- *Cumulative 2050 With And Without Modified Project Conditions*: Noise Impact Analysis Table 7-5, *Cumulative 2050 Without Project Conditions Noise Level Contours*, presents the "Cumulative 2050 Without Modified Project Conditions" CNEL noise levels, which are expected to range from 63.1 to 69.6 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Noise Impact Analysis Table 7-6, *Cumulative 2050 With Project Conditions Noise Level Contours*, shows that roadway noise levels from "Cumulative 2050 Without Modified Project Condition" would range from 66.3 to 69.7 CNEL. Noise Impact Analysis Table 7-9, *Cumulative 2050 Off-Site Project-Related Traffic Noise Impacts*, shows that the modified project off-site contribution to cumulative traffic noise level increases up to 0.5 dBA CNEL.

  Based on the significance criteria for off-site traffic noise impacts as presented in Table 7, land uses adjacent to the study area roadway segments would not experience substantial noise level increases due to modified project-related traffic noise level increases and impacts in this regard would be considered less than significant.

Overall, the modified project would result in less than significant traffic noise impacts during operation. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Operational Vibration

The modified project would not generate additional long-term operational traffic, and no new stationary noise sources are anticipated. Operational noise impacts resulting from the modified project would be less than significant. Further, the modified project would not involve railroads operations or substantial heavy truck trips and would not result in

significant vibration impacts at surrounding uses during operation. As such, less than significant impacts would occur in this regard. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Airport Noise

The modified project site is located approximately 350 feet north of the Ontario International Airport (ONT). This places the modified project site within the ONT Airport Influence Area according to Policy Map 2-1 of the ONT ALUCP. The ONT ALUCP was amended July 2018 to promote compatibility between airport and the surrounding land uses. Since the modified project site is located within the ONT Airport Influence Area, the modified project is subject to the Noise Criteria established in the ONT ALUCP. As shown on Noise Impact Analysis Exhibit 3-B, the modified project site is located within the 60 to 70 dBA CNEL airport noise level contours. Specifically, as shown on Noise Impact Analysis Exhibit 8-A, the 65 dBA CNEL noise level contours cross the southern portion of the modified project site, while the remainder of the modified project site would be located between the 60 and 65 CNEL noise level contours of Ontario Airport.

According to Table 2-3 of the ONT ALUCP, the short-term lodging land use (i.e., hotel) within the 60 to 70 dBA CNEL is considered a conditionally compatible land use which must demonstrate compliance with the interior noise standard of 45 CNEL.

As shown in Noise Impact Analysis Tables 8-4, *First Floor Interior Noise Levels (CNEL)*, through 8-12, *Ninth Floor Interior Noise Levels (CNEL)*, on-site interior traffic noise levels would not exceed the 45 dBA CNEL interior noise level standard for hotel rooms and additional noise abatement measures are not needed. As such, airport noise impacts would be less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.11 Transportation

Approved Project Findings

TOP 2050 SEIR determined that the approved project would result in less than significant impacts related to the circulation system, hazardous traffic conditions due to geometric design, and adequate emergency access. However, TOP 2050 SEIR found that due to the approved project's anticipated population increase, an increase in Vehicle Miles Traveled (VMT) would occur, which would result in potentially significant impacts. As such, TOP 2050 SEIR included Mitigation Measure T-1, which would require that prior to

approval of discretionary projects under TOP 2050 and subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) *Final Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity*, and approved by the City (if applicable). However, given the uncertainty of the effectiveness of implementing TDM measures at a Citywide level and of their effectiveness at reducing Citywide VMT, VMT impacts were determined to be significant and unavoidable.

Modified Project Analysis

The *Empire Groves Hotel – VMT Analysis,* (VMT Analysis), prepared by Translutions, Inc., and dated October 12, 2023, was prepared for the modified project; refer to Appendix J, *VMT Analysis*.

Based on the City's VMT guidelines, a project would result in a significant VMT impact if either of the following conditions are satisfied:

1. Project Generated VMT: A significant impact would occur if the project VMT per Service Population (VMT/SP) exceeds the Citywide average for Service Population under General Plan Buildout Conditions; or
2. Project Effect on VMT: A significant impact would occur if the project causes total daily VMT within the City to be higher than the no project alternative under cumulative conditions.

Based on the results of the VMT Analysis modeling, modified project-generated VMT would be 32.13 VMT/SP and the Citywide average at General Plan buildout would be 32.55 VMT/SP; therefore, the modified project would result in less than significant VMT impacts. Additionally, based on the modeling, for future year 2045, Citywide average at General Plan buildout with the modified project would be 22.64 VMT/SP, and Citywide average at General Plan buildout without the modified project would be 22.73 VMT/SP. Therefore, implementation of the modified project would lower Citywide VMT/SP at buildout year 2045 and would result in a less than significant impact.

While the modified project does not propose new bicycle facilities or new transit infrastructure, the modified project would continue to provide access to existing facilities, including multipurpose trails, as well as stops and connections for Metrolink, Amtrak, West Valley Connector BRT, Ontario Airport Loop, and Metro. As described in Section 2.3, *Modified Project Description*, the modified project would provide sidewalk improvements along the site perimeter, including visible crosswalks at major intersections and the Specific Plan identifies potential future roadway improvements along East Holt Boulevard, East Guasti Road, and Airport Drive that would further expand the multimodal

transportation network in the modified project area. All transportation improvements would be designed to City standards and would enhance connectivity through and around the modified project site as well as between neighboring districts and the airport. Further, no roadway improvements are proposed that would create geometric design hazards or impact emergency access in the modified project area.

Overall, the modified project would not result in a new significant environmental effect or substantial increase the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.12 Tribal Cultural Resources

Approved Project Findings

According to TOP 2050 SEIR, future development as a result of TOP 2050 implementation could occur in portions of the City with sensitivity to tribal cultural resources. Grading and construction activities in undeveloped areas or redevelopment that requires deeper soil excavation than in the past could potentially disturb tribal cultural resources. However, TOP 2050 SEIR determined that 2010 TOP EIR Mitigation Measures 5-3 (tribal consultation and preparation of a cultural resources assessment) and 5-4 (construction-related tribal resources mitigation) as well as TOP 2050 SEIR Mitigation Measures TCR-1 (tribal cultural resources monitoring plan) and TCR-2 (treatment and disposition of cultural resources) would reduce potential impacts associated with tribal cultural resources to less than significant levels. Therefore, TOP 2050 SEIR concluded that impacts would be less than significant with mitigation incorporated.

Modified Project Analysis

As of July 1, 2015, California Assembly Bill 52 (AB 52) was enacted and expanded CEQA by establishing a formal consultation process for California tribes within the CEQA process. AB 52 states that prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report for a project, a lead agency shall begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project, if the tribe requested to the lead agency, in writing, to be informed by the lead agency of proposed projects in that geographic area and the tribe requests consultation. As this environmental document (i.e., an Addendum) is not a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report, AB 52 consultation would not apply to the modified project. Nevertheless, tribal consultation under AB 52 and California Senate Bill (SB) 18 was conducted as part of TOP 2050 SEIR, which resulted in the inclusion of 2010 TOP EIR Mitigation Measures 5-3 (tribal consultation and preparation of a cultural resources

assessment) and 5-4 (construction-related tribal resources mitigation) as well as TOP 2050 SEIR Mitigation Measures TCR-1 (tribal cultural resources monitoring plan) and TCR-2 (treatment and disposition of cultural resources) to reduce potential impacts associated with tribal cultural resources to less than significant levels.

SB 18 states that prior to a local (city or county) government's adoption of any general plan or specific plan, or amendment to general and specific plans, or a designation of open space land proposed on or after March 1, 2005, the city or county shall conduct consultations with California Native American tribes for the purpose of preserving or mitigating impacts to Cultural Places. The modified project proposes to construct a hotel and retail development with associated site improvements in accordance with the proposed Empire Groves Specific Plan. As such, tribal consultation under SB 18 is required and was conducted for the modified project. As required, the City distributed letters by e-mail to applicable tribes identified by the Native American Heritage Commission (NAHC). The City initiated tribal consultation on October 29, 2024, by emailing letters that provided a description of the modified project and notified each tribe of the opportunity to consult with the City regarding the modified project.

The City initiated consultation on November 12, 2024, with the Gabrieleno Band of Mission Indians – Kizh Nation (Kizh Nation) and concluded consultation on December 3, 2025. The Kizh Nation did not identify any cultural resources on the project site, however, the tribe requested project conditions to be included regarding tribal monitoring and notification that are included below. The Yuhaaviatam of San Manuel Nation e-mailed the City on November 5, 2025, and did not identify any cultural resources on the project site however requested project conditions to be included consistent with TOP 2050 SEIR Mitigation Measures TCR-1 and TCR-2 that are included below. The modified project would not result in any new or substantially increased impacts that were not identified as part of the Certified TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures:

TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:

1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;
2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come

to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);

3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources.

Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;

2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:

    a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic

recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;

b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;
c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;
d. At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

Addendum Project Conditions: Below are tribal project conditions for the Yuhaaviatam of San Manuel Nation and Gabrieleno Band of Mission Indians – Kizh Nation.

A. Yuhaaviatam of San Manuel Nation:

1. In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. Additionally, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed within TOP 2050 SEIR Mitigation Measures TCR-1, regarding any pre-contact finds and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal input with regards to significance and treatment.

2. If significant pre-contact cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TOP 2050 SEIR Mitigation Measures TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

3. If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project.

4. The Yuhaaviatam of San Manuel Nation Cultural Resources Management Department (YSMN) shall be contacted, as detailed in TOP 2050 SEIR Mitigation Measure TCR-1, of any pre-contact cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a Cultural Resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

5. Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project

B. Gabrieleno Band of Mission Indians – Kizh Nation:

1. The project applicant or lead agency shall retain a Native American Tribal Monitor from the Gabrieleno Band of Mission Indians – Kizh Nation to ensure proper oversight of Tribal Cultural Resources (TCR). The Tribal Cultural Resources monitoring plan shall address the details, timing, and responsibilities for cultural resource activities occurring on the project site. The plan shall include:

    a. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling.

b. Full-time presence of a designated Native American Tribal Monitor from the Gabrieleno Band of Mission Indians – Kizh Nation during all grading, excavation, and ground-disturbing activities on the site. The monitor shall coordinate with the developer to ensure safety requirements, duties, and scope of work are adhered to. The Tribal Monitor shall also have the authority to stop and redirect grading activities if tribal cultural resources are identified.

c. Protocols and stipulations to address inadvertent discoveries of Tribal Cultural Resources, including immediate evaluation by the Kizh Nation. At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a Tribal Cultural Monitor from the Gabrieleno Band of Mission Indians – Kizh Nation to monitor all such activities. A Tribal Monitor shall be present during all initial grading activities. If tribal resources are identified during grubbing activities, the Tribal Monitor shall continue to be present during subsequent grading activities.

2. Treatment and Disposition of Cultural Resources. In the event that Tribal Cultural Resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., the following procedures shall be followed to ensure proper and disposition of the discoveries:

   a. Temporary Curation and Storage: During construction, all discovered resources shall be temporarily curated in a secure on-site location under the oversight of the Tribal Monitor from the Gabrieleno Band of Mission Indians – Kizh Nation.

   b. Treatment and Final Disposition All discovered cultural resources, including sacred items, burial goods, and archaeological artifacts, shall remain under the custodianship of the Gabrieleno Band of Mission Indians – Kizh Nation. Final disposition shall occur through the following process of On-site Reburial. Discovered items shall be reburied on-site in coordination with the Gabrieleno Band of Mission Indians – Kizh Nation. Measures shall be taken to ensure the future reburial area is protected from any potential future impacts. Reburial shall only occur after cataloging, basic analysis, recordation, and any other necessary documentation have been completed in consultation with the Kizh Nation.

3. Phase IV Monitoring Report: Upon completion of grading, excavation, and ground-disturbing activities, a Phase IV Monitoring Report shall be submitted to the City of Ontario within 60 days. This report shall document:

    a. All monitoring activities conducted by the Tribal Monitors from the Gabrieleno Band of Mission Indians – Kizh Nation.

    b. The impacts to known resources on the property.

    c. A summary of how each mitigation measure was fulfilled.

    d. The type and disposition of cultural resources recovered.

    e. Evidence of cultural sensitivity training provided to construction staff prior to project commencement.

    f. A confidential appendix including daily/weekly monitoring notes prepared by the monitors. All reports produced shall be submitted to the City of Ontario, the Gabrieleno Band of Mission Indians – Kizh Nation, and any other relevant agencies.

3.2.13 Utilities and Service Systems

Approved Project Findings

TOP 2050 SEIR determined that, following compliance with all applicable regulations and ordinances issued by the Inland Empire Utilities Agency (IEUA), wastewater generated by the approved project could be adequately treated by the wastewater service provider and would not require the construction of new wastewater treatment facilities or the expansion of existing facilities or exceed wastewater treatment requirements of the Regional Water Quality Control Board. Additionally, TOP 2050 SEIR concluded that water demand in the City is projected through 2045 in the *City of Ontario 2020 Urban Water Management Plan* (2020 UWMP), and therefore the City's water supply and delivery systems are adequate to meet the requirements of the approved project. Further, as discussed in Section 3.2.8, *Hydrology and Water Quality*, in order to ensure existing and proposed drainage systems under the approved project are adequate to serve buildout of TOP 2050, TOP 2050 SEIR requires all future development to prepare hydrology and hydraulic studies in accordance with the County Hydrology Manual and analyze stormwater flows that result from the 100-year storm event to ensure that the capacities of the storm drain systems are not exceeded. Additionally, future projects would be required to comply with the Santa Ana RWQCB MS4 permit and the San Bernardino County Stormwater Program. Lastly, TOP 2050 determined that existing and/or proposed facilities would be able to accommodate solid waste generated by the approved project, and that the approved project would comply with related solid waste regulations. Overall,

it was determined that impacts to utilities and service systems would be less than significant following compliance with existing regulations and policies.

Modified Project Analysis

The modified project proposes to install a sewer line on-site to connect to an existing 12-inch sewer main in East Holt Boulevard. As the modified project site is currently vacant, development of the modified project would generate additional wastewater compared to existing conditions, which could increase sewer flows and increase demand on the wastewater treatment provider. However, the modified project has a similar footprint compared to the site buildout envisioned by the approved project. As such, the City's Sewer Master Plan and Capital Improvement Program accounted for buildout of the modified project site, and the modified project would be adequately served by the existing conveyance system. Additionally, as stated in TOP 2050 SEIR, IEUA has experienced a decrease in the volume of sewage flow of approximately 10 percent over the last 20 years, due to a decrease in indoor water consumption with new development compliance with California Green Building Standards Code and water conservation efforts. The IEUA anticipates a significant increase in the growth of its service area in the next ten years, with 40 percent of the growth resulting from new development in the City. The IEUA develops 10-year forecasts and specifies capital improvements that will be implemented to meet the increase in demand; further, future projects have been assumed in the IEUA's Sewer System Management Plans. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

The modified project proposes water line connections from the site to an existing 12-inch water main in East Guasti Road along the modified project frontage and an existing 6-inch water main in East Holt Boulevard along the modified project frontage. Additionally, the modified project proposes to install an 8-inch recycled water main in East Guasti Road that connects to an existing 8-inch recycled water main in Convention Center Way (north of East Holt Boulevard) to extend south in East Guasti Road to end east of the Cucamonga Creek Channel. Given that the modified project site is currently vacant, development of the modified project would increase water demand. As stated in TOP 2050 SEIR, the City has the discretion to require water capacity studies associated with new development and redevelopment and currently requires site-specific studies to determine a project's impact throughout the water system. As such, *Water Supply Assessment and Written Verification of Sufficient Water Supply for the Empire Groves Hotel Specific Plan* (Water Supply Assessment), prepared by PlaceWorks and dated August 2024, was prepared for the modified project; refer to Appendix K, *Water Supply Assessment*. Based on the Water Supply Assessment, the modified project would result in total potable water demand of approximately 80.60 acre-feet per year (AFY) and total recycled water demand of approximately 13.35 AFY. Development of the project site consistent with the site's MU-Multimodal land use designation was previously included in the 2020 UWMP. Therefore, water demand associated with the modified project was compared to water demand associated with buildout of the site as a mixed-use

development consistent with the 2020 UWMP. The results showed that the modified project would result in a net increase in potable water demand by 43.55 AFY compared to the approved project and a net decrease in recycled water demand by 1.71 AFY compared to the approved project. Nonetheless, the net increase in potable water demand is within the 2020 UWMP projected water demand increases for the years 2025 to 2030, which is within the timeframe in which the modified project is anticipated to be completed. Furthermore, the City has the ability to increase groundwater production from the Chino Basin as well as increase imported water. As such, the City would have sufficient water supplies available during normal, single dry, and multiple dry years through the year 2045 to meet all projected water demands associated with its existing and future customers, including the modified project. The modified project would also be required to pay connection fees, which would offset the costs of system maintenance and capital upgrades to support the new development in the City's service area. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

The modified project proposes stormwater improvements consisting of an underground detention system and stormwater pump in the southeast corner of the site. According to the Hydrology Report prepared for the modified project, modified project implementation would increase impervious areas on-site, thereby increasing flows discharging from site. As such, the proposed stormwater pump would be installed to convey flows to the proposed underground detention system for treatment and restricted flow into an existing 108-inch stormwater line in Guasti Road. The proposed stormwater improvements would ensure the modified project do not cause a significant impact to downstream systems and discharge flows are reduced compared to existing conditions. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Given that the modified project site is currently vacant, development of the modified project would increase solid waste generation and increase demand for solid waste services. The approved project was estimated to occupy approximately two percent of the Badlands Sanitary Landfill and the El Sobrante Landfill remaining capacities. Given that the modified project has a similar development potential to the buildout envisioned for the City's MU-Multimodal designated areas by the approved project, it is not anticipated that development of the modified project would substantially increase solid waste generation. Additionally, the modified project would be required to comply with CALGreen, AB 341, AB 1826, and TOP 2050 policies regarding waste diversion. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

4.0 DETERMINATION/ADDENDUM CONCLUSION

As detailed in the analysis presented above, this Addendum supports the conclusion that the modified project constitutes minor or technical changes and do not result in any new significant environmental effects or a substantial increase in the severity of previously identified significant effects as compared to the conclusions of TOP 2050 SEIR. No new information has become available and no substantial changes to the circumstances under which the approved project was being undertaken since the certification of TOP 2050 SEIR have occurred. As identified in TOP 2050 SEIR, the approved project would result in significant environmental impacts with regard to air quality, cultural resources, noise, and transportation. However, the modified project would not substantially increase the severity of these effects. In addition, there are no new or different mitigation measures or alternatives that would substantially reduce these significant impacts.

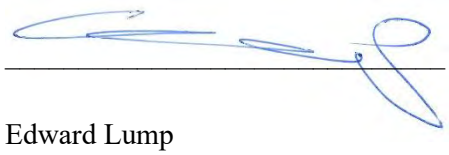
Subject: **Phase I Environmental Site Assessment: *Proposed Empire Resort and Spa,* Southeast Corner of E. Holt Boulevard and E. Guasti Road, APN 0110-322-33-0-000, City of Ontario, San Bernardino County, California 91761**



Dear Mr. Leggio:

Petra Geosciences, Inc. (Petra) presents this Phase I Environmental Site Assessment for the above-referenced site. This assessment has been conducted in accordance with our Supplemental Proposal No. 22-398P, dated October 20, 2023, and in conformance with the scope and limitations of the standards set forth in the American Society for Testing and Materials (ASTM) Practice E 1527-21, the EPA's All Appropriate Inquiry (AAI) regulations 40 CFR Part 312.

This opportunity to be of service to you is sincerely appreciated. Please do not hesitate to call this office if you have questions pertaining to this report.

Respectfully submitted,

PETRA GEOSCIENCES, INC.

Edward Lump

Senior Principal Engineer

EXECUTIVE SUMMARY

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Proposed Empire Resort and Spa
Southeast Corner of E. Holt Boulevard and E. Guasti Road
Assessor Parcel Number (APN) 0110-322-33-0-000
City of Ontario, San Bernardino County, California 91761

INTRODUCTION

The information presented in this report includes the results of our recent site reconnaissance, a review of pertinent literature, and recent federal, state, and local government agency records. Our field reconnaissance, data gathering, and compilation was performed by Mr. Edward Lump, Associate Geologist, with oversight by Dr. Siamak Jafroudi President and Principal Engineer.

SITE DESCRIPTION AND GENERAL INFORMATION

1. The subject property is a vacant site located at the southeasterly corner of E. Holt Boulevard and E. Guasti Road in the city of Ontario, San Bernardino County, California. The site is bounded by hotel properties to the north and west; improved Cucamonga Creek to the east and a distribution center and vacant land beyond; and a railroad line to the south with Ontario International Airport beyond. Sidewalks are not present along any street edges bounding the subject property. Chain link fencing delineates the subject site boundary perimeter. A site location map is included as Figure 1.

2. The subject site is comprised of one parcel of approximately 10.4-acres with Assessor Parcel Number (APN) 0110-322-33-0-000. A plan showing recent conditions on the site is included as Figure 2.

3. Access to the subject property is via an open gate off E. Guasti Road near E. Holt Boulevard. A second locked gate is situated further south. At the time of our field reconnaissance, the site was vacant land. A majority of the subject site is covered with moderately thick to thick, dry native vegetation with somewhat scattered trees; however, an irregularly shaped strip of cleared vegetation exists along the westerly side of the subject site, exposing native soil. Some of this cleared area is covered with gravel. Some of the trees have been uprooted and partially ground up to mulch. A thinner strip of partially cleared vegetation exists along the east property boundary with Cucamonga Creek. Windblow trash and debris is common along the northern boundary with E. Holt Boulevard and to a lesser extent along the west and south boundary with E. Guasti Road. Windblown trash and debris are occasionally observed along the east edge of the dirt area and the brush area of the northwesterly area onsite. The site slopes gently to the southeast with existing elevations on the order of 965 feet above mean sea level (msl) to 950 feet above msl (USGS, 1981).

4. Within the subject property trash and debris is minimal. The largest area of debris is in the northeastern portion of the subject site, where what appears to be remnants of a homeless encampment was observed. Three dumped piles of soil noted in the south-central area of the subject property appear to be relatively recent. It appears these soil piles were placed on top of a relatively thin layer of leveled fill soil. Except for roots/rootlets, the surface of these piles was clean of trash and debris. Except for occasional concrete fragments, trash and debris was limited within the subject property. A few small areas of waste concrete and asphalt were noted among the brush in the interior of the subject site.

5. No water wells were observed on site during our reconnaissance.

6. Overhead power lines were observed adjacent to the subject property during our site reconnaissance. Overhead lines with one pole mounted transformer were noted outside the fence along the east side of E. Guasti Road near a fire hydrant. The transformer appeared to be in good condition at the time of our reconnaissance. No ground surface staining or distressed vegetation was noted below the transformer. No pad mounted transformers were observed; however, yellow bollards were observed near two high voltage SCE risers and a vault within the southwesterly portion of the subject site. Closer to the open gate, a buried concrete water valve box was observed inside the fence line.

7. Information obtained during this assessment indicated that the subject property and vicinity appeared to have been utilized for agricultural purposes in the form of grape orchards from at least 1938 to sometime after/during 1975 and before/during 1985. No structures were observed within the subject site boundary from at least 1938 to the present day. From 1985 to 2023, the subject property was vacant and undeveloped land with relatively uniform native vegetation and scattered trees. Holt Boulevard was constructed along the north side of the subject property from at least 1938. Guasti Road was constructed along the south and western site boundary sometime after/during 1985 and before/during 1989. Historical information reviewed during this assessment includes aerial photographs (dating back to 1938), USGS topographical maps (dating back to 1897), and interviews.

8. No sites were identified in our search of various government agency database records, which appear to have impacted the soils or groundwater beneath the subject site.

9. There was no evidence of drums, above ground storage tanks, underground storage tanks, sumps, pits, pools, or lagoons identified within the subject property boundary during our site assessment.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized environmental conditions are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site. If the presences of recognized environmental conditions are identified on a subject site, it may warrant additional research, site assessment, and/or action.

- No REC's have been identified within or affecting the subject property.

Controlled recognized environmental conditions (CREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-21 as a recognized environmental condition resulting from the past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (i.e., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. For example, if a leaking underground storage tank has been cleaned up to a commercial use standard but does not meet unrestricted residential cleanup criteria; this would be considered a controlled recognized environmental condition. The "control" is represented by the (inferred) restriction that the property remains commercial.

- No CREC's have been identified within or affecting the subject property.

Historical recognized environmental conditions (HREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-21 as a past release of any *hazardous substances or petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory agency, without subjecting the *property* to any required controls (i.e., *property* use restrictions, *activity and use limitations*, *institutional controls* or *engineering controls*).

- No HREC's have been identified within or affecting the subject property.

We have performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E 1527-21 for the subject property, APN 0110-322-33-0-000, located at the southeast corner of E. Holt Boulevard and E. Guasti Road, in the City of Ontario, San Bernardino County, California. Any exceptions to, or deletions from, this practice are described in the section titled data gaps of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property at this time.

SITE CONSIDERATIONS

The items presented below are not considered recognized environmental conditions in accordance with ASTM E 1527-21. Although these items may warrant consideration in conjunction with any planned development activities, they are not recognized environmental conditions. The information regarding possible actions relative to these items has been provided as guidance.

1. With re-development of any former agricultural property, a certain amount of unknown subsurface conditions may be anticipated. Any discolored soils, noxious odors, buried pipelines or irrigation channels, and/or other buried objects/debris encountered during clearing and grubbing, or future grading and development should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed.

2. It is possible that abandoned irrigation lines will be encountered during demolition, clearing, and grubbing, or rough grading. If these irrigation lines are concrete, they should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed. In the event concrete irrigation lines are encountered, caution should be taken to not crush the lines until it can be ascertained that they do not contain asbestos.

3. It is recommended that all debris and trash observed on the subject site be removed and disposed of in accordance with current local, state and federal disposal regulations.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Proposed Empire Resort and Spa
Southeast Corner of E. Holt Boulevard and E. Guasti Road
Assessor Parcel Number (APN) 0110-322-33-0-000
City of Ontario, San Bernardino County, California 91761

INTRODUCTION

The information presented in this report includes the results of our recent field reconnaissance, a review of various federal, state, and local government agency records, and a review of historic aerial photographs and topographic maps for the site and vicinity. This report includes a summary of our findings, our opinion as to the current environmental condition of the site, and recommendations for additional work, if needed.

Purpose

This assessment was conducted to determine if any recognized environmental conditions exist on the subject site. Recognized environmental conditions are defined by the American Society for Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site.

This assessment is also intended to satisfy the requirement for conducting all appropriate inquiries into the previous ownership and uses of a property for the purposes of meeting the all appropriate inquiries provisions necessary to qualify for certain landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

We have performed this assessment in general conformance with the scope and limitations of the standards set forth in the ASTM Practice E 1527-21, the EPA's All Appropriate Inquiry (AAI) regulations 40 CFR Part 312.

Involved Parties

This report was prepared by Petra Geosciences, Inc. (Petra), at the request of Diversified Pacific Communities, for their exclusive use. Use of this report or reliance thereon by other parties or projects is not authorized. The report may not be suitable for other parties or other purposes.

SCOPE OF ASSESSMENT

The scope of this assessment included the following:

1. Performing a site reconnaissance to identify the current conditions and land use of the subject site and adjoining properties, during which visual evidence of prior uses of the subject site and adjoining properties were noted. The site reconnaissance included an observation of the site surface and the site perimeter. Representative photographs of our site walk are provided in Appendix A.

2. Researching historical land use of the subject site and vicinity by reviewing available historical aerial photographs, United States Geologic Survey (USGS) topographic maps, fire insurance maps, city directories, and other reasonably ascertainable maps and data (Appendix C).

3. Review Preliminary Title Search document by Ticor Title, dated May 6, 2022, provided by the client (Appendix E).

4. Conducting a search for Environmental Liens and Activities and Use Limitations (AULs) back to 1980 for the subject property parcel (Appendix C).

5. Performing a cursory review of local and regional geological conditions as they pertain solely to commenting of recognized environmental conditions for the site.

6. Obtaining and reviewing a search of pertinent federal, state, and local regulatory agency databases concerning environmental conditions on and in the vicinity of the site. As specified in the ASTM and AAI standards, the following databases were searched using, at a minimum, the recommended search radius:

    - Federal National Priority List (NPL) site list,
    - Federal Delisted NPL site list,
    - Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) site list,
    - Federal CERCLIS- No Further Remedial Action Planned (CERC-NFRAP) site list,
    - Federal Resource Conservation and Recovery Act Information (RCRA) Corrective Action Report (CORRACTS) facilities list,
    - Federal RCRA non-CORRACTS Treat, Store and Dispose (RCRA-TSD) facilities list,
    - Federal RCRA generators list,
    - Federal institutional control/engineering control registries,
    - Federal Emergency Response Notification System (ERNS) list,
    - State and tribal lists of hazardous waste sites identified for investigation or remediation including: State- and tribal-equivalent NPL, State, and tribal-equivalent CERCLIS lists,
    - State and tribal landfill and/or solid waste disposal site lists,
    - State and tribal leaking storage tank lists,
    - State and tribal registered storage tank lists,
    - State and tribal institutional control/engineering control registries,
    - State and tribal voluntary cleanup sites, and
    - State and tribal Brownfield sites.

    In the interest of thoroughness, numerous non-ASTM and non-AAI required databases were also searched. These databases are listed and discussed in the database search included within this report (Appendix B).

7. Contacting and interviewing knowledgeable persons, such as property owners, managers, and representatives of local government agencies regarding historical site use and current site conditions, if possible.

8. Evaluating the presence of recognized environmental conditions at the subject site through visual observation and research of reasonably ascertainable records. Recognized environmental conditions may include the presence of hazardous materials, petroleum products, underground storage tanks, above ground storage tanks, drums, chemical containers, polychlorinated biphenyls

(PCB's), liquid or solid wastes, oil wells, and areas indicative of potential contamination including stained soils and/or pavement, stressed vegetation, drains, sumps, pits, ponds, lagoons, odors, and septic systems.

9. Preparing this report presenting the results of our assessment.

10. Non-Scope Items. In addition to those items discussed above, several items outside the scope of ASTM Standard E 1527-21 and AAI will be addressed in this assessment. The non-scope items include:

    a. Cursory visual examination of the site for the potential presence of asbestos containing materials. Please note this is not a survey for these materials.

    b. Cursory visual examination of the site for the potential presence of lead-based paint. Please note this is not a survey for these materials.

Unless listed above, this assessment does not include any testing or sampling of materials (such as an assessment for the potential presence of methane or radon, asbestos or lead-based paints, or the sampling and testing of soil, soil vapor, air, surface water, or groundwater). This assessment does not include evaluating the site for the presence of wetlands, regulatory compliance, or other items beyond the scope of ASTM E 1527-21 or 40 CFR Part 312, nor is it an assessment for vapor intrusion as defined by ASTM E 2600-15.

SITE OVERVIEW

According to the California Department of Conservation, Geologic Energy Management Division (CalGEM) Online Mapping System (2023), the site is located within Township 01 South, Range 07 West, Section 22, San Bernardino Base and Meridian. Site elevations range from approximately 965± feet above mean sea level (msl) in the northern portion of the site, to 950± feet above msl in the southeast (USGS, 2018). A site location map is included as Figure 1.

The subject site is comprised of one parcel of approximately 10.4-acres with Assessor Parcel Number (APN) 011-032-233. The site is bounded by hotel properties to the north and west; improved Cucamonga Creek to the east and a distribution center and vacant land beyond; and a railroad line to the south with Ontario International Airport beyond. Sidewalks are not present along any street edges bounding the subject property. Chain link fencing delineates the subject site boundary perimeter. An aerial photograph showing the configuration of the subject property is attached as Figure 2.

PREVIOUS LAND USE

Information obtained during this assessment indicated that the subject property and vicinity appeared to have been utilized for agricultural purposes in the form of grapes from at least 1938 to sometime after/during 1975 and before/during 1985. No structures were observed within the subject site boundary from at least 1938 to the present day. From 1985 to 2023, the subject property was vacant and undeveloped land with relatively uniform native vegetation and scattered trees. Holt Boulevard was constructed along the north side of the subject property from at least 1938. Guasti Road was constructed along the south and western site boundary sometime after/during 1985 and before/during 1989. Historical information reviewed during this assessment includes aerial photographs (dating back to 1938), USGS topographical maps (dating back to 1897), and interviews.

PREVIOUS REPORTS

No previous environmental report for the subject site was provided to Petra for review during this assessment.

As a part of this assessment, Petra also reviewed potential environmental concerns associated with facilities in proximity to the subject property via electronic reports, maps, and/or databases. Information from our review is incorporated into this report.

ENVIRONMENTAL SETTING

The following section provides a cursory overview of the regional and local geologic setting and includes information pertaining to groundwater conditions in the vicinity of the subject site. Geotechnical hazard information (faults, landslides, etc.) is not part of this assessment. This section does not constitute a geotechnical evaluation of the subject property and should not be taken as such.

Geology

Geologically, the site lies within the northern portion of the Peninsular Ranges Geomorphic Province (CGS, 2002). The Peninsular Range Province extends from the tip of Baja California north to the Transverse Ranges Geomorphic Province and is characterized by northwest trending mountain ranges separated by subparallel fault zones. The San Bernardino Mountains, located north of the site, provides the boundary between the Peninsula Range Province and the Transverse Ranges Province. In general, the province is underlain primarily of plutonic rock of the Southern California Batholith. The Peninsular Range Geomorphic Province is generally characterized by alluviated basins and elevated erosion surfaces.

More specifically, published geologic maps of the area indicate that the site and surrounding alluvial areas are underlain by Holocene- and Late Pleistocene-age Young alluvial-fan deposits (Bedrossian, Hayhurst, and Roffers, 2010). This soil is described as unconsolidated to slightly consolidated boulder, cobble, sand, and silt deposits issued from a confined valley or canyon.

Surface Water

No indication of surface water was observed on the property or in close proximity at the time of our site reconnaissance.

The subject property is situated within Flood Insurance Rate Map (FIRMette) 06071C8628J. Most of the subject property is mapped within Zone X, defined as an area defined as areas of 0.2 percent annual chance flood; and areas of 1 percent annual chance flood with average depths of less than 1 foot or within drainage areas less than 1 square mile. A small portion of the north central portion of the subject property is also mapped within Zone X, defined, however, as an area of minimal flood hazard. Cucamonga Creek is within Zone A, defined as a 1 percent annual chance flood discharge contained within structure. The FIRMette map (effective February 10, 2015) is provided in Appendix B.

Groundwater

The site is located within the Upper Santa Ana Valley - Chino (8-002.01) Groundwater Basin. No historic groundwater wells are listed within the subject site on the CDWR water data library (CDWR, 2023). Based on our review, the closest mapped well to the subject property (Chino-1002337) is mapped on the north side of the I-10 Freeway, approximately 3,300 feet to the northeast. In April 1929, this well reported a depth to groundwater of approximately 219 feet below the ground surface (bgs). In 1944 depth was recorded as 242 feet bgs; in 2000 355 feet bgs; in 2018 343 feet bgs; and, in March 2023 344 feet bgs. In general, groundwater depth varies within the area and though flow direction specifically beneath the subject property is unknown, it is reasonable to estimate flow to follow regional topography to the south/southeast.

RESULTS OF ASSESSMENT

The results of our site reconnaissance and assessment of adjacent sites, agency database review, and historical land use study are presented in the following sections.

Site Observation

Petra conducted a reconnaissance of the subject site on November 4, 2023. Representative site photographs are included in Appendix A. Our site observations are summarized below.

1. The subject property is a vacant site located at the southeasterly corner of E. Holt Boulevard and E. Guasti Road in the city of Ontario, San Bernardino County, California. The site is bounded by hotel properties to the north and west; improved Cucamonga Creek to the east and a distribution center and vacant land beyond; and a railroad line to the south with Ontario International Airport beyond. Sidewalks are not present along any street edges bounding the subject property. Chain link fencing delineates the subject site boundary perimeter. A site location map is included as Figure 1.

2. The subject site is comprised of one parcel of approximately 10.4-acres with Assessor Parcel Number (APN) 0110-322-33-0-000. A plan showing recent conditions on the site is included as Figure 2.

3. Access to the subject property is via an open gate off E. Guasti Road near E. Holt Boulevard. A second locked gate is situated further south. At the time of our field reconnaissance, the site was vacant land. A majority of the subject site is covered with moderately thick to thick, dry native vegetation with somewhat scattered trees; however, an irregularly shaped strip of cleared vegetation exists along the westerly side of the subject site, exposing native soil. Some of this cleared area is covered with gravel. Some of the trees have been uprooted and partially ground up to mulch. A thinner strip of partially cleared vegetation exists along the east property boundary with Cucamonga Creek. Windblow trash and debris is common along the northern boundary with E. Holt Boulevard and to a lesser extent along the west and south boundary with E. Guasti Road. Windblown trash and debris are occasionally observed along the east edge of the dirt area and the brush area of the northwesterly area onsite. The site slopes gently to the southeast with existing elevations on the order of 965 feet above mean sea level (msl) to 950 feet above msl (USGS, 1981).

4. Within the subject property trash and debris is minimal. The largest area of debris is in the northeastern portion of the subject site, where what appears to be remnants of a homeless encampment was observed. Three dumped piles of soil noted in the south-central area of the subject property appear to be relatively recent. It appears these soil piles were placed on top of a relatively thin layer of leveled fill soil. Except for roots/rootlets, the surface of these piles was clean of trash and debris. Except for occasional concrete fragments, trash and debris was limited within the subject property. A few small areas of waste concrete and asphalt were noted among the brush in the interior of the subject site.

5. No water wells were observed on site during our reconnaissance.

6. Overhead power lines were observed adjacent to the subject property during our site reconnaissance. Overhead lines with one pole mounted transformer were noted outside the fence along the east side of E. Guasti Road near a fire hydrant. The transformer appeared to be in good condition at the time of our reconnaissance. No ground surface staining or distressed vegetation was noted below the transformer. No pad mounted transformers were observed; however, yellow bollards were observed near two high voltage SCE risers and a vault within the southwesterly portion of the subject site. Closer to the open gate, a buried concrete water valve box was observed inside the fence line.

7. There was no evidence of drums, above ground storage tanks, underground storage tanks, sumps, pits, pools, or lagoons identified within the subject property boundary during our site assessment.

Adjacent Site and Vicinity Observations

The property is situated in an area of commercial land use. Our observations are noted below:

South To the south of the property is E. Guasti Road, a railroad line and Ontario Airport beyond.

East To the east of the site is Cucamonga Creek, with a distribution center to the northeast and a vacant lot to the southeast beyond.

West To the west of the property is E. Guasti Road, with a hotel beyond.

North To the north of the site is E. Holt Boulevard and the east bound onramp to I-10, with hotel development beyond.

Government Agency Database Research

A search of federal, state, and local government listings was performed by Environmental Data Resources, Inc. (EDR) for the purposes of this report. The search radius used for all government databases meets or exceeds the standard search distance adopted by ASTM and AAI.

Results of Agency Records Search

A data search of the various government agency records listed in Appendix C revealed two listings mapped for the subject site under the Facility Index System/Facility Registry System (FINDS), Enforcement & Compliance History Information (ECHO), and Aerometric Information Retrieval System-Minor (US AIRS) databases. The Site Name is listed as Marriott Airport Hotel, 2200 E. Holt Street, Ontario, CA 91761. Based upon our site reconnaissance and Bing Maps, 2200 E. Holt Boulevard is located on the west side of E. Guasti Road (the subject property is located on the east). These database listings pertain solely to air quality monitoring of stationary sources of air pollution.

The EDR report shows 57 other listings at approximately 25 addresses within the requested search radii. Eighteen of the listings refer to businesses reported only under the Resource Conservation Recovery Act (RCRA) NonGenerator (RCRA NonGen/NLR) or San Bernardino County Permit (CA San Bern. Co. Permit) databases. Thirty-six of the listings are mapped within 1,760 feet (1/3 mile) of the center of the subject property; however, 13 are mapped at a down- or cross-groundwater gradient. Thirty-one orphan sites (sites with inadequate address information to be mapped by EDR) were identified during the agency database search. Refer to the EDR Radius Map Report in Appendix C for the search radii completed for this assessment.

The linear distance and groundwater gradient guidelines provided in ASTM E2600-15 (Tier 1 Areas of Concern) are used as a reasonable screening tool for groundwater and vapor migration to identify a

recognized environmental condition (REC) associated with the subject site (ASTM, 2015; Buonicore, 2014). For contaminated sources (such as a dry cleaner with a PCE release or a gas station with a leaking underground storage tank releasing BTEX) located up-gradient of the Target Property (TP), the focus would be on those contaminated sites within the AOC distance of 1,760 feet. The AOC search distance in the cross-gradient quadrant is reduced from 1,760 feet to 365 feet and the AOC for contaminated sites down-gradient from the TP is reduced from 1,760 feet to 100 feet.

A brief description of the sites listed in the EDR report, which are of potential concern due to the nature of the listing or their proximity to the site (i.e., within the AOC), is provided below. EDR's VEC Map application depicting the AOC pertaining to the subject property is provided in Appendix B.

Sites A1 & A2 Target Site: Marriott Airport Hotel, 2200 E. Holt St., Ontario, CA 91761: This listing is mapped as the Target Property; however, as noted above, Bing Maps located this address and hotel across E. Guasti Road from the subject property. This address is reported under the Facility Index System/Facility Registry System (FINDS), Enforcement & Compliance History Information (ECHO), and Aerometric Information Retrieval System-Minor (US AIRS) databases. Under FINDS, the Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the US EPA, state, and local air pollution agencies. No additional pertinent data is provided. No additional pertinent data is provided under ECHO. Under US AIRS MINOR, the default air classification code is reported as MIN. The air program is reported as "Stratospheric Ozone Protection." The activity group is listed as "Compliance Monitoring." No additional pertinent data is provided. Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this adjacent property these listings do not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

Site 3: Well 29, Ontario, CA: This site is listed less than 1/8-mile east-northeast of and at a higher elevation than the subject site. This site is reported on the State Water Resources Control Board's (CA PFAS) database. EDR maps the well directly east of the Cucamonga Channel, which bounds the east edge of the subject property. The site use is reported as "Drinking Water Wells". Potential Contaminants of Concern are "not reported". Potential media affected is listed as "not reported". Site history is "not reported." The matrix is listed as "liquid." PFOA is listed as < 2 nanograms per liter (NG/L) in December 2019. An additional 10 PFAS analytes are reported at a concentration < 2 NG/L. No additional pertinent data is provided.

Based upon our experience with laboratory detection levels of PFAS in groundwater, a concentration reported as <2 NG/L represent a non-detect designation, or below the laboratory detection limit. Based upon the 2019 PFAS groundwater results, this listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

Site B4: Frontier California: Airport RSC3/9, 2152 E. D St., Ontario, CA 91764: This site is listed less than 1/8-mile west-northwest of and at a higher elevation than the subject site. This site is reported on the San Bernardino County Permit (CA San Bern. Co. Permit) database. The permit category is listed as "hazardous materials 1-3 chemicals special." The facility status is listed as "active." The expiration date is reported as 5-31-2023. No additional pertinent data is provided. Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this property listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

Site 5: Holiday Inn, 2155 E. Convention Center Way, Ontario, CA 91764: This site is listed less than 1/8-mile north of and at a higher elevation than the subject site. This site is reported on the Resource Conservation Recovery Act (RCRA) Non-Generator/No Longer Regulated (RCRA NonGen/NLR) database. The Federal Waste Generation Description is reported as "not regulated, verified." The NAICS Code, 72111, is described as "hotels (except casino hotels) and motels." This facility has received no notices of violations and no evaluation actions. Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this property listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

Site B11: L.D. King, Inc., 2151 E. Convention Center Way, Suite 100, Ontario, CA 91764: This site is listed less than 1/8-mile northwest of and at a higher elevation than the subject site. This site is reported on the CA San Bern. Co. Permit database. The permit category is listed as "conditionally exempt small quantity generator." The facility status is reported as "inactive" as of 8-3-2005. No additional pertinent information is provided. Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this property listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

Site 14: Radisson Ontario Airport, 2200 E. Holt Blvd., Ontario, CA 91761: This site is listed less than 1/8-mile west of and at a higher elevation than the subject site. This site is reported on the CA San Bern. Co. Permit database. The permit category is listed as "hazardous materials 1-3 chemicals special." The facility status is listed as "inactive." The expiration date is reported as 9-30-2017. No additional pertinent data is provided. Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this property listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

Site D15: Mark Christopher Auto Center, 2131 Convention Center Way, Ontario, CA 91764: This site is listed between 1/8-mile and 1/4-mile northwest of and at a higher elevation than the subject site. This address is reported on CA EPA's California Underground Storage Tank (CA UST) database. The UST is permitted through San Bernardino County Fire Department. The installation date was listed as 1-7-1991. The double-walled steel UST is reported to have two compartments with a capacity of 4,000 gallons. The UST content is listed as regular unleaded. Tank piping was reported as fiberglass. Tank alarms are present. A permit for a second UST was listed for A 2,000-gallon used oil UST. The same general tank construction was reported. No additional pertinent information is provided. Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this property listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

Site D16: Mark Christopher Chevrolet, 2131 E. D St, Ontario, CA 91764: This site is listed between 1/8-mile and 1/4-mile northwest of and at a higher elevation than the subject site. This facility is reported on multiple regulatory agency databases including Small Quantity Hazardous Waste Generator (RCRA SQG) and multiple UST databases, which can be reviewed in EDR's *Radius Report* in Appendix C; however, this site was not reported on a leaking underground storage tank (LUST) database. This address is considered located up groundwater gradient from the subject property.

Under the CA San Bern. Co. Permit database, the permit category was listed as "1,320- to 10,000-gallon facility capacity." The facility status is listed as "active" with an expiration date of 10-31-2023. The second permit category was reported for "hazardous materials 11 – 30 chemicals" with the same status and expiration date. The permit also reported this facility as a "large quantity (hazardous waste) generator." These permits noted regular UST annual inspections per tank for the facility. Under the CA EPA's Environmental Reporting System (CERS) database, administrative violations were listed. Notes indicate

the facility returned to compliance, in some cases corrected during the agency inspection. No additional pertinent information is provided.

Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this property the listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently. Additional information is provided below under GeoTracker in the *Local Agencies* section.

Site D17: Metropolitan Transit District, 2131 D, Ontario, CA 91764: This site is listed between 1/8-mile and 1/4-mile northwest of and at a higher elevation than the subject site. This facility is reported on CA EPA's Historic Hazardous Waste & Substance Site (CA HIST CORTESE) database. No additional pertinent information is provided. Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this property listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

Site F30: Ontario Convention Center, 2000 Convention Center Way, Ontario, CA 91764: This site is listed between 1/8-mile and 1/4-mile northwest of and at a higher elevation than the subject site. This facility is reported on CA San Bern. Co. Permit and CA CERS databases. Under CA San Bern. Co. Permit, the owner of this facility is reported as the City of Ontario Utilities Department. The permit category is reported as "Hazardous Materials 4-10 Chemicals." The status is reported as "active" with an expiration date of 5-31-2023. Administrative violations and compliance evaluation inspections were listed. Notes indicate the facility returned to compliance, in some cases corrected during the agency inspection. No additional pertinent information is provided.

A second permit was listed for *Version Wireless: Turner* at the same address. The permit category is reported as "Hazardous Materials 1-3 Chemicals." The status is reported as "active" with an expiration date of 11-30-2021. This site was also listed under CERS, with a description of "Chemical Storage Facilities." Administrative violations and compliance evaluation inspections were listed.

Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this property listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

Site F31: AT&T Mobility-(USID26378), 2000 Convention Center Way, Ontario, CA 91764: This site is listed between 1/8-mile and 1/4-mile northwest of and at a higher elevation than the subject site. This facility is reported on the CA San Bern. Co. Permit database. Under CA San Bern. Co. Permit, the owner of this facility is reported as New Cingular Wireless PCS, LLC dba AT&T Mobility. The permit category is reported as "Hazardous Materials 1-3 Chemicals." The status is reported as "inactive" with an expiration date of 8-31-2022. No administrative violations or compliance evaluation inspections were listed. No additional pertinent information is provided. Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials this property listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

All other site listings in the EDR report do not currently appear to represent a recognized environmental condition with regards to the subject site, due to the nature of the listings (school site assessments, non-generators, etc.), the oversight agency having granted No Further Action, the site being outside the AOC from the subject site, and/or their distance from the subject site and/or depth to contamination.

Orphan Sites

Orphan sites are those that the database search was not able to locate due to lack of complete address information. Thirty-one orphan sites are listed in the EDR report. Nine LUST listings for the City of Ontario and the Ontario Postal Service, four drycleaners, one EDR Manufactured Gas Plant (MGP), two EDR Historic Auto Stations, and five SLIC database listings were checked for location relative to the subject property. The drycleaners at 9359 Foothill Boulevard, Rancho Cucamonga, were over 1 mile north-northeast from the subject property. The MGP site appeared to be over a mile west of the subject site. The LUST listings were the most difficult to locate based upon the readably available data presented by EDR. The Post office LUST site was mapped by Bings Maps over a half mile to the west of the subject site and at a cross gradient. The remaining 8 City LUST listings were not located. The EDR Historic Auto database sites at 4265 E. Holt Boulevard appeared to be over 1 mile to the west. The 4 SLIC database sites listed Northrop, Lockheed, Douglass Aircraft Company, California Air National Guard, and GE Engine Service at the Ontario International Airport, which is south and down gradient from the subject property.

Based upon our cursory review of the most relevant orphan sites, the orphan sites do not appear to represent a recognized environmental condition (REC) with regards to the subject property at this time.

Local Agencies

Petra reviewed information held by the agencies listed below during the course of this assessment.

San Bernardino County Fire Department

The San Bernardino County Fire Department Hazardous Materials Division maintains records related to hazardous materials business and management plans, hazardous waste generation and onsite treatment, aboveground petroleum storage, underground storage tanks, and California Accidental Release Program facilities in San Bernardino County. Records held by this agency were accessed by EDR during the government database search. No listings for the subject site were reported by EDR.

California Regional Water Quality Control Board

The California Regional Water Quality Control Board-Santa Ana Region 8 (RWQCB) maintains records of leaking underground storage tank sites and groundwater cleanups for sites in the Santa Ana Region. Records held by the RWQCB were accessed by EDR during the government database search. No listings for the subject site were reported by EDR.

GeoTracker

The GeoTracker website maintains a record of environmental data for regulated facilities in California. No database listings for the subject site were reported on GeoTracker. The memorandum documenting this inquiry is included in Appendix B.

Based upon the number of database listings for Mark Christopher Auto Center (2131 Convention Center Way, Ontario, CA 91764) above in the *Results of Agency Records* database search, Petra reviewed information on GeoTracker. The facility was mapped with permitted underground storage tanks only. The permitting agency was reported as San Bernardino County Fire Department. A LUST listing was not reported. Based upon the absence of a dual listing pertaining to an unauthorized release, spill, or leak of hazardous materials, this confirms that this offsite property listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property currently.

- GeoTracker PFAS Map

Per- and polyfluoroalkyl substances (PHAS) is a large family of emerging contaminants with over 2,000 fluorinated chemicals. The persistence and mobility of some PFAS, combined with decades of widespread use in industrial processes, certain types of firefighting foams, and consumer products, have resulted in their being present in environmental media at trace levels across the globe. Toxicological studies have raised concerns regarding the bioaccumulative nature and potential health concerns of some PFAS. As a result, our understanding of PFAS and the risks they may pose is rapidly evolving (ITRC, 2022).

Since the 1950s, many products commonly used by consumers and industry have been manufactured with or from PFAS, as the unique physical and chemical properties of PFAS impart oil, water, stain, and soil repellency, chemical and thermal stability, and/or friction reduction to a range of products. These products have applications in many industries, including the aerospace, semiconductor, medical, automotive, construction, electronics, and aviation industries, as well as in consumer products (such as carpets, clothing, furniture, outdoor equipment, food packaging), and firefighting applications (ITRC, 2022).

Effective February 25, 2022, for purposes of Proposition 65, the Office of Environmental Health Hazard Assessment (OEHHA) added perfluorooctanoic acid (PFOA) to the list of chemicals known to the State of California to cause cancer. On September 6, 2022, the US EPA issued a notice of proposed rulemaking to designate perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund).

Petra reviewed the interactive map of sites where water wells have analytical test data for the suite identified as per- and polyfluoroalkyl (PFAS), which include PHOA and PFOS (currently listed on CERCLA). One well was mapped in proximity to the subject property, just east of Cucamonga Creek (Public Drinking Water Well 29). Results for 12 different PFAS, including PFOA and PFOS, were reported as less than 2 nanograms per liter (ng/L) or non-detect on January 9, 2020. May 2023 US EPA Regional Screening Levels (RSLs) for tap water list PFOA at 0.06 micrograms per liter (µg/L) and PFOS at 0.04 µg/L (or 60 ng/L and 40 ng/L, respectively). No Maximum Contaminant Level (MCL) is provided. As such, non-detect concentrations, or the detection limit of PFOA and PFOS in groundwater, over 200 feet below the ground surface in the subject site area, are well below the RSLs for tap water.

<u>California Department of Conservation, Geologic Energy Management Division (CalGEM)</u>

According to the California Department of Conservation, Geologic Energy Management Division (CalGEM), there are no active or abandoned oil, or gas wells located on the subject site. Further, there were no indications of any such wells found during our reconnaissance of the subject site. A copy of this map is included in Appendix B.

California Department of Conservation

The California Department of Conservation, Division of Mine Reclamation's "Mines Online" interactive map was queried regarding mines in proximity to the subject property. The map depicted no mines within the subject property or within one mile of the subject property. The memorandum documenting this inquiry is included in Appendix B.

Department of Toxic Substances Control

The online database EnviroStor (DTSC, 2023), which provides records on LUSTs, SLICs, Priority cleanup sites and states sites, is maintained by the Department of Toxic Substances Control (DTSC). No database listings for the subject site were reported on EnviroStor. The memorandum documenting this inquiry is included in Appendix B.

Department of Toxic Substances Control – Land Use Covenants

Petra reviewed the DTSC's Permitting Land Use Covenants Web App for land use covenants (LUCs) affecting the subject property. None were found for the subject property. The memorandum documenting this inquiry is included in Appendix B.

National Pipeline Mapping System

Petra reviewed the National Pipeline Mapping System (NPMS, 2023) public viewer website for gas transmission pipelines and hazardous liquid trunklines on or close to the subject property. Due to security purposes, close-up map views are not available. According to the information reviewed, a hazardous liquid pipeline or petroleum pipelines are mapped south of Guasti Road, apparently along the railroad line. One of the pipelines is reported as permanently abandoned. The commodity of the second pipeline is reported as "non HVL product." The pipeline owner is listed as Kinder Morgan. A copy of this map is included in Appendix B.

Vapor Migration

Standards presented in ASTM E1527-21 considers the assessment of vapor migration similar to that of groundwater contamination. As a result, Petra reviewed documentation regarding surrounding sites near the subject property with known soil and groundwater contamination to preliminarily evaluate potential areas of concern for vapor migration/encroachment onto the subject property. An area of concern typically includes active or abandoned gas stations and dry cleaners, industrial facilities, and hazardous waste disposal and landfill facilities with known or suspected soil and/or groundwater contamination.

For vapor encroachment to represent a potential for vapor intrusion to structures within the subject property, vapors must have a pathway to create an indoor air quality condition (i.e., Recognized Environmental Condition). As a result, vapor encroachment from an offsite release onto the subject property does not immediately equate to vapor intrusion into existing or proposed structures within the subject property, and cannot be ascertained without additional field work.

In the absence of specific criteria within ASTM Standard E1527-21, Petra considered the linear distance and groundwater gradient guidelines provided in ASTM E2600-15 (Tier 1 Areas of Concern) as a reasonable screening tool for vapor migration to identify a recognized environmental condition (REC) associated with the subject site (ASTM, 2015; Buonicore, 2014). As a result of our review of readily available information, no surrounding sites have been identified during this assessment which would represent a concern in regard to vapor encroachment on to the subject site at this time.

Petra also reviewed the USEPA's default residential Vapor Intrusion Screening Levels (VISLs) for PFOA and PFOS. We found that these chemicals "are not considered sufficiently volatile and hazardous to pose inhalation risk via vapor from a soil or groundwater source". Currently, non-detect levels of PFOA and PFOS are reported in a public well adjacent to the subject property; however, groundwater is over 200 feet below the ground surface in proximity to the subject property and not anticipated to represent a potential environmental concern to the subject property unless groundwater rises to less than 100 feet below the ground surface. PHOA and PFOS vapor encroachment is not considered a likely risk to the subject property.

Evaluation of Records Search Results

In summary, no sites were identified in our search of various government agency database records, which may have significantly adversely impacted soil, soil vapor, or groundwater beneath the subject site at this time.

Results of Aerial Photo Analysis

Although aerial photographs can often be a valuable source of information in the assessment of historical land usage, it should be understood that information extrapolated from photographic images is strictly interpretation and not necessarily fact. For this reason, it may not be appropriate to draw conclusions regarding previous site activities based solely upon aerial photograph analysis.

In order to provide a complete assessment of historical land usage on and in the vicinity of the subject site, aerial photographs with coverage of the subject site and vicinity were obtained from EDR and viewed by a representative of this firm. Photographs from the years 1938, 1949, 1953, 1966, 1975, 1985, 1989, 1994, 2002, 2006, 2009, 2012, 2016, and 2020 were provided by EDR. Also, aerial photographs (i.e., Google Earth®) from 2020 through 2023 have been reviewed for this assessment and noted no significant changes to the subject property. A summary of the information obtained during the aerial photograph review follows. Copies of the aerial photographs obtained from EDR are included in Appendix C.

1938, 1949 and 1953 Photographs

In photographs from 1938, 1949, and 1953, the subject property and surrounding land is developed for agricultural purposes, which may consist of grapes. A roadway exists along the north and south boundaries of the site. An unimproved drainage is visible along the east boundary. Multiple rows of young and mature trees are observed mostly south of the dirt road along the south property boundary. What appears to be a railroad line is south of the dirt road. No buildings are readily visible within the subject property.

No readily detectable changes to the subject property were observed in the 1949 black and white aerial photograph. The roadway along the north site boundary is improved. The drainage channel east of the site appears to be channelized. Only one row of trees is visible on the north side of the dirt road south of the subject property. No significant changes are noted to land surrounding the subject site; however, the photograph has been blocked south of the railroad. Rows of cultivated vegetation remains visible within the subject property in the 1953 photograph. An airfield is visible south of the subject site. I-10 bridge construction is noted across the drainage north of the site.

1966, 1975, and 1985 Photographs

In the 1966 black and white aerial photograph, surface conditions within the subject property remain very similar to the previous photograph. Vegetation in the eastern two-thirds of the site appears less dense compared to the western one-third. A thin, north-south trending dirt road separates the two areas. No structures are visible within the subject property. What appears to be a farm compound is visible on the east side of the channel across from the southeast corner of the site. The drainage channel along the east edge of the site may be concrete lined. The I-10 Freeway north of the subject property appears active. An expanded airfield with at least two runways is visible south of the subject property.

The 1975 infrared aerial photograph depicts minimal changes to the subject property, except for checkered vegetation patterns. Additionally, vegetation onsite presents a light red or pink tone, suggesting lower plant vigor. An improved road (Guasti Road), which intersects Holt Boulevard, is visible along the south and western edges of the subject property. The farm compound east of the southeast portion of the subject property has expanded to the north and includes multiple buildings.

Cultivated vegetation rows are no longer visible onsite or in the site vicinity in the 1985 photograph. Areas of this vegetation are noted along the eastern property boundary with the drainage channel. Uniform grasses are observed within the remaining area of the subject property. Hotels are observed to the north, between I-10 and Holt Boulevard, including the northeast corner of Guasti Road and Holt Boulevard. What appear to be graded pads are observed to the west (across Guasti Road), to the northwest (across Holt Boulevard),

and to the northeast (across Holt Boulevard). A large building (commercial?) with parking and truck docks is east of the drainage channel, opposite the northeastern portion of the subject property. The farm compound remains east of the southeast portion of the site.

1989, 1994, 2002, 2006, 2009, and 2012 Photographs

In the 1989 photograph, the subject property is undeveloped with buildings visible. What appears to be native vegetation covers a majority of the subject site, except for the eastern edge and three thin areas crossing the site. Trees are noted in the northern portion of the site. Surrounding land appears to be built out to conditions similar to what is current in the vicinity, except for vacant lots across Holt Boulevard and the northeastern portion of the site. Except for the absence of vegetation clearings crossing the site, the subject property conditions in 1994 remain similar to the previous photograph. In addition, a small, half circle shaped clearing is observed on the southwest edge of the subject property. The farm compound east of the southeast portion of the site is no longer visible and the area consists of unform grasses. Except for local variations in onsite vegetation, no significant changes were noted on the undeveloped subject property in 2002, 2006, 2009, and 2012. In the 2009 aerial photograph, what appears to be a hotel has been constructed offsite, across Holt Boulevard from the northeastern portion of the subject site.

2016 and 2020 Photographs

In the 2016 color photograph, a relatively large area of vegetation clearing was observed in the west-northwesterly portion of the subject property. Vegetation clearing was also noted along the south, southeast, and east areas of the site. A small clearing was observed at the northeasterly area of the property. No significant changes were noted in the 2020 aerial photograph. Surrounding land remained hotel use to the west and north, Ontario Airport to the south, vacant land to the southeast and a commercial warehouse to the northeast.

Google Earth Imagery 2020 to 2023

Petra also reviewed historic aerial photographs on Goggle Earth™ from October 2020, September 2022, and May 2023. These photographs depicted similar site conditions to the property to that described above and observed within the subject site during our site walk.

Historical USGS Topographic Maps

Petra reviewed the historical USGS topographic maps of the site and vicinity provided by EDR which included Target Quad's: dated 1897, 1900, 1903, 1941, 1944, 1953, 1954, 1966, 1973, 1976, 1981, 2012, 2015, and 2018. No structures were shown on the subject property in any of the maps. The 1897, 1900, and 1903 maps depicted the subject property and immediate vicinity as undeveloped. A small, northwest-

southeast trending drainage intersected the western edge of the site. A railroad line was visible south of the property. No buildings were depicted in the site area. The 1941 and 1944 maps showed an improved road along the north edge of the site (Holt Boulevard). An unimproved road (1941) and later improved (1944) trending east-west was noted along the south property boundary. Railroad tracks were further south. A thin, unimproved drainage was visible to the east.

Maps from 1953, 1954, 1966, 1973, 1976, and 1981 depicted agricultural development on the subject property and vicinity. I-10 to the north and Ontario International Airport to the south were visible in the 1953 map. In the 1966 map, the road along the south edge of the subject property was labeled A Street. The 1976 map showed three small buildings offsite across the channel from the southeastern portion of the subject site. The 2012 map depicted Guasti Road improved along the south and western edge of the subject site. Maps from 2015 and 2018 showed no changes to the subject property or streets in the vicinity. These maps generally support observations made from the aerial photographs reviewed. Copies of the maps reviewed are provided in Appendix C.

Environmental Lien and Activity and Use Limitations Search 1980

Environmental Liens and Activity and Use Limitations (AULs) indicate restrictions on a property, which may represent a recognized environmental condition for the property. The subject properties San Bernardino County Assessor Parcel Number (APN) 011-032-233-0000 was utilized in this search.

An Environmental Liens and AUL Search dating back to 1980 was conducted by EDR as part of this assessment using the above APN. The EDR Environmental Lien and AUL Search 1980 Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information filed between January 1, 1980 and October 30, 2023;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- search for environmental encumbering instrument(s) filed between 1980 and the date of this report;
- provide a copy of any environmental encumbrance(s); and
- provide a copy of the current deed when available.

Public records of San Bernardino County, California were searched from January 1, 1980 to October 30, 2023, and no other deeds vesting title in the subject property were found or recorded during the period searched. Research sources included the San Bernardino County Recorder's Office, the San Bernardino County Assessor's Office, and the California Department of Toxic Substances Control (DTSC). Judicial records were not searched. Based upon available information evaluated by the title search professional, the jurisdiction does not require a search of judicial records in order to identify environmental liens.

The results from this search indicated that there were no recorded Environmental Liens or AULs listed for the subject property APN. A complete Environmental Liens and AUL Search 1980 report is provided in Appendix C. A summary is provided in the table below.

Historic Chain of Title From 1980

Assessor Parcel Number	Grantor	Grantee	Recorded Date
011--032-233	Qualco, Inc. fka Agriswiss, Inc.	JC Horizon, Ltd.	08/24/2018
	Co-Invest Ontario, Inc	Agriswiss, Inc.	11/22/1985
	James M. & Eloise B. Kline	Co-Invest Ontario, Inc.	07/01/1983

A copy of the lien and AUL search report are provided in Appendix C.

Preliminary Title Report

A Preliminary Title report by Ticor Title was provided by the client, dated November 15, 2023. The land referred to in this report in the County of San Bernardino, State of California is described as APN: 0110-322-33-0-000. The title to said estate or interest at the date hereof is vested in *JC Horizon. Ltd*., a California Corporation.

Exceptions presented in the report date back to April 17, 1946 and include easements to San Bernardino County Flood Control District (September 12, 1951) and the City of Ontario Public Utilities (April 7, 1966).

Fire Insurance Maps and City Directories

Fire Insurance Maps provide information on structure locations and operations, which were present at the time of the survey. These maps were completed for most major cities and metropolitan areas, dating from 1867, and provide information into past usage of buildings and how commercial and industrial zoning has changed over time. Sanborn™ Fire Insurance maps were requested for this study. EDR reports that the

subject site is "unmapped property" on fire insurance maps. The memorandum documenting this inquiry is included in Appendix C.

City Directory

City Directories provide information for a specific address at a specific time. A search of city directories from 1922 to 2020 was conducted by EDR for this assessment. The search was conducted for the target streets (E. Guasti Rd. and E. Holt Blvd.) and adjoining streets (A St., Airport Dr., Convention Center Way).

McCutcheon Construction was reported on A Street in 1980 and 1985. Historically A Street was located south of the subject property, but no longer exists. The US Department of Agriculture Animal and Plant Inspection facility is reported on Airport Drive, south of the railroad easement, in 2000, 2003, and 2008.

Mark Christopher Auto Center at 2131 Convention Center Way, north of the subject property, was listed in 2003 and 2008. Mark Christopher was also listed on D Street in 1990 and 1995. Additional discussion regarding Mark Christopher Chevrolet and Auto Center is provided above in the *Results of Agency Records Search* section. Additional commercial businesses, offices, and hotels are reported on Convention Center Way in 2003 and 2008, including the California State Health Vector Borne Disease facility and the California State Health Food and Drug Branch at 2151 Convention Center Way in 2003. The California Department of Health Services was also listed at the same address in 1995, 2000 and 2010. Kaiser Cement Corporation was listed at 2151 D Street, north of the site, in 1985.

In 2000 through 2010, Great Quality and E.L. Yeager Construction companies were listed at 2445 E. Guasti Rd., east of the subject property. HUB Distributing Corporation was listed at the same address in 1980, 1985, 1992, 1995, 2000, and 2008.

The only address listed on E. Holt Boulevard was 2200 E. Holt Boulevard, Ontario, California. Google Earth maps this address across E. Guasti Road from the subject property. In 1991 and 1995 the occupants were reported as Clarion Hotel Ontario Airport and Swank Audio Visuals, Inc. In 2003 and 2008 the occupants were reported as Kustom Gifts, KVL Audio Visual Corp., Marriott Hotel, and On Command Corp.

No listings were found for the subject property. Adjoining properties were first listed in 1975. No surrounding listings, which would indicate a potential concern for the subject site based on the name of the listing, was included in the EDR city directory image report. A copy of this search is presented in Appendix C.

EDR Property Tax Map Report

EDR's Property Tax Map report indicated there was no coverage for the subject parcel number. A copy of the EDR report is provided in Appendix C.

Building Permits

Building Permit data provides information to identify current and/or former operations and structures/features which may represent a recognized environmental condition for the subject site. The complete collection of building permit available to EDR was searched, and as of October 2, 2023, EDR does not have access to building permits in the city where the target property is located (Ontario, California). A copy of this search is presented in Appendix C.

Interviews

Petra provided an Owner Questionnaire to Mr. Jake Sowder, Assistant Project Manager with Diversified Pacific Communities. Mr. Sowder forwarded the Questionnaire to Ms. Judy Lee, owner of subject site. The completed Property Owner Interview Questionnaire was returned to Petra on October 30, 2023 by Mr. Sowder. Ms. Lee's response to the questionnaire is summarized below.

1. According to Ms. Lee, she does have a good knowledge regarding the uses and physical characteristics of the property and does have good knowledge regarding the activities/processes conducted at the property.

2. Ms. Lee stated that the subject property was, "vacant land since we purchased it in 2018". No additional information was provided regarding past use of the site.

3. Ms. Lee indicated that, to the best of her knowledge, there are no hazardous substances or petroleum products present on the site. He indicated that there is no potential recognized environmental conditions within or adjacent to the site. Additionally, Ms. Lee noted that she is not aware of any current or previous uses of the property, or nearby properties that would suggest the presence of potential recognized environmental conditions, hazardous substances, or materials.

4. Ms. Lee indicated that there are no water wells, clarifiers, disposal wells or underground irrigation system on the subject property. She also noted that, to the best of her knowledge, there are no utility corridors on the site.

5. Ms. Lee started that she does not have good knowledge regarding the identity of any existing documents relating to the property and responded that there is one environmental assessment report by BBG Assessment, dated February 11, 2019. Ms. Lee noted that she is not aware of environmental permits, storage tank registrations, reports regarding hydrogeologic condition on site or in the vicinity, there are no hazardous waste generator notices or reports, and no geotechnical studies.

6. According to Ms. Lee , based on her knowledge and experience related to the property, there are no notices or other correspondence from any government agency relating to past or current violations of environmental laws.

7. According to Ms. Lee, there are no notices or other correspondence from any governmental agency relating to environmental liens encumbering the property.

8. According to Ms. Lee, there are no pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.

9. According to Ms. Lee, there are no notices from any governmental entity regarding any possible violations of environmental laws, or possible liability relating to hazardous substances or petroleum products.

A copy of the complete Owner Questionnaire is provided in Appendix D.

User / Client Knowledge

In compliance with AAI, Petra provided a User / Client Questionnaire to Mr. Jake Sowder, Assistant Project Manager with Diversified Pacific Communities. Mr. Sowder forwarded the Questionnaire to Mr. Nolan Leggio, Director of Forward Planning with Diversified Pacific Communities to complete. Mr. Leggio noted that the Phase I ESA was required due to development of the site as a hotel. A summary of the questions and response is provided below.

1. Mr. Leggio indicated he does have reports for this project.

2. Mr. Leggio indicated that there are no current restrictions regarding Petra contacting local agencies regarding the subject property.

3. According to Mr. Leggio, he is not aware of any environmental clean-up liens against the property that are filed or recorded under federal, tribal, state of local law. He did not respond to the question whether he will be conducting a search of environmental cleanup liens against the property that are filed or recorded in a registry. Mr. Leggio indicated that Petra is to complete this task. Mr. Leggio noted that a preliminary title report was conducted by Ticor Title Company of California. (*Petra: a copy was provided by Mr. Leggio.*)

According to Mr. Leggio, he is not aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place on or for the site, and/or have been filed or that environmental cleanup liens against the property that are filed or recorded under federal, tribal, state of local law. He responded that he will be conducting a search of AULs against the property that are filed or recorded in a registry. Mr. Leggio requested Petra to complete this task.

4. According to Mr. Leggio, he does not have specialized knowledge or experience related to the property or nearby properties.

5. Mr. Leggio indicated that the purchase price for the land is fair market value.

6. Mr. Leggio indicated that he is not aware of past uses of the subject property.

7. Mr. Leggio indicated that he is not aware of chemical spills that have occurred on the subject property or environmental cleanups that have taken place on the property or on adjacent properties.

8. According to Mr. Leggio, he is not aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of hazardous materials/chemical releases or threatened releases.

9. According to Mr. Leggio, he is not aware of any specific chemicals present currently or previously on the site.

10. According to Mr. Leggio, he does not know of any obvious indicators that point to the presence or likely presence of contamination at the property.

A copy of the complete user-client questionnaire is provided in Appendix D.

Data Failures and Data Gaps

In the event that data gaps are identified, the Environmental Professional (EP) will endeavor to comment on the significance of those data gaps. However, the EP cannot, and does not warrant or guarantee that no significant events, releases, or conditions arose, during periods such as data gaps.

Petra reviewed several sources for historical information regarding the subject site. These sources included a government agency database search, a city directory search, a review of historical aerial photographs and historical USGS topographic maps, and interviews. Some of the gaps between the aerial photographs (1938 to 1949: 1953 to 1966) and the USGS topographic maps exceeded 10 years and fire insurance maps covering the target property were not found.

Data gaps exist in the historic information reviewed. These gaps are due to the limited records and resources available, which are reasonably ascertainable and practically reviewable in the local area. However, it is our opinion that if additional historical information were to become available, it is not likely to change the conclusions or recommendations of this assessment.

DISCUSSION OF POTENTIAL ENVIRONMENTAL CONCERNS

The following discussions of potential environmental concerns are presented to inform the client as to the existence, or lack thereof, of recognized environmental conditions present on the subject site.

Regulatory Actions

Based upon a thorough search of available federal, state, and local records, no known current regulatory action is pending with respect to the subject property.

Adjacent and Nearby Properties

No information has been obtained during this assessment which would indicate the presence of recognized environmental conditions adjacent to the subject site that are considered likely to pose a significant impact to soils or groundwater beneath the subject site at this time.

Polychlorinated Biphenyls (PCB's)

Polychlorinated biphenyls (PCB's) are historically linked to electrical equipment, such as capacitors and transformers, due to their physical and chemical characteristics. PCB's, persistent in the environment, are known to accumulate in organisms and the food chain.

Any electrical equipment (i.e., transformers, capacitors, and fluorescent light fittings) containing dielectric insulating fluids or coolants, manufactured prior to 1976, should be considered to potentially contain PCB's. PCB's may also be found in older lubricating oils, cutting oils, hydraulic fluids, paints, sealants, and flame retardants (UNEP, 2002).

At this time, buildings which were known to have occupied the southern portion of the subject property, are no longer present. One pole-mounted transformer was observed outside the chain link fencing along E. Guasti Road. The transformer appeared to be in good condition and there were no readily detectable signs of surface staining around the base of the wooden pole. No information has been obtained during this assessment which would indicate the existing or past presence of Polychlorinated Biphenyls (PCB's) at the site. A PCB survey, however, was not conducted at the subject property as part of this assessment.

Underground Storage Tanks

No information has been obtained during this assessment, which would indicate fuel underground storage tanks (UST's) to be located on the subject site currently nor are UST's reported to have been located on site in the past. Further, no surface indications of UST's were observed on the subject site during the site reconnaissance.

Above Ground Storage Tanks

No information has been obtained during this assessment, which would indicate above ground fuel storage tanks (AST's) are located on the subject site currently, nor are ASTs reported to have been located on the site in the past.

Stormwater/Wastewater Discharge

At this time, stormwater/wastewater discharge from the site appears to be limited to surface water runoff. It is anticipated that precipitation falling on the site would infiltrate site soils. Water which does not infiltrate site soils would be expected to flow off of the site following the surface topography. Cucamonga Creek, a concrete lines drainage channel flows south along the eastern edge of the subject property.

Pesticide and Herbicide Residue

Based on information obtained during this assessment, the site was used for agricultural (grape vineyards) purposes from at least 1938 to sometime during/between 1975 and 1985; however, the infrared photograph from 1975 presents light red or pink tones suggesting lower plant vigor. Sometime during/between 1975 and 1985 agricultural usage ceased, and the land has remained vacant from that time to the present. There is a potential that copper based fungicides (common vineyard contaminants) may have been applied to the former grape plants to prevent vine downy mildew and, therefore, may have impacted the near surface soils. However, it is our understanding that the potential for vine downy mildew is relatively low for the area due to the temperate climate in the region.

Copper sulfate is partly washed down to lower soil levels by water percolating through the ground; partly bound to soil components; and partly changed into different metabolites, or breakdown products. Copper is considered to be among the more mobile of the heavy metals in surface environments. Due to the passage of time (at least 38 years), soil characteristics (alluvial fan deposits of sands, gravel, and cobbles) and the environment of the region, the potential that copper residues remaining in onsite soils exceeding regulatory screening levels is considered very low to nil.

Asbestos-Containing Materials

Buildings were not known to have occupied the subject property from at least 1938 to the present day. No potential asbestos-containing materials (ACMs) were observed on the site during our recent site reconnaissance and no information was found which indicated the use, storage, or disposal of asbestos-containing materials on the site. An ACM survey, however, was not conducted at the subject property as part of this assessment.

Lead-Based Paints

Buildings were not known to have occupied the subject property from at least 1938 to the present day. No potential lead-based paint (LBP) materials were observed on the site during our recent site reconnaissance and no information was found which indicated the use, storage, or disposal of lead-based paint materials on the site. A LBP survey, however, was not conducted at the subject property as part of this assessment.

Landfills

The EDR Radius Report does not list any known landfills within the search radius conducted for this assessment. Therefore, landfills do not appear to represent a recognized environmental condition with regards to the subject site.

Water Supplies

No water wells were observed on the subject site. There were no signs observed by Petra during our recent site reconnaissance indicating water is supplied to the subject property.

Waste Generation and Storage

Waste generation and storage was not observed onsite during our site reconnaissance. Windblown trash was most common along the perimeter fencing and small localized areas of trash/debris were noted within the subject property, including remnants of a homeless encampment in the northeasterly portion of the subject property. A few areas of tree stump grinding have created relatively large isolated areas of wood mulch. It is recommended that the debris be removed and disposed of, in accordance with current regulations.

CONCLUSIONS

Recognized Environmental Conditions

Recognized environmental conditions are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site. If the presences of recognized environmental conditions are identified on a subject site, it may warrant additional research, site assessment, and/or action.

- No REC's have been identified within or affecting the subject property.

Controlled recognized environmental conditions (CREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-21 as a recognized environmental condition resulting from the past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (i.e., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. For example, if a leaking underground storage tank has been cleaned up to a commercial use standard but does not meet unrestricted residential cleanup criteria; this would be considered a controlled recognized environmental condition. The "control" is represented by the (inferred) restriction that the property remains commercial.

- No CREC's have been identified within or affecting the subject property.

Historical recognized environmental conditions (HREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-21 as a past release of any *hazardous substances or petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory agency, without subjecting the *property* to any required controls (i.e., *property* use restrictions, *activity and use limitations*, *institutional controls* or *engineering controls*).

- No HREC's have been identified within or affecting the subject property.

We have performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E 1527-21 for the subject property, APN 011-032-233, located at the southeast corner of E. Holt Boulevard and E. Guasti Road, in the city of Ontario, San Bernardino County, California. Any exceptions to, or deletions from, this practice are described in the section titled data gaps of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property at this time.

SITE CONSIDERATIONS

The items presented below are not considered recognized environmental conditions in accordance with ASTM E 1527-21. Although these items may warrant consideration in conjunction with any planned development activities, they are not recognized environmental conditions. The information regarding possible actions relative to these items has been provided as guidance.

1. With re-development of any former agricultural property, a certain amount of unknown subsurface conditions may be anticipated. Any discolored soils, noxious odors, buried pipelines or irrigation channels, and/or other buried objects/debris encountered during clearing and grubbing, or future grading and development should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed.

2. It is possible that abandoned irrigation lines will be encountered during demolition, clearing, and grubbing, or rough grading. If these irrigation lines are concrete, they should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed. In the event concrete irrigation lines are encountered, caution should be taken to not crush the lines until it can be ascertained that they do not contain asbestos.

3. It is recommended that all debris and trash observed on the subject site be removed and disposed of in accordance with current local, state and federal disposal regulations.

LIMITATIONS

This assessment is based upon the project as described and the environmental data obtained from the field reconnaissance and research performed as outlined in this report. This report has not been prepared for use by parties or projects other than those named or described in this report, additional studies may be required.

Since our assessment is based upon a review of available data and visual assessment of the site, without any invasive study, the conclusions presented herein are professional opinions. These opinions have been derived in accordance with current standards of practice, and no warranty is expressed or implied.

This firm's evaluation of previous reports and/or subconsultant reports focuses on the completeness of the information presented in the document, in accordance with applicable rules and regulations, and does not include the establishment of data sufficiency or accuracy.

QUALIFICATIONS

Resumes for the staff who contributed to this report are presented in Appendix F.

“We the undersigned declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. We have the specific qualification based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. We have developed and performed the all appropriate inquiries in general conformance with the standards and practices set forth in 40 CFR Part 312.”

Respectfully submitted,

APPENDIX A

SITE PHOTOGRAPHS

Photo #1 – northerly view across the west-central portion of the property.

Photo #2 – east view of import soils stockpiled in the southwesterly portion of the property.

Photo # 3 – northeasterly view of tree stump and lumber in the west central area of the site. Note ground mulch in foreground.

Photo #4 – northeasterly view of rubber tire in northwesterly portion of the property.

Photo # 5 – cardboard and lumber debris in north-central portion of the property.

Photo #6 – West view of surface conditions along northwest edge of the site. Holt Blvd. is visible to the right.

Photo # 7 – southeast view of site conditions in west-southwest portion of the property.

Photo #8 – southerly view of site conditions along southwesterly boundary with E. Guasti Rd. Note above ground yellow SCE bollards and risers in background.

Photo # 9 – electric meter box onsite near second southern gate along E. Guasti Rd.

Photo #10 – southeasterly view of high voltage SCE risers and manhole near electric meter box shown in Photo 9.

Photo # 11 – small level pile of asphalt in west-central portion of the property.

Photo #12 – northwest view of pole-mounted transformer outside fence in the southwest portion of the site.

Photo #13 – southerly view of surface utilities and Cucamonga Creek access road in southeast corner of site.

Photo #14 – north view of large concrete fragments noted near Cucamonga Creek in east-central edge of site.

Photo #15 – northeast view of site conditions in northeast portion of the site. Homeless camp is near base of tree.

Photo #16 – debris related to abandoned homeless camp in northeastern portion of the property. Holt Blvd. and Cucamonga Creek are visible in the background.

Photo #17 – additional debris related to abandoned homeless camp in northeast portion of the property.

Photo #18 – northeast view of dumped concrete and asphalt fragments north of homeless camp in northeast portion of the subject property.

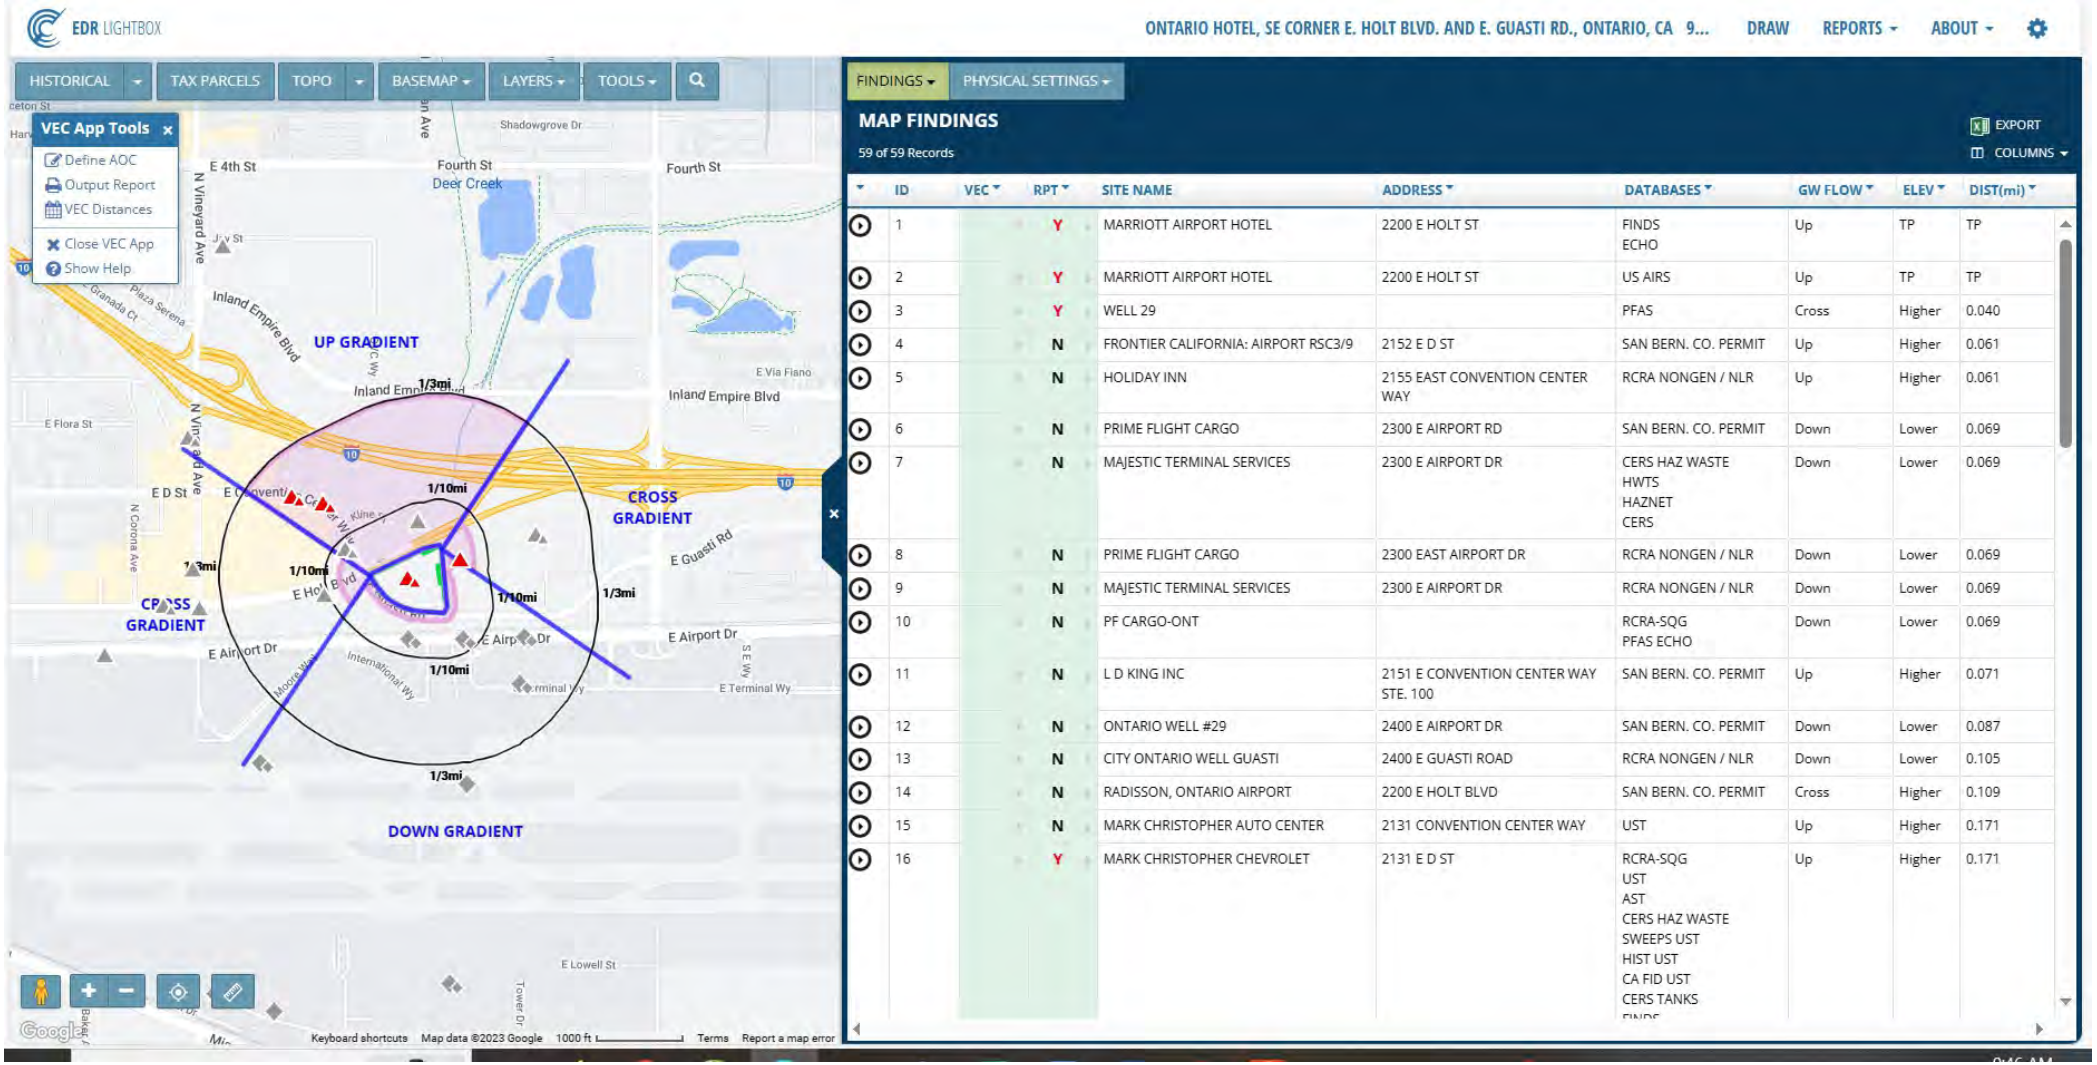

Photo #19 – west view of surface conditions in northeasterly portion of the site. Holt Blvd. is visible in right photo.

Photo #20 – southwest view across the subject property from near the northeast corner of the site.

Facility History

5/3/17- The Hartwell corporation received an ISD on 12/12/81. In February of 1983 the facility then applied for a variance and exemption for ISD as they determined the facility should not have been permitted under an ISD in 1981. In January 1991, they withdrew from variance and applied for PBR. However due to violations and contaminations at the site, this facility was referred to clean up (see project information in clean up Envirostor for details). A no further action determination for the Hartwell Corp was made on 9/25/14 by the clean up program. This facility is being administratively closed in the Permitting Evirostor database due to never being a TSDF and was regulated by the tiered permitting program.

Site History

The site currently has two residential structures on a portion of the site with the remainder being used as a vineyard since 1945. The vineyard replaced peach orchards and tomatoes that were grown as an agricultural crop. Reported onsite environmental conditions include current and historic application of agricultural chemicals, an abandoned 200-gallon underground storage tanks and stained soils.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 07/24/2023 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
GE ENGINE SERVICES I EPA ID:: CAD009542721	***1923 E AVION ST***	***SSW 1/2 - 1 (0.945 mi.)***	***M57***	***264***

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/24/2023 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 07/24/2023 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there is 1 CA RESPONSE site within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/24/2023 has revealed that there are 6 CA ENVIROSTOR sites within approximately 1 mile of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CA HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the CA HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 CA HIST Cal-Sites site within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/24/2023 has revealed that there are 11 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/05/2023 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

CA PFAS: A listing of PFAS contaminated sites included in the GeoTracker database.

A review of the CA PFAS list, as provided by EDR, and dated 06/02/2023 has revealed that there is 1 CA PFAS site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
WELL 29		ENE 0 - 1/8 (0.040 mi.)	3	10

CA AQUEOUS FOAM: Airports shown on this list are those believed to use Aqueous Film Forming Foam (AFFF), and certified by the Federal Aviation Administration (FAA) under Title 14, Code of Federal Regulations (CFR), Part 139 (14 CFR Part 139). This list was created by SWRCB using information available from the FAA. Location points shown are from the latitude and longitude listed on the FAA airport master record.

A review of the CA AQUEOUS FOAM list, as provided by EDR, and dated 06/02/2023 has revealed that there is 1 CA AQUEOUS FOAM site within approximately 0.25 miles of the target property.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violations:
Site ID: 46662
Site Name: MARK CHRISTOPHER AUTO CENTER
Violation Date: 03-09-2022
Citation: 23 CCR 16 2715(c)(4) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)(4)
Violation Description: Failure to maintain a list of employees trained by the designated operator on-site or off-site at a readily available location, if approved by the UPA. For training that occurs on or after October 1, 2018, failure to maintain a copy of the "Facility Employee Training Certificate" on-site or off-site at a readily available location, if approved by the UPA.
Violation Notes: Returned to compliance on 03/30/2022. OBSERVATION: At the time of document review, UST employee training documentation records were not in the UST Compliance binder. CORRECTIVE ACTION: Provide UST employee training documentation within 30 days.
Violation Division: San Bernardino County Fire Department
Violation Program: UST
Violation Source: CERS,

Site ID: 46662
Site Name: MARK CHRISTOPHER AUTO CENTER
Violation Date: 03-09-2022
Citation: 23 CCR 16 2716(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(f)
Violation Description: Failure to maintain on-site, or off-site at a readily available location if approved by the UPA, copies of Designated Operator inspection records as follows: Designated operator monthly inspection records for inspections performed before October 1, 2018 must be kept for 12 months from the month of inspection. For inspections performed on or after October 1, 2018, copies of the "Designated Underground Storage Tank Operator Visual Inspection Report" must be kept for 36 months from the month of inspection.
Violation Notes: Returned to compliance on 04/05/2022. OBSERVATION: At the time of document review, observed that the Designated Operator Monthly Inspection Report for January 2022 was missing from the UST Compliance Binder. CORRECTIVE ACTION: Provide the Designated Operator Monthly Inspection Report for January 2022 within 30 days and place the copy in the UST Compliance Binder.
Violation Division: San Bernardino County Fire Department
Violation Program: UST

Violation Program:	APSA
Violation Source:	CERS,

Site ID:	46662
Site Name:	MARK CHRISTOPHER AUTO CENTER
Violation Date:	03-23-2015
Citation:	23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description:	Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes:	Returned to compliance on 03/23/2015. VISUAL ALARM (LIGHT) AT EXTERNAL ENUNCIATOR FAILED TO PROPERLY OPERATE WHEN TESTED. COMPLIANCE REQUIREMENT: LIGHT WAS REPAIRED AND DEVICE WAS RETESTED. VIOLATION CORRECTED.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:

Site ID:	24611
Site Name:	Delta Air Lines, Inc.
Violation Date:	02-16-2023
Citation:	HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 02/28/2023. OBSERVATION: 1. At the time of the inspection observed (1) 120-gallon aboveground diesel tank not reported on the hazardous materials inventory. 2. At the time of the inspection, observed ~17,000 Kg of lead acid batteries inaccurately reported on the hazardous materials inventory. CORRECTIVE ACTION: Ensure all hazardous materials stored above the thresholds of 55-gallons of liquids, 500-pounds of solids, 200-cubic feet of

ONTARIO INTERNATIONAL AIRPORT (Continued) **S119086494**

compressed flammable gases, 1,000-cubic feet of compressed non-flammable gas, and any amount of hazardous waste are completely and accurately reported on the hazardous materials inventory. Update the hazardous materials inventory reported to CERS. Sign and return the Certificate of Compliance to the inspector within 30 days indicating the Hazardous materials inventory has been completely and accurately updated.

Violation Date:	03-05-2021
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 09/28/2021. OBSERVATION: The facility is no longer operating the shop on the North side of the airport and has moved into a building on the South side of the airport. The mailing address and operations are still based out of Terminal 2 on the North side. As the shop itself has moved, the site map submitted in CERS is no longer valid and a new map shall be prepared and submitted into CERS. The emergency response plan document shall also be revised accordingly to account for any changes with the move. Also, hazardous materials were observed on site during the inspection that are not listed in the most current CERS inventory or are listed in lesser quantities. CORRECTIVE ACTION: Submit a signed statement that the Business Plan elements have been updated and resubmitted into CERS.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month

ONTARIO INTERNATIONAL AIRPORT (Continued) **S119086494**

	if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 04/05/2021. OBSERVATION: Observed a 55-gallon drum of used oil and a ~20-gallon container of waste coolant stored on site for longer than one year. CORRECTIVE ACTION: Submit a copy of a hazardous waste manifest showing that the used oil and waste coolant have been removed.

Site ID: 538456
CERS ID: 850683
CERS Description: Industrial Facility Storm Water

Violations:

Site ID: 538456
Site Name: Ontario International Airport
Violation Date: 12-16-2021
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SWPPP
Violation Notes: Sampling violation: Section XI.B.4 requires samples shall be collected from each drainage area at all discharge locations unless a Representative Sampling Reduction report has been submitted. As no report has been submitted, this is a violation of section XI.B.4.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Site ID: 538456
Site Name: Ontario International Airport
Violation Date: 06-15-2022
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SWPPP
Violation Notes: The resolution of site map Figures 2, 3, 4, 5, 7, and 8 makes some text illegible. The illegibility of the maps is in violation of section X.E.1 of the IGP.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Site ID: 538456
Site Name: Ontario International Airport
Violation Date: 12-16-2021
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SWPPP
Violation Notes: Sampling violation: Per December 16, 2021 inspection, wattles were installed around the CC-terminals sampling point inlet and no other terminal inlets. Any samples collected from CC-terminals under these conditions were not representative of storm water associated with industrial activities as is required under section XI.B.4 of the IGP.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Site ID: 538456
Site Name: Ontario International Airport
Violation Date: 06-15-2022
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Deficient BMP Implementation
Violation Notes: I observed accumulated sediment and broken concrete near the CC-sheetflow sampling point (pages 5-7). The broken concrete is in violation of XXI.F since concrete serves as a pollution control device

ONTARIO INTERNATIONAL AIRPORT (Continued) **S119086494**

that prevents sediment from being mobilized. The accumulated sediment may be in violation of section X.H.1 if it is feasible to clean it up.
I observed five open dumpsters in the Menzies Maintenance area, at least three of which contained industrial waste (page 10), and one uncovered waste bin in the MY area (page 20). This is in violation of section X.H.1.d.iii. I observed eroded banks causing deterioration of the asphalt paving in the MY channel (pages 13-16). This is also in violation of section XXI.F mentioned previously. I observed open absorbent bags, spilled absorbent, and a deteriorated sandbag in the MY area. This may be in violation of section X.H.1.c.ii if it is feasible to clean up the spilled material.

Violation Program: INDSTW
Violation Source: SMARTS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-16-2021
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Walkthrough of site with Matthew Renaud. Photos and details in inspection report. Note that Deer Creek is no longer being sampled, and CC Sheetflow and CC terminal sampling sites have been added. SWPPP and inspection reports were accessible on site. Some concerns with erosion and displacement of BMPS were noted, and Mr. Renaud commented that they would be repaired. Envirosocks used at sampling locations. Site is in level 1 for Zinc, TSS, and Copper

Citation: HSC 6.95 25508.1(a)-(e) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(e)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name.
Violation Notes: Returned to compliance on 05/07/2019. Hazardous materials were observed on site during the inspection that are not listed in the most current Business Plan inventory or are listed in lesser quantities. The contacts listed in CERS have changed and require revision. Also, some of the elements required on the site map were not present.
Violation Division: San Bernardino County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 53940

ONTARIO CONVENTION CENTER (Continued) **S106230076**

Site Name: ONTARIO CONVENTION CENTER
Violation Date: 04-25-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes: Returned to compliance on 05/07/2019. OBSERVATION: The emergency response phone number for this agency (CUPA) was not listed within the emergency response plan. Regulated facilities in this jurisdiction are required to include one of the following phone numbers in the Emergency Response Plans & Procedures: (800) 33-TOXIC or (909) 386-8425. CORRECTIVE ACTION: Submit an updated emergency response plan into the California Environmental Reporting System (CERS).

Violations:

Site ID: 102986
Site Name: Cardenas Markets Distribution Center
Violation Date: 05-28-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 06/15/2020. OBSERVATION: The hazardous materials inventory needs to be updated to include used oil filter and the sulfuric acid content of the equipment batteries. The quantity of propane also needs to be updated to show approximately 255 gallons instead of the 50 gallons currently listed. CORRECTIVE ACTION: Submit an accurate and complete hazardous materials inventory.

Has Projects:	Yes
NPL Status:	Not reported
Project Required:	Yes
Feature Description:	The site consisted of a total of 875.49 acres; 375.11 acres fee, 518.12 acres lease, and 0.26 acres easement acquired between 1942 and 1944. A portion of the site (Ontario Air National Guard) is adressed under J09CA0522. Civilian airport operations at this site began in the early 1930s and was located in the southwest corner of the field. The airport was then expanded between 1940 and 1942 by the City of Ontario. The AAF began operation in 1942, when the U.S. Army obtained control of Ontario Municipal Airport and expanded it by development of the agricultural land adjacent to the airport. The U.S. Army utilized the site for training P-38 fighter pilots. The site was surplused on 15 November 1945 and then transferred on 29 October 1946 to the War Assets Administration for control. In 1949, the U.S. terminated allleases and easements at the site and quitclaimed the fee title tot he City of Ontario, with the exception of 7.93 acres, which was withdrawn from surplus on 7 April 1949 by the U.S. Air Force for the establishment of the National Guard Training Site.

Fiscal Year: 2013
Federal Facility ID: CA9799F6868
RAB: Not reported
NPL Status: Not Listed
Description: The site comprised of 875.49 acres in Ontario, California. The site encompasses all of the present airport property west of Archibald Avenue and sections south of Mission Blvd. between Grove and Turner Streets. The City of Ontario subsequently expanded the airport to the east to lengthen the runways and taxiways and named the airport Ontario International Airport. Over the years, the City of Ontario leased portions of the airport to numerous companies for commercial and industrial purposes. Aerospace companies built, tested, overhauled, and refurbished aircraft within and adjacent to the airport. In 1985, the City of Ontario deeded title of the airport property to the City of Los Angeles, Department of Airports (LADA). From 1967 to 1985, the LADA operated and maintained the airport for the City of Ontario under an agreement. AAF improvements included maintenance and fueling facilities for aircraft and motor vehicles, taxiways and hardstands, subsistence, recreation, storage and operations buildings, utilities, and an ammo dump.
History: The site consisted of a total of 875.49 acres; 375.11 acres fee, 518.12 acres lease, and 0.26 acres easement acquired between 1942 and 1944. A portion of the site (Ontario Air National Guard) is adressed under J09CA0522. Civilian airport operations at this site began in the early 1930s and was located in the southwest corner of the field. The airport was then expanded between 1940 and 1942 by the City of Ontario. The AAF began operation in 1942, when the U.S. Army obtained control of Ontario Municipal Airport and expanded it by development of the agricultural land adjacent to the airport. The U.S. Army utilized the site for training P-38 fighter pilots. The site was surplused on 15 November 1945 and then transferred on 29 October 1946 to the War Assets Administration for control. In 1949, the U.S. terminated allleases and easements at the site and quitclaimed the fee title tot he City of Ontario, with the exception of 7.93 acres, which was withdrawn from surplus on 7 April 1949 by the U.S. Air Force for the establishment of the National Guard Training Site.

Current Owner:	LOCAL: CITY The City of Los Angeles, the current owner and operator of the Ontario International Airport, uses the site for aviation purposes.
EMS Map Link:	https://fudsportal.usace.army.mil/ems/inventory/map?id=61125
Eligibility:	Eligible
Has Projects:	Yes
NPL Status:	Not reported
Project Required:	Yes
Feature Description:	The site has been used as an airport and for Air National Guard training. The former Ontario Air National Guard Training Site is located on a small portion of the former Ontario Army Airfield (DERP Site No. J09CA053100). The U.S. Air Force acquired the site for the use of the CANG. The CANG used the site from 1949 to about 1980 for ANG flight training. The former ANG site was disposed of to the LADA in 1988. LADA has leased this area to various tenants whom have used the hangar located on this site.
Latitude:	34.0513
Longitude:	-117.600998

FUDS Detail as of Jan 2015:

Fiscal Year:	2013
Federal Facility ID:	CA9799F5543
RAB:	Not reported
NPL Status:	Not Listed
Description:	The former Ontario Air National Guard Training Site consisted of 30.62 acres leased to the U.S. Air Force by the City of Ontario and 7.93 acres fee owned by the U.S. Air Force and leased to the California Air National Guard (CANG). It is on 1280 S. Tower Drive, Ontario, California. The site is located along the south-central border of Ontario International Airport. In 1985, the city of Ontario conveyed the entire airport to the City of Los Angeles, Department of Airports (LADA). The site was included in that conveyance. By supplemental agreement dated 11 May 1988, 27.41 acres were deleted from the lease between the Air Force and the City of Los Angeles, reducing the size of the site. The Air Force still leases 3.21 acres from LADA and still owns 7.93 acres fee. This area is currently used by the California Air National Guard (CANG), 148th Combat Communications Squadron. This portion contains supply and administrative facilities and a motor pool, and is ineligible for consideration under DERP-FUDS. Since 1988, the eligible portion of the site has been leased to various tenants whom have used the hangar.
History:	The site has been used as an airport and for Air National Guard training. The former Ontario Air National Guard Training Site is located on a small portion of the former Ontario Army Airfield (DERP Site No. J09CA053100). The U.S. Air Force acquired the site for the use of the CANG. The CANG used the site from 1949 to about 1980 for ANG flight training. The former ANG site was disposed of to the LADA in 1988. LADA has leased this area to various tenants whom have used the hangar located on this site.

Completed Document Type: Operation & Maintenance Order/Agreement
Completed Date: 08/28/1998
Comments: Enforceable Agreement for Operation and Maintenance was signed by DTSC and GE.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * CEQA
Completed Date: 09/16/1994
Comments: The Department approved the final Remedial Action Plan for the General Electric Jet Engine Test Cell Facility. The CEQA (Negative Declaration) documents have also been approved. The remedial alternative recommended for the site consists of in situ soil vapor extraction to reduce VOC levels at the known source areas of the site. Groundwater investigation and cleanup will be under the oversight of the RWQCB.

RWQCB Region:	SANTA ANA RWQCB (REGION 8)
Site History:	The Site has been operated by GE Engine Services as an aircraft engine facility since 1956. Chlorintaed solvents were used in the 1950s and 1960s. In early 1970s, 1,1,1-TCE replaced TCE. From 1981 to 1996, isopropyl alcohol was the only solvent used at the facility.

GE ENGINE SERVICES, INC. (Continued) **S109517004**

Prior to 1974, some waste water flowed to the wash area along the north side of the facility. In 1974, two dry wells were constructed (Area A & B). Some waste water were discharged to dry wells. From 1980 until 2006, waste water were treated at the Site. Site investigations were completed between 1985 and 1998. On-ste and off-Site ground investigations were performed between 1994 and 1998. Another phase of off-Site GW investigation occured in 2001 and 2002. Another phase is scheduled for 2009. GW plume extend approximately in southwesterly direction to Grove Ave. On-Site soil remediation have been completed and GE is working with DTSC to complete the closure process in 2009.

Violation Date: 04-12-2016
Citation: HSC 6.7 25292.1(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25292.1(a)
Violation Description: Failure to operate the UST system to prevent spills and/or overfills.
Violation Notes: Returned to compliance on 04/19/2016. THE TRIENNIAL SECONDARY CONTAINMENT (SB989) TESTING PERFORMED ON 3/22/16 REVEALED A FAILURE WITHIN THE DIESEL UDC (MAINTENANCE YARD). THE EXACT POINT OF FAILURE HAS YET TO BE IDENTIFIED AS ALL PENETRATIONS (PIPING AND CONDUIT) ARE LOCATED AT APPROXIMATELY THE SAME HEIGHT WITHIN THE CONTAINMENT. PER THE ON-SITE CONTRACTOR, PLANS FOR REPAIR HAVE BEEN DRAWN UP, BUT HAVE YET TO BE SUBMITTED TO THIS DEPARTMENT FOR REVIEW. REQUIREMENT: WITHIN 10 DAYS, COMPLETE AND SUBMIT THE REPAIR PLAN FOR THE DIESEL UDC. NOTE: A PERMIT WILL BE REQUIRED FOR PENETRATION REPAIRS.

Section(s) 25284.2

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Violation Notes: Returned to compliance on 05/21/2021. OBSERVATION: At the time of inspection, the spill buckets did not meet the 5-gallon capacity requirement. CORRECTIVE ACTION: Submit plans and apply for a permit for replacement of the spill buckets for both tanks (unleaded and diesel) within 30 days.

Violation Description:	Failure to maintain secondary containment (e.g., failure of secondary containment testing).
Violation Notes:	Returned to compliance on 05/06/2020. OBSERVATION: Penetrations were replaced inside the turbine sump for the unleaded tank without permits. CORRECTIVE ACTION: Submit plans and apply for a permit for SB989 repairs to the turbine sump for the unleaded tank within 30 days. The SB989 failure was noted on report dated 03/19/2019. Penalty fees will apply.

Violation Source: CERS,

Site ID: 398642
Site Name: ONTARIO INTERNATIONAL AIRPORT
Violation Date: 04-29-2022
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five

GENERAL ELECTRIC CO-AVIATION (Continued) **U001569990**

minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 07/13/2022. OBERVATION: 1) All UST s at the Maintenance Yard have external Audible/Visual (A/V) alarms only. When an overfill alarm is activated for one UST, additional overfill alarms for other tanks will not activate if the alarm for the first tank has not yet cleared. This effectively eliminates overfill protection for all but one tank if multiple tanks are filled at the same time. 2) The initial Overfill Prevention Equipment test was conducted on 04/09/2019. The next Overfill Prevention Equipment test was due by 10/31/2021. The Overfill Prevention Equipment test must be conducted once every three years starting 10/01/2018. CORRECTIVE ACTION: 1) UST systems that can only activate external alarms when the first UST overfill condition occurs, additional actions must be taken to ensure that each UST has a functional overfill prevention independent of the other UST s at the facility (i.e., installing a separate alarm unit or other appropriate overfill equipment for each tank). Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D005
Waste Description:	Barium
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F006
Waste Description:	Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Quarterly Update:	The site is a test facility for commercial and military jet engines that has operated from 1956 to the present. About 6,000 gallons of hazardous waste were disposed of in dry wells. There is an estimated 600 cubic yards of waste and contaminated soil on the site. Results of a preliminary investigation in 1987 indicated the presence of 1,1,1-trichloroethane (TCA), tetrachloroethene (PCE), chloroform, naphthalene, 2-methylnaph- thalene, and volatile aromatic (xylene, toluene, ethylbenzene) in soils near the dry wells. Hazardous substances disposed of in dry wells may potentially enter groundwater and contaminate drinking water supplies. The workers on the facility may be exposed to volatile organic compounds if contaminated subsurface soils are excavated or disturbed. General Electric performed preliminary assessment soil sampling in 1984 and 1987 to identify contaminated areas on the facility. A Consent Order between General Electric and DHS was signed September 28, 1988, for both groundwater and soil remediation. A Remedial Investigation / Feasibility Study was done in 1993 to fully characterize the site. DTSC approved the final Remedial Action Plan on September 16, 1994. System operation of the vapor extraction treatment systems in areas A, B and C began on May 17, 1996. An Enforceable Agreement for Operation and Maintenance was signed by DTSC and GE on August 28, 1998. Quarterly reports on the status of operation have been submitted to DTSC since commencing remediation. Concentrations of VOCs in shallow soils in areas A, B, and C at the site have reached acceptable closure levels. The shallow extraction wells in areas A, B, and C will be maintained in operational condition until sufficient data can be obtained to evaluate rebound data.

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The potentially responsible parties (PRPs) include General Electric and the City of Los Angeles Department of Airports. DHS entered into a consent order with the PRPs on September 28, 1988. DHS has budgeted $50,000 for oversight/monitoring of cleanup activities. DHS will recover its direct costs, plus staff costs and overhead related to the project. The PRPs will pay for the cost of investigation and remedial action.
Site Description:	This facility maintains and overhauls aircraft engines. Hazardous wastes disposed of onsite have contaminated soils.
Hazardous Waste Desc:	About 6,000 gallons of hazardous waste were disposed of in dry wells. There is an estimated 600 cubic yards of waste and contaminated soil on the site. Results of a 1987 investigation indicated the presence of 1,1,1-trichloroethane (TCA), tetrachloroethene (PCE), chloroform, naphthalene, 2- methylnaphthalene, and volatile aromatics (xylene, toluene, ethylbenzene) in soils near the dry wells.
Threat To Public Health & Env:	Hazardous substances disposed of in dry wells may potentially enter ground water and contaminate drinking water supplies. The workers on the facility may be exposed to volatile organic compounds if contaminated soils, currently beneath an asphalt orcement cover, are excavated or disturbed.
Site Activity Status:	General Electric performed soil sampling in 1984 and 1987 to identify contaminated areas on the facility. General Electric is proceeding with site investigation in order to fully characterize the site.

Background Info:

General Electric has operated a jet engine test facility at this site from 1956 to the present. Both commercial and military engines are tested at the facility.

About 6,000 gallons of hazardous waste were disposed of in dry wells. There is an estimated 600 cubic yards of waste and contaminated soil on the site. Results of a preliminary investigation in 1987, indicated the presence of 1,1,1-trichloroethane (TCA), tetrachloroethene (PCE), chloroform, naphthalene, 2-methylnaphthalene, and volatile aromatic (xylene, toluene, ethylbenzene) in soils near the dry wells.

Hazardous substances disposed of in dry wells may potentially enter groundwater and contaminate drinking water supplies. The workers on the facility may be exposed to volatile organic compounds if contaminated subsurface soils, are excavated or disturbed.

General Electric performed soil sampling in 1984, and 1987, to identify contaminated areas on the facility. General Electric has performed a site investigation to fully characterizethe site. A Consent Order between General Electric and DHS was signed September 28, 1988, for both groundwater and soil remediation.

System operation of the vapor extraction treatment systems in

GE ENGINE SERVICES (Continued) **S103643503**

areas A, B and C began on May 17, 1996. Quarterly reports on the status of operation have been submitted to DTSC since commencing remediation. Concentrations of VOCs in shallow soils in areas A, B, and C at the site have reached acceptable closure levels. The shallow extraction wells in areas A, B, and C will be maintained in operational condition until sufficient data can be obtained to evaluate rebound data.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/19/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/23/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/07/2023
Date Data Arrived at EDR: 08/08/2023

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

ONTARIO HOTEL
SE CORNER E. HOLT BLVD. AND E. GUASTI RD.
ONTARIO, CA 91761

TARGET PROPERTY COORDINATES

Latitude (North):	34.064239 - 34° 3' 51.26''
Longitude (West):	117.602656 - 117° 36' 9.56''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	444386.3
UTM Y (Meters):	3769248.0
Elevation:	962 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12015973 GUASTI, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

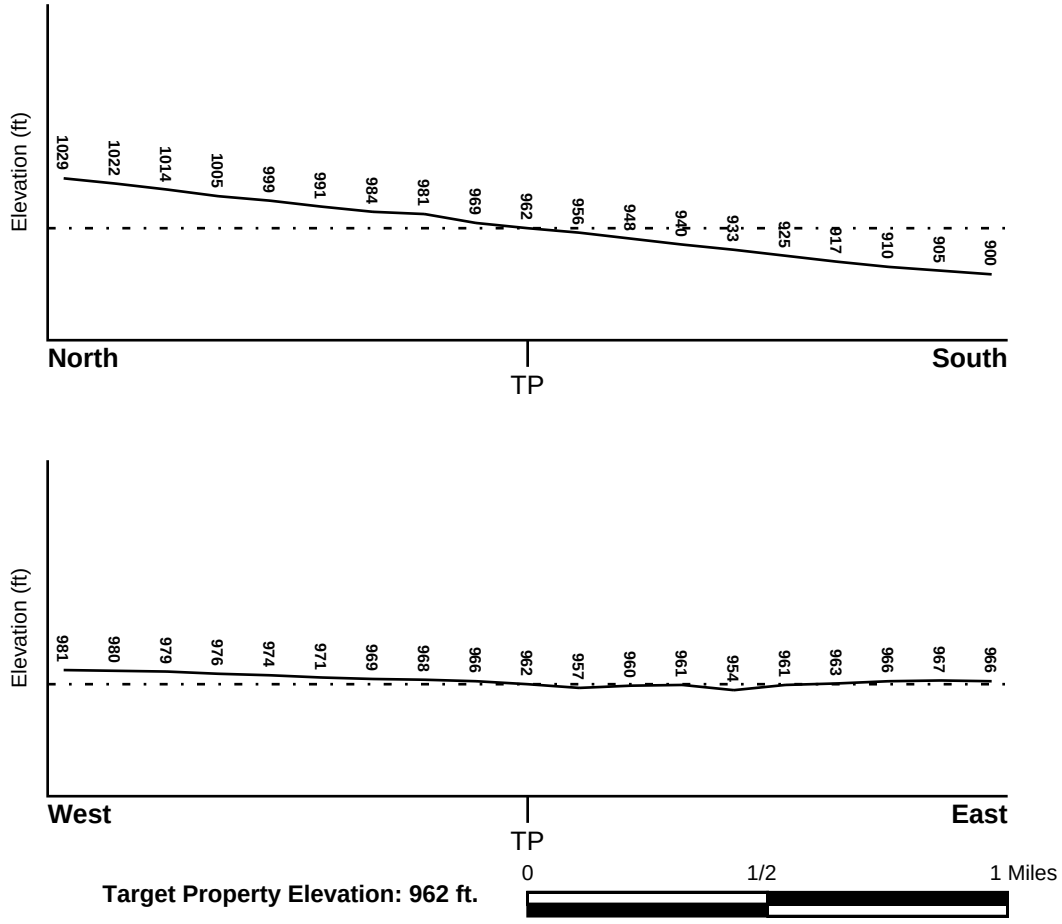
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 962 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C8628J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8629H	FEMA FIRM Flood data
06071C8636J	FEMA FIRM Flood data
06071C8637H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
GUASTI	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
6	1/4 - 1/2 Mile SSE	SW
1G	1/4 - 1/2 Mile SSE	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Petra Geotechnical Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

NO COVERAGE

Thank you for your business.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR Environmental Lien and AUL Search 1980

The EDR Environmental Lien and AUL Search 1980 report provides results from a search of available land title records for environmental cleanup liens and other activity and use limitations (AULs), such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address and/or parcel information to:

- search for parcel number and/or legal description
- search for ownership information filed between 1980 and the most current publicly available date
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.
- search for environmental encumbering instrument(s) filed between 1980 and the most current publicly available date
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Property Archives, LLC researched and compiled the land title information contained in this EDR Environmental Lien and AUL Search 1980 report on behalf of EDR.

EXHIBIT A

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL 2 OF PARCEL MAP NO. 5660, IN THE CITY OF ONTARIO, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 69 OF PARCEL MAPS, PAGES 76 THROUGH 78, INCLUSIVE, RECORDS OF SAID COUNTY AS AMENDED BY MAP RECORDED IN BOOK 80 OF PARCEL MAPS, PAGES 56 THROUGH 58, INCLUSIVE, RECORDS OF SAID COUNTY.

APN: 0110-322-33-0-000

EXHIBIT B
PERMITTED EXCEPTIONS

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2018-2019.

B. Property taxes, including any personal property taxes and any assessments collected with taxes, are as follows:

Tax Identification No.:	0110-322-33-0-000
Fiscal Year:	2014-2015
1st Installment:	$21,676.95, Paid
2nd Installment:	$21,676.91, Paid
Homeowners Exemption:	$0.00
Code Area:	004-080

C. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. The ownership of said Land does not include rights of access to or from the street, highway, or freeway abutting said Land, such rights having been relinquished by the document,

Recording Date:	April 17, 1946
Recording No:	in Book 1881, Page 477, Official Records
Affects:	Said land

Said deed further contains a waiver in favor of the State of California of any claims for damages to said land by reason of the location, construction, landscaping or maintenance of a highway or freeway contiguous thereto.

3. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	San Bernardino County Flood Control District
Purpose:	Flood control and water conservation
Recording Date:	September 12, 1951
Recording No:	in Book 2822, Page 335, Official Records
Affects:	That portion of Parcel 2 shown on the recorded Map of said Parcel Map and more particularly described by recital therein.

4. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	The City of Ontario
Purpose:	Public utilities
Recording Date:	April 7, 1966
Recording No:	in Book 6604, Page 153, Official Records
Affects:	That portion of Hellman Avenue, vacated.

5. Requirements contained in the Improvement Certificate as shown by recital in the Owners Certificate of the recorded map of said Parcel Map thereon.

EXHIBIT B
PERMITTED EXCEPTIONS
(Continued)

6. Covenants, conditions, restrictions and easements but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, sexual orientation, familial status, marital status, disability, handicap, national origin, ancestry, source of income, gender, gender identity, gender expression, medical condition or genetic information, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

Recording Date: July 26, 1984
Recording No: 84-176925, Official Records

Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

7. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document.

Redevelopment Agency: Guasti Redevelopment Project Area
Recording Date: November 5, 2007
Recording No: 2007-0615960, Official Records

8. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.

9. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

10. Matters which may be disclosed by an inspection and/or by a correct ALTA/ACSM Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

11. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

END OF EXCEPTIONS

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

APPENDIX D

INTERVIEWS

PETRA GEOSCIENCES, INC.
40880 County Center Dr., Suite M, Temecula, CA 92591 * (951) 600-9271 * (714) 549-8921

PHASE I USER/CLIENT QUESTIONNAIRE

The purpose of this questionnaire is to obtain information from the user / client regarding the Subject Property.

Date Sent to Client **October 27, 2023** Date Received from Client _____

A. SITE INFORMATION

1. Property Name/APN: **Ontario Hotel / APN 011-032-233**

2. Location (If a map is available, please include it): **10.5 Acres of undeveloped land at SE corner of E. Holt Blvd. & E. Guasti Rd., Ontario, CA**

3. Why is the Phase I required? (Development as a residential parcel, protection from CERCLA liability, etc?): Development as hotel

4. Please list all parties who will rely on the Phase I report: Diversified Pacific

5. Is there an Interview Contact for this job? (A current owner, operator, or someone with knowledge of the history and/or processes occurring at the site). ☑ Yes ☐ No

   If yes, please provide the following information:
   Person to be interviewed: Judy Lee
   Title/Company: President/JC Horizons LTD
   Phone number and/or email address: (626) 695-790
   judy-jchorizon@jchorizonsltd.com

6. Do you have any reports for this job (such as previous Phase I's, biology reports, cultural resource reports, geotechnical reports, etc.) ☑ Yes ☐ No

   If yes, please provide them for Petra to review. *Date Received from Client*_____

7. As part of our assessment, Petra contacts local agencies to obtain miscellaneous information about the project site such as previous investigations, zoning, and flood zone. Do you have any current restrictions regarding Petra contacting these agencies?

   ☐ Yes ☑ No

   If yes, please contact us to discuss further.

B. SITE ACESS

1. Does Petra have access to the property at this time? ☑ Yes ☐ No

2. Are there any access restrictions such as a locked gate or required insurance forms? Certificate of Insurance needed.
   There is a gate surrounding the property. Enter from the southeast corner adacent to the flood control channel on Guasti Road.

3. Is there a site manager that Petra needs to contact prior to visiting the site? No, just give Diversified (Nolan Leggio) 48 hr notice.

C. LANDOWNER LIABILITY PROTECTIONS

In order to qualify for one of the Landowner Liability Protections offered by the Small Business liability Relief and Brownfields Revitalization of 2001 (the "Brownfields Amendments"), the client must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

1. Did a search of the land title records identify any environmental liens filed or recorded against the subject property under federal, tribal, state, or local law? (40 CFR 312.25) ☐ Yes ☑ No

   If no, have you or will you conduct a search for any environmental cleanup liens against the property that are filed or recorded in a registry? ☑ Yes ☐ No

   If yes, please provide Petra with this information. A title report has been provided

   If no, do you require Petra to complete this task, which requires an additional fee? ☑ Yes ☐ No

2. Did a search of the land title records identify land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the subject site and/or have been recorded against the subject property under federal, tribal, state, or local law? (40 CFR 312.25) ☐ Yes ☑ No

   If no, have you or will you conduct a search for any AULs against the property that are filed or recorded in a registry? ☑ Yes ☐ No

   If yes, please provide Petra with this information. _____

   If no, do you require Petra to complete this task, which requires an additional fee? ☑ Yes ☐No

3. As the User of this Environmental Site Assessment, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the potential chemicals and processes used by this type of business? (40 CFR 312.28) ☐ Yes ☑ No

   If yes, please provide Petra with this information. _____

PETRA GEOSCIENCES, INC.
40880 County Center Dr., Suite M, Temecula, CA 92591 * (951) 600-9271 * (714) 549-8921

4. Does the purchase price being paid for the subject property reasonably reflect the fair market value of the property? (40 CFR 312.29) ☑ Yes ☐ No

   If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination or any environmental concerns are known or believed to be present at the property?

   ☐ Yes ☐ No

   If yes, please provide Petra with that information. _____

5. Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of hazardous materials/chemical releases or threatened releases? (40 CFR 312.30) For example,

   A. Do you know the past uses of the property? ☐ Yes ☑ No

   If yes, please provide Petra with the information. _____

   B. Do you know of specific chemicals that are present or once were present at the subject property? ☐ Yes ☑ No

   If yes, please provide Petra with the information. _____

   C. Do you know of spills or other chemical releases that have taken place at the subject property? ☐ Yes ☑ No

   If yes, please provide Petra with the information. _____

   D. Do you know of any environmental cleanups that have taken place at the subject property or adjacent properties? ☐ Yes ☑ No

   If yes, please provide Petra with the information. _____

6. As the user of this ESA, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property? (40 CFR 312.31) ☐ Yes ☑ No

   If yes, please provide Petra with the information. _____

Ref No.:

Property: Vacant Land, Ontario, CA

In response to the application for a policy of title insurance referenced herein, **Ticor Title Company of California** hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of a defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Exclusions from Coverage, and Conditions of said policy forms.

With respect to any contemplated owner's policy, the printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA/ALTA Homeowner's Policy of Title Insurance, which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a binder or commitment should be requested.

Countersigned By:

Authorized Officer or Agent
Kenji Kikuchi

Effective date: November 15, 2023 at 07:30 AM

The form of Policy or Policies of Title Insurance contemplated by this Report is:

ALTA Homeowner's Policy of Title Insurance 2021

1. The estate or interest in the Land hereinafter described or referred to covered by this Report is:

   A Fee

2. Title to said estate or interest at the date hereof is vested in:

   JC Horizon, Ltd., a California Corporation

3. The Land referred to in this Report is described as follows:

   SEE EXHIBIT "A" ATTACHED HERETO AND MADE A PART HEREOF

EXHIBIT A

Legal Description

For APN/Parcel ID(s): 0110-322-33-0-000

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA AND IS DESCRIBED AS FOLLOWS:

PARCEL 2 OF PARCEL MAP NO. 5660, IN THE CITY OF ONTARIO, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 69 OF PARCEL MAPS, PAGES 76 THROUGH 78, INCLUSIVE, RECORDS OF SAID COUNTY AS AMENDED BY MAP RECORDED IN BOOK 80 OF PARCEL MAPS, PAGES 56 THROUGH 58, INCLUSIVE, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPTIONS

At the date hereof, items to be considered and exceptions to coverage in addition to the printed exceptions and exclusions in said policy form would be as follows:

1. Property taxes, including any personal property taxes and any assessments collected with taxes, are as follows:

   Tax Id No.: 0110-322-33-0-000
   Fiscal Year: 2023-2024
   1st Installment: $44,865.94, Open (Delinquent after December 10)
   Penalty: $4,486.60
   2nd Installment: $44,865.92, Open (Delinquent after April 10)
   Penalty and Cost: $4,496.60
   Homeowners Exempt: None
   Code Area: 004-080

2. Any liens or other assessments, bonds, or special district liens including without limitation, Community Facility Districts, that arise by reason of any local, City, Municipal or County Project or Special District.

3. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

4. Water rights, claims or title to water, whether or not disclosed by the public records.

5. Easement(s) in favor of the public over any existing roads lying within said Land.

6. The fact that the ownership of said land does not include rights of access to or from the street, highway, or freeway abutting said land, such rights having been relinquished by the document,

   Recording Date: April 17, 1946
   Recording No.: Book 1881, Page 477, Official Records
   Affects: said land more particularly described therein

   Said deed further contains a waiver in favor of the State of California of any claims for damages to said land by reason of the location, construction, landscaping or maintenance of a highway or freeway contiguous thereto.

7. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

   Granted to: San Bernardino County Flood Control District
   Purpose: flood control and water conservation
   Recording Date: September 12, 1951
   Recording No.: Book 2822, Page 335, Official Records
   Affects: said land more particularly described therein

8. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

   Granted to: The City of Ontario
   Purpose: public utilities
   Recording Date: April 7, 1966
   Recording No.: Book 6604, Page 153, Official Records
   Affects: said land more particularly described therein

9. All easements, offers and dedications as shown on the official map

   Parcel Map No.: 5660

10. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon age, race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

    Recording Date: July 26, 1984
    Recording No: 84-176925, Official Records

    Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or trust deed made in good faith and for value.

    Matters contained in that certain document

    Entitled: Assignment and Assumption of Declarant Rights and Obligations
    Recording Date: June 15, 1998
    Recording No.: 1998-0228785, Official Records

    Reference is hereby made to said document for full particulars.

11. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document.

    Redevelopment Agency: City of Ontario Redevelopment Agency
    Recording Date: July 26, 2001
    Recording No.: 2001-301860, Official Records

    and Recording Date: November 5, 2007
    and Recording No: 2007-0615960, Official Records

12. A deed of trust to secure an indebtedness in the amount shown below,

    Amount: $4,000,000.00
    Dated: March 29, 2019
    Trustor/Grantor: JC Horizon Ltd., a California Corporation
    Trustee: Stewart Title of California, Inc
    Beneficiary: Golden Bank, National Association, a National Bank Association
    Loan No: 2008099
    Recording Date: April 5, 2019
    Recording No.: 2019-0105954, Official Records

    An agreement to modify the terms and provisions of said deed of trust as therein provided

    Executed by: JC Horizon Ltd., a California Corporation and Golden Bank, NA
    Recording Date: May 19, 2021
    Recording No.: 2021-0230979, Official Records

    An agreement to modify the terms and provisions of said deed of trust as therein provided

    Executed by: JC Horizon Ltd and Golden Bank, NA
    Recording Date: June 9, 2023
    Recording No.: 2023-0142795, Official Records

13. An assignment of all moneys due, or to become due as rental or otherwise from said Land, to secure payment of an indebtedness, shown below and upon the terms and conditions therein

Amount:	$4,000,000.00
Assigned to:	Golden Bank, National Association, a National Bank Association
Assigned By:	JC Horizon Ltd., a California Corporation
Recording Date:	April 5, 2019
Recording No:	2019-0105955, Official Records

14. Matters which may be disclosed by an inspection and/or by a correct ALTA/ACSM Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

15. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other matters which a correct survey would disclose and which are not shown by the public records.

16. Any easements not disclosed by the Public Records as to matters affecting title to real property, whether or not said easements are visible and apparent.

17. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the Public Records.

    The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

    The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

END OF EXCEPTIONS

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

REQUIREMENTS

1. In order to complete this report, the Company requires a Statement of Information to be completed by the following party(s),

   Party(s): All Parties

   The Company reserves the right to add additional items or make further requirements after review of the requested Statement of Information.

   NOTE: The Statement of Information is necessary to complete the search and examination of title under this order. Any title search includes matters that are indexed by name only, and having a completed Statement of Information assists the Company in the elimination of certain matters which appear to involve the parties but in fact affect another party with the same or similar name. Be assured that the Statement of Information is essential and will be kept strictly confidential to this file.

2. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the limited partnership named below.

   Name: JC Horizon, Ltd., a California Corporation

   a. A complete copy of the limited partnership agreement and all amendments thereto.

   b. Satisfactory evidence that the partnership was validly formed and is in good standing

   The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

3. Furnish for review a full and complete copy of any unrecorded agreement, contract, license and/or lease together with all supplements, assignments and amendments thereto, prior to the close of this transaction.

   The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

4. The Company will require an affidavit signed by the seller/mortgagor certifying that there are no matters that could give rise to any defects, liens, encumbrances, adverse claims or other matters that would attach to the Land between the effective date of the report and the recording of the instruments creating the estate to be insured.

END OF REQUIREMENTS

INFORMATIONAL NOTES

1. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

2. NOTE: Please contact your Title Officer to obtain the current recording fees.

3. NOTE: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

4. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

5. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

END OF INFORMATIONAL NOTES

FIDELITY NATIONAL FINANCIAL
PRIVACY NOTICE

Effective January 1, 2023

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to affiliated or nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;
- to affiliated or nonaffiliated third parties with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information

We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: We are providing this notice pursuant to state law. You may be placed on our internal Do Not Call List by calling FNF Privacy at (888) 714-2710 or by contacting us via the information set forth at the end of this Privacy Notice. For further information concerning Nevada's telephone solicitation law, you may contact: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: aginquiries@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

For Virginia Residents: For additional information about your Virginia privacy rights, please email privacy@fnf.com or call (888) 714-2710.

Information From Children

The FNF Websites are not intended or designed to attract persons under the age of eighteen (18). We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users

FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans

Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice.

Accessing and Correcting Information; Contact Us

If you have questions or would like to correct your Personal Information, visit FNF's Privacy Inquiry Website or contact us by phone at (888) 714-2710, by email at privacy@fnf.com, or by mail to:

Fidelity National Financial, Inc.

Jacksonville, Florida 32204
Attn: Chief Privacy Officer

FIDELITY NATIONAL FINANCIAL
CALIFORNIA PRIVACY NOTICE

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This California Privacy Notice explains how we collect, use, and disclose Personal Information, when and to whom we disclose such information, and the rights you, as a California resident ("Consumer"), have regarding your Personal Information ("California Privacy Rights"). "Personal Information" means information that identifies, relates to, describes, and is reasonably capable of being associated with, or could reasonably be linked, directly or indirectly, with a particular consumer or household. If FNF has collected, used, or disclosed your Personal Information in relation to a job application or employment, independent contractor, officer, owner, or director relationship with FNF, FNF's practices are discussed in our Notice at Collection for Prospective Employees, available at ***Prospective California Employees***.

Some subsidiaries maintain separate California Privacy Notices or privacy statements. If a subsidiary has a separate California Privacy Notice, it will be available on the subsidiary's website, and this California Privacy Notice does not apply.

Collection of categories of Personal Information:

In the preceding twelve (12) months FNF has collected, and will continue to collect, the following categories of Personal Information from you:

- Identifiers such as name, address, telephone number, IP address, email address, account name, social security number, driver's license number, state identification card, passport number, financial information, date of birth, or other similar identifiers;
- Characteristics of protected classifications under California or Federal law;
- Commercial information, including records of personal property, products or services purchased, or other purchasing or consuming histories;
- Internet or other electronic network activity information including, but not limited to browsing history on FNF websites, and information regarding a Consumer's interaction with an FNF website;
- Geolocation data;
- Professional or employment information;
- Education Information.

This Personal Information is collected from the following sources:

- Information we receive from you on applications or other forms;
- Information about your transactions with FNF, our affiliates, or others;
- Information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities, or from internet service providers, data analytics providers, and social networks;
- Information from the use of our websites and mobile applications;
- Information we receive directly from you related to doing business with us.

This Personal Information is collected for the following business purposes:

- To provide products and services to you or in connection with a transaction involving you;
- To perform a contract between FNF and the Consumer;
- To improve our products and services;
- To comply with legal obligations;
- To protect against fraudulent or illegal activity;

- To communicate with you about FNF or our affiliates;
- To maintain an account with FNF or our affiliates;
- To provide, support, personalize, and develop our websites, products, and services;
- To directly market our products to consumers;
- As described to you when collecting your Personal Information or as otherwise set forth in the California Consumer Privacy Act.

Disclosures of Personal Information for a business purpose:

In the preceding twelve (12) months FNF has disclosed, and will continue to disclose, the categories of Personal Information listed above for a business purpose. We may disclose Personal Information for a business purpose to the following categories of third parties:

- FNF affiliates and subsidiaries;
- Non-affiliated third parties, with your prior consent;
- Businesses in connection with the sale or other disposition of all or part of the FNF business and/or assets;
- Service Providers and non-affiliated third parties such as internet service providers, data analytics providers, and social networks;
- Law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order.

Sale of Personal Information:

In the preceding twelve (12) months, FNF has not sold or shared Personal Information. FNF does not sell or share Personal Information.

Retention Periods:

Due to the breadth and variety of data collected by FNF, it is not possible for us to provide you with a comprehensive list of timeframes during which we retain each category of Personal Information. FNF retains categories of information as reasonably necessary to satisfy the purpose for which we collect the information. This time period varies depending on the purpose for which we collected the information, the nature and frequency of our interactions and relationship with you, whether we have a legal basis to continue retaining the information, industry practices, the value and sensitivity of the information, and state and federal recordkeeping requirements.

Personal Information of minors:

FNF does not knowingly collect the Personal Information of minors. FNF does not sell or share the information of consumers under sixteen (16) years of age.

Sensitive Personal Information:

FNF does not use or disclose sensitive Personal Information for any purposes other than those specified in the California Consumer Privacy Act.

Right to know:

Consumers have a right to know about Personal Information collected, used, disclosed, shared, or sold, including the categories of such Personal Information, as well as the purpose for such collection, use, disclosure, sharing, or selling, categories of third parties to whom Personal Information is disclosed, shared or sold, and the specific pieces of Personal Information collected about the Consumer. Consumers have the right to request FNF disclose what Personal Information it collected, used, and disclosed in the past twelve (12) months, or since January 1, 2022.

Right to request deletion:

Consumers have a right to request the deletion of their Personal Information, subject to certain exceptions.

Right to Correct:

Consumers have the right to correct inaccurate Personal Information.

Right to non-discrimination:

Consumers have a right not to be discriminated against because of exercising their consumer privacy rights. We will not discriminate against Consumers for exercising any of their California Privacy Rights.

Privacy Requests:

To exercise any of your California Privacy Rights, or if acting as an authorized agent on behalf of another individual, please visit *California Privacy Request*, call us Toll Free at 888-413-1748, or write to the address at the end of this notice.

Upon making a California Privacy Request, FNF will verify the Consumer's identity by requiring an account, loan, escrow number, or other identifying information from the Consumer.

The above-rights are subject to any applicable rights and obligations including both Federal and California exemptions rendering FNF, or Personal Information collected by FNF, exempt from certain CCPA requirements.

A Consumer may use an Authorized Agent to submit any CCPA request. Authorized agents' requests will be processed like any other CCPA request, but FNF will also require the Consumer provide the agent written permission to make the request and verify his or her identity with FNF.

FNF website services for mortgage loans:

Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice describing the categories, sources, and uses of your Personal Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Information. FNF does not share Information collected through the Service Websites, except (1) as required or authorized by contract with the mortgage loan servicer or lender, or (2) as required by law or in the good-faith belief that such disclosure is necessary to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

California Privacy Notice - Effective Date:

This California Privacy Notice was last updated on January 1, 2023.

Contact for more information:

For questions or concerns about FNF's California Privacy Notice and privacy practices, or to exercise any of your California Privacy Rights, please visit ***California Privacy***, call Toll Free 888-413-1748, or contact us by mail at the below address.

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

The charge for a lender's policy shall be forty percent (40%) to fifty percent (50%) of the appropriate title insurance rate, depending on the type of coverage selected.

WIRE SAFE™ | Inquire before you wire!

WIRE FRAUD ALERT

This Notice is not intended to provide legal or professional advice.
If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the number of relevant parties to the transaction as soon as an escrow account is opened.** DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY - 1990 (11-09-18)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material unless such lien is shown by the public records at Date of Policy.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART II

(*Variable exceptions such as taxes, easements, CC&R's, etc., are inserted here*)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE OWNER'S POLICY (02-04-22)
EXCLUSIONS FROM COVERAGE

The following matters are excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement on the Land;
   iii. the subdivision of land; or
   iv. environmental remediation or protection.
   b. any governmental forfeiture, police, regulatory, or national security power.
   c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.

   Exclusion 1 does not modify or limit the coverage provided under Covered Risk 5 or 6.
2. Any power of eminent domain. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 7.
3. Any defect, lien, encumbrance, adverse claim, or other matter:
   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at the Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 9 or 10); or
   e. resulting in loss or damage that would not have been sustained if consideration sufficient to qualify the Insured named in Schedule A as a bona fide purchaser had been given for the Title at the Date of Policy.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights law, that the transaction vesting the Title as shown in Schedule A is a:
   a. fraudulent conveyance or fraudulent transfer;
   b. voidable transfer under the Uniform Voidable Transactions Act; or
   c. preferential transfer:
      i. to the extent the instrument of transfer vesting the Title as shown in Schedule A is not a transfer made as a contemporaneous exchange for new value; or
      ii. for any other reason not stated in Covered Risk 9.b.
5. Any claim of a PACA-PSA Trust. Exclusion 5 does not modify or limit the coverage provided under Covered Risk 8.
6. Any lien on the Title for real estate taxes or assessments imposed or collected by a governmental authority that becomes due and payable after the Date of Policy.

   Exclusion 6 does not modify or limit the coverage provided under Covered Risk 2.b.
7 Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

EXCEPTIONS FROM COVERAGE

Some historical land records contain Discriminatory Covenants that are illegal and unenforceable by law. This policy treats any Discriminatory Covenant in a document referenced in Schedule B as if each Discriminatory Covenant is redacted, repudiated, removed, and not republished or recirculated. Only the remaining provisions of the document are excepted from coverage.

This policy does not insure against loss or damage and the Company will not pay costs, attorneys' fees, or expenses resulting from the terms and conditions of any lease or easement identified in Schedule A, and the following matters:

PART I

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records at Date of Policy but that could be (a) ascertained by an inspection of the Land, or (b) asserted by persons or parties in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records at Date of Policy.
4. Any encroachment, encumbrance, violation, variation, easement, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records at Date of Policy.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor, material or equipment unless such lien is shown by the Public Records at Date of Policy.
7. Any claim to (a) ownership of or rights to minerals and similar substances, including but not limited to ores, metals, coal, lignite, oil, gas, uranium, clay, rock, sand, and gravel located in, on, or under the Land or produced from the Land, whether such ownership or rights arise by lease, grant, exception, conveyance, reservation, or otherwise; and (b) any rights, privileges, immunities, rights of way, and easements associated therewith or appurtenant thereto, whether or not the interests or rights excepted in (a) or (b) appear in the Public Records or are shown in Schedule B.

PART II

(*Variable exceptions such as taxes, easements, CC&R's, etc., are inserted here*)

CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (7-01-21)
EXCLUSIONS FROM COVERAGE

The following matters are excluded from the coverage of this policy and We will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement on the Land;
   iii. the subdivision of land; or
   iv. environmental remediation or protection.
   b. any governmental forfeiture, police, or regulatory, or national security power.
   c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.

   Exclusion 1 does not modify or limit the coverage provided under Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23, or 27.
2. Any power to take the Land by condemnation. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 17.
3. Any defect, lien, encumbrance, adverse claim, or other matter:
   a. created, suffered, assumed, or agreed to by You;
   b. not Known to Us, not recorded in the Public Records at the Date of Policy, but Known to You and not disclosed in writing to Us by You prior to the date You became an Insured under this policy;
   c. resulting in no loss or damage to You;
   d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 5, 8.f., 25, 26, 27, 28, or 32); or
   e. resulting in loss or damage that would not have been sustained if You paid consideration sufficient to qualify You as a bona fide purchaser of the Title at the Date of Policy.
4. Lack of a right:
   a. to any land outside the area specifically described and referred to in Item 3 of Schedule A; and
   b. in any street, road, avenue, alley, lane, right-of-way, body of water, or waterway that abut the Land.

   Exclusion 4 does not modify or limit the coverage provided under Covered Risk 11 or 21.
5. The failure of Your existing structures, or any portion of Your existing structures, to have been constructed before, on, or after the Date of Policy in accordance with applicable building codes. Exclusion 5 does not modify or limit the coverage provided under Covered Risk 14 or 15.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights law, that the transfer of the Title to You is a:
   a. fraudulent conveyance or fraudulent transfer;
   b. voidable transfer under the Uniform Voidable Transactions Act; or
   c. preferential transfer:
      i. to the extent the instrument of transfer vesting the Title as shown in Schedule A is not a transfer made as a contemporaneous exchange for new value; or
      ii. for any other reason not stated in Covered Risk 30.
7. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
8. Negligence by a person or an entity exercising a right to extract or develop oil, gas, minerals, groundwater, or any other subsurface substance.
9. Any lien on Your Title for real estate taxes or assessments, imposed or collected by a governmental authority that becomes due and payable after the Date of Policy. Exclusion 9 does not modify or limit the coverage provided under Covered Risk 8.a or 27.
10. Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19 and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.

   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.

   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19 and 21, Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

ALTA OWNER'S POLICY (07-01-2021)

EXCLUSIONS FROM COVERAGE

The following matters are excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement on the Land;
   iii. the subdivision of land; or
   iv. environmental remediation or protection.
   b. any governmental forfeiture, police, regulatory, or national security power.
   c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.

   Exclusion 1 does not modify or limit the coverage provided under Covered Risk 5 or 6.
2. Any power of eminent domain. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 7.
3. Any defect, lien, encumbrance, adverse claim, or other matter:
   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at the Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 9 or 10); or
   e. resulting in loss or damage that would not have been sustained if consideration sufficient to qualify the Insured named in Schedule A as a bona fide purchaser had been given for the Title at the Date of Policy.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights law, that the transaction vesting the Title as shown in Schedule A is a:
   a. fraudulent conveyance or fraudulent transfer;
   b. voidable transfer under the Uniform Voidable Transactions Act; or
   c. preferential transfer:
      i. to the extent the instrument of transfer vesting the Title as shown in Schedule A is not a transfer made as a contemporaneous exchange for new value; or
      ii. for any other reason not stated in Covered Risk 9.b.
5. Any claim of a PACA-PSA Trust. Exclusion 5 does not modify or limit the coverage provided under Covered Risk 8.
6. Any lien on the Title for real estate taxes or assessments, imposed or collected by a governmental authority that becomes due and payable after the Date of Policy. Exclusion 6 does not modify or limit the coverage provided under Covered Risk 2.b.
7. Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

EXCEPTIONS FROM COVERAGE

Some historical land records contain Discriminatory Covenants that are illegal and unenforceable by law. This policy treats any Discriminatory Covenant in a document referenced in Schedule B as if each Discriminatory Covenant is redacted, repudiated, removed, and not republished or recirculated. Only the remaining provisions of the document are excepted from coverage.

This policy does not insure against loss or damage and the Company will not pay costs, attorneys' fees, or expenses resulting from the terms and conditions of any lease or easement identified in Schedule A, and the following matters:

NOTE: The 2021 ALTA Owner's Policy may be issued to afford either Standard Coverage or Extended Coverage. In addition to variable exceptions such as taxes, easements, CC&R's, etc., the Exceptions from Coverage in a Standard Coverage policy will also include the Western Regional Standard Coverage Exceptions listed as 1 through 7 below:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records at Date of Policy but that could be (a) ascertained by an inspection of the Land or (b) asserted by persons or parties in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records at Date of Policy.
4. Any encroachment, encumbrance, violation, variation, easement, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records at Date of Policy.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor, material or equipment unless such lien is shown by the Public Records at Date of Policy.
7. Any claim to (a) ownership of or rights to minerals and similar substances, including but not limited to ores, metals, coal, lignite, oil, gas, uranium, clay, rock, sand, and gravel located in, on, or under the Land or produced from the Land, whether such ownership or rights arise by lease, grant, exception, conveyance, reservation, or otherwise; and (b) any rights, privileges, immunities, rights of way, and easements associated therewith or appurtenant thereto, whether or not the interests or rights excepted in (a) or (b) appear in the Public Records or are shown in Schedule B.

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees, or expenses that arise by reason of:

NOTE: The 2006 ALTA Owner's Policy may be issued to afford either Standard Coverage or Extended Coverage. In addition to variable exceptions such as taxes, easements, CC&R's, etc., the Exceptions from Coverage in a Standard Coverage policy will also include the Western Regional Standard Coverage Exceptions listed below as 1 through 7 below:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records at Date of Policy but that could be (a) ascertained by an inspection of the Land, or (b) asserted by persons or parties in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records at Date of Policy.
4. Any encroachment, encumbrance, violation, variation, easement, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records at Date of Policy.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor, material or equipment unless such lien is shown by the Public Records at Date of Policy.]
7. Any claim to (a) ownership of or rights to minerals and similar substances, including but not limited to ores, metals, coal, lignite, oil, gas, uranium, clay, rock, sand, and gravel located in, on, or under the Land or produced from the Land, whether such ownership or rights arise by lease, grant, exception, conveyance, reservation, or otherwise; and (b) any rights, privileges, immunities, rights of way, and easements associated therewith or appurtenant thereto, whether or not the interests or rights excepted in (a) or (b) appear in the Public Records or are shown in Schedule B.

TICOR TITLE COMPANY

OWNER'S DECLARATION

Escrow No.: TT4002374
Property: Vacant Land, Ontario, CA

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   A. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at Vacant Land, Ontario, CA, further described as follows: See Preliminary Report/Commitment No. TT4002374 for full legal description (the "Land").

   B. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at Vacant Land, Ontario, CA, further described as follows: See Preliminary Report/Commitment No. TT4002374 for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   A. During the period of six (6) months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   B. During the period of six (6) months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatsoever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Chicago Title Insurance Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above referenced Preliminary Report/Commitment.

5. The Land is currently in use as _____; _____ occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

OWNER'S DECLARATION

(continued)

8. Between the most recent Effective Date of the above referenced Preliminary Report/Commitment and the date of recording of the Insured Instrument(s), Owner has not taken or allowed, and will not take or allow, any action or inaction to encumber or otherwise affect title to the Land.

This declaration is made with the intention that Chicago Title Insurance Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys' fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on December 5, 2023at 12:00 AM.

_____

AFFIDAVIT

Title No.: TT4002374-SA

This Affidavit, when fully completed, is to be signed **and notarized**, then returned to Ticor Title Company of California to enable Ticor Title Company of California to insure the presently pending transaction.

The undersigned owner hereby states that there are no unrecorded leases or agreements affecting the property described in the Preliminary Report for Title Order Number TT4002374-SA and that there is no one in possession or entitled to possession of said property other than the vestee shown in said Preliminary Report, **except**:

_____

_____

_____

_____

The undersigned owner states that to his/her knowledge, there are no liens or rights to liens upon said property for labor, services and materials for work contracted for, and completed by, an owner, lessee, sub-lessee or tenant within the last year or which is now in progress, **except**:

_____

_____

_____

_____

This statement is made in connection with the request to Ticor Title Company of California to issue its policy(ies) of title insurance with respect to Title Order Number TT4002374-SA.

IN WITNESS WHEREOF, the undersigned have executed this document on the date(s) set forth below.

RESUMES

ED LUMP

MR. ED LUMP
Associate Geologist

EDUCATION
B.Sc Geology, San Diego State University, San Diego, California

PROFESSIONAL SUMMARY
Mr. Lump has been in the field of Engineering Geology since 1984 and in the field of Environmental Assessment since 1990. Serving as a field technician, soils laboratory technician, and geologist he has gained field experience on numerous hillside and flatland residential and commercial developments throughout southern California. As an engineering geologist he supervised field personnel and conducted numerous geologic and geotechnical evaluations on residential, commercial and industrial developments in California, Arizona and Nevada. His projects have included landslide and fault evaluations, single and multi-tract residential properties, shopping centers/national chain retail developments, and forensic evaluations, as well as grading and construction oversight. Mr. Lump has also conducted and managed numerous Phase I Environmental Site Assessments and Phase II soil, groundwater and soil vapor assessments for vacant, agricultural, residential, commercial and industrial properties in California, Arizona and Nevada.

SELECTED PROJECT EXPERIENCE

Environmental Site Assessments
- Limited Phase II and Soil Vapor Survey, 2013, County of Riverside, future Eastvale fire station, Riverside County, CA
- Phase I ESA, 2013, Wakeland Housing Development, 10 apartment complex portfolio, San Diego County, CA
- Phase I ESA and Limited Phase II, 2013, William Lyon Homes, Upland Residential Development, San Bernardino County, CA
- Limited Phase II Assessment, 2013, KB Homes, Spring Mountain Ranch, Riverside County, CA
- Environmental demolition and grading oversight, 2011/2012, Standard Pacific Homes, Harmony Grove residential development, San Diego County, CA
- Groundwater Mounding Evaluation, 2008, Lowe's HIW, Lowe's of Pacoima, Los Angeles County, CA
- Phase I ESA, Pesticide Residue Survey, Remedial Earthwork Guidelines, and Final As-Built Assessment, 2003/2004, Lennar Homes, Bressi Ranch, San Diego County, CA

Geologic and Geotechnical Evaluations
- Lake Elsinore Marketplace, Diamond Development, Riverside County, CA
- Salton Sea Solar Plant, Chevron Solar, Inc., Imperial County, CA
- Lowe's of Sparks, Nevada, Lowe's HIW, Washoe County, NV
- Walmart Murrieta, Walmart, Inc., Riverside County, CA
- Santa Fe Hills/Paloma Residential Development, KB Homes, San Diego County, CA
- Carmel Mountain Ranch Residential Development, Presley of San Diego, San Diego County, CA
- Lowe's of Bullhead City, Arizona, Lowe's HIW, Mohave County, AZ

ED LUMP

Grading and Construction

- Discovery Hills Residential Development, Presley of San Diego, San Diego County, CA
- Lowe's of Prescott, Arizona, Lowe's HIW, Yavapai County, AZ
- Salt Creek Residential Development, KB Homes, San Diego County, CA
- Lowe's of Pacoima, Lowe's HIW, Los Angeles County, CA
- Lake Elsinore Marketplace, Diamond Development, Riverside County, CA
- Carmel Mountain Ranch Residential Development, Presley of San Diego, San Diego County, CA

SIAMAK JAFROUDI

DR. SIAMAK JAFROUDI
President
Principal-in-Charge

EDUCATION
PhD, Geotechnical Engineering, 1983,
UC Davis
MS, Civil Engineering, 1978, UC Davis

REGISTRATIONS
Civil Engineering, California, PE 36641
Geotechnical Engineer, California, GE 2024
Environmental Assessor, REA 01655

PROFESSIONAL SUMMARY
Dr. Jafroudi has over 34 years of professional experience in geotechnical engineering. His area of specialization is "material characterization" in relation to slope stability evaluation, liquefaction analysis, pavement design, collapse potential, earth retaining structures and earthquake engineering. Dr. Jafroudi's experience encompasses the design and supervision of a multitude of soil mechanics laboratory tests and drilling programs. With a broad range of project experience, he has served as a Principal Engineer on several key projects for such clients as school, university and college districts, public agencies; transportation agencies; residential and commercial developers, as well as private sector clients.

Acquiring a doctorate degree in Geotechnical Engineering as well as a Master of Science degree in Civil Engineering, Dr. Jafroudi maintains extensive working knowledge and experience with respect to these challenging fields. Dr. Jafroudi is a Registered Geotechnical Engineer (GE), a Registered Environmental Assessor (REA), and is registered in Civil Engineering (PE), all in the state of California. Additionally, he is an active member of the American Society of Civil Engineers, the Earthquake Engineering Research Institute and California Geotechnical Engineering Association.

SELECTED PROJECT EXPERIENCE

Environmental Site Assessments
- KB Homes, Hollywood Beverly Christian Church, Hollywood
- Castle & Cooke, Lake Elsinore Outlet Mall, Lake Elsinore
- Covina Transit Plaza, Foothill Transit, Covina
- First Street Bridge Widening, Los Angeles County
- Overland Street Bridge Improvements, Los Angeles County
- 801 Office Tower, Mani Brothers, Los Angeles
- Harmony Grove Site Acquisition, New Urban West, San Diego County

EXECUTIVE SUMMARY

ES.1 SUMMARY OF FINDINGS

The results of this *Empire Groves Hotel Air Quality Impact Analysis* (AQIA) are summarized below based on the significance criteria in Section 3 of this report consistent with Appendix G of the *Guidelines for Implementation of the California Environmental Quality Act* (*CEQA Guidelines*) (1). Table ES-1 shows the findings of significance for each potential air quality impact under the California Environmental Quality Act (CEQA).

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Regional Construction Emissions	3.4	*Less Than Significant*	*n/a*
Localized Construction Emissions	3.7	*Less Than Significant*	*n/a*
Regional Operational Emissions	3.5	*Less Than Significant*	*n/a*

Odors	3.12	*Less Than Significant*	*n/a*
Cumulative Impacts	3.13	*Less Than Significant*	*n/a*

ES.2 REGULATORY REQUIREMENTS

There are numerous requirements that development projects must comply with by law, and that were put in place by federal, State, and local regulatory agencies for the improvement of air quality.

Any operation or activity that might cause the emission of any smoke, fly ash, dust, fumes, vapors, gases, or other forms of air pollution, which can cause damage to human health, vegetation, or

other forms of property, or can cause excessive soiling on any other parcel shall conform to the requirements of the South Coast Air Quality Management District (SCAQMD).

SCAQMD RULES

SCAQMD Rules that are currently applicable during construction activity for this Project are described below.

SCAQMD RULE 402

A person shall not discharge from any source whatsoever such quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or that endanger the comfort, repose, health, or safety of any such persons or the public, or that cause, or have a natural tendency to cause, injury or damage to business or property. The provisions of this rule do not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.

Odor Emissions. All uses shall be operated in a manner such that no offensive odor is perceptible at or beyond the property line of that use.

SCAQMD RULE 403

This rule is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (human-made) fugitive dust sources by requiring actions to prevent and reduce fugitive dust emissions. Rule 403 applies to any activity or human-made condition capable of generating fugitive dust and requires best available control measures to be applied to earth moving and grading activities.

Dust Control, Operations. Any operation or activity that might cause the emission of any smoke, fly ash, dust, fumes, vapors, gases, or other forms of air pollution, which can cause damage to human health, vegetation, or other forms of property, or can cause excessive soiling on any other parcel, shall conform to the requirements of the SCAQMD.

SCAQMD RULE 1113

This rule serves to limit the VOC content of architectural coatings used on projects in the South Coast Air Basin. This rule applies to any person who supplies, sells, offers for sale, or manufactures any architectural coating for use on projects.

SCAQMD RULE 1301

This rule is intended to provide that pre-construction review requirements to ensure that new or relocated facilities do not interfere with progress in attainment of the National Ambient Air Quality Standards (NAAQS), while future economic growth within the South Coast Air Basin is not unnecessarily restricted. The specific air quality goal is to achieve no net increases from new or modified permitted sources of nonattainment air contaminants or their precursors. Rule 1301 also limits emission increases of ammonia, and Ozone Depleting Compounds (ODCs) from new, modified or relocated facilities by requiring the use of Best Available Control Technology (BACT).

SCAQMD RULE 1401

A person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any 1 hour that is as dark or darker in shade as that designated No. 1 on the Ringelmann Chart, as published by the United States (U.S.) Bureau of Mines.

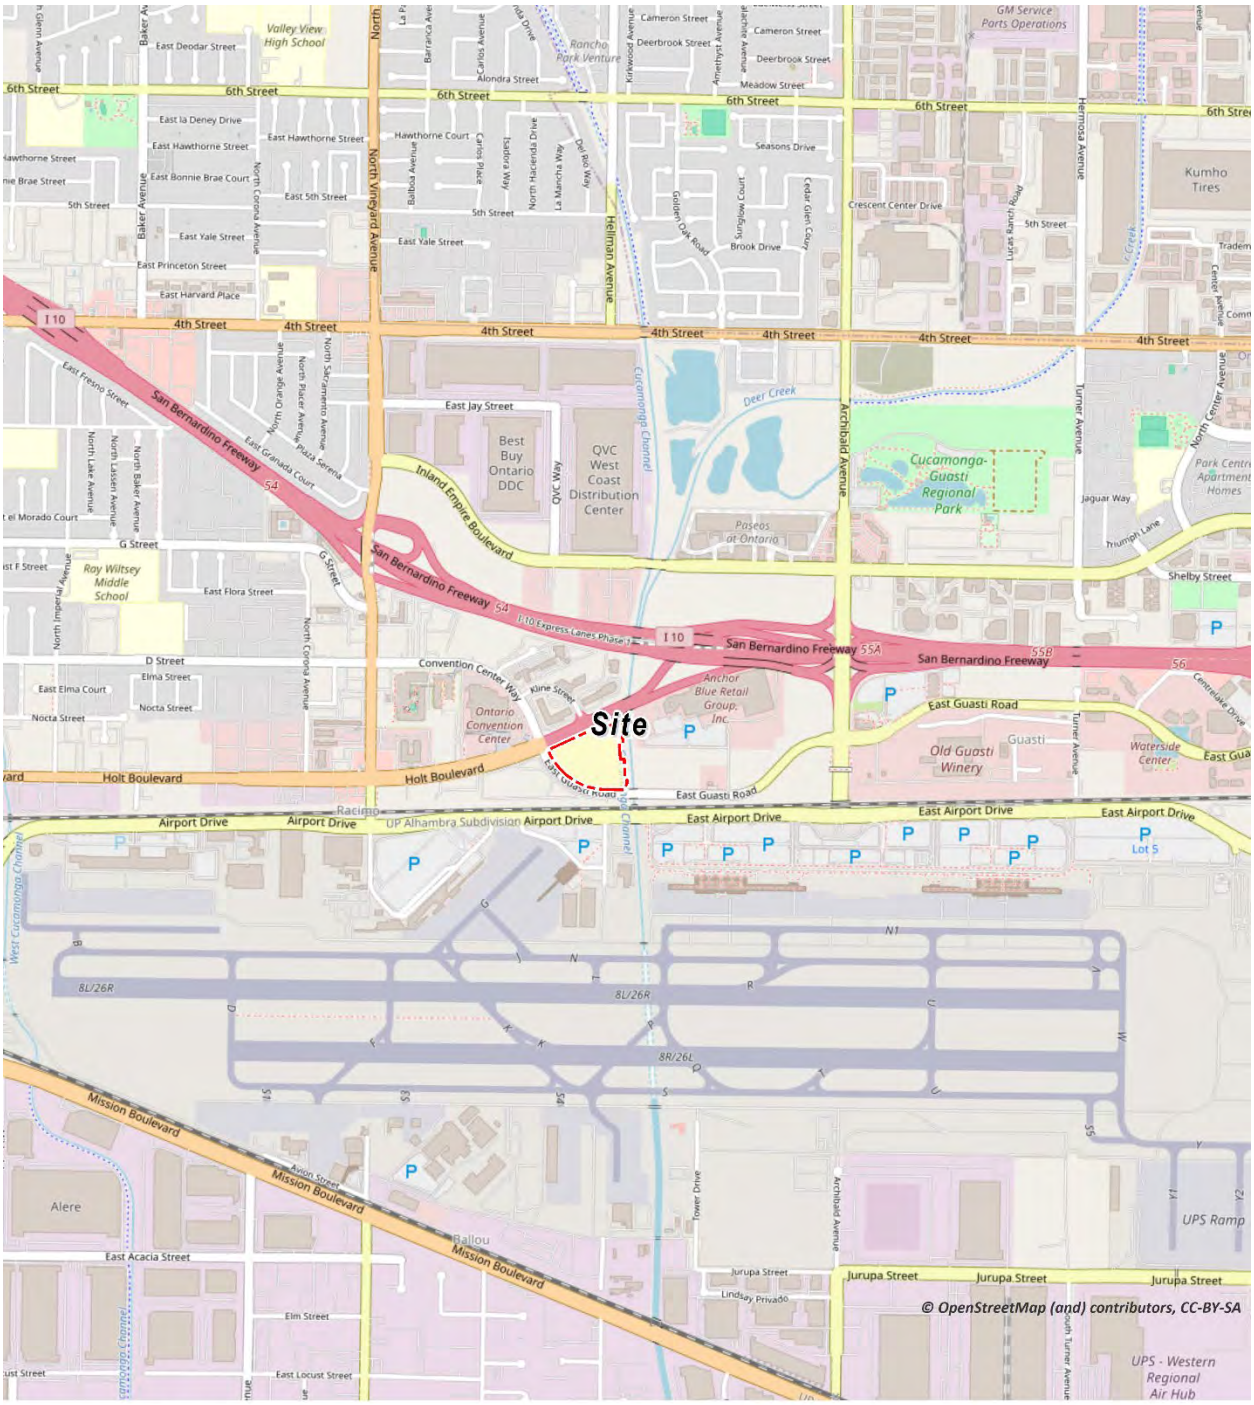
1 INTRODUCTION

This report presents the results of the AQIA prepared by Urban Crossroads, Inc., for the proposed Empire Groves Hotel Project (Project). The purpose of this AQIA is to evaluate the potential impacts to air quality associated with construction and operation of the Project and recommend measures to mitigate impacts considered potentially significant in comparison to thresholds established by the SCAQMD.



1.1 SITE LOCATION

The proposed Project site is located at the northeast corner of Holt Boulevard and Guasti Road in the City of Ontario, as shown in Exhibit 1-A.

1.2 PROJECT DESCRIPTION

The Project consists of a hotel that includes 600 rooms and suites, 2 ballrooms, a spa & fitness center, meeting and conference rooms as well as an outdoor pool and event lawn on 10.43 acres. A preliminary site plan for the proposed hotel development is shown on Exhibit 1-B. The Project will be developed within a single phase with an anticipated opening year of 2025.

This page intentionally left blank

2 AIR QUALITY SETTING

This section provides an overview of the existing air quality conditions in the Project area and region.

2.1 SOUTH COAST AIR BASIN

The Project site is located in the South Coast Air Basin (SCAB) within the jurisdiction of SCAQMD (2). The SCAQMD was created by the 1977 Lewis-Presley Air Quality Management Act, which merged four county air pollution control bodies into one regional district. Under the Act, the SCAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards. As stated, the Project site is located within the SCAB, a 6,745-square-mile subregion of the SCAQMD, which includes the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County.

The SCAB is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east, and the San Diego Air Basin to the south.

2.2 REGIONAL CLIMATE

The regional climate has a substantial influence on air quality in the SCAB. In addition, the temperature, wind, humidity, precipitation, and amount of sunshine influence the air quality.

The annual average temperatures throughout the SCAB vary from the low to mid 60s (degrees Fahrenheit [°F]). Due to a decreased marine influence, the eastern portion of the SCAB shows greater variability in average annual minimum and maximum temperatures. January is the coldest month throughout the SCAB, with average minimum temperatures of 47°F in downtown Los Angeles and 36°F in San Bernardino. All portions of the SCAB have recorded maximum temperatures above 100°F.

Although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB, and the conversion of sulfur dioxide (SO_2) to sulfates (SO_4) is heightened in air with high relative humidity. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is 71% along the coast and 59% inland. Since the ocean effect is dominant, periods of heavy early morning fog are frequent and low stratus clouds are a characteristic feature. These effects decrease with distance from the coast.

More than 90% of the SCAB's rainfall occurs from November through April. The annual average rainfall varies from approximately nine inches in Riverside to fourteen inches in downtown Los Angeles. Monthly and yearly rainfall totals are extremely variable. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the SCAB with frequency being higher near the coast.

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year, there are approximately 10 hours of possible sunshine, and on the longest day of the year, there are approximately 14½ hours of possible sunshine.

The importance of wind to air pollution is considerable. The direction and speed of the wind determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the "Catalina Eddy," a low level cyclonic (counterclockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections.

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level.

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter, when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as nitrogen oxides (NO_X) and carbon monoxide (CO) from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline.

2.3 WIND PATTERNS AND PROJECT LOCATION

The distinctive climate of the Project area and the SCAB is determined by its terrain and geographical location. The SCAB is located in a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean in the southwest quadrant with high mountains forming the remainder of the perimeter.

Wind patterns across the south coastal region are characterized by westerly and southwesterly onshore winds during the day and easterly or northeasterly breezes at night. Winds are characteristically light although the speed is somewhat greater during the dry summer months than during the rainy winter season.

2.4 CRITERIA POLLUTANTS

Criteria pollutants are pollutants that are regulated through the development of human health based and/or environmentally based criteria for setting permissible levels. Criteria pollutants, their typical sources, and health effects are identified below (3):

TABLE 2-1: CRITERIA POLLUTANTS

Criteria Pollutant	Description	Sources	Health Effects
CO	CO is a colorless, odorless gas produced by the incomplete combustion of carbon-containing fuels, such as gasoline or wood. CO concentrations tend to be the highest during the winter morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion engines, unlike ozone (O_3), motor vehicles operating at slow speeds are the primary source of CO in the SCAB. The highest ambient CO concentrations are generally found near congested transportation corridors and intersections.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment, and residential heating.	Individuals with a deficient blood supply to the heart are the most susceptible to the adverse effects of CO exposure. The effects observed include earlier onset of chest pain with exercise, and electrocardiograph changes indicative of decreased oxygen (O_2) supply to the heart. Inhaled CO has no direct toxic effect on the lungs but exerts its effect on tissues by interfering with O_2 transport and competing with O_2 to combine with hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, conditions with an increased demand for O_2 supply can be adversely affected by exposure to CO. Individuals most at risk include fetuses, patients with diseases involving heart and blood vessels, and patients with chronic hypoxemia (O_2 deficiency) as seen at high altitudes.
SO_2	SO_2 is a colorless, extremely irritating gas or liquid. It enters the atmosphere as a pollutant	Coal or oil burning power plants and industries,	A few minutes of exposure to low levels of SO_2 can result in airway constriction in some

Criteria Pollutant	Description	Sources	Health Effects
	mainly as a result of burning high sulfur-content fuel oils and coal and from chemical processes occurring at chemical plants and refineries. When SO_2 oxidizes in the atmosphere, it forms SO_4. Collectively, these pollutants are referred to as sulfur oxides (SO_X).	refineries, diesel engines.	asthmatics, all of whom are sensitive to its effects. In asthmatics, increase in resistance to air flow, as well as reduction in breathing capacity leading to severe breathing difficulties, are observed after acute exposure to SO_2. In contrast, healthy individuals do not exhibit similar acute responses even after exposure to higher concentrations of SO_2. Animal studies suggest that despite SO_2 being a respiratory irritant, it does not cause substantial lung injury at ambient concentrations. However, very high levels of exposure can cause lung edema (fluid accumulation), lung tissue damage, and sloughing off of cells lining the respiratory tract. Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient SO_2 levels. In these studies, efforts to separate the effects of SO_2 from those of fine particles have not been successful. It is not clear whether the two pollutants act synergistically, or one pollutant alone is the predominant factor.
NO_X	NO_X consist of nitric oxide (NO), nitrogen dioxide (NO_2) and nitrous oxide (N_2O) and are formed when nitrogen (N_2) combines with O_2. Their lifespan in the atmosphere ranges from	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming	Population-based studies suggest that an increase in acute respiratory illness, including infections and respiratory symptoms in children (not infants), is

Criteria Pollutant	Description	Sources	Health Effects
	one to seven days for nitric oxide and nitrogen dioxide, to 170 years for nitrous oxide. NO_X is typically created during combustion processes and are major contributors to smog formation and acid deposition. NO_2 is a criteria air pollutant and may result in numerous adverse health effects; it absorbs blue light, resulting in a brownish-red cast to the atmosphere and reduced visibility. Of the seven types of nitrogen oxide compounds, NO_2 is the most abundant in the atmosphere. As ambient concentrations of NO_2 are related to traffic density, commuters in heavy traffic may be exposed to higher concentrations of NO_2 than those indicated by a regional monitoring station.	equipment, and residential heating.	associated with long-term exposure to NO_2 at levels found in homes with gas stoves, which are higher than ambient levels found in Southern California. Increase in resistance to air flow and airway contraction is observed after short-term exposure to NO_2 in healthy subjects. Larger decreases in lung functions are observed in individuals with asthma or chronic obstructive pulmonary disease (e.g., chronic bronchitis, emphysema) than in healthy individuals, indicating a greater susceptibility of these sub-groups. In animals, exposure to levels of NO_2 considerably higher than ambient concentrations result in increased susceptibility to infections, possibly due to the observed changes in cells involved in maintaining immune functions. The severity of lung tissue damage associated with high levels of O_3 exposure increases when animals are exposed to a combination of O_3 and NO_2.
O_3	O_3 is a highly reactive and unstable gas that is formed when VOCs and NO_X, both byproducts of internal combustion engine exhaust, undergo slow photochemical reactions in the presence of sunlight. O_3 concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable to the formation of this pollutant.	Formed when reactive organic gases (ROG) and NO_X react in the presence of sunlight. ROG sources include any source that burns fuels, (e.g., gasoline, natural gas, wood, oil) solvents, petroleum processing and	Individuals exercising outdoors, children, and people with pre-existing lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the most susceptible sub-groups for O_3 effects. Short-term exposure (lasting for a few hours) to O_3 at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased

Criteria Pollutant	Description	Sources	Health Effects
		storage, and pesticides.	susceptibility to infections, inflammation of the lung tissue, and some immunological changes. Elevated O_3 levels are associated with increased school absences. In recent years, a correlation between elevated ambient O_3 levels and increases in daily hospital admission rates, as well as mortality, has also been reported. An increased risk for asthma has been found in children who participate in multiple outdoor sports and live in communities with high O_3 levels. O_3 exposure under exercising conditions is known to increase the severity of the responses described above. Animal studies suggest that exposure to a combination of pollutants that includes O_3 may be more toxic than exposure to O_3 alone. Although lung volume and resistance changes observed after a single exposure diminish with repeated exposures, biochemical and cellular changes appear to persist, which can lead to subsequent lung structural changes.
Particulate Matter	PM_{10}: A major air pollutant consisting of tiny solid or liquid particles of soot, dust, smoke, fumes, and aerosols. Particulate matter pollution is a major cause of reduced visibility (haze) which is caused by the scattering of light and consequently the significant reduction in air clarity. The size of the particles (10 microns or smaller, about 0.0004 inches or less) allows them to easily enter the lungs where they	Sources of PM_{10} include road dust, windblown dust, and construction. Also formed from other pollutants (acid rain, NO_X, SO_X, organics). Incomplete combustion of any fuel.	A consistent correlation between elevated ambient fine particulate matter (PM_{10} and $PM_{2.5}$) levels and an increase in mortality rates, respiratory infections, number and severity of asthma attacks and the number of hospital admissions has been observed in different parts of the United States and various areas around the world. In

Criteria Pollutant	Description	Sources	Health Effects
	may be deposited, resulting in adverse health effects. Additionally, it should be noted that PM_{10} is considered a criteria air pollutant. $PM_{2.5}$: A similar air pollutant to PM_{10} consisting of tiny solid or liquid particles which are 2.5 microns or smaller (which is often referred to as fine particles). These particles are formed in the atmosphere from primary gaseous emissions that include SO_4 formed from SO_2 release from power plants and industrial facilities and nitrates that are formed from NO_X release from power plants, automobiles, and other types of combustion sources. The chemical composition of fine particles highly depends on location, time of year, and weather conditions. $PM_{2.5}$ is a criteria air pollutant.	$PM_{2.5}$ comes from fuel combustion in motor vehicles, equipment, and industrial sources, residential and agricultural burning. Also formed from reaction of other pollutants (acid rain, NO_X, SO_X, organics).	recent years, some studies have reported an association between long-term exposure to air pollution dominated by fine particles and increased mortality, reduction in lifespan, and an increased mortality from lung cancer. Daily fluctuations in $PM_{2.5}$ concentration levels have also been related to hospital admissions for acute respiratory conditions in children, to school and kindergarten absences, to a decrease in respiratory lung volumes in children without asthma, and to increased medication use in children and adults with asthma. Recent studies show lung function growth in children is reduced with long term exposure to particulate matter. The elderly, people with pre-existing respiratory or cardiovascular disease, and children appear to be more susceptible to the effects of high levels of PM_{10} and $PM_{2.5}$.
VOC	VOCs are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. VOCs contribute to the formation of smog through atmospheric photochemical reactions and/or may be toxic. Compounds of carbon (also known as organic compounds) have different levels of reactivity; that is, they do not react at the same speed or do not form O_3 to the same extent when exposed to photochemical processes. VOCs often have an odor, and some examples include	Organic chemicals are widely used as ingredients in household products. Paints, varnishes, and wax all contain organic solvents, as do many cleaning, disinfecting, cosmetic, degreasing, and hobby products. Fuels are made up of organic chemicals. All of these products can	Breathing VOCs can irritate the eyes, nose, and throat, can cause difficulty breathing and nausea, and can damage the central nervous system as well as other organs. Some VOCs can cause cancer. Not all VOCs have all these health effects, though many have several.

Criteria Pollutant	Description	Sources	Health Effects
	gasoline, alcohol, and the solvents used in paints. Exceptions to the VOC designation include CO, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. VOCs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms VOC and ROG (see below) are used interchangeably.	release organic compounds while you are using them, and, to some degree, when they are stored.	
ROG	Similar to VOC, ROGs are also precursors in forming O_3 and consist of compounds containing methane, ethane, propane, butane, and longer chain hydrocarbons, which are typically the result of some type of combustion/decomposition process. Smog is formed when ROG and NO_X react in the presence of sunlight. ROGs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms ROG and VOC (see previous) are used interchangeably.	Sources similar to VOCs.	Health effects similar to VOCs.
Lead (Pb)	Pb is a heavy metal that is highly persistent in the environment and considered a criteria pollutant. In the past, the primary source of Pb in the air was emissions from vehicles burning leaded gasoline. The major sources of Pb emissions are ore and metals processing, particularly Pb smelters, and piston-engine aircraft operating on leaded aviation gasoline. Other stationary sources include waste incinerators, utilities, and lead-acid battery manufacturers. It should be noted that the Project does not include operational activities such as metal processing or Pb acid battery manufacturing. As such,	Metal smelters, resource recovery, leaded gasoline, deterioration of Pb paint.	Fetuses, infants, and children are more sensitive than others to the adverse effects of Pb exposure. Exposure to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased Pb levels are associated with increased blood pressure. Pb poisoning can cause anemia, lethargy, seizures, and death; although it appears that there are no direct effects of Pb on the

Criteria Pollutant	Description	Sources	Health Effects
	the Project is not anticipated to generate a quantifiable amount of Pb emissions.		respiratory system. Pb can be stored in the bone from early age environmental exposure, and elevated blood Pb levels can occur due to breakdown of bone tissue during pregnancy, hyperthyroidism (increased secretion of hormones from the thyroid gland) and osteoporosis (breakdown of bony tissue). Fetuses and breast-fed babies can be exposed to higher levels of Pb because of previous environmental Pb exposure of their mothers.
Odor	Odor means the perception experienced by a person when one or more chemical substances in the air come into contact with the human olfactory nerves (4).	Odors can come from many sources including animals, human activities, industry, nature, and vehicles.	Offensive odors can potentially affect human health in several ways. First, odorant compounds can irritate the eye, nose, and throat, which can reduce respiratory volume. Second, studies have shown that the VOCs that cause odors can stimulate sensory nerves to cause neurochemical changes that might influence health, for instance, by compromising the immune system. Finally, unpleasant odors can trigger memories or attitudes linked to unpleasant odors, causing cognitive and emotional effects such as stress.

2.5 EXISTING AIR QUALITY

Existing air quality is measured at established SCAQMD air quality monitoring stations. Monitored air quality is evaluated in the context of ambient air quality standards. These standards are the levels of air quality that are considered safe, with an adequate margin of safety, to protect the public health and welfare. National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) currently in effect are shown in Table 2-2 (5).

The determination of whether a region's air quality is healthful or unhealthful is determined by comparing contaminant levels in ambient air samples to the state and federal standards. At the time of this AQIA, the most recent state and federal standards were updated by CARB on May 4, 2016, and are presented in Table 2-2. The air quality in a region is considered to be in attainment by the state if the measured ambient air pollutant levels for O_3, CO (except 8-hour Lake Tahoe), SO_2 (1 and 24 hour), NO_2, PM_{10}, and $PM_{2.5}$ are not to be exceeded. All others are not to be equaled or exceeded. It should be noted that the three-year period is presented for informational purposes and is not the basis for how the state assigns attainment status. Attainment status for a pollutant means that the SCAQMD meets the standards set by the EPA or the California EPA (CalEPA). Conversely, nonattainment means that an area has monitored air quality that does not meet the NAAQS or CAAQS standards. In order to improve air quality in nonattainment areas, a State Implementation Plan (SIP) is drafted by CARB. The SIP outlines the measures that the state will take to improve air quality. Once nonattainment areas meet the standards and additional redesignation requirements, the EPA will designate the area as a maintenance area (6).

TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (1 OF 2)

Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards [1]		National Standards [2]		
		Concentration [3]	Method [4]	Primary [3,5]	Secondary [3,6]	Method [7]
Ozone (O_3)[8]	1 Hour	0.09 ppm (180 µg/m^3)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m^3)		0.070 ppm (137 µg/m^3)		
Respirable Particulate Matter (PM10)[9]	24 Hour	50 µg/m^3	Gravimetric or Beta Attenuation	150 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m^3		—		
Fine Particulate Matter (PM2.5)[9]	24 Hour	—	—	35 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m^3	Gravimetric or Beta Attenuation	12.0 µg/m^3	15 µg/m^3	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m^3)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m^3)		9 ppm (10 mg/m^3)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		—	—	
Nitrogen Dioxide (NO_2)[10]	1 Hour	0.18 ppm (339 µg/m^3)	Gas Phase Chemiluminescence	100 ppb (188 µg/m^3)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m^3)		0.053 ppm (100 µg/m^3)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1 Hour	0.25 ppm (655 µg/m^3)	Ultraviolet Fluorescence	75 ppb (196 µg/m^3)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m^3)	
	24 Hour	0.04 ppm (105 µg/m^3)		0.14 ppm (for certain areas)[11]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[11]	—	
Lead[12,13]	30 Day Average	1.5 µg/m^3	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m^3 (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m^3		
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	No National Standards		
Sulfates	24 Hour	25 µg/m^3	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24 Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

See footnotes on next page …

California Air Resources Board (5/4/16)

TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (2 OF 2)

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.
8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.
9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.
12. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
14. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

For more information please call ARB-PIO at (916) 322-2990 **California Air Resources Board (5/4/16)**

2.6 REGIONAL AIR QUALITY

Air pollution contributes to a wide variety of adverse health effects. The EPA has established NAAQS for seven of the most common air pollutants: CO, Pb, O_3, PM_{10}, $PM_{2.5}$, NO_2, and SO_2 which are known as criteria pollutants. The SCAQMD monitors levels of various criteria pollutants at 35 permanent monitoring stations and 2 single-pollutant source Pb air monitoring sites throughout the air district (7). On January 25, 2024, CARB adopted the proposed 2023 amendments to the state and national area designations. See Table 2-3 for attainment designations for the SCAB (8). Appendix 2.1 provides geographic representation of the state and federal attainment status for applicable criteria pollutants within the SCAB.

TABLE 2-3: ATTAINMENT STATUS OF CRITERIA POLLUTANTS IN THE SCAB

Criteria Pollutant	State Designation	Federal Designation
O_3 – 1-hour standard	Nonattainment	--
O_3 – 8-hour standard	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Attainment
$PM_{2.5}$	Nonattainment	Nonattainment
CO	Attainment	Unclassifiable/Attainment
NO_2	Attainment	Unclassifiable/Attainment
SO_2	Attainment	Unclassifiable/Attainment
Pb[1]	Attainment	Unclassifiable/Attainment

Note: See Appendix 2.1 for a detailed map of State/National Area Designations within the SCAB
"-" = The national 1-hour O_3 standard was revoked effective June 15, 2005.

2.7 LOCAL AIR QUALITY

The SCAQMD has designated general forecast areas and air monitoring areas (referred to as Source Receptor Areas [SRA]) throughout the district in order to provide Southern California residents about the air quality conditions. The Project site is located within SRA 33. Within SRA 33, the SCAQMD CA-60 Near Road monitoring station, located approximately 2.32 miles south of the Project site, is the nearest long-term air quality monitoring station and reports air quality statistics for NO_2 and $PM_{2.5}$. As the CA-60 Near Road monitoring station does not provide data for O_3, CO, or PM_{10}, the next nearest monitoring stations will be utilized. It should be noted that the following stations will be used to report air quality data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$.

- SRA 33 (CA-60 Near Road) – NO_2 and $PM_{2.5}$
- SRA 33 (I-10 Near Road) – CO
- SRA 34 (Central San Bernardino Valley 2) – O_3 and PM_{10}

[1] The Federal nonattainment designation for lead is only applicable towards the Los Angeles County portion of the SCAB.

It should be noted that data from I-10 Near Road and Central San Bernardino Valley 2 monitoring stations were utilized in lieu of the CA-60 Near Road monitoring station only in instances where data was not available.

The most recent three (3) years of data available is shown in Table 2-4 and identifies the number of days ambient air quality standards were exceeded for the study area, which is considered to be representative of the local air quality at the Project site. Data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$ for 2020 through 2022 was obtained from the SCAQMD Air Quality Data Tables (9). Additionally, data for SO_2 has been omitted as attainment is regularly met in the SCAB and few monitoring stations measure SO_2 concentrations.

TABLE 2-4: PROJECT AREA AIR QUALITY MONITORING SUMMARY 2020-2022

Pollutant	Standard	Year		
		2020	2021	2022
O_3				
Maximum Federal 1-Hour Concentration (ppm)		0.162	0.142	0.128
Maximum Federal 8-Hour Concentration (ppm)		0.128	0.112	0.105
Number of Days Exceeding State 1-Hour Standard	> 0.09 ppm	89	66	60
Number of Days Exceeding State/Federal 8-Hour Standard	> 0.070 ppm	128	101	103
CO				
Maximum Federal 1-Hour Concentration	> 35 ppm	1.5	2.8	1.3
Maximum Federal 8-Hour Concentration	> 20 ppm	1.2	1.4	1.0
NO_2				
Maximum Federal 1-Hour Concentration	> 0.100 ppm	0.102	0.080	0.085
Annual Federal Standard Design Value		0.029	0.030	0.029
PM_{10}				
Maximum Federal 24-Hour Concentration (µg/m^3)	> 150 µg/m^3	80	111	177
Annual Federal Arithmetic Mean (µg/m^3)		38.7	39.3	38.0
Number of Days Exceeding Federal 24-Hour Standard	> 150 µg/m^3	0	0	1
Number of Days Exceeding State 24-Hour Standard	> 50 µg/m^3	81	79	65
$PM_{2.5}$				
Maximum Federal 24-Hour Concentration (µg/m^3)	> 35 µg/m^3	53.1	65.4	41.8
Annual Federal Arithmetic Mean (µg/m^3)	> 12 µg/m^3	14.36	14.48	12.20
Number of Days Exceeding Federal 24-Hour Standard	> 35 µg/m^3	4	13	1

ppm = Parts Per Million
µg/m^3 = Microgram per Cubic Meter
Source: Data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$ was obtained from SCAQMD Air Quality Data Tables.

2.8 REGULATORY BACKGROUND

2.8.1 FEDERAL REGULATIONS

The EPA is responsible for setting and enforcing the NAAQS for O_3, CO, NO_X, SO_2, PM_{10}, and Pb (10). The EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (11). The CAA also mandates that states submit and implement SIPs for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions) (12) (13). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O_3, NO_2, SO_2, PM_{10}, CO, $PM_{2.5}$, and Pb. The NAAQS were amended in July 1997 to include an additional standard for O_3 and to adopt a NAAQS for $PM_{2.5}$. Table 2-3 (previously presented) provides the NAAQS within the SCAB.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and NO_X. NO_X is a collective term that includes all forms of NO_X which are emitted as byproducts of the combustion process.

2.8.2 CALIFORNIA REGULATIONS

CARB

CARB, which became part of CalEPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. AB 2595 mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. CARB established the CAAQS for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for SO_4, visibility, hydrogen sulfide (H_2S), and vinyl chloride (C_2H_3Cl). However, at this time, H_2S and C_2H_3Cl are not measured at any monitoring stations in the SCAB

because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (14) (10).

Local air quality management districts, such as the SCAQMD, regulate air emissions from stationary sources such as commercial and industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare Air Quality Management Plans (AQMP) that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;
- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g. motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a 5% or more annual reduction in emissions or 15% or more in a period of three years for ROGs, NO_X, CO and PM_{10}. However, air basins may use an alternative emission reduction strategy that achieves a reduction of less than 5% per year under certain circumstances.

TITLE 24 ENERGY EFFICIENCY STANDARDS AND CALIFORNIA GREEN BUILDING STANDARDS

California Code of Regulations (CCR) Title 24 Part 6: The California Energy Code was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption.

The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. CCR, Title 24, Part 11: California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect on August 1, 2009, and is administered by the California Building Standards Commission.

CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2022 California Green Building Code Standards that became effective on January 1, 2023. The CEC anticipates that the 2022 energy code will provide $1.5 billion in consumer benefits and reduce GHG emissions by 10 million metric tons (15). The Project would be required to comply with the applicable standards in place at the time plan check submittals are made. These require, among other items (16):

RESIDENTIAL MANDATORY MEASURES

- Electric vehicle (EV) charging stations. New construction shall comply with Section 4.106.4.1, 4.106.4.2, 4.106.4.3, to facilitate future installation and use of EV chargers. Electric vehicle supply equipment (EVSE) shall be installed in accordance with the *California Electrical Code*, Article 625. (4.106.4).

  - New one- and two-family dwellings and town-houses with attached private garages. For each dwelling unit, install a listed raceway to accommodate a dedicated 208/240-volt branch circuit. The raceway shall not be less than trade size 1 (nominal 1-inch inside diameter). The raceway shall originate at the main service or subpanel and shall terminate into a listed cabinet, box or other enclosure in close proximity to the proposed location of an EV charger. Raceways are required to be continuous at enclosed, inaccessible or concealed areas and spaces. The service panel and/or subpanel shall provide capacity to install a 40-ampere 208/240-volt minimum dedicated branch circuit and space(s) reserved to permit installation of a branch circuit overcurrent protective device.
  - New hotels and motels. All newly constructed hotels and motels shall provide EV spaces capable of supporting future installation of EVSE. The construction documents shall identify the location of the EV spaces. The number of required EV spaces shall be based on the total number of parking spaces provided for all types of parking facilities in accordance with Table 4.106.4.3.1.
- Water conserving plumbing fixtures and fittings. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with Sections 4.303.1.1, 4.303.1.2, 4.303.1.3, and 4.303.1.4.
- Outdoor potable water use in landscape areas. Residential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient Landscape Ordinance (MWELO), whichever is more stringent.
- Operation and maintenance manual. At the time of final inspection, a manual, compact disc, web-based reference or other media acceptable to the enforcing agency which includes all of the following shall be placed in the building:
  - Directions to the owner or occupant that the manual shall remain with the building throughout the life cycle of the structure.
  - Operations and maintenance instructions for the following:
    - Equipment and appliances, including water-saving devices and systems, HVAC systems, photovoltaic systems, EV chargers, water-heating systems and other major appliances and equipment.
    - Roof and yard drainage, including gutter and downspouts.
    - Space conditioning systems, including condensers and air filters.
    - Landscape irrigation systems.
    - Water reuse systems.
  - Information from local utility, water and waste recovery providers on methods to further reduce future resource consumption, including recycling programs and locations.
  - Public transportation and/or carpool options available in the area.
  - Educational material on the positive impacts of an interior relative humidity between 30-60% and what methods occupants may use to maintain the relative humidity level in that range.
  - Information about water-conserving landscape and irrigation design and controllers which conserve water.
  - Instructions for maintaining gutters and downspouts and the importance of diverting water at least 5 feet away from the foundation.

  - Information about state solar energy and incentive programs available.
  - A copy of all special inspection verifications required by the enforcing agency of this code.
  - Information from CALFIRE on maintenance of defensible space around residential structures.
- Any installed gas fireplace shall be direct-vent sealed-combustion type. Any installed woodstove or pellet stove shall comply with U.S. EPA New Source Performance Standards (NSPS) emission limits as applicable, and shall have a permanent label indicating they are certified to meet the emission limits. Woodstoves, pellet stoves and fireplaces shall also comply with applicable local ordinances.
- Paints and coatings. Architectural paints and coatings shall comply with VOC limits in Table 1 of the CARB Architectural Suggested Control Measure, as shown in Table 4.504.3, unless more stringent local limits apply. The VOC content limit for coatings that do not meet the definitions for the specialty coatings categories listed in Table 4.504.3 shall be determined by classifying the coating as a Flat, Nonflat, or Nonflat-high Gloss coating, based on its glass, as defined in subsections 4.21, 4.36, and 4.37 of the 2007 CARB, Suggested Control Measure, and the corresponding Flat, Nonflat, Nonflat-high Gloss VOC limit in Table 4.504.3 shall apply.

2.8.3 AQMP

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMP to meet the state and federal ambient air quality standards (17). AQMPs are updated regularly to ensure an effective reduction in emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. A detailed discussion on the AQMP and Project consistency with the AQMP is provided in Section 3.10.

This page intentionally left blank

3 PROJECT AIR QUALITY IMPACT

3.1 INTRODUCTION

This study quantifies air quality emissions generated by construction and operation of the Project and addresses whether the Project conflicts with implementation of the SCAQMD's AQMP. The analysis of Project-generated air emissions determines whether the Project would result in a cumulatively considerable net increase of any criteria pollutant for which the SCAB is in non-attainment under an applicable NAAQS and CAAQS. Additionally, the Project has been evaluated to determine whether it would expose sensitive receptors to substantial pollutant concentrations and the impacts of odors. The significance of these potential impacts is described in the following sections.

3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the *CEQA Guidelines* (14 CCR §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (1):

- Conflict with or obstruct implementation of the applicable air quality plan.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.
- Expose sensitive receptors to substantial pollutant concentrations.
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The SCAQMD has also developed regional significance thresholds for other regulated pollutants, as summarized at Table 3-1 (18). The SCAQMD's *CEQA Air Quality Significance Thresholds* (March 2023) indicate that any projects in the SCAB with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 3-1: MAXIMUM DAILY REGIONAL EMISSIONS THRESHOLDS

Pollutant	Regional Construction Threshold	Regional Operational Thresholds
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Pb	3 lbs/day	3 lbs/day

lbs/day = Pounds Per Day

3.3 MODELS EMPLOYED TO ANALYZE AIR QUALITY

3.3.1 CALEEMOD

Land uses such as the Project affect air quality through construction-source and operational-source emissions.

In August 2023, the California Air Pollution Control Officers Association (CAPCOA) in conjunction with other California air districts including the SCAQMD, released the latest version of the California Emissions Estimator Model (CalEEMod) version 2022.1.1.22. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and greenhouse gas (GHG) emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (19). Accordingly, the latest version of CalEEMod has been used for this Project to determine construction and operational air quality emissions. Output from the model runs for both construction and operational activity are provided in Appendix 3.1.

3.4 CONSTRUCTION EMISSIONS

3.4.1 CONSTRUCTION ACTIVITIES

Construction activities associated with the Project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Construction-related emissions are expected from the following construction activities:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

GRADING ACTIVITIES

Dust is typically a major concern during grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called “fugitive emissions.” Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). CalEEMod was utilized to calculate fugitive dust emissions resulting from this phase of activity. Per client-provided data, the Project would require 130,000 cubic yards of export for earthwork activities.

ON-ROAD TRIPS

Construction generates on-road vehicle emissions from vehicle usage for workers, vendors, and haul trucks commuting to and from the site. The number of worker, vendor, and hauling trips are presented below in Table 3-2. Worker trips are based on CalEEMod defaults. It should be noted that for vendor trips, specifically, CalEEMod only assigns vendor trips to the Building Construction

phase. Vendor trips would likely occur during all phases of construction. As such, the CalEEMod defaults for vendor trips have been adjusted based on a ratio of the total vendor trips to the number of days of each subphase of activity.

TABLE 3-2: CONSTRUCTION TRIP ASSUMPTIONS

Construction Activity	Worker Trips Per Day	Vendor Trips Per Day	Hauling Trips Per Day
Site Preparation	18	5	0
Grading	20	16	542
Building Construction	456	157	0
Paving	15	0	0
Architectural Coating	91	0	0

3.4.2 CONSTRUCTION DURATION

For purposes of analysis, construction of Project is expected to commence June 2026 and would last through September 2025. The construction schedule utilized in the analysis, shown in Table 3-3, represents a "conservative" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent.[2] The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per *CEQA Guidelines* (1).

TABLE 3-3: CONSTRUCTION DURATION

Construction Activity	Start Date	End Date	Working Days
Site Preparation	6/3/2024	6/14/2024	10
Grading	6/17/2024	7/26/2024	30
Building Construction	7/29/2024	9/19/2025	300
Paving	8/25/2025	9/19/2025	20
Architectural Coating	5/19/2025	9/19/2025	90

3.4.3 CONSTRUCTION EQUIPMENT

Consistent with industry standards and typical construction practices, each piece of equipment listed in Table 3-4 is assumed to operate up to a total of eight (8) hours per day, or more than two-thirds of the period during which construction activities are allowed pursuant to the City code.

[2] As shown in the CalEEMod User's Guide Version 2022, Appendix G "Table G-11. Statewide Average Annual Offoad Equipment Emission Factors" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

TABLE 3-4: CONSTRUCTION EQUIPMENT ASSUMPTIONS

Construction Activity	Equipment[1]	Amount	Hours Per Day
Site Preparation	Rubber Tired Dozers	3	8
	Crawler Tractors	4	8
Grading	Graders	1	8
	Excavators	2	8
	Scrapers	2	8
	Rubber Tired Dozers	1	8
	Crawler Tractors	1	8
Building Construction	Forklifts	2	8
	Generator Sets	3	8
	Cranes	1	8
	Welders	1	8
	Tractors/Loaders/Backhoes	1	8
Paving	Pavers	2	8
	Paving Equipment	2	8
	Rollers	2	8
Architectural Coating	Air Compressors	1	8

[1] In order to account for fugitive dust emissions, Crawler Tractors were used in lieu of Tractors/Loaders/Backhoes during the site preparation and grading phases of Project construction.

3.4.4 CONSTRUCTION EMISSIONS SUMMARY

IMPACTS WITHOUT MITIGATION

The estimated maximum daily construction emissions without mitigation are summarized in Table 3-5. Detailed construction model outputs are presented in Appendix 3.1. Under the assumed scenarios, emissions resulting from the Project construction would not exceed criteria pollutant thresholds established by the SCAQMD.

TABLE 3-5: OVERALL CONSTRUCTION EMISSIONS SUMMARY – WITHOUT MITIGATION

Year	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2024	4.86	85.10	59.57	0.32	15.68	5.96
2025	39.43	27.80	72.35	0.08	9.62	2.95

Year	Emissions (lbs/day)					
	VOC	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
Winter						
2024	3.67	20.66	46.45	0.06	7.91	2.33
2025	3.30	19.14	43.84	0.06	7.84	2.27
Maximum Daily Emissions	**39.43**	**85.10**	**72.35**	**0.32**	**15.68**	**5.96**
SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Source: CalEEMod construction-source (unmitigated) emissions are presented in Appendix 3.1

3.5 OPERATIONAL EMISSIONS

Operational activities associated with the Project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Operational emissions are expected from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions

3.5.1 AREA SOURCE EMISSIONS

ARCHITECTURAL COATINGS

Over a period of time, the Project buildings would require maintenance and would therefore produce emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings. The emissions associated with architectural coatings were calculated using CalEEMod.

CONSUMER PRODUCTS

Consumer products include, but are not limited to, detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants. The emissions associated with use of consumer products were calculated based on defaults provided within CalEEMod.

LANDSCAPE MAINTENANCE EQUIPMENT

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. It should be noted that on October 9, 2021, Governor Gavin Newsom signed AB 1346. The bill aims to ban the sale of new gasoline-powered equipment under 25 gross horsepower (known as small off-road engines [SOREs]) by January 1, 2024, which is now in effect. However, for purposes of analysis, the emissions associated with landscape maintenance

equipment were calculated based on assumptions provided in CalEEMod, and do not incorporate the emissions reductions that would be realized from implementation of AB 1346.

3.5.2 Energy Source Emissions

Combustion Emissions Associated with Natural Gas and Electricity

Electricity and natural gas are used by almost every project. Criteria pollutant emissions are emitted through the generation of electricity and consumption of natural gas. However, because electrical generating facilities for the Project area are located either outside the region (state) or offset through the use of pollution credits (RECLAIM) for generation within the SCAB, criteria pollutant emissions from offsite generation of electricity are excluded from the evaluation of significance. Electricity and natural gas usage associated with the Project was calculated by CalEEMod using default parameters.

3.5.3 Mobile Source Emissions

The Project related air quality emissions derive primarily from vehicle trips associated with the Project, including employee trips and commercial trips to and from the site associated with the proposed uses. Trip characteristics available from the *Empire Groves Hotel Traffic Impact Analysis* were utilized in this analysis (20).

Fugitive Dust Related to Vehicular Travel

Vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of brake and tire wear particulates. The emissions estimate for travel on paved roads was calculated using CalEEMod.

3.5.4 Operational Emissions Summary

Operational activities for summer and winter scenarios are presented in Table 3-6. The estimated operational-source emissions are summarized in Table 3-6. Detailed operation model outputs for the Project are presented in Appendix 3.1. Project operational activities would not exceed the numerical thresholds of significance established by the SCAQMD for emissions of any criteria pollutant. As such, operational impacts would be considered less-than-significant.

TABLE 3-6: SUMMARY OF PEAK OPERATIONAL EMISSIONS

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
Mobile Source	19.66	18.24	172.16	0.41	35.25	9.14
Area Source	23.33	0.40	47.22	0.00	0.08	0.06
Energy Source	0.29	5.21	4.38	0.03	0.40	0.40
Project Maximum Daily Emissions	**43.28**	**23.84**	**223.76**	**0.44**	**35.73**	**9.60**
SCAQMD Regional Threshold	55	55	550	150	150	55
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**
Winter

3.6 LOCALIZED SIGNIFICANCE

BACKGROUND ON LST DEVELOPMENT

The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs).

The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4.[3] LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

[3] The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

LSTs were developed in response to environmental justice and health concerns raised by the public regarding exposure of individuals to criteria pollutants in local communities. To address the issue of localized significance, the SCAQMD adopted LSTs that show whether a project would cause or contribute to localized air quality impacts and thereby cause or contribute to potential localized adverse health effects. The analysis makes use of methodology included in the *LST Methodology* (21).

EMISSIONS CONSIDERED

Based on SCAQMD's *LST Methodology*, emissions for concern during construction activities are on-site NO_X, CO, $PM_{2.5}$, and PM_{10}. The *LST Methodology* clearly states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs (22)." As such, for purposes of the construction LST analysis, only emissions included in the CalEEMod "on-site" emissions outputs were considered.

DISPERSION MODELING

In order to estimate localized pollutant concentrations resulting from Project construction, the SCAQMD-approved American Meteorological Society/EPA Regulatory Model (AERMOD) dispersion model was utilized. The modeling approach utilized is discussed as follows:

SOURCES

It should be noted that in order to model worst-case conditions, the highest daily peak on-site emissions resulting from overlapping construction activity were modeled.

A ground level release height and a 1 meter (approximately 3.28 feet) initial vertical dimension (sigma z) were utilized for fugitive dust emissions of PM_{10} and $PM_{2.5}$ consistent with SCAQMD's LST guidance.

In order to account for equipment exhaust emissions from NO_2, CO, PM_{10}, and $PM_{2.5}$ a release height of 5.0 meters was utilized consistent with SCAQMD's LST guidance.

METEOROLOGICAL DATA AND MODEL OPTIONS

In order to account for meteorological conditions at the Project site, meteorological data from the SCAQMD's Ontario Airport monitoring station was utilized, as this is the nearest station to the Project site for which meteorological data is available. Additionally, a receptor height of 2 meters and regulatory default options were utilized consistent with SCAQMD's LST guidance.

RECEPTORS

As previously stated, LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable NAAQS and CAAQS at the nearest residence or sensitive receptor. Receptor locations are off-site locations where individuals may be exposed to emissions from Project activities.

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly,

and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as "sensitive receptors." These structures typically include uses such as residences, hotels, and hospitals where an individual can remain for 24 hours. Consistent with the LST Methodology, the nearest land use where an individual could remain for 24 hours to the Project site has been used to determine construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$, since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time.

LSTs apply, even for non-sensitive land uses, consistent with *LST Methodology* and SCAQMD guidance. Per the *LST Methodology*, commercial and industrial facilities are not included in the definition of sensitive receptor because employees and patrons do not typically remain on-site for a full 24 hours but are typically on-site for 8 hours or less. However, *LST Methodology* explicitly states that "*LSTs based on shorter averaging periods, such as the NO_2 and CO LSTs, could also be applied to receptors such as industrial or commercial facilities since it is reasonable to assume that a worker at these sites could be present for periods of one to eight hours* (22)." Therefore, any adjacent land use where an individual could remain for 1 or 8 hours, that is located at a closer distance to the Project site than the receptor used for PM_{10} and $PM_{2.5}$ analysis, must be considered to determine construction and operational LST air impacts for emissions of NO_2 and CO since these pollutants have an averaging time of 1 and 8 hours.

PROJECT-RELATED RECEPTORS

Receptors in the Project study area are described below and shown in Exhibit 3-B. Localized air quality impacts were evaluated at sensitive receptor land uses nearest the Project site. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site.

- R1: Location R1 represents the Ontario Gateway Hotel at 2200 E Holt Blvd, approximately 176 feet west of the Project site.
- R2: Location R2 represents the existing residence at 304 N Placer Privado, approximately 2,802 feet north of the Project site.
- R3: Location R3 represents the existing building of Holiday Inn Ontario Airport at 2155 E Convention Center Way, approximately 237 feet north of the Project site.
- R4: Location R4 represents the existing residence at 2505 E Date Palm Paseo, approximately 1,968 feet north of the Project site.
- R5: Location R5 represents the existing residence at 710 Via Dolcetto, approximately 3,593 feet northeast of the Project site.
- R6: Location R6 represents the Frontier Center at 2151 E Convention Center Way, approximately 232 feet north of the Project site.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining a Project's impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time).

EXHIBIT 3-B: RECEPTOR LOCATIONS

3.7 CONSTRUCTION-SOURCE EMISSIONS LST ANALYSIS

Emissions during the peak construction activity will not exceed the SCAQMD's localized significance thresholds at the maximally exposed receptor location, as illustrated in Table 3-7 (without mitigation). All other modeled locations in the study area would experience a lesser concentration and consequently a lesser impact. As such, the Project's localized impacts during construction activity would be less than significant. AERMOD model outputs are provided in Appendix 3.5 (without mitigation).

TABLE 3-7: LOCALIZED SIGNIFICANCE SUMMARY PEAK CONSTRUCTION – WITHOUT MITIGATION

Peak Construction	CO		NO_2	PM_{10}	$PM_{2.5}$
	Averaging Time				
	1-Hour	8-Hour	1-Hour	24-Hours	24-Hours
Peak Day Localized Emissions	0.05	0.03	3.66E-02	2.72	1.57
Background Concentration [A]	1.30	1.00	0.085		
Total Concentration	**1.35**	**1.03**	**0.12**	**2.72**	**1.57**
SCAQMD Localized Significance Threshold	20	9	0.18	10.4	10.4
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**

[A] Highest concentration from the last three years of available data.
Notes: PM_{10} and $PM_{2.5}$ concentrations are expressed in $\mu g/m^3$. All others are expressed in ppm.
Based on SCAQMD's LST Methodology, background concentrations are considered only for CO and NO_2.

3.8 OPERATIONAL-SOURCE EMISSIONS LST ANALYSIS

The Project consists of a hotel that includes 600 rooms and suites, 2 ballrooms, a spa & fitness center, meeting and conference rooms as well as an outdoor pool and event lawn on 10.43 acres.

According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The proposed Project does not include such uses, and thus, due to the lack of significant stationary source emissions, no long-term localized significance threshold analysis is needed.

3.9 CO "HOT SPOT" ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific CO "hot spots" is not needed to reach this conclusion. An adverse CO concentration, known as a "hot spot," would occur if an exceedance of the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur.

It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in

California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment. To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any violation of CO standards, as shown in Table 3-8.

TABLE 3-8: CO MODEL RESULTS

Intersection Location	CO Concentrations (ppm)		
	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire Boulevard/Veteran Avenue	4.6	3.5	3.7
Sunset Boulevard/Highland Avenue	4	4.5	3.5
La Cienega Boulevard/Century Boulevard	3.7	3.1	5.2
Long Beach Boulevard/Imperial Highway	3	3.1	8.4

Source: 2003 AQMP, Appendix V: Modeling and Attainment Demonstrations
Notes: Federal 1-hour standard is 35 ppm and the deferral 8-hour standard is 9.0 ppm.

Based on the SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (*1992 CO Plan*), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of traffic volumes and congestion at a particular intersection. As evidence of this, for example, 8.4 ppm 8-hour CO concentration measured at the Long Beach Blvd. and Imperial Hwy. intersection (highest CO generating intersection within the "hot spot" analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 7.7 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared (23). In contrast, an adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur.

The ambient 1-hour and 8-hour CO concentration within the Project study area is estimated to be 1.3 ppm and 1.0 ppm, respectively (data from CA-60 Near Road monitoring station for 2022). Therefore, even if the traffic volumes for the proposed Project were double or even triple the traffic volumes generated at the Long Beach Blvd. and Imperial Hwy. intersection, coupled with the on-going improvements in ambient air quality, the Project would not be capable of resulting in a CO "hot spot" at any study area intersections.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour (vph)—or 24,000 vph where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (24). Traffic volumes generating the CO concentrations for the "hot spot"

analysis is shown in Table 3-9. The busiest intersection evaluated was at Wilshire Boulevard and Veteran Avenue, which has a daily traffic volume of approximately 100,000 vph and AM/PM traffic volumes of 8,062 vph and 7,719 vph respectively (23). The *2003 AQMP* estimated that the 1-hour concentration for this intersection was 4.6 ppm; this indicates that, should the daily traffic volume increase four times to 400,000 vehicles per day, CO concentrations (4.6 ppm x 4= 18.4 ppm) would still not likely exceed the most stringent 1-hour CO standard (20.0 ppm).[4]

TABLE 3-9: TRAFFIC VOLUMES

Intersection Location	Peak Traffic Volumes (vph)				
	Eastbound (AM/PM)	Westbound (AM/PM)	Southbound (AM/PM)	Northbound (AM/PM)	Total (AM/PM)
Wilshire Boulevard/Veteran Avenue	4,954/2,069	1,830/3,317	721/1,400	560/933	8,062/7,719
Sunset Boulevard/Highland Avenue	1,417/1,764	1,342/1,540	2,304/1,832	1,551/2,238	6,614/5,374
La Cienega Boulevard/Century Boulevard	2,540/2,243	1,890/2,728	1,384/2,029	821/1,674	6,634/8,674
Long Beach Boulevard/Imperial Highway	1,217/2,020	1,760/1,400	479/944	756/1,150	4,212/5,514

Source: 2003 AQMP

3.10 AQMP

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743-square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of was previoulsy referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the SCAG, county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In December 2022, the SCAQMD released the *Final 2022 AQMP* (*2022 AQMP*). The *2022 AQMP* continues to evaluate current integrated strategies and control measures to meet the CAAQS, as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (25). Similar to the 2016 AQMP, the *2022 AQMP* incorporates scientific and technological information and planning assumptions, including the *2020-2045 RTP/SCS*, a planning document that supports the integration of land use and transportation to help the region meet the federal CAA requirements

[4] Based on the ratio of the CO standard (20.0 ppm) and the modeled value (4.6 ppm)

(26). The Project's consistency with the AQMP will be determined using the *2022 AQMP* as discussed below.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the *1993 CEQA Handbook* (27). These indicators are discussed below:

3.10.1 CONSISTENCY CRITERION NO. 1

The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations that Consistency Criterion No. 1 refer to are the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded.

Construction Impacts – Consistency Criterion 1

As evaluated, the Project's localized and regional construction-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected.

Operational Impacts – Consistency Criterion 1

As evaluated, the Project's localized and regional operation-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected.

On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

3.10.2 CONSISTENCY CRITERION NO. 2

The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The *2022 AQMP* demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Ontario General Plan is considered to be consistent with the AQMP***.***

Construction Impacts – Consistency Criterion 2

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, a less than significant impact would result.

Operational Impacts – Consistency Criterion 2

The TOP 2050 adopted by the City in August 2022, designates the Project site as "Mixed Use – Multimodal" land uses. The "Mixed-Use" designation allows for a maximum FAR of 1.0 for office and retail uses. Intensive office, retail, and residential uses are envisioned to be integrated with the future multimodal transit station that is under consideration, which links rail, regional, local and Airport transit (28).

The proposed Project includes the development of a hotel with 600 rooms and suites, 2 ballrooms, a spa & fitness center, meeting and conference rooms as well as an outdoor pool and event lawn on 10.43 acres. Since the Project's proposed land use is consistent with the General Plan and as the Project's construction and operational-source air pollutant emissions would not exceed the regional or localized significance thresholds, the Project is determined to be consistent with the second criterion.

On the basis of the preceding discussion, the Project is determined to be consistent with the AQMP and a less than significant impact is expected.

AQMP Consistency Conclusion

The Project would not have the potential to result in or cause NAAQS or CAAQS violations. The Project's proposed uses are consistent with the General Plan land use designation and the Project would not exceed the regional or localized construction and operational thresholds. As such, the Project is considered to be consistent with the AQMP.

3.11 Potential Impacts to Sensitive Receptors

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Results of the LST analysis indicate that the Project will not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction.

Additionally, the Project will not exceed the SCAQMD localized significance thresholds during operational activity. Further Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of Project operations.

3.11.1 Friant Ranch Case

In December 2018, in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, the California Supreme Court held that an Environmental Impact Report's (EIR) air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided.

Most local agencies, including the City of Perris, lack the data to do their own assessment of potential health impacts from criteria air pollutant emissions, as would be required to establish customized, locally-specific thresholds of significance based on potential health impacts from an individual development project. The use of national or "generic" data to fill the gap of missing local data would not yield accurate results because such data does not capture local air patterns,

local background conditions, or local population characteristics, all of which play a role in how a population experiences air pollution. Because it is impracticable to accurately isolate the exact cause of a human disease (for example, the role a particular air pollutant plays compared to the role of other allergens and genetics in causing asthma), existing scientific tools cannot accurately estimate health impacts of the Project's air emissions without undue speculation. Instead, readers are directed to the Project's air quality impact analysis above, which provides extensive information concerning the quantifiable and non-quantifiable health risks related to the Project's construction and long-term operation.

Notwithstanding, this AQIA does evaluate the proposed Project's localized impact to air quality for emissions of CO, NO_X, PM_{10}, and $PM_{2.5}$ by comparing the proposed project's on-site emissions to the SCAQMD's applicable LST thresholds. The LST analysis above determined that the Project would not result in emissions exceeding SCAQMD's LSTs. Therefore, the proposed Project would not be expected to exceed the most stringent applicable federal or state ambient air quality standards for emissions of CO, NO_X, PM_{10}, and $PM_{2.5}$.

As the Project's emissions would comply with federal, state, and local air quality standards, the proposed Project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level and would not provide a reliable indicator of health effects if modeled.

3.12 ODORS

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming);
- Wastewater treatment plants;
- Food processing plants;
- Chemical plants;
- Composting operations;
- Refineries;
- Landfills;
- Dairies; and
- Fiberglass molding facilities.

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated

refuse would be stored in covered containers and removed at regular intervals in compliance with current solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors and other emissions (such as those leading to odors) associated with construction and operations activities of the proposed Project would be less than significant and no mitigation is required (29).

3.13 CUMULATIVE IMPACTS

As previously shown in Table 2-3, the CAAQS designate the Project site as nonattainment for O_3 PM_{10}, and $PM_{2.5}$ while the NAAQS designates the Project site as nonattainment for O_3 and $PM_{2.5}$.

The SCAQMD has published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (30). In this report the SCAQMD clearly states (Page D-3):

> *"…the SCAQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for TAC emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*
>
> *Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions exceeding the SCAQMD's thresholds would also not cause a cumulatively considerable increase in emissions for those pollutants for which SCAB is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds would be considered cumulatively considerable.

CONSTRUCTION IMPACTS

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project construction-source emissions would be considered less than significant on a Project-specific and cumulative basis.

OPERATIONAL IMPACTS

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project operation-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project operation-source emissions would be considered less than significant on a project-specific and cumulative basis.

APPENDIX 2.1:

STATE/FEDERAL ATTAINMENT STATUS OF CRITERIA POLLUTANTS

Appendix C
Maps and Tables of Area Designations for State and National Ambient Air Quality Standards

Appendix C
Maps and Tables of Area Designations for State and National Ambient Air Quality Standards

This attachment fulfills the requirement of Health and Safety Code section 40718 for CARB to publish maps that identify areas where one or more violations of any State ambient air quality standard (State standard) or national ambient air quality standard (national standard) have been measured. The national standards are those promulgated under section 109 of the federal Clean Air Act (42 U.S.C. 7409).

This attachment is divided into three parts. The first part comprises a table showing the levels, averaging times, and measurement methods for each of the State and national standards. This is followed by a section containing maps and tables showing the area designations for each pollutant for which there is a State standard in the California Code of Regulations, title 17, section 70200. The last section contains maps and tables showing the most current area designations for the national standards.

(Updated 5/4/16)

Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards [1]		National Standards [2]		
		Concentration [3]	Method [4]	Primary [3,5]	Secondary [3,6]	Method [7]
Ozone (O_3)[8]	1 Hour	0.09 ppm (180 µg/m³)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m³)		0.070 ppm (137 µg/m³)		
Respirable Particulate Matter (PM10)[9]	24 Hour	50 µg/m³	Gravimetric or Beta Attenuation	150 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m³		—		
Fine Particulate Matter (PM2.5)[9]	24 Hour	—	—	35 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	12.0 µg/m³	15 µg/m³	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m³)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m³)		9 ppm (10 mg/m³)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m³)		—	—	
Nitrogen Dioxide (NO_2)[10]	1 Hour	0.18 ppm (339 µg/m³)	Gas Phase Chemiluminescence	100 ppb (188 µg/m³)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m³)		0.053 ppm (100 µg/m³)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1 Hour	0.25 ppm (655 µg/m³)	Ultraviolet Fluorescence	75 ppb (196 µg/m³)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m³)	
	24 Hour	0.04 ppm (105 µg/m³)		0.14 ppm (for certain areas)[11]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[11]	—	
Lead[12,13]	30 Day Average	1.5 µg/m³	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m³ (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m³		
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	**No National Standards**		
Sulfates	24 Hour	25 µg/m³	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m³)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24 Hour	0.01 ppm (26 µg/m³)	Gas Chromatography			

See footnotes on next page ...

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1- and 24-hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.

3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.

5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

7. Reference method as described by the U.S. EPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the U.S. EPA.

8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

12. The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$)as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

14. In 1989, the CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

Area Designations for the State Ambient Air Quality Standards

The following maps and tables show the area designations for each pollutant with a State standard set forth in the California Code of Regulations, title 17, section 60200. Each area is identified as attainment, nonattainment, nonattainment-transitional, or unclassified for each pollutant, as shown below:

Designation	Abbreviation
Attainment	A
Nonattainment	N
Nonattainment-Transitional	NA-T
Unclassified	U

In general, CARB designates areas by air basin for pollutants with a regional impact and by county for pollutants with a more local impact. However, when there are areas within an air basin or county with distinctly different air quality deriving from sources and conditions not affecting the entire air basin or county, CARB may designate a smaller area. Generally, when boundaries of the designated area differ from the air basin or county boundaries, the description of the specific area is referenced at the bottom of the summary table.

[1] AB 3048 (Olberg) and AB 2525 (Miller) signed into law in 1996, made changes to Health and Safety Code, section 40925.5. One of the changes allows nonattainment districts to become nonattainment-transitional for ozone by operation of law.

Area Designations for the National Ambient Air Quality Standards

The following maps and tables show the area designations for each pollutant with a national ambient air quality standard. Additional information about the federal area designations is available on the U.S. EPA website:

https://www.epa.gov/green-book

Over the last several years, U.S. EPA has been reviewing the levels of the various national standards. The agency has already promulgated new standard levels for some pollutants and is considering revising the levels for others. Information about the status of these reviews is available on the U.S. EPA website:

https://www.epa.gov/criteria-air-pollutants

Designation Categories

Suspended Particulate Matter (PM_{10}). The U.S. EPA uses three categories to designate areas with respect to PM_{10}:

- Attainment (A)
- Nonattainment (N)
- Unclassifiable (U)

Ozone, Fine Suspended Particulate Matter ($PM_{2.5}$), Carbon Monoxide (CO), and Nitrogen Dioxide (NO_2). The U.S. EPA uses two categories to designate areas with respect to these standards:

- Nonattainment (N)
- Unclassifiable/Attainment (U/A)

The national 1-hour ozone standard was revoked effective June 15, 2005, and the area designations map reflects the 2015 national 8-hour ozone standard of 0.070 ppm. Area designations were finalized on August 3, 2018.

On December 14, 2012, the U.S. EPA established a new national annual primary $PM_{2.5}$ standard of 12.0 µg/m^3. Area designations were finalized in December 2014. The current designation map reflects the most recently revised (2012) annual average standard of 12.0 µg/m^3 as well as the 24-hour standard of 35 µg/m^3, revised in 2006.

On January 22, 2010, the U.S. EPA established a new national 1-hour NO_2 standard of 100 parts per billion (ppb) and retained the annual average standard of 53 ppb. Designations for the primary NO_2 standard became effective on February 29, 2012. All areas of California meet this standard.

Sulfur Dioxide (SO_2). The U.S. EPA uses three categories to designate areas with respect to the 24-hour and annual average sulfur dioxide standards. These designation categories are:

- Nonattainment (N),
- Unclassifiable (U), and
- Unclassifiable/Attainment (U/A).

On June 2, 2010, the U.S. EPA established a new primary 1-hour SO_2 standard of 75 parts per billion (ppb). At the same time, U.S. EPA revoked the 24-hour and annual average standards. Area designations for the 1-hour SO_2 standard were finalized on December 21, 2017 and are reflected in the area designations map.

Lead (particulate). The U.S. EPA promulgated a new rolling 3-month average lead standard in October 2008 of 0.15 $\mu g/m^3$. Designations were made for this standard in November 2010.

Designation Areas

From time to time, the boundaries of the California air basins have been changed to facilitate the planning process. CARB generally initiates these changes, and they are not always reflected in the U.S. EPA's area designations. For purposes of consistency, the maps in this attachment reflect area designation boundaries and nomenclature as promulgated by the U.S. EPA. In some cases, these may not be the same as those adopted by CARB. For example, the national area designations reflect the former Southeast Desert Air Basin. In accordance with Health and Safety Code section 39606.1, CARB redefined this area in 1996 to be the Mojave Desert Air Basin and Salton Sea Air Basin. The definitions and boundaries for all areas designated for the national standards can be found in Title 40, Code of Federal Regulations (CFR), Chapter I, Subchapter C, Part 81.305. They are available on the web at: *https://ecfr.io/Title-40/se40.20.81_1305*

---

[1] For this purpose, the Sacramento Metro Area comprises all of Sacramento and Yolo Counties, the Sacramento Valley Air Basin portion of Solano County, the southern portion of Sutter County, and the Sacramento Valley and Mountain Counties Air Basins portions of Placer and El Dorado counties.

[2] South Central Coast Air Basin Channel Islands:
Santa Barbara County includes Santa Cruz, San Miguel, Santa Rosa, and Santa Barbara Islands.
Ventura County includes Anacapa and San Nicolas Islands.
South Coast Air Basin:
Los Angeles County includes San Clemente and Santa Catalina Islands.

[1] Air quality in Sacramento County meets the national PM_{10} standards. The request for redesignation to attainment was approved by U.S. EPA in September 2013.

[2] The request for redesignation to attainment for the Imperial Valley Planning Area was approved by U.S. EPA in September 2020, effective October 2020.

* Definitions and references for all areas can be found in 40 CFR, Chapter I, Part 81.305. This map reflects the 2006 24-hour $PM_{2.5}$ standard as well as the 1997 and 2012 $PM_{2.5}$ annual standards.

[1] For this purpose, Sacramento Metro Area comprises all of Sacramento and portions of El Dorado, Placer, Solano, and Yolo Counties. Air quality in this area meets the national $PM_{2.5}$ standards. A Determination of Attainment for the 2006 24-hour $PM_{2.5}$ standard was made by U.S. EPA in June 2017.

[2] Air quality in this area meets the national $PM_{2.5}$ standards. A Determination of Attainment for the 2006 24-hour $PM_{2.5}$ standard was made by U.S. EPA in June 2017.

[3] Those lands of the Santa Rosa Band of Cahulla Mission Indians in Riverside County are designated Unclassifiable/Attainment.

[4] That portion of Imperial County encompassing the urban and surrounding areas of Brawley, Calexico, El Centro, Heber, Holtville, Imperial, Seeley, and Westmorland. Air quality in this area meets the national $PM_{2.5}$ standards. A Determination of Attainment for the 2006 24-hour $PM_{2.5}$ standard was made by U.S. EPA in June 2017.

APPENDIX 3.1:

CALEEMOD PROJECT EMISSIONS MODEL OUTPUTS

15693 - Guasti and Holt Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

3. Construction Emissions Details

3.1. Site Preparation (2024) - Unmitigated

3.3. Grading (2024) - Unmitigated

3.5. Building Construction (2024) - Unmitigated

3.7. Building Construction (2025) - Unmitigated

3.9. Paving (2025) - Unmitigated

3.11. Architectural Coating (2025) - Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

2906

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	15693 - Guasti and Holt
Construction Start Date	6/3/2024
Operational Year	2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.80
Precipitation (days)	20.8
Location	34.064251, -117.602592
County	San Bernardino-South Coast
City	Ontario
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5246
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
								2910

Hotel	600	Room	6.90	649,498	0.00	—	—	—
Enclosed Parking with Elevator	436	1000sqft	3.53	436,410	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	20.2	annual days of extreme heat
Extreme Precipitation	5.10	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	88.8
AQ-PM	97.4
AQ-DPM	86.0
Drinking Water	93.3
Lead Risk Housing	97.4
Pesticides	14.9
Toxic Releases	71.7
Traffic	47.3
Effect Indicators	—
CleanUp Sites	96.3

2944

Groundwater	83.7
Haz Waste Facilities/Generators	96.6
Impaired Water Bodies	43.8
Solid Waste	92.8
Sensitive Population	—
Asthma	70.1
Cardio-vascular	82.9
Low Birth Weights	67.4
Socioeconomic Factor Indicators	—
Education	95.7
Housing	89.8
Linguistic	96.3
Poverty	94.2
Unemployment	19.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	5.184139612
Employed	38.86821506
Median HI	6.518670602
Education	—
Bachelor's or higher	4.157577313
High school enrollment	100
Preschool enrollment	44.43731554
Transportation	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	100
Healthy Places Index Score for Project Location (b)	11.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Construction: Construction Phases	Taken from client data Building Construction, Paving, and Architectural Coating overlap to present a conservative analysis

Construction: Off-Road Equipment	T/L/B replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases. Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, and Building Construction
Construction: Architectural Coatings	SCAQMD Rule 1113
Operations: Vehicle Data	Taken from trip generation
Operations: Refrigerants	As of 1 January 2022, new commercial refrigeration equipment may not use refrigerants with a GWP of 150 or greater. Further, R-404A (the CalEEMod default) is unacceptable for new supermarket and cold storage systems as of 1 January 2019 and 2023, respectively Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater

                                            ***     MODEL SETUP OPTIONS SUMMARY
  ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
```

```
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for    64 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Accepts FLAGPOLE Receptor . Heights.
      * The User Specified a Pollutant Type of: CO

 **Model Calculates  2 Short Term Average(s) of:   1-HR   8-HR
     and Calculates PERIOD Averages

 **This Run Includes:     64 Source(s);       1 Source Group(s); and      27
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:     64 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   289.00 ;  Decay
```

Coef. =   0.000   ; Rot. Angle =   0.0
                  Emission Units = GRAMS/SEC   ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =   3.6 MB of RAM.

 **Input Runstream File: aermod.inp

 **Output Print File: aermod.out

 **Detailed Error/Message File: 15693-Guasti & Holt.err

 **File for Summary of Results: 15693-Guasti & Holt.sum

  ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for    64 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Accepts FLAGPOLE Receptor . Heights.
      * The User Specified a Pollutant Type of: NOX

 **Model Calculates  1 Short Term Average(s) of:   1-HR

 **This Run Includes:     64 Source(s);       1 Source Group(s); and      27
Receptor(s)

                with:      0 POINT(s), including
```

```
                          0 POINTCAP(s) and      0 POINTHOR(s)
                and:     64 VOLUME source(s)
                and:      0 AREA type source(s)
                and:      0 LINE source(s)
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   289.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Construction LST NOX.err

 **File for Summary of Results:   Construction LST NOX.sum
