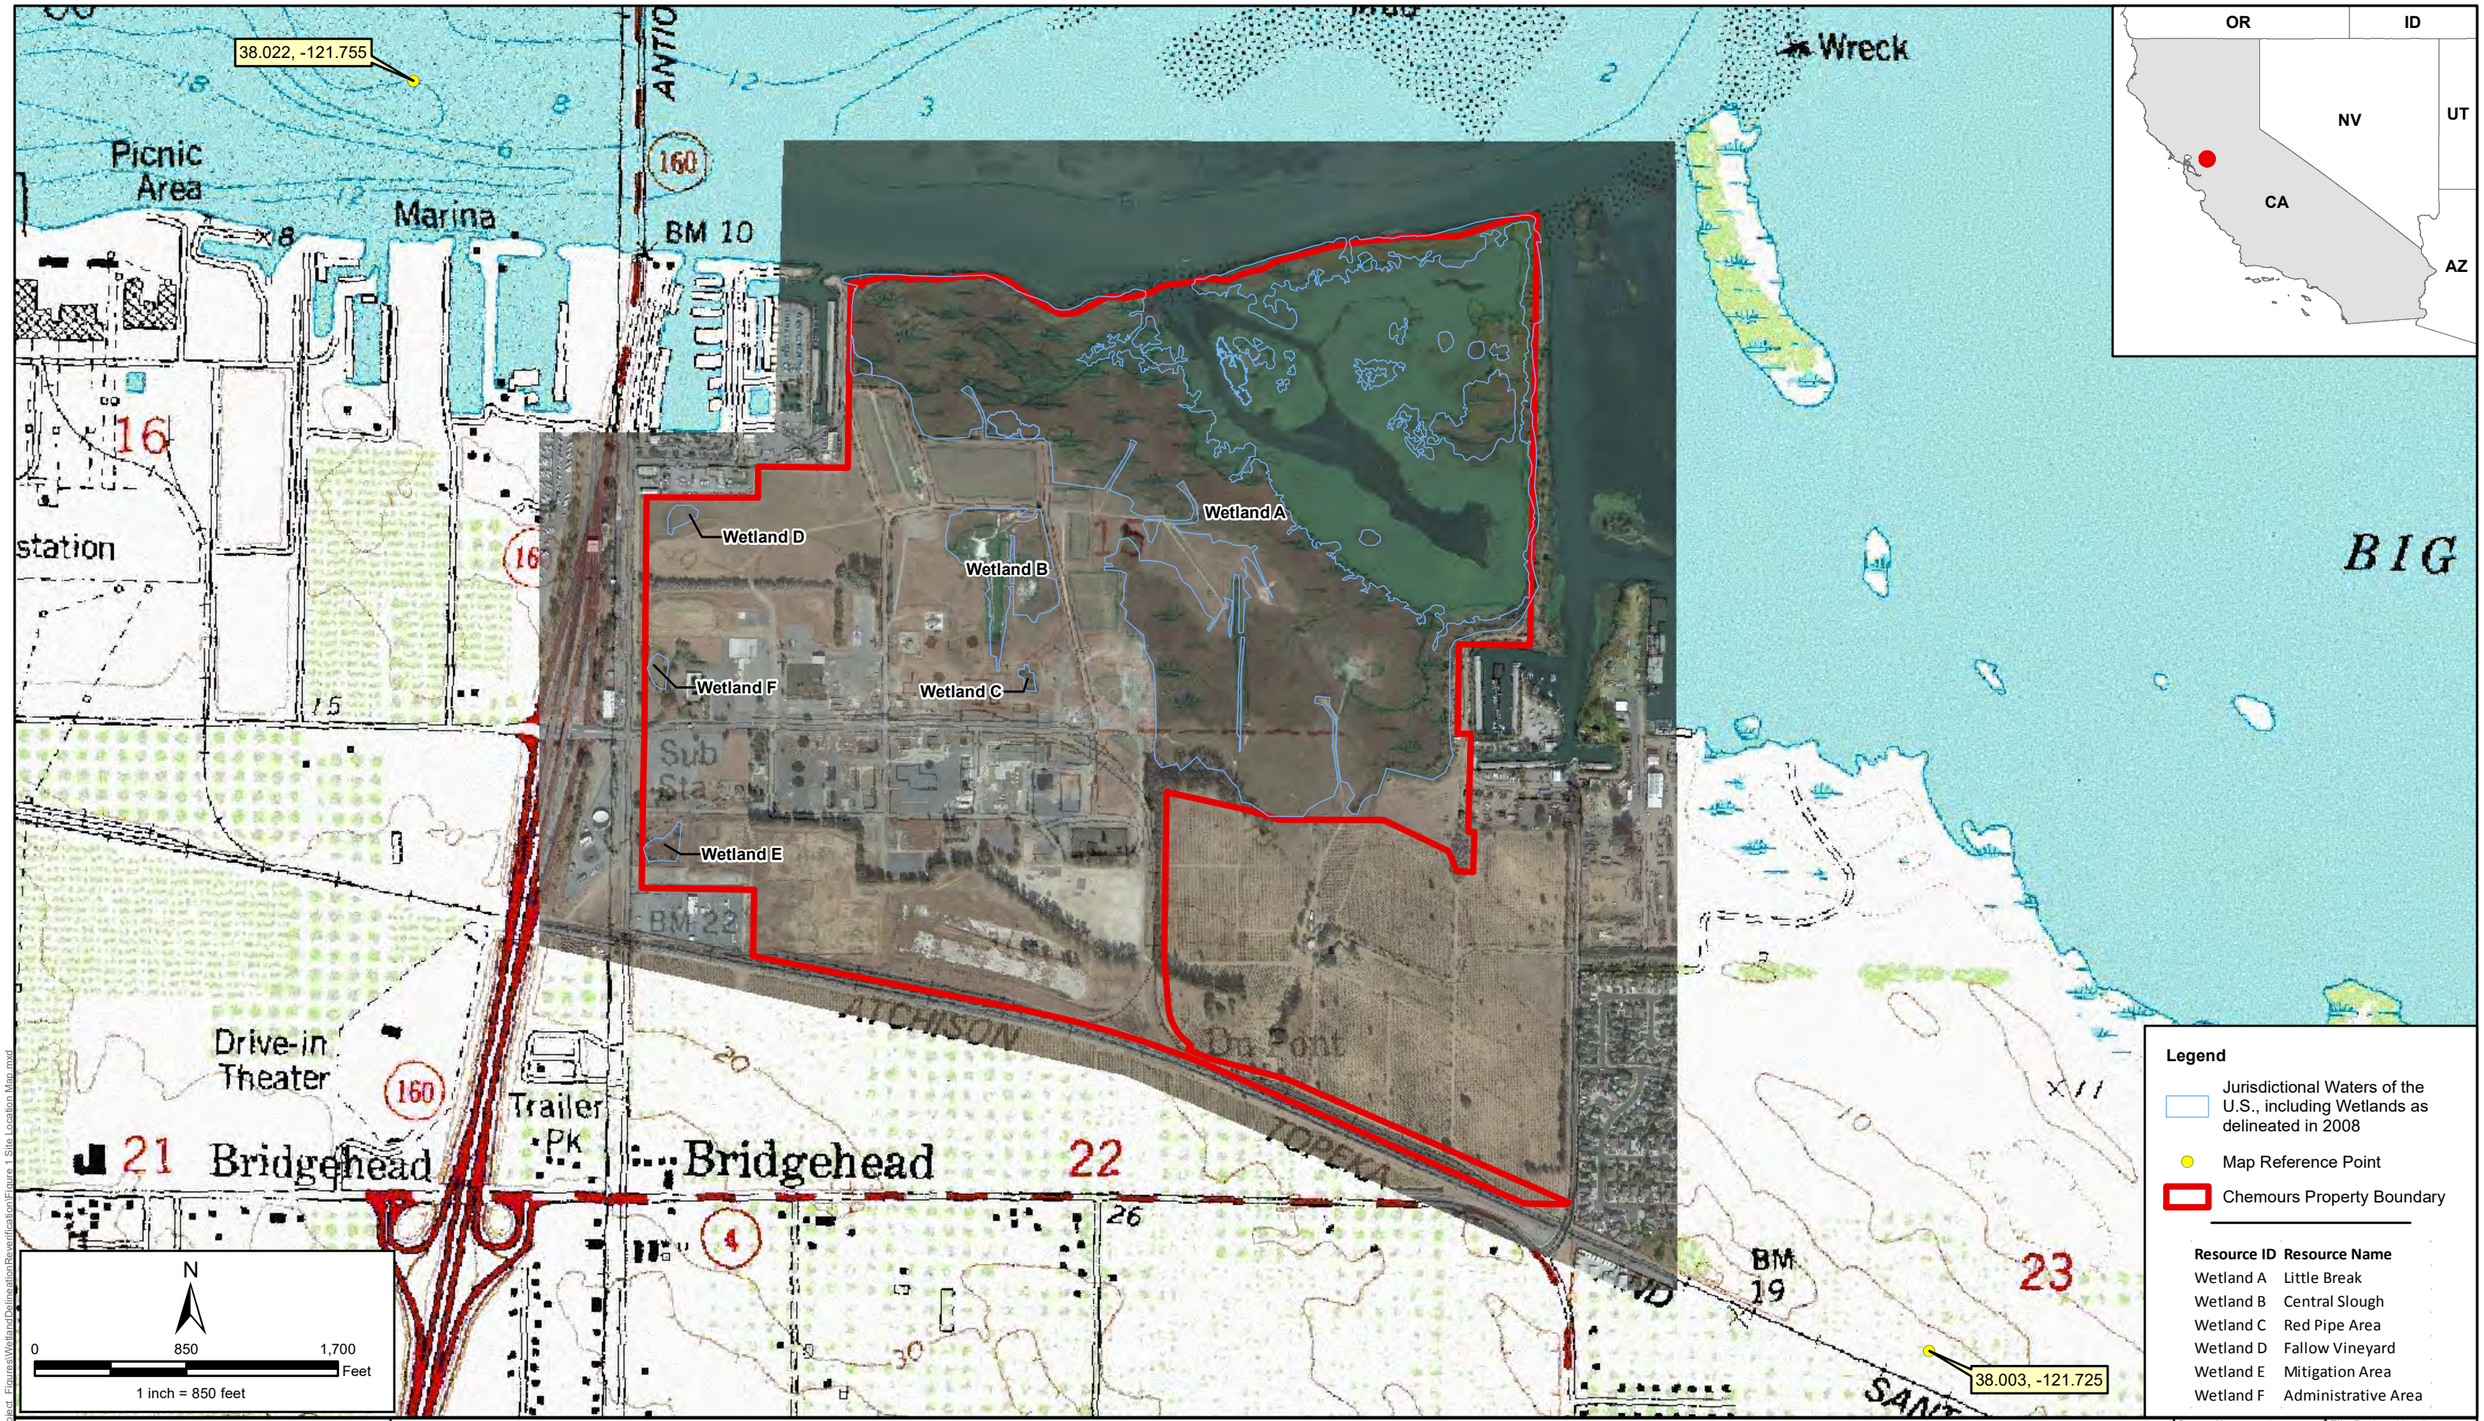
in 2008, but the east part of the wetland has expanded. Perennial ryegrass (*Festuca perennis*), seaside barley (*Hordeum marinum*), and annual rabbit's-foot grass *(Polypogon monspeliensis)* are dominant species in the eastern portion of the wetland, with an estimated 90% cover being comprised of these hyrdrophytic species.

The enlargement of Wetland "D" over the past decade appears related to grading and stockpiling soil on the south side of the wetland starting in the summer of 2011, and grading on the north side of the wetland starting in the summer of 2012. Google Earth aerial photographs from 2011 to 2018 chronicle these activities. By late-2015, a berm encircling Wetland "D" is apparent on aerial photographs; this berm remains today and is about 1 foot tall (see photographs in Attachment B).

In contrast, we determined the 2008 boundaries of Wetlands "E" and "F" remain valid. At several locations around each feature, the wetland boundary was identified by relatively abrupt transitions in vegetation composition, soils, and hydrology that aligned very closely (i.e., within 1-2 feet) with the previous delineation. Review of Google Earth aerial photographs from 2008 to 2018 confirm there have been no changes in land use on lands surrounding Wetlands "E" and "F". The locations of our GPS confirmation points around each of these wetlands and a few photographs are included in Attachment C.

We hope this information is helpful. Please call me at (209) 745-1159 with any questions.

Sincerely,



Diane S. Moore, M.S.

Principal Biologist

Preapplication Meeting Notes

Preapplication Meeting Notes for Chemours Oakley Remediation Project (SPK-2018-00848)

Meeting Date: October 4, 2018

Attendees:

Linda Leeman – Ascent
Tammie Beyerl – Ascent
Ramon Aberasturi – USACE
Nick White – Central Valley Regional Water Quality Control Board

On the Phone:

Troy Bussey – Pioneer
Elden Holder – USFWS
Ted Thayer – Ascent

Project Overview – project description, purpose and need

Troy – Gave the background of the previous permitted activity regarding the ground water remediation and emphasized the small nature of the disturbance and the human made nature of the Central Slough and the Central Slough Channel, the need for removing the contaminated sediment, and the inclusion of avoidance and mitigation measures.

Ramon - Asked about reuse on site of water from dewatering from upland wells, and whether a NWP 16 would be needed.

Troy - Explained that the water from ground water remediation would be reinjected back underground not on the surface; therefore, a NWP16 would not be needed because there is no discharge.

Ramon – Advised a review of NWP 38 decision document and look for the word "stabilize". Describe how water off the dredged soil would be stabilized. Also review all regional conditions for fill. Use language from the decision document when completing the PCN.

Tammie/Troy – Explained that the dredge material will not be placed back in waters of the U.S. and that the dredge area would not be re-filled. Also dredging would only be 6 to 18 inches of sediment. This resolved confusion about where digging to 6 feet and fill with clean soil would occur (in uplands).

Ramon - Narrow the scope of the description of the dredging activities. Asked about where the water that would be in the dredged material would go. Recommended discussing "stabilizing" the water as described in the NWP 38 decision document.

Ramon gave additional direction in follow-up email: Please narrow the scope of the PCN you will be submitting, e.g., the project description in your September 25, 2018 memo describes upland soil excavation activities, excavating 6-feet below grade, dewatering and backfilling excavations in one short paragraph. Please clarify the dewatering activities associated with the excavations in waters of the U.S.

Endangered Species Act

Ramon – There is habitat for delta smelt and giant garter snake (GGS) so informal consultation would be required. The USACE would do a "not likely to adversely affect" determination and seek a letter of concurrence from USFWS. Reference programmatic consultation document for GGS in PCN and supporting materials.

Linda - Asked if a BA would be needed and Ramon indicated that the existing technical reports would suffice.

Ramon - Indicated that work within open water means a steelhead effect and a letter of concurrence would be needed from NOAA fisheries for a "not likely to adversely affect" determination.

Linda - Asked for information on previous consultation.

Troy - Indicated that Parsons (Dennis Brown) would have Outfall and Plume 3 consultation language. Troy asked Ascent to send him an email to ask for the documents.

Ramon – Previous letters of concurrence were March 3, 2013 to the USFWS and October 21, 2013 to NMFS; reference these in the PCN.

Eldon – Was concerned that a recent IPaC search be included in request for letter of concurrence.

Linda – Indicated that Ascent would include a current IPaC search in the documentation.

Cultural Resources/Section 106 Compliance

Ramon –With previous USACE action for wells there was no Section106 consultation with State Historic Preservation Office (SHPO) based on determination of no potential to affect historic properties. The site has a history of disturbance and land uses/conditions have not changed since prior determination. He indicated that this project would have no effect and that no consultation would be needed.

Tammie/Linda – Asked if the 2016 California Historical Resources Information System record search should be included or is USACE comfortable with previous information.

Ramon - Cite reference materials previously submitted for Dupont parcel. The PCN will be electronic submittal. No consultation with SHPO needed.

General Discussion, Q & A

Nick – Asked if the slough would be dry at time of dredging. If the decanted water is not contained, a dredging permit may be needed. If decanted water is contained and removed, then only 401 WQC. If decanted water is treated and discharged a low threat NPDES permit would be needed. CVRWQCB will determine at the time the 401-application is received if a dredging permit and NPDES permit would be needed.

Troy – Indicated that there would be water at least at two of the dredging locations during project implementation.

Ramon – Re-emphasized the use of "stabilize" for water that is re-injected to the wells and of the water off the dredge material. Describe that fill during dredging would only include "incidental fallback" and would be de minimis.

Nick – Also indicated a preference for electronic submittal

Attachment D

Signed Request for Jurisdictional Determination Form

REQUEST FOR JURISDICTIONAL DETERMINATION

This form should be used when a jurisdictional determination (JD) is required from the U.S. Army Corps of Engineers, Sacramento District. It is intended to help both the requestor and the Corps in determining which type of JD, if any, is appropriate. Use of the form is optional; however the information and consent is needed to complete a JD. If you are applying for a Department of the Army permit, you do not need to request a JD. A jurisdictional determination is not required to process a permit application. At the time an application is submitted, the Corps will assume the aquatic resources on the parcel/within the review area are waters of the United States for the purpose of making a permit decision. With no JD requested, the permit application may be processed more quickly. The permittee retains the ability to request a JD any time during or after the permit application review process.

I am requesting the U.S. Army Corps of Engineers, Sacramento District, complete a jurisdictional determination for the parcel/review area located at:

Street Address: 6000 Bridgehead Road City: Oakley County: Contra Costa County
State: CA Zip: 94561 Section: 15 Township: 2N Range: 2E
Latitude (decimal degrees): 38.0130937057153 Longitude (decimal degrees): -121.742981408318
The approximate size of the review area for the JD is 376.44 acres. **(Please attach location map)**

Choose one:
- ☐ I currently own this property.
- ☐ I plan to purchase this property.
- ☑ I am an agent/consultant acting on behalf of the requestor.
- ☐ Other: _____

Choose one:
- ☐ I am requesting an Approved JD.
- ☑ I am requesting a Preliminary JD.
- ☐ I am unclear as to which JD I would like to request and require additional information to inform my decision.

Reason for request: (check all that apply)
- ☐ I intend to construct/develop a project or perform activities on this parcel/review area which would be designed to avoid all aquatic resources.
- ☐ I intend to construct/develop a project or perform activities on this parcel/review area which would be designed to avoid all jurisdictional aquatic resources under Corps authority.
- ☑ I intend to construct/develop a project or perform activities on this parcel/review area which may require authorization from the Corps, and the JD would be used to avoid and minimize impacts to jurisdictional aquatic resources and as an initial step in a future permitting process.
- ☐ I intend to construct/develop a project or perform activities on this parcel/review area which may require authorization from the Corps; this request is accompanied by my permit application and the JD is to be used in the permitting process.
- ☐ I intend to construct/develop a project or perform activities in a navigable water of the U.S. which is included on the district's list of navigable waters under Section 10 of the Rivers and Harbors Act of 1899 and/or is subject to the ebb and flow of the tide.
- ☐ A JD is required in order to obtain my local/state authorization.
- ☐ I intend to contest jurisdiction over a particular aquatic resource and request the Corps confirm that jurisdiction does/does not exist over the aquatic resource on the parcel/review.
- ☐ I believe that the parcel/review area may be comprised entirely of dry land.

Other: _____

Attached Information:
- ☑ Maps depicting the general location and aquatic resources within the review area consistent with Map and Drawing Standards for the South Pacific Division Regulatory Program (Public Notice February 2016, http://www.spd.usace.army.mil/Missions/Regulatory/Public-Notices-and-References/Article/651327/updated-map-and-drawing-standards/)
- ☑ Aquatic Resources Delineation Report, if available, consistent with the Sacramento District's Minimum Standards for Acceptance (Public Notice January 2016, http://1.usa.gov/1V68IYa)

By signing below, you are indicating that you have the authority, or are acting as the duly authorized agent of a person or entity with such authority, to and do hereby grant Corps personnel right of entry to legally access the site if needed to perform the JD. Your signature shall be an affirmation that you possess the requisite property rights to request a JD on the subject property.

*Signature: _____ Date: 8/2/18
Name: Troy Bussey Jr. Company name: PIONEER Technologies Corporation

U.S. ARMY CORPS OF ENGINEERS, SACRAMENTO DISTRICT
1325 J STREET
SACRAMENTO CA 95814-2922

March 20, 2019

Regulatory Division (SPK-2018-00848)

Ascent Environmental, Inc.
Attn: Mr. Troy Bussey Jr.
Pioneer Technologies Corporation
5205 Corporate Ctr. Ct. SE, Suite A
Olympia, Washington 98503-5901

Dear Mr. Bussey:

We are responding to your December 3, 2018, request for a preliminary jurisdictional determination (JD) for the Chemours-Oakley Remediation Project site. The approximately 376-acre project site is located near the San Joaquin River, 6000 Bridgehead Road, Latitude 38.011278°, Longitude -121.748685°, near the City of Oakley, Contra Costa County, California.

Based on available information, we concur with your aquatic resources delineation for the site as depicted on the enclosed December 4, 2018, Wetland Delineation Map prepared by Ascent Environmental (enclosure 1). The approximately 176.16-acres of Open Water, Marsh Wetlands and Seasonal Wetlands within the survey area are potential jurisdictional aquatic resources ("waters of the United States)" regulated under Section 404 of the Clean Water Act and Section 9 and 10 of the Rivers and Harbors Act.

At your request, we have completed a preliminary JD for the site. Enclosed find a copy of the *Preliminary Jurisdictional Determination Form* (enclosure 2). Please sign and return the completed form to this office, at the address listed below, within 30 days of the date of this letter. If you do not return the signed form within 30 days, we will presume concurrence and finalize the preliminary jurisdictional determination.

You may request an approved JD for this site at any time prior to starting work within waters, including after a permit decision is made.

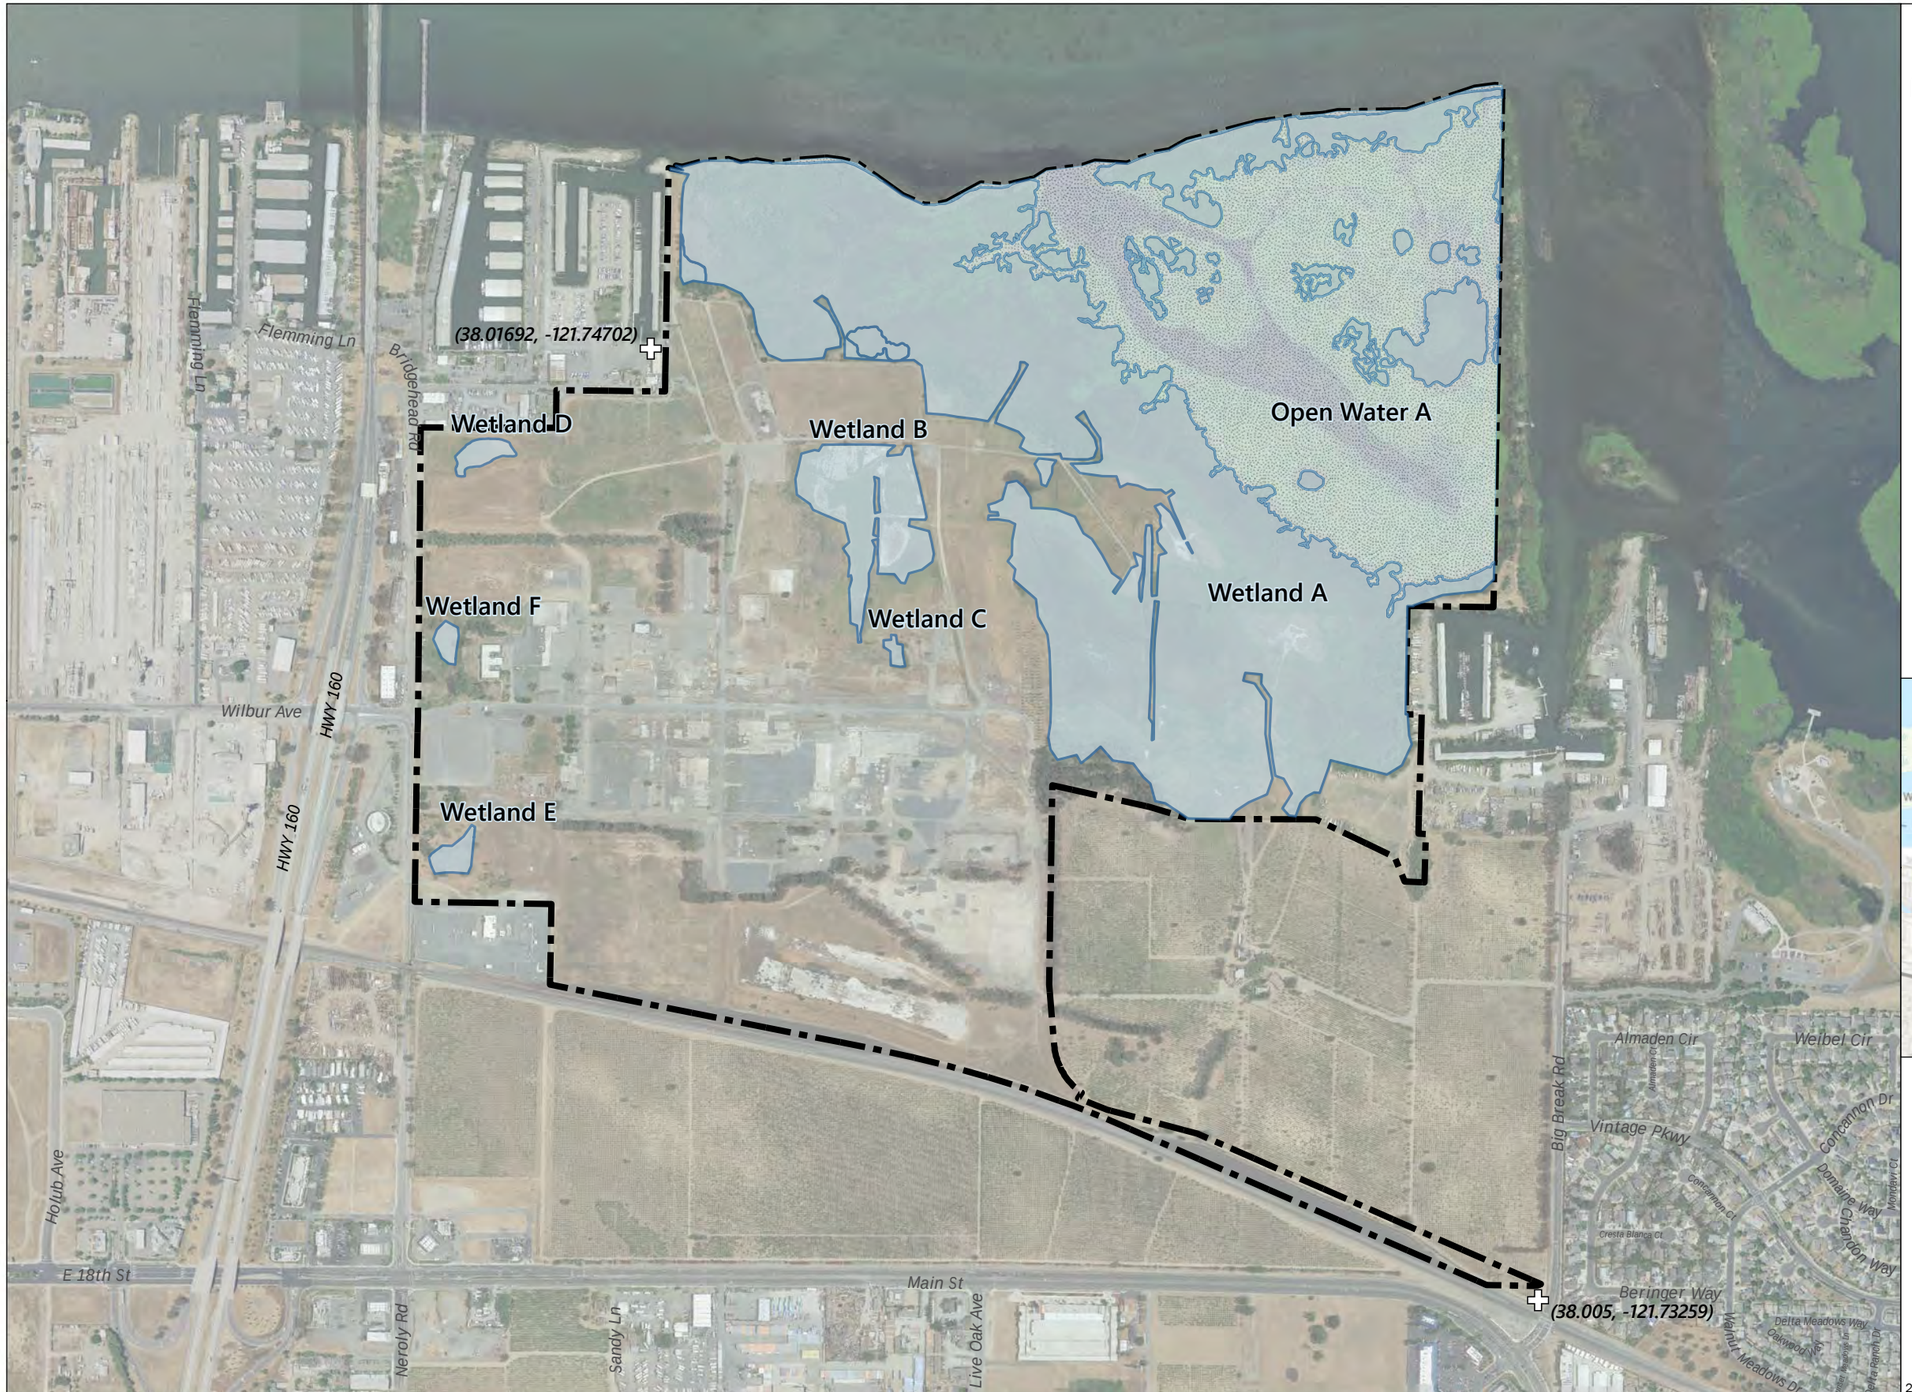
We recommend you provide a copy of this letter and notice to all other affected parties, including any individual who has an identifiable and substantial legal interest in the property.

This preliminary jurisdictional determination has been conducted to identify the potential limits of wetlands and other aquatic resources at the project site which may be subject to U.S. Army Corps of Engineers jurisdiction under Section 404 of the Clean

Water Act and/or Section 9 and 10 of the Rivers and Harbors Act. A *Notification of Appeal Process and Request for Appeal Form* is enclosed to notify you of your options with this determination (enclosure 3).

We appreciate feedback, especially about interactions with our staff and processes.

Please refer to identification number SPK-2018-00848 in any correspondence concerning this project. If you have any questions, please contact me by email at *Ramon.Aberasturi@usace.army.mil*, or telephone at (916) 557-6865. For program information or to complete our Customer Survey, visit our website at *www.spk.usace.army.mil/Missions/Regulatory.aspx*.



Sincerely,

Ramon Aberasturi

PRELIMINARY JURISDICTIONAL DETERMINATION (PJD) FORM

BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR PJD: 2018.12.14

B. NAME AND ADDRESS OF PERSON REQUESTING PJD: Troy Bussey Jr., 5205 Corporate Ctr Ct SE,Suite A, Olynpia, Washington 95803-5901

C. DISTRICT OFFICE, FILE NAME, AND NUMBER: Chemours-Oakley Remediation Project, SPK-2018-00848

D. PROJECT LOCATION(S) AND BACKGROUND INFORMATION:
(USE THE TABLE BELOW TO DOCUMENT MULTIPLE AQUATIC RESOURCES AND/OR AQUATIC RESOURCES AT DIFFERENT SITES)

State: CA County/parish/borough: Contra Costa County City: Antioch

Center coordinates of site (lat/long in degree decimal format):

Lat.: 38.0112784481634 Long.: -121.748685836792

Universal Transverse Mercator: 609847.34, 4207805.13

Name of nearest waterbody: San Joaquin River

E. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

☒ Office (Desk) Determination. Date: 2018.12.14

☐ Field Determination. Date(s):

TABLE OF AQUATIC RESOURCES IN REVIEW AREA WHICH "MAY BE" SUBJECT TO REGULATORY JURISDICTION.

Site number	Latitude (decimal degrees)	Longitude (decimal degrees)	Estimated amount of aquatic resource in review area (acreage and linear feet, if applicable)	Type of aquatic resource (i.e., wetland vs. non-wetland waters)	Geographic authority to which the aquatic resource "may be" subject (i.e., Section 404 or Section 10/404)
Wetland A - Little Break EM	38.016000	-121.738000	103.67	DELINPJD	Section 10/404
Wetland A - Little Break OW	38.016000	-121.73800	64.19	DELINPJD	Section 10/404
Wetland B - Central Slough EM	38.0150000	-121.744000	6.5	DELINPJD	Section 404
Wetland C - Red Pipe Area	38.013000	-121.743000	0.2	DELINPJD	Section 404

Site number	Latitude (decimal degrees)	Longitude (decimal degrees)	Estimated amount of aquatic resource in review area (acreage and linear feet, if applicable)	Type of aquatic resource (i.e., wetland vs. non-wetland waters)	Geographic authority to which the aquatic resource "may be" subject (i.e., Section 404 or Section 10/404)
Wetland D - Fallow Vineyard	38.015599	-121.749759	0.61	DELINPJD	Section 404
Wetland E - Mitigation Area	38.010380	121.749992	0.62	DELINPJD	Section 404
Wetland F - Administrative Area	38.013174	-121.750203	0.37	DELINPJD	Section 404

1) The Corps of Engineers believes that there may be jurisdictional aquatic resources in the review area, and the requestor of this PJD is hereby advised of his or her option to request and obtain an approved JD (AJD) for that review area based on an informed decision after having discussed the various types of JDs and their characteristics and circumstances when they may be appropriate.

2) In any circumstance where a permit applicant obtains an individual permit, or a Nationwide General Permit (NWP) or other general permit verification requiring "pre-construction notification" (PCN), or requests verification for a non-reporting NWP or other general permit, and the permit applicant has not requested an AJD for the activity, the permit applicant is hereby made aware that: (1) the permit applicant has elected to seek a permit authorization based on a PJD, which does not make an official determination of jurisdictional aquatic resources; (2) the applicant has the option to request an AJD before accepting the terms and conditions of the permit authorization, and that basing a permit authorization on an AJD could possibly result in less compensatory mitigation being required or different special conditions; (3) the applicant has the right to request an individual permit rather than accepting the terms and conditions of the NWP or other general permit authorization; (4) the applicant can accept a permit authorization and thereby agree to comply with all the terms and conditions of that permit, including whatever mitigation requirements the Corps has determined to be necessary; (5) undertaking any activity in reliance upon the subject permit authorization without requesting an AJD constitutes the applicant's acceptance of the use of the PJD; (6) accepting a permit authorization (e.g., signing a proffered individual permit) or undertaking any activity in reliance on any form of Corps permit authorization based on a PJD constitutes agreement that all aquatic resources in the review area affected in any way by that activity will be treated as jurisdictional, and waives any challenge to such jurisdiction in any administrative or judicial compliance or enforcement action, or in any administrative appeal or in any Federal court; and (7) whether the applicant elects to use either an AJD or a PJD, the JD will be processed as soon as practicable. Further, an AJD, a proffered individual permit (and all terms and conditions contained therein), or individual permit denial can be administratively appealed pursuant to 33 C.F.R. Part 331. If, during an administrative appeal, it becomes appropriate to make an official determination whether geographic jurisdiction exists over aquatic resources in the review area, or to provide an official delineation of jurisdictional aquatic resources in the review area, the Corps will provide an AJD to accomplish that result, as soon as is practicable. This PJD finds that there *"may be"* waters of the U.S. and/or that there *"may be"* navigable waters of the U.S. on the subject review area, and identifies all aquatic features in the review area that could be affected by the proposed activity, based on the following information:

NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL

Applicant: Pioneer Technologies Corporation: Mr. Bussey.	File No.: SPK-2018-00848	Date: March 20, 2019

Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A
	PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
	APPROVED JURISDICTIONAL DETERMINATION	D
→	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at *http://www.usace.army.mil/cecw/pages/reg_materials.aspx* or Corps regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- OBJECT: If you object to the permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this form and return the form to the district engineer. Your objections must be received by the district engineer within 60 days of the date of this notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your letter, the district engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the district engineer will send you a proffered permit for your reconsideration, as indicated in Section B below.

B: PROFFERED PERMIT: You may accept or appeal the permit

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- APPEAL: If you choose to decline the proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer (address on reverse). This form must be received by the division engineer within 60 days of the date of this notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer (address on reverse). This form must be received by the division engineer within 60 days of the date of this notice.

D: APPROVED JURISDICTIONAL DETERMINATION: You may accept or appeal the approved JD or provide new information.

- ACCEPT: You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this notice, means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.

- APPEAL: If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer (address on reverse). This form must be received by the division engineer within 60 days of the date of this notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION: You do not need to respond to the Corps regarding the preliminary JD. The Preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps district for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this form to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record, the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the review officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact:

Ramon Aberasturi
Regulatory Project Manager
California Delta Section
U.S. Army Corps of Engineers

Phone: (916) 557-6865, FAX 916-557-7803
Email: Ramon.Aberasturi@usace.army.mil

If you only have questions regarding the appeal process you may also contact:

Thomas J. Cavanaugh
Administrative Appeal Review Officer
U.S. Army Corps of Engineers
South Pacific Division
1455 Market Street, 2052B
San Francisco, California 94103-1399
Phone: 415-503-6574, FAX 415-503-6646)
Email: Thomas.J.Cavanaugh@usace.army.mil

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15 day notice of any site investigation, and will have the opportunity to participate in all site investigations.

	Date:	Telephone number:
Signature of appellant or agent.		

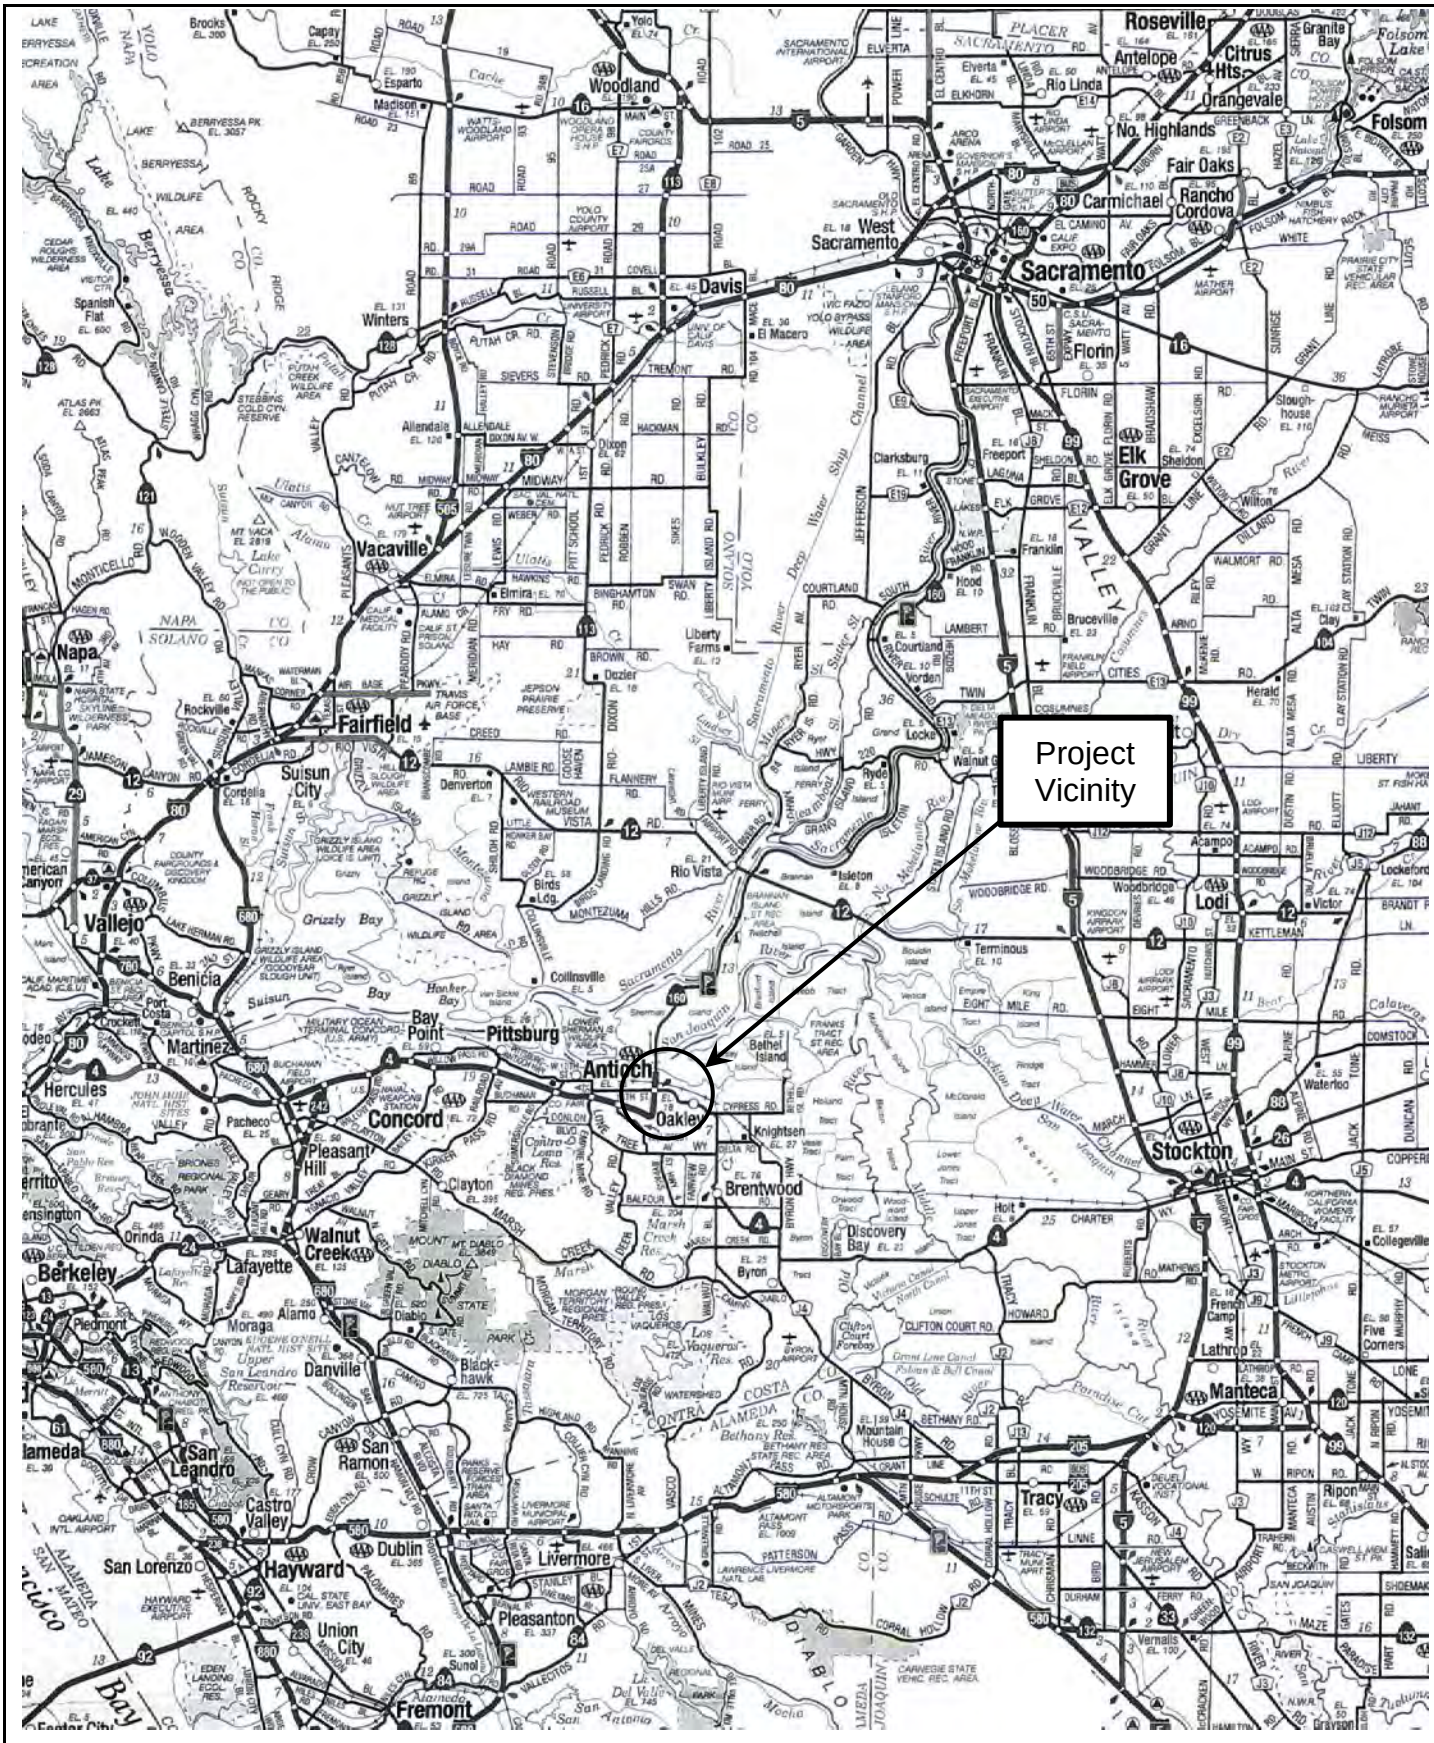
MOORE BIOLOGICAL CONSULTANTS

Memorandum

TO: Jed Momot, NorthPoint Development

FROM: Diane Moore

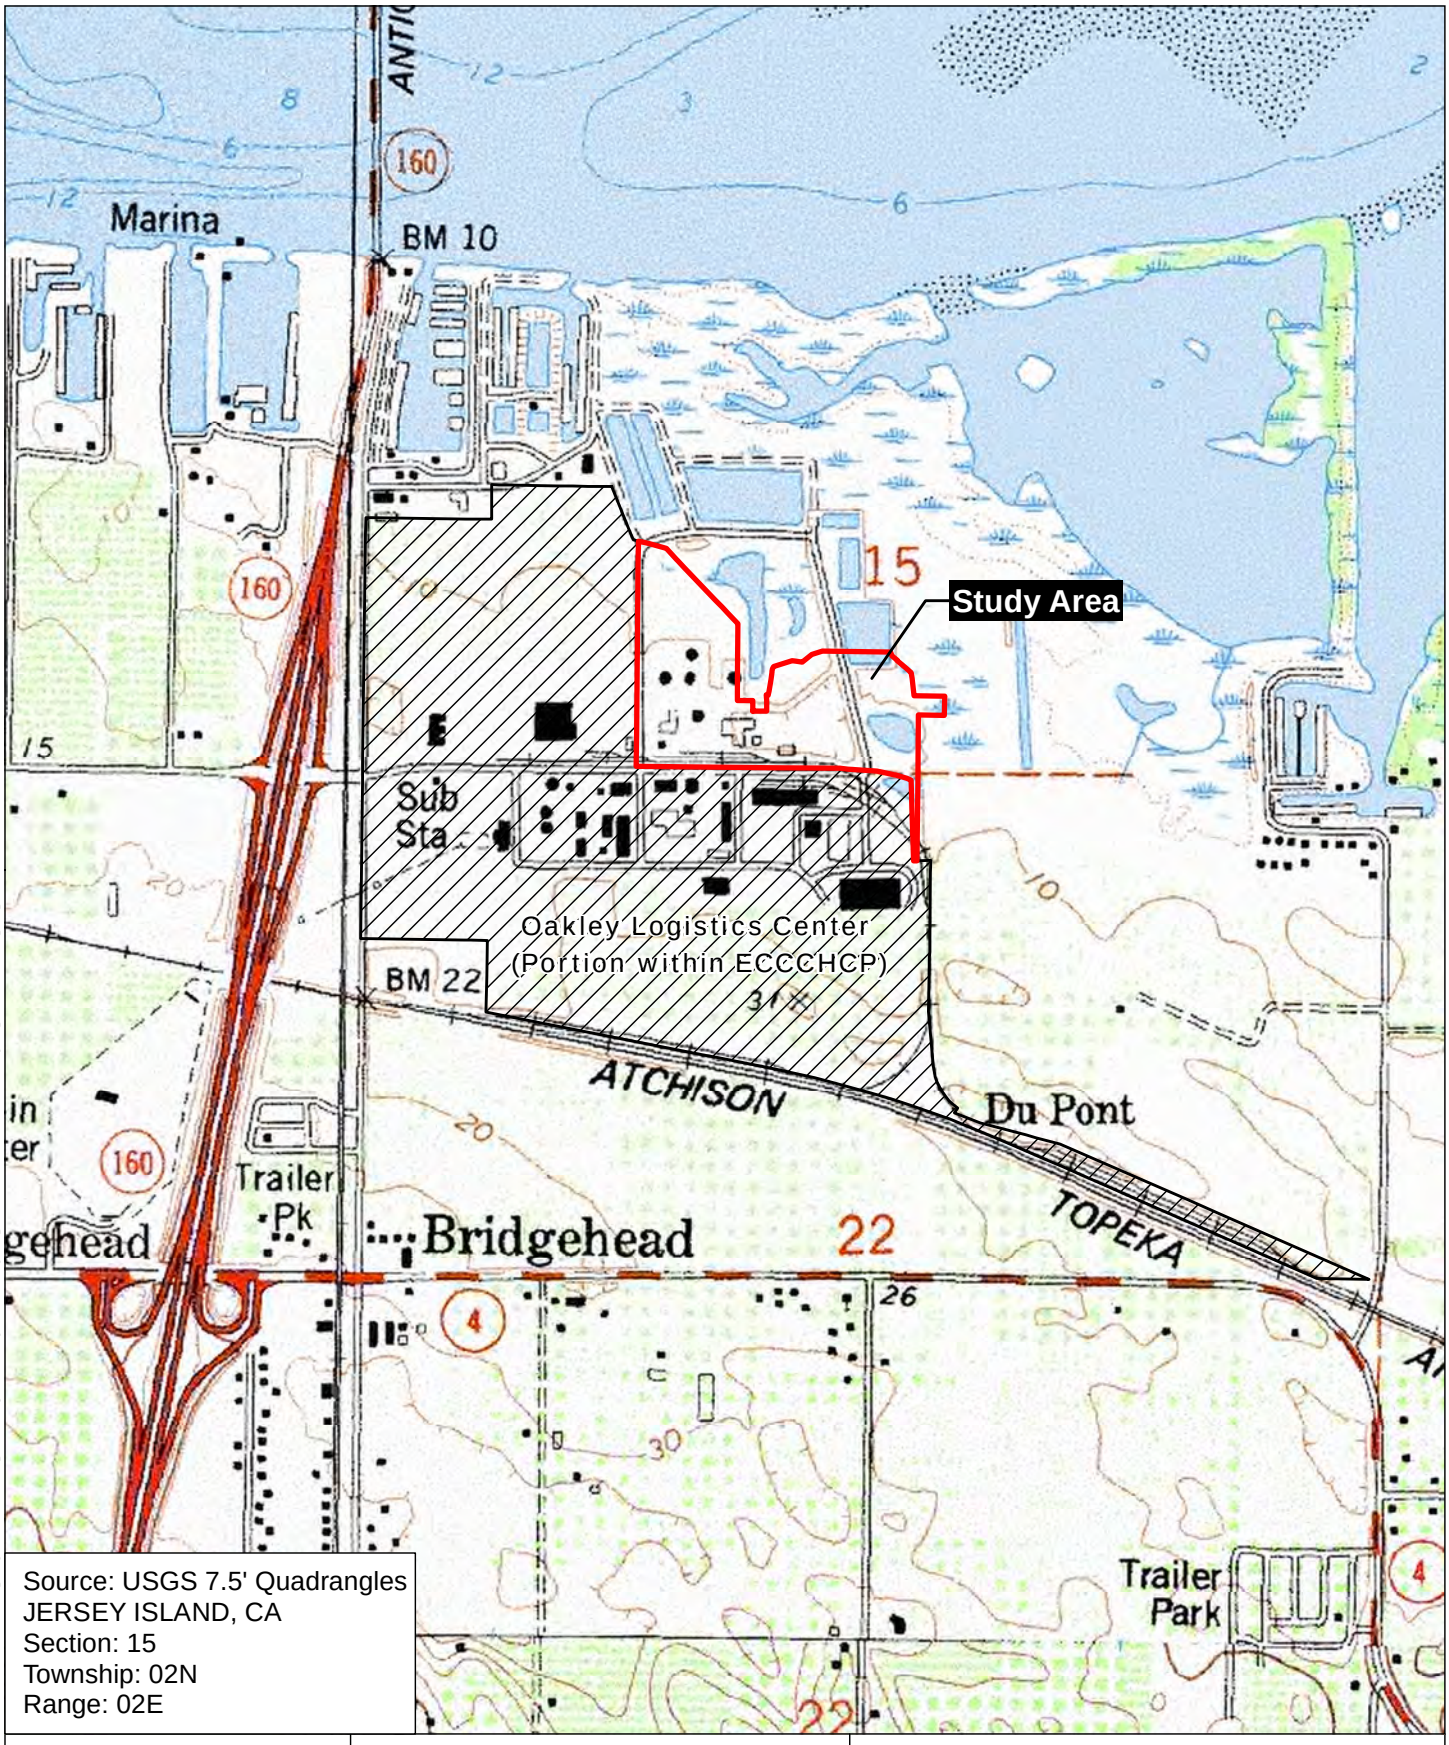
SUBJECT: "CONTRA COSTA LOGISTICS CENTER", OAKLEY, CALIFORNIA: OVERVIEW OF SPECIAL-STATUS SPECIES IN THE PORTION OF THE SITE OUTSIDE THE EAST CONTRA COSTA COUNTY HABITAT CONSERVATION PLAN



DATE: July 18, 2019

The overall 375.70+/- acre property is in northwest Oakley, Contra Costa County, California (Figure 1). The 166.42+/- acre "Project Site", located in the southwest part of the parcel includes approximately 142.10+/- acres of land within the East Contra Costa County Habitat Conservation Plan (ECCCHCP) Permit Area and 24.32+/- acres of land just outside the ECCCHCP Permit Area (Figure 2).

There are several land cover types within the overall property, including a large slough and expansive tidal and alkali wetlands in the northeast part of the property. In contrast, the 24.32+/- "project site" primarily consists of previously developed areas and ruderal grasslands (Figure 3). The project site contains 16.42+/- acres of highly ruderal grassland and 7.49+/- acres of previously developed areas (Figure 4). The project site also includes a 0.20+/- acre seasonal wetland that will be filled and a small area of a permanent tidal wetland (0.21+/- acres) where a storm drain outfall structure will be constructed. The Site Plan and Conceptual Outfall Structure Exhibits are included in Attachment A; representative photographs are included in Attachment B.



This overview of special-status species in the 24.32+/- acres of land outside the ECCCHCP permit area was prepared in support of the City's California Environmental Quality Act (CEQA) review process. These species have either been documented or may potentially occur in the greater project vicinity.

VEGETATION AND HABITATS

Oakley Logistics Center
(Portion Outside ECCCHCP)

Special-status wildlife and plant species that have been previously documented in the greater project vicinity were identified by a search of California Department of Fish and Wildlife's (CDFW) California Natural Diversity Database (CNDDB, 2019). The CNDDB search included the USGS 7.5-minute Antioch North, Antioch South, Jersey Island, and Brentwood topographic quadrangles, which is approximately 240 square miles surrounding the site (Attachment C). The U.S. Fish and Wildlife Service (USFWS) IPaC Trust Report of Federally Threatened and Endangered species that may occur in or be affected by projects in the project vicinity was also reviewed (Attachment C).

SPECIAL-STATUS PLANTS: Several special-status plants were identified in the CNDDB (2019) search area: large-flowered fiddleneck (*Amsinckia grandiflora*), Mt. Diablo manzanita (*Arctostaphylos auriculata*), alkali milk-vetch (*Astragalus tener var. tener*), brittlescale (*Atriplex depressa*), big tarplant (*Blepharizonia plumosa ssp. plumosa*), Mt. Diablo fairy-lantern (*Calochortus pulchellus*), Congdon's tarplant (*Centromadia parryi spp. congdonii*), soft salty bird's-beak (*Chloropyron molle* ssp. *molle*), Bolander's water hemlock (*Cicuta maculata var. bolanderi*), Hoover's cryptantha (*Cryptantha hooveri*), dwarf downingia (*Downingia pusilla*), Antioch Dunes buckwheat (*Eriogonum nudum* var. *psychicola*), Mt. Diablo buckwheat (*Eriogonum truncatum*), Jepson's coyote thistle (*Eryngium jepsonii*), Contra Costa wallflower (*Erysimum capitatum* var. *angustatum*), diamond-petaled California poppy (*Eschscholzia rhombipetala*), San Joaquin spearscale (*Extriplex joaquiniana*), fragrant fritillary (*Fritillaria liliacea*), Diablo helianthella (*Helianthella castanea*), Brewers western flax (*Hesperolinon breweri*), woolly rose mallow (*Hibiscus lasiocarpus*), Contra Costa goldfields (*Lasthenia conjugens*), Delta tule pea (*Lathyrus jepsonii* var. *jepsonii*), Mason's lilaeopsis (*Lilaeopsis masonii*), Delta mudwort (*Limosella australis*), showy golden madia (*Madia radiata*), Hall's bush mallow (*Malacothamnus hallii*), shining navarretia (*Navarretia nigelliformis* ssp. *radians*), Antioch dunes evening primrose (*Oenothera deltoides* ssp. *howellii*), bearded popcorn-flower (*Plagiobothrys hystriculus*), eel-grass pondweed (*Potamogeton zosteriformis*), chaparral ragwort (*Senecio aphanactis*), Keck's checkerbloom (*Sidalcea keckii*), Suisun marsh aster (*Symphotrichum lentum*), caper-fruited tropidocarpum (*Tropidocarpum capparideum*), and oval-leaved viburnum

1346

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
PLANTS						
Large-flowered fiddleneck	*Amsinckia grandiflora*	E	E	1B	Cismontane woodland, valley and foothill grassland; elevations 902-1,805 feet; blooms April - May.	Unlikely: the ruderal grassland habitats in the site are highly disturbed and do not provide suitable habitat for large-flowered fiddleneck; the site is also well below the elevation range of this species (CNPS, 2019). The nearest occurrence of large-flowered fiddleneck in the CNDDB (2019) search area is approximately 7 miles southwest of the site.
Mt. Diablo manzanita	*Arctostaphylos auriculata*	None	None	1B	Chaparral, only on the Mt. Diablo area of Contra Costa County; elevations 443-2,133 feet; blooms January - March.	Unlikely: the site does not provide suitable habitat for Mt. Diablo manzanita. The site is also not in the elevation range of this species (CNPS, 2019). The nearest occurrence of the Mt. Diablo manzanita in the CNDDB (2019) search area is approximately 6 miles southwest of the site.
Alkali milk-vetch	*Astragalus tener var. tener*	None	None	1B	Alkali playas and vernal pools; elevations 3-197 feet; blooms March - June.	Unlikely: the project site does not provide suitable habitat for this species; there are no vernal pools or alkali playas in the site. The nearest occurrence of alkali milk-vetch in the CNDDB (2019) search area is approximately 8.5 miles northwest of the site.
Brittlescale	*Atriplex depressa*	None	None	1B	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland, vernal pool habitats within alkaline clay soils; elevations 3-1,050 feet; blooms April - October.	Unlikely: the ruderal grassland in the project site is highly disturbed and does not provide suitable habitat for brittlescale; there are also no other habitats in the site to support this species. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 5 miles south of the site.
Big tarplant	*Blepharizonia plumosa ssp. plumosa*	None	None	1B	Valley and foothill grassland, usually in clay soils; elevations 98-1,657 feet; blooms July - October.	Unlikely: the ruderal grassland in the site is highly disturbed and does not provide suitable habitat for big tarplant. The site is also not within the elevation range of this species (CNPS, 2019). The nearest occurrence of this species in the CNDDB (2019) search area is approximately 5 miles southwest of the site.

1347

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Mt. Diablo fairy-lantern	*Calochortus pulchellus*	None	None	1B	Chaparral, cismontane woodland, riparian woodland, valley and foothill grassland; elevations 98-2,756 feet; blooms April - June.	Unlikely: the ruderal grassland in the project site is highly disturbed and does not provide suitable habitat for Mt. Diablo fairy-lantern. The site is also not within the elevation range of this species (CNPS, 2019). The nearest occurrence of Mt. Diablo fairy-lantern in the CNDDB (2019) search area is approximately 8 miles southwest of the site.
Congdon's tarplant	*Centromadia parryi spp. congdonii*	None	None	1B	Valley and foothill grassland, usually in alkaline soils; elevations 0-754 feet; blooms May – October	Unlikely: the ruderal grasslands in the site are highly disturbed and do not provide suitable habitat for this species. The nearest occurrence of Congdon's tarplant in the CNDDB (2019) search area is approximately 5.5 miles southeast of the site.
Soft salty bird's-beak	*Chloropyron molle ssp. molle*	E	R	1B	Coastal salt marsh; elevations 0-10 feet; blooms July - November.	Unlikely: the permanent wetland is choked with cattails and tules and provides poor quality habitat for this species. Additionally, soft salty bird's-beak was not observed in the permanent wetland during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrence of soft salty bird's-beak in the CNDDB (2019) search area is approximately 1 mile north of the site. The site is not in designated critical habitat for this species (USFWS, 2007)
Bolander's water hemlock	*Cicuta maculata var. bolanderi*	None	None	2	Fresh or brackish water marshes; elevations 0-656 feet; blooms July - September.	Unlikely: as it is wet only seasonally, the seasonal wetland in the site provides poor quality marsh habitat for Bolander's water hemlock; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Bolander's water hemlock was also not observed in the wetlands during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrence of this species in the CNDDB (2019) search area is mapped nonspecifically approximately 1 mile east of the site.

1348

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Hoover's cryptantha	*Cryptantha hooveri*	None	None	1B	Inland dunes; sandy areas in valley and foothill grasslands; elevations 30-492 feet; blooms April - May.	Unlikely: there are no dunes in the site and the ruderal grasslands are heavily disturbed and do not provide suitable habitat for Hoover's cryptantha; the site is also at the very low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of Hoover's cryptantha in the CNDDB (2019) search area is approximately 2 miles southwest of the site.
Dwarf downingia	*Downingia pusilla*	None	None	2	Vernal pools; elevations 3-1,460 feet; blooms March - May.	Unlikely: there are no vernal pools in the site and the seasonal wetland in the site does not provide habitat for vernal pool plants. The nearest occurrence of dwarf downingia in the CNDDB (2019) search area is approximately 9.5 miles northwest of the site.
Antioch Dunes buckwheat	*Eriogonum nudum* var. *psychicola*	None	None	1B	Inland dunes; elevations 0-66 feet; blooms July - October.	Unlikely: the site does not provide dune habitat for Antioch Dunes buckwheat. The nearest occurrence of this speices in the CNDDB (2019) search area is approximately 2 miles west of the site. Additionally, this species was not observed during the recent rare plant survey for the remediation project (California Environmental Services, 2017).
Mt. Diablo buckwheat	*Eriogonum truncatum*	None	None	1B	Coastal scrub, valley and foothill grassland and coastal scrub; usually on sandy soils; elevations 10-1,148 feet; blooms April - December.	Unlikely: the ruderal grasslands are highly disturbed and do not provide suitable habitat for Mt. Diablo buckwheat; the site is also at the very low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of Mt. Diablo buckwheat in the CNDDB (2019) search area is approximately 3 miles southwest of the site.
Jepson's coyote thistle	*Eryngium jepsonii*	None	None	1B	Valley and foothill grasslands, within vernal pools; elevations 10 – 985 feet; blooms April - August.	Unlikely: the site does not provide suitable habitat for Jepson's coyote thistle. The site is also at the very low end of the elevation range of Jepson's coyote thistle (CNPS, 2019). The nearest occurrence of this species in the CNDDB (2019) search area is approximately 8 miles southwest of the site.

1349

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Contra Costa wallflower	*Erysimum capitatum var. angustatum*	E	E	1B	Inland dunes; elevations 10-66 feet; blooms March - July.	Unlikely: the site does not provide dune habitat for Contra Costa wallflower. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 2 miles west of the site. The site is not in designated critical habitat for Contra Costa wallflower (CFR, 1990a).
Diamond-petaled California poppy	*Eschscholzia rhombipetala*	None	None	1B	Valley and foothill grasslands in alkaline, clay soils; elevations 0-3,200 feet; blooms March - April.	Unlikely: the on-site grasslands are highly disturbed and do not provide suitable habitat for diamond-petaled California poppy. The site is at the very low end of the elevation range of this species, which is considered extirpated in Contra Costa County (CNPS, 2019). The nearest occurrence of diamond-petaled California poppy in the CNDDB (2019) search area is approximately 2.5 miles northwest of the site.
San Joaquin spearscale	*Extriplex joaquiniana*	None	None	1B	Chenopod scrub, meadows, playas and seeps, valley and foothill grassland; within alkaline soils; elevations 3 – 2,740 feet; blooms April – October.	Unlikely: the ruderal grasslands in the site are highly disturbed and do not provide suitable habitat for this species. The site is also at the very low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of San Joaquin spearscale in the CNDDB (2019) search area is approximately 5 miles south of the site.
Fragrant fritillary	*Fritillaria liliacea*	None	None	1B	Coastal scrub, valley and foothill grassland and coastal prairie; often on serpentine soils; elevations 10-1,345 feet; blooms February - April.	Unlikely: the ruderal grasslands are highly disturbed and do not provide suitable habitat for fragrant fritillary; no areas of serpentine soils were observed in the site. The site is also at the very low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of fragrant fritillary in the CNDDB (2019) search area is approximately 9.5 miles northwest of the site.

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Diablo helianthella	*Helianthella castanea*	None	None	1B	Broad-leaved upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland; elevations 197-4,265 feet; blooms March - June.	Unlikely: the on-site ruderal grasslands are heavily disturbed and provides poor quality habitat for Diablo helianthella. The site is also not within the elevation range of this species (CNPS, 2019) and below the elevation range of the potential habitat for this species as modeled in the ECCCHCP (Jones & Stokes, 2006). The nearest occurrence of Diablo helianthella in the CNDDB (2019) search area is approximately 7.5 miles southwest of the site.
Brewers western flax	*Hesperolinon breweri*	None	None	1B	Chaparral, cismontane woodland, valley and foothill grassland; usually serpentine soils; elevations 98-3,100 feet; blooms May - July.	Unlikely: the ruderal grasslands in the project site are highly disturbed and does not provide suitable habitat for Brewers western flax. The site is also not within the elevation range of this species (CNPS, 2019). The nearest occurrence of Brewers western flax in the CNDDB (2019) search area is approximately 5 miles southwest of the project site.
Woolly rose mallow	*Hibiscus lasiocarpus var. occidentalis*	None	None	1B.2	Freshwater marshes and swamps, usually along the edges of delta islands; elevations 0-393 feet; blooms June – September.	Unlikely: as it is wet only seasonally, the seasonal wetland in the site provides poor quality marsh habitat for woolly rose mallow; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, woolly rose mallow was not observed in these wetlands during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrence of this species in the CNDDB (2019) search area is approximately 6 miles northeast of the project site.

1351

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Contra Costa goldfields	*Lasthenia conjugens*	E	None	1B	Valley and foothill grassland within vernal pools and swales; elevations 0-1,542 feet; blooms March - June.	Unlikely: the site does not provide suitable habitat for Contra Costa goldfields; there are no vernal pools in the site and the seasonal wetlands in the site do not provide suitable habitat for vernal pool plants. The site is at the very low end of the elevation range of this species (CNPS, 2019) and the nearest occurrence of Contra Costa goldfields in the CNDDB (2019) search area is a record mapped nonspecifically surrounding the city of Antioch, approximately 3 miles southwest of the site. The site is not in designated critical habitat for this species (USFWS 2005a).
Delta tule pea	*Lathyrus jepsonii var. jepsonii*	None	None	1B	Freshwater or brackish marshes and swamps, usually along the edges of delta islands; elevations 0-16 feet; blooms May - September.	Unlikely: as it is wet only seasonally, the seasonal wetland in the site provides poor quality marsh habitat for delta tule pea; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, delta tule pea was not observed in the wetlands during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrence of delta tule pea in the CNDDB (2019) search area is approximately 2 miles northwest of the site.
Mason's lilaeopsis	*Lilaeopsis masonii*	None	R	1B	Freshwater or brackish marshes, tidally inundated; swamps and riparian scrub, usually along the edges of delta islands; elevations 0-33 feet; blooms April - November.	Unlikely: as it is wet only seasonally, the seasonal wetland in the site provides poor quality marsh habitat for Mason's lilaeopsis; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, this species was not observed in the wetlands during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrences of Mason's lilaeopsis recorded in the CNDDB (2019) search area are a few records along delta waterways within a mile north and northeast of the site.

1352

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Delta mudwort	*Limosella australis*	None	None	2	Freshwater or brackish marsh, tidally inundated; swamps, usually along the edges of delta islands; elevations 0-10 feet; blooms May – August	Unlikely as it is wet only seasonally, the seasonal wetland in the site provides poor quality marsh habitat for Delta mudwort; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, this species was not observed in the wetlands during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrences of Delta mudwort recorded in the CNDDB (2019) search area are a few records along delta waterways within a mile north and northeast of the site.
Showy golden madia	*Madia radiata*	None	None	1B	Cismontane woodland, valley and foothill grassland; elevations 82-3,986 feet; blooms March - May.	Unlikely: the on-site grasslands are heavily disturbed and do not provide suitable habitat for showy golden madia; this species is also considered extirpated in Contra Costa County (CNPS, 2019). The nearest occurrence of showy golden madia in the CNDDB (2019) search area is approximately 4.5 miles southwest of the site.
Hall's bush mallow	*Malacothamnus hallii*	None	None	1B	Chaparral; elevations 33-2,493 feet; blooms May - October.	Unlikely: the site does not contain suitable habitat for this species; there is no chaparral habitat within the project site. The nearest occurrence of Hall's bush mallow in the CNDDB (2019) search area is approximately 8 miles southwest of the site.
Shining navarretia	*Navarretia nigelliformis ssp. radians*	None	None	1B	Cismontane woodland, valley and foothill grassland, vernal pools, usually in clay soils; elevations 249-3,281 feet; blooms April - July.	Unlikely: the on-site grasslands are heavily disturbed and do not provide suitable habitat for shining navarretia and there are no vernal pools in the site. The site is also well below the elevation range of this species (CNPS, 2019). The nearest occurrence of shining navarretia in the CNDDB (2019) search area is approximately 5 miles southwest of the site.

1353

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Colusa grass	*Neostapfia colusana*	T	E	1B	Vernal pools (large and deep); elevations 16-656 feet; blooms May – August	Unlikely: there are no vernal pools in the site. There are no occurrences of Colusa grass in the CNDDB (2019) search area. The site is not in designated critical habitat for this species (USFWS 2005a).
Antioch dunes evening primrose	*Oenothera deltoides ssp. howellii*	E	E	1B	Interior dunes in the Delta region; elevations 0 – 98 feet; blooms March - September	Unlikely: the site does not contain dune habitat for this species. Additionally, this species was not observed in the site during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrences of Antioch dunes evening primrose in the CNDDB (2019) search area is a few records within 1 mile southwest and west of the site. The site is not in designated critical habitat for this species (CFR, 1990b).
Bearded popcorn-flower	*Plagiobothrys hystriculus*	None	None	1B	Vernal pools, valley and foothill grassland; elevations 0-899 feet; blooms April - May.	Unlikely: the ruderal grassland in the site is highly disturbed and there are no vernal pools in the site to support bearded popcorn-flower. The site is at the low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of bearded popcorn-flower in the CNDDB (2019) search area is approximately 9 miles northwest of the site.
Eel-grass pondweed	*Potamogeton zosteriformis*	None	None	2	Marshes and swamps; elevations 0-6,120 feet; blooms June - July	Unlikely: the seasonal wetland in the site provides poor quality marsh habitat for eel-grass pondweed; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. The site is also at the very low end of the elevation range of this species (CNPS, 2019). Additionally, eel-grass pondweed was not observed in the wetlands during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrence of this species in the CNDDB (2019) search area is approximately 6 miles northeast of the site.

1354

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Chaparral ragwort	*Senecio aphanactis*	None	None	2	Cismontane woodland, coastal scrub, within drying alkaline flats; elevations 49-2,625 feet; blooms January - April.	Unlikely: the site does not contain suitable habitat for chaparral ragwort; the site is also below the elevation range of this species (CNPS, 2019). The nearest occurrence of this species in the CNDDB (2019) search area is approximately 8.5 miles southwest of the site.
Keck's checkerbloom	*Sidalcea keckii*	E	None	1B	Cismontane woodland, valley and foothill grassland, usually serpentine or clay soils; elevations 246-2,132 feet; blooms April - June.	Unlikely: the on-site grasslands are highly disturbed and do not provide suitable habitat for this species. The site is also well below the elevation range of this species (CNPS, 2019) The nearest occurrence of Keck's checkerbloom in the CNDDB (2019) search area is approximately 10 miles northwest of the site.
Suisun marsh aster	*Symphotrichum lentum*	None	None	1B	Freshwater and brackish marshes and swamps, usually along the edges of delta islands; elevations 0-10 feet; blooms May – November.	Unlikely: the seasonal wetland in the site provides very poor quality marsh habitat for Suisun marsh aster; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, this species was not observed in the wetlands during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrence of this species in the CNDDB (2019) search area is a record mapped nonspecifically within 1 mile east of the site.
Caper-fruited tropidocarpum	*Tropidocarpum capparideum*	None	None	1B	Valley and foothill grassland, alkaline soils; elevations 3-1,493 feet; blooms March - April.	Unlikely: the on-site grasslands are highly disturbed and do not provide suitable habitat for this species. The nearest occurrence of caper-fruited tropidocarpum in the CNDDB (2019) search area is approximately 10.5 miles southeast of the site.

1355

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Oval-leaved viburnum	*Viburnum ellipticum*	None	None	2	Chaparral, cismontane woodland, and lower montane coniferous forest; elevations 705-4,593 feet; blooms May - June.	Unlikely: the site does not contain suitable habitat for this species. The site is also well below the known elevation range of oval-leaved viburnum (CNPS, 2019). The nearest occurrence of this species in the CNDDB (2019) search area is approximately 11.5 miles southwest of the site.
WILDLIFE						
Birds						
Burrowing owl	*Athene cunicularia*	None	SC	N/A	Open, dry annual or perennial grasslands, deserts and scrublands characterized by low-growing vegetation.	Unlikely: the ruderal grassland in the site is highly disturbed and portions are routinely mowed. No burrowing owls or burrows with evidence of owl occupancy were observed. The nearest occurrence of nesting burrowing owls in the CNDDB (2019) search area is approximately 1 mile southwest of the site.
Swainson's hawk	*Buteo swainsoni*	None	T	N/A	Breeds in stands of tall trees in open areas. Requires adjacent suitable foraging habitats such as grasslands or alfalfa fields supporting rodents.	Moderate: there are several large trees in and surrounding the project site suitable for nesting by Swainson's hawks. Additionally, there is annual cropland and suitable foraging habitat in close proximity to the site. There is a record of Swainson's hawks in the CNDDB (2019) nesting along the west edge of the site.
White-tailed kite	*Elanus leucurus*	None	FP	N/A	Herbaceous lowlands with variable tree growth and dense population of voles.	Moderate: grasslands in the site and grasslands and annual cropland in the close proximity to the projects site provides foraging habitat for white-tailed kite. Relatively large trees in and surrounding the site are suitable for nesting. The nearest occurrence of white-tailed kite in the CNDDB (2019) search area is approximately 2.5 miles southeast of the site. This species was documented nesting in the overall property during surveys conducted for the remediation project (Ardea & Bumgardner, 2017).

1356

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Tricolored blackbird	*Agelaius tricolor*	None	CE/SC	N/A	Requires open water and protected nesting substrate, usually cattails and riparian scrub with surrounding foraging habitat.	Unlikely: the emergent wetland vegetation in the seasonal wetland in the site and at the storm drain outfall site may provide suitable tricolored blackbird nesting habitat. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 9 miles southeast of the site.
California black rail	*Laterallus jamaicensis coturniculus*	None	T	N/A	Mainly inhabits salt marshes bordering larger bays.	Low: the seasonal wetland in the site does not provide habitat for California black rail; this freshwater seasonal wetland contains only a small patch of marsh vegetation. In contrast, the near-shore portions of the permanent wetland provide potentially suitable habitat for this species. The nearest occurrence of California black rail in the CNDDB (2019) search area is in the mosaic of pickleweed wetlands and coastal salt marsh habitats just northeast of the site. The CNDDB record is noted that there has been development in this area since the detection and it is "unknown if this site is still populated". California black rail was documented nesting in the overall property during surveys conducted for the remediation project (Ardea & Bumgardner, 2017).
California clapper rail	*Rallus longirostris obsoletus*	E	E	N/A	Salt water and brackish marshes traversed by tidal sloughs in the San Francisco Bay, associated with pickleweed.	Unlikely: while there is suitable habitat to support California clapper rail near the site, the site is located outside the known range of this species. There are no occurrences of California clapper rail in the CNDDB (2019) search area.
California least tern	*Sternula antillarum browni*	E	E	N/A	Estuaries and bays; nests on exposed tidal flats or beaches	Unlikely: while there is suitable habitat to support California least tern near the site, the site is located outside the known range of this species. There are no occurrences of California least tern in the CNDDB (2019) search area.

1357

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Bank swallow	*Riparia riparia*	None	T	N/AS	Nests colonially in riparian habitats; requires vertical banks and cliffs with fine-textured soils.	Unlikely: there is no suitable nesting habitat for bank swallows in the site. The only occurrence of this species in the CNDDB (2019) search area is approximately 7.5 miles northeast of the project site.
Saltmarsh common yellowthroat	*Geothlypis trichas sinuosa*	None	SC	N/A	Fresh and salt water marshes. Requires thick, continuous cover down to water surface for foraging	Low: the seasonal wetland is very small and supports a very small patch of marsh vegetation. In contrast, the near-shore portions of the permanent wetland provide potentially suitable habitat for this species. Saltmarsh common yellowthroat was documented in the overall property during surveys conducted support of the ongoing remediation project (Ardea & Bumgardner, 2017). The nearest occurrence of this species in the CNDDB (2019) search area is approximately 7 miles northwest of the project site.
Loggerhead shrike	*Lanius ludovicianus*	None	SC	N/A	Annual grasslands and agricultural areas throughout the Central Valley; nests in trees and shrubs.	Moderate: the highly disturbed ruderal grasslands in the site provide suitable foraging for this species, which is relatively widespread in the area, in low numbers. Additionally, loggerhead shrike may nest in trees or shrubs in the site. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 3 miles southeast of the site. Loggerhead shrike was documented nesting in the overall property during surveys conducted for the remediation project (Ardea & Bumgardner, 2017).
Suisun song sparrow	*Melospiza melodia maxillaris*	None	SC	N/A	Resident of brackish water marshes, usually in or near Suisun Bay. Inhabits cattails, tules, and tangles bordering sloughs	Unlikely: the seasonal wetland in the site provides low quality marsh habitat for this species. In contrast, the near-shore portions of the permanent wetland provide potentially suitable habitat for this species. The nearest occurrence of Suisun song sparrow in the CNDDB (2019) search area is approximately 5 miles northwest of the site.

1358

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Song sparrow "Modesto" population	*Melospiza melodia*	None	SC	N/A	Resident of brackish water marshes. Inhabits cattails, tules, and tangles bordering sloughs	Unlikely: the seasonal wetland in the site supports small amounts of marsh vegetation and provides low quality marsh habitat for the "Modesto" population of song sparrow. In contrast, the near-shore portions of the permanent wetland provide potentially suitable habitat for this species. The nearest occurrence of song sparrow ("Modesto" population) in the CNDDB (2019) search area is approximately 3.5 miles northeast of the site.
Mammals						
San Joaquin kit fox	*Vulpes macrotis mutica*	E	T	N/A	Inhabits open, dry grasslands and scrublands with loose textured soils.	Unlikely: the grasslands in the site are heavily disturbed and portions are routinely mowed. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 5.5 miles southwest of the site.
American badger	*Taxidea taxus*	None	SC	N/A	Drier open stages of most shrub, forest, and herbaceous habitats, with friable soils.	Unlikely: the site does not provide suitable habitat for American badger. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 5 miles southwest of the site.
Salt-marsh harvest mouse	*Reithrodontomys raviventris*	E	E	N/A	Saline emergent wetlands dominated by pickleweed	Unlikely: the site is outside of the range of this species. The nearest occurrence of salt-marsh harvest mouse in the CNDDB (2019) search area is a historical record (1985) approximately 5 miles northwest of the site.
Pallid bat	*Antrozous pallidus*	None	SC	N/A	Open and dry habitats with rocky areas for roosting.	Unlikely: the site does not provide suitable habitat for this species. The nearest occurrence of pallid bat in the CNDDB (2019) search area is approximately 12 miles southwest of the site
Western red bat	*Lasiurus blossevillii*	None	SC	N/A	Roosts in trees in a wide variety of habitats.	Unlikely: although some trees in the site may be suitable for western red bat for roosting, this species is not known to be widespread in the area. The nearest occurrence of western red bat in the CNDDB (2019) search area is mapped nonspecifically in the city of Antioch, approximately 4 miles west of the site.

1359

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Reptiles & Amphibians						
California tiger salamander	*Ambystoma californiense*	T	T	N/A	Seasonal water bodies without fish (i.e., vernal pools and stock ponds) and grassland/ woodland habitats with summer refugia (i.e., burrows).	Unlikely: there is no suitable habitat within or near the site for California tiger salamander. This species occurs in the transitional bands between the valley floor and foothills and is not known to occur in the delta. The nearest occurrence of California tiger salamander in the CNDDB (2019) search area is approximately 3.5 miles southwest of the site. The site is not within designated critical habitat for this species (USFWS, 2005b).
Giant garter snake	*Thamnophis gigas*	T	T	N/A	Freshwater marsh and low gradient streams; also adapted to drainage canals and irrigation ditches, primarily for dispersal or migration.	Unlikely: while this highly aquatic species may occur in regional delta waterways, the site provides poor quality habitat for giant garter snake. The nearest occurrence of this species in the CNDDB (2019) search area is a historical record (1987) mapped as "best guess". This record includes a large area mapped nonspecifically, including a portion of the north part of the site.
California red-legged frog	*Rana draytonii*	T	SC	N/A	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation.	Unlikely: there is no suitable habitat for California red-legged frog in or near the project site. This species is also presumed extinct on the floor of the Central Valley of California. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 5.5 miles southwest of the site. The site is not in California red-legged frog designated critical habitat (USFWS, 2006a).
Foothill yellow-legged frog	*Rana boylii*	None	SC	N/A	Perennial water bodies (i.e., streams and ponds) with abundant riparian vegetation.	Unlikely: there is no suitable aquatic habitat for foothill yellow-legged frog in the project site. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 10.5 miles southwest of the site.
Northern California legless lizard	*Anniella pulchra pulchra*	None	SC	N/A	Sandy or loose loamy soils under sparse vegetation.	Unlikely: the site provides marginally suitable habitat for northern California legless lizard. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 1 miles southeast of the site.

1360

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Alameda whipsnake	*Masticophis lateralis euryxanthus*	T	T	N/A	Scrub, chaparral, grassland, and woodland habitat mosaics. South-facing slopes and ravines.	Unlikely: the grasslands in the site are highly disturbed and do not provide suitable habitat for Alameda whipsnake. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 5 miles southwest of the site. The site is not in designated critical habitat for Alameda whipsnake (USFWS, 2006b).
California glossy snake	*Arizona elegans occidentalis*	None	SC	N/A	Arid scrub, rocky washes, grasslands, and chaparral.	Unlikely: the highly disturbed grasslands in the site does not provide suitable habitat for California glossy snake. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 2 miles west of the site.
Western pond turtle	*Emys marmorata*	None	SC	N/A	Ponds, marshes, streams, and ditches with emergent aquatic vegetation and basking areas.	Unlikely: the site provides poor quality habitat for this species. The nearest occurrence of western pond turtle in the CNDDB (2019) search area is approximately 1 mile north of the site.
Fish						
Central Valley steelhead	*Oncorhynchus mykiss irideus*	T	None	N/A	Riffle and pool complexes with adequate spawning substrates within Central Valley drainages.	None: the site does not provide suitable habitat for this species; Central Valley steelhead is known to occur in the San Joaquin River north of the site. The nearest occurrence of this species in the CNDDB (2019) search area is in the San Joaquin River, north of the site. The site is not in designated as critical habitat for Central Valley steelhead (NOAA, 2005).
Delta smelt	*Hypomesus transpacificus*	T	T	N/A	Shallow lower delta waterways with submersed aquatic plants and other suitable refugia.	None: the site does not provide suitable habitat for this species; delta smelt occur in the San Joaquin River north of the site and there is an occurrence of delta smelt in the CNDDB (2019) search area is in the San Joaquin River just north of the site. Like much of Oakley, the project site is within designated critical habitat for delta smelt (USFWS, 1994) as the critical habitat of this species is generally defined by elevation.

1361

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Winter-run Chinook salmon	*Oncorhynchus tshawytscha*	E	E	N/A	Deep flowing pools and riffle complexes with adequate spawning substrates.	Unlikely: the site does not provide suitable habitat for this species; winter-run Chinook salmon occur in the San Joaquin River north of the site. There are no occurrences of this species recorded in the CNDDB (2018) within the search area.
Spring-run Chinook salmon	*Oncorhynchus tshawytscha*	T	T	N/A	Deep flowing pools and riffle complexes with adequate spawning substrates.	Unlikely: the site does not provide suitable habitat for this species; spring-run Chinook salmon occur in the San Joaquin River north of the site. There are no occurrences of this species recorded in the CNDDB (2018) within the search area.
Longfin smelt	*Spirinchus thaleichthys*	C	T	N/A	Brackish estuarine habitats.	None: the site does not provide suitable habitat for this species; longfin smelt is known to occur in the San Joaquin River north of the site and there is an occurrence of longfin smelt in the CNDDB (2019) search area is in the San Joaquin River just north of the site.
Green sturgeon	*Acipenser medirostris*	T	SC	N/A	Freshwater and saltwater habitats; spawn in freshwater rivers.	Unlikely: the site does not provide suitable habitat for this species; green sturgeon known to occur in the San Joaquin River north of the site. There are no occurrences of green sturgeon recorded in the CNDDB (2019) within the search area.
Sacramento perch	*Archoplites interruptus*	None	SC	N/A	Sloughs, lakes, and low-moving Central Valley Rivers; requires warm water.	None: the site does not provide suitable habitat for Sacramento perch; this species may occur in the San Joaquin River north of the site. The nearest occurrence of this species in the CNDDB (2019) search area is in the San Joaquin River just north of the site.
Invertebrates						
Valley elderberry longhorn beetle	*Desmocerus californicus dimorphus*	T	None	N/A	Elderberry shrubs, usually in Central Valley riparian habitats.	Unlikely: there are no blue elderberry shrubs in or adjacent to the site. There are no occurrences of valley elderberry longhorn beetle recorded in the CNDDB (2019) in the search area. The site is not in designated critical habitat for this species (USFWS 1980a).

1362

TABLE 1

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Project Site
Vernal pool fairy shrimp	*Branchinecta lynchi*	T	None	N/A	Vernal pools	Unlikely: there are no vernal pools in the site. The nearest occurrence of vernal pool fairy shrimp in the CNDDB (2019) search area is approximately 5.5 mile southwest of the site. The site is not in designated critical habitat of this species(USFWS, 2005a).
Conservancy fairy shrimp	*Branchinecta conservatio*	E	None	N/A	Vernal pools	Unlikely: there are no vernal pools in the site. The nearest occurrence of Conservancy fairy shrimp in the CNDDB (2019) search area is approximately 9.5 miles northwest of the site. The site is not in designated critical habitat for this species (USFWS 2005a).
Vernal pool tadpole shrimp	*Lepidurus packardi*	E	None	N/A	Vernal pools	Unlikely: there are no vernal pools in or near the site. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 9 miles northwest of the site. The site is not in designated critical habitat for vernal pool tadpole shrimp (USFWS, 2005a).
San Bruno elfin butterfly	*Callophrys mossii bayensis*	E	None	N/A	Rocky outcrops and cliffs in coastal scrub habitats.	Unlikely: the site does not provide suitable habitat for this species. There are no occurrences of San Bruno elfin butterfly in the CNDDB (2019) search area.
Lange's metalmark butterfly	*Apodemia mormo langei*	E	None	N/A	Inhabits stabilized dunes along the San Joaquin River.	Unlikely: there is no dune habitat in the project site. The closest occurrence of Lange's metalmark butterfly in the CNDDB (2019) search area is approximately 7 miles northwest of the site.
Delta green ground beetle	*Elaphrus viridis*	T	None	N/A	Margins of vernal pools in grasslands.	Unlikely: there are no vernal pools in the site. There are no occurrences of delta green ground beetle in the CNDDB (2019) in the search area. The site is not in designated critical habitat of this species (USFWS 1980b).

[1] T= Threatened; E = Endangered; C = Candidate.

[2] T= Threatened; E = Endangered; R = Rare; FP = Fully Protected Species; SC = Species of Special Concern per California Department of Fish and Wildlife.

[3] CNPS List 1B includes species that are rare, threatened, or endangered in California and elsewhere; List 2 includes plants that are rare, threatened or endangered in California but are more common elsewhere.

1363

(*Viburnum ellipticum*) (Table 1 and CNDDB search results in Attachment B). Although not in the CNDDB (2019) search area, Colusa grass (*Neostapfia colusana*) is listed on the USFWS IPaC Trust Report (Attachment C).

SPECIAL-STATUS WILDLIFE: Several special-status wildlife were identified in the CNDDB (2019) search: burrowing owl (*Athene cunicularia*), Swainson's hawk (*Buteo swainsoni*), white-tailed kite (*Elanus leucurus*), tricolored blackbird (*Agelaius tricolor*), California black rail (*Laterallus jamaicensis coturniculus*), bank swallow (*Riparia riparia*), saltmarsh common yellowthroat (*Geothlypis trichas sinuosa*), loggerhead shrike (*Lanius ludovicianus*), Suisun song sparrow (*Melospiza melodia maxillaris*), song sparrow "Modesto population" (*Melospiza melodia*), San Joaquin kit fox (*Vulpes macrotis mutica*), American badger (*Taxidea taxus*), salt-marsh harvest mouse (*Reithrodontomys raviventris*), pallid bat (*Antrozous pallidus*), western red bat (*Lasiurus blossevillii*), California tiger salamander (*Ambystoma californiense*), giant garter snake (*Thamnophis gigas*), California red-legged frog (*Rana aurora draytonii*), foothill yellow-legged frog (*Rana boylii*), northern California legless lizard (*Anniella pulchra pulchra*), Alameda whipsnake (*Masticophis lateralis euryxanthus*), California glossy snake (*Arizona elegans occidentalis*), western pond turtle (*Emys marmorata*), Central Valley steelhead (*Oncorhynchus mykiss irrideus*), delta smelt (*Hypomesus transpacificus*), longfin smelt (*Spirinchus thaleichthys*), Sacramento perch (*Archoplites interruptus*), vernal pool fairy shrimp (*Branchinecta lynchi*), Conservancy fairy shrimp (*Branchinecta conservatio*), vernal pool tadpole shrimp (*Lepidurus packardi*), and Lange's metalmark butterfly (*Apodemia mormo langei*) (Table 1 and Attachment C).

Although not included in the CNDDB within the search area, California clapper rail (*Rallus longirostris obsoletus*), California least tern (*Sternula antillarum browni*), valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*), San Bruno elfin butterfly (*Callophrus mossii bayensis*), and delta green ground beetle (*Elaphrus viridis*) are in the USFWS IPaC Trust Resource Report (Attachment C). Additionally, winter-run Chinook salmon (*Oncorhynchus tshawytscha*), spring-run Chinook salmon (*Oncorhynchus tshawytscha*), and green sturgeon (*Acipenser medirostris*) were added

1364

to Table 1, as these fish are known to occur in the San Joaquin River just north of the site.

Focused surveys for many of the special-status plant species in Table 1 were recently conducted in support of the ongoing soil and groundwater remediation project at the site (California Environmental Services, 2017). Surveys for several of the special-status wildlife species have also been conducted in support of the ongoing soil and groundwater remediation project at the site. Surveys of the remediation areas were conducted by Ardea Consulting & Bumgardner Biological Consulting during 2017; the results of prior surveys at the site are also described by Ardea & Bumgardner (2017). The surveys encompassed the only seasonal wetland in the site that is located outside the boundaries of the ECCCHCP. The surveys also encompassed much of the ruderal grassland habitat in the portion of the site that is located outside the boundaries of the ECCCHCP. Finally, the surveys included the Permanent Wetland just north of the proposed outfall site, in an area with similar habitats as those found at the outfall site.

No special-status plants were located in the site during the 2017 surveys. A few special-status birds were documented in the site. California black rail, white-tailed kite, and loggerhead shrike were documented nesting in the overall property during surveys conducted in support of the ongoing soil and groundwater remediation project at the site (Ardea & Bumgardner, 2017). Saltmarsh common yellowthroat was also observed during the nesting season, but nesting was not documented. The trees and shrubs in the project site provide potentially suitable nesting habitat for white-tailed kite and loggerhead shrike. While the permanent wetland may be used nesting California black rail and saltmarsh common yellowthroat, the remainder of the project site does not provide suitable nesting habitat for either species.

Project Impact Overview and Potential Mitigation Options

The project will involve permanent impacts to approximately 14 acres of land outside of the ECCCHCP Permit Area and potential temporary impacts to approximately 8 acres of

land outside the ECCCHCP Permit Area. The precise acreages will depend on final engineering design. Permanent impacts will include conversion of habitat to project features such as buildings, parking lots, and the storm drain outfall. In contrast, the temporary impacts will be from grading; following construction, these graded areas will support ruderal grassland vegetation, similar to that occurring on the site. The grassland will continue to provide foraging habitat to Swainson's hawk and other species.

In the event the loss of potential Swainson's hawk foraging habitat exceeds 5 acres, this would be a potentially significant impact, requiring compensatory mitigation. Consistent with CDFW's Staff Report regarding Mitigation for Impacts to Swainson's Hawks (*Buteo Swainsoni*) in the Central Valley of California (CDFG, 1994), mitigation would be provided at a 1:1 ratio at a CDFW-approved mitigation bank, such as the Elsie-Gridley Mitigation Bank. This purchase of credits would also provide compensatory mitigation for burrowing owl and other species that occur in ruderal grasslands in the project vicinity.

The 0.197+/- acre seasonal wetland that is outside the boundaries of the ECCCHCP Permit Area will be filled under Nationwide Permit 39. Approximately 0.035+/- acres of permanent wetlands outside the boundaries of the ECCCHCP Permit Area will be also be filled during construction of the storm drain outfall under Nationwide Permit 7. Outfall construction will also result in temporary impacts to an additional 0.030+/- acres of permanent wetlands surrounding the outfall. Potential project impacts to special-status fish from the storm drain outfall are being analyzed in a stand-alone Biological Assessment (BA). The BA will be submitted to USACE with the Nationwide Permit 7 & 39 Preconstruction Notification to support Section 7 Consultation(s) with USFWS and/or the National Marine Fisheries Service (NMFS). It is anticipated that NMFS and USFWS will require compensatory mitigation for impacts to the tidal wetlands and associated special-status fish species. The required mitigation would be provided at the standard ratio of 3:1 at a mitigation bank approved by USFWS, NMFS, ACOE and CDFW, such as the Cosumnes Floodplain Mitigation Bank.

Avoidance and Minimization Measures

Swainson's hawk could potentially nest in trees in or near the site and could be disturbed by construction noise and activity. Burrowing owls could potentially nest in the site and could be disturbed by construction noise and activity. Trees and grasslands in the site could be used by birds protected by the Migratory Bird Treaty Act of 1918 and Fish and Game Code of California. Special-status fish in downstream waterways could be impacted from sedimentation during construction of the outfall. In addition to providing compensatory mitigation, the applicant will employ standard avoidance and minimization measures during project construction:

- A pre-construction survey for nesting Swainson's hawks within 0.25 miles of the project site is recommended if construction commences between March 1 and September 15. If active nests are found, a qualified biologist should determine the need (if any) for temporal restrictions on construction. The determination should utilize criteria set forth by CDFW (CDFG, 1994).

- Pre-construction surveys for burrowing owls within 250 feet of the site will occur if construction commences between February 1 and August 31. If occupied burrows are found, a qualified biologist will determine the need (if any) for temporal restrictions on construction pursuant to criteria set forth by CDFW (CDFG, 2012).

- If vegetation removal or construction commences during the general avian nesting season (March 1 through July 31), a pre-construction survey for all species of nesting birds is recommended. If active nests are found, work in the vicinity of the nests should be delayed until the young fledge.

- Project construction should be scheduled between August 1 and November 30 to reduce the potential for sedimentation in the permanent wetland, and associated impacts to aquatic resources including special-status fish that

occur in the downstream waterways on a seasonal basis. This work window may be adjusted through consultation with CDFW, NMFS and/or USFWS

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information.
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

1388

NAME	STATUS

NOT FOR CONSULTATION

Salt Marsh Harvest Mouse Reithrodontomys raviventris — Endangered
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/613

San Joaquin Kit Fox Vulpes macrotis mutica — Endangered
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/2873

Birds

NAME	STATUS
California Clapper Rail Rallus longirostris obsoletus No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4240	Endangered

Delta Green Ground Beetle Elaphrus viridis There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/2319	Threatened
Lange's Metalmark Butterfly Apodemia mormo langei There is **proposed** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/4382	Endangered
San Bruno Elfin Butterfly Callophrys mossii bayensis There is **proposed** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/3394	Endangered
Valley Elderberry Longhorn Beetle Desmocerus californicus dimorphus There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/7850	Threatened

Crustaceans

NAME	STATUS
Conservancy Fairy Shrimp Branchinecta conservatio There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/8246	Endangered
Vernal Pool Fairy Shrimp Branchinecta lynchi There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/498	Threatened

NOT FOR CONSULTATION

Vernal Pool Tadpole Shrimp Lepidurus packardi There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/2246	Endangered

Flowering Plants

NAME	STATUS
Antioch Dunes Evening-primrose Oenothera deltoides ssp. howellii There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/5970	Endangered
Colusa Grass Neostapfia colusana There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/5690	Threatened
Contra Costa Goldfields Lasthenia conjugens There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/7058	Endangered
Contra Costa Wallflower Erysimum capitatum var. angustatum There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/7601	Endangered
Keck's Checker-mallow Sidalcea keckii There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/5704	Endangered
Soft Bird's-beak Cordylanthus mollis ssp. mollis There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/8541	Endangered

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

This location overlaps the critical habitat for the following species:

NAME	TYPE

NOT FOR CONSULTATION

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA SOMETIME WITHIN

NOT FOR CONSULTATION

THE TIMEFRAME SPECIFIED, WHICH IS A VERY LIBERAL ESTIMATE OF THE DATES INSIDE WHICH THE BIRD BREEDS ACROSS ITS ENTIRE RANGE. "BREEDS ELSEWHERE" INDICATES THAT THE BIRD DOES NOT LIKELY BREED IN YOUR PROJECT AREA.)

Allen's Hummingbird Selasphorus sasin — Breeds Feb 1 to Jul 15
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9637

Bald Eagle Haliaeetus leucocephalus — Breeds Jan 1 to Aug 31
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1626

Black Rail Laterallus jamaicensis — Breeds Mar 1 to Sep 15
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/7717

Burrowing Owl Athene cunicularia — Breeds Mar 15 to Aug 31
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9737

California Thrasher Toxostoma redivivum — Breeds Jan 1 to Jul 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Clark's Grebe Aechmophorus clarkii — Breeds Jan 1 to Dec 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Common Yellowthroat Geothlypis trichas sinuosa — Breeds May 20 to Jul 31
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/2084

NOT FOR CONSULTATION

Golden Eagle Aquila chrysaetos — Breeds Jan 1 to Aug 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1680

Lawrence's Goldfinch Carduelis lawrencei — Breeds Mar 20 to Sep 20

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9464

Lewis's Woodpecker Melanerpes lewis — Breeds Apr 20 to Sep 30

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9408

Long-billed Curlew Numenius americanus — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/5511

Marbled Godwit Limosa fedoa — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9481

Nuttall's Woodpecker Picoides nuttallii — Breeds Apr 1 to Jul 20

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9410

Oak Titmouse Baeolophus inornatus — Breeds Mar 15 to Jul 15

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9656

Rufous Hummingbird selasphorus rufus — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8002

Short-billed Dowitcher Limnodromus griseus — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9480

NOT FOR CONSULTATION

Song Sparrow Melospiza melodia This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Feb 20 to Sep 5
Spotted Towhee Pipilo maculatus clementae This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/4243	Breeds Apr 15 to Jul 20
Tricolored Blackbird Agelaius tricolor This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3910	Breeds Mar 15 to Aug 10
Whimbrel Numenius phaeopus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9483	Breeds elsewhere
Willet Tringa semipalmata This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds elsewhere
Wrentit Chamaea fasciata This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Mar 15 to Aug 10
Yellow-billed Magpie Pica nuttalli This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9726	Breeds Apr 1 to Jul 31

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

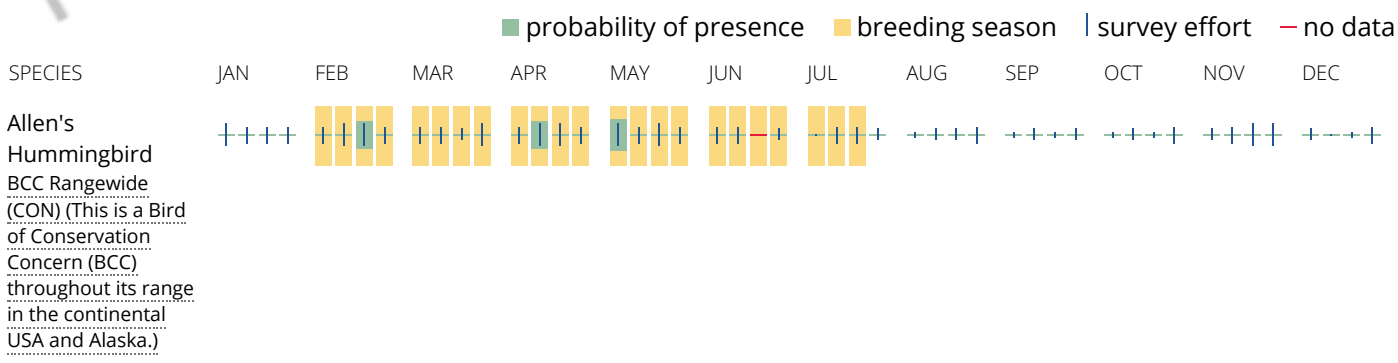
Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

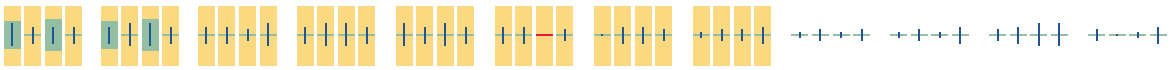
To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.



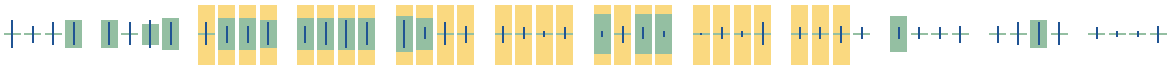
Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

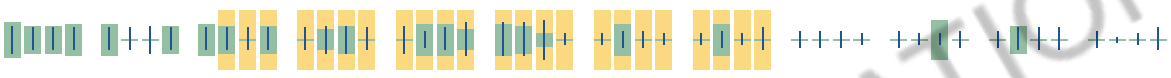


No Data (–)
A week is marked as having no data if there were no survey events for that week.

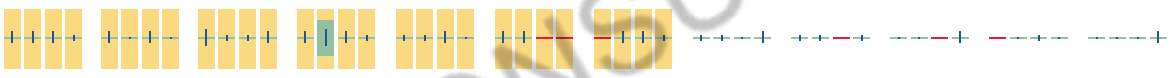
Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.



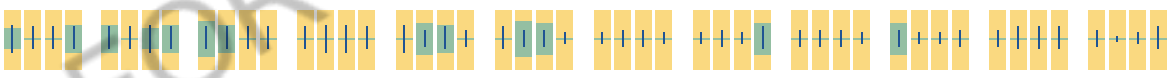
NOT FOR CONSULTATION



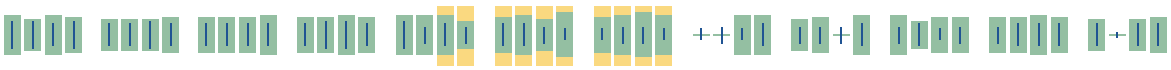
Bald Eagle
Non-BCC Vulnerable (This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.)



Black Rail
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



Burrowing Owl
BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)



California Thrasher
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Clark's Grebe
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Common Yellowthroat
BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

NOT FOR CONSULTATION

Golden Eagle
Non-BCC Vulnerable (This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.)

Lawrence's Goldfinch
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Lewis's Woodpecker
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

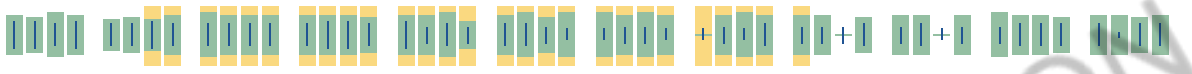
Long-billed Curlew
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Marbled Godwit
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

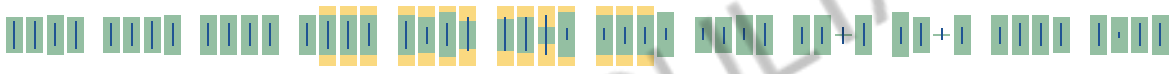
NOT FOR CONSULTATION

Nuttall's Woodpecker
BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

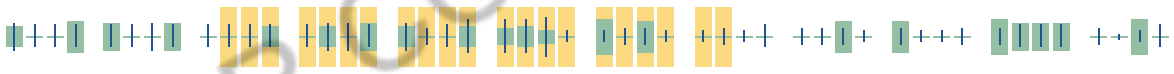
Oak Titmouse
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



Rufous Hummingbird
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



Short-billed Dowitcher
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

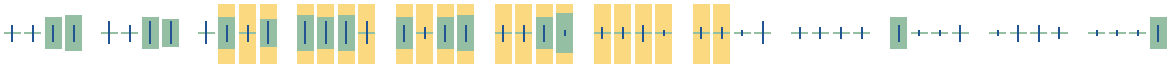


Song Sparrow
BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

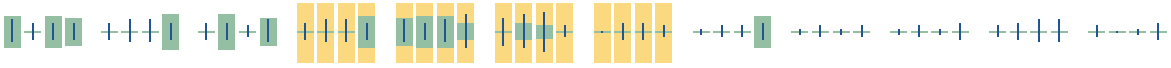
Spotted Towhee
BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

Tricolored Blackbird
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Whimbrel
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



Willet
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



NOT FOR CONSULTATION

Wrentit
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Yellow-billed Magpie
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures and/or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the E-bird Explore Data Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

NOT FOR CONSULTATION

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ “What does IPaC use to generate the migratory birds potentially occurring in my specified location”. Please be aware this report provides the “probability of presence” of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the “no data” indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to

NOT FOR CONSULTATION

confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

This location overlaps the following wetlands:

ESTUARINE AND MARINE DEEPWATER

- E1UBL

ESTUARINE AND MARINE WETLAND

- E2EM1N
- E2USM
- E2EM1P

FRESHWATER EMERGENT WETLAND

- PEM1T

R2UBHx
R1UBVx

A full description for each wetland code can be found at the National Wetlands Inventory website

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

NOT FOR CONSULTATION

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

@Trees, Bugs, Dirt 2018. All rights reserved. This report, dated Friday, December 7, 2018 is for the exclusive and confidential use of Trees, Bugs, Dirt clients and their representatives for this project only, and shall not be reproduced in whole or in part on other occasions without the written permission of Michael Baefsky.

SUMMARY
Six hundred and sixty two trees (>=6.6" in diameter) are located in the areas to be developed on the site. Trunk diameters of trees inventoried range from 6.7" to 199.7, averaging 29.2". Tree health ranges from dead to excellent, averaging poor-fair. Structural quality ranges from very poor to good, averaging poor. Form ranges from very poor to excellent, averaging poor. One hundred and thirty trees are identified as heritage and protected trees on site.

INTRODUCTION

PURPOSE AND USE

This report is intended to provide information for the Client and the City of Oakley as part of a development permit for the property, in compliance with the City of Oakley Heritage and Protected Trees Ordinance 9.1.1112.

ASSIGNMENT

I was hired by Jed Momot, NorthPoint Development, to inventory & evaluate trees in proposed development areas and to provide an Arborist Report that includes a summary of my observations & a location map.

LIMITS OF ASSIGNMENT

- Did not evaluate trees below ground or aerially, nor use invasive or destructive methods to assess health
- Evaluated trees within proposed development areas 6.6" and greater in diameter
- No recommendations for care or preservation

BACKGROUND

Proposed development will require the removal of all trees in the development areas. However, trees are protected in Oakley if they are at least 15.6 inches in diameter and a "native oak", or at least 15.6" in diameter and providing benefits, or"adjacent" to a riparian habitat, foothill woodland or oak savanna and at least 6.5 inches in diameter (single trunk) or 12.5 inches in diameter (multiple trunks), and on the City of Oakley's list of "indigenous" trees. Removal of protected trees in Oakley requires a permit and mitigation.

OBSERVATIONS

LOCATION

The site is south of Highway 160 and Bridgehead Road, between railroad tracks and a fenceline next to the Oakley marina on both sides of Wilbur Ave.

SETTING

The relatively flat site includes some structures and historically maintained landscapes, roads, foundations, berms, parking lots, paved and unpaved areas and areas in the process of being mitigated for environmental contamination. A variety of areas host wetland habitat including detention basins and ponds.

Delhi sand is the soil series mapped in the area of the site. It is a somewhat excessively drained soil with rapid permeability and negligible to slow runoff. These poorly structured soils were typically dominated by grasses and herbaceous forbs with scattered trees and shrubs, later almonds & grapes were farmed in them.

METHODS

On October 10, 2018, I met with the client, began working on the site on October 11 and completed field work on November 14. I walked the site with a chaperone and looked at the trees in the development areas. I identified trees to species, measured **trunk circumferences** at 4.5 feet above grade, tagged trunks with numbered tags, digitally imaged the trees and assessed their health, structural quality and form.

Measurements & Estimates

- Trunk circumferences measured at 4.5 feet above grade, unless otherwise noted due to access problems
- Palm size estimated as trunk clear of new fronds, from ground level up
- Multiple trunks combined for a cumulative trunk measurement
- Trunk circumferences divided by 3.14 to calculate diameter, and rounded off to one significant digit

Health Structure & Form Evaluations

+numerical rating system; zero (dead), one (very poor), two (poor), three (fair), four (good) and five (excellent)

+ form assessed by rating specimens on their deviance from the norm for the species in this region, visual qualities such as attractiveness, and engineering functions such as screening, shading and creating views

+qualitative descriptions and items assessed for health & structure include

- rooting zone - bare, mulched, limited space, weeds, competing vegetation, moisture, debris
- root crown region (trunk & root junction) - buried, clear, pests, diseases, wet, wounds, cavities
- trunk - taper, lack of taper, wounds, lean, growth cracks, stress cracks, pests, diseases, wounds
- scaffold (large, major) branches - taper, distribution of branches, strength of branch connections, wounds, pests
- smaller branches - distribution, size, amount, strength of connections, pests, diseases
- twigs - annual growth, color, size, distribution, dead/live
- foliage - color, size, distribution, pests, diseases, leaf fall

DATA - *See Appendix A for complete data set*

- 662 trees measured, evaluated, tagged, digitally imaged & located with gps & on map
- 130 heritage & protected trees identified
- 3 indigenous species identified (#trees); CA sycamore (3), coast live oak (39), and fremont poplar (1)
  - 16 other species identified; Aleppo pine (1), almond (4), athel tamarisk (150), blue gum eucalyptus (127), CA peppertree (1), Chinese pistache (3), coast redwood (2), fruitless mulberry (1), Mexican fan palm (37), pacific willow (32), red river gum (228), shore pine (5), scots pine (1), southern magnolia (5), tree of heaven (16), willows not identified to species (4)
- trunk diameter (size) ranged from 6.7 inches to 199.7 inches, averaging 29.2 inches
- health ranged from dead to excellent, averaging
- structure & form ranged from very poor to, averaging

APPENDIX C - GLOSSARY

dripline - region underneath tree canopy

form - genetically determined appearance that includes spread, height & configuration

health - tree growth as expressed by foliage, twigs, branches & trunks including resistance to pests

root crown – region where trunk and root system meet, also called `buttress' or `butt'

rooting zone – area where roots are likely to survive, beginning at the trunk and extending up to three times the radius of a tree's dripline region

scaffold – large, structural branch

structure - physical and mechanical qualities of tree

trunk circumference – measurement of trunk, distance around

trunk diameter - trunk circumference divided by 3.14

APPENDIX E - TREE LOCATION MAP (Also available as pdf & kmz files)

APPENDIX F - CERTIFICATE OF PERFORMANCE

I, Michael Baefsky certify:

- That I have reviewed City of Oakley Heritage and Protected Trees Ordinance 9.1.1112
- That I have evaluated the subject trees, and stated my findings accurately. The extent of the evaluation is stated in the attached report;
- That I have no current or prospective interest in the vegetation or the property that is the subject of this report and have no personal interest or bias with respect to the parties involved;
- That the analysis, opinions, and conclusions stated herein are my own;
- That my analysis, opinions, and conclusions were developed and this report has been prepared according to commonly accepted professional practices;
- That no one provided significant professional assistance to the consultant, except as indicated within the report;
- That my compensation is not contingent upon the reporting of a predetermined conclusion that favors the cause of the client or any other party.

I certify that I am Registered Consulting Arborist #456, a member of the American Society of Consulting Arborists, and am Certified Arborist & Qualified Risk Assessor #WE0222A, Agricultural Pest Control Advisor #074617, Qualified Applicator #99864, Licensed Landscape Contractor #931410, and have been involved in the practice of Arboriculture, Integrated Pest Management, Plant Health Care and Ecological Soils Management, and the study of soils and horticulture for over thirty years.

Oakley Logistics Center Project

City of Oakley

TRANSPORTATION IMPACT ANALYSIS

1) INTRODUCTION

This traffic impact study describes the existing and future conditions for transportation with and without the proposed project, which consists of construction of five warehouse buildings with a total of 1,985,304 square feet of space. The proposed project would have its main entrance on the eastern side of the intersection of Wilbur Avenue and Bridgehead Road. Two secondary access points will also be provided on Bridgehead Road. One access would be located to the north of the Wilbur Avenue entrance and another would be located to the south. This study also describes the regulatory setting; the criterion used for determining the significance of environmental impacts; and summarizes potential environmental impacts and appropriate mitigation measures. This study has been conducted in accordance with the requirements and methodologies set forth by the City of Oakley, the Contra Costa Transportation Authority (CCTA), Caltrans, and the applicable provisions of CEQA.

Summary of Required Mitigations and Recommended Improvement Measures - The following is a summary of the proposed mitigation measures to address the transportation impacts of the project. Based on a detailed analysis of traffic operations with and without each of the proposed mitigations, implementation of the following mitigation measures could reduce some project impacts to a *less-than-significant* level. The remaining impacts would be *significant and unavoidable*.

Impact #1 **Impacts to intersection operations - The project would contribute to LOS operations exceeding the established standards at the following seven intersections:**

Wilbur Avenue at Bridgehead Road (Intersection #5)
Main Street at Bridgehead Road (Intersection #9)
Big Break Road at Main Street (Intersection #11)
Oakley Road at Live Oak Avenue (Intersection #13)
Main Street at Empire Avenue (Intersection #14)
Laurel Road at Empire Avenue (Intersection #19)
Gateway Drive at Empire Avenue (Intersection #24)

The addition of traffic from the proposed project would contribute to these seven intersections exceeding the established LOS standards or resulting in queuing impacts. With future planned improvements at Intersections #19 and #24 (a westbound dual left turn lane and installation of a traffic signal, respectively) the project's impacts would be reduced to less than significant. However, without implementation of the recommended mitigations below, the development of the proposed project would result in a potentially significant impact to the LOS and queuing at the intersections of Wilbur Avenue at Bridgehead Road, Main Street at Bridgehead Road, Big Break at Main Street, Oakley Road at Live Oak Avenue, and Main Street and Empire Avenue. Implementation of the following mitigation measures would reduce the impacts at these intersections to a less-than-significant level in all of the plus project scenarios.

Mitigation Measures

Prior to construction the project would mitigate the above-identified impacts by paying a proportionate share of the construction costs of the following improvement, subject to City approval. The intersection mitigations required for the project to meet the established LOS standards are:

MM 1 (a) Wilbur Avenue at Bridgehead Road – Installation of a four-way traffic signal with crosswalks.

MM 1 (b) Main Street at Bridgehead Road/Neroly Road – 1) Installation of a dual eastbound left turn lane and a dual northbound left turn lane and 2) Implementation of signal coordination with the adjacent traffic signal at the SR 160 Eastbound Ramps.

MM 1 (c) Big Break Road at Main Street – 1) Widening of the southbound Big Break Road approach to the intersection to allow for an additional approach lane, 2) Construction of a dual left turn lane on the eastbound Main Street approach to the intersection, and 3) Widening of the eastbound and westbound Main Street approaches to allow for three through lanes in each direction.

MM 1 (d) Oakley Road at Live Oak Avenue – Widening of the westbound Oakley Road approach to the intersection to allow for a separate right turn lane.

MM 1 (e) Main Street at Empire Avenue – Installation of a dual westbound left turn lane.

Impact #2 Impacts to roadway segment operations - The project would contribute to LOS operations exceeding the established standards on the following roadway segment:

Bridgehead Road between the Planned River Oaks Crossing Entrance and the Main Street/Neroly Road Intersection

The addition of traffic from the proposed project would contribute to this roadway segment exceeding the established LOS standards. Without implementation of the recommended mitigation below, the development of the proposed project would result in a potentially significant impact to the LOS on Bridgehead Road. Implementation of the following mitigation measures would reduce the impact to a less-than-significant level in all of the plus project scenarios.

Mitigation Measures

Prior to construction the project would mitigate the above-identified impacts by paying a proportionate share of the construction costs of the following improvement, subject to City approval. The mitigation required for the project to meet the established LOS standards is:

MM 2 *Bridgehead Road between the Planned River Oaks Crossing Entrance and the Main Street/Neroly Road Intersection – Widening of this segment of Bridgehead Road from a two lane to a four lane cross-section.*

Impact #3 Impacts to freeway operations – The project would contribute to State Route 4 exceeding the established delay index standards during the AM peak hour.

The development of the proposed project would increase the total traffic during both AM and PM peak hours. For SR 4 the East County Action Plan specifies a maximum delay index of 2.5. As shown in Table 9 in Section 5.13 the proposed project would not significantly increase the delay index under existing or cumulative conditions. However, the proposed project would add traffic to State Route 4 in the westbound direction during the AM peak hour, which is forecast to exceed the County's established delay index standard of 2.5. Therefore, the proposed project would have a ***significant impact*** to freeway operations.

Mitigation Measure

Prior to construction the project would mitigate the above-identified impacts by paying the required traffic impact fees, subject to City approval.

MM 3 *Payment of the Regional Transportation Development Impact Mitigation Fee – The project will pay the Regional Transportation Development Impact Mitigation Fee (the "RTDIM") to fund regional freeway system improvements including State Route 4 improvements. Because the City of Oakley does not control the funding, prioritization and/or construction of improvement projects, this impact would remain* ***significant and unavoidable.***

2) PROJECT DESCRIPTION

As noted above, the proposed project consists of construction of five warehouse buildings with a total of 1,985,304 square feet of space. For the purposes of the trip generation forecasts this is assumed to include an e-commerce fulfillment center with a total of 134,474 square feet of space plus 15,526 square feet of storage space. The proposed project would have its main entrance on the eastern side of the intersection of Wilbur Avenue and Bridgehead Road. Two secondary access points will also be provided on Bridgehead Road. One access would be located to the north of the Wilbur Avenue entrance and another would be located to the south. The former buildings on the site are currently vacant. **Figure 1** shows the location of the project and the surrounding roadway network. **Figure 2** shows the proposed site plan for the project.

3) EXISTING CONDITIONS

This section of the report describes the roadways, traffic conditions and other existing transportation characteristics in the vicinity of the project. The primary basis of the analysis is the peak hour level of service for the key intersections. The hours identified as the "peak" hours are generally between 7:30 a.m. and 8:30 a.m. and 4:30 p.m. and 5:30 p.m. for the transportation facilities described, based on the intersection turning movement counts collected for this analysis. Throughout this report, these peak hours will be identified as the AM and PM peak hours, respectively.

3.1 Project Study Intersections

Based on the project's trip generation and the potential for traffic impacts a list of project study intersections was prepared including all signalized intersections where more than 50 peak hour trips would be added as per the Contra Costa Transportation Authority's Technical Procedures.[1] **Figure 1** shows the location of the project study intersections. As mentioned above, all access to the site will be via three access points on Bridgehead Road with the main entrance opposite of Wilbur Avenue. There are twenty-six (26) study intersections included in the analysis.

3.2 Traffic Analysis Scenarios

The study intersections were evaluated for the following six scenarios:

- Scenario 1: *Existing Conditions* – Level of Service (LOS) based on existing peak hour volumes and existing intersection configurations.
- Scenario 2: *Existing Plus Project* – Existing traffic volumes plus trips from the proposed project.
- Scenario 3: *Baseline (No Project) Conditions* – The Baseline scenario is based on the existing volumes plus growth in background traffic (for three years) plus the traffic from all reasonably foreseeable developments that could substantially affect the volumes at the project study intersections.
- Scenario 4: *Baseline Plus Project Conditions* – This scenario is based on the Baseline traffic volumes plus the trips from the proposed project.
- Scenario 5: *Cumulative Conditions* – This scenario includes year 2040 cumulative volumes based on planned and approved projects the Countywide Travel Demand Model.
- Scenario 6: *Cumulative Plus Project Conditions* – This scenario includes year 2040 cumulative volumes based on the Countywide Travel Demand Model plus the trips from the proposed project.

3.3 Existing Roadway Network

Routes of Regional Significance - Routes of Regional Significance (RRS) are major roadway and freeway corridors that serve regional traffic. These are identified in Action Plans adopted by the Contra Costa Transportation Authority under the countywide Measure J program. State Route 4, State Route 160, Wilbur Avenue, E. 18th Street, and Main Street are all identified as RRS in the East County Action Plan.

[1] *Final Technical Procedures*, Contra Costa Transportation Authority, Walnut Creek, CA, January 16, 2013.

As discussed previously, the project location and the surrounding roadway network are illustrated in **Figure 1**. The following is a more detailed description of some of the main roadways that could be affected by the project:

- **State Route 4 (SR 4)–** State Route (SR) 4 is the primary east-west corridor in Contra Costa County. It connects Interstate 80 in the city of Hercules to the west with the cities of Oakley and Brentwood to the east and terminates at SR 89 in South Lake Tahoe. SR 4 has been widened to eight lanes, four in each direction including High Occupancy Vehicle (HOV) lanes, from SR 242 to Contra Loma Boulevard.

- **State Route 160 (SR 160)–** State Route (SR) is connects State Route 4 and Contra Costa County with the Sacramento River Delta and the City of Rio Vista. It continues to follow the Sacramento River up to the City of Freeport area of Sacramento County.

- **Wilbur Avenue –** Wilbur Avenue is an east-west roadway that is designated by the Contra Costa Transportation Authority as a route of regional significance. It extends west from Bridgehead Road to terminate at A Street in the City of Antioch. Within the study area, Wilbur Avenue has two to four travel lanes with left turn pockets and a speed limits ranging from 40 to 45 mph.

- **Main Street –** Main Street is a primary east-west arterial in the City of Oakley. It extends east from Bridgehead Road to through downtown and then continues south into Brentwood until Delta Road where it changes names to Brentwood Boulevard.

- **E. 18th Street** - East 18th Street is an east-west two- to four-lane roadway in Antioch and that runs parallel to the SR 4 corridor. East of the Bridgehead Road the street name changes to Main Street. This corridor is designated a Route of Regional Significance in the 2008 East County Action Plan.

- **Laurel Road –** Laurel Road is an east-west two-lane residential collector street with residential and vacant land on both sides. The posted speed on Laurel Road is 45 mph. Please note that Laurel Road is eventually planned to be extended to Sellers Avenue.

- **Oakley Road -** Oakley Road is a two-lane east-west roadway that connects Oakley to Antioch. Oakley Road begins at Viera Avenue in Antioch, extending past SR 160 to terminate at Empire Avenue.

3.4 Analysis Methodology

Existing operational conditions at the twenty-six (26) study intersections have been evaluated according to the requirements set forth by the Contra Costa County Transportation Authority

(CCTA) using the methodology set forth in the Final Technical Procedures Update (dated July 19, 2006). Analysis of traffic operations was conducted using the 2010 *Highway Capacity Manual* (*HCM*) Level of Service (LOS) methodology with Synchro software.[2] Level of service is an expression, in the form of a scale, of the relationship between the capacity of an intersection (or roadway segment) to accommodate the volume of traffic moving through it at any given time. The level of service scale describes traffic flow with six ratings ranging from A to F, with "A" indicating relatively free flow of traffic and "F" indicating stop-and-go traffic characterized by traffic jams. As the amount of traffic moving through a given intersection or roadway segment increases, the traffic flow conditions that motorists experience rapidly deteriorate as the capacity of the intersection or roadway segment is reached. Under such conditions, there is general instability in the traffic flow, which means that relatively small incidents (e.g., momentary engine stall) can cause considerable fluctuations in speeds and delays that lead to traffic congestion. This near-capacity situation is labeled level of service (LOS) E. Beyond LOS E, the intersection or roadway segment capacity has been exceeded, and arriving traffic will exceed the ability of the intersection to accommodate it.

For signalized intersections, The *HCM* methodology determines the capacity of each lane group approaching the intersection. The LOS is then based on average control delay (in seconds per vehicle) for the various movements within the intersection. A combined weighted average control delay and LOS are presented for the intersection. A summary of the HCM results and copies of the detailed HCM LOS calculations are included in the appendix to this report. **Table 1** summarizes the relationship between LOS, average control delay, and the volume to capacity ratio at signalized intersections.

For unsignalized intersections (all-way stop controlled and two-way stop controlled) the average control delay and LOS operating conditions are calculated by approach (e.g., northbound) and by movement (e.g., northbound left-turn) for those movements that are subject to delay. In general, the operating conditions for unsignalized intersections are presented for the worst approach. **Table 2** summarizes the relationship between LOS and average control delay at unsignalized intersections.

For roadway segments the signal delay and travel time are calculated by direction (e.g., northbound and southbound). The level of service is then determined by direction for each segment from the resulting arterial speeds that are output from the Synchro model using the HCM urban street segment methodology. **Table 3** summarizes the relationship between LOS and arterial speeds for roadway segments.

3.5 Existing Intersection Capacity Conditions (Scenario 1)

The existing intersection geometry at each of the project study intersections can be seen in **Figure 3** and the existing traffic volumes at each are presented in **Figure 4.** Traffic counts at

TABLE 1
SIGNALIZED INTERSECTION LEVEL OF SERVICE DEFINITIONS

Level of Service	Description of Operations	Average Delay (sec/veh)	Volume to Capacity Ratio
A	Insignificant Delays: No approach phase is fully used and no vehicle waits longer than one red indication.	≤ 10	< 0.60
B	Minimal Delays: An occasional approach phase is fully used. Drivers begin to feel restricted.	> 10 to 20	> 0.61 to 0.70
C	Acceptable Delays: Major approach phase may become fully used. Most drivers feel somewhat restricted.	> 20 to 35	> 0.71 to 0.80
D	Tolerable Delays: Drivers may wait through no more than one red indication. Queues may develop but dissipate rapidly without excessive delays.	> 35 to 55	> 0.81 to 0.90
E	Significant Delays: Volumes approaching capacity. Vehicles may wait through several signal cycles and long vehicle queues from upstream.	> 55 to 80	> 0.91 to 1.00
F	Excessive Delays: Represents conditions at capacity, with extremely long delays. Queues may block upstream intersections.	> 80	> 1.00

TABLE 3
ROADWAY SEGMENT LEVEL OF SERVICE DEFINITIONS

Level of Service	Travel Speed (miles per hour)
A	>36 mph
B	> 23 to 36
C	> 18 to 23
D	> 14 to 18
E	> 14
F	≤ 14

SOURCE: 6th Edition of the *Highway Capacity Manual*, Transportation Research Board, 2016.
NOTE: The level of service and speed ranges presented are for a 45 mph roadway.

the study intersections were conducted in November of 2018 at times when local schools were in session. **Table 4** summarizes the associated LOS computation results for the existing weekday AM and PM peak hour conditions. Please note that the corresponding LOS analysis calculation sheets and information regarding the peak hour factors and signal timings are presented in the appendix to this report. As shown in **Table 4**, all of the project study intersections currently have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours with the exception of Intersection #24 (Gateway Drive at Empire Avenue) which would exceed the LOS D threshold established in the City's General Plan. See Section 4.3 for a description of the applicable intersection thresholds.

3.6 Pedestrian and Bicycle Facilities

Bicycle and pedestrian facilities in the project study area are currently very limited with no marked crosswalks and only small segments of discontinuous sidewalks provided in the immediate vicinity of the project. **Figure 5** presents the existing and proposed bicycle facilities in the project area. Bicycle paths, lanes and routes are typical examples of bicycle transportation facilities, which are defined by Caltrans as being in one of the three classes:

Class I – Provides a completely separated facility designed for the exclusive use of bicyclists and pedestrians with crossing points minimized.

Class II – Provides a restricted right-of-way designated lane for the exclusive or semi-exclusive use of bicycles with through travel by motor vehicles or pedestrians prohibited, but with vehicle parking and cross-flows by pedestrians and motorists permitted.

Class III – Provides a route designated by signs or permanent markings and shared with pedestrians and motorists.

TRAFFIC ENGINEERING, INC.

3.7 Transit Service

Figure 6 presents the transit service available in the project area. Two major public transit operators provide service within or adjacent to the study area. These include BART and the Eastern Contra Costa Transit Authority (or Tri Delta Transit). These operators are described below.

Bay Area Rapid Transit (BART) – BART is a rapid mass transit system which provides regional transportation connections to much of the Bay Area. It runs from the North Bay Area in Richmond to the South Bay Area in Fremont. In the east-west direction it runs from Oakley to the San Francisco Airport and Milbrae with several connections in Oakland. The Bay Point BART station, which is closest to the proposed project, serves Oakley and other surrounding cities and has trains that run from about 4:00 am to 12:00 am daily, with a weekday frequency of 15 minutes. An E-BART extension to Hillcrest Avenue in Antioch has been completed and connects with BART at the Bay Point BART station. Please note there is also an E-BART Station at Railroad Avenue.

Tri Delta Transit - Tri Delta Transit serves the East County including Brentwood, Oakley, Oakley, Oakley, Bay Point and unincorporated areas of East County. Tri Delta Transit operates fourteen local bus routes from Monday to Friday, including three express services, and four local bus routes during weekends and Holidays. The Tri Delta Transit routes that runs closest to the proposed project are Routes 300, 383, 391, and 393 which have stops at Bridgehead Road and Main Street, which is about 1,800 feet from the southern entrance to the project site.

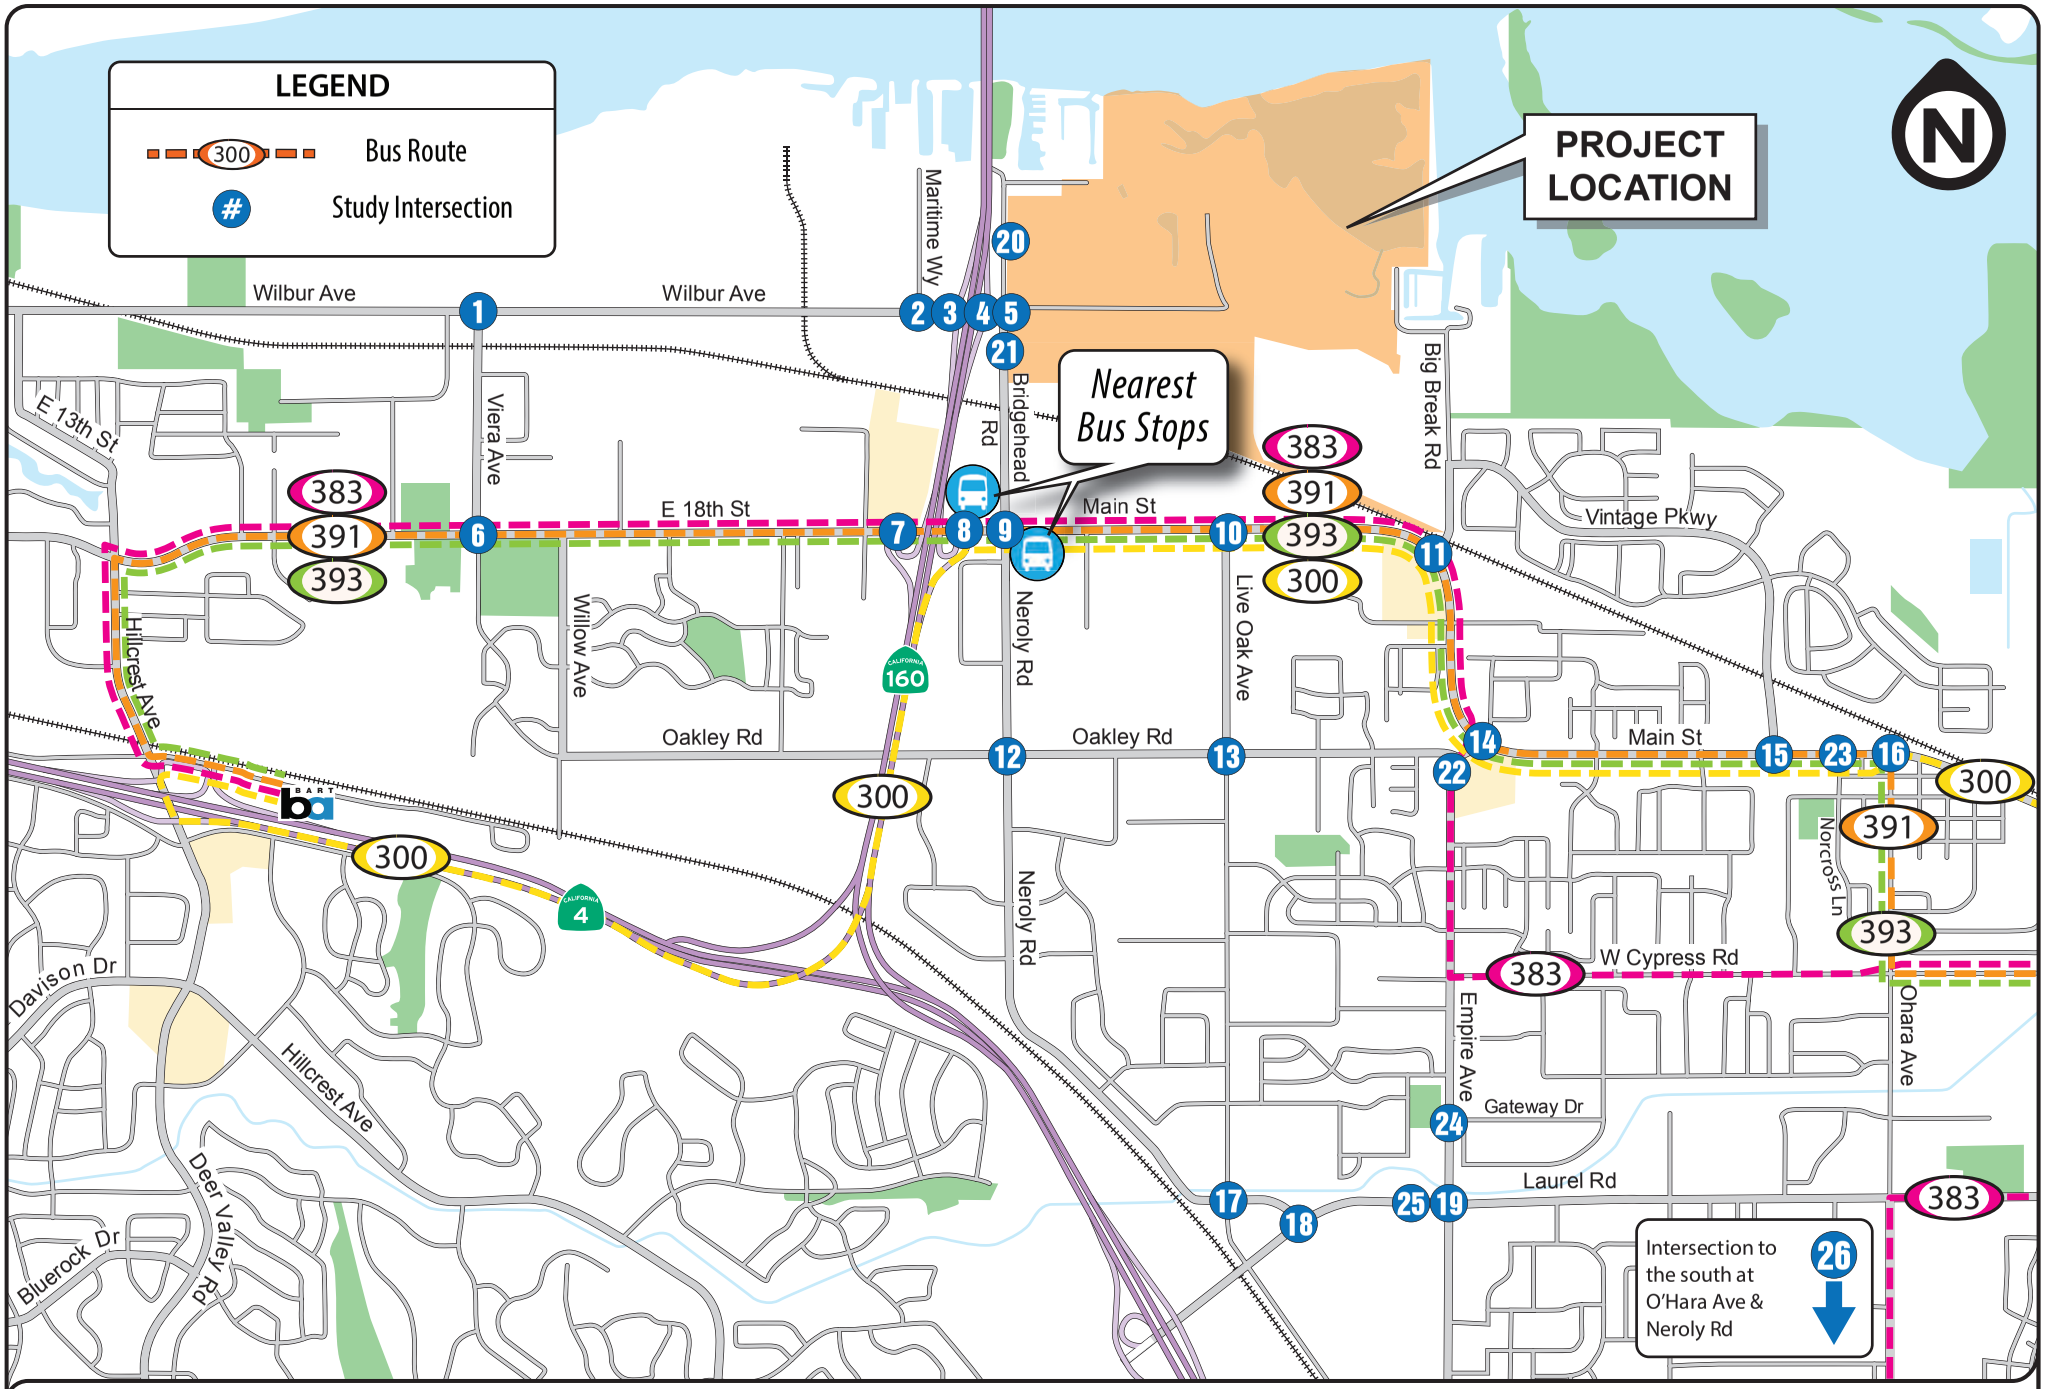

FIGURE 6 | TRANSIT SERVICE IN THE PROJECT STUDY AREA
TRANSPORTATION IMPACT ANALYSIS

3.8 Standards and Objectives

Existing policies, laws and regulations that apply to the proposed project are summarized below.

Caltrans - The California Department of Transportation (Caltrans) has jurisdiction over State highways. Therefore, Caltrans controls all construction, modification, and maintenance of State highways, such as SR 4. Any improvements to these roadways would require Caltrans' approval. The Guide for the Preparation of Traffic Impact Studies provides consistent guidance for Caltrans staff who review local development and land use change proposals. The Guide also informs local agencies about the information needed for Caltrans to analyze the traffic impacts to state highway facilities which include freeway segments, on- or off-ramps, and signalized intersections.

Contra Costa Countywide Comprehensive Transportation Plan Update (2017) - The transportation policies that are applicable within Contra Costa County are based on the Contra Costa County Comprehensive Transportation Plan. This document identifies the criteria for analyzing transportation impacts and sets forth plans for future improvements in the county.

City of Oakley General Plan - The Transportation and Circulation Element included in the City of Oakley General Plan was prepared pursuant to Section 65302(b) of the California Government Code. The Transportation and Circulation Element addresses the location and extent of existing and planned transportation routes, terminals, and other local public utilities and facilities. The General Plan identifies roadway and transit goals and policies that have been adopted to ensure that the transportation system of the City will have adequate capacity to serve planned growth. These goals and policies are intended to provide a plan and implementation measures for an integrated, multi-modal transportation system that will safely and efficiently meet the transportation needs of all economic and social segments of the City.

Significance Criteria - According to CEQA guidelines, a project would have a significant impact if it would:

- Conflict with an applicable program, plan, ordinance or policy establishing measures of effectiveness for the performance of addressing the circulation system, including transit, roadways, bicycle lanes and pedestrian facilities/paths?

  The goal of the City of Oakley (City) is to maintain a Level of Service (LOS) D during the peak hours, according to the General Plan. The City does not have plans, ordinances, or policies establishing measures of effectiveness for the performance of other parts of its circulation system.

  This analysis also includes intersections under the jurisdiction of Contra Costa County and Caltrans. For the Caltrans freeway facilities, the operational standards and significance criteria are established by the Contra Costa Transportation Authority

(CCTA) acting as the designated Congestion Management Agency (CMA) representing the jurisdictions of Contra Costa County. As the acting CMA, the CCTA establishes the traffic LOS standards for all state highway facilities in Contra Costa County, which supersede the general Caltrans operational standard for all state highways.[3]
The City's and the CCTA's measures of effectiveness are summarized below:

Signalized Intersections - Project-related operational impacts on the signalized study intersections in the City of Oakley are considered significant if project-related traffic causes the Level of Service (LOS) rating to deteriorate from LOS D to LOS E or F, from LOS E to LOS F, or if the volume-to-capacity ratio at an intersection already operating at an unacceptable level were to increase by 0.01 or more.

Unsignalized Intersections - Project-related operational impacts on unsignalized intersections are considered significant if project generated traffic causes the worst-case movement (or average of all movements for all-way stop-controlled intersections and roundabouts) deteriorates from LOS D or better to LOS E or F.

Roadway Segments - Project-related operational impacts on roadway segments are considered significant if project generated traffic causes the LOS rating to deteriorate from LOS D to LOS E or F, from LOS E to LOS F, or if the volume-to-capacity ratio at an intersection operating at an unacceptable level were to increase by 0.01 or more.

SR 4 Freeway - For the State Route 4 freeway the East County Action Plan specifies a maximum MTSO delay index of 2.5.[4] The MTSO delay index and average speed is measured over the length of SR 4 from Willow Pass Grade to SR 160. For the Caltrans freeway facilities being studied, the operational standards and significance criteria are established by the CCTA acting as the designated Congestion Management Agency (CMA) representing the jurisdictions of Contra Costa County.

- Would the project conflict with or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)? This section states that vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should also be presumed to have a less than significant transportation impact.
- Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections).
- Result in inadequate emergency vehicle access.

4) TRANSPORTATION IMPACT ANALYSIS

4.1 Project Trip Generation

The proposed project would consist of construction of five warehouse buildings with a total of 1,985,304 square feet of space. The resulting trip generation calculations are shown in **Table 5**. They are based on the trip generation rates for a High-Cube Fulfillment Center Warehouse (ITE Land Use Code 155) and Warehousing (ITE Land Use Code 150) from the Institute of Transportation Engineer's (ITE) Trip Generation Manual, 10th Edition. The total trip generation reflects all vehicle trips that would be counted at the project driveways, both inbound and outbound. Since the project has no retail or mixed use components there were no adjustments applied to account for pass-by or internal trips. For the purposes of determining the reasonable worst-case impacts of traffic on the surrounding street network from a proposed project, the trips generated by this proposed development are estimated for the peak commute hours of 7:30 a.m. and 8:30 a.m. and 4:30 p.m. and 5:30 p.m., which represent the peak of "*adjacent street traffic*". This is the time period when the project traffic would generally contribute to the greatest amount of congestion.

TABLE 5
PROJECT TRIP GENERATION CALCULATIONS

Land Use	***Size***	***ADT***	***AM Peak Hour***			***PM Peak Hour***		
			In	***Out***	***Total***	***In***	***Out***	***Total***
High Cube Fulfillment Center Trip Rates		8.18	0.45	0.14	0.59	0.38	0.99	1.37
E-Commerce Fulfillment Center Trip Generation	*150,000* square feet*	*1,100*	*60*	*19*	*79*	*51*	*133*	*184*
Warehousing Trip Rates		1.74	0.13	0.04	0.17	0.05	0.14	0.19
Warehousing Trip Generation	*1,835,304 square feet*	*3,193*	*239*	*73*	*312*	*92*	*257*	*349*
Total Project Trip Generation	*1,985,304 square feet*	***4,292***	***299***	***92***	***391***	***143***	***390***	***533***

SOURCE: ITE Trip Generation Manual, 10th Edition
NOTE: * Total includes the 134,474 sq. ft. facility plus a 15,526 sq. ft. storage area not included in the trip generation.

4.2 Project Trip Distribution

The trip distribution assumptions have been based on the project's proximity to freeway interchanges, the existing directional split at nearby intersections, and the overall land use patterns in the area as determined from the Countywide Travel Demand Model. The project plans to direct employees and trucks to use the Wilbur Avenue interchange in an effort to

avoid/minimize congestion on E. 18th Street at its interchange with SR 160 and also on surface street in surrounding cities. **Table 6** shows the percentage of project traffic assigned to various study roadways. **Figure 7** shows the project traffic that would be added at each of the study intersections. Please note that a figure presenting the detailed trip distribution paths used in the analysis is provided in the technical appendix.

TABLE 6
PROJECT TRIP DISTRIBUTION ASSUMPTIONS

Origin / Destination	*Peak Hour Trip Distribution Percentages*
To the west on State Route 4	27%
To the west on E. 18th Street	4%
To the west on Wilbur Avenue	5%
To the north on State Route 160	7%
To the north on Big Break Road	2%
To the north on Vintage Parkway	1%
To the east on Main Street	6%
To the south on O'Hara Avenue	3%
To the east on the Laurel Road	5%
To the south on Empire Road	1%
To the south on Live Oak Avenue	6%
To the south on State Route 4	17%
To the west on Oakley Road	1%
Local Retail/Restaurant/Service Station Trips	15%

4.3 Existing Plus Project Traffic Capacity Conditions (Scenario 2)

This scenario evaluates the existing conditions with the addition of traffic from the proposed project. The traffic volumes for each of the study intersections for the Existing Plus Project scenario are shown in **Figure 8**. The capacity calculations for the Existing Plus Project scenario are shown in **Table 7**. The corresponding LOS analysis calculation sheets are presented in the appendix to this report. As shown in **Table 7**, all of the signalized study intersections would have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours with the exception of Intersection #24 (Gateway Drive at Empire Avenue) which would exceed the LOS D threshold established in the City's General Plan. However, the proposed project would not add any traffic to the critical side street movements and would not increase the volume to capacity ratio by more than 0.01. Therefore, the project's contribution to traffic at this intersection would not be considered a significant impact. Please note this intersection is

SOURCE: Abrams Associates, 2019 **NOTE:** Delay results are presented in terms of seconds per vehicle.

forecast to continue exceeding the City's LOS standards regardless of whether or not the proposed project is implemented.

As traffic volumes increase vehicle queues typically will also increase at most intersections. In the Existing plus Project condition, the project traffic would contribute to the average vehicle queues (based on the 95th percentile vehicle queue) potentially extending beyond the available storage for certain movements. Please note these movements are forecast to continue exceeding the available storage regardless of whether or not the proposed project is implemented. Mitigations to improve the operations at these intersections are discussed in Section 5. These locations include:

Main Street at Bridgehead Road
Eastbound Main Street Left Turn
Southbound Bridgehead Road Left Turn

Main Street at Empire Avenue
Westbound Main Street Left Turn
Northbound Empire Avenue Left Turn

Oakley Road at Empire Avenue
Westbound Oakley Town Center Left Turn

4.4 Baseline Traffic Capacity Conditions (Scenario 3)

The Baseline scenario evaluates the existing conditions with the addition of traffic from reasonably foreseeable projects in the area and general baseline growth in traffic. For this analysis the baseline volumes were developed based on the assumption that the project completion date would be 2021 with an average traffic growth of 1% per year. The trips added by near-term development during this time was based on the forecast trip generation for a list of 25 approved projects identified by the City. These are projects anticipated to be completed in the next five years that could potentially effect the traffic volumes at the project study intersections. The traffic volumes for each of the study intersections for the Baseline scenario are shown in **Figure 9**. **Table 8** summarizes the associated LOS computation results for the Baseline weekday AM and PM peak hour conditions. As shown in **Table 8**, all of the signalized study intersections would continue to have acceptable conditions (LOS D or better) under the Baseline Plus Project scenario during the weekday AM and PM peak hours with the exception of Intersections #19 (Laurel Avenue and Empire Avenue) and #24 (Gateway Drive at Empire Avenue) which would both exceed the LOS D threshold established in the City's General Plan.

4.5 Baseline *Plus Project* Traffic Capacity Conditions (Scenario 4)

The Baseline plus proposed project traffic forecasts were developed by adding traffic from Phases 1+2 to the baseline traffic volumes. The traffic volumes for each of the study intersections for the Baseline Plus Project scenario are shown in **Figure 10**. **Table 8**

SOURCE: Abrams Associates, 2019 **NOTE:** Delay results are presented in terms of seconds per vehicle.

summarizes the LOS results for the Baseline and Baseline Plus Project weekday AM and PM peak hour conditions. The corresponding LOS analysis calculation sheets are presented in the appendix to this report. As shown in **Table 8**, all of the signalized study intersections would continue to have acceptable conditions (LOS D or better) under the Baseline Plus Project scenario during the weekday AM and PM peak hours with the exception of Intersections #13, (Oakley Road at Live Oak Avenue), #19 (Laurel Avenue at Empire Avenue), and #24 (Gateway Drive at Empire Avenue) which would all exceed the LOS D threshold established in the City's General Plan. However, at intersections #19 and #24 the project would not increase the V/C ratio by more than 0.01 and therefore this would not be considered a significant impact. With the future planned improvements at Intersections #19 and #24 (a westbound dual left turn lane and installation of a traffic signal, respectively) the level of service at these intersections is forecast to operate at acceptable levels (LOS D or better). It should be noted that these intersections are forecast to exceed the City's LOS standards regardless of whether or not the proposed project is implemented. Please note that at the other intersection exceeding the thresholds (Intersection #13) the project would increase volume to capacity ratio by more than 0.01. Therefore, the project's contribution to traffic at this intersection would be considered a significant impact.

As traffic volumes increase vehicle queues typically will also increase at most intersections. In the Baseline plus Project condition, the project traffic would contribute to the average vehicle queues (based on the 95th percentile vehicle queue) potentially extending beyond the available storage for certain movements. Please note these movements are forecast to continue exceeding the available storage regardless of whether or not the proposed project is implemented. Mitigations to improve the operations at these intersections are discussed in Section 5. These locations include:

Main Street at Bridgehead Road
Eastbound Main Street Left Turn
Southbound Bridgehead Road Left Turn

Main Street at Empire Avenue
Westbound Main Street Left Turn
Northbound Empire Avenue Left Turn

Oakley Road at Empire Avenue
Westbound Oakley Town Center Left Turn

4.6 Cumulative Traffic Capacity Conditions (Scenario 5)

For the cumulative conditions, the intersection traffic volumes were based on the existing turning movements plus incremental growth in background traffic (1% per year) based on the County's traffic model. **Figure 11** presents the cumulative build-out traffic volumes for the project study intersections. **Table 9** summarizes the LOS results for the Cumulative (Year

2040) traffic conditions at each of the project study intersections. As shown on this table, the project study intersections would continue to have acceptable conditions during the weekday AM and PM peak commute hours with the exception of Intersections #11 (Big Break Road and Main Street), Intersection #13 (Oakley Road and Live Oak Avenue), and #24 (Gateway Drive at Empire Avenue) which would all exceed the LOS D threshold established in the City's General Plan.

4.7 Cumulative Plus Project Traffic Capacity Conditions (Scenario 6)

Table 9 summarizes the LOS results for the Cumulative Plus Project (Year 2040) traffic conditions at each of the project study intersection. **Figure 12** presents the cumulative build-out traffic volumes including the traffic from the proposed project. As shown on this table, all of the signalized study intersections would continue to have acceptable conditions during the weekday AM and PM peak commute hours with exception of Intersections #5 (Wilbur Avenue at Bridgehead Road), #11 (Big Break Road and Main Street), Intersection #13 (Oakley Road and Live Oak Avenue), and #24 (Gateway Drive at Empire Avenue) which would all exceed the LOS D threshold established in the City's General Plan. However, at intersection #24 the project would not increase the V/C ratio by more than 0.01 and therefore this would not be considered a significant impact. With the future planned improvements at intersection #24 (installation of a traffic signal) the level of service at this intersection is forecast to operate at acceptable levels (LOS D or better). It should be noted that with the exception of the poor LOS at Intersection #5 (which is triggered by the project) all of the above mentioned intersections are forecast to exceed the City's LOS standards regardless of whether or not the proposed project is implemented. Please note that at the other intersections exceeding the thresholds (Intersections #5, #11, and #13) the project would increase volume to capacity ratio by more than 0.01. Therefore, the project's contribution to traffic at these intersections would be considered a significant impact.

As traffic volumes increase vehicle queues typically will also increase at most intersections. In the Cumulative plus Project condition, the project traffic would contribute to the average vehicle queues (based on the 95th percentile vehicle queue) potentially extending beyond the available storage for certain movements. Please note these movements are forecast to continue exceeding the available storage regardless of whether or not the proposed project is implemented. Mitigations to improve the operations at these intersections are discussed in Section 5. These locations include:

Wilbur Avenue at Bridgehead Road
Northbound Bridgehead Road Left Turn

Main Street at Bridgehead Road
Eastbound Main Street Left Turn
Southbound Bridgehead Road Left Turn
Northbound Bridgehead Road Left Turn

Oakley Road at Empire Avenue
Westbound Oakley Town Center Left Turn

For study intersections that are projected to operate at LOS D or better during the peak commute hours, monitoring and adjusting traffic signal timings in response to actual traffic volumes to minimize the potential for vehicle queue spillback is recommended.

4.8 Roadway Segment Analysis

Analysis of Traffic Operations on Bridgehead Road and Wilbur Avenue - As part of this study a detailed analysis of the roadway segment traffic operations was conducted for Wilbur Avenue and Bridgehead Road adjacent to the proposed project. The analysis indicated both of these roadways would continue to have acceptable conditions with the current lane configuration (one lane in each direction) during the weekday AM and PM peak commute hours (LOS D or better) under all scenarios with the exception of one segment of Bridgehead Road. Under cumulative conditions the segment of Bridgehead Road south of the planned entrance to the River Oaks Crossing Specific Plan Area (i.e. the segment south of the railroad over-crossing) would exceed LOS D under both the AM and PM peak hours. This two lane roadway segment is forecast to operate at LOS F during the PM peak hour with the removal of the Live Oak Avenue extension and the addition of forecast traffic from the proposed project and the River Oaks Specific Plan. Please note it is possible that planned improvements on the southbound approach to the Main Street intersection in combination with improvements to the planned River Oaks Crossing entrance intersection could potentially improve operations on this segment, depending on the final design for those improvements. However, the proposed project would increase the volume to capacity ratio on this segment by more than 0.01. Therefore, the project's contribution to traffic at these intersections would be considered a significant impact. Mitigation to improve the operations on this roadway segment is discussed in Section 5. Complete roadway segment analysis tables and calculations for all study scenarios are included in the appendix to this report. In addition, a detailed analysis of the cumulative plus project pavement traffic index for Bridgehead Road was prepared. The traffic index (TI) is used to determine the required pavement thickness needed to accommodate truck traffic and is calculated based on Equivalent Single Axle Loads (ESALs) for various vehicle types. These factors used in combination with the future traffic volume forecasts to compute the 20 year ESAL, which is then used to determine the Traffic Index, as per Caltrans Standards. The TI calculations resulted in a forecast cumulative plus project TI of 10.6.

4.9 Freeways

Analysis of the Delay Index on the State Route 4 Freeway - The delay index measures travel congestion and is expressed as the ratio of the time required to travel between two points during the peak hour (the congested travel time) and the time required during un-congested off-peak times. A delay index of 2.0 means that congested travel time is twice as long as during an off-peak travel time. The following shows the formula for calculating delay indices:

Delay Index = Measured Peak Hour Travel Time / Free Flow Travel Time

The numerator of the delay index formula, the measured peak hour travel time, was determined from speed runs conducted along I-580 during the AM and PM peak hours in the spring of 2019 as part of the Contra Costa Transportation Authority's Congestion Management Program Monitoring. The denominator of the delay index formula, the free flow travel time is defined as "*the time it takes to traverse a roadway segment at the speed limit including the average uncongested delay experienced at traffic signals*."

It is important to note that achievement of the MTSO delay index and average speed is measured over the length of SR 4 from Willow Pass Grade to Balfour Road. For SR 4 the East County Action Plan specifies a maximum delay index of 2.5.[5] As shown in **Table 10** the proposed project would not significantly increase the delay index under existing or cumulative conditions. However, the delay index on westbound SR 4 during the AM peak hour is forecast to exceed the MTSO of 2.5 under cumulative plus project conditions and therefore the addition of project traffic would be considered a significant impact.

Freeway Ramp Analysis - As part of this study a detailed analysis of the merge and diverge movements for all ramps was prepared for the interchanges of SR 160 at Main Street and at Wilbur Avenue. The analysis indicated all ramp merges and diverges at the two intersections would continue to have acceptable conditions during the weekday AM and PM peak commute hours (LOS C or better) under all scenarios. Complete freeway ramp analysis tables for all study scenarios are included in the appendix to this report.

4.10 Safety

The proposed project was not found to cause (or substantially increase) any safety hazards due to any design features or incompatible uses. Although the project would increase vehicle and pedestrian traffic in the project vicinity it is not expected to significantly impact or change the design of any existing transportation facilities or create any new safety problems in the area. Five years of California Highway Patrol accident records were evaluated for Wilbur Avenue to verify there were no existing safety problem. This data is included in the technical appendix to this report. The project is proposing to provide sufficient pedestrian pathways and signage

[5] *Draft East County Action Plan for Routes of Regional Significance*, Fehr & Peers Associates, Walnut Creek, CA, November 2013.

TABLE 10
STATE ROUTE 4 FREEWAY DELAY INDEX CALCULATION RESULTS
WITH AND WITHOUT THE PROPOSED PROJECT

Scenario	*Direction*	*MTSO*	*No Project*	*With Project*
Existing AM Peak Hour (2019)	Eastbound	2.5	1.1	1.2
	Westbound	2.5	2.5	2.5
Existing PM Peak Hour (2019)	Eastbound	2.5	1.4	1.4
	Westbound	2.5	1.3	1.3
Cumulative AM Peak Hour (2040)	Eastbound	2.5	1.3	1.3
	Westbound	2.5	3.1	3.1
Cumulative PM Peak Hour (2040)	Eastbound	2.5	1.8	1.8
	Westbound	2.5	1.5	1.5

SOURCE: Abrams Associates, 2019

within the project to ensure the current level of pedestrian safety is maintained. Therefore, based on the City's significance criteria the project's impacts on transportation safety would be less than significant and no mitigation would be required.

4.11 Transit Impacts

The project would not result in degradation of the level of service (or a significant increase in delay) on any roadway segments currently being utilized by bus transit in the area and, as such, no significant impacts to bus transit are expected. The proposed project not be expected to significantly impact the operating capacity of E-BART or any existing bus routes. The proposed project could potentially help support existing bus services with additional transit ridership and would not conflict with any transit plans or goals of the BART, the County, or Tri Delta Transit. Although the proposed project does have the potential to increase patronage on BART and bus lines in the area, no significant effects on transit capacity are anticipated given the additional ridership would be added primarily in the non-peak directions. As a result, the project would not be expected to result in any significant impacts to bus transit service in the area.

4.12 Pedestrians, Bicycles and Non-Motorized Vehicular Travel

The City does not have level of service standards for pedestrian or bicycle facilities. Nevertheless, use of existing facilities by the users of the project would not be expected to overcrowd those facilities or decrease their performance or safety. The proposed project would not generate a significant increase in pedestrian traffic in the area when compared to the

existing volumes. In addition to the relatively low trip generation, the proposed project would not significantly impact or change the design of any existing pedestrian facilities and should not create any new safety problems for pedestrians in the area.

The project will add some pedestrians and bicyclists in the area but the volumes added would not be expected to significantly impact any existing bicycle facilities. In relation to the existing conditions, the proposed project would not cause substantial changes to the pedestrian or bicycle traffic in the area and would not significantly impact or require changes to the design of any existing bicycle or pedestrian facilities. However, consistent with the City and County General Plans, the project could be asked to contribute to additional pedestrian and bicycle improvement measures in the vicinity of the project. The project would also be required to provide adequate internal pedestrian facilities that connect it to the surrounding pedestrian network.

4.13 Site Access and Circulation

No site circulation or access issues have been identified that would cause a traffic safety problem or any unusual traffic congestion or delay. The proposed intersections that would provide access to the project are forecast to have acceptable operations, with the exception of the main entrance intersection at Wilbur Avenue. The addition of project traffic at this intersection is forecast to degrade it from LOS D to LOS E in the cumulative plus project scenario (scenario 6). As discussed below in Section 5, the proposed mitigation for the project's impacts to this intersection is the installation of a traffic signal. Please note that a detailed truck turning analysis was conducted for the project based on STAA standard six-axle truck.

4.14 Parking

Parking analysis is provided for planning and informational purposes only. Based on the information provided below the parking provided would be sufficient to meet the estimated demand of the project based on ITE data and trip generation surveys of over 40 different warehouses.

City of Oakley Parking Requirements - This section discusses the City of Oakley's zoning and estimated parking demand for the project. Section 9.1.1402 of the Oakley Municipal Code specifies that for industrial uses such as warehousing one space per every 1,000 feet of gross floor area is required. **Table 11** presents a summary of the unadjusted parking requirements for the project.

Table 11
Off-Street Parking Calculations Based on the Oakley Municipal Code

Land Use	Size		Parking Requirement	Required Spaces
Warehousing	1,985,304	sq. ft.	1 space per 1,000 sq. ft.	1,985 spaces

Parking Demand Based on ITE Parking Generation Rates - To provide additional information on parking demand, **Table 12** provides a summary of the peak parking demand results using the ITE parking generation rates for the project taken from the 5th Edition of the ITE Parking Generation Manual. As shown in **Table 12**, the proposed project would be forecast to have a peak parking demand for approximately 774 parking spaces based on the ITE data.

Table 12
Off-Street Parking Calculations Using Parking Data from the Institute of Transportation Engineers

Component	Data Source	ITE Land Use Code	Size		Parking Ratio	Peak Demand
Warehousing	ITE Parking Demand Rates	150	1,985,304	sq. ft.	0.39	774 vehicles

Based on this analysis the proposed project would provide an adequate supply of off-street parking based on the forecast parking demand. Therefore, subject to final City approval of the proposed parking plan, there should be no significant parking impacts to the surrounding properties.

4.15 Transportation Demand Management Program

In September 2010, the California Air Resources Board (ARB or Board) set passenger vehicle greenhouse gas (GHG) emission reduction targets for 2020 and 2035 for each of the 18 Metropolitan Planning Organization (MPO) regions in California under the Sustainable Communities and Climate Protection Act of 2008 (SB 375). Oakley supports these goals by implementing policies that require new projects achieve a reduction in the number of peak hour drive-alone commute vehicle trips. The project transportation demand management (TDM) program requested by the City is intended to reduce the total vehicle miles traveled (VMT) by motorists in the project area. Please note that reductions in VMT are generally considered to translate directly into reduced GHG's. The project is also required to prepare a Transportation Demand Management (TDM) Plan based on direction provided by the City of Oakley, because it is proposing to provide less than the amount of parking required by the City's Municipal Code.

Proposed TDM Strategies - The Project could potentially address the requested reduction in off-street parking by implementing the following strategies. These strategies would be incorporated into the project and could be considered as part of the City's parking demand review because they are not accounted for in the base parking demand of 761 vehicles estimated for the project. The following is a summary of strategies that are recommend to be incorporated into the project:

Increased Bus Service or Private Shuttle Service to BART – There are currently no plans for Tri-Delta Transit to run buses up to Wilbur Avenue near the project site and the nearest bus stops

are currently about 1,800 feet from the southern entrance to the project site and there are no sidewalks on the route to the bus stops. However, Tri-Delta Transit staff indicated the agency would certainly consider adding a stop in the future, but there was no funding available for it at this time. Alternatively, the project could potentially provide a frequent (30 – 40 minute headways) direct weekday shuttle service between the project site and the Antioch E-BART station for three hours during both the peak morning and evening commute periods. This service could be operated by a private contractor or by Tri-Delta Transit. Shuttles shall be fully accessible to passengers using wheelchairs and other mobility services and have the capacity to transport bicycles. In addition, explore providing a real-time smart-phone app that tracks real-time arrivals to make shuttle use more reliable and convenient.

Installation of Bicycle Lanes on Bridgehead Road – The potential for construction of bicycle lanes on Bridgehead Road between Main Street and the future extension of the Big Break Trail (along the north side of the project site) should be investigated. In addition to providing for safe bicycle access to the project site to help reduce auto use, the bicycle lanes would also provide an important connection from Main Street to the planned future bicycle lanes on the SR 160 bridge and the Big Break Regional Trail. The bicycle lanes would also improve safety for pedestrians in any areas where sidewalks are not provided by providing a paved shoulder to walk on in the vicinity of the railroad overcrossing. In some areas there is currently less than two feet of pavement from the edge of the travel lanes to where the steep embankments begin on either side of the roadway. It should be noted that constructing sidewalks in addition to the bike lanes is not proposed due to the constrained width at the existing railroad overcrossing.

Carpool and Ride-Matching Assistance Program – The building management shall offer personalized ride-matching assistance to pair residents and employees interested in forming commute carpools. As an enhancement, building management may consider using specific services such as ZimRide, TwoGo by SAP, Enterprise RideShare, or 511.org RideShare.

Preferential Parking for Carpoolers – The management shall offer preferential carpool parking for eligible commuters. To be eligible for carpool parking, the carpool shall consist of three or more people. The management shall monitor and provide adequate carpool spaces to meet or exceed potential demand.

Dedicated Parking Spaces for Car Share Services – Setting aside parking spaces to be dedicated for use by car share services to serve employees. This could reduce parking demand and GHG emissions associated with the project by providing more flexibility for employees who otherwise utilize alternate modes. The availability of car share services within a project can potentially reduce the demand for employees to own their own cars. A review of over 25 studies from Europe and the U.S. where car sharing services are available, found that in North America, on average, 20% of respondents gave up a privately owned vehicle and 40% avoided

purchasing one, which results in an average of five privately owned vehicles replaced per every car sharing vehicle.[6] However, it should be noted that this data is for residential projects and the effects, while still significant, would most likely be less for a commercial project.

On Site Sales of Transit Passes – The building management shall offer direct on-site sales of transit passes purchased and sold at a bulk group rate (through monthly pass programs such as the Clipper Card, which is accepted by BART and Tri-Delta Transit).

TDM Coordinator – Management shall designate a "*TDM coordinator*" to coordinate, monitor and publicize TDM activities. The effectiveness of providing a TDM Coordinator on automobile ownership is not known at this time. It is assumed the applicant may instruct the management company to designate their on-site manager as the TDM coordinator.

Transportation and Commute Information Kiosks - An information board or kiosk will be located in the building in a common gathering area (e.g., lobby, employee entrance, break, or lunch room). The kiosk will contain transportation information, such as Emergency Ride Home (ERH), transit schedules, bike maps, and 511 ride-matching. Information will be updated periodically by the designated Transportation Coordinator (TC).

Bicycle Parking – Long-Term (Class I) - Free Class I (long-term) covered and secure bicycle parking facilities could be provided on-site for bicycle commuters. This may also be provided as individual bike lockers or a secured and covered bike cage located indoors.

Bicycle Parking – Short-Term (Class II) - Free Class II (short-term) secure bicycle parking facilities could be provided on-site for bicycle commuters and visitors.

Tenant Performance and Lease Language – TDM Requirements - For all tenants, the applicant will draft lease language or side agreements that require the identification of a designated contact responsible for compliance and implementation of the TDM program.

Tenant/Employer Commute Program Training - As needed and applicable, the applicant or property management will provide individual tenants of the project with initial TDM (and commute) program training, commute program start-up assistance.

Employee Transportation Brochure - At the time of occupancy, all tenants and employees will be provided with an Employee Transportation Brochure regarding the Commute Program. This brochure will include (but not be limited to) information about carpool parking, transit opportunities, ride-matching services, bicycle routes, and emergency rides home.

[6] *Car Sharing: Where and How it Succeeds, TCRP Report 108*, Transportation Cooperative Research Program, Washington D.C., 2005.

5) MITIGATION

The following is a list of project impacts and proposed mitigation measures to address the transportation impacts of the project. Based on a detailed analysis of traffic operations with and without each of the proposed mitigations, implementation of the following mitigation measures could reduce some project impacts to a *less-than-significant* level. The remaining impacts would be *significant and unavoidable*.

Impact #1 Impacts to intersection operations - The project would contribute to LOS operations exceeding the established standards at the following seven intersections:

Wilbur Avenue at Bridgehead Road (Intersection #5)
Main Street at Bridgehead Road (Intersection #9)
Big Break Road at Main Street (Intersection #11)
Oakley Road at Live Oak Avenue (Intersection #13)
Main Street at Empire Avenue (Intersection #14)
Laurel Road at Empire Avenue (Intersection #19)
Gateway Drive at Empire Avenue (Intersection #24)

The addition of traffic from the proposed project would contribute to these seven intersections exceeding the established LOS standards or resulting in queuing impacts. With future planned improvements at Intersections #19 and #24 (a westbound dual left turn lane and installation of a traffic signal, respectively) the project's impacts would be reduced to less than significant. However, without implementation of the recommended mitigations below, the development of the proposed project would result in a potentially significant impact to the LOS and queuing at the intersections of Wilbur Avenue at Bridgehead Road, Main Street at Bridgehead Road, Big Break at Main Street, Oakley Road at Live Oak Avenue, and Main Street and Empire Avenue. Implementation of the following mitigation measures would reduce the impacts at these intersections to a less-than-significant level in all of the plus project scenarios.

Mitigation Measures

Prior to construction the project would mitigate the above-identified impacts by paying a proportionate share of the construction costs of the following improvement, subject to City approval. The intersection mitigations required for the project to meet the established LOS standards are:

MM 1 (a) Wilbur Avenue at Bridgehead Road – Installation of a four-way traffic signal with crosswalks.

MM 1 (b) *Main Street at Bridgehead Road/Neroly Road – 1) Installation of a dual eastbound left turn lane and a dual northbound left turn lane and 2) Implementation of signal coordination with the adjacent traffic signal at the SR 160 Eastbound Ramps.*

MM 1 (c) *Big Break Road at Main Street – 1) Widening of the southbound Big Break Road approach to the intersection to allow for an additional southbound right turn lane 2) Construction of a dual left turn lane on the eastbound Main Street approach to the intersection, and 3) Widening of the eastbound and westbound Main Street approaches to allow for three through lanes in each direction.*

MM 1 (d) *Oakley Road at Live Oak Avenue – Widening of the westbound Oakley Road approach to the intersection to allow for a separate right turn lane.*

MM 1 (e) *Main Street at Empire Avenue – Installation of a dual westbound left turn lane.*

Impact #2 Impacts to roadway segment operations - The project would contribute to LOS operations exceeding the established standards on the following roadway segment:

Bridgehead Road between the Planned River Oaks Crossing Entrance and the Main Street/Neroly Road Intersection

The addition of traffic from the proposed project would contribute to this roadway segment exceeding the established LOS standards. Without implementation of the recommended mitigation below, the development of the proposed project would result in a potentially significant impact to the LOS on Bridgehead Road. Implementation of the following mitigation measures would reduce the impact to a less-than-significant level in all of the plus project scenarios.

Mitigation Measures

Prior to construction the project would mitigate the above-identified impacts by paying a proportionate share of the construction costs of the following improvement, subject to City approval. The mitigation required for the project to meet the established LOS standards is:

MM 2 *<u>Bridgehead Road between the Planned River Oaks Crossing Entrance and the Main Street/Neroly Road Intersection</u> – Widening of this segment of Bridgehead Road from a two lane to a four lane cross-section.*

Impact #3 Impacts to freeway operations – The project would contribute to State Route 4 exceeding the established delay index standards during the AM peak hour.

The development of the proposed project would increase the total traffic during both AM and PM peak hours. For SR 4 the East County Action Plan specifies a maximum delay index of 2.5. As shown in Table 9 in Section 4.8 the proposed project would not significantly increase the delay index under existing or cumulative conditions. However, the proposed project would add traffic to State Route 4 in the westbound direction during the AM peak hour under cumulative conditions, which is forecast to exceed the County's established delay index standard of 2.5. Therefore, the proposed project would have a ***significant impact*** to freeway operations.

<u>Mitigation Measure</u>

Prior to construction the project would mitigate the above-identified impacts by paying the required traffic impact fees described below in Mitigation Measure 2, subject to City approval.

MM 3 *<u>Payment of the Regional Transportation Development Impact Mitigation Fee</u> – The project will pay the Regional Transportation Development Impact Mitigation Fee (the "RTDIM") to fund regional freeway system improvements including State Route 4 improvements. Because the project applicant and the City of Oakley do not control the funding, prioritization and/or construction of improvement projects, this impact would remain* ***significant and unavoidable.***

Impact #3 Impacts related to conflicts with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or potential decreases to the performance or safety of such facilities.

The project would not result in degradation of the level of service (or a significant increase in delay) on any roadway segments currently being utilized by bus transit in the area and would not increase ridership beyond existing capacity. As such, no significant impacts to bus transit are expected. In addition, the project would not significantly impact or change the design of any existing transportation facility or create any new safety problems in the area. This analysis is based on the fact that the project, as proposed, will have adequate pedestrian facilities that connect it to the surrounding pedestrian network. Therefore, based on the City's significance

criteria the project's impacts on alternative transportation would be considered less than significant and no mitigations would be required.

Mitigation Measure(s)
None required.

Impact #4 Demolition and construction activities associated with the proposed project would result in an increase in traffic to and from the site and could lead to unsafe conditions near the project site.

The increase in traffic as a result of demolition and construction activities associated with the proposed project has been quantified assuming a worst-case single phase construction period of 24 months.

Heavy Equipment

Approximately ten pieces of heavy equipment are estimated to be transported on and off the site each month throughout the demolition and construction of the proposed project. Heavy equipment transport to and from the site could cause traffic impacts in the vicinity of the project site during construction. However, each load would be required to obtain all necessary permits, which would include conditions. Prior to issuance of grading and building permits, the project applicant would be required to submit a Traffic Control Plan.

The requirements within the Traffic Control Plan include, but are not limited to, the following: truck drivers would be notified of and required to use the most direct route between the site and SR 4, as determined by the City Engineering Department; all site ingress and egress would occur only at the main driveways to the project site and construction activities may require installation of temporary (or ultimate) traffic signals as determined by the City Engineer; specifically designated travel routes for large vehicles would be monitored and controlled by flaggers for large construction vehicle ingress and egress; warning signs indicating frequent truck entry and exit would be posted on Wilbur Avenue; and any debris and mud on nearby streets caused by trucks would be monitored daily and may require instituting a street cleaning program. In addition, the ten loads of heavy equipment being hauled to and from the site each month would be short-term and temporary.

Employees

The weekday work is expected to begin around 7:00 AM and end around 4:00 PM. The construction worker arrival peak would occur between 6:30 AM and 7:30 AM, and the departure peak would occur between 4:00 PM and 5:00 PM. These peak hours are slightly before the citywide commute peaks. It should be noted that the number of trips generated during construction would not only be temporary, but

would also be substantially less than the proposed project at buildout. Based on past construction of similar projects, construction workers could require parking for up to 200 vehicles during the peak construction period. Additionally, deliveries, visits, and other activities may generate peak non-worker parking demand of 20 to 25 trucks and automobiles per day. Therefore, up to 225 vehicle parking spaces may be required during the peak construction period for the construction employees. Furthermore, the Traffic Control Plan requires construction employee parking be provided on the project site to eliminate conflicts with nearby residential areas. Because the construction of the project can be staggered so that employee parking demand is met by using on-site parking, the impacts of construction-related employee traffic and parking are considered less-than-significant.

Construction Material Import/Export

The project would also require removal of existing debris as well as the importation of construction material, including raw materials for the building pads, the buildings, the parking area, and landscaping. During the maximum peak construction period, the project could generate approximately 150 truck trips per day. Furthermore, under the provisions of the Traffic Control Plan, if importation and exportation of material becomes a traffic nuisance, then the City Engineer may limit the hours the activities can take place.

Traffic Control Plan

The Traffic Control Plan would indicate how parking for construction workers would be provided during construction and ensure a safe flow of traffic in the project area during construction. This analysis assumed construction of the entire project in one phase to identify the potential worst-case traffic effects. If the project is built in phases over time, the effects of each phase will be the same or less. Each phase will be subject to a Traffic Control Plan and oversight by the City Engineer. The last phase may require added worker parking measures, depending on the circumstances, as there will not be any remaining vacant land for parking. Therefore, the demolition and construction activities associated with the proposed project or its individual phases would not lead to noticeable congestion in the vicinity of the site or the perception of decreased traffic safety resulting in a ***less-than-significant*** impact.

Mitigation Measure(s)
None required.

Impact #5 Impacts related to site access and circulation.

The proposed project would have its main entrance on the eastern side of the intersection of Wilbur Avenue and Bridgehead Road. Two secondary access

points will also be provided on Bridgehead Road. One access would be located to the north of the Wilbur Avenue entrance and another would be located to the south. As discussed above, the proposed mitigation for the project's impacts at the main access intersection is the installation of a traffic signal. Based on a review of the proposed site plan it was determined that the site circulation should function well and would not cause any safety or operational problems. The project site design has been required to conform to City design standards and is not expected to create any significant impacts to pedestrians, bicyclists or traffic operations. Therefore, impacts related to site access and circulation to the proposed project would be ***less-than-significant*** with implementation of the following mitigation measure.

Mitigation Measure

MM 1 (a) Wilbur Avenue at Bridgehead Road – Installation of a four-way traffic signal with crosswalks.

Impact #6 Impacts regarding emergency vehicle access on and surrounding the proposed project site.

Sufficient emergency access is determined by factors such as number of access points, roadway width, and proximity to fire stations. The land use plan for the proposed project would include three entrances on Bridgehead Road. All lane widths within the project would meet the minimum width that can accommodate an emergency vehicle; therefore, the width of the internal roadways would be adequate. In addition, with the proposed mitigations the addition of traffic from project traffic would not result in any significant changes to emergency vehicle response times in the area. Therefore, development of the project is expected to have ***less-than-significant*** impacts regarding emergency vehicle access.

Mitigation Measure(s)
None required.

Re: Trip Generation Summary for the Revised Project Description for the Oakley Logistics Center

This letter summarizes the results of the latest trip generation forecasts for the Oakley Logistics Center. Based on the latest site plan we were provided (dated August 16, 2019) the project would now include an e-commerce fulfillment center with 117,217 square feet of building space.

Project Trip Generation

The proposed project would consist of construction of four warehouse buildings and one fulfillment center building with a total of 1,952,521 square feet of building space. The resulting trip generation calculations are shown in **Table 1**. They are based on the trip generation rates for a High-Cube Fulfillment Center Warehouse (ITE Land Use Code 155) and Warehousing (ITE Land Use Code 150) from the Institute of Transportation Engineer's (ITE) Trip Generation Manual, 10th Edition. Please note the directional distribution was not provided for the High-Cube Fulfillment Center Warehouse data so it was based on the distribution from the standard warehouse category. Extensive research was conducted to verify that the use of the ITE High-Cube Fulfillment Center Warehouse trip rates would provide a conservative assumption for the trip generation for the project. Attached is an article on fulfillment center trip generation from the July 2019 ITE Journal for your review. Please note the trip generation rates were generally found to be lower than the ITE trip generation rates, presumably due to the extensive automation with newer fulfillment centers and also fleet scheduling to avoid adjacent street peak hour congestion. The total trip generation in **Table 1** reflects all vehicle trips that would be counted at the project driveways, both inbound and outbound.

Please review these assumptions and let me know if you determine any adjustments or changes are appropriate. Don't hesitate to contact me if you need addional information.

Sincerely,

Stephen C. Abrams

Fulfillment Center Trip Generation

By Bala Rajappan, P.E., T.E., ENV SP (F), Lee Taubeneck, P.E., and Sushil Patil

A large commercial development, spanning 700 acres, within a city in western San Joaquin County, CA, USA was approved after completion of the Environmental Impact Report in 2013. The development adjoins a number of collector distributor roads, and is in close proximity to two Interstate freeways 580 and 205, both running east to west at this location. International Parkway, a major collector road—slated to be improved to a major arterial—runs north to south between the two interstate freeways. An environmental document proposed several improvements to International Parkway interchanges at I-205 and I-580. Two scoping documents were completed in 2016 by R&M Consulting Engineers Inc., and were approved by the California Department of Transportation (Caltrans) District 10 within four months to assist in the planning and funding of these improvements.

Consistent with Caltrans project development procedures, the city has embarked on preparation of the next level of approval documents for the interchanges. These documents require updated traffic forecasts for up to 20-years post-construction completion. Current scheduling calls for construction to begin in 2020 and end by the conclusion of 2022 for both interchange improvements. Consequently, traffic forecasts are necessary for the year 2042.

The business uses planned for this development at the time of approval of the environmental document included light industrial, general office, retail commercial, and a small percentage of high cube warehouses. However, over the lengthy period of environmental document preparation, review, and approval, the demand for high cube warehouses such as fulfillment centers had increased significantly. Consequently, after the approval of the environmental document and the specific plan, the very first set of buildings constructed and opened for use were fulfillment centers. The infrastructure construction to support this development such as roadways, water, sewer, electrical, etc. was rapidly completed based on business uses considered in the environmental document.

Initial Field Observations

As the first four buildings opened for business and were fully operational, driveway and intersection traffic observed were significantly lower traffic than anticipated. Three of these buildings were fulfillment centers, and the other was a parcel hub. Given the extraordinary demand for fulfillment centers, the next set of buildings designed and permitted were also all fulfillment centers. Consequently, there was an urgent need to reanalyze the trip generation characteristics of this entire development. An attempt was made to use trip rates from the *ITE Trip Generation Manual*, 10th Edition. The ITE edition, however, has only two points in the data set, 155—High Cube Warehouse, with big differences in rates between the two points. It seemed the authors had more data with the three that are already in operation, and a few more within the city in close proximity. The authors therefore decided to collect driveway and intersection traffic volume data to forecast trips for the remaining fulfillment centers.

The purpose of this paper is to present the results of trip generation characteristics of fulfillment centers that are in operation within this commercial development and some of those in close proximity to this area.

Fulfillment Center Development Phases

This development was divided into 17 Traffic Analysis Zones (TAZs). Each TAZ was assigned a unique three-digit number. Given the projected duration of subdivision buildout, it was appropriate to forecast traffic numbers for three separate time periods: existing, 2022, and 2042. The first period coincides with fulfillment centers which are in operation, about 2.8 million square feet (ft.) (260,128 square meters [m]). The second period, corresponds to completion of Interim Phase 2 construction with about 6 million square ft. (557,418 square m) of fulfillment centers. The third period corresponds to full build out of the development, with an additional 11.8 million square ft. (1,096,255 square m) of fulfillment centers. Figure 1 shows a collage of existing fulfillment centers layouts and their driveway movements.

The fulfillment centers were fully operational as of April 2018 and are shown in Figure 2. In addition, there is also one parcel hub in full operation.

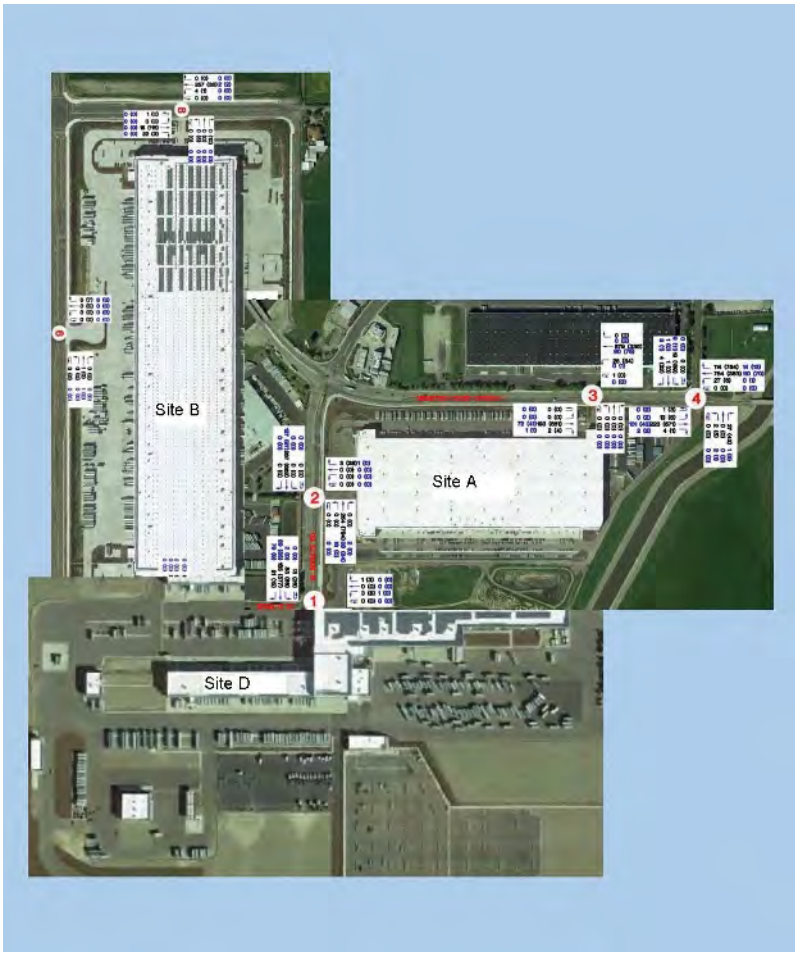

Figure 1. A collage of existing fulfillment centers layouts and their driveway movements.

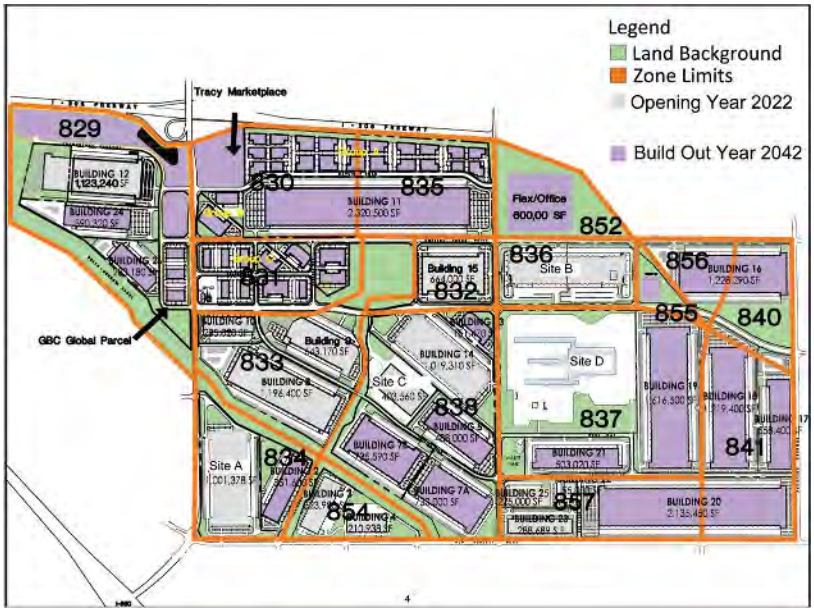

Figure 2. Build Out Year (2042) Building and Zone Map.

Traffic Count Data

Traffic volumes at operational intersections and driveways across the development were counted in June and December 2017, and April 2018. All counts included trucks. Counts were taken for morning and afternoon/evening 3-hour peak periods in 15-minute intervals. The AM peak period was between 5:00–8:00 a.m. and PM period was between 3:00–6:00 p.m.

Raw data were summarized in tabular form and intersection movements were then broken down by direction (through, left, and right) and peak hours (AM and PM). Peak of adjacent street intersections was determined by selecting four peak 15-minute intervals. The adjacent street intersection peak hours were between 7:00–8:00 a.m. in the morning, and 5:00–6:00 p.m. in the evening. Traffic volumes for all driveways for each building were summed for time period corresponding to adjacent street peak hour to arrive at total facility trips. Total trips for each building were then divided by facility area to arrive at trip generation rates per 1,000 square ft. (93 square m). The building area was obtained from the development construction plans.

Updated Fulfillment Center Trip Generation Rates

As of February 2017, two fulfillment centers and the parcel hub had been in operation for more than two years. The most recent tenant began operations as a third fulfillment center in February 2017, and has been in full capacity since the opening. Current peak-hour traffic volumes generated by buildings in operation are shown in Table 1.

Traffic counts at the three operational fulfillment centers were supplemented with two rounds of additional counts, and counts at similar facilities nearby. These additional data are shown in Table 2. It includes count data from two separate Amazon facilities.

In Table 2, the authors used the highest trip data for each peak from June and December 2017 and April 2018 counts for each location as the final selected data points to calculate the average trip rate and were able to estimate the generation rates for fulfillment centers corresponding to peak hour of adjacent street. The AM average is estimated at 0.13 trips per 1,000 square ft. (93 square m) and PM average of 0.09 trips per 1,000 square ft. (93 square m). These rates could represent a majority of newer fulfillment centers. The Table 2 averages exclude the Site I data.

Site I, an older facility located within the city but outside of this development, clearly seemed to be an outlier with much higher rates of 1.45 during the AM peak hour and 0.89 during the PM peak hour. The other sites were generating between 0.03 and 0.51 during the AM peak hour and between 0.01 and 0.24 during the PM peak hour. Upon further investigation, the authors determined that Site I is a sort facility (i.e., a fulfillment center that ships out smaller items and that requires extensive sorting, potentially manual). The rest of the Sites in Table 2 are in the non-sort category (i.e., fulfillment center that ships large box items with a higher automation level).

Although more research and data are needed to verify sort vs. non-sort category of fulfillment center trip generation characteristics, we could say that fulfillment centers in this development in general are generating much lower trips.

Comparison to ITE Rates

The lower end of rate range presented in the *ITE Trip Generation Manual,* 10th Edition, for land use 155 (High-Cube Fulfillment Center Warehouse) with 0.15 for AM and 0.27 for PM peak hour trip generation rates seem to represent fulfillment centers with characteristics closer to rates in Table 2 with average of 0.13 for AM and 0.09 for PM peak hours. The higher data point in the ITE data set of 0.84 for AM and 1.98 for PM peak hours seem closer to the sort Site 5 facility with rates of 1.45 and 0.89 for AM and PM peak hour, respectively.

The trip generation rates presented here require further research with data from fulfillment centers from various parts of the state and country. There are a few observations that can be made about the centers studied here.

The newer fulfillment centers utilize a significant amount of automation for efficiency and cost reduction. The automation reduces the number of workers and therefore trips during the peak hours.

The centers operate trucks and other commercial vehicles outside the AM and PM peak hours/periods. Fleet operations of this kind avoid delays due to local street as well as freeway/interchange traffic congestion.

Conclusion. Results from the study of fulfillment centers in the western portion of San Joaquin County closely support the significantly lower traffic volumes observed after completion of the first three. These trip generation rates were documented at 0.13 and 0.09 trips per 1,000 square ft. (93 square m) for AM and PM peak hours, respectively. These averages matched closer to

Table 1 – Traffic Volumes from Buildings in Operation (April 2018).

Avg. Trip rate	5,861,030	2640	(249)	0.36	1726	(199)	0.23
Average Trip Rate	4,750,001	**594**	**(118)**	**0.13**	**432**	**(77)**	**0.09**

Note: Average Trip Rate is calculated from highest trip data for each peak from June and December 2017 and April/May 20[19] counts (shown in bold).

1611

the low point of the two-point data set used in the (155 – High Cube Fulfillment Center Warehouse) *ITE Trip Generation Manual*, 10th Edition trip rates, at 0.15 and 0.27 for AM and PM peak hours, respectively.

The sort facility was clearly an outlier with generation of 1.45 and 0.89 trips per 1,000 square ft. (93 square m) for AM and PM peak hours, respectively. This data point is closer to the higher point of the two-point data set used in the (155 – High Cube Fulfillment Center Warehouse) *ITE Trip Generation Manual*, 10th Edition trip rates, at 0.84 for AM and 1.98 for PM peak hours.

Other observations made include extensive automation with newer fulfillment centers and fleet scheduling to avoid adjacent street peak hour congestion. With time, additional automation including autonomous fleets and flexible employee work shifts could continue to reduce trips during adjacent street peak hour congestion. **itej**

INDUSTRY NEWS

NACTO Releases Best Practices for Next-Generation Street Intersection Design

The National Association of City Transportation Officials (NACTO) has released best practices for next-generation intersection designs that save lives and make walking and biking more comfortable for people of all ages and abilities. Intersections are the place where the most vehicle-bike conflicts occur. In 2017, 43 percent of urban bicyclist fatalities occurred at intersections. On many streets, large turn radii and wide lanes encourage drivers to make sweeping, fast turns. These design decisions increase exposure and risk for people walking and biking, reduce the safety and comfort of the bike network, and discourage cycling. As cities work to make streets safer and more welcoming for bicyclists of all ages and abilities, intersection design is key. The new guidance, *Don't Give Up at the Intersection*, expands the groundbreaking NACTO *Urban Bikeway Design Guide* with new diagrams detailing intersection design treatments and signal strategies that reduce vehicle-bike and vehicle-pedestrian conflicts. *Don't Give Up at the Intersection* is available for free online at www.nacto.org/saferintersections. **itej**

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

RE: Logistics Center – Development Agreement (DA 01-18), Rezone (RZ 08-18), Tentative Map (05-18) and Design Review (DR 12-18)

The above referenced develop is exclusively comprised of the land previously referred to as the DuPont campus. In the preparation of Diablo Water District's (District) 2015 Urban Water Management Plan (UWMP), the District including demands for a future heavy industrial water user at this location.

The 2015 UWMP included up to 1.1 million gallons per day of water consumption at the former DuPont location. Since 2015, no long-term, significant supply issues have arisen that would impact the District's ability to serve this location the estimate water supply volume in the District's 2015 UWMP.

Estimated water consumption for the proposed development is significantly lower than the demands estimated in 2015, only further solidifying the District's ability to serve this project.

Thank you,

Dan Muelrath

Appendix I

Memorandum

To:	Jason Vogan
From:	Chad Coleman Megan Shaw
Date:	September 24, 2019
Project:	Oakley Logistics Center
Subject:	Lift Station Recommendations

NorthPoint Development is developing the Oakley Logistic Center (OLC) project in Oakley, CA: a proposed industrial-zoned development. This memorandum is a summary of the engineering used to evaluate options to convey wastewater from the OLC into the existing gravity sewer collection system on Highway 4 operated by Ironhouse Sanitary District (ISD). Four options have been considered:

1. Pump into the Existing Lauritzen Pump Station (PS).
2. Pump from the Oakley Logistics Center to the existing Lauritzen Force Main Pipeline on Bridgehead Road.
3. Pump from the Oakley Logistics Center directly to the Bridgehead Pump Station using a new OLC Force Main Pipeline.
4. Pump from the Oakley Logistics Center directly to the Bridgehead Pump Station using a new OLC Force Main Pipeline. Abandon the Lauritzen Pump Station and force main to Bridgehead Pump Station, and re-route the flows into new OLC Pump Station.

Design Flow Assumptions

The options have been evaluated assuming the following design flows for the OLC, as calculated below in Table 1.

Table 1 – Anticipated Design Flows

Unit Flow (gallons/acre) [a]	1,200
Total Development Area (acres) [b]	150
ADWF (gpd) [c]	180,000
Peaking Factor [d]	3.5
GWI [d]	18 gpm
Peak Flow (gpm) =	455

COLEMAN ENGINEERING

[a] District assigned Unit Flow (gpd per acre) to parcels with the Light Industrial designation, approved by Vivian Housen in e-mail to Jason Vogan, dated 9/10/19
[b] Per Notice of Preparation, approved by Vivian Housen in e-email to Jason Vogan, dated 9/10/19
[c] Approved by Vivian Housen in e-mail to Jason Vogan, dated 9/10/19
[d] Per District Standard Design Criteria, 4-01, B-C.

Based on Improvement Plans provided by ISD staff, existing force main pipelines are all 4-inches in diameter and are in good condition and would not need to be replaced, subject to adequate capacity. We also assumed that all force main pipelines should have a velocity between 3 and 7 feet per second.

New OLC Pump Station and Force Main Assumptions

As documented above, it is calculated that the new OLC Pump Station will be required to convey 455 gpm. The head conditions are unknown but will be determined once the following parameters are established: site grading, OLC Pump Station location, OLC Force Main profile, OLC Force Main discharge location and elevation.

Details about the OLC Pump Station are not critical to this analysis since the recommended pump station will be essentially identical in all four options considered in this analysis. Based on recently completed wastewater pump stations in the ISD service area, it is estimated that this facility will cost approximately $900,000.

The OLC Force Main is calculated to be 6-inches in diameter. At the calculated flow rate of 455 gpm, this pipeline size will result in a pipeline velocity of 5.2 fps. The OLC Pump Station location is not yet determined but we have assumed a location for the purposes of this evaluation, as shown on the four attached figures. The length of the OLC Force Main in each option is assumed based on the assumed OLC Pump Station location. Therefore, the OLC Force Main will be a consideration in selection of the preferred option in this analysis.

Options Analysis

Option 1
For Option 1, flows from the OLC will be pumped directly to the existing Lauritzen PS. This option will affect all of the components downstream, including:

- OLC Pump Station
- Lauritzen Pump Station
- Lauritzen Force Main Pipeline from the Lauritzen Pump Station to the Bridgehead Pump Station
- Bridgehead Pump Station
- Bridgehead Force Main Pipeline to the gravity sewer on Highway 4

Per an email from Vivian Housen to Jason Vogan on December 13, 2018, the Lauritzen Pump Station is currently at full capacity during wet weather. Because of this, the additional OLC sewer flow that would be routed to the Lauritzen Pump Station under Option 1 would require the pump station to be upsized. From discussion with Louis Solano from ISD, the

Lauritzen Pump Station is in good condition and does not need to be repaired but will need a new epoxy coating in the wet well if it is to be used to serve the OLC.

The Lauritzen Force Main Pipeline will also require replacement. Average and peak flows from the Lauritzen Pump Station were not provided by ISD. The flows were approximated using dimensions of the existing Lauritzen Pump Station that were provided. The Lauritzen Pump Station wet well is approximately 8-feet in diameter with 3-feet of active storage volume used for pumping. Using SCADA data and records of the amount of volume pumped, the approximate average flow pumped by the Bridgehead Pump Station is calculated to be 1 gpm.

The peak flow calculated from OLC will result in a pipeline velocity of 11.6 fps in the existing 4-inch Lauritzen Force Main. Before existing Lauritzen flow is added to this new OLC flow, the capacity of the existing force main is be exceeded. Therefore, we have assumed that complete replacement of the Lauritzen Force Main with a new 6-inch diameter pipe, with a pipeline velocity of 5.2 fps, will be required for Option 1.

Average and peak flows from the Bridgehead Pump Station were not provided by ISD. The flows were approximated using dimensions of the existing Bridgehead Pump Station that were provided. The Bridgehead Pump Station wet well is approximately 8-feet in diameter with 2-feet of active storage volume used for pumping. Using SCADA data and records of the amount of volume pumped, the approximate average flow pumped by the Bridgehead Pump Station is calculated to be 180 gpm.

Increasing the flow coming into the Bridgehead Pump Station (from OLC) without increasing the storage volume will require the pumps to operate more frequently. The new estimated flow into the Bridgehead Pump Station will be the sum of the current 180 gpm and the 455 gpm that will be added from the OLC. The pump station will be required to pump at least 635 gpm (180 gpm + 455 gpm) in order convey the anticipated peak flows from the upstream sewer sheds.

For the purpose of calculating the required pump design point, dimensions of the existing Bridgehead wet well are shown below in Table 2.

Table 2 – Bridgehead Pump Station Wet Well Elevations

	Elevation (ft)
Rim Elevation [a]	23.5
Inlet Gravity Sewer Invert [a]	12.3
Wet Well Floor Elevation [a]	9.0
Total Depth	14.5
Force Main high point elevation [a]	27.0

[a] From Bridgehead Road Force Main & Gravity Sewer Project No. C-92 Plans

Using the information from Table 2, it appears that the static pumping head is approximately 18-feet. In addition, there are friction losses of approximately 10-feet that must also be considered, bringing the total dynamic head (TDH) requirement to approximately 28-feet.

The current pumps are the Flygt NP 3085 MT 3~ Adaptive 462. The existing pump is unable to pump the required 635 gpm with the added flow from the OLC. Because of this, it will be necessary for the Bridgehead Pump Station pumps to be upgraded.

From discussions with Louis Solano from ISD, the Bridgehead Pump Station is in good condition and does not need to be repaired, but it will need a new epoxy coating in the wet well if it is to be used to serve additional areas.

The Bridgehead Force Main downstream of the Bridgehead Pump Station is 4-inches in diameter. Considering the additional flows shown in Table 1, and this 4-inch dia. force main, the velocity will be too high to accommodate the flow to be added. Because of this, the existing Bridgehead Force Main cannot be used to serve the OLC development. For Option 1 to work, the Bridgehead Force Main will have to be replaced with a larger pipeline. From the velocities shown below in Table 3, the recommended size for the new Bridgehead Force Main pipeline from the Bridgehead Pump Station to the gravity sewer is 8-inches.

Table 3 – Bridgehead Force Main Sizing

Alternative Force Main Pipe Diameter	Bridgehead Force Main Velocity (fps)
4-inch	16.2
6-inch	7.2
8-inch	4.1
10-inch	2.6

All Option 1 improvements are depicted on the attached Option 1 Figure.

Option 2

Option 2 requires construction of a new OLC Pump Station and pumping the anticipated flows from the OLC to the existing Lauritzen Force Main on Bridgehead Road. Because of the increased flow into the Lauritzen Force Main, upgrade of the Lauritzen Pump Station will be required. This upgrade will include new pumps that will allow for shared use of the Lauritzen Force Main by the existing Lauritzen Pump Station and the new OLC Pump Station. Wet well lining is not assumed to be required for Option 2 because no new flow is planned to be introduced into the Lauritzen Pump Station.

At the point of intersection of the existing Lauritzen Force Main and the new OLC Force Main, the flows will be increased from the current flow through the 4-inch force main. Given the flows anticipated for the OLC in Table 1, the existing 4-inch Lauritzen Force Main would result in a velocity that would exceed the standard of 7 feet per second. In order to avoid

exceeding this limit, the force main pipe from the intersection of the existing Lauritzen Force Main and the new OLC Force Main would need to be upsized, as it was for the entire length in Option 1. 6-inch diameter pipe has been assumed.

Option 2 will require the same improvements to the Bridgehead Pump Station and Force Main as in Option 1. This includes replacement of the pumps, new wet well lining, as well as an upsized Bridgehead Force Main.

All Option 2 improvements are depicted on the attached Option 2 Figure.

Option 3

Option 3 assumes that new sewer flow from the OLC will be pumped into a new 6-inch OLC Force Main pipeline that extends from the new OLC Pump Station all the way to the Bridgehead Pump Station. It is assumed that the new OLC Force Main will parallel the existing Lauritzen Force Main in Bridgehead Road. It is also assumed that Option 3 will have no effect on the existing Lauritzen Pump Station or Force Main and so no improvements are assumed for the Lauritzen system in Option 3.

Option 3 will require the same improvements to the Bridgehead Pump Station and Force Main as in Options 1 and 2. This includes replacement of the pumps, new wet well lining, as well as an upsized Bridgehead Force Main.

All Option 3 improvements are depicted on the attached Option 3 Figure.

Option 4

Option 4 assumes that the Lauritzen Pump Station will be converted into a manhole, and the existing force mains from the Lauritzen Pump Station to the existing Bridgehead Pump Station will be abandoned. The flow from the existing Lauritzen Pump Station will be routed to the OLC sewer system, and to the OLC Pump Station.

ISD has confirmed that there are abandoned laterals along the force main between Lauritzen Pump Station and the Bridgehead Pump Station, which will not affect the abandonment of the Lauritzen Force Main. ISD has not confirmed if there are any laterals along the force main that are still in use. In the event that there is a lateral between Lauritzen and Bridgehead Pump Stations that is still in use, the Lauritzen Force Main would only be abandoned to the point of the lateral. Drawings provided by ISD show a connecting pipe to the Lauritzen Force Main south of the intersection of Lauritzen Road and Bridgehead Road. This pipe is aligned to the west side so that it may serve the Caltrans toll station however that possibility has not been confirmed by ISD.

Converting Lauritzen Pump Station into a manhole would include the following:

- Removing the pumps, guide rails, and piping inside of the wet well
- Removing the electrical components of the pump station
- Grouting the cores for the electrical conduits
- Installing a blind flange at the end of the abandoned force main

- Coring a new hole to provide the connection to the new OLC sewer system
- Installing drop manhole hardware

Option 4 will require the same improvements to the Bridgehead Pump Station and Force Main as in Options 1, 2 and 3. This includes replacement of the pumps, new wet well lining, as well as an upsized Bridgehead Force Main.

All Option 4 improvements are depicted on the attached Option 4 Figure.

Summary of Options

The following summary includes items specific to each option.

Option 1

Pump into the existing Lauritzen Pump Station. This would require the following modifications:

- OLC Pump Station
- Lauritzen Pump Station upgrades
- A new Lauritzen Force Main
- Bridgehead Pump Station upgrades
- Replacing the existing 4-inch dia. Bridgehead Force Main with a new 8-inch pipeline

Option 2

Pump into the existing Lauritzen Force Main between the Lauritzen and Bridgehead Pump Stations on Bridgehead Road. This would require the following changes:

- OLC Pump Station
- Lauritzen Pump Station upgrade
- A new OLC Force Main from the intersection of Bridgehead Road and Wilber Avenue to the Bridgehead Pump Station
- Bridgehead Pump Station upgrades
- Replacing the existing 4-inch dia. Bridgehead Force Main with a new 8-inch pipeline

Option 3

Build a new force main in the Wilbur Ave. extension, then to Bridgehead Road and south to the existing gravity pipe upstream of the Bridgehead Pump Station. This would require the following modifications:

- OLC Pump Station
- A new OLC Force Main to the existing Bridgehead Pump Station
- Bridgehead Pump Station upgrades
- Replacing the existing 4-inch dia. Bridgehead Force Main with a new 8-inch pipeline

Option 4

Abandon the Lauritzen Pump Station and force main to Bridgehead Pump Station, and re-routing the flows into a new OLC Pump Station which will pump into the existing Bridgehead Pump Station with a new Force Main Pipeline on Bridgehead Road. This would require the following modifications:

- OLC Pump Station

- A new OLC Force Main to the existing Bridgehead Pump Station
- Bridgehead Pump Station upgrades
- Replacing the existing 4-inch dia. Bridgehead Force Main with a new 8-inch pipeline
- Converting the existing Lauritzen Pump Station into a manhole
- Abandoning existing force main between Lauritzen Pump Station and Bridgehead Pump Station
- A new gravity fed sewer from existing Lauritzen Pump Station into OLC Sewer System

Conceptual Level Costs and Recommendations

Table 4 below is a summary of the conceptual level costs of the three options.

Table 4 – Conceptual Cost Options

Option	Conceptual Cost
1. Connect to Lauritzen Pump Station	$3,086,000
2. Connect to the existing Lauritzen Force Main	$2,448,000
3. Connect to the Bridgehead Pump Station	$2,382,000
4. Replace Lauritzen Pump Station with OLC Pump Station	$2,496,000

Per discussion with Vivian Housen on 7/18/19 the Ironhouse Sanitary District would prefer to not have additional lift stations added. Because of this, Option 4 is the most favorable option to ISD.

Based on the conceptual level cost estimate, and input from ISD, it is recommended that Option 4 be pursued. Options 1 and 2 offer no advantages and only increased costs required to upgrade and improve existing Lauritzen facilities that do not require modifications in Option 3. While Option 3 has the lowest cost, it will add an additional lift station and will not be accepted by ISD.

It is recommended that environmental impacts be evaluated for Option 4.
