AGENDA
Oakley City Council

Tuesday, December 17, 2019
6:30 PM
Oakley Council Chambers located at 3231 Main Street, Oakley, California 94561

MISSION STATEMENT: The City of Oakley exists to build and enhance a quality community and to serve the public in a friendly, efficient, responsive manner.

VISION STATEMENT: The City of Oakley will be recognized as a model of civic participation and a vibrant Delta community where families live, work, play, shop and visit.

Agendas are posted in Oakley at Oakley City Hall-3231 Main Street, outside the gym at Delta Vista Middle School-4901 Frank Hengel Way and outside the Library at Freedom High School-1050 Neroly Road; agendas are also posted on the City's Internet Website www.ci.oakley.ca.us.

A complete packet of information containing staff reports and exhibits related to each item is available for public review prior to an Oakley City Council and/or City Council Acting as the Successor Agency to the Oakley Redevelopment Agency/Oakley Public Financing Authority meeting at Oakley City Hall, 3231 Main Street, Oakley, CA 94561. Any writings or documents provided to a majority of the Oakley City Council, Oakley City Council Acting as the Successor Agency to the Oakley Redevelopment Agency or Oakley Public Financing Authority regarding any item on this agenda will be made available for public inspection, during regular business hours, at the front counter in the Main Lobby of the Oakley City Hall located at 3231 Main Street, Oakley, CA 94561.

Agendas may be picked up at the Oakley City Hall located at 3231 Main Street, Oakley, CA 94561 for no charge. To request information regarding placement on the City's agenda e-mail distribution list, please contact us at (925) 625-7000.

We provide social media options to stay connected to City Hall through Facebook, Twitter, Next Door and Instagram. Other opportunities to connect with City Hall include Peak Democracy, Oakley OnDemand and Constant Contacts. Please contact us at (925) 625-7000 for additional information or visit our website at www.oakleyinfo.com

If you have a physically challenging condition and require special accommodations, please call the City Clerk's office at (925) 625-7013.

Please keep cell phones/electronic devices turned off during the meeting. Please be advised that City Council meetings are video recorded and attendees may appear on video.

1. Call to Order and Roll Call

2. Pledge of Allegiance

2.1 Pledge of Allegiance to the Flag (Mayor Kevin Romick)

3. Public Comment

4. Consent Calendar

5. Public Hearing

5.1 Oakley Logistics Center - An application requesting 1) Certification of the Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations; 2) Adoption of the Mitigation Monitoring and Reporting Program; and approval of 3) a General Plan Amendment (GPA 04-18) to amend the land use designation of the 143.3-acre project site from Light Industrial (LI) /Business Park (BP) /Utility Energy (UE) to Light Industrial (LI) with the remainder of the subject property being Delta Recreation (DR), and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan; 4) a Rezone (RZ 08-18) to amend the zoning designation of the 375.7-acre subject property from Specific Plan (SP-3) to Planned Unit Development (P-1); 5) a Vesting Tentative Map (TM 05-18) to create eight parcels within the 375.7-acre subject property; 6) Design Review (DR 12-18), including the Final Development Plan, for the project's design, including site plans, architectural elevations, conceptual landscape plans, and other physical development; and 7) Development Agreement (DA 01-18) for the proposed development between the City of Oakley and the project applicant. The project site is located at 6000 Bridgehead Road (APN's: 037-020-008, -009, -010, and -014 through -022). (Joshua McMurray, Community Development Director)
Suggested Action: Staff recommends the City Council approve the Oakley Logistic Center project with the following actions:

1) Certify the Oakley Logistics Center Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations and adopt the

Mitigation Monitoring and Reporting Program 2) Adopt a Resolution approving the General Plan Amendment to amend the land use designation of the 143.3-acre project site from Light Industrial (LI) /Business Park (BP) /Utility Energy (UE) to Light Industrial (LI) with the remainder of the subject property being Delta Recreation (DR), and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan, as conditioned 3) Waive the first reading and introduce an Ordinance approving the Rezone to amend the zoning designation of the 375.7-acre subject property from Specific Plan (SP-3) to Planned Unit Development (P-1), as conditioned 4) Adopt a resolution approving the Vesting Tentative Map and Design Review, as conditioned 5) Waive the first reading and introduce an ordinance approving the development agreement.

OAKLEY
CALIFORNIA

STAFF REPORT

DATE: December 17, 2019

TO: Bryan Montgomery, City Manager *Approved and Forwarded to the City Council*

FROM: Joshua McMurray, Community Development Director

SUBJECT: **Oakley Logistics Center - An application requesting 1) Certification of the Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations; 2) Adoption of the Mitigation Monitoring and Reporting Program; and approval of 3) a General Plan Amendment (GPA 04-18) to amend the land use designation of the 143.3-acre project site from Light Industrial (LI) /Business Park (BP) /Utility Energy (UE) to Light Industrial (LI) with the remainder of the subject property being Delta Recreation (DR), and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan; 4) a Rezone (RZ 08-18) to amend the zoning designation of the 375.7-acre subject property from Specific Plan (SP-3) to Planned Unit Development (P-1); 5) a Vesting Tentative Map (TM 05-18) to create eight parcels within the 375.7-acre subject property; 6) Design Review (DR 12-18), including the Final Development Plan, for the project's design, including site plans, architectural elevations, conceptual landscape plans, and other physical development; and 7) Development Agreement (DA 01-18) for the proposed development between the City of Oakley and the project applicant. The project site is located at 6000 Bridgehead Road (APN's: 037-020-008, -009, -010, and -014 through -022).**

Summary

This is an application by NP Oakley, LLC. ("Applicant") requesting 1) Certification of the Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations; 2) Adoption of the Mitigation Monitoring and Reporting Program; and approval of 3) a General Plan Amendment (GPA 04-18) to amend the land use designation of the 143.3-acre project site from Light Industrial (LI) /Business Park (BP) /Utility Energy (UE) to Light Industrial (LI) with the remainder of the subject property being Delta Recreation (DR), and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan; 4) a Rezone (RZ 08-18) to amend the zoning designation of the 375.7-acre

subject property from Specific Plan (SP-3) to Planned Unit Development (P-1); 5) a Vesting Tentative Map (TM 05-18) to create eight parcels within the 375.7-acre subject property; 6) Design Review (DR 12-18), including the Final Development Plan, for the project's design, including site plans, architectural elevations, conceptual landscape plans, and other physical development; and 7) Development Agreement (DA 01-18) for the proposed development between the City of Oakley and the project applicant ("Project"). The project site is located at 6000 Bridgehead Road (APN's: 037-020-008, -009, -010, and -014 through -022).

Staff recommends the City Council approve the Oakley Logistic Center project with the following actions:

- Certify the Oakley Logistics Center Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations and adopt the Mitigation Monitoring and Reporting Program; and

- Adopt a Resolution approving the General Plan Amendment to amend the land use designation of the 143.3-acre project site from Light Industrial (LI) /Business Park (BP) /Utility Energy (UE) to Light Industrial (LI) with the remainder of the subject property being Delta Recreation (DR), and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan, as conditioned; and

- Waive the first reading and introduce an Ordinance approving the Rezone to amend the zoning designation of the 375.7-acre subject property from Specific Plan (SP-3) to Planned Unit Development (P-1), as conditioned; and

- Adopt a resolution approving the Vesting Tentative Map and Design Review, as conditioned; and

- Waive the first reading and introduce an ordinance approving the development agreement.

Existing General Plan and Zoning

General Plan – The following are excerpts from the Oakley 2020 General Plan:

- Existing:
  - *(BP) Business Park* - The Business Park designation is intended to provide space for office uses in a larger campus-like setting. Research and development, corporate offices, professional and administrative offices, and select light industrial uses are encouraged, though heavy industrial uses are strictly prohibited. Development in this designation should be characterized by large-

scale, attractive, park-like settings with common parking and consistent architectural themes. Business Parks should be comprehensively designed with a significant emphasis on aesthetics. Complimentary retail and commercial uses may be allowed only as secondary uses in a larger office development.

- *(LI) Light Industrial* - The Light Industrial designation allows for uses such as processing, packaging, machinery, repair, fabricating, distribution, warehousing and storage, research and development, and similar uses which emit limited amounts of smoke, noise, light, or pollutants. These uses should, when possible, be combined in development projects that incorporate various uses to minimize travel and transport for goods and services related to and required to support the industrial use. This approach is also designed to help reduce regional commuter traffic by providing employment opportunities for residents of Oakley within the City Limits.

- *(UE) Utility Energy* - The Utility Energy designation allows for power plant uses involved in the clean production of electricity utilizing the best available combustion turbine technology. The structures associated with this land use designation shall be aesthetically designed, including landscape buffers, and produce no significant adverse affects, including excess noise, dust, and glare on surrounding land uses.

- (DR) Delta Recreation - This land use designation encompasses the lowlands of the San Joaquin Delta along the City's northern edge. Most of the land designated Delta Recreation is currently within the 100-year flood plain as mapped by FEMA, which means the area is subject to periodic flooding. Due to the proximity of the Delta, these lands have substantial recreational value and offer important opportunities for public access to the Oakley waterfront, including parklands and trails offering public access. Agriculture and wildlife habitat are also considered appropriate uses of these areas. Additional uses that may, at the City's discretion, be allowed within this designation include but are not limited to marinas, shooting ranges, duck and other hunting clubs, campgrounds, golf courses and other outdoor recreation complexes.

  Conditional uses allowed in the Delta Recreation land use designation shall be limited to those low- to medium-intensity establishments that do not rely on urban levels of service or infrastructure, and which will not draw large concentrations of people to flood-prone areas. Specific regulations for development within the Delta Recreation designation are provided within the Goals, Policies and Programs section of this Element.

- Proposed:
    - *(LI) Light Industrial* - The Light Industrial designation allows for uses such as processing, packaging, machinery, repair, fabricating, distribution, warehousing and storage, research and development, and similar uses which emit limited amounts of smoke, noise, light, or pollutants. These uses should, when possible, be combined in development projects that incorporate various uses to minimize travel and transport for goods and services related to and required to support the industrial use. This approach is also designed to help reduce regional commuter traffic by providing employment opportunities for residents of Oakley within the City Limits.

    - The remainder of the subject property will be designated as Delta Recreation (DR).

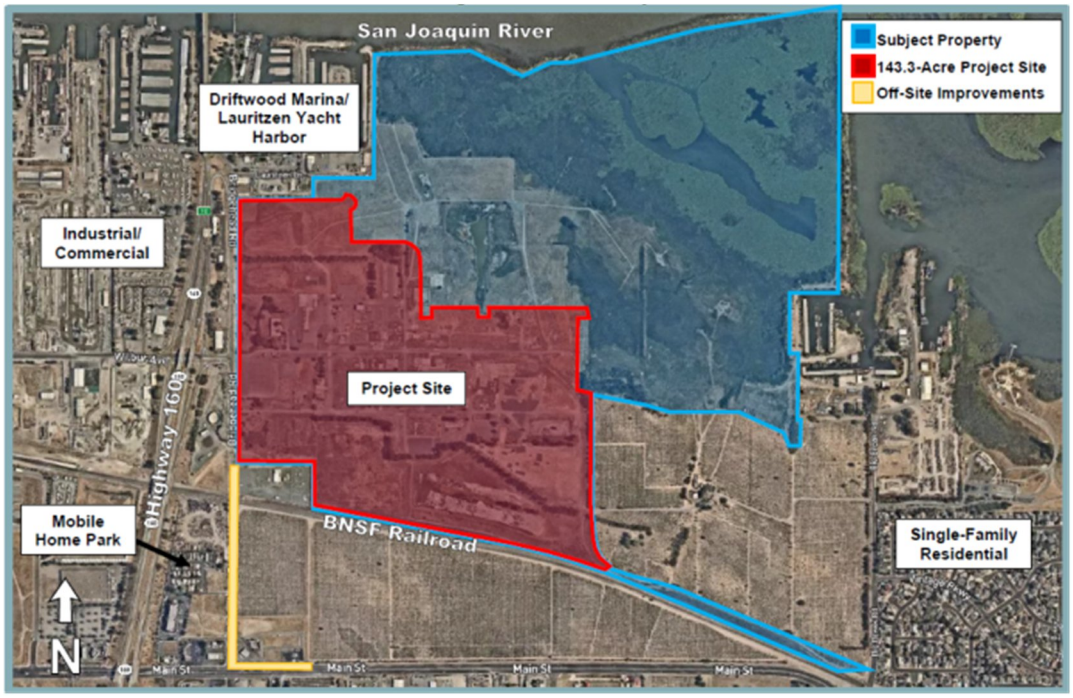
Zoning

- Existing: The existing zoning on the property is Specific Plan (SP-3). This Specific Plan designation was applied to the property as a placeholder that would have allowed for the development of a Specific Plan on the property. Several years back, the City and then owner of the property DuPont were working towards developing a Specific Plan. That plan was never fully developed or adopted and thus this current zoning designation is simply a placeholder that doesn't have any accompanying development standards or use regulations. The proposed project would clean this up.

- Proposed: Planned Unit Development (P-1) District – P-1 District allows for project specific development regulations, including minimum lot sizes, setbacks, and uses, as specified in OMC section 9.1.1002.

Existing Conditions and Surrounding Land Uses

The subject property consists of approximately 375.7 acres located in the northwest portion of the City of Oakley, adjacent to State Route (SR) 160, on Bridgehead Road, north of Main Street and the Burlington Northern Santa Fe (BNSF) railroad right-of-way. The subject property is situated along the southern bank of the San Joaquin River. The area immediately to the west of the subject property and south of Wilbur Avenue, is located within the City of Antioch city limits. Figure 1 below shows a street view of the subject property from the intersection of Wilber Avenue and Bridgehead Road.



The subject property includes 12 existing parcels, identified as Assessor's Parcel Numbers (APNs) 037-020-008, -009, -010, and -014 through -022. While the entire subject property is approximately 375.7 acres, development of the logistics center would only occur on approximately 143.3 acres within the southwestern portion of the subject property. The 143.3-acre development area is hereinafter referred to as the

project site. The remaining 232.4 acres of the subject property are hereinafter referred to as the remainder area, and would remain natural, less some potential soil borrowing on areas that are both immediately adjacent to the 143.3-acre project site and outside of any wetland or marsh areas. Figure 2 on the following page shows an aerial of the subject property.

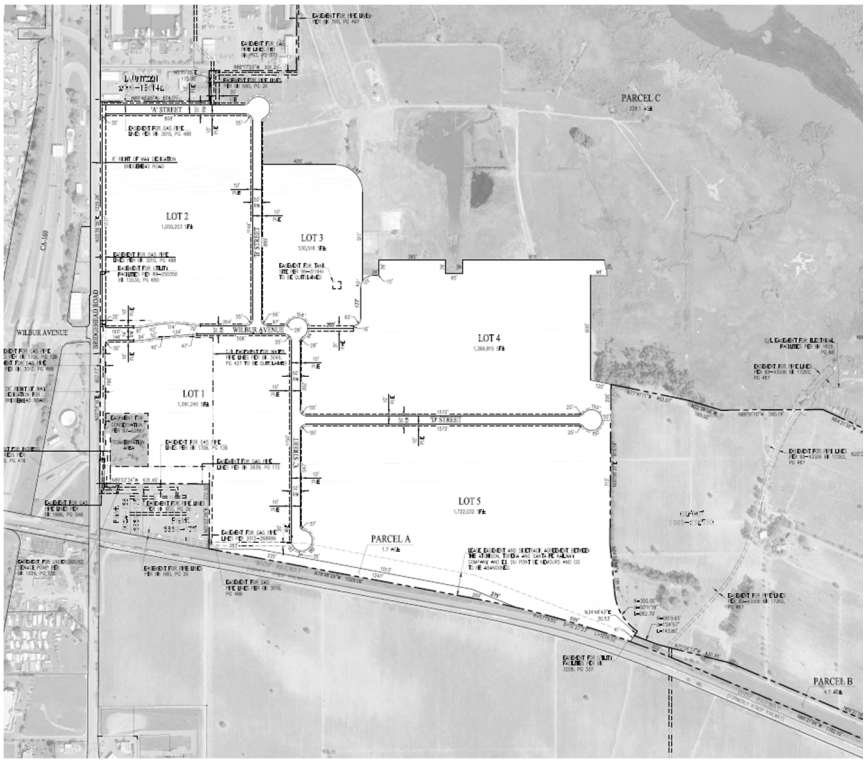
Figure 1. Street View of Project Site from the intersection of Wilber Avenue and Bridgehead Road

Figure 2. Aerial of Subject Property and Adjacent Properties

Project Description

Proposed General Plan Amendment

The proposed General Plan land use designation amendment is to change the area within the project site from *(BP) Business Park*, *(LI) Light Industrial* and *(UE) Utility Energy* to *(LI) Light Industrial*. As stated in the Oakley 2020 General Plan, "The Light Industrial designation allows for uses such as processing, packaging, machinery, repair, fabricating, distribution, warehousing and storage, research and development, and similar uses which emit limited amounts of smoke, noise, light, or pollutants. These uses should, when possible, be combined in development projects that incorporate various uses to minimize travel and transport for goods and services related to and required to support the industrial use. This approach is also designed to help reduce regional commuter traffic by providing employment opportunities for residents of Oakley within the City Limits." In order to establish the proposed project, the applicable land use designations would need to be amended to an industrial designation, such as the LI designation.



Proposed Rezoning

Amending the applicable land use designation to LI would allow for a rezoning application to change the applicable zoning district, but only to one of the zoning districts found to be compatible with LI, which include General Commercial (C) District, Light Industrial (LI) District, or Planned Unit Development (P-1) District. The P-1 District allows for any land uses permitted by an approved final development plan which are in harmony with each other, serve to fulfill the function of the planned unit development, and are consistent with the General Plan. The applicant has proposed the Planned Unit Development (P-1) District, which in this case would allow for the proposed project.

Proposed Vesting Tentative Map

The project proposal includes a Vesting Tentative Map to subdivide to create eight parcels within the 375.7-acre subject property. The subdivision includes the extension of Wilbur Avenue and 4 new streets that provide access to all of the parcels. The Vesting Tentative Map Exhibit is depicted as Figure 3 on the next page:

Figure 3. Vesting Tentative Map Exhibit

Proposed Design Review

The Design Review Ordinance has different levels of Design Review procedures for review and approval of a Design Review Permit. Oakley Municipal Code section 9.1.1604(d)(1)(a) requires that an application for any structure that is above ground or alters the existing grade in any commercial, industrial or public and semi-public zoning district, including plans to modify the facade or color of a structure significantly be referred to the Planning Commission for review and approval as a public hearing item.[1]. The proposed new development fits the criteria above and requires Design Review. The proposed Design Review covers all of the physical development of the project, such as house floor plans and elevations, lot siting, colors and materials, landscaping, and walls/fencing.

Proposed Development Agreement

The application includes a Development Agreement between the City of Oakley and the project applicant. Chapter 3 of Title 9 of the Oakley Municipal Code outlines the public hearing notification and approval process for Development Agreements.

[1] City Council acts as the Planning Commission per Ordinance No. 06-09

Analysis

General Plan Amendment

The City of Oakley 2020 General Plan designates the entire subject property as Light Industrial (LI), Business Park (BP), Utility Energy (UE) and Delta Recreation (DR). The area proposed to be developed is designated Light Industrial, Business Park and Utility Energy. Program 5.1.L in the Economic Development Element of the General Plan targets the Project site for economic development and seeks to develop the area with business park and/or light industrial uses. This Program states that development of this property may be pursued through a comprehensive business park master plan or Planned Unit Development zone.

In order to implement the economic development goal in the General Plan with the Project, the applicant seeks to amend the General Plan in two areas. First, the applicant seeks to remove the land use designations of "Utility Energy" and "Business Park" that exist on a portion of the site and replace them with "Light Industrial." A portion of the site is already designated Light Industrial. This change will allow the entire developable area of the site to have the same designation of "Light Industrial." The remainder of the site will remain "Delta Recreation" and will not be developed. Consistent with the "Light Industrial" development standard in the General Plan, a maximum of 50 percent of the property is proposed for industrial uses (approximately 150 acres).

Second, the applicant seeks to remove on Figure 3-1 Circulation Diagram the proposed extension of Live Oak Avenue through the Project site. No other text or information can be found in the General Plan discussing this proposed extension.

Rezone

The City's zoning map identifies the property as Specific Plan (SP-3). That SP-3 zoning was a placeholder for a one-time contemplated Specific Plan that never came to fruition. As contemplated in the General Plan (Program 5.1.L), the applicant seeks to rezone the property to Planned Unit Development to allow flexibility to develop light industrial and related uses consistent with the General Plan and as set forth in the Project. The proposed Rezone would bring the project into conformance with the requested General Plan amendment as well as provide text and regulations to implement the new Planned Unit Development zoning.

The purpose of the Planned Unit Development Logistics Center District (P-1 Logistics Center District) is to allow the logistics, transport, and distribution of goods to be carried out by various operators on a commercial basis. It is the intent of this P-1 Logistics Center District to allow flexibility in type, design and layout of buildings; to encourage a more efficient use of land reflecting changes in land development; to encourage the expansion of urban areas incorporating the best features of modern design while conserving the value of the land; and to provide a procedure which

relates the type, design and layout of development to the particular site and the particular demand at the time of development. No residential structures are permitted or conditionally permitted in the P-1 Logistics Center District.

Vesting Tentative Map

The Vesting Tentative Map has been reviewed against all applicable codes including the Subdivision Map Act and the Zoning Ordinance. The applicant has proposed the Planned Unit Development (P-1) District which allows the project to develop its own unique development standards. The Final Development Plan (Part of Attachment 4) lists the specific standards applicable to this project. The Vesting Tentative Map as proposed meets all applicable codes and regulations.

Design Review

The proposed plans were analyzed for consistency with the adopted Oakley Commercial & Industrial Design Guidelines ("Guidelines"). The Design Guidelines address the physical characteristics and visual qualities of new commercial and industrial developments. The intent is to ensure consistently high quality, and to allow flexibility and the ability to provide unique solutions which enhance a project's design.

The development will consist of concrete, tilt-up buildings, with landscaping and fencing around each parcels perimeter. The applicant has submitted conceptual architecture that can be used as a guide to what we can expect to see built. The applicant has developed and manages over 71.5 million square feet of industrial development since 2012. They have provided a series of examples from projects all over the country that use the type of construction proposed. These examples can be seen in Figure 4 below and on the following page.

Figure 4. Sample Architecture from existing NorthPoint sites

The P-1 District regulations set for the approval procedure for each individual building and site improvements. If consistent with the architecture presented within this report and the project file, the Zoning Administrator (ZA) would approved the design with the Building Permit application for each building. If the ZA determines that a specific development plan is not substantially consistent with, or includes a more intensive development than, the plan previously approved, this P-1 District would need to be amended to accommodate the changes. That amendment would require a City Council action. With adoption of the proposed resolution for the Design Review approval, as conditioned, the project will comply with the Commercial & Industrial Design Guidelines.

Development Agreement

The attached Development Agreement outlines the terms that the City and the property owner would be responsible for carrying out. There are a few terms that are worth pointing out as follows:

- The life of the Development Agreement is 25 years and that commences 30 days from the date the Ordinance is adopted.
- The term of all entitlements would be the same as the duration of the Development Agreement
- The Development Agreement contains a preliminary phasing plan that outlines the expected delivery of the project
- It includes a Point of Sale Determination clause that states, “As each user is confirmed to occupy the site, the Parties shall work together to determine if the project location can be identified as the point-of-sale location consistent with all applicable local, state and federal laws.”
- Outlines the applicable Development Impact Fees.

As the last bullet states, the Development Impact Fees are discussed in detail within the Development Agreement. One of the fees spelled out in section 8.2 of the

agreement relates to the Traffic Impact Fee (TIF). The Developer has asked for a set TIF obligation to make the project more competitive in terms of attracting tenants/users. This obligation is lower than the full obligation this project would normally be subject to. One thing to note as well is that typically the TIF is paid at the time a building permit is pulled. For a project of this scale that TIF would be spread over many years and the City would not realize the full fee until buildout of the project. There is also the uncertainty that the project never is developed to its full potential and thus the full TIF at this conceptual stage could be much different to what would be collected when the project is developed. With this in mind, the Applicant has proposed to pay the City upfront with the first building permit a total of $3,850,000. This includes a TIF payment of $3,000,000 and a Community Benefit Contribution of $850,000. These two payments are important to understand in that the TIF is restricted to projects within the Traffic impact Fee Program. Typically these projects include both Capital Improvement Program projects to implement the TIF Program and sometimes developer initiated improvements as a result of a development. The Community Benefit Contribution is intended to also go towards roadway projects that are not restricted by the TIF program and this can be spent on roadway maintenance projects. Staff sees the upfront payment of the fee and the contribution as a way to make more immediate and lasting roadway improvements that may have taken years to complete.

Economic Impact and Fiscal Impact Analysis

The City contracted with Economic & Planning Systems, Inc. to prepare both an Economic Impact Analysis and a Fiscal Impact Analysis. These two analyses have helped City Staff formulate and finalize the Final Draft Development Agreement that is attached to this report.

The purpose of the Economic Impact Analysis is to evaluate the economic impacts associated with project development. Economic impacts comprise both direct effects and secondary (indirect and induced) effects. Direct effects represent those impacts attributable directly to a project, such as jobs or income generated by that project. Indirect and induced effects represent the spin-off or multiplier effects of that project. The purpose of the Fiscal Impact Analysis is to compare forecasts of the revenues generated through property tax, sales tax, and other City revenue sources with the cost of providing citywide services to the Project.

An Executive Summary has been prepared to recap the findings made in the report. Those findings are:

1. Buildout of the Project is estimated to yield a net fiscal surplus for the City's General Fund. The Project is estimated to generate a net General Fund surplus of approximately $388,400 annually at buildout.

2. Buildout of the Project has the potential to generate significant revenues for the Fire District. Primarily based on estimated property tax revenues to be

generated by the Project, the Fire District is anticipated to receive nearly $420,000 in revenues annually resulting from Project development.

3. Construction of the Project is anticipated to create 725 job years throughout the Projects development period. One-time economic impacts stemming from construction of the Project are estimated to generate total output of $125.5 million (measured in 2019 dollars).

4. At buildout, the Project is anticipated to generate approximately $475.4 million in total economic activity in the County. Based on the anticipated employment in the Project at buildout, approximately $475.4 million in total economic activity (measured in 2019 dollars) is estimated to be generated in the County annually. The Project is estimated to result in nearly 2,850 full- and part-time jobs in the County as a result of ongoing, annual Project operations, including 1,890 direct (on-site) Project jobs, 490 indirect, and 470 induced jobs. These full- and part-time jobs are estimated to generate approximately $194.2 million in earned employee compensation (wages and benefits).

As the findings in the report show, this project doesn't just benefit the City of Oakley, rather it will serve as a regional catalyst for jobs and business in the County and beyond. This project will also provide significant fee revenue to the respective Districts that serve the project, including the Diablo Water District, Ironhouse Sanitary District and the East Contra Costa County Fire Protection District. Lastly, it will serve to provide approximately 2-million square feet of new, Class A light industrial, warehousing, distribution, e-commerce fulfillment, and light manufacturing space that does not exist today.

General Plan Policies

The project meets the following Policies from the Oakley 2020 General Plan as follows:

- *2.1.1 - Promote a combination of **employment** and residential uses that provide both **jobs** and housing for Oakley's residents.*

- *2.1.4 - Promote the placement of the most intensive non-residential development (Commercial, Business Park and Light Industrial) in the Northwest Oakley Planning Area as defined in Figure 2-3.*

- *2.1.10 - When considering large scale development projects, the City may, at its discretion, authorize a Specific Plan (SP) or Planned Unit Development (PUD) approach that allows flexibility within a project area. Under this approach, the distribution of land uses may vary from the land uses as designated on the Land Use Diagram. The SP/PUD approach shall not allow either an overall greater development density than allowed under the Land Use Diagram, or a combination of uses that undermines*

the overall intent of the project area as established under the General Plan policies and Land Use Diagram.

- *2.4.1 - The City of Oakley does not support or accommodate general Heavy Industrial uses. The City does allow and encourage Light Industrial and Utility Energy uses in appropriate locations.*

- *2.4.3 - Ensure there is adequate land available to accommodate industrial development.*

- 5.1.3 - Actively recruit businesses and industries that are compatible with the General Plan's land use and implementation goals and policies and with the EDP.

Citizen Planning Advisors

The Oakley Citizen Planning Advisors received copies of the Applicant's Plans via email on November 1, 2017. Per City Council Resolution 15-14, which established the Citizen Planning Advisors, Staff has attached the comments received from the Citizen Planning Advisors to the Staff Report. Although the process does not necessarily have Staff respond directly to each of the individual comments, Staff did review them and many of the comments are addressed in this report's "Analysis" section or the conditions of approval, and Staff is prepared to address them at the City Council's discretion.

California Environmental Quality Act (CEQA)

The Oakley Logistics Center Project was subject to environmental analysis under CEQA and an Environmental Impact Report (EIR) was prepared. For the Oakley Logistics Center project, three related EIR documents have been published:

- Notice of Preparation (NOP)
- Draft EIR (DEIR)
- Final EIR (FIER) (Responses to Comments)

<u>Background of EIR</u>

The Draft EIR (DEIR) was published and made available for public comment from October 16, 2019 to December 3, 2019. The DEIR includes the draft report in addition to all of the references and technical documents used to analyze the project. All of these documents were available to the public during the public review period.

The City received written comments from:

- Contra Costa Mosquito and Vector Control District
- Lozeau Drury LLP
- Department of Toxic Substances Control
- Ironhouse Sanitary District
- East Bay Regional Park District
- Adams, Broadwell, Jospeh & Cardozo
- California State Lands Commission
- City of Antioch

The Final EIR contains the responses to comments on the Public Review DEIR, and by reference includes all the information in the Public Review DEIR and DEIR. Therefore, the Final EIR is not a standalone document; rather it is the final piece of the entire project EIR. The response to comment within the Final EIR was mailed to all commenters on the DEIR that responded to the DEIR before the December 3, 2019 5:00 PM deadline, at least 10 days prior to the public hearing date for the project. The City did receive two comment letters; one from the City of Antioch dated December 4, 2019 and received on December 9, 2019 and one from the California States Land Commission received on December 5, 2019. The Final EIR includes a response to the California State Lands Commission letter because that was received in time to comment and incorporate into the Final EIR. Staff has provided the City Council a response to the City of Antioch letter under Attachment 5, as there was not enough time to incorporate it into the Final EIR.

Significant and Unavoidable Impacts

The EIR analyzed the potential for the project to have environmental impacts. Several potentially significant impacts were able to be reduced to a less than significant level through the implementation of mitigation measures. The EIR also identified impacts that could not be reduced to a less than significant level even with implementation of mitigation measures, as summarized below:

- Air Quality and Greenhouse Gas Emissions: 4.1-1 - Conflict with or obstruct implementation of the applicable air quality plan during project construction.

- Air Quality and Greenhouse Gas Emissions: 4.1-5 - Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

- Transportation and Circulation: 4.4-10 - Impacts to freeway operations under Cumulative Plus Project conditions.

- Transportation and Circulation: 4.4-11 - Substantially increase cumulative hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

A complete analysis of the significant and unavoidable impacts can be found in Chapters 4.1 and 4.4 of the EIR.

In order to certify the EIR, the City Council must adopt a Statement of Overriding Considerations for all impacts that are found to be significant and unavoidable. The Statement of Overriding Considerations are included in the proposed resolution to certify the EIR resolution (attached).

Biology

The biological resources analysis is somewhat unique in that this project involves land that is partially within the East Contra Costa County Habitat Conservation Plan (ECCCHCP) and land that is outside of that plan area. Approximately 40% of the overall parcel is within the boundaries of the ECCCHCP and the majority of the proposed development is located in this area. Project development will also occur on approximately 24-acres of land outside the boundaries of the ECCCHCP, including a new storm drain outfall in tidal wetlands east of the new buildings. Mitigation for project impacts to biological resources in lands outside the permitted boundary of the ECCCHCP will be accomplished off-site, at agency-approved mitigation banks.

Transportation

A draft Traffic Impact Analysis (TIA) has been prepared for the project dated October 9, 2019. With respect to Project access, the main entrance is located on the eastern side of the intersection of Wilbur Avenue and Bridgehead Road. Two secondary access points will also be provided on Bridgehead Road. One would be located to the north of the Wilbur Avenue entrance and another would be located to the south.

The project will complete the following improvements or pay the fair share contribution to the following projects as follows:

Construct -

- Main Street at Bridgehead Road/Neroly Road –The project applicant shall construct the following improvements at the Main Street/Bridgehead Road/Neroly Road intersection: 1) installation of a dual eastbound left turn lane and a dual northbound left-turn lane; and 2) implementation of signal coordination with the adjacent traffic signal at the SR 160 eastbound ramps.

- Bridgehead Road/Wilbur Avenue – The project applicant shall construct the installation of a four-way traffic signal with crosswalks at the Wilbur Avenue/Bridgehead Road intersection.

- Bridgehead Road between the Planned River Oaks Crossing Entrance and the Main Street/Neroly Road Intersection – The project applicant shall provide for the construction of the widening of Bridgehead Road between the

northernmost driveway of the Arco Development and the Main Street/Neroly Road intersection to include a four-lane cross-section.

Fair-Share -

- Oakley Road/Live Oak Avenue – The project applicant shall pay a fair-share contribution to the City of Oakley to fund widening of the westbound Oakley Road approach to the Oakley Road/Live Oak Avenue intersection to allow for a separate right turn lane.

- Main Street at Empire Avenue – The project applicant shall pay a fair-share contribution to the City of Oakley to fund the installation of a dual westbound left-turn lane at the Main Street/Empire Avenue intersection.

- Big Break Road at Main Street – The project applicant shall pay a fair-share contribution to the City of Oakley to fund the following improvements to the Big Break Road/Main Street intersection, to the satisfaction of the City Engineer 1) widening of the southbound Big Break Road approach to the intersection to allow for an additional approach lane; 2) construction of a dual left turn lane on the eastbound Main Street approach to the intersection; and 3) Widening of the eastbound and westbound Main Street approaches to allow for three through lanes in each direction.

- Bridgehead Road between the Planned River Oaks Crossing Entrance and the Main Street/Neroly Road Intersection – The project applicant shall pay a fair-share contribution towards the widening of Bridgehead Road between the planned River Oaks Crossing entrance and the northernmost driveway at the ARCO development to include a four-lane cross-section.

Findings

Draft findings for the General Plan Amendment, Vesting Tentative Map and Design Review can be found in the proposed Resolutions. Draft findings for the Rezone can be found in the proposed Ordinance.

Recommendation

Staff recommends the City Council approve the Oakley Logistic Center project with the following actions:

- Certify the Oakley Logistics Center Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations and adopt the Mitigation Monitoring and Reporting Program; and

- Adopt a Resolution approving the General Plan Amendment to amend the land use designation of the 143.3-acre project site from Light Industrial (LI) /Business Park (BP) /Utility Energy (UE) to Light Industrial (LI) with the remainder of the subject property being Delta Recreation (DR), and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan, as conditioned;

- Waive the first reading and introduce an Ordinance approving the Rezone to amend the zoning designation of the 375.7-acre subject property from Specific Plan (SP-3) to Planned Unit Development (P-1) , as conditioned; and

- Adopt a resolution approving the Vesting Tentative Map and Design Review, as conditioned; and

- Waive the first reading and introduce an ordinance approving the development agreement.

NOTICE OF PUBLIC HEARING

Notice is hereby given that on **December 17, 2019** at 6:30 p.m., or as soon thereafter as the matter may be heard, the City Council of the City of Oakley will hold a Public Hearing at the Council Chambers located at 3231 Main Street, Oakley, CA 94561 for the purposes of considering an application for a **Development Agreement (DA 01-18), General Plan Amendment (GPA 04-18), Rezone (RZ 08-18), Vesting Tentative Map (TM 05-18) and Design Review (DR 12-18).**

Project Name: Oakley Logistics Center

Project Location: 6000 Bridgehead Rd., Oakley, CA 94561; APN's: 037-020-008, -009, -010, and -014 through -022.

Applicant: NP Oakley, LLC, Attn: Jed Momot, 12977 N. Outer 40 Road, Suite 203, St. Louis, MO 63141

Request: This is a public hearing on a request for 1) Certification of the Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations; 2) Adoption of the Mitigation Monitoring and Reporting Program; and approval of 3) a General Plan Amendment (GPA 04-18) to amend the land use designation of the 143.3-acre project site from Light Industrial (LI) /Business Park (BP) /Utility Energy (UE) to Light Industrial (LI) with the remainder of the subject property being Delta Recreation (DR) , and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan; 4) a Rezone (RZ 08-18) to amend the zoning designation of the 375.7-acre subject property from Specific Plan (SP-3) to Planned Unit Development (P-1); 5) a Vesting Tentative Map (TM 05-18) to create eight parcels within the 375.7-acre subject property; 6) Design Review (DR 12-18), including the Final Development Plan, for the project's design, including site plans, architectural elevations, conceptual landscape plans, and other physical development; and 7) Development Agreement (DA 01-18) for the proposed development between the City of Oakley and the project applicant. The project description and plans are available at https://www.ci.oakley.ca.us/departments/planning-zoning/current-projects/.

How to Review: The Staff Report and its attachments will be available for public review, on or before **December 11, 2019** at City Hall, 3231 Main Street, Oakley, CA 94561 or online at www.ci.oakley.ca.us/agendas-minutes-videos-archive/ by navigating to the **December 17, 2019** agenda and clicking the project title link. (Note: City Hall is closed on the 1st and 3rd Fridays of each month).

Interested persons are invited to submit written comments prior to, and may testify at, the public hearing. **Written comments may be submitted to Joshua McMurray, Community Development Director at the City of Oakley, 3231 Main Street, Oakley, CA 94561 or by email to: mcmurray@ci.oakley.ca.us.**

NOTICE IS ALSO GIVEN pursuant to Government Code Section 65009(b) that, if this matter is subsequently challenged in Court by you or others, you may be limited to raising only those issues you or someone else has raised at a Public Hearing described in this notice or in written correspondence delivered to the City of Oakley City Clerk at, or prior to, the Public Hearing.

1. Introduction

1. INTRODUCTION

1.1 INTRODUCTION

The Oakley Logistics Center Project Environmental Impact Report (EIR) has been prepared in accordance with the California Environmental Quality Act (CEQA) of 1970, Pub. Res. Code §§ 21000-21178, as amended and the Guidelines for Implementation of the California Environmental Quality Act, Cal. Code Regs. Title 14, §§ 15000-15387 (CEQA Guidelines). The City of Oakley is the lead agency for the environmental review of the Oakley Logistics Center project (proposed project) evaluated herein and has the principal responsibility for approving the project. As required by Section 15121 of the CEQA Guidelines, this EIR will (a) inform public agency decision-makers, and the public generally, of the significant environmental effects of the project, (b) identify possible ways to minimize the significant adverse environmental effects, and (c) describe reasonable and feasible project alternatives which reduce environmental effects. The public agency shall consider the information in the EIR along with other information that may be presented to the agency.

1.2 PROJECT SUMMARY

The property that is the subject of the proposed project (subject property) is located on the northwest side of the City of Oakley, adjacent to State Route (SR) 160, on Bridgehead Road, north of Main Street and the Burlington Northern Santa Fe (BNSF) Railroad, with entrance provided from Bridgehead Road on to Wilbur Avenue. The property address is 6000 Bridgehead Road and is identified by Assessor's Parcel Numbers (APNs) 037-020-008, -009, -010, -014, through -022. The subject property is located south of the San Joaquin River and east of Antioch city limits.

The subject property is site of the former DuPont Chemical Plant that produced chlorofluorocarbons, fuel additive anti-knock compounds (AKCs) and titanium dioxide between 1956 to 1997. The facility was demolished in 1999, less two dilapidated buildings and some remnant utility infrastructure. The site has been undergoing remedial and cleanup work for soil and groundwater contamination. The site is highly disturbed from its precious use as a chemical plant and as a result of the remediation efforts.

The entire subject property consists of approximately 375.7 acres; however, the logistics center would only develop on approximately 143.3 acres within the southwest portion of the property. The 143.3-acre development area is referred to throughout this EIR as the project site. Outside of the 143.3-acre project site, the remaining 232.4 acres of the subject property (hereinafter referred to as the remainder area) would remain natural, less some potential soil borrowing on areas that are both immediately adjacent to the 143.3-acre project site and outside of any wetland or marsh areas.

The subject property is currently designated Light Industrial (LI), Utility Energy (UE), Business Park (BP), and Delta Recreation (DR) per the City of Oakley 2020 General Plan Land Use Map and is zoned Specific Plan (SP-3).

The proposed project would include construction of five buildings across the project site ranging in size from 150,000 square feet (sf) to 642,960 sf for a total of approximately 2.0 million sf. The

proposed project would include demolition of the existing structures and utility remnants and construction of the proposed buildings over two phases. Specific uses for the proposed buildings would be subject to site-specific development standards in the proposed Planned Unit Development. Access to the project site would be provided by a main entrance located at the intersection of Wilbur Avenue and Bridgehead Road and two secondary access points on Bridgehead Road. The proposed project would include the widening of Bridgehead Road from the site boundary with the PG&E property to the south, north to the site boundary with the Lauritzen Yacht Harbor storage property. Furthermore, Wilbur avenue would be extended eastward by approximately 1,170 feet into the project site. Both the widened portion of Bridgehead Road as well as the extension of Wilbur Avenue would be dedicated to the City as public roadways, along with A Street, B Street, C Street, and D Street within the project site. Additional off-site improvements associated with the proposed project would include construction of a new sew pump station at Wilbur Avenue, a new six-inch force main within Bridgehead Road, and improvements at the existing Bridgehead Pump Station and Bridgehead Force Main.

The proposed project would require the following discretionary actions by the City of Oakley:

- Certification of the Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations. Before the City can approve the proposed project, the City must certify that the EIR was completed in compliance with the requirements of CEQA, that the decision-making body has reviewed and considered the information in the EIR, and that the EIR reflects the independent judgment of the City of Davis. The City would also be required to adopt Findings of Fact, and for any impacts determined to be significant and unavoidable, a Statement of Overriding Considerations, as part of project approval.
- Adoption of the Mitigation Monitoring and Reporting Program. Certification of the EIR requires adoption of a Mitigation Monitoring and Reporting Plan (MMRP), which specifies the methods for monitoring mitigation measures required to eliminate or reduce the project's significant effects on the environment.
- Approval of a General Plan Amendment (map and text) (GP 04-18). The proposed project would require a General Plan Amendment to amend the land use designation of the 143.3-acre project site from Light Industrial/Business Park/Utility Energy to Light Industrial, and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan (see Figure 3-7).
- Approval of a Rezone (RZ 08-18). The proposed project would require a rezone to amend the zoning designation of the 375.7-acre subject property from Specific Plan (SP-3) to Planned Unit Development (P-1).
- Approval of a Vesting Tentative Map (TM 05-18). The proposed project would include a Vesting Tentative Map to create eight parcels within the 375.7-acre subject property;
- Approval of Final Development Plan. Because the project would rezone the 143.3-acre project site to P-1, the project would require approval of a Final Development Plan pursuant to Section 9.1.1002 of the City of Oakley Municipal Code. Standards and conditions, including permitted and conditionally permitted uses, would be provided for both the 143.3-acre project site and the 232.4-acre remainder area.
- Approval of a Design Review (DR 12-18). The proposed project would be subject to the City's Design Review process in accordance with Section 9.1.1604 of the City of Oakley Municipal Code. The purpose of the Design Review process is to review and analysis of the project's design, including site plans, architectural elevations, conceptual landscape plans, and other physical development.

- Approval of a Development Agreement (DA 01-18). The proposed project includes a request for approval of a Development Agreement for the proposed development. The agreement would be between the City of Oakley and the project applicant.
- Approval of a Tree Removal Permit. The proposed project would require approval of a tree removal permit in accordance with Section 9.1.1112 of the City of Oakley Municipal Code.

Please refer to Chapter 3, Project Description, of this EIR for a detailed description of the proposed project and entitlements, as well as a full list of the project objectives.

1.3 PURPOSE OF THE EIR

As provided in the CEQA Guidelines Section 15021, public agencies are charged with the duty to avoid or minimize environmental damage where feasible. The public agency has an obligation to balance a variety of public objectives, including economic, environmental, and social issues.

CEQA requires the preparation of an EIR prior to approving any project that may have a significant effect on the environment. For the purposes of CEQA, the term *project* refers to the whole of an action, which has the potential for resulting in a direct physical change or a reasonably foreseeable indirect physical change in the environment (CEQA Guidelines Section 15378[a]). With respect to the proposed project, the City has determined that the proposed development is a project within the definition of CEQA.

The lead agency, which is the City of Oakley for this project, is required to consider the information in the EIR along with any other available information in deciding whether to approve the application. The basic requirements for an EIR include discussions of the environmental setting, environmental impacts, mitigation measures, alternatives, growth inducing impacts, and cumulative impacts.

The CEQA Guidelines identify several types of EIRs, each applicable to different project circumstances. This EIR has been prepared as a project-level EIR pursuant to CEQA Guidelines Section 15161, which is an analysis that examines the environmental impacts of a specific development project. A project-level EIR focuses primarily on the changes in the environment that would result from the development of the project, and examines all phases of the project including planning, construction, and operation.

1.4 EIR PROCESS

The EIR process begins with the decision by the lead agency to prepare an EIR, either during a preliminary review of a project or at the conclusion of an Initial Study (see Appendix A). Once the decision is made to prepare an EIR, the lead agency sends a Notice of Preparation (NOP) to appropriate government agencies and, when required, to the State Clearinghouse (SCH) in the Office of Planning and Research (OPR), which will ensure that responsible and trustee State agencies reply within the required time. The SCH assigns an identification number to the project, which then becomes the identification number for all subsequent environmental documents on the project. Commenting agencies have 30 days to respond to the NOP and provide information regarding alternatives and mitigation measures they wish to have explored in the Draft EIR and to provide notification regarding whether the agency will be a responsible agency or a trustee agency for the project.

The NOP (see Appendix B) for the proposed project was prepared and circulated to agencies and the public from February 20, 2019 to March 21, 2019. In addition, the City held an NOP scoping

meeting during the 30-day review period, on March 6, 2019, for the purpose of receiving comments on the scope of the environmental analysis to be prepared for the proposed project. Eight comment letters were received during the NOP public review period and one comment letter was received after the NOP public review period. The comment letters are provided as Appendix C to this EIR. See Section 1.7 below for a summary of the comments received on the NOP.

Upon completion of the Draft EIR and prior to circulation to State and local agencies and interested members of the public, a notice of completion will be filed with the SCH and a public notice of availability will be published to inform interested parties that a Draft EIR is available for agency and public review. In addition, the notice will provide information regarding the location of copies of the Draft EIR available for public review and any public meetings or hearings that are scheduled. The Draft EIR will be circulated for a minimum period of 45 days, during which time reviewers may submit comments on the document to the lead agency. The lead agency must respond to comments in writing. If significant new information, as defined in CEQA Guidelines Section 15088.5, is added to an EIR after public notice of availability is given, but before certification of the EIR, the revised EIR or affected chapters must be recirculated for an additional public review period with related comments and responses.

A Final EIR will be prepared, containing the Draft EIR or a revision thereof as well as comments and responses to comments on the Draft EIR. Before approving a project, the lead agency shall certify that the EIR (consisting of the Draft EIR and Final EIR) has been completed in compliance with CEQA, and that the EIR has been presented to the decision-making body of the lead agency, which has reviewed and considered the EIR. The lead agency shall also certify that the EIR reflects the lead agency's independent judgment and analysis.

The findings prepared by the lead agency must be based on substantial evidence in the administrative record and must include an explanation that bridges the gap between evidence in the record and the conclusions required by CEQA. If the decision-making body elects to proceed with a project that would have unavoidable significant impacts, then a Statement of Overriding Considerations explaining the decision to balance the benefits of the project against unavoidable environmental impacts must be prepared.

1.5 SCOPE OF THE EIR

This EIR constitutes a project-level analysis, and pursuant to CEQA Guidelines Section 15161, covers "all phases of the project including planning, construction, and operation." The CEQA Guidelines, Section 15126.2(a), states in pertinent part:

> An EIR shall identify and focus on the significant environmental effects of the proposed project. In assessing the impact of a proposed project on the environment, the lead agency should normally limit its examination to changes in the existing physical conditions in the affected area as they exist at the time the notice of preparation is published, or where no notice of preparation is published, at the time environmental analysis is commenced.

An Initial Study was prepared on February 20, 2019 and is included as Appendix A to this EIR. The Initial Study determined that the proposed project could have a potentially significant environmental impact on the following topic areas:

- Air Quality and GHG Emissions;
- Biological Resources;
- Hydrology and Water Quality;

- Transportation and Circulation; and
- Utilities and Service Systems.

The evaluation of effects is presented on a resource-by-resource basis in Chapters 4.1 through 4.5 of the EIR. Each chapter is divided into the following four sections: Introduction, Existing Environmental Setting, Regulatory Context, and Impacts and Mitigation Measures. Impacts that are determined to be significant in Chapters 4.1 through 4.5, and for which feasible mitigation measures are not available to reduce those impacts to a less-than-significant level, are identified as *significant and unavoidable*. Chapter 5 presents a discussion of growth-inducing impacts, a summary of cumulative impacts, a discussion of energy related impacts, and significant irreversible as well as significant unavoidable environmental changes associated with the project. Alternatives to the proposed project are discussed in Chapter 6 of the EIR.

1.6 NOTICE OF PREPARATION AND SCOPING

As noted above, in accordance with CEQA Guidelines Section 15082, an NOP was circulated to the public, local, State and federal agencies, and other known interested parties for a 30-day public and agency review period on February 20, 2019 (included as Appendix B). The purpose of the NOP was to provide notification that an EIR for the proposed project was being prepared and to solicit public input on the scope and content of the document.

1.7 COMMENTS RECEIVED ON THE NOTICE OF PREPARATION

During the NOP public review period from February 20, 2019 to March 21, 2019, the City of Oakley received nine comment letters, one of which was received after the public review period. A copy of each letter is provided in Appendix C of this EIR. In addition, verbal comments were received at the public scoping meeting held on March 6, 2019. The comment letters were authored by the following representatives of State and local agencies, groups, and residents/members of the general public:

State Agencies

- California Department of Conservation – Charlene L. Wardlow;
- California Department of Transportation (Caltrans) – Patricia Maurice;
- Department of Toxic Substances Control (DTSC) – Robert Irving; and
- Native American Heritage Commission – Gayle Totton.

Local Agencies

- Bay Area Air Quality Management District – Greg Nudd;
- East Bay Regional Park District – Devan Reiff; and
- TRANSPLAN Committee – Jamar Stamps.

Groups/General Public

- Henri and Karen Abbadie; and
- Chris Lauritzen.

The following list, categorized by issue, summarizes the concerns in the comment letters and through verbal comments and where the comments are addressed within this EIR:

Air Quality and GHG Emissions	Concerns related to: • GHG emissions during construction and long-term operation, and ability of project to meet the State's reduction targets. • Truck routes and number of diesel-powered trucks entering and leaving the center. • Dust emissions from construction. • Potential health risks from criteria and toxic pollutants. • Connection of the site to pedestrian networks.
Biological Resources	Concerns related to: • Fill of wetlands and loss of tree habitat.
Hydrology and Water Quality	Concerns related to: • Stormwater runoff patterns.
Transportation and Circulation	Concerns related to: • Increased trips at nearby intersections. • Use of transit services and bicycle and pedestrian facilities. • Reducing vehicle miles traveled. • Truck traffic along Bridgehead Road. • Traffic impacts to patrons of the Delta recreation area.
Utilities and Service Systems	Concerns related to: • Past use of wells on the property. • Increased need for sewer, water, electrical, and gas services.
Initial Study (Appendix A)	Concerns related to: • Compatibility of proposed General Plan land use amendment with the City's General Plan. • Increase in light and glare on surrounding areas. • Visual character, height, and design of buildings. • Cultural resources and compliance with Assembly Bill 52 and Senate Bill 18. • Truck noise along Bridgehead Road.

1.8 ORGANIZATION OF THE DRAFT EIR

The proposed project EIR is organized into the following sections:

Chapter 1 – Introduction

Provides an introduction and overview describing the intended use of the EIR and the review and certification process, as well as summaries of the chapters included in the EIR and summaries of the issues and concerns received from the public and public agencies during the NOP review period.

Chapter 2 – Executive Summary

Summarizes the elements of the project and the environmental impacts that would result from implementation of the proposed project, describes proposed mitigation measures, and indicates the level of significance of impacts after mitigation. Acknowledges alternatives that would reduce or avoid significant impacts and areas of known controversy.

Chapter 3 – Project Description

Provides a detailed description of the proposed project, including the project's location, background information, major objectives, and technical characteristics.

Chapter 4 – Environmental Impacts and Mitigation Measures

Contains a project-level and cumulative analysis of environmental issue areas associated with the proposed project. The section for each environmental issue contains an introduction and description of the setting of the project site, identifies impacts and recommends appropriate mitigation measures.

Chapter 5 – Statutorily Required Sections

Provides discussions required by CEQA regarding impacts that would result from the proposed project, including a summary of potential growth-inducing impacts, significant irreversible changes to the environment, impacts related to energy, and significant and unavoidable impacts.

Chapter 6 – Alternatives Analysis

The Alternatives Analysis chapter of the EIR describes and evaluates the alternatives to the proposed project.

Chapter 7 – EIR Authors and Persons Consulted

The EIR Authors and Persons Consulted chapter of the EIR lists EIR and technical report authors who provided technical assistance in the preparation and review of the EIR.

Chapter 8 – References

The References chapter of the EIR provides bibliographic information for all references and resources cited.

Appendices

The Appendices include the IS, NOP, comments received during the NOP comment period, and technical reports prepared for the proposed project.

2. Executive Summary

2. EXECUTIVE SUMMARY

2.1 INTRODUCTION

The Executive Summary chapter of the EIR provides an overview of the proposed project (see Chapter 3, Project Description, for further details) and provides a table summary of the conclusions of the environmental analysis provided in Chapters 4.1 through 4.5. This chapter also summarizes the alternatives to the proposed project that are described in Chapter 6, Alternatives Analysis, and identifies the Environmentally Superior Alternative. Table 2-1 contains the environmental impacts associated with the proposed project, the significance of the impacts, the proposed mitigation measures for the impacts, and the significance of the impacts after implementation of the mitigation measures.

2.2 SUMMARY DESCRIPTION OF THE PROPOSED PROJECT

The subject property is located on the northwest side of the City of Oakley, adjacent to State Route (SR) 160, on Bridgehead Road, north of Main Street and the Burlington Northern Santa Fe (BNSF) Railroad, with entrance provided from Bridgehead Road on to Wilbur Avenue. The property address is 6000 Bridgehead Road and is identified by Assessor's Parcel Numbers (APNs) 037-020-008, -009, -010, -014, through -022. The subject property is located south of the San Joaquin River and east of Antioch city limits.

The subject property is site of the former DuPont Chemical Plant that produced chlorofluorocarbons, fuel additive anti-knock compounds (AKCs) and titanium dioxide between 1956 to 1997. The facility was demolished in 1999, less two dilapidated buildings and some remnant utility infrastructure. The site has been undergoing remedial and cleanup work for soil and groundwater contamination. The site is highly disturbed from its previous use as a chemical plant and as a result of the remediation efforts.

The entire subject property consists of approximately 375.7 acres; however, the logistics center would only develop on approximately 143.3 acres within the southwest portion of the property. The 143.3-acre development area is referred to throughout this EIR as the project site. Outside of the 143.3-acre project site, the remaining 232.4 acres of the subject property (hereinafter referred to as the remainder area) would remain natural, less some potential soil borrowing on areas that are both immediately adjacent to the 143.3-acre project site and outside of any wetland or marsh areas.

The subject property is currently designated Light Industrial (LI), Utility Energy (UE), Business Park (BP), and Delta Recreation (DR) per the City of Oakley 2020 General Plan Land Use Map and is zoned Specific Plan (SP-3).

The proposed project would include construction of five buildings across the project site ranging in size from 150,000 square feet (sf) to 642,960 sf for a total of approximately 2.0 million sf. The proposed project would include demolition of the existing structure and utility remnants and construction of the proposed buildings over two phases. Specific uses for the proposed buildings would be subject to site-specific development standards in the proposed Planned Unit Development. Access to the project site would be provided by a main entrance located at the

intersection of Wilbur Avenue and Bridgehead Road and two secondary access points on Bridgehead Road. The proposed project would include the widening of Bridgehead Road from the site boundary with the PG&E property to the south, north to the site boundary with the Lauritzen Yacht Harbor storage property. Furthermore, Wilbur avenue would be extended eastward by approximately 1,170 feet into the project site. Both the widened portion of Bridgehead Road as well as the extension of Wilbur Avenue would be dedicated to the City as public roadways, along with A Street, B Street, C Street, and D Street within the project site. Additional off-site improvements associated with the proposed project would include construction of a new sew pump station at Wilbur Avenue, a new six-inch force main within Bridgehead Road, and improvements at the existing Bridgehead Pump Station and Bridgehead Force Main.

The proposed project requests the following discretionary actions by the City of Oakley:

- Certification of the Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations. Before the City can approve the proposed project, the City must certify that the EIR was completed in compliance with the requirements of CEQA, that the decision-making body has reviewed and considered the information in the EIR, and that the EIR reflects the independent judgment of the City of Davis. The City would also be required to adopt Findings of Fact, and for any impacts determined to be significant and unavoidable, a Statement of Overriding Considerations, as part of project approval.
- Adoption of the Mitigation Monitoring and Reporting Program. Certification of the EIR requires adoption of a Mitigation Monitoring and Reporting Plan (MMRP), which specifies the methods for monitoring mitigation measures required to eliminate or reduce the project's significant effects on the environment.
- Approval of a General Plan Amendment (map and text) (GP 04-18). The proposed project would require a General Plan Amendment to amend the land use designation of the 143.3-acre project site from Light Industrial/Business Park/Utility Energy to Light Industrial, and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan (see Figure 3-7).
- Approval of a Rezone (RZ 08-18). The proposed project would require a rezone to amend the zoning designation of the 375.7-acre subject property from Specific Plan (SP-3) to Planned Unit Development (P-1).
- Approval of a Vesting Tentative Map (TM 05-18). The proposed project would include a Vesting Tentative Map to create eight parcels within the 375.7-acre subject property;
- Approval of Final Development Plan. Because the project would rezone the 143.3-acre project site to P-1, the project would require approval of a Final Development Plan pursuant to Section 9.1.1002 of the City of Oakley Municipal Code. Standards and conditions, including permitted and conditionally permitted uses, would be provided for both the 143.3-acre project site and the 232.4-acre remainder area.
- Approval of a Design Review (DR 12-18). The proposed project would be subject to the City's Design Review process in accordance with Section 9.1.1604 of the City of Oakley Municipal Code. The purpose of the Design Review process is to review and analysis of the project's design, including site plans, architectural elevations, conceptual landscape plans, and other physical development.
- Approval of a Development Agreement (DA 01-18). The proposed project includes a request for approval of a Development Agreement for the proposed development. The agreement would be between the City of Oakley and the project applicant.

- Approval of a Tree Removal Permit. The proposed project would require approval of a tree removal permit in accordance with Section 9.1.1112 of the City of Oakley Municipal Code.

Please refer to Chapter 3, Project Description, of this EIR for a detailed description of the proposed project and entitlements, as well as a full list of the project objectives.

2.3 ENVIRONMENTAL IMPACTS AND PROPOSED AND RECOMMENDED MITIGATION

Under CEQA, a significant effect on the environment is defined as a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project, including land, air, water, mineral, flora, fauna, ambient noise, and objects of historic or aesthetic significance. Mitigation measures must be implemented as part of the proposed project to reduce potential adverse impacts to a less-than-significant level. Such mitigation measures are noted in this EIR and are found in the following technical chapters: Air Quality and Greenhouse Gas Emissions; Biological Resources; Hydrology and Water Quality; and Transportation and Circulation. Any impact that remains significant after implementation of mitigation measures is considered a significant and unavoidable impact.

A summary of the identified impacts in the technical chapters of the EIR, as well as the Initial Study prepared for the project, is presented in Table 2-1. In Table 2-1, the proposed project impacts are identified for each technical chapter (Chapter 4.1 through 4.5) of the EIR. In addition, Table 2-1 includes the level of significance of each impact, any mitigation measures required for each impact, and the resulting level of significance after implementation of mitigation measures for each impact.

2.4 SUMMARY OF PROJECT ALTERNATIVES

The following section presents a summary of the evaluation of the alternatives considered for the proposed project, which include the following:

- No Project (No Build) Alternative;
- Reduced Intensity Alternative; and
- Reduced Footprint Alternative.

The following summary provides brief descriptions of the three alternatives to the proposed project that are evaluated in this Draft EIR. For a more thorough discussion of project alternatives, please refer to Chapter 6, Alternatives Analysis.

No Project (No Build) Alternative

The No Project (No Build) Alternative assumes that the current conditions at the project site would remain, and the site would not be developed with a logistics center. As described in this EIR, the project site is highly disturbed and has been undergoing remediation and clean-up efforts for many years. The site was once occupied by DuPont, which manufactured chemicals that were determined by the DTSC to pose a risk to human health and the environment, causing the clean-up efforts. Manufacturing ceased in 1999 and the manufacturing facilities at the site were mostly demolished. Because development of the site would not occur potential impacts from the development of the proposed project would not occur. The Alternative would not meet any of the project objectives.

Reduced Intensity Alternative

The Reduced Intensity Alternative would involve similar development of the project site; however, the total square footage would be reduced by 50 percent, for a total square footage of approximately 1.0 million sf. All other aspects of the Alternative would be similar to the proposed project. Because the Alternative would reduce the total square footage, the Alternative would not meet Project Objectives 1 or 2, and would only partially meet Project Objectives 3 and 4. The Reduced Intensity Alternative would meet the remaining project objective.

Reduced Footprint Alternative

The Reduced Footprint Alternative would reduce the total buildout square footage by 75 percent and the footprint by 50 percent as compared to the proposed project, for a total of 500,000 sf of building area. The reduced footprint would involve grading of just 70.9 acres, rather than 141.8 acres. The Alternative would involve similar operations as the proposed project; however, the production capabilities would be limited as a result of the size reduction. The Reduced Footprint Alternative would not meet Project Objective 1 or 2, and Project Objectives 3 and 4 would be only partially met. The remaining objective would be met under the Alternative.

Environmentally Superior Alternative

An EIR is required to identify the environmentally superior alternative from among the range of reasonable alternatives that are evaluated. Section 15126(e)(2) of the CEQA Guidelines requires that an environmentally superior alternative be designated and states, "If the environmentally superior alternative is the 'no project' alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives." The No Project (No Build) Alternative would be considered the environmentally superior alternative, because the project site is assumed to remain undeveloped under the Alternative. Consequently, the impacts resulting from the proposed project would not occur under the Alternative. However, leaving the site vacant with a dilapidated building and remnants of utility infrastructure could be considered urban blight.

The Reduced Intensity Alternative would result in fewer impacts related to Air Quality and Greenhouse Gas Emissions, and Transportation and Circulation, but would result in similar impacts related to Biological Resources, Hydrology and Water Quality, and Utilities and Service Systems. The Reduced Footprint Alternative would result in fewer impacts related to Air Quality and Greenhouse Gas Emissions, Biological Resources, Hydrology and Water Quality, and Transportation and Circulation but would result in similar impacts related to Utilities and Service Systems. It should be noted that neither the Reduced Intensity Alternative would eliminate the significant and unavoidable impacts related to Transportation and Circulation and Air Quality and Greenhouse Gas Emissions; however, the Reduced Footprint Alternative would reduce significant and unavoidable impacts to less than significant. Because the Reduced Footprint Alternative would be capable of reducing more of the impacts identified for the proposed project than the Reduced Intensity Alternative, while still meeting the majority of the project objectives, the Reduced Footprint Alternative would be considered the environmentally superior alternative to the proposed project.

2.5 AREAS OF CONTROVERSY

Areas of controversy that were identified in NOP comment letters, and are otherwise known for the region, include the following:

- Increases in air quality emissions and impacts to climate change;
- Biological impacts associated with wildlife and plant habitats;

- Increased stormwater runoff causing soil erosion, flooding, or pollution;
- Concerns related to related to average daily trips and increased vehicle traffic during the holidays and over weekends;
- Increased vehicle traffic on the truck routes in the project area;
- Potential impacts related to dust that could result from grading of the project site and the import/export of soil;
- Water supply and distribution systems;
- Concerns related to the alteration of drainage on the project site and the impacts the proposed project could have on the wetlands in the area;
- Concern related to potential adverse effects on the San Joaquin River and the San Francisco Bay resulting from construction activities and operations at the project site;
- Wastewater facility impacts; and
- Increased utility service demand.

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
4.1 Air Quality and Greenhouse Gas Emissions			
4.1-1 Conflict with or obstruct implementation of the applicable air quality plan during project construction	S	*4.1-1(a)* *Prior to issuance of a grading permit, the project applicant shall show on the grading plans via notation that the contractor shall ensure that all off-road heavy-duty diesel-powered equipment (e.g., rubber tired dozers, excavators, graders, scrapers, pavers, paving equipment, and cranes) to be used for each phase of construction of the project (i.e., owned, leased, and subcontractor vehicles) shall meet California Air Resources Board (CARB) Tier 4 emissions standards or cleaner. The grading plans shall be submitted for review and approval by the Public Works and Engineering Department. In addition, all off-road equipment operating at the construction site must be maintained in proper working condition according to manufacturer's specifications. Idling shall be limited to 5 minutes or less in accordance with the Off-Road Diesel Fueled Fleet Regulation as required by CARB.* *Idling shall be limited to five minutes or less for all on-road related and/or delivery trucks in accordance with CARB's On-Road Heavy-Duty Diesel Vehicles (In-Use) Regulation. Clear Signage regarding idling restrictions should be placed at the entrances to the construction site.* *4.1-1(b)* *All Improvement Plans for the proposed project shall identify, via notation, that all architectural coatings, paints, finishes and adhesives used within the project*	SU

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact		Level of Significance Prior to Mitigation	Mitigation Measures		Level of Significance After Mitigation
				site during project construction and operations shall be zero-VOC emitting. Furthermore, all future leases signed for proposed structures or operational spaces within the project site must contain binding language informing future tenants of the requirement that only zero-VOC architectural coatings, paints, finishes and adhesives may be used within the project site. Inclusion of such language within Improvement Plans for project construction shall be confirmed through submittal of Improvement Plans to the City of Oakley Planning Division for review and approval.	
4.1-2	Conflict or obstruct implementation of the applicable air quality plan during project operation.	S	*4.1-2*	*Implement Mitigation Measure 4.1-1(b).*	LTS
4.1-3	Expose sensitive receptors to substantial pollutant concentrations.	S	*4.1-3*	*Prior to issuance of building permits for each phase of development, the project applicant shall show on the building plans that all loading docks shall be equipped with dedicated electrical outlets sufficient to provide power to any truck mounted transportation refrigerated units accessing the loading docks. In addition, all loading docks shall be equipped with signage stating the following, "State regulations prohibit engine idling in excess of five minutes." The building plans shall be submitted for review and approval by the City of Oakley Building Division.*	LTS
4.1-4	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-	LTS	*None required.*		N/A

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

	attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).				
4.1-5	Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.	S	*4.1-5(a)*	*Implement Mitigation Measure 4.1-1(a).*	SU
			4.1-5(b)	*Implement Mitigation Measure 4.1-3.*	
			4.1-5(c)	*Improvement Plans and building plans for the proposed project shall identify all feasible mitigation measures developed in coordination with the BAAQMD and as determined by the City of Oakley Planning Division to reduce significant impacts to the extent feasible. Mitigation Measures may include, but would not be limited to, BAAQMD's recommended mitigation measures such as the following:* • *Orient buildings to maximize passive solar heating;* • *Improve bike and pedestrian network (complete sidewalks, connection to adjacent areas, connection to bike network, etc.);* • *Implement bicycle and pedestrian facilities such as bike lanes, routes, and paths, bike parking, sidewalks, and benches;* • *Dedicate land on-site to facilitate future connections with the Big Break Regional Trail;*	

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		• *Promote ridesharing, transit, bicycling, and walking for work trips through dedication of preferential parking spaces, provision of on-site bicycle parking, provision of end-of-trip facilities such as bicycle lockers and on-site showers;* • *Subsidize employee transit passes;* • *Install electric vehicle charging infrastructure in excess of existing CBSC requirements;* • *Provide charging stations and preferential parking spots for electric vehicles;* • *Install energy star appliances;* • *Install solar water heating;* • *Install on-site renewable energy systems;* • *Use water efficient landscapes and native/drought-tolerant vegetation;* • *Provide outdoor electrical outlets to allow for use of electrically powered landscaping equipment;* • *Construct on-site or fund off-site carbon sequestration projects (such as tree plantings or reforestation projects); and* • *Purchase carbon credits to offset project annual emissions. Carbon offset credits shall be verified and registered with The Climate Registry, the Climate Action Reserve, or another source approved by CARB, BAAQMD, or the City of Oakley.*	

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		If off-site mitigation measures are proposed, the applicant must be able to show that the emission reductions from identified projects are real, permanent through the duration of the project, enforceable, and are equal to the pollutant type and amount of the project impact being offset. In addition, any off-site measures shall be subject to review and approval by to City of Oakley Planning Division. BAAQMD recommends that off-site mitigation projects occur within the nine-county Bay Area in order to reduce localized impacts and capture potential co-benefits. If BAAQMD has established an off-site mitigation program at the time a development application is submitted, as an off-site mitigation measure, the applicant may choose to enter into an agreement with BAAQMD and pay into the established off-site mitigation program fund, where BAAQMD would commit to reducing the type and amount of emissions identified in the agreement.	
4.2 Biological Resources			
4.2-1 Have a substantial adverse effect, either directly or through habitat modifications, on burrowing owl.	S	*Areas of the Project Site Within the ECCC HCP/NCCP Permit Area and Off-Site Improvement Areas* *4.2-1(a)* *Prior to the issuance of grading or construction permits for each phase of development of the project, the applicant shall pay the applicable ECCC HCP/NCCP per-acre Development Fee in effect for Zone I in compliance with Article 7, Habitat Conservation Plan/Natural Community Conservation Plan Implementing Program, of the Oakley Municipal Code. The Development Fee will cover the*	LTS

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		development of habitat that primarily includes annual grassland. Payment of the Development Fee would address the loss of potential habitat of special-status plant species associated with grasslands. The fees would be used in part to protect these affected special-status plant species by bringing existing populations of the species under protection. *Alternately, the project applicant may, in accordance with the terms of Oakley Municipal Code Article 7, offer to dedicate land in lieu of some or all of the mitigation fees. All applicable mitigation fees shall be paid, or an "in-lieu-of fee" agreement executed, prior to the issuance of a grading permit for the project.* *The Oakley Planning Division and the Contra Costa County Conservancy shall approve the final method of compliance with the ECCC HCP/NCCP provisions.* *4.2-1(b) Preconstruction Survey* *Prior to any ground disturbance related to covered activities, a USFWS/CDFW- approved biologist will conduct a preconstruction survey in areas identified in the planning surveys as having potential burrowing owl habitat. The surveys will establish the presence or absence of western burrowing owl and/or habitat features and evaluate use by owls in accordance with CDFW survey guidelines (California Department of Fish and Game 1995).*	

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		On the parcel where the activity is proposed, the biologist will survey the proposed disturbance footprint and a 500-foot radius from the perimeter of the proposed footprint to identify burrows and owls. Adjacent parcels under different land ownership will not be surveyed. Surveys should take place near sunrise or sunset in accordance with CDFW guidelines. All burrows or burrowing owls will be identified and mapped. Surveys will take place no more than 30 days prior to construction. During the breeding season (February 1 to August 31), surveys will document whether burrowing owls are nesting in or directly adjacent to disturbance areas. During the nonbreeding season (September 1 to January 31), surveys will document whether burrowing owls are using habitat in or directly adjacent to any disturbance area. Survey results will be valid only for the season (breeding or nonbreeding) during which the survey is conducted. *Areas of the Project Site Outside the ECCC HCP/NCCP Permit Area* *4.2-1(c) Preconstruction Survey* *Prior to any ground disturbance related to covered activities, a USFWS/CDFW-approved biologist will conduct a preconstruction survey in of potential burrowing owl habitat. The surveys will establish the presence or absence of western burrowing owl*	

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		and/or habitat features and evaluate use by owls in accordance with CDFW survey guidelines (California Department of Fish and Game 2012). *Compensatory Habitat Mitigation* *If active owl burrows are identified during pre-construction surveys in areas of the project site outside of the ECCC HCP/NCCP Permit Area and the project would impact active burrows, the project applicant shall provide compensatory mitigation for the permanent loss of burrowing owl habitat at a ratio of 2.5 acres of higher quality owl habitat for every one acre of suitable owl habitat disturbed. The calculation of habitat loss may exclude acres currently occupied by hardscape or structures. Such mitigation may include the permanent protection of land that is deemed to be suitable burrowing owl habitat through a conservation easement deeded to a non-profit conservation organization or public agency with a conservation mission, or the purchase of burrowing owl conservation bank credits from a CDFW-approved burrowing owl conservation bank. A record of the compensatory mitigation provided by the project applicant shall be submitted to the City of Oakley Planning Division prior to initiation of ground disturbing activities.* *Entire Project Site and Off-Site Improvement Areas*	

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		4.2-1(d) *Avoidance, Minimization, and Construction Monitoring* *If burrowing owls are found during the breeding season (February 1 to August 31), the project proponent will avoid all nest sites that could be disturbed by project construction during the remainder of the breeding season or while the nest is occupied by adults or young. Avoidance will include establishment of a non-disturbance buffer zone (described below). Construction may occur during the breeding season if a qualified biologist monitors the nest and determines that the birds have not begun egg-laying and incubation or that the juveniles from the occupied burrows have fledged. During the nonbreeding season (September 1 to January 31), the project proponent should avoid the owls and the burrows they are using, if possible. Avoidance will include the establishment of a buffer zone (described below).* *During the breeding season, buffer zones of at least 250 feet in which no construction activities can occur will be established around each occupied burrow (nest site). Buffer zones of 160 feet will be established around each burrow being used during the nonbreeding season. The buffers will be delineated by highly visible, temporary construction fencing.*	

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		If occupied burrows for burrowing owls are not avoided, passive relocation will be implemented. Owls should be excluded from burrows in the immediate impact zone and within a 160-foot buffer zone by installing one-way doors in burrow entrances. These doors should be in place for 48 hours prior to excavation. The project area should be monitored daily for 1 week to confirm that the owl has abandoned the burrow. Whenever possible, burrows should be excavated using hand tools and refilled to prevent reoccupation (California Department of Fish and Game 1995). Plastic tubing or a similar structure should be inserted in the tunnels during excavation to maintain an escape route for any owls inside the burrow.	
4.2-2 Have a substantial adverse effect, either directly or through habitat modifications, on Swainson's hawk.	S	*Areas of the Project Site Within the ECCC HCP/NCCP Permit Area and Off-Site Improvement Areas* *4.2-2(a) Implement Mitigation Measure 4.2-1(a).* *4.2-2(b) Preconstruction Survey* *Prior to any ground disturbance related to covered activities that occurs during the nesting season (March 15 to September 15), a qualified biologist will conduct a preconstruction survey no more than 1 month prior to construction to establish whether Swainson's hawk nests within 1,000 feet of the project site are occupied. If potentially occupied nests within 1,000 feet are off the project site, then their occupancy will be determined by observation from*	LTS

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		public roads or by observations of Swainson's hawk activity (e.g., foraging) near the project site. If nests are occupied, minimization measures and construction monitoring are required (see below). *Avoidance, Minimization, and Construction Monitoring* *During the nesting season (March 15 to September 15), covered activities within 1,000 feet of occupied nests or nests under construction will be prohibited to prevent nest abandonment. If site-specific conditions or the nature of the covered activity (e.g., steep topography, dense vegetation, limited activities) indicate that a smaller buffer could be used, the Implementing Entity will coordinate with CDFW/USFWS to determine the appropriate buffer size. If young fledge prior to September 15, covered activities can proceed normally. If the active nest site is shielded from view and noise from the project site by other development, topography, or other features, the project applicant can apply to the Implementing Entity for a waiver of this avoidance measure. Any waiver must also be approved by USFWS and CDFW. While the nest is occupied, activities outside the buffer can take place.* *All active nest trees will be preserved on site, if feasible. Nest trees, including non-native trees, lost to covered activities will be mitigated by the project*	

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		proponent according to the requirements of Mitigation Measure 4.2-2(c). *4.2-2(c)* *Should the proposed project result in the loss of non-riparian Swainson's hawk nest trees, the project applicant shall implement the following measures:* • *If determined to be feasible by the City of Oakley Planning Division, the project applicant shall provide for the planting of 15 saplings for every nest tree removed, with the objective of having at least five mature trees established for every tree lost, according to the requirements listed further below; and either of the following:* 1. *Pay the Implementing Entity an additional fee to purchase, plant, maintain, and monitor 15 saplings on the ECCC HCP/NCCP Preserve System for every tree lost according to the requirements listed below; OR* 2. *The project proponent will plant, maintain, and monitor 15 saplings for every tree lost at a site to be approved by the Implementing Entity (e.g., within an ECCC HCP/NCCP Preserve or existing open space linked to ECCC HCP/NCCP preserves), according to the requirements listed below.*	

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		The following requirements shall be met for all planting options: • *Tree survival shall be monitored at least annually for five years, then every other year until year 12. All trees lost during the first five years will be replaced. Success will be reached at the end of 12 years if at least five trees per tree lost survive without supplemental irrigation or protection from herbivory. Trees must also survive for at least three years without irrigation.* • *Irrigation and fencing to protect from deer and other herbivores may be needed for the first several years to ensure maximum tree survival.* • *Native trees suitable for this site should be planted. When site conditions permit, a variety of native trees will be planted for each tree lost to provide trees with different growth rates, maturation, and life span, and to provide a variety of tree canopy structures for Swainson's hawk. This variety will help to ensure that nest trees will be available in the short term (five-10 years for cottonwoods and willows) and in the long term (e.g., Valley oak, sycamore). This will also minimize the temporal loss of nest trees.* • *Riparian woodland restoration conducted as a result of covered activities (i.e., loss of riparian*

4.2-3 Have a substantial adverse effect, either directly or through habitat modifications, on Golden Eagle.	S	*Areas of the Project Site Within the ECCC HCP/NCCP Permit Area and Off-Site Improvement Areas* *4.2-3(a) Implement Mitigation Measure 4.2-1(a).* *4.2-3(b) Preconstruction Survey* *Prior to implementation of covered activities, a qualified biologist shall conduct a preconstruction survey to establish whether nests of golden eagles are occupied (see Section 6.3.1, Planning Surveys of the ECCC HCP/NCCP). If nests are occupied, the following minimization requirements and construction monitoring shall be required.* *Avoidance and Minimization* *Covered activities shall be prohibited within 0.5 mile of active nests. Nests can be built and active at almost any time of the year, although mating and egg incubation occurs late January through August, with peak activity in March through July. If site-specific conditions or the nature of the covered activity (e.g., steep topography, dense vegetation, limited activities) indicate that a smaller buffer could be appropriate or that a larger buffer should be implemented, the Implementing Entity shall coordinate with CDFW/USFWS to determine the appropriate buffer size.* *Construction Monitoring*	LTS

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		Construction monitoring shall focus on ensuring that covered activities do not occur within the buffer zone established around an active nest. Although no known golden eagle nest sites occur within or near the Urban Limit Line, covered activities inside and outside of the Preserve System have the potential to disturb golden eagle nest sites. Construction monitoring shall ensure that direct effects to golden eagles are minimized.	
4.2-4 Have a substantial adverse effect, either directly or through habitat modifications, on white-tailed kite, tricolored blackbird, California black rail, saltmarsh common yellowthroat, loggerhead shrike, Suisun song sparrow, song sparrow "Modesto" population, and foraging or nesting habitat for other special-status avian species.	S	*Areas of the Project Site Within the ECCC HCP/NCCP Permit Area and Off-Site Improvement Areas* *4.2-4(a) Prior to any ground disturbance related to covered activities that occur during the nesting season (March 15 to August 31), a qualified biologist shall conduct a preconstruction survey for white-tailed kite no more than one month prior to construction to establish whether white-tailed kite is nesting in trees within or visible from the site or the off-site water quality basin. In the event active nests are found, the applicant shall notify the Implementing Entity and consult with CDFW for further guidance.* *Grasslands and trees in or near the site or the off-site water quality basin could be used by other species of nesting birds protected by the Migratory Bird Treaty Act. If possible, vegetation removal will occur outside of the general bird nesting season (February 1 through August 31). Alternately, a qualified biologist will conduct a preconstruction survey no more than*	LTS

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		two weeks prior to vegetation removal. In the event active nests are found, the applicant shall notify the Implementing Entity and consult with CDFW for further guidance *Areas of the Project Site Outside the ECCC HCP/NCCP Permit Area* *4.2-4(b) If construction activities commence anytime during the nesting/breeding season of native bird species potentially nesting on or near the project site (typically February through August in the project region), a pre-construction survey for nesting birds shall be conducted by a qualified biologist within two weeks of the commencement of construction activities. The results of the survey shall be submitted to the City of Oakley Planning Division.* *If active nests are found in areas that could be directly affected or are within 500 feet of construction and would be subject to prolonged construction-related noise, an initial no-disturbance buffer zone shall be created around active nests during the breeding season or until a qualified biologist determines that all young have fledged. The initial sizes of the buffer zones and types of construction activities restricted within them shall be a minimum of 500 feet for raptors, and a minimum of 50 feet for other species, and in consultation with CDFW may be reduced enlarged by taking into account factors such as the following:*	

NI = *No Impact*; N/A = *Not Applicable*; LS = *Less-than-Significant*; S = *Significant*; SU = *Significant and Unavoidable*

Table 2-1
Summary of Impacts and Mitigation Measures

Impact	Level of Significance Prior to Mitigation	Mitigation Measures	Level of Significance After Mitigation
		• *Noise and human disturbance levels at the construction site at the time of the survey and the noise and disturbance expected during the construction activity;* • *Distance and amount of vegetation or other screening between the construction site and the nest; and* • *Sensitivity of individual nesting species and behaviors of the nesting birds.*	
4.2-5 Have a substantial adverse effect on riparian habitat or other sensitive natural community, or State or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.	S	*Areas of the Project Site Within the ECCC HCP/NCCP Permit Area* *4.2-5(a) Prior to the issuance of grading or construction permits for each phase of development of the project, the applicant shall pay the applicable ECCC HCP/NCCP per-acre Wetland Mitigation Fee in compliance with Article 7, Habitat Conservation Plan/Natural Community Conservation Plan Implementing Program, of the Oakley Municipal Code. Payment of the Wetland Mitigation Fee would address the loss of wetland habitat within the portions of the project site covered by the ECCC HCP/NCCP. The fees would be used in part to restore or create compensatory wetlands.* *Alternately, the project applicant may, in accordance with the terms of Oakley Municipal Code Article 7, create and restore wetlands in lieu of some or all of the mitigation fees. All applicable mitigation fees shall be paid, or an "in-lieu-of fee" agreement executed,*	LTS

3. Project Description

3.0. PROJECT DESCRIPTION

3.1 INTRODUCTION

Section 15125 of CEQA Guidelines requires an EIR to include a description of the physical environmental conditions of the project site and the site vicinity, as they exist at the time the Notice of Preparation is published, from a local and regional perspective. Knowledge of the existing environmental setting is critical to the assessment of environmental impacts. Per CEQA Guidelines Section 15125, the description of the environmental setting shall not be longer than necessary to understand the potential significant effects of the project.

The Project Description chapter of the EIR provides a comprehensive description of the Oakley Logistics Center Project (proposed project) in accordance with CEQA Guidelines. Please note that this chapter provides an overall general description of the existing environmental conditions; however, detailed discussions of the existing setting in compliance with CEQA Guidelines Section 15125, as it relates to each given potential impact area, is included in each technical chapter of this EIR.

3.2 PROJECT LOCATION

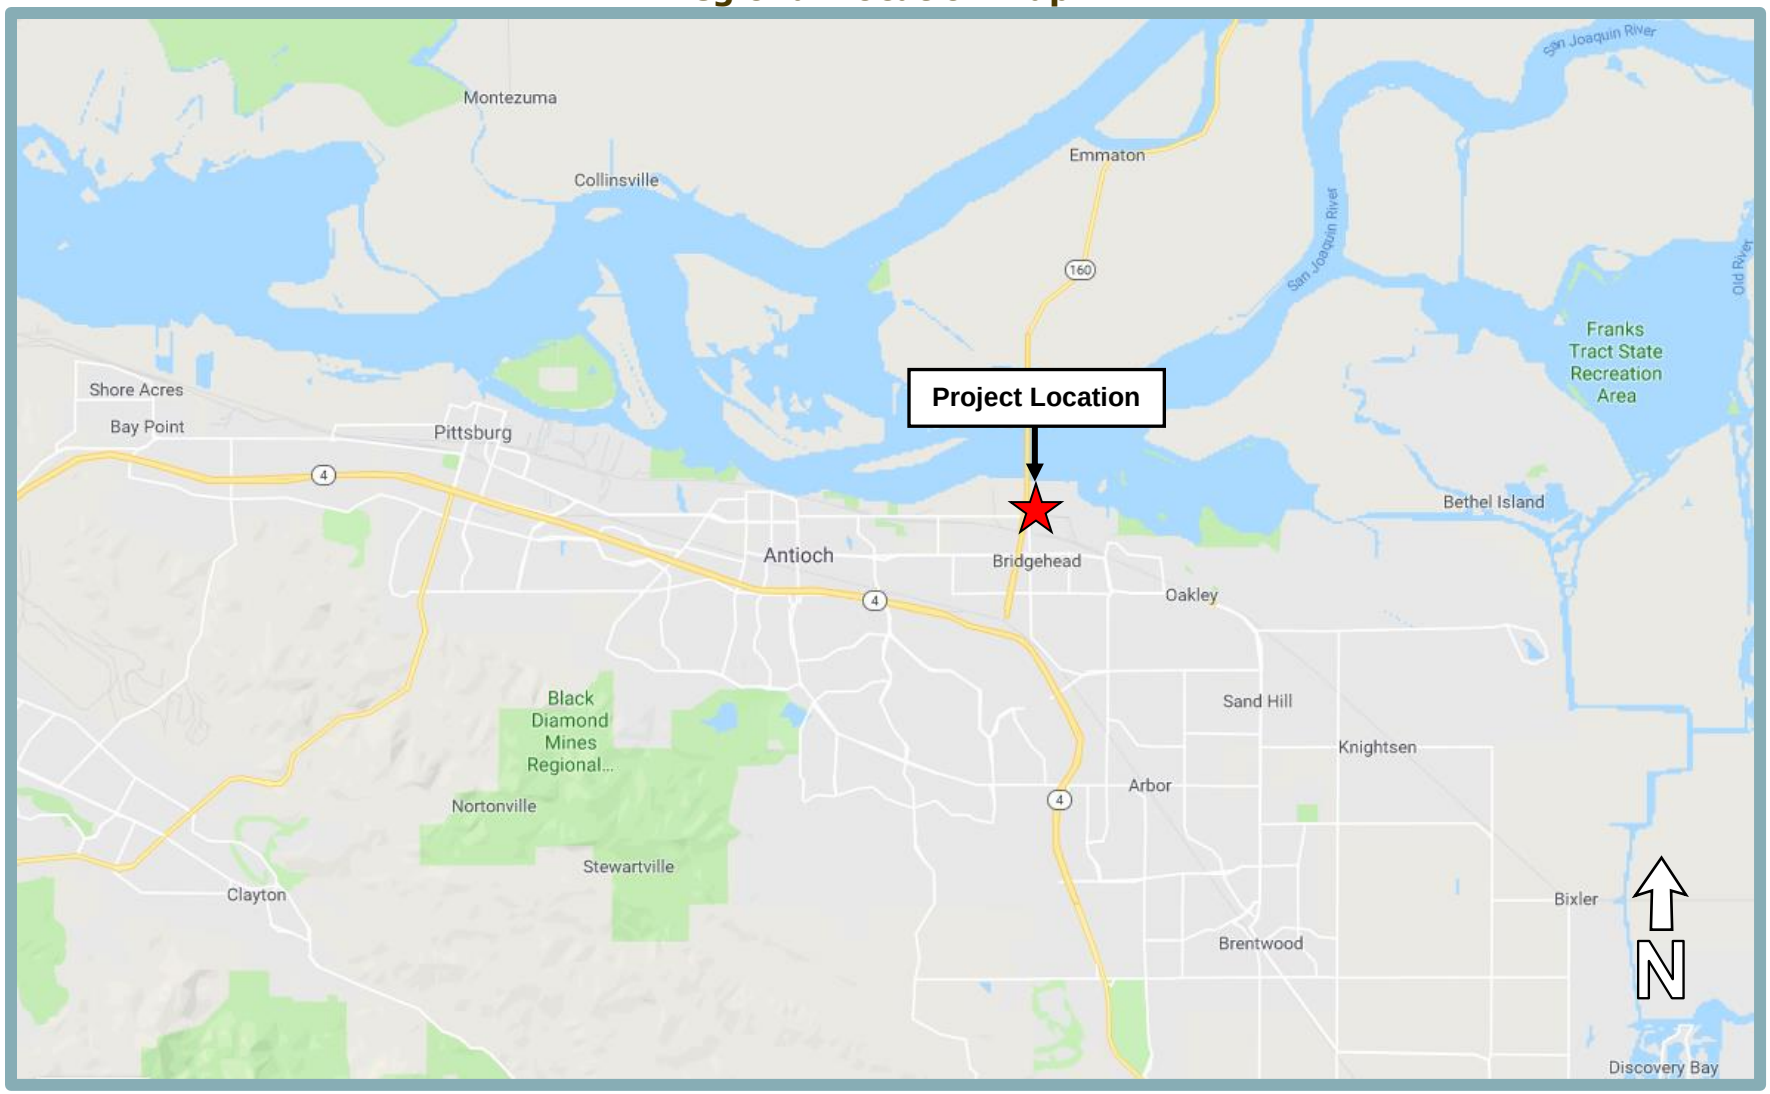
The subject property consists of approximately 375.7 acres located on the northwest portion of the City of Oakley, adjacent to State Route (SR) 160, on Bridgehead Road, north of Main Street and the Burlington Northern Santa Fe (BNSF) Railroad (see Figure 3-1 and Figure 3-2). The subject property is situated along the southern bank of the San Joaquin River. The area immediately to the west of the subject property, south of Wilbur Avenue, is located within the City of Antioch city limits.

The subject property includes 12 existing parcels, identified as Assessor's Parcel Numbers (APNs) 037-020-008, -009, -010, and -014 through -022. While the entire subject property is approximately 375.7 acres, development of the logistics center would only occur on approximately 143.3 acres within the southwestern portion of the subject property. The 143.3-acre development area is hereinafter referred to as the project site. The remaining 232.4 acres of the subject property are hereinafter referred to as the remainder area, and would remain natural, less some potential soil borrowing on areas that are both immediately adjacent to the 143.3-acre project site and outside of any wetland or marsh areas.

3.3 BACKGROUND

The project area, located at 6000 Bridgehead Road, was once occupied by the chemical manufacturing company DuPont. From 1956 to 1997 the DuPont facility, sometimes referred to as the "Chemours" or "DuPont" site, operated as a manufacturing facility that produced chlorofluorocarbons, fuel additive anti-knock compounds (AKCs) and titanium dioxide. DuPont operated the plant from 1956 to 1997. At the height of the facility's operations, DuPont employed nearly 600 people. The facility started in making the gasoline "anti-knock" agent tetraethyl lead and refrigeration cooling compounds called Freon®. In 1963, DuPont expanded its operations to include the production of titanium dioxide, and other chemicals.

Figure 3-1
Regional Location Map



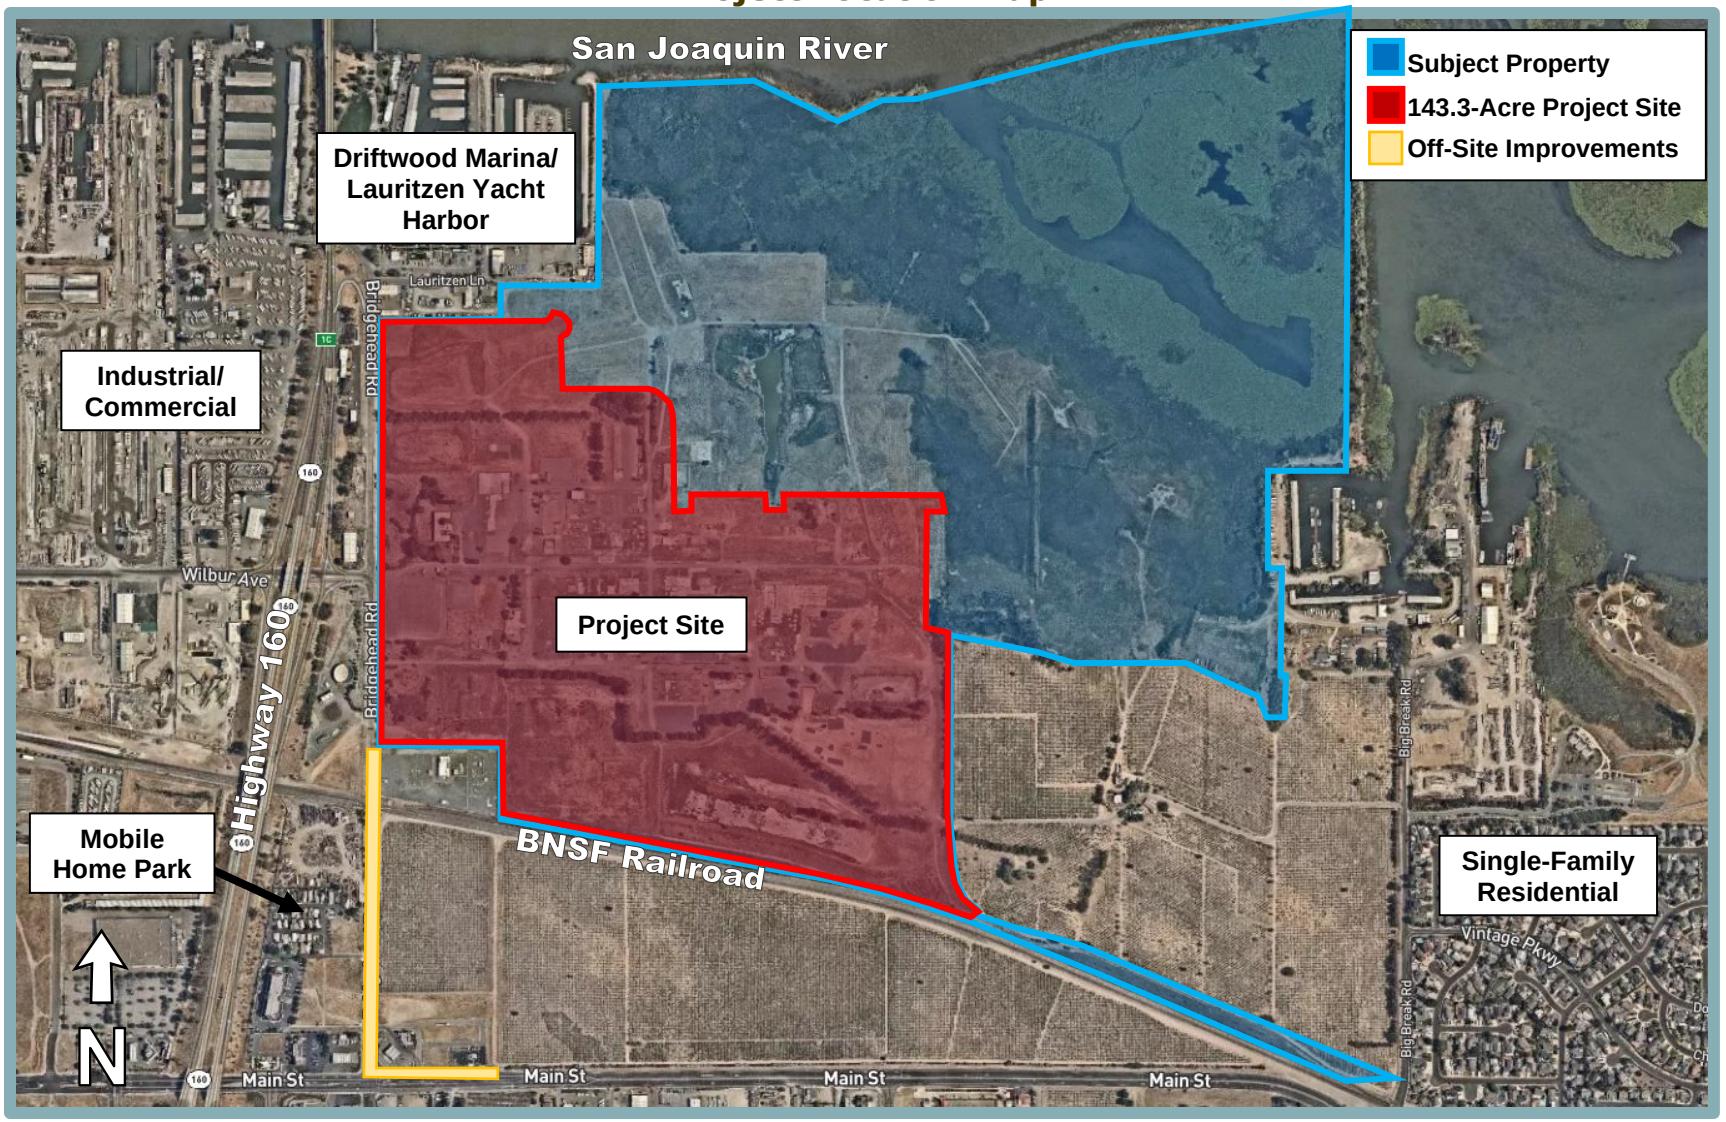


Figure 3-2
Project Location Map

All manufacturing operations ceased in 1999 and the facility has been demolished, less two dilapidated buildings and various remnants of utility infrastructure. Since 2003, the site has been undergoing extensive clean-up and remediation efforts through the Department of Toxic Substance Control (DTSC), including soil and groundwater remediation. In 2013, DuPont separated its chemical segment from its other businesses and remedial obligations for the site were transferred to Chemours who is working with DTSC on the remediation efforts. Most recent, on June 29, 2018, DSC certified a Mitigated Negative Declaration (MND) for the remaining remediation work. This remediation work is being performed in two field seasons. The first field season started in August/September 2018, and the anticipated completion date for this work is mid-2019. The anticipated start date for the second field season is August or September 2019, and the anticipated completion date is January or February 2020.

The site has been highly disturbed and altered over the years by the DuPont operations and remediation efforts. The remediation efforts will allow areas of the site to develop with industrial and commercial uses (in the 143.3-acre project site) and recreational uses (on the 232.4-acre remainder area). Additional information on the cleanup efforts for the site can be found at https://dtsc.ca.gov.

3.4 PROJECT SETTING AND SURROUNDING LAND USES

Currently, the subject property consists primarily of paved, unmaintained, and disturbed urban land. Two existing buildings, totaling approximately 11,778 sf and 2,640 sf, respectively, are located within the western portion of the subject property, near Bridgehead Road. The site is highly disturbed from past grading activities, former manufacturing operations, and current remediation work.

Per the City of Oakley 2020 General Plan, the 143.3-acre project site is currently designated Light Industrial (LI), Utility Energy (UE), and Business Park (BP) (see Figure 3-3). In addition, a 195-acre portion of the remainder area is designated Delta Recreation (DR). The subject property, including the project site, is zoned Specific Plan (SP-3) (see Figure 3-4).

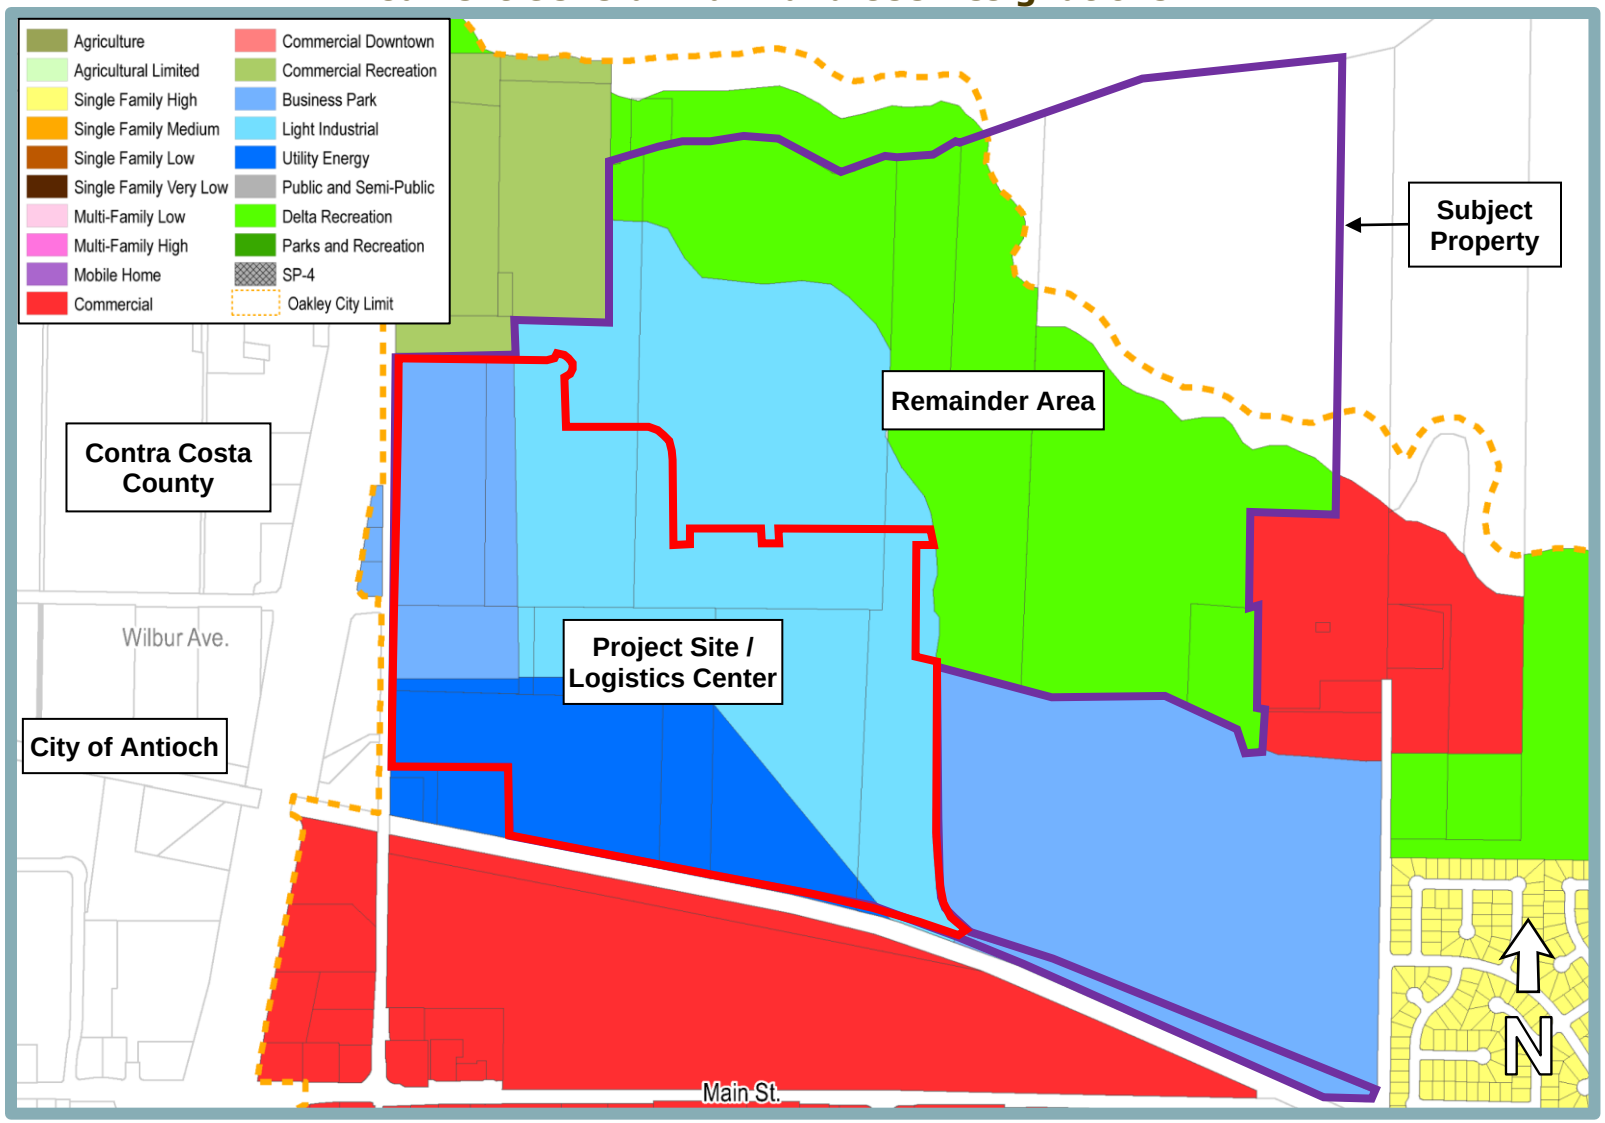
The subject parcel is bordered by Bridgehead Road to the west and BNSF railroad tracks to the south. Various industrial and commercial uses, including a boat repair shop, are located west of the site across Bridgehead Road. Additional industrial and commercial development is located further west across SR 160. The areas to the south and east of the parcel consist of vineyards. A mobile home park exists to the southwest of the project site, and a single-family residential subdivision is located further east of the site, east of Big Break Road. The Big Break Marina and a construction equipment storage yard are located to the north of the subdivision. Existing uses to the northeast of the subject parcel include the Driftwood Marina, the Lauritzen Yacht Harbor, the Antioch/Oakley Regional Shoreline Park, and a canvas supply store (Canvas Factory).

3.5 PROJECT OBJECTIVES

The following objectives have been developed by the project applicant for the proposed project:

1. Develop a logistics center with approximately 2,000,000 sf of Class A industrial light warehousing, e-commerce fulfillment, distribution, and light manufacturing space consisting of five buildings.
2. Redevelop the former DuPont site with a robust logistics center that provides nearly 2,000 jobs for the region.

Figure 3-3
Current General Plan Land Use Designations



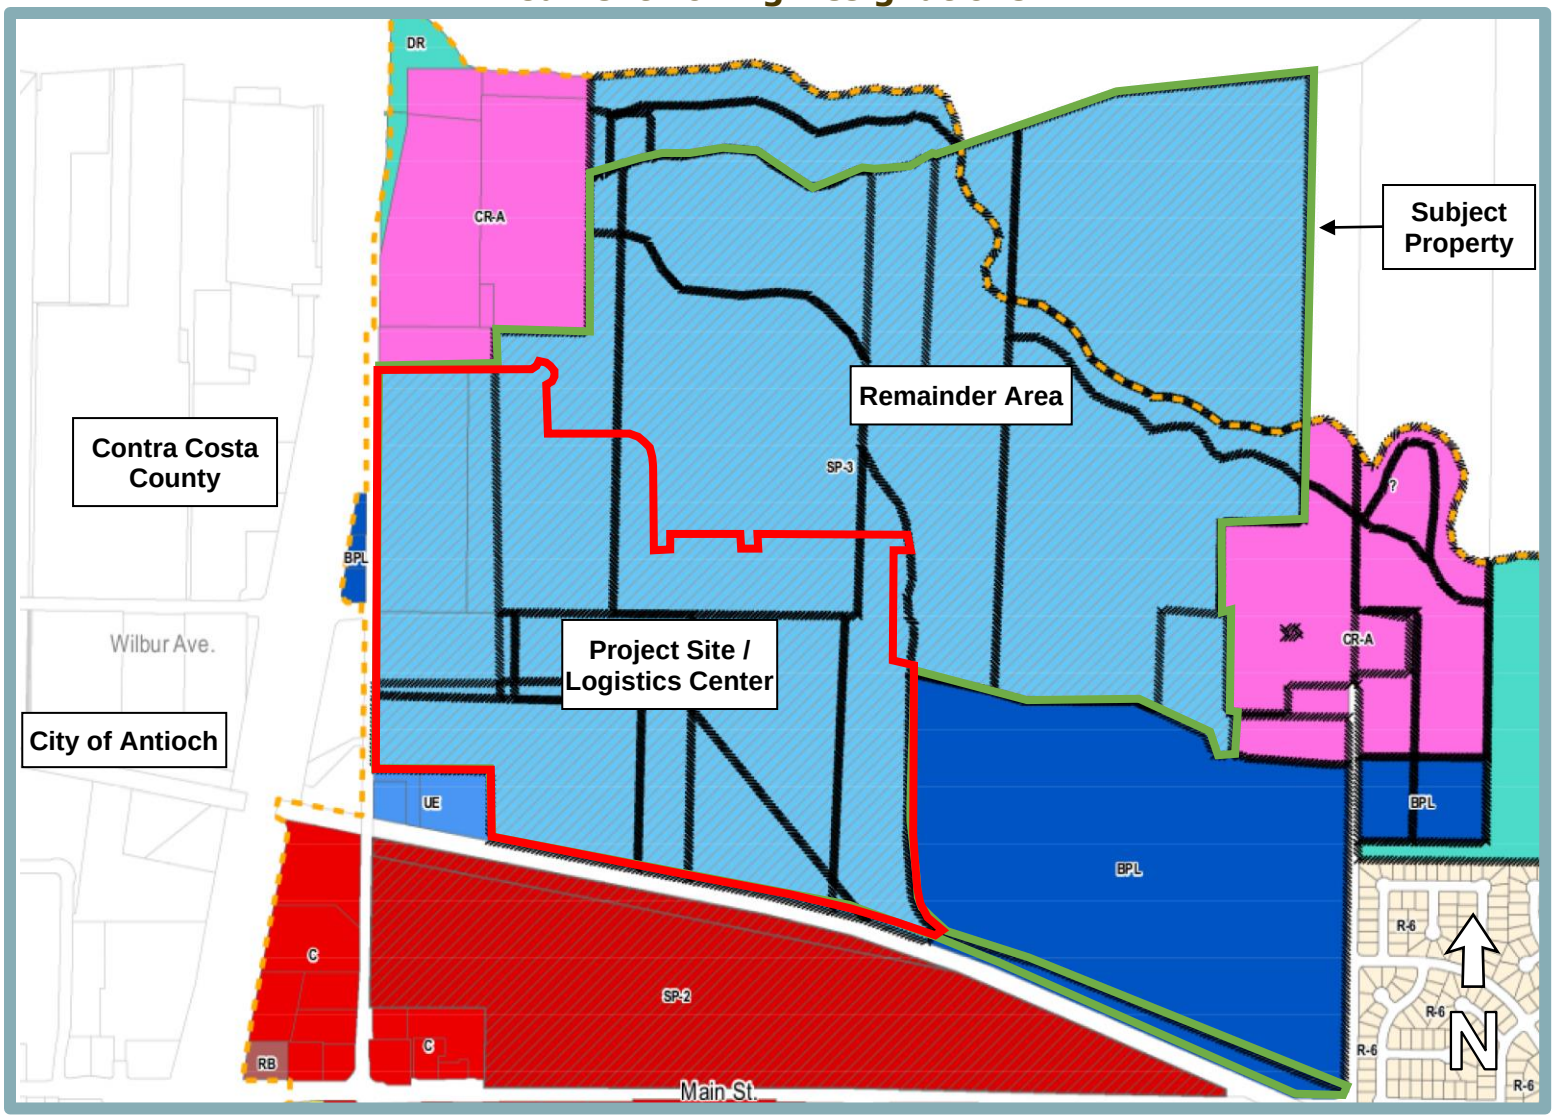


Figure 3-4
Current Zoning Designations

3. Implement a key focus in the Oakley General Plan to develop industrial and like distribution uses on the site.
4. Implement the City's vision in the General Plan to develop this site as a primary employment center.
5. Allow the sensitive area designated "Delta Recreation" on the property to remain in its natural state.

3.6 PROJECT COMPONENTS

The proposed project would include demolition of the existing on-site structures and remnant utility infrastructure and approval of a Vesting Tentative Map (and other entitlements) to subdivide the subject property into eight parcels for the construction of five new buildings and associated improvements on Lots 1 through 5 within the 143.3-acre project site (see Figure 3-5 and Figure 3-6). The following sections describe the proposed buildings, as well as access and circulation improvements, utility improvements, grading activities, and construction timing.

Proposed Buildings

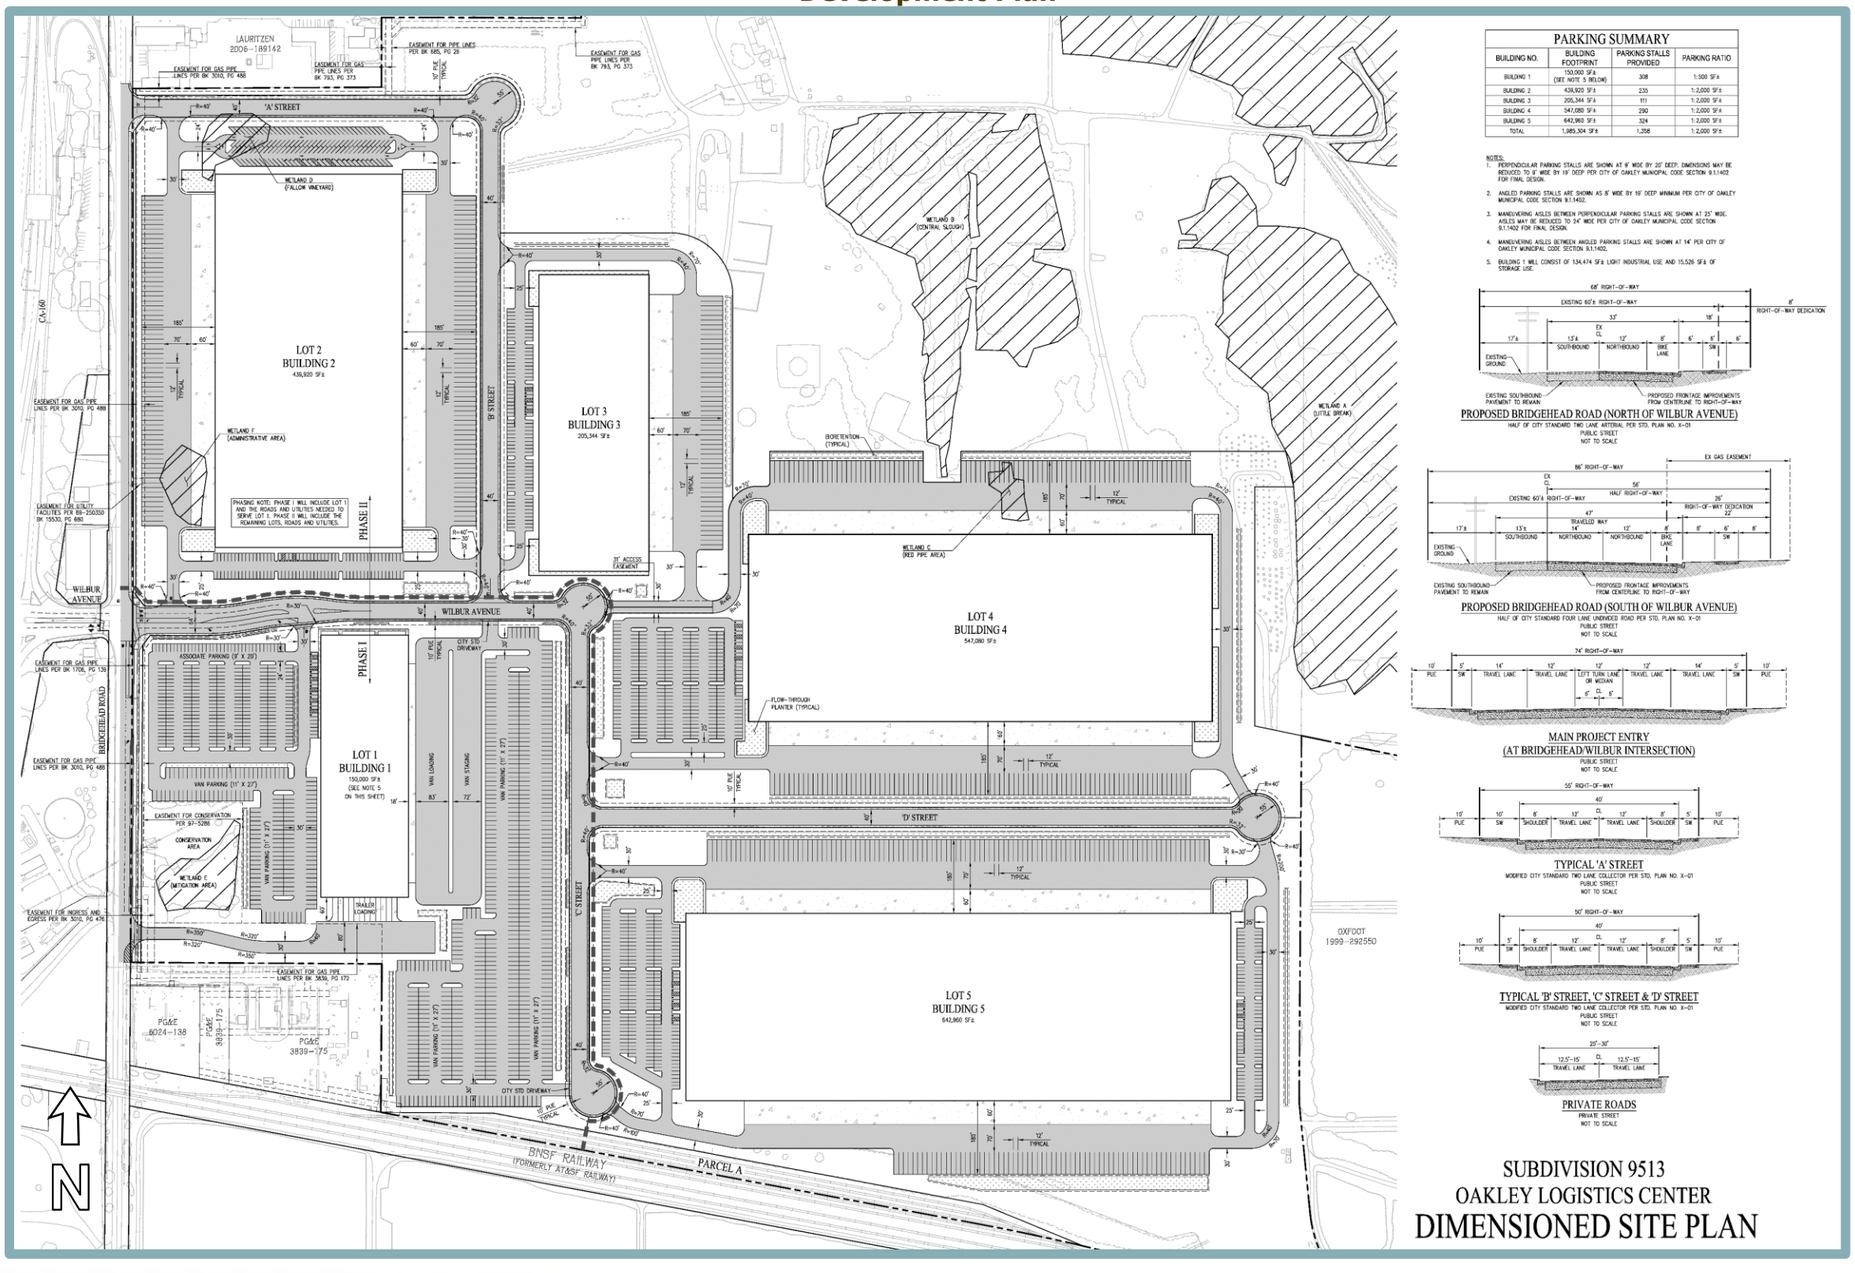
The proposed buildings would range in size from approximately 150,000 square feet (sf) to 642,960 sf, for a total of approximately 2.0 million sf, and would include front load and cross docked warehouses. Table 3-1 below provides a summary of the proposed buildings.

Table 3-1
Building Summary

Building	Size (sf)	# of Parking Stalls
1	150,000*	308
2	439,920	235
3	205,344	111
4	547,080	290
5	642,960	324
Total:	**1,985,304**	**1,358**

Note: (*) Building 1 would consist of 134,474 sf of light industrial uses and 15,526 sf of storage use, to be restricted through a Condition of Approval.

For the purpose of this EIR, the buildings are assumed to be capable of accommodating a range of light industrial, warehousing, distribution, e-commerce fulfillment, and light manufacturing uses as set forth in the Planned Unit Development. Specific uses for the buildings would be subject to the site-specific development standards established in the proposed Planned Unit Development.



Access and Circulation

The main entrance to the project site would be located on the eastern side of the intersection of Wilbur Avenue and Bridgehead Road. As part of the project, Wilbur Avenue would be extended eastward into the project site as a public street, with a roadway width of 64 feet and a 75-foot right-of-way at the site entrance. In addition, two secondary access points would be provided on Bridgehead Road: the first would be located to the south of the Wilbur Avenue entrance, and the second would be located to the north. Each of the proposed buildings would be accessible from the two northern access points, while the southernmost access would only provide access to Building 1.

Figure 3-5
Vesting Tentative Map

Figure 3-6
Development Plan

Along the project frontage south of Wilbur Avenue, the project would include widening of Bridgehead Road to include one 12-foot northbound through lane, one 14-foot northbound through lane, and an eight-foot bike lane. North of Wilbur Avenue, the roadway would include a new eight-foot bike lane, and the existing northbound through lane would be repaved. New curb, gutter, and separated sidewalks would be provided at the east side of Bridgehead Road along the length of the project frontage. The project would not include any improvements west of the Bridgehead Road centerline.

The widened section of Bridgehead Road and the proposed extension of Wilbur Avenue into the site would be dedicated to the City as public roadways, along with A Street, B Street, C Street, and D Street within the project site. All other access roads and parking areas would be privately maintained and would include easements as required by the City and utility agencies. Each of the five buildings would have individual access, parking areas, and loading dock access. The proposed project would include a total of 1,358 parking spaces. Parking spaces would be 9 feet wide by 20 feet deep per the City of Oakley Municipal Code Section 9.1.1402.

Consistent with the Oakley 2020 General Plan, roadway infrastructure would be constructed to meet the needs of the proposed planned unit development and provide access to the subject property. Street widths would be designed in accordance with traffic studies completed for the project, as well as the specifications within the City of Oakley Public Works and Engineering Standard Plans. Additionally, the proposed project would include a change to the General Plan Figure 3-1, Circulation Diagram, to remove the proposed extension of Live Oak Avenue through the project site (see Figure 3-7). Potential traffic effects associated with removal of the proposed extension were evaluated in a memorandum prepared for the project site by Abrams Associates Traffic Engineering, Inc.[1]

Tree Removal

The project site includes a total of 662 trees approximately 6.6 inches in diameter or greater. The trees are scattered throughout the site, with higher concentrations located within the northwest and southeast portions of the site. With development of the proposed project, most of the existing on-site trees would be removed, 130 of which are identified as heritage or protected trees. Additional information related to the on-site trees is provided in the Arborist Report prepared for the project site by Trees, Bugs, Dirt consulting (Appendix F).[2]

Off-Site Improvements

As noted below, the proposed wastewater conveyance system for the project site would include construction of a new sewer pump station located within Wilbur Avenue. In addition, a new six-inch force main would be constructed off-site within Bridgehead Road, between the proposed pump station and the existing Bridgehead Pump Station. Connection between the pump stations would require extension of the pipeline approximately 2,500 feet south. Additionally, because the existing Bridgehead Pump Station and Bridgehead Force Main would not be able to accommodate the increased wastewater flows from the project site, improvements would be required at both. Furthermore, as discussed under the Stormwater Drainage section below, the project would include off-site improvements at the Del Antico Detention Basin.

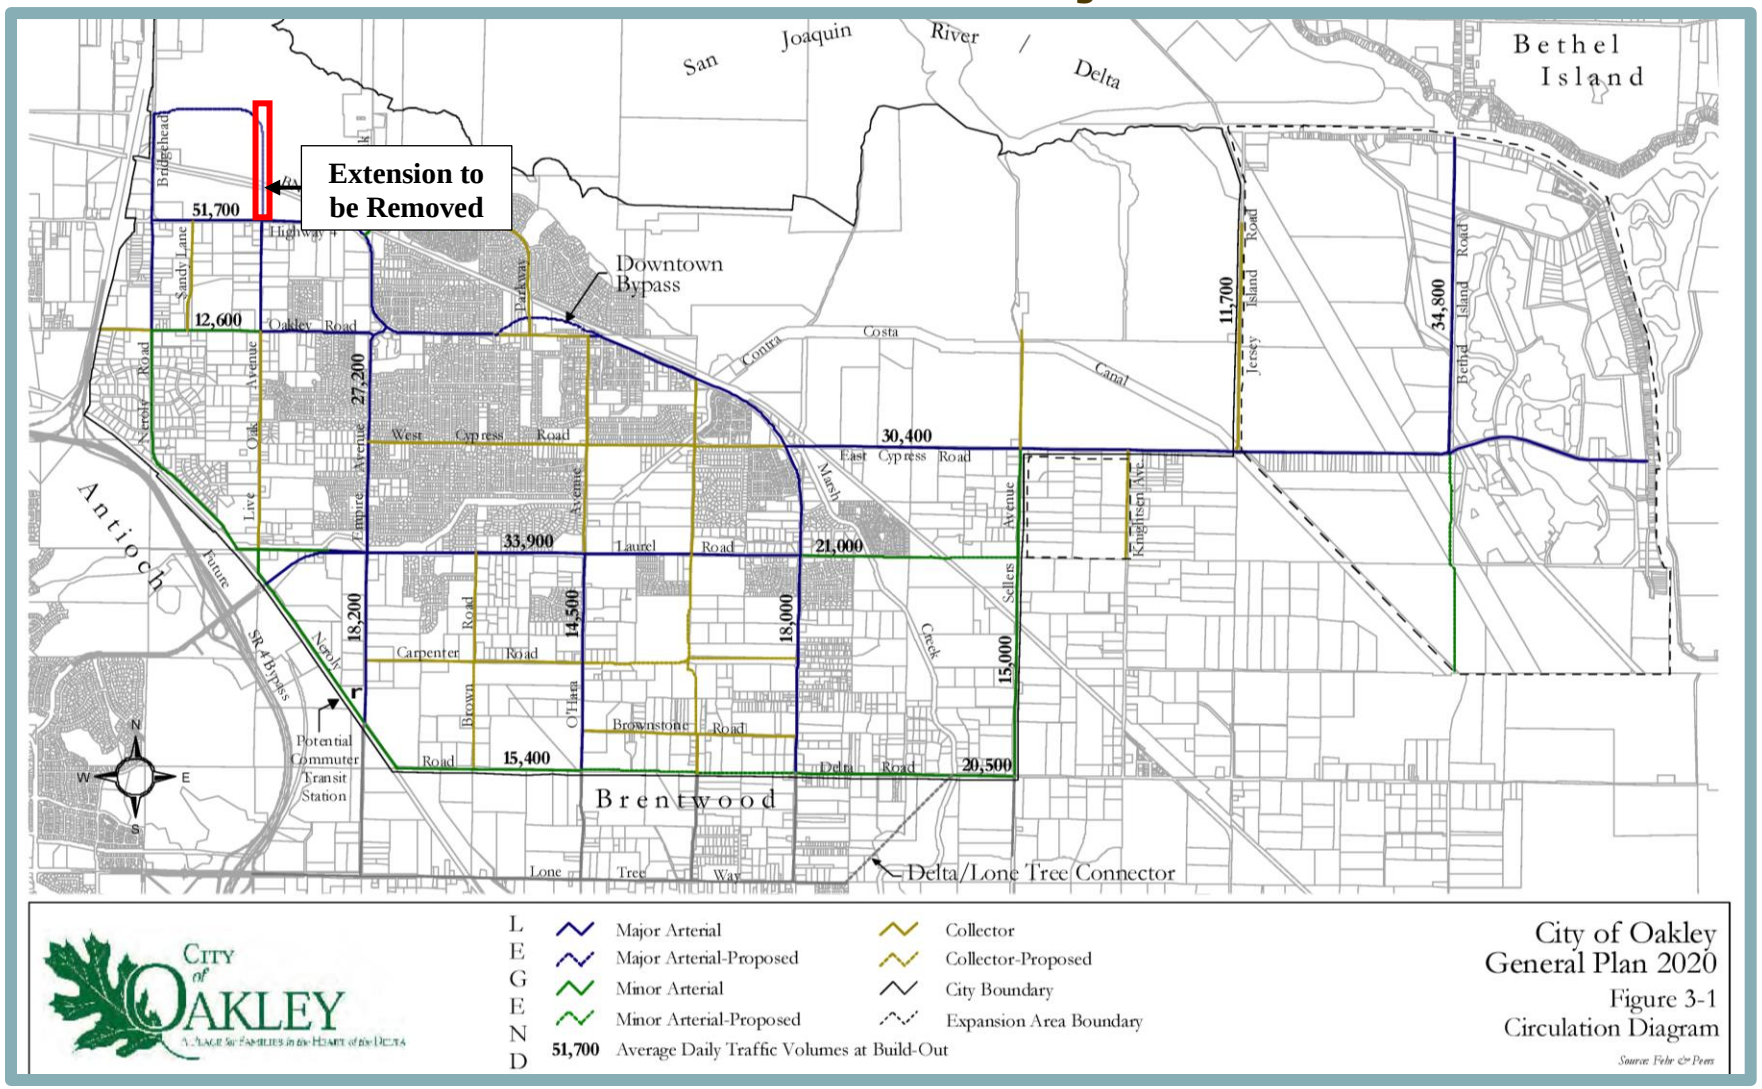
Figure 3-7
General Plan Circulation Diagram



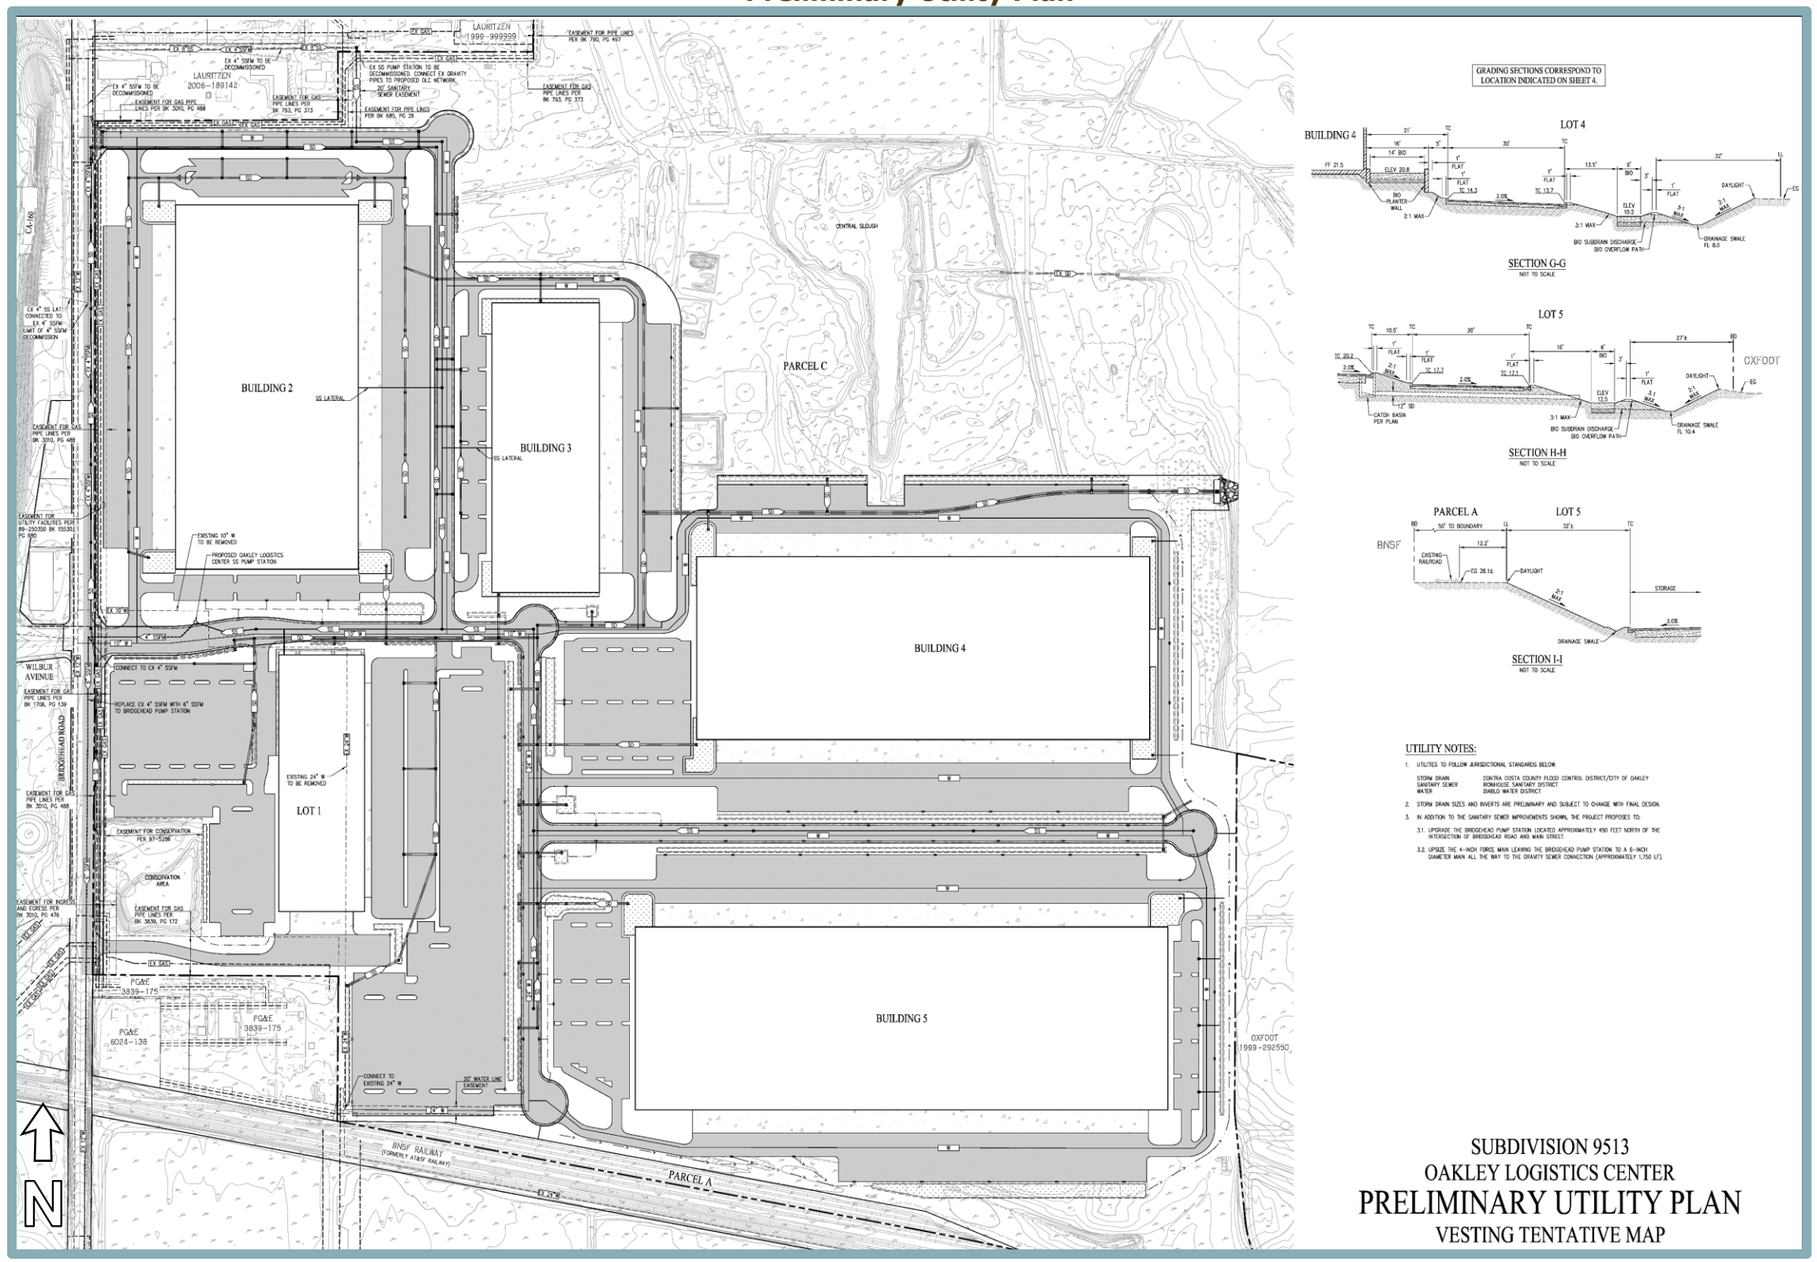


Figure 3-8
Preliminary Utility Plan

Utilities

The following sections describe water supply, sewer, and storm drainage utilities that would be constructed as part of the proposed project (see Figure 3-8).

Water

The Diablo Water District (DWD) currently provides potable water service to the project area. Along the southern boundary of the subject property, DWD maintains a 24-inch water line within the railroad corridor. At the southwest corner of the subject property, the line extends northward to Wilbur Avenue, transitioning to a 10-inch line along the way. Within Wilbur Avenue, the existing water line extends towards Bridgehead Road, where the line splits and extends further to the north and south. In addition to the DWD-owned water lines, the project site contains numerous private water lines.

As part of the proposed project, the private on-site water system would be removed completely. In addition, a portion of the existing DWD 24-inch line conflicts with the location of proposed Building 1 (the most southwesterly) and would be relocated east, under the proposed public street. Per DWD standards, any waterline serving more than one building must be owned and operated by DWD and each building must have its own metered potable water service. DWD facilities must be in public right of way or within an easement granted to DWD. Accordingly, the relocated water line in the extension of Wilbur Avenue and C Street would be owned and operated by DWD, as would any water lines within A Street and B Street. From the DWD lines, individual services to Buildings 1 through 5 would be privately owned and operated. On-site hydrants would be served by a private fire loop within the drive aisles and parking areas and will be spaced to meet Fire Code requirements. Potable and fire services would be sized to meet demand requirements calculated for each individual building and use.

Sewer

Iron House Sanitary District (ISD) provides sanitary sewer collection and treatment for the project area, including the project site. ISD operates the existing Lauritzen Sewer Pump Station in Lauritzen Lane at the north edge of the site.

From the pump station, a sewer force main in Lauritzen Lane and Bridgehead Road connects to a short section of gravity sewer piping near the off-site mobile home park. The gravity piping flows to the existing Bridgehead Sewer Pump Station near the north edge of the existing Arco AM/PM shopping center at Bridgehead Road before ultimately reaching the Ironhouse Sewer Treatment Plant near Downtown Oakley. In addition, within the project site, existing sewer lines likely connect the existing administration building to either the Lauritzen Pump Station or the sewer force main in Bridgehead Road; however, the system is not well-documented. As part of the project, such existing sewer lines would be removed. Other on-site wastewater flows including contaminated groundwater are collected in a central collection area and trucked off-site for disposal.

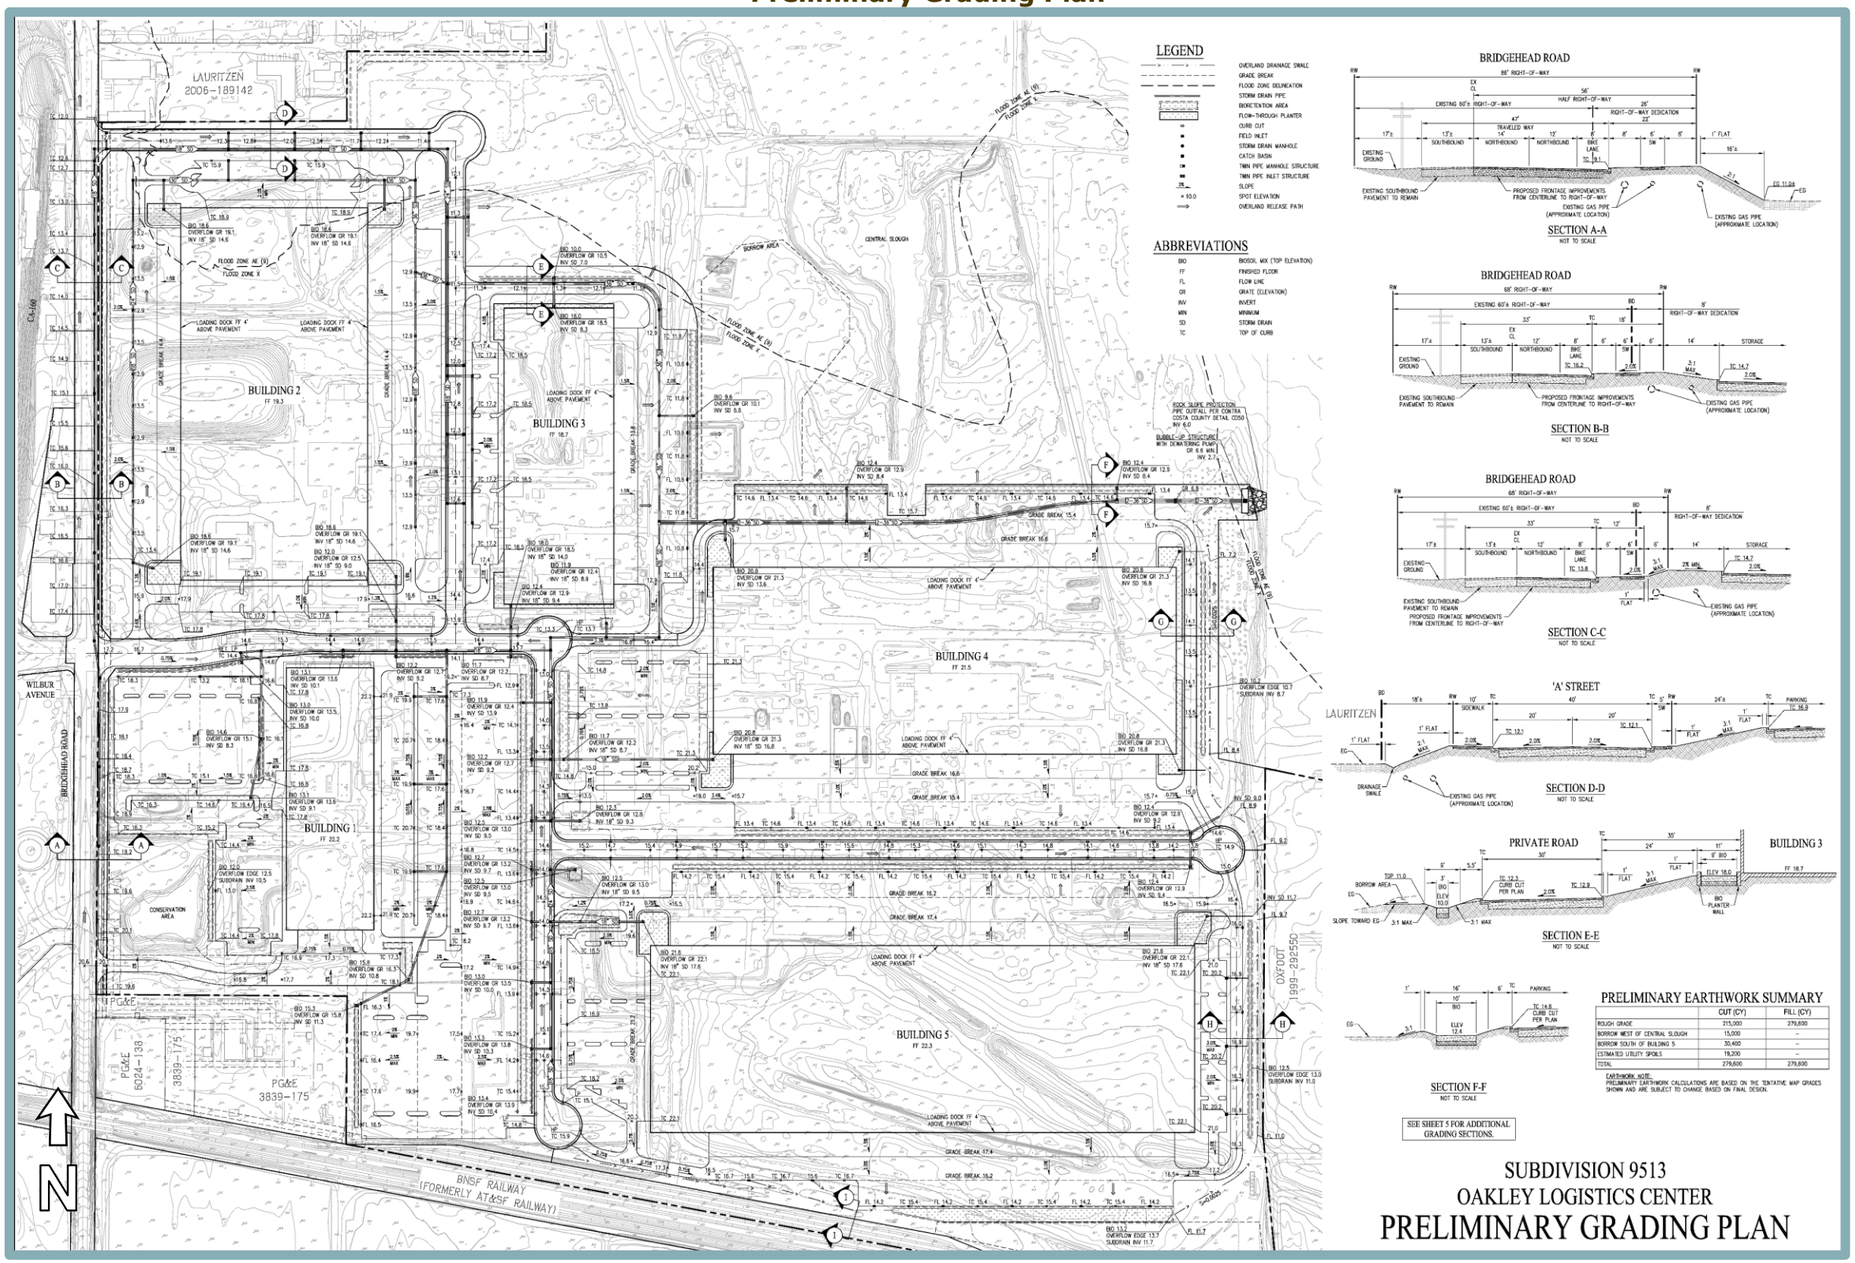
Wastewater flows generated from the proposed buildings would be collected by a new sanitary sewer line system within the on-site parking and drive aisles/streets, connecting to a new pump station that would be constructed near the Wilbur Avenue access at Bridgehead Road. Wastewater from the pump station would flow to a new force main constructed beneath Bridgehead Road, and eventually lead to the existing Bridgehead Pump Station. Minor upgrades to the Bridgehead pump station would be required to accommodate the increased flows from the project. In addition, the existing four-inch Bridgehead Force Main would need to be upsized with a new 10-inch pipeline in order to meet ISD velocity requirements. The new sewer pump station,

force main, and any lines within public streets would be owned and operated by ISD, while all other on-site sewer collection piping would be privately operated and maintained.

Stormwater Drainage

The City of Oakley operates and maintains the existing public storm drain system in the project area. Currently, the subject property does not include any existing public stormwater drainage facilities. Stormwater runoff from the subject property either infiltrates the on-site soils or flows to the San Joaquin River along the northern boundary of the subject property. Along Bridgehead Road, the site contains three depressed areas that store and infiltrate storm water flows and do not include outfalls. The southernmost is near the PG&E site and is encumbered by a conservation easement. The other two are near the existing administration building, south of the north project site boundary.

With development of the proposed project, the two northerly infiltration basins on the project site would be filled. The infiltration basin encumbered by the conservation easement would be retained. A portion of the flows from the Building 1 area will be conveyed to the infiltration basin, consistent with historic patterns. For the remainder of the project site, stormwater runoff from impervious areas, including roofs, sidewalks, and other hardscape features would be conveyed to bio-filtration basins located throughout the site. Treated stormwater from the bio-filtration basins would be conveyed, by way of a series of new underground drainage pipes and shallow ditches, to a new armored outfall apron to the marsh area east of the proposed building area. The armored apron would prevent scour and erosion, and would be equipped with a flap gate or trash rack, as necessary, to prevent debris inflows from the Delta during high tide events. Because existing public storm drain infrastructure does not exist in the area, flows from the Bridgehead Road public right-of-way and the proposed public streets would need to be conveyed through privately-owned portions of the site to the proposed outfall. Thus, such private portions of the storm drain system would require easements to the City.



If the outfall cannot be constructed as part of the early phases of site development due to permitting or other reasons, interim detention basins would be constructed near early phase building pads or open space areas to provide storage opportunities for storm water. Such basins would be filled in once the outfall is available. Hydrology and hydraulic analysis will be required for the sizing of the proposed interim detention basins.

Due to site physical constraints, on-site stormwater treatment cannot be provided for 100 percent of the impervious drainage areas within the project site. Rather, on-site treatment can only be provided for approximately 83 percent of the impervious drainage areas within the project site. Provision C.3.e.i.1 of the Municipal Regional Storm Water Permit-Order No. R2-2015-0049 allowed LID treatment at an off-site location. Thus, off-site stormwater treatment will be located at the existing 2.9-acre Del Antico Detention Basin. The proposed off-site stormwater treatment improvements would provide regional benefits of an equivalent quantity of both stormwater runoff and pollutant loading and achieve a net environmental benefit for the City.

Grading Activities and Construction Timing

Existing grades within the project site range from a low of approximately seven (7) feet above mean sea level (M.S.L.) at the northwest corner of the site to a high of approximately 23 feet in the southwest corner (see Figure 3-9).

Figure 3-9
Preliminary Grading Plan

As part of the proposed project, the project site would be graded with a series of cuts and fills to produce an overland stormwater release path towards the proposed outfall and Delta edges. Two existing wetland areas along Bridgehead Road within the northwestern portion of the project site would be filled.

Elevations for the proposed buildings would be between approximately 19 and 22 feet with adjacent truck docks being approximately four feet below the finished floors. Cuts and fills for the site are anticipated to roughly balance; thus, net import/export of soil would not likely be required. If import/export is necessary it will likely be less than 25,000 cubic yards of material.

It is anticipated the development of the proposed project is to be constructed in two phase and the duration of construction is assumed to be three to five years. Phase I would include development of Building 1, which would include e-commerce and fulfillment uses. Phase II would include development of Buildings 2 through 5, which would include e-commerce, light manufacturing, or distribution/warehousing uses.

3.6 REQUESTED DISCRETIONARY ACTIONS

Implementation of the proposed project would require the following discretionary actions by the City of Oakley:

- Certification of the Environmental Impact Report, including adoption of Findings of Fact and a Statement of Overriding Considerations. Before the City can approve the proposed project, the City must certify that the EIR was completed in compliance with the requirements of CEQA, that the decision-making body has reviewed and considered the information in the EIR, and that the EIR reflects the independent judgment of the City of Davis. The City would also be required to adopt Findings of Fact, and for any impacts determined to be significant and unavoidable, a Statement of Overriding Considerations, as part of project approval.
- Adoption of the Mitigation Monitoring and Reporting Program. Certification of the EIR requires adoption of a Mitigation Monitoring and Reporting Plan (MMRP), which specifies the methods for monitoring mitigation measures required to eliminate or reduce the project's significant effects on the environment.
- Approval of a General Plan Amendment (map and text) (GP 04-18). The proposed project would require a General Plan Amendment to amend the land use designation of the 143.3-acre project site from Light Industrial/Business Park/Utility Energy to Light Industrial, and to remove the proposed extension of Live Oak Avenue from Figure 3-1, Circulation Diagram, of the General Plan (see Figure 3-7).
- Approval of a Rezone (RZ 08-18). The proposed project would require a rezone to amend the zoning designation of the 375.7-acre subject property from Specific Plan (SP-3) to Planned Unit Development (P-1).
- Approval of a Vesting Tentative Map (TM 05-18). The proposed project would include a Vesting Tentative Map to create eight parcels within the 375.7-acre subject property;
- Approval of Final Development Plan. Because the project would rezone the 375.7-acre subject property to P-1, the project would require approval of a Final Development Plan pursuant to Section 9.1.1002 of the City of Oakley Municipal Code. Standards and conditions, including permitted and conditionally permitted uses, would be provided for both the 143.3-acre project site and the 232.4-acre remainder area.
- Approval of a Design Review (DR 12-18). The proposed project would be subject to the City's Design Review process in accordance with Section 9.1.1604 of the City of Oakley

Municipal Code. The purpose of the Design Review process is to review and analysis of the project's design, including site plans, architectural elevations, conceptual landscape plans, and other physical development.

- Approval of a Development Agreement (DA 01-18). The proposed project includes a request for approval of a Development Agreement for the proposed development. The agreement would be between the City of Oakley and the project applicant.
- Approval of a Tree Removal Permit. The proposed project would require approval of a tree removal permit in accordance with Section 9.1.1112 of the City of Oakley Municipal Code.

4. Environmental Impacts and Mitigation Measures

4.0 Introduction to the Analysis

4.0. INTRODUCTION TO THE ANALYSIS

4.0.1 INTRODUCTION

The technical chapters of this EIR include the analysis of the potential impacts of buildout of the proposed project on a range of environmental issue areas. Chapters 4.1 through 4.5 describe the focus of the analysis, references and other data sources for the analysis, the environmental setting related to each specific issue area, project-specific impacts and mitigation measures, and the cumulative impacts of the project for each issue area. The format of each of the technical chapters is described at the end of this chapter.

4.0.2 DETERMINATION OF SIGNIFICANCE

Under CEQA, a significant effect is defined as a substantial or potentially substantial adverse change in the environment (Public Resources Code §21068). The CEQA Guidelines require that the determination of significance be based on scientific and factual data. The specific criteria for determining the significance of a particular impact are identified within in each technical chapter, and are consistent with significance criteria set forth in the CEQA Guidelines or as based on the professional judgment of the EIR preparers.

4.0.3 ENVIRONMENTAL ISSUES DISMISSED IN THE INITIAL STUDY

The Initial Study prepared for the proposed project (Appendix A) includes a detailed environmental checklist addressing a range of technical environmental issues. For each technical environmental issue, the Initial Study identifies the level of impact for the proposed project. The Initial Study identifies the environmental effects as “no impact,” “less than significant,” “less than significant with mitigation incorporated,” and “potentially significant.”

Impacts identified in the Initial Study as less-than-significant with mitigation, less than significant, or no impact are presented below. All remaining issues identified in the Initial Study as potentially significant are discussed in the subsequent technical chapters of this EIR.

- *Aesthetics (All Sections):* The proposed project is not in an area designated as a scenic vista by the City of Oakley and, according to the California Department of Transportation, State scenic highways are not located within, or within view of, the project site, and the project would not damage any scenic resources. The project site is located within an urbanized area of the City of Oakley and is currently highly disturbed and vacant. As such, views of the site would not be degraded as a result of implementation of the proposed project. In addition, development would be subject to Design Review, to ensure the proposed project would not result in the addition of substantial light or glare. Based on the above, the proposed project would result in ***less-than-significant*** impacts to Aesthetics.

- *Air Quality (d):* Typical sources of objectionable odor include wastewater treatment plants, landfills, and composting facilities, which are not proposed as part of the project, nor are such uses located near the project site. Diesel fumes from construction equipment and delivery trucks are often found to be objectionable; however, future construction of the project site would be temporary, and permanent sources of odor are not currently present

or proposed on the project site. Therefore, the proposed project is not likely to create objectionable odors affecting a substantial number of people, and a ***less-than-significant*** impact would occur related to odors. Impacts related to odors are not discussed further in this EIR.

- *Biological Resources (f):* The proposed project would adhere to the East Contra Costa County Habitat Conservation Plan and, thus, would not conflict with the provisions of an adopted Habitat Conservation Plan. Therefore, a ***less-than-significant*** impact would occur because there would be no conflicts with an adopted Habitat Conservation Plan. Impacts related to Habitat Conservation Plans are not discussed further in this EIR

- *Cultural Resources (All Sections).* According to the Oakley General Plan EIR, officially designated historical structures do not exist within the City; however, numerous buildings within the downtown area may be eligible for designation or listing as historic structures. The project site does not contain any farm structures that could be eligible for historical consideration by the City, nor does the site contain any historic structures listed by the California Register of Historic Resources, National Register of Historic Places, or the California Register of Historical Landmarks. Due to the disturbed nature of the site and the surrounding area, the discovery of archeological resources is not expected. However, unknown archaeological resources, including human bone, have the potential to be uncovered during ground-disturbing construction activities. Implementation of Mitigation Measures V-1 and V-2, which require site-specific procedures if buried archaeological, paleontological, and/or cultural resources are encountered during site grading or other site work, would reduce the such impacts to a *less-than-significant* level. Therefore, the proposed project would result in a ***less-than-significant*** impact to Cultural Resources.

- *Geology and Soils (All Sections):* Although the project site is not located within an Alquist-Priolo Special Studies Zone, the General Plan EIR determined that the City of Oakley is within a seismically active zone which could expose people or structures to substantial adverse effects, including effects related to liquefaction. Implementation of Mitigation Measures VII-1 and VII-2, which require the Improvement Plans and Grading Plans to incorporate recommendations from a design-level geotechnical report for approval by the City Engineer prior to issuance of a grading permit, would reduce the above impacts to a *less-than-significant* level. On-site soils are not considered to be expansive and implementation of the proposed project would not result in substantial soil erosion or exposure of future structures to expansive soils.

  The project site has been heavily disturbed through previous filling and grading activities, manufacturing operations, and ongoing remediation activities. However unlikely, the potential exists for ground disturbing activities associated with implementation of the proposed project to discover or destroy a unique paleontological resource or geologic feature. Implementation of Mitigation Measure VII-3, which reiterates the requirement to implement Mitigation Measures V-1 and V-2, would reduce the potential impact to a *less-than-significant* level. Therefore, the proposed project would result in a ***less-than-significant*** impact to Geology and Soils.

- *Hazards and Hazardous Materials (All Sections):* The project site is the location of a former DuPont chemical manufacturing facility which ceased activities in 1999. On-site manufacturing facilities have since been demolished and remediation activities to remove

or treat impacted sediment, soil, and groundwater at the site are being implemented. The project site is not listed on the Department of Toxic Substances Control- Hazardous Waste and Substances Site List (Cortese List) and operation of the proposed project would not require the use of hazardous materials. Furthermore, during construction and operation of the proposed project, the project applicant and all future operators at the project site would be required to comply with the measures included in the Soil and Materials Management Plan (SMMP) that has been prepared for the project or, alternatively, submit a separate SMMP to the Department of Toxic Substances Control for review and approval.

The project site is not located within close proximity to a school or airport, would not impair or physically interfere with an adopted emergency response plan, and is not located within or adjacent to wildlands which could expose people or structures to wildfires. Therefore, the proposed project would result in ***less-than-significant*** impacts related to Hazards and Hazardous Materials.

- *Land Use and Planning (All Sections):* The General Plan Amendment to change the Utility Energy and Business Park designation for the site to Light Industrial, and the rezone from Specific Plan to Planned Unit Development would not physically divide an established community and the project would be consistent with surrounding industrial development. As such, the proposed project would result in a ***less-than-significant*** impact.

- *Mineral Resources (All Sections):* The project site has been previously disturbed and does not constitute a likely source of minerals. The nearest active mine is the Kennedy Mine, located approximately 57 miles from the project site. Because the project would not result in the loss of availability of a known mineral resource or locally important recovery site, ***no impact*** would occur.

- *Noise (All Sections):* Operation of the proposed project would involve sources of noise that would be similar to the surrounding area, such as vehicle noise from employee trips to and from the sites, delivery trucks, and other limited noise sources. The nearest sensitive noise receptor to the project site is a mobile home park located approximately 1,000 away. Based on the Caltrans Transportation and Construction Vibration Guidance Manual, vibration generated by construction activities associated with implementation of the proposed project would not be expected to result in structural damage to nearby residences. In addition, Section 9.1.1002(4)(b)(x) of the City of Oakley Municipal Code prohibits the use of buildings and operations which involve noise levels incompatible with present or future development of surrounding property, and the nearest sensitive receptors are 1,000 feet away. Furthermore, the project site is not located within an airport land use plan or in the vicinity of a private airstrip. Therefore, the proposed project would result in a ***less-than-significant*** impact related to noise.

- *Population and Housing (All Sections):* The proposed project would require approval of a General Plan Amendment and rezone to change the land use designation of the project site from Business Park and Utility Energy to Light Industrial and the zoning from Specific Plan to Planned Unit Development. The requested changes to the site would not be expected to induce population growth for the area beyond what has been analyzed in the General Plan EIR. In addition, the project site is predominantly vacant and has been previously used as a manufacturing facility. As such, demolition of existing on-site

structures would not result in the loss of housing or displacement of existence residents. Therefore, the a ***less-than-significant*** impact would occur.

- *Public Services (All Sections):* The proposed project would be used for light industrial, warehousing, distribution, e-commerce fulfillment, and light manufacturing purposes. Residences would not be developed as part of the project, and thus, an increase in schools, parks, or recreational public facilities such as trails or open spaces would not be necessary. Based on the above, the project would not result in substantial adverse physical impacts associated with the provision of new or altered governmental facilities, and thus, a ***less-than-significant*** impact would occur.

- *Recreation (All Sections):* The project would not create housing which would induce population growth in the area, and thus, would not create increased usage of existing neighborhood and regional parks or recreational facilities. Therefore, the project would have a ***less-than-significant*** impact related to recreational requirements.

- *Transportation (d):* The proposed project would construct internal circulation roads consistent with Title 19 Section 3.05 of the California Code of Regulations, which mandates right of way lanes not be less than 20 feet in width and fire/emergency access lanes be a minimum of 20 feet wide. Lanes would be built out 25 to 30 feet in width. Thus, the proposed project would have a ***less-than-significant*** impact related to inadequate emergency access.

- *Tribal Cultural Resources (All Sections):* According to a search of the California Historical Resource Information System and the California Register of Historical Resources, the project site is not eligible for listing as a historical resource. Compliant with AB 52 (Public Resources Code Section 21080.3.1), on January 28, 2019, project notification letters were distributed to local Native American Tribes. The City did not receive any requests for consultation. A low potential exists for ground disturbing activities associated with implementation of the proposed project to unearth undiscovered surficial Native American resources. Implementation of Mitigation Measures V-1 and V-2, which require all work to be stopped within 100 feet of a newly discovered archeological, paleontological, and/or tribal cultural resource, and coordination with the Contra Costa County Coroner and the Native American Heritage Commission in the event that human bone is discovered on the site, would reduce all potential construction-related impacts to a ***less-than-significant*** level.

- *Wildfire (All Sections):* The project site is located on a relatively flat surface in an urbanized area surrounded by existing commercial and residential development in the City of Oakley. In addition, the California Department of Forestry and Fire Protection Fire and Resource Assessment Program indicates that the project site is not located within or adjacent to a Very High Fire Hazard Severity Zone. Therefore, a ***less-than-significant*** impact would occur.

4.0.4 ENVIRONMENTAL ISSUES ADDRESSED IN THIS EIR

The Initial Study identified several environmental impacts as potentially significant, requiring further analysis. This EIR provides the additional analysis necessary to address the technical environmental impacts not fully resolved in the Initial Study. Consistent with the conclusions of

the Initial Study, the following environmental issues are addressed in separate technical chapters of this EIR:

- Air Quality and Greenhouse Gas Emissions;
- Biological Resources;
- Hydrology and Water Quality;
- Transportation and Circulation; and
- Utilities and Service Systems.

Chapter 5.0 of the EIR presents a discussion and comprehensive list of all significant and unavoidable impacts identified in Chapters 4.1 through 4.5.

4.0.5 CHAPTER FORMAT

Each technical chapter addressing a specific environmental issue begins with an **introduction** describing the purpose of the chapter. The introduction is followed by a description of the project's **existing environmental setting** pertaining to that particular environmental issue. The setting description is followed by the **regulatory context** and the **impacts and mitigation measures** discussion. The discussion contains the **standards of significance**, followed by the **method of analysis**. The standards of significance section includes references to the specific Initial Study checklist questions consistent with Appendix G of the CEQA Guidelines. The **impacts and mitigation measures** discussion includes impact statements prefaced by a number in bold-faced type. An explanation of each impact and an analysis of the impact's significance follow each impact statement (see below), followed by all mitigation measures pertinent to each individual impact. The degree of relief provided by identified mitigation measures is also evaluated. An example of the format is shown below.

4.x-1 Statement of Impact

Discussion of impact for the proposed project in paragraph format.

Statement of ***level of significance*** of impact without implementation of mitigation is included at the end of each impact discussion. The following levels of significance without implementation of mitigation will be utilized in the EIR: less than significant and significant. If an impact is determined to be significant, mitigation will be included in order to reduce the specific impact to the maximum extent feasible. Impacts that cannot be reduced to a less-than-significant level with implementation of all feasible mitigation would be considered to remain significant and unavoidable.

Mitigation Measure(s)
Statement of *level of significance* of impact with implementation of mitigation is included immediately preceding the mitigation measures.

4.x-1(a) *Required mitigation measure(s) presented in italics and listed in consecutive order.*

4.x-1(b) *etc., etc.*

4.1 Air Quality and Greenhouse Gas Emissions

4.1. AIR QUALITY AND GREENHOUSE GAS EMISSIONS

4.1.1 INTRODUCTION

The Air Quality and Greenhouse Gas Emissions chapter of the EIR describes the potential impacts of the proposed project on local and regional air quality. The chapter includes a discussion of the existing air quality and greenhouse gas (GHG) setting, construction-related air quality impacts resulting from grading and equipment emissions, direct and indirect emissions associated with the project, the impacts of these emissions on both the local and regional scale, and mitigation measures warranted to reduce or eliminate any identified significant impacts. This chapter is based on the City of Oakley General Plan,[1] and the General Plan EIR,[2] the California Emissions Estimator Model (CalEEMod) version 2016.3.2,[3] and is primarily based on information, guidance, and analysis protocol provided by the Bay Area Air Quality Management District (BAAQMD). All modeling results are included in Appendix D of this EIR.

4.1.2 EXISTING ENVIRONMENTAL SETTING

The following information provides an overview of the existing environmental setting in relation to air quality within the proposed project area. Air basin characteristics, ambient air quality standards (AAQS), attainment status and regional air quality plans, local air quality monitoring, odors, sensitive receptors, and greenhouse gases are discussed.

Air Basin Characteristics

The project site is located in the eastern portion of the nine-county San Francisco Bay Area Air Basin (SFBAAB), and is within the jurisdictional boundaries of the BAAQMD. The SFBAAB consists of coastal mountain ranges, inland valleys, and bays. The proposed project is located on the south side of the San Joaquin River delta, east of the Carquinez Strait, and would be considered to be within the Carquinez Strait region of the SFBAAB. Being located between the greater Bay Area and the Central Valley has great influence on the climate and air quality of the area. During the summer and fall months, marine air is drawn eastward through the Carquinez Strait, with common wind speeds of 15 to 20 miles per hour throughout the region.

The general westerly flow of the winds in the straits tends to move pollutants east. Thus, the winds dilute pollutants and transport them away from the area, so that emissions released in the project area have more influence on air quality in the Sacramento and San Joaquin Valleys than locally. However, stationary sources located in upwind cities and the City's location downwind of the greater Bay Area also means that pollutants from other areas are transported to the City.

Average daily maximum temperatures (in degrees Fahrenheit) range from mid 50s to low 60s in the winter and the high 80s in the summer. Average minimum temperatures are in the high 30s to low 40s in the winter and the mid 50s in the summer. Rainfall amounts in the region vary, with an average of 13.3 inches annually in Oakley.

Ambient Air Quality Standards

Both the U.S. Environmental Protection Agency (USEPA) and the California Air Resources Board (CARB) have established ambient air quality standards for common pollutants. The federal standards are divided into primary standards, which are designed to protect the public health, and secondary standards, which are designed to protect the public welfare. The ambient air quality standards for each contaminant represent safe levels that avoid specific adverse health effects. Pollutants for which air quality standards have been established are called "criteria" pollutants. Table 4.1-1 identifies the major pollutants, characteristics, health effects and typical sources. The federal and California ambient air quality standards (NAAQS and CAAQS, respectively) are summarized in Table 4.1-2. The NAAQS and CAAQS were developed independently with differing purposes and methods. As a result, the federal and State standards differ in some cases. In general, the State of California standards are more stringent than the federal standards, particularly for ozone and particulate matter (PM).

A description of each criteria pollutant, including the potential health effects from each pollutant, is provided in the following section.

Ozone

Ozone is a reactive gas consisting of three oxygen atoms. In the troposphere, ozone is a product of the photochemical process involving the sun's energy, and is a secondary pollutant formed as a result of a complex chemical reaction between reactive organic gases (ROG) and oxides of nitrogen (NO_X) emissions in the presence of sunlight. As such, unlike other pollutants, ozone is not released directly into the atmosphere from any sources. In the stratosphere, ozone exists naturally and shields Earth from harmful incoming ultraviolet radiation. The primary source of ozone precursors is mobile sources, including cars, trucks, buses, construction equipment, and agricultural equipment. Ground-level ozone reaches the highest level during the afternoon and early evening hours. High levels occur most often during the summer months. Ground-level ozone is a strong irritant that could cause constriction of the airways, forcing the respiratory system to work harder in order to provide oxygen. Ozone at the Earth's surface causes numerous adverse health effects and is a major component of smog. High concentrations of ground level ozone can adversely affect the human respiratory system and aggravate cardiovascular disease and many respiratory ailments.

Reactive Organic Gas

ROG is a reactive chemical gas composed of hydrocarbon compounds typically found in paints and solvents that contributes to the formation of smog and ozone by involvement in atmospheric chemical reactions. A separate health standard does not exist for ROG. However, some compounds that make up ROG are toxic, such as the carcinogen benzene.

Oxides of Nitrogen

NO_X are a family of gaseous nitrogen compounds and are precursors to the formation of ozone and particulate matter. The major component of NO_X, nitrogen dioxide (NO_2), is a reddish-brown gas that discolors the air and is toxic at high concentrations. NO_X results primarily from the combustion of fossil fuels under high temperature and pressure. On-road and off-road motor vehicles and fuel combustion are the major sources of NO_X. NO_X reacts with ROG to form smog, which could result in adverse impacts to human health, damage the environment, and cause poor visibility. Additionally, NO_X emissions are a major component of acid rain. Health effects related to NO_X include lung irritation and lung damage and can cause increased risk of acute and chronic respiratory disease.

Table 4.1-1
Summary of Criteria Pollutants

Pollutant	Characteristics	Health Effects	Major Sources
Ozone	A highly reactive gas produced by the photochemical process involving a chemical reaction between the sun's energy and other pollutant emissions. Often called photochemical smog.	• Eye irritation • Wheezing, chest pain, dry throat, headache, or nausea • Aggravated respiratory disease such as emphysema, bronchitis, and asthma	Combustion sources such as factories, automobiles, and evaporation of solvents and fuels.
Carbon Monoxide	An odorless, colorless, highly toxic gas that is formed by the incomplete combustion of fuels.	• Impairment of oxygen transport in the bloodstream • Impaired vision, reduced alertness, chest pain, and headaches • Can be fatal in the case of very high concentrations	Automobile exhaust, combustion of fuels, and combustion of wood in woodstoves and fireplaces.
Nitrogen Dioxide	A reddish-brown gas that discolors the air and is formed during combustion of fossil fuels under high temperature and pressure.	• Lung irrigation and damage • Increased risk of acute and chronic respiratory disease	Automobile and diesel truck exhaust, industrial processes, and fossil-fueled power plants.
Sulfur Dioxide	A colorless, irritating gas with a rotten egg odor formed by combustion of sulfur-containing fossil fuels.	• Aggravation of chronic obstruction lung disease • Increased risk of acute and chronic respiratory disease	Diesel vehicle exhaust, oil-powered power plants, and industrial processes.
Particulate Matter (PM_{10} and $PM_{2.5}$)	A complex mixture of extremely small particles and liquid droplets that can easily pass through the throat and nose and enter the lungs.	• Aggravation of chronic respiratory disease • Heart and lung disease • Coughing • Bronchitis • Chronic respiratory disease in children • Irregular heartbeat • Nonfatal heart attacks	Combustion sources such as automobiles, power generation, industrial processes, and wood burning. Also from unpaved roads, farming activities, and fugitive windblown dust.
Lead	A metal found naturally in the environment as well as in manufactured products.	• Loss of appetite, weakness, apathy, and miscarriage • Lesions of the neuromuscular system, circulatory system, brain, and gastrointestinal tract	Industrial sources and combustion of leaded aviation gasoline.

Table 4.1-2
Ambient Air Quality Standards

Pollutant	Averaging Time	CAAQS	NAAQS	
			Primary	Secondary
Ozone	1 Hour	0.09 ppm	-	Same as primary
	8 Hour	0.070 ppm	0.070 ppm	
Carbon Monoxide	8 Hour	9 ppm	9 ppm	-
	1 Hour	20 ppm	35 ppm	
Nitrogen Dioxide	Annual Mean	0.030 ppm	53 ppb	Same as primary
	1 Hour	0.18 ppm	100 ppb	-
Sulfur Dioxide	24 Hour	0.04 ppm	-	-
	3 Hour	-	-	0.5 ppm
	1 Hour	0.25 ppm	75 ppb	-
Respirable Particulate Matter (PM_{10})	Annual Mean	20 ug/m^3	-	Same as primary
	24 Hour	50 ug/m^3	150 ug/m^3	
Fine Particulate Matter ($PM_{2.5}$)	Annual Mean	12 ug/m^3	12 ug/m^3	15 ug/m^3
	24 Hour	-	35 ug/m^3	Same as primary
Lead	30 Day Average	1.5 ug/m^3	-	-
	Calendar Quarter	-	1.5 ug/m^3	Same as primary
Sulfates	24 Hour	25 ug/m^3	-	-
Hydrogen Sulfide	1 Hour	0.03 ppm	-	-
Vinyl Chloride	24 Hour	0.010 ppm	-	-
Visibility Reducing Particles[1]	8 Hour	see note below	-	-

ppm = parts per million
ppb = parts per billion
µg/m^3 = micrograms per cubic meter

1. Statewide Visibility Reducing Particle Standard (except Lake Tahoe Air Basin): Particles in sufficient amount to produce an extinction coefficient of 0.23 per kilometer when the relative humidity is less than 70 percent. This standard is intended to limit the frequency and severity of visibility impairment due to regional haze and is equivalent to a 10-mile nominal visual range.

Carbon Monoxide

Carbon monoxide (CO) is a colorless, odorless, poisonous gas produced by incomplete burning of carbon-based fuels such as gasoline, oil, and wood. When CO enters the body, the CO combines with chemicals in the body, which prevents blood from carrying oxygen to cells, tissues, and organs. Symptoms of exposure to CO can include problems with vision, reduced alertness, and general reduction in mental and physical functions. Exposure to CO can result in chest pain, headaches, reduced mental alertness, and death at high concentrations.

Sulfur Dioxide

Sulfur Dioxide (SO_2) is a colorless, irritating gas with a rotten egg odor formed primarily by the combustion of sulfur-containing fossil fuels from mobile sources, such as locomotives, ships, and off-road diesel equipment. SO_2 is also emitted from several industrial processes, such as petroleum refining and metal processing. Similar to airborne NO_X, suspended sulfur oxide

particles contribute to poor visibility. The sulfur oxide particles are also a component of particulate matter, discussed below.

Particulate Matter

Particulate matter, also known as particle pollution or PM, is a complex mixture of extremely small particles and liquid droplets. Particle pollution is made up of a number of components, including acids (such as nitrates and sulfates), organic chemicals, metals, and soil or dust particles. The size of particles is directly linked to their potential for causing health impacts. The USEPA is concerned about particles that are 10 micrometers in diameter or smaller (PM_{10}) because those are the particles that generally pass through the throat and nose and enter the lungs. Once inhaled, the particles could affect the heart and lungs and cause serious health effects. USEPA groups particle pollution into three categories based on their size and where they are deposited:

- "Inhalable coarse particles ($PM_{2.5-10}$)," which are found near roadways and dusty industries, are between 2.5 and 10 micrometers in diameter. $PM_{2.5-10}$ is deposited in the thoracic region of the lungs.
- "Fine particles ($PM_{2.5}$)," which are found in smoke and haze, are 2.5 micrometers in diameter and smaller. $PM_{2.5}$ particles could be directly emitted from sources such as forest fires, or could form when gases emitted from power plants, industries, and automobiles react in the air. They penetrate deeply into the thoracic and alveolar regions of the lungs.
- “Ultrafine particles (UFP),” are very, very small particles (less than 0.1 micrometers in diameter) largely resulting from the combustion of fossil fuels, meat, wood, and other hydrocarbons. While UFP mass is a small portion of $PM_{2.5}$, their high surface area, deep lung penetration, and transfer into the bloodstream could result in disproportionate health impacts relative to their mass. UFP is not currently regulated separately, but is analyzed as part of $PM_{2.5}$.

PM_{10}, $PM_{2.5}$, and UFP include primary pollutants, which are emitted directly to the atmosphere and secondary pollutants, which are formed in the atmosphere by chemical reactions among precursors. Generally speaking, $PM_{2.5}$ and UFP are emitted by combustion sources like vehicles, power generation, industrial processes, and wood burning, while PM_{10} sources include the same sources plus roads and farming activities. Fugitive windblown dust and other area sources also represent a source of airborne dust. Long-term PM pollution, especially fine particles, could result in significant health problems including, but not limited to, the following: increased respiratory symptoms, such as irritation of the airways, coughing or difficulty breathing; decreased lung function; aggravated asthma; development of chronic respiratory disease in children; development of chronic bronchitis or obstructive lung disease; irregular heartbeat; heart attacks; and increased blood pressure.

Lead

Lead is a relatively soft and chemically resistant metal that is a natural constituent of air, water, and the biosphere. Lead is neither created nor destroyed in the environment, and, thus, essentially persists forever. Lead forms compounds with both organic and inorganic substances. As an air pollutant, lead is present in small particles. Sources of lead emissions in California include a variety of industrial activities. Gasoline-powered automobile engines were a major source of airborne lead through the use of leaded fuels. The use of leaded fuel has been mostly phased out, with the result that ambient concentrations of lead have dropped dramatically. However, because lead was emitted in large amounts from vehicles when leaded gasoline was

used, lead is present in many soils (especially urban soils) as a result of airborne dispersion and could become re-suspended into the air.

Because lead is only slowly excreted by the human body, exposures to small amounts of lead from a variety of sources could accumulate to harmful levels. Effects from inhalation of lead above the level of the ambient air quality standard may include impaired blood formation and nerve conduction. Lead can adversely affect the nervous, reproductive, digestive, immune, and blood-forming systems. Symptoms could include fatigue, anxiety, short-term memory loss, depression, weakness in the extremities, and learning disabilities in children. Lead also causes cancer.

Sulfates

Sulfates are the fully oxidized ionic form of sulfur and are colorless gases. Sulfates occur in combination with metal and/or hydrogen ions. In California, emissions of sulfur compounds occur primarily from the combustion of petroleum-derived fuels (e.g., gasoline and diesel fuel) that contain sulfur. The sulfur is oxidized to SO_2 during the combustion process and subsequently converted to sulfate compounds in the atmosphere. The conversion of SO_2 to sulfates takes place comparatively rapidly and completely in urban areas of California due to regional meteorological features.

The sulfates standard established by CARB is designed to prevent aggravation of respiratory symptoms. Effects of sulfate exposure at levels above the standard include a decrease in ventilatory function, aggravation of asthmatic symptoms, and an increased risk of cardio-pulmonary disease. Sulfates are particularly effective in degrading visibility, and, because they are usually acidic, can harm ecosystems and damage materials and property.

Hydrogen Sulfide

Hydrogen Sulfide (H_2S) is associated with geothermal activity, oil and gas production, refining, sewage treatment plants, and confined animal feeding operations. Hydrogen sulfide is extremely hazardous in high concentrations, especially in enclosed spaces (800 parts per million [ppm] can cause death).

Vinyl Chloride

Vinyl Chloride (C_2H_3Cl, also known as VCM) is a colorless gas that does not occur naturally, but is formed when other substances such as trichloroethane, trichloroethylene, and tetrachloro-ethylene are broken down. Vinyl chloride is used to make polyvinyl chloride (PVC) which is used to make a variety of plastic products, including pipes, wire and cable coatings, and packaging materials.

Visibility Reducing Particles

Visibility Reducing Particles are a mixture of suspended particulate matter consisting of dry solid fragments, solid cores with liquid coatings, and small droplets of liquid. The standard is intended to limit the frequency and severity of visibility impairment due to regional haze and is equivalent to a 10-mile nominal visual range.

Toxic Air Contaminants

In addition to the criteria pollutants discussed above, Toxic Air Contaminants (TACs) are also a category of environmental concern. TACs are present in many types of emissions with varying degrees of toxicity. Public exposure to TACs can result from emissions from normal operations, as well as accidental releases. Common stationary sources of TACs include gasoline stations,

dry cleaners, and diesel backup generators, which are subject to BAAQMD stationary source permit requirements. The other, often more significant, common source type is on-road motor vehicles, such as cars and trucks, on freeways and roads, and off-road sources such as construction equipment, ships, and trains.

Fossil fueled combustion engines, including those used in cars, trucks, and some pieces of construction equipment, release at least 40 different TACs. In terms of health risks, the most volatile contaminants are diesel particulate matter (DPM), benzene, formaldehyde, 1,3-butadiene, toluene, xylenes, and acetaldehyde. Gasoline vapors contain several TACs, including benzene, toluene, and xylenes. Diesel engines emit a complex mixture of air pollutants, including both gaseous and solid material. The solid material in diesel exhaust, DPM, is composed of carbon particles and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of such chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene. Diesel exhaust also contains gaseous pollutants, including volatile organic compounds and NO_X. Due to the published evidence of a relationship between diesel exhaust exposure and lung cancer and other adverse health effects, the CARB has identified DPM from diesel-fueled engines as a TAC. Although a variety of TACs are emitted by fossil fueled combustion engines, the cancer risk due to DPM exposure represents a more significant risk than the other TACs discussed above.[4]

More than 90 percent of DPM is less than one micrometer in diameter, and, thus, DPM is a subset of $PM_{2.5}$. As a California statewide average, DPM comprises about eight percent of $PM_{2.5}$ in outdoor air, although DPM levels vary regionally due to the non-uniform distribution of sources throughout the State. Most major sources of diesel emissions, such as ships, trains, and trucks, operate in and around ports, rail yards, and heavily-traveled roadways. Such areas are often located near highly populated areas. Accordingly, elevated DPM levels are mainly an urban problem, with large numbers of people exposed to higher DPM concentrations, resulting in greater health consequences compared to rural areas.

Due to the high levels of diesel activity, high volume freeways, stationary diesel engines, rail yards and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM. Construction-related activities also have the potential to generate concentrations of DPM from on-road haul trucks and off-road equipment exhaust emissions.

The size of diesel particulates that are of the greatest health concern are fine particles (i.e., $PM_{2.5}$) and ultrafine particles (UFPs), which are a subset of $PM_{2.5}$. UFPs have a small diameter (on the order of 0.1 micrometers).[5] The small diameter of UFPs imparts the particulates with unique attributes, such as high surface areas and the ability to penetrate deeply into lungs. Once UFPs have been deposited in lungs, the small diameter allows the UFPs to be transferred to the bloodstream. The high surface area of the UFPs also allows for a greater adsorption of other chemicals, which are transported along with the UFPs into the bloodstream of the inhaler, where the chemicals can eventually reach critical organs.[6] The penetration capability of UFPs may contribute to adverse health effects related to heart, lung, and other organ health.[7] The majority of UFPs originate from internal combustion engines, including on-road vehicles, off-road

4 California Air Resources Board. *Reducing Toxic Air Pollutants in California's Communities*. February 6, 2002.

7 South Coast Air Quality Management District. *Final 2012 Air Quality Management Plan*. December 2012.

equipment, and stationary sources.[8] Thus, UFPs form a subset of DPM, as well as a subset of $PM_{2.5}$, and estimations of either concentrations or emissions of $PM_{2.5}$ or DPM include UFPs. UFPs are relatively short-lived pollutants, as compared to pollutants such as $PM_{2.5}$, which can persist for several weeks. Furthermore, UFPs rapidly agglomerate (stick together) and form larger particles (e.g. $PM_{2.5}$). As a result, the concentration of UFPs declines exponentially with increased distance from the source.[9]

Health risks from TACs are a function of both the concentration of emissions and the duration of exposure, which typically are associated with long-term exposure and the associated risk of contracting cancer. Health effects of exposure to TACs other than cancer include birth defects, neurological damage, and death. Because chronic exposure can result in adverse health effects, TACs are regulated at the regional, State, and federal level. The identification, regulation, and monitoring of TACs is relatively new compared to criteria air pollutants that have established AAQS. TACs are regulated or evaluated on the basis of risk to human health rather than comparison to an AAQS or emission-based threshold.

Attainment Status and Regional Air Quality Plans

Areas not meeting the NAAQS presented in Table 4.1-2 above are designated by the USEPA as nonattainment. Further classifications of nonattainment areas are based on the severity of the nonattainment problem, with marginal, moderate, serious, severe, and extreme nonattainment classifications for ozone. Nonattainment classifications for PM range from marginal to serious. The Federal Clean Air Act (FCAA) requires areas violating the NAAQS to prepare an air quality control plan referred to as the State Implementation Plan (SIP). The SIP contains the strategies and control measures for states to use to attain the NAAQS. The SIP is periodically modified to reflect the latest emissions inventories, planning documents, rules, and regulations of air basins as reported by the agencies with jurisdiction over them. The USEPA reviews SIPs to determine if they conform to the mandates of the FCAA amendments and would achieve air quality goals when implemented.

The CARB is the agency responsible for coordination and oversight of State and local air pollution control programs in California and for implementing the California Clean Air Act (CCAA) of 1988. The CCAA classifies ozone nonattainment areas as moderate, serious, severe, and extreme based on severity of violations of the CAAQS. For each nonattainment area classification, the CCAA specifies air quality management strategies that must be adopted. For all nonattainment areas, attainment plans are required to demonstrate a five-percent-per-year reduction in nonattainment air pollutants or their precursors, averaged every consecutive three-year period, unless an approved alternative measure of progress is developed. Air districts with air quality that is in violation of CAAQS are required to prepare an air quality attainment plan that lays out a program to attain the CCAA mandates.

Table 4.1-3 presents the current attainment status of the SFBAAB, including Contra Costa County. As shown in the table, the area is currently designated as a nonattainment area for the State and federal ozone, State and federal $PM_{2.5}$, and State PM_{10} standards. The SFBAAB is designated attainment or unclassified for all other AAQS.

Source: Bay Area Air Quality Management District. Air Quality Standards and Attainment Status. Available at: http://www.baaqmd.gov/research-and-data/air-quality-standards-and-attainment-status. Accessed August 2019.

In compliance with the FCAA and CCAA, the BAAQMD periodically prepares and updates air quality plans that provide emission reduction strategies to achieve attainment of the AAQS, including control strategies to reduce air pollutant emissions through regulations, incentive programs, public education, and partnerships with other agencies. The current air quality plans were prepared in cooperation with the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG).

The most recent federal ozone plan is the 2001 Ozone Attainment Plan, which is a proposed revision to the Bay Area part of the SIP to achieve the federal ozone standard.[10] The plan was adopted on October 24, 2001 and approved by the CARB on November 1, 2001.

The most recent State ozone plan is the 2017 Clean Air Plan (CAP), adopted on April 19, 2017.[11] The 2017 CAP was developed as a multi-pollutant plan that provides an integrated control strategy to reduce ozone, PM, TACs, and GHGs. The control strategies included in the 2017 CAP serve as the backbone of the 2017 CAP, and build upon existing regional, state, and national programs for emissions reductions. The 2017 CAP includes 85 control measures, which provide an integrative approach to reducing ozone, PM, TAC, and GHG emissions.

[10] Bay Area Air Quality Management District. *Air Quality Plans*. Available at: http://www.baaqmd.gov/Divisions/Planning-and-Research/Plans.aspx. Accessed September 2019.
[11] *Ibid.*

The aforementioned air quality plans contain mobile source controls, stationary source controls, and transportation control measures to be implemented in the region to attain the State and federal standards within the SFBAAB. The plans are based on population and employment projections provided by local governments, usually developed as part of the General Plan update process.

Local Air Quality Monitoring

Air quality is monitored by BAAQMD and CARB at various locations in the region that provide information on ambient concentrations of criteria air pollutants and TACs to help determine which air quality standards are being violated, and to direct the BAAQMD emission reduction efforts, such as developing attainment plans and rules, incentive programs, etc. The proposed project site is located nearest to the Bethel Island Road monitoring site, which is located approximately six miles east of the project site at 5551 Bethel Island Road. Data for $PM_{2.5}$, was not available for the Bethel Island Road monitoring site; thus, such data was obtained from the next nearest monitoring site, which is the Concord monitoring site located approximately 15.5 miles west of the project site at 2975 Treat Boulevard. Table 4.1-4 shows historical occurrences of pollutant levels exceeding the State and federal AAQS for the three-year period from 2016 to 2018. The number of days that each standard was exceeded is presented in the tables as well. As shown in the table, the State AAQS and the federal 8-hour AAQS for ozone were exceeded. In addition, the State PM_{10} and State and federal $PM_{2.5}$ AAQS were exceeded. All other State and federal AAQS were met in the area.

Table 4.1-4
Air Quality Data Summary for the Bethel Island Road Air Quality Monitoring Site (2016-2018)

Pollutant	Standard	Days Standard Was Exceeded		
		2016	2017	2018
1-Hour Ozone	State	0	0	0
	Federal	0	0	0
8-Hour Ozone	State	2	2	1
	Federal	2	1	1
24-Hour PM_{10}	State	0	1	2
	Federal	0	0	0
24-Hour $PM_{2.5}$*	Federal	0	6	14
1-Hour Nitrogen Dioxide	State	0	0	0
	Federal	0	0	0

*Data obtained from the Concord monitoring site.

***Source:** California Air Resources Board. Aerometric Data Analysis and Management (iADAM) System. Available at: http://www.arb.ca.gov/adam/topfour/topfour1.php. Accessed August 2019.*

It should be noted that air quality in the SFBAAB during the years 2017 and 2018 was heavily impacted by wildfires in Northern California counties, such as the Tubbs Fire which burned in Napa, Sonoma, and Lake counties, the Camp Fire in Butte County, and the Mendocino Complex Fire, which burned in Mendocino, Lake, Colusa, and Glenn Counties. Smoke from the wildfires played a large role in the exceedances of the federal $PM_{2.5}$ standards in the years 2017 and 2018.

Sensitive Receptors

Some land uses are considered more sensitive to air pollution than others, due to the types of population groups or activities involved. Children, pregnant women, the elderly, and those with

existing health problems are especially vulnerable to the effects of air pollution. Accordingly, land uses that are typically considered to be sensitive receptors include residences, schools, day care centers, playgrounds, and medical facilities. A mobile home park exists southwest of the project site, as well as residences to the east across a vacant parcel. Additionally, the Orchard Park School is located over 2,200 feet south of the southern project site boundary. For analysis purposes the aforementioned residences and elementary school would be considered sensitive receptors, with the residences to the southwest being the closest receptors, approximately 1,000 feet from the project site. Residences exist along the southern boundary of the off-site Del Antico stormwater basin, and additional residences are located to the east and west of the basin.

Greenhouse Gases

GHGs are gases that absorb and emit radiation within the thermal infrared range, trapping heat in the earth's atmosphere. Some GHGs occur naturally and are emitted into the atmosphere through both natural processes and human activities. Other GHGs are created and emitted solely through human activities. The principal GHGs that enter the atmosphere due to human activities are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and fluorinated carbons. Other common GHGs include water vapor, ozone, and aerosols. Since the beginning of the Industrial Revolution, global atmospheric concentrations of GHGs have increased due to human activities such as the burning of fossil fuels, clearing of forests and other activities. The increase in atmospheric concentrations of GHG due to human activities has resulted in more heat being held within the atmosphere, which is the accepted explanation for global climate change.[12]

The primary GHG emitted by human activities is CO_2, with the next largest components being CH_4 and N_2O. The primary sources of CH_4 emissions include domestic livestock sources, decomposition of wastes in landfills, releases from natural gas systems, coal mine seepage, and manure management. The main human activities producing N_2O are agricultural soil management, fuel combustion in motor vehicles, nitric acid production, manure management, and stationary fuel combustion. Emissions of GHG by economic sector indicate that energy-related activities account for the majority of U.S. emissions. Electricity generation is the largest single-source of GHG emissions, and transportation is the second largest source, followed by industrial activities. The agricultural, commercial, and residential sectors account for the remainder of GHG emission sources.[13] Emissions of GHG are partially offset by uptake of carbon and sequestration in forests, trees in urban areas, agricultural soils, landfilled yard trimmings and food scraps, and absorption of CO_2 by the earth's oceans; however, the rate of emissions of GHGs currently outpaces the rate of uptake, thus causing global atmospheric concentrations to increase.[14] Attainment concentration standards for GHGs have not been established by the federal or State government.

Global Warming Potential

Global Warming Potential (GWP) is one type of simplified index (based upon radiative properties) that can be used to estimate the potential future impacts of emissions of various gases. According to the USEPA, the global warming potential of a gas, or aerosol, to trap heat in the atmosphere

[12] U.S. Environmental Protection Agency. *Climate Change Indicators: Atmospheric Concentrations of Greenhouse Gases*. Available at: https://www.epa.gov/climate-indicators/climate-change-indicators-atmospheric-concentrations-greenhouse-gases. Accessed August 2019.

[13] U.S. Environmental Protection Agency. *Sources of Greenhouse Gas Emissions*. Available at: https://www.epa.gov/ghgemissions/sources-greenhouse-gas-emissions. Accessed September 2019.

[14] U.S. Environmental Protection Agency. *Climate Change Indicators: Atmospheric Concentrations of Greenhouse Gases.* Available at: https://www.epa.gov/climate-indicators/climate-change-indicators-atmospheric-concentrations-greenhouse-gases. Accessed September 2019.

is the "cumulative radiative forcing effects of a gas over a specified time horizon resulting from the emission of a unit mass of gas relative to a reference gas." The reference gas for comparison is CO_2. GWP is based on a number of factors, including the heat-absorbing ability of each gas relative to that of CO_2, as well as the decay rate of each gas relative to that of CO_2. Each gas's GWP is determined by comparing the radiative forcing associated with emissions of that gas versus the radiative forcing associated with emissions of the same mass of CO_2, for which the GWP is set at one. Methane gas, for example, is estimated by the USEPA to have a comparative global warming potential 25 times greater than that of CO_2, as shown in Table 4.1-5.

Table 4.1-5
Global Warming Potentials and Atmospheric Lifetimes of Select GHGs

Gas	Atmospheric Lifetime (years)	Global Warming Potential (100 year time horizon)
Carbon Dioxide (CO_2)	50-200[1]	1
Methane (CH_4)	12	25
Nitrous Oxide (N_2O)	114	298
HFC-23	270	14,800
HFC-134a	14	1,430
HFC-152a	1.4	124
PFC: Tetrafluoromethane (CF_4)	50,000	7,390
PFC: Hexafluoroethane (C_2F_6)	10,000	12,200
Sulfur Hexafluoride (SF_6)	3,200	22,800

1. For a given amount of carbon dioxide emitted, some fraction of the atmospheric increase in concentration is quickly absorbed by the oceans and terrestrial vegetation, some fraction of the atmospheric increase will only slowly decrease over a number of years, and a small portion of the increase will remain for many centuries or more.

Source: USEPA. Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-2013. April 15, 2017.

As shown in the table, at the extreme end of the scale, sulfur hexafluoride is estimated to have a comparative GWP 22,800 times that of CO_2. The "specified time horizon" is related to the atmospheric lifetimes of such GHGs, which are estimated by the USEPA to vary from 50 to 200 years for CO_2, to 50,000 years for tetrafluoromethane. Longer atmospheric lifetimes allow GHG to buildup in the atmosphere; therefore, longer lifetimes correlate with the global warming potential of a gas. The common indicator for GHG is expressed in terms of metric tons of CO_2 equivalents ($MTCO_2e$).

Effects of Global Climate Change

Uncertainties exist as to exactly what the climate changes will be in various local areas of the Earth. According to the California Natural Resources Agency's report *Safeguarding California: Reducing Climate Risk*[15] *and the* California State Department of Justice[16] climate change impacts to California may include:

15 Natural Resources Agency. *Safeguarding California: Reducing Climate Risk*. July 2014.
16 State of California Department of Justice. *Climate Change Impacts in California*. Available at: https://oag.ca.gov/environment/impact. Accessed September 2019.

- Sea level rise, coastal flooding, and coastal erosion;
- Saltwater intrusion into the San Joaquin-Sacramento River Delta and contamination of drinking water supplies;
- Increased tree mortality, higher risk of wildfires, and reduced forestry yields;
- Reduced agricultural productivity;
- Increased frequency, duration, and intensity of conditions conducive to air pollution formation (particularly ozone);
- Reduced precipitation, changes to precipitation and runoff patterns, reduced snowfall (precipitation occurring as rain instead of snow), earlier snowmelt, decreased snowpack, and increased agricultural demand for water;
- Increased experiences of heat waves;
- Increased growing season and increased growth rates of weeds, insect pests and pathogens;
- Impacts to public health including increased risk of injury or death from dehydration, heatstroke, heart attack, and respiratory problems;
- Habitat destruction and loss of ecosystems.

4.1.3 REGULATORY CONTEXT

Air quality and GHG emissions are monitored and regulated through the efforts of various international, federal, State, and local government agencies. Agencies work jointly and individually to improve air quality through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for regulating and improving the air quality within the project area and monitoring or reducing GHG emissions are discussed below.

Federal Regulations

The most prominent federal regulation is the FCAA, which is implemented and enforced by the USEPA.

FCAA and USEPA

The FCAA requires the USEPA to set NAAQS and designate areas with air quality not meeting NAAQS as nonattainment. The USEPA is responsible for enforcement of NAAQS for atmospheric pollutants and regulates emission sources that are under the exclusive authority of the federal government including emissions of GHGs. The USEPA's air quality mandates are drawn primarily from the FCAA, which was signed into law in 1970. Congress substantially amended the FCAA in 1977 and again in 1990. The USEPA has adopted policies consistent with FCAA requirements demanding states to prepare SIPs that demonstrate attainment and maintenance of the NAAQS.

State Regulations

California has adopted a variety of regulations aimed at reducing air pollution and GHG emissions. Only the most prominent and applicable California air quality- and GHG-related legislation is included below; however, an exhaustive list and extensive details of California air quality legislation can be found at the CARB website (http://www.arb.ca.gov/html/lawsregs.htm).

CCAA and CARB

The CARB is the agency responsible for coordination and oversight of State and local air pollution control programs in California and for implementing the CCAA. The CCAA requires that air quality plans be prepared for areas of the State that have not met the CAAQS for ozone, CO, NO_X, and SO_2. Among other requirements of the CCAA, the plans must include a wide range of

implementable control measures, which often include transportation control measures and performance standards. In order to implement the transportation-related provisions of the CCAA, local air pollution control districts have been granted explicit authority to adopt and implement transportation controls. The CARB, California's air quality management agency, regulates and oversees the activities of county air pollution control districts and regional air quality management districts. The CARB regulates local air quality indirectly using State standards and vehicle emission standards, by conducting research activities, and through planning and coordinating activities. In addition, the CARB has primary responsibility in California to develop and implement air pollution control plans designed to achieve and maintain the NAAQS established by the USEPA. Furthermore, the CARB is charged with developing rules and regulations to cap and reduce GHG emissions.

State Legislation Related to Air Quality

Although significant overlap exists between regulations related to air quality and GHG emissions, to the extent feasible, the following section provides the regulations related to air quality in California.

Air Quality and Land Use Handbook

CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* (CARB Handbook) addresses the importance of considering health risk issues when siting sensitive land uses, including residential development, in the vicinity of intensive air pollutant emission sources including freeways or high-traffic roads, distribution centers, ports, petroleum refineries, chrome plating operations, dry cleaners, and gasoline dispensing facilities.[17] The CARB Handbook draws upon studies evaluating the health effects of traffic traveling on major interstate highways in metropolitan California centers within Los Angeles (I-405 and I-710), the San Francisco Bay, and San Diego areas. The recommendations identified by CARB, including siting residential uses a minimum distance of 500 feet from freeways or other high-traffic roadways, are consistent with those adopted by the State of California for location of new schools. Specifically, the CARB Handbook recommends, "Avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day" (CARB 2005).

Importantly, the Introduction chapter of the CARB Handbook clarifies that the guidelines are strictly advisory, recognizing that: "[l]and use decisions are a local government responsibility. The Air Resources Board Handbook is advisory and these recommendations do not establish regulatory standards of any kind." CARB recognizes that there may be land use objectives as well as meteorological and other site-specific conditions that need to be considered by a governmental jurisdiction relative to the general recommended setbacks, specifically stating, "[t]hese recommendations are advisory. Land use agencies have to balance other considerations, including housing and transportation needs, economic development priorities, and other quality of life issues" (CARB 2005).

Assembly Bill 1807

Assembly Bill (AB) 1807, enacted in September 1983, sets forth a procedure for the identification and control of TACs in California. CARB is responsible for the identification and control of TACs, except pesticide use, which is regulated by the California Department of Pesticide Regulation.

[17] California Air Resources Board. *Air Quality and Land Use Handbook: A Community Health Perspective*. April 2005.

AB 2588

The Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588), California Health and Safety Code Section 44300 et seq., provides for the regulation of over 200 TACs, including DPM, and is the primary air contaminant legislation in California. Under the act, local air districts may request that a facility account for its TAC emissions. Local air districts then prioritize facilities on the basis of emissions, and high priority designated facilities are required to submit a health risk assessment and communicate the results to the affected public.

Asbestos Airborne Toxic Control Measure for Construction, Grading, Quarrying, and Surface Mining Operations

In 2002, the Asbestos Airborne Toxic Control Measure (ATCM) for Construction, Grading, Quarrying, and Surface Mining Operations (Title 17, Section 93105, of the California Code of Regulations) went into effect, which requires each air pollution control and air quality management district to implement and enforce the requirements of Section 93105 and propose their own asbestos ATCM as provided in Health and Safety Code section 39666(d).[18]

Senate Bill 656

In 2003, the Legislature passed Senate Bill (SB) 656 to reduce public exposure to PM_{10} and $PM_{2.5}$ above the State CAAQS. The legislation requires the CARB, in consultation with local air pollution control and air quality management districts, to adopt a list of the most readily available, feasible, and cost-effective control measures that could be implemented by air districts to reduce PM_{10} and $PM_{2.5}$ emissions. The CARB list is based on California rules and regulations existing as of January 1, 2004, and was adopted by CARB in November 2004. Categories addressed by SB 656 include measures for reduction of emissions associated with residential wood combustion and outdoor greenwaste burning, fugitive dust sources such as paved and unpaved roads and construction, combustion sources such as boilers, heaters, and charbroiling, solvents and coatings, and product manufacturing. Some of the measures include, but are not limited to, the following:

- Reduce or eliminate wood-burning devices allowed;
- Prohibit residential open burning;
- Permit and provide performance standards for controlled burns;
- Require water or chemical stabilizers/dust suppressants during grading activities;
- Limit visible dust emissions beyond the project boundary during construction;
- Require paving/curbing of roadway shoulder areas; and
- Require street sweeping.

Under SB 656, each air district is required to prioritize the measures identified by CARB, based on the cost effectiveness of the measures and their effect on public health, air quality, and emission reductions. Per SB 656 requirements, the BAAQMD amended their Regulation 6, Rule 3 related to wood-burning appliances to include conditions consistent with SB 656, including such conditions as the prohibition of the installation of any new, permanently installed, indoor or outdoor, uncontrolled wood-burning appliances.

[18] California Air Resources Board. *2002-07-29 Asbestos ATCM for Construction, Grading, Quarrying, and Surface Mining Operations*. June 3, 2015. Available at: http://www.arb.ca.gov/toxics/atcm/asb2atcm.htm. Accessed April 2017.

Heavy-Duty Vehicle Idling Emission Reduction Program

On October 20, 2005, CARB approved a regulatory measure to reduce emissions of toxics and criteria pollutants by limiting idling of new and in-use sleeper berth equipped diesel trucks.[19] The regulation consists of new engine and in-use truck requirements and emission performance requirements for technologies used as alternatives to idling the truck's main engine. For example, the regulation requires 2008 and newer model year heavy-duty diesel engines to be equipped with a non-programmable engine shutdown system that automatically shuts down the engine after five minutes of idling, or optionally meet a stringent NO_X emission standard. The regulation also requires operators of both in-state and out-of-state registered sleeper berth equipped trucks to manually shut down their engine when idling more than five minutes at any location within California beginning in 2008. Emission producing alternative technologies such as diesel-fueled auxiliary power systems and fuel-fired heaters are also required to meet emission performance requirements that ensure emissions are not exceeding the emissions of a truck engine operating at idle.

In-Use Off-Road Diesel Vehicle Regulation

On July 26, 2007, CARB adopted a regulation to reduce DPM and NO_X emissions from in-use (existing), off-road, heavy-duty diesel vehicles in California.[20] Such vehicles are used in construction, mining, and industrial operations. The regulation is designed to reduce harmful emissions from vehicles by subjecting fleet owners to retrofit or accelerated replacement/repower requirements, imposing idling limitations on owners, operators, renters, or lessees of off-road diesel vehicles. The idling limits require operators of applicable off-road vehicles (self-propelled diesel-fueled vehicles 25 horsepower and up that were not designed to be driven on-road) to limit idling to less than five minutes. The idling requirements are specified in Title 13 of the California Code of Regulations.

State Legislation Related to GHG Emissions

Although significant overlap exists between regulations related to air quality and GHG emissions, to the extent feasible, the following section provides the regulations related to GHG emissions in California.

AB 1007

AB 1007, State Alternative Fuels Plan (Pavley, Chapter 371, Statutes of 2005), required development and adoption of a State plan to increase the use of alternative fuels. The final *State Alternative Fuels Plan* was adopted on December 5, 2007 and presented strategies and actions California must take to increase the use of alternative, non-petroleum fuels in a manner that minimizes costs to California and maximizes the economic benefits of in-state production. Examples of such strategies include establishment of government incentive programs for alternative fuels, creation of a Low Carbon Fuel Standard to reduce the carbon intensity of transportation fuels, and the allowance of GHG emissions credits to entities using alternatively fueled vehicles. The plan assessed various alternative fuels and developed fuel portfolios to meet California's goals to reduce petroleum consumption, increase alternative fuels use, reduce GHG emissions, and increase in-state production of biofuels without causing a significant degradation of public health and environmental quality. The Plan recommended goals for alternative fuel use as well as reductions in the carbon intensities of fuels such as gasoline and diesel, and lays a

[19] California Air Resources Board. *Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling*. October 24, 2013. Available at: http://www.arb.ca.gov/msprog/truck-idling/truck-idling.htm. Accessed August 2016.

[20] California Air Resources Board. *In-Use Off-Road Diesel Vehicle Regulation*. December 10, 2014. Available at: http://www.arb.ca.gov/msprog/ordiesel/ordiesel.htm. Accessed August 2019.

foundation for building a multi-fuel transportation energy future for California by 2050. As of 2017, decreases in the carbon intensity of conventional fuels have met or exceeded the compliance targets, and the use of alternative fuels has increased by approximately 800 million gallons of gas equivalence units.[21]

AB 1493

California AB 1493 (Stats. 2002, ch. 200) (Health & Safety Code, §42823, 43018.5), known as Pavley I, was enacted on July 22, 2002. AB 1493 requires that the CARB develop and adopt regulations that achieve "the maximum feasible reduction of GHGs emitted by passenger vehicles and light-duty truck and other vehicles determined by the CARB to be vehicles whose primary use is noncommercial personal transportation in the state." On June 30, 2009, the USEPA granted a waiver of CAA preemption to California for the State's GHG emission standards for motor vehicles, beginning with the 2009 model year. Pursuant to the CAA, the waiver allows for the State to have special authority to enact stricter air pollution standards for motor vehicles than the federal government's. On September 24, 2009, the CARB adopted amendments to the Pavley regulations (Pavley I) that reduce GHG emissions in new passenger vehicles from 2009 through 2016. The second phase of the Pavley regulations (Pavley II) is expected to affect model year vehicles from 2016 through 2020. The CARB estimates that the regulation would reduce GHG emissions from the light-duty passenger vehicle fleet by an estimated 18 percent in 2020 and by 27 percent in 2030.

It should be noted that the State's waiver was officially revoked by the USEPA on September 19, 2019. However, the State's ability to set tailpipe emissions standards will be settled in court, and long-term elimination of CARB's adopted amendments to the Pavley regulations is speculative at this time. Thus, for the purpose of this analysis, such emissions standards are assumed to apply to the project.

Renewable Portfolio Standard (RPS) and SB 100

Established in 2002 under SB 1078, accelerated in 2006 under SB 107, and expanded in 2011 under SB 2, California's RPS is one of the most ambitious renewable energy standards in the country. The RPS program requires investor-owned utilities, electric service providers, and community choice aggregators to increase procurement from eligible renewable energy resources to 33 percent of total procurement by 2020.

Since the inception of the RPS program, the program has been extended and enhanced multiple times. In 2015, SB 350 extended the State's RPS program by requiring that publicly owned utilities procure 50 percent of their electricity from renewable energy sources by 2030. The requirements of SB 350 were expanded and intensified in 2018 through the adoption of SB 100, which mandated that all electricity generated within the State by publicly owned utilities be generated through carbon-free sources by 2045. In addition, SB 100 increased the previous renewable energy requirement for the year 2030 by 10 percent; thus requiring that 60 percent of electricity generated by publicly owned utilities originate from renewable sources by 2030.

Executive Order S-03-05

On June 1, 2005, then-Governor Schwarzenegger signed Executive Order S-03-05, which established total GHG emission targets. Specifically, emissions are to be reduced to year 2000

[21] California Air Resources Board. *Low Carbon Fuel Standard Data Dashboard*. Available at: https://www.arb.ca.gov/fuels/lcfs/dashboard/dashboard.htm. Accessed May 2019.

levels by 2010, 1990 levels by 2020, and to 80 percent below 1990 levels by 2050. The Executive Order directed the Secretary of the California Environmental Protection Agency (Cal-EPA) to coordinate a multi-agency effort to reduce GHG emissions to the target levels. The Secretary is also directed to submit biannual reports to the governor and state legislature describing: (1) progress made toward reaching the emission targets; (2) impacts of global warming on California's resources; and (3) mitigation and adaptation plans to combat these impacts.

To comply with the Executive Order, the Secretary of the Cal-EPA created a Climate Act Team (CAT) made up of members from various State agencies and commissions. In March 2006, CAT released their first report. In addition, the CAT has released several "white papers" addressing issues pertaining to the potential impacts of climate change on California.

AB 32

In September 2006, AB 32, the California Climate Solutions Act of 2006, was enacted (Stats. 2006, ch. 488) (Health & Saf. Code, §38500 et seq.). AB 32 delegated the authority for its implementation to the CARB and directs CARB to enforce the State-wide cap. Among other requirements, AB 32 required CARB to (1) identify the State-wide level of GHG emissions in 1990 to serve as the emissions limit to be achieved by 2020, and (2) develop and implement a Scoping Plan. Accordingly, the CARB has prepared the *Climate Change Scoping Plan* (Scoping Plan) for California, which was approved in 2008 and updated in 2014 and 2017.[22] The following sections present further information regarding plans and programs that have been introduced in order to meet the statutory requirements of AB 32.

California Scoping Plan

The 2008 Scoping Plan identified GHG reduction measures that would be necessary to reduce statewide emissions as required by AB 32. Many of the GHG reduction measures identified in the 2008 Scoping Plan have been adopted, such as the Low Carbon Fuel Standard, Pavley, Advanced Clean Car standards, RPS, and the State's Cap-and-Trade system.

Building upon the 2008 Scoping Plan, the 2013 and 2017 Scoping Plan Updates introduced new strategies and recommendations to continue GHG emissions reductions. The 2013 Scoping Plan Update created a framework for achievement of 2020 GHG reduction goals and identified actions that may be built upon to continue GHG reductions past 2020, as required by AB 32. Following the 2013 Scoping Plan, the 2017 Scoping Plan sets a path for the achievement of California's year 2030 GHG reduction goals.

California GHG Cap-and-Trade Program

California's GHG Cap-and-Trade Program was originally envisioned in the 2008 Scoping Plan as a key strategy to achieve GHG emissions reductions mandated by AB 32. The Cap-and-Trade Program is intended to put California on the path to meet the GHG emission reduction goal of 1990 levels by the year 2020, and ultimately achieving an 80 percent reduction from 1990 levels by 2050. Under cap-and-trade, an overall limit on GHG emissions from capped sectors has been established and facilities or industries subject to the cap are be able to trade permits (allowances) to emit GHGs. The CARB designed the California Cap-and-Trade Program to be enforceable and to meet the requirements of AB 32.[23] The Program started on January 1, 2012, with an enforceable

[22] California Air Resources Board. *AB 32 Scoping Plan*. Accessible at: https://www.arb.ca.gov/cc/scopingplan/scopingplan.htm. Accessed September 2019.

[23] California Air Resources Board. *Overview of ARB Emissions Trading Program*. Available at: https://www.arb.ca.gov/cc/capandtrade/guidance/cap_trade_overview.pdf. Accessed February 2018.

compliance obligation beginning with the 2013 GHG emissions. On January 1, 2014 California linked the state's cap-and-trade plan with Quebec's, and on January 1, 2015 the program expanded to include transportation and natural gas fuel suppliers.[24] AB 398 was adopted by the State's legislature in July 2017, which reauthorized the Cap-and-Trade Program through December 31, 2030. The reauthorization and continued operation of the Cap-and-Trade Program represents a key strategy within the State's 2017 Scoping Plan Update for the achievement of California's year 2030 GHG reduction goals.

Executive Order S-01-07

On January 18, 2007, then-Governor Schwarzenegger signed Executive Order S-01-07, which mandates that a State-wide goal be established to reduce carbon intensity of California's transportation fuels by at least 10 percent by 2020. The Order also requires that a Low Carbon Fuel Standard (LCFS) for transportation fuels be established for California.

SB 97

As amended, SB 97, signed in August 2007, acknowledges that climate change is an important environmental issue that requires analysis under CEQA. The bill directed the Governor's Office of Planning and Research (OPR) to prepare, develop, and transmit to the Resources Agency guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions. As directed by SB 97, the OPR amended the CEQA Guidelines to provide guidance to public agencies regarding the analysis and mitigation of GHG emissions and the effects of GHG emissions in CEQA documents. The amendments included revisions to the *Appendix G Initial Study Checklist* that incorporated a new subdivision to address project-generated GHG emissions and contribution to climate change. The new subdivision emphasizes that the effects of GHG emissions are cumulative and should be analyzed in the context of CEQA's requirements for cumulative impacts analysis. Under the revised CEQA Appendix G checklist, an agency should consider whether a project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, and whether a project conflicts with an applicable plan, policy, or regulation adopted for the purpose of reducing emission of GHGs.

Further guidance based on SB 97 suggests that the lead agency make a good-faith effort, based on available information, to describe, calculate, or estimate the amount of GHG emissions resulting from a project. When assessing the significance of impacts from GHG emissions on the environment, lead agencies should consider the extent to which the project may increase or reduce GHG, as compared to the existing environmental setting, whether the project emissions exceed a threshold of significance determined applicable to the project, and/or the extent to which the project complies with adopted regulations or requirements to implement a state wide, regional, or local plan for the reduction or mitigation of GHG emissions. Feasible mitigation under SB 97 includes on-site and off-site measures, such as GHG emission-reducing design features and GHG sequestration.

SB 375

In September 2008, SB 375, known as the Sustainable Communities and Climate Protection Act of 2008, was enacted, which is intended to build on AB 32 by attempting to control GHG emissions by curbing sprawl. SB 375 enhances CARB's ability to reach goals set by AB 32 by directing CARB to develop regional GHG emission reduction targets to be achieved by the State's 18

[24] California Air Resources Board. *Overview of ARB Emissions Trading Program*. Available at: https://www.arb.ca.gov/cc/capandtrade/guidance/cap_trade_overview.pdf. Accessed February 2018.

metropolitan planning organizations (MPOs), including the including the Association of Bay Area Governments (ABAG). Under SB 375, MPOs must align regional transportation, housing, and land-use plans and prepare a "Sustainable Communities Strategy" (SCS) to reduce the amount of vehicle miles traveled in their respective regions and demonstrate the region's ability to attain its greenhouse gas reduction targets. SB 375 provides incentives for creating walkable and sustainable communities and revitalizing existing communities, and allows home builders to get relief from certain environmental reviews under CEQA if they build projects consistent with the new sustainable community strategies. Furthermore, SB 375 encourages the development of alternative transportation options, which will reduce traffic congestion.

Executive Order S-13-08

Then-Governor Arnold Schwarzenegger issued Executive Order S-13-08 on November 14, 2008. The Executive Order is intended to hasten California's response to the impacts of global climate change, particularly sea level rise, and directs state agencies to take specified actions to assess and plan for such impacts, including requesting the National Academy of Sciences to prepare a Sea Level Rise Assessment Report, directing the Business, Transportation, and Housing Agency to assess the vulnerability of the State's transportation systems to sea level rise, and requiring the Office of Planning and Research and the Natural Resources Agency to provide land use planning guidance related to sea level rise and other climate change impacts.

The order also required State agencies to develop adaptation strategies to respond to the impacts of global climate change that are predicted to occur over the next 50 to 100 years. The adaption strategies report summarizes key climate change impacts to the State for the following areas: public health; ocean and coastal resources; water supply and flood protection; agriculture; forestry; biodiversity and habitat; and transportation and energy infrastructure. The report recommends strategies and specific responsibilities related to water supply, planning and land use, public health, fire protection, and energy conservation.

AB 197 and SB 32

On September 8, 2016, AB 197 and SB 32 were enacted with the goal of providing further control over GHG emissions in the State. SB 32 built on previous GHG reduction goals by requiring that the CARB ensure that statewide GHG emissions are reduced to 40 percent below the 1990 level by the year 2030. Additionally, SB 32 emphasized the critical role that reducing GHG emissions would play in protecting disadvantaged communities and the public health from adverse impacts of climate change. Enactment of SB 32 was predicated on the enactment of AB 197, which seeks to make the achievement of SB 32's mandated GHG emission reductions more transparent to the public and responsive to the Legislature. Transparency to the public is achieved by AB 197 through the publication of an online inventory of GHG and TAC emissions from facilities required to report such emissions pursuant to Section 38530 of California's Health and Safety Code. AB 197 further established a six-member Joint Legislative Committee on Climate Change Policies, which is intended to provide oversight and accountability of the CARB, while also adding two new legislatively-appointed, non-voting members to the CARB. Additionally, AB 197 directs the CARB to consider the "social costs" of emission reduction rules and regulations, with particular focus on how such measures may impact disadvantaged communities.

Executive Order B-55-18

On September 10, 2018, then-Governor Brown established a statewide goal of carbon neutrality as soon as possible, and no later than 2045. Following achievement of carbon neutrality, net negative emissions should be pursued as the new emissions goal. The executive order directed

the CARB to work with relevant state agencies to develop frameworks for implementation and tracking of the new goal, and further directed the CARB to support the carbon neutrality goal through future updates to the State Scoping Plan. The implementation of carbon sequestration targets and projects for natural and working lands is identified as a necessary measure to achieve carbon neutrality and net negative emissions.

California Building Standards Code

California's building codes (California Code of Regulations [CCR], Title 24) are published on a triennial basis, and contain standards that regulate the method of use, properties, performance, or types of materials used in the construction, alteration, improvement, repair, or rehabilitation of a building or other improvement to real property. The California Building Standards Code (CBSC) is responsible for the administration and implementation of each code cycle, which includes the proposal, review, and adoption process. Supplements and errata are issued throughout the cycle to make necessary mid-term corrections. The 2019 code has been prepared and will become effective January 1, 2020. The California building code standards apply State-wide; however, a local jurisdiction may amend a building code standard if the jurisdiction makes a finding that the amendment is reasonably necessary due to local climatic, geological, or topographical conditions.

California Green Building Standards Code

The 2019 California Green Building Standards Code, otherwise known as the CALGreen Code (CCR Title 24, Part 11), is a portion of the CBSC, which will become effective with the rest of the CBSC on January 1, 2020. The purpose of the CALGreen Code is to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices. The provisions of the code apply to the planning, design, operation, construction, use, and occupancy of every newly constructed building or structure throughout California.

The CALGreen Code encourages local governments to adopt more stringent voluntary provisions, known as Tier 1 and Tier 2 provisions, to further reduce emissions, improve energy efficiency, and conserve natural resources. If a local government adopts one of the tiers, the provisions become mandates for all new construction within that jurisdiction.

Building Energy Efficiency Standards

The 2019 Building Energy Efficiency Standards is a portion of the CBSC (CCR Title 24, Parts 6 and 11) expands upon energy efficiency measures from the 2016 Building Energy Efficiency Standards resulting in a seven percent reduction in energy consumption from the 2016 standards for residential structures. Energy reductions relative to previous Building Energy Efficiency Standards would be achieved through various regulations including requirements for the use of high efficacy lighting, improved water heating system efficiency, and high-performance attics and walls.

One of the improvements included within the 2019 Building Energy Efficiency Standards will be the requirement that certain residential developments, including some single-family and low-rise residential developments, include on-site solar energy systems capable of producing 100 percent of the electricity demanded by the residences. Certain residential developments, including developments that are subject to substantial shading, rendering the use of on-site solar photovoltaic systems infeasible, are exempted from the foregoing requirement; however, such

developments would continue to be subject to all other applicable portions of the 2019 Building Energy Efficiency Standards.

Local Regulations

The following are the regulatory agencies and regulations pertinent to the proposed project on a local level.

Plan Bay Area

Plan Bay Area is a long-range integrated transportation and land use/housing strategy through 2040 for the San Francisco Bay Area, designed to reduce GHG emissions from cars and light-duty trucks. On July 18, 2013, the Plan was jointly approved by the MTC and the ABAG. Pursuant to SB 375, the Plan includes the region's Sustainable Communities Strategy and 2040 Regional Transportation Plan. Plan Bay Area provides a strategy for meeting 80 percent of the region's future housing needs in Priority Development Areas (PDAs).[25] Plan Bay Area anticipates that from 2010 to 2040, Contra Costa County is projected to experience 12 percent of the total regional housing growth, or an estimated 93,390 additional households. The County will also take 11 percent of the region's job growth, or 70,300 new jobs, the majority of which will be in PDAs. Both job and housing growth will cluster along San Pablo Avenue in the western part of the County, including Richmond, as well as in the suburbs of Antioch, Pittsburg, Walnut Creek, and San Ramon. The project site is located within a PDA.

The plan assists jurisdictions seeking to implement the plan at the local level by providing funding for PDA planning and transportation projects. Plan Bay Area also provides jurisdictions with the option of increasing the efficiency of the development process for projects consistent with the plan and other criteria included in SB 375.

Bay Area Air Quality Management District

The BAAQMD is the public agency entrusted with regulating stationary sources of air pollution in the nine counties that surround San Francisco Bay: Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, southwestern Solano, and southern Sonoma counties. The BAAQMD has prepared their own *CEQA Air Quality Guidelines* (May 2017), which is intended to be used for assistance with CEQA review. The BAAQMD CEQA Air Quality Guidelines include thresholds of significance and project screening levels for criteria air pollutants (ROG, NO_X, PM_{10}, and $PM_{2.5}$), GHGs, TACs, CO, and odors, as well as methods to assess and mitigate project-level and plan-level impacts.

Regional Air Quality Plans

As discussed above, the 2001 Ozone Attainment Plan was prepared as a revision to the Bay Area part of the SIP to achieve the federal ozone standard. The plan was adopted on October 24, 2001, approved by the CARB on November 1, 2001, and was submitted to the USEPA on November 30, 2001 for review and approval as a revision to the SIP. In addition, in order to fulfill federal air quality planning requirements, the BAAQMD adopted a $PM_{2.5}$ emissions inventory for the year 2010, which was submitted to the USEPA on January 14, 2013 for inclusion in the SIP.

The most recent State ozone plan is the 2017 CAP, adopted on April 19, 2017. The 2017 CAP was developed as a multi-pollutant plan that provides an integrated control strategy to reduce

[25] Association of Bay Area Governments and Metropolitan Transportation Commission. *Plan Bay Area 2040: Final.* Available at: http://2040.planbayarea.org/reports. Accessed August 2019.

ozone, PM, TACs, and GHGs. Although the CCAA does not require the region to submit a plan for achieving the State PM_{10} standard, the BAAQMD has prioritized measures to reduce PM in developing the control strategy for the 2017 CAP. It should be noted that on January 9, 2013, the USEPA issued a final rule to determine that the San Francisco Bay Area has attained the 24-hour $PM_{2.5}$ federal standard, which suspends federal SIP planning requirements for the Bay Area.

The aforementioned applicable air quality plans contain mobile source controls, stationary source controls, and transportation control measures to be implemented in the region to attain the State and federal standards within the SFBAAB. The plans are based on population and employment projections provided by local governments, usually developed as part of the General Plan update process.

Rules and Regulations

All projects under the jurisdiction of the BAAQMD are required to comply with all applicable BAAQMD rules and regulations. Applicable BAAQMD's regulations and rules include, but are not limited to, the following:

- Regulation 2: Permits
  - Rule 5: New Source Review of Toxic Air Contaminates
- Regulation 6: Particulate Matter and Visible Emissions
  - Rule 2: Commercial Cooking Equipment
  - Rule 3: Wood-burning Devices
- Regulation 7: Odorous Substances
- Regulation 8: Organic Compounds
  - Rule 3: Architectural Coatings
- Regulation 11: Hazardous Pollutants
  - Rule 2: Asbestos Demolition, Renovation and Manufacturing

City of Oakley General Plan

The following goals and policies related to air quality are from the City of Oakley General Plan:

Goal 6.2 Maintain or improve air quality in the City of Oakley.

Policy 6.2.1	Support the principles of reducing air pollutants through land use, transportation, and energy use planning.
Policy 6.2.2	Encourage transportation modes that minimize contaminant emissions from motor vehicle use.
Policy 6.2.3	Interpret and implement the General Plan to be consistent with the regional Bay Area Air Quality Management Plan (AQMP), as periodically updated.
Policy 6.2.4	Ensure location and design of development projects so as to conserve air quality and minimize direct and indirect emissions of air contaminants.
Policy 6.2.5	Encourage air quality improvement through educational outreach programs, such as "Spare the Air Day."

City of Oakley Strategic Energy Plan

The City of Oakley adopted a Strategic Energy Plan in 2015. The Strategic Energy Plan establishes the City Council's desire to promote energy-use reductions, clean energy generation,

and GHG emissions reductions. To achieve such goals, the City became a Pilot City in the East Bay Energy Watch Strategic Planning Program, which was formed by PG&E in Alameda and Contra Costa counties. The Strategic Energy Plan is focused on municipal operations, and through careful consideration of energy-efficiency in City operations, the City hopes to provide achievable examples and demonstrations of financially viable and sustainably energy solutions to the community as a whole. Because the Strategic Energy Plan is focused on municipal operations, the policies within the document do not directly apply to private development within the City.

4.1.4 Impacts and Mitigation Measures

The standards of significance and methodology used to analyze and determine the proposed project's potential project-specific impacts related to air quality are described below. In addition, a discussion of the project's impacts, as well as mitigation measures where necessary, is also presented.

Standards of Significance

Consistent with Appendix G of the CEQA Guidelines, this chapter of the EIR considers a significant impact associated with air quality and/or GHG emissions to occur if the proposed project would result in any of the following:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);
- Expose sensitive receptors to substantial pollutant concentrations (including localized CO concentrations and TAC emissions);
- Result in other emissions (such as those leading to odors) affecting a substantial number of people;
- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

Issues Not Discussed Further

The Initial Study prepared for the proposed project (see Appendix C) determined that development of the proposed project would result in a less-than-significant impact with mitigation incorporated related to the following:

- Result in other emissions (such as those leading to odors) affecting a substantial number of people.

For the reasons cited in the Initial Study, the potential impacts associated with odors are not analyzed further in this EIR.

Criteria Pollutants, Localized CO, TACs, and GHGs

The air quality and GHG emissions analysis in this EIR uses the thresholds for criteria pollutants, localized CO, TAC emissions, and GHG emissions as discussed below.

The BAAQMD thresholds of significance for ozone precursor and PM emissions are presented in Table 4.1-6 and are expressed in pounds per day (lbs/day) for construction and operational average daily emissions and tons per year (tons/year) for maximum annual operational emissions. In addition to the thresholds of significance presented below for criteria air pollutants of particular concern for the Bay Area, BAAQMD has developed thresholds for GHG emissions, localized CO emissions, and TACs. Pursuant to CEQA Guidelines Section 15064.4(b)(2), the lead agency is charged with determining a threshold of significance that is applicable to the project. For the analysis within this EIR, the City has elected to use the BAAQMD's thresholds of significance.

Table 4.1-6
BAAQMD Thresholds of Significance

Pollutant	Construction	Operational	
	Average Daily Emissions (lbs/day)	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tons/year)
ROG	54	54	10
NO_X	54	54	10
PM_{10} (exhaust)	82	82	15
$PM_{2.5}$ (exhaust)	54	54	10

Source: BAAQMD, CEQA Guidelines, May 2017.

Localized CO Emissions

If a project would cause localized CO emissions to exceed the 1-hour and 8-hour CAAQS of 20.0 ppm and 9.0 ppm, respectively, BAAQMD would consider the project to result in a significant impact to air quality. In order to provide a conservative indication of whether a project would result in localized CO emissions that would exceed the applicable threshold of significance, the BAAQMD has established screening criteria for localized CO emissions. According to BAAQMD, a project would result in a less-than-significant impact related to localized CO emission concentrations if the following screening criteria are met:

- The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans;
- The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; and
- The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, underpass, etc.).

TAC Emissions

According to BAAQMD, a significant impact related to TACs would occur if a project would cause any of the following:

- An increase in cancer risk levels of more than 10 persons in one million;
- A non-cancer (chronic or acute) hazard index greater than 1.0; or
- An annual average $PM_{2.5}$ concentration of 0.3 micrograms per cubic meter ($\mu g/m^3$) or greater.

An impact associated with TACs would also occur if the aggregate total of all past, present, and foreseeable future sources within a 1,000-foot radius from the fence line of a source, or from the location of a receptor, plus the contribution from the project, would exceed the following:

- An increase in cancer risk levels (from all local sources) of more than 100 persons in one million;
- A chronic non-cancer hazard index (from all local sources) greater than 10.0; or
- An annual average $PM_{2.5}$ concentration (from all local sources) of 0.8 µg/m^3 or greater.

GHG Emissions

The BAAQMD developed a threshold of significance for project-level GHG emissions in 2009. The District's approach to developing the threshold was to identify a threshold level of GHG emissions for which a project would not be expected to substantially conflict with existing California legislation. At the time that the thresholds were developed, the foremost legislation regarding GHG emissions was AB 32, which established an emissions reductions goal of reducing statewide emissions to 1990 levels by 2020.[26] If a project would generate GHG emissions above the threshold level, the project would be considered to generate significant GHG emissions and conflict with AB 32. The GHG emissions thresholds of significance recommended by BAAQMD to determine compliance with AB 32 are as follows:

- 1,100 $MTCO_2e$/yr; or
- 4.6 $MTCO_2e$/SP/yr, where "SP" equates to service population, which is the total residents plus employees.

Because BAAQMD emissions thresholds include both a mass emissions threshold (i.e., 1,100 $MTCO_2e$/yr), and an emissions efficiency threshold (i.e., 4.6 $MTCO_2e$/SP/yr), a project may result in operational emissions in excess of 1,100 $MTCO_2e$/yr, but still avoid a significant impact by resulting in emissions below the 4.6 $MTCO_2e$/SP/yr efficiency threshold, or vice versa. It should be noted that the foregoing thresholds are intended for use in assessing operational GHG emissions only. However, construction of a proposed project would result in GHG emissions over a short-period of time. To capture the construction-related GHG emissions due to buildout of the proposed project, such emissions are amortized over the duration of the construction period and added to the operational GHG emissions. Given that construction-related GHG emissions would not occur concurrently with operational emissions and would cease upon completion of construction activities, combining the two emissions sources represents a conservative estimate of total project GHG emissions.

Since the adoption of BAAQMD's GHG thresholds of significance, the State legislature has passed AB 197 and SB 32, which builds off of AB 32 and establishes a statewide GHG reduction target of 40 percent below 1990 levels by 2030. Considering the legislative progress that has occurred regarding statewide reduction goals since the adoption of BAAQMD's standards, the emissions thresholds presented above would determine whether a proposed project would be in compliance with the 2020 emissions reductions goals of AB 32, but would not demonstrate whether a project would be in compliance with SB 32. In accordance with the changing legislative environment, the BAAQMD has begun the process of updating the District's CEQA Guidelines; however, updated thresholds of significance have not yet been adopted. In the absence of

[26] Bay Area Air Quality Management District. *California Environmental Quality Act Guidelines Update: Proposed Thresholds of Significance*. December 7, 2009.

BAAQMD-adopted thresholds to assess a project's compliance with SB 32, the City has chosen to consider additional GHG emissions thresholds.

The BAAQMD has determined that projects with operational emissions equal to or less than 1,100 $MTCO_2e$/yr or 4.6 $MTCO_2e$/SP/yr would comply with the emission reductions target of 1990 levels by 2020 set forth by AB 32. SB 32 requires that by 2030 statewide emissions be reduced by 40 percent beyond the 2020 reduction target set by AB 32; therefore, in the absence of specific guidance from BAAQMD or the CARB, the City assumes that in order to meet the reduction targets of SB 32, a proposed project would be required to reduce emissions by an additional 40 percent beyond the emissions reductions currently required by BAAQMD for compliance with AB 32. Assuming a 40 percent reduction from current BAAQMD targets would be in compliance with SB 32, a proposed project would be in compliance with SB 32 if the project's emissions did not exceed the following thresholds:

- 660 $MTCO_2e$/yr; or
- 2.76 $MTCO_2e$/SP/yr.

In addition to the quantitative thresholds described above, the City has also determined that a qualitative analysis assessing the project's compliance with the CARB's 2017 Scoping Plan is warranted. The CARB's 2017 Scoping Plan establishes a strategy to meet California's 2030 GHG targets; accordingly, should the project be shown to comply with the 2017 Scoping Plan, the proposed project would be considered consistent with Statewide reduction targets for the year 2030. Based on recommendations from BAAQMD, a project's compliance with the local actions contained in Appendix B of the 2017 Scoping Plan can be used to assess a project's compliance with the 2017 Scoping Plan.[27]

By using the BAAQMD thresholds of significance for GHG, the updated SB 32 thresholds, and the local actions within Appendix B of the 2017 Scoping Plan, the City would comply with Section 15064.4(b)(3) of the CEQA Guidelines, which suggests that lead agencies consider the extent that the project would comply with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction of GHG emissions.

Method of Analysis

A comparison of project-related emissions to the thresholds discussed above shall determine the significance of the potential impacts to air quality and climate change resulting from the proposed project. Emissions attributable to the proposed project which exceed the significance thresholds could have a significant effect on regional air quality and the attainment of the federal and State AAQS. Where potentially significant air quality impacts are identified, mitigation measures are described that would reduce or eliminate the impact.

Construction Emissions

The proposed project's short-term construction emissions were estimated using the California Emissions Estimator Model (CalEEMod) version 2016.3.2 software, which is a statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify air quality emissions from land use projects. The model applies inherent default values for various land uses, including trip generation rates based on the

[27] Flores, Arienna, Bay Area Air Quality Management District. Personal communication [phone], Jacb Byrne, Senior Associate/Air Quality Technician, Raney Planning & Management. September 17, 2019.

ITE Manual, vehicle mix, trip length, average speed, etc. However, where project-specific data was available, such data was input into the model.

As explained in the Project Description chapter of this EIR, construction of the proposed project is assumed to occur over approximately three years. For the purposes of analyzing air quality impacts related to implementation of the proposed project, construction would likely occur in two phases. The first phase of construction would be the only one to include demolition and would result in approximately 10,000 sf of building material being demolished. In addition, phase one would include construction of improvements to Bridgehead Road. After phase one, phase two is anticipated to involve mass grading of the remaining portion of the project site, and subsequent construction of all remaining site improvements. Per the applicant, phase two is anticipated to begin within approximately six months of the initiation of phase one.

The assumption that construction phases would overlap provides the most conservative approach to this analysis. It should further be noted that the proposed project would include off-site improvements related to wastewater pipeline improvements and improvements to an off-site drainage basin. The off-site improvements were modeled in CalEEMod separately from on-site construction work. Off-site improvements include work related to improvements at the Del Antico stormwater basin and sewer line improvements within Bridgehead Road and Main Street.

Based on project information, the following assumptions were made for the construction modeling for the proposed project:

- The Industrial Park and Unrefrigerated Warehouse land uses were applied;
- Demolition would involve removal of approximately 10,000 sf of debris from the project site, which would include debris from the demolition of existing structures within the project site;
- Construction would begin in March of 2020;
- Construction of the second, overlapping phase would begin six months after initiation of the first phase of construction;
- A total of approximately 40 acres would be disturbed during the first grading phase;
- The remaining area of the site would be graded during phase two;
- 2.86 acres would be disturbed at the off-site Del Antico Basin during project implementation; and
- Off-site sewer line improvements would involve placement of a new four-inch water line that would be approximately 2,500 feet in length as well as upsizing approximately 1,015 feet of existing sewer line with a new six-inch diameter line.

The results of emissions estimations were compared to the standards of significance discussed above in order to determine the associated level of impact. Results of the modeling are expressed in lbs/day for criteria air pollutant emissions and $MTCO_2e$/yr for GHG emissions, which allows for comparison between the model results and the thresholds of significance. All CalEEMod modeling results are included in Appendix D to this EIR.

Operational Emissions

The proposed project's operational emissions were estimated using CalEEMod. Operation of the proposed project would result in direct and indirect emissions from various sources including energy consumption, grounds keeping, and mobile emissions from workers as well as deliveries.

The modeling performed for the proposed project included compliance with BAAQMD rules and regulations (i.e., low-VOC [volatile organic compounds] paints and low-VOC cleaning supplies), as well as with the 2019 California Building Energy Efficiency Standards Code. All buildings within the State of California are required to comply with the mandatory standards within the 2019 California Building Energy Efficiency Standards Code. CalEEMod Version 2016.3.2 assumes new structures would be built in accordance with the 2016 California Building Energy Efficiency Standards Code. The CalEEMod inputs for the proposed project were adjusted to reflect the energy efficiency improvements inherent in the 2019 California Building Energy Efficiency Standards Code over the 2016 California Building Energy Efficiency Standards Code.[28] The proposed project's compliance with such would be verified as part of the City's building approval review process. Furthermore, the CO_2 intensity factor was adjusted within CalEEMod in order to reflect PG&E's anticipated progress towards the State RPS goal by 2030.[29] Project-specific vehicle trip data was provided by Abrams Associates, and the trip rate data was applied to the project modeling.

The results of emissions estimations were compared to the standards of significance discussed above in order to determine the associated level of impact. Results of the modeling are expressed in lbs/day for project-level emissions, tons/yr for cumulative emissions, and $MTCO_2e$/yr for GHG emissions, which allows for comparison between the model results and the thresholds of significance. All CalEEMod modeling results are included in Appendix D to this EIR.

Project-Specific Impacts and Mitigation Measures

Global climate change is, by nature, a cumulative impact. Emissions of GHG contribute, on a cumulative basis, to the significant adverse environmental impacts of global climate change (e.g., sea level rise, impacts to water supply and water quality, public health impacts, impacts to ecosystems, impacts to agriculture, and other environmental impacts). While GHG emissions from a project in combination with other past, present, and future projects contribute to the world-wide phenomenon of global climate change and the associated environmental impacts, a single project could not generate enough GHG emissions to contribute noticeably to a change in the global average temperature. Because the effects of GHG emissions are cumulative by nature, separate discussions for project-level and cumulative-level impacts for the proposed project are not necessary for this section of the EIR.

However, potential impacts related to air quality may occur on both a project-level and a cumulative basis. Accordingly, a project-level analysis of potential air quality-related impacts is presented below.

4.1-1 Conflict with or obstruct implementation of the applicable air quality plan during project construction. Based on the analysis below and despite implementation of mitigation, the impact is *significant and unavoidable*.

During construction of the project, various types of equipment and vehicles would temporarily operate on the project site and within off-site improvement areas. Construction-related emissions would be generated from demolition activity,

[28] California Energy Commission. *2019 Building Energy Efficiency Standards*. March 2018.
[29] California Public Utilities Commission. *California Renewables Portfolio Standard (RPS)*. Available at: http://www.cpuc.ca.gov/renewables/. Accessed August 2019.

construction equipment, utility work related to off-site improvements, vegetation clearing and earth movement activities, construction workers' commute, and construction material hauling for the entire construction period. The aforementioned activities would involve the use of diesel- and gasoline-powered equipment that would generate emissions of criteria pollutants. Project construction activities also represent sources of fugitive dust, which includes $PM_{2.5}$ emissions. As construction of the proposed project would generate emissions of criteria air pollutants, including ROG, NO_X, and PM_{10}, intermittently within the site and in the vicinity of the site, until all construction has been completed, construction is a potential concern, as the proposed project is located in a nonattainment area for ozone and PM.

The proposed project is required to comply with all BAAQMD rules and regulations including Regulation 8, Rule 3 related to architectural coatings. In addition, all projects under the jurisdiction of the BAAQMD are recommended to implement all of the Basic Construction Mitigation Measures provided in the BAAQMD CEQA Guidelines, which include the following:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 mph.
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
7. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator.
8. Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.

Using CalEEMod, the proposed project's maximum construction-related emissions were estimated and are presented in Table 4.1-7. Although BAAQMD recommends that all construction activity within the SFBAAB implement the above listed Basic Construction Mitigation Measures, the proposed project was modeled without the inclusion of such measures to provide a conservative, worst-case emissions scenario. If project construction included any of the Basic Construction Mitigation Measures, PM emissions would likely be reduced from what is presented below.

Modeling assumptions are discussed in the Method of Analysis section above. As presented in Table 4.1-7, the proposed project would result in construction-related emissions of $PM_{10,}$ and $PM_{2.5}$ below the applicable thresholds of significance. However, emissions of ROG and NO_X would exceed the applicable threshold of significance. Therefore, the proposed project could contribute to the region's nonattainment status of ozone and violate an air quality standard, and a ***significant*** impact associated with construction-related emissions of ROG and NO_X could result.

Table 4.1-7
Maximum Unmitigated Construction Emissions (lbs/day)

Pollutant	On-Site Project Emissions	Off-Site Project Emissions	Total Project Emissions	Threshold of Significance	Exceeds Threshold?
ROG	150.02	4.00	154.02	54	**YES**
NO_X	122.14	41.29	163.43	54	**YES**
PM_{10} (exhaust)	3.71	2.00	5.71	82	**NO**
PM_{10} (fugitive)	20.53	12.52	33.05	None	**N/A**
$PM_{2.5}$ (exhaust)	3.45	1.85	5.3	54	**NO**
$PM_{2.5}$ (fugitive)	7.05	6.70	13.75	None	**N/A**

Source: CalEEMod, September and October 2019 (see Appendix D).

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the construction-related emissions of ROG and NO_X to the maximum extent practicable. The reductions in ROG resulting from the following mitigation measures would be sufficient to reduce ROG below the BAAQMD's thresholds. However, as shown in Table 4.1-8 NO_X would remain in excess of the applicable threshold of significance of 54 lbs/day. Additional feasible mitigation does not exist to reduce the NO_X emissions to below the applicable threshold of significance. Thus, despite implementation of the following mitigation measure, the impact would remain *significant and unavoidable*.

Table 4.1-8
Maximum Mitigated Construction Emissions (lbs/day)

Pollutant	On-Site Project Emissions	Off-Site Project Emissions	Total Project Emissions	Threshold of Significance	Exceeds Threshold?
ROG	7.53	0.62	8.15	54	**NO**
NO_X	56.74	2.45	59.19	54	**YES**
PM_{10} (exhaust)	0.45	0.07	0.52	82	**NO**
PM_{10} (fugitive)	20.53	12.52	33.05	None	**N/A**
$PM_{2.5}$ (exhaust)	0.43	0.07	0.50	54	**NO**
$PM_{2.5}$ (fugitive)	7.05	6.70	13.75	None	**N/A**

Source: CalEEMod, September and October 2019 (see Appendix D).

4.1-1(a) Prior to issuance of a grading permit, the project applicant shall show on the grading plans via notation that the contractor shall ensure that all off-road heavy-duty diesel-powered equipment (e.g., rubber tired dozers, excavators, graders, scrapers, pavers, paving equipment, and cranes) to be used for each phase of construction of the project (i.e., owned, leased, and subcontractor vehicles) shall meet California Air Resources Board

(CARB) Tier 4 emissions standards or cleaner. The grading plans shall be submitted for review and approval by the Public Works and Engineering Department. In addition, all off-road equipment operating at the construction site must be maintained in proper working condition according to manufacturer's specifications. Idling shall be limited to 5 minutes or less in accordance with the Off-Road Diesel Fueled Fleet Regulation as required by CARB.

Idling shall be limited to five minutes or less for all on-road related and/or delivery trucks in accordance with CARB's On-Road Heavy-Duty Diesel Vehicles (In-Use) Regulation. Clear Signage regarding idling restrictions should be placed at the entrances to the construction site.

4.1-1(b) All Improvement Plans for the proposed project shall identify, via notation, that all architectural coatings, paints, finishes and adhesives used within the project site during project construction and operations shall be zero-VOC emitting. Furthermore, all future leases signed for proposed structures or operational spaces within the project site must contain binding language informing future tenants of the requirement that only zero-VOC architectural coatings, paints, finishes and adhesives may be used within the project site. Inclusion of such language within Improvement Plans for project construction shall be confirmed through submittal of Improvement Plans to the City of Oakley Planning Division for review and approval.

4.1-2 Conflict with or obstruct implementation of the applicable air quality plan during project operation. Based on the analysis below and with implementation of mitigation, the impact is *less than significant*.

Operational emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$ would be generated by the proposed project from both mobile and stationary sources. Day-to-day activities such as future employees' vehicle trips and delivery truck trips to and from the project site would make up the majority of the mobile emissions. Emissions would occur from area sources such as natural gas combustion from heating mechanisms, landscape maintenance equipment exhaust, and consumer products (e.g., deodorants, cleaning products, spray paint, etc.).

The proposed project's daily unmitigated operational emissions have been estimated using CalEEMod and are presented in Table 4.1-9 below. The various assumptions included in the modeling are discussed above.

As shown in Table 4.1-9 below, the proposed project would result in operational emissions of NO_X, PM_{10} and $PM_{2.5}$ below the applicable thresholds of significance. However, emissions of ROG would exceed the applicable thresholds of significance, and thus, could generate long-term operational criteria air pollutant emissions in excess of thresholds, the project could contribute to the region's nonattainment status of ozone and/or violate an air quality standard.

Table 4.1-9
Maximum Unmitigated Project Operational Emissions (lbs/day)

Pollutant	Project Emissions				Threshold of Significance	Exceeds Threshold?
	Area	Energy	Mobile	Total		
ROG	48.44	0.63	5.97	**55.05**	54	**YES**
NO_X	0.00	5.76	24.36	**30.12**	54	**NO**
PM_{10} (exhaust)	0.00	0.44	0.19	**0.63**	82	**NO**
PM_{10} (fugitive)	-	-	22.91	**22.91**	None	**N/A**
$PM_{2.5}$ (exhaust)	0.00	0.44	0.18	**0.62**	54	**NO**
$PM_{2.5}$ (fugitive)	-	-	6.13	**6.13**	None	**N/A**

Source: CalEEMod, September and October 2019 (see Appendix D).

As stated previously, the applicable regional air quality plans include the 2001 Ozone Attainment Plan and the 2017 CAP. The air quality plans contain mobile source controls, stationary source controls, and transportation control measures to be implemented within the region to attain the State and federal ozone standards within the SFBAAB. According to the BAAQMD CEQA Guidelines, if a project would not result in significant and unavoidable air quality impacts, after the application of all feasible mitigation, the project may be considered consistent with the air quality plans. Additionally, if approval of a project would not cause the disruption, delay, or otherwise hinder the implementation of any air quality plan control measure, the project may be considered consistent with the air quality plans. Because the proposed project is expected to generate long-term operational criteria air pollutant emission in excess of thresholds, the project would be considered to conflict with or obstruct implementation of regional air quality plans.

Based on the above, the proposed project would result in a ***significant*** impact associated with the generation of operational emissions of ROG in excess of thresholds and a conflict with or obstruction of implementation of regional air quality plans.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the emission of ROG, related to project operations as shown in Table 4.1-10. As shown in the table, Mitigation Measure 4.1-2 would reduce ROG emissions generated by project operations below the BAAQMD's threshold of 54 lbs/day. Therefore, following implementation of the following mitigation, the impact would be *less than significant*.

4.1-2 Implement Mitigation Measure 4.1-1(b).

Table 4.1-10
Mitigated Maximum Project Operational Emissions (lbs/day)

	ROG	NO_X	PM_{10} (Exhaust)	$PM_{2.5}$ (Exhaust)
Unmitigated Proposed Project	55.05	30.12	0.63	0.62
Mitigated Proposed Project	49.31	30.12	0.63	0.62
Difference	*-5.74*	*-0.00*	*-0.00*	*-0.00*

Mitigated Emissions Exceed Thresholds?	**NO**	**NO**	**NO**	**NO**

Source: CalEEMod, September and October 2019 (see Appendix D).

4.1-3 Expose sensitive receptors to substantial pollutant concentrations. Based on the analysis below and with implementation of mitigation, the impact is *less than significant*.

The major pollutant concentrations of concern are localized CO emissions, TAC emissions, and criteria pollutants, all of which are addressed in further detail below.

Localized CO Emissions

Localized concentrations of CO are related to the levels of traffic and congestion along streets and at intersections. Implementation of the proposed project would increase traffic volumes on streets near the project site; therefore, the project would be expected to increase local CO concentrations. High levels of localized CO concentrations are only expected where background levels are high, and traffic volumes and congestion levels are high. The statewide CO Protocol document identifies signalized intersections operating at Level of Service (LOS) E or F, or projects that would result in the worsening of signalized intersections to LOS E or F, as having the potential to result in localized CO concentrations in excess of the State or federal AAQS, as a result of large numbers of cars idling at stop lights.[30]

In accordance with the State CO Protocol, the BAAQMD has established preliminary screening criteria for determining whether the effect that a project would have on any given intersection would cause a potential CO hotspot. If the following criteria are met by the proposed project at all affected intersections, the proposed project would not be expected to result in a CO hotspot:

- The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans;
- The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; and

[30] California Department of Transportation. *Transportation Project-Level Carbon Monoxide Protocol*. Revised December, 1997.

- The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, underpass, etc.).

The East County Action Plan includes several adopted traffic management plans and programs for selected arterials in East Contra Costa County. The potential traffic-related impacts from development of the project are discussed in comparison with such plans and other regulations in further detail in Chapter 4.4, Transportation and Circulation of this EIR. The Contra Costa Congestion Management Program (CCMP) outlines strategies for managing the performance of regional transportation within the County, including standards, performance measures, a capital program of projects, and a travel demand element. The Transportation Impact Analysis (TIA) prepared for the proposed project used the growth estimates, travel demand model, and other information from the CCMP, and the analysis presented in Chapter 4.4, of this EIR, includes consideration of the project's compliance with the CCMP. In addition, the Contra Costa Transportation Authority (CCTA) and associated Regional Transportation Planning Committees have set various standards on specific roadways, called Multi-Modal Transportation Service Objectives (MTSO's), which are specific to each region and regulate the routes of regional significance. The TIA prepared for the proposed project evaluated the potential for the proposed project to conflict with multi-modal transportation within the project area, including routes of regional significance, and the use of alternative means of transportation. As discussed in detail in Chapter 4.4, Transportation and Circulation of this EIR, impacts related to MTSO's would be reduced to less than significant and the proposed project would not result in impacts to alternative modes of transportation or routes of regional significance. Therefore, the proposed project would be considered to be consistent with the applicable congestion management programs or transportation plans.

Based on data provided in the TIA prepared for the proposed project, the maximum traffic volume anticipated at an affected intersection would not reach 44,000 vehicles per hour. In addition, the project would not increase traffic volumes to over 24,000 vehicles at any intersections where vertical and/or horizontal mixing is substantially limited. Therefore, the proposed project would be expected to result in substantial levels of localized CO at surrounding intersections or generate localized concentrations of CO that would exceed standards.

TAC Emissions

Another category of environmental concern is TACs. The CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* (Handbook) provides recommendations for siting new sensitive land uses near sources typically associated with significant levels of TAC emissions, including, but not limited to, freeways and high traffic roads, distribution centers, and rail yards.[31] The CARB has identified DPM from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM. Health risks from TACs are a function of both the concentration of emissions and the duration of exposure.

[31] California Air Resources Board. *Air Quality and Land Use Handbook: A Community Health Perspective*. April 2005.

The proposed project would involve construction activity within the project site, as well as in off-site improvement areas. Furthermore, the proposed use of the project site would be anticipated to involve frequent heavy-duty vehicle traffic. Both construction activity and project operations could result in TAC emissions as discussed in further depth below.

Construction activities have the potential to generate DPM emissions related to the number and types of equipment typically associated with construction. Off-road heavy-duty diesel equipment used for site grading, paving, utility trenching and other construction activities result in the generation of DPM. The nearest sensitive receptors to the project site and off-site improvement areas could become exposed to DPM emissions during construction activities. However, construction is temporary and occurs over a relatively short duration for each development phase. Off-site improvements are limited relative to on-site construction activity, and would be completed over a short construction period. Because health risks associated with exposure to DPM or any TAC are typically correlated with high concentrations over a long period of exposure, the completion of construction activities over a short period of time would reduce the potential for nearby receptors to be exposed to substantial concentrations of DPM. In addition, buildout of the proposed project would likely occur in phases, where only portions of the site or off-site improvement areas would be disturbed at a time, with operation of construction equipment occurring intermittently throughout the course of a day. All construction equipment and operation thereof would be regulated per CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation.[32] The In-Use Off-Road Diesel Vehicle Regulation includes emissions reducing requirements such as limitations on vehicle idling, disclosure, reporting, and labeling requirements for existing vehicles, as well as standards relating to fleet average emissions and the use of Best Available Control Technologies. In addition, Mitigation Measure 4.1-1 requires the use of Tier 4 compliant engines for all pieces of off-road equipment. Tier 4 compliant engines reduce PM emissions, including DPM, to the maximum extent practicable. In fact, comparing the estimated unmitigated and mitigated emissions related to project construction, presented in Table 4.1-7 and Table 4.1-8, demonstrates that estimated $PM_{2.5}$ emissions would be reduced by approximately 80 percent through the implementation of Tier 4 engines. DPM is a subset of $PM_{2.5}$; thus, the reduction in $PM_{2.5}$ is considered to represent a reduction in DPM emissions. Considering the intermittent nature of construction equipment operating within an influential distance to the nearest sensitive receptors, the relatively short duration of construction activities, and the implementation of Tier 4 engines, the likelihood that sensitive receptors would be exposed to high concentrations of DPM for any extended period of time would be low. Thus, construction of the proposed project would not be expected to expose sensitive receptors to substantial concentrations of TACs.

The CARB's Handbook considers facilities (distribution centers) with associated diesel truck trips of more than 100 trucks per day, or 40 trucks per day if each truck is equipped with a transportation refrigeration unit (TRU), as a source of substantial TAC emissions, specifically DPM, and recommends that such facilities should not be cited within 1,000 feet of nearby sensitive receptors. The proposed project would involve development of approximately 143.3 acres within the larger 375.7-acre subject

[32] California Code of Regulations, Title 13, Article 4.8, Chapter 9, Section 2449.

property. Although portions of the 143.3-acre project site are within 1,000 feet from the nearest sensitive receptors to the southwest of the project site, other portions of the project site are separated from the nearest receptor by much greater distances. Furthermore, the CARB's principal concern related to distribution centers is DPM emissions from diesel vehicles resulting from the movement of goods to and from distribution centers. The amount of heavy-duty vehicle use as well as the distribution of such vehicles within the site determines the pattern of DPM emissions, and the potential for such emissions to disperse off-site and effect nearby receptors. The greatest amount of DPM emissions from the project site would occur in areas of the project site experiencing frequent diesel vehicle traffic and diesel vehicle idling. Diesel truck travel within the site would occur within the proposed internal roadways, while truck idling would primarily occur within the loading dock areas of the project site.

With regard to truck travel to the site, the project plans to direct employees and trucks to use the Wilbur Avenue interchange in an effort to avoid/minimize congestion on E. 18th Street at its interchange with SR 160, and also on surface street in surrounding cities. From the Wilbur Avenue interchange, heavy-duty trucks and passenger vehicles would access the site by way of three proposed vehicular access points. The northernmost site access would be located over 2,800 feet to the north of the nearest sensitive receptors, the central/main access point, at Wilbur Avenue, would be over 1,500 feet from the nearest sensitive receptor, and the southernmost access point would be between 800 and 1,000 feet from the nearest sensitive receptor to the southwest of the site. Thus, two of the three site access points would be separated from the nearest sensitive receptors by distances well in excess of 1,000 feet.

In addition to the separation of two of the site accesses from the nearest receptor by more than 1,000 feet, based on the proposed site plans, presented in Chapter 3, Project Description, none of the proposed loading docks would be within 1,000 feet of the nearest sensitive receptor to the southwest. However, the loading dock to Building 1, depicted on Figure 3-6, of Chapter 3 of this EIR, is located just outside of the CARB's recommended screening distance. With the exception of the loading dock and associated drive aisle for Building 1, all other loading docks and drive aisles within the site would be at least 1,500 feet from the mobile home park. Consequently, emissions from the majority of on-site drive aisles and loading docks would be sufficiently separated from nearby sensitive receptors to ensure that nearby receptors would not be exposed to excess concentrations of DPM.

Although the majority of proposed drive aisles and loading docks would be separated from the nearest sensitive receptors by at least 1,500 feet, the southernmost access point to the project site is between 800 and 1,000 feet from the nearest sensitive receptor to the southwest of the site. Based on the configuration of proposed site accesses and drive aisles, the southernmost project entry point would be used solely to provide access to the loading dock associated with Building 1, and would not provide access to any other portions of the project site. Consequently, the drive aisle closest to the mobile home park would only experience heavy-duty diesel truck traffic related to operations at Building 1. According to Abrams and Associates, Building 1 would experience 1,100 total daily trips from all types of vehicles, and approximately nine percent of the total daily trips or 99 trips, would be associated with heavy-duty trucks. It should be noted that although the southernmost project entry would only provide access to Building 1, two additional access points from Wilbur Avenue would provide

vehicular access to Building 1. Thus, the 1,100 daily trips associated with Building 1 would likely be split between all of the available access points, and, thus, the majority of trips related to operations at Building 1 would likely occur at distances in excess of 1,000 feet from the nearest receptor.

Because the loading dock associated with Building 1 would only be accessible from the southernmost access point to the site, all 99 heavy-duty truck trips associated with operation of Building 1 are assumed to access and leave the project site by way of the southernmost site entry. Even in the event that all of the heavy-duty trucks accessing Building 1 use the southern entry, Building 1 is only anticipated to experience 99 heavy-duty truck trips per day. A total of 99 truck trips per day would be below CARB's screening threshold for distribution centers, and would not be anticipated to expose the nearest sensitive receptors to substantial DPM emissions.

Additionally, the prevailing wind pattern in the project region is westerly, with air moving from the San Francisco Bay area into the Central Valley. The westerly pattern of air movement would generally disperse pollutants released within the project site away from the sensitive receptors located to the southwest of the project site.

Based on the above, the majority of heavy-duty truck trips to and from the project site would occur well outside of the CARB's recommended separation distances of 1,000 feet. Operations related to Building 1 could involve heavy-duty vehicle traffic within 1,000 feet of the nearest sensitive receptor; however, the proposed loading dock for Building 1 would be outside of the recommended 1,000-foot separation distance, and Building 1 would not be anticipated to attract 100 or more heavy-duty trucks per day. Although operations of Building 1 are not anticipated to attract more than 100 heavy-duty trucks per day, trucks accessing Building 1 could include trucks using TRUs. TRUs are typically diesel powered, and continuous stationary operation of TRUs at the loading dock associated with Building 1 would constitute a source of localized DPM. Should project operations result in more than 40 TRU equipped trucks per day accessing Building 1, idling of TRUs at the Building 1 loading dock could result in exposure of nearby receptors to substantial concentrations of DPM related to idling TRUs and heavy-duty diesel vehicles.

Criteria Pollutants

As noted in Impact 4.1-1 of this section, construction-related activities included in the proposed project would have the potential to result in a significant and unavoidable impact related to the emission of criteria air pollutants. In particular, construction related activities associated with implementation of the proposed project would result in NO_X emissions in excess of the BAAQMD's thresholds of significance. The largest NO_X generating activity would be from off-site sources during building construction of each project phase. Specifically, off-site sources during building construction relate to the movement of goods and construction materials to and from the site by project vendors.

The BAAQMD's thresholds of significance were established with consideration given to the health-based air quality standards established by the NAAQS and CAAQS, and

are designed to aid the district in achieving attainment of the NAAQS and CAAQS.[33] The BAAQMD's thresholds of significance are intended to aid achievement of the NAAQS and CAAQS for which the SFBAAB is in nonattainment, but the thresholds of significance do not represent a level above which individual project-level emissions would directly result in public health impacts. Rather, the thresholds of significance represent emissions levels that would ensure that project-specific emissions would not inhibit attainment of regional NAAQS and CAAQS through cumulatively considerable contributions to basin-wide emissions. On a regional level, the long-term operational emissions of the proposed project would have a greater potential to affect the attainment of the NAAQS and the CAAQS, compared to short-term construction emissions, given that operational emissions would occur on an on-going basis throughout the life of the project. As discussed under Impact 4.1-2 of this section, the operational emissions of the proposed project would be below BAAQMD's thresholds of significance following implementation of mitigation. Consequently, the proposed projects would not inhibit attainment of regional NAAQS and CAAQS on a long-term, on-going basis.

As noted above, construction activity would result in emissions in excess of the BAAQMD's standards; however, several factors would reduce the likelihood that short-term construction-related emissions would result in adverse health impacts. Emissions related to construction activity would occur over a relatively limited amount of time. For instance, project construction is only anticipated to occur over a four-year period, which, relative to the anticipated operational lifetime of the project, is relatively short. Furthermore, the largest source of emissions during each construction phase would be the transport of construction material to the site by vendors. Emissions from vendor trips to the site and off-site improvement areas would be distributed throughout the entire route taken by each vendor, which would result in the dispersal of emissions from the vendor vehicles. Criteria pollutant emissions from vendor vehicles would be dispersed through regional wind patterns, which generally push pollutants out of the SFBAAB and throughout nearby air basins. Thus, emissions resulting from project-related construction would be dispersed throughout a large area, and emissions related to the proposed project would represent a small fraction of emissions resulting from activities throughout the SFBAAB and nearby air basins. Dispersal of vendor vehicle emissions would reduce the likelihood that any single receptor would be subject to excess concentrations of criteria pollutants due to project construction sufficient to result in health impacts. In summary, construction-related emissions would occur over a relatively short period of time and would be dispersed throughout the project region as vendor vehicles move to and from the project site.

Standard methodologies for assessing health impacts related to pollutant exposure involve conducting dispersion modeling that considers the location and type of emission sources, the location of existing sensitive receptors, and environmental factors such as climate, wind direction, and topography. Various sources exist within the project region that may be used to supply construction material to the project site; however, should the proposed project be implemented, some of the currently available locations for construction material may have ceased operations, and other sites not yet in operation may become available sources of construction. Thus, the source of construction material and the path taken to deliver such material to the project site

[33] Bay Area Air Quality Management District. *Air Quality Guidelines*. May 2017.

cannot be known at this time. Because emissions from construction activity would occur over a large area, and the exact route of vendor trips to and from the site is not currently known, dispersion modeling for project-related emissions would be highly speculative. Additionally, dispersion models with sufficient computational power to estimate pollutant dispersion and resultant health impacts throughout the entire SFBAAB and nearby air basins are not currently available.

Considering the above, implementation of the proposed project would not result in long-term emissions of criteria pollutants that would exceed BAAQMD standards, and, thus, would not inhibit attainment of regional NAAQS and CAAQS. In addition, due to the factors discussed above, although construction activity would result in short-term emission of NO_X in excess of the BAAQMD's standards, such emissions would be unlikely to result in health impacts because construction emissions would occur over a short-duration and would be dispersed on- and off-site throughout the SFBAAB and nearby air basins.

Conclusion

As discussed above, the proposed project would not cause any substantial levels of localized CO concentrations nor would the project result in substantial exposure of sensitive receptors to criteria pollutants. Construction-related emissions would be temporary, intermittent throughout the day, spread over the project site, and regulated. In addition, DPM emitted from heavy-duty diesel vehicles during project operations would be spread over the project site and would occur outside of the CARB's recommended separation distance from the nearest sensitive receptor. However, should operations of Building 1 involve the use of more than 40 trucks equipped with TRUs each day, idling TRUs could result in substantial emissions of DPM, which could affect the nearest sensitive receptors. Thus, the proposed project would result in a ***potentially significant*** impact associated with exposure of sensitive receptors to substantial levels of pollutant concentrations.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the need for TRUs to be operated within the project site. Reducing the operation of TRUs would result in a reduction in the amount of DPM emitted at loading docks within the project site, which would reduce the likelihood of any nearby sensitive receptors being exposed to substantial concentrations of pollutants. Accordingly, with implementation of the following mitigation measure, the impact would be *less than significant*.

4.1-3 *Prior to issuance of building permits for each phase of development, the project applicant shall show on the building plans that all loading docks shall be equipped with dedicated electrical outlets sufficient to provide power to any truck mounted transportation refrigerated units accessing the loading docks. In addition, all loading docks shall be equipped with signage stating the following, "*State regulations prohibit engine idling in excess of five minutes.*" The building plans shall be submitted for review and approval by the City of Oakley Building Division.*

Cumulative Impacts and Mitigation Measures

As defined in Section 15355 of the CEQA Guidelines, "cumulative impacts" refers to two or more individual effects which, when considered together, are considerable, compound, or increase other environmental impacts. The individual effects may be changes resulting from a single project or a number of separate projects. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects.

A project's emissions may be individually limited, but cumulatively considerable when taken in combination with past, present, and future development projects. The geographic context for the cumulative air quality analysis includes Contra Costa County and surrounding areas within the portion of the SFBAAB that is designated nonattainment for ozone and PM_{10}.

4.1-4 Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors). Based on the analysis below, the project's incremental contribution to this significant cumulative impact is *less than cumulatively considerable*.

The long-term emissions associated with operation of the proposed project in conjunction with other existing or planned development in the area would incrementally contribute to impacts to the region's air quality. The proposed project's contribution to cumulative emissions of criteria air pollutants were calculated using CalEEMod and are presented in Table 4.1-11.

Table 4.1-11
Unmitigated Project Cumulative Emissions (tons/yr)

	ROG	NO_X	PM_{10} (Exhaust)	$PM_{2.5}$ (Exhaust)
Unmitigated Project Emissions	9.90	5.40	0.12	0.11
BAAQMD Thresholds	10	10	15	10
Emissions Exceed Thresholds?	**NO**	**NO**	**NO**	**NO**

Source: CalEEMod, September and October 2019 (see Appendix D).

As shown in the table, the proposed project's operational cumulative emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$ would be below BAAQMD's thresholds of significance for cumulative project emissions. Therefore, unmitigated emissions resulting from project operations would not have the potential to result in a cumulatively considerable net increase in criteria pollutant emissions, for which the region is in nonattainment for federal and state ozone standards. As such, the proposed project's incremental contribution to regional air quality impacts would be ***less than cumulatively considerable***.

Mitigation Measure(s)

None required.

4.1-5 Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Based on the analysis below and despite implementation of all feasible mitigation measures, the proposed project's incremental contribution to this significant cumulative impact is *cumulatively considerable* and *significant and unavoidable*.

An individual project's GHG emissions are at a micro-scale level relative to global emissions and effects to global climate change; however, an individual project could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. As such, impacts related to emissions of GHG are inherently considered cumulative impacts.

Implementation of the proposed project would cumulatively contribute to increases of GHG emissions that are associated with global climate change. Estimated GHG emissions attributable to future development would be primarily associated with increases of CO_2 and, to a lesser extent, other GHG pollutants, such as CH_4 and N_2O. Sources of GHG emissions include area sources, mobile sources or vehicles, utilities (electricity and natural gas), water usage, wastewater generation, and the generation of solid waste.

Potential impacts resulting from project implementation are considered in comparison with BAAQMD's adopted thresholds of significance and the year 2030 thresholds of significance discussed above, as well in comparison with the Local Actions included in Appendix B of the CARB's Scoping Plan.

GHG Emissions Thresholds

Construction GHG emissions are a one-time release and are, therefore, not typically expected to generate a significant contribution to global climate change. Neither the City nor BAAQMD has an adopted threshold of significance for construction-related GHG emissions and does not require quantification. Nonetheless, the proposed project's construction GHG emissions have been estimated. The CalEEMod emissions estimates prepared for the proposed project determined that unmitigated project construction would result in total emissions of 8,839.59 $MTCO_2e$.

Following estimation of construction related emissions, such emissions were amortized and included in the annual operational GHG emissions. Amortizing the construction GHG emissions (a one-time release that would occur only during construction of the project) and including them in the annual operational emissions (which would occur every year over the lifetime of the entire project) would represent a conservative analysis for the annual operational emissions. The BAAQMD does not recommend any specific operational lifetimes for use in amortizing construction-related GHG emissions; however, the emissions were amortized based on information from California Executive Order D-16-00 and the US Green Building Council's 2013

report on *The Costs and Financial Benefits of Green Buildings*.[34] In the absence of specific BAAQMD recommendations, a 25-year operational lifetime is used for this analysis. Therefore, the total construction emissions amortized over 25 years would be 353.58 $MTCO_2e$/yr.

According to the US Green Building Council, an industrial park type development have typical employee generation rates of 500 sf per employee. Warehousing type land uses involve between 781 sf per employee. The proposed project would involve development of five industrial buildings within the project site, which includes features similar to both warehouses and industrial parks. Given the range of employment factors available, the conservative factor of 781 sf per employee was chosen for this analysis. Using an employment generation factor of 781 sf per employee, 2,542 employees would be anticipated to work at the project site.[35] The number of employees is used below to calculate the annual emissions per service population for project operations.

The proposed project's operational GHG emission estimations were conducted using CalEEMod and are included in Appendix D to this EIR.

Compliance with AB 32

As shown in Table 4.1-12, the project's total unmitigated annual GHG emissions in the first year of project operation, 2023, including amortized construction-related emissions, were estimated to be approximately 10,988.70 $MTCO_2e$/yr, which results in emissions of 4.32 $MTCO_2e$/SP/yr. Thus, implementation of the proposed project would result in emissions below the BAAQMD's 4.6 $MTCO_2e$/SP/yr threshold of significance for GHG emissions, and the proposed project would be considered to comply with the emissions reductions targets of AB 32.

Table 4.1-12
Unmitigated Year 2023 Project GHG Emissions

	Annual GHG Emissions
Construction-Related GHG Emissions	353.58 MTCO2e/yr
Operational GHG Emissions:	10,635.12 MTCO2e/yr
Area	0.06 MTCO2e/yr
Energy	4,537.80 MTCO2e/yr
Mobile	3,977.05 MTCO2e/yr
Waste	1,215.40 MTCO2e/yr
Water	904.80 MTCO2e/yr
Total Annual GHG Emissions	10,988.70 MTCO2e/yr
Total Annual GHG Emissions Per Service Population[1]	**4.32 MTCO2e/SP/yr**
BAAQMD AB 32 Threshold	4.6 MTCO2e/SP/yr
Exceeds Threshold?	**NO**

Note:
[1] Service population for project calculated to be 2,542 based on one employee per 781 sf.

[35] U.S. Green Building Council. *Building Area Per Employee by Business Type*. May 13, 2008.

Compliance with SB 32

As shown in Table 4.1-13, the project's total unmitigated annual GHG emissions in the first year of project operation, 2023, including amortized construction-related emissions, were estimated to be approximately 9,407.45 $MTCO_2e$/yr, which results in emissions of 3.70 $MTCO_2e$/SP/yr. Thus, implementation of the proposed would result in emissions above the 660 $MTCO_2e$/yr and 2.76 $MTCO_2e$/SP/yr thresholds of significance being used for GHG emissions in the year 2030, and, thus, the proposed project would be considered to conflict with SB 32.

Table 4.1-13
Unmitigated Year 2030 Project GHG Emissions

	Annual GHG Emissions
Construction-Related GHG Emissions	353.58 MTCO2e/yr
Operational GHG Emissions:	9,053.87 MTCO2e/yr
Area	0.06 MTCO2e/yr
Energy	3,571.21 MTCO2e/yr
Mobile	3,442.27 MTCO2e/yr
Waste	1,215.40 MTCO2e/yr
Water	824.93 MTCO2e/yr
Total Annual GHG Emissions	9,407.45 MTCO2e/yr
Total Annual GHG Emissions Per Service Population[1]	**3.70 MTCO2e/SP/yr**
BAAQMD SB 32 Threshold	2.76 MTCO2e/SP/yr
Exceeds Threshold?	**YES**

Project Consistency with the 2017 Scoping Plan

Appendix B to the CARB's 2017 Scoping Plan provides a examples of potentially feasible mitigation measures that could be considered to assess a project's compliance with the 2017 Scoping Plan. Because the 2017 Scoping Plan represents the CARB's strategy for meeting the State's 2030 GHG emissions reductions goals, compliance with the Local Actions within the 2017 Scoping Plan would demonstrate the project's compliance with SB 32. The project's consistency with the Local Actions within the 2017 Scoping Plan is assessed in Table 4.1-14 below.

Table 4.1-14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	**Consistency Discussion**
Construction	
Enforce idling time restrictions for construction vehicles.	Mitigation Measure 4.1-1(a) requires enforcement of idling time restrictions for on-road and off-road construction vehicles. Thus, the proposed project would comply with this suggested measure.
Require construction vehicles to operate with the highest tier engines commercially available.	Mitigation Measure 4.1-1(a) requires the use of Tier 4 engines in all on-site equipment. Tier 4 engines are the highest tier engines commercially available. Thus, the proposed project would comply with this suggested measure.

Table 4.1-14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
Divert and recycle construction and demolition waste, and use locally-sourced building materials with a high recycled material content to the greatest extent feasible.	The CALGreen code requires the diversion of construction and demolition waste, and the proposed project would be required to comply with the requirements within the most up-to-date CALGreen Code. The project applicant has not committed to using locally-sourced building materials or materials with a high recycled content, and, thus, compliance with this suggested measure is uncertain at this time.
Minimize tree removal, and mitigate indirect GHG emissions increases that occur due to vegetation removal, loss of sequestration, and soil disturbance.	Implementation of the proposed project is anticipated to result in removal of some or all of the 662 existing on-site trees. Thus, the proposed project would not comply with this suggested measure.
Utilize existing grid power for electric energy rather than operating temporary gasoline/diesel powered generators.	The project applicant has not committed to the use of grid power for electric energy rather than operating temporary power generators; thus, compliance with this suggested measure is uncertain at this time.
Increase use of electric and renewable fuel powered construction equipment and require renewable diesel fuel where commercially available.	The project applicant has not committed to the use of alternatively fueled construction equipment. Furthermore, the commercial availability of renewable diesel in the project area is currently unknown. Consequently, compliance with this suggested measure is uncertain at this time.
Require diesel equipment fleets to be lower emitting than any current emission standard.	Use of Tier 4 engines in compliance with Mitigation Measure 4.1-1(a) would ensure that diesel equipment used during project construction would be lower emitting than any current emission standard. Thus, the proposed project would comply with this suggested measure.
Operations	
Comply with lead agency's standards for mitigating transportation impacts under SB 743.	The City of Oakley has not yet adopted standards for mitigating transportation impacts under SB 743. Accordingly, this suggested measure is not applicable to the proposed project.
Require on-site EV charging capabilities for parking spaces serving the project to meet jurisdiction-wide EV proliferation goals.	Per the 2019 CALGreen Code, the project is required to provide the infrastructure necessary to facilitate installation of EV charging systems in six percent of total on-site parking spaces. Compliance with the 2019 CALGreen Code would ensure that the proposed project provides sufficient EV charging infrastructure to comply with this suggested measure.
Allow for new construction to install fewer on-site parking spaces than required by local municipal building code, if appropriate.[1]	The project is a logistics and intermodal center that will facilitate the movement of goods in the area. Thus, limitations on parking are impractical for the proposed uses and the proposed project would not comply with this suggested measure.
Dedicate on-site parking for shared vehicles.	The project applicant has not committed to providing on-site parking for shared vehicles. Therefore, compliance with this suggested measure is uncertain at this time.
Provide adequate, safe, convenient, and secure on-site bicycle parking and storage in multi-family residential projects and in non-residential projects.	The project applicant has not committed to providing on-site bicycle parking. Therefore, compliance with this suggested measure is uncertain at this time.
Provide on- and off-site safety improvements for bike, pedestrian, and transit connections, and/or	The proposed project would include provision of on- and off-site pedestrian facilities related to internal roadways and improvements to Bridgehead Road. In addition, improvements

Table 4.1-14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
implement relevant improvements identified in an applicable bicycle and/or pedestrian master plan.	to Bridgehead Road would include provision of northbound bicycle lanes. Consequently, the proposed project would comply with this suggested measure.
Require on-site renewable energy generation.	The project applicant has not committed to providing on-site renewable energy generation. As a result, compliance with this suggested measure is uncertain at this time.
Prohibit wood-burning fireplaces in new development, and require replacement of wood-burning fireplaces for renovations over a certain size development.	The proposed project would not include wood-burning fireplaces. Thus, the proposed project would comply with this suggested measure.
Require cool roofs and "cool parking" that promotes cool surface treatment for new parking facilities as well as existing surface lots undergoing resurfacing.	The project applicant has not committed to providing cool roofs and/or cool parking. Therefore, compliance with this suggested measure is uncertain at this time.
Require solar-ready roofs.	The CBSC requires that new non-residential structures be built with solar-ready roofs. Therefore, the proposed project would be required to provide solar-ready roofs and would comply with this suggested measure.
Require organic collection in new developments.	Chapter 20 of the City's Municipal Code requires that the owner of any property that generates green waste must subscribe with a franchisee for collection and disposal service. Project operations are anticipated to result in the production of organic waste. Thus, green waste collection would be required, and the proposed project would comply with this suggested measure.
Require low-water landscaping in new developments (see CALGreen Divisions 4.3 and 5.3 and the Model Water Efficient Landscape Ordinance [MWELO], which is referenced in CALGreen). Require water efficient landscape maintenance to conserve water and reduce landscape waste.	Chapter 31 of the City's Municipal Code requires that new developments with a total landscape area equal to or greater than 2,500 sf must comply with water-efficient landscape requirements. Consequently, the proposed project would be required to provide water-efficient landscaping, and the project would comply with this suggested measure.
Achieve Zero Net Energy performance building standards prior to dates required by the Energy Code.	The project applicant has not committed to achieving Zero Net Energy. Thus, compliance with this suggested measure is uncertain at this time.
Encourage new construction, including municipal building construction, to achieve third-party green building certifications, such as the GreenPoint Rated program, LEED rating system, or Living Building Challenge.	The project applicant has not committed to achieving third-party green building certification. Consequently, compliance with this suggested measure is uncertain at this time.
Require the design of bike lanes to connect to the regional bicycle network.	The project applicant has not committed to accommodating a proposed extension of the Big Break Regional Trail through the project site. Although the project would include the provision of bicycle lanes along Bridgehead Road, because the project would not include provision of connections to Big Break Regional Trail, which is a regional bicycle network, the project

(Continued on next page)

Table 4.1-14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
	compliance with this suggested measure is uncertain at this time.
Expand urban forestry and green infrastructure in new land development.	The project applicant has not finalized a landscaping plan for the proposed project. The inclusion of flow-through planters and bioretention areas for stormwater treatment could be considered green infrastructure. However, because a landscaping plan has not been finalized, the provision of on-site trees to contribute to an expansion of urban forestry is uncertain, and, consequently, compliance with this suggested measure is uncertain at this time.
Require preferential parking spaces for park and ride to incentivize carpooling, vanpooling, commuter bus, electric vehicles, and rail service use.	The project applicant has not committed to dedicating preferential spaces for carpooling, vanpooling, electric vehicles, or park and ride spaces for commuter bus and rail service use. Thus, compliance with this suggested measure is uncertain at this time.
Require a transportation management plan for specific plans which establishes a numeric target for non-single occupancy vehicle travel and overall VMT.	The proposed project does not include a transportation management plan. Thus, the proposed project would not comply with this suggested measure.
Develop a rideshare program targeting commuters to major employment centers.	Although the project is anticipated to be a major employment center, the project applicant has not committed to developing a rideshare program. Thus, the proposed project would not comply with this suggested measure.
Require the design of bus stops/shelters/express lanes in new developments to promote the usage of mass-transit.	The proposed project does not involve the construction of new bus stops/shelters/express lanes. Accordingly, the suggested measure is not applicable to the proposed project.
Require gas outlets in residential backyards for use with outdoor cooking appliances such as gas barbeques if natural gas service is available.	The proposed project is not a residential project. Consequently, the suggested measure is not applicable to the proposed project.
Require the installation of electrical outlets on the exterior walls of both the front and back of residences to promote the use of electric landscape maintenance equipment.[2]	The proposed project is not a residential project. Consequently, the suggested measure is not applicable to the proposed project.
Require the design of the electric outlets and/or wiring in new residential unit garages to promote electric vehicle usage.	The proposed project is not a residential project. Consequently, the suggested measure is not applicable to the proposed project.
Require electric vehicle charging station (Conductive/inductive) and signage for non-residential developments.	Although the 2019 CALGreen Code requires the provision of infrastructure necessary to facilitate installation of EV charging systems, the project applicant has not committed to installing signed, operational EV charging stations. Therefore, compliance with this suggested measure is uncertain at this time.

(Continued on next page)

Table 4.1-14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
Provide electric outlets to promote the use of electric landscape maintenance equipment to the extent feasible on parks and public/quasi-public lands.	The proposed project does not include parks or public/quasi-public lands, and, as such, the suggested measure is not applicable to the proposed project.
Require each residential unit to be "solar ready," including installing the appropriate hardware and proper structural engineering.	The proposed project is not a residential project. Consequently, the suggested measure is not applicable to the proposed project.
Require the installation of energy conserving appliances such as on-demand tank-less water heaters and whole-house fans.	The project applicant has not committed to installing energy conserving appliances. As a result, compliance with this suggested measure is uncertain at this time.
Require each residential and commercial building equip buildings [sic] with energy efficient AC units and heating systems with programmable thermostats/timers.	The project applicant has not committed to installing energy efficient AC units and heating systems. Therefore, compliance with this suggested measure is uncertain at this time.
Require large-scale residential developments and commercial buildings to report energy use, and set specific targets for per-capita energy use.	The project applicant has not committed to reporting energy use or setting specific energy use targets. Accordingly, compliance with this suggested measure is uncertain at this time.
Require each residential and commercial building to utilize low flow water fixtures such as low flow toilets and faucets (see CALGreen Divisions 4.3 and 5.3 as well as Appendices A4.3 and A5.3).	The proposed project would be required to comply with the non-residential water efficiency regulations within CALGreen. Thus, the proposed project would comply with this suggested measure.
Require the use of energy-efficient lighting for all street, parking, and area lighting.	Plans for street, parking, and area lighting have not been finalized. Thus, the use of energy-efficient lighting features within the project site is currently unknown, and compliance with this suggested measure is uncertain at this time.
Require the landscaping design for parking lots to utilize tree cover and compost/mulch.	Landscaping plans for the project site have not been finalized. Thus, the use of tree cover and compost/mulching within the project site is currently unknown, and compliance with this suggested measure is uncertain at this time.
Incorporate water retention in the design of parking lots and landscaping, including using compost/mulch.	The proposed project would incorporate flow-through planters as well as bioretention areas for stormwater management on-site. While the use of compost/mulch in these areas is currently unknown, due to the stormwater features included in the project, the project is considered to comply with this measure.
Require the development project to propose an off-site mitigation project which should generate carbon credits equivalent to the anticipated GHG emission reductions. This would be implemented via an approved protocol for carbon credits from California Air Pollution Control Officers Association (CAPCOA), the California Air	The project applicant has not committed to an off-site mitigation project that would generate carbon credits. Consequently, compliance with this suggested measure is uncertain at this time.

(Continued on next page)

Table 4.1-14
Project Consistency with the 2017 Scoping Plan

Suggested Measure	Consistency Discussion
Resources Board, or other similar entities determined acceptable by the local air district.	
Require the project to purchase carbon credits from the CAPCOA GHG Reduction Exchange Program, American Carbon Registry (ACR), Climate Action Reserve (CAR) or other similar carbon credit registry determined to be acceptable by the local air district.	The project applicant has not committed to purchasing carbon credits. Accordingly, compliance with this suggested measure is uncertain at this time.
Encourage the applicant to consider generating or purchasing local and California-only carbon credits as the preferred mechanism to implement its off-site mitigation measure for GHG emissions and that will facilitate the State's efforts in achieving the GHG emission reduction goal.	The project applicant has not committed to purchasing local or California-only carbon credits. Therefore, compliance with this suggested measure is uncertain at this time.

Notes:
[1] This is not to be confused with the Americans with Disabilities Act (ADA) requirements or other minimum parking requirements for dedicating space to clean air vehicles and/or EV charging infrastructure
[2] The requirements for outdoor receptacle outlets are located in the California Electrical Code, Article 210.52(E).

Source: California Air Resources Board. AB 32 Scoping Plan [Appendix B]. Accessible at: https://www.arb.ca.gov/cc/scopingplan/scopingplan.htm. Accessed September 2019.

As shown in Table 4.1-14 the proposed project would comply with some of the suggested measures. However, the project would not comply with the majority of the applicable measures, and, as a result, the proposed project would not be considered to be consistent with the 2017 Scoping Plan. Because the 2017 Scoping Plan is the CARB's strategy for meeting the State's 2030 emissions goals established by SB 32, the project would be considered to conflict with SB 32.

Conclusion

Based on the above, project emissions in the year 2023 would be below the BAAQMD's threshold of significance and could be considered in compliance with the emissions reductions required by AB 32. However, project emissions in the year 2030 would not achieve the emissions reductions required by SB 32 and the project would conflict with the 2017 Scoping Plan, which is the CARB's strategy for achieving the emissions reductions goals of SB 32. Therefore, the proposed project would be considered to conflict with the goals of SB 32, and would contribute to a ***cumulatively considerable*** impact related to GHG emissions.

Mitigation Measure(s)

The use of Tier 4 construction equipment, as required by Mitigation Measure 4.1-1(a), would reduce construction equipment fuel consumption by approximately five

percent.[36] Increased fuel efficiency and decreased total fuel consumption would directly reduce construction-related GHG emissions, and requiring the use of Tier 4 engines is considered to be the maximum feasible mitigation measure available for construction-related GHG emissions.

Implementation of the following mitigation measures would reduce GHG emissions from operation of the proposed project. However, unless subsequent GHG emissions analysis can be performed to show otherwise, the impact is assumed to remain *cumulatively considerable* and *significant and unavoidable*.

4.1-5(a) Implement Mitigation Measure 4.1-1(a).

4.1-5(b) Implement Mitigation Measure 4.1-3.

4.1-5(c) Improvement Plans and building plans for the proposed project shall identify all feasible mitigation measures developed in coordination with the BAAQMD and as determined by the City of Oakley Planning Division to reduce significant impacts to the extent feasible. Mitigation Measures may include, but would not be limited to, BAAQMD's recommended mitigation measures such as the following:

- *Orient buildings to maximize passive solar heating;*
- *Improve bike and pedestrian network (complete sidewalks, connection to adjacent areas, connection to bike network, etc.);*
- *Implement bicycle and pedestrian facilities such as bike lanes, routes, and paths, bike parking, sidewalks, and benches;*
- *Dedicate land on-site to facilitate future connections with the Big Break Regional Trail;*
- *Promote ridesharing, transit, bicycling, and walking for work trips through dedication of preferential parking spaces, provision of on-site bicycle parking, provision of end-of-trip facilities such as bicycle lockers and on-site showers;*
- *Subsidize employee transit passes;*
- *Install electric vehicle charging infrastructure in excess of existing CBSC requirements;*
- *Provide charging stations and preferential parking spots for electric vehicles;*
- *Install energy star appliances;*
- *Install solar water heating;*
- *Install on-site renewable energy systems;*
- *Use water efficient landscapes and native/drought-tolerant vegetation;*
- *Provide outdoor electrical outlets to allow for use of electrically powered landscaping equipment;*
- *Construct on-site or fund off-site carbon sequestration projects (such as tree plantings or reforestation projects); and*

[36] Empire Cat. *Tier 4 Emissions Technology*. Available at: http://www.empire-cat.com/Power_Systems/Emissions_Solutions/Tier_4_Technology.aspx. Accessed June 2019.

- *Purchase carbon credits to offset project annual emissions. Carbon offset credits shall be verified and registered with The Climate Registry, the Climate Action Reserve, or another source approved by CARB, BAAQMD, or the City of Oakley.*

If off-site mitigation measures are proposed, the applicant must be able to show that the emission reductions from identified projects are real, permanent through the duration of the project, enforceable, and are equal to the pollutant type and amount of the project impact being offset. In addition, any off-site measures shall be subject to review and approval by to City of Oakley Planning Division. BAAQMD recommends that off-site mitigation projects occur within the nine-county Bay Area in order to reduce localized impacts and capture potential co-benefits. If BAAQMD has established an off-site mitigation program at the time a development application is submitted, as an off-site mitigation measure, the applicant may choose to enter into an agreement with BAAQMD and pay into the established off-site mitigation program fund, where BAAQMD would commit to reducing the type and amount of emissions identified in the agreement.

4.2 Biological Resources

4.2. BIOLOGICAL RESOURCES

4.2.1 INTRODUCTION

The Biological Resources chapter of the EIR evaluates the potential for the proposed project to result in impacts to biological resources known to occur or potentially occur within the proposed project site or within off-site improvement areas. Information for the Biological Resources chapter is primarily drawn from the following studies prepared for the proposed project: Planning Survey Report (PSR),[1] a special-status plant survey,[2] and a supplemental Memorandum[3] prepared for the proposed project by Moore Biological (see Appendix E), a Biological Assessment of the proposed stormwater discharge prepared by FISHBIO,[4] an Arborist Report prepared for the project site by Trees, Bugs, Dirt consulting (Appendix F),[5] as well as the City of Oakley General Plan[6] and associated EIR.[7]

In addition to the project-specific PSR and other documents listed above, the site has been extensively studied in relation to the on-going Chemours Remediation Project at the site. Studies of the site related to the Chemours Remediation Project included rare plant surveys, wetland delineations, and special-status species surveys. In drafting the project-specific PSR and supplemental Memorandum, Moore Biological integrated information from previous work completed for the Chemours Remediation Project.

4.2.2 EXISTING ENVIRONMENTAL SETTING

The following sections describe the regional and project setting of the site, as well as the existing biological resources occurring in the proposed project area.

Regional Setting

The City of Oakley is located in Contra Costa County, in the East Bay region of the San Francisco Bay. The City is located along the San Joaquin-Sacramento River Delta. The City of Oakley is bordered by the San Joaquin River (northern region), the City of Antioch (western region), and the City of Brentwood (southern region). The eastern border of the City is adjacent to agricultural and open space areas within the San Joaquin-Sacramento River Delta region.

Elevations within the City of Oakley range from sea level to approximately 120 feet above mean sea level. Vegetation communities characteristic of the City and surrounding area includes agricultural lands, ruderal fields, perennial and seasonal marshes, orchards, developed areas, and communities endemic to the area's dunes and other natural features.

6 City of Oakley. *City of Oakley 2020 General Plan*. Adopted December 16, 2002.
7 City of Oakley. *General Plan Draft Environmental Impact Report*. September 2002.

The East Contra Costa County Habitat Conservation Plan and Natural Community Conservation Plan (ECCC HCP/NCCP) covers approximately 174,000 acres in the eastern portion of Contra Costa County, including most of the City of Oakley. The ECCC HCP/NCCP seeks to provide a regional approach to the protection of several threatened, endangered, and special-status species in the ECCC HCP/NCCP area. As such, the ECCC HCP/NCCP authorizes take coverage pursuant to the Federal Endangered Species Act (FESA) and the California Endangered Species Act (CESA), and provides compensatory mitigation for 28 special-status plant and animal species. Because the ECCC HCP/NCCP provides a regional approach to the protection of endangered species, participants in the ECCC HCP/NCCP permitting process are provided streamlined permitting from the U.S. Fish and Wildlife Service (USFWS) and the California Department of Fish and Wildlife (CDFW). Streamlined permitting is achieved by requiring proposed developments to pay standardized impact fees, conduct focused surveys, and implement standardized minimization, avoidance, and mitigation measures. Development projects within the ECCC HCP/NCCP Permit Area are subject to such requirements. The majority of the City of Oakley is included in the ECCC HCP/NCCP Permit area and development within portions of the City within the ECCC HCP/NCCP Permit area are subject to the ECCC HCP/NCCP permitting process.

Project Setting

The subject property consists of approximately 375.70 acres located on the northwest portion of the City of Oakley, adjacent to State Route (SR) 160, on Bridgehead Road, north of Main Street and the Burlington Northern Santa Fe (BNSF) Railroad. The property includes 12 parcels, identified as Assessor's Parcel Numbers (APNs) 037-020-008, -009, -010, -014, -015, -016, -017, -018, -019, -020, -021, and -022. Elevations within the subject property range from approximately 10 to 30 feet above mean sea level (MSL). While the entire property is approximately 375.70 acres, the proposed project would only develop approximately 143.3 acres within the southwestern portion of the property. The 143.3-acre development area, which includes 1.51-acres of off-site improvements along the east side of Bridgehead Road adjacent to the property, is hereinafter referred to as the "project site" while the entire 375.70-acre property is referred to as the subject property (see Figure 3-2 of the Project Description Chapter of this EIR). In addition to the 143.3-acre project site, the proposed project would involve various off-site improvement activities. The off-site improvements include utility infrastructure construction work within Bridgehead Road and Main Street, and improvement work at the 2.95-acre Del Antico Stormwater Basin (identified by APN 035-402-009). Within the 375.70-acre subject property and off-site improvement areas, Moore Biological studied a total of 169.37-acres, which encompassed the entire 143.3-acre project site, additional areas adjacent to the project site that may be disturbed through soil borrowing or grading, and the Del Antico Stormwater Basin.

Portions of the subject property were previously developed with a chemical manufacturing facility that operated from 1956 to 1997. Following cessation of manufacturing activity, the majority of the on-site structures were demolished. The project site has been listed as a corrective action site since 2008 by the Department of Toxic Substances Control (DTSC) and is a former interim status Resource Conservation and Recovery Act (RCRA) facility.

Currently, the southwest portion of the subject property consists primarily of paved and unmaintained urban land, while the northeastern portion of the subject property consists of marsh areas associated with the San-Joaquin River. Two existing buildings, totaling approximately 11,778 sf and 2,640 sf, respectively, are located within the western portion of the project site, near Bridgehead Road. Previous development of the subject property as well as on-going remediation of the subject property by Chemours has resulted in a highly disturbed

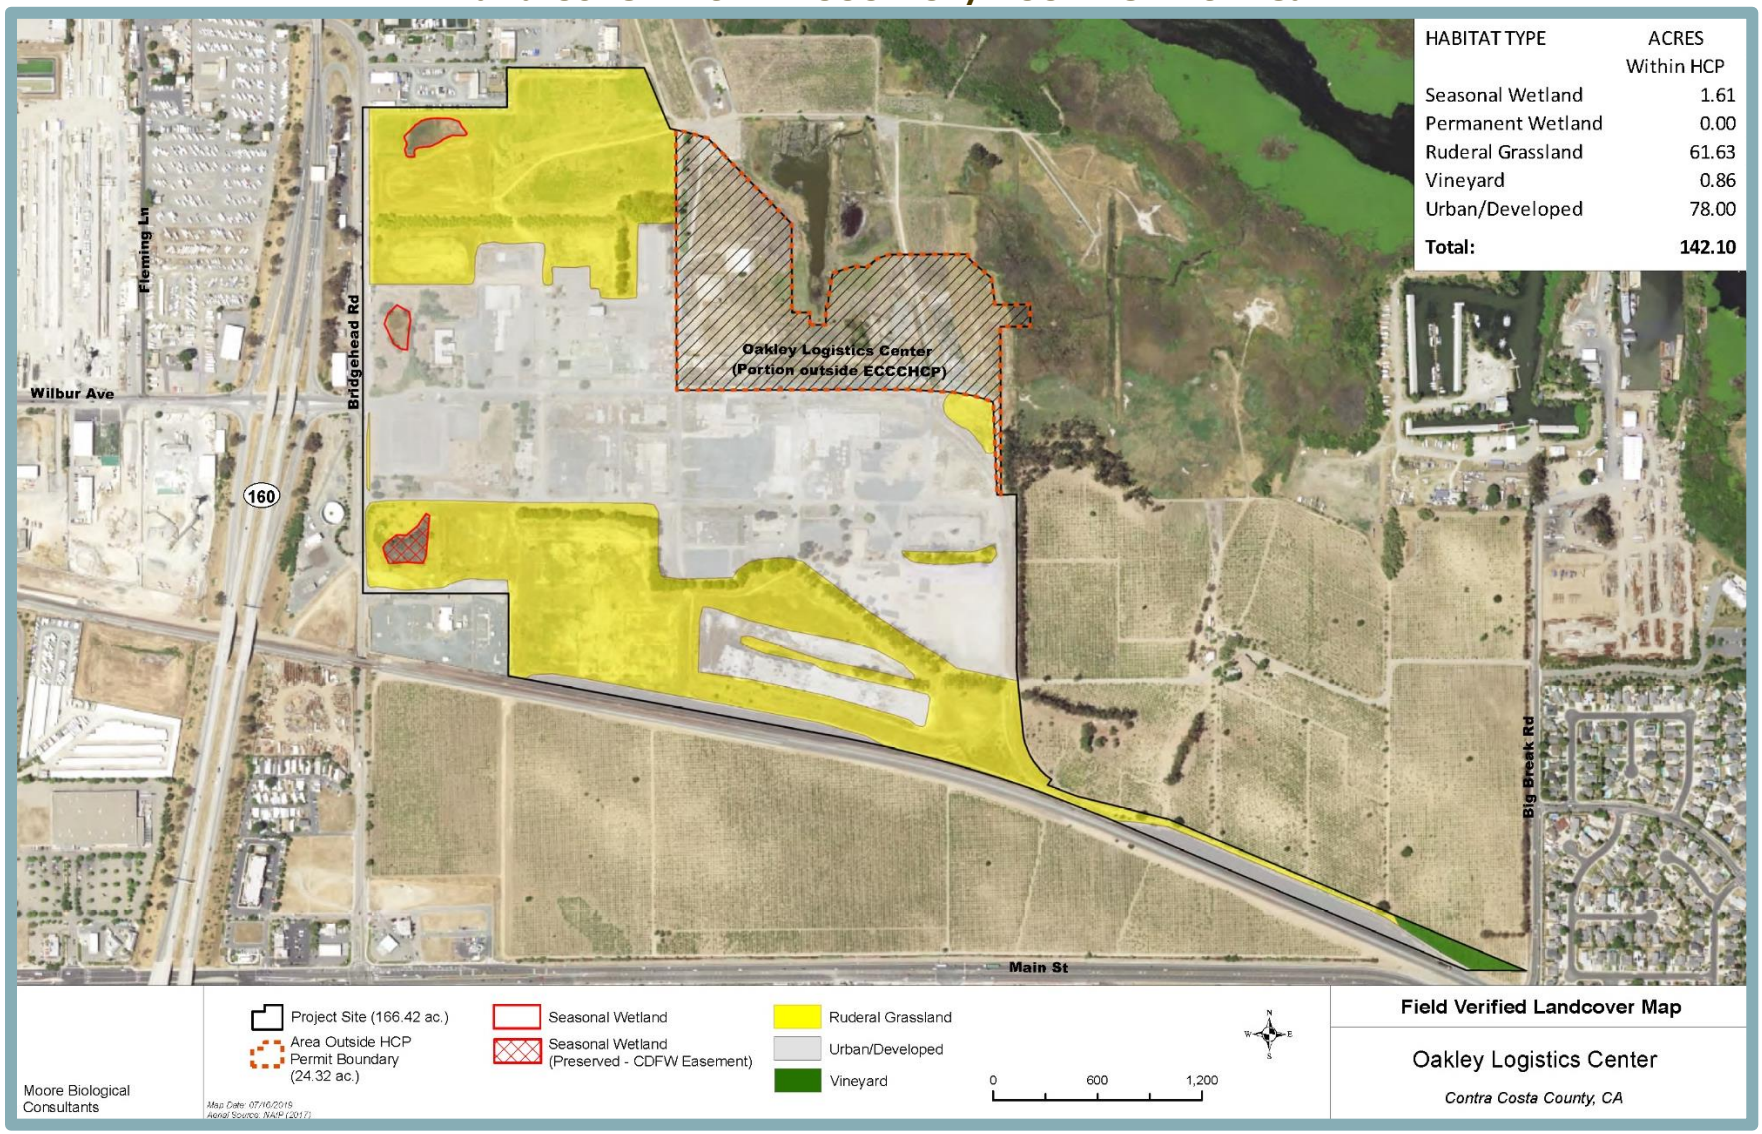
landscape within the site. On-going remediation activity includes the use of heavy equipment throughout the site as well as ground disturbance and vegetation removal.

The subject property is bordered by Bridgehead Road to the west and BNSF railroad tracks to the south. Various industrial and commercial uses, including a boat repair shop, are located west of the property, across Bridgehead Road. The areas to the south and east of the property consist of actively managed agricultural land, that are currently vineyards. A mobile home park is located to the southwest of the property, and a single-family residential subdivision is located further east of the property, east of Big Break Road. The Big Break Marina and a construction equipment storage yard are located to the north of the subdivision. Existing uses to the north of the subject property include the Driftwood Marina, the Lauritzen Yacht Harbor, the Antioch/Oakley Regional Shoreline Park, and a canvas supply store (Canvas Factory).

ECCC HCP/NCCP Permit Area

The ECCC HCP/NCCP Permit Area encompasses the majority of the City of Oakley; however, as shown in Figure 4.2-1 and Figure 4.2-2 portions of the project site are outside of the ECCC HCP/NCCP Permit Area. Within the 169.37 acres studied by Moore Biological Consultants, approximately 145.05 acres of land are included within the ECCC HCP/NCCP Permit Area and 24.32 acres of land are outside of the ECCC HCP/NCCP Permit Area. The majority of development associated with the proposed project would take place within the 145.05-acre portion of the subject property inside the ECCC HCP/NCCP Permit Area. Moreover, all 4.46 acres of off-site improvement areas are within the ECCC HCP/NCCP Permit Area. Consequently, the majority of the area to be developed as part of the proposed project is within the ECCC HCP/NCCP Permit Area, and the remaining portion of the project site, equaling approximately 24.32 acres, is outside of the ECCC HCP/NCCP Permit Area.

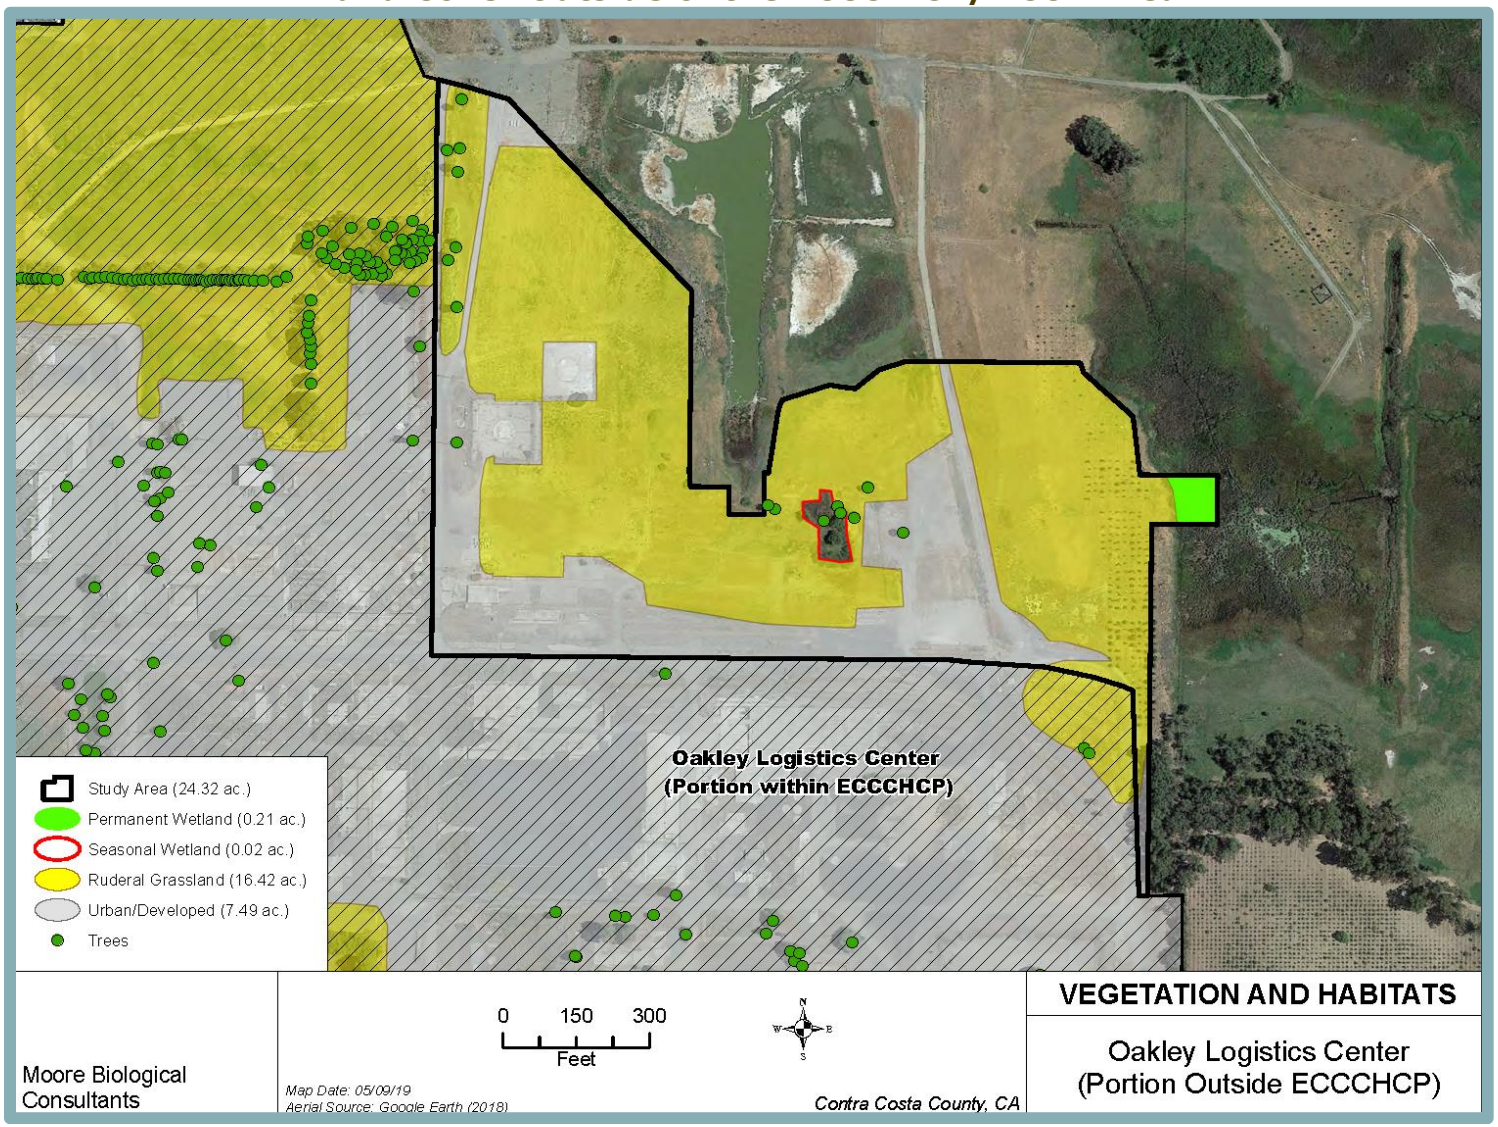
All work completed within the ECCC HCP/NCCP Permit Area is subject to the requirements of the ECCC HCP/NCCP, which provides a programmatic approach to reducing impacts to endangered species.



Vegetation Communities and Land Cover Types

Several land cover types exist within the subject property, including a large slough, expansive tidal and alkali wetlands, grassland, seasonal wetlands, permanent wetland, urban/developed land, and vineyards. However, the only vegetation communities and land cover types existing within the project site and area studied by Moore Biological are ruderal grassland, seasonal wetlands, permanent wetlands, vineyard, and urban/developed land, which are described in the following sections. The vegetation communities and land cover types within the project site are presented in Figure 4.2-1 and Figure 4.2-2, while the land cover types present at the Del Antico Basin are presented in Figure 4.2-3. It should be noted that much of the area within the subject property has been heavily disturbed through past site development and demolition activity, as well as on-going remediation work. Furthermore, the Del Antico Basin is regularly maintained through vegetation management.

Ruderal Grassland



A large portion of the project site, including the shoulder of Bridgehead Road adjacent to the property, is comprised of ruderal grassland vegetation that has been highly disturbed by previous development, soil remediation, and other human activities. Grasslands within the project site appear to be periodically mowed and disked for weed abatement.

Figure 4.2-1
Land Cover within ECCC HCP/NCCP Permit Area

Source: Moore Biological Consultants, 2019

Figure 4.2-2
Land Cover Outside of the ECCC HCP/NCCP Area

Source: Moore Biological Consultants, 2019.

Figure 4.2-3
Land Cover at the Del Antico Basin

Source: Moore Biological Consultants, 2019.

Ruderal grassland vegetation primarily consists of non-native weedy species. Within the site, the dominant grassland species include oats (*Avena fatua),* soft chess brome (*Bromus hordeaceus*), ripgut brome (*Bromus diandrus*), red brome (*Bromus madritensis*), wall barley (*Hordeum mrinum*), perennial ryegrass (*Lolium perenne*), yellow star thistle (*Centaurea solstitialis*), Italian thistle (*Carduus pycnocephalus*), bull thistle (*Cirsium vulgare*), black mustard (*Brassica nigra*), and filaree (*Erodium sp.*).

Vineyard

A small area of vineyard exists within the panhandle extending southeast from the body of the site, generally within Parcel B (Figure 4.2-1). The vineyard extends off-site, to the east, and the vineyard ends near existing railroad tracks. Ruderal grassland vegetation is present at ground-level, beneath the vines.

Urban/Developed Land

Several portions of the project site show evidence of former buildings and previous development. Former buildings and foundations are located throughout the project site, as are paved and gravel areas; the paved portion of Bridgehead Road is also urban land (Figure 4.2-1 and Figure 4.2-2). An administrative building complex located in the western portion of the site is currently being used as an on-site office associated with ongoing on-site remediation efforts. Areas where off-site utility infrastructure improvements would be conducted are located within urban/developed land associated with Bridgehead Road and Main Street rights-of-way.

Off-Site Improvement Areas

The proposed project includes utility infrastructure construction work within Bridgehead Road and Main Street, and improvement work at the Del Antico Stormwater Basin. These off-site improvement areas are within the ECCC HCP/NCCP Permit Area, and, thus, work within such areas is required to comply with the ECCC HCP/NCCP. The existing vegetation communities and land cover types at each of the off-site improvement areas are discussed in further depth below.

Del Antico Basin

The Del Antico Basin is an existing stormwater basin located off Del Antico Avenue within the City of Oakley. The basin receives stormwater for the surrounding developments. Regular maintenance of the basin includes vegetation control; thus, while the basin may experience growth of ruderal grassland vegetation, such vegetation is frequently maintained. As shown in Figure 4.2-3 the Del Antico Basin contains 2.926 acres of grassland habitat and 0.019 acre of urban/developed land.

Off-Site Utility Work

The proposed project would include off-site infrastructure improvements within Bridgehead Road and Main Street. All such infrastructure improvements would occur within areas that have previously been developed for roadways. Consequently, the land cover type for the area of improvements would be considered urban/developed land.

Aquatic Resources

On-site aquatic resources have been identified through a process that began with delineation in 2006 and a jurisdictional determination issued by the U.S. Army Corps of Engineers (USACE) in 2008. The original delineation of on-site aquatic resources was subsequently submitted for reverification in 2016, and further updates to the delineation of on-site wetlands were prepared by Ascent Environmental in December of 2018 and verified by the USACE in March 2019. The PSR and supplemental memorandum prepared by Moore Biological Consultants incorporates

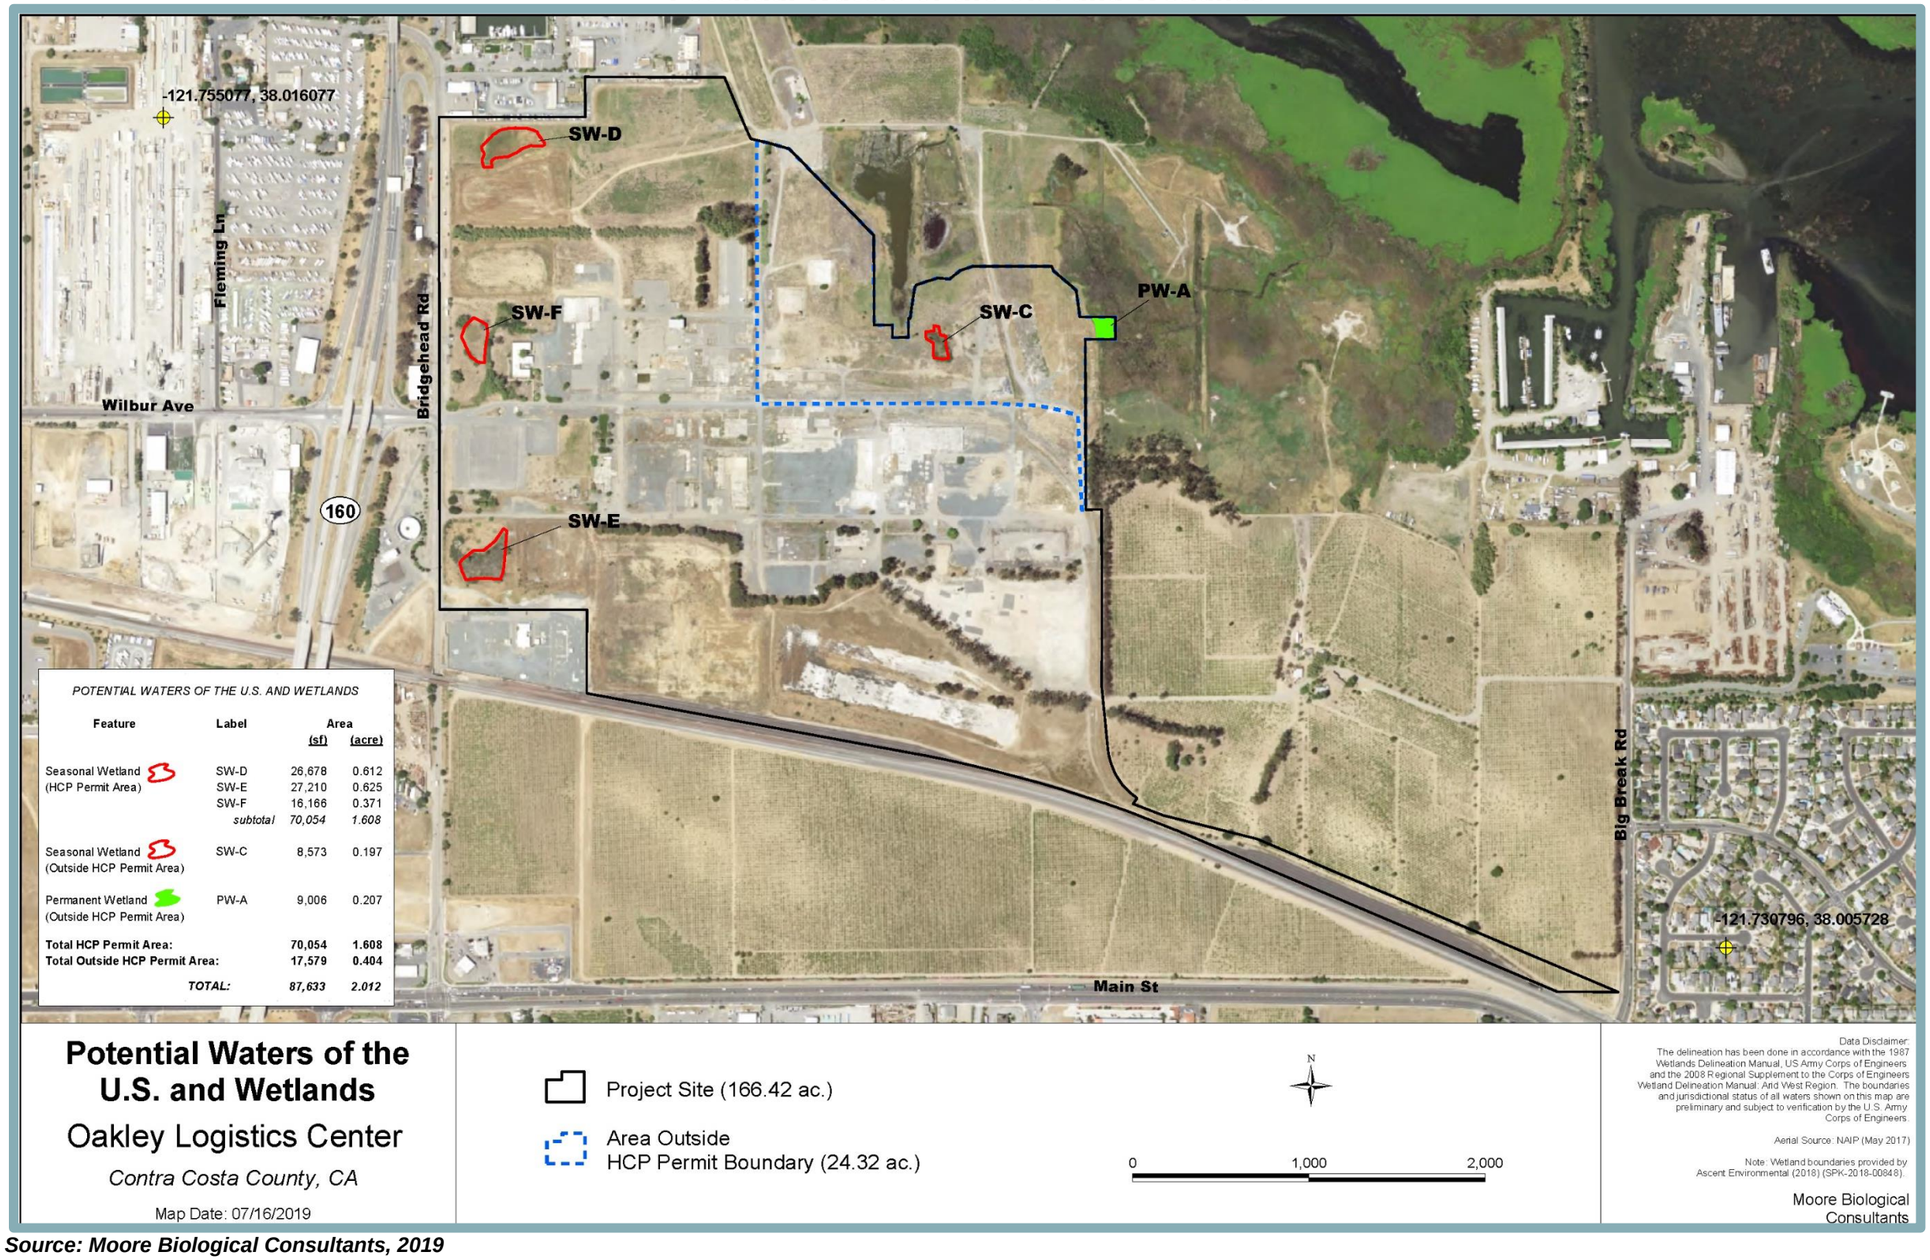
the previous delineation activity conducted within the project site and relies on the most-up-to-date information related to delineated aquatic resources within the site.

Aquatic resources mapped within the entire subject property are summarized in Table 4.2-1. Aquatic resources mapped within the project site, which represent a subset the aquatic resources mapped within the subject property, are summarized in Table 4.2-2 and depicted in Figure 4.2-4.

Table 4.2-1
Aquatic Resources Mapped within the Subject Property

Resource Type	Area (acres)
Seasonal Wetland	1.80
Permanent Wetland	110.16
Open Water	64.19
Total Aquatic Resources Within the Subject Property	**176.15[1]**

Note:
[1] Corps verification letter cites 176.16 acres; the 0.01-acre discrepancy appears related to rounding of the area of Central Slough ("Wetland B"), which is outside of the project site.



Source: Moore Biological Consultants, July 2019.

Table 4.2-2
Aquatic Resources Mapped within the Project Site

Resource Type	Area	
	Square Feet	Acreage
Within ECCC HCP/NCCP Permit Area		
Seasonal Wetland (SW-D)	26,678	0.612
Seasonal Wetland (SW-E)	27,210	0.625
Seasonal Wetland (SW-F)	16,166	0.371
Subtotal	*70,054*	*1.608*
Outside of ECCC HCP/NCCP Permit Area		
Seasonal Wetland (SW-C)	8,573	0.197
Permanent Wetland (PW-A)	9,006	0.207
Subtotal	*17,579*	*0.404*
Total Aquatic Resources Within the Project Site	**87,633**	**2.012**

Source: Moore Biological Consultants, July 2019.

Figure 4.2-4
Potential Waters of the U.S. and Wetlands

Source: Moore Biological Consultants, 2019

As noted in Table 4.2-2, open water aquatic resources do not exist within the project site. Furthermore, only a small portion of permanent wetland area exists within the project site, in an area identified for construction of a stormwater outfall structure. The area of permanent wetland within the project site is outside of the ECCC HCP/NCCP Permit Area. Because the proposed project does not include any proposed changes or activity within areas outside of the project site, the following discussion focuses on the 2.012 acres of seasonal wetland and permanent wetland habitats existing within the project site.

It should be noted that all wetlands within the ECCC HCP/NCCP Permit Area are subject to the regulations of the ECCC HCP/NCCP. Furthermore, the off-site improvement areas do not contain any areas identified as potentially jurisdictional wetlands or other aquatic resources.

Seasonal Wetlands

Four seasonal wetlands have been delineated within the project site (see Figure 4.2-4). Three of the seasonal wetlands are located in the western portion of the site, within the ECCC HCP/NCCP Permit Area. The fourth seasonal wetland is located in the northeastern portion of the site, outside of the ECCC HCP/NCCP Permit Area. All of the above seasonal wetlands occur within shallow basins incised several feel below adjacent grasslands. None of the above wetlands have habitat attributes resembling vernal pools. Soils in the wetlands are sandy and appear to be well-draining.

Two of the three on-site seasonal wetlands within the ECCC HCP/NCCP Permit Area and the seasonal wetland located outside of the ECCC HCP/NCCP Permit Area are surrounded by woody riparian species including California black walnut (*Juglans californica*), Gooding's black willow (*Salix goodingii*), Pacific willow, (*Salix lsiandra*), Fremont's cottonwoods (*Populus fremontii*), and coast live oak (*Quercus agrifolia*). Although riparian species are present, due to the composition of the wetlands, riparian habitat is not considered present within the project site. The seasonal wetland in the northwest corner of the site contains only a few willow saplings in the southwestern tip of the wetland. Dominant wetland species found within the floors of the above seasonal wetlands include seaside barley (*Hordeum marinum*, perennial ryegrass (*Lolium perenne*), annual rabbit's-foot grass (*Polypogon monspeliensis*), and curly dock (*Rumex crispus*). In addition, some patches of saltgrass (*Distichlis spicata*), hard-stem club-rush (i.e., tules) (*Schoenoplectus acutus*), and cattails (*Typha* sp.) exist within some of the seasonal wetlands.

Permanent Wetlands

A permanent wetland area is located within the eastern portion of the area outside of the ECCC HCP/NCCP Permit Area. The on-site permanent wetland area is a small portion of a larger complex of permanent wetlands associated with the San Joaquin River to the north of the site. Vegetation within the permanent wetland feature is dominated by thick cattails (*Typha latifolia*) and tules (*Schoenoplectus acutus*). The on-site permanent wetland is along the edge of the larger complex of permanent wetlands, with relatively limited habitat value compared to more central portions of the larger wetland complex.

Special-Status Species

For this analysis, special-status species are considered any of the following:

- Listed or proposed for listing as threatened or endangered under federal Endangered Species Act (ESA) or candidates for possible future listing (U.S. Fish and Wildlife Service [USFWS] 2015);
- Listed or candidates for listing by the State of California as threatened or endangered under the California Endangered Species Act (CESA);

- Listed as Fully Protected under the California Fish and Game Code;
- Animals identified by CDFW as species of special concern;
- Plants considered by CDFW to be "rare, threatened, or endangered in California" and assigned a California Rare Plant Rank (CRPR). The CDFW system includes five rarity and endangerment ranks for categorizing plant species of concern, which are summarized as follows:
    - CRPR 1A Plants presumed to be extinct in California;
    - CRPR 1B Plants that are rare, threatened, or endangered in California and elsewhere;
    - CRPR 2 Plants that are rare, threatened, or endangered in California but more common elsewhere;
    - CRPR 3 Plants about which more information is needed (a review list); and
    - CRPR 4 Plants of limited distribution (a watch list);
- Meeting the definition of rare or endangered under CEQA Sections 15380(b) and (d).

Moore Biological Consultants determined the special-status plant and wildlife species present in the project vicinity by consulting the CDFW's California Natural Diversity Database (CNDDB), as well as the USFWS's Information for Planning and Consultation (IPaC) system

Special-Status Plants

Based on queries of the CNDDB and IPaC, as well as previously completed special-status plant surveys completed for the Chemours remediation activity, Moore Biological Consultants concluded that 36 species of special-status plants have the potential to occur within the query area. Table 4.2-3 provides a list of all special-status plant species that are known to occur or have the potential to occur within the query area. The table provides information for each species, including common and scientific name, protected status, habitat suitability of the site, and potential for each species to occur based on previous surveys of the project site and existing conditions within the site.

As noted in the Table 4.2-3, field surveys for the presence of special-status plants have been conducted of the project site in association with soil remediation work conducted within the project site. Moore Biological Consultants also conducted surveys for special-status plants in August 2019 in the seasonal wetland and permanent wetland outside of the ECCC HCP/NCCP Permit Area. Pursuant to the ECCC HCP/NCCP, the areas of ruderal grasslands in the project site and the Del Antico Basin are not considered as having potential to support special-status plants covered by the ECCC HCP/NCCP. Due to an absence of potentially suitable habitat for special-status plants, focused surveys during the blooming period of each species were not warranted. As the Del Antico Basin is comprised entirely of ruderal grassland, Table 4.2-3 and the following discussion only pertains to the site

Of the 36 special-status plants recorded in the query area, only a few have the potential to occur within the project site. The expansive tidal wetlands in the northeast part of the overall property provide potentially suitable habitat for soft salty bird's-beak (*Chloropyron molle* ssp. *molle*), Bolander's water hemlock (*Cicuta maculata var. bolanderi*), woolly rose mallow (*Hibiscus lasiocarpus*), Delta tule pea (*Lathyrus jepsonii* var. *jepsonii*), Mason's lilaeopsis (*Lilaeopsis masonii*), Delta mudwort (*Limosella australis*), eel-grass pondweed (*Potamogeton zosteriformis*), and Suisun marsh aster (*Symphotrichum lentum*). The storm drain outfall site is along the edge of the tidal wetlands and provides potentially suitable habitat for some of these species. However, none of these species, or any other special-status plant species, was observed in the site during any of the surveys.

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
Large-flowered fiddleneck	*Amsinckia grandiflora*	FE/CE/1B	Cismontane woodland, valley and foothill grassland; elevations 902-1,805 feet; blooms April - May.	**Unlikely**: the ruderal grassland habitats in the site are highly disturbed and do not provide suitable habitat for large-flowered fiddleneck; the site is also well below the elevation range of this species (CNPS, 2019). The nearest occurrence of large-flowered fiddleneck in the CNDDB (2019) search area is approximately seven miles southwest of the site.
Mt. Diablo manzanita	*Arctostaphylos auriculata*	--/--/1B	Chaparral, only on the Mt. Diablo area of Contra Costa County; elevations 443-2,133 feet; blooms January - March.	**Unlikely**: the site does not provide suitable habitat for Mt. Diablo manzanita. The site is not in the elevation range of this species (CNPS, 2019). The nearest occurrence of the Mt. Diablo manzanita in the CNDDB (2019) search area is approximately six miles southwest of the site.
Alkali Milk-Vetch	*Astragalus tener var. tener)*	--/--/1B	Alkali playas and vernal pools; elevations 3-197 feet; blooms March - June.	**Unlikely**: the project site does not provide suitable habitat for this species; vernal pools and alkali playas do not exist within the site. The nearest occurrence of alkali milk-vetch in the CNDDB (2019) search area is approximately 8.5 miles northwest of the site.
Brittlescale	*Atriplex depressa*	--/--/1B	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland, vernal pool habitats within alkaline clay soils; elevations 3-1,050 feet; blooms April - October.	**Unlikely**: the ruderal grassland in the project site is highly disturbed and does not provide suitable habitat for brittlescale; there are also no other habitats in the site to support this species. The nearest occurrence of this species in the CNDDB (2019) search area is approximately five miles south of the site.

(Continued on next page)

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
Big tarplant	*Blepharizonia plumosa ssp. plumosa*	--/--/1B	Valley and foothill grassland, usually in clay soils; elevations 98-1,657 feet; blooms July - October.	**Unlikely**: the ruderal grassland in the site is highly disturbed and does not provide suitable habitat for big tarplant. The site is also not within the elevation range of this species (CNPS, 2019). The nearest occurrence of this species in the CNDDB (2019) search area is approximately five miles southwest of the site.
Mt. Diablo fairy-lantern	*Calochortus pulchellus*	--/--/1B	Chaparral, cismontane woodland, riparian woodland, valley and foothill grassland; elevations 98-2,756 feet; blooms April - June.	**Unlikely**: the ruderal grassland in the project site is highly disturbed and does not provide suitable habitat for Mt. Diablo fairy-lantern. The site is not within the elevation range of this species (CNPS, 2019). The nearest occurrence of Mt. Diablo fairy-lantern in the CNDDB (2019) search area is approximately eight miles southwest of the site.
Congdon's Tarplant	*Centromadia parryi ssp. congdonii)*	--/--/1B	Valley and foothill grassland, usually in alkaline soils; elevations 0-754 feet; blooms May - October.	**Unlikely:** the ruderal grasslands in the site are highly disturbed and do not provide suitable habitat for this species. The nearest occurrence of Congdon's tarplant in the CNDDB (2019) search area is approximately 5.5 miles southeast of the site.
Soft salty bird's beak	Chloropyron mole ssp. molle	FE/CR/1B	Coastal salt marsh; elevations 0-10 feet; blooms July - November.	**Unlikely**: the permanent wetland is choked with cattails and tules and provides poor quality habitat for this species. Additionally, soft salty bird's-beak was not observed in the permanent wetland during the rare plant survey for the remediation project (California Environmental Services, 2017) or during the recent 2019 surveys by Moore Biological Consultants. The nearest occurrence of soft salty bird's-beak in the CNDDB (2019) search area is

(Continued on next page)

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
				approximately one mile north of the site. The site is not in designated critical habitat for this species (USFWS, 2007)
Bolander's water-hemlock	*Cicuta maculata var. bolanderi*	--/--/2	Fresh or brackish water marshes; elevations 0- 656 feet; blooms July - September.	**Unlikely**: because the on-site seasonal wetlands are wet only seasonally, they provide poor quality marsh habitat for Bolander's water hemlock; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Bolander's water hemlock was not observed during the rare plant survey for the remediation project (California Environmental Services, 2017) or during the recent 2019 surveys by Moore Biological Consultants. The nearest occurrence of this species in the CNDDB (2019) search area is mapped nonspecifically approximately one mile east of the site.
Hoover's cryptantha	Cryptantha hooveri	--/--/1B	Inland dunes; sandy areas in valley and foothill grasslands; elevations 30-492 feet; blooms April - May.	**Unlikely**: there are no dunes in the site and the ruderal grasslands are heavily disturbed and do not provide suitable habitat for Hoover's cryptantha; the site is also at the very low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of Hoover's cryptantha in the CNDDB (2019) search area is approximately two miles southwest of the site.
Dwarf downingia	*Downingia pusilla*	--/--/2	Vernal pools; elevations 3-1,460 feet; blooms March - May.	**Unlikely**: there are no vernal pools in the site and the seasonal wetlands in the site do not provide habitat for vernal pool plants. The nearest occurrence of dwarf downingia in the CNDDB (2019) search area is

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
				approximately 9.5 miles northwest of the site.
Antioch Dunes buckwheat	*Eriogonum nudum var. psychicola*	--/--/1B	Inland dunes; elevations 0-66 feet; blooms July - October. *(Continued on next page)*	**Unlikely**: the site does not provide dune habitat for Antioch Dunes buckwheat. The nearest occurrence of this species in the CNDDB (2019) search area is approximately two miles west of the site. Additionally, this species was not observed during the recent rare plant survey for the remediation project (California Environmental Services, 2017).
Mt. Diablo buckwheat	*Eriogonum truncatum*	--/--/1B	Coastal scrub, valley and foothill grassland and coastal scrub; usually on sandy soils; elevations 10-1,148 feet; blooms April - December.	**Unlikely**: the ruderal grasslands are highly disturbed and do not provide suitable habitat for Mt. Diablo buckwheat; the site is also at the very low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of Mt. Diablo buckwheat in the CNDDB (2019) search area is approximately three miles southwest of the site.
Jepson's coyote thistle	*Eryngium jepsonii*	--/--/1B.2	Valley and foothill grasslands, within vernal pools; elevations 10–985 feet; blooms April - August.	**Unlikely**: the site does not provide suitable habitat for Jepson's coyote thistle. The site is also at the very low end of the elevation range of Jepson's coyote thistle (CNPS, 2019). The nearest occurrence of this species in the CNDDB (2019) search area is approximately eight miles southwest of the site.
Contra Costa wallflower	*Erysimum capitatum var. angustatum*	FE/CE/Rank 1B	Inland dunes; elevations 10-66 feet; blooms March - July.	**Unlikely**: the site does not provide dune habitat for Contra Costa wallflower. The nearest occurrence of this species in the CNDDB (2019) search area is approximately two miles west of the site. The site is not in designated critical habitat for Contra Costa wallflower (CFR, 1999a).

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
Diamond-petaled California poppy	*Eschscholzia rhombipetala*	--/--/1B	Valley and foothill grasslands in alkaline, clay soils; elevations 0-3,200 feet; blooms March - April.	**Unlikely**: the on-site grasslands are highly disturbed and do not provide suitable habitat for diamond-petaled California poppy. The site is at the very low end of the elevation range of this species, which is considered extirpated in Contra Costa County (CNPS, 2019). The nearest occurrence of diamond-petaled California poppy in the CNDDB (2019) search area is approximately 2.5 miles northwest of the site.
San Joaquin spearscale	*Extriplex joaquiniana*	--/--/1B	Chenopod scrub, meadows, playas and seeps, valley and foothill grassland; within alkaline soils; elevations 3-2,740 feet; blooms April - October.	**Unlikely**: the ruderal grasslands in the site are highly disturbed and do not provide suitable habitat for this species. The site is also at the very low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of San Joaquin spearscale in the CNDDB (2019) search area is approximately five miles south of the site.
Fragrant fritillary	*Fritillaria liliacea*	--/--/1B	Coastal scrub, valley and foothill grassland and coastal prairie; often on serpentine soils; elevations 10-1,345 feet; blooms February - April.	**Unlikely**: the ruderal grasslands are highly disturbed and do not provide suitable habitat for fragrant fritillary; no areas of serpentine soils were observed in the site. The site is also at the very low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of fragrant fritillary in the CNDDB (2019) search area is approximately 9.5 miles northwest of the site.
Diablo helianthella	*Helianthella castanea*	--/--/1B	Broad-leaved upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland; elevations 197-4,265 feet; blooms March - June.	**Unlikely**: Unlikely: the on-site ruderal grasslands are heavily disturbed and provides poor quality habitat for Diablo helianthella. The site is also not within the elevation range of this species (CNPS,

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
				2019) and below the elevation range of the potential habitat for this species as modeled in the ECCC HCP/NCCP. The nearest occurrence of Diablo helianthella in the CNDDB (2019) search area is approximately 7.5 miles southwest of the site.
Brewers western flax	*Hesperolinon breweri*	--/--/1B	Chaparral, cismontane woodland, valley and foothill grassland; usually serpentine soils; elevations 98-3,100 feet; blooms May - July.	**Unlikely**: the ruderal grasslands in the project site are highly disturbed and does not provide suitable habitat for Brewers western flax. The site is also not within the elevation range of this species (CNPS, 2019). The nearest occurrence of Brewers western flax in the CNDDB (2019) search area is approximately five miles southwest of the project site.
Woolly rose-mallow	*Hibiscus lasiocarpos var. occidentalis*	--/--/1B.2	Freshwater marshes and swamps, usually along the edges of delta islands; elevations 0-393 feet; blooms June - September.	**Unlikely**: because the on-site seasonal wetlands are wet only seasonally, they provide poor quality marsh habitat for woolly rose mallow; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, woolly rose mallow was not observed during the rare plant survey for the remediation project (California Environmental Services, 2017) or during the recent 2019 surveys by Moore Biological Consultants. The nearest occurrence of this species in the CNDDB (2019) search area is approximately six miles northeast of the project site.
Contra Costa Goldfields	*Lasthenia conjugens*	FE/--/1B	Valley and foothill grassland within vernal pools and swales; elevations 0-1,542 feet; blooms March - June.	**Unlikely**: the site does not provide suitable habitat for Contra Costa goldfields; there are no vernal pools in the site and the seasonal wetlands in the site do not provide suitable

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
				habitat for vernal pool plants. The site is at the very low end of the elevation range of this species (CNPS, 2019) and the nearest occurrence of Contra Costa goldfields in the CNDDB (2019) search area is a record mapped nonspecifically surrounding the city of Antioch, approximately three miles southwest of the site. The site is not in designated critical habitat for this species (USFWS 2005a).
Delta tule pea	*Lathyrus jepsonii var. jepsonii*	--/--/1B	Marshes and swamps, usually along the edges of delta islands; elevations 0-16 feet; blooms May - September.	**Unlikely**: because the on-site seasonal wetlands are wet only seasonally, they provide poor quality marsh habitat for delta tule pea; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, delta tule pea was not observed during the rare plant survey for the remediation project (California Environmental Services, 2017) or during the recent 2019 surveys by Moore Biological Consultants. The nearest occurrence of delta tule pea in the CNDDB (2019) search area is approximately two miles northwest of the site.
Mason's lilaeopsis	*Lilaeopsis masonii*	--/CR/1B	Marshes, swamps and riparian scrub, usually along the edges of delta islands; elevations 0-33 feet; blooms April - November.	**Unlikely**: because the on-site seasonal wetlands are wet only seasonally, they provide poor quality marsh habitat for Mason's lilaeopsis; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, this species was not observed during the rare plant survey for the remediation project (California Environmental Services, 2017)

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
				or during the recent 2019 surveys by Moore Biological Consultants. The nearest occurrences of Mason's lilaeopsis recorded in the CNDDB (2019) search area are a few records along delta waterways within a mile north and northeast of the site.
Delta mudwort	*Limosella australis*	--/--/2B.1	Marshes and swamps, usually along the edges of delta islands; elevations 0-10 feet; blooms May - August.	**Unlikely**: because the on-site seasonal wetlands are wet only seasonally, they provide poor quality marsh habitat for Delta mudwort; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, this species was not observed in the wetlands during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrences of Delta mudwort recorded in the CNDDB (2019) search area are a few records along delta waterways within a mile north and northeast of the site.
Showy golden madia	*Madia radiata*	--/--/1B	Cismontane woodland, valley and foothill grassland; elevations 82- 3,986 feet; blooms March - May.	**Unlikely**: the on-site grasslands are heavily disturbed and do not provide suitable habitat for showy golden madia; this species is also considered extirpated in Contra Costa County (CNPS, 2019). The nearest occurrence of showy golden madia in the CNDDB (2019) search area is approximately 4.5 miles southwest of the site.
Hall's bush-mallow	*Malacothamnus hallii*	--/--/1B.	Chaparral, coastal scrub at elevations between 32-2,493 feet above sea level. Blooms May - October.	**Unlikely**: the site does not contain suitable habitat for this species; there is no chaparral habitat within the project site. The nearest occurrence of Hall's bush mallow in the CNDDB (2019) search area is

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
				approximately eight miles southwest of the site.
Shining navarretia	*Navarretia nigelliformis ssp. radians*	--/--/1B	Cismontane woodland, valley and foothill grassland, vernal pools, usually in clay soils; elevations 249-3,281 feet; blooms April - July.	**Unlikely**: the on-site grasslands are heavily disturbed and do not provide suitable habitat for shining navarretia and there are no vernal pools in the site. The site is also well below the elevation range of this species (CNPS, 2019). The nearest occurrence of shining navarretia in the CNDDB (2019) search area is approximately five miles southwest of the site.
Colusa Grass	*Neostapfia colusana*	FT/CE/1B	Vernal pools (large and deep); elevations 16-656 feet; blooms May - August.	**Unlikely**: there are no vernal pools in the site. There are no occurrences of Colusa grass in the CNDDB (2019) search area. The site is not in designated critical habitat for this species (USFWS 2005a).
Antioch Dunes evening-primrose	*Oenothera deltoides ssp. howellii*	FE/CE/1B	Interior dunes in the Delta region; elevations 0-98 feet; blooms March – September.	**Unlikely**: the site does not contain dune habitat for this species. Additionally, this species was not observed in the site during the recent rare plant survey for the remediation project (California Environmental Services, 2017). The nearest occurrences of Antioch dunes evening primrose in the CNDDB (2019) search area is a few records within one mile southwest and west of the site. The site is not in designated critical habitat for this species (CFR, 1999b).
Bearded popcornflower	*Plagiobothrys hystriculus*	--/--/1B	Vernal pools, valley and foothill grassland; elevations 0-899 feet; blooms April – May.	**Unlikely**: the ruderal grassland in the site is highly disturbed and there are no vernal pools in the site to support bearded popcorn-flower. The site is at the low end of the elevation range of this species (CNPS, 2019). The nearest occurrence of bearded

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
				popcornflower in the CNDDB (2019) search area is approximately nine miles northwest of the site.
Eel-grass pondweed	*Potamogeton zosteriformis*	--/--/2	Marshes and swamps at elevations between 0-6,102 feet above sea level. Blooms June – July.	**Unlikely**: because the on-site seasonal wetlands are wet only seasonally, they provide poor quality marsh habitat for eel-grass pondweed; the nearshore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. The site is also at the very low end of the elevation range of this species (CNPS, 2019). Additionally, eel-grass pondweed was not observed during the rare plant survey for the remediation project (California Environmental Services, 2017) or during the recent 2019 surveys by Moore Biological Consultants. The nearest occurrence of this species in the CNDDB (2019) search area is approximately six miles northeast of the site.
Chaparral ragwort	*Senecio aphanactis*	--/--/2	Cismontane woodland, coastal scrub, within drying alkaline flats; elevations 49-2,625 feet; blooms January – April.	**Unlikely**: the site does not contain suitable habitat for chaparral ragwort; the site is also below the elevation range of this species (CNPS, 2019). The nearest occurrence of this species in the CNDDB (2019) search area is approximately 8.5 miles southwest of the site
Keck's checkerbloom	*Sidalcea keckii*	--/FE/1B	Cismontane woodland, valley and foothill grassland, usually serpentine or clay soils; elevations 246-2,132 feet; blooms April - June.	**Unlikely**: the on-site grasslands are highly disturbed and do not provide suitable habitat for this species. The site is also well below the elevation range of this species (CNPS, 2019) The nearest occurrence of Keck's checkerbloom in the CNDDB (2019) search area is approximately 10 miles

Table 4.2-3
Special-Status Plant Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site
				northwest of the site.
Suisun marsh aster	*Symphyotrichum lentum*	--/--/1B	Marshes and swamps, usually along the edges of delta island; elevations 0-10 feet; blooms May - November.	**Unlikely**: because the on-site seasonal wetlands are wet only seasonally, they provide poor quality marsh habitat for Suisun marsh aster; the near-shore portions of the permanent wetland are choked with cattails and tules and provide poor quality habitat for this species. Additionally, this species was not observed during the rare plant survey for the remediation project (California Environmental Services, 2017) or during the recent 2019 surveys by Moore Biological Consultants. The nearest occurrence of this species in the CNDDB (2019) search area is a record mapped nonspecifically within one mile east of the site.
Caper-fruited tropidocarpum	*Tropidocarpum capparideum*	--/--/1B	Valley and foothill grassland, alkaline soils; elevations 3-1,493 feet; blooms March - April.	**Unlikely**: the on-site grasslands are highly disturbed and do not provide suitable habitat for this species. The nearest occurrence of caper-fruited tropidocarpum in the CNDDB (2019) search area is approximately 10.5 miles southeast of the site.
Oval-leaved viburnum	*Viburnum ellipticum*	--/--/2	Chaparral, cismontane woodland, and lower montane coniferous forest; elevations 705-4,593 feet; blooms May - June.	**Unlikely**: the site does not contain suitable habitat for this species. The site is also well below the known elevation range of oval-leaved viburnum (CNPS, 2019). The nearest occurrence of this species in the CNDDB (2019) search area is approximately 11.5 miles southwest of the site.

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
Invertebrates				
Valley elderberry longhorn beetle	*Desmocerus californicus dimorphus*	T/--	Elderberry shrubs, usually in Central Valley riparian habitats.	**Unlikely**: there are no blue elderberry shrubs in or adjacent to the site. There are no occurrences of valley elderberry longhorn beetle recorded in the CNDDB (2019) in the search area. The site is not in designated critical habitat for this species (USFWS 1980a).
Vernal pool fairy shrimp	*Branchinecta lynchi*	T/--	Vernal pools.	**Unlikely**: there are no vernal pools in the site. The nearest occurrence of vernal pool fairy shrimp in the CNDDB (2019) search area is approximately 5.5 mile southwest of the site. The site is not in designated critical habitat of this species(USFWS, 2005a).
Conservancy fairy shrimp	*Branchinecta conservation*	E/--	Vernal pools.	**Unlikely**: there are no vernal pools in the site. The nearest occurrence of Conservancy fairy shrimp in the CNDDB (2019) search area is approximately 9.5 miles northwest of the site. The site is not in designated critical habitat for this species (USFWS 2005a).
Vernal pool tadpole shrimp	*Lepidurus packardi*	E/--	Vernal Pools	**Unlikely**: there are no vernal pools in or near the site. The nearest occurrence of this species in the CNDDB (2019) search area is approximately nine miles northwest of the site. The site is not in designated critical habitat for vernal pool tadpole shrimp (USFWS, 2005a).
San Bruno elfin butterfly	*Callophrys mossii bayensis*	E/--	Rocky outcrops and cliffs in coastal scrub habitats.	**Unlikely**: the site does not provide suitable habitat for this species. There are no occurrences of San Bruno elfin butterfly in the CNDDB (2019) search area.
Lange's	*Apodemia mormo*	E/--	Inhabits stabilized dunes along the	**Unlikely**: there is no dune habitat in the

(Continued on next page)

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
metalmark butterfly	*langei*		San Joaquin River.	project site. The closest occurrence of Lange's metalmark butterfly in the CNDDB (2019) search area is approximately seven miles northwest of the site.
Delta green ground beetle	*Elaphrus viridis*	T/--	Margins of vernal pools in grasslands.	**Unlikely**: there are no vernal pools in the site. There are no occurrences of delta green ground beetle in the CNDDB (2019) in the search area. The site is not in designated critical habitat of this species (USFWS 1980b).
Fish				
Central Valley steelhead	*Oncorhynchus mykiss*	T/--	Riffle and pool complexes with adequate spawning substrates within Central Valley drainages.	**None**: the site does not provide suitable habitat for this species; Central Valley steelhead is known to occur in the San Joaquin River north of the site. The nearest occurrence of this species in the CNDDB (2019) search area is in the San Joaquin River, north of the site. The site is not in designated as critical habitat for Central Valley steelhead (NOAA, 2005).
Delta smelt	*Hypomesus transpacificus*	T/T	Shallow lower delta waterways with submersed aquatic plants and other suitable refugia.	**None**: the site does not provide suitable habitat for this species; delta smelt occur in the San Joaquin River north of the site and there is an occurrence of delta smelt in the CNDDB (2019) search area is in the San Joaquin River just north of the site. Like much of Oakley, the project site is within designated critical habitat for delta smelt (USFWS, 1994) as the critical habitat of this species is generally defined by elevation.
Winter-run Chinook salmon	*Oncorhynchus tshawytscha*	E/E	Deep flowing pools and riffle complexes with adequate spawning substrates.	**Unlikely**: the site does not provide suitable habitat for this species; winter-run Chinook salmon occur in the San Joaquin River

(Continued on next page)

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
				north of the site. There are no occurrences of this species recorded in the CNDDB (2018) within the search area.
Spring-run Chinook salmon	*Oncorhynchus tshawytscha*	T/T	Deep flowing pools and riffle complexes with adequate spawning substrates.	**Unlikely**: the site does not provide suitable habitat for this species; spring-run Chinook salmon occur in the San Joaquin River north of the site. There are no occurrences of this species recorded in the CNDDB (2018) within the search area.
Longfin smelt	*Spirinchus thaleichthys*	--/SC	Brackish estuarine habitats.	**None**: the site does not provide suitable habitat for this species; longfin smelt is known to occur in the San Joaquin River north of the site and there is an occurrence of longfin smelt in the CNDDB (2019) search area is in the San Joaquin River just north of the site.
Green sturgeon	*Acipenser medirostris*	T/SC	Freshwater and saltwater habitats; spawn in freshwater rivers.	**Unlikely**: the site does not provide suitable habitat for this species; green sturgeon isknown to occur in the San Joaquin River north of the site. There are no occurrences of green sturgeon recorded in the CNDDB (2019) within the search area.
Sacramento perch	*Archoplites interruptus*	--/SC	Sloughs, lakes, and low-moving Central Valley Rivers; requires warm water.	**None**: the site does not provide suitable habitat for Sacramento perch; this species may occur in the San Joaquin River north of the site. The nearest occurrence of this species in the CNDDB (2019) search area is in the San Joaquin River just north of the site.

(Continued on next page)

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
Reptiles and Amphibians				
California tiger salamander	*Ambystoma californiense*	T/T	Seasonal water bodies without fish (i.e., vernal pools and stock ponds) and grassland/ woodland habitats with summer refugia (i.e., burrows).	**Unlikely**: there is no suitable habitat within or near the site for California tiger salamander. This species occurs in the transitional bands between the valley floor and foothills and is not known to occur in the delta. The nearest occurrence of California tiger salamander in the CNDDB (2019) search area is approximately 3.5 miles southwest of the site. The site is not within designated critical habitat for this species (USFWS, 2005b).
Giant garter snake	*Thamnophis gigas*	T/T	Freshwater marsh and low gradient streams; also adapted to drainage canals and irrigation ditches, primarily for dispersal or migration.	**Unlikely**: while this highly aquatic species may occur in regional delta waterways, the site provides poor quality habitat for giant garter snake. The nearest occurrence of this species in the CNDDB (2019) search area is a historical record (1987) mapped as "best guess". This record includes a large area mapped nonspecifically, including a portion of the north part of the site.
California red-legged frog	*Rana draytonii*	T/SC	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation.	**Unlikely**: there is no suitable habitat for California red-legged frog in or near the project site. This species is also presumed extinct on the floor of the Central Valley of California. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 5.5 miles southwest of the site. The site is not in California red-legged frog designated critical habitat (USFWS, 2006a).
Foothill yellow-legged frog	*Rana boylii*	--/SC	Perennial water bodies (i.e., streams and ponds) with abundant riparian	**Unlikely**: there is no suitable aquatic habitat for foothill yellow-legged frog in the

(Continued on next page)

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
			vegetation.	project site. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 10.5 miles southwest of the site.
Northern California legless lizard	*Aniella pulchra pulchra*	--/SC	Sandy or loose loamy soils under sparse vegetation.	**Unlikely**: the site provides marginally suitable habitat for northern California legless lizard. The nearest occurrence of this species in the CNDDB (2019) search area is approximately one mile southeast of the site.
Alameda whipsnake	*Masticophis lateralis euryzanthus*	T/T	Scrub, chaparral, grassland, and woodland habitat mosaics. South-facing slopes and ravines.	**Unlikely**: the grasslands in the site are highly disturbed and do not provide suitable habitat for Alameda whipsnake. The nearest occurrence of this species in the CNDDB (2019) search area is approximately five miles southwest of the site. The site is not in designated critical habitat for Alameda whipsnake (USFWS, 2006b).
California glossy snake	*Arizona elegans occidentalis*	--/SC	Arid scrub, rocky washes, grasslands, and chaparral.	**Unlikely**: the highly disturbed grasslands in the site do not provide suitable habitat for California glossy snake. The nearest occurrence of this species in the CNDDB (2019) search area is approximately two miles west of the site.
Western pond turtle	*Emys marmorata*	--/SC	Ponds, marshes, streams, and ditches with emergent aquatic vegetation and basking areas.	**Unlikely**: the site provides poor quality habitat for this species. The nearest occurrence of western pond turtle in the CNDDB (2019) search area is approximately one mile north of the site.

(Continued on next page)

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
Birds				
Burrowing Owl	*Athene cunicularia*	--/SC	Open, dry annual or perennial grasslands, deserts and scrublands characterized by low-growing vegetation.	**Low**: the ruderal grassland in the site is highly disturbed and portions are routinely mowed. No burrowing owls or burrows with evidence of owl occupancy were observed. The nearest occurrence of nesting burrowing owls in the CNDDB (2019) search area is approximately one mile southwest of the site. Nevertheless, the grassland portion of the project site within the ECCC HCP/NCCP Permit Area is considered potential habitat for the species.
Golden Eagle	*Aquila chrysaetos*	--/FP	Nesting areas are associated with cliff-walled canyons and large trees. Foraging habitat includes rolling hills and mountain areas.	**Low**: due to the highly disturbed nature of the project site and surrounding area, the project site is not considered to represent habitat for the species. However, the project site is included in the ECCC HCP/NCCP as an area of potential habitat for the species.
Swainson's hawk	*Buteo swainsoni*	--/T	Breeds in stands of tall trees in open areas. Requires adjacent suitable foraging habitats such as grasslands or alfalfa fields supporting rodents.	**Moderate**: there are several large trees in and surrounding the project site suitable for nesting by Swainson's hawks. Additionally, there is annual cropland and suitable foraging habitat in close proximity to the site. There is a record of Swainson's hawks in the CNDDB (2019) nesting along the west edge of the site. A pair of Swainson's hawks was documented nesting in one of the eucalyptus trees in the southwest part of the site during 2018 and Swainson's hawks were observed soaring around the same trees during a March 21, 2019 site visit. The CNDDB (2019) does not yet contain this occurrence.

(Continued on next page)

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
White-tailed kite	*Elanus leucurus*	--/FP	Herbaceous lowlands with variable tree growth and dense population of voles.	**Moderate**: grasslands in the site and grasslands and annual cropland in the close proximity to the projects site provides foraging habitat for white-tailed kite. Relatively large trees in and surrounding the site are suitable for nesting. The nearest occurrence of white-tailed kite in the CNDDB (2019) search area is approximately 2.5 miles southeast of the site. This species was documented nesting in the subject property during surveys conducted for the remediation project (Ardea & Bumgardner, 2017).
Tricolored blackbird	*Agelaius tricolor*	--/CE/SC	Requires open water and protected nesting substrate, usually cattails and riparian scrub with surrounding foraging habitat.	**Low**: the emergent wetland vegetation in the seasonal wetlands in the site and at the storm drain outfall site may provide suitable tricolored blackbird nesting habitat. The nearest occurrence of this species in the CNDDB (2019) search area is approximately nine miles southeast of the site.
California black rail	*Laterallus jamaicensis coturniculus*	--/T	Mainly inhabits salt marshes bordering larger bays.	**Low**: the seasonal wetlands in the site do not provide habitat for California black rail.. In contrast, the near-shore portions of the permanent wetland provide potentially suitable habitat for this species. The nearest occurrence of California black rail in the CNDDB (2019) search area is in the mosaic of pickleweed wetlands and coastal salt marsh habitats just northeast of the site. The CNDDB record is noted that there has been development in this area since the detection and it is “unknown if this site is still populated”. California black rail was

(Continued on next page)

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
				documented nesting in the subject property during surveys conducted for the remediation project (Ardea & Bumgardner, 2017).
California clapper rail	*Rallus longirostris obsoletus*	E/E	Salt water and brackish marshes traversed by tidal sloughs in the San Francisco Bay, associated with abundant growths of pickleweed.	**Unlikely**: while there is suitable habitat to support California clapper rail near the site, the site is located outside the known range of this species. There are no occurrences of California clapper rail in the CNDDB (2019) search area.
California least tern	*Sturnula antillarum browni*	E/E	Estuaries and bays; nests on exposed tidal flats or beaches.	**Unlikely**: while there is suitable habitat to support California least tern near the site, the site is located outside the known range of this species. There are no occurrences of California least tern in the CNDDB (2019) search area.
Bank swallow	Riparia riparia	--/T	Nests colonially in riparian habitats; requires vertical banks and cliffs with fine textured soils.	**Unlikely**: there is no suitable nesting habitat for bank swallows in the site. The only occurrence of this species in the CNDDB (2019) search area is approximately 7.5 miles northeast of the project site.
Saltmarsh common yellowthroat	*Geothlypis trichas sinuosa*	--/SC	Fresh and salt water marshes. Requires thick, continuous cover down to water surface for foraging.	**Low**: the seasonal wetlands in the site are small and support limited marsh vegetation. In contrast, the near-shore portions of the permanent wetland provide potentially suitable habitat for this species. Saltmarsh common yellowthroat was documented in the subject property during surveys conducted support of the ongoing remediation project (Ardea & Bumgardner, 2017). The nearest occurrence of this species in the CNDDB (2019) search area is approximately seven miles northwest of

(Continued on next page)

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
				the project site.
Loggerhead shrike	*Lanius ludovicianus*	BCC/CSC	Annual grasslands and agricultural areas throughout the Central Valley; nests in trees and shrubs.	**Moderate**: the highly disturbed ruderal grasslands in the site provide suitable foraging for this species, which is relatively widespread in the area, in low numbers. Additionally, loggerhead shrike may nest in trees or shrubs in the site. The nearest occurrence of this species in the CNDDB (2019) search area is approximately three miles southeast of the site. Loggerhead shrike was documented nesting in the overall property during surveys conducted for the remediation project (Ardea & Bumgardner, 2017)
Suisun song sparrow	*Melospiza melodia maxillaris*	--/SC	Resident of brackish water marshes, usually in or near Suisun Bay. Inhabits cattails, tules, and tangles bordering sloughs.	**Low**: the seasonal wetlands in the site provide low quality marsh habitat for this species. In contrast, the near-shore portions of the permanent wetland provide potentially suitable habitat for this species. The nearest occurrence of Suisun song sparrow in the CNDDB (2019) search area is approximately five miles northwest of the site.
Song sparrow "Modesto" population	*Melospiza melodia*	--/SC	Resident of brackish water marshes. Inhabits cattails, tules, and tangles bordering sloughs.	**Low**: the seasonal wetlands in the site support small amounts of marsh vegetation and provides low quality marsh habitat for the "Modesto" population of song sparrow. In contrast, the near-shore portions of the permanent wetland provide potentially suitable habitat for this species. The nearest occurrence of song sparrow ("Modesto" population) in the CNDDB (2019) search area is approximately 3.5

(Continued on next page)

Table 4.2-4
Special-Status Wildlife Species

Common Name	Scientific Name	Status	Habitat	Potential for Occurrence in the Project Site/Off-Site Improvement Areas
				miles northeast of the site.
Mammals				
San Joaquin kit fox	*Vulpes macrotis mutica*	E/T	Inhabits open, dry grasslands and scrublands with loose textured soils.	**Unlikely**: the grasslands in the site are heavily disturbed and portions are routinely mowed. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 5.5 miles southwest of the site.
American badger	*Taxidea taxus*	--/SC	Drier open stages of most shrub, forest, and herbaceous habitats, with friable soils.	**Unlikely**: the site does not provide suitable habitat for American badger. The nearest occurrence of this species in the CNDDB (2019) search area is approximately 5 miles southwest of the site.
Salt-marsh harvest mouse	*Reithrodontomys raviventris*	E/E	Saline emergent wetlands dominated by pickleweed.	**Unlikely**: the site is outside of the range of this species. The nearest occurrence of salt-marsh harvest mouse in the CNDDB (2019) search area is a historical record (1985) approximately five miles northwest of the site.
Pallid bat	*Antrozous pallidus*	--/SC	Open and dry habitats with rocky areas for roosting.	**Unlikely**: the site does not provide suitable habitat for this species. The nearest occurrence of pallid bat in the CNDDB (2019) search area is approximately 12 miles southwest of the site.
Western red bat	*Lasiurus blossevillii*	--/SC	Roosts in trees in a wide variety of habitats.	**Unlikely**: although some trees in the site may be suitable for western red bat for roosting, this species is not known to be widespread in the area. The nearest occurrence of western red bat in the CNDDB (2019) search area is mapped nonspecifically in the City of Antioch, approximately four miles west of the site.

Special-Status Wildlife Species

Based on queries of the CNDDB and IPaC, previously completed studies prepared for the Chemours remediation activity, as well as surveys of existing site conditions conducted by Moore Biological Consultants, 39 special-status wildlife species known to occur within the query area, ten of which are considered to have a low or moderate potential to occur within the subject property (see Table 4.2-4). The remaining 31 special-status wildlife species are considered unlikely to occur within the subject property or do not have any potential to occur within the subject property.

Each of the ten species considered to have the potential to occur within the project site, are discussed in further depth below.

Birds

A total of 10 special-status bird species were identified as having the potential to occur within the project site based on literature review, site conditions, and the landcover types deemed to be potential habitats for the species in the ECCC HCP/NCCP (see Table 4.2-4). The Del Antico Basin provides potentially suitable habitat for four of these species: burrowing owl (*Athene cunicularia*), golden eagle (*Aquila chrysaetos*), Swainson's hawk (*Buteo swainsoni*), and white-tailed kite (*Elanus leucurus*).

During site visits in 2017 associated with the Chemours remediation activity, several special-status birds were documented as nesting within the subject property, including California black rail, white-tailed kite, and loggerhead shrike. In addition, Saltmarsh common yellowthroat was observed during the nesting season, but nesting of the species was not documented.

Brief descriptions of the 10 special-status bird species that are present or have the potential to occur within the project area and/or off-site improvement areas are presented below.

Burrowing Owl

The burrowing owl is not listed pursuant to either CESA or FESA; however, the burrowing owl is designated as a federal Bird of Conservation Concern and a California Species of Special Concern. Burrowing owls inhabit dry open rolling hills, grasslands, desert floors, and open bare ground with gullies and arroyos. The burrowing owl can also inhabit developed areas such as golf courses, cemeteries, road sides within cities, airports, vacant lots in residential areas, school campuses, and fairgrounds. The burrowing owl species typically uses burrows created by fossorial mammals, most notably the California ground squirrel, but may also use manmade structures such as cement culverts or pipes; cement, asphalt, wood debris piles, or openings beneath cement or asphalt pavement. The breeding season typically occurs between February 1 and August 31. Burrowing owls are a covered species under the ECCC HCP/NCCP.

Due to the presence of grassland habitat within the subject property, portions of the subject Due to the presence of grassland habitat, portions of the site and the Del Antico Basin are considered suitable habitat for the species. Moore Biological Consultants inspected the site and the Del Antico Basin for burrowing owls, ground squirrel burrows, and burrows with evidence of burrowing owl occupancy, but did not identify any such features or individual burrowing owls. It should be noted that the past and on-going disturbance of grassland areas within the project site reduces the suitability of the site as habitat for the species. Nevertheless, because the ECCC HCP/NCCP assumes that the grassland on-site and the Del Antico Basin is suitable habitat, and because potentially suitable habitat is present in the portion of the site outside the

ECCC HCP/NCCP Permit Area, the potential for burrowing owl to occur within the project site and the Del Antico Basin is considered within this EIR.

Golden Eagle

The golden eagle is not listed pursuant to either CESA or FESA. However, the golden eagle is fully protected according to §3511 of the California Fish and Game Code and the federal Bald and Golden Eagle Protection Act. Golden eagles generally nest on cliff ledges and/or large lone trees in rolling to mountainous terrain. Golden eagles nest throughout California except the Central Valley, the immediate coast, and portions of southeastern California. Occurrences within the Central Valley are usually dispersing post-breeding birds, non-breeding sub-adults, or migrants. Foraging habitat includes open grassland and savannah and nesting occurs during February through August. Golden Eagle are a covered species under the ECCC HCP/NCCP.

The site is within the range of the species, and a few potential nest trees exist within the project site or are visible from the site and the Del Antico Basin. Golden eagles were not observed within the site, and the species is more frequently found nesting on cliffs in remote natural areas. Furthermore, the species demonstrates preference for less urbanized settings, and the on-going remediation work at the site would likely reduce to the suitability of on-site nesting trees as habitat for the species. The CNDDB does not contain records of the species in the project area. Nevertheless, because the portion of the project site within the ECCC HCP/NCCP Permit Area and the Del Antico Basin contain potential nest trees, the project site and the Del Antico Basin are considered potentially suitable habitat. Because the ECCC HCP/NCCP assumes that the grassland on-site and the Del Antico Basin is suitable golden eagle habitat, and because potentially suitable habitat is present in the portion of the site outside the ECCC HCP/NCCP Permit Area, the potential for golden eagle to occur within the project site and the Del Antico Basin is considered within this EIR

Swainson's Hawk

Swainson's hawk is listed as a threatened species and is protected pursuant to the CESA. In California, the nesting season for Swainson's hawk ranges from early March to late August. Swainson's hawk nest within tall trees in a variety of wooded communities including riparian, oak woodland, roadside landscape corridors, urban areas, and agricultural areas, among others. Foraging habitat includes open grassland, savannah, low-cover row crop fields, and livestock pastures. According to Moore Biological Consultants, several large trees within the project site and a few trees in the Del Antico Basin provide potential nesting habitat for Swainson's hawk while grassland and cropland in the site, basin, and surrounding areas provide potentially suitable foraging habitat.

The CNDDB contains a 2012 record of Swainson's hawks nesting in a redwood tree in the project site near Bridgehead Road. This record indicates two juvenile Swainson's hawks successfully fledged in 2011 and there were several failed nesting attempts in 2012 before the nesting tree was removed. A pair of Swainson's hawks were documented nesting in a eucalyptus tree within the project site during 2018, and Swainson's hawks were observed soaring around the same trees during a March 21, 2019 site visit. Considering the species' nest site affinity, Swainson's hawks are expected to return to the site to nest in future years. As the Del Antico Basin is surrounded by subdivisions and a vineyard, Swainson's hawks are unlikely to nest in the basin. Because the ECCC HCP/NCCP assumes that the grassland on-site and the Del Antico Basin is suitable Swainson's hawk habitat, and because potentially suitable habitat is present in the portion of the site outside the ECCC HCP/NCCP Permit Area, the

potential for Swainson's hawk to occur within the project site and the Del Antico Basin is considered within this EIR.

White-Tailed Kite

White-tailed kite is not listed pursuant to either CESA or FESA; however, the white-tailed kite is fully protected pursuant to §3511 of the California Fish and Game Code. In northern California, white-tailed kite nesting occurs from March through early August, with nesting activity peaking from March through June. Nesting habitat includes trees within riparian, oak woodland, savannah, and agricultural communities that are near foraging areas such as low elevation grasslands, agricultural, meadows, farmlands, savannahs, and emergent wetlands.

White-tailed kite has been documented nesting in the subject properties during previous site surveys conducted in relation to the Chemours remediation activity. According to Moore Biological Consultants, several large trees within the project site and a few trees in the Del Antico Basin provide potential nesting habitat for white-tailed kite while grassland and cropland in the site, basin, and surrounding areas provide potentially suitable foraging habitat. Because the ECCC HCP/NCCP assumes trees are potentially suitable white-tailed kite nesting habitat, and because potentially suitable nesting habitat is present in the portion of the site outside the ECCC HCP/NCCP Permit Area, the potential for white-tailed kite to occur within the project site and the Del Antico Basin is considered within this EIR.

Tricolored Blackbird

Tricolored blackbirds (*Agelaius tricolor*) are not federally listed, but are state listed as threatened. Tricolored blackbirds are colonial nesters preferring to nest in dense stands of cattails, bulrush, or blackberry thickets, often associated with aquatic features. The tricolored blackbird nest in colonies that can range from several pairs to several thousand pairs, depending on prey availability, the presence of predators, or level of human disturbance. Tricolored blackbirds nesting habitat includes emergent marsh, riparian woodland/scrub, blackberry thickets, densely vegetated agricultural and idle fields (e.g., wheat, triticale, safflower, fava bean fields, thistle, mustard, cane, and fiddleneck), usually with some nearby standing water or ground saturation. The tricolored blackbirds feed mainly on grasshoppers during the breeding season, but may also forage upon a variety of other insects, grains, and seeds in open grasslands, wetlands, feedlots, dairies, and agricultural fields. The nesting season is generally from March through August. According to the Moore Biological Consultants, the nearest occurrence of the species is approximately nine miles to the southeast of the site. The emergent wetland vegetation in the seasonal and permanent wetland areas within the project site may provide suitable nesting habitat for the species. Grassland and cropland in the site, the Del Antico Basin, and surrounding areas provide potentially suitable foraging habitat. Because there is suitable tricolored blackbird nesting habitat in the site, the potential for tricolored blackbirds tricolored blackbirds to occur within the project site is considered within this EIR.

California Black Rail

The California black rail (*Laterallus jamaicensis coturnculus*) is a scarce bird that occurs in saline, brackish, and freshwater wetlands. The species is not federally listed, but is state listed as threatened. According to the CNDDB California black rails have not been documented within a five-mile radius of the study area. Although Moore Biological Consultants did not consider the seasonal wetlands to provide habitat for the species, the permanent wetlands on-site are considered suitable nesting habitat. The nearest reported CNDDB occurrence of the species

occurred in the wetlands and coastal salt marsh habitats located to the northeast of the project site. Furthermore, field surveys of the site in 2017 documented nesting of the species within the subject property. Although the species is documented nesting in the subject property, the portion of the permanent wetlands included in the project site represents a small, relatively poor habitat for the species. Thus, the likelihood that the species would occur within the project site is low. Further, the Del Antico Basin does not provide suitable habitat for California black rail. Because potentially suitable habitat for California black rail is present in part of the site, the potential for California black rail to occur within the project site is considered within this EIR.

Saltmarsh Common Yellowthroat

The saltmarsh common yellowthroat (*Geothylpis trichas sinuosa*), also known as the San Francisco common yellowthroat, is a subspecies of the common yellowthroat that is endemic to the San Francisco Bay. The species is identified as a species of special concern by the CDFW, but is not listed as threatened or endangered by the CDFW or USFWS. Saltmarsh common yellowthroat occur year-round within the breeding range of the subspecies. Breeding season extends from mid-March to July. The current range of the species includes four main areas: coastal riparian and wetland areas of western Marin County, the tidal marsh system of the San Pablo Bay, the tidal marsh system of the southern San Francisco Bay, and coastal riparian and wetland areas in San Mateo County.

The permanent wetlands within the project site provide potentially suitable habitat for the species. During field surveys conducted in 2017, saltmarsh common yellowthroat was identified within the subject property. Although the species is documented in the subject property, the portion of the permanent wetlands included in the project site represents a small, relatively poor habitat for the species. Thus, the likelihood that the species would occur within the project site is low. Further, the Del Antico Basin does not provide suitable habitat for saltmarsh common yellowthroat. Because potentially suitable habitat for saltmarsh common yellowthroat is present in part of the site, the potential for saltmarsh common yellowthroat to occur within the project site is considered within this EIR.

Loggerhead Shrike

The loggerhead shrike (*Lanius ludovicianus*) is not listed pursuant to either CESA or FESA, but is designated a federal Bird of Conservation Concern and a California Species of Special Concern. Loggerhead shrikes nest in small trees and shrubs in open country with short vegetation such as pastures, old orchards, mowed roadsides, cemeteries, golf courses, agricultural fields, riparian areas, and open woodlands. The nesting season extends from March through June.

According to Moore Biological Consultants, loggerhead shrike were documented as nesting within the subject property during surveys conducted in 2017. Trees and shrubs within the Del Antico Basin also provide potentially suitable loggerhead shrike nesting. Because potentially suitable nesting habitat for loggerhead shrike is present in the site and the Del Antico Basin, the potential for loggerhead shrike to occur within the project site and the Del Antico Basin is considered within this EIR.

Suisun Song Sparrow

The Suisun song sparrow (*Melospiza melodia maxillaris*) is a subspecies of the Song Sparrow that is endemic to the Suisun Marsh within the San Joaquin-Sacramento River Delta. The sub species is not listed pursuant to either CESA or FESA, but is designated as a Species of

Special Concern per the CDFW. Suisun song sparrow are believed to prefer fully tidal marshes, but some muted tidal marshes or impounded wetlands may also provide suitable habitat. Along with the hydrologic regime, vegetation seems to be a factor in habitat selection. Dense vegetation is required for nesting sites, song perches, and refuge from predators. Nesting sites with higher perimeter-to-area ratios have shown lower nesting success and higher rates of predation than sites with lower perimeter-to-area ratios, suggesting that nesting success occurs more frequently in larger habitat patches.[8]

The permanent wetland area within the subject property represents potentially suitable habitat for the species, with the permanent wetland area included in the project site representing a small portion of the edge of such suitable habitat. The nearest CNDDB occurrence of the species is approximately five-miles to the northwest of the project site. The Del Antico Basin does not provide suitable habitat for Suisun song sparrow. Because potentially suitable habitat for Suisun song sparrow is present in part of the site, the potential for Suisun song sparrow to occur within the project site is considered within this EIR.

Song Sparrow "Modesto" Population

The Song Sparrow "Modesto" Population (Melospiza melodia) is not listed pursuant to either CESA or FESA. However, the species is designated as a Species of Special Concern per the CDFW. The Song Sparrow "Modesto" Population was considered a distinct subspecies until revisions in 2001, and may again be considered a distinct subspecies pending further research. The Song Sparrow "Modesto" Population is endemic to the north-central portion of the Central Valley, with some of the highest population densities occurring in the San Joaquin-Sacramento River Delta. The species is generally associated with wetland areas and riparian habitats.[9] The seasonal wetlands within the project site provide low quality marsh habitat, while the permanent wetland within the subject property provides potentially suitable habitat for the species. The Del Antico Basin does not provide suitable habitat for Song Sparrow "Modesto" Population. Because potentially suitable habitat for Song Sparrow "Modesto" Population is present in part of the site, the potential for Song Sparrow "Modesto" Population to occur within the project site is considered within this EIR.

Special-Status Fish

As noted in Table 4.2-4, seven fish species are known to occur in the San Joaquin River to the north of the project site. Because the project site does not contain any portion of the San Joaquin River, and the project site does not provide suitable habitat for any fish species, none of the seven fish species were considered to have any likelihood of occurring within the project site. Although the project site does not contain any habitat for special-status fish species, the proposed stormwater outfall within the project site would direct treated stormwater to the on-site permanent wetlands, which are a part of the larger permanent wetlands and open water aquatic resources within the subject property. In-turn, the larger permanent wetlands and open water aquatic resources are hydrologically connected to the San Joaquin River north of the project site. Thus, implementation of the proposed stormwater outfall could result in impacts to water quality in an area hydrologically connected with the San Joaquin River. As such, FISHBIO prepared an assessment of potential impacts to special-status fish species that could occur due

[8] Shuford, W.D., and Gardali T., editors. *California Bird Species of Special Concern A ranked assessment of species, subspecies, and distinct populations of birds of immediate conservation concern in California.* Studies of Western Birds 1. Western Field Ornithologists, Camarillo, California, and California Department of Fish and Game, Sacramento. 2008.

[9] *Ibid*.

to inclusion of the proposed stormwater outfall structure. Based on research conducted by FISHBIO for the proposed project, FISHBIO determined that the San Joaquin River north of the project site provides suitable habitat for the following species, which may be impacted by the proposed project: Chinook salmon (*Oncorhynchus tshawytscha*), Central Valley steelhead (*Oncorhynchus mykiss irideus*), delta smelt (*Hypomesus transpacificus*), longfin smelt (*Spirinchus thaleichthys*), and the southern Distinct Population Segment (sDPS) of green sturgeon (*Acipenser medirostris*). Consequently, impacts to the foregoing species will be analyzed within this EIR.

Sensitive Natural Communities

Wetlands within the project site include both seasonal and permanent wetlands as shown in Figure 4.2-4. Wetlands are areas that are saturated by surface or ground water at a frequency and duration to support a prevalence of vegetation adapted for life in saturated soil conditions. Wetlands usually must possess plants adapted to saturated conditions, wetland hydrology, and soils that are periodically or permanently saturated. The plant and wildlife communities often supported by wetland areas are considered sensitive natural communities.

Project Site

A jurisdictional delineation of waters of the U.S. was conducted for the subject property in 2006 and verified by the USACE in 2008. An updated wetland delineation was conducted in 2016, refined in 2018, and verified by the USACE in March 2019. As shown in Table 4.2-1, the 2019 verified delineation included a total of approximately 176.15 acres of potentially jurisdictional waters of the U.S. within the subject property. The 176.15-acre total includes approximately 64.19 acres of open water, 110.16 acres of permanent wetlands, which includes 6.49 acres of Slough, and 1.80 acres of seasonal wetlands. Of the foregoing wetland areas within the subject property, all of the seasonal wetlands, but only 0.207 acres of the permanent wetlands are present within the project site. The project site does not include any areas identified as open water, but the on-site permanent wetlands are hydrologically connected to the open water portions of the subject property.

Trees

Trees, Bugs, and Dirt conducted an inventory of existing trees within the project site (Appendix F). In total, 662 trees are located within the project site. Several rows of large trees are scattered throughout the site, and consist primarily of *Eucalyptus* spp. and tamarisk (*Tamarix* sp.), as well as some pines (*Pinus* spp.) and coastal live oaks (*Quercus agrifolia*). In addition to isolated trees throughout various parts of the site, ornamental trees surround the administration building in the western portion of the site. Trees surrounding the seasonal wetlands consist of Fremont cottonwoods, willows, and black walnuts. Implementation of the proposed project would result in removal of most of the on-site trees, 130 of which are identified as heritage or protected trees.

In addition to the on-site trees, Moore Biological Consultants identified several existing trees within the Del Antico Basin. Trees within the Del Antico Basin are primarily tree of heaven, other ornamental tree, and one coastal live oak.

Wildlife Movement/Corridors

The project site is located within the northwestern corner of the City of Oakley in proximity to SR 160, and the City of Antioch. Despite the existence of relatively open vineyards to the south and east of the project site, the remaining areas surrounding the project site and the areas beyond

the existing vineyards have been largely urbanized. Therefore, significant wildlife movement corridors do not exist within the land area adjacent to the project site, including the off-site utility improvement areas. The San Joaquin River is located immediately to the north of the project site, which connects to the San Joaquin-Sacramento River delta as well as the San Francisco Bay. The San Joaquin River acts as a major movement corridor for wildlife species including fish, avian species, and aquatic mammals.

The Del Antico Basin is located within a portion of the City of Oakley that is predominantly urbanized. Although vineyards exist to the northeast of the Del Antico Basin, the vineyards are surrounded by urban development including roadways and railroads. Consequently, the Del Antico Basin and surrounding area does not represent a wildlife movement corridor. Furthermore, dispersal of wildlife to the Del Antico Basin site is constrained by the existence of urban development around the basin and the adjacent vineyard.

4.2.3 REGULATORY CONTEXT

The following is a description of federal, State, and local environmental laws and policies that are relevant to the CEQA review process.

Federal Regulations

The following are the federal environmental laws and policies relevant to biological resources.

Federal Endangered Species Act

Under the FESA, the Secretary of the Interior and the Secretary of Commerce have joint authority to list a species as threatened or endangered (16 USC § 1533(c)). Two federal agencies oversee the FESA: the USFWS has jurisdiction over plants, wildlife, and resident fish, while the National Marine Fisheries Service (NMFS) has jurisdiction over anadromous fish and marine fish and mammals. Section 7 of the FESA mandates that federal agencies consult with the USFWS and NMFS to ensure that federal agency actions do not jeopardize the continued existence of a listed species or destroy or adversely modify critical habitat for listed species. The FESA prohibits the 'take' of any fish or wildlife species listed as threatened or endangered, including the destruction of habitat that could hinder species recovery. Take is defined as harassing, harming, pursuing, hunting, shooting, wounding, killing, trapping, capturing, collecting, or attempting to engage in any such conduct.

Section 10 requires the issuance of an "incidental take" permit before any public or private action may be taken that could take an endangered or threatened species. The permit requires preparation and implementation of a habitat conservation plan (HCP) that would offset the take of individuals that may occur, incidental to implementation of a proposed project, by providing for the protection of the affected species.

Pursuant to the requirements of the FESA, a federal agency reviewing a project within the jurisdiction of the agency must determine whether any federally listed threatened or endangered species may be present in the project area and whether the proposed project will have a potentially significant impact on such species. In addition, the agency is required to determine whether the proposed action is likely to jeopardize the continued existence of any species proposed to be listed under FESA or result in the destruction or adverse modification of critical habitat proposed to be designated for such species (16 USC § 1536(3), (4)).

Migratory Bird Treaty Act

Raptors (birds of prey), migratory birds, and other avian species are protected by a number of state and federal laws. The federal Migratory Bird Treaty Act (MBTA) prohibits the killing, possessing, or trading of migratory birds except in accordance with regulations prescribed by the Secretary of Interior. Section 3503.5 of the California Fish and Game Code states, "It is unlawful to take, possess, or destroy any birds in the order *Falconiformes* or *Strigiformes* (birds-of-prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by the code or any regulation adopted pursuant thereto."

Clean Water Act

The USACE regulates discharge of dredged or fill material into waters of the U.S. under Section 404 of the Clean Water Act (CWA). "Discharge of fill material" is defined as the addition of fill material into waters of the U.S., including but not limited to the following: placement of fill that is necessary for the construction of any structure, or impoundment requiring rock, sand, dirt, or other material for the construction; site-development fills for recreational, industrial, commercial, residential, and other uses; causeways or road fills; and fill for intake and outfall pipes and sub-aqueous utility lines (33 C.F.R. §328.2[f]). In addition, Section 401 of the CWA (33 U.S.C. 1341) requires any applicant for a federal license or permit to conduct any activity that may result in a discharge of a pollutant into waters of the U.S. to obtain a certification that the discharge will comply with the applicable effluent limitations and water quality standards.

Waters of the U.S. include a range of wet environments such as lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, and wet meadows. Wetlands are defined as "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33 C.F.R. §328.3[b]).

Furthermore, jurisdictional waters of the U.S.can be defined by exhibiting a defined bed and bank and the ordinary high water mark (OHWM). The OHWM is defined by the USACE as "that line on shore established by the fluctuations of water and indicated by physical character of the soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas" (33 C.F.R. §328.3[e]).

State Regulations

The following are the State environmental laws and policies relevant to biological resources.

California Department of Fish and Wildlife

CDFW administers a number of laws and programs designed to protect fish and wildlife resources under the California Fish and Game Code (FGC), such as CESA (FGC Section 2050, et seq.), Fully Protected Species (FGC Section 3511) and the Lake or Streambed Alteration Agreement Program (FGC Sections 1600 to 1616). Such regulations are summarized in the following sections.

California Endangered Species Act

The State of California enacted CESA in 1984. CESA is similar to the FESA but pertains to State-listed endangered and threatened species. CESA requires State agencies to consult with CDFW when preparing CEQA documents to ensure that the State lead agency actions do not

jeopardize the existence of listed species. CESA directs agencies to consult with CDFW on projects or actions that could affect listed species, directs CDFW to determine whether jeopardy would occur, and allows CDFW to identify "reasonable and prudent alternatives" to the project consistent with conserving the species. Agencies can approve a project that affects a listed species if they determine that "overriding considerations" exist; however, the agencies are prohibited from approving projects that would result in the extinction of a listed species.

CESA prohibits the taking of State-listed endangered or threatened plant and wildlife species. CDFW exercises authority over mitigation projects involving State-listed species, including those resulting from CEQA mitigation requirements. CDFW may authorize taking if an approved habitat management plan or management agreement that avoids or compensates for possible jeopardy is implemented. CDFW requires preparation of mitigation plans in accordance with published guidelines.

Fish and Game Code Section 3505

Birds of prey are protected in California under provisions of the California FGC, Section 3503.5, (1992), which states, "it is unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." Construction disturbance during the breeding season could result in the incidental loss of fertile eggs or nestlings, or otherwise lead to nest abandonment. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered "taking" by CDFW.

Lake or Streambed Alteration Program

The CDFW is responsible for conserving, protecting, and managing California's fish, wildlife, and native plant resources. To meet this responsibility, the Fish and Game Code, Section 1602, requires notification to CDFW of any proposed activity that may substantially modify a river, stream, or lake. Notification is required by any person, business, state or local government agency, or public utility that proposes an activity that will:

- substantially divert or obstruct the natural flow of any river, stream or lake;
- substantially change or use any material from the bed, channel, or bank of any river, stream, or lake; or
- deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake.

For the purposes of Section 1602, rivers, streams and lakes must flow at least intermittently through a bed or channel. If notification is required and CDFW believes the proposed activity is likely to result in adverse harm to the natural environment, the CDFW will require that the parties enter into a Lake or Streambed Alteration Agreement.

CDFW Species of Special Concern

In addition to formal listings under FESA and CESA, plant and wildlife species receive additional consideration during the CEQA process. Species that may by considered for review are included on a list of "Species of Special Concern" developed by CDFW. Species whose numbers, reproductive success, or habitat may be threatened are tracked by CDFW in California.

Native Plant Protection Act

The Native Plant Protection Act (NPPA) was enacted in 1977 and allows the Fish and Game Commission to designate plants as rare or endangered. Currently 64 species, subspecies, and varieties of plants that are protected as rare under the NPPA. The NPPA prohibits take of endangered or rare native plants, but includes some exceptions for agricultural and nursery operations, emergencies, and after properly notifying CDFW for vegetation removal from canals, roads, and other sites, changes in land use, and in certain other situations.

Regional Water Quality Control Board

Pursuant to Section 401 of the CWA and EPA 404(b)(1) guidelines, in order for a USACE federal permit applicant to conduct any activity which may result in discharge into navigable waters, they must provide a certification from the Regional Water Quality Control Board (RWQCB) that such discharge will comply with the State water quality standards. The RWQCB has a policy of no-net-loss of wetlands in effect and typically requires mitigation for all impacts to wetlands before the RWQCB will issue water quality certification.

Under the Porter-Cologne Water Quality Control Act (Cal. Water Code Section 13000-14920), the RWQCB is authorized to regulate the discharge of waste that could affect the quality of the State's waters. Therefore, even if a project does not require a federal permit (i.e., a Nationwide Permit from the USACE), the project may still require review and approval by the RWQCB, in light of the approval of NWPs on March 9, 2000 and the Supreme Court's decision in the case of the Solid Waste Agency of Northern Cook County (SWANCC) vs. USACE. The RWQCB in response to the above case, issued guidance for regulation of discharges to "isolated" water on June 25, 2004. The guidance states:

> Discharges subject to Clean Water Act section 404 receive a level of regulatory review and protection by the USACE and are also subject to streambed alteration agreements issued by the CDFW; whereas discharges to waters of the State subject to SWANCC receive no federal oversight and usually fall out of CDFW jurisdiction. Absent of RWQCB attention, such discharges will generally go entirely unregulated. Therefore, to the extent that staffing constraints require the RWQCB to regulate some dredge and fill discharges of similar extent, severity, and permanence to federally-protected waters of similar value. Dredging, filling, or excavation of "isolated" waters constitutes a discharge of waste to waters of the State, and prospective dischargers are required to submit a report of waste discharge to the RWQCB and comply with other requirements of Porter-Cologne.

When reviewing applications, the RWQCB focuses on ensuring that projects do not adversely affect the "beneficial uses" associated with waters of the State. Generally, the RWQCB defines beneficial uses to include all of the resources, services and qualities of aquatic ecosystems and underground aquifers that benefit the State. In most cases, the RWQCB seeks to protect the beneficial uses by requiring the integration of water quality control measures into projects that will result in discharge into waters of the State. For most construction projects, RWQCB requires the use of construction and post-construction Best Management Practices (BMPs). In many cases, proper use of BMPs, including bioengineering detention ponds, grassy swales, sand filters, modified roof techniques, drains, and other features, will speed project approval from RWQCB. Development setbacks from creeks are also requested by RWQCB as they often lead to less creek-related impacts in the future.

Local Regulations

The following are the local government's environmental policies relevant to biological resources.

East Contra Costa County Habitat Conservation Plan and Natural Community Conservation Plan

On January 25, 2000, the Contra Costa County Board of Supervisors made a declaration of intent to participate in the development of the ECCC HCP/NCCP. On June 30, 2000, the East Contra Costa County Habitat Conservation Plan Association Agreement went into effect. The agreement established the East Contra Costa Habitat Conservation Plan Association (HCPA) as the lead agency in drafting the ECCC HCP/NCCP for submittal to the governing boards and councils of member agencies, oversee compliance with CEQA and NEPA, and would serve as the lead agency under CEQA for developing the ECCC HCP/NCCP. The City of Oakley elected to participate in the development of the ECCC HCP/NCCP and was a member of the HCPA.

The City of Oakley approved the ECCC HCP/NCCP on November 13, 2007 (Resolution 19-07). The USFWS signed the federal permit for the HCP/NCCP on July 25, 2007, and the CDFW signed the State permit for the ECCC HCP/NCCP on August 6, 2007. Currently, all participating jurisdictions have approved the ECCC HCP/NCCP and have adopted implementing ordinances and the fee structures set forth in the ECCC HCP/NCCP.

Based on the ECCC HCP/NCCP and the data and analyses referenced therein, there is a reasonable relationship between the use of the ECCC HCP/NCCP mitigation fees authorized by the City of Oakley and the type of development projects subject to the fees. The Development Fee is used to fund the acquisition of land, the enhancement and management of habitat and the other activities to mitigate for impacts to open space habitat and covered species caused by affected development projects. The Wetland Mitigation Fee is used to fund the restoration, creation and management of jurisdictional wetlands and waters and riparian woodland/scrub and other actions in order to mitigate for impacts to jurisdictional wetlands and waters and riparian areas caused by affected development projects. The ECCC HCP/NCCP fees apply to development projects that impact open space, habitat suitable for one or more covered species, jurisdictional wetlands and waters, or riparian areas. In this way, the ECCC HCP/NCCP fees are used only for purposes reasonably related to the types of development projects that will be subject to the fees.

City of Oakley General Plan

The Oakley General Plan programs, goals, and policies relating to the protection of biological resources that are applicable to the proposed project are presented below.

Goal 2.6 Ensure that open space areas are properly managed and designed to conserve natural resources and enhance the community's character and provide passive recreational opportunities.

- Policy 2.6.1 Provide public access to the Delta and the waterfront wherever appropriate and feasible. Typically, such access should be unobstructed to the public by foot or bicycle, and where appropriate by horse, automobile, and/or boat.
- Policy 2.6.2 Preserve, enhance, and/or restore selected existing natural habitat areas, as feasible.

Goal 6.3	Encourage preservation of important ecological and biological resources.	
	Policy 6.3.1	Encourage preservation of important ecological and biological resources
	Policy 6.3.3	Use land use planning to reduce the impact of urban development on important ecological and biological resources identified during application review and analysis.
	Policy 6.3.4	Encourage preservation and enhancement of the natural characteristics of the San Joaquin Delta and Dutch Slough in a manner that encourages public access.
	Policy 6.3.5	Encourage preservation and enhancement of Delta wetlands, significant trees, natural vegetation, and wildlife population.
	Policy 6.3.6	Encourage preservation of portions of important wildlife habitats that would be disturbed by major development, particularly adjacent to the Delta.
	Program 6.3.A	Prior to development within identified sensitive habitat areas, the area shall be surveyed for special status plant and/or animal species. If any special status plant or animal species are found in areas proposed for development, the appropriate resource agencies hall be contacted and species-specific management strategies established to ensure the protection of the particular species. Development in sensitive habitat areas should be avoided to the maximum extent possible.
	Program 6.3.B	Participate with regional, state, and federal agencies and organizations to establish and preserve open space that provides habitat for locally present wildlife.
	Program 6.3.C	Investigate and implement as appropriate a tree-planting program. Consider similar existing programs such as the Sacramento Tree Foundation.
	Program 6.3.D	Continue to implement (and update as needed) the City's Heritage Tree Preservation Ordinance.
	Program 6.3.E	As funding becomes available, prepare a detailed inventory of ecological resource areas, along with detailed maps showing the location of significant resources. Resources should include, but not be limited to, unique natural areas, wetland areas, habitats of rare, threatened, endangered, and other uncommon and protected species.
	Program 6.3.F	As funding becomes available, prepare a Wetland Protection Ordinance.
	Program 6.3.G	Evaluate the feasibility of expanding drainage easements along waterways and modifying banks and/or levees to increase the width of stream corridors.
	Program 6.3.H	Investigate and implement as appropriate City Zoning regulations requiring expanded setbacks, and land

dedications along waterways to allow expansion and enhancement of waterways.

City of Oakley Heritage and Protected Trees

Section 9.1.1112 of the City's Municipal Code provides for the preservation of certain protected trees within public and private property in the City of Oakley. Specifically, the Municipal Code defines both protected trees and heritage trees. Heritage trees are defined as a California native oak that measures at least 50 inches in circumference (i.e. 15.6 inches in diameter) at 4.5 feet above grade, regardless of location or health. Furthermore, a tree of a species other than a California native oak that measures at least 50 inches in circumference at 4.5 feet above grate and is either on an undeveloped property, located on public property or within the right-of-way, or located on private property and is found to provide benefits to the subject property as well as neighboring properties. For the purposes of Section 9.1.1112, an undeveloped property includes a parcel of land on which the structures are proposed to be demolished or relocated.

A protected tree is defined under Section 9.1.1112 as a heritage tree, or a tree adjacent to or part of a riparian habitat, foothill woodland or oak savanna area where the tree in question measures 20 inches or larger in circumference (i.e. 6.5 inches in diameter) as measured 4.5 feet above the natural grade. For a multi-stemmed tree the sum of the circumferences must measure 40 inches or more measured at 4.5 feet above the natural grade. To be considered protected under the foregoing standards, the tree must be of an indigenous species as identified in Section 9.1.1112(e)(1)(b). Alternatively, any tree shown to be preserved on an approved tentative map, development plan, site plan, or required for preservation as a condition of approval of project, or any tree required to be planted as a replacement for an unlawfully removed tree are considered protected.

Heritage and protected trees may only be destroyed or removed where a permit has been obtained for such actions, unless the tree removal is exempt from permit requirements per Section 9.1.1112. As a condition of approval of a tree removal permit, the permit applicant shall replace the removed trees either through designated replacement ratios, through the payment of in-lieu fees, or a combination of replacement and payment of in-lieu fees.

4.2.4 IMPACTS AND MITIGATION MEASURES

The following section describes the standards of significance and methodology utilized to analyze and determine the proposed project's potential impacts related to biological resources. A discussion of the project's impacts, as well as mitigation measures, are also presented.

Standards of Significance

For the purposes of this EIR, the following standards of significance were adapted from Appendix G of the CEQA Guidelines. Impacts are considered significant if implementation of the proposed project would do any one or more of the following:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS;
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or USFWS;

- Have a substantial adverse effect on State or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.
- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites; or
- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Issues Not Discussed Further

The Initial Study prepared for the proposed project (see Appendix C) determined that development of the proposed project would result in a less-than-significant impact related to the following:

- Conflict with the provisions of an adopted HCP, Natural Community Conservation Plan (NCCP), or other approved local, regional, or State habitat conservation plan.

For the reasons cited in the Initial Study, the potential impacts associated with the above are not analyzed further in this EIR.

Method of Analysis

The information contained in this analysis is primarily based on the PSR and supplemental memoranda prepared for the project site by Moore Biological Consultants, as well as the Arborist Report prepared by Trees, Bugs, Dirt, and the Biological Assessment addressing special-status fish prepared by FISHBIO.

In preparing the PSR and supplemental memorandum, Moore Biological Consultants performed pedestrian surveys of the accessible portions of the subject property on October 8 and 19, November 2 and 15, 2018, and March 21, 2019. Moore Biological Consultants performed additional special-status plant surveys on August 8 and 27, 2019 within Seasonal Wetland SW-C and within the permanent wetland PW-A (see Figure 4.2-4). The special-status plant surveys conducted in 2019 by Moore Biological were specifically intended to determine the presence or absence of salty bird's beak, Bolander's water hemlock, wooly rose mallow, Delta tule pea, Mason's lilaeopsis, Delta mudwort, eel-grass pondweed, and Suisun Marsh aster in areas outside of the ECCC HCP/NCCP Permit Area. The August 2019 special-status plant surveys were conducted during the appropriate blooming period for all species with the exception of eel-grass pondweed. Although the special-status plant surveys were conducted outside of the blooming season for eel-grass pondweed, the species is readily identifiable in August through vegetative characteristics.

Moore Biological Consultants conducted a survey of the off-site Del Antico Basin on September 24, 2019. The site survey included a systematic search of the entire basin by foot.

Furthermore, Moore Biological Consultants relied upon previous site-surveys conducted in relation to the Chemours Remediation Project. Site-surveys conducted for the remediation activity on-site include rare plant surveys in 2013 and 2015. Following the 2015 rare plant survey, a targeted list of 10 special-status plants with the potential to occur in the Chemours Remediation Project site was compiled. Additional rare plant surveys using the targeted list were conducted on June 27 and August 3, 2017. Site surveys conducted in connection with the

Chemours Remediation Project provided information related to the presence/absence of special-status wildlife within the subject property.

The PSR and technical memorandum relied on the findings of the jurisdictional determination prepared for the subject property, which was reverified by the USACE in March 2019.

As noted previously, Moore Biological Consultants performed queries of the CNDDB and IPaC to determine special-status species occurring within the project region.

FISHBIO relied on multiple sources of data to determine the special-status fish species with the potential to occur within the project area. The principal sources of data used by FISHBIO were the University of California, Davis PISCES database,[10] the USFWS's IPaC tool, data available from NOAA's fisheries website,[11] and data from the CDFW.[12]

Trees, Bugs, Dirt conducted field work between October 11 and November 14, during which time all on-site trees were surveyed. Each tree was tagged and the arborist noted the species, circumference, health, structural quality, and form of each tree.

During the survey of Del Antico Basin conducted by Moore Biological Consultants, several trees were noted within the basin.

Project-Specific Impacts and Mitigation Measures

The following discussion of biological resources impacts is based on implementation of the proposed project in comparison to existing conditions and the standards of significance presented above. As noted previously, the project site includes 142.10 acres of land within the ECCC HCP/NCCP Permit Area and 24.32 acres of land outside of the ECCC HCP/NCCP Permit Area; the Del Antico Basin is within the ECCC HCP/NCCP Permit Area. The ECCC HCP/NCCP includes species specific minimization, avoidance, and mitigation measures for covered activities within the ECCC HCP/NCCP. Activities conducted in areas outside of the ECCC HCP/NCCP Permit Area are not considered covered activities under the ECCC HCP/NCCP. Consequently, the following impact discussions will include separate analyses for impacts within the ECCC HCP/NCCP Permit Area and impacts outside of the ECCC HCP/NCCP as needed.

4.2-1 Have a substantial adverse effect, either directly or through habitat modifications, on burrowing owl. Based on the analysis below and with implementation of mitigation, the impact would be *less than significant*.

The burrowing owl (*Athene cunicularia*) is not listed pursuant to either CESA or FESA; however, the burrowing owl is designated as a federal Bird of Conservation Concern and a California Species of Special Concern and is covered by the

Potential Impacts Outside of ECCC HCP/NCCP Permit Area

As described above, although the project site contains ruderal grassland and ground squirrel burrows, the grassland areas are routinely mowed and the existing burrows do not show signs of burrowing owl activity. On-going remediation within the project site involves frequent use of heavy-duty equipment and ground disturbance, which reduces the value of the site as habitat for the species. Despite the low habitat value of the site, the project site is conservatively considered to represent habitat for the species. Should the species be present within the project site, implementation of the proposed project could result in direct adverse effects to the species during ground disturbance and development.

Potential Impacts Within the ECCC HCP/NCCP Permit Area

As discussed above, the project site and subject property contain grassland areas that are considered to be habitat for burrowing owl under the ECCC HCP/NCCP. Consequently, while the signs of burrowing owl activity within the site have not been noted during multiple site visits, and the project site is heavily disturbed by on-going remediation work, grassland portions of the project site are considered to represent potential habitat for the species. Because implementation of the proposed project would result in conversion of some of the existing grassland areas within the project site to industrial uses, the proposed project would result in the loss of potential habitat under the ECCC HCP/NCCP. The ECCC HCP/NCCP provides compensatory habitat within dedicated preserve areas, which may be used as habitat by burrowing owl. The payment of ECCC HCP/NCCP fees as a result of the project would be used, in combination with other fees, to purchase preserve area, which would represent compensatory habitat for the species.

Furthermore, ground-disturbing activities, such as grading and development, within the project site would have the potential to disturb nesting or overwintering burrowing owls within the project site.

The ECCC HCP/NCCP includes minimization, avoidance, and mitigation measures intended to reduce the potential for covered activities, such as project-related construction activities, to result in direct impacts to covered species. Implementation of all applicable minimization, avoidance, and mitigation measures would be required to ensure the project's compliance with the ECCC HCP/NCCP.

Off-site Improvement Areas

It should be noted that the ECCC HCP/NCCP does not consider developed land, such as the off-site utility improvement areas, to represent suitable habitat for the species. Therefore, proposed off-site improvements related to utility work within or adjacent to existing roadways would not have the potential to result in impacts to burrowing owls.

The Del Antico Basin contains ruderal grassland that could provide habitat for the species. Signs of burrowing owl activity and ground squirrel burrows were not noted within the Del Antico Basin during Moore Biological Consultant's site visit.

Furthermore, the CNDDB does not contain any nearby occurrences of the species. Nevertheless, because the Del Antico Basin contains ruderal grassland, the proposed basin improvements could result in adverse effects both directly and through habitat modification on burrowing owls within the ECCC HCP/NCCP Permit Area. Because the Del Antico Basin is located within the ECCC HCP/NCCP Permit area, basin improvement activity would be required to comply with the minimization, avoidance, and mitigation measures included in the ECCC HCP/NCCP.

Conclusion

Considering the requirements of the ECCC HCP/NCCP, implementation of the proposed project within the ECCC HCP/NCCP Permit Area would be considered to have the potential to result in adverse effects on the species. Although Moore Biological Consultants determined that the project site is not likely to provide suitable habitat for the species, to maintain consistency with the ECCC HCP/NCCP, implementation of the project outside of the ECCC HCP/NCCP Permit Area is conservatively assumed to result in potential adverse effects to the species. Consequently, a ***significant*** impact on burrowing owls could result.

Mitigation Measure(s)

The proposed project's participation in the ECCC HCP/NCCP would provide a mechanism to adequately mitigate impacts to special-status species within the off-site improvement areas and the portion of the project site included in the ECCC HCP/NCCP Permit Area. Moreover, the ECCC HCP/NCCP includes minimization, avoidance, and mitigation measures intended to reduce potential impacts to covered species. The following mitigation measures have been designed to fulfill the requirements of the ECCC HCP/NCCP, including requirements related to a minimization, avoidance, and mitigation measures. Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

Areas of the Project Site Within the ECCC HCP/NCCP Permit Area and Off-Site Improvement Areas

4.2-1(a) *Prior to the issuance of grading or construction permits for each phase of development of the project, the applicant shall pay the applicable ECCC HCP/NCCP per-acre Development Fee in effect for Zone I in compliance with Article 7, Habitat Conservation Plan/Natural Community Conservation Plan Implementing Program, of the Oakley Municipal Code. The Development Fee will cover the development of habitat that primarily includes annual grassland. Payment of the Development Fee would address the loss of potential habitat of special-status plant species associated with grasslands. The fees would be used in part to protect these affected special-status plant species by bringing existing populations of the species under protection.*

Alternately, the project applicant may, in accordance with the terms of Oakley Municipal Code Article 7, offer to dedicate land in lieu of some or all of the mitigation fees. All applicable mitigation fees shall be paid, or an "in-lieu-of fee" agreement executed, prior to the issuance of a grading permit for the project.

The Oakley Planning Division and the Contra Costa County Conservancy shall approve the final method of compliance with the ECCC HCP/NCCP provisions.

4.2-1(b) Preconstruction Survey

Prior to any ground disturbance related to covered activities, a USFWS/CDFW- approved biologist will conduct a preconstruction survey in areas identified in the planning surveys as having potential burrowing owl habitat. The surveys will establish the presence or absence of western burrowing owl and/or habitat features and evaluate use by owls in accordance with CDFW survey guidelines (California Department of Fish and Game 1995).

On the parcel where the activity is proposed, the biologist will survey the proposed disturbance footprint and a 500-foot radius from the perimeter of the proposed footprint to identify burrows and owls. Adjacent parcels under different land ownership will not be surveyed. Surveys should take place near sunrise or sunset in accordance with CDFW guidelines. All burrows or burrowing owls will be identified and mapped. Surveys will take place no more than 30 days prior to construction. During the breeding season (February 1 to August 31), surveys will document whether burrowing owls are nesting in or directly adjacent to disturbance areas. During the nonbreeding season (September 1 to January 31), surveys will document whether burrowing owls are using habitat in or directly adjacent to any disturbance area. Survey results will be valid only for the season (breeding or nonbreeding) during which the survey is conducted.

Areas of the Project Site Outside the ECCC HCP/NCCP Permit Area

4.2-1(c) Preconstruction Survey

Prior to any ground disturbance related to covered activities, a USFWS/CDFW-approved biologist will conduct a preconstruction survey in of potential burrowing owl habitat. The surveys will establish the presence or absence of western burrowing owl and/or habitat features and evaluate use by owls in accordance with CDFW survey guidelines (California Department of Fish and Game 2012).

Compensatory Habitat Mitigation

If active owl burrows are identified during pre-construction surveys in areas of the project site outside of the ECCC HCP/NCCP Permit Area and the project would impact active burrows, the project applicant shall provide compensatory mitigation for the permanent loss of burrowing owl habitat at a ratio of 2.5 acres of higher quality owl habitat for every one acre of suitable owl habitat disturbed. The calculation of habitat loss may exclude acres currently occupied by hardscape or structures. Such mitigation may include the permanent protection of land that is deemed to be suitable burrowing owl habitat through a conservation easement

deeded to a non-profit conservation organization or public agency with a conservation mission, or the purchase of burrowing owl conservation bank credits from a CDFW-approved burrowing owl conservation bank. A record of the compensatory mitigation provided by the project applicant shall be submitted to the City of Oakley Planning Division prior to initiation of ground disturbing activities.

Entire Project Site and Off-Site Improvement Areas

4.2-1(d) Avoidance, Minimization, and Construction Monitoring

If burrowing owls are found during the breeding season (February 1 to August 31), the project proponent will avoid all nest sites that could be disturbed by project construction during the remainder of the breeding season or while the nest is occupied by adults or young. Avoidance will include establishment of a non-disturbance buffer zone (described below). Construction may occur during the breeding season if a qualified biologist monitors the nest and determines that the birds have not begun egg-laying and incubation or that the juveniles from the occupied burrows have fledged. During the nonbreeding season (September 1 to January 31), the project proponent should avoid the owls and the burrows they are using, if possible. Avoidance will include the establishment of a buffer zone (described below).

During the breeding season, buffer zones of at least 250 feet in which no construction activities can occur will be established around each occupied burrow (nest site). Buffer zones of 160 feet will be established around each burrow being used during the nonbreeding season. The buffers will be delineated by highly visible, temporary construction fencing.

If occupied burrows for burrowing owls are not avoided, passive relocation will be implemented. Owls should be excluded from burrows in the immediate impact zone and within a 160-foot buffer zone by installing one-way doors in burrow entrances. These doors should be in place for 48 hours prior to excavation. The project area should be monitored daily for 1 week to confirm that the owl has abandoned the burrow. Whenever possible, burrows should be excavated using hand tools and refilled to prevent reoccupation (California Department of Fish and Game 1995). Plastic tubing or a similar structure should be inserted in the tunnels during excavation to maintain an escape route for any owls inside the burrow.

4.2-2 Have a substantial adverse effect, either directly or through habitat modifications, on Swainson's hawk. Based on the analysis below and with implementation of mitigation, the impact would be *less than significant*.

Several trees within and surrounding the project site and the Del Antico Basin are large enough to support Swainson's hawk nesting activity. A pair of Swainson's hawks were documented as nesting in one of the existing eucalyptus trees within the

southwest portion of the project site in 2018. During field surveys conducted on March 21, 2019, Swainson's hawks were observed soaring around the same eucalyptus tree. Given the species' affinity for reusing nesting sites, Moore Biological Consultants concluded that Swainson's hawks could continue to return to the eucalyptus tree in future years.

Potential Impacts Outside of ECCC HCP/NCCP Permit Area

The CDFW considers five or more vacant acres located within 10 miles of an active nest, including nests that have been active within the last five years, to be significant foraging habitat for Swainson's hawk. The portion of the project site outside of the ECCC HCP/NCCP Permit Area that could be developed with implementation of the proposed project contains 16.42 acres of ruderal grassland. Considering the existence of a Swainson's hawk nest within the project site that was confirmed as being used as recently as 2018, implementation of the proposed project could result in the conversion of foraging habitat

The conversion of such foraging habitat is considered a significant impact, in accordance with the *Staff Report Regarding Mitigation for Impacts to Swainson's Hawk (Buteo swainsoni) in the Central Valley of California* (Staff Report).[13] The Staff Report states that foraging habitat loss within one mile of an active nest must mitigated at a ratio of 1:1.

It should be noted that the Swainson's hawk nest identified in the CNDDB (2019) is located in the western portion of the project site, within the ECCC HCP/NCCP Permit Area; the Swainson's hawk nest documented in 2018 in the southwest part of the site is also within the ECCC HCP/NCCP Permit Area. Nevertheless, should trees within the portion of the project site outside of the ECCC HCP/NCCP Permit Area be used by Swainson's hawks for nesting, implementation of the proposed project could result in removal of such trees. Removal of trees containing nesting Swainson's hawks could result in nesting failure or take of individual Swainson's hawks. Thus, removal of on-site trees both inside and outside of the ECCC HCP/NCCP Permit Area could result in significant adverse effects to Swainson's hawks.

Potential Impacts Within the ECCC HCP/NCCP Permit Area

Implementation of the proposed project would result in conversion of grassland areas within the ECCC HCP/NCCP Permit Area to industrial uses. The conversion of grassland to industrial uses would represent a loss of foraging habitat for the species. Furthermore, the proposed project is anticipated to involve removal of trees within the project site. Tree removal could involve loss of potential or existing nesting habitat.

Payment of the ECCC HCP/NCCP Zone I fees required as part of Mitigation Measure 4.2-1(a) would be used by the ECCC HCP/NCCP to purchase compensatory habitat for the conversion of grasslands on-site. The compensatory habitat would address impacts to suitable foraging habitat for Swainson's hawk within the ECCC HCP/NCCP area. The ECCC HCP/NCCP includes minimization, avoidance, and mitigation measures intended to reduce the potential for covered

[13] Department of Fish and Wildlife. *Staff Report Regarding Mitigation for Impacts to Swainson's Hawk (Buteo swainsoni) in the Central Valley of California.* November 8, 1994.

activities, such as project-related construction activities, to result in direct impacts to covered species. Implementation of all applicable minimization, avoidance, and mitigation measures would be required to ensure the project's compliance with the ECCC HCP/NCCP.

Nevertheless, implementation of the proposed project could result in adverse effects both directly and through habitat modification on Swainson's hawks within the ECCC HCP/NCCP Permit Area.

Off-site Improvement Areas

It should be noted that off-site utility improvement areas do not represent suitable foraging or nesting habitat for the species.

However, Del Antico Basin contains several trees that could provide nesting habitat for the species. Moreover, the grassland portions of the basin could be considered foraging habitat for the species as well.

Consequently, while off-site utility improvements would not be anticipated to have the potential to result in impacts to the species, improvement work within the Del Antico Basin could result in adverse effects both directly and through habitat modification on Swainson's hawks within the ECCC HCP/NCCP Permit Area.

Conclusion

Implementation of the proposed project would result in the loss of Swainson's hawk foraging and nesting habitat within the project site, both within and outside the ECCC HCP/NCCP permit Area. As such, the proposed project could result in direct and indirect adverse effects on Swainson's hawks, which would be considered a ***significant*** impact.

Mitigation Measure(s)

The proposed project's participation in the ECCC HCP/NCCP would provide a mechanism to adequately mitigate impacts to special-status species within off-site improvement areas and the portion of the project site included in the ECCC HCP/NCCP Permit Area. Moreover, the ECCC HCP/NCCP include minimization, avoidance, and mitigation measures intended to reduce potential impacts to covered species. The following mitigation measures have been designed to fulfill the requirements of the ECCC HCP/NCCP, including requirements related to minimization, avoidance, and mitigation measures. Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

Areas of the Project Site Within the ECCC HCP/NCCP Permit Area and Off-Site Improvement Areas

4.2-2(a) Implement Mitigation Measure 4.2-1(a).

4.2-2(b) Preconstruction Survey

Prior to any ground disturbance related to covered activities that occurs during the nesting season (March 15 to September 15), a qualified biologist will conduct a preconstruction survey no more than 1 month prior

to construction to establish whether Swainson's hawk nests within 1,000 feet of the project site are occupied. If potentially occupied nests within 1,000 feet are off the project site, then their occupancy will be determined by observation from public roads or by observations of Swainson's hawk activity (e.g., foraging) near the project site. If nests are occupied, minimization measures and construction monitoring are required (see below).

Avoidance, Minimization, and Construction Monitoring

During the nesting season (March 15 to September 15), covered activities within 1,000 feet of occupied nests or nests under construction will be prohibited to prevent nest abandonment. If site-specific conditions or the nature of the covered activity (e.g., steep topography, dense vegetation, limited activities) indicate that a smaller buffer could be used, the Implementing Entity will coordinate with CDFW/USFWS to determine the appropriate buffer size. If young fledge prior to September 15, covered activities can proceed normally. If the active nest site is shielded from view and noise from the project site by other development, topography, or other features, the project applicant can apply to the Implementing Entity for a waiver of this avoidance measure. Any waiver must also be approved by USFWS and CDFW. While the nest is occupied, activities outside the buffer can take place.

All active nest trees will be preserved on site, if feasible. Nest trees, including non-native trees, lost to covered activities will be mitigated by the project proponent according to the requirements of Mitigation Measure 4.2-2(c).

4.2-2(c) Should the proposed project result in the loss of non-riparian Swainson's hawk nest trees, the project applicant shall implement the following measures:

- *If determined to be feasible by the City of Oakley Planning Division, the project applicant shall provide for the planting of 15 saplings for every nest tree removed, with the objective of having at least five mature trees established for every tree lost, according to the requirements listed further below; and either of the following:*
    1. *Pay the Implementing Entity an additional fee to purchase, plant, maintain, and monitor 15 saplings on the ECCC HCP/NCCP Preserve System for every tree lost according to the requirements listed below; OR*
    2. *The project proponent will plant, maintain, and monitor 15 saplings for every tree lost at a site to be approved by the Implementing Entity (e.g., within an ECCC HCP/NCCP Preserve or existing open space linked to ECCC HCP/NCCP preserves), according to the requirements listed below.*

The following requirements shall be met for all planting options:

- *Tree survival shall be monitored at least annually for five years, then every other year until year 12. All trees lost during the first five years will be replaced. Success will be reached at the end of 12 years if at least five trees per tree lost survive without supplemental irrigation or protection from herbivory. Trees must also survive for at least three years without irrigation.*
- *Irrigation and fencing to protect from deer and other herbivores may be needed for the first several years to ensure maximum tree survival.*
- *Native trees suitable for this site should be planted. When site conditions permit, a variety of native trees will be planted for each tree lost to provide trees with different growth rates, maturation, and life span, and to provide a variety of tree canopy structures for Swainson's hawk. This variety will help to ensure that nest trees will be available in the short term (five-10 years for cottonwoods and willows) and in the long term (e.g., Valley oak, sycamore). This will also minimize the temporal loss of nest trees.*
- *Riparian woodland restoration conducted as a result of covered activities (i.e., loss of riparian woodland) can be used to offset the nest tree planting requirement above, if the nest trees are riparian species.*
- *Whenever feasible and when site conditions permit, trees should be planted in clumps together or with existing trees to provide larger areas of suitable nesting habitat and to create a natural buffer between nest trees and adjacent development (if plantings occur on the development site).*
- *Whenever feasible, plantings on the site should occur closest to suitable foraging habitat outside the urban development area.*
- *Trees planted in the HCP/NCCP preserves or other approved offsite location will occur within the known range of Swainson's hawk in the inventory area and as close as possible to high-quality foraging habitat.*

Prior to issuance of tree removal permits for the project site, the City of Oakley Planning Division shall be notified whether the proposed project would include removal of nesting trees. Should such removal be required for implementation of the proposed project, the Contra Costa County Conservancy shall be notified and the foregoing measures shall be implemented as applicable, through the tree removal permit granted by the City of Oakley.

Areas of the Project Site Outside the ECCC HCP/NCCP Permit Area

4.2-2(d) *Prior to initiation of ground disturbing activity for the project, the project applicant shall mitigate for the loss of suitable Swainson's hawk foraging habitat by implementing the following measure:*

- *One acre of suitable foraging habitat shall be protected for each acre of suitable foraging habitat developed outside of the ECCC HCP/NCCP Permit Area. Protection shall be via purchase of*

mitigation bank credits or other land protection mechanism acceptable to CDFW.

Proof of purchase of mitigation credits as required per the above mitigation options, shall be provided to the Oakley Planning Division for review and approval prior to initiation of ground disturbance for any portion of the project site.

4.2-2(e) The project applicant shall implement the following avoidance measures for potential effects on Swainson's hawk nests during construction:

- *Prior to ground disturbing activities during the nesting season (March 15 through September 15), a qualified biologist shall conduct a pre-construction survey no more than one month prior to construction to establish whether occupied Swainson's hawk nests occur on or within 1,000 feet of the area of proposed construction. The results of the survey shall be submitted to the City of Oakley Planning Division. If occupied nests are not found, then further mitigation is not required.*
- *If occupied nests are found, project construction activity shall not occur within a 1,000-foot buffer zone distance from the nest unless a lesser buffer zone is approved by the City in consultation with CDFW. During the nesting season, construction activities shall be avoided within the established buffer zone to prevent nest abandonment. Construction monitoring shall be required to ensure that the established buffer zone is adhered to. If young fledge prior to September 15, construction activities can proceed normally without a buffer zone. If an active nest site is present but shielded from view and noise by other development or other features, the City may waive this avoidance measure (establishment of a buffer zone) if approved by the CDFW.*
- *All nest trees shall be preserved on site, if feasible. Nest trees that cannot be preserved may only be removed outside of the nesting season (i.e. nest trees may only be removed September 16 through March 14), and subject to the requirements of Mitigation Measure 4.2-2(b).*

4.2-3 Have a substantial adverse effect, either directly or through habitat modifications, on Golden Eagle. Based on the analysis below and with implementation of mitigation, the impact would be *less than significant*.

Moore Biological Consultants did not consider the area of the project site outside of the ECCC HCP/NCCP Permit Area to represent golden eagle habitat. However, the ECCC HCP/NCCP considers the undeveloped grassland areas of the project site within the ECCC HCP/NCCP Permit Area to represent potential golden eagle habitat. Furthermore, Moore Biological Consultants has identified various on-site trees within the ECCC HCP/NCCP Permit Area as providing potential nesting habitat for the

species. Therefore, the following discussion focuses on the area of the project site within the ECCC HCP/NCCP Permit Area.

The proposed project would result in the conversion of potential on-site golden eagle foraging habitat from grassland to industrial land uses. The ECCC HCP/NCCP provides compensatory habitat within dedicated preserve areas, which may be used as habitat by golden eagle. The payment of ECCC HCP/NCCP fees as a result of the project would be used, in combination with other fees, to purchase preserve area, which would represent compensatory habitat for the species.

Under the ECCC HCP/NCCP construction activity within 0.5-mile of an active golden eagle nest is prohibited. Should golden eagles nest within 0.5-mile of any areas that would be disturbed due to implementation of the proposed project, initiation of construction activity would conflict with the ECCC HCP/NCCP and could result in adverse effects to the species. It should be noted that the ECCC HCP/NCCP includes minimization, avoidance, and mitigation measures intended to reduce the potential for covered activities, such as project-related construction activities, to result in direct impacts to covered species. Implementation of all applicable minimization, avoidance, and mitigation measures would be required to ensure the project's compliance with the ECCC HCP/NCCP.

Off-Site Improvement Areas

The ECCC HCP/NCCP does not consider developed land, such as the off-site utility improvement areas to represent suitable habitat for the species. Although several trees exist within the Del Antico Basin and the basin is primarily characterized by ruderal grassland, the trees within the Del Antico Basin are not large enough to support golden eagle and golden eagle would not be expected to nest or forage in such a heavily urbanized area. Furthermore, the CNDDB does not contain any recorded occurrences of the species in proximity to the Del Antico Basin. Nevertheless, the ECCC HCP/NCCP prohibits any construction activity within 0.5-mile of a golden eagle nest, and the foregoing prohibition would apply to off-site improvements.

Conclusion

Considering the potential for the proposed project to result in the loss of on-site foraging habitat and for project-related construction activity to occur within 0.5-mile of an active nest, the proposed project could result in adverse effects to the species, either directly or indirectly, and a ***significant*** impact could occur within the ECCC HCP/NCCP Permit Area.

Mitigation Measure(s)

The proposed project's participation in the ECCC HCP/NCCP would provide a mechanism to adequately mitigate impacts to special-status species within off-site improvement areas and within the portion of the project site included in the ECCC HCP/NCCP Permit Area. Moreover, the ECCC HCP/NCCP includes minimization, avoidance, and mitigation measures intended to reduce potential impacts to covered species. The following mitigation measures have been designed to fulfill the requirements of the ECCC HCP/NCCP, including requirements related to

minimization, avoidance, and mitigation measures. Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

Areas of the Project Site Within the ECCC HCP/NCCP Permit Area and Off-Site Improvement Areas

4.2-3(a) Implement Mitigation Measure 4.2-1(a).

4.2-3(b) Preconstruction Survey

Prior to implementation of covered activities, a qualified biologist shall conduct a preconstruction survey to establish whether nests of golden eagles are occupied (see Section 6.3.1, Planning Surveys of the ECCC HCP/NCCP). If nests are occupied, the following minimization requirements and construction monitoring shall be required.

Avoidance and Minimization

Covered activities shall be prohibited within 0.5 mile of active nests. Nests can be built and active at almost any time of the year, although mating and egg incubation occurs late January through August, with peak activity in March through July. If site-specific conditions or the nature of the covered activity (e.g., steep topography, dense vegetation, limited activities) indicate that a smaller buffer could be appropriate or that a larger buffer should be implemented, the Implementing Entity shall coordinate with CDFW/USFWS to determine the appropriate buffer size.

Construction Monitoring

Construction monitoring shall focus on ensuring that covered activities do not occur within the buffer zone established around an active nest. Although no known golden eagle nest sites occur within or near the Urban Limit Line, covered activities inside and outside of the Preserve System have the potential to disturb golden eagle nest sites. Construction monitoring shall ensure that direct effects to golden eagles are minimized.

4.2-4 Have a substantial adverse effect, either directly or through habitat modifications, on white-tailed kite, tricolored blackbird, California black rail, saltmarsh common yellowthroat, loggerhead shrike, Suisun song sparrow, song sparrow "Modesto" population, and foraging or nesting habitat for other special-status avian species. Based on the analysis below and with implementation of mitigation, the impact would be *less than significant*.

In addition to the species protected by the ECCC HCP/NCCP discussed in Impacts 4.2-1 through 4.2-3, the project site could represent habitat for several other special-status species of birds. Because the special-status bird species listed below are not specifically covered under the ECCC HCP/NCCP, the following discussion considers potential impacts to such species over the entire project site as well as in off-site improvement areas.

The white-tailed kite, tricolored blackbird, California black rail, saltmarsh common yellowthroat, and loggerhead shrike could use portions of the on-site habitats for foraging or nesting habitat; a few of these species may use the Del Antico Basin for foraging or nesting. In particular, trees could provide nesting habitat for white-tailed kite or loggerhead shrike, and Moore Biological Consultants noted that site surveys of the project site in 2017 documented loggerhead shrike nesting within the project site. Furthermore, tricolored blackbird, California black rail, saltmarsh common yellowthroat, Suisun song sparrow, and song sparrow "Modesto" population could use a combination of the permanent wetlands or seasonal wetlands within, or in proximity to, the project site for foraging or nesting habitat. It should be noted that while the subject property contains permanent wetland areas that are suitable habitat for species such as tricolored blackbird, California black rail, saltmarsh common yellowthroat, Suisun song sparrow, and song sparrow "Modesto" population, the permanent wetland areas included in the project site represent low quality habitat on the fringe of the expansive permanent wetlands northeast of the site. The likelihood that any of the foregoing species would use the small section of low-quality permanent wetland habitat that would be disturbed by implementation of the project is low.

In addition to the species specified above, other avian species protected under the MBTA and Fish and Game Code of California could use trees, grassland, wetland, or permanent wetland habitats in the site for foraging or nesting activity. Although the on-site grassland, trees, and wetland habitats could provide suitable habitat for avian species, all such habitats within the project site have been disturbed through previous development or remediation activity, or are in close proximity to such areas of disturbance. Past and on-going disturbance of the project site reduces the suitability of the site as habitat for special-status and other protected avian species.

Off-Site Improvements

Off-site utility improvement areas are primarily comprised of developed land. Due to the existence of roadways and the highly disturbed nature of the off-site utility improvement areas, areas that would be disturbed by proposed off-site utility improvements would not be anticipated to disturb many of the species discussed above. However, should tree nesting species inhabit any existing trees in the immediate vicinity of the off-site improvement area, construction activities related to project implementation could result in disturbance of special-status avian species.

The Del Antico Basin contains primarily ruderal grassland habitat with scattered trees. The grassland portions of the Del Antico Basin are routinely maintained through vegetation management, which reduces the likelihood of ground nesting birds using the Del Antico Basin. However, should tree nesting species, including white-tailed kite or other protected avian species, inhabit any of the existing trees within or adjacent to the basin or should ground nesting birds be present within the basin, proposed basin improvements could result in adverse effects to special-status or other protected avian species.

Conclusion

Implementation of the proposed project would involve removal of on-site trees, fill of on-site wetlands, construction of an outfall structure within the permanent wetlands

on-site, and off-site improvements. Such activities would have the potential to result in impacts to the aforementioned special-status species and other protected avian species, either directly or indirectly. Consequently, the proposed project could result in a ***significant*** impact to white-tailed kite, tricolored blackbird, California black rail, saltmarsh common yellowthroat, loggerhead shrike, Suisun song sparrow, song sparrow "Modesto" population or other avian species protected under the MBTA and Fish and Game Code of California.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

Areas of the Project Site Within the ECCC HCP/NCCP Permit Area and Off-Site Improvement Areas

4.2-4(a) Prior to any ground disturbance related to covered activities that occur during the nesting season (March 15 to August 31), a qualified biologist shall conduct a preconstruction survey for white-tailed kite no more than one month prior to construction to establish whether white-tailed kite is nesting in trees within or visible from the site or the off-site water quality basin. In the event active nests are found, the applicant shall notify the Implementing Entity and consult with CDFW for further guidance.

Grasslands and trees in or near the site or the off-site water quality basin could be used by other species of nesting birds protected by the Migratory Bird Treaty Act. If possible, vegetation removal will occur outside of the general bird nesting season (February 1 through August 31). Alternately, a qualified biologist will conduct a preconstruction survey no more than two weeks prior to vegetation removal. In the event active nests are found, the applicant shall notify the Implementing Entity and consult with CDFW for further guidance

Areas of the Project Site Outside the ECCC HCP/NCCP Permit Area

4.2-4(b) If construction activities commence anytime during the nesting/breeding season of native bird species potentially nesting on or near the project site (typically February through August in the project region), a pre-construction survey for nesting birds shall be conducted by a qualified biologist within two weeks of the commencement of construction activities. The results of the survey shall be submitted to the City of Oakley Planning Division.

If active nests are found in areas that could be directly affected or are within 500 feet of construction and would be subject to prolonged construction-related noise, an initial no-disturbance buffer zone shall be created around active nests during the breeding season or until a qualified biologist determines that all young have fledged. The initial sizes of the buffer zones and types of construction activities restricted within them shall be a minimum of 500 feet for raptors, and a minimum of 50 feet for other species, and in consultation with CDFW may be reduced or enlarged by taking into account factors such as the following:

- *Noise and human disturbance levels at the construction site at the time of the survey and the noise and disturbance expected during the construction activity;*
- *Distance and amount of vegetation or other screening between the construction site and the nest; and*
- *Sensitivity of individual nesting species and behaviors of the nesting birds.*

4.2-5 Have a substantial adverse effect on riparian habitat or other sensitive natural community, or State or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. Based on the analysis below and with implementation of mitigation, the impact is *less than significant*.

Due to an absence of rivers and streams in the project site, Moore Biological Consultants concluded that the project site does not contain riparian habitat. However, the project site contains four seasonal wetlands and a portion of one permanent wetland, all of which have been previously delineated and the delineations subsequently verified. The off-site utility improvement areas do not contain any wetland areas, and, consist solely of previously developed roadways or roadway rights-of-way. Additionally, the Del Antico Basin does not contain any potentially jurisdictional wetlands. Therefore, implementation of the proposed project would not result in impacts related to riparian habitat, or sensitive natural communities or wetland areas off-site. Potential impacts to aquatic resources within the project site are further discussed below.

The proposed project would involve grading and development activities associated with construction and operation of the proposed industrial structures, drive aisles, parking areas, and on-site infrastructure. On-site infrastructure would include construction of a proposed stormwater outfall structure, which would extend into the permanent wetlands within the project site. Such development activities would have the potential to involve the disturbance, removal, fill or hydrologic interruption of wetlands or other waters of the U.S. or state regulated by the USACE, RWQCB, and/or the CDFW. As shown in Table 4.2-5, the proposed project would have the potential to impact 0.983 acre of seasonal wetlands within the ECCC HCP/NCCP Permit Area, as well as 0.197 acres of seasonal wetland and 0.065 acre of permanent wetlands outside of the ECCC HCP/NCCP Permit Area.

It should be noted that 0.030 acre of impacts to the permanent wetlands would be temporary during the construction of the proposed storm drain outfall, while the remaining 0.035 acre would be permanently impacted due to development of the outfall structure. As discussed in further depth in Impact 4.2-6, impacts to wetlands could result in adverse effects to water quality and special-status fish species within the San Joaquin River and nearby San Joaquin-Sacramento River Delta. Wildlife using the San Joaquin River is considered a sensitive natural community; thus,

implementation of the proposed project could result in substantial adverse effects to a sensitive natural community.

Table 4.2-5
Aquatic Resources Impacts and Avoidance within the Project Area

Resource Type	Existing (Acre)	Impacts (Acres)	Avoided (Acres)
Within ECCC HCP/NCCP Permit Area			
Seasonal Wetland (SW-D)	0.612	0.612	0.000
Seasonal Wetland (SW-E)	0.625	0.000	0.625
Seasonal Wetland (SW-F)	0.371	0.371	0.000
Subtotal	*1.608*	*0.983*	*0.625*
Outside of ECCC HCP/NCCP Permit Area			
Seasonal Wetland (SW-C)	0.197	0.197	0.000
Permanent Wetland (PW-A)	0.207	0.065	0.142
Subtotal	*0.404*	*0.262*	*0.142*
Total Aquatic Resources	**2.012**	**1.245**	**0.767**

Source: Moore Biological Consultants, July 2019.

Impacts to wetlands within the ECCC HCP/NCCP Permit Area are subject to the conditions of the Regional General Permit 1 issued by the USACE Sacramento District for ECCC HCP/NCCP covered activities. In addition, the ECCC HCP/NCCP provides for compensatory wetland habitat within dedicated preserve areas. The payment of ECCC HCP/NCCP fees as a result of the project would be used, in combination with other fees, for restoration/creation of wetlands, which would represent compensatory wetlands for those impacted by the project. Impacts to wetlands outside of the ECCC HCP/NCCP Permit Area would be subject to all applicable regulations of the USACE, RWQCB, and/or the CDFW.

Based on the above, implementation of the proposed project could have a substantial adverse effect on sensitive natural communities and/or have a substantial adverse effect on State or Federally protected aquatic resources (including, but not limited to, marsh, vernal pool, coastal, etc.), through direct removal, filling, hydrological interruption, or other means. Thus, a ***significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

Areas of the Project Site Within the ECCC HCP/NCCP Permit Area

4.2-5(a) Prior to the issuance of grading or construction permits for each phase of development of the project, the applicant shall pay the applicable ECCC HCP/NCCP per-acre Wetland Mitigation Fee in compliance with Article 7, Habitat Conservation Plan/Natural Community Conservation Plan Implementing Program, of the Oakley Municipal Code. Payment of the Wetland Mitigation Fee would address the loss of wetland habitat within the portions of the project site covered by the ECCC HCP/NCCP. The fees would be used in part to restore or create compensatory wetlands.

Alternately, the project applicant may, in accordance with the terms of Oakley Municipal Code Article 7, create and restore wetlands in lieu of some or all of the mitigation fees. All applicable mitigation fees shall be paid, or an "in-lieu-of fee" agreement executed, prior to the issuance of a grading permit for the project.

The Oakley Planning Division and the Contra Costa County Conservancy will need to approve the final method of compliance with the ECCC HCP/NCCP provisions.

4.2-5(b) The following measures from pages 6-33 through 6-35 of the ECCC HCP/NCCP shall be implemented avoid and minimize impacts of covered activities on wetlands:

- *The project shall comply with the guidelines in Conservation Measure 1.10 of the ECCC HCP/NCCP to minimize the effects of urban development on downstream hydrology, streams, and wetlands.*
- *All wetlands to be avoided by covered activities shall be temporarily staked in the field by a qualified biologist.*
- *Personnel conducting ground-disturbing activities within or adjacent to wetlands will be trained by a qualified biologist in these avoidance and minimization measures and the permit obligations of project proponents working under the ECCC HCP/NCCP.*
- *Trash generated during project construction shall be promptly and properly removed from the site.*
- *Construction or maintenance vehicles shall not be refueled within 200 feet of wetlands unless a bermed and lined refueling area is constructed and hazardous material absorbent pads are available in the event of a spill.*
- *Appropriate erosion-control measures (e.g., fiber rolls, filter fences, vegetative buffer strips) shall be used on site to reduce siltation and runoff of contaminants into the wetlands. Filter fences and mesh shall be of material that will not entrap reptiles and amphibians. Erosion control blankets shall be used as a last resort because of their tendency to biodegrade slowly and trap reptiles and amphibians.*
- *Fiber rolls used for erosion control shall be certified as free of noxious weed seed.*
- *Seed mixtures applied for erosion control shall not contain invasive non-native species, and shall be composed of native species or sterile non-native species.*
- *Herbicides shall not be applied within or adjacent to on-site wetlands unless needed to control serious invasive plants. In this case, herbicides that have been approved for use by EPA in or adjacent to aquatic habitats may be used as long as label instructions are followed and applications avoid or minimize impacts on covered species and their habitats. Appropriate herbicides may be applied to the ruderal grassland within the*

buffer area during the dry season to control nonnative invasive species such as yellow star-thistle. Herbicide drift shall be minimized by applying the herbicide as close to the target area as possible.

Areas of the Project Site Outside the ECCC HCP/NCCP Permit Area

4.2-5(d) *To the extent feasible, the project shall be designed to avoid and minimize adverse effects to waters of the U.S. or jurisdictional waters of the State of California within the project area. Prior to Improvement Plan approval for the project or any phase thereof, a Section 404 permit for fill of jurisdictional wetlands shall be acquired, and mitigation for impacts to jurisdictional waters that cannot be avoided shall conform with the USACE "no-net-loss" policy. Mitigation for impacts to both federal and State jurisdictional waters shall be addressed using these guidelines.*

If a Section 404 permit is obtained, the applicant must also obtain a water quality certification from the RWQCB under Section 401 of the Clean Water Act (CWA). Written verification of the Section 404 permit and the Section 401 water quality certification shall be submitted to the Oakley Planning Division.

4.2-5(e) *Prior to issuance of a building permit to construct the storm drain outfall, the applicant shall apply for a Section 1600 Lake or Streambed Alteration Agreement from CDFW. The information provided shall include a description of all of the activities associated with the proposed project, not just those closely associated with the drainages and/or riparian vegetation. Impacts shall be outlined in the application and are expected to be in substantial conformance with the impacts to biological resources outlined in this document. Impacts for each activity shall be broken down by temporary and permanent, and a description of the proposed mitigation for biological resource impacts shall be outlined per activity and then by temporary and permanent. Information regarding project-specific drainage and hydrology changes resulting from project implementation shall be provided as well as a description of storm water treatment methods. Minimization and avoidance measures shall be proposed as appropriate and may include:*

- *Preconstruction surveys and reporting;*
- *Protective fencing around avoided biological resources;*
- *Worker environmental awareness training;*
- *Installation and maintenance of silt curtains and/or turbidity barriers;*
- *Water quality monitoring with the authority to stop work should water quality degradation occur; and/or*
- *Installation of other project-specific water quality best management practices.*

In addition, mitigation may include restoration or enhancement of resources on- or off-site, purchase habitat credits from an agency-

approved mitigation/conservation bank off-site, such as the Cosumnes Floodplain Mitigation Bank, working with a local land trust to preserve land, or any other method acceptable to CDFW. A written record of the Section 1600 Lake or Streambed Alteration Agreement, including all applicable minimization and avoidance measures, shall be submitted to the City of Oakley Planning Division.

4.2-5(f) To reduce the potential for sedimentation in the permanent wetlands on-site, project construction requiring in-water work or work within areas identified as permanent wetlands within the project site shall only occur between August 1 and November 30. The work window may only be adjusted through consultation with the CDFW, NMFS, and/or USFWS. The language of this mitigation measure shall be included on final Improvement Plans submitted to the City for review and approval.

Entire Project Site

4.2-5(g) High visibility and silt fencing shall be erected at the edge of construction/maintenance footprint if work is anticipated to occur within 50 feet of potentially jurisdictional features and riparian areas which are proposed for avoidance. A biological monitor shall be present during the fence installation and during any initial grading or vegetation clearing activities within 50 feet of potentially jurisdictional features and riparian areas which are proposed for avoidance. The language of this mitigation measure shall be included on final Improvement Plans submitted to the City for review and approval.

4.2-6 Have a substantial adverse effect, either directly or through habitat modifications, on special-status fish species. Based on the analysis below and with implementation of mitigation, the impact would be *less than significant*.

As noted in Wetland Delineation included as part of the PSR prepared for the proposed project, the subject property includes seasonal wetlands, permanent wetlands, and open water aquatic resources. Although open water habitats exist within the subject property, the project site does not contain any areas designated as open water, and implementation of the proposed project would not result in any direct physical changes to areas of the subject property designated as open water. In addition, the seasonal wetlands within the project site are hydrologically isolated and do not provide habitat for any fish species, and, as such, any impacts to seasonal wetlands within the project site would not have the potential to adversely affect special-status fish species. Although the proposed project does not include any direct changes to the open water aquatic resources within the project site, the proposed project would include construction of a stormwater outfall in the area identified as a permanent wetland within the project site. It should be noted that the areas of the subject property containing open water habitat and permanent wetland habitat are outside of the ECCC HCP/NCCP area. In addition, off-site improvements do not have the potential to result in impacts to special-status species.

FISHBIO analyzed the potential for special-status fish species to use the permanent wetlands and open water within the project site as habitat, and concluded that the presence of any special-status fish species within the subject property would be highly unlikely. In particular, only one Central Valley Steelhead has been captured during seine surveys conducted by USFWS near the project area since 2008. Only one Delta Smelt was caught in the region, near Sherman Island, in 2017, and this capture was the first fish captured since November 2005. Both the green sturgeon and Chinook salmon could use the San Joaquin River to the north of the project site for migration; however, neither species would be likely to use portions of the subject property for this purpose, and both species are strong swimmers that could easily avoid any disturbances occurring on-site.

Considering the absence of special-status fish habitat within the on-site permanent wetlands, the low likelihood of any special-status species being present within the subject property, and the ability of many of the special-status fish species to swim away from any potential sources of disturbance, construction of the proposed stormwater outfall structure within the on-site permanent wetland area would not have the potential to result in direct impacts to special-status fish species. However, the on-site permanent wetlands are hydrologically connected to the open water habitat within the subject property. The open water portions of the subject property are connected with the San Joaquin River and the larger San Joaquin-Sacramento Delta.

As discussed in Impact 4.2-5, the proposed project would involve fill of 0.035-acre of permanent wetland and temporary impacts to an additional 0.030-acre of permanent wetland during construction of the proposed stormwater outfall structure. Considering the hydrologic connectivity between the on-site permanent wetlands, open water within the subject property, and the San Joaquin River, should implementation of the proposed project result in impacts to water quality due to work within the permanent wetlands, such impacts could affect other connected aquatic resources and result in adverse effects to special-status fish species. For instance, ground disturbing activity within the permanent wetland areas of the project site could result in the release of silt or sediment into the water column, which would adversely affect water quality and special-status fish species in the vicinity of the project site. It should be noted that potential adverse effects on water quality resulting from the proposed project are discussed in further depth in Section 4.3, Hydrology and Water Quality, of this EIR.

Although the potential exists for work within the permanent wetland areas of the project site to result in impacts to special-status fish through the release of sediment during construction activity, as discussed in Impact 4.2-5, work within the permanent wetland areas of the site would be subject to permitting requirements through the USACE, USFWS, NMFS, and CDFW. Although the exact permitting requirements would be determined through further consultation between the project applicant and the permitting agencies, Mitigation Measure 4.2-5(e) presents the permit requirements that would likely be imposed by the permitting agency to ensure that construction of the proposed outfall would not result in impacts to water quality and special-status fish.

In addition to the permitting requirements, construction of the proposed outfall would be conducted in a manner designed to minimize the potential for impacts to occur.

For instance, construction within the permanent wetlands would be scheduled to take place during the late-summer or early fall time period, as required by Mitigation Measure 4.2-5(f) of this EIR. Construction during this time period would avoid the avian nesting season and, according to FISHBIO, would avoid the seasons during which special-status fish species are likely to be present within the portion of the San Joaquin River to the north of the project site. The proposed design for the outfall structure includes a containment structure over a low concrete weir. The weir would help to prevent inflow of Delta waters into the project drain system during high tide while simultaneously assuring that outflow from the structure would be spread out to flow into the adjacent wetland at low depths and non-erosive velocities. A small length of rock slope protection would be included in the downslope of the weir to provide additional protection against scour and thereby minimize additional turbidity inputs that may have otherwise resulted from erosion downslope of the weir.

Despite the inherent design features intended to reduce impacts to water quality and special-status species, implementation of the proposed project without application of measures sufficient to ensure the protection of water quality could result in adverse effects to special-status fish species. Therefore, the proposed project could result in a ***significant*** impact.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

Entire Project Site

4.2-6 Implement Mitigation Measures 4.2-5(e) through 4.2-5(g).

4.2-7 Substantially interfere with movement of native, resident, or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites. Based on the analysis below the impact is *less than significant*.

As discussed in sub-section 4.2.2, the project site is surrounded by developed lands to the east, west, and south. Therefore, significant wildlife movement corridors do not exist within the land area adjacent to the project site or adjacent to the off-site improvement areas. The San Joaquin River to the north of the project site acts as a major movement corridor for wildlife species including fish, avian species, and aquatic mammals. The proposed project would not include any construction activity that could substantially diminish the ability of the San Joaquin River to act as a movement corridor. In addition, Mitigation Measure 4.2-5(e) would ensure that implementation of the proposed project would not result in any water quality impacts to the San Joaquin River that could inhibit the use of the river as a migratory corridor.

Surveys of the project site have recorded the use of the site for nesting activity of avian species covered under the ECCC HCP/NCCP, MBTA, and Fish and Game Code of California. However, such nesting activity has been limited to individual pairs, and due to the highly disturbed nature of the project site, the project site is not considered a significant wildlife nursery site. Furthermore, Mitigation Measure 4.2-

1(a) requires payment of impact fees for the loss of habitat within the ECCC HCP/NCCP Permit Area. Such fees would be used in part to purchase compensatory habitat areas, which would provide for the protection of similar breeding habitat. Considering the limited use of the project site for breeding by native wildlife, the highly disturbed nature of the site, and the requirement that the proposed project includes payment of ECCC HCP/NCCP fees, the proposed project would not impede the use of a wildlife nursery site.

The off-site improvement areas are within or adjacent to existing roadways, and have been previously developed and disturbed. Roadways are not considered wildlife movement corridors and are not suitable wildlife nursery sites, and construction work within roadways would not have the potential to impact movement corridors or wildlife nursery sites.

Considering the above, the proposed project would not interfere with the movement of native wildlife nor would the project impede the use of native wildlife nursery sites, and impacts to wildlife corridors and native wildlife nursery sites as a result of the implementation of the project site, would be ***less-than-significant***.

Mitigation Measure(s)
None required.

4.2-8 Conflict with any local policies or ordinances protecting biological resources, such as the City of Oakley's Heritage and Protected Tree standards. Based on the analysis below and with implementation of mitigation, the impact would be *less than significant.*

Trees, Bugs, and Dirt determined that the project site contains a total of 662 trees. Of the 662 trees located within the project site, 130 trees are considered heritage and/or protected trees due to the size and species of the trees. Implementation of the proposed project would require removal of some or all of the identified trees within the project site, including the 130 heritage and/or protected trees.

In addition to the removal of on-site trees, off-site improvements may require the removal of trees. For instance, several trees exist within the Del Antico Basin, including one coastal live oak. The existing trees within the Del Antico Basin have not been assessed to determine whether any such trees would be considered heritage and/or protected treed due to their size and species. Furthermore, plans for the improvement of Del Antico Basin have not yet been finalized, and the need for removal of the existing trees within Del Antico Basin is not known with certainty.

As noted in Section 9.1.1112 of the City's Municipal Code, heritage and protected trees may only be destroyed or a removed when a permit for such actions has been granted or such activities are found to be exempt per the stipulations of Section 9.1.1112. Permit applications must be submitted to the Oakley Community Development Department and must show any trees to be removed or protected. Should implementation of the proposed project include protection of any on-site trees, the project applicant would be required to adhere to the Tree Preservation and

Protection requirements within the City's Municipal Code, and the project applicant may be required to submit security deposits for the appraised values of any trees to be preserved.

For any trees proposed for removal, the project applicant may be required to submit proposed methods of compensation or replacement. In compliance with the City's Municipal Code, removed trees may be replaced through planting of compensatory trees. Additionally, the project applicant may elect to pay in-lieu fees or provide a combination of on-site replacement tree planting with in-lieu fee payment to the satisfaction of the Director of the Community Development or Planning Commission.

The proposed project would include submittal of a tree removal permit application to the City for the proposed on-site and off-site improvements as part of the overall project approval. However, without compliance with applicable standards included in Section 9.1.1112 of the City's Municipal Code, the proposed project could result in conflicts with the City of Oakley's regulations regarding Heritage and Protected Tree preservation, which would be considered a ***significant*** impact.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above impact to a *less-than-significant* level.

Entire Project Site and Off-Site Improvement Areas

4.2-8 *Prior to project-related tree removal, the project applicant shall be required to comply with the standards included in Section 9.1.1112 of the City's Municipal Code by implementing one of the options provided in Section 9.1.1112(g)(11)(a), to the satisfaction of the Director of the Community Development Department or the Planning Commission, as applicable.*

Cumulative Impacts and Mitigation Measures

As defined in Section 15355 of the CEQA Guidelines, "cumulative impacts" refers to two or more individual effects which, when considered together, are considerable, compound, or increase other environmental impacts. The individual effects may be changes resulting from a single project or a number of separate projects. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects.

The following discussion of impacts is based on the implementation of the proposed project in combination with other proposed and pending projects in the region. Other proposed and pending projects in the region under the cumulative context would include buildout of the City of Oakley General Plan, as well as development of the most recent planned land uses within the vicinity of the project area. Habitat loss resulting from the proposed project would combine with related effects resulting from cumulative development in the cumulative geographic setting. In addition, cumulative habitat loss could result in indirect adverse effects to the long-term viability of special-status species populations within the cumulative geographic setting, due to loss of their habitats.

4.2-9 Cumulative loss of biological resources in the City of Oakley. Based on the analysis below, the project's incremental contribution to this cumulative impact is *less than cumulatively considerable*.

As defined in Section 15355 of the State CEQA Guidelines, "cumulative impacts" refer to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts. The individual effects may be changes resulting from a single project or a number of separate projects. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects (CEQA Guidelines 15355). Accordingly, an assessment of cumulative impacts should consider impacts identified as significant, as well as impacts identified as less than significant for individual projects that may become significant in a collective sense when considering the co-occurrence of multiple projects.

The Oakley area, like other communities in the Bay Area, has experienced urban growth over the last several decades. The project site is a former chemical manufacturing facility that operated from 1956 to 1997, with manufacturing activities ceasing by 1998. Following cessation of industrial activities at the project site, the majority of the industrial structures were demolished in 1999, and the project site has been subject to various remediation activities since that time. Considering that the site had been previously developed and the highly disturbed nature of the site due to such development and on-going site remediation, the project site is of relatively low habitat value. Nevertheless, because a portion of the project site is within the ECCC HCP/NCCP Permit Area, the project would be required to pay development impact fees to mitigate for the loss of grassland habitat and wetland areas within portions of the project site. Payment of ECCC HCP/NCCP development fees by the proposed project, in combination with fee payment from other cumulative development in the ECCC HCP/NCCP Permit Area, would ensure that cumulative habitat loss would be mitigated through the protection of similar habitat elsewhere in the ECCC HCP/NCCP Permit Area.

Moreover, off-site improvement areas that would be disturbed with implementation of the proposed project are within the ECCC HCP/NCCP Permit Area and would be subject to the development fees discussed above. Considering the low habitat value of the off-site utility improvement areas as well as the urbanized nature of the area surrounding the Del Antico Basin, payment of development fees would ensure that cumulative habitat loss would be mitigated through the protection of more suitable habitat elsewhere in the ECCC HCP/NCCP Permit Area.

Although portions of the proposed project would involve development outside of the ECCC HCP/NCCP Permit Area, because the majority of the project site has been previously developed for industrial uses in the past, the project site is considered relatively low value habitat. Consequently, development of the portions of the project site outside of the ECCC HCP/NCCP Permit Area would not be considered to represent a substantial loss of habitat. Areas of the subject property to the north and northeast of the project site would remain undisturbed with implementation of the

proposed project, which would ensure that the wetland, open water, and other habitat areas in these portions of the subject property would not be degraded due to implementation of the proposed project.

The City of Oakley determined that with implementation of all General Plan goals and policies related to biological resources, a less-than-significant impact would occur to biological resources with buildout of the City's General Plan. The proposed project includes a General Plan Amendment to accommodate the proposed industrial development within the project site; however, the proposed development would continue to be subject to the goals and policies within the City's General Plan. Furthermore, this EIR includes various mitigation measures to compensate for and protect biological resources within the project site.

Implementation of the project-specific mitigation, along with adherence to applicable General Plan goals and policies as well as participation in the ECCC HCP/NCCP would ensure that implementation of the proposed project would result in a ***less-than-cumulatively-considerable*** impact.

Mitigation Measure(s)
None required.

4.3. Hydrology and Water Quality

4.3. HYDROLOGY AND WATER QUALITY

4.3.1 INTRODUCTION

The Hydrology and Water Quality chapter of the EIR describes existing drainage and water resources for the project site and evaluates potential impacts of proposed project with respect to flooding, surface water resources, and groundwater resources. Information for the Hydrology and Water Quality chapter was primarily drawn from the *City of Oakley 2020 General Plan*[1] and associated EIR,[2] as well as the Stormwater Control Plan prepared for the proposed project.[3] It should be noted that impacts associated with water supply and capacity are addressed in Chapter 4.5, Utilities and Service Systems, of this EIR.

4.3.2 EXISTING ENVIRONMENTAL SETTING

The section below describes the existing hydrological features of the surrounding region and the project site, as well as the water quality of the existing resources in and around the project site.

Regional Hydrology

The project site is located within the City of Oakley on the eastern side of Contra Costa County and is bordered by the San Joaquin River Delta to the north. Water sources in the region include rivers, streams, sloughs, marshes, wetlands, channels, and harbors. The following is a discussion of the regional climate, waterways, drainage, and flooding.

Climate and Rainfall

The City experiences a generally favorable, moderate climate. Areas along the bay shore experience fog and marine air, creating mild winters and summers. The temperatures in the City range from an average 54 degrees in the winter to 91 degrees in the summer. Precipitation in the City occurs primarily in the winter months and averages 12 inches per year.

Waterways and Water Bodies

The principal waterways within the City of Oakley include the Contra Costa Canal, Marsh Creek, and East Antioch Creek. The Contra Costa Canal runs east to west through the eastern portion of the City. Marsh Creek runs south to north on the east side of the City and discharges into the Delta. East Antioch Creek borders the southwest City boundary and discharges into the Delta.

The predominant body of water adjacent to the City of Oakley is the San Joaquin River Delta. The waterway serves as an open space area, sensitive plant and wildlife habitat, and recreation opportunity. The Delta is located at the northernmost area of the City and is formed by the confluence of the Sacramento and San Joaquin rivers. The Delta delivers water for irrigation in the San Joaquin Valley and is a municipal water supply for much of California.

---

1 City of Oakley. *City of Oakley 2020 General Plan*. Adopted December 16, 2002.
2 City of Oakley. *General Plan Draft Environmental Impact Report*. September 2002.
3 Balance Hyrologics, Inc. and Carlson, Barbee & Gibson. *Stormwater Control Plan Oakley Logistics Center.* August 23, 2019.

The Dutch Slough area is an extension of the Delta that is located along the northern boundary of the City. The area includes a contiguous block of land that includes agricultural lands, ruderal lands, and Delta frontage, providing habitat, foraging and shelter opportunities for resident wildlife. Dutch Slough is located along the northern boundary of the City and is bisected by the Contra Costa Canal. The area is considered Delta Recreation and preserved by the City. The Slough runs east to west and drains into the Delta.

Drainage

The Contra Costa County Flood Control and Water Conservation District (CFCWCD) controls flood and stormwaters throughout the County, including in the City of Oakley. The City slopes gradually to the Delta with the highest points nearest the southern boundaries. Regional waters flow through Oakley using the Marsh Creek corridor and other Delta outfalls. Because Marsh Creek has limited capacity, local and regional detention basins have been created to control flow into Marsh Creek and to minimize flooding.

The CFCWCD has developed drainage plans to guide the development of new drainage systems and ensure compliance with the National Pollution Discharge Elimination System (NPDES) permit. The individual drainage areas have been sized to meet buildout expectations based on land use designations. Stormwater is collected and discharged to either Marsh Creek or pipelines leading to the Delta. Marsh Creek is owned and operated by CFCWCD. The regional drainage plan has been updated using current land use forecasts and flow predictive models. The basins can be dual use facilities and are designed so they do not incur standing water. Many basins have fencing so a gate can be closed if standing water is sensed in the basin.

Flooding

Substantial areas within the City are subject to flooding, especially areas along the Delta and northeast of the Contra Costa Canal. The most serious flood hazards existing in the City are related to the system of levees that protect the islands and adjacent main lands in the Delta. Flooding problems have been exacerbated by boat movement on the waterways, which creates waves that accelerate the natural process of levee erosion.

The City continues to implement flood prevention measures, including protection of development along the shoreline, floodproofing of buildings, and rights-of-way for levees. Flood protection is required in most parts of the City and several measures are taken to ensure reduced impacts in flood areas.

Dam Inundation

According to the General Plan EIR, the north and northeastern portions of the City are subject to potential dam inundation by the New Melones Lake, Folsom Lake, and San Luis Reservoir. The inundation areas are depicted in Figure 8-6 of the General Plan EIR. The New Melones Dam is located off of State Route (SR) 49, approximately 60 miles from the City, and would be the most damaging according to Figure 8-6.

Project Site and Area Drainage

The project site is located in the northern portion of the City and is bordered by the Delta to the north. It should be noted that the entire 375.7-acre subject property contains waterways connecting to the Delta; however, only 143.3 acres of the site would be developed and the waterways to the north would remain untouched. The site also contains the Central Slough in the middle of the site, which is currently used as overflow for runoff from the project site.

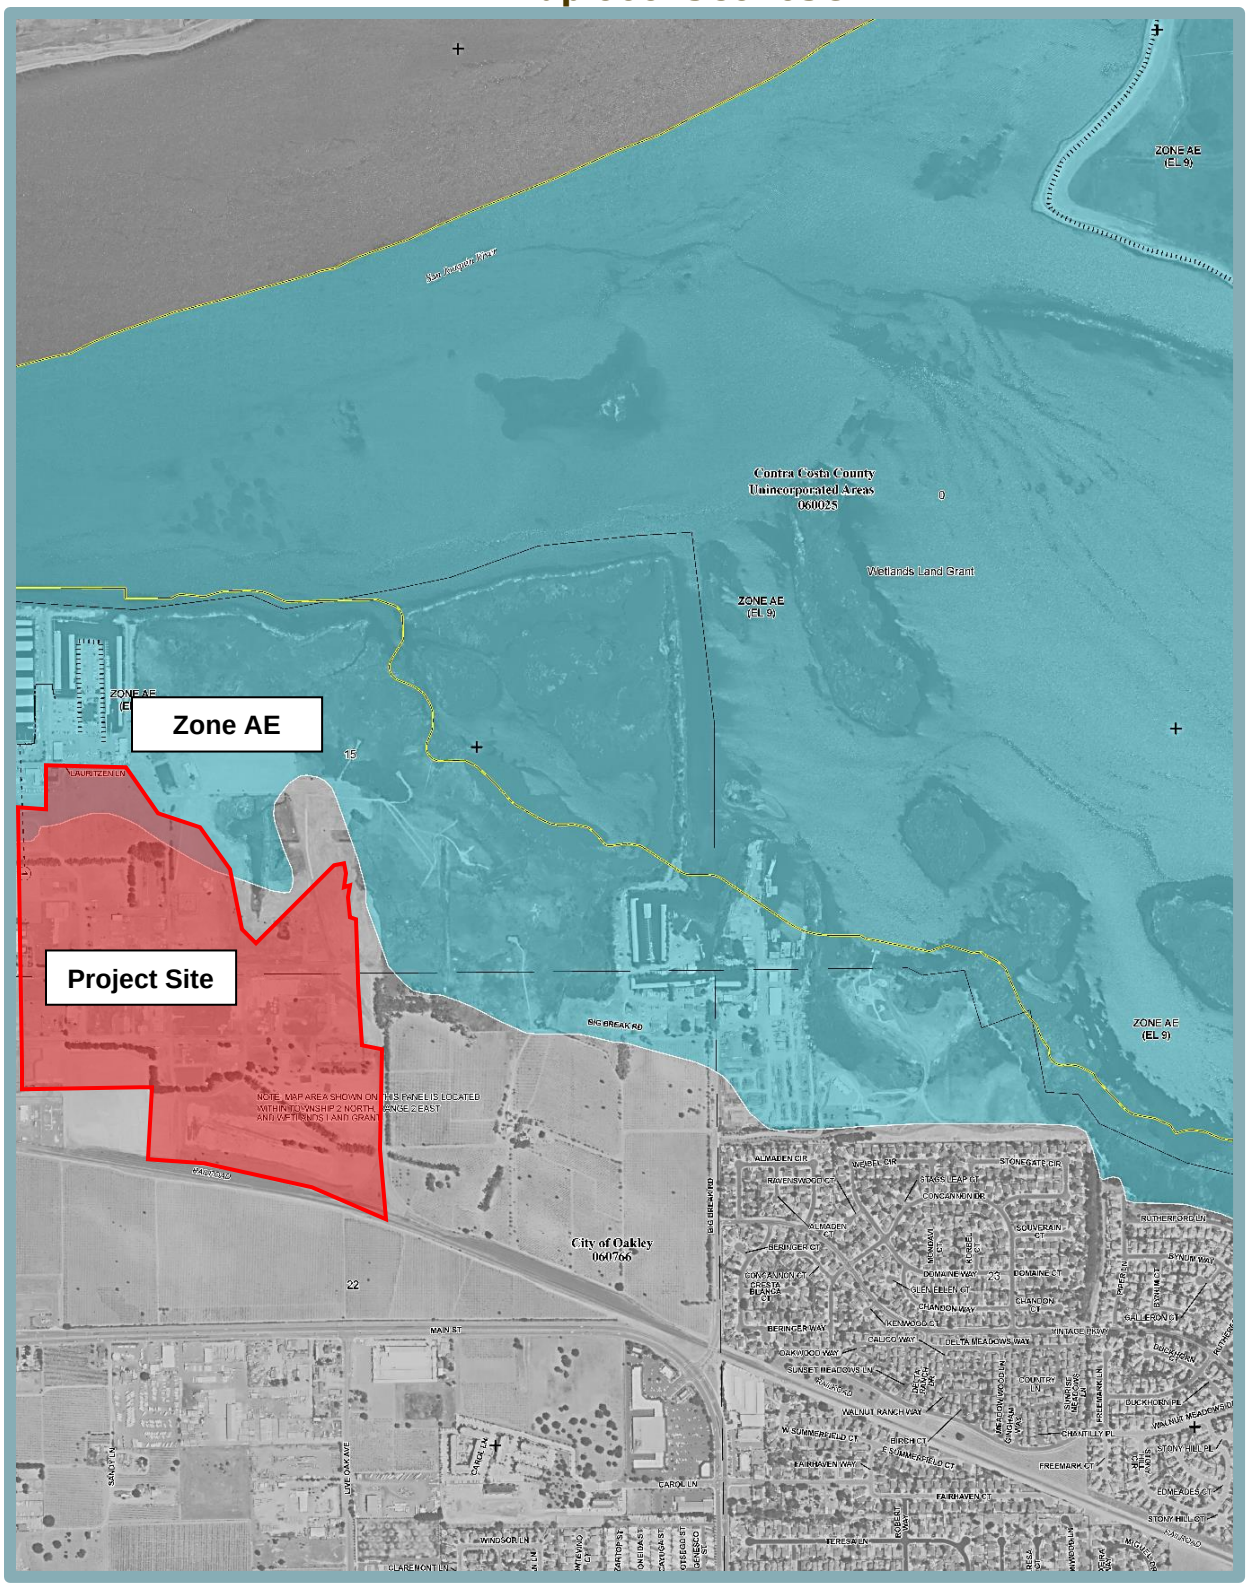
The topography of the site ranges from a low of about six feet at the northeast corner of the site to a high of about 20 feet in the southwest corner. The slope of the site generally flows from south to north with relatively uniform elevations across most of the site. Primary development would occur in the middle of the site which is relatively level.

The City of Oakley maintains and operates the public storm drain system in the vicinity of the project site. Historically, most stormwater from the impervious areas of the project site have either infiltrated into open spaces or been collected in a pipe system that discharged into the Delta. Currently, stormwater flows to three depressed areas along Bridgehead Road which store and infiltrate water flows. The southernmost depressed area is near the southwestern portion of the site. The other two are just south of the north property line. Central Slough also currently collects overland flows and conveys them to the Delta through a culvert outfitted with a tidal gate. All other stormwater flows from the site either infiltrate into open spaces or sheet drain to the Delta.

The site is part of unformed Drainage Area 29 and does not have any existing or planned public storm drain facilities within the project site. Drainage Area 29H stops just south of the site, before the BNSF Railroad corridor and contains a 66-inch pipe that traverses the project area directly east of the site and discharges to an outlet structure at the shoreline and into the Delta.

Local Flooding

The Federal Emergency Management Agency (FEMA) categorizes flood prone areas based on the frequency of occurrence. As shown in Figure 4.3-1, the project site is within Flood Insurance Rate Map (FIRM) 06013C0163G. According to the FIRM, most of the site is within Flood Hazard Zone X. Zone X is described by FEMA as an area of moderate to low flood risk, usually between the 100-year to 500-year flood levels. However, a portion of the site in the northwestern most corner is in Zone AE, which is considered an area at high risk for flooding and known as the 100-year floodplain. The map establishes a base elevation of nine feet. In order to develop within the Zone AE, the proposed project would be required to remove the designation through the CLOMR-F/LOMR-F process.



Groundwater

Water is provided to the project site by the Diablo Water District (DWD). DWD and associated wells overlie the northwestern portion of the Tracy Subbasin, which is 1 of 16 subbasins in the San Joaquin Valley Groundwater Basin. DWD has developed a groundwater supply system that provides additional supply reliability. The system currently consists of groundwater from two wells in Oakley, conveyed in a dedicated well supply pipeline to a blending facility located near the Randall-Bold WTP. At the blending facility, the groundwater is treated and blended with treated surface water within DWD's distribution system, prior to distribution to any customers. The amount of groundwater used in proportion to surface water is automatically controlled to maintain good water quality with a target hardness of 140 milligrams per liter (except in times of drought when the target hardness may be higher). When fully implemented, groundwater may comprise up to 20 percent of DWD's total supply. DWD has taken steps to protect and actively manage the groundwater basin.

Water Quality

Water is essential to recreation, the viability of agriculture, and the development of housing, commerce, and industry, as well as the maintenance of high-quality fish and wildlife habitats. Land uses and activities that the City must consider in protecting the quality of the City's water include construction activities, agricultural land uses, and urban runoff.

Figure 4.3-1
FEMA Map 06013C0163G

Source: FEMA, 2015.

Construction Activities

Construction activities generally have the potential to cause erosion and sedimentation associated with groundbreaking and clearing activities. Such effects could result in impacts to nearby water bodies. Unstable soil could be washed or wind-blown into nearby surface water. Due to the use of heavy equipment during construction activities, during rainfall events, petroleum products and other pollutants from construction equipment have the potential to enter nearby drainages.

Urban Runoff

Stormwater runoff from urban areas could contain a variety of pollutants that may reduce the quality of groundwater when introduced into groundwater aquifers or surface water when allowed to flow untreated to water bodies. Pollutants typically found in urban runoff include commercial cleaning supplies and landscape-related chemicals (insecticides, herbicides, fungicides and rodenticides), heavy metals (such as copper, zinc, and cadmium), oils and greases, and nutrients (nitrogen and phosphorus).

4.3.3 REGULATORY CONTEXT

The following is a description of federal, State, and local environmental laws and policies that are relevant to the review of hydrology and water quality under the California Environmental Quality Act (CEQA) process.

Federal Regulations

The following section includes federal environmental goals and policies relevant to the CEQA review process pertaining to the hydrology and water quality aspects of the proposed project.

Federal Emergency Management Agency

The FEMA is responsible for determining flood elevations and floodplain boundaries based on U.S. Army Corps of Engineers (USACE) studies. FEMA is also responsible for distributing the FIRMS, which are used in the National Flood Insurance Program (NFIP). The FIRMs identify the locations of special flood hazard areas, including the 100-year floodplains.

FEMA allows non-residential development in the floodplain; however, construction activities are restricted within flood hazard areas, depending upon the potential for flooding within each area. Federal regulations governing development in a floodplain are set forth in Title 44, Part 60 of the Code of Federal Regulations (CFR). The CFR standards are implemented at the State level through construction codes and local ordinances; however, these regulations only apply to residential and non-residential structure improvements. Although roadway construction or modification is not explicitly addressed in the FEMA regulations, the California Department of Transportation (Caltrans) has also adopted criteria and standards for roadway drainage systems and projects situated within designated floodplains. Standards that apply to floodplain issues are based on federal regulations (Title 23, Part 650 of the CFR). At the State level, roadway design must comply with drainage standards included in Chapters 800-890 of the Caltrans Highway Design Manual. CFR Section 60.3(c)(10) restricts cumulative development from increasing the water surface elevation of the base flood by more than one foot within the floodplain.

Federal Clean Water Act

The NPDES permit system was established in the federal Clean Water Act (CWA) to regulate municipal and industrial discharges to surface waters of the U.S. Each NPDES permit contains

limits on allowable concentrations and mass emissions of pollutants contained in the discharge. Sections 401 and 402 of the CWA contain general requirements regarding NPDES permits. Section 307 of the CWA describes the factors that EPA must consider in setting effluent limits for priority pollutants.

Nonpoint sources are diffuse and originate over a wide area rather than from a definable point. Nonpoint pollution often enters receiving water in the form of surface runoff, but is not conveyed by way of pipelines or discrete conveyances. As defined in the federal regulations, such nonpoint sources are generally exempt from federal NPDES permit program requirements. However, two types of nonpoint source discharges are controlled by the NPDES program – nonpoint source discharge caused by general construction activities, and the general quality of stormwater in municipal stormwater systems. The 1987 amendments to the CWA directed the federal Environmental Protection Agency (EPA) to implement the stormwater program in two phases. Phase I addressed discharges from large (population 250,000 or above) and medium (population 100,000 to 250,000) municipalities and certain industrial activities. Phase II addresses all other discharges defined by EPA that are not included in Phase I.

Section 402 of the CWA mandates that certain types of construction activities comply with the requirements of the NPDES stormwater program. The Phase II Rule, issued in 1999, requires that construction activities that disturb land equal to or greater than one acre require permitting under the NPDES program. In California, permitting occurs under the General Permit for Stormwater Discharges Associated with Construction Activity, issued to the State Water Resources Control Board (SWRCB), implemented and enforced by the nine Regional Water Quality Control Boards (RWQCBs).

As of July 1, 2010, all dischargers with projects that include clearing, grading or stockpiling activities expected to disturb one or more acres of soil are required to obtain compliance under the NPDES Construction General Permit Order 2009-0009-DWQ. The General Permit requires all dischargers, where construction activity disturbs one or more acres, to take the following measures:

1. Develop and implement a stormwater pollution prevention program (SWPPP) to include a site map(s) of existing and proposed building and roadway footprints, drainage patterns and stormwater collection and discharge points, and pre- and post- project topography;
2. Describe types and placement of best management practices (BMPs) in the SWPPP that will be used to protect stormwater quality;
3. Provide a visual and chemical (if non-visible pollutants are expected) monitoring program for implementation upon BMP failure; and
4. Provide a sediment monitoring plan if the area discharges directly to a water body listed on the 303(d) list for sediment.

To obtain coverage, a SWPPP must be submitted to the RWQCB electronically and a copy of the SWPPP must be submitted to the City of Oakley. When project construction is completed, the landowner must file a Notice of Termination (NOT).

Construction Site Runoff Management

In accordance with NPDES regulations, in order to minimize the potential effects of construction runoff on receiving water quality, the State requires that any construction activity affecting one acre or more must obtain a General Construction Activity Stormwater Permit. Permit applicants

are required to prepare a SWPPP and implement BMPs to reduce construction effects on receiving water quality by implementing erosion and sediment control measures.

State Regulations

The following section includes the State regulations relevant to the CEQA review process pertaining to the hydrology and water quality aspects of the proposed project.

State Water Resources Control Board

The SWRCB and the RWQCBs are responsible for ensuring implementation and compliance with the provisions of the federal CWA and California's Porter-Cologne Water Quality Control Act. Contra Costa County includes areas within the Central Valley Regional Water Quality Control Board (CVRWQCB) (Region 5S) and the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) (Region 2) jurisdictional boundaries. The project site is situated within the jurisdictional boundaries of the CVRWQCB. The CVRWQCB has the authority to implement water quality protection standards through the issuance of permits for discharges to waters at locations within their jurisdiction.

The County Watershed Program is responsible for ensuring that the County complies with NPDES permits, which include the Municipal Regional Permit (MRP) (NPDES Permit No. CAS612008) and the East Contra Costa County Municipal Stormwater Permit (EC3MSP) (NPDES Permit No. CAS083313). The MRP was adopted by the SFBRWQCB on October 14, 2009, and applies to 76 Bay Area municipalities and discharges to the San Francisco Bay. The EC3MSP was adopted by the CVRWQCB on September 23, 2010, and applies to the cities of Antioch, Oakley, Brentwood, unincorporated Contra Costa County and the CFCWCD and discharges to the Delta. The EC3MSP largely mimics the MRP.

The MRP and EC3MSP contain a comprehensive plan to reduce the discharge of pollutants in stormwater to the maximum extent practicable in order to protect water quality. To accomplish such, a number of provisions are included in the permits, such as Provision C.3, New Development and Redevelopment. Provision C.3 requires new development and redevelopment projects that create and/or replace 10,000 square feet (sf) or more of impervious surface over the whole site to include appropriate source control, site design, and stormwater treatment measures to address stormwater runoff pollutant discharges and prevent increases in runoff flows primarily through the implementation of low impact development (LID) techniques. To aid in the design of appropriate stormwater system design consistent with the Provision C.3 requirements, the *Stormwater C.3 Guidebook* was developed.[4]

Local Regulations

The following section includes the local regulations relevant to the CEQA review process pertaining to the hydrology and water quality aspects of the proposed project.

Contra Costa Clean Water Program

All incorporated cities and the CFCWCD joined together to form the Contra Costa Clean Water Program. The Contra Costa Clean Water Program obtained a Joint Municipal NPDES Permit from the San Francisco Bay and Central Valley RWQCBs in September 1993 and January 1994, respectively. The permits, reissued every five years, contain a comprehensive plan to reduce the

[4] Contra Costa Clean Water Program and Dan Cloak Environmental Consulting. *Stormwater C.3 Guidebook, Stormwater Quality Requirements for Development Applications, 6th Edition*. February 15, 2012.

discharge of pollutants to the "maximum extent practicable". Some of the methods used to control discharges include: infiltration devices (A means for the water to enter the soil as with infiltration trenches, dry wells, and catch basins), sand filters, oil and grease traps, constructed wetlands, and wet ponds.

As discussed above, the proposed project is a C.3 regulated project and future development is required to include appropriate site design measures, source controls, and hydraulically-sized stormwater treatment and flow control measures. The goal of Provision C.3 is for the NPDES Permittees to use their planning authorities to include appropriate source control, site design, and stormwater treatment measures in new development and redevelopment projects to address both soluble and insoluble stormwater runoff pollutant discharges and prevent increases in runoff flows from new development and redevelopment projects. The goal is to be accomplished primarily through the implementation of low impact development (LID) techniques.

CFCWCD

The CFCWCD provides a variety of services related to flood protection within Contra Costa County. Such services include flood control planning and maintenance, development review and infrastructure financing fees, development of flood control standards, data collection and hydraulic modeling, and technical review of developments and environmental documents. The CFCWCD is separated into formed drainage areas, and new developments within drainage areas are assessed drainage fees. The proposed project is located in Drainage Area 29, and is subject to the relevant CFCWCD fees for that drainage area.

City of Oakley General Plan

The following objectives and policies of the Oakley General Plan are applicable to the hydrology and water quality aspects of the proposed project.

Goal 4.8 Assure the provision of potable water availability in quantifies sufficient to serve existing and future residents.

- Policy 4.8.1 Coordinate future development with all water agencies to ensure facilities are available for proper water supply.
- Policy 4.8.3 Encourage the preservation of water resource throughout the City.
- Policy 4.8.5 Ensure that water service systems be required to meet regulatory standards for water delivery, water storage, and emergency water supplies.
- Policy 4.8.10 Identify and develop opportunities, in cooperation with water service agencies, for use of non-potable water, including ground water, reclaimed water, and untreated surface water, for other than domestic use.
- Policy 4.8.11 Identify, monitor, and regulate land uses and activities that could result in contamination of groundwater supplies to minimize the risk of such contamination

Goal 4.10 Protect persons and property from the damaging impacts of flooding.

- Policy 4.10.1 Work cooperatively with Contra Costa County Flood Control and Water Conservation District (CFCWCD) to ensure and enhance flood protection in the City of Oakley.

Policy 4.10.2 Pursue and achieve compliance with all regional, State, and Federal regulations related to flood control, drainage, and water quality.

Policy 4.10.3 Recognize the unique flooding constraints of the areas north and east of the Contra Costa Canal.

Policy 4.10.4 Pursue responsible and adequate financing for implementation of the Drainage Plan.

Policy 4.10.5 Improve and expand the functionality of Marsh Creek as a major drainage corridor.

Policy 4.10.6 Develop new drainage facilities and/or improvements to existing facilities to provide additional recreational or environmental benefit, where possible.

Policy 4.10.9 Detention basin design shall ensure that water entering the basin outflows completely within a specified time, thus minimizing standing water or long-term saturation within the basin.

Goal 8.2 Protect public safety and minimize the risk to life and property from flooding.

Policy 8.2.3 Buildings in urban development near the shoreline of the Delta and in flood-prone areas shall be protected from flood dangers, including consideration of rising sea levels.

Policy 8.2.4 Habitable areas of structures near the shoreline of the Delta and in flood-prone areas shall be sited above the highest water level expected during the life of the project, or shall be protected for the expected life of the project by levees of an adequate design.

City of Oakley Municipal Code

The following sections of the Oakley Municipal Code are applicable to the hydrology and water quality aspects of the proposed project.

Section 6.11: Stormwater Management and Discharge Control

Because construction activity during land development has the potential to result in pollution of nearby waterways, Section 6.11 requires the implementation of stormwater pollution control measures during all construction phases.

Section 4.27: Waterways and Water Supply

Because the project site is located near a major waterway within the City, the proposed project would be required to adhere to all rules and regulations set forth in the Section controlling water quality and supply.

4.3.4 IMPACTS AND MITIGATION MEASURES

The following section describes the standards of significance and methodology utilized to analyze and determine the proposed project's potential impacts related to hydrology and water quality. A discussion of the project's impacts, as well as mitigation measures where necessary, is also presented.

Standards of Significance

Consistent with Appendix G of the CEQA Guidelines and the City's General Plan, a significant impact would occur if the proposed project would result in any of the following:

- Violate any water quality standards or waste discharge requirements, or otherwise substantially degrade water quality;
- Substantially deplete groundwater supplies or interfere substantially with groundwater recharge;
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
    - Result in substantial erosion or siltation on- or off-site;
    - Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
    - Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or;
    - Impede or redirect flood flows;
- In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation;
- Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

The proposed project's impacts associated with water supply and capacity are further addressed in Chapter 4.5 of this EIR, Utilities and Service Systems.

Method of Analysis

Site conditions and impacts analysis for this chapter are based primarily on the Preliminary Stormwater Control Plan prepared for the proposed project by CBG Civil Engineers. The Preliminary Stormwater Control Plan was prepared in compliance with the *Stormwater C.3 Guidebook* and includes sizing calculations for the proposed on-site integrated management practices (IMPs). In accordance with the *Stormwater C.3 Guidebook*, the Preliminary Stormwater Control Plan demonstrates the project's compliance with applicable requirements of Provision C.3 to minimize imperviousness, retain or detain stormwater, slow runoff rates, incorporate required source controls, treat stormwater prior to discharge from the site, control runoff rates and durations, and provide for operation and maintenance of treatment and flow-control facilities. The Preliminary Stormwater Control Plan includes analysis of the proposed on-site stormwater management system's adequacy for water quality treatment, flowrate, and treatment sizing.

Project Impacts and Mitigation Measures

The following discussion of impacts is based on the implementation of the proposed project in comparison with the standards of significance identified above.

4.3-1 Violate any federal, State, or County potable water quality standards, create or contribute runoff water which would include substantial additional sources of polluted water, or otherwise substantially degrade surface or ground water quality during construction. Based on the analysis below and with implementation of mitigation, the impact is *less than significant*.

Construction of the proposed project would include demolition of two existing buildings, construction of five new buildings, grading of approximately 166.42 acres, excavation for utilities, and other construction-related activities that could cause soil erosion at an accelerated rate during storm events. All such activities have the potential to affect water quality and contribute to localized violations of water quality standards if stormwater runoff from construction activities enters receiving waters.

Construction activities such as grading, excavation, and trenching for on- and off-site improvements would result in the disturbance of soils. The exposed soils have the potential to affect water quality in two ways: 1) suspended soil particles and sediments transported through runoff; or 2) sediments transported as dust that eventually reach local water bodies. Spills or leaks from heavy equipment and machinery, staging areas, or building sites also have the potential to enter runoff. Typical pollutants include, but are not limited to, petroleum and heavy metals from equipment and products such as paints, solvents, and cleaning agents, which could contain hazardous constituents. Sediment from erosion of graded or excavated surface materials, leaks or spills from equipment, or inadvertent releases of building products could result in water quality degradation if runoff containing the sediment or contaminants should enter receiving waters in sufficient quantities. Impacts from construction-related activities would generally be short-term and of limited duration.

Section 6.11 of the City's Municipal Code, Storm Water Management and Discharge Control requires projects that create or replace one acre or more of impervious surfaces, such as the proposed project, to comply with the City's NPDES permit. Consequently, the applicant would be required by the State to obtain a General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit), which pertains to pollution from grading and project construction. Compliance with the Permit requires the project applicant to file a Notice of Intent (NOI) with the SWRCB and prepare a SWPPP prior to construction. The SWPPP would incorporate BMPs in order to prevent, or reduce to the greatest feasible extent, adverse impacts to water quality from erosion and sedimentation.

Consistent with State guidelines and Section 6.11 of the Municipal Code, the proposed project would be required to implement BMPs, including erosion and sediment control BMPs and non-stormwater management and materials management BMPs. Erosion controls include practices to stabilize soil, to protect the soil in its existing location, and to prevent soil particles from migrating. Examples of erosion control BMPs include preserving existing vegetation, mulching, and hydroseeding. Sediment controls include practices to collect soil particles after they have migrated, but before the sediment leaves the site. Examples of sediment control BMPs include street sweeping, fiber rolls, silt fencing, gravel bags, sand bags, storm drain inlet protection, sediment

traps, and detention basins. Wind erosion controls prevent soil particles from leaving the site in the air. Examples of wind erosion control BMPs include applying water or other dust suppressants to exposed soils on the site. Tracking controls prevent sediment from being tracked off-site via vehicles leaving the site to the extent practicable. Tracking controls could include a stabilized construction entrance, which would not only limit the access points to the construction site, but also function to partially remove sediment from vehicles prior to leaving the site.

Non-stormwater management and material management controls reduce non-sediment-related pollutants from potentially leaving the construction site to the extent practicable. The Construction General Permit prohibits the discharge of materials other than stormwater and authorized non-stormwater discharges (such as irrigation and pipe flushing and testing). Non-stormwater BMPs tend to be management practices with the purpose of preventing stormwater from coming into contact with potential pollutants. Examples of non-stormwater BMPs include preventing illicit discharges, and implementing good practices for vehicle and equipment maintenance, cleaning, and fueling operations, such as using drip pans under vehicles. Waste and materials management BMPs include implementing practices and procedures to prevent pollution from materials used on construction sites. Examples of materials management BMPs include the following:

- Good housekeeping activities such as storing of materials covered and elevated off the ground, in a central location;
- Securely locating portable toilets away from the storm drainage system and performing routine maintenance;
- Providing a central location for concrete washout and performing routine maintenance;
- Providing several dumpsters and trash cans throughout the construction site for litter/floatable management; and
- Covering and/or containing stockpiled materials and overall good housekeeping on the site.
-

While the final materials management BMPs to be used during construction of the proposed project are currently unknown, the project would likely include a combination of the BMP examples listed above. Final BMPs for the proposed project construction would be chosen in consultation with the applicable California Stormwater Quality Association Stormwater BMP Handbooks and implemented by the project contractor. Prior to development, the proposed project would be required to create a SWPPP to mitigate any potential runoff from the project site. However, should the SWPPP not be reviewed and approved, the proposed project could violate water quality standards and/or waste discharge requirements, and a ***significant*** impact could occur related to violation of any federal, State, or County potable water quality standards, create or contribute runoff, or otherwise substantially degrade surface or ground water quality during construction.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the impact to *less-than-significant.*

4.3-1 Prior to any grading activities, the applicant shall provide a Stormwater Pollution Prevention Plan (SWPPP) for the entire project site which shall include construction and post construction BMPs (including both physical and programs BMPs) to the satisfaction of the City Engineer. The SWPPP shall include the following:

- *Utilize on-site sediment control BMPs to retain sediment on the project site, such as: straw wattle; silt fences, storm drain inlet protection, erosion control blankets, and concrete washouts;*
- *Stabilized construction entrances and/or Wheel washing racks;*
- *Cover soil, equipment and supplies that could contribute pollution prior to rainfall events or monitoring runoff;*
- *Perform monitoring of discharges to the stormwater system; and*
- *Provide permanent cover to stabilize the disturbed surfaces after construction has been completed, as the project is a phased development.*

4.3-2 Violate any federal, State, or County potable water quality standards, create or contribute runoff water which would include substantial additional sources of polluted water, or otherwise substantially degrade surface or ground water quality during operations. Based on the analysis below, the impact is *less than significant*.

The proposed project would include demolition of the two existing structures on the project site and construction of five new buildings and associated improvements. As such, the project site would be covered in mostly impervious surfaces. During operations, the proposed project would generate multiple vehicle and truck trips to and from the project site. Vehicles and other urban activities release contaminants onto the impervious surfaces. Anticipated runoff contaminants associated with the proposed project include sediments, pesticides, oil and grease, nutrients, metals, bacteria, and trash.

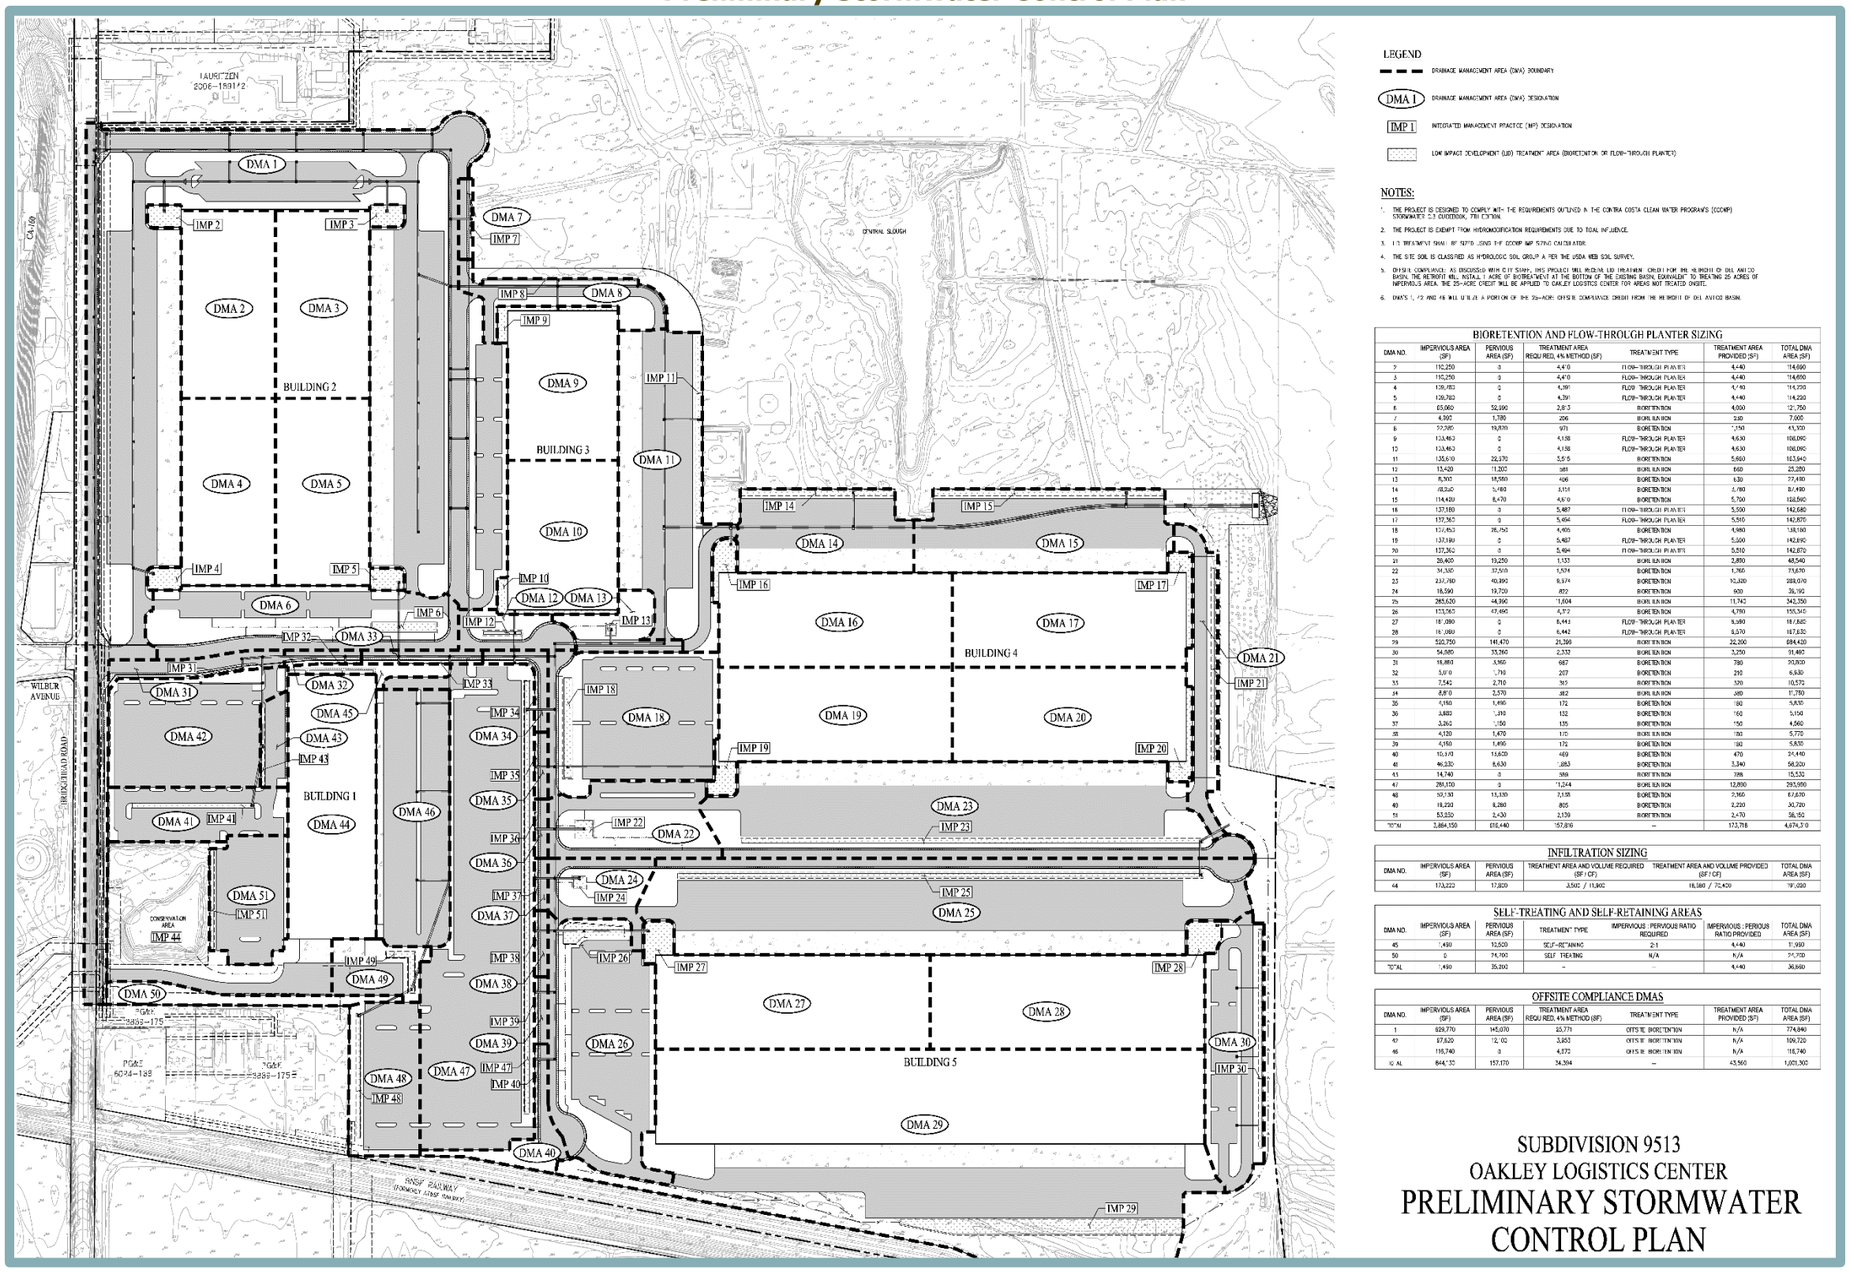
Source Control Measures

As discussed above, on-site activities that could potentially produce stormwater pollutants include pest control, landscape maintenance, vehicle traffic and associated leaks and spills, and pollution associated with warehouse materials. However, the Preliminary Stormwater Control Plan has identified permanent and operational source control BMPs which would be applied with development of the proposed project.

Among the potential BMPs would be inspection of storm drain markers, minimal use of pesticides and fertilizers, adequate number of receptacles to prevent inappropriate manners of refuse storage, well-maintained containers, and employee training on attention to spills and leaks of pollutants.

Proposed Storm Drain System

As discussed above, because the proposed project would create more than 10,000 sf of new impervious surfaces, the project would be required to comply with the Provision C.3 requirements, including preparation of a site-specific Stormwater Control Plan (see Figure 4.3-2). The Stormwater Control Plan must show that the proposed project would not result in any new or increased impacts that would impair the beneficial uses of downstream waters.



According to the Preliminary Stormwater Control Plan prepared for the proposed project, the project site would be divided into 51 drainage management areas (DMAs). Of the total DMAs, 33 would be designed to include bioretention facilities and 12 would be designed to include flow-through planters. All integrated management practice (IMP) treatment areas would be sized using the County IMP sizing calculator. Additionally, DMA 44 would be an infiltration basin in an existing pond. The existing pond qualifies as an IMP based on the following characteristics: the depth to groundwater is greater than 10 feet, the underlying soil is Hydrologic Soil Group A, and the infiltration rate sufficiently achieves a 72-hour drawdown time. DMAs 45 and 50 would be designed as self-treating and self-retaining areas. According to the C.3 requirements, runoff from the self-treating area must not enter an IMP or other DMA, nor should the total impervious surfaces exceed five percent of the self-treating area. Based on the SWCP, the total impervious area in the self-treatment DMAs would not exceed four percent of the total pervious area, and thus, would be in compliance with C.3 requirements. The final three DMAs would direct stormwater to an offsite basin discussed below.

The on-site DMA sizes would range from 4,560 sf to 684,420 sf. The bioretention facilities would be designed to meet C.3 requirements and would generally be 12 inches deep with a minimum of 18 inches of biosoil mix over 12 inches of Class 2 permeable drain rock. The flow-through planters would also meet C.3 requirements and would be developed with class 2 drain rock underlain by an impermeable liner.

Treated water from the IMPs would then flow to a drainage outfall to be constructed on the berm to the east of the project site and would drain directly to the tidally influenced wetland abutting the site. The low-impact outfall will include a terminal riser structure, with pipes coming into an outlet box from which runoff will overflow into the larger concrete containment structure.

Runoff would drain from the containment structure over a low concrete weir with a preliminary design crest length of 60 feet and rest elevation at 6.5 feet. The weir would help to prevent inflow of Delta waters into the project drainage system during high tide. A small length of rock slope protection would be included in the downslope of the weir to provide additional protection against scour and thereby minimize additional turbidity inputs that may have resulted from erosion.

Figure 4.3-2
Preliminary Stormwater Control Plan

Due to site physical constraints, on-site stormwater treatment cannot be provided for 100 percent of the impervious drainage areas within the project site. Rather, on-site treatment can only be provided for approximately 83 percent of the impervious drainage areas within the project site. Provision C.3.e.i.1 of the Municipal Regional Storm Water Permit-Order No. R2-2015-0049 allowed LID treatment at an off-site location. Thus, off-site stormwater treatment will be located at the existing 2.9-acre Del Antico Detention Basin. The proposed off-site stormwater treatment improvements would provide regional benefits of an equivalent quantity of both stormwater runoff and pollutant loading and achieve a net environmental benefit for the City.

The proposed improvements would include excavation of approximately one-acre of the basin and installation of an 18-inch layer of engineered biosoil over a 12-inch layer of baserock within the excavated area. The added biosoil and baserock would effectively convert the bottom of the basin into a bioretention area. Spoils generated from excavating the basin bottom would be spread on the side banks; thus, soil export would not be required. The basin would not include an underdrain because the existing outlet structure cannot be adjusted, nor can the storage capacity of the basin be reduced.

Conclusion

Based on the Preliminary Stormwater Control Plan, each treatment area would meet Provision C.3 requirements through adequate sizing and treatment measures and all potential sources of pollution would be prevented or minimized through implementation of BMPs, including on-site IMPs and the off-site Del Antico Basin. Therefore, the proposed project would not violate any federal, State, or local water quality standards, create or contribute runoff which would include sources of polluted water, or otherwise substantially degrade surface or groundwater quality during operations, and with implementation of standard permit conditions, the project would not result in significant hydrology and water quality impacts, so a ***less-than-significant*** impact would occur.

Mitigation Measure(s)

None required.

4.3-3 Substantially deplete groundwater supplies or interfere substantially with groundwater recharge. Based on the analysis below, the impact is *less than significant*.

A discussion of water supply is provided in Chapter 4.5, Utilities and Service Systems, of this EIR. As noted therein, water is provided to the project site by the DWD. According to the DWD Final 2015 Urban Water Management Plan (UWMP), water demand and connection projections for DWD are based on buildout land uses in current adopted general plans. Over the period from 2015 to 2040, DWD's demand is estimated to increase from 1,492 million gallons (MG) per year to 5,349 MG per year. DWD estimates that residential water usage comprises about 82 percent of the total use and non-residential usage comprises about 18 percent. DWD has developed a groundwater supply system that provides additional supply reliability. When fully implemented, groundwater may comprise up to 20 percent of DWD's total supply. As indicated in the Urban Water Management Plan, DWD has adequate supply sources

to meet future needs under normal year, single year and multi-year drought conditions.[5]

Although the project includes a General Plan Amendment to remove the Business Park and Utility Energy land use designations, the General Plan has anticipated development of the former DuPont property and envisions the area as a primary employment center. Thus, water use associated with the entire site would be similar to what has already been anticipated by the General Plan and UWMP. Additionally, the site has been developed and lain with impervious surfaces for several years. Thus, the site has not been a source of considerable groundwater recharge, and development of the proposed project would not alter the current groundwater recharge capabilities.

Therefore, the proposed project would result in a ***less-than-significant*** impact related to substantially depleting groundwater supplies or interference with groundwater recharge.

Mitigation Measure(s)

None required.

4.3-4 Substantially alter the existing drainage pattern of the site or area, or increase the rate or amount of surface runoff. Based on the analysis below and with implementation of mitigation, the impact is *less than significant*.

Currently, the project site is covered in mostly impervious surfaces. However, development of the proposed project would result in new impervious surfaces, and thus, an incremental reduction in the amount of natural soil surfaces available for runoff and infiltration. The reduction in infiltration area for stormwater would alter the existing drainage pattern of the site, and result in an increase in the amount of runoff from the site during storm events.

In recognition of the potential alteration to site drainage patterns, the General Plan includes multiple policies regarding drainage during future development of the project site. Policy 4.10.2 requires projects achieve compliance with all regional, State, and Federal regulations related to flood control, drainage, and water quality. Thus, adherence to the C.3 requirements would ensure that the proposed project would be in compliance with both the City's General Plan and State standards. Per Policy 4.10.9, detention basins would be designed to ensure that water entering the basin flows out completely within a specified time.

Most water that falls on the project site flows to three depressed areas that store and infiltrate stormwater flows at the northern and southern boundaries of the site. Central Slough currently collects overland flows and conveys them to the Delta through a culvert. All other stormwater flows from the site either infiltrate into opens spaces or sheet drain to the Delta. As such, the addition of bioretention basins would improve

[5] Diablo Water District. *Diablo Water District Final 2015 Urban Water Management Plan.* June 2016.

the current method of runoff by filtering, mediating, and monitoring quality and flow rate of runoff from the project site.

Furthermore, the proposed project would adhere to all C.3 regulations which require that the drainage system of the site would be designed such that the peak storm drainage flow leaving the site after development does not exceed the existing undeveloped storm drainage flow.

Peak Flow

C.3 Guidelines require that post-development runoff flows from the site do not increase as compared to pre-development flows. To ensure that runoff flows do not increase, future development within the site would be required to include source control, site design, and stormwater treatment measures to control post-development runoff.

While the proposed project is not subject to peak flow control because the receiving body of water would not be negatively affected by an increase in flows, the proposed stormwater outfall has the potential to be negatively impacted by high tides during Delta flood events. Thus, the Preliminary Stormwater Control Plan conducted an assessment of the anticipated flow rates in relation to the tidal elevations to model the peak flows against the tidal cycle. Input parameters for the model were compiled from site topography, preliminary project plans, soils survey information, and additional recommendations from the City. The peak flow output results are shown in Table 4.3-1 below.

Table 4.3-1
Hydrologic Modeling System Output Summary

Storm Event	DMA	Peak Discharge (cfs)	Inflow Volume (ac-ft)	Peak Tailwater (ft, NAVD)
10-year, 3-hour	A	65.6	4.8	-
	B	42.8	2.8	-
	Total	**106.9**	**7.6**	**7.2**
10-year, 24-hour	A	68.3	10.5	-
	B	43.8	6.5	-
	Total	**101.1**	**17.0**	**7.2**
100-year, 24-hour	A	103.3	18.9	-
	B	65.9	11.3	-
	Total	**152.9**	**30.3**	**7.4**

Source: Balance Hyrdologics, 2019.

The outfall structure would be designed to discharge flows into the southern portion of the adjacent wetlands. All runoff would have previously been treated to standards set forth in the Municipal Regional Stormwater Permit. The low-impact outfall structure would include a terminal riser structure, with dual 36-inch pipes coming into an outlet box from which runoff would overflow into a larger concrete containment structure. Runoff would leave the containment structure over a low concrete weir with a preliminary design crest length of 60 feet. The preliminary design sets the weir crest elevation at 6.5 feet, compared to the mean higher high-water levels of 5.95 feet. Use of the weir structure would prevent inflow of Delta waters into the project storm drain system during normal high tides, while assuring that outflow would be spread out so that water flows into the adjacent wetland at low depths and non-erosive velocities. An

additional feature in the low-impact outfall would be a small dewatering pump which would be located in the riser structure and would serve to fully dewater the pipe system between storm events. Because runoff exiting the storm drain system would need to flow over the outfall weir, the water surface elevation in the containment structure upstream of the weir would be the effective tailwater elevation for the overall storm drain system.

Based on calculations in the Preliminary Stormwater Control Plan, the currently proposed outfall structure would be designed to be an adequate elevation to prevent inflow from the Delta. While the development of the proposed project would alter the drainage pattern of the site, the project would not experience inflow from the Delta and would be consistent with C.3 Guidelines. However, because the Preliminary Stormwater Control Plan does not include pre-project compared to post-project flows, the proposed project could conflict with C.3 requirements if the calculations are not included in the Final Stormwater Control Plan. Thus, a ***significant*** impact could occur related to substantially altering the existing drainage pattern of the site or area, or increase the rate or amount of surface runoff.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

4.3-4 *As part of the Improvement Plan submittal process, the preliminary Stormwater Control Plan provided during environmental review shall be submitted in final format for the review and approval of the City Engineer or Public Works and Engineering Department. The final Stormwater Control Plan will be reviewed in concert with the Improvement Plans to confirm conformity between the two. The report shall be prepared by a Registered Civil Engineer and shall, at a minimum, include: A written text addressing existing conditions, the effects of the proposed improvements, all appropriate calculations, watershed maps, changes in flows and patterns, and proposed on- and off-site improvements to accommodate flows from this project. The report shall identify water quality protection features and methods to be used during construction, as well as long-term post-construction water quality measures. The final Stormwater Control Plan shall be prepared in conformance with the requirements of the C.3 Guidebook that are in effect at the time of Improvement Plan submittal.*

4.3-5 Substantially alter the existing drainage pattern of the site or area in such a manner as to impede or redirect flood flows. Based on the analysis below and with implementation of mitigation, the impact is *less than significant.*

As discussed above, the majority of the site is within Zone X, which is outside of a 100-year flood hazard area. However, portions of the site are within Zone AE, which is an area subject to inundation by the one-percent-annual-chance flood event. The area designated as Zone AE is limited to a small northwest portion of the site. A portion of Building 2 is proposed to be constructed in Zone AE. As such, placement of the structure could redirect or impede flood flows. However, the project applicant would

be required to demonstrate appropriate solutions and adequate protection in order to be approved for development within the 100-year floodplain. Additionally, a Conditional Letter of Map Revision must be submitted to FEMA prior to initiation of construction.

Development of the proposed project would include water detention facilities which would regulate and improve the current water flow on the project site. The detention basin would include an outfall to the marsh area and would be equipped with a flap gate to prevent inflows from the Delta during high tide events, thus reducing risk of flooding on the project site.

All dams pose the potential risk of failure, most likely from seismically-induced ground shaking or another seismic event, which threatens the area below the dam with inundation of water spilling from the dam. As illustrated in Figure 8-6 of the General Plan, the project site is subject to potential dam inundation by the New Melones Lake, Folsom Lake, or San Luis Reservoir. While the likelihood of dam failure is low, the General Plan has set forth polices which would limit the risk of dam failure, including proper engineering and approval by the City to construct within the dam inundation zone. Thus, the risk of dam failure on the project site has been anticipated and evaluated by the General Plan.

While the proposed project would not likely be at risk of dam inundation and would include development of detention basins in order to improve the flow of water on the project site, the portion of Building 3 placed in the flood hazard zone could alter the existing drainage pattern of the site in such a manner as to impede or redirect flood flows and a ***significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

4.3-5 *As part of the Improvement Plan submittal process, the project applicant shall obtain a Conditional Letter of Map Revision Based on Fill from FEMA for the placement of a development within the FEMA-identified Flood Hazard Zone AE. A copy of the Conditional Letter of Map Revision Based on Fill from FEMA shall be submitted to the Public Works and Engineering Department prior to issuance of certificates of occupancy.*

4.3-6 In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation. Based on the analysis below, the impact is *less than significant.*

As noted previously, the northwesternmost portion of the project site is located in a FEMA-identified flood hazard zone. A portion of Building 3 is proposed to be developed within the flood hazard zone. However, as discussed above, the proposed project would adhere to the applicable General Plan policies related to flood hazards, receive approval from the City, and submit a Conditional Letter of Map Revision from FEMA in order to develop within the flood hazard zone.

Tsunamis are defined as sea waves created by undersea fault movement, whereas a seiche is a long-wavelength, large-scale wave action set up in a closed body of water such as a lake or reservoir. The project site is located proximity 45 miles from the nearest coastline and would not be potentially affected by flooding risks associated with tsunamis. Seiches do not pose a risk to the proposed project, as the project site is not located adjacent to a large closed body of water.

Considering that the proposed project would undergo review and approval for development within the flood hazard zone and would not be at risk for inundation by tsunamis or seiches, the proposed project would not have the potential to risk release of pollutants due to inundation. Consequently, the proposed project would result in a ***less-than-significant*** impact related to the release of pollutants due to inundation.

Mitigation Measure(s)

None required.

Cumulative Impacts and Mitigation Measures

As defined in Section 15355 of the CEQA Guidelines, "cumulative impacts" refers to two or more individual effects which, when considered together, are considerable, compound, or increase other environmental impacts. The individual effects may be changes resulting from a single project or a number of separate projects. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects.

4.3-7 Cumulative impacts related to water quality. Based on the analysis below, the project's incremental contribution to this significant cumulative impact is *less than cumulatively considerable*.

Construction activities have the potential to affect water quality and contribute to localized violations of water quality standards if stormwater runoff from construction activities enters receiving waters. Additional runoff from construction sites could carry sediment from erosion of graded or excavated surface materials, leaks or spills from equipment, or inadvertent releases of building products, which could result in water quality degradation if runoff containing such sediment or contaminants should enter receiving waters in sufficient quantities. Thus, construction activities associated with the proposed project, in combination with construction activities associated with other reasonably foreseeable projects in the City, could result in cumulative impacts related to water quality.

Similar to the proposed project, cumulative development within the City of Oakley would be subject to Provision C.3 stormwater requirements, including source control and treatment control features, as well as the State General Construction Permit. Specifically, regulated projects are required to divide the project area into DMAs and implement and direct water to appropriately-sized SDMs and Baseline Hydromodification Measures to each DMA. Source control measures must be designed for pollutant-generating activities or sources consistent with recommendations from the CASQA Stormwater BMP Handbook for New Development

and Redevelopment, or equivalent manual, and must be shown on Improvement Plans.

Based on the conceptual stormwater design, the proposed project would properly treat stormwater runoff prior to discharge from the site. Thus, urban pollutants entering and potentially polluting the local drainage system would not be expected to occur as a result of the project. A final drainage report would be required with submittal of the Improvement Plans for City review and approval to substantiate the preliminary report's LID and non-LID sizing calculations. The project would be subject to NPDES Construction General Permit requirements, including implementation of BMPs and preparation of a site-specific SWPPP. Therefore, the project's incremental contribution to the significant cumulative impact would be ***less than cumulatively considerable***.

Mitigation Measure(s)

None required.

4.4 Transportation and Circulation

4.4. TRANSPORTATION AND CIRCULATION

4.4.1 INTRODUCTION

The Transportation and Circulation section of the EIR analyzes the potential impacts of the proposed project on the surrounding transportation system, including roadways, bicycle, pedestrian, and transit facilities and services under Existing, Existing Plus Project, Baseline (No Project), Baseline Plus Project, Cumulative, and Cumulative Plus Project conditions. The information contained within this section of the EIR is primarily based on the Transportation Impact Analysis prepared for the proposed project by Abrams Associates Traffic Engineers, Inc. (see Appendix G).[1] Information from the City of Oakley General Plan[2] and the General Plan EIR[3] is also referenced and the City of Oakley Updated Traffic Impact Fee Report.

4.4.2 EXISTING ENVIRONMENTAL SETTING

The sections below describe the physical and operational characteristics of the existing transportation system within the project vicinity, including the surrounding roadway network and existing transit, bicycle, and pedestrian facilities.

Existing Roadway Network

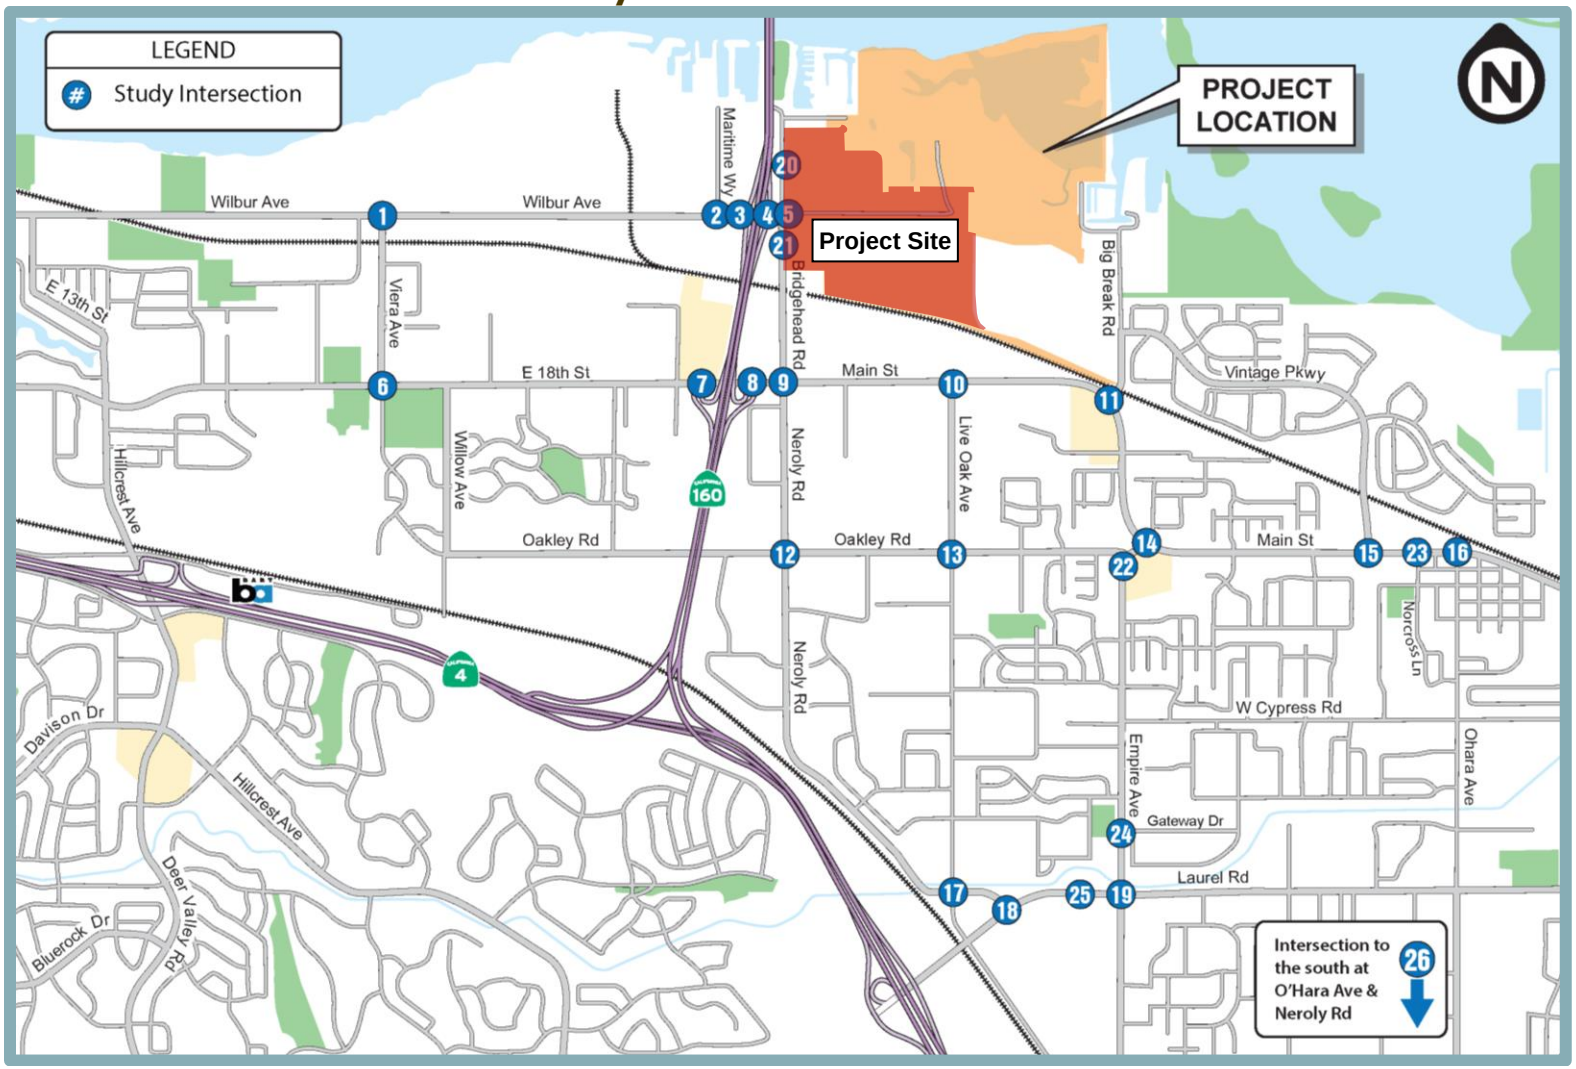


Figure 4.4-1 provides an overview of the roadway network in the project area. Specific roadway facilities are described below, including roadway facilities identified as Routes of Regional Significance in the Contra Costa Transportation Authority (CCTA) East County Action Plan:

- SR 4: State Route (SR) 4 is the primary east-west corridor in Contra Costa County. The roadway connects Interstate 80 (I-80) in the City of Hercules, to the west, with the cities of Oakley and Brentwood, to the east, and terminates at SR 89 in South Lake Tahoe. SR 4 has been widened to eight lanes, four in each direction, including High Occupancy Vehicle (HOV) lanes, from SR 242 to Contra Loma Boulevard.
- SR 160: SR 160 connects SR 4 and Contra Costa County with the Sacramento River Delta and the City of Rio Vista. SR 160 continues to follow the Sacramento River up to the Freeport area of Sacramento County.
- Wilbur Avenue: Wilbur Avenue is an east-west roadway that is designated by the CCTA as a route of regional significance. The roadway extends west from Bridgehead Road to terminate at A Street in the City of Antioch. Within the study area, Wilbur Avenue has two to four travel lanes with left turn pockets.
- Main Street: Main Street is a primary east-west arterial in the City of Oakley. The roadway extends east from Bridgehead Road to through downtown and then continues south into Brentwood until Delta Road, where Main Street changes names to Brentwood Boulevard.

Figure 4.4-1
Study Intersection Locations

Source: Abrams Associates, 2019.

- E. 18th Street: E. 18th Street is an east-west two- to four-lane roadway in Antioch and that runs parallel to the SR 4 corridor. East of the Bridgehead Road the street name changes to Main Street. E. 18th Street is designated a Route of Regional Significance in the 2008 East County Action Plan.
- Laurel Road: Laurel Road is an east-west two-lane residential collector street with residential and vacant land on both sides. Please note that Laurel Road is eventually planned to be extended to Sellers Avenue.
- Oakley Road: Oakley Road is a two-lane east-west roadway that connects Oakley to Antioch. Oakley Road begins at Viera Avenue in Antioch, extending past SR 160 to terminate at Empire Avenue.

Study Intersections

The following study intersections were evaluated in the Transportation Impact Analysis:

1. Viera Avenue and Wilbur Avenue;
2. Maritime Way and Wilbur Avenue;
3. SR 160 SB Ramps and Wilbur Avenue;
4. SR 160 NB Ramps and Wilbur Avenue;
5. Bridgehead Road and Wilbur Avenue;
6. Viera Avenue and E. 18th Street;
7. SR 160 SB Ramps and E. 18th Street;
8. SR 160 NB Ramps and Main Street;
9. Neroly Road/Bridgehead Road and Main Street;
10. Live Oak Avenue and Main Street;
11. Big Break Road and Main Street;
12. Oakley Road and Neroly Road;
13. Oakley Road and Live Oak Avenue;
14. Empire Avenue and Main Street;
15. Vintage Parkway and Main Street;
16. O'Hara Avenue and Main Street;
17. Neroly Road and Live Oak Avenue;
18. Laurel Road and Live Oak Avenue;
19. Laurel Road and Empire Avenue;
20. Bridgehead Road and Northern Project Driveway;
21. Bridgehead Road and Southern Project Driveway;
22. Oakley Road and Empire Avenue;
23. Norcross Lane and Main Street;
24. Gateway Drive and Empire Avenue;
25. Approved Arco Driveway and Laurel Road; and
26. O'Hara Avenue and Neroly Road.

Intersections 20 and 21 would be constructed as part of the proposed project; thus intersection operations are not reported for existing conditions.

Common Traffic Analysis Terms

The Transportation Impact Analysis analyzes roadway operating conditions using intersection level of service (LOS) as a primary measure of operational performance. LOS is an expression, in the form of a scale, of the relationship between the capacity of an intersection (or roadway

segment) to accommodate the volume of traffic moving through the facility at any given time. The level of service scale describes traffic flow with six ratings ranging from A to F, with "A" indicating relatively free flow of traffic and "F" indicating stop-and-go traffic characterized by traffic jams. As the amount of traffic moving through a given intersection or roadway segment increases, the traffic flow conditions that motorists experience rapidly deteriorate as the capacity of the intersection or roadway segment is reached. Under such conditions, general instability in the traffic flow exists, which means that relatively small incidents (e.g., momentary engine stall) can cause considerable fluctuations in speeds and delays that lead to traffic congestion. This near-capacity situation is labeled LOS E. Beyond LOS E, the intersection or roadway segment capacity has been exceeded, and arriving traffic will exceed the ability of the intersection to accommodate such traffic.

For signalized intersections, the 2010 Highway Capacity Manual (HCM) methodology determines the capacity of each lane group approaching the intersection. The LOS is then based on average control delay (in seconds per vehicle) for the various movements within the intersection. Table 4.4-1 summarizes the relationship between LOS, average control delay, and the volume to capacity ratio (V/C) at signalized intersections.

Table 4.4-1
Signalized Intersection LOS Criteria

LOS	Description of Operations	Average Delay	V/C
A	Insignificant Delays: No approach phase is fully used and no vehicle waits longer than one red indication.	≤ 10	≤ 60
B	Minimal Delays: An occasional approach phase is fully used. Drivers begin to feel restricted.	> 10 to 20	> 0.61 to 0.70
C	Acceptable Delays: Major approach phase may become fully used. Most drivers feel somewhat restricted.	> 20 to 35	> 0.71 to 0.80
D	Tolerable Delays: Drivers may wait through no more than one red indication. Queues may develop but dissipate rapidly without excessive delays.	> 35 to 55	> 0.81 to 0.90
E	Significant Delays: Volumes approaching capacity. Vehicles may wait through several signal cycles and long vehicle queues from upstream.	> 55 to 80	> 0.91 to 1.00
F	Excessive Delays: Represents conditions at capacity, with extremely long delays. Queues may block upstream intersections.	> 80	> 1.00

Note: Average control delay is presented in seconds per vehicle.

Source: Abrams Associates, 2019.

For unsignalized (all-way stop controlled and two-way stop controlled) intersections, the average control delay and LOS operating conditions are calculated by approach (e.g., northbound) and movement (e.g., northbound left-turn) for such movements that are subject to delay. In general, the operating conditions for unsignalized intersections are presented for the worst approach. Table 4.4-2 summarizes the relationship between LOS and average control delay at unsignalized intersections.

Table 4.4-2
Unsignalized Intersection LOS Criteria

LOS	Description of Operations	Average Delay
A	No delay for stop-controlled approaches.	≤ 10
B	Operations with minor delays.	> 10 to 15
C	Operations with moderate delays.	> 15 to 25
D	Operations with some delays.	> 25 to 35
E	Operations with high delays and long queues.	> 35 to 50
F	Operation with extreme congestion, with very high delays and long queues unacceptable to most drivers.	> 50

Note: Average control delay is presented in seconds per vehicle.

Source: Abrams Associates, 2019.

Vehicle Miles Travelled (VMT) is an alternative to LOS for determination of transportation impacts. VMT is a metric of the total miles travel by vehicles in a defined area over a defined period of time and is often used to estimate the environmental impacts of driving. projects that effect VMT include projects that promote a mode shift from personal auto vehicle to transit, biking, walking, or vanpool, and projects that restrict urban sprawl and promote infill development.[4] The City of Oakley has not adopted a VMT analysis procedure at this time.

Central and East County Routes of Regional Significance

The CCTA and the Regional Transportation Planning Committees following the CCTA have set various standards on specific roadways, called Multi-Modal Transportation Service Objectives (MTSOs). The MTSOs are specific to each region and regulate Routes of Regional Significance, which are major roadway and freeway corridors that serve regional traffic. The Action Plans adopted by the CCTA under the countywide Measure J program identify a number of Routes of Regional Significance within the project area. SR 4, SR 160, Wilbur Avenue, E. 18th Street, and Main Street are all identified as Routes of Regional Significance in the East County Action Plan.

For freeway segments, the East County Action Plan for Routes of Regional Significance has established the delay index as the MTSO for SR 4 through the study area. The delay index is the ratio of travel time on a facility divided by the travel times that occur during non-congested free-flow periods. Should the delay index exceed 2.5 during either the AM or PM peak period, freeway operations would be considered deficient. A delay index of 2.5 would equate to peak hour travel taking 2.5 times as long as off-peak travel or an average travel speed below 26 miles per hour assuming a non-congested free-flow speed of 65 miles per hour.

Existing Traffic Conditions

In order to determine existing operations at study intersections, intersection turning movement counts were conducted by Abrams Associates during the morning and evening peak periods. The hours identified as the “peak” hours are generally between 7:30 AM and 8:30 AM and 4:30 PM and 5:30 PM for the transportation facilities described, based on the intersection turning movement counts collected by Abrams Associates.

[4] California Air Resources Board. *Methods to Assess Co-Benefits of California Climate Investments, Vehicle Miles Travelled.* August 30, 2017.

Study Intersection Operations – Existing Conditions

The existing intersection geometry at each of the project study intersections is shown in Figure 4.4-2 through Figure 4.4-4. Traffic counts at the study intersections were conducted in November of 2018 at times when local schools were in session. Table 4.4-3 summarizes the associated LOS computation results for the existing weekday AM and PM peak hour conditions. As shown in Table 4.4-3, all of the project study intersections currently have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours with the exception of Intersection #24 (Gateway Drive at Empire Avenue), which would exceed the LOS D threshold established in the City's General Plan (see "Significance Criteria" discussion below). The City is currently constructing the signal for this intersection through the City's Capital Improvement Program.

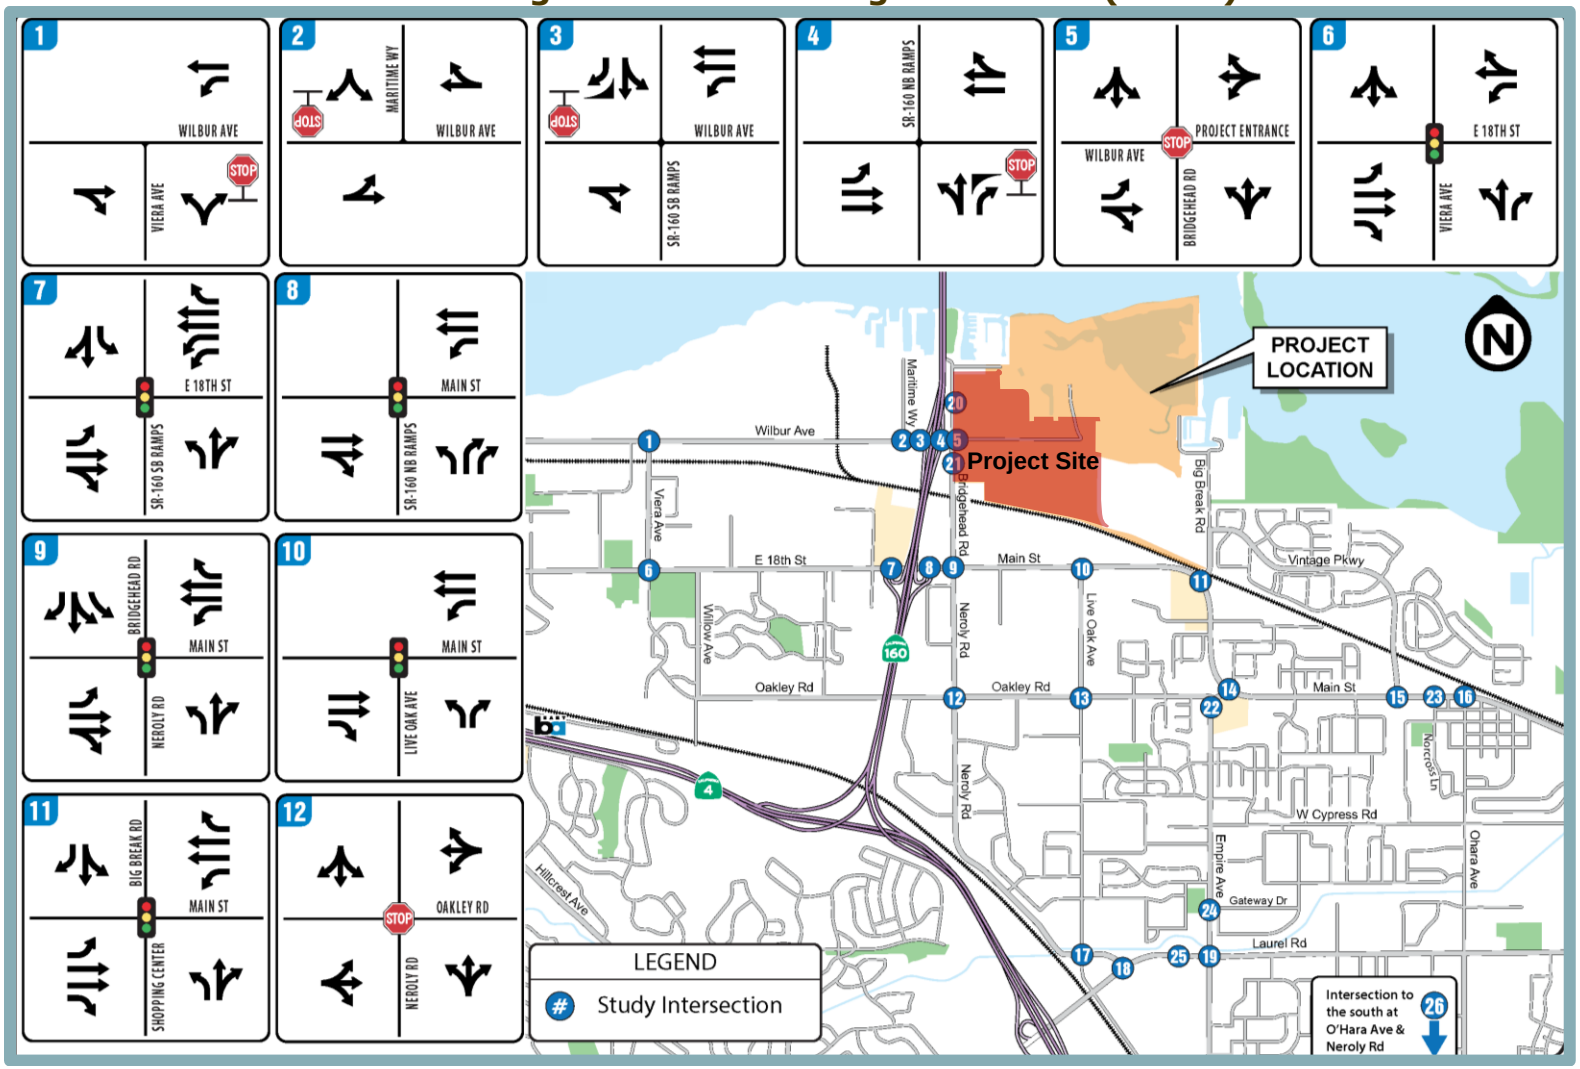
Pedestrian and Bicycle Facilities

Pedestrian and Bicycle facilities in the project study area are currently limited, with only small segments of discontinuous sidewalks provided in the immediate vicinity of the project. Marked crosswalks are not available in the immediate project vicinity. Figure 4.4-5 presents the existing and planned bicycle facilities in the project area.

Bicycle paths, lanes, and routes are typical examples of bicycle transportation facilities, which are defined by Caltrans as being in one of the three classes:

- Class I – Provides a completely separated facility designed for the exclusive use of bicyclists and pedestrians with crossing points minimized.
- Class II – Provides a restricted right-of-way designated lane for the exclusive or semi-exclusive use of bicycles with through travel by motor vehicles or pedestrians prohibited, but with vehicle parking and cross-flows by pedestrians and motorists permitted.
- Class III – Provides a route designated by signs or permanent markings and shared with pedestrians and motorists.

The CCTA's Countywide Bicycle and Pedestrian Plan includes a wide variety of goals and policies supportive of bicycle and pedestrian infrastructure planning and identifies future pedestrian and bicycle facilities throughout the County. The Countywide Bicycle and Pedestrian Plan identifies a future bicycle route extending east to west through the northern portion of the project site. [5]



Transit Systems

Figure 4.4-6 presents the transit service available in the project area. Two major public transit operators provide service within or adjacent to the study area: Bay Area Rapid Transit (BART) and the Eastern Contra Costa Transit Authority (Tri Delta Transit).

BART is a rapid mass transit system which provides regional transportation connections to much of the Bay Area. Service provided by BART runs from the North Bay Area in Richmond to the South Bay Area in Fremont. In the east-west direction, BART runs from Oakley to the San Francisco Airport and Milbrae with several connections in Oakland. The Bay Point BART station, which is closest to the project site, serves Oakley and other surrounding cities and has trains that run from 4:00 AM to 12:00 PM daily, with a weekday frequency of 15 minutes.

Figure 4.4-6
Existing Transit Service and Facilities

Source: Abrams Associates, 2019.

An E-BART extension to Hillcrest Avenue in Antioch connects with BART at the Bay Point BART station. In addition, an E-BART Station is located at Railroad Avenue.

Tri Delta Transit serves the East County area, including the cities of Brentwood, Oakley, Bay Point, and unincorporated areas of East County. Tri Delta Transit operates 14 local bus routes from Monday to Friday, including three express services, and four local bus routes during weekends and Holidays. The Tri Delta Transit routes that runs closest to the project site are Routes 300, 383, 391, and 393, which have stops at Bridgehead Road and Main Street, located approximately 1,800 feet from the southern entrance to the project site.

4.4.3 REGULATORY CONTEXT

The following is a description of the regulatory context under which transportation issues are managed at the State and local levels. Federal regulations related to transportation and circulation are not applicable to the proposed project.

State Regulations

The following are the State environmental laws and policies relevant to transportation.

California Department of Transportation

The California Department of Transportation (Caltrans) is responsible for planning, designing, constructing, operating, and maintaining all State-owned roadways in Contra Costa County. Federal highway standards are implemented in California by Caltrans. Any improvements or modifications to the State highway system within the City of Oakley need to be approved by Caltrans. The City of Oakley does not have the ability to unilaterally make improvements to the State highway system. Caltrans' *Guide for the Preparation of Traffic Impact Studies* (December 2002) provides guidance on the evaluation of traffic impacts to State highway facilities. The document outlines when a traffic impact study is needed and what should be included in the scope of the study.

Senate Bill 743

Senate Bill (SB) 743 (Stats. 2013, ch. 386) (SB 743) requires the Governor's Office of Planning and Research (OPR) to establish new metrics for determining the significance of transportation impacts of projects within transit priority areas (TPAs) and allows OPR to extend use of the metric beyond TPAs. In response, OPR selected VMT as the preferred transportation impact metric and applied their discretion to require its use statewide. In addition, SB 743 establishes that aesthetic and parking impacts of a residential, mixed-use residential, or employment center projects on an infill site within a TPA shall not be considered significant impacts on the environment. Furthermore, SB 743 deemphasizes the use of vehicle LOS and similar measures related to delay shall as the sole basis for determining the significance of transportation impacts.

Local Regulations and Policies

The following are applicable local regulations and policies relevant to transportation.

Contra Costa Countywide Comprehensive Transportation Plan

The CCCTA is a public agency formed by the Contra Costa voters to manage the County's transportation sales tax program and to do countywide transportation planning. The 2017 Countywide Comprehensive Transportation Plan, adopted September 20, 2017, is the CCTA's

most recent, broadest policy and planning document. The Plan identifies the criteria for analyzing transportation impacts and sets forth plans for future roadway improvements in the County. In addition, the Plan relies on collaboration with and between partners, both on the countywide and regional levels. Each of the County's five Regional Transportation Planning Committees created an Action Plan, which identifies a complete list of actions to be completed as a result of the Action Plan.

Central and East County Action Plans

As part of the Action Plan process, each Regional Transportation Planning Committee identified projects and programs in the form of actions to be included in the Action Plan for the Routes of Regional Significance. Each Action Plan states the vision, goals, and policies; designates Routes of Regional Significance; sets objectives for such routes; and presents specific actions to achieve established objectives. The actions are listed on both a route-by-route and a regional scale, and aim to support the transportation objectives as specified by each Regional Transportation Planning Committee. The latest *East County Action Plan for Routes of Regional Significance* was adopted September 2017.

City of Oakley General Plan

The following goals and policies related to transportation and circulation from the City of Oakley General Plan are applicable to the proposed project.

Goal 3.1 Provide an efficient and balanced transportation system.

- Policy 3.1.1 Strive to maintain Level of Service D as the minimum acceptable service standard for intersections during peak periods (except those facilities identified as Routes of Regional Significance).
- Policy 3.1.2 For those facilities identified as Routes of Regional Significance, maintain the minimum acceptable service standards specified in the East County Action Plan Final 2000 Update, or future Action Plan updates as adopted.
- Policy 3.1.4 Consistent with the California Vehicle Code, direct trucks to appropriate truck routes.
- Policy 3.1.5 Encourage a multi-modal circulation system that supports non-automobile travel.
- Policy 3.1.6 Address future roadway needs through both new road construction and management of existing and planned roadway capacity.
- Policy 3.1.7 Create and maintain fee and other programs adequate to assure sufficient financing and land to maintain and achieve prescribed Levels of Service.
- Policy 3.1.8 Mitigate conflicts between new roadway improvements and existing rural roadways when the identified conflicts threaten public health, safety and welfare.

Goal 3.2 Promote and encourage walking and bicycling.

	Policy 3.2.1	Provide maximum opportunities for bicycle and pedestrian circulation on existing and new roadway facilities.
	Policy 3.2.2	Enhance opportunities for bicycle and pedestrian activity in new public and private development projects.
	Policy 3.2.3	Create a bicycle and pedestrian system that provides connections throughout Oakley and with neighboring areas, and serves both recreational and commuter users.
	Policy 3.2.4	Design new roadway facilities to accommodate bicycle and pedestrian traffic. Include Class I, II, or III bicycle facilities as appropriate. Through the Design Review process, provide sidewalks on all roads, except in cases where very low pedestrian volumes and/or safety considerations preclude sidewalks.
Goal 3.3	Provide adequate, convenient, and affordable public transportation.	
	Policy 3.3.1	Design new roadways and facilities to accommodate public transit.
	Policy 3.3.2	Ensure that new public and private development supports public transit.
	Policy 3.3.3	Encourage transit providers to improve transit routes, frequency, and level of service to adequately serve the mobility needs of Oakley residents, including those dependent on public transit.
Goal 3.5	Monitor, improve, and enhance traffic safety and reduce the potential for traffic accidents.	
	Policy 3.5.2	Design a roadway system that maximizes safety for all users.
	Policy 3.5.3	Maintain roadway facilities to maximize safety.
Goal 3.7	Coordinate land use and transportation planning to maximize use of limited transportation resources.	
	Policy 3.7.1	To the extent feasible, protect existing and future land uses from the noise, visual, and other impacts of major roadway construction projects.
	Policy 3.7.2	Ensure that the density and mixture of future land uses (both public and private) encourage transit usage, walking and bicycling.
	Policy 3.7.3	Provide sufficient parking, while considering the effect of parking supply on the use of alternate modes.
	Policy 3.7.4	Mitigate development impacts and ensure that new development pays its own way.
	Policy 3.7.5	New development should not result in inconsistent street frontage improvements along streets adjacent to and serving the project. 3.7.6 Mitigate potential circulation conflicts between new roadways and existing rural roadways adjacent to new development.

Policy 3.7.7	Encourage site planning that promotes all modes of transportation, and that minimizes vehicular trips between different land uses.
Policy 3.7.8	Pursue a mix of both new housing and additional jobs in Oakley, as part of the overall strategy to balance jobs and housing in East County.
Policy 3.7.9	Support the Metropolitan Transportation Commission's Safe Routes to Schools program.
Policy 3.7.10	Support and pursue Safe Routes to Schools projects to enhance pedestrian safety within Oakley.

4.4.4 IMPACTS AND MITIGATION MEASURES

The following section describes the standards of significance and methodology utilized to analyze and determine the proposed project's potential impacts related to transportation and circulation. In addition, a discussion of the project's impacts, as well as mitigation measures where necessary, is presented.

Standards of Significance

Consistent with Appendix G of the CEQA Guidelines, the proposed project would be considered to result in a significant adverse impact on the environment in relation to transportation and circulation if the project would result in any of the following:

- Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities;
- Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b);
- Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or
- Result in inadequate emergency access.

Issues Not Discussed Further

Section 15064.3 of the CEQA Guidelines provides specific considerations for evaluating a project's transportation impacts. Per Section 15064.3, analysis of VMT attributable to a project is the most appropriate measure of transportation impacts. While changes to driving conditions that increase intersection delay are an important consideration for traffic operations and management, the method of analysis does not fully describe environmental effects associated with fuel consumption, emissions, and public health. Section 15064.3(3) changes the focus of transportation impact analysis in CEQA from measuring impact to drivers to measuring the impact of driving. It should be noted that at this time, the provisions of Section 15064.3 apply only prospectively; determination of impacts based on VMT is not required Statewide until July 1, 2020.

The proposed project would be required by the City to prepare a Transportation Demand Management (TDM) Plan demonstrating a reduction in the number of peak hour drive-alone commute vehicle trips. Implementation of the TDM Plan would have the effect reducing the project's overall VMT; however, the degree of such reductions cannot be determined at this time. Given that the provisions of Section 15064.3 are not yet mandatory, the proposed project have a less-than-significant impact related to the following:

- Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b).

The Initial Study prepared for the proposed project (see Appendix C) determined that development of the proposed project would result in a less-than-significant impact related to the following:

- Result in inadequate emergency access.

For the reasons cited in the Initial Study, the potential impacts associated with emergency access are not analyzed further in this EIR. Furthermore, it should be noted that parking is not a CEQA issue and is not analyzed, nor required to be analyzed, in this EIR. However, parking is an important planning consideration that will be evaluated as part of the merits of the proposed project.

City of Oakley/CCTA Thresholds

The goal of the City of Oakley is to maintain LOS D operations during the peak hours, according to the General Plan. The City does not have plans, ordinances, or policies establishing measures of effectiveness for the performance of other parts of its circulation system. In addition to intersections subject to the City's circulation system standards, this analysis includes study intersections under the jurisdiction of Contra Costa County and Caltrans. For the Caltrans freeway facilities, the CCTA acting as the designated Congestion Management Agency (CMA) representing the jurisdictions of Contra Costa County. As the acting CMA, the CCTA establishes the traffic LOS standards for all state highway facilities in Contra Costa County, which supersede the general Caltrans operational standard for all state highways. The City's and the CCTA's measures of effectiveness for intersections, roadway segments, and SR 4 are summarized below.

Signalized Intersections

Project-related operational impacts on the signalized study intersections in the City of Oakley are considered significant if project-related traffic causes the LOS rating to deteriorate from LOS D to LOS E or F, from LOS E to LOS F, or if the volume-to-capacity (V/C) ratio at an intersection already operating at an unacceptable level would increase by 0.01 or more.

Unsignalized Intersections

Project-related operational impacts on unsignalized intersections are considered significant if project generated traffic causes the worst-case movement (or average of all movements for all-way stop-controlled intersections and roundabouts) to deteriorate from LOS D or better to LOS E or F.

Roadway Segments

Project-related operational impacts on roadway segments are considered significant if project generated traffic causes the LOS rating to deteriorate from LOS D to LOS E or F, from LOS E to LOS F, or if the V/C ratio at an intersection operating at an unacceptable level would increase by 0.01 or more.

SR 4 Freeway

As discussed previously, the CCTA's East County Action Plan for Routes of Regional Significance establishes the delay index as the MTSO for SR 4 through the project area. The MTSO delay index and average speed is measured over the length of SR 4 from Willow Pass Grade to SR 160. Project-related operational impacts on SR 4 are considered significant if the project would cause a new exceedance of the 2.5-second delay index MTSO established by the CCTA in the

East County Action Plan, or would add any volume of traffic to an SR 4 segment that is already anticipated to exceed the 2.5-second delay index without the project.

Method of Analysis

The analysis methodology provided in the Transportation Impact Analysis prepared for the proposed project by Abrams Associates is discussed below.

Analysis Scenarios

The following analysis scenarios are included in this EIR:

- **Existing Conditions –** Existing peak hour volumes and existing intersection configurations**.**
- **Existing Plus Project –** Existing traffic volumes plus trips from the proposed project.
- **Baseline (No Project) Conditions –** The Baseline scenario is based on the existing traffic volumes plus growth in background traffic (for three years), plus the traffic from all reasonably foreseeable developments that could substantially affect the volumes at the project study intersections.
- **Baseline Plus Project Conditions –**Baseline traffic volumes plus the trips from the proposed project.
- **Cumulative Conditions –** Year 2040 cumulative volumes based on planned and approved projects included in the Countywide Travel Demand Model.
- **Cumulative Plus Project Conditions –** Year 2040 cumulative volumes based on the Countywide Travel Demand Model plus the trips from the proposed project.

Intersection Traffic Volumes

As part of the Transportation Impact Analysis, the existing operational conditions at the 26 study intersections were evaluated according to the requirements set forth by the CCTA using the methodology set forth in the Final Technical Procedures Update (dated July 19, 2006). Analysis of traffic operations was conducted using the 2010 HCM LOS methodology with Synchro software.

Project Trip Generation

The proposed project would include construction of five new buildings totaling 1,985,304 square feet (sf) of building space, including 15,526 sf of storage space. As part of the Transportation Impact Analysis, the project's vehicle trip generation was estimated using the trip generation rates for a High-Cube Fulfillment Center Warehouse (ITE Land Use Code 155) and Warehousing (ITE Land Use Code 150) from the Institute of Transportation Engineer's (ITE) Trip Generation Manual, 10th Edition. The total trip generation reflects all vehicle trips that would be counted at the project driveways, both inbound and outbound. Because the project does not include retail or mixed use components, Abrams Associates did not apply any adjustments to account for pass-by or internal trips. It should be noted that the 15,526 sf of storage space would not result in any vehicle trip generation and, thus, was not included in the trip generation calculations prepared by Abrams Associates. Use of the storage space would be restricted by the City through a Condition of Approval.

For purposes of determining the reasonable worst-case impacts of traffic on the surrounding street network from a proposed project, the trips generated by this proposed development are estimated for the peak commute hours of 7:30 AM and 8:30 AM and 4:30 PM and 5:30 PM, which

represent the peak of "adjacent street traffic". The resulting trip generation estimates are summarized in Table 4.4-4 below. As shown in the table, the project would generate approximately 4,292 average daily trips (ADT), with 391 trips occurring during the AM peak hour and 533 trips occurring during the PM peak hour. Approximately nine percent of the vehicle trips associated with proposed distribution center building (Building 1), or a total of 99 trips, would be associated with heavy-duty trucks.

Table 4.4-4
Project Vehicle Trip Generation

Land Use	Size	ADT	AM Peak Hour			PM Peak Hour		
			Total	In	Out	Total	In	Out
High Cube Fulfillment Center Trip Rates	*per sf*	*8.18*	*0.45*	*0.14*	*0.59*	*0.38*	*0.99*	*1.37*
Distribution Center Trip Generation	134,474 sf	1,100	60	19	79	51	133	184
Warehousing Trip Rates	*per sf*	*1.74*	*0.13*	*0.04*	*0.17*	*0.05*	*0.14*	*0.19*
Warehouse Trip Generation	1,835,304 sf	3,193	239	73	312	92	257	349
Total Project Trip Generation	**1,985,304**	**4,292**	**299**	**92**	**391**	**143**	**390**	**533**

Source: Abrams Associates, 2019.

Project Trip Distribution

The trip distribution assumptions for the proposed project were based on the project's proximity to freeway interchanges, the existing directional split at nearby intersections, and the overall land use patterns in the area as determined from the Countywide Travel Demand Model. The project plans to direct employees and trucks to use the Wilbur Avenue interchange in an effort to avoid/minimize congestion on E. 18th Street at the interchange with SR 160, and also on surface street in surrounding cities. Table 4.4-5 shows the percentage of project traffic assigned to various study roadways.

Table 4.4-5
Project Trip Distribution

Origin/Destination	Peak Hour Trip Distribution Percentages
To the west on SR 4	27%
To the west on E. 18th Street	4%
To the west on Wilbur Avenue	5%
To the north on SR 160	7%
To the north on Big Break Road	2%
To the north on Vintage Parkway	1%
To the east on Main Street	6%
To the south on O'Hara Avenue	3%
To the east on the Laurel Road	5%
To the south on Empire Road	1%
To the south on Live Oak Avenue	6%
To the south on State Route 4	17%
To the west on Oakley Road	1%
Local Retail/Restaurant/Service Station Trips	15%

Source: Abrams Associates, 2019.

Baseline Condition Traffic Volumes

The Baseline conditions include the existing traffic volumes and lane configurations plus traffic from reasonably foreseeable projects in the area and general baseline growth in traffic. For this analysis, the baseline volumes were developed based on the assumption that the project completion date would be 2021, with an average traffic growth of 1 percent per year. The trips added by near-term development during this time was based on the forecast trip generation for a list of 25 approved projects identified by the City. Such projects are anticipated to be completed in the next five years and could potentially affect the traffic volumes at the project study intersections.

SR 4 Freeway

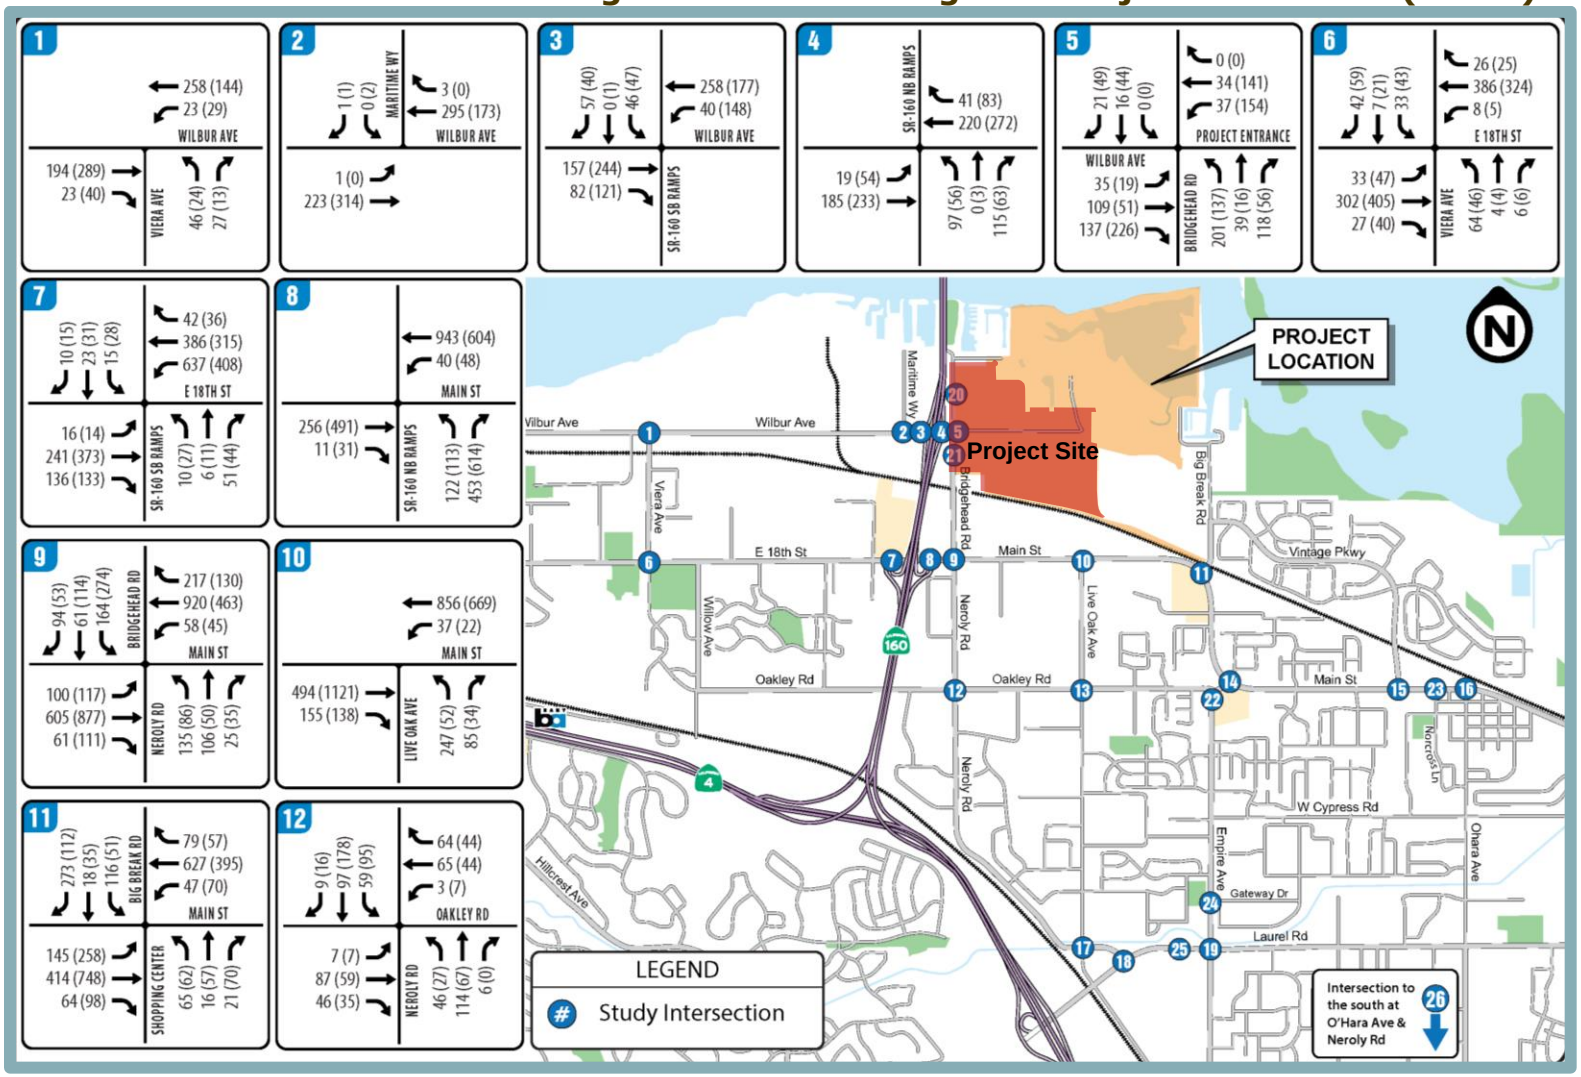
The delay index measures travel congestion and is expressed as the ratio of the time required to travel between two points during the peak hour (the congested travel time) and the time required during un-congested off-peak times. A delay index of 2.0 means that congested travel time is twice as long as during an off-peak travel time. The following shows the formula for calculating delay indices:

Delay Index = Free Flow Travel Time/Measured Peak Hour Travel Time

The denominator of the delay index formula, the measured peak hour travel time, was determined from speed runs conducted along SR 4 during the AM and PM peak hours in the spring of 2015 as part of the CCTA's CMP 2017 Monitoring Report. The numerator of the delay index formula, the free flow travel time is defined as the time it takes to traverse a roadway segment at the speed limit, including the average uncongested delay experienced at traffic signals.

It should be noted that the achievement of the MTSO delay index and average speed is measured over the length of SR 4 from Willow Pass Grade to Balfour Road.

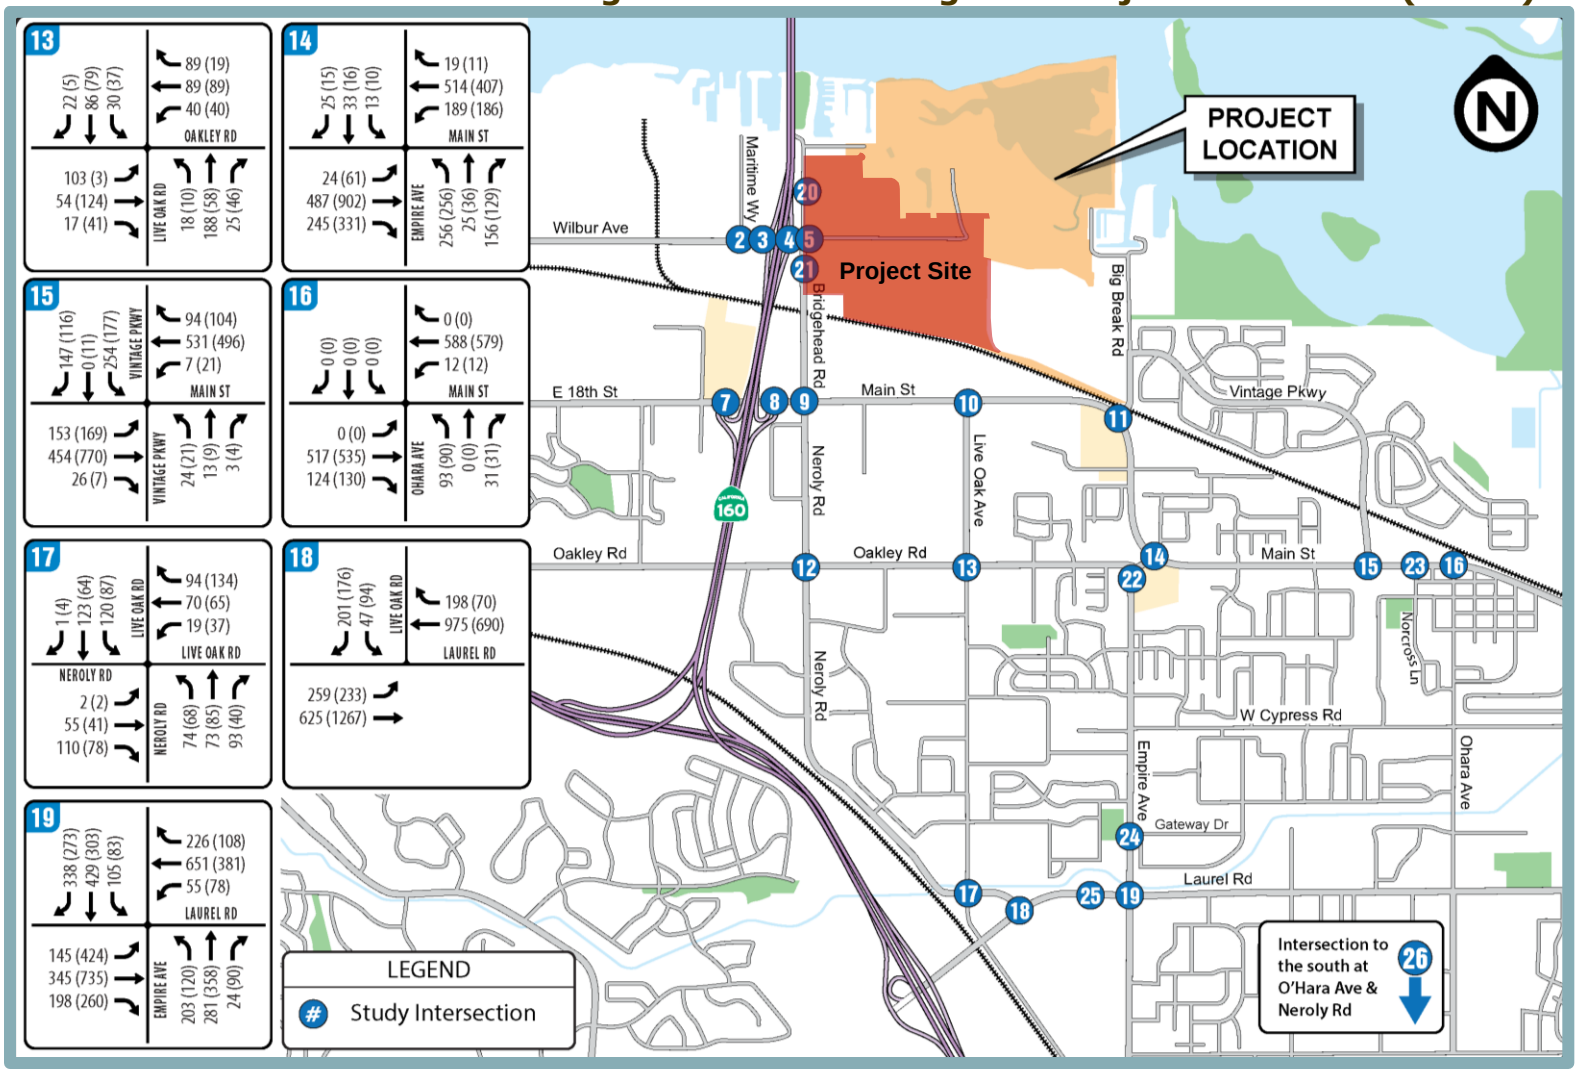
Project-Specific Impacts and Mitigation Measures



The following discussion of impacts is based on implementation of the proposed project in comparison with the standards of significance identified above.

4.4-1 Impacts to study intersections under Existing Plus Project conditions. Based on the analysis below, the impact is *less than significant*.

Under the Existing Plus Project conditions, the estimated traffic associated with the proposed project was added to existing traffic volumes at the study intersections. The resulting traffic volumes for each of the study intersections for the Existing Plus Project conditions are shown in Figure 4.4-7 through Figure 4.4-9.



As shown in Table 4.4-6, all of the signalized study intersections would have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours with the exception of Intersection #24 (Gateway Drive at Empire Avenue), which would operate at LOS E during the PM peak hour with and without project traffic. However, the proposed project would not add any traffic to the critical side street movements and would not increase the volume to capacity ratio by more than 0.01.

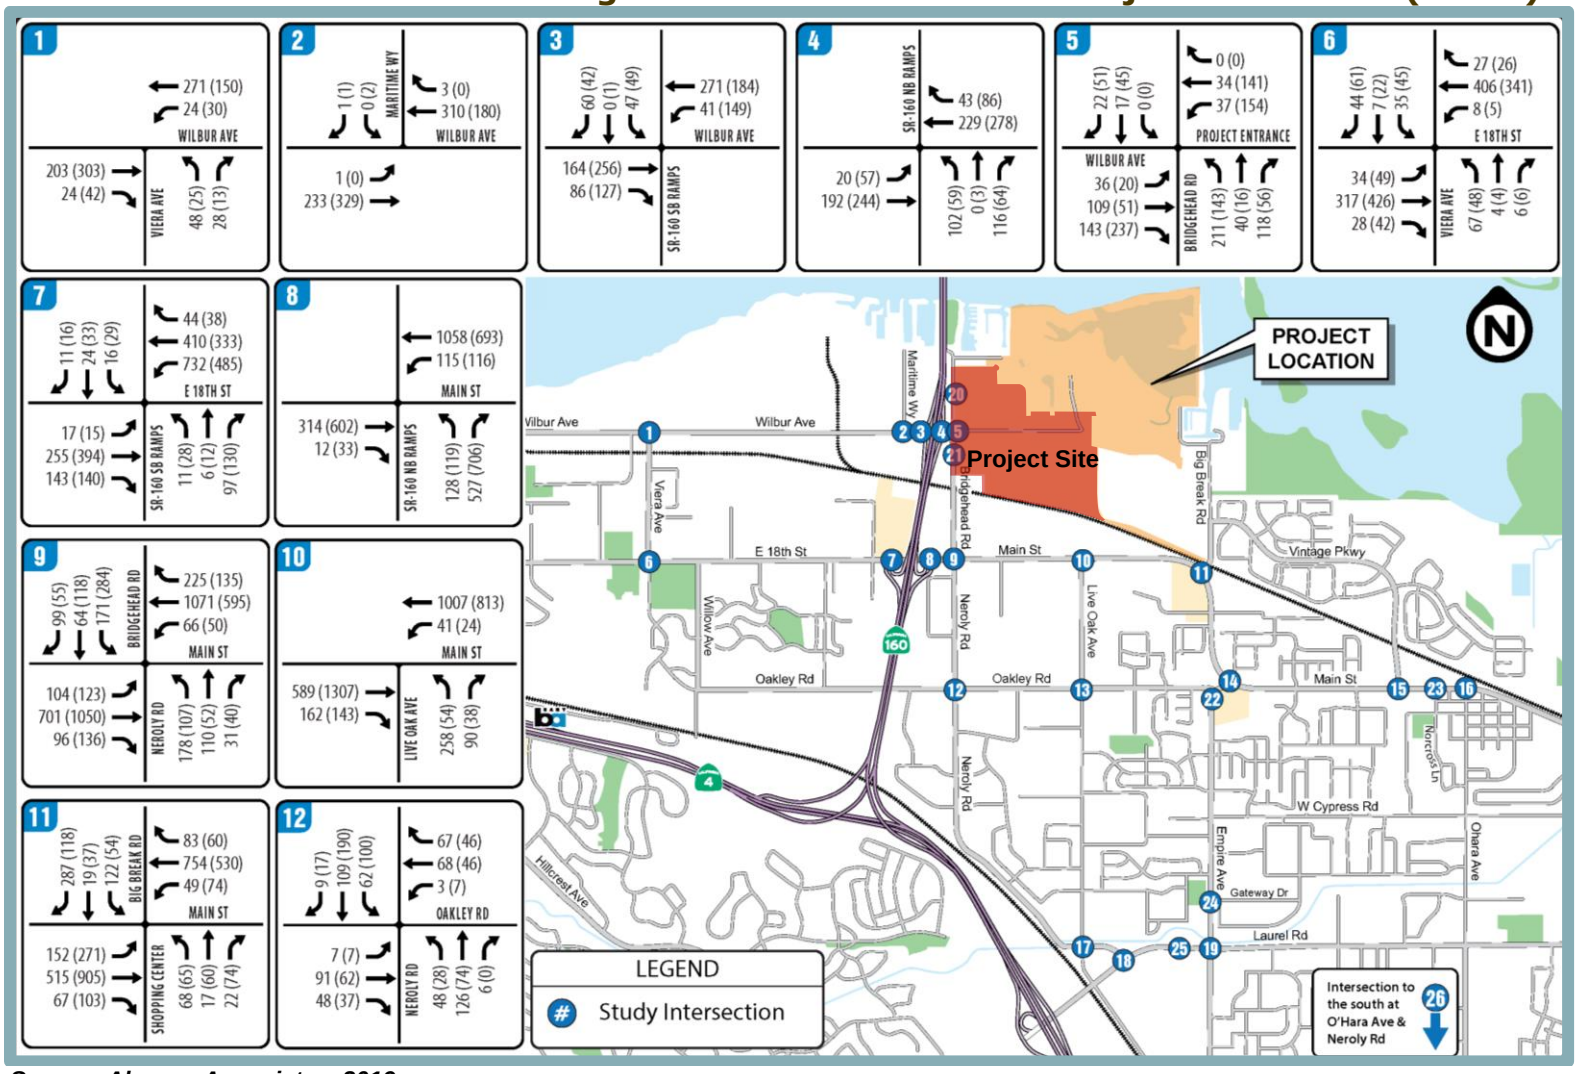
Notes:
- Delay is presented in seconds per vehicle.
- ***Bold and italicized*** text indicates applicable LOS threshold exceeded.
- (*) indicates queuing capacity exceeded.

Source: Abrams Associates, 2019.

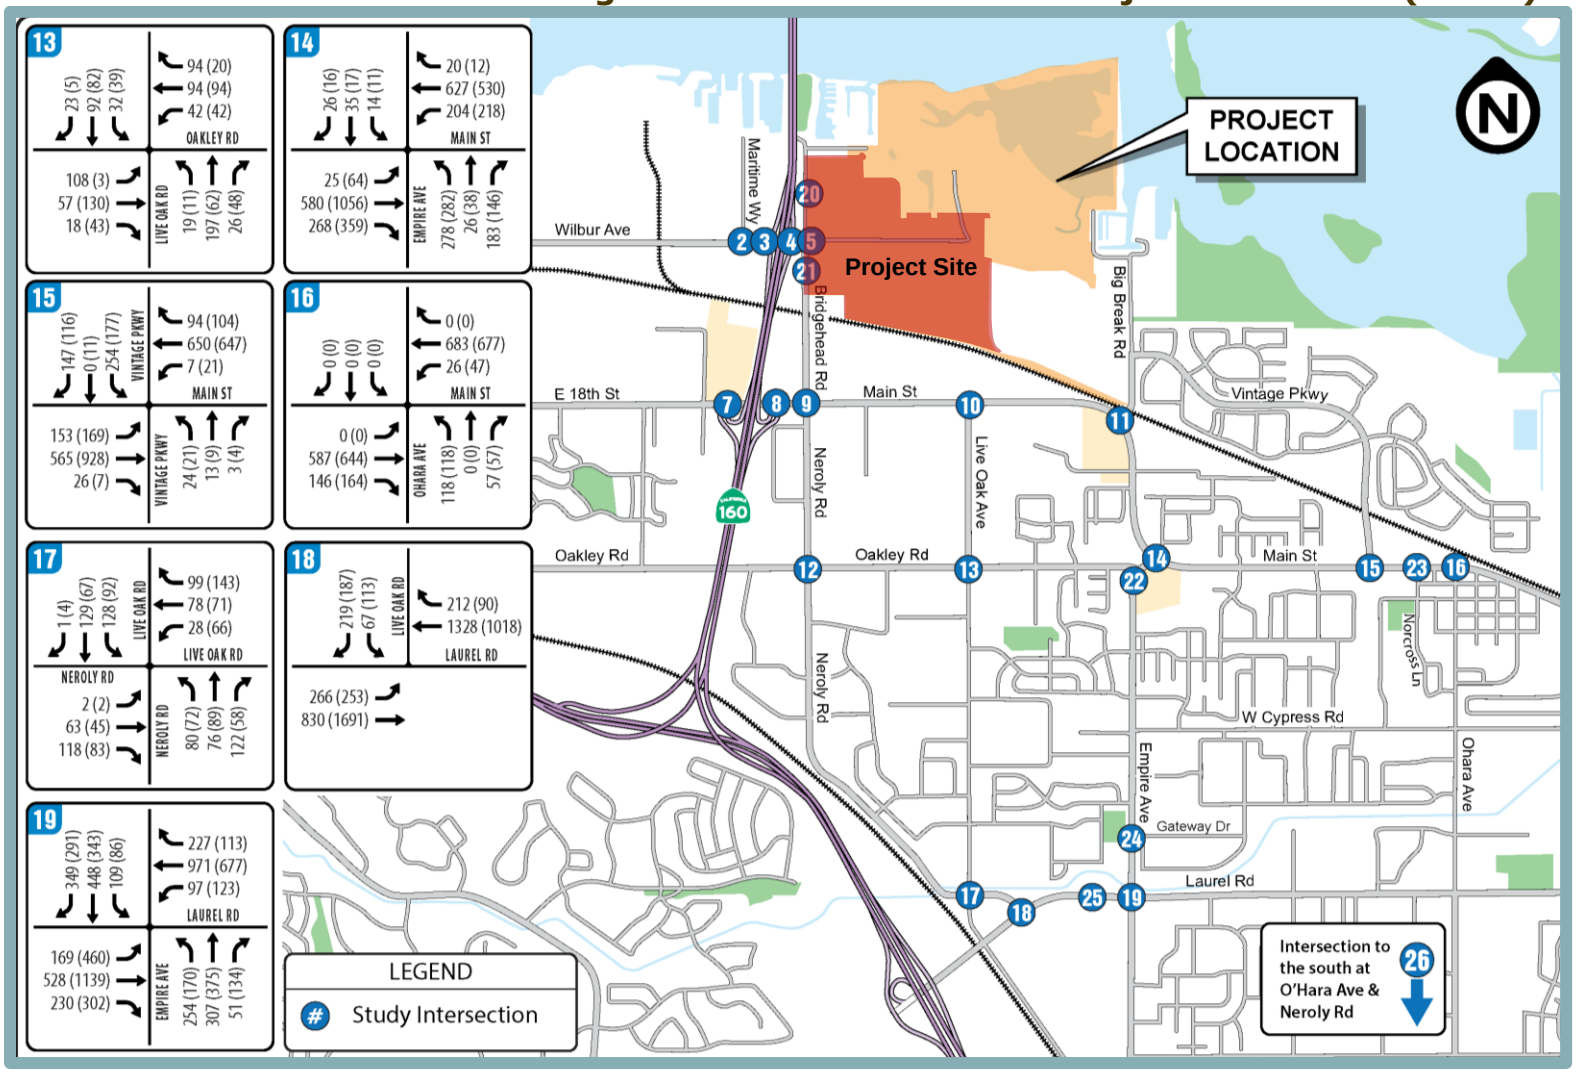
Therefore, the project's contribution to traffic at the Gateway Drive/Empire Avenue intersection would not be considered a significant impact. It should be noted that the City is currently constructing a signal at the Gateway Drive/Empire Avenue intersection, which would improve the LOS at the intersection.



Based on the above, impacts to study intersections under Existing Plus Project conditions would be ***less than significant***.

Mitigation Measure(s)
None Required.

4.4-2 Impacts to study intersections under Baseline Plus Project conditions. Based on the analysis below and with implementation of mitigation, the impact is *less than significant*.



The Baseline Plus Project conditions were developed by adding project trip generation to the Baseline traffic volumes. The resulting traffic volumes for each of the study intersections for the Baseline Plus Project conditions are shown in Figure 4.4-10 through Figure 4.4-12. Table 4.4-7 summarizes the LOS results for the Baseline and Baseline Plus Project weekday AM and PM peak hour conditions.

Source: Abrams Associates, 2019.

As shown in Table 4.4-7, all of the signalized study intersections would operate with acceptable conditions (LOS D or better) under the Baseline Plus Project scenario during the weekday AM and PM peak hours, with the exception of the following intersections:

13. Oakley Road/Live Oak Avenue (LOS E, AM peak hour);
19. Laurel Avenue/Empire Avenue (LOS E, PM peak hour); and
24. Gateway Drive/Empire Avenue (LOS F, PM peak hour).

Oakley Road/Live Oak Avenue (Intersection #13)

The Oakley Road/Live Oak Avenue intersection would operate at an unacceptable LOS E during the AM peak hour without the addition of project traffic. Under Baseline Plus Project conditions, the addition of project traffic would cause AM peak hour operations at the intersection to degrade to LOS F and would increase the V/C ratio by more than 0.01. Therefore, a significant impact would occur.

Laurel Avenue/Empire Avenue (Intersection #19)

The Laurel Avenue/Empire Avenue intersection would operate at LOS E during the PM peak hour with and without the project. The addition of project traffic would cause the V/C ratio at the intersection to increase by 0.006 during the AM peak hour and 0.007 during the AM peak hour, which is below the City's 0.01 V/C increase threshold. Thus, a less-than-significant impact would occur.

Gateway Drive/Empire Avenue (Intersection #24)

The Gateway Drive/Empire Avenue intersection would operate at LOS F during the PM peak hour with and without the project. The addition of project traffic would cause

V/C ratio at the intersection to increase by 0.003 during the AM and PM peak hours, which is below the City's 0.01 V/C increase threshold. Thus, a less-than-significant impact would occur.

Conclusion

Under Baseline Plus Project conditions, the proposed project would not substantially worsen operations at the Laurel Avenue/Empire Avenue intersection or the Gateway Drive/Empire Avenue intersection. However, the project would conflict with the City's established thresholds at the intersection of Oakley Road/Live Oak Avenue. Therefore, the proposed project could result in a ***significant*** impact. It should be noted that the City has already approved a project that, once implemented, would modify the signal at the Laurel Avenue/Empire Avenue intersection by adding eastbound and westbound double left-turn lanes, thereby improving the LOS at the intersection. In addition, a new traffic signal is currently under construction at the Gateway Drive/Empire Avenue intersection.

Mitigation Measure(s)

With implementation of the following mitigation measure, intersection operations would be improved to an acceptable LOS under Baseline Plus Project conditions. The required improvement is included in the City's 2017 Traffic Impact Fee Update (Item #38). Thus, the impact would be reduced to a *less-than-significant* level.

4.4-2 *Oakley Road/Live Oak Avenue – Prior to issuance of the first building permit, the project applicant shall pay a fair-share contribution to the City of Oakley to fund widening of the westbound Oakley Road approach to the Oakley Road/Live Oak Avenue intersection to allow for a separate right turn lane, to the satisfaction of the City Engineer. The improvement is included in the City's 2017 Traffic Impact Fee Update (Item #38).*

4.4-3 Impacts to study roadway segments under Existing Plus Project and Baseline Plus Project conditions. Based on the analysis below, the impact is *less than significant*.

As part of the Transportation Impact Analysis, a detailed analysis of the roadway segment traffic operations was conducted for Wilbur Avenue and Bridgehead Road adjacent to the project site. The analysis indicated that both roadways would continue to have acceptable conditions with the current lane configuration (one lane in each direction) during the weekday AM and PM peak commute hours (LOS D or better) under Existing Plus Project and Baseline Plus Project conditions (see Table 4.4-8) . Complete roadway segment analysis tables for all study scenarios are included in the appendix to the Transportation Impact Analysis (see Appendix G to this EIR).

Table 4.4-8
Study Roadway Segments – Baseline Plus Project Conditions

Segment	Direction	Peak Hour	Baseline Conditions		Baseline Plus Project	
			Speed (mph)	LOS	Speed (mph)	LOS
Bridgehead Road between Main Street and Wilbur Avenue	Northbound	AM	25.4	B	23.1	C
		PM	25.3	B	23.0	C
	Southbound	AM	16.3	D	16.2	D
		PM	16.8	D	16.4	D

Source: Abrams Associates, 2019.

Therefore, under both Existing Plus Project and Baseline Plus Project conditions, a ***less-than-significant*** impact would occur with regard to study roadway segments.

Mitigation Measure(s)
None required.

4.4-4 Impacts to freeway operations under Existing Plus Project conditions. Based on the analysis below, the impact is *less than significant*.

Project-generated traffic on the segments of SR 4 located within the vicinity of the project was evaluated under Existing Plus Project conditions. The resulting delay index for the freeway segments is shown in Table 4.4-9 below. As shown in the table, the project would not substantially increase the delay index along eastbound or westbound segments relative to Existing conditions, and traffic would not exceed the 2.5-second delay index MTSO established by the CCTA in the East County Action Plan. Thus, a ***less-than-significant*** impact would occur.

Table 4.4-9
Freeway Operations – Existing Plus Project Conditions

Peak Hour	Direction	MTSO	Existing	Existing Plus Project
AM	Eastbound	2.5	1.1	1.2
	Westbound	2.5	2.5	2.5
PM	Eastbound	2.5	1.4	1.4
	Westbound	2.5	1.3	1.3

Source: Abrams Associates, 2019.

Mitigation Measure(s)
None required.

4.4-5 Impacts to pedestrian, bicycle, and transit facilities. Based on the analysis below, the impact is *less than significant*.

The following sections provide an analysis of potential impacts to pedestrian and bicycle facilities, as well as transit facilities and services.

Pedestrian and Bicycle Facilities

The City does not provide LOS standards for pedestrian or bicycle facilities. Nevertheless, use of existing facilities associated with development of the project would not be expected to overcrowd those facilities or decrease their performance or safety. The project would add some pedestrians and bicyclists in the area; however, the volumes added would not be expected to significantly impact any existing bicycle facilities. In relation to the existing conditions, the proposed project would not cause substantial changes to the pedestrian or bicycle traffic in the area and would not significantly impact or require changes to the design of any existing bicycle or pedestrian facilities. However, consistent with the City and County General Plans, the project would contribute to additional pedestrian and bicycle improvement measures in the vicinity of the project. In addition, the project would include adequate internal pedestrian facilities that connect the project site to the surrounding pedestrian network.

Transit Facilities and Services

The project would not result in degradation of the LOS, cause or a significant increase in delay, on any roadway segments currently being utilized by bus transit in the area. Thus, significant impacts to bus transit are expected. The proposed project not be expected to significantly impact the operating capacity of E-BART or any existing bus routes. In addition, the proposed project could potentially help support existing bus services with additional transit ridership and would not conflict with any transit plans or goals of the BART, the County, or Tri Delta Transit.

Although the proposed project does have the potential to increase patronage on BART and bus lines in the area, the additional ridership would be added primarily in the non-peak directions and, thus, would not substantially affect the capacity of the existing transit services.

Conclusion

Based on the above, the proposed project would not result in substantial adverse effects to pedestrian, bicycle, or transit facilities in the project area. In addition, the project would not conflict with any adopted plans governing operations of such facilities. Therefore, a ***less-than-significant*** impact would occur.

Mitigation Measure(s)

None required.

4.4-6 Impacts related to construction vehicle traffic. Based on the analysis below and with implementation of mitigation, the impact is *less than significant*.

Construction of the proposed project, including demolition, site preparation, and construction, and delivery activities, would generate contractor employee trips and a variety of other construction-related vehicle trips. As part of the Transportation Impact Analysis, the increase in traffic as a result of demolition and construction activities associated with the proposed project was quantified assuming a worst-case single-phase construction period. If the project is built in phases over time, the effects of each

phase will be the same or less. The last phase may require added worker parking measures, depending on the circumstances, vacant land may not be available for parking.

The following sections provide a summary of potential issues related to related to heavy equipment use, employee commuting, and material import/export.

Heavy Equipment

Approximately ten pieces of heavy equipment are estimated to require transport on and off the site each month throughout the demolition and construction of the proposed project. In addition, the ten loads of heavy equipment being hauled to and from the site each month would be short-term and temporary. Nonetheless, given the potential for heavy-duty construction equipment to result in conflicts with traffic patterns on roadways within the site vicinity, a significant impact could occur.

Employees

The weekday work is expected to begin at approximately 7:00 AM and end at approximately 4:00 PM. The construction worker arrival peak would occur between 6:30 AM and 7:30 AM, and the departure peak would occur between 4:00 PM and 5:00 PM. Such peak hours are slightly before the city-wide commute peaks. It should be noted that the number of trips generated during construction would not only be temporary, but would also be substantially less than the proposed project at buildout. However, based on past construction of similar projects, construction workers could require parking for up to 200 vehicles during the peak construction period. Additionally, deliveries, visits, and other activities may generate peak non-worker parking demand of 20 to 25 trucks and automobiles per day. Therefore, up to 225 vehicle parking spaces may be required during the peak construction period for the construction employees. If sufficient on-site parking areas are not provided during construction of the proposed project, employee/worker parking could interfere with the surrounding roadway network, and a significant impact could occur.

Construction Material Import/Export

The project would require removal of existing debris as well as the importation of construction material, including raw materials for the building pads, the buildings, the parking areas, and landscaping. During the maximum peak construction period, the project could generate approximately 150 truck trips per day. Given that such haul truck traffic has the potential to conflict with traffic patterns along the surrounding roadways, a significant impact could occur.

Conclusion

Based on the above, the demolition and construction activities associated with the proposed project or its individual phases could potentially lead to noticeable congestion in the vicinity of the site or the perception of decreased traffic safety. Therefore, project traffic related to construction activities could result in a ***significant*** impact.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above impact to a *less-than-significant* level.

4.4-6 *Prior to issuance of demolition or grading permits, the project applicant shall prepare and submit a Traffic Control Plan to the City for review and approval. The Traffic Control Plan shall include, but not be limited to, the following items, to the satisfaction of the City Engineer.*

- *Truck drivers shall be notified of and required to use the most direct route between the site and SR 4, as determined by the City Engineering Department;*
- *All site ingress and egress shall occur only at the main driveways to the project site and construction activities may require installation of temporary (or ultimate) traffic signals as determined by the City Engineer;*
- *Specifically-designated travel routes for large vehicles shall be monitored and controlled by flaggers for large construction vehicle ingress and egress;*
- *Warning signs indicating frequent truck entry and exit shall be posted on Wilbur Avenue;*
- *Any debris and mud on nearby streets caused by trucks shall be monitored daily and may require instituting a street cleaning program;*
- *Construction employee parking shall be provided on the project site to eliminate conflicts with nearby areas. Construction of the project shall be staggered so that employee parking demand is met primarily by using on-site parking; and*
- *If importation and exportation of material becomes a traffic nuisance, the City Engineer shall limit the hours the activities can take place.*

4.4-7 Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment). Based on the analysis below and with implementation of mitigation, the impact is *less than significant*.

The following sections provide a discussion of potential hazards related to vehicle queuing and site access/circulation

Vehicle Queuing

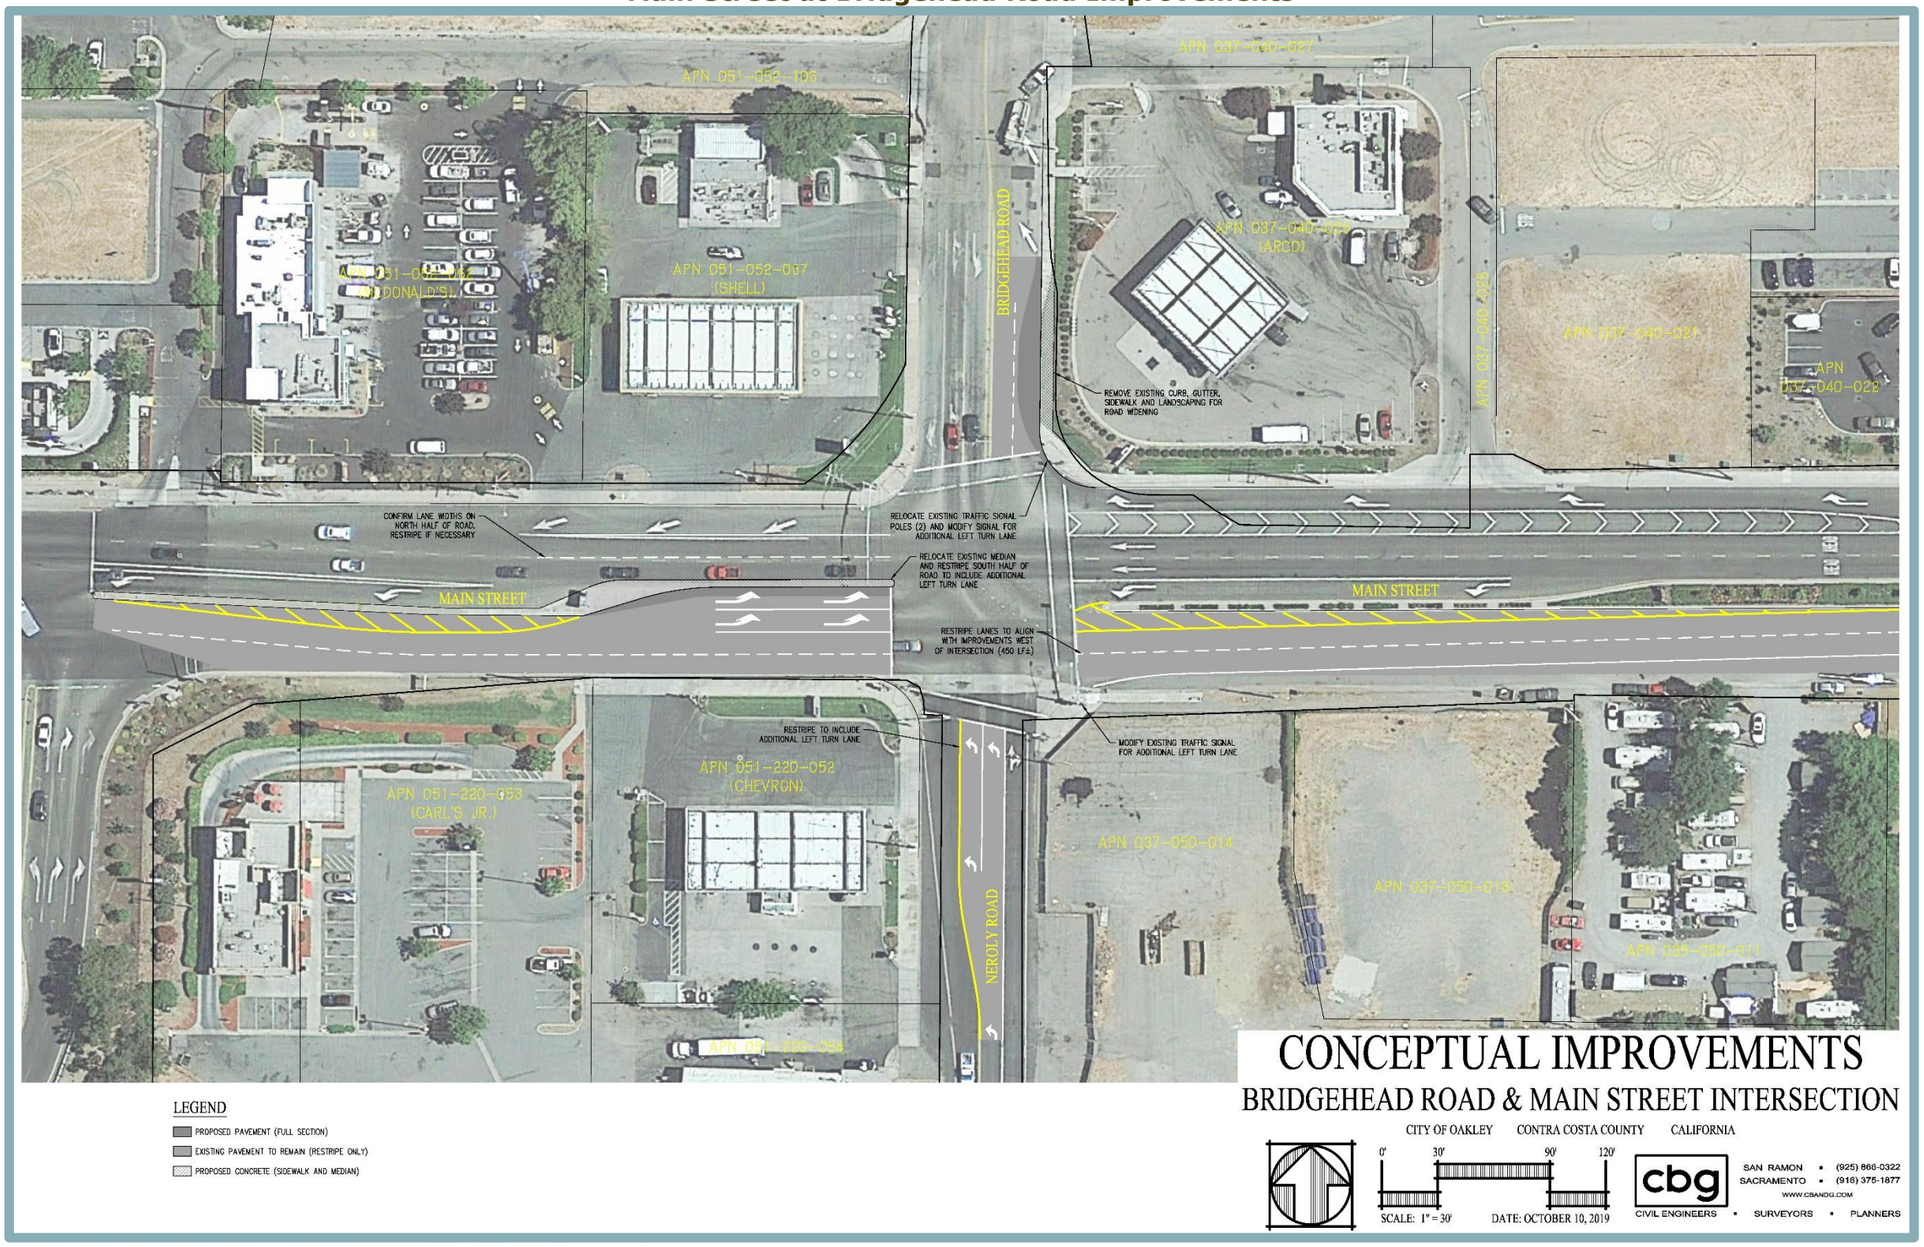
As traffic volumes increase vehicle queues typically will also increase at most intersections. In both the Existing Plus Project and Baseline Plus Project condition, the project traffic would contribute to the average vehicle queues (based on the 95th percentile vehicle queue) potentially extending beyond the available storage for the following movements:

9. Neroly Road/Bridgehead Road/Main Street
    - Eastbound Main Street left turn; and
    - Southbound Bridgehead Road left turn.
14. Empire Avenue/Main Street
    - Westbound Main Street left turn;
    - Northbound Empire Avenue left turn.
22. Oakley Road/Empire Avenue
    - Westbound Oakley Town Center left turn.

Such movements are forecast to continue exceeding the available storage regardless of whether or not the proposed project is implemented. Nonetheless, given that the project could exacerbate existing queuing issues, thereby resulting in more frequent lane blockages, a significant impact related to traffic safety could occur under Existing Plus Project and Baseline Plus Project conditions.

Site Access and Circulation

The main entrance to the project site would be located on the eastern side of the intersection of Wilbur Avenue and Bridgehead Road. Two secondary access points would also be provided on Bridgehead Road. One access would be located to the north of the Wilbur Avenue entrance and the other would be located to the south. As part of the Transportation Impact Analysis, the proposed site design was reviewed for site access and circulation issues. A detailed truck turning analysis was conducted for the project based on Surface Transportation Assistance Act (STAA) standard six-axle truck. Based on the results of the analysis, Abrams Associates determined that the proposed site design would not result in any traffic safety issues or cause unusual traffic congestion or delay within the site.



Conclusion

Based on the above, under Existing Plus Project and Baseline Plus Project conditions, the proposed project would not result in any substantial hazards related to site access/circulation. However, under both conditions, the project could exacerbate existing queuing issues at the Neroly Road/Bridgehead Road/Main Street, Empire Avenue/Main Street, and Oakley Road/Empire Avenue intersections, thereby resulting in increased hazards for vehicles travelling through the intersections. Therefore, the proposed project would result in a ***significant*** impact related to creation of hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

Mitigation Measure(s)

With implementation of the following mitigation measures, vehicle queuing would be reduced to acceptable conditions under Baseline Plus Project conditions. It should be noted that Mitigation Measure 4.6-7(b) would address queuing issues at both the Main Street/Empire Avenue and Oakley Road/Empire Avenue intersections. It should be noted that the City's Traffic Impact Fee will be updated to include the required improvements to the Main Street/Empire Avenue intersection, shown in Figure 4.4-13 below.

Figure 4.4-13
Main Street at Bridgehead Road Improvements

Payment of a fair share contribution to the improvements, as required by Mitigation Measure 4.4-7(b), would be required after completion of the Traffic Impact Fee update. Thus, with implementation of the following mitigation measures, the impact would be reduced to a *less-than-significant* level.

4.4-7(a) *Main Street at Bridgehead Road/Neroly Road – Prior to issuance of the first building permit or as determined by the City Engineer, the project applicant shall construct the following improvements at the Main Street/Bridgehead Road/Neroly Road intersection, to the satisfaction of the City Engineer: 1) installation of a dual eastbound left turn lane and a dual northbound left-turn lane; and 2) implementation of signal coordination with the adjacent traffic signal at the SR 160 eastbound ramps. The aforementioned improvements are included in the City's 2017 Traffic Impact Fee Update (Item #47).*

4.4-7(b) *Main Street at Empire Avenue – Prior to issuance of the first building permit or as determined by the City Engineer, the project applicant shall pay a fair share contribution to the City of Oakley to fund the installation of a dual westbound left-turn lane at the Main Street/Empire Avenue intersection, to the satisfaction of the City Engineer.*

Cumulative Impacts and Mitigation Measures

As defined in Section 15355 of the CEQA Guidelines, "cumulative impacts" refers to two or more individual effects which, when considered together, are considerable, compound, or increase other environmental impacts. The individual effects may be changes resulting from a single project or a number of separate projects. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects.

As discussed in the Transportation Impact Analysis, between Existing Plus Project and Cumulative Plus Project conditions, travel characteristics associated with the proposed project would not materially alter the project's effect on surrounding transportation system operating conditions or performance related to bicycle facilities, pedestrian facilities, transit facilities and services, and emergency vehicle access. In addition, construction activities associated with the project would be complete prior to the cumulative analysis year. Therefore, the proposed project would not result in a considerable contribution to cumulative impacts on the topics listed above beyond the impacts discussed above. Such topics are not discussed further in this EIR.

4.4-8 Impacts to study intersections under Cumulative Plus Project conditions. Based on the analysis below and with implementation of mitigation, the impact is *less than cumulatively considerable*.

For the Cumulative No Project conditions, the intersection traffic volumes were based on the existing turning movements plus incremental growth in background traffic (one percent per year) based on the County's traffic model. The Cumulative Plus Project conditions were developed by adding project trip generation to the Cumulative No Project traffic volumes. The resulting traffic volumes for each of the study intersections

for the Cumulative Plus Project conditions are shown in Figure 4.4-14 through Figure 4.4-16. Table 4.4-10 summarizes the LOS results for the Cumulative No Project and Cumulative Plus Project weekday AM and PM peak hour conditions.

As shown in Table 4.4-10, all of the signalized study intersections would operate with acceptable conditions (LOS D or better) under the Cumulative Plus Project scenario during the weekday AM and PM peak hours, with the exception of the following intersections:

5. Bridgehead Road/Wilbur Avenue (LOS E, PM peak hour);
11. Big Break Road/Main Street (LOS F, AM peak hour; LOS E, PM peak hour);
13. Oakley Road/Live Oak Avenue (LOS F, AM peak hour); and
24. Gateway Drive/Empire Avenue (LOS E, AM peak hour; LOSF, PM peak hour).

Bridgehead Road/Wilbur Avenue (Intersection #5)

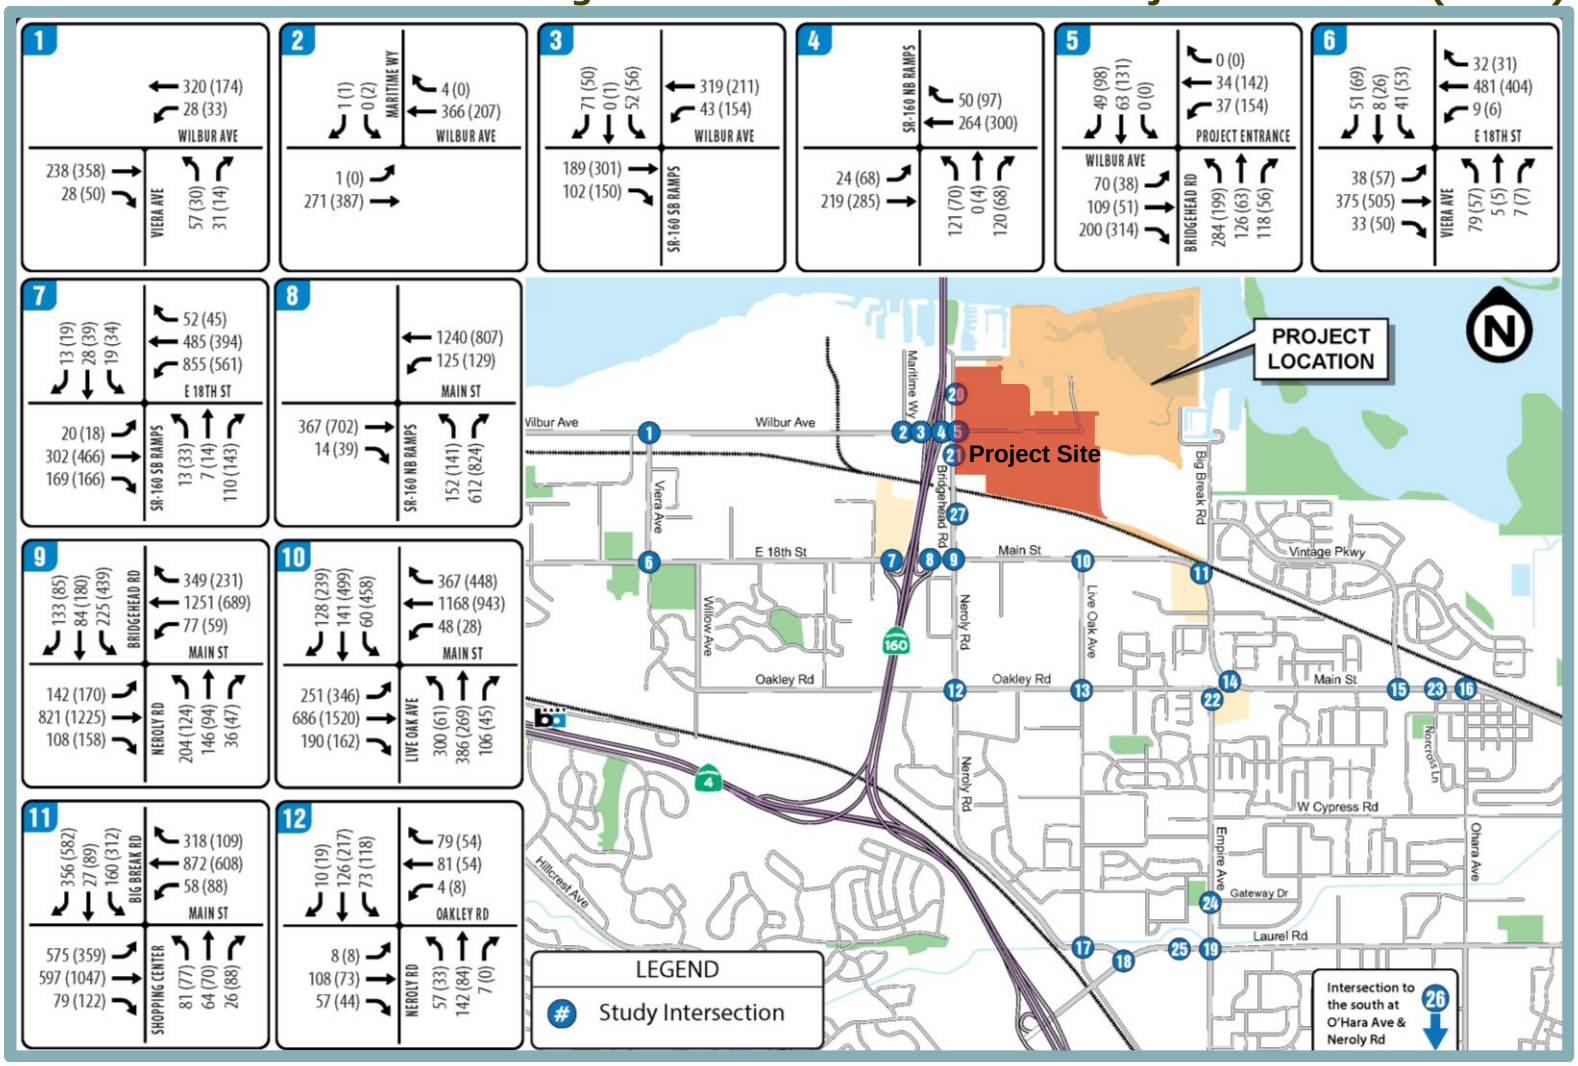
The addition of project traffic would cause operations at the Bridgehead Road/Wilbur Avenue intersection to deteriorate from an acceptable LOS D to an unacceptable LOS E during the PM peak hour. Thus, a significant impact would occur.

Big Break Road/Main Street (Intersection #11)

The Big Break Road/Main Street intersection would operate at LOS F and LOS E during the AM and PM peak hours, respectively, with and without the project. The addition of project traffic would increase the V/C ratio by more than 0.01 during both peak hours. Thus, a significant impact would occur.

Oakley Road/Live Oak Avenue (Intersection #13)

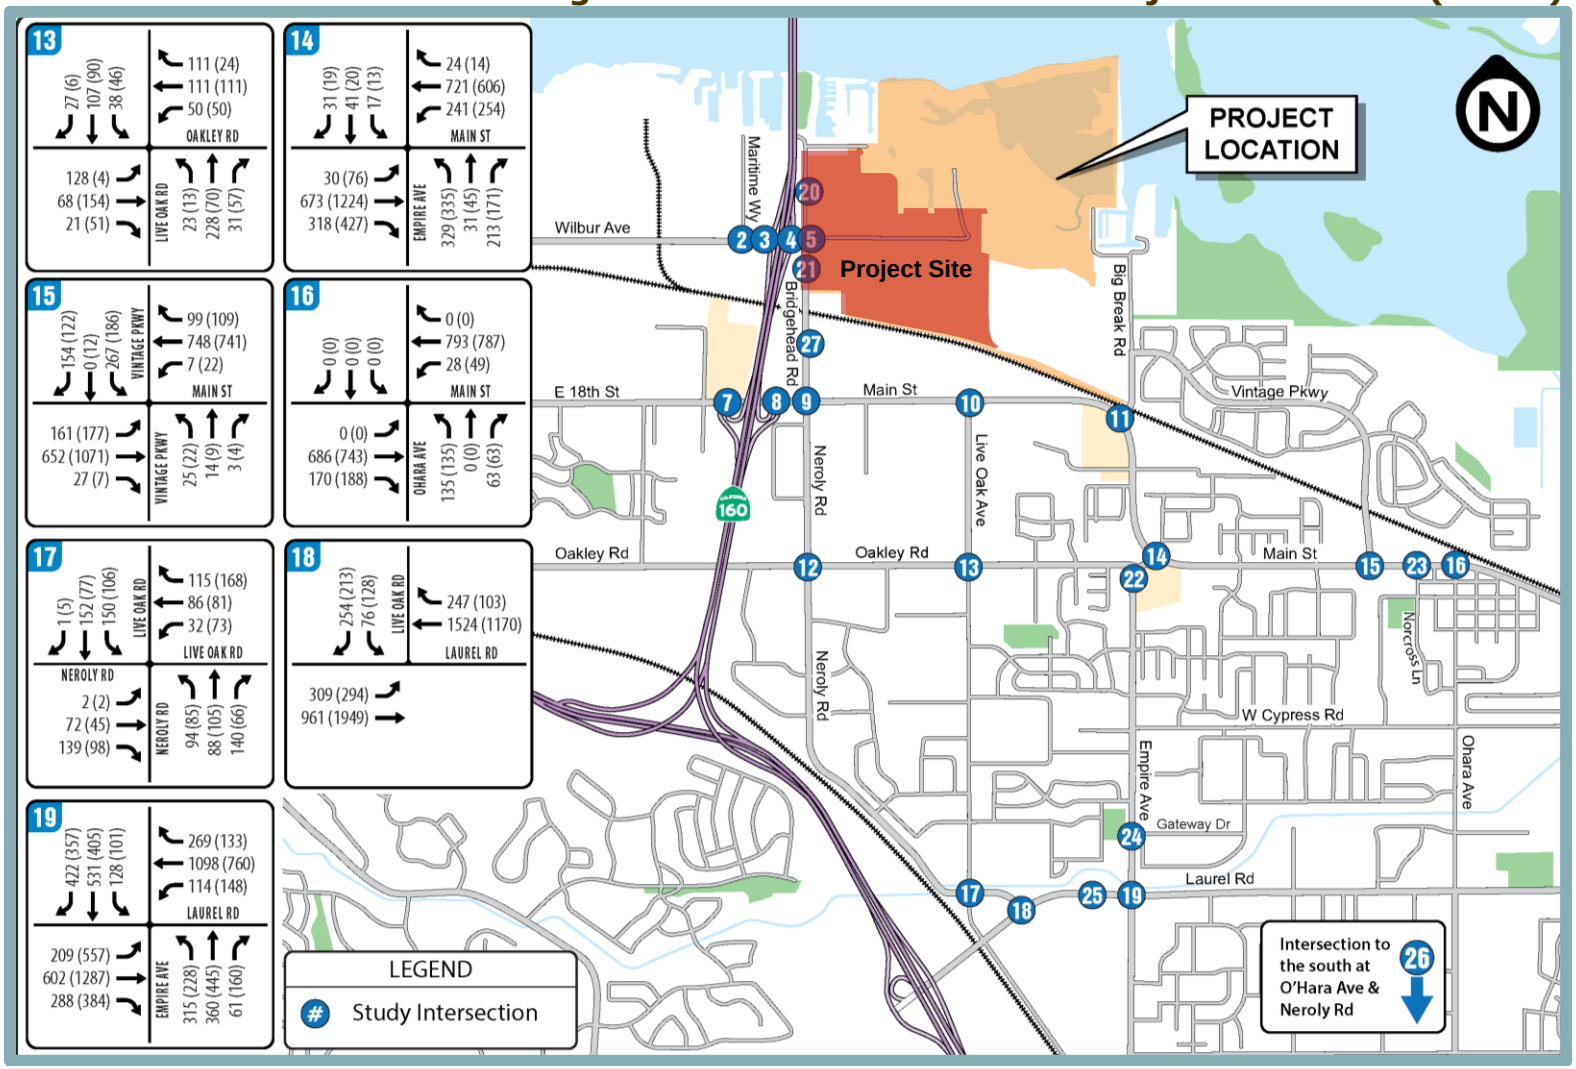
The Oakley Road/Live Oak Avenue intersection would operate at an unacceptable LOS E during the AM peak hour without the addition of project traffic. Under Cumulative Plus Project conditions, the addition of project traffic would cause AM peak hour operations at the intersection to degrade to LOS F and would increase the V/C ratio by more than 0.01. Therefore, a significant impact would occur.



Gateway Drive/Empire Avenue (Intersection #24)

The Gateway Drive/Empire Avenue intersection would operate at LOS E during the AM peak hour and LOS F during the PM peak hour with and without the project. The addition of project traffic would cause V/C ratio at the intersection to increase by 0.002 during the AM and PM peak hours, which is below the City's 0.01 V/C increase threshold. Thus, a less-than-significant impact would occur.

Conclusion



Under Cumulative Plus Project conditions, the proposed project would not substantially worsen operations at the Gateway Drive/Empire Avenue intersection. However, the project would conflict with the City's established thresholds at the intersections of Bridgehead Road/Wilbur Avenue, Big Break Road/Main Street, and Oakley Road/Live Oak Avenue. Therefore, the proposed project's incremental contribution to cumulative impacts at the three intersections could be ***cumulatively considerable***.

Mitigation Measure(s)

With implementation of the following mitigation measures, intersection operations would be improved to an acceptable LOS under Cumulative Plus Project conditions. It should be noted that the City's Traffic Impact Fee will be updated to include the required improvements to the Big Break Road/Main Street intersection. Payment of a fair share contribution to the improvements, as required by Mitigation Measure 4.4-8(b), would be required after completion of the Traffic Impact Fee update. Thus, with implementation of the following mitigation measures, the project's incremental contribution to the cumulative impact would be *less than cumulatively considerable*.

4.4-8(a) *Bridgehead Road/Wilbur Avenue – Prior to buildout of the proposed project or as determined by the City Engineer, the project applicant shall construct the installation of a four-way traffic signal with crosswalks at the Wilbur Avenue/Bridgehead Road intersection, to the satisfaction of the City Engineer. The improvement is included in the City's 2017 Traffic Impact Fee Update.*

4.4-8(b) *Big Break Road at Main Street – Prior to issuance of the first building permit or as determined by the City Engineer, the project applicant shall pay a fair share contribution to the City of Oakley to fund the following improvements to the Big Break Road/Main Street intersection, to the satisfaction of the City Engineer 1) widening of the southbound Big Break Road approach to the intersection to allow for an additional approach lane; 2) construction of a dual left turn lane on the eastbound Main Street approach to the intersection; and 3) Widening of the*

eastbound and westbound Main Street approaches to allow for three through lanes in each direction.

4.4-8(c) *Implement Mitigation Measure 4.4-2.*

4.4-9 Impacts to study roadway segments under Cumulative Plus Project conditions. Based on the analysis below and with implementation of mitigation, the impact is *less than cumulatively considerable*.

As part of the Transportation Impact Analysis, a detailed analysis of the roadway segment traffic operations was conducted for Wilbur Avenue and Bridgehead Road adjacent to the project site. The analysis indicated that Wilbur Avenue would continue to have acceptable conditions during the weekday AM and PM peak commute hours (LOS D or better) under Cumulative Plus Project conditions. However, the segment of Bridgehead Road south of the planned entrance to the River Oaks Crossing Specific Plan Area (i.e. the segment south of the railroad over- crossing) would exceed LOS D under both the AM and PM peak hours with and without the addition of project traffic. The two-lane roadway segment is forecast to operate at LOS F during the PM peak hour with the removal of the Live Oak Avenue extension and the addition of forecast traffic from the proposed project and the River Oaks Specific Plan.

Planned improvements on the southbound approach to the Main Street intersection in combination with improvements to the planned River Oaks Crossing entrance intersection could potentially improve operations on the Bridgehead Road segment, depending on the final design for the improvements. However, the proposed project would increase the V/C ratio on the affected segment by more than 0.01 relative to Cumulative (no project) conditions. Complete roadway segment analysis tables for all study scenarios are included in the appendix to the TIA (see Appendix G to this EIR).

Based on the above, under Cumulative Plus Project conditions, the project's incremental contribution to the significant impact at the affected segment of Bridgehead Road would be ***cumulatively considerable***.

Mitigation Measure(s)

With implementation of the following mitigation measure, intersection operations would be improved to an acceptable LOS under Cumulative Plus Project conditions. It should be noted that the City's Traffic Impact Fee will be updated to include the required Bridgehead Road widening. Payment of a fair share contribution to the improvements, as required by Mitigation Measure 4.4-9, would be required after completion of the Traffic Impact Fee update. Thus, with implementation of the following mitigation measures, the project's incremental contribution to the cumulative impact would be *less than cumulatively considerable*.

4.4-9 *Bridgehead Road between the Planned River Oaks Crossing Entrance and the Main Street/Neroly Road Intersection – Prior to issuance of certificates of occupancy or as determined by the City Engineer, the project applicant shall pay a fair-share contribution towards the*

widening of Bridgehead Road between the planned River Oaks Crossing entrance and the northernmost driveway at the ARCO development to include a four-lane cross-section, to the satisfaction of the City Engineer. In addition, the project applicant shall provide for the construction of the widening of Bridgehead Road between the northernmost driveway of the Arco Development and the Main Street/Neroly Road intersection to include a four-lane cross-section, to the satisfaction of the City Engineer.

4.4-10 Impacts to freeway operations under Cumulative Plus Project conditions. Based on the analysis below, even with mitigation, the impact is *cumulatively considerable* and *significant and unavoidable*.

Project-generated traffic on the segments of SR 4 located within the vicinity of the project was evaluated under both Cumulative Plus Project conditions. The resulting delay index for the freeway segments is shown in Table 4.4-11 below. As shown in the table, the project would not increase the delay index along eastbound or westbound segments relative to Cumulative conditions.

Table 4.4-11
Freeway Operations – Cumulative Plus Project Conditions

Peak Hour	Direction	MTSO	Cumulative No Project	Cumulative Plus Project
AM	Eastbound	2.5	1.3	1.3
	Westbound	2.5	***3.1***	***3.1***
PM	Eastbound	2.5	1.8	1.8
	Westbound	2.5	1.5	1.5

Note: ***Bold and italicized*** text indicates MTSO exceeded.

Source: Abrams Associates, 2019.

Nonetheless, because the MTSO at the freeway segment would be exceeded, payment of applicable East Contra Costa. Regional Fee and Financing Authority (ECCRFFA)/Regional Transportation Development Impact Mitigation (RTDIM) fees would be required. Without payment of the required fees, the project's incremental contribution to cumulative SR 4 impacts would be ***cumulatively considerable***.

Mitigation Measure(s)

Implementation of the following mitigation measure would help to offset the project's incremental contribution to significant impacts along SR 4. However, given that SR 4 is not under the City's jurisdiction, the City does not have control over the funding, prioritization, or construction of improvements along the freeway. Thus, the project's contribution to the impact identified above would remain *cumulatively considerable* and *significant and unavoidable*.

4.4-10 *Prior to issuance of building permits, the project applicant shall pay the applicable Regional Transportation Development Impact Mitigation (RTDIM) Fee to fund regional freeway system improvements along SR*

4. Proof of payment shall be submitted to the City of Oakley Planning Division.

4.4-11 Substantially increase cumulative hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment). Based on the analysis below, even with mitigation, the impact is *cumulatively considerable* and *significant and unavoidable*.

As traffic volumes increase vehicle queues typically will also increase at most intersections. In Cumulative Plus Project condition, the project traffic would contribute to the average vehicle queues (based on the 95th percentile vehicle queue) potentially extending beyond the available storage for the following movements:

5. Bridgehead Road/Wilbur Avenue
    - Northbound Bridgehead Road left turn.
9. Neroly Road/Bridgehead Road/Main Street
    - Eastbound Main Street left turn;
    - Southbound Bridgehead Road left turn; and
    - Northbound Bridgehead Road left turn.
14. Empire Avenue/Main Street
    - Westbound Main Street left turn;
    - Northbound Empire Avenue left turn; and
    - Southbound Charles Way left turn.
22. Oakley Road/Empire Avenue
    - Westbound Oakley Town Center left turn.

Such movements are forecast to continue exceeding the available storage regardless of whether or not the proposed project is implemented. Nonetheless, given that the project could exacerbate existing queuing issues, thereby resulting in more frequent lane blockages, the project's incremental contribution to significant cumulative impacts related to traffic safety could be ***cumulatively considerable*** under Cumulative Plus Project conditions.

Mitigation Measure(s)

With implementation of the following mitigation measure, vehicle queuing would be reduced to acceptable conditions under Cumulative Plus Project conditions. However, a portion of the required improvements are not included in the City's 2017 Traffic Impact Fee Update. Given that timing and funding for the improvements have not been identified by the City, the impact would remain *cumulatively considerable and significant and unavoidable.*

4.4-11 Implement Mitigation Measures 4.4-7(a), 4.4-7(b), and 4.4-8(a).

4.5 Utilities and Service Systems

4.5. UTILITIES AND SERVICE SYSTEMS

4.5.1 INTRODUCTION

The Utilities and Service Systems chapter of the EIR summarizes the setting information and identifies potential new demands resulting from the proposed project's water supply, wastewater systems, and solid waste disposal. Information for the Utilities and Service Systems chapter was primarily drawn from a technical water supply memorandum prepared for the proposed project by Diablo Water District (Water Memo) (see Appendix H),[1] a technical sewer memorandum prepared for the project by Coleman Engineering (Sewer Memo) (see Appendix I),[2] the Diablo Water District 2015 Urban Water Management Plan (UWMP),[3] the City of Oakley General Plan,[4] and the General Plan EIR.[5]

4.5.2 EXISTING ENVIRONMENTAL SETTING

The following section describes the existing utilities, including water delivery infrastructure and supplies, wastewater conveyance and treatment, solid waste, and gas, electric, and telecommunications infrastructure.

Water Delivery Infrastructure and Available Supplies

The Diablo Water District (DWD) currently provides potable water service to the project area, including the project site.

Water Distribution Infrastructure

Along the southern boundary of the subject property, DWD maintains a 24-inch water line within the Burlington Northern Santa Fe (BNSF) railroad corridor. At the southwest corner of the subject property, the line extends northward to Wilbur Avenue, transitioning to a 10-inch line. Within Wilbur Avenue, the existing water line extends towards Bridgehead Road, where the line connects to a larger north-south oriented 12-inch line within the roadway. To the north, the 12-inch line connects to a line near the Antioch/Oakley Regional Park. To the south, the 12-inch line connects to an existing water line before looping to other DWD-maintained water conveyance infrastructure in Main Street to the south of the site. In addition to the public DWD-owned water lines, the project site contains numerous domestic and fire service connections that feed an existing private on-site water system. The extent of the private on-site water conveyance infrastructure is not well-documented.

Water Supply Sources

Per the DWD's 2015 UWMP, DWD's primary water supply for its distribution system is treated surface water from the United States Bureau of Reclamation's Central Valley Project (CVP) purchased from the Contra Costa Water District (CCWD). CVP water is conveyed through the

Contra Costa Canal and Los Vaqueros system, and treated at the Randall-Bold Water Treatment Plant (WTP) in Oakley, which is jointly owned by DWD and CCWD.

In addition, DWD has developed its own groundwater supply system to provide additional supply reliability. When fully implemented, groundwater may comprise up to 20 percent of DWD's total supply. Table 4.5-1 summarizes the current and projected available water supply from DWD's sources, presented in millions of gallons (MG).

Table 4.5-1
Current and Projected Available Water Supplies (MG)

Water Supply Source	2015	2020	2025	2030	2035	2040
Surface Water Purchased from CCWD	2,738	4,563	4,563	5,475	5,475	5,475
DWD Groundwater	672	924	924	1,176	1,176	1,176
Total Supply	3,410	5,487	5,487	6,651	6,651	6,651

Source: Diablo Water District, 2016.

Surface Water Purchased from CCWD

DWD purchases CVP water from CCWD, its wholesale supplier, who has a contract with the U.S. Bureau of Reclamation for 195,000 acre-feet (AF) per year through February 2045. Raw surface water is supplied by way of the Contra Costa Canal, which can convey water either from Rock Slough in the Sacramento-San Joaquin River Delta, Los Vaqueros Reservoir, or CCWD's other intakes on Old River and Victoria Canal (near Middle River). The Contra Costa Canal is owned by the U.S. Bureau of Reclamation and operated by CCWD. The Los Vaqueros Reservoir is a 160,000-AF storage facility located approximately eight miles south of the City of Brentwood. Water to fill the reservoir comes from a pump station intake on Old River near SR 4 or Victoria Canal near Middle River.

The raw surface water from the Contra Costa Canal and/or Los Vaqueros Reservoir is treated at the Randall-Bold WTP in the City of Oakley. The Randall-Bold WTP is jointly owned by DWD and CCWD, and is operated and maintained by CCWD. DWD has a joint powers agreement with CCWD for 15-million gallons per day (mgd) of treated water from the Randall-Bold WTP, with the right to purchase additional capacity up to a total of 30 mgd. DWD intends to purchase additional treated surface water capacity from CCWD, when needed, as its primary supply for future development.

Per the 2015 UWMP, accommodating buildout of DWD's ultimate service area, including the project area, will require either purchase of additional excess capacity at the existing WTP, if any is available, or expansion of the existing WTP, which was initially designed and constructed with a capacity of 40 mgd and is expandable to 80 mgd. DWD's current capacity of 15 mgd from the Randall-Bold WTP provides an average day supply of 7.5 mgd (2,738 MG). A total of 30-mgd ultimate capacity for maximum day demand conditions will provide an average day supply of 15 mgd (5,475 MG). In accordance with current agreements, DWD must purchase additional supply in no larger than 5-mgd increments. It is anticipated that DWD will purchase a total of 7.5 mgd in additional capacity between 2020 and 2030 in order to meet demands and water quality blending goals for the groundwater system.

Groundwater

The groundwater supply system operated by DWD currently consists of groundwater from two wells in the City Oakley, conveyed in a dedicated well supply pipeline to a blending facility located near the Randall-Bold WTP.[6] Currently, the DWD operates with a total groundwater supply capacity of 4.0 mgd. by 2020, DWD expects to develop an additional 1.5 mgd in well capacity, with another 1.5 mgd provided by 2030. Ultimately, groundwater may provide up to 20 percent of DWD's overall water supply.

The groundwater wells operated by DWD overlie the northwestern portion of the Tracy Subbasin, which is part of the larger San Joaquin Valley Groundwater Basin. As noted in the 2015 UWMP, per the Department of Water Resources (DWR), the Basin is not adjudicated and is not currently in a state of overdraft. The DWR has not yet established a priority level for the Tracy Subbasin.[7]

Water Demand Projections

The 2015 UWMP includes water demand and connection projections for the DWD service area for 2020 through 2040 (see Table 4.5-2). The future demand projections are estimated based on the calculated number of non-residential connections per acre from available buildout land use planning information for the DWD service area, including the City of Oakley General Plan. Linear interpolation was used to determine the number of connections at five-year intervals from 2015 to 2040, which assumes a constant growth rate from 2015 to buildout in 2040.

Table 4.5-2
Existing and Projected Water Deliveries (MG)

Water Use Sector	2015	2020	2025	2030	2035	2040
Industrial	<1	73	146	219	292	365
Total Water Demand	1,492	2,263	3,036	3,805	4,578	5,349

Source: Diablo Water District, 2016.

Buildout of the project site, which is currently designated Light Industrial (LI), Utility Energy (UE), and Business Park (BP) per the City's General Plan, was included in the demand projections. Specifically, the 2015 UWMP assumed development of the site with a large heavy industrial user to replace the former Dupont chemical manufacturing facility. As shown in the table above, metered industrial water demand for 2015 was negligible within the DWD service area. Development of new industrial uses outside of the project site is not currently anticipated by DWD. Thus, the 365 MG of industrial water demand projected for 2040 would be primarily attributed to full buildout of the project site.

Water Supply Availability

A comparison of projected water supply and demand during normal, single-dry, and multiple-dry years is included in Table 4.5-3 below, as adapted from the 2015 UWMP. Results of the comparisons show surpluses of water supply compared with demand all conditions. As shown in the table, DWD has adequate supply sources to meet future needs under all conditions.

6 Diablo Water District. *Final 2015 Urban Water Management Plan [pg. 4-5].* June 2016.
7 California Department of Water Resources. *Sustainable Groundwater Management Act 2018 Basin Prioritization* [Table A-1]. January 2019.

Table 4.5-3
Summary of Water Demand Versus Supply During Hydrologic Normal, Single Dry, and Multiple Dry Years (MG)

		2020	2025	2030	2035	2040
Normal Year						
Total Water Supply		5,487	5,487	6,651	6,651	6,651
Total Water Demand		2,263	3,036	3,509	3,986	4,462
Surplus/Deficit		**+3,224**	**+3,224**	**+3,142**	**+2,665**	**+2,189**
Single Dry Year						
Total Surface Water Supply		5,487	5,487	6,651	6,651	6,651
Total Water Demand		2,263	3,036	3,805	4,578	5,349
Surplus/Deficit		**+3,224**	**+3,224**	**+3,142**	**+2,665**	**+2,189**
Multiple Dry Years						
First Year	Total Water Supply	5,487	5,487	6,651	6,651	6,651
	Total Water Demand	2,263	3,036	3,509	3,986	4,462
	Surplus/Deficit	**+3,224**	**+3,224**	**+3,142**	**+2,665**	**+2,189**
Second Year	Total Water Supply	5,487	5,487	6,651	6,542	6,323
	Total Water Demand	2,263	3,036	3,509	3,986	4,462
	Surplus/Deficit	**+3,224**	**+3,224**	**+3,142**	**+2,555**	**+1,860**
Third Year	Total Water Supply	5,030	5,030	6,104	5,994	5,830
	Total Water Demand	2,263	3,036	3,509	3,686	4,462
	Surplus/Deficit	**+2,767**	**+1,994**	**+2,594**	**+2,008**	**+1,368**

Note: Projected water demands for each hydrologic condition account for demand reductions needed to maintain an urban water use target of 163 gpd after 2020. The required reductions for are as follows: 296 MG for 2030; 592 MG for 2035, and 887 MG for 2040.

Source: Diablo Water District, 2016.

Water Shortage Contingency Planning

As part of the 2015 UWMP, DWD has considered possibilities of shortage and outages that could affect water supply. Water shortage contingency planning includes actions to be implemented during a catastrophic interruption of water supplies including, but not limited to, regional power outage, earthquake, fire, flooding, or other disasters. The 2015 UWMP contains a draft Water Shortage Contingency Plan that can be tailored by DWD to meet specific drought or emergency conditions that may occur in the future. The purpose of the Water Shortage Contingency Plan is to be prepared to impose temporary demand reductions in case available supply falls below the planned levels discussed in the UWMP. The draft Water Shortage Contingency Plans addresses both short-term and long-term water supply outages.

Water Quality

Water quality supplies are tested by DWD daily, weekly, monthly, and annually. Once a year, DWD issues the Annual Consumer Confidence Report, which includes reported water testing results. As noted previously, the DWD's water supplies are treated at the Randall-Bold WTP in the City of Oakley.

Wastewater Conveyance and Treatment

Ironhouse Sanitary District (ISD) provides sanitary sewer collection and treatment for the project area, including the project site. Per the *Sanitary Sewer Management Plan*, the ISD maintains 125 miles of collection system pipelines and 15.9 miles of force main pipelines, as well as 34 sewer

lift stations.[8] The ISD owns and operates a 4.3 mgd Wastewater Treatment Plant (WWTP) located at 450 Walnut Meadows Drive in the City of Oakley.

ISD operates the existing Lauritzen Sewer Pump Station in Lauritzen Lane at the north edge of the site. From the pump station, a sewer force main in Lauritzen Lane and Bridgehead Road connects to a short section of gravity sewer piping near the off-site mobile home park. The gravity piping flows to the existing Bridgehead Sewer Pump Station near the north edge of the existing Arco AM/PM shopping center at Bridgehead Road before ultimately reaching the ISD WWTP. In addition, within the project site, existing sewer lines likely connect the Administration Building to either the Lauritzen Pump Station or the sewer force main in Bridgehead Road; however, the system is not well-documented. Other on-site wastewater flows including contaminated groundwater are collected in a central collection area and trucked off-site for disposal.

Solid Waste

Solid waste collection services within the City of Oakley are provided under a franchise agreement with Mt. Diablo Resource Recovery. Mt. Diablo Resource Recovery provides both solid waste pickup and recycling pickup for commercial businesses within the City, as well as processing of demolition and recycling waste.

The solid waste collected by Mt. Diablo Resource Recovery is hauled to the Recycling Center and Transfer Station (RCTS) in Pittsburg, which is operated by Contra Costa Waste Service. Residential, commercial, and industrial waste is processed at this transfer facility and the residual material is hauled to Potrero Hills Landfill (PHLF) located in Solano County to the north.[9]

In 2008 a Construction and Demolition sort line was designed and installed at RCTS which diverts in excess of 90 percent of all construction and demolition material. Since then, the facility diversion has increased to over 40 percent of all incoming materials, assisting the Contra Costa County and Solano County jurisdictions in meeting and exceeding their Assembly Bill (AB) 939 goals, AB 341 goals and AB 1826 goals.[10]

Per the most recent Joint Technical Document prepared for the facility, as of March 18,2016, the PHLF had a remaining effective capacity of approximately 54.6 million cubic yards, or approximately 69 percent of the facility's total available capacity of 78.9 million cubic yards. Based on anticipated future refuse to be received at the facility, the site life of the PHLF is estimated to extent to approximately 2048.[11]

Gas and Electricity Infrastructure

Natural gas and electricity service within the City of Oakley is provided by the Pacific Gas & Electric Company (PG&E). PG&E is a San Francisco based, private company, publicly regulated by the California Public Utilities Commission and provides electricity and natural gas to the majority of Northern California. PG&E's long-range plans provide for availability of service to accommodate increased demand associated with projected growth.

11 Golder Associates. *Joint Technical Document, Potrero Hills Landfill* [pg. 12]. July 2017.

Currently, electricity and natural gas lines are located within a utility easement along portions of the northern and western boundaries of the project site. In addition, multiple gas lines are located within Bridgehead Road to the west of the project site.

4.5.3 REGULATORY CONTEXT

The following discussion contains a summary review of regulatory controls pertaining to utilities and service systems, including federal, State, and local rules and regulations.

Federal Regulations

The following are the federal environmental laws and policies relevant to utilities and service systems.

National Pollutant Discharge Elimination System

The National Pollutant Discharge Elimination System (NPDES) permit system was established in the federal Clean Water Act (CWA) to regulate municipal and industrial discharges to surface waters of the U.S. Each NPDES permit contains limits on allowable concentrations and mass emissions of pollutants contained in the discharge. Sections 401 and 402 of the CWA contain general requirements regarding NPDES permits. Section 307 of the CWA describes the factors that the Environmental Protection Agency (EPA) must consider in setting effluent limits for priority pollutants.

Safe Drinking Water Act

The federal Safe Drinking Water Act (SDWA), which was enacted in 1974, gives the U.S. EPA the authority to set standards for contaminants in drinking water supplies. The EPA was required to establish primary regulations for the control of contaminants that affected public health and secondary regulations for compounds that affect the taste, odor, and aesthetics of drinking water. Accordingly, the U.S. EPA set a maximum contaminant level or treatment technique for each of the 83 contaminants in drinking water listed in the SDWA. Under the provisions of SDWA, the California Department of Health Services (DHS) has the primary enforcement responsibility. Title 22 of the California Administrative Code establishes DHS authority, and stipulates State drinking water quality and monitoring standards.

State Regulations

The following are the State environmental laws and policies relevant to utilities and service systems.

California Green Building Code

The California Building Code (CBC) contains standards that regulate the method of use, properties, performance, or types of materials used in the construction, alteration, improvement, repair, or rehabilitation of a building or other improvement to real property. The CBC is adopted every three years by the Building Standards Commission (BSC). The 2016 California Green Building Standards Code, otherwise known as the CALGreen Code, is the most recent version of the code. In addition to the new State-wide mandates, CALGreen encourages local governments to adopt more stringent voluntary provisions, known as Tier 1 and Tier 2 provisions, to further reduce air pollutant emissions, improve energy efficiency, and conserve natural resources. If a local government adopts one of the tiers, the provisions become mandates for all new construction within that jurisdiction. The most significant features of the CALGreen Code related to public services and utilities include the following:

- Mandatory reduction in indoor water use, through the use of high-efficiency toilets, faucet aerators and other fixtures;
- Diversion of 50 percent of construction waste from landfills, increasing voluntarily to 65 and 75 percent for new homes; and
- Mandatory use of low-pollutant emitting interior finish materials such as paints, carpet, vinyl flooring, and particle board.

The 2019 CALGreen Code was published on July 1, 2019 and will take effect on January 1, 2020. The updated code will provide more stringent energy efficiency requirements for new commercial and industrial development,

Assembly Bill 1881

Assembly Bill (AB) 1881, the Water Conservation in Landscaping Act of 2006 required the Department of Water Resources (DWR) to update the Model Efficient Landscape Ordinance. Furthermore, AB 1881 required local agencies to adopt the updated model ordinance or an equivalent ordinance by January 1, 2010. If local jurisdictions failed to adopt the updated model ordinance or an equivalent by January 1, 2010, the DWR's updated model ordinance would automatically be adopted by statute. Chapter 31 of the City of Oakley Municipal Code includes the City's adopted Water-Efficient Landscape Requirements.

Sustainable Groundwater Management Act (SGMA)

On September 16, 2014, Governor Jerry Brown signed into law a three-bill legislative package, composed of AB 1739 (Dickinson), SB 1168 (Pavley), and SB 1319 (Pavley), collectively known as the SGMA. For the first time in its history, California was provided with a framework for sustainable, groundwater management - "management and use of groundwater in a manner that can be maintained during the planning and implementation horizon without causing undesirable results."

The SGMA requires governments and water agencies of high- and medium-priority basins to halt overdraft and bring groundwater basins into balanced levels of pumping and recharge. Under SGMA, such basins should reach sustainability within 20 years of implementing sustainability plans. For critically over-drafted basins, the deadline year is set at 2040. For the remaining high- and medium-priority basins, 2042 is the deadline. Through the Sustainable Groundwater Management Program, DWR provides ongoing support to local agencies through guidance and financial and technical assistance. SGMA empowers local agencies to form Groundwater Sustainability Agencies (GSAs) to manage basins sustainably and requires such GSAs to adopt Groundwater Sustainability Plans (GSPs) for crucial groundwater basins in California.

In 2007, DWD voluntarily adopted a Groundwater Management Plan for the Tracy Subbasin according to the procedures outlined in the SGMA.[12] The purpose of the Groundwater Management Plan is to provide a management framework for maintaining a high quality, reliable, and sustainable supply of groundwater from the Tracy Subbasin within DWD's sphere of influence. As noted in the 2015 UWMP, DWD intends to manage groundwater conjunctively with its surface water resources and support basin management objectives (BMOs) directed toward the sustainability of groundwater supplies on regional and local scales (e.g., groundwater basin and subbasin).[13] Groundwater management involves coordinated actions related to groundwater

[12] Diablo Water District. *Groundwater Management Plan for AB 3030.* May 2007.
[13] Diablo Water District. *Final 2015 Urban Water Management Plan.* June 2016.

withdrawal, replenishment, and protection to achieve long-term sustainability of the resource without detrimental effects on other resources and the environment. The Groundwater Management Plan sets forth the framework and related actions necessary to accomplish DWD's purposes while satisfying regional BMOs.

Urban Water Management Planning Act

In 1983, the California Legislature enacted the Urban Water Management Planning Act (Water Code Sections 10610 – 10656). The Act requires that every urban water supplier that provides water to 3,000 or more customers, or that provides over 3,000 acre-feet of water annually shall prepare and adopt an UWMP within a year of becoming an urban water supplier and update the plan at least once every five years. The Act specifies the content that is to be included in an UWMP, and states that urban water suppliers should make every effort to ensure the appropriate level of reliability in its water service sufficient to meet the needs of its various categories of customers during normal, dry, and multiple dry-years. The Act also states that the management of urban water demands and the efficient use of water shall be actively pursued to protect both the people of the State and their water resources.

California Integrated Waste Management Act - Assembly Bill 939

To minimize the amount of solid waste that must be disposed of by transformation (i.e., recycling) and land disposal, the State Legislature passed the California Integrated Waste Management Act of 1989 (AB 939), effective January 1990. According to AB 939, all cities and counties are required to divert 25 percent of all solid waste from landfill facilities by January 1, 1995, and 50 percent by January 1, 2000. Solid waste plans are required to explain how each city's AB 939 plan will be integrated within the respective county plan. The plans must promote (in order of priority) source reduction, recycling and composting, and environmentally safe transformation and land disposal. Cities and counties that do not meet this mandate are subject to $10,000-per-day fines.

Senate Bill 1016

In 2007, SB 1016 amended portions of AB 939, which allows the California Integrated Waste Management Board (CIWMB) to use per capita disposal as an indicator in evaluating compliance with the requirements of AB 939. Jurisdictions track and report their per capita disposal rates to CalRecycle.

AB 341 (2011) also established a statewide recycling goal of 75 percent; the 50 percent disposal reduction mandate still applies for cities and counties under AB 939 (1989). This law also requires certain businesses to recycle. To comply with this requirement, businesses may separate their recyclables and self-haul them to a recycling facility, recycle on-site, or subscribe to a mixed waste process service that diverts recyclables.

Assembly Bill 1826

AB 1826 (2014) requires certain business, beginning in 2016, to recycle their organic waste. The law also requires jurisdictions to develop and implement an organics recycling program. To comply with this requirement, businesses may separate their organic waste and self-haul it to an organics recycling facility, recycle on-site, or subscribe to a service that recycles organic waste.

Senate Bill 605

SB 605 (2014) directed the California Air Resources Board (CARB) to develop a comprehensive Short-Lived Climate Pollutant (SLCP) strategy in coordination with CalRecycle and other state and local agencies to reduce statewide emissions of SLCPs. SB 1383 (2016) directed the CARB

to approve and start implementing the SLCP strategy by 2018. Since methane is a SLCP produced from the decomposition of organic waste in landfills, the bill established targets to achieve a statewide 50-percent reduction in the level of the disposal of organic waste from the 2014 level by 2020, a 75-percent reduction in the level of the disposal of organic waste from the 2014 level by 2025, and no less than 20 percent recovery of edible food currently disposed by 2025. The bill required CalRecycle, in coordination with the CARB, to adopt regulations to achieve the organic waste reduction targets. The CARB approved a Short-Lived Climate Pollutant Strategy in 2017. CalRecycle is currently developing regulations.

Local Regulations

The following local standards and regulations are applicable to the proposed project.

City of Oakley General Plan

The following goals and policies related to utilities and service systems from the City of Oakley General Plan are applicable to the proposed project.

Goal 4.7 Promote and seek to assure the provision of safe, efficient, and cost-effective removal of waste from residences, businesses, and industry.

- Policy 4.7.1 Promote the reduction of the amount of waste disposed of in landfills by: 1) reducing the amount of solid waste generated (waste reduction); 2) reusing as much of the solid waste as possible (recycling); 3) utilizing the energy and nutrient value of the solid waste (waste to energy and composting); and 4) properly disposing of the remaining solid waste (landfill disposal).
- Policy 4.7.2 Support the diversion of as much waste as feasible from landfills through recovery and recycling.
- Policy 4.7.5 Consider solid waste disposal capacity in land use planning and permitting activities, along with other utility requirements, such as water and sewer service.

Goal 4.8 Assure the provision of potable water availability in quantities sufficient to serve existing and future residents.

- Policy 4.8.1 Coordinate future development with all water agencies to ensure facilities are available for proper water supply.
- Policy 4.8.4 Ensure that new development pays the costs related to the need for increased water system capacity.
- Policy 4.8.5 Ensure that water service systems be required to meet regulatory standards for water delivery, water storage, and emergency water supplies.
- Policy 4.8.12 Reduce the need for water system improvements by encouraging new development to incorporate water conservation measures to decrease peak water use.

- Program 4.8.A At the project approval stage, the City shall require new development to demonstrate that adequate water quantity

and quality can be provided. The City shall determine whether 1) capacity exists within the water system if a development project is built within a set period of time, or 2) capacity will be provided by a funded program or other mechanism. This finding will be based on information furnished or made available to the City from consultations with the appropriate water agency, the applicant, or other sources.

Goal 4.9 Assure the provision of sewer collection, treatment and disposal facilities that are adequate to meet the current and projected needs of existing and future residents.

Policy 4.9.1 Coordinate future development with the Ironhouse Sanitary District to ensure facilities are available for proper wastewater disposal.

Policy 4.9.4 Reduce the need for sewer system improvements by requiring new development to incorporate water conservation measures, which reduce flows into the sanitary sewer system.

Program 4.9.A Require new development to pay its fair share of the cost of on- and off-site infrastructure. This shall include installation of necessary public facilities, payment of impact fees, and participation in a Capital Improvement Program.

Program 4.9.D At the project approval stage, require new development to demonstrate that wastewater treatment capacity can be provided. The City shall obtain assurance that 1) capacity exists within the wastewater treatment system if a development project is built within a set period of time, or 2) capacity will be provided by a funded program or other mechanism. This finding will be based on information furnished or made available to the City from consultations with the Ironhouse sanitation District, the applicant, or other sources.

4.5.4 IMPACTS AND MITIGATION MEASURES

The following section describes the standards of significance and methodology utilized to analyze and determine the proposed project's potential impacts related to utilities and service systems. In addition, a discussion of the project's impacts, as well as mitigation measures where necessary, is presented.

Standards of Significance

Consistent with Appendix G of the CEQA Guidelines, determination of significant impacts is based on whether the proposed project would result in the following:

- Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications

facilities, the construction or relocation of which could cause significant environmental effects;
- Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years;
- Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments;
- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or
- Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

The proposed project's potential impacts associated with construction/expansion of stormwater drainage facilities are addressed in Chapter 4.3, Hydrology and Water Quality, of this EIR.

Method of Analysis

Determinations of the significance of the proposed project's impacts were made based on the project's modifications to existing or planned utilities, and the ability of the existing utilities to accommodate the proposed project, using the above significance criteria.

Water Supply and Conveyance

Projected water demand associated with the proposed project was evaluated by the DWD based on the historical consumption at the former DuPont Facility. The 2015 UWMP prepared for the DWD was used to determine the adequacy of existing water supplies for the proposed project and future anticipated demand.

Wastewater Treatment and Conveyance

The Sanitary Sewer Memo prepared for the proposed project by Coleman Engineering was used to evaluate the options of the proposed project to convey wastewater from the project site into the existing gravity sewer collection system on SR 4 operated by ISD, as well as the size and capacity required by the proposed new pump station.

Policies regarding sewers are found in Section 6.7 of the City of Oakley Municipal Code. Additionally, Coleman Engineering consulted with ISD for specific flow rates and capacities. Sanitary sewer flows are characterized by a diurnal curve, where flows tend to be low during early morning hours, at maximum sometime in the morning, and at maximum again in the afternoon/evening hours. In addition, sewer flows increase during wet weather as groundwater and rain water leaks into the system. Such leakage is termed inflow and infiltration (I/I). Groundwater (infiltration) seeps into sewer pipes through holes, cracks, joint failures, and faulty connections. Stormwater (inflow) rapidly flows into sewers by way of roof drain downspouts, foundation drains, storm drain cross-connections, and holes in manhole covers. Most I/I is caused by aging infrastructure that requires maintenance or replacement.
Design flow calculations were based on equivalent sizing units per 1,000 sf. Three options were evaluated within the memo to determine the most efficient and effective method for wastewater treatment and conveyance:

1. Pump into the existing Lauritzen Pump Station;
2. Pump from the project site to the existing Lauritzen Force Main Pipeline on Bridgehead Road; and

3. Pump from the project site directly to the Bridgehead Pump Station using a new project-specific Force Main Pipeline.

Solid Waste

Solid waste generated by the proposed project was estimated and considered with respect to the anticipated capacity at the solid waste facilities that would serve the proposed project. Sources of solid waste generation for the proposed project include demolition waste, construction material waste, and waste associated with long-term operations at the proposed facility.

Natural Gas and Electricity

The natural gas and electricity demand of the proposed project were estimated using the California Emissions Estimator Model (CalEEMod) version 2016.3.2 software. As discussed in further depth in Chapter 4.1, Air Quality and Greenhouse Gas Emissions, of this EIR, CalEEMod provides a standardized platform for the estimation of air quality emissions within California. To calculate air quality emissions, CalEEMod estimates the amount of natural gas and electricity that operation of a proposed project would demand. CalEEMod outputs are included as Appendix D to this EIR.

Project Impacts and Mitigation Measures

The following discussion of impacts is based on the implementation of the proposed project in comparison with the standards of significance identified above.

4.5-1 Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. Based on the analysis below, the impact is *less than significant*.

The following sections include analysis of potential environmental effects related to physical relocation or construction of water supply, wastewater treatment, and electric, natural gas, and telecommunications utilities necessary to serve the proposed project.

Water Supply Infrastructure

Currently, DWD operates an existing 24-inch water line in the railroad corridor along the southern boundary of the site. The 24-inch water line leaves the railroad corridor and extends to Wilbur Avenue, transitioning to a 10-inch line beneath the road. The line then extends north and ties to an existing line near the Antioch/Oakley Regional Shoreline. Additionally, the site contains a series of formerly privately-operated water lines.

As part of the proposed project, the private on-site water system would be removed completely. In addition, a portion of the existing DWD 24-inch line conflicts with the location of proposed Building 1 (the most southwesterly) and would be relocated east, under the proposed public street. Per DWD standards, any waterline serving more than one building must be owned and operated by DWD and each building must have its own metered potable water service. DWD facilities must be in public right of way or within an easement granted to DWD. Accordingly, the relocated water line in the

extension of Wilbur Avenue and C Street would be owned and operated by DWD, as would any water lines within A Street and B Street. From the DWD lines, individual services to Buildings 1 through 5 would be privately owned and operated. Figure 3-7 in Chapter 3 of this EIR provides an overview of the proposed utility improvements.

On-site fire hydrants would be served by a private fire loop within the drive aisles and parking areas and would be spaced to meet Fire Code requirements. Fire services would be sized to meet demand requirements calculated for each individual building and use. Additionally, the East Contra Costa Fire Protection District would review the proposed site plan and ensure that the current and proposed water conveyance infrastructure would be sufficient to serve the project site.

The proposed project would not necessitate the expansion of the existing DWD-owned water supply lines that would serve the project site. As noted above, the project would include relocation of an existing water line and construction of new private water supply infrastructure within the site, which would involve trenching and other ground-disturbing activity; however, off-site water utility improvements would not be required. Potential environmental effects associated with such ground-disturbing activities are analyzed throughout this EIR.

Wastewater Infrastructure

Development of the proposed project would include construction of a new six-inch sanitary sewer line that would extend from the beginning of Wilbur Avenue to the end of the cul de sac and then move south to service Buildings 1 and 2. The sewer lines would flow to a new lift station located on the north side of Wilbur Avenue. All lines within the project site would be sized to accommodate the flows generated by each building and use.

Per the Sanitary Sewer Memo written for the proposed project, three options were evaluated to determine the best wastewater conveyance plan. Two of the options would include connection to the Lauritzen and Bridgehead Pump Stations. However, both options would require sizable upgrades to all systems and would be environmentally intensive. Thus, the third option evaluated in the Memo would be implemented with development of the project site.

As part of the proposed project, a new pump station would be constructed on the project site within Wilbur Avenue, and would be known as the Oakley Logistics Center Pump Station. In addition, a new six-inch force main would connect to the pump station and extend approximately 2,500 feet south, along Bridgehead Road, and connect to the Bridgehead Pump Station. The new Oakley Logistics Center Force Main would parallel the existing Laurtizen Force Main in Bridgehead Road. Construction of the new pump station and force main would not have any effect on the existing Lauritzen Pump Station or Force Main.

However, the increased flow from the project site to the Bridgehead Pump Station would require the pump to operate more frequently and process at least 454 gallons per minute (gpm) in order to convey the anticipated peak flows from the upstream sewer sheds. At the current flow rate, the existing pumps would not be able to accommodate the increased flows from the project site. Thus, the pumps at the

Bridgehead Pump Station would require upgrading, as well as a new epoxy coating in the wet well. Additionally, considering the additional flows from the project site, the velocity would be too high for any additional flow to be added to the existing four-inch Bridgehead Force Main. Thus, the proposed project includes replacement of the existing main with a six-inch pipeline.

Construction of the new Oakley Logistics Center Force Main would occur within previously disturbed areas in or adjacent to existing roadways, and would not permanently degrade the existing environmental setting. Potential impacts related to criteria and pollutant and greenhouse gas (GHG) emissions associated with the sewer improvements are analyzed in Chapter 4.1, Air Quality and Greenhouse Gas Emissions. In addition, potential biological impacts associated with the sewer improvements are analyzed in Chapter 4.2. All proposed sewer improvements are presented in Figure 4.5-1 below.

Electricity, Natural Gas, and Telecommunications

Electricity and natural gas services within the project area are provided by PG&E. The proposed project would include installation of new connections to the existing electrical and gas lines located within Bridgehead Road. The project site currently contains easements for gas pipe lines at the north and south borders of the project site. New easements would be created for any new improvements required to serve the project.

Conclusion

Based on the above, the proposed on-site water system improvements would meet the minimum design standards of the City of Oakley and DWD. While construction of the wastewater conveyance system would require construction of a new pump station and force main as well as improvements to existing wastewater infrastructure, the construction and expansion of such has been analyzed as part of the proposed project.

Therefore, the proposed project would have a ***less-than-significant*** impact related to requiring or resulting in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.

Mitigation Measure(s)

None required.

4.5-2 Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. Based on the analysis below, the impact is *less than significant*.

As noted previously, the 2015 UWMP assumed development of the project site with a large heavy industrial user to replace the former Dupont chemical manufacturing facility. The UWMP included up to 1.1 mgd of water consumption at the former DuPont location. Since 2015, long-term, significant supply issues have not arisen that would impact the District's ability to serve the project site.

Figure 4.5-1
Proposed Sewer Improvements

Additionally, the estimated water consumption for the proposed project is significantly lower than the demands estimated in 2015. Thus, per a Memo from the DWD, the District has sufficient water supplies available to serve the project.[14]

Under the current General Plan land use and zoning designations, full buildout of the project site could include up to 1,985,304 sf of industrial uses. Based on the 2015 UWMP, industrial land uses require the smallest percentage of water amongst other land uses. For comparison, single-family residential uses are projected to require 1,475 MG of water in the year 2020 while industrial uses are projected to need 73 MG.

Given the relatively small amount of water required for industrial uses, that the UWMP has accounted for buildout of an industrial land use on the project site, and because the DWD has confirmed that water supplies would be sufficient to serve the project site, the proposed project would have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. Thus, a ***less-than-significant*** impact would occur.

Mitigation Measure(s)

None required.

4.5-3 Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments. Based on the analysis below, the impact is *less than significant.*

As discussed above, the proposed project would construct new sanitary sewer lines on the project site with connection to a new sewer pump station and force main. The average peak flows of the proposed project were calculated by Coleman Engineering in the Sanitary Sewer Memo and are listed in Table 4.5-4 below. The calculations include a measurement of an equivalent service unit (ESU) per 1,000 sf based on 2,187,324 sf. Since preparation of the Sanitary Sewer Memo, the proposed project square footage has been reduced to 1,985,304 sf. Thus, the analysis presented herein is conservative.

Table 4.5-4
Anticipated Design Flows

ESU/1,000 sf	gpd/ESU	Peaking Factor	GWI (gpm)	Peak Flow (gpm)
0.25	195	3.5	15	274

Source: Coleman Engineering, 2019

An ESU is described as a measurement unit based on impervious surface area of an average improved lot or parcel, determined by a statistically significant sampling of such parcels. Additionally, the Memo calculated the gallons per day (gpd) per ESU in order to determine the estimated wastewater flows per day at the project site based

[14] Diablo Water District. *RE: Logistics Center – Development Agreement (DA 01-18), Rezone (RZ 08-18), Tentative Map (05-18), and Design Review (DR 12-18).* January 9, 2019.

on the impervious surface area. Groundwater infiltration (GWI) was also evaluated in order to determine the extraneous groundwater flows which would be processed by pump stations and force mains within the City. Finally, all calculations were used to determine the peak flow rate of wastewater produced by the project site which would contribute to the City's overall wastewater system.

Based on the table above, the proposed project would result in a peak flow of 274 gpm. Thus, the pump station which wastewater would be directed must be able to accommodate an increase in 274 gpm. As discussed above, the Lauritzen Pump Station to the north of the project site is currently at full capacity during wet weather. Additionally, the Bridgehead Pump station has an approximate average flow of 180 gpm. Because neither of the existing pump stations in the vicinity of the project area able to accommodate flows of 274 gpm from the project site, the proposed project would include construction of a new pump station on the project site, as well as connection and construction of a new force main, which would direct wastewater flows to the Bridgehead Pump Station. The new force main would be four-inches in diameter in order to process the 274 gpm from the pump station at a velocity of 7.0 feet per second. With construction of the new pump station and connecting force main, the proposed project would result in adequate capacity for wastewater conveyance.

In addition to the construction of new infrastructure, the proposed project would upgrade both the Bridgehead Pump Station and the Bridgehead Force Main. The Bridgehead Pump Station would be upgraded to accommodate at least 454 gpm of wastewater in order to convey the anticipated peak flows from the upstream sewer sheds. The Bridgehead Force Main would also be upgraded to six-inches.

Based on the above anticipated flow rate from the project site, the proposed project would require construction of a new pump station and force main as well as upgrades to the existing Bridgehead Pump Station and Force Main. Thus, upon buildout of the proposed project, the Sanitary Sewer Memo has determined that the project would result in a determination by the wastewater treatment provider that adequate capacity to serve the project's projected demand in addition to the provider's existing commitments exists. Thus, a ***less-than-significant*** impact would occur.

Mitigation Measure(s)
None required.

4.5-4 Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or fail to comply with federal, state, and local management and reduction statutes and regulations related to solid waste. Based on the analysis below, the impact is *less than significant*.

The proposed project would generate solid waste associated with demolition and construction activities as well as from future operations of the proposed development. Construction debris would be disposed of in accordance with applicable federal, State,

and local regulations and standards. As discussed previously, solid waste collection services would be provided by the City of Oakley in coordination with Oakley Disposal, Inc. and Mt. Diablo Recycling. Solid waste collected by Oakley Disposal is hauled to the RCTS in Pittsburg, which is operated by Contra Costa Waste Service. Residential, commercial, and industrial waste is processed at the transfer facility and the residual material is hauled to the PHLF located in Solano County to the north. As stated above, the PHLF has remaining effective capacity of approximately 54.6 million cubic yards, or approximately 69 percent of the facility's total available capacity of 78.9 million cubic yards. The total acreage of the Landfill is approximately 525 acres, with a disposal acreage of 340 acres. The most recent solid waste permit was issued for the Landfill on February 14, 2012. According to the Permit, the estimated closure date is 2048.[15]

The proposed project consists of the demolition of two existing on-site structures totaling approximately 14,418 sf and subsequent development of an approximately 1,985,304 sf of total building area, parking areas, and various associated improvements. The demolition and activity would generate debris, which could create a short-term impact on solid waste disposal, while operations associated with the proposed facilities would generate additional waste over the long-term life of the project.

The U.S. EPA's report, *Estimating 2003 Building-Related Construction and Demolition Materials Amounts*, was used to estimate the amount of waste that would be generated by construction activities. The EPA estimates that non-residential construction generates an average of 4.34 lbs/sf, while non-residential demolition generates an average of 158 lbs/sf.[16] The proposed project would therefore be expected to generate approximately 8,616,219 lbs of construction waste (1,985,304 sf x 4.34 lbs/sf) and approximately 2,278,044 lbs of demolition waste (14,418 sf X 158 lbs/sf). Thus, the proposed project would be anticipated to generate a total of 10,894,263 lbs, or approximately 5,447 tons, of waste during demolition and construction activities.

The construction and demolition debris estimate presented above represents a conservative analysis of the maximum potential waste production from the construction and demolition process. The City of Oakley Municipal Code requires at least 50 percent diversion of construction and demolition waste for projects. As such, a minimum of 2,770 tons of waste would be diverted away from landfill disposal during construction and demolition. Considering the applicable Municipal Code requirements, the proposed project would be anticipated to contribute approximately 2,770 tons of waste. Construction and demolition waste generation represents a short-term increase in waste generation and all disposal of construction and demolition debris would adhere to the requirements set forth throughout Section 4.20 of the Municipal Code. Therefore, waste from construction and demolition associated with the project would not violate any City policies or exceed the allowable disposal limit at the PHLF.

Long-term operation of the proposed project would produce solid waste that would be collected by the City of Oakley and taken to the RCTS and eventually hauled to the

[15] Solano County Department of Resource Management. *Solid Waste Facility Permit (Potrero Hills Landfill).* February 14, 2012.

[16] U.S. Environmental Protection Agency. *Estimating 2003 Building-Related Construction and Demolition Materials Amounts.* 2009.

PHLF. Solid waste generated by the project site would be typical of an industrial use. The City's General Plan EIR analyzed solid waste impacts with development of the City and determined that the policies implemented in the General Plan will ensure that the production of waste does not strain solid waste and recycling services. The proposed project would adhere to all applicable policies in the General Plan, including 4.7.1, which requires projects promote the reduction of the amount of waste disposed of in landfills by reducing, recycling, composting, and properly disposing of solid waste.

Based on the above, solid waste generated from the construction and operation of the proposed project would not exceed the permitted capacity of the RCTS or PHLF; as a result, impacts related to increased demand for solid waste disposal services would be ***less-than-significant***.

Mitigation Measure(s)
None required.

Cumulative Impacts and Mitigation Measures

As defined in Section 15355 of the CEQA Guidelines, "cumulative impacts" refers to two or more individual effects which, when considered together, are considerable, compound, or increase other environmental impacts. The individual effects may be changes resulting from a single project or a number of separate projects. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects.

4.5-5 Increase in demand for utilities and service systems associated with the proposed project, in combination with future buildout of the City. Based on the analysis below, the project's incremental contribution to this significant cumulative impact is *less than cumulatively considerable*.

Implementation of the proposed project would contribute to an increased demand for public services and utilities in the City of Oakley and the region. The impacts of such demand is discussed below.

Water

Implementation of the proposed project would contribute to an increased demand for public services and facilities in the DWD region and the City's future water demand is anticipated to continue to increase as approved projects build out and new developments are approved and constructed within the DWD's water service area. The DWD currently has an extensive water shortage contingency plan in place, as described in the 2015 UWMP. Based on the 2015 UWMP, the DWD anticipates surplus supply for the demand of water in the District.

Development of the project site has been anticipated and analyzed by the UWMP and the City's General Plan. Both analyses have taken into account concurrent growth with development of the proposed project and determined that water supplies are sufficient to serve the project site.

Wastewater

As described above, the Sanitary Sewer Memo identified the best option for the proposed project's wastewater conveyance system. Based on the Memo, development of the project would include construction of a new sanitary sewer pump station on the project site as well as connection to and construction of a new force main which would extend approximately 2,500 feet south along Bridgehead Road to the Bridgehead Pump Station. Based on the current flow rate and projection of future wastewater directed to the Bridgehead Pump Station, the Memo determined that the existing capacity of the pump station would not be sufficient to meet the project demands. Thus, the proposed project would also include upgrades to the Bridgehead Pump Station and expansion of the Bridgehead Force Main to a six-inch pipeline.

Based on the above, the construction of new on-site sewer conveyance infrastructure and the improvements to existing infrastructure would ensure that the proposed project would not increase the demand for services in combination with future buildout of the City above what has been anticipated by the City's General Plan.

Solid Waste

The PHLF is expected to have adequate capacity to serve the regional waste disposal needs until the anticipated closure date of approximately 2048. Similar to water supply demands, as standards and regulations regarding solid waste reduction and recycling programs become more stringent, the overall demand for solid waste disposal services would likely reduce compared to baseline conditions. Furthermore, Oakley's General Plan EIR concluded that impacts related to solid waste would be less than significant with implementation of Goal 4.7 mentioned above. Potential future development within the City would be required to comply with all applicable General Plan policies, which would encourage recycling and reduce construction waste during development of the project. As discussed above, development of the project site with an industrial center has been anticipated in the General Plan EIR and thus, solid waste production at the site has been analyzed. Upon development of the proposed project, all relevant goals and policies set forth by the City and County would be applied.

Electricity and Natural Gas

The proposed project would result in energy consumption in the form of electricity and natural gas for interior and exterior building lighting, heating, ventilation, and air conditioning (HVAC), electronic equipment, machinery, refrigeration, appliances, security systems, and more. In addition, maintenance activities during operations, such as landscape maintenance, would involve the use of electric or fueled equipment. The proposed project site is located adjacent to other existing development to the north that are currently supplied electricity and natural gas services by PG&E. The project site would connect to existing PG&E utility lines in the project vicinity.

Electricity and natural gas demand associated with the proposed project were estimated using California Emissions Estimator Model (CalEEMod). Operational energy use associated with the proposed project based on CalEEMod outputs is anticipated to be 30.1 GWh/yr. For comparison, the Countywide consumption of electricity in 2018 totaled 9,308 GWh. As such, the proposed project would account for 0.0032 percent of the County's total electricity use. Additionally, the project's natural gas consumption would total approximately 0.358 million therms/yr. The

Countywide consumption of natural gas in 2018 was 1,124 million therms. Thus, the project would account for 0.0003 percent of the County's total usage.

Based on the above, the proposed project's incremental increase in electricity and natural gas consumption would not result in a cumulative increase in demand for electricity or natural gas in combination with future buildout of the City.

Conclusion

Based on the above, adequate water supplies exist to accommodate cumulative growth within the City, including the increased demand due to operation of the proposed project. In addition, the project would include construction of new wastewater conveyance infrastructure in order to accommodate the increased flows. The project would not result in any significant cumulative impacts related to necessary expansion of electrical and natural gas infrastructure. Thus, the project's impact would be minimized to the maximum extent feasible such that the project's incremental contribution to the significant cumulative impact would be ***less than cumulatively considerable***.

Mitigation Measure(s)

None feasible.

5. Statutorily Required Sections

5. STATUTORILY REQUIRED SECTIONS

5.1 INTRODUCTION

The Statutorily Required Sections chapter of the Draft EIR includes discussions regarding those topics that are required to be included in an EIR, pursuant to CEQA Guidelines, Section 15126.2. The chapter includes a discussion of the proposed project's potential to induce growth. In addition, the chapter includes lists of significant irreversible environmental changes, cumulative impacts, and significant and unavoidable impacts caused by the proposed project.

5.2 GROWTH-INDUCING IMPACTS

An EIR must discuss the ways in which a proposed project could foster economic or population growth in the vicinity of the project and how that growth would, in turn, affect the surrounding environment (see CEQA Guidelines, Section 15126.2[d]). Growth can be induced in a number of ways, including through the elimination of obstacles to growth or through the stimulation of economic activity within the region. Examples of projects likely to have growth-inducing impacts include extensions or expansions of infrastructure systems beyond what is needed to serve project-specific demand, and development of new residential subdivisions or office complexes in areas that are currently only sparsely developed or are undeveloped. The discussion of the removal of obstacles to growth relates directly to the removal of infrastructure limitations or regulatory constraints that could result in growth unforeseen at the time of project approval.

The CEQA Guidelines are clear that while an analysis of growth-inducing effects is required, it should not be assumed that induced growth is necessarily significant or adverse. A number of issues must be considered when assessing the growth-inducing effects of development plans, such as the proposed project, including the following:

- **Elimination of Obstacles to Growth:** The extent to which infrastructure capacity provided to accommodate the proposed project would allow additional development in surrounding areas; and
- **Economic Effects**: The extent to which development of the proposed project could cause increased activity in the local or regional economy.

Growth-inducing impacts associated with the proposed project would be considered to be any effects of the project allowing for additional growth or increases in population beyond that proposed by the project or anticipated in the Oakley General Plan.

The proposed project would include demolition of the existing on-site structures to construct five new buildings and associated improvements within the 143.3-acre project site. The proposed buildings would range in size from 150,000 square feet (sf) to 642,960 sf, for a total of approximately 2.0 million sf, and would include front load and cross docked warehouses. For the purpose of this EIR, the buildings are assumed to be capable of accommodating a range of light industrial, warehousing, distribution, e-commerce fulfillment, and light manufacturing uses. Specific uses for the buildings would be subject to the site-specific development standards as set forth in the proposed Planned Unit Development.

Given that the proposed project would not create housing, the nature of the project would not directly induce population growth. The project site is located within the vicinity of existing residential land uses, namely east of the site and south, across Main Street. Thus, housing opportunities are available in the project area should employees need to relocate for new employment at the proposed industrial facility.

While the proposed project would not create housing, which would directly affect growth-inducing factors, the project would not create obstacles to growth within the area. A physical obstacle to growth typically involves the lack of public service infrastructure. The extension of public service infrastructure, including roadways, water mains, and sewer lines, into areas that are not currently provided with these services, would be expected to support new development. Similarly, the elimination or change to a regulatory obstacle, including existing growth and development policies, could result in new growth. The primary infrastructure systems installed as part of the proposed project, including roadways and wastewater, water, and storm drain systems, would be sized to meet on those demands created by the proposed project. In addition, utility lines currently exist in the project vicinity and the proposed project would connect to the existing lines.

Therefore, because the proposed project would not directly induce any population growth and infrastructure required for the proposed project would be sized to meet the demands created solely by the project, the proposed project would not be expected to result in any growth-inducing impacts.

5.3 CUMULATIVE IMPACTS

CEQA Guidelines, Section 15130 requires that an EIR discuss the cumulative and long-term effects of the proposed project that adversely affect the environment. “Cumulative impacts” are defined as “two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts” (CEQA Guidelines, Section 15355). “[I]ndividual effects may be changes resulting from a single project or a number of separate projects” (CEQA Guidelines, Section 15355, subd. [a]). “The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time” (CEQA Guidelines, Section 15355, subd. [b]).

The need for cumulative impact assessment reflects the fact that, although a project may cause an “individually limited” or “individually minor” incremental impact that, by itself, is not significant, the increment may be “cumulatively considerable,” and, thus, significant, when viewed together with environmental changes anticipated from past, present, and probable future projects (CEQA Guidelines, Section 15064, subd. [h(1)], Section 15065, subd. [c], and Section 15355, subd. [b]). Accordingly, particular impacts may be less than significant on a project-specific basis but significant on a cumulative basis if their small incremental contribution, viewed against the larger backdrop, is cumulatively considerable. However, it should be noted that CEQA Guidelines, Section 15064, Subdivision (h)(5) states, “[…] the mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project’s incremental effects are cumulatively considerable.” Therefore, even where cumulative impacts are significant, any level of incremental contribution is not necessarily deemed cumulatively considerable.

Section 15130(b) of CEQA Guidelines indicates that the level of detail of the cumulative analysis need not be as great as for the project impact analyses, but that analysis should reflect the severity of the impacts and their likelihood of occurrence, and that the analysis should be focused, practical, and reasonable. To be adequate, a discussion of cumulative effects must include the following elements:

> (1) Either (a) a list of past, present and probable future projects, including, if necessary, those outside the agency's control, or (b) a summary of projections contained in an adopted general plan or related planning document, or in a prior certified EIR, which described or evaluated regional or area-wide conditions contributing to the cumulative impact, provide that such documents are reference and made available for public inspection at a specified location;
>
> (2) A summary of the individual projects' environmental effects, with specific reference to additional information and stating where such information is available; and
>
> (3) A reasonable analysis of all of the relevant projects' cumulative impacts, with an examination of reasonable, feasible options for mitigating or avoiding the project's contribution to such effects (Section 15130[b]).

For some projects, the only feasible mitigation measures will involve the adoption of ordinances or regulations, rather than the imposition of conditions on a project-by-project basis (Section 15130[c]). Section 15130(a)(3) states that an EIR may determine that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable, and thus not significant, if a project is required to implement or fund the project's fair share of a mitigation measure or measures designed to alleviate the cumulative impact.

Cumulative Setting

The lead agency should define the relevant geographic area of inquiry for each impact category (id., Section 15130, subd. [b][3]), and should then identify the universe of "past, present, and probable future projects producing related or cumulative impacts" relevant to the various categories, either through the preparation of a "list" of such projects or through the use of "a summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or area wide conditions contributing to the cumulative impact" (id., subd. [b][1]).

Cumulative impacts are analyzed in each of the technical chapters of this EIR (Chapters 4.1 through 4.5). The majority of the cumulative analyses for the proposed project presented throughout this EIR are based on buildout of the City's General Plan as well as present and probable future projects within the region. With regard to the Transportation and Circulation analysis presented in this EIR, cumulative traffic volumes were developed assuming incremental growth in background traffic (one percent per year) based on the County's traffic model. Limited situations exist where the cumulative geographic setting differs related to certain environmental issue areas. One example includes air quality, for which the cumulative geographic setting is the San Francisco Bay Area Air Basin (SFBAAB). Global climate change is, by nature, a cumulative impact. Emissions of greenhouse gas (GHG) contribute, on a cumulative basis, to the significant adverse environmental impacts of global climate change (e.g., sea level rise, impacts to water supply and water quality, public health impacts, impacts to ecosystems, impacts to agriculture, and other environmental impacts). A single project could not generate enough GHG emissions to contribute noticeably to a change in the global average temperature. However, the combination

of GHG emissions from a project in combination with other past, present, and future projects could contribute substantially to the world-wide phenomenon of global climate change and the associated environmental impacts. Although the geographical context for global climate change is the Earth, for analysis purposes under CEQA, and due to the regulatory context pertaining to GHG emissions and global climate change applicable to the proposed project, the geographical context for global climate change in this EIR is limited to the State of California.

5.4 ENERGY CONSERVATION

In order to ensure energy implications are considered in project decisions, Appendix G of CEQA Guidelines requires a discussion of the potential energy impacts of projects, with particular emphasis on avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy. The goal of conserving energy implies the wise and efficient use of energy. Per Appendix G, a project would result in a significant impact related to energy conservation if the project would:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction operation; or
b. Conflict with or obstruct a State or local plan for renewable energy or energy efficiency.

The main forms of available energy supply are electricity, natural gas, and oil. A description of the 2016 California Green Building Standards Code, with which the proposed project would be required to comply, as well as discussions regarding the proposed project's potential effects related to each form of energy supply during construction and operations is provided below.

California Green Building Standards Code

The 2019 California Green Building Standards Code, otherwise known as the CALGreen Code (CCR Title 24, Part 11), is a portion of the California Building Standards Code (CBSC), which will become effective with the rest of the CBSC on January 1, 2020. The purpose of the CALGreen Code is to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices. The provisions of the code apply to the planning, design, operation, construction, use, and occupancy of every newly constructed building or structure throughout California.

The CALGreen Code encourages local governments to adopt more stringent voluntary provisions, known as Tier 1 and Tier 2 provisions, to further reduce emissions, improve energy efficiency, and conserve natural resources. If a local government adopts one of the tiers, the provisions become mandates for all new construction within that jurisdiction.

Building Energy Efficiency Standards

The 2019 Building Energy Efficiency Standards is a portion of the CBSC (CCR Title 24, Parts 6 and 11) and expands upon energy efficiency measures from the 2016 Building Energy Efficiency Standards, resulting in a reduction of approximately 30 percent in energy consumption relative to the 2016 standards for non-residential structures. Energy reductions relative to previous Building Energy Efficiency Standards would be achieved through various regulations including requirements for the use of high efficacy lighting, improved water heating system efficiency, and high-performance mechanical equipment.

Construction Energy Use

Appendix F of the CEQA Guidelines identifies several potential sources of energy conservation impacts, including the project's construction energy requirements and energy use efficiencies by amount and fuel type. Construction of the proposed project would result in a temporary increase in energy consumption in the area.

As discussed in Chapter 4.1, Air Quality and Greenhouse Gas Emissions, of this EIR, construction of the proposed project is conservatively assumed to commence in March 2020 and would occur over approximately three years. All construction equipment and operation thereof would be regulated per the California Air Resources Board (CARB) In-Use Off-Road Diesel Vehicle Regulation, which includes measures to reduce emissions from vehicles by subjecting fleet owners to retrofit or accelerate replacement/repower requirements, imposing idling limitations on owners, operators, renters, or lessees of off-road diesel vehicles. Project construction would also be required to implement all of the Basic Construction Mitigation Measures provided in the BAAQMD CEQA Guidelines, which include limits on idling times and requirements related to construction equipment maintenance and upkeep. Such regulations promote the use of efficient, modern equipment, which often results in the consumption of less fuel.

Construction equipment operating at the project site would occur over a relatively short duration in comparison to the operational lifetime of the proposed project, and would operate intermittently over the construction period for the project. Construction activities would occur during normal daytime working hours, between 7:30 AM and 7:00 PM Monday through Friday, and from 9:00 AM to 7:00 PM on Saturdays and Sundays, per Section 4.2.208 of the Municipal Code. Furthermore, implementation of Mitigation Measure 4.1-1(a) would require that all off-road heavy-duty diesel-powered equipment (e.g., rubber tired dozers, excavators, graders, scrapers, pavers, paving equipment, and cranes) to be used for each phase of construction of the project (i.e., owned, leased, and subcontractor vehicles) meet U.S. Environmental Protection Agency emissions standards for Tier 4 engines or equivalent, which would increase the fuel efficiency of equipment used on the project site.

The CARB has prepared the *2017 Climate Change Scoping Plan Update (The 2017 Climate Change Scoping Plan Update)*,[1] which builds upon previous efforts to reduce GHG emissions and is designed to continue to shift the California economy away from dependence on fossil fuels. Appendix B of the 2017 Scoping Plan includes examples of local actions (municipal code changes, zoning changes, policy directions, and mitigation measures) that would support the State's climate goals. The examples provided include, but are not limited to, enforcing idling time restrictions for construction vehicles, utilizing existing grid power for electric energy rather than operating temporary gasoline/diesel-powered generators, and increasing use of electric and renewable fuel-powered construction equipment. The regulations described above, with which the proposed project must comply, as well as the required mitigation measures set forth in this EIR, would be consistent with the intention of the 2017 Scoping Plan and the recommended actions included in Appendix B of the 2017 Scoping Plan. Additionally, the City of Oakley has taken action to meet the goals of the State by outlining a comprehensive and actionable approach for energy reduction through the Strategic Energy Plan, where sustainable construction practices are encouraged.

Nonetheless, buildout of the proposed project would involve on-site energy demand and consumption related to use of oil in the form of gasoline and diesel fuel for construction worker

[1] California Air Resources Board. *California's 2017 Climate Change Scoping Plan.* November 2017.

vehicle trips, hauling and materials delivery truck trips, and operation of off-road construction equipment. In addition, diesel-fueled portable generators may be necessary to provide additional electricity demands for temporary on-site lighting, welding, and for supplying energy to areas of the site where energy supply cannot be met via a hookup to the existing electricity grid.

Electricity Demand During Construction

Typically, at construction sites, electricity from the existing grid is used to power portable and temporary lights or office trailers. Because grid electricity would be utilized primarily for steady sources such as lighting, not sudden, intermittent sources such as welding or other hand-held tools, the increase in electricity usage at the site during construction would not be expected to cause any substantial peaks in demand. However, the base demand for electricity in the area would increase.

The proposed project is anticipated to be built out over multiple phases, one-by-one, where only portions of the project site would be developed at a time, with periods of non-construction between phases. Overall, construction equipment operating at the project site would occur over a relatively short duration in comparison to the operational lifetime of the proposed project, and would operate intermittently over the construction period. As the site develops, operational electricity demand would become the dominant demand source. Operational electricity demand would be much greater than construction, and is discussed in further detail below.

The Pacific Gas and Electric Company (PG&E) supplies electricity to the City of Oakley and would serve the site following construction of the proposed project. Electricity is provided from PG&E-owned sources, and additional electricity supplies are purchased by PG&E from other energy providers. Thus, PG&E relies on a variety of electricity sources including hydropower, natural gas-fired generators, nuclear, and renewable energy sources.[2] Construction of the proposed project, which would result in temporary increases in electricity demand, would not cause a permanent or substantial increase in demand that would exceed PG&E's demand projections or exceed the ability of PG&E's existing infrastructure to handle such an increase.

Based on the above, construction of the proposed project would not cause a permanent or substantial increase in demand that would exceed demand projections for the region or such that the existing PG&E supplies or infrastructure could not handle the increase. Therefore, project construction would not result in any significant impacts on local or regional electricity supplies, the need for additional capacity, or on peak or base period electricity demands. As such, the temporary increase in electricity due to project construction activities would not be considered an inefficient, wasteful, and unnecessary consumption of energy, and significant adverse impacts on electricity resources would not occur.

Oil Demand During Construction

Worker, delivery, and hauling vehicle trips would be generated during construction. Worker vehicle trips are assumed to use gasoline, and delivery and hauling trucks are assumed to use diesel fuel. Diesel fuel would also be used to power the construction and off-road equipment necessary for construction activities, including rubber-tired dozers, tractors, excavators, cranes, and other types of equipment. In addition, diesel-fueled portable generators may be used where electricity from the grid cannot be provided or for where more immediate electricity is needed such as for welding or other hand tools. Overall, construction equipment operating at the project site

[2] Pacific Gas & Electric Company. *Company Profile*. Available at: https://www.pge.com/en_US/about-pge/company-information/profile/profile.page. Accessed June 2019.

would occur over a relatively short duration in comparison to the operational lifetime of the project and would be intermittent over the period of construction for the project. Operational oil demand would be much greater than construction oil demand, and is discussed further below.

A number of federal, State, and local standards and regulations exist that require improvements in vehicle efficiency, fuel economy, cleaner-burning engines, and emissions reductions. For example, as noted above, CARB has adopted the In-Use Off-Road Diesel Vehicle Regulation, which is intended to reduce emissions from in-use, off-road, heavy-duty diesel vehicles in California by imposing limits on idling, requiring all vehicles to be reported to CARB, restricting the addition of older vehicles into fleets, and requiring fleets to reduce emissions by retiring, replacing, or repowering older engines, or installing exhaust retrofits. The In-Use Off-Road Diesel Vehicle Regulation would subsequently help to improve fuel efficiency and reduce GHG emissions. Any licensed contractor for the project and equipment would have to be in compliance with all applicable regulations, such as the in-use, off-road, heavy-duty vehicle regulation. Thus, the proposed project would comply with existing standards related to construction fuel efficiency. Technological innovations and more stringent standards are being researched, such as multi-function equipment, hybrid equipment, or other design changes, which could help to reduce demand on oil and emissions associated with construction.

Overall, the temporary increase in gasoline and diesel consumption due to project construction activities would not be an inefficient, wasteful, and unnecessary consumption of energy, and significant adverse impacts on oil resources would not occur.

Conclusion

Construction of the proposed project would result in a temporary increase in demand for energy resources. However, the temporary increase would not result in a significant increase in peak or base demands or require additional capacity from local or regional energy supplies. In addition, the proposed project would be required to comply with all applicable regulations related to energy conservation and fuel efficiency, which would help to reduce the temporary increase in demand. As such, the project would not result in an inefficient, wasteful, and unnecessary consumption of energy. Therefore, buildout of the proposed project would result in a less-than-significant impact on energy resources during construction.

Operational Energy Use

In order to ensure energy implications are considered in project decisions, Appendix F of the CEQA Guidelines requires a discussion of the potential energy impacts of a project, with particular emphasis on avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy. Appendix F identifies several potential methods of evaluating a project's energy use, which are listed as follows and discussed in further detail below, with the exception of the project's construction-related energy requirements and energy use efficiencies, which are discussed above:

- The project's energy requirements and energy use efficiencies by amount and fuel type for each stage of the project including construction, operation, maintenance and/or removal.
- The effects of the project on local and regional energy supplies and on requirements for additional capacity.
- The effects of the project on peak and base period demands for electricity and other forms of energy.

- The degree to which the project complies with existing energy standards.
- The effects of the project on energy resources.
- The project's projected transportation energy use requirements and its overall use of efficient transportation alternatives.

Building Energy

The project site is currently developed with two existing buildings, totaling 11,778 sf and 2,640 sf, respectively. Prior to vacancy, the buildings were connected to PG&E utility lines and contributed to energy use within the City. As part of the proposed project, the existing buildings would be demolished and the site would be redeveloped with warehouse and distribution uses. The proposed buildings would connect to existing PG&E utility lines in the project vicinity. Energy use associated with operation of the proposed project would be typical of industrial park uses, requiring electricity and natural gas for interior and exterior building lighting, heating, ventilation, and air conditioning (HVAC), electronic equipment, machinery, refrigeration, security systems, and more. The proposed project's operational emissions were estimated using CalEEMod. The modeling performed for the proposed project included compliance with BAAQMD rules and regulations (i.e., low-VOC [volatile organic compounds] paints and low-VOC cleaning supplies), as well as with the 2019 California Building Energy Efficiency Standards Code. All buildings within the State of California are required to comply with the mandatory standards within the 2019 California Building Energy Efficiency Standards Code.

The proposed project would increase the intensity of development within the project site from current levels, and result in energy demands for natural gas of approximately 21,430,000 kBTU/yr and demands for electricity of approximately 30,000,000 kWhr/yr. Such demands for natural gas and electricity would be higher than what currently exists for the project site; however, increased energy demand does not necessarily mean that a project would have an impact related to energy resources. Based on Appendix F of the CEQA Guidelines, a proposed project would result in an impact related to energy resources if a project would result in the inefficient use or waste of energy.

As stated above, structures included in the proposed project would be subject to all relevant provisions of the 2019 update of the CBSC, including the 2019 Building Energy Efficiency Standards. Adherence to the most recent CALGreen and the 2019 Building Energy Efficiency Standards would require that new efficacy lighting be installed, as well as ensure the efficient use of electricity and natural gas through the incorporation of such features as efficient water heating systems, and high-performance mechanical equipment.

Transportation Energy

The annual VMT at full buildout of the proposed project is anticipated to be approximately 7,561,950, based on CalEEMod outputs for the project (see Appendix D). The average fuel economy for the U.S. passenger vehicle fleet was 24.2 miles per gallon (mpg) in 2017, the most recent year such data is available.[3] An average of 24.2 mpg and an annual VMT of 7,561,950 would result in the consumption of 7,440 barrels of gasoline a year. California is estimated to

[3] U.S. Energy Information Administration. *Total Energy, Table 1.8 Motor Vehicle Mileage, Fuel Consumption, and Fuel Economy*. Available at: https://www.eia.gov/totalenergy/data/browser/?tbl=T01.08#/?f=A&start=200001. Accessed September 2019.

consume approximately 558 million barrels of petroleum per year.[4] Based on the annual consumption within the State, the proposed project would result in a 0.000013 percent increase in the State's current consumption of gasoline with development of the proposed project. It should be noted that a portion of the trips associated with the proposed project would not necessarily be new trips. Rather, some trips would be redistributed as residents already living in the area redirect their commute to the project site. As such, energy consumption associated with project VMT would not be unique to the project.

California leads the nation in registered alternatively-fueled and hybrid vehicles. In addition, State-specific regulations encourage fuel efficiency and reduction of dependence on oil. Improvements in vehicle efficiency and fuel economy standards help to reduce consumption of gasoline and reduce the State's dependence on petroleum products. The 2019 CBSC also requires new developments to include the necessary electrical infrastructure for electric vehicle charging stations. The proposed project would be required to comply with all applicable regulations associated with vehicle efficiency and fuel economy. In addition, bicycle and pedestrian facilities would be provided along Bridgehead Road to facilitate alternative transportation. The project would also be required to improve sidewalks with connection to the adjacent streets and sidewalks. The aforementioned improvements would provide pedestrian connectivity within the project site and to existing off-site pedestrian facilities, thereby helping to discourage driving and reduce vehicle trips.

Conclusion

As discussed above, the proposed project operations would involve an increase in energy consumption. However, the proposed project would comply with all applicable standards and regulations regarding energy conservation and fuel efficiency, which would ensure that the future uses would be designed to be energy efficient to the maximum extent practicable. Accordingly, the proposed project would not be considered to result in a wasteful, inefficient, or unnecessary usage of energy, and impacts related to operational energy would be considered less than significant.

5.5 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

The State CEQA Guidelines mandate that an EIR address any significant irreversible environmental changes that would result if the proposed project were implemented (CEQA Guidelines, Section 15126.2[c]). An impact would fall into this category if any of the following would occur:

- The project would involve a large commitment of nonrenewable resources;
- The primary and secondary impacts of a project would generally commit future generations to similar uses (e.g., a highway provides access to a previously remote area);
- The project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project; or
- The phasing of the proposed consumption of resources is not justified (e.g., the project involves a wasteful use of energy).

[4] U.S. Energy Information Administration. *California: State Profile and Energy Estimates*. Available at: https://www.eia.gov/state/seds/data.php?incfile=/state/seds/sep_fuel/html/fuel_use_pa.html&sid=US&sid=CA. Accessed September 2019.

The proposed project would likely result in, or contribute to, the following significant irreversible environmental changes:

- Placement and/or extension of roadways;
- Irreversible consumption of goods and services associated with the future operations; and
- Irreversible consumption of energy and natural resources, such as electricity and natural gas, associated with the future operations.

5.6 SIGNIFICANT AND UNAVOIDABLE IMPACTS

According to CEQA Guidelines, an EIR must include a description of those impacts identified as significant and unavoidable should the proposed action be implemented (CEQA Guidelines §15126.2[b]). Such impacts would be considered unavoidable when the determination is made that either mitigation is not feasible or only partial mitigation is feasible such that the impact is not reduced to a level that is less-than-significant. This section identifies significant impacts that could not be eliminated or reduced to a less-than-significant level by mitigations imposed by the City. The final determination of the significance of impacts and the feasibility of mitigation measures would be made by the City as part of the City's certification action. The significant and unavoidable impacts of the proposed project are listed below. A complete analysis of the significant and unavoidable impacts can be found in Chapters 4.1 and 4.4 of this EIR.

4.1-1 Conflict with or obstruct implementation of the applicable air quality plan during project construction.

4.1-5 Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

4.4-10 Impacts to freeway operations under Cumulative Plus Project conditions.

4.4-11 Substantially increase cumulative hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

6. Alternatives Analysis

6. ALTERNATIVES ANALYSIS

6.1 INTRODUCTION

The Alternatives Analysis chapter of the EIR includes consideration and discussion of a range of reasonable alternatives to the proposed project, as required per CEQA Guidelines Section 15126.6. Generally, the chapter includes discussions of the following: the purpose of an alternative analysis; alternatives considered but dismissed; reasonable range of project alternatives and their associated impacts in comparison to the proposed project's impacts; and the environmentally superior alternative.

6.2 PURPOSE OF ALTERNATIVES

The primary intent of the alternatives evaluation in an EIR, as stated in Section 15126.6(a) of the CEQA Guidelines, is to "[…] describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives." In the context of CEQA Guidelines Section 21061.1, "feasible" is defined as:

> ...capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors.

Section 15126.6(f) of CEQA Guidelines states, "The range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice." Section 15126.6(f) of CEQA Guidelines further states:

> The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determined could feasibly attain most of the basic objectives of the project.

In addition, an EIR is not required to analyze alternatives when the effects of the alternative "cannot be reasonably ascertained and whose implementation is remote and speculative."

The CEQA Guidelines provide the following guidance for discussing alternatives to a proposed project:

- An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project, but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives (CEQA Guidelines Section 15126.6[a]).

- Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly (CEQA Guidelines Section 15126.6[b]).
- The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination […] Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts (CEQA Guidelines Section 15126.6[c]).
- The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison (CEQA Guidelines Section 15126.6[d]).
- If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed (CEQA Guidelines Section 15126.6[d]).
- The specific alternative of "no project" shall also be evaluated along with its impact. The purpose of describing and analyzing a no project alternative is to allow decision-makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The no project alternative analysis is not the baseline for determining whether the proposed project's environmental impacts may be significant, unless it is identical to the existing environmental setting analysis which does establish that baseline (CEQA Guidelines Section 15126.6[e][1]).
- If the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives (CEQA Guidelines Section 15126.6[e][2]).

Project Objectives

Based on the above, reasonable alternatives to the project must be capable of feasibly attaining most of the basic objectives of the project. The proposed project is being pursued with the following objectives:

1. Develop a logistics center with approximately 2,000,000 sf of Class A industrial light warehousing, e-commerce fulfillment, distribution, and light manufacturing space consisting of five buildings.
2. Redevelop the former DuPont site with a robust logistics center that provides nearly 2,000 jobs for the region.
3. Implement a key focus in the Oakley General Plan to develop industrial and like distribution uses on the site.
4. Implement the City's vision in the General Plan to develop this site as a primary employment center.
5. Allow the sensitive area designated "Delta Recreation" on the property to remain in its natural state.

Impacts Identified in the EIR

In addition to attaining the majority of project objectives, reasonable alternatives to the project must be capable of reducing the magnitude of, or avoiding, identified significant environmental impacts of the proposed project. A summary of the environmental impacts identified for the proposed project are provide below.

Significant and Unavoidable

Impacts of the proposed project that have been determined to remain significant and unavoidable, even after implementation of the feasible mitigation measures set forth in this EIR, include the following:

- ***Air Quality and Greenhouse Gas Emissions.*** The EIR determined that implementation of the proposed project could result in a significant impact related to emissions of the criteria pollutant NO_X. In addition, a significant impact would occur related to conflicting with the goals of Senate Bill (SB) 32 related to GHG emissions. The EIR requires mitigation to minimize impacts as much as possible; however, despite implementation of mitigation measures, the project would still result in significant and unavoidable impacts.

- ***Transportation and Circulation.*** The project would result in a significant impact to the westbound segment of SR 4 in the project vicinity and could result in significant queuing impacts at the Bridgehead Road/Wilbur Avenue, Neroly Road/Bridgehead Road/Main Street, Empire Avenue/Main Street, and Oakley Road/Empire Avenue intersections under Cumulative Plus Project conditions. Even with implementation of mitigation, the identified significant impacts were determined to remain significant and unavoidable.

Less Than Significant with Mitigation

Significant environmental impacts of the proposed project that have been identified as requiring mitigation measures to ensure that the level of significance is ultimately less than significant include the following:

- ***Air Quality and Greenhouse Gas Emissions.*** The EIR determined that implementation of the proposed project could result in significant impacts related to operational emissions of ROG. Furthermore, project operations could result in substantial emissions of the TAC DPM due to the use of transportation refrigeration units at Building 1. The EIR requires mitigation in order to ensure that the impacts are reduced to a less-than-significant level.

- ***Biological Resources.*** The EIR determined that implementation of the proposed project could result in significant impacts related to the following: special-status vernal pool branchiopods; special-status bird species; riparian habitat or other sensitive natural community, or federally protected wetlands as defined by Section 404 of the CWA through direct removal, filling, hydrological interruption, or other means; and a conflict with local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. The EIR requires mitigation in order to ensure that the impact is reduced to a less-than-significant level.

- ***Hydrology and Water Quality.*** The EIR determined that implementation of the proposed project could result in significant impacts related to the following: violation of federal, State, or County potable water quality standards, creation or contribution of runoff water

which would include substantial additional sources of polluted water, or otherwise substantially degrade surface or ground water quality during construction and operation; and substantial alteration of the existing drainage pattern of the site or area, or increase the rate or amount of surface runoff. The EIR requires mitigation in order to ensure that the aforementioned impacts are reduced to less-than-significant levels.

- ***Transportation and Circulation.*** The EIR determined that implementation of the proposed project could result in significant impacts to study intersections under Baseline Plus Project and Cumulative Plus Project conditions. Under Existing Plus Project and Baseline Plus Project conditions, the proposed project could result in significant impacts related to queuing at the Main Street/Bridgehead Road, Main Street/Empire Avenue, and Oakley Road/Empire Avenue intersections. In addition, a significant impact was identified for construction traffic and for study roadway segments under Cumulative Plus Project conditions. The EIR requires mitigation in order to ensure that the aforementioned impacts are reduced to less-than-significant levels.

Less Than Significant

Environmental impacts of the proposed project that have been identified as less than significant in this EIR include the following:

- ***Utilities and Service Systems.*** This EIR determined that implementation of the proposed project would result in less-than-significant impacts related to Utilities and Service Systems

The Initial Study prepared for the proposed project includes a detailed environmental checklist addressing a range of technical environmental issues (see Appendix A). For each technical environmental issue, the Initial Study identifies the level of impact for the proposed project. The Initial Study identifies the environmental effects as either “no impact,” “less-than-significant,” “less-than-significant with mitigation incorporated,” or “potentially significant.” Impacts identified for the proposed project in the Initial Study as “no impact,” “less-than-significant,” or “less-than-significant with mitigation incorporated” are listed below.

- Aesthetics (All Sections);
- Agriculture Resources (All Sections);
- Air Quality (d);
- Biological Resources (f);
- Cultural Resources (All Sections);
- Geology and Soils (All Sections);
- Hazards and Hazardous Materials (All Sections);
- Land Use and Planning (All Sections);
- Mineral Resources (All Sections);
- Noise (All Sections);
- Population and Housing (All Sections);
- Public Services (All Sections);
- Recreation (All Sections);
- Transportation and Circulation (d);

- Tribal Cultural Resources (All Sections); and
- Wildfire (All Sections).

As stated above, reasonable alternatives to the project must be capable of reducing the magnitude of, or avoiding, identified significant environmental impacts of the proposed project. Because the proposed project would not result in significant impacts related to the resource areas listed above, a comparison of potential impacts associated with the aforementioned resource areas as a result of project alternatives versus the proposed project is not provided in this chapter. Rather, this chapter focuses on those resource areas and specific impacts listed above that have been identified for the proposed project as either significant and unavoidable or less than significant with mitigation.

6.3 SELECTION OF ALTERNATIVES

The requirement that an EIR evaluate alternatives to the proposed project or alternatives to the location of the proposed project is a broad one; the primary intent of the alternatives analysis is to disclose other ways that the objectives of the project could be attained, while reducing the magnitude of, or avoiding, one or more of the environmental impacts of the proposed project. Alternatives that are included and evaluated in the EIR must be feasible alternatives. However, the CEQA Guidelines require the EIR to "set forth only those alternatives necessary to permit a reasoned choice." The following sections discuss the alternatives that were considered but dismissed from further analysis.

Alternatives Considered But Dismissed From Further Analysis

Consistent with CEQA, primary consideration was given to alternatives that could reduce significant impacts, while still meeting most of the basic project objectives. As stated in Guidelines Section 15126.6(c), among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are:

- failure to meet most of the basic project objectives;
- infeasibility; or
- inability to avoid significant environmental impacts.

Regarding infeasibility, among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control, or otherwise have access to the alternative site (or the site is already owned by the proponent). Not one of these factors establishes a fixed limit on the scope of reasonable alternatives.

The two alternatives that were considered but dismissed from detailed analysis in this EIR are discussed below, along with the reason(s) for dismissal, within the context of the three above-outlined permissible reasons.

Off-Site Alternative

As noted previously, the purpose of an alternatives analysis is to develop alternatives to the proposed project that substantially lessen at least one of the significant environmental effects

identified as a result of the project, while still meeting most, if not all, of the basic project objectives. Development of the proposed project at an off-site location would not be capable of meeting the majority of project objectives due to a number of the project objectives being specific to the project site size and location. For example, Objective 2 is related to redeveloping the former DuPont site, which is the project site; by definition, the off-site alternative would not involve redevelopment of the DuPont site, and, thus, Objective 2 would not be met. Objective 3 and 4 are related to developing the site as an industrial site/primary employment center. Although other sites may be appropriate for the proposed project, the other sites are currently developed with industrial operations. It should also be noted that while other industrial areas exist within the City of Oakley, the project proponents do not own the other industrial sites. Additionally, alternative locations would not adequately meet the needs of the project site, including the size of the project site and the Light Industrial designation. Two other locations with the designation of Light Industrial exist in the City of Oakley. Location 1 is located north of Oakley Road and east of Neroly Road. Location 2 is located west of the Ironhouse Sanitary District offices, northeast of Main Street. Location 1 is currently partially developed and used for industrial purposes while Location 2 is a fraction of the size of the current project site.

In addition, the City's General Plan identifies the project site as an area suitable for development as included in the proposed project. For instance, Policy 5.1.L of the City's General Plan identifies the project site as an important area for future development through a comprehensive business park master plan or Planned Unit Development, while page 5-10 of the General Plan identifies the site as an Economic Development Opportunity within the City, and page 2-26 of the City's General Plan envisions the area containing the project site as the primary employment center for the City. Development of off-site alternatives would fail to fulfill the foregoing policies and visions within the General Plan.

The CEQA Guidelines (Section 15126.6[b]) requires that only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR. The Off-Site Alternative would involve the construction of the proposed project on an alternative location. The Off-Site Alternative would have the same type and intensity of uses as the proposed project. The Off-Site Alternative site Location 1 within the City is currently partially developed and located near residences. The development of the site would be expected to result in greater impacts than the proposed project given the close proximity to existing residences. For instance, off-site locations may contain cultural resources that have not been disturbed by previous development. Even if a site fit for redevelopment were to be considered for an Off-Site Alternative, the proposed uses would not be likely to complement the existing uses and/or activities at the site to the extent that would occur from reuse of the former DuPont site for industrial uses. Furthermore, the project site is located adjacent to SR 160, with convenient access to SR 4, thereby reducing traffic volumes routed through city streets within the project area. Consequently, development of an Off-Site Alternative would be expected to result in at least the same, if not greater, level of impacts as compared to the proposed project. Furthermore, the Applicant does not own an alternative location that would be adequate to construct the proposed project.

Overall, a feasible off-site location that would meet the requirements of CEQA, as well as meet the basic objectives of the proposed project, does not exist. Therefore, an Off-Site Alternative was dismissed from detailed analysis within this EIR.

No Project (Buildout Pursuant to Existing Designation) Alternative

The No Project (Buildout Pursuant to Existing Designation) Alternative would require the industrial manufacturing facilities be developed on the northeastern portion of the project site as it is currently the only designated Light Industrial portion of the site. The western portion of the project site is designated Business Park and the southern portion of the site is designated Utility Energy. In compliance with the existing land use designations of the site, the No Project (Buildout Pursuant to Existing Designation) Alternative would develop business offices on the Business Park portion of the site as well as complimentary industrial manufacturing operations on the northeastern portion of the site. As part of the No Project (Buildout Pursuant to Existing Designation) Alternative, the Utility Energy portion of the site would be used for energy related activities, such as substations and power plants.

While the Alternative would not require a General Plan Amendment, the No Project (Buildout Pursuant to Existing Designation) Alternative would incorporate similar operations as the proposed project. For example, the No Project (Buildout Pursuant to Existing Designation) Alternative would involve construction of manufacturing and business park structures, resulting in similar construction emissions and ground disturbance. In addition, the No Project (Buildout Pursuant to Existing Designation) Alternative would involve development of all areas of the site currently designated as Light Industrial. Therefore, a No Project (Buildout Pursuant to Existing Designation) Alternative would not involve designation of any portion of the project site as "Delta Recreation", and existing biological resources within the project site would be avoided within the proposed Delta Recreation area under the proposed project but would be impacted under the Alternative.

Consequently, development of the No Project (Buildout Pursuant to Existing Designation) Alternative would be expected to result in greater levels of impacts as compared to the proposed project. Therefore, a No Project (Buildout Pursuant to Existing Designation) Alternative was dismissed from detailed analysis within this EIR.

Alternatives Considered in this EIR

Three alternatives to the proposed project were developed based on City staff input and the technical analysis performed to identify the significant environmental effects of the proposed project. The following three alternatives are considered feasible alternatives to the project, and are evaluated in further detail in this section:

- No Project (No Build) Alternative;
- Reduced Intensity Alternative; and
- Reduced Footprint Alternative.

Each of the project alternatives is described in detail below, with a corresponding analysis of each alternative's impacts in comparison to the proposed project. While an effort has been made to include quantitative data for certain analytical topics, where possible, qualitative comparisons of the various alternatives to the project are primarily provided. Such an approach to the analysis is appropriate as evidenced by CEQA Guidelines Section 15126.6[d], which states that the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. The analysis evaluates impacts that would occur with the alternatives relative to the significant impacts identified for the proposed project. The following terminology is used:

- "Fewer" = Fewer amount of impacts than Proposed Project;
- "Similar" = Similar to Proposed Project; and
- "Greater" = Greater than Proposed Project.

When the term "fewer" is used, the reader should not necessarily equate this to elimination of significant impacts identified for the proposed project. For example, in many cases, an alternative would reduce the relative intensity of a significant impact identified for the proposed project, but the impact would still be expected to remain significant under the alternative, thereby requiring mitigation. In other cases, the use of the term "fewer" may mean the actual elimination of an impact identified for the proposed project altogether. The following discussions will clarify the use of the term.

A comparison of the environmental impacts resulting from the considered alternatives and the proposed project is provided in Table 6-4.

No Project (No Build) Alternative

CEQA requires the evaluation of the comparative impacts of the "No Project" alternative (CEQA Guidelines Section 15126.6[e]). Analysis of the no project alternative shall:

> "… discuss […] existing conditions […] as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services." (*Id.*, subd. [e][2]) "If the project is other than a land use or regulatory plan, for example a development project on identifiable property, the 'no project' alternative is the circumstance under which the project does not proceed. Here the discussion would compare the environmental effects of the property remaining in the property's existing state versus environmental effects that would occur if the project were approved. If disapproval of the project under consideration would result in predictable actions by others, such as the proposal of some other project, this 'no project' consequence should be discussed. In certain instances, the no project alternative means 'no build,' wherein the existing environmental setting is maintained. However, where failure to proceed with the project would not result in preservation of existing environmental conditions, the analysis should identify the practical result of the project's non-approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment." (*Id.*, subd. [e][3][B]).

The No Project (No Build) Alternative is defined as the continuation of the existing conditions of the project site, which currently consists of remnants left from the operation of the DuPont Chemical Plant on the western portion of the 375.7-acre subject property. All DuPont manufacturing ceased in 1999 and the manufacturing facilities at the site were mostly demolished. The No Project (No Build) Alternative would not require the demolition of the remaining on-site structures. Because development of the site would not occur, potential impacts from the proposed project would not occur as a result of the No Project (No Build) Alternative. However, leaving the site in its barren and highly disturbed condition could cause negative aesthetic impacts and result in blighted conditions. Moreover, the City's General Plan identifies the site as an area suitable for development and envisions the project site and surrounding area acting as the primary

employment center for the City. The No Project (No Build) Alternative would not fulfill the stated aims of the City's General Plan.

Air Quality and GHG Emissions

The No Project (No Build) Alternative would consist of the continuation of the existing conditions of the project site. Because the No Project (No Build) Alternative would not involve construction activities, the Alternative would not result in emissions of criteria pollutants. Considering that the No Project (No Build) Alternative would not result in any construction activity or resulting emissions from the project site, the No Project (No Build) Alternative would not result in any impacts related to the emissions of criteria pollutants during construction. Furthermore, the No Project (No Build) Alternative would not involve any operational emissions of toxic air contaminants or criteria pollutants, and the mitigation measures included in this EIR to reduce such emissions under the proposed project would not be required under the No Project (No Build) Alternative. Under the No Project (No Build) Alternative, GHG emissions would not occur from related to operations at the project site. Thus, the No Project (No Build) Alternative would not result in a significant and unavoidable impact related to GHG emissions. It should be noted that in the absence of the proposed project, the demand for transporting goods within the project region would remain, and vehicle trips generated from such would still occur in the region. Therefore, the No Project (No Build) Alternative would not necessarily guarantee that emissions related to the movement of goods in the project region would be lower than the levels that would occur with implementation of the proposed project. Nevertheless, under the No Project (No Build) Alternative, the significant and unavoidable impacts related to criteria pollutant emissions during construction and GHG emissions would not occur.

Biological Resources

Because construction or any other ground-disturbing activities would not occur under the No Project (No Build) Alternative, impacts associated with the on-site seasonal and permanent wetlands would not occur. Similarly, the No Project (No Build) Alternative would not involve disturbance to any of the on-site trees; thus, impacts to potential Swainson's hawk nesting trees or other special-status bird species that could use the on-site trees as habitat would not occur. Because the existing on-site trees would remain, the No Project (No Build) Alternative would not have the potential to result in the removal of existing heritage or protected trees. Therefore, impacts identified for the proposed project related to biological resources would not occur under the No Project (No Build) Alternative.

Hydrology and Water Quality

Because the No Project (No Build) Alternative would not involve construction, impacts related to a violation of federal, State, or County potable water quality standards, creation or contribution of runoff water which would include substantial additional sources of polluted water, or otherwise substantially degrade surface or ground water quality during construction and operation would not occur. Additionally, because the No Project (No Build) Alternative would not alter the existing drainage pattern of the site or surrounding area or increase the rate or amount of surface runoff, impacts related to such would not occur under the Alternative. Furthermore, the No Project (No Build) Alternative would not include development within a 100-year floodplain.

Overall, impacts identified for the proposed project related to hydrology and water quality would not occur under the No Project (No Build) Alternative.

Transportation and Circulation

Because the No Project (No Build) Alternative would not involve construction activities, impacts associated with traffic related to construction and operation activities would not occur. In addition, because the No Project (No Build) Alternative would not involve any changes to the existing on-site uses, an increase in traffic associated with the site would not occur. Therefore, impacts related to degradation of intersection operations and traffic congestion would not occur. Furthermore, the No Project (No Build) Alternative would not modify the existing or planned alternative transportation facilities or services and, thus, would not have the potential to conflict with policies from the City of Oakley's General Plan. Accordingly, impacts related to such would not occur.

Overall, none of the impacts identified for the proposed project related to transportation and circulation would occur under the No Project (No Build) Alternative.

Utilities and Service Systems

Under the No Project (No Build) Alternative, significant impacts related to wastewater supplies or infrastructure, solid waste, electricity, and natural gas services would not occur. Because the No Project (No Build) Alternative would not involve improvements to off-site waste water infrastructure, impacts related to such would not occur as a result of the No Project (No Build) Alternative. Additionally, the No Project (No Build) Alternative would not include construction of a new pump station to accommodate wastewater flows. Therefore, the impacts identified for the proposed project related to generation of solid waste and wastewater conveyance that may have a significant impact on the environment would not occur under the No Project (No Build) Alternative.

Reduced Intensity Alternative

The Reduced Intensity Alternative would involve development of the proposed project; however, the Alternative would be designed to reduce the total amount of proposed building square footage. The Reduced Intensity Alternative would still be capable of large operations and employ a substantial amount of people. For the proposed project, this EIR assumes the total square footage of the project would be approximately 2.0 million sf. Under the Reduced Intensity Alternative, the total building space would be reduced by 50 percent and total approximately 1.0 million sf. All other aspects of the proposed project would be similar under the Reduced Intensity Alternative.

The reduced size of the structures included in the Reduced Intensity Alternative would curtail the ability of the Reduced Intensity Alternative to meet the objectives of the proposed project. For instance, Objective 1 refers specifically to development of approximately 2.0 million sf of industrial facilities on the site. The Alternative would only involve development of 1.0 million sf of industrial facilities on the site. The Alternative would not meet Objectives 1 and 2, and would only partially meet objectives 3 and 4. Because the Reduced Intensity Alternative would involve development of the site for employment type uses, the Reduced Intensity Alternative could partially fulfill the employment focused vision for the site as articulated in Policy 5.1.L, and on pages 5-10 and 2-26 of the City's General Plan.

The Reduced Intensity Alternative would be designed to avoid any disturbance of the biological resources and wetlands located northeast of the site. While the conceptual design of this alternative would eliminate the proposed project's potentially significant impact to wetland resources, the Reduced Intensity Alternative would not be capable of reducing the project's

significant and unavoidable impacts related to transportation and circulation and associated cumulative impacts to less-than-significant levels for reasons identified below.

Air Quality and GHG Emissions

The Reduced Intensity Alternative would result in less development on the project site and thus, would result in slightly less construction activities. Accordingly, the air pollutant emissions associated with construction activities would be slightly reduced under the Reduced Intensity Alternative. Emissions from construction of the Reduced Intensity Alternative were quantified, and are presented in Table 6-1 below. The Reduced Intensity Alternative would be subject to implementation of Mitigation Measures 4.1-1(a) and 4.1-1(b); thus, Table 6-1 presents only mitigated emissions. It should be noted that emissions modeling for the alternative assumed a portion of the proposed high cube fulfillment center use would be used for storage purposes only, similar to what is proposed in the project, and would not generate additional vehicle trips.

As shown in Table 6-1, implementation of Mitigation Measures 4.1-1(a) and 4.1-1(b) would be sufficient to reduce emissions below the BAAQMD's thresholds. Consequently, the Reduced Intensity Alternative would not result in a significant and unavoidable impact related to project construction.

Table 6-1
Reduced Intensity Alternative Maximum Construction Emissions (lbs/day)

Pollutant	Project Site Emissions	Threshold of Significance	Exceeds Threshold?
ROG	5.08	54	**NO**
NO_x	37.13	54	**NO**
PM_{10} (exhaust)	0.33	82	**NO**
PM_{10} (fugitive)	14.56	None	**N/A**
$PM_{2.5}$ (exhaust)	0.32	54	**NO**
$PM_{2.5}$ (fugitive)	5.58	None	**N/A**

Source: CalEEMod, October 2019 (see Appendix D).

With regard to operational emissions, the Reduced Intensity Alternative would result in less development of the project site, and thus, less warehousing spaces, which would slightly reduce the number of vehicles traveling to and from the project site. Given that operational emissions associated with the proposed project were determined to be less-than-significant, the Alternative is anticipated to be below the necessary thresholds as well.

Due to the anticipated reduction in vehicle trips to and from the site under the Reduced Intensity Alternative, impacts related to exposure of sensitive receptors to substantial pollutant concentrations associated with project operations, would be fewer; however; Mitigation Measure 4.1-3 would likely continue to be required under the Reduced Intensity Alternative. Furthermore, although reductions in on-site operations would reduce operational GHG emissions, in general, the Reduced Intensity Alternative would be anticipated to result in a significant and unavoidable impact related to GHG emissions.

Overall, the Reduced Intensity Alternative would not result in the significant and unavoidable impact identified for implementation of the proposed project related to construction emissions.

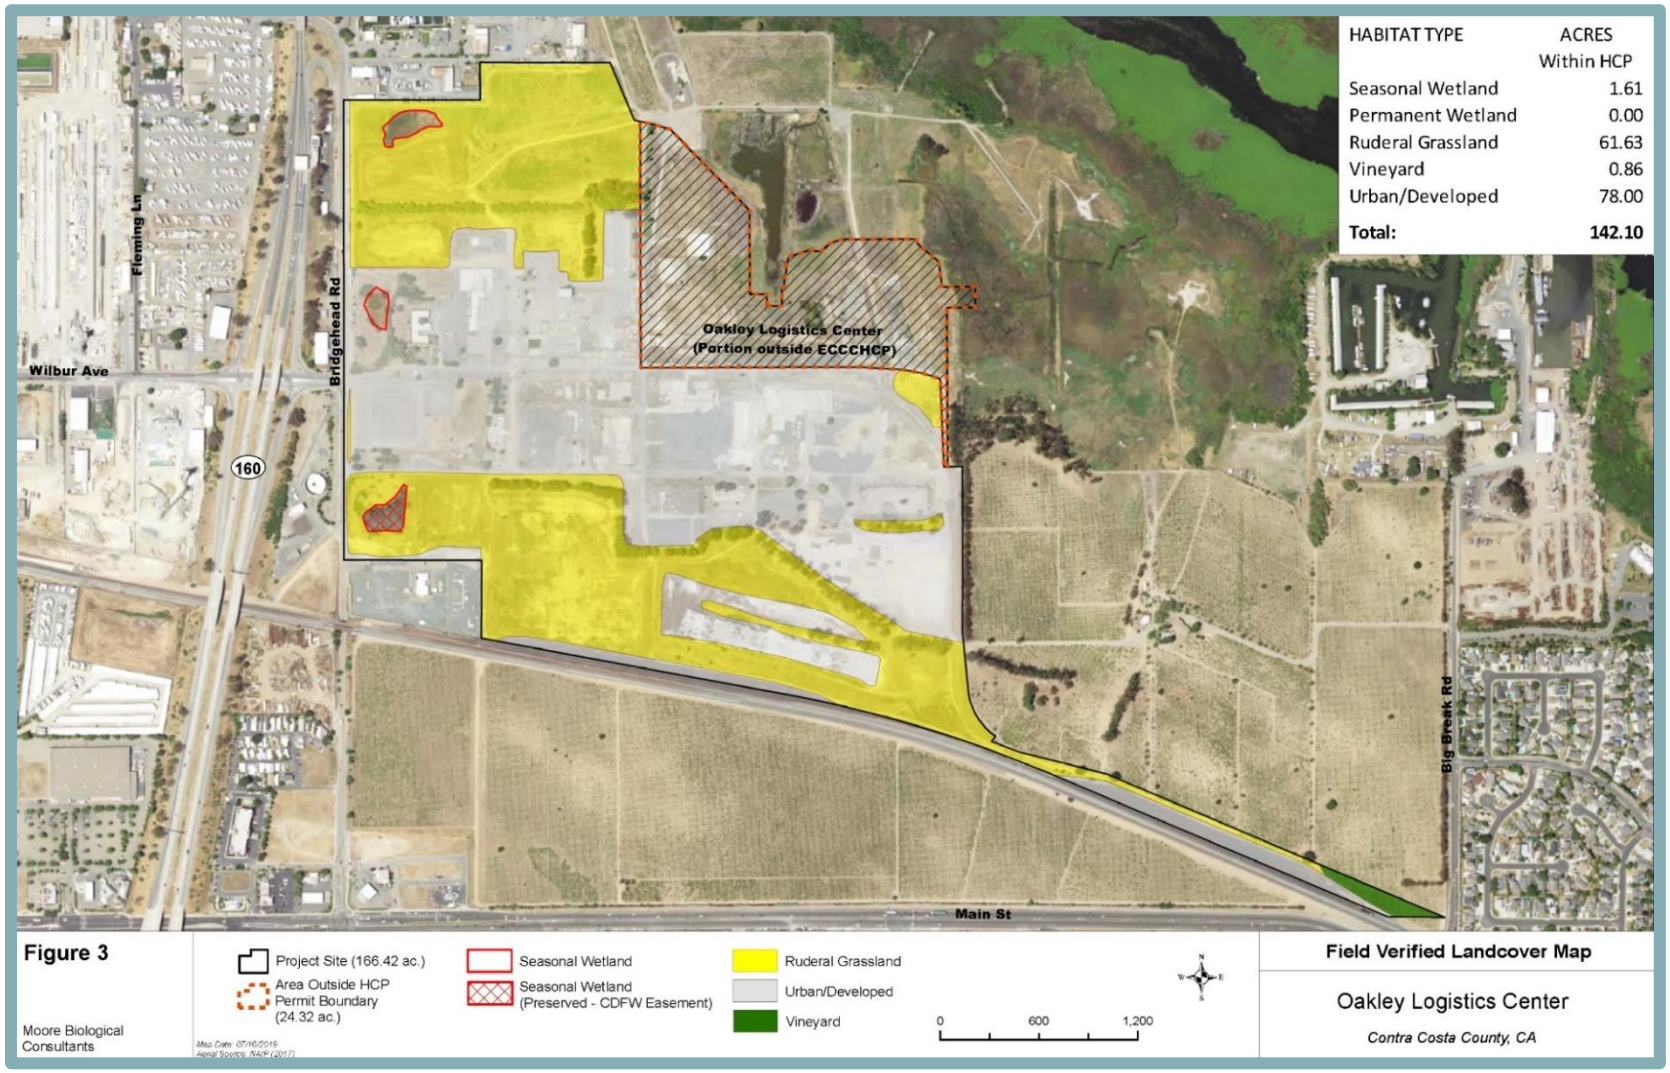
Although the Reduced Intensity Alternative would be anticipated to result in a significant and unavoidable impact related to GHG emissions, the Reduced Intensity Alternative would result in fewer impacts as compared to the proposed project.

Biological Resources

The Reduced Intensity Alternative would involve development of the project site with approximately 1.0 million sf of building space. Although the Alternative would result in a 50 percent reduction in building space, the disturbance area of the site would remain the same. Given the size of the proposed industrial development under the alternative, implementation of the Reduced Intensity Alternative would be anticipated to result in some fill of seasonal wetlands on-site, as well as the removal of some on-site trees and conversion of grassland habitat. Therefore, implementation of the Reduced Intensity Alternative would continue to require mitigation as presented in the Biological Resources Section of this EIR.

It should be noted that development under the Reduced Intensity Alternative would occur in areas of the project site both within and outside of the East Contra Costa County Habitat Conservation Plan/Natural Community Plan (ECCC HCP/NCCP) (see Figure 6-1). Thus, only portions of the Reduced Intensity Alternative could be mitigated through mitigation fee payment and ECCC HCP/NCCP minimization, avoidance, and mitigation measures.

Considering the above, the Reduced Intensity Alternative would result in similar impacts as compared to the proposed project; however, the same mitigation measures required for the proposed project would be applicable for the Alternative as well.



Hydrology and Water Quality

Given that the Reduced Intensity Alternative would involve the same construction activities as the proposed project, similar impacts would occur related to water quality. Because the Alternative would result in new impervious areas, alteration of the drainage patterns of the site would still be necessary which would increase the amount of stormwater runoff. Mitigation Measure 4.3-4 would still be required to ensure runoff does not exceed the capabilities of existing infrastructure. Furthermore, the Alternative would still result in development of the northwest portion of the site which is located in the Zone AE 100-year floodplain. Mitigation Measures 4.3-5 would still be required for the Alternative and, thus, would result in similar impacts related to flooding.

The Reduced Intensity Alternative would involve altering existing drainage patterns of the site which would redirect stormwater flows. Accordingly, the potential to result in similar impacts related to stormwater drainage during operations would occur under the Alternative and the same mitigation measures would be required to ensure impacts are reduced to less than significant. The Reduced Intensity Alternative would still result in impacts related to the 100-year floodplain. With impacts related to flooding and alteration of the existing drainage pattern of the site or area, the Alternative would result in similar impacts as the proposed project.

Therefore, overall, the impacts identified for the Reduced Intensity Alternative related to hydrology and water quality would be similar than that of the proposed project.

Figure 6-1
Land Cover within ECCC HCP/NCCP Permit Area

Transportation and Circulation

Because the Reduced Intensity Alternative would still involve demolition of the on-site structures and construction of new buildings, similar levels of construction vehicle traffic would occur. Accordingly, impacts associated with traffic related to construction activities would be similar under the Alternative. Because buildout of the Reduced Intensity Alternative would result in development of the project site, the Alternative would still result in the potential to conflict with policies from the City of Oakley's General Plan. Given that truck haul traffic has the potential to conflict with traffic patterns along the surrounding roadways, Mitigation Measure 4.4-6 would still be applicable.

While construction activities would result in similar vehicle traffic, vehicle trip generation associated with the Alternative would be fewer than that of the proposed project due to the reduced square footage. As shown in Table 6-2, average daily trips for the Alternative would total approximately 2,255 trips. Given that the average daily trips would be almost half as much as the proposed project, associated traffic impacts would be fewer.

Table 6-2
Reduced Intensity Alternative Trip Generation

Land Use	Size	Trip Generation						
			AM Peak Hour			PM Peak Hour		
		Daily	**In**	**Out**	**Total**	**In**	**Out**	**Total**
Warehousing Trip Rates		*1.74*	*0.04*	*0.17*	*0.13*	*0.14*	*0.19*	*0.05*
Alternative Warehouse Trip Generation	920,000	1,601	37	157	120	129	175	46
High Cube Fulfillment Center Trip Rates		*8.18*	*0.14*	*0.59*	*0.45*	*0.99*	*1.37*	*0.38*
Alternative Distribution Center Trip Generation	80,000	654	11	47	36	79	110	31

Source: Abrams Associates, 2019.

Overall, development of the Reduced Intensity Alternative would result in slightly fewer impacts related to Transportation and Circulation compared to that of the proposed project; however, the significant and unavoidable impacts identified for the proposed project would still be expected to occur given that construction of the proposed project would still increase traffic on local roadways.

Utilities and Service Systems

As discussed in Chapter 4.5, Utilities and Service Systems, of this EIR, the proposed project would not result in significant impacts related to wastewater supplies or infrastructure, solid waste, electricity, and natural gas services. Because the Reduced Intensity Alternative would involve less square footage than the proposed project, the amount of wastewater generation, solid waste generation, demand for public services and facilities, including energy consumption associated with the site would be less under the Reduced Intensity Alternative.

While wastewater and solid waste generation would be reduced under the Alternative, off-site improvements to the wastewater infrastructure and construction of a new pump station would still be necessary. Currently, the Lauritzen Pump station is at full capacity and the Bridgehead Pump station is not capable of accommodating the flow of the Alternative. As a result, off-site infrastructure improvements, including upgrades to the Bridgehead Pump Station and Force Main,

would be required to ensure adequate capacity for wastewater conveyance. The Alternative would also be required to construct a new pump station as to not exceed the capabilities of the wastewater infrastructure. Therefore, development of the Reduced Intensity Alternative would result in similar impacts related to utilities and service systems to that of the proposed project.

Reduced Footprint Alternative

The Reduced Footprint Alternative would involve buildout of the site with a reduced development footprint. The Alternative would reduce the footprint of the project by 50 percent while the proposed square footage would be reduced by 75 percent. The proposed project would include grading of 141.8 acres of the project site while the Reduced Footprint Alternative would only involve grading of 70.9 acres. As part of the Alternative, reducing the square footage by 75 percent of the total square footage would result in a total of 500,000 sf. The Alternative would still allow operations of the industrial facilities; however, the size of the buildings, drive aisles, and parking spaces on the site would be significantly reduced.

While the Reduced Footprint Alternative would generally involve similar operations as the proposed project, the Alternative would result in fewer employees and output operations as a result of the reduction in the overall footprint and proposed building area. The Alternative would still be capable of incorporating the five buildings; however, the production capabilities may be limited. Additionally, the Alternative would not meet certain objectives for the proposed project; however, the Alternative would still be feasible. For example, Project Objective 1 refers specifically to development of approximately 2.0 million sf of industrial warehousing and light manufacturing space. The Alternative would only use 500,000 sf for the industrial warehousing but could feasibly still consist of five buildings. Objective 4 aims to develop the site as a primary employment center. Because operations and production output would reduce as a result of the Reduced Footprint Alternative, the number of employees would likely decrease; however, Objective 4 could still be partially met as the Alternative could still employ a substantial number of people. Because the Reduced Footprint Alternative would involve development of the site for employment type uses, the Reduced Footprint Alternative could partially fulfill the employment focused vision for the site as articulated in Policy 5.1.L, and on pages 5-10 and 2-26 of the City's General Plan.

The Reduced Footprint Alternative would be designed to avoid any disturbance of the biological resources and wetlands located northeast of the site. The reduction in square footage would allow the project footprint to match the East Contra Costa County Habitat Conservation Plan (ECCC HCP/NCCP) boundaries. As shown in , the proposed project is currently exceeding the boundaries of the ECCC HCP/NCCP permit area. The Alternative would avoid the wetland areas and biological resources on-site, thus, reducing the impact.

While the conceptual design of this alternative would eliminate the proposed project's potentially significant impact to wetland resources, Reduced Footprint Alternative would not be capable of reducing the project's significant and unavoidable impacts related to transportation and circulation and associated cumulative impacts to less-than-significant levels for reasons identified below.

Air Quality and GHG Emissions

The Reduced Footprint Alternative would involve a reduced area of disturbance during construction activities due to the reduction in building square footage, which would subsequently result in less construction activity than the proposed project. A reduction in construction activities

would result in fewer associated air pollutant emissions. Emissions from construction of the Reduced Footprint Alternative were quantified, and are presented in Table 6-3 below. The emissions presented in Table 6-3 represent mitigated emissions following implementation of Mitigation Measures 4.1-1(a) and 4.1-1(b). It should be noted that emissions modeling for the alternative assumed a portion of the proposed high cube fulfillment center use would be used for storage purposes only, similar to what is proposed in the project, and would not generate additional vehicle trips.

Table 6-3
Reduced Footprint Alternative Maximum Construction Emissions (lbs/day)

Pollutant	Project Site Emissions	Threshold of Significance	Exceeds Threshold?
ROG	3.13	54	**NO**
NO_x	21.25	54	**NO**
PM_{10} (exhaust)	0.24	82	**NO**
PM_{10} (fugitive)	11.11	None	**N/A**
$PM_{2.5}$ (exhaust)	0.23	54	**NO**
$PM_{2.5}$ (fugitive)	4.54	None	**N/A**

Source: CalEEMod, October 2019 (see Appendix D).

As shown in Table 6-3, implementation of Mitigation Measures 4.1-1(a) and 4.1-1(b) would be sufficient to reduce construction-related emissions below the BAAQMD's thresholds of significance. Consequently, the Reduced Footprint Alternative would not result in a significant and unavoidable impact related to project construction. Furthermore, implementation of the Reduced Footprint Alternative would result in reduced operational activity within the site, thus, trips associated with delivery and operations would be reduced.

Due to the anticipated reduction in vehicle trips to and from the site under the Reduced Footprint Alternative, impacts related to exposure of sensitive receptors to substantial pollutant concentrations associated with project operations, would be fewer; however; Mitigation Measure 4.1-3 may continue to be required under the Reduced Footprint Alternative. Furthermore, although reductions in on-site operations would reduce operational GHG emissions, overall, the Reduced Footprint Alternative would be anticipated to result in a significant and unavoidable impact related to GHG emissions.

Overall, the Reduced Footprint Alternative would not result in the significant and unavoidable impact identified for implementation of the proposed project related to construction emissions. Although the Reduced Footprint Alternative would be anticipated to result in a significant and unavoidable impact related to GHG emissions, the Reduced Footprint Alternative would result in fewer impacts as compared to the proposed project.

Biological Resources

The Reduced Footprint Alternative would greatly reduce on-site development and focus the remaining development within portions of the project site covered by the ECCC HCP/NCCP. Focusing the proposed development within areas covered by the ECCC HCP/NCCP would ensure that the proposed project would avoid the existing seasonal wetland within the northeast portion of the project site, which would reduce impacts to seasonal wetlands within the project

site by at least 0.02 acres. In addition, the reduced development footprint would likely allow for the preservation of some of the existing on-site trees; thus, reducing impacts to heritage and protected trees.

By restricting development to areas of the project site within the ECCC HCP/NCCP Permit Area, all construction activities associated with the Reduced Footprint Alternative would be considered covered activities under the ECCC HCP/NCCP. The ECCC HCP/NCCP provides for a uniform regional mechanism of project mitigation and impact reduction through the payment of ECCC HCP/NCCP impact fees and the application of minimization, avoidance, and mitigation measures. All ground-disturbance associated with the Reduced Footprint Alternative would be considered covered activities under the ECCC HCP/NCCP and would be mitigated through application of fee payment and standard minimization, avoidance, and mitigation measures. Compared to the proposed project, implementation of the Reduced Footprint Alternative solely within the portion of the site covered by the ECCC HCP/NCCP would serve to reduce impacts to biological resources by providing for comprehensive mitigation based on regional conservation strategies. Considering the above, the Reduced Footprint Alternative would reduce potential impacts to wetlands and trees on-site. Furthermore, the alternative would only include development within areas of the site covered by the ECCC HCP/NCCP, which would reduce impacts related to ground-disturbing activities and conversion of grassland to industrial uses. Overall, the impacts related to biological resources identified for the proposed project would be fewer under the Reduced Footprint Alternative, and although mitigation would continue to be required to ensure consistency with the ECCC HCP/NCCP, fewer mitigation measures as compared to the proposed project would be required.

Hydrology and Water Quality

Reduced Footprint Alternative would involve a smaller area of disturbance than what would occur under the proposed project. The reduced area of disturbance would result in a reduced potential for impacts related to the altering of drainage patterns on the site. Nonetheless, Mitigation Measure 4.3-4 would still be required to minimize the potential for stormwater to exceed infrastructure capabilities. While Mitigation Measures 4.3-4 would still be required, Mitigation Measure 4.3-5 would not be required for Reduced Footprint Alternative as a reduction in square footage would result in development outside of the 100-year floodplain. Thus, impacts related to development within a 100-year floodplain would not occur under the Alternative.

Because Reduced Footprint Alternative would involve a smaller building square footage for the industrial facility, which would correlate to a reduction in the on-site impervious surface area, the amount of runoff would be reduced under the Alternative. For similar reasons, impacts related to the alteration of the existing drainage pattern of the site or area, as well as an increase in the rate or amount of surface runoff, would be fewer under the Alternative than the proposed project. Given that the amount of runoff for the proposed project would decrease, the off-site basin would not be needed for the Alternative.

Overall, the impacts identified for the proposed project related to hydrology and water quality would be fewer under Reduced Footprint Alternative given that the proposed project would no longer be located in the 100-year floodplain and would not require the off-site drainage basin.

Transportation and Circulation

Because Reduced Footprint Alternative would involve a smaller area of disturbance and overall building square footage than the proposed project, the level of associated construction vehicle traffic would be reduced. Accordingly, impacts associated with traffic related to construction activities would be fewer under the Alternative.

Given that the Reduced Footprint Alternative would reduce the building square footage on the site and the overall development area, associated operational vehicle trips would likely be fewer. The number of drive aisles and parking spaces would be significantly reduced, and thus, would result in fewer vehicle trips on- and off-site. Furthermore, given that vehicle trips would be approximately half as much as the proposed project for a 50 percent reduction in square feet, it can be assumed that reducing square footage by 75 percent would reduce significant and unavoidable impacts to less-than-significant.

In addition, the Reduced Footprint Alternative could result in slightly fewer cumulative impacts. The intersections of Big Break Road/Main Street and Oakley Road/Live Oak Avenue would operate at an unacceptable standard of LOS F under the proposed project. Given that the development area of the Reduced Footprint Alternative would be significantly reduced, traffic conditions would operate at acceptable levels. As such, implementation of Mitigation Measures 4.4-9 and 4.4-10 would not be necessary for the Alternative. Thus, the Reduced Footprint Alternative would result in fewer impacts under Cumulative Plus Project conditions than that of the proposed project and, thus, reduce significant and unavoidable impacts to less-than-significant.

Overall, development of the Reduced Footprint Alternative would result in fewer impacts related to transportation and circulation compared to that of the proposed project and the significant and unavoidable impacts identified for the proposed project would not be expected to occur.

Utilities and Service Systems

As discussed in Chapter 4.5, Utilities and Service Systems, of this EIR, the proposed project would not result in significant impacts related to wastewater supplies or infrastructure, solid waste, electricity, and natural gas services. Because the Reduced Footprint Alternative would involve a substantial reduction in square footage of the proposed project, the Alternative would generate less wastewater and solid waste. Accordingly, the amount of wastewater generation, solid waste generation, and energy consumption associated with the site would be fewer under the Reduced Footprint Alternative.

Although reduction in the project footprint would result in significantly less waste, improvements to the Bridgehead Pump Station would still be required to accommodate the proposed project. Because the Lauritzen Pump station is currently at full capacity, upgrades to the Bridgehead Pump station and force main would be necessary to accommodate wastewater flows. In addition to the improvements of the Bridgehead Pump station and force main, construction of a new pump station would be included in order to ensure adequate capacity for wastewater conveyance. Therefore, development of the Reduced Footprint Alternative would result in similar impacts related to utilities and service systems to that of the proposed project.

6.4 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

An EIR is required to identify the environmentally superior alternative from among the range of reasonable alternatives that are evaluated. Section 15126(e)(2) of the CEQA Guidelines requires that an environmentally superior alternative be designated and states, "If the environmentally superior alternative is the 'no project' alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives."

Designating a superior alternative depends in large part on what environmental effects one considers most important. This EIR does not presume to make this determination; rather, the determinations of which impacts are more important are left to the reader and the decision makers. Generally, the environmentally superior alternative is the one that would result in the fewest environmental impacts as a result of project implementation. However, it should be noted that the environmental considerations are one portion of the factors that must be considered by the public and the decisionmakers in deliberations on the proposed project and the alternatives. Other factors of importance include urban design, economics, social factors, and fiscal considerations. In addition, the superior alternative would, ideally, still provide opportunities to achieve the project objectives.

The No Project (No Build) Alternative would not meet any of the project objectives, because the site would not be redeveloped for Light Industrial use. The Reduced Intensity Alternative would not meet Objectives 1 or 2, and would only partially meet Objectives 3 and 4. The Reduced Footprint Alternative would not meet Objectives 1 and 2, and would only partially meet Objectives 3 and 4. Objective 5 would be met under both the Reduced Intensity Alternative and the Reduced Footprint Alternative.

A comparison of the impacts that would occur under each of the alternatives, as discussed in detail above, to those anticipated for the proposed project is illustrated in Table 6-4 below. As shown in Table 6-4, all of the significant impacts identified for the proposed project would not occur under the No Project (No Build) Alternative. The Reduced Intensity Alternative would result in fewer impacts related to Air Quality and Greenhouse Gas Emissions, and Transportation and Circulation, but would result in similar impacts related to Biological Resources, Hydrology and Water Quality, and Utilities and Service Systems. The Reduced Footprint Alternative would result in fewer impacts related to Air Quality and Greenhouse Gas Emissions, Biological Resources, Hydrology and Water Quality, and Transportation and Circulation but would result in similar impacts related to Utilities and Service Systems. It should be noted that the Reduced Intensity Alternative would not eliminate the significant and unavoidable impacts related to Transportation and Circulation and GHG Emissions; however, the Reduced Footprint Alternative would reduce significant and unavoidable impacts related to Transportation and Circulation to less than significant. Because the Reduced Footprint Alternative would be capable of reducing more of the impacts identified for the proposed project than the Reduced Intensity Alternative, while still meeting the majority of the project objectives, the Reduced Footprint Alternative would be considered the environmentally superior alternative to the proposed project.

Table 6-4
Alternative Environmental Impacts Comparison

Resource Area	Proposed Project	No Project (No Build) Alternative	Reduced Intensity Alternative	Reduced Footprint Alternative
Air Quality and GHG Emissions	Significant and Unavoidable	None	Fewer*	Fewer*
Biological Resources	Less-Than-Significant with Mitigation	None	Similar	Fewer
Hydrology and Water Quality	Less-Than-Significant with Mitigation	None	Similar	Fewer
Transportation and Circulation	Significant and Unavoidable	None	Fewer*	Fewer
Utilities and Service Systems	Less-than-significant	None	Similar	Similar

Notes:
No Impact = "None"
Less than Proposed Project = "Fewer"
Similar to Proposed Project = "Similar"
Greater than Proposed Project = "Greater"
* Significant and unavoidable impacts identified for the proposed project would remain.

INITIAL STUDY

A. BACKGROUND

1.	Project Title:	Oakley Logistics Center
2.	Lead Agency Name and Address:	City of Oakley 3231 Main Street Oakley, CA 94561
3.	Contact Person and Phone Number:	Joshua McMurray Planning Manager (925) 625-7000
4.	Project Location:	6000 Bridgehead Road Oakley, CA 94561
	Assessor's Parcel Numbers (APNs):	037-020-008, -009, -010, -014, -015, -016, -017, -018, -019, -020, -021, and -022
5.	Project Sponsor:	North Point Development 12977 North Forty Drive, Suite 203 St. Louis, Missouri 63141
6.	Existing General Plan:	Business Park/Light Industrial/Utility Energy/ Delta Recreation
7.	Proposed General Plan:	Light Industrial
8.	Existing Zoning:	Specific Plan
9.	Proposed Zoning:	Planned Unit Development

10. Project Description Summary:

The Oakley Logistics Center (proposed project) is located on approximately 345 acres of land on the northwest side of the City of Oakley. The proposed project would include development of approximately 150 acres of the land project area. The proposed logistics center would be developed with light industrial uses. The project site is currently zoned Specific Plan and seeks to be rezoned as Planned Unit Development in order to allow flexibility to develop light industrial and related uses consistent with the General Plan. The site is currently designated Business Park/Light Industrial/Utility Energy/Delta Recreation under the City of Oakley 2020

General Plan. The proposed project would include a General Plan Amendment to remove the Business Park and Utility Energy land use designations, and expand the Light Industrial land use designation over the area to be developed. The Delta Recreation designation would remain and the area would not be developed.

11. Surrounding Land Uses and Setting:

The proposed project would develop approximately 150 acres of the project site, located on Bridgehead Road north of Main Street and the Burlington Northern Santa Fe (BNSF) railroad, with entrance provided by Wilbur Avenue. Surrounding existing land uses include commercial and industrial uses to the west, vacant land to the south, a mobile home park southwest, vacant land to the east, and the San Joaquin River Delta and Lauritzen Yacht Harbor to the north.

12. Status of Native American Consultation Pursuant to Public Resources Code Section 21080.3.1.:

In compliance with Assembly Bill (AB) 52 (Public Resources Code Section 21080.3.1), project notification letters were distributed to the Amah Mutsin Tribal Band of Mission San Juan Bautista, The Ohlone Indian Tribe, Wilton Rancheria, the Indian Canyon Mutsun Band of Costanoan, the Muwekma Ohlone Indian Tribe of the SF Bay Area, the North Valley Yokuts Tribe, and the Torres Martinez Desert Cahuila Indians. The letters were distributed on January 28, 2019 and requests to consult were not received to date.

B. SOURCES

All technical reports and modeling results prepared for the project analysis are available upon request at the City of Oakley City Hall, located at 3231 Main Street, Oakley, CA 94561. The following documents are referenced information sources utilized by this analysis:

C. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is "Potentially Significant" as indicated by the checklist on the following pages.

☐ **Aesthetics**	☐ **Agriculture and Forest Resources**	✖ **Air Quality**
✖ **Biological Resources**	☐ **Cultural Resources**	✖ **Energy**
☐ **Geology and Soils**	✖ **Greenhouse Gas Emissions**	☐ **Hazards and Hazardous Materials**
✖ **Hydrology and Water Quality**	☐ **Land Use and Planning**	☐ **Mineral Resources**
☐ **Noise**	☐ **Population and Housing**	☐ **Public Services**
☐ **Recreation**	✖ **Transportation**	☐ **Tribal Cultural Resources**
☐ **Wildfire**	✖ **Utilities and Service Systems**	

D. DETERMINATION

On the basis of this Initial Study:

☐ I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the applicant. A MITIGATED NEGATIVE DECLARATION will be prepared.

✖ I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

E. BACKGROUND AND INTRODUCTION

This Initial Study (IS) provides an environmental analysis pursuant to the California Environmental Quality Act (CEQA) for the proposed project. The applicant has submitted this application to the City of Oakley, which is the Lead Agency for the purposes of CEQA review. The IS contains an analysis of the environmental effects of construction and operation of the proposed project.

In December 2002, the City of Oakley adopted the Oakley General Plan and the Oakley General Plan Environmental Impact Report (EIR). The General Plan EIR was a program-level EIR, prepared pursuant to Section 15168 of the CEQA Guidelines (Title 14, California Code of Regulations, Sections 15000 *et seq*.). The General Plan EIR analyzed full implementation of the Oakley General Plan and identified measures to mitigate the significant adverse project and cumulative impacts associated with the General Plan. Pursuant to CEQA Guidelines Section 15150(a), the City of Oakley General Plan and General Plan EIR are incorporated by reference. Both documents are available at the City of Oakley, 3231 Main Street, Oakley, CA 94561.

The impact discussions for each section of this IS have been largely based on information in the Oakley General Plan and the Oakley General Plan EIR.

The mitigation measures prescribed for environmental effects described in this IS would be implemented in conjunction with the project, as required by CEQA, and the mitigation measures would be incorporated into the project. In addition, findings and a project Mitigation Monitoring and Reporting Program (MMRP) would be adopted in conjunction with approval of the project.

The proposed project site is the location of a former DuPont chemical manufacturing facility that produced chlorofluorocarbons and anti-knock fuel additive compounds. All manufacturing activities ceased by 1999 and the manufacturing facilities at the site have been demolished. The site is undergoing corrective action under the Resource Conservation and Recovery Act. The Department of Toxic Substances Control (DTSC), as the lead agency, certified a Mitigated Negative Declaration (MND) for the remediation project on June 29, 2018. The remedial activities will eliminate or reduce potential exposures and hazards at the site. As the remediation is completed, the remediated areas of the site will be ready for the development of industrial and commercial uses.

F. PROJECT DESCRIPTION

The following section includes a description of the project's location and surrounding land uses, as well as a discussion of the project components and discretionary actions requested of the City of Oakley by the applicant.

Project Location and Surrounding Land Uses

The project site is located on the northwest side of the City of Oakley, adjacent to State Route (SR) 160, on Bridgehead Road, north of Main Street and the BNSF Railroad, with entrance provided by Wilbur Avenue. The entire property is approximately 345 acres. However, the proposed project would only develop approximately 150 acres of the property. The remaining 195 acres would be undisturbed. The site is bounded by commercial and industrial uses to the west, vacant land to the east, the BNSF railroad and a mobile home park to the south, and the Delta and Lauritzen Yacht Harbor to the north (see Figure 1).

Project Components

The proposed project includes construction of seven buildings across the project site ranging in size from 47,460 square feet (sf) to 567,840 sf, for a total of 2,249,544 sf (see Figure 2). The buildings would include front load and cross docked warehouses. The proposed project would include demolition of the existing structures and construction of the proposed buildings.

Construction and Proposed Uses

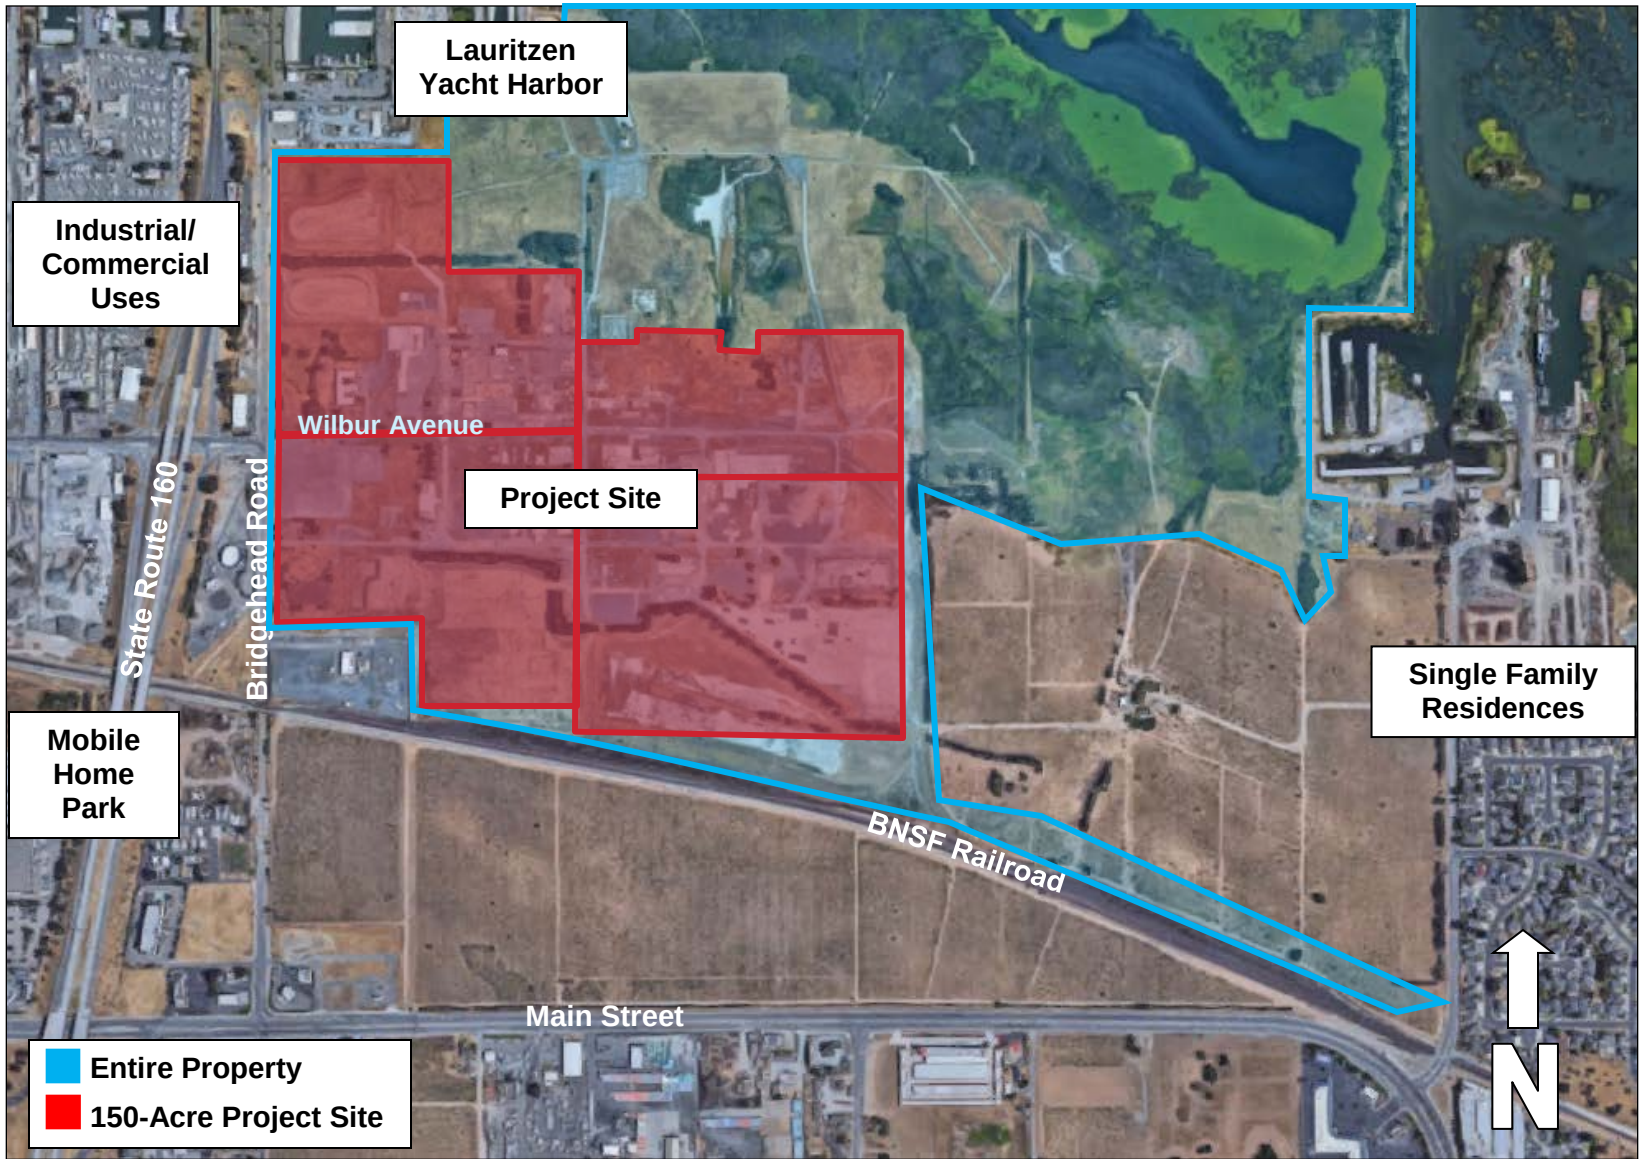
The development of the proposed project would occur over three years and would include construction of seven buildings with associated parking areas, circulation improvements, and truck court areas. The frontage road on Wilbur Avenue would be improved to provide access to each building, and construction of two entrances north and south of Wilbur Avenue off of Bridgehead Road would also improve circulation throughout the project site.

The proposed project would provide spaces for light industrial, warehousing, and manufacturing uses consistent with the General Plan.

Grading

Existing grades within the project site range from a low of about seven feet at the northwest corner of the site to a high of about 23 feet in the southwest corner. Proposed grading would consist of a series of cuts and fills to produce an overland stormwater release path towards the Central Slough and Delta edges. Two existing wetlands along Bridgehead Road would be filled. Elevations for the proposed buildings would be between 19.3 and 23.7 feet with adjacent truck docks being approximately four feet below the finished floors. A preliminary earthwork model for the grading scheme indicates that approximately 250,000 cubic yards of import would be needed. However, as the site planning is refined, an effort would be made to reduce the amount of material required for import and export.

Figure 1
Project Vicinity Map



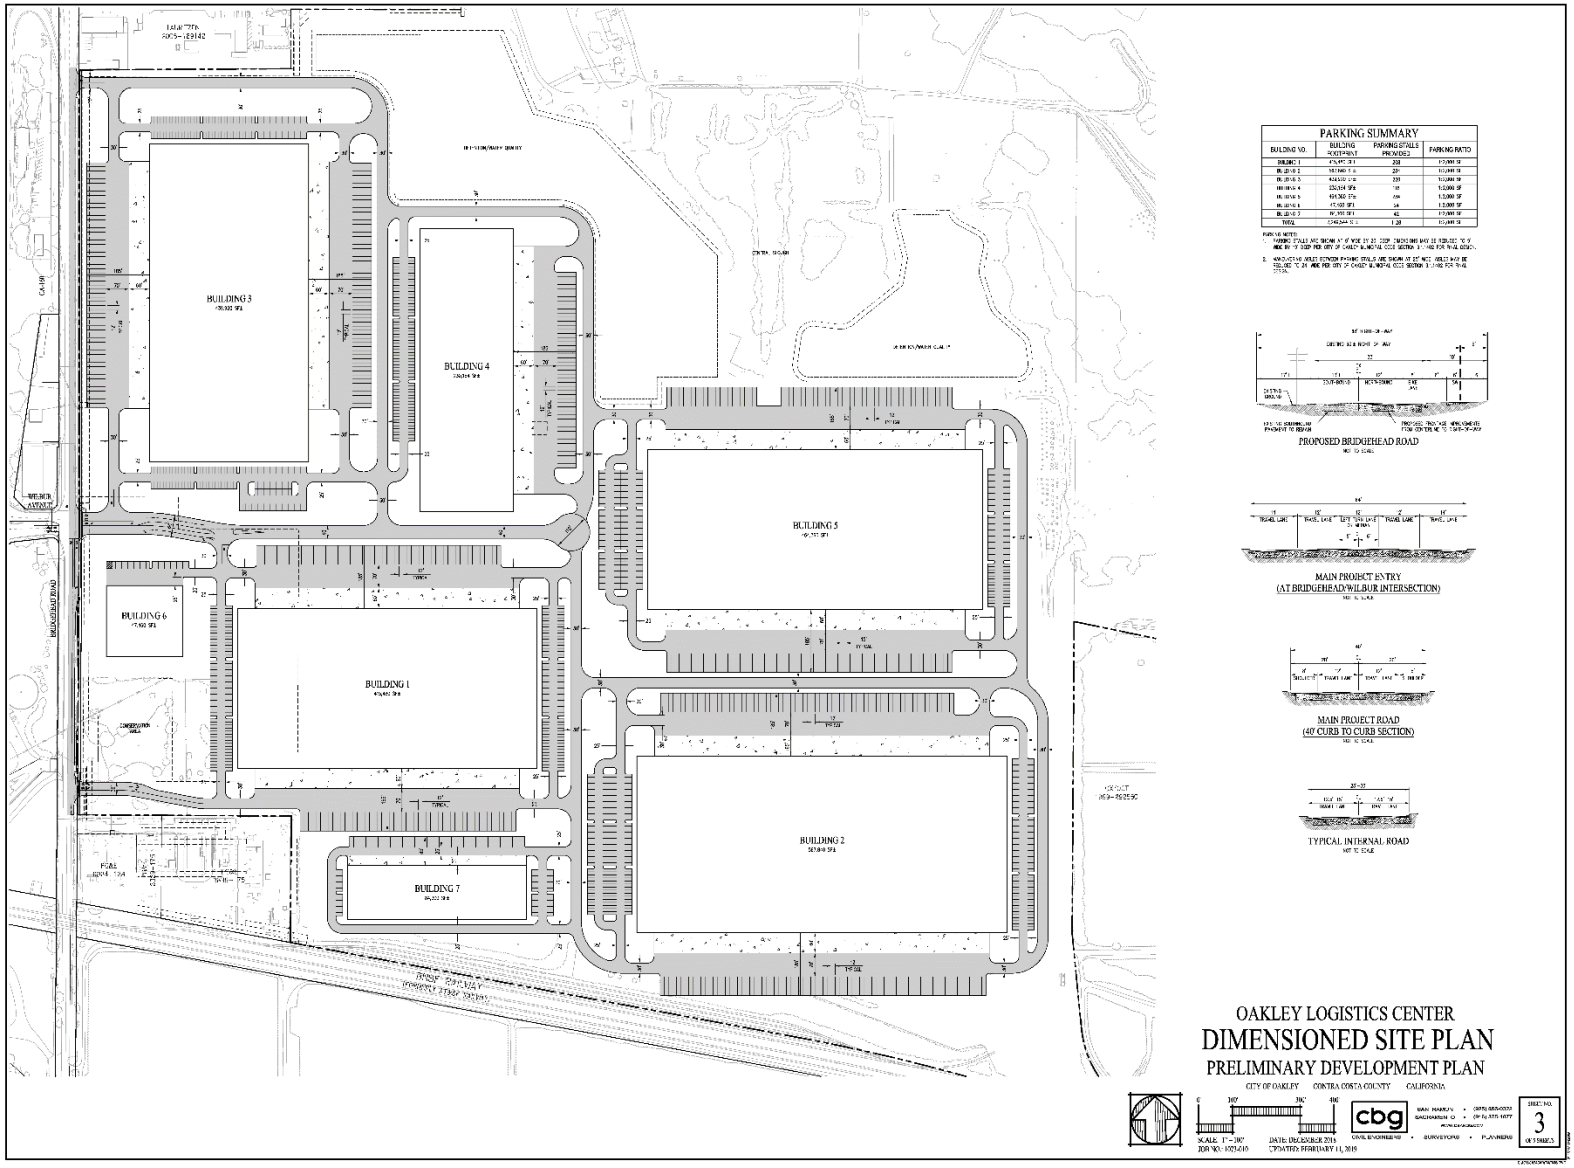


Figure 2
Tentative Site Map

Project Site Access

The main entrance to the project site would be located on the eastern side of the intersection of Wilbur Avenue and Bridgehead Road. Two secondary access points would also be provided on Bridgehead Road. The first would be located to the south of the Wilbur Avenue entrance and the second would be located to the north.

Each of the seven buildings would have individual access and parking areas. Buildings 1 through 5 would have loading dock access on two sides of each building. The proposed project would include a total of 1,128 parking spaces. Parking spaces would be 9 feet wide by 20 feet deep per the City of Oakley Municipal Code Section 9.1.1402.

Roadway Improvements

Consistent with the Oakley 2020 General Plan, roadway infrastructure would be constructed to meet the needs of a planned unit development and provide access to the project area. Street widths would be designed in accordance with traffic studies completed for the project as well as the specifications within the Oakley 2020 General Plan.

Wilbur Avenue would provide the main entrance to the proposed project. Internal circulation roads would be privately maintained. The southern entrance from Bridgehead Road would be constructed to circulate the project site and provide access to Buildings 1 and 7. The entrance from the northern portion of Bridgehead Road would be constructed to provide access to Building 3 and circulate the entire project site. The primary entrance on Wilbur Avenue would be expanded to 64 feet at the entrance.

Additionally, the proposed project would include a change to the General Plan Figure 3-1, Circulation Diagram, to remove the proposed extension of Live Oak Avenue through the project site (See Figure 3)

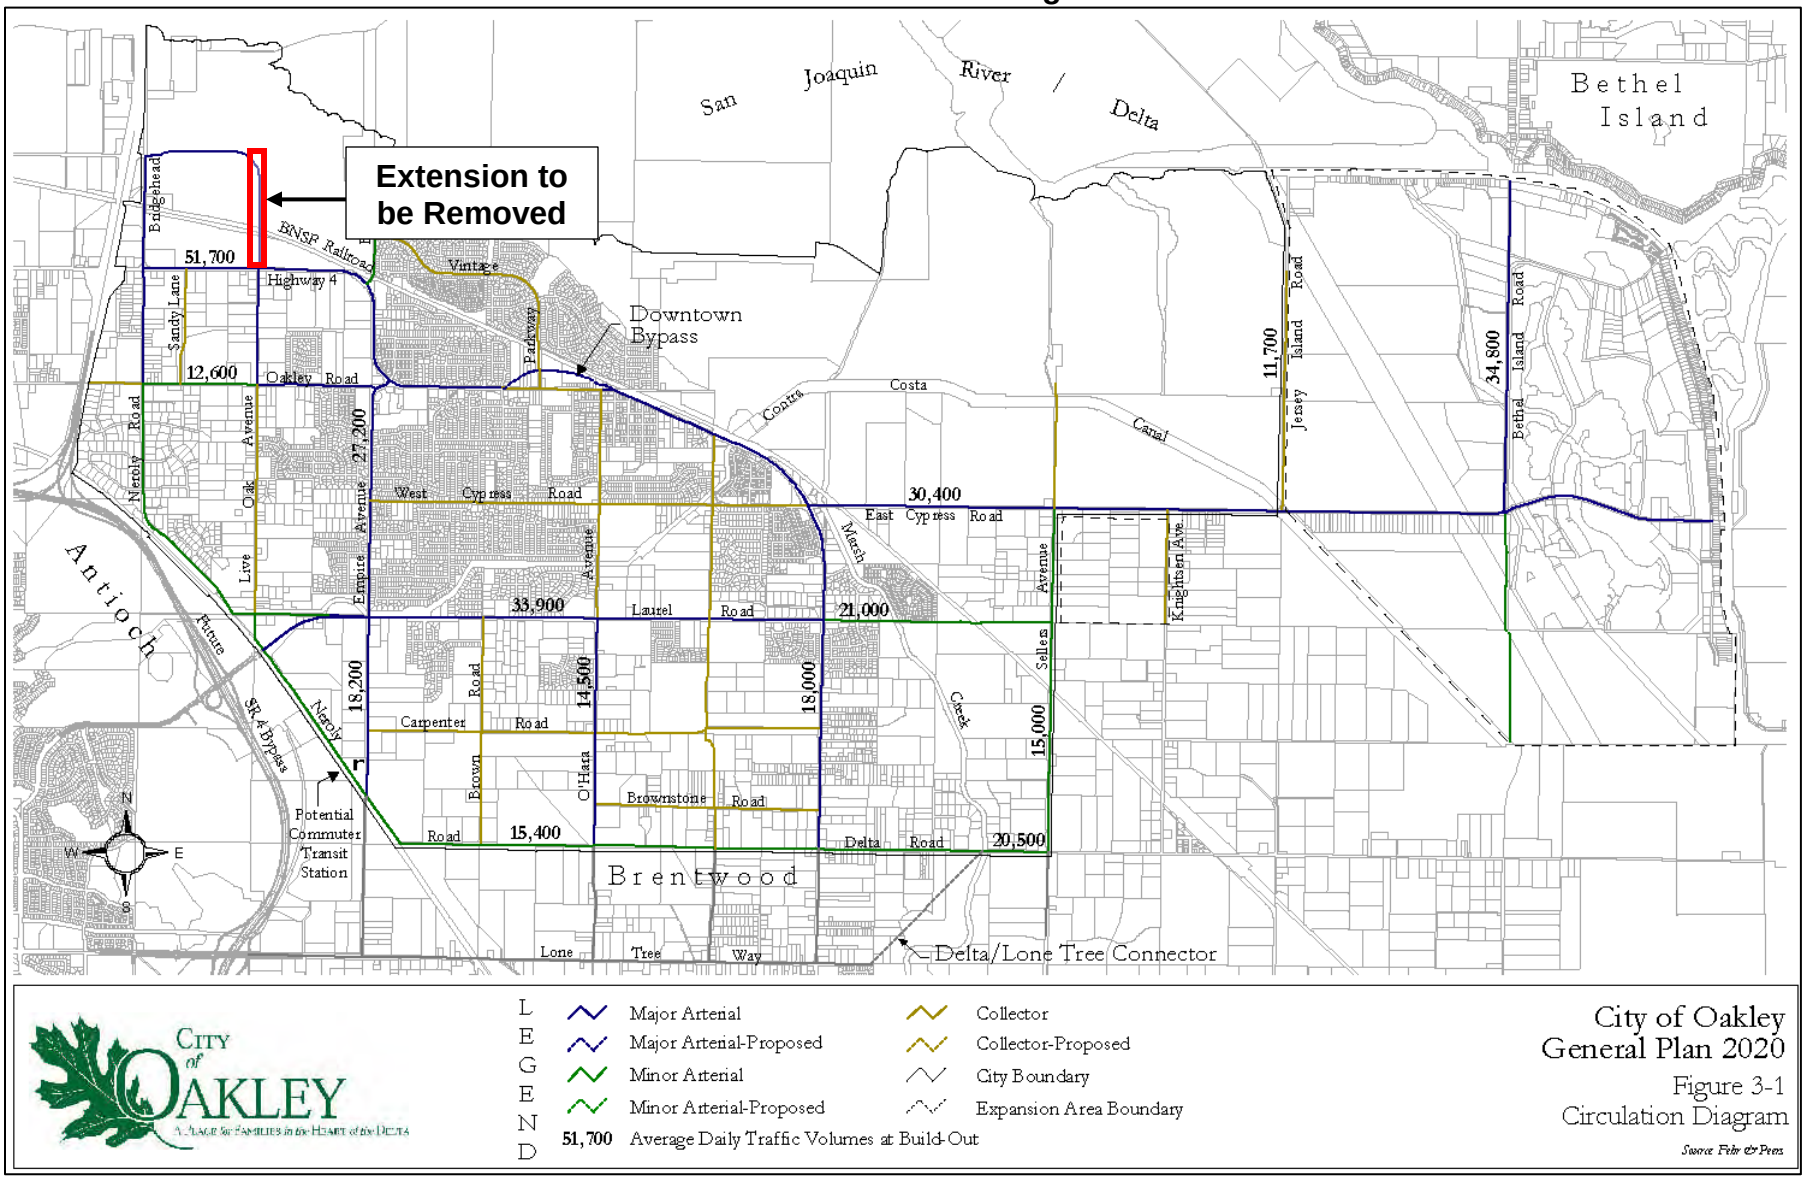
Utilities

The following is a discussion of the planned utility services of the proposed project. See Figure 4 for the proposed utilities site plan.

Water

Diablo Water District (DWD) provides potable water service to the project area. DWD has existing water lines along the southern boundary of the site, extending north and south. The private on-site water system currently used would be removed completely. The project includes a proposed water line in the main private drive aisle extending from Wilbur Avenue to the proposed cul-de-sac, operated by DWD. From that point, services to Buildings 2, 5, and 7 would be privately owned and operated. Buildings 1, 3, 4, and 6 would also be served from connections off the DWD line at connections along the main drive aisle.

Figure 3
General Plan Circulation Diagram



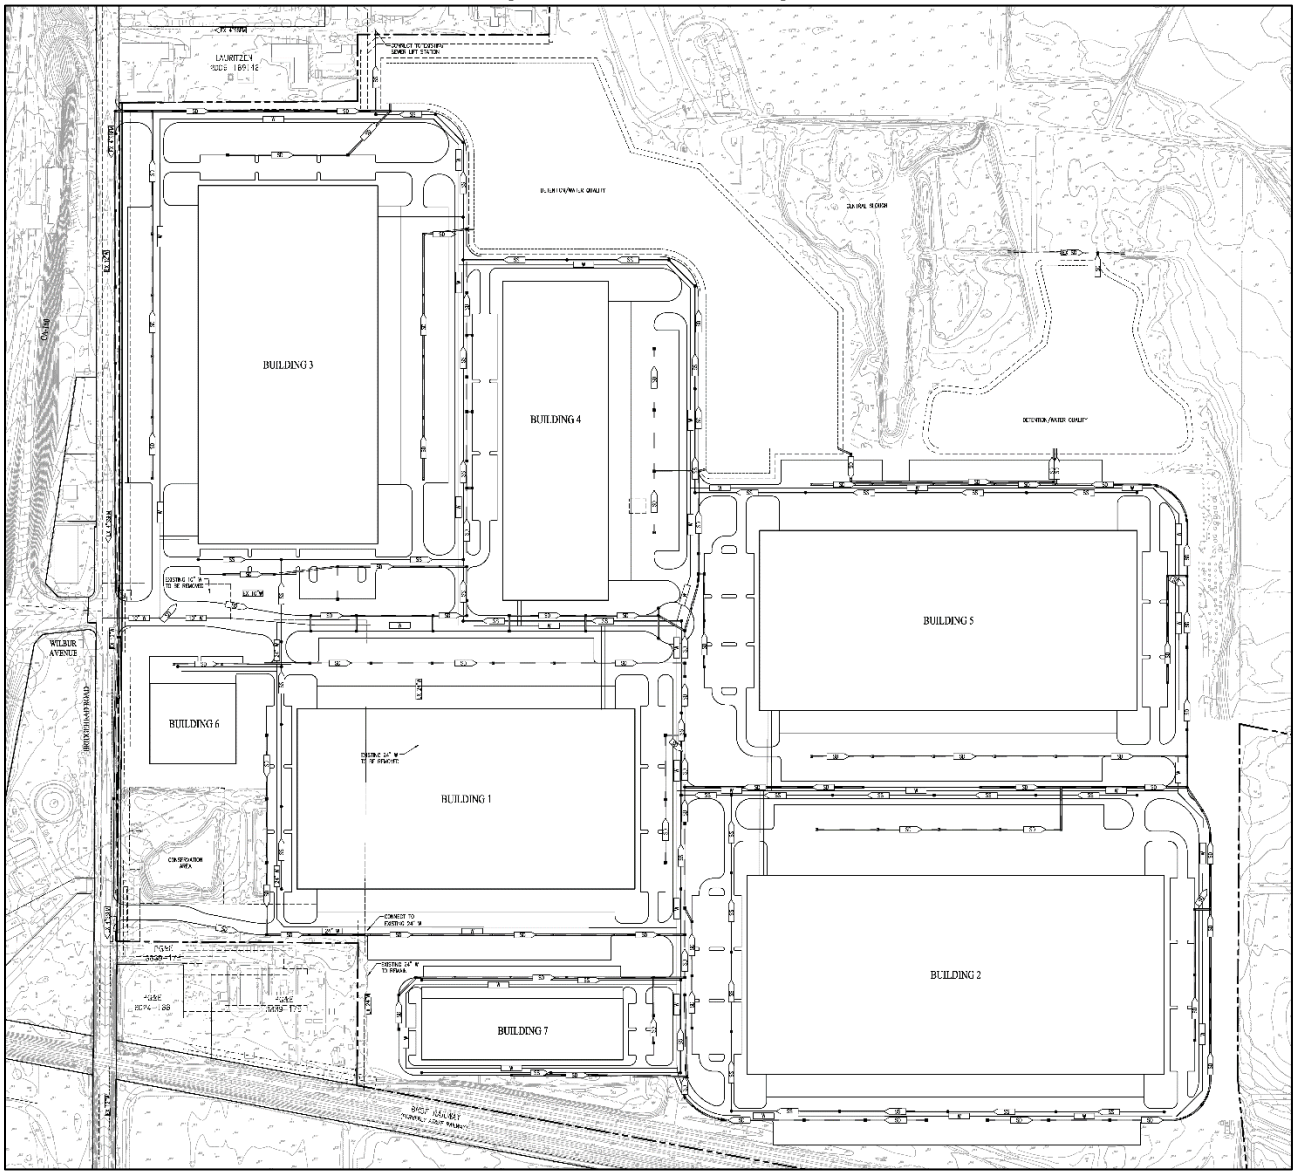


Figure 4
Proposed Utilities Map

Sewer

Iron House Sanitary District (ISD) provides sanitary sewer collection and treatment for the project area. ISD operates the existing Lauritzen Sewer Pump Station in Lauritzen Lane at the north edge of the site. Wastewater flows generated from the buildings would be collected in a pipe network that circulates within the parking and drive aisles of the project area and connects to the Lauritzen Pump Station.

Storm Drainage

The City of Oakley operates and maintains the public storm drain system in the vicinity of the project area. The site currently does not contain existing or planned public storm drain facilities. Stormwater from impervious building rooves and pavement areas would be conveyed to biofiltration basins located throughout the site. Water from the basins would then be conveyed to the southern tip of Central Slough. Flows from the site would be conveyed to an existing pipe and discharged to the Delta. On-site piping and biofiltration basins would be privately maintained.

Discretionary Actions

Implementation of the proposed project would require the following discretionary actions by the City of Oakley:

- Certification of the Environmental Impact Report;
- Adoption of the Mitigation Monitoring and Reporting Program;
- Approval of a General Plan Amendment (GP 04-18) to amend the land use designation from Light Industrial/Business Park/Utility Energy to Light Industrial;
- Approval of General Plan Amendment to remove the proposed extension of Live Oak Avenue from General Plan Figure 3-1, Circulation Diagram;
- Approval of a Rezone (RZ 08-18) from Specific Plan (SP-3) to Planned Unit Development (P-1);
- Approval of Preliminary and Final Development Plan;
- Approval of a Design Review (DR 12-18);
- Approval of a Tentative Subdivision Map to create 11 parcels (TM 05-18); and
- Approval of a Development Agreement (DA 01-18).

G. ENVIRONMENTAL CHECKLIST

The following checklist contains the environmental checklist form presented in Appendix G of the CEQA Guidelines. The checklist form is used to describe the impacts of the proposed project. A discussion follows each environmental issue area identified in the checklist. Included in each discussion are project-specific mitigation measures required, where necessary, as part of the proposed project.

For this checklist, the following designations are used:

Potentially Significant Impact: An impact that could be significant, and for which mitigation has not been identified. If any potentially significant impacts are identified, an EIR must be prepared.

Less Than Significant With Mitigation Incorporated: An impact that requires mitigation to reduce the impact to a less-than-significant level.

Less-Than-Significant Impact: Any impact that would not be considered significant under CEQA relative to existing standards.

No Impact: The project would not have any impact.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
I. AESTHETICS. *Would the project:*					
a.	Have a substantial adverse effect on a scenic vista?	☐	☐	✖	☐
b.	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?	☐	☐	✖	☐
c.	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	✖	☐
d.	Create a new source of substantial light or glare which would adversely affect day or night-time views in the area?	☐	☐	✖	☐

Discussion

a. Scenic resources in Oakley, as defined in the City's General Plan, include predominant natural landscape features such as the Delta Waterway, Marsh Creek, and views of Mount Diablo to the west. The City of Oakley does not specifically identify scenic vistas within the City's planning area, but the conclusion could be drawn that any development which would impact views of any of the aforementioned landscape features from public viewpoints would result in an impact to scenic vistas. The nearest location where public views of the Delta are afforded is SR 160, which is a raised highway. Other existing roadways nearby, such as Bridgehead Road do not afford views of the Delta due to the low elevation of such roadways and intervening vegetation or development. The City of Oakley General Plan allows a maximum building height of 50-feet for industrial uses; however, the proposed buildings would not exceed 36-feet. Considering the limited height of proposed structures and the existing height of SR 160, the proposed project would not be built to a height to obstruct potential views of the Delta from the public roadway. Therefore, consistency with the General Plan would ensure scenic views would not be affected. Additionally, the project is not located in close

proximity to development whose views would be obstructed by buildout of the proposed project. Because the proposed project is not in an area designated as a scenic vista by the City of Oakley and would not adversely affect a scenic vista, the project would result in a ***less-than-significant*** impact related to such.

b. According to the California Scenic Highway Mapping System, administered by Caltrans, the eastern portion of SR 4 is eligible for State Scenic Highway designation[1]. The proposed project is located approximately 1.5 miles north of SR 4 within the section of the roadway eligible for state designation. However, the project is removed enough from SR 4 that visibility from the highway is not possible. Because the project site is not visible from SR 4, the proposed project would not damage scenic resources within a State Scenic Highway and would result in a ***less-than-significant*** impact.

c. The project site is located within an urbanized area of the City. Industrial and commercial land uses surround the project site. The site is surrounded by vacant land to the east. A harbor is currently located directly north of the project. The visual character of the site would be consistent with the existing character, as the project would remain industrial. The zoning amendment to Planned Unit Development would be consistent with the proposed uses of the project.

   Additionally, the project site is currently highly disturbed and vacant. The project site was occupied by a chemical manufacturer for over 42 years and is now undergoing remediation activities under supervision of the Department of Toxic Substances Control. Development of the proposed project would alter the existing setting and possibly improve the aesthetics of the site by changing the vacant site to construct state of the art industrial buildings. Therefore, the proposed project would not substantially degrade the existing visual character or quality of public views of the site nor would the project conflict with applicable zoning regulations. As such, the impact would be considered ***less than significant***.

d. Currently, the proposed project site consists of vacant land and some unoccupied buildings. The development of the proposed project would add new sources of light and glare to the site; however, as previously discussed, the General Plan designates the site for Business Park/Light Industrial/Utility Energy uses. The General Plan Amendment to Light Industrial on the entire project site and development of seven warehouses for light industrial and manufacturing uses would be consistent with development anticipated in the General Plan. In addition, the development would be subject to review by the Planning Commission under Section 9.1.1604, Design Review, which would ensure that the proposed project would not result in light trespass onto adjacent properties or result in the addition of a substantial source of light or glare. Therefore, any creation of new sources of light and glare by the future project would be considered a ***less-than-significant*** impact.

[1] California Department of Transportation. *California Scenic Highway Mapping System Contra Costa County*. Available at: http://www.dot.ca.gov/hq/LandArch/16_livability/scenic_highways/. Accessed January 2019.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
II. AGRICULTURE RESOURCES. *In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:*					
a.	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	✖
b.	Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	✖
c.	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	✖
d.	Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	✖
e.	Involve other changes in the existing environment which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use?	☐	☐	☐	✖

Discussion

a,e. The proposed project site is designated as "Urban and Built-Up Land" on the Contra Costa County Important Farmland Map 2016, published by the Department of Conservation.[2] Given the designation of the site as Urban and Built-Up Land, development of the proposed project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use, or otherwise result in the loss of Farmland to non-agricultural use.

Additionally, the project site is currently highly disturbed and vacant. The site is now undergoing remediation activities under supervision of the DTSC. Remediation activities will protect human health and the health of the environment by eliminating or reducing the potential for exposures to constituents of concern (COC). The proposed project would also preserve 195 acres of Delta Recreation on the property, leaving the area undisturbed. Therefore, ***no impact*** would occur related to the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance or other changes in the existing environment which could individually or cumulatively result in loss of Farmland to non-agricultural use.

b. The project site is currently zoned as Specific Plan. The proposed project includes request for rezoning to Planned Unit Development. Consequently, the project would not conflict with any agricultural zoning use for the project site. Additionally, the site is not under a Williamson Act contract. Thus, the proposed project would not conflict with existing zoning for agricultural use and would not conflict with a Williamson Act contract, and ***no impact*** would occur.

c,d. The project site is not considered forest land (as defined in Public Resources Code section 12220[g]), timberland (as defined by Public Resources Code section 4526) and is not zoned Timberland Production (as defined by Government Code section 51104[g]). Therefore, the proposed project would have ***no impact*** with regard to conversion of forest land or any potential conflict with forest land, timberland, or Timberland Production zoning.

[2] California Department of Conservation. *Contra Costa County Important Farmland 2016.* Published August 2018.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
III. AIR QUALITY. *Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:*					
a.	Conflict with or obstruct implementation of the applicable air quality plan?	✖	☐	☐	☐
b.	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	✖	☐	☐	☐
c.	Expose sensitive receptors to substantial pollutant concentrations?	✖	☐	☐	☐
d.	Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	✖	☐

Discussion

a-c. The City of Oakley is located in the San Francisco Bay Area Air Basin (SFBAAB), which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). The SFBAAB area is currently designated as a nonattainment area for the State and federal ozone, State and federal fine particulate matter 2.5 microns in diameter ($PM_{2.5}$), and State respirable particulate matter 10 microns in diameter (PM_{10}) ambient air quality standards (AAQS). The SFBAAB is designated attainment or unclassified for all other AAQS. It should be noted that on January 9, 2013, the U.S. Environmental Protection Agency (USEPA) issued a final rule to determine that the Bay Area has attained the 24-hour $PM_{2.5}$ federal AAQS. Nonetheless, the Bay Area must continue to be designated as nonattainment for the federal $PM_{2.5}$ AAQS until such time as the BAAQMD submits a redesignation request and a maintenance plan to the USEPA, and the USEPA approves the proposed redesignation. The USEPA has not yet approved a request for redesignation of the SFBAAB; therefore, the SFBAAB remains in nonattainment for 24-hour $PM_{2.5}$.

In compliance with regulations, due to the nonattainment designations of the area, the BAAQMD periodically prepares and updates air quality plans that provide emission reduction strategies to achieve attainment of the AAQS, including control strategies to reduce air pollutant emissions through regulations, incentive programs, public education, and partnerships with other agencies. The current air quality plans are prepared in cooperation with the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG).

During construction of the project, various types of equipment and vehicles would temporarily operate on the project site. Construction exhaust emissions would be generated from construction equipment, demolition, grading, construction worker commutes, and construction material hauling for the entire construction period. The aforementioned activities would involve the use of diesel and gasoline powered equipment that would generate emissions of criteria pollutants. Project construction activities also represent sources of fugitive dust, which includes PM emissions. As construction of the proposed project would generate air pollutant emissions intermittently within the site, and the vicinity of the site, until all construction has been completed, construction is a potential concern because the proposed project is in a non-attainment zone for ozone and PM.

Furthermore, development of the proposed project would result in an increased number of vehicle trips associated with traffic to and from the proposed project site. Operation of the proposed project would result in emissions associated with area sources such as natural gas combustion from heating mechanisms, landscape maintenance, and potential equipment emissions, such as propane powered forklifts. The additional traffic and operations associated with the proposed project could result in increases in criteria pollutant emissions above thresholds established by the BAAQMD. Therefore, the proposed project could violate an air quality standard or result in a cumulatively considerable net increase of any criteria pollutant, and thus, may conflict with or obstruct implementation of the applicable air quality plan.

The major pollutants of concern are localized carbon monoxide (CO) emissions and toxic air contaminant (TAC) emissions. Localized concentrations of CO are related to the levels of traffic and congestion along streets and at intersections. Implementation of the proposed project could increase traffic volumes on streets near the project site, including the nearby Lauritzen Yacht Harbor to the north and mobile home park to the south. Because the proposed project could cause an increase in the localized CO concentrations in the project vicinity, and would involve temporary TAC emissions associated with construction, as well as operational emissions of delivery trucks, the proposed project could expose sensitive receptors to substantial pollutant concentrations.

Accordingly, the proposed project could result in a ***potentially significant*** impact related to air quality.

Further analysis of this impact will be discussed in the Air Quality and GHG Emissions chapter of the Oakley Logistics Center EIR being prepared for the project.

d. Typical odor-generating land uses include, but are not limited to, wastewater treatment plants, landfills, and composting facilities. The proposed project would not introduce any such land uses and is not located in the vicinity of any such existing or planned land uses.

Operation of the proposed project would be typical of other industrial and manufacturing spaces. Any waste or recyclables generated by use of the project would be properly contained and handled in order to reduce any objectionable odors. Additionally, BAAQMD regulates objectionable odors through Regulation 7, Odorous Substances, which does not become applicable until the Air Pollution Control Officer (APCO) receives odor complaints from ten or more complainants within a 90-day period. Once effective, Regulation 7 places general limitation on odorous substances and specific emission limitations on certain odorous compounds, which remain effective until such time that citizen complaints have been received by the APCO for one year.

Based on the above, construction and operation of the proposed project would have a ***less-than-significant*** impact related to creation of objectionable odors affecting a substantial number of people.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES. *Would the project:*					
a.	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	✖	☐	☐	☐
b.	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	✖	☐	☐	☐
c.	Have a substantial adverse effect on state or federally protected (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	✖	☐	☐	☐
d.	Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?	✖	☐	☐	☐
e.	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	✖	☐	☐	☐
f.	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	✖	☐

Discussion

a-d. Special-status species are plants and animals that are legally protected under the State and/or Federal Endangered Species Act (FESA) or other regulations. The FESA of 1973 declares that all federal departments and agencies shall utilize their authority to conserve endangered and threatened plant and animal species. The California Endangered Species Act (CESA) of 1984 parallels the policies of FESA and pertains to native California species.

The East Contra Costa County Habitat Conservation Plan/Natural Community Conservation Plan (ECCCHCP) was approved in August 2007 and the City of Oakley approved the implementing ordinance on November 13, 2007. The project site is located in the City of Oakley and covered by the ECCCHCP. The ECCCHCP establishes mitigation required in order to avoid direct impacts on fully protected wildlife species, covered migratory birds, wetlands, and hydrologic conditions. The majority of the project site is located within the ECCCHCP Permit Area, with a small area located outside the Permit Area. The ECCCHCP authorizes take coverage pursuant to FESA and CESA and provides compensatory mitigation for 28 special-status plant and animal species. The proposed project would participate in the ECCCHCP, and would provide compensatory mitigation for the entire project through coordination with the United States Fish and Wildlife Service and California Department of Fish and Wildlife (CDFW).

According to the ECCCHCP Planning Survey Report conducted by Moore Biological Consultants[3], three special-status animals covered under the ECCCHCP have the potential to occur on the project site: Western burrowing owl, Swainson's hawk, and Golden Eagle. The project site does not provide habitat for special-status plants covered under the ECCCHCP and provides low quality habitat for a few non-covered special-status plant species. According to a technical memorandum prepared by Moore Biological Consultants and various CEQA documents and associated technical reports, only a few special-status animals not covered under the ECCCHCP have the potential to occur on the project site. The project site contains suitable habitat for a few special-status species, and thus the project could have a substantial adverse effect on a species identified as a candidate, sensitive, or special-status species.

Wildlife movement corridors are areas in which regional wildlife populations regularly and predictably move during dispersal or migration. Many other areas provide habitat for migratory species, such as nesting birds, during parts of the year. White-tailed kite, a "fully protected species," per California Fish and Game Code Section 3511 could potentially nest in trees in or near the site. On-site grasslands, trees, and shrubs could be used by other species of nesting birds protected by the Migratory Bird Treaty Act and Game Code of California. Thus, the project has the possibility to impact migratory wildlife corridors.

Waters of the U.S., including wetlands, are broadly defined under 33 Code of Federal Regulations (CFR) 328 to include navigable waterways, their tributaries, and adjacent wetlands. State and federal agencies regulate wetland habitat and Section 404 of the Clean Water Act requires that a permit be secured prior to the discharge of dredged or fill materials into any waters of the U.S., including wetlands. Both CDFW and the U.S. Army Corps of Engineers have jurisdiction over modifications to riverbanks, lakes, stream channels and other wetland features.

[3] Moore Biological Consultants. *Planning Survey Report for Oakley Logistics Center*. December 2018.

Potentially jurisdictional waters of the U.S. and wetlands on site would be avoided to the maximum extent practicable. The project would be constructed in the southwest part of the overall property, fully avoiding Big Break and the expansive alkali wetlands associated with the San Joaquin River. While a seasonal wetland in the southwest portion of the project site would be avoided and preserved, a few seasonal wetlands would be filled for construction of the proposed project. Due to site topography and location in the preferred development parts of the project site, impacts to the wetlands may be unavoidable.

According to the Planning Survey Report conducted for the project, the project site consists of the following land cover types: ruderal grassland, seasonal wetlands, alkali wetland, slough/channel, and urban/developed. Because of construction and buildout of the project and infill of seasonal wetlands, the project could impact a riparian or sensitive natural community.

The site is now undergoing remediation activities under supervision of the DTSC. Remediation activities will protect human health and the health of the environment by eliminating or reducing the potential for exposures to COCs.

Based on the studies conducted for the proposed project, a ***potentially significant*** impact could occur related to special-status species, federally protected wetlands, sensitive natural communities, and wildlife movement corridors.

Further analysis of this impact will be discussed in the Biological Resources chapter of the Oakley Logistics Center EIR being prepared for the project.

e. As part of a biological assessment for the proposed project, an Arborist Report was conducted in compliance with the City of Oakley Heritage and Protected Trees Ordinance 9.1.1112. As part of the evaluation, 662 trees were measured in the project site. Trunk diameter of the trees ranged from 6.7 inches to 199.7 inches, averaging 29.2 inches. Tree health averaged poor to fair. Structural quality ranged from very poor to good, averaging poor.

Development of the proposed project would require the removal of all trees in the development area. Upon site review, 130 trees were identified as heritage and are protected on site. Thus, the proposed project could have a ***potentially significant*** impact related to conflict with local policies or ordinances, such as a tree preservation policy.

Further analysis of this impact will be discussed in the Biological Resources chapter of the Oakley Logistics Center EIR being prepared for the project.

f. The proposed project would adhere to the ECCCHCP and would not conflict with the provisions of an adopted Habitat Conservation Plan. Thus, a ***less-than-significant*** impact would occur.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
V. CULTURAL RESOURCES. *Would the project:*					
a.	Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☐	☐	✖	☐
b.	Cause a substantial adverse change in the significance of a unique archaeological resource pursuant to Section 15064.5?	☐	✖	☐	☐
c.	Disturb any human remains, including those interred outside of formal cemeteries?	☐	✖	☐	☐

Discussion

a. The Oakley General Plan EIR on page 3-149 states that "while there are no officially designated historic structures in Oakley, there are numerous buildings, primarily in the old town area, eligible for such designation or listing […] Oakley's historic resources are generally in need of official recognition." Historical resources are features that are associated with the lives of historically-important persons and/or historically-significant events, or that embody the distinctive characteristics of a type, period, region, or method of construction. As the General Plan EIR states, most historical structures are located in Old Town Oakley. Historical structures outside in the outlying area of the City are generally farm structures built in the 1930s. The project site does not contain any farm structures which would be eligible for historical consideration by the City. Additionally, the proposed project site does not contain any historical structures listed by the California Register of Historical Resources, National Register of Historic Places, or the California Register of Historical Landmarks. Therefore, the project would not cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5, and a ***less-than-significant*** impact would occur.

b,c. According to the Oakley General Plan EIR (p. 3-148), few archeological finds have occurred in the City of Oakley. However, the City's General Plan EIR states that given the rich history of the region, the City will continue to require procedures if artifacts are unearthed during construction. The project area was heavily disturbed during historical filling/grading activities and former manufacturing operations, as well as current remediation efforts. As a result, the project would be unlikely to unearth cultural resources in the previously disturbed areas where soil and debris would be excavated.

A search of cultural and historical resources at the project site and within a half-mile radius of the project site boundary was conducted in 2016. One resource was

identified within the site boundary. The resource is described as the breached levee system which runs along San Joaquin River on the northern boundary. The levee system was recorded by USACE in 2014 and was determined to be lacking in integrity. The levee is located outside of the project boundary and would not be affected by construction and operation of the proposed project.

Due to the disturbed nature of the site and the surrounding area, the discovery of archeological resources is not expected. However, unknown archaeological resources, including human bone, have the potential to be uncovered during ground-disturbing construction activities. As a result, a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the potential construction-related impact to a *less-than-significant* level.

V-1. *If buried archaeological, paleontological, and/or cultural resources are encountered during site grading or other site work, all such work shall be halted immediately within 100 feet of the discovery and the developer shall immediately notify the Planning Division of the discovery. In such case, the developer shall be required, at their own expense, to retain the services of a qualified archaeologist for the purpose of recording, protecting, or curating the discovery, as appropriate. The archaeologist shall be required to submit to the City of Oakley Planning Division for review and approval a report of the findings and method of curation or protection of the resources. Further grading or site work within the area of discovery would not be allowed until the preceding work has occurred.*

V-2. *Pursuant to State Health and Safety Code §7050.5 (c) State Public Resources Code §5097.98, if human bone or bone of unknown origin is found during construction, all work shall stop within 100 feet of the find and the Contra Costa County Coroner shall be contacted immediately. If the remains are determined to be Native American, the Coroner shall notify the Native American Heritage Commission, who shall notify the person believed to be the most likely descendant. The most likely descendant shall work with the contractor to develop a program for re-internment of the human remains and any associated artifacts. Additional work is not to take place within 100 feet of the find until the identified appropriate actions have been implemented.*

Issues	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
VI. ENERGY. *Would the project:*				
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	✖	☐	☐	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	✖	☐	☐	☐

Discussion

a,b. The main forms of available energy supply are electricity, natural gas, and oil. A description of the 2016 California Green Building Standards Code (CBSC), with which the proposed project would be required to comply, as well as discussions regarding the proposed project's potential effects related to energy demand during construction and operations is provided below.

The 2016 CBSC, otherwise known as the CAL Green Code (CCR Title 24, Part 11), became effective on January 1, 2017. The purpose of the CAL Green Code is to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices.

Construction of the proposed project would involve on-site energy demand and consumption related to use of oil in the form of gasoline and diesel fuel for construction worker vehicle trips, hauling and materials delivery truck trips, and operation of off-road construction equipment. In addition, diesel-fueled portable generators may be necessary to provide additional electricity demands for temporary on-site lighting, welding, and for supplying energy to areas of the sites where energy supply cannot be met via a hookup to the existing electricity grid.

Following implementation of the proposed project, PG&E would provide electricity and natural gas to the project site. Energy use associated with operation of the proposed project would be typical of industrial and manufacturing uses, requiring electricity and natural gas for interior and exterior building lighting, heating, ventilation, and air conditioning (HVAC), electronic equipment, machinery, appliances, security systems, and more. Maintenance activities during operations, such as landscape maintenance, could involve the use of electric or gas-powered equipment. In addition to on-site energy use, the proposed project would result in transportation energy use associated with employee vehicle trips generated by the proposed project.

Based on the increased vehicle trips generated as well as the potential increase in energy usage, the project could result in a significant environmental impact due to wasteful or inefficient energy as well as conflict with a state or local plan for renewable energy. Thus, a ***potentially significant*** impact could occur.

Further analysis of this impact will be discussed in the Statutorily Required Sections chapter of the Oakley Logistics Center EIR being prepared for the project.

Issues			Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
VII. GEOLOGY AND SOILS. *Would the project:*						
a.	Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:					
	i.	Rupture of a known earthquake fault, as delineated on the most recent Alquist - Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area based on other substantial evidence of a known fault?	☐	☐	✖	☐
	ii.	Strong seismic ground shaking?	☐	✖	☐	☐
	iii.	Seismic-related ground failure, including liquefaction?	☐	✖	☐	☐
	iv.	Landslides?	☐	☐	✖	☐
b.	Result in substantial soil erosion or the loss of topsoil?		☐	☐	✖	☐
c.	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?		☐	✖	☐	☐
d.	Be located on expansive soil, as defined in Table 18-1B of the Uniform Building Code?		☐	☐	✖	☐
e.	Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?		☐	☐	☐	✖
f.	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?		☐	✖	☐	☐

Discussion

ai,aiv. The site is located in an area of moderate to high seismicity. Known active faults are not mapped across the property and the site is not located within an Alquist-Priolo Earthquake Fault Zone; however, the Oakley 2020 General Plan Background Report states that the San Francisco Bay area is an area of high seismic risk. As shown in Figure 8-1 of the City's General Plan, *Faults and Seismic Stability*, three active faults are in the Oakley area, with the Brentwood Fault directly underlying the City, and the Davis and Antioch Faults to the west of the

City. Potential seismic hazards resulting from a nearby moderate to major earthquake can generally be classified as primary and secondary. The primary effect is ground rupture, also called surface faulting. The common secondary seismic hazards include ground shaking, liquefaction, landslides, and ground lurching. Issues related to ground rupture and landslides are discussed below.

Ground Rupture

Figure 8-1 of the City's General Plan shows fault traces for all known and inferred faults in the area. The proposed project is not underlain by any faults known to the City and as a result, ground rupture is unlikely at the project site.

Landslides

The project area is relatively flat; therefore, landslides do not represent a likely hazard. According to the Association of Bay Area Governments (ABAG), the proposed project site is not in an area susceptible to landslides.[4]

Conclusion

Thus, based on the above, the propose project would not expose people or structures to potential substantial adverse effects including the risk of loss, injury, or death involving ground rupture or landslides, and a ***less-than-significant*** impact would occur.

aii,aiii, c. The City of Oakley is located in an area of moderate to high seismicity. While the project site is not located in an Alquist-Priolo Earthquake zone, the San Francisco Bay Area is considered an area of high seismic risk, and an earthquake at a nearby fault could result in impacts to the project site related to ground shaking and liquefaction.

Ground Shaking

An earthquake of moderate to high magnitude generated within the region could cause considerable ground shaking at the site, similar to that which has occurred in the past. To mitigate the shaking effects, structures should be designed using sound engineering judgment and the California Building Code (CBC) requirements, as a minimum. Seismic design provisions of current building codes generally prescribe minimum lateral forces, applied statically to the structure, combined with the gravity forces. The code-prescribed lateral forces are generally considered to be substantially smaller than the comparable forces that would be associated with a major earthquake. Therefore, structures should be able to: (1) resist minor earthquakes without damage, (2) resist moderate earthquakes without structural damage but with some nonstructural damage, and (3) resist major

[4] Association of Bay Area Governments. *Resilience Program*. Available at: http://gis.abag.ca.gov/website/Hazards/. Accessed January 7, 2019.

earthquakes without collapse but with some structural as well as nonstructural damage. Conformance to the current building code recommendations does not constitute any kind of guarantee that significant structural damage would not occur in the event of a maximum magnitude earthquake; however, a well-designed and well-constructed structure can be reasonably expected to resist collapse thus reducing loss of life in a major earthquake.

Ground Lurching

Ground lurching is a result of the rolling motion imparted to the ground surface during energy released by an earthquake. Such rolling motion can cause ground cracks to form in weaker soils. The potential for the formation of cracks is considered greater at contacts between deep alluvium and bedrock. Figure 8-1 of the City's General Plan indicates the project site is designated as being comprised of Younger Alluvium. According to the Oakley 2020 General Plan EIR, Younger Alluvium is susceptible to moderate damage during ground shaking. As a result, foundation and pavement must be designed to reduce the potential for adverse impacts from possible lurch cracking.

Liquefaction

Soil liquefaction results from loss of strength during cyclic loading, such as that imposed by earthquakes. Soils most susceptible to liquefaction are clean, loose, saturated, uniformly graded and fine-grained sands. As shown in Figure 8-2, of the City of Oakley General Plan 2020, *Estimated Liquefaction Potential*, most of the City's planning area is within an area of generally high liquefaction potential, which includes the project site. The City of Oakley General Plan (p. 8-3) Policy 8.1.9 requires any structures permitted in areas of high liquefaction potential be sited, designed, and constructed to minimize the dangers from damage due to earthquake-induced liquefaction. A geologic engineering study must be performed which defines and delineates potential hazardous geologic and/or soils conditions, recommends means of mitigating any adverse conditions, and provides implementation of the mitigation measures. Because the proposed project would be sited in an area of generally high liquefaction potential, the project would be subject to Policy 8.1.9, and would require a design-level geologic engineering study. Without completion of a design-level geotechnical report and implementation of relevant recommendations therein, the proposed project could expose people or structures to potential risk of loss, injury, or death by the project's location on an unstable geologic or soil unit.

Conclusion

The project site is not within an Alquist-Priolo Special Studies Zone; however, the City of Oakley General Plan, General Plan Background Report, and General Plan EIR indicate that the Oakley area is located in a seismically active zone. Development of the proposed project in this seismically active zone could expose

people or structures to substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking, ground lurching, liquefaction, or the location of the project on an unstable geologic unit or soil. Therefore, a ***potentially significant*** impact could result.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impacts related to liquefiable soils, and ground lurching to a *less-than-significant* level.

VII-1. *Prior to issuance of a grading permit, the applicant/developer shall incorporate the recommendations of a design-level geotechnical report into the Improvement Plans for approval by the City Engineer. The following measures include, but are not limited to, the options available to reduce site liquefaction potential and expansive soils, and/or adverse effects to structures located above potentially liquefiable soils. Once final grading plans are designed, the project's geotechnical engineers shall determine the appropriate methods of mitigating the effects of liquefaction, such as:*

- *Remove and replace potentially liquefiable soils and/or expansive and corrosive soils;*
- *Strengthen foundations (e.g., post-tensioned slab, reinforced mat or grid foundation, or other similar system) to resist excessive differential settlement associated with seismically-induced liquefaction;*
- *Support the proposed structures on an engineered fill pad (minimum of 5 feet thick) in order to reduce differential settlement resulting from seismically-induced liquefaction and post-seismic pore pressure dissipation; and/or*
- *Densify potentially liquefiable soils with an in-situ ground improvement technique such as deep dynamic compaction, vibro-compaction, vibro-replacement, compaction grouting, or other similar methods.*

VII-2. *All grading and foundation plans for the development shall be designed by a Civil and Structural Engineer and reviewed and approved by the Director of Public Works/City Engineer, Chief Building Official, and a qualified Geotechnical Engineer prior to issuance of grading and building permits to ensure that all geotechnical recommendations specified in the geotechnical report required by Mitigation Measure VI-1 are properly incorporated and utilized in the project design.*

b. Soil found on site is mapped as Delhi sand. Delhi sand is a somewhat excessively drained soil with rapid permeability and is negligible to slow runoff. According to

soil mapping by the U.S. Department of Agriculture Natural Resources Conservation Service, the project area does not contain soil with high susceptibility to erosion.[5] Erosion factor K indicates the susceptibility of a soil to sheet and rill erosion by water. Values of K range from 0.02 to 0.69. Soil at the project site has a rating of 0.05. Thus, the proposed project would not result in substantial soil erosion or loss of topsoil and a ***less-than-significant*** impact would occur.

d. Delhi sand, the soil predominately found on the project site, is not known to be expansive, and would not risk the proposed project be located on expansive soil, as defined in Table 18-1B of the Uniform Building Code. Thus, a ***less-than-significant*** impact would occur.

e. The proposed project would be serviced by ISD for sanitary sewer collection and treatment. Construction of the proposed buildings would include a sewage line connection to existing sewer pump stations and would not include construction or usage of a septic tank. Thus, the project would have ***no impact*** related to soils incapable of adequately supporting septic tanks.

f. As discussed in Section V, Cultural Resources, according to the Oakley General Plan EIR (page 3-148), few paleontological finds have been discovered in the City of Oakley. Additionally, the project area was heavily disturbed during past filling/grading activities, former manufacturing operations, and ongoing remediation activities. As a result, the project would be unlikely to directly or indirectly destroy a unique paleontological resource or unique geologic feature. However, construction activities involving grading, paving, and excavation could result in the discovery of a paleontological feature, and ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impacts related to liquefiable soils, and ground lurching to a *less-than-significant* level.

VII-3. Implement Mitigation Measures V-1 and V-2.

Issues		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
VIII. GREENHOUSE GAS EMISSIONS.					
Would the project:					
a.	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	✖	☐	☐	☐
b.	Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?	✖	☐	☐	☐

Discussion

a,b. Emissions of greenhouse gases (GHGs) contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Therefore, the cumulative global emissions of GHGs contributing to global climate change can be attributed to every nation, region, and city, and virtually every individual on earth. An individual project's GHG emissions are at a micro-scale level relative to global emissions and effects to global climate change; however, an individual project could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. As such, impacts related to emissions of GHG are inherently considered cumulative impacts.

A number of regulations currently exist related to GHG emissions, predominantly Assembly Bill (AB 32), Executive Order S-3-05, and Senate Bill (32). AB 32 sets forth a statewide GHG emissions reduction target of 1990 levels by 2020. Executive Order S-3-05 sets forth a transitional reduction target of 2000 levels by 2010, the same target as AB 32 of 1990 levels by 2020, and further builds upon the AB 32 target by requiring a reduction to 80 percent below 1990 levels by 2050. SB 32 also builds upon AB 32 and sets forth a transitional reduction target of 40 percent below 1990 levels by 2030. In order to implement the statewide GHG emissions reduction targets, local jurisdictions are encouraged to prepare and adopt area-specific GHG reduction plans and/or thresholds of significance for GHG emissions.

Estimated GHG emissions attributable to future development would be primarily associated with increases of carbon dioxide (CO_2) and, to a lesser extent, other GHG pollutants, such as methane (CH_4) and nitrous oxide (N_2O) associated with area sources, mobile sources or vehicles, utilities (electricity and natural gas), water usage, wastewater generation, and the generation of solid waste. Buildout of the proposed project would contribute to increases of GHG emissions that are associated with global climate change during construction and operations. As such, the proposed project would generate GHG emissions, either directly or

indirectly, that may have a significant impact on the environment, or conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Therefore, impacts related to GHG emissions and global climate change could be cumulatively considerable and considered ***potentially significant***.

Further analysis of this impact will be discussed in the Air Quality and GHG Emissions chapter of the Oakley Logistics Center EIR being prepared for the project.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
IX. HAZARDS AND HAZARDOUS MATERIALS. *Would the project:*					
a.	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	✖	☐
b.	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment?	☐	☐	✖	☐
c.	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	✖
d.	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	✖	☐
e.	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	✖
f.	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	✖	☐
g.	Expose people or structures, either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?	☐	☐	✖	☐

Discussion

a,b,d. The proposed project site is the location of a former DuPont chemical manufacturing facility that produced chlorofluorocarbons, fuel additive anti-knock compounds, and titanium oxide. All manufacturing activities ceased by 1999 and the manufacturing facilities at the site have been demolished. The site is

undergoing corrective action under the Resource Conservation and Recovery Act. DTSC certified an Initial Study on June 29, 2018, which approved three corrective measures studies to address the release of COC.[6] Remediation activities will remove and/or treat impacted sediment, soil, and groundwater at the site in order to eliminate or reduce potential exposures and hazards at the site. All generated waste will be handled, treated, and transported in accordance with federal, State, and local statutes and regulations. The project will be conducted under supervision of the DTSC and will protect human health and the environment.

As the remediation is completed, the remediated areas will be ready for development. During construction, the proposed project could involve use of various products such as concrete, paints, and adhesives, as well as operation of heavy equipment, which could contain fuels and oils. Small quantities of potentially toxic substances would be used at the project site and transported to and from the site during construction. However, the project contractor would be required to comply with all California Health and Safety Codes and local City and County ordinances regulating the handling, storage, and transportation of hazardous and toxic materials. Compliance with such regulations would ensure that the proposed project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment during construction activities.

Operations associated with the proposed project would be typical of other warehouses in the City, and would be governed by the uses permitted for the site per the City's Municipal Code and General Plan. Upon approval of the General Plan amendment, the proposed project would be developed according to the designation, which allows for uses such as processing, distribution, warehousing, and storage. While not currently anticipated, in the event that future operations associated with the proposed project would involve the routine use, transport, or disposal of hazardous materials, such materials would be safely managed in accordance with the applicable regulations.

While the project site is currently listed as a corrective action facility on a list of DTSC cleanup sites, the project site is not on the Cortese List pursuant to Government Code Section 65962.5.[7] Additionally, upon completion of the remediation, the project site will no longer be under corrective action.

Because the project site will be fully remediated prior to construction of the proposed project and the operation of the proposed project is not expected to require the use of hazardous materials, the project would have a ***less-than-significant*** impact related to creation of significant hazards to the public or the

[6] Department of Toxic Substances Control. *Initial Study Chemours Oakley Site Sediment, Soil and Groundwater Corrective Measure Studies*. June 29, 2018.

[7] California Department of Toxic Substances Control. EnviroStor. Available at: http://www.envirostor.dtsc.ca.gov. Accessed January 2019.

environment through transport, use, disposal, or accidental release of hazardous materials.

c. The proposed project would not be located within one-quarter mile of a school. Therefore, the project would have ***no impact*** related to hazardous emissions or the handling of hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

e. The proposed project is not located in the within an airport land use plan. The closest airport to the project site is the Byron Airport, located 14 miles from the project site. As such, the proposed project site is not located within two miles of any public airports and does not fall within an airport land use plan area. Therefore, ***no impact*** related to a safety hazard for people residing or working in the project area would occur.

f. Sufficient emergency access is determined by factors such as number of access points, roadway width, and proximity to fire stations. The proposed project would include three entrances to the project site. All lane widths within the project would meet the minimum width that can accommodate an emergency vehicle. As a result, the proposed project would not impair or physically interfere with an adopted emergency response plan and a ***less-than-significant*** impact would occur.

g. According to the California Department of Forestry and Fire Protection (CAL FIRE) Fire and Resource Assessment Program, the proposed project site is not located within a Very High Fire Hazard Severity Zone.[8] In addition, the site is surrounded by existing development to the north, and south. The site is not located adjacent to wildlands. Therefore, the proposed project would not expose people or structures to the risk of loss, injury or death involving wildland fires, and a ***less-than-significant*** impact would occur.

[8] California Department of Forestry and Fire Protection. *Contra Costa County, Very High Fire Hazard Severity Zones in LRA*. June 12, 2018.

Issues			Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
X. HYDROLOGY AND WATER QUALITY. *Would the project:*						
a.		Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	✖	☐	☐	☐
b.		Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	✖	☐	☐	☐
c.		Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	✖	☐	☐	☐
	i.	Result in substantial erosion or siltation on- or off-site;	✖	☐	☐	☐
	ii.	Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	✖	☐	☐	☐
	iii.	Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	✖	☐	☐	☐
	iv.	Impede or redirect flood flows?	✖	☐	☐	☐
d.		In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	✖	☐	☐	☐
e.		Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	✖	☐	☐	☐

Discussion

a-c. During project construction, topsoil would be exposed due to grading of the site. After grading and prior to overlaying the ground surface with impervious surfaces and structures, the potential exists for wind and water erosion to discharge sediment and/or urban pollutants into stormwater runoff, which could adversely affect water quality. The proposed project would be regulated by the San Francisco

Bay Regional Water Quality Control Board (SFBRWQCB) in order to not result in construction related degradation of water quality.

Stormwater and runoff from impervious buildings would be conveyed to biofiltration basins located throughout the site, as required by Provision C.3 of the Municipal Regional permit. Water from the basins would then be conveyed to the Central Slough. Flows would circulate through Central Slough and discharge to the Delta. Since the site is immediately adjacent to the Delta, on-site detention will likely not be necessary. Biofiltration basins would be privately maintained.

The City's National Pollutant Discharge Elimination System (NPDES) permit requires that any projects that would create or replace 10,000 square feet or more of impervious surfaces must submit a Stormwater Control Plan (SWCP) with their development permit. The City of Oakley's Municipal Code Section 6.11, Stormwater Management and Discharge Control, requires that the SWCP include appropriate design measures to treat runoff from all proposed impervious surfaces. Because the proposed project would meet the above stipulations, a SWCP would be necessary.

The site is now undergoing remediation activities under supervision of the DTSC. Remediation activities will protect human health and the health of the environment by eliminating or reducing the potential for exposures to COCs.

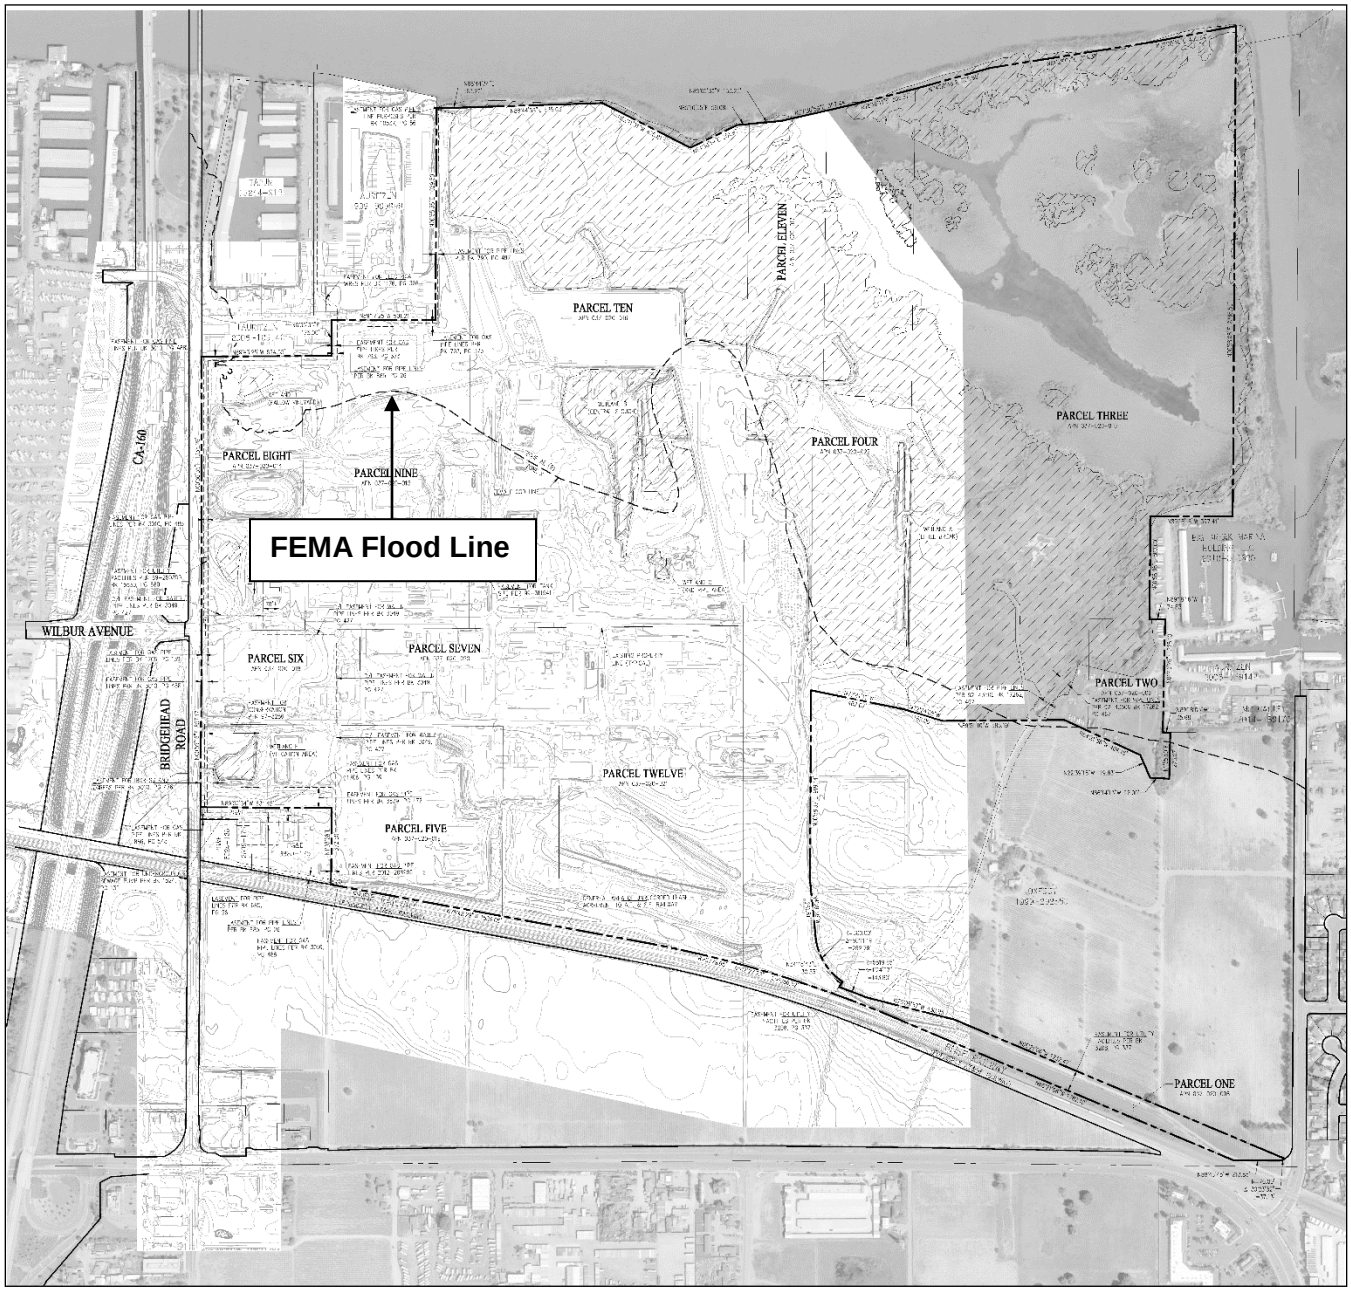
Based on the above, the project could have ***potentially significant*** impacts related to water quality standards, drainage patterns, or increase in runoff which would result in substantial erosion or runoff which would exceed the capacity of existing or planned stormwater drainage systems.

Further analysis of this impact will be discussed in the Hydrology and Water Quality chapter of the Oakley Logistics Center EIR being prepared for the project.

d. The project site is located on a FEMA Flood Insurance Rate Maps (FIRMs). Based on the FEMA FIRMs (Map Number ID 06013C0163G), the majority of the project site is within Zone X, which is described by FEMA as an area having a moderate or minimal risk of flooding (see Figure 5). However, FEMA identifies Zone AE, which is defined as a 100-year flood plain, present on the perimeter of the project site. A small portion of the northwest corner of Building 3 is most likely located in Zone AE. Development of the proposed project could place structures in flood hazard zone.

Tsunamis are defined as sea waves created by undersea fault movement and pose little danger away from shorelines. A seiche is a long-wavelength, large-scale wave action set up in a closed body of water such as a lake or reservoir, whose destructive capacity is not as great as that of tsunamis. Seiches are known to have occurred during earthquakes, but none have been recorded in the Bay Area. The proposed project is located approximately 35 miles from the Pacific Ocean and

San Francisco Bay. The ABAG does not list the project area at risk for tsunami or seiche inundation.[9] However, because the proposed project is located in a flood hazard zone, a ***potentially significant*** impact could occur related to risk of release of pollutants due to project inundation.



Further analysis of this impact will be discussed in the Hydrology and Water Quality chapter of the Oakley Logistics Center EIR being prepared for the project.

e. Water is supplied to the project site by the Diablo Water District (DWD). As stated in the DWD Groundwater Management Plan, water supply currently includes both surface water and groundwater sources. Groundwater supplies have not historically accounted for a large portion of water supply in the City. However, the Groundwater Management Plan projects an increase in groundwater usage to supply the DWD service areas. In addition, the proposed project would require an NPDES permit and a SWCP as the project would create over 10,000 square feet in impervious surfaces, and require treatment of stormwater before discharging in to the Delta. Thus, because the proposed project could demand water above the projected supply and would require a SWCP, the proposed project could conflict with or obstruct implementation of a sustainable groundwater management plan or a water quality control plan and a ***potentially significant*** impact could occur.

Further analysis of this impact will be discussed in the Hydrology and Water Quality chapter of the Oakley Logistics Center EIR being prepared for the project.

Figure 5
FEMA Flood Line Site Plan

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XI. LAND USE AND PLANNING. *Would the project:*					
a.	Physically divide an established community?	☐	☐	✖	☐
b.	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating on environmental effect?	☐	☐	✖	☐

Discussion

a. The proposed project includes requests for a General Plan Amendment to remove the Utility Energy and Business Park designation and expand the Light Industrial use to the entire project site. The project also requests a rezone from Specific Plan to Planned Unit Development, which would allow for flexibility to develop industrial and manufacturing-related uses. The approximately 150-acre project site is located on Bridgehead Road north of Main Street and the BNSF Railroad. The proposed project would be built out on a vacant property, and would not physically divide an established community, resulting in a ***less-than-significant*** impact.

b. The proposed project includes a request for a General Plan Amendment to remove the Utility Energy and Business Park designation and expand the Light Industrial use to the entire project site. The proposed project also requests a rezone from Specific Plan to Planned Unit Development. Upon approval of both amendments, the proposed project would develop warehouses for light industrial purposes. The development of such would promote Program 5.1L of the General Plan, which is to continue to recognize the importance of making an adequate supply of land available for economic development through development of the property to a Planned Unit Development. In addition, the General Plan has accounted for development of the project site as an industrial center and planned for development of the area.

The proposed project would also include an amendment to the Circulation Diagram in the General Plan, which could alter the expected circulation throughout the City. However, the Traffic Impact Analysis performed for the proposed project assumed removal of the proposed extension of Live Oak Avenue, and found that the removal of such would not interfere with projected buildout of the City. Thus, based on the above, the proposed project would have a ***less-than-significant*** impact related to creation of a significant environmental impact due to a conflict with any land use plan, policy, or regulation.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XII. MINERAL RESOURCES.					
Would the project:					
a.	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	✖
b.	Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	✖

Discussion

a,b. The City of Oakley General Plan Background Report states that the only viable mineral resource currently mined in the City of Oakley is sand. Currently mining of sand does not occur at the project site and much of the adjacent land is developed for commercial uses. Due to the previously disturbed nature of the project site, the area would likely not be a source of minerals Additionally, the nearest active mine in California is the Kennedy Mine, located approximately 57 miles from the project site. Thus, proposed project would not result in the loss of availability of a known mineral resource or a locally important mineral recovery site; therefore, the proposed project would have ***no impact*** to mineral resources.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XIII. NOISE.					
Would the project result in:					
a.	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	✖	☐
b.	Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	✖	☐
c.	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	✖

Discussion

a. The proposed project would involve sources of noise that would be similar to the surrounding area, such as vehicle noise from employee trips, large-scale delivery trucks, and other limited sources of noise. The nearest existing sensitive receptor is a mobile home park located approximately 1,000 feet southwest of the project site.

Construction Noise

During construction of the proposed project, heavy equipment would be used for grading, excavation, paving, and building construction, which would increase ambient noise levels when in use. Noise levels would vary depending on the type of equipment used, how the equipment is operated, and how well the equipment is maintained. In addition, noise exposure at any single point outside the project site would vary depending on the proximity of construction activities to that point. Standard construction equipment, such as graders, backhoes, loaders, and trucks, would be used on-site.

Table 1 shows maximum noise levels associated with typical construction equipment. Based on the table, activities involved in typical construction would generate maximum noise levels up to 85 dB at a distance of 50 feet.

Table 1 Construction Equipment Noise	
Type of Equipment	**Maximum Level, dB at 50 feet**
Backhoe	78
Compactor	83
Compressor (air)	78
Dozer	82
Dump Truck	76
Excavator	81
Generator	81
Pneumatic Tools	85
Source: Federal Highway Administration, Roadway Construction Noise Model User's Guide, January 2006.	

As one increases the distance between equipment, or increases separation of areas with simultaneous construction activity, dispersion and distance attenuation reduce the effects of combining separate noise sources. The noise levels from a source will decrease at a rate of approximately 6 dB per every doubling of distance from the noise source. Therefore, construction of the proposed project would expose the nearest sensitive receptor, located 1,000 feet southwest of the proposed project, to 61dB of construction noise at most. Therefore, the level of noise that would reach the nearest sensitive receptor would be below the 65 dB threshold for residences.[10]

Operational Noise

The primary existing source of noise in the project vicinity is traffic along Bridgehead Road. Operations of the proposed project would likely involve delivery truck noise and employee vehicle trips to the proposed project. According to the California Department of Transportation (Caltrans) noise level estimates,[11] a diesel truck is likely to produce 85 dB at 50 feet. However, the nearest sensitive receptor is located approximately 1,000 feet from the southern border of the project site, and thus, would only be exposed to a maximum of 61 dB of truck noise, which is below the 65 dB threshold for residences. The General Plan Noise Element predicts that the segment of Bridgehead Road north of Main Street will experience traffic noise levels of 60.4 dB at 100 feet from the roadway centerline upon buildout of the City. Because the General Plan designates light industrial buildout at the project site, traffic noise associated with the proposed project is accounted for in the City's noise level predictions. Additionally, because the nearest sensitive receptor is 200 feet from the Bridgehead Road centerline, the levels of noise experienced would be below 60.4 dB expected, and thus, would not be impacted by increased vehicle noise along Bridgehead Road.

[10] City of Oakley. *City of Oakley 2020 General Plan* [Table 9-3]. Amended February 2, 2016.
[11] California Department of Transportation Division of Environmental Analysis. *Technical Noise Supplement to the Traffic Noise Analysis Protocol.* September 2013.

Furthermore, the City of Oakley Municipal Code Section 9.1.1002(4)(b)(x) prohibits the use of buildings by operations which involve noise levels incompatible with present or potential development of surrounding property. Because the surrounding area is industrial and commercial, the proposed project would remain consistent with the Municipal Code.

Thus, because the nearest sensitive receptor would be located 1,000 feet away from the project and 200 feet from the Bridgehead Road centerline, the proposed project would not produce noise which would generate temporary or permanent increases in ambient noise levels in the vicinity in excess of standards established by the General Plan, resulting in a ***less-than-significant*** impact.

b. Groundborne vibration would be generated during construction of the proposed project. Residential land uses surrounding the project site would be sensitive to excessive vibrations caused by construction. For structural damage, Caltrans uses a vibration limit of 0.5 inches/second, peak particle velocity (in/sec, PPV), for buildings structurally sound and designed to modern engineering standards; 0.2 in/sec PPV for buildings that are found to be structurally sound but where structural damage is a major concern; and a conservative limit of 0.08 in/sec PPV for historic buildings or buildings that are documented to be structurally weakened. All surrounding structures are assumed to be structurally sound, but damage would be a concern so the 0.2 in/sec PPV will be used as a threshold of significance for structural damage. The threshold of 0.2 in/sec PPV is also used by Caltrans as the threshold for human annoyance caused by vibration. Therefore, activities creating vibrations exceeding 0.2 in/sec PPV would impact sensitive receptors in nearby residences.[12] Table 2 presents typical vibration levels that could be expected from construction equipment at a distance of 25 feet.

Potential future construction activities, such as drilling, the use of jackhammers, and other high-power or vibratory tools, and rolling stock equipment (tracked vehicles, compactors, etc.), may generate groundborne vibration in the immediate vicinity. As shown in Table 2, jackhammers typically generate vibration levels of 0.035 in/sec PPV, while drilling typically generates vibration levels of 0.09 in/sec PPV, and the strongest source of vibrations, vibratory rollers, generates vibration levels of 0.21 in/sec PPV all at a distance of 25 feet.

Vibration levels would vary depending on soil conditions, construction methods, and equipment used. It should be noted that groundborne vibrations dissipate with distance. The closest residential structure is approximately 1,000 feet away. Because the closest residence is not in the project vicinity, the PPV experienced would be reduced well below the PPVs reported in Table 2.

[12] Caltrans. *Transportation and Construction Vibration Guidance Manual*. September 2013.

Table 2 Vibration Source Levels for Construction Equipment	
Equipment	**PPV at 25 ft (in/sec)**
Vibratory Roller	0.210
Large Bulldozer	0.089
Caisson drilling	0.089
Loaded trucks	0.076
Jackhammer	0.035
Small bulldozer	0.003
Source: Caltrans, Transportation and Construction Vibration: Guidance Manual. September 2013.	

The Caltrans *Transportation and Construction Vibration Guidance Manual* provides a formula for estimating vibration dissipation with distance.[13] Calculations were completed to determine the maximum vibration caused by the construction activities using the Caltrans formula. Because the Vibratory Roller would be the most intense possible source of vibrations, the reference PPV of 0.210 in/sec was used for the calculations. At a distance of 300 feet from the project site, any sensitive receptors would receive 0.012 in/sec PPV from the use of a Vibratory Roller, which is well below the 0.2 in/sec PPV significance threshold used for the analysis. The nearest residence is 1,000 feet away and would receive 0.004 in/sec PPV from the use of a Vibratory Roller. Consequently, vibration generated by construction activities associated with the proposed project are not expected to be perceptible at nearby structures or residences, and the construction-generated vibrations would not be expected to result in structural damage to such residences. Furthermore, construction is temporary and construction equipment would operate intermittently throughout the course of a day, would be restricted to daytime hours per the City of Oakley Municipal Code Section 4.2.208, and would likely only occur over portions of the improvement area at a time.

Therefore, the project would not involve the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels resulting in a ***less-than-significant*** impact.

c. The proposed project is not located in the vicinity of a private airstrip or within an airport land use plan. The closest airports to the project site are the Buchanan Field and Byron Airport, located 16 miles and 14 miles from the project site, respectively. As such, the proposed project site is not located within two miles of any public airports or private airstrips and does not fall within an airport land use plan area. Therefore, the project would not expose people working or residing in the project area to excessive noise produced by an airport and a ***less-than-significant*** impact would occur.

[13] $PPV_{Equipment}=PPV_{Reference}(25/D)^{1.1}$
Where: D = distance from equipment to the receiver in feet (assumed to be 35 feet)
PPV_{Ref} = reference PPV at 25 feet (from Table 2)
Source: California Department of Transportation. *Transportation and Construction Vibration Guidance Manual*. [pg. 37]. September 2013.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XIV.POPULATION AND HOUSING.					
Would the project:					
a.	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure)?	☐	☐	✖	☐
b.	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	✖	☐

Discussion

a. The proposed project would include development of a logistics center to be used for light industrial and manufacturing purposes. The proposed project requests a General Plan Amendment to remove the Business Park and Utility Energy designation and expand Light Industrial to the entire project site. Additionally, the project requests a Rezone (RZ 08-19) from Specific Plan to Planned Unit Development. The zoning amendment would allow for greater flexibility within the project and would bring economic and employment boosts. While the project would provide space for new business, development would not necessarily induce population growth. According to General Plan Draft EIR, light industrial land uses should be developed to minimize travel and transport for goods and service and reduce regional commute traffic by providing employment opportunity for residents currently residing within the City limits. The proposed project would be compatible with the land use designation. Thus, the project would have a ***less-than-significant*** impact related to such.

b. The proposed project would be developed on a mostly vacant project site formerly used as a manufacturing facility. Demolition of the existing on-site structures would not result in a loss of housing. Therefore, the project would not displace substantial numbers of existing housing or people, and a ***less-than-significant*** impact would occur.

Issues	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XV. PUBLIC SERVICES. *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*				
a. Fire protection?	☐	☐	✖	☐
b. Police protection?	☐	☐	✖	☐
c. Schools?	☐	☐	✖	☐
d. Parks?	☐	☐	✖	☐
e. Other Public Facilities?	☐	☐	✖	☐

Discussion

a-e. Fire protection is currently provided to the City of Oakley by the East Contra Costa Fire Protection District. The proposed project would be subject to the fire facilities impact fees established by the City of Oakley Municipal Code Section 9.2.502. Payment of the required impact fee would mitigate any potential impacts caused by increased demands on fire services that may result from the proposed project, as well as ensure that the project conforms with the City of Oakley's General Plan Policy 4.4.2.

Police protection is currently provided to the City of Oakley by the Oakley Police Department and the Contra Costa County Sheriff's Office. The proposed project site is currently under jurisdiction of, and adequately protected by, the Oakley Policy Department.

The proposed project would be used for light industrial and manufacturing purposes. Residences would not be developed as part of the project, and thus, an increase in schools, parks, or other public facilities would not be necessary. Based on the above, the project would not result in substantial adverse physical impacts associated with the provision of new or altered governmental facilities, and thus, a ***less-than-significant*** impact would occur.

Issues	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XVI.RECREATION. *Would the project:*				
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	✖	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	✖	☐

Discussion

a-b. The proposed project would result in development of a logistics center to be used for light industrial and manufacturing spaces. The project would not create housing which would induce population growth in the area, and thus, would not create increased usage of existing neighborhood and regional parks or recreational facilities. Therefore, the project would have a ***less-than-significant*** impact related to recreational requirements.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XVII. TRANSPORTATION.					
Would the project:					
a.	Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	✖	☐	☐	☐
b.	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	✖	☐	☐	☐
c.	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	✖	☐	☐	☐
d.	Result in inadequate emergency access?	☐	☐	✖	☐

Discussion

a. The proposed project would include a Rezone and a General Plan Amendment for development of seven warehouses to be used for light industrial and manufacturing purposes. The proposed project would have a main entrance at the intersection of Wilbur Avenue and Bridgehead Road. Two secondary access points would also be provided on Bridgehead Road. One access point would be located to the north of the Wilbur Avenue entrance and another would be located to the south. SR 4, SR 160, Wilbur Avenue, E. 18th Street, and Main Street are all identified as routes of regional significance to the project.

According to the Contra Costa Transportation Authority (CCTA) Congestion Management Plan (CMP), any land development application generating more than 100 peak hour trips is required to prepare a study of the project's traffic impacts on the CMP network. Development and operation of the proposed project would be anticipated to result in 382 vehicle trips in the AM peak hour and 427 vehicle trips during the PM peak hour.

Additionally, the proposed project requests to remove the proposed extension of Live Oak Avenue connecting to Wilbur Avenue from the Circulation Diagram listed in Figure 3-1 of the General Plan. Based on the above, the proposed change to the Circulation Diagram and increased trips could conflict with a program, plan, or ordinance addressing the circulation system, and a ***potentially significant*** impact could occur.

Further analysis of this impact will be provided in the Transportation chapter of the Oakley Logistics Center EIR being prepared for the project.

c. Section 15064.3 of the CEQA Guidelines provides specific considerations for evaluating a project's transportation impacts. Per Section 15064.3, analysis of vehicle miles travelled (VMT) attributable to a project is the most appropriate measure of transportation impacts. Other relevant considerations may include the effects of the project on transit and non-motorized travel. Except as provided in Section 15064.3 (b)(2) regarding roadway capacity, a project's effect on automobile delay does not constitute a significant environmental impact under CEQA. It should be noted that currently, the provisions of Section 15064.3 apply only prospectively; determination of impacts based on VMT is not required Statewide until July 1, 2020.

Per Section 15064.3(3), a lead agency may analyze a project's VMT qualitatively based on the availability of transit, proximity to destinations, etc. The proposed project would have access to the Tri Delta Transit system and the Bay Area Rapid Transit (BART). Lines 300, 383, 391 and 393 on the Tri Delta System provide the closest service to the project site, with stops at Bridgehead Road and Main Street. While the project could have adequate access to public transit, the expected number of vehicle miles travelled would increase based on the expected number of employee and truck visits to and from the project site. Thus, using a VMT analysis, the project could be inconsistent with CEQA Guidelines Section 15064.3, and a ***potentially significant*** impact could occur.

Further analysis of this impact will be provided in the Transportation chapter of the Oakley Logistics Center EIR being prepared for the project.

c. The proposed project would increase vehicle trips to and from the site, as well as alter the design of the current circulation system. The project would create new entrances to the project site accessible from Bridgehead Road and could possibly increase hazards due to employees and delivery trucks entering and exiting the project site onto Bridgehead Road. Thus, a ***potentially significant*** impact could occur related to increased hazards due to a geometric design feature.

Further analysis of this impact will be provided in the Transportation chapter of the Oakley Logistics Center EIR being prepared for the project.

d. The proposed project would construct internal circulation roads consistent with Title 19 Section 3.05 of the California Code of Regulations, which mandates right of way lanes not be less than 20 feet in width and fire/emergency access lanes be a minimum of 20 feet wide. Lanes would be built out 25 to 30 feet in width. Thus, the proposed project would have a ***less-than-significant*** impact related to inadequate emergency access.

Issues	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XVIII. TRIBAL CULTURAL RESOURCES. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:*				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k).	☐	☐	✖	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	✖	☐

Discussion

a,b. As discussed in Section V, Cultural Resources, of this IS, per a records search of the California Historical Resources Information System and the California Register of Historical Resources, the project site is not listed or eligible for listing as a historical resource.

In compliance with Assembly Bill (AB) 52 (Public Resources Code Section 21080.3.1), a project notification letter was distributed to the the Amah Mutsin Tribal Band of Mission San Juan Bautista, The Ohlone Indian Tribe, Wilton Rancheria, the Indian Canyon Mutsun Band of Costanoan, the Muwekma Ohlone Indian Tribe of the SF Bay Area, the North Valley Yokuts Tribe, and the Torres Martinez Desert Cahuila Indians. The letters were distributed on January 28, 2019. Requests for consultation have not been received to date.

The potential for unrecorded Native American resources to exist within the project site is relatively low based on the highly-disturbed nature of the site.

Implementation of Mitigation Measure V-2, described in detail in Section V. (Cultural Resources), would reduce any potential impacts related to unknown resources to less-than-significant levels. Based on a record search of the Native American Heritage Commission (NAHC) Sacred Land files, known tribal resources do not exist for the project area or adjacent lands.

Given that the project would be required to comply with the City's standard conditions of approval regarding cultural resources, as well as mitigation measures in Section V, construction of the proposed project would not result in a substantial adverse change in the significance of a tribal cultural resource. Per Public Resource Code sections 5020.1(k) and 5024.1, the project site is not listed as a historical resource nor does the site contain any known resources with significance to a California Native American tribe. Thus, the proposed project would have a ***less-than-significant*** impact related to tribal cultural resources.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XIX. UTILITIES AND SERVICE SYSTEMS.					
Would the project:					
a.	Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	✖	☐	☐	☐
b.	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	✖	☐	☐	☐
c.	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	✖	☐	☐	☐
d.	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	✖	☐	☐	☐
e.	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	✖	☐	☐	☐

Discussion

a,c. The proposed project would be served by ISD to provide sanitary sewer collection and treatment for the project area. ISD operates the existing Lauritzen Sewer Pump Station in Lauritzen Lane at the north edge of the site. A sewer force main in Lauritzen and Bridgehead Road connects from the pump station to a short run of gravity pipe starting at the north edge of the Sandy Point 3 Mobile Home Park. Flows continue to the ISD Treatment Plant near downtown Oakley. Other on-site wastewater flows including contaminated groundwater are collected in a central collection area and trucked off-site for disposal. Storm water from impervious building rooves and pavement areas would be conveyed to biofiltration basins located throughout the site as required by Provision C.3 of the Municipal Regional Permit. Water from the basins would then be conveyed to the Central Slough and discharged to the Delta. In the event the Lauritzen Pump Station cannot accommodate the flows generated by the project, a new sewer pump station would be constructed at a central location on the site. Thus, because the impacts of the project on wastewater treatment requirements and expansion of wastewater treatment facilities are not yet known, the impacts are ***potentially significant***.

Further analysis of this impact will be provided in the Utilities and Service Systems chapter of the Oakley Logistics Center EIR being prepared for the project.

b. Water is provided to the project site by the Diablo Water District (DWD). According to the DWD Final 2015 Urban Water Management Plan (2015 UWMP), water demand and connection projections for DWD are based on buildout land uses in current adopted general plans. During the period from 2015 to 2040, DWD's demand is estimated to increase from 1,492 MG per year to 5,349 MG per year. DWD estimates that by 2040, non-industrial water usage will comprise about 18 percent of the total use. As indicated in the Urban Water Management Plan, DWD has adequate supply sources to meet future needs under normal year, single year and multi-year drought conditions.[14]

The proposed project would connect to an existing 24-inch water line in the railroad corridor along the southern boundary of the site and would be managed by DWD. The current private on-site water system would be removed completely. In addition, a portion of the existing 24-inch line would be relocated west into the proposed parking area and drive aisles. Individual water services to the Buildings 1,3,4, and 6 would be served from connections along the main drive aisle. Buildings 2,5, and 7 would be privately operated.

As previously discussed, DWD determined adequate supply sources exist to meet future needs under normal year, single year, and multi-year drought conditions. However, given that the project has not yet calculated potable water service demand requirements, the project could have a ***potentially significant*** impact.

Further analysis of this impact will be provided in the Utilities and Service Systems chapter of the Oakley Logistics Center EIR being prepared for the project.

d,e. Solid waste collected by Oakley Disposal in the City limits of Oakley is hauled to the recycling Center and Transfer Station in Pittsburg, which is operated by Contra Costa Waste Service. Residential, commercial, and industrial waste is processed at the transfer facility and the residual material is hauled to Potrero Hills Landfill outside Suisun City, which has a daily capacity of 3,400 tons.

Given that the proposed project would provide warehousing, manufacturing, and business spaces, the proposed project would not be expected to generate solid waste in excess of what was previously anticipated by the General Plan. However, because number of employees and manufacturing spaces are not yet known, the proposed project could generate solid waste in excess of State or local standards or conflict with management and reduction statuses related to solid waste, and a ***potentially significant*** impact could result.

Further analysis of this impact will be provided in the Utilities and Service Systems chapter of the Oakley Logistics Center EIR being prepared for the project.

[14] Diablo Water District. *Diablo Water District Final 2015 Urban Water Management Plan.* June 2016.

Issues		Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XX. WILDFIRE. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:*					
a.	Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	✖	☐
b.	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	✖	☐
c.	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	✖	☐
d.	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post fire slope instability, or drainage changes?	☐	☐	✖	☐

Discussion

a-d. As noted in Section IX, Hazards and Hazardous Materials, according to the California Department of Forestry and Fire Protection (CAL FIRE) Fire and Resource Assessment Program, the project site is not located within a Very High Fire Hazard Severity Zone.[15] In addition, the site is located on a relatively flat surface and in an urban area. The surrounding area is commercial and residential land uses. Thus, the proposed project would not experience result in substantial risk or hazards related to wildfires, and a ***less-than-significant*** impact would occur.

[15] California Department of Forestry and Fire Protection. *Contra Costa County, Very High Fire Hazard Severity Zones in LRA*. June 12, 2018.

Issues	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XXI.MANDATORY FINDINGS OF SIGNIFICANCE.				
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	✖	☐	☐	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	✖	☐	☐	☐
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	✖	☐	☐	☐

Discussion

a. Although relatively unlikely, based upon the current land cover types found on-site, special-status wildlife species and/or federally- or state-protected birds not covered under the ECCCHCP could be occupying the site. In addition, the project is known to contain habitats suitable to three special-status species and some migratory bird populations. Construction and operation of the project could have the potential to degrade the quality of the environment or reduce the habitat of a threatened animal. Therefore, the proposed project would have ***potentially significant*** impact related to degradation of the quality of the environment, reduction of habitat, threatened species, and/or California's history or prehistory.

Further analysis of this impact will be discussed in the Biological Resources chapter of the Oakley Logistics Center EIR being prepared for the project.

b,c. The proposed project in conjunction with other development within the City of Oakley could incrementally contribute to cumulative impacts in the area. As discussed in the Transportation section of this IS, the proposed project would result in an increase in vehicle traffic on the street system surrounding the project area. Additionally, the increased trips generated by the proposed project, could produce air contaminants and greenhouse gas emissions above what is acceptable by the BAAQMD. The project could also have environmental effects on human beings, emission of toxic air contaminants, and hazards which could result in adverse

effects on human beings and the natural environment. Therefore, a ***potentially significant*** impact could occur.

Further analysis of this impact will be discussed in the Biological Resources, Transportation, Air Quality and GHG Emissions, and Statutorily Required Sections chapters of the Oakley Logistics Center EIR being prepared for the project.

TO: California State Clearinghouse
Responsible and Trustee Agencies
Interested Parties and Organizations

FROM: Joshua McMurray, Planning Manager
City of Oakley

SUBJECT: NOTICE OF PREPRARATION OF AN ENVIRONMENTAL IMPACT REPORT FOR THE PROPOSED OAKLEY LOGISTICS CENTER PROJECT

The City of Oakley is the lead agency for the preparation of an Environmental Impact Report (EIR) for the proposed Oakley Logistics Center (proposed project). The scope of the EIR has been proposed based upon a determination by the City of Oakley. The City of Oakley has directed the preparation of this EIR in compliance with the California Environmental Quality Act (CEQA).

Once a decision is made to prepare an EIR, the lead agency must prepare a NOP to inform all responsible and trustee agencies that an EIR would be prepared (CEQA Guidelines Section 15082). The purpose of the NOP is to provide agencies with sufficient information describing both the proposed project and the potential environmental effects to enable the agencies to make a meaningful response as to the scope and content of the information to be included in the EIR. The City of Oakley is also soliciting comments on the scope of the EIR from the general public.

BACKGROUND

The project area, located at 6000 Bridgehead Road, was once occupied by the chemical manufacturing company DuPont. From 1956 to 1997 the DuPont facility, sometimes referred to as the Chemours site, operated as a manufacturing facility to produce tetraethyl lead, fuel additive anti-knock compounds, and titanium dioxide. DuPont stopped all production activities at the former manufacturing facility in 1998 and demolished many of the buildings in 1999. The project site has been listed as a corrective action site since 2008 by the Department of Toxic Substances Control (DTSC) and is a former interim status Resource Conservation and Recovery Act (RCRA) facility.

On June 29, 2018 DTSC, as the lead agency, certified a Mitigated Negative Declaration for remediation work to be performed in the project area. The DTSC approved three Corrective Measures Studies to address the release of Constituents of Concern (COC). The remedial activities will address the release of COCs in sediment, soil, and groundwater that may pose a risk to human health or the environment. Key COCs that will be remediated include lead, organolead, carbon tetrachloride, CFC-11, CFC-113, 1,2-dichloroethen, tetrachloroethylene, and arsenic. The remediation work at the site began in August 2018 and is expected to be completed by Spring 2020. As the remediation is completed, the affected areas of the site will be ready for development of industrial and commercial use.

PROJECT DESCRIPTION

The following is a discussion of the project location, land use, and components.

Project Location and Setting

The project site is located on the northwest side of the City of Oakley, adjacent to State Route (SR) 160, on Bridgehead Road, north of Main Street and the Burlington Northern Santa Fe (BNSF) Railroad, with entrance provided from Bridgehead Road on to Wilbur Avenue. The site is identified by Assessor's Parcel Numbers (APNs) 037-020-008, -009, -010, -014, -015, -016, -017, -018, -019, -020, -021, and -022. The entire property is approximately 345 acres. However, the proposed project would only develop approximately 150 acres of the property. The remaining 195 acres would be undisturbed. Currently the project site consists of paved and unmaintained urban land and two existing buildings. The site has been previously disturbed during past grading activities, former manufacturing operations, and current remediation work.

The site is bordered by commercial and industrial uses to the west, vacant land to the east and south, a mobile home park southwest, and the San Joaquin River Delta and Lauritzen Yacht Harbor to the north.

Project Entitlements

The entitlements requested with this application include:

- Certification of the Environmental Impact Report;
- Adoption of the Mitigation Monitoring and Reporting Program;
- Approval of a General Plan Amendment (GP 04-18) to amend the land use designation from Light Industrial/Business Park/Utility Energy to Light Industrial;
- Approval of a General Plan Amendment to remove the proposed extension of Live Oak Avenue from General Plan Figure 3-1, Circulation Diagram;
- Approval of a Rezone (RZ 08-18) from Specific Plan (SP-3) to Planned Unit Development (P-1);
- Approval of Preliminary and Final Development Plan;
- Approval of a Design Review (DR 12-18);
- Approval of a Tentative Subdivision Map to create 11 parcels (TM 05-18); and
- Approval of a Development Agreement (DA 01-18).

Existing Land Use and Zoning Designations

The project site is currently designated Light Industrial (LI), Utility Energy (UE), and Business Park (BP), with the remainder of the property designated Delta Recreation (DR) under the City of Oakley 2020 General Plan land use map. The site is zoned Specific Plan (SP-3).

Project Components

The proposed project includes construction of seven buildings across the project site ranging in size from 47,460 square feet (sf) to 567,840 sf, totaling 2,249,544 sf (see Figure 3). The buildings would include front load and cross docked warehouses. The proposed project would include demolition of the existing structures and construction of the proposed buildings. For purposes of the CEQA analysis in the project-level EIR, the project applications reflect the following:

<u>General Plan and Zoning Code Amendment</u>

The project site is currently designated Light Industrial, Business Park, and Utility Energy. The proposed project would include a General Plan Amendment to remove the Business Park and Utility Energy designation and keep only the Light Industrial designation across the development area. The undisturbed areas of the property would remain designated as Delta Recreation. The proposed project would also include an amendment to the General Plan Figure 3-1, Circulation Diagram, in order to remove the proposed extension of Live Oak Avenue through the project site. Additionally, the project would include a proposed zoning amendment from Specific Plan to Planned Unit Development. A Planned Unit

Development designation would allow for flexibility to develop light industrial and related uses consistent with the 2020 General Plan.

Upon rezoning of the project area to Planned Unit Development, the proposed project would have flexibility to develop light industrial and related uses consistent with the General Plan. The diversity of available uses could allow for light manufacturing, warehousing, and business spaces.

Construction

The development of the proposed project would be expected to occur over three years. Development may occur as the respective areas of land are remediated and cleared for construction. Development of the proposed project would include construction of seven buildings with associated parking areas, circulation improvements, and truck court areas. The frontage road on Wilbur Avenue would be improved to provide access to each building, and construction of two additional entrances north and south of Wilbur Avenue off of Bridgehead Road would also improve circulation throughout the project site.

Existing grades within the project site range from a low of about seven feet at the northwest corner of the site to a high of about 23 feet in the southwest corner. Proposed grading would consist of a series of cuts and fills to produce an overland stormwater release path towards the Central Slough and Delta edges. In the process, two existing wetland areas along Bridgehead Road would be filled (See Figure 4).

Elevations for the proposed buildings would be between 19.3 and 23.7 feet with adjacent truck docks being approximately four feet below the finished floors (See Figure 5). A preliminary earthwork model for the grading scheme indicates that approximately 250,000 cubic yards of import would be needed.

Utilities

The following is a discussion of planned utility services of the proposed project.

Water

Diablo Water District (DWD) provides potable water service to the project area. DWD has existing water lines along the southern boundary of the site, extending north and south. The private on-site water system currently used would be removed completely. The project includes a proposed water line in the main private drive aisle extending from Wilbur Avenue to the proposed cul-de-sac, operated by DWD. From that point, services to Buildings 2, 5, and 7 would be privately owned and operated. Buildings 1, 3, 4, and 6 would also be served from connections off the DWD line at connections along the main drive aisle.

Sewer

Iron House Sanitary District (ISD) provides sanitary sewer collection and treatment for the project area. ISD operates the existing Lauritzen Sewer Pump Station in Lauritzen Lane at the north edge of the site. Wastewater flows generated from the buildings would be collected in a pipe network that circulates within the parking and drive aisles of the project area and connects to the Lauritzen Pump Station. In the event the Lauritzen Pump Station cannot accommodate the flows generated by the project, a new sewer pump station will be constructed at a central location on the project site. A new sewer force main would then be constructed to connect to the gravity line that starts on the west side of Bridgehead Road.

Storm Drainage

The City of Oakley operates and maintains the public storm drain system in the vicinity of the project area. The site currently does not contain existing or planned public storm drain facilities. Storm water from impervious building rooves and pavement areas would be conveyed to biofiltration basins located throughout the site. Water from the basins would then be conveyed to the Central Slough. Flows from the site would be conveyed to an existing pipe and discharged to the Delta. On-site piping and biofiltration basins would be privately maintained.

Roadway Improvements

Consistent with the Oakley 2020 General Plan, roadway infrastructure would be constructed to meet the needs of a planned unit development and provide access to the project site. Street widths would be designed in accordance with traffic studies completed for the project as well as the Oakley 2020 General Plan.

Wilbur Avenue would provide the main entrance to the proposed project. Internal circulation roads would be privately maintained. Additionally, the southern entrance to project site from Bridgehead Road would be improved to circulate the project site and provide access to Buildings 1 and 7. The entrance from the northern portion of Bridgehead Road would be constructed to provide access to Building 3 and circulate the entire project site. The primary entrance on Wilbur Avenue would be expanded to 64 feet at the entrance.

Additionally, the proposed project would include an amendment to the General Plan Figure 3-1, Circulation Diagram, in order to remove the extension of Live Oak Avenue through the project site.

ENVIRONMENTAL EFFECTS

The City has reviewed the proposed project and prepared an Initial Study (see attached). Based on the analysis within the Initial Study, the City has determined that the EIR should address the following issues. The initial study will address all of the issues not addressed in the EIR.

Each of the following issue chapters will include a discussion of the existing setting, thresholds of significance, specific impacts, mitigation measures, and monitoring strategies. The environmental impact discussions within the Oakley Logistics Center EIR will tier from the General Plan EIR analysis and conclusions.

Air Quality and GHG Emissions

The air quality and greenhouse gas (GHG) emissions analysis for the proposed project will be performed using the California Emissions Estimator Model (CalEEMOD) software program. Vehicle trip generation data from the project-specific Traffic Impact Analysis will be used as model input data. The air quality impact analysis will include a quantitative assessment of short-term (i.e., construction) and long-term (i.e., operational) increases of criteria air pollutant emissions of primary concern (i.e., ROG, NO_X, and PM_{10}). The project's cumulative contribution to regional air quality will be discussed, based in part on the modeling conducted at the project level.

The GHG emissions analysis will include a quantitative estimate of operational carbon dioxide equivalent emissions from both stationary and mobile sources. Mobile source emissions from passenger cars and light trucks will be based on estimated vehicle miles traveled, as derived from the project-specific Traffic Impact Analysis, and as quantified through the CalEEMod program. Construction and demolition emission from the proposed project will also be quantified using CalEEMod.

The significance of air quality and GHG impacts will be determined in comparison to Bay Area Air Quality Management District (BAAQMD) significance thresholds. BAAQMD-recommended mitigation measures will be incorporated to reduce any significant air quality impacts, and anticipated reductions in emissions associated with proposed mitigation measures will be quantified. Proposed project emissions will also be discussed as pursuant to Assembly Bill 32 and Senate Bill 52.

Biological Resources

The Biological Resources chapter will be based on studies and findings prepared and made as part of the remediation project, the Planning Survey Report for the proposed project, the Arborist Report prepared for the project site, and supporting documentation required by the East Contra Costa County Habitat Conservation Plan (ECCCHCP). The Biological Resources chapter of the EIR will include a description of

the potential effects on plant communities, wildlife, and wetlands, including adverse effects on rare, endangered, candidate, sensitive, and special-status species that are identified during site reconnaissance, as well as the impacts related to fill of wetlands during project construction. The section will describe the impact the project would have on biological resources identified by the biologist and assign mitigation measures, if feasible, to limit the impacts to a less-than-significant level. In addition, this chapter will identify the required permits relating to biological resources. Additionally, the Biological Resources chapter will analyze the proposed project's consistency with the ECCCHCP.

Hydrology and Water Quality

The Hydrology and Water Quality chapter of the EIR will summarize setting information and identify potential impacts on stormwater drainage and receiving water quality, groundwater, and flooding. The Hydrology and Water Quality chapter will address the proposed project's projected increase in peak flow and how the increase in peak flow would be attenuated on-site such that post-development flows do not exceed pre-development flows. In addition, the chapter will evaluate any impacts associated with alteration of the 100-year floodplain limits and existing drainage patterns. Furthermore, the chapter will address how stormwater will be treated prior to being discharged in the downstream system. Compliance with the requirements of the San Francisco Bay Regional Water Quality Control Board will be discussed in the chapter. The chapter will primarily be based on a project-specific utilities site plan.

Transportation

The transportation chapter will include evaluation of the operations at 24 study intersections for four different scenarios. Current roadway and intersection capabilities and operating levels of service (LOS) will be quantified. The scenarios include an evaluation of the existing intersection capacity conditions, existing plus project conditions, baseline traffic capacity conditions, and baseline plus project conditions.

The intersections and project driveways to be analyzed include the following:

1. Viera Avenue/Wilbur Avenue
2. Maritime Way/Wilbur Avenue
3. State Route 160 SB Ramps/Wilbur Avenue
4. State Route 160 NB Ramps/Wilbur Avenue
5. Bridgehead Road/Wilbur Avenue
6. Viera Avenue/East 18th Street
7. State Route 160 SB Ramps/East 18th Street
8. State Route 160 NB/Main Street
9. Neroly Road/Bridgehead Road and Main Street
10. Live Oak Avenue/Main Street
11. Big Break Road/Main Street
12. Oakley Road/Neroly Road
13. Oakley Road/Live Oak Avenue
14. Empire Avenue/Main Street
15. Vintage Parkway/Main Street
16. O'Hara Avenue/Main Street
17. Neroly Road/Live Oak Avenue
18. Laurel Road/Live Oak Avenue
19. Laurel Road/Empire Avenue
20. Main Street/Norcross Lane
21. Empire Avenue/Oakley Road
22. O'Hara Avenue/Neroly Road
23. Empire Avenue/Gateway Drive
24. Laurel Road/Arco Driveway

In addition, a detailed site circulation and access review will be conducted to determine the adequacy of the proposed site plan in accordance with generally accepted traffic engineering standards. Emergency access, transit, pedestrian, and bicycle facilities will also be discussed and analyzed to ensure adequacy of the proposed facilities based upon existing City of Oakley plans. This chapter of the EIR will also include a discussion of the existing setting, identification of the thresholds of significance, identification of impacts, and the development of mitigation measures and monitoring strategies. The traffic chapter will be based on a Traffic Impact Analysis prepared for the proposed project, in accordance with the Contra Costa Transportation Authority (CCTA) Implementation Guide adopted June 16, 2010, as well as the Circulation Element of the 2020 General Plan.

Utilities and Service Systems

The Utilities and Service Systems chapter of the EIR will summarize setting information and identify potential new demand for services on water, sewer, and solid waste. The chapter will address the proposed water and sewer demand for the project and the infrastructure improvements needed to provide water and sewer service to the project site, including construction of the proposed sewer pump station, and whether the existing service providers can accommodate the project within their existing systems. If existing water, sewer, or solid waste facilities would be impacted, mitigation measures will be identified to ensure that the project's demand can be adequately accommodated.

Statutorily Required Sections

Pursuant to CEQA Guidelines Section 21100(B)(5), the Statutorily Required Sections chapter of the EIR will address the potential for growth-inducing impacts of the proposed project, focusing on whether removal of any impediments to growth would occur with the project. In addition, the chapter will include a discussion of potential energy impacts due to the project and any proposed energy efficiency and/or conservation measures. A summary of the significant and unavoidable impacts identified within the EIR will be included in this chapter, as well as a discussion of significant irreversible impacts. The chapter will also summarize the cumulative impact analyses, which will be provided in each technical chapter of the EIR.

Alternatives Analysis

In accordance with Section 15126.6(a) of the CEQA Guidelines, the EIR will include an analysis of a range of alternatives, including a No Project Alternative. Consideration will be given to potential off-site locations consistent with CEQA Guidelines, Section 15126.6(f)(2), and such locations will be determined in consultation with City staff. If it is determined that an off-site alternative is not feasible, the EIR will include a discussion describing why such a conclusion was reached. The project alternatives will be selected when more information related to project impacts is available in order to be designed to reduce significant project impacts. The chapter will also include a section of alternatives considered but dismissed, if necessary. The Alternatives Analysis chapter will describe the alternatives and identify the environmentally superior alternative. The alternatives will be analyzed at a level of detail less than that of the proposed project; however, the analyses will include sufficient detail to allow a meaningful comparison of the impacts. Such detail may include conceptual site plans for each alternative, basic quantitative traffic information (e.g., trip generation), as well as a table that will compare the features and the impacts of each alternative.

SUBMITTING COMMENTS

To ensure that the full range of issues related to this proposed project are addressed and all significant issues are identified, written comments are invited from all interested parties. Written comments concerning the proposed EIR for the Oakley Logistics Center project should be directed to the name and address below:

Mr. Joshua McMurray
Planning Manager
3231 Main Street
Oakley, CA 94561

(925) 625-7004

Written comments are due to the City of Oakley at the location addressed above by 5:00 p.m. on March 21, 2019.

SCOPING MEETING

A public scoping meeting will be held on March 6 at 5 p.m. at 3231 Main Street, Oakley, regarding the proposed EIR for the Oakley Logistics Center project.

State Clearinghouse
State.Clearinghouse@opr.ca.gov
PO Box 3044
Sacramento, CA 95812-3044

CEQA Project: **SCH #2019029113**
Lead Agency: **Oakley Logistics Center Project**
Project Title: **Oakley Logistics Center Project**

The Division of Oil, Gas, and Geothermal Resources (Division) oversees the drilling, operation, maintenance, and plugging and abandonment of oil, natural gas, and geothermal wells. Our regulatory program emphasizes the wise development of oil, natural gas, and geothermal resources in the state through sound engineering practices that protect the environment, prevent pollution, and ensure public safety. Northern California is known for its rich gas fields. Division staff have reviewed the documents depicting the proposed project.

The proposed Oakley Logistics Center Project (project) includes seven proposed buildings on a 150-acre parcel in Oakley, California. The project occupies parts of the former DuPont Chemical plant. The locations of the project and buildings provided by the City of Oakley are presented on the attached map which also shows known locations of oil and gas wells. We have made no attempt to verify well locations for accuracy. **Two known wells are located within the project area; neither well is located within the footprint of the proposed buildings. One well was a dry hole (DuPont #1) drilled in 1969. The second was drilled as a water disposal well drilled in 1957. Our records show a history of well construction, but no record of abandonment, though the well is listed as plugged.**

For future reference, you can review wells located on private and public land at the Division's website: **https://secure.conservation.ca.gov/WellSearch**. Based on our review of available data, no impact to known oil or gas wells is likely.

The local permitting agencies and property owner should be aware of, and fully understand, that significant and potentially dangerous issues may be associated with development near oil and gas wells. These issues are non-exhaustively identified in the following comments and are provided by the Division for consideration by the local permitting agency, in conjunction with the property owner and/or developer, on a parcel-by-parcel or well-by-well basis. As stated above, the Division provides the above well review information solely to facilitate decisions made by the local permitting agency regarding potential development near an oil or gas well.

State of California Natural Resources Agency | Department of Conservation
Northern District, 801 K Street, MS 18-05, Sacramento, CA 95814
conservation.ca.gov | T: (916) 322-1110 | F: (916) 323-0424

DocuSign Envelope ID: 1B35C27C-5B28-41EB-80FC-8F0EDC899A78

1. It is recommended that access to a well located on the property be maintained in the event re-abandonment of the well becomes necessary in the future. Impeding access to a well could result in the need to remove any structure or obstacle that prevents or impedes access. This includes, but is not limited to, buildings, housing, fencing, landscaping, trees, pools, patios, sidewalks, and decking.

2. Nothing guarantees that a well abandoned to current standards will not start leaking oil, gas, and/or water in the future. It always remains a possibility that any well may start to leak oil, gas, and/or water after abandonment, no matter how thoroughly the well was plugged and abandoned. The Division acknowledges that wells abandoned to current standards have a lower probability of leaking oil, gas, and/or water in the future, but makes no guarantees as to the adequacy of this well's abandonment or the potential need for future re-abandonment.

3. Based on comments **1** and **2** above, the Division makes the following general recommendations:

   a. Maintain physical access to any oil or gas well encountered.

   b. Ensure that the abandonment of oil or gas wells is to current standards.

   If the local permitting agency, property owner, and/or developer chooses not to follow recommendation "**b**" for a well located on the development site property, the Division believes that the importance of following recommendation "**a**" for the well located on the subject property increases. If recommendation "**a**" cannot be followed for the well located on the subject property, then the Division advises the local permitting agency, property owner, and/or developer to consider any and all alternatives to proposed construction or development on the site (see comment **4** below).

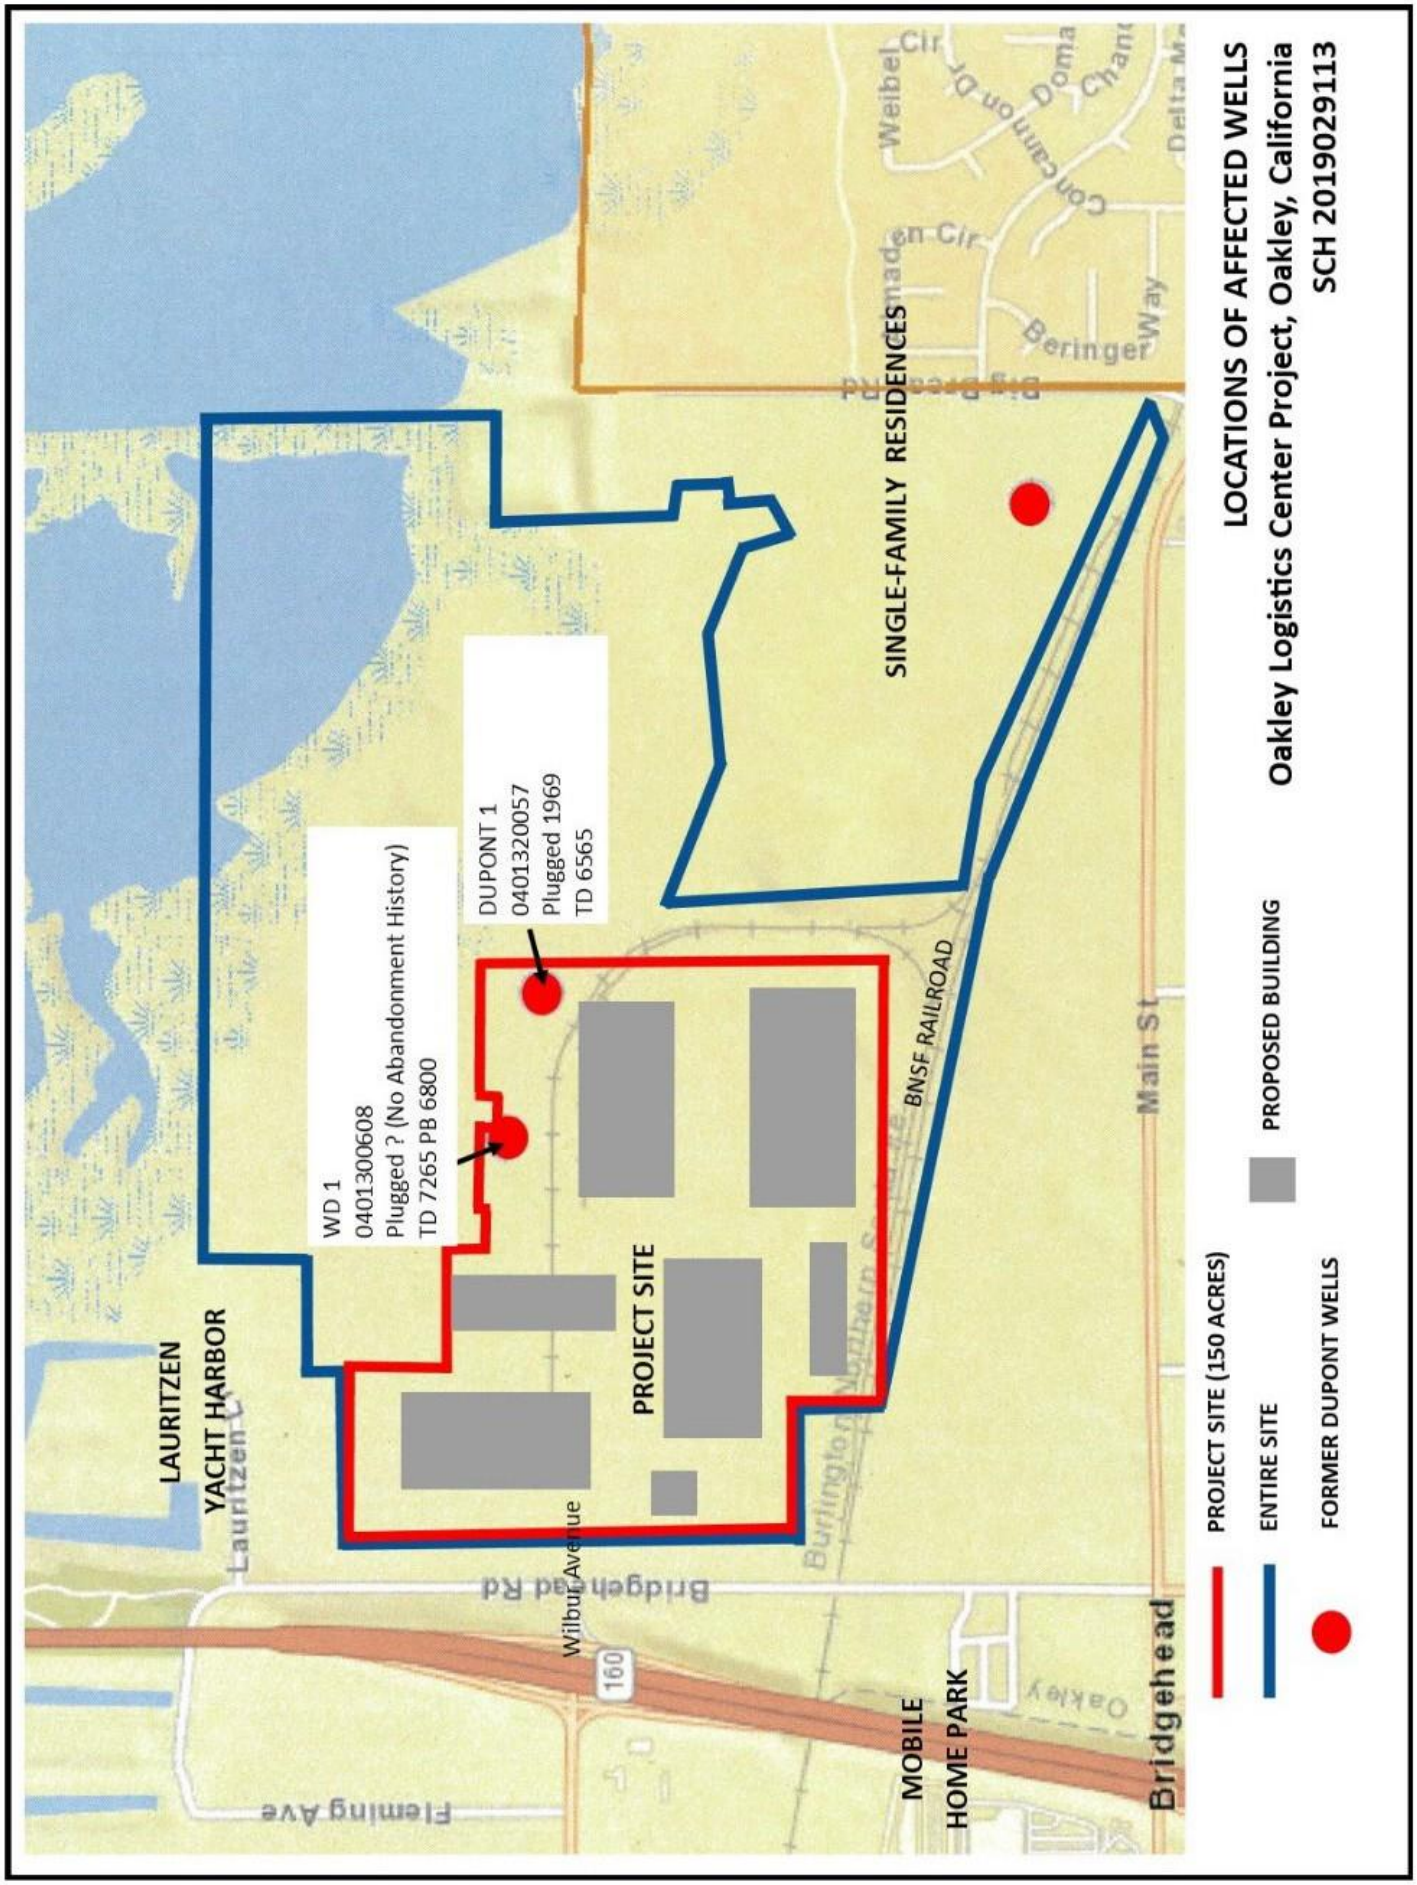
4. Sections 3208 and 3255(a)(3) of the Public Resources Code give the Division the authority to order the re-abandonment of any well that is hazardous, or that poses a danger to life, health, or natural resources. Responsibility for re-abandonment costs for any well may be affected by the choices made by the local permitting agency, property owner, and/or developer in considering the general recommendations set forth in this letter. (Cal. Public Res. Code, § 3208.1.)

5. Maintaining sufficient access to a gas well may be generally described as maintaining "rig access" to the well. Rig access allows a well servicing rig and associated necessary equipment to reach the well from a public street or access way, solely over the parcel on which the well is located. A well servicing rig, and any necessary equipment, should be able to pass unimpeded along and over

DocuSign Envelope ID: 1B35C27C-5B28-41EB-80FC-8F0EDC899A78

the route, and should be able to access the well without disturbing the integrity of surrounding infrastructure.

6. If, during the course of development of this proposed project, **any unknown well(s) is/are discovered**, the Division should be notified immediately so that the newly-discovered well(s) can be incorporated into the records and investigated. The Division recommends that any wells found in the course of this project, and any pertinent information obtained after the issuance of this letter, be communicated to the appropriate county recorder for inclusion in the title information of the subject real property. This is to ensure that present and future property owners are aware of (1) the wells located on the property, and (2) potentially significant issues associated with any improvements near oil or gas wells.



No well work may be performed on any oil or gas well without written approval from the Division in the form of an appropriate permit. This includes, but is not limited to, mitigating leaking fluids or gas from abandoned wells, modifications to well casings, and/or any other re-abandonment work. (NOTE: The Division regulates the depth of any well below final grade (depth below the surface of the ground). Title 14, Section 1723.5 of the California Code of Regulations states that all well casings shall be cut off at least 5 feet but no more than 10 feet below grade. If any well needs to be lowered or raised (i.e. casing cut down or casing riser added) to meet this grade regulation, a permit from the Division is required before work can start.)

Joshua McMurray, Planning Manager
City of Oakley
Community Development Department
3231 Main Street
Oakley, CA 94561

Dear Joshua McMurray:

Oakley Logistics Center Project—Notice of Preparation (NOP)

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. In tandem with the Metropolitan Transportation Commission's (MTC) Sustainable Communities Strategy (SCS), Caltrans' mission signals a modernization of our approach to evaluate and mitigate impacts to the State Transportation Network (STN). Caltrans' Strategic Management Plan 2015-2020 aims to reduce Vehicle Miles Traveled (VMT) in part, by tripling bicycle and doubling both pedestrian and transit travel by 2020. Our comments are based on the NOP. Additional comments pending final review.

Project Understanding

The proposed project includes the construction of seven warehouse buildings across the site ranging in size from 47,460 square feet (sf) to 567,840 sf. The buildings would include front load and cross docked warehouses. The entire property is approximately 345 acres. The proposed project would only develop approximately 150 acres of the property. The remaining 195 acres would be undisturbed. Roadway improvements would be constructed to meet the needs of a planned unit development and provide access to the project site. Street widths would be designed in accordance with traffic studies completed for the project as well as the Oakley 2020 General Plan.

Wilbur Avenue would provide the main entrance to the proposed project. Additionally, the southern entrance to project site from Bridgehead Road would be improved to circulate the project site and provide access to Buildings 1 and 7. The entrance from the northern portion of Bridgehead Road would be constructed to provide access to Building 3 and circulate the entire project site. The primary entrance to project site through Wilbur Avenue would be expanded to 64 feet at the entrance. Existing grades within the project site range from low of about seven feet at the northwest corner of the site to a high of 23 feet in the southwest corner. Proposed grading would consist of a

series of cuts and fills to produce an overland storm water release path towards the Central Slough and Delta edges. In the process, two existing wetlands areas along Bridgehead Road would be filled. The proposed project site is located on the eastern edge of State Route (SR) 160. Regional Access is located 350 feet from the site at SR 160 and Wilbur Avenue interchange. Please specify number of proposed parking spaces.

Regional Significance

Since this project meets the criteria to be deemed of statewide, regional or areawide significance per CEQA Section 15206(b), the DEIR should be submitted to both the Contra Costa County Transportation Authority and the Metropolitan Transportation Commission for review and comment.

Vehicle Trip Reduction

From Caltrans' Smart Mobility 2010: A Call to Action for the New Decade, the project site is identified as Place Type 4c: Dedicated Use Area, that consists of large tract land used for commercial purposes such as business park or warehousing. Given the project's intensification of vehicle and freight truck use, the project should include a robust Transportation Demand Management (TDM) Program to reduce VMT and greenhouse gas emissions. Such measures will be critical in order to facilitate efficient transportation access to and from the project site and reduce transportation impacts associated with the project. Suggested TDM Strategies include working with the Tri Delta Transit to decrease headway times and improve way-findings on bus lines to provide a better connection between the project site and Antioch Bart Station and regional transit destinations by providing:

- Membership in a transportation management association;
- Transit subsidies and/or annual passes to all employees;
- Design project to encourage walking, bicycling and convenient transit access;
- Carpool and clean-fuel parking spaces conveniently located to encourage carpooling and clean-fuel vehicles;
- Lower parking ratios;
- Charging stations and designated parking spaces for electric vehicles;
- Secured bicycle storage facilities;
- Fix-it bicycle repair station(s);
- Subsidize transit passes on an ongoing basis;
- Transportation and commute information kiosk;
- Outdoor areas with patios, furniture, pedestrian pathways, picnic and recreational areas;
- Showers, changing rooms and clothing lockers for bike commuters;
- Bicycle route mapping resources and bicycle parking incentives;
- Employee transportation coordinator;
- Emergency Ride Home program;

- Participation/Formation in/of a Transportation Management Association (TMA) in partnership with other developments in the area; and
- Aggressive trip reduction targets with annual Lead Agency monitoring and enforcement.

Transportation Demand Management programs should be documented with annual monitoring reports by an onsite TDM coordinator to demonstrate effectiveness. If the project does not achieve the VMT reduction goals, the reports should also include next steps to take in order to achieve those targets. Also, reducing parking supply can encourage active forms of transportation, reduce regional VMT, and lessen future transportation impacts on SR 160 and SR 4 and other nearby State facilities. These smart growth approaches are consistent with the MTC's Regional Transportation Plan/SCS goals and would meet Caltrans Strategic Management Plan sustainability goals.

For additional TDM options, please refer to the Federal Highway Administration's Integrating Demand Management into the Transportation Planning Process: A Desk Reference (Chapter 8). The reference is available online at:
http://www.ops.fhwa.dot.gov/publications/fhwahop12035/fhwahop12035.pdf.

Travel Demand Analysis
Please submit a travel demand analysis that provides VMT analysis resulting from the proposed project. With the enactment of Senate Bill (SB) 743, Caltrans is focusing on transportation infrastructure that supports smart growth and efficient development to ensure alignment with State policies through the use of efficient development patterns, innovative travel demand reduction strategies, multimodal improvements, and VMT as the primary transportation impact metric. Please ensure that the travel demand analysis includes:

- A vicinity map, regional location map, and site plan clearly showing project access in relation to the STN. Ingress and egress for all project components should be clearly identified. Clearly identify the State right-of-way (ROW). Project driveways, local roads and intersections, car/bike parking, and transit facilities should be mapped.

- A VMT analysis pursuant to the Lead Agency's guidelines or, if the Lead Agency has no guidelines, the Office of Planning and Research's Draft Guidelines. Projects that result in automobile VMT per capita greater than 15% below existing (i.e. baseline) city-wide or regional values for similar land use types may indicate a significant impact. If necessary, mitigation for increasing VMT should be identified. Mitigation should support the use of transit and active transportation modes. Potential mitigation measures that include the requirements of other agencies such as Caltrans are fully enforceable through permit conditions, agreements, or other legally-binding instruments under the control of the City.

- A schematic illustration of walking, biking and auto conditions at the project site and study

area roadways. Potential issues for all road users should be identified and fully mitigated.

- The project's primary and secondary effects on pedestrians, bicycles, disabled travelers and transit performance should be evaluated, including countermeasures and trade-offs resulting from mitigating VMT increases. Access to pedestrians, bicycle, and transit facilities must be maintained.

Multimodal Planning
The project should be conditioned to ensure connections to existing bike lanes and multi-use trails to facilitate walking and biking to nearby jobs. Connections to the proposed low-stress bikeway within the planned project area should be completed to ensure connection at Bridgehead Road, and Wilbur Avenue, bikeways since the proposed project is adjacent to Tri Delta's 383 bus stop, which provides connection to Antioch's BART station. Please see *Contra Costa Countywide Bicycle and Pedestrian Plan:* http://keepcontracostamoving.net/interactive-map/

Transportation Impact Fees
Please identify project travel demand or VMT and estimate the costs of public transportation improvements necessitated by the proposed project; viable funding sources such as development and/or transportation impact fees should also be identified. We encourage a sufficient allocation of fair share contributions toward multi-modal and regional transit improvements to fully mitigate cumulative impacts to regional transportation. We also strongly support measures to increase sustainable mode shares, thereby reducing VMT.

Transportation Management Plan
A Caltrans-approved Transportation Management Plan (TMP) is required to avoid project-related impacts to the STN, if it is anticipated that vehicular, bicycle, and pedestrian traffic will be impacted during the construction of the proposed project requiring traffic restrictions and detours. The TMP must also comply with the requirements of corresponding jurisdictions.

In addition, pedestrian access through the construction zone must be in accordance with the Americans with Disabilities Act (ADA) regulations (see Caltrans *Temporary Pedestrian Facilities Handbook)* for maintaining pedestrian access and meeting ADA requirements during construction at: www.dot.ca.gov/hq/construc/safety/Temporary_Pedestrian_Facilities_Handbook.pdf

Also see Caltrans Traffic Operations Policy Directive 11-01 "Accommodating Bicyclists in Temporary Traffic Control Zones" at: www.dot.ca.gov/trafficops/policy/11-01.pdf. All curb ramps and pedestrian facilities located within the limits of the project are required to be brought up to current ADA standards as part of this project.

For further TMP assistance, please contact the Caltrans District 4 Office of Traffic Management Operations at (510) 286-4579. Further transportation management information is available at the

following website: www.dot.ca.gov/hq/traffops/trafmgmt/tmp_lcs/index.htm.

Lead Agency
As the Lead Agency, the City of Oakley is responsible for all project mitigation, including any needed improvements to the STN. The project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures.

Encroachment Permit
Please be advised that any work or traffic control that encroaches onto the State ROW requires an Encroachment Permit that is issued by Caltrans. Traffic-related mitigation measures should be incorporated into the construction plans prior to the encroachment permit process. To apply, a completed Encroachment Permit application, the adopted environmental document, and five (5) sets of plans clearly indicating State ROW must be submitted to: Office of Permits, California DOT, District 4, P.O. Box 23660, Oakland, CA 94623-0660. Traffic-related mitigation measures should be incorporated into the construction plans prior to the encroachment permit process. See the website link below for more information.
http://www.dot.ca.gov/hq/traffops/developserv/permits/

Should you have any questions regarding this letter, please contact Michael Casas at 510-286-5614 or michael.casas@dot.ca.gov.

Sincerely,

PATRICIA MAURICE

Subject: Response to Comments regarding the Notice of Preparation for the Oakley Logistics Center Project Draft Environmental Impact Report

Dear Mr. McMurray,

Thank you for granting the Department of Toxic Substances Control (DTSC) an extension to comment on the Notice of Preparation (NOP) for the Oakley Logistics Center Project draft Environmental Impact Report (EIR). DTSC submits the following comments on the NOP to be considered in the preparation of the EIR:

1. Portions of the project site may not be fully remediated by Chemours prior to construction of the proposed project. Although most of Chemours remediation is expected to be completed by Spring 2020, there will be ongoing operation and maintenance of the groundwater remedy for many years, including a phyto-remediation area and extensive monitoring well network. Per DTSC's final remedy decision document (Statement of Basis, dated June 2018), land use controls (e.g. land use covenant (LUC)) are required to ensure that any future redevelopment activities on site do not interfere with remedy features. These features include tree planting areas for the phyto-remediation in addition to monitoring wells or other remedy features.

    a. Please provide an analysis of the future redevelopment activity impacts on ongoing operation and maintenance of the groundwater remedy and how those impacts, if any, may be addressed in the Draft EIR.

    b. Please delineate the monitoring well and phyto-remediation locations within the proposed project on maps in the Draft EIR.

2. As stated in #1 above, portions of the project site may not be fully remediated by Chemours prior to construction of the proposed project. Vapor mitigation is required by DTSC for areas with subsurface VOC soil contamination, which will need to be considered in the building design and construction. Please provide an analysis of these future redevelopment activities to assess any impacts on implementation of the VOC contamination remedies and how those impacts, if any, may be addressed in the Draft EIR.

Printed on Recycled Paper

3. As stated in #1 above, portions of the project site may not be fully remediated by Chemours prior to construction of the proposed project. Per the final remedy, the Soil and Materials Management Plan must be implemented to ensure that contaminated soil handled at the site is properly managed in accordance with applicable laws, regulations, and best management practices. According to the NOP, excavation and grading are included the future redevelopment activities. Please provide an analysis to identify and assess potential impacts from the movement of contaminated soil and how those impacts, if any, may be addressed in the Draft EIR.

4. The existing hazardous waste post-closure permit is not discussed in the NOP nor delineated in any figures provided with either the NOP or Initial Study. A section of the post-closure area appears to be within, or adjacent to, this project's Detention/Water Quality pond.

    a. Please delineate the post-closure area on the proposed project maps in the Draft EIR.

    b. Provide discussion on the long-term maintenance that is required and analyze the compatibility of project activities with the LUC in the Draft EIR.

5. DTSC is concerned that the grading work for the proposed project, including the Detention/Water Quality pond adjacent to the post-closure area, may impact the integrity of the existing containment systems. Please provide analysis of how project activities may impact the post-closure containment on water quality and how those impacts, if any, may be addressed in the Draft EIR.

Thank you for considering the Department of Toxic Substances Control's comments in the preparation of the Draft EIR. If you have any questions or would like any clarification on DTSC's comments, please contact me at (916) 255-3988 or email at robert.irving@dtsc.ca.gov or Candace Hill, Senior Environmental Planner at (916) 255-6681 or candace.hill@dtsc.ca.gov. We look forward to receiving the Draft EIR. Thank you for your assistance in protecting California's people and environment from harmful effects of toxic substances.

Sincerely,

Robert Irving

RE: SCH# 2019029113 Oakley Logistics Center Project, Contra Costa County

Dear Mr. McMurray:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
   a. A brief description of the project.
   b. The lead agency contact information.
   c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
   d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).
   a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
   a. Alternatives to the project.
   b. Recommended mitigation measures.
   c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
   a. Type of environmental review necessary.
   b. Significance of the tribal cultural resources.
   c. Significance of the project's impacts on tribal cultural resources.
   d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
   a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
   b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
    a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
    b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
    a. Avoidance and preservation of the resources in place, including, but not limited to:
        i. Planning and construction to avoid the resources and protect the cultural and natural context.
        ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
    b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
        i. Protecting the cultural character and integrity of the resource.
        ii. Protecting the traditional use of the resource.
        iii. Protecting the confidentiality of the resource.
    c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
    d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).
    e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).
    f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
    a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.
    b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
    c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Gayle.Totton@nahc.ca.gov.

Sincerely,

for Gayle Totton

RE: Oakley Logistics Center Project

Dear Mr. McMurray,

Bay Area Air Quality Management District (Air District) staff have reviewed the initial study and notice of preparation (NOP) for a draft environmental impact report (DEIR) on the Oakley Logistics Center (Project). The proposed Project is a distribution center consisting of up to seven buildings and 2.5 million square feet of warehouse space on a former industrial site in the northwest corner of the City of Oakley (City). Some changes to Bridgehead Road and Wilbur Avenue are also included in the Project.

The initial study contains preliminary details about the Project. As the Project undergoes more detailed review in a DEIR, we encourage the City to develop a detailed description of the distribution center that includes a reasonable estimation of the tenants and on-site equipment for goods movement associated with a fully constructed, fully operational site. If there is a possibility of intensive warehouse types, such as refrigerated buildings, we encourage the DEIR to include them when estimating potential impacts.

We likewise encourage the DEIR to include a detailed description of all truck types and truck routes for goods entering and leaving the distribution center. The transportation impacts section proposes an assessment of the vehicle miles traveled (VMT), and we encourage the Project to break this down by truck type and route.

We encourage the City to conduct a health risk assessment (HRA) to evaluate potential health risks from criteria and toxic pollutants. This HRA should consider impacts for sensitive land uses near the project site and along principal access routes for vehicles entering or leaving the logistics center. Unless it is no longer occupied, the mobile home park near the project site should be included. The Air District recommends that City use AERMOD to evaluate individual and cumulative health impacts.

The Air District encourages the City to make a significance determination for greenhouse gas impacts based on the most recent State greenhouse gas targets and CEQA guidance. The Air District's 2010 CEQA guidelines are based on the State's 2020 greenhouse gas targets. These targets have been superseded by the State's 2030 and 2050 climate stabilization goals and by the most recent draft of the AB 32 Scoping Plan written by the California Air Resources Board.

Connect with the
Bay Area Air District:

To minimize environmental impacts, we recommend that the City consider the following mitigation measures for the Project:

- Dust mitigation measures during construction, as listed in the Air District's CEQA guidelines,
- A requirement that construction vehicles use electric or Tier IV engines,
- Design and buildout of the distribution center to support next-generation vehicles, such as electrified, hybrid, fuel cell, or hydrogen-fueled heavy-duty trucks,
- Design and buildout of the distribution center with electrified loading docks that eliminate the need for on-site idling of vehicles (e.g., refrigerated vehicles),
- Use of renewable diesel if diesel vehicles or equipment is anticipated,
- A requirement that on-site vehicles for goods movement are zero-emission or electric,
- A requirement that backup power at the site is zero-emission or electric, if practicable,
- Inclusion of charging stations for light-duty vehicles (e.g., for employee or customer travel),
- Buffer zones and vegetative barriers around the site,
- Consistency determination with the State's sustainable freight strategy, and
- Consideration of off-site mitigation options, should there be any construction or operational phase impacts that cannot be mitigated on site.

Recognizing and complimenting the City on its decision to apply VMT as a criterion for evaluating transportation impacts, we make the following analysis recommendations:

- Inclusion of a thorough breakdown of VMT and potential mitigation options by vehicle type, and
- Inclusion of evidence to justify any assumptions about reductions in VMT related to new employment options at the distribution center and reduction in local commutes.

Air District staff are available to assist the City in addressing these comments. If you have questions or wish to discuss our comments further, please feel free to contact Chad White, Senior Environmental Planner, at 415-749-8619 or cwhite@baaqmd.gov.

Sincerely,

for

Greg Nudd

RE: Notice of Preparation of an Environmental Impact Report for the Oakley Logistics Center Project

Dear Mr. McMurray:

The East Bay Regional Park District (Park District) appreciates the opportunity to provide comments on the Notice of Preparation of an Environmental Impact Report for the proposed Oakley Logistics Center Project (project). The property is approximately 345 acres with a development footprint of approximately 150-acres. The project is located just east of the Wilbur Avenue and Bridgehead Road intersection, between the Park District's Antioch/Oakley Regional Shoreline and the Big Break Regional Shoreline. The project proposes up to 2,249,544 square feet of space for light industrial, warehousing and manufacturing uses, in seven buildings across the project site.

The project provides the opportunity for a future Big Break to Antioch Pier Trail connection, as included in the Oakley 2020 General Plan[1] and as identified as a potential regional trail in the Park District's 2013 Master Plan. As the project is now being evaluated for environmental impacts under CEQA, the Park District requests that the planned regional trail connection be added into the design of the project, included in the CEQA project description, and fully addressed in the Draft EIR. As with other similar projects in the region, the Park District requests that this trail connection be built at the time of project construction by the developer.

The Park District previously provided comments on the preliminary development plan of this proposed project on January 16, 2019, with strong encouragement that the zoning and project design include dedication of a public access easement for development of a key portion of the Big Break Shoreline Regional Trail/Big Break to Antioch Pier Trail. This would provide a connection from Big Break Regional Shoreline to Antioch/Oakley Regional Shoreline through the Oakley Logistics Center site. This trail, in addition to being included in the Park District's Master Plan and the Oakley 2020 General Plan and Parks, Trails and Recreation Master Plan 2020, is also designated by the Delta Protection Commission as the Great California Delta Trail, a hiking and biking trail connecting all five counties in the Delta region.

The current regional trail ends to the east of the project at Big Break Road. The Park District requests that the project design and CEQA project description of the Draft EIR be revised to

[1] Oakley 2020 General Plan, Park and Recreation Element, pgs. 7-32

Board of Directors

Ayn Wieskamp, President, Ward 5 | Ellen Corbett, Vice-President, Ward 4 | Dee Rosario, Treasurer, Ward 2 | Colin Coffey, Secretary, Ward 7 | Whitney Dotson, Ward 1 | Dennis Waespi, Ward 3 | Beverly Lane, Ward 6 | Robert E. Doyle, General Manager

include the construction of the trail within a designated public access easement. The trail should be designed to Caltrans standards to provide a safe recreational and transportation corridor that meets ADA requirements. The alignment should traverse the entire project site east to west and intersect with Bridgehead Road, where the Caltrans District 4 Bike Plan proposes development of Class II bike lanes on State Highway 160 across the Antioch Bridge to Sacramento County.

The proposed trail would eventually provide a critical link west to the San Francisco Bay Trail in Martinez, offering shoreline access at strategic locations, and south to the Marsh Creek Regional Trail. The project offers an opportunity to construct this trail segment near a severely disadvantaged community, identified by the California Department of Water Resources. As proposed, the project will prevent local and regional efforts to complete this important regional trail link for the residents of Oakley and surrounding communities, unless a public trail access easement is included in the conditions of approval and made an allowable use in the Planned Development zoning designation of this site.

The Initial Study project description includes the fill of two existing wetlands near Bridgehead Road, and the removal of 130 heritage trees in the development area. As the Draft EIR studies the impact and required permitting of these actions, the Park District would like to discuss with the City, the East Contra Costa Habitat Conservancy and the developer the mitigations for this loss of habitat.

As roadway infrastructure improvements are planned for Bridgehead Road, to meet the project's needs and the specifications of the Oakley 2020 General Plan, the Park District would like the opportunity to work with the City to improve access to the Antioch-Oakley Shoreline, which will likely be used as an amenity by future employees of the new logistics center, given its proximity to the project, less than a half mile from the Wilbur Avenue entrance.

Section 16 "Recreation" of the Initial Study finds that the development of the logistics center would not induce population growth that would increase the use of regional parks or recreational facilities. However, the Park District requests that for the draft EIR, the project description be revised to include an easement and construction of a future regional trail connecting Big Break to the Antioch Pier. If so revised, this future trail would be considered a "recreational facility" and should be evaluated under CEQA.

Thank you for the opportunity to provide comments on the Initial Study and Notice of Preparation of an Environmental Impact Report for this project. The Park District looks forward to continuing to participate and providing additional comments to the City on the project. If you have any questions or concerns, please contact me at (510) 544-2325, or by e-mail at DReiff@ebparks.org.

Respectfully,

Devan Reiff, AICP

TRANSPLAN COMMITTEE
EAST COUNTY TRANSPORTATION PLANNING
Antioch • Brentwood • Oakley • Pittsburg • Contra Costa County
30 Muir Road, Martinez, CA 94553

March 21, 2019

Joshua McMurray
Planning Manager
City of Oakley
3231 Main Street
Oakley, CA 94561

RE: Notice of Preparation of a Draft Environmental Impact Report – Oakley Logistics Center Project

Dear Mr. McMurray:

On behalf of the TRANSPLAN Committee, thank you for the opportunity to provide comments on the City of Oakley's ("City") proposed Oakley Logistics Center ("proposed project") Notice of Preparation ("NOP"). TRANSPLAN is the sub-regional transportation planning committee ("RTPC") in eastern Contra Costa County and includes five member agencies (cities of Antioch, Brentwood, Oakley and Pittsburg, and Contra Costa County), and includes partner agencies such as Tri-Delta Transit and 511 Contra Costa. TRANSPLAN coordinates the transportation interests of the communities in eastern Contra Costa County and administers the East County Action Plan for Routes of Regional Significance ("Action Plan"). The Action Plan facilitates establishment of goals, performance measures (called Multimodal Transportation Service Objectives, or "MTSOs") for designated Routes of Regional Significance ("RRS"), and outlines a set of projects, programs, measures, and actions that will support achievement of the MTSOs. TRANSPLAN recommends the Draft Environmental Impact Report ("DEIR") consider the following comments:

Transportation Impacts

1. TRANSPLAN staff recommends the DEIR's transportation impact analysis evaluate signalized intersections (or freeway ramps) to which at least 50 net new peak hour vehicle trips would be added by the proposed project. The DEIR should also analyze impacts to existing freeway ramp metering operations (e.g. ramp queues). Warehouse facilities also typically induce higher amounts of heavy truck traffic. The transportation impact analysis should also evaluate the impact of heavy truck trips on the local transportation network.

   The MTSOs for freeways and arterial routes are as follows:

MTSOs on Freeways:
• The Delay Index should not exceed 2.5 during the AM or PM peak period.

Phone: 925.674.7832 Fax: 925.674.7258 jamar.stamps@dcd.cccounty.us www.transplan.us

• HOV lane utilization should exceed 600 vehicles per lane in the peak direction during the peak hour.
MTSOs on Suburban Arterial Routes:
• Maintain LOS D or better at all signalized intersections, except:
• Within Priority Development Areas, any physical improvement identified as a result of applying the above standard shall be evaluated for its effects on all intersection users, including pedestrians, cyclists, and transit users.

Transit Service

2. Transit productivity is an east county area-wide objective of the Action Plan. Therefore, the DEIR's transportation impact analysis should consider the proposed project's potential impacts on transit service. The Action Plan's measures for the purpose of monitoring this objective include:

Bus Riders per Service Hour:
• The average number of riders boarding a fixed-route bus during an hour of scheduled bus service when persons may board with a fare or pass.
BART Ridership:
• The average number of weekday riders on all BART trains between Bay Point and North Concord Stations. (Note: this MTSO was established prior to the completion of the eBART extension to Antioch. Evaluation should consider trains between the Antioch Station and North Concord.)

Several Tri-Delta Transit bus routes as well as BART serve areas at or near the proposed project site. The proposed project will likely induce demand on existing transit systems. The DEIR's transportation impact analysis should determine if existing transit service from the aforementioned providers is adequate, would need augmentation or new service to accommodate transit demand from the proposed project.

Bicycle and Pedestrian Facilities

3. The Action Plan encourages active transportation to improve multi-modal mobility and decrease single-occupant vehicle travel. The DEIR's transportation impact analysis should identify opportunities to provide appropriate infrastructure to eliminate physical barriers (i.e. freeway interchanges, lengthy street crossings, expansive parking lot driveways, etc.) to bicycle and pedestrian travel to, from and within the project area.

Transportation Demand Management

4. TRANSPLAN staff would encourage the proposed project implement transportation demand management ("TDM") strategies, which can benefit the region by promoting the use of travel modes that are more efficient and environmentally friendly. TDM strategies can potentially decrease the number of single-occupant auto trips, and therefore the proposed project's impact on roadway network congestion.

Phone: 925.674.7832 Fax: 925.674.7258 jamar.stamps@dcd.cccounty.us www.transplan.us

Thank you for your consideration, TRANSPLAN appreciates the opportunity to participate in the environmental review process for the proposed project. If you have any questions, please do not hesitate to contact TRANSPLAN staff at jamar.stamps@dcd.cccounty.us or (925) 674-7832.

Sincerely,

Jamar Stamps, AICP
TRANSPLAN staff

Performance Marine Specialties

March 21, 2019

Joshua McMurray, Planning Manager

City of Oakley

Re:Oakley Logistics Center NOP/IS

We are the owners of Performance Marine Specialties, Inc. We currently and for the last 20 years have rented a building in Lauritzen's Yacht Harbor. We have been recently been made aware of the project that is in planning for the property that is adjacent to our building. As we have just recently been made aware of this project, we have not had the opportunity to research the effects that this may have on our business.

The major concerns are traffic, dirt and dust, noise, security and general interruption to our business. We would like the opportunity to be able to learn more and be aware of progress of this project. We would also like to give you more specifics about our business and how this project will have a financial and customer relationship consequences to our business.

Re: Oakley Logistics Center NOP/IS

Dear Mr. McMurray,

I appreciate the opportunity to review and provide comments on the Notice of Preparation (NOP) and Initial Study (IS) for the Oakley Logistics Center. I am a co-owner and partner with my sister, Margaret Lauritzen, of the Lauritzen Yacht Harbor at 115 Lauritzen Lane, which is adjacent to the proposed project site. The Lauritzen Yacht Harbor was constructed in 1959 and has been in continuous operation as a marina for 60 years. The marina includes a residence, boat storage, berths, launch ramp and fuel. The Lauritzen Yacht Harbor is also home to Performance Marine, Canvas Factory, and the Marine Patrol. My southerly property line is the northerly property line of the logistics center project site.

When DuPont was in full operation, it had three different processes at the plant. TEL was the anti knock compound in lead gas, FREON F11, F12 the CFC's, and TI02 the paint pigment. Most of the finished products at least for the TEL went out by rail. There is railroad siding (railroad spur lines) just south of the plant between the plant and Main Street. That was all for DuPont. The last plant to get shut down was the pigments plant when the plant closed in 1999.

It should be noted that during full operation of the plant, DuPont also had farming, wetlands, and trees that were buffers for the adjoining properties and the community. The northern wind row of 100-year old Tamarack trees were a visual barrier such that the buildings of the DuPont plant were not visible from the Lauritzen Yacht Harbor. Between the Tamarack trees and the Lauritzen property, there were vineyards and wetlands that provided a beautiful setting and a sizeable separation of industrial and recreational uses. There was over 500 feet of buffer between the DuPont plant and the marina. There were also vineyards to the south and east of the plant that are still in existence today that buffer the view and operations of the plant from the community. When the City incorporated and adopted its General Plan, it designated DuPont's land along Bridgehead Road as Business Park, which is a regulatory type of buffer between industrial and recreational uses. My point is that the Lauritzen's land has always had a buffer from the industrial uses on the DuPont property. The proposed project seems to eliminate the buffer and place industrial use right up to the boundary of Commercial Recreation land.

My comments on the scope and content of the pending EIR are as follows:

Transportation

The initial study indicates there are potentially significant impacts that will require further analysis in the EIR. In addition to the factors identified in the initial study, the EIR should include an analysis to determine if the project will substantially increase hazards due to incompatible uses. The project is proposing to develop a 2.25 million square foot logistics center with all of its access points on Bridgehead Road. All of the truck trips to and from the logistics center will be on Bridgehead Road. The issue is not just the number of trips during peak hours. It is the substantial increase of truck traffic throughout the day and night on Bridgehead Road due to the project.

The truck traffic raises a number of questions and concerns:

- Is there adequate truck queuing on-site, or will trucks back up on Bridgehead Road?
- Is there adequate truck and trailer parking on-site, or will trucks and trailers park on Bridgehead Road?
- Trucks and trailers take longer to accelerate and get off the line from a stop to get across the intersection. Two or three cars can get across the intersection much faster than a single truck and trailer rig. Will the traffic study take this into account for the timing and capacity of the road?
- Truck and trailers are longer in length than passenger vehicles. They occupy more space than a passenger car. Will the traffic study take the length of trucks and trailers into account for the capacity of the road?
- Warehouse and distribution facilities often use the large trucks, referred to as STAA trucks. Will this project use STAA trucks?
- Is Bridgehead Road designated as a STAA truck route?
- The under pass on Bridgehead Road frequently floods because mud gets in the sump pump and plugs up the pump. The City closes the road from the mobile home park to Wilbur Avenue. Will this be taken into account in the traffic study?

Bridgehead Road is the primary access to the Antioch/Oakley Regional Shoreline Park, Lauritzen Yacht Harbor, Driftwood Marina, Bridge Marina, and Jim's Holiday Harbor. The traffic associated with these uses includes people seeking outdoor recreation at the regional park and waterfront. There are families, children, and pets. There are tourists and fishermen. Cars, boats, watercraft, strollers and bicycles are all in the mix. People come to experience the park and waterfront on mornings, afternoons, evenings, weekends, and holidays. There are numerous recreational events held at the park and shoreline. The EIR should analyze if the increase in truck trips throughout the day and night creates unacceptable traffic congestion on Bridgehead Road, and if the co-mingling of truck traffic with recreational traffic creates an incompatible land use.

In addition to truck and vehicle traffic impacts, the EIR should address pedestrian, bicycle, and multi-use trails. There are existing trails at the Antioch/Oakley Regional Shoreline Park and Big Break Marina Regional Shoreline Park. In years past, there were public discussions about a "bridge to bridge" trail and an expansion of the De Anza historical trail on Bridgehead Road and specifically, on the DuPont property. At the scoping meeting, we were told that the City does not have a bicycle or trails master plan. Since there is no master plan to guide the location and connectivity of trails, this should be considered a potentially significant impact.

The initial study checklist includes the question: Will the project result in inadequate emergency access? The initial study indicates this will be a less than significant impact. However, all truck traffic must use Bridgehead Road to access the site. What would happen if there was a disaster on Bridgehead Road that blocked access? How would people at the project site get out? Bridgehead Road is a dead end road at the Antioch bridge. How would people at the marinas get out? What emergency access is available? This impact should be reclassified as a potentially significant impact to be addressed in the EIR.

Land Use and Planning

The Initial Study checklist includes the question:

> Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

The project includes a General Plan Amendment to remove the Business Park and Utility Energy designations and expand the Light Industrial use to the entire project site. The initial study indicates the development would promote Program 5.1L of the General Plan, which is to promote economic development. The environmental analysis should be expanded to include a discussion of the economic benefits, such as jobs and projected revenues, that are relied upon to make this conclusion. If the project generates jobs, how many would be temporary construction jobs, truck driving jobs, and permanent jobs onsite? How would the traffic associated with the temporary construction and truck driving jobs impact the adjacent harbor and the future development of its land within the Commercial Recreation designation? The change in land use in the Bridgehead Road corridor from Business Park to Light Industrial is change of direction for the City in its planning policies. Light Industrial is not conducive to commercial recreation, tourism, restaurants, residential and other waterfront development envisioned for the Commercial Recreation area along Oakley's shoreline.

The General Plan has numerous policies that may be applicable to the project. Given the proximity of the site to the Delta, I suggest the environmental analysis include information on the project's consistency with the General Plan policies:

> Policy 2.1.6 Ensure a strong physical connection to the Delta and the waterfront, including convenient public access and recreational opportunities.
>
> Policy 2.4.5 Incorporate design buffers between potentially incompatible land uses and avoid, to the extent feasible, new land uses that compromise existing businesses and operations.
>
> Policy 2.6.1 Provide public access to the Delta and the waterfront wherever appropriate and feasible. Typically, such access should be unobstructed to the public by foot or bicycle, and where appropriate by horse, automobile and/or boat.

Furthermore, the General Plan Land Use Element includes Special Planning Areas, which highlights there are distinct geographic areas within the City that merit special consideration. One of the special planning areas is the Northwest Oakley Planning Area. The Northwest Oakley Planning Area specifically includes the former DuPont facility, the Lauritzen Yacht Harbor, and the Driftwood Marina. It articulates a development vision, that includes the following statements:

- The City envisions this Area as the primary employment center within Oakley.
- Development within the Business Park designation is anticipated to be of a campus character, providing attractive architecture within a landscaped setting.
- This General Plan allows for up to 30 acres to be developed at a high density involving multi-story office buildings and related facilities.
- The proximity to the Delta is considered a further opportunity to enhance the overall quality of this Area, including the intensive urban development of the Business Park designation. As such, all development located north of the BNSF Railroad must consider the Delta context through site design and architecture, strengthen the relationship between the built and nature environments, and provide significant public access to the waterfront through such remedies as trail and riparian easements and land dedication to the City of Oakley where appropriate.

There is no information regarding what impact the proposed project might have on the Special Planning Area vision in the General Plan. The EIR should provide additional analysis on this topic.

The Project includes a rezone from Specific Plan to Planned Unit Development (PUD), which would allow flexibility to develop light industrial uses consistent with the 2020 General Plan. However, the 2020 General Plan will reach the end of its planning horizon next year. The City has launched a General Plan Update, but a PUD cannot be tied to a General Plan that has not yet been adopted.

This raises some interesting questions and scenarios. The 2020 General Plan may be out of date when the DTSC remediation work is expected to be completed and the site is ready for development. The PUD (zoning) might be tied to an outdated General Plan. The adoption of a PUD might impair the General Plan Update and the City's ability to develop new policies applicable to the Northwest Oakley Planning Area. For these reasons, Land Use and Planning impacts should be evaluated as "potentially significant impacts" in the EIR.

Aesthetics

The Initial Study states that 50-foot high buildings are allowed in the zone and the proposed buildings are only 36 feet. However, this approach does not take into account (a) how high the building pads will be elevated (perhaps as much as 12 feet on the northern pads), (b) the massive, overall size of the buildings (hundreds of thousands of square feet!), and (c) how the visual appearance of development will be changed from what is intended to be a Business Park in the General Plan & Zoning to the proposed Light Industrial logistics center. The building elevations in the project application shows truck parking and dock doors facing Bridgehead Road.

The aesthetics of a Business Park are considerably different from the aesthetics of a Light Industrial logistics center. A Business Park has landscaped areas, architecturally-enhanced buildings, and a campus-like environment which is pedestrian and bicycle friendly, with potential views of the Delta from multi-story office buildings. A Light Industrial logistics center will consist of massive warehouse and distribution structures, expansive asphalt parking lots and access drives, building walls full of loading docks, rows of trucks and tractor trailers, security gates, walls, fences, and few visual amenities for those traveling past the site to get to other destinations, such as the Antioch/Oakley Regional Shoreline Park and Lauritzen Yacht Harbor. The change of character from a campus-like setting to a warehouse and distribution center will have an impact on the aesthetics of Bridgehead Road from the project site to the San Joaquin River. It is not just the height of the buildings that matters, it is the visual impact and the change of character of the area that needs to be considered. There may be a need to include graphic representations of the building elevations along Bridgehead Road with building pad/street elevations to demonstrate the size and visual character of the buildings.

The Initial Study states the visual character of the site would be consistent with its surroundings and the existing character, as the project would remain industrial. This makes no sense. Along Bridgehead Road, the project site has a General Plan designation of Business Park. The project site is not designated Industrial along Bridgehead Road. How would a logistics center be consistent with the visual character of a regional shoreline park, a yacht harbor, and the marine-related commercial uses?

North of the project site, our property is zoned Commercial Recreation Aquatic (CR-A). The CR-A Zone allows hotels, restaurants, and residential uses with a conditional use permit. There is an existing residence at the marine now. The EIR should take into consideration the aesthetic impacts to the existing and potential land uses in the vicinity.

A logistics center has a completely different purpose and aesthetic connotation than a business park. There will be an impact to the aesthetics of the area, and it will likely be significant. This topic should be evaluated as a "potentially significant impact" in the EIR.

Noise

The Initial Study states the proposed project would involve sources of noise that are similar to the surrounding area and the impacts are less than significant. However, a major noise source related to the project is the noise of trucks that would use Bridgehead Road to access the site day and night. The noise generated by this volume and duration of trucks does not exist on Bridgehead Road at this time. The environmental analysis should be expanded to determine if the project would generate a substantial, permanent increase in the ambient noise levels in the vicinity due to the truck traffic impacts on Bridgehead Road. The operational characteristics should be disclosed, such as if the logistics center will be operational 24 hours a day, 365 days a year.

North of the project site, our property is zoned Commercial Recreation Aquatic (CR-A). The CR-A Zone allows hotels, restaurants, and residential uses with a conditional use permit. There is an existing residence at the marine now. The existing residence is less than 500 feet from the project

site. The EIR should take into consideration the noise impacts to the existing and potential land uses in the vicinity.

The noise impacts are related to the traffic impacts in the Transportation section, which has already been identified as a potentially significant impact to be studied further in the EIR. Accordingly, noise should be evaluated as a "potentially significant impact" in the EIR.

Light and Glare

When DuPont was in operation, there was a 500-foot buffer of vineyards and wetlands that shielded us from light and glare associated with the plant. The proposed logistics center comes right up to the northern property line. There will be light and glare associated with the parking lots, access drives, truck headlights, and security measures. If the logistics center includes 24-hour operations, it may cause light pollution that affects the commercial and residential nature of our property. As noted earlier, our property in the CR-A Zone allows hotels, restaurants, and residential uses with a conditional use permit. The existing residence at the marine is less than 500 feet from the project site. The EIR should take into consideration the light and glare impacts to the existing and potential land uses in the vicinity.

Public Services

Based upon the earlier comments regarding traffic, land use, and planning, the proposed project may have potentially significant impacts on the regional shoreline park and the response times for the Marine Patrol located on Bridgehead Road. The Initial Study should be amended to reflect these factors as Potentially Significant Impacts to parks and other public services.

Recreation

There are four marina's that provide boating access to the Delta that would be affected by the proposed project. Impacts to the boating community should be considered in the EIR. Lauritzen Yacht Harbor provides roughly 137 berths and 300 boats in dry storage. We launch about 4,000 boats a year at our launching ramp for day use, not just from the Oakley area. Driftwood Marina has roughly 200 boat berths. Bridge Marina has roughly 200 boat berths plus the yacht club. Jim's Holiday Harbor has roughly 110 berths plus the dry dock.

In addition to the boat facilities, there are major recreational events, such as the bass tournaments, that draw people from the region to Oakley's shoreline.

Based upon the earlier comments regarding traffic, land use, and planning, the proposed project may have a potentially significant impact on the regional shoreline park and boating community. The Initial Study should be amended to reflect these factors as Potentially Significant Impacts on the regional park, trails, and other recreational facilities.

Hydrology and Water Quality

The existing drainage pattern for stormwater runoff needs to be evaluated as part of development proposal on the site. Under existing conditions, there is some stormwater that naturally flows from Lauritzen Yacht Harbor south to the project site. The EIR should address impacts on adjacent properties in the EIR regarding the proposed changes to the existing drainage patterns.

The EIR should include a discussion of the California 200-year flood zone if applicable to the subject site.

The EIR should include a discussion of sea level rise if applicable to the subject site.

Utilities

The Initial Study indicates the utilities and service systems are all potentially significant impacts to be studied in the EIR. As part of the analysis, it would be appropriate to identify if the proposed utilities will be sized for the service area and if the utilities will be extended to the property line.

The initial study identifies the existing Lauritzen Sewer Pump Station in Lauritzen Lane. A sewer force main in Lauritzen and Bridgehead Road connects the pump station to a short run of gravity pipe. In the event the Lauritzen Pump Station cannot accommodate the flows generated by the project, a new sewer pump station would be constructed. To expand on this topic, the EIR should disclose how much of the available capacity would be used and how much would remain before a new pump station is required.

The EIR should also provide information on the adequacy of the water, electrical, and gas service to serve the project site and to accommodate future development in the service area.

Air Quality

Even with diligent watering of the construction site during the grading and dirt hauling phases, there may be dust impacting the boats stored in the vicinity and dust issues for the canvas shop and marine repair businesses adjacent to the site. Mitigation measures should be included to address off-site dust-related impacts that cannot be reduced with on-site efforts alone.

Thank you for considering these factors in the environmental process. Please feel free to contact me if there are any questions.

Warm regards,

Chris Lauritzen
