2.4 Water Quality Credits

A water quality credit program is applicable for certain types of development projects if it is not feasible to meet the requirements for on-site LID. Proponents for eligible projects, as described below, can apply for water quality credits that would reduce project obligations for selecting and sizing other treatment BMP or participating in other alternative compliance programs. Refer to Section 6.2 in the TGD for WQMP to determine if water quality credits are applicable for the project.

Form 2.4-1 Water Quality Credits

1 Project Types that Qualify for Water Quality Credits: *Select all that apply*			
☐ Redevelopment projects that reduce the overall impervious footprint of the project site. [Credit = % impervious reduced]	Higher density development projects ☐ Vertical density [20%] ☐ 7 units/ acre [5%]	☐ Mixed use development, (combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that demonstrate environmental benefits not realized through single use projects) [20%]	☐ Brownfield redevelopment (redevelop real property complicated by presence or potential of hazardous contaminants) [25%]
☐ Redevelopment projects in established historic district, historic preservation area, or similar significant core city center areas [10%]	☒ Transit-oriented developments (mixed use residential or commercial area designed to maximize access to public transportation) [20%]	☐ In-fill projects (conversion of empty lots & other underused spaces < 5 acres, substantially surrounded by urban land uses, into more beneficially used spaces, such as residential or commercial areas) [10%]	☐ Live-Work developments (variety of developments designed to support residential and vocational needs) [20%]
2 Total Credit % *(Total all credit percentages up to a maximum allowable credit of 50 percent)*			
Description of Water Quality Credit Eligibility (if applicable)			

Section 3 Site and Watershed Description

Describe the project site conditions that will facilitate the selection of BMP through an analysis of the physical conditions and limitations of the site and its receiving waters. Identify distinct drainage areas (DA) that collect flow from a portion of the site and describe how runoff from each DA (and sub-watershed DMAs) is conveyed to the site outlet(s). Refer to Section 3.2 in the TGD for WQMP. The form below is provided as an example. Then complete Forms 3.2 and 3.3 for each DA on the project site. ***If the project has more than one drainage area for stormwater management, then complete additional versions of these forms for each DA / outlet.***

Form 3-1 Site Location and Hydrologic Features

Site coordinates *take GPS measurement at approximate center of site*	Latitude 34° 3'51.12"N	Longitude 117°36'10.53"W	Thomas Bros Map page
1 San Bernardino County climatic region: ☒ Valley ☐ Mountain			
2 Does the site have more than one drainage area (DA): Yes☐ No☒ *If no, proceed to Form 3-2. If yes, then use this form to show a conceptual schematic describing DMAs and hydrologic feature connecting DMAs to the site outlet(s).*			

Conveyance	Briefly describe on-site drainage features to convey runoff that is not retained within a DMA
DA1 DMA A flows to Outlet 1	*Onsite drainage flows via network of local storm drains to underground infiltration system and then to existing 108" storm drain located south of Guasti Avenue. 108" SD connects to Cucamonga Creek.*

Form 3-2 Existing Hydrologic Characteristics for Drainage Area 1

For Drainage Area 1's sub-watershed DMA, provide the following characteristics	DMA A	DMA B	DMA C	DMA D
1 DMA drainage area (ft^2)	454,257			
2 Existing site impervious area (ft^2)	0			
3 Antecedent moisture condition *For desert areas, use http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*	II			
4 Hydrologic soil group *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	**A**			
5 Longest flowpath length (ft)	890			
6 Longest flowpath slope (ft/ft)	0.0124			
7 Current land cover type(s) *Select from Fig C-3 of Hydrology Manual*	Grass, Annual			
8 Pre-developed pervious area condition: *Based on the extent of wet season vegetated cover good >75%; Fair 50-75%; Poor <50% Attach photos of site to support rating*	Fair			

Form 3-3 Watershed Description for Drainage Area

Receiving waters *Refer to Watershed Mapping Tool - http://permitrack.sbcounty.gov/wap/ See 'Drainage Facilities" link at this website*	Cucamonga Creek Reach 1 (Valley Reach), Santa Ana River Reach 4, 3, 2 and 1,
Applicable TMDLs *Refer to Local Implementation Plan*	TMDL required - Cadmium (2016) TMDL required - Copper (2016) TMDL required - Lead (2016) TMDL required - Zinc (2016)
303(d) listed impairments *Refer to Local Implementation Plan and Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/ and State Water Resources Control Board website – http://www.waterboards.ca.gov/santaana/water_issues/programs/tmdl/index.shtml*	Cadmium, Copper, Lead, Zinc
Environmentally Sensitive Areas (ESA) *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	None
Unlined Downstream Water Bodies *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	Santa Ana River
Hydrologic Conditions of Concern	☐ Yes *Complete Hydrologic Conditions of Concern (HCOC) Assessment. Include Forms 4.2-2 through Form 4.2-5 and Hydromodification BMP Form 4.3-10 in submittal* ☒ No
Watershed–based BMP included in a RWQCB approved WAP	☐ Yes *Attach verification of regional BMP evaluation criteria in WAP* • *More Effective than On-site LID* • *Remaining Capacity for Project DCV* • *Upstream of any Water of the US* • *Operational at Project Completion* • *Long-Term Maintenance Plan* ☒ No

Section 4 Best Management Practices (BMP)

4.1 Source Control BMP

4.1.1 Pollution Prevention

Non-structural and structural source control BMP are required to be incorporated into all new development and significant redevelopment projects. Form 4.1-1 and 4.1-2 are used to describe specific source control BMPs used in the WQMP or to explain why a certain BMP is not applicable. Table 7-3 of the TGD for WQMP provides a list of applicable source control BMP for projects with specific types of potential pollutant sources or activities. The source control BMP in this table must be implemented for projects with these specific types of potential pollutant sources or activities.

The preparers of this WQMP have reviewed the source control BMP requirements for new development and significant redevelopment projects. The preparers have also reviewed the specific BMP required for project as specified in Forms 4.1-1 and 4.1-2. All applicable non-structural and structural source control BMP shall be implemented in the project.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N1	Education of Property Owners, Tenants and Occupants on Stormwater BMPs	☒	☐	provide environmental awareness education materials, made available by the municipalities, to maintenance staff. Among other things, these materials will describe the use of chemicals (including household type) that should be limited to the property, with no discharge of wastes via hosing or other direct discharge to gutters, catch basins and storm drains. Educational materials available from the San Bernardino Stormwater Program and can be downloaded at: http://www.sbcountystormwater.org/gov_out.html
N2	Activity Restrictions	☒	☐	Use restrictions will be developed by building operator through lease terms, and City restrictions will be imposed via permits and local ordinance
N3	Landscape Management BMPs	☒	☐	Identify on-going landscape maintenance requirements consistent with applicable local ordinances that may include fertilizer and/or pesticide usage
N4	BMP Maintenance	☒	☐	Identify responsibility for implementation and scheduled cleaning/maintenance of BMPs. (See Section 5)
N5	Title 22 CCR Compliance (How development will comply)	☐	☒	No community care facility is proposed
N6	Local Water Quality Ordinances	☒	☐	Site must comply with any applicable local water quality ordinances set by the local jurisdiction
N7	Spill Contingency Plan	☒	☐	Prepare spill contingency plan and provide to maintenance staff
N8	Underground Storage Tank Compliance	☐	☒	No underground storage tanks proposed
N9	Hazardous Materials Disclosure Compliance	☒	☐	

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N10	Uniform Fire Code Implementation	☒	☐	Adhere to requirements of UFC
N11	Litter/Debris Control Program	☒	☐	implement trash management and litter control procedures in the common areas aimed at reducing pollution of drainage water. The owner may contract with their landscape maintenance firms to provide this service during regularly scheduled maintenance, which should consist of litter patrol, emptying of trash receptacles in common areas,
N12	Employee Training	☒	☐	Implement training program
N13	Housekeeping of Loading Docks	☒	☐	Maintain loading docks in accordance with CASQA standards
N14	Catch Basin Inspection Program	☒	☐	The owner is required to have at least 80 percent of drainage facilities inspected, cleaned and maintained on an annual basis with 100 percent of the facilities included in a two-year period. Cleaning should take place in the late summer/early fall prior to the start of the rainy season. Drainage facilities include catch basins (storm drain inlets), detention basins, retention basins, sediment basins, open drainage channels and lift stations.
N15	Vacuum Sweeping of Private Streets and Parking Lots	☒	☐	Streets and parking lots are required to be swept on a regular frequency based on usage and field observations of waste accumulation, using a vacuum assisted sweeper. At a minimum all paved areas of a business shall be swept, in late summer or early fall, prior to the start of the rainy season or equivalent, as required by the governing jurisdiction
N16	Other Non-structural Measures for Public Agency Projects	☐	☒	No public agency projects associated.

Form 4.1-1 Non-Structural Source Control BMPs				
N17	Comply with all other applicable NPDES permits	☒	☐	Permittees shall comply with other NPDES permits such as General Industrial permits, etc., to include BMPs that are required as a part of a SWPPP

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S1	Provide storm drain system stencilling and signage (CASQA New Development BMP Handbook SD-13)	☒	☐	Provide stenciling or labeling on all storm drain inlets and catch basins. Post signs and prohibitive language and/or graphical icons that prohibit illegal dumping
S2	Design and construct outdoor material storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-34)	☐	☒	No outdoor material storage is proposed
S3	Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	☒	☐	All trash container areas shall be paved with an impervious surface with no run-on from adjoining areas and bins will have attached lids to prevent exposure to precipitation
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	☒	☐	Landscape should employ rain shutoff devices, flow reducers or shutoff valves triggered by a pressure drop, mulches, appropriate plant material, etc. The timing and application methods of irrigation water must be designed to minimize the runoff of excess irrigation water into the municipal storm drain system.
S5	Finish grade of landscaped areas at a minimum of 1-2 inches below top of curb, sidewalk, or pavement	☒	☐	All landscaping shall be finish-graded at a minimum of 1-2 inches below top of curb, sidewalk or pavement.
S6	Protect slopes and channels and provide energy dissipation (CASQA New Development BMP Handbook SD-10)	☒	☐	Vegetate slopes with native drought tolerant vegetation and, if necessary, provide water efficient irrigation.
S7	Covered dock areas (CASQA New Development BMP Handbook SD-31)	☒	☐	Dock is located at basement level
S8	Covered maintenance bays with spill containment plans (CASQA New Development BMP Handbook SD-31)	☐	☒	No maintenance bays proposed
S9	Vehicle wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	No vehicle wash areas proposed

S10	Covered outdoor processing areas (CASQA New Development BMP Handbook SD-36)	☐	☐	

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S11	Equipment wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	No equipment wash area proposed
S12	Fueling areas (CASQA New Development BMP Handbook SD-30)	☐	☒	No fueling area proposed
S13	Hillside landscaping (CASQA New Development BMP Handbook SD-10)	☐	☒	Not a hillside project
S14	Wash water control for food preparation areas	☒	☐	Food preparation within restaurants per health code requirements
S15	Community car wash racks (CASQA New Development BMP Handbook SD-33)	☐	☒	No community car wash proposed

4.1.2 Preventative LID Site Design Practices

Site design practices associated with new LID requirements in the MS4 Permit should be considered in the earliest phases of a project. Preventative site design practices can result in smaller DCV for LID BMP and hydromodification control BMP by reducing runoff generation. Describe site design and drainage plan including:

- A narrative of site design practices utilized or rationale for not using practices
- A narrative of how site plan incorporates preventive site design practices
- Include an attached Site Plan layout which shows how preventative site design practices are included in WQMP

Refer to Section 5.2 of the TGD for WQMP for more details.

Form 4.1-3 Preventative LID Site Design Practices Checklist

Site Design Practices *If yes, explain how preventative site design practice is addressed in project site plan. If no, other LID BMPs must be selected to meet targets*
Minimize impervious areas: Yes ☒ No ☐ Explanation: Impervious areas have been minimized by designing those surfaces to minimum widths while still meeting City and accessibility requirements.
Maximize natural infiltration capacity: Yes ☒ No ☐ Explanation: Limit compaction in landscape areas to maximize infiltration capacity
Preserve existing drainage patterns and time of concentration: Yes ☐ No ☒ Explanation: Area DA1, will be developed and provide hotel building and infrastructure and cannot maintain existing time of concentration but does maintain the overall drainage pattern direction towards the southeast corner of the development
Disconnect impervious areas: Yes ☒ No ☐ Explanation: Recreational open spaces provided and greenbelt surrounds the proposed structure.
Protect existing vegetation and sensitive areas: Yes ☐ No ☒ Explanation: Area DA1 will be developed and is barren; scattered grass onsite will be removed.
Re-vegetate disturbed areas: Yes ☒ No ☐ Explanation: The project proposes extensive landscape of open recreation areas.
Minimize unnecessary compaction in stormwater retention/infiltration basin/trench areas: Yes ☐ No ☒ Explanation: No basin is proposed. Project will utilize underground storage.
Utilize vegetated drainage swales in place of underground piping or imperviously lined swales: Yes ☒ No ☐ Explanation: Where feasible, drainage swales will be incorporated
Stake off areas that will be used for landscaping to minimize compaction during construction: Yes ☒ No ☐ Explanation: The proposed landscape areas will be staked off during construction

4.2 Project Performance Criteria

The purpose of this section of the Project WQMP is to establish targets for post-development hydrology based on performance criteria specified in the MS4 Permit. These targets include runoff volume for water quality control (referred to as LID design capture volume), and runoff volume, time of concentration, and peak runoff for protection of any downstream waterbody segments with a HCOC. ***If the project has more than one outlet for stormwater runoff, then complete additional versions of these forms for each DA / outlet.***

Methods applied in the following forms include:

- For LID BMP Design Capture Volume (DCV), the San Bernardino County Stormwater Program requires use of the P_6 method (MS4 Permit Section XI.D.6a.ii) – Form 4.2-1
- For HCOC pre- and post-development hydrologic calculation, the San Bernardino County Stormwater Program requires the use of the Rational Method (San Bernardino County Hydrology Manual Section D). Forms 4.2-2 through Form 4.2-5 calculate hydrologic variables including runoff volume, time of concentration, and peak runoff from the project site pre- and post-development using the Hydrology Manual Rational Method approach. For projects greater than 640 acres (1.0 mi^2), the Rational Method and these forms should not be used. For such projects, the Unit Hydrograph Method (San Bernardino County Hydrology Manual Section E) shall be applied for hydrologic calculations for HCOC performance criteria.

Refer to Section 4 in the TGD for WQMP for detailed guidance and instructions.

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DA 1)

1 Project area DA 1 (ft^2): 454,257	**2** Imperviousness after applying preventative site design practices (Imp%): 80%	**3** Runoff Coefficient (Rc): 0.5933 *$R_c = 0.858(Imp\%)^{\wedge 3}-0.78(Imp\%)^{\wedge 2}+0.774(Imp\%)+0.04$*
4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr\text{-}1hr}$ (in): 0.609 *http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html*		
5 Compute P_6, Mean 6-hr Precipitation (inches): 0.902 *P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*		
6 Drawdown Rate *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
7 Compute design capture volume, DCV (ft^3): 40,157 *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*		

Form 4.2-2 Summary of HCOC Assessment (DA 1)

Does project have the potential to cause or contribute to an HCOC in a downstream channel: Yes No

Go to: http://permitrack.sbcounty.gov/wap/

If "Yes", then complete HCOC assessment of site hydrology for 2yr storm event using Forms 4.2-3 through 4.2-5 and insert results below

(Forms 4.2-3 through 4.2-5 may be replaced by computer software analysis based on the San Bernardino County Hydrology Manual)

If "No," then proceed to Section 4.3 Project Conformance Analysis

NOT APPLICABLE

Condition	Runoff Volume (ft^3)	Time of Concentration (min)	Peak Runoff (cfs)
Pre-developed	**1** *Form 4.2-3 Item 12*	**2** *Form 4.2-4 Item 13*	**3** *Form 4.2-5 Item 10*
Post-developed	**4** *Form 4.2-3 Item 13*	**5** *Form 4.2-4 Item 14*	**6** *Form 4.2-5 Item 14*
Difference	**7** *Item 4 – Item 1*	**8** *Item 2 – Item 5*	**9** *Item 6 – Item 3*
Difference (as % of pre-developed)	**10** % *Item 7 / Item 1*	**11** % *Item 8 / Item 2*	**12** % *Item 9 / Item 3*

Form 4.2-3 HCOC Assessment for Runoff Volume (DA 1)

Weighted Curve Number Determination for: Pre-developed DA	DMA A	DMA B	DMA C	DMA D	DMA E	DMA F	DMA G	DMA H
1a Land Cover type								
2a Hydrologic Soil Group (HSG)								
3a DMA Area, ft² *sum of areas of DMA should equal area of DA*								
4a Curve Number (CN) *use Items 1 and 2 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*								
Weighted Curve Number Determination for: Post-developed DA	DMA A	DMA B	DMA C	DMA D	DMA E	DMA F	DMA G	DMA H
1b Land Cover type								
2b Hydrologic Soil Group (HSG)								
3b DMA Area, ft² *sum of areas of DMA should equal area of DA*								
4b Curve Number (CN) *use Items 5 and 6 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*								

5 Pre-Developed area-weighted CN:	**7** Pre-developed soil storage capacity, S (in): *S = (1000 / Item 5) - 10*	**9** Initial abstraction, I_a (in): *I_a = 0.2 * Item 7*
6 Post-Developed area-weighted CN:	**8** Post-developed soil storage capacity, S (in): *S = (1000 / Item 6) - 10*	**10** Initial abstraction, I_a (in): *I_a = 0.2 * Item 8*

11 Precipitation for 2 yr, 24 hr storm (in):
Go to: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html

12 Pre-developed Volume (ft³):
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 9)^2 / ((Item 11 – Item 9 + Item 7)*

13 Post-developed Volume (ft³):
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 10)^2 / ((Item 11 – Item 10 + Item 8)*

14 Volume Reduction needed to meet HCOC Requirement, (ft³):
*V_{HCOC} = (Item 13 * 0.95) – Item 12*

NOT APPLICABLE

Form 4.2-4 HCOC Assessment for Time of Concentration (DA 1)

Compute time of concentration for pre and post developed conditions for each DA *(For projects using the Hydrology Manual complete the form below)*

Variables	Pre-developed DA1 *Use additional forms if there are more than 4 DMA*				Post-developed DA1 *Use additional forms if there are more than 4 DMA*			
	DMA A	DMA B	DMA C	DMA D	DMA A	DMA B	DMA C	DMA D
1 Length of flowpath (ft) *Use Form 3-2 Item 5 for pre-developed condition*								
2 Change in elevation (ft)								
3 Slope (ft/ft), S_o = *Item 2 / Item 1*								
4 Land cover								
5 Initial DMA time of concentration (min) *Appendix C of the TGD for WQMP*								
6 Length of conveyance from DMA outlet to project site outlet (ft) *May be zero if DMA outlet is at project site outlet*								
7 Cross-sectional area of channel (ft^2)								
8 Wetted perimeter of channel (ft)								
9 Manning's roughness of channel (n)								
10 Channel flow velocity (ft/sec) V_{fps} = *(1.49 / Item 9) * (Item 7/Item 8)^0.67 * (Item 3)^0.5*								
11 Travel time to outlet (min) T_t = *Item 6 / (Item 10 * 60)*								
12 Total time of concentration (min) T_c = *Item 5 + Item 11*								

NOT APPLICABLE

13 Pre-developed time of concentration (min): *Minimum of Item 12 pre-developed DMA*

14 Post-developed time of concentration (min): *Minimum of Item 12 post-developed DMA*

15 Additional time of concentration needed to meet HCOC requirement (min): $T_{C\text{-}HCOC}$ = *(Item 13 * 0.95) – Item 14*

Form 4.2-5 HCOC Assessment for Peak Runoff (DA 1)

NOT APPLICABLE

Compute peak runoff for pre- and post-developed conditions

Variables		Pre-developed DA to Project Outlet (*Use additional forms if more than 3 DMA*)			Post-developed DA to Project Outlet (*Use additional forms if more than 3 DMA*)		
		DMA A	DMA B	DMA C	DMA A	DMA B	DMA C
1 Rainfall Intensity for storm duration equal to time of concentration *I_{peak} = 10^(LOG Form 4.2-1 Item 4 - 0.6 LOG Form 4.2-4 Item 5 /60)*							
2 Drainage Area of each DMA (Acres) *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
3 Ratio of pervious area to total area *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
4 Pervious area infiltration rate (in/hr) *Use pervious area CN and antecedent moisture condition with Appendix C-3 of the TGD for WQMP*							
5 Maximum loss rate (in/hr) *F_m = Item 3 * Item 4* *Use area-weighted F_m from DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
6 Peak Flow from DMA (cfs) *Q_p =Item 2 * 0.9 * (Item 1 - Item 5)*							
7 Time of concentration adjustment factor for other DMA to site discharge point *Form 4.2-4 Item 12 DMA / Other DMA upstream of site discharge point (If ratio is greater than 1.0, then use maximum value of 1.0)*	DMA A	*n/a*			*n/a*		
	DMA B		*n/a*			*n/a*	
	DMA C			*n/a*			*n/a*

8 Pre-developed Q_p at T_c for DMA A: *Q_p = Item 6_{DMAA} + [Item 6_{DMAB} * (Item 1_{DMAA} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAA/2}$] + [Item 6_{DMAC} * (Item 1_{DMAA} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAA/3}$]*	9 Pre-developed Q_p at T_c for DMA B: *Q_p = Item 6_{DMAB} + [Item 6_{DMAA} * (Item 1_{DMAB} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAB/1}$] + [Item 6_{DMAC} * (Item 1_{DMAB} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAB/3}$]*	10 Pre-developed Q_p at T_c for DMA C: *Q_p = Item 6_{DMAC} + [Item 6_{DMAA} * (Item 1_{DMAC} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAC/1}$] + [Item 6_{DMAB} * (Item 1_{DMAC} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAC/2}$]*
10 Peak runoff from pre-developed condition confluence analysis (cfs): *Maximum of Item 8, 9, and 10 (including additional forms as needed)*		
11 Post-developed Q_p at T_c for DMA A: *Same as Item 8 for post-developed values*	12 Post-developed Q_p at T_c for DMA B: *Same as Item 9 for post-developed values*	13 Post-developed Q_p at T_c for DMA C: *Same as Item 10 for post-developed values*
14 Peak runoff from post-developed condition confluence analysis (cfs): *Maximum of Item 11, 12, and 13 (including additional forms as needed)*		
15 Peak runoff reduction needed to meet HCOC Requirement (cfs): *$Q_{p\text{-}HCOC}$ = (Item 14 * 0.95) – Item 10*		

4.3 Project Conformance Analysis

Complete the following forms for each project site DA to document that the proposed LID BMPs conform to the project DCV developed to meet performance criteria specified in the MS4 Permit (WQMP Template Section 4.2). For the LID DCV, the forms are ordered according to hierarchy of BMP selection as required by the MS4 Permit (see Section 5.3.1 in the TGD for WQMP). The forms compute the following for on-site LID BMP:

- Site Design and Hydrologic Source Controls (Form 4.3-2)
- Retention and Infiltration (Form 4.3-3)
- Harvested and Use (Form 4.3-4) or
- Biotreatment (Form 4.3-5).

At the end of each form, additional fields facilitate the determination of the extent of mitigation provided by the specific BMP category, allowing for use of the next category of BMP in the hierarchy, if necessary.

The first step in the analysis, using Section 5.3.2.1 of the TGD for WQMP, is to complete Forms 4.3-1 and 4.3-3) to determine if retention and infiltration BMPs are infeasible for the project. For each feasibility criterion in Form 4.3-1, if the answer is "Yes," provide all study findings that includes relevant calculations, maps, data sources, etc. used to make the determination of infeasibility.

Next, complete Forms 4.3-2 and 4.3-4 to determine the feasibility of applicable HSC and harvest and use BMPs, and, if their implementation is feasible, the extent of mitigation of the DCV.

If no site constraints exist that would limit the type of BMP to be implemented in a DA, evaluate the use of combinations of LID BMPs, including all applicable HSC BMPs to maximize on-site retention of the DCV. If no combination of BMP can mitigate the entire DCV, implement the single BMP type, or combination of BMP types, that maximizes on-site retention of the DCV within the minimum effective area.

If the combination of LID HSC, retention and infiltration, and harvest and use BMPs are unable to mitigate the entire DCV, then biotreatment BMPs may be implemented by the project proponent. If biotreatment BMPs are used, then they must be sized to provide sufficient capacity for effective treatment of the remainder of the volume-based performance criteria that cannot be achieved with LID BMPs (TGD for WQMP Section 5.4.4.2). **Under no circumstances shall any portion of the DCV be released from the site without effective mitigation and/or treatment**.

Form 4.3-1 Infiltration BMP Feasibility (DA 1)

Feasibility Criterion – Complete evaluation for each DA on the Project Site

[1] Would infiltration BMP pose significant risk for groundwater related concerns? Yes ☐ No ☒
Refer to Section 5.3.2.1 of the TGD for WQMP

If Yes, Provide basis: (attach)

[2] Would installation of infiltration BMP significantly increase the risk of geotechnical hazards? Yes ☐ No ☒
(Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert):

- The location is less than 50 feet away from slopes steeper than 15 percent
- The location is less than eight feet from building foundations or an alternative setback.
- A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.

If Yes, Provide basis: (attach)

[3] Would infiltration of runoff on a Project site violate downstream water rights? Yes ☐ No ☒

If Yes, Provide basis: (attach)

[4] Is proposed infiltration facility located on hydrologic soil group (HSG) D soils or does the site geotechnical investigation indicate presence of soil characteristics, which support categorization as D soils? Yes ☐ No ☒

If Yes, Provide basis: (attach)

[5] Is the design infiltration rate, after accounting for safety factor of 2.0, below proposed facility less than 0.3 in/hr (accounting for soil amendments)? Yes ☐ No ☒

If Yes, Provide basis: (attach)

[6] Would on-site infiltration or reduction of runoff over pre-developed conditions be partially or fully inconsistent with watershed management strategies as defined in the WAP, or impair beneficial uses? Yes ☐ No ☒
See Section 3.5 of the TGD for WQMP and WAP

If Yes, Provide basis: (attach)

[7] Any answer from Item 1 through Item 3 is "Yes": Yes ☐ No ☐
If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Harvest and Use BMP. If no, then proceed to Item 8 below.

[8] Any answer from Item 4 through Item 6 is "Yes": Yes ☐ No ☐
If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Hydrologic Source Control BMP.
If no, then proceed to Item 9, below.

[9] All answers to Item 1 through Item 6 are "No":
Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP.
Proceed to Form 4.3-2, Hydrologic Source Control BMP.

4.3.1 Site Design Hydrologic Source Control BMP

Section XI.E. of the Permit emphasizes the use of LID preventative measures; and the use of LID HSC BMPs reduces the portion of the DCV that must be addressed in downstream BMPs. Therefore, all applicable HSC shall be provided except where they are mutually exclusive with each other, or with other BMPs. Mutual exclusivity may result from overlapping BMP footprints such that either would be potentially feasible by itself, but both could not be implemented. Please note that while there are no numeric standards regarding the use of HSC, if a project cannot feasibly meet BMP sizing requirements or cannot fully address HCOCs, feasibility of all applicable HSC must be part of demonstrating that the BMP system has been designed to retain the maximum feasible portion of the DCV. Complete Form 4.3-2 to identify and calculate estimated retention volume from implementing site design HSC BMP. Refer to Section 5.4.1 in the TGD for more detailed guidance.

Form 4.3-2 Site Design Hydrologic Source Control BMPs (DA 1)

1 Implementation of Impervious Area Dispersion BMP (i.e. routing runoff from impervious to pervious areas), excluding impervious areas planned for routing to on-lot infiltration BMP: Yes ☐ No ☒ *If yes, complete Items 2-5; If no, proceed to Item 6*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Total impervious area draining to pervious area (ft^2)			
3 Ratio of pervious area receiving runoff to impervious area			
4 Retention volume achieved from impervious area dispersion (ft^3) *V = Item2 * Item 3 * (0.5/12), assuming retention of 0.5 inches of runoff*			
5 Sum of retention volume achieved from impervious area dispersion (ft^3):	$V_{retention}$ *=Sum of Item 4 for all BMPs*		
6 Implementation of Localized On-lot Infiltration BMPs (e.g. on-lot rain gardens): Yes ☐ No ☒ *If yes, complete Items 7-13 for aggregate of all on-lot infiltration BMP in each DA; If no, proceed to Item 14*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
7 Ponding surface area (ft^2)			
8 Ponding depth (ft)			
9 Surface area of amended soil/gravel (ft^2)			
10 Average depth of amended soil/gravel (ft)			
11 Average porosity of amended soil/gravel			
12 Retention volume achieved from on-lot infiltration (ft^3) $V_{retention}$ *= (Item 7 *Item 8) + (Item 9 * Item 10 * Item 11)*			
13 Runoff volume retention from on-lot infiltration (ft^3):	$V_{retention}$ *=Sum of Item 12 for all BMPs*		

Form 4.3-2 Site Design Hydrologic Source Control BMPs (DA 1)

Form 4.3-2 cont. Site Design Hydrologic Source Control BMPs (DA 1)

14 Implementation of evapotranspiration BMP (green, brown, or blue roofs): Yes ☐ No ☒ *If yes, complete Items 15-20. If no, proceed to Item 21*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
15 Rooftop area planned for ET BMP (ft^2)			
16 Average wet season ET demand (in/day) *Use local values, typical ~ 0.1*			
17 Daily ET demand (ft^3/day) *Item 15 * (Item 16 / 12)*			
18 Drawdown time (hrs) *Copy Item 6 in Form 4.2-1*			
19 Retention Volume (ft^3) $V_{retention}$ *= Item 17 * (Item 18 / 24)*			
20 Runoff volume retention from evapotranspiration BMPs (ft^3): $V_{retention}$ *=Sum of Item 19 for all BMPs*			
21 Implementation of Street Trees: Yes ☐ No ☒ *If yes, complete Items 22-25. If no, proceed to Item 26*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
22 Number of Street Trees			
23 Average canopy cover over impervious area (ft^2)			
24 Runoff volume retention from street trees (ft^3) $V_{retention}$ *= Item 22 * Item 23 * (0.05/12) assume runoff retention of 0.05 inches*			
25 Runoff volume retention from street tree BMPs (ft^3): $V_{retention}$ *= Sum of Item 24 for all BMPs*			
26 Implementation of residential rain barrel/cisterns: Yes ☐ No ☒ *If yes, complete Items 27-29; If no, proceed to Item 30*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
27 Number of rain barrels/cisterns			
28 Runoff volume retention from rain barrels/cisterns (ft^3) $V_{retention}$ *= Item 27 * 3*			
29 Runoff volume retention from residential rain barrels/Cisterns (ft3): $V_{retention}$ *=Sum of Item 28 for all BMPs*			
30 Total Retention Volume from Site Design Hydrologic Source Control BMPs: 0 *Sum of Items 5, 13, 20, 25 and 29*			

4.3.2 Infiltration BMPs

Use Form 4.3-3 to compute on-site retention of runoff from proposed retention and infiltration BMPs. Volume retention estimates are sensitive to the percolation rate used, which determines the amount of runoff that can be infiltrated within the specified drawdown time. The infiltration safety factor reduces field measured percolation to account for potential inaccuracy associated with field measurements, declining BMP performance over time, and compaction during construction. Appendix D of the TGD for WQMP provides guidance on estimating an appropriate safety factor to use in Form 4.3-3.

If site constraints limit the use of BMPs to a single type and implementation of retention and infiltration BMPs mitigate no more than 40% of the DCV, then they are considered infeasible and the Project Proponent may evaluate the effectiveness of BMPs lower in the LID hierarchy of use (Section 5.5.1 of the TGD for WQMP)

If implementation of infiltrations BMPs is feasible as determined using Form 4.3-1, then LID infiltration BMPs shall be implemented to the MEP (section 4.1 of the TGD for WQMP).

.

Form 4.3-3 Infiltration LID BMP - including underground BMPs (DA 1)

1 Remaining LID DCV not met by site design HSC BMP (ft^3): 40,157 *V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item 30*

BMP Type *Use columns to the right to compute runoff volume retention from proposed infiltration BMP (select BMP from Table 5-4 in TGD for WQMP) - Use additional forms for more BMPs*	DA 1 DMA A BMP Type Chambers	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Infiltration rate of underlying soils (in/hr) *See Section 5.4.2 and Appendix D of the TGD for WQMP for minimum requirements for assessment methods*	50		
3 Infiltration safety factor *See TGD Section 5.4.2 and Appendix D*	3.25		
4 Design percolation rate (in/hr) *P_{design} = Item 2 / Item 3*	15.38		
5 Ponded water drawdown time (hr) *Copy Item 6 in Form 4.2-1*	48		
6 Maximum ponding depth (ft) *BMP specific, see Table 5-4 of the TGD for WQMP for BMP design details*	0		
7 Ponding Depth (ft) *d_{BMP} = Minimum of (1/12*Item 4*Item 5) or Item 6*	0		
8 Infiltrating surface area, SA_{BMP} (ft^2) *the lesser of the area needed for infiltration of full DCV or minimum space requirements from Table 5.7 of the TGD for WQMP*	0		
9 Amended soil depth, d_{media} (ft) *Only included in certain BMP types, see Table 5-4 in the TGD for WQMP for reference to BMP design details*	0		
10 Amended soil porosity	0		
11 Gravel depth, d_{media} (ft) *Only included in certain BMP types, see Table 5-4 of the TGD for WQMP for BMP design details*	0		
12 Gravel porosity	0		
13 Duration of storm as basin is filling (hrs) *Typical ~ 3hrs*	3		
14 Above Ground Retention Volume (ft^3) *$V_{retention}$ = Item 8 * [Item7 + (Item 9 * Item 10) + (Item 11 * Item 12) + (Item 13 * (Item 4 / 12))]*	0		
15 Underground Retention Volume (ft^3) *Volume determined using manufacturer's specifications and calculations*	40,933		

16 Total Retention Volume from LID Infiltration BMPs: 40,933 *(Sum of Items 14 and 15 for all infiltration BMP included in plan)*

17 Fraction of DCV achieved with infiltration BMP: 102% *Retention% = Item 16 / Form 4.2-1 Item 7*

18 Is full LID DCV retained onsite with combination of hydrologic source control and LID retention/infiltration BMPs? Yes ☒ No ☐

If yes, demonstrate conformance using Form 4.3-10; If no, then reduce Item 3, Factor of Safety to 2.0 and increase Item 8, Infiltrating Surface Area, such that the portion of the site area used for retention and infiltration BMPs equals or exceeds the minimum effective area thresholds (Table 5-7 of the TGD for WQMP) for the applicable category of development and repeat all above calculations.

4.3.3 Harvest and Use BMP

Harvest and use BMP may be considered if the full LID DCV cannot be met by maximizing infiltration BMPs. Use Form 4.3-4 to compute on-site retention of runoff from proposed harvest and use BMPs.

Volume retention estimates for harvest and use BMPs are sensitive to the on-site demand for captured stormwater. Since irrigation water demand is low in the wet season, when most rainfall events occur in San Bernardino County, the volume of water that can be used within a specified drawdown period is relatively low. The bottom portion of Form 4.3-4 facilitates the necessary computations to show infeasibility if a minimum incremental benefit of 40 percent of the LID DCV would not be achievable with MEP implementation of on-site harvest and use of stormwater (Section 5.5.4 of the TGD for WQMP).

Form 4.3-4 Harvest and Use BMPs (DA 1)

1 Remaining LID DCV not met by site design HSC or infiltration BMP (ft^3): 0 *V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16*			
BMP Type(s) *Compute runoff volume retention from proposed harvest and use BMP (Select BMPs from Table 5-4 of the TGD for WQMP) - Use additional forms for more BMPs*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Describe cistern or runoff detention facility			
3 Storage volume for proposed detention type (ft^3) *Volume of cistern*			
4 Landscaped area planned for use of harvested stormwater (ft^2)			
5 Average wet season daily irrigation demand (in/day) Use local values, typical ~ 0.1 in/day			
6 Daily water demand (ft^3/day) *Item 4 * (Item 5 / 12)*			
7 Drawdown time (hrs) *Copy Item 6 from Form 4.2-1*			
8 Retention Volume (ft^3) *$V_{retention}$ = Minimum of (Item 3) or (Item 6 * (Item 7 / 24))*			
9 Total Retention Volume (ft^3) from Harvest and Use BMP *Sum of Item 8 for all harvest and use BMP included in plan*			
10 Is the full DCV retained with a combination of LID HSC, retention and infiltration, and harvest & use BMPs? Yes No *If yes, demonstrate conformance using Form 4.3-10. If no, then re-evaluate combinations of all LID BMP and optimize their implementation such that the maximum portion of the DCV is retained on-site (using a single BMP type or combination of BMP types). If the full DCV cannot be mitigated after this optimization process, proceed to Section 4.3.4.*			

NOT APPLICABLE

4.3.4 Biotreatment BMP

Biotreatment BMPs may be considered if the full LID DCV cannot be met by maximizing retention and infiltration, and harvest and use BMPs. A key consideration when using biotreatment BMP is the effectiveness of the proposed BMP in addressing the pollutants of concern for the project (see Table 5-5 of the TGD for WQMP).

Use Form 4.3-5 to summarize the potential for volume based and/or flow based biotreatment options to biotreat the remaining unmet LID DCV w. Biotreatment computations are included as follows:

- Use Form 4.3-6 to compute biotreatment in small volume based biotreatment BMP (e.g. bioretention w/underdrains);
- Use Form 4.3-7 to compute biotreatment in large volume based biotreatment BMP (e.g. constructed wetlands);
- Use Form 4.3-8 to compute sizing criteria for flow-based biotreatment BMP (e.g. bioswales)

Form 4.3-5 Selection and Evaluation of Biotreatment BMP (DA 1)

1 Remaining LID DCV not met by site design HSC, infiltration, or harvest and use BMP for potential biotreatment (ft³): 0 *Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16- Form 4.3-4 Item 9*	List pollutants of concern *Copy from Form 2.3-1.*	
2 Biotreatment BMP Selected *(Select biotreatment BMP(s) necessary to ensure all pollutants of concern are addressed through Unit Operations and Processes, described in Table 5-5 of the TGD for WQMP)*	Volume-based biotreatment *Use Forms 4.3-6 and 4.3-7 to compute treated volume*	Flow-based biotreatment *Use Form 4.3-8 to compute treated volume*
	Bioretention with underdrain Planter box with underdrain Constructed wetland Wet extended detention Dry extended detention	Vegetated swale Vegetated filter strip Proprietary biotreatment
3 Volume biotreated in volume based biotreatment BMP (ft³): *Form 4.3-6 Item 15 + Form 4.3-7 Item*	4 Compute remaining LID DCV with implementation of volume based biotreatment BMP (ft³): *Item 1 – Item 3*	5 Remaining fraction of LID DCV for sizing flow based biotreatment BMP: % *Item 4 / Item 1*
6 Flow-based biotreatment BMP capacity provided (cfs): *Use Figure 5-2 of the TGD for WQMP to determine flow capacity required to provide biotreatment of remaining percentage of unmet LID DCV (Item 5), for the project's precipitation zone (Form 3-1 Item 1)*		
7 Metrics for MEP determination: • Provided a WQMP with the portion of site area used for suite of LID BMP equal to minimum thresholds in Table 5-7 of the TGD for WQMP for the proposed category of development: *If maximized on-site retention BMPs is feasible for partial capture, then LID BMP implementation must be optimized to retain and infiltrate the maximum portion of the DCV possible within the prescribed minimum effective area. The remaining portion of the DCV shall then be mitigated using biotreatment BMP.*		

NOT APPLICABLE

Form 4.3-6 Volume Based Biotreatment (DA 1) – Bioretention and Planter Boxes with Underdrains

Biotreatment BMP Type *(Bioretention w/underdrain, planter box w/underdrain, other comparable BMP)*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
1 Pollutants addressed with BMP *List all pollutant of concern that will be effectively reduced through specific Unit Operations and Processes described in Table 5-5 of the TGD for WQMP*			
2 Amended soil infiltration rate *Typical ~ 5.0*			
3 Amended soil infiltration safety factor *Typical ~ 2.0*			
4 Amended soil design percolation rate (in/hr) P_{design} = *Item 2 / Item 3*

NOT APPLICABLE

4.3.5 Conformance Summary

Complete Form 4.3-9 to demonstrate how on-site LID DCV is met with proposed site design hydrologic source control, infiltration, harvest and use, and/or biotreatment BMP. The bottom line of the form is used to describe the basis for infeasibility determination for on-site LID BMP to achieve full LID DCV, and provides methods for computing remaining volume to be addressed in an alternative compliance plan. If the project has more than one outlet, then complete additional versions of this form for each outlet.

Form 4.3-9 Conformance Summary and Alternative Compliance Volume Estimate (DA 1)

1 Total LID DCV for the Project DA-1 (ft^3):40,157 *Copy Item 7 in Form 4.2-1*

2 On-site retention with site design hydrologic source control LID BMP (ft^3): 0 *Copy Item 30 in Form 4.3-2*

3 On-site retention with LID infiltration BMP (ft^3):40,933 *Copy Item 16 in Form 4.3-3*

4 On-site retention with LID harvest and use BMP (ft^3): 0 *Copy Item 9 in Form 4.3-4*

5 On-site biotreatment with volume based biotreatment BMP (ft^3): 0 *Copy Item 3 in Form 4.3-5*

6 Flow capacity provided by flow based biotreatment BMP (cfs): 0 *Copy Item 6 in Form 4.3-5*

7 LID BMP performance criteria are achieved if answer to any of the following is "Yes":

- Full retention of LID DCV with site design HSC, infiltration, or harvest and use BMP: Yes ☒ No ☐
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV: Yes ☐ No ☐
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- On-site retention and infiltration is determined to be infeasible and biotreatment BMP provide biotreatment for all pollutants of concern for full LID DCV: Yes ☐ No ☐
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

8 If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:

- Combination of HSC, retention and infiltration, harvest and use, and biotreatment BMPs provide less than full LID DCV capture: ☐
  Checked yes for Form 4.3-5 Item 7, Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} *= (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*
- An approved Watershed Action Plan (WAP) demonstrates that water quality and hydrologic impacts of urbanization are more effective when managed in at an off-site facility: ☐
  Attach appropriate WAP section, including technical documentation, showing effectiveness comparisons for the project site and regional watershed

4.3.6 Hydromodification Control BMP

Use Form 4.3-10 to compute the remaining runoff volume retention, after LID BMP are implemented, needed to address HCOC, and the increase in time of concentration and decrease in peak runoff necessary to meet targets for protection of waterbodies with a potential HCOC. Describe hydromodification control BMP that address HCOC, which may include off-site BMP and/or in-stream controls. Section 5.6 of the TGD for WQMP provides additional details on selection and evaluation of hydromodification control BMP.

Form 4.3-10 Hydromodification Control BMPs (DA 1)

1 Volume reduction needed for HCOC performance criteria (ft^3): *(Form 4.2-2 Item 4 * 0.95) – Form 4.2-2 Item 1*	2 On-site retention with site design hydrologic source control, infiltration, and harvest and use LID BMP (ft^3): *Sum of Form 4.3-9 Items 2, 3, and 4 Evaluate option to increase implementation of on-site retention in Forms 4.3-2, 4.3-3, and 4.3-4 in excess of LID DCV toward achieving HCOC volume reduction*
3 Remaining volume for HCOC volume capture (ft^3): *Item 1 – Item 2*	4 Volume capture provided by incorporating additional on-site or off-site retention BMPs (ft^3): *Existing downstream BMPs may be used to demonstrate additional volume capture (if so, attach to this WQMP a hydrologic analysis showing how the additional volume would be retained during a 2-yr storm event for the regional watershed)*

5 If Item 4 is less than Item 3, incorporate in-stream controls on downstream waterbody segment to prevent impacts due to hydromodification *Attach in-stream control BMP selection and evaluation to this WQMP*

6 Is Form 4.2-2 Item 11 less than or equal to 5%: Yes No

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate increase in time of concentration achieved by proposed LID site design, LID BMP, and additional on-site or off-site retention BMP

  BMP upstream of a waterbody segment with a potential HCOC may be used to demonstrate increased time of concentration through hydrograph attenuation (if so, show that the hydraulic residence time provided in BMP for a 2-year storm event is equal or greater than the addition time of concentration requirement in Form 4.2-4 Item 15)
- Increase time of concentration by preserving pre-developed flow path and/or increase travel time by reducing slope and increasing cross-sectional area and roughness for proposed on-site conveyance facilities
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California

7 Form 4.2-2 Item 12 less than or equal to 5%: Yes No

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate reduction in peak runoff achieved by proposed LID site design, LID BMPs, and additional on-site or off-site retention BMPs

  BMPs upstream of a waterbody segment with a potential HCOC may be used to demonstrate additional peak runoff reduction through hydrograph attenuation (if so, attach to this WQMP, a hydrograph analysis showing how the peak runoff would be reduced during a 2-yr storm event)
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California

NOT APPLICABLE

4.4 Alternative Compliance Plan (if applicable)

Describe an alternative compliance plan (if applicable) for projects not fully able to infiltrate, harvest and use, or biotreat the DCV via on-site LID practices. A project proponent must develop an alternative compliance plan to address the remainder of the LID DCV. Depending on project type some projects may qualify for water quality credits that can be applied to reduce the DCV that must be treated prior to development of an alternative compliance plan (see Form 2.4-1, Water Quality Credits). Form 4.3-9 Item 8 includes instructions on how to apply water quality credits when computing the DCV that must be met through alternative compliance. Alternative compliance plans may include one or more of the following elements:

- On-site structural treatment control BMP - All treatment control BMP should be located as close to possible to the pollutant sources and should not be located within receiving waters;
- Off-site structural treatment control BMP - Pollutant removal should occur prior to discharge of runoff to receiving waters;
- Urban runoff fund or In-lieu program, if available

Depending upon the proposed alternative compliance plan, approval by the executive officer may or may not be required (see Section 6 of the TGD for WQMP).

Section 5 Inspection and Maintenance Responsibility for Post Construction BMP

All BMP included as part of the project WQMP are required to be maintained through regular scheduled inspection and maintenance (refer to Section 8, Post Construction BMP Requirements, in the TGD for WQMP). Fully complete Form 5-1 summarizing all BMP included in the WQMP. Attach additional forms as needed. The WQMP shall also include a detailed Operation and Maintenance Plan for all BMP and may require a Maintenance Agreement (consult the jurisdiction's LIP). If a Maintenance Agreement is required, it must also be attached to the WQMP.

Form 5-1 BMP Inspection and Maintenance (use additional forms as necessary)

BMP	Reponsible Party(s)	Inspection/ Maintenance Activities Required	Minimum Frequency of Activities
Litter/Debris Control Program SD-32, N11, N15, S3	Owner	Litter shall be picked up, trash enclosure areas shall be swept and cleaned, dumpsters shall be emptied.	Weekly
Housekeeping of Loading Docks N13	Owner	Loading docks shall be inspected to ensure proper maintenance is completed.	Weekly
Catch Basin Inspection Program SD-11, N14, S1	Owner	Catch basins shall be inspected to ensure proper operation.	Monthly during rainy season (Oct-May) and before and after each storm event
Parking Lot Sweeping SC-43, SC-71	Owner	Parking lots must be swept	Quarterly (Minimum), Weekly during rainy season (Oct-May)
Landscape Management SC-73, SD-10, SD-12, N3, S4, S5	Owner	Gardening and lawn care practices to prevent landscape waste to exit project site per SC-73	Weekly

Underground Infiltration Chambers N4	Owner	See manufacturer information in O&M information. See Appendix D	See manufacturer information in O&M information. See Appendix D
N1, N2, N6, N12, N17	Owner	Educational material distributed to maintain compliance of activity restrictions, local water quality ordinances, and employee training	As Needed

Section 6 WQMP Attachments

6.1. Site Plan and Drainage Plan

Include a site plan and drainage plan sheet set containing the following minimum information:

- Project location
- Site boundary
- Land uses and land covers, as applicable
- Suitability/feasibility constraints
- Structural Source Control BMP locations
- Site Design Hydrologic Source Control BMP locations
- LID BMP details
- Drainage delineations and flow information
- Drainage connections

6.2 Electronic Data Submittal

Minimum requirements include submittal of PDF exhibits in addition to hard copies. Format must not require specialized software to open. If the local jurisdiction requires specialized electronic document formats (as described in their local Local Implementation Plan), this section will describe the contents (e.g., layering, nomenclature, geo-referencing, etc.) of these documents so that they may be interpreted efficiently and accurately.

6.3 Post Construction

Attach all O&M Plans and Maintenance Agreements for BMP to the WQMP.

6.4 Other Supporting Documentation

- BMP Educational Materials
- Activity Restriction – C, C&R's & Lease Agreements

Attachment A – Site Plan

Attachment B – HCOC Map

Attachment C – Calculations

Worksheet H: Factor of Safety and Design Infiltration Rate and Worksheet

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	2	0.50
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.25
B	Design	Tributary area size	0.25	2	0.5
		Level of pretreatment/ expected sediment loads	0.25	2	0.5
		Redundancy	0.25	2	0.5
		Compaction during construction	0.25	2	0.5
		Design Safety Factor, $S_B = \Sigma p$			2.0
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					3.25
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					50
Design Infiltration Rate, in/hr, $K_{DESIGN} = S_{TOT} \times K_M$					15.38

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

60-day	7.27 (6.44-8.38)	10.2 (9.02-11.8)	14.2 (12.6-16.5)	17.7 (15.5-20.7)	22.7 (19.2-27.3)	26.7 (22.2-32.9)	31.0 (25.1-39.1)	35.6 (28.1-46.1)	42.3 (32.0-57.0)	47.7 (34.9-66.6)

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

Curve (1) Numbers of Hydrologic Soil-Cover Complexes For Pervious Areas-AMC II

Cover Type (3)	Quality of Cover (2)	Soil Group A	B	C	D
NATURAL COVERS -					
Barren (Rockland, eroded and graded land)		78	86	91	93
Chaparral, Broadleaf (Manzonita, ceanothus and scrub oak)	Poor	53	70	80	85
	Fair	40	63	75	81
	Good	31	57	71	78
Chaparral, Narrowleaf (Chamise and redshank)	Poor	71	82	88	91
	Fair	55	72	81	86
Grass, Annual or Perennial	Poor	67	78	86	89
	Fair	50	69	79	84
	Good	38	61	74	80
Meadows or Cienegas (Areas with seasonally high water table, principal vegetation is sod forming grass)	Poor	63	77	85	88
	Fair	51	70	80	84
	Good	30	58	71	78
Open Brush (Soft wood shrubs - buckwheat, sage, etc.)	Poor	62	76	84	88
	Fair	46	66	77	83
	Good	41	63	75	81
Woodland (Coniferous or broadleaf trees predominate. Canopy density is at least 50 percent.)	Poor	45	66	77	83
	Fair	36	60	73	79
	Good	25	55	70	77
Woodland, Grass (Coniferous or broadleaf trees with canopy density from 20 to 50 percent)	Poor	57	73	82	86
	Fair	44	65	77	82
	Good	33	58	72	79
URBAN COVERS -					
Residential or Commercial Landscaping (Lawn, shrubs, etc.)	Good	32	56	69	75
Turf (Irrigated and mowed grass)	Poor	58	74	83	87
	Fair	44	65	77	82
	Good	33	58	72	79
AGRICULTURAL COVERS -					
Fallow (Land plowed but not tilled or seeded)		77	86	91	94

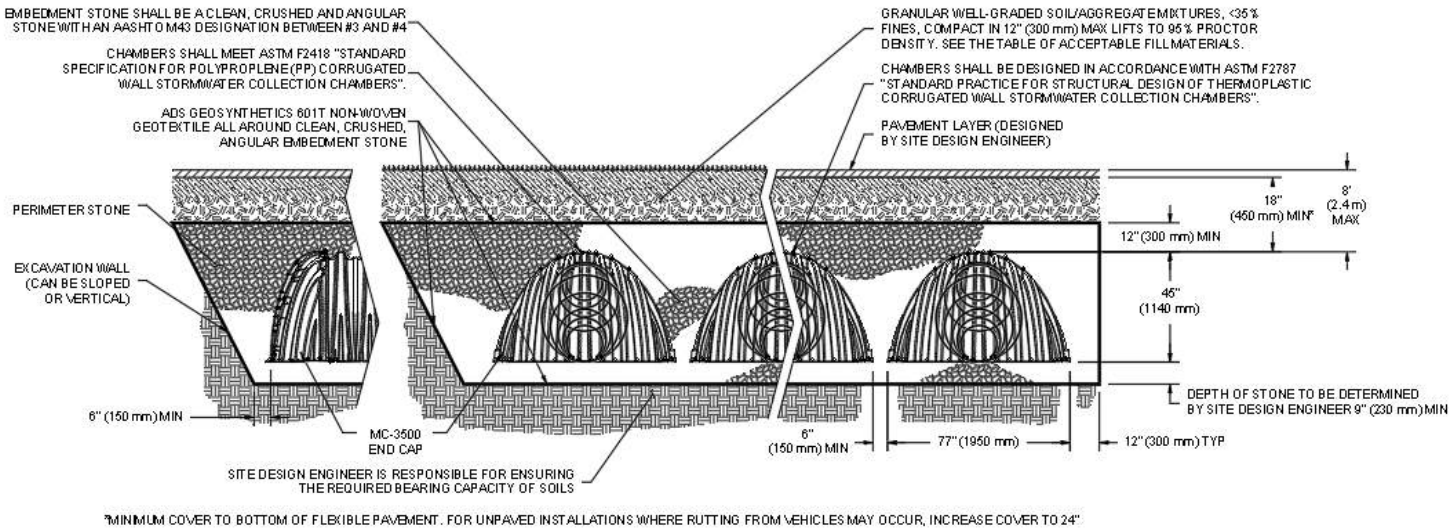
SAN BERNARDINO COUNTY
HYDROLOGY MANUAL

CURVE NUMBERS FOR PERVIOUS AREAS

Figure C-3 (1 of 2)

User Inputs

Chamber Model:	MC-3500
Outlet Control Structure:	No
Project Name:	
Engineer:	N/A
Project Location:	
Measurement Type:	Imperial
Required Storage Volume:	40200 cubic ft.
Stone Porosity:	40%
Stone Foundation Depth:	12 in.
Stone Above Chambers:	12 in.
Average Cover Over Chambers:	18 in.
Design Constraint Dimensions:	(110 ft. x 150 ft.)



Results

System Volume and Bed Size

Installed Storage Volume:	40932.80 cubic ft.
Storage Volume Per Chamber:	109.90 cubic ft.
Number Of Chambers Required:	214
Number Of End Caps Required:	22
Chamber Rows:	11
Maximum Length:	153.57 ft.
Maximum Width:	77.58 ft.
Approx. Bed Size Required:	11576.07 square ft.

System Components

Amount Of Stone Required:	1583 cubic yards
Volume Of Excavation (Not Including Fill):	2466 cubic yards
Total Non-woven Geotextile Required:	3442 square yards
Woven Geotextile Required (excluding Isolator Row):	151 square yards
Woven Geotextile Required (Isolator Row):	172 square yards
Total Woven Geotextile Required:	323 square yards
Impervious Liner Required:	0 square yards

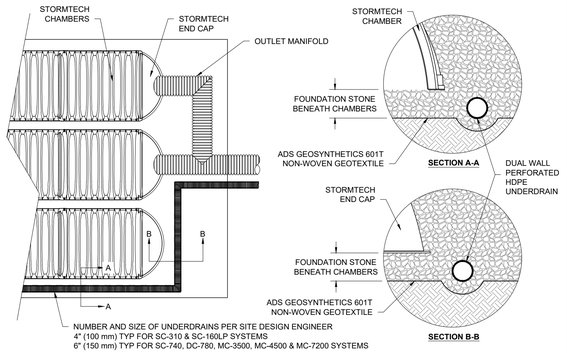
Advanced Drainage Systems, Inc.

SiteAssist®
FOR STORMTECH INSTALLATION INSTRUCTIONS VISIT OUR APP

MC-3500 STORMTECH CHAMBER SPECIFICATIONS

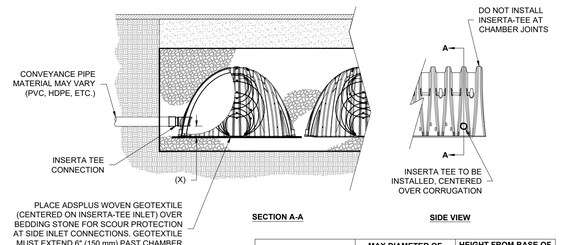
1. CHAMBERS SHALL BE STORMTECH MC-3500.
2. CHAMBERS SHALL BE ARCH-SHAPED AND SHALL BE MANUFACTURED FROM VIRGIN, IMPACT-MODIFIED POLYPROPYLENE COPOLYMERS.
3. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 45x76 DESIGNATION SS.
4. CHAMBER ROWS SHALL PROVIDE CONTINUOUS, UNOBSTRUCTED INTERNAL SPACE WITH NO INTERNAL SUPPORTS THAT WOULD IMPEDE FLOW OR LIMIT ACCESS FOR INSPECTION.
5. THE STRUCTURAL DESIGN OF THE CHAMBERS, THE STRUCTURAL BACKFILL, AND THE INSTALLATION REQUIREMENTS SHALL ENSURE THAT THE LOAD FACTORS SPECIFIED IN THE AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS, SECTION 12.12, ARE MET FOR: 1) LONG-DURATION DEAD LOADS AND 2) SHORT-DURATION LIVE LOADS, BASED ON THE AASHTO DESIGN TRUCK WITH CONSIDERATION FOR IMPACT AND MULTIPLE VEHICLE PRESENCES.
6. CHAMBERS SHALL BE DESIGNED, TESTED AND ALLOWABLE LOAD CONFIGURATIONS DETERMINED IN ACCORDANCE WITH ASTM F2787, "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS". LOAD CONFIGURATIONS SHALL INCLUDE: 1) INSTANTANEOUS (<1 MIN) AASHTO DESIGN TRUCK LIVE LOAD ON MINIMUM COVER 2) MAXIMUM PERMANENT (75-YR) COVER LOAD AND 3) ALLOWABLE COVER WITH PARKED (1-WEEK) AASHTO DESIGN TRUCK.
7. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT SHALL BE GREATER THAN OR EQUAL TO 450 LBS/FT/%. THE ASC IS DEFINED IN SECTION 6.2.8 OF ASTM F2418. AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.
8. ONLY CHAMBERS THAT ARE APPROVED BY THE SITE DESIGN ENGINEER WILL BE ALLOWED. UPON REQUEST BY THE SITE DESIGN ENGINEER OR OWNER, THE CHAMBER MANUFACTURER SHALL SUBMIT A STRUCTURAL EVALUATION FOR APPROVAL BEFORE DELIVERING CHAMBERS TO THE PROJECT SITE AS FOLLOWS:
   - THE STRUCTURAL EVALUATION SHALL BE SEALED BY A REGISTERED PROFESSIONAL ENGINEER.
   - THE STRUCTURAL EVALUATION SHALL DEMONSTRATE THAT THE SAFETY FACTORS ARE GREATER THAN OR EQUAL TO 1.95 FOR DEAD LOAD AND 1.75 FOR LIVE LOAD, THE MINIMUM REQUIRED BY ASTM F2787 AND BY SECTIONS 3 AND 12.12 OF THE AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS FOR THERMOPLASTIC PIPE.
   - THE TEST DERIVED CREEP MODULUS AS SPECIFIED IN ASTM F2418 SHALL BE USED FOR PERMANENT DEAD LOAD DESIGN EXCEPT THAT IT SHALL BE THE 75-YEAR MODULUS USED FOR DESIGN.
9. CHAMBERS AND END CAPS SHALL BE PRODUCED AT AN ISO 9001 CERTIFIED MANUFACTURING FACILITY.

IMPORTANT - NOTES FOR THE BIDDING AND INSTALLATION OF MC-3500 CHAMBER SYSTEM



1. STORMTECH MC-3500 CHAMBERS SHALL NOT BE INSTALLED UNTIL THE MANUFACTURER'S REPRESENTATIVE HAS COMPLETED A PRE-CONSTRUCTION MEETING WITH THE INSTALLERS.
2. STORMTECH MC-3500 CHAMBERS SHALL BE INSTALLED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
3. CHAMBERS ARE NOT TO BE BACKFILLED WITH A DOZER OR AN EXCAVATOR SITUATED OVER THE CHAMBERS. STORMTECH RECOMMENDS 3 BACKFILL METHODS:
   - STONESHOOTER LOCATED OFF THE CHAMBER BED.
   - BACKFILL AS ROWS ARE BUILT USING AN EXCAVATOR ON THE FOUNDATION STONE OR SUBGRADE.
   - BACKFILL FROM OUTSIDE THE EXCAVATION USING A LONG BOOM HOE OR EXCAVATOR.
4. THE FOUNDATION STONE SHALL BE LEVELED AND COMPACTED PRIOR TO PLACING CHAMBERS.
5. JOINTS BETWEEN CHAMBERS SHALL BE PROPERLY SEATED PRIOR TO PLACING STONE.
6. MAINTAIN MINIMUM - 6" (150 mm) SPACING BETWEEN THE CHAMBER ROWS.
7. INLET AND OUTLET MANIFOLDS MUST BE INSERTED A MINIMUM OF 12" (300 mm) INTO CHAMBER END CAPS.
8. EMBEDMENT STONE SURROUNDING CHAMBERS MUST BE A CLEAN, CRUSHED, ANGULAR STONE MEETING THE AASHTO M43 DESIGNATION OF #3 OR #4.
9. STONE MUST BE PLACED ON THE TOP CENTER OF THE CHAMBER TO ANCHOR THE CHAMBERS IN PLACE AND PRESERVE ROW SPACING.
10. THE CONTRACTOR MUST REPORT ANY DISCREPANCIES WITH CHAMBER FOUNDATION MATERIALS BEARING CAPACITIES TO THE SITE DESIGN ENGINEER.
11. ADS RECOMMENDS THE USE OF "FLEXSTORM CATCH IT" INSERTS DURING CONSTRUCTION FOR ALL INLETS TO PROTECT THE SUBSURFACE STORMWATER MANAGEMENT SYSTEM FROM CONSTRUCTION SITE RUNOFF.

NOTES FOR CONSTRUCTION EQUIPMENT

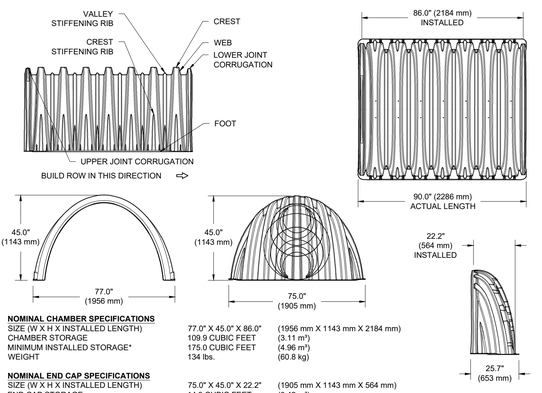


1. STORMTECH MC-3500 CHAMBERS SHALL BE INSTALLED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
2. THE USE OF EQUIPMENT OVER MC-3500 CHAMBERS IS LIMITED:
   - NO EQUIPMENT IS ALLOWED ON BARE CHAMBERS.
   - NO RUBBER TIRED LOADER, DUMP TRUCK, OR EXCAVATORS ARE ALLOWED UNTIL PROPER FILL DEPTHS ARE REACHED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
   - WEIGHT LIMITS FOR CONSTRUCTION EQUIPMENT CAN BE FOUND IN THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
3. FULL 36" (900 mm) OF STABILIZED COVER MATERIALS OVER THE CHAMBERS IS REQUIRED FOR DUMP TRUCK TRAVEL OR DUMPING.

USE OF A DOZER TO PUSH EMBEDMENT STONE BETWEEN THE ROWS OF CHAMBERS MAY CAUSE DAMAGE TO CHAMBERS AND IS NOT AN ACCEPTABLE BACKFILL METHOD. ANY CHAMBERS DAMAGED BY USING THE "DUMP AND PUSH" METHOD ARE NOT COVERED UNDER THE STORMTECH STANDARD WARRANTY.

CONTACT STORMTECH AT 1-888-892-2694 WITH ANY QUESTIONS ON INSTALLATION REQUIREMENTS OR WEIGHT LIMITS FOR CONSTRUCTION EQUIPMENT.

5 UNDERDRAIN DETAIL



NOTES:
- PART NUMBERS WILL VARY BASED ON INLET PIPE MATERIALS. CONTACT STORMTECH FOR MORE INFORMATION.
- CONTACT ADS ENGINEERING SERVICES IF INSERTA TEE INLET MUST BE RAISED AS NOT ALL INVERTS ARE POSSIBLE.

CHAMBER	MAX DIAMETER OF INSERTA TEE	HEIGHT FROM BASE OF CHAMBER (X)
SC-310	6" (150 mm)	4" (100 mm)
SC-740	10" (250 mm)	4" (100 mm)
DC-780	10" (250 mm)	4" (100 mm)

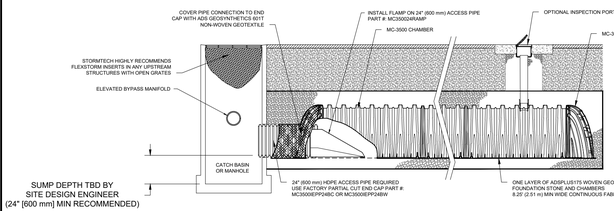
NOTE: ALL DIMENSIONS ARE NOMINAL

CUSTOM PARTIAL CUT INVERTS ARE AVAILABLE UPON REQUEST. INVENTORIED MANIFOLDS INCLUDE 12-24" (300-600 mm) SIZE ON SIZE AND 15-48" (375-1200 mm) ECCENTRIC MANIFOLDS. CUSTOM INVERT LOCATIONS ON THE MC-3500 END CAP CUT IN THE FIELD ARE NOT RECOMMENDED FOR PIPE SIZES GREATER THAN 10" (250 mm). THE INVERT LOCATION IN COLUMN 'B' ARE THE HIGHEST POSSIBLE FOR THE PIPE SIZE.

2 MC-3500 TECHNICAL SPECIFICATIONS

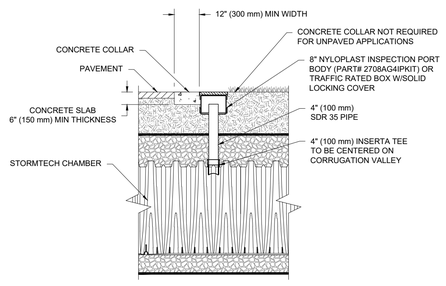
INSPECTION & MAINTENANCE

STEP 1) INSPECT ISOLATOR ROW PLUS FOR SEDIMENT
- A. INSPECTION PORTS (IF PRESENT)
  - A.1. REMOVE/OPEN LID ON NYLOPLAST INLINE DRAIN
  - A.2. REMOVE AND CLEAN FLEXSTORM FILTER IF INSTALLED
  - A.3. USING A FLASHLIGHT AND STADIA ROD, MEASURE DEPTH OF SEDIMENT AND RECORD ON MAINTENANCE LOG
  - A.4. LOWER A CAMERA INTO ISOLATOR ROW PLUS FOR VISUAL INSPECTION OF SEDIMENT LEVELS (OPTIONAL)
  - A.5. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.
- B. ALL ISOLATOR PLUS ROWS
  - B.1. REMOVE COVER FROM STRUCTURE AT UPSTREAM END OF ISOLATOR ROW PLUS
  - B.2. USING A FLASHLIGHT, INSPECT DOWN THE ISOLATOR ROW PLUS THROUGH OUTLET PIPE
    - i) MIRRORS ON POLES OR CAMERAS MAY BE USED TO AVOID A CONFINED SPACE ENTRY
    - ii) FOLLOW OSHA REGULATIONS FOR CONFINED SPACE ENTRY IF ENTERING MANHOLE
  - B.3. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.



STEP 2) CLEAN OUT ISOLATOR ROW PLUS USING THE JETVAC PROCESS
- A. A FIXED CULVERT CLEANING NOZZLE WITH REAR FACING SPREAD OF 45° (1.1 m) OR MORE IS PREFERRED
- B. APPLY MULTIPLE PASSES OF JETVAC UNTIL BACKFLUSH WATER IS CLEAN
- C. VACUUM STRUCTURE SUMP AS REQUIRED

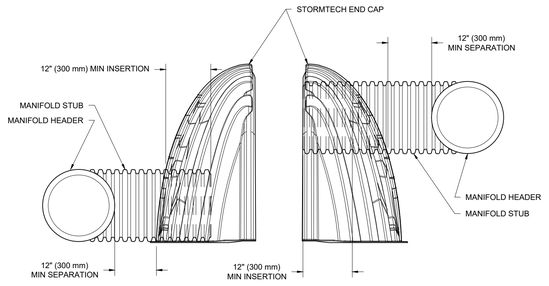
STEP 3) REPLACE ALL COVERS, GRATES, FILTERS, AND LIDS; RECORD OBSERVATIONS AND ACTIONS.



STEP 4) INSPECT AND CLEAN BASINS AND MANHOLES UPSTREAM OF THE STORMTECH SYSTEM.

NOTES

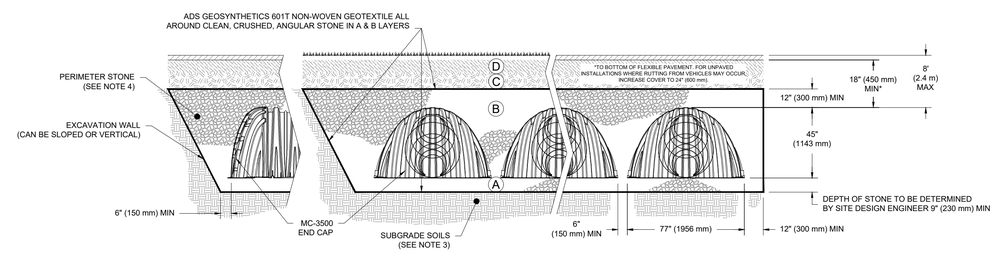
1. INSPECT EVERY 6 MONTHS DURING THE FIRST YEAR OF OPERATION. ADJUST THE INSPECTION INTERVAL BASED ON PREVIOUS OBSERVATIONS OF SEDIMENT ACCUMULATION AND HIGH WATER ELEVATIONS.
2. CONDUCT JETTING AND VACTORING ANNUALLY OR WHEN INSPECTION SHOWS THAT MAINTENANCE IS NECESSARY.



3 MC-3500 ISOLATOR ROW PLUS DETAIL

NOTE:
INSPECTION PORTS MAY BE CONNECTED THROUGH ANY CHAMBER CORRUGATION VALLEY.

4 4" PVC INSPECTION PORT DETAIL (MC SERIES CHAMBER)



NOTE: MANIFOLD STUB MUST BE LAID HORIZONTAL FOR A PROPER FIT IN END CAP OPENING.

7 MC-SERIES END CAP INSERTION DETAIL

ACCEPTABLE FILL MATERIALS: STORMTECH MC-3500 CHAMBER SYSTEMS

	MATERIAL LOCATION	DESCRIPTION	AASHTO MATERIAL CLASSIFICATIONS	COMPACTION / DENSITY REQUIREMENT
D	**FINAL FILL:** FILL MATERIAL FOR LAYER 'D' STARTS FROM THE TOP OF THE 'C' LAYER TO THE BOTTOM OF FLEXIBLE PAVEMENT OR UNPAVED FINISHED GRADE ABOVE. NOTE THAT PAVEMENT SUBBASE MAY BE PART OF THE 'D' LAYER	ANY SOIL/ROCK MATERIALS, NATIVE SOILS, OR PER ENGINEER'S PLANS. CHECK PLANS FOR PAVEMENT SUBGRADE REQUIREMENTS.	N/A	PREPARE PER SITE DESIGN ENGINEER'S PLANS. PAVED INSTALLATIONS MAY HAVE STRINGENT MATERIAL AND PREPARATION REQUIREMENTS.
C	**INITIAL FILL:** FILL MATERIAL FOR LAYER 'C' STARTS FROM THE TOP OF THE EMBEDMENT STONE ('B' LAYER) TO 24" (600 mm) ABOVE THE TOP OF THE CHAMBER. NOTE THAT PAVEMENT SUBBASE MAY BE A PART OF THE 'C' LAYER.	GRANULAR WELL-GRADED SOIL/AGGREGATE MIXTURES, <35% FINES OR PROCESSED AGGREGATE. MOST PAVEMENT SUBBASE MATERIALS CAN BE USED IN LIEU OF THIS LAYER. PLEASE NOTE:
1. THE LISTED AASHTO DESIGNATIONS ARE FOR GRADATIONS ONLY. THE STONE MUST ALSO BE CLEAN, CRUSHED, ANGULAR. FOR EXAMPLE, A SPECIFICATION FOR #4 STONE WOULD STATE: "CLEAN, CRUSHED, ANGULAR NO. 4 (AASHTO M43) STONE".
2. STORMTECH COMPACTION REQUIREMENTS ARE MET FOR 'A' LOCATION MATERIALS WHEN PLACED AND COMPACTED IN 9" (230 mm) (MAX) LIFTS USING TWO FULL COVERAGES WITH A VIBRATORY COMPACTOR.
3. WHERE INFILTRATION SURFACES MAY BE COMPROMISED BY COMPACTION, FOR STANDARD DESIGN LOAD CONDITIONS, A FLAT SURFACE MAY BE ACHIEVED BY RAKING OR DRAGGING WITHOUT COMPACTION EQUIPMENT. FOR SPECIAL LOAD DESIGNS, CONTACT STORMTECH FOR COMPACTION REQUIREMENTS.
4. ONCE LAYER 'C' IS PLACED, ANY SOIL/MATERIAL CAN BE PLACED IN LAYER 'D' UP TO THE FINISHED GRADE. MOST PAVEMENT SUBBASE SOILS CAN BE USED TO REPLACE THE MATERIAL REQUIREMENTS OF LAYER 'C' OR 'D' AT THE SITE DESIGN ENGINEER'S DISCRETION.

NOTES:

1. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 45x76 DESIGNATION SS.
2. MC-3500 CHAMBERS SHALL BE DESIGNED IN ACCORDANCE WITH ASTM F2787 "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".
3. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR ASSESSING THE BEARING RESISTANCE (ALLOWABLE BEARING CAPACITY) OF THE SUBGRADE SOILS AND THE DEPTH OF FOUNDATION STONE WITH CONSIDERATION FOR THE RANGE OF EXPECTED SOIL MOISTURE CONDITIONS.
4. PERIMETER STONE MUST BE EXTENDED HORIZONTALLY TO THE EXCAVATION WALL FOR BOTH VERTICAL AND SLOPED EXCAVATION WALLS.
5. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT AS DEFINED IN SECTION 6.2.8 OF ASTM F2418 SHALL BE GREATER THAN OR EQUAL TO 500 LBS/FT/%. AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.

Attention: Mr. Nolan Leggio

Subject: **Field Percolation Tests Results, Proposed Empire Resort and Spa Project, Approximately 10.4 Acres of Vacant Land at Southeast Corner of E. Holt Boulevard and E. Guasti Road, City of Ontario, San Bernardino, California**

Reference: Petra Geosciences, Inc. 2023, DRAFT Preliminary Geotechnical Evaluation, Proposed Empire Resort and Spa Project, Approximately 10.4 Acres of Vacant Land at Southeast Corner of E. Holt Boulevard and E. Guasti Road, APN 011 032 233, City of Ontario, San Bernardino, California, J.N. 22-398 dated February 10.

Dear Mr. Leggio:

Petra Geosciences, Inc. (Petra) has prepared this letter report presenting the results of our percolation testing for the subject project.

Objective

The objective of this investigation was to evaluate infiltration rates of the site soils, consisting of upper younger alluvial deposits, for the preliminary design of onsite infiltration facilities. To achieve this objective, we have drilled five test borings on the order of 5 to 15 feet using a hollow-stem drill equipment, conducted borehole percolation tests of the lower part of each borehole, and calculated the infiltration rate. The project site and the locations of the percolation boreholes are shown in Figure 1.

Test Method and Scope of Services

Percolation test to evaluate site infiltration rate was performed in conformance with Design Handbook for Low Impact Development, Best Management Practices, by Riverside County Flood Control and Water Conservation District, dated September 2011 (RCFFCWCD, 2011). As such, our scope of work included the following:

1. Collect and review readily available literature and maps about soil and geologic conditions within and adjacent to the site including our prior soil and boring data, see reference.

2. Consult with project civil engineer on targeted test locations and depths.

3. Drill 5 exploratory borings using the hollow-stem auger drilling method and perform falling-head percolation test in each borehole. The percolation tests results and infiltration rate calculations are presented in Appendix A.

4. Log and field-classify soil materials encountered in each boring in accordance with the visual-manual procedures outlined in the Unified Soil Classification System and the American Society for Testing and Materials (ASTM) Procedure D 2488-90. All field activities were performed by or under the direct observation of a State of California Certified Engineering Geologist.

5. Collect representative bulk soil samples near the bottom of each borehole utilizing a 1.4- inch inside diameter Standard Penetration Test (SPT) split-spoon sampler. Perform a laboratory derived grain size analysis (sieve) on each sample.

6. Prepare this letter report presenting the results of our evaluations.

Test Description and Results

The falling head percolation testing method was used in accordance with the cited reference. The borings for the percolation tests were advanced using an 8-inch diameter hollow-stem auger to depths between approximately 5 and 15 feet below the existing ground surface. As anticipated, surficial fills underlain by alluvial deposits were encountered in each test borings. The excavated materials in the generally upper 5 to 8 consisted of silty fine to medium sands with variable gravels that were medium-dense and slightly moist. The soil materials below approximately 8 feet generally consisted of interbedded silty sand with less fines to sand with silts also with variable gravel content that were medium dense and slightly moist. Percolation testing was performed in the bottom 4 to 5 feet of the boreholes. The locations of the percolation test borings are shown on the Test Location Map (Figure 1) and the boring logs are presented in Appendix A.

Following a presoaking period, field testing was conducted in a perforated pipe lowered into the borehole, with ¾-inch gravel surrounding the pipe, at 10-minute intervals for a period of approximately 1 hour. The falling-head percolation test data were utilized in determining the test infiltration rate, I_t, expressed in units of inches/hour, utilizing the Porchet Method (RCFCWCD, 2011). The infiltration rate, I_t, was calculated by determining the volumetric water flow rate through the wetted borehole surface area, expressed in terms of inches per hour. The un-factored test results are summarized in the following table, Table 1 and the field test data and laboratory test results are presented in Appendix B and C.

TABLE 1

Un-Factored Infiltration Test Results

Test No.	Borehole Total Depth (feet)	Approximate Test Zone (feet below existing grade)	Geologic Unit / Soil Description	Infiltration Test Rate, I_t (in/hr)
P-1	5	1-5	Qal (SM)	0.9
P-2	15	10-15	Qal (SP-SM)	49.3
P-3	10	5-10	Qal (SP-SM)	50.6
P-4	7	2-7	Qal (SM)	2.3
P-5	5	1-5	Qal (SM)	2.1

The test data indicates the alluvial deposits greater than approximately 9 feet below existing site grades are considered permeable. As observed, the shallow subsurface native soils, for containing high fines content, exhibit variable permeability, as measured by percolation tests at different depths. As such, it is our professional opinion that the infiltration rates approximately 9 feet below surface are more suitable for the intended infiltration purposes.

Discussion

Suitability Assessment

In view of the test data, certain jurisdictions consider such factors as infiltration assessment method, soil texture, site soils variability, and depth to groundwater/impervious layer to assign a Suitability Assessment Safety Factor that should be applied to the infiltration rates.

To perform such an evaluation, we have adopted a procedure provided by Santa Ana Regional Water Quality Control Board (SARWQCB) in their Technical Guidance Document (TGD) for the Preparation of Conceptual/Preliminary and/or Project Water Quality Management Plans (WQMPs), with Appendices, For Santa Ana Regional Board consideration, dated December 20, 2013 (SARWQCB, 2013). Based on Appendix D of this document, using Table VII.3: Suitability Assessment Related Considerations for Infiltration Facility Safety Factors, and Worksheet H: Factor of Safety and Design Infiltration Rate and Worksheet, of the Orange County BMP Design Manual, the following is presented.

TABLE 2

Site Suitability Reduction Factor (Category A) for Infiltration Rate

Considerations		Concern		Reduction Factor
Description	**Weight**	**Level**	**Safety Factor**	**Weight x Safety Factor**
Soil Assessment Method	0.25	Low	1.0	0.25
Predominant Soil Texture	0.25	Low	1.0	0.25
Site Soil Variability	0.25	medium	2.0	0.50
Depth to Groundwater/Impervious Layer	0.25	Low	1.0	0.25
Reduction Factor (sum of individual Reduction Factors)				**1.25**

Based on the information provided in Table 2, a Reduction Factor of 1.25 should be applied to the values of Infiltration Rate, I_t, provided in Table 1, above, for Site Suitability considerations.

Construction Procedure

The infiltration rates provided herein are considered representative of the native soils in the vicinity of the percolation test locations. Care should be taken to minimize disturbance of the exposed bottom surface of the basins as fill placement or any compaction effort applied to the area will have a detrimental effect on the anticipated infiltration rate of the proposed infiltration areas.

Environmental Impact

It should be noted that clean, potable water was used for the test. Surface runoff usually carries with it debris and fine particles that are typically expected to reduce the calculated infiltration rate.

Factor of Safety

The values of infiltration rate provided in Table 1 are raw test values. As discussed above, these values should be corrected for site Suitability considerations by applying a Reduction factor as provided in Table 2. Further, the project civil engineer needs to consider a Design Safety Factor, which incorporates such items as tributary area size, level of pretreatment/expected sediment load, redundancy/contingency plan and compaction during construction, in combination with the Suitability Assessment Safety/Reduction Factor for the design of the system.

This report may be subject to review by the controlling agency.

Respectfully submitted,

Standard Penetration Test

Shelby Tube Sample

Bulk Sample

No Recovery in SPT Sampler

No Recovery in Shelby Tube

Notes:
Blows Per Foot: Number of blows required to advance sampler 1 foot (unless a lesser distance is specified). Samplers in general were driven into the soil or bedrock at the bottom of the hole with a standard (140 lb.) hammer dropping a standard 30 inches unless noted otherwise in Log Notes. Drive samples collected in bucket auger borings may be obtained by dropping non-standard weight from variable heights. When a SPT sampler is used the blow count conforms to ASTM D-1586

EXECUTIVE SUMMARY

Urban Crossroads, Inc. has prepared this noise study to determine the noise exposure and the necessary noise abatement measures for the proposed Empire Groves Hotel development ("Project"). The Project site is located at the northeast corner of Holt Boulevard and Guasti Road in the City of Ontario. The Project includes the development of a hotel that includes 600 rooms, 2 ballrooms, a spa and fitness center, meeting and conference rooms as well as an outdoor pool and event lawn. This noise impact analysis was prepared to satisfy the City of Ontario noise level standards and ensure that adequate noise abatement measures are incorporated into the Project's development. In addition, recommendations for exterior and interior noise abatement are identified based on the latest Project site plans.

SUMMARY OF CEQA SIGNIFICANCE FINDINGS

The results of this Empire Groves Hotel Noise Impact Analysis are summarized below based on the significance criteria in Section 4 of this report consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1)(1) Table ES-1 shows the findings of significance for each potential noise and/or vibration impact under CEQA.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated

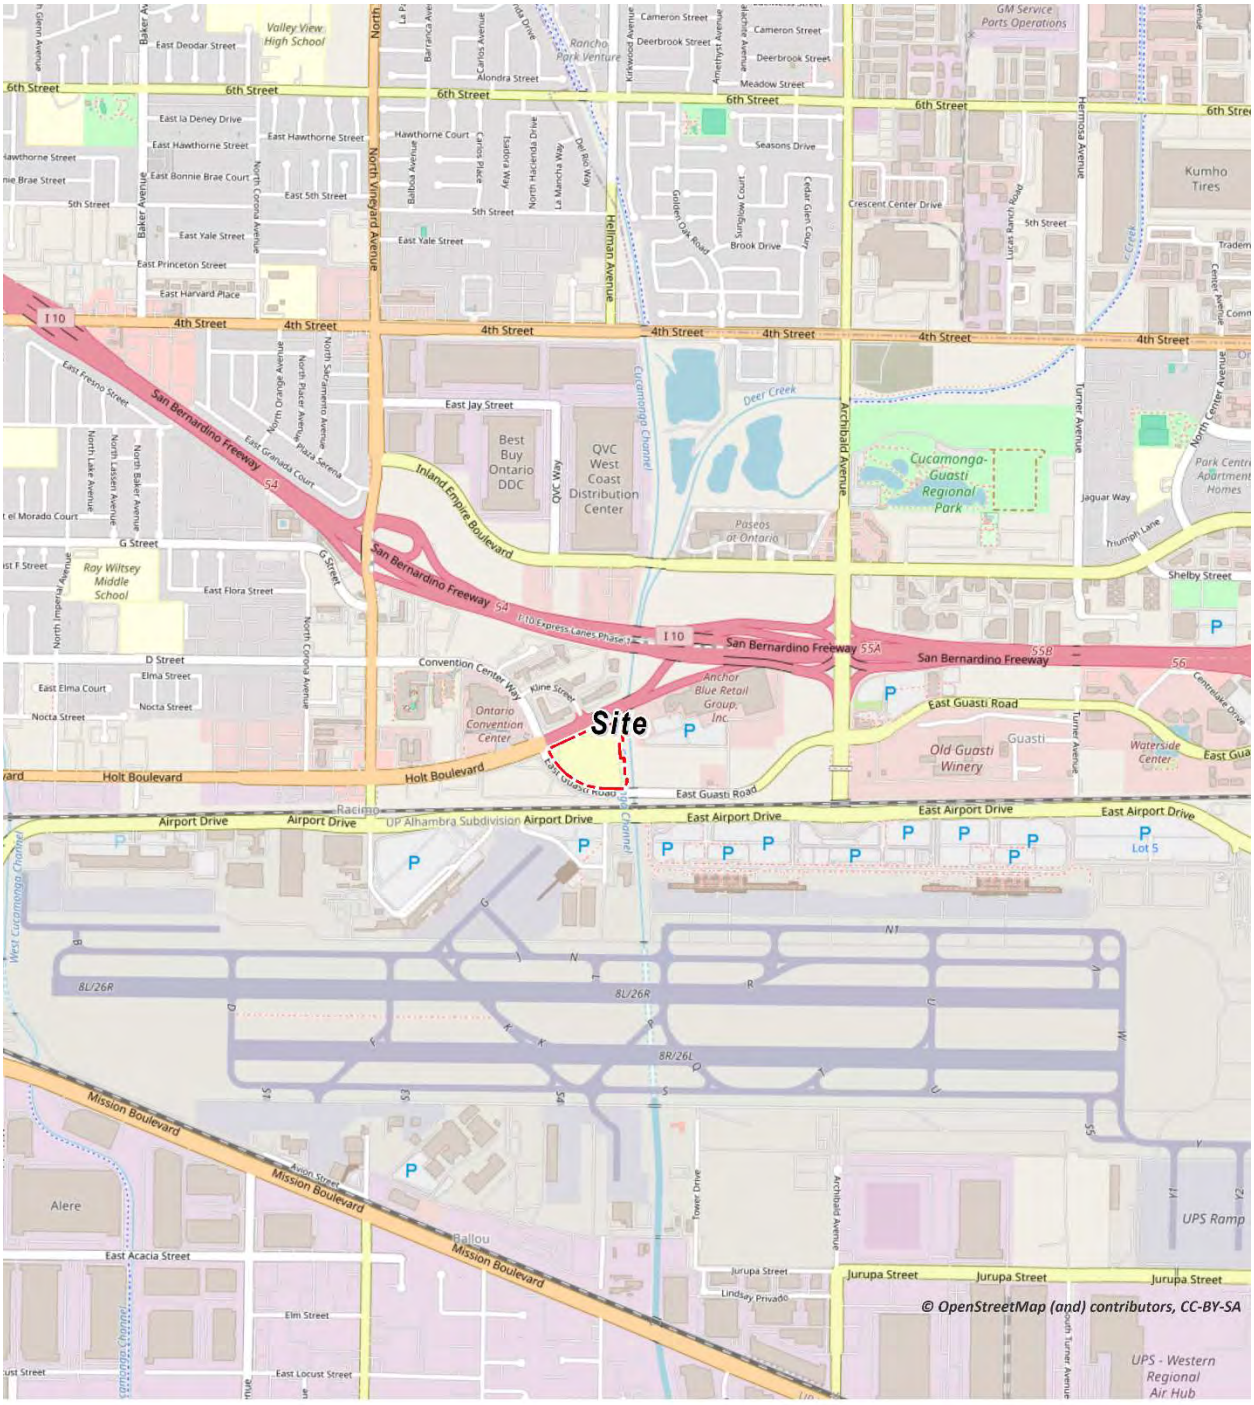
1 INTRODUCTION

This noise analysis has been completed to determine the noise impacts associated with the development of the proposed Empire Groves Hotel ("Project"). This noise study briefly describes the proposed Project, provides information regarding noise fundamentals, sets out the local regulatory setting, presents the study methods and procedures noise analysis, evaluates the potential noise impacts from operation and construction of the Project, and as necessary, identifies mitigation measures to reduce impacts.



1.1 SITE LOCATION

The proposed Empire Groves Hotel site is located at the northeast corner of Holt Boulevard and Guasti Road in the City of Ontario, as shown on Exhibit 1-A. The project site is approximately 834 feet south of Interstate 10, and approximately 325 feet north of Ontario International Airport.

1.2 PROJECT DESCRIPTION

The Project consists of a hotel that includes 600 rooms, 2 ballrooms, a spa and fitness center, meeting and conference rooms as well as an outdoor pool and event lawn on 10.43 acres. A preliminary site plan for the proposed hotel development is shown on Exhibit 1-B.

2 FUNDAMENTALS

Noise is simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Exhibit 2-A presents a summary of the typical noise levels and their subjective loudness and effects that are described in more detail below.

EXHIBIT 2-A: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	COMMON INDOOR ACTIVITIES	A - WEIGHTED SOUND LEVEL dBA	SUBJECTIVE LOUDNESS	EFFECTS OF NOISE
THRESHOLD OF PAIN		140	INTOLERABLE OR DEAFENING	HEARING LOSS
NEAR JET ENGINE		130		
		120		
JET FLY-OVER AT 300m (1000 ft)	ROCK BAND	110		
LOUD AUTO HORN		100	VERY NOISY	
GAS LAWN MOWER AT 1m (3 ft)		90		
DIESEL TRUCK AT 15m (50 ft), at 80 km/hr (50 mph)	FOOD BLENDER AT 1m (3 ft)	80		SPEECH INTERFERENCE
NOISY URBAN AREA, DAYTIME	VACUUM CLEANER AT 3m (10 ft)	70	LOUD	
HEAVY TRAFFIC AT 90m (300 ft)	NORMAL SPEECH AT 1m (3 ft)	60		
QUIET URBAN DAYTIME	LARGE BUSINESS OFFICE	50	MODERATE	SLEEP DISTURBANCE
QUIET URBAN NIGHTTIME	THEATER, LARGE CONFERENCE ROOM (BACKGROUND)	40		
QUIET SUBURBAN NIGHTTIME	LIBRARY	30	FAINT	NO EFFECT
QUIET RURAL NIGHTTIME	BEDROOM AT NIGHT, CONCERT HALL (BACKGROUND)	20		
	BROADCAST/RECORDING STUDIO	10	VERY FAINT	
LOWEST THRESHOLD OF HUMAN HEARING	LOWEST THRESHOLD OF HUMAN HEARING	0

2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. (2) The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA

at approximately 100 feet, which can cause serious discomfort. (3) Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages, rather than instantaneous, noise levels. The most used figure is the equivalent level (L_{eq}). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period (typically one hour) and is commonly used to describe the "average" noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA L_{eq} sound levels in the evening from 7:00 p.m. to 10:00 p.m., and the addition of 10 decibels to dBA L_{eq} sound levels at night between 10:00 p.m. and 7:00 a.m. These additions are made to account for the noise sensitive time periods during the evening and night hours when sound appears louder. CNEL does not represent the actual sound level heard at any time, but rather represents the total sound exposure. The City of Ontario relies on the 24-hour CNEL level to assess land use compatibility with transportation related noise sources.

2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The way noise reduces with distance depends on the following factors.

2.3.1 GEOMETRIC SPREADING

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source. (2)

2.3.2 GROUND ABSORPTION

The propagation path of noise from a highway to a receiver is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually

sufficiently accurate for distances of less than 200 ft. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receiver, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receiver such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source. (4)

2.3.3 ATMOSPHERIC EFFECTS

Receivers located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects. (2)

2.3.4 SHIELDING

A large object or barrier in the path between a noise source and a receiver can substantially attenuate noise levels at the receiver. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an "out of sight, out of mind" effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearby residents. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide and dense enough to completely obstruct the line-of sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The Federal Highway Administration (FHWA) does not consider the planting of vegetation to be a noise abatement measure (4).

2.4 NOISE CONTROL

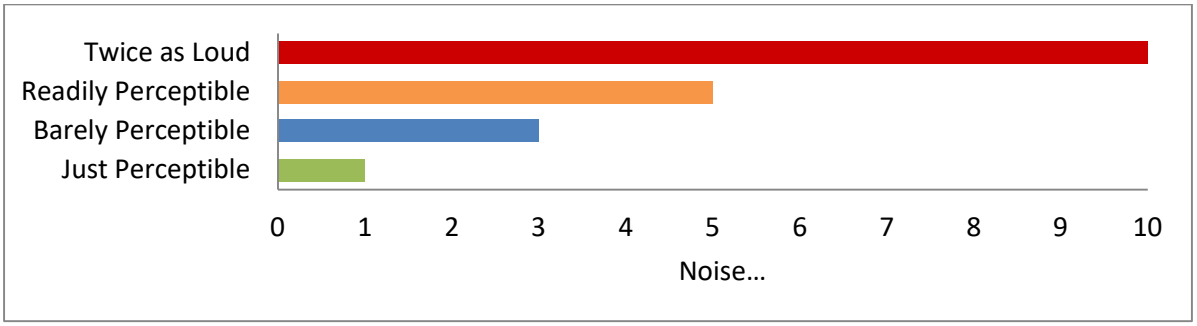
Noise control is the process of obtaining an acceptable noise environment for an observation point or receiver by controlling the noise source, transmission path, receiver, or all three. This concept is known as the source-path-receiver concept. In general, noise control measures can be applied to these three elements.

2.5 NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by up to 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receiver. Noise barriers, however, do have limitations. For a noise barrier to work, it must be high enough and long enough to block the path of the noise source (4).

2.6 LAND USE COMPATIBILITY WITH NOISE

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized (5).



2.7 COMMUNITY RESPONSE TO NOISE

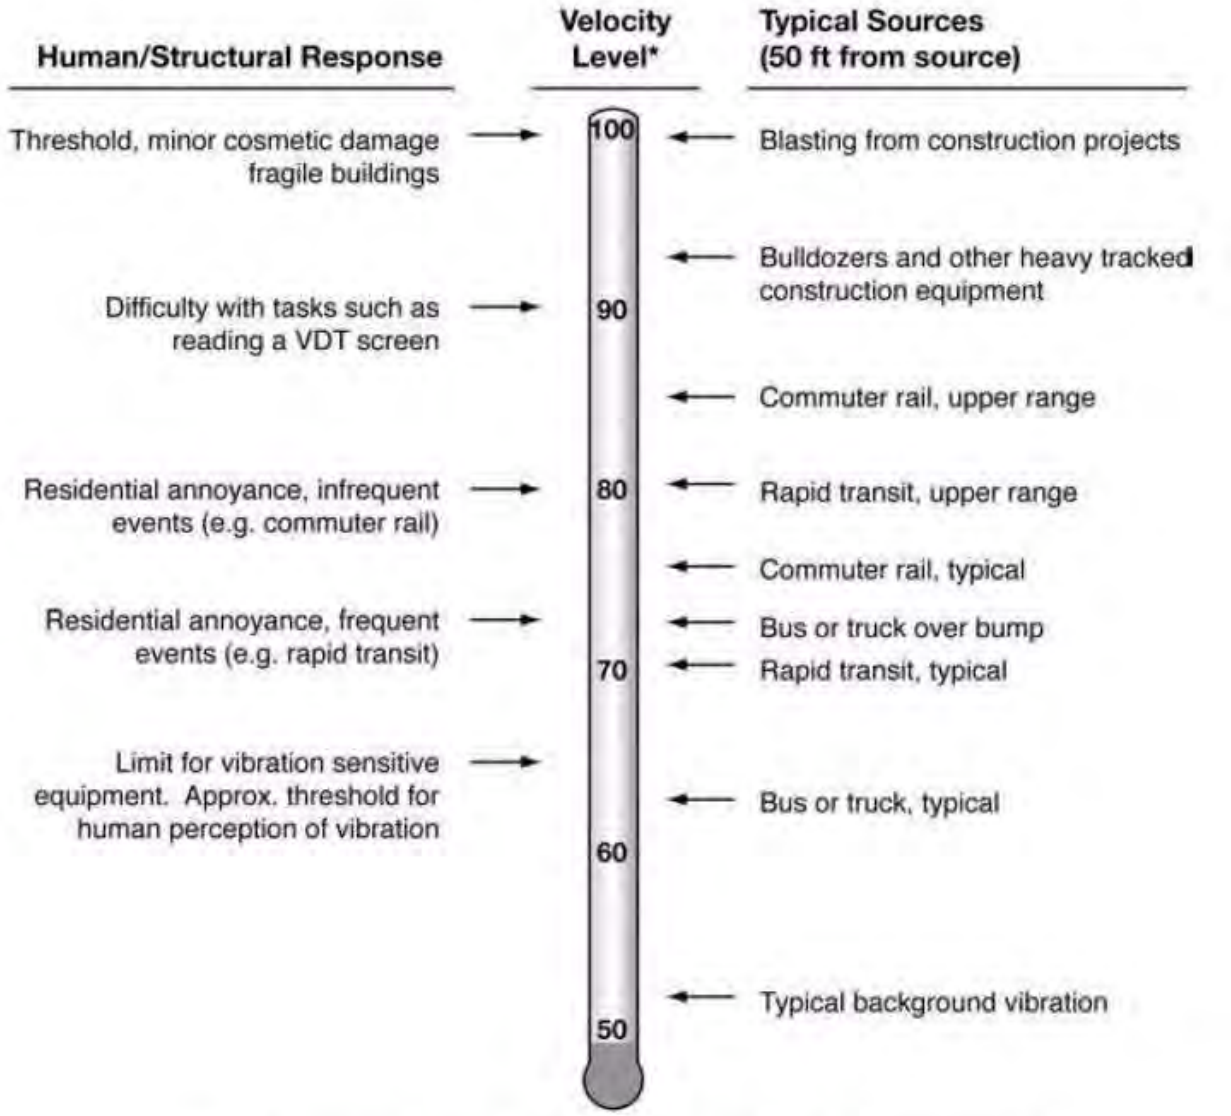
Community responses to noise may range from registering a complaint by telephone or letter, to initiating court action, depending upon everyone's susceptibility to noise and personal attitudes about noise. Several factors are related to the level of community annoyance including:

- Fear associated with noise producing activities;
- Socio-economic status and educational level;
- Perception that those affected are being unfairly treated;
- Attitudes regarding the usefulness of the noise-producing activity;
- Belief that the noise source can be controlled.

Approximately ten percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints will occur. Twenty-five percent of the population will not complain even in very severe noise environments. Thus, a variety of reactions can be expected from people exposed to any given noise environment. (6) Surveys have shown that about ten percent of the people exposed to traffic noise of 60 dBA will report being highly annoyed with the noise, and each increase of one dBA is associated with approximately two percent more people being highly annoyed. When traffic noise exceeds 60 dBA or aircraft noise exceeds 55 dBA, people may begin to complain. (6) Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels as shown on Exhibit 2-B. A change of 3 dBA is considered *barely perceptible*, and changes of 5 dBA are considered *readily perceptible*. (4)

EXHIBIT 2-B: NOISE LEVEL INCREASE PERCEPTION

2.8 VIBRATION



Per the Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* (7), vibration is the periodic oscillation of a medium or object. Vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. However, the RMS amplitude and PPV are related mathematically, and the RMS amplitude can be calculated from the PPV. The RMS amplitude is approximately 70% of the PPV (in/sec) (8). Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receivers for vibration include structures (especially older masonry structures), people (especially residents, the elderly, and sick), and vibration-sensitive equipment and/or activities.

While not universally accepted, vibration decibel notation (VdB) is used by the FTA in their guidance manual to describe vibration levels and provide a background of common vibration levels (9). As stated in the FTA guidance manual, the background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background

vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

EXHIBIT 2-C: TYPICAL LEVELS OF GROUND-BORNE VIBRATION

3 REGULATORY SETTING

The federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research (OPR). (10) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels*. In addition, the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

3.2 STATE OF CALIFORNIA BUILDING CODE

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research (OPR). (11) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels*. In addition, the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

3.2.1 RESIDENTIAL CONSTRUCTION

The State of California's noise insulation standards for all residential units are codified in the California Code of Regulations (CCR), Title 24, Building Standards Administrative Code, Chapter 12, Section 1206. These noise standards are applied to new construction that contains dwelling units or sleeping units, such as residential and hotel or motel uses, in California for controlling interior noise levels resulting from exterior noise sources. For new buildings, the acceptable interior noise limit is 45 dBA CNEL in habitable rooms (12).

3.2.2 NON-RESIDENTIAL CONSTRUCTION

The State of California's Green Building Standards Code contains mandatory measures for non-residential building construction in Section 5.507 on Environmental Comfort. (13) These noise

standards are applied to new construction in California for controlling interior noise levels resulting from exterior noise sources. The regulations specify that acoustical studies must be prepared when non-residential structures are developed in areas where the exterior noise levels exceed 65 dBA CNEL, such as within a noise contour of an airport, freeway, railroad, and other noise source. If the development falls within an airport or freeway 65 dBA CNEL noise contour, buildings shall be construction to provide an interior noise level environment attributable to exterior sources that does not exceed an hourly equivalent level of 50 dBA L_{eq} in occupied areas during any hour of operation.

3.3 CITY OF ONTARIO GENERAL PLAN NOISE ELEMENT

The City of Ontario General Plan (Policy Plan) identifies several policies to minimize the impacts of excessive noise levels throughout the community. Policy Plan Section S4, Noise Hazards, establishes a goal of maintaining *an environment where noise does not adversely affect the public's health, safety, and welfare.* (14) To satisfy this goal, the Policy Plan identifies seven policies related to: noise mitigation; coordination with transportation authorities; noise mitigation; truck traffic; roadway design; airport noise compatibility and rail noise mitigation. The noise criteria identified on Table 5-13-3 of The Ontario Plan 2050 Final Supplemental Environmental Impact Report (FSEIR) (15) provide guidelines to evaluate land use compatibility within various noise environments. Table 5-13-3 is reproduced here as Exhibit 3-A *Ontario Noise Level Exposure and Land Use Compatibility Guidelines*.

Source: Ontario 2010.
1 No special noise insulation required, assuming buildings of normal conventional construction.
2 Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditions will normally suffice.
3 New construction should be discouraged. Noise/aviation easements required for all new construction. If new construction does proceed, a detailed analysis of noise reduction requirements must be made, and necessary noise insulation features included.
4 No new construction should be permitted.

3.3 OPERATIONAL NOISE STANDARDS

To analyze noise impacts originating from a designated fixed location or private property such as the Empire Groves Hotel, stationary-source (operational) noise levels are evaluated against standards established under a City's Municipal Code. The City of Ontario requires that noise from new stationary sources in the City comply with the City's Noise Ordinance, which limits the acceptable noise at the property line of the impacted property, to reduce nuisances to sensitive land uses. Compliance with the City's Noise Ordinance would result in noise levels that are acceptable to the City and would result in less than significant noise impacts from stationary sources. The City of Ontario Municipal Code, Title 5, Chapter 29 noise standards are included in Appendix 3.1.

Section 5-29.04(a) identifies the allowable daytime and nighttime ambient exterior noise standards for each land use type. For Manufacturing and Industrial land uses (Noise Zone V), such as the Project, ambient exterior noise levels may not exceed 65 dBA L_{eq} during the daytime hours (7:00 a.m. to 10:00 p.m.) and may not exceed 60 dBA L_{eq} during the nighttime hours (10:00 p.m. to 7:00 a.m.). For residential land uses (Noise Zone I), ambient exterior noise levels may not exceed 65 dBA L_{eq} during the daytime hours (7:00 a.m. to 10:00 p.m.) and may not exceed 45 dBA L_{eq} during the nighttime hours (10:00 p.m. to 7:00 a.m.) (16). The lower noise level standard shall apply on the boundary between two (2) different noise zones. If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard. The maximum acceptable Project-related operational noise levels received at off-site land uses in the City of Ontario are identified on Table 3-1.

TABLE 3-1: OPERATIONAL NOISE STANDARDS

Noise Zone	Land Use	Exterior Noise Levels (dBA Leq)[2]	
		Daytime (7am-10pm)	Nighttime (10pm-7am)
I	Single-Family Residential	65	45
II	Multi-Family Residential	65	50
III	Commercial	65	60
IV	Residential Mixed-Use	70	70
V	Manufacturing and Industrial	70	70

[1] Source: Section 5-29.04 of the City of Ontario Municipal Code (Appendix 3.1).
[2] L_{eq} represents a steady state sound level containing the same total energy as a time varying signal over a given period.

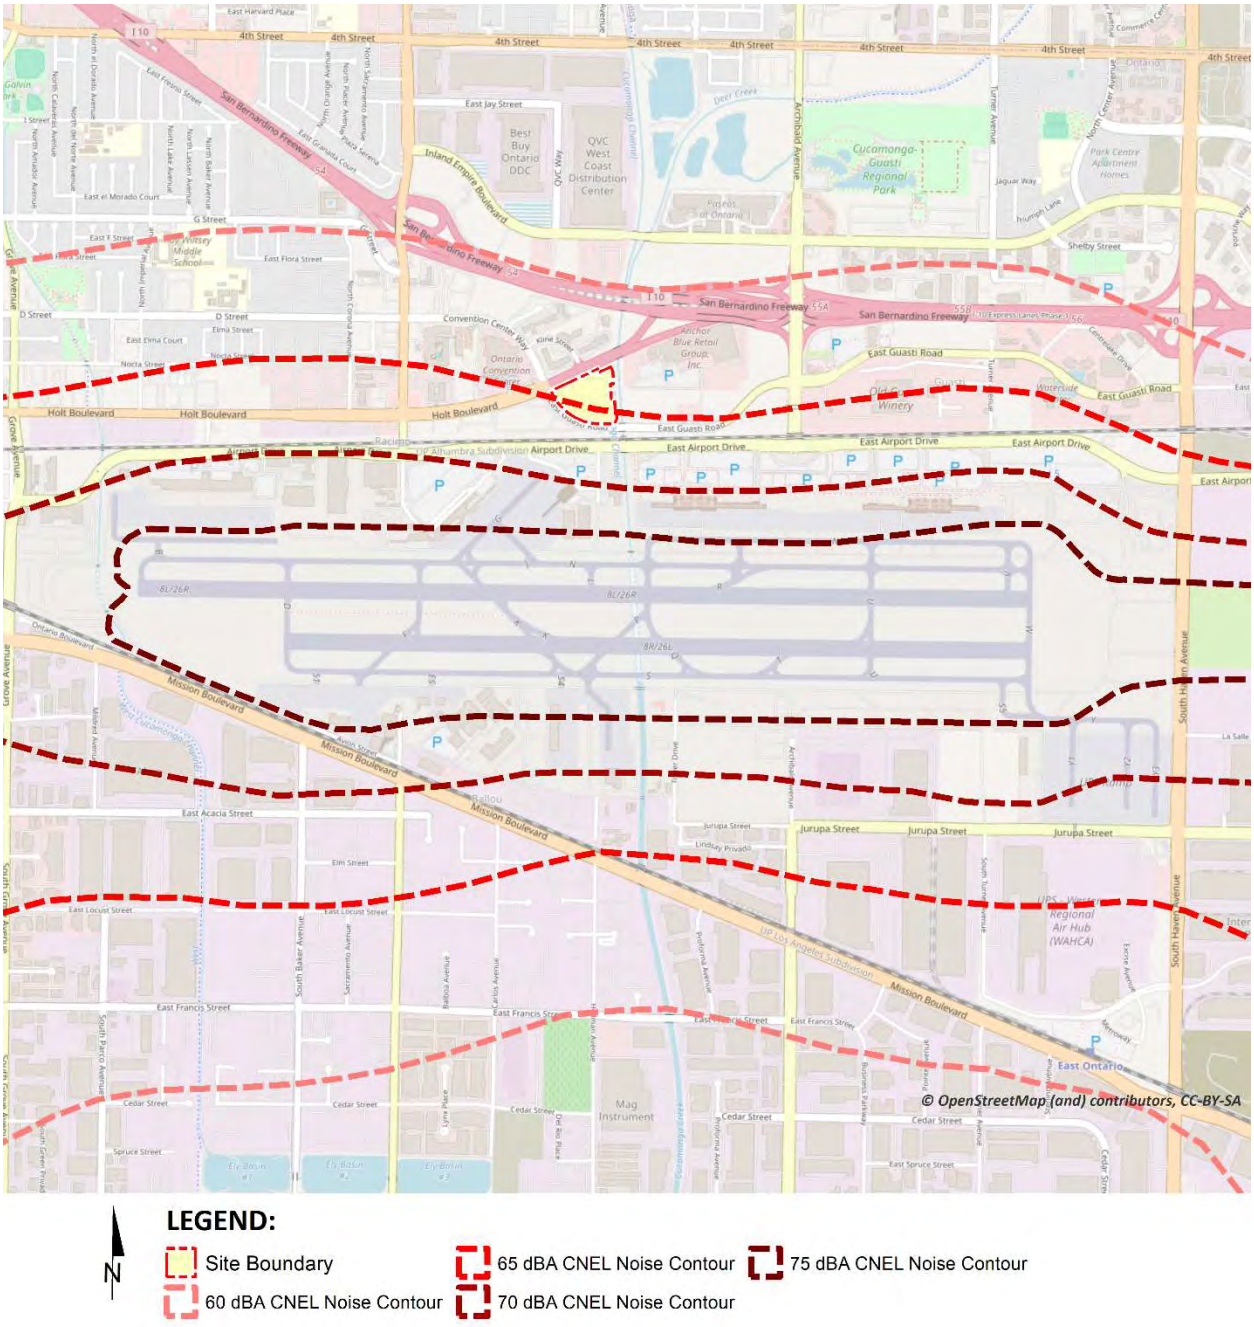
3.4 CONSTRUCTION NOISE STANDARDS

The City of Ontario has set restrictions to control noise impacts associated with construction. Section 5-29.09 of the Municipal Code states: *No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between*

the hours of 9:00 a.m. and 6:00 p.m. (16) While the City Section 5-29.09 stablishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels at potentially affected receiver locations for CEQA analysis purposes.

Construction noise would be considered significant if construction activities occurring outside of the hours specified (7:00 AM and 6:00 PM weekdays and 9:00 AM to 6:00 PM weekends, excluding federal holidays) or if construction activities substantially elevate the ambient noise environment at noise-sensitive uses for a substantial period. It is assumed that the Modified Project construction activities would comply with the City's hour of activity restrictions, thereby precluding construction activities during noise-sensitive time periods. However, neither the City of Ontario General Plan Noise Element or Municipal Codes establish numeric maximum acceptable construction source noise levels at potentially affected receivers, which would allow for a quantified determination of what CEQA constitutes a *substantial temporary or permanent increase in ambient noise levels*. Therefore, a numerical construction threshold based on Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* is used for analysis of daytime construction impacts. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise sensitive land uses and 85 dBA L_{eq} for non-noise sensitive commercial land uses. (17)

3.5 VIBRATION STANDARDS



To analyze vibration impacts originating from the operation and construction of Empire Groves Hotel, vibration-generating activities are appropriately evaluated against standards established under a City's Municipal Code, if such standards exist. However, the City of Ontario does not identify specific vibration level limits. Therefore, for analysis purposes, the Caltrans *Transportation and Construction Vibration Guidance Manual* (8), vibration damage criteria are used in this noise study to assess potential vibration-related impacts at adjacent building locations. The nearest buildings adjacent to the Project site can best be described as "modern industrial/commercial buildings" with a maximum acceptable continuous vibration threshold of 0.5 PPV (in/sec).

3.6 AIRPORT LAND USE COMPATIBILITY

The Project site is located approximately 350 feet north of the Ontario International Airport (ONT). This places the Project site within the ONT Airport Influence Area according to Policy Map 2-1 of the *Ontario International Airport Land Use Compatibility Plan (ONT ALUCP).* The ONT ALUCP was amended July 2018 to promote compatibility between airport and the land uses that surround it (18). Since the Project site is located within the ONT Airport Influence Area, the Project is subject to the Noise Criteria established on Table 2-3 in the ONT ALUCP (Appendix 3.2). As shown on Exhibit 3-B, the Project site is located within the 60 to 70 dBA CNEL airport noise level contours. According to Table 2-3 of the ONT ALUCP, the short-term lodging land uses located within the 60 to 70 dBA CNEL, are considered a conditionally compatible land use which must demonstrate compliance with the interior noise standards of 45 CNEL for residential and 50 CNEL for . For "*conditional"* land use*,* the *building structure must be capable of attenuating*

exterior noise from all noise sources to the indoor CNEL indicated by the number in the cell (either 45 or 50), and *caution should be exercised with regard to noise-sensitive outdoor uses; these uses are likely to be disrupted by aircraft noise events; acceptability is dependent upon characteristics of the specific use*. The ONT ALUCP identifies the noise-sensitive uses as *residential, hospitals, nursing facilities, intermediate care facilities, educational facilities, libraries, museums, places of worship, child-care facilities, and certain types of passive recreational parks and open space*.

EXHIBIT 3-B: ONTARIO INTERNATIONAL AIRPORT NOISE LEVEL CONTOURS AND THE PROJECT SITE

4 SIGNIFICANCE CRITERIA

The following significance criteria are based on currently adopted guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (19) For the purposes of this report, impacts would be potentially significant if the Project results in or causes:

A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

B. Generation of excessive ground-borne vibration or ground-borne noise levels?

C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

4.1 NOISE LEVEL INCREASES (THRESHOLD A)

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines described above at the closest sensitive receiver locations. Under CEQA, consideration must be given to the magnitude of the increase, the existing baseline ambient noise levels, and the location of noise-sensitive receivers to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes *that there is no single noise increase that renders the noise impact significant.* (20) This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called *ambient* environment. In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will typically be judged.

4.1.1 NOISE-SENSITIVE RECEIVERS

The Federal Interagency Committee on Noise (FICON) (21) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) and equivalent continuous noise level (L_{eq}).

As previously stated, the approach used in this noise study recognizes *that there is no single noise increase that renders the noise impact significant*, based on a 2008 California Court of Appeal ruling on Gray v. County of Madera. (20) For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria may be exceeded. Therefore, for this analysis, a *readily perceptible* 5 dBA or greater project-related noise level increase is considered a significant impact when the without project noise levels are below 60 dBA. Per the FICON, in areas where the without project noise levels

range from 60 to 65 dBA, a 3 dBA *barely perceptible* noise level increase appears to be appropriate for most people. When the without project noise levels already exceed 65 dBA, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded, since it likely contributes to an existing noise exposure exceedance. The FICON guidance provides an established source of criteria to assess the impacts of substantial temporary or permanent increase in baseline ambient noise levels. Based on the FICON criteria, the amount to which a given noise level increase is considered acceptable is reduced when the without Project (baseline) noise levels are already shown to exceed certain land-use specific exterior noise level criteria. The specific levels are based on typical responses to noise level increases of 5 dBA or *readily perceptible*, 3 dBA or *barely perceptible*, and 1.5 dBA depending on the underlying without Project noise levels for noise-sensitive uses. These levels of increases and their perceived acceptance are consistent with guidance provided by both the Federal Highway Administration (22 p. 9) and Caltrans (23 p. 2_48).

4.1.2 NON-NOISE-SENSITIVE RECEIVERS

The *Ontario Noise Level Exposure and Land Use Compatibility Guidelines* were used to establish the satisfactory noise levels of significance for the non-noise-sensitive land uses in the Project study area. As previously shown on Exhibit 3-A, the *normally acceptable* exterior noise level for non-noise-sensitive general industrial land uses is 75 dBA CNEL. Noise levels greater than 75 dBA CNEL are considered *normally unacceptable.* (14)

To determine if Project-related traffic noise level increases are significant at off-site non-noise-sensitive general industrial land uses, a *barely perceptible* 3 dBA criteria is used. When the without Project noise levels are greater than the *normally acceptable* 75 dBA CNEL land use compatibility criteria, a *barely perceptible* 3 dBA or greater noise level increase is considered a significant impact since the noise level criteria is already exceeded. The noise level increases used to determine significant impacts for non-noise-sensitive land uses is generally consistent with the FICON noise level increase thresholds for noise-sensitive land uses but instead rely on *Ontario Noise Level Exposure and Land Use Compatibility Guidelines normally acceptable* 75 dBA CNEL exterior noise level criteria for non-noise sensitive general industrial land uses.

4.2 VIBRATION (THRESHOLD B)

As described in Section 3.5, the vibration impacts originating from the construction of the Empire Groves Hotel, vibration-generating activities are appropriately evaluated using the Caltrans vibration damage thresholds to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise sensitive buildings adjacent to the Project site can best be described as “modern industrial/commercial buildings” with a maximum acceptable continuous vibration threshold of 0.5 PPV (in/sec).

4.3 CEQA GUIDELINES NOT FURTHER ANALYZED (THRESHOLD C)

CEQA Noise Threshold C applies when there are nearby public and private airports and/or air strips and focuses on land use compatibility of the Project to nearby airports and airstrips. The

closest airport which would require additional noise analysis under CEQA guideline C is the Ontario International Airport. As previously indicated in Section 3.6, the Project site is located within the ONT Airport Influence Area and between the 60 and 70 dBA CNEL airport noise impact zones.

4.4 SIGNIFICANCE CRITERIA SUMMARY

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. Table 4-1 shows the significance criteria summary matrix that includes the allowable criteria used to identify potentially significant incremental noise level increases.

TABLE 4-1: SIGNIFICANCE CRITERIA SUMMARY

Analysis	Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
On-Site Traffic Noise	All	Exterior Noise Level Criteria	See Exhibit 3-A	
	Residential	Interior Noise Level Standard	45 dBA CNEL[1]	
	Non-Residential	Interior Noise Level Standard	50 dBA CNEL[2]	
Off-Site	Noise-Sensitive	if ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase[3]	
		if ambient is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase[3]	
		if ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase[3]	
	Non-Noise Sensitive	if ambient is > 75 dBA CNEL	≥ 3 dBA CNEL Project increase	
Operational	Residential	Exterior Noise Level Limit[4]	55 dBA L_{eq}	45 dBA L_{eq}
	Commercial		65 dBA L_{eq}	60 dBA L_{eq}
	Noise-Sensitive	if ambient is < 60 dBA L_{eq}	≥ 5 dBA L_{eq} Project increase[3]	
		if ambient is 60 - 65 dBA L_{eq}	≥ 3 dBA L_{eq} Project increase[3]	
		if ambient is > 65 dBA L_{eq}	≥ 1.5 dBA L_{eq} Project increase[3]	
Construction	Residential	Noise Level Threshold[5]	80 dBA L_{eq}	70 dBA L_{eq}
	Commercial		85 dBA L_{eq}	80 dBA L_{eq}
	Commercial	Vibration Level Threshold[6]	0.5 PPV (in/sec)	n/a
Airport Noise	Long- and Short-Term Lodging	Exterior Noise Level Criteria	70 dBA CNEL[7]	
		Interior Noise Level Standard	45 dBA CNEL[7]

5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, 24-hour noise level measurements were taken at five locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-A provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, noise level measurements were collected by Urban Crossroads, Inc. on Wednesday, April 24, 2024. Appendix 5.1 includes study area photos.

5.1 MEASUREMENT PROCEDURE AND CRITERIA

To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the daytime and nighttime hourly noise levels and calculate the 24-hour CNEL. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (24)

5.2 NOISE MEASUREMENT LOCATIONS

The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing ambient hourly noise levels surrounding the Project site. Both Caltrans and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent every part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the Caltrans general site location guidelines which indicate that, *sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources*. (2) Further, FTA guidance states, t*hat it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community*. (17)

EXHIBIT 5-A: NOISE MEASUREMENT LOCATIONS

Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence, because each receiver measurement represents a group of buildings that share acoustical equivalence. (17) In other words, the area represented by the receiver shares similar shielding, terrain, and geometric relationship to the reference noise source. Receivers represent a location of noise sensitive areas and are used to estimate the future noise level impacts. Collecting reference ambient noise level measurements at the nearby sensitive receiver locations allows for a comparison of the before and after Project noise levels and is necessary to assess potential noise impacts due to the Project's contribution to the ambient noise levels.

5.3 NOISE MEASUREMENT RESULTS

The noise measurements presented below focus on the average or equivalent sound levels (L_{eq}). The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. Table 5-1 identifies the hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise levels at each noise level measurement location.

TABLE 5-1: 24-HOUR AMBIENT NOISE LEVEL MEASUREMENTS

Location[1]	Description	Energy Average Noise Level (dBA L_{eq})[2]	
		Daytime	Nighttime
L1	Located west of the site near the hotel at 2200 Holt Blvd.	64.2	61.2
L2	Located west of the site near the residence at 304 N Placer Privado	59.1	58.3
L3	Located north of the site near the residence at 2155 Convention Center Way	62.0	58.3
L4	Located northeast of the site near the residence at 2505 Date Palm Paseo	71.7	67.7
L5	Located northeast of the site near the residence at 3045 Inland Empire Blvd	66.5	61.7

[1] See Exhibit 5-A for the noise level measurement locations.
[2] Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2.
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

Table 5-1 provides the (energy average) noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. Appendix 5.2 provides summary worksheets of the noise levels for each hour as well as the minimum, maximum, L_1, L_2, L_5, L_8, L_{25}, L_{50}, L_{90}, L_{95}, and L_{99} percentile noise levels observed during the daytime and nighttime periods.

6 TRAFFIC NOISE METHODS AND PROCEDURES

The following section outlines the methods and procedures used to estimate and analyze the future traffic noise environment. Consistent with City of Ontario *Noise Level Exposure and Land Use Compatibility Guidelines* (see Exhibit 3-A), all transportation related noise levels are presented in terms of the 24-hour CNEL's.

6.1 FHWA TRAFFIC NOISE PREDICTION MODEL

The estimated roadway noise impacts from vehicular traffic were calculated using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. (25) The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. (26) Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period.

6.1.1 OFF-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

Table 6-1 presents the roadway parameters used to assess the Project's off-site transportation noise impacts for Existing, Opening Year (2025), and General Plan Buildout (2045) Conditions, with and without Project Conditions. Table 6-1 identifies the twenty-one (21) study area roadway segments, the distance from the centerline to adjacent land use based on the functional roadway classifications per the City of Ontario General Plan and the posted vehicle speeds.

The average daily traffic volumes used for this study are presented on Table 6-2 and are based on *Empire Groves Hotel Traffic Impact Analysis* prepared by Translations, Inc. (27)

[1] Empire Gove Hotel Traffic Impact Analysis, Translutions, Inc.

Table 6-3 presents the time-of-day vehicle splits by vehicle type, and Table 6-4 presents the total traffic flow distributions (vehicle mixes) used for this analysis. The vehicle mix provides the hourly distribution percentages of automobile, medium trucks, and heavy trucks for input into the FHWA Model based on roadway types. To predict the future noise environment at each building within the Project site, coordinate information was collected to identify the noise transmission path between the noise source and receiver. The coordinate information is based on the Project site plan showing the plotting of each Project building in relationship to surrounding roadways, as shown in Exhibit 1-B and in Appendix 6.1.

TABLE 6-3: TIME OF DAY VEHICLE SPLITS

Time Period	Vehicle Type		
	Autos	Medium Trucks	Heavy Trucks
Daytime (7:00 a.m. - 7:00 p.m.)	77.5%	84.8%	86.5%
Evening (7:00 p.m. - 10:00 p.m.)	12.9%	4.9%	2.7%
Nighttime (10:00 p.m. - 7:00 a.m.)	9.6%	10.3%	10.8%
Total:	100.0%	100.0%	100.0%

Source: Typical Southern California vehicle mix.

TABLE 6-4: DISTRIBUTION OF FLOW BY VEHICLE TYPE (VEHICLE MIX)

Roadway	Total % Traffic Flow			Total
	Autos	Medium Trucks	Heavy Trucks	
All Roadways	97.42%	1.84%	0.74%	100.00%

Source: Typical Southern California vehicle mix.

6.1.2 ON-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

The on-site roadway parameters including the average daily traffic (ADT) volumes used for this study are presented on Table 6-5. Future average daily traffic volumes needed to assess the future on-site traffic noise environment and to identify the appropriate noise abatement measures that address the worst-case future noise conditions, shown on Table 6-5, were obtained from the *Empire Groves Hotel Traffic Impact Analysis*. (28) The vehicle speed is based on the posted speed limit for Lampson Avenue. Soft site conditions were used to analyze the traffic noise impacts within the Project study area which account for the sound propagation loss over natural surfaces such as normal earth and ground vegetation. Research conducted by Caltrans has shown that due to the mix of ground types in actual situations, the hard site condition over predicted traffic noise levels and the use of soft site conditions is more appropriate for the application of the FHWA traffic noise prediction model. (29)

TABLE 6-5: ON SITE ROADWAY PARAMATERS

Location	Classification[1]	Lanes	Average Daily Traffic Volume[2]	Speed Limit (mph)[3]	Site Conditions
Holt Boulevard	Principal Arterial	4	13,340	50	Soft
Guasti Road	Minor Arterial	2	11,960	45	Soft

[3] Posted Speed Limit

6.2 ON-SITE RAIL NOISE PREDICTION MODEL

The estimated railroad noise impacts from the railroad lines south of the Project site are calculated using the Federal Transit Administration (FTA) General Transit Noise Assessment

Model. The FTA Model calculates the predicted noise level based on the type of train, distance to receiver, number of trains per hour, speed, number of cars per train, and type of railroad tracks. The planned future train volumes and speeds are shown on Table 6-5 and were obtained from the *Ontario Gateway Specific Plan Environmental Impact Report* (EIR) prepared by the City of Ontario. (30) According to the EIR noise section, by future Year 2030 conditions, the UPRR railroad is expected to support a combination of approximately 46 Metrolink trains and 65 Freight trains daily. The EIR did not have a projection for Amtrack train activity, however, based on the Amtrack schedules, Amtrack operates the Sunset Limited and Texas Eagle trains, which would equate to approximately 5 train pass-byes per day on average.

TABLE 6-6: ON-SITE RAILROAD PARAMETERS

Rail Activity1	Speed (mph)	Future Trains Per Day			
		Daytime (7am-7pm)	Evening (7pm-10pm)	Nighttime (10pm-7am)	Total (24 Hours)
Amtrak	50	5	0	0	5
Metrolink	50	27	8	12	46
Freight	50	25	3	36	65
Totals:		57	11	48	116

7 OFF-SITE TRANSPORTATION NOISE IMPACTS

To assess the off-site traffic CNEL noise level impacts associated with development of the proposed Project, noise level contours were developed based on *Empire Groves Hotel Traffic Impact Analysis.* (28) Noise level contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise level contours were developed for the following traffic scenarios:

- Existing Conditions: This scenario refers to existing traffic conditions.
- Existing Plus Project Conditions (E+P): This scenario refers to existing traffic conditions plus project traffic increases.
- Opening Year (2025) Conditions (OY 2025): This scenario includes Existing traffic volumes plus an ambient growth factor of 8.24% plus traffic from pending and approved but not yet constructed known development projects in the area.
- Opening Year (2025) Plus Project Conditions (OY 2025+P): This scenario includes Opening Year Cumulative (2025) Without Project volumes plus Project traffic increases.
- General Plan Buildout (2045) Without Project Conditions (GBPO): This scenario includes Existing traffic volumes plus an ambient growth factor of 14% plus traffic from pending and approved but not yet constructed known development projects in the area.
- General Plan Buildout (2045) With Project Conditions (GBPO+P): This scenario includes General Plan Buildout Without Project volumes plus Project traffic increases.

7.1 TRAFFIC NOISE LEVEL CONTOURS

Noise contours were used to assess the Project's incremental 24-hour dBA CNEL traffic-related noise impacts at land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA CNEL noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the Project study area.

Tables 7-1 through 7-6 present a summary of the exterior dBA CNEL traffic noise levels. Roadway segments are analyzed in each of the following timeframes: Existing, Opening Year 2022 with and without Project Buildout, General Plan Buildout (2045) with and without Project conditions. Appendix 7.1 includes a summary of the dBA CNEL traffic noise level contours for each of the traffic scenarios.

21	Holt Blvd.	Convention Center Wy	Commercial	66.9	RW	81	174

[1] Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.
[2] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the nearest receiving land use.
"RW" = Location of the respective noise contour falls within the right-of-way of the road.

7.2 EXISTING CONDITION PROJECT TRAFFIC NOISE LEVELS

Table 7-1 presents the Existing without Project conditions CNEL noise levels, which are expected to range from 57.5 to 67.6 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-2 shows the Existing with Project conditions will range from 58.7 to 67.7 dBA CNEL. As shown on Table 7-7 the Existing with Project will generate a noise level increase of up to 2.5 dBA CNEL on the study area roadway segments. Based on the significance criteria in Section 4.2 for off-site traffic noise impacts, the Project-related noise level increases are considered less than significant under Existing conditions at the land uses adjacent to roadways conveying Project traffic.

7.3 OY 2026 TRAFFIC NOISE LEVEL INCREASES

Table 7-3 presents the OY 2026 without Project conditions CNEL noise levels, which are expected to range from 60.3 to 69.0 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-4 shows the OY 2026 with Project conditions will range from 61.0 to 69.0 dBA CNEL. Table 7-8 shows that the OY 2026 Project off-site traffic noise level increases of up to 1.6 dBA CNEL. Based on the significance criteria for off-site traffic noise presented in Section 4.2 for off-site traffic noise impacts, land uses adjacent to the study area roadway segments would experience *less than significant* noise level increases due to unmitigated OY 2026 Project-related traffic noise levels.

7.4 CUMULATIVE 2050 TRAFFIC NOISE LEVEL INCREASES

Table 7-5 presents the Cumulative 2050 without Project conditions CNEL noise levels, which are expected to range from 63.1 to 69.6 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-6 shows the Cumulative 2050 with Project conditions will range from 66.3 to 69.7 CNEL. Table 7-9 shows that the Project off-site contribution to cumulative traffic noise level increases up to 0.5 dBA CNEL. Based on the significance criteria for off-site traffic noise presented in Section 4.2 for off-site traffic noise impacts, land uses adjacent to the study area roadway segments would not experience substantial noise level increases due to Project-related traffic noise level increases and would be considered a *less than significant impact*.

8 ON-SITE NOISE ANALYSIS

An on-site exterior noise impact analysis has been completed to determine the noise exposure levels that would result from adjacent transportation noise sources in the Project study area, and to identify potential noise attenuation measures that would achieve acceptable Project exterior and interior noise levels. The primary source of transportation noise affecting the Project site is anticipated to be from Holt Avenue and Guasti Road.

8.1 ON-SITE TRAFFIC NOISE ANALYSIS

Using the FHWA traffic noise prediction model and the parameters outlined in Tables 6-1 to 6-4, the expected future exterior noise levels for the on-site Project land uses were estimated. Table 8-1 presents a summary of future on-site exterior traffic noise levels at future building facades. The on-site traffic noise analysis calculations are provided in Appendix 8.1.

TABLE 8-1: EXTERIOR TRAFFIC NOISE LEVELS

Location[1]	Roadway	Unmitigated Exterior Noise Level (dBA CNEL)	Land Use Compatibility[2]
R1	Holt Boulevard	65.2	*Normally Unacceptable*
R2	Holt Boulevard	58.9	*Clearly Acceptable*
R3	Guasti Road	61.3	*Clearly Acceptable*
R4	Guasti Road	61.1	*Clearly Acceptable*
R5	Guasti Road	59.5	*Clearly Acceptable*
R6	Guasti Road	58.2	*Clearly Acceptable*
R7	Holt Boulevard	58.4	*Clearly Acceptable*
R8	Holt Boulevard	62.5	*Clearly Acceptable*
R9	Guasti Road	60.5	*Clearly Acceptable*
R10	Holt Boulevard	62.0	*Clearly Acceptable*

[1] Locations are shown in Exhibit 8-A.
[2] Based on Exhibit 3-A.

8.2 ON-SITE TRAIN NOISE ANALYSIS

The Union Pacific Railroad (UPRR) is located approximately 350 feet south of the Project site. Using the train parameters outlined in Table 6-5, the expected future exterior noise levels for the on-site Project land uses were estimated. Table 8-2 presents a summary of future on-site exterior train noise levels at future building facades. The on-site train noise analysis calculations are provided in Appendix 8.2.

TABLE 8-2: EXTERIOR TRAIN NOISE LEVELS

Location[1]	Distance (feet)	Noise Level dBA CNEL
O3	552'	66.4
O4	468'	67.1
O5	347'	68.4
O6	370'	68.1
O9	613'	65.9

Source: Federal Transit Administration

8.3 ON-SITE AIRCRAFT NOISE ANALYSIS

The ONT is located approximately 350 feet south of the Project site. Exhibit 3-B shows the Project site in relation to the airport's projected noise level contour boundaries (31). As shown on Exhibit 8-A, the 65 dBA CNEL noise level contours cross the southern portion of the Project site, while the remainder of Project site would be located between the 60 and 65 CNEL noise level contours of Ontario Airport.

8.4 ON-SITE NOISE ANALYSIS

The on-site exterior traffic noise analysis indicates that on-site locations will experience exterior noise levels ranging from 65.9 to 69.8 CNEL from all transportation sources.

TABLE 8-4: TOTAL TRANSPORTATION NOISE LEVELS

Location[1]	Traffic Noise Level (dBA CNEL)	Aircraft Noise Level (dBA CNEL)	Train Noise Level (dBA CNEL)	Total Noise Level (dBA CNEL)
O1	65.2	65.0	0.0	68.1
O2	58.9	65.0	0.0	66.0
O3	61.3	65.0	65.4	69.0
O4	61.1	65.0	66.1	69.3
O5	59.5	65.0	67.4	69.8
O6	58.2	65.0	67.1	69.5
O7	58.4	65.0	0.0	65.9
O8	62.5	65.0	0.0	66.9
O9	60.5	65.0	64.9	68.7
O10	62.0	65.0	0.0	66.8

8.5 EXTERIOR NOISE LEVEL COMPATIBILITY

Based on City of Ontario *Land Use Compatibility for Community Noise Exposure* shown on Exhibit 3-A, the commercial and lodging land uses are considered as *clearly acceptable to normally acceptable* with unmitigated exterior noise levels of less than 70 dBA CNEL. This noise analysis shows that the Project will satisfy the City of Ontario 70 dBA CNEL exterior noise level standards for lodging land uses without additional noise abatement measures.

8.6 INTERIOR NOISE ANALYSIS

To ensure that the interior noise levels comply with the interior noise level standards, future exterior noise levels were calculated at the estimated at the first through ninth floor building façade locations. On-site receiver locations are shown in Exhibit 8-A.

8.6.1 NOISE REDUCTION METHODOLOGY

The interior noise level is the difference between the predicted exterior noise level at the building facade and the noise reduction of the structure. Typical building construction will provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." (22) (32) However, sound leaks, cracks and openings within the window assembly can greatly diminish its effectiveness in reducing noise. Several methods are used to improve interior noise reduction, including: [1] weather-stripped solid core exterior doors; [2] upgraded dual glazed windows; [3] mechanical ventilation/air conditioning; and [4] exterior wall/roof assembles free of cut outs or openings.

8.6.2 INTERIOR NOISE LEVEL ASSESSMENT

To provide the necessary interior noise level reduction, Tables 8-4 through 8-12 indicate that Project land uses adjacent to Holt Avenue and Guasti Road will require a windows-closed condition and a means of mechanical ventilation (e.g. air conditioning). Tables 8-4 through 8-12 show that the future unmitigated interior traffic noise levels at the first through ninth floor are expected to range from 40.9 to 44.8 dBA CNEL. The interior noise assessment shows that the City of Ontario interior noise level standard can be satisfied using standard construction techniques.

8.6.3 INTERIOR TRAFFIC NOISE LEVEL COMPLIANCE

Tables 8-4 through 8-12 shows that on-site interior traffic noise levels will not exceed the 45 dBA CNEL interior noise level standard for lodging rooms or the 50 CNEL standard for non-residential areas and additional noise abatement measures are not needed.

9 SENSITIVE RECEIVER LOCATIONS

To assess the potential for off-site operational and short-term construction noise impacts, the following receiver locations, as shown on Exhibit 9-A, were identified as representative locations for analysis. Sensitive receiver locations are generally defined as "[a]n area where noise interferes with normal activities associated with its use. Normally, noise sensitive areas include residential, educational, health, and religious structures and sites, and parks, recreational areas, areas with wilderness characteristics, wildlife refuges, and cultural and historical sites (33)." Moderately noise-sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, out-patient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

To describe the potential off-site Project noise levels, five receiver locations in the vicinity of the Project site were identified. All distances are measured from the Project site boundary to the outdoor living areas (e.g., private backyards) or at the building façade, whichever is closer to the Project site. Other sensitive land uses in the Project study area that are located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures. Distance is measured in a straight line from the project boundary to each receiver location.

R1: Location R1 represents an existing hotel Ontario Gateway Hotel located at 2200 E Holt Boulevard, approximately 176 feet south of the Project site. A 24-hour noise measurement was taken near this location, L1, to describe the existing ambient noise environment.

R2: Location R2 represents an existing residence at located 1795 E D St, approximately 2,802 feet west of the Project site. The 24-hour noise measurement L2 is representative the existing ambient noise environment.

R3: Location R3 represents the Frontier Center located at 2151 E Convention Center Way, approximately 237 feet northwest of the Project site. A 24-hour noise measurement was taken near this location, L4, to describe the existing ambient noise environment.

R4: Location R4 represents the Paseos Apartment located at 2505 E Date Palm Paseo, approximately 1,968 feet north of the Project site. A 24-hour noise measurement was taken near this location, L4, to describe the existing ambient noise environment.

R5: Location R5 represents an existing residence located at 705 Via Dolcetto, approximately 3,593 feet northeast of the Project site. A 24-hour noise measurement was taken near this location, L5, to describe the existing ambient noise environment.

EXHIBIT 9-A: RECEIVER LOCATIONS

10 OPERATIONAL NOISE IMPACTS

This section analyzes the potential operational noise impacts resulting from the operation of events with amplified sound, outdoor activities, swimming pool/spa activities, roof-mounted air conditioning units, loading dock activities, and parking lot vehicle movement

10.1 OPERATIONAL NOISE SOURCES

This operational noise analysis is intended to describe noise level impacts associated with the expected typical of daytime and nighttime activities at the Project site. To analyze noise impacts originating from the Project, the operational noise levels are evaluated against standards established in the City of Ontario Municipal Code, 5-29.04(a). Section 5-29.04(a) of the City of Ontario Municipal Code (included in Appendix 3.1) sets a stationary-source average L_{eq} exterior noise limit for not to be exceeded 65 dBA L_{eq} during daytime hours and 45 dBA L_{eq} during nighttime hours at residential properties and 65 dBA L_{eq} during daytime hours and 60 dBA L_{eq} during nighttime hours at commercial properties, such as those nearest the Project site.

10.2 REFERENCE NOISE LEVELS

To estimate the Project operational noise impacts, reference noise levels were collected from sample manufacturers specifications for similar equipment, published research, and/or measurements of similar activities that represent the noise levels expected with the development of the Project. This section provides a detailed description of the reference noise level shown on Table 11-1, which are used to estimate the Project operational noise impacts. It is important to note that the following predicted noise levels assume the worst-case noise environment with the events with amplified sound, outdoor activities, swimming pool/spa activities, roof-mounted air conditioning units, loading dock activities, and parking lot vehicle movement all operating continuously. These sources of noise activity will likely vary throughout the day.

EXHIBIT 10-A: OPERATIONAL NOISE SOURCE LOCATIONS

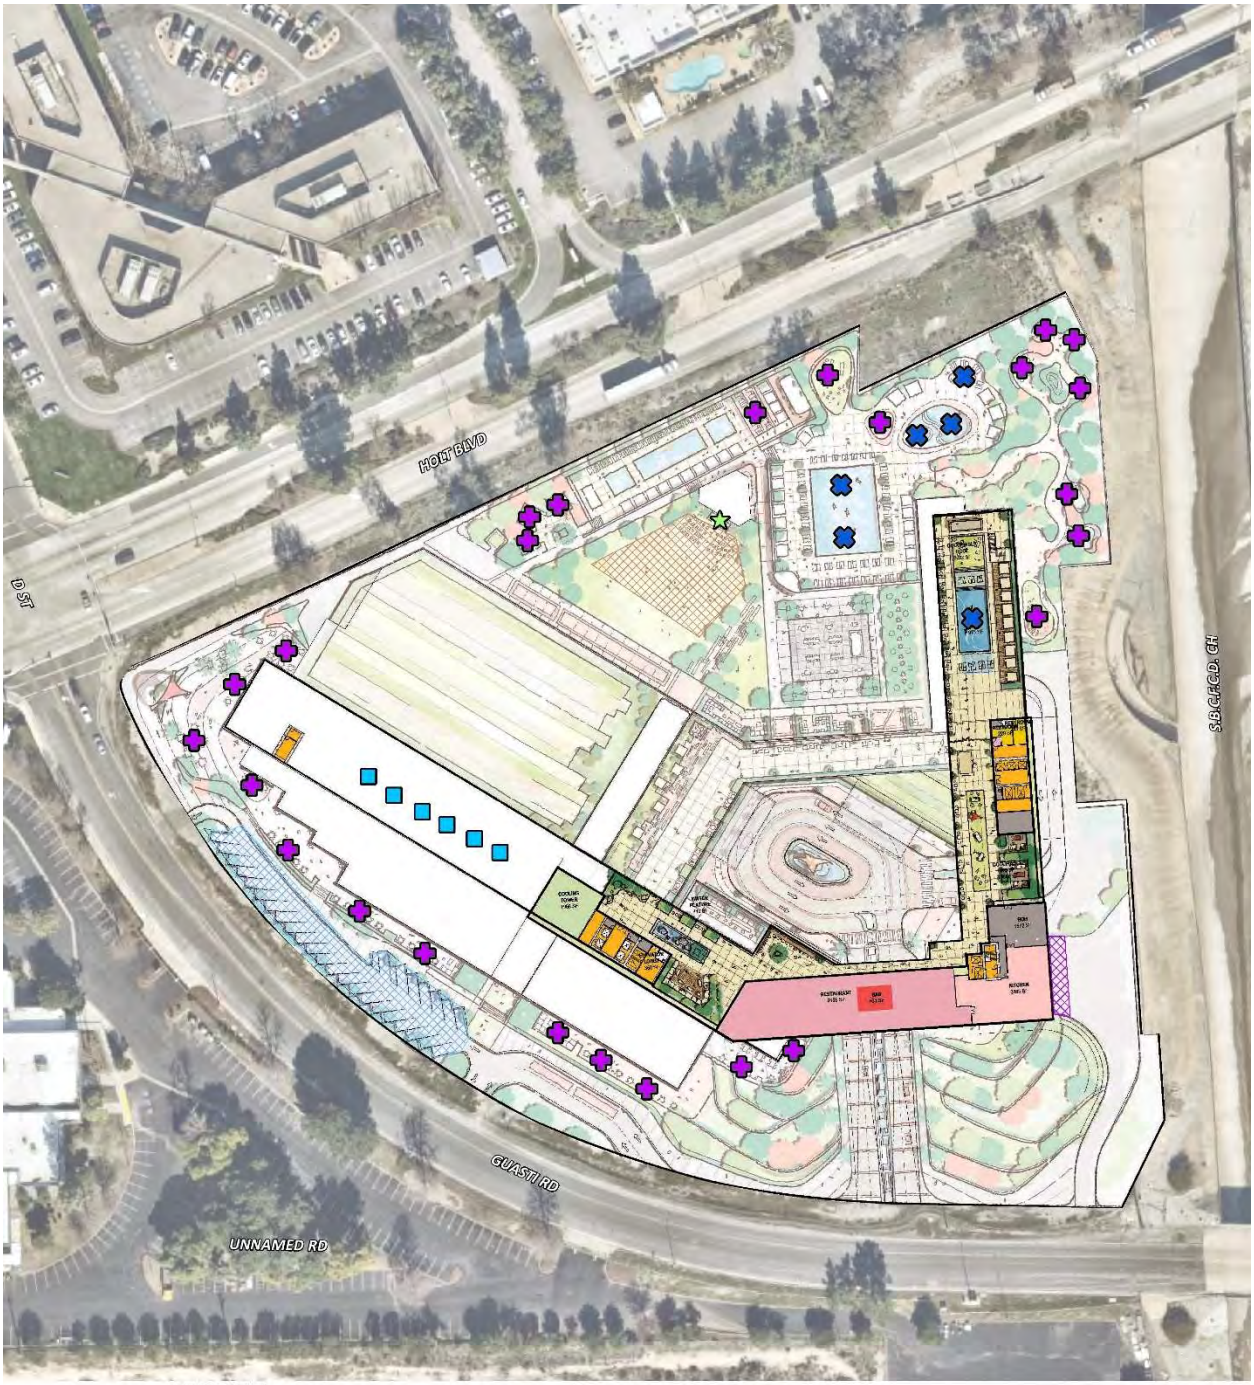

TABLE 10-1: REFERENCE NOISE LEVELS

Noise Source[1]	Noise Source Height (Feet)	Min./ Hour[2]		Reference Noise Level (dBA L_{eq}) @ 50 Feet	Sound Power Level (dBA)[3]
		Day	Night		
Event/Announcement Speaker	5'	60	60	75.6	107.2
Outdoor Gatherings	5'	60	60	59.9	91.5
Swimming Pool Activities	5'	60	60	63.0	94.6
Roof-Top Air Conditioning Units	5'	45	30	77.4	109.0
Loading Dock Activities	8'	60	60	71.8	103.4
Parking Lot Vehicle Movements	0'	60	60	31.4	63.0

[1] As measured by Urban Crossroads, Inc.
[2] Anticipated duration (minutes within the hour) of noise activity during typical hourly conditions expected at the Project site. "Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.
[3] Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings. Sound power levels calculated using the CadnaA noise model at the reference distance to the noise source. Numbers may vary due to size differences between point and area noise sources.

10.2.1 MEASUREMENT PROCEDURES

The reference noise level measurements presented in this section were collected using a Larson Davis LxT Type 1 precisions sound level meter (serial number 01146). The LxT sound level meter was calibrated using a Larson-Davis calibrator, Model CAL 200, was programmed in "slow" mode to record noise levels in "A" weighted form and was located at approximately five feet above the ground elevation for each measurement. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (24)

10.2.2 EVENT ANNOUNCEMENTS/SPEAKERS

To describe the potential noise level impacts associated with potential activities at the event yard, a reference noise level measurements were collected of dancing, with a MC and amplified speakers; and outdoor dining and a wedding venue. The dancing included several common wedding dance songs, cheering, shouting, dancing, and announcements by the MC. Based on reference noise level measurements collected by Urban Crossroads, Inc. these activities averaged 75.6 dBA L_{eq} at a uniform reference distance of 50 feet. The dining and wedding included announcements, groups of guests talking and eating in an outdoor setting. The event announcements and music may occur after 10:00 p.m. Therefore, event announcements activity is modeled as occurring the full hour during the nighttime hours. Based on reference noise level measurements collected by Urban Crossroads, Inc. these activities averaged 85 dBA L_{eq} at a uniform reference distance of 50 feet.

10.2.3 OUTDOOR GATHERING ACTIVITY

To represent the noise levels associated with outdoor gathering activities, Urban Crossroads, Inc. collected a reference noise level measurement at an existing conference hotel in Anaheim. The

outdoor gathering activities included people dining, drinking, with background music etc. on outdoor patio /seating areas. The outdoor activities and events may be expected to occur after 10:00 p.m. Therefore, outdoor activities are modeled as occurring the full hour during the nighttime hours. The measured reference noise level at the uniform 50-foot reference distance is 59.9 dBA L_{eq}.

10.2.4 SWIMMING POOL ACTIVITY

To represent the noise levels associated with pool activities, Urban Crossroads collected a reference noise level measurement at an existing outdoor pool and spa. The measured reference noise level at the uniform 50-foot reference distance is 54.7 dBA Leq for pool activity. The pool activity noise levels include kids playing, running, screaming, splashing, playing with a ball, and parents talking. Typically, noise associated with pool activities is expected to occur between 7:00 a.m. and 10:00 p.m. however, due to the type of land use pool activity may be expected to occur after 10:00 p.m. Therefore, pool activity is modeled as occurring the full hour during the nighttime hours.

10.2.5 ROOF-TOP AIR CONDITIONING UNITS

Mechanical equipment, such as generators, trash compactors, heating, ventilation and air conditioning (HVAC) units would be included as part of the proposed improvements. Mechanical equipment would be utilized in commercial as well as institutional areas. The noise level measurements describe a single mechanical roof-top air conditioning unit. The reference noise level represents a Trane Quiet Curb Series 130-ton model packaged air conditioning unit (Appendix 10.1). At the uniform reference distance of 50 feet, the reference noise level is 77.4 dBA L_{eq}. Based on the typical operating conditions, the roof-top air conditioning units are estimated to operate for and average 45 minutes per hour during the daytime hours, and 30 minutes per hour during the nighttime hours. These operating conditions reflect peak cooling requirements. For this noise analysis, the air conditioning units are expected to be located on the roof of the Project buildings.

10.2.6 LOADING DOCK ACTIVITY

To describe the noise levels associated with a loading dock activity, Urban Crossroads collected a reference noise level measurement at an existing loading dock. The loading dock activity noise levels describe two trucks idling, deliveries, backup alarms, unloading/loading a truck, docking including a combination of tractor trailer semi-trucks, two-axle delivery trucks, and background forklift operations. The measured reference noise level at the uniform 50-foot reference distance is 71.8 dBA L_{eq} for the loading dock activity. The loading dock activity and events may be expected to occur after 10:00 p.m. Therefore, loading dock activity is modeled as occurring the full hour during the nighttime hours.

10.2.7 PARKING LOT ACTIVITY

Parking activities are based on the area of the parking spaces. The Project includes approximately 30 new surface parking spaces, which are assumed to have a maximum of 4 movements per hour for a total of 120 events in an hour. Based on studies conducted in Europe and Australia, the

average parking procedure, which included movement associated with either entering or exiting the parking area, parking the vehicles, and opening and closing doors resulted in a sound power level of approximately 63 dBA L_w/square meter per event (34) (35). Parking lot activity is assumed to occur during the daytime and nighttime hours.

10.3 CADNAA NOISE PREDICTION MODEL

To fully describe the exterior operational noise levels from the Project, Urban Crossroads, Inc. developed a noise prediction model using the CadnaA (Computer Aided Noise Abatement) computer program. CadnaA can analyze multiple types of noise sources using the spatially accurate Project site plan, georeferenced Nearmap aerial imagery, topography, buildings, and barriers in its calculations to predict outdoor noise levels.

Using the ISO 9613 protocol, CadnaA will calculate the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of noise level at each receiver and the partial noise level contributions by noise source. Consistent with the ISO 9613 protocol, the CadnaA noise prediction model relies on the reference sound power level (L_w) to describe individual noise sources. While sound pressure levels (e.g., L_{eq}) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (L_w) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles and barriers, air absorption, wind, and other factors. Sound power is the acoustical energy emitted by the sound source and is an absolute value that is not affected by the environment.

The operational noise level calculations provided in this noise study account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. A default ground attenuation factor of 0.5 was used in the CadnaA noise analysis to account for mixed ground representing a combination of hard and soft surfaces. Appendix 10.2 includes the detailed noise model inputs used to estimate the Project operational noise levels presented in this section.

10.4 PROJECT OPERATIONAL NOISE LEVELS

Using the reference noise levels to represent the proposed Project operations that include events with amplified sound, outdoor activities, swimming pool/spa activities, roof-mounted air conditioning units, loading dock activities, and parking lot vehicle movement, Urban Crossroads, Inc. calculated the operational source noise levels that are expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of the sensitive receiver locations. Table 10-2 shows the Project operational noise levels during the daytime hours of 7:00 a.m. to 10:00 p.m. The daytime hourly noise levels at the off-site receiver locations are expected to range from 37.9 to 56.3 dBA L_{eq}.

TABLE 10-2: DAYTIME PROJECT OPERATIONAL NOISE LEVELS

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA Leq)				
	R1	R2	R3	R4	R5
Event/Announcement Speaker	22.1	31.0	51.8	34.8	29.1
Outdoor Gatherings	49.4	31.3	49.6	34.0	27.7
Swimming Pool Activities	18.5	28.2	48.1	32.3	27.0
Roof-Top Air Conditioning Units	52.8	38.6	50.8	40.3	35.5
Loading Dock Activities	20.8	5.0	22.0	33.1	28.5
Parking Lot Vehicle Movements	30.2	5.2	0.0	0.0	0.0
Total (All Noise Sources)	**54.4**	**40.2**	**56.3**	**43.0**	**37.9**

[1] See Exhibit 11-A for the noise source locations. CadnaA noise model calculations are included in Appendix 11.1.

Table 10-3 shows the Project operational noise levels during the nighttime hours of 10:00 p.m. to 7:00 a.m. The nighttime hourly noise levels at the off-site receiver locations are expected to range from 36.1 to 55.0 dBA L_{eq}.

TABLE 10-3: NIGHTTIME PROJECT OPERATIONAL NOISE LEVELS

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA Leq)				
	R1	R2	R3	R4	R5

Parking Lot Vehicle Movements	30.2	5.2	0.0	0.0	0.0
Total (All Noise Sources)	**52.4**	**38.2**	**55.0**	**41.3**	**36.1**

[1] See Exhibit 10-A for the noise source locations. CadnaA noise model calculations are included in Appendix 10.1.

10.5 PROJECT OPERATIONAL NOISE LEVEL COMPLIANCE

To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Ontario exterior noise level standards at nearby noise-sensitive receiver locations. Table 10-4 shows the operational noise levels associated with Empire Groves Hotel Project will satisfy the City of Ontario 65 dBA L_{eq} exterior noise level standards at all nearby receiver locations. Therefore, the operational noise impacts are considered *less than significant* at the nearby noise-sensitive receiver locations.

TABLE 10-4: OPERATIONAL NOISE LEVEL COMPLIANCE

Receiver Location[1]	Project Operational Noise Levels (dBA Leq)[2]		Noise Level Standards (dBA Leq)[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	54.4	52.4	65.0	60.0	No	No
R2	40.2	38.2	65.0	45.0	No	No
R3	56.3	55.0	65.0	60.0	No	No

[2] Proposed Project operational noise level calculations are included in Appendix 10.2.
[3] Section 5-29.04 of the City of Ontario Municipal Code (Appendix 3.1).
[4] Do the estimated Project operational noise source activities exceed the noise level standards? "Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

10.6 PROJECT OPERATIONAL NOISE LEVEL INCREASES

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise levels measurements for the nearest receiver locations potentially impacted by Project operational noise sources. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. (2) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10\log_{10}[10^{SPL1/10} + 10^{SPL2/10} + \ldots 10^{SPLn/10}]$$

Where "SPL1," "SPL2," etc. are equal to the sound pressure levels being combined, or in this case, the Project-operational and existing ambient noise levels. The difference between the combined Project and ambient noise levels describes the Project noise level increases to the existing ambient noise environment. As indicated on Tables 10-5 and 10-6, the Project will generate daytime and nighttime operational noise level increases are expected to range up to 1.7 dBA L_{eq} at the nearest receiver locations. Project-related operational noise level increases will satisfy the operational noise level increase significance criteria presented on Table 4-1. Therefore, the incremental Project operational noise level increase is considered *less than significant* at all receiver locations.

TABLE 10-5: DAYTIME PROJECT OPERATIONAL NOISE LEVEL INCREASES

Receiver Location[1]	Total Project Operational Noise Level[2]	Measurement Location[3]	Reference Ambient Noise Levels[4]	Combined Project and Ambient[5]	Project Increase[6]	Increase Criteria	Increase Criteria Exceeded?

[6] The noise level increase expected with the addition of the proposed Project activities.

11 CONSTRUCTION IMPACTS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project. Exhibit 11-A shows the construction activity boundaries in relation to the nearest sensitive receiver locations previously described in Section 8. According to Section 5-29.09 of the Municipal Code states: *No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.* (16)

In addition, since neither the City of Ontario General Plan or Municipal Code establish numeric maximum acceptable construction source noise levels at potentially affected receivers for CEQA analysis purposes. Therefore, a numerical construction threshold based on Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for analysis of daytime construction impacts. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise sensitive residential land use. (17).

11.1 CONSTRUCTION NOISE LEVELS

Noise generated by the Project construction equipment will include a combination of trucks, power tools, concrete mixers, and portable generators that when combined can reach high levels. The number and mix of construction equipment are expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

11.2 TYPICAL CONSTRUCTION REFERENCE NOISE LEVELS

To describe construction noise activities, this construction noise analysis was prepared using reference construction equipment noise levels from the Federal Highway Administration (FHWA) published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. (36) The RCNM equipment database, provides a comprehensive list of the noise generating characteristics for specific types of construction equipment. In addition, the database provides an acoustical usage factor to estimate the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation. The equipment shown Table 11-1 represents the loudest pieces of equipment anticipated during each phase of construction.

EXHIBIT 11-A: CONSTRUCTION NOISE SOURCE AND RECEIVER LOCATIONS

TABLE 11-1: CONSTRUCTION REFERENCE NOISE LEVELS

Construction Stage	Reference Construction Activity	Reference Noise Level @ 50 Feet (dBA L_{eq})[1]	Combined Noise Level (dBA L_{eq})[2]
Site Preparation	Crawler Tractors	78	80
	Hauling Trucks	72

[2] Represents the combined noise level for all equipment assuming they operate at the same time consistent with FTA Transit Noise and Vibration Impact Assessment guidance.
[3] Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings. Sound power levels calibrated using the CadnaA noise model at the reference distance to the noise source.

11.3 CONSTRUCTION NOISE ANALYSIS

Using the reference construction equipment noise levels and the CadnaA noise prediction model, calculations of the Project construction noise level impacts at the nearby sensitive receiver locations were completed. For construction noise assessment, construction equipment can be considered to operate in two modes: stationary and mobile. As defined, stationary equipment operates in a single location for one or more days at a time, with either fixed-power operation (e.g., pumps, generators, and compressors) or variable-power operation (e.g., pile drivers, rock drills, and pavement breakers). Mobile equipment moves around the construction site with power applied in cyclic fashion, such as bulldozers, graders, and loaders (FTA 2018). The FTA and FHWA recommend noise impacts from stationary equipment be assessed from the center of the equipment location, while noise impacts from mobile construction equipment should be assessed from the center of the equipment activity area (e.g., construction site). Thus, to assess a more realistic and reasonable worst-case construction scenario while accounting for the dynamic nature of construction activities, this Project construction noise analysis models the equipment combination with the highest reference combined level as a moving point within the construction area (Project site boundary). Construction impacts are based on the highest noise level calculated at each receiver location. As shown on Table 11-2, the construction noise levels

are expected to range from 34.4 to 60.0 dBA L_{eq}, and the highest construction levels are expected to range from 40.4 to 60.0 dBA L_{eq} at the nearest receiver locations. Appendix 11.1 includes the detailed CadnaA construction noise model inputs.

TABLE 11-2: CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})					
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels[2]
R1	57.0	60.0	58.0	60.0	54.0	60.0
R2	39.5	42.5	40.5	42.5	36.5	42.5
R3	56.3	59.3	57.3	59.3	53.3	59.3
R4	42.5	45.5	43.5	45.5	39.5	45.5
R5	37.4	40.4	38.4	40.4	34.4	40.4

[1] Noise receiver locations are shown on Exhibit 9-A.
[2] Construction noise level calculations based on distance from the construction activity, which is measured from the Project site boundary to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix 11.1.

11.4 CONSTRUCTION NOISE LEVEL COMPLIANCE

To evaluate whether the Project will generate potentially significant short-term noise levels at nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts at residential locations. The construction noise analysis shows that the nearest receiver locations will satisfy the reasonable daytime significance thresholds shown in Table 4-1 during Project construction activities as shown on Table 11-3. Therefore, the noise impacts due to Project construction noise is considered *less than significant* at all receiver locations.

TABLE 11-3: CONSTRUCTION NOISE LEVEL COMPLIANCE

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	60.0	80	No
R2	42.5	80	No
R3	59.3	80	No
R4	45.5	80	No
R5	40.4	80	No

[1] Noise receiver locations are shown on Exhibit 9-A.
[2] Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations as shown on Table 11-2.
[3] Construction noise level thresholds as shown on Table 4-1.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?

11.5 CONSTRUCTION VIBRATION ANALYSIS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from Project construction activities would cause only intermittent, localized intrusion. Ground-borne vibration levels resulting from typical construction activities occurring within the Project site were estimated by data published by the Federal Transit Administration (FTA) (17) and Caltrans (8). However, while vehicular traffic is rarely perceptible, construction has the potential to result in varying degrees of temporary ground vibration, depending on the specific construction activities and equipment used.

Ground vibration levels associated with various types of construction equipment are summarized on Table 11-4. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential Project construction vibration levels using the following vibration assessment methods defined by Caltrans. Caltrans provides the following equation: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$ (8).

TABLE 11-4: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV (in/sec) at 25 feet
Small bulldozer	0.003
Jackhammer	0.035
Loaded Trucks	0.076
Large bulldozer	0.089

Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual

Table 11-5 presents the expected Project related vibration levels at the nearby receiver locations. At distances ranging from 176 feet to 3,593 feet from Project construction activities (at the Project site boundary), construction vibration levels are estimated to be less than 0.01 PPV (in/sec) at the nearest vibration sensitive receiver. Based on maximum acceptable continuous vibration threshold of 0.50 PPV (in/sec), the typical Project construction vibration levels will fall below the building damage thresholds at all the receiver locations. Therefore, the Project-related vibration impacts are considered less than significant during typical construction activities at the Project site.

Further, vibration levels at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating simultaneously adjacent to the Project site perimeter.

TABLE 11-5: PROJECT CONSTRUCTION VIBRATION LEVELS

Receiver[1]	Distance to Const. Activity (Feet)[2]	Typical Construction Vibration Levels PPV (in/sec)[3]					Thresholds PPV (in/sec)[4]	Thresholds Exceeded?[5]
		Small bulldozer	Jackhammer	Loaded Trucks	Large bulldozer	Highest Vibration Level		
R1	176'	0.00	0.00	0.00	0.00	0.00	0.50	No

5-29.20 Noise abatement program

Sec. 5-29.01. Declaration of findings and policy.

It is hereby found and declared that:

(a) The making and creation of excessive, unnecessary or unusually loud noises within the limits of the City is a condition that has existed for some time, however, the extent and volume of such noises is increasing;

(b) The making, creation or maintenance of such excessive, unnecessary, unnatural or unusually loud noises that are prolonged, unusual and unnatural in their time, place and use affect and are a detriment to public health, comfort, convenience, safety, welfare and prosperity of the residents of the City; and

(c) The necessity in the public interest for the provisions and prohibitions hereinafter contained and enacted, is declared as a matter of legislative determination and public policy, and it is further declared that the provisions and prohibitions hereinafter contained and enacted are in pursuance of and for the purpose of securing and promoting the public health, comfort, convenience, safety, welfare and prosperity and the peace and quiet of the residents of the City.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.02. Definitions.

As used in this chapter, specific words and phrases are defined as follows:

(a) "Ambient noise level" shall mean the all-encompassing noise level associated with a given environment and is a composite of sounds from all sources, excluding the alleged offensive noise or excessive sound, at the location and approximate time at which a comparison with the alleged offensive noise is to be made.

(b) "Applicable (noise) zone" shall mean the noise zone category based on the actual use of the property, provided that the actual use is a legal use in the City.

(c) "A-weighted sound level" shall mean the sound pressure level in decibels (dBAs) as measured with a sound level meter using the A-weighted filter network (scale) at slow response and at a pressure of twenty (20) micropascals. The A-weighted filter de-emphasizes the very low and a very high frequency component of sound in a manner similar to the response of the human ear, and is a numerical method of rating human judgment of loudness.

(d) "Decibel (dBA)" shall mean a unit for measuring the amplitude of a sound, equal to twenty (20) times the logarithm to the base ten (10) of the ratio of pressure of the sound measured to the reference pressure of twenty (20) micropascals.

(e) "Equivalent sound or noise level (Leq)" shall mean the International Electrotechnical Commission (IEC) 60804 Standard for measurement, or the most recent revision thereof, for the sound level corresponding to a steady state noise level over a given sample period with the same amount of acoustic energy as the actual time varying noise level or the energy average noise level during the sample period. The measurement period for the purposes of this chapter is fifteen (15) minutes.

(f) "Impulsive noise" shall mean a noise of short duration usually less than one (1) second and of high intensity, with an abrupt onset and rapid decay. Such objectionable noises may also be repetitive.

(g) "Intrusive noise" shall mean that noise that intrudes over and above the ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, time of occurrence and tonal information content, as well as the prevailing ambient noise level.

(h) "Maintenance" shall mean the upkeep, repair or preservation of existing property or structures.

(i) "Noise" shall mean any unwanted sound or sound that is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing or is otherwise annoying.

(j) "Noise level (sound level)" shall mean the weighted sound pressure level obtained by use of a sound level meter having a standard frequency filter for attenuating part of the sound spectrum. For purposes of this chapter, all noise levels (sound levels) shall be A-weighted sound pressure level.

(k) "Noise (sound) level meter" shall mean an instrument, including a microphone, an amplifier, an output meter and frequency weighting networks for the measurement and determination of noise and sound levels. For the purposes of this chapter, the sound level meter must meet the International Electrotechnical Commission (IEC) 60651 and 60804 Standards, or the most recent revisions thereof, for Type 1 sound level meters or an instrument and the associated recording and analyzing equipment that will provide equivalent data.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.03. Designated noise zones.

The properties hereinafter described shall be assigned to the following noise zones:

Noise Zone I:	All single-family residential properties;
Noise Zone II:	All multi-family residential properties and mobile home parks;

Noise Zone III:	All commercial property;
Noise Zone IV:	The residential portion of mixed use properties;
Noise Zone V:	All manufacturing or industrial properties and all other uses.

The actual use of the property, and not necessarily its zoning designation, shall be the determining factor in establishing whether a property is in Noise Zone I, II, III, IV or V, provided that the actual use is a legal use within the applicable zone.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.04. Exterior noise standards.

(a) The following exterior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Exterior Noise Level (1)		***Allowed Equivalent Noise Level, Leq. (2)***	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	65 dBA	45 dBA
II	Multi-Family Residential, Mobile Home Parks	65 dBA	50 dBA
III	Commercial Property	65 dBA	60 dBA
IV	Residential Portion of Mixed Use	70 dBA	70 dBA
V	Manufacturing and Industrial, Other Uses	70 dBA	70 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period; and

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.05. Interior noise standards.

(a) The following interior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Interior Noise Level (1)		**Allowed Equivalent Noise Level, Leq.** (2)	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	45 dBA	40 dBA
II	Multi-Family Residential, Mobile Home Parks	45 dBA	40 dBA
IV	Residential Portion of Mixed Use	45 dBA	40 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period;

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.06. Exemptions.

The following activities shall be exempted from the provisions of this chapter:

(a) Any activity conducted on public property, or on private property with the consent of the owner, by any public entity or its officers, employees, representatives, agents, subcontractors, permittees, licensees or lessees that the public entity has authorized are exempt from the provisions of this chapter. This includes, without limitation, sporting and recreational activities that are sponsored, co-sponsored, permitted or allowed by the City or any school district within the City's jurisdictional boundaries. This also includes, without limitation, occasional outdoor gatherings, public dances, shows or sporting and entertainment events, provided such events are conducted pursuant to an approval, authorization, contract, lease, permit or sublease by the appropriate public entity, specifically the planning commission or City Council;

(b) Occasional outdoor gatherings, public dances, show, sporting and entertainment events, provided said events are conducted pursuant to a permit or license issued by the appropriate jurisdiction relative to the staging of said events;

(c) Any mechanical device, apparatus or equipment used, related to or connected with emergency machinery, vehicle, work or warning alarm or bell, provided the sounding of any bell or alarm on any building or motor vehicle shall terminate its operation within forty-five (45) minutes in any hour of its being activated;

(d) Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the provisions of § 5-29.09;

(e) Noise sources associated with construction, repair, remodeling, demolition or grading of public rights-of-way or during authorized seismic surveys;

(f) All mechanical devices, apparatus or equipment associated with agriculture operations provided that:

(1) Operations do not take place between 8:00 p.m. and 7:00 a.m.;

(2) Such operations and equipment are utilized for the protection or salvage of agricultural crops during periods of potential or actual frost damage or other adverse weather conditions; or

(3) Such operations and equipment are associated with agricultural pest control through pesticide application, provided the application is made in accordance with permits issued by or regulations enforced by the California Department of Agriculture;

(g) Noise sources associated with the maintenance of real property. Such activities shall instead be subject to the provisions of § 5-29.08;

(h) Any activity to the extent regulation thereof has been preempted by state or federal law;

(i) Any noise sources associated with people and/or music associated with a party at a residential property. Such noise shall be subject to the provisions of OMC § 5-29.07;

(j) Any noise source emanating from an ice cream truck within the City. Such noise shall be subject to the provisions of OMC § 4-18.04;

(k) Any noise sources associated with barking dogs or other intermittent noises made by animals on any properly within the City. Such noise shall be subject to the provisions of OMC Chapter 1, Title 6;

(l) Noise sources related to uses approved by a permit or development agreement adopted prior to the date of adoption of this chapter and that contains acoustic or noise standard conditions of approval. This exemption shall only be applicable during the effective period of the City-approved permit or development agreement.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.07. Loud and disturbing noise.

(a) It is unlawful for any person or property owner within the City to make, cause or allow to be made any loud, excessive, impulsive or intrusive noise, disturbance or commotion that disturbs the peace or quiet of any area or that causes discomfort or annoyance to any reasonable person of normal sensitivities in the area, after a Police or Code Enforcement Officer has first requested that the person or property owner cease and desist from making such noise. The types of loud, disturbing, excessive, impulsive or intrusive noise may include, but shall not be limited to, yelling, shouting, hooting, whistling, singing, playing a musical instrument, or emitting or transmitting any loud music or noise from any mechanical or electrical sound making or sound-amplifying device.

(b) The factors, standards, and conditions that may be considered in determining whether a violation of the provisions of this section has been committed, included, but not limited to, the following:

(1) The level of the noise;

(2) The level and intensity of the background (ambient) noise, if any;

(3) The proximity of the noise to residential or commercial sleeping areas;

(4) The nature and zoning of the area within which the noise emanates;

(5) The density of inhabitation of the area within which the noise emanates;

(6) The time of day and night the noise occurs;

(7) The duration of the noise;

(8) Whether the noise is constant, recurrent or intermittent;

(9) Whether the noise is produced by a commercial or noncommercial activity; and

(10) Whether the use is lawful under the provisions of Title 5 of this Code and whether the noise is one that could reasonably be expected from the activity or allowed use.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.08. Real property maintenance noise regulations.

(a) No person, while engaged in maintenance of real property, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, except between the hours of 8:00 a.m. and 6:00 p.m.

(b) Trimming or pruning that requires the use of chainsaws or mulching machines shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(c) The use of electrical or gasoline powered blowers, such as commonly used by gardeners or other persons for cleaning lawns, yards, driveways, gutters and other property shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(d) No landowner, gardener, property maintenance service, contractor, subcontractor or employer shall permit or allow any person or persons working under his or her direction or control to operate any tool, equipment or machine in violation of the provisions of this section.

(e) Exceptions. The provisions of this section shall not apply to the following:

(1) Emergency property maintenance required by the building official;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or department head determines that the maintenance, repair or improvement is immediately necessary to maintain public service,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes maintenance during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any maintenance that complies with the noise limits specified in § 5-29.04.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.09. Construction activity noise regulations.

(a) No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

(b) No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

(c) Exceptions.

(1) The provisions of this section shall not apply to emergency construction work performed by a private party when authorized by the City Manager or his or her designee;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or a department head determines that the maintenance, repair or improvement is immediately necessary to maintain public services,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes construction during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any construction that complies with the noise limits specified in §§ 5-29.04 or 5-29.05.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.10. Other public agency exceptions.

The provisions of this chapter shall not be construed to prohibit any work at different hours by or under the direction of any other public agency or public or private utility companies in cases of necessity or emergency.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.11. Schools, day care centers, churches, libraries, museums, health care institutions; Special provisions.

It is unlawful for any person to create any noise that causes the outdoor noise level at any school, day care center, hospital or similar health care institution, church, library or museum while the same is in use, to exceed the noise standards specified in § 5-29.04 prescribed for the assigned Noise Zone I.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.12. Sound amplifying equipment.

Loudspeakers, sound amplifiers, public address systems or similar devices used to amplify sounds shall be subject to the provisions of § 5-29.13. Such sound amplifying equipment shall not be construed to include electronic devices, including but not limited to, radios, tape players, tape recorders, compact disc players, MP3 players, electric keyboards, music synthesizers, record players or televisions, which are designed and operated for personal use, or used entirely within a building and are not designed or used to convey the human voice, music or any other sound to an audience outside such building, or which are used in vehicles and heard only by occupants of the vehicle in which installed.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.13. Amplified sound.

(a) The City Council enacts the following legislation for the sole purpose of securing and promoting the public health, comfort, safety and welfare for its citizenry. While recognizing that the use of sound amplifying equipment may be entitled to certain protection by the constitutional rights of freedom of speech and assembly, the City Council finds that in order to protect the public safety and the correlative rights of the citizens of this community to privacy and freedom from public nuisance of loud and unnecessary noise, reasonable regulation of the time, place and manner of the use of amplifying equipment is necessary. In no event shall approval or authorization

required herein be withheld by reason of the constitutionally protected content of any material proposed to be broadcast through amplifying equipment.

(b) It is unlawful for any person, other than personnel of law enforcement or governmental agencies, to install, use or operate a loudspeaker or sound amplifying device in a fixed or movable position or mounted upon any vehicle within the City for the purpose of giving instructions, directions, talks, addresses or lectures to any persons or assemblages of persons in or upon any street, alley, sidewalk, park, place or public property without a permit to do so from the Police Chief or his or her designee. Notwithstanding any other provision of this chapter, the provisions of this section shall also apply to the use of sound amplifying equipment upon public or private property when used in connection with outdoor or indoor public or private events, whether or not admission is charged or food or beverages are sold, when such activity is to be attended by more than one hundred (100) persons and the noise emanating from the event will be audible at the property plane, or in the case of a street dance or concert on the nearest residential property. Those activities listed in § 5-29.06(a) are exempt from the requirements of this section.

(c) The Police Chief or his or her designee is authorized to approve and issue permits under this section.

(d) An application for a permit required by this section shall be filed with the Police Chief at least sixteen (16) days and no more than one hundred twenty (120) days prior to the date on which the sound amplifying equipment is intended to be used. Applications for events covered by the First Amendment of the United States Constitution are exempt from the time requirements of this section if it is shown that circumstances require a shorter filing period and the event will not constitute an unsafe condition. The application shall contain the following information:

(1) The name, address and telephone number of both the owner and the user of the sound amplifying equipment;

(2) The license number, if a sound truck is to be used;

(3) A general description of the sound amplifying equipment which is to be used;

(4) Whether sound amplifying equipment will be used for commercial or noncommercial purpose;

(5) The dates and times upon and within which, and the streets or property over or upon which, the equipment is proposed to be operated;

(6) The name or names of one (1) or more persons who will be present during the conduct of any activities for which registration is sought and who will have authority to reduce the volume of any sound amplifying equipment during the course of the activities if required pursuant to this chapter and, otherwise, to insure compliance with the provisions of this chapter;

(7) A statement by the applicant that he or she is willing and able to comply with the provisions of this chapter and the conditions of the permit; and

(8) A sketch of the area or facilities within which the activities are to be conducted, with approximate dimensions and illustration of the location and orientation of all sound-amplifying equipment.

(e) The Police Chief shall deny the permit application or revoke any permit if the chief finds any of the following:

(1) The application contains materially false or intentionally misleading information;

(2) The use of sound amplifying equipment at an event or activity proposed will be located in or upon a premises, building or structure that is hazardous to the health or safety of the employees or patrons of the premises, business, activity, or event, or the general public, under the standards established by the Uniform Building or Fire Codes, or other applicable codes, as set forth in OMC Titles 4 and 8;

(3) The use of sound amplifying equipment at an event or activity proposed in or upon a premises, building or structure that lacks adequate on-site parking for participants attending the proposed event or activity under the applicable standards set forth in OMC Title 9;

(4) The conditions of any motor vehicle movement are such that, in his or her opinion, the use of the equipment would constitute an unreasonable interference with traffic safety;

(5) The conditions of pedestrian movement are such that the use of the equipment would constitute a detriment to traffic safety;

(6) The application submitted by the applicant reveals that the applicant would violate the provisions of this section or any other provision of federal, state and/or local law;

(7) The applicant is unwilling or unable to comply with the provisions of this chapter or any conditions imposed upon any permit issued;

(8) There had already been a permitted event at the intended location, or within a two hundred (200) yard radius of the intended location and the prior permitted event was located on residentially zoned property or on a street, alley, public parking lot or neighborhood park within three (3) months prior to the intended event. Community parks are exempt from this subsection (8); or

(9) The applicant or location has had previous violations within the past calendar year, and in the judgment of the Police Chief, issuance would be contrary to the intent of this section.

(f) In determining whether the use of the equipment would constitute an unreasonable interference with or detriment to traffic safety, the Police Chief shall consider, but shall not necessarily be limited to:

(1) The volumes, patterns and speed of vehicular and pedestrian traffic in the proposed area of use;

(2) The relationship of the proposed use of equipment and potential impacts upon traffic patterns;

(3) Availability of sufficient room for the operation of the equipment without significantly interfering with the traffic patterns;

(4) Proximity to schools, playgrounds and similar facilities where use of such equipment might attract children into traffic patterns; or

(5) Proximity to busy intersections or other potentially hazardous conditions where use of such equipment might constitute a hazard by reason of its tendency to distract drivers of vehicles or pedestrians.

(g) Issuance or denial.

(1) If the application is approved, the Police Chief shall return an approved copy of the application to the applicant and shall issue a permit. The permit shall constitute permission for the use of the sound amplifying equipment as requested.

(2) Any application filed shall be either approved or disapproved within five (5) days of the filing thereof.

(3) If the application is disapproved, the Police Chief shall return a disapproved copy forthwith to the applicant with a written statement on the reason for disapproval.

(i) Any person aggrieved by a decision of the Police Chief or his or her designee may file an appeal to the City Manager. A complete and proper appeal shall be filed with the City Clerk within ten (10) calendar days of the action that is the subject of the appeal. If the applicant fails to file an appeal within the ten (10) day filing period provided herein, denial shall take effect immediately upon expiration of such filing period. All appeals shall be in writing and shall contain the following information: (a) name(s) of the person filing the appeal, (b) a brief statement in ordinary and concise language of the relief sought, and (c) the signatures of all parties named as appellants and their mailing addresses. After receiving the appeal, the City Clerk shall immediately forward the matter to the City Manager for handling.

(ii) The City Manager shall, upon receipt of the appeal, set the matter for hearing before the City Manager or a hearing officer. Any hearing officer shall be a licensed attorney or recognized mediator designated by the City Manager. The hearing shall be set for not more than ten (10) calendar days after the receipt of the appeal unless a longer time is requested or consented to by the appellant. Notice of such hearing shall be given in writing and mailed at least five (5) calendar days prior to the date of the hearing, by U.S. mail, with a proof of service attached, addressed to the address listed on the permit application, or the written appeal if differen

the permit application. The notice shall state the grounds of the complaint or reason for the denial and shall state the time and place where such hearing will be held.

(iii) The City Manager or hearing officer shall, within ten (10) calendar days following the conclusion of the hearing, make a written finding and decision, which shall be delivered to the City and the appellant by first class mail. Notwithstanding any provision in this Code, the decision of the City Manager or hearing officer shall be the final administrative decision of the City. Any party dissatisfied with the decision of the City Manager or hearing officer may seek review of such decision under the provisions of Code Civil Procedure, §§ 1094.5 and 1094.8, as amended from time to time.

(h) In addition to any other provisions of this Code, the use of sound-amplifying equipment and sound trucks in the City shall be subject to the following regulations:

(1) The only sounds permitted are music and human speech;

(2) Sound shall not be emitted within one hundred (100) yards of hospitals, churches, schools and City Hall;

(3) The volume of sound shall be controlled so that it will not be audible for a distance in excess of one hundred (100) feet from the sound amplifying equipment or sound truck, and so that the volume is not unreasonably loud, raucous, jarring, disturbing or a nuisance to persons within the range of allowed audibility; or

(4) The sound amplifying equipment or sound truck shall not be used between the hours of 8:00 p.m. and 8:00 a.m.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.14. Motor vehicles.

The use of any motor vehicle in such a condition as to create excessive, impulsive or intrusive noises is prohibited. The discharge into the open air of the exhaust of any internal combustion engine, stationary or mounted on wheels, motorboat or motor vehicle, including motor cycle, whether or not discharged through a muffler or other similar device, which discharge creates excessive, unusual, impulsive or intrusive noise is prohibited. Motor vehicles shall comply with the noise regulations of the California Vehicle Code.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.15. Noise level measurement.

(a) The location selected for measuring exterior noise levels in a residential area shall be at any part of a private yard, patio, deck or balcony normally used for human activity and identified by the owner or, if occupied by someone other than the owner, the occupant of the affected property as suspected of exceeding the noise level standard. This location may be the closest point in the private yard or patio, or on the deck or balcony, to the noise source, but should not be located in nonhuman activity areas such as trash container storage areas, planter beds, above or contacting a property line fence, or other areas not normally used as part of the yard, patio, deck or balcony. The location selected for measuring exterior noise levels in a nonresidential area shall be at the closest point to the noise source. The measurement microphone height shall be five (5) feet above finish elevation or, in the case of a deck or balcony, the measurement microphone height shall be five (5) feet above the finished floor level.

(b) The location selected for measuring interior noise levels shall be made within the affected residential unit. The measurements shall be made at a point at least four (4) feet from the wall, ceiling or floor, or within the frame of a window opening, nearest the noise source. The measurements shall be made with windows in an open position.

(c) Any decibel measurement made pursuant to the provisions of this chapter shall be measured in decibels (dBAs) as measured with a sound level meter using the A-weighted sound pressure level.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.16. Prima facie violation.

Any noise exceeding the noise level standard as specified in §§ 5-29.04 and 5-29.05, shall be deemed to be prima facie evidence of a violation of the provisions of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.17. Penalty.

(a) Any person who negligently or knowingly violates any provision of this chapter shall be guilty of an infraction and upon conviction shall be punishable by a fine specified in OMC § 1-2.01. Each day a violation occurs shall constitute a separate offense and shall be punishable as such.

(b) Any person who negligently or knowingly violates any provision of this chapter may also be subject to fine(s) specified in the administrative citation schedule of fines set forth in OMC § 1-5.04. The manner of issuing administrative citations shall comply with all the procedures specified in OMC Chapter 5, Title 1.

(c) As an additional remedy, the operation or maintenance of any device, instrument, vehicle or machinery in violation of any provisions of this chapter, which operation or maintenance causes or creates sound levels exceeding the allowable standards as specified in this chapter, shall be deemed and is declared to be a public nuisance and may be subject to abatement by a restraining order or injunction issued by a court of competent jurisdiction.

(d) Any violation of this chapter is declared to be a public nuisance and may be abated in accordance with law. The expense of enforcing this chapter is declared to be public nuisance and may be by resolution of the City Council declared to be a lien and special assessment against the property on which such nuisance is maintained, and any such charge shall also be a personal obligation of the property owner.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.18. Enforcement and administration.

(a) It shall be the responsibility of Police or Code Enforcement Officers to enforce the provisions of this chapter and to perform all other functions required by this chapter. Such duties shall include, but not be limited to investigating potential violations, issuing warning notices and citations, and providing evidence to the City prosecutor for legal action.

(b) For violations of § 5-29.07, Police or Code Enforcement Officers shall obtain a declaration under penalty of perjury from two (2) declarants living in separate households within a sixty (60) day period stating in detail all of the following:

(1) That the declarant is a resident of a residential neighborhood located within two hundred (200) yards of the noise source; and

(2) Within the past month declarant has heard noise for substantially long periods to the extreme annoyance of the declarant.

(3) Declarations from two (2) declarants are required to prove a violation of § 5-29.07, but are not required to prove that a person has violated any other provision of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.19. City Manager waiver.

The City Manager is authorized to grant a temporary waiver to the provisions of this chapter for a period of time necessary to correct the violations of this chapter, if such temporary waiver would be in the public interest and there is no feasible and prudent alternative to the activity, or the method of conducting the activity, for which the temporary waiver is sought. This time period may include a commitment to a program that includes placing necessary orders and entering into necessary contracts within thirty (30) days for repair or installation.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.20. Noise abatement program.

(a) In circumstances where adopted community-wide noise standards and policies prove impractical in controlling noise generated from a specific source, the City Council may establish a noise abatement program that recognizes the characteristics of the noise source and affected property and that incorporates specialized mitigation measures.

(b) Noise abatement programs shall set forth in detail the approved terms, conditions and requirements for achieving maximum compliance with noise standards and policies. Said terms, conditions and requirements may include, but shall not be limited to, limitations, restrictions, or prohibitions on operating hours, location of operations, and the types of equipment.

(§ 2, Ord. 2888, eff. March 6, 2008)

APPENDIX 3.2:

ONTARIO INTERNATIONAL AIRPORT
ALUC NOISE CRITERIA

This page intentionally left blank

Table 2-3
Noise Criteria

Legend: Land use compatibility
(A detailed explanation of each land use acceptability category is provided on pg. 2-50 of this table.)

Normally Compatible Land Use	Conditional Land Use (45/50)	Incompatible Land Use

- Cells that are conditionally compatible that have a number, indicate the interior noise level standard condition for use consistency.

Land Use Category [1] *Note: Multiple land use categories and compatibility criteria may apply to a project*	Noise Impact Zones Exterior Noise Exposure [2] (CNEL dB) ≤ 60	60-65	65-70	70-75	≥ 75	Criteria for Conditional Uses *Note: Interior noise level limits shown in yellow cells also apply (See **Policy N4**)*
Outdoor Uses (limited or no activities in buildings)						
Natural Land Areas: desert, brush lands						Compatible at levels indicated, but noise disruption of natural quiet will occur
Water: flood plains, wetlands, lakes, reservoirs						
Agriculture (except residences and livestock): crops, orchards, vineyards, pasture, range land						
Livestock Uses: feed lots, stockyards, breeding, fish hatcheries, horse stables						Exercise caution with uses involving noise-sensitive animals
Outdoor Major Assembly Facilities: spectator-oriented outdoor stadiums, amphitheaters, fairgrounds, zoos [3]						Exercise caution if clear audibility by users is essential
Group Recreation (limited spectator stands): athletic fields, water recreation facilities, picnic areas						Exercise caution if clear audibility by users is essential
Small/Non-Group Recreation: golf courses, tennis courts, shooting ranges						Exercise caution if clear audibility by users is essential
Local Parks: children-oriented neighborhood parks, playgrounds						Exercise caution if clear audibility by users is essential
Camping: campgrounds, recreational vehicle/motor home parks						
Cemeteries (excluding chapels)						Compatible at levels indicated, but noise disruption of outdoor activities will occur
Residential and Lodging Uses						
Residential (<8 d.u./acre): individual dwellings, townhouses, mobile homes, bed & breakfast inns [4]		**45**				
Residential (≥8 d.u./acre) [4]		**45**	**45**			
Long-Term Lodging (>30 nights): extended-stay hotels, dormitories		**45**	**45**			
Short-Term Lodging (≤ 30 nights): hotels, motels, other transient lodging (except conference/assembly facilities)		**45**	**45**			

Table 2-3
Noise Criteria

Legend: Land use compatibility
(A detailed explanation of each land use acceptability category is provided on pg. 2-50 of this table.)

Normally Compatible Land Use	Conditional Land Use (45/50)	Incompatible Land Use

- Cells that are conditionally compatible that have a number, indicate the interior noise level standard condition for use consistency.

Land Use Category [1] *Note: Multiple land use categories and compatibility criteria may apply to a project*	Noise Impact Zones Exterior Noise Exposure [2] (CNEL dB) ≤ 60	60-65	65-70	70-75	≥ 75	Criteria for Conditional Uses *Note: Interior noise level limits shown in yellow cells also apply (See **Policy N4**)*
Congregate Care: retirement homes, assisted living, nursing homes, intermediate care facilities		45	45			
Educational and Institutional Uses						
Family day care homes (≤14 children) [4]		45				
Children's Schools: K-12, day care centers (>14 children); school libraries		45				
Adult Education classroom space: adult schools, colleges, universities		45	45			Applies only to classrooms; offices, laboratory facilities, gymnasiums, outdoor athletic facilities, and other uses to be evaluated as indicated for those land use categories
Community Libraries		45				
Indoor Major Assembly Facilities: auditoriums, conference centers, concert halls, indoor arenas [3]		45	45			
Indoor Large Assembly Facilities: movie theaters, places of worship, cemetery chapels, mortuaries [3]		45	45			
Indoor Recreation: gymnasiums, club houses, athletic clubs, dance studios			50			
In-Patient Medical: hospitals, mental hospitals		45	45			
Out-Patient Medical: health care centers, clinics		45	45	45		
Penal Institutions: prisons, reformatories		45	45			
Public Safety Facilities: police, fire stations			50	50		
Commercial, Office, and Service Uses						
Major Retail: regional shopping centers, 'big box' retail			50	50		Outdoor dining or gathering places incompatible above CNEL 70 dB
Local Retail: community/neighborhood shopping centers, grocery stores			50	50		Outdoor dining or gathering places incompatible above CNEL 70 dB
Eating/Drinking Establishments: restaurants, fast-food dining, bars			50	50		Outdoor dining or gathering places incompatible above CNEL 70 dB
Limited Retail/Wholesale: furniture, automobiles, heavy equipment, lumber yards, nurseries			50	50		

Table 2-3
Noise Criteria

Legend: Land use compatibility
(A detailed explanation of each land use acceptability category is provided on pg. 2-50 of this table.)

Normally Compatible Land Use	Conditional Land Use (45/50)	Incompatible Land Use

- Cells that are conditionally compatible that have a number, indicate the interior noise level standard condition for use consistency.

Land Use Category [1] *Note: Multiple land use categories and compatibility criteria may apply to a project*	Noise Impact Zones Exterior Noise Exposure [2] (CNEL dB) ≤ 60	60-65	65-70	70-75	≥ 75	Criteria for Conditional Uses *Note: Interior noise level limits shown in yellow cells also apply (See **Policy N4**)*
Offices: professional services, doctors, finance, civic; radio, television & recording studios, office space associated with other listed uses			50	50		
Personal & Miscellaneous Services: barbers, car washes, print shops			50	50		
Vehicle Fueling: gas stations, trucking & transportation terminals				50	50	
Industrial, Manufacturing, and Storage Uses						
Hazardous Materials Production: oil refineries, chemical plants (≥6,000 gallons)						
Heavy Industrial						
Light Industrial, High Intensity: food products preparation, electronic equipment				50	50	
Light Industrial, Low Intensity: machine shops, wood products, auto repair				50	50	
Research & Development			50	50		
Indoor Storage: wholesale sales, warehouses, mini/other indoor storage, barns, greenhouses						
Outdoor Storage: public works yards, automobile dismantling						
Mining & Extraction						
Transportation, Communication, and Utilities						
Rail & Bus Stations				50	50	
Transportation Routes: road & rail rights-of-way, bus stops						
Auto Parking: surface lots, structures						
Communications Facilities: emergency communications, broadcast & cell towers						
Power Plants						
Electrical Substations						
Wastewater Facilities: treatment, disposal						
Solid Waste Disposal Facilities: landfill, incineration						
Solid Waste Transfer Facilities, Recycle Centers						

Land Use Compatibility	Interpretation/Comments
Normally Compatible	*Indoor Uses:* Either the activities associated with the land use are inherently noisy or standard construction methods will sufficiently attenuate exterior noise to an acceptable indoor community noise equivalent level (CNEL); for land use types that are compatible because of inherent noise levels, sound attenuation must be provided for associated office, retail, and other noise-sensitive indoor spaces sufficient to reduce exterior noise to an interior maximum of CNEL 50 dB *Outdoor Uses:* Except as noted in the table, activities associated with the land use may be carried out with minimal interference from aircraft noise
Conditional	*Indoor Uses:* Building structure must be capable of attenuating exterior noise from all noise sources to the indoor CNEL indicated by the number in the cell (either 45 or 50) *Outdoor Uses:* Caution should be exercised with regard to noise-sensitive outdoor uses; these uses are likely to be disrupted by aircraft noise events; acceptability is dependent upon characteristics of the specific use [5]
Incompatible	*Indoor Uses:* Unacceptable noise interference if windows are open; at exposures above CNEL 65 dB, extensive mitigation techniques required to make the indoor environment acceptable for performance of activities associated with the land use *Outdoor Uses:* Severe noise interference makes the outdoor environment unacceptable for performance of activities associated with the land use

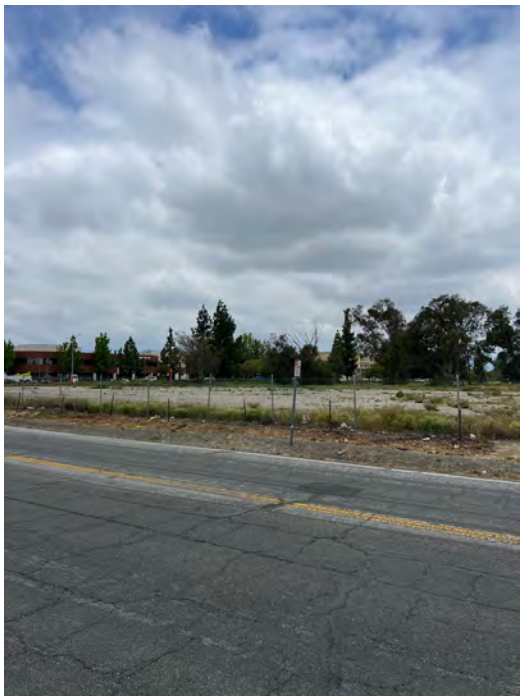
Notes

[1] Land uses not specifically listed shall be evaluated using the criteria for similar uses.

[2] For the purposes of these criteria, the exterior noise exposure generated by aircraft activity at ONT is defined by the projected noise impact zones illustrated on **Map 2-3** of this *Compatibility Plan*.

[3] A *Major Assembly Facility* is defined as having a capacity of ≥1,000 people, while a *Large Assembly Facility* has a capacity of 300 to 999 people. Source: International Building Code.

[4] In accordance with **Policies S1, N2,** and **SP2**, construction of a single-family home, including a second dwelling unit as defined by state law, is allowed on a legal lot of record if such use is permitted by local land use regulations. A family day care home (serving ≤14 children) may be established in any dwelling.



[5] Noise-sensitive land uses are ones for which the associated primary activities, whether indoor or outdoor, are susceptible to disruption by loud noise events. The most common types of noise-sensitive land uses include, but are not limited to, the following: residential, hospitals, nursing facilities, intermediate care facilities, educational facilities, libraries, museums, places of worship, child-care facilities, and certain types of passive recreational parks and open space.

Mr. Jay Bautista, Traffic/Transportation Manager
City of Ontario
303 E. B Street
Ontario, California 91764

Subject: Empire Groves Hotel – VMT Analysis

Dear Mr. Bautista,

Translutions, Inc. (Translutions) is pleased to provide this letter discussing the Vehicle Miles Traveled (VMT) analysis for the proposed hotel and ancillary uses to be located south of Holt Boulevard and east of Guasti Road.

PROJECT DESCRIPTION

The proposed project includes a 600-room hotel and ancillary uses such as ball rooms, restaurants and a street facing retail component. Figure 1 shows the site plan for the proposed project.

VMT IMPACT THRESHOLDS

The City of Ontario has adopted guidelines to help ensure that land use development and transportation projects comply with the latest requirements of the California Environmental Quality Act (CEQA) regarding Vehicle Miles Traveled (VMT). The guidelines provide the City with standardized criteria and established thresholds of significance to be used for analyzing transportation impacts for CEQA. The guidelines were adopted on May 26, 2020 by the Planning Commission.

Based on the City Guidelines, a project would result in a significant project generated VMT impact if either of the following conditions are satisfied:

1. **Project Generated VMT:** A significant impact would occur if the project VMT/SP exceeds the Citywide average for Service Population under General Plan Buildout Conditions.
2. **Project Effect on VMT:** A significant impact would occur if the project causes total daily VMT within the City to be higher than the no project alternative under cumulative conditions.

MODELING METHODOLOGY

The analysis methodology for the project generated VMT and project effect of VMT were developed consistent with the City VMT guidelines. The analysis was conducted using the San Bernardino Transportation Analysis Model (SBTAM) with the City's General Plan socio-economic data.

Socio-Economic Data. The project socio-economic date (SED) for retail uses were based on the ratio of the ITE trip generation based on gross leasable area for retail uses (or the number of rooms for hotel) and employees.

Other Edits. No network edits were made for the project beyond aggregating zones to represent the project.

Model Runs. Each model was run for 5 loops, and the convergence criteria was set at 0.01. Final assignment runs were completed.

MODEL OUTPUTS

The analysis methodology for the project generated VMT and project effect of VMT were developed consistent with the City VMT guidelines. The model outputs were checked for reasonableness by comparing the trip generation of the modified zones and adjacent zones. The results were found to be consistent. VMT data was extracted using the time-of-day Origin-Destination (OD) matrices multiplied by the time-of-day skims. Per standard modeling practice, the data reported is daily weekday VMT. Table A shows the model outputs and calculations for the project generated VMT, and Table B shows the outputs for project effect on VMT.

Table A: Project Generated VMT (General Plan Buildout)

	General Plan Buildout	
	Project	**City**
Population		258,143
Employment	372	175,983
Retail Consumers	1,305	
Service Population	1,677	434,126
OD VMT	53,871	14,129,050
OD VMT per service population	**32.13**	**32.55**

Table B - Project Effect on VMT (General Plan Buildout)

	Future Year (2045)	
	Without Project	**With Project**
Roadway VMT	9,868,972	9,864,411
Service Population	434,126	435,803
VMT per service population	22.73	22.64

VMT EVALUATION

Future Year Project Generated VMT. As seen on Table A, the future year OD VMT forecast for the City is 32.55 VMT/SP whereas the project generated VMT is 32.13 VMT/SP which shows that the project will have a less than significant impact on VMT.

Future Year Project Effect on VMT. As seen on Table B, the forecast Citywide segment level VMT under no project conditions is 22.73 VMT/SP. The Citywide segment level VMT with the proposed project is forecast to be 22.64 VMT/SP. Therefore, the proposed project results in a lower VMT/SP and therefore, has a less than significant impact.

CONCLUSION

As seen above, the buildout project generated VMT of 32.13 is less than the City threshold of 32.55. The project effect on VMT is also lower than the threshold under buildout conditions, which means that the project will result in a reduction in overall VMT/SP for the City as well as VMT on the City roadways. Based on the adopted guidelines, the VMT impacts of the proposed project are anticipated to be less than significant.

We hope you will find this information helpful. Should you have any questions, please don't hesitate to call me at (949) 656-3131 or by email at sandipan@translutions.com.

Sincerely,

translutions, Inc.

1. Introduction

1.1 INTRODUCTION

This document prepared for the City of Ontario is a Water Supply Assessment and Written Verification of Sufficient Water Supply (WSA/WV) intended to meet the requirements of Senate Bill (SB) 610 and SB 221. The water demand for the Empire Groves Hotel Specific Plan ("proposed project") is calculated and the adequacy of water supplies to meet the proposed land use changes is evaluated.

SB 610 established the primary legal standards for assessing the sufficiency of water supplies for new development projects. This statute requires as part of the environmental review conducted for a qualifying project pursuant to the California Environmental Quality Act (CEQA), that the public water supplier or land use agency – in this case the City of Ontario – prepare a Water Supply Assessment (WSA) of the reliability of water supplies for the project, considering normal, single dry, and multiple dry years over a 20-year horizon. The basic requirement is that a WSA must "include a discussion with regard to whether the public water system's total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the water system's existing and planned future uses, including agricultural and manufacturing uses." Since the proposed project includes the development of a hotel with more than 500 rooms, it meets the definition of a project as defined by Government Code Section 10912(a)(1) and requires the preparation of a WSA.

SB 221 mandates affirmative written verification from the water purveyor of the public water system that sufficient water supplies are available for certain residential subdivisions of property prior to approval of a tentative map. Since the proposed project requires the approval of a development agreement and includes the addition of more than 500 hotel rooms, it meets the definition of a subdivision in Government Code Section 66473.7(a)(1) and therefore triggers the need for a Written Verification of Sufficient Water Supply (WV) pursuant to SB 221.

1.2 SITE LOCATION AND EXISTING CONDITIONS

The Empire Groves Hotel Specific Plan (proposed project) site is situated in the southeastern quadrant of the intersection of East Holt Boulevard and East Guasti Road in the City of Ontario. The project area is a triangular plot of land spanning 10.43 acres. The site is bounded to the north by Holt Boulevard and to the south and southwest by Guasti Road. The eastern boundary is defined by the existing flood channel and a trail called Cucamonga Creek Trail. Regional location is provided in Figure 1, *Regional Location Map*. The project site is currently vacant land with no temporary or permanent structures (see Figure 2, *Aerial Photograph*).

1.3 PROJECT DESCRIPTION AND HISTORY

The Empire Groves Hotel project comprises two primary zones: hotel and local-serving retail. The hotel component within the Specific Plan area comprises a 600-room, full-service hotel equipped with various guest amenities. These amenities include banquet halls, conference rooms, restaurants, a café, a day spa, pool facilities, and a rooftop terrace. The first floor of the hotel consists of the lobby, lounge, upscale restaurant and bar, spa, retail area, small meeting rooms, and a spacious banquet/conference center. The first-floor mezzanine level has a game room, fitness area, meeting rooms, and a board room in addition to mechanical and electrical equipment. The second-floor houses offices and a fitness center. The remaining floors are dedicated to spacious guest suites with a range of amenities. The hotel's rooftop is designed with a pool and lounge terrace that offers views and features a full-service restaurant and bar. The hotel's entrance includes a porte-cochere with decorative pavers and landscaping. This motor court is accessible from Guasti Road and offers check-in and valet services for guests. The local serving retails Small may include coffee shops, food and beverage outlets, retail, print shops, laundry or tailoring services that will serve the needs of the local community. The proposed buildout is shown in Table 1, *Proposed Buildout*, and Figure 3, *Conceptual Plan*.

Table 1 Proposed Buildout

Land Use	Total Square Feet	Notes
Hotel Rooms	366,808	600 rooms and secondary uses
Restaurants/Café/Bar/Lounge	30,839	3 meals and signature restaurants, rooftop bar and restaurant, and lobby bar and lounge
Day Spa	11, 357

1.3.1 Landscaping

1.3.1.1 LEVEL 1 – STREET LEVEL

The Level 1 conceptual landscape plan includes an entrance area; edge treatment; a courtyard, pool, and spa areas; and pedestrian paths as shown in Figure 4, *Recreation and Open Space Concept - Level 1*.

The landscape concept for the entrance employs an array of elements, such as multiple palm varieties and landscaped features with varying heights and geometrical profiles to create a visually appealing entrance. The entranceway has a canal water feature that bisects the entrance roadway and leads to a spacious entrance plaza area. The entrance plaza area includes an arrival fountain and sculpture.

Street edge treatments within the Specific Plan area provide a transition between the surrounding uses and the proposed project specifically along Holt Boulevard and Guasti Road. The street edge treatments encompass an array of street trees and decorative flowering trees. The proposed meandering sidewalks will connect off-street parking areas along Guasti Road to a plaza area within the retail development at the intersection of Holt Boulevard and Guasti Road. This plaza features decorative pavers, accent plantings and raised planters, palm trees, and outdoor shaded seating areas.

The hotel courtyard, pool, and spa areas are in the northeastern section of the proposed project, encircled by Holt Boulevard to the north, the hotel itself to the south and west, and the Cucamonga Creek to the east. This outdoor can be accessed via the hotel lobby and comprises of three distinct pool areas, a water garden, large and small event spaces, a wellness garden, and a food and beverage pavilion. One of the three pool areas will include a splash pad and a jacuzzi. These amenities will also include passive covered seating areas and comfortable outdoor furnishings, interspersed with water features and landscaping. Landscaping within this outdoor space will be characterized by low hedges and accent plantings, deciduous canopy trees, and shade trees.

A series of interconnecting sidewalks and paths will be provided throughout the Specific Plan area to connect to the hotel amenities and public gathering spaces. Low hedge and accent plantings will be used to enhance the pedestrian paths, while deciduous canopy trees will be used to provide shade and visual comfort.

A buffer will be created between Cucamonga Creek and the eastern edge of the project site to ensure privacy from the trail users. To accomplish this, a dense, 6- to 7-foot-high hedge is proposed.

1. Introduction

1.3.1.2 LEVEL 3 – BUILDING THIRD FLOOR

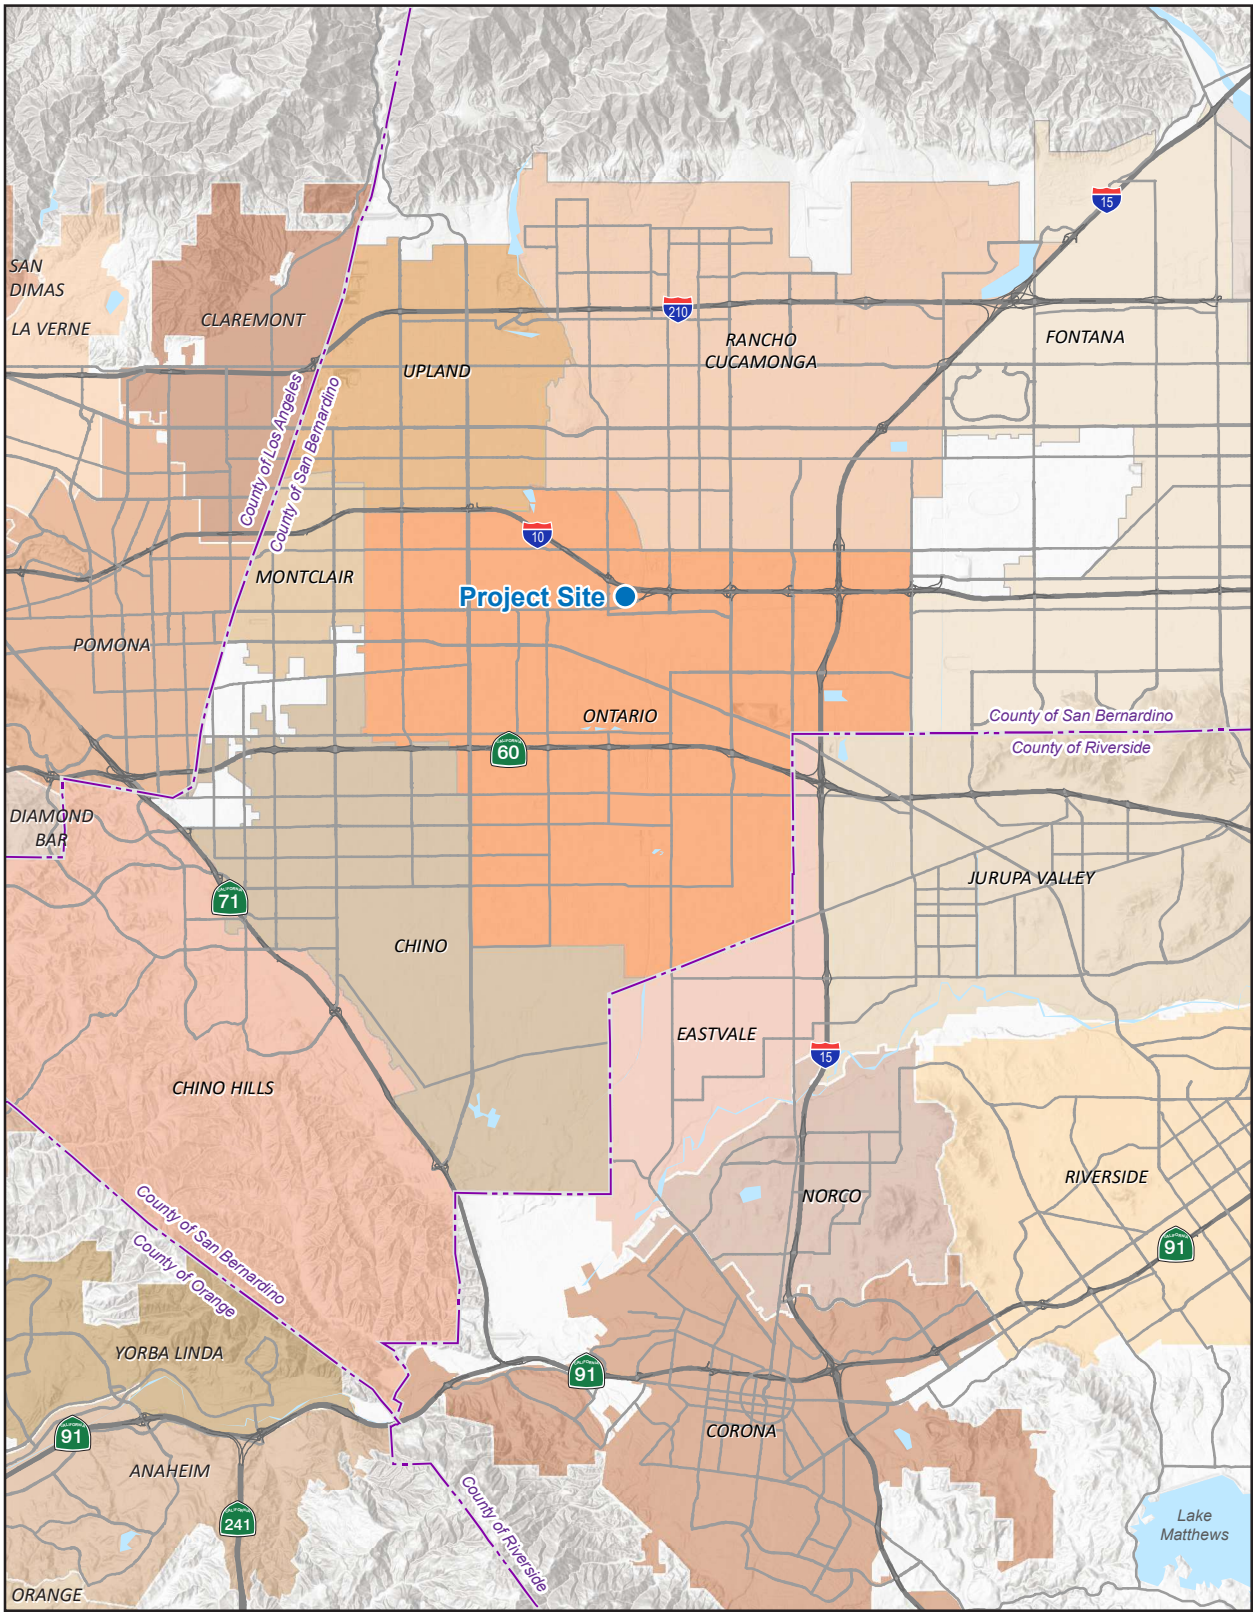
The Level 3 conceptual landscape plan is shown in Figure 5, *Recreation and Open Space Concept - Level 3*. The plan uses a meadow concept of landscaping. Meadow-type landscaping refers to the design of outdoor spaces to mimic the characteristics of a natural meadow. A meadow is typically an open field or grassland area, often found in natural settings, which is characterized by a diverse growth of wildflowers, grasses, and other native vegetation.

1.3.1.3 LEVEL 9 – ROOFTOP

The Level 9 conceptual landscape plan is shown in Figure 6, *Recreation and Open Space Concept - Level 9*. The plan is divided into two distinct areas: Sky Island on the west and High Gardens on the east. These areas will be linked by a corridor.

The Sky Island will include a central water feature, a stone landscaping area, seating areas, and an expansive outdoor wooden deck. The High Gardens will include a VIP pool, various seating options and outdoor living rooms.

The total landscaping proposed is 133,374 square feet.[1] All proposed landscaping will utilize, to the greatest extent possible, sustainable landscaping practices and technology and water conservation methods. All plants will be water-conserving, drought-tolerant plants. Permanent and automatic irrigation or drip irrigation systems will be used for all landscaped areas. All landscape irrigation would be with recycled water. The canal, arrival fountain, and water features will be recirculated systems that use recycled water.



1.3.2 Infrastructure Improvements

An existing 6-inch water link is located under Holt Boulevard to the north and an existing 12-inch water line is located under Rio Hondo Avenue to the west. The proposed project will connect to the existing water line under Holt Boulevard through a new domestic water line that will run along the eastern, southern, and the southern half of the western boundary of the project site.

There are recycled water mains in the vicinity of the project site, with a point of connection located at the intersection of Guasti Road and Holt Boulevard. Recycled water infrastructure improvements will include installing an 8-inch recycled water main in Guasti Road that connects to the 8-inch recycled water main in Convention Center Way, north of Holt Boulevard.

2. Water Supply Assessment

2.1 WATER PURVEYOR

The Ontario Municipal Utilities Company (OMUC) provides water service to residents, businesses, and other users in the City of Ontario, including areas surrounding the project site. As of 2020, OMUC provided water to a population of approximately 181,107 people. The primary source of water is groundwater from the Chino Groundwater Basin (Chino Basin). Other water supplies include treated groundwater from the Chino Basin Desalter Authority (CDA), recycled water from Inland Empire Utilities Agency (IEUA), imported water from the Water Facilities Authority (WFA), and purchased water from the San Antonio Water Company (SAWCo).

According to the City's 2020 Water Master Plan Update[2] (WMP), the City's water system consists of the following:

- Five primary pressure zones (925, 1010, 1074, 1212, and 1348)
- Over 620 miles of water transmission and distribution pipelines ranging in size from 2 inches to 42 inches in diameter
- 7,277 fire hydrants
- 35,906 water meters
- 17 active wells
- Twelve reservoirs with a total volume of 75 million gallons
- Six active booster pump stations
- Fifteen pressure reducing stations
- Two connections to Water Facilities Authority
- Two connections to Chino Desalter Authority
- Five inter-agency connections
- Two ion exchange treatment facilities
- Four altitude valves

In 2023, potable water demands were 28,990 acre-feet per year (AFY) and recycled water demand was 9,088 AFY.[3] The total demands in the year 2045 are projected to be 73,668 AFY. Potable water demands are projected to be 57,609 AFY and recycled water demands are projected to be 16,059 AFY (including agricultural demands).

[2] AKM Consulting Engineers, June 2020. *Draft City of Ontario Water Master Plan Update.*
[3] Ontario Municipal Utilities Company. 2024. *2023 Water Production Summary.*

The passage of SB X7-7 (also known as the Water Conservation Act of 2009) resulted in increased efforts to reduce potable water usage by requiring all California urban water suppliers to achieve a 20 percent reduction in demands (from a historical baseline) by 2020. Using a 15-year base period of 1995 to 2004, the City's baseline water usage averaged 245 gallons per capita per day (GPCD). The City's per-capita water use during Fiscal Year 2019-20 was 161 GPCD, which is below the 2020 target of 196 GPCD.[4]

It is required that every urban water supplier assess the reliability to provide water service to its customers under normal, single dry, and multiple dry years. As discussed in the City's 2020 Urban Water Management Plan (UWMP), the City is capable of meeting the water demands of its customers in normal, single dry, and multiple dry years between 2020 and 2045.[5]

2.2 LEGAL REQUIREMENTS

SB 610 established the primary legal standards for assessing the sufficiency of water supplies for new development projects that qualify as a project pursuant to CEQA. Affected land developments are those that meet certain size thresholds. The proposed project meets the threshold for a proposed hotel of more than 500 rooms. Therefore, the proposed project, as described in Section 1.3, meets the criteria for preparation of a WSA.

SB 221 requires that a sufficient water supply shall be available prior to the approval of a tentative map that includes a subdivision. A subdivision is defined as a proposed residential development of more than 500 dwelling units, except for a public water system that has fewer than 5,000 service connections, in which case a subdivision means any proposed residential development that would account for an increase of 10 percent or more in the number of the public water system's existing service connections. OMUC has more than 5,000 service connections and the proposed project includes more than 500 hoel rooms. Therefore, as described in Section 1.3, the proposed project requires a WV.

The basic requirement is that a WSA/WV must "include a discussion with regard to whether the public water system's total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the water system's existing and planned future uses, including agricultural and manufacturing uses." If the water demand for a proposed project is accounted for in an adopted UWMP, the WSA/WV preparer may incorporate that information into the WSA/WV.

The WSA/WV also requires additional analysis if any portion of the water purveyor's water supplies include groundwater. A description of any groundwater basin or basins from which the proposed project will be supplied in addition to a detailed description and analysis of the amount and location of groundwater pumped by the public water system for the past five years should be provided. The WSA/WV should also include an analysis of the sufficiency of the groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project. For a basin for which a

[4] City of Ontario, 2021. *2020 Urban Water Management Plan.*
[5] City of Ontario, 2021. *2020 Urban Water Management Plan.*

court or the State Water Resources Control Board has adjudicated the rights to pump groundwater, the order or decree adopted by the court, or the State Water Resources Control Board should be included.

Upon adoption, the WSA/WV is incorporated into the CEQA document being prepared for the project, and the lead agency must determine, based on the entire record, whether projected water supplies will be sufficient to satisfy demands for the project, in addition to existing and future uses.

2.3 WATER DEMAND ANALYSIS

This section provides the current and projected future water demands for the City of Ontario, the estimated water demand for the proposed project, and assesses if the proposed project was included in the projection of future water demands for the City of Ontario, as described in the 2020 UWMP. As per Section 10910 (c) (2) of the California Water Code:

> *"if the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f), and (g)."*

2.3.1 City of Ontario Water Demands

The primary source of water for the proposed project would be existing water supplies used by the City to provide service to its customers. This section analyzes the water demands of existing and planned future City customers.

Current and projected potable and recycled water demands by customer class are presented in Table 2. The City's total 2020 demand was 39,921 AFY. Potable water demands were 32,109 AFY and recycled water demands were 7,812 AFY (including agricultural demands). The projected 2045 total demand is 73,668 AFY, with potable water demands projected to be 57,609 AFY and recycled water demands projected to be 16,059 AFY (including agricultural demands).

Table 2 Current and Projected Water Demands for the City of Ontario (AFY)

Use Type	2020	2025	2030	2035	2040	2045
Potable Water Demand						
Single Family	12,502	15,723	17,540	19,109	22,431	22,431
Multi-Family	5,068	6,374	7,110	7,746	9,093	9,093
Commercial	5,359	6,740	7,519	8,191	9,615	9,615
Industrial	2,078	2,613	2,915	3,176	3,728	3,728

AFY = Acre-feet/year
Source: City of Ontario 2020 UWMP, 2021.

2.3.2 Proposed Project Water Demand

A description of the proposed project and buildout projections are provided in Table 1 above. The project site is vacant and there are no current uses on the site. Therefore, the proposed development would require connections to the City's water mains for potable and recycled water use.

Table 3 provides the total indoor water demand estimate for the proposed development. Indoor water demand was determined using potable water demand factors from the City's 2020 WMP. Since the 2020 WMP does not include a rate for restaurants and banquet halls, demand rates from the Jamul Casino Hotel and Event Center Project Assessment of Wastewater and Water Related Environmental Off-Site Impacts Report were used.[6] Occupancy rates, number of seats, days of operation, and the number of events per year were provided by the applicant.[7]

Table 3 Indoor Water Demand for the Proposed Project

Land Use	Units	Occupancy Rate (%)	Water Demand Rate	Water Demand (gpd)	Number of Operational Days or Events per Year[4]	Total Domestic Water Usage (afy)
Hotel Rooms	600 rooms	70	130 gpd/room[1]	54,600	365	61.15
Restaurants/Café/ Bar/Lounge	610 seats	40	30 gpd/seat[2]	7,320	350	7.86
Day Spa	11,357 sf	-	1,000 gpd/ac[1]	261	350	0.28
Gym	7,906 sf	-	11 gal/yr/sf[3]	238	350	0.26
Banquet/Meeting Rooms	100 seats	-	30 gpd/seat[2]	3,000	900	8.29
Admin/Office	4,262 sf	-	2,500 gpd/ac[1]	245	350	0.26
Local Serving Retail	11,946 sf	-	1,800 gpd/ac[1]	494	350	0.53
					Total	78.63

ac = acre; sf = square foot; gpd = gallons per day; yr=year.
[1] Source: AKM Consulting Engineers, June 2020. Draft City of Ontario Water Master Plan Update. Rates with recycled water from Table 4-8 were used. Hospitality rate used for hotel rooms. Office Commercial rate used for offices. Neighborhood Commercial rate used for retail. Open Space Recreational used for Day Spa.

[3] Rate for Fitness Center provided by OMUC in an Email from Alexis Mascarinas dated June 5, 2024.

[6] EEC Environmental. September 26, 2022. Jamul Casino Hotel and Event Center Project Assessment of Wastewater and Water Related Environmental Off-Site Impacts Report.
[7] Emails from Alexis Mascarinas, Associate Engineer, dated May 13, 2024 and June 5, 2024.

2. Water Supply Assessment

The proposed project also includes landscaping, pools, jacuzzies, a children's splash area, fountains, canals, and other water features. The potable and recycled water demands for these features are included in Table 4. The average water evaporation rate off the surface of the pools and jacuzzies was assumed to be about a quarter of an inch of water per day.[8] It is also assumed that the splash pad would be a recirculated spray park. A recirculating spray park only uses water to initially fill the holding tank and then water to make up for losses due to evaporation and bather carry off. It is assumed that the recirculated system would have a 1,500-gallon underground tank and that 25 percent is lost to evaporation and bather carry off.[9,10] For the fountains, canals, and other outdoor water features, a factor of 50% is added to the evaporation rate for pools when compared to the rate of a swimming pool to account for the spray.

The outdoor landscaping water demand is calculated using the Department of Water Resource's Water Budget Workbook for New and Rehabilitate Non-Residential Landscapes.[11] The Maximum Applied Water Allowance (MAWA) shown in Table 4 was calculated using a reference evapotranspiration (Eto) of 49.20 inches and a total annual precipitation of 10.68 inches/year[12] (see Attachment A). Since all irrigation would be with recycled water, the landscaped areas were entered into the workbook as Special Landscape Areas (SLA).

Table 4 Outdoor Water Demand for the Proposed Project

Land Use	Square Footage	Water Losses	Water Demand Rate (gpd)
Potable Water Demand			
Pools and Jacuzzies	8,789	0.021 ft/day	1,381[1]
Splash Pad	353	25%	375[2]
		Total	**1,756**
Recycled Water Demand			
Fountains/Canals/Other Water Features	5,844	0.032 ft/day	1,377[3]
Landscaping	133,374	-	10,542
		Total	**11,919**

ft = feet; gpd=gallons per day.

[1] Evaporation off the surface of the pools and jacuzzies is calculated by multiplying 0.021 ft/day (half an inch a day) by the surface area (8,789 square feet) for a total of 184.6 cubic feet per day of water lost to evaporation. 184.6 cubic feet per day is 1,381 gpd.

[2] It is assumed that the splash play area includes a recirculated spray park that is only drained when contamination occurs since the water quality in the tank must be tested daily in compliance with health codes. A recirculating spray park only uses water to initially fill the holding tank and then water to make up for losses due to evaporation and bather carry off. It is assumed that the recirculated system would have a 1,500-gallon underground tank and that 25 percent is lost to evaporation and bather carry off. Therefore, the daily water loss is 1,500 x 0.25 = 375 gpd.

[3] Evaporation off the surface of the fountains, canals, and other outdoor water features is calculated by multiplying 0.032 ft/day (150% of the pool evaporation rate) by the surface area (5,844 square feet) for a total of 187 cubic feet per day of water lost to evaporation. 187 cubic feet per day is 1,377 gpd.

As shown in Table 3, the total indoor water demand is estimated to be 78.63 AFY. As shown in Table 4, the total outdoor potable water demand is estimated to be 7,037 gpd or 1.97 AFY. Therefore, the total potable water demand for the project would be 80.60 AFY. The total recycled water use is 11,919 gpd or 13.35 AFY.

2.3.3 Proposed Project with Respect to the 2020 UWMP

To evaluate water supply reliability, California statutes require the consideration of water supplies and demands in three types of water conditions: normal, single dry, and multiple dry water years.[13] The 2020 UWMP indicates that the City can meet the water demands of its customers in normal, single dry, and multiple dry years between 2020 and 2045.

The 2020 UWMP projected water demands are based on future land uses as specified in the City's 2010 General Plan. The 2010 General Plan designates the project site as mixed-use within the "Multi-Modal" area.[14] The mixed-use land use category accommodates a horizontal and/or vertical mixture of retail, service, office, restaurant, entertainment, cultural, and residential uses.[15]

The 2010 General Plan includes buildout statistics for APN# 011032233 as shown in Table 5. Based on the land use for the project site included in the 2020 UWMP, the water demand for the project site that was included in the UWMP is shown in Table 5.

Table 5 Water Demand Estimate for the Project Site Based on Land Use in the 2020 UWMP

Land Use	Unit	Water Demand Rate	Total Domestic Water Usage (gpd)
Potable Water			
Multi-Family Residential	63 du	60 gpd/person[1]	12,814
Office	205,317 sf	2,500 gpd/ac[1]	11,784
Commercial	205,317 sf	1,800 gpd/ac[1]	8,484
Total	**-**	**-**	**33,082**
Recycled Water			
Multi-Family Residential	0.79 ac[2]	1,500 gpd/ac[3]	1,185
Office	205,317 sf	1,500 gpd/ac[3]	7,070
Commercial	205,317 sf	1,100 gpd/ac[3]	5,185
Total	**-**	**-**	**13,440**

Source: City of Ontario 2020 UWMP, 2021; PlaceWorks, 2024; United States Census, 2023.
sf = square feet; du = dwelling unit; ac = acre; gpd = gallons per day
[1] Table 4-8 of the City of Ontario's 2020 Water Master Plan (Appendix E of the UWMP) was used to establish the water demand rate. The Mixed Use "High Density Residential (w/ RW)" rate, "Non-Office (w/ RW)" rate, and "Office (w/RW)" rate were chosen to account for potable water demand. It is assumed that the multi-family units will accommodate 3.39 people/du.
[2] The 2010 General Plan allows a minimum of 20 du/acre and a maximum of 80 du/acre for residential units within the Mixed-Use designation. As a conservative approach, the maximum density of 80 du/acre is assumed for this analysis.
[3] Table 5-3 of the City of Ontario's Recycled Water Master Plan Update (Appendix K of the UWMP) was used to establish the water demand rate. The "Mixed Use" rate was chosen to account for recycled water demand for multi-family residential and office uses. The "General Commercial" rate was used for commercial uses.

As shown in Table 5, the total potable water demand within the site area that was accounted for in the 2020 UWMP is estimated to be 33,082 gpd (37.05 AFY). The proposed project's total potable water demand of

[13] Department of Water Resources, 2005. California Water Plan, Bulletin 160-05, Volume III ("Each district has different assumptions and policies that guide their planning").
[14] Email from Alexis Mascarinas, Associate Engineer, dated June 10, 2024.
[15] PlaceWorks. 2009. *The Ontario Plan Draft EIR*.

80.60 AFY results in a net increase of 43.55 AFY when compared to the water demand accounted for the site in the 2020 UWMP.

The total recycled water demand that was accounted for in the 2020 UWMP is estimated to be 13,440 gpd (15.06 AFY) resulting in a net decrease of 1.71 AFY.

2.4 WATER SUPPLY ANALYSIS

This section identifies the sources of water used by the City of Ontario and evaluates the water supplies that would be used by the City and the proposed project during normal, single-dry, and multiple-dry years through the year 2045. Water sources used by the City include groundwater from the Chino Basin, treated groundwater from CDA, recycled water from IEUA, imported water from WFA, and purchased water from SAWCo.

The City of Ontario extracts groundwater from 17 active wells within the Chino Basin. Groundwater from the Chino Basin is used by the City of Ontario either directly by pumping into its distribution system or by treating the groundwater at one of its two treatment plants and then pumping the treated groundwater into the City of Ontario's distribution system. The ultimate capacity of Ontario's existing and future wells is projected to be 98.5 million gallons per day (mgd) or 110,337 AFY. Additional information on the City's groundwater resources and groundwater rights is provided in Section 2.5.

In addition to its well production, the City of Ontario also purchases treated Chino Basin groundwater from the CDA. The CDA was formed in 2002 as a Joint Powers Authority consisting of IEUA; Jurupa Community Services District; Cities of Chino, Chino Hills, Norco and Ontario, and Santa Ana River Water Company. Western Municipal Water District joined in 2010.

CDA can produce up to 40,000 AF from the Chino Basin every year for the purpose of groundwater cleanup and control of contaminant migration. The member agencies have contract entitlements to receive a total of 35,200 AFY of treated water from CDA. The City's current contract entitlement is 8,533 AFY; however, this may increase in years where the amount of water produced is greater than the projected amount of 40,000 AF. The CDA currently owns and operates two desalters (Chino I and Chino II Desalters) that consist of groundwater extraction wells connected to pumps and pipelines that direct water to advanced treatment facilities. The final product is a high-quality drinking water, which is sold to member agencies through "take or pay" contracts.[16]

Recycled water is provided to the City of Ontario by IEUA, which owns and operates four regional water recycling plants that produce disinfected and filtered tertiary treated recycled water in compliance with California Title 22 regulations. IEUA provides recycled water to the City of Ontario and their local agencies through a distribution system consisting of pipelines, booster pump stations, pressure regulating station, and reservoirs.[17]

[16] City of Ontario, 2021. *2020 Urban Water Management Plan.*
[17] Inland Empire Utilities Agency. 2021. *2020 Urban Water Management Plan.*

2. Water Supply Assessment

The City has been obtaining recycled water from IEUA since 1972. Currently, recycled water is used in the City for agricultural irrigation, landscape irrigation, golf course irrigation, and industrial uses. As stated in the City's 2020 UWMP, the City has the right of first purchase of their Base Entitlement. Base Entitlement is defined as the total quantity of sewage delivered into the regional sewerage system by the City less normal processing losses resulting from the treatment of sewage. Based on the City's current Recycled Water Master Plan and the 2020 UWMP, the City has enough recycled water rights to meet future recycled water demands. In 2023, the City used 9,088 AFY of recycled water.[18] IEUA estimated that the Base Entitlement for the City during FY 2022-23 was approximately 13,853 AFY. In the same fiscal year, the City used 8,790 AF of recycled water for direct use and 3,517 AFY of recycled water for groundwater recharge.[19]

The City also obtains treated imported water from the WFA, which is a wholesale water supplier to the cities of Chino, Chino Hills, Ontario, Upland, and the Monte Vista Water District. The WFA purchases imported water from IEUA, which in turn purchases untreated water from the Metropolitan Water District (MWD).[20] The MWD obtains its water from the State Water Project (SWP) and has projected 100 percent water supply reliability over the next 20 years, as per its 2020 UWMP.[21]

WFA owns and operates the Agua de Lejos Treatment Plant located in the City of Upland. The Agua de Lejos Treatment Plant is a conventional surface water treatment facility that treats and disinfects imported water supplies from the SWP delivered by MWD through IEUA. The Agua de Lejos Treatment Plant began operating in 1988 and has a treatment capacity of 81 mgd.[22] The City owns 31.4 percent of the plant capacity (25.4 mgd, 28,500 AFY). The maximum capacity available to the City is 19,924 AFY, which equals the total capacity of 28,000 AFY less the Dry Year Yield shift obligation of 8,076 AFY.[23]

The City also purchases water from SAWCo which delivers potable and irrigation water to a variety of shareholders. These shareholders include most residents of San Antonio Heights (an unincorporated area of San Bernardino County), the Cities of Upland and Ontario, Monte Vista Water District, the United States Forest Service, the San Bernardino County Flood Control District, local golf courses, rock quarries, and grove irrigators. In 2020, SAWCo's total active share entitlement was 12,570 AF. The City has an entitlement of 600 AF. SAWCo's water supply sources include surface water obtained from the San Antonio Canyon, water from the San Antonio Tunnel, and groundwater sources from the Chino Basin, Six Basins, and Cucamonga Basin.[24]

Water supplies provided to the City for the year 2023 are summarized in Table 6.

AFY = Acre-feet per year

It is required that every urban water supplier assess the reliability to provide water service to its customers under normal, dry, and multiple dry water years. This evaluation from the 2020 UWMP is provided in Table 7. The City depends on a combination of imported and local supplies to meet its water demands and has taken numerous steps to ensure that it has adequate supplies. The City's projected water supplies are based on historical long-term averages and supplies during previous dry year conditions obtained from CDA, SAWCo, WFA and groundwater supplies from the Chino Basin. In the event that water from CDA, SAWCo, and WFA may be limited, the City has the flexibility to increase groundwater production from the Chino Basin. Consequently, water supplies available to the City are projected to meet demands for the next 25 years during normal years, single-dry years, and multiple-dry years, as shown in Table 7.[25]

Source: City of Ontario 2020 UWMP, 2021.
Notes: Supply and demand are equal for years 2040 and 2045 because the City anticipates buildout to occur in 2040.

The City will increase its total normal-year water supply from 39,921 AF of water delivered in 2020 to 73,668 AF in 2045. The increased water supply will come from full utilization of the City's groundwater rights in the Chino Basin (including increased groundwater recharge with recycled water). The Chino Basin was adjudicated under the Chino Basin Judgment in 1978. During drought cycles, the Chino Basin has been managed to maintain sustainable groundwater levels. Therefore, based on historical and on-going management practices, the City will be able to rely on the Chino Basin for adequate supply over the next 25 years under single dry years and drought periods of five consecutive years.[26]

Additionally, an increase in imported water is assumed to be available in wet and normal years. With the ability for the City to store water in the Chino Basin, in its local and supplemental storage accounts as well as the MWD's Dry-Year Yield (DDY) Program storage account, the City has the capability and water supply available to reduce imported water deliveries in dry years and increase groundwater production to meet future demands. Section 2.5 provides a description of the management of groundwater resources in the Chino Basin, as well as information on basin management.

2.5 GROUNDWATER ANALYSIS

Since most of the potable water supplied by the City of Ontario comes from groundwater, SB 610 requires a groundwater analysis to be included as part of the WSA. The Water Code requires that the WSA include:

- Groundwater information from the 2020 UWMP
- Groundwater basin description including the legal rights to pump
- Historic use of groundwater from the 2020 UWMP
- Projected use of groundwater
- Sufficiency of groundwater from the Chino Basin

[26] City of Ontario. 2021. *2020 Urban Water Management Plan.*

Per SB 221, where a water supply for a proposed subdivision includes groundwater, the public water system serving the proposed subdivision needs to evaluate, based on substantial evidence, the extent to which it has the right to extract the additional groundwater needed to supply the proposed subdivision.[27]

The City of Ontario's legal right to pump water in an amount necessary to meet its demands has been adjudicated and the safe yield of the aquifer has been determined. The construction of Wells 45, 46, and 47, as part of the Dry Year Yield Storage Program, increases the City's groundwater pumping capacity to meet peak demands. The City also has stored water in the Chino Basin and participates in an ongoing groundwater recharge program, using stormwater, dry-weather runoff, and recycled water, that ensures the safe yield of the Chino Basin is not exceeded. In addition, the City participates in water conservation efforts, adopts ordinances pertaining to water shortage contingency planning and the prevention of water waste, conservation pricing, and various public outreach programs to encourage its customers to reduce their water consumption.

2.5.1 Groundwater Information from the 2020 UWMP

The 2020 UWMP adopted by the City in June 2021 contains a description of the Chino Groundwater Basin, the City's current and projected water supplies and demands, the reliability of the water supply, water shortage plans, the Optimum Basin Management Plan, and the adjudication judgment administered by the Chino Basin Watermaster. In addition, Appendix E of the UWMP explains the methods and calculations by which the future water demand of the City was estimated, based on the land use designations in the General Plan.

2.5.1.1 GROUNDWATER BASIN DESCRIPTION

The City of Ontario obtains its groundwater from the Chino Groundwater Basin. The Chino Basin encompasses about 235 square miles of the upper Santa Ana River watershed and lies within portions of San Bernardino, Riverside, and Los Angeles counties. The Chino Basin has approximately five to six million-acre feet of water in storage and an estimated one million acre-feet of storage capacity. The Chino Basin is divided into five management zones, based on similar hydrologic conditions, as shown in Figure 7, *Chino Groundwater Basin Management Zones*. The City of Ontario is located approximately in the center of the Chino Basin.

Groundwater quality in Chino Basin is generally good with better quality in the northern portion of the basin where recharge occurs. Salinity (TDS) and nitrate-nitrogen concentrations are higher in the southern portion of the basin. The Chino Basin has been extensively studied by the Chino Basin Watermaster. Reports are available at this website: http://www.cbwm.org/.

The Chino Basin Watermaster began development of the Optimum Basin Management Program (OBMP) in 1998 and completed it in 2000. The OBMP was updated in 2020. The purpose of the program is to address both water quality and water supply considerations. The southern portion of the Chino Basin requires groundwater treatment to control the outflow of salts and nitrates into the Santa Ana River. As such, one of the main benefits of the CDA is to remove salts and nitrates to clean up the Chino Basin. CDA operates 22 groundwater extraction wells that prevent brackish groundwater from flowing into the Santa Ana River. CDA removes salts from brackish groundwater extracted from the lower Chino Basin through the Chino I and II

[27] Government Code Section 66473.7(h).

2. Water Supply Assessment

Desalter facilities. The Chino I Desalter is in the City of Chino and has a total capacity of 14.2 MGD. The Chino II Desalter is in Jurupa Valley and was expanded in 2017 to have a total capacity of 33 MGD.[28]

The OBMP and its implementation agreement, the Peace Agreement, was approved by the Court in October 2000. One of the stipulations of the OBMP requires member agencies to extract approximately 40,000 AFY of groundwater from the southern portion of the Chino Basin, treat it to potable water standards, and then deliver it to the member agencies. Member agencies have contract entitlements to receive a total of 35,200 AFY of treated water from CDA. The City's current contract entitlement is 8,533 AFY.[29]

2.5.1.1 LEGAL RIGHT TO PUMP FROM THE CHINO BASIN

Water rights to the Chino Basin were adjudicated in 1978 by the Superior Court of the State of California for San Bernardino County. Since that time, the Chino Basin has been sustainably managed, as required by the Judgment, under the direction of the court-appointed Watermaster. The original Watermaster was the Chino Basin Municipal Water District (now IEUA). Since 1998, the Watermaster has been the Chino Basin Watermaster.

Multiple cities and water purveyors pump groundwater from the Chino Basin for all or part of their municipal and industrial water supplies. Agricultural users also pump groundwater from the Basin. The safe yield of the Chino Basin is 131,000 AFY as of 2020. The safe yield quantity is allocated among three pools of right holders as follows:

- Overlying Agricultural Pool (dairymen, farmers, and the State of California)
- Overlying Non-Agricultural Pool (businesses and industries)
- Appropriative Pool (local cities, public water districts, and private water companies)

The Operating Safe Yield (OSY) is defined as the annual amount of groundwater which the Watermaster determines can be produced from the Appropriative Pool parties without replenishment obligation. The City of Ontario is a member of both the Overlying Non-Agricultural Pool and the Appropriative Pool and is therefore subject to the regulations imposed by the Chino Basin Watermaster. The Judgment allocates a portion of the safe yield to the Overlying Non-Agricultural Pool and a portion of the OSY to the Appropriative Pool.

Pursuant to the Judgment, the City has appropriative rights to approximately 21 percent of the OSY allocated to the Appropriative Pool and 53 percent of the safe yield assigned to the Overlying Non-Agricultural Pool.[30] With an OSY of 40,834 AFY, the City's current appropriative right is approximately 8,470 AFY as of July 2021. As of July 2021, the safe yield is allocated at 82,800 AFY to the Overlying Agricultural Pool and 7,350 AFY to the Overlying Non-Agricultural Pool. The City has purchased and has rights to 3,921 AF of Overlying Non-Agricultural Pool water.[31]

[30] City of Ontario. 2021. *2020 Urban Water Management Plan.*
[31] City of Ontario. 2021. *2020 Urban Water Management Plan.*

2. Water Supply Assessment

The Judgment states that all Chino Basin users can pump enough water from the Basin to meet their requirements. If pumping by a party exceeds its share of the safe yield, assessments are levied by the Chino Basin Watermaster to replace overproduction. The Judgment also recognizes that there is a substantial amount of available unused groundwater storage capacity in the Chino Basin that can be used for storage and the conjunctive use of supplemental and basin waters.[32] The Chino Basin Watermaster has the authority to reallocate shares of unallocated safe yield water on an annual basis, as per the latest 2019 Watermaster Resolution No. 2019-03.[33] The Watermaster publishes an annual report that summarizes the status and management of the Chino Basin. A copy of the Chino Basin Judgment and latest Watermaster Annual Report can be found at www.cbwm.org.

The City of Ontario also participates in the Dry Year Yield (DYY) Storage Program, which is a cooperative conjunctive use program involving MWD, IEUA, Chino Basin Watermaster, Three Valleys Municipal Water District, and some of the Chino Basin groundwater producers. Under the DYY Program, MWD is allowed to store up to 100,000 AF of water in the Chino Basin when surplus water is available and the Chino Basin groundwater producers can extract 33,000 AFY for three years in dry, drought, or emergency periods. The City authorized execution of an agreement with IEUA to participate in the DYY program in 2003. Participation obligates the City to reduce its use of imported water compared to a baseline by a fixed amount, known as the "shift obligation." The City's shift obligation is 8,076 AFY. During years when MWD calls for extraction, the City's WFA purchases would be reduced by up to 8,076 AFY compared to the previous year. Because Jurupa Community Services District does not have an imported water connection, it has entered into an agreement with the City to meet its shift obligation. Under this agreement, Jurupa Community Services District conveys groundwater to the City in an amount equal to its shift obligation. This program allows the City to be less reliant upon imported water supplies and the additional groundwater capacity allows the City to increase the percentage of groundwater supply used to meet peak demands.[34]

In addition to the appropriative pool and overlying non-agricultural pool water rights, as well as the contract obligations through the DYY Program, the following is a summary of other groundwater rights for Chino Basin:

- **LAND USE CONVERSIONS**

  As of 2023, the City receives 5,586 AFY from the Chino Basin due to conversions from agricultural to non-agricultural land uses. The Chino Basin Watermaster reallocates the unused portion of the Chino Basin Safe Yield from the Overlying Agricultural Pool to the Appropriative Pool members as a supplement to the Appropriative Pool share of Operating Safe Yield rights in any year.[35,36]

2. Water Supply Assessment

- **FONTANA RECYCLED WATER RIGHTS**

  The City also has a long-term contract to purchase up to 3,000 AFY of recharged recycled water rights from the City of Fontana, which does not operate its own water system.[37]

- **CITY GROUNDWATER STORAGE**

  The City has rights to store water in the Chino Basin (Appropriative and Overlying Non- Agricultural) and has been increasing its various storage accounts in recent years. The City holds water in both local storage accounts and supplemental accounts. Local storage accounts hold unpumped OSY groundwater rights and stormwater that has been recharged into the Chino Basin. Supplemental accounts hold both imported water and recycled water that has been recharged into the Chino Basin. As of June 30, 2023, the City has 123,135 AF in storage pursuant to Appropriative rights and zero AF in storage pursuant to Overlying Non-Agricultural rights.[38,39]

- **INCREASED GROUNDWATER RECHARGE**

  The City is entitled to water rights due to groundwater recharge with stormwater and recycled water in the Chino Basin. The credited amount is based on the volume recharged and therefore varies annually but is projected to increase over time. In fiscal year 2022, 6,932 AF was recharged for the City including 3,000 AF from the city of Fontana. In fiscal year 2023, 6,420 was recharged for the City including 2,903 AF from the city of Fontana.[40,41]

The various groundwater rights held by the City of Ontario are summarized in Table 8.

Table 8 City of Ontario Groundwater Rights Summary

	Current as of 2023 (AFY)
Dry Year Storage Program	0
Appropriative Pool	8,470
Overlying Non-Agricultural Pool	3,921
Land Use Conversions	5,586
Groundwater Recharge Credits	Varies
Fontana Recycled Water Rights	Max. 3,000
Groundwater Storage Accounts	Appropriative Pool: 123,135
	Overlying Non-Agricultural: 0

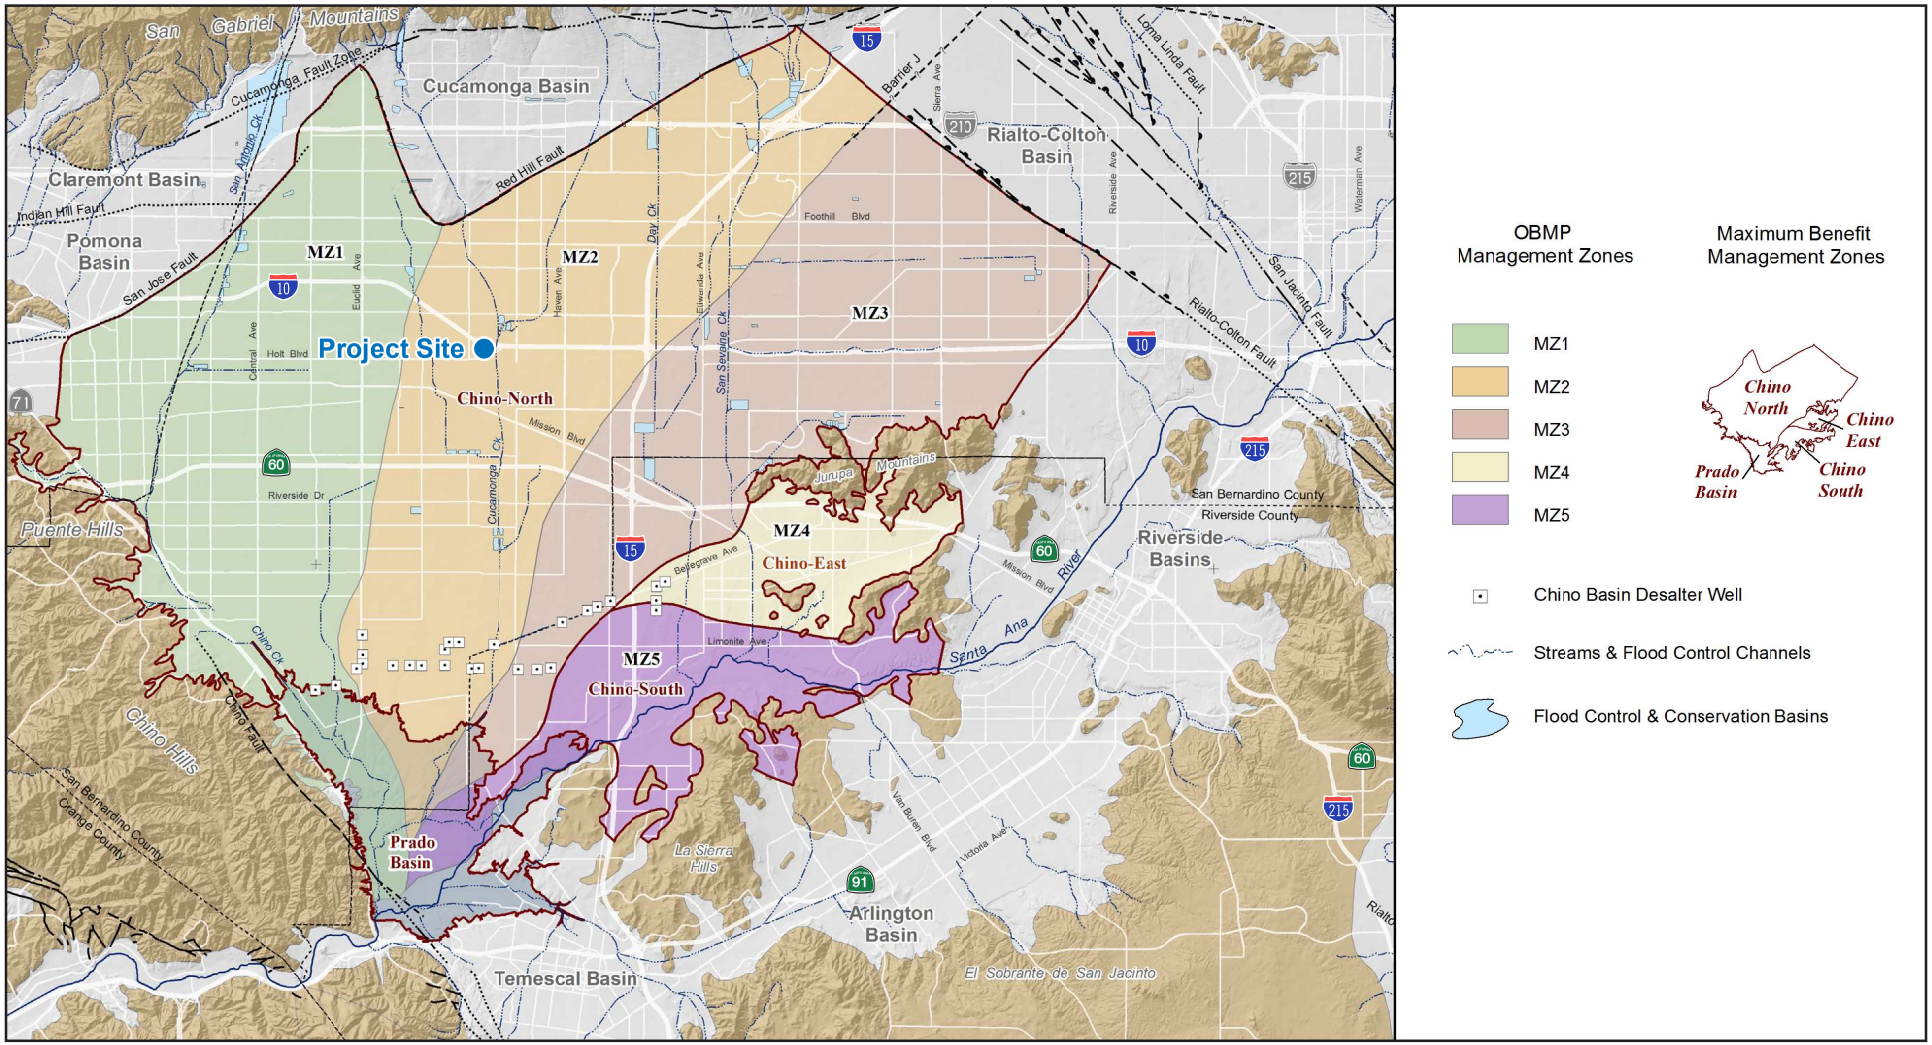
2.5.2 Historic Use of Groundwater



The City owns and operates 17 active groundwater wells. The amount of groundwater pumped by the City of Ontario from the Chino Basin since 2016 is listed below in Table 9. A map of the location of the groundwater wells and pressure zones is shown on Figure 8, *Ontario Ultimate Water System.*

Table 9 Historic Groundwater Production

Calendar Year	Groundwater produced (AFY)
2016	22,751
2017	24,672
2018	26,109
2019	19,604
2020	18,395
2021	17,171
2022	18,967
2023	15,077
Average

2. Water Supply Assessment

This page intentionally left blank.

2.5.3 Projected Use of Groundwater

The proposed project will receive water from the City of Ontario, using groundwater extracted from the Chino Basin, treated groundwater from the CDA, recycled water from the IEUA, and imported water from the WFA.

Groundwater from the Chino Basin will be directly pumped by the City of Ontario into its distribution system or by treating the groundwater at the City's two ion-exchange facilities before pumping it into the distribution system. The City's current well capacity is 38,600 gallons per minute (gpm) or 55.6 mgd. The City's ultimate source of supply will be equal to or greater than 68,404 gpm, this includes the nine future wells.

The projected amount of groundwater pumped by the City of Ontario from the Chino Basin up to the year 2045 is listed below in Table 10.

Table 10 Projected Groundwater Production

Calendar Year	Groundwater produced (AFY)
2025	20,249
2030	22,915
2035	24,943
2040	31,476
2045	31,476

Source: City of Ontario 2020 UWMP, 2021.

2.5.4 Sufficiency of Groundwater from Chino Basin

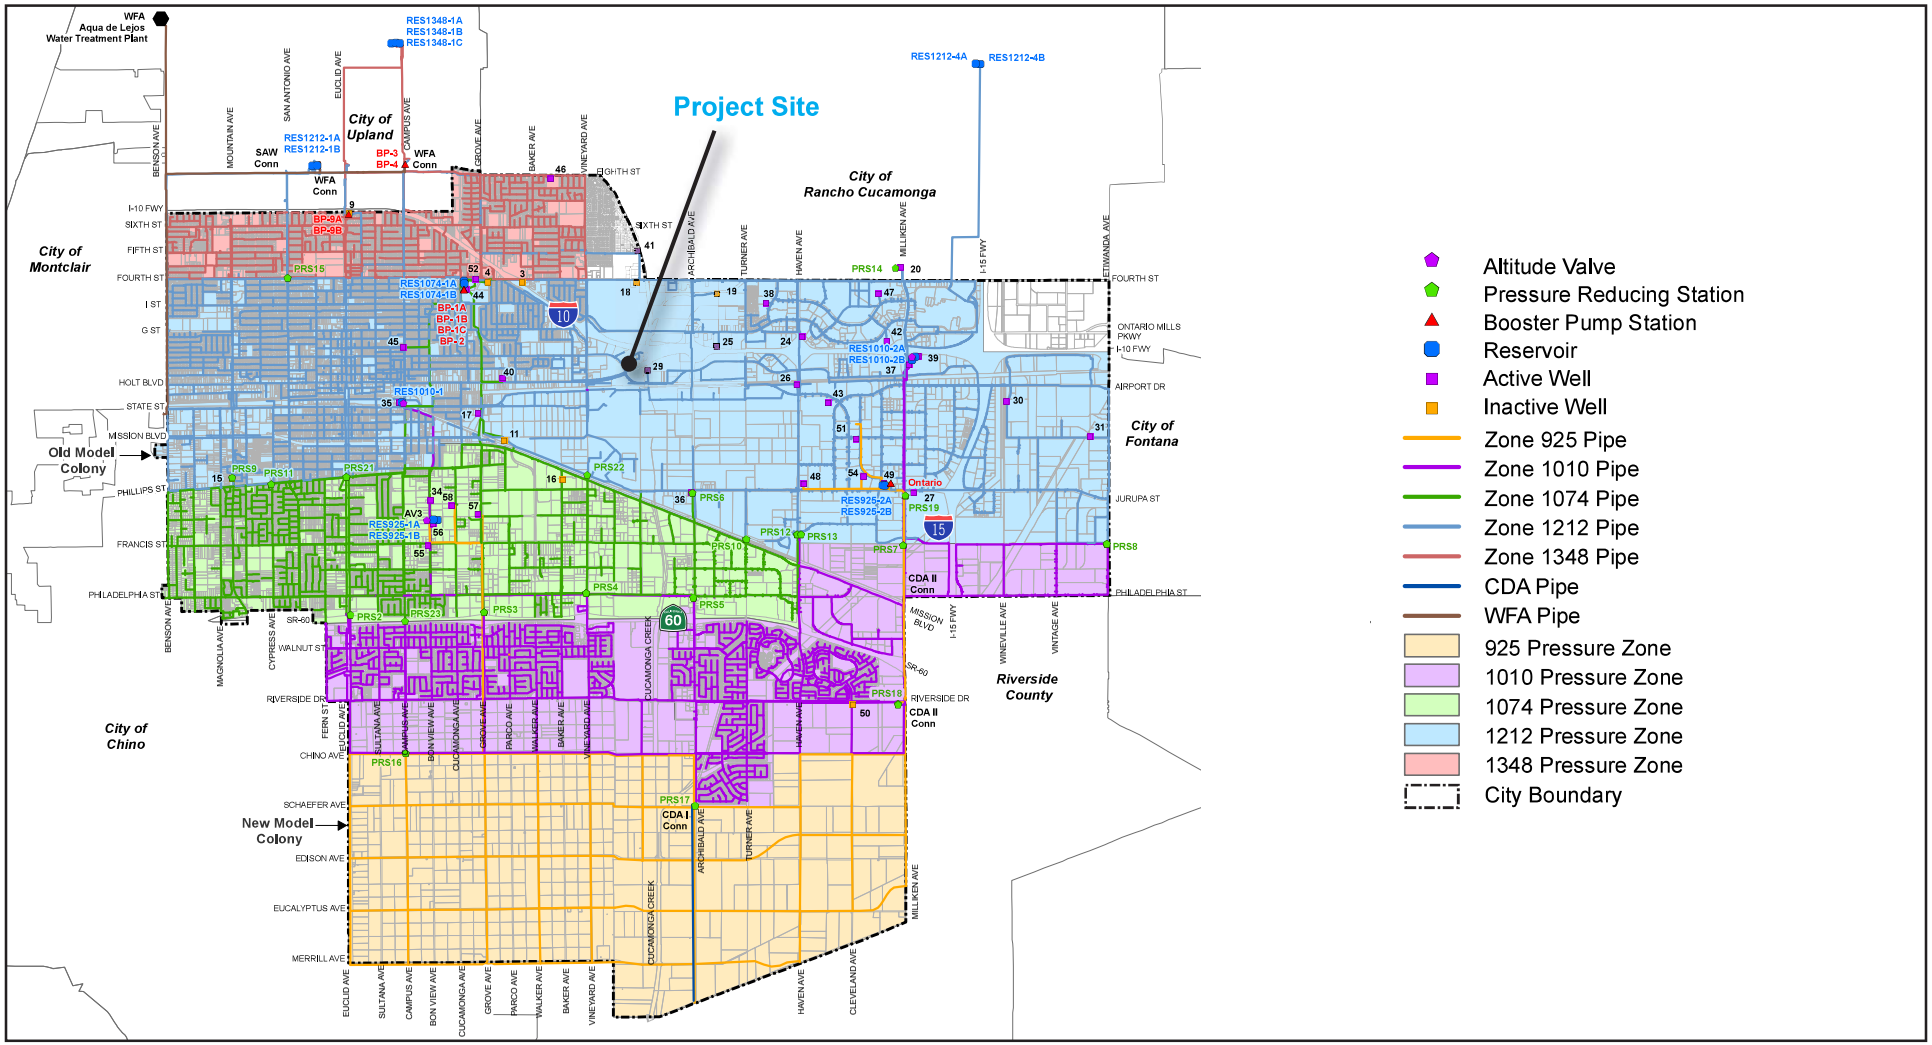
According to the 2020 UWMP, the City's water supply (including conservation measures) will be sufficient to supply all its needs to residential, commercial, and industrial customers through the year 2045 during normal, single dry, and multiple dry years. The City of Ontario's legal right to pump water in an amount necessary to meet its demands has been adjudicated and will ensure the long-term reliability of the groundwater source as the safe yield of the aquifer has been determined.

Approximately two-thirds of the City's water supply is groundwater pumped through its own wells located in the Chino Basin. The construction of Wells 45, 46, and 47, as part of the DYY Storage Program, increases the City's groundwater pumping capacity to meet peak demands. The City also has 123,135 AF of stored water in the Chino Basin as of 2023 and participates in an ongoing groundwater recharge program, using stormwater, dry-weather runoff, and recycled water, that ensures the safe yield of the Chino Basin is not exceeded. The expansion of the groundwater desalter program and ongoing expansion of the recycled water program will reduce the City's dependence on groundwater pumping. In addition, the City adopts ordinances pertaining to water shortage contingency planning and the prevention of water waste, conservation pricing, and various public outreach programs to encourage its customers to reduce their water consumption.[42]

[42] City of Ontario. 2021. 2020 *Urban Water Management Plan*.

2.5.5 Ability of Water Supplies to Accommodate the Proposed Project

As noted in Section 2.3.3 the proposed project would result in a net increase of 43.55 AFY in potable water demand and decrease of 1.71 AFY in recycled water demand when compared to the water demand accounted for the site in the 2020 UWMP. The net increase in potable water is within the projected potable water demand increases shown in Table 7 for the years 2025 to 2030, the timeframe in which the proposed project is anticipated to be completed.



Furthermore, although Table 7 does not include any residual water supply capacities, the City has the flexibility to increase groundwater production from the Chino Basin. An increase in imported water is also available to the City in wet and normal years. Projected groundwater production is shown in Table 10 and capped at 31,476 AFY for the years 2040 and 2045. This amount is what is needed for the projected water demands. However, the City can increase this production as shown in Table 8. As of June 30, 2023, the City has 123,135 AF in storage pursuant to Appropriative rights. Along with the other groundwater supply allocations shown in Table 8, the City has the capability to accommodate the net increase in water demand associated with the proposed project.

2.6 WATER SHORTAGE CONTINGENCY PLANNING

To prepare for water shortages, the City adopted Ordinance No. 3027 on September 1, 2015, in response to the Emergency Conservation Regulations mandated by the State Water Resources Control Board. Under this ordinance, the Water Conservation Plan was updated with more stringent prohibitions and penalties. Ordinance 3027 updated the City's Water Conservation Plan that is codified in Chapter 8A, Title 6 of the City's Municipal Code ("Water Conservation Plan").

The City Council adopted its 2020 Water Shortage Contingency Plan in June 2021, which describes the methods to achieve and the implication of reducing water supplies to at least 50 percent. The City and OMUC implement various programs to reduce customer water consumption, including stringent use restrictions, actions, and penalties, as well as public outreach, education, and communication programs.

Figure 8 - Ontario Ultimate Water System

Source: AKM 2011.

2. Water Supply Assessment

This page intentionally left blank.

Depending on the initiative of the City's customers to voluntarily conserve water at times of crisis, the City can determine when and how quickly to implement the mandatory conservation phases. The severity of the water shortage will influence which methods will be implemented. The demand reduction stages that correspond to water shortage levels are as follows:

- Stage 1 – Water supply shortage of up to 10 percent or as otherwise directed by executive order or State agency regulation
- Stage 2 – Water supply shortage between 10 and 20 percent
- Stage 3 – Water supply shortage between 20 and 30 percent
- Stage 4 – Water supply shortage between 30 and 40 percent
- Stage 5 – Water supply shortage between 40 and 50 percent
- Stage 6 – Water supply shortage greater than 50 percent

As of May 2023, the City entered into a Voluntary Conservation Stage where the public is encouraged to voluntariy conserve water described in the Water Shortage Contingecy Plan.

2.7 WATER EFFICIENCY STRATEGIES

The City has implemented "Demand Management Measures" to reduce its water demands and achieve its water use targets. These measures include:

- Adoption of an ordinance to promote conservation and prevent water waste. The City adopted Ordinance No. 3027 in October 2015 to establish water conservation measures, staged water supply shortage demand management measures, and prevent water waste. The adoption of Ordinance No. 3027 was part of a comprehensive water shortage planning effort to manage the City's response to water supply challenges it may encounter.
- Metering of all customer connections, including separate metering for single-family residential, commercial, industrial, large landscape, and institutional/governmental facilities.
- Implementation of conservation pricing. The City's current water rate structure is tiered to promote water conservation by customers. In the event the customer uses more than the amount of water allotted for the budgeted allocation, a Drought Surcharge rate would apply.
- Development of public education and outreach programs regarding water conservation. The City developed a public information program to educate the public on the benefits of water conservation. The program involves the dissemination of information through literature provided at City Hall and other City of Ontario facilities and articles in the City of Ontario newsletter. The City includes periodic information flyers with the water bills to address water conservation and other important matters. The City also periodically holds public seminars and workshops with other local agencies to promote water conservation.
- Implementation of actions to assess and manage water distribution system losses. The City has water conservation literature that alerts customers to be on the lookout for water system leaks and to correct them promptly. As part of normal operation and maintenance of the water system, City staff performs preventive maintenance. This includes regular checks on valves and meters and pipeline maintenance. If leaks are encountered or suspected during routine inspection of the system, further evaluation is conducted

and leaks are subsequently repaired. The City also monitors the water system for loss by comparing water production to water sales.

- Provision of rebate programs. The City routinely hosts seminars and workshops in the community to promote landscape and offers a rebate program for the purchase of landscape-related items to both residential and commercial customers to promote water conservation. The City also offers a rebate program for the purchase of high-efficiency washing machines, high-efficiency toilets, and weather-based irrigation controllers. [43]

Furthermore, the City along with other IEUA member agencies implement a Regional Water Use Efficiency Business Plan. The Business Plan references SB X7-7 and the State Water Resources Control Board's Emergency Conservation Regulations that help guide the development of water reduction goals. The Business Plan describes in detail how the region and the City will achieve the water reduction goals. In addition, the City participates in water conservation efforts through the California Urban Water Conservation Council committing to implement Best Management Practices for more efficient use or conservation of water.[44]

2.8 SUMMARY

A WSA/WV was prepared to assess the water demand and supply conditions with implementation of the proposed project. As shown in Table 3 and 4, the total potable water demand for the proposed project is conservatively estimated to be 80.60 AFY and the total recycled water demand is estimated at 13.35 AFY.

According to the City's 2020 UWMP, the City has adequate supplies to serve 100 percent of its customers during normal, dry year, and multiple dry year demand through 2045 with projected population increases and future development projects. The proposed project would result in a net increase of 43.55 AFY in potable water demand and net 1.71 AFY decrease in recycled water demand when compared to the water demand accounted for the site in the 2020 UWMP. This net increase is within the 2020 UWMP projected potable and recycled water demand increases for the years 2025 to 2030, the timeframe in which the proposed project is anticipated to be completed. Furthermore, the City has the flexibility to increase groundwater production from the Chino Basin and increases in imported water is also available to the City in wet and normal years. As shown in Section 2.5.5, the City has adequate groundwater allocations to accommodate the net increase in water demand associated with the proposed project.

This WSA/WV concludes that the City will have sufficient water supplies available during normal, single dry, and multiple dry years through the year 2045 to meet all projected water demands associated with its existing and future customers, including the proposed project. In the unlikely event of a water shortage, implementation of the City's Water Conservation Plan and water efficiency strategies would ensure that sufficient water supplies were available to serve its customers, including the project and existing and future users.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PDA23-005, A DEVELOPMENT AGREEMENT BETWEEN THE CITY OF ONTARIO AND DIVERSIFIED PACIFIC DEVELOPMENT GROUP, LLC, TO ESTABLISH THE TERMS AND CONDITIONS ASSOCIATED WITH A DEVELOPMENT PLAN (FILE NO. PDEV23-039), FOR A 10.43 ACRE PROPERTY LOCATED ON THE SOUTHEAST CORNER OF GUASTI ROAD AND HOLT BOULEVARD WITHIN THE PROPOSED PA1 (HOSPITALITY MIXED-USE) DISTRICT OF THE EMPIRE GROVES SPECIFIC PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 110-322-33.

WHEREAS, DIVERSIFIED PACIFIC DEVELOPMENT GROUP, LLC ("Applicant") has filed an Application for the approval of a Development Agreement, File No. PDA23-005, as described in the title of this Ordinance (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 10.43 acres of land generally located on southeast corner of Guasti Road and Holt Boulevard, within the proposed Empire Groves Specific Plan; and

WHEREAS, the properties to the north of the Project site are within the CCS (Convention Center Support Commercial) zoning district and are developed with offices and hotel. The property to the east is within the UC (Utilities Corridor) zoning district and is developed with a flood control channel. The property to the south and west is within the CCS (Convention Center Support Commercial) zoning district, and is developed with hotel; and

WHEREAS, the applicant submitted a Development Plan (File No. PDEV23-039) to construct a 600,000 square foot hotel and commercial building consisting of 600 rooms; and

WHEREAS, in conjunction with the Project, the Applicant also filed an application for a Specific Plan (Empire Groves), File No. PSP23-001, to establish the land use district, development standards, guidelines, and infrastructure improvements for the development of up to 600,000 square feet of hospitality and commercial land uses on the project site; and

WHEREAS, on February 25, 2025, the Planning Commission conducted a public hearing and approved Resolution No. PC25-006, recommending the City Council approve a Resolution adopting an Addendum to the Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the City Council on August 16, 2022, in conjunction with File No. PGPA20-002. The Addendum finds that the proposed project introduces no new significant environmental impacts. Furthermore, all mitigation measures previously adopted with the Certified Environmental Impact Report are incorporated into the Project by reference; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 25, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the SEIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC25-007, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on March 18, 2025, the City Council approved a Resolution adopting an SEIR Addendum to a previous Certified EIR prepared pursuant to CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines, which indicated that all potential environmental impacts from the Project were less than significant or could be mitigated to a level of significance; and

WHEREAS, on March 18, 2025, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to TOP 2050 Supplemental Environmental Impact Report, certified by the City of Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002.

(2) The Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(5) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

(6) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all mitigation measures previously adopted by the Certified EIR, are incorporated herein by this reference.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental

effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of

approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 4: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

The provisions of the development agreement are consistent with the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan, and any applicable specific plans. The Development Agreement applies to approximately 10.43 acres of land located on the southeast corner of Guasti Road and Holt Boulevard within the proposed Empire Groves Specific Plan (File No. PSP23-001). The Development Agreement establishes parameters for the development of land within the Empire Groves Specific Plan. The Development Agreement also grants the Applicant, the right to develop, the Project site. These terms and conditions are consistent with The Ontario Plan Policy Plan (General Plan), design guidelines and development standards for the proposed Empire Groves Specific Plan and will help further the vision of the Guasti District, the Multimodal Mixed-Use Land Use designation, and support the nearby Convention Center.

SECTION 5: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described Development Agreement, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 6: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 8: ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 9: ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 10: ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

_____, 2025

San Bernardino County, California

DRAFT

DEVELOPMENT AGREEMENT NO. PDA_____

This Development Agreement (hereinafter "Agreement") is dated as of _____, 2025, for reference purposes only, and is entered into by and between the City of Ontario, a California municipal corporation (hereinafter "CITY"), and DIVERSIFIED PACIFIC DEVELOPMENT GROUP LLC, a California limited liability company (hereinafter "OWNER"):

RECITALS

WHEREAS, CITY is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864, et seq. of the Government Code and Section 4.01.015 of the Ontario Development Code; and

WHEREAS, OWNER and CITY desire that they enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of CITY; and

WHEREAS, by electing to enter into this Agreement, CITY shall bind future City Councils of CITY by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of CITY; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by CITY and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of CITY and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, all of the procedures of the California Environmental Quality Act, Public Resources Code §§21000, et seq. ("CEQA") have been met with respect to the Hotel Project and the Agreement in that certain Addendum to the Final Supplemental Environmental Impact Report for the Ontario Plan 2050; Empire Groves Specific Plan (State Clearinghouse No. 2021070364 (the "Addendum").

WHEREAS, the City Council found and determined that the Addendum was prepared in accordance with the requirements of CEQA and adequately describes the impacts of the Hotel Project described in the Addendum, which included consideration of this Agreement; and

WHEREAS, CITY is currently engaged in the Ontario Convention Center Expansion & Renovation Project (as further defined in Section 4.6.1 as the "Convention Center Project"), which is slated to significantly expand and remodel the existing convention center. To support the Convention Center Project and other possible improvements that CITY is considering making, as discussed further in this Agreement, CITY and OWNER desire that OWNER develop, construct and operate a full service convention hotel ("Hotel") on the Property, which can support and enhance the Convention Center Project. For purposes of this Agreement, a full service convention hotel means a hotel that offers a range of onsite amenities, including a restaurant, pool, gym, laundry services, business center and meeting space or conference rooms; and

WHEREAS, CITY and OWNER agree that the Convention Center Project and Hotel Project are complementary and that the parties agree to use commercially reasonable efforts to

coordinate the reopening of Convention Center and opening of the Hotel Project. As part of the Convention Center Project, CITY intends to significantly expand the Convention Center and may construct a public parking structure and outdoor plaza as part of the Convention Center Project to provide new parking near the Convention Center and the proposed Hotel Project. To further the success of the Convention Center, CITY is considering the acquisition of some or all of the Surrounding Properties (described in Section 4.7 below), to establish thereon a vibrant high-end, luxury retail, commercial and residential uses that would enhance the economic viability of the Hotel Project and to further improve the tax base of CITY; and

WHEREAS, the Hotel Project will provide substantial public benefits to CITY, including the creation of job opportunities for local residents in hospitality, retail, management, construction and maintenance. The Hotel Project will support local entrepreneurs and small businesses by providing them with platforms to showcase and sell their products or services. The Hotel Project will generate tax revenue for CITY. The Hotel Project will attract visitors, host key events, provide support to the Convention Center and other local businesses, ultimately enhancing the overall cityscape, further benefiting local businesses and the local economy; and

WHEREAS, this Agreement and the Hotel Project are consistent with CITY'S Comprehensive General Plan and any specific plan applicable thereto; and

WHEREAS, all actions taken and approvals given by CITY have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, development of the Property, as defined in Section 1.1.21 and as more particularly described and depicted in the attached Exhibit "A" – Legal Description of the Property and Exhibit "B" - Map Showing Property and its Location, in accordance with this Agreement will provide substantial benefits to CITY and will further important policies and goals of CITY; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property, ensure progressive installation of necessary improvements, provide for public services appropriate to the development of the Hotel Project, and generally serve the purposes for which development agreements under Sections 65864 et seq. of the Government Code are intended; and

WHEREAS, OWNER has incurred and will in the future be incurring substantial costs to facilitate development of the Property in accordance with this Agreement; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in excess of the generally applicable requirements to assure vesting of legal rights to develop the Property in accordance with this Agreement.

COVENANTS

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

DRAFT

1.1. Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1. "Agreement" means this Development Agreement.

1.1.2. "CITY" means the City of Ontario, California, a California municipal corporation.

1.1.3. "Convention Center Project" is defined in the recitals to this Agreement and supplemented pursuant to Section 4.8.1 below.

1.1.4. "Development" means the improvement of the Property for the purposes of completing the Hotel Project, including the structures, improvements and facilities comprising the Hotel Project including, but not limited to: grading; the construction of public infrastructure and public facilities related to the Hotel Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping. "Development" does not include the maintenance, repair, reconstruction or redevelopment of any building, structure, improvement or facility after the construction and completion thereof.

1.1.5. "Development Approvals" means all permits and other entitlements for use subject to approval or issuance by CITY in connection with development of the Property including, but not limited to:

(a) specific plans and specific plan amendments;

(b) tentative and final subdivision and parcel maps;

(c) development plan review;

(d) conditional use permits, public use permits and plot plans;

(e) zoning;

(f) grading and building permits.

1.1.6. "Development Exaction" means any requirement of CITY in connection with or pursuant to any Land Use Regulation or Development Approval for the dedication of land, the construction of improvements or public facilities, or the payment of fees in order to lessen, offset, mitigate or compensate for the impacts of development on the environment or other public interests.

1.1.7. "Development Impact Fee" means a monetary exaction or other charge, other than a tax or special assessment, whether characterized as a fee or a tax and whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, and, for purposes of this Agreement only, includes fees collected under development agreements adopted pursuant to Article 2.5 of the Government Code (commencing with Section 65864) of Chapter 4. For purposes of this Agreement only, "Development Impact Fee" shall not include processing fees and charges imposed by CITY to cover the estimated actual costs to CITY of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications

and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superseded, including by amendment or replacement.

1.1.8. "Development Plan" means the Existing Development Approvals and the Existing Land Use Regulations applicable to development of the Property.

1.1.9. "Effective Date" means the date that the ordinance approving this Agreement goes into effect.

1.1.10. "Existing Development Approvals" means all Development Approvals approved or issued prior to the Effective Date. Existing Development Approvals includes the Approvals incorporated herein as **Exhibit "C"** and all other Approvals which are a matter of public record on the Effective Date.

1.1.11. "Existing Land Use Regulations" means all Land Use Regulations in effect on the Effective Date. Existing Land Use Regulations includes the Regulations incorporated herein as **Exhibit "D"** and all other Land Use Regulations that are in effect and a matter of public record on the Effective Date.

1.1.12. "Final Non-Appealable Date" means the date the Existing Development Approvals are final and non-appealable as set forth in the CITY Development Code and any applicable laws and the applicable statute of limitations has expired under the California Environmental Quality Act (Public Resources Code §21000 *et seq.)* and implementing Guidelines for CEQA (14 Cal. Code Regs. § 15000 *et seq.)* with respect to the Addendum, in each case without the filing of any third party challenge, appeal, or lawsuit or, if filed, such challenge, appeal, or lawsuit has been resolved in a manner satisfactory to OWNER. Promptly after the Final Non-Appealable Date occurs, the parties shall execute a joint memorandum or side letter confirming the final date of the Final Non-Appealable Date and, thereafter, the Final Non-Appealable Date shall be deemed to be the date agreed upon by the parties in such memorandum or side letter.

1.1.13. "Force Majeure" has the meaning set forth in Section 10.11.

1.1.14. "Full Service Convention Hotel" has the meaning as set forth in the Recitals and supplemented pursuant to Section 4.4.3 below.

1.1.15. "General Plan" means The Ontario Plan adopted on August 16, 2022, by Ordinance No.___ , as amended up to the date of the first reading of the ordinance adopting and approving this Agreement.

1.1.16. "Hotel Project" means the development of the Property contemplated by the Development Plan, as such Plan may be further defined, enhanced or modified pursuant to the provisions of this Agreement.

DRAFT

1.1.17. "Improvement" or "Improvements" means those public improvements required to support the development of the Hotel Project as described in the development conditions for the Hotel Project, as further described in **Exhibit "E"** and depicted in **Exhibit "F"** (together, the "Infrastructure Improvements Exhibit").

1.1.18. "Land Use Regulations" means all ordinances, resolutions, codes, rules, regulations and official policies of CITY governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of buildings, the provisions for reservation or dedication of land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. "Land Use Regulations" does not include any CITY ordinance, resolution, code, rule, regulation or official policy, governing:

(a) the conduct of businesses, professions, and occupations;

(b) taxes and assessments;

(c) the control and abatement of nuisances;

(d) the granting of encroachment permits and the conveyance of similar rights and interests that provide for the use of or the entry upon public property;

(e) the exercise of the power of eminent domain.

1.1.19. "Mortgagee" means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device lender, and their successors and assigns.

1.1.20. "OWNER" means the persons and entities listed as OWNER on page 1 of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.21. "Parking Tax" means the tax imposed by CITY for the renting of a parking space in a parking station in the City of Ontario pursuant to Title 3, Chapter 8 of the Ontario Municipal Code, as may be modified from time to time.

1.1.22. "Property" means the real property described on **Exhibit "A"** and shown on **Exhibit "B"** to this Agreement.

1.1.23. "Reservations of Authority" means the rights and authority excepted from the assurances and rights provided to OWNER under this Agreement and reserved to CITY under Section 3.7 of this Agreement.

1.1.24. "Specific Plan" means that certain specific plan adopted by CITY Council, and entitled, "Empire Groves Specific Plan."

1.1.25. "Subsequent Development Approvals" means all Development Approvals required subsequent to the Effective Date in connection with development of the Property. Subsequent Development Approvals shall be deemed to be subject to the provisions of this Agreement, without any further action needed on the part of either CITY or OWNER.

1.1.26. "Subsequent Land Use Regulations" means any Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.1.27. "Transient Occupancy Tax" or "TOT" means the tax imposed by CITY on the rent charged to guests for occupancy of hotel rooms within the development, as authorized by

DRAFT

Title 3, Chapter 6 of the Ontario Municipal Code or otherwise, as may be modified from time to time.

1.1.28. "Total Project Costs" means all costs and expenses incurred by OWNER to acquire, develop and construct the Hotel Project and all portions thereof, and to brand and open the Hotel Project to the public, inclusive of all hotel management and franchise costs, fees and charges.

1.2. Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

1.2.1. Exhibit "A" — Legal Description of the Property.

1.2.2. Exhibit "B" — Map showing Property and its location.

1.2.3. Exhibit "C" — Existing Development Approvals.

1.2.4. Exhibit "D" — Existing Land Use Regulations.

1.2.5. Exhibit "E" — Description of Required Infrastructure Improvements.

1.2.6. Exhibit "F" — Depiction of Required Infrastructure Improvements.

1.2.7. Exhibit "H-1"— Surrounding Property.

1.2.8. Exhibit "H-2" — Miller Property.

1.2.9. Exhibit "I" – Conceptual Depiction of the Convention Center Expansion.

2. GENERAL PROVISIONS.

2.1. Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and shall be carried out in accordance with the terms of this Agreement.

2.2. Ownership of Property. OWNER represents and covenants that it is the owner of the fee simple title to the Property or a portion thereof, or the lessee of the Property or has the right to acquire fee simple title to the Property or a portion thereof from the current owner(s) thereof. To the extent OWNER does not own fee simple title to the Property, OWNER shall obtain written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof.

2.3. Term. The term of this Agreement shall commence on the Effective Date and shall continue for an initial term of thirty (30) years thereafter unless this term is modified or extended pursuant to the provisions of this Agreement.

2.4. Assignment.

2.4.1. Right to Assign. OWNER shall have the right to sell, transfer or assign the Property (inclusive of all improvements thereon) in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410, et seq.), to any person, partnership, limited liability company, joint venture, firm or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement and be made in compliance with the following:

(a) No sale, transfer or assignment of any right or interest under this

DRAFT

Agreement shall be made unless made together with the sale, transfer or assignment of all or a part of the Property.

(b) Concurrent with any such sale, transfer or assignment, or within fifteen (15) business days thereafter, OWNER shall notify CITY'S City Manager, in writing, of such sale, transfer or assignment and shall provide CITY with: (1) an executed agreement providing therein that the purchaser, transferee or assignee expressly and unconditionally assumes all the duties and obligations of OWNER under this Agreement with respect to the portion of the Property so sold, transferred or assigned arising from and after the date of such sale, transfer or assignment; and (2) the payment of the applicable processing charge to cover CITY'S review and consideration of such sale, transfer or assignment.

(c) Any sale, transfer or assignment not made in compliance with the foregoing conditions shall constitute a default by OWNER under this Agreement. Notwithstanding the failure of any purchaser, transferee or assignee to execute the agreement required by Paragraph (b) of this Subsection 2.4.1, the benefits and burdens of this Agreement shall be binding upon and inure to such purchaser, transferee or assignee, arising from and after the date of such assignment. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer or assignment that is not made in compliance with this Section 2.4.

2.4.2. Release of Transferring Owner. Notwithstanding any sale, transfer or assignment, a transferring OWNER shall continue to be obligated under this Agreement unless OWNER no longer has a legal or equitable interest in all or any part of the portion of the Property sold, transferred or assigned, or such transferring owner is given a release in writing by CITY, which release shall be provided by CITY upon the full satisfaction by such transferring owner of the following conditions:

(a) OWNER no longer has a legal or equitable interest in all or any part of the portion of the Property sold, transferred or assigned.

(b) OWNER is not then in default under this Agreement.

(c) OWNER has provided CITY with the notice and executed agreement required under Paragraph (b) of Subsection 2.4.1 above.

(d) The purchaser, transferee or assignee provides CITY with security equivalent to any security previously provided by OWNER to secure performance of its obligations hereunder.

(e) The provisions of this Section 2.4.2 and Section 2.4.3 below shall not apply to the holder of a mortgage (inclusive of a deed of trust) encumbering the Property as security for the provision of financing towards the improvement of the Property, but shall be governed pursuant to the terms of Section 9 of this Agreement.

2.4.3. Effect of Assignment and Release of Obligations. In the event of a sale, transfer or assignment pursuant to the provisions of Section 2.4.1 above and notwithstanding the release provisions of Section 2.4.2 above:

(a) The assignee shall be liable for the performance of all obligations of OWNER with respect to transferred property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

(b) The owner of the Retained Property shall remain liable for the performance of all obligations of OWNER with respect to Retained Property, but shall have no further obligations with respect to the transferred property.

(c) The assignee's exercise, use and enjoyment of the Property or portion thereof (but not any Retained Property) shall be subject to the terms of this Agreement to the same extent as if the assignee were OWNER from and after the date the assignee took title to the Property or portion thereof.

2.4.4. Subsequent Assignment. Any subsequent sale, transfer or assignment after an initial sale, transfer or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.5. Partial Assignment and Assumption. CITY and OWNER agree OWNER may partially assign its obligations and rights under this Agreement, and all amendments hereto, to a purchaser, transferee or assignee of a lot, which has been subdivided subject to provisions of a partial assignment and assumption agreement in a form reasonably approved by CITY. Any such complete and executed partial assignment and assumption of this Agreement shall be submitted to CITY for approval pursuant to Section 2.4.1 of this Agreement. Within thirty (30) days following such complete submittal, CITY shall review, and if the above conditions are satisfied, shall approve the partial assignment and release and notify the purchaser, transferee or assignee in writing thereof. If CITY shall fail to respond to such request for approval within such sixty (60) day period, CITY shall be deemed to have approved such request. No such release approved pursuant to this Subsection 2.4.5 shall cause, or otherwise affect, a release of OWNER from the duties and obligations under this Agreement that are retained by OWNER and excluded from the transfer or assignment.

2.5. Amendment or Cancellation of Agreement. This Agreement may be amended or cancelled in whole or in part only in the manner provided for in Government Code Section 65868.1. Any amendment of this Agreement, which amendment has been requested by OWNER, shall be considered by CITY only upon the payment of the applicable processing charge. This provision shall not limit any remedy of CITY or OWNER as provided by this Agreement. Either Party or successor in interest, may propose an amendment to or cancellation, in whole or in part, of this Agreement. Any amendment or cancellation shall be by mutual consent of the parties or their successors in interest except as provided otherwise in this Agreement or in Government Code Section 65865.1. For purposes of this section, the term "successor in interest" shall mean any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the first instance. Notwithstanding the foregoing sentence, if CITY initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, CITY shall first give notice to OWNER of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation.

2.6. Amendment to Reflect Consistency With Future Amendments to the Development Plan. To the extent any future amendment to the Development Plan (which shall occur only with OWNER prior written approval) provides for modifications to rights or

DRAFT

obligations that differ from or alter the same or similar rights or obligations contained in this Development Agreement, OWNER reserves the right to request an amendment to this Development Agreement to reflect and address any or all of such modifications.

2.7. Minor Modification. Upon the written application of OWNER, minor modifications and changes to the Development Plan including modifications to building design or footprint (not affecting minimum setbacks), parking layout and design, and landscape area design may be approved by the Director of the Planning Department without the need to amend this Development Agreement. Other changes in the Development Plan shall be processed pursuant to the CITY Zoning Ordinance. It is also contemplated by CITY and OWNER that OWNER may, from time to time, seek amendments to one or more of the Development Approvals. Any such amendments are contemplated by CITY and OWNER as being within the scope of this Agreement as long as they are consistent with the Land Use Regulations and shall, upon approval by CITY, continue to constitute the Development Approvals as referenced herein. The parties agree that any such modifications or amendments shall not constitute an amendment to this Agreement nor require an amendment to this Agreement.

2.8. Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

2.8.1. Expiration of the stated term of this Agreement as set forth in Section 2.3.

2.8.2. Entry of a final judgment setting aside, voiding or annulling the adoption of the ordinance approving this Agreement.

2.8.3. The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement.

2.8.4. Termination of this Agreement based on any uncured default of OWNER and following the termination proceedings requirement by the Development Agreement policies.

Completion of the Hotel Project in accordance with the terms of this Agreement including issuance of all required occupancy permits and acceptance by CITY or applicable public agency of all required dedications, shall not terminate this Agreement or the rights of OWNER or CITY hereunder. Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement, no party shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any obligations which are specifically set forth as surviving this Agreement. Upon such termination, any public facilities and services mitigation fees paid pursuant to Section 4.2 of this Agreement by OWNER to CITY on which construction has not yet begun shall be refunded to OWNER by CITY within a reasonable period of time.

2.9. Notices.

2.9.1. As used in this Agreement, "notice" includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder.

2.9.2. All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named

below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows. A copy of any notice may be sent via electronic mail to the email addresses as specified below:

If to CITY:

Scott Ochoa, City Manager
City of Ontario
303 East "B" Street
Ontario, CA 91764
Email: SOchoa@ontarioca.gov

If to OWNER:

Jeff Burum and Matt Jordan
Diversified Pacific Development Group LLC
10621 Civic Center Drive
Rancho Cucamonga, CA 91730
Email: JBurum@divpac.com

with a copy to:

Ruben Duran, City Attorney
Best Best & Krieger, LLP
2855 E Guasti Road, Suite 400
Ontario, CA 91761
Email: ruben.duran@bbklaw.com

with a copy to:

Guy Maisnik
Jeffer, Mangels, Butler & Mitchell LLP
1900 Avenue of the Stars, 7th Floor
Los Angeles, CA 90067
Email: mgm@jmbm.com

2.9.3. Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1. Development of the Hotel Project; Rights to Develop.

3.1.1. Development of the Hotel Project. In consideration of the premises, purposes, and intentions set forth in this Agreement, and in consideration of the assurances for development of the Hotel Project pursuant to this Agreement, OWNER agrees to use commercially reasonable efforts to develop the Hotel Project, and development of the Hotel Project shall be in accordance with: (i) the terms and conditions of this Agreement; (ii) the terms and conditions established in the Development Approvals; and (iii) the Existing Land Use Regulations. OWNER further agrees that the use, density and intensity, maximum height and size of structures and provisions for the Property reservation and dedication of land for public purposes related to the Property shall be limited to those uses permitted by the Existing Land Use Regulations. Development of the Hotel Project shall be in accordance with the Development Approvals. Construction of the Hotel Project shall be in compliance with all applicable building codes and standards, as such may be modified from time to time.

DRAFT

3.1.2. Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority, OWNER shall have a vested right to develop the Property in accordance with the Existing Land Use Regulations, subject to the terms and conditions of this Agreement and the conditions established in the Development Approvals. The Hotel Project shall remain subject to all Subsequent Development Approvals required to complete the Hotel Project as contemplated by the Development Plan. Except as otherwise provided in this Agreement, the permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, and provisions for reservation and dedication of land for public purposes shall be those set forth in the Existing Land Use Regulations.

3.2. Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority in Section 3.6 herein, the rules, regulations and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be the Existing Land Use Regulations. In connection with any Subsequent Development Approval, CITY shall exercise discretion in accordance with the same manner as it exercises its discretion under its police powers, including the Reservations of Authority set forth herein; provided however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3. Timing of Development. The parties acknowledge that OWNER cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions depend upon numerous factors which are not within the control of OWNER, such as market orientation and demand, interest rates, absorption, completion and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo (1984) 37 Cal. 3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that OWNER shall have the right to develop the Property in such order and at such rate and at such times as OWNER deems appropriate within the exercise of its subjective business judgment, subject to any timing or phasing requirements set forth in the Development Plan or the Phasing Plan; provided, however, that OWNER and CITY acknowledge that it shall not be a default of OWNER under this Agreement or otherwise, if the following milestones dates or any dates set forth in the Development Plan or the Phasing Plan are not achieved:

Milestone Table:

	Event	Date
1.	Submission by OWNER of building plans to CITY for the Hotel Project	On or before three hundred sixty-five (365) days following the Final Non-Appealable Date.
2	Commencement of Construction of the Hotel Project	On or before two (2) years following the Final Non-Appealable Date.

2.	(Continued)	In order to achieve this milestone, CITY agrees to complete its review of (a) OWNER'S initial plan check submission within twenty-one (21) days after receipt of such initial submission by CITY (provided, however, prior to such submission OWNER and CITY shall meet to review the proposed application), and (b) any additional submissions required to obtain the required permits for the Hotel Project within fourteen (14) days following receipt of such additional submissions by CITY. There shall be a day-for-day extension of this Commencement of Construction milestone if CITY fails to timely respond to such submissions within the time periods set forth above (each, a "CITY Response Delay").

Notwithstanding anything to the contrary herein, subject to force majeure, if OWNER has not substantially completed the Hotel by the expiration of four (4) calendar years, with two (2) options to extend each for two (2) years for a total of eight (8) years in the event that both options are exercised, following the Final Non-Appealable Date, CITY shall have the right to terminate this Agreement, provided that the foregoing period shall be extended if OWNER has proceeded in good faith, but has not yet been able to obtain feasible financing on commercially reasonable terms and conditions for the construction of the Hotel Project or on account of a Force Majeure event for the number of days that the inability to obtain feasible financing event or the Force Majeure event was in effect. OWNER shall provide at least sixty (60) days advance written notice to CITY if OWNER exercises an option to extend the completion date of the Hotel Project.

3.4. Requirement for Public Infrastructure Improvements. OWNER shall comply with any conditions of the Development Approvals with respect to providing public infrastructure improvements or facilities, if any, to the extent required in connection with the Hotel Project. Notwithstanding any terms that may expressly identify, or the absence thereof to identify, any certain Public Infrastructure Improvements within the terms of this Agreement, the obligations of OWNER which are imposed by the conditions of the Development Approvals for the Hotel Project shall still be in effect and are not waived. Development of the Property is contingent in part on the phasing of area-wide infrastructure improvements over which OWNER has control and subject to the provisions of this Agreement. The issuance of building permits by CITY for the Development of the Property is, in general, contingent on OWNER'S completion of such needed infrastructure improvements to the extent provided herein and the availability of improvements and services to serve the Property.

3.4.1. Infrastructure Improvement Exhibit. Attached hereto as **Exhibits "E**" and **"F"** are a description and depiction, respectively, of the Improvements needed for the development of the Property. In the event of any discrepancy between **Exhibit "E"** and **Exhibit "F"**, **Exhibit "F"** shall control.

3.4.2. Infrastructure Improvement Plan. Subject to the prior submittal by OWNER and approval by CITY of a plan to provide sufficient public infrastructure for the construction of the Development of the Property. The plan to be submitted by OWNER for CITY approval shall describe the utilities and other infrastructure necessary to provide sufficient fire protection and other public health and safety requirements for the Development and other facilities for the Hotel Project. .

3.5. Phasing Plan. Development of the Property shall be subject to all timing and any phasing requirements established by the Development Plan, provided the same are consistent with the terms of this Agreement.

3.6. Changes and Amendments. The parties acknowledge that refinement and further development of the Hotel Project may require Subsequent Development Approvals and may demonstrate that changes are appropriate and mutually desirable in the Existing Development Approvals. In the event OWNER finds that a change in the Existing Development Approvals is necessary or appropriate, OWNER shall apply for a Subsequent Development Approval to effectuate such change and CITY shall process and act on such application in accordance with the Existing Land Use Regulations, except as otherwise provided by this Agreement including the Reservations of Authority. If approved, any such change in the Existing Development Approvals shall be incorporated herein as an addendum to **Exhibit "C"**, and may be further changed from time to time as provided in this Section. Unless otherwise required by law, as determined in CITY'S reasonable discretion, a change to the Existing Development Approvals shall be deemed "minor" and not require an amendment to this Agreement provided such change does not:

(a) Alter the permitted uses of the Property as a whole; or

(b) Increase the density or intensity of use of the Property as a whole; or

(c) Increase the maximum height and size of permitted buildings; or

(d) Delete a requirement for the reservation or dedication of land for public purposes within the Property as a whole; or

(d) Constitute a project requiring a subsequent or supplemental environmental impact report pursuant to Section 21166 of the Public Resources Code.

3.7. Reservations of Authority.

3.7.1. Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, CITY shall not be prevented from applying new rules, regulations and policies upon OWNER, nor shall a development agreement prevent CITY from denying or conditionally approving any subsequent development project application on the basis of such new rules, regulations and policies where the new rules, regulations and policies consist of the following:

(a) Processing fees and charges of every kind and nature imposed by CITY to cover the costs of processing applications for Development Approvals or for monitoring

compliance with any Development Approvals

(b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, hearings, reports, recommendations, appeals and any other matter of procedure;

(c) Regulations, policies and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by CITY and any local amendments to those codes adopted by CITY; provided however that, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan;

(d) Regulations that may conflict with this Agreement and the Development Plan but that are reasonably necessary to protect the residents of the project and/or of the immediate community from a condition perilous to their health or safety;

(e) Regulations that do not conflict with those rules, regulations and policies set forth in this Agreement or the Development Plan. Any regulation, whether adopted by initiative or otherwise, limiting the rate or timing of development of the Property shall be deemed to conflict with the Development Plan and shall therefore not be applicable to the development of the Property;

(f) Regulations that may conflict with this Agreement or the Development Plan, but to which OWNER consents in writing.

(g) Regulations imposing Development Exactions; provided, however, that no such subsequently adopted Development Exaction shall be applicable to development of the Property unless such Development Exaction is applied uniformly to development, either throughout the CITY or within a defined area of benefit which includes the Property. No such subsequently adopted Development Exaction shall apply if its application to the Property would physically prevent development of the Property for the uses and to the density or intensity of development set forth in the Development Plan. In the event any such subsequently adopted Development Exaction fulfills the same purposes, in whole or in part, as the fees set forth in Section 4 of this Agreement, CITY shall allow a credit against such subsequently adopted Development Exaction for the fees paid under Section 4 of this Agreement to the extent such fees fulfill the same purposes.

3.7.2. Subsequent Development Approvals. This Agreement shall not prevent CITY, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations that do not conflict with the Development Plan and/or Existing Development Approvals, nor shall this Agreement prevent CITY from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Development Plan and/or the Existing Development Approvals.

3.7.3. Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or Federal laws or regulations, provided, however, that this Agreement shall remain in full force

and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce. In the event OWNER alleges that such State or Federal laws or regulations preclude or prevent compliance with one or more provisions of this Agreement, and CITY does not agree, OWNER may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided however, that nothing contained in this Section 3.7.3 shall impose on CITY any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.7.4. Intent. The parties acknowledge and agree that CITY is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations and exceptions are intended to reserve to CITY all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if necessary, to reserve to CITY all such power and authority which cannot be restricted by contract.

3.8. Public Works; Utilities. If OWNER is required by this Agreement or as a condition of the Hotel Project Development Approval to construct any public works facilities which will be dedicated to CITY or any other public agency upon completion, and if required by applicable laws to do so, OWNER shall perform such work in the same manner and subject to the same requirements as would be applicable to CITY or such other public agency should it have undertaken such construction. As a condition of development approval, and subject to the terms of this Agreement, OWNER shall connect the Hotel Project to all utilities necessary to provide adequate water, recycled water, sewer, gas, electric, and other utility service to the Hotel Project, as further described and depicted in the Infrastructure Improvements Exhibit. As a further condition of development approval, OWNER shall contract with CITY for CITY-owned or operated utilities for this purpose, for such price and on such terms as may be available to similarly situated customers in the City of Ontario. Notwithstanding the foregoing, OWNER is not responsible for a future or unreasonable requests to upsize or increase in capacity of any utilities to provide adequate water, recycled water, sewer, gas, electric and other utility service that are not directly related to or to service the Hotel Project. As further condition of development approval, to the extent OWNER does not own the Property in fee simple, OWNER must provide to CITY the written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof, pursuant to Section 2.2.

3.8.1. OWNER agrees that development of the Hotel Project shall require the construction of storm drain improvements as described in **Exhibit "E"** and depicted in **Exhibit "F"**. OWNER shall be responsible for the construction of the necessary extension of storm drain facilities to the extent such storm drain facilities are needed for the Hotel Project.

3.8.2. OWNER agrees that development of the Hotel Project shall require the construction of street improvements as described in **Exhibit "E"** and depicted in **Exhibit "F".**

3.8.3. OWNER agrees that development of the Property shall require the extension of permanent water and recycled water improvements as described in **Exhibit "E"** and depicted in **Exhibit "F"** to serve the Property. OWNER also agrees that recycled water, if available, shall be utilized by OWNER for all construction-related water uses including prior to, and during, any grading of the Property. CITY agrees to work with OWNER to the construction and installation of the non-potable reuse system ("Reuse System"), and OWNER acknowledges that the Reuse System is subject to submittal to and approval by the State Regional Water Quality Control Board.

3.8.4. OWNER agrees that development of the Property shall require the sewer improvements, at OWNER'S sole cost and expense, subject to the terms of this Agreement, as described in **Exhibit "E"** and depicted in **Exhibit "F"**.

3.8.5. If imposed by CITY as a condition of approval for the Hotel Project, prior to the issuance of building permits for the Hotel Project, CITY agrees to enter into an agreement with San Bernardino County Flood Control District ("Flood Control") for fire access by emergency, fire and first responders vehicles and personnel on the east side of the Property boundary using the existing San Bernardino County Flood Control District's Access Road. Any modifications to the entitlement landscape plans to address Flood Control's requirements will be made to the landscape construction documents that will become part of the Development Plan. If the proposed alternative emergency access is determined to be unfeasible by the CITY, OWNER shall be responsible for providing a revised access plan that ensures sufficient access for Fire Department and other emergency vehicles and personnel to service the east tower of the Hotel Project to the satisfaction of the Fire Department and the CITY. CITY agrees to work cooperatively with OWNER to adjust the landscaping plan on the Property to ensure sufficient access for Fire Department and other emergency vehicles and personnel to service the east tower of the Hotel Project to the satisfaction of the Fire Department.

3.9. Acquisition of Offsite Provision of Real Property Interests. In any instance where OWNER is required by any Development Approval or Land Use Regulation and the Development Plan to construct any public improvement on land not owned by OWNER ("Offsite Improvements"), OWNER shall at its sole cost and expense provide or cause to be provided, the real property interests necessary for the construction of such public improvements (the "Offsite Property").

3.9.1. CITY Acquisition of Offsite Property. In the event OWNER is unable, after exercising reasonable and good faith efforts, including, but not limited to, the rights under Sections 1001 and 1002 of the Civil Code, to acquire the Offsite Property necessary for the construction of the Offsite Improvements, and following the written request by OWNER to CITY, CITY agrees to take reasonable and good faith efforts to acquire the Offsite Property from the owner or owners of record by negotiation to the extent permitted by law and consistent with this Agreement. If CITY is unable to acquire the Offsite Property by negotiation within thirty (30) days after OWNER'S written request, CITY shall, in accordance with the procedures established by law, use its power of eminent domain to acquire the required Offsite Property at a public hearing noticed and conducted in accordance with California Code of Civil Procedure Section 1245.235 for the purpose of considering the adoption of a resolution of necessity concerning the Offsite Property, subject to approval by the City Council and the conditions set forth in this Section 3.9.1. CITY and OWNER acknowledge that the timelines set forth in this Section 3.9.1 represent the maximum time periods which CITY and OWNER reasonably believe will be necessary to complete the acquisition of any Offsite Property. CITY agrees to use reasonable efforts to complete the actions described within lesser time periods, to the extent that it is reasonably able to do so, consistent with the legal constraints imposed upon CITY. OWNER shall pay all costs associated with such acquisition or condemnation proceedings for the required real property interests. This Section 3.9.1 is not intended by the parties to impose upon OWNER an enforceable duty to acquire land or construct any public improvements on land not owned by OWNER, except to the extent that OWNER elects to proceed with the development of the Hotel Project, and CITY is prevented by applicable law from acquiring such Offsite Property, and then

only in accordance with valid conditions imposed by CITY upon the development of the Hotel Project under the Subdivision Map Act (California Government Code Section 66410 et seq.), or other legal authority.

3.9.2. Owner's Option to Terminate Proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to making an offer to the owner of the Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease all acquisition proceedings with respect to that Offsite Property, whereupon CITY shall cease such proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to the date of the hearing on CITY'S intent to consider the adoption of a resolution of necessity as to any Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease condemnation proceedings, whereupon CITY shall cease such proceedings. If OWNER does not notify CITY to cease condemnation proceedings within said fifteen (15) day period, then CITY may proceed to consider and act upon the Offsite Property resolution of necessity. If CITY adopts such resolution of necessity, then CITY shall diligently institute condemnation proceedings and file a complaint in condemnation and seek an order of immediate possession with respect to the Offsite Property.

3.10. Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of CITY possess authority to regulate aspects of the development of the Property separately from or jointly with CITY and this Agreement does not limit the authority of such other public agencies. CITY agrees to cooperate fully, at no cost to CITY, with OWNER in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations or policies of CITY.

4. PUBLIC BENEFITS.

4.1. Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs that will not be fully met by the Development Plan and further acknowledge and agree that this Agreement confers substantial private benefits on OWNER that should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the private benefits conferred on OWNER by providing more fully for the satisfaction of the public needs resulting from the Project.

4.2. Development Impact Fees.

4.2.1. Amount and Components of Development Impact Fees. Development Impact Fees ("DIF") shall be paid by OWNER. The Development Impact Fee amounts to be paid by OWNER shall be the amounts that are in effect at the time such amounts are due. Nothing contained in this Agreement shall affect the ability of the CITY to impose new Development Impact Fees or amend the amounts of existing Development Impact Fees. Additionally, nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by CITY to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by CITY.

(a) Schools Obligations. OWNER shall satisfy its school obligations with the applicable school district by paying school impact fees. Written evidence of approval by

the applicable school district that OWNER has met its school obligations may be required by CITY as the condition to the issuance by CITY of any building permits for the Hotel Project.

(b) Inland Empire Utilities Agency ("IEUA") Sewer Connection Fees. OWNER shall satisfy the applicable obligations by paying IEUA fees.

4.2.2. Time of Payment. Development Impact Fees shall be paid to CITY prior to the issuance of any building permits for the Hotel Project. Notwithstanding the foregoing, deferral of the payment of any Development Impact Fees that are imposed by CITY may be granted pursuant to a separate agreement approved by CITY in accordance with Section 4.2.3 below and CITY policy. The parties understand and agree that the Development Impact Fees established or imposed by other public agencies that are not controlled by CITY even if such Development Impact Fees may be collected by CITY (including without limitation, if applicable, the Inland Empire Utilities Agency Sewer Connection Fees, Ontario-Montclair School District (K-12) Fees, Cucamonga School District and Chaffey Joint Union High School Fees) (collectively, the "Non-Deferrable Fees") must be paid when and as required in their standard course and schedule and may not be deferred hereunder. The DIF payment obligation shall be a covenant running with the land and shall survive the expiration or early termination of this Agreement indefinitely until the deferred DIFs are paid in full in accordance with this Agreement in the event that any of the above criteria or conditions have not been satisfied by the OWNER or the Deferral DIF Agreement in the event that OWNER elects to defer the CITY imposed DIF.

4.2.3. Election to Defer DIF imposed by CITY.

(a) OWNER shall have the right to elect (but is not obligated) to amortize the payment of up to fifty percent (50%) of the total amount of the Development Impact Fees that are due and payable for the Hotel Project (the amount so elected, the "Deferred DIF") over a period of thirty (30) years commencing from the Deferred DIF Repayment Date at an annual four percent (4%) simple interest rate. As used herein, "Deferred DIF Repayment Date" means the date of the issuance of a temporary or other certificate of occupancy for the Hotel Project and the Effective Date for DIF Deferral Agreement (as described below). For the avoidance of doubt, any of the Non-Deferrable Fees shall not be included in the amount that can be deferred; however, the amount of such Non-Deferrable Fees may be included in the calculation of the total amount of Development Impact Fees due and payable for the Hotel Project only for the purposes of calculating the fifty percent (50%) amount that OWNER may elect to defer as Deferred DIFs. By way of example only, if the amount of the DIFs imposed by the CITY are $2,500,000 and the amount of the Non-Deferrable Fees imposed by other agencies are $3,500,000, then the total amount of Development Impact Fees equal $6,000,000. Even though fifty percent of $6,000,000 is $3,000,000, the OWNER may only elect to defer up to $2,500,000, the amount of the CITY-imposed DIF. The $3,500,000 Non-Deferrable Fees imposed by other agencies are still due and payable as required in their standard course and schedule and may not be deferred hereunder. If OWNER elects to defer the payment of the DIF pursuant to this Section 4.2.3, then OWNER and CITY shall enter into a DIF Deferral Agreement that shall be executed with notarized signatures and recorded against the Property in the Official Records of the County of San Bernardino within five (5) days after full execution by the Parties.

(b) The DIF Deferral Agreement shall contain the following key terms: OWNER agrees that, commencing upon the Deferred DIF Repayment Date, OWNER

shall pay to the CITY, on the 1st day of the next following month and each and every successive month for three hundred sixty (360) consecutive months, an amount equal to the amortized principal and interest of the actual amount of the Deferred DIFs amortized over thirty (30) years at an annual 4 percent (4%) simple interest rate, without demand, notice or offset. The entire unpaid principal balance of the amortized Deferred DIFs and any accrued but unpaid interest shall be immediately due and payable to the CITY upon the occurrence of any of the following events: (1) the termination of this Agreement; (2) any uncured default by OWNER with regard to repayment of the amortized Deferred DIFs to the CITY (if such amounts have not been paid to the CITY within five (5) business days of OWNER'S receipt of written notice from the CITY); or (3) any sale, transfer or assignment of all or substantially all of the OWNER'S leasehold or fee interest (as applicable) in the Property that is not approved by the CITY in advance (which such approval shall not be unreasonably withheld, conditioned or delayed). Any monthly payment or portion thereof not paid to the CITY as and when due under the terms of this Agreement or the DIF Deferral Agreement shall accrue interest from the date on which such payment was due at the rate of ten percent (10%), and if not paid within the five (5) business day cure period described above, CITY may file a lien against the Property for such delinquent amounts including any accrued and unpaid interest. All payments under this Subsection will be applied first to penalties and late fees, then to interest, then to reduce the principal amount owed. The Deferred DIFs and any accrued but unpaid interest may be pre-paid to the CITY at any time without any pre-payment penalty.

(c) The Deferred DIF payment obligation shall be a covenant running with the land and shall survive the expiration or early termination of this Agreement indefinitely until the Deferred DIFs are paid in full in accordance with this Agreement or the DIF Deferral Agreement.

4.3. Responsibility for Construction of Public Improvements.

4.3.1. Timely Construction of Public Infrastructure. The phasing of the area wide infrastructure construction within the vicinity of the Hotel Project must be as approved by CITY. OWNER shall be responsible for the timely construction and completion of all public infrastructure required as a condition of approval for the Hotel Project as shown on the attached **Exhibit "F"** and any and all Hotel Project development conditions included in the Development Approvals. Unless otherwise specified in the Development Plan, all other required Improvements for the Hotel Project, shall be completed and operational for occupancy in accordance with a schedule approved by CITY and OWNER. All Infrastructure and Improvements shall be completed as required by the Development Plan.

4.3.2. Construction of DIF Program Infrastructure. To the extent OWNER is required to construct and completes construction of public improvements that are included in CITY'S Development Impact Fee Program, CITY agrees that CITY shall issue DIF Credit in accordance with the provisions of a separate Fee Credit Agreement between CITY and OWNER. Limitations on the use of DIF Credit issued to OWNER to offset OWNER'S DIF payment obligations shall also be subject to the provisions of a separate Fee Credit Agreement. CITY and OWNER agree that the Fee Credit Agreement between CITY and OWNER shall comply with CITY'S adopted policies applicable to such agreements.

4.4. Hotel Requirements. To balance any private benefit conferred upon OWNER under this Agreement, OWNER agrees to provide the following as consideration for such private

benefits:

4.4.1. For the duration of operating the Hotel that will be constructed as part of the Hotel Project, OWNER will maintain or caused to be maintained a booking policy that allows the Visitor and Convention Bureau to reserve a minimum number of hotel rooms to secure a convention;

4.4.2. OWNER will diligently pursue and demonstrate substantial progress to construct the Hotel to completion within the time periods provided in the Development Plan and this Agreement.

4.4.3. The new Hotel must:

(a) have at least [500] rooms;

(b) be a full-service convention hotel such that it will contain (i) appropriate meeting space for the number of hotel rooms; (ii) a full service bar; and (iii) at least one three meal restaurant on premises;

(c) must be a major brand; no non-brand affiliations, but may be associated with a brand that appears on at least _____ other properties worldwide

(d) be located on the Property, which is in the "Convention Center-Hotel District," which will soon be established and would generally be defined as the area bounded by Corona Avenue to the west, Turner Avenue to the east, I-10 to the north, and the BNSF railroad to the south.

4.5. Taxes. The Hotel Project will provide substantial public benefits from the increase in property taxes, retail sales taxes, transient occupancy taxes and parking taxes. The purpose of this section is to establish the terms and conditions under which CITY will rebate or reimburse a certain volume of gross tax revenue comprised of the Transient Occupancy Taxes and Parking Taxes (collectively referred to as the "Taxes") for a set period of years, provided certain conditions are met by OWNER and pursuant to the terms and conditions in this Section 4.5. The rebate or reimbursement is intended to support the financial feasibility of the Hotel Project and encourage economic growth within the City of Ontario. OWNER would not enter into this Agreement and take the risk of the Hotel Project without the provisions of this Section 4.5. The rebate or reimbursement of Taxes to OWNER provided in Section 4.5.1 shall be considered material consideration by CITY for OWNER to encourage OWNER to incur the significant risk and liability in connection with the Hotel Project and to encourage and facilitate economic growth in the City of Ontario.

4.5.1. Covenant to Rebate/Reimburse. CITY and OWNER agree that OWNER shall be entitled to the rebate and reimbursement of the Taxes on an annual basis commencing upon the date the Hotel opens for business to the public and continuing until the earlier of (a) the twentieth (20^{th}) anniversary of such opening date of the Hotel, or (b) the date that the Taxes rebated and received by OWNER meets the fifty percent (50%) of the Total Project Costs threshold, which rebate and reimbursement period shall be extended on a day for day basis for each day following the date that the Hotel opens for business that the Convention Center Project is not completed; but such rebate and reimbursement period shall not exceed thirty (30) years from the Effective Date. The rebate and reimbursement of Taxes will occur by CITY providing an annual rebate of such tax revenue to OWNER, without offset, deduction or abatement, up to limits provided in this Section 4.5.1.

DRAFT

4.5.2. Accounting and Audits. OWNER shall provide to CITY with all the necessary documentation to substantiate the amount of TOT and Parking Taxes otherwise collectable each year of the Covenant Period. CITY reserves the right to audit the books and records of OWNER exclusively related to the Total Project Costs and TOT, provided that (a) such audit shall not occur more than once in any twelve month period, (b) such audit shall be performed not later than ninety (90) days following the date OWNER delivers to CITY such documentation and (c) such auditor shall be a national and reputable auditor and not compensated in whole or part on a contingency basis, including any incentive payment based on a percentage of savings or revenues. OWNER shall make such records available to CITY upon reasonable written notice during such audit period.

4.6. Maintenance of Open Space. OWNER shall provide for ongoing maintenance of all parks, common areas, and open space areas within the Hotel Project as may be set forth in the Development Approvals.

4.7. Compliance with Public Benefits Requirements. In the event Owner fails or refuses to comply with any condition referenced in Section 4.1 through 4.6, or challenges (whether administratively or through legal proceedings) the imposition of such conditions, OWNER shall be deemed in default of this Agreement pursuant to Section 7. below, thereby entitling the CITY to any and all remedies permitted under this Agreement, including, without limitation, the right of the CITY to withhold OWNER'S Project-related building permits, certificates of occupancy, or discretionary approvals, without liability.

4.8. City Improvements. Notwithstanding anything to the contrary in this Agreement, it shall be a condition of CITY'S obligations, if such obligation exists in this Agrement, to acquire, design, develop, construct and operate the Convention Center Project that CITY completes all actions and procedures necessary to complete a public project, including without limitation, satisfying the requirements of the California Environmental Quality Act and applicable laws for a public work project and is subject to the availability and sufficiency of funding by the CITY, as determined by CITY in its sole discretion and good faith judgment.

4.8.1. Convention Center Expansion. CITY is currently engaged in the Ontario Convention Center Expansion & Renovation Project ("Convention Center Project"), which is slated to significantly expand the existing convention center and renovate the premises and may include the construction of a public parking structure and outdoor plaza as part of the Convention Center Project to provide new parking near the Convention Center and the Hotel Project as shown in the attached Exhibit "I", Conceptual Depiction of the Convention Center Expansion. CITY is willing to allow OWNER certain permissions to use the parking on a first come first serve basis with no dedicated spaces for such use. CITY and OWNER agree that the Convention Center Project and the Hotel Project are complementary and that the parties agree to use commercially reasonable efforts to coordinate the re-opening of Convention Center Project and the opening of the Hotel Project. OWNER shall have the right to use the CITY'S public parking structure or surface parking on a first come, first serve basis for parking for the benefit of its Hotel guests and other Hotel patrons; provided any parking fees and costs, if due, for such parking shall be borne and paid by the OWNER, the Hotel guests or Hotel patrons using the parking and not at the cost to CITY. Further, in the event that OWNER desires dedicated parking spaces for any particular event or to provide parking validations to the Hotel guests or Hotel patrons, OWNER shall submit a request to CITY and CITY agrees to work cooperatively with OWNER to accommodate OWNER'S request based on availability and events at the

DRAFT

Convention Center and such parking fees and costs shall be borne and paid by OWNER, the Hotel guests or Hotel patrons using the parking spaces. OWNER shall pay to CITY any such parking fees and costs paid by Hotel guests and patrons to park in the CITY parking structure or surface parking which are collected by OWNER in its Hotel operations.

4.8.2. Pedestrian Bridge. A pedestrian bridge ("Bridge") spanning Holt Boulevard is estimated to cost $6.5M. This cost to design and maintain the Bridge shall be at CITY'S cost and expense. The cost to construct the Bridge, not to exceed such estimated cost, shall be split equally between CITY and OWNER if, and only if, the Bridge is completed and open to the public by December 31, 2026; otherwise, CITY will bear one hundred percent of the cost to construct the Bridge. Notwithstanding the aforementioned agreement to share the cost of to construct the Bridge, CITY retains and shall have all rights and sole discretion to design and construct such improvements on CITY'S timing for and scope of the completion of the bridge improvements that has been determined by CITY.

4.8.3. Guasti Road. CITY agrees to make road improvements Guasti Road adjacent to the Property in accordance with CITY standards for road improvements. CITY retains and shall have all rights and sole discretion to design and construct such improvements on CITY'S scope of the completion of the road improvements on Guasti Road that has been determined by CITY. OWNER shall complete the improvements on the parkway behind the curb and gutter as shown on **Exhibit "B"**.

4.8.4. Holt Boulevard. CITY agrees to make road improvements to Holt Boulevard adjacent to the Property in accordance with CITY standards for road improvements. CITY retains and shall have all rights and sole discretion to design and construct such improvements on CITY'S timing for and scope of the completion of the road improvements on Holt Boulevard that has been determined by CITY. OWNER shall complete the improvements on the parkway behind the curb and gutter as shown on **Exhibit "B"**.

4.8.5. Cucamonga Creek Flood Control Channel. Improvements to the Cucamonga Creek Flood Control Channel is not part of CITY'S Capital Improvement Program. To include any such improvements to CITY'S Capital Improvement Program, CITY shall have the right and sole discretion to design and construct such improvements on CITY'S timing and scope that has been determined by CITY.

4.9. Acquisition Properties. The acquisition of any of the Surrounding Properties or the Miller Property are subject to compliance with all applicable laws and regulations, including but not limited to, laws pertaining to land use approvals, subdivisions of land, budgetary considerations, environmental reviews and the acquisition and disposition of real property by CITY and any subsequent required discretionary approvals by the City Council of the CITY. Nothing contained herein this Section 4.9 of the Agreement shall mean that CITY is set on a certain course or action pertaining to the acquisition of any or all of the Surrounding Properties or the Miller Property.

4.9.1. Surrounding Properties. CITY is exploring and assessing the feasibility of establishing an entertainment and convention district, located generally around the Ontario Convention Center ("Convention Center"), the Ontario International Airport ("Airport") and the Property, which may be comprised of a mix of high density residential housing, entertainment, retail, hospitality and commercial office-oriented uses. This may include the acquisition of several properties in the areas and certain capital improvements and infrastructure as part of the

overall vision of creating key destination areas and high end amenities in this community to promote economic growth and development, whereby a number of properties surrounding the Convention Center have been preliminarily identified as potential sites for public purposes, as depicted in **Exhibit "H-1"** (individually or collectively, as applicable, "Surrounding Property").

In the event that CITY acquires any real property interest in the Surrounding Property located near the Convention Center , CITY conditionally grants OWNER, and OWNER shall have, a conditional first right of refusal to purchase any such Surrounding Property (whether now or later owned by CITY), subject to all applicable laws and regulations that must be complied with, including but not limited to, laws pertaining to land use approvals, subdivisions of land, budgetary considerations, environmental reviews and the acquisition and disposition of real property by CITY and provided the parties enter into a separate agreement or agreements for any Surrounding Property, subject to any subsequent required discretionary approvals by the City Council of the CITY. Notwithstanding the foregoing, the CITY retains all rights and discretion to use any or all of any acquired Surrounding Property for its own uses and purposes. Nothing contained herein this Agreement shall mean that CITY is set on a certain course or action pertaining to the Surrounding Property shown on **Exhibit "H-1"**, nor does it obligate CITY to purchase any of the Surrounding Property shown on **Exhibit "H-1"**, nor does it mean that CITY would be liable to OWNER should CITY not acquire any of the real property interests of said Surrounding Property shown on **Exhibit "H-1"**.

4.9.2. Miller Property. Separate from the Surrounding Property shown on **Exhibit "H-1"**, CITY acknowledges that it is material to OWNER'S development of the Hotel Project that certain real property and improvements thereon shown on **Exhibit "H-2"** (the "Miller Property") be available to OWNER by granting an option to acquire from CITY in the event that CITY may acquire the Miller Property. OWNER acknowledges that CITY desires to acquire the Miller Property for its own uses and public purposes, including but not limited to using it as a multi-modal transit hub or for another public purpose. As of the Effective Date, neither CITY nor OWNER own any portion of or interest in the Miller Property. CITY shall use commercially reasonable efforts to acquire the Miller Property directly from the current Miller Property owners by negotiated purchase; provided, that CITY determines by proper CITY procedures that acquisition of any or all of the Miller Property is necessary for its uses or projects. To the extent that the exact location for the interface between rail, bus, passenger vehicle, and active transportation to the Airport has not been determined by the San Bernardino County Transportation Authority ("SBCTA") and the Ontario International Airport Authority ("OIAA"), CITY shall use commercially reasonable efforts to acquire the entire site. If a portion of the Miller Property acquired is not developed for a public purpose, OWNER shall have the right to exercise an option (the "Option") to acquire within one (1) year of CITY'S acquisition at the price for which it was acquired. Should OWNER not exercise its option with one year, then OWNER shall have a first right of refusal, at the then-market price, for no more than two (2) years from the date of acquisition by CITY.

(a) Reservation of CITY Discretion. If CITY is unable to negotiate the purchase of the Miller Property between itself and the Miller Property owners, CITY may consider initiating eminent domain proceedings to acquire the Miller Property, subject to and in accordance with all applicable laws and procedures. It is expressly acknowledged, understood and agreed by the Parties that CITY undertakes no obligation to adopt any resolution of necessity, and does not prejudge or commit to any person regarding the findings and

determinations to be made by CITY with respect to any resolution of necessity. If CITY does not elect to or is unable to acquire title or the insurable right to possession of the Miller Property through exercise of its power of eminent domain or by negotiated purchase on or before [DATE], the Parties shall meet and confer for ninety (90) days to discuss in good faith alternative deal structures. If no such alternative is approved by the Parties within such ninety (90) day period, the Parties shall have no further obligations or liability to the other Party or to any person relative to the terms of this Section 4.9.2 in this Agreement and neither OWNER nor CITY shall be in Default under this Agreement.

(b) Independent Contract Consideration. Upon the Effective Date of this Agreement, OWNER shall deliver to CITY the sum of one hundred dollars ($100.00) ("Independent Contract Consideration"), which amount has been bargained for and agreed to as adequate consideration for OWNER'S option to purchase the Miller Property, or any portion thereof, during the time periods provided in Section 4.9.2 above and for CITY'S execution, delivery and performance of this Agreement. The Independent Contract Consideration is in addition to and independent of all other consideration provided in this Agreement and is nonrefundable to OWNER in all events.

(c) Exercise of Option. OWNER may exercise the Option, if at all, by delivering notice to CITY of OWNER'S intent to exercise the Option (the "Option Exercise Notice"). Upon CITY'S receipt of the Option Exercise Notice, the parties shall enter into a purchase and sale agreement for the applicable Option Property at the Option Price described below and on other terms and provisions consistent with the terms by which CITY acquired the Miller Property.

4.9.3. Insufficient Funds for Acquisition of Properties. In the event that CITY determines, in CITY'S sole and exclusive discretion, that CITY does not have sufficient funds to purchase any or all of the Surrounding Properties or the Miller Property, CITY shall provide Notice to OWNER of the amount that CITY requires to complete the acquisition of the Surrounding Properties or the Miller Property. OWNER may, but shall not be obligated to, provide the funds necessary to complete the acquisition of the Surrounding Properties or the Miller Property. If CITY determines that it has insufficient funds to acquire the Surrounding Properties or the Miller Property and Developer does not provide the funds necessary for CITY to acquire the Surrounding Properties or the Miller Property, CITY shall not be in default under this Agreement and shall be without liability to OWNER.

4.10. Signage. OWNER shall have the right to install and maintain or cause to be installed and maintained signage throughout the Hotel Project, and on improvements throughout the Hotel Project and other portions of the Specific Plan Area controlled or occupied by OWNER or any affiliate thereof in accordance with the Sign Program set forth in the Specific Plan and as shown on the Development Plan, including the right to engage in advertising and marketing using display messages or images, utilizing a series or grid of lights that may, be changed by electronic means, including without limitation cathode ray, LED display, plasma screen, liquid crystal display (LCD), LED embedded, architectural glass fiber optic, or other electronic media or technology.

5. FINANCING OF PUBLIC IMPROVEMENTS.

5.1. Financing Mechanism(s). If deemed appropriate and acceptable to OWNER in its sole and absolute discretion based on its feasibility for the Hotel Project, CITY and OWNER will

DRAFT

cooperate in the formation of any special assessment district, community facilities district or alternate financing mechanism to pay for the construction and/or maintenance and operation of public infrastructure facilities or Improvements required as part of the Development Plan. CITY also agrees that, to the extent any such district or other financing entity is formed and sells bonds in order to finance such infrastructure or Improvements, OWNER may be reimbursed to the extent that OWNER spends funds or dedicates land for the establishment of public facilities. Notwithstanding the foregoing, it is acknowledged and agreed by the parties that nothing contained in this Agreement shall be construed as requiring OWNER or CITY to form any such district or to issue and sell bonds.

6. REVIEW FOR COMPLIANCE.

6.1. Periodic and Special Reviews.

6.1.1. Time for and Initiation of Periodic Review. CITY shall review this Agreement every twelve (12) months from the Effective Date in order to ascertain the good faith compliance by OWNER with the terms of this Agreement. The OWNER shall submit an Annual Monitoring Report to CITY, in a form reasonably acceptable to the City Manager, along with any applicable processing charge within ten (10) days after each anniversary date of the Effective Date of this Agreement. Within thirty (30) days after the receipt of the Annual Monitoring Report, CITY shall review the Annual Monitoring Report. Prior to the expiration of the thirty (30) day review period, CITY shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of CITY'S intent to conduct a Special Review pursuant to Sections 6.1.2 through 6.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his designee. If CITY does not issue a notice of non-compliance within such thirty (30) day period, CITY shall be deemed to have issued a notice of compliance only for that year of review and shall not apply to any subsequent, future years in which a review and monitoring by be conducted by CITY.

6.1.2. Initiation of Special Review. A special review may be called either by agreement between the parties or by initiation in one or more of the following ways:

(a) Affirmative vote of at least four (4) members of the Planning Commission; or

(b) Affirmative vote of at least three (3) members of the City Council.

6.1.3. Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice that CITY intends to undertake a special review of this Agreement to OWNER. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

6.1.4. Public Hearing. The Planning Commission shall conduct a hearing at which OWNER must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue is upon OWNER.

6.1.5. Findings Upon Public Hearing. The Planning Commission shall determine upon the basis of substantial evidence whether or not OWNER has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

6.1.6. Procedure Upon Findings.

(a) If the Planning Commission finds and determines on the basis of

substantial evidence that OWNER has complied in good faith with the terms and conditions of this Agreement during the period under review, the review for that period is concluded.

(b) If the Planning Commission finds and determines on the basis of substantial evidence that OWNER has not complied in good faith with the terms and conditions of this Agreement during the period under review, the Planning Commission may recommend to the City Council to modify or terminate this Agreement.

(c) The OWNER may appeal a determination pursuant to paragraph (b) to the City Council in accordance with CITY'S rule for consideration of appeals in zoning matters generally.

6.2. Proceedings Upon Modification or Termination. If, upon a finding under Section 6.1.6(b), CITY determines to proceed with modification or termination of this Agreement, CITY shall give notice to the property OWNER of its intention so to do. The notice shall be given at least ten (10) calendar days prior to the scheduled hearing and contain:

6.2.1. The time and place of the hearing;

6.2.2. A statement as to whether or not CITY proposes to terminate or to modify this Agreement; and

6.2.3. Other information that CITY considers necessary to inform OWNER of the nature of the proceeding.

6.3. Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, OWNER shall be given an opportunity to be heard. The OWNER shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on OWNER. If the City Council finds, based upon substantial evidence in the administrative record, that OWNER has not complied in good faith with the terms and conditions of the agreement, the City Council may terminate or modify this Agreement and impose those conditions to the action it takes as it considers necessary to protect the interests of CITY. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

6.4. Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, OWNER is found to be in compliance with this Agreement, CITY shall, upon written request by OWNER, issue a Certificate of Agreement Compliance ("Certificate") to OWNER stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Planning Director and City Council that (1) this Agreement remains in effect and (2) OWNER is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. OWNER may record the Certificate with the County Recorder. Whether or not the Certificate is relied upon by assignees or other transferees or OWNER, CITY shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Planning Director or City Council.

7. DEFAULT AND REMEDIES.

7.1. Remedies in General. It is acknowledged by the parties that CITY would not have

DRAFT

entered into this Agreement if it were to be liable in damages under this Agreement, or with respect to this Agreement or the application thereof. Each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, except that CITY shall not be liable in damages to OWNER, or to any successor in interest of OWNER, or to any other person, and OWNER covenants not to sue for damages or claim any damages.

7.2. Specific Performance. The parties acknowledge that money damages and remedies at law generally are inadequate and specific performance and other non-monetary relief are particularly appropriate remedies for the enforcement of certain rights set forth in this Agreement and should be available for the following reasons:

7.2.1. Money damages are unavailable against CITY as provided in Section 7.1 above.

7.2.2 Due to the size, nature and scope of the Hotel Project, it may not be practical or possible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, OWNER may be foreclosed from other choices it may have had to utilize the Property or portions thereof. OWNER has invested significant time and resources and performed extensive planning and processing of the Hotel Project in agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Hotel Project in reliance upon the terms of this Agreement, and it is not possible to determine the sum of money which would adequately compensate OWNER for such efforts.

7.3. Release. Except for nondamage remedies, including the remedy of specific performance and judicial review as provided for in Sections 7.2 and 6.3, respectively, OWNER, for itself, its successors and assignees, hereby releases CITY, its officers, agents and employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon CITY because it entered into this Agreement or because of the terms of this Agreement.

7.4. Termination or Modification of Agreement for Default of OWNER. Subject to the provisions contained in Subsection 6.3 herein, CITY may terminate or modify this Agreement for any failure of OWNER to perform any material duty or obligation of OWNER under this Agreement, or to comply in good faith with the terms of this Agreement (hereinafter referred to as "default"); provided, however, CITY may terminate or modify this Agreement pursuant to this Section only after providing written notice to OWNER of default setting forth the nature of the default and the actions, if any, required by OWNER to cure such default and, where the default can be cured, OWNER has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

7.5. Termination of Agreement for Default of CITY. OWNER may terminate this Agreement only in the event of a default by CITY in the performance of a material term of this Agreement and only after providing written notice to CITY of default setting forth the nature of

the default and the actions, if any, required by CITY to cure such default and, where the default can be cured, CITY has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

8. THIRD PARTY LITIGATION.

8.1. General Plan Litigation. CITY has determined that this Agreement is consistent with its Comprehensive General Plan, as such General Plan exists as of the Effective Date ("General Plan"), and that the General Plan meets all requirements of law. OWNER has reviewed the General Plan and concurs with CITY'S determination. CITY shall have no liability in damages under this Agreement for any failure of CITY to perform under this Agreement or the inability of OWNER to develop the Property as contemplated by the Development Plan of this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

8.2. Third Party Litigation Concerning Agreement. OWNER shall defend, at its expense, including reasonable attorneys' fees, indemnify, and hold harmless CITY, its agents, officers and employees from any claim, action or proceeding against CITY, its agents, officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. CITY shall defend, at its expense, including reasonable attorneys' fees, indemnify, and hold harmless OWNER, its agents, officers and employees from any claim, action or proceeding against OWNER, its agents, officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. The parties shall promptly notify each other of any such claim, action or proceeding, and shall cooperate in the defense.

8.3. Indemnity. In addition to the provisions of Section 8.2 above, OWNER shall indemnify and hold CITY, its officers, agents, employees and independent contractors free and harmless from any liability whatsoever, resulting from the negligence or willful misconduct of OWNER, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury, or death (OWNER'S employees included) or any other element of damage of any kind or nature, relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, failure and conveyance of the public improvements, save and except to the extent of any claims for damages arising through the negligence or willful misconduct of CITY or any of its officers, employees, subcontractors and independent contractors. CITY shall cooperate with OWNER in the defense of any third party legal action.

8.4. Environment Assurances. OWNER shall indemnify and hold CITY, its officers, agents, and employees free and harmless from any liability, based or asserted, upon any negligent act or omission of OWNER, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns and independent contractors for any violation of any federal, state or local law, ordinance or regulation relating to the industrial hygiene or to environmental conditions on, under or about the Property, not complying with applicable law including, but not limited to, soil and groundwater conditions, and OWNER shall defend, at its

expense, including attorneys' fees, CITY, its officers, agents and employees in any action based or asserted upon any such alleged negligent act or omission. CITY shall cooperate with OWNER in the defense of any third party legal action.

8.5. Survival. The provisions of this Sections 8.1 through 8.5, inclusive, shall survive the termination of this Agreement.

9. MORTGAGEE PROTECTION.

The parties hereto agree that this Agreement shall not prevent or limit OWNER, in any manner, at OWNER'S sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Property. CITY acknowledges that the Mortgagees providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with OWNER and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. CITY will not unreasonably withhold its consent to any such requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

9.1. Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

9.2. The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, which Mortgagee, has submitted a request in writing to CITY in the manner specified herein for giving notices, shall be entitled to receive written notification from CITY of any default by OWNER in the performance of OWNER'S obligations under this Agreement.

9.3. If CITY timely receives a request from a Mortgagee requesting a copy of any notice of default given to OWNER under the terms of this Agreement, CITY shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to OWNER. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

9.4. Any Mortgagee who comes into possession of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of OWNER'S obligations or other affirmative covenants of OWNER hereunder, or to guarantee such performance; provided, however, that to the extent that any covenant to be performed by OWNER is a condition precedent to the performance of a covenant by CITY, the performance thereof shall continue to be a condition precedent to CITY'S performance hereunder, and further provided that any sale, transfer or assignment by any Mortgagee in possession shall be subject to the provisions of Section 2.4 of this Agreement.

9.5. Notwithstanding anything to the contrary in this Agreement, it shall be a condition of OWNER'S obligations to develop, construct and operate the Hotel Project that OWNER obtains construction financing from a Mortgage on commercially reasonable terms and provisions that make the Hotel Project feasible as determined by OWNER in its good faith judgment.

DRAFT

10. MISCELLANEOUS PROVISIONS.

10.1. Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the San Bernardino County Recorder by the City Clerk within the ten (10) days after CITY executes this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if CITY terminates or modifies the agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the San Bernardino County Recorder.

10.2. Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties with respect to the matters addressed in this Agreement, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

10.3. Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including the payment of the fees set forth therein, are essential elements of this Agreement and CITY would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

10.4. Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

10.5. Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

10.6. Singular and Plural. As used herein, the singular of any word includes the plural.

10.7. Joint and Several Obligations. Subject to Section 2.4, if at any time during the term of this Agreement the Property is owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of any such owner shall be the default of all such owners. Notwithstanding the foregoing, no owner of a single lot which has been finally subdivided and sold to such owner as a member of the public or otherwise as an ultimate user shall have any obligation under this Agreement except as provided under Section 4 hereof.

10.8. Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

10.9. Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

10.10. No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

10.11. Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods, earthquakes, other Acts of God, fires, wars, riots or similar hostilities, pandemics, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, court actions (such as restraining orders or injunctions), means the (i) the unavailability of labor or supplies; a governmental moratorium or similar prohibition on construction; or a major disruption to the national, regional or international economies, capital markets and/or real estate markets or other causes beyond the party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder shall be extended by the for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years**.**

10.12. Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

10.13. Successors in Interest. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof.

10.14. Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

10.15. Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of San Bernardino, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

10.16. Hotel Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Hotel Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and

DRAFT

that each party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between CITY and OWNER is that of a government entity regulating the development of private property and the owner of such property.

10.17. Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his powers and duties under this Agreement to an Assistant City Manager or other management level employee of CITY.

10.18. Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by CITY of its power of eminent domain.

10.19. Agent for Service of Process. In the event OWNER is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, OWNER shall file with the Planning Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon OWNER. If for any reason service of such process upon such agent is not feasible, then in such event OWNER may be personally served with such process out of this County and such service shall constitute valid service upon OWNER. OWNER is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto. OWNER for itself, assigns and successors hereby waives the provisions of the Hague Convention (Convention on the Service Abroad of Judicial and Extra Judicial Documents in Civil or Commercial Matters, 20 U.S.T. 361, T.I.A.S. No. 6638).

10.20. Estoppel Certificate. Within thirty (30) business days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured defaults in the performance of the requesting party, except as may be represented by the requesting party. OWNER shall pay to CITY all costs not to exceed $5,000, incurred by CITY in connection with the issuance of estoppel certificates under this Section 10.20 prior to CITY'S issuance of such certificates.

DRAFT

10.21 Authority to Execute. The person or persons executing this Agreement on behalf of OWNER warrants and represents that he or she/they have the authority to execute this Agreement on behalf of his or her/their corporation, partnership or business entity and warrants and represents that he or she/they has/have the authority to bind OWNER to the performance of its obligations hereunder.

10.22 Prevailing Wage. OWNER, for itself, and shall pass such obligation down to its successor and assigns, agrees, covenants and warrants that the development of the Property, if any, shall comply with all applicable federal and state labor laws (including, without limitation, the requirement under California law to pay prevailing wages and hire apprentices, applicable state prevailing wage requirements pursuant to Labor Code Sections 1720 et seq. and 1770 et seq., and the regulations pursuant thereto, ("Prevailing Wage Laws")), and all obligations as set forth herein with respect to any work performed on the Property and for the Hotel Project. CITY makes no representations concerning prevailing wages in compliance with California Labor Code Section 1770 et seq. OWNER acknowledges and agrees that it shall be responsible for reviewing the applicable laws and regulations with respect to the payment of prevailing wages and complying therewith. OWNER shall be solely responsible for determining and effectuating compliance with such laws. OWNER shall bear all risks of payment or non-payment of prevailing wages under California law and/or the implementation of Labor Code Section 1781, as the same may be amended from time to time, and/or any other similar law, with respect to the construction of improvements on the Property and the Hotel Project. OWNER shall indemnify, hold harmless and defends CITY, its officials, officers, employees, agents, from any and all claims, liabilities, penalties, damages, judgments, costs, expenses, and fees arising from, or out of, the acts or omissions of OWNER or any failure to comply with all applicable laws, rules or regulations pertaining to the Prevailing Wage Laws. The foregoing indemnity shall survive termination of this Agreement and shall continue after completion of the construction and development of the Hotel Project on the Property.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSP23-001, A SPECIFIC PLAN (EMPIRE GROVES) TO ESTABLISH THE LAND USE DISTRICT, DEVELOPMENT STANDARDS, GUIDELINES, AND INFRASTRUCTURE IMPROVEMENTS FOR THE DEVELOPMENT OF UP TO 600,000 SQUARE FEET OF HOSPITALITY AND COMMERCIAL LAND USES ON 10.43-ACRES OF LAND LOCATED ON THE SOUTHEAST CORNER OF GUASTI ROAD AND HOLT BOULEVARD AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 110-322-33

WHEREAS, DIVERSIFIED PACIFIC DEVELOPMENT GROUP, LLC ("Applicant") has filed an Application for the approval of a Specific Plan, File No. PSP23-001, as described in the title of this Ordinance (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 10.43 acres of land generally located on southeast corner of Guasti Road and Holt Boulevard, within the proposed Empire Groves Specific Plan; and

WHEREAS, the properties to the north of the Project site are within the CCS (Convention Center Support Commercial) zoning district and are developed with offices and hotel. The property to the east is within the UC (Utilities Corridor) zoning district and is developed with a flood control channel. The property to the south and west is within the CCS (Convention Center Support Commercial) zoning district, and is developed with hotel; and

WHEREAS, the Empire Groves Specific Plan serves to implement the City's Policy Plan for the project site and provides zoning regulations for development of the Project site by establishing permitted land uses, development standards, infrastructure requirements, and implementation requirements for the development of 10.43 acres within the Specific Plan boundaries. The Empire Groves Specific Plan proposes a land use plan that includes one Planning Area for the Project site, the Hospitality Mixed Use (PA1); and

WHEREAS, the Hospitality Mixed-Use combines hotel uses, ancillary services and amenities with local-serving commercial uses on a single property. At buildout, the total development allowed for the project site will be 600,000 square feet; and

WHEREAS, the Hotel use is the primary component of Hospitality Mixed-Use and will occupy the majority of the FAR of the development (553,124 square feet). The hotel use includes 600 guest rooms, office space for hotel administration, and may also include ancillary uses such as restaurants, bars, lounges, day spas, gyms, ballrooms and meeting rooms; and

WHEREAS, the local-serving retail uses (46,876 square feet) will be stand-alone uses not affiliated with the hotel and these businesses may include a combination of coffee shops, restaurants and retail that complement the hotel and convention center; and

WHEREAS, in conjunction with the Project, the Applicant also filed an application for a Development Agreement (File No. PDA23-005) between the City of Ontario and Diversified Pacific Development Group, LLC to establish the terms and conditions for the associated Development Plan (File No. PDEV23-039); and

WHEREAS, on February 25, 2025, the Planning Commission conducted a public hearing and approved Resolution No. PC25-006, recommending the City Council approve a Resolution adopting an Addendum to the Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the City Council on August 16, 2022, in conjunction with File No. PGPA20-002. The Addendum finds that the proposed project introduces no new significant environmental impacts. Furthermore, all mitigation measures previously adopted with the Certified Environmental Impact Report are incorporated into the Project by reference; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 25, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the SEIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC25-006, recommending the

City Council adopt the SEIR Addendum, and voting to issue Resolution No. PC25-008, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on March 18, 2025, the City Council approved a Resolution adopting an Addendum to a previous Certified EIR prepared pursuant to CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines, which indicated that all potential environmental impacts from the Project were less than significant or could be mitigated to a level of significance; and

WHEREAS, on March 18, 2025, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to TOP 2050 Supplemental Environmental Impact Report, certified by the City of Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002.

(2) The Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(5) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

(6) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all

mitigation measures previously adopted by the Certified EIR, are incorporated herein by this reference.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 4: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.*** The 10.43 Empire Groves Specific Plan is suitable for a hotel/commercial mixed-use development and is consistent with the goals and policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of TOP 2050.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed Empire Groves Specific Plan is in conformance with the Land Use Policies and Goals of the Policy Plan and will provide standards and guidelines for the harmonious development of the Project site, in a manner consistent with the Policy Plan. The Specific Plan is proposing hotel/commercial mixed-use development for the 10.43 acre site, which is what is mandated by the land use plan of the Policy Plan; therefore, the proposed land uses will not be detrimental to the public interest, health, safety, convenience, or general welfare of the City because it will provide land uses that are consistent with the existing and future development of the surrounding area.

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land***

uses. The proposed Specific Plan will establish a hotel/commercial land use, which aligns with the Project site and surrounding land uses planned in TOP 2050.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** Specific Plan will allow for hotel/commercial mixed-use on the subject site. When in conformance with the Specific Plan, the project site is suitable in size and shape, allows for sufficient access and availability of utilities to accommodate the anticipated development.

SECTION 5: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described Specific Plan, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 6: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 8: ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 9: ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 10: ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this _____ day of _____ 2025.

01 | Introduction

1.1 Project Location

The Empire Groves Specific Plan (project) site is situated in the southeastern quadrant of the intersection of East Holt Boulevard and East Guasti Road in the City of Ontario. The Specific Plan Area is a triangular plot of land spanning 10.43 acres.

To the north, it is bounded by Holt Boulevard, while East Guasti Road runs along its southern and southwestern edges. The eastern boundary is defined by an existing flood channel and the Cucamonga Creek Trail. To the south of the site lies the Ontario International Airport, which is separated by East Guasti Road, Airport Drive, and a set of railroad tracks. The Specific Plan Area has direct access from Interstate 10 (I-10), situated to the north of the site.

Directly north of the Specific Plan Area, across East Holt Boulevard, is the Frontier Center office building and the Holiday Inn. To the northwest is the Ontario Convention Center, and to the west is the Ontario Gateway Hotel.

The regional project location is shown in **Figure 1**, while **Figure 2** provides the local context. There are several hotels, office buildings, and car dealerships within a 1-mile radius of the Specific Plan Area as seen in **Figure 3.** The Specific Plan Area assessor's parcel number is 11032233.

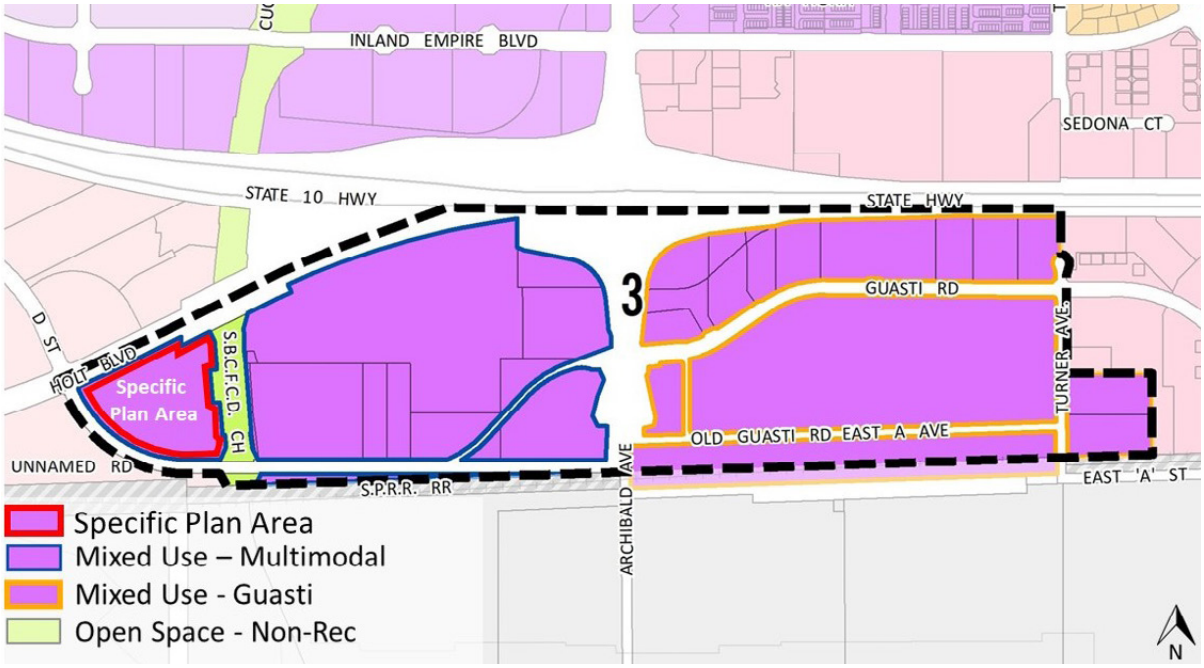
1.2 The Vision

The vision of the project is as follows:



> ***"Establish a world-class hotel development that serves as a central hub, offering exceptional amenities, exclusive experiences, and a renowned brand. This hotel project will serve as a catalyst for the advancement of neighboring areas, fostering meaningful connections by promoting the revitalization of roadways and trails surrounding the Specific Plan Area."***

The Specific Plan Area is part of the Guasti District, according to the Community Design Element (CD-05 Guasti District Place Type) of the General Plan (also called The Ontario Plan). The district is envisioned to preserve and enhance the historic buildings as the focal point of a vibrant mixed-use area. The district will include intense office, commercial, and lodging uses along the I-10 corridor, and appropriately scaled residential, office, commercial, and lodging near the Guasti Village historic district core. The multimodal mixed-use area within the Guasti District is intended to leverage proximity to the future multimodal transportation center and link the Ontario Convention Center, Guasti compound , and Ontario International Airport through strong physical and visual design.

Further, the Guasti District is adjacent to the Entertainment District to the east, which is envisioned as a large-scale regional entertainment hub, leveraging attractions such as the Toyota Arena and Ontario Mills, and supported by a variety of retail and dining options alongside high-intensity office and residential development. This area will evolve into a walkable urban center through the addition of mixed-use infill development, a pedestrian-oriented road and trail network, key public realm improvements, and multiple transit options.

The critical infrastructure surrounding the Specific Plan Area provides connectivity between these districts and other parts of the City and includes easy access to I-10, major arterial streets, Ontario station, planned airport loop, existing BRT lines, Metrolink lines, and the airport. The development in the Specific Plan Area could spur future growth in the area and encourage further infrastructure investments and connectivity. Some ideas for infrastructure projects include the following:

Figure 4: Guasti District Extents - Community Design Element

Source: City of Ontario

- As a direct connection to the Convention Center and freeway, this high-traffic area could transform into a place to be enjoyed either by car or on foot, with interpretive/ kinetic art and grand gestures of innovative placemaking.

- Holt Boulevard could transform with the addition of tree-lined sidewalks, a landscaped median, outdoor seating areas, and kiosks. To enhance the area's appeal, digital beacons and adaptable signage within the median could create a distinct gateway effect.

- Guasti Road could be transformed into a multimodal roadway with sidewalks, and bike lanes. This road can also be used as an occasional pedestrian-only zone for pop-up events, markets, and street takeovers.

- A portion of the flood control channel could be re-imagined as a multimodal greenway that promotes outdoor activity. The greenway's potential is vast, with eight miles of northbound trail that end at the Rancho Cucamonga Creek trailhead.

Given the multitude of critical infrastructure components that could be implemented in the region, along with the visionary City planning efforts already in progress, this area is well-positioned for development projects that will optimize the region's potential for future growth.

1.3 Specific Plan Purpose

The Empire Groves Specific Plan establishes land use regulations, development standards, and design guidelines tailored to the unique goals of the hotel and retail development envisioned at this particular location. The Specific Plan defines the uses that are permitted and their locations, as well as design guidelines for buildings and related on-site improvements. The Specific Plan ensures that the area develops in a coordinated manner with adequate consideration of infrastructure, services, public safety, and project financing. The purpose of the Specific Plan is to:

- Provide a planning framework that responds to the physical and market-driven aspects of future development opportunities.

- Reclaim the site and transform it into a visually attractive living, working, and shopping environment.

- Determine the appropriate location, maximum intensity, and mix of uses through new development parameters.

- Encourage compatible land uses and interfaces with adjacent properties.

- Conform to state laws and local ordinances and policies for the preparation of specific plans.

1.4 Community Benefits

There are several community benefits to building a hotel complex with a retail component in the City of Ontario.

- Construction and operation of the hotel complex will create job opportunities for local residents, including positions in hospitality, retail, management, and maintenance.

- The inclusion of retail spaces can support local entrepreneurs and small businesses by providing them with platforms to showcase and sell their products or services.

- The development will generate tax revenue for the City, contributing to public funds for essential services like education, infrastructure, and public safety.

- A well-located and easily accessible hotel complex such as this will attract visitors and is a great candidate for hosting events and conferences, further benefiting local businesses and the economy.

The development of a hotel complex can also attract additional investment in the area, spurring further development and leading to improvements in local infrastructure, including road upgrades, sidewalks, and public transportation facilities, ultimately enhancing the overall cityscape as discussed in the Vision.

Public spaces within the complex can serve as gathering spots for residents and visitors, contributing to a sense of community. The presence of a well-maintained hotel complex can positively impact property values in the surrounding area.

1.5 California Environmental Quality Act Compliance

A CEQA analysis was conducted according to the City's Environmental Review Update Checklist Form for Projects with Previously Approved Environmental Documents to evaluate potential impacts resulting from the implementation of this Specific Plan. It was determined that the certified Final Environmental Impact Report (EIR) previously prepared to evaluate the General Plan update adequately covers this Specific Plan's potential impacts. Therefore, an Addendum to the Final EIR was determined to be the appropriate CEQA document to analyze this Specific Plan. The Addendum concluded that, since the General Plan update EIR was certified, there are no changes in the project, changes in circumstances under which the project is undertaken, and/or "new information of substantial importance" that would cause one or more significant effects.

1.6 Project Objectives

The Empire Groves Specific Plan reflects the City of Ontario's long-term objectives, which include the expansion of the City's economic base consistent with maintaining and enhancing the high quality of life for all residents. The following objectives, achieved through the implementation of the Specific Plan, have been identified as applicable to the project:

High-Quality Development: Implement high-quality development through the adoption of this Specific Plan that will provide a world-class hotel and local retail in this area.

Flexible Standards: Provide flexible standards that permit limited modifications between retail, restaurant, and hotel spaces that align with the ever-changing market conditions and allow for long-term financial stability.

Placemaking: Create a series of attractive, interconnected gathering spaces, including rooftop gardens, outdoor dining spaces, gardens, meadows, courtyards, pools, lounges, and other outdoor facilities to meet the recreational and social needs of visitors and guests.

Adequate Parking: Provide flexible parking standards to encourage parking facilities that sufficiently meet the parking demand for all uses at all times.

Reduce Per-Capita VMT: Design and locate new development adjacent to existing transportation infrastructure and services to reduce the need for vehicle trips and to minimize the distance of vehicle trips typically made by automobile.

1.7 Specific Plan Authority and Requirements

1.7.1 Authority

The California Government Code establishes the authority for a legislative body to adopt an ordinance or resolution requiring that a specific plan be prepared. As with general plans, the Planning Commission must hold a public hearing before the planning agency can recommend the adoption of a specific plan. The City Council may then adopt a specific plan by ordinance or resolution.

The Empire Groves Specific Plan is regulatory in nature and serves as zoning for the properties involved. Development plans, site plans, and tentative tract and parcel maps must be consistent with both the Empire Groves Specific Plan and the City of Ontario's General Plan, as amended.

The Empire Groves Specific Plan is prepared and established through the authority granted to the City of Ontario by the California Government Code, Title 7, Division 1, Chapter 3, Article 8, Sections 65450 through 65457 (Specific Plans). The City Code does not have any additional specific content requirements beyond that required by the Government Code.

1.7.2 Government Code Requirements

According to Section 65451, "a specific plan shall include a text and a diagram or diagrams which specify all of the following in detail:

- The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.
- The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.
- Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.
- A program of implementation measures including regulations, public works projects, and financing measures necessary to carry out the project.
- The specific plan shall include a statement of the relationship of the specific plan to the general plan."

1.8 Relationship to Planning Documents

1.8.1 General Plan

In accordance with the California Government Code, the adoption and administration of specific plans are permitted as an implementation tool of a general plan. Specific plans must demonstrate consistency with the policies set forth in the general plan. An analysis of how the Empire Groves Specific Plan is consistent with the policies in the City's General Plan is contained in **Appendix A**. A General Plan Amendment will be requested as part of the project application to change the land use designation from Multimodal Mixed Use to a Specific Plan.

1.8.1.1 General Plan Policy Guidance

The following General Plan policies are useful in providing direction for the project and supporting the project objectives:

1.8.1.1.1 Land Use Element

Policy LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

Policy LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

Policy LU-2.11 Context-Aware Transitions and Connections. We require new development projects and land-planning efforts to provide context-aware and appropriate transitions and connections between existing and planned neighborhoods, blocks, sites, and buildings.

1.8.1.1.2 Mobility Element

Policy M-2.1 Active Transportation. We maintain our Active Transportation Master Plan to create

a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.

Policy M-2.3 Pedestrian Walkways. We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.

Policy M-2.4 Network Opportunities. We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed-use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.

1.8.1.1.3 Housing Element

Policy H-2.3 Ontario Airport Metro Center. We foster a vibrant, urban, intense, and highly amenitized community in the Ontario Airport Metro Center Area through a mix of residential, entertainment, retail, and office-oriented uses.

1.8.1.1.4 Community Economics Element

Policy CE-1.8 Regional Attraction. We encourage the development and programming of regional, cultural, and entertainment destinations in Ontario.

Policy CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

1.8.1.1.5 Community Design Element

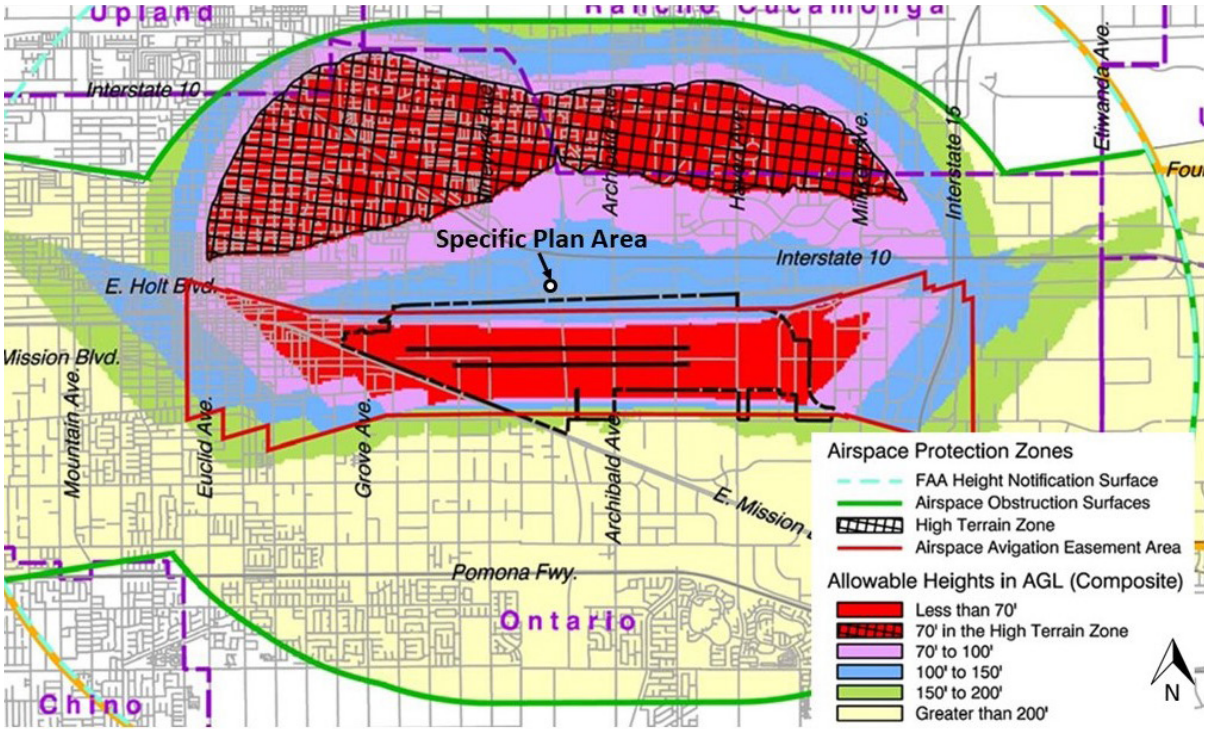
Goal CD-1 A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

Policy CD-1.1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

Goal CD-2 A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.

Policy CD-3.1 Unique Identity. We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.

Policy CD-3.4 Context-Aware and Appropriate Design. We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.



1.8.2 Zoning Code

Per the provisions of state law, the Specific Plan will establish the zoning and regulations for the site. In situations where the Specific Plan is silent, the City of Ontario's Zoning Code will prevail. The site is currently zoned as Specific Plan (SP) and will refer to this document for the development of the site.

1.8.3 Ontario Airport Land Use Compatibility Plan

The Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) was adopted by the Ontario City Council on April 19, 2011. The basic function of the ONT ALUCP is to promote compatibility between ONT and the land uses that surround it. In accordance with state law, the ONT Airport Influence Area encompasses all lands that could be negatively impacted by ONT's present, or future aircraft operations or land uses that could negatively affect ONT's airport operations. The project area is located within the noise impact and airspace protection zones of the ONT ALUCP. All development proposals are required to be consistent with

Figure 5: Compatibility Policy Map - Airport Protection Zones

Source: Ontario International Airport Land Use Compatibility Plan, Policy Map 2-4

the Ontario International Airport Land Use Compatibility Plan policies and criteria.

In addition to safety and noise, the plan evaluates airspace protection compatibility to prevent creation of land use features that can be hazards to aircraft in flight and have the potential for causing an aircraft accident to occur. One such hazard is building height. To determine the allowable heights of future objects, the underlying ground elevation is compared with the elevation of the controlling portions of the Federal Aviation Regulations Part 77, Terminal Instrument Procedures, and One-Engine Inoperative surfaces. These are depicted as color bands in **Figure 5**. Each color band represents a range of distance, measured in vertical feet, between the ground and overlying surface.

The Specific Plan Area falls in an allowable height range of 100 to 150 feet. Based on the plan policies, the project proponent shall submit notification of the proposal to the Federal Aviation Administration, as required by the provisions of Federal Aviation Regulations Part 77, Subpart B, and by the California Public Utilities Code, Sections 21658 and 21659.

1.9 Specific Plan Organization

This Specific Plan is organized into the following six chapters.

Chapter 1 | Introduction

This chapter explains the role and function of specific plans. It articulates the vision and a synopsis of the community advantages that may accrue through the execution of this project. This chapter also delineates the Specific Plan's extent and authority, its adherence to the California Environmental Quality Act (CEQA), and its alignment with the City's General Plan and Zoning Ordinance, as well as the overarching guidance provided by General Plan policies. Moreover, this chapter establishes the groundwork for the subsequent chapters by elucidating the purpose and objectives of this Specific Plan.

Chapter 2| Existing Conditions

This chapter includes an analysis of the current conditions, encompassing the surrounding environment, land use, zoning, topography, geology, flooding, and noise levels.

Chapter 3| Development Plan

This chapter outlines the comprehensive land use framework, encompassing a summary of the project, and infrastructure plans, covering circulation, water supply, sewage, recycled water, and dry utilities.

Chapter 4| Development Standards

This chapter serves as the authoritative document that delineates the specific land use designations and regulatory guidelines for this Specific Plan. Upon the formal adoption of this Specific Plan, the provisions related to land use and development standards outlined in this chapter will assume the status of official zoning regulations for the designated area.

Chapter 5| Design Guidelines

This chapter outlines the fundamental guiding principles that underpin the architectural and urban design aspects of the Specific Plan. These guidelines are intended to provide a comprehensive framework for the aesthetic and functional aspects of the project, ensuring a harmonious and purposeful development that aligns with the overarching vision of the Specific Plan.

Chapter 6 | Implementation

This chapter outlines the guidelines for overseeing and administering the Specific Plan's development, encompassing procedures for amendments, the equivalency program, and the prioritization of implementation.

02

Existing Conditions

2.1 Existing Land Use

The Specific Plan Area is currently vacant land with no temporary or permanent structures. There is, however, some vegetation and trees on the site. **Figure 6** shows images of the existing site.

2.2 Existing General Plan Land Use

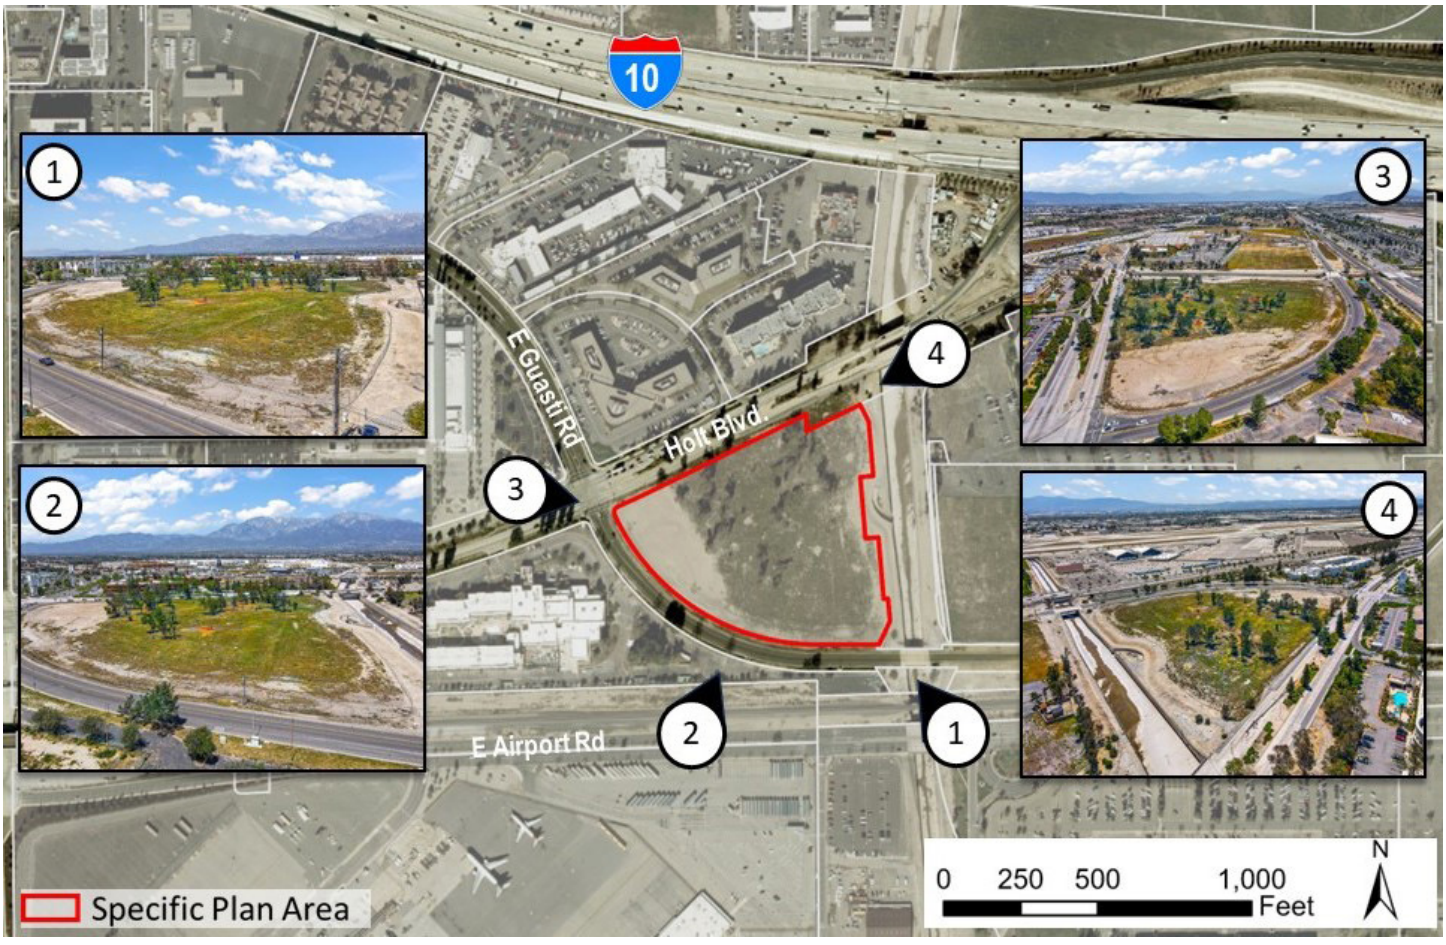
According to the City's General Plan Land Use Element, the Specific Plan Area has a Mixed Use–Multimodal land use (refer to **Figure 7**). The Specific Plan Area also falls in the Ontario Airport Metro Center Overlay (refer to **Figure 8**).

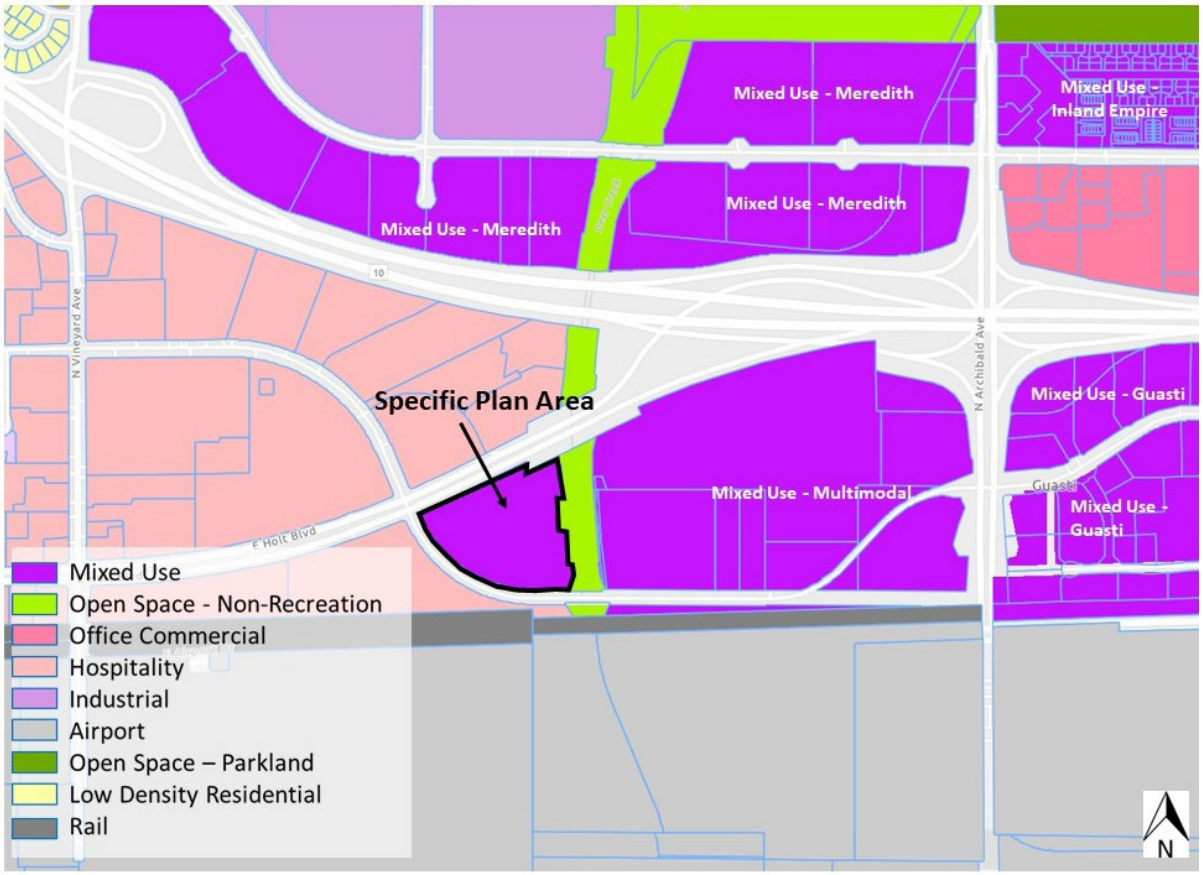
2.2.1 Multimodal Mixed-Use

The future multimodal transit station is under consideration within the Mixed-Use Area, which will link rail, regional, local, and airport transit. Intensive office, retail, and residential uses are envisioned to be integrated with the transit station. The transit center is envisioned as an iconic, convenient, and intuitively designed multimodal transportation center that will serve the City of Ontario and the region at large.

According to the General Plan full buildout summary, the total acreage under the Multimodal Mixed-Use Area (west of Archibald Avenue and south of I-10) is 72.56 acres, of which 10.43 acres fall in the Specific Plan Area. It is estimated that the entire Multimodal Mixed-Use area will absorb a total of 2,449,727 square feet of nonresidential development and will create 5,993 jobs. Of this, 553,124 square feet is allocated to lodging and the rest to retail and office development. The area will have an allowable density of 20.0 to 80.0 dwelling units per acre.

Figure 6: Existing Site Aerial and Context Photos





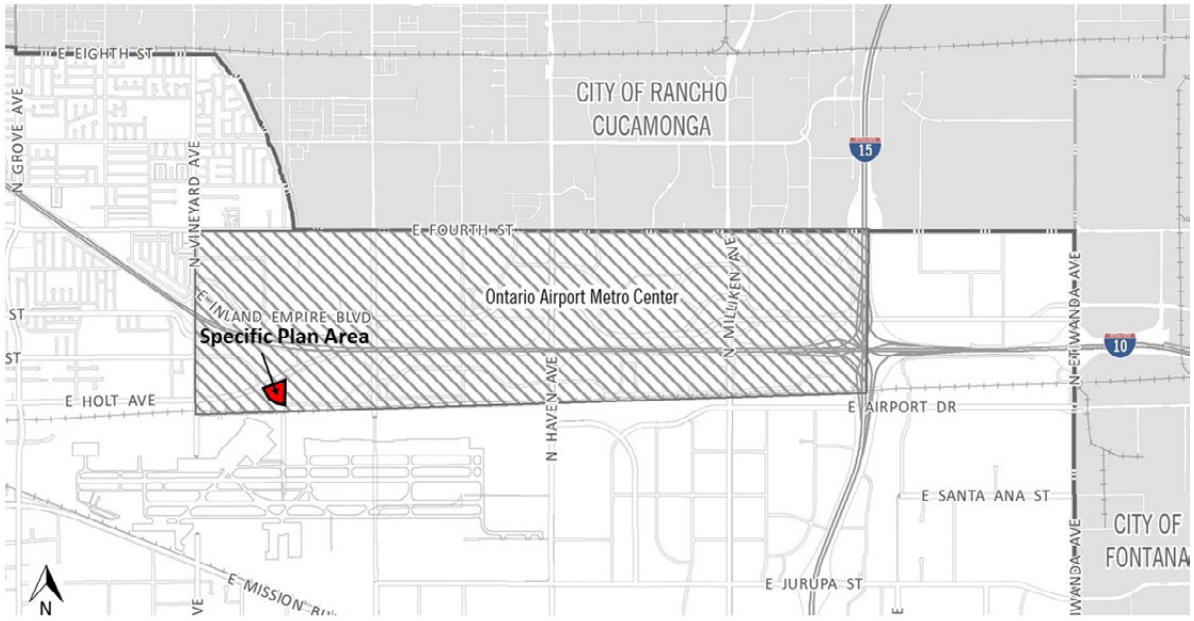


Figure 7: Existing General Plan Land Use

Source: City of Ontario

Figure 8: Existing Ontario Airport Metro Center Overlay

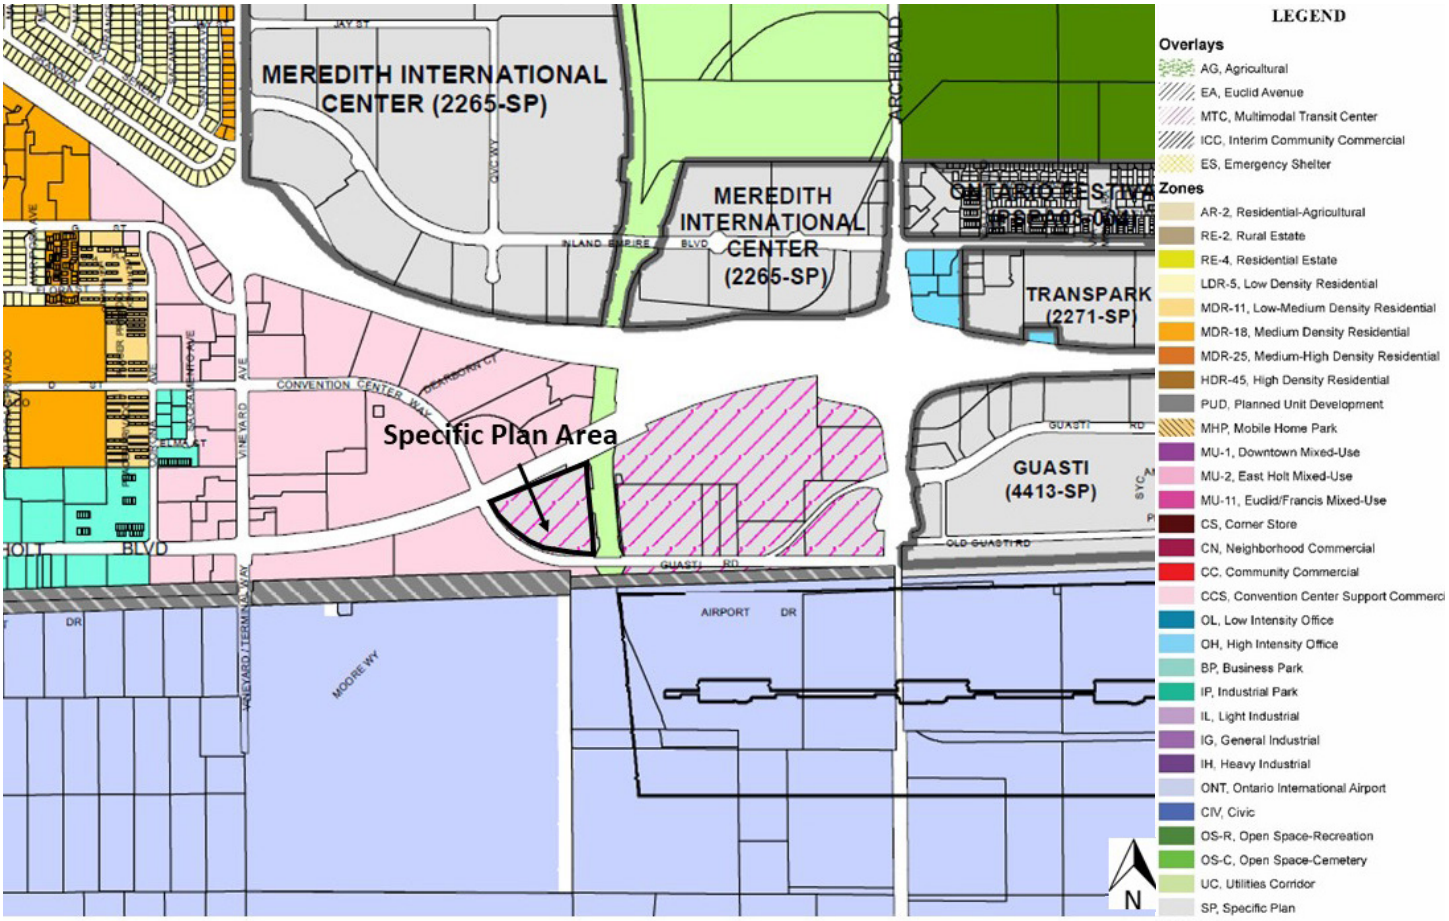
Source: City of Ontario

2.2.2 Ontario Airport Metro Center Overlay

The Ontario Airport Metro Center Overlay is envisioned as the most intensive area in the County with a vertical and horizontal mixture of regional-serving retail, office, restaurant, entertainment, cultural, and residential uses in low- to mid-rise buildings (i.e., 3-10 stories).

2.2.3 Surrounding Land Uses

The surrounding land uses include Hospitality (HOS) on the west with a floor area ratio (FAR) of 1:00; Mixed Use–Multimodal (MU-Multimodal) on the east of Specific Plan Area with a density of 20.0 to 80.0 dwelling units per acre and FAR of 1.0; Mixed Use - Meredith (MU-Meredith) in the north with a density of 14.0 to 125.0 dwelling units per acre and FAR of 3; and Airport (ARPT) in the south (refer to **Figure 7**).



2.3 Existing Zoning

According to the City's Zoning Map, the existing zoning for the Specific Plan Area is a Specific Plan Zone with a Multimodal Transit Center overlay zone. Below are the descriptions of these zones.

2.3.1 SP (Special Plan) Zoning District

The SP zoning district is established to accommodate the adoption of specific plans pursuant to Exhibit LU-05 Overlay Areas (Additional Plans Map) of the Policy Plan component of The Ontario Plan. All land uses, activities, and facilities within the SP zoning district shall only be allowed pursuant to the applicable Specific Plan document.

Figure 9: Existing Zoning

Source: City of Ontario, The Ontario Plan 2050

2.3.2 MTC (Multimodal Transit Center) Overlay District

The Mhe MTC Overlay District was established to allow for the interim use of existing buildings located within the overlay district boundary (established pursuant to Paragraph 5.01.010.F.4 [MTC Overlay District] of the Development Code), while at the same time preserving the City's vision for development of a multimodal transit center and supporting mixed-use development. To this end, the below-listed land uses are permitted within existing buildings in the MTC Overlay District:

- General warehousing, storage, and distribution trades.
- Wholesale trades.
- Retail trades limited to 15 percent of the building's gross floor area or 8,000 square feet, whichever is less.
- Office administrative and business support services.
- Other uses approved by the Planning Director or his/her designee that are similar in nature to those uses listed above, provided all activities are wholly contained within the building and do not have the potential to negatively impact properties in the vicinity, or are inconsistent with the Vision and Policy Plan components of The Ontario Plan.

The Specific Plan Area is surrounded by parcels designated as a Specific Plan Zone with MTC overlay in the east and a CCS (Convention Center Support) Commercial Zone to the north, west, and south. Properties farther south are zoned RC (Railway Corridor) and Airport.

2.4 Topography

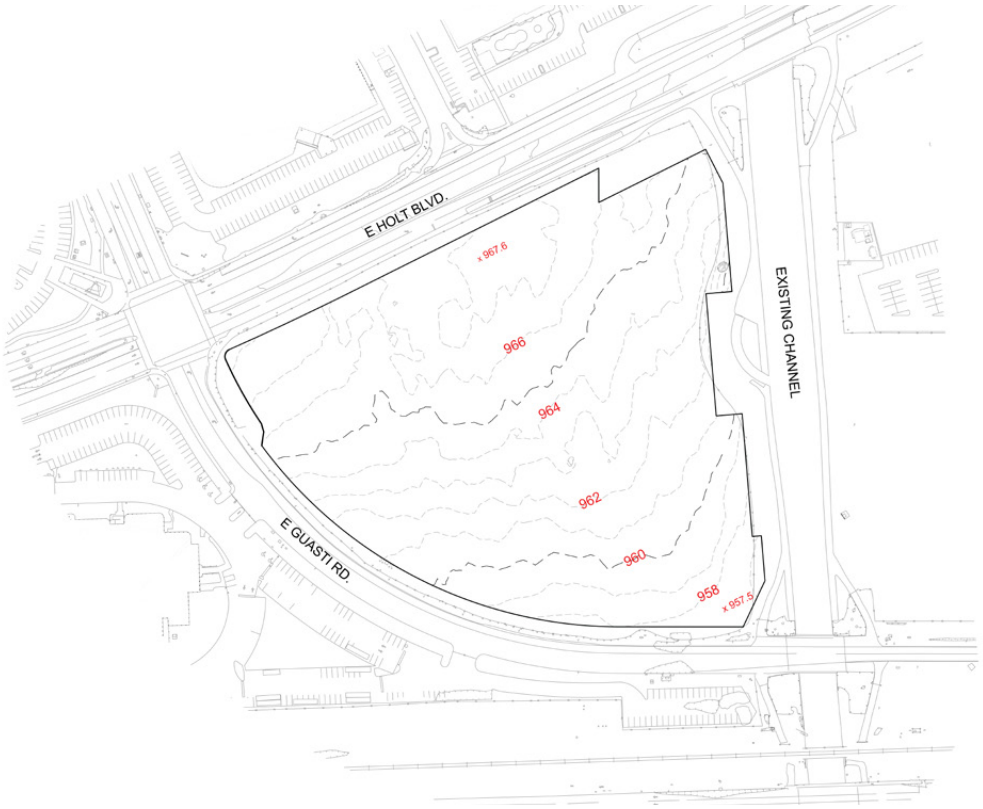
The Specific Plan Area is relatively flat with an approximately 1.25 percent slope from the north to the south (refer to **Figure 10**). The site elevation ranges from approximately 968 feet to 957 feet above mean sea level.

2.5 Geology and Soils

2.5.1 Fault Zones

The Specific Plan Area is not located within the boundaries of an earthquake fault zone for fault rupture hazards as defined by the Alquist-Priolo Earthquake Fault Zoning Act or identified in The Ontario Plan. The Alquist-Priolo Earthquake Fault Zoning Act is a California state law designed to reduce the risk of damage to building structures on or near active earthquake fault zones. The California Department of Conservation, in cooperation with local governments, is responsible for mapping the location of active earthquake fault zones. The act prohibits the construction of critical facilities (e.g., schools, and hospitals) and limits the construction of residential buildings within the mapped zones. The nearest earthquake fault zone is the Sierra Madre fault zone, which is more than 6 miles north of the Specific Plan Area. No other faults have been mapped in the City of Ontario, according to the City's General Plan.

2.5.2 Land Subsidence



Land subsidence due to groundwater pumping is a gradual sinking or settling of the earth's surface caused by the excessive extraction of groundwater from underground aquifers. When groundwater is pumped from these aquifers at a rate faster than it can naturally be replenished, it creates a void or space underground.

Land subsidence due to groundwater pumping has been a long-standing issue in various parts of California, including Ontario. California's San Gabriel Valley, where Ontario is located, has experienced land subsidence as a result of excessive groundwater extraction for several decades. The entirety of the Specific Plan Area, similar to the majority of Ontario, is susceptible to land subsidence due to groundwater pumping.

2.5.3 Soils

The Specific Plan Area is underlain by Pleistocene/Holocene-aged Tujunga soils that typically develop from alluvial deposits, which are sediments carried and deposited by water,

Figure 10: Topography

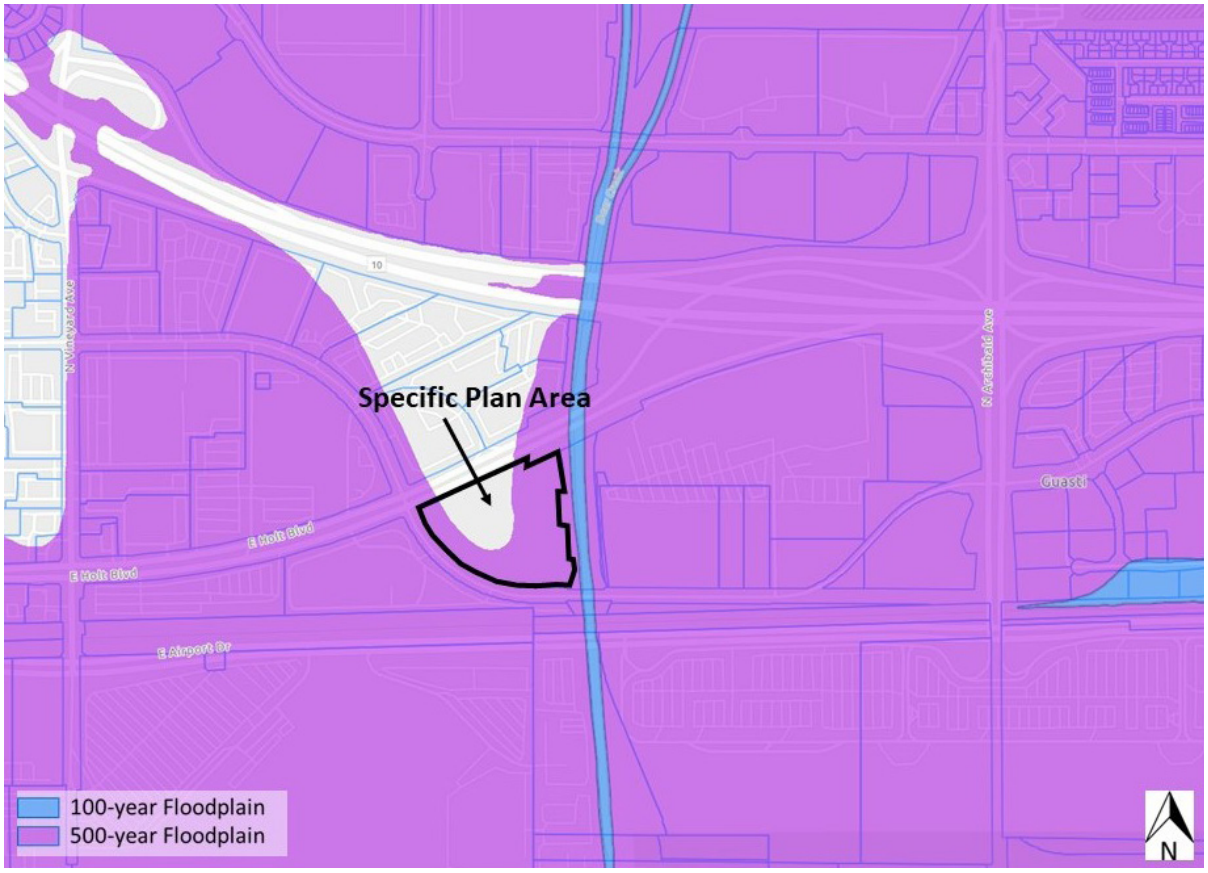
often in areas near rivers, streams, or floodplains. The Tujunga soil series generally features a loamy texture, which means it has a balanced mixture of sand, silt, and clay. This texture is often suitable for agriculture and gardening. They usually have good to moderate drainage properties, making them suitable for a variety of land uses.

2.6 Flooding

2.6.1 FEMA Floodplain

The majority of the Specific Plan Area, as shown in **Figure 11**, is in a Federal Emergency Management Agency (FEMA) designated 500-year floodplain. The FEMA 500-year floodplain is a designated area that represents the land area at risk of flooding during a severe flood event with a 0.2 percent annual probability of occurrence, which is roughly equivalent to a 1-in-500 chance of occurring in any given year. This means that, on average, it has a low annual probability (0.2 percent) of occurring; such a flood might be expected to happen once every 500 years.

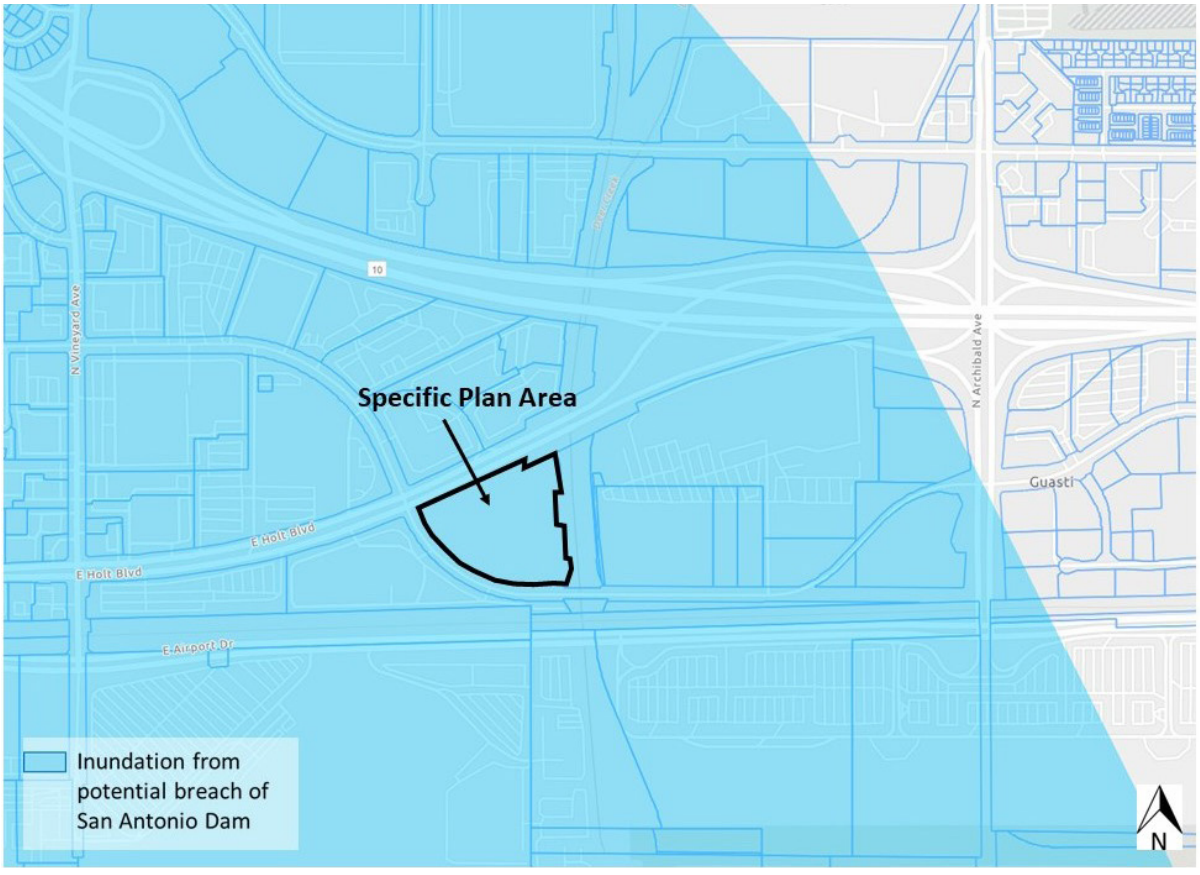
2.6.2 Dam Inundation



San Antonio Dam is an embankment flood control and debris dam on San Antonio Creek in San Bernardino County, California, about 5 miles (8.0 kilometers) north of Ontario. A potential breach of this dam could inundate most of the City, including the Specific Plan Area (refer to **Figure 12**). The reservoir behind the dam is usually dry but can fill up after large flooding events. The dam is owned by the US Army Corps of Engineers, Los Angeles District. The City periodically coordinates with the dam owners to monitor the condition of the dam.

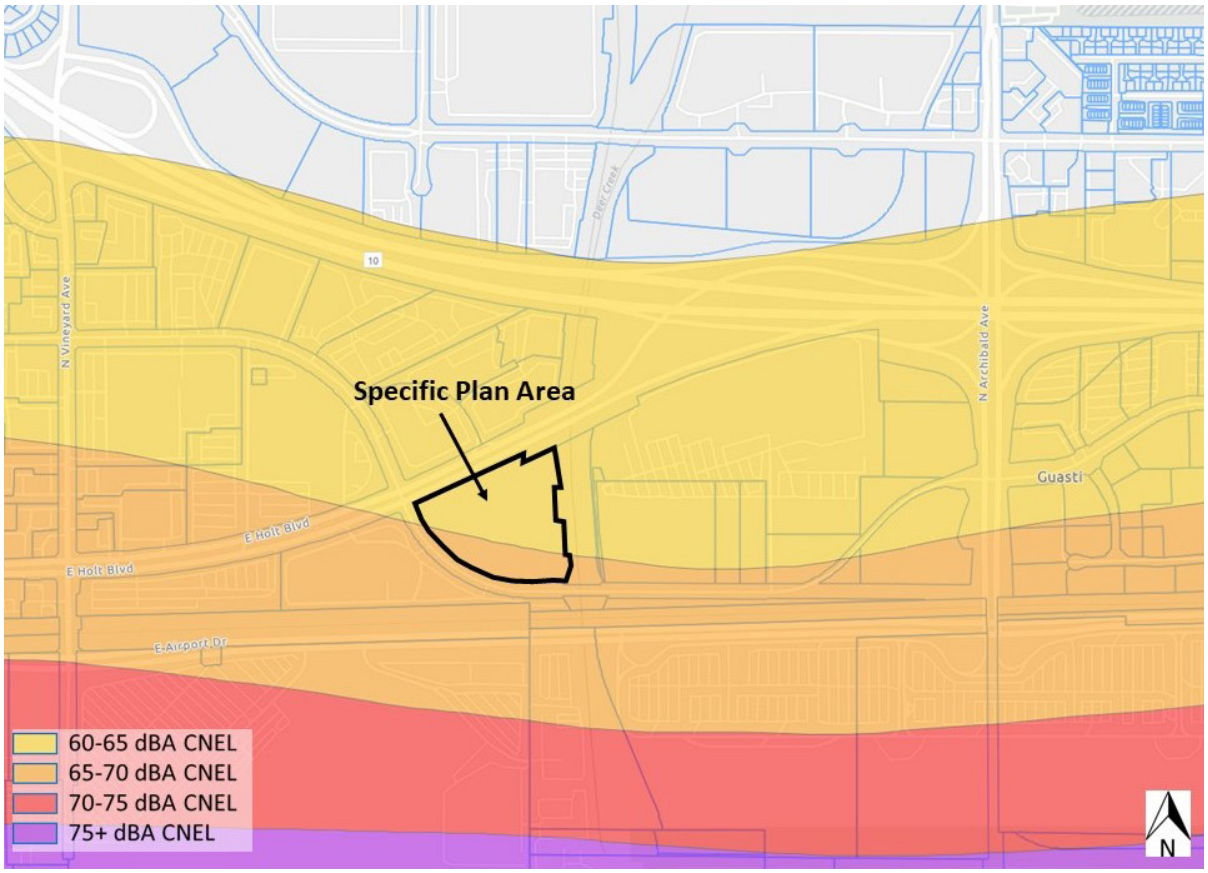
2.6.3 Existing Storm Water and Drainage

The site is located immediately west of the Cucamonga Creek Channel. This fully improved facility provides regional flood control and storm conveyance to the surrounding area.



A 108" diameter storm drain extends westerly from the Cucamonga Creek Channel just south of Guasti Road. This facility provides storm conveyance for the adjacent property.

Figure 11: Floodplain



Source: City of Ontario, The Ontario Plan 2050, Safety Element

Figure 12: Dam Inundation

Source: City of Ontario, The Ontario Plan 2050, Safety Element

Figure 13: Noise Levels from Ontario Airport

Source: City of Ontario, The Ontario Plan 2050, Safety Element

The City of Ontario Master Plan of Drainage indicates a future 60" Storm Drain will be constructed within Holt Boulevard along the project frontage.

2.6.4 Existing NPDES Compliance

The project site is currently vacant / undeveloped and not subject to NPDES compliance.

2.7 Noise Levels

The City's Zoning Code provides exterior noise standards for the allowed equivalent noise levels for lodging facilities to be up to 70 dbA. The equivalent noise level is a measure used to represent a constant noise level over a specified period, usually one hour. It is a way of expressing a varying noise environment as a single, constant level for ease of comparison. The General Plan update also provides the existing noise level contours from traffic, railroad, and airport, all of which are within acceptable ranges. Noise from Ontario Airport is shown in **Figure 13**.

03

Development Plan

3.1 Introduction

The Development Plan provides for the development of vibrant communities that allow for a variety of lodging, commercial, entertainment, and open space opportunities that expand the Guasti area and strengthen the City of Ontario's economy. To achieve this, this Specific Plan encourages a variety of complementary land uses and community-accessible amenities and services to establish the Specific Plan Area as a key activity node.

This chapter provides the framework to guide the development in the Specific Plan Area and identifies the land uses, circulation, and infrastructure that implement the vision of the Empire Groves Specific Plan. It is important to note that even though the discussion and exhibits in this chapter are intended to guide development within the Specific Plan Area, the exhibits provided herein are conceptual in nature and may change, subject to the requirements in this Specific Plan.

3.2 Land Use Plan

The Specific Plan consists of one planning area (PA1)–Hospitality Mixed Use (refer to **Figure 14**).

3.2.1 Hospitality Mixed-Use

Hospitality Mixed-Use refers to a development that combines hotel uses, ancillary services and amenities with local-serving commercial uses within a single property. The allowable uses are listed in **Table 3**.

Integrating hotel uses with local-serving retail offers several benefits including, increased foot traffic, enhances guest experiences, and stronger community engagement. Additionally, it can lead to economic benefits and greater sustainability and efficiency. Hotels focus on providing hospitality and amenities for guests, while local-serving retail emphasizes practicality and convenience for both visitors and local residents. Combined, these uses create a dynamic, mutually beneficial environment that enhances the appeal and functionality of both. The area allotted to each use can be found in **Table 1.**

3.2.1.1 Hotel Uses (553,124 SF)

Hotel use is the primary component of Hospitality Mixed-Use and should occupy the majority of the FAR of the development. This includes guest rooms, office space

Figure 14: Land Use Map

Table 1: Buildout of Empire Groves Specific Plan

AREAS	TOTAL SQUARE FEET	NOTES
Hotel Use	553,124	See chapter 3.2.1.1 and Table 3 for details.
Local-Serving Retail	46,876	See chapter 3.2.1.2 and Table 3 for details.
Total Square Feet	600,000	
Note: The project FAR is based on gross project acreage of 10.43. Covered outdoor areas are calculated towards FAR but not towards parking calculation. Utility areas and parking are not calculated towards FAR and include all areas below grade, including parking, central plant, transformer yard, bicycle parking, main electrical/emergency/generator rooms, loading docks, trash rooms, vertical shafts, and stairs as well as spaces above grade including mechanical rooms, vertical shafts, and parking.		

Figure 15: Street Plan

Source: City of Ontario, The Ontario Plan 2050, Mobility Element

for hotel administration, (MAX SF-basic lodging 553,124SF) and may also include restaurant(minimal SF), bars, lounges, day spas, gyms, ballrooms, meeting rooms, and more (see **Table 3**).

At buildout, the total development for the project area will be approximately 600,000 square feet. **Table 1** provides the maximum buildout for each use.

3.2.1.2 Local-Serving Retail Uses (46,876 SF)

Local-serving retail, on the other hand, caters to the daily needs of the local community as well as the hotel use. These businesses may include coffee shops, restaurants, retail, print shops, laundry or tailoring services and similar types of uses (see Table 3). These types of uses can benefit shoppers visiting the surrounding area as well as nearby residents who can access these services by foot.

3.3 Circulation and Access

3.3.1 Vehicular Circulation in the Vicinity

The Circulation Plan complements the Land Use Plan by linking the hotel and retail uses to adjacent land uses and is designed to enhance connectivity and facilitate the movement of various transportation modes. Located south of the San Bernardino Freeway (I-10), the Specific Plan Area is generally bounded by Holt Boulevard to the north, East Guasti Road to the south and southwest, and hotel and light industrial uses to the west and east, respectively.

Holt Boulevard and East Guasti Road provide connections to I-10, which would be the primary regional access point to the Specific Plan Area. These thoroughfares also provide connectivity to Archibald Avenue and North Vineyard Avenue, located a block away to the east and west of the Specific Plan Area, respectively, and permit easy access to the airport to the south of the Specific Plan Area.

3.3.1.1 Potential Roadway Improvements in the Vicinity

While not a part of the Specific Plan, potential roadway improvements in the vicinity could enhance and stimulate future development of the area and improve connectivity between the Guasti District and Airport Metro/Entertainment District in the east as well as with the airport. **Figure 15**, Street Plan of the Mobility Element from The Ontario Plan 2050, reflects the city's vision for developing a comprehensive, multimodal transportation network. This network is designed to meet the mobility needs of residents, visitors, and businesses while maintaining a high quality of life.

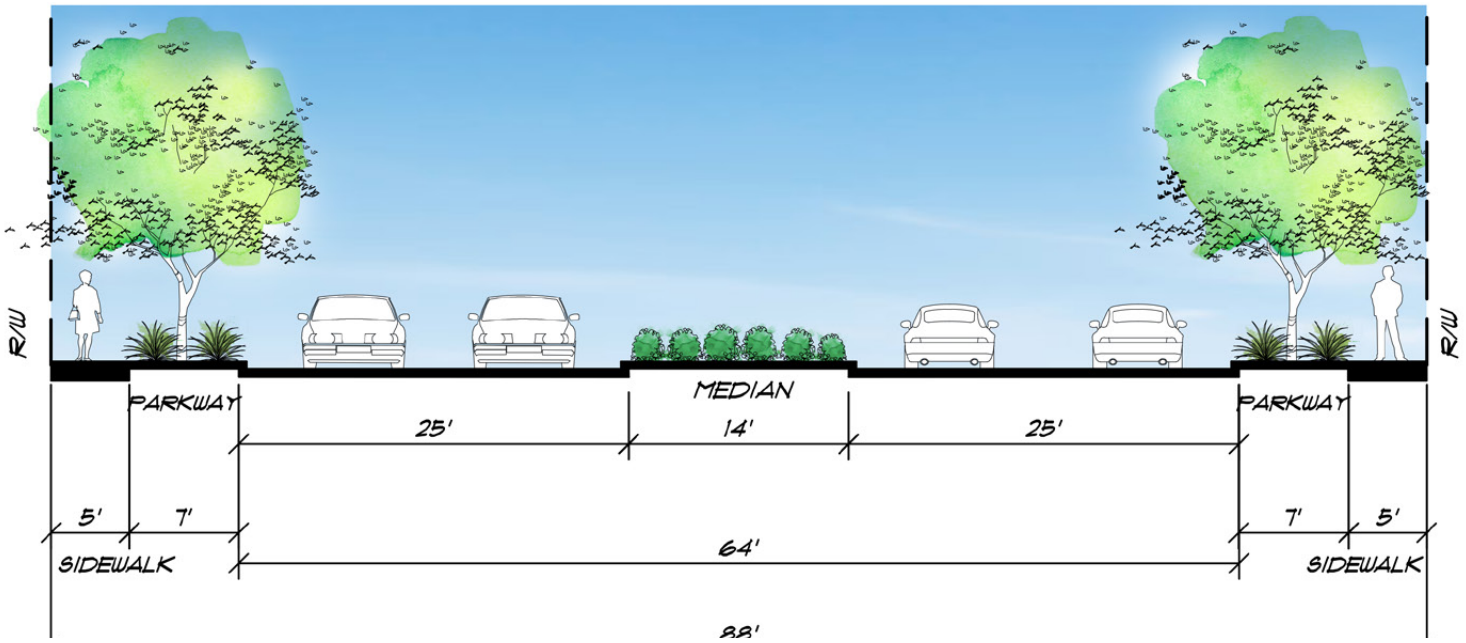
Holt Boulevard: Holt Boulevard is a major connector and can be envisioned as a gateway to the Guasti District, as reflected in **Figure 17**. It currently has three lanes on the north side and two lanes on the south side of the roadway. A lane drops from each side as one travels east past the Holt Boulevard and Guasti Road intersection. The roadway has wide medians. It may be improved to make it visually appealing by adding attractive landscaping and shaded trees within the median and on the edges of the roadway. The existing sidewalks could be widened and enhanced, and gaps could be filled with new sidewalks for easier and continuous pedestrian access. Holt Boulevard along the project frontage is an on-ramp entrance for Interstate 10. Required roadway improvements associated with this development will need to be coordinated with the California Department of Transportation (Caltrans). Proposed final roadway design will be subject to City review and approval.

East Guasti Road: East Guasti Road provides ample right-of-way for improvements, as reflected in **Figure 16.** Proposed improvements from Holt Avenue to the east side of the bridge over the Cucamonga Creek include a four-lane roadway, a landscaped median, and a new sidewalk on the northeast side. Final roadway design and limits will be subject to the City's review and approval. There is an existing sidewalk on the southwest side that

covers roughly half of the total frontage, and the entire southwest side of the roadway is existing, while the northeast side is proposed. Additional roadway improvements could include a bike lane and sidewalk with shaded trees, complementing the future development of the area and connecting the Guasti District with the Airport Metro/Entertainment District.

Airport Drive: The Guasti District has many hotels and lodging facilities. A major part of the clientele comes from the airport, south of the Specific Plan Area. The district acts as the gateway to the City from the airport. Hence, investing in Airport Drive improvements and establishing better connectivity with the area north of the airport will both enhance the travel experience for visitors and help with future investments in the area. Airport Drive currently has three lanes in each direction with a median and a sidewalk on the south side of the roadway. The north side is bordered by railroad

Figure 16: Street Section: East Guasti Road



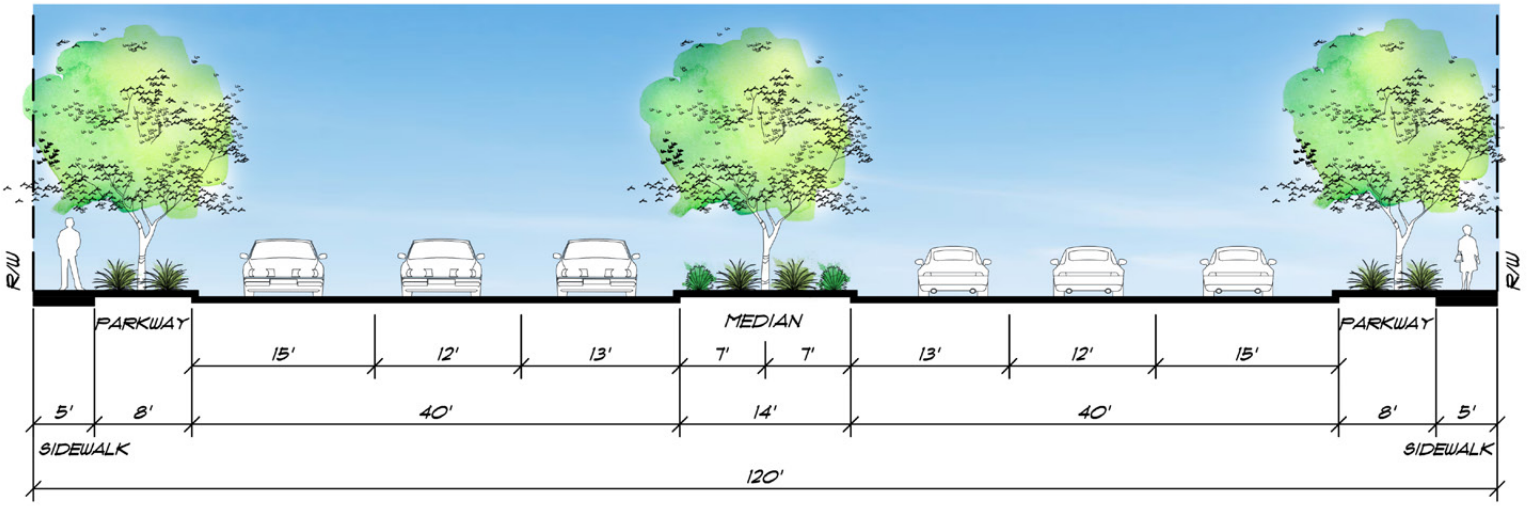


Figure 17: Street Section: Holt Boulevard and Bridge

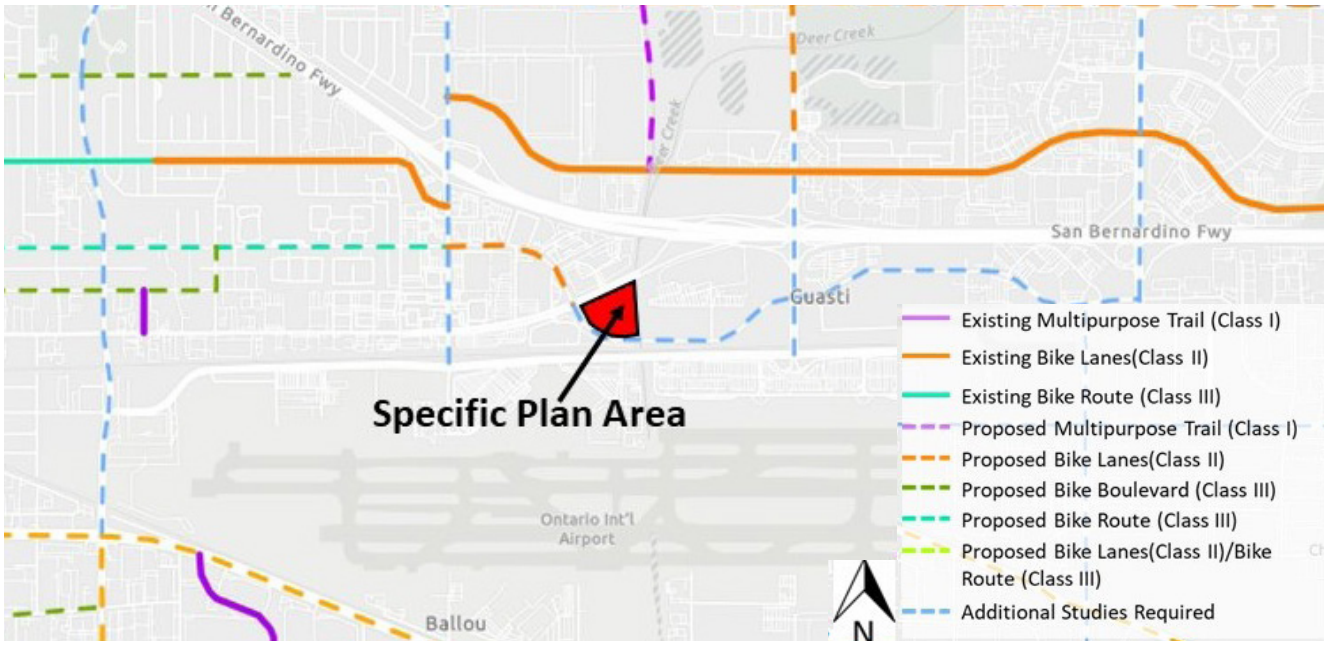
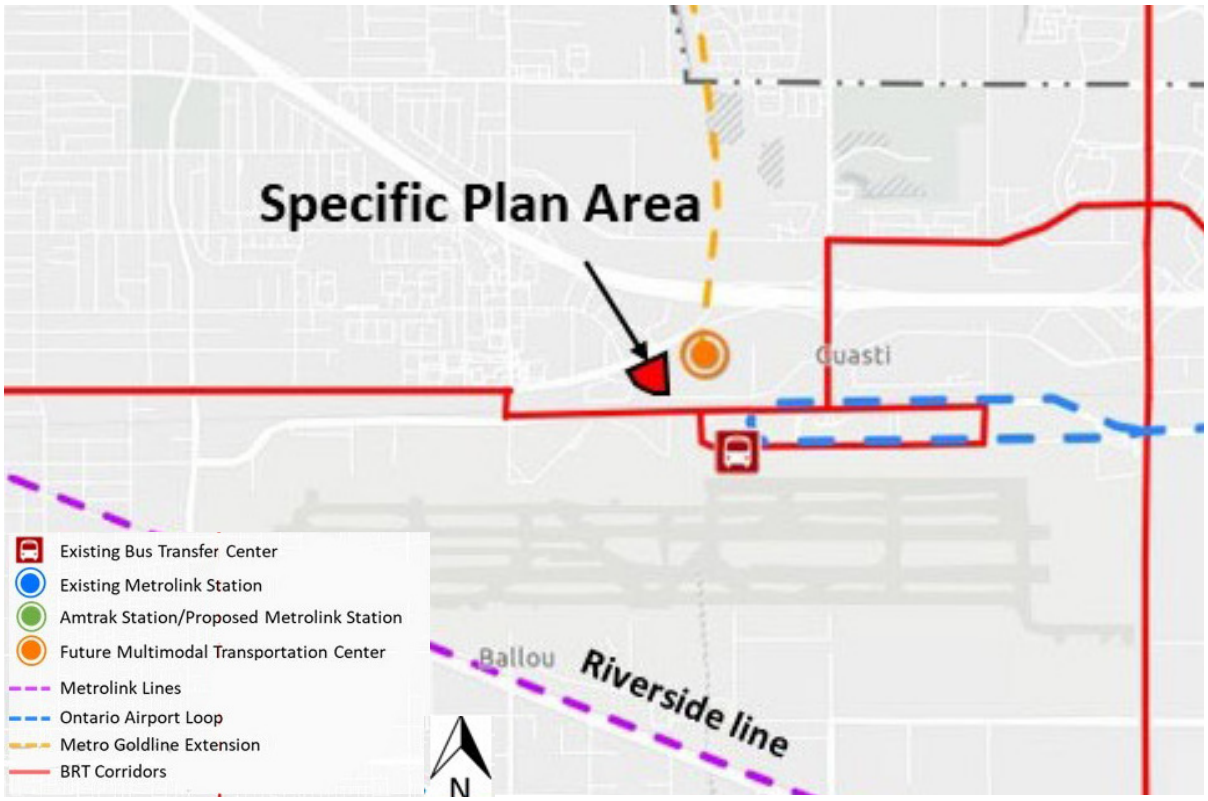


tracks. Enhancements could include adding landscaping to the median and sidewalks and filling any gaps in the sidewalks. Adding landscaping as a buffer between the railroad tracks and the roadway will add to the visual appeal of the roadway. In addition, pedestrian bridges could be added to connect the airport to the Guasti District.

3.3.2 Non-motorized Circulation in the Vicinity

The City is in the process of drafting its Active Transportation Master Plan. However, the City's General Plan Mobility Element provides insights into the current and proposed bike facilities in the City, as shown in **Figure 18.** There are several existing bike facilities north of the Specific Plan Area. These include bike lanes along the Ontario Mills Parkway and Del Norte Avenue. There are several proposed facilities in the vicinity of the Specific Plan Area, including along Guasti Road, Archibald Avenue, and Vineyard Avenue. A proposed multipurpose trail is contemplated along Cucamonga Creek that will eventually connect to the regional trail system. However, the trail currently terminates at the Ontario Mills Parkway. If extended to Guasti Road, this trail can become an important non-motorized link between the Guasti District and the rest of the City.



The pedestrian circulation around the Specific Plan Area is provided by sidewalks that currently have gaps at certain locations. The development of the Specific Plan Area will include sidewalks around the site and development of a plaza at the intersection of Holt Boulevard and Guasti Road. However, to enhance pedestrian connectivity, it is essential to envision the roadways in the vicinity with wider, shaded sidewalks, as described above in *Potential Roadway Improvements in the Vicinity* and reflected in **Figures 16 and 17**.

Figure 18: Multipurpose Trails and Bikeways

Figure 20: BRT Route

Source: Guida Geospatial Solutions; San Bernardino County Transportation Authority (SBCTA), West Valley Connector Project, Phase 1.

3.3.3 Transit Access

The Specific Plan Area enjoys ample access to a variety of transit facilities (see **Figure 19**).

Metrolink and Amtrak Stations: Two Metrolink lines serve the Specific Plan Area. South of the site is the Riverside Line, which provides east–west service between downtown Los Angeles and Riverside. North of the site is the San Bernardino Line, which provides east–west commuter rail service between downtown Los Angeles and San Bernardino.

The East Ontario Metrolink Station provides access to the Riverside Line and is the nearest Metrolink station to the Specific Plan Area, approximately 11 minutes by car. This station is on East Francis Street and can be reached via South Haven Avenue. The Ontario Station, an Amtrak station, is approximately 8 minutes away by car from the Specific Plan Area. It is also a proposed Metrolink station for the Riverside Line. This station is on East Emporia Street and can be conveniently reached by taking Euclid Avenue via East Transit Street.

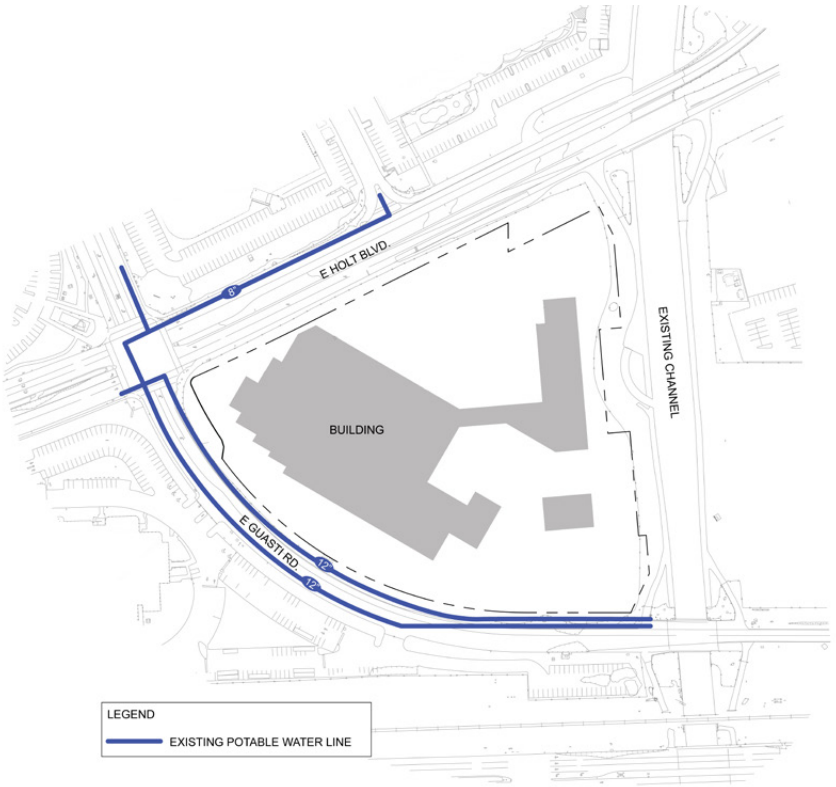
Several stations are located north of the Specific Plan Area along the San Bernardino Line. The closest ones are the Rancho Cucamonga and Upland Stations.

BRT Routes: The West Valley Connector Bus Rapid Transit (BRT), which is under construction, is managed by the San Bernardino County Transit Authority. Phase I of the project is 19 miles and will upgrade a portion of existing Route 61, which runs along Holt Boulevard, adding approximately 3.5 miles as center-running, dedicated bus-only lanes (see **Figure 20**). There will be 21 stations in Phase I that will provide an improved transit connection to ONT and help build transit connectivity by linking ONT, two Metrolink lines (San Bernardino and Riverside), and multiple major activity centers along the route, including Ontario Mills and Victoria Gardens. Headways will be 10 minutes in the peak commute period and 15 minutes off-peak, providing a high level of service to the community.

It will traverse Airport Drive with its nearest station to the Specific Plan Area situated at the junction of Vineyard Avenue and Holt Boulevard. Although there are stations along Airport Drive, they are presently inaccessible due to a railroad between the Specific Plan Area and Airport Drive. A potential pedestrian bridge linking Guasti Road to Airport Drive would establish a direct and convenient route from Airport Drive to the Specific Plan Area.

Ontario Airport Loop: The Ontario Airport Loop project is a proposed tunnel to ONT that will feature a bi-directional system where passengers traveling to and from ONT will be transported in autonomous, zero-emission vehicles on an "on-demand" basis between the Cucamonga Metrolink Station and airport terminals. The project is considering the possibility of utilizing an elevated loop system to traverse Airport Drive, with potential stops along this route.

Metro Gold Line Extension: The current Metro Gold Line extension will reach San Bernardino County with new stations in the cities of Glendora, San Dimas, La Verne, Pomona, Claremont, and Montclair. The current terminus planned for Montclair, however, is just 6 miles short of ONT—a critical airport and economic driver for San Bernardino, Riverside, and parts of Los Angeles Counties. Metro Rail from Glendora to Pomona is currently under construction and is expected to be completed by 2025. Extension of the rail service further east from Pomona to Montclair is expected to be completed by 2028.



3.4 Infrastructure Plan

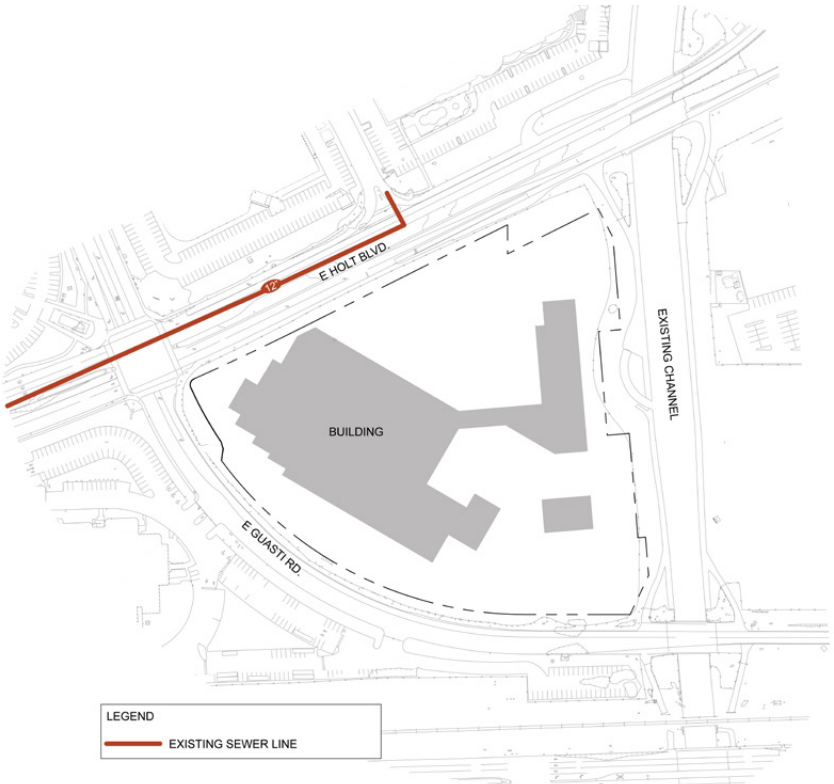
3.4.1 Potable Water

The City's ultimate potable water system will consist of five pressure zones. The Specific Plan Area is located within the 1212 Pressure Zone.

Water service to the Specific Plan Area will be provided by the City. Currently, there are water mains in the vicinity of the Specific Plan Area. There is an existing 12-inch water main in Guasti Road along the project frontage, and an existing 8-inch water main in Holt Boulevard along the project frontage, both available for connection. The future potable water system to serve the City is shown in **Figure 21**. Sizing and alignment of the potable water lines will be consistent with the City of Ontario Potable Water System Master Plan and/or a City-approved hydraulic analysis.

Figure 21: Specific Plan Area Potable Water Plan

3.4.2 Sewer



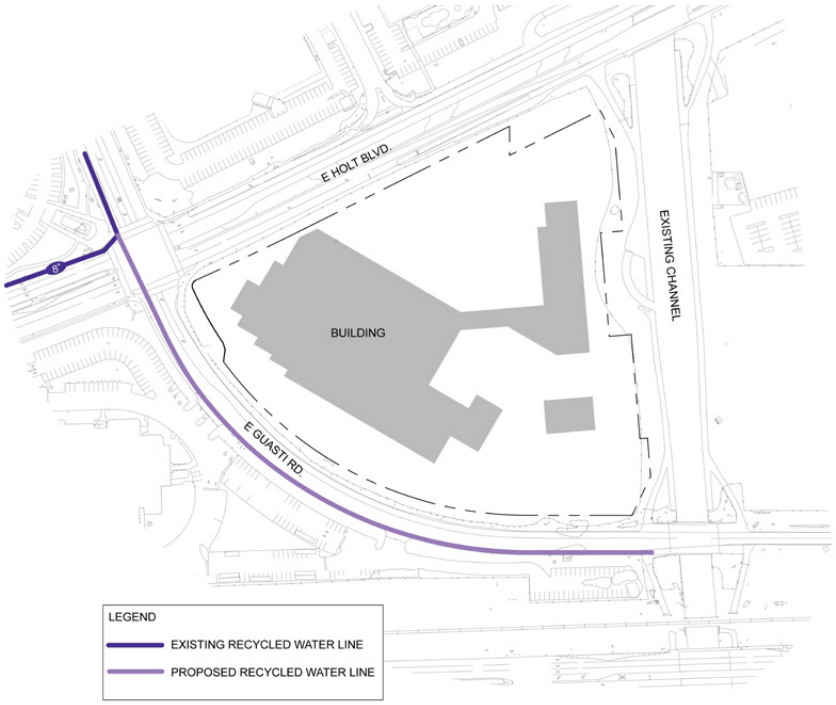
The project will connect to existing sewer mains. Sewer mains are maintained by the City of Ontario and wastewater is treated at the Inland Empire Utilities Agency (IEUA) Treatment Plant. Several regional trunk sewers collect sewage generated in the city and transport it to IEUA's Regional Plant No. 1 and Regional Plant No. 5 for treatment. The City of Ontario is divided into eight major sewersheds. The Specific Plan Area is in Sewershed 3. Sewage is collected by the City's system and generally flows from north to south towards the IEUA Upland Interceptor. The City's Sewer Master Plan is currently being updated.

All required sewer infrastructure will be consistent with the approved master plan. There is an existing sewer main located in Holt Boulevard available for connection. The sizing and alignment of existing and proposed sewer lines are shown in **Figure 22.** Sizing and alignment of the sewer lines will be consistent with the City of Ontario Sewer Master Plan and/or a City-approved hydraulic analysis.

3.4.3 Recycled Water Plan

Currently, there are recycled water mains in the vicinity of the Specific Plan Area, with a point of connection located at the intersection of Guasti Road and Holt Boulevard. Recycled water is provided to the City by the IEUA from its four wastewater reclamation plants. The entire

Figure 22: Specific Plan Area Sewer Plan



Specific Plan Area is within the City's master-planned 1299 Pressure Zone.

Recycled water infrastructure improvements for the Specific Plan Area require the planning, design, and construction of a 1299 Pressure Zone Recycled Water Master Plan main, which includes installing an 8-inch recycled water main in Guasti Road that connects to the 8-inch recycled water main in Convention Center Way, north of Holt Boulevard, and extends south in Guasti Road, ending east of the Cucamonga Creek Channel. The sizing and alignment of existing and proposed recycled water lines are shown in **Figure 23.** Sizing and alignment of the recycled water lines will be consistent with the City of Ontario Recycled Water System Master Plan and/or a City-approved hydraulic analysis.

3.4.4 Stormwater/Drainage NPDES Compliance

Drainage within the project area will be conveyed via a system of on-site drains to the southeast corner of the site where it will enter a series of underground detention / infiltration chambers. These chambers will provide attenuation of peak flows as well as detaining stormwater for infiltration/treatment as required by the most current San Bernardino County Area-Wide MS4 permit. Flows exceeding the required treatment volume will be conveyed southeasterly across Guasti Road to the existing 108" storm drain pipe, which in-turn conveys flows to Cucamonga Creek.

Figure 23: Specific Plan Area Recycled Water Plan

All Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

Activities resulting in one acre or more land disturbances are required to obtain coverage under the Construction General Permit (CGP). The owner is the legally responsible person (LRP) of the site and shall have a Stormwater Pollution Prevention Plan (SWPPP) developed and submitted through the SMARTS website at https://smarts.waterboards.ca.gove/smarts/faces/SwSmartslogin.xhtml.

3.4.5 Dry Utilities

Electricity: Southern California Edison provides electricity to the Specific Plan Area and maintains aboveground power lines within the area. During construction, electrical lines will be placed underground. Utilities and maintenance facilities for the hotel will be installed on the first level of below-grade parking at the northern portion of the site.

Natural Gas: The Southern California Gas Company provides natural gas to the Specific Plan Area. As required, additional points of connection to existing gas lines will be provided.

Telephone: Telephone service is offered regionally by telecommunications providers, such as AT&T and Verizon. Infrastructure supporting telephone services will be provided and installed along with other utilities.

Cable: Cable television services are provided to the Specific Plan Area by local area cable providers, such as Time Warner Cable. Infrastructure supporting cable television services will be provided and installed along with other utilities.

Solid Waste Collection: Solid waste collection service will be contracted by the applicant with the City of Ontario Integrated Waste Division. All solid waste collected on-site will be required to comply with federal, state, and local regulations.

Fiber Optic: Fiber Optic broadband communication service will be offered to the Specific Plan area by Ontario Fiber. Infrastructure supporting fiber optic service will be installed.

3.5 Community Services

3.5.1 Fire Protection Services

The Specific Plan Area is served by the Ontario Fire Department. The nearest fire stations to the site are Fire Station No. 8 and Fire Station No. 10. Both fire stations are located within 5 miles from the Specific Plan Area, and each house an engine company and paramedic.

The applicant will work with the Ontario Fire Department, the Ontario Police Department, Public Works, and other City departments to provide appropriate access to the Specific Plan Area in a satisfactory manner that is feasible.

3.5.2 Police Services

The Ontario Police Department provides police protection services in the City of Ontario and will serve the Specific Plan Area. The main police station is located at 2500 S. Archibald Avenue, approximately 5.3 miles south of the Specific Plan Area.

04

Development Standards

4.1 Introduction

Development standards provide the zoning regulations for the Specific Plan Area, while the design guidelines provide design guidance. It is important to make a clear distinction between the two. Development standards are mandatory and are generally quantitative, objective, and measurable in nature, and use the word "shall." Design guidelines are suggestions and are generally qualitative and subjective in nature. They generally use the words "should" or "may."

4.2 Development Standards

4.2.1 Site Development

4.2.1.1 Setbacks

Building setbacks for the Specific Plan Area are shown in **Table 2**.

Projections and Elements into Setbacks:

- Architectural projections and overhangs may encroach into a setback up to a maximum of 3 feet. However, any such overhang or projection that is permanent in nature should have a minimum overhead clearance of 12 feet. With the exception of balconies which shall be allowed to encroach up to 5'. However, architectural projections shall not encroach into the public right- of-way.

- Landscape and hardscape design elements and features such as trees, benches, trellises, fountains, planter boxes, shade structures, fountains, movable/fixed seating, seating walls and steps, boundary walls, and fences are allowed in setback areas. However, at least 6 feet of clear space must be maintained for pedestrian movement.

- Outdoor eating areas are allowed within the setback areas. (Note: the setbacks are from ROW, there is pedestrian movement in the ROW already contemplated)

4.2.1.2 Height

The maximum building height will be regulated by Federal Aviation Administration and the Ontario International Airport Land Use Compatibility Plan, (ONT ALUCP). The allowable building heights for the Specific Plan boundary range from 110 to 140 feet in height. Any structure that is over 90 feet in height will be required to file an FAA Form 7460-1, Notice of Proposed Construction or Alteration and receive a determination of "No Hazard" consistent with the policies and criteria of the ONT ALUCP.

4.2.1.3 Floor Area Ratio

The Multimodal Mixed-use Area, which encompasses the Specific Plan Area, allows for approximately 553,000 square feet of lodging and 1.9 million square feet of office/retail (refer to **2.2.1, Multimodal Mixed-Use** section). The Specific Plan Area plans to use a portion of this allocated square footage for the development of Hospitality Mixed-Use in the project area (refer to **Table 1**).

The total FAR of the entire Multimodal Mixed-Use District shall not exceed 1.0.

- FAR is the ratio of a building's total floor area to the size of the piece of land upon which it is built.

- The FAR excludes soft and hard landscaped areas, subterranean parking, mechanical equipment areas, vertical shafts, and utility areas.

- The FAR includes covered outdoor areas.

4.2.1.4 Lot Coverage

The total lot coverage should not exceed 40 percent of the land area.

Table 2: Building Setbacks

SETBACKS TO PROPERTY BOUNDARY	MINIMUM SETBACK
Guasti Road	Building - 10 feet; Parking - 5 feet
Holt Boulevard	Building - 5 feet; Parking - 5 feet
Cucamonga Channel-Interior Setback	Building 10 feet; Parking - 5 feet
Note: Balconies that are considered private open space, (see section 4.2.4.2 Private Open Spaces below) shall be allowed to encroach up to 5'. Landscaping and water features for passive and active recreational activities are allowed in the setback areas. Temporary structures such as gazebos and other shade structures are also allowed in setback areas.	

4.2.2 Land Use Matrix

Table 3 lists allowable uses for Hotel and Local-Serving Retail, indicating which uses are permitted (P), and conditional review (C) within the Hospitality Mixed Use of the Specific Plan.

- Permitted Use (P) can be established as primary or secondary use without requiring discretionary approval. This includes ancillary or accessory uses that are typically incidental to the main use on the premises.
- Conditionally Permitted Use (C) is permitted upon the approval of a Conditional Use Permit by the Zoning Administrator.
- A land use not listed in Table 3 shall be considered a prohibited land use. For land uses similar to those listed in Table 3, but not expressly stated in this Specific Plan, the Planning Director or his/her designee shall be granted the authority to make a determination of the applicability of similar land uses.

4.2.3 Utilities

4.2.3.1 Mechanical Equipment

- Rooftop mechanical equipment shall be securely fastened to the roof and fully screened with architectural elements consistent with the overall design of the development.

4.2.4 Open Spaces

4.2.4.1 Public Open Spaces

Public open spaces include any sidewalk, landscaping, plaza areas, patios, decks, water features, or other passive recreational areas open to public.

- Public gathering spaces shall be accessible to adjacent uses and from public sidewalks.

4.2.4.2 Private Open Spaces

Private open spaces include any sidewalk, walkways, landscaped areas, plaza areas, water features, balconies, patios, decks and other active or passive recreational areas open only to the users of the development.

Legend: Permitted Use (P), Conditional Use Permit (C)

Table 3: Allowable Land Uses

HOSPITALITY MIXED-USES	ALLOWABLE USES	NOTES
Hotel Uses		
ATM	P	
Automobile Rental and Leasing Services	C	▪ No on-site vehicle storage allowed.
Banquet Halls and Conference Facilities	P	
Business Center	P	
Cafés and Restaurants (Alcohol sales not permitted)	P	▪ Includes Bakeries and Coffee Shops.
Cafés and Restaurants (Alcohol sales permitted)	C	▪ Includes Bakeries and Coffee Shops.
Child Day Care facilities	C	
Convenience Stores (Alcohol sales not permitted)	P	▪ Includes Sundry Shops. ▪ Catered towards guests.
Convenience Stores (Alcohol sales permitted)	C	▪ Includes Sundry Shops. ▪ Catered towards guests.
Day Spa and Massage studio	C	
Fitness Center and Gym	P	
Florist and Gift Shop	P	
Guest Services	P	▪ Includes Concierge, Baggage, and Valet Services.
Hotel Administrative Offices	P	
Hotel Lodging	P	
Live Entertainment	C	▪ Includes Night Clubs, Dancing, VIP Rooms, and Similar Uses.
Lounges and Bars	C	▪ Includes Lounges, Bars, or Rooftop Bars.
Outdoor Dining Areas (Alcohol sales not permitted)	P	
Outdoor Dining Areas (Alcohol sales permitted)	C	
Wireless Telecommunications Facilities	C	▪ Includes integrated building design. ▪ Must be Roof-Mounted. ▪ See Chapter 5.03.420 for Development Code.

Legend: Permitted Use (P), Conditional Use Permit (C)

HOSPITALITY MIXED-USES	ALLOWABLE USES	NOTES
Local-Serving Retail (Typical with Hospitality Mixed-Use)		
Antique Stores	P	
Art Gallery	P	▪ Includes Art Galleries or Art Supply Stores.
Banking/ATM	P	
Automobile Rental and Leasing Services	C	▪ No on-site vehicle storage allowed.
Beauty Services	P	▪ Includes Barber Shops, Beauty Salons, Nail Salons, Tanning Salons, and other similar uses.
Beauty Supply Store	P	
Bicycle/Segway Rentals	P	▪ Includes e-Bicycle and e-scooter Rentals or similar personal recreation devices.
Boutique or Specialty Wines and Liquor Stores	C	
Brew Pub and Micro-brewery	C	
Business Center	P	▪ Includes Mail/Shipping services, e.g. Fed Ex, UPS, and Amazon Locker.
Cafés and Restaurants (Alcohol sales not permitted)	P	▪ Includes Bakeries and Coffee Shops.
Cafés and Restaurants (Alcohol sales permitted)	C	▪ Includes Bakeries and Coffee Shops.
Clothing and Accessory Stores	P	
Convenience Stores (Alcohol sales not permitted)	P	▪ Includes Sundry Shops. ▪ Catered towards guests.
Convenience Stores (Alcohol sales permitted)	C	▪ Includes Sundry Shops. ▪ Catered towards guests.
Fast-Food Restaurants	P	▪ Drive-throughs not allowed.
Fitness Studio	C	
Food Kiosk	P	▪ Includes two or more food or beverage concession stands that operate together as a commercial establishment. ▪ Alcohol sales not permitted.
General Office	P	▪ Includes office spaces related to Administrative and Support Services, Retail, Finance and Insurance Offices, Management of Companies and Enterprises, Travel agency/arrangements, and Professional Services.

- Private open spaces can be located on upper floors and rooftop.

- Balconies, if provided, shall have a minimum area of 30 square feet and a minimum dimension of 5 feet length and width.

- As noted above in Table 2: Building Setbacks, balconies shall be allowed to encroach a maximum 5 feet into a required front, side, or rear yard setback.

4.2.4.3 Applicable to Both Public and Private Open Spaces

- Pedestrian zones designed to enhance access to outdoor public amenities must be identifiable by using robust, easy-to-maintain surface materials, such as decorative pavers or other comparable architectural enhancements.

- Pedestrian areas should be compliant with the Americans with Disabilities Act.

- Alternative sidewalk materials within public right-of-way and for sidewalks used for public access shall be subject to City review and approval.

4.2.5 Parking

4.2.5.1 Off-Street Parking

- 1.5 parking spaces per every 1,000 square feet of Hospitality Mixed-Use development shall be provided. Utility areas, parking, and covered outdoor areas shall be excluded from parking calculations.

- Up to 100 percent of parking can be provided as valet parking by a hospitality mixed use project.

- Off-street parking design standards and parking lot lighting shall comply with Sections 6.03.045 and 6.03.050 of the Ontario Development Code, respectively.

- Parking spaces specifically designated and conveniently located for fuel-efficient vehicles shall be provided in conjunction with development projects pursuant to current regulations contained in CALGreen (California Code of Regulations Title 24, Part 11).

- A parking analysis shall be provided with the entitlement package.

- Spillover parking may be provided off-site no more than one-half mile away from the development's main entrance. Parking analysis and an agreement with locations shall be provided.

- All parking facilities must have clearly designated markings for individual parking stalls, drive aisles, approach lanes, and maneuvering areas to facilitate efficient traffic flow.

- Digital parking guidance signs shall be installed for hotel parking to indicate the location of available parking spaces by level and assist in directing vehicles to available parking spaces.

4.2.5.2 Bike Parking

- Bicycle parking facilities, including bicycle racks, lockers, and other secure facilities, shall be provided in conjunction with development projects pursuant to current regulations contained in CALGreen (California Code of Regulations Title 24, Part 11).

- All bicycle parking facilities shall have lighting that provides high visibility. Lighting shall be maintained in operational condition at all times.

4.2.5.3 Loading

- Off-street loading standards shall comply with Section 6.03.055 of the Ontario Development Code.

- Each off-street loading space and its access shall be designed to avoid undue interference with the public use of streets and private drives and shall not be part of the off-street parking area required for each particular use.

- Loading areas shall be screened, enclosed, and/or located appropriately to minimize potential nuisances, such as odor and noise.

- Loading areas shall be clearly marked as being distinct from required parking spaces and aisles.

05

Design Guidelines

5.1 Introduction

These guidelines establish a clear set of qualitative guiding principles that form a basis for the City of Ontario to review the Specific Plan project. The guidelines serve two primary purposes:

1. To establish high-quality design for new development.

2. To facilitate the design review and planning approval process relative to building configuration and architecture that is appropriate for this development.

The guidelines are not intended as a literal requirement; instead, they serve as a framework for the design review process and cover key elements including building mass, entrances, façade design and composition, roof forms, materials, and colors. The City shall use the guidelines as part of the formal design review process, and qualitative findings shall be made by the decision-making body demonstrating such compliance.

5.2 Design Guidelines

5.2.1 Massing and Elevation Treatment

- Building facades should avoid a continuous single plane and break monotony by using at least two planes.

- The bottom levels and the top two levels may be treated differently in architectural style compared to other floors to break the monotony of elevation. See example in **Figure 24**.

- Vertical elements should be used to provide rhythm and continuity between the floors. See example in **Figure 25**.

Figure 24: Elevation Treatment

Figure 25: Vertical Elements Providing Continuity and Rhythm

- To achieve good building articulation, beyond the building facade and diversity of planes, there should be at least one additional color and one additional material across an elevation.

- To minimize heat gain, shading devices should be provided for glazed surfaces, particularly on the east, south, and west sides of the building. Shading can take the form of recessed windows using colonnade-type structure or devices fixed to the exterior wall that are harmonious with the building materials or color.

- Building massing shall consist of a mix of building heights and incorporate vertical plane breaks, changes in building/ridge height, or other accent roof forms to create visual interest.

- Free-standing architectural treatment may be used in front of the building walls to create layering.

- When used, parapet walls shall incorporate side/rear elevation returns to preclude an unfinished, "false front" appearance.

- Exposed downspouts and overflow holes on building front facades are prohibited.

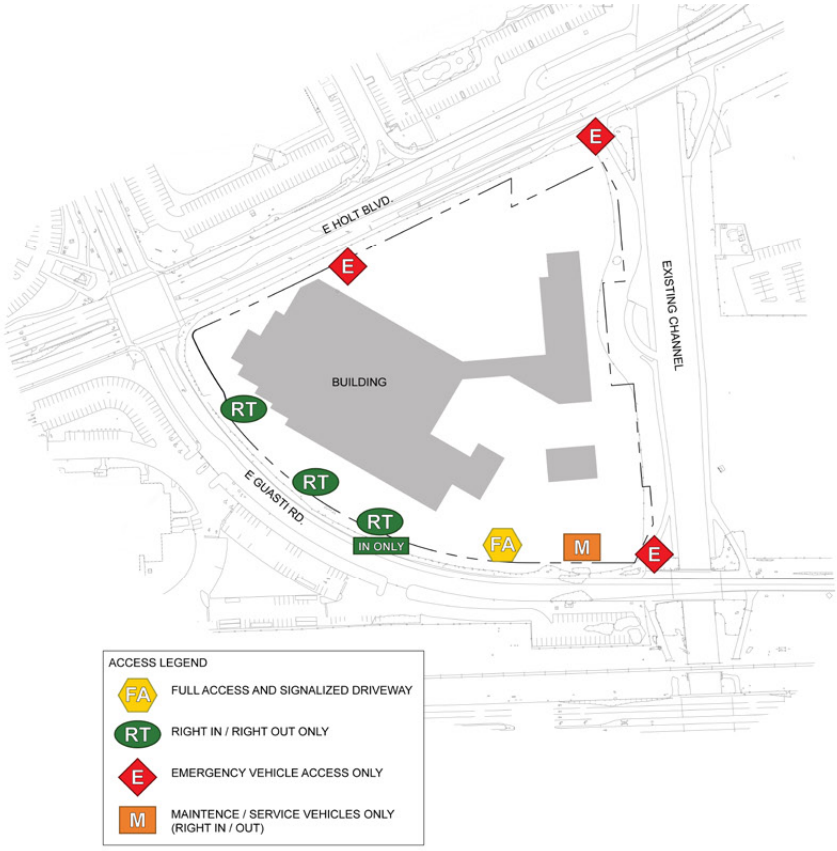
- All rooftop mounted equipment shall be screened from public view using materials complementary to those used on the main structure (see Subsection 6.C.1.f, Functional Elements).

5.2.2 Elevation Material

- The elevation materials should be durable and require low maintenance.

- As far as possible, materials should be selected that can be reused or recycled easily at the end of their lives using existing recycling systems.

- Efficient and right-sized building design



should be used to minimize wastage of materials.

5.2.3 Site Planning and Circulation

The following site planning and circulation design guidelines for hospitality mixed use promote aesthetic quality, efficient land use, and public safety. See **Figure 26** for an example illustrating safe ingress and egress options, including designated entrances for emergency vehicle and separate delivery access. The final improvement plans reflecting the location and details of these improvements will be reviewed and approved by the City Engineer.

- Service and delivery/loading zones should be separated from visitor, guest and customer parking, and pedestrian walkways where feasible. This helps reduce the risk of accidents by keeping heavy vehicles and delivery activities away from areas where pedestrians and regular vehicles are present.
- Ensure that all areas are accessible to emergency vehicles and personnel, with clearly marked routes and entrances.
- The main access to the hotel as well as to the hotel parking (basement levels 1 and 2) is from Guasti Road. The main access to the hotel will be full access with a traffic signal.
- Additional right-of-way may be required to accommodate an additional left turn and right turn lanes at intersection based on required queue lengths per the Traffic Impact Analysis/Specific Plan EIR.
- Additional traffic signals may be required based on locations of future access points and as identified in the Traffic Impact Analysis/Specific Plan EIR.

Figure 26: Site Access

5.2.4 Landscape Guidelines

The landscape will play an important role at many levels, primarily to soften transitions from the ground plane to the vertical plane; offer screening from the adjacent neighborhood; and add color and texture to the development. Examples of landscaping can be seen in **Figure 27** and **Figure 28.**

Below are general landscape guidelines.

- Standards for the provision and maintenance of landscaping within the Specific Plan Area shall comply with Section 6.05.010: *Landscape Design Principles*, Section 6.05.045: *Landscape Development Standards*, and Section 6.05.050: *Landscape Maintenance* of the Ontario Development Code.
- Trees and plant material should either be native to Southern California or adaptive and from regions with similar climates.
- Invasive plant species should be prohibited.
- All plants should be water-conserving, drought-tolerant plants to the maximum extent practical
- Trees, shrubs, hedges, and deciduous vines should be used to minimize solar heat gain during the summer and maximize heat gain during the winter.
- Tree branches should be pruned to at least 7 feet from the ground for street trees.
- Landscaping should not obstruct pedestrian movements and should be designed in a way so as not to block visibility of businesses and signage.
- Landscaping should not obstruct the sightlines of motorist or pedestrians.

5.2.4.1 Paving Materials

Paving materials contribute significantly to the overall outdoor experience. The style of landscape, maintenance requirements, and the specific purpose of the paved area should be considered when selecting paving materials.

- Paving materials should complement the architectural style as well as elevation materials of the building.
- Paving materials should serve both functionality and aesthetics. For example, slip-resistant concrete, decorative pavers, decomposed granite, or natural stone may work well in walkways and garden paths while bluestone, brick, or colored concrete may be more welcoming for a patio.
- Materials should be chosen that withstand weather conditions, foot traffic, and other wear.
- A combination of paving materials should be used to identify and define pedestrian paths and to provide variety. Changes in paving materials should be employed to demarcate areas, for example, to separate pedestrian walkways from other gathering spaces.

Examples of paving materials are shown in **Figure 29**.

5.2.3.2 Planting Materials

- Landscaping in the project area shall be done in accordance with Section 6.05—Landscaping, of the Ontario Development Code.
- All landscaping in the Specific Plan Area must be drought tolerant and California friendly.
- **Figure 30**, **Figure 31**, and **Figure 32** show examples of appropriate planting materials that may be used for landscape improvements within the Specific Plan Area.

5.2.5 Lighting

Effective site lighting is crucial for ensuring safety, enhancing visibility, and promoting energy efficiency in various environments. The following guidelines outline best practices for implementing a comprehensive lighting strategy that addresses these goals. Adherence to these principles helps create well-lit, secure, and aesthetically pleasing spaces that meet the needs of all users.

Figure 27: Specific Plan Area Landscaping Examples

Encaustic Concrete
Pattern: Diagonal
Color: Gray, Light Gray

Crushed Stone
"Apache Sunset"

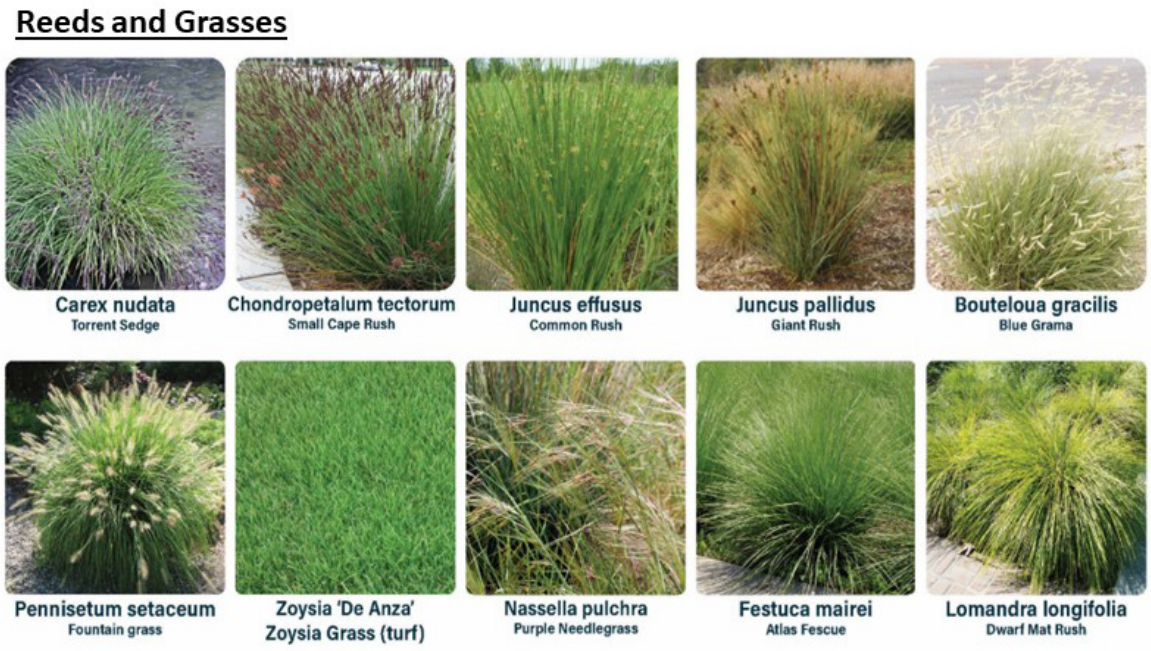

Figure 30: Shrubs and Ground Cover Palette

Figure 31: Evergreen, Deciduous, Flowering, and Palm Tree Palette

Figure 32: Reeds and Grasses Palette

The design, technology, and required photometrics will be determined during the final design stage. The fixture style, color and material should be decided in conjunction with other elements, such as benches and waste receptacles, to create a coordinated look and feel within the development. Below are some guidelines for selection and placement of lighting fixtures.

- Uniform lighting distribution should be employed to reduce dark spots and improve overall visibility.
- Adequate lighting should be provided along pathways, walkways, and pedestrian areas to ensure safe navigation. Use of low, bollard-type lighting and/or landscape accent lighting is encouraged, especially in pedestrian areas.
- Lighting should be provided in all parking, vehicular, and pedestrian circulation areas, and loading and storage areas.
- Site lighting should not be directed off-site. Light spill to the neighboring areas should be minimized where feasible.
- Shielded fixtures that minimize sky glow, glare, and light trespass should be used. While up-lighting may be allowed to accentuate certain architectural features and landscaping, care should be taken to make sure that such features minimize sky glow.
- Lighting fixtures should complement the façade and be of a style that suits the architectural style of the building.
- The use of energy-efficient light-emitting diode (LED) lighting fixtures should be considered to reduce energy consumption and maintenance costs.
- Motion sensors should be installed where appropriate to activate lighting only when needed, promoting energy conservation.
- Lighting provision during project construction should be in accordance with Ontario Municipal Code, Title 4, Chapter 11, Section 4-11.11, *Construction site security provisions.*

5.2.6 Sign Program

Informational signs may be installed throughout the Specific Plan Area to provide information about the businesses, such as development name, logo, conference center, and retail uses as well as for general advertising or marketing purposes. Other directional and wayfinding signage may be provided in addition to informational signs. Below are the signage guidelines to assist with the review and approval of proposed project signage. An exhibit detailing the locations and types of signs will be required as part of the review and approval process for the project's sign program which shall comply with Chapter 8 of the City of Ontario's Development Code, as further outlined in Chapter 5.2.6.2 Sign Program Approval Process, herein.

Digital Advertising Signs are allowed integrated into the design of the building. The Digital Advertising Signs may display products, brands, and businesses associated with the commercial uses in the development as well as offsite advertisements, City sponsored events, and public service announcements. An approved Development Agreement or Master Sign Program and user agreement shall be required in accordance with the Ontario Development Code to establish development standards for design, approved content, sign area, location and use.

5.2.6.1 Signage Guidelines

- Signage may display messages or images utilizing a series or grid of lights that may be changed by electronic means, including cathode ray, LED display, plasma screen, liquid crystal display (LCD), LED embedded, architectural glass fiber optic, or other electronic media or technology.
- Signs may be illuminated by external and/or internal light sources.
- Use of exposed neon lighting and fiber optics shall be prohibited.
- Signage colors, materials, and finishes shall complement those used on the architecture on-site.
- No sign shall be installed, relocated, or maintained so as to prevent entry or exit out of any door.
- No sign installation shall create a safety hazard by obstructing views of pedestrian and vehicular traffic.
- Any sign installation in a pedestrian pathway shall leave a clear 5-foot space for pedestrian movement.
- No signs shall be located within a required easement unless an encroachment permit has been authorized by the affected utility.
- No sign shall obstruct access to fire hydrants, fire department connection, or fire department access roads.
- Signs that audibly advertise, identify, or provide direction to a use or activity are prohibited.
- Signs exhibiting or displaying content of an obscene, indecent, or immoral nature or unlawful activity are prohibited.
- Entry monument signage may be used to identify each development in the Specific Plan Area. Entry monuments shall be designed in accordance with City of Ontario Traffic and Transportation Guidelines for monument placement.
- Signage shall be employed to identify a center and tenants within a center, direct vehicular traffic, and provide on-site wayfinding for pedestrians.
- Each business is permitted one wall sign on each side that is visible from the street, size and placement of these signs will be reviewed as part of the sign program approval process.

5.2.6.2 Sign Program Approval Process

The developer will submit a sign program for projects in the Specific Plan Area in accordance with City requirements. The discretionary approval of a sign program will be in accordance with the of the City of Ontario Development Code.

Deviations from the sign program may be allowed to accommodate the design guidelines in Section 5.2.5 Signage Guidelines of this document.

The developer will provide the following to the City:

1. Completed sign program application and filing fee.

2. Three copies of the sign program. The sign program shall be prepared in 8½" X 11" or 11" X 17" format, and shall include the following:

   a. A master plan, drawn to scale, delineating the site proposed to be included in the sign program and the general location of all signs.

   b. Drawings indicating the exterior surface details of all buildings within the site upon which wall signs, directory signs, or projecting signs are proposed to be located.

   c. Proposed color schemes of the signs.

5.2.7 Privacy and Security Screening

Privacy screening or fencing is designed to shield a property from external view, preventing onlookers from seeing into private spaces of the development. They are intended to safeguard a property by preventing unauthorized entry, trespassing, or intrusion.

- Peripheral walls and fences shall comply with Section 6.02.025 of the Ontario Development Code.

- Landscape screening, walls, or fencing shall be a minimum of 6 feet and a maximum of 8 feet high.

- Walls should use brick, slump stone, tile, textured concrete, stucco on masonry, or steel framing that is complementary to the building materials used in the façade of the building. Plain concrete block walls (i.e., precision block) or chain-link fencing with inserts are not permitted.

- Landscape hedges should be at least 2 feet wide.

- Wall, wrought iron, tubular steel fencing, or other transparent type of fencing or walls should use decorative columns, pilasters, or other architectural elements to provide relief and break the monotony.

- All non-transparent perimeter walls and/or fences should be treated with anti-graffiti paint or vines on the roadside and should incorporate landscaping whenever possible.

06 | Implementation

6.1 Applicability

The provisions and regulations contained in this Specific Plan provide the standards for land uses and development located within the Specific Plan Area. The Specific Plan supersedes otherwise applicable City of Ontario development standards and regulations unless stated otherwise in this document. Whenever the provisions and development standards contained in the Specific Plan conflict with those contained in the City of Ontario Zoning Code, the provisions of the Specific Plan shall take precedence. Where the Specific Plan does not address such provisions, the City of Ontario Zoning Code shall apply.

6.2 Severability

In the event that any provision of this Specific Plan or its application to any person or circumstance is held to be invalid or unconstitutional by any court of competent jurisdiction, such portions shall be deemed separate, distinct, and independent, and shall not affect the validity of the remaining provisions of this Specific Plan or applications thereof, which can be implemented without the invalid provision or application.

6.3 Interpretation

The Planning Director or his/her designee is authorized by the City of Ontario to interpret, administer, and enforce the provisions of the Empire Groves Specific Plan. The provisions of this Specific Plan shall be interpreted in a manner consistent with the goals, policies, purpose, and intent established in the Empire Groves Specific Plan.

6.4 Development Review

The procedures and regulatory provisions necessary to administer the development review procedures for applicable properties, structures, and uses located within the Empire Groves Specific Plan Area shall be subject to the requirements as set forth herein and in accordance with Chapter 6.0: Development and Subdivision Regulations of the City of Ontario Development Code.

The Specific Plan is reviewed by the Planning Director or his/her designee and Development Advisory Board. Any suggested revisions will be discussed and made as appropriate. It will then be reviewed by the City of Ontario Planning Commission and approved and adopted by the City Council. Once adopted, the Empire Groves Specific Plan forms the legal framework for the evaluation of development applications.

6.5 Financing

All on-site improvements will be undertaken and financed by the developer. The costs for related off-site improvements shall be the responsibility of either the developer or the City as defined further in the conditions of approval and Development Agreement.

6.6 Maintenance Responsibilities

Maintenance of all improvements within the Specific Plan Area, including private/quasi-public open space and recreation facilities; private driveways; circulation; landscape; and WQMP, BMPs, and private drainage infrastructure (underground infiltration chambers and CDS Units) will be the responsibility of the applicant. Maintenance of the public ROW including sidewalk areas in the immediate vicinity of the Specific Plan Area will also be the responsibility of the City.

6.7 Specific Plan Amendments

Amendments to the Empire Groves Specific Plan may be requested by the applicant or by the City at any time pursuant to Section

65453(a) of the California Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for specific plan amendments. In the event the proposed amendment requires supplemental environmental analysis pursuant to CEQA, the applicant will be responsible for preparation of the necessary CEQA documentation. Below are the processes of minor and major amendments to this Specific Plan.

6.7.1 Minor Amendments

Minor amendments to the development standards and design guidelines of a Specific Plan are permitted under City of Ontario Municipal Code Sec. 4.02.080. These amendments require a discretionary review process, which can be initiated by either the developer or the City of Ontario. Approval may be granted by the Planning Director or their designee, as specified in the Ontario Development Code, Division 2.02, Table 2.02.1, (Section B, item 12). Any modifications must align with the intent of the originally approved Specific Plan, be in substantial conformance with it, and not be detrimental to public health, safety, and welfare. No further approval will be necessary.

Some examples of minor amendments are listed below.

- Changes to Specific Plan boundary, provided the total acreage of the affected area does not increase or decrease the total acreage by more than 15 percent.
- Additions, deletions, or modifications to Table 3, Allowable Uses, which lists the permitted and conditionally permitted uses in the Specific Plan Area, provided the Planning Director determines the changes to be consistent with the objectives and intent of the Specific Plan and therefore minor.
- Minor adjustments to design guidelines including conceptual architecture, landscape, signage, and lighting.
- Minor adjustments to landscape materials, wall materials, wall alignment, entry design and streetscape design that are consistent with the conceptual design set forth in the specific plan's development standards and design guidelines.
- Revisions to infrastructure facility sizing and precise location for dry utilities, water, sewer, and storm drainage improvements subject to approval of the City Engineer.
- Revisions to roadway alignments when the change results in a centerline shift of less than 250 feet.
- Other adjustments or revisions of similar nature to those listed above that do not substantially change the intent or character of the Specific Plan and are deemed minor by the Planning Director.

6.7.2 Major Amendments

Specific amendments that are more substantial in nature than minor adjustments and include changing any regulation, general provision, procedure, or other provision will be considered a major adjustment to the Specific Plan and shall be subject to a formal Specific Plan Amendment application process pursuant to Section 4.01.035 of the Ontario Development Code and California Government Code Section 65450, et seq.

If the proposed amendment requires supplemental environmental analysis pursuant to CEQA, the applicant shall adhere to the City's adopted procedures and CEQA Guidelines.

6.8 CEQA Review

City of Ontario is defined as the lead agency under CEQA based on its authority to approve the Empire Groves Specific Plan. Prior to an approval of a project within the Specific Plan Area, the City Council will be required to certify the associated environmental document.

California Public Resources Code Section 21081.6 also requires public agencies to adopt a Mitigation Monitoring and Reporting Program to ensure that mitigation measures are implemented. Prior to a Certification of Occupancy for any building located within the Specific Plan Area, the Planning Director or his/her designee, as appropriate, shall confirm that applicable mitigation measures have been implemented in accordance with the approved plans.

APPENDIX

A

Consistency with General Plan Update

Appendix A: General Plan Consistency Analysis

Land Use Element		
GOAL LU-1	**A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.**	
Policies		
LU-1.1	Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City. (Link to Mobility Element Policies M2-M-2.1, M3-M-3.3; Community Design Element Image and Identity Section; Community Design Policies CD-3.1, CD-3.3, CD-3.6)	Consistent: The Specific Plan is in a planned growth area (Guasti District) per the General Plan.
LU-1.2	Sustainable Community Strategy. We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.	Consistent: The Specific Plan integrates many sustainable and smart growth strategies. It supports multimodal transportation in the area.
LU-1.3	Adequate Capacity. We require adequate infrastructure and services for all development.	Consistent: Adequate existing infrastructure is available for the Specific Plan.
LU-1.4	Multimodal Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities (Link to Mobility Element Policies M-2.1, M-3.3; Community Design Element Policy CD-2.6, CD-3.1, CD-3.3, CD3.6).	Consistent: The Specific Plan is a mixed-use plan. It supports multimodal transportation planning projects in the area. It includes provisions for bicycle parking, electric vehicle charging stations, and other amenities.
LU-1.5	Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance. (Link to Community Economics Element Policy CE-1.1; Mobility Element Policy M-1.6)	Consistent: The Specific Plan is a mixed-use plan with Hotel and Local Serving Retail uses and will contribute to a substantial number of jobs in the area which leads to jobs-housing balance.
LU-1.6	Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario. (Link to Community Economics Element Complete Community Section; Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	Consistent: The Specific Plan is primarily commercial and does not include housing. However, it is designed to create job opportunities for residents within the City. This approach contributes to the development of complete communities by fostering local employment and supporting the overall economic growth of the area.

LU-1.7	Revenues and Costs. We require future amendments to our Land Use Plan to be accompanied by analyses of fiscal impacts. (Link to Community Economics Policy CE-3.2)	Consistent: The Specific Plan will be financed by the developer.
GOAL LU-2	**Compatibility between a wide range of uses and resultant urban patterns and forms.**	
Policies		
LU-2.1	Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.	Consistent: The Specific Plan will not have any adverse impacts on the adjacent properties. It will contribute positively as the adjacent properties include a conference center, airport, and other hotel properties that are complementary to this development.
LU-2.2	Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas. (Link to Community Design Element)	Consistent: Although this area is classified as an environmental justice area according to Cal Enviroscreen 4.0, it is not residential. The high pollution burden, largely due to the nearby airport, contributes to its high score. The Specific Plan incorporates sustainable strategies and is a mixed-use plan. It supports multimodal transportation projects in the area and includes provisions for bicycle parking, electric vehicle charging stations, and other amenities.
LU-2.3	Hazardous Uses. We regulate the development of industrial and similar uses that use, store, produce, or transport toxic substances, air emissions, other pollutants, or hazardous materials. (Link to Safety Element Hazardous Materials & Waste Section, including Policies S-6.4 and S-6.5)	Consistent: There are no hazardous materials stored, produced, or transported to the site. Standard cleaning and laundry services for the hotel are provided.
LU-2.4	Regulation of Nuisances. We regulate the location, concentration, and operation of potential nuisances.	N/A
LU-2.5	Regulation of Uses. We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.	N/A
LU-2.6	Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	Consistent: The Specific Plan will add new sidewalks and landscaping along Holt Boulevard and Guasti Road, a corner plaza at the intersection and the entrance court with heavy landscaping, all of which will contribute to the aesthetically pleasing surroundings.
LU-2.7	Inter-jurisdictional Coordination. We maintain an ongoing liaison with ONT, Caltrans, Public Utilities Commission, the railroads, and other agencies to help minimize impacts and improve the operations and aesthetics of their facilities.	N/A
LU-2.8	Transitional Areas. We require development in transitional areas to protect the quality of life of current residents.	N/A
LU-2.9	Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	N/A

LU-2.10	Sensitive Uses. We monitor and share information with the community about stationary and non-stationary emission sources. We encourage siting and design of facilities to minimize health and safety risks on existing and proposed sensitive uses, especially in environmental justice areas.	N/A
LU-2.11	Context-Aware Transitions and Connections. We require new development projects and land-planning efforts to provide context-aware and appropriate transitions and connections between existing and planned neighborhoods, blocks, sites, and buildings. (Link to Community Design Element Policies CD-1.1, CD-1.3, CD-3.4)	Consistent: The Specific Plan complements the adjacent properties, including a conference center, airport, and other hotel properties. Therefore, the proposed development is context-aware with appropriate transitions and connections.
GOAL LU-3	**Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.**	
Policies		
LU-3.1	Development Standards. We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes. (Link to Community Design Element Design Quality and Urban, Mixed Use, and Transit-oriented Place Types Sections)	Consistent: The development standards chapter provides mandatory provisions that are intended to achieve the vision of the Specific Plan and provide for objective standards that are measurable. The design guidelines however are not mandatory and provide flexibility.
LU-3.2	Design Incentives. We offer design incentives to help projects achieve the Vision. (Link to Community Design Element)	N/A
LU-3.3	Land Use Flexibility. We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.	Consistent: The Specific Plan development standards include bicycle facilities and includes bike rentals as a permitted use that may aid in the reduction of vehicular trips. The Specific Plan is a mixed-use development and provides for local serving retail and restaurants that will also help reduce trips. The Local Serving Retail area has a public plaza and outdoor seating which contributes to community gathering places. The hotel features gathering areas and landscaping both within and around the property, enhancing the overall appeal of the area.
GOAL LU-4	**Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.**	
Policies		
LU-4.1	Commitment to Vision. We are committed to achieving our Vision but realize that it may take time and several interim steps to get there.	Consistent: The plan is consistent with Guasti District's vision within the Ontario Plan.

LU-4.2	Interim Development. We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision. (Link to Community Economics Element Policy CE-2.3; Community Design Element Policy CD-1.2; Community Design Element Urban, Mixed Use, and Transit-oriented Place Types section).	Consistent: The Specific Plan is a mixed-use plan with Hotel and Local Serving Retail uses and transit- supportive use.
LU-4.3	Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	Consistent: The necessary infrastructure and services either exist or will be in place to support development within the Specific Plan.
LU-4.4	Shared Infrastructure. We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types. (Link to Community Design Element Policy CD-3.6)	Consistent: The Specific Plan is a mixed-use plan with Hotel and Local Serving Retail uses and transit- supportive use. The parking areas are shared. The ULI shared parking analysis has provided on-site parking for the entire development. The plaza area at the intersection of Holt Boulevard and Guasti Road is a public plaza.
GOAL LU-5	**Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.**	
Policies		
LU-5.1	Coordination with Airport Authorities. We collaborate with FAA, Caltrans Division of Aeronautics, airport owners, neighboring jurisdictions, and other shareholders in the preparation, update, and maintenance of airport-related plans.	Consistent The Specific Plan is consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan. The Specific Plan includes uses compatible with surrounding land uses and adjacent properties.
LU-5.2	Airport Planning Consistency. We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans, and airport land use compatibility plans for ONT and Chino Airport.	Consistent: The Specific Plan is consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan. The Specific Plan includes uses compatible with surrounding land uses and adjacent properties.
LU-5.3	Airport Impacts. We work with agencies to maximize resources to mitigate the impacts and hazards related to airport operations – their homes.	Consistent: The Specific Plan is consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan. The Specific Plan includes uses compatible with surrounding land uses and adjacent properties.
LU-5.4	ONT Growth Forecast. We support and promote an ONT that accommodates 30 million annual passengers and 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.	N/A
LU-5.5	Airport Compatibility Planning for ONT. We create and maintain the Airport Land Use Compatibility Plan for ONT.	Consistent: The Specific Plan is consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan.

LU-5.6	Alternative Process. We fulfill our responsibilities and comply with state law with regard to the Alternative Process for proper airport land use compatibility planning.	Consistent: The Specific Plan is consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan.
LU-5.7	ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.	Consistent: The Specific Plan is consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan. The allowable height is within the range (100' to 150') as prescribed by Airport Land Use Compatibility Plan.
LU-5.8	Chino Airport. We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.	N/A
Housing Element		
GOAL H-1	**Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.**	
Policies		
H-1.1	Housing Rehabilitation. We support the rehabilitation, maintenance, and improvement of single-family, multiple-family, and mobile homes through code compliance, removal of blight where necessary, and provision of rehabilitation assistance where feasible.	N/A: The Specific Plan is a mixed-use plan with Hotel and Local Serving Retail uses. It does not include housing.
H-1.2	Neighborhood Conditions. We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.	Consistent: The Specific Plan has a Local Serving Retail component with a public plaza that will contribute to neighborhood amenities. Development within the Specific Plan will contribute to a substantial number of jobs in the area and lead to jobs-housing balance and community building efforts.
H-1.3	Community Amenities. We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes and public safety for neighborhoods consistent with City master plans and neighborhood plans.	Consistent: The Specific Plan has a Local Serving Retail component with a public plaza that will contribute to neighborhood amenities. The Specific Plan will create a pedestrian realm with wide, buffered, and landscaped sidewalks that will contribute to pedestrian safety.
H-1.4	Historical Preservation. We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.	N/A: There are no local historical or cultural resources within the Specific Plan.
H-1.5	Neighborhood Identity. We strengthen neighborhood identity through creating parks and recreational outlets, sponsoring neighborhood events, and encouraging resident participation in the planning and improvement of their neighborhoods.	Consistent: The hotel is envisioned to be a world-class hotel with high aesthetic value creating identity for the neighborhood. Additionally, it will provide paid event space in the form of banquet halls as well as restaurants. Additionally, it includes a public plaza in the Local Serving Retail portion of the Specific Plan.

GOAL H-2	**Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.**	
Policies		
H-2.1	Corridor Housing. We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.	N/A: The Specific Plan is a commercial mixed-use plan with Hotel and Local Serving Retail uses. It does not include a residential component. However, development within the Specific Plan will contribute to a substantial number of jobs in the area and lead to jobs-housing balance.
H-2.2	Historic Downtown. We foster a vibrant historic downtown through facilitating a wide range of housing types and affordability levels for households of all ages, housing preferences, and income levels.	N/A: The Specific Plan is a commercial mixed-use plan with Hotel and Local Serving Retail uses. It does not include a residential component.
H-2.3	Ontario Airport Metro Center. We foster a vibrant, urban, intense, and highly amenitized community in the Ontario Airport Metro Center Area through a mix of residential, entertainment, retail, and office-oriented uses.	The Specific Plan is within the Ontario Airport Metro Center and provides for a commercial mixed-use development with Hotel and Local Serving Retail.
H-2.4	Ontario Ranch. We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	N/A: The Specific Plan is a commercial mixed-use plan with Hotel and Local Serving Retail uses. It does not include a residential component.
H-2.5	Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.	N/A: The Specific Plan is a commercial mixed-use plan with Hotel and Local Serving Retail uses It does not include a residential component.
H-2.6	Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.	N/A: The Specific Plan is a commercial mixed-use plan with Hotel and Local Serving Retail uses It does not include a residential component.
GOAL H-3	**A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.**	
Policies		
H-3.1	Incentives. We maintain incentive programs that can be offered to projects that provide benefits to the community such as exceptional design quality, economic advantages, environmental sustainability, or other benefits that would otherwise be unrealized.	N/A
H-3.2	Flexible Standards. We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.	Consistent: The development standards for mixed-use development are flexible and provide for high quality development.
H-3.3	Development Review. We maintain a residential development review process that provides certainty and transparency for project stakeholders and the public, yet allows for the appropriate review to facilitate quality housing development.	N/A

H-3.4	Financial Incentives. We consider financial incentives to facilitate and encourage the production, rehabilitation or improvement of housing, or provision of services where such activity furthers housing and community-wide goals.	N/A
GOAL H-4	**Increased opportunities for low- and moderate-income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities. Inclusive communities, racial equity, fair housing choice, and access to opportunity.**	
Policies		
H-4.1	Preservation of Affordable Apartments. We strive to facilitate the preservation of the affordability of publicly assisted apartments for lower-income households through financial assistance, technical assistance, rehabilitation, and collaborative partnerships.	N/A
H-4.2	Homeownership Opportunities. We increase and expand homeownership rates for lower- and moderate-income households by offering financial assistance, low-interest loans, and educational resources, and by working in collaboration with partnerships.	N/A
H-4.3	Rental Assistance. We support the provision of rental assistance for individuals and families earning extremely low, very low, and low income with funding from the state and federal government.	N/A
H-4.4	Mixed-income Housing. We encourage the integration of affordable housing in the Ontario Ranch, Ontario Airport Metro Center Area, and existing neighborhoods.	N/A
H-4.5	Collaborative Partnerships. We support collaborative partnerships of nonprofit organizations, affordable housing developers, major employers, and for-profit developers to produce affordable housing.	N/A
H-4.6	Fair Housing. We further fair housing by prohibiting discrimination in the housing market, lifting barriers that restrict access to housing, and providing education, support, and enforcement services to address discriminatory practices.	N/A
GOAL H-5	**A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.**	
Policies		
H-5.1	Senior Housing. We support the development of accessible and affordable senior housing and provide financial assistance for seniors to maintain and improve their homes.	N/A
H-5.2	Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.	N/A

H-5.3	Disabled People. We increase the supply of permanent, affordable, and accessible housing for people with disabilities, and provide assistance to allow them to maintain and improve their homes.	N/A
H-5.4	Homeless People. We partner with nonprofit partners to provide emergency shelters, transitional housing, permanent supportive housing, and supportive services for people who are homeless.	N/A
H-5.5	Supportive Services. We financially support organizations, as feasible, that provide support services that meet the needs of those with special needs and further the greatest level of independence.	N/A
H-5.6	Partnerships. We collaborate with nonprofit organizations, private developers, employers, government agencies, and other interested parties to develop affordable housing and provide support services.	N/A
Parks and Recreation Element		
GOAL PR-1	**A system of safe and accessible parks that meets the needs of the community.**	
Policies		
PR-1.1	Access to Parks. In all new residential development areas, we strive to provide a park and/or recreational facility within walking distance (¼ mile) of every residence and prioritize the establishment of parks in environmental justice areas that do not have adequate access to parks.	N/A: The Specific Plan is a commercial mixed-use plan with Hotel and Local Serving Retail uses. Although this area is classified as an environmental justice area according to Cal Enviroscreen 4.0, it is not residential and does not include a residential component. However, the plan encourages the improvement of and connection to Cucamonga Creek Trail and improvements of Holt Boulevard and Guasti Road which will contribute to the safe and comfortable mobility between the Specific Plan and surrounding uses.
PR-1.2	Adjacency to Schools. We examine locating parks adjacent to school sites to promote joint-use opportunities.	N/A: The Specific Plan does not include a residential component so there is no impact on the location of schools.
PR-1.3	Funding. We shall seek outside, one-time sources of funding for capital improvements and reserve ongoing City funds primarily for operations and maintenance.	N/A
PR-1.4	Joint-use Opportunities. In areas where there is a need but no City recreational facility, we explore joint-use opportunities. (e.g., school sites).	N/A
PR-1.5	Acreage Standard. We strive to provide 5 acres of parkland (public and private) per 1,000 residents.	Consistent. The Specific Plan contributes to both public and private open space. Please see below for the Public/Private landscape area breakdown: - Level 1: Public landscape (not including driveways):28,621 sq ft; Private - landscape:205,335 sq ft - Level 3: Private landscape: 57,365 sq ft - Level 9: Private landscape: 32,119 sq ft

PR-1.6	Private Parks. We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	Consistent. The Specific Plan contributes to both public and private open space. Please see below for the Public/Private landscape area breakdown: - Level 1: Public landscape (not including driveways):28,621 sq ft; Private - landscape:205,335 sq ft - Level 3: Private landscape: 57,365 sq ft - Level 9: Private landscape: 32,119 sq ft
PR-1.7	Special Needs/Universal Design. We attempt to provide recreational opportunities at parks for people of all ages and abilities.	Consistent. The Specific Plan aims to design all public realm and open space facilities with Universal Design standards.
PR-1.8	Renovation. We examine renovating existing facilities prior to building replacement facilities.	N/A: This is a new development Specific Plan.
PR-1.9	Phased Development. We require parks be built in new communities before a significant proportion of residents move in.	N/A: The Specific Plan does not have a residential component
PR-1.10	Master Plans for Individual Park Facilities. We require an individual park master plan for parks in excess of 10 acres.	N/A
PR-1.11	Environmental Function of Parks. We require new parks to meet environmental management objectives.	N/A: The development is not a parks project.
PR-1.12	Trails. We promote connections between parks and local trails including those managed by other public agencies.	N/A: The development is not a parks project, but the Specific Plan is supportive of connections to the Cucamonga Creek Trail.
PR-1.13	Equestrian Trails. We require the design, construction, and maintenance of equestrian trails in Rural Residential designated areas.	N/A
PR-1.14	Multi-family Residential Developments. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.	N/A: The development is not a residential project.
PR-1.15	Trail Connectivity. We strengthen and improve equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	Consistent: The development is supportive of connections to the Cucamonga Creek Trail.
PR-1.16	Equestrian Master Plan. We use Homer Briggs Park as the primary focal point for the development of a Master Plan of Equestrian Trails in the Rural Residential area.	N/A
GOAL PR-5	**A range of recreational programs provided by public, private, and nonprofit organizations that meet the needs of the community's varied interests, age groups, and abilities.**	
Policies		
PR-2.1	Participation. We program park facilities to maximize utilization and participation, while considering park size, location, and population served.	N/A: The development is not a parks project.

PR-2.2	Needs Assessment. We track the needs and priorities for recreational programming and look for ways to meet demand.	N/A: The development is not a parks project.
PR-2.3	Community Involvement. We involve the local community in planning programs for neighborhood and community park facilities.	N/A: The development is not a parks project.
PR-2.4	Access to Programs. We provide a range of recreational and physical exercise programs that are accessible to residents of all income levels throughout the community and prioritize establishing and maintaining equitable access for residents in environmental justice areas.	N/A: Although this area is classified as an environmental justice area according to Cal Enviroscreen 4.0, it does not include residential and is not a parks project. However, the Specific Plan incorporates sustainable strategies and public open space. The plan also encourages the improvement of and connection to Cucamonga Creek Trail. Additionally, public realm improvements of the sidewalk areas and edge friction elements such as curbs, street trees, lighting, etc. along Holt Boulevard and Guasti Road contribute to walkability and connectivity to surrounding areas.
PR-2.5	Partnerships. We partner with local and regional agencies, nonprofit organizations, and the private sector to provide a comprehensive range of recreational programs.	N/A
PR-2.6	Crime Deterrents. We promote and participate in recreational programming as part of our crime prevention effort.	N/A
Environmental Resources Element		
GOAL ER-1	**A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.**	
Policies		
ER-1.1	Local Water Supply. We increase local water supplies to reduce our dependence on imported water. New and redevelopment projects are aligned with our available water supply and/or to enhance our available water supply.	Consistent: Development within the Specific Plan is consistent with General Plan and will not impose water demand beyond that analyzed in the General Plan.
ER-1.2	Matching Supply to Use. We match water supply and quality to the appropriate use.	N/A
ER-1.3	Conservation and Sustainable Water Supply. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability	N/A
ER-1.4	Supply-Demand Balance. We require that available water supply and demands be balanced.	Consistent: Development within the Specific Plan is consistent with General Plan and will not impose water demand beyond that analyzed in the General Plan.
ER-1.5	Water Resource Management. Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	N/A

ER-1.6	Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	Consistent: Development within the Specific Plan will use native or drought-tolerant landscaping techniques and will incorporate LID where feasible.
ER-1.7	Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	Consistent: Development within the Specific Plan will use native or drought-tolerant landscaping techniques and will incorporate LID where feasible.
ER-1.8	Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	Consistent: Development within the Specific Plan will be consistent waste discharge requirements adopted by the Regional Water Quality Control Board.
GOAL ER-2	**A cost effective, integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates.**	
Policies		
ER-2.1	Waste Diversion. We shall meet or exceed AB 939 requirements.	Consistent: Development within the Specific Plan will comply with state requirements.
ER-2.2	Hazardous and Electronic Wastes. We prohibit the disposal of hazardous and electronic waste into the municipal waste stream pursuant to state law.	Consistent: Development within the Specific Plan will comply with state requirements.
ER-2.3	Purchase Products Made from Recycled Materials. We purchase recycled-content products where it is cost effective.	Consistent: Development within the Specific Plan will purchase products made from recycled materials where feasible ensuring competitiveness in the market or adherence to industry standards.
GOAL ER-3	**Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**	
Policies		
ER-3.1	Conservation Strategy. We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	Consistent: Development within the Specific Plan will aim to conserve energy to the extent feasible based on market competitiveness and industry standards.
ER-3.2	Green Development– Communities. We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	Consistent: Development within the Specific Plan will use many sustainable practices such as shared parking, drought-tolerant landscaping, transit-supportive design, mixed-use development, pedestrian support, electric charging stations, bike parking facilities, provision of open spaces, heat island reduction, light pollution reduction, enhanced indoor air quality strategies, low-emitting materials, daylighting, and other techniques that are consistent with the LEED Neighborhood Development rating system.

ER-3.3	Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	Consistent: The building maximizes the site's potential for appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation. The main façade of the building is on the south which receives maximum sunlight. Being a hotel with a double-loaded corridor, the rooms are also oriented toward the north. Vertical architectural fin walls are used for solar control as well as architectural element.
ER-3.4	Green Development– Public Buildings. We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	N/A: The Specific Plan is not a City building.
ER-3.5	Fuel-Efficient and Alternative Energy Vehicles and Equipment. We require purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.	Consistent: Any new vehicles owned for the use of the hotel will meet or surpass state emissions requirements and/or use renewable sources of energy.
ER-3.6	Generation- Renewable Sources. We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	Consistent: Development within the Specific Plan will consider using renewable energy sources.
GOAL ER-4	**Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.**	
Policies		
ER-4.1	Land Use. We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	Consistent: The Specific Plan is a mixed-use development with a hotel and retail area and will contribute to a substantial number of jobs in the area and lead to a jobs-housing balance.
ER-4.2	Sensitive Land Uses. We prohibit the future siting of sensitive land uses within the distances defined by the California Air Resources Board for specific source categories, without sufficient mitigation.	N/A
ER-4.3	Greenhouse Gases (GHG) Emissions Reductions. We will reduce GHG emissions in accordance with regional, state, and federal regulations.	Consistent: The Specific Plan is a mixed-use development with a hotel and retail area. It is transit supportive as it is located in the vicinity of Metrolink and Amtrak Stations and BRT route. It encourages active transportation by providing an enhanced public realm and bike facilities. The plan encourages the improvement of and connection to Cucamonga Creek Trail. The land uses allow for bike rental and repair facilities in the Local Serving Retail area. It also has an electric charging station in the parking areas. All of the above contribute to the lowering of GHG.

ER-4.4	Indoor Air Quality. We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	Consistent: The indoor building materials will comply with State Green Building Codes.
ER-4.5	Transportation. We promote mass transit and non-motorized mobility options (walking, biking) to reduce air pollutant emissions.	Consistent: The Specific Plan is a mixed-use plan with hotel and retail uses. It is transit-supportive as it is located in the vicinity of Metrolink and Amtrak Stations and BRT route. It encourages active transportation by providing an enhanced public realm and bike facilities. The plan encourages the improvement of and connection to Cucamonga Creek Trail. The land uses allow for bike rental in the Local Serving Retail area. It also has an electric charging station in the parking areas. All of the above contribute to reducing air pollutant emissions.
ER-4.6	Particulate Matter. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.	Consistent: The development will comply with State and Federal Clean Air Standards.
ER-4.7	Other Agency Collaboration. We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source, with a particular focus on sources that affect environmental justice areas in Ontario.	N/A
ER-4.8	Tree Planting. We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the “heat island” effect.	Consistent: The Specific Plan includes a number of new trees (See landscaping concepts) that will contribute to enhancing air quality and reducing the “heat island” effect.

ER-4.9	New Localized Air Pollution Sources Near Existing Sensitive Receptors. We require new developments to conduct a Health Risk Assessment for land uses that generate more than 100 trucks per day or 40 trucks per day by trucks operating transportation refrigeration units (TRU's) within 1,000 feet from sensitive land uses (California Health and Safety Code § 42705.5(a)(5)). If the health risk assessment determines the new development poses health hazards that increase the incremental cancer risk above the threshold established by the South Coast Air Quality Management District (AQMD), we will only approve permits upon the condition that adequate mitigation measures are proposed and implemented for potential impacts on the sensitive uses around the site and along the route within Ontario taken by the trucks to and from freeways. We require new developments that must perform a health risk assessment to conduct additional public outreach by sending notifications in multiple languages to all residents living within 500 feet and encourage hosting a public meeting.	N/A
GOAL ER-5	**Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.**	
Policies		
ER-5.1	Habitat Conservation Areas. We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.	N/A: There are no biological resources within the Specific Plan.
ER-5.2	Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	N/A: There are no protected species within the Specific Plan.
ER-5.3	Right to Farm. We support the right of existing farms to continue their operations within the Ontario Ranch.	N/A
ER-5.4	Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	N/A
ER-5.5	Mining Operations. We prohibit future mining operations where the resource extraction activities are incompatible with existing or proposed adjacent land uses.	N/A

Community Economics Element		
GOAL CE-1	**A complete community that provides for all incomes and stages of life.**	
Policies		
CE-1.1	Jobs-Housing Balance. We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.	Consistent: The Specific Plan includes hotel and retail uses that will contribute to a substantial number of jobs in the area and lead to jobs-housing balance.
CE-1.2	Jobs and Workforce Skills. We use our economic development resources to: 1. attract jobs suited for the skills and education of current and future City residents; 2. work with regional partners to provide opportunities for the labor force to improve its skills and education; and 3. attract businesses that increase Ontario's stake and participation in growing sectors of the regional and global economy. (Link to Social Resources Policy SR-2.2)	Consistent: The Specific Plan includes hotel, and retail uses that will contribute to a substantial number of jobs in the area for residents and attract businesses in the Local Serving Retail as well as within the hotel.
CE-1.3	Regional Approach to Workforce Development. We work with our partners to provide workforce training and development services throughout the region, recognizing that Ontario employers rely on workers living outside of the City.	N/A
CE-1.4	Business Retention and Expansion. We continuously improve two-way communication with the Ontario business community and emphasize customer service to existing businesses as part of our competitive advantage.	Consistent: The development owners and operators will be open to two-way communication with the City.
CE-1.5	Business Attraction. We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.	Consistent: The Specific Plan is a hotel and retail plan that will attract businesses in the Local Serving Retail as well as within the hotel.
CE-1.6	Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	N/A: The Specific Plan does not include a residential component.
CE-1.7	Retail Goods and Services. We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.	Consistent: The Specific Plan is a mixed-use development with a hotel and retail component.

CE-1.8	Regional Attraction. We encourage the development and programming of regional, cultural, and entertainment destinations in Ontario.	N/A
CE-1.9	Regional Leadership. We provide leadership for public, quasi-public, and private-sector partners that help Ontario and its residents and businesses realize our goals and achieve our Vision.	N/A
CE-1.10	Life-Long Education. We work with our partners who provide life-long learning to ensure that our residents and workforce have access to education at all stages of life.	N/A
CE-1.11	Socioeconomic Trends. We continuously monitor, plan for, and respond to changing socioeconomic trends.	N/A
CE-1.12	Circulation. We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles. (Link to Mobility Element Public Transit Section)	Consistent: The Specific Plan is transit-supportive and located in the vicinity of Metrolink and Amtrack stations as well as along the future BRT route.
CE-1.13	Safety and Security. We invest in public safety and communicate our successes because the perception and reality of safety and security are necessary prerequisites for private investment and economic growth.	Consistent: The Specific Plan will incorporate industry-standard safety and security measures.
GOAL CE-2	**A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.**	
Policies		
CE-2.1	Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community. (Link to Community Design Element)	Consistent: The design guidelines for mixed-use development aim to provide for high-quality development that is aesthetically pleasing and creates a unique identity.
CE-2.2	Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	Consistent: The design guidelines for mixed-use development aim to provide for high-quality development that is aesthetically pleasing and creates a unique identity. The standards and concept plans also provide sustainable strategies and functional spaces.
CE-2.3	Interim Development. We require interim development that does not reflect the long-term Vision, be limited in scale of development so that the investment can be sufficiently amortized to make Vision-compatible redevelopment financially feasible.	N/A
CE-2.4	Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	Consistent: The design guidelines for mixed-use development aim to provide for high-quality development that is aesthetically pleasing and creates a unique identity.

CE-2.5	Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values. (Link to Community Design Element Policy CD-5.1)	Consistent: Development of private property within the Specific Plan will be privately maintained.
CE-2.6	Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property. (Link to Community Design Element Policy CD-5.1)	N/A
GOAL CE-3	**Decision-making deliberations that incorporate the full short-term and long-term economic and fiscal implications of proposed City Council actions.**	
Policies		
CE-3.1	Fiscal Impact Disclosure. We require requests for City Council action to disclose the full fiscal impacts, including direct and indirect costs.	N/A
CE-3.2	General Plan Amendments. We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.	Consistent: There are no foreseen fiscal impacts on the City. All on-site improvements will be undertaken and financed by the developer. The costs for related off-site improvements shall be the responsibility of either the Developer or the City as defined further in the conditions of the approval and Development Agreement.
CE-3.3	Long-Term Funding Disclosure. We require those requesting City support or funding for projects or programs to disclose if and how they can be continued without further City support.	Consistent: There are no foreseen fiscal impacts on the City. All on-site improvements will be undertaken and financed by the developer. The costs for related off-site improvements shall be the responsibility of either the Developer or the City as defined further in the conditions of the approval and Development Agreement.
CE-3.4	Improving Fiscal Decision-Making. We periodically assess the accuracy of projections for staff time and City resources and use the assessment results to improve our fiscal decision-making process.	N/A
CE-3.5	Sustainable Development. We recognize impacts to municipal finances as an element of sustainability, and we require claims of sustainability to assess fiscal impacts.	N/A
CE-3.6	Fully Funded Liability. We require long-term liabilities, such as retiree medical benefits, employee accrued leave balances, and self-insured liability claims to be fully funded to ensure sound, long-term fiscal health.	Consistent. All long-term liabilities will be in accordance with industry standard.
CE-3.7	Programmatically Balanced Budget. We require that the annual budget include appropriations allocated in a manner to meet the goal of the programmatically balanced budget.	N/A

CE-3.8	Budget Margins. We require that the adopted budget for revenue and expenditures reflect sufficient budget margins to minimize negative impacts to City services due to economic uncertainties.	N/A
CE-3.9	Complete Comparative Context. We require that our annual budget process provide the complete comparative context for proposed new and increased funding so decision makers can fully understand the trade-offs among budget choices.	N/A
Safety Element		
GOAL S-1	**Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.**	
Policies		
S-1.1	Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	Consistent: Development within the Specific Plan will comply with California Building Code adopted by the City, including provisions regarding lateral forces and grading.
S-1.2	Entitlement and Permitting Process. We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.	Consistent: Development within the Specific Plan will comply with California Building Code adopted by the City, including provisions regarding lateral forces and grading.
S-1.3	Continual Update of Technical Information. We maintain up-to-date California Geological Survey seismic hazard maps.	N/A
S-1.4	Seismically Vulnerable Structures. We conform to state law regarding unreinforced masonry structures and coordinate with not-for-profits to facilitate seismic retrofits in environmental justice areas and for low-income households.	N/A
GOAL S-2	**Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.**	
Policies		
S-2.1	Entitlement and Permitting Process. We require hydrological studies prepared by a state-certified engineer when new development is located in a 100-year or 500-year floodplain to assess the impact that the new development will have on the flooding potential of existing development down-gradient.	TBD
S-2.2	Floodplain Mapping. We require any new development partially or entirely in 100-year flood zones to provide detailed floodplain mapping for 100- and 200-year storm events as part of the development approval process.	N/A: The Specific Plan is not in the 100-year flood zones.

S-2.3	Facilities that Use Hazardous Materials. We comply with state and federal law and do not permit facilities using, storing, or otherwise involved with substantial quantities of onsite hazardous materials to be located in the 100-year flood zone or 500-year flood zone unless all standards of elevation, floodproofing, and storage have been implemented to the satisfaction of the Building Department.	N/A: There are no hazardous materials stored, produced, or transported to the site.
S-2.4	Prohibited Land Uses. We prohibit the development of new essential and critical facilities in the 100-year floodplain and discourage the development of new essential and critical facilities in the 500-year floodplain unless all standards of elevation and flood proofing demonstrate that a facility can be safe and operational during a flood event, implemented to the satisfaction of the Building Department.	N/A
S-2.5	Stormwater Management. We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces. (Link to Environmental Resources Element)	N/A: The Specific Plan is not in the 100-year flood zones.
S-2.6	Use of Flood Control Facilities. We encourage joint use of flood control facilities as open space or other types of recreational facilities.	Consistent: The Specific plan is located immediately west of the Cucamonga Creek Channel. This fully improved facility provides regional flood control and storm conveyance to the surrounding area. A portion of the flood control channel could be re-imagined as a multimodal greenway that promotes outdoor activity.
S-2.7	Collaboration Between Agencies. Collaborate with the San Bernardino County Flood Control District and other state and federal agencies to maintain flood-control infrastructure to minimize flood damage.	N/A
GOAL S-3	**Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.**	
Policies		
S-3.1	Prevention Services. We proactively mitigate or reduce the negative effects of fire, hazardous materials release, and structural collapse by implementing the regularly adopted California Fire Code and California Building Code.	Consistent: Development within the Specific Plan will comply with California Fire Code and California Building Code adopted by the City.
S-3.2	Community Outreach. We provide education to local schools and community groups to promote personal and public safety.	N/A

S-3.3	Fire and Emergency Medical Services. We maintain sufficient fire stations, equipment and staffing to respond effectively to emergencies and meet the needs of the community and state requirements.	N/A

S-3.4	Special Team Services. We maintain effective special rescue services.	N/A
S-3.5	Emergency Notifications. We maintain a public alert notification system that efficiently conveys information about imminent, developing, ongoing, and concluding emergency events to residents and visitors, working with network providers that translate information into other languages.	N/A
S-3.6	Interagency Cooperation. In order to back up and supplement our capabilities to respond to emergencies, we participate in the California Fire Rescue and Mutual Aid Plan.	N/A
S-3.7	Water Supply and System Redundancy. We monitor our water system to manage and ensure adequate firefighting water supplies.	N/A
S-3.8	Fire Prevention through Environmental Design. We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings. (Link to Community Design Element)	Consistent: Development within the Specific Plan will incorporate fire prevention considerations in the design of streetscapes, sites, open spaces, and buildings. See landscape plan concepts.
S-3.9	Resource Allocation. We analyze fire data to evaluate the effectiveness of our fire prevention and reduction strategies and allocate resources accordingly.	N/A
GOAL S-4	**An environment where noise does not adversely affect the public's health, safety, and welfare.**	
Policies		
S-4.1	Noise Mitigation. We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	Consistent: Development within the Specific Plan is allowed equivalent noise levels within 70 dbA per the City's Zoning Code for exterior noise standards for lodging facilities.
S-4.2	Coordination with Transportation Authorities. We collaborate with airport owners, FAA, Caltrans, SBCTA, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of, and updates to transportation-related plans to minimize noise impacts and provide appropriate mitigation measures.	N/A
S-4.3	Airport Noise Mitigation. We aggressively pursue funding and utilize programs to reduce effects of aircraft noise in impacted areas of our community.	N/A
S-4.4	Truck Traffic. We manage truck traffic to minimize noise impacts on sensitive land uses.	N/A
S-4.5	Roadway Design. We design streets and highways to minimize noise impacts.	N/A

S-4.6	Airport Noise Compatibility. We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise-sensitive land uses within airport noise impact zones.	N/A
S-4.7	Rail Noise Mitigation. We require residential and mixed use development of vibration-sensitive uses in areas within 200 feet of rail to evaluate for indoor vibration levels and mitigate any exceedances of the Federal Transit Administration vibration-annoyance criteria.	N/A
GOAL S-5	**Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.**	
Policies		
S-5.1	Dust Control Measures. We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	Consistent: Development within the Specific Plan requires little to no grading. However, Best Management Practices will be implemented for dust control.
S-5.2	Grading in High Winds. We prohibit excavation and grading during strong wind conditions, as defined by the Building Code.	Consistent: Development within the Specific Plan requires little to no grading. Grading during strong wind conditions will be prohibited, as defined by the Building Code.
S-5.3	Public Safety Power Shutoffs. We coordinate with utility companies to minimize service interruptions, such as Public Safety Power Shutoffs, before, during, and after windstorms and wind-related hazards.	N/A
GOAL S-6	**Reduced potential for hazardous materials exposure and contamination.**	
Policies		
S-6.1	Disclosure and Notification. We enforce disclosure laws that require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use, or transport.	N/A
S-6.2	Response to Hazardous Materials Releases. We respond to hazardous materials incidents and coordinate these services with other jurisdictions.	N/A
S-6.3	Safer Alternatives. We minimize our use of pesticides and other hazardous materials by choosing non-toxic alternatives that do not pose a threat to the environment, especially when it could affect public park facilities and open spaces.	Consistent: Safer non-toxic alternatives will be used for the maintenance of landscaped areas within the Specific Plan.
S-6.4	Safe Storage and Maintenance Practices. We require that the users of hazardous materials be adequately prepared to prevent and mitigate hazardous materials releases.	N/A

S-6.5	Location of Hazardous Material Facilities. We regulate facilities that will be involved in the production, use, storage, or disposal of hazardous materials, pursuant to federal, state, county, and local regulations, so that impacts to the environment and sensitive land uses are mitigated. We prohibit new hazardous waste facilities in close proximity to sensitive land uses and environmental justice areas.	N/A
S-6.6	Location of Sensitive Land Uses. We prohibit new sensitive land uses from locating within airport safety zones and near existing sites that use, store, or generate large quantities of hazardous materials. (Link to Land Use Element)	N/A
S-6.7	Household Hazardous Waste. We support the proper disposal of household hazardous substances.	N/A
S-6.8	Mitigation and Remediation of Groundwater Contamination. We actively participate in local and regional efforts directed at both mitigating environmental exposure to contaminated groundwater and taking action to clean up contaminated groundwater once exposure occurs.	N/A
S-6.9	Remediation of Methane. We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	N/A
GOAL S-7	**Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.**	
Policies		
S-7.1	Police Unit Response. We respond to calls for service in a timely manner.	N/A
S-7.2	Community Oriented Problem Solving (C.O.P.S.). We support and maintain the mission of COPS to identify and resolve community problems.	N/A
S-7.3	Prevention Services. We provide crime prevention programs targeted to youth, parents, seniors, businesses, and neighborhoods.	N/A

S-7.4	Crime Prevention through Environmental Design (CPTED). We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.	Consistent: CPTED techniques are implemented in the Specific Plan. These include but not limited to the following: - Design public spaces, such as lobbies, and entrances, to maximize visibility. - Use landscaping and lighting strategically to eliminate hiding spots and create clear sightlines. - Limit access points to the hotel and use controlled entry systems. - Use fencing, gates, and other barriers to control access to the property. - Use design elements, such as changes in paving materials or landscaping, to delineate different areas. -Provide well-lit pathways and amenities that encourage guests to use outdoor spaces. -Use clear and informative signage to guide guests and staff around the property.
S-7.5	Interdepartmental Coordination. We utilize all City departments to help reduce crime and promote public safety.	N/A
S-7.6	Partnerships. We partner with other local, state, and federal law enforcement agencies and private security providers to enhance public safety services in Ontario.	N/A
S-7.7	Resource Allocation. We analyze crime data to evaluate the effectiveness of crime prevention and reduction strategies and allocate resources accordingly.	N/A
S-7.8	Social Services. We support behavioral health and social services as part of the public safety solution.	N/A
GOAL S-8	**Disaster resilient, prepared community through effective emergency/disaster preparedness, response, mitigation, and recovery.**	
Policies		
S-8.1	State and Federal Mandates. We maintain emergency management programs that meet the requirements of the State of California Standardized Emergency Management System (SEMS) and the National Incident Management System (NIMS).	N/A
S-8.2	Emergency Management Plans. We maintain, update, and adopt the Emergency Operations Plan (EOP) and incorporate, by reference the City's Hazard Mitigation Plan (HMP).	N/A
S-8.3	Emergency/Disaster Training Exercises. We conduct training and exercises to prepare for and evaluate emergency/disaster response and recovery procedures.	N/A

S-8.4	Interagency Collaboration. We maintain partnerships, including automatic aid agreements, with fire protection, police and sheriff departments, and emergency management agencies in San Bernardino and Riverside County to strengthen emergency response.	N/A
S-8.5	Interdepartmental Coordination. We utilize all City departments to help support emergency/disaster preparedness, response, mitigation, and recovery.	N/A
S-8.6	Community Outreach. We provide education to the community to promote personal, family, and community emergency preparedness to both natural and human-generated hazards.	N/A
S-8.7	Extreme Heat and Air Quality. We work to ensure that all community members are informed about and have access to community cooling centers and clean air centers during extreme heat events or wildfires, with a focus on serving environmental justice communities. We support the development of extreme heat emergency response policies and practices to address these critical health risks in the community.	N/A
S-8.8	Regional Partnerships for Climate Adaptation. We partner with local governments in San Bernardino County, Riverside County, and Inland Southern California Climate Collaborative to develop regional climate change adaptation strategies and programs.	N/A
S-8.9	Backup Power in Critical Facilities. We require backup power be maintained in critical facilities. We encourage backup power solutions that include renewable energy components.	N/A
GOAL S-9	**Incorporate energy efficient practices and renewable energy systems to improve air quality, comfort, and energy reliability during temporary power outages.**	
Policies		
S-9.1	Solar Energy. We support and may incentivize the installation of residential and commercial solar panels and battery storage systems that can provide electricity during power outages.	N/A
S-9.2	Renewable Energy. Renovate existing city-owned facilities and plan future facilities to include renewable energy generation capacity and battery storage as part of an effort to make public facilities and services greener and more resilient to power outages.	N/A
S-9.3	Energy Efficiency Retrofits. We support and may incentivize retrofits to residential and commercial buildings that improve energy efficiency and insulation from extreme temperatures, giving priority towards low-income applicants.	N/A

Mobility Element		
M-1	**A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.**	
	Policies	
M-1.1	Roadway Design and Maintenance. We require our roadways to: 1. Comply with federal, state, and local design and safety standards; 2. Meet the needs of multiple transportation modes and users; 3. Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; 4. Be maintained in accordance with best practices; 5. Be compatible with the streetscape and surrounding land uses; and 6. Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies. (Link to Community Design Element Policies CD-2.5, CD-2.6, CD-2.16, CD-3.3)	N/A: There are no roadways proposed within the Specific Plan other than the entranceway and access to the basement. These are designed with best practices in mind that promote the efficient flow of traffic.
M-1.2	Mitigation of Impacts. We require development to mitigate its traffic impacts.	Consistent: Traffic impacts will be mitigated based on a development agreement with the City.
M-1.3	Agency Coordination on Roadway Improvements. We work with Caltrans, SBCTA, and others to identify, fund, and implement needed improvements to roadways when necessary. We work with neighboring jurisdictions to promote regional connectivity, access, and meet operational level of service standards at the City limits.	N/A
M-1.4	Complete Streets. We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	N/A: There are no roadways proposed within the Specific Plan other than the entranceway and access to the basement. These are designed with best practices in mind that promote efficient traffic flow and allow for pedestrian movement. The Specific Plan also improves the pedestrian realm along Holt Boulevard and Guasti Road which will contribute to complete street.

M-1.5	Level of Service. Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).	Consistent: Traffic impacts will be mitigated based on a development agreement with the City.
M-1.6	Reduce Vehicle Miles Traveled. We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.	Consistent: The Specific Plan is a mixed-use development with a hotel and retail area. It is transit supportive as it is located in the vicinity of Metrolink and Amtrak Stations and BRT route. It encourages active transportation by providing an enhanced public realm and bike facilities. The plan encourages the improvement of and connection to Cucamonga Creek Trail. The Local Serving Retail allows for bike rentals . The Specific Plan Development Standards call for electric charging stations in the parking areas. All of the above contribute to the lowering of VMT.
M-2	**A system of trails and corridors that facilitate and encourage active modes of transportation.**	
Policies		
M-2.1	Active Transportation. We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	Consistent: The plan encourages active transportation by providing an enhanced public realm and bike facilities. The plan encourages the improvement of and connection to Cucamonga Creek Trail.
M-2.2	Bicycle System. We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	Consistent: The plan encourages active transportation by providing an enhanced public realm and bike facilities. The plan encourages the improvement of and connection to Cucamonga Creek Trail.
M-2.3	Pedestrian Walkways. We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points. (Link to Community Design Policy CD-3.3)	Consistent: There are no roadways proposed within the Specific Plan other than the entranceway and access to the basement. These are designed with best practices and features that allow for pedestrian movement. The Specific Plan also improves the pedestrian realm along Holt Boulevard and Guasti Road which will contribute to the safe and comfortable mobility between the Specific Plan and surrounding uses.

M-2.4	Network Opportunities. We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed- use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity. (Link to Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	Consistent: The Specific Plan is transit-supportive and located in the vicinity of Metrolink and Amtrack stations as well as along the future BRT route.
M-3	**A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.**	
	Policies	
M-3.1	Transit Partners. We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available, cost-efficient, and convenient, particularly for residents in environmental justice areas.	N/A
M-3.2	Alternative Transit Facilities at New Development. We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.	N/A: While the Specific Plan is in the vicinity of the Metrolink and Amtrack stations, it is not adjacent to these facilities. The same goes with the BRT route. The plan does provide for bike parking.
M-3.3	Transit-Oriented Development. We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use and reduce vehicle miles traveled.	Consistent: The Specific Plan is a mixed-use development with a hotel and retail area. The future multimodal transit station is under consideration within the Mixed-Use Area, which will link rail, regional, local, and airport transit. The Specific Plan is transit-supportive and contributes to the lowering of VMT.
M-3.4	Bus Rapid Transit (BRT) Corridors. We work with regional transit agencies to implement BRT service and reduce vehicle miles traveled by targeting destinations and corridors with the highest number of potential riders.	N/A
M-3.5	Light Rail. We support extension of the Metro Rail Gold Line to Ontario, and will work to secure station locations at the proposed multimodal transit center.	N/A
M-3.6	Metrolink Expansion. We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center.	N/A
M-3.7	High Speed Rail. We encourage the development of high-speed rail systems that would enhance regional mobility in Southern California and serve the City of Ontario.	N/A

M-3.8	Feeder Systems. We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario.	N/A
M-3.9	Ontario Airport Metro Center Circulator. We will explore development of a convenient mobility system, including but not limited to shuttle service, people mover, and shared car system, for the Ontario Airport Metro Center.	N/A
M-3.10	Multimodal Transportation Center. We intend to ensure the development of a multimodal transportation center near ONT airport to serve as a transit hub with amenities for transit riders, pedestrians, and bicyclists transitioning to local buses, BRT, the Gold Line, high-speed rail, the proposed Ontario Airport Metro Center Circulator, and other future transit modes. We support locations for the multimodal transportation center that are north of ONT airport, between Vineyard Avenue and Interstate 15.	N/A
M-3.11	Transit and Community Facilities. We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit. Conversely, we plan (and coordinate with other transit agencies to plan) future transit routes to serve existing community facilities.	N/A
M-4	**An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.**	
	Policies	
M-4.1	Truck Routes. We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.	N/A
M-4.2	Regional Participation. We work with regional and subregional transportation agencies and adjacent cities to plan and implement goods movement strategies, including regional truck routes, plans and projects that improve mobility, support the efficient movement of goods, and minimize negative environmental impacts. (Link to Environmental Resources Policy ER-4.3)	N/A
M-4.3	Railroad Grade Separations. We eliminate at-grade rail crossings identified on Exhibit M-01, Roadway Classifications.	N/A

M-4.4	Environmental Considerations. We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	N/A
M-4.5	Air Cargo. We support and promote a ONT airport that accommodates 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.	N/A
GOAL M-5	**A proactive leadership role in helping identify and facilitate implementation of strategies that address regional transportation challenges.**	
Policies		
M-5.1	Regional Leadership. We maintain a leadership role to help identify and implement potential solutions to long-term regional transportation problems.	N/A
M-5.2	Land Use Compatibility with Regional Transportation Facilities. We work with ONT, railroads, Caltrans, SBCTA, and other transportation agencies to minimize impacts.	N/A
Community Design Element		
GOAL CD-1	**A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.**	
Policies		
CD-1.1	City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.	Consistent: The Specific Plan is a mixed-use development with hotel and Local Serving Retail uses. The design standards within the Specific Plan aim to provide for high-quality development that is aesthetically pleasing and contributes to City identity.
CD-1.2	Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities. (Link to Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	Consistent: The Specific Plan is a mixed-use development with hotel and Local Serving Retail uses. The design standards within the Specific Plan aim to provide for high-quality development that is aesthetically pleasing and contributes to City identity. The concept plans and elevations are contemporary and aesthetically pleasing. The public plaza and public realm along Holt Boulevard and Guasti Road contribute to public placemaking whereas the private open space and recreational areas contribute to placemaking elements within the development. The signage, lighting, landscaping, and paving standards aim to contribute to placemaking.

CD-1.3	Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.	N/A
CD-1.4	Transportation Corridors. We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.	Consistent: The Specific Plan includes a public plaza and public realm along Holt Boulevard and Guasti Road which contribute to public placemaking and enhancement of these corridors.
CD-1.5	View Corridors. We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.	N/A
GOAL CD-2	**A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.**	
Policies		
CD-2.1	Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through: 1. Building volume, massing, and height to provide context-appropriate scale and proportion; 2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and 3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.	Consistent: The development standards and design guidelines chapters in the Specific Plan document discuss massing, architecture, materials, and related topics. The elevation rendering shows a high-quality design with contemporary architecture and high-quality materials (refer to the material palette in the design guidelines). Digital illumination is also used to provide a cutting edge to the architecture of the building. There is a regularity in architecture through the use of architectural fins that create vertical elements, and they are intercepted by horizontal elements forming a grid-like pattern.

CD-2.2	Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as: 1. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services; 2. Varied parcel sizes and lot configurations to accommodate a diversity of housing types; 3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access; 4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and 5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	Consistent: The Specific Plan includes a public plaza and public realm improvements of the sidewalk areas and edge friction elements such as curbs, street trees, lighting, etc. along Holt Boulevard and Guasti Road contributing to walkability and traffic calming. These also maximize safety, comfort, and aesthetics for all users. The hotels have windows looking onto Guasti Road and Holt Boulevard that provide views of the street. Parking is provided underground.
CD-2.3	Commercial Areas. We desire commercial areas and centers to be distinctive, pedestrian friendly, functional, and vibrant with a range of businesses, places to gather, and connectivity to the neighborhoods they serve.	Consistent: The Specific Plan includes a public plaza and public realm improvements of the sidewalk areas and edge friction elements such as curbs, street trees, lighting, etc. along Holt Boulevard and Guasti Road which contribute to walkability and traffic calming. These also maximize safety, comfort, and aesthetics for all users.
CD-2.4	Urban, Mixed Use, and Transit-oriented Areas. We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type. (Link to Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	Consistent: The Specific Plan includes a public plaza and public realm improvements of the sidewalk areas and edge friction elements such as curbs, street trees, lighting, etc. along Holt Boulevard and Guasti Road which contribute to walkability and traffic calming. These also maximize safety, comfort, and aesthetics for all users.
CD-2.5	Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	Consistent: The Specific Plan includes a public plaza and public realm improvements of the sidewalk areas and edge friction elements such as curbs, street trees, lighting, etc. along Holt Boulevard and Guasti Road which addresses this policy.

CD-2.6	Connectivity. We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: 1. Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic; 2. A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and 3. Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.	Consistent: The Circulation Plan complements the Land Use Plan by linking the hotel and retail uses to adjacent land uses and is designed to enhance connectivity and facilitate the movement of various transportation modes. Additionally, the development of the Specific Plan Area will include sidewalks around the site and development of a plaza at the intersection of Holt Boulevard and Guasti Road.
CD-2.7	Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.	Consistent: The Development Standards and Design Guidelines within the Specific plan include many sustainable practices such as shared parking, drought-tolerant landscaping, transit-supportive design, mixed-use development, pedestrian support, electric charging stations, bike parking facilities, provision of open spaces, heat island reduction, light pollution reduction, enhanced indoor air quality strategies, low-emitting materials, daylighting, and so on that are consistent with Sustainable design.
CD-2.8	Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.	Consistent: All outdoor spaces, including entrances and parking areas, are designed to ensure maximum visibility and adequate lighting. This includes both public and private areas. Review the parking and lighting standards and guidelines within the Specific Plan.
CD-2.9	Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	Consistent: The Specific Plan includes many sustainable practices to the extent possible including drought-tolerant landscaping, low-emitting materials, paving materials, reduced heat island effect, daylighting, and other techniques. A variety of paving materials are used as shown in the paving palette in design guidelines to delineate and define spaces both public and private.

CD-2.10	Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include: 1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field. 2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping. 3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	N/A: The Specific Plan does not include residential. The parking is provided underground.
CD-2.11	Entry Statements. We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	Consistent: The Specific Plan entrance is designed with attractive landscaping that features terraced planting, an entry canal water feature, an attractive entranceway, an arrival court with sculpture, and outdoor dining spaces. The local retail area includes a plaza, an attractive landscaping buffer, and outdoor dining spaces.
CD-2.12	Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	Consistent: The Specific Plan sign program is well-defined in in the development standards and provides for the size, location, and themes of the signage. The signage will be made of durable materials and will be complementary to the building design.
CD-2.13	Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.	N/A
CD-2.14	Availability of Information. We provide easy access to information for developers, builders and the public about design quality, construction quality, and sustainable building practices.	N/A
CD-2.15	Leverage Professional and Trade Organizations. We support excellence in design and construction quality through collaboration with trade and professional organizations that provide expertise, resources and programs for developers, builders, and the public.	N/A
CD-2.16	Transit Stops. We require transit stops be conveniently located, well lit, safe, and clearly accessible to pedestrians, bicyclists, and people of all abilities.	N/A

GOAL CD-3	Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.	
	Policies	
CD-3.1	Unique Identity. We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.	Consistent: The design guidelines for mixed-use development aim to provide for high-quality development that is aesthetically pleasing and contributes to the City's identity. The concept plans and elevations are contemporary and aesthetically pleasing. The public plaza and public realm along Holt Boulevard and Guasti Road contribute to public placemaking whereas the private open space and recreational areas contribute to placemaking elements within the development. The signage, lighting, landscaping, and paving standards aim to contribute to placemaking.
CD-3.2	Comfortable, Human-Scale Public Realm. We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.	Consistent: The Specific Plan includes a public plaza and public realm improvements of the sidewalk areas and edge friction elements such as curbs, street trees, lighting, etc. along Holt Boulevard and Guasti Road contribute to walkability and traffic calming. These also maximize safety, comfort, and aesthetics for all users.
CD-3.3	Complete and Connected Network. We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	Consistent: The Specific Plan encourages active transportation by providing an enhanced public realm and bike facilities, including bike rentals as an allowable use in the Local Serving Retail area. The plan encourages the improvement of and connection to Cucamonga Creek Trail. The Specific Plan also improves the pedestrian realm along Holt Boulevard and Guasti Road. The public plaza and public realm improvements of the sidewalk areas and edge friction elements such as curbs, street trees, lighting, etc. along Holt Boulevard and Guasti Road contribute to walkability. All of the above encourage physical activity.
CD-3.4	Context-Aware and Appropriate Design. We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.	Consistent: The Specific Plan is consistent with General Plan Update- The Ontario Plan's "Guasti District".
CD-3.5	Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	Consistent: The Specific Plan includes a public plaza and public realm improvements of the sidewalk areas encourage active use. There are outdoor dining areas both for the restaurants within the Hotel overlooking Guasti road and for restaurants within the Local Serving Retail areas.

CD-3.6	Managed Infrastructure. We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.	Consistent: The Specific Plan encourages the improvement of and connection to Cucamonga Creek Trail. The Specific Plan also improves the pedestrian realm along Holt Boulevard and Guasti Road. The public plaza and public realm improvements of the sidewalk areas and edge friction elements such as curbs, street trees, lighting, etc. along Holt Boulevard and Guasti Road contribute to walkability.
GOAL CD-4	**Historic buildings, streets, landscapes, and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, have been preserved and serve as a focal point for civic pride and identity.**	
Policies		
CD-4.1	Cultural Resource Management. We update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.	N/A
CD-4.2	Collaboration with Property Owners and Developers. We educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and unique neighborhoods.	N/A
CD-4.3	Collaboration with Outside Agencies. We pursue opportunities to team with other agencies, local organizations, and nonprofits in order to preserve and promote Ontario's heritage.	N/A
CD-4.4	Incentives. We use the Mills Act and other federal, state, regional and local programs to assist property owners with the preservation of select properties and structures.	N/A
CD-4.5	Adaptive Reuse. We actively promote and support the adaptive reuse of historic sites and buildings to preserve and maintain their viability.	N/A
CD-4.6	Promotion of Public Involvement in Preservation. We engage in programs to publicize and promote the City's and the public's involvement in preservation efforts.	N/A
CD-4.7	Public Outreach. We provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, the Ontario Museum of History and Art, and the Robert E. Ellingwood Model Colony History Room.	N/A
GOAL CD-5	**A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.**	
Policies		

CD-5.1	Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.	Consistent: Maintenance of all improvements within the Specific Plan site, including private/quasi-public open space and recreation facilities, private driveways, circulation, and landscape, will be the responsibility of the applicant. Maintenance of the sidewalk areas in the immediate vicinity of the Specific Plan site will also be the responsibility of the applicant.
CD-5.2	Maintenance of Infrastructure. We require the continual maintenance of infrastructure.	Consistent: Maintenance of all improvements within the Specific Plan, including private/quasi-public open space and recreation facilities, private driveways, circulation, and landscape, will be the responsibility of the applicant. Maintenance of the sidewalk areas in the immediate vicinity of the Specific Plan will also be the responsibility of the applicant.
CD-5.3	Improvements to Property & Infrastructure. We provide programs to improve property and infrastructure.	Consistent: Maintenance of all improvements within the Specific Plan, including private/quasi-public open space and recreation facilities, private driveways, circulation, and landscape, will be the responsibility of the applicant. Maintenance of the sidewalk areas in the immediate vicinity of the Specific Plan will also be the responsibility of the applicant.
CD-5.4	Neighborhood Involvement. We encourage active community involvement to implement programs aimed at the beautification and improvement of neighborhoods.	N/A
Social Resources Element		
GOAL SR-1	**Residents have access to information, services and goods that improve their health and wellbeing.**	
Policies		
SR-1.1	Partnering for Healthcare. We work with healthcare providers, and local, regional, state, and federal agencies to attract and retain a diversity of affordable, quality healthcare and facilities for the entire community.	N/A
SR-1.2	Nutrition Choices. We support the promotion of equitable access to affordable healthy food choices in the community, including community gardens, farmers markets, and cooking classes.	N/A
SR-1.3	Health Education. We promote equitable access to health education, including disease prevention, mental health, nutrition, and physical fitness.	N/A

SR-1.4	Physical Activity. We encourage activities and community design that improve the physical fitness of our community members, with an emphasis on the provision of activities and facilities in environmental justice areas.	Consistent: The Specific Plan is a mixed-use development with a hotel and retail area and encourages active transportation by providing an enhanced public realm and bike facilities. The plan encourages the improvement of and connection to Cucamonga Creek Trail. The Local Serving Retail allows for bike rentals The Specific Plan also improves the pedestrian realm along Holt Boulevard and Guasti Road. All of the above encourage physical activity.
GOAL SR-2	**A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.**	
Policies		
SR-2.1	Educational Partners. We partner with educational institutions throughout the region in order to expand the range and quality of educational offerings available to the community.	N/A
SR-2.2	Workforce Training. We will work with industrial organizations, businesses, and educational institutions to create opportunities for workforce training.	N/A
SR-2.3	Joint Use of Facilities. We partner with public and private educational institutions to jointly use facilities for both City and educational purposes.	N/A
SR-2.4	Access to Schools. We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.	N/A
SR-2.5	School Facilities. We plan and coordinate with school districts for designing and locating school facilities to meet the City's goals, such as for health, walkability, and safety and to minimize impacts to existing neighborhoods.	N/A
SR-2.6	Language. We promote broad outreach in languages used by the community for proposed projects that could negatively affect environmental justice areas.	N/A
SR-2.7	Community Engagement. We promote targeted outreach and education to historically underrepresented groups to encourage meaningful participation in decision-making process for projects whose outcomes will affect land use in environmental justice areas.	N/A
GOAL SR-3	**A range of community and leisure programs and activities provided by public, private, and nonprofit organizations that meet the needs of the community's varied interests, age groups and abilities.**	
Policies		

SR-3.1	Partnerships. We partner with local and regional agencies, nonprofit organizations, and the private sector to provide a comprehensive range of community activities and events to citizens.	N/A
SR-3.2	Needs Assessment. We track the needs and priorities for community services and look for ways to meet demands and avoid duplication of offerings.	N/A
SR-3.3	Program Outreach. We promote information about leisure activities, classes, special events, and other services and activities to our community.	N/A
SR-3.4	Community Events. We plan and actively participate in regularly scheduled community events and seasonal or yearly citywide events.	N/A
SR-3.5	Community Activities as Crime Deterrents. We promote and participate in community activities as part of our crime prevention efforts. (Link to Safety Element Policy S-7.3)	N/A
GOAL SR-4	**City libraries that connect community members of all ages and abilities to a broad range of programs, communication, and informational resources.**	
Policies		
SR-4.1	Community Needs. We identify and monitor community needs for library services, technology, and facilities, and tailor them to effectively meet those needs.	N/A
SR-4.2	Interagency Coordination. We leverage relationships with outside agencies, educational institutions, and neighboring jurisdictions to share library resources to the benefit of Ontario residents.	N/A
SR-4.3	Library Outreach. We outreach to the community to increase the patronage of the library.	N/A
SR-4.4	Coordination with Other Community Services. We coordinate library programs with other recreational and community programs and facilities.	N/A
SR-4.5	Focal Points of the Community. We design and program Ontario's libraries as focal points of community engagement, including public outreach and community events.	N/A
SR-4.6	Robert E. Ellingwood Model Colony History Room. We work with the Ontario Museum of History and Art in order to collect, preserve, and display artifacts and images from Ontario's heritage and connect the City's past to the present through the History Room.	N/A
GOAL SR-5	**Local heritage, entertainment, and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.**	
Policies		

SR-5.1	Provision of Entertainment and Culture. We support equitable access to a range of entertainment and cultural experiences such as public art, exhibitions, and performances.	N/A
SR-5.2	Local Heritage Education. We partner with educational providers to promote culture and heritage. (Link to Community Design Element, Historic Preservation Section).	N/A
SR-5.3	Public Art. We encourage public art in buildings, parks, open spaces, and other public and private spaces.	N/A
SR-5.4	Private-Public Sector Events. We partner with private and nonprofit sectors to provide and promote participation in cultural activities including fairs, festivals, and other events geared to neighborhoods, the City as a whole, and the region.	N/A
SR-5.5	Promotion of Ontario Artists and Musicians. We promote awareness of entertainment and culture produced in Ontario.	N/A

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PDEV23-039, A DEVELOPMENT PLAN TO CONSTRUCT A 600,000 SQUARE FOOT HOTEL AND COMMERCIAL BUILDING CONSISTING OF 600 ROOMS ON 10.43-ACRES OF LAND LOCATED ON THE SOUTHEAST CORNER OF GUASTI ROAD AND HOLT BOULEVARD WITHIN THE PROPOSED PA1 (HOSPITALITY MIXED-USE) DISTRICT OF THE EMPIRE GROVES SPECIFIC PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 110-322-33.

WHEREAS, DIVERSIFIED PACIFIC DEVELOPMENT GROUP, LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of a Development Plan, File No. PDEV23-039, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 10.43 acres of land generally located on southeast corner of Guasti Road and Holt Boulevard, within the proposed Empire Groves Specific Plan; and

WHEREAS, the properties to the north of the Project site are within the CCS (Convention Center Support Commercial) zoning district, and are developed with offices and hotel. The property to the east is within the UC (Utilities Corridor) zoning district and is developed with a flood control channel. The property to the south and west is within the CCS (Convention Center Support Commercial) zoning district, and is developed with hotel; and

WHEREAS, the proposed 600,000 square foot luxury hotel and commercial building consists of 600 rooms and will provide destination dining, luxury retail, banquet halls, spa, fitness center, public gathering spaces and additional guest amenities; and

WHEREAS, the proposed project is associated with the proposed Empire Groves Specific Plan (concurrently under review), and approval of the hotel development is contingent upon approval of the Empire Groves Specific Plan; and

WHEREAS, a shared parking analysis was completed by Translutions (Dated: November 2023) to evaluate the shared parking demand of the 600-room/suite full-service hotel with amenities (a pool/spa, fitness areas, meeting/conference rooms) and retail/restaurant areas. The methodology used for the shared parking analyses includes base parking demand ratios derived from the Urban Land Institute's (ULI) Shared Parking (3rd Edition, 2020). The parking analyses identified the highest parking demand is for 925 spaces on weekdays and 745 parking spaces on weekends. The Project is proposing a total of 932 parking spaces to meet the parking needs of the project; and

WHEREAS, in conjunction with the Project, the Applicant also filed an application for a Specific Plan (Empire Groves), File No. PSP23-001 and Development Agreement, File No. PDA23-005, which both require City Council approval; and

WHEREAS, the Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022 (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San

Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 19, 2025, the Development Advisory Board of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date, voting to issue Decision No. DAB25-004, respectively, recommending that the Planning Commission recommend the City Council approve the Application; and

WHEREAS, on February 25, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the EIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC25-006, recommending the City Council adopt the EIR Addendum, and voting to issue Resolution No. PC25-009, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on March 18, 2025, the City Council issued a Resolution adopting the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on March 18, 2025, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 2: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 3: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 2, above, the City Council hereby concludes as follows:

(1) ***The proposed development at the proposed location is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Project is located within the Mixed Use - Multimodal (MU-Multimodal land use district of the Policy Plan Land Use Map, and the proposed - PA1 (Hospitality Mixed-Use) of the Empire Groves Specific Plan. The development standards and conditions under which the proposed Project will be constructed and maintained is consistent with the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.

(2) ***The proposed development is compatible with those on adjoining sites in relation to location of buildings, with particular attention to privacy, views, any physical constraint identified on the site and the characteristics of the area in which the site is located.*** The Project has been designed consistent with the requirements of the City of Ontario Development Code and the proposed - PA1 (Hospitality Mixed-Use) of the Empire Groves Specific Plan, including standards relative to the particular land use proposed (hotel/commercial), as-well-as building intensity, building and parking setbacks, building height, number of off-street parking and loading spaces, on-site and off-site landscaping, and fences, walls and obstructions.

(3) ***The proposed development will complement and/or improve upon the quality of existing development in the vicinity of the project and the minimum safeguards necessary to protect the public health, safety and general welfare have been required of the proposed project.*** The City Council has required certain safeguards, and imposed certain conditions of approval, which have been established to ensure that: [i] the purposes of the proposed Empire Groves Specific Plan are maintained; [ii] the project will not endanger the public health, safety or general welfare; [iii] the project will not result in any significant environmental impacts; [iv] the project will be in harmony with the area in which it is located; and [v] the project will be in full conformity with the Vision, City Council Priorities and Policy Plan components of The Ontario Plan, and the proposed Empire Groves Specific Plan.

(4) ***The proposed development is consistent with the development standards and design guidelines set forth in the Development Code, or applicable specific plan or planned unit development*****.** The proposed Project has been reviewed for consistency with the general development standards and guidelines of the proposed Empire Groves Specific Plan that are applicable to the proposed Project, including building intensity, building and parking setbacks, building height, amount of off-street parking and loading spaces, parking lot dimensions, design and landscaping, bicycle parking, on-site landscaping, and fences and walls, as-well-as those development standards and guidelines specifically related to the particular land use being proposed (hotel/commercial). As a result of this review, the City Council has determined that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the development standards and guidelines described in the proposed Empire Groves Specific Plan.

SECTION 4: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described Development Plan and Conditions of Approval, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 18th day of March, 2025.

Project Description: A Development Plan to construct a 600,000 square foot hotel and commercial building consisting of 600 rooms on 10.43 acres of land located on the southeast corner of Guasti Road and Holt Boulevard within the proposed PA1 (Hospitality Mixed-Use) district of the Empire Groves Specific Plan; (APN: 110-322-33) **submitted by Diversified Pacific Development Group, LLC ;**

Prepared By: Lorena Mejia, Senior Planner
Phone: 909.395.2276 (direct)
Email: lmejia@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department. The Development Agreement and Empire Groves Specific Plan shall govern the project site where conflicts occur with the Standard Conditions of approval.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

(a) One CD containing a complete electronic website version of the final Specific Plan document, including all required revisions.

2.2 Time Limits.

(a) Development Plan approval shall become null and void as outlined in the Development Agreement, File No. PDA23-005.

2.3 General Requirements. The Project shall comply with the following general requirements:

(a) All construction documentation shall be coordinated for consistency, including, but not limited to, architectural, structural, mechanical, electrical, plumbing, landscape

and irrigation, grading, utility and street improvement plans. All such plans shall be consistent with the approved entitlement plans on file with the Planning Department.

(b) The project site shall be developed in conformance with the approved plans on file with the City. Any variation from the approved plans must be reviewed and approved by the Planning Department prior to building permit issuance.

(c) The herein-listed conditions of approval from all City departments shall be included in the construction plan set for the project, which shall be maintained on site during project construction.

2.4 Landscaping.

(a) The Project shall provide and continuously maintain landscaping and irrigation systems in compliance with the provisions of Ontario Development Code Division 6.05 (Landscaping).

(b) Comply with the conditions of approval of the Planning Department, Landscape Planning Division.

(c) Landscaping shall not be installed until the Landscape and Irrigation Construction Documentation Plans required by Ontario Development Code Division 6.05 (Landscaping) have been approved by the Landscape Planning Division.

(d) Changes to approved Landscape and Irrigation Construction Documentation Plans, which affect the character or quantity of the plant material or irrigation system design, shall be resubmitted for approval of the revision by the Landscape Planning Division, prior to the commencement of the changes.

2.5 Walls and Fences. All Project walls and fences shall comply with the requirements of Ontario Development Code Division 6.02 (Walls, Fences and Obstructions).

2.6 Parking, Circulation and Access.

(a) The Project shall comply with the applicable off-street parking, loading and lighting requirements of City of Ontario Development Code Division 6.03 (Off-Street Parking and Loading).

(b) Areas provided to meet the City's parking requirements, including off-street parking and loading spaces, access drives, and maneuvering areas, shall not be used for the outdoor storage of materials and equipment, nor shall it be used for any other purpose than parking.

(c) The required number of off-street parking spaces and/or loading spaces shall be provided at the time of site and/or building occupancy. All parking and loading spaces shall be maintained in good condition for the duration of the building or use.

(d) Parking spaces specifically designated and conveniently located for use by the physically disabled shall be provided pursuant to current accessibility regulations contained in State law (CCR Title 24, Part 2, Chapters 2B71, and CVC Section 22507.8).

(e) Bicycle parking facilities, including bicycle racks, lockers, and other secure facilities, shall be provided in conjunction with development projects pursuant to current regulations contained in CALGreen (CAC Title 24, Part 11). The final design and placement of bicycle parking facilities shall be subject to Planning Department review and approval.

2.7 Outdoor Loading and Storage Areas.

(a) Loading facilities shall be designed and constructed pursuant to Development Code Division 6.03 (Off-Street Parking and Loading).

(b) Areas designated for off-street parking, loading, and vehicular circulation and maneuvering, shall not be used for the outdoor storage of materials or equipment.

2.8 Site Lighting.

(a) All off-street parking facilities shall be provided with nighttime security lighting pursuant to Ontario Municipal Code Section 4-11.08 (Special Residential Building Provisions) and Section 4-11.09 (Special Commercial/Industrial Building Provisions), designed to confine emitted light to the parking areas. Parking facilities shall be lit from sunset until sunrise, daily, and shall be operated by a photocell switch.

(b) Unless intended as part of a master lighting program, no operation, activity, or lighting fixture shall create illumination on any adjacent property.

2.9 Mechanical and Rooftop Equipment.

(a) All exterior roof-mounted mechanical, heating and air conditioning equipment, and all appurtenances thereto, shall be completely screened from public view by parapet walls or roof screens that are architecturally treated so as to be consistent with the building architecture.

(b) All ground-mounted utility equipment and structures, such as tanks, transformers, HVAC equipment, and backflow prevention devices, shall be located out of view from a public street, or adequately screened through the use of landscaping and/or decorative low garden walls.

2.10 Security Standards. The Project shall comply with all applicable requirements of Ontario Municipal Code Title 4 (Public Safety), Chapter 11 (Security Standards for Buildings).

2.11 Signs.

(a) All Project signage shall comply with the requirements of Ontario Development Code Division 8.1 (Sign Regulations).

(b) On-site posting of public noticing shall be provided pursuant to Code Section 2.03.010.C.4, which consists of one or more large, 6-foot-tall, freestanding public notification signs. The sign face shall measure 4 feet tall by 8 feet wide, in a format approved by the Planning Director. The sign shall be posted no later than ten calendar days prior to the Planning Commission hearing date and removed no later than fourteen calendar days following the City

Council hearing date, unless otherwise required by the Planning Director. The format is available on the City's website.

2.12 Sound Attenuation. The Project shall be constructed and operated in a manner so as not to exceed the maximum interior and exterior noise levels set forth in Ontario Municipal Code Title 5 (Public Welfare, Morals, and Conduct), Chapter 29 (Noise).

2.13 Disclosure Statements.

(a) A copy of the Public Report from the Department of Real Estate, prepared for the subdivision pursuant to Business and Professions Code Section 11000 et seq., shall be provided to each prospective buyer of the residential units and shall include a statement to the effect that:

(i) This tract is subject to noise from the Ontario International Airport and may be more severely impacted in the future.

(ii) Some of the property adjacent to this tract is zoned for agricultural uses and there could be fly, odor, or related problems due to the proximity of animals.

(iii) The area south of Riverside Drive lies within the San Bernardino County Agricultural Preserve. Dairies currently existing in that area are likely to remain for the foreseeable future.

(iv) This tract is part of a Landscape Maintenance District. The homeowner(s) will be assessed through their property taxes for the continuing maintenance of the district.

2.14 Environmental Requirements.

(a) If human remains are found during project grading/excavation/construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and Native American consultation has been completed (if deemed applicable).

(b) If any archeological or paleontological resources are found during project grading/excavation/construction, the area shall not be disturbed until the significance of the resource is determined. If determined to be significant, the resource shall be recovered by a qualified archeologist or paleontologist consistent with current standards and guidelines, or other appropriate measures implemented.

2.15 Indemnification. The applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul any approval of the City of Ontario, whether by its City Council, Planning Commission or other authorized board or officer. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

2.16 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded

to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

(b) After the Project's entitlement approval, and prior to issuance of final building permits, the Planning Department's Plan Check and Inspection fees shall be paid at the rate established by resolution of the City Council.

2.17 Related Applications. Development Plan approval shall not be final and complete until such time as File Nos. PDA23-005 and PSP23-001 have been approved by the City Council.

2.18 Final Occupancy. The Project Architect of record will certify that construction of each building site and the exterior elevations of each structure shall be completed in compliance with the approved plans. Any deviation to approved plans shall require a resubmittal to the Planning Department for review and approval prior to construction. The Occupancy Release Request Form/Architect Certificate of Compliance shall be provided prior to final occupancy. After the receipt of this Certification, the Planning Department will conduct a final site and exterior elevations inspection. The Owner's Representative and Contractor shall be present.

2.19 Tribal - Yuhaaviatam of San Manuel Nation.

(a) In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. Additionally, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed within TCR-1, regarding any pre-contact finds and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal input with regards to significance and treatment.

(b) If significant pre-contact cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

(c) If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project.

(d) The Yuhaaviatam of San Manuel Nation Cultural Resources Management Department (YSMN) shall be contacted, as detailed in CUL-1, of any pre-contact cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a Cultural Resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present

that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

(e) Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project

2.20 Tribal - Gabrieleno Band of Mission Indians – Kizh Nation.

(a) The project applicant or lead agency shall retain a Native American Tribal Monitor from the Gabrieleno Band of Mission Indians – Kizh Nation to ensure proper oversight of Tribal Cultural Resources (TCR). The Tribal Cultural Resources monitoring plan shall address the details, timing, and responsibilities for cultural resource activities occurring on the project site. The plan shall include:

(i) Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling.

(ii) Full-time presence of a designated Native American Tribal Monitor from the Gabrieleno Band of Mission Indians – Kizh Nation during all grading, excavation, and ground-disturbing activities on the site. The monitor shall coordinate with the developer to ensure safety requirements, duties, and scope of work are adhered to. The Tribal Monitor shall also have the authority to stop and redirect grading activities if tribal cultural resources are identified.

(iii) Protocols and stipulations to address inadvertent discoveries of Tribal Cultural Resources, including immediate evaluation by the Kizh Nation. At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a Tribal Cultural Monitor from the Gabrieleno Band of Mission Indians – Kizh Nation to monitor all such activities. A Tribal Monitor shall be present during all initial grading activities. If tribal resources are identified during grubbing activities, the Tribal Monitor shall continue to be present during subsequent grading activities.

(b) Treatment and Disposition of Cultural Resources. In the event that Tribal Cultural Resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., the following procedures shall be followed to ensure proper and disposition of the discoveries:

(i) Temporary Curation and Storage: During construction, all discovered resources shall be temporarily curated in a secure on-site location under the oversight of the Tribal Monitor from the Gabrieleno Band of Mission Indians – Kizh Nation.

(ii) Treatment and Final Disposition All discovered cultural resources, including sacred items, burial goods, and archaeological artifacts, shall remain under the custodianship of the Gabrieleno Band of Mission Indians – Kizh Nation. Final disposition shall occur through the following process of On-site Reburial. Discovered items shall be reburied on-site in coordination with the Gabrieleno Band of Mission Indians – Kizh Nation. Measures shall be taken to ensure the future reburial area is protected from any potential future impacts. Reburial shall only occur after cataloging, basic analysis, recordation, and any other necessary documentation have been completed in consultation with the Kizh Nation.

(c) Phase IV Monitoring Report: Upon completion of grading, excavation, and ground-disturbing activities, a Phase IV Monitoring Report shall be submitted to the City of Ontario within 60 days. This report shall document:

(i) All monitoring activities conducted by the Tribal Monitors from the Gabrieleno Band of Mission Indians – Kizh Nation.

(ii) The impacts to known resources on the property.

(iii) A summary of how each mitigation measure was fulfilled.

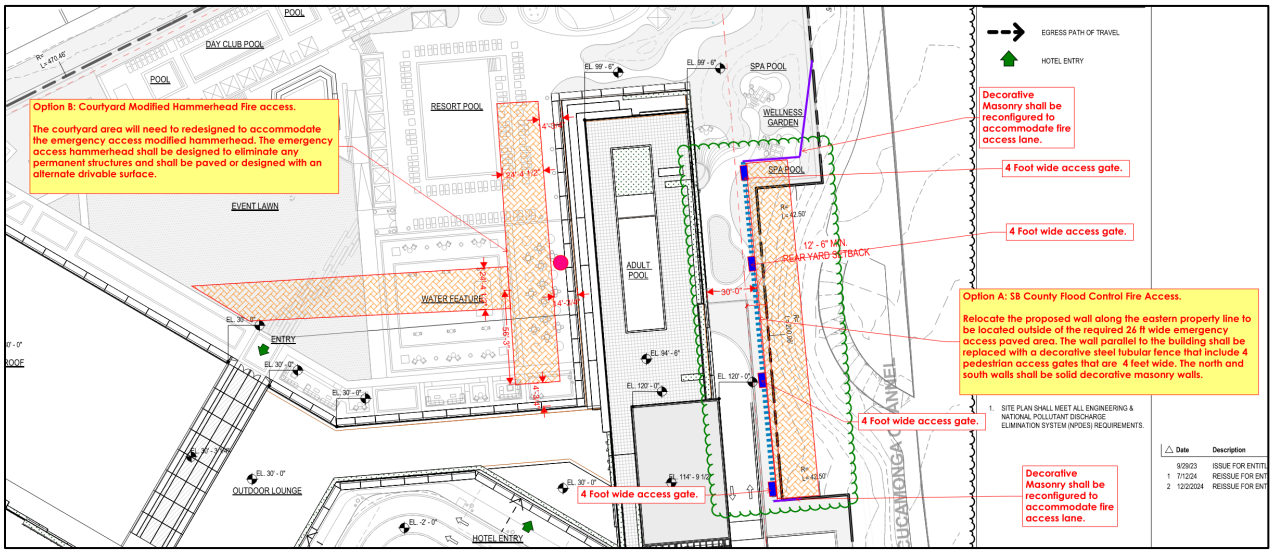
(iv) The type and disposition of cultural resources recovered.

(v) Evidence of cultural sensitivity training provided to construction staff prior to project commencement.

(vi) A confidential appendix including daily/weekly monitoring notes prepared by the monitors. All reports produced shall be submitted to the City of Ontario, the Gabrieleno Band of Mission Indians – Kizh Nation, and any other relevant agencies

2.21 Additional Requirements.

(a) The Applicant/Owner and the City shall continue to refine and finalize the associated Development Agreement (PDA23-005) as needed between the City and the Owner, including all attached exhibits, prior to review and consideration by the City Council as the final decision-making body.



(b) The final size and locations of the proposed Digital Advertising Signs integrated into the design of the building shall require separate approval. An approved Master Sign Program and user agreement shall be required in accordance with the Ontario Development Code to establish development standards for design, approved content, sign area, location, and use.

(c) The Fire Department has conditioned the project to provide a secondary point off fire access for the proposed project. The Fire conditions allow for two fire access scenarios (see the following exhibit) that include the following:

(i) Option A: SB County flood control – In Option A fire access shall be taken from the San Bernardino County Flood Control Channel located along the eastern property line. This option contingent upon approval from San Bernardino County. If approved by the County the wall and landscape areas along the eastern property line will need to be redesigned and reconfigured to accommodate the required 26-foot-wide emergency access road shown in the following exhibit. The final design shall require fire and planning approval.

(ii) Option B: Courtyard Modified Hammerhead – If Option A is not approved then Option B will be implemented. Option B is the design of a modified hammerhead located within the north courtyard area with access from Holt Boulevard. The north courtyard will need to be redesigned to accommodate adequate fire access as illustrated in the following exhibit. The emergency access hammerhead shall eliminate any permanent structures and shall

be paved or designed with an alternate drivable surface. The courtyard modified hammerhead design or an alternate design shall require fire and planning approval.

THIS PROJECT SHALL COMPLY WITH THE REQUIREMENTS SET FORTH IN THE GENERAL STANDARD CONDITIONS OF APPROVAL ADOPTED BY THE CITY COUNCIL (RESOLUTION NO. 2017-027) AND THE PROJECT SPECIFIC CONDITIONS OF APPROVAL SPECIFIED HEREIN. ONLY APPLICABLE CONDITIONS OF APPROVAL ARE CHECKED. THE APPLICANT SHALL BE RESPONSIBLE FOR THE COMPLETION OF ALL APPLICABLE CONDITIONS OF APPROVAL PRIOR TO FINAL MAP OR PARCEL MAP APPROVAL, ISSUANCE OF PERMITS AND/OR OCCUPANCY CLEARANCE, AS SPECIFIED IN THIS REPORT.

1. PRIOR TO FINAL MAP OR PARCEL MAP APPROVAL, APPLICANT SHALL:

			Check When Complete
☐	1.01	Dedicate to the City of Ontario, the right-of-way, described below to achieve: _____ feet on _____ Property line corner 'cut-back' required at the intersection of _____ and _____.	☐
☐	1.02	Dedicate to the City of Ontario, the following easement(s): _____ _____	☐
☐	1.03	Restrict vehicular access to the site as follows: _____	☐
☐	1.04	Vacate the following street(s) and/or easement(s): A. All interfering on-site easements shall be quitclaimed, vacated, and/or submit non-interference letter from affected owner/utility company.	☐
☐	1.05	Submit a copy of a recorded private reciprocal use agreement or easement. The agreement or easement shall ensure, at a minimum, common ingress and egress and joint maintenance of all common access areas and drive aisles.	☐
☐	1.06	Provide (original document) Covenants, Conditions and Restrictions (CC&Rs) as applicable to the project and as approved by the City Attorney and the Engineering and Planning Departments, ready for recordation with the County of San Bernardino. The CC&Rs shall provide for, but not be limited to, common ingress and egress, joint maintenance responsibility for all common access improvements, common facilities, parking areas, utilities, median and landscaping improvements and drive approaches, in addition to maintenance requirements established in the Water Quality Management Plan (WQMP), as applicable to the project. The CC&Rs shall also address the maintenance and repair responsibility for public improvements/utilities (sewer, water, storm drain, recycled water, etc.) located within open space/easements. In the event of any maintenance or repair of these facilities, the City shall only restore disturbed areas to current City Standards.	☐
☐	1.07	For all development occurring south of the Pomona Freeway (60-Freeway) and within the specified boundary limits (per Boundary Map found at *http://tceplumecleanup.com/*), the property developer/owner is made aware of the South Archibald Trichloroethylene (TCE) Plume "Disclosure Letter". Property owner may wish to provide this Letter as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq. This may include notifications in the Covenants, Conditions and Restrictions (CC&Rs) or other documents related to property transfer and disclosures. Additional information on the plume is available from the Santa Ana Regional Water Quality Control Board at *http://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658*.	☐
☐	1.08	File an application for Reapportionment of Assessment, together with payment of a reapportionment processing fee, for each existing assessment district listed below. Contact the Financial Services Department at (909) 395-2124 regarding this requirement. (1) _____ (2) _____	☐
☐	1.09	Prepare a fully executed Subdivision Agreement (on City approved format and forms) with accompanying security as required, or complete all public improvements.	☐

☐ 1.10 Provide a monument bond (i.e. cash deposit) in an amount calculated by the City's approved cost estimate spreadsheet (available for download on the City's website: www.ontarioca.gov) or as specified in writing by the applicant's Registered Engineer or Licensed Land Surveyor of Record and approved by the City Engineer, whichever is greater. ☐

☐ 1.11 Provide a preliminary title report current to within 30 days. ☐

☐ 1.12 File an application, together with an initial deposit (if required), to establish a Community Facilities District (CFD) pursuant to the Mello-Roos Community Facilities District Act of 1982. The application and fee shall be submitted a minimum of four (4) months prior to final subdivision map approval, and the CFD shall be established prior to final subdivision map approval or issuance of building permits, whichever occurs first. The CFD shall be established upon the subject property to provide funding for various City services. An annual special tax shall be levied upon each parcel or lot in an amount to be determined. The special tax will be collected along with annual property taxes. The City shall be the sole lead agency in the formation of any CFD. Contact Financial Services Agency at (909) 395-2015 or email CFD@ontarioca.gov to initiate the CFD application process. ☐

☐ 1.13 Ontario Ranch Developments: ☐

☐ 1) Provide evidence of final cancellation of Williamson Act contracts associated with this tract, prior to approval of any final subdivision map. Cancellation of contracts shall have been approved by the City Council.

☐ 2) Provide evidence of sufficient storm water capacity availability equivalents (Certificate of Storm Water Treatment Equivalents).

☐ 3) Provide evidence of sufficient water availability equivalents (Certificate of Net MDD Availability).

☐ 1.14 Other conditions: _____ ☐

2. PRIOR TO ISSUANCE OF ANY PERMITS, APPLICANT SHALL:

A. GENERAL
(Permits includes Grading, Building, Demolition and Encroachment)

☐ 2.01 Record Parcel Map/Tract Map No. _____ pursuant to the Subdivision Map Act and in accordance with the City of Ontario Municipal Code. ☐

☐ 2.02 Submit a PDF of the recorded map to the City Engineer's office. ☐

☒ **2.03 Note that the subject parcel is a recognized parcel in the City of Ontario per Parcel Map 5660.** ☐

☐ 2.04 Note that the subject parcel is an 'unrecognized' parcel in the City of Ontario and shall require a Certificate of Compliance to be processed unless a deed is provided confirming the existence of the parcel prior to the date of March 4, 1972. ☐

☐ 2.05 Apply for a: ☐

☐ Certificate of Compliance with a Record of Survey;

☐ Lot Line Adjustment (Record a Conforming Deed with the County of San Bernardino within six months of the recordation of the Lot Line Adjustment to conform the new LLA legal description. Submit a copy of the recorded Conforming Deed to the Engineering Department.);

☐ Make a Dedication of Easement.

☐ 2.06 Provide (original document) Covenants, Conditions and Restrictions (CC&R's), as applicable to the project, and as approved by the City Attorney and the Engineering and Planning Departments, ready for recordation with the County of San Bernardino. The CC&R's shall provide for, but not be limited to, common ingress and egress, joint maintenance of all common access improvements, common facilities, parking areas, utilities and drive approaches in addition to maintenance requirements established in the Water Quality Management Plan (WQMP), as applicable to the project. ☐

☐ 2.07 For all development occurring south of the Pomona Freeway (60-Freeway) and within the specified boundary limits (per Boundary Map found at *http://tceplumecleanup.com/*), the property developer/owner is made aware of the South Archibald Trichloroethylene (TCE) Plume "Disclosure Letter". Property owner may wish to provide this Letter as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq. This may include notifications in the Covenants, Conditions and Restrictions (CC&Rs) or other documents related to property transfer and disclosures. Additional information on the plume is available from the Santa Ana Regional Water Quality Control Board at *http://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658*. ☐

☒ **2.08 Submit a soils/geology report.** ☐

☒ **2.09 Other Agency Permit/Approval: Submit a copy of the approved permit and/or other form of approval of the project from the following agency or agencies:** ☐

- ☒ **State of California Department of Transportation (Caltrans) for street and utility improvements along Holt Blvd**
- ☐ San Bernardino County Road Department (SBCRD)
- ☒ **San Bernardino County Flood Control District (SBCFCD) for proposed Fire Access Lane through SBCFCD property along Cucamonga Channel**
- ☐ Federal Emergency Management Agency (FEMA)
- ☐ Cucamonga Valley Water District (CVWD) for sewer/water service
- ☐ United States Army Corps of Engineers (USACE)
- ☐ California Department of Fish & Game
- ☐ Inland Empire Utilities Agency (IEUA)
- ☐ Other: _____

☒ **2.10 Dedicate to the City of Ontario the right-of-way described below:** ☐

- **20 feet on Guasti Road along the proposed right turn pocket to Holt Blvd, see Transportation Section Condition 1 and 2 for more detail.**
- **Property line corner 'cut-back' required at the intersection of Guasti Road and Holt Blvd**

☒ **2.11 Dedicate to the City of Ontario the following easement(s):** ☐

- **An easement for emergency vehicle access to the City of Ontario along approved Fire Access Lane from Holt Blvd through hotel courtyard**
- **An easement for emergency vehicle access to the City of Ontario along approved Fire Access Lane from Holt Blvd to Guasti Rd through SBCFCD property along the Cucamonga Channel**
- **An easement for pedestrian public access to the City of Ontario for the onsite sidewalk along Guasti Road, see Condition 2.18.3 for more detail.**

☒ **2.12 Vacate the following street(s) and/or easement(s):** ☐

A. All interfering on-site easements shall be quitclaimed, vacated, and/or submit non-interference letter from affected owner/utility company.

☐ 2.13 Ontario Ranch Developments: ☐

☐ 1) Submit a copy of the permit from the San Bernardino County Health Department to the Engineering Department and the Ontario Municipal Utilities Company (OMUC) for the destruction/abandonment of the on-site water well. The well shall be destroyed/abandoned in accordance with the San Bernardino County Health Department guidelines.

☐ 2) Make a formal request to the City of Ontario Engineering Department for the proposed temporary use of an existing agricultural water well for purposes other than agriculture, such as grading, dust control, etc. Upon approval, the Applicant shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by said agreement.

☐ 3) Design proposed retaining walls to retain up to a maximum of three (3) feet of earth. In no case shall a wall exceed an overall height of nine (9) feet (i.e. maximum 6-foot high wall on top of a maximum 3-foot high retaining wall.

☒ **2.14** **Submit a security deposit to the Engineering Department to guarantee construction of the public improvements required herein valued at 100% of the approved construction cost estimate. Security deposit shall be in accordance with the City of Ontario Municipal Code. Security deposit will be eligible for release, in accordance with City procedure, upon completion and acceptance of said public improvements.** ☐

☒ **2.15** **The applicant/developer shall submit all necessary survey documents prepared by a Licensed Surveyor registered in the State of California detailing all existing survey monuments in and around the project site. These documents are to be reviewed and approved by the City Survey Office.** ☐

☒ **2.16** **Pay all Development Impact Fees (DIF) to the Building Department. Storm Drain Development Impact Fee shall be paid to the Building Department. Final fee shall be determined based on the approved site plan and the DIF rate at the time of payment.** ☐

☒ **2.17** **Other conditions:** ☐

- **This Development Plan shall comply with the approved Specific Plan (PSP23-001) and the approved Development Agreement (PDA23-005).**
- **The applicant/developer shall establish, on behalf of the City, a maintenance, access, and use agreement with SBCFCD for the proposed Fire Access Lane along the Cucamonga Channel from Holt Blvd. to Guasti Rd. within SBCFCD property.**

B. PUBLIC IMPROVEMENTS
(See attached Exhibit 'A' for plan check submittal requirements.)

☒ 2.18 **Design and construct full public improvements in accordance with the City of Ontario Municipal Code, current City standards and specifications, master plans and the adopted specific plan for the area, if any. These public improvements shall include, but not be limited to, the following (checked boxes):**

Improvement	Guasti Rd	Holt Blvd	-	-
Curb and Gutter	☒ **New; 32 ft. from C/L** ☐ Replace damaged ☐ Remove and replace	☒ **New; 30 ft. from C/L** ☐ Replace damaged ☐ Remove and replace	☐ New; ___ ft. from C/L ☐ Replace damaged ☐ Remove and replace	☐ New; ___ ft. from C/L ☐ Replace damaged ☐ Remove and replace
AC Pavement	☒ **Replacement[1]** ☒ **Widen 13 additional feet along frontage, including pavm't transitions**	☐ Replacement ☐ Widen ____ additional feet along frontage, including pavm't transitions	☐ Replacement ☐ Widen ____ additional feet along frontage, including pavm't transitions	☐ Replacement ☐ Widen ____ additional feet along frontage, including pavm't transitions
PCC Pavement (Truck Route Only)	☐ New ☐ Modify existing	☒ **Widen 10 additional feet along frontage, including pavm't transitions** ☒ **Replace Existing[2]**	☐ New ☐ Modify existing	☐ New ☐ Modify existing
Drive Approach	☒ **New** ☐ Remove and replace	☒ **New** ☐ Remove and replace	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace
Sidewalk	☒ **New[3]** ☐ Remove and replace	☒ **New** ☐ Remove and replace	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace
ADA Access Ramp	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace
Parkway	☒ **Trees** ☒ **Landscaping (w/irrigation)**	☒ **Trees** ☒ **Landscaping (w/irrigation)**	☐ Trees ☐ Landscaping (w/irrigation)	☐ Trees ☐ Landscaping (w/irrigation)

Removal of Improvements	_____ _____ _____	_____ _____ _____	_____ _____ _____	_____ _____ _____
Other Improvements	☒ Bridge Widening, (see **2.24)**	_____ _____ _____	_____ _____ _____	_____ _____ _____

Specific notes for improvements listed in item no. 2.18, above:

1. **Replace existing AC pavement along north side of Guasti Road from proposed median to proposed widening along project frontage per City of Ontario Standard Drawing number 1011.**
2. **Southernmost row of existing PCC pavement panels along Holt Blvd shall be removed and replaced in conjunction with the proposed frontage improvements.**
3. **Onsite sidewalk along Guasti Road shall have a continuous ADA accessible path of travel from each connection to public sidewalk.**

☒ **2.19 Construct a 2" asphalt concrete (AC) grind and overlay on the existing section of the following street(s):** ☐

- **South side of Guasti Rd, edge of gutter to proposed median curb, from Holt Blvd to Cucamonga Channel bridge**

☐ 2.20 Reconstruction of the full pavement structural section, per City of Ontario Standard Drawing number 1011, may be required based on the existing pavement condition and final street design. Minimum limits of reconstruction shall be along property frontage, from street centerline to curb/gutter. ☐

☒ **2.21 Depending on site conditions and number of utility service cuts at time of construction, additional pavement restoration may be required.** ☐

☐ 2.22 Make arrangements with the Cucamonga Valley Water District (CVWD) to provide ☐ water service ☐ sewer service to the site. This property is within the area served by the CVWD and Applicant shall provide documentation to the City verifying that all required CVWD fees have been paid. ☐

☐ 2.23 Overhead utilities shall be under-grounded, in accordance with Title 7 of the City's Municipal Code (Ordinance No. 2804 and 2892). Developer may pay in-lieu fee, approximately _____, for undergrounding of utilities in accordance with Section 7-7.302.e of the City's Municipal Code. ☐

☒ **2.24 Other conditions:** ☐

- **The applicant/developer shall design and construct a widening of Guasti Road bridge over the Cucamonga Channel to accommodate 2 lanes of vehicular traffic in each direction and pedestrian travel and transitions. Additional right-of-way to be dedicated as needed per final design. Improvements to be coordinated, reviewed, and approved by City and SBCFCD. The Development Agreement shall determine responsible party for funding and or construction of this improvement. See Transportation Section Condition 3 for more detail.**

C. SEWER

☒ **2.25 A 12 inch sewer main is available for connection by this project in Holt Blvd (Ref: Sewer Drawing Number: S13859)** ☐

☐ 2.26 Design and construct a sewer main extension. A sewer main is not available for direct connection. The closest main is approximately _____ feet away. ☐

☐ 2.27 Submit documentation that shows expected peak loading values for modeling the impact of the subject project to the existing sewer system. The project site is within a deficient public sewer system area. Applicant shall be responsible for all costs associated with the preparation of the model. Based on the results of the analysis, Applicant may be required to mitigate the project impact to the deficient public sewer system, including, but not limited to, upgrading of existing sewer main(s), construction of new sewer main(s) or diversion of sewer discharge to another sewer. ☐

☒ **2.28 Other conditions: See Exhibit B for Utilities Engineering Conditions of Approval** ☐

D. WATER

☒ **2.29 A 12 inch water main is available for connection by this project in Guasti Rd (Ref: Water Drawing Number: W11988)** ☐

☐ 2.30 Design and construct a water main extension. A water main is not available for direct connection. The closest main is approximately _____ feet away. ☐

☒ **2.31 Other conditions: See Exhibit B for Utilities Engineering Conditions of Approval** ☐

E. RECYCLED WATER

☐ 2.32 A _____inch recycled water main is available for connection by this project in _____. (Ref: Recycled Water Drawing Number:_____) ☐

☒ **2.33 Design and construct an on-site recycled water system for this project. A recycled water main does exist in the vicinity of this project.** ☐

☐ 2.34 Design and construct an on-site recycled water ready system for this project. A recycled water main does not currently exist in the vicinity of this project but is planned for the near future. If Applicant would like to connect to this recycled water main when it becomes available, the cost for the connection shall be borne solely by the Applicant. ☐

☒ **2.35 Submit one (1) electronic copy, in PDF format, of the Supplemental Engineering Report (ER), for the use of recycled water to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and subsequent submittal to the California State Water Board (Division of Drinking Water) for final approval.** ☐

Note: The Division of Drinking Water review and approval process may take up to four (4) months. Contact the OMUC's Water Quality Programs at (909) 395-2678 or email OMUCWQPlanCheck@ontarioca.gov regarding this requirement. *Failure to obtain an approval letter from the Division of Drinking Water authorizing the use of recycled water will delay meter installation and if applicable, occupancy release for new developments.*

☒ **2.36 Submit one (1) electronic copy, in PDF format, of the Landscape Plans (on-site & off-site) to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and approval.**

☒ **2.37 Other conditions: See Exhibit B for Utilities Engineering Conditions of Approval** ☐

F. TRAFFIC / TRANSPORTATION

☐ 2.38 Submit a focused traffic impact study, prepared and signed by a Traffic/Civil Engineer registered in the State of California. The study shall address, but not be limited to, the following issues as required by the City Engineer: ☐

1. On-site and off-site circulation
2. Traffic level of service (LOS) at 'build-out' and future years
3. Impact at specific intersections as selected by the City Engineer

☒ **2.39 New traffic signal installations shall be added to Southern California Edison (SCE) customer account number # 2-20-044-3877.** ☐

☒ **2.40 Other conditions: See Exhibit A for Transportation Section Conditions of Approval** ☐

G. DRAINAGE / HYDROLOGY

☒ **2.41 A 108 inch storm drain main is available to accept flows from this project in Guasti Rd. (Ref: Storm Drain Drawing Number: D10795)** ☐

☒ **2.42 Submit a hydrology study and drainage analysis, prepared and signed by a Civil Engineer registered in the State of California. The study shall be prepared in accordance with the San Bernardino County Hydrology Manual and City of Ontario standards and guidelines. Additional drainage facilities, including, but not limited to, improvements beyond the project frontage, may be required to be designed and constructed, by Applicant, as a result of the findings of this study.** ☐

☐ 2.43 An adequate drainage facility to accept additional runoff from the site does not currently exist downstream of the project. Design and construct a storm water detention facility on the project site. 100-year post-development peak flow shall be attenuated such that it does not exceed 80% of pre-development peak flows, in accordance with the approved hydrology study and improvement plans. ☐

☐ 2.44 Submit a copy of a recorded private drainage easement or drainage acceptance agreement to the Engineering Department for the acceptance of any increase to volume and/or concentration of historical drainage flows onto adjacent property, prior to approval of the grading plan for the project. ☐

☐ 2.45 Comply with the City of Ontario Flood Damage Prevention Ordinance (Ordinance No. 2409). The project site or a portion of the project site is within the Special Flood Hazard Area (SFHA) as indicated on the Flood Insurance Rate Map (FIRM) and is subject to flooding during a 100-year frequency storm. The site plan shall be subject to the provisions of the National Flood Insurance Program. ☐

☐ 2.46 Other conditions: _____ ☐

H. STORM WATER QUALITY / NATIONAL POLLUTANT DISCHARGE AND ELIMINATION SYSTEM (NPDES)

☐ 2.47 401 Water Quality Certification/404 Permit – Submit a copy of any applicable 401 Certification or 404 Permit for the subject project to the City project engineer. Development that will affect any body of surface water (i.e. lake, creek, open drainage channel, etc.) may require a 401 Water Quality Certification from the California Regional Water Quality Control Board, Santa Ana Region (RWQCB) and a 404 Permit from the United States Army Corps of Engineers (USACE). The groups of water bodies classified in these requirements are perennial (flow year round) and ephemeral (flow during rain conditions, only) and include, but are not limited to, direct connections into San Bernardino County Flood Control District (SBCFCD) channels. ☐
If a 401 Certification and/or a 404 Permit are not required, a letter confirming this from Applicant's engineer shall be submitted.
Contact information: USACE (Los Angeles District) (213) 452-3414; RWQCB (951) 782-4130.

☒ **2.48 Submit a Water Quality Management Plan (WQMP). This plan shall be approved by the Engineering Department prior to approval of any grading plan. The WQMP shall be submitted, utilizing the current San Bernardino County Stormwater Program template, available at: http://www.sbcounty.gov/dpw/land/npdes.asp.** ☐

☒ **2.49 Design and construct a Connector Pipe Trash Screen or equivalent Trash Treatment Control Device, per catch basin located within or accepting flows tributary of a Priority Land Use (PLU) area that meets the Full Capture System definition and specifications, and is on the Certified List of the State Water Resources Control Board. The device shall be adequately sized per catch basin and include a deflector screen with vector control access for abatement application, vertical support bars, and removable component to facilitate maintenance and cleaning.** ☐

☒ **2.50 Other conditions:** ☐
Activities resulting in one acre or more land disturbance are required to obtain coverage under the Construction General Permit (CGP). The owner is the legally responsible person (LRP) of the site and shall have a Stormwater Pollution Prevention Plan (SWPPP) developed and submitted through the SMARTS website at https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml.

J. SPECIAL DISTRICTS

☐ 2.51 File an application, together with an initial deposit (if required), to establish a Community Facilities District (CFD) pursuant to the Mello-Roos Community Facilities District Act of 1982. The application and fee shall be submitted a minimum of four (4) months prior to final subdivision map approval, and the CFD shall be established prior to final subdivision map approval or issuance of building permits, whichever occurs first. The CFD shall be established upon the subject property to provide funding for various City services. An annual special tax shall be levied upon each parcel or lot in an amount to be determined. The special tax will be collected along with annual property taxes. The City shall be the sole lead agency in the formation of any CFD. Contact Financial Services Agency at (909) 395-2015 or email CFD@ontarioca.gov to initiate the CFD application process. ☐

☐ 2.52 Other conditions: _____ ☐

K. FIBER OPTIC

☒ **2.53 A fiber optic line is available for connection by this project in Holt Blvd. (Ref: Fiber Optic Drawing Number: 22936)** ☐

☒ **2.54 Design and construct fiber optic system to provide access to the City's conduit and fiber optic system per the City's Fiber Optic Master Plan. Building entrance conduits shall start from the closest OntarioNet hand hole constructed along the project frontage in the ROW and shall terminate in the main telecommunications room for each building. Conduit infrastructure shall interconnect with the primary and/or secondary backbone fiber optic conduit system at the nearest OntarioNet hand hole. Generally located at the northwest corner of Holt Blvd and Guasti Rd** ☐

☐ 2.55 Refer to the City's Fiber Optic Master Plan for design and layout guidelines. Contact the Broadband Operations Department at (909) 395-2000, regarding this requirement. ☐

☒ **2.56 Other conditions: See Exhibit C for Broadband Operations Section Conditions of Approval** ☐

3. PRIOR TO ISSUANCE OF A CERTIFICATE OF OCCUPANCY, APPLICANT SHALL:

☒ **3.01 Set new monuments in place of any monuments that have been damaged or destroyed as a result of construction of the subject project. Monuments shall be set in accordance with City of Ontario standards and to the satisfaction of the City Engineer.** ☐

☒ **3.02 Complete all requirements for recycled water usage.** ☐

☒ **1) Procure from OMUC a copy of the letter of confirmation from the California State Water Board (Division of Drinking Water) that the Engineering Report (ER) has been reviewed and the subject site is approved for the use of recycled water.**

☒ **2) Obtain clearance from the OMUC confirming completion of recycled water improvements and passing of shutdown tests and cross connection inspection, upon availability/usage of recycled water.**

☒ **3) Complete Site Supervisor training of on-site personnel in the use of recycled water, in accordance with the ER, upon availability/usage of recycled water.**

☒ **3.03 The applicant/developer shall submit all final survey documents prepared by a Licensed Surveyor registered in the State of California detailing all survey monuments that have been preserved, revised, adjusted or set along with any maps, corner records or Records of Survey needed to comply with these Conditions of Approvals and the latest edition of the California Professional Land Survey Act. These documents are to be reviewed and approved by the City Survey Office.** ☐

☐ 3.04 Ontario Ranch Projects: For developments located at an intersection of any two collector or arterial streets, the applicant/developer shall set a monument if one does not already exist at that intersection. Contact the City Survey office for information on reference benchmarks, acceptable methodology and required submittals. ☐

☒ **3.05 Confirm payment of all Development Impact Fees (DIF) to the Building Department.** ☐

☒ **3.06 Submit electronic copies (PDF and Auto CAD format) of all approved improvement plans, studies and reports (i.e. hydrology, traffic, WQMP, etc.).** ☐

4. PRIOR TO FINAL ACCEPTANCE, APPLICANT SHALL:

☒ **4.01 Complete all Conditions of Approval listed under Sections 1-3 above.** ☐

☒ **4.02 Pay all outstanding fees pursuant to the City of Ontario Municipal Code, including but not limited to, plan check fees, inspection fees and Development Impact Fees.** ☐

☒ **4.03 The applicant/developer shall submit a written request for the City's final acceptance of the project addressed to the City Project Engineer. The request shall include a completed Acceptance and Bond Release Checklist, state that all Conditions of Approval have been completed and shall be signed by the applicant/developer. Upon receipt of the request, review of the request shall be a minimum of 10 business days. Conditions of Approval that are deemed incomplete by the City will cause delays in the acceptance process.** ☐

☒ **4.04 Submit record drawings (PDF) for all public improvements identified within Section 2 of these Conditions of Approval.** ☐

EXHIBIT 'A'

ENGINEERING DEPARTMENT
First Plan Check Submittal Checklist

Project Number: PDEV23-039, PSP23-001, PDA23-005

All plan check submittals are to be done digitally through the City Of Ontario Citizen Portal Access. The following items are to be included with the first plan check submittal:

1. ☒ **A copy of this check list**
2. ☒ **Payment of fee for Plan Checking**
3. ☒ **Engineering Cost Estimate (on City form) with engineer's wet signature and stamp.**
4. ☒ **Project Conditions of Approval**
5. ☒ **Potable and Recycled Water demand calculations (include water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size).**
6. ☒ **Public Street improvement plan with street cross-sections**
7. ☒ **Public Water improvement plan (include water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size)**
8. ☒ **Recycled Water improvement plan (include recycled water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size and an exhibit showing the limits of areas being irrigated by each recycled water meter)**
9. ☒ **Public Sewer improvement plan**
10. ☒ **Public Storm Drain improvement plan**
11. ☒ **Public Street Light improvement plan**
12. ☒ **Signing and Striping improvement plan**
13. ☒ **Fiber Optic plan (include Auto CAD electronic submittal)**
14. ☒ **HOA Landscape improvement plans. Show corner sight line distance per engineering standard drawing 1309.**
15. ☐ CFD Landscape improvement plans. Show corner sight line distance per engineering standard drawing 1309.
16. ☒ **Dry Utility plans within public right-of-way (at a minimum the plans must show existing and ultimate right-of-way, curb and gutter, proposed utility location including centerline dimensions, wall to wall clearances between proposed utility and adjacent public line, street work repaired per Standard Drawing No. 1306. Include Auto CAD electronic submittal)**
17. ☒ **Traffic Signal improvement plan and One (1) copy of Traffic Signal Specifications with modified Special Provisions. Please contact the Traffic Division at (909) 395-2154 to obtain Traffic Signal Specifications.**
18. ☒ **Water Quality Management Plan (WQMP), including one (1) copy of the approved Preliminary WQMP (PWQMP).**
19. ☒ **Hydrology/Drainage study**

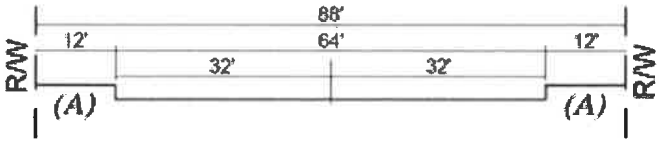
20. ☒ **Soils/Geology report**
21. ☐ Payment for Final Map/Parcel Map processing fee
22. ☐ Final Map/Parcel Map
23. ☐ Approved Tentative Map
24. ☒ **Preliminary Title Report (current within 30 days)**
25. ☐ Traverse Closure Calculations
26. ☒ **Set of supporting documents and maps (legible copies): referenced improvement plans (full size), referenced record final maps/parcel maps (full size, 18"x26"), Assessor's Parcel map (full size, 11"x17"), recorded documents such as deeds, lot line adjustments, easements, etc.**
27. ☒ **Supplemental Engineering Report, in electronic format (PDF format), for recycled water use only. Must be reviewed and submitted to the Division of Drinking Water by OMUC Water Quality Programs before clearing plan check workflows (includes grading and landscape plan reviews). *Approval letter issued by the Division of Drinking Water must be obtained before meter installation and if applicable, occupancy release.***
28. ☒ **Other: Precise Grading Plan coordinated with the offsite improvement plans to include, but not be limited to, utility tie-in points of connection between public and private facilities, driveway and sidewalk connections, and perimeter wall/fence heights and locations.**

CITY OF ONTARIO
MEMORANDUM

Development Plan Review
Engineering Department:
Transportation Section

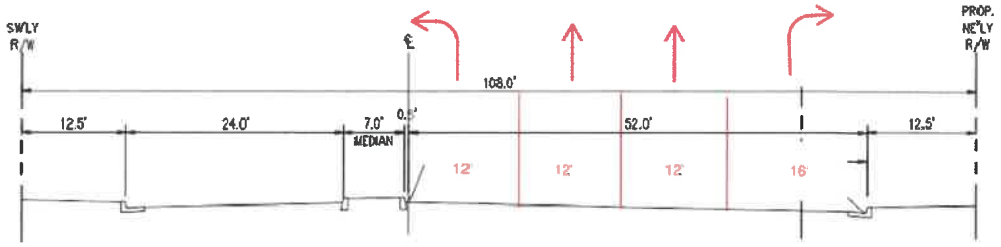
Project: PDEV23-039
(600 Room Hotel)

Date: February 11, 2025



Location: 2236 East Holt Boulevard

By: Jaime Maciel-Carrera
Diego Tapia



The Transportation Division recommends the following to be incorporated into the Project's Conditions-of-Approval:

Conditions:

1. The required street section for Guasti Road along the project frontage will generally be 64-feet (curb to curb) with an 88-foot ROW section. However, as Guasti Road approaches Holt Blvd/Convention Center Way, additional ROW will be required to accommodate additional left or right turn lanes as determined by the traffic analysis being prepared for the project. See street section below:

2. The Applicant/Developer shall be responsible for installing the required lane configuration, on Guasti Road approaching the signalized intersection at Holt Boulevard. This includes a right turn lane pocket length of 135-feet. See the lane configuration below:

3. The Applicant/Developer shall be responsible to widen the existing bridge on Guasti Road at the easterly property line over the Cucamonga Creek Channel in order to accommodate 4

travel lanes and sidewalk (north and southside) per the City of Ontario General Plan, the Master Plan of Streets and Highways, and to the satisfaction of the City Engineer. The Development Agreement shall determine responsible party for funding and or construction of this improvement.

4. The Applicant/Developer shall be responsible to design and construct raised median along project frontage on Guasti Road from Holt Boulevard to the easterly property line. Raised median shall have a break at the proposed signalized main entrance in order to accommodate full access.

5. The Applicant/Developer shall be responsible to design and construct modifications to the existing traffic signal on Guasti Road and Holt Boulevard as necessary to accommodate the roadway widening of Guasti Road. The traffic signal modification shall address relocation or upgrade of any affected equipment including poles, video detection, interconnect/fiber optic communication equipment, cable and conduit, CCTV cameras, emergency vehicle preemption systems, and bicycle detection to the satisfaction of the City Engineer. All new signal equipment shall be installed at its ultimate location, unless precluded by right-of-way limitations. The Development Agreement shall determine responsible party for funding and or construction of this improvement

6. The Applicant/Developer shall be responsible to design and construct a traffic signal on Guasti Road at the main entrance (approximately 980-feet East of Holt Boulevard and Convention Center Way). The new traffic signal shall include poles, video detection, CCTV, fiber optic communication equipment, cable and conduit, emergency vehicle preemption systems, and bicycle detection to the satisfaction of the City Engineer. All new signal equipment shall be installed at its ultimate location, unless precluded by right-of-way limitations.

7. The Applicant/Developer shall install all-way stop at the intersection of Cardena's driveway and Guasti Road.

8. The Applicant/Developer shall be responsible to design and construct in-fill public street lights and a potential new service as needed along Guasti Road and Holt Boulevard (between Guasti/Convention Center Way and I-10 On-Ramp). Street lighting shall be LED-type and in accordance with City's Approved Material List LED Luminaires. The Applicant/Developer shall also install smart nodes on all new street light fixtures.

9. The Applicant/Developer shall be responsible to design and construct the necessary pavement and striping transitions from existing roadway conditions to the widened roadway portions along Guasti Road. Striping and paving improvements shall include the removal existing interim signing and striping beyond the project frontage limits and the installation of ultimate signing and striping, and additional pavement necessary to accommodate fully widened street improvements and raised median, to east of the Cucamonga Channel bridge to the satisfaction of the City Engineer and in accordance with the Development Agreement.

10. Guasti Road and Holt Boulevard (between Convention Center Way/Guasti Road and I-10 On-Ramp) shall be signed "No Stopping Anytime" along the property frontage.

11. Design and construct proposed driveways in accordance with City of Ontario Standard Drawing No. 1204 for Commercial Driveway.

12. All project driveways onto Guasti Road from Holt Boulevard/Convention Center Way to the easterly property line, except the signalized main entrance, shall be restricted to right-in/right-out access due to the proposed raised median.

13. All landscaping, block walls, and other obstructions shall be compatible with the stopping sight distance requirements per City of Ontario Standard Drawing No. 1309.

14. The Applicant/Developer's engineer-of-record shall meet with City Engineering staff prior to designing and submitting for plan check the signing/striping, street lighting and traffic signal design plans to define limits of improvements.

EXHIBIT B

CITY OF ONTARIO
MEMORANDUM

ONTARIO MUNICIPAL UTILITIES COMPANY

DATE: February 05, 2025
TO: Jeff Tang, Engineering Department
CC: Lorena Mejia, Planning Department
FROM: Eric Woosley, Utilities Engineering (QC:CS/DM)
SUBJECT: DPR #3 - Utilties Engineering Condtions of Approval
PROJECT NO.: PDEV23-039

BRIEF DESCRIPTION

A Development Plan to construct one 9-story hotel consisting of approximately 596,450 square feet, including 600 rooms, ancillary retail and various amenities on 10.43 acres of land located at 2236 East Holt Boulevard, within the SP (Specific Plan) zoning district and the MTC (Multimodal Transit Center) overlay. (APNs: 0110-322-33) Related Files: PSP-23-001; PDA-23-005.

UTILITIES ENGINEERING CONDITIONS OF APPROVAL

CONDITIONS OF APPROVAL: *The Ontario Municipal Utilities Company (OMUC) recommends this application for approval subject to the conditions outlined below and compliance with the City's Design Development Guidelines, Specifications Design Criteria, and City Standards.*

1. Standard Conditions of Approval: Project shall comply with the requirements as set forth in the Amendment to the Standard Conditions of Approval for New Development Projects adopted by the City Council (Resolution No. 2017-027) on April 18, 2017; as well as project-specific conditions/requirements as outlined below.

Prior to Issuance of Any Permits (Grading, Building, Demolition and Encroachment), unless other timeline milestones are specified by individual conditions below, the Applicant Shall:

General Conditions (Section 2.A, Other conditions): The Applicant shall comply with the following:

2. Final Utilities Systems Map (USM): Submit a Final Utilities Systems Map (USM) as part of the precise grading plan submittal that meets all the City's USM requirements. These requirements include showing and labeling all existing and proposed utilities (including all appurtenances such as backflow devices, DCDAs, etc.), sizes, points of connection, and any easements. The final utility design shall comply with all Division of Drinking Water (CCR §64572) Separation Requirements. See the *Utility Systems Map (USM) Requirements document* for details.
    a. The proposed utilities, utility alignments, and Public Rights-of-Way (ROW)/Public Utility Easements (PUE) shown on the Conceptual Utilities Systems Map (CUSM) and other Entitlement documents are not considered final and shall be revised during Final Design to meet all City Design Guidelines, Standards, City Requirements, and all the Conditions of Approval contained in this document.
3. Note the following definitions and concepts for Public Utility Improvements and Private Utility Improvements: Public Improvements shall be designed per City Public Design Guidelines and City Standards and constructed through a City Encroachment Permit; and Private Onsite Improvements shall be designed per Building Code and Plumbing Code and constructed through a City Building Permit.
    a. Public Utility Improvements include the following: water main pipelines and sewer main pipelines; sewer laterals connecting to a Public Sewer Main up to the Cleanout (or Manhole) at PL/ROW; water services and connected appurtenances (Meters/Meter Boxes, Fire Hydrants, Airvacs, Blowoffs, etc.) connecting to a Public Water Main per City Standards; and Fire Services connecting to a Public Water Main from the Main up to the DCDA. Public Water Improvements and Public Sewer Improvements are required to be designed and constructed through Public Improvement Plans with Plan View and Profile View per City Standards, Guidelines, and Requirements.
    b. Private Utility Improvements include the following: onsite water plumbing lines after a Public Meter, or after the Fire DCDA and including the DCDA; Backflow Devices and other Cross-Connection Prevention; onsite sewer upstream of the Public Sewer Lateral, including the Cleanout (or Manhole) at PL/ROW/PUE Edge;

Monitoring Manholes and other Wastewater Pretreatment Facilities. Private Onsite Utility Improvements are required to be designed and constructed per Building and Plumbing Plans with: the Backflows, DCDAs, Cleanout (or Manhole) at PL/ROW/PUE Edge, and Monitoring Manholes being designed and constructed through a Precise Grading Plan; and, the other Pretreatment Devices (Grease Interceptor, Sand, Oil Interceptors, etc.) and the connections to the buildings and structures through a building Plumbing Plan.

4. Public Utilities and Public Right-of-Way including Public Utility Easements (PUE): All City of Ontario Public Utilities shall be installed within a Public Right-of-Way (ROW), or within a Public Utility Easements (PUE), or within a combination of ROW and PUE. In this case, Public Utilities is referring to the mains and connected appurtenances of the following City of Ontario/OMUC Utilities: Public Potable Water; Public Recycled Water; and Public Sanitary Sewer. Public Utilities shall be subject to the Minimum ROW/PUE Area Requirements and PUE Restrictions:
    a. Minimum ROW Area Requirements: Public Utilities shall be installed within in existing ROW/PUE in alignments/locations that meet the following minimum ROW/PUE areas surrounding the Public Utilities, and/or additional ROW/PUE shall be dedicated/granted to the City to provide the following minimum ROW/PUE areas surrounding the Public Utilities:
        i. For each main, the ROW/PUE Area shall be a minimum of 20 feet wide, centered on the utility main with a minimum of 10 feet of ROW/PUE on each side of the main and this minimum area shall extend a minimum for 10 feet past the end of a main;
        ii. For each Service/Lateral, the ROW/PUE Area shall be a minimum of 10 feet wide, centered on the service/lateral with a minimum of 5 feet of ROW on each side of each service/lateral;
        iii. For each water meter box, the ROW/PUE Area shall be a minimum of 5 feet behind and 5 feet on each side of a water meter box;
        iv. For each water appurtenances (fire hydrants, blowoffs, airvacs, etc.), the ROW/PUE Area shall be a minimum of 5 feet on each side surrounding the water appurtenances (fire hydrants, blowoffs, airvacs, etc.);
        v. The ROW/PUE minimum areas for separate Public Utilities may overlap, provided that all minimum separations and PUE Restrictions are met.
    b. PUE Restrictions: The Minimum PUE Area required surrounding Public Utilities shall be subject to the following restrictions:
        i. The Minimum PUE Area required surrounding Public Utilities shall not contain:
            A. Any storm water quality improvements (infiltration, detention, retention, bioswale, etc.);
            B. Landscaping with thick or intrusive root structures,
            C. Any trees;
            D. Any private utilities, plumbing lines, private fire system, or irrigation lines; or,
            E. Any permanent structures or overhangs of permanent structures.
        ii. The PUE surface shall be designed to allow vehicle access over and along the full length of the utility main by any City maintenance vehicle.
        iii. Minimum Separations: Within a PUE, all Department of Drinking Water (DDW) Water Main Separations per California Code of Regulations (CCR) §64572 shall be met for all Public Potable Water Mains and Services between: all Public City Utilities; Non-City Utilities; and Private Utilities. Additionally, the following Minimum Separations shall be met:
            A. At minimum there shall be a 4 feet horizontal separation between each utility as measured between the outside walls of the utility pipelines, or in the case of a Joint Utility Trench, between the outside edge of the Joint Utility Trench and the outside wall of the Utility Pipeline.
            B. Public Utility mains shall not be located behind curb or under curb and gutter and shall be located a minimum of 5 feet from curbface.

Sewer Conditions (Section 2.C): The Applicant shall comply with the following:

5. Public Sewer Improvements: Design and construct the following required public sewer mains in accordance with City of Ontario Standards and Design Guidelines and Specifications: N/A
    a. There is an existing sewer main (S13859) available for connection by this project in Holt Boulevard.
6. Sewer Lateral: Per City of Ontario Standard Drawing No. 2003:
    a. Install a sewer lateral connected to the existing 12-inch public sewer main (S13859) in Holt Boulevard.
    b. No storm water quality improvements (infiltration, detention, retention, bioswale, etc.) shall be installed above or within 5 feet of any Public Sewer Lateral.

7. Private Onsite Sewer System and Plumbing: The Onsite Sewer System shall be privately maintained by the property owner and shall be designed as follows:
    a. Design and construct a manhole per city standard upstream of the proposed on-site lateral manhole, to facilitate the transition of the proposed on-site private force sewer system to a gravity sewer system. The transition manhole shall be located a minimum of 10 feet upstream of the on-site lateral manhole.
    b. The Onsite sewer system and building plumbing shall be designed in such a way that the sanitary domestic wastewater flows leave the building separately from non-sanitary wastewater flows (industrial, process, or kitchen, etc.) and the line for non-sanitary wastewater flows can be upgraded in the future to have pretreatment equipment and devices on it, as required by a Wastewater Discharge Permit.
    c. Each private system shall have an onsite monitoring manhole prior to the point of connection with the Public Sewer System.
    d. No storm water quality improvements (infiltration, detention, retention, bioswale, etc.) shall be installed above or within 5 feet of any Private Onsite Sewer pipes.
8. Monitoring Manhole: Per City of Ontario Standard Drawing Nos. 2201 and 2203:
    a. Each sewer system (sanitary and non-sanitary flows) shall have a monitoring manhole on-site as part of the privately owned and maintained sewer system(s), upstream of the sewer lateral.
        i. Each monitoring manhole shall be in a location directly accessible by field staff.
9. Wastewater Discharge Permit: The Occupant/Applicant shall apply for a Wastewater Discharge Permit for their Establishment, and shall comply will all the requirements of the Wastewater Discharge Permit found at: (http://www.ontarioca.gov/municipal-utilities-company/utilities/industrial-wastewater-discharge-permit). Requirements of the Wastewater Discharge Permit may include but not limited to: Installation of wastewater pretreatment equipment, such as clarifiers. For wastewater permit application questions, please contact: omucenvironmental@ontarioca.gov

Potable Water Conditions (Section 2.D): The Applicant shall comply with the following:

10. Public Water Improvements: Design and construct the following required public water mains in accordance with City of Ontario Standards and Design Guidelines and Specifications: N/A
    a. There is an existing 12-inch potable water main (W11988) available for connection by this project in Guasti Road.
    b. There is an existing 12-inch potable water main stub (W11987) in Holt Boulevard. If the Fire Department requires public fire hydrants along the frontage of Holt Boulevard, or if the fire flow along Holt Boulevard is determined to be inadequate through the hydraulic analysis during final design; extension of the 12-inch along the frontage of Holt Boulevard shall be required.
11. Existing Appurtenance: Abandon the existing 2-inch air release and vacuum relief (airvac) (W11987) located at the SEC of Holt Boulevard and Guasti Road and install a new 2-inch airvac per City of Ontario Standard Drawing No. 4102.
12. Existing Fire Hydrants: The existing fire hydrant located in the location of the proposed drive approach shall be abandoned to the main connection.
13. Fire Hydrants: Per City of Ontario Standard Drawing No. 4101:
    a. Install fire hydrants along the project frontages connected to the potable water main per City of Ontario Standards. Fire hydrants connected to potable water mains shall be spaced a maximum of 300 feet apart or per Fire Department Standards/Requirements.
14. Fire Service with Fire System Double Check Detector Assembly (DCDA): Per City of Ontario Standard Drawing No. 4208:
    a. If an onsite private fire system is required, then a separate Fire Service equipped with a DCDA connected to the Public Potable Water System is required, to serve the onsite private fire system. The onsite fire system shall be separate from the onsite domestic water plumbing system and the onsite landscape irrigation system.

15. Water Service with a Meter and Backflow Prevention Assembly Reduced Pressure Device:

    a. Install a water service and meter connected to the existing potable water main in Guasti Road per City of Ontario Standards. The water service shall be equipped with a backflow prevention device. The water meter shall be located within the ROW.

16. Existing Water Services:

    a. All existing unused water services shall be abandoned to the main water connection.

Recycled Water Conditions (Section 2.E): The Applicant shall comply with the following:

17. Public Recycled Water Improvements: Design and construct the following required public recycled water mains in accordance with City of Ontario Standards and Design Guidelines and Specifications:

    a. An 8-inch recycled water main (1299 PZ) in Guasti Road between Holt Boulevard and the Cucamonga Creek Channel.

        i. The point of connection for the recycled water main is located in Convention Center Way north of the intersection of Holt Boulevard and Guasti Road/Convention Center Way (P11059). The connection shall be made with a tee, connecting the recycled water mains in both Convention center Way and Holt Boulevard, and extending south in Guasti Road to the Cucamonga Creek Channel bridge. Any portions of the existing recycled water main, including, but not limited to the diagonal section of the recycled water main and existing bends located in said intersection no longer connected and active, resulting from the modifications required to facilitate the connection, shall be abandoned.

18. City Ordinance 2689: This development shall comply with City Ordinance 2689 and make use of recycled water for all approved uses, including but not limited to landscape irrigation.

19. Irrigation Recycled Water Service with Meter:

    a. Install a water service and meter for irrigation purposes connected to the new recycled water main in Guasti Road per City of Ontario Standards. The irrigation recycled water meter shall be located within the ROW.

20. Recycled Water Program Requirements: In order to receive recycled water service, the applicant shall comply with each of the following:

    a. Prior to Precise Grading Plan Approval and Building Permits Issuance:

        i. Submit one (1) electronic copy, in PDF format, of the Landscape Plans (on-site & off-site) to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and approval.

        ii. Submit one (1) electronic copy, in PDF format, of the Supplemental Engineering Report (ER), for the use of recycled water to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and subsequent submittal to the California State Water Board (Division of Drinking Water) for final approval.

        Note: The Division of Drinking Water review and approval process may take up to four (4) months. Contact the OMUC's Water Quality Programs at (909) 395-2678 or email OMUCWQPlanCheck@ontarioca.gov regarding this requirement. Failure to obtain an approval letter from the Division of Drinking Water authorizing the use of recycled water will delay meter installation and if applicable, occupancy release for new developments.

    b. Prior to Occupancy Release/Finalizing:

        i. Procure from OMUC a copy of the letter of confirmation from the California State Water Board (Division of Drinking Water) that the Engineering Report (ER) has been reviewed and the subject site is approved for the use of recycled water.

        ii. Obtain clearance from the OMUC confirming completion of recycled water improvements and passing of shutdown tests and cross connection inspection, upon availability/usage of recycled water.

        iii. Complete Site Supervisor training of on-site personnel in the use of recycled water, in accordance with the ER, upon availability/usage of recycled water.

UTILITIES SYSTEMS MAP (USM) REQUIREMENTS:

The USM shall meet, at a minimum, the following requirements:

1. USM Content and Format: The Utilities Systems Maps shall show all existing and proposed Utilities (Potable Water, Recycled Water, Sewer, Storm Drain, and other utilities) including each of the City's public utilities' points of connection to the existing systems. This plan should include::

    a. Format: The Utilities Systems plan at a minimum 1:100 scale (or large engineering scale as appropriate to show needed details) that clearly shows each existing and proposed utility and its relative location. This includes property lines, right-of-way, public utility easements, but should not include underlying existing topography, just proposed general grades. Use appropriate colors for each Utility type: blue for Potable Water; purple for Recycled Water; green for Sanitary Sewer; yellow-brown for storm Drain.

    b. Services and Laterals: All Proposed Utility Service laterals for each parcel (potable water domestic, recycled water irrigation, potable/recycled water for process water, and sewer) and any associated appurtenances.

        i. Meter and Backflow Device Locations: Show all proposed meters and required backflow devices located per City Standards (Water Services and Meters; Backflow Devices). Meters should be located in public rights-of-way or PUEs; either at the R/W (or PUE) line for curb adjacent sidewalks or at back of curb for all other cases. All water connections that serve more than one residential unit are required to have a backflow device installed behind the meter.

    c. Cross Sections **(if applicable, for project construction new public mains)**: Scaled cross sections showing the utility layout on the Utility Systems Map (Utility Plan) for each public street, private street and Public Utility Easement (PUE). The cross sections shall show the location and size of each utility and annotate the property/ROW lines, the type of finished surface material, the distance of each utility from centerline, the depth from finished surface to top of pipe, and the distance between utilities (outside wall to outside wall).

    d. Points of Connections: The locations of the points of connections to the existing utility systems, which can include breaks between the map area and the connection points with descriptions of the pipe size, type, use (pressure zone for water), and distance. An inset map can be used in addition to this to help provide clarity.

    e. Water Demand Table **(if applicable, for projects within Ontario Ranch/NMC)**: Add a Water Demand Table to the Utility Systems Map (Utility Plan) that calculates the project's domestic water use based on land use category (residential, commercial, and OS-R/Parks) and the number of units. The table shall state demand in terms of Average Daily Demand (ADD from Table 4-8 of the Water Master Plan) and Water Demand Equivalents (WDE / Net MDD from Exhibit C-2R of the NMC Construction Agreement; WDEs only if NMC). It should also identify the quantity of units in each category and the specific lots that are included in that category. Please Note that master planned lines are designed using gross acreage densities for all projected water use from residential categories.

        i. See Attached Sheet for WDT Example.

    f. Phasing Plan (***if applicable***): As separate exhibits, provide a proposed phasing plan showing the phasing of the infrastructure and the number and type (TOP land use category) of units in each phase.

        i. All phases must have: a connection to public sewer; a two separate looped connections to the potable water system, where no one closing of a main segment results in any part of any of any phase being without potable water.

ii. For public water mains in all phases, dead-end water lines (temporary or permanent) are limited to serving 28 dwelling units or a maximum of 600 linear feet, whichever comes first. Otherwise a looped water system with at least two (2) points of connection to the primary public system is required.

g. Private Onsite Systems versus Public Systems within PUEs for Residential Tract Map Project(***if applicable***): the following requirements apply when to delineating between Private and Public Systems:

i. Current Standard Drawing No. 1304 remains applicable and minimum health separation must be met.

ii. Public water mains will be accepted in longer alleys when it serves more than 6 meters.

iii. Public sewer mains will be accepted in alleys where the water is public.

iv. Public dead-end water mains will require a blow-off at the end and the alley should be designed to accommodate runoff from required water main flushing operations.

v. Public sewer mains in alleys will require a manhole at both ends of the main.

vi. Public meters serving more than one single family residential unit are considered as multifamily service with master meter and require: a backflow device after the meter, private HOA sub-metering for each unit, and a separate Fire Service with DCDA to provide private onsite fire service.

CITY OF ONTARIO
MEMORANDUM

DEVELOPMENT PLAN REVIEW CONDITIONS OF APPROVAL
Broadband Operations Section

DATE: 08-25-24

PROJECT: PDEV23-039

LOCATION: Holt and Guasti

PROJECT ENGINEER: Jeff

BROADBAND PLAN CHECKER: Cameron Chadwick - CChadwick@ontarioca.gov

---

The following Conditions of Approval requirements must be incorporated prior to the Development Advisory Board and/or Zoning Administrator Hearing.

1. Project shall be designed and constructed to provide access to the City's conduit and fiber optic system per the City's Fiber Optic Master Plan. Building entrance conduits shall start from the closest OntarioNet hand hole in the Right-of-Way (ROW) and shall terminate in the main telecommunications room for each building. Conduit infrastructure shall interconnect with the primary and/or secondary backbone fiber optic conduit system at the nearest OntarioNet hand hole.
2. Contractor is responsible for locating and connecting conduit to existing OntarioNet hand holes on adjacent properties within a reasonable distance. There should be no "Gaps" in conduit between the contractor's development and the adjacent property. OntarioNet hand holes are typically located in the ROW at the extreme edge of a property.
3. Where a joint telecom or street light street crossing is required, include (2) 2" HDPE SDR-11 conduits or (1) 4" schedule 80 conduit sleeve. Terminate the street crossing conduit(s) in a new HH-3/22 OntarioNet hand hole in the right of way
4. The City requires a public utility easement for fiber optics on all private aisles/alley ways.
5. Hand holes - Design and install OntarioNet fiber optic hand hole HH-FP (10x00x10), HH-1 (13x24x18), HH-2 (17x30x24), HH-2A (24x36x30), HH-3 (30x48x36) and/or HH-4 (36x60x36) as needed. Respectively, Newbasis Part # PLA100010T-00002, PCA132418-00006, PCA-173024-90116, PCA-243630-90064, PCA-304836-90244 and PCA-366036-90146 or equivalent as specified per City Standard 1316. Conduits sweeping into hand holes shall enter in flush with the cut-out mouse holes aligned parallel to the bottom of the box and come in perpendicular to the wall of the box. Conduits shall not enter at any angle other than parallel. Provide 5-foot minimum clearance from existing/proposed utilities. All hand holes will have ¼-inch galvanized wire between the hand holes and the gravel it is placed on.
6. ROW Conduit – Design and install fiber optic conduit at a minimum depth of 36-inch. Trenching shall be per City Standard 1306. Install (1) 2-inch HDPE SDR-11 (Smoothwall) roll pipe (Orange) duct and (1) 2-inch HDPE SDR-11 (Smoothwall) roll pipe (Orange with Black Stripe) duct. Conduit(s) between ROW hand holes and hand holes on private property shall be 2-inch HDPE SDR-11 (Smoothwall) roll pipe (Orange) duct.
7. Building Entrance (Single Family) – Design and install 0.75-inch HDPE SDR-11 (Smoothwall) roll pipe (Orange) duct from hand holes on property or hand holes in the ROW. Consult City's Fiber Team for design assistance.
8. Building Entrance (Multi-family and Commercial) - From the nearest handhole to the building entrance, design and install fiber optic conduit at a minimum depth of 36-inches. Trenching shall be per City Standard for Commercial Buildings. (1) 2-inch HDPE SDR-11 (Smoothwall) roll pipe (Orange) duct. Install

locate/tracer wires minimum 12AWG within conduit bank and fiber warning tape 18-inch above the uppermost duct

9. Multi-family and commercial properties shall terminate conduit in an electrical room adjacent to the wall no less than five inches above the finished floor. A 20" width X length 36" space shall be reserved on the plywood wall for OntarioNet equipment. This space shall be labeled "OntarioNet Only". Ontario Conduit shall be labeled "OntarioNet"
10. A minimum 13/16 millimeter microduct joint use telecommunications conduit with pull-rope from the single-family, multi-family or commercial building communal telecom/electrical room/closet to each multi-family or commercial building unit shall be installed. See Structured Wiring Checklist on City's website for additional details.
11. Warning Tape - Contractor shall supply and install an approved non-detectable warning tape 18-inch above the uppermost conduit when backfilling trenches, pits or excavations greater than 10' in length. Warning Tape shall be non-detectable, Orange in color, 4-inch minimum width, 4 mil, 500% minimum elongation, with bold printed black letters "CAUTION - BURIED FIBER OPTIC CABLE BELOW" printed in bold black lettering no less than 2-inch high.
12. All hand holes, conduits, conduit banks, materials and installations are per the City's Fiber Optic Master Plan and City Fiber Optic Cable and Duct Standards. All hand holes, conduits and ducts shall be placed in the public right of way.
13. All unused conduits/ducts/microducts shall be protected with duct plugs that provide a positive seal. Ducts that are occupied shall be protected with industry accepted duct seal compound.
14. Locate/Tracer Wire - Conduit bank requires (1) 12AWG high strength (minimum break load 452#) copper-clad steel with 30mil HDPE orange insulation for locate/tracer wire. Contact City's Fiber Team for tracer wire specifications and see note 8.
15. Multi-family dwellings are considered commercial property.
16. Refer to the In-tract Fiber Network Design guideline on the City's website for additional in-tract conduit guidelines.

AIRPORT LAND USE COMPATIBILITY PLANNING
CONSISTENCY DETERMINATION REPORT

ONTARIO AIRPORT PLANNING

Project File No.: PSP23-001, PDEV23-039, PDA23-005

Address: southeast corner of Guasti Road and Holt Boulevard

APN: 110-322-33

Existing Land Use: Vacant lot

Proposed Land Use: Specific Plan, Development Plan to construct a 600,000 square foot hotel and commercial building

Site Acreage: 10.43 Proposed Structure Height: 120 FT

ONT-IAC Project Review: n/a

Airport Influence Area: ONT

The project is impacted by the following ONT ALUCP Compatibility Zones:

Safety	Noise Impact	Airspace Protection	Overflight Notification
☐ Zone 1	☐ 75+ dB CNEL	☐ High Terrain Zone	☑ Avigation Easement Dedication
☐ Zone 1A	☐ 70 - 75 dB CNEL	☑ FAA Notification Surfaces	☑ Recorded Overflight Notification
☐ Zone 2	☑ 65 - 70 dB CNEL	☑ Airspace Obstruction Surfaces	☐ Real Estate Transaction Disclosure
☐ Zone 3	☑ 60 - 65 dB CNEL	☐ Airspace Avigation Easement Area	
☐ Zone 4		Allowable Height: 120 -140 FT	
☐ Zone 5			

The project is impacted by the following Chino ALUCP Safety Zones:

☐ Zone 1 ☐ Zone 2 ☐ Zone 3 ☐ Zone 4 ☐ Zone 5 ☐ Zone 6

Allowable Height: _____

CONSISTENCY DETERMINATION

This proposed Project is: ○ Exempt from the ALUCP ○ Consistent ◉ Consistent with Conditions ○ Inconsistent

The proposed project is located within the Airport Influence Area of Ontario International Airport (ONT) and was evaluated and found to be consistent with the policies and criteria of the Airport Land Use Compatibility Plan (ALUCP) for ONT.

See Attached conditions.

Airport Planner Signature: Lorena Mejia

Project Conditions

1. The project site is located within an area where 120-140 foot building heights are allowed. The applicant will be required to file for an FAA Obstruction Evaluation/Airport Airspace Analysis (FAA Form 7460-1) and receive a Determination of No Hazard prior to building permit issuance.

2. The project site is located within an area where 120-140 foot building heights are allowed. The applicant will be required to file for an FAA Obstruction Evaluation/Airport Airspace Analysis (FAA Form 7460-1) for any temporary construction equipment such as cranes and receive a Determination of No Hazard for any temporary structures/objects that are over 100 feet in height.

SITE AND BUILDING FEATURES:

A. 2022 CBC Type of Construction: Not listed, assumed I-A

B. Type of Roof Materials: N/A

C. Ground Floor Area(s): N/A

D. Number of Stories: 9

E. Total Square Footage: 598,441 Sq. Ft.

F. 2022 CBC Occupancy Classification(s): R-1

CONDITIONS OF APPROVAL:

1.0 GENERAL

☒ 1.1 The following are the Ontario Fire Department ("Fire Department") requirements for this development project, based on the current edition of the California Fire Code (CFC), and the current versions of the Fire Prevention Standards ("Standards.") It is recommended that the applicant or developer transmit a copy of these requirements to the on-site contractor(s) and that all questions or concerns be directed to the Bureau of Fire Prevention, at (909) 395-2029. For copies of Ontario Fire Department Standards please access the City of Ontario web site at www.ontarioca.gov/Fire/Prevention.

☒ 1.2 These Fire Department conditions of approval are to be included on any and all construction drawings.

2.0 FIRE DEPARTMENT ACCESS

☒ 2.1 Fire Department vehicle access roadways shall be provided to within one hundred and fifty feet (150') of all portions of the exterior walls of the first story of any building, unless specifically approved. Roadways shall be paved with an all-weather surface and shall be a minimum of twenty-four (24) ft. wide. See Standard #B-004.

☒ 2.2 In order to allow for adequate turning radius for emergency fire apparatus, all turns shall be designed to meet the minimum twenty-five feet (25') inside and forty-five feet (45') outside turning radius per Standard #B-005.

☒ 2.3 Fire Department access roadways that exceed one hundred and fifty feet (150') in length shall have an approved turn-around per Standard #B-002.

☒ 2.4 Access drive aisles which cross property lines shall be provided with CC&Rs, access easements, or reciprocating agreements, and shall be recorded on the titles of affected properties, and copies of same shall be provided at the time of building plan check.

☒ 2.5 "No Parking-Fire Lane" signs and /or red painted curbs with lettering are required to be installed in interior access roadways, in locations where vehicle parking would obstruct the minimum clear width requirement. Installation shall be per Standard #B-001.

☒ 2.6 Security gates or other barriers on fire access roadways shall be provided with a Knox brand key switch or padlock to allow Fire Department access. See Standards #B-003, B-004 and H-001.

☒ 2.7 Any time PRIOR to on-site combustible construction and/or storage, a minimum twenty-four feet (24') wide circulating all weather access roads shall be provided to within one hundred and fifty feet (150') of all portions of the exterior walls of the first story of any building, unless specifically approved by fire department and other emergency services.

3.0 WATER SUPPLY

☒ 3.1 The required fire flow per Fire Department standards, based on the 2022 California Fire Code, Appendix B, is 3000 gallons per minute (g.p.m.) for 4 hours at a minimum of 20 pounds per square inch (p.s.i.) residual operating pressure.

☒ 3.2 Off-site (public) fire hydrants are required to be installed on all frontage streets, at a maximum spacing of three hundred feet (300') apart, on alternating sides of the street. Streets with a center median shall require public hydrants spaced five hundred feet (500') apart, on the same side of the street.

☒ 3.3 Buildings that exceed 100,000 square feet in floor area shall provide an onsite looped fire protection water line around the building(s.) The loops shall be required to have two or more points of connection from a public circulating water main.

☒ 3.4 The water supply, including water mains and fire hydrants, shall be tested and approved by the Engineering Department and Fire Department prior to combustible construction to assure availability and reliability for firefighting purposes.

4.0 FIRE PROTECTION SYSTEMS

☒ 4.1 On-site private fire hydrants are required per Standard #D-005, and identified in accordance with Standard #D-002. Installation and locations(s) are subject to the approval of the Fire Department. An application with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.2 Underground fire mains which cross property lines shall be provided with CC & R, easements, or reciprocating agreements, and shall be recorded on the titles of affected properties, and copies of same shall be provided at the time of fire department plan check. The shared use of private fire mains or fire pumps is allowable only between immediately adjacent properties and shall not cross any public street.

☒ 4.3 An automatic fire sprinkler system is required. The system design shall be in accordance with National Fire Protection Association (NFPA) Standard 13. All new fire sprinkler systems, except those in single family dwellings, which contain twenty (20) sprinkler heads or more shall be monitored by an approved listed supervising station. An application along with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.4 Wood frame buildings that are to be sprinkled shall have these systems in service (but not necessarily finaled) before the building is enclosed.

☒ 4.5 Fire Department Connections (FDC) shall be located on the address side of the building within one hundred fifty feet (150') of a public fire hydrant on the same side of the street. Provide identification for all fire sprinkler control valves and fire department connections per Standard #D-007. Raised curbs adjacent to Fire Department connection(s) shall be painted red, five feet either side, per City standards.

☒ 4.6 A fire alarm system is required. The system design shall be in accordance with National Fire Protection Association (NFPA) Standard 72. An application along with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.7 Portable fire extinguishers are required to be installed prior to occupancy per Standard #C-001. Please contact the Fire Prevention Bureau to determine the exact number, type and placement required.

☒ 4.8 A fixed fire extinguishing system is required for the protection of hood, duct, plenum and cooking surfaces. This system must comply with National Fire Protection Association (NFPA) Standards 17A and 96. An application with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.9 Provide a Fire Command Center in accordance with the Fire Code Section 508.1 in all buildings classified as high-rise buildings by the California Building Code and Group I-2 occupancies having occupied floors located more than 75 feet (23 m) above the lowest level of fire department vehicle access and in all F-1 and S-1 occupancies with a building footprint greater than 500,000 square feet

5.0 BUILDING CONSTRUCTION FEATURES

☒ 5.1 The developer/general contractor is to be responsible for reasonable periodic cleanup of the development during construction to avoid hazardous accumulations of combustible trash and debris both on and off the site.

☒ 5.2 Approved numbers or addresses shall be placed on all new and existing buildings in such a position as to be plainly visible and legible from the street or road fronting the property. Multi-tenant or building projects shall have addresses and/or suite numbers provided on the rear of the building. Address numbers shall contrast with their background. See Section 9-1 6.06 of the Ontario Municipal Code and Standards #H-003 and #H-002.

☒ 5.6 Knox ® brand key-box(es) shall be installed in location(s) acceptable to the Fire Department. All Knox boxes shall be monitored for tamper by the building fire alarm system. See Standard #H-001 for specific requirements.

6.0 OTHER SPECIAL USES

☒ 6.1 The storage, use, dispensing, or handling of any hazardous materials shall be approved by the Fire Department, and adequate fire protection features shall be required. If hazardous materials are proposed, a Fire Department Hazardous Materials Information Packet, including Disclosure Form and Information Worksheet, shall be completed and submitted with Material Safety Data Sheets to the Fire Department along with building construction plans.

☒ 6.3 Underground fuel tanks, their associated piping and dispensers shall be reviewed, approved, and permitted by Ontario Building Department, Ontario Fire Department, and San Bernardino County Fire Department Hazardous Materials Division. In fueling facilities, an exterior emergency pump shut-off switch shall be provided.

GENERAL NOTES

1. "NO PARKING-FIRE LANE" SIGNS AND /OR RED PAINTED CURBS WITH LETTERING ARE REQUIRED TO BE INSTALLED IN INTERIOR ACCESS ROADWAYS. IN LOCATIONS WHERE VEHICLE PARKING WOULD OBSTRUCT THE MINIMUM CLEAR WIDTH REQUIREMENT. INSTALLATION SHALL BE PER STANDARD #B-001.

PROVIDE KNOX BRAND KEY SWITCH OR PADLOCK AT THE SLIDING SECURITY GATE TO ALLOW FIRE DEPARTMENT ACCESS. REFER TO LANDSCAPE DRAWINGS FOR THE GATE INFORMATION.

Proposed Fire Hydrant Locations

Rooftop Stair Access

Option B: Modified Hammerhead design within courtyard area. Provide minimum 26 ft wide paved or alternate driveable surface drive aisle parallel to the west wing of the building and is setback 15 ft from building as shown.

Option A: SB County Flood Control Fire Access. Provide a minimum 26 ft wide paved area, setback 30 ft from building between the proposed southern wall to the north rooftop stair access as shown. This Option requires San Bernardino County approval.

☒	**Preliminary Plans (dated 12/12/2024) meet the Standard Conditions for New Development and have been approved considering that the following conditions below be met upon submittal of the landscape construction documents.**
☐	**Preliminary Plans (dated) have not been approved. Corrections noted below are required before Preliminary Landscape Plan approval.**

A RESPONSE SHEET IS REQUIRED WITH RESUBMITTAL OR PLANS WILL BE RETURNED AS INCOMPLETE.
DIGITAL SUBMITTALS MUST BE 10MB OR LESS.

Civil/ Site Plans

1. Mitigation for removed trees shall equal the trunk diameter of heritage trees removed per the Development Code Tree Preservation Policy and Protection Measures, section 6.05.020. A total of 795.5 inches of trunk replacement is required; see below for mitigation options.
2. Show on demo plans and landscape construction plans trees to be preserved, removed or mitigation measures for trees removed, such as:
   a. New 15 gallon trees min 1" diameter trunk, in addition to trees required.
   b. New 24" box trees min 1.5" diameter trunk, in addition to trees required.
   c. Upsizing trees on the plan one size larger such as 15 gallon to 24" box, or 24" to 36" box size.
   d. Monetary value of the trees removed as identified in the "Guide for Plant Appraisal," approved certified arborist plant appraiser, may be equal to the value of the installation cost of planting, fertilizing, staking, and irrigating 15-gallon trees (100$ each) to the City of Ontario Historic Preservation Fund for city tree planting or city approved combination of the above items.
3. Include improvements to the Cucamonga Flood Control Channel.
4. Before permit issuance, stormwater infiltration devices located in landscape areas shall be reviewed and plans approved by the Landscape Planning Division. Any stormwater devices in parkway areas shall not displace street trees.
5. Stormwater chamber systems shall be designed and configured to allow for required tree locations.
6. Show transformers set back 5' from paving all sides. Coordinate with landscape plans. Note that if SCE requires bollards (less than 5' setback from vehicular paving), permanent, decorative bollards will be required; submit cut shets to the Planning Department.

7. Show all backflow devices set back 4’ from paving on all sides. Locate on level grade
8. Locate utilities including light standards, fire hydrants, water, drain, and sewer lines to not conflict with required tree locations—coordinate civil plans with landscape plans.
9. Provide a utility clear space 8’ wide in parkways and 30’ apart for street trees. Move water meters, drain lines, and light standards to the utility minimum spacing and show utility lines at the edges of the parkway, toward the driveway apron, to allow space for street trees.

Landscape Plans

10. Shrub and Ground Cover Palette: Replace Dendromecon and Mimulus are easily overwatered, Isomeris (large and rangy, OK with ample planter areas), Ericameria (invasive), Lavandula (short-lived), Pennisetum/Nassella (invasive) and limit the use of non-invasive ornamental grasses to accent areas (difficult and costly to maintain in masses and poor winter appearance).
11. Show backflow devices with 36” high strappy leaf shrub screening and trash enclosures and transformers, a 4’-5’ high evergreen hedge screening. Do not encircle utility; show as masses and duplicate masses in other locations at regular intervals.
12. Locate light standards, fire hydrants, water, and sewer lines to not conflict with required tree locations. Coordinate civil plans with landscape plans
13. Show all utilities on the landscape plans. Coordinate so utilities are clear of tree locations.
14. Landscape construction plans shall meet the requirements of the Landscape Development Guidelines. See http://www.ontarioca.gov/landscape-planning/standards
15. After a project’s entitlement approval, the applicant shall pay all applicable fees for landscape plan check and inspections at a rate established by resolution of the City Council.

Specific Plan Comments

16. Shrub and Ground Cover Palette: Replace Dendromecon and Mimulus are easily overwatered, Isomeris (large and rangy, OK with ample planter areas), Ericameria (invasive), Lavandula (short-lived), Pennisetum/Nassella (invasive) and limit the use of non-invasive ornamental grasses to accent areas (difficult and costly to maintain in masses and poor winter appearance).

Following Standard Building Department Conditions of Approval
Are Applicable to This Project:

See checked boxes below

Specific Conditions:

A)

Specific Comments (NOTE: THESE COMMENTS ARE NOT CONDITIONS!):

A)

(NOTE: Standard Conditions of Approval are attached.)

BUILDING DEPARTMENT

GENERAL CONDITIONS

☒ 1. Shall comply with the latest adopted edition of the following codes as applicable:

A. California Building Code
B. California Residential Code
C. California Existing Building Code
D. California Electrical Code
E. California Mechanical Code
F. California Plumbing Code
G. California Energy Code.
H. California Fire Code
I. California Green Building Standards Code.

☐ 2. The property owner/business operator shall comply with all applicable City of Ontario Municipal Codes and Ordinances.

☒ 3. The requirements of the Department of Environmental Health Services and the Air Quality Management District shall be satisfied prior to the issuance of any permit if hazardous materials are stored and/or used.

☒ 4. Pursuant to the California Business and Professions Code Section 6737, most projects are required to be designed by a California Licensed Architect or Engineer. The project owner or developer should review the section of the California Codes and comply with the regulation

☐ 5. All perimeter / boundary walls shall be designed and constructed so that the outer/exterior face of the wall is as close as possible to the lot line. In any case, the outer/exterior face of the wall shall be within two (2) inches of the lot line. Distances greater than two (2) inches may be approved prior to construction by the Building Official on a case-by-case basis for extenuating circumstances.

☐ 6. All lot lines, easement lines, etc. shall be located and/or relocated in such a manner as to not cause any existing structure to become non-conforming with the requirements of the latest adopted edition of the Building Code, or any other applicable law, ordinance, or code.

☒ 7. The Developer/Owner is responsible for the coordination of the final occupancy. The Developer/Owner shall obtain clearances from each department and division prior to requesting a final building inspection from the Building Department. Each department shall sign the Building Department Job Card

☒ 8. All signs shall be Underwriters Laboratories, or equal, approved.

☐ 9. Permits are required prior to the removal and/or demolition of structures.

☐ 10. In addition to approval from Building Department, approval is required from the County of San Bernardino, Department of Public Health and the California Regional Water Quality Control Board, Santa Ana Region for the Private Sewage Disposal System.

☐ 11. The existing private sewage system will have to be modified as required to accommodate the new use. Plans and/or supporting data will have to be submitted to, and approved by, the Building Department regarding the new use and necessary modifications. Additionally, approval from the Regional Water Quality Control Board, Santa Ana Region, is required for the new use.

☐ 12. The coach shall bear a State of California, Department of Housing and Community Development (HCD) insignia indicating the occupancy group and design loads that the coach conforms to, and other relevant information regarding exiting, fire safety, electrical, plumbing and mechanical. The foundation system, porch and awning shall comply with plans that bear the HCD "Standard Plan Approval" stamp. The coach, foundation system, porch and awning shall comply with the City of Ontario's design loads and site-specific conditions.

☐ 13. The conversion of the existing single-family dwelling(s) into a commercial use changes the occupancy group classification, and therefore the existing buildings must be made to comply with the requirements of all applicable codes for the new occupancy classification. Complete plans, calculations and other specifications shall be submitted to the Building Department for review, approval and subsequent permit issuance. The plans, calculations and other specifications shall be prepared by an Architect or Registered Civil/Structural Engineer licensed by the State of California who is qualified to perform said work.

☐ 14. The site, or a portion of the site, is in a flood hazard area. Justification that the proposed development does not adversely affect the location or carrying capacity of the floodway, nor does it adversely affect upstream or downstream sites shall be provided to Building Department. Additionally, all provisions must be taken to protect the site from flood damage.

☐ 15. All exterior lighting shall be orientated, directed, and/or shielded as much as possible so that direct illumination does not infringe onto adjoining properties.

☒ 16. Site facilities such as parking open or covered, recreation facilities, and trash dumpster areas, and common use areas shall be accessible per the CBC, Chapter 11.

☒ 17. Trash Enclosure shall be covered, and the interior clearances shall be designed to accommodate the following:

- 4' min. side access entrance

- 3’ min. wide clear pathway along rear of enclosure between trash bins and back wall.
- Trash bins must be oriented sideways to allow access from the narrow dimension.
- Use of curbs or wheel stops shall be provided within the enclosure to maintain access clearances and bin orientations.

☒ 18. The applicant/developer shall include the conditions of approval of this resolution on the construction plans.

☒ 19. Site development and grading shall be designed to provide access to all entrances and exterior ground floors exits and access to normal paths of travel, and where necessary to provide access. Paths of travel shall incorporate (but not limited to) exterior stairs, landings, walks and sidewalks, pedestrian ramps, curb ramps, warning curbs, detectable warning, signage, gates, lifts and walking surface materials. The accessible route(s) of travel shall be the most practical direct route between accessible building entrances, site facilities, accessible parking, public sidewalks, and the accessible entrance(s) to the site, California Building Code, (CBC) Chapter 11, Sec, 11A and 11B.

☐ 20. Commercial/Industrial gated site must have at least one pedestrian emergency gate, 3’-0’ x 6’-8” min. gate size, equipped with panel hardware on the inside, and gate must swing out. Pedestrian emergency gates can be installed integrated with vehicular gates.

☐ 21. New residential single-family dwelling (SFD’s):

- The side yard gate must swing out toward the street.
- The gas meter shall not obstruct side yard access gates.
- Air Conditioning unit located at side yard shall maintain 3’ min. clearance from property line wall to AC unit.
- Provide a continuous concrete walk between garage side door to driveway or sidewalk.

☐ 22. New development projects located in the Ontario Ranch specific plan are required to submit a **methane assessment report**. This report shall be submitted to the Building Department for review and approval at grading plan submittal.

☐ 23. If hazardous substances are used and/or stored, a technical opinion and report, identifying and developing methods of protection from the hazards presented by the hazardous materials may be required. This report shall be prepared by a qualified person, firm, or corporation and submitted to Building Department. This report shall also explain the proposed facility's intended methods of operation and list all of the proposed materials, their quantities, classifications, and the effects of any chemical (material) intermixing in the event of an accident or spill.

☒ 24. The property owner/business operator shall provide a grease interceptor at a location where it shall be easily accessible for inspection, cleaning, and removal of accumulated grease. The sizing and installation shall conform to the current California Plumbing Code. The grease interceptor shall be constructed in accordance with plans approved by the Director of Public

Works and the Building Official. The property owner/business operator shall contract with a maintenance company for maintenance and cleaning of the grease interceptor.

SITE CONSTRUCTION REQUIRMENTS

☒ 25. All construction sites must be protected by a security fence and screening. The fencing and screening shall always maintained to protect pedestrians

☒ 26. Temporary toilet facilities shall be provided for construction workers. The toilet facilities shall be maintained in a sanitary condition. Construction toilet facilities of the non-sewer type shall conform to ANSI ZA.3

☒ 27. Construction projects which require temporary electrical power shall obtain an Electrical Permit from Building Department. No temporary electrical power will be granted to a project unless one of the following items is in place and approved by Building Department and the Planning Department.
(A) Installation of a construction trailer, or
(B) Security fenced area where the electrical power will be located

☒ 28. Installation of construction/sales trailers must be located on private property. No trailers can be in the public street right of way

☒ 29. Any temporary building, trailer, commercial coach, etc. installed and/or used in connection with a construction project shall comply with City Code.

☐ 30. Prior to issuance of a Building Permit all of the following must be in place: portable toilet with hand wash station, all BMP's, fencing and signage on each adjacent street saying "If there is any dust or debris coming from this site please contact (superintendent number here) or the AQMD if the problem is not being resolved" or something similar to this.

PRIOR TO ISSUANCE OF BUILDING/CONSTRUCTION PERMITS

☒ 31. The following grading items shall be completed and/or submitted – as applicable – prior to the issuance of building permits for this project:

A. Precise grading plans shall be approved
B. Rough grading completed
C. Compaction certification completed
D. Pad elevation certification completed
E. Rough grade inspection signed off by a City's Building Inspector

☒ 32. Prior to the issuance of a Building Permit, the applicant shall pay all Development

Improvement Fees to the City. Copies of receipts shall be provided to the Building Department prior to permit issuance.

☒ 33. The Tract or Parcel map shall record prior to the issuance of any permits.

☐ 34. The existing parcels shall be combined into a single parcel, or a lot line adjustment shall be done so that the proposed structure(s) does not cross any lot line and complies with all requirements of the California Building Code, prior to any building permits being issued.

☐ 35. Fire sprinklers, fire alarm systems and fire hydrant plans shall be submitted for plan review concurrently with building plans and shall be approved prior to permit issuance

☒ 36. Prior to issuance of Building Permits, school fees need to be paid to school district where project is located

- The side yard gate must swing out toward the street.
- The gas meter shall not obstruct side yard access gates.
- Air Conditioning unit located at side yard shall maintain 3’ min. clearance from property line wall to AC unit.
- Provide a continuous concrete walk between garage side door to driveway or sidewalk.

☐ 22. New development projects located in the Ontario Ranch specific plan are required to submit a **methane assessment report**. This report shall be submitted to the Building Department for review and approval at grading plan submittal.

☐ 23. If hazardous substances are used and/or stored, a technical opinion and report, identifying and developing methods of protection from the hazards presented by the hazardous materials may be required. This report shall be prepared by a qualified person, firm, or corporation and submitted to Building Department. This report shall also explain the proposed facility's intended methods of operation and list all of the proposed materials, their quantities, classifications, and the effects of any chemical (material) intermixing in the event of an accident or spill.

☒ 24. The property owner/business operator shall provide a grease interceptor at a location where it shall be easily accessible for inspection, cleaning, and removal of accumulated grease. The sizing and installation shall conform to the current California Plumbing Code. The grease interceptor shall be constructed in accordance with plans approved by the Director of Public

Works and the Building Official. The property owner/business operator shall contract with a maintenance company for maintenance and cleaning of the grease interceptor.

SITE CONSTRUCTION REQUIRMENTS

☒ 25. All construction sites must be protected by a security fence and screening. The fencing and screening shall always maintained to protect pedestrians

☒ 26. Temporary toilet facilities shall be provided for construction workers. The toilet facilities shall be maintained in a sanitary condition. Construction toilet facilities of the non-sewer type shall conform to ANSI ZA.3

☒ 27. Construction projects which require temporary electrical power shall obtain an Electrical Permit from Building Department. No temporary electrical power will be granted to a project unless one of the following items is in place and approved by Building Department and the Planning Department.
(A) Installation of a construction trailer, or
(B) Security fenced area where the electrical power will be located

☒ 28. Installation of construction/sales trailers must be located on private property. No trailers can be in the public street right of way

☒ 29. Any temporary building, trailer, commercial coach, etc. installed and/or used in connection with a construction project shall comply with City Code.

☐ 30. Prior to issuance of a Building Permit all of the following must be in place: portable toilet with hand wash station, all BMP's, fencing and signage on each adjacent street saying "If there is any dust or debris coming from this site please contact (superintendent number here) or the AQMD if the problem is not being resolved" or something similar to this.

PRIOR TO ISSUANCE OF BUILDING/CONSTRUCTION PERMITS

☒ 31. The following grading items shall be completed and/or submitted – as applicable – prior to the issuance of building permits for this project:

A. Precise grading plans shall be approved
B. Rough grading completed
C. Compaction certification completed
D. Pad elevation certification completed
E. Rough grade inspection signed off by a City's Building Inspector

☒ 32. Prior to the issuance of a Building Permit, the applicant shall pay all Development

Improvement Fees to the City. Copies of receipts shall be provided to the Building Department prior to permit issuance.

☒ 33. The Tract or Parcel map shall record prior to the issuance of any permits.

☐ 34. The existing parcels shall be combined into a single parcel, or a lot line adjustment shall be done so that the proposed structure(s) does not cross any lot line and complies with all requirements of the California Building Code, prior to any building permits being issued.

☐ 35. Fire sprinklers, fire alarm systems and fire hydrant plans shall be submitted for plan review concurrently with building plans and shall be approved prior to permit issuance

☒ 36. Prior to issuance of Building Permits, school fees need to be paid to school district where project is located

CITY OF ONTARIO *Agenda Report* **March 18, 2025**	**SECTION:** **PUBLIC HEARINGS**
Department: Financial Services Prepared By: Matthew Hernandez Department: Prepared By: Matthew Hernandez Staff Member Presenting: Armen Harkalyan, Executive Director of Finance Reviewed By: Claudia Hernandez Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 22

SUBJECT: **A CONSOLIDATED PUBLIC HEARING TO CONSIDER ADOPTION OF A RESOLUTION APPROVING THE DIF NEXUS REPORT UPDATE AND MODIFY DEVELOPMENT IMPACT FEES**

RECOMMENDATION: That the City Council consider and adopt a Resolution to approve the City's Development Impact Fees (DIF) 2024 Nexus Report Update and modify the DIF fees.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods
Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: The recommended update of the Development Impact Fees ("DIF") continues to reflect the City Council's direction that new development pays its fair share of the costs for infrastructure and those costs of new development taking place in the City do not impact existing residents. There is no General Fund impact from adopting the DIF update. The update of the DIF Program is conducted periodically to reflect modifications to specific DIF projects based on changes in projected infrastructure needs, actual costs, revised engineering estimates and updated cost estimates. DIF, assessed on per unit or per square foot basis, is intended to cover the cost of infrastructure improvements needed to support new development. With adoption of the fees as proposed, the City's DIF Program is estimated to generate sufficient revenue for infrastructure construction/installation over the buildout of the City.

BACKGROUND & ANALYSIS: On July 1, 2003, the City Council adopted Ordinance Nos. 2779 and 2780 to approve Development Impact Fees (DIF) for the City. The DIF has been updated periodically since 2005. Since its inception, the DIF Program has had separate DIF amounts and funds for what has historically been termed the "New Model Colony" (known as Ontario Ranch) and the "Old Model Colony" (known as General City) areas.

The development impact fees were last updated on August 16, 2022, and the Master Facility Plan was last updated on May 16, 2023. In the DIF updates since its inception, there have been only minimal changes in the scopes and estimated costs of DIF Program projects. The most recent update to the DIF Program's methodology was adopted in August 2022.

In support of the revised DIF amounts, Revenue & Cost Specialists, LLC ("Consultant") prepared comprehensive updates to the Development Impact Fee Calculation and Nexus Update Report (the "DIF Nexus Report"). The completed DIF Nexus Report is on file in the Records Management Department. The report includes the cost details of the changes reflected in the update and schedules used in the calculation of the updated DIF amounts. The proposed DIF Nexus Report includes adjustments to the land use database reflected within The Ontario Plan 2050 ("TOP 2050") update. TOP 2050 incorporates changes in land use types and densities which necessitates material revisions to the City's infrastructure (Streets, Storm Drains, Water and Sewer) Master Plans and DIF Program.

The major changes incorporated in the 2024 update include the following:

- The cost per acre for land acquisition has been increased from $700,000 to $1,000,000.
- The individual 2024 project cost amounts in numerous infrastructure categories have been escalated by application of the change in an applicable cost index.
- In the Police, Fire, Streets, Storm Drain, Water, Sewer, and Fiber Optic categories, numerous individual project cost estimates have been adjusted to reflect updated engineering estimates and/or actual costs.
- In the Police and Fire categories, Staff is recommending an increase of fees because of the actual cost increase associated with the equipment in these respective categories.
- The City continued its practice established in 2022 by applying outstanding (available) developer held "DIF Credits" in each infrastructure category were added as continued costs for projects that have not necessarily been constructed and/or paid for by the City. Numerous DIF projects were financed or constructed by individual developers, and they will ultimately expect repayment for that over-build via the DIF Credits that have been issued by the City. Pursuant to the City's DIF Program Policies, DIF Credits are available for use at permit issuance to offset (reduce) the fee in the respective infrastructure category for which the DIF Credit was issued. The availability of credits decreases the amount of DIF revenue that the City will ultimately collect. Therefore, any outstanding DIF Credit amount that has been included in this Report's calculations within the DIF calculation methodology, was done to establish the appropriate DIF fee schedule necessary to finance both the remaining infrastructure costs and total developer's DIF Credits at General Plan build-out.
- In 2024 the City expanded on this practice by factoring outstanding "DIF Credits" in the calculation of the Local / Regional percentage split across applicable infrastructure categories. The incorporation of outstanding DIF credits assists the City in recuperating additional DIF in order to eliminate any City subsidy for the long-term development of the Ontario Ranch Area.
- Assembly Bill 602 ("AB 602") became effective January 1, 2022. Per AB 602, if a local jurisdiction adopts a calculation and nexus study report after July 1, 2022, it must calculate its DIF imposed on a housing development project proportionately to the square footage of proposed units of the development, unless it makes the following findings: A) an explanation

as to why square footage is not an appropriate metric to calculate fees imposed on housing development projects; B) an explanation that an alternative basis of calculating the fee bears a reasonable relationship between the fee charged and the burden posed by the development; and C) that other policies in the fee structure support smaller developments, or otherwise ensure that smaller developments are not charged disproportionate fees. The proposed DIF Nexus Report attached to this agenda report, and incorporated herein by reference, details supportive justifications for the City to continue to impose residential development impact fees in the same manner that additional development service demands are calculated - that is, on a per unit basis (see DIF Nexus Report - Appendix F). The City will not impose development impact fees for residential development projects based on the square footage of proposed units for completing the City's General Plan. The current and proposed set of fees fosters greater accuracy in planning and provides the City with the required level of certainty in impact fee collection.

- The City also added an additional section to the 2024 document identifying an estimated completion date for each DIF Project identified in the Update.

The City is maintaining the methodology established in the 2022 Nexus Study; however, updating the cost of the projects related to the actual costs reported by Developers and the City within the 2024 study. The attached "Exhibit A" of the proposed Resolution specifies the updated DIF amounts for the General City and Ontario Ranch areas as of July 1st, 2025. The attached "Exhibit B" of the proposed Resolution specifies the updated DIF amounts for the General City and Ontario Ranch areas as of July 1st, 2026. The City is practicing a phased approach to its DIF Update No changes are proposed to the DIF Program implementation policies or land use categories definitions as part of this DIF Program update.

Staff notified and worked with the Building Industry Association ("BIA") and NMC Builders, LLC ("NMC") on this recommended update to the DIF and provided both entities with a copy of the proposed fees and the back-up materials. Several meetings were held with representatives of NMC Builders to provide and exchange cost information related to the proposed modifications to the DIF Program. NMC Builders have communicated that they have no further comments on the proposed revisions to the DIF Program and have provided notice to the City indicating that they do not object to adoption of the fees as proposed. Under State law, fee increases cannot become effective any sooner than 60 days after adoption by the legislative body.

Staff recommends the City Council adopt the attached Resolution approving the proposed DIF Nexus Report and increased Development Impact Fees.

February 10, 2025

Honorable Mayor and City Council

Ontario, CA 91764

RE: February 2025 Update to the 2022 Development Impact Fee (DIF) Calculation

Honorable Mayor, Council and City Manager Ochoa:

Please find enclosed copies of the amended Development Impact Fee schedules (DIFs) updated from the 2022 *Development Impact Fee Calculation and Nexus Report* and the amended individual project detail pages from the April 2022 *Master Facilities Plan*. The City's Development Impact Fees (DIF) have been reviewed periodically since they were comprehensively calculated in May 2003 in order to maintain continued viability of the DIF capital financing system, and they have been amended as necessary to allow for changes to project scopes, cost estimates and allocability. This February 2025 update includes numerous adjustments, as discussed below.

The format of this amendment of the existing Development Impact Fees consists of:

1. This letter identifying the alterations made by infrastructure or Chapter.

2. A section containing the updated *Master Facilities Plan* pages identifying any combined changes in the specific project costs, descriptions and/or source responsibilities.

3. A section containing the amended Development Impact Fee summary schedules which identify the proposed fees, total estimated collections, total infrastructure costs and the collection differences and the twelve separate amended infrastructure Development Impact Fee calculation schedules indicating the distribution of costs with the appropriate infrastructure nexus.

4. A section identifying the City's Distribution of collected impact fee receipts over Regional/Local demands to insure that both regional and local

needs are met over the same period of time. RCS does not participate in the calculation of these percentages but are included in this document based upon City staff calculations.

There has been no attempt to amend the text contained within the 2022 *Development Impact Fee Calculation and Nexus Report* as the nexus and logic within the Report does not change text beyond some minor modifications to Appendix F. The text revision is undertaken on the four year cycle of the complete recalculation of the DIFs which would be begun in 2026. However, certain amounts contained within the text, and tables included in the individual chapters have been updated to present the current amounts. All 393 Master Facility Plan Projects have been reviewed and adjusted (primarily increased with some reductions) as necessary to reflect the on-going and continuing diminution in the purchasing power of the dollar. While some projects were recalculated or restructured, most of the modifications were driven by one of three major cost increase indices. The standard modifications and/or types of modifications included in the 2024 update were adjusted as follows:

Projects that are structure construction-based such as libraries, fire stations and public use facilities were increased 113.20% based upon the Engineering News Record – Building Cost Index increase from January 2022 to May 2024. Use of this index may be henceforth identified as the ENR-BCI.

Building Cost Index - May 2024	8331.36
Building Cost Index - January 2022	7359.09
ENR-BCI Percent Increase	**113.20%**

Projects that are below ground or below based facilities (circulation-based improvements, water, sewer and storm drainage collection pipes, etc) were increased based upon the Engineering News Record – Construction Cost Index increase of 107.90% from January 2022 to May 2024. Use of this index amy be henceforth identified as the ENR-CCI.

Construction Cost Index - May 2024	13536.09
Construction Cost Index - January 2022	12555.55
ENR-CCI Percent Increase	**107.90%**

Projects that are deliverable products (vehicles, equipment, one-time supplies and electronics) were increased based upon the Consumer Price Index increase of 111.70% from January 2022 to June 2024. Use of this index may be henceforth identified as the CPI.

Consumer Price Index – June 2024	314.175
Consumer Price Index - January 2022	281.148
CPI Percent Increase	**111.70%**

Specific cost changes to each infrastructure are as follows:

Law Enforcement Facilities, Vehicles and Equipment

Purchase of and Improvements to the Police Station were not increased.
Police Response Vehicles, Officer Assigned Equipment and the Helicopter costs were increased by specific amounts based upon recent Police Department acquisitions.
The City Yard improvement costs were increase by the Engineering News Record – Building Cost Index of 113.20%.

Fire Suppression/Medic Facilities, Vehicles and Equipment

Fire stations and ancillary Facilities were increased by the ENR-BCI
Fire response vehicles were increased by the CPI
The City Yard improvement costs were increase by the Engineering News Record – Building Cost Index of 113.20%.

Circulation (Streets, Signals and Bridges) System Facilities

Projects ST-004, 011, 012, 013, 015, 022, 023, and ST-024 were increased by recalculating the project specifications and/or design changes.
ST-103 (vehicles) and ST-112 (equipment) were increased by the Consumer Price Index increase of 111.70%.
The City Yard improvement costs were increase by the Engineering News Record – Building Cost Index of 113.20%.
All other projects were increased by the Engineering News Index Construction Cost increase of 107.90%

Storm Drainage Collection Facilities

Projects ST-001, 002, 005, 006, 007, 022, 041, and SD-050 were increased by recalculating the project specifications and/or design changes.
SD-069 (vehicles) was increased by the Consumer Price Index increase of 111.70%.
All other projects were increased by 138.00% based upon an agreement with the New Model Colony Builders Group (henceforth *NMC Builders*) that reduces a significant disparity between the City's estimated MFP costs with actual construction costs.
The City Yard improvement costs were increase by the Engineering News Record – Building Cost Index of 113.20%.

Water Source, Storage and Distribution System

Project costs were altered (increased/decreased) by Utilities Engineering staff based upon recalculations.
The City Yard improvement costs were increase by the Engineering News Record – Building Cost Index of 113.20%.

Sewer Collection System

Project costs were altered (increased/decreased) by Utilities Engineering staff based upon recalculations.
The City Yard improvement costs were increase by the Engineering News Record – Building Cost Index of 113.20%.

Refuse Collection Facilities and Equipment

Refuse equipment costs increases were based upon recent purchases of similar equipment.
The City Yard improvement costs were increase by the Engineering News Record – Building Cost Index of 113.20%.

General Government Facilities, Vehicles and Equipment

GF-001 was not increased as the project is completed and the costs are set.
GF-002 and GF-003 were increased by the Consumer Price Index.
GF-004 was discontinued two or three update cycles ago.
The City Yard improvement costs were increase by the Engineering News Record – Building Cost Index of 113.20%.

Library Facilities and Collection System

Library construction costs were increased by The Engineering News Record – Building Cost Index increase of 113.20%
Library collection items were increased by the Consumer Price index increase of 111.70%

Public Use Facilities

Public Use Facilities construction costs were increased by The Engineering News Record – Building Cost Index increase of 113.20%.

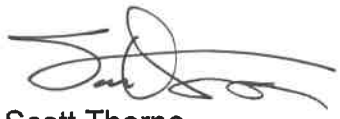
Aquatics Center Facilities

Aquatics Facilities construction costs were increased by The Engineering News Record – Building Cost Index increase of 113.20%.

Park Land Acquisition and Park Improvements

Park land acquisition costs were increased to $1,000,000 per acre based upon recent land acquisition and appraisal costs.

Park facilities construction costs were increased by The Engineering News Record – Construction Cost Index increase of 107.90%.
The City Yard improvement costs were increase by the Engineering News Record – Building Cost Index of 113.20%.



Fiber Optics System Improvements

Projects FO-001, 002, 005 and FO-006 were adjusted by the ENR-CCI increase of 107.90%.
FO-007 and FO-008 were adjusted by the CPI increase of 111.70%.
FO-004 was increased by a specific recalculated amount which resulted in a 113.70% increase.

Please refer to the Exhibits to this letter for the specifics of the detailed adjustments made to every project in the 2025 update that includes an adjustment from the 2022 Report.

Revenue & Cost Specialists, L.L.C staff are ready to assist the City in any way that may be beneficial to the adoption of the new fees necessary to insure that the City can accommodate the private development of its many vacant acres at no cost to the existing community, either in actual costs-out-of-pocket or in the diminution of existing levels of service.

Sincerely,

Scott Thorpe
Senior Vice President.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment

Project Title / Ref#: Police Station Purchase/Roof Improvements Prior To Occupancy **LE -001**

Submitting Departments: Police Department

Project Description:

The existing Police Station is the result of the purchase of a 175,000 square foot vacated commercial building. The facility was purchased and the roof was replaced prior to any interior improvements (see (LE-002). It was anticipated that the station would be final station for the City at General Plan build-out.

Justification / Consequences of Avoidance:

The City General Plan indicates the potential addition of 80,179 additional residences, 546 commercial lodging units and 103,169,117 square feet of business square feet are added to the City. This will result in a doubling of the population and a significant increase in the number of square feet of high demand business uses. As the residential and business community continues to expand (through development), the Police Department will receive a statistically based number of additional calls-for-service, As these additional calls-for-service are realized the Department will need to increase the number of sworn officers in order to accommodate these additional calls-for-service. However, if the number of sworn officers remains static, the existing level of service (LOS), by definition, will decrease. The additional officers will require 350 of space per sworn officer to maintain the City's space per officer standard.

Relationship to General Plan Development:

Roughly 45% of the facilities square feet are necessary to meet the needs of the existing staff of the existing 225 sworn officers. The remaining 55% represents space for 272 additional officers (of 497 total required officers) the demands from future development.

Allocation To General Plan Buildout: 54.72%

Reference Document:

None, all police projects are based upon development-generated additional demand.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. There will be no cost increases to this project until the City's Land Use Database is altered.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment

Project Title / Ref#: Complete Remaining Interior Improvements @ 55% Of Bldg Space **LE -002**

Submitting Departments: Police Department

Project Description:

The existing Police facility can meet the needs of 497 sworn officers at an adequate and sufficient standard of 350 square feet per officer. Future demand at General Plan build-out indicates the need for 272 sworn officers (to maintain the existing level of service), to join the existing 225 sworn officers for a General Plan build-out of or 497 total officers.

Justification / Consequences of Avoidance:

As the residential and business community continues to expand (through development), the Police Department will receive a statistically based number of additional calls-for-service, As these additional calls-for-service are realized the Department will need to increase the number of sworn officers in order to accommodate these additional calls-for-service. However, if the number of sworn officers remains static, the existing level of service (LOS), by definition, will decrease. The additional officers will require 350 square feet of space per sworn officer to maintain the existing standard.

Relationship to General Plan Development:

All Police Department projects are based upon the incremental needs (based upon existing LOS standards) created by new development and thus are 100% related to General Plan development and are based upon the proportional increase in demand as evidenced by calls-for-service data.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, all police projects are based upon development-generated additional demand.

Project Timing:

As development occurs and creates the additional demand and DIF receipts are collected. There will be no increases to this project until the City's Land Use Database is altered. There will be no cost increases to this project until the City's Land Use Database is altered.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$3,868,246	$3,868,246

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment

Project Title / Ref#: Additional Patrol/Detective/Specialty/Staff Vehicles **LE -003**

Submitting Departments: Police Department

Project Description:

The project consists of acquiring 284 additional law enforcement response vehicles including patrol, unmarked and specialty vehicles at an average of $69,850 per vehicle. The addition of 272 officers will require the acquisition of roughly 284 assorted law enforcement vehicles at an average of $69,850. This will maintain the existing standard of 1.04 vehicles (235) per sworn officer (225). The vehicles would consist of a variety of staff, patrol, specialty and under-cover vehicles.

Justification / Consequences of Avoidance:

As the residential and business community continues to expand (through development), the Police Department will receive a statistically based number of additional calls-for-service, As these additional calls-for-service are realized the Department will need to increase the number of sworn officers in order to accommodate these additional calls-for-service. However, if the number of sworn officers remains static, the existing level of service (LOS), by definition, will decrease. The city has 235 vehicles for 225 officers for a standard of 1.04 vehicles per officer. The additional 272 officers will need 272 additional vehicles to maintain the existing 1.04 vehicle per sworn officer standard.

Relationship to General Plan Development:

All Police Department projects are based upon the needs created by new development and thus are 100% related to General Plan development and are based upon the proportional increase in demand as evidenced by calls-for-service data.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, all police projects are based upon development-generated additional demand.

Project Timing:

As development occurs and creates the additional demand and DIF receipts are collected. The estimated cost increase of 29% is based upon current City cost to acquire and outfit patrol units.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment

Project Title / Ref#: Additional Officer Assigned Equipment **LE -004**

Submitting Departments: Police Department

Project Description:

Acquire additional equipment assigned to officers necessary to function in the field. The list includes (but is not limited to): protective vest, handgun, baton, and a compliment of leathers, handcuffs, uniforms, helmet, raincoat and a heavy duty flashlight. The costs include a nominal amount for a back-ground check, medical physical check, polygraph and psychological exam for the successful candidates. The costs are based upon the $18,246 per officer for the 272 additional officers required.

Justification / Consequences of Avoidance:

As the residential and business community continues to expand (through development), the Police Department will receive a statistically based number of additional calls-for-service, As these additional calls-for-service are realized the Department will need to increase the number of sworn officers in order to accommodate these additional calls-for-service. However, if the number of sworn officers remains static, the existing level of service (LOS), by definition, will decrease.

Relationship to General Plan Development:

All Police Department projects are based upon the needs created by new development and thus are 100% related to General Plan development and are based upon the proportional increase in demand as evidenced by calls-for-service data.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, all police projects are based upon development-generated additional demand.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The estimated cost increase of 24% is based upon current City cost to acquire and issue assigned equipment.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Law Enforcement Facilities, Vehicles And Equipment

Project Title / Ref#: Share Of Common City Yard Improvements **LE -010**

Submitting Departments: Police Department

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of $38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated $38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for additional law enforcement vehicles maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance yard demands. This demand for additional structural capacity results from the doubling of all public infrastructures from the Ontario Ranch area as well as the remaining portions of the General City area.

Relationship to General Plan Development:

All Police Department projects are based upon the needs created by new development and thus are 100% related to General Plan development and are based upon the proportional increase in demand as evidenced by calls-for-service data.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon an analysis of demands on City yard capacity and expansion needs.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. City Yard improvements cost increase is based upon the Engineering News Record - Building Cost Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Project Completed Or No Longer Needed **FS -001**

Submitting Departments: Fire Department

Project Description:

Fire Station #9 land acquisition and construction project has been completed.

Justification / Consequences of Avoidance:

As the residential and business community development in occurs in the Ontario Ranch area the Fire Department will receive a statistically based number of additional calls-for-service, A minimum of five stations will be required to accommodate these statistically-based calls-for-service that will be generated by the development of the Ontario Ranch area.

Relationship to General Plan Development:

The five proposed stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area.

Allocation To General Plan Buildout: 0.00%

Reference Document:

The project is no longer needed, but has been included to act as a project number placeholder.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Station #11 Land Acquisition And Construction **FS -003**

Submitting Departments: Fire Department

Project Description:

Construct an 11,200 square foot, three-bay wide by two vehicle deep fire station in the Ontario Ranch area. The station would consist of three 1,400 square foot bays, each capable of housing two medium sized vehicles or one long aerial vehicle. The station would have 350 square feet of entry/office space for public access, 1,625 square feet of mechanical and workroom space, 4,345 square feet of living space for up to eight fire-fighters, (double that if emergency measures were needed) and 680 square feet of training room. This station serves the basic model for all future stations to be built in the City. The three bays wide feature will allow for the shifting of resources throughout the day as needed to maximize service capability without incurring on-going greater staffing costs. A fourth bay is included in FS-012 for City-wide reserves vehicle storage. See FS-012, Ontario Ranch Vehicle Storage Bays, Stations 11, 12, 13, 14.

Justification / Consequences of Avoidance:

As the residential and business community development in occurs in the Ontario Ranch area the Fire Department will receive a statistically based number of additional calls-for-service, A minimum of five stations will be required to accommodate these statistically-based calls-for-service that will be generated by the development of the Ontario Ranch area.

Relationship to General Plan Development:

The four remaining OR proposed stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area.

Allocation To General Plan Buildout: 86.88%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The 2022 station cost estimates were increased to 2024 costs by the ENR - Building Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Ontario Ranch Vehicle Storage Bays - Stations 11, 12, 13, 14 **FS -012**

Submitting Departments: Fire Department

Project Description:

Construct an additional 1,400 square foot bays at each of stations, 11, 12, 13, and 14 for storage of city-wide fire response vehicles. These have been set up as a separate project because these bays demonstrate city-wide benefit and need to be financed by all new development within the City as well as the existing community.

Justification / Consequences of Avoidance:

The City can expect the construction of 80,149 dwelling nuts, 546 commercial lodging units and over 100 million square feet of business uses and this development will generate a larger number of reserve vehicles. The lifetime of these vehicles will be increased significantly if these vehicles are housed.

Relationship to General Plan Development:

These bays will be utilized to house existing and future City-wide reserve response vehicles and the costs have distributed as such.

Allocation To General Plan Buildout: 56.04%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.The 2022 station cost estimates were increased to 2024 costs by the ENR - Building Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design/Engineering/Administration	$0	$0	$0	$0	$608,680	$608,680
2. Land Acquisition/Right Of Way	$0	$0	$0	$0	$437,840	$437,840
3. Construction	$0	$0	$0	$0	$5,557,640	$5,557,640
4. Contingency	$0	$0	$0	$0	$320,160	$320,160
5. Equipment/Other	$0	$0	$0	$0	$529,200	$529,200
TOTAL COST:	$0	$0	$0	$0	$7,453,520	$7,453,520

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Battalion Chief Response Vehicle **FS -013**

Submitting Departments: Fire Department

Project Description:
Acquire a Battalion Chief response vehicle.

Justification / Consequences of Avoidance:
The additional calls-for-service that will be generated by new development within Ontario Ranch will generate the need for a third Battalion Chief and thus a vehicle.

Relationship to General Plan Development:
The proposed five stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area. This vehicle would be assigned to the Ontario Ranch area.

Allocation To General Plan Buildout: 86.88%

Reference Document:
None, projections are based upon a staff application of General Plan based response times.

Project Timing:
The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.The 2022 response fleet cost estimates were increased to 2024 by the Consumer Price Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Fighter Assigned Equipment **FS -014**

Submitting Departments: Fire Department

Project Description:

.Acquire fire fighter assigned equipment. It cost the City some $17,108 to outfit each firefighter. There will be a need for remaining 89 additional firefighters to staff the five proposed Ontario Ranch area stations.

Justification / Consequences of Avoidance:

The firefighters require personally-assigned equipment and cannot perform their duties without it.

Relationship to General Plan Development:

The proposed five stations are necessary to provide first-in capabilities to the Ontario Ranch area. These stations may on occasion support calls-for-service in other areas of the City, but will also receive support from other stations in return. As such the related costs are fully allocated to that planning area. This equipment is necessary for staffing in these five stations.

Allocation To General Plan Buildout: 86.88%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.The 2022 fire fighter assigned equipment cost estimates were increased to 2024 by the Consumer Price Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$0	$0

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Administrative Headquarters Relocation **FS -015**

Submitting Departments: Fire Department

Project Description:

The project consists of relocating the Fire Administration service from its existing location in the City Hall Annex to a site generally located on West C Street between Laurel Avenue and Palm Avenue. Phase I would consist of acquiring the land located at 1408 East Francis Street. Phase II would consist of the design and construction of a new facility that would house Fire Administration, Fire Prevention and Education, Fire Dispatch and the City Emergency Operations Center (see FS-017). This facility would be approximately 30,000 square feet and occupy two floors.

Justification / Consequences of Avoidance:

Fire Administration was originally collocated with Fire Station #1 until Station #1 relocated to the City Hall Annex in 2013. The ultimate plan is to combine the Fire Station #1 0perations and Fire Administration operations into the same building on the west side of Euclid.

Relationship to General Plan Development:

The costs are pro-rated between existing and new development because it contains both expansion and rehabilitation components.

Allocation To General Plan Buildout: 56.04%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The 2022 station cost estimates were increased to 2024 costs by the ENR - Building Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$2,993,300	$2,993,300
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$1,166,670	$1,166,670
3. Construction	$0	$0	$0	$0	$27,215,000	$27,215,000
4. Contingency	$0	$0	$0	$0	$1,644,390	$1,644,390
5. Equipment / Other	$0	$0	$0	$0	$2,718,000	$2,718,000
TOTAL COST:	$0	$0	$0	$0	$35,737,360	$35,737,360

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Training Center Expansion **FS -016**

Submitting Departments: Fire Department

Project Description:

The project consists of the construction of a combination of 10,400 S.F. training tower and training classroom space, office space and restrooms. There would also be a drafting pit constructed and additional practice facilities and apparatus.

Justification / Consequences of Avoidance:

New development will cause an appreciable increase in new fire-fighters and thus training activity at the City's training center. New development will generate an increase in full time staffing. This increased training activity will put considerable strain on the finite capabilities of the training facilities, particularly the training tower, creating competing demands for the limited classroom, space and physical training opportunities. The previously described facilities will allow the department to meet the on-going required training of new fire-fighters and the continuing education needs of long-term firefighters.

Relationship to General Plan Development:

The costs are pro-rated between new development in Ontario Ranch and the General City areas because the facility is at capacity now.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The 2022 station cost estimates were increased to 2024 costs by the ENR - Building Cost Index

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$1,312,419	$1,312,419
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$0	$0
3. Construction	$0	$0	$0	$0	$8,749,457	$8,749,457
4. Contingency	$0	$0	$0	$0	$1,006,187	$1,006,187
5. Equipment / Other	$0	$0	$0	$0	$0	$0
TOTAL COST:	$0	$0	$0	$0	$11,068,063	$11,068,063

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: City Emergency Operations Center **FS -017**

Submitting Departments: Fire Department

Project Description:

Acquire and install multi-purpose audio, video, telecommunications and operational equipment in the Emergency Operations Center. The project consists of 6,500 square feet of interior improvements at about $700 per square foot and the installation of $500,000 in electronic equipment.

Justification / Consequences of Avoidance:

Given the recent relocation of the facility to the basement of the City Hall Annex facility, the project will provide the facility with the necessary audio/visual, telecommunications and operational equipment with which to manage any potential city emergencies. The facility will also be a back-up dispatch center and training venue.

Relationship to General Plan Development:

The costs are pro-rated between existing and new development because it is an expanded capacity.

Allocation To General Plan Buildout: 56.04%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.The 2022 station cost estimates were increased to 2024 costs by the ENR - Building Cost Index

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Special Operations Support Vehicle **FS -018**

Submitting Departments: Fire Department

Project Description:

Acquire a special operations support vehicle. The vehicle would be, in effect, a rolling warehouse and canteen. The vehicle would be dispatched to unusually large or long term incidents that would require provision of fluids/food, supplies, change of emergency equipment and other comfort capabilities.

Justification / Consequences of Avoidance:

The vehicle would be necessary for long term emergency incidents.

Relationship to General Plan Development:

The costs are pro-rated between existing and new development because it is a new and additional capacity.

Allocation To General Plan Buildout: 56.04%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.The 2022 response fleet cost estimates were increased to 2024 by the Consumer Price Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Mobile Air And Lighting Support Vehicle **FS -019**

Submitting Departments: Fire Department

Project Description:

Acquire a mobile air and lighting support vehicle. The truck (or cab/trailer) would consist of amiable lights for increasing visibility of any involved structure (during anytime of the day). In addition, the vehicle would have air bottle re-filling capacity.

Justification / Consequences of Avoidance:

The vehicle would provide increased visibility of involved structures, via external lighting, and would provide firefighters with an additional tool or on-site capability. Additionally, an on-site air bottle filling capability will be necessary for over-height and/or over-wide facilities requiring longer structural interior attacks. Acquisition would result in increased fire suppression response capacities by improving the firefighting conditions.

Relationship to General Plan Development:

The costs are pro-rated between existing and new development because it is a new and additional capacity.

Allocation To General Plan Buildout: 56.04%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.The 2022 response fleet cost estimates were increased to 2024 by the Consumer Price Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Share Of Common City Yard Improvements **FS -021**

Submitting Departments: Fire Department

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. and 6) Construct additional CNG fueling stations. The combined improvements have a total projected cost of $44.5 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated $44.4 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater fire suppression system vehicle maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of demand on all public infrastructures resulting from the development of the Ontario Ranch area and remaining portions of the General City.

Relationship to General Plan Development:

The project fully benefits new development in the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Fire Station Operations #1 Relocation **FS -023**

Submitting Departments: Fire Department

Project Description:

This project consists of relocating Station #1 from its current location at 425 East B Street. The station would consist of five1,400 square foot bays and living quarters for eight on-duty fire fighters, a fire investigator and a battalion chief. The desired location for relocation would be parcels at the corner of D Street and Sultana Avenue.

Justification / Consequences of Avoidance:

The current Fire Station #1 is over 60 years old and is in need of major and repeating repairs; additionally the station is not adequately sized to safely house the current personnel, equipment and apparatus needed at this very central location. The current parcel is undersized at 0.55 acres. The proposed location will allow for more rapid responses to emergency incidents in and around the downtown area as well as providing a more efficient and effective working environment for the response fire personnel.

Relationship to General Plan Development:

The facility relocation is needed to accommodate full General Plan development in the General City area without adding significant staffing costs.

Allocation To General Plan Buildout: 35.00%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.The 2022 station cost estimates were increased to 2024 costs by the ENR - Building Cost Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Fire Suppression Facilities, Vehicles And Equipment

Project Title / Ref#: Expand Station #3 (East Francis) **FS -024**

Submitting Departments: Fire Department

Project Description:

Expand Station #3 to accommodate a second company. The existing station, the City's smallest, is located at 1408 East Francis adjacent to the fire and emergency training center. The expansion would consist of two bays at a total of 2,800 square feet, 745 square feet of mechanical and storage space and 2,070 square feet of additional dorm/shower/living space.

Justification / Consequences of Avoidance:

Full development in the General City area will more than double the annual medic/fire/emergency calls-for-service requiring the addition of an additional company. This station is centrally located and can respond to a great many of these additional calls-for-service.

Relationship to General Plan Development:

The facility expansion will be required to accommodate the additional calls-for-service resulting from full development within the General City area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, projections are based upon a staff application of General Plan based response times.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.The 2022 station cost estimates were increased to 2024 costs by the ENR - Building Cost Index.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Archibald Avenue From Riverside To Edison (P) **ST -001**

Submitting Departments: Engineering Department

Project Description:

Construct the additional lanes beyond the curb adjacent lane in each direction on Archibald Avenue from Riverside Drive to Edison Avenue (about 7,800 linear feet). The project segment, which may include one or more traffic signals included on ST-024, will be one of the key arterials/collectors servicing the Ontario Ranch area. Project costs include the raised landscape median and all lanes except the curb adjacent lane. The construction of the curb adjacent lane and frontage improvements will be constructed as a condition of approval. Contingency is included at 10% of the estimated construction cost. Project administration, consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Bellegrave Avenue From Archibald To Milliken **ST -003**

Submitting Departments: Engineering Department

Project Description:

Construction of the additional lanes beyond the curb adjacent lane in each direction on Bellegrave Avenue from Archibald Avenue to Haven Avenue and only on the north side from Haven Avenue to Milliken Avenue (about 10,900 linear feet). The project segment, which may include one or more traffic signals included on ST-024, will be one of the key arterials/collectors servicing the Ontario Ranch area. Project costs include the raised landscape median and all lanes except the curb adjacent lane. The construction of the curb adjacent lane and frontage improvements will be constructed as a condition of approval. The project has been completed but remains in the calculation until the City's Land Use Database is amended at a later time.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F. The project has been left in as a place holder to maintain the original numbering system.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The project has been completed in April of 2023.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Campus Avenue From Riverside To Merrill **ST -004**

Submitting Departments: Engineering Department

Project Description:

Construct the additional lanes beyond the curb adjacent lane in each direction on Campus Avenue from Riverside to Merrill (13,200 linear feet). The project segment, which may include one or more traffic signals included on ST-024, will be one of the key arterials/collectors servicing the Ontario Ranch area. Project costs include the raised landscape median and all lanes except the curb adjacent lane. The construction of the curb adjacent lane and frontage improvements will be constructed as a condition of approval except for a portion from Schaefer to approximately 1271' south of Schaefer. The last lane improvements include neighborhood edge and fiber optic for this portion are included in the project costs. Contingency is included at 10% of the estimated construction cost. Project administration, consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

Allocation To General Plan Buildout: 100.00%

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Haven Avenue From Riverside To Bellegrave **ST -014**

Submitting Departments: Engineering Department

Project Description:

Construct the additional lanes beyond the curb adjacent lane in each direction on Haven Avenue from Riverside Drive to Bellegrave Avenue (about 13,200 linear feet). The project segment, which may include one or more traffic signals included on ST-024, will be one of the key arterials/collectors servicing the Ontario Ranch area. Project costs include the raised landscape median and all lanes except the curb adjacent lane. The construction of the curb adjacent lane and frontage improvements will be constructed as a condition of approval. Contingency is included at 10% of the estimated construction cost. Project administration, consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$746,155	$746,155
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$0	$0
3. Construction	$0	$0	$0	$0	$4,522,152	$4,522,152
4. Contingency	$0	$0	$0	$0	$452,215	$452,215
5. Equipment / Other	$0	$0	$0	$0	$0	$0
TOTAL COST:	$0	$0	$0	$0	$5,720,522	$5,720,522

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Merrill Avenue From Euclid To Archibald **ST -015**

Submitting Departments: Engineering Department

Project Description:

Construct the additional lanes beyond the curb adjacent lane on north side of Merrill Avenue from Euclid Avenue to Carpenter Avenue and in each direction from Carpenter Avenue to Archibald Avenue (about 17,300 linear feet). The project segment, which may include one or more traffic signals included on ST-024, will be one of the key arterials/collectors servicing the Ontario Ranch area. Project costs include the raised landscape median and all lanes except the curb adjacent lane. The construction of the curb adjacent lane and frontage improvements will be constructed as a condition of approval. Contingency is included at 10% of the estimated construction cost. Project Cost will also include utility relocation on a portion of Carpenter Avenue to align with the intersection of Merrill Avenue. Project administration, consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased by 454.7% based upon a recalculation of the project costs.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Ontario Ranch Traffic Control System **ST -024**

Submitting Departments: Engineering Department

Project Description:

Construct the Ontario Traffic Signal and Interconnect Control System. The improvements include the 1/2 mile backbone signals (consisting of 46 new signals and sixteen signal modifications, signal interconnect and intelligent transportation system costs) and key 1/4 mile signals (consisting of 56 new signals). Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs. (Amended 09/14, text and costs).

Justification / Consequences of Avoidance:

The project will allow for reliable and redundant communication to traffic signals within the Ontario Ranch area. Failure to implement these improvements will result in significant delays to manage traffic incidents as the City's traffic demands reach build out.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's roadway network within the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

New Model Colony Transportation Program Implimentation Plan, Februrary 2001.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased by 122.7% based upon a recalculation of the project costs.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Non-Dev. ROW, Frontage Imps. & SCE Pole Relocations **ST -025**

Submitting Departments: Engineering Department

Project Description:

The project consists of four components: 1) ROW acquisition/construction of last lane improvements, including curb adjacent lane pavement and frontage improvements for non-developer (SCE, SOCALF, SBCFCD) properties fronting arterial/collector roadways (1.2 million SF at $6/SF), 2) Relocation 405 existing SCE transmission poles (at $53,000/pole) which impact the future construction of the ultimate width collector and arterial roadways, 3) Construction of the last lane improvements, including curb adjacent lane pavement and full frontage improvements of any arterial/collector street contiguous to the Great Park (17,500 LF at $250/LF)and 4), Construction of the full width improvements including curb adjacent lane improvements and full frontage improvements of Grand Park Street along the 1,600 LF of future high school frontage.

Justification / Consequences of Avoidance:

Construction of improvements along non-developer frontage is required to provide uniform street cross-section and continuous path of travel for pedestrian, bicycle and vehicle traffic to ensure that an acceptable level of services is maintained.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch development as identified in the Ontario Ranch land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: General City Street Lights **ST -033**

Submitting Departments: Engineering Department

Project Description:

The project consists of the construction of approximately 600 street lights in various locations in the General City lacking adequate street lighting at roughly $6,200 per light pole to complete the system of 11,500 existing street lights. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario has identified these improvements as necessary to illuminate remaining sections of streets. Failure to implement these improvements would result in unsatisfactory illumination levels in areas of new development. The city conforms to guidelines recommended by the Illuminating Engineering Society (IES).

Relationship to General Plan Development:

The General Plan's Roadway System Section requires roadways to comply with industry standard design and safety practices.

Allocation To General Plan Buildout: 100.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: General City Traffic Signals **ST -034**

Submitting Departments: Engineering Department

Project Description:

Construct twenty-four (24) new and modify seven (7) existing traffic signals, including emergency vehicle pre-emption and battery backup system modifications within the General City. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs

Justification / Consequences of Avoidance:

The project will allow for reliable and redundant communication to traffic signals within the General City. Failure to implement these improvements will result in significant delays to manage traffic incidents as the City's traffic demands reach build out

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the city's roadway network.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Bon View Avenue From Mission To Belmont **ST -039**

Submitting Departments: Engineering Department

Project Description:

Widen Bon view Avenue to reflect current Master Plan of Streets and Highways from Mission Boulevard to Belmont Street (about 900 linear feet). Project cost includes reconstruction and relocation of existing curb & gutter, landscape parkway, sidewalk, streetlights and modification of traffic signals to their ultimate location. Right of way acquisition is included at 20% of the estimated construction cost. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction, ROW and contingency costs. (Amended 09/14, Measure I percent change).

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the General City development as identified in the General City area land use database.

Allocation To General Plan Buildout: 44.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$81,728	$81,728
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$85,023	$85,023
3. Construction	$0	$0	$0	$0	$495,323	$495,323
4. Contingency	$0	$0	$0	$0	$49,532	$49,532
5. Equipment / Other	$0	$0	$0	$0	$0	$0
TOTAL COST:	$0	$0	$0	$0	$711,606	$711,606

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Grove Avenue From I-10 Freeway To Holt **ST -042**

Submitting Departments: Engineering Department

Project Description:

Widen Grove Avenue to reflect current Master Plan of Streets and Highways from I-10 Freeway to Holt Boulevard (about 3,400 linear feet). Project cost includes reconstruction and relocation of existing curb & gutter, landscape parkway, sidewalk, streetlights and raised landscape median to their ultimate location. The estimated cost is based on the 2010 Grove/I-10 PSR. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the General City development as identified in the General City area land use database.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Holt Boulevard From Benson To Vineyard **ST -053**

Submitting Departments: Engineering Department

Project Description:

Widen Holt Boulevard to reflect current Master Plan of Streets and Highways from Benson Avenue to Vineyard Avenue (about 23,100 linear feet). Project cost includes reconstruction and relocation of existing curb & gutter, landscape parkway, sidewalk, streetlights, raised landscape median and modification of traffic signals to their ultimate location. Right of way acquisition is included at 20% of the estimated construction cost. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction, ROW and contingency costs. (Amended 09/14, cost change).

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the General City development as identified in the General City area land use database.

Allocation To General Plan Buildout: 44.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Philadelphia From E/O Vineyard To Cucamonga Creek **ST -066**

Submitting Departments: Engineering Department

Project Description:

Widen Philadelphia Street to reflect current Master Plan of Streets and Highways from East of Vineyard Avenue to Cucamonga Creek (about 2,200 linear feet). Project cost includes construction of curb & gutter, landscape parkway, sidewalk and streetlights to their ultimate location. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the General City development as identified in the General City area land use database.

Allocation To General Plan Buildout: 44.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

Submitting Departments: Engineering Department

Project Description:

Widen the North and South Mission Boulevard Bridges over the Cucamonga Creek. Contingency is included at 25% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The Project is required to maintain existing traffic flow along this segment and provide additional capacity for anticipated additional traffic demands.

Allocation To General Plan Buildout: 44.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

The project will eliminate conflicts and delays associated with at-grade roadway/rail road crossings. Failure to implement these improvements will result in increased delays as both vehicle and rail traffic is expected to increase.

Relationship to General Plan Development:

The General Plan's Goods Movement Section identifies the elimination of the at-grade rail crossing at this location.

Allocation To General Plan Buildout: 44.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Pavement Management System Rehabilitation Program **ST -102**

Submitting Departments: Engineering Department

Project Description:

Reconstruct street segments as identified by the Pavement Management Program. These street segments represent ordinary wear and tear on existing streets and existing business demands. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs

Justification / Consequences of Avoidance:

The City of Ontario has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is required to merely maintain and maximize existing traffic flow along all existing City street segments.

Allocation To General Plan Buildout: 0.00%

Reference Document:

The street segments within this project are generated by the City's Pavement Management Program.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Circulation System Maintenance Vehicles **ST -103**

Submitting Departments: Engineering Department

Project Description:

Acquire additional circulation system maintenance vehicles proportional to the increase in both lane miles constructed and trip-ends generated new development in both the Ontario Ranch and General City areas.

Justification / Consequences of Avoidance:

The existing inventory of circulation system maintenance vehicles would be incapable of maintaining the near doubling of street lane-miles, bridges and traffic signals.

Relationship to General Plan Development:

The project is required merely to maintain the City's capacity to maintain all roads that are accepted upon dedication to the City after construction.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon proportional analysis of existing fleet and equipment and future additional infrastructure.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Vehicle cost estimates from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Consumer Price Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Great Park Bridge Over Archibald Avenue **ST -104**

Submitting Departments: Engineering Department

Project Description:

Construct a decorative bridge including end monuments over Archibald Avenue along the proposed Great Park greenbelt to allow for safe pedestrian/cyclist access from the east and west side of the park.

Justification / Consequences of Avoidance:

The project is necessary to maximize the use of the full park without obstructing traffic on Archibald Avenue.

Relationship to General Plan Development:

The project is required to accommodate the traffic generated from the Ontario Ranch areadevelopment as identified in the Ontario ranch area land use database.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Project estimate dated September 9, 2002.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Project No Longer Needed. **ST -110**

Submitting Departments: Engineering Department

Project Description:
.tHE project is no longer needed.

Justification / Consequences of Avoidance:
The project has been left in as a place holder to maintain the previous project numbering system.

Relationship to General Plan Development:
The project is no longer needed.

Allocation To General Plan Buildout: 0.00%

Reference Document:
Not applicable.

Project Timing:
The project is no longer needed

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$0	$0
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$0	$0
3. Construction	$0	$0	$0	$0	$0	$0
4. Contingency	$0	$0	$0	$0	$0	$0
5. Equipment / Other	$0	$0	$0	$0	$0	$0
TOTAL COST:	$0	$0	$0	$0	$0	$0

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: I-10 Freeway At Grove/Fourth **ST -111**

Submitting Departments: Engineering Department

Project Description:

The project consists of improvements and capacity expansion of the I-10 at Grove/Fourth Interchange. Project administration consisting of engineering, construction management and contract administration is included at 10% of the construction costs and contingency at 10% of construction costs.

Justification / Consequences of Avoidance:

The interchange improvements are intended to provide operational, safety and capacity improvements to the interchange system and provide a better and more uniform access for freeway traffic to local destinations (and vice versa); including to and from the Ontario International Airport. Failure to implement these improvements will result in critical deficiencies that will be further exacerbated by future growth.

Relationship to General Plan Development:

The General Plan's Mobility Element promotes local and regional transportation solutions. The project will relieve congestion by distributing demand in conformance with the General Plan.

Allocation To General Plan Buildout: 10.90%

Reference Document:

DRAFT PSR estimate.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$17,153,206	$17,153,206
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$65,458,400	$65,458,400
3. Construction	$0	$0	$0	$0	$103,958,822	$103,958,822
4. Contingency	$0	$0	$0	$0	$10,395,882	$10,395,882
5. Equipment / Other	$0	$0	$0	$0	$0	$0
TOTAL COST:	$0	$0	$0	$0	$196,966,310	$196,966,310

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Traffic Signal System Control And Operations Center **ST -112**

Submitting Departments: Engineering Department

Project Description:

Construct improvements to the Traffic Signal System Control and Operations Center. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The project will create a traffic management facility where signal timing plans and traffic management plans can be quickly and efficiently implemented in order to reduce congestion, handle varying traffic conditions and improve road safety. Failure to implement the improvements will result in significant delays to manage traffic incidents as the city's traffic demands reach build out.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's roadway network.

Allocation To General Plan Buildout: 100.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs for this project from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Consumer Price Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$332,450	$332,450
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$0	$0
3. Construction	$0	$0	$0	$0	$2,014,848	$2,014,848
4. Contingency	$0	$0	$0	$0	$201,485	$201,485

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: General City Backbone Signal Interconnect **ST -113**

Submitting Departments: Engineering Department

Project Description:

Construct improvements to the General City area Backbone Signal Interconnect system. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The project will allow for reliable and redundant communication to traffic signals within the General City. Failure to implement these improvements will result in significant delays to manage traffic incidents as the City's traffic demands reach build out.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's roadway network.

Allocation To General Plan Buildout: 20.00%

Reference Document:

2012 Street Development Impact Fee (DIF) Program Memo, May 8, 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$379,717	$379,717
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$0	$0
3. Construction	$0	$0	$0	$0	$2,301,315	$2,301,315
4. Contingency	$0	$0	$0	$0	$230,132	$230,132

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: I-10 At Euclid Avenue Eastbound On Ramp **ST -114**

Submitting Departments: Engineering Department

Project Description:

The project consists of improvements and capacity expansion of the I-10 at Euclid Avenue eastbound on ramp. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

These improvements are necessary to increase the interchange's capacity to accommodate anticipated growth in the General City area. Failure to implement these improvements will result in unsatisfactory interchange capacity.

Relationship to General Plan Development:

The General Plan's Mobility Element promotes local and regional transportation solutions. The project will relieve congestion by distributing demand in conformance with the General Plan.

Allocation To General Plan Buildout: 7.00%

Reference Document:

SANBAG Nexus Study.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: I-10 At Vineyard Interchange Reconstruction/Expansion **ST -116**

Submitting Departments: Engineering Department

Project Description:

The project consists of intersection and landscaping improvements of the I-10 at Vineyard Avenue interchange. The I-10 Corridor project will be reconstructing the interchange as a project cost.

Justification / Consequences of Avoidance:

These improvements are necessary to increase the interchange's capacity to accommodate anticipated growth in the General City area. Failure to implement these improvements will result in unsatisfactory interchange capacity.

Relationship to General Plan Development:

The General Plan's Mobility Element promotes local and regional transportation solutions. The project will relieve congestion by distributing demand in conformance with the General Plan.

Allocation To General Plan Buildout: 40.00%

Reference Document:

09/08/16 Letter to City from SANBAG.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$349,279	$349,279

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Ontario Ranch Street/Trails Separation **ST -117**

Submitting Departments: Engineering Department

Project Description:

The project consists of grade separation of trails from streets in the Ontario Ranch area wherever practical or needed. Contingency is included at 10% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs

Justification / Consequences of Avoidance:

The project will eliminate conflicts and delays associated with at-grade roadway and trail crossings.

Relationship to General Plan Development:

The project benefits future development within the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

The reference used for this project consists of a memo from Public Works - Engineering staff.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Hellman Avenue Bridge Over Cucamonga Creek **ST -118**

Submitting Departments: Engineering Department

Project Description:

Widen the Hellman Avenue Bridge over the Cucamonga Creek. Contingency is included at 25% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The Project is required to maintain existing traffic flow along this segment and provide additional capacity for anticipated additional traffic demands.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Edison Avenue Bridge Over Cucamonga Creek **ST -123**

Submitting Departments: Engineering Department

Project Description:

Construct the Edison Avenue Bridge over the Cucamonga Creek. Contingency is included at 25% of the estimated construction cost. Project administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS). Failure to make the General Plan's recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The Project is required to maintain existing traffic flow along this segment and provide additional capacity for anticipated additional traffic demands.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Streets and Highways (September, 2011).

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$2,532,659	$2,532,659
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$0	$0
3. Construction	$0	$0	$0	$0	$13,507,513	$13,507,513
4. Contingency	$0	$0	$0	$0	$3,376,878	$3,376,878
5. Equipment / Other	$0	$0	$0	$0	$0	$0

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Share Of Common City Yard Improvements **ST -126**

Submitting Departments: Engineering Department

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of $38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated $38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater circulation system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructures from the Ontario Ranch area and remaining portions of the General City area.

Relationship to General Plan Development:

The project benefits both existing and future development within the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon an analysis of demands on City yard capacity and expansion needs.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs were static in 2022 thus there is no cost index increase applied,

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$257,125	$257,125

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Ontario Ranch Bus Stop Shelters **ST -127**

Submitting Departments: Engineering Department

Project Description:

Construct the Ontario Ranch bus stop shelters. The improvements include 218 bus stops throughout the Ontario Ranch area. Labor for the installation is included at 10% of the materials cost and contingency is included at 10% of total construction and labor costs. (Added 09/14, project added).

Justification / Consequences of Avoidance:

The project will allow for future bus shelter installations at currently identified locations which will be furnished with a bus pad or bus turnout.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplies a reliable alternative transportation system and provides a viable alternative to the automobile.

Allocation To General Plan Buildout: 100.00%

Reference Document:

New Model Colony Bus Facility Justification Study, August 2007 and memo RE: ST-128.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.Costs from the 2022 DIF Calculation Report have been increased to July 2024 cost estimates by the Engineering News Record Construction Cost Index.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Ontario Ranch Design Studies **ST -128**

Submitting Departments: Engineering Department

Project Description:

Recovery of costs incurred by the Ontario Ranch Construction group expended on behalf of all other developments. The Master Plan studies include: 1. Master Plan of Infrastructure Alignments, 2. GIS System Integration Traffic Studies, Rights-of-way Studies, Streetscape Master Plan and the Pavement design document. (Added 09/14, study reimbursement costs).

Justification / Consequences of Avoidance:

The studies were necessary to develop infrastructure requirements that define and benefit all development in the Ontario Ranch area.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's Roadway Network.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Ontario Ranch (formerly NMC) Construction Agreement.

Project Timing:

As needed and as available. Costs were static in 2022 thus there is no cost index increase applied,

MFP 2024-2025 Update

Infrastructure: Local Circulation (Streets, Bridges & Signals) System

Project Title / Ref#: Guasti Road Extension From 1,530' E/O Haven Easterly 310' **ST -130**

Submitting Departments: Engineering Department

Project Description:

Extend Guasti Road to reflect current Master Plan of Streets and Highways from 1,530 feet east of Haven (about 310 feet). Project costs include street, curb, gutter, landscaped parkway, sidewalk, street lights, truck filter and abandoning/constructing a water meter and fire double detector check.

Justification / Consequences of Avoidance:

The City of Ontario's General Plan has identified these improvements as necessary to maintain an acceptable level of service (LOS) in light of additional lane mile demands created by new development. Failure to make these General Plan recommended improvements would result in an unacceptable LOS F.

Relationship to General Plan Development:

The project is consistent with the General Plan's Mobility Element in that it supplements the design and maintenance of the City's Roadway Network

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Euclid Avenue, Riverside To Merrill **SD -001**

Submitting Departments: Engineering Department

Project Description:

Construct 13,200 linear feet of storm drain system along Euclid Avenue from Riverside Drive to Merrill Avenue, identified as EULD-XIV-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to the OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. Storm Drainage project cost estimates were increased by by 144.6% based upon a recalculation of the project costs. Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Walker Avenue, Merrill To Chino **SD -013**

Submitting Departments: Engineering Department

Project Description:

Construct 9,300 linear feet of storm drain system along Walker Avenue from Eucalyptus Avenue to Chino Avenue, identified as WLKR-XII-1 in the City of Ontario Master Plan of Drainage (March 2012, amended 2017). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. Storm Drainage project cost estimates were increased by 38% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Turner Avenue, Riverside To County Line Channel **SD -025**

Submitting Departments: Engineering Department

Project Description:

Construct 14,720 linear feet of storm drain system along Turner Avenue from Riverside Drive to the County Line Channel (located along Bellegrave Avenue), identified as TRNR-X-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. Storm Drainage project cost estimates were increased by 38% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$294,458	$294,458

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Schaefer Avenue Between Mill Creek And Milliken **SD -036**

Submitting Departments: Engineering Department

Project Description:

Construct 1,600 linear feet of storm drain system along Schaefer Avenue from Mill Creek Avenue to 1,600 feet east of Mill Creek, identified as MLCR-X-6 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" columStorm Drainage project cost estimates were increased by 38% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Chino Avenue, Cucamonga Channel To N/O Chino **SD -048**

Submitting Departments: Engineering Department

Project Description:

Construct 2,800 linear feet of storm drain system along Chino Avenue from Cucamonga Channel to north of Chino Avenue, identified as CHIN-XI-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 10% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. The amount of any project costs not fully attributed to OR area (if any) represents the percentage of storm water collected or moved by that segment of pipe was not generated by rainfall within the OR area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, OR projects will be constructed as needed and as DIF receipts are collected. Storm Drainage project cost estimates were increased by 38% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Offsite Euclid Avenue Storm Drain **SD -050**

Submitting Departments: Engineering Department

Project Description:

Contribute to the construction of a storm drainage system along Euclid Avenue from Merrill Avenue to the Prado Flood Control Basin located south of Pine Avenue in the City of Chino. The project costs will be distributed between the San Bernardino County Flood Control District, City of Chino and City of Ontario. This amount represents the City of Ontario's contribution towards the roughly $80.5 million project. The SBCFD will contribute an additional $25.5 million while the City of Chino will contribute $30,121,262.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch (OR) area and is likely totally within that area. Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Campus Avenue, Cedar To Riverside **SD -059**

Submitting Departments: Engineering Department

Project Description:

Construct 7,200 linear feet of storm drain system along Campus Avenue from Cedar Street to Riverside Drive and Riverside Drive from 800 feet west of Campus Avenue to Campus Avenue, identified as CAMP-VIII-1 and CAMP-VIII-2 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 15% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City (GC) area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within GC area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, GC projects will be constructed as needed and as local DIF receipts are collected. Storm Drainage project cost estimates were increased by 38% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$662,675	$662,675
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$0	$0

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Storm Drainage Maintenance Vehicles **SD -069**

Submitting Departments: Engineering Department

Project Description:

Expand the fleet of maintenance vehicles necessary to maintain the proportionally expanded amount of storm drainage line capacity, as represented by the construction projects within this chapter.

Justification / Consequences of Avoidance:

As the storm drainage system is expanded there will be an increased demand upon the existing vehicles dedicated to the maintenance of the storm drainage collection system. The additional vehicles will be necessary to avoid any decrease in the existing capability to maintain the existing system

Relationship to General Plan Development:

The proposed vehicles are fully related to additional demands created by new development thus are fully attributed to new development.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

As development Impact Fees are collected and the existing fleet is incapable of meeting all maintenance demands. Fleet costs have been increased by the Consumer Price Index over the 2022 estimates.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Boulder Avenue, I To State **SD -070**

Submitting Departments: Engineering Department

Project Description:

Construct 10,000 linear feet of storm drain system along I Street from Mountain Avenue to Boulder Avenue, Boulder Avenue from I Street to Holt Boulevard, Holt Boulevard from Boulder Avenue to Mountain Avenue, Mountain Avenue from Holt Boulevard to State Street, D Street from Boulder Avenue to 700 feet east of Boulder Avenue and in Vesta Avenue from Boulder Avenue to 700 feet east of Boulder Avenue, identified as BLDR-VI-1a, BLDR-VI-2a, BLDR-VI-3 and BLDR-VI-4 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 15% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost. The project is designed to accept storm water flows from the City of Upland (Refer to Project Number SD-083 for the second phase of this project for the upstream conditions).

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 0.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, GC projects will be constructed as needed and as local DIF receipts are collected. Storm Drainage project cost estimates were increased by 38% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Sultana Avenue, State To Phillips (Phase 2 Of SD-062) **SD -080**

Submitting Departments: Engineering Department

Project Description:

Construct 7,100 linear feet of storm drain system along Sultana Avenue from State Street to Phillips Street and Mission Boulevard from Lemon Avenue to Sultana Avenue (this is the second phase of the project number SD-062), Walnut Street from 600 feet west of Sultana Avenue to Sultana Avenue, Euclid Avenue from 60 FWY to Walnut Street, Fern Avenue from 60 FWY to Walnut Street, identified as SULT-VII-1b, SULT-VII-2, WLNT-VII-1, EULD-VII-1 and FERN-VII-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 15% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 0.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, GC projects will be constructed as needed and as local DIF receipts are collected. Storm Drainage project cost estimates were increased by 38% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$618,500	$618,500
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$0	$0

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Baker Avenue And Riverside Drive, S/O 60 Freeway **SD -089**

Submitting Departments: Engineering Department

Project Description:

Construct 4,200 linear feet of storm drain system along Baker Avenue from the 60 FWY to Riverside Drive and Riverside Drive from east of Vineyard Avenue to Whispering Lakes Lane, identified as BAKR-IV-1 and RVSD-IV-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 15% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost. This is a new project based on the Master Plan of Drainage update in March of 2012.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 0.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, GC projects will be constructed as needed and as local DIF receipts are collected. Storm Drainage project cost estimates were increased by 38% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$491,628	$491,628

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Holt Boulevard, Convention Center To Cucamonga Channel **SD -098**

Submitting Departments: Engineering Department

Project Description:

Construct 2,000 linear feet of storm drain system along Holt Boulevard from Convention Center Way to Cucamonga Channel and Convention Center Way from Dearborn Court to Holt Boulevard, identified as HOLT-IV-1 in the City of Ontario Master Plan of Drainage (March 2012). Contingency is included at 15% of the estimated construction cost. Project Administration consisting of engineering, construction management and contract administration is included at 15% of the combined construction/contingency cost. This is a new project based on the Master Plan of Drainage update in March of 2012.

Justification / Consequences of Avoidance:

These drainage improvements are needed to provide efficient and timely storm water removal. Storm water will increase in amounts proportional to the percentage of development on an acre due to the decrease in the amount of pervious (i.e. dirt/turf) surface available for infiltration. The cumulative amount of development will create significant amounts of storm water run-off that must be dealt with safely and quickly. Potential flooding of major and secondary arterials including most residential and business areas may occur as development continues to increase the City's overall percentage of impervious surface (i.e. buildings, parking lots, streets, etc.). Additionally, emergency vehicle response maybe impacted due to unmitigated flooding conditions.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from within the General City area and is likely to be totally within that area. The amount of any project costs not fully attributed to new development within General City area (if any) represents the percentage of proposed storm water collection lines currently needed (or a portion thereof) thus that percentage is recognized as a current deficiency and will need to be financed by sources other than DIFs.

Allocation To General Plan Buildout: 0.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, GC projects will be constructed as needed and as local DIF receipts are collected. Storm Drainage project cost estimates were increased by 38% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$201,769	$201,769

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Share Of Common City Yard Improvements **SD -103**

Submitting Departments: Engineering Department

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of $38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated $38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater storm drainage collection system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructures from the Ontario Ranch area and remaining portions of General City area.

Relationship to General Plan Development:

The project benefits both existing and future development within the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Master Plan of Storm Drainage, March 2012, as amended by the change in the ENR Construction Cost Index since 03/2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. City Yard improvement cost estimates have been increased by the Engineering News Record - Building Cost Index over the 2022-23 cost estimates.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Storm Drainage Collection System Facilities

Project Title / Ref#: Ontario Ranch Storm Drain Design Studies **SD -105**

Submitting Departments: Engineering Department

Project Description:

Recovery of costs incurred by the New Model Colony Construction group expended on behalf of all other developments. The Master Plan studies include: 1. Cucamonga Creek Drain Concept Development Studies and 2. Storm water Quality Management Guidance Plan. (Added 09/14, report reimbursements).

Justification / Consequences of Avoidance:

The studies were necessary to develop infrastructure requirements that define and benefit all development in the Ontario Ranch area.

Relationship to General Plan Development:

The project is related to the collection and removal of storm water from the Ontario Ranch area and is likely benefits all parcels within that area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Ontario Ranch (formerly NMC) Construction Agreement.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Phillips Street 1010' Zone Well **WT -001**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:
Construction of Well #39 and appurtenant piping for the Phillips Street Pressure zone.

Justification / Consequences of Avoidance:
The project is required to provide adequate well pumping capacity for future additional residents and businesses.

Relationship to General Plan Development:
The project 100% benefits new development in the General City area.

Allocation To General Plan Buildout: 100.00%

Reference Document:
Water Master Plan, August 2000

Project Timing:
While the project is 100.00% development related, the project's construction has been expedited by using Non-DIF receipts. The projects costs remain in the DIF calculation in order to reimburse those loans from other Fund's. There was no 2024 change in this cost estimate.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Eighth Street 1212' Zone Wells **WT -002**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construction of wells #40, #42 and #43 to produce 2,500 GPM each and appurtenant piping for the Eighth Street Pressure zone. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost

Justification / Consequences of Avoidance:

The project is required to provide adequate well pumping capacity for future additional residents and businesses.

Relationship to General Plan Development:

The project benefits new development in Ontario Ranch (42.09%) and the General City area (57.91%).

Allocation To General Plan Buildout: 100.00%

Reference Document:

Water Master Plan, April 2012.

Project Timing:

Well #40 was constructed in 2004; preliminary work and drilling of well #43 had been completed. remainder of project timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Water project cost increases have been reviewed with the NMC Builders Group.

The project is required to provide adequate and timely water storage for future additional residents and businesses.

Relationship to General Plan Development:

The project fully benefits new development in the Ontario Ranch area (100%).

Allocation To General Plan Buildout: 100.00%

Reference Document:

Water Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The significant water project cost increases have been reviewed with the NMC Builders Group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$16,198,481	$16,198,481
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$0	$0

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Phillips Street 1010' Zone Reservoirs **WT -015**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:
The project represents the remaining costs of the 1010-2B at 9MG reservoir.

Justification / Consequences of Avoidance:
The project is required to provide adequate and timely water transmission for future additional residents and businesses.

Relationship to General Plan Development:
The project fully benefits new development and future water users in the Ontario Ranch area (100%).

Allocation To General Plan Buildout: 100.00%

Reference Document:
Water Master Plan, April 2012.

Project Timing:
The project has been largely constructed. The significant water project cost increases have been reviewed with the NMC Builders Group. Though the project is largely completed, costs remain for the completion of the project and for repayment to other no-DIF fund for advancing the construction schedule.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Recycled Water System **WT -016**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct a recycled water system consisting of constructing 29,000 linear feet of 8-inch to 12-inch mains in the General City and 266,000 linear feet of 8-inch to 12-inch mains and one booster station and four pressure reducing stations in Ontario Ranch to distribute recycled water primarily for landscaping and irrigation purposes. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

The project is required to provide adequate and timely recycled water transmission and distribution for future additional residents and businesses and would increase the availability of potable water sources for domestic purposes.

Relationship to General Plan Development:

The project benefits new development and future water users in the Ontario Ranch area (85.13%) and the General City area (14.87%).

Allocation To General Plan Buildout: 100.00%

Reference Document:

Recycled Water Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The significant water project cost increases have been reviewed with the NMC Builders Group.

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Back-Up Power Supply **WT -017**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Acquire and install back-up engine generator units to insure a continuous flow of water well pumping in case of a commercial power shortage. Plans include converting twenty wells to allow for back-up power and for eight portable generators. The cost of the two wells already converted has been included at identified costs. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

The project is required to provide adequate and timely water transmission for future additional residents and businesses.

Relationship to General Plan Development:

The project benefits new development and future water users in the Ontario Ranch area (27.88%) and the General City area (7.21%) and existing water users (64.91%).

Allocation To General Plan Buildout: 35.09%

Reference Document:

Water Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The significant water project cost increases have been reviewed with the NMC Builders Group.

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Water System Maintenance Vehicle/Equipment Fleet **WT -028**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:
This project is the cost for the purchase of additional utility system maintenance vehicles and equipment.

Justification / Consequences of Avoidance:
The addition of tens of thousands of linear feet of water distribution lines, pumps and reservoirs will increase the demand upon the existing maintenance vehicle feet. Additional utility maintenance vehicles will be required.

Relationship to General Plan Development:
The additional vehicles are directly related to new development in both General City and Ontario Ranch areas based upon relative new water demands.

Allocation To General Plan Buildout: 100.00%

Reference Document:
Based upon proportional analysis of existing fleet and equipment and future additional infrastructure.

Project Timing:
The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Project Completed Or No Longer Necessary **WT -030**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:
Project has been completed or no longer necessary.

Justification / Consequences of Avoidance:
The project has been left in as a place holder to maintain the previous project numbering system.

Relationship to General Plan Development:
Project has been completed or is no longer necessary.

Allocation To General Plan Buildout: 100.00%

Reference Document:
Water and Recycled Water Master Plan, May 2006.

Project Timing:
The project has been completed.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: JCSD/Ontario Reservoir (Phillips Street 1010' Zone) **WT -031**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

The project consists of a contribution towards the construction of reservoirs improvements in order to provide storage for secondary water supply to the City water system. The project construction cost is the actual cost.

Justification / Consequences of Avoidance:

The project is required to provide adequate and timely water transmission for future additional residents and businesses.

Relationship to General Plan Development:

The project benefits new development in the Ontario Ranch area (50%) and new development the General City area (10%) and existing water users (40%).

Allocation To General Plan Buildout: 60.00%

Reference Document:

Water and Recycled Water Master Plan, May 2006.

Project Timing:

While the project is 100.00% development related, the project's construction has been expedited by using Non-DIF receipts. The projects costs remain in the DIF calculation in order to reimburse those loans from other Fund's and complete the project.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Water Treatment **WT -032**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

The project consists of the construction of water treatment facilities. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

The project is required to provide adequate and timely water transmission for future additional residents and businesses.

Relationship to General Plan Development:

The project benefits future water users in the Ontario Ranch area and existing water users.

Allocation To General Plan Buildout: 53.01%

Reference Document:

Water Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Water staff have updated the costs based upon recent construction cost experience. Water project cost increases have been reviewed with the NMC Builders Group.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Water Source Supply **WT -034**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

The project consists of costs for securing additional water supply sources to meet the projected water demands anticipated at the build-out of the City's General Plan. Additional water supply sources include Chino Basin Desalter Authority (CDA), Recycled Water, Chino Basin Non-Agricultural Pool Rights (Non-Ag), and other sources to be determined which may include Chino Basin Safe Yield rights. Additional Ontario Ranch supplies include: 3,533 AFY from CDA Expansion ($28,405,706); 11,486 AFY of Recycled Water (incl. in WT-016); 2,306 AFY of previously acquired Non-Ag rights ($17,834,593); and 3,056 AFY of other water rights/supplies to be acquired ($12,374,672). (continued under "Justification".

Justification / Consequences of Avoidance:

Additional OMC supplies include: 765 AFY of previously acquired San Antonio Water Co. shares ($549,400); 512 AFY from the existing CDA ($3,385,294); and 6,899 AFY of Recycled Water (incl. in WT-016).

The project is required to ensure sufficient water supplies are available to meet future demands.

Relationship to General Plan Development:

The combined project fully benefits new development within both the Ontario Ranch (93.71%) and General City areas (6.29%).

Allocation To General Plan Buildout: 100.00%

Reference Document:

Urban Water Management Plan, 2010, the Ontario Plan Environmental Impact Report.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Water Source, Storage And Distribution System

Project Title / Ref#: Share Of Common City Yard Improvements **WT -037**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of $38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This project represents the proportional amount of a total estimated $38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater water system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various existing maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructure from the Ontario Ranch and remaining portions underbuilt portions of the General City.

Relationship to General Plan Development:

The project fully benefits future water users in the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon an analysis of demands on City yard capacity and expansion needs.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Eastern Trunk Sewer **SW -001**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

The Eastern Trunk Sewer line consists of approximately 25,940 linear feet of sewer pipe ranging in size from 12" to 42" pipe. The line generally begins at the Turner Pump station and Riverside drive and travels west to Archibald Avenue where it turns south to Merrill Avenue. At Merrill Avenue, the line turns west to baker Avenue where it turns south to connect with the IEUA Kimball interceptor. The segment along Merrill Avenue requires that the line go under Cucamonga Creek. The project has been completed.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in the General City and Ontario Ranch areas and existing sewage flows.

Relationship to General Plan Development:

The project is mostly (84.28%) related to existing flows and will be financed with utility rate receipts with the remaining 15.72% related to development within to the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 15.72%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

While the project is 100.00% development related, the project's construction has been expedited by using Non-DIF receipts. The projects costs remain in the DIF calculation in order to reimburse those loans from other Fund's.Project costs were increased by the CPI recognizing that these expedited costs will need to be paid back to the Sewer Operations fund with simple interest applied.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Western Trunk Sewer **SW -002**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

The project consists of approximately 32,800 linear feet of 18-inch to 36-inch" diameter sewer pipe. The Western Trunk Sewer is a gravity sewer that will extend from the intersection of Riverside drive and Carpenter Avenue4 to IEUA's Kimball interceptor. The general alignment of this trunk sewer begins at the intersection of Riverside drive and Carpenter Avenue; travels south in carpenter Avenue to Schafer Avenue; west to Walker Avenue; south to Merrill Avenue; west to Euclid Avenue; and south to the connection with IEUA's Kimball Interceptor at Kimball Avenue. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in General City and Ontario Ranch areas and existing sewage flows.

Relationship to General Plan Development:

The project is related to existing flows and will be financed with utility rate receipts with the remaining related to development within Ontario Ranch.

Allocation To General Plan Buildout: 50.88%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Sewer Collection Facilities project cost estimates were increased by 223.8% based upon a recalculation of the project costs.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Eucalyptus East Trunk Sewer **SW -003**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

The Eucalyptus East Trunk Sewer consists of approximately 4,500 linear feet of 15-inch diameter pipe in Eucalyptus Avenue, east of Archibald Avenue. This project will tie into the eastern Trunk Sewer at Archibald Avenue. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in the Ontario Ranch area.

Relationship to General Plan Development:

The project is fully related to development within Ontario Ranch.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

Sewer Collection Facilities project cost estimates were increased by 17% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Plaza Serena Street, Granada Court To Vineyard Avenue **SW -015**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct the sewer line starting from Plaza Serena, Granada Court to Vineyard Avenue (OS-12). Contingency costs are included at 15% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in the General City area and existing sewage flows.

Relationship to General Plan Development:

The project is mostly largely related to existing flows and will be financed with utility rate receipts with the remaining new demand related to development within to the General City area.

Allocation To General Plan Buildout: 29.80%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

While the project is 29.50% development related, some of the project's construction has been expedited by using Non-DIF receipts. The projects costs remain in the DIF calculation in order to reimburse those loans from other Fund's. Project costs were increased by the CPI recognizing that these expedited costs will need to be paid back to the Sewer Operations fund with simple interest applied.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Holt Boulevard, West Of Imperial Avenue **SW -017**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct 650 linear feet of sewer line starting from Holt Boulevard to just west of Imperial Avenue (OS-14). Contingency costs are included at 15% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in the General City area and existing sewage flows.

Relationship to General Plan Development:

The project is largely related to existing flows and that portion will be financed with utility rate receipts with the remaining amount related to additional development demands from within the General City area.

Allocation To General Plan Buildout: 38.70%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Sewer Collection Facilities project cost estimates were increased by 17% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Vineyard Avenue, South Of Cedar Et. Al. **SW -022**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct numerous sewer lines including: Vineyard Avenue, south of Cedar Street (OS-21), Archibald, through the Airport (OS-25), Philadelphia and Hellman (OS-26), Inland empire Boulevard west of Archibald Avenue; and easement between Inland Empire Boulevard and Guasti Road (OS-22), Easement south of Guasti Road (OS-23) and Old Guasti Road west of Turner Avenue (OS-24). Contingency costs are included at 15% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from existing sewage flows in the General City Area.

Relationship to General Plan Development:

The project is largely related to development within the General City area with the minor amount remaining related to existing flows with that prortion financed with utility rate receipts.

Allocation To General Plan Buildout: 88.79%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Sewer Collection Facilities project cost estimates were increased by 17% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Easement East Of Haven **SW -023**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct 2,700 linear feet of sewer line along an easement, just east of Haven Avenue.t (OS-16). Contingency costs are included at 15% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from existing sewage flows in the General City area.

Relationship to General Plan Development:

The project is mostly related to development within the General City area with the remaining amount benefitting existing flows within General City which would be financed with utility rate receipts.

Allocation To General Plan Buildout: 73.41%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Sewer Utility Maintenance Vehicles **SW -026**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

This project is the cost for the purchase of additional utility system maintenance vehicles and equipment.

Justification / Consequences of Avoidance:

The addition of tens of thousands of linear feet of sewer collection lines will increase the demand upon the existing utility system maintenance vehicle feet. Additional vactors and utility maintenance vehicles will be required.

Relationship to General Plan Development:

The additional vehicles are directly related to new development in both the General City and Ontario Ranch areas based upon the relative addition of new sewer demands.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. 2022-23 Vehicle costs were increased by the Consumer Price Index to 2024-25.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Sewer Utility Master Plan **SW -027**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Update the New Model Colony (now Ontario Ranch) Sewer Master Plan. An updated master Plan is required to evaluate the changing conditions and the sewer demands and infrastructure needed to provide adequate removal of sewage from private and public development.

Justification / Consequences of Avoidance:

Failure to maintain a Master Plan will limit the City's ability to properly plan for, prioritize and define all future sewer projects.

Relationship to General Plan Development:

The Master Plan is required to be able to continue to accommodate the additions of new development thus is attributed to new development.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the Master Plan described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The Sewer Master Plan cost from 2022-23 was increased by the Consumer Price Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Virginia Avenue Between D Street And Nocta Street **SW -035**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct a sewer line along Virginia Avenue between D Street and Nocta Street ((OS-07). Contingency costs are included at 15% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting from proposed development in the General City and existing sewage flows.

Relationship to General Plan Development:

The project is largely related to existing flows and will be financed with utility rate receipts with the remaining amont related to development within the General City area.

Allocation To General Plan Buildout: 19.60%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

While the project is 19.60% development related, some of the project's construction has been expedited by using Non-DIF receipts. The projects costs remain in the DIF calculation in order to reimburse those loans from other Fund's. Project costs were increased by the CPI recognizing that these expedited costs will need to be paid back to the Sewer Operations fund with simple interest applied.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Deer Creek Loop And Laurel Tree Drive **SW -036**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct 1,250 linear foot of sewer collection line in the Deer Creek loop and Laurel tree drive (OS-08). Contingency costs are included at 15% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost.

Justification / Consequences of Avoidance:

This project is necessary to be able to meet the sewage collection capacity demand that has been calculated as necessary resulting largely from existing sewage flows in the General City area.

Relationship to General Plan Development:

The project is largely related to existing General City existing flows and will be financed with utility rate receipts. The remaining minor amount is attributed to development in the General City.

Allocation To General Plan Buildout: 0.31%

Reference Document:

Old Model Colony and New Model Colony Sewer Master Plan, April 2012.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Sewer Collection Facilities project cost estimates were increased by 17% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Share Of Common City Yard Improvements **SW -048**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of $38.2 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated $38.2 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater sewer collection system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructures from the Ontario Ranch area and remaining portions of the General City area.

Relationship to General Plan Development:

The City yard improvements are directly related to new development.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon an analysis of demands on City yard capacity and expansion needs.

Project Timing:

The timing of the capital acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. The 2022-23 City Yard cost estimates have been increased by the Engineering News Record - Building Cost Index.

MFP 2024-2025 Update

Infrastructure: Sewer Collection Facilities

Project Title / Ref#: Airport Drive Main, E/O Grove **SW -050**

Submitting Departments: City Of Ontario Municipal Utilities Company

Project Description:
Install 580 linear feet of 8" sewer line in Airport Drive. The scope of work includes manhole modifications, pavement removal and replacement and traffic control.

Justification / Consequences of Avoidance:
This project is necessary to provide sewer service to underserved developments along Airport Drive.

Relationship to General Plan Development:
This project will be designed and constructed as a Conditional Approval for a specific development proposal. A share of the construction cost will be reimbursed from the City of Ontario to the Developer via a reimbursement agreement.

Allocation To General Plan Buildout: 100.00%

Reference Document:
None, staff projections.

Project Timing:
The timing of the capital acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Sewer Collection Facilities project cost estimates were increased by 17% based upon an average of all conduit size pipe cost increases as presented by the NMC Builders group.

Master Facilities Plan Project Detail

Infrastructure: Refuse Collection Vehicles, Containers And Facilities

Project Title / Ref#: Side Loader Collection Carts **RC -001**

Submitting Departments: Public Works Agency

Project Description:

The project consists of acquiring 39,308 side loader collection barrels (of all types, trash, organic waste and recyclables). The additional barrels are required to meet the additional side loader refuse collection demands resulting from new residential detached dwelling development.

Justification / Consequences of Avoidance:

Refuse needs to be collected in a timely and efficient manner. Additions to the rolling stock and inventory of collection containers will be necessary as the net 80,149 additional residences, 546 commercial lodging units and 103,169,177 square feet of business square feet are added to the City.

Relationship to General Plan Development:

The vehicles, containers and additional facilities will be needed to meet the needs of new development. The existing inventory only meets the needs of the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

Infrastructure: Refuse Collection Vehicles, Containers And Facilities

Project Title / Ref#: Share Of Common City Yard Improvements **RC -007**

Submitting Departments: Public Works Agency

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations. 7) Reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. 8) Procure equipment for electric vehicles charging infrastructure to support the City's increasing electric fleet, and 9) Plan and prepare a transfer station to be potential built at the current City Yard. The combined improvements have a total projected cost of $44.5 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated $44.5 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater refuse collection system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructures from both the Ontario Ranch area and the remaining portions of the General City area.

Relationship to General Plan Development:

The vehicles, containers and additional facilities will be needed to meet the needs of new development. The existing inventory meets the needs of the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. Costs were increased from the 2022 Report by the Engineering News Record Building Cost Index.

PROPOSED EXPENDITURES	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015-2020	Total all Years

4. Contingency	$0	$0	$0	$0	$1,848,832	$1,848,832
5. Equipment / Other	$0	$0	$0	$0	$0	$0
TOTAL COST:	$0	$0	$0	$0	$20,337,135	$20,337,135

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

Infrastructure: Refuse Collection Vehicles, Containers And Facilities

Project Title / Ref#: Existing Fund Balance Purchases **RC -008**

Submitting Departments: Public Works Agency

Project Description:

This impact fee fund has $4,530,466 in existing fund balance waiting to be spent on any combination of additional containers and collection vehicles (traditional and alternative fuel) electric vehicles infrastructure and more importantly, improvements to the City maintenance yard. The bulk of this fund balance will be dedicated to the required City yard improvements.

Justification / Consequences of Avoidance:

The City Yard will fail to meet the needs of additional collection vehicles storage and repair capabilities/capacity.

Relationship to General Plan Development:

The vehicles, containers and additional facilities will be needed to meet the needs of new development. The existing inventory only meets the needs of the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition described herein, was not included in the scope of the engagement, thus all project costs default to the "build-out" column. All costs are at nominal, or current dollar value.

1) If project timing is not a component of this effort, then all projects default to their "Thru Build Out" amount.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: General Facilities, Vehicles And Equipment

Project Title / Ref#: City Hall And Annex Reconfiguration **GF -001**

Submitting Departments: Central Management

Project Description:

This project represents the cost (to date) of reconfiguring the City Hall and the City Hall Annex (former Police Station) into general office space. It also includes the future cost of completing the remaining reconfiguration of the Annex as it is not yet been completed. Some of the DIF proceeds will be used to complete the Emergency Operation Center.

Justification / Consequences of Avoidance:

As the City doubles in size, (population, businesses, residences, infrastructure, etc.) there will be a need for additional office space. The demand created by future development will benefit from the City having a building become available such as the former police facility but will need to contribute by constructing the reconfiguration. The reconfiguration provides a very inexpensive alternative to constructing additional office square footage.

Relationship to General Plan Development:

The additional space will be required over time as the City expands. The existing facilities are sufficient for the existing community. A small amount has been attributed to the existing community, but most of it, 80%, is required for accommodating the demands of new development.

Allocation To General Plan Buildout: 80.00%

Reference Document:

None.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. Project is completed and cost does not change.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: General Facilities, Vehicles And Equipment

Project Title / Ref#: Expansion Of Administrative Pool Car Fleet **GF -002**

Submitting Departments: Central Management

Project Description:
Expand the City Hall pool vehicle fleet. Vehicles would consist of standard sedans, small trucks and some four wheel drive vehicles.

Justification / Consequences of Avoidance:
The City will require additional unassigned pool cars as the City experiences additional demands for code enforcement, mail and supply, planning and engineering staff on-site inspections, and other required services.

Relationship to General Plan Development:
The vehicles would be additions to the existing fleet and thus is fully attributed to new development.

Allocation To General Plan Buildout: 100.00%

Reference Document:
None.

Project Timing:
The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. 2022 cost estimates have been increased by the Consumer Price Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: General Facilities, Vehicles And Equipment

Project Title / Ref#: Share Of Common City Yard Improvements **GF -005**

Submitting Departments: Central Management

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of $44.5 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated $44.5 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater general facilities maintenance capacity (vehicles and structures). The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructures from the Ontario Ranch and remaining portions of the General City area.

Relationship to General Plan Development:

The existing yard meets the City's needs quite well. The existing land holdings are adequate and sufficient, but some of the more recently acquired parcels and buildings will need some reconfiguring to be sufficient and adequate for future development-generated demands.

Allocation To General Plan Buildout: 100.00%

Reference Document:

No specific document, based upon proportional inventory expansion.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. City Yard 2022 costs have been increased by the ENR - Building Cost Index.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Library Facilities And Collection

Project Title / Ref#: Library Facilities Space Expansion **LB -001**

Submitting Departments: Community & Public Services Agency

Project Description:

The project consists of the acquisition of land and construction of a total of 115,599 square feet of library space in one or more locations in order to maintain pace with new development-generated residential population growth. The expansion needs roughly relate to 33,063 square feet to new General City residents and some 82,356 square feet to service the anticipated Ontario Ranch new residents. Contingency costs are included as a normal part of the construction estimate at 10%. Project administration, consisting of engineering, construction management and contract administration is included at 15% of the combined construction and contingency costs.

Justification / Consequences of Avoidance:

The proposed expansion will provide the square footage necessary to maintain the current ratio of floor space to residential patrons as is offered at this point in time. The current level of service standard is 0.460 square feet of space per City resident. Were no additional library space be added to the City, the standard would drop to 0.193 square feet per person at general Plan build-out.

Relationship to General Plan Development:

The Library Land Acquisition and Construction development impact fee schedule is necessary to accommodate new development and are intended to prevent the diminishment of library facilities availability to the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, General City and Ontario Ranch projects will be constructed as needed and as DIF receipts are collected.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$10,307,182	$10,307,182
2. Land Acquistion / Right Of Way	$0	$0	$0	$0	$6,447,772	$6,447,772
3. Construction	$0	$0	$0	$0	$62,467,971	$62,467,971

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Library Facilities And Collection

Project Title / Ref#: Library Collection Expansion **LB -002**

Submitting Departments: Community & Public Services Agency

Project Description:

This project consists of acquisition and processing of approximately 486,521 additional library collection items to increase the public library's collection in order to maintain pace with new residential home construction and occupancy. Collection items consist of books, audio books on CD, films on DVD, E-books and audiobook licenses, laptops, Hot spots and hot spot data plans, software licenses, learning equipment, makerspace equipment and varied household equipment (such as tool sets, small appliances, electronics, sporting goods and much more). The City enjoys a standard of approximately 1.936 "collection" items per resident. The General City area will require approximately 139,152 collection items and Ontario Ranch area will require 347,369 collection items to maintain the current standard.

Justification / Consequences of Avoidance:

The proposed expansion will provide the collection additions necessary to maintain the current ratio of collection items to residential patrons as is offered at this point in time. The current level of service standard is 1.936 collection items per resident. Should the current collection not be expanded, the number of collection items per president would drop to about 0.813 collection items per resident at General Plan build-out. The 486,521 additional collection items represents the amount necessary to maintain the current standard.

Relationship to General Plan Development:

The library collection item development impact fees are necessary to accommodate new development and are intended to prevent the diminishment of the library collection availability to the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, General City and Ontario Ranch projects will be constructed as needed and as DIF receipts are collected.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Public Use (Community Centers) Facilities

Project Title / Ref#: Public Use Community Center Space Expansion **PF -001**

Submitting Departments: Community & Public Services Agency

Project Description:

Acquire land for and construct approximately 201,042 square feet community center for a broad range of public uses. The facilities would contain various rooms for classes, meetings, and sports activities. They may also have a "serving kitchen" and banquet facilities.

Justification / Consequences of Avoidance:

The City has a public use facilities community center standard of 0.800 square feet per resident based upon the existing 145,570 square feet of existing public use facilities divided by the 2021 State of California Department of Finance population estimate of 182,004. Failure to maintain that standard would force the City to continually reduce the level of services to its citizens. Should the City not construct any additional public use facilities, the standard of square foot space per resident would plummet to 0.336 square feet per resident. The Community & Services Agency would not be able to meet requests for space by instructors, groups and individual citizens.

Relationship to General Plan Development:

The Community Center land acquisition and development impact fees are necessary to accommodate new development and are intended to prevent the diminishment of public use facilities availability to the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Aquatics Facilities

Project Title / Ref#: Aquatics Centers - Pool Expansion **AQ -001**

Submitting Departments: Community & Public Services Agency

Project Description:

One of the park amenities planned for inclusion within the Great Park is a public Aquatics Center. This amenity is to be located within the active sports area of the Great Park and serve the Ontario Ranch neighborhoods and the General City areas with a combo community center/aquatic center building programmed with full recreational activities. The aquatic center will serve as the local community plunge offering an Olympic sized pool to provide community aquatic opportunities for swim lessons, swim competition, recreational family swim and recreational exercise swimming. The current standards are 0.414 square feet of pool surface per resident and 0.026 square feet of support building per resident. The City would likely need to add non-impact fee to construct the size aquatics complex desired. The $8.2 million represents the amount that can be financed with impact fee receipts.

Justification / Consequences of Avoidance:

The construction of additional pool surface square feet based upon the collection of impact fee receipts would merely maintain the existing standard of square foot of surface per resident. The existing pools would prove inadequate to meet the aquatics needs of the City's future residents, in particular, the Ontario Ranch area where there are no aquatics facilities.

Relationship to General Plan Development:

The aquatics DIFs are necessary to accommodate new development and are intended to prevent the diminishment of the availability to the existing community of the City's existing pool complexes.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. In general, Ontario Ranch projects will be constructed as needed and as DIF receipts are collected. All costs are at nominal, or current dollar value. Project costs were increased by the ENR - CCI over 2022 costs. Project costs below include a fund balance of approximately $754,867.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$1,320,393	$1,320,393

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Park Land Acquisition And Park Infrastructure Development

Project Title / Ref#: Park Land Acquisition And Park Facilities Development **PK -001**

Submitting Departments: Community & Public Services Agency

Project Description:

Acquire land for and develop approximately 753.9 acres of a combination of community/sports park acres designed to meet the community's youth/adult needs for both passive/programmed sports/activity uses. Improvements would include grading, irrigation, turf, sports infrastructure, playground climbing apparatus, drinking fountains, restrooms, group picnicking facilities, BBQs, benches, metered walking and bike paths and passive open green space. Contingency costs are included at 10% of the estimated construction cost. Administration, engineering and construction management are included at 15% of the combined construction/contingency cost. Neighborhood, or local, parks are added as a condition of approval consistent with the size of the proposed residential development.

Justification / Consequences of Avoidance:

The City currently enjoys a park standard of 2.59 acres per 1,000 residents based upon a 471.52 park acres and a 2021 California State Department of Finance population of 182,004. The Quimby Act allows the City to adopt a standard of 3.0 acres per 1,000 if the City is below that figure. In order for the City to maintain the 3.0 acres per 1,000 resident's standard, while potential adding the residents from some 80,149 additional residential dwellings, the City would need to add a combination of 754 acres of community and sports parks. There are no such specific plans for any particular combination of for the 754 acres of parks, beyond the conceptual Great Park plans, that could be financed from the DIF receipts.

Relationship to General Plan Development:

The park land acquisition and park facilities Development Impact Fees are necessary to accommodate new development and are intended to prevent the diminishment of park availability to the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. All costs are at nominal, or current dollar value. Cost have been increased over 2022 estimates based upon a combination the ENR BCI, ENR CCI and the CPI.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years
1. Design / Engineering / Administratic	$0	$0	$0	$0	$60,589,311	$60,589,311
2. Land Acquisition/Right Of Way	$0	$0	$0	$0	$828,280,963	$828,280,963
3. Construction	$0	$0	$0	$0	$367,207,941	$367,207,941

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Park Land Acquisition And Park Infrastructure Development

Project Title / Ref#: Park Maintenance Vehicles **PK -002**

Submitting Departments: Community & Public Services Agency

Project Description:

Acquire the park maintenance vehicles necessary and sufficient to maintain the approximately 754 additional acres of a combination of community and sports park acres designed to meet the community's youth and adult needs for both passive and programmed sports and activity use.

Justification / Consequences of Avoidance:

The City's existing park maintenance fleet would become overwhelmed by the addition of 754 acres of park.

Relationship to General Plan Development:

The park land acquisition and Development Impact Fees are necessary to accommodate new development and are intended to prevent the diminishment of park availability to the existing community.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. All costs are at nominal, or current dollar value. 2022 project costs have been increased by the Consumer Price Index for all consumers.

PROPOSED EXPENDITURES	FY 2024-25	FY 2025-26	FY 2026-27	FY 2027-28	G.P. Build-Out	Total all Years

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: Park Land Acquisition And Park Infrastructure Development

Project Title / Ref#: Share Of Common City Yard Improvements **PK -003**

Submitting Departments: Community & Public Services Agency

Project Description:

Construct the following improvements: 1) Reconfigure some 60,000 square feet of a recently acquired warehouse and office space. 2) Pave approximately ten acres of currently dirt parking lot, primarily for the refuse operation refueling area. 3) Construct additional fleet maintenance operations bays. 4) Construct a new welding shop. 5) Increase security through additional fencing and lighting. 6) Construct additional CNG fueling stations and 7) reconfigure a recently acquired 24,000 square foot building into covered parking to maximize fleet lifetime. The combined improvements have a total projected cost of $44.4 million and are spread between all City operations that make use of the City yard.

Justification / Consequences of Avoidance:

This amount represents the proportional amount of a total estimated $44.5 million in structural improvements to the City maintenance yard necessary to meet the increasing demands for greater park system maintenance capacity. The City has acquired adequate land and has existing structural capacity for the various maintenance demands. This demand for additional structural capacity results from the doubling of all public infrastructure from the Ontario ranch area and remaining portions of the General City area.

Relationship to General Plan Development:

The project benefits future development within both the General City and Ontario Ranch areas.

Allocation To General Plan Buildout: 100.00%

Reference Document:

Based upon the City's Aesthetic, Cultural, Open Space and Recreation Resources GP Element.

Project Timing:

The timing of the capital construction or acquisition herein, is not included in the scope of this engagement, thus all project costs default to the "Build-out" column. All costs are at nominal, or current dollar value. 2022 costs have been increased by the Engineering News Record Building Cost Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: FiberOptics System

Project Title / Ref#: HEAD END Facilities (Points Of Presence System) **FO -001**

Submitting Departments: Information Technology

Project Description:

This project consists of the construction and installation of Point-of-Presence (POP) facilities and equipment that are categorized as Head End Facilities. The HEAD END facilities are a critical part of the Fiber Communications system. The Head End facilities will be located in several strategic locations, including City Hall, City Arena, and two separate locations within the Ontario Ranch area. These Head end facilities will provide the primary services hub for the delivery of services to the end-user. The Head End Facilities will provide a reliable FTTH System, through diversity and by leveraging a ring design, with redundant connections throughout System and multiple content feeds. This Project includes the installation of equipment in existing City facilities, including specialized power systems, fire suppression systems, back-up power systems and fiber optic distribution equipment. This Project also includes site development costs and pre-fabricated structure

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve the Ontario Ranch area. Multiple locations are required to provide redundancy and avoid service outages. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project will primarily provide services to the new development in the Ontario Ranch area. A portion of the Project located within existing City facilities may also provide the potential to provide Fiber optic communications services to a limited area of the General City at some point in the future. All potential project costs related to future services to the General City have been removed from the estimated Project costs. The estimated Project costs are fully related to new development in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

A Major portion of the project will need to be constructed and completed to enable the initiation of services to the Ontario Ranch area. The remainder of the Project may be constructed as the system expands and DIF receipts are collected. 2022 cost estimates were increased by the ENR - Construction Cost Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: FiberOptics System

Project Title / Ref#: Core Network - Planning/Installation - Equipment/Facilities **FO -002**

Submitting Departments: Information Technology

Project Description:

This Project includes the planning services and pre-development services required for the design of an effective FTTH, including pre-design work with legal and specialized consulting services, preliminary review of available FTTH system alternatives. This Project also includes development of system standards and coordinating standards for conduit design within residential developments. In addition to the planning and pre-development services, this Project includes the acquisition and installation of the Core Network system. This includes the acquisition and installation of fiber optic cabling and fiber optic distribution systems between the Points-of-Presence locations in the existing City facilities and Ontario Ranch locations. The resulting Core Network system will distribute fiber optic services in a manner that will provide redundancy and service reliability.

Justification / Consequences of Avoidance:

The Project is needed to provide Fiber Optic system services to the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project will primarily provide services to the new development in the Ontario Ranch area. A portion of the Project located within existing City facilities may also provide the potential to provide Fiber optic communications services to a limited area of the General City at some point in the future. All potential project costs related to future services to the General City have been removed from the estimated Project costs. Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: FiberOptics System

Project Title / Ref#: Distribution Network - Major Streets Conduit System **FO -004**

Submitting Departments: Information Technology

Project Description:

This Project consists of the construction of the Fiber Optic Distribution Network in the major streets in the Ontario Ranch area and to connect the Fiber Optic system in the Ontario Ranch area to the locations in the existing City facilities. The Project will include the construction of approximately 359,400 linear feet of conduit to be constructed within the rights-of-way of the major streets in the Ontario Ranch area. Construction of this conduit will allow for the additional installation of fiber cabling to provide the Primary Ring, Secondary Ring, and Lateral portions of the Ontario Ranch Fiber Optics system. This conduit will also allow for the installation of the fiber cabling to provide the connections between the various Points-of-Presence facilities in the existing City facilities and the Ontario Ranch facility locations.

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve the Ontario Ranch area. The installation of conduit is required in all major streets to provide minimum system capabilities, including traffic signal timing coordination and other City utility functions in the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project will provide services to the new development in the Ontario Ranch area only. The estimated Project costs are fully related to new development in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

An initial portion of the project will be constructed to enable the initiation of services to the Ontario Ranch area. The remainder of the Project is anticipated to be constructed at the time the major streets are constructed and the system expands.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: FiberOptics System

Project Title / Ref#: Cabling System - Residential/Non-Residential **FO -006**

Submitting Departments: Information Technology

Project Description:

This Project consists of the design and construction of the fiber cabling and related distribution cabinets and equipment for the Fiber Optic System within neighborhood (in-tract) streets in the Ontario Ranch area. This in-tract fiber cabling will connect the Fiber Optic system to the facilities located within the major streets within the Ontario Ranch area. The Project will include the design and construction of the fiber cabling to be installed in the conduit installed by the individual developers within the rights-of-way of the neighborhood streets in the Ontario Ranch area. This Project will provide a Fiber Optics system in both residential neighborhoods and non-residential areas in the Ontario Ranch area.

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve the Ontario Ranch area. The installation of fiber cabling, cabinets and equipment is required in the in-tract streets to provide a Fiber Optics system in the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project will provide services to the new development in the Ontario Ranch area only. The estimated Project costs are fully related to new development in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

The project is anticipated to be constructed within individual development projects at time that local in-tract streets are constructed. It is anticipated that the individual developers will continue to be required to install conduit and related underground system needs and this Project will provide the related construction of the in-tract fiber systems. 2022 cost estimates were increased by the ENR - Construction Cost Index.

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: FiberOptics System

Project Title / Ref#: Fiber Equipment Within Residential Units **FO -007**

Submitting Departments: Information Technology

Project Description:

This Project will include the acquisition and installation of Fiber Optic System equipment for each residential unit in the Ontario Ranch area. This includes attached, detached residential units and commercial lodging units. The Network Interface Device (NID) equipment will be acquired and installed in approximately 45,900 residential units within the Ontario Ranch area. This Project will provide for the installation of a NID at each residential unit within the Ontario Ranch area. The Project will also provide for all required design for the placement of the NID equipment within various types of single and multi-family residential units.

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve residential units within the Ontario Ranch area. The installation of fiber equipment in each residential unit is required to provide a Fiber Optics system in the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve residential units within the Ontario Ranch Area. The installation of fiber cabling and equipment is required for each residential unit in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

The project is anticipated to be constructed within individual development projects at time that non-residential buildings are constructed. 2022 cost estimates were increased by a combination of the ENR - Construction Cost Index and the consumer Price Index.

CITY OF ONTARIO, CALIFORNIA

Master Facilities Plan Project Detail

MFP 2024-2025 Update

Infrastructure: FiberOptics System

Project Title / Ref#: Fiber Equipment Within Non-Residential Areas **FO -008**

Submitting Departments: Information Technology

Project Description:

This Project will include the acquisition and installation of Fiber Optic System equipment for each non-residential building in the Ontario Ranch area. The Project will provide the design and installation of network interface equipment in all non-residential units within the Ontario Ranch area. The Project includes the estimated acquisition and installation costs for the projected number of non-residential buildings in the Ontario Ranch area and the General Plan designated land-uses for those non-residential buildings.

Justification / Consequences of Avoidance:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve non-residential buildings within the Ontario Ranch Aaea. The installation of fiber equipment in each non-residential building is required to provide a Fiber Optics system in the Ontario Ranch area. 2021-22 Update: Project costs were recalculated based upon greater costing experience over previous estimates. An increase to the Ontario Ranch land use database also increased the project costs.

Relationship to General Plan Development:

The Project is a requirement for the provision of a Fiber Optics Communication system to serve non-residential buildings within the Ontario Ranch area. The installation of fiber cabling and equipment is required for each non-residential building in the Ontario Ranch area.

Allocation To General Plan Buildout: 100.00%

Reference Document:

None, staff projections.

Project Timing:

The project is anticipated to be constructed within an individual development project time frame.
2022 cost estimates were increased by the ENR - Construction Cost Index.

NOTES:

(1). All developer-held "credits" under FINANCIAL ADJUSTMENTS will appear as a positive indicating an additional Infrastructure Fund obligation that will be redeemed (in lieu of a DIF payment) at some point in the future.

(2). A negative figure under FINANCIAL ADJUSTMENTS indicates a positive Fund Balance mitigating the project total. A positive figure indicates an amount that needs to be recovered by DIFs.

(3). Costs distributed based upon recent actual twelve month Police Department "Calls-for-Service" statistics.

NOTES:

(1). All developer-held "credits" under FINANCIAL ADJUSTMENTS will appear as a positive indicating an additional Infrastructure Fund obligation that will be redeemed (in lieu of a DIF payment) at some point in the future.

(2). A negative figure under FINANCIAL ADJUSTMENTS indicates a positive Fund Balance mitigating the project total. A positive figure indicates an amount that needs to be recovered by DIFs.

(3). Costs distribution based upon Coefficient of Drainage statistics.

NOTES:

(1). All developer-held "credits" under FINANCIAL ADJUSTMENTS will appear as a positive indicating an additional Infrastructure Fund obligation that will be redeemed (in lieu of a DIF payment) at some point in the future.

(2). A negative figure under FINANCIAL ADJUSTMENTS indicates a positive Fund Balance mitigating the project total. A positive figure indicates an amount that needs to be recovered by DIFs.

(3). Costs distribution based upon the water allocation factors from the Water Master Plan.

					Forward to Schedule 8.4		**Forward to Schedule 8.2**	

NOTES:

(1). All developer-held "credits" under FINANCIAL ADJUSTMENTS will appear as a positive indicating an additional Infrastructure Fund obligation that will be redeemed (in lieu of a DIF payment) at some point in the future.

(2). A negative figure under FINANCIAL ADJUSTMENTS indicates a positive Fund Balance mitigating the project total. A positive figure indicates an amount that needs to be recovered by DIFs.

(3). Costs distribution based upon the Sewer allocation factors from the Sewer Master Plan.

City of Ontario
Refuse Collection Facilities and Vehicles

A. RESIDENTIAL SIDE-LOADER COLLECTION FOR DETACHED DWELLINGS

Daily Stops per Single Route	700	Barrel Stops per Day
Number of Days of Collection	5	Ten-hour Days per Week
Pick-up Capability of One Truck	3,500	Barrels per Week

Cost per Sideloader Collection Vehicle	$408,757	per Side-Loader Truck
Pick-up Capability of One Vehicle	3,500	Barrels per Week
Cost per Barrel per Pick-up Stop	$116.79	per Barrel per Stop

	Truck Cost	Barrel Cost	Total Cost per Home
Refuse/Trash Sideloader Collection Bin 96G	$116.79	$58.08	$174.87
Green Waste Sideloader Collection Bin 96G	$116.79	$58.08	$174.87
Recycle Sideloader Collection Bin 96G	$116.79	$58.08	$174.87
Average 2nd Bin (5% of Homes)	$5.84	$2.90	$8.74
Total (rounded)	$356.21	$177.14	$533.00

B. COMMERCIAL COLLECTION FOR ATTACHED UNITS

Cost per Front-loader Collection vehicle	$406,100	per Front-loader Truck
Collection Capability of one Truck	800	Bins per Week
Cost per Bin Collection	$507.63	per Bin per Stop

	Truck Cost	Bin Cost	Total Cost
Four Cubic Yard Bib (Trash)	$507.63	$1,192.00	$1,699.63
Four Cubic Yard Bib (Trash)	$507.63	$1,192.00	$1,699.63
Four Cubic Yard Bin (Recycle)	$507.63	$1,192.00	$1,699.63
Four Cubic Yard Bin (Recycle)	$507.63	$1,192.00	$1,699.63
Total Cost per Standard Attached Acre			$6,798.52
Average Number of Attached Residential Units/Acre			15
Total Truck Cost per Attached Unit (rounded)			$453.00

Total Cost per High Density Attached Acre	$6,798.52
Average Number of High Density Residential Units/Acre	30
Total Truck Cost per High Density Unit (rounded)	$227.00

C. COLLECTION FOR RETAIL/SERVICE AND BUSINESS PARK UNITS

	Truck Cost	Bin Cost	Total Cost
Refuse Bin (1.5 Collections/Week, 4CY Bin)	$761.45	$1,192.00	$1,953.45
Recycle Bin (1.5 Collections/Week, 4CY Bin)	$761.45	$1,192.00	$1,953.45
Total Cost per Average General Retail/Service Acre			$3,906.89

Average Square Feet of Retail/Service Pad per Acre	10,949
Cost per Square Foot for Average Retail/Service Uses	$0.357
Average Square Feet of Business Park Pad per Acre	22,006
Cost per Square Foot for Average Business Park Uses	$0.178

Schedule 9.1
2021-22 Development Impact Cost Calculation (Rev 07/24)
City of Ontario
Refuse Collection Facilities and Vehicles

D. COMMERCIAL COLLECTION FOR RESTAURANTS
(Five day/week mandatory collection and two day/week recycling collection)

	Truck Cost	Bin Cost	Total Cost
Restaurant Waste, Five/Week	$2,538.15	$1,192.00	$3,730.15
Restaurant Recycle, Two/Week	$1,015.26	$1,192.00	$2,207.26
Total Cost per Average Restaurant Commercial Acre			$5,937.41
Average Square Feet of Restaurant Pad/Acre			11,979
Square Foot Cost per Five Days a Week Collection			$0.496

E. HOTEL/MOTEL UNITS COLLECTION (assumes thrice weekly)

	Truck Cost	**Bin Cost**	**Total Cost**
Commercial - General (Three/week)	$1,522.89	$1,192.00	$2,714.89
Commercial - Recycle (One/week)	$507.63	$1,192.00	$1,699.63
Total Cost per Average Hotel/Motel Acre			$4,414.52
Average Hotel/Motel Units per Acre			30
Cost per Hotel/Motel Unit (rounded)			$147.00

F. OFFICE AND INSTITUTIONAL USES

Office and Institutional Refuse Vehicle/Bin	$507.63	$1,192.00	$1,699.63
Office and Institutional Recycle Vehicle/Bin	$507.63	$1,192.00	$1,699.63
Total Cost per Average Retail, Office and Institutional Acre			$3,399.26
Average Square Feet of Office Pad/Acre			25,177
Cost per Square Foot			$0.135
Average Square Feet of Institutional Pad/Acre			21,780
Cost per Square Foot			$0.156

G. INDUSTRIAL ROLL-OFF COLLECTION FOR MISCELLANEOUS UNITS

Cost of Roll-off Box Collection Truck	$335,713
Units per Week	50
Collection Cost per Weekly Roll-off Stop	$6,714.26
Cost of a 40 Cubic Yard Roll-off Collection Box	$12,734.00
Cost of Once/Week Front Loader Pick-up	$507.63
Cost of Four Cubic Yard Recycle Bin and Once/Week Pick-up	$1,192.00
Total Cost of Industrial Pick-up for Five Acres	$21,147.89
Square Feet of Pad In Five Acre Parcel	214,560
Cost per square Foot of Industrial/Manufacturing Pad per Acre	$0.099

Appendix F

Findings in Support of Continuation of City Policy to Impose Residential Dwelling Unit Development Impact Fee on a per Unit Basis

AB-602 (Gov't Code. sections 66016.5(a)(5)(A) and (B)) states that if the City adopts a calculation and nexus study after July 1, 2022, it must *either* "calculate a fee imposed on a housing development project proportionately to the square footage of proposed units of the development" *or* make the following findings:

(i) An explanation as to why square footage is not an appropriate metric to calculate fees imposed on housing development projects.

(ii) An explanation that an alternative basis of calculating the fee bears a reasonable relationship between the fee charged and the burden posed by the development.

(iii) That other policies in the fee structure support smaller developments, or otherwise ensure that smaller developments are not charged disproportionate fees.

There is no requirement for the City to have a financial element in the City's General Plan document. Thus, a properly calculated *Development Impact Fee Calculation and Nexus Report* functions as the de-facto financial plan in support of the City's General Zoning Plan. It identifies the anticipated service demands by infrastructure based upon averages and lays out a fair and reasonable method with which to finance the required capital projects and acquisitions necessary to accommodate those anticipated new service demands.

The City of Ontario has expressed that it will continue to impose residential development impact fees based upon the same manner that additional development service demands are calculated – that is, by type of average unit. The City will not impose development impact fees based on residential development projects proportionate to the square footage of proposed units for completing the City's General Plan. The current set of fees fosters greater accuracy in planning and provides the City with the required level of certainty in needed impact fee collection.

The California Mitigation Fee Act (Government Code §66000, et.seq.), which was first established in 1987, specifies that every public agency that adopts development impact fees must provide the essential calculation and nexus report with fees calculated upon data that is as empirical as possible. AB-602's *Proportionate to Square Footage,* is based upon a *presumption*[1] that a smaller detached dwelling creates less local government service demands than a larger detached dwelling. AB-602 does not offer any peer reviewed, third party empirical data that substantiates that a small square footage detached dwelling unit creates less municipal service impacts than a larger square foot detached dwelling. As such, the City has determined that the best practices for both managing development and obtaining the adequate impact fee financing for the development-generated infrastructure is as identified in the many infrastructure chapters in this Report.

The City's zoning code allows for identification of the use of privately held land and in some cases, primarily business uses, provides for a maximum Floor Area Ratio (FAR) that limits the amount of square feet that can be constructed on an acre of business space. No such limitation is placed upon the construction square foot of a detached dwelling unit (AKA "single family residence"). The size of the proposed detached dwellings is determined as marketable by the developer.

---

[1] (noun: **presumption**; plural noun: **presumptions** – an idea that is taken to be true, and often used as the basis for other ideas, although it is not known for certain.

This Report indicates that the City (using recent GIS data) has 1,685 acres zoned for detached dwellings. At approximately 7.6 detached dwelling units per acre, this equates to an additional 12,793 detached dwellings to be constructed by General Plan build-out of the City. The City does not, however, have any information as to how many square feet any of these 12,793 detached dwelling units will be, that is, within applicable zoning, determined by the developers of the various parcels.

This Report employs the most defensible empirical sources, appropriate to the demands of that particular infrastructure to determine the *average* demands of an *average* detached dwelling. These sources determine demand by an average detached dwelling but does produce this demand data for various sized detached dwellings. Such data is simply not available.

The amount of and complexity of any City's infrastructure defines (in all or part) the Level of Service (LOS) of that infrastructure, not just currently but in perpetuity. This makes the one-time DIF financing of any City's infrastructure that much more important. It takes balance to accommodate development with the police responses within the desired standard. It will take a combination of additional law enforcement station space, response and support vehicles and specialty equipment to support the required officers (non-impact supported). The importance of having a properly calculated and documented DIF schedule in order to accommodate development-related demands cannot be over-stated. The same concept holds true for the two labor-intensive public safety services and the infrastructure intensive services such as circulation, storm drainage collection, potable and recycled water distribution and sewer collection.

The collection of an impact fee to raise capital revenue for development-based demands is one time but represents the municipal service needs of that dwelling unit as long as that structure exists. Thus the argument that any new detached dwelling will generate less municipal service demand based on its smaller square footage is divorced from the reality that any particular residential dwelling may have different occupants over 50 years (e.g. a home for a family of four to a single resident).

Government Code §66000 charges local governments to determine the most fair method of distributing the costs of infrastructure required to support services to new development. The following paragraphs identify the logic behind using a per unit impact fee schedule over per square foot impact fee schedule by infrastructure. To summarize, each uses best practices information from empirical data, all of which is based upon per unit demand data. To divert to a per square foot fee schedule, any agency would have to divide the more accurate per unit fee schedule by an average square foot figure for detached dwellings, attached dwellings and mobile home dwellings. Since there is no known source for average residential dwellings size particular to the City of Ontario, the resulting figure would be no more than a guess. As a result, the per square foot impact fee schedule would yield a less accurate result than the City's existing per unit methodology.

Police and Fire Calls-for-Service (CFS) - For the calculation of Police and Fire demand data, RCS used Ontario-sourced GIS-based calls-for-service matched up with the City's Land-Use GIS database. As an example, in 2020 there were 12,454 calls-for-service logged into the dispatch data to the 12,793 existing detached dwellings for an average of 0.973 calls-for-service to a single detached dwelling. Again, the City does not know what size of any of the City's detached dwellings are so the City could not possibly determine the total square feet of 12,793 detached dwellings or the individual square footage of each of those 12,793 dwellings, and accordingly determine whether square footage is the best metric to calculate proportional impact fees. Without such data, the City cannot make an accurate demonstrated link between the square foot space of a detached dwelling with that dwelling's infrastructures service demand rates. A fee imposed per unit, on the other hand, accomplishes greater accuracy that. The City's GIS data does not include the size of each residential dwelling in the City.

Circulation Needs - According to the volume of empirical data collected by the highly respected *Institute of Traffic Engineering* (ITE), an average detached dwelling generates approximately 9.5 trip-ends per day, but the ITE does not offer any distinction between small and large homes, because such data does not exist in their database. There is no demonstrated link or nexus between the detached dwelling's S.F. with its demand rate. GIS data does not include the size of each residential dwelling in the City. Per unit fees, on the other hand, accomplishes that desired greater accuracy.

Storm Drainage - The storm runoff from a 1,800 square foot single-floor residence is the same as the storm runoff from a 3,600 square foot two-story building. Both require a 1,800 square foot pad, so a 50% fee for the 1,800 square foot home compared to the 3,600 square foot home would be inequitable and unsupported by data. This Report utilizes rainfall runoff data from the *San Bernardino Hydrology Manual* (1986). Williamson and Schmidt, Irvine, CA, Figure C-4. The document indicates that the coefficient of drainage for a development of homes close to seven units per acre is 0.775. No such data is available for large versus small homes, nor can "large" or "small" be defined.

Quality of Life Infrastructure (parks, aquatic facilities, libraries and community centers) - Quality of Life standards are based upon current population numbers. As an example, there are 145,570 square feet of public use facilities (i.e. community centers). Given an existing population of 182,004 residents, that creates an existing standard of 0.800 square feet of public use facilities per resident. A fee for a new square foot of public use facility is determined and then multiplied by the empirically-based average number of persons per type of residential dwelling. These impact fees are generally based upon census data that identifies an *average* number of persons per type of dwelling unit. In Ontario, those figures are 3.806 persons per detached dwelling, 3.373 per attached dwelling unit and 3.175 per mobile home (see Table 2-4). The Census data does not determine household density by the size of the dwelling unit but they do represent the most empirically driven *average* density per dwelling unit data. Within the City of Ontario there are likely 1,300 square foot dwellings that have five or more residents just as there are likely 3,600 square foot residential dwellings with two or less residents. However wither of these dwelling can be sold and the number of residents in each could change. That is the point of an *average*, it represents an empirical figure based upon a larger pool of information. Therefore an average based on type of dwelling is far more empirical than dividing the average cost by some unsubstantiated average dwelling size. By doing so, larger residential dwellings could be treated unfairly if they end up being assessed a greater amount in order to balance or subsidize the smaller detached dwelling units based upon the presumption (non-empirical data) that these smaller detached dwelling units somehow create lesser dwelling densities than would a larger unit.

Importance of a Static or Average per Unit based Development Impact Fee Schedule. The City must be able to depend on the collection of sufficient impact fee revenues with which to finance development-generated projects necessary to accommodate new development with adequate and sufficient service levels without decreasing the existing levels of service. This assurance will be greatly diminished should the City choose an arbitrarily determined per residential square foot impact fee schedule. As an example, the City has identified that a 6,200 square foot basic 2 X 2 fire station (two bays wide by two vehicles deep) is required to service an area with about 3,000 average detached dwellings. However, if a greater proportion of the 3,000 homes are far smaller than the City had anticipated, the City will not have adequate DIF revenue to construct that station. With a per unit determined fee representing an average demand per unit, the City can have significantly greater confidence in receiving the DIF revenue necessary to construct that station and thus respond to those 3,000 detached dwellings, regardless of the size of the detached dwellings, while also ensuring that such units do not pay more than their proportional impact. The City's development practices neither favors nor penalizes any one land-use over another. Nor are the City's policies unfair within any one land-use based upon available empirical data. For residential units based upon best practices empirically-based averages, all are assessed the same fee; no developer is charged disproportionately, which is calculated on a per unit basis based on the best data and evidence available to the City. The type of dwelling unit drives the fee, not the square footage. Since the City does not impose per square foot-based impact fees, it also does not apply such fees on any room in addition to a residential dwelling.

DIFs for non-residential uses (i.e. the variety of businesses) have always been calculated and imposed on a per square foot basis as empirical data is available for those uses. Additionally, each of those business uses (see Table 2-1) has differing maximum allowable floor area ratio (FAR).

The City is mindful that the state is encouraging construction of smaller detached dwellings and is assuming that these types of residential dwellings create lesser demand merely because they are smaller. However, given the lack of any empirical data supporting such an assumption, the City feels obligated to adopt residential impact fees that are fair to all developers of residential dwellings, regardless of size. In the end, the City has determined to err on the side of fair treatment of all residential development.

In conclusion, given the empirically-based and significant effort spent on identifying the number and capacity of increasing infrastructure projects needed to accommodate the planned-for and anticipated new development and the fair means demonstrated in the calculation and Report, the City has determined that the empirically-driven per Unit residential fee is the most appropriate metric with which to calculate and fairly impose the City's impact fee schedule.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, ADOPTING THE DEVELOPMENT IMPACT FEE CALCULATION AND NEXUS UPDATE REPORT AND ADOPTING AN UPDATED AND MODIFIED DEVELOPMENT IMPACT FEE SCHEDULE.

WHEREAS, on July 1, 2003, the City Council of the City of Ontario (the "City Council") adopted Ordinance Nos. 2779 and 2780 to implement new and modified Development Impact Fees in recognition of the need to finance adequate infrastructure and other public improvements and facilities made necessary by new development in the City of Ontario ("City"); and

WHEREAS, the City Council previously adopted Resolution No. 2003-039 to establish policies for the implementation of the new and modified Development Impact Fees; Resolution No. 2003-070 to establish additional definitions and policies for the application of Development Impact Fees; and Resolution Nos. 2005-005, 2005-099, 2007-023, 2007-150, 2011-011, 2012-092, 2015-008, 2017-102, 2019-135, and 2022-133 to update and modify Development Impact Fee amounts; and

WHEREAS, the City previously retained Revenue and Costs Specialists LLC to develop development impact fees, supported by nexus findings in the Development Impact Fee Calculation Nexus Report for the City of Ontario, California, dated July 15, 2022 (“2022 Study”); and

WHEREAS, City staff and Revenue and Costs Specialists LLC, have reviewed the Development Impact Fee (“DIF”) program and the infrastructure Master Plans and determined that the findings in the 2022 Study still support the City’s DIF program, but that the 2022 Study requires certain updates to reflect current costs, projections, and plans; and

WHEREAS, accordingly, City staff and Revenue and Cost Specialists LLC produced an update to the DIF program documents, titled “Development Impact Fee Calculation and Nexus Update Report” (the “DIF Update Report”) for the City of Ontario, dated March 18, 2025, on file with the City Clerk and incorporated by this reference, which includes recommendations and support for updated Development Impact Fee amounts; and

WHEREAS, the City has previously adopted an updated DIF Master Facilities Plan on March 16, 2023 via Resolution No. 2023-036 pursuant to section 66016.5(a)(6) of the Act, and such DIF Master Facilities Plan is on file with the Office of the City Clerk and incorporated herein by this reference; and

WHEREAS, the DIF Update Report, together with the DIF Master Facilities Plan, and the 2022 Study, comprise the “DIF Nexus Report” supporting the DIFs; and

WHEREAS, the DIF Nexus Report, referenced above, complies with the Mitigation Fee Act (Government Code, section 66000 et seq.) (the "Act"), specifically, section 66001(a) by establishing the basis for the imposition of fees, and the fee amounts for new development. In particular, the DIF Nexus Report:

1. Identifies the purpose of each development fee;

2. Identifies the use to which the fee will be put;

3. Shows a reasonable relationship between the fee's use and the type of development project upon which the fee is imposed;

4. Shows a reasonable relationship between the need for the public facility and the type of development project upon which the fee is imposed;

5. Shows a reasonable relationship between the amount of the fee and the costs of the public facility or portion of the public facility that is attributed to the development upon which the fee is imposed; and

WHEREAS, Assembly Bill 602 ("AB 602") became effective January 1, 2022. Per AB 602, if a local jurisdiction adopts a calculation and nexus study report after July 1, 2022, it must calculate its fees imposed on housing development projects proportionately to the square footage of proposed units of each development, unless it makes the following findings:

1. An explanation as to why square footage is not an appropriate metric to calculate fees imposed on housing development projects;

2. An explanation that an alternative basis of calculating the fee bears a reasonable relationship between the fee charged and the burden posed by the development; and

3. That other policies in the fee structure support smaller developments, or otherwise ensure that smaller developments are not charged disproportionate fees; and

WHEREAS, the proposed DIF Nexus Report details supportive justifications for the City to continue to impose residential development impact fees in the same manner that additional development service demands are calculated – that is, on a per unit basis; and

WHEREAS, prior to adopting the changes to the rates for the City's DIFs, the City Council must adopt the DIF Nexus Report supporting the increases to the Development Impact Fee amounts and taking other actions to ensure compliance with the Act, including holding a noticed public hearing for the adoption of the DIF Nexus Report; and

WHEREAS, in accordance with the Act and Assembly Bill 602, a copy of the above referenced DIF Nexus Report has been made available for inspection by the public at Ontario City Hall for thirty (30) calendar days prior to the adoption of this Resolution; and

WHEREAS, notice of a consolidated public hearing to consider the adoption of the DIF Nexus Report and the increases to the Development Impact Fees was published in the newspaper and mailed to all interested parties that have submitted written requests for such written notice, as applicable, in compliance with the Act; and

WHEREAS, on March 18, 2025, the City Council held a noticed consolidated public hearing at which it heard and considered any and all verbal and/or written testimony from the public, reviewed and considered the information including the DIF Nexus Report, the increases to the Development Impact Fees, all supporting data, and information provided at the public hearing by staff, and has now determined to adopt the DIF Nexus Report and increases to the Development Impact Fees; and

WHEREAS, the previously-adopted Ordinance No. 2779 stated that "The Fee Schedule may be amended from time to time by resolution of the City Council, in compliance with the Mitigation Fee Act, Government Code Section 66000, et seq."

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ONTARIO:

SECTION 1. The above recitals are true and correct and are incorporated herein by this reference.

SECTION 2. The City Council has been presented with and has reviewed the information related to the DIF Nexus Report, including all supporting data and after being so informed hereby adopts the DIF Nexus Report and supporting data.

SECTION 3. Pursuant to Government Code § 66016.5(a)(5)(B) and in satisfaction of AB 602, the City Council hereby adopts the findings and conclusions set forth in Appendix "F" of the DIF Nexus Report and incorporates them herein by reference.

SECTION 4. The DIF amounts contained in "Exhibit A" and "Exhibit B" are hereby adopted. This Resolution, and the DIF amounts adopted herein, shall supersede any other action of the City Council only to the extent of any conflict.

SECTION 5. This Resolution, including the updated fee amounts contained in "Exhibit A" and "Exhibit B" attached hereto and incorporated herein, shall be effective for all new development projects occurring in the City, when applicable, sixty (60) days following its adoption.

SECTION 6. If any provision of this Resolution or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other

provisions or applications, and to this end the provisions of this Resolution are declared to be severable.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 18th day of March, 2025.

"EXHIBIT A"

City of Ontario Development Impact Fee Schedule 07.01.25 – 06.30.26

General City – Maximum Law Enforcement
Development Impact Fees by Land Use

Proposed Land Use	Impact Fee Per Unit or S.F.
Detached Dwellings	$ 705/Unit
Attached Dwellings	$ 738/Unit
High Density Dwellings	$ 738/Unit
Mobile Home Dwellings	$ 686/Unit
Commercial Lodging Units	$ 653/Unit
Retail/Services Uses	$0.995/S.F.
Office Uses	$0.321/S.F.
Business Park Uses	$0 050/S.F.
Industrial Uses	$0.050/S.F.
Institutional Uses	$0.345/S.F.

General City – Maximum Fire Suppression Facilities,
Vehicles and Equipment Development Impact Fees by Land Use

Proposed Land Use	Impact Fee per Unit or S.F.
Detached Dwellings	$ 787/Unit
Attached Dwellings	$ 749/Unit
High Density Dwellings	$ 749/Unit
Mobile Home Dwellings	$ 883/Unit
Commercial Lodging Units	$ 499/Unit
Retail/Services Uses	$0.560/S.F.
Office Uses	$0.345/S.F.
Business Park Uses	$0.039/S.F.
Industrial Uses	$0.039/S.F.
Institutional Uses	$0.123/S.F.

General City – Maximum Regional Streets, Signals and Bridges
Development Impact Fees by Land Use

Proposed Land Use	Impact Fee per Unit or S.F.

RE: Recalculation to the City's Development Impact Fee (DIF) Calculation and Nexus Report

Honorable Mayor, Council Members, and City Manager Ochoa:

The City's Development Impact Fee (DIF) Schedule, originally calculated in 2003, has been updated ten times over the 18-year period, nearly every two years since its first adoption. Those necessary updates were generally limited to changes in project costs based upon an appropriate cost index to keep the impact fees financially relevant. Most of the projects were updated by an appropriate cost inflation index but a number of projects were changed in complexity and/or fully recalculated. The land-use database originally used in 2012 Report was pursuant to The Ontario Plan (TOP) 2010 Update, and has not been updated since the adoption of the 2012 Report. Subsequently, this update differs in that the land-use database was updated to reflect the changes in potential development from vacant or underutilized to developed parcels based on the TOP 2050 Update. The City is to be congratulated for this commitment and the efforts of the many it took to do so.

Generally, this Report is a complete update of the City's previous update iterations of the City's "*Development Impact Fee Calculation and Nexus Report*". The nexus and logic within the Report has not changed however, every aspect of the original Report and subsequent updates has been updated. The Report indicates that the City has completed roughly 20% of the projects identified in original Report. That is not to say that the quality of data has not been improved. State-of-the-art and more sophisticated GIS data gathering abilities have increased the quality of data. The major modifications and/or types of modifications included in the 2021-22 update are as follows:

- The Land-use Database was fully recalculated using the City's existing advanced GIS data. This data has not been updated since the 2012 Report which was based upon the then "shape files" available at the time of preparation of the 2012 Report.

- Given the recalculation of the land-use database, this action necessitated an update to the City's Police and Fire/Rescue calls-for-service, also using the GIS based dispatch calls-for-service data. This data is not only more current but given the link between the City's Land-Use Parcel GIS data and the address-based calls-for-service, the resulting data is far more precise than the effort performed in 2012.

- Changes were made to the Fire Suppression/Rescue facility needs by adding a fourth bay to the four remaining stations to be constructed in the Ontario Ranch area. However, these fourth bays are intended for storage of all secondary, or reserve vehicles used in emergency operations throughout Ontario, thus the cost is spread over the entire City, including existing calls-for-service.

- In numerous infrastructure categories, the individual project cost amounts have been escalated by application of the change in an applicable cost index;

- In the Fire category, as well as the hard infrastructure categories (Circulation, Storm Drainage, Water and Sewer Utilities), numerous individual project cost estimates have been adjusted to reflect updated engineering estimates and/or actual costs;

- The per square foot construction cost of Quality of Life structures (pool buildings, community centers and libraries) were changed from estimates to the actual cost per square foot based upon the final costs for the construction of the Anthony Munoz Community Center.

- The cost per acre for Parks construction has been increased from $500,000 to $560,200;

- The cost per acre for land acquisition has been increased from $585,000 to $700,000;

- Outstanding credits (available) developer held "DIF Credits" in each infrastructure category were added as continued costs for projects that have not necessarily been constructed and/or paid for by the City. To assist in the creation of much needed infrastructure in the Ontario Ranch area, individual developers, many of whom constructed or acquired infrastructure capacity-increasing improvements, are eligible to receive DIF Credits (or payment) against future impact fees for any portion of the infrastructure that was above and beyond what would have been

their maximum calculated impact fee obligation. In short, numerous projects were financed or constructed by individual developers and they will ultimately expect repayment for that over-build via the DIF Credits that have been issued by the City. Pursuant to the City's DIF Program Policies, DIF Credits are available for use at permit issuance to off-set (reduce) the fee in the respective infrastructure category for which the DIF Credit was issued. The availability of credits decreases the amount of DIF revenue that the City will ultimately collect. Therefore, any outstanding DIF Credit amount that has been included in this Report's calculations within the DIF calculation methodology, was done so to establish the appropriate DIF fee schedule necessary to finance both the remaining infrastructure costs and total developer's DIF Credits at General Plan build-out. The incorporation of the outstanding DIF credits assists the City in recuperating additional DIF revenues in order to eliminate any City subsidy from the General Fund (or utility operating fund) for the long-term development of the Ontario Ranch area.

Revenue & Cost Specialists, L.L.C staff are ready to assist the City in any way that may be beneficial to the adoption of the new fees necessary to insure that the City can accommodate the private development of its many vacant acres at no cost to the existing community, either in actual costs-out-of-pocket or in the diminution of existing levels of service.

Sincerely,

Scott Thorpe
Senior Vice President

Chapter 1
Background and Introduction

In 2000 the City of Ontario retained Revenue & Cost Specialists to undertake a comprehensive cost calculation of the City's development impact costs for two areas of the City. The two areas consisted of the more developed *General City (GC)* area and the largely undeveloped former dairy farm area referred to as *Ontario Ranch (OR)*. *Ontario Ranch* had been referred to as *New Model Colony* in previous reports but it was amended to *Ontario Ranch* in this 2017 update at the request of the Ontario Ranch Builders.

The development impact cost calculations are intended to identify the cost of accommodating continued development in both areas in such a fashion as to not decrease the levels of service currently enjoyed by the City's existing residents and businesses. The development impact cost calculations were then formalized as a set of Development Impact Fees (henceforth referred to as DIF) schedules by City Council. A periodic review and adjustment of the City's DIFs is appropriate and warranted in order to continue to ensure that the City collects sufficient monies to construct the additional infrastructure needed to accommodate the anticipated growth of new residents and businesses expected to be developed in the City. The resulting DIF schedules have been reviewed and amended periodically as estimated costs and capital needs have changed. As a result of this diligence, the DIF schedules have served the City well for many years. However, after twelve years of cumulative changes, the most significant being a General Plan amendment has resulting in greater OR densities, requires a full update of all development assumptions, estimated demands and capital project costs was prudent. For this and other reasons, the City has entered into the exhaustive effort to recalculate the amount of the existing and new DIFs.

This *Development Impact Fee Calculation and Nexus Report* effort remains consistent with the original 2002-03 Report's intent to include a significant amount of detail such as a complete list of all remaining 316 projects to be financed by the DIF schedules, by infrastructure. Each project has a corresponding detail page in the supporting *Master Facilities Plan,* which in turn tells the reader where additional information can be found regarding that project. Just over 59% of the projects identified in the City's *Master Facilities Plan* are supported by an infrastructure Master Plan (i.e. Water Master Plan). The remaining 41% of the *Master Facilities Plan* projects are either broader (i.e. total acres of parks to be constructed) or are based upon in-house studies or calculations by the City's infrastructure staff experts (i.e. fire station sizes/locations).

The *Master Facilities Plan* is a separate document which includes an expanded amount of information about each project for anyone wishing it, while allowing the *Development Impact Fee Calculation and Nexus Report* to remain more focused on the allocation and distribution of capital costs to the remaining new development. A *Master Facilities Plan* with this level of detail is generally not offered by other DIF consultants and the City is to be commended for recognizing the importance of this information to the reader and committed the effort in generating it. The combined *Development Impact Fee Calculation and Nexus Report* and the *Master Facilities Plan* offer greater information for the Council to make policy decisions, greater understanding by the development community, and an easier tracking (and updating) system for the staff.

The *Master Facilities Plan* also serves to inform the users that collected DIFs are committed per §66000 of the Government Code. The DIF receipts that are collected over five years (and kept in fund balances during that period) may not necessarily reach the level necessary to construct a needed project per the *Master Facilities Plan.* This does not mean the projects are no longer needed. The inclusion of those projects in the *Master Facilities Plan* indicates the continued importance of that project over time, certainly over a five year period.

The Importance of Capital Infrastructure. The Levels of Service (LOS) of any one City infrastructure is based (or limited) upon the capacity of that infrastructure to support the users, residents or businesses. The design of any municipal project has a finite capacity, such as a four lane road, a 30" storm drainage pipe or a 10,000 square foot library. Each is designed to meet the needs of a defined number of users. A street segment can only handle so many vehicles per hour, especially at a speed that makes it worth using for driving over longer distances. A storm drainage pipe that is 30" cannot handle storm flows twice its capacity. A library can hold just so many collection items and serve only so many residents, all the librarians in the world cannot make up for limited library space. A municipality with 0.40 square feet per resident of library space will be able to serve more residents than a municipality with only a 0.10 square feet standard per resident of library space. The following is a more precise example using law enforcement.

Consider the labor intensive service of law enforcement, regardless of the quality and capabilities of the City's sworn police officers, the Department remains highly dependent upon its infrastructure capacity. A police station of 7,500 square feet will have capacity to support roughly thirty sworn police officers at about 250 square feet per officer. If the station size remains the same at 7,500 square feet but the sworn compliment doubles to sixty police officers, the station will become exceedingly dysfunctional. The same holds true for police response vehicles and law enforcement specialty equipment. If a City adds thirty additional officers but cannot add station space, vehicles and specialty equipment, the City has dealt with only half of the service equation. They have achieved little.

Further, if you add 30 police officers:

- But do not add police response vehicles, the calls-for-services responses will be very poor.
- But no additional station space, the calls-for-services responses will be dysfunctional, and unpredictable.
- But do not provide the sworn officers with the required personal and specialty equipment; the calls-for-services responses will be dangerous, certainly for the police officer.

On the opposite side, if you add all of the above capital needs, but do not add additional sworn officers, the result would probably be limited to a minor improvement in response times.

Good municipal service takes a balance of staff and infrastructure. Of course, the DIFs can only be used for the capital acquisitions, the ongoing labor staffing costs will need to come from other sources.

PROPORTIONAL ANALYSIS

A helpful component of this Report is the proportional analysis of the infrastructure needs required to accommodate continued development of the City as compared to the existing infrastructure that has been generated through years of taxes and other contributions and currently serves the existing community. This proportional analysis is intended to recognize and reconcile the difference between the City's desired level of service required of new development, per statements in the various General Plan elements, with that of the *de-facto* or actual level of service provided to the existing community. The inclusion of the proportional analysis will assist the City Council in adopting a DIF structure that recognizes inter-generational equity and assists the Council in making the difficult policy decisions regarding the required capital additions needed to accommodate new development by increasing the lay-person's understanding of *fairness.*

The proportional analysis is important, if for no other reason, than for community inter-generational equity, i.e., fairness in the infrastructure investment that has been made by existing residents and businesses with those of new residents and businesses that wish to use the existing infrastructure. As an example, new development will be required to expand the number of arterial and collector lane miles in the City but new development also benefits from the immediate use of Euclid Avenue constructed so many years ago just as an existing citizen can use a newly constructed arterial street segment. In short, previous generations of businesses and residents have contributed to the development of the City infrastructure and this fact should be recognized by future residents and businesses by contributing a similar amount of capacity towards completing the various infrastructure systems.

It is one thing to identify the many public improvement projects needed through build-out. It is an entirely different thing to assume that all of the identified improvements are required to meet the demands of the new development. Clearly, some projects will be *replacements* of the existing infrastructure while others will be *capacity increasing* projects. Within the category of the latter, they may also be further classified into two categories;

1. Projects dealing with existing deficiencies, i.e., projects required regardless of whether there is additional development or not. An example would be a traffic intersection currently controlled by stop signs that currently meets traffic warrants for a traffic signal.

2. Projects required as a result of the need to accommodate future development. An example of this would be a signal that is currently controlled quite adequately by stop signs, but because of development in the near and *downstream* areas will ultimately need to be signalized.

This Report provides the documentation of the City's costs which serve as the basis for calculating DIFs. The updated DIF Schedules and related information can be found in Chapters 3 through 16 and Appendices A, B, C, D, E and F of this Report.

RCS staff has worked with Administrative Services, Police, Fire, I.T., Community Services, Development Services, Community and Public Services and the Utilities Department staff to

generate and review the supporting data which forms the calculation of Development Impact Fee schedules. The results of this review can be found on the schedules located at the end of each Chapter.

Development Impact Fee Structure. The General Plan provides a range of potential densities for residential development, as such, the DIFs for residential uses need to be calculated on a per dwelling unit basis to reflect more accurately the impacts from a specific development. For example, a property zoned as detached dwelling residential development may contain from three to six units per acre. If fees are calculated on an acreage basis, the developer proposing three units per acre will pay the same amount as a developer constructing six units per acre. Similarly, fees are calculated on a square footage basis for business (retail/service, office and industrial, etc.) parcels to reflect the impacts of different building intensities for these types of development. Some of the infrastructures have optional fee structure recommended for unusual developments, such as a parking structure, which in itself does not create demand beyond additional storm drainage run-off, where the structure required the additional parking does.

A second reason for the proposed DIF fee structure recommended in this Report involves the issue of building expansion or intensification of retail, office and industrial areas. For example, if a property owner of commercial or industrial property proposes an expansion to his building, the question exists about how to charge this proposed expansion for its impact on the City's streets, storm drainage system, and other infrastructures. A fee calculated on a building square footage basis simplifies this calculation.

CALCULATION OF DEVELOPMENT IMPACT FEES

In California, State legislation sets certain legal and procedural parameters for the charging of these fees. This legislation was passed as AB1600 by the California Legislature and is now codified as California Government Code Sections 66000 through 66009. This State law went into effect on January 1, 1989.

Government Code §66000 requires documentation of projects to be financed by Development Impact Fees prior to their levy and collection, and that the monies collected actually be committed within five years to a project of direct benefit to the development which paid the fees. Many states have such controlling statutes. Specifically, Government Code §66000 requires the following process:

1. Delineation of the **PURPOSE** of the fee.

2. Determination of the **USE** of the fee.

3. Determination of the **RELATIONSHIP** between the use of the fee and the type of development paying the fee.

4. Determination of the relationship between the **NEED** for the facility and the type of development project. **NOTE: Numbers 2 & 4 will be reversed throughout the**

chapters in this Report because it is apparent that *need* should be identified before *use*.

5. Determination of the relationship between the **AMOUNT** of the fee and the **COST** of the portion of the facility attributed to the specific development project.

This Report, with some additions, utilizes the basic methodology consistent with the above requirements of Government Code §66000. Briefly, the following steps were undertaken in the calculation of DIFs for the City:

1. Define the level of service desired within the General Plan area for each project or acquisition identified as necessary. In some areas, certain statistical measures are commonly used to measure or define an acceptable level of service for a category of infrastructure. Street intersections, for instance, are commonly rated based on a Level of Service scale of "A" to "F" developed by transportation engineers. Most agencies adopt a LOS of "C".

2. Review the Land use map and determine the existing mix of land uses and amount of undeveloped and developed land. The magnitude of growth and its impacts can thus be determined by considering this land use data when planning needed infrastructure. This inventory can be found in Table 2-1 in Chapter 2 and Appendix B.

3. Identify all additions to the capital facilities or equipment inventory necessary to maintain the identified levels of service in the area. Then, determine the cost of those additions. An infrastructure *Master Plan* is the highest form of data.

4. Identify a level of responsibility, identifying, as termed in this Report, the relative need (or as referred to in the accompanying schedules as "PERCENT NEED") for the facility or equipment necessary to accommodate "growth" as defined, and as opposed to current needs.

5. Distribute the costs identified as a result of development growth on a basis of land use. Costs are distributed between each land use based on their relative use, or *nexus,* of the capital system. For example, future street costs were distributed to each land use based on their trip generation characteristics.

OTHER ASSUMPTIONS OF THE REPORT

In addition to the land use assumptions contained in the next Chapter of this Report, other important assumptions of this study include the following:

"Normal" Subdivision Improvements Omitted. "Local" public improvements generally associated with and identified as being the sole responsibility of the developer through the subdivision or development review process are not included in either of the project lists or consequent calculations. This type of "on site" and immediately adjacent improvement would include all such capital construction within the boundaries of any development, such as street lights, curb, gutter, sidewalks, neighborhood streets and all local utility pipes. These improvements would continue to be the direct responsibility of the developer, with or without the addition of DIFs.

Land Acquisition Costs. Land acquisition cost estimates have been developed after discussions with City officials over recent acquisitions or current negotiations. Arguments for higher or lower costs can be made; however, the herein contained per acre amounts appear to be the most appropriate current figure for the purposes of this study. Land costs for parks, the largest land acquisition effort in this report, have not been altered from the last (2010) update. However, City finance staff has indicated that land acquisition costs will be reviewed annually to adjust for the marked swings that can occur to land acquisition costs, as opposed to the more historically predictable construction costs.

Exclusion/Rejection of Any Type of "Credit" for Undeveloped Land. It has been argued by some that a credit for capital-related revenues, such as gas taxes, should be made against the DIFs calculated or imposed by a city. Using the state gas tax as an example, proponents of a DIF credit argue that a city will receive increased annual gas taxes because of the additional population generated by future residential development. It is therefore argued that a developer should receive a credit for any associated gas tax revenues collected as a result of the residents or businesses that occupy the new dwellings against any Circulation DIF imposed by the City based on either of two separate arguments.

The first argument for a gas tax credit supposes that the additional gas taxes created by residential development are used to pay for the maintenance of existing streets, which is the responsibility of existing development. Since the new streets constructed via DIFs will not require rehabilitation or reconstruction for another 10 to 20 years, the gas tax generated by new development is therefore a windfall to the City and should be credited against the DIF. What this argument fails to consider is that any new resident or business to the City will begin to contribute immediately to the use and deterioration of all City streets. A cursory review of City finances will reveal that the portion of the State gas tax received by cities falls far short of meeting the City's needed street improvements and repairs in any given year. The gas taxes *generated* by new development simply cannot meet the maintenance costs of either the new streets associated with the development or the existing streets which the new resident uses on a daily basis.

The second argument proposes that the developer pays his full share of constructing new roads when he pays the City's Circulation System Development Impact Fee and that the gas taxes generated by the additional residents in a development are unfairly used to make improvements to the existing street system. It is most cities experience that gas taxes are barely adequate to meet streets-related operational costs, and if they are sufficient to meet these costs, the remainder is used for capital-related maintenance projects.

For these reasons, credits of existing operational revenues are not considered for Circulation System DIFs in this Report. A similar discussion can be made for the other fees considered herein, and therefore no credits against any such fees are included in this calculation of development impact costs.

Appropriate Expansion. Debt service is a reasonable cost of construction of many, but not necessarily all, public facilities and infrastructure. The following example illustrates this. DIFs are collected in incremental amounts, but facilities are not expanded in those same incremental amounts. As an example, a community center fee, based upon a standard of 1.2 square feet per detached dwelling residence, may be collected for each residential dwelling in the City, but after collecting the fee for a 100-unit subdivision, it would be impractical to expand the community center 120 square feet. Fees are collected, placed in a separate fund, generating interest until such a time that a 2,000 to 3,000 square foot expansion is possible. During that build-up time, the community center will experience some temporary overcrowding as the standard drops from 1.2 S.F./dwelling to about 0.9 S.F./dwelling. This "temporary overcapacity" clearly may be an inconvenience, bringing about some crowding and an increased unavailability for rental or reservation until enough DIFs have been collected for a practical expansion to bring the community center facility back up to the original standard. In short, a development of 120 residences may be brought "on-line" (occupancy permit) and bring about a temporary reduction in community center facility standards without endangering the citizen's health and safety.

However, such a *temporary overcapacity* in storm water collection is not possible without the potential for damage to both private and public property. Capacity for the collection/removal of storm water must be available prior to the construction that increases the impervious surface (and thus storm water run-off) of the parcel. If the local storm collection line is currently at capacity (peak or otherwise), no additional units may be brought on line until additional collection capacity can be created. Again, there is a practical size of an addition to construct and it is not likely practical for developers to wait until there is enough added demand (and fees) to pay for the facility addition. As a result, financing through some type of debt instrument may be the only alternative. Circumstances vary from city to city as to what facility expansions are critical and which can absorb temporary overcapacity for limited periods of time.

Financing Costs. Since financing costs reflect an actual, and generally significant, outlay of funds for an agency, they would be included in the project costs where debt financing was required due to the immediacy of the need for the facility or infrastructure to show the full costs of such facility or infrastructure and insure that new development also pays its "fair share" of these costs. These costs, if any, would be referenced in the *Master Facilities Plan* project detail page. Financing should only be included for facilities where, based upon staff's estimate, the immediacy of need for the facility requires debt financing. Or in the alternative, should financing be entered into on a facility, the impact fees should be recalculated to reflect those actual costs. In such cases, the debt service payments would be discounted to today's cost to account for the diminishing value of the dollar and would be in keeping with the cost methodology used in this study to show projects in current costs. To consider the face value of bond payments when determining costs, on the other hand, would be inaccurate as it would treat the value of a dollar today the same as the value of a dollar twenty years from now. Such an approach would tend

to overvalue the costs of debt service requirements and therefore cause an agency to overcharge on its DIFs. However, no project within this DIF Report contains debt service.

OTHER ISSUES

There are those who claim that the addition of DIFs unfairly creates an inflated resale price for existing residences. The argument is that if the public agency adopts a $20,000 to $25,000 development impact fee per detached dwelling, then the price for an existing dwelling is *artificially* increased by the same amount. We will use the example of a detached dwelling detached unit that cost the developer $200,000 to construct and complete to a point that the occupancy permit is approved.

Full Cost of a Residential Dwelling. The $200,000 represents only the above ground costs. The true and actual cost of a new dwelling is the cost of acquiring the parcel, necessary government approvals and permits, construction supplies, labor, debt service on the above, on-site [1] public improvements, and the cost of extending public services to that dwelling.

These public service extension costs include (but are not limited to:

- The addition of law enforcement personnel requiring the expansion of the police station, response vehicles and specialty equipment.
- Additional fire stations, response vehicles and specialty rescue equipment.
- Widening of road segment of traffic arterials, collectors, bridge and additional signals.
- Additional capacity in downstream storm drainage collection pipes and the treatment of storm water.
- Additions to water delivery capability, including source, treatment, storage and delivery.
- Additions to the sewage capability, including collection, treatment and disposal.
- Additions to the maintenance capabilities (i.e., municipal corporation yard and maintenance vehicles) necessary to maintain the above added infrastructure.
- Additional library, aquatics center, public meeting and developed park space for recreational/social purposes.

Thus while the cost of constructing the above ground portion of a detached dwelling unit may be $200,000, the previously identified "downstream" costs may be in the area of $20,000 to $25,000 per detached dwelling unit or in the area of 10% to 12% of the above ground cost.

[1] On-site improvements include local streets and medians, curbs and gutters, sewer lines, water lines, street lights, storm gutter or drainage pipes, electrical power lines and all of the other requirements of the City's development code on privately-held developments, hence the reference of "On-site".

If this argument is not clear, picture a 2,800 square foot detached dwelling, costing $200,000 to construct the above ground structure, located in the middle of an empty square mile, no roads, no utility service, no public safety response, no flood control and no recreational facilities. What is the market value of this detached dwelling? Probably not even the $200,000 that it cost to construct the structure. All of a sudden, the $20,000 impact fee for the infrastructure needed to support that one residential unit and this seems like a bargain. In short, new development needs an existing system of municipal infrastructure to hook up to.

Thus, the true and complete *cost* of a new detached dwelling unit is the cost of constructing the structure and the cost of extending the municipal services to the dwelling regardless of who pays for the actual costs of extending those services. To some degree these service-related infrastructure costs have been recognized, the only question remaining is who should for pay them, existing or new residents?

Effect on Market Price. Again, let us assume that a cumulative $20,000 to $25,000 impact fee imposed upon *new* detached dwelling construction increases the market price of an *existing* detached dwelling unit. Wouldn't this just be the recognition that the existing detached dwelling already has those physical links to the municipal services? A slightly different way of looking at this argument is that the existing family residences each have a "share" in a municipal corporation[2] and the share is valued at the cost of the connection to the various municipal utilities, transportation system, flood protection and public safety. It is a logical step then to require any newly constructed detached dwelling to purchase a "share" at an equal cost.

CHAPTER ORGANIZATION

Within each "hard infrastructure" Chapter (Chapters Three through Eight and Ten) there will be a minimum of three and a maximum of four cost/fee tables. They will be:

The first schedule, the ***Allocation of Project Cost Estimates*** identifies the projects, their costs and the relationship, in an allocation percentage, to future development. These schedules will begin with the number x.1 as in 3.1, 4.1, 5.1 etc.).

GC – Minimum Needs-based Impact Fee - This schedule will calculate the DIF schedule that would need to be adopted to meet the minimal capital needs identified in the Report (on the second schedule at the end of the Chapter, i.e., 3.2, 4.2, 5.2 etc.) for that infrastructure but limited to the General City needs. Strictly speaking this schedule is a calculation of the development impact **costs**, suitable to be adopted as development impact **fees**, by the legislative body, in this case the Ontario City Council

With adoption of this level of DIFs, one could claim that new development is occurring without any additional cost to the existing residents and businesses. You could not, however, necessarily claim that new development is paying its fair share.

2 Not unlike a private corporation.

Existing Community Financial Commitment Comparison This schedule, while not an impact fee calculation, identifies the cost (in current nominal dollar value) of the existing infrastructure, including land, physical improvements and capital equipment. The distribution of this replacement value equity total over the existing developed community is the average amount that has been invested by the current community of residents and businesses and is a good indication, or comparison, with what could be imposed upon new development. This financial commitment will be expressed in terms of the cost to construct or acquire the assets at current replacement costs. Significant differences between this schedule and the GC Minimum Needs-based DIF rate schedule would certainly be worth additional analysis. These Schedules would be numbered 3.3, 4.3, 5.3, etc.

If the average equity (for a detached dwelling for example) on this *Existing Commitment Financial Commitment Comparison* Table is greater than the average cost on the previous *Minimum Needs-based* Table, then that infrastructure system is front-ended with more of the system, say 80% of it has been constructed while only at 50% of General Plan build-out and it likely has excess capacity at that point in time. The excess capacity is the result of earlier residents and businesses of the community having put more of the system into place than will be necessary by the remaining un-built portions of the community. The existing community has advanced money to build capacity into the infrastructure system to meet the needs of residents and businesses not yet there. This table is intended to be instructive rather than legal.

OR Minimum Needs-based Impact Fee - This schedule will identify the DIFs that would need to be adopted to meet the basic capital needs identified in the Report for that infrastructure but limited to the Ontario Ranch needs. Given the nearly complete vacancy of the existing parcels in the area and that new private development will install or pay for all required public improvements, one could claim that new development is indeed paying its *fair share.*

Distribution of Existing Impact Fee Fund Balance. The existing City-wide DIFs have a combined Fund Balance of $76.3 million (reserved separately by infrastructure and by the GC/OR areas) and each was created to finance various infrastructure needed as new residents and businesses locate in newly created residential dwellings and buildings. Some of the DIF funds have a positive balance and some a negative balance. There are no specific restrictions on the monies, beyond the restriction that they be used on improvements within the Fund title and committed within a five-year time frame. The *Master Facilities Plan,* when adopted, suffices for that commitment.

Use of Textual Acronyms. *Development Impact Fees* will henceforth often be referred to as **DIFs.** *General City* will often be referred to as **GC** and *Ontario Ranch* will often be referred to as **OR.** The *Master Facilities Plan* will often be referred to as the **MFP**.

END OF CHAPTER TEXT

Chapter 2
Demographics and Findings

This Chapter represents the beginning and end of the DIF calculation process. It begins with an inventory of fully developed, undeveloped and under-developed units and acreage within the City and concludes with a summary of recommended DIF schedules with detailed infrastructure explanations in the following chapters of this Report. This 2021-22 update includes a significant GIS-based recalculation of the Land Use Database (Table 2-1) on page 14. This had not been undertaken in over 10 years and has had an effect on the anticipated demands and project costs.

LAND USE ASSUMPTIONS

This Report contains an inventory of fully developed, undeveloped and underdeveloped land within the City limits of Ontario and is based upon the City's most recent General Plan update. The *Undeveloped* and the *Underdeveloped* delta land inventory, identified as *Potential Development,* combine to form the base for the distribution of the estimated costs of the service-expanding capital projects necessary to accommodate that same anticipated development. Without the expansion projects, the City would be unable to accommodate that new development, effectively halting it. The *developed* land inventory forms the base for distributing the replacement cost of the existing infrastructure. This action provides the basis for comparison with the proposed DIF schedules and for the *de facto* identification of the many existing Levels of Service (LOS) currently provided by the City's existing infrastructure which is conservatively valued at between $2.0 and $3.0 billion.

In January 2010, the City Council adopted The Ontario Plan (TOP), a General Plan update setting forth a new vision for the City over the next 30 years. The vision included the densification and intensification of existing land uses in key growth areas of the City, focusing in the I-10 corridor and the Ontario Ranch. The vision incorporated modifications that effect the Development Impact Fee formulation including, but not limited to, the following:

1. Several land use categories were combined into one category and/or were eliminated (Airport Industrial, East Holt Study Area, Planned Commercial, Planned Industrial, etc.);

2. New land use categories were introduced with TOP adoption, including High Density Residential and Business Park;

3. Residential densities were increased in the growth areas. Previously, the highest density allowed was up to 25 units per acre for the majority of areas, with a few small areas achieving 60 units per acre (downtown apartments). TOP provides a new density range for High Density Residential up to 45 dwelling units per acre and, in the Mixed Use designation, densities up to 125 dwelling units per acre; and

4. Floor Area Ratios (FAR) were increased in commercial, office and industrial categories.

Table 2-1, is the resulting inventory of all private land uses contained within the current City limits split by what are referred to as General City and Ontario Ranch (essentially the area of the City that is south of Riverside Drive) and are based on the General Plan's land use inventory, a staff analysis of privately held parcels in both of the General City area and the Ontario Ranch area.

Table 2-1 consists of three horizontal blocks of information from the top to the bottom, they are:

Total - Land-use Database – General City and Ontario Ranch - This block of information identifies the amount of developed and undeveloped land in terms of acres and units for the City's entire City limits and is the sum of the two areas identified following.

Land-use Database within the City's General City Area - Net This block of information identifies the existing development and development opportunities within the General City area of the City in terms of acres and appropriate units. The information in the *Existing Development* column will be used to identify the current investment to compare the proportionality of the proposed DIFs as previously described in Chapter One. The *Potential Development* column will be used to distribute the cost of infrastructure improvements needed to accommodate development in the General City area to those generating the need for those same improvements. The area is the sum of three General City Sub-areas (detailed in Appendix B). The three sub areas include, *GC-Existing Vacant*, *GC–Demolition* and *GC–Redeveloped* with the final two representing the demolition of existing private structure and the rebuilding of new private structure with a net increased amount of units or square feet.

40% Redevelopment. Extensive development has taken place in the GC over the past *30* years. Based on the previously adopted general plans, development was capped at a lower intensity/density than envisioned by TOP. As a result, many properties are considered underutilized by today's standards. In order to achieve ultimate build-out identified in TOP, many of the industrial sites would have to be razed and re-built to current FAR levels. Given the building life cycles, financing, and investments made to date, that level of recycling is not practical for the foreseeable future. As a result, staff has reviewed the information and considered 40% redevelopment as a reasonable factor for the planning period.

Land-use Database within the City's Ontario Ranch Area - The Undeveloped column will be used to distribute the cost of infrastructure improvements needed to accommodate development in the Ontario Ranch area of the City to those generating the need for (and benefitting from) those same improvements. There will be no proportionality analysis for Ontario Ranch area due to the special circumstance based upon its annexation in November 1999 to the City for purposes of accommodating development of this eight to nine square mile area.

Since it is a matter of merely accommodating the private development of vacant land, the City has little if any reason to create any additional deficiencies in its GC infrastructure by expending already limited City revenue resources on new infrastructure. Additionally, there

may be some higher LOS standards applied to the Ontario Ranch area than the existing General City area, due to more current technologies, and only the Ontario Ranch development community will accrue the benefit of those higher standards. An example would be the recycled water efforts.

OR Expanded Units. As mentioned previously, the adoption of The Ontario Plan introduced the densification and intensification of land uses in the OR. Previously, the General Plan estimated 54,428 residential units with an average maximum density of 17.1 dwelling units per acre. TOP approval increased the density up to 23 dwelling units per acre in the Medium Density Residential category and provided densities up to 30 dwelling units per acre in the High Density /Mixed Use categories. The Ontario Ranch area will generate approximately 71.4% (or 179,426) of the anticipated 251,302 additional residents at General Plan Build-out.

A greater level of land use database detail is available in Appendix B – Expanded Land-use Database.

DIF Land-use Types Definitions. This Report classifies private development into one of four residential *DIF Land-use Types* or one of six different business-based *DIF Land-use Types.* For purposes of the Report, the term *DIF Land-use Type* will refer to one of the ten broad types under which the City's specifically defined zoning code *land-uses* will fall into. These *DIF Land-use Types* are defined following:

Residential Land Uses:

- **Detached Dwelling Units** - This DIF Land-use Type is generally defined as a detached unit and corresponds to an allowable use within the City's land-use designation of ***Rural Residential (RR), Low Density Residential (LDR)*** and limited amounts of ***Low/Medium Density Residential (LMDR)***. This category would include the construction of the unusual detached condominium or detached townhome and a manufactured unit on an individual lot.

- **Attached Dwelling Units** – This larger category consists of apartments, townhomes, condominiums or any other living unit that is attached to any other unit. It generally corresponds to an allowable land-use designation of ***Low-Medium Density Residential (LMDR)*** and ***Medium Density Residential (MDR)***. Some of the residential units proposed within ***Mixed Use (MU)*** development could be expected in this DIF Land-use Type.

- **High Density Residential Units** - Corresponds to the City's land-use designations of ***High Density Residential (HDR)***. This is a new DIF Land-use Type from the 2001 Report and was included due to rising increase in construction of such units typically around 25 to 30 units per acre. Some of the residential units proposed within ***Mixed Use (MU)*** development could be expected in this DIF Land-use Type.

- **Mobile Home Dwelling Residential Units** - This DIF Land-use Type encompasses portions of ***Medium Density Residential*** land-use designation in the Zoning Code. No applications for this type is anticipated, but given the number of existing mobile home parks, the calculation was included for purposes of the proportional analysis.

  It is important to note that the removal of one existing manufactured unit (or existing mobile home dwelling) and the replacement with a similar dwelling does not constitute a DIF imposition event, it is merely a replacement of existing demand. The construction of the mobile unit pad is the DIF imposition event. No such units are expected in the City's OR area so no such category was calculated.

Business/Commerce Land Uses:

- **Commercial Lodging** (keyed) **Units** - This *DIF Land-use Type* corresponds to a limited portion (as an allowable use) generally within some business use

designations such as ***Mixed Use (MU)***, ***General Commercial (GC)***, ***Office Commercial (OC)*** and completely within the ***Hospitality (HOS)*** designation.

- **Retail/Service Uses** - As utilized in this Report, Commercial uses include the general type of retail services and thus includes outlets ranging from restaurants to auto repair shops to shopping centers. This category includes the ***Neighborhood Commercial (NC)***, ***General Commercial (GC)*** and the ***Office Commercial (OC)*** zones and in some cases the ***Hospitality (HOS)*** designation.

- **Office Uses** - As utilized in this Report, Office uses would include the general category of professional and medical office. This category includes the ***General Commercial (GC)***, ***Office Commercial (OC)*** and ***Business Park (BP)*** zone.

- **Business Park Uses** - This *DIF Land-use Type* is largely limited to the single ***Business Park (BP)*** land-use zone.

- **Industrial/Manufacturing Uses** - This *DIF Land-use Type* contains all businesses engaged in heavy manufacturing or industrial development in the single ***Industrial (IND)*** zone.

- **Institutional Uses** - This *DIF Land-use Type*, based upon the specific use, may be approved in just about any of the City's previously mentioned zones. It consists of private schools, private meeting places, places of worship and similar private facilities

Definitions of DIF Application Categories Status. For each of the DIF land-use categories detailed above and on Table 2-2, acreage is categorized as either *Existing Development* or *Potential Development*. Definitions regarding the status of each land use are as follows:

Existing Development Acres/Units – This column title reference identifies land in the City which is developed or land which has received a building permit but may not yet be constructed. Acreage in this category may include non-conforming use areas of the City which contain extensive development prior to an annexation or before changes to the General Plan were made.

Development Opportunities Acres/Units - Refers to all non-public vacant acreage located within the City. This category also includes any vacant parcel and 40% of those anticipated to be redeveloped and upsized in the long-term future or any large parcels with some development on it with subdivision opportunities. Table 2-2, following, is a summary of Appendix B.

Table 2-2 provides a summary of the detailed land use inventory, limited to privately held property, provided on Table 2-1. Staff's land use inventory reveals that there are presently 16,473 acres of privately-held developed land within the City's current City boundaries. Conversely, there remain 8,385 acres of vacant or substantially undeveloped land in the City, with most of it, some 4,727 acres, in Ontario Ranch. Acreage designated for Detached Dwelling development constitutes the greatest amount (17.0%) of vacant acreage of all the land uses.

Table 2-2
City of Ontario's General City and Ontario Ranch Areas
Summary of Developed and Potential Development Acreage

DIF Land-use Type	Existing Developed Parcels	% of Total Private Acres	Development Opportunity Parcels	% of Total Private Acres	Total Private Acres
Detached Dwelling Units	6,328	25.5%	1,685	6.7%	8,013
Attached Dwelling Units	722	2.9%	1,499	6.0%	2,221
High Density Dwelling Units	193	0.8%	1,037	4.2%	1,230
Mobile Home Dwelling Units	204	0.8%	14	0.1%	218
Commercial Lodging Units	143	0.6%	12	0.0%	155
Retail/Service Uses	487	2.0%	1,271	5.1%	1,758
Office Uses	310	1.2%	936	3.8%	1,246
Business Park Uses	777	3.1%	769	3.1%	1,546
Industrial Uses	6,890	27.7%	1,110	4.5%	8,000
Institutional Uses	419	1.7%	52	0.2%	471
Total Acres	16,473	66.3%	8,385	33.7%	24,858

POPULATION PROJECTIONS

A second component in determining the magnitude of impact of future development and the necessary facilities needed to mitigate that impact is a realistic assessment of the build-out population of the City. Many of the facilities contained in this Report are sized according to either the estimated population at theoretical "build-out" or upon service levels which are based in part upon an estimation of the population to be served. Library facilities, parks and recreation facilities and community center facilities and equipment are examples of cost areas which rely heavily on population projections to determine space and facility needs. Park standards are usually stated in terms of the number of acres of park land per 1,000 persons, for instance.

There are at least two generally accepted methods for projecting future population levels in a City: (A) past growth trends projected forward and (B) population holding capacity based on the General Plan land-use element. Each of these methods can be useful even though both possess certain limitations.

There are several serious flaws in projecting the build-out population of a community using the past growth trends methodology. While this method is relatively simple and therefore easy for the general public to understand, it does not give consideration to when an area is actually built out. Eventually there comes a point in time where the amount of available land to build on is negligible. This technique does not help explain when that point is reached.

Also, the past growth trends approach is not sensitive to policy changes made by Council or land use issues contained in the City's General Plan. For these reasons, this technique is more

useful in projecting short-term population levels and should not be used to forecast the built-out population of an area.

This Report relies on the methodology of ***holding-capacity*** (described in the following section) to project future service levels and facility requirements.

Holding Capacity Analysis. The methodology used in this Report to forecast the built-out population of Ontario is the current holding capacity approach. This method calculates the sum of existing development and potential development allowable under current land use regulations, using average densities found in the City.

The first step in projecting the City's population using the holding capacity approach is to inventory the remaining undeveloped acres within the City limits, which was previously accomplished in Tables 2-1 and 2-2 of this Chapter. The next step is to estimate the potential dwelling units allowed per acre and then multiply the potential number of units by the average number of residents per unit.

The number of persons per unit for new residential units is based on the 2000 U.S. Census and ranges from 3.806 and 3.373 persons for detached dwellings and attached dwelling respectively High density dwelling units have 2.669 persons per unit and there are 3.175 persons in each mobile home dwelling unit. The 2000 Census data was selected over the recently released 2010 Census due to a change in reporting the data, eliminating the same calculation and some conflicting data. Additionally, the results of the 2010 census were impacted by the economic factors of the time which appears to have increased dwelling density data temporarily higher.

Based on these 2000 Census dwelling density data, future residential development can be expected to generate somewhere from 240,519 to 251,302 additional residents (3) to the City of Ontario, joining the 182,004 citizens already living in City, resulting in a total estimated population at build-out (based upon the inclusion of existing City limits) of approximately 427,915 residents. The higher number is based upon full occupancy of all new dwelling units and the lower figure is based upon the historical occupancy levels at the time of the census count. The 427,915 is the average of the two.

Table 2-4 following uses the additional housing projected in the Land-use Database and estimates the additional potential population for the City of Ontario through build-out for both Old and Ontario Ranch. The number of potential new dwelling units was calculated by multiplying the amount of vacant acreage for each land use zone by the average densities (i.e., number of units allowed per acre) indicated in the City's General Plan.

The estimated General Plan build-out population of 427,915 (average between high and low) or more residents using this holding capacity approach is typically lower than the population forecasts based on the mathematical models described previously. This implies that either the City's period of residential build-out will actually take 25 to 30 years or that the City's growth rate will increase from recent historical levels. Given that the Ontario Ranch area has some 4,727 net acres to develop, this latter scenario is probably more likely to occur. As the residentially

[3] Depending upon the vacancy factor based upon the average of 96.4% for all residences.

zoned land remaining to be developed continues to be built on during the next thirty years, the City is likely to see the number of new dwelling units developed decrease each year.

[This space left vacant to place the following table on a single page].

Average Population at General Plan Build-out	427,915

SUMMARY OF FINDINGS

City staff and RCS have identified over $3.91 billion in needed and master planned capital improvement projects required through the City's General Plan build-out of both GC and OR, including both projects related to existing deficiencies and those needed solely to support future growth. Roughly 76.1% or about $2.97 billion of the total project list is required as the result of accommodating development. Due to a significant amount of outstanding developers credits and negative fund balance, less than 1% of the identified development-generated capital projects can be funded by an existing balance in the various existing DIF receipts (or fund balance). Table 2-4 indicates the capital project costs by area.

Table 2-4
Total City-wide General Plan Build-out
Capital Requirements
(rounded)

Infrastructure Type	General City	Ontario Ranch	Total - All Projects
Law Enforcement	$31,084,134	$42,020,603	$73,104,737
Fire Suppression	$27,776,396	$76,845,342	$104,621,738
Circulation System	$173,321,022	$346,386,801	$519,707,823
Storm Drainage	$68,710,652	$138,667,242	$207,377,894
Water System	$98,736,620	$359,056,789	$457,793,409
Sewer System	$26,364,639	$77,500,028	$103,864,567
Refuse Collection	$24,033,932	$40,922,641	$64,956,573
General Government	$9,972,635	$13,603,355	$23,575,970
Library Expansion	$26,049,081	$67,278,476	$94,227,557
Public Meeting Space	$37,614,782	$93,905,435	$131,520,217
Aquatics Facilities	$2,342,353	$5,847,691	$8,190,044
Park Land Development	$294,033,194	$734,054,897	$1,028,088,091
Land Use Settlement	$0	$27,225,956	$24,124,064
Fiber Optic System	$0	$128,350,091	$128,350,091
Sub-total DIF Related	$820,939,340	$2,151,665,327	$2,972,604,667
Non-DIF Related Projects			$935,161,545
Total - Projects (rounded)			$3,907,766,212

The adoption of the recommended DIF schedule amounts supported by the calculations in this Report (Schedule 2.1) would finance a great deal of this areas development-generated capital facilities by raising upwards to $2.9 billion in new DIF revenues (to be combined with the existing DIF fund balance/Outstanding Credits of $38.5 million) available to fund growth-related capital projects or not place an unnecessary draw on other City revenues such as utility rate receipts.

DIFs for the City's General City Area. Based on these costs and the schedules found at the end of each of the remaining chapters of this Report, costs attributable to future development were derived on a per unit basis for residential land uses and on a per square foot of pad basis for business land uses. Schedule 2.1, found at the end of this Chapter, provides a summary of the recommended GC DIF schedules for each type of infrastructure and land use category. The total recommended maximum DIFs for each of the ten DIF Land Use Types within General City are summarized following.

Table 2-5
Summary of Proposed Development Impact Fees
for the City's General City Area

DIF Land Use Type	Recommended Development Impact Fees
Detached Dwelling Unit	$29,293/Unit
Attached Dwelling Unit	$23,365/Unit
High Density Dwelling Unit	$18,140/Unit
Mobile Home Dwelling Unit	$23,053/Unit
Commercial Lodging Keyed Unit	$4,069/Unit
Retail/Service Uses Square Foot	$8.806/S.F.
Office Uses Square Foot	$5.026/S.F.
Business Park Uses Square Foot	$5.150/S.F.
Industrial Uses square Foot	$2.994/S.F.
Institutional Use Square Foot	$7.698/S.F.

Specific DIF schedule rates for each land use can be found at the end of each chapter relating to each infrastructure. Schedule 2.1 at the end of this Chapter also identifies the probable development impact fee revenue, the estimated capital cost total and the difference, by individual infrastructure type (e.g. fire).

DIFs for the City's Ontario Ranch Area. Based on these costs and the schedules found at the end of each of the remaining chapters of this Report, costs attributable to future development were derived on a per unit basis for residential land uses and on a per square foot of pad basis for business land uses. Schedule 2.2, found at the end of this Chapter, provides a summary of the recommended OR DIF schedules for each type of infrastructure and land use category. The total recommended maximum DIFs for each of the nine DIF Land Use Types within Ontario Ranch are summarized following.

Table 2-6
Summary of Proposed Development Impact Fees
for the City's Ontario Ranch Area

DIF Land Use Type	Recommended Development Impact Fees
Detached Dwelling Units	$44,213/Unit
Attached Dwelling Units	$32,690/Unit
High Density Dwelling Units	$24,392/Unit
Commercial Lodging Units	$12,124/Unit
Retail/Service Uses	$19,524/Unit
Office Uses	$14.802/S.F.
Business Park Uses	$12.066/S.F.
Industrial Uses	$8.758/S.F.
Institutional Uses	$14.547/S.F.

Specific DIF schedule rates for each land use can be found at the end of each chapter relating to each infrastructure. Schedule 2.2 at the end of this Chapter also identifies the probable impact fee revenue, the capital cost total and the difference, by individual infrastructure type (e.g. fire).

Schedules 2.1 and 2.2 each require two pages to summarize the many infrastructures, identify the individual Infrastructure DIFs and combined DIFs by DIF Land-use Type and provide a calculation of the potential collection through build-out at the proposed *Minimum-Needs*-based *DIF* schedules and the cost of the total infrastructure needs.

FORMAT OF THIS REPORT

The following chapters of this Report contain the detailed information relative to the calculation of DIFs recommended by RCS for the entire City. Appropriate textual explanations are contained in each chapter with a chapter devoted to each of the fourteen sets of cost schedules, (twelve sets for General City) listed following, and four appendices, one of which contains a summary of DIF recommendations.

CHAPTER 3 - Law Enforcement Facilities, Vehicles, and Equipment
CHAPTER 4 - Fire Suppression Facilities, Vehicles, and Equipment
CHAPTER 5 - Circulation (Streets, Signals and Bridges) System
CHAPTER 6 - Storm Drainage Collection System Facilities
CHAPTER 7 - Water Source, Storage and Distribution System

CHAPTER 8 - Sewer Collection System
CHAPTER 9 - Refuse Collection Facilities and Fleet
CHAPTER 10 - General Facilities, Vehicles and Equipment
CHAPTER 11 - Library Facilities and Collection Items
CHAPTER 12 - Public Use (Community Center) Facilities
CHAPTER 13 - Aquatics Facilities
CHAPTER 14 - Park Land Acquisition and Park Facilities Development
CHAPTER 15 - Ontario Ranch Open Space Land Acquisition
CHAPTER 16 - Fiber Optics Communication System

APPENDIX A - Summary of Recommendations.
APPENDIX B - Expanded Land-use Database.
APPENDIX C - Distribution of Common City Yard Improvement Costs and City Yard Reserve Transfer Percentages.
APPENDIX D - New and General City Development Impact Fee Policies
APPENDIX E - Major Four Hard Infrastructure Costing Adjustments
APPENDIX F - AB-602 Considerations

NOTE REGARDING TEXTUAL MATHEMATICS: It is important to note that the use of a computer provides for calculations to a large number of decimal points. Such data, when included in text and supporting textual tables, has often been rounded to usually no more than two or three decimals for clarity and thus may not be replicated to the necessary degree of accuracy as the spreadsheet schedules at the end of each chapter. If questions arise between the tables and schedules, the schedules at the end of the chapter will prevail as the more accurate. The schedules at the end of the Chapter are instructive as to recommendations. The tables within the chapter texts are summaries of the schedule at the end of the chapter and are illustrative.

END OF CHAPTER TEXT

Schedule 2.1

City of Ontario, General City, at General Plan Maintenance Costs, Reflecting 2021-22 Amendments
Summary of Development Impact Fees By Type of Fee (continued on next page)
(Costs/Fees per Residential Type Dwelling Unit, or Business Type Square Foot)

Chapter 3
Law Enforcement Facilities, Vehicles, and Equipment

The Existing System of Law Enforcement Assets or infrastructure. The Ontario Police Department currently operates out of a largely unfinished 175,000 square foot facility on roughly 20 acres at 2500 South Archibald Avenue. The building was specifically purchased due to its excess space capacity and, with appropriate interior improvements, its ability to absorb many additional sworn officers as significant development occurs. The interior of the facility is roughly 45% improved leaving 55% to be improved over time as the City approaches General Plan build-out.

The Department also has a significant inventory of:

- Vehicles (official and undercover) some with various added extra equipment;
- Assigned officer equipment such as various leathers, armament, clothing, and safety apparel;
- Communications equipment;
- Specialty and computer equipment; and,
- Helicopter program and related equipment.

Demand Upon Infrastructure Created by the Development of Underdeveloped or Vacant Parcels. Residents and businesses benefit from law enforcement services in three ways: directly, indirectly and through standby availability. Direct services are those where a resident or business owner requires a direct response, usually as a result of being the victim of a crime. Direct service results in the form of a law enforcement officer contacting the victim. Indirect benefits, such as crime prevention programs, free patrol time and other law enforcement services that serve all businesses, citizens and visitors, are impossible to calculate for a specific beneficiary. An example of indirect benefit would be the apprehension of a burglar in your neighbor's residence yesterday. Had that burglar not been arrested he/she may have broken into your residence or business tomorrow. Most residents and businesses may go for many years before ever requiring a call-for-service. However, these fortunate residents and businesses still benefit from law enforcement services, if in no other way than that a law enforcement officer is available, through adequate planned stand-by, to respond if required.

The addition of new residential units and new businesses will increase the demand upon the law enforcement service level by creating more direct calls-for-service, more areas requiring preventive patrol, and in general, more opportunities for crimes to be committed.

The continuous development of vacant or underutilized parcels into residential or business units will also generate more calls. The residents and business owners occupying those residences and businesses will create the increase in law enforcement calls-for-service. More residences and businesses will mean more responses to the burglaries, domestic disputes, noise complaints, shoplifting and miscellaneous incidents that will occur in the new residences and businesses. If the law enforcement force capabilities (the base) are not expanded, then the increasing number of calls-for-service (the rate) will reduce the amount of "free" hours available for preventative patrol. This inability to expand the capabilities would ultimately drive the Department into a reactionary mode. The additional calls-for-service would limit the amount of time for training, planning, pro-active crime prevention and other non-direct services.

The **Purpose** of the Fee. Additional law enforcement calls-for-service are expected, and the cost of adding sworn officers necessary to respond to those calls can be determined. Those new costs can be translated to a fee, or an amount, necessary to be collected to offset the added costs of the required additional staffing. These costs include equipping and housing the additional officers. Providing that the fee is adopted and imposed, new development will finance its proportional capital costs of expansion of the Law Enforcement facility. The continued costs of the annual salary and benefits for those additional officers will need to come from increases in general taxes (primarily property and sales taxes) generated by the new residences and businesses and their occupants.

The **Use** of the Fee. The revenues raised from a properly calculated and legally-supported Law Enforcement Impact Fee would be limited to capital costs related to that growth. The fees would be used to complete the interior improvements within the law enforcement station, increase the number of response and investigator's vehicles, and properly equip additional officers. Conversely, the Law Enforcement DIF receipts cannot be used to replace existing vehicles, or replace normal vacancies. Rehabilitation of the former large retail building created additional space at a cost less than the new construction of space. Other projects and capital acquisitions include:

LE-001, Police Station Purchase and Interior Improvements Prior to Occupancy – The project consists of the acquisition costs and full completion of the 175,000 square foot facility on Archibald Avenue just south of the SR-60. The facility was selected and acquired in order to serve the existing community and also house the additional officers needed to serve future development with law enforcement services. The full cost of $10.3 million is split proportionally between the existing calls-for-service (45.28%) and the calls-for-service generated by new development at General Plan build-out (54.72%). The facility space demands are based upon a minimum standard of 350 square feet per officer.

LE-002, Remaining Interior Improvements @ 55% of Police Station. Complete the interior improvements to roughly 96,250 square feet of the under-utilized portion of the Police Station. The building improvements are progressing with the interior improvements in a manner consistent with the addition of police calls-for-service and sworn officers (see LW-001 previous).

LE-003, Additional Patrol/Detectives/Specialty/Staff Vehicles – This project is the acquisition of 284 assorted law enforcement vehicles in order to maintain the existing 1.04 vehicles per officer standard.

LE-004, Additional Police Officer Assigned Equipment – Officers in the field will require personally assigned equipment of leathers, handgun, helmet, and assorted protection. The costs include the recruitment cost of a medical exam, polygraph, fingerprinting, psychological exam and back-ground check for successful candidates. The costs are included at $18,246 per officer the anticipated 272 additionally required officers.

LE-005, Additional Specialty Equipment – This project is the acquisition of specialty equipment such as laptop computers, servers, specialty printers. It also includes special weapons and tactics equipment, bicycles, body cameras and other specialty equipment.

LE-006, Building Appurtenances Equipment – This project represents items that support use of the building such as phone systems, alarms, security systems and the like.

LE-007, Communications Equipment – This project includes any type of communications device and mostly consists of hand-held radios and batteries, battery chargers cells phones.

LE-008, Advanced Technology Software and Equipment – This project is the acquisition of specialty equipment such as linked database systems and other cooperative law enforcement sharing systems.

LE-009, Additional Helicopter Capacity – The City's helicopter program capacity will be overwhelmed with the proposed addition of 80,149 dwelling units, over 500 hotel/motel keyed-rooms and 103.2 million square feet of business use space. The capacity of an additional helicopter will be required to maintain the existing level of service.

LE-010, Share of Common City Yard Improvements – The City maintenance yard is the front line for maintenance and repair of all of the City's capital acquisitions and infrastructure. The existing facility has adequate space but will need additional facility improvements in order to maintain the additional law enforcement vehicles and the police station itself. The $2,365,388 is law enforcement's portion of the $44.5 million in improvements required at the maintenance yard (see Chapter 10 for greater detail).

The Relationship Between the Need for *The Fee* and *The Type* of Development Project. Department records were used to demonstrate that differing land uses generate differing numbers of calls. Police staff provided extremely accurate calls-for-service data by over-laying the Department's computerized response records with the City's zoning map thus allowing 100% of the calls-for-service to be categorized. Table 3-1, following, summarizes an analysis of the calls-for-service received by the Police Department over a recent twelve month period. The breakdown of calls into the land uses that generated them, divided by the number of developed units (during the same period) generated a *calls-for-service* ratio, factor or nexus.

Newly Calculated Calls-for-Service data. This impact fee update includes a recalculation of law enforcement calls-for-service by land-use. The previous calls-for-service data was based upon data that was over 12 years old and was calculated with the then state-of-art "shape files", the best data available at the time. This update is based upon a more GIS-based data set of all law enforcement calls-for-service coupled with the City's GIS-based land-use database. This provide for a more accurate data driven calculation

[This space left vacant in order to place the following table on a single page].

Table 3-1
Law Enforcement Calls-for-Service Generated by DIF Land-use Type
(Over a 12 Month Period)

DIF Land-use Type	Developed Dwellings or Square Feet	Actual Calls For Service Over 12 Months	Total Calls per Dwelling or 1,000 SF (KSF)
Detached Dwelling Units	31,997	31,149	0.973/Unit
Attached Dwelling Units	13,097	13,340	1.019/Unit
High Density Dwellings	4,812	4,901	1.019/Unit
Mobile Home Dwelling Units	2,097	1,983	0.946/Unit
Commercial Lodging Units	5,810	5,236	0.901/Unit
Retail/Service Uses	18,552,286	25,456	1.374/KSF
Office Uses	9,959,192	4,408	0.443/KSF
Business Park Uses	10,271,628	715	0.070/KSF
Industrial Uses	112,134,057	7,808	0.070/KSF
Institutional Uses	2,318,711	1,106	0.477/KSF

As an example, there were approximately 31,149 calls-for-service that generated a response to one of the 31,997 detached dwelling units in the City. The result indicates that, on average, each dwelling will generate just over 0.973 calls per year. The same analysis was undertaken for the other land uses, with the limited exception that attached dwelling units and high density dwelling units were combined. Since these calls-for-service by land use are an empirical average, they were then used to project the number of additional future calls that could be expected at TOP build-out by multiplying the calls per residential unit or business acre by the number of anticipated number of new residential dwellings or business acres. To determine the number of additional officers necessary to meet this increase from future developments, the number of increased calls resulting from new development was then divided by the average number of calls that an existing officer currently responds to.

These calls-for-service rates are then applied to (multiplied by) the undeveloped land-use database anticipated units to determine the number of calls-for-service in the future. The additional calls-for-service, in this case 116,135, were then divided by the number of calls-for-service that a single officer currently absorbs.

The existing complement of 225 sworn officers currently absorbs the 96,102 annual calls by responding to just over 427 calls-for-service each to privately-owned and developed parcels annually. Based upon the addition of 116,135 calls-for-service, the City will need to successfully recruit 272 additional officers to maintain the same response capabilities that are currently provided by the existing 225 officers now. This is not to imply that the existing level of services or the ratio of officers to calls-for-service is the *desired* level of service, it merely is the *current or existing* level of service. To adequately mobilize the 272 new sworn officers, the City will need to add 284 response vehicles at a total cost of $19,837,400 to maintain the existing ratio of 1.04

vehicles per sworn officer (284 vehicles divided by 272 officers) and for the personnel recruitment and equipment at a combined cost of $4,962,912 (272 officers X $18,246 in assigned equipment costs).

The Relationship Between the *Use of the Fee* and the *Type of Development* Paying the Fee. Again, *use of the fee* is a similar argument to the *need for the fee.* As the development occurs, the impact is generated and the impact fee would be collected as the development occurs. The collected DIF receipts would be put to use to acquire equipment for additional officers, vehicles and additional building space necessary to respond to those additional calls, *without reducing the capability of responding to calls from the existing community.*

The Relationship Between the *Amount of the Fee* and the *Cost of the Portion* of the Facility Attributed to the Development Project. The building size at 175,000 square will meet the needs for operations space (and location) through General Plan build-out. The build-out complement of 497 sworn officers, (225 current and 272 projected) will maintain an adequate and sufficient 350 square foot per officer current average.

Basic Needs-based Fees. Table 3-2, following, summarizes the resulting DIFs (from Schedule 3.2) for development to contribute $73,104,737 towards the expansion of the Law Enforcement capabilities of the City in order to allow the City to extend the same level of service to the City's newest citizens and businesses.

Table 3-2
Minimum Needs-based Law Enforcement Facilities, Vehicles and Equipment Development Impact Costs by DIF Land-use Type

DIF land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$7,839,552	$613/Unit
Attached Dwelling Units	$20,755,866	$641/Unit
High Density Dwelling Units	$22,369,225	$641/Unit
Mobile Home Units	$56,653	$596/Unit
Commercial Lodging Units	$309,704	$567/Unit
Retail/Service Uses	$12,038,818	$0.865/S.F.
Office Uses	$6,565,483	$0.279/S.F.
Business Park Uses	$741,528	$0.044/S.F.
Industrial Uses	$2,087,987	$0.044/S.F.
Institutional Uses	$339,920	$0.300/S.F.

Existing Financial Commitment Comparison Costs. The City invested about $24.9 million in the outright purchase and the remodeling to date, (about 45% of the floor space) of the new facility, a large former retail building on Archibald Avenue. One of the reasons the facility was selected

was that it could meet development need and its long range capacity for additional calls-for-service resulting from new development. The Department staff uses 235 assorted vehicles with various added extra equipment costing a total of $16,415,145 for an average cost of about $69,850 per vehicle. The inventory of 235 vehicles consists of standard response vehicles and staff/specialty vehicles. The existing 225 sworn officers each have assigned equipment such as various leathers, armament, clothing and safety apparel costing some $18,246 per sworn officer or a combined $4,105,350. Specialty equipment amounts to a cumulative $2,785,632. Existing hand-held communications equipment has a replacement cost of approximately $675,075. The helicopter program has assets with a replacement cost of approximately $3,206,810. Lastly, there is $1,747,445 invested in land-based communications equipment, specialty equipment and computer workstations. Combined, the City has invested, at current dollars, some $63,727,177 into the law enforcement services including the negative $1,441,855 existing Law Enforcement Impact Fee Fund balance.

When this combined replacement financial commitment cost figure is distributed over the entire current community (via Table 3-3 following and Schedule 3.3), we find that the existing financial commitment is quite large (at 105%) to that of the calculated Law Enforcement Basic DIFs (or cost), indicating that the existing community has invested more than would have been required from future development.

Table 3-3
Existing Law Enforcement Community
Financial Commitment Comparison Data

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$20,655,531	$646/Unit
Attached Dwelling Units	$8,846,023	$675/Unit
High Density Dwelling Units	$3,249,952	$675/Unit
Mobile Home Dwelling Units	$1,314,967	$627/Unit
Commercial Lodging Units	$3,472,097	$598/Unit
Retail/Service Uses	$16,880,388	$0.911/S.F.
Office Uses	$2,923,034	$0.294/S.F.
Business Park Uses	$474,131	$0.046/S.F.
Industrial Uses	$5,177,642	$0.046/S.F.
Institutional Uses	$733,411	$0.316/S.F.

[This space left vacant in order to place the Chapter recommendations on a single page].

RECOMMENDED DEVELOPMENT IMPACT FEES

Since the *Minimum Needs-based Impact Costs (*necessary for expansion indicating the City's investment in Police capabilities) are less than the *Existing Community Financial Commitment Comparison*, the Minimum *Needs-based Development Impact Fee* schedule identified in Table 3-2 and Schedule 3.2 would be the most equitable DIF schedule to adopt. The DIF schedule would be the same for both of the City's Ontario Ranch area and the undeveloped parcels of General City area.

RECAP OF RECOMMENDED LAW ENFORCEMENT DEVELOPMENT IMPACT FEES

- **General City** - Adopt Schedule 3.2.
- **Ontario Ranch** - Adopt (same) Schedule 3.2.

Chapter 4
Fire Suppression Facilities, Vehicles, and Equipment

Separate DIF Application Areas. Because of distinctly differing capital needs there will be a separate DIF schedule for the Ontario Ranch area of the City. This action is necessary to ensure that new development in the General City area of the City is not required to subsidize the significant development costs of the Ontario Ranch area, with its significant public construction demands. This process will also be applied to the next four infrastructure Chapters consisting of Circulation System, Storm Drainage Collection, Water Distribution and Sewer Collection. General City DIF calculations and explanations will be at the beginning of the chapter with Ontario Ranch calculations and textual explanations following towards the end of the Chapter.

The Existing System. The City has invested in an extensive system of fire facilities, response vehicles and specialty equipment. The Fire Department responds to calls-for-service from ten (10) existing stations (includes the specialty station at the airport) and trains at a facility consisting of classrooms, offices and support areas with specialty situation training mock-up implements. Three of the fire facilities are designated for special operations. The fire facilities are detailed as follows:

Fire Station #1/Headquarters is 42,951 square feet and is located on a 39,900 square foot parcel at 425 East B Street (and portions of the Annex facility). This station houses the Bomb Squad unit and specialty trailer. This station also houses the mobile command unit. The water tender, brush engine and various reserve apparatus are distributed throughout the ten stations and are subject to reallocation depending upon operational needs and vehicle maintenance.

The Fire Station #1 specific facilities consist of:

Administrative Offices - 20,172 square feet,
Emergency Operations Center - 8,179 square feet,
Storage Bays - 2,400; and,
Station Living Quarters and Bays - 12,200 square feet.

Fire Station #2 is a 4,000 square foot residential style on a 30,000 square foot parcel at 544 West Francis Street.

Fire Station #3 is a 5,600 square foot facility located on a 20,000 square foot parcel located at 1408 East Francis Street.

Fire Station #4 is a 5,200 square foot facility located on a 20,000 square foot facility located at 1005 North Mountain Avenue.

Fire Station #5 is a 5,200 square foot facility on a 35,000 square foot parcel located at 1530 East 4th Street.

Fire Station #6 is an 11,125 square foot facility located on a 41,000 square foot parcel located at 2931 East Philadelphia Street. Stations #6, #7 and #8 are based upon a similar floor plan.

Fire Station #7, is an 11,125 square foot facility located on a 41,000 square foot parcel located at 4901 E. Vanderbilt Avenue.

Fire Station #8 is an 11,125 square foot station on a 42,000 square foot parcel located at 3429 East Shelby Street. Station #8 houses the Technical Rescue Team and its response unit.

Station #9 was recently constructed at 2661 East Grand Park and consists of a 10,476 square foot facility constructed on a roughly 60,000+ square foot parcel. This station will be the primarily response facility to calls-for-service in the Ontario Ranch area. Station #9 houses the HazMat Team and response unit.

Station #10 is located at 1230 Tower Way on Ontario Airport property and is owned by the Ontario Airport Authority as opposed to the City and thus has been excluded from any calculations in this Report.

The **Training Center** is located at 1408 East Francis adjacent to Station #3 on a 154,240 square foot parcel and consists of a combined 10,400 square feet of classrooms, offices and apparatus/storage bays and numerous training exercise implements and props.

The land and replacement construction costs of the existing stations and training facilities is approximately $137.3 million. Not surprisingly, the City also has a sizable fleet of equipped City-owned response and prevention units consisting of:

- Four tractor drawn, tiller assisted aerial apparatus;
- Fifteen fire engines, one brush engine and one water tender;
- Eleven SUV type staff vehicles;
- Ten sedan type staff vehicles;
- Seven utility or flatbed trucks;
- One Bomb Squad, one Hazmat Squad, one Technical Rescue Squad, and one Mobile Command Post; and,
- Two Bomb Investigation trailers, one EOD truck, and one Fire Safety House trailer.

General City Replacement Assets. The total investment in the vehicle compliment in the is about $34.0 million. State or County vehicles and equipment are not included in the financial commitment figure. The City's fire-fighter assigned equipment and successful psychological and back-ground checks, at $17,108 per fire-fighter, is approximately $3.2 million investment total for the existing staff of one hundred and eighty-six fire fighters (figure excludes non-hires). There is also $3,045,500 in specialty equipment (typically in the station but not part of vehicle inventory). Lastly, the Fire Suppression Facility, Vehicle and Equipment Impact Fee has a negative fund balance of $2,412,140 creating a net investment of $175.2 million.

The current financial commitment or investment, in fire stations, training facilities, response fleet with specialty equipment and fund balance is a sizable $175,163,942. This figure represents what it would cost to establish the existing Department response capability to the General City at current vehicle, equipment, land acquisition and construction costs. The relevance of this figure will be established later in this Chapter.

Demand Upon Infrastructure Created by the Development of Underdeveloped or Vacant Parcels. While it can be said that numerous factors are considered when determining the number and location of fire stations in any city, it can be stated without fear of contradiction that all new private development in the City will have an effect on the City's current ability to respond to fire, rescue and emergency calls-for-service. The affect, simplified but not trivialized, is twofold. Initially, each new residential and business development will create, on average, more calls-for-service increasing the likelihood of simultaneous (and thus competing) calls-for-service. Additionally, as development spreads further from any existing station or stations, as large-scale development is often likely to do, the distances (and thus response times) will increase, taking the existing fire companies out-of-service for greater periods of time.

The capacity of any fire station is finite and will reach practical limits (through call *frequency* and *total time*). When that capacity is exceeded, the level of service afforded to existing development will be greatly reduced. Or stated in another way, if development continues without the addition of fire stations, the existing stations could be overwhelmed in terms of calls-for-service, making a timely response for emergency service a virtual coin flip. That is, will the existing fire companies be available to respond to your needs or will they most likely be out-of-service on a call in a different part of the community?

The **Purpose** of the Fee. In order to continue to be able to respond to an ever-increasing number of expected calls, the City staff has determined the need for the addition of four stations and the relocation of two existing stations to maximize coverage. Having the right type, size and number of fire stations in the right locations will enable policy makers, the Chief and City Council to house fire fighters, apparatus, and equipment in a rational way for maximum use of capital resources at the lowest annual operations cost. Conversely, the penalties are high and extremely visible for poor fire station location or a lack of one. Adverse effects are felt by the City staff, the council, and possibly by the existing taxpayers. With poor location or no additional locations, response times via great distance or out-of-service due to a previous call can become excessive, and if a tragedy occurs, the incident would be well publicized.

Often, response time is mistakenly referred to for only the first-in unit, and this can be a grave error. Instead, response time must consider *all* the forces necessary to place the incident under control. If the first unit arrives within five minutes but cannot provide the necessary water flow, or perform the needed functions due to a lack of staffing, the five minute response becomes insignificant and irrelevant. Thus an increase in the number and type of response vehicles is also necessary to match and equip the needed additional staff. The following sections identify the manner in which the City plans to meet the demands of additional calls-for-service.

The **Use** of the Fee. The revenues generated from a properly calculated and legally-supported Fire Suppression Facilities and Equipment Impact Fee would be limited to capital costs related to that growth. The fees would be used to construct new stations or expand existing stations (to increase the response capacity of that station) and increase the number of emergency response vehicles. Conversely, the Fire Suppression Facilities DIF receipts would not be used to repair any existing fire stations or replace any existing emergency response vehicles. Additional facilities are planned to come on-line, as needed, as development creates additional demands beyond the capability (volume or calls and distance) of the existing stations. The capital expansions include:

FS-001 and FS-002, Projects Completed or No Longer Needed.

FS-003, FS-005, FS-007 and FS-009 - Land acquisition and construction of four new 11,200 square foot stations, each of which would be located in the Ontario Ranch area of the City where approximately 54,428 detached, attached and high density dwelling units and 39.6 million square feet of retail/service, office and business park, industrial and institutional uses and 396 commercial lodging rooms are expected to be constructed. The four stations would be three bays wide by two bays deep at approximately 11,200 square feet each (see next group of projects). These stations are largely needed to serve the Ontario Ranch area. Each has an estimated land acquisition/construction cost of approximately $13.5 million.

FS-003A, FS-005A, FS-007A and FS-009A - Land acquisition and construction of four additional storage bays at 1,400 square foot, all four of which would be located in the Ontario Ranch area at the corresponding station listed previously. This would increase the capacity of each of those four stations described above to a four bay wide by two vehicles deep facility (4X2). However, these additional "4th bay" facilities are intended to store City-wide equipment such as back-up engines, tillers and other specialty fleet and thus the cost of these facilities are spread over the entire community including the existing community.

FS-004, FS-006, FS-008, FS-010 - Each of the previously referenced stations would need a fully-equipped basic response engine at $1,019,530. FS-004 also includes a fully-equipped aerial apparatus at $3,103,352.

FS-011 consists of the **Two Reserve Response Engines** needed to maintain the Department's one reserve engine per three active engines standard.

FS-012, Project Completed or No Longer Needed.

FS-013, Battalion Chief Response Vehicle - The Ontario Ranch's five stations will generate the need for a second battalion Chief who will need a fully equipped response vehicle.

FS-014, Fire Fighter Assigned Equipment - The additional 89 fire-fighters will be needed for the Ontario Ranch area and will require personally assigned equipment.

FS-015, Fire Administrative Headquarters Relocation - The project consists of constructing a $31.6 million, 30,000 square foot facility west of Euclid and north of Holt Avenue. The existing 17,000 Headquarters station has become inadequate in terms of space required for meetings, training and vehicles.

FS-016, Training Center Expansion - The current training facility will no longer be able to serve the anticipated additional staff and will need to be enlarged at approximately $9.8 million.

FS-017, City Emergency Operation Center - This $4.0 million project is the completion of the extremely important EOC facilities, the center for management for all large scale emergencies in the City.

FS-018, Special Operations Support Vehicle - The project consist of the addition of a support vehicle that is a rolling warehouse and canteen for long term incidents.

FS-019, Mobile Air and Support Vehicle - The support vehicle provides air-filling capability and has amiable bright lights for night-time fire and rescue incidents.

FS-020, Emergency Service Communications System - This is the companion project to LE-007 in the Law Enforcement infrastructure category.

FS-021, Share of Common City Yard Improvements - The City maintenance yard is the front line for maintenance/repair of all of the City's capital acquisitions and infrastructure. The existing facility has adequate space but will need additional facility improvements to be able to maintain the additional fire suppression vehicles and the new fire stations. The $1,404,845 is the fire suppression/rescue portion of the $44.5 million in improvements required at the maintenance yard.

FS-022, Project Completed or No Longer Necessary.

FS-023, Fire Station #1 Operations Relocation – Relocate the fire operation component of existing Station #1 along with the relocation of the Headquarters operation (see FS-015).

FS-024, Expand Station #3 (East Francis) – This is the smallest station in the City's inventory and will need to be expanded to accommodate a second company.

FS-025 has been completed.

The proposed projects and costs are identified on Schedule 4.1 and are detailed in the MFP. The total cost of completing the fire infrastructure system is a net $143,341,375. However there are outstanding credits for developer contributions in Ontario Ranch of $4,721,216. There are also negative fund balances in both the General City area ($2,412,140) and Ontario Ranch ($8,455,912). There is a planned one-time transfer of $3.5 million from the special Fund 119. The cumulative $112,052,680 acts to add to the financial obligations of the Fire Suppression Facilities, Vehicles and Equipment Impact Fee Fund moving the total cost to be recovered from impact fees from $143.3 million to $155.5 million.

The Relationship Between the Need for The Fee and The Type of Development Project. Fire service response standards extended to new development should be consistent with the fire response currently enjoyed by the City's existing citizens and business community by constructing new facilities, or else the result will be in the deterioration of the level of service (LOS) provided both to the existing residents and future citizens and businesses within the City of Ontario. It follows that it is appropriate to assess future development to contribute additional fire facilities.

To project the impact of future development on fire services, it was first necessary to quantify the current impact on services from each of the City's land uses. Then, a determination of the costs of future capital facilities necessary to meet this increased demand was made. The following section illustrates the relative impact from each land use on fire services and facilities. While the majority of these requests for service were made by Ontario citizens from their residences, a large percentage of requests were generated from new commercial and industrial uses within the City. A survey of each land use and its existing effect on requests for calls-for-

service was conducted to project the impact of future development on fire services. The calls-for-service survey was updated with current calls-forr-service data in a similar manner and concurrently with the process used to determine law enforcement demand (specifically described in Chapter 3, Law Enforcement et al.). Only requests for fire and rescue services to privately held property were counted. Requests for service to public property, such as City parks and public right-of-way or intersections, were excluded thus distributing these calls pro-rata through the requests for service from privately held property. This is based upon the argument that all public land serves privately held land in some manner.

Table 4-1, following, identifies the number of calls-for-service received by the Fire Department during the past calendar year by the previously identified DIF categories. The number of requests for service received by the Department during the year was then divided by either the developed (1,000) square feet, the existing number of dwelling units to determine the number of requests generated per business square foot, per dwelling unit or commercial lodging unit.

Table 4-1
Fire Suppression Existing Calls-for-Service Generated by Land Use
(Over a 12 Month Period Responses to the General City Area)

DIF Land-use Type	Developed Dwellings or Square Feet	Actual Calls For Service Over 12 Months	Total Calls per Dwelling or 1,000 SF (KSF)
Detached Dwelling Units	27,449	7,211	0.263/Unit
Attached Dwelling Units	12,050	3,011	0.250/Unit
High Density Dwelling Units	4,812	1,202	0.250/Unit
Mobile Home Dwelling Units	2,097	611	0.291/Unit
Commercial Lodging Units	5,810	970	0.167/Unit
Retail/Service Uses	18,418,611	3,438	0.187/KSF
Office Uses	9,595,912	1,141	0.115/KSF
Business Park Uses	9,587,138	128	0.013/KSF
Industrial Uses	106,400,598	1,417	0.013/KSF
Institutional Uses	2,318,711	95	0.041/KSF

Of residential land uses, a detached dwelling unit is just slightly more likely to require an emergency fire service response at 0.263 annual responses per unit than an attached dwelling unit at 0.250 annual responses per unit. Retail/Service use development is shown to generate the highest business use demand at 0.187 responses per 1,000 square foot of building space, while industrial development generates the least demand of 0.013 calls per 1,000 square feet. The lower demand by industrial uses should be expected given the greater density of employees and patrons in an office use establishment when compared to an industrial business of similar square feet. However, it should be noted that while there are fewer calls for industrial properties, significant training is required to be prepared for industrial responses, (i.e., trenching response and hazardous materials training).

Based upon these calls-for-service and the anticipated development, future demands in General City will increase from the 19,224 annual calls-for-service to private development by 10,895 to 30,119 calls-for-service per year. Continued development will benefit from the existence of the current eight stations and the fact that they have some existing capacity.

Resulting General City Area DIF Schedule. The collection of the resulting DIFs through build-out would allow the City to acquire or construct almost all of the proposed General City expansions and required equipment. This generally indicates that the City's expansion of the Fire capital has maintained pace with the increases in calls-for-service from new development and that there are very few if any deficiencies in the infrastructure dedicated to fire suppression/medic services. Table 4-2, on the following page, indicates the impact fee necessary to finance the cost to the additional stations, response equipment and fire-fighter equipment.

Table 4-2
City of Ontario's General City Area
Basic Needs-based Fire Suppression Facilities, Vehicles and Equipment Development Impact Costs by DIF Land-use Type

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units (1)	$822,962	$728/Unit
Attached Dwelling Units	$1,862,055	$693/Unit
High Density Dwelling Units	$15,107,034	$693/Unit
Mobile Home Units	$77,586	$817/Unit
Commercial Lodging Units	$69,273	$462/Unit
Retail/Service Uses	$4,231,189	$0.518/S.F.
Office Uses	$6,658,511	$0.319/S.F.
Business Park Uses	$252,153	$0.036/S.F.
Industrial Uses	$1,102,825	$0.036/S.F.
Institutional Uses	$4,949	$0.014/S.F.

The Relationship Between the Use of the Fee and the Type of Development Paying the Fee. The *use of the fee* is equivalent to the *need for the fee*. The DIF would be collected as the development occurs (generally at building permit or some predetermined point in the process). As the development occurs, the impact is generated. The collected DIF receipts would be put to use to acquire additional fire-fighters assigned and specialty equipment, emergency response vehicles and an additional fire station necessary to respond to those additional calls-for-service, without reducing the capability of responding to calls from the existing community.

The Relationship Between the Amount of the Fee and the Cost of the Portion of the Facility Attributed to the Development Project. The new land, facilities, vehicles and equipment for the Ontario Ranch area are fully attributed to new development in that area. Station completion and relocations in the General City are also fully attributed to the General City area development. For projects that benefit both areas, the calls-for-service data was used to distribute responsibility. As an example, projects FS-015, FS-017, FS-018 and FS-019 will benefit both existing and all future residents and businesses, thus calls-for-service for the existing community (43.96%), OR (33.00%) and GC (23.04%), or the percentage that each represents of the total General Plan build-out calls-for-service. Detail regarding the full acquisition cost of the existing project is outlined in the *Master Facilities Project* detail page. The relationship for each project is identified on the individual detail project pages in the *MFP*.

The current community's commitment has been to establish the existing eight-station and training facility capability paid for via past General Fund receipts. To allow future residents to benefit by use of all of the capital needs without contributing additional assets, would be clearly unfair to the existing residents and would reduce their current level of service. Table 4-3, following, summarizes the distribution of the $175,163,942 in replacement costs to the existing residents and business owners (Schedule 4.3 details this distribution).

The replacement value of the existing fire infrastructure (stations, response fleet and related safety equipment) of $175,163,942 represents the current equity investment or *financial commitment* towards fire suppression capability by the existing community. When this figure is distributed over the existing community in the same manner as the future costs, by the land use demands, an investment, or financial "commitment" (or equity for that matter) per unit can be determined. As an example, each attached dwelling unit has invested about $2,394 into fire suppression capital while the proposed DIF is nearly one third as much at $728 per attached dwelling.

[This space left vacant in order to place the following table on a single page].

Table 4-3
Existing Fire Suppression Community
Financial Commitment Comparison Data

DIF Land-use Type	Allocation of Development Costs	Asset/Equity Investment Per Unit or Square Foot
Detached Dwelling Units	$65,704,702	$2,394/Unit
Attached Dwelling Units	$27,435,426	$2,276/Unit
High Density Dwelling Units	$10,952,302	$2,276/Unit
Mobile Home Dwelling Units	$5,567,268	$2,655/Unit
Commercial Lodging Units	$8,838,380	$1,521/Unit
Retail/Service Uses	$31,326,136	$1.701/S.F.
Office Uses	$10,396,487	$1.044/S.F.
Business Park Uses	$1,166,302	$0.122/S.F.
Industrial Uses	$12,911,325	$0.121/S.F.
Institutional Uses	$865,615	$0.373/S.F.

Resulting Ontario Ranch Area Development Impact Fee Schedule. The Ontario Ranch area will need to acquire five parcels and construct five stations to serve the 54,428 residential dwellings, 396 commercial lodging units and 36.4 million square feet of business use space which will generate nearly 15,603 annual calls-for-service to privately-held property in that area. In addition, the department will need to acquire additional response equipment, additional training capacity and maintenance capacity. This will cost $76,845,342 to complete the Ontario Ranch footprint fire capital needs. Negative fund balances and outstanding developer credits amount to an additional $13,177,128 in this impact fee fund obligations. This amount is mitigated by a one-time transfer of $3,536,588 from Fund 119 creating a net total amount to be supported by future impact fees to $86,485,882.

When these costs are distributed over the OR land-use database using the calls-for-service nexus rates, the proposed fees are as follows in Table 4-4 (as summarized from Schedule 4.2)

[This space left vacant in order to place the following table on a single page].

Table 4-4
The City's Ontario Ranch Area
Basic Needs-based Fire Suppression Facilities,
Vehicles and Equipment Development Impact Costs
by DIF Land-use Type

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$17,000,077	$1,458/Unit
Attached Dwelling Units	$41,133,867	$1,386/Unit
High Density Dwelling Units	$18,130,829	$1,386/Unit
Commercial Lodging Units	$365,831	$924/Unit
Retail/Service Uses	$5,964,161	$1.037/S.F.
Office Uses	$1,701,671	$0.637/S.F.
Business Park Uses	$715,034	$0.072/S.F.
Industrial Uses	$1,224,981	$0.072/S.F.
Institutional Uses	$249,431	$0.229/S.F.

RECOMMENDED IMPACT FEES

The Existing Community Financial Commitment Comparison (Schedule 4.3) is far greater than the GC Minimum Needs-based Impact Costs (Schedule 4.2), which are necessary and sufficient to maintain the established fire suppressions system in that area. The OR Minimum Needs-based Impact Costs (Schedule 4.4) are necessary and sufficient to establish a fire suppressions system in that area. Schedules 4.2 and 4.4 would be the most equitable fee schedules to adopt for the GC and OR areas respectively.

OTHER NOTES AND ISSUES

1. Newly constructed industrial developments, initially charged the lower industrial use impact fee, often end up being retail/service uses and generate greater demands those of the industrial land uses. If this trend is left unrecognized, the Department, as well as other City services, will be faced with the greater demand from commercial uses, but will be left only with the collection of the lower industrial impact fee rates. To avoid this under-collection, the City should impose an impact fee representing the difference between the retail/service DIF and the previously paid industrial land-use impact fee when a CUP is approved and tenant improvement plans are submitted indicating a commercial use in an industrial zone.

RECAP OF RECOMMENDED FIRE SUPPRESSION IMPACT FEES

- **General City Area**- Adopt Schedule 4.2.
- **Ontario Ranch Area** - Adopt Schedule 4.4.

END OF CHAPTER TEXT

Schedule 4.1

City of Ontario

1). All developer-held "credits" under FINANCIAL ADJUSTMENTS will appear as a positive indicating an additional Infrastructure Fund obligation that will be redeemed (in lieu of a DIF payment) at some point in the future.
2). A negative figure under FINANCIAL ADJUSTMENTS indicates a positive Fund Balance mitigating the project total. A positive figure indicates an amount that needs to be recovered by DIFs.
3). Costs distributed based upon recent actual twelve month Police Department "Calls-for-Service" statistics.

Chapter 5
Circulation (Streets, Signals and Bridges) System

The following Chapter will discuss the Circulation System capital improvements consisting of major street segments, traffic signals and bridges required for the City through build-out of the existing City General Plan as identified in the Land-use Database Table in Chapter 2. Initially, RCS recommends continuation of the calculation of a comprehensive DIF schedule covering all components of the circulation system within the GC (General City) and OR (Ontario Ranch) areas, those three components consisting of major street segments, signals and bridge improvements. The reasons are practical in that combining this infrastructure will provide greater flexibility in establishing priorities in what is essentially a singular transportation issue with a common nexus, a combination of trip-end [4] generation and average trip distance. It is not uncommon that a single circulation capital project involves both a street segment improvement and traffic signal improvement.

The Existing System. The City currently has and maintains an extensive system of roadways available for transportation of goods and services, as well as for educational, recreational, and social purposes. Streets that fall under the jurisdiction of the City of Ontario are classified as one of four types of roadways for the purposes of this Report. The types of roadways are defined in The Ontario Plan Mobility Element.

Other Principal Arterial – This type of roadway typically has a 14' to 36' raised median that separates anywhere from four to eight lanes of traffic. This type of roadway may also have multi-purpose trails. The Other *Principal Arterial* contains the greatest portion of through-travel use and includes all higher-volume streets except those serving short trips.

Minor Arterial – Unlike the Other *Principal Arterial*, a *Minor Arterial* usually does not have a raised landscaped median. This type of roadway can accommodate four to six lanes of traffic and usually serves local and long distance trips with moderate mobility and considerable land access and connects less concentrated traffic generating areas such as schools, neighborhoods, and shopping centers.

Collector Street – A *collector street* does not have a raised landscaped median and can accommodate two to four lanes of traffic. This type of roadway serves mixed trips and provides service to abutting land and collects traffic from local streets.

Local Street – *Local streets* service residential areas and provide little long distance mobility. They are typically not striped but accommodate one lane of traffic in each direction. The curb-to-curb roadway width ranges from 36' to 48'. In general,

4 A *trip* is defined as a series of one or more trip-ends. A trip-end is a single stop in a trip. As an example, a drive from home to work is a trip. Each individual stop along the way along the way to drop children off at a school, buy gas, get a lunch, drop off laundry and the ultimate arrival at work or home is a trip-end. The term *trip* has no effect on the calculation and only means *a drive*.

construction of these streets is the responsibility of the developer, who then dedicates the completed street to the City. The City will accept the street improvements and the responsibility to maintain them if they meet City's requirements. For these reasons, the cost of all "local" streets has not been included in the Circulation System financial commitment calculation or the proportionality test.

GENERAL CITY DEVELOPMENT IMPACT FEES

Demand Upon Infrastructure Created by the Development of Undeveloped Parcels. Undeveloped parcels create few trip-ends beyond an occasional visit to the site for weed abatement purposes, planning purposes or to consider a sale or development of the vacant parcel. None of these trip-ends are not on a routine basis. However, a developed parcel will generate a statistically predictable amount of trip-ends and trip-miles, depending upon the specific land use of the development. Thus it can be stated that a vacant parcel, when developed into a specific use, i.e., residential or business, will generate more traffic than it did when it was vacant. Similarly, a change in the use of the property may increase or decrease the number of trip-ends, i.e., the demolition of a low trip-generating insurance office into reconstruction as a new a high trip generating fast-food restaurant.

All new development contributes to cumulative traffic impacts, which are difficult to measure and mitigate on a project-by-project basis but which have significant and widespread cumulative impacts on the City's existing road system. Factors that will increase the competition for existing major street segment lane miles existing in General City area include the following:

- The construction of 66.7 million square feet of private business uses on the net 2,598 under or undeveloped acres will generate 2.36 million additional daily trip-miles or about 84.9% of the total new trip-miles expected at GC General Plan build-out. This figure could vary significantly depending upon the type of commercial uses constructed and possible zoning changes or conditional use permits issued.

- An increase in the City's GC full-time population through the construction of about 25,721 additional dwelling units contributing approximately 414,498 new (net) daily trip-miles or just over 15.0% of the newly expected daily trip-miles.

- The addition of about 150 commercial lodging units will generate about 2,736 trip-miles, or about three tenths of one percent of the total new trip-miles.

When all (or most) of the available vacant land in the General City is developed, the City can expect an additional 2,770,597 daily trip-miles. For perspective, the City currently experiences an estimated 5,908,482 daily trip-miles from/to the existing residences and businesses. The roughly 2,770,597 newly anticipated trip-miles represent about a 46.9% increase over the current 5,908,482 daily trip-miles.

The **Purpose** of the Fee. In General City, most of the planned arterials and collectors exist in some form, perhaps not yet fully widened to allow for the full number of lanes. Stated another way, there are few if any opportunities to construct any completely new arterial/collectors. Thus

the collection of Circulation System DIFs become very imperative as a revenue source to finish off these existing, but, limited or incomplete, or not yet maximized roads. The same can be said for bridges, a number of them are included on the list to be completed to their maximum planned width, again maximizing the carrying capacity. Additionally, the fees would be used to complete the system of signals that insures the smooth movement of vehicles through intersections. Efficient signalization (i.e. turn pockets and fully actuated left-turn signals) are also important to keep vehicular traffic moving at the optimum efficiency through major intersections.

Included are transportation projects needed to alter existing arterials, connectors or collectors that currently exist, but due to additional trip-ends are becoming ineffective at moving vehicles.

Again, given the magnitude of growth projected in this Report, numerous intersection improvements and construction of new traffic signals will also be needed to avoid congestion and gridlock in the future. Traffic planners have long known that the most critical constraint in a typical roadway network would be the intersections. While the street capacity may be theoretically adequate to carry traffic volumes at build-out, motorists may experience congestion and even gridlock at the intersections of the street. While the City will certainly undertake numerous major street widening projects, an equally important component of traffic circulation is the installation of traffic signals and lane reconfiguration at critical intersections in the City.

The importance of traffic signals is two-fold. First, the City can build only so many major collector/arterial streets and there are limits as to how many extra lanes they will have. Second, north-south collectors will, by definition, intersect with east-west collectors assuring that *someone* will have to stop, either at a stop sign or a traffic signal. The traffic carrying capacity of each collector can only be maximized by assuring orderly flow of traffic by signalizing those intersecting collectors.

The collection of Circulation System DIFs is not intended to eliminate the time-honored practice of the developer constructing the full width roadway and being reimbursed for the portion greater than would otherwise be required of the developer. This impact fee calculation and resulting fee collection would simply improve the reimbursement capability.

The City's total MFP Circulation System infrastructure section identifies 106 remaining circulation-related projects covering both the General City and Ontario Ranch areas of the City. They have an estimated cost of $1,065,494,324. Approximately 16.27% of this amount or $173,321,022 has been identified as the responsibility of GC development as these projects will increase the capacity of the GC circulation system. Approximately 32.51% or $346,386,801 of the total project amount has been identified as the responsibility of OR Development. The remainder, 51.22% or $545,786,503 are projects that are not development-generated and will require non-DIF revenue sources. Most of this latter amount, about $212.5 million, is necessary for the remaining six planned but very costly grade separations under or over the Alhambra and Los Angeles rail-lines and $185.3 million for two remaining I-10 interchange improvements. The eight grade separations will not be fully financed by DIFs. An additional $27.9 million that is necessary for the pavement rehabilitation system projects will also not be financed from DIFs since they represent maintenance. The individual projects and costs are identified on Schedule 5.1 at the end of the Chapter and detailed in the MFP.

The **Use** of the Fee. The collection of Circulation System DIF schedule receipts would be used to construct the projects (or portions of projects) identified in Schedule 5.1 at the conclusion of this Chapter's text. The collected fees will be used to create additional lane miles, bridge lanes and signals with which to accommodate the additional 2,770,597 daily trip-miles expected from further development of General City.

The Relationship Between the Need for the Fee and The Type of Development Project. Schedule 5.1 identifies the additional traffic to be generated by new development, by type of development. The technical volume, *Trip Generation (Manual)* 7th Edition, produced by the Institute of Traffic Engineers, has been used to identify the *nexus*, or relationship between the type of development and the projected number of trips that development will generate.

A 900-unit detached dwelling specific plan would generate about 31,130 daily trip-miles and a twenty-acre retail/service development would generate 111,504 daily trip-miles. Each would pay its proportionate share of the total 2,770,597 newly created General City trip-miles expected at General Plan build-out. In the case of the detached dwelling residential development, the daily trip-miles generated by the 900 new residences represents about 1.2% of the total 2,770,597 new trip-miles anticipated at build-out, thus they would be required to pay or construct projects on the list to an amount equal to 1.2% of the total development-related project costs. The 20 acre retail/service development would finance 4.0% of the capital project list.

Circulation System Cost Distribution by Average Land-use Trip Frequency/Distance

New Trip Adjustment for *Pass-by* or *Diverted* Trips. Schedule 5.2 contains a sub-schedule that identifies adjustments to new total ***trip-ends***. As an example, an acre of general retail/service use would be expected, on average, to generate about 412 trip-ends daily. However, approximately 15% of those trip-ends, or about 62 trip-ends per day, are ***pass-by trip-ends.*** The ***trip-end*** is not truly an ***end*** but is actually one in a series of stops, i.e. at various commercial establishments, with a different location such as a residence as the final ***trip-end*** or destination of the series of ***trip-ends***. In order to be considered a pass-by trip, the location of the stop must be contiguous to the ***generator*** route [5], i.e. the route that would have been used even if the temporary stop had not been made. The Institute of Transportation Engineers (ITE) indicates that:

> Thus when forecasted trips based upon the trip generation rates are distributed to the adjacent streets, some reduction is made to account for those trips already there that will be attracted to the proposed development. [6]

Pass-by trip-ends are fully adjusted (reduced at 100%) from the average trip-ends (per day) generated by the eight land uses identified in Schedules 5.2 and 5.3.

---

5 An example of a diverted trip-end would be a single trip-end where along the way from work, a motorists evening drive deviates from the normal route taken home at perhaps a preferred grocery store, mail drop, or to pick up a child from a piano lesson before continuing home. Each of these three stops would be considered *diverted* trip-ends.

6 Trip generation, Institute of Transportation Engineers, 1099 14th Street, Suite 300 West, Washington D.C. 20005-3438. Definition of terms, page 147.

A *diverted* trip is similar to a *pass-by* trip-end in that it is an extra stop between, as an example, a motorists' work site and his or her residence. The *diverted* trip differs slightly from the *pass-by* trip in that it requires a minor deviation from the normal ***generator*** route and the temporary stop. In short, a *diverted* trip creates a separate side trip using additional (and different) lane miles from that of the normal route from the motorist's place of employment and his or her residence[6]. These trips increase the traffic volume from the generator route, but only for brief distances. The ITE states that diverted trips:

> are produced from traffic volume on roadways within the vicinity of the generator (route) and require a diversion from that roadway to another roadway with access to the site. These roadways could include streets or freeways adjacent to the generator but without access to the generator [(7)].

These *diverted* trips will be adjusted (reduced at 50%) from the full trip count for each of the land uses identified in Chapter 2. In this case the diverted trip ends result in a further reduction of 82 trip-ends daily of the full impact. Thus the original 412 daily trip miles resulting from the one acre of commercial use nets to a lower 268 additional trip ends per day.

Again, the sub-schedule at the bottom of Schedule 5.2 indicates the total trip-ends and the reduction due to the number pass-by trips (at 100%) and diverted trips (at 50%). The trip pass-by and diversion percentages were generated and are supported by a study conducted by the San Diego Association of Governments (SANDAG) in conjunction with various U.S. and California government agencies [(8)].

Additionally, the same SANDAG data schedule referenced above provides information for a trip distance factor component to the nexus. Based upon that data, a trip to an industrial work-site has the greatest distance at 9.0 miles. A trip to an office averages 8.8 miles, residential trips average 7.9 miles, a trip from a hotel or motel (once in residence) averages 7.6 miles, and an average trip to a retail/service site is the shortest at 4.3 miles. This indicates that drivers generally appear willing travel further distances to work and for treatment at medical offices than they are to shop. Both frequency (trip-ends) and distance (average miles per trip) have been combined into the nexus by multiplying average trip frequency by average trip distance. Tri-mile rates have been calculated for the ten DIF land-use categories. They are demonstrated at the bottom of schedule 5.2 at the end of the Chapter.

The Relationship Between the Use of the Fee and the Type of Development Paying the Fee. There is very little difference between this and the above category. The fee collected will be based on the projected number of trip-ends the proposed development will generate in relationship to the total 2,770,597 additional projected trip-miles at build-out. Any amount imposed as a Circulation System DIF will be placed in a separate fund (collecting interest), and is to be used only on the projects identified on Schedule 5.1 as development-related.

---

7 Institute of Transportation Engineers, 1099 14th Street NW, Suite 300 west, Washington D.C. 2005-3438, Definition of Terms, page 146.

8 *Traffic Generators*, San Diego Association of Governments, 401 B Street, Suite 800, San Diego, CA 92101. Brief Guide to Traffic Generators Rates. Compiled in conjunction with the U.S. Department of Housing and Urban Development. U.S. Department of Transportation, The California Department of Transportation and the U.S. Environmental Protection Agency, July 1995.

From time to time the City may require an applicant for a private project to construct a street or signal improvement (or portion thereof) that is on the list of required improvements at the end of this Chapter. This method is often undertaken to expedite the project at the request of the applicant/developer. The developer should receive a credit for any monies expended on this required improvement against their Circulation System DIF.

The Relationship Between the Amount of the Fee and the Cost of the Portion of the Facility Attributed to the Development Project. The calculation of the Circulation System DIFs is based upon the recognition that differing types of developments generate differing amounts of trip-miles. The fee is based upon the projected number of trips generated by the proposed private development project. Circulation DIF receipts will be accumulated until they reach the amount that could construct a meaningful project to alleviate or mitigate the demands of those new developments. Table 5-1 (summarized from Schedule 5.2) on the following page identifies the Minimal Needs-based Circulation System DIF schedule for General City.

Table 5-1
City of Ontario's General City Area
Basic Needs-based Circulation System
Development Impact Costs
by DIF Land-use Type

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units (1)	$2,515,209	$2,224/Unit
Attached Dwelling Units	$3,991,517	$1,485/Unit
High Density Dwelling Units	$20,033,840	$919/Unit
Mobile Home Units	$110,140	$1,159/Unit
Commercial Lodging Units	$175,915	$1,173/Unit
Retail/Service Uses	$36,687,107	$4.494/S.F.
Office Uses	$53,665,521	$2.568/S.F.
Business Park Uses	$18,622,728	$2.672/S.F.
Industrial Uses	$42,209,456	$1.377/S.F.
Institutional Uses	$127,821	$2.934/S.F.

(1). Detached Dwelling Units indicates a negative due a reduction in those units in GC

This set of proposed fees would generate the Minimum needs amount of revenue necessary to construct the needed street, signal and bridge construction projects. These figures then need to be compared to the financial commitment demonstrated by the existing community.

Alternative Cost Methodology. A more precise calculation of costs for specific types of land uses (i.e., banks, hospitals, convalescent residences, etc.) can be determined by multiplying the average cost per trip of $64.30 by the applicable daily trip-mile rate. An example of this calculation can be found at the bottom of Schedule 5.2 and applied to Table 5-2, following.

These tables list trip rates and costs for various residential, resort, industrial and commercial developments. A fee system based on a lengthy schedule of trip rates theoretically provides more accuracy and therefore financial commitment in determining specific uses' impact on the City's circulation system, but at the same time may increase the City's costs to administer the fee. A more extensive listing of traffic generators by land use is available in *Trip Generation* as published by the Institute of Transportation Engineers, New York, NY.

[This space left vacant to place the following table on a single page].

Table 5-2
Detail of Circulation System Basic Needs-based Development (rounded) Impact Fees for Specific General City Area Commercial/Office Uses

Land Use Category	Adjusted Trip-ends	Average Distance	Trip-end to Trip	Additional Trip-miles	Cost per Trip-mile	Cost per 1,000 Square Feet or Dwelling Unit
RESIDENTIAL LAND USES (per Unit):						
Detached Dwelling Unit	8.76	7.9	0.5	34.60	$64.30	$2,224 /Unit
Apartment	5.85	7.9	0.5	23.1	$64.30	$1,484 /Unit
Condominium/Townhome	5.36	7.9	0.5	21.2	$64.30	$1,363 /Unit
High Density Dwelling	3.61	7.9	0.5	14.3	$64.30	$918 /Unit
Mobile Home Dwelling	4.57	7.9	0.5	18.1	$64.30	$1,185 /Unit
RESORT/TOURIST (per Unit or Entry Door):						
Hotel (multi-story)	6.29	7.6	0.5	23.9	$64.30	$1,537 /Room
All Suites Hotel	3.77	7.6	0.5	14.3	$64.30	$919 /Room
Motel	4.34	7.6	0.5	16.5	$64.30	$1,061 /Room
INDUSTRIAL (per 1,000 SF):						
General Light Industrial	6.17	9.0	0.5	27.8	$64.30	$1,788 /KSF
Heavy Industrial	5.97	9.0	0.5	26.9	$64.30	$1,730 /KSF
Manufacturing	2.73	9.0	0.5	12.3	$64.30	$791 /KSF
Warehousing	4.39	9.0	0.5	19.8	$64.30	$1,273 /KSF
MISCELLANEOUS BUSINESS USES (per 1,000 SF):						
Office Park	9.08	8.8	0.5	40.0	$64.30	$2,572 /KSF
Research Park	7.18	8.8	0.5	31.6	$64.30	$2,032 /KSF
Business Park (Specific)	11.29	8.8	0.5	49.7	$64.30	$3,196 /KSF
RETAIL/SERVICE USES (per 1,000 SF):						
Building Material Store	29.35	4.3	0.5	63.1	$64.30	$4,057 /KSF
Garden Center	23.45	4.3	0.5	50.4	$64.30	$3,241 /KSF
Movie Theater	2.47	4.3	0.5	5.3	$64.30	$341 /KSF
Church	5.92	4.3	0.5	12.7	$64.30	$817 /KSF
Medical-Dental Office	22.21	8.8	0.5	97.7	$64.30	$6,282 /KSF
General Office Building	7.16	8.8	0.5	31.5	$64.30	$2,025 /KSF
Shopping Center	30.20	4.3	0.5	64.9	$64.30	$4,173 /KSF
Hospital	11.42	4.3	0.5	24.6	$64.30	$1,582 /KSF
Discount Center	62.93	4.3	0.5	135.3	$64.30	$8,700 /KSF
High-Turnover Restaurant	8.90	4.3	0.5	19.1	$64.30	$1,228 /KSF
Convenience Market	43.57	4.3	0.5	93.7	$64.30	$6,025 /KSF
Walk-in Bank	13.97	4.3	0.5	30.0	$64.30	$1,929 /KSF
Other: (not available "per KSF")						
Cemetary (per acre)	3.07	4.3	0.5	6.6	$64.30	$424.38 /Acre
Service Station/Market (avg	107.69	4.3	0.5	231.5	$64.30	$14,885.45 /FP/Day
Service Station/Car Wash	99.35	4.3	0.5	213.6	$64.30	$13,734.48 /FP/Day

Table 5-3 following, (and summarized from Schedule 5.3) identifies the assets of the existing system (at current construction and acquisition costs). The $910,371,218 consists of the existing circulation plan arterial and collector lanes (along with curb, gutter and sidewalks) at $497,485,472, major streets rights-of-way at $218,103,708, street lights with a replacement value of $40,367,100 plus signalized intersections valued at $66,141,600. There are numerous existing bridges over creeks/washes with an estimated replacement value of $63,790,000. The existing railroad grade separations have a replacement value of approximately $26,500,000 and a fleet of vehicles costing some $2,801,570. There is also an existing GC negative fund balance of which acts as a negative asset and reduces the total Circulation assets by $4,818,232. When the resulting net $910,371,218 is distributed over the existing community, using the same nexus factor (e.g. trip-miles) used for distribution of future costs, the existing community has contributed the following, on average, by land use:

Table 5-3
Existing Circulation System Community
Financial Commitment Comparison Data

DIF Land-use Category	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$146,284,782	$5,329/Unit
Attached Dwelling Units	$42,879,331	$3,558/Unit
High Density Dwelling Units	$10,593,681	$2,202/Unit
Mobile Home Units	$5,827,256	$2,779/Unit
Commercial Lodging Units	$16,327,257	$2,810/Unit
Retail/Service Uses	$198,335,956	$10.768/S.F.
Office Uses	$61,294,047	$6.155/S.F.
Business Park Uses	$61,387,419	$6.403/S.F.
Industrial Uses	$351,138,113	$3.300/S.F.
Institutional Uses	$16,303,375	$7.031/S.F.

It should be noted that the existing community has contributed, on average, much more than would be required of future development to meet the minimum needs for build-out and all users. While there is clearly excess capacity in the existing system, it is usually the result of the existing community absorbing the initial street construction costs including the costly right-of-way acquisition, the later part of the community often finances only the smaller segment length widening's which maximize the street segments capacity.

Recommended GC Circulation System DIF Schedule. The adoption of Schedule 5.2 at the end of the chapter (and as summarized in Table 5-1), as the GC Circulation System DIF Schedule would generate enough capital to construct the facilities needed by the new development. In addition, the City should adopt the application of the *per trip-mile fee* from the bottom of Schedule 5.2 and multiplied by the specific use Table 5-2 or the listing of traffic generation by

land use available in *Trip Generation* as published by the Institute of Transportation Engineers, New York, N.Y.

ONTARIO RANCH AREA CIRCULATION SYSTEM DEVELOPMENT IMPACT FEES

The Ontario Ranch has its own major street segment, signal and bridge needs. The increased standards are due to greater understanding of vehicular movement and state-of-the-art traffic planning. Were the transportation needs of The Ontario Plan to be included in a single Ontario City DIF, the GC area would unfairly have to subsidize the OR area, something that the current residents and businesses in GC would not care to undertake. Indeed, RCS was given the direction that there is every expectation that the OR area would, at a minimum, pay their own way and where appropriate, pay their fair share.

The Use of The Fee. This fee will be primarily used to construct additional or "extra" lane miles. "Extra" lane miles are defined as the outside two lanes of a four-lane road, the outside four lanes on a six lane arterial, or the outside six lanes on an eight lane arterial. This calculation is intended to create greater equity among privately owned parcels with differing contiguous lane configurations. Consider that some private parcels will be contiguous to six lane streets and could be exacted to build one half of the six lanes, while other private parcels may be contiguous to a planned two lane avenue and would only be exacted to construct one half of the two lanes, or two lanes with a reimbursement for one of the lanes when the parcel on the opposite side is developed. The inequity is obvious; those contiguous to the larger capacity-carrying road types quite often pay a greater amount.

Construction Responsibility vs. DIF Payment. This DIF assumes that each developer, contiguous to a planned Major Street would:

- Dedicate the needed right-of-way and would be responsible for last lane of asphalt concrete or PCC and the median area (approximately 40 feet wide);
- Construct the parkway landscaping; and,
- Construct the curb, gutter, sidewalk, striping and street lights.

However, construction of the extra lanes would be financed by the Circulation System DIF, contributed to by all development within the OR area, thereby leveling the playing field between privately held parcels contiguous to a six lane collector as opposed to those privately held parcels contiguous to a two lane minor arterial. A given developer may undertake the actual construction of the *extra* lanes at the same time that they construct the *first* lane, but they would receive a reimbursement for construction of those *extra* lanes.

The City staff, through various documents, studies and agreements with other governmental agencies has identified a net $346,386,801 in necessary streets (in "extra" lane miles), signals bridges and other circulation system projects necessary to accommodate the 2,618,742 additional trip-miles in the OR are of the City. Included in these costs are a number of projects identified by other agencies such as SANBAG and CALTRANS. This figure is increased by $31,129,155 via a combination of owed outstanding developer credits and negative fund

balances to a total of $377,515,956 to be recovered from future DIF collections. This calculates to approximately $144.16 per daily trip-mile.

The DIF Adoption Ordinance should contain the necessary language for identifying the process for calculating the reimbursement amount for the construction of *extra* lanes. Table 5-4, following and summarized from Schedule 5.4, identifies the DIFs necessary to collect in order to foster the construction of the transportation system within the confines of the Ontario Ranch area. These are recommended for adoption.

Table 5-4
City of Ontario's Ontario Ranch Area
Basic Needs-based Circulation System
Development Impact Costs
by DIF Land-use Type

DIF Land Use Type	Allocation of Development Costs	Development Impact Cost per Unit or Square Foot
Detached Dwelling Units	$58,149,528	$4,986/Unit
Attached Dwelling Units	$98,828,970	$3,329/Unit
High Density Dwelling Units	$26,946,252	$2,060/Unit
Commercial Lodging Units	$1,041,262	$2,629/Unit
Retail/Service Uses	$57,947,273	$10.075/S.F.
Office Uses	$15,375,740	$5.758/S.F.
Business Park Uses	$59,268,746	$5.991/S.F.
Industrial Uses	$52,434,189	$3.088/S.F.
Institutional Uses	$7,163,995	$6.579/S.F.

ONTARIO RANCH CIRCULATION SYSTEM DIF SCHEDULE RECOMMENDATION

The DIFs for the nine broad land uses, as identified in Table 5-5 and Schedule 5.4 are recommended as the required set of fees with the option for the staff to apply the *per trip fee* calculated at $144.16 per trip-end from Schedule 5.4 multiplied by the specific use on Table 5-5 or the more extensive listing of traffic generation by land use available in *Trip Generation* as published by the Institute of Transportation Engineers, New York, N.Y.

[This space left blank to place the following table on one page].

Table 5-5
Detail of Circulation System Basic Needs-based DIFs (rounded) for Specific Ontario Ranch Area Business Uses

Land Use Category	Adjusted Trip-ends	Average Distance	Trip-end to Trip	Additional Trip-miles	Cost per Trip-mile	Cost per 1,000 Square Feet or Dwelling Unit
RESIDENTIAL LAND USES (per Unit):						
Detached Dwelling Unit	8.76	7.9	0.5	34.60	$144.16	$4,987 /Unit
Apartment	5.85	7.9	0.5	23.1	$144.16	$3,329 /Unit
Condominium/Townhome	5.36	7.9	0.5	21.2	$144.16	$3,056 /Unit
High Density Dwelling	3.61	7.9	0.5	14.3	$144.16	$2,060 /Unit
Mobile Home Dwelling	4.57	7.9	0.5	18.1	$144.16	$2,630 /Unit
RESORT/TOURIST (per Unit or Entry Door):						
Hotel (multi-story)	6.29	7.6	0.5	23.9	$144.16	$3,445 /Room
All Suites Hotel	3.77	7.6	0.5	14.3	$144.16	$2,061 /Room
Motel	4.34	7.6	0.5	16.5	$144.16	$2,379 /Room
INDUSTRIAL (per 1,000 SF):

Service Station/Car Wash	99.35	4.3	0.5	213.6	$144.16	$30,792.42 /FP/Day

RECAP OF RECOMMENDED CIRCULATION SYSTEM DEVELOPMENT IMPACT FEES

- **General City Area** - Adopt Schedule 5.2 for most land-uses and the per trip-end rate on Schedule 5.2 to be used in conjunction with the most current edition of ITE manual (and the trip length figures (via SANDAG) at the bottom of Schedule 5.2) for unusual land-uses (e.g. an amusement park).

- **Ontario Ranch Area** - Adopt Schedule 5.4 for most land-uses and the per trip-end rate on Schedule 5.4 to be used in conjunction with the most current edition of ITE manual (and the trip length figures (via SANDAG) at the bottom of Schedule 5.2) for unusual land-uses (e.g. an amusement park).

NOTES:

(1). All developer-held "credits" under FINANCIAL ADJUSTMENTS will appear as a positive indicating an additional Infrastructure Fund obligation that will be redeemed (in lieu of a DIF payment) at some point in the future.

(2). A negative figure under FINANCIAL ADJUSTMENTS indicates a positive Fund Balance mitigating the project total. A positive figure indicates an amount that needs to be recovered by DIFs.

(3). Costs distribution based upon a frequency and distance factor.

Chapter 6
Storm Drainage Collection System Facilities

Storm Drainage collection system is an infrastructure that will also consist of two DIF schedules, one for each of the GC (General City) and OR (Ontario Ranch) areas of the City. Again this is due to significantly differing capital needs of the two areas. The first part of this chapter will be directed at explaining the nexus and the specific GC Storm drainage DIFs. The remainder of the Chapter will address the OR area needs and the resulting OR DIF schedule.

GENERAL CITY STORM DRAINAGE FACILITIES IMPACT FEES

The Existing GC System. The City's existing storm drainage network is composed of street gutter facilities, inlets and a network of storm drain pipe-lines which convey run-off to larger pipelines, washes and creeks located throughout the City ultimately leading into the Santa Ana River. However, as the City continues to develop vacant parcels with rooftops, parking lots and driveways, the existing City-owned storm drainage lines will reach capacity and the ability of the existing drainage lines to collect additional run-off from developing areas will diminish regardless of the availability of a good system of wash channels. Additionally, there are areas in the City, such as near safety facilities such as the Police Station (existing and future) and numerous fire stations that require storm drainage improvements to insure adequate safety response times to a few large vacant areas to be developed.

City records indicate that the existing GC storm drainage system has about 426,568 linear feet of reinforced concrete pipe sized averaging about 50", requiring 1,103 inlet boxes/manholes, 427 junction boxes and 1,706 inlets. The City also has 14,726 linear feet of concrete channel.

Property-based Benefit Reasoning. Initially, the use of separate zones was reconsidered for each drainage basin within the City because each area has its own capital needs for storm-water collection. Storm-water run-off from south of SR-60 may not directly impact the homeowner north of Mission Avenue; similarly, a small debris detention basin near Auto Center Drive required to handle run-off from the businesses in that area may provide little direct benefit to a business in the downtown area of the City. In each case, there can be some distinct property-related areas of benefit for each drainage basin. However, the owners and users of all developed and undeveloped parcels benefit, directly and indirectly, from all City-wide existing and future storm drainage improvements. As the various systems within the greater community of the City of Ontario develop, concurrent with development of private property, the benefits are generally recognized as:

1. Proposed development projects can only be approved by the City when precautions, generally in the form of infrastructure improvements, have been made that assure that developed and undeveloped downstream parcels will not be adversely affected (i.e., inundated, flooded, cut off from access in and out), by storm water from the project being proposed. The avoidance of downstream or down-zone damage from the development of an upstream parcel may not be a major concern to a developer, but the City must concern itself with such issues when approving private development proposals.

2. The private development being assessed a DIF will receive the same storm-water protection from other development projects upstream or up-zone from its own development.

3. Storm water must be adequately controlled and removed to large scale flood control channels or creeks to assure access by public safety vehicles to all parts of the City, regardless of which zone a call-for-service is in. Fire and other rescue calls, as well as law enforcement and public works responses, cannot wait during heavy rainstorms. To the contrary, emergency calls-for-service probably increase during such storm events and the City's public safety and maintenance units must be able to respond, ***to all zones***.

4. The City of Ontario's citizens and business owners/employees must also be able to travel safely (and send/receive goods and services) in heavy rain through one zone to another. An adequate and sufficient storm drainage system will provide such protection.

5. Storm drainage collection pipes protect the integrity of the road bed of the very important arterials and collectors.

RCS recommends continuation the single zone storm drainage fee for GC. Storm water will leave one part of the City and pass through other portions the Santa Ana River riverbed area.

Demand Upon Infrastructure Created by the Development of Underdeveloped or Undeveloped Parcels. The construction of flood control and storm drainage facilities is essential to the preservation of private property, public streets, curbs and other facilities. The county or a regional level of government is generally responsible for *flood control* [9], and cities are generally responsible for *storm drainage*. The building of new residences and businesses on presently undeveloped land will increase the amount of *runoff* and thus accelerate the need for additional storm drainage facilities to handle increased *runoff* from these developing areas. As the vacant land is developed and bare dirt or turf is replaced with impervious rooftop, parking lots, driveways, pools, and sidewalks, greater rainfall amounts *run off* of the developed parcel.

The amount of the run-off varies with differing types of development (i.e. land-use) and the varying amounts are referred to as the *run-off coefficients*. Approximately 0.775 (or 77.5%) of rainfall that falls on a parcel developed with detached dwelling residences, is not absorbed by that parcel and for the most part exits that developed parcel. The rate for an attached dwelling run-off is not much higher than a detached dwelling at 0.810 (81.0%). Most business uses such as lodging, retail/service, office, industrial and institutional have a run-off coefficient in excess of 0.900 or 90.0% with the exception of Business Park at a slightly lesser 0.875 or 87.5%.

Clearly, rainfall run-off increases with development. The cumulative effects of additional run-off must be managed with the appropriate capital facilities. These costs of the new storm drainage

[9] Projects of major importance generally involving the control of large quantities of flood water through numerous cities and unincorporated areas.

(and flood control revenue shortages) will be distributed by the coefficients of drainage, i.e., the percentage of property that will end up with impervious coverage such as asphalt or cement-based concrete drives or parking lots, rooftop, pools and any other hard surface that does not allow any absorption into the soil.

The **Purpose** of the Fee. The costs of extending the same level of storm drainage protection to the newly developing residences and businesses as is provided to the existing community (that has largely paid for the existing system) can be calculated, a fee imposed and collected. The Fee revenues can then be used to expand the storm drainage facilities necessary to extend that same level of services. The City staff has identified a total of $299,014,967 in storm drainage projects required to fully complete the City's network of pipes and small channels. Development within the General City area is responsible for $68,710,652 of that project estimate amount. The existing General City area Storm Drainage DIF Fund balance of $9,726,169 acts to reduce that figure while credits to developers that have constructed some portions of the GC storm drainage system increases the project totals by $2,694,792 netting to a reduced final figure of $61,679,275. That figure has been identified as Category "A" projects in the Master Plan of Drainage, which include mainline storm drain facilities that will relieve flooding in areas within GC without any current storm drain facilities.

Category C projects (Ontario Ranch), consisting of projects to service future development, mostly within the OR, include $138,667,242 in OR Storm Drainage DIF projects. Category C projects have combined outstanding credits (a negative that must be collected) total of $29,649,054 while there is a positive fund balance of $10,614,169 for a net increase to the $138,667,242 of $19,034,885 to $157,702,127. This will be discussed later in the Report.

The Use of the Fee. The construction of flood and storm drainage facilities in the City of Ontario is essential to the preservation of public and private property. The San Bernardino County Flood Control District (SBCFCD) is the agency responsible for planning, construction, operation and maintenance of regional flood control facilities for this region. The SBCFCD will consider taking responsibility for storm drain facilities that convey storm water run-off greater than 750 cfs or from drainage areas that are greater than 640 acres. The City is typically responsible for the collection of local storm water run-off below those thresholds.

The building of new residences and businesses on presently undeveloped land will require the installation of additional storm drains of sufficient capacity with an adequate number of inlets to handle increased rainwater run-off from these areas where development reduces natural absorption opportunities. This Chapter reviews the costs of storm drainage and flood control facilities needed to serve future development.

The revenues raised from a properly calculated and supported Storm Drainage Collection Facilities DIF would be limited to the capitalized costs related to that growth. The fees would be used to construct the additional or parallel storm drainage lines necessary to increase the drainage capacity of the system to accommodate the additional rainwater run-off generated by the continued development. Conversely, the Storm Drainage Collection System DIF receipts would not be used to repair, replace or rehabilitate any existing storm drainage lines. The limited

exceptions would be if the replacement or rehabilitation project creates additional capacity, in which case that proportional amount of additional capacity could be included as a DIF cost.

The Relationship Between the Need for The Fee and The Type of Development Project. Upon the identification of the costs of storm drainage facilities generated by future development, costs must be further distributed for each of the land uses (i.e., business and residential uses) based on their estimated rainwater run-off. Residential detached dwelling development leaves the greatest remaining turf percentage per parcel and thus the greatest percolation, and conversely the least run-off of rainwater. As such, the detached dwelling residential land use should not bear the same cost as the institutional or industrial development, which generally have little or no turf area (or stated another way, a higher percentage of impervious area) and therefore generates a higher amount of rainwater run-off. For this Report, costs were distributed between land uses on established run-off coefficients. A listing of these run-off coefficients is provided in Table 6-1[10] following.

Table 6-1
Storm Drainage Run-off Coefficients
(By Acre)

DIF Land-use Type	Run-off Coefficient
Detached Dwelling Units	0.775
Attached Dwelling Units	0.810
High Density Dwelling Units	0.900
Mobile Home Dwelling Units (GC)	0.800
Commercial Lodging (keyed) Units	0.900
Retail/Service Uses	0.900
Office Uses	0.900
Business Park Uses	0.875
Industrial Uses	0.950
Institutional Uses	0.950

As stated earlier, the General City area requires $61,679,275 in *Category A* storm drainage projects. Table 6-2, following, demonstrates the DIF schedule that would need to be imposed to fully fund the completion of the *Category A* storm drainage system's collection of pipes and channels identified in the Master Plan of Drainage necessary for the GC area of the City. It would not be unreasonable to require development, those generating greater amounts of rainwater run-off, to finance some portion of the identified storm drainage needs providing there is no violation of the proportionality requirement. Table 6-2 indicates the resulting fees required

10 *San Bernardino Hydrology Manual* (1986). Williamson and Schmidt, Irvine, CA , Figure C-4.

to fully fund the *Category A* (General City) projects. Please note that the DIF, by land use, is in terms of *units* such as residential dwellings or business square feet of building pad (adjusted for multiple floors).

Table 6-2
City of Ontario's General City Area
Minimal Needs-based Storm Drainage System
Development Impact Costs
by DIF Land-use Type

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$3,847,370	$3,402/Unit
Attached Dwelling Units	$2,808,646	$1,045/Unit
High Density Dwelling Units	$10,197,756	$468/Unit
Mobile Home Units	$212,216	$2,234/Unit
Commercial Lodging Units	$51,159	$341/Unit
Retail/Service Uses	$16,916,679	$2.072/S.F.
Office Uses	$14,017,651	$0.671/S.F.
Business Park Uses	$5,653,577	$0.811/S.F.
Industrial Uses	$7,938,220	$0.259/S.F.
Institutional Uses	$36,001	$0.856/S.F.

The Relationship Between the Use of the Fee and the Type of Development Paying the Fee. The Storm Drainage DIFs that are imposed and collected will be used to mitigate the storm water run-off generated by the type of development. If the development is a commercial or industrial property generating a significant amount of run-off, the fee collected will be proportionally higher and will be enough to construct the required additions to the storm drainage system downstream from this development.

From time to time the City may require an applicant of a private project to construct an improvement (or portion thereof) that is on the list of required improvements at the end of this Chapter. This is often done to expedite the project for the applicant/developer. The developer should receive a credit for any money expended on this required improvement against their calculated storm drainage impact fee.

The Relationship Between the Amount of the Fee and the Cost of the Portion of the Facility Attributed to the Development Project. Similar to the section above, the relationship is based upon the projected amount of storm water that will need to be collected and safely transported to flood control channels or rivers. The downstream collection lines (lines further down from the proposed project but prior to the outfall into a river/flood control channel) need to be sized to

handle all of the storm-water collected upstream. Storm-water that is collected in one location accumulates feeder lines along the way and thus the downstream system must be built increasingly higher the farther from the water source.

Table 6-3, following, distributes the total equity replacement value of the existing storm drainage system at $245,985,006 over the existing GC developed community. The total consists of the actual existing storm drainage pipe and channel systems at $235,890,545, the existing storm drainage maintenance vehicle allocation of $368,292 and existing GC Storm Drainage Collection System DIF fund balance of $9,726,169. There remains a developer credit of $2,694,792 that acts as a debit to the existing value of the system, in effect it is owed to the developers holding those credits. The combined $243,290,214 development impact cost investment, represents the long term financial commitment contributed by the existing community through dedications (from the developers of these established developments) and tax contributions.

Table 6-3
Existing Storm Drainage Community
Financial Commitment Comparison Data

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$70,339,640	$2,563/Unit
Attached Dwelling Units	$9,956,461	$826/Unit
High Density Dwelling Units	$3,330,901	$692/Unit
Mobile Home Units	$3,129,551	$1,492/Unit
Commercial Lodging Units	$2,467,973	$425/Unit
Retail/Service Uses	$8,232,331	$0.447/S.F.
Office Uses	$5,350,152	$0.537/S.F.
Business Park Uses	$12,433,351	$1.297/S.F.
Industrial Uses	$120,416,777	$1.132/S.F.
Institutional Uses	$7,633,076	$3.292/S.F.

Of note is the fact that in Table 6-3, the investment "equity" of the current community is less than that of the previously exhibited Minimum Needs-based DIFs identified in Table 6-2, indicating that proportionality between the existing community and the future community does not exist. As such, it would not be appropriate to require the undeveloped parcels to finance (via Table 6-3 and Schedule 6.3) the remainder of the Storm Water Collection System needs for the General City area of the City.

Recommended General City Storm Drainage Development Impact Fee Schedule. The adoption of Schedule 6.3 and summarized in Table 6-3 as the Storm Drainage Collection System DIF schedule would generate capital to construct the storm drainage collection facilities needed by the new development in the GC.

ONTARIO RANCH IMPACT FEE CALCULATION

Storm drainage projects related to the construction of private land within Ontario Ranch will be one of the more costly infrastructures necessary for the area at just over a net $157.7 million for the entire system. These projects, identified on Schedule 6.1 listed under the *Construction Needs Generated by New Development in OR* column, are also detailed in the *Master Plan of Drainage.*

Most of the projects fall clearly within the boundaries of the Ontario Ranch area and serve only that area, while others have some shared responsibility with General City. The shared projects include:

- SD-032 - Mill Creek, Chino to County Line Channel,
- SD-069 - Storm Drainage Maintenance Vehicles,
- SD-075 - Storm Drain Master Plan; and,
- SD-103 - Share of Common City Yard Improvements.

Again, as with Circulation System, the City had no desire to annex an area as large as the OR area of Ontario, and then be forced to subsidize the cost of accommodating the storm drainage needs generated by development in that area at the cost of existing residents and businesses. Those that choose to develop vacant parcels in the Ontario Ranch area will need to bear the full costs of the infrastructure required to serve or accommodate that development. Accordingly, all efforts have been made to insure that no projects benefitting new development in the General City have been included in the net $157,702,127 in OR storm drainage capital needs. This cost would be distributed over the 4,727.0 additional acres of impervious surface from OR developments.

Table 6-4, following and summarized from Schedule 6.5, identifies the fee schedule necessary to be applied to the combination of proposed development of the varying land-uses in Ontario Ranch. The costs have been distributed using the same nexus identified earlier in this Chapter as Table 6-1 *Storm Drainage Run-off Coefficients*. The proposed DIFs are as follows:

[This space left vacant in order to place the following table on a singe page].

Table 6-4
Ontario's Ontario Ranch Area Storm Drainage Collection System
Development Impact Fee
by DIF Land Use Type

DIF Land Use Type	Allocation of Development Costs	Development Impact Cost per Unit Or Square Foot
Detached Dwelling Units	$43,662,462	$3,744/Unit
Attached Dwelling Units	$42,202,923	$1,422/Unit
High Density Dwelling Units	$15,642,590	$1,196/Unit
Commercial Lodging Units	$320,691	$810/Unit
Retail/Service Uses	$9,941,418	$1.782/S.F.
Office Uses	$4,062,085	$1.521/S.F.
Business Park Uses	$14,827,005	$1.490/S.F.
Industrial Uses	$25,162,358	$1.482/S.F.
Institutional Uses	$1,880,595	$1.727/S.F.

RECAP OF RECOMMENDED STORM DRAINAGE IMPROVEMENTS DIFS

- **General City** - Adopt Schedule 6.3 for the ten land-uses and the *Cost Distribution per Acre* figure (from the third column from the right side of the Schedule 6.3) for developments that do not involve a building pad, (e.g. additional asphalt parking area).

- **Ontario Ranch** - Adopt Schedule 6.4 for the nine land-uses and the *Cost Distribution per Acre* figure (from the third column from the right side of Schedule 6.4) for developments that do not involve a building pad, (e.g. additional asphalt parking area) or cases where the unit density varies significantly from Schedule 6.4

NOTES:
(1). All developer-held "credits" under FINANCIAL ADJUSTMENTS will appear as a positive indicating an additional Infrastructure Fund obligation that will be redeemed (in lieu of a DIF payment) at some point in the future.
(2). A negative figure under FINANCIAL ADJUSTMENTS indicates a positive Fund Balance mitigating the project total. A positive figure indicates an amount that needs to be recovered by DIFs.
(3). Costs distribution based upon Coefficient of Drainage statistics.

Chapter 7
Water Source, Storage and Distribution Facilities

Assuming that an adequate water supply with appropriate treatment facilities is available, the next critical component needed to accommodate development is an adequate water storage and distribution system. The City's water source, as presently constituted, cannot be expected to completely support the City's existing and future population, especially the near doubling of demand from the Ontario Ranch's over 5,500 acres of private development. In order to meet all future water demands, the City will need to collect sufficient monies for an adequate water supply as well as the construction of new storage reservoirs and distribution lines needed over the short and long term from the development community in order to continue to allow development.

Existing GC System. In addition to the City's distribution system with a replacement value of $496,870,839, the City has well capacities with a replacement value of $115,078,345 and reservoirs at $100,315,860. The City owns Water Facility Authority (WFA) and San Antonio water shares valued at roughly $19,172,187. The system also has PRV stations ($9,403,160), booster stations ($8,159,250), treatment facilities ($17,103,834), altitude valves ($624,668) and a share of the utility maintenance vehicles ($2,678,630). There is also a GC DIF fund balance of $19,923,578. The total assets are $789,330,351. Some of these assets will benefit the Ontario Ranch and the cost will be recovered from development within Ontario Ranch. This recovery will be discussed later.

GC Water Demands, by Land Use. Water use, for residential users was calculated (and planned for) on either a gallon per dwelling unit per day (GPD) basis for residential uses or gallons acre per day (GPAD) basis for business uses in the City's most recent Water Master Plan. Table 7-1 following, indicates the DIF Land-use Type averages that were used as the nexus in the DIF distribution model. Since the City does not have a regional recycled water program in the GC area for the watering of common areas, the capital-needs costs will be distributed over new development based upon potable water demands at the meter and will not include any distributed recycled water demands. The following GC water demands are from the 2012 Water Master Plan.

[This space left vacant to place the following table on a single page].

Table 7-1
General City Water Demand by DIF Land Use Type
Demand in GPD or GPAD

DIF Land-use Type	Gallons (per Unit) per Day	Gallons per Acre per Day
Detached Dwelling Units	544	
Attached Dwelling Units	372	
High Density Dwelling Units	251	
Mobile Residences Dwelling Units	372	
Commercial Lodging Units	150	
Retail/Service Uses		2,200
Office Uses		3,400
Business Park Uses		2,200
Industrial Uses		2,000
Institutional Uses		2,200

Based upon Table 7-2 and the land-use database, the City's water system currently has the capacity (on average) deliver about 40.1 million gallons/day to GC users. This does not include the water demands from public institutions, other non-private uses and system loss. Obviously this is an annual average and seasonal factors could be expected to affect use. Table 7-2, on the following page, indicates the demand for water (on average) for existing development within the City's GC boundaries.

[This space left vacant to place the following table on a single page].

Table 7-2
Existing Community GC Water Demand
in Gallons per Day (rounded)

DIF Land-use Type	Existing Residential Units	Potential Business Acres	Water Demand in GPD or GPAD	Projected GPD Water Demand
Detached Dwellings	27,449		544/Unit	14,932,256
Attached Dwellings	12,050		372/Unit	4,482,600
High Density Dwellings	4,812		251/Unit	1,207,812
Mobile Residences Dwellings	2,097		372/Unit	780,084
Commercial Lodging Units	5,810		150/Unit	871,500
Retail/Service Uses		477	2,200/Acre	1,049,400
Office Uses		310	3,400/Acre	1,054,000
Business Park Uses		741	2,200/Acre	1,630,200
Industrial Uses		6,610	2,000/Acre	13,220,000
Institutional Uses		419	2,200/Acre	921,800
Total Gallons per Day	- - -	- - -	- - -	**40,149,652**

Again using the GPD demand data from Table 7-1 and the land-use database, the City will be asked to deliver an additional net 13.8 million gallons per day (average) to new GC users. Table 7-3, following, indicates the demand for water (on average) for future development within the City's GC boundaries. The 13.8 million gallons daily figure results in a slightly lower actual daily total water demand due to the use of Master Plan land-use demand averages applied to the narrower ten DIF Land-use Types as opposed to the actual broad variety of business uses. This will hold true for Tables 7-2, 7-3 and 7-4. Each of these tables **Total Gallons per Day** will be slightly understated when compared to the Master Plan totals.

[This space required to place the following table on a single page].

Table 7-3
GC Development-generated Additional Water Demand
in Gallons per Day (rounded)

DIF land-use Type	Potential Residential Units	Potential Business Acres	Water Demand in GPD of GPAD	Projected GPD Water Demand
Detached Dwellings	544		544/Unit	615,254
Attached Dwellings	372		372/Unit	999,936
High Density Dwellings	251		251/Unit	5,473,557
Mobile Residences Dwellings	372		372/Unit	35,340
Commercial Lodging Units	150		150/Unit	22,500
Retail/Service Uses		992	2,200/Acre	2,182,400
Office Uses		822	3,400/Acre	2,794,800
Business Park Uses		341	2,200/Acre	750,200
Industrial Uses		441	2,000/Acre	882,000
Institutional Uses		2	2,200/Acre	4,400
Total Gallons per Day	- - -	- - -	- - -	**13,760,397**

The total average daily need (existing and future) water demand is as follows:

Table 7-4
Total General Plan GC Average Day Water Demand at General Plan Build-out (rounded)
in Gallons per Day (rounded)

DIF Land-use Type	Potential Residential Units	Potential Business Acres	Water Demand in GPD or GPAD	Projected GPD Water Demand
Detached Dwellings	28,580		544/Unit	15,547,520
Attached Dwellings	14,378		372/Unit	5,482,536
High Density Dwellings	26,619		251/Unit	6,681,369
Mobile Residences Dwellings	2,192		372/Unit	815,424
Commercial Lodging Units	5,960		150/Unit	894,000
Retail/Service Uses		1,469	2,200/Acre	3,231,800
Office Uses		1,132	3,400/Acre	3,848,800
Business Park Uses		1,082	2,200/Acre	2,380,400
Industrial Uses		7,051	2,000/Acre	14,120,000
Institutional Uses		421	2,200/Acre	926,200
Total Gallons per Day	- - -	- - -	- - -	**53,910,049**

The total projected average daily demand from all GC Ontario privately held acreage at General Plan build-out is about 53.9 million gallons daily. However, build-out of all undeveloped property within the water basin may create water demands a little greater than the existing capacity. The expected increase in average daily demand may require the City to locate additional sources of water beyond the existing annual acre feet capacity or mandate water conservation efforts, including water recycling.

PROJECTS NEEDED FOR PROPER WATER DISTRIBUTION

Utility infrastructure such as water is unique among all City infrastructures. Water demand simply cannot be ignored for long period of times as can be police, fire, streets and park levels of service (LOS). Residents could be asked to allow the number of officers to remain static, or wait a little longer for fire fighters, or even put up with the more congested traffic or more crowded parks. However, a delivered water supply must be in evidence to even *consider* additional growth. Even though Table 7-4 (which does not even consider the significant needs of OR) applies average daily use rates and creates a total demand difficult to imagine, it is apparent that additional water distribution capability is necessary to allow for additional growth. Without adequate water distribution capabilities, development will grind to a stop. It is a prerequisite system.

Since a water distribution system is a prerequisite to development (i.e. there is no development without water), it tends to be a somewhat "front-ended" system, that is, the system develops earlier and the existing community tends to have built more of the system at any point in time than does the remainder of development. That is precisely the case with Ontario's water utility, the GC water system appears to have been front-ended by the existing community.

Schedule 7.1 identifies the water distribution system improvements needed to insure the continued adequate flow of water as needed to proposed development projects. There are 23 remaining water system related capital projects necessary for extending service to new development in GC and OR or maintaining service to existing GC water users with a total of just over $457,793,409 million. Staff has identified fifteen projects (or portions thereof) totaling some $98.7 million for funding by the existing GC water users as either replacements or benefitting only existing users. This figure will not be included in any impact fee calculation.

There is approximately $98.9 million in projects identified as benefitting new development in GC area of the City. This figure is reduced to $78.8 million when the positive fund balance of $19.9 is applied as mitigation factor and was used to calculate the GC DIF schedule.

Approximately $359.1 million in new projects have been identified as benefitting only OR. Added to this OR figure is $4,375,000 in reimbursements for past water system expenses borne by GC water users but benefitting the OR area for a total of $363..5 million. The $4.4 million in reimbursement expenses relate to the proportionate cost borne by the existing water users on the existing system which provides supplemental water supply to the OR under maximum day demand. The water system will have to absorb approximately $46.0 in outstanding developer credits that have been issued when individual developers have constructed projects that were identified on Schedule 7.1. Additionally there is a positive fund balance of $2.3 million in

collection from previous OR DIF payments mitigating the total. The above estimates factors result in a net $407.1 million in projects yet to be completed in the OR area.

CALCULATION OF IMPACT COSTS

This Report identifies two methods of calculating potable and OR recycled water system delivery DIFs and imposing said fees. They are:

- *Standard (Average) DIF Land-use Type DIFs, similar to the other fees in this Report.*
- *An impact fee based upon the meter size needed to serve a development, if needed.*

Standard Use Category DIFs. Table 7-5, following, lists the ten major land uses based upon average water usage statistics, (see Schedule 7.2). Some $485.9 million in new water capital expansion is required in the GC and OR portions of the City. Approximately $78,813,042 of this cost has been identified for GC DIF funding. The $78.8 million is distributed pro-rata over the remaining under-built and totally vacant acreage in the City's General City area as demonstrated in Table 7-5 following.

Table 7-5
City of Ontario's General City Area
Basic Needs-based Water Distribution System
Development Impact Costs
by DIF Land-use Type

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$3,523,941	$3,113/Unit
Attached Dwelling Units	$5,727,160	$2,130/Unit
High Density Dwelling Units	$31,349,944	$1,437/Unit
Mobile Home Dwelling Units	$202,411	$2,129/Unit
Commercial Lodging Units	$128,869	$859/Unit
Retail/Service Uses	$12,499,754	$1.531/S.F.
Office Uses	$16,007,292	$0.766/S.F.
Business Park Uses	$4,296,791	$0.617/S.F.
Industrial Uses	$5,051,679	$0.165/S.F.
Institutional Uses	$25,201	$0.579/S.F.

Cost and Financing of the Existing System. Typically a water system is the oldest service provided by any City. The City's engineering staff has identified the cost of the existing "spine" system, consisting of distribution pipe, wells, valves, reservoirs and shares of water rights to be

$789,330,351. This figure does not include local (tract) lines and connections, estimated conservatively to be in the area of an additional $350.0 million. The system has been constructed from four sources, water user rates (more commonly known as monthly water bills), exactions, DIFs, and requirements of development approval. A portion of that nearly $789.3 million figure is the existing fund balance in the Water System DIF Fund of $19,923,578.

When this nearly $789.3 million in equity is distributed to the existing community based upon the same nexus used to distribute future costs by land use, (see Schedule 7.3) the results indicate that a detached dwelling has contributed, on average, an astounding $10,694 towards the water system. This distributed equity is clearly greater than the distributed *GC – Minimum Needs-based Impact Costs* exemplified in Table 7-5 (and Schedule 7.2) indicating there are no proportionality issues. Table 7-6 following demonstrates the distribution of existing assets.

Table 7-6
City of Ontario's General City Area
Existing Circulation System Community
Financial Commitment Comparison Data
(Not updated in 2017)

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$293,563,762	$10,694/Unit
Attached Dwelling Units	$88,126,598	$7,313/Unit
High Density Dwelling Units	$23,745,229	$4,935/Unit
Mobile Home Units	$15,336,222	$7,313/Unit
Commercial Lodging Units	$17,133,434	$2,949/Unit
Retail/Service Uses	$20,630,895	$1.120/S.F.
Office Uses	$20,721,330	$2.081/S.F.
Business Park Uses	$32,049,253	$3.343/S.F.
Industrial Uses	$259,901,312	$2.443/S.F.
Institutional Uses	$18,122,317	$7.816/S.F.

Necessity of DIF Financing. DIFs are necessary for the construction of the remainder of the water system for one significant reason. Initially, the storage and delivery of water has, for many years, been recognized by most public agencies as a utility. Utilities differ from general tax-supported services in that they are similar to private sector utility businesses. Potable water rates are elastic, within reason, and can be set to meet water delivery costs whereas taxes cannot. Therefore, general taxes must be protected and reserved for services that do not have any such an elastic revenue source such as public safety, park maintenance, storm drainage, and others.

The use of water (consumer benefit) can be measured, unlike many of the City's services. Water rates can, and should be, set to meet the Council's priorities and policies in terms of water use. As a result of the above, the use of general taxes, where no relationship between the rate of taxation and benefit exists, in support of any utility service would be inappropriate.

Recommended GC DIF Schedule. The adoption of Table 7-5, based upon Schedule 7.2 at the end of the chapter, as the water distribution DIFs would generate enough capital to construct the facilities needed by the new development. The DIFs contained on Schedule 7.2 also contain amounts less than the *Existing Community Financial Commitment Comparison* identified in Schedule 7.3 thus do not violate any proportionate requirements.

CREDITS AGAINST DEVELOPMENT IMPACT FEES

The City does not charge *stand-by* water rates. Vacant parcels are not charged water rates and therefore they have not contributed to the capital development of the water system. As a result there can be no credit for previous contributions to capital from vacant parcels, simply because there were none made. Additionally, there have been no General Fund expenditures on water projects.

Credit for Developer Constructed Improvements. Similar to roadway and storm drainage construction, it will likely be advantageous to have the developer construct certain public improvements contiguous to the private development. The adoption of the DIF schedules encourages such agreements. It is recommended that the City continue the process of agreeing to allow developers to construct water system capital improvements, identified within the City's Capital Financing Plan and part of the DIF calculation and then calculating a credit for that project contribution amount. The net DIF would be the amount per the adopted schedules less the credit for the capital constructed by the developer.

ALTERNATIVE GC DEVELOPMENT IMPACT FEE METHODOLOGIES

There are two alternatives to the ten basic GC area DIF categories. They are primarily applicable to the more specific demands by the multitude of differing business uses.

Equivalent EDU Based on Meter Size. The standard detached dwelling residence has a 3/4" meter at 15 gallons per minute normal (minimum-maximum) flow [11] which is defined as the **E**quivalent **D**welling **U**nit, or EDU. Schedule 7.2 indicates that the smallest meter size, 3/4", would cost $3,113 per connection, at the Minimum Needs based DIF schedule rate. The following Table 7-7 indicates the cost for larger meters based upon the normal flow demands, with again, the detached dwelling (detached) residence as the standard. A one inch meter is rated at 25 gallons per minute, which is 1.67 times larger than the 15 gallons per minute than is afforded by a 3/4" meter. Thus the one inch meter fee would be 1.67 times higher ($5,189) than the $3,113 for the 3/4" meter. Other meter sizes are as follows:

11 *Meter Flow Ranges,* based upon *Minimum Maximum Continuous Flow Rates*, American Water Works Association.

Table 7-7
Equivalent Water Meter Size Calculation
Based upon Minimum Needs-based Impact Fees

Water Meter Size	Normal Water Flow (GPM)	Water Demand Factor	Cost per E.D.U (3/4" Meter)	DIF Cost per Meter Size
¾" Meter	15	1.000	$3,113	$3,113
1' Meter	25	1.667	$3,113	$5,189
1 & ½" Meter	50	3.333	$3,113	$10,376
2" Meter	80	5.333	$3,113	$16,602
3" Meter	240	16.000	$3,113	$49,808
4" Meter	420	28.000	$3,113	$87,164
6" Meter	920	61.333	$3,113	$190,930
8" Meter	1,600	106.667	$3,113	$332,054
10" Meter	2,500	166.667	$3,113	$518,834
12" Meter	3,300	220.000	$3,113	$684,860

ONTARIO RANCH WATER SYSTEM IMPACT FEE CALCULATION

Ontario Ranch will need a significant amount of water system improvements in order to accommodate the large scale development planned for the area. Initially, capital requirements consist of $359,056,789 in new wells, reservoirs, transmission mains and other general improvements needed. In addition, there is $4,375,000 in reimbursement to GC water users for system costs previously borne by General City water rate payers for system-wide improvements for which OR users will benefit. There are a total of $45,960,877 in outstanding developer credits to developers for in effect, "overbuilding" beyond their calculated financial responsibility has they simply paid their impact fees. Lastly, there is a small but positive fund balance of $2,344,443. Combined the total of $407,058,223 in costs will be spread over users generating demands of 29,928,527 gallons per day.

OR Water Demands, by Land Use. The 29.9 million gallons per day demand estimate for OR General Plan build-out water use was based upon (and planned for) a gallon per dwelling (GPD) unit per day basis for residential uses or gallons per acre per day (GPAD) basis for business uses per the City's most recent Water Master Plan. Table 7-8 following indicates the DIF Land-use Type averages that were used in the DIF distribution model. The demand rates are based upon the combined potable water required on-site (meter) and the recycled water used for common parkways, parks, neighborhood edges and other suitable uses. It is important to note that while all efforts are being undertaken by the various developers to limit the demand for potable water by residential dwellings and business uses, the amount of recycled water cannot be ignored in the per unit nexus. Those efforts are demonstrated in the "Potable Water Demands" column in Table 7-8 following. However, to meet the potable water needs, the

Master Plan also identified OR projects necessary to maximize that potable use by expanding opportunities to use the recycled water in as many locations as possible. As a result the nexus distribution in Schedule 7.4 is based upon the combined potable and recycled water demand. Table 7-8 follows.

Table 7-8
Ontario Ranch Water Demand by Land Use
Demand in GPD or GPAD

DIF Land-use Type	Potable Water Demands	Recycled Water Demands	Total Gallons per Day (per Unit)	Total Gallons per Acre per Day
Detached Dwelling Units	526	188	714	
Attached Dwelling Units	323	69	392	
High Density Dwelling Units	152	56	208	
Commercial Lodging Units	150	150	300	
Retail/Service Uses	2,200	2,632		4,832
Office Uses	3,400	1,563		4,963
Business Park Uses	2,200	2,045		4,245
Industrial Uses	2,000	2,795		4,795
Institutional Uses	2,200	1,545		3,745

The results are detailed in Schedule 7.4 and (identified in Table 7-9) following and are recommended as the OR Water Source, Storage and Distribution System DIF schedule.

[This space left vacant in order to place the following table on a single page].

Table 7-9
City of Ontario's Ontario Ranch Area
Basic Needs-based Water Distribution System
Development Impact Costs by DIF Land-use Type

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$113,251,103	$9,711/Unit
Attached Dwelling Units	$158,263,104	$5,332/Unit
High Density Dwelling Units	$37,009,112	$2,829/Unit
Commercial Lodging Units	$1,615,800	$4,080/Unit
Retail/Service Uses	$18,335,904	$3.188/S.F.
Office Uses	$7,695,207	$2.882/S.F.
Business Park Uses	$24,711,133	$2.483/S.F.
Industrial Uses	$43,630,071	$2.569/S.F.
Institutional Uses	$2,546,789	$2.339/S.F.

ALTERNATIVE OR DEVELOPMENT IMPACT FEE METHODOLOGIES

There are two alternatives to the nine basic OR area DIF categories. They are primarily applicable to the more specific demands by the multitude of differing business uses.

Equivalent EDU Based on Meter Size. The standard detached dwelling residence has a 3/4" meter at 15 gallons per minute normal (minimum-maximum) flow [12] which is defined as the **E**quivalent **D**welling **U**nit, or EDU. Schedule 7.4 indicates that the smallest meter size, 3/4", would cost $9,711 per connection, at the Minimum Needs based DIFs rate. The following Table 7-10 indicates the cost for larger meters based upon the normal flow demands, with again, the detached dwelling (detached) residence as the standard. A one inch meter is rated at 25 gallons per minute, which is 1.67 times larger than the 15 gallons per minute than is afforded by a 3/4" meter. Thus the one inch meter fee would be 1.67 times higher ($16,188 than the $9,711 for the 3/4" meter. Other meter sizes are as follows in Table 7-10:

[This space left vacant in order to place the following table on a single page].

12 *Meter Flow Ranges* based upon Minimum Maximum Continuous Flow Rates, American Water Works Association.

Table 7-10
Equivalent Water Meter Size Calculation
Based upon Minimum Needs-based Impact Fees

Water Meter Size	Normal Water Flow (GPM)	Water Demand Factor	Cost per E.D.U (3/4" Meter)	DIF Cost per Meter Size
¾" Meter	15	1.000	$9,711	$9,711
1' Meter	25	1.667	$9,711	$16,188
1 & ½" Meter	50	3.333	$9,711	$32,367
2" Meter	80	5.333	$9,711	$51,789
3" Meter	240	16.000	$9,711	$155,376
4" Meter	420	28.000	$9,711	$271,908
6" Meter	920	61.333	$9,711	$595,605
8" Meter	1,600	106.667	$9,711	$1,035,843
10" Meter	2,500	166.667	$9,711	$1,618,503
12" Meter	3,300	220.000	$9,711	$2,136,420

RECAP OF RECOMMENDED WATER SYSTEM IMPROVEMENTS IMPACT FEES

- **General City** – Adopt:
  A. Schedule 7.2 for the ten basic DIF categories,
  B. Table 7-7, Equivalent Water Meter Size Calculation Based upon *Minimum Needs-based Development Impact Fees*, and:

- **Ontario Ranch** – Adopt:
  A. Schedule 7.4 for the nine basic DIF categories,
  B. Table 7-10, Equivalent Water Meter Size Calculation Based upon *Minimum Needs-based Development Impact Fees*, and:

Chapter 8
Sewer Collection Facilities

As was mentioned in the prior chapter and will be reiterated here, a city or public agency experiencing dramatic growth may put off the construction of needed parks, roads storm drainage projects and the like and still function, perhaps minimally. However, nothing stops development in its tracks any faster than the lack of a water distribution system and a sewage collection system. These two systems were some of the earliest calculated DIFs, although they were generally called "hook up" fees [13]. In short, a residence or business cannot exist without these important connections.

Growth will continue to impact City services in two ways. The first is development within areas already served by the sewer collection system which, if not properly sized at construction, could overwhelm the existing capacity of the pipe. Such is the case with GC. The second way growth impacts the City is by development proposals in areas where the system improvements do not yet exist as with the OR area. A properly undertaken Master Plan will eliminate the first problem, but it will take money to construct the additionally needed lines. It is a commonly accepted principle in both water and sewer expansion that DIF receipts can finance the expansions as needed and required. If a development wanted to connect and there were no close-by lines, the developer would finance the expansion with perhaps a reimbursement agreement if appropriate.

The principle remains the same with these DIFs. This Chapter will calculate a fee schedule that represents the proportional expense per unit of growth by DIF Land-use Type, i.e., a detached dwelling unit, a commercial lodging unit or 1,000 square feet of business space.

Similar to the circulation, storm drainage and water DIFs, sewer collection infrastructure will require separate DIF schedules for GC and OR in order to insure that existing GC users are not placed in the position of subsidizing OR area development. The GC DIF calculation and general sewer collection discussion will be in the beginning of the Chapter and the OR calculation will follow at the end of the chapter.

EXISTING SEWER GC COLLECTION SYSTEM

The City's major line sewer collection system currently consists of an identified 468,723 linear feet of various sized (10" to 48") reinforced concrete pipe, over 1,875 manholes and various backfill, road base and asphalt. The current cost of duplicating the entire system of laterals, locals and collectors, would be approximately $346,761,523. There are also a number of pump stations with a replacement value $750,000. There is $1,610,053 in specialty equipment and vehicles dedicated to sewer collection system maintenance. There is an existing negative GC DIF fund balance of $4,052,853. These individual assets create sewer collection system investment of $345,068,723.

[13] Not to be confused with a "connection" fee which is a reimbursement for the actual costs of having a city-worker either set the water meter or connect the privately owned sewer pipe from the home to the City's later sewer pipe.

GENERAL CITY SEWER COLLECTION SYSTEM DEVELOPMENT IMPACT FEES

Schedule 8.1 identifies 38 sewer collection capital projects, (after fourteen of the original 52 have been completed and removed from the total), necessary to accommodate the remaining growth in the GC part of the City and also maintain the existing system. GC development will be responsible for some portion of 25 of the remaining 38 projects. OR had some (or all) of the responsibility for 14 of the projects. Twenty-two of the projects have some portion (or all) of the costs related to maintenance of the existing system and thus these portions are not allocated to development. Combined, they will cost an estimated $137,148,405 to design, construct and inspect, or acquire. The combined GC and OR DIF positive fund balances of $5,184,412 and reduce that figure the $5,422,835 in outstanding developer credits slightly increases the total $137,386,829.

The Schedule 8.1 projects were identified by the City's Engineering Staff, and they were based upon the *General City and Ontario Ranch Sewer Master Plan of 2012*.

The project costs related to GC growth needs were then distributed to the development categories within GC by the system design flows, or gallons per day/acre flow rates (GPAD) for business development or gallons per day (GPD) for residential construction. The OR sewer design flow rates are based upon the previously mentioned Sewer Master Plan and are as follows in Table 8-1:

Table 8-1
General City Sewer Flow Rate
Demand by Land Use
Demand in GPD or GPAD

DIF Land-use Type	Gallons (per Unit) per Day	Gallons per Acre per Day
Detached Dwelling Units	240	
Attached Dwelling Units	210	
High Density Dwelling Units	180	
Mobile Residences Dwelling Units	210	
Commercial Lodging Units	140	
Retail/Service Uses		900
Office Uses		3,000
Business Park Uses		1,200
Industrial Uses		1,600
Institutional Uses		1,500

DISTRIBUTION OF CAPTAL COSTS

Table 8-2, following, is extracted from Schedule 8.2 and demonstrates the results of distributing the $26,077,681 in GC sewer system expansion costs over the remaining undeveloped parcels in GC.

Table 8-2
City of Ontario's General City Area
Basic Needs-based Sewer Collection System
Development Impact Costs
by DIF Land-use Type

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$652,617	$577/Unit
Attached Dwelling Units	$1,357,443	$505/Unit
High Density Dwelling Units	$9,438,736	$433/Unit
Mobile Home Units	$47,970	$505/Unit
Commercial Lodging Units	$50,424	$336/Unit
Retail/Service Uses	$2,146,830	$0.263/S.F.
Office Uses	$5,929,777	$0.284/S.F.
Business Park Uses	$983,945	$0.141/S.F.
Industrial Uses	$1,696,581	$0.055/S.F.
Institutional Uses	$7,140	$0.164/S.F.

The results indicate that the varying types of residential dwellings will need to contribute anywhere from a low of $433 for a high density dwelling unit to a high of $577 for a detached dwelling unit in either DIF payments or in contributed capital in the form of off-site sewer lines (to the same amount).

Existing Contribution. Table 8-3, on the following page, distributes the current replacement cost, or long-term investment of the existing system distributed over those who have contributed to the existing sewer system, the current users and rate payers. This has been done in the same manner as the future costs were distributed against the future users, by the same average demand statistics used for modeling master plans. The results indicate that the average high density dwelling unit has contributed $2,516 per unit and a detached dwelling unit has contributed about $3,354 per unit.

[This space left vacant to place the following table on a single page].

Table 8-3
Existing Sewer Collection System Community
Financial Commitment Comparison Data

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$92,067,786	$3,354/Unit
Attached Dwelling Units	$35,366,093	$2,935/Unit
High Density Dwelling Units	$12,105,011	$2,516/Unit
Mobile Home Units	$6,156,026	$2,936/Unit
Commercial Lodging Units	$11,366,564	$1,956/Unit
Retail/Service Uses	$6,000,745	$0.326/S.F.
Office Uses	$12,998,739	$1.305/S.F.
Business Park Uses	$12,425,925	$1.296/S.F.
Industrial Uses	$147,803,286	$1.389/S.F.
Institutional Uses	$8,781,999	$3.787/S.F.

PROPORTIONATE SHARE ANALYSIS

Necessity for DIFs. DIFs are necessary and appropriate for the construction of the remainder of the sewer collection system for one significant reason. Similar to the distribution of water, the collection and treatment of sewage has long since been recognized by most public agencies as a utility. Utilities differ from general tax-supported services in that they are similar to private sector utility businesses and are financed by utility rates. Sewer collection rates are relatively elastic, within reason, and can be set to meet sewage collection costs whereas taxes for general municipal services cannot. As a result, general taxes must be protected and reserved for services that do not have any such an elastic revenue source such as public safety, park maintenance, storm drainage, and others. Additionally, as long as the existing sewer users have an adequate system for their needs, they would have little interest in having sewer rates rise for any reason other than operating costs as opposed to meeting the cost of adding new users. Clearly, the cost of adding to the system infrastructure to accommodate additional private development demands should be imposed upon that same private development.

The contribution to the sewer collection system (benefit) can be measured, unlike many of the City's services. Sewer rates can, and should be, set to meet the Council's priorities and policies in terms of the sewer system use. The use of general taxes, where no relationship between the rate of taxation and benefit exists, in support of any utility service would be inappropriate.

Recommended GC Area DIF Schedule. The adoption of Schedule 8.2 at the end of the Chapter text (as summarized in table 8-2), as the Sewer Collection Facilities DIF schedule is both reasonable and would generate enough capital to construct the infrastructure facilities needed by the new development. The DIFs contained in Schedules 8.2 also contain amounts lesser than the financial commitment fees identified in Schedule 8.3 thus Schedule 8.2 does not violate any proportionate requirements.

CREDITS AGAINST DEVELOPMENT IMPACT FEES

Like the water utility, there are no *stand-by* sewer collection rates. Vacant parcels are not charged sewer rates and therefore they have not contributed to the capital development of the sewer system. As a result there can be no allowance for previous contributions to capital from vacant parcels, simply because there were none. Additionally, there have been no General Fund expenditures on sewer projects.

Credit for Developer Constructed Improvements Contained Within the City's MFP and Impact Fee Calculation. Similar to other infrastructure construction, it may be advantageous to have the developer construct certain public improvements contiguous to the private development. The adoption of DIFs should not preclude such agreements. Thus it is recommended that the City continue the process of agreeing to allow developers to make sewer system capital improvements that are identified within the City's MFP and that are part of the impact fee calculation, and receive a credit for that constructed amount. The net DIF would be the amount per the adopted schedules less the credit for the capital constructed by the developer.

.

ONTARIO RANCH SEWER COLLECTION SYSTEM IMPACT FEE

Ontario Ranch will need a significant amount of sewer collection system improvements in order to accommodate the large scale development planned for the area. There is some $73,398,698 in remaining collection trunk mains and other general improvements. In addition, there is the $681,912 in costs for a proportional expansion of the sewer maintenance fleet and $2,858,406 as the sewer operations share of the City maintenance yard improvements. There is a $561,012 portion of a Master Plan costs. The total of all these project and financial adjustments is $77,500,028. There is a net negative $4,291,276 in a combination of positive developer credits (increases total) and a positive Fund Balance (decreases total) will be spread over users developing on 4,727 vacant acres generating demands of 11,947,928 gallons per day. The project costs related to OR growth needs were then distributed to the development categories within OR by the system design flows, or gallons per day/acre flow rates (GPAD) for business development or gallons per day (GPD) for residential construction. The OR sewer design flow rates are based upon the previously mentioned Sewer Master Plan and also reflect the OR residential water conservation efforts. They are as follows in Table 8-4:

[This space left vacant to place the following table on a single page].

Table 8-4
General City Sewer Flow Rate
Demand by Land Use
Demand in GPD or GPAD

DIF land-use Type	Gallons (per Unit) per Day	Gallons per Acre per Day
Detached Dwelling Units	240	
Attached Dwelling Units	182	
High Density Dwelling Units	110	
Commercial Lodging Units	140	
Retail/Service Uses		900
Office Uses		3,000
Business Park Uses		1,200
Industrial Uses		1,600
Institutional Uses		1,500

These distributed costs are recommended as the OR Sewer Collection System DIF Schedule per Table 8-5 (as summarized from Schedule 8.4), following:

Table 8-5
City of Ontario's Ontario Ranch Area
Basic Needs-based Sewer Collection System
Development Impact Costs
by DIF Land-use Type

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$19,160,431	$1,642/Unit
Attached Dwelling Units	$36,983,574	$1,246/Unit
High Density Dwelling Units	$9,850,945	$753/Unit
Commercial Lodging Units	$379,512	$958/Unit
Retail/Service Uses	$1,719,253	$0.299/S.F.
Office Uses	$2,340,867	$0.877/S.F.
Business Park Uses	$3,516,208	$0.353/S.F.
Industrial Uses	$7,327,683	$0.431/S.F.
Institutional Uses	$513,949	$0.472/S.F.

RECAP OF RECOMMENDED SEWER SYSTEM IMPROVEMENTS IMPACT FEES

- **General City** - Adopt Schedule 8.2 for the ten basic land-uses.
- **Ontario Ranch** - Adopt Schedule 8.4 for the nine basic land-uses.

NOTES:

(1). All developer-held "credits" under FINANCIAL ADJUSTMENTS will appear as a positive indicating an additional Infrastructure Fund obligation that will be redeemed (in lieu of a DIF payment) at some point in the future.

(2). A negative figure under FINANCIAL ADJUSTMENTS indicates a positive Fund Balance mitigating the project total. A positive figure indicates an amount that needs to be recovered by DIFs.

(3). Costs distribution based upon the Sewer allocation factors from the Sewer Master Plan.

Chapter 9
Refuse Collection Facilities and Equipment

This chapter contains a calculation of the demand from development upon the City's inventory of refuse collection equipment, storage and maintenance facilities. The existing refuse capacity is the result of existing customer rate and fee payments. The inventory is also needed to serve the existing inventory of residential and business space. New refuse customers will impact the City by requiring new refuse vehicles and various types of collection containers which in turn will increase demand upon the refuse collection system facilities and maintenance capacity.

Many cities simply include the cost of capital acquisition within their operating budget. Cities that choose to finance the expansion of their refuse fleet through monthly user charges, rather than DIFs, are in fact forcing the existing refuse customers to subsidize the costs of these new businesses and residences. However, these costs can legitimately be recovered through a DIF schedule in virtually the same manner as a circulation or sewer DIF.

The calculation of refuse collection DIFs depends on the type of service required by a particular development, be it a residential unit or a business. Schedule 9.1, sections A through G demonstrate the varying costs for the three types of refuse collection services offered by the City: side-loader, front-loader and roll-off. Tables 9-1 through 9-7 will identify the cost calculation for the direct capital acquisition costs of the collection vehicles and the collection bins required by each DIF use category.

Table 9-8 will apply the City's indirect costs of the Refuse operations share of common City Yard improvements. These costs are significant given the extraordinary demands upon fleet maintenance facilities, overnight parking and fueling of collection vehicles and bin storage. In addition the vehicles are CNG powered and thus each parking spot will require the slow fill CNG capability.

Detached Dwelling Unit Residential Side-loader service (Schedule 9.1-A) - A side-loader truck can service 700 barrels per day for five days per week for a total of 3,500 total barrels pick-up capacity. The residential side-loader truck costs $375,000 and thus it costs $107.14 to service each collection barrel.

On average, detached dwelling residential dwellings have 3.05 barrels as some (about one in twenty) have a second refuse, green waste or recycle bin. A collection barrel costs $55.31 each. The resulting cost is $495.00 (rounded) per detached dwelling unit for the 3.05 barrel collection weekly.

[This space left vacant in order to place the following table on a single page].

Table 9-1
Refuse Collection
Development Impact Fee
for Detached Dwelling Units

	Cost per Item	Items Required	Total Cost
Collection Barrels	$55.31	3.05	$168.70
Portion of Side-loader Vehicle	$107.14	3.05	$326.78
Total (rounded)			**$495.00**

Commercial Front-loader for Attached Dwellings (Schedule 9.1-B) - A single front-loader truck, which serves large attached residential developments, commercial and industrial uses, costs $375,000. This cost is divided by the estimated 800 four cubic yard bins of refuse hauled per truck per week (160 per day for 5 days each) to derive at a cost of $468.75 per four cubic yard bin pick-up.

On average, it takes two - four cubic yard refuse bins and two - four cubic yard recycle bins to serve fifteen attached dwelling units. The bins, at $1,136 each, would cost $4,544. The cost for the truck to collect the four bins would be $1,875 (4 X $312.50). The combined bin and collection cost of $6,419.00, when divided by the fifteen detached units indicates a rounded cost of $428 per dwelling.

The high density units would require the same vehicle/bin combination costs of $6,419 but would serve twice as many (30) units resulting in a rounded cost of $214 per dwelling.

Table 9-2
Refuse Collection Development Impact Fee for
Residential Attached Dwellings
and High Density Dwelling Units

	Cost per Item	Items Required	Total Cost
Front-loader Vehicle Cost/Bin	$468.75	4	$1,875
Four Cubic Yard Bins	$1,136.00	4	$4,544
Total Cost for Vehicle & Bins			$6,419
Number of Units/Acre			15
Cost per Attached Dwelling Unit			**$428.00**
Total Cost for Vehicle & Bins			$6,419
Number of Units/Acre			30
Cost/High Density Dwelling Unit			**$214.00**

Commercial Collection for Retail/Service and Business Park use Developments Schedule 9.1-C) - A typical one acre-based Retail/Service establishment with a building pad size of 10,949 square feet will have two - four cubic yard bins (one for refuse and one for recycling) picked up on average one and a half times a week. This is the same of a Business park use but that development will result in a lower FAR or average square feet per average acre. As with 9.1 - B above, one front-loader truck, which serves Retail/Service uses and Business Park uses, will cost $375,000. This cost is divided by the estimated 800 bins the truck can collect weekly to derive a cost of $703.13 per bin pick-up or $2,272, for the two bins, one and a half pick-ups per week. The bin cost is $2,272 each for a total of $3,678.25.

The total capital acquisition cost for serving the one acre of Retail/Service business is $3,678.25 based upon an average of 11,979 square feet pad yield per acre results in a $0.336/square foot cost. The total capital cost for serving the one acre of Business Park use is the same at $2,199.06 per acre but based upon a lower average of higher 22,206 square feet pad yield per acre generates a $0.167/square foot cost.

Table 9-3 following indicates the fee necessary to serve Retail/Service and Business Park establishments.

Table 9-3
Refuse Collection and Business Park
Development Impact Fee
for Retail/Service Establishments

	Cost per Item	Items Required	Total Cost
Front-loader Vehicle Cost/Bin	$703.13	2	$1,406.26
Four Cubic Yard Bins	$1,136	2	$2,272.00
Total Cost for Vehicle & Bins			$3,678.26
Retail/Service Square Feet/Acre			10,949
Cost per Square Foot			**$0.336**
Total Cost for Vehicle & Bins			$3,678.26
Business Park Square Feet/Acre			22,006
Cost per Square Foot			**$0.167**

Commercial Collection for Restaurants Units (Schedule 9.1 - D) - Restaurants differ from other retail establishments in that they require a higher frequency of collection due to the volume of food wastes and the problems that would be caused with heat over a less frequent pick-up schedule. The typical one acre-based restaurant establishment with a building pad size of 11,979 square feet will also require two - four cubic yard bins (one for refuse and one for recycling) but due to the food wastes restaurant waste bin collection is typically five days a week while the recycle bin collection is limited to twice a week. As with 9.1-B, one front-loader truck, which serves commercial retail uses, costs $375,000. When divided by the estimated 800 bins

the truck can collect weekly, a cost of $468.75 per bin per day pick-up is derived. The two combined bins will require seven bin pick-up days (five for refuse and two for recycle trash) for a capital capacity cost of $3,281.25. The two bins cost $1,136 each for a total of $272.00. The total capital cost for serving the one acre commercial restaurant business is $5,553.25. Based upon the average 11,979 square feet yield of business pad a per acre, an impact fee of $0.464 per square foot is required to acquire the capital capacity to serve that new restaurant without requiring existing customers to subsidize the expansion.

Table 9-4
Refuse Collection
Development Impact Cost
for Commercial Restaurant Establishments

	Cost per Item	Items Required	Total Cost
Front-loader Vehicle Cost/Bin	$468.75	7	$3,281.25
Four Cubic Yard Bins	$1,136.00	2	$2,272.00
Total Cost for Vehicle & Bins			$5,553.25
Restaurant Square Feet/Acre			11,979
Cost per Square Foot			**$0.464**

Commercial Collection for Commercial Lodging (hotel/motel) Units (Schedule 9.1-E) - A typical one acre can support 30 hotel/motel units and will require two - four cubic yard bins, one bin for refuse picked up three times a week and one bin for recycling picked up once a week. As with 9.1-B, one front-loader truck, which serves commercial retail uses, costs $375,000. This cost is divided by the estimated 800 bins the truck can collect weekly to derive a cost of $468.75 per bin pick-up or $1,875.00 for the four bin pick-ups per week. The two bins cost $1,136 each for a total of $2,272.00. The total capital cost required for serving the one acre of hotel/motel units is $4,147.00. There is an average of thirty commercial lodging units per acre resulting in an $138.00 cost per keyed commercial lodging unit. Table 9-5, following, indicates the fee calculation.

Table 9-5
Refuse Collection
Development Impact Fee
for Commercial Lodging Units

	Cost per Item	Number Required	Total Cost
Refuse Collection Vehicle Cost/Pick-up (4)	$468.75	4	$1,875.00
Four Cubic Yard Bin Cost	$1,136	2	$2,272.00
Total Cost for Vehicle(s) & Bin(s)			$4,147.00
Commercial Lodging Units/Acre			30
Cost/Commercial Lodging Unit			$138.00

Commercial Collection for Office and Institutional Units (Schedule 9.1-F) - A typical one acre office establishment with a building pad size of 25,177 square feet [14] and an institutional use acre will, on average, result in 21,780 square feet. Both will require two - four cubic yard bins (one for refuse and one for recycling) picked up on average once a week. As with 9.1-B, one front-loader truck, which serves commercial retail uses, costs $468.75. This cost is divided by the estimated 800 bins the truck can collect weekly to derive a cost of $468.75 per bin pick-up or $937.50 for the two required pick-ups. The two bins cost $1,136 each for a total of $2,272.00. The total capital cost for serving the one acre commercial business is $3,209.50 or $1.27 per square foot for the office use and $0.147 per square foot for institutional uses. Table 9-6, following, indicates the fee calculation:

Table 9-6
Refuse Collection
Development Impact Fee
for Office and Institutional Uses

	Cost per Item	Items Required	Total Cost
Front-loader Vehicle Cost/Bin	$468.75	2	$937.50
Four Cubic Yard Bin	$1,136.00	2	$2,272.00
Total Cost for Vehicle & Bin			$3,209.50
Office Square Feet/Acre			25,177
Cost per Square Foot			**$0.127**
Total Cost for Vehicle & Bins			$3,209.50
Institutional Square Feet/Acre			21,780
Cost per Square Foot			**$0.147**

Industrial Roll-Off Service (Schedule 9.1-G) - This service is very expensive to provide because a truck will have to make one trip to the landfill for every load picked-up, regardless of the size of the roll-off box (10, 20 or 40 cubic yards) being transported. A roll-off truck, costing some $299,724, will collect and transport approximately 50 loads per week, which generates a one-time capital cost of $5,994.48 for each load collected during the week. However, the City primarily uses 40 cubic yard boxes and finds that one 40 cubic yard box picked-up once a week can serve the needs of a five acre industrial business. A 40 cubic yard box has a cost of $12,128.

Recycling is also required of industrial uses and generally requires once a week service for a four cubic yard bin. To determine the total impact cost of a development which uses roll-off service, the cost of the roll-off vehicle is added to the purchase price for a roll-off bin. Thus, the fee for roll-off equipment for serving large industrial/manufacturing uses is calculated as follows:

14 Based upon 26,386,000 square feet on 583.65 acres.

Table 9-7
Roll-Off Refuse Collection
Development Impact Fee
for Industrial/Manufacturing Uses

	Cost per Item	Items Required	Total Cost
Front-loader Vehicle Cost/Bin	$468.75	1	$468.75
Four Cubic Yard Bin	$1,136.00	1	$1,136.00
Forty Cubic Yard Vehicle	$5,994.48	1	$5,994.48
Forty Cubic Yard Bin	$12,128.00	1	$12,128.00
Total Cost for Vehicle(s) & Bin(s)			$19,727.23
Industrial Square Feet Served/Five Acres			214,560
Cost Square Foot of Industrial Businesses			**$0.092**

Share of Common City Yard Improvements. Based upon the Table 2-1, the City refuse collection operation will need to acquire $42.4 million in various collection vehicles and bins of all sizes. This is based upon the General Plan supported Land-use Database. The Refuse Department's portion of the City Yard improvements is $17,965,667, or roughly a 9.1% surcharge on the $44.4 million City Yard capital acquisition cost, or a 42.3% addition to the basic truck, bins and barrels costs. To insure that the City can fully accommodate the refuse demands of new residents and businesses, the City needs to acquire both the direct (vehicles and bins) and indirect improvements (vehicle maintenance, parking and fueling capacity) and should do so without imposing those costs on the existing community. In short, a fleet of collection trucks without the capacity to maintain them will ultimately prove problematical. Table 9-8 following indicates the final DIF costs.

[This space left vacant in order to place the following table on a single page].

Table 9-8
Application of Refuse Collection
Share of Common City yard Improvements
as an Overhead to Direct Costs

DIF Land-use Type	Direct Refuse Collection Costs	City Yard Improvements Cost Overhead	Total Development Impact Cost
Detached Dwelling Unit	$495.00	142.31%	$704.00
Attached Dwelling Unit	$428.00	142.31%	$609.00
High Density Dwelling Unit	$214.00	142.31%	$305.00
Retail Uses by S. F.	$0.336	142.31%	$0.478
Business Park Uses by S. F.	$0.167	142.31%	$0.238
Commercial Restaurants by S.F.	$0.464	142.31%	$0.660
Commercial Lodging Unit	$138.00	142.31%	$196.00
Office Uses by S.F.	$0.127	142.31%	$0.181
Institutional Use by S.F.	$0.147	142.31%	$2.009
Industrial Uses by S.F.	$0.092	142.31%	$0.131

RECAP OF RECOMMENDED REFUSE COLLECTION DEVELOPMENT IMPACT FEES

- **General City** - Adopt Schedule 9.1 for the ten basic service collection types.
- **Ontario Ranch** -Adopt Schedule 9.1 for the ten basic service collection types.

However, the final DIF to be imposed on any given private development will be based upon the submitted design drawings. As an example, some attached dwelling units will require common bin service, but others may be better served by individual barrel collection service.

END OF CHAPTER TEXT

Schedule 9.1
2021-22 Development Impact Cost Calculation Update
City of Ontario
Refuse Collection Facilities and Vehicles

A. RESIDENTIAL SIDE-LOADER COLLECTION FOR DETACHED DWELLINGS

Daily Stops per Single Route	700	Barrel Stops per Day
Number of Days of Collection	5	Ten-hour Days per Week
Pick-up Capability of One Truck	3,500	Barrels per Week

Cost per Collection Vehicle	$375,000	per Side-Loader Truck
Pick-up Capability of One Vehicle	3,500	Barrels per Week

	Truck Cost	Bin Cost	Total Cost
Four Cubic Yard Trash Bin	$468.75	$1,136.00	$1,604.75
Four Cubic Yard Trash Bin	$468.75	$1,136.00	$1,604.75
Four Cubic Yard Recycle Bin	$468.75	$1,136.00	$1,604.75
Four Cubic Yard Recycle Bin	$468.75	$1,136.00	$1,604.75
Total Cost per Standard Attached Acre			$6,419.00
Average Number of Attached Residential Units/Acre			15
Total Truck Cost per Attached Unit (rounded)			$428.00

Total Cost per High Density Attached Acre	$6,419.00
Average Number of High Density Residential Units/Acre	30
Total Truck Cost per High Density Unit (rounded)	$214.00

C. COLLECTION FOR RETAIL/SERVICE AND BUSINESS PARK UNITS

	Truck Cost	Bin Cost	Total Cost
Refuse Bin (1.5 Collections/Week, 4CY)	$703.13	$1,136.00	$1,839.13
Recycle Bin (1.5 Collections/Week, 4CY)	$703.13	$1,136.00	$1,839.13
Total Cost per Average General Retail/Service Acre			$3,678.25

Average Square Feet of Retail/Service Pad per Acre	10,949
Cost per Square Foot for Average Retail/Service Uses	$0.336

Average Square Feet of Business Park Pad per Acre	22,006
Cost per Square Foot for Average Business Park Uses	$0.167

Schedule 9.1
2021-22 Development Impact Cost Calculation Update
City of Ontario
Refuse Collection Facilities and Vehicles

D. COMMERCIAL COLLECTION FOR RESTAURANTS
(Five day/week mandatory collection and two day/week recycling collection)

	Truck Cost	Bin Cost	Total Cost
Restaurant Waste, Five/Week	$2,343.75	$1,136.00	$3,479.75
Restaurant Recycle, Two/Week	$937.50	$1,136.00	$2,073.50
Total Cost per Average Restaurant Commercial Acre			$5,553.25
Average Square Feet of Restaurant Pad/Acre			11,979
Square Foot Cost per Five Days a Week Collection			$0.464

E. HOTEL/MOTEL UNITS COLLECTION (assumes thrice weekly)

	Truck Cost	**Bin Cost**	**Total Cost**
Commercial - General (Three/week)	$1,406.25	$1,136.00	$2,542.25
Commercial - Recycle (One/week)	$468.75	$1,136.00	$1,604.75
Total Cost per Average Hotel/Motel Acre			$4,147.00
Average Hotel/Motel Units per Acre			30
Cost per Hotel/Motel Unit (rounded)			$138.00

F. OFFICE AND INSTITUTIONAL USES

Office and Institutional Refuse	$468.75	$1,136.00	$1,604.75
Office and Institutional Recycle	$468.75	$1,136.00	$1,604.75
Total Cost per Average Retail, Office and Institutional Acre			$3,209.50
Average Square Feet of Office Pad/Acre			25,177
Cost per Square Foot			$0.127
Average Square Feet of Institutional Pad/Acre			21,780
Cost per Square Foot			$0.147

G. INDUSTRIAL ROLL-OFF COLLECTION FOR MISCELLANEOUS UNITS

Cost of Roll-off Boxes Collection Truck	$299,724
Units per Week	50
Collection Cost per Weekly Roll-off Stop	$5,994.48
Cost of a 40 Cubic Yard Roll-off Box	$12,128.00
Cost of Once/Week Front Loader Pick-up	$468.75
Cost of Four Cubic Yard Recycle Bin and Once/Week Pick-up	$1,136.00
Total Cost of Industrial Pick-up for Five Acres	$19,727.23
Square Feet of Pad In Five Acre Parcel	214,560
Cost per square Foot of Industrial/Manufacturing Pad per Acre	$0.092

Schedule 9.1
2021-22 Development Impact Cost Calculation Update
City of Ontario
Refuse Collection Facilities and Vehicles

A. RESIDENTIAL SIDE-LOADER COLLECTION FOR DETACHED DWELLINGS				
	Detached Dwellings per Unit	$495.00	142.31%	$704
B. COMMERCIAL COLLECTION FOR ATTACHED UNITS				
	Attached Dwellings per Unit	$428.00	142.31%	$609
	High Density Dwellings per Unit	$214.00	142.31%	$305
C. COLLECTION FOR RETAIL/SERVICE AND BUSINESS PARK UNITS				
	Retail Uses, per Square Foot	$0.336	142.31%	$0.478
	Business Park Uses, per Square Foot	$0.167	142.31%	$0.238
D. COMMERCIAL COLLECTION FOR RESTAURANTS				
	Commercial Restaurants	$0.464	142.31%	$0.660
E. HOTEL/MOTEL UNITS COLLECTION (assumes thrice weekly)				
	Hotel Units, per Keyed Unit	$138.00	142.31%	$196
F. OFFICE AND INSTITUTIONAL USES				
	Office Uses, per Square Foot	$0.127	142.31%	$0.181
	Institutional Uses, per Square Foot	$0.147	142.31%	$0.209
G. INDUSTRIAL ROLL-OFF COLLECTION FOR MISCELLANEOUS UNITS				
	Industrial Roll-off Users per Square Foot	$0.092	142.31%	$0.131

H. ORGANIC FOOD WASTE COLLECTION PROGRAM (New in 2019)		
Cost per Front-loader Truck	$375,000	per Front-loader Truck
Collection Capability of one Truck	700	Bins per Week
Cost per Bin Collection	$535.71	per Bin per Stop

32 Gallon Food Waste Bin	$40
64 Gallon Food Waste Bin	$49
1.5 CY Bin Food Waste Bin	$751
3.0 CY Bin Food Waste Bin	$982

Chapter 10
General Facilities, Vehicles and Equipment

The Existing System. General Facilities are generally limited to general office or work buildings and equipment used by City staff to undertake their daily duties. The City possesses (i.e., owns outright) a significant amount of general facilities square footage. The replacement costs are as follows:

City Hall Facilities and Annex	$33,438,307
Computer and Miscellaneous Equipment	$33,109,140
General Fund Portion of City Yard & Garage	$19,358,148
General Fund (pool and some maintenance) Vehicles	$4,150,800
General Facilities Impact Fee Fund balance	$4,255,805

The combined replacement cost of the structures, land, and equipment is $94,312,200. Land costs for numerous other facilities are not included because they are included in the park calculation.

Demand Upon Infrastructure Created by the Development of Underdeveloped or Undeveloped Parcels. As the City increases in both population and additional business ventures, the City Hall will gradually become overcrowded with a growing staff, even if major efforts are made to keep the number of municipal workers to a minimum. As a result the former 38,700 square foot Police station, with some renovation, will be able to absorb the increased City operations that have little contact with the public. The same will hold true for the City Maintenance Yard which can absorb some increased demand over the short term but over the long term near doubling of the City's residents and businesses, capacity will need to be expanded.

City pool vehicles generally made available to general employees assigned with general code enforcement, intra-city mail delivery, planning and engineering field inspection projects and other issues that require on-site review, as well as other travel by employees that do not have assigned City vehicles, will be checked-out on an increasing basis requiring some fleet additions.

Lastly, the City's centralized and personal desktop computer processing capability and storage space will also be impacted with greater amounts of data necessary to manage a larger city.

The **Purpose** of the Fee. The costs of extending the same level of service to the newly developing community as is provided to the existing community that has largely paid for the existing facilities can be calculated, a fee imposed and collected, and the fee used to expand the facilities necessary to extend that same level of services.

The **Use** of the Fee. The revenues that are raised from a properly calculated and supported General Facilities and Equipment Impact Fee would be limited to capital(ized) costs related to that growth. The fees would be used to construct additional general facilities. Conversely, the General Facilities, Vehicles and Equipment DIF receipts would not be used to repair or rehabilitate any existing general building (with the exception of reconfiguring City Hall Annex,

which would be far less expensive than constructing a new building). The improvements necessary to contend with increased demand resulting from additional residents and businesses would include the following:

- City Hall and the Annex reconfiguration.
- Expansion of the administrative pool car and general maintenance fleet.
- Up-sizing of the existing centralized computer system capacity.
- Completion of the City maintenance service center by financing the General Fund portion of the *Share of Common City Yard Improvements.*

Please note that GF-004, the Animal Holding Facility, has no estimate as the City does not have any specific plans in motion to construct such a facility. The project number is now a place-holder until such time as the City defines such a facility.

The *Common City Yard Improvements* project will be discussed further. In the earlier report, the full cost of the City Yard improvements was included in the General Facilities, Vehicles and Equipment infrastructure category. This report recognizes that differing municipal services require differing amounts of improvements. Refuse, for example, will directly need paved parking space and specialty CNG fueling stations for the many new refuse collection vehicles, while the Fire vehicles need additional fleet maintenance space for the temporary times that a fire engine needs either routine or extraordinary repairs.

The existing community has purchased sufficient space thus no land or parcel acquisitions are proposed. However, significant storage and workshop space will be needed to maintain the infrastructure the City will receive through dedication, as evidenced by the nearly $1.5 billion in development-generated infrastructure included in this document alone. Add to this figure an estimated additional $1.0 billion in *local* streets, storm drainage, and water distribution and sewer collection systems improvements included within the footprint of all developments that are not included in this Report.

Public facilities within the footprint of a development specifically benefit only those residences or businesses within that footprint. These improvements are required as a condition of approval and are not distributed to any other developer as part of a DIF distribution. However, all of these improvements are ultimately dedicated, accepted by and maintained in perpetuity by the City. It must be noted that the City's corporation maintenance yard is the first line of defense of maximizing the various infrastructure improvements and without proper sizing, the City would have little ability to maximize the life of the entirety of the City's infrastructure. The City has determined continued use of the city yard improvement costs from the previous DIF calculations until such time as a full City Yard Master Plan can be conducted and estimated.

These four separate costs were distributed to the various users based upon their demands upon the City Yard (see Appendix C for greater detail). The City Yard capacity expansion costs have been distributed as follows:

City Service/infrastructure	Chapter Text	Improvement Allocation
Police Fleet Maintenance	Chapter 3	$2,365,388
Fire Fleet Maintenance	Chapter 4	$1,404,845
Circulation System Maintenance	Chapter 5	$1,915,576
Storm Drainage Maintenance	Chapter 6	$1,739,460
Water System Maintenance	Chapter 7	$9,472,959
Sewer System Maintenance	Chapter 8	$3,970,009
Refuse Collection Maintenance	Chapter 9	$17,965,667
General Facilities – Other	Chapter 10	$1,583,822
Public Use Facilities (in future)	Chapter 12	$0
Park Maintenance	Chapter 14	$4,047,273
FiberOptics System (in future)	Chapter 16	$0
Total Allocated Cost		**$44,464,999**

The Relationship Between the Need for The Fee and The Type of Development Project. The need is based upon the recognition that additional developed parcels in the City will create the need for more building space and specialty equipment, largely within the arena of overhead space, i.e., administrative management, personnel, record keeping, financial accounting, etc. The costs are distributed on an equal acreage basis as the most direct index of demand relating to central management services.

The Relationship Between the use of the fee and the Type of Development paying the Fee. General management, City-wide and General Plan issues transcend type of land use and the use of the fee, as well as the need for the fee. Distribution will be based upon an equal benefit in terms of general management of the City.

Relationship Between the Amount of the Fee and the Cost of the Portion of the Facility Attributed to the Development Project. The fee would be based upon the size of the development. A fee has been determined for individual units, either residential dwelling units or business square feet. A development of twelve residential units would have to pay a fee twelve times larger than a single unit. No developer will be required to construct any portion of any general facility as a condition of development.

Resulting DIF Schedule. Table 10-1 following, summarizes the Minimum Needs-based General Facilities DIFs. The fees identified following represent the fees necessary to construct or acquire the facilities identified on Schedule 10.1.

Table 10-1
City of Ontario's Entire City Area
Basic Needs-based General Facilities, Vehicles and Equipment
Development Impact Costs
by DIF Land-use Type

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$3,882,466	$303/Unit
Attached Dwelling Units	$3,453,897	$107/Unit
High Density Dwelling Units	$2,389,387	$68/Unit
Mobile Home Units	$32,258	$340/Unit
Commercial Lodging Units	$27,650	$51/Unit
Retail/Service Uses	$2,928,555	$0.210/S.F.
Office Uses	$2,156,670	$0.092/S.F.
Business Park Uses	$1,771,879	$0.105/S.F.
Industrial Uses	$2,557,589	$0.054/S.F.
Institutional Uses	$119,815	$0.106/S.F.

It must be restated that the existing community has invested in and established the City Hall, City maintenance service center, General Fund fleet, and electronic equipment at a replacement value of $94,312,200. In short, the current community has created more than adequate staff facilities. As a result, the current community has amassed a significant equity position vis-a-vis future needs. Table 10-2, following, identifies the average "equity" position or ownership per unit or square foot.

[This space left vacant to place the following table of a single page].

Table 10-2
Existing General Facilities, Vehicles and Equipment
Community Financial Commitment Comparison

DIF Land-use Type	Allocation of Development Costs	Development Impact Cost Per Unit or Square Foot
Detached Dwelling Units	$36,229,442	$1,132/Unit
Attached Dwelling Units	$4,133,637	$316/Unit
High Density Dwelling Units	$1,104,975	$230/Unit
Mobile Home Units	$1,167,953	$557/Unit
Commercial Lodging Units	$818,712	$141/Unit
Retail/Service Uses	$2,788,201	$0.151/S.F.
Office Uses	$1,774,830	$0.178/S.F.
Business Park Uses	$4,448,527	$0.433/S.F.
Industrial Uses	$39,447,038	$0.252/S.F.
Institutional Uses	$2,398,884	$1.035/S.F.

Of importance is the fact that the existing community will have contributed over 75% of the amount City's General Facilities needed at General Plan build-out.

RECOMMENDED IMPACT FEES

The *Minimum Needs-based Impact Costs* should be adopted for the two broad land uses, per Schedule 10.2 and summarized in table 10-3. The *Existing Community Financial Commitment* indicates that the existing community has generated a great deal more infrastructure than will be asked of future development.

RECAP OF RECOMMENDED GENERAL FACILITIES ET. AL. IMPACT FEES

- **General City** - Adopt Schedule 10.3 for the ten basic land-uses.
- **Ontario Ranch** - Adopt Schedule 10.3 for the nine basic land-uses.

Chapter 11
Library Facilities and Collection Items

The Existing System. The City currently owns a 58,000 square foot library facility at the Civic Center and has paid for approximately 14,800 square feet of the Colony High School library which is open to the public during specific hours. The City also has approximately a net of $8,178,651, ($8,256,956 less $78,350 in outstanding redeemable development credits), in Library DIF fund balance which represents about 10,997 square feet of future library space and 46,237 collection items). When the total 83,797 square feet are divided by the current population of 182,004, a city-wide library facilities space standard of 0.460 square feet/person is established (83,797 square feet ÷182,004 residents).

Demand Upon Infrastructure Created by the Development of Underdeveloped or Undeveloped Parcels. Stated simply, the 83,797 square feet of Library space will only be able to accommodate a finite number of collection items and patrons. Additional development will increase the demand on the existing square feet of library pad and the collection.

The **Purpose** of the Fee. The purpose of the fee is to enable the City to construct additional library space and additional collection items when necessary to ensure that the City's citizens have access to and enjoyment of the library space and collection. Table 11-1, following, indicates that the remaining residential development and typical number of persons per type of residential dwelling will generate a need for an additional 115,599 square feet in order to maintain the existing library facility standard of 0.460 square feet per person.

Table 11-1
Square Feet Required to Maintain Existing Standard

Residential DIF land-use Type	Number of Units Anticipated	Persons per Dwelling	Population Generated
Detached Dwelling Units	12,793	3.806	48,690
Attached Dwelling Units	32,372	3.373	109,191
High Density Dwelling Units	34,889	2.669	93,119
Mobile Home Dwelling Units	95	3.175	302
Additional City Residents from Added Dwelling Units			251,302
Square Foot per Person Existing Standard			0.460
Square Feet of Library Space Required to Maintain Standard			**115,599**

The City also has an extensive inventory of books, tapes, subscriptions called a *collection* of volumes. The City currently has 352,336 volumes in its collection (306,099 in service and 46,237 represented in available Fund Balance). Again, divided by the existing population of 182,004, the resulting standard is 1.936 current volumes per person. Table 11-2, following, indicates the

additional number of residents to be served and the number of volumes required to maintain the existing standard. The City will need to acquire 486,521 volumes to maintain the existing 1.936 volumes per person in light of the additional 251,302, persons at General Plan build-out.

Table 11-2
Volumes Required to Maintain Existing Standard

DIF Land-use Type	Number of Units Anticipated	Persons per Dwelling	Population Generated
Detached Dwelling Units	12,793	3.806	48,690
Attached Dwelling Units	32,732	3.373	109,191
High Density Dwelling Units	34,899	2.669	93,119
Mobile Home Units	302	3.175	136
Additional City Residents from Added Dwelling Units			251,302
Collection Items per Person Existing Standard			1.936
Library Collection Items Required to Maintain Standard			**486,521**

The **Use** of the Fee. The fee, if adopted, would be imposed, collected and expended on additional library facility space and on the number of volumes in the City Library's collection.

The Relationship Between the Need for The Fee and The Type of Development Project. The development of any acreage zoned for residential uses, increases the demand on the finite amount of library space and volumes. Thus, those residential land uses that generate higher amounts of residents (i.e., detached dwelling unit) will be charged a proportionally higher amount. There is no information available demonstrating a link or nexus between library use and local businesses.

The Relationship Between the Use of the Fee and the Type of Development Paying the Fee. Additional square feet will be constructed with the fees collected from residential development and additional volumes will be acquired for the collection. The fees cannot be used for any other purpose.

The Relationship Between the Amount of the Fee and the Cost of the Portion of the Facility Attributed to the Development Project. The cost of acquiring land for additional library space and construction is about $609.61 per square foot per Schedule 11.1. The 83,797 square feet of library space, when divided by the 182,004 existing citizens creates a standard of 0.460 square feet of library space per citizen. The standard of 0.460 square foot standard multiplied by the $609.61 per square foot of pad cost of library construction results in a charge of $280.42 per additional City resident.

Table 11-4
Establishment of the Library Facilities Standard
and Cost per Person to Maintain the Standard

City-owned (or generated) Library Square Feet	83,797
Current Population	182,004
Square Feet per Resident	0.460
Construction Cost of Library per Square Foot	$609.61
Space Cost per Additional Resident	**$280.42**

The cost of acquiring additional volumes, called the accession process (15) (per Schedule 11.1) is $31.90 per volume. The accession process cost has decreased greatly over the last 25 years due to contracting out this time intensive process. The 352,336 current volumes, when divided by the 182,004 existing citizens create a standard of 1.936 library collection items per City resident. The standard of 1.936 collection items multiplied by the $31.90 per volume results in a cost of $60.39 per additional City resident, in order to maintain the existing standard. Table 11-5 identifies this;

Table 11-5
Establishment of the Library Collection Standard
and Cost per Person to Maintain the Standard

City-owned (or generated) Collection Items	344,533
Current Population	182,004
Collection Items per Resident	1.936
Accessions Cost per Collection Item	$31.90
Collections Cost per Additional Resident	**$61.76**

Resulting Library Space and Collection Items DIF Schedule. The combined cost per new resident is $342.18 ($280.42 for 0.460 square feet of library space and $61.76 for 1.936 additional collection items). Table 11-6, following indicates the amount required for pro-rata expansion of the library space per Schedule 11.1. If adopted and imposed on the remaining development, it would collect enough to acquire land for and construct an additional 115,599 square feet of library space and an additional 486,521 volumes.

[This space left vacant to place to following table on a single page].

15 The accession process includes: need research, ordering, receipt, preparation, entering it into the computer and actual placement on the shelves.

Table 11-6
Summary of Library Space and Collection Impact Costs

DIF Land-use Type	Residents Per Dwelling	Cost per Resident	Impact Cost per Dwelling
Detached Dwelling Units	3.806	$342.18	$1,302
Attached Dwelling Units	3.373	$342.18	$1,154
High Density Dwelling Units	2.669	$342.18	$913
Mobile Home Dwelling Units	3.175	$342.18	$1,086

RECAP OF RECOMMENDED LIBRARY AND COLLECTION VOLUMES IMPACT FEES

- **General City** - Adopt Schedule 11.1 for the four basic residential dwelling types.
- **Ontario Ranch** - Adopt Schedule 11.1 for the three basic residential dwelling types in Ontario Ranch (detached, attached and high density dwelling units).

Mobile Home Dwelling Unit	3.175	$890	$196	$1,086

FAR = Floor Area ratio

Chapter 12
Public Use (Community Centers) Facilities

This important component of the City's offerings to its citizens is generally included in the Park Acquisition and Park Improvements DIF Schedule but was split out in the 2000-01 Report as a separate impact fee for three reasons.

First, few parks contain a community public use center.

Secondly, it is difficult to insure that the cost for such a facility is properly included in the average park development cost per acre.

Lastly and perhaps most importantly, it has been the experience of RCS staff, that when the cost for community centers is included as a cost of park development, these facilities simply do not get built. This is because the park impact fee revenues get used on the costly demand for turfed park acres with sports or passive-use park improvements.

The Existing System. The City has a number of facilities currently dedicated for public use facilities. Such facilities are available to community groups for meetings and other civic functions. This category of buildings differs from General Facilities which are those used by the City staff to undertake their municipal service duties (City Hall as an example).

The City owns some facilities dedicated to a specific use, such as the gymnasium, and one available for broader uses, the De Anza Community Center. Table 12-1 shows the City's existing public meeting facilities.

Table 12-1
Inventory of Existing (Owned) Public Meeting Facilities

Public Use Meeting Facility	Square Feet
Armstrong Center	13,500
Dorothy A. Quesada Center	10,000
Civic Center Senior Center	13,964
Anthony Munoz Community Center	24,000
De Anza Community Center	23,683
City of Ontario Museum	19,478
Westwind Community Center & Gymnasium	26,260
Future Facilities S.F. in DIF Fund Balance	14,685
Total Public Use Square Feet	**145,570**

Since the last DIF Update Report update the Anthony Munoz Community Center was expanded from 5,103 square feet to 24,000 square feet. The amount of square feet represented by existing fund balance increased from 1,450 square feet to 14,685 indicating that the City is likely able to construct one or more additional public use facilities in the near future.

The City's Public Use Facilities impact fee fund balance of $8,951,931 (÷ $609.61) represents an additional 14,685 square feet but is dedicated for that purpose and cannot be used for any other purpose. As such it is an un-realized asset, yet to be constructed. The City may be waiting for an additional amount to construct a larger facility or has yet to determine what use the addition public use facility will serve.

Based upon an existing population of 182,004, the 145,570 square feet of public use facilities resources creates a standard of 0.800 square feet per resident. This standard indicates that the City maintains a substantial commitment to providing a community center or recreation space for public groups and individuals. Table 12-2, following, demonstrates the calculation establishing the square foot standard:

Table 12-2
Calculation of Public Use Facilities
Square Foot Standard

Public Meeting Space Square Feet	145,570
Current City Population	182,004
Square Foot per Resident Standard	0.800

Demand Upon Infrastructure Created by the Development of Underdeveloped or Undeveloped Parcels. Simply stated, additional residential dwelling units will increase the population, placing greater demands for use of the existing community centers. The construction of a detached dwelling unit will create, on average, 3.806 potential new community center users. The addition of a new attached dwelling will create on average 2.669 potential new users.

The **Purpose** of the Fee. The purpose of the fee is to determine the cost of expanding the community center and public-use type facilities by some 201,042 square feet to meet the added demands created by the construction of additional residential dwelling units. It should be noted that 201,042 square feet of public use facilities may not fully meet the needs of the build-out community and that square feet may be desired by the community. The reference to the 201,042 square feet indicates that is the amount of additional public use facilities square feet that could be financed by DIFs. Table 12-3, following, demonstrates the calculation of the number of additional square feet required to maintain the existing Public Use facilities standard:

[This space left vacant in order to place the following table on a single page].

Table 12-3
Square Feet of Community Center Space
Required to Maintain Existing Standard

Residential DIF land-use Type	Number of Units Anticipated	Persons per Dwelling	Population Generated
Detached Dwelling Units	12,793	3.806	48,690
Attached Dwelling Units	32,372	3.373	109,191
High Density Dwelling Units	34,889	2.669	93,119
Mobile Home Units	95	3.175	302
Additional City Residents from Added Dwelling Units			251,302
Square Foot per Person Existing Standard			0.800
Community Center Space (SF) Required to Maintain Standard			**201,042**

The **Use** of the Fee. The fee, if adopted, would be imposed, collected, and spent on the construction of additional community center space that benefits City of Ontario residents, not rehabilitation of any existing public use facility.

The Relationship Between the Need for The Fee and The Type of Development Project. Different types of residential dwellings generally have differing amounts of people dwelling in them. Census data indicates the following occupancy statistics for the City:

Detached Dwelling Units ..... 3.806 Persons/Unit
Attached Dwelling Units ..... 3.373 Persons/Unit
High Density Dwelling Units ..... 2.669 Persons/Unit
Mobile Home Family Dwelling Units ..... 3.175 Persons/Unit

The Relationship Between the Use of the Fee and the Type of Development Paying the Fee. The fee will be used to expand the amount of community center square feet in proportions consistent with the average persons per dwelling. Community centers would be expanded in the following amounts following, by type of residential dwelling:

Detached Dwelling Unit ..... 3.806 Persons per Unit X 0.800 Square Feet = 3.045 Square Feet
Attached Dwelling Unit ..... 3.373 Persons per Unit X 0.800 Square Feet = 2.698 Square Feet
High Density Dwelling Unit ..... 2.669 Persons per Unit X 0.800 Square Feet = 2.135 Square Feet
Mobile Home Dwelling Unit ..... 3.175 Persons per Unit X 0.800 Square Feet = 2.540 Square Feet

The Relationship Between the Amount of the Fee and the Cost of the Portion of the Facility Attributed to the Development Project. The cost of adding 0.800 square feet of building space per person is roughly $487.69 based upon a $609.61 per square foot ($547.90 for construction, $48.21 for land acquisition (or $16.07 per square foot cost and a floor area ratio of 0.333) and parcel site hardscape improvements of $13.50.

Resulting DIFs. Table 12-4, following, indicates the proposed Public Meeting DIF.

Table 12-4
Summary of Public Meeting Facilities Impact Fee

DIF Land-use Type	Impact Fee Per Unit
Detached Dwelling Unit	$1,856
Attached Dwelling Unit	$1,645
High Density Dwelling Unit	$1,302
Mobile Home Dwelling Unit	$1,548

RECAP OF RECOMMENDED PUBLIC USE FACILITIES IMPACT FEES

- **General City** - Adopt Schedule 12.1 for the four basic residential dwelling categories.
- **Ontario Ranch** - Adopt Schedule 12.1 for the three basic residential dwelling categories in Ontario Ranch (detached, attached and high density dwelling units).

END OF CHAPTER TEXT

Total Cost for One Square Foot of Public Use Space	$609.61	
Square Foot per Resident Standard	0.800	
Cost per New Resident	$487.69	

Cost per Land Use Residential Dwelling Unit	Density per Dwelling Unit	Total Public Use Resources	Total Cost
Detached Dwelling Unit	3.806	$1,856	$1,856
Attached Dwelling Unit	3.373	$1,645	$1,645
High Density Dwelling Unit	2.669	$1,302	$1,302
Mobile Home Dwelling Unit	3.175	$1,548	$1,548

Chapter 13
Aquatics Facilities

This component of City infrastructure is also separated from the Park Land Acquisition and DIF for the same reasons described in the previous Chapter regarding Public Use (community center) Facilities.

The Existing System. The City owns four aquatics facilities consisting of a total of 6,668 square feet of swimming pool surface and 4,294 square feet of combination locker/utilities/office buildings. The De Anza Park Pool, listed in the previous Report, has been dismantled and is no longer included in the calculation of the standard. These remaining facilities are available to individuals and groups represented by the existing 182,004 residents for leisure and general fitness uses. Table 13-1, following, details the aquatics complexes and the current fund balance.

Table 13-1
Existing City Pools/Utility Buildings

Pool Facility	Pool Surface Capacity	Pool Support Facilities
Anthony Munoz Park Aquatics Center	1,225	424
Bon View Park Aquatics Center	1,369	412
Vineyard Park Aquatics Center	1,296	450
Westwind Park Aquatics Center	2,580	2,880
Square Feet Represented by Fund Balance	1,061	683
Total Square Feet	**7,531**	**4,849**

Demand Upon Infrastructure Created by the Development of Underdeveloped or Undeveloped Parcels. Simply stated, additional residential dwelling units will increase the population placing greater demands upon the City's existing aquatics centers. The construction of detached dwelling and attached dwellings will create, on average, 3.806 and 3.373 potential new potential pool users, respectively. A high density dwelling will generate approximately 2.669 residents. The addition of mobile residences in the unlikely event that any mobile home dwelling pads be applied for and approved) will create 3.175 potential new pool users each. Table 12-2 indicates the current *de-facto* standards are 0.0266 square feet of locker/office building per person and 0.0414 square feet of pool surface per person in the City.

Table 13-2
Calculation of Aquatics Facilities - Square Foot Standards

	Pool Surface	Support Space
Space Square Feet	7,531	4,849
Current City Population	182,004	182,004
Square Foot per Resident Standard	0.0414	0.0266

The **Purpose** of the Fee. The purpose of the fee is to generate DIF revenue with which to expand the aquatics centers capacity to meet the added demands created by the construction of additional residential dwelling units. The City has preliminary plans on locating a $12.0 million aquatic facility in the City. The collected DIF revenue will only finance just over 68% of the facility as it is an increase in the existing standard. The remaining 32% will need to come from sources other than impact fees.

The **Use** of the Fee. The fee, if adopted, would be imposed, collected, and spent on the construction of additional aquatics centers that would benefit City of Ontario residents, but would not be spent on rehabilitation of the existing aquatic center.

The Relationship Between the Need for The Fee and The Type of Development Project. Different types of residential dwellings generally have differing numbers of people dwelling in them. United States Census 1990 data (see Table 2-3. page 23) was used to determine the occupancy density statistics for the City. They are summarized following:

Detached Dwelling Units	3.806 Persons/Unit
Attached Dwelling Units	3.373 Persons/Unit
High Density Dwelling Units	2.669 Persons/Unit
Mobile Home Dwelling Units	3.175 Persons/Unit

The Relationship Between the Use of the Fee and the Type of Development Paying the Fee. The fee will be used to expand the pool and aquatics center space in proportions consistent with the average persons per dwelling. The aquatic center pools and locker/utility buildings would be expanded in the amounts on the following page, by type of residential dwelling:

Detached Dwelling Units	0.1575 S.F. of locker space and 0.1014 S.F. of pool surface
Attached Dwelling Units	0.1396 S.F. of locker space and 0.0899 S.F. of pool surface
High Density Dwelling Units	0.1104 S.F. of locker space and 0.0711 S.F. of pool surface
Mobile Home Dwelling Units	0.1314 S.F. of locker space and 0.0846 S.F. of pool surface

The Relationship Between the Amount of the Fee and the Cost of the Portion of the Facility Attributed to the Development Project. Schedule 13.1 indicates the pool and locker building cost calculations. The pool construction costs are also based upon past pool construction costs received from previous agencies.

The two separate square foot costs above total about $29.44 per person for the pool expansion ($362.71/S.F. X 0.0414 = $15.01 per person) about $14.43 per person for the locker/service building expansion ($541.80/S.F. X 0.0266 = $14.43 per person) or $29.44 per person for both construction components. Thus a detached dwelling detached unit would incur impact costs of $112 (3.806 persons X $29.44, rounded). An attached dwelling unit would generate impact costs of about $100, (3.373 persons X $29.44, rounded). A high density dwelling unit requires aquatics facility expansion costs of $79 (2.669 persons X $29.44 rounded).

Resulting DIF Schedule. Schedule 13.1, as summarized by Table 13-2 following, indicates the proposed Aquatics Facilities DIF schedule.

Table 13-3
Summary of Aquatics Facilities Impact Fee

DIF Land-use Type	Impact Fee Per Unit
Detached Dwelling Unit	$112
Attached Dwelling Unit	$100
High Density Dwelling Unit	$79
Mobile Home Dwelling Unit	$94

RECAP OF RECOMMENDED AQUATICS FACILITIES IMPACT FEES

- **General City** - Adopt Schedule 13.1 for the four basic residential land-uses.
- **Ontario Ranch** - Adopt Schedule 13.1 for the three basic residential land-uses in Ontario Ranch (detached, attached and high density dwelling units).

Chapter 14
Park Land Acquisition and Park Infrastructure Development

This Chapter summarizes the City's existing inventory of parks and identifies the ratio of park land per resident allowable under the Quimby Act (§66477 of the Government Code) [16] for residential developments involving the subdivision of land and the Mitigation Fee Act (§66000 of the Government Code) for the construction of residential developments not involving the subdivision of land. The existing per capita standard is then utilized to calculate the park dedication requirement for future residential development.

EXISTING PARKS AND RECREATION SYSTEM

Intensive parks and park recreational facilities constitute one of the City of Ontario's greatest challenges both with respect to facilities for both current residents and future citizens. The provision of a well-planned park system, with a variation in the size and nature of facilities offered, is an important amenity to residents of any city, the City of Ontario included. A mixture of passive and active uses and facilities and programs which appeal to a broad spectrum of potential park users is considered optimal in most urban cities. A city's park system is often a major factor in selection of a place to live. The current acres dedicated to park use will serve well to meet the City's current needs. However if the number of park acres remains static at 452.94 acres, they will not continue to meet recreational demands in light of a potential near doubling of the City's population.

Future residential development, by increasing the City's population, will impact the City's park system by requiring additional baseball fields and adequate space for various athletic activities. Given the magnitude of growth projected in this and other reports, the challenge facing the City will be to provide new facilities and park land to serve the recreational needs of these new residents. Without additional park land acquisition and continued development of currently owned but underutilized park land during the next twenty to thirty years, the City's parks will become overcrowded and overused, with the ultimate result becoming a negative experience for park users.

Existing Parks. Currently, the City owns approximately 452.94 acres of park land, most of it developed. John Galvin, Westwind, DeAnza, Anthony Munoz, Soccer Park and Homer Briggs parks are the largest developed parks. At a total of 121.4 acres, they represent over a quarter of the park system acreage (when only traditional parks are considered) and provide the greatest variety of sports and passive uses. There are an additional 18.58 acres of potential park land represented in Fund Balance for a total of 471.52 acres in existing or potential parks.

Table 14-1, on the following page, is an inventory of the existing park acreage.

16 Adoption of a Quimby Act Fee requires a park "plan".

14-1
Inventory of Owned and Developed Park Land

Park or Space Name	Owned Park Acres	Developed Park Acres
Anthony Munoz Hall of Fame Park	15.80	15.80
Armstrong Community Center Park	1.14	1.14
Bon View Park	10.30	10.30
Celebration Park (North and South)	10.50	10.50
Centennial Park	4.60	4.60
Civic Center Conservation Park	1.00	1.00
Creekside Park	6.90	6.90
Cypress Park	4.70	4.70
De Anza Park	19.20	19.20
Del Rancho Park	4.80	4.80
Euclid Median Park	13.40	13.40
George Gibbs Park	2.70	2.70
Grove Park	3.10	3.10
Homer Briggs Park	14.40	14.40
James F. Bryant Park (L)	4.50	4.50
James Galanis Park	4.80	4.80
Jay Littleton Ballpark	9.70	9.70
John Galvin Park	25.60	25.60
Kimball Park	7.10	7.10
Nugent's Park	0.20	0.20
Ontario Motor Speedway Park	6.20	6.20
Ontario Soccer Park	23.40	23.40
Ontario Town Square Park	1.90	1.90
Ranch Park	1.80	1.80
Sam Alba Park	1.00	1.00
South Bon View Park	4.80	4.80
Veteran's Park	7.50	7.50
Vineyard Park	9.00	9.00
West Cucamonga Creek Trail	34.00	34.00
Westwind Park	23.00	23.00
Whispering Lakes Golf Course	176.30	176.30
Park Equivalent in Fund Balance	18.58	18.58
Total Park Acres	**471.52**	**471.52**

City De Facto Park Standard. Table 14-2, following, is a comparison of the acreage of parks to the City of Ontario's current population and indicates that the City presently possesses a total standard of 2.59 acres of owned park land per 1,000 residents, (471.52 acres ÷ [182,004 residents ÷ 1,000], rounded). Of the 471.52 total acres, 18.58 acres are represented in Park Acquisition and Park Improvements DIF fund balance (yet to be built) and do not require maintenance. This is slightly following the benchmark of 3.0 acres per 1,000 persons contained in Section 66477 of the California Government Code relating to dedication of parks.

Table 14-2
Calculation of Actual City-owned Park Acres Standard

	Owned Acres	Developed Acres
Total Park Acres	471.52	471.52
Current City Population	182,004	182,004
Population Divided by 1,000	182.0	182.0
Park Acres per 1,000 Population	2.59	2.59

However, the Quimby Act, to be discussed later, allows a minimum standard of 3.0 acres per thousand residents even if the City does not reach that standard. However, the *park acres owned* standard for the City of Ontario is 2.59 acres per 1,000 residents and thus the Quimby allowable minimum standard of 3.0 acres per 1,000 new residents will be used for *park land acquisition.*

The Quimby minimum of 3.0 acres per 1,000 residents has not been exceeded by the 2.59 acres per 1,000 residents and thus the Quimby allowable minimum of 3.0 acres per 1,000 will be used in the remainder of the Chapter for park *land acquisition and construction.* Though not relevant to the City of Ontario, the Quimby Act has a cap of 5.0 acres per thousand residents (Government Code §66447 (a) (2).

Planned Park Improvements. In addition to the on-going improvement of the existing 471.52 acres (17), the City will need to acquire 753.9 park acres, per Table 14-3, and develop these new parks to serve the additional 251,302 residents anticipated to live in both the General City and Ontario Ranch areas of the City at General Plan build-out. City staff has not proposed any specific improvements to existing parks or any new park configurations.

[This space left vacant to place the following table on a single page].

Table 14-3

17 The Quimby Act does allow for the use of receipts raised by the adoption of a Quimby Act park Impact Fee to be used for rehabilitation of existing park configurations.

Calculation of Required Park Acres per Allowable Standard

General Plan Anticipated Population Increase	251,302
Additional Population Divided by 1,000	251.3
Allowable Standard in Acres/1,000	3.0
Park Acres required to Maintain Standard	753.9

These general improvements are outlined in the MFP. The 753.9 acres could be constructed in some combination of the following park configurations:

Mini or "Pocket" Parks - This the smallest of the parks designations and though generally not planned due to higher maintenance costs, usually are the result of acquiring an unusual parcel of land sometimes with historical significance. Nugent's Park fits best into this category.

Local or Neighborhood Parks - These parks are generally five to ten acres and serve local (1/4 mile walk-in distance) users. Not surprisingly, the City has a number of these parks. Centennial Park, James Galanis and South Bon View Park are good examples of this category.

Community or Sport Parks - These parks are most functional when they are twenty acres or larger and are designed to meet the needs of the entire community. Often, ten to twenty acre parks are forced to act as community or sports parks. These needs include youth and adult sports organizations, clubs or associations and large scale community events such as 4th of July celebrations or festivals. Anthony Munoz Hall of Fame Park, the Ontario Soccer Park or De Anza Park are good an example of sports parks and John Galvin Park best depicts a broad-based use community park.

The park and recreation improvements that could be contained within the almost 754 needed acres and the existing standard (Table 14-1) are both consistent with the City's Park and Recreation Element of the General Plan. The City's 2.59 acres per 1,000 population standard comes close but falls short of three acre per 1,000 population standard that is a common but frequently unmet minimum target of municipalities and recreation and park special districts throughout Southern California.

CALCULATION OF PARK DEDICATION STANDARD

Unlike the other facilities discussed in this Report, the California Government Code contains enabling legislation for the acquisition and development of community and neighborhood parks by a City. This legislation, codified as Section 66477 of the Government Code and known commonly as the "Quimby Act", establishes criteria for charging new development for park facilities based on specific park standards. This Report will recommend the adoption of Quimby-style park fees over an AB 1600-style DIF for developments requiring the subdivision of land and an AB 1600 fee for non-subdivided land.

Allowable Park Standard As stated earlier, under §66477 of the Government Code, the City

may charge new residential development based on a standard of 3.0 acres per 1,000 residents even if the City does not presently possess a ratio of 3.0 acres per 1,000 for the existing population. The Government Code also enables a city to charge development based on a standard higher than 3.0 acres (to a maximum of 5.0 acres) if the City currently exceeds the minimum benchmark ratio of 3.0 acres per 1,000 residents.

The law states that "if the amount of existing neighborhood and community park area ... exceeds the [3 acres of park area per 1,000 person] limit ... the legislative body may adopt the calculated amount as a higher standard not to exceed 5 acres per 1,000 persons" [18]. Park fees may be required by the City provided that the City meets certain conditions including:

- The amount and location of land to be dedicated or the fees to be paid shall bear a reasonable relationship to the use of the park by the future inhabitants of the subdivision.
- The legislative body has adopted a general plan containing a recreational element, and the park and recreational facilities are in accordance with definite principles and standards contained therein.
- The city ... shall develop a schedule specifying how, when, and where it will use the land or fees, or both, to develop park or recreational facilities ... Any fees collected under the ordinance shall be committed within five years after the payment of such fees.

Determination of a Park Standard. The City desires to have a standard of 5.0 acres/1,000 persons park standard within the Ontario Ranch area [19]. As previously identified, the City currently has 2.59 acres of owned and developed park acres/1,000 residents. The Quimby Act allows the City to adopt a standard of 3.0 acres per thousand as the low-end threshold. However, the 3.0 acres per 1,000 residents standard is the highest standard that can be adopted under the Quimby Act, without actually maintaining a standard higher than 3.0 acres/1,000. The adoption of the 5.0 acres/1,000 standard in the Ontario Ranch General Plan Amendment is not sufficient for adoption of an impact fee that is based upon the costs of acquiring and developing five acres/1,000 new residents, the City must currently meet that 5.0 per 1,000 standard. A specific plan identifying the need for the five acre requirement may be sufficient and adequate for the higher standard. The fact remains then, that the City will need to find an alternative to acquire the remaining 2.0 acres/1,000 residents.

CALCULATION OF IMPACT COSTS

Once a per capita standard for parks is determined, the cost of residential development's impact on the City's park system can then be computed as follows.

Park Land Acquisition Costs. Land costs will vary significantly from one park to another. The

18 California Government Code, Title 7, Division 2, Section 66447 (b).
19 Policy 12.1.1 page 5-13, City of Ontario Ontario Ranch General Plan Amendment.

park land to be acquired must be suitable for park construction and is conservatively estimated at approximately $761,490 per acre ($700,000/acre for the park land purchase and $61,490/acre for rough grading) which is used in the Park DIF calculation. This is consistent with the cost of some land suitable for residential dwelling development in Ontario Ranch.

Park Improvements Construction Costs. Park improvement construction costs are largely based upon the recent construction of the Ontario Soccer Park, the City's most recently constructed park. The park improvement construction cost of $560,200 per acre has been amended to recognize increases in park construction costs since that soccer facility was constructed. The City does not have any more recent park construction history. Community centers and aquatic centers were not included in the cost calculation (see Chapters 12 and 13).

Additional Park Infrastructure Impact Costs. The addition of park acres will increase maintenance costs, both in terms of demand upon the existing vehicles and then the maintenance of those vehicles and storage of park maintenance supplies. The City currently has $1,782,800 in existing park maintenance vehicles and equipment that deemed as adequate and sufficient for maintaining the existing amount of park acres. Based upon the 471.52 existing or potential park acres, the City has $3,983 in required maintenance vehicles per acre of developed park. Table 14-4 following demonstrates this.

Table 14-4
Calculation of Park Maintenance
Vehicles & Equipment Component

Existing Maintenance Vehicles Cost	$1,878,120
Total Existing Park Acres	471.52
Maintenance Vehicle Cost per Acre Maintained	$3,983
Acres/1,000 Park Acres/Resident Standard	3.0
Existing Vehicle Cost per Three Park Acres	$11,949
Divided by 1,000 New Residents	1,000
Maintenance Vehicle Cost per Additional Resident	$11.95

Additionally, the Parks operation has been allocated $4,047,273 as its share of the $44.5 million in the common City Yard improvements required to provide the City Yard with capacity to maintain the ever-growing inventory of infrastructure. Based upon the 753.9 acres to be built, each acre of additional park will require $5,638 towards the Park maintenance operations $4,047,273 of the total $68.7 million required in City Yard improvements. Table 14-5 following demonstrates this.

[This space left vacant to place the following table on a single page].

Table 14-5
Calculation of Park Maintenance
Share of Common City Yard improvements Component

City Yard Improvement Share	$4,047,273
Total New Park Acres Anticipated	753.9
Yard Improvement Cost per New Park Acre	$5,368
Park Acres Standard Acres/1,000 Residents	3.0
Yard Cost per Three Park Acres	$16,104
Yard Improvement Cost Divided by 1,000 Residents	1,000
Maintenance Yard Cost per Additional Resident	$16.10

Average Park Acquisition, Development and Maintenance Vehicles and Facilities Cost per Capita. The combined park land acquisition, park improvements development and support facilities cost is $1,331,041 per acre ($761,490/acre for land acquisition, $560,200 per acre for park improvements and $9,531 for the required maintenance vehicles and facilities). If the City were to charge development for the maximum allowable amount of park acreage as allowed in the Quimby Act and as recommended here, then the City would need to acquire 3.00 acres of new park land for every potential 1,000 new residents to the City. The 3.00 acres of land acquisition and development per 1,000 persons would be $3,993,122 or about $3,993.12 per new resident. Schedule 14.1 calculates the cost to develop 3.00 acres, which again represents the required park land cost for 1,000 persons.

Average Cost per Dwelling Unit. Schedule 14.1 further calculates the cost per dwelling unit based on the per person park land acquisition, development and maintenance vehicles cost of $3,993.12 (Schedule 14.1) and the average number of persons per unit for each category of housing. Detached dwelling residential housing has the highest number of persons per dwelling unit (@ 3.806 per unit) and consequently carries the highest impact fee, $15,198 per unit ($3,993.12 X 3.806 persons per unit, rounded). Attached dwelling units have an average of 3.373 persons per unit and would need to be assessed $13,470 ($3,993.12 X 3.373, rounded). Table 14-6, following, summarizes the calculated and recommended fees for each of these three residential categories. Schedule 14.1 provides greater park calculation detail and a complete schedule of Park Land Acquisition and Park Improvements DIFs for each of the four dwelling unit types.

[This space left vacant to place the following table on a single page].

Table 14-6
Summary of Park Development Fees for
Residential Dwelling Construction

DIF Land-use Type	Development Impact Cost
Detached Dwelling Unit	$15,198/Unit
Attached Dwelling Unit	$13,470/Unit
High Density Dwelling Unit	$10,658/Unit
Mobile Home Dwelling Unit	$12,678/Unit

The DIFs for detached dwelling residential development involving the subdivision of land, as identified in Table 14-6, should be adopted under the auspices of the Quimby Act. The Residential dwelling units not requiring the sub-division of a privately-owned parcel will need to be adopted as a Government Code § 66000 supported DIF [20].

RECAP OF RECOMMENDED PARK LAND ACQUISITION AND PARK INFRASTRUCTURE DEVELOPMENT IMPACT FEES

- **General City** - Adopt Schedule 14.1 for the four basic residential land-uses.
- **Ontario Ranch** - Adopt Schedule 14.1 for the three basic residential land-uses in Ontario Ranch (detached, attached and high density dwelling units).

END OF CHAPTER TEXT

Chapter 15
Ontario Ranch Species, Habitat Conservation and Open Space Mitigation
(Chapter is static and will never change)

This chapter is intended to establish the legal and policy basis for the establishment and imposition of DIFs on new development in the City of Ontario's Ontario Ranch ("OR"). The purpose of the fees is to finance the purchase of land and conservation easements to mitigate the loss of open space, to protect endangered and threatened species and their habitat, to promote open space conservation and its inherent benefits, and to mitigate some of the more generalized adverse impacts to the environment associated with development of the OR.

EXISTING ENVIRONMENTAL AND BIOLOGICAL SETTING

Environmental Setting. The OR is currently used primarily for agricultural, dairy farm and related uses. Of the roughly 8,200 acres in the OR, approximately 5,537 acres are considered developable acres. While some land in the OR is presently devoted to residential development, it generally exists to provide living areas for dairy owners and their employees. The agricultural, dairy and related uses in the OR have provided valuable habitat areas for a variety of wildlife and plant species, some of which are endangered or threatened. At the same time, the open space areas necessarily left vacant by agricultural and related activities provide other benefits to the region in general and to the citizens of the City of Ontario in particular. These benefits include, but are not limited to: (1) species migration corridors; (2) unobstructed view corridors and aesthetics; (3) passive recreational opportunities; and (4) open space preservation.

The decreased viability of dairy and agricultural industries in this area, coupled with the demand for housing in the region, has placed tremendous development pressures on land in the OR. With the adoption of the Sphere of Influence ("SOI") General Plan Amendment ("GPA"), certification of the Environmental Impact Report ("EIR") in 1998, the City planned for the orderly transition of the OR from an area primarily devoted to agricultural and dairy operations to one that is predominantly residential, with supporting office, commercial, industrial, recreational and open space uses. In 1999 the City secured the annexation of the OR into its corporate limits.

Biological Setting. The existing agricultural and dairy operations in the OR support a variety of wildlife. As set forth in the SOI GPA and EIR, the area supports a diversity of wildlife, especially birds. The topography of the area and the existing passive open space uses provide for the accumulation of standing water used by migratory and resident birdlife, including varieties of cormorants, herons, egrets, ibises, kites, harriers, hawks, merlins, plovers, curlews, gulls, burrowing owls, shrikes, and blackbirds, all of which have been observed in field observations of the area. Many of these are a species of special concern, a candidate species, a threatened species or an endangered species under federal or state law. Dozens of other species of birds protected under the Migratory Bird Treaty Act are also present in the OR. The state-endangered western yellowbilled cuckoo and federally listed California gnatcatcher may also be present, or have historically inhabited the area.

The current agricultural operations in the area provide a compatible land use for sensitive species since fields under cultivation and fallow areas collect surface run-off and flood waters. In addition, drainage patterns also influence the number and size of such ponds. In fact, there are numerous flood control channels, detention basins and creeks in the area. Wildlife, and particularly birds, relies upon these wetlands-watery areas as habitat and foraging areas.

Wildlife also inhabits the windrows, or tall vegetation, areas located in the OR. Of particular importance are the numerous species of raptors found in these trees, including red-tailed hawks and American kestrels. Wildlife also inhabits agricultural open fields. These fields are important to bird species. Fields act as an intermediate area between windrows and wet areas. Birds forage for rodents and other prey living in the fields. Indeed, fields are the most suitable habitat for mice and ground squirrels. The ferruginous hawk, a sensitive species, often roosts on the ground in these portions of the OR. Other birds perch on trees. Dairy operations and buildings also attract and provide nesting areas and other habitat for bird species and wildlife in the OR. Sparrows, rock doves, finches, egrets and blackbirds are more tolerant of human activity associated with such sites.

According to the United States Fish and Wildlife Service, portions of the OR could support one of the few remaining populations of the Delhi Sands Flower-Loving Fly ("DSF"), a federally listed endangered species in the Ontario Recovery Unit. The Ontario Recovery Unit is one of only three areas identified in the Federal Endangered Species Act ("FESA) recovery plan for the DSF. That plan states that preservation of occupied habitat and restoration of unoccupied habitat for the DSF in the Ontario Recovery Unit is to be accomplished through fee acquisition, conservation easements, voluntary management plans and habitat conservation plans.

Moreover, at least seven mammal species listed as species of special concern or candidate species also occupy the OR. These include numerous species of rare bats. There are also San Diego black-tailed hares, pocket mice and kangaroo rats, desert wood rats, raccoons, foxes and bobcats. Numerous amphibian and reptile species are also present. Residential, commercial and industrial development in the OR will directly, indirectly and cumulatively eliminate the habitat relied upon by the above species. Standing water needed by a large percentage of the species, particularly fowl will be largely eliminated due to the construction of infrastructure projects and the paving over of large areas in the OR area. Development will also eliminate potential habitat for the DSF and for small mammals, which are used as a food sources by raptors and other imperiled species in the area. Traffic, noise, pollution and other effects associated with development and its related infrastructure will also drive away species by eliminating perching areas, nesting sites and other components of habitat.

DEVELOPMENT FEE APPROACH

The City has exhaustively considered all potentially feasible mitigation that could be provided to offset impacts to species and open space in the OR. As a result of a CEQA lawsuit brought on the City by the Endangered Habitats League and the Sierra Club, extensive discussions with environmental groups and other stakeholders have occurred since the adoption of the GPA and EIR in 1998 and input has been received and utilized from the stakeholders. These discussions

have focused on ensuring that concrete steps to protect species, habitat and open space are taken, while allowing for flexibility in the process to allow funding to be used where it can provide maximum benefit. Memorialized in a settlement agreement between the City and Endangered Habitats League and Sierra Club, the City and the stakeholders have determined that raising funds sufficient to offset impacts to species and ensuring that these funds be put to the best and highest use are a priority. The City and the stakeholders have also determined that a third party with special expertise in species/habitat acquisition and management issues would be the most suitable entity to spearhead the conservation effort.

These funds will allow for the acquisition of mitigation property in the Chino/El Prado Basin area to offset impacts in the OR because lands in the greater Chino Basin have been shown to be used by species now resident in the OR. Moreover, Chino Basin lands are of higher biological value and can be purchased in larger blocks than can be purchased in the OR.

The settlement agreement (1) specifically allows for the acquisition of all OR habitat/open space mitigation property "offsite" so that larger, more biologically beneficial blocks of habitat can be purchased; (2) allow for the hiring or establishment of a land trust to spearhead the habitat/open space acquisition process; (3) give the land trust maximum flexibility to determine the type and amounts of land that should be purchased; (4) provide that DIFs be collected in amounts sufficient to offset the biological impacts to species now existing in the OR and loss of open space; (5) ensure, given the conclusions in the EIR and the underlying biological studies, that raptors, waterfowl and other bird species will bear a substantial burden and be unduly displaced by development of the OR, that the bulk of collected mitigation fees be used to offset impacts to such species; (6) provide that up to $500 per acre of mitigation fees may be used by the City to benefit DSF; and (7) provide that $22.7 million is the appropriate and justifiable amount that will be raised through DIFs to offset these impacts.

Justification for the amount and need for DIFs to be established and imposed in the OR by the City of Ontario can be divided into three categories. These include (1) compliance with the adopted policies and mitigation measures of the general plan amendments and their associated CEQA documents for the protection of species and their habitat; (2) mitigation for the loss of open space and its attendant benefits; and (3) mitigation for the direct, indirect and cumulative impacts on species from development and development-related infrastructure.

1. Compliance with the General Plan, Its Amendments and CEQA

To offset negative impacts to species, their habitat and open space, the SOI GPA and EIR require that suitable replacement habitat and natural open space lands be acquired in areas in and around the Chino/El Prado Basin. Birds and other species which currently inhabit the OR, whether seasonally or full time, range throughout the Chino/El Prado Basin and into surrounding areas. Lands to the south and southwest of the OR retain substantial standing water and thus serve as potential, viable habitat for many of these, particularly birds. Thus, the collection of DIFs to fund the purchase of land and conservation easements provides the most direct and beneficial method of mitigating the impacts to open space resources and habitat land. Moreover, the purchase of properties in areas outside the boundaries of the OR, but within the

Chino Basin, not only promotes the goals of the general plan amendments and related CEQA documents, but also provides a unique and biologically acceptable method for retaining open space for the benefit of species in a cost-effective manner.

Mitigation Fee Act (California Government Code, Section 66000 et seq.)

A set forth in Chapter 1, DIFs are imposed on development as a means to mitigate the impacts and infrastructure demands created by development activity. In accordance with the requirements of California Government Code, Section 66000 et seq., this section intends to:

1. Identify the purpose of the habitat and open space DIFs at issue;

2. Identify the uses to which these DIFs will be used;

3. Determine how there is a reasonable relationship between these DIFs and the types of development projects upon which the DIFs are imposed; and

5. Determine how there is a reasonable relationship between the need for the public facilities, in this case habitat land and open space, and the type of development projects upon which these DIFs are imposed.

In addition, this section will, in accordance with Government Code, Section 66001(b), generally discuss how there is a reasonable relationship between the amount of the proposed fees and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The following analysis provides the justification required by the Mitigation Fee Act:

1. The Purpose of the Fee. The primary purpose of the fee is to acquire and restore mitigation lands to offset impacts to species now living in the OR and impacts to existing open space. The mitigation fee will be used to advance the goals, objectives and policies set forth in the SOI GPA adopted in 1998. .According to the GPA, "the City shall be reimbursed for mitigation land purchase and habitat creation costs with DIFs to be paid by each developer within the NMC" (now referred to as OR). Accordingly, one of the components of the habitat and open space mitigation fee, and indeed the largest one, is to be used to purchase the lands within the Chino/El Prado Basin required by the EIR.

The habitat mitigation and open space fee is also to provide funding to offset direct, indirect and cumulative impacts to DSF in the OR. Thus, a separate component of the habitat and open space DIF may be utilized to acquire and restore lands to partially offset direct and cumulative impacts to DSF. However, it should be noted that the fee is not intended to cover any DSF mitigation required by the Service or under CEQA on a project-by-project basis.

In sum, habitat mitigation and open space fees will be used to protect open space, sensitive habitat areas, wetlands, aesthetics and historic view sheds; and to provide habitat area for endangered and sensitive species and other wildlife. Collection of fees will allow the City to

satisfy its CEQA obligations and to purchase larger parcels of property which are more biologically suitable for species that might not be able to be obtained if habitat impacts to raptors and waterfowl were mitigated for on a project-by-project basis. Portions of the fee will also be used to benefit DSF and to offset generalized impacts to species and the environment.

2. The Use to which the Fee is to Be Put. Habitat and open space mitigation fees collected will be used to meet the requirements of the EIR to purchase, and where necessary enhance or restore, open space and habitat conservation areas near the OR to benefit raptors, mammals, burrowing owls, DSF and other species which currently occupy the area. In order to assure that land purchased with DIFs is appropriate for species, the City will hire or establish a land trust that is familiar with the biological and other needs of the species inhabiting the OR. With oversight by and subject to conditions imposed by the City, the land trust will purchase mitigation land to maintain natural conditions and assure the continued viability and use of acquired lands for habitat conservation and open space purposes.

Acquired lands will also benefit the public by providing natural open space which will be lost as a result of development of the OR. Thus, the fees will defray the cost of specific community amenities, including protecting historic view sheds and providing passive recreational opportunities for present and future residents of the OR. In addition to purchasing habitat and open space areas in fee, conservation easements, rights of way, management agreements and other legal entitlements or mechanisms which will ensure the long-term sustenance of habitat and open space may also be acquired. The lands to be purchased will be located in or adjacent to the greater Chino/El Prado Basin area. Acquiring mitigation lands in these areas will be more cost effective than purchasing lands in the more expensive OR.

3. The relationship between the fee's use and the type of development project upon which the fee is imposed. (Benefit Relationship). As the OR is developed, all types of development (i.e., residential, industrial and commercial) will use up more and more available open space/habitat areas. No single type of development will have a greater impact than another because it is the depletion of land in its natural state that severely impacts retention of species and open space amenities in the OR. Indeed, such development activity and related public infrastructure improvements necessarily deplete, both directly and cumulatively, open space and habitat area that would otherwise remain available to support the goals of the general plan and specific plan policies (i.e., protection of sensitive species, view sheds, flood protection, aesthetics, wetlands, development of property with sensitivity toward the environment). Of particular importance are the cumulative impacts associated with the development, all of which are to be taken into account when determining the benefit relationship.

As set forth above, there is a reasonable relationship between the purchase of open space/habitat and all developments in the OR. This impact is equalized among all types of development because it is the conversion of land from its natural state that creates the impact upon species and open space opportunities.

4. The relationship between the need for the public facility (open space) and the type of development project upon which the fee is imposed. (Impact Relationship). As set forth above, it would be infeasible and impractical for each development in the OR to provide sufficient open

space and quality habitat areas to meet the mitigation goals for waterfowl, raptors and other species set forth in the GPA and the related CEQA documents (i.e., to ensure long-term viability of sensitive species). Each development in the OR equally impacts (on an acre-by-acre basis) the supply of available land for open space and habitat areas. Thus, the imposition of fees is the most practical way of permitting development to proceed in an environmentally responsible manner.

The SOI GPA, EIR and related biological studies indicate that species currently range across all portions of the OR. All development, whether residential, commercial, industrial or otherwise, will lead to the urbanization of the area and the elimination of precious natural open space and habitat area. Moreover, all new development leads to the need for, or the size of, the construction of additional roadways and other public improvements which, in turn, have negative effects on species and the environment.

5. The relationship between the amount of the fee and the cost of the public facility (open space/habitat) attributable to the development upon which the fee is imposed. ("Rough Proportionality" Relationship). As set forth above, each development in the OR equally impacts the supply of available land for open space and habitat areas. Moreover, each individual development project and its related necessary infrastructure improvements, when examined along with the cumulative impacts of all development in the OR, will have an adverse effect on the availability of open space and species, as well as any remaining open space in the vicinity of development in the OR. Thus, imposition of DIFs to purchase replacement open space and habitat areas (and to protect them from infrastructure encroachments) is the most efficient, practical and equitable method of permitting development to proceed in an environmentally responsible manner and in a manner that complies with the adopted plans and mitigation measures for the OR.

CEQA Mitigation. The SOI GPA and their associated CEQA documents and biological studies require that 305 acres of land be acquired, restored and/or retained in its natural state to provide substantive beneficial opportunities for species protection and open space conservation. Under the terms of the Settlement Agreement between the City and Endangered Habitats League and Sierra Club, a mitigation fee of $2,000 per developable acre is to be assessed. Additionally, the cost of the off-site habitat/open space mitigation (305 acres) is to be funded at a rate of $40,000 per acre. Combined, these two factors equate to approximately $22.7 million.

The City and the stakeholders believe that providing maximum flexibility in the land acquisition and restoration process will be of the greatest benefit to species. Such flexibility will allow for the acquisition of larger parcels of land, corridors and other areas of high biological and open space value as such lands become available. At the same time, the City and the stakeholders wish to ensure that sufficient funds are raised through the DIF process to satisfy the requirements of the GPA and CEQA processes.

In determining the total amount needed to be collected to meet these needs, the City examined seven separate scenarios. These scenarios are set forth below. Under each scenario, the land trust acquires a combination of lands in fee and conservation easements in the Chino Basin for

the benefit of waterfowl and raptors. In some cases, DSF mitigation lands are acquired, where feasible. The restoration/enhancement of some of these lands is also assumed.

Scenario 1:

Purchase Price for Lands in Chino Basin in Fee:	200 acres x $85,000/acre = $17,000,000
Purchase Price for Conservation Easements in Chino Basin:	105 acres x $45,000/acre = $4,725,000
Restoration/Enhancement:	50 acres x $20,000/acre = $1,000,000
	Total = $22,725,000

Scenario 2

Purchase Price for Lands in Chino Basin in Fee:	175 acres x $85,000/acre = $14,875,000
Purchase Price for conservation Easements in Chino Basin:	100 acres x $45,000/acre = $4,500,000
Restoration/Enhancement:	40 acres x $20,000/acre = $800,000
Purchase Price for DSF habitat in Recovery Area:	25 acres x $100,000/acre = $2,500,000
DSF and Restoration Costs:	15 acres x $3,500/acre = $52:500
	Total = $22,727,500

Scenario 3:

Purchase Price for Lands in Chino Basin in Fee:	220 acres x $85,000/acre = $18,700,000
Purchase Price for conservation Easements in Chino Basin:	10 acres x $45,000/acre = $450,000
Restoration/Enhancement:	100 acres x $20,000/acre = $2,000,000
Purchase Price for DSF habitat in Recovery Area:	15 acres x $100,000/acre = $1,500,000
DSF Land Restoration Costs:	15 acres x $3,500/acre = $52,500
	Total = $22,702,500

Scenario 4:

Purchase Price for Lands in Chino Basin in Fee:	240 acres x $85,000/acre = $20,400,000
Purchase Price for Conservation Easements in Chino Basin:	25 acres x $45,000/acre = $1,125,000
Restoration/Enhancement:	10 acres x $20,000/acre = $200,000
Purchase Price for DSF habitat in Recovery Area:	10 acres x $1 00,000/acre = $1,000,000
DSF Land Restoration Costs:	5 acres x $3,500/acre = $17,500
	Total = $22,742,500

Scenario 5:

Purchase Price for Lands in Chino Basin in Fee:	125 acres x $85,000/acre = $10,625,000
Purchase Price for Conservation Easements in Chino Basin:	200 acres x $45,000/acre = $9,000,000
Restoration/Enhancement:	50 acres x $20,000/acre = $1,000,000
Purchase Price for DSF habitat in Recovery Area:	20 acres x $1 00,000/acre = $2,000,000
DSF and Restoration Costs:	20 acres x $3,500/acre = $70,000
	Total = $22,695,000

Scenario 6

Purchase Price for Lands in Chino Basin in Fee:	100 acres x $85,000/acre = $8,500,000
Purchase Price for conservation Easements in Chino Basin:	250 acres x $45,000/acre = $11,250,000
Restoration/Enhancement:	100 acres x $20,000/acre = $2,000,000
Purchase Price for DSF habitat in Recovery Area:	10 acres x $100,000/acre = $1,000,000
DSF Land Restoration Costs:	10 acres x $3,500/acre = $35,000

Scenario 7:

Purchase Price for Lands in Chino Basin in Fee:	150 acres x $85,000/acre = $12,750,000
Purchase Price for Conservation Easements in Chino Basin:	125 acres x $45,000/acre = $5,625,000
Restoration/Enhancement:	90 acres x $20,000/acre = $1,800,000
Purchase Price for DSF habitat in Recovery Area:	25 acres x $100,000/acre = $2,500,000
DSF and Restoration Costs:	15 acres x $3,500/acre = $52,500
	Total = $22,727,500

The habitat and open space mitigation fees adopted by the City will provide an effective way to establish a comprehensive program that can benefit multiple species due to the potential for acquiring larger expanses of open space areas and regional connection to other open space areas. In addition, the program raises public awareness of biological resource issues through the passive interface of active park areas with natural open space areas. Implementation of such a program allows appropriate economic and infrastructure projects in the OR to move forward compatibly with the protection/enhancement of biological resources.

Table 15-1, following, identifies the Mitigation DIFs on a per net developable acre and per unit. NOTE: The *per unit* figures are merely for presentation purposes only, these (non-development impact) fees will be imposed on a *per acre* ($4,320 per acre specifically) basis only.

Table 15-1
Species, Habitat Conservation and Open Space Mitigation
Impact Fee, per Acre (for adoption) and per Unit (for presentation)

DIF Category	Mitigation Impact Fee per Acre	Average Units per Acre	Open Space Cost per Unit
Detached Dwelling Units	$4,320	6.12	$706
Attached Dwelling Units	$4,320	28.19	$153
High Density Dwelling Units	$4,320	38.40	$113
Commercial Lodging Units	$4,320	44.00	$98
Retail/Service Uses (in SF)	$4,320	17,474	$0.247
Office Uses (in SF)	$4,320	33,287	$0.130
Business Park Uses (in SF)	$4,320	20,094	$0.215
Industrial Uses (in SF)	$4,320	27,608	$0.156
Institutional Use (in SF)	$4,320	21,780	$0.198

RECAP OF RECOMMENDED SPECIES, HABITAT CONSERVATION AND OPEN SPACE LAND MITIGATION IMPACT FEE

- General City - These fees do not apply to General City development.
- Ontario Ranch - Adopt the ***Mitigation Impact Fee per Acre*** column on Table 15-1 as the Mitigation Fees to be applied to all private development within Ontario Ranch and applied on the net acres of the development.

Per Net Acre Fee. Based upon the above scenarios and calculations, it has been conservatively estimated that the City must raise a net $22,718,000 to fund the acquisition of the WRCA and the other habitat and open space acreage required by the GPA and EIR. As there are 5,259 developable acres (5,537 less land required for pocket parks, community parks, and schools not previously removed from the land use table) in the OR, the recommended DIF for the acquisition of open space and habitat land is $4,320 per net acre (rounded).

Of the $4,320 amount, the City may utilize up to $500 per acre to carry out the provisions of the GPA and EIR related to DSF. As set forth above, the GPA requires the City "to cooperate with the Service to mitigate impacts to the DSF, establish standards for buffers for protecting DSF restoration areas, and work to create DSF habitat, where possible." The DSF Recovery Plan calls for the establishment of 150 acres of DSF preserve areas in or adjacent to the OR. To the extent feasible, there will be an attempt to acquire properties which benefit both DSF and raptors/waterfowl. The City may thus use the $500 per acre retained portion of the $4,320 fee to carry out requirements set by the Service. However, it should be noted that CEQA specific plan documents, or the Service or other regulatory agencies, may require mitigation for impacts to DSF on a project by project basis, if applicable. The $500 per acre retained portion of the habitat and open space DIF is not intended to cover or be used to purchase mitigation land associated with any such individual development project.

Other Costs. In addition, to the above costs, the City of Ontario could also elect to impose DIFs to offset the more general adverse impacts to species and the environment associated with development of area. However, in light of the per acre costs associated with the GPA and EIR mitigation, it is recommended that the City absorb these more generalized costs.

Conclusion

With the commercial, residential and industrial development anticipated for the OR, many of the existing species habitat and open space attributes will be compromised or eliminated as construction proceeds. To offset these negative impacts to species, open space, and the environment more generally, the City has adopted habitat conservation and open space mitigation fees to provide for the acquisition and restoration of lands within or adjacent to the Chino/El Prado Basin area suitable for habitat and open space. These fees will implement the goals and objectives of the GPA, the EIR, and the settlement agreement; enhance the long-term viability of imperiled species; provide a mechanism to facilitate more efficient and species-sensitive development; provide a mechanism to partially offset impacts associates with City

infrastructure improvements; and provide a substantial benefit to the City, its residents and its businesses.

RECAP OF RECOMMENDED SPECIES, HABITAT CONSERVATION AND OPEN SPACE LAND MITIGATION IMPACT FEE

- **General City** - These fees do not apply to General City development.
- **Ontario Ranch** - Adopt the ***Mitigation Impact Fee per Acre*** column on Schedule 15.2 and Table 15-1 as the Acre Mitigation Fees to be applied to all private development within Ontario Ranch and applied on the net acres of the development.

END OF CHAPTER TEXT

Schedule 15.1

City of Ontario - Ontario Ranch
2021-22 Development Impact Cost Calculation Update
Open Space Legal Agreement (OR)
(This fee is static, and is not subject to change.)

Line #	Description	Estimated Cost	Cost Distribution for Components I & II: Percent Need	Cost Distribution for Components I & II: Apportioned Dollar Cost	Cost Distribution for Component III: Percent Need	Cost Distribution for Component III: Apportioned Dollar Cost
LS-001	Habitat and Open Space Mitigation	$20,420,640	100.00%	$20,420,640	0.00%	$0
	ESTIMATED GENERAL PLAN SETTLEMENT COSTS	$20,420,640	100.00%	$20,420,640	0.00%	$0
	Existing Fund Balance (Does not reduce mitgation)	$6,805,316	100.00%	$6,805,316	0.00%	$0
	Total Lawsuit Contribution	$27,225,956	100.00%	$27,225,956	0.00%	$0

NOTE: Since this is not a project but a contribution by developers the "Existing Fund Balace" is dedicated to the estimated settlement costs, and does not reduce it.

Schedule 15.2

1. This is not a Development Impact Fee, it is a settlement applied to development within the Ontario Ranch. It has been included to provide an average per unit cost.

Chapter 16
Ontario Ranch
Fiber Optic Communications System

Fiber Optic Communications Equipment and Facilities is an infrastructure that will only be imposed upon development in the Ontario Ranch. General City already has communications lines imbedded within the right-of-way and thus could not benefit from the timing of the construction of the system described herein.

The City of Ontario is proposing a fiber optic telecommunication infrastructure to meet several goals including the following:

1. The telecommunication industry, specifically service providers, is in a period of rapid change. The Telecommunications Act of 1996 reaffirmed the principles of an open marketplace. Many new service providers are entering the market for voice, video and data services. All this is happening while the technology used in the "last mile" to residences and businesses has stabilized. In order for the City to protect its rights-of-way within the Ontario Ranch the City will install a *state of the art* telecommunications infrastructure which can accommodate a large number of competitive service providers. This will eliminate the need for future disruptions within developed right of ways in the Ontario Ranch by allowing service providers the use of the City's infrastructure to provide service. This infrastructure will also provide a platform for continued expansion of new technologies community benefits, and unlimited capacities as the need for access continues to grow.

2. Incumbent service providers lack of interest and resources limits their ability to install "state of the art" telecommunication infrastructure in the OR. Incumbents typically have a limited amount of funds, with large geographical, which leads to cherry-picking in high density markets and large cities through-out the United States. While they may install some fiber optics in the main delivery system, the systems they are likely to install to the dwelling will be based on a much more restricted technology. This limited infrastructure will quickly become outdated, forcing more disruptions in the rights-of-way and existing street infrastructure within OR.

3. The installation of a fiber optic telecommunications infrastructure will provide an enhanced amenity for the OR allowing residents and businesses a high level of access to technology. Examples include everything from interactive/high definition television, dwelling to medical screening, video conferencing, and access to high-speed business networks. This will enhance the attractiveness of the community to professionals, skilled technicians and technological businesses and improve the economic development potential of the OR.

4. The fiber optic telecommunications infrastructure will assist telecommuters by providing high-speed data access and video conferencing directly from the dwelling over secure virtual private networks. Within the OR location, the head end of one of the busiest commutes into Orange and Los Angeles Counties, the anticipated level of telecommuter

participation will be higher when compared to the national average. This fiber infrastructure will mitigate traffic congestion and significantly improve the quality of life for the residents of the OR.

5. The schools within the OR, from elementary through the College levels, will benefit from this fiber optic infrastructure inasmuch as it will allow improved curriculum based on distance learning and use of remote resources to support the educational process. Schools will be able to establish on-site broadcast capabilities in addition to downloading a variety of professionally developed curriculum from throughout the world.

6. The City will be able to use the fiber optic network to improve operations by enabling low cost, high speed connections between City facilities as well as by allowing the City to provide automated reading of meters and the use of video to assist with control of traffic flow in the OR.

7. Finally, the fiber optic telecommunications infrastructure will lower the overall costs when compared to the installation of multiple traditional telecommunications systems. The bandwidth capacity is significantly large enough to accommodate all services over this single fiber infrastructure. This will lower costs, dramatically improve telecommunications capability and spur open competition in the marketplace.

The **Purpose** of the Fee. The impact fee for telecommunication will allow the local government to control the telecommunications infrastructure in a manner designed to maximize the public benefit. This will be accomplished by lowering service cost as the result of competition between telecommunication service providers, significantly reducing right-of-way costs to the taxpayer, and improving security and quality of life issues in general. The impact fee will allow the infrastructure to be completed while self-sustaining income from the service providers will pay for the maintenance of the system. This model is similar to the construction of any other infrastructure including streets, water distribution facilities and sewer collection facilities.

The **Use** of the Fee. The fee will be used to construct the fiber optic communications system, consisting of the *head-end* equipment, the *core network*, *the last mile* and miscellaneous equipment necessary to extend voice, video and data services to the Ontario Ranch. According to the OntarioNet, A Master Plan for the Deployment of an Advanced Fiber Optic Telecommunications Network in the Ontario Ranch. The following costs were recalculated in 2021-22 with current costs and new operational requirements.

The *head-end* network (FO-001), typically housed in an environmentally controlled concrete enclosure, and is the central access point for the service providers and network support services. In simpler terms, it is the place where outside vendors (such as video broadcast) would connect to the system. This portion of the system is estimated to cost $9,628,430.

The *core network* (FO-002) is simply the largest part of the fiber optic cabling. The Master Plan consists of trenching, hand holes and fiber splices. This portion of the program is estimated to cost $17,055,967.

The implementation model (FO-003), has been completed.

The heart of the network is the Distribution Network – Major Streets Conduit System (FO-004) includes construction, installation, splicing, testing of backbone distribution infrastructure, including cabinets, pull boxes, conduit, miscellaneous equipment, uninterruptable power supply (UPS), remote equipment, and fiber and splicing connections has been re-estimated to be just over $14.8 million.

The System Distribution Network – Fiber System (FO-005) of equipment is a logical grouping of some 300 to 382 subscribers as a single node of service, depending upon the configuration of detached dwelling, detached and commercial, office or industrial business uses. This portion of the project will cost approximately $4,200,622.

The Cabling System Project (FO-006) is an additional project is to provide for the design and construction of the fiber cabling and related distribution cabinets and equipment for the Fiber Optic System within neighborhood (in-tract) streets in the Ontario Ranch area. This in-tract fiber cabling will connect the Fiber Optic system to the facilities located within the major streets within the Ontario Ranch area. The Project will include the design and construction of the fiber cabling to be installed in the conduit installed by the individual developers within the rights-of-way of the neighborhood streets in the Ontario Ranch area. This Project will provide a Fiber Optics system in both residential neighborhoods and non-residential areas in the Ontario Ranch area. The projected costs of this project are $35,980,788.

The Fiber Equipment for Residential Units (FO-007) Project includes the acquisition and installation of Fiber Optic System equipment for each residential unit in the Ontario Ranch Area. This includes attached, detached residential units and commercial lodging units. The Network Interface Device (NID) equipment will be acquired and installed in approximately 45,900 residential units within the Ontario Ranch area. The projected costs of this project are $35,893,754.

The Fiber Equipment for Non-Residential Units (FO-008) Project includes the acquisition and installation of Fiber Optic System equipment for each non-residential building in the Ontario Ranch Area. The Project will provide the design and installation of network interface equipment in all non-residential units within the Ontario Ranch area. The projected costs of this project are $10,716,065.

Share Of Common City Yard Improvements (FO-009) is defined as improvement and the use of facilities that provide storage, assembly, and execution for the Fiber Optic System. These facilities will be needed in the future to provide adequate space to support the expansion of the Fiber Optic System throughout the City. However, the estimated costs will need to be identified by a Master Planned City Yard Improvement Program and are not included in this update. Thus there is no estimate at this time.

Most of these individual projects are distributed by the future number of connections to the system.

The Relationship Between the Need for The Fee and The Type of Development Project. The distribution of the system construction costs will be based upon an equivalent Residential Unit (or bandwidth) methodology. A detached dwelling will be the equivalent dwelling unit base at a

minimum of 300 megabits per second (henceforth Mbps) of data capacity in order for the network to provide voice, data and video services with acceptable quality and delivery. Based upon network parameters, the cost (to be identified later in the Chapter) to construct the system in order to provide the 300 Mbps of service to one **detached dwelling residence** will be defined as a one ***R***esidential ***U***nit or ***RU*** (and which will be used as the common denominator in the following examples) and represents a minimum of 300 Mbps of service to one provider.

Each **detached dwelling** would require its own 300 Mbps of bandwidth for voice, data and video service, thus each detached unit will require its own RU for service activation.

Individual **commercial lodging (e.g. hotel/motel) units**, have close proximity and will require only the minimum 300 Mbps per ten rental units, or stated differently, each single unit will only need 10% of the single ***RU*** or 0.1 ***RU***.

Approximately 2,500 square feet of **Retail/Commercial Use** space will require 165% of an ***RU***, or 0.5 ***RU*** per 1,000 square feet.

Office Uses, again in close quarters, (defined as ten employees) operating in approximately 3,000 square feet of space) would demand the equivalent of 40% of an ***RU***.

Business Park Uses – (defined to have ten employees) operating in a 10,000 square foot industrial environment) would demand the equivalent of 40% of an ***RU***.

Industrial Uses, (defined to have ten employees, operating in a 10,000 square foot industrial environment) would demand the equivalent of 40% of an ***RU***.

Institutional Uses operating in a 21,780 square foot industrial environment) would demand the equivalent of 290% of an ***RU***.

Schedule 16.2 at the end of the Chapter contains a table identifying the number of RU's per acre based upon the various Floor Area Ratios that are summarized following in Table 16-1.

[This space left vacant in order to place the following table on a single page].

Table 16-1
Residential Unit (RU) Equivalents

DIF Use Category	Residential Unit Equivalent
Detached Dwelling Units	1.00
Attached Dwelling Units	1.00
High Density Dwelling Units	1.00
Commercial Lodging Units	0.10
Retail/Service Uses	1.65
Office Uses	3.12
Business Park Uses	1.43
Industrial Uses	1.02
Institutional Uses	2.90

The Relationship Between the Use of the Fee and the Type of Development Paying the Fee. The Fiber Optic DIFs that will be imposed and collected will be used to construct the system required to serve the system defined by the various mix of the types of development. If the development is an office property generating a greater amount of megabytes of bandwidth, the fee collected will be proportionally higher and will be enough to construct the required additions to the fiber optics communications system.

The Relationship Between the Amount of the Fee and the Cost of the Portion of the Facility Attributed to the Development Project. Similar to the section above, the relationship is based upon the projected amount of Mbps of bandwidth required to serve user base and the cost to provide that number of megabytes.

ONTARIO RANCH IMPACT FEE CALCULATION

Table 16-2, following and summarized from Schedule 16.2, identifies the fees necessary to be applied to the combination of proposed development of the varying land-uses in Ontario Ranch. The costs have been distributed using the same nexus identified earlier in this Chapter as Table 16-1 *Residential Unit Equivalents.* The proposed DIFs are as follows:

Table 16-2
Ontario Ranch Fiber Optic Communication
Development Impact Fee by Land Use

Development Use Category	Allocation of System Improvement Costs	Cost Impact per Unit or Square Foot
Detached Dwelling Units	$23,991,700	$2,057/Unit
Attached Dwelling Units	$61,067,539	$2,057/Unit
High Density Dwelling Units	$26,913,002	$2,057/Unit
Commercial Lodging Units	$717,319	$1,811/Unit
Retail/Service Uses	$8,249,166	$1.434/S.F.
Office Uses	$6,384,137	$2.391/S.F.
Business Park Uses	$10,992,911	$1.104/S.F.
Industrial Uses	$12,176,487	$0.717/S.F.
Institutional Uses	$2,600,281	$2.388/S.F.

RECAP OF RECOMMENDED FIBER OPTIC COMMUNICATIONS SYSTEM IMPACT FEES

- **General City** - There is no fiber optic system DIF schedule to be imposed in the General City area of the City.
- **Ontario Ranch** - Adopt Schedule 16.2 for the nine use development categories.

END OF CHAPTER TEXT

Schedule 16.1

City of Ontario - Ontario Ranch

Appendix A

Summary of Recommendations

SUMMARY OF RECOMMENDATIONS

Chapter 3 - Law Enforcement Facilities and Equipment
- GC/OR - Adopt Schedule 3.2, p.37, *Entire City – Minimal Capital Needs-based Impact Costs*

Chapter 4 - Fire Suppression Facilities, Vehicles and Equipment
- GC – Adopt Schedule 4.2, p. 51, *GC Minimal Capital Needs-based Impact Costs.*
- OR – Adopt Schedule 4.4, p. 53, *OR Minimal Capital Needs-based Impact Costs.*
- Split/create separate GC/OR Fire Suppression Impact fee Funds.

Chapter 5 – Circulation (Streets, Signals and Bridges) System
- GC - Adopt Schedule 5.2, p.72, *GC - Minimal Capital Needs-based Impact Costs, and the ALTERNATIVE COST METHODOLOGY, per single trip-end cost from Schedule 5.2 to apply to Table 5-2 and the more specific ITE Trip Calculation, 7th Edition for Business Uses.*
- *OR - Adopt Schedule 5.4, P. 74, OR - Minimal Capital Needs-based Impact Costs, and the ALTERNATIVE COST METHODOLOGY, per single trip-end cost from Schedule 5.4 to apply to Table 5-5 and the more specific ITE Trip Calculation, 7th Edition for Business Uses.*

Chapter 6 - Storm Drainage Collection Facilities
- GC - Adopt Schedule 6.4, p. 87, *General Plan Build-out Average Infrastructure Costs* with alternative use of the *Cost Distribution per Acre* column for unusual uses.
- OR - Adopt Schedule 6.5, p. 89, *OR – Minimum Capital Needs-based Impact Costs* with alternative use of the use *Distribution of Cost Distribution per Acre* column for unusual uses.

Chapter 7 - Water Source, Storage and Distribution Facilities
- GC - Adopt Schedule 7.2, p. 104, *GC - Minimal Capital Needs-based Impact Costs, Table 7-7,* p. 98, and *Equivalent Water meter Size calculation based Upon Minimum Needs-based Impact Fees.*
- OR - Adopt Schedule 7.4, p. 106, *GC - Minimal Capital Needs-based Impact Costs, Table 7-11, p. 102, and Equivalent Water meter Size calculation based Upon Minimum Needs- based Impact Fees.*

Chapter 8 - Sewer Collection Facilities
- GC - Adopt Schedule 8.2, p. 116, *GC - Minimal Capital Needs-based Impact Costs.*
- OR - Adopt Schedule 8.4, p. 118, *OR - Minimal Capital Needs-based Impact Costs.*

Chapter 9 - Refuse Collection Facilities and Equipment
- GC/OR - Adopt Schedule 9.1, parts **A** through H, p. 126-128.

Appendix A - Summary of DIF Recommendations (continued)

Chapter 10 - General Facilities, Vehicles and Equipment

- GC/OR - Adopt Schedule 10.2, p. 135, Entire City – Minimal Needs-based Impact Costs.
- Create City Maintenance Yard Expansion DIF Fund and deposit the portion of each infrastructures DIF that is "City yard Improvement" related per page 187, Appendix C.

Chapter 11 - Library Facilities and Collection Items

- GC/OR - Adopt Schedule 11.1, p. 141.

Chapter 12 - Public Meeting (Community Centers) Facilities

- GC/OR - Adopt Schedule 12.1 p. 146.

Chapter 13 – Aquatics Facilities

- Adopt Schedule 13.1, p.150.

Chapter 14- Park Land Acquisition and Park Infrastructure Development

- Create Quimby Act Park land Acquisition and DIF Fund, Note (1).
- GC/OR - Adopt Schedule 14.1, page 159-160, for residential uses requiring the sub-division of land for Quimby Act application.
- GC/OR - Adopt Schedule 14.1, page 159-160, for residential uses not requiring the sub-division of land for AB1600 application.

NOTES:

(1). Separate Park Land Acquisition and Development Funds are necessary because the Quimby Act allows use of receipts for rehabilitation of existing facilities whereas the AB1600 requirements prevent such expenditures.

Chapter 15 - OR Species, Habitat Conservation and Open Space Land Mitigation

- OR – Extend the current adoption of the *Mitigation Fee per Acre* in Schedule-15.1, p. 172, as OR Species, Habitat Conservation and Open Space Land Mitigation Impact Fee. This "fee" does not change.

Chapter 16 - Ontario Ranch - Fiber Optic Communication System

- OR - Adopt Schedule 16.2 - Fiber Optic Communication System Impact Fee, p. 180.

DEVELOPMENT IMPACT FEE REIMBURSEMENT POLICY CALCULATIONS

Exhibits "B" and "C" of the City of Ontario Development Impact Fee policies indicates that, within certain infrastructures, the project costs have been separated into two types of costs, they are: 1) Infrastructure projects that serve a local area referred to as *Local Adjacent Projects*; and 2) infrastructure projects that serve a larger regional area referred to as *Regional Projects*.

The two Exhibits within the Development Impact fee Policy's document further explain the conditions and limitations under which developers are to be reimbursed for the construction of public infrastructure identified in the *Development Impact Fee Calculation and Nexus Report* and the *Master Facilities Plan*. The reader should refer to that policy document for an in-depth explanation of the reimbursement policies.

The Local Adjacent/Regional schedules are now included in this document.

There are two schedules for each of the nine areas/schedules that require the distinction (i.e. the GC area Storm Drainage Collection System). The first establishes the percentage of the projects that are *Regional* project costs with its reciprocal establishing the *Local Adjacent* percentage of the project costs.

The second schedule within the area/infrastructure applies the two percentages (that add up to 100%) to the proposed development impact fee for that area (OR or GC) and infrastructure (i.e. circulation).

2021-22	General City Regional Projects Circulation System	GC	
DIF No.	DIF Program Project Description	Regional Project Costs	
ST-071	Holt Boulevard Bridge over West Cucamonga Creek	$109,972

Findings in Support of Continuation of City Policy to Impose Residential Development Impact Fees on a per Unit Basis

Findings in Support of Continuation of City Policy to Impose Residential Development Impact Fees on a per Unit Basis.

AB-602 (Gov't C. sections 66016.5(a)(5)(A) and (B)) states that if the City adopts a calculation and nexus study after July 1, 2022, it must *either* "calculate a fee imposed on a housing development project proportionately to the square footage of proposed units of the development" *or* make the following findings:

> (i) An explanation as to why square footage is not an appropriate metric to calculate fees imposed on housing development projects.
>
> (ii) An explanation that an alternative basis of calculating the fee bears a reasonable relationship between the fee charged and the burden posed by the development.
>
> (iii) That other policies in the fee structure support smaller developments, or otherwise ensure that smaller developments are not charged disproportionate fees.

There is no requirement for the City to have a financial element in the City's General Plan document. Thus, a properly calculated *Development Impact Fee Calculation and Nexus Report* functions as the de-facto financial plan in support of the City's General Zoning Plan. It identifies the anticipated service demands by infrastructure based upon averages and lays out a fair and reasonable method with which to finance the required capital projects and acquisitions necessary to accommodate those anticipated new service demands.

The City of Ontario has expressed that it will continue to impose residential development impact fees based upon the same manner that additional development service demands are calculated – that is, by type of average unit. The City will not impose development impact fees based on residential development projects proportionate to the square footage of proposed units for completing the City's General Plan. The current set of fees fosters greater accuracy in planning and provides the City with the required level of certainty in impact fee collection.

The California Mitigation Fee Act (Government Code §66000, et.seq.), which was first established in 1987, specifies that every public agency that adopts development impact fees must provide the essential calculation and nexus report with fees calculated upon data that is as empirical as possible. AB-602's *Proportionate to Square Footage,* is based upon a *presumption*[1] that a smaller detached dwelling creates less local government service demands than a larger detached dwelling. AB-602 does not offer any peer reviewed, third party empirical data that substantiates that a small square footage detached dwelling unit creates less municipal service impacts than a larger square foot detached dwelling. As such, the City has determined that the best practices for both managing development and obtaining the adequate impact fee financing for the development-generated infrastructure is as identified in this Report.

The City's zoning code allows for identification of the use of privately held land and in some cases, primarily business uses, provides for a maximum Floor Area Ratio (FAR) that limits the amount of square feet that can be constructed on an acre of business space. No such limitation is placed upon the construction of a detached dwelling unit (AKA "single family residence"). The detached dwellings can be a size that the developer determines to be a marketable product.

[1] (noun: **presumption**; plural noun: **presumptions** – an idea that is taken to be true, and often used as the basis for other ideas, although it is not known for certain.

This Report indicates that the City (using recent GIS data) has 1,685 acres zoned for detached dwellings. At approximately 7.6 detached dwelling units per acre, this equates to an additional 12,793 detached dwellings to be constructed by General Plan build-out of the City. The City does not, however, have any information as to how many square feet any of these 12,793 detached dwelling units will be, that is, within applicable zoning, determined by the developers of the various parcels.

This Report employs the most defensible empirical sources, appropriate to the demands of that particular infrastructure to determine the *average* demands of an *average* detached dwelling. These sources determine demand by an average detached dwelling but does produce this demand data for various sized detached dwellings. Such data is simply not available.

The amount of and complexity of any City's infrastructure defines (in all or part) the Level of Service (LOS) of that infrastructure, not just currently but in perpetuity. This makes the one-time DIF financing of any City's infrastructure that much more important. It takes balance to accommodate development with the police responses within the desired standard. It will take a combination of additional law enforcement station space, response and support vehicles and specialty equipment to support the required officers (non-impact supported). The importance of having a properly calculated and documented DIF schedule in order to accommodate development-related demands cannot be over-stated. The same concept holds true for the two labor-intensive public safety services and the infrastructure intensive services such as circulation, storm drainage collection, potable and recycled water distribution and sewer collection.

The collection of an impact fee to raise capital revenue for development-based demands is one- time but represents the municipal service needs of that dwelling unit as long as that structure exists. Thus the argument that any new detached dwelling will generate less municipal service demand based on its smaller square footage is divorced from the reality that any particular residential dwelling may have different occupants over 50 years (e.g. a home for a family of four to a single resident).

Police and Fire Calls-for-Service (CFS) - For the calculation of Police and Fire demand data, RCS used Ontario- sourced GIS-based calls-for-service matched up with the City's Land-Use GIS database. As an example, in 2020 there were 12,454 calls-for-service logged into the dispatch data to the 12,793 existing detached dwellings for an average of 0.973 calls-for-service to a single detached dwelling. Again, the City does not know what size these detached dwellings are so could not possibly determine the total square feet of 12,793 detached dwellings or the individual square footage of each of those 12,793 dwellings. GIS data does not include the size of each residential dwelling in the City.

Circulation Needs - According to the volume of empirical data collected by the highly respected *Institute of Traffic Engineering* (ITE), an average detached dwelling generates approximately 9.5 trip-ends per day, but the ITE does not offer any distinction between small and large homes, because such data does not exist in their database.

Storm Drainage - The storm runoff from a 1,800 square foot single-floor residence is the same as the storm runoff from a 3,600 square foot two-story building. Both have a 1,800 square foot pad, so a 50% fee for the 1,800 square foot home compared to the 3,600 square foot home would be inequitable and unsupported by data. This Report utilizes rainfall runoff data from the *San Bernardino Hydrology Manual* (1986). Williamson and Schmidt, Irvine, CA, Figure C-4. The document indicates that the coefficient of drainage for a development of homes close to seven units per acre is 0.775. No such data is available for large versus small homes.

Public Utilities - Water and Sewer Master Plans are the documents that engineering consultants and City staff use to ensure that the proposed spine water distribution and sewer collection systems are adequate and sufficient to meet all needs within the City's limits. These Master Plan total demand calculations are typically based upon averages for each of the City's utilities. Master Plans are based on the proposed number of dwelling units or business square feet in order to identify the demand for new infrastructure. Financing them should be on the same basis.

Quality of Life Infrastructure (parks, aquatic facilities, libraries and community centers) - Quality of Life standards are based upon current population numbers. As an example there are

145,570 square feet of public use facilities (i.e. community centers). Given an existing population of 182,004 residents, that creates an existing standard of 0.800 square feet of public use facilities per resident. A fee for a new square foot of public use facility is determined and then multiplied by the empirically-based average number of persons per type of residential dwelling. These impact fees are generally based upon census data that identifies average number of persons per type of dwelling unit. In Ontario, those figures are 3.806 persons per detached dwelling, 3.373 per attached dwelling unit and 3.175 per mobile home (see Table 2-4). The Census data does not determine these figures by size of dwelling unit and thus they represent the most empirically driven data. Anecdotally there are likely 1,300 square foot dwellings with anywhere from one, two or six residents just as there can be in a 2,600 square foot home. Therefore an average based on type of dwelling is far more empirical than dividing the average cost by some unsubstantiated average dwelling size. By doing so, larger residential dwellings could be treated unfairly if they end up being assessed a greater amount in order to balance or subsidize the smaller detached dwelling units based upon the presumption (non-empirical data) that these smaller detached dwelling units somehow create lesser dwelling densities than would a larger unit. Such a subsidy flies in the face of The Mitigation Fee Act.

Importance of a Static or Average Development Impact Fee Schedule. The City must be able to depend on the collection of sufficient impact fee revenues with which to finance development-generated projects necessary to accommodate new development with adequate and sufficient service levels without decreasing the existing levels of service. This assurance will be diminished should the City choose a per residential square foot impact fee schedule. As an example, the City has identified that a 6,200 square foot basic 2X2 fire station is required to service an area with about 3,000 average detached dwellings. However, if a greater proportion of the 3,000 homes are far smaller than the City had anticipated, the City will not have adequate DIF revenue to construct that station. With flat fee representing an average demand per unit, the City can have greater confidence in receiving the DIF revenue necessary to construct that station and thus respond to those 3,000 detached dwellings, regardless of the size of the detached dwellings.

The City's development practices neither favor nor penalize any one land-use over another. Nor are the City's policies unfair within any one land-use. For residential units based upon empirically-based averages, all are assessed the same fee; no developer is charged disproportionately. The type of dwelling unit drives the fee, not the square footage. For residential units, all are assessed the same fee; none are charged disproportionately.

Since the City does not impose per square foot-based impact fees, it also does not apply such fees on any room addition to a residential dwelling.

DIFs for non-residential uses (i.e. the variety of businesses) have always been calculated and imposed on a per square foot basis as empirical data is available for those uses. Additionally each of those business uses (see Table 2-1) has differing maximum allowable floor area ratio (FAR).

The City is mindful that the state is encouraging construction of smaller detached dwellings and is assuming that these types of residential dwellings create lesser demand merely because they are smaller. However, given the lack of any empirical data supporting such an assumption, the City feels obligated to adopt residential impact fees that are fair to all developers of residential dwellings, regardless of size. In the end, the City has determined to err on the side of fair treatment of all residential development.

In conclusion, given the empirically-based and significant effort spent on identifying the number and capacity of increasing infrastructure projects needed to accommodate the planned-for and anticipated new development and the fair means demonstrated in the calculation and Report, the City has determined that the empirically-driven per Unit residential fee is the most appropriate metric with which to calculate and fairly impose the City's schedule of impact fees.

End of Report

Regarding: City of Ontario Master Plan and Development Impact Fee Program 2025 Update

Dear Mr. Ochoa:

The purpose of this letter is to express our support for the City's updated Development Impact Fee (DIF) programs as proposed by City Staff.

We have spent a significant amount of time evaluating the updated fees and have worked in cooperation with the City staff to gain an understanding of the components and justifications for the increased fees. We do appreciate the City's transparence and collaboration we experienced throughout this process.

While any increase in fees negatively impacts our property values, we understand that a certain level of fees is necessary to support the improvements and related program costs that the City of Ontario is planning and that our future residents will enjoy. After evaluation, we have concluded that the fee increases are reasonable and we support the updated DIF fee schedule as proposed. Given the significant increase in the program costs and fees, we also appreciate the City's phasing in of the fees 50% per the effective date of the ordinance and the remaining 50% one year later.

Please feel free to contact me at (714) 637-4405 x107 with any questions or concerns you may have.

Sincerely,

Richard Cisakowski
President

PROPOSED CONSOLIDATED DIF SCHEDULE

Land Use Category	Current General City*	Proposed General City*	Difference	Percent Change	Current Ontario Ranch*	Proposed Ontario Ranch*	Difference	Percent Change
Per Unit:								
Residential, Detached	$28,984	$37,595	$8,611	29.71%	$43,226	$58,575	$15,349	35.51%
Residential, Attached	$23,012	$29,674	$6,662	28.95%	$31,980	$42,405	$10,425	32.60%
Residential, High Density	$17,787	$22,965	$5,178	29.11%	$23,729	$31,026	$7,297	30.75%
Mobile Homes	$22,561	$29,373	$6,812	30.19%	N/A	N/A	N/A	N/A
Commercial Lodging	$3,697	$5,168	$1,471	39.79%	$11,511	$16,464	$4,953	43.03%
Per Square Foot:								
Retail/Services Uses	$8.534	$10.745	$2.211	25.91%	$18.972	$24.772	$5.800	30.57%
Restaurants	$8.716	$10.946	$2.230	25.59%	$19.154	$24.973	$5.819	30.38%
Office Uses	$5.026	$6.141	$1.115	22.18%	$14.618	$19.148	$4.530	30.99%
Business Park Uses	$5.150	$6.360	$1.210	23.50%	$11.880	$15.705	$3.825	32.20%
Industrial Uses	$2.968	$3.675	$0.707	23.82%	$8.552	$11.867	$3.315	38.76%
Institutional Uses	$7.584	$9.679	$2.095	27.62%	$14.234	$18.530	$4.296	30.18%

*Maximum Fee amounts are shown for comparison purposes only. Due to the drastic increase in infrastrucutre cost experienced by the City and its partners, City is introducing a phased approach over the next two years to reach the proposed fee listed. The proposed fee will be active as on 07.01.26

SUBJECT: The City Council will consider (1) the adoption of a Development Impact Fee Nexus Report Update (the “Report”) and (2) increased Development Impact Fees applicable to new development occurring within the City (the “DIF”). This public hearing of the City of Ontario authorizes the City to impose the increased DIF rates. The Report and proposed DIF increase will be adopted in accordance with the Mitigation Fee Act, pursuant to Government Code sections 66000 et seq. and 66016.5. The Report, the proposed DIF fee schedule, and all supporting data are available for public review on the City’s website at https://www.ontarioca.gov/government/financial-services. Copies of these documents are also available for review in the Office of the City Clerk, City of Ontario located at 303 East B Street, Ontario, California, 91764 during normal business hours. ADDITIONAL INFORMATION: Members of the public are invited to attend the hearing and express opinions or submit evidence for or against the proposed DIF increase described above. At the above noted time and place, testimony from interested persons will be heard by the City Council and duly considered prior to taking action on the above proposed DIF increase. Pursuant to the California Government Code, please take notice as follows: If you challenge the action described in this written notice in court, you may be limited to raising only those issues you or someone else

NOTICE OF PUBLIC HEARING
CITY COUNCIL
CITY OF ONTARIO
DEVELOPMENT IMPACT FEE NEXUS REPORT AND FEE UPDATE

Notice is hereby given that the **CITY COUNCIL** of the **CITY OF ONTARIO** will hold a consolidated **PUBLIC HEARING** at its regular meeting scheduled at 6:30 PM, on March 18, 2025.

SUBJECT: The City Council will consider (1) the adoption of a Development Impact Fee Nexus Report Update (the "Report") and (2) increased Development Impact Fees applicable to new development occurring within the City (the "DIF"). This public hearing of the City of Ontario authorizes the City to impose the increased DIF rates.

The Report and proposed DIF increase will be adopted in accordance with the Mitigation Fee Act, pursuant to Government Code sections 66000 et seq. and 66016.5. The Report, the proposed DIF fee schedule, and all supporting data are available for public review on the City's website at https://www.ontarioca.gov/government/financial-services. Copies of these documents are also available for review in the Office of the City Clerk, City of Ontario located at 303 East B Street, Ontario, California, 91764 during normal business hours.

ADDITIONAL INFORMATION: Members of the public are invited to attend the hearing and express opinions or submit evidence for or against the proposed DIF increase described above. At the above noted time and place, testimony from interested persons will be heard by the City Council and duly considered prior to taking action on the above proposed DIF increase.

Pursuant to the California Government Code, please take notice as follows: If you challenge the action described in this written notice in court, you may be limited to raising only those issues you or someone else raises at the public hearing, or in written correspondence delivered to the City at, or prior to, the public hearing.

If you have any questions about the above proposal or want to submit comments, you may contact the City of Ontario City Clerk's Office at 303 East B Street, Ontario, California, 91764; Phone (909) 395-2000; or via email at smautz@ontario.gov.
